During World War II members of the Maccabi, formerly of the \*Haganah, volunteered for the British army and established a Maccabi unit in 1941. In the same year the movement instituted what has become the tradition of the relay of runners carrying a lighted torch from Modi'in, the home of the Maccabees, to various parts of the country and, since the establishment of the State, to the presidential residence in Jerusalem. (In 1977 it reached the president of the United States.) Since the Six-Day War, Maccabi has organized marches "In the Footsteps of the Fighters" to such places as Mt. Sinai, the "Path of the 35" to Kefar Ezyon, Masada, and the ascent of the Hermon.

Maccabi's soccer and basketball teams have dominated their sports in Israel. The Maccabi Tel Aviv soccer team has won 18 league championships and 22 state cups through the 2004/5 season, while the Maccabi Tel Aviv basketball team, in addition to winning 45 league championships and 35 state cups, has also won the European championship five times.

Maccabi has a junior organization "Young Maccabi" which was founded in 1929 and whose aims include training youth towards good citizenship and personal fulfillment in all branches of Israeli life and adherence to Jewish traditional values. (For Israel Maccabi until World War II, see \*Sport in Israel before 1948.)

**MACCOBY, HAYYIM ZUNDEL** (1858–1916), Zionist preacher, one of the first members of Hovevei Zion (see \*Hibat Zion) in England. Born near Kobrin, Poland, Maccooby decided to become a preacher when he discovered his oratorical talents, and he attracted many followers. In 1873 he was ac-

cepted as the preacher of Kamenets and from that time on was called "The Maggid from Kamenets." In 1875 he left Kamenets and was a preacher in several places until he became the first regular preacher of the Hībbat Zion movement, in 1883. In this office he traversed Russia, Lithuania, and Poland. About 300 societies for the settlement of Erez Israel were founded because of his influence and in spite of the opposition of many rabbis. In 1890 he left Russia for England, where he also attracted large audiences to his sermons and was thus a pioneer of the Hībbat Zion movement in the country. Maccoby was one of the strongest opponents of \*Herzl for religious reasons. In 1929 a collection of his sermons entitled *Ḥayyim* was published with a detailed biography.

[Getzel Kressel]

**MACCOBY, HYAM** (1924–2004), British scholar of ancient Judaism. Born in 1924 in Sunderland, the son of a mathematics tutor and the grandson of the Maggid of Kamenets (see \*Maccoby, Ḥayyim Zundel), Poland, Hyam Maccoby was educated at Oxford. He became a schoolteacher and was then the librarian of Leo Baeck College, London. In 1998 he was made research professor at the Centre for Jewish Studies at Leeds University. Maccoby was widely known for his writings on Jesus, the founder of Christianity, and his milieu in Roman Judea. In such works as *Judea: Jesus and the Jewish Resistance* (1980), Maccoby argued that Jesus should be viewed as a liberal but Torah-observant Pharisee, who opposed the Romans but not other Jews. Maccoby also saw the origins of Christian antisemitism as beginning with the foundations of Christianity as a separate religion, a view he put forward in such works as *Judas Iscariot and the Myth of Jewish Evil* (1992) and in *Paul and Hellenism* (1991). Maccoby was widely known through his many appearances on television; he was frequently attacked by both Christians and Orthodox Jews.

[William D. Rubinstein (2<sup>nd</sup> ed.)]

**MCDONALD, JAMES GROVER** (1886–1964), first U.S. ambassador to Israel. McDonald, who was born in Coldwater, Ohio, was assistant professor of history at the University of Indiana, before moving to New York. From 1919 to 1933 McDonald served as chairman of the Foreign Policy Association. During the 1920s he made numerous trips abroad for this organization becoming, in the process, a familiar figure at the League of Nations headquarters in Geneva. McDonald's interest in Zionism was sparked by his experiences as League of Nations high commissioner for refugees from Germany. He held this post from 1933 to 1935 when he resigned and issued a dramatic statement accusing the German government of planning a policy of race extermination and attacking League members for their indifference to the plight of the German refugees. In 1938 he was elected to head the newly cre-

ated Presidential Advisory Committee on Political Refugees (PACPR), a quasi-official agency whose main task was to serve as a conduit for funneling the names of prominent refugees to be considered for special visitor's visas to the State Department. In September 1940 McDonald clashed with officials in the State Department who were imposing ever-stricter regulations to halt the influx of refugees. When the White House was finally called upon to mediate in the conflict, McDonald asked for and received Eleanor Roosevelt's support. However, despite her intercession, Roosevelt supported the State Department. In May 1943, seemingly affected by the lack of administration support for the refugee cause, McDonald rejected an opportunity to head the U.S. delegation to a refugee conference at Bermuda. During the next two years, he frequently advocated that Palestine be opened to immigration, "limited only by the absorption capacity of the area." In 1945 his efforts were partly rewarded when the Anglo-American Committee of Inquiry on Palestine, of which he was a member, recommended the admission of 100,000 displaced Jews. President Truman appointed McDonald U.S. special representative to Israel in 1948 and ambassador in 1949. McDonald served in this post until his retirement in 1951. He wrote *My Mission to Israel 1948–1951* (1953). After his retirement, McDonald devoted much time to Zionist-sponsored causes, especially the sale of Israel bonds.

[Henry L. Feingold]

**MACEDONIA**, region of southeastern Europe where Alexander the Great was born. As a result of the latter's conquests and subsequent Greek rule in Palestine, the Hebrew term "Javan" as it appears in the Bible was generally translated by the rabbis "Macedonia" (cf. Targum Pseudo-Jonathan to Gen. 10:2; Yoma 10a). Although the origins of a Jewish community in Macedonia are unknown, it is certain that such a colony existed toward the end of the Second Temple period. Philo, in the list of Jewish communities quoted from the correspondence of Agrippa 1 to Caligula, refers also to the Jews of Macedonia (The Embassy to Gaius, 281). Moreover, the fact that Paul and his followers made a number of journeys to Macedonia, and that their doctrines were readily accepted there, tends to substantiate the existence of a Jewish colony (cf. Acts 16:9; 18:5; 20:1; I Cor. 16:5; II Cor. 1:16; 2:13; 7:5). Josephus, in describing the Jewish community of Alexandria, claims that the Jewish residents there were granted the right to be called "Macedonians" (Wars 2:487–88; Ant. 12:8; Apion 2:35). However, papyrological research has shown that the phrase "Macedonian" eventually lost its original ethnic significance, and is in fact a designation of specific military status.

For later periods see also \*Bulgaria; Byzantine \*Empire; \*Greece; \*Yugoslavia.

**MACHABEY, ARMAND** (1886–1966), French musicologist and composer. Born in Pont-de-Roide, France. Machabey studied classics and music in Paris with d’Indy and Pirro, concentrating on composition, but eventually devoted himself to musicology. His main contributions were made in the field of medieval musicology. He wrote his dissertation (1928) on the evolution of musical forms in the Middle Ages, for which he was awarded the Bernier Prize of the Académie des Beaux-Arts in 1930. His writings include monographs on Ravel, *Anton Bruckner* (1946), *Le Bel Canto* (1948) as well as *Traité de la critique musicale* (1946) and studies of notation such as *La Notation musicale* (1952). He also wrote about *Girolamo Frescobaldi* (1952) and *Guillaume de Machaut: la vie et l’oeuvre musicale* (2 vols., 1955), which are his best-known works. In 1957 he edited with Dufourcq and Raugel the *Larousse de la musique* encyclopedia. His compositions include chamber and solo instrument music such as six short preludes for piano, six pieces for violin and piano, and orchestral works.

**MACHADO**, family name of Portuguese \*Marranos. The best known is perhaps DAVID MENDEZ MACHADO (d. 1753), who left his native Lisbon in 1732 after he had aroused the suspicions of the \*Inquisition that he practiced Judaism in secret. He arrived in Savannah, Georgia – by way of London – during 1733. Within that year he married Zipphorah Nuñez (c. 1714–1799), daughter of the former Portuguese court physician Samuel \*Nuñez; Machado was then appointed *hazzan* at New York City’s Spanish-Portuguese synagogue, Shearith Israel, serving from 1734 to 1753. His daughter, REBECCA (1746–1831), married Jonas \*Phillips (1736–1803), the revolutionary war patriot. Among David Machado’s descendants were Uriah Phillips \*Levy and Mordecai Manuel \*Noah. The record of freemen in New York City for 1739 lists an AARON MACHADO, probably the brother of the *hazzan*. The Machado family name appears also in the earliest records of the Mexican Inquisition: ANTONIO MACHADO and his daughter ISABEL were inculpated during the trial of Jorge de Almeida in 1600.

**MACHAERUS**, Transjordanian frontier fortress erected by the Hasmonean king Alexander \*Yannai (Jannaeus) in southern Perea, E. of the Jordan and adjacent to the border of Nabatean Arabia (Jos., Wars, 1:161; 3:46; 7:163–170). The place served as one of the depositories for his treasures (Jos., Ant., 13:417). It served as a base for Alexander and \*Aristobulus in their resistance against the Romans. Pliny describes it as one of the strongest points in the region after Jerusalem (Pliny, *Historia Naturalis*, 5:16, 72) and Strabo lists the fortress among

the Hasmonean strongholds (16:2, 40). Taken by Gabinius and destroyed, it was later rebuilt by Herod the Great. Machaerus was also the place where \*John the Baptist was executed. According to Josephus (Ant., 18:116–117) John’s activities in the lower Jordan River region so alarmed the Tetrarch \*Herod Antipas (nicknamed the “fox”: Luke 13:32), son of Herod the Great, that he had him executed. The story given in the gospels regarding the reason for John’s execution is different, but in no way contradicts the reason given by Josephus. According to Mark (6:17–18; cf. Matt. 14:3–4; Luke 3:18–20) John spoke out publicly about the unlawfulness of the union between Herod and Herodias (in keeping with Lev. 18:6) which annoyed Herod considerably, but he was eventually beheaded owing to a request made by Salome on the occasion of Herod’s birthday (Mark 6:14–29; Matt. 14:1–12). The place served as one of the stations for signaling the appearance of the new moon and the arrival of holidays (Tosef., RH 2:2). Herds, mainly of goats, were said to have been raised in the mountains of Machaerus (Tam. 3:8). In the Jewish War against the Romans the fortress was taken over by the Zealots (Jos., Wars, 2:485) and remained one of their strongholds even after the fall of Jerusalem (Jos., Wars, 4:555). In 72 C.E. the Roman legate Lucilius Bassus captured it after a short siege (Jos., Wars, 7:164ff.; which also includes a description of the site). Machaerus (Jabal al-Mishnaqa) is situated close to the present-day village of al-Mukāwir, 14 mi. (c. 22 km.) southwest of Madaba. The site was visited in the 19<sup>th</sup> century by J.L. Burckhardt, H. Tristram, and C.R. Conder. F.M. Abel made a survey of the site in 1909. In the 1920s a sculpted head identified by P. Ilton as the head of Salome was said to have been found in a cave 80 ft. north of Machaerus. Excavations were first made at the site by J. Vardaman in 1968, but the results were never published. In the early 1970s Strobel made a survey of the Roman siege-works around the site. Bassus’ unfinished ramp is still visible on one side of the site. Father V. Corbo undertook major excavations at the site from the late 1970s. A few tombs from the first century C.E. were recently investigated at the site.

[Michael Avi-Yonah / Shimon Gibson (2<sup>nd</sup> ed.)]

**MACHAUT, DENIS DE** (late 14<sup>th</sup> century), Parisian Jew who converted to Christianity. The provost of Paris decreed that

his youngest child was to remain under the father's guardianship and receive a Christian upbringing, while the other three children were entrusted to Christian families. De Machaut was to be allowed to visit them but not his wife, who had remained Jewish. After a period of time determined by the provost, the children were to be interrogated on their intention to become Christians or not. A short while later, when Denis de Machaut disappeared, the Jews were accused of having seized him in order to attempt to bring him back to Judaism. Seven of the community's leaders were condemned to be burned at the stake. On April 6, 1394, parliament commuted the sentence to imprisonment until De Machaut was returned. The sentence was accompanied by repeated, severe corporal punishment, and the Paris community was also fined 10,000 livres. It has been claimed that this affair was a decisive factor in the expulsion decree against the Jews of France issued in 1394.

[Bernhard Blumenkranz]

**MACHIR** (Heb. מַכִּיר), son of Manasseh and grandson of Joseph. Although Machir appears to have been an only son according to Numbers 26:29–34 (cf. Gen. 50:23), other traditions ascribe more sons to Manasseh (Josh. 17:2), and name Asriel as a brother (1 Chron. 7:14). Machir's mother is said to have been an Aramean (*ibid.*). He married \*Maacah who bore him Peresh and Sheresh (1 Chron. 7:16). He also had a daughter (1 Chron. 2:21). He is most frequently described as the father of Gilead (Num. 26:29; Josh. 17:1; 1 Chron. 2:21; 7:14). Machir is the eponym of one of the most important clans of the tribe of Manasseh, the special status of which is acknowledged in Genesis 50:23. In the Song of Deborah, Machir is mentioned along with Ephraim and Benjamin (Judg. 5:14) while Manasseh is missing, indicating that this powerful tribe is represented by Machir. Further, the Song distinguishes between this tribe and the Gilead who resides in Transjordan and who, along with the tribe of Reuben, did not participate in the war (Judg. 5:15, 17). However, the location of Machir west of the Jordan contradicts other sources which state that the Machirites captured the Gilead and the Bashan in Moses' time before the Israelites crossed the Jordan (Num. 32:39–40; Josh. 17:1). It is reasonable to suppose that at first the entire clan dwelt west of the Jordan. Later, a part of it crossed to the eastern side (cf. Josh. 13:31, "A part of the sons of Machir"). It was subsequent to this settlement that Machir became head of Gilead. According to Numbers 32:39–42, the clan settled in the northern Gilead from the Jabbok to the Yarmuk, while \*Jair, son of Manasseh, and Nobah were located even farther north, in the Bashan (cf. Deut. 3:14). In contrast to this, Joshua 13:29–31 and 17:1–2 record that the Machirites settled both in the Gilead and in the Bashan, whereas Jair was situated in the land of Gilead (1 Chron. 2:22). These contradictions may be reconciled by assuming that Jair was another branch of the larger clan of Machir or, in the course of time, became af-

filiated with it. Indeed, in 1 Chronicles 2:21 Jair is considered Machir's descendant. Further, Maacah's being Machir's wife (1 Chron. 7:16) suggests that the Machirites settled north of the Yarmuk bordering the land of Maacah. The reference in 1 Chronicles 7:14 apparently hints at an ethnic assimilation of the families of Machir with the Aramean population north of the Yarmuk.

[Bustanay Oded]

**MACHIR BEN JUDAH** (first half 11<sup>th</sup> century), younger brother of \*Gershom b. Judah, "the Light of the Exile." Machir was the author of *Alef Bet de-Rabbi Makhir*. This work was in the possession of Rashi and the tosafists, who quote from it (Rashi, Gen. 43:11; Pes. 50a; Er. 22a; Tos. Nid. 7b s.v. *shammuti*, et al.), but it is now lost. It was the first talmudic dictionary to be compiled in Europe, not unlike the *Arukh* of \*Nathan b. Jehiel of Rome. Its chief function was to connect words used in the Talmud with Scripture, to explain them, and to translate them into French. In consequence it also engaged in biblical exegesis. All the explanations in Machir's book were, evidently, given anonymously, no authorities being mentioned in it.

Machir had four sons: Nathan, Menahem, Nehemiah, and Yakar. These four collected the rulings, customs, and responsa of the great scholars of their locality. Menahem included all the material in a work which is referred to in the literature of the \*rishonim as *Ma'aseh ha-Makhiri* (Rabban – Eliezer b. \*Nathan – Prague, 1610, 84c). Most of the material in his book, since lost, was included in the works of the *De-vei Rashi* ("school of Rashi") and the whole book may have been used as the foundation for the *Ma'aseh ha-Ge'onim* (Berlin, 1909), certainly in respect of the information it affords about the customs of Speyer, Worms, and Mainz. The majority of the material in the *Ma'aseh ha-Ge'onim* is from these four brothers.

**BIBLIOGRAPHY:** A. Epstein, *Ma'aseh ha-Ge'onim* (1909), x–xiii (introd.).

[Israel Moses Ta-Shma]

**MACHLUP, FRITZ** (1902–1983), U.S. economist. Born in Wiener Neustadt, Austria, Machlup was a partner in a paper manufacturing enterprise in 1923. In 1929 he began lecturing at the Volkshochschule in Vienna. In 1933 he emigrated to the U.S. He was a research fellow at the Rockefeller Foundation in New York City, which he left in 1935 to become professor of economics at the University of Buffalo. In 1947 he was appointed professor of political economy at Johns Hopkins and in 1960 became professor of economics and international finance at Princeton University, serving at the same time as director of Princeton's international finance section (1960–71). During the 1960s, one of Machlup's principal interests was the expansion of international liquidity. In 1963, he formed an organization of academics, known as the Bellagio Group, to study the looming international monetary problems, develop

an academic consensus, and offer practical solutions. Among the offices he held in academic organizations were the presidencies of the Southern Economic Association (1960); the American Association of University Professors (1962–64); the American Economic Association (1966); and the International Economic Association (1971–74). He also served as a consultant to the U.S. Treasury (1965–77).

He is regarded as one of the fathers of the concept of “the information society” and “the information economy.” Although Machlup never won a Nobel Prize, the Nobel committee listed his name several times as a candidate

Machlup’s many publications include *The Stock Market, Credit and Capital Formation* (1940); *The Political Economy of Monopoly* (1952); *The Economic Review of the Patent System* (1958); *The Production and Distribution of Knowledge in the United States* (1962); *International Payments, Debts, and Gold* (1964); *Education and Economic Growth* (1970); *Methodology of Economics and Other Social Sciences* (1978); the three-volume *Information through the Printed Word* (1978); and the first three volumes of the projected 10-volume series *Knowledge: Its Creation, Distribution, and Economic Significance* (1980, 1982, 1983).

[Joachim O. Ronall / Ruth Beloff (2<sup>nd</sup> ed.)]

**MACHPELAH, CAVE OF** (Heb. מַעְרַת הַמַּכְפֵּלָה). The word “Machpelah,” which in the Bible always appears with a definite article, is variously the name of a cave (Gen. 23:9, 19; 25:9); a field, “the cave which is in the field of Machpelah” (Gen. 49:30); and a place, “the field of Ephron, which was in Machpelah” (Gen. 23:17). The actual meaning of “Machpelah” is understood by all the early translations (Targum, Septuagint, et al.) as well as by the rabbis to mean “double” (from the Hebrew root *k-p-l*) and is interpreted in rabbinical literature as referring either to a double cave or to the “couples” buried in the cave. Machpelah is situated near Mamre, identified with Hebron (Gen. 23:19, 33:19). The Bible relates that Abraham, wishing to bury Sarah, purchased Machpelah from Ephron the Hittite for 400 silver shekels. Abraham himself, Isaac and Rebekah, Jacob and Leah were all later buried there. Jacob specifically commanded his sons not to bury him in Egypt but to lay him to rest with his fathers in the cave of Machpelah (Gen. 47:28–31; 49:30).

The site of the cave is today identified with Ḥaram el-Khalil in modern Hebron. Surrounding the area, to a height of 39 ft. (12 m.), is a magnificent wall, distinguished by its decorative drafted-margin masonry, which are up to 23 ft. (7.5 m.) in length, and a very particular arrangement of pilasters. This wall is attributed to the time of Herod the Great and surrounding walls with pilasters also existed at the Temple Mount in Jerusalem and at Mamre (Ramat el-Khalil) (see Jacobson, Magen). Josephus, who describes the tombs of the patriarchs as “of really fine marble and exquisite workmanship” (Jos., Wars 4:532), does not, however, mention the

surrounding wall (*temenos*). The first to prepare a plan of the structure was Ermete Pierotti between 1854 and 1861. A major study of the monument was later made by L.H. Vincent and E.J.H. Mackay following World War I in 1919. In 1968–69 excavations were conducted by Z. Yeivin along the southwestern side of the surrounding wall, bringing to light leveled rock surfaces, cupmarks, and a plastered installation. Interestingly, the monumental Herodian walls were very carefully adapted to the irregularities of the underlying surface of the rock, perhaps in an attempt to preserve the holiness of the hill.

The earliest source on the arrangement of the Patriarchal graves is in the Book of Jubilees (36:21) which states that “Leah is buried to the left of Sarah.” According to the Jerusalem Talmud, the graves of the patriarchs are situated in the form used for the partaking of a meal; the most prominent reclining at the head, on the middle couch, the second above him and the third below him (TJ, Ta’an. 4:2). The two structures, which today mark the tombs of Abraham and Sarah, are indeed in the center of the compound area. The tombs of Jacob and Leah are at the northwestern end so that when facing the tombs from the southwest – the probable original entrance – the tomb of Leah is in fact to the left of Sarah’s. The area inside the compound was evidently originally left roofless (a similar conclusion may be reached regarding the Mamre compound). The Byzantines built a church, later converted by the Muslims into a mosque, at the southeastern extremity, which left the two constructions marking Isaac and Rebekah’s tombs inside, while those for Abraham and Sarah were outside, at the entrance. In the floor, inside the mosque, are two openings leading to the cave underneath. One of these, at the southeast wall, is covered by stone slabs fixed with iron hooks. The other, at the opposite wall, is open, as a Muslim custom requires the lowering of an oil lamp which is continually lit. The actual form of the cavern is uncertain but from the accounts of travelers it seems safe to conclude that there are at least two caves joined by a passage and possibly a third inner chamber. The entrance to the caves (apart from the two openings) is inaccessible today, though following the Six-Day War, Moshe \*Dayan, who was serving as defense minister at that time, managed to gain access to a flight of steps leading to a narrow subterranean tunnel extending beneath the tomb of Isaac and leading to a chamber containing Moslem inscribed plaques. Rabbinic sources mention the burial of Adam and Eve in the Machpelah and the alternative biblical name for Hebron, Kiriath-Arba (“the town of the four”), is explained to refer to the four couples buried there. According to Josephus and apocryphal sources, the sons of Jacob were also buried in the Machpelah. A Muslim tradition maintains that Joseph was buried here, his tomb and the Mosque of Joseph being just outside the southwest exit of the compound. This tradition is probably due to a corruption of the Arabic name for Esau, whose head, according to aggadic sources, fell within the cave after he had been killed in a battle for the right of burial in the Machpelah (Sot. 13a; PDR 39).

Plan of the mosque above the Cave of Machpelah. After L.H. Vincent et al., Hebron, Le Haram El Khalil, Sépulture des Patriarches, Paris, 1923.

During the Byzantine period, the Jews were authorized to pray within the area. The Christians entered through one gate and the Jews through another, offering incense while doing so; when the Arabs conquered the country they handed over the supervision of the cave of Machpelah to the Jews, in recognition of their assistance. During the late 11<sup>th</sup> century, the official responsible for the area bore the title of "The Servant to the Fathers of the World." The Jews of Hebron were accustomed to pray daily in the cave of Machpelah for the welfare of the head of the Palestinian gaonate. Many Jews sought to be buried in the vicinity of the cave of Machpelah. It was then written of them that "their resting-place was with that of the Fathers of the World." \*Benjamin of Tudela, the 12<sup>th</sup>-century traveler, relates that "many barrels, full of the remains of Jews, were brought there and they are still laid to rest there to this day." The Mamluk sultan Baybars prohibited the Jews and Christians from praying within the area (1267). Jews, however, were permitted to ascend five, later seven, steps on the side of the eastern wall and to insert petitions into a hole opposite the fourth step. This hole pierces the entire thickness of the wall, to a depth of 6 ft. 6 in. (2.25 m.). It is first mentioned in 1521, and it can almost certainly be assumed to have been made at the request of the Jews of Hebron, possibly on payment of a large sum, so that their supplications would fall into the cave situated under the floor of the area. The extremity of the hole is below the blocked opening in the mosque floor and leads to the cave.

Following the Six-Day War of 1967 the Machpelah became a popular center of pilgrimage, and Jews, after a period of 700 years, were once more able to visit the tombs of the patriarchs, and regular services were held there. Though strictly regulated, the use of the Machpelah by Jews and Muslims has made it one more bone of contention in a divided city. On Purim, February 25, 1994, Baruch Goldstein, Kiryat Arba's medical doctor, entered the Machpelah during Muslim prayers and opened fire with an automatic weapon, killing 29 and wounding 100.

[Joseph Braslavi (Braslavski) / Shimon Gibson (2<sup>nd</sup> ed)]

**MACHT, DAVID I.** (1882–1961), U.S. pharmacologist. Macht, who was born in Moscow, was educated in the U.S. He graduated from Johns Hopkins Medical School where he lectured in

pharmacology from 1912 to 1932. From 1933 to 1941 he served as visiting professor of general physiology at Yeshiva College (see \*Yeshiva University) and from 1944 onward was consultant and research pharmacologist at Sinai Hospital in Baltimore. Macht published over 900 scientific studies in his field and introduced a number of new methods of treatment of diseases. He discovered the curative qualities of benzyl alcohol as a substitute for cocaine; he found that morphine and codeine have a sedative or depressant effect on the respiratory center as opposed to other narcotic drugs that act as stimulants; he proved that a difference exists in the biological effects produced by Roentgen rays of varying wavelength and introduced a cure for pemphigus by application of "deep" X-rays; he made a special study of the thromboplastic properties of various medical agents, especially of antibiotics. He also did extensive research on the pharmacology of blood and spinal fluid of psychotic patients. An Orthodox Jew, Macht constantly attempted to show the harmonious relationship between religion and science. He studied medical descriptions appearing in the Bible and the Talmud and showed that many of the so-called "miracles" or "medical stupidities" were in reality accurate descriptions of either diseases or their treatments. (Some of these are listed in Friedenwald, *The Jews and Medicine*, 2 (1967<sup>2</sup>), index.)

**BIBLIOGRAPHY:** S.R. Kagan, *Jewish Medicine* (1952), 217–9; *New York Times* (Oct. 16, 1961), 29.

[Suessmann Muntner]

**MACIAS, ENRICO (Gaston Ghrenassia; 1938– )**, French singer and entertainer. Born in Constantine, Algeria, Macias won popularity as a composer and singer of light songs, winning a reputation as the voice of the *pieds noirs* (French Algerians). In 1966 he sang before 120,000 people at the Dinamo Stadium in Moscow and performed in 40 other Soviet towns. He visited Israel in 1967 and sang for the troops and was then banned in Arab states. In 1968 he appeared in Carnegie Hall. In 1978, he was invited to Egypt by President Anwar Sadat and sang before 20,000 people at the foot of the pyramids. After Sadat's assassination he composed "Un berger vient de tomber" in his memory. His message of peace, brotherhood, and solidarity in songs like "Aimez-vous les uns les autres" brought him awards from the UN and engagements all around the world.

**MACK, JULIAN WILLIAM** (1866–1943), U.S. judge and Zionist leader. Mack, who was born in San Francisco, graduated from Harvard Law School in 1887, studied at the universities of Berlin and Leipzig, entered law practice in Chicago, and served as professor of law at Northwestern University (1895–1902) and the University of Chicago (1902–40). He was elected judge of the circuit court of Cook County, Illinois, in 1903, and was judge of the Chicago juvenile court (1904–07), and the U.S. commerce court (1911–13). In 1904 he became president of the National Conference of Social Workers. His interest in the welfare of children was recognized in his ap-

pointment as one of the chairmen of the White House conference on children in 1908. Mack was appointed to the U.S. circuit court of appeals in 1913 and presided over hundreds of civil and criminal cases until his retirement in 1941. As a judge in Chicago and subsequently, Mack fought for a progressive approach to the problem of juvenile delinquency. During World War I, he performed ably on several national assignments, including the establishment of standards for reasonable treatment of conscientious objectors. A member of the Harvard University Board of Overseers for 18 years, he was influential in blocking a proposal in 1922 for a *numerus clausus* for Jewish students.

Mack's interest in Jewish affairs was deep and abiding. In addition to active participation in social work and charitable endeavors, he was among the founders of the American Jewish Committee in 1906 and on its executive committee for 12 years. Influenced by \*Brandeis, Mack became an ardent Zionist, served as president of the first American Jewish Congress in 1918, and first chairman of the \*Comité des Délégations Juives at the Versailles Peace Conference in 1919. Mack was elected president of the \*Zionist Organization of America in 1918, but resigned with Brandeis in a dispute over methods of developing Palestine. He continued his efforts, however, holding high posts in the Palestine Endowment Fund, World Jewish Congress, Jewish Agency for Palestine, United Palestine Appeal, and the Hebrew University. The Israel settlement Ramat ha-Shofet ("Judge's Hill") was so called in his memory. Mack's credo, "We ask no more for the Jew than we do for anyone else," expressed both his sense of justice and loyalty to his people. He wrote *Americanism and Zionism* (1918).

[Morton Rosenstock]

**MACKLOWE, HARRY** (1938– ), U.S. real-estate developer. One of New York's best-known builders, Macklowe, the son of a garment executive from Westchester, dropped out of the University of Alabama, New York University, and the School of Visual Arts before throwing himself into the real-estate business in the 1960s. He moved quickly from broker to builder, developing a keen interest in architecture and modern art that were reflected in his sleek modernistic buildings and starkly white minimalist offices. Although he had been a prolific builder, Macklowe became well known in 1985 when his company tore down two single-room occupancy hotels in midtown Manhattan during the night without turning off the gas or obtaining permits. He was not criminally charged, but he paid New York City \$2 million to settle a civil lawsuit, and one of his executives pled guilty to criminal misdemeanor charges. Years later he built the Macklowe Hotel on the site. But Macklowe, like many New York developers, lost a string of buildings, including the hotel, to lenders during the recession in the mid-1990s. When the New York real-estate market began heating up again in 1996, Macklowe found new finan-

cial partners and resurfaced. He converted a loft building into a luxury apartment house. He bought a tired-looking office building on Madison Avenue in 1996 for \$45 million, a price that even his banker thought was too high. Macklowe renovated the building, installed more windows in the offices, and expanded the retail space on a valuable stretch of the avenue. It looked like a huge success until a section of the brick façade crashed to the street, closing traffic on Madison Avenue for weeks. In 2003 Macklowe bought the 50-story General Motors Building on Fifth Avenue in New York for \$1.4 billion, then the most ever paid for a skyscraper in the United States.

[Stewart Kampel (2<sup>nd</sup> ed.)]

**MACNIN (Cohen ben Maknin)**, Moroccan family of \*Mogador which at the close of the 18<sup>th</sup> century was at first appointed "merchants of the sultan." MAC'UD MACNIN (d. 1832) was sent to Europe in 1809 by Sultan Mulay Suleiman in order to acquire a large amount of military equipment for the defense of the Moroccan ports. In 1813 he arrived in London as minister plenipotentiary. From 1795 his brother MEIR (d. c. 1830) headed the important firm of Mogador, whose principal agencies were in Marseilles and London. From 1799 the latter agency was directed by his nephew Solomon Sebag, the father of the future Sir Joseph Sebag-Montefiore. From the beginning of his reign Mulay Abd al-Raḥmān (1822–59) granted Meir Macnin the exclusive right to export certain products and foodstuffs from \*Tetuán and \*Tangier and opened on his behalf the port of Tit to the maritime commerce of cereals. The port of Mazagan was put under his authority. From 1823 the sultan named him as his representative and envoy to the Christian courts, with the right of appointing consuls wherever he found the necessity. In 1826 he left on a special mission to London, and in 1828 he was appointed minister plenipotentiary.

[David Corcos]

**MÂCON**, capital of the department of Saône-et-Loire, E. France. The first \*Church council of Mâcon (583) issued a series of decisions concerning the Jews. However, the first specific record of the presence of Jews in Mâcon dates from about 820, when \*Agobard, archbishop of Lyons, began missionary activity among Jewish children at Mâcon who were sent to Arles for safety; he also arranged for the delivery of sermons condemning friendly relations between Christians and Jews. From 886 Jews are mentioned as owners of fields, and especially vineyards, on the outskirts of Mâcon and its surroundings, in at least 15 villages and places where they cultivated the land themselves. The Jewish quarter developed in Bourgneuf. The cemetery was situated not far from Pont Jeu, formerly known as Pont des Juifs. Several medieval Hebrew tombstones have been discovered, some of which are preserved in the Museum of Mâcon. Not far from the site of the cemetery, there was a house commonly known by the name Sabbath, a term

sometimes employed in Burgundy for synagogue. In 1378, the municipality attempted to compulsorily segregate the 18 Jews still living in Mâcon in a separate quarter. They were expelled from the town in 1394. During the 17<sup>th</sup> and 18<sup>th</sup> centuries, Jews of Avignon visited Mâcon and its surroundings to trade. At the beginning of World War II, there were about 50 Jewish families living in Mâcon, but they were not organized into a community. The postwar community, consisting mainly of arrivals from North Africa, numbered 200 in 1969.

Szajkowski, *Analytical Franco-Jewish Gazetteer 1939–1945* (1966), 255.

[Bernhard Blumenkranz]

°**MACROBIUS, AMBROSIUS** (c. 400), Roman grammarian. He credits \*Augustus with a grim pun reflecting Jewish abstinence from swine flesh. On hearing that \*Herod had ordered his own son to be killed, Augustus remarked: “I would rather be Herod’s pig [Gr. *hus*] than his son [Gr. *huios*]” (*Saturnalia* 2:4, 11).

[Jacob Petroff]

**MADABA, MEDEBA** (Heb. מַדְבָּא), Moabite city, situated about 5½ mi. (9 km.) S. of Heshbon in the center of a fertile plain, the biblical Mishor, 2,550 ft. (785 m.) above sea level. The city was captured by the Israelites from the Amorite king Sihon and was allocated to the tribe of Reuben (Num. 21:30; Josh. 13:9, 16). Near Madaba, David defeated the Aramean allies of Ammon (1 Chron. 19:7; cf. 11 Sam. 10). Israel lost its hold on the city when the monarchy was divided. Omri recaptured it, but the Moabite king Mesha restored it to Moab. In Mesha’s inscription (the “Moabite Stele”), King Omri is referred to as having taken “possession of all the land of [the] Me(ha)deba” (see also 11 Kings 3:4–5). In c. 160 B.C.E. persons from Madaba were accused of killing John, brother of Judas Maccabaeus (1 Macc. 9:35–42; Jos., Ant., 3.1.2). Subsequently Jonathan and Simon retaliated. It was finally conquered by John Hyrcanus I and remained in Hasmonean control down to the time of Alexander \*Yannai (Jannaeus). Hyrcanus II ceded it to the Nabateans, handing it over to Aretas III in return for his help against his brother Aristobulus II (Jos., Ant., 14.1.4). Two funerary inscriptions are known mentioning the Beni ‘Amirat family from the time of the Nabatean hegemony in the region. In 106 C.E. it was incorporated into the Roman province of Arabia (*Provincia Arabia*). The town was mentioned by various writers including Eusebius (128:20), Ptolemy (Geog. 5.16.4), Hierocles (Syn. 720–21), George of Cyprus (No. 1062), and Stephen of Byzantium (Eth. 449:6). A number of inscriptions are known, one mentioning the city council (*bolkeuta*) of Madaba, and two others the names of Roman centurions from the Third Cirenian Legions stationed at Madaba. An imperial inscription relates that an important building was erected in 219/20 C.E. next to the city gate. Jews lived there in Mishnaic

times (Mik. 7:1), but they were probably a minority. It was a flourishing Christian city in Byzantine times, with the town expanding considerably, serving as a bishopric from the mid-fifth century. It had numerous churches, most of which were paved with mosaics, dating mainly from the sixth to eighth centuries. The best known of these is the northern church with a mosaic pavement designed as a map of the Holy Land (see below). According to an Arab historian (947 C.E.), al-Mas’udi, Madaba was ruled by the Ghassanids in the sixth century. An inscription found within a large cistern credits the emperor Justinian with building activities at Madaba. A pictorial representation of the city of Madaba appears in one of the panels of a mosaic uncovered in the Church of St. Stephen at Umm Rasas dating to the early Abbasid period. Few descriptions of Madaba are known from the Abbasid through to Ottoman periods. In the early 21<sup>st</sup> century Madaba was a flourishing town in Jordan with Christian and Muslim inhabitants.

The first explorers to describe the ancient ruins of Madaba were U. Seetzen in 1806, followed by J. Burkhardt in 1812, members of the American Palestine Exploration Society in 1872, C.R. Conder in 1881, and G. Schumacher, P.M. Séjourné, and F.J. Bliss in the 1890s.

### The Madaba Mosaic Map

In 1884 the mosaic map was discovered during the erection of a new Greek Orthodox church, but it was only in 1896, when part of it had already been ruined, that it finally came to the attention of scholars, with the announcement made in 1897. The mosaic was restored and recorded in color by a German expedition in 1965–66. The map was laid in the transept of a Byzantine period church and originally measured 72 ft. (22 m.) × 23 ft. (7 m.). It represented the biblical Holy Land and neighboring regions, from Byblos (Geba) in the north to No-Ammon (Thebes in Egypt) in the south. The map was oriented toward the east, with the Mediterranean Sea at the bottom. The scale is uneven, largest for the more important areas (central Judea – 1:15,000; Jerusalem – 1:1,650). In general, it follows the *Onomasticon* of Eusebius; it was based on a Roman road map, with the addition of vignettes representing the principal cities. The Greek texts give biblical and contemporary names, sometimes with a historical note or verse from the Septuagint. Important places and tribal areas are marked in red. The extant part of the map covers an area from Neapolis (Nablus) to Egypt. The most valuable section is the detailed plan of Jerusalem, showing two colonnaded streets, the Tower of David, many churches and monasteries, including the Church of the Holy Sepulcher and that on Mount Zion, baths, and perhaps even the Western Wall. Most of the other cities indicated on the map are fragmentary. It notes many names in the Negev which are not recorded elsewhere. A few natural features are indicated on the map, as well as boats in the Dead Sea, animals in the deserts, and ferries across the Jordan. In some details, the Madaba map shows clear evidence of the influence of Jewish lore, as in the location of the mountains Ebal and Gerizim near Jericho (although a second Tur Ger-

izim is placed in its true position near Nablus). The mosaic is dated by consensus of opinion to the mid-sixth century C.E., but a few scholars (notably Bahat) would like to date it much later to the second half of the seventh century C.E.

[Michael Avi-Yonah / Shimon Gibson (2<sup>nd</sup> ed.)]

**MADAGASCAR**, island off Africa. Legends and theories about alleged Jewish descent of and influence on inhabitants of Madagascar are current and widespread, but the resemblance of certain customs is probably a consequence of contact with Islam through trade activities in the late Middle Ages. Various theories and suppositions regarding affinities to the ancient Hebrews were published by a French Lazarist missionary, Joseph Briant, in a booklet entitled *L'hébreu à Madagascar*.

Madagascar never had a sizable Jewish population. A few score of Jewish families settled in Tananarive during the French colonial period, but no community was created.

#### Relations with Israel

The State of Israel was among the very first (and still few) countries to establish an embassy in the newly proclaimed Malagasy Republic (1960), and, over the years, Presidents Tsiranana and Ben-Zvi exchanged visits and Israel Prime Minister Eshkol and Foreign Minister Golda Meir also visited Madagascar. Israel activities in Madagascar include the construction of the first luxury hotel, and agricultural experts have helped to produce citrus and improve poultry breeding and corn production. In addition, about 200 people from the Malagasy Republic have undergone technical training in Israel. Relations between the two countries were close, although the intimate relationship between France and Madagascar cast a shadow over the picture after the 1967 change in French policy toward the Arab-Israel conflict. Following the Yom Kippur War, Madagascar broke off diplomatic relations with Israel, but ties were resumed in 1993.

[Zvi Loker]

**MADAGASCAR PLAN**, proposal for Jewish settlement devised by the Nazi regime in the 1930s. Like most of the Nazis' schemes to solve the "Jewish question," the Madagascar Plan had already been conceived by others. In 1885 the German antisemitic nationalist Paul de \*Lagarde had advocated deporting the Jews of Poland, Russia, Romania, and Austria in preparation for German colonization of the East. He preferred

the French island colony of Madagascar on the east coast of Africa over Palestine. In 1926 and 1927, both Poland and Japan investigated Madagascar and proposed the island as a possible solution to their overpopulation problem; both dismissed the idea as not feasible. In 1937, a new Polish commission was sent to Madagascar to determine if Jews could be induced to settle there. Leon Alter, the director of \*HICEM in Warsaw, and Salmon Dyk, an agricultural engineer from Tel Aviv, took part in the mission. The assessments of the commission's director Major M. Lepecki and of Alter differed widely, but it was obvious to all that the area was generally inhospitable to Europeans and that there was a serious danger of potential settlers contracting endemic tropical diseases. This point was emphasized by the French governor-general of the island Marcel Olivier in his statements and writings opposing the proposal. Yet the proposal refused to die. On December 9, 1938, French Foreign Minister Georges Bonnet informed German Foreign Minister Joachim \*Ribbentrop that, in order to rid France of 10,000 Jewish refugees, it would be necessary to ship them elsewhere. According to Ribbentrop, the French were seriously considering sending them to Madagascar.

The island of Madagascar was also discussed within the Nazi regime, which generally considered mass emigration to be the "Final Solution" to the "Jewish problem." On March 5, 1938, the SS officer in charge of forced Jewish emigration, Adolf \*Eichmann, was commissioned to assemble material to provide the chief of the Security Police (SIPO) Reinhardt \*Heydrich with "a foreign policy solution as it had been negotiated between Poland and France," i.e., the Madagascar Plan. Temporarily shelved in the wake of the war, the project was again taken up after the fall of France in the summer of 1940. Eichmann prepared a detailed official report on the island and its "colonization" possibilities based on information gathered from the French Colonial Office. He added an evacuation plan calling for 4,000,000 Jews to be shipped to Madagascar over a period of four years. Eichmann also advocated the creation of a "police reserve" as a giant ghetto ("*Gross-Getto*"). The plan was to be financed by a special bank managing confiscated Jewish property and by contributions exacted from world Jewry. The idea was also analyzed by Martin Luther's department in the German Foreign Office, which served as a liaison with the SS. The plan leaked out and was published in Italy in July. The \*American Jewish Committee was alarmed enough to commission Eugene Hevesi to write a special report, which was eventually published in May 1941, that sought to demonstrate that Jews, as Europeans, could not survive the conditions on the island. By that time, of course, the Nazis were already preparing a completely different "\*Final Solution." In August 1940, the Third Reich officially endorsed the Madagascar Plan. The 20-page proposal presented a detailed plan which no longer depended upon the consent of defeated France. The operation, whose code word was "*Endloesung*," was repeatedly discussed throughout 1940 and 1941. By the fall of 1941, the extermination program was already well underway. On February 10, 1942, only a few weeks after

the \*Wannsee Conference, the Madagascar Plan was officially shelved and replaced in public policy statements by the program of “evacuation to the East.”

[Leni Yahil]

**MADISON**, capital of Wisconsin since 1837. Madison’s Jewish presence dates back to roughly 1850, when a merchant named Aaron Boskowitz clerked in a store. By 1863, about 40 Jewish households, mostly storekeepers from Bohemia and West Prussia, had established a synagogue, a burial society, and a women’s auxiliary. Through the 1870s, most of the original members died, stopped practicing Judaism, or moved away. The synagogue dissolved altogether in 1922. From 1880 to 1910, a small Jewish community existed in the nearby city of Monroe, Wisconsin. Its members were merchants from Poland and Austria who had ties to wholesale houses in Chicago. Several of Monroe’s Jews came to Madison, notably Solomon Levitan, who had run a store in nearby New Glarus. A Progressive, Levitan served seven terms as Wisconsin state treasurer during the 1920s and 1930s.

Madison’s present Jewish institutions trace their roots to Jews who arrived in the Madison area in the 1890s from Minsk, via Milwaukee. Like Jewish immigrants elsewhere, they tended to work in the junk and grocery businesses. In 1904, they built an Orthodox synagogue whose members went on to found Madison’s present-day Conservative and Reform congregations. Elias Tobenkin, who came from the shtetl of Kapule, Minsk, in 1899, wrote about Madison in his novels *Witte Arrives* (1914) and *God of Might* (1925).

Rachel Szold Jastrow, sister of Henrietta \*Szold, founded Madison’s chapter of Hadassah. Jewish men in Madison tended to affiliate with cliquish lodges, but Hadassah brought together women from all strata of Madison’s Jewish community.

What distinguished Madison from other small Jewish communities was the presence of the University of Wisconsin. Jews had been students there since the early 1860s, and Joseph Jastrow, a psychologist and the first Jewish faculty member, was hired in 1888. In 1911, philosopher Horace Kalten began a chapter of the Menorah Society, an early Jewish student organization. Antisemitism in many university departments prevented many Jews, such as Ludwig \*Lewisohn, Lionel \*Trilling, and Milton \*Friedman, from obtaining tenure-track professorships. However, economist Selig \*Perlman, kinesthesiologist Blanche Trilling, pharmacologist Arthur Solomon Loevenhart, among others, held tenured positions at Wisconsin before World War II. In addition to the Menorah Society, some Jewish students at Wisconsin joined Avukah, a student Zionist society, a Reform student congregation, and Jewish fraternities and sororities. The Hillel Foundation, established in 1924, served as a clearinghouse for Jewish activities on campus. Scholars fleeing the Holocaust settled at Wisconsin. Some, like pharmacist George Urdang, escaped

before the war; others, like historian George Mosse and poet Felix Pollak, came to Wisconsin afterwards. During the late 1940s and 1950s, departments across the university ended their prejudice against hiring Jewish faculty.

During World War II, the Madison Jewish Welfare Fund organized USO events at Truax Air Force Base, and many Jews who served there returned to Madison after the war. As antisemitism faded, Jewish families began to move to new subdivisions across the city. Increased access to graduate and professional schools, combined with the consolidation of traditional Jewish businesses, prompted more Jews to seek work in education, government, and the professions.

Although members of the state legislature hinted that “out-of-state radicals” were responsible for campus protests, vaguely antisemitic statements like these made little difference to most Madison Jews. Some student-movement leaders, such as future Madison mayor Paul Soglin, had Jewish roots, but many were gentile Wisconsinites.

Totalling roughly 6,000 people in the early 2000s, Madison’s Jewish community has continued to thrive since the 1970s. Observant Jews attend local Reform, Reconstructionist, Conservative, and Lubavitch congregations, plus the Hillel synagogue on campus. The Madison Jewish Community Council and Jewish Social Services support local and international Jewish initiatives. Immigrants from Canada, South Africa, Israel, and the former Soviet Union continue to settle in Madison, often as professors, doctors, and other professionals.

[Jonathan Pollack (2<sup>nd</sup> ed.)]

**\*MADISON, JAMES** (1750–1836), fourth president of the United States. The son of a prominent Episcopalian family, Madison graduated from the College of New Jersey in 1771. Because he was then considering a career in the ministry, he spent an additional year studying theology and Hebrew. Throughout his political career, he contended that complete religious liberty was essential for a harmonious society and that religious institutions established by the state engendered “ignorance and corruption.” During the Virginia constitutional convention in 1776, he opposed a provision for full religious “toleration,” proposing instead that the law declare “the full and free exercise of it [religion] according to the dictates of conscience.” In 1784 he successfully led the opposition to a resolution in the Virginia House of Delegates for a tax in “support of the Christian religion, or of some Christian church” and warned that “Instead of holding forth an asylum to the persecuted, it is itself a signal of persecution.” As president he vetoed two bills in 1811 which would have granted legal prerogatives to certain churches.

While serving as a congressman from 1780 to 1783, Madison borrowed money from the Jewish broker Haym \*Salomon, whom he later referred to gratefully in a letter. Writing to Mordecai M. \*Noah in 1818, he expressed delight at the blessings conferred upon Jews by religious liberty in America, while in 1820 he wrote to Jacob \*De La Motta that while being little known, “the history of the Jews must be forever interesting.”

During his presidency he appointed several Jews to government posts, including John \*Hays as collector for the Indian Territory in 1814, Mordecai Noah as consul general at Tunis in 1813, and Joel \*Hart as consul at Leith, Scotland, in 1817.

[Edward L. Greenstein]

**MADMŪN BEN JAPHETH BEN BUNDĀR** (d. 1151), son of the first \**nagid* of the Jews of South \*Yemen. Maḏmūn continued in his father's position as the "official of the merchants" in \*Aden, representing the merchants who traded with India, and in this capacity was also the leader of the Jews and the *nagid* of the communities of South Yemen. Dozens of letters have been preserved in the \**Genizah* which were written to or by him, as well as court actions connected with his name and poems in his honor. More details are known about him than about any other *nagid* of Yemen from the 11<sup>th</sup> to the beginning of the 14<sup>th</sup> centuries. He was in charge of the port of Aden and supervised the customs payments. He formulated the agreements about prices of merchandise and his house served as a post office for the Jewish merchants, as well as a warehouse for merchandise. He owned ships which sailed from Aden to Ceylon. Among his wide-ranging activities, he jointly owned a ship with a vizier in Yemen. In a court action he is named "the confidant of rulers whether on the sea or in the desert," which means that he was held in esteem by the Muslim rulers and drew up agreements with tribal leaders and the leaders of pirates in order to assure free navigation on the sea routes between Egypt and India. In the above-mentioned court action it is stated that he was "appointed on behalf of the *rashei galuyyot* ["exilarchs"] and the *rashei yeshivot* ["academy heads"]." It is not clear whether the reference here is to the exilarch in Babylon or to a person representing the exilarch who lived in Yemen; there is an hypothesis that the reference is to the *bet din* in \*San'a. *Rashei yeshivot* refers to the Palestinian academy in Egypt.

Maḏmūn maintained close contact with the *gaon* Mazli'ah b. Solomon ha-Kohen, who was active in 1127–39 as head of the Palestinian academy which moved to Egypt as a result of the conquest of Palestine by the Crusaders. Maḏmūn sent the *gaon* questions on *halakhah*, together with expensive gifts which were also given to the scholars of his academy. He ordered that the name of the *gaon* be mentioned in the *reshut* prayer after the name of the exilarch. His attachment to the Palestinian academy aroused the opposition of the supporters of Babylonia. In documents he is called "the *nagid* of God's people, the minister of ministers, head of the communities." The Tunisian merchant Abraham b. Perahyah b. Yiju writes of him in his eulogy: "with seven names given by the exilarch," among which are mentioned, *alluf*, *nagid*, and friend of the academy. When he died, his eldest son, Ḥalfon, who is also called *nagid*, continued in his father's position in economic and public life.

**MADON** (Heb. מַדּוֹן), Canaanite city in the north of Erez Israel whose king was defeated by Joshua in the battle at the waters of Merom (Josh. 11:1; 12:19). It is usually identified with the tell at Qarn Hiṭṭin (Horns of \*Hittin), a peak about 4 mi. (7 km.) west of Tiberias. Remains of walls, including one of cyclopean masonry, and potsherds from the Canaanite and Israelite periods were found on this tell. The identification is based on the similarity between the names Madon and Khirbat Madīn, situated south of Qarn Hiṭṭin, which Arabic tradition connects with Moses' father-in-law Jethro, the priest of Midian, whose grave is venerated nearby. Some scholars, however, question the form of the name Madon, which is the sole basis for the identification. No town with this name is known from any other source; the Septuagint calls it Marron and identifies it with the city Merom near the site of the battle (in LXX: *Hydor Marron*, "waters of Merom"). \*Merom is known from various sources as an important city in Upper Galilee and Madon may be a corrupt form of its name.

[Yohanan Aharoni]

**MADRAS** (today **Chennai**), city in S. India. Formerly known as Fort St. George, Madras was the first territorial acquisition of the English East India Company in 1639. In the last decades of the 17<sup>th</sup> century its diamond trade attracted Anglo-Portuguese Jewish merchants, who were allowed by the Company to establish a merchant colony which continued until the end of the 18<sup>th</sup> century. In the Madras corporation, established in 1688, the "Hebrew merchants" were represented by Jewish aldermen. Among the Jewish merchants prominent in the early days were Bartholomew \*Rodrigues, Domingo do Porto, Alvaro da \*Fonseca, Jacques \*Paiva, Francis Marques, Isaac do Porto, Joseph d'Almanza, and Isaac Sardo \*Abendana. In the 18<sup>th</sup> century many Ashkenazi Jews from London participated in the profitable trade, including Marcus \*Moses and his family, Ephraim Isaac, the \*Franks, and later the Portuguese family De \*Castro and Salomon \*Franco. The Jewish merchants in Madras were integrated into the English society and were on good social terms with several of the governors.

The fluctuating nature of the merchant colony apparently prevented the organization of a Jewish community and the only communal institution seems to have been a cemetery. Some tombstones still remain, but they have been transferred to a new municipal site in Madras called the "People's Park," the entrance of which bears a tablet inscribed in Hebrew *Beit ha-Hayyim*. Only 20 Jews were living in Madras in 1968. Unlike those of \*Cochin, \*Bombay, and \*Calcutta, the Jews in

Madras did not create any literary works. It was only due to the Christian mission that some Hebrew books were published there in the 19<sup>th</sup> century. A noteworthy Jewish literary event there was the publication of the *Travels from Jerusalem...* of \*David d'Beth Hillel in 1832. In the early 21<sup>st</sup> century the Jewish community of Chennai consisted mainly of expatriates.

[Walter Joseph Fischel]

**MADRID (Magerit)**, capital of Spain. Mentioned as a Moorish stronghold, it was a tiny town in the Middle Ages. A small Jewish community existed there in the 11<sup>th</sup> century. Most of the Jews there were apparently merchants during the Muslim period. Nearby was located the small town of Alluden, whose name is derived from the Arabic *al-Yahūdiyyin* (“the Jews”). Madrid was captured from the Muslims by Alfonso VI in 1083.

[Haim Z'ew Hirschberg]

#### The Community's Status

The community began to flourish during the 13<sup>th</sup> century, the Jewish quarter being located on the present Calle de la Fé (“Street of the Faith”). The synagogue, which was destroyed during the persecutions of 1391 (see below), was situated next to the Church of San Lorenzo. In 1293 a copy of the resolutions passed by the Cortes in Valladolid was sent to Madrid, in which Sancho IV ratified a series of restrictions concerning the Jews. They were barred from holding official positions, the rate of usury they were permitted to charge was defined, and they were prohibited from acquiring real estate from Christians or from selling them properties already acquired, among other limitations. In 1307, when Ferdinand IV confirmed these prohibitions at the Cortes in Valladolid, a copy of them was passed to Madrid. They were endorsed by Alfonso XI in 1329. A directive from the time of \*Asher b. Jehiel (early 14<sup>th</sup> century) permitting action to be taken against an \*informer who had harmed the community is extant (Asher b. Jehiel, Responsa, Constantinople (1517), ch. 17, no. 6).

The Jews of Madrid owned goods and real estate in the town and its environs. In 1385 John I acceded to the request of the Cortes and delivered a copy of its resolutions to Madrid. He then imposed a series of restrictions concerning the relations between Jews and Christians, prohibiting Jews from holding official positions, canceling debts owed them by Christians for 15 months, and abrogating the right to acquire stolen goods, among other regulations.

#### Persecutions and Expulsion

The persecutions of 1391 were disastrous for the Madrid community. Most of its members were massacred, some adopted Christianity, and community life came to an end. The municipal authorities, in a report sent to the Crown, complained of the *pueblo menudo* (“little people”) who continued the riot-

ing and pillaging for a whole year. Several of the rioters were arrested and tried, but many escaped justice. Apparently the community was later reestablished, although it was greatly impoverished.

During the early 1460s, \*Alfonso de Espina preached in Madrid against the \*Conversos. It was there that he turned to \*Alfonso de Oropesa, the head of the Order of St. Jerome, to enlist his support in eradicating judaizing tendencies among them. In 1478 the municipal council complained that the Jews and the Moors there were not wearing a distinctive sign (\*badge). The Crown answered the complaint on November 12 and ordered that the offenders should be punished in the prescribed manner. On February 2, Ferdinand and Isabella renewed the restriction issued by John II in 1447 which prohibited the Jews of Madrid from trading in foodstuffs and medicaments and from practicing as surgeons.

No details are known as to how the community fared after the decree of expulsion of the Jews from Spain was issued in March 1492. However, on Oct. 7, 1492, Ferdinand and Isabella ordered an investigation into reports of attacks on local Jews by various persons who had promised to assist them in reaching the frontiers in order to go to the kingdoms of Fez and Tlemcen. On Nov. 8, Fernando Nuñez Coronel (Abraham \*Seneor) and Luis de Alcalá were authorized to collect the debts still owing to Jews.

In Madrid there were two Jewish quarters. One existed until 1481, the other was established that year. In the 15<sup>th</sup> century Jews lived in various parts of the town, in the area of Puerta del Sol and in the neighborhood of Santiago. The Jewish quarter until 1481 was near Puerta de Valnadú, in today's Isabell II square.

#### The Conversos

Several Conversos of Madrid were tried by the Inquisition. They were at first tried in Toledo; however, in 1561 when Madrid became the capital of the kingdom during the reign of Philip II, the supreme tribunal of the kingdom was established there and subsequently numerous \*autos-da-fé were held in the city. During the 17<sup>th</sup> century, many Portuguese Conversos were tried there and one of the large autos-da-fé in this period has been painted by Rizzi de Guevara. During the 1630s, Jacob \*Cansino negotiated with the Conde-Duque de Olivares concerning the possible return of the Jews to Madrid, after the example of the Jewish community in Rome. However, the talks had no results because of opposition from the Inquisition. Throughout this period, Madrid was the principal center of the activities of the Portuguese Conversos, several of whom were connected with the court, while others developed diversified business enterprises and maintained relations with the Converso centers outside the Iberian Peninsula.

#### The Reestablished Community

Jewish settlement in Madrid was gradually renewed from 1869, with the conferment of the constitution and the arrival of Jews from North Africa, who were joined by Jewish immigrants

from Europe. However, it was only during the 1920s that a community was organized. During World War I, Madrid gave asylum to a number of refugees, and Max \*Nordau and A.S. \*Yahuda, who lectured there in Semitic philology, lived there during this period. Among the first Jews to settle in Madrid was the Bauer family, whose members played an important part in the organization and development of the community. The law of 1924 which granted citizenship to individuals of Spanish descent encouraged the further development of the community, and in the early 1930s there was an addition of refugees from Nazi Germany. During the Spanish Civil War, the community underwent much suffering and most of its members dispersed.

In 1941, the Arias Montano Institute for Jewish Studies was founded and a department of Jewish studies headed by Professor Francisco Cantera-Burgos was organized within the University of Madrid. It was later headed by Professor F. Perez Castro. Madrid also gave asylum to war refugees, who were supported by the American Jewish \*Joint Distribution Committee. After the war, the community began reorganization. A synagogue was founded in Calle del Cardinal Cisneros. In 1958, a Jewish center with a synagogue was opened. In 1959, while the representative of the World Sephardi Federation, Yair Behar Passy, was visiting Madrid, an exhibition of Jewish culture in Spain was held at the National Library of Madrid. An Institute for Jewish, Sephardi, and Near Eastern Studies was founded jointly by the Higher Council for Scientific Research and the World Sephardi Federation in 1961. (In 1968 the institute amalgamated with the Arias Montano Institute.) Within the framework of the institute, the first symposium on Spanish Jewry was held in Madrid in 1964. Leaders of the Madrid community in the late 1960s included A. Bauer, H. Cohen, L. Blitz, and M. Mazin (the president of the community). In that year the community numbered over 3,000, a level it maintained into the 21<sup>st</sup> century. It served as a center for Jewish students from abroad coming to study in Madrid. Jewish immigrants from North Africa constitute the majority of the Jews. In 1968 the community inaugurated its new communal center and synagogue. Dr. B. Garzon was appointed first rabbi of the community, which had a recognized school and a Jewish scout movement. The Sephardi Federation of Spain in Madrid coordinates the activities of all the Jewish communities in Spain.

In Madrid there are several institutions that have great importance from the Jewish historical point of view. In the Archivo Histórico Nacional, the Biblioteca Nacional, and the Academia de la Historia there are numerous documents related to the Jews. In the Biblioteca we find the Bible of Ferrara and kept in the Casa de Alba is the famous Bible translated by Moses Arragel into Castilian. In El Escorial, near Madrid, are valuable Hebrew manuscripts in the library of the monastery. The Institute Arias Montano, dedicated to research in Jewish and Sephardic studies, publishes the journal *Sefarad* devoted to these topics.

**MADURO, RICARDO** (1946– ), president of Honduras. Maduro is a member of a prominent Jewish family of Portuguese origin that can be traced from Portugal to Amsterdam and then to Curaçao and Panama. His father, Osmond Levy Maduro of Panama, settled in Tegucigalpa, the capital of Honduras. Ricardo Maduro studied economy at Stanford University and became a successful businessman. As a supporter of democracy he became active in the Nationalist Party of Honduras. After losing his son to kidnappers, he also worked for measures to ensure law and order. After he was accused of being a Panamanian, and therefore ineligible to run for president, the High Election Tribunal declared him a Honduran citizen; he was elected president on Jan. 27, 2002.

[Mordechai Arbell (2<sup>nd</sup> ed.)]

**MAES, ANDREAS** (Masius; 1515?–1573), Flemish Hebraist and Orientalist. A lawyer and a diplomat, Maes spent much of his life in Italy, where he met Guillaume Postel, under whom he studied Arabic and with whom he thereafter maintained an interesting correspondence. In Venice, Maes joined the humanist circle of Daniel Bomberg and was in touch with the pioneer grammarian Elijah Levita. Maes contributed to the Antwerp polyglot Bible (1568–72), in which he published an edition of the Targums and the first printed grammar and lexicon of Syriac. His Hebrew-Greek edition of Joshua, *Josuae imperatoris historia...* (Antwerp, 1574), which appeared posthumously, aroused controversy because of its independence in regard to the masoretic text. This work lists the rabbinic and kabbalistic manuscripts in Maes' library, which must have been one of the major collections of Judaica in the Renaissance. Maes was apparently a member of the heretical Flemish sect ("The Family of Charity") led by Postel, Arias Montano, and the printer Christophe Plantin. Maes opposed the papal condemnation of the Talmud and the burning of rabbinic books at Rome in 1559.

[Godfrey Edmond Silverman]

**MAESTRO, YAAKOV (Jacko; 1927– ),** Greek Holocaust prisoner. Maestro was born in Salonika. In 1943, at age 15, he

arrived at Auschwitz in the first deportation from Salonika. In Salonika, he had learned German from his father, who was a tourist guide, and had done odd jobs during the German occupation of Salonika as a shoeshine boy and porter, coming into contact with German and Italian soldiers. Upon arriving in Auschwitz, camp commander Schwartz, who had replaced Rudolph Hess, noticed that he was a German speaker. He became a translator and was in charge of work assignments for 16,000 prisoners in Auschwitz. He worked under the political prisoner Yeze Pozinski during the morning hours in the *Fuhrerbarrack* in the office of the *Arbeitsdienst*. The two prisoners coordinated the work schedule according to demand and registered the details of the prisoners on card files in the *Kartei* Department. Maestro could ease conditions for prisoners by not sending them to difficult work groups. He could also arrange for them to remain in the barracks to avoid hard labor. He helped many Jews, possibly hundreds, to survive. He concerned himself with the needs and fate of the Greek Jewish prisoners and passed notes between separated family members in the camp complex. He also supplied additional food, and in order to manipulate the work schedule he often bribed the Nazi commanders with money, food, cigarettes, or vodka, which he acquired on the black market in the camp or from political prisoners, or from civilian workers, who could buy him various items on the outside in exchange for payment. He also bribed Nazi guards and commanders to save prisoners from punishment and helped keep *musselmen* from being sent to death.

On three occasions his sister Esther (whose married name was Sidikario after the Holocaust) saved a total of 181 girls from Bloc 25 in Birkenau who were destined for gassing, sneaking them out through the windows to an adjacent shack.

After the war Maestro immigrated to Israel and ran a car repair garage.

[Yitzchak Kerem (2<sup>nd</sup> ed.)]

**MAFTIR** (Heb. מַפְטִיר; “one who concludes”), name given to the three or more concluding verses of the weekly Sabbath *sidrah* (“Torah portion”) as well as to the final verses of the portions read on festivals and public \*fast days. The person who is called up to the reading from the Torah of these passages and who then recites the \*haftarah from the Prophets is also called *maftir*.

**MAGDALA (Migdal)**, a city on Lake Gennesaret (the Sea of Galilee) in Galilee, about 7 km. north of Tiberias. It is overlooked by a high escarpment near the Wadi Hamam (the Valley of the Robbers). “*Migdal*” is an Aramaic word meaning “tower” or “fortress.” The Greeks called the village Taricheia, a word meaning “pickling,” because of Magdala’s fish salting industry, one of the mainstays of its economy. The other important element of its economy was its boat-building.

Magdala was first excavated in 1971–74 by Corbo and Loffreda, who found what they misidentified as a mini-syna-

gogue (actually a stepped fountain house or *nymphaeum*), a water reservoir, and some mosaic floors. One of the mosaics, now on display at Capernaum, depicts an ancient boat with both sails and oars. Situated west of Capernaum (Jos., Life, 59, 72), Magdala was walled on the land side and contained a stadium. Even in antiquity, Magdala was well known, and among its prominent citizens were Jannaeus son of Levi and Dassion, friends of Agrippa II (Jos., Life, 131; Wars, 2:597).

When three Roman legions under the control of Vespasian laid siege to the city of Tiberias in 67 C.E., the city opened its gates, and Josephus and his forces surrendered. The city was attacked by the Roman army, which advanced from Sennabris to Tiberias and then to Magdala (Jos., Wars, 3:462–505, 532–542). Since Tiberias – along with Tarichaea-Magdala, Bethsaida-Julias, and its 14 villages – had been given to Herod Agrippa II by the emperor Nero prior to the war, and since Josephus and the inhabitants of the city openly surrendered to Vespasian and his forces, the Romans permitted Tiberias to remain under Jewish rule until 100 C.E. (Jos., Wars, 3:445–61).

After the destruction of the Jewish Temple in Jerusalem, Magdala became the seat of one of the 24 priestly divisions and as the city grew there were several Roman style villas built, with baths and mosaics, and the *cardo* (the main street) was paved. Magdala is mentioned directly only once in the New Testament (Matthew 15:39), where it is recorded that Jesus visited the area by boat. However, it is referred to as Magadan, not Magdala. The area of Magdala is also associated in the New Testament with the name Dalmanutha, as seen in Mark 8:10. All other references to the city are indirect ones (Mark 16:9; Luke 8:2).

It was said to be the hometown of Mary the Magdalene (Matt. 27:56; Mark 15:40). In Talmudic sources it appears as Migdal Nunaiya, a center for fishing and the preserving industry (Pes. 46a). R. Isaac and R. Judah were two of the *amoraim* living in Magdala. Resh Lakish sought refuge there against the wrath of the patriarch Judah II. After the destruction of the Temple, the priests of the family of Ezekiel settled there.

[Lidia Domenica Matassa (2<sup>nd</sup> ed.)]

**MAGDEBURG**, city in Germany. The Jewish community of Magdeburg is one of the oldest in Germany. As early as 965 there were Jews living in the town, and they were placed under the jurisdiction of the archbishop by Otto the Great. They traded in the “clothing-court” (*Kleiderhof*), in the merchants’ quarter, and conducted their trade even beyond the Oder River. Their quarter, the *Judendorf*, was situated in the south

of the city, in the archbishop's domain. The Jews took part in the funeral procession of Archbishop Walthard von Magdeburg in 1012. The cemetery dates from the 13<sup>th</sup> century – the oldest gravestone bears the date 1268 – later enlarged in 1312 and 1383. In 1213 the soldiers of Otto IV destroyed the *Juden-dorf*, and four years later the Jews moved to nearby Sudenburg, where numerous other Jews already lived. Demanding jurisdiction over the Jews in 1260, the canons of the cathedral laid claim to the fines they paid in silver, while those paid in gold were to remain the property of the archbishop. Prominent in the city were R. Hezekiah b. Jacob, who corresponded with R. Isaac Or Zaru'a (\*Issac ben Moses of Vienna), and R. \*Hayyim b. Paltiel, rabbi in Magdeburg in 1291, who was in correspondence with R. Meir of Rothenburg. The Jews were persecuted in 1302 and again during the \*Black Death disturbances of 1349, despite the attempts of the archbishop and the city authorities to protect them. They were attacked again in 1357 and 1384 when another epidemic broke out. Archbishop Dietrich employed a Jewish court banker between 1361 and 1367. In 1410 Archbishop Guenther issued a letter of protection (*Schutzbrief*) for a period of six years, at a cost to the community of 40 silver marks. During the 15<sup>th</sup> century the community maintained a flourishing yeshivah. In 1493 the Jews of Magdeburg were expelled; the synagogue was converted into a chapel and the cemetery destroyed.

When the great elector, Frederick William, readmitted Jews to \*Prussia (1671), *Schutzjuden* settled once more in Magdeburg. From 1703 they were to be found in Sudenburg, from 1715 in the newer part of town (the *Neustadt*), and from 1729 in the *Altstadt*. A religious school was founded by the modern community in 1834 and a *hevra kaddisha* in 1839. Rabbis of the community included Ludwig \*Philippson, editor of *\*Allgemeine Zeitung des Judentums*; Moritz \*Guedemann, and Moritz Spanier, both of whom wrote a history of the community. Eduard \*Lasker and Otto \*Landsberg were repeatedly elected to parliament from Magdeburg. The prosperous community, which included 45 doctors (who founded their own club in 1903), had about 20 social, cultural, and charitable organizations in 1933. The number of Jews increased steadily from 330 in 1817 to 559 in 1840; 1,000 in 1859; 1,815 in 1885; 1,843 in 1910; and around 3,200 in 1928, then dropped to 2,361 (0.6% of the total population) in 1933. The synagogue, built in 1851 and enlarged to seat 900 in 1897, was burned down on November 10, 1938. The men were interned in \*Buchenwald. By May 17, 1939, only 679 Jews remained in the town, and the majority were transported to concentration camps. On July 1, 1944, there were still 185 Jews living in Magdeburg, mainly partners of mixed marriages, who managed to survive the war. After the war, some Jews returned to Magdeburg. In 1962 the Jewish community numbered 79 and diminished to 49 in 1969. It declined even more during the 1970s and 1980s, dwindling to 35 in 1989. But in 2005 it rose to 635 members due to the immigration of Jews from the former Soviet Union. Magdeburg is the seat of the Association of Jewish communities in the State of Saxony-Anhalt, which was founded in 1994.

**MAGDEBURG LAW**, term applied to the constitutional and commercial urban law which developed in \*Magdeburg in the Middle Ages and became a pattern for new city constitutions in Central and Eastern Europe. The Magdeburg law was adopted by most cities in central, eastern, and northern Germany, Bohemia, and Moravia. Magdeburg, the mother town of the constitutions, possessed a supreme court, to which appeals and queries were addressed, including litigation between Christians and Jews. These cases were treated fairly, without discrimination and with no accompanying degrading oaths. In the 14<sup>th</sup> century the charters of many towns in Galicia were copies of this law, as were those of Lublin (1317), Sandomierz (1356), Lemberg (Lvov; 1356), Vilna (1387), Brest (1370), and Grodno (1391); in the following century it was extended to several towns in southern Poland, among them Lutsk (1432) and Minsk (1496), and in the 16<sup>th</sup> century to the towns of Pinsk (1511), Kovel (1518), Tarnopol (1550), Mogilev (1578), Vitebsk (1582), and others. Originally, the privileges enshrined in the law were granted only to German craftsmen and merchants, Jews and all other non-German town dwellers being excluded. However, in the charter granting the law to the city of Lemberg (June 17, 1365), the Jews, Armenians, and other nationals were free to decide whether they wished to avail themselves of it or whether they preferred to abide by their own laws and remain subject to the jurisdiction of their elders, under the chairmanship of the local bailiff. Later the law was granted to all the townspeople, including Jews (as in Kiev and Podolia). One of the paragraphs of the Magdeburg law which was of importance for the Jews provided that no Jew could be forced to stand warranty for objects he had bought or received as a pawn, i.e., to reveal from whom he had bought or received them. The Jews were therefore not responsible for receiving stolen property.

**MAGEN DAVID** (Heb. מגן דָּוִד; "shield of David"), the hexagram or six-pointed star formed by two equilateral triangles

which have the same center and are placed in opposite directions.

From as early as the Bronze Age it was used – possibly as an ornament and possibly as a magical sign – in many civilizations and in regions as far apart as Mesopotamia and Britain. Iron Age examples are known from India and from the Iberian peninsula prior to the Roman conquest. Occasionally it appears on Jewish artefacts, such as lamps and seals, but without having any special and recognizable significance. The oldest undisputed example is on a seal from the seventh century B. C.E. found in Sidon and belonging to one Joshua b. Asayahu. In the Second Temple period, the hexagram was often used by Jews and non-Jews alike alongside the pentagram (the five-pointed star), and in the synagogue of Capernaum (second or third century C.E.) it is found side by side with the pentagram and the swastika on a frieze. There is no reason to assume that it was used for any purposes other than decorative. Theories interpreting it as a planetary sign of Saturn and connecting it with the holy stone in the pre-Davidic sanctuary in Jerusalem (Hildegard Lewy, in *Archiv Orientalní*, vol. 18, 1950, 330–65) are purely speculative. Neither in the magical papyri nor in the oldest sources of Jewish \*magic does the hexagram appear, but it began to figure as a magical sign from the early Middle Ages. Among Jewish emblems from Hellenistic times (discussed in E. Goodenough, *Jewish Symbols in the Greco-Roman Period*), both hexagram and pentagram are missing.

The ornamental use of the hexagram continued in the Middle Ages, especially in Muslim and Christian countries. The kings of Navarre used it on their seals (10<sup>th</sup> and 11<sup>th</sup> centuries) and (like the pentagram) it was frequently employed on notarial signs in Spain, France, Denmark, and Germany, by Christian and Jewish notaries alike. Sometimes drawn with slightly curved lines, it appears in early Byzantine and many medieval European churches, as, for example, on a stone from an early church in Tiberias (preserved in the Municipal Museum) and on the entrance to the Cathedrals of Burgos, Valencia, and Lerida. Examples are also found on objects used in the church, sometimes in a slanted position; as on the marble bishop's throne (c. 1266) in the Cathedral of Anagni. Probably in imitation of church usage – and certainly not as a specifically Jewish symbol – the hexagram is found on some synagogues from the later Middle Ages, for example, in Hamelin (Germany, c. 1280) and Budweis (Bohemia, probably 14<sup>th</sup> century). In Arab sources the hexagram, along with other geometrical ornaments, was widely used under the designation “seal of Solomon,” a term which was also taken over by many Jewish groups. This name connects the hexagram with early Christian, possibly Judeo-Christian magic, such as the Greek magical work *The Testament of Solomon*. It is not clear in which period the hexagram was engraved on the seal or ring of Solomon, mentioned in the Talmud (Git. 68a–b) as a sign of his dominion over the demons, instead of the name of God, which originally appeared. However, this happened in Christian circles where Byzantine amulets of the sixth century already use the “seal of Solomon” as the name of the

hexagram. In many medieval Hebrew manuscripts elaborate designs of the hexagram are to be found, without its being given any name. The origin of this use can be clearly traced to Bible manuscripts from Muslim countries (a specimen is shown in Gunzburg and Stasoff, *L'ornement hébraïque* (1905), pl. 8, 15). From the 13<sup>th</sup> century onward it is found in Hebrew Bible manuscripts from Germany and Spain. Sometimes parts of the masorah are written in the form of a hexagram; sometimes it is simply used, in a more or less elaborate form, as an ornament. Richly adorned specimens from manuscripts in Oxford and Paris have been reproduced by C. Roth, *Sefarad*, 12, 1952, p. 356, pl. II, and in the catalog of the exhibition “Synagoga,” Recklinghausen, 1960, pl. B. 4.

In Arabic magic the “seal of Solomon” was widely used, but at first its use in Jewish circles was restricted to relatively rare cases. Even then, the hexagram and pentagram were easily interchangeable and the name was applied to both figures. As a talisman, it was common in many of the magical versions of the *mezuzah* which were widespread between the tenth and 14<sup>th</sup> centuries. Frequently, the magical additions to the traditional text of the *mezuzah* contained samples of the hexagram, sometimes as many as 12. In magical Hebrew manuscripts of the later Middle Ages, the hexagram was used for certain amulets, among which one for putting out fires attained great popularity (see Heinrich Loewe, *Juedischer Feuersegen*, 1930).

The notion of a “shield of David” with magical powers was originally unconnected with the sign. It is difficult to say whether the notion arose in Islam, where the Koran sees David as the first to make protective arms, or from inner traditions of Jewish magic. From earlier times there is only one instance connecting the hexagram with the name David on a sixth-century tombstone from Taranto, southern Italy. There seems to have been some special reason for putting the hexagram before the name of the deceased. The oldest text mentioning a shield of David is contained in an explanation of a magical “alphabet of the angel \*Metatron” which stems from the geonic period and was current among the \*Hasidei Ashkenaz of the 12<sup>th</sup> century. But here it was the holy Name of 72 names which was said to have been engraved on this protective shield, together with the name  $\text{MKBY}$ , which the tradition of the magicians connected with Judah Maccabee. In cognate sources this tradition was much embellished. The name of the angel Taftafiyah, one of the names of Metatron, was added to the 72 holy names, and indeed an amulet in the form of a hexagram with this one name became one of the most widespread protective charms in many medieval and later manuscripts. (From c. 1500 onward the name *Shaddai* was often substituted for the purely magical one.) This must have provided the transition to the use of the term “*magen David*” for the sign. What caused the substitution of the figure instead of the “great name of 72 names” is not clear, but in the 16<sup>th</sup> century instructions can still be found stating that the shield of David should not be drawn in simple lines but must be composed of certain holy names and their combinations, after the pattern of those biblical manuscripts where the lines were composed of the text

of the masorah. The oldest known witness to the usage of the term is the kabbalistic *Sefer ha-Gevul*, written by a grandson of Nahmanides in the early 14<sup>th</sup> century. The hexagram occurs there twice, both times called “*magen David*” and containing the same magical name as in the aforementioned amulet, demonstrating its direct connection with the magical tradition. According to other traditions, mentioned in Isaac Arama’s *Akedat Yizhak*, the emblem of David’s shield was not the image known by this name today, but Psalm 67 in the shape of the *menorah*. This became a widespread custom and the “*menorah* Psalm” was considered a talisman of great power. A booklet from the 16<sup>th</sup> century says: “King David used to bear this psalm inscribed, pictured, and engraved on his shield, in the shape of the *menorah*, when he went forth to battle, and he would meditate on its mystery and conquer.”

Between 1300 and 1700 the two terms, shield of David and seal of Solomon, are used indiscriminately, predominantly in magical texts, but slowly the former gained ascendancy. It was also used, from 1492, as a printers’ sign, especially in books printed in Prague in the first half of the 16<sup>th</sup> century and in the books printed by the Foa family in Italy and Holland, who incorporated it in their coat of arms. Several Italian Jewish families followed their example between 1660 and 1770. All these usages had as yet no general Jewish connotation. The official use of the shield of David can be traced to Prague, from where it spread in the 17<sup>th</sup> and 18<sup>th</sup> centuries through Moravia and Austria and later to southern Germany and Holland. In 1354, Charles IV granted the Prague community the privilege of bearing its own flag – later called in documents “King David’s flag” – on which the hexagram was depicted. It therefore became an official emblem, probably chosen because of its significance as a symbol of the days of old when King David, as it were, wore it on his shield. This explains its wide use in Prague, in synagogues, on the official seal of the community, on printed books, and on other objects. Here it was always called *magen David*. Its use on the tombstone (1613) of David Gans, the astronomer and historian, was still exceptional, obviously in reference to the title of his last work *Magen David*. Except for one tombstone in Bordeaux (c. 1726), no other example of its being used on tombstones is known before the end of the 18<sup>th</sup> century. A curious parallel to the development in Prague is the one case of a representation of the Synagogue as an allegorical figure, holding a flag bearing the *magen David* in a 14<sup>th</sup>-century Catalan manuscript of the *Breviar d’amor* by Matfre d’Ermengaud (Ms. of Yates Thompson 31 in the British Museum).

The symbol early moved to other communities. Its use in Budweis has been mentioned above, and the Vienna community used it on its seal in 1655. In the following year it is found on a stone marking the boundary between the Jewish and the Christian quarters of Vienna (according to P. Diamant) or between the Jewish quarter and the Carmelite monastery (according to Max Grunwald). Apparently it was an officially recognized symbol. When the Viennese Jews were expelled in 1670 they took the symbol to many of their new habitats,

especially in Moravia, but also to the Ashkenazi community of Amsterdam, where it was used from 1671, first on a medalion permitting entrance to the graveyard. Later it became part of the community’s seal. Curiously enough, its migration eastward was much slower. It never occurs on official seals, but here and there during the 17<sup>th</sup> and 18<sup>th</sup> centuries it appears as an ornament on objects for use in synagogues and on wood carvings over the Torah shrine (first in Volpa, near Grodno, 1643).

The use of the hexagram as an alchemical symbol denoting the harmony between the antagonistic elements of water and fire became current in the later 17<sup>th</sup> century, but this had no influence in Jewish circles. Many alchemists, too, began calling it the shield of David (traceable since 1724). But another symbolism sprang up in kabbalistic circles, where the “shield of David” became the “shield of the son of David,” the Messiah. Whether this usage was current in Orthodox circles too is not certain, though not impossible. The two kabbalists who testify to it, Isaiah the son of Joel Ba’al Shem (Jacob Emden, *Torat ha-Kena’ot*, p. 128) and Abraham Hayyim Kohen from Nikolsburg, combine the two interpretations. But there is no doubt that this messianic interpretation of the sign was current among the followers of \*Shabbetai Zevi. The famous amulets given by Jonathan \*Eybeschutz in Metz and Hamburg, which have no convincing interpretation other than a Shabbatean one, have throughout a shield of David designated as “seal of מַבְד” (Messiah b. David), “seal of the God of Israel,” etc. The shield of David was transformed into a secret symbol of the Shabbatean vision of redemption, although this interpretation remained an esoteric one, not to be published.

The prime motive behind the wide diffusion of the sign in the 19<sup>th</sup> century was the desire to imitate Christianity. The Jews looked for a striking and simple sign which would “symbolize” Judaism in the same way as the cross symbolizes Christianity. This led to the ascendancy of the *magen David* in official use, on ritual objects and in many other ways. From central and Western Europe it made its way to Eastern Europe and to Oriental Jewry. Almost every synagogue bore it; innumerable communities, and private and charitable organizations stamped it on their seals and letterheads. Whereas during the 18<sup>th</sup> century its use on ritual objects was still very restricted – a good specimen is a plate for *mazzot* (1770), reproduced on the title page of *Monumenta Judaica*, catalog of a Jewish exposition in Cologne, 1963 – it now became most popular. By 1799 it had already appeared as a specific Jewish sign in a satirical antisemitic engraving (A. Rubens, *Jewish Iconography*, no. 1611); in 1822 it was used on the Rothschild family coat of arms when they were raised to the nobility by the Austrian emperor; and from 1840 Heinrich Heine signed his correspondence from Paris in the *Augsburger Allgemeine Zeitung* with a *magen David* instead of his name, a remarkable indication of his Jewish identification in spite of his conversion. From such general use it was taken over by the Zionist movement. The very first issue of *Die Welt*, Herzl’s Zionist journal, bore it as its emblem. The *magen David* became the symbol of new hopes

and a new future for the Jewish people, and Franz Rosenzweig also interpreted it in *Der Stern der Erloesung* (1921) as summing up his philosophical ideas about the meaning of Judaism and the relationships between God, men, and the world. When the Nazis used it as a badge of shame which was to accompany millions on their way to death it took on a new dimension of depth, uniting suffering and hope. While the State of Israel, in its search for Jewish authenticity, chose as its emblem the *menorah*, a much older Jewish symbol, the *magen David* was maintained on the national (formerly Zionist) flag, and is widely used in Jewish life.

**MAGEN DAVID ADOM** (**MDA**, Hebrew “Red Shield of David”), Israel’s emergency medical first aid society (equivalent to the Red Cross). Magen David Adom was founded in 1930 and was recognized by the government of Israel and by the Knesset (MDA Knesset Law 1950/1970). It operates several major services: first aid, ambulance, and mobile intensive-care services; national blood bank services, including a fractionation institute for plasma by-products; and first aid instruction. The MDA institutions include the MDA executive committee, the MDA council, and the MDA conference. The conference is held every four years and deals with organizational activity and future goals. The council consists of 45 members and the executive committee consists of 12 members; both institutions are made up of MDA members and public representatives named by various government bodies.

Magen David Adom operates in 11 geographical areas, running 95 first aid stations, with some 700 ambulances deployed in these stations and in ambulance posts in kibbutzim and settlements. In addition, there are operational at first aid stations – on alert and in reserve – some 50 mobile intensive-care units, 22 mobile disaster units, and 18 blood mobiles. MDA employed 1,500 workers in 2006, while its volunteer force numbered more than 5,000 in 1991 and 10,000 in 2006. MDA National Blood Service is responsible for the collection, processing, examination, and distribution of blood units to hospitals all over Israel. The services include the national donor operation, the central blood bank, and the plasma processing

institution, which were located inside Tel Hashomer hospital and employed 200 workers in 2005. The services collect about 280,000 blood units each year.

In time of war, Magen David Adom is part of Israel Civil Defense, more precisely, of the IDF Home Front Command, and operates in close cooperation with the IDF Medical Corps.

MDA’s budget for 1995 came to \$33 million, covered by income from ambulance services, blood services, first aid and first aid equipment sales, and other internal sources as well as a government subsidy.

Its equipment and development budget for 1995 totaled some \$7 million. This sum, raised for MDA by its Friends societies in 15 countries, is earmarked for special development projects and purchase of lifesaving vehicles, medical equipment, etc. MDA Friends societies are active in Argentina, Australia, Belgium, Canada, France, Germany, Great Britain, Italy, The Netherlands, South Africa, Sweden, Switzerland, the United States, Uruguay, and Venezuela.

Following worldwide efforts – supported by prominent statesmen in many countries – to have Magen David Adom in Israel admitted into the International Federation of Red Cross and Red Crescent Societies, this finally occurred in 2006.

Notwithstanding the delay, over the years MDA continued to cooperate with the International Red Cross and offer assistance to other countries afflicted by natural and other disasters.

Special relations on a bilateral basis are conducted by the MDA with the American Red Cross, German Red Cross, The Netherlands Red Cross, Czech Red Cross, and Hungarian Red Cross.

In 1978 the American Red Cross issued a directive to all its national chapters to display the flag of MDA at all functions and meetings at which other emblems of National Red Cross and National Red Crescent Societies are displayed.

**MAGGID** (Heb. מַגִּיד; pl. *maggidim*), literally “one who relates” (cf. 11 Sam. 15:13). The term, however, has two special connotations in later Hebrew: a) a popular – and often itinerant – preacher, and b) an angel or supermundane spirit which conveys teachings to scholars worthy of such communication in mysterious ways.

#### The Maggid as Preacher

Itinerant preachers appear in Jewish history long before the emergence of the specific term. Descriptions of the life and social standing of some *tannaim* and *amoraim* depict them as leading the lives of itinerant preachers. During the geonic period, however, there is no record of them and it is not until the 11<sup>th</sup> century that one finds mention of them. Tales about some of the \*Hasidei Ashkenaz show them as begging itinerant preachers. The tradition of the itinerant *maggid* developed during the late Middle Ages. The 14<sup>th</sup>-century anonymous author of the *Sefer ha-Kaneh* and *Ha-Peli'ah* sets much of his

bitter social and moral criticism in the context of his experiences while wandering and preaching in various communities. In the second half of the 16<sup>th</sup> century \*Ephraim Solomon b. Aaron Luntschitz was a typical, if much respected and influential, itinerant *maggid*. He relates that “in my later years, yielding to the importunities of prominent men, I preached in Lublin, especially during the great fairs, where Jewish leaders as well as large masses of the people gathered. There I used to express myself quite freely covering the shortcomings of the rabbis as well as of the laity, undeterred by any consideration or fear. This boldness, naturally enough, created for me numerous enemies who heaped slander upon my name and otherwise persecuted me... Of course, I could well have avoided all this wrath and uproar had I been willing to be more restrained in my utterances, or were I more chary of my personal honor. But I had long resolved to put the honor of God above my own” (*Ammudei Shesh* (Prague, 1617), introduction). In this, as in many other passages, Luntschitz shows his strength of character and the troubles that beset a courageous itinerant preacher, attuned to the mood and spiritual needs of his public but fearless in criticizing them. Use of the parable (*mashal*) is already much in evidence in his writings, which also show a conscious effort to stimulate his public and impress them through a show of wit and learning. All these traits were common from the 18<sup>th</sup> century on when the name *maggid* came into regular use to denote both an itinerant and non-itinerant preacher. There are records of salaried *maggidim* appointed by the community. Some historians have ascribed a considerable part in the social and religious upheavals of the end of the 17<sup>th</sup> and during the 18<sup>th</sup> centuries to the influence of itinerant *maggidim*, who, they consider, functioned as a kind of “non-establishment intelligentsia,” having much of the learning and influence of the regular scholars but largely without their connections in the upper strata of Jewish society. They have thus attributed the rise and early success of \*Ḥasidism to the influence of such *maggidim*, pointing out that several of the early ḥasidic leaders were called *maggid* or the synonym for *maggid*, *mokhi’ah* (“morals preacher”), such as \*Dov Baer of Mezhibezh or \*Jacob Joseph of Polonnoye. Others, however, note that even the most radical of the 18<sup>th</sup>-century *maggidim*, \*Berechiah (Berakh) b. Eliakim Getzel the Younger, considered himself, despite his outspoken social criticism, to be allied by the nature of his office to that of the communal rabbi. They show also that much of the anti-ḥasidic propaganda was conducted by *maggidim*, chief among them being Jacob \*Kranz “the Maggid of Dubno,” an admiring pupil of \*Elijah b. Solomon Zalman, the Gaon of Vilna, who expressly followed the advice of the Gaon on the method of preaching. Kranz, who was celebrated for his parables, exemplifies the type of *maggidim* who were associated with the \**Mitnagged* leadership in Lithuanian Jewry. Lithuania and the *Mitnagged* culture remained throughout the 19<sup>th</sup> and into the 20<sup>th</sup> centuries the field of activity of the *maggidim*. Sometimes the office of *maggid* was combined with that of *dayyan*, hence the modern titles, mostly in Eastern Europe, of *maggid mei-*

*sharim u-moreh zedek* (the *maggid* of uprightness (cf. Is. 45: 19) and teacher of righteousness, the latter being a synonym for a *dayyan*). Sometimes the *maggid* was appointed to a town, with the official title of *maggid de-mata*, in Yiddish *Shtotmaggid*. Vilna had a *Shtotmaggid*, usually a respected and outstanding scholar, until recent times. Men like Ezekiel b. Isaac ha-Levi \*Landau, the *Shtotmaggid* of Vilna; the great itinerant *maggid* \*Moses Isaac Darshan, the “Kelmer Maggid”; or the *maggid* suspected of Haskalah leanings, Zevi Hirsch b. Ze’ev Wolf \*Dainow, the “Slutzker Maggid,” continued a tradition of preaching expressly intended for the masses, which contained much social criticism but also provided social guidance. Their preaching was also characterized by the mournful sing-song intonation of their delivery (see also \*Musar movement). Their direct successors were the “Zionist *maggidim*” like Z. \*Maccoby the “Kamenitzer Maggid,” and Zevi Hirsch \*Masliansky. Many of the *meshullahim* (\**Sheluḥei Erez Israel*) for the yeshivot and Erez Israel actually filled the function of *maggidim*. Wherever *Mitnagged* communities were established in other countries, *maggidim* accompanied the immigrants. In modern Erez Israel, Ben Zion Yadler and Benzion \*Alfes were in the tradition of the great *maggidim*. A few *maggidim* are still active in the State of Israel and the United States (see also \**Darshan*; \**Preaching*).

[Haim Hillel Ben-Sasson]

### In Kabbalah

The angel or heavenly force called the *maggid* passes secrets to a kabbalist, when he is asleep or awake, speaks words from his mouth, or dictates to him when he is writing. This revelation is one of the outstanding phenomena in Kabbalah in the 16<sup>th</sup> to 18<sup>th</sup> centuries. Throughout the history of Kabbalah, kabbalists relied on heavenly inspirations, the revelations of Elijah, \*Metatron, and other angels, or even on heavenly forces such as the Holy Spirit, in addition to questions in dreams and magical means of communication with heavenly forces. An early stage of this phenomenon may be seen in the questioning in dreams practiced before the formation of the Kabbalah, and even regarding the problems of Kabbalah, e.g., by Jacob of Marvège (Provence), author of *She’èlot u-Teshuvot min ha-Shamayim* (commentary by R. Margulies, Lvov, 1929). The *maggid* of the 16<sup>th</sup> to 18<sup>th</sup> centuries is simply another version of the previous occurrence, though at times the phenomenon seems, in particular cases, to have personal psychological roots.

The image of the *maggid* who reveals heavenly secrets was apparently first crystallized in the circle of Joseph \*Taitazak, who lived at the time of the Spanish expulsion and whose circle included many of the great kabbalists and preachers of Safed. The revelations of Taitazak (or those attributed to him) were written prior to the expulsion and were presented as coming from God Himself. In the Safed literature, the main expositions of the essence of the *maggid* are found in the writings of Moses \*Cordovero and Ḥayyim \*Vital. In this circle the most outstanding phenomenon was the appearance of the

*maggid* of Joseph \*Caro. Recording the words of the *maggid*, Caro wrote *Sefer ha-Maggid*, of which only a fragment has survived, called by the printers *Maggid Meisharim*. The major statements of Caro's *maggid* were sermons interpreting the secrets of the Kabbalah and biblical commentary, but many of his pronouncements have a personal and practical meaning. The *maggid* guided Caro in his wanderings in Turkey and directed him to immigrate to Erez Israel. He stimulated Caro to write his halakhic works and to behave morally, promising him achievements in *halakhah* and in his personal life, toward attaining his great dream – martyrdom, like Solomon \*Molcho. Caro's *maggid* was the *Shekhinah* ("Divine Presence"), the tenth *Sefirah* in the kabbalistic system, which took on the form of the Mishnah, the Oral Law. To bring about the appearance of the *maggid*, Caro would study *mishnayot*. The *maggid* spoke to him while he was awake, often just as he awoke. Scholars have not reached a conclusion concerning the psychological nature of this revelation, but it is clear that it did not affect the relation of Caro's personality to reality; it was one aspect of his personality which neither contradicted nor harmed the whole.

The Shabbatean movement gave great impetus to appearances of *maggidim* and many revealed secrets to the Shabbateans. The revelations of a *maggid* to Isaac Zurgeon, an associate of \*Shabbetai Zevi in Adrianople in 1668 who confirmed the latter as Messiah and defended his apostasy, have been published (R. Schatz, in: *Sefunot*, 12). There also exists particularly detailed information on the appearance of a *maggid* in the house of study of Abraham \*Rovigo, leader of a Shabbatean circle in Modena, Italy, from 1675 to 1691. The first *maggid* to appear in his house of study was that of Baer Perlhefter whose revelation had a great impact on him. Many letters of Meir Rofe who directs his questions to the *maggid*, and their answers, are in existence. The central question discussed in the revelations concerns the reason for Shabbetai Zevi's death and a prediction of his return in a year's time. Apparently, a *maggid* was later revealed to Rovigo himself. The most detailed revelations in this house of study have been transmitted by Mordecai Ashkenazi, a pupil of Rovigo's from Zolkiew who was neither a scholar of Torah nor of esoteric matters but who astounded Rovigo with his Shabbatean revelation. Ashkenazi's notebook and other documents relating the revelations of his *maggid* have survived. This *maggid* always revealed himself in a dream; at first only his voice was heard and afterward his form was seen. Scholem has suggested that this was a projection of the image of Rovigo, Ashkenazi's teacher. His revelations include Shabbatean theories, and together with them private advice, mostly on routine matters and on Ashkenazi's education and studies. Apparently they even included criticism of the former *maggid*, that of Baer Perlhefter, based on suspicions of Perlhefter's sins toward the end of his life, whose nature is not clear. Ashkenazi's *maggid* – like Caro's – encouraged his master and teacher to immigrate to Erez Israel and gave him practical advice on ways of realizing this aim, whose background was Shabbatean messianism.

A lengthy and stormy dispute was caused by a *maggid* who revealed himself to Moses Ḥayyim \*Luzzatto in Italy in 1727. The *maggid* dictated to Luzzatto, in the language of the Zohar, *Razin Genizin*, *Tikkunim Ḥadashim*, and other works, which were meant to become a second Zohar (*Zohar Tinyana*). The *maggidim* of Ashkenazi and Caro also spoke the language of the Targum, i.e., Aramaic. The record of the first revelation of Luzzatto's *maggid*, who appeared on Wednesday, Rosh Ḥodesh (the New Moon of) Sivan 1727, still exists. This *maggid* was a voice without an image who spoke to the recipient while he was awake and not in a dream, and alone. This angered Moses \*Hagiz and others, because they thought that the young Luzzatto was not worthy of such a heavenly revelation and also because they suspected the Shabbatean character of the revelations.

The nature of the phenomenon apparently must be examined in the general context of kabbalistic mysticism, which consistently seeks heavenly confirmation for the secrets revealed to the kabbalist. At different times, various forms were given to these confirmations – some by pseudepigraphy and some by a divine revelation. In general, it appears that there was no fraudulent basis to these revelations, that their source lay in the kabbalist's complete conviction of the hidden heavenly truth in the secrets revealed to him, and that his testimony that he heard them from a divine source is honest. In addition, it seems that the *maggid* is also connected with the parapsychological phenomenon of the materialization of part of the kabbalist's soul which, acquiring an independent form, disassociates itself from the rest of his person and, confronting him objectively as it were, speaks to him.

**MAGGID, DAVID** (1862–1942?), scholar and writer. Maggid was born in Vilna, son of Hillel Noah \*Maggid-Steinschneider. As secretary to S.J. \*Fuenn, he assisted him in writing *Ha-Ozar* ("The Treasury," 1884–1903) and *Keneset Yisrael* ("Assembly of Israel," 1886–90), a biographical dictionary of Jewish authors and scholars. Later, in St. Petersburg, he taught Jewish religion in government secondary schools. The author of numerous articles on Jewish history and art, he was also a contributor to the *Yevreyskaya Entsiklopediya*. His research encompassed Jewish music of antiquity and the Middle Ages as well as the folklore of the Jews of Crimea. In 1919 he succeeded A.A. \*Harkavy as librarian of the Jewish and Oriental department of the National Library of Petrograd. In 1921 he

was appointed professor of art history at the Russian Institute in Petrograd and in 1925 became professor of Hebrew at the university. He continued to publish articles and works outside the Soviet Union. Notable are his reminiscences of his father and the first *maskilim* of Vilna, published in *Fun Noentn Ovar* (1937). Other works include *Toledot M. Antokolski* ("The Life of M. Antokolski," 1897), *Rabbi Mordekhai Aharon Guenzburg* (1897), and the completion of his father's work *Toledot Mishpehot Guenzburg* ("The History of the Guenzburg Families," 1899).

[Yehuda Slutsky]

**MAGGID-STEINSCHNEIDER, HILLEL NOAH** (1829–1903), Hebrew scholar and writer. Maggid-Steinschneider, born in Vilna, owed the first part of his name to his grandfather Phinehas, who was *Maggid* in Vilna, and the second part to his profession, stonemasonry (*Steinschneider*). He also was a bookdealer. As a stonemason he often composed tombstone inscriptions, which led to an interest in and research about the lives of well-known Vilna families and personalities, particularly those buried in the old and new cemeteries of the town. He published *Ir Vilna* (part 1 only, 1900), a biographical work containing hundreds of biographies of famous Vilna personalities. Maggid also assisted S.J. \*Fuenn in collecting material for his history of Vilna Jewry, *Kiryah Ne'emanah* (1860), and also prepared its second edition with numerous additions and a biography of the author (1915). He wrote a history of the \*Guenzburg family completed by his son (*Toledot Mishpehot Guenzburg*, 1899) and a biography of David Oppenheim (in Y. ben Hayyim Mezah (ed.), *Gan Peraḥim*, 1882); with his father-in-law J. Gordon he composed a Thousand Year Calendar, *Lu'ah al Elef Shanim* (1854).

Maggid contributed numerous biographical and genealogical articles to Hebrew periodicals, such as *Ha-Shahar*, *Ha-Karmel*, and *Ha-Maggid*. He was put in charge of the \*Straschun and S.J. Fuenn libraries when they were given to the Vilna community. Maggid's biographical and bibliographical research, much of which remained unpublished, was of importance, though like other works of the transitory period from old to modern scholarship, his writings lacked organization and literary form.

**MAGHAR, AL-**, Druze village in northern Israel, 10 mi. (16 km.) N.W. of Tiberias. One of the major Druze centers, the village had 5,750 inhabitants in 1969, of whom a minority were Christian and Muslim Arabs. Its economy was based on hill farming and on local workshops. By the end of 2002 Maghar's population had tripled its size to 17,900 (57% Druzes, 23% Christians and 20% Muslims). The village has municipal coun-

cil status and extends over an area of 9 sq. mi. (23 sq. km.). In 2000, income there was about half the national average. The place is possibly identical with Ma'ariyyah or Me'arot where a priestly family lived in talmudic times (*Baraita of the Twenty-Four Mishmarot*).

[Efraim Orni / Shaked Gilboa (2<sup>nd</sup> ed.)]

**MAGHREBI-MA'ARAVI**, name of Jewish personalities and congregations originating from North Africa. The Arab geographers designate North Africa and Spain as Maghreb, the West. The name Maghreb-Ma'arav ("West"), Maghrebi-Ma'aravi ("the Westerner"), occurs in geonic literature and later. It continues to be applied to North African congregations and their rites. The Maghrebis speak different Arabic dialects, which, in addition to special rites and patterns of life, distinguishes their language from other, Eastern Judeo-Arabic dialects and their customs from other congregations.

## MAGIC.

### Early Magic

Broadly defined, magic is a system of non-canonical ritual practices aiming at changing reality. In early Jewish magic this system was based on the use of powerful verbal performative formulae – incantations – whose oral or written expression was realized in the framework of a ceremony. The purpose of the magical act was generally to compel metaphysical entities such as demons, angels, stars and celestial bodies, holy names, and even God Himself, to bring about for the user the reality he desired. Early Jewish magical literature is evidenced in magical writings and objects from the Land of Israel, Babylonia, and North Africa, dating from the third century until the 12<sup>th</sup> (prior to the development of the Kabbalah and the change it effected in Jewish magic in the direction of practical Kabbalah). This literature enables us to trace the verbal elements of the adjuration as a magical text, such as the employment of the verbal root, šb', addressing the metaphysical forces in the first person singular, the utilization of expressions of urgency, and threats towards them, indicating the client mentioned in the magical object by his first name and the name of his mother, and more. On this basis we can establish that as more of these textual characteristics are found in any given Jewish text, its magical tendency increases. From here we can also define all the Jewish magical cultural products. Texts that include adjurations, such as books of guidance for sorcery, are magic texts in a broader sense, and those that express beliefs and customs commonly found in texts of both these categories are magic texts in the broadest sense; objects upon which adjuration texts are found such as sheets of paper, leather, cloth or metal, or clay bowls are magic objects (amulets, magic bowls), and in the wider circle are included objects that serve as a means of ritual power in the context of

the outlook expressed in the magical literature; ceremonies where adjuration texts are written or uttered, or where use is made of magical objects, are considered as ceremonies of magical character. This manner of definition of magic allows a flexible relationship between it and the other components of Jewish culture, and in particular the religion. Instead of an a priori culture-dependent dictionary distinction that strives to distinguish between what is magic and what is not viewed as such, one finds a dynamic system of phenomena characterized as possessing a greater or lesser magical essence, but not necessarily related to their place in the overall socio-cultural system of ritual power. Relinquishing the apposition of magic to religion in the phenomenological dimension allows us to divert the distinction between them to the social plane where the non-canonical position of magic finds expression. Texts, magical objects, and ceremonies generally do not have a routine place in the Jewish canonical system of practice for attaining ritual power. At the same time it is not impossible that portions of the latter, such as the biblical examination of the suspected adulteress, the recitation of the \**Shema* before going to sleep, and the \**mezuzah*, be defined as possessing a magical character. In this manner the cultural products of early Judaism itself testify to the gap between the official and explicit perception (in the Bible and the Mishnah) that prohibits sorcery and considers it as a capital sin and its firm place in the day-to-day lives of the people. Recognition of the existence of this gap is naturally related to the recognition of the distance between the inner-cultural definition of magic as an illegitimate form of ritual activity by its very essence, and its external, academic definition, based on sociological notions of religion, that views it as the non-canonical, marginal, and in most cases prohibited part of the overall activity aimed at attaining ritual power (which also includes a legitimate-canonical side, i.e., religion), repressed by the ruling religious center of society as concerns its struggle over power and control.

The sources documenting early Jewish magic may be divided into two kinds: primary sources, those originating in magical culture itself, and secondary sources, those found in texts that are not, in essence, magical. Primary sources from the biblical era are rare. Noteworthy among them are silver amulets from the end of the seventh century B.C.E., found in a burial network in the Hinnom valley in Jerusalem, and upon which the priestly blessing is inscribed. In the Bible itself, sorcery and divination are prohibited and those who dealt in them were persecuted. It would appear, however, that this prohibition, closely tied in the Bible to the religious-ethical uniqueness of the people of Israel and its distinctiveness from the surrounding nations, well testifies to the perpetuation of these ritual practices that priestly and prophetic circles aspired to marginalize in favor of those that they themselves offered and to which they attributed canonical status. Nevertheless, at least in one outstanding case, that of the ordeal for examination of the suspected adulteress (Num. 5:11–31), one suspects the acquisition of a magical practice (which under-

went an intercultural, priestly, oicotypification) by the religious establishment. The result bears testimony to the belief in the performative power of curses among both that priestly establishment and the people as a whole. Metaphysical beings central to magical practice such as angels, Satan, and demons are indeed mentioned in the biblical literature, however in a way that is unconnected to the overall system of typical magical beliefs and practices in which they were to function later. First and foremost, they are not introduced as being under any kind of vigorous human manipulation. In the only case where Satan is mentioned as being expelled by words that may reflect an exorcistic formula, it is by God Himself, and from His presence (Zech. 3:2). Human power to manipulate concrete reality is admitted in the bible in both the hands of foreign sorcerers, such as the Egyptians, or Balaam, and God's prophets. In any case, it is always subservient to God's will and force. Even the marvels manifested time and again by God's prophets are not performed on account of their own power. Being men of the one and only omnipotent God, their miracles are viewed mainly as a didactic performance of what He Himself executes.

The apocryphal literature in general, and particularly the writings of the Dead Sea sect, increased immeasurably the angelological and demonological deliberations and well reflect the metaphysical expansion of society within Judaism in this period. The figure of Satan (also called Belial or Mastema) has evolved into the head of an army of evil spirits and the lord of the demons. The origin of these demons, imageless and highly harmful spiritual beings, was perceived as the product of the impure hybrid coupling of rebellious angels with the daughters of Adam (a tradition alluded to in Genesis 6:1–4, and expanded in 1 Enoch and in the Book of Jubilees). At that time, it is told, sorcery was brought down to the world and given to women. Alongside it the Book of Remedies was delivered to Noah, according to God's command, for protection against the wicked demons that had attacked his children. The Qumran scrolls reveal to us a well-developed demonological perception. Qumranic Psalm fragments testify to apotropaic ritual practices against demons. The works of Josephus and the New Testament reflect a similar reality in the first century C.E. Demons were perceived as the cause of both corporal and mental disorders and their removal through rituals that featured magical objects, roots, and verbal formulae was a common method of healing. Comparing the depictions of exorcism and healing performed by Jesus according to the New Testament with the Greek magical papyri reveals his place as a Jewish magician within the intercultural tradition of Late Antiquity as well as his uniqueness within that tradition (both in terms of his actions of healing and exorcising, and in utilizing them as a means of his religious mission). According to the testimony of the Gospels, Jesus was accused by his Jewish opponents of using the power of Beelzebub, the prince of the demons. In other words, he was accused of being a sorcerer, i.e., possessing considerable supernatural power, but that this power was derived from an impure source and was therefore illegitimate.

His followers naturally saw him as a holy man who was performing miracles through divine power.

The apocryphal literature and the Dead Sea sect literature also demonstrate the considerable angelological expansion of social reality; only here human magical power vis-à-vis the angels is not yet reflected. Their assistance to men is judged a gesture of good will, a divine mission, or preordained reality, but not the result of their compulsion to act in this way through human efforts. This notion appears in full force in the primary sources of early Jewish magic: amulets and incantation bowls that were geared primarily for protection, healing, and success and which document actual magical activity for the clients mentioned in them by name, and magical recipes collected in compositions and books of recipes. The magical recipe literature presents to us the notion that magic is a part of normal life. It is hard to imagine an area of life for which no magical assistance is offered in this literature. The amulets and magic bowls connect this theoretical literature to the actual day-to-day lives of the Jews of Late Antiquity.

Ancient Jewish magical praxis was based on a system of beliefs that concerned the connection between physical and metaphysical reality and the manner by which language is capable of connecting between them for human profit. Social reality was expanded to include metaphysical beings that were divided into four categories: (a) God; (b) celestial beings such as angels, stars and planets, divine names, etc.; (c) various demons and evil spirits (including personifications of harmful sorcery); (d) the dead. The correct use of an adjuration (mostly by a suitable person within a well-defined ceremony) was viewed as being able to subordinate any one of the above to obey the adjurer's will. Generally the adjurations were aimed at activating the celestial beings, principally angels or demons. The magical use of God or the dead is rarely documented. Magical compositions such as the *Book of Mysteries (Sefer ha-Razim)* or the *Sword of Moses (Harba de-Moshe)* reveal to us a highly developed angelological perception. The names of the angels, their order and relative powers are placed at the disposal of whosoever wishes to manipulate them. Divine aid, in the form of a command that God sent to his angels, is what allows man to take power over them through the use of incantations and divine names and to manipulate them at will. Magical practice is therefore portrayed in these works as a part of the Jewish monotheistic belief and not as anomalous to it. Alongside this angelology a rich demonology is also revealed in the magical literature. Demons were perceived as responsible for every misfortune in human life and in particular when it affected the body. Protection from them and their removal from the moment they penetrated someone's life space was a central purpose of Jewish magical activity. However, the magical literature testifies to the use of magical means for dealing with many other matters. These include the relations between people such as marriage and sexual relations, success in litigation, control over one's fellow being, injuring someone, protection from injury, victory in battle, and so on. They appear to be further used in such daily cares as improving the

products of labor and agricultural produce, fishing, trade, and even minor objectives such as kindling an oven in winter or the expulsion of crickets or mice from the house. Besides all this, another area of great importance was served by magic: knowledge. Angels, demons, and the dead functioned in the Jewish magic culture as agents of almost limitless knowledge that could be adjured to reveal to man whatever he desired to know. Summoning angels for this purpose was associated on occasion with the practice of the dream request. Thus, while divination is not identical to magic, there is much evidence of Jewish magical divination practices based on utilizing adjurations as well as other magical means.

As noted, the basis of early Jewish sorcery was in the use of adjurations. These verbal formulae, which were defined with precision and adapted individually for their specific objectives, were mostly uttered or written in a ceremonial framework. The ritual state of all the participants in the ceremony was also well defined and almost always entailed the purity (in halakhic terms) of the performer. The conditions of the performance of the ceremony and its verbal, material, and behavioral components varied with each case. On more than one occasion they were borrowed from Hellenistic magic. Professional terms loaned from the Hellenistic magical jargon testify, too, to the intercultural relationship in this field, the other expression of which was the penetration by indubitably Jewish elements into Hellenistic magical practice. It is not easy to chart with precision the elements of the magic ceremony. However, beyond the variety of means one central mechanism, which constitutes a system, stands out: the sympathetic mechanism. In early Jewish magic it is usual to find attempts to bring about a reality by means of juxtaposing it to another based on the principle: "Just as A, so B." The depiction of one reality (A) may be done simply and freely, or it may be through similitude (for example, "Just as the sky is suppressed before God and the Earth is suppressed before people... so may the inhabitants of this town be suppressed and broken and fallen before Yose son of Zenobia"). Often, serving this purpose are biblical verses whose meaning, or words appearing in them, are relevant for the desired effect (for example, "Noah found favor with the Lord" (Gen. 6:8) is quoted for attaining "grace and favor"; "I will not bring upon you any of the diseases that I brought upon the Egyptians" (Ex. 15:26) is quoted for healing). The choice of magic materials necessary for the sorcery may also reflect this aim (for example, a round bowl would serve for protection from all sides, a heart of a young lion for attaining courage). Often, the ceremony includes the preparation of a magical object, that is, an object which has adjuration texts on it. This will serve the client over a length of time. Amulets were worn on the body or were buried in the house or even in the synagogue. Incantation bowls were buried in the corners of rooms or below the threshold, dwelling places of demons against whom the bowls were intended. Occasionally the verbal adjuration was sunken into a piece of food or a liquid that the client would have to swallow or to rub over his body. In this way the magical quality

of the words passed into the client's body and strengthened him from within.

The secondary magical sources, the rabbinic literature, and early Jewish mystical works demonstrate that the magic outlook was not confined to the more boorish classes of society. The early Jewish mystical literature testifies to the central place of performative ritual power in two areas: (a) as a means to overcome the hostile angels in the course of a mystical journey to God's Throne of Honor; (b) as a social advantage in the possession of the mystic in this world following his return from his heavenly journey. The magical matter is so pronounced in the early Jewish mystical literature that some of the scholars judge this aspect (and not the experiences of the ascent to the higher realm and the sight of God) as the kernel unifying all the writings that constitute this literature. Rabbinic literature, too, indicates the place of the magical and demonological outlook, and the accompanying practices, in the social-religious elite. Three approaches are reflected in it alongside each other (as is typical of this polyphonic literature), and all are founded on the very recognition of the efficacy of sorcery: (a) an official halakhic position that associates sorcery with the "Ways of the Amorite," meaning the gentile customs prohibited for Jews on account of the Jews' distinctiveness from them, prohibits it in every way, and punishes those who dabble in it by stoning (while distinguishing the real acts of magic from acts of deception that are not judged as the sin of sorcery); (b) a pragmatic approach that permits the use of those magic objects and verbal means (that are not, of course, denoted as such) whose benefit has been proven (primarily for medicinal purposes), permits the study of sorcery (as opposed to its operation), and even requires of those taking a seat in the Sanhedrin to be "masters of sorcery"; (c) a narrative approach that uses, in the manner of the talmudic homiletic story, magical motifs for didactic purposes. Here a dual tendency is noticeable whereby on the one hand the ritual-magical powers of the sages themselves (which naturally are not identified with sorcery but rather with holiness based on a life of Torah and observance of the divine commandments) are extolled, while on the other hand accusations are leveled at the "other," primarily women and heretics, for acts of sorcery. This labeling is intended to mark out these "others" as dangerous people who act with illegitimate power, and to marginalize them, placing them far from the desirable-legitimate focus of power, that of the sages themselves, who are both the narrators and the heroes of the narratives. The climax of this dual tendency is found in the stories that describe struggles between sages and sorcerers or sorceresses, which, as is to be expected, end in the sages' victory, and in this way exemplify their worthy socio-religious model. It would appear therefore that the contradiction between the halakhic and narrative approaches toward magic is not to be resolved through distinguishing between the "rabbi's genuine viewpoint," which was negative and deprecatory by virtue of their religious beliefs and the laws deriving from them, on the one hand, and their "lip service" to the beliefs of the ignorant masses (which

originated in the penetration of foreign influences), through lack of choice, and for didactic purposes, on the other hand, as was done in the past, but by recognizing the aspirations of the rabbis for a social monopoly over ritual power. The rabbinic demonological stories are to be understood in a similar way. They, too, should be seen as a narrative shaping of motifs that rest upon popular beliefs in both their own circles as well as amongst the masses, with a didactic objective. More than the stories are concerned with demonic reality in itself, they are about the relations between this reality and that of the sages, and more specifically the relative superiority of the sages and their disciples over all that affects the ways of the demons. This includes protection from them and control over them by the power of their holiness, their legal authority, and ritual-magical means. Thus, the demonological stories join the magical and mystical ones in revealing a ramified system of beliefs and ritual practices relating to angels, demons, and sorcery in the Jewish culture of Late Antiquity. Primary magical evidence completes the picture by tying the literary testimony to day-to-day experience and exposing the actual praxis of ancient Jewish magic.

[Yuval Harari (2<sup>nd</sup> ed.)]

### In Medieval Hebrew Literature

**TERMINOLOGY.** The terms "magic" (*kishuf*), "magician" (*mekhashef*), and "witch" (*mekhashefah*) are relatively rare in medieval Hebrew literature, especially when compared with the frequency with which magic practices are mentioned. The underlying reason is undoubtedly the explicit biblical prohibition against the practice of magic (repeatedly dwelt upon in medieval Hebrew literature) and the Bible's abhorrence of magicians and soothsayers. There is, therefore, no favorable allusion to magic practices in medieval literature, and they are rarely dealt with in a purely informative manner, although the numerous texts of the *Genizah* dealing with this topic allow us to understand in how many ways magic was present in Jewish life during the Middle Ages. Such terms as *kishuf*, *mekhashef*, and *mekhashefah* were descriptive of the wicked, sinners, and non-Jews. Magic was discussed in medieval Hebrew literature, but surreptitiously, under the guise of different names, such as *segullot* ("remedies" or "charms"), *kame'ot* ("amulets"), *refu'ot* ("cures"), *goralot* ("destinies" or "fortunes"), *simanim* ("signs" or "omens"), and *refafot* ("bodily itches as a portent"). The medieval writer thus was able to circumvent the term "magic" and eschew a direct confrontation with the biblical prohibition. In fact, the practice of magic was very popular and widespread among medieval Jews, and the number of texts including magical elements is very striking.

**SOURCES AND DISSEMINATION.** Literature on magic is universal in its character, its methods, and its structure. Each society, each language, and every period contributed toward magic literature, enriching it or modifying it in the light of the particular characteristics of the society, the culture, and the times. The main themes and methods in magic were, however, transmitted from country to country, from language to lan-

guage throughout the ages without any basic changes being wrought. In the Middle Ages, Jewish magic literature differs very little from the magic literature of other nations. Magical practices were very widespread during the Middle Ages not only in Jewish communities but also among Muslims and Christians. Textbooks of magic circulated in the three cultures, although theoretical considerations were less frequent. Hebrew works on magic quote extensively from non-Jewish magic literature, citing especially sources that medieval scholarship attributed to ancient Greek authors. The basic terminology and methods found in Hebrew works are similar to those dominant in non-Jewish works. In some Hebrew works a term may be used which was originally Hebrew but is applied in such a way as to show that it was copied from a non-Hebrew work; its Hebrew origin had apparently been unknown to the Hebrew writer, for example, the term *Elo'i Sabaoth* derived from the Hebrew *Elohei Zeva'ot*. Angelology and magic formulas in Hebrew, Greek, and Latin of the Hellenistic period were basic to the development of medieval magic literature. Since this period led to the fusion of Hebrew and non-Hebrew formulas, the process continued throughout the Middle Ages when terms and formulas from Arabic, German, French, Slavic, and other languages were added to medieval Hebrew magic literature. To date there is no serious study on the sources on which medieval Hebrew magic works drew. The various influences have neither been defined nor classified and no clear distinction can therefore be made between the following sources: the Assyrian and Babylonian (which apparently also influenced the Talmud), the Hellenistic (Jewish-Hellenistic and Greek), the ancient Egyptian and their later adaptations during the syncretistic periods of the Roman Empire, the original Arabic and their fusion with the Persian and Indian, and the European which were intermingled with Arabic and other sources. Principally, however, there is as yet no way to distinguish in every case between traditional Hebrew magic, derived from the biblical and talmudic periods, and the magic elements which reached Jewish writers from foreign sources. An example is a Greek and Arabic traditional connection between Saturn and magic; in Jewish medieval thought both magic and Saturn, who is in charge of the Jewish people, are also connected with the Sabbath day (Idel). We know today that Jewish magic in the Middle Ages was strongly influenced by two Arabic treatises, al-Kindi's *De radiis* and al-Majariti's *Picatrix*, which were translated into Latin and Hebrew, but their actual degree of influence has not been sufficiently studied. Until such studies are made, only impressions and generalizations can serve as basis for any assumption as to the nature of medieval Hebrew magic works.

Though there are no detailed studies on hand, there is no doubt that Jewish medieval magic drew on all the above-mentioned sources. Some medieval Hebrew works correspond very closely to non-Jewish magic writings. Others, for example a number of 18<sup>th</sup>-century collections of Hebrew magic formulas, differ little from magic formulas which survived from the geonic period. Collections which originated in North Africa

are very similar to works on magic by Jews in Germany. There is thus no essential difference in the basic magic formulas and the attitude toward magic between the various nations, countries, and periods. The same fusion of ancient and medieval sources is to be found in each of these works, all of which contain Arab, European, and authentic Jewish elements.

**THE CHARACTER OF HEBREW MAGIC LITERATURE.** The character of Hebrew magic literature was influenced not only by the biblical prohibition on witchcraft but by the nature of this literature. Works on magic neither use nor are identified by terms denoting magic, but were written under the guise of concepts which neither reveal their special character nor their contents. There are hundreds of collections on magic, in print and in manuscripts, appearing under such names as *simanim*, *refafot*, *refu'ot*, *goralot*, and *segullot*. These works are usually not devoted only to one branch of magic or popular superstition, but to a variety of practices such as dream interpretation, popular medicine, and amulets. Unfortunately, the complete typology of magic literature has not yet been seriously studied.

Many of these works are anonymous; in others the name of the editor or compiler appears in the introduction. (The term "author" is not applicable to such works, which are nothing but collections drawn from various sources.) Rarely is there anything known of them from other sources; most of them were obscure writers who did not engage in scholarly activities. This may be the underlying reason for the low level of the language and literary merit of most of these works. Some of the writings on magic are attributed to ancient sages and scholars; thus, for example, works which are partly devoted to the interpretation of dreams are often ascribed to the biblical figures Daniel or Joseph; works on *goralot* ("destinies" or "fortunes") are attributed to the wise \*Ahithophel the Gilonite, etc. Babylonian *geonim* and early scholars, from Saadia b. Joseph Gaon to Nahmanides, have had works on magic ascribed to them. Though widely disseminated, works on magic were mostly not written within the framework of medieval and early modern scholarly Hebrew literature. In any case, the corpus of Jewish magic, including complete books and fragments, is very large. Some of the better known works that discuss magic are Maimonides' *Guide of the Perplexed* and *Mishneh Torah*, including sorcery and magic among the forbidden practices; the commentaries on the Pentateuch by Nahmanides (13<sup>th</sup> century); the responsa of Solomon ben \*Adret and the sermons of Nissim \*Gerondi in the 14<sup>th</sup> century; *Nishmat Hayyim* by \*Manasseh Ben Israel, in which the author devotes a long chapter to the description of magical practices; *Derekh ha-Shem* by Moses Hayyim \*Luzzatto, has a section on magic; and *Shalshet ha-Kabbalah*, an important historical work in which the author, Gedaliah b. Joseph \*Ibn Yahya, a Renaissance scholar, also discusses magic.

The literature of the \*Hasidei Ashkenaz, probably more than any other medieval corpus of Hebrew scholarly writings, is a source on medieval magic (12<sup>th</sup> and 13<sup>th</sup> centuries), especially

*Sefer Ḥasidim* and the esoteric works of \*Judah b. Samuel ha-Ḥasid of Regensburg and of his disciples, of which *Hokhmat ha-Nefesh*, a work on psychology by \*Eleazar b. Judah of Worms, is a prime example. The concern of the Ashkenazi Ḥasidim with magic practices and phenomena has its roots in some of their theological ideas.

MAGIC AND MEDIEVAL DISCIPLINES. Medieval man, as reflected in the literature on magic, did not clearly differentiate between magic and other branches of knowledge, especially between medicine, astrology, and magic. There were very different kinds of magic, some of them of a high cultural level, and other more popular types. Cultural magic was considered a branch of medieval science, at the same level as medicine or astrology. Many times, this magic was a kind of alternative medicine. Most of the collections dealing mainly with magic do not distinguish between the treatment of an ailment according to the accepted norms of popular medicine, such as the application of heat, herbs, and certain foods, and magic means, calling for the help of angels and demons to heal the patient. This failure of distinction was not only due to the lack of a scientific framework but to the desire to lend authority and legitimacy to magic formulas when combined with medical practice. These works also do not clearly distinguish between astrology and magic. Works on *goralot* (“destinies” or “fortunes”) include astrological calculations which portend the fate of a man according to the constellations at his birth, and determine his character traits and religious, economic, and social status. The same works also contain magic instructions on how to use the auguries of the constellations for other purposes and how to change a man’s fate through incantations and amulets, etc.

Most of the magic in the extant collections is devoted to *simanim* which derives from the fact that the Talmud, contrary to its injunction against the practice of magic, allows the practice of “signs.” This literature describes various events, feelings, or even the itching of various parts of the human body (*refafot*), which are indicative of an oncoming event. Incantations are often chanted and charms used in an attempt either to nullify an ominous portent or to enhance a benign prophecy. To this category also belongs the literature of “dream interpretation” which describes in detail various occurrences within dreams thought to reveal the future to the dreamer. Sometimes advice is tendered in the use of magical means to prevent the bad dreams from being realized. Compilations of popular medical literature, such as *The Book of Women’s Love* (perhaps 13<sup>th</sup> century), contained many magic (mainly love magic) elements and formulas; most of these practices, reflected in the written materials or transmitted in oral form, were current during the Middle Ages. Their main goal was to manipulate sexuality, intervening in human relationships. Some of these formulas are taken from the tradition of the “practical Kabbalah.”

The *segullah* is basic to all magic formulas and is the main magic means used by the person himself. Knowledge

of many charms is the professional distinction of the expert magician. The central element in the *segullah* is a name or a series of names which is considered holy. The common appellation of a magician in Eastern Europe in the 17<sup>th</sup> and 18<sup>th</sup> centuries as *Ba’al Shem* or *Ba’al Shem Tov* (“owner of the Holy Name” or “owner of the Holy Good Name”) is rooted in this practice. The name used is most frequently that of an angel, or, sometimes, one of the many names of God. Sometimes even the name of a demon is resorted to which would seem to make this form of magic “black magic.” The demon invoked in such charms is, however, thought to be a “bad angel” (*malakh ḥabbalah*) who should be addressed when the magician intends to harm someone, kill an enemy, cause damage, find the whereabouts of a thief and make him return his loot, etc. Some of the names in the *segullah* are common biblical or talmudic-midrashic names, mostly polysyllabic so as to awe the hearer and to seem as strange as possible. Many of the names were culled from *Heikhalot* and *Merkabah* writings, the Hebrew mystical literature of the talmudic and geonic period from which the major part of Hebrew medieval angelology is derived; sometimes even from non-Hebrew sources; others were created anagrammatically according to a definite system, either from other known names or from biblical verses.

The name, which is the essence of the *segullah*, is supplemented with various elements which differ from book to book and even from page to page in the same work. The *segullah*, or the petition for magical intercession (of a supernatural power), must be written in a clear form or enunciated clearly and loudly. Sometimes the time at which the deed should occur (a certain hour of the day or night or a certain day of the month) is also given; an astrological element was thus added to the magical charm. Certain substantive elements are also added, such as bits of flesh, bone, or skin from various animals (or even the human body), or certain herbs or plants. In the classic cases of sympathetic magic sometimes the performer of the act of magic, when he directs an incantation against a certain person, draws a picture of the latter or writes his name, or even molds his likeness in clay. These means were especially resorted to in the case of a thief. The suffering inflicted by sympathetic magic on the thief caused him to reveal the cache of the stolen goods and give them back. Through these means demons could also be compelled to serve man, when an incantation with the name of the culprit proved ineffective.

The *segullah* is used both as a direct magic act to attain a certain aim and as an auxiliary to medical aid, to reveal a man’s fate, to appease or prompt the auguries of a “sign,” or to interpret a dream. An amulet, for instance, is usually nothing more than a *segullah* written in a certain form, so that a person could carry it with him always. Such a charm is usually protective, invoking the heavenly powers to safeguard the wearer against any harm.

The contents of works on *segullot* are arranged according to their purposes. A title states the function of the charm after which there is a description of the charm including the holy names and the other necessary elements. Another type

of *segullot* literature, sometimes called *shimmushim* (“uses”), is arranged according to the holy names indicating the purpose and uses to which each name can be put. Thus, for instance, *Sefer ha-Heshek* lists 70 names of the archangel \*Metatron, after each of which the author gives the use that it can be put to and what magical purpose can best be served by using one particular appellation of this angel. The holy divine names, composed either of 42 letters or 72 letters, which are comprised of units of three or six letters, serve many magic purposes; each name can be the means of achieving a specific magic goal. Treatises on the magic use of the Psalms (*Sefer Shimmush Tehillim*) and on the properties of the members of animals were very common in Jewish houses. Some form of magic was even practiced by rabbis who did not see them as opposed to Judaism (Barkai). “*Shimmushei Tehillim*” (“The Uses of the Psalms”), a body of magic writings, describes the magic power inherent in certain verses and chapters in the Psalms and in some other Scriptures. The Bible was also used for the purpose of “sign” magic, i.e., prophecies. A person practicing this magic would open the Bible, put his finger at random on a certain verse and the content of this verse would reveal the attitude of the Divine Powers to the question or request of the person inquiring.

RELATIONSHIP BETWEEN MYSTIC AND MAGIC LITERATURES. Scholars believe that the extent of the influence of magic on Jewish mysticism has not yet been sufficiently studied. Historical circumstances rather than literary or conceptual affinities have created an impression, especially in modern times, that there is a similarity or even identity between mystic literature and magic in Jewish life and thought. One expression of this view is the term “*kabbalah maʿasit*” (“practical tradition”), which is magic, and “*kabbalah iyyunit*” (“theoretical tradition”), which is mysticism. “Kabbalah” in this context means nothing more than tradition and does not denote any special mystical system. Nineteenth-century scholars of Jewish studies who were fiercely opposed to \*Ḥasidism, which is one derivation of the Kabbalah proper (the mystical ideology), saw Ḥasidism and Kabbalah as representing medieval superstition, and did not try to differentiate between mystical thought and magic practice, which to them seemed to derive from the same source. Their ideas were accepted even by some 20<sup>th</sup>-century scholars.

Still, there is some connection between the development of magic literature and mystical literature. In talmudic times there undoubtedly existed a unique magic literature to which such works as *Sefer ha-Razim*, published in a scholarly edition (by M. Margalioth, 1966; there is an English translation by M.A. Morgan, 1983), clearly testify. The book is an example of early Jewish magic which did not have any mystic tendency, and which is influenced mainly by non-Hebrew sources.

If the magic elements are not very dominant in this kind of rabbinic literature, the writings of the *Heikhalot* and the *Merkabah* have a strong magical component. Included are works of a clear magical character, e.g., *Hakkarat Panim ve-*

*Sidrei Sirtutum*, a work on chiromancy. Even major works of this literature, such as *Sefer Heikhalot Rabbati*, include some material concerning prophecies, signs, and even incantations. According to the conceptual view of *Heikhalot* and *Merkabah* literature, when the angels revealed heavenly mysteries (revelations which constitute the body of this literature) to the talmudic sages they also made esoteric magic disclosures in which they described the divine worlds and eschatological secrets. These texts of early Jewish mysticism include many adjurations of magical character asking the angels to come down and reveal to man the mysteries of heaven and earth, including the complete knowledge of the Torah, and sometimes alluding to the necessary rituals for the heavenly journey of the mystic. The means of achieving the goals of this mysticism is magic; the authors of this literature “attempted to integrate magic into Judaism” (Schaefer). The magical view of the Hebrew language, combining letters for forming divine names, is one of the bases of this form of Jewish mysticism. Medieval scholars, the Ḥasidei Ashkenaz, and the kabbalists who resorted to *Heikhalot* and *Merkabah* literature in their esoteric and mystical speculations also accepted the magic tradition that it embraced and sometimes even practiced it.

Magic is relatively little treated in theoretical Kabbalah writings, especially in works which concentrated on matters concerning the structure of the divine worlds, the *Sefirot*, and the developments within the divine realm (themes central to kabbalistic literature). Many kabbalists, from those in the Gerona circle (13<sup>th</sup> century) on, did not practice magic at all. The doctrines of medicine and astrology are undoubtedly nearer to that of magic than the doctrines of Jewish mysticism. A detailed examination of magic literature clearly shows that most of those who practiced magic, or the authors of works on magic, did not know anything about mysticism in general, or Kabbalah in particular. It is therefore very unlikely that kabbalistic symbolism of the holy *Sefirot*, or the kabbalistic concept of evil, would appear in magic charms. When the *Zohar* became part of the holy literature and widely known, it was used for magic purposes, but no more than the Book of Psalms. The use that both works were put to does not reflect their original content. Supernatural knowledge and powers were, however, attributed to many kabbalists. Even Isaac the Blind, one of the earliest kabbalists who lived in Provence, was described as having the power to distinguish between a new soul, which appeared for the first time in the world, and an old soul, which had been reincarnated. This tradition of magic and supernatural hagiography of prominent kabbalists developed continually up to the times of Isaac \*Luria and \*Israel Baʿal Shem Tov. The writings of Moshe \*Cordovero (16<sup>th</sup> century), the kabbalist of Safed, are also full of magical views, since he adopted a type of Kabbalah very close to astral magic.

Based on a tradition preserved in a talmudic text on the creation of an artificial man, unable to speak, and using techniques found in the *Sefer Yezirah* (combination of letters), medieval kabbalists and ḥasidic circles developed the idea of the *golem*, which was from the very beginning replete with

magic content. There were different modalities of this idea in Franco-Ashkenazi and Sephardic centers, going from the purely material being to the fully spiritual one. Zoharic and Lurianic kabbalists were not interested in the topic, while ecstatic kabbalists and Cordovero paid attention to it. In particular, the Ashkenazi texts dealing with the *golem* were basically magical, as shown by Idel.

Magic in Kabbalah literature is touched upon in discussion of earthly or demonological matters, but even in this literature it was cautiously treated and circumscribed. Few magic elements are found in the Zohar, and in the writings of other early kabbalists there are even less. The case of the ecstatic Kabbalah, the school of Abraham \*Abulafia, is very different: for him, magical techniques like the combination of letters can be a help in attaining the personal mystical experience that endows the mystic with magical powers.

Later magic literature and kabbalistic doctrine were also seldom fused. Hayyim \*Vital describes some magic practices in his autobiographical work *Sefer ha-Hezyonot* ("Book of Visions"), which, however, he does not relate to the special kabbalistic doctrine of his teacher, Isaac Luria. In his theological works, magic is a marginal theme. Though he accepted magic, it did not impinge on his innermost spiritual beliefs expressed in the kabbalistic myth which he set down in many books. The same applies to the writings of many other kabbalists.

The Ḥasidei Ashkenaz discussed magic in their works at length and also had some magic works attributed to them. The relationship they established between esoteric theology and magic speculation was rooted in a peculiar theological development. The Ashkenazi ḥasidic theology is based on the concept that God, far away from the natural world and the laws that govern it, is revealed, according to these laws, within the world of man in specific, well-defined phenomena which confirm to man His existence. Such phenomena, miraculous in character, including magic, witchcraft, and demonology, defy the laws of nature and reveal the power of the hidden Godhead. The Ḥasidei Ashkenaz consequently tried to collect in their writings as many descriptions of such phenomena as possible which they analyzed and on which they commented in the light of their own esoteric doctrine. The inference, however, cannot be drawn that they dealt in practical magic more or less than other scholars of that period. The implication is merely that they were theologically interested in such matters more than others, and therefore included them in their literature.

The Ḥasidei Ashkenaz thus became famous as scholars possessed of magic knowledge, and many legends revolved around them, such as the story about a competition in magic between \*Samuel b. Kalonymus he-Ḥasid, and three non-Jewish magicians; the story about the ability of Eleazar b. Judah of Worms to get very quickly from place to place (*kefizat haderekh*) by the power of a magical formula; the tale of Judah b. Samuel he-Ḥasid who overpowered an evil magician; and many others. How far the legends woven about scholars were removed from the actual lives of these scholars may be seen

by the fact that Abraham \*Ibn Ezra, the Spanish Jewish philosopher and commentator, became the hero of many magic stories (probably because of his astrological works).

Some 19<sup>th</sup>-century scholars described modern Ḥasidism, founded by Israel Ba'al Shem Tov, as a prime example of magic and superstition. While many leaders of the ḥasidic movement believed in magic and practiced it, especially in giving amulets (the Ba'al Shem Tov himself dealt in magic and probably made his living as a popular healer and magician), ḥasidic theoretical literature, the vast homiletic literature which describes its ideology, is devoid of all magic elements. Ḥasidic tales might contain elements of the use of magic or of overcoming magic deeds performed by evil non-Jews, but ḥasidic doctrines eschewed magic elements even more than the kabbalistic literature which the Ḥasidim had inherited and developed. The difference between the "practical tradition" of Ḥasidism, which practiced magic, and the "ideological (theoretical) tradition" of the movement is probably more pronounced in modern Ḥasidism than in any other mystic movement.

**MEDIEVAL JEWISH MAGICIANS.** The terms *mekhashef* ("magician") and *mekhashefah* ("witch") in medieval literature designate two very different categories. A *mekhashef* is a person possessed of secret knowledge in magic which he uses for his own profit or to help others. He is considered a professional and is paid for his services. While in medieval Hebrew literature there are few records of a Jew being described as a *mekhashef*, in the early modern period the usage is much more frequent but under the name \*Ba'al Shem (i.e., "owner of the Holy Name").

*Mekhashef* designates a certain psycho-pathological state, often connected with cannibalism. The term alludes to women and men who wander in forests, singly or in groups, or sometimes live in a community and kidnap babies or even grown-ups in order to eat them or suck their blood. While the term *mekhashefah* frequently recurs in medieval Hebrew literature, the actual phenomenon it represents seems to have been rare. In the 12<sup>th</sup> and 13<sup>th</sup> centuries in Central Europe these vampires were called "*shtria*" for the female (from the Latin *strix*, *striga*) and werewolf for the male. Such vampires do not necessarily possess any supernatural powers or secret knowledge. In *Sefer Ḥasidim*, a 13<sup>th</sup>-century ethical work, there is a description of a baby born with teeth and a tail. The rabbi of the community advised that these be cut, so that when he grew up he would not eat people. This seems to testify to a case where a child was considered to have been born a werewolf, and could be cured naturally. No supernatural elements seem to be involved either in the birth of the werewolf or the proposed cure. A community where women ate children is also described in *Sefer Ḥasidim*. When threatened that if they continued their practice their teeth would be ground on the stones of the well, they stopped. The story is told as a clinical fact (which it probably was) and there seems to be neither any supernatural nor religious connotation or implication. On the other hand, in other stories from 13<sup>th</sup>-century Central Europe

such creatures are immortal. They never die naturally but are killed in a prescribed manner. In one case, a witch was offered divine forgiveness if she were to reveal the secret of how she might be killed. Thus the person who committed the sin of cannibalism could religiously be saved. The phenomenon, apparently pathological in nature, was, in some cases, explained supernaturally – as if such cases were already dead, and therefore could not be killed. The *mekhashefah* does not belong to magic in the strict sense but designates a species of abominable creatures who form a category in themselves to which should be added the beliefs associated with them such as the belief in the “mare,” a woman who strangles men in their sleep (hence the word “nightmare”). Other unnatural creatures who do not fit into either of the above categories should be classed somewhere between demons and magicians, or demons and witches. The term *mekhashefah* and the literature that evolved around it had relatively little influence on the development of medieval Jewish culture; the term *mekhashef*, however, is much more prominent.

In the 17<sup>th</sup> and 18<sup>th</sup> centuries in Eastern Europe the position of magicians (“*ba’alei Shem*”) began to emerge on the Jewish social scene. The *ba’alei Shem* practiced magic and popular medicine, used amulets, drove away demons, and prophesied. Owing to the power inherent in the names they knew to use, they could discover thieves, retrieve lost articles, purify houses from evil spirits, etc. From the historical point of view, however, these magicians were of special significance in that many of them disseminated Shabbatean ideas throughout Eastern Europe; magicians were also instrumental in the development of the ḥasidic movement.

MAGIC IN MEDIEVAL JEWISH SOCIETY. In the opinion of some scholars, a negative attitude in respect to magic has relegated the study of magic, and its role in medieval Jewish society, to the margins of Jewish studies. The existing materials, in particular the fragments of the *Genizah*, have not yet been adequately studied, and we still lack today good monographs on medieval Jewish magic and divination. For that reason, it is not easy to attain an accurate picture of the social role of magic during these centuries. Jewish intellectuals did not consider magic either as an ideological or social challenge which had to be dealt with. But the texts of the *Genizah* show that magic was familiar at both the elite and popular levels of culture (Wasserstrom). The belief in the power of magic was apparently universal in Jewish society, both in the East and in the West, from the beginning of the Middle Ages up to early modern times. Opposition to magic was voiced by but a few which, when expressed in writing, formed a minor element within their work. While Maimonides, like some other Jewish philosophers, rejected magic and the use of amulets, he was not deeply concerned with it and only devoted a few passages to the problem in *Guide of the Perplexed*, much less, for instance, than to his argument with astrology on which he wrote a special treatise. Among others who repudiated magic were Saadiah Gaon (who rejected it in the same way as astrology)

and Hai Gaon; they too, however, did not stress the question in their writings. As a consequence belief in magic hardly ever called forth any defenders in Hebrew literature. In the great 13<sup>th</sup>-century controversy the rabbis of France in their criticism also denounced Maimonides for his opposition to magic; it was, however, a very minor point. Menahem Ziyiyoni’s short treatise on the defense of magic and the belief in demons, *Zefunei Ziyiyoni* (in Ms.), is written from a kabbalistic point of view as were similar treatises by other kabbalists.

The practice of magic (which is quite different from a belief in magic) was also not a major problem in Judaism, though magic as such was condemned outright because of the biblical prohibition and it therefore was practiced under the guise of different names. The practice of “signs,” “charms,” amulets, astrology, and popular medicine was never a subject of serious scholarly discussion. Magic was employed without deep discussion in many areas of life: for influencing people’s feelings and opinions, for healing all kinds of illness, for incantations, for mystical trance-inducement, for apotropaic charms, and even for finding hidden treasures. Some halakhists tried to accept the situation, distinguishing between magical practices that were directly forbidden and other practices that could be seen as not properly magic and were allowed. It was not strange that some magical practices, connected first of all with popular medicine or with human relations, or even with mystical traditions, were explained as something natural, and as such were not forbidden. Other kinds of magical practices, performed with the intention of influencing astral forces, or related to black magic, were usually prohibited. Owing to the biblical prohibition on magic the most vulgar and “black” forms of magic did not become common in Judaism and such practices as necromancy were very rare. While some books on magic contain formulas for killing an enemy by magic means, for love potions, etc., there is no evidence that these were practiced. These formulas were probably copied from non-Jewish sources. Sorcery was many times identified with black magic, and while some jurists did not see in it any real danger, others saw it in the context of demons or destructive angels and considered it forbidden as contrary to God’s will.

As a result the practice of some kinds of magic was not a legitimate and commonly accepted profession in medieval Jewish society and the religious convictions of a man who practiced magic were suspect. Formulas were thus written down since there was no oral transmission within a special class of practitioners of magic. Many Jews, especially in the East, usually consulted non-Jewish magicians rather than Jewish magicians.

The Christian injunctions against magic and witchcraft and the fierce persecutions against those who practiced magic, which started around the end of the 15<sup>th</sup> century, affected in a particular way many \*Conversos, but also old Christian families that had to face similar charges. Jews and Conversos were accused of ritual crimes and were persecuted by the Inquisition, as in the case of “the holy child of La Guardia” at the end of the 15<sup>th</sup> century which was considered a case of black

magic. This kind of attitude does not have parallel in Judaism. There are few examples in Judaism of Jews persecuting Jews because of magic practices. In those rare cases where there is evidence of such persecutions, the accusation served as a camouflage for more fundamental reasons. Thus the accusations of the rabbis of Venice against Moses Ḥayyim Luzzatto for dealing in magic were a guise for their suspicion that he had Shabbatean tendencies. In those Jewish communities where Christian anti-witchcraft persecutions had an influence, such as Italy, the relationship between Jews and non-Jews was closer than elsewhere.

The only social sphere of Jewish life in which magic practice attained legitimacy was in the formulas of the *herem* ("excommunication"). Many *herem* texts have incantations with a clear magic undertone.

The un-transcendental purposes of most magical practices were probably one of the reasons why magic played such a minor role in cultivated medieval Jewish literature. There are few records of major significance in which magic featured, such as \*Joseph della Reina's attempt to hasten the redemption through magic means. Magic literature centers around such minor matters as toothaches and lost articles, and some attempt at prophecy of private persons' destiny. It thus did not always relate to the major historical and ideological problems of medieval Jewish society. The private character of the practice rendered it unimportant in the eyes of both its supporters and opponents so that it never became a major issue of dispute.

In spite of the relatively small influence that magic had on medieval Jewish thought, some scholars consider that the widespread use of magical practices among Jews made the members of other communities see magic as a Jewish specialization. This can in no way justify the fact that Jewish magic became a cause for antisemitism and hatred toward the Jews in the Middle Ages. The belief that every Jew was an evil magician, possessed of supernatural evil powers, was very widespread among certain popular groups of Christians in the Middle Ages and early modern times. In some uncultivated ambiances Jews were believed to be the people of Satan and they thus possessed supernatural secrets. This concept was one of the major sources of persecutions and blood libels throughout that period. Jewish reality in the Middle Ages hardly gave any substance to such accusations or to such an impression of the Jewish people. The basis for it was Christian theology, which in ecclesiastical circles described the Jews as deicides, therefore Satanic, and therefore possessors of magic.

**MAGIDOR, MENACHEM** (1946– ), president of the Hebrew University of Jerusalem. Magidor was born in Petah Tikvah, Israel. He received his academic education at the Hebrew University of Jerusalem, getting his B.Sc. in mathematics and physics in 1965, a M.Sc. in mathematics in 1967, and a Ph.D. in mathematics in 1972. In 1968 he joined the department of mathematics at the Hebrew University. From 1975 to 1977 he was a lecturer in the department of mathematics of Ben-Gurion University and in 1976–78 he was head of the computer science program there. In 1978 he returned to the Hebrew University, where he became professor in 1982. In 1987–89 he was chairman of the Institute of Mathematics and Computer Science and in 1988–89 he was member of the executive committee of the board of governors of the university. In 1992 Magidor was named dean of the faculty of sciences, a position he held until 1996. From 1997 he was the president of the Hebrew University. Magidor was a member of professional and academic associations in the field of mathematics. He served as editor of several academic journals and book series and published some 50 articles.

**MAGIDOV, JACOB** (1869–1943), Yiddish writer and editor. Born in Odessa, he received both a traditional and a secular education. Immigrating to the United States in 1886, he worked in a shirt factory and studied law at night, passing the bar examination in 1904 and for a time practicing law. Active

in the Jewish labor movement from his arrival, he played an important role in 1888 in the founding of the United Hebrew Trades, an important institution devoted to organizing Jewish workers into unions. He was also active in the Socialist Labor Party. Magidov began his career as a writer and editor in the Jewish socialist press in 1894. He wrote for *Di Arbeter Tsaytung* on American politics and became city editor of the *Dos Abend Blat* at the end of the 1890s. After writing for the *Forverts* for a short time he joined *Der Morgn-Zhurnal* in 1901 and remained associated with it for the rest of his life. His book *Der Shpigl fun der Ist Side* ("The Mirror of the East Side," 1923) contains valuable insights into Jewish personalities of his generation. Magidov was one of the many immigrant intellectuals who felt it their duty to bridge the gap between the Yiddish-speaking masses and their new environment. Especially as the city editor of *Der Morgn-Zhurnal*, he served them as an interpreter of events in the new homeland.

[Henry J. Tobias]

**MAGINO, MEIR** (late 16<sup>th</sup> century), Venetian inventor. In 1587 Pope Sixtus v invited him to introduce into the Papal States his process of extracting silk thread from the cocoon twice a year. Concerning this new process, Magino published an Italian work entitled *Dialoghi di M. Magino Gabrielli Hebreo venetiano sopra l'utili sue invenzioni circa la seta* (Venice, 1588); this elegantly printed book contains numerous illustrations, among them a portrait of the author, and a Hebrew poem written by him with an Italian translation by S. Tellarino. A second patent secured for Magino the rights to a new process for polishing mirrors and colored cut glass with a special kind of oil. He was also granted the exclusive right to produce special wine bottles, which are still in use in Roman wineshops. One of his children, GABRIEL induced Ferdinand I of Tuscany to issue the famous appeal to Jews to come and settle in Leghorn (1593). He was promised the office of consul general of the Jews in Pisa and Leghorn, but the appointment did not materialize.

[Attilio Milano]

**MAGNES, JUDAH LEON** (1877–1948), U.S. rabbi and communal leader. He was chancellor and first president of the Hebrew University of Jerusalem. Magnes was born in San Francisco, California, to parents who emigrated from Poland and Germany in 1863. He attended the Hebrew Union College, where he was ordained as a Reform rabbi in 1900. Magnes spent the years 1900–03 studying in Berlin and Heidelberg. During his years in Germany he traveled widely in Eastern Europe and was profoundly moved by the intensive Jewish life he found. It strengthened his earlier sympathetic feeling toward Zionism and brought him to the commitment to make Zionism and service to his people his mission in life.

On his return from Germany he became rabbi of Temple Israel in Brooklyn (1904–05) and afterward the assistant rabbi of Temple Emanu-El in New York (1906–10). At the same time he served as the secretary of the American Zionist Federation (1905–08) and later became the president of the Kehillah of New York \*City from its founding in 1908 until its demise in 1922; he left for Palestine in the same year. Founded to advance and coordinate Jewish life in New York City, the Kehillah dealt vigorously with such internal problems as religious life and Jewish education; in the latter area its Bureau of Jewish Education, directed by Samson \*Benderly, pioneered in the centralization and modernization of Jewish education in the U.S. The Kehillah was active and effective in labor arbitration and helped to repress crime in the immigrant Jewish areas in cooperation with the city's police department. It provided a nexus for cooperation between "uptown" and "downtown" Jews and a forum for Jewish public opinion. Magnes was the Kehillah's moving spirit and most competent leader, spokesman, peace-maker, fund raiser, and philosopher, and thus a leading figure in the metropolis. In 1905 he participated in the Zionist Congress at Basle as a member of the U.S. delegation. It was there that he came face to face with the leaders of Russian Jewry and through them he reached a greater understanding of East European Jewry. Back in New York (after his first visit in Palestine) he headed the greatest Jewish demonstration against the Kishinev pogroms and established the Self-Defense Association which collected funds for the purchase of arms to be smuggled to the Jewish \*self-defense bodies in Russia. In 1904 he joined Solomon \*Schechter's inner circle and moved toward religious traditionalism. In Zionism he became a disciple and follower of Aḥad \*Ha-Am, whom Magnes called "The Harmonious Jew." After the Kishinev pogroms he helped Cyrus \*Sulzberger and Louis \*Marshall in establishing the American Jewish \*Committee. In 1908 he married Beatrice Lowenstein, the sister-in-law of Louis Marshall, and this brought him closer to the leading Jewish circles. At the same time he strengthened his ties with the East European Jews.

Magnes' shift toward religious traditionalism brought him to break with Temple Emanu-El. His unfulfilled demands for religious changes led him to resign in 1910. From 1911 to 1912 he was rabbi of B'nai Jeshurun, a leading Conservative congregation, after which he left congregational work altogether to devote himself to Jewish public service. However, Magnes' opposition to U.S. entry into World War I in 1917 out of pacifist convictions, and his activity in the peace movement during the war, undermined his leadership of a Jewish community firmly committed to the war and concerned over possible imputations of disloyalty. His brilliant U.S. Jewish communal career actually ended in 1917. In 1922 Magnes emigrated with his family to Palestine, where he continued his activities in establishing the Hebrew \*University of which he was the chancellor (1925–35) and first president (1935–48) until his death. He was active in raising funds for the university, in securing the donation of several personal libraries, and in

developing several of its major divisions, especially the Institute for Jewish Studies which was inaugurated in 1924, even before the official opening of the Hebrew University in 1925. The Hebrew University honored him first by publishing *Sefer Magnes* in 1938 and later by naming one of the Chairs of Bible and the press of the University after him, as well as by granting him and Chaim Weizmann the first honorary degrees of the university. With the beginning of World War II, in spite of his pacifistic outlook on life, he called for war against Nazi Germany, serving as chairman of the Supply Board Scientific Advisory Committee of the War. He also helped his life-long friend Henrietta Szold in her Youth Aliyah work and became the chairman of an Emergency Council of Hadassah in Palestine, as well as the chairman of the Middle East Advisory Council of the American Jewish Joint Distribution Committee which he had helped found in World War I. During World War II he helped Jews who escaped to Turkey from Nazi-occupied countries, became responsible for the direction of relief work amongst the Jews throughout the Orient. Out of his pacifist convictions and the belief that the Jews are not like all nations, he sought an accord with the Palestinian Arabs and entered the political arena with the conviction that Jewish-Arab accord is of the greatest importance not only for the peaceful building of the country but also for the Jewish spirit. He started his political agitation immediately after the 1929 disturbances (see Israel, State of: Historical Survey), stating, "One of the greatest cultural duties of the Jewish people is the attempt to enter the promised land, not by means of conquest as Joshua, but through peaceful and cultural means, through hard work, sacrifices, love and with a decision not to do anything which cannot be justified before the world conscience" (Opening Speech of the Hebrew University Academic Year 1929/30). Magnes renewed his activities after the riots in 1936 and opposed the Royal Commission's suggestion for the partitioning of Palestine, always believing in the policy of establishing Palestine as a binational state and feeling that it was his personal mission to bring the Arabs and Jews together (see Berit Shalom; Palestine Partition and Partition Plans; Palestine, Inquiry Commissions on). With this belief he carried on his political activities until his death in New York in 1948 while on a visit there. He was later reinterred in Jerusalem. A Judah L. Magnes Memorial Museum was set up in Oakland, California, in 1961, and later moved to Berkeley. Magnes' writings and speeches were collected in *War-Time Addresses 1917-1921* (1923), *Addresses by the Chancellor of the Hebrew University* (1936), and in *The Perplexity of the Times* (1946).

[Lloyd P. Gartner / Daniel Efron]

**MAGNES MUSEUM, JUDAH L.** Located in Berkeley, in a century-old mansion about a mile from the University of California, the Magnes Museum contains the third largest collection of Judaica in the United States. The Museum was founded in 1962 in Oakland by the New York-born Jewish educator Seymour Fromer, with editor and writer Rebecca Camhi Fromer as co-founder, and moved to its current location four years later. It is named in honor of Judah L. Magnes, who was born in San Francisco in 1877 and raised in Oakland, the first native Californian to receive rabbinical ordination. Magnes was the founder and first president of the Hebrew University of Jerusalem and his friend and colleague Martin Buber became honorary chair of the museum soon after its inception.

During Seymour Fromer's 36-year tenure as museum director, and following his retirement in 1998, the museum has collected, preserved, and made available artistic, historical, and literary material reflecting Jewish life and culture throughout history. In 1968, the Siegfried Strauss Collection was acquired as the core of the museum's ceremonial art holdings, which have expanded to include one of the world's largest collections of Hanukah menorahs and Torah binders, costumes, and other textiles. The museum also rescued artifacts from endangered Jewish communities such as Czechoslovakia, Morocco, Egypt, and India.

Over the decades the museum has acquired thousands of prints, drawings, portfolios, and posters of Jewish interest including works by Hermann Struck, Ben Shahn, and Marc Chagall. It holds the works of painters such as Max Liebermann, Daniel Moritz Oppenheim, Toby Rosenthal, Lazar Krestin, Lesser Ury, Muriel Minkowski, Isadore Kaufman, and Raphael Soyer; and sculptors such as Elbert Weinberg and Harold Paris. In 1974, the museum won accreditation by the American Association of Museums, the first U.S. Jewish museum to receive such recognition, and three years later was a founding member of the Council of American Jewish Museums.

The museum is also a repository for historical documents of Jews in the American West. Its Western Jewish History Center, initiated in 1967 and directed for more than three decades by San Francisco State University Professor Moses Rischin, was the first regional Jewish history center in the U.S. It contains a comprehensive archival research library, including letters and diaries, organization reports and minutes, portraits and photographs, marriage and death certificates, and Anglo-Jewish newspapers published since 1857. In addition, the Western Jewish History Center has published more than a dozen books on Northern California Jewry: bibliographies, narrative histories, and personal memoirs. Through its Commission for the Preservation of Pioneer Jewish Cemeteries and Landmarks, the Museum has restored, and continues to maintain, seven Jewish Gold Rush cemeteries in the California Mother Lode in the foothills of the Sierra Mountains.

The Museum sponsored the Jewish-American Hall of Fame, which has minted medals annually in recognition of Jews who have made significant contributions to American

life. Annual poetry, video, and photography competitions were established to showcase the work of contemporary artists and filmmakers. The Museum's Harry and Dorothy Blumenthal Rare Book and Manuscript Library has a significant collection of illuminated *ketukbot*, manuscripts, and printed materials relating to Jewish customs and ceremonies, and to Jews in India and the Karaites.

From its inception, the Magnes has made Holocaust studies one of its leading priorities and was one of the first museums to have a gallery devoted to the artifacts and art of the Shoah. In the mid-1960s, under the guidance of leading Oakland Rabbi Harold Schulweis, it established the Institute for the Righteous Acts, a center documenting and analyzing the altruistic behavior of rescuers of Jews during the Nazi Era. The museum has published numerous survivor memoirs and has emphasized the post-liberation period, with a publication and exhibit on the detention camp in Cypress, and several works on the Displaced Persons camps.

Drawing on its own collections and loans from the U.S., Europe, and Israel, the Magnes has maintained a regular schedule of art, history, and ethnographic exhibits on Jewish life and culture. The Jacques and Esther Reutlinger Gallery was built in 1981 to accommodate changing exhibits and associated educational programs.

Especially in the 1970s and 1980s, the museum was one of the key catalysts of a Jewish cultural renaissance in the Bay Area as Fromer nurtured many young Jewish scholars and artists. He provided studio and exhibition space for the revival of illuminated Ketubot, led by David Moss; he assisted Deborah Kaufman in founding and developing the first Jewish Film Festival; he commissioned the California Jewish historian Ava Kahn to create educational materials for schools; he provided the impetus to Fred Rosenbaum who founded the adult school *Lehrhaus Judaica* and wrote several books on local Jewish history published by the museum.

In 2002, a younger Jewish museum in San Francisco emphasizing contemporary art merged with the Magnes. But disagreements about the direction of the merged institution resulted in a de-coupling in about a year. The Magnes looks forward to erecting a new center in the growing arts district of downtown Berkeley.

[Fred S. Rosenbaum (2<sup>nd</sup> ed.)]

**MAGNIN, EDGAR FOGEL** (1890–1984), U.S. Reform rabbi and communal leader. Magnin was born in San Francisco to a well-known mercantile family. He was ordained at Hebrew Union College (1914). After a year as rabbi in Stockton, California (1914), Magnin led Congregation B'nai B'rith, called

from 1929 onward the Wilshire Boulevard Temple in Los Angeles, which grew under his leadership from 400 families to 2,000 to become one of the largest and most influential congregations in the country. During his tenure, the landmark building on Wilshire Boulevard that still serves as the home of his congregation was built and opened. His service to the congregation coincided with the dramatic expansion of Los Angeles Jewry in size and in influence. Outspoken, colorful, forceful, Rabbi Magnin was for many decades the unofficial voice and representative of the Los Angeles Jewish community in a variety of religious, governmental, social, educational, and cultural organizations and institutions and the leading voice of West Coast Reform Judaism. He was an early pioneer in Christian Jewish dialogue. During World War II he represented the Jewish Welfare Board and traveled to combat zones under the auspices of the National Conference of Christians and Jews. Within the Jewish community he was a leader in the Los Angeles Jewish Community Council, Cedars-Sinai Hospital, University Religious Conference, Los Angeles Hillel Council, Hebrew Union College-Jewish Institute of Religion, and B'nai B'rith, among many others. Rabbi Magnin was a lecturer in history at the University of Southern California (1934–55) and at the California School of Hebrew Union College. The graduate school at HUC in Los Angeles is named the Edgar F. Magnin School of Graduate Studies. Deeply involved in political life, he delivered a prayer at the first inauguration of Richard M. Nixon in 1969. Author of *How to Lead a Richer and Fuller Life* (1951), he was columnist for the *Los Angeles Herald Examiner* and the Anglo-Jewish weekly *Heritage*. The street in front of the temple is name Edgar F. Magnin Square.

[Max Vorspan]

**MAGNIN, MARY ANN COHEN** (1849–1943), founder of I. Magnin and Company, a fashionable department store catering to an exclusive clientele in the western United States. An extraordinary businesswoman known for her fashion sense and insistence on quality, Magnin, the daughter of a rabbi, was born in Scheveningen, Holland, and emigrated to London with her family. In 1865 she married Isaac Magnin, a Dutch-born gilder and carver in the Great Synagogue of London. The couple had eight children, seven of whom were born in London. In the mid-1870s, in the wake of the California gold rush, the family journeyed around Cape Horn to San Francisco, where Isaac hoped to locate gilding work. Magnin, who had learned fine sewing and lace-trimming from her mother, began making baby clothes, lingerie, and bridal trousseaux to supplement the family's income. She opened a small store in Oakland, before moving her business to San Francisco, soon hiring seamstresses to keep up with orders. Renamed I. Magnin in 1877, the store relocated to the city's prime commercial district. Despite its name, Isaac Magnin, who died in 1907, was not involved in its management. As Magnin brought her sons into the business, merchandise selection expanded with fine women's wear from New York and Europe. Beyond the main San Francisco store, others were built across the west-

ern United States, including Los Angeles, Seattle, Oakland, Santa Barbara, and other fashionable locales. All stores were designed by respected architects and the buildings became instant landmarks. When her store was destroyed by fire following the 1906 earthquake, Magnin retrieved her merchandise from the spared Customs House and continued to sell garments from her undamaged home, hiring carriages to bring customers to her makeshift store. In this way, she clothed the new needy and made a substantial profit. Dubbed "Queen Victoria" by her family because of her regal demeanor, Magnin lived into her mid-nineties, daily inspecting the main San Francisco store until her death.

[Ava F. Kahn (2<sup>nd</sup> ed.)]

**MAGNUS**, English family. SIR PHILIP MAGNUS (1842–1933) was an educator and politician. Born in London, he was a minister of the West London Synagogue of British Jews (Reform) from 1866 to 1880, and lectured in applied mathematics at University College, London. In 1880 Magnus was appointed organizing secretary and director of the newly established City and Guilds of London Institute. He served on the Royal Commission whose report led to the Technical Education Act of 1884. Magnus was responsible for inclusion of a faculty of engineering at the reconstructed London University in 1889. From 1906 to 1922, he was the university's member of parliament, the first Jew to be elected for a university seat. He was knighted in 1886 and created a baronet in 1917. Magnus played a leading part in Anglo-Jewish affairs, as chairman of the council of the West London Synagogue and as a vice president of the \*Board of Deputies of British Jews and the \*Anglo-Jewish Association. He was violently opposed to Zionism and was one of the founders of the anti-Zionist League of British Jews. Sir Philip's wife KATIE MAGNUS (1844–1924) was a writer. The daughter of the Portsmouth goldsmith and communal figure Emanuel Emanuel, she published traditional and historical tales for young readers and her often reprinted *Outlines of Jewish History* (1886) was an especially successful evocation of the past. Her *Jewish Portraits* (1888) included studies of \*Judah Halevi, \*Heine, and Moses \*Mendelssohn. Sir Philip and Lady Magnus' son, LAURIE MAGNUS (1872–1933), began his writing career mainly with studies of English poetry. In 1902 he wrote *Aspects of the Jewish Question*, which revealed him to be an anti-Zionist like his father. Four years later, in *Religio Laici Judaici* ("The Faith of a Jewish Layman"), he again propounded the view that Judaism was a religion and not a nationality. For 14 years, from its inception in 1917 to its suspension, he edited the anti-Zionist *Jewish Guardian*. He was active in Jewish communal life as a warden of the West London Reform Synagogue, a member of the council of Jews' College, London, and president of the Union of Jewish Literary Societies. His

most important books were *Dictionary of European Literature* (1926) and *The Jews in the Christian Era and their Contribution to its Civilization* (1929). He was also a director of Routledge, the publishers. He married Dora (c. 1882–1972), the daughter of Sir Isidore \*Spielmann. As Laurie Magnus shortly predeceased his father, the baronetcy devolved directly upon his son SIR PHILIP MONTEFIORE MAGNUS (1906–1988). Educated at Westminster school and Oxford, he was originally a civil servant before becoming a full-time writer. He was the author of a number of successful and highly regarded biographies: *Edmund Burke* (1939), *Sir Walter Raleigh* (1952), *Gladstone* (1954), *Kitchener* (1958), and *King Edward VII* (1964). He severed his connections with Judaism, and in 1951 formally added his wife's family name to his own, becoming Sir Philip Magnus-Allcroft. His best-selling biography of Gladstone is credited with restoring the reputation of the Victorians after its decline following World War I.

**MAGNUS, EDUARD** (1799–1872), German painter. Born in Berlin, Magnus studied medicine, philosophy, and architecture and traveled in France, Italy, Spain, and England before turning to painting. Magnus was a member of the generation of painters who effected the changes of art in Berlin in the 1830s and 1840. Magnus' work reflects the transition in German art of the period from Biedermeier to Realism. Beginning as a Nazarene (see Philipp \*Veit), he developed a romantic neoclassicism influenced by the French painter Ingres, and finally a realistic style. He had a good reputation as a portrait painter. His paintings differ from other portraits in the posture of his figures and in their natural facial expression, as seen in the 1845 portrait of Felix Mendelssohn Bartholdy (private collection). Among his other subjects were the singer Jenny Lind, the sculptor Thorwaldsen, and members of the Prussian royal family. Magnus also left some paintings recording his travels. He perceived the talent of the young artist Adolph Menzel and encouraged him by buying his paintings. He was baptized as a child.

[Jihan Radjai-Ordoubadi (2<sup>nd</sup> ed.)]

**MAGNUS, HEINRICH GUSTAV** (1802–1870), German chemist and physicist. Magnus, who was born in Berlin into a wealthy family, left Judaism. He began teaching at the University of Berlin in 1831. From 1845 to 1869 he was professor of physics and technology at Berlin, and in 1861 became rector of the university. His numerous discoveries include the first platinum-ammonia complex, Magnus' green salt

(Pt(NH<sub>3</sub>)<sub>4</sub>)Pt-Cl<sub>4</sub>) and the “Magnus Effect.” The latter referred originally to projectiles which, subjected to rapid rotation, are turned aside from their original direction by forces which act upon them crosswise. It has important aerodynamic applications.

[Samuel Aaron Miller]

**MAGNUS, MARCUS** (also known as **Mordecai ben Manlin Dessau, Raubach, and Weisel**; d. 1736), court agent of the Prussian crown prince, later King Frederick William I. In his struggle for power in the \*Berlin community, his great rival was Jost \*Liebmann and later Liebmann’s widow, Esther. In 1709 he became head of the community and in 1720 the spokesman for provincial Jewry before the Prussian authorities. After a protracted quarrel, in which both sides appealed to the king, Magnus persuaded the community to erect one public synagogue instead of the private ones maintained by Liebmann and the Veit and Riess families (1712/14). In 1722 he was appointed salaried permanent chief elder of the Berlin community together with Moses Levi \*Gomperz, a position he held until his death.

[Meir Lamed]

**MAGNUS, PAUL WILHELM** (1844–1914), German botanist. His father, Meyer Magnus, was a member of the Berlin City Council. Under the influence of the botanist Paul \*Ascherson, the young Magnus abandoned the thought of a medical career and turned to the study of botany. After obtaining his degree, Magnus was invited by the Ministry of Agriculture to participate in scientific surveys of the North and Baltic Seas. His studies of specimens brought back from these expeditions led to important contributions on the growth patterns of algae as well as to pioneering investigations of the chytrids, an obscure and still poorly understood group of fungi. Magnus joined the faculty of the University of Berlin in 1875 and was promoted to the rank of *Professor Extraordinarius* in 1880. In 1911 the honorary title of *Geheimer Regierungsrat* was conferred upon him. His most important work was concerned with the systematics and life histories of a number of parasitic fungi.

**BIBLIOGRAPHY:** G. Lindav, in: *Berichte der deutschen botanischen Gesellschaft*, 32 (1914), 32–63.

[Mordecai L. Gabriel]

**MAGNUS, RUDOLPH** (1873–1927), German physiologist and pharmacologist. Magnus, who was born in Brunswick, became one of the foremost co-workers of the famous physiologist Sir Charles Sherrington in Oxford. He investigated the mechanisms governing the posture and balance of the body and discovered its center of reflexes in the brainstem up to the

midbrain. He became lecturer in pharmacology at Heidelberg until his appointment at Utrecht (1908), where he founded the first pharmacological institute in Holland. Magnus studied the pharmacology and physiology of the intestines, and worked on digitalis. In 1924 he collected the works of his institute in *Koerperhaltung; Koerperstellung, Gleichgewicht und Bewegung bei Saeugern*, with A. de Klein (1930); and *Lane Lectures on Experimental Pharmacology and Medicine* (1930). Other works are *Vom Urtier zum Menschen* (1908) and *Wilhelm Boelsche* (1909).

[Nathan Koren]

**MAGNUS, SOLOMON WOLFF** (1910–1992), Zambian lawyer and politician. Born in Russia, Magnus was taken to England as a child. He was educated at University College, London, and at Gray’s Inn. Magnus practiced at the bar, and later served in British intelligence during World War II. He went to Zambia (Northern Rhodesia) in 1959 and in 1962 was elected to the Legislative Assembly. In 1968 he was made a High Court judge, serving until 1971. From the 1970s he again lived in England and was commissioner of the Foreign Compensation Commission from 1977 to 1983. He was active in Jewish affairs both in England and in Zambia, where he headed the Jewish community. Magnus was a prolific legal writer, especially on housing and tenant law, and was the author or co-author of many standard legal textbooks.

**MAGYAR ZSIDÓ SZEMLE** (“Hungarian Jewish Review”), Hungarian Jewish monthly journal which was established in 1884 and appeared until 1948 in a total of 65 volumes. During the first decade each volume of *Magyar Zsidó Szemle* contained more than 600 pages, but the number was subsequently reduced; in the period of crisis following the two world wars only individual issues were published annually. The aims of the journal were: to serve as a platform for Hungarian Jewry; to deal in Hungarian with Jewish scholarly subjects; to publish sources of the history of Hungarian Jewry; to discuss problems of religious education; and to review works on Judaica and Jewish history published outside Hungary. The editorial board was headed by professors and directors of the Budapest rabbinical seminary: W. \*Bacher (1884–90), L. \*Blau (1891–1930), and D.S. \*Loewinger (1931–48). The first associate editors did not belong to the seminary (J. Bánóczy, 1884–90; F. Mezey, 1891–95), but the subsequent ones were professors and lecturers at that institute: \*M. Guttman, H. Guttman, S. \*Hevesi, F. Hevesi, D. Friedmann, J. Hahn, A. \*Scheiber, and M. Weiss.

Attempts were made to transfer some of the many and varied subjects covered by the journal to periodicals devoted to special topics: *Yavneh*, which dealt with problems of religious education (1928–30, vols. 1–3), and *Moriah*, in which sermons were published (1930, vol. 1). Of the appendices to the journal, the most important is the Hebrew supplement

*Ha-Zofeh me-Erez Hagar* which appeared from 1911 onward. Among its contributors were distinguished Judaic scholars in the world. Until the outbreak of World War I its first four volumes appeared as a supplement to *Magyar Zsidó Szemle*. Subsequently from 1921 to 1930 it was published separately as a quarterly, under the title of *Ha-Zofeh le-Hokhmat Yisrael*.

During this decade the circle of its scholarly contributors widened still further and the journal became a focal point of scholarship of prime importance in the Jewish world. After *Ha-Zofeh* ceased publication, its role was continued by *Ha-Soker*, which appeared between 1933 and 1940 (i–vi) under the editorship of D.S. Loewinger, with J.M. Guttman, F. Hevesi, and D. Friedmann as associate editors. Between the two world wars a change also took place in the contents of *Magyar Zsidó Szemle*, in which there began to appear articles not only in Hungarian but also in other European languages, as well as in Hebrew. The authors of these articles were Hungarian Jewish scholars, as well as Jewish and non-Jewish scholars from Hungary and other countries.

[David Samuel Loewinger]

**MAḤAL**, abbreviation of *Mitnaddevei Huz la-Arez* (Foreign Volunteers), the term used for volunteers from abroad, mainly Jews, who enlisted in the Israel Defense Forces (IDF) and participated in the \*War of Independence, 1948/49. In practice the Maḥal section of the IDF Manpower Branch handled volunteers who were citizens or residents of countries outside Eastern and Central Europe. No reliable statistics are available, but it was officially estimated that Maḥal comprised about 5,000 volunteers. Of these, about 1,500 were from U.S.A. and Canada, about 500 from South Africa, and about 1,000 from Great Britain. The small Jewish community of Finland contributed the largest proportion of volunteers, a total of only 30, but 2% of its strength.

The first groups of volunteers were organized after the UN General Assembly recommended the partition of Palestine in November 1947. In some instances, the initiative was spontaneous and local. This was the case in Canada, where two Jewish ex-servicemen issued a call for volunteers for Israel. The same was true in Scandinavia. In South Africa, the movement was organized after the arrival of two representatives of the \*Jewish Agency who contacted the South African Jewish servicemen's association. By the beginning of 1948, volunteer organizations were at work in most Jewish communities in the Western world. In many countries the activities were under cover: the official destination of the volunteers was France. A small number of volunteers, mainly with military skills urgently needed by the \*Haganah, were smuggled into the country before the State of Israel was proclaimed. The majority of the volunteers were channeled through training camps in France and Italy, organized by the Haganah European Command (with headquarters in Paris) and staffed by instructors from Palestine. Most were

World War II veterans, and some had been officers. Transport facilities across the Mediterranean were difficult to arrange.

On arrival, the Maḥal volunteers were absorbed in IDF units according to the need for reinforcements, not fighting in separate formations. They thus fought on all fronts. Their contribution was not in numbers but in quality and experience, most necessary in a new army whose fighting tradition was that of an underground movement. Maḥal's major contribution was to the air force, which was organized, commanded, and to a large degree, staffed by overseas volunteers and by foreign air force veterans on special contract. Maḥal volunteers also played an important part in staffing the army medical corps. Individual volunteers also made important contributions to the engineers' corps, the signal corps, the armored units, and the artillery. Approximately 150 Maḥal volunteers were killed in action, the majority from U.S.A. and Canada. About 300 remained in Israel or returned later to settle there, but the majority came, fought, and returned to their countries of origin.

[Herbert Pundik]

**MAHALALEL BEN SHABBETAI HALLELYAH** (d. after 1675), rabbi, kabbalist and Hebrew poet. Born at the beginning of the 17<sup>th</sup> century in Civitanova, Mahalalel suffered many hardships in his youth in Italy as a result of which he seems to have been compelled to wander to various places. Before 1660, he was appointed rabbi of Ancona. He was known primarily for his collection of poems and *piyyutim*, *Hallelyah*, recited in synagogues on Sabbaths and festivals. This collection also included prayers which were kabbalistic in spirit. Mahalalel and his community were ardent believers in \*Shabbetai Zevi even after his apostasy in 1666. Two completely different versions of his hymn to Shabbetai Zevi and his prophet, \*Nathan of Gaza, appear in *Hallelyah*, one version, apparently, composed before and the other after the apostasy. Some of the poems from this collection were published by S. Bernstein (see bibliography). From those of Mahalalel's letters which were also included in this collection and published in part by Bernstein, it seems that he had close ties with the great contemporary scholars in Italy. The following works by him remain in manuscript: *Kodesh Hillulim*, a commentary on the Pentateuch, and *Hallel Gamur*. Sixty-eight halakhic rulings, his responsa, are included in manuscripts (Mantua, Municipal Library, Ms. 88; Ferrara, Talmud Torah, Ms. 20/1).

Wilensky, in: *Sinai*, 25 (1949), 66; G. Scholem, *Shabbetai Zevi*, 2 (1957), 404f.; idem, in: *Sefer ha-Yovel Z. Wolfson* (1965), 225–41.

[Abraham David]

**MAHALLA AL-KUBRA**, town in Lower Egypt, halfway between \*Alexandria and \*Damietta. There was a flourishing Jewish community in Mahalla al-Kubra under the \*Fatimids. Yosef ha-Yerushalmi, who stayed in Mahalla al-Kubra for a short time, sent a letter to this community at the end of the 11<sup>th</sup>

century. The community in Mahalla al-Kubra is noted in the Ebiatar Gaon scroll from the second half of the 11<sup>th</sup> century. \*Benjamin of Tudela, the 12<sup>th</sup>-century traveler, relates that he found 500 Jews living there (E.N. Adler (ed.), *Jewish Travelers* (1930), 74). According to a list of contributions to ransom Jewish prisoners, the sum donated by the Mahalla community in the middle of the 12<sup>th</sup> century was the largest of the Delta communities (Mann, *Egypt*, 2 (1922), 290). Many documents written in Mahalla during the 12<sup>th</sup> and early 13<sup>th</sup> centuries have been found in the Cairo \**Genizah*. The Jews of Mahalla were engaged in handicrafts and commerce, such as the silk trade. According to a marriage *takkanah*, in 1187, R. Perahyah b. Joseph was *dayyan* in Mahalla. The community developed after the great fire in Fustat in 1168. Rabbi Ḥayim ben Hanel ben Abraham al-Amshafiti settled there after the fire. He was a famous physician and served also in the Fatimid court. Joseph \*Sambari, the 17<sup>th</sup>-century Egyptian chronicler, mentions the *Sefer Torah* in the synagogue of Mahalla, which was read only on the New Moon and on which people took the oath (Neubauer, *Chronicles*, 1 (1887), 119). A document from the year 1726 reports that the local Jews were ruled by the Jewish leaders of the Cairo community. A document from 1772 notes the *gabbai* of the synagogue was the leader of the community. The *shoḥet* Isaac ben Solomon Cohen Yadi'a Karmon was also a *melammed*, *sofer*, and cantor. In 1729 the leader of the community was the Spanish Rabbi Abraham Zadik. In this century the Spanish congregation was wealthier than the Must'arab congregation. Abraham Zadik was a merchant. He obtained a ruling from the Muslim court of law allowing for the restoration of the synagogue in Mahalla. In the 19<sup>th</sup> century the community sent part of its income to the community of Cairo. In 1896 the community paid money to the representative of the Vizier Ahmad, according to local tradition to pay for the use of their synagogue. According to popular tradition, the tomb of R. Ḥayyim ibn al-Amshafiti is situated under the synagogue and pilgrimages (Arabic *ziyāra*) were held there every year on the first day of Iyyar. According to Jacob \*Saphir (*Even Sappir*, 1 (1866), 21b), in the middle of the 19<sup>th</sup> century there were 20 Jewish families in the town. As was the case with other Egyptian Jewish communities, Mahalla's Jewish population increased considerably at the end of the 19<sup>th</sup> century, and by 1897 there were 200 Jews there. When the Zionist movement spread in the beginning of the 20<sup>th</sup> century, the Jews of Mahalla established a Zionist association. In 1901 the rabbis of Cairo declared their new *kiddushin* regulation in Mahalla al-Kubra. The Jewish population fell to 91 by 1927, and further declined to ten families by 1937. In 1932 Israel Ben-Ze'ev visited the place and found there an old cemetery from the time of Maimonides. For many generations this cemetery was the cemetery of the Delta Jews. In the Jewish ghetto he found a few old buildings and a synagogue. In the beginning of the 20<sup>th</sup> century the ghetto was closed at night.

[Eliyahu Ashtor / Leah Bornstein-Makovetsky (2<sup>nd</sup> ed.)]

**MAHANAIM** (Heb. מַחֲנַיִם), locality east of the Jordan which was named by Jacob before he crossed the Jabbok on his way to \*Penuel; according to the etiological version in Genesis 32:3, he named it “God’s camp” after he saw the angels of God there. It was on the border between the territories of the half-tribe of Manasseh and of the tribe of Gad (Josh. 13:26, 30); it also appears as a levitical city in Gad (Josh. 21:38; 1 Chron. 6:65). After the disastrous battle of Mt. Gilboa, Abner son of Ner, captain of Saul’s army, took Ish-Bosheth, Saul’s son, to Mahanaim and established it as the capital of the dynasty of Saul (11 Sam. 2:8); from Mahanaim he started out on his ill-fated expedition to Gibeon and to it he later returned (2:12, 29). It was also chosen by David as his capital during Absalom’s rebellion; here he received supplies from Barzillai and other Gileadites (17:24, 27), set out for battle with the rebels, and received the news of Absalom’s death. It appears for the last time in the Bible as the capital of Solomon’s seventh district with Ahinadab the son of Iddo as its governor (1 Kings 4:14). In Shishak’s list of conquered towns, it occurs as one of the cities captured during his campaign in the fifth year of Rehoboam. All sources point to its location in the vicinity of the Jabbok in central Gilead, but its exact identification is disputed. The earliest identification of the place with Khirbat al-Makhna 2.5 mi. (4 km.) north of Aijalon, following Estori ha-Parḥi (13<sup>th</sup> century), has been discarded by modern scholars. Dalman was the first to point to the twin site of Tulūl al-Dhahab on the Jabbok; Glueck, however, would look there for Penuel. Aharoni suggests that the western mound of Tulūl al-Dhahab is Mahanaim and that the eastern mound is Penuel. De Vaux and Noth suggest Tell al-Ḥajaj, uphill and to the south of the Jabbok.

**BIBLIOGRAPHY:** Glueck, in: *AASOR*, 18/19 (1939), 232–5; EM, s.v. (incl. bibl.); Aharoni, *Land*, index.

[Michael Avi-Yonah]

**MAḤANAYIM** (Heb. מַחֲנַיִם; “Two Camps,” allusion to Gen. 32:3 and other verses, although biblical \*Mahanaim was in Transjordan), kibbutz in northern Israel in the Ḥuleh Valley, affiliated with Ha-Kibbutz ha-Me’uḥad. First founded as a moshavah for Orthodox Jews in 1898, but soon abandoned. In 1902, the \*Jewish Colonization Association (ICA) settled a small group there whose economy was to be based on tobacco cultivation. The attempt failed, as did another plan to settle Jews from the Caucasus on the site to raise beef cattle. A further attempt was made in 1918, when a laborers’ group set

out to establish a moshav there. Finally, in 1939, the present kibbutz was established, when the Jewish institutions stepped up settlement on the land as a reply to the British \*White Paper (1939). In 1970 Maḥanayim's economy was based on intensive farming. At the outset of the 21<sup>st</sup> century its economy included a few farming branches and industry based on Diuk Technology, a leading manufacturer of building profiles and metal components for solar heaters. In addition, Mahanayim had guest rooms and an interest in a nearby tourist site. Also nearby was the Maḥanayim airfield, servicing the northeastern part of the country. In the mid-1990s, the kibbutz population was approximately 440, declining to 361 in 2002.

[Efraim Orni / Shaked Gilboa (2<sup>nd</sup> ed.)]

**MAHER SHALAL HASH BAZ** (Heb. מָהֵר שָׁלַל הָשׁ בָּז), traditional vocalization of the name which, according to Isaiah 8:3–4, \*Isaiah was commanded by the Lord to give to the son who was born to him during the Aramean Ephraimite war against Judah (734/3–732 B.C.E.), with the explanation that “before the lad is able to call ‘father!’ and ‘mother!’ the wealth of Damascus and the spoils of Samaria shall be carried off before the king of Assyria.” Since the four words express twice the idea of speed and booty, it is easy to understand how the name can signify that, but the traditional vocalization leaves the parallelism imperfect; for according to it the words mean literally “Hurry, spoil! Booty has rushed.” It therefore seems probable that either the vocalization of the third word is to be corrected to *hush*, in which case the name will mean, literally, “Hurry, spoil! Rush, booty!” or the vocalization of the first word is to be corrected to *mihar*, yielding the literal sense, “Spoil has hurried, booty has rushed.” Such prophetic namings as portents of the future notoriously not only portend the future but help to bring it about, exactly like other prophetic acts that symbolize what they predict (see \*Prophecy). Accordingly, the writing involving the four words in 8:1–2 is also intended at once to portend and to effectuate the early plundering of Damascus and Samaria by the Assyrians; on some problems of detail, see Isaiah A, Panel 3, Field A.

[Harold Louis Ginsberg]

**MAHLER, ARTHUR** (1871–1916), classical archaeologist and Zionist parliamentarian. Born in Prague, from 1902 Mahler was a professor of classical archaeology at the German University in Prague. He joined the Zionist Movement at the beginning of the 20<sup>th</sup> century, and in the elections of 1907 he was elected, together with A. Stand and H. Gabel, to the Austrian parliament on a pro-Zionist ticket. Together they established the Jewish Club headed by B. Straucher, which was the first of its kind in parliamentary history. Because of the Austrian government's intrigues and the influence of Jewish assimilationists, however, the pro-Zionist list lost the 1911 elections. Mahler then left Prague and settled in Vienna.

[Getzel Kressel]

**MAHLER, EDUARD** (1857–1945), Hungarian Orientalist, mathematician, and astronomer. Mahler was born in Czipfer, Hungary. In 1882 he became assistant to the astronomer Theodor Oppolzer at the Vienna Observatory and, in 1885, assistant at the Institute of Weights and Measures. The same year he published his *Astronomische Untersuchungen ueber die in der Bibel erwahnte aegyptische Finsterniss* and *Astronomische Untersuchung ueber die in hebraeischen Schriften erwahnten Finsternisse*. (“Astronomical Researches on the Egyptian Darkness Account in the Bible” and “Astronomical Research on the Accounts of Darkness in the Hebrew Scriptures”). He had already written some important mathematical studies, particularly on the theory of surfaces, but his interest turned more and more to astronomy and chronology of the ancient Orient, as is evident in his *Biblische Chronologie und Zeitrechnung der Hebraeer*, “Biblical Chronology and the Hebrews' Time-Reckoning” (1887) and his translation of and commentary on Maimonides, *Kiddush ha-Hodesh* (1889). In 1896 Mahler went to Budapest as assistant at the Institute of Trigonometry. Two years later he became assistant keeper in the department of archaeology of the Hungarian National Museum and also began lecturing on Oriental history and languages at Budapest University; in 1914 he was appointed professor there. In 1912 he became director of the newly founded Egyptological Institute and, in 1922, director of the Oriental Institute. Mahler explored the date of the Exodus and tried to demonstrate that the biblical data relating the Exodus are accurate in *Der Pharao des Exodus*, “The Pharaoh of the Exodus” (1896), and in various articles. He wrote the “Bibel-Babel” controversy, on the \*Elephantine documents, and on calendar reform. Further chronological studies culminated in his classic *Handbuch der juedischen Chronologie* (1916, repr. 1967), in which he established the systems of the different Jewish calendars and chronologies in the light of ancient Near Eastern and medieval reckonings. He also provided comparative tables which make possible the conversion of a date in one system to the corresponding date in another system, especially the Christian calendar. Mahler later took up the problem of the Easter date and that of Jesus' death. He was associated with the excavations of an old Roman settlement at Dunapentele, where evidence for the earliest presence of Jews in Hungary was discovered.

**MAHLER, GUSTAV** (1860–1911), composer and conductor. Born in Kalischt, Bohemia, Mahler began his career as a conductor of operettas in Bad Hall. He rose through positions in Ljubljana, Olomouc, Kassel, Prague, Leipzig, Budapest, and Hamburg and progressed to become, in 1897, the director of the Vienna Court Opera. (He had to convert to Catholicism to secure this position and was baptized in the spring of 1897.) His tenure in Vienna brought the opera to a level of artistic achievement previously unknown there. However, he resigned in 1907 because of hostile intrigues. His remaining winters

were spent in New York where he conducted the Metropolitan Opera and the New York Philharmonic. He died in Vienna.

Mahler, although one of the most popular symphonic composers today, was overshadowed as a composer in his lifetime by his successes as a conductor. His attempts to compose opera were abortive despite his genius as opera director. His libretto *Ruebezahl* survives, without music, and unpublished. Though no opera by Mahler exists, his sense of musical drama is evident in his ten symphonies and his "symphony in songs," *Das Lied von der Erde*. Four of the symphonies contain substantial vocal sections; in fact, the Eighth is a gigantic choral work. Mahler did not live to complete his Tenth Symphony; however, Deryck Cooke's "performing version" has been widely accepted as an authentic presentation. Mahler's songs, often written to folk texts, show deep understanding of the voice. Many themes from the songs were reworked in the symphonies. The most important song cycles are *Lieder eines fahrenden Gesellen* (1884) and *Kindertotenlieder* (1900–02).

[Dika Newlin]

**MAHLER, MARGARET (Schoenberger; 1897–1985)**, child psychiatrist and psychoanalyst. Born in Sopron, Hungary, in the early 1930s she directed in Vienna the first psychoanalytically oriented child guidance clinic. In 1938 she settled in New York and in 1941 was appointed associate in psychiatry at Columbia University College of Physicians and Surgeons. In 1955 she was appointed clinical professor of psychiatry at the Albert Einstein College of Medicine. She was a training analyst at the New York Psychoanalytic Institute and in 1957 became the director of research of Masters Children's Center, where parallel studies of psychotic and normal children and their mothers are conducted. A comprehensive summary of Mahler's work of the 1940s appeared in the *Psychoanalytic Study of the Child*, vols. 3–4, 1948. Two main concepts associated with her name are the symbiotic infantile psychosis and the separation-individuation process of normal development during the first three years of life. In her book *On Human Symbiosis*, vol. 1 (1968), Mahler describes the core of infantile psychosis as "faulty or absent individuation" resulting from a deficiency in the child's intrapsychic utilization of the mothering partner during the symbiotic phase.

In 1970 the Margaret S. Mahler Psychiatric Research Foundation was established in Wynnwood, Pennsylvania. Its objective is to increase understanding of children's psychological and emotional development, particularly in the separation-individuation process, and to transmit that information to parents, therapists, and childcare providers.

Other books by Mahler include *The Psychological Birth of the Human Infant* (1975) and *The Memoirs of Margaret S. Mahler* (with P. Stepanky, 1988).

[Miriam Ben-Aaron / Ruth Beloff (2<sup>nd</sup> ed.)]

**MAHLER, RAPHAEL (1899–1977)**, historian. Mahler, who was born in Nowy Sącz, eastern Galicia, Poland, studied at the rabbinical seminary and the University of Vienna until 1922. He served as a teacher of general and Jewish history in Jewish secondary schools in Poland. In 1937 he immigrated to the United States and was a teacher in various educational institutions in New York. He was a member from his youth of the left Po'alei Zion party and was connected with \*YIVO in its research studies and administration, both in Poland and in the U.S. In 1950 he went to Israel, where he lectured on the history of Israel at Tel Aviv University and in 1961 was appointed professor there. He wrote many studies on the history of the Jews in Yiddish, Polish, German, English, and, after going to Israel, chiefly in Hebrew. Among his works are the following: *Di Yidn in Amolikh Poyln* (New York, 1946, in the publication *Di Yidn by Poyln*); *Ha-Kara'im* (1946), on the Karaites; *Yidn in Amolikh Poyln in Likht fun Tsifern* (Warsaw, 1958); *Yehudei Polin bein Shetei ha-Milhamot* ("Jews in Poland Between the Two World Wars," 1968). Among his articles is "Torat Borochov ve-Shitato be-Yameinu Anu" (in: *Ba-Derekh*, 1965). His major work, *Divrei Yemei Yisrael; Dorot Aharonim* ("History of the Jewish People in Modern Times"), has been published only in part: first part (on 1789–1815) in 4 vols. (1956–62), and the first volume (1970) of part two (on 1815–48). In his introduction to the work Mahler explains his theory of Jewish history in accordance with historical materialism, his division of Jewish history in the modern period in conformity with social and economic evolution, and the class war and changes of governments during these years. His scientific work is based upon an abundance of sources and a rich bibliography. In 1977 he was awarded the Israel Prize for contributions to the study of Jewish history.

**BIBLIOGRAPHY:** Kressel, *Leksikon*, 2 (1967), 319; LYNL, 5 (1963), 393–7.

**MAHLON AND CHILION** (Heb. מַחְלוֹן וְכִילִיּוֹן), the two sons of Elimelech and Naomi (Ruth 1:2ff.; 4:9–10). They were Ephrathites of Bethlehem who migrated to Moab, together with their parents, during a drought in the time of the Judges. After their father's death, the two brothers married Moabite women, Chilion marrying Orpah, and Mahlon, \*Ruth. Both died childless. Their names have been taken to mean "sickness" and "destruction" and have been explained as symbolic of their untimely death. But Mahlon could be connected with *maḥol*, "dance," and Chilion with a word meaning "completion."

#### In the Aggadah

Mahlon and Chilion are identified with Joash and Saraph of 1 Chronicles 4:22, the different names indicating their char-

acteristics and destiny. Joash was so called because he lost hope (from the root *שׂא*, “to give up hope”) of the messianic era; Saraph because he was condemned to be burned (from the root *שרף*, “to burn”); Mahlon, because he committed acts of profanation (from the root *הלל*, “to profane”); and Chilion because he was condemned by God to destruction (from the root *כלה* “to destroy”; BB 91b). They sinned in leaving Erez Israel (BB 91a), and in that they neither proselytized their wives nor ensured that they performed ritual immersion (Ruth R. 2:9). Before they died, they were rendered penniless (Ruth R.2:10).

**BIBLIOGRAPHY:** Noth, *Personennamen*, 54, 249; Ginzberg, *Legends*, 4 (1925), 31; 6 (1925), 189; Y. Ḥasida, *Ishei ha-Tanakh* (1964), 258–9.

**MAH NISHTANNAH** (Heb. *מָה נִשְׁתַּנָּה*; “What is different?”), first words of the four questions asked at the Passover *seder* service. The questions come at the beginning of the recital of the \*Haggadah and are usually asked by the youngest participant. The first sentence reads: “Why is this night different from all other nights?”

According to the Ashkenazi rite, the questions come in the following order: (1) Why on this night is only *mazzah* (“unleavened bread”) eaten? (2) Why are bitter herbs consumed? (3) Why are herbs dipped twice (in salt water and in *haroset*) during the *seder* meal? (4) Why do we sit reclined at the *seder* table? The text of the answers “We were slaves unto Pharaoh in Egypt...” follows the set of four questions. The reply is usually made by the father, or the person conducting the *seder*.

The *Mah Nishtannah* dates back to mishnaic times (Pes. 10:4) and originated in contemporaneous dining customs (manners and sequence) at festive meals. The questions were made part of the *seder* celebration as an introduction and reminder to the father to fulfill the biblical injunction: “And thou shalt tell thy son in that day, saying: it is because of that which the Lord did for me when I came forth out of Egypt” (Ex. 13:8; see also Ex. 13:14, 15). The Mishnah enumerates four questions to be asked during the *seder* (Pes. 10:4); the third, “Why do we eat only roasted meat [of the paschal sacrifice]?” was omitted after the Destruction of the Temple and the consequent cessation of sacrifices, and for it was substituted another question which is not mentioned in the Mishnah (Why do we recline?). The Sephardi ritual retained the geonic order of the four questions: (1) dipping, (2) unleavened bread, (3) bitter herbs, (4) reclining.

In the geonic literature (and as late as \*Rashi and \*Maimonides, *Yad, Ḥamez u-Mazzah*, 8:2) the *Mah Nishtannah* was probably recited by the person conducting the *seder* and not asked by the children. Where there is no child present at the *seder* table, the questions should be asked by the housewife, and if only men participate, they must ask each other, even if they are learned scholars (Pes. 116a). The *Mah Nishtannah* questions form part of the *Haggadah* ritual of all trends and segments in Judaism, including Reform.

**MAḤOZA**, town on the River Tigris (Ber. 59b), on the bank of the Nahar Malka (Fluvius Regum), one of the canals connecting the Euphrates with the Tigris. Maḥoza was a suburb of Be-Ardashir, situated on the left bank of the Tigris, and of the town of Ctesiphon, situated on its right bank (Er. 57b). Ctesiphon, established by Seleucus Nicator, the founder of the Seleucid dynasty about 300 B.C.E., was destroyed by the Roman commander Avidus Cassius in 165 C.E. On its ruins Ardashir I (226–240 C.E.) erected a new city after his name, the Be-Ardashir mentioned occasionally in the Talmud. Both cities served as the capital. Maḥoza’s importance derived also from the fact that it was situated on a central trading route through which caravans passed, as well as considerable merchandise which passed on the rivers. The Jews of Maḥoza took a very active part in the commercial life, both within the town (BB 29b) and beyond it (Git. 6a). The merchants were very successful. They ate well (Shab. 109a), drank much wine (Ta’an. 26a), and were hedonists (RH 17a). Of the women of Maḥoza it is related that they were lazy (Shab. 32b) and wore many ornaments (BK 119a). Among the Jews of Maḥoza were also successful farmers. Some of them possessed fields and orchards, irrigating their fields from the waters of the Tigris (Ber. 59b; Ket. 67a). They reared cattle (Er. 26a; BB 36a, Rashbam ad loc.) and also traded in grain (Git. 73a). A Jewish settlement in Seleucus and Ctesiphon during the first century C.E. is mentioned by Josephus (Ant., 18:310ff.).

Maḥoza is mentioned for the first time as a center of study after the destruction of the academy of \*Nehardea in 259 (*Iggeret R. Sherira Gaon*, ed. by B.M. Lewin (1921), 82). Maḥoza attained the height of its fame after the death of \*Abbaye in 338 when the academy of Pumbedita together with its scholars moved to Maḥoza, where Rava, who headed the academy for 14 years from 338–352, dwelt (*ibid.*, 88f.). During this period Maḥoza had a considerable Jewish population. They constituted the majority of its inhabitants and Abbaye was surprised that there was no \*mezuzah on the city gate (Yoma 11a). It also contained many proselytes (Kid. 73a). Because of Maḥoza’s proximity to Be-Ardashir, Rava had close relations with the government (see \*Shapur II). When the emperor Julian invaded Babylon in 363, Maḥoza was destroyed. However, on his death and the withdrawal of the Romans, it was rebuilt. Maḥoza declined as a Jewish settlement in the second half of the fifth century as a result of the uprising of the Nestorian Christians.

[Moshe Beer]

**MAH TOVU** (Heb. *מָה טוּבוֹ*; “How goodly”), the opening words of a prayer recited by Ashkenazi Jews upon entering

the synagogue. The initial words are a quotation from Numbers 24:5. The remainder of the prayer consists of Psalms 5:8; 26:8; 69:14; and 95:6 (with Ps. 95:6 modified from the plural to the singular form). The Talmud interprets the “tents” and “dwellings” of Numbers 24:5 to refer to synagogues and schools (Sanh. 105b), and the “time of grace” mentioned in Psalms 69:14, to mean the time of public worship (Ber. 8a). At one time, the rabbis apparently intended to include Balaam’s blessing of the children of Israel (Num. 22–24) in the recitation of \*Shema; however, they decided that it was too lengthy for the congregation (Ber. 12b).

Sephardi Jews recite Psalms 5:8 on entering the synagogue, and Psalms 5:9 on leaving.

See \*Liturgy; \**Shaharit*.

**BIBLIOGRAPHY:** Elbogen, *Gottesdienst*, 87, 526; Idelsohn, *Liturgy*, 73f.; E. Levy, *Yesodot ha-Tefillah* (1952<sup>2</sup>), 76, 131.

**MAḤZIKE HADAS (Mahazikei ha-Dat)**, organization in Galicia and Bukovina, representing the first attempt of the Orthodox to unite for political action in order to foster its beliefs in the sphere of Jewish social life. The organization was initiated by a meeting of the larger Jewish communities which was convened by \*Shomer Israel in Lvov (Lemberg), in 1878, in connection with their opposition to the founding of a rabbinical seminary and to the organizational changes in the communities. The Maḥzike Hadas society was founded primarily to ward off the dangers that lay in such new plans. It was headed by Simon \*Sofer (Schreiber) of Cracow (son of the Ḥatam Sofer) and Joshua Rokeaḥ, the rabbi of \*Belz. The founding convention took place on March 13, 1879. There the statutes of the new organization were determined and the bimonthly *Mahzikei ha-Dat* which appeared in both Hebrew and in Yiddish and which was directed against the publication \*Izraelita was founded. The organization came out with a special list of candidates for the elections of the Austrian parliament of 1879. Of the four candidates it put forward only one, Simon Sofer, was elected, Sofer joined the “Polish club” in opposition to the Jewish assimilationist representatives. In 1882 the organization convened a large conference which was attended by 200 rabbis and 800 representatives of communities. The purpose of the conference was to protect the religious character of the communities from the reform tendencies of the progressives. The conference passed a resolution that only Jews observing the precepts of the Shulḥan Arukh were to be granted full voting rights for communal elections. The death of Simon Schreiber in 1883 temporarily weakened the movement, but in 1908 the rabbi of Belz renewed its vigor by publishing a proclamation *Kol Mahazikei ha-Dat* which denounced any attempt to introduce a progressive spirit into the communities according to the patterns of Western Europe or, under the influence of Zionism and socialism, to inject into them a secular national content. The rabbi of Belz also denounced the efforts of the Vienna community to set up a central union for Austria. After World War I, when Poland became independent, a section of the Orthodox community, under the influence of the

rabbi of Belz, organized an independent political party, calling itself Maḥzike Hadas. The party was founded at a convention which was attended by representatives from 100 communities and which took place in Grodek Jagiellonski (Gorodok), on Dec. 22, 1931. Its influence was chiefly felt throughout Galicia as a rival to \*Agudat Israel.

[Avraham Rubinstein]

**MAḤZOR** (Heb. מַחְזֹר, *mahazor*; “cycle”), festival prayer book. The word is similar to the term *Mahzarta* of the Syrian Church, which means a breviary, and was originally applied to the poetical insertions to be recited in prayers throughout the yearly cycle. In Ashkenazi usage, it came to refer distinctly to the festival prayer book, as distinct from the *siddur* (the daily prayer book). The term is also used by Sephardi Jews.

#### **Mahzorim, Illuminated**

Illuminated *mahzorim* flourished in the Ashkenazi world throughout the 13<sup>th</sup> and 14<sup>th</sup> centuries, mainly in southwest Germany, in the Rhine valley, making their appearance soon after an authoritative “cycle” of prayers emerged. In the 15<sup>th</sup> century the fashion moved to northern Italy, where many Ashkenazim had settled, and influenced Italian Jewish illumination. While the Ashkenazi *siddur* contained the daily and personal prayers, both for home and synagogue, the *mahzor* contains the synagogal communal prayers for the festivals and the seven special Sabbaths of the Jewish year. In the Italian rite, the term *mahzor* embraced both the daily and festival prayers. Primarily intended for the use of the *hazzan*, the German *mahzorim* are usually large – written in clear, bold letters – and contain a large selection of *piyyutim* (“liturgical poems”) for each festival, offering the cantor a variety of choice. A large number of German *mahzorim* are illuminated with initial-word panels and with illustrations of a ritual and textual nature. These *mahzorim* were executed over a period of some 100 years, from the mid-13<sup>th</sup> to the mid-14<sup>th</sup> century.

The earliest surviving illustrated *mahzor* manuscript of the 13<sup>th</sup> century is the two-volume codex of the Michael Collection in the Bodleian Library (Mss. Mich. 617 and Mich. 627), written in 1258 by Judah b. Samuel, called Seltman. Though it is not extensively illustrated it is important, since it proves that illuminated *mahzorim* existed prior to this date. It was probably illuminated by a gentile, since the first initial-word panel was painted upside down, as though it was a Latin manuscript. However, despite this, the manuscript contains motifs which became traditional in later *mahzorim* and which could not have been invented by gentiles. The finest examples of *mahzorim* from the south of Germany are the first volume of the *Worms Mahzor* of 1272 (see below); the *Laud Mahzor* of about 1290 (Bodleian Library, Ms. Laud Or. 321); the *Leipzig Mahzor* of about 1300 (see below); the *Dou-*

*ble Mahzor* in Dresden (Saechsische Landesbibliothek, Ms. A 46a) and Breslau (State and University Library Cod. Or. 1. 1); the *Tripartite Mahzor* of about 1320 (Budapest, Hungarian Academy of Sciences, Ms. A. 384, British Museum, Add. Ms. 22413, and Bodleian Library, Ms. Mich. 619), and the *Darmstadt Mahzor* of 1340 (Hessische Lands-und Hochschulbibliothek, Cod. Or. 13).

These *mahzorim* illustrate both the development of style in southern Germany and the use of a special Jewish \*iconography. An example of such development in both style and in motif is found in the distortion of human figures. In all manuscripts before 1300, the use of animal-headed people is consistent; in the *Leipzig Mahzor*, people have birds' beaks instead of a nose and mouth; but the artists of the later *Tripartite Mahzor* did not understand the reason for such distortions, and painted all the male figures with ordinary human heads and all the females with animal heads.

Southern German *mahzorim* have a very wide range of text illustrations. Most of them begin with the prayers for the four special Sabbaths before Passover, continuing with Passover, the Feast of Weeks, the New Year, the Day of Atonement, and the Feast of Tabernacles. Four of the *megillot* ("scrolls") are also usually included in the *mahzor* – sometimes placed together, at other times appended to the particular celebrations with which they were associated. The Book of Esther was usually written separately on a scroll, to be read at the festival of Purim.

Most German *mahzorim* have illustrations of the signs of the zodiac for each of the verses of a *piyyut* in the prayer for dew recited on the first day of Passover (*Leipzig Mahzor*, vol. 1, fol. 133; *Worms Mahzor*, vol. 1, fol. 95v.; Ms. Mich. fols. 49–51). The signs of the zodiac are depicted in small medallions in the margin. In the *Worms* and the *Tripartite* manuscripts, the labors of the months are depicted in medallions next to the signs of the zodiac. Some specifically Jewish elements have developed in the zodiac illustrations, such as a bucket instead of Aquarius; in some cases a draw well is depicted instead of a mere bucket, and in some *mahzorim* a kid is shown next to the well to illustrate both Capricorn and Aquarius, which are referred to in one verse of this *piyyut*. In one *mahzor* (Bodleian Library, Ms. Opp. 161, fol. 84), 11 signs of the zodiac are depicted in one large roundel divided into 12 sections, similar to the arrangements of the signs of the zodiac in floor mosaics of early synagogues (e.g., Bet Alfa). This example may be an indication of a traditional way of depicting the astronomical zodiac *circulus*, which survived into the Middle Ages.

The illustration for the Feast of Weeks traditionally depicts Moses receiving the Tablets of the Law and giving them to the Israelites, who are standing at the foot of Mount Sinai (e.g., *Leipzig Mahzor*, vol. 1, fol. 130v.; British Museum, Ms. Add. 22413, fol. 3v.; *Worms Mahzor*, vol. 1, fol. 151). In the *Land Mahzor* (fol. 127v.) the giving of the Law is combined with an illustration of Moses sprinkling the blood of the Covenant over the Israelites. In the *Leipzig Mahzor* (vol. 1, fol. 130) the Israelites are standing as though within the mountain, illus-

trating the Midrash which states that God erected a mountain over the Israelites until they agreed to accept the Torah.

The second volume of an Ashkenazi *mahzor* normally starts with the prayers for Rosh Ha-Shanah, illustrated by the sacrifice of Isaac, with the ram caught in a thicket by his horns. The sounding of the ram's horn (*shofar*) on New Year's day is a commemoration of God's covenant with Abraham at the time of the sacrifice (e.g., *Leipzig Mahzor*, vol. 2, fols. 26v., 66; Bodleian Library, Ms. Laud Or. 321, fol. 184, and Ms. Reg. 1, fol. 207v.; *Double Mahzor*, Breslau, fol. 46v.). In some *mahzorim*, a horned and claw-footed devil is depicted next to a *shofar* blower, who sometimes supports his right foot on a three-legged stool in order to ward off the earthly influence of evil. This is in accordance with the common superstition that a three-point object keeps evil spirits away (e.g., Budapest, Ms. A. 388, vol. 2, fol. 12v.; Paris, Bibliothèque de l'Alliance Israélite Universelle). Openings of prayers from the Day of Atonement are usually illustrated by initial words and by parts of prayers written within full-page arches resembling doors, an allusion to the Gates of Mercy, now opened to accept the individual prayers of every Jew (e.g., *Leipzig Mahzor*, vol. 2; Berlin, Preussischer Kulturbesitz, Ms. Or. Fol. 388, fol. 69; *Worms Mahzor*, vol. 2; *Double Mahzor*, Breslau, fol. 89).

The prayers for the Feast of Tabernacles are sometimes illustrated by a man holding the fruits of the Holy Land: the *lulav* ("palm branch"), the *etrog* ("citrus fruit"), *Hadas* ("myrtle"), and *aravah* ("willow").

Some *mahzorim* are merely decorated and contain no illustrations at all. An example is the *Nuremberg Mahzor* of 1331, which for six centuries was owned by the municipality of Nuremberg and is now in the Schocken Library in Jerusalem (Ms. 24100). Its large initial-word panel for the first day of Passover is decorated with foliage scrolls, grotesques, and an architectural top. In the 15<sup>th</sup> century, the illumination of large-sized *mahzorim* was no longer fashionable. The smaller-sized illuminated prayer book which became more common continued to be called a *mahzor*. One such example is the *Mahzor of Rabbi Friedman of Ruzhin*. This mid-15<sup>th</sup> century eastern German prayer book was probably intended for use in the synagogue and at home by a wealthy member of the Jewish community. Though the system of illustration remained Ashkenazi, the decoration shows the influence of Italian motifs, evident in the marginal miniatures, initial-word panels, and human busts emerging from flowers. An example of the fusion of the two traditions is the *Schocken Italian Mahzor* of 1441 (Ms. 13873), which is a large volume, written and decorated in Roman style, of the Roman rite, but with illustrations following the Ashkenazi tradition.

Most of the 15<sup>th</sup>-century Italian *mahzorim* are personal rather than synagogal prayer books, stressing the daily prayers, and containing a *Haggadah* which was recited at home. They are therefore small, handy to carry to and from the synagogue, with the prayers arranged for the individual, starting with the daily and Sabbath prayers and the Festival ones. These illuminated small *mahzorim* were not usually extensively illustrated;

besides the decorated openings of prayers, they contained fairly simple marginal pen drawings. Good early examples are those related to famous families of northern and central Italy. Such are *maḥzorim* executed at the order of Daniel b. Samuel ha-Rofe b. Daniel ha-Dayyan, one at Bertinoro in 1390 (Bodleian Library, Ms. Can. Or. 81) and another at Forlì in 1393 (British Museum, Add. Ms. 26968). In these works, as in others done for the same patron, the tinted drawings are of Lombard style. A *maḥzor* from Pisa of 1397 ordered by another well-known patron, Jehiel b. Mattathias of the Beit-El family (Sassoon Ms. 1028), is in the same style. Some of the text illustrations in these *maḥzorim* resemble those of the traditional Ashkenazi ones: a horn-blower for the New Year; a *sukkah* for Tabernacles; the balance for Sabbath *Shekalim*; a crescent and star for Sabbath *Ha-Hodesh*; and more detailed illustrations for the Passover *Haggadah*.

The same system of illustration was also used by the Ashkenazi scribe and illuminator Joel b. \*Simeon. Of the three *maḥzorim* executed in his workshop in the third quarter of the 15<sup>th</sup> century, the last was probably made for a woman, since it contains several marginal pen drawings of a ritual nature in which a lady called Maraviglia is the main character. Closely related to the Florentine style of Joel b. Simeon are some more elegant *maḥzorim* which have pen and colored decorations on almost every page. Such is the *Rothschild Maḥzor* of 1492 from Florence (Jewish Theological Seminary in New York, Ms. 03225), which was illuminated in three different styles and techniques, with elaborate illuminated opening pages, illustrations to each section, and tinted decorations on each page. Moses receiving the Tablets of the Law illustrating the opening to the mishnaic tractate *Avot* (fol. 139) is an example of the second kind. Other *maḥzorim* with a similar system of illustration are fairly common, though some are richer than others.

The *maḥzor* in the *Rothschild Miscellany*, Ms. 24, Israel Museum, Ms. 180/51, which has sumptuous Ferrarese illuminations from about 1470, consists of textual illustrations for each festival and prayers for special occasions. In fact, it contains a wealth of material illustrating almost every custom of daily life in a rich Jewish Renaissance household. No other manuscript equals the richness and scope of the illumination of this miscellany, though only a portion of its 473 leaves is a *maḥzor*. The *Pesaro Maḥzor* of 1480 (Sassoon Ms. 23), containing almost as many pages as the *Rothschild Miscellany*, consists only of a prayer book of Roman rite. Its borders are very richly decorated by a Ferrarese artist, but there are fewer text illustrations, mostly within a wreath in the lower part of the border.

Two of the outstanding Ashkenazi *Maḥzorim* are described in detail below.

### The Leipzig Maḥzor

(Leipzig, University Library, Ms. v. 1102) is the most sumptuous of the south German illuminated *maḥzorim* and has the most extensive array of text illustrations. Almost all the spe-

cial Sabbaths, feasts, and festivals are illustrated. The first volume was written by Menahem, who decorated his name (fols. 113, 137) in the same way as Menahem the scribe who copied the *Birds' Head Haggadah* (see *Illuminated \*Haggadot*). The second volume was copied by a scribe called Isaac. The two volumes were wrongly bound with additions and corrections in later dates. The giant manuscript was probably intended initially for a *ḥazzan* of a very rich community on the Upper Rhine. The first volume of the *Leipzig Maḥzor* opens with a frontispiece representing Samson rending the lion, possibly an allusion to the phrase "Grow strong like a lion to fulfill the will of your Maker," sometimes referring to the *ḥazzan* (vol. 1, fol. 19). At the end of the short introductory prayers, there is a miniature depicting the *ḥazzan* standing covered with his *tallit* ("prayer shawl") in front of a marble pulpit, on which a large open book rests. This probably represents the first volume of the Leipzig manuscript. The second volume is shown in the hands of a young man wearing a Jewish hat, who is standing behind the *ḥazzan* accompanied by a bearded Jew (vol. 1, fol. 27). A man holding a scale is a common illustration for the Sabbath of *Parashat Shekalim*, referring to the payment of the annual half-shekel for the Temple sacrifices (Ex. 30:11–16).

Most illustrations in the *Leipzig Maḥzor* are common to other south German *maḥzorim*, such as the tall tree from which Haman and his ten sons are hanging (vol. 1, fol. 51v.), illustrating a *piyyut* for Purim; a red heifer illustrates *Parashat Parah* (1, 53v); the sun and moon illustrate *Parashat ha-Hodesh* (1, 59); a betrothed couple sitting on a bench illustrates a *piyyut* for the "Great Sabbath" before Passover, alluding to the Torah as the bride of the people of Israel (1, 64). The Egyptians pursuing the Israelites illustrate the Passover Eve prayer (1, 72v.–73), the signs of the zodiac the prayer for dew recited on the first day of Passover (1, 85–87), and Moses receiving the tablets of the Law illustrating *Shavuot* (1, 130v.). An additional illustration (1, v. 131) depicts the contemporary custom of initiating children into the study of the Torah. The child is brought to his teacher's lap to lick the honey-covered alphabet tablet in order to sweeten his introduction to the study of the Torah, while the other children, in celebration of his initiation, receive eggs and cakes. The first volume ends with the *kinot* ("dirges") for the Ninth of Av, which are hardly ever illustrated. As is common in Ashkenazi *maḥzorim*, the second volume begins with the prayers for Rosh Ha-Shanah, with illustrations of the *\*akedah* and the ram caught in a thicket. The opening prayers for the Day of Atonement are illustrated with the customary arches resembling doors, alluding to the Gates of Mercy (2, fols. 74v., 85, 164v.), but one of the arches has in the lower margin the additional midrashic illustration of Abraham being saved from the fire of the Chaldeans because of his belief. The feast of Sukkot is illustrated by a man holding the prescribed "four species," and in the lower margin the legendary beasts, the leviathan and behemoth are fighting, an event which is supposed to take place before the end of time. The style of the *Leipzig Maḥzor* is related to south German illumination around 1300. A facsimile of 68 illuminated pages

from the *Leipzig Maḥzor*, with an introductory volume, was published in 1964.

### The Worms Maḥzor

(Jerusalem, Jewish National and University Library, Ms. Heb. 4781/1–11) consists of two unrelated volumes, which were kept together in the Worms Synagogue from 1578. The fact that the page size, text area, and style of script are different in each volume, and that Ecclesiastes is repeated in both, indicates that they were executed independently. Only the first volume is dated, through a colophon (fol. 34v) stating that it was completed on Jan. 1, 1272, written by Simḥah b. Judah for his uncle R. Baruch b. Isaac. Another entry mentions the scribe, his father Judah of Nuremberg, and Shemaiah the Frenchman, who may have been the artist. Neither volume was intended for the Worms community, since they both contain *piyyutim* and prayers which are not included in the Worms rite while one *piyyut* was common in the rite of Mainz. The first volume of the *Worms Maḥzor* is one of the earliest dated illuminated *maḥzorim* from southern Germany. Associated with the colored initial-word panels are many text illustrations for the special Sabbaths, Passover, and Shavuot. The illustration for *Parashat Shekalim* depicts a man holding a balance, weighing the half-shekels for the payment in the Temple (fol. 39v). Although the illumination of the *Worms Maḥzor* is somewhat crude, it resembles south German Latin illumination of the second half of the 13<sup>th</sup> century. Another link with the south German Jewish school of illumination is the style of the animals, birds, and distorted heads of human figures. The second volume contains a very few decorations of a somewhat later south German style.

**MAḤZOR VITRY**, halakhic-liturgical composition by Simḥah b. Samuel of Vitry, a small town in the department of Marne, France. Simḥah was an outstanding pupil, or even a colleague, of Rashi and apparently died during his teacher's lifetime (i.e., before 1105 – see Gross, *Gallia Judaica*, 196). His son Samuel married Rashi's granddaughter and he was the grandfather of the famous tosafist, Isaac of \*Dampierre

(Urbach, *Tosafot*, 115). Like his colleague Shemaiah, Rashi's secretary, he occupied himself with the arrangement of his master's halakhic rulings, and later authorities sometimes confused their names. There is however no basis for the assumption of some scholars that there existed two works, one by Shemaiah and one by Simḥah, both entitled *Maḥzor Vitry* (Urbach, *ibid.*, 33). *Maḥzor Vitry* belongs to the group of works from the school of Rashi (e.g., the *Pardes*, *Sefer ha-Orah*, *Siddur Rashi*) which are based upon Rashi's rulings and usages, but which are expanded with additions from other authorities, sometimes even discussing and criticising their views, in order to defend those of Rashi. *Maḥzor Vitry* is in the form of a halakhic-liturgical work, the purpose of which was to give the halakhic rulings of the liturgy for the whole circle (*maḥzor*) of the year, weekdays, Sabbaths, and festivals, and connect them with the accepted formula of the prayers. The fact that it also includes laws of Sabbath, \*eruv, marriage, and ritual slaughter makes it wider in scope than the *siddurim* of \*Amram and Saadiah \*Gaon, which were also sent to various communities at their request. The *Maḥzor Vitry*, referred to by 13<sup>th</sup>-century authorities, such as the *Sefer Mitzvot Gadol* of Moses b. Jacob of \*Coucy (Positive Commandments 27) and the *Or Zarua* (part 1, p. 55) of Isaac b. Moses of \*Vienna exist in various versions which differ considerably from one another both in scope and arrangement. Apparently it gained instant acceptance and it was enlarged, as was the custom of that time, by successive additions. There does not yet exist a critical edition based on all available manuscripts. The published edition (by S. Hurwitz, 1889, 1923<sup>2</sup>) is from the London manuscript (Margoliouth, *Cat*, no. 655) containing many additions, some indicated by the letter פ, most of them apparently from Isaac b. Durbal, a contemporary of Jacob Tam, but also including later responsa and extracts from the *Sefer ha-Terumah* of Baruch b. Isaac. It reflects the state of the work in the 13<sup>th</sup> and 14<sup>th</sup> centuries. The Oxford manuscript (Bodleian Library, Ms. Opp. 59) omits most of these additions in those fragments preserved in two manuscripts. On the other hand, they contain compilations which have no connection with the *maḥzor*. A more original text occurs in the Reggio manuscript (now in the library of the Jewish Theological Seminary of America) which has as yet not been examined because of its poor state of preservation, and the Parma manuscript (B. Pal. 2574).

### Contents and Form

The halakhic portion of the *Maḥzor Vitry* precedes the liturgical formulae, and includes commentaries to the prayers taken from the *aggadah*. The Reggio manuscript includes the following topics: weekday prayers (with their relevant laws), the night prayer, the order of prayers for the Sabbath and its conclusion, the New Moon, the Sanctification of the Moon, Ḥanukkah, Purim, Passover *Haggadah*, and the Aramaic translation of the reading for the 7<sup>th</sup> day of Passover (Ex. 13:17–15:26) and the laws of Shavuot with a similar Aramaic translation. (Both these Aramaic translations are much enlarged and are to be found in many medieval *maḥzorim*.)

There follow *Avot* with a commentary, *Hilkhot Derek Erez*, *Pirkei Ben Azzai*, a commentary on the *Kaddish* and on the Ten Commandments, the order of service for the Ninth Av, the laws of fasts and mourning, Rosh Ha-Shanah, the Day of Atonement, Sukkot and the \*Hoshanot with a commentary, the order of service for Simḥat Torah, the order of service for marriage and circumcision, and the laws of \*sheḥitah and \*terefot. In the enlarged text in the London manuscript there have been added the laws of *Niddah*, *Zizit*, *Tefillin*, *Mezuzah*, *Sefer Torah*, the complete text of tractate *Soferim*, tractate *Kallah* and the laws of divorce, and \*ḥalīzah. In addition there are many *piyyutim* and *aggadot*. The main sources of *Mahzor Vitry* are the decisions and customs of Rashi. Simḥah apparently based himself on the *Siddur Rashi* with whose text the *maḥzor* is often identical (see Buber, *Siddur Rashi*, introd. p. 54) but it excludes all the texts of the prayers. In the halakhic portion the sources, in addition to the Talmud, are the geonic literature, especially the Halakhot \*Gedolot and Halakhot \*Pesukot, and the *siddur* of Amram Gaon, which is often quoted verbatim, without giving the source. The talmudic quotations often differ from those in the existing text. *Mahzor Vitry* is an important source for the historical study of *halakhah* and liturgy, particularly according to the French tradition. The *piyyutim* in the *maḥzor* differ in the various manuscripts, making it difficult to determine which were current during the period when the *Mahzor Vitry* was composed. The text of these *piyyutim* which were apparently collected at a later period and appended to the London manuscript have been published separately under the title “*Kunteres ha-Piyyutim*” by H. Brody (Berlin, 1894).

[Ernst Daniel Goldschmidt]

**MAIER, JOSEPH** (1911–2002), U.S. sociologist. Born in Leipzig, Germany, the son of a rabbi, Maier studied in Germany and in the U.S. He received his M.A. (1934) and his Ph.D. (1939) from Columbia University. After the War, Maier did voluntary service in Germany and participated in the Nuremberg Trials, becoming chief of the analysis section of the Interrogation Division. In 1947 he was appointed professor of sociology at Rutgers University and became chairman of the department until his retirement in 1980. Maier was a specialist in the sociology of religion and became widely known as the author of a weekly column in the New York German-language Jewish newspaper *Aufbau* dealing with the application of halakhic wisdom to contemporary social problems.

With Werner Cahnman, Maier established the organization for the Preservation of Jewish Cultural Monuments in Europe, later called the Rashi Association (1978). From 1980 on, he served as its president, helping to establish such projects as the Institute of Judaic Studies at the University of Munich.

Among Maier's published works are *On Hegel's Critique of Kant* (1939) and *Sociology* (with J. Rumney, 1953). With J. Marcus and Z. Tarr he edited *German Jewry: Its History and Sociology: Selected Essays by Werner J. Cahnman* (1989).

**MAILER, NORMAN** (1923– ), U.S. novelist and essayist. Born in New Jersey, Mailer grew up in New York City and attended Harvard College. His two years with the U.S. Army in the Pacific theater during World War II provided him with the background for his bestselling novel *The Naked and the Dead* (1948), whose violent dialogue and often lyric prose that evoked the fears and passions of men at war made him an overnight literary celebrity. *Barbary Shore* (1951) was a semi-surrealistic political novel set in a Brooklyn rooming house and *The Deer Park* (1955) a novel about Hollywood; in both of these books, which he himself called “existential,” he revealed his growing fascination with the individual who intellectually, physically, or morally feels compelled to drive himself to extremes beyond the norms of human conduct in order to experience his own individuality. Mailer's increasing impatience with the novel as a medium for expressing his extraordinarily fertile if undisciplined mind and his ability to yoke together ideas of the most varied political, psychological, and philosophical nature led him in the 1950s to turn more and more to the essay, of which he published several collections: *Advertisements for Myself* (1959), *The Presidential Papers* (1963), and *Cannibals and Christians* (1966). *Why Are We in Vietnam?* (1967) represented an experiment to deal in symbolic fictional terms with a burning political issue of the day. In 1968, Mailer wrote *Armies in the Night*, an eyewitness account of an anti-Vietnam demonstration held in front of the Pentagon in Washington whose melange of reportage, social and political speculation, and personal confession, written in a wildly exuberant prose, established his reputation by general critical consensus as the most brilliant virtuoso stylist in the United States. A second documentary, *Miami and the Siege of Chicago* (1968), about the Republican and Democratic nominating conventions of 1968, was again a masterpiece of its kind.

Mailer's interest in radical politics took him from Socialism to anarchism to a generalized hostility toward the regimentation and mechanization of modern life that he labeled “radical conservatism.” Always partial to publicity, he sought to popularize his ideas by running in the New York mayoralty campaign of 1969.

*A Fire on the Moon* (1970) was about the implications of the U.S. space program. In 1971, Mailer's *The Prisoner of Sex* was published, drawing the ire of the feminist movement. In 1980 Mailer was awarded the Pulitzer Prize in fiction for *Executioner's Song*, which offered a detailed account through an ensemble of characters of the life and execution of Gary Gilmore, a convicted murderer. *Ancient Evenings* (1983), a novel, is set in the Egypt of the 13<sup>th</sup> to the 12<sup>th</sup> century B.C.E.

His look at the CIA, *Harlot's Ghost*, appeared in 1991, and his study of Lee Harvey Oswald, *Oswald's Tale*, was published in 1995. *The Time of Our Time* (1998) is a massive sampling of Mailer's work. His *The Spooky Art: Some Thoughts on Writing* (2003) is a gathering of his thoughts about writers, his own work, and the writing life.

Evaluations of Mailer often return to his fascination with violence and sexuality. Mailer's reading of violence in "The White Negro" (found in *Advertisements for Myself*) is a good example. Mailer argued that the Negro could survive his perilous American existence by accepting the desires of the body, living sensuously within the present moment. This creation of the self through action leads to the existential recognition of the self, in part, as body. The existentialist "must be able to feel oneself ... to know one's desires, one's rages, one's anguish ..." Jazz, for Mailer, the endowment of "orgasm," became one of the commanding achievements of the African-American, and spoke to, and of, "instantaneous existential states to which some whites could respond." The hipster's consecration of the present, his living his hatreds, his seeking the end of cultural and political repression through a life outside bourgeois mores, would be shaped in the future by the African-American's winning equality, a "potential superiority" that was feared, providing the background for domestic politics. Mailer's essay cemented into a mosaic the Holocaust, the concentration camp, African-American humiliation, endurance, and self-resurgence. Its affirmative violence coupled with sexuality provides a clue to some of Mailer's other work, most notably "The Time of Her Time" (found in *Advertisements for Myself*), *An American Dream* (1965), and possibly his life (he stabbed his second wife, Adele, in 1960).

His place in American literature is large, though his place in American-Jewish writing is problematic. (In her "Toward a New Yiddish" (*Judaism*, Summer 1970) Cynthia \*Ozick believed that he would become a minor, if not forgotten writer because he did not write within the liturgical and moral richness of Jewish tradition.) On the one hand, his sharp indictments of the alliance among American politics, commercialism, and violence are insightful and enduring. His choice of characters and their novelistic development concentrate one version of American culture within the psychological and social existence of his subjects (whether fictional or actual; whether individuals or actual events). On the other hand, his influence on the American-Jewish novelist is, perhaps, that of craft. He is at ease in developing a realism in both its narrow and extreme senses – a focus on the empirical furniture of experience as well as a concentration on American myths and cultural directives informing the way we perceive, and act upon, the world.

[Hillel Halkin / Lewis Fried (2<sup>nd</sup> ed.)]

**MAIMI, SIMON** (d. 1497), a rabbi from Segovia, in Castile, who found refuge in Portugal. Maimi was martyred when

\*Manuel I, king of Portugal, tried to force him to accept Christianity, thinking that if the chief rabbi set the example all the Jews could soon be baptized. The attempt to convert Portuguese Jewry occurred during the spring of 1497, following the promulgation of the edict of expulsion on Dec. 4, 1496. Maimi and about eight leading personalities – including his son-in-law, and probably Abraham b. Jacob \*Saba, Abraham b. Samuel \*Zacuto, and Isaac b. Joseph \*Caro – were thrown into a dungeon and buried up to their necks. The group refused to yield, and when the wall was torn down a few days later Maimi was dead. His body was stealthily taken by several Marranos who, at the risk of their lives, succeeded in burying him in the Jewish cemetery near Lisbon.

**BIBLIOGRAPHY:** Roth, Marranos, 60; N. Slouschz, *Ha-Anusim be-Portugal* (1932), 9, 63.

**MAIMON (Fishman), ADA** (1893–1973). Israeli labor leader, member of the First and Second Knessets. Born in Marculesti, Bessarabia, Maimon was the sister of Judah Leib \*Maimon, who was a member of the United Religious Front in the first Knesset. Ada Maimon received a traditional and general Hebrew education. In her youth she joined a movement that was connected to Ha-Po'el ha-Za'ir. She settled in Erez Israel in 1912, and worked as a teacher in Petaḥ Tikvah, Rehovot, Nes Ziyonah, and Ben Shemen. In 1914 she was sent to open a Hebrew girls school in Safed. In 1913–20 Maimon was a member of the Ha-Po'el ha-Za'ir Central Committee, and was a delegate to the Prague conference in 1920 at which the Hitahadut – the union between Ha-Po'el ha-Za'ir and Ze'irei Ziyon – was established. She participated in the founding conference of the \*Histadrut in 1920, and was elected to its Executive Committee. She was one of the founders of the Women's Workers Council (\*Mo'ezet ha-Po'alot) and its secretary in 1921–30. In 1930 she founded the Ayanot Agricultural School near Nes Ziyonah, and headed it for many years. In 1946–47 Maimon headed the Immigration Department of the Histadrut, and in this capacity visited displaced persons camps in Germany and British detention camps in Cyprus. In 1949 she was elected to the First Knesset on the Mapai list. In the First and Second Knesset she was a member of the Constitution, Law and Justice Committee, and actively participated in initiating and passing legislation concerning the status of women. Unlike most other women labor leaders, she was also a member of the Executive of World \*WIZO.

Ada Maimon wrote *Tenu'at ha-Po'alot be-Erez Yisrael* (1929), *Ha-Haluzah be-Erez-Yisrael* (1930), *Ayanot, Mi-Meshek Po'alot le-Veit Sefer Ḥakla'i Tikhon* (1946), *Ḥamishim Shenot Tenu'at ha-Po'alot, 1904–54* (1955), and *Le-Orekh ha-Derekh: Mivḥar Devarim ve-Iggerot* (1973).

[Susan Hattis Rolef (2<sup>nd</sup> ed.)]

**MAIMON (Fishman), JUDAH LEIB** (1875–1962), rabbi and leader of religious Zionism. Born in Marculesti, Bessarabia, Maimon studied in Lithuanian yeshivot and, after being ordained, served as a preacher (*Maggid meisharim*) in Marculesti

and in 1905–13 as rabbi in Ungeni. In 1900 he met Rabbi Isaac Jacob \*Reines, founder of \*Mizrachi, and afterward took an active part in the founding conference of Mizrachi, which was held in Vilna, and in its first world conference in Pressburg (Bratislava). Beginning with the Second Zionist Congress, he participated in all the subsequent Congresses and was for many years a member of the Zionist General Council. From 1935 he served as Mizrachi's representative on the Zionist Executive, was vice chairman of the Executive, and headed the Department for Artisans and Retail Business as well as the Department of Religious Affairs.

Maimon settled in Erez Israel in 1913 and was among the founders of the educational network of Mizrachi there. At the outbreak of World War I he was imprisoned and expelled by the Turkish authorities. He went to the United States, where he was active in the effort to strengthen Mizrachi and published hundreds of articles in the press. He returned on the first ship to reach the shores of Palestine after the war and met Rabbi \*Kook, with whom he became very friendly. Together they established the chief rabbinate of Palestine, and Maimon formulated the rabbinate's constitution and organized its founding ceremony. In 1936 he established the Mosad ha-Rav Kook, which published hundreds of books. His private library contained over 40,000 volumes, among them many very rare books, first editions, incunabula, and the only extant copies of many important manuscripts.

Although he maintained his adherence to the organized framework of the *yishuv*, Maimon often expressed his sympathy with the secessionist organizations, Irgun Zeva'i Le'ummi (IZL) and Loḥamei Herut Israel (Leḥi), and gave evidence on behalf of IZL prisoners. He proclaimed the right of every Jew to bear arms in his own defense and in the defense of Jewish rights in Erez Israel. When the Haganah began actively to suppress IZL (1944–45), Maimon expressed his opposition to these activities. On "Black Saturday" (June 1946) he was interned as acting chairman of the Jewish Agency Executive. His imprisonment aroused a great furor, since the British had compelled him by force to desecrate the Sabbath, and after great pressure he was released by special order of the high commissioner.

In the first years after the establishment of the State of Israel, Maimon advocated the institution of a Sanhedrin as a supreme religious authority, but this attempt aroused opposition in many religious circles. He was appointed minister of religions and minister in charge of war casualties both in the provisional government and in the first elected one; and was a member of the First Knesset. He later relinquished his political activities and devoted himself entirely to literary work.

Maimon was a prolific author. His first work was *Ha-Noten ba-Yam Derekh* (1903). His second work *Ḥadar Horati*, a collection of articles on *halakhah*, Maimonides, and *aggadah*, was published ten years later. He also published other articles and biblical investigations. In 1907 he began to publish the talmudic-literary journal, *Ha-Yonah*, which was banned by censorship, however, and its publication discontinued. In 1921

Maimon founded the Mizrachi weekly, *Ha-Tor*, whose publication was continued for 15 years. He later founded and edited the monthly *Sinai*, of which he issued 50 volumes. His major work, *Sarei ha-Me'ah* (6 vols., 1942–47), describes the greatest Jewish scholars of the last century. His other writings include *Le-Ma'an Ziyyon Lo Eḥeshah* (2 vols., 1954–55), *Middei Ḥodesh be-Ḥodsho* (8 vols., 1955–62), *Ḥaggim u-Mo'adim* (1950<sup>3</sup>), *Ha-Ziyyonut ha-Datit ve-Hitpatteḥutah* (1937), *Rabbi Moshe ben Maimon* (1959), *Toledot ha-Gra* (1954), and an edition of Judah b. Kalonymus' *Yihusei Tanna'im ve-Amora'im* (1942).

**MAIMON, SOLOMON** (1753–1800), philosopher. Maimon was born in Sukoviburg, Poland (now Belarus). He was a child prodigy in the study of rabbinical literature. Married at the age of 11 and a father at 14, Maimon supported his family by working as a tutor in neighboring towns. In his spare time he studied Jewish philosophy and Kabbalah; he adopted the name "Maimon" in honor of Maimonides. His attempt to demonstrate that the Kabbalah is based on philosophy caused the Ḥasidim with whom he associated to regard him as a heretic. He turned to the study of secular subjects and left his home and family to study in Berlin. In about 1777, after many hardships, he arrived at the gates of Berlin but was refused entry by officials of the Jewish community. After six months as a mendicant he arrived in Posen (Poznan), where he was received and aided by the rabbi, Zvi Hirsch b. Abraham. He taught for two years in Posen, but, finding the religious atmosphere of the community stifling, he made another trip to Berlin; this time he was able to enter the city.

In Berlin he became a member of Moses \*Mendelssohn's circle, but was abandoned by Mendelssohn a few years later because of the dissolute life he led. Forced to leave Berlin, he moved first to Hamburg and then to Amsterdam. In Hamburg he beseeched a Lutheran pastor to convert him to Christianity, yet he confessed his disbelief in Christian doctrines. The pastor retorted that Maimon was too much a philosopher to be a Christian. Thereafter, between 1783 and 1786, with the help of some benefactors, he was able to study at the gymnasium of Altona. Still poverty-stricken, he moved from Altona to Berlin, then to Breslau, and in 1787 back to Berlin. There he studied Kantian philosophy and under its influence wrote his first work in German, *Versuch ueber die Transzendentalphilosophie* (1790). He sent a manuscript of the book to Marcus \*Herz, who sent it to Immanuel \*Kant. Kant remarked in a letter to Herz (May 26, 1789) that it was clear to him from a cursory study of the book that its value was very great, and that nobody understood his philosophy as well as Maimon (E. Cassirer (ed.), *Immanuel Kants Werke*, 9 (1918), 415). Kant's letter determined Maimon's future. He found a publisher for his book and scholarly journals accepted his articles for publication. From 1790 to 1795 Maimon was supported by a benefactor, Count Adolf Kalkreuth, at whose residences near Berlin

and Freistadt, Silesia, he lived. When Maimon died, he was buried outside the Jewish cemetery as a heretic.

### Other Works

In 1791 Maimon published a philosophical lexicon, containing a series of essays on the principal points of philosophy (new edition 1970). In 1793 he published his *Streifereien im Gebiete der Philosophie*, followed by three works on the history of philosophy: *Ueber die Progresse der Philosophie* (1793); *Versuch einer neuen Logik* (1794; 1812<sup>2</sup>), in which he attempted to expound a system of logic; and *Die Kategorien des Aristoteles* (1794, 1798<sup>2</sup>). In 1797 his work *Kritische Untersuchungen ueber den menschlichen Geist* was published.

Maimon also wrote the following works in Hebrew, but only the first was published: *Givat ha-Moreh* (1791; ed. by S.H. Bergman and N. Rotenstreich, 1966), a commentary on the first part of Maimonides' *Guide of the Perplexed*; *Ta'alamot Hokhmah*, on mathematical physics; and *Heshek Shelomo*, which was divided into four parts, namely "*Ma'aseh Nissim*," on the 12 sermons of Nissim b. Reuben Gerondi, "*Eved Avraham*," on Ibn Ezra's commentary on the Pentateuch and Psalms, "*Ma'aseh Livnat ha-Sappir*," which are reflections, and "*Ma'aseh Hoshev*," on algebra. Maimon's autobiography (*Solomon Maimons Lebengeschichte, von ihm selbst geschrieben*), his only book to win wide acclaim, was published in Berlin in 1793 (Eng. trans. by M. Hadas (1947) and S.H. Bergmann (ed.; 1954); Heb. trans. (1942). It is an important source for the study of Judaism and Hasidism in Eastern Europe in that period. The 12<sup>th</sup> chapter describes Mendelssohn and his thought.

### Philosophy

To account for the origin of knowledge and its objectivity, the German philosopher Kant had posited the "thing-in-itself" as something existing outside the mind but unknowable in itself. Maimon's main contribution was to give a new direction to Kant's discussion of it. Maimon agreed with Kant that the cognition process must have a cause and that this cause must also guarantee the objectivity of the knowledge. But he differed from Kant by holding that this cause exists in the mind, not outside it. Invoking Kant's distinction between sensibility and understanding, Maimon affirmed that the concepts of understanding arise from perceptions of sensibility, which he appears to assume are the same for everyone, and which therefore guarantee their objectivity. Maimon maintained further that sensibility is a kind of understanding, but more limited and imperfect than understanding itself.

The "thing-in-itself" had another meaning for Maimon, namely, as the final goal toward which all cognition tends. Our knowledge is always fragmentary, but as it increases it approaches an ideal knowledge. This may be illustrated by a polygon, which approaches a circle as sides are added, but does not reach it.

**INFINITE INTELLECT.** While Maimon rejected Kant's extramental "thing-in-itself" as the cause of knowledge and the guarantor of its objectivity, he still had to answer Kant's ques-

tion of how knowledge is related to a world outside the mind. In his words, "To find a passage from the external world to the mental world is more important than to find a way to East India, no matter what statesmen may say." Maimon bridged this gap by assuming that our sensibility is only an imperfect expression of intellectual reality which underlies the world. Hence the objects of the outside world presented to sensibility are concepts and their relations. But since concepts and their relations must inhere in some intellect, Maimon posits an infinite intellect. Our intellect is derived from this infinite intellect. As finite creatures we can only comprehend a small portion of this rational structure of the world.

The assumption of an infinite intellect permits Maimon to bridge the gap between the intra-mental and extral-mental worlds. But the infinite intellect, in turn, does not receive concepts from objects lying outside of it; rather, it creates objects from within itself. There is no distinction between the form of knowledge and its content. Maimon summarized his position: "We posit... an infinite intellect... which creates out of itself all possible kinds of relations of things. Our intellect is the very same intellect, but in a more limited degree."

**LAW OF DETERMINABILITY.** Maimon had to face the further problem of how to describe the mode of thinking of the infinite intellect, that is, how the concepts cohere to create the structure of the rational world. To answer that question Maimon formulated the "law of determinability" ("*Satz der Bestimmbarkeit*"). One account of this complex notion was based on Kant's distinction between analytic and synthetic judgments. Analytic judgments, whose form is "A is A," are tautological and they do not produce knowledge; synthetic judgments, whose form is "A is B," produce certain knowledge. Maimon criticizes Kant's notion that synthetic judgments are certain, since in his view subject and predicate in these judgments are foreign to one another. Against Kant's two kinds of judgments, Maimon posited a third – the "law of determinability" – according to which there exists a judgment which is both analytic and synthetic. Using the proposition "the color is blue," Maimon states that the subject (the color) can exist without the predicate (blue), and, hence, the relation between subject and predicate is synthetic; on the other hand, the predicate (blue) cannot exist alone but only in connection with the subject and, hence, it is analytic. Maimon had hoped that through this law he could open new possibilities for metaphysics, but he was too careful a philosopher to attempt to build this speculative structure himself.

**MAIMON'S SKEPTICISM.** Despite the rationalist structure of his idealist philosophy, Maimon exhibited a skeptical streak. While he claimed that the hypothesis of an infinite intellect and the discovery of the law of determinability provide the possibility of viewing the world as a rational structure, he never claimed that one could know with certainty that this rational structure in fact exists in the world. The kind of doubts raised by skeptical philosophers such as David Hume remained. Philosophy can only show that it is possible to con-

struct a rational structure for the world, but it cannot show that this rational structure exists in fact. Hence, one can only philosophize “conditionally.”

Maimon’s philosophy strongly influenced the philosopher Johann Fichte and, through Fichte, German idealist philosophy. During the 19<sup>th</sup> century, Maimon was neglected; as a result of the efforts of the historian of philosophy J.E. Erdmann (in his *History of Philosophy* (1892<sup>3</sup>), index), however, interest in Maimon has been revived in the 20<sup>th</sup> century. In recent years several basic books dealing with his system have appeared. A new photostatic edition of his collected works began to appear in 1965.

[Samuel Hugo Bergman]

**MAIMON, YA'ACOV** (1902–1977), Israel government stenographer. In 1976 Maimon was awarded the Israel Prize for services in immigrant absorption. Born in Russia, Maimon immigrated in 1922. With the influx of immigrants to Israel after the establishment of the state he devoted himself, in a voluntary capacity, to the absorption of immigrants and organized hundreds of volunteers who followed his example. Maimon served as the official stenographer of the government and invented the system of Hebrew stenography.

**MAIMON BEN JOSEPH** (d. 1165/1170), Spanish rabbi and *dayyan*; father of \*Maimonides. Maimon studied in Lucena under Joseph \*Ibn Migash, and transmitted his teachings, both oral and in writing, to his son, who utilized them as the basis for his own halakhic works. Maimon was a *dayyan* of Cordoba for many years, until he and his family were compelled to leave, in consequence of the edict of forced conversion issued by the \*Almohads after their conquest of the city about 1149. For about ten years he wandered through Spain and probably also Provence. About 1160 he immigrated with his family to Fez, Morocco, where it was easier for forced converts to preserve their Judaism. In Fez he forbade the people to follow the false messiah, Moses Dari, who was popular there at the time. In 1165 he proceeded to Erez Israel, where he died, possibly in the following year. According to one tradition, his grave is in Tiberias. Some scholars think, however, that he went to Egypt with his son and died there.

Maimon was one of the most outstanding and influential scholars of his generation and the first of his distinguished family of whom a written work is known. His *Iggeret ha-Neḥamah*, written in his second year in Fez (published in the original Arabic by M. Simons, see bibliography; and in a scholarly Hebrew translation by B. Klar, 1945), was designed to comfort and guide the forced converts of Islam in their effort to preserve their Judaism. “We who are in exile can be compared to a man who is drowning. The water has reached

our nostrils but we still grasp hold of something ... and as the water threatens to engulf us, behold, a rope consisting of God’s precepts and His Torah dangles from heaven to earth. Whoever seizes hold of it still has hope of living ... and surely he who holds on even only with the tips of his fingers has more hope than he who lets go completely.”

Maimon’s fundamental premise – later adopted by his son Maimonides and accepted as law among Jews in Islamic countries – is that Islam, in that it is free from personification of the Deity, is not to be regarded as idolatry. In keeping with this view, he opposed martyrdom to avoid conversion to Islam. Unlike other scholars, who left the people without hope, Maimon asserts that those who perform the precepts in secret will be rewarded, laying particular stress on the value of reciting the \*Amidah three times daily, even in its abridged form, and even in Arabic. He also places great emphasis upon the importance of belief in the divinity of the mission of Moses, to whose virtues the work is largely devoted, comparing such belief to belief in God Himself. This principle, later embodied by Maimonides in his 13 principles, was designed to nullify belief in the divine mission of Mohammed, for which reason Maimon also stresses that Daniel was the last of the prophets. Maimon’s work reflects the spirit of despair that had seized the Jews of the countries during the time of the Almohads, and it fortified his readers that the tyrannical rule would not continue for long, as had been promised by the prophets. Maimon also wrote commentaries to the Talmud, from which his son quotes abundantly; a book on the laws of prayer and the festivals, from which only isolated quotations have been preserved (Simon b. Zemaḥ Duran, *Tashbez*, 1, no. 2); responsa, a number of which have been published by A.H. Freimann (see bibl.); a commentary on the Torah; a work on the laws of ritual purity; and, apparently, an exposition of an Arabic astronomical book. With the exception of the responsa, all his works were written in Arabic.

[Israel Moses Ta-Shma]

**MAIMONIDEAN CONTROVERSY**, a vast complex of disputed cultural, religious, and social problems, focusing around several central themes. Some of the elements of this controversy considerably antedate \*Maimonides (1135–1204); and of the questions brought into sharp relief by his ideas and writings, some have remained topical in many Jewish circles. Vast fields of human experience and thought are encompassed by it: reason and philosophy in their relation to faith and tradition; what components are permitted and what prohibited in the education of a man following the Torah; the proper understanding of \*anthropomorphism as expressed in the Bible

and Talmud; central theological concepts such as the \*resurrection of the body; and the very form of Maimonides' *Mishneh Torah* and its attitude toward talmudic discussion. The question of hierarchical leadership versus intellectual, personal leadership was one of the early causes of this controversy. In the Middle Ages the controversy had four climaxes: (1) during the last years of Maimonides' life, following the publication of his *Mishneh Torah* in 1180 until his death in 1204; (2) around 1230–35, involving David \*Kimḥi, \*Solomon b. Abraham of Montpellier, \*Naḥmanides and others, and centering in \*Provence; (3) the years 1288–90 in the Near East, involving Solomon Petit and Rabbi Isaac of Acre; (4) around 1300–06, involving Abba Mari b. Moses \*Astruc, Solomon b. Abraham \*Adret, \*Asher b. Jehiel, \*Jedaiah b. Abraham Bedersi (ha-Penini, and Menahem b. Solomon \*Meiri, and centering in Christian Spain and Provence. In between these moments when the conflict flared up anew and reached climaxes as a result of specific circumstances and the personalities involved, tensions and disputes continued among proponents and opponents of philosophy and Maimonides.

Although it is convenient to frame the four climaxes of the controversy as distinct historical stages, recent research has led to a reappraisal, in light of which these climaxes cannot be characterized as separate stages in a homogeneous process. It is certainly true that there were some essential differences among the stages. For example: in the fourth and final stage Maimonides himself no longer was the subject of the controversy, and even the conservative party accepted his positions, whereas in the early stages his *Guide of the Perplexed* and *Book of Knowledge* (the first section of the *Mishneh Torah*, containing philosophical material) were the main target; in the early stages the opposition was to philosophy per se, whereas in the latter stages the opposition was to unrestricted access to and teaching of philosophy, not a total rejection of it. Historians of the controversy over Maimonides and philosophy have tended to focus on extreme positions in each period, which lend themselves to simple characterization. On the other hand, the evidence increasingly supports the view that many Jewish intellectuals did not fall into either extreme camp – that of excessive rationalist allegorization or that of opposition in principle to all “foreign wisdom.” Many of the rationalist camp were strictly observant in their personal life and maintained the supremacy of the authority of the Torah, such as Judah b. Samuel ibn Abbas and Kalonymos, who were confirmed rationalists but rejected extreme philosophical positions. At the same time, among the conservative halakhic authorities were those who did not object in principle to the study of philosophy (to the contrary, they themselves had philosophical educations) but only to premature exposure of the youth to philosophy and to extreme rationalist allegorization, especially in public sermons in the synagogue. Abba Mari \*Astruc ha-Yarḥi, for example, who played a major role in promoting the limited Barcelona ban on philosophy in the fourth and final climax of the controversy (1305), wrote a philosophical work, *Sefer ha-Yare'ah*, which in many respects is rationalist in outlook.

The crisis of Spanish Jewry in the 15<sup>th</sup> century accentuated the main educational and social themes of the old controversy. In Renaissance Italy and in the diversified and flourishing Jewish center of Poland-Lithuania the old quarrel again became topical, though in a milder form. With the enlightenment (\*Haskalah) of the 18<sup>th</sup> century the “Maimonidean side” of the controversy was given a new, greatly secularized, and radical expression by Moses \*Mendelssohn and his followers – an expression that could scarcely have been imagined by the former protagonists. In German \*neo-Orthodoxy, the “Maimonidean side” – particularly in its striving for a synthesis of Jewish faith and “general culture,” as well as in certain of its social tendencies – found a new, conservative expression. In Yemen in the 19<sup>th</sup> century and well into the 20<sup>th</sup>, there was a distinct “Maimonidean camp” and a struggle against it (see Kafah).

In the last two decades of the 20<sup>th</sup> century and the first years of the 21<sup>st</sup> century, Maimonides again became the focus of a controversy in ultra-Orthodoxy, as a result of the emphasis placed by Rabbi Menaḥem Mendel \*Schneersohn of Chabad-Lubavitch Ḥasidism on the study of the *Mishneh Torah*. The non-ḥasidic leadership, in particular of the Lithuanian type of yeshivah, vehemently rejected placing Maimonides at the center of the curriculum in place of such classic codes as Joseph Caro's *Shulḥan Arukh*.

### The First Clash: During Maimonides' Lifetime

Through the charisma of his personality and the trend of his thought and leadership Maimonides himself initiated this. An exile from Muslim Spain, he met in the Near East the hierarchical traditions of the exilarchate and the \**geonim*. Maimonides was willing and ready to respect the \*exilarch as scion of the royal house of David and as the proper authority, from the halakhic point of view, to appoint and ordain judges.

His mind and heart vehemently opposed the claims of the *geonim*. He criticized sharply the way they:

fixed for themselves monetary demands from individuals and communities and caused people to think, in utter foolishness, that it is obligatory and proper that they should help sages and scholars and people studying Torah ... all this is wrong. There is not a single word, either in the Torah or in the sayings of the [talmudic] sages, to lend credence to it ... for as we look into the sayings of the talmudic sages, we do not find that they ask people for money, nor did they collect money for the honorable and cherished academies (commentary to Avot 4:5).

This attempt to undermine the economic and social foundations of the leadership of the Babylonian *geonim* went hand in hand with Maimonides' opposition to their program of studies and his contempt for their very office. The *Gaon* at Baghdad at this time was \*Samuel b. Ali, a strong and authoritarian personality. In an ironic “apology” for Samuel b. Ali's attacks on the *Mishneh Torah*, Maimonides explains to one of his pupils:

Why, my son, should you take offense that a man whom people accustom from his youth to believe that there is none like him

in his generation; when age, high office, aristocratic descent, the lack of people of discernment in this town, and his relationship with individuals, all have combined to produce this execrable consequence that each and every individual hangs expectantly on each word pronounced from the academy in anticipation of an honorific title from there... – why do you wonder that he has acquired such [evil] traits? How, my son, could you imagine that he should love truth enough to acknowledge his weakness?... This is a thing that a man like him will never do, as it was not done by better men who preceded him (letter to Joseph b. Judah in: D.H. Baneth (ed.), *Iggerot ha-Rambam* (1946), 54f.).

The gaonate is represented as corrupt, and typical academy study as being of questionable value. Concerning Zechariah, the son-in-law of the *Gaon*, Maimonides writes:

He is a very foolish man. He studies very hard at this talmudic discussion and its commentaries, and thinks that he is the greatest of his generation, having already attained the peak of perfection. My esteemed son knows that my appreciation of the greatest of the sages of Israel is such that I evaluate their worth according to their own criteria. They themselves have defined ‘the argumentations [*havayot*] of \*Abbaye and \*Rava [as] a small matter.’ If this is a small matter, why should I pay attention to an old man who is really miserable, an ignoramus in every respect? To my eyes he is like a newborn baby; one has to defend him, according to the measure of his [Zechariah’s] foolishness (*ibid.*, 56ff.; the bulk of this passage has been erased in most manuscripts).

This vehement revolt against the authority of the *geonim* came at a time when Samuel b. Ali was attempting to minimize the authority of the exilarch on the grounds that what the people needed then was no more than the leadership of the *geonim* and the guidance of their study in the academy. Small wonder that such a revolt aroused reciprocal anger, coming, as it did, in defense of Maimonides’ *Mishneh Torah* which claimed expressly (in the introduction) to supersede the Talmud in popular usage, replacing its deliberations – the very core and substance of the life of academies and *geonim* – by his systematic code. The claim of the intellectual to replace an aristocratic hierarchy seemed to be combined with an attempt to impose Greek systematic modes of codification in place of the traditional many-voiced flow of talmudic discussion. It is hardly surprising that Samuel b. Ali, Zechariah, and \*Daniel b. Saadiah ha-Bavli all sought and found halakhic flaws in this code. Some of their arguments have philosophical and theological overtones, but these were to come to the forefront only in the second stage of the controversy. In the main, in this phase, it was Maimonides’ creativity which was found provocative, as well as his attitude to Talmud study and to the leadership of established institutions, all of which were being defended against him.

### The First Stage in Europe

In this first flare-up, the controversy was thus not over philosophy as such, or over Maimonides’ philosophy in particular, since his *Guide of the Perplexed* was translated into Hebrew only at the very end of his life. The criticism was

leveled primarily against his *Mishneh Torah* and his attitude toward resurrection. The criticism of the *Mishneh Torah* focused on Maimonides’ methodology, the fact that he did not cite sources for his decisions, and his claim that the study of his Code would replace the study of Talmud: “A person should study the written Torah first, and then read this [book], and thereby know the entire oral Torah, so that he will not need to read any other book in between them.” The criticism also reflected divergent local traditions and custom (*minhag*). Maimonides’ great Ashkenazi critic, R. \*Abraham b. David of Posquières (Ravad), in his critical gloss (*hasagah*) to the Introduction to the *Mishneh Torah*, asserted that Maimonides “has abandoned the method of all the authors who preceded him, because they brought proofs for their words, and cited their sources... But this way, I do not know why I should disregard my tradition and my proof for the sake of this author’s book.” Ravad also attacked Maimonides on theoretical issues. Maimonides had categorized as a heretic (*min*) anyone who affirms that there is one God but that God has a body (Yad, Teshuvah 3:7). In his *hasagah* to this passage, Ravad protested: “Why did he call such a person a heretic, when some who were greater and better than he followed this opinion, according to what they found in the Bible and even more, according to what they found in *aggadot* which corrupt opinions?” What is significant here is not that Ravad defended corporeal beliefs – he also rejected the corporealism of “*aggadot* which corrupt opinions” – but that he attacked the legitimacy of Maimonides’ categorization of such corrupt opinions as heresy.

As for the criticism of Maimonides’ regarding the traditional belief in bodily resurrection, because of his consistent emphasis on an intellectualist understanding of the world to come (*olam ha-ba*) in terms of the survival only of the actual intellect in proportion to its attainment of knowledge, Ravad wrote (on Yad, Teshuvah 8:2): “The words of this man seem close to one who says that there is no bodily resurrection of the dead, but only of the soul.” Others were equally critical of Maimonides’ apparent denial of resurrection.

Ramah (R. Meir b. Todros ha-Levi \*Abulafia), who was active in the first two climaxes of the controversy, was in many respects a sincere admirer of Maimonides. In the first period he was shocked at the implication that Maimonides did not affirm the resurrection of the body as a halakhic principle. In an angry letter sent to the scholars of \*Lunel he not only sought to prove by copious quotations the dogmatic truth of bodily resurrection, but also added passionately that if there is no such resurrection, “to what end did the bodies stand watch for their God, did they go in darkness for the sake of their God? If the bodies are not resurrected, where is their hope and where are they to look for it?” (*Kitāb al-Rasīl*<sup>7</sup> (1871), 14). Abulafia also attacked Maimonides on other halakhic points. It was only after he saw Maimonides’ *Treatise on Resurrection* that he became satisfied that Maimonides, in fact, affirmed the traditional belief. While some of his correspondents agreed with his earlier criticism, others tried to convince him that he had misunderstood the purport of Maimonides’ teaching on

resurrection, and this latter view was accepted wholeheartedly by the *nasi* Sheshet b. Isaac of Saragossa, who in a very radical sense gave expression to Maimonides' rationalism and philosophical synthesis. Writing about 1200, he attacked sharply and derisively what he regarded as the simplicism and materialism of Abulafia's view (A. Marx, in: JQR, 25, (1934/35), 406–28). To speak about bodily resurrection is "to bring down our saintly fathers from the highest level – the status of the angels who enjoy divine glory and live forever – to the status of man, through their returning to the impure body which cannot exist except through food and drink, and must end in dust and worms ... but the life of wisdom is greater than foolishness, as light is greater than darkness. These notions seem to me like the words of one confused" (*ibid.*, 418). The only correct conception of resurrection, he thought, is the one also accepted by the pagan philosophers. Resurrection means the eternal life of the soul of the sage-philosopher. "If the soul – while still in the body – was yearning for its Creator, subordinating its passion to its reason, [then] when it leaves the body, [it] will attain the highest status, for which it yearned while still in the body; and over it God will emanate of His spirit. This, in the view of the sages, is the resurrection of the dead and the reward of the just at the end of days" (*ibid.*, 421 ff.). All pronouncements in the Bible and the Talmud about bodily resurrection are only for the simple men who constitute the majority of mankind and who understand only material rewards, and the same holds true for the Muslim paradise (*ibid.*, 424).

I ask this fool who maintains that the souls will return to the dead corpses and that they are destined to return to the soil of Israel. Into which body will the soul return? If it is to the body from which it has departed, [then this will] already have returned to its elements thousands of years earlier; [it is now] earth, dust, and worms. Where it has been buried, a house has been built, a vineyard planted, or some other plants have taken root and you cannot find the earth or the dust or the worms into which the body has turned. If, however, this soul is to return to another body, which God will create, then it is another man who will be created in his own time, and has not been dead; how, then can you say that he is being resurrected and that God rewards him, as he has not as yet achieved anything? (*ibid.*, 426).

Sheshet records opposition to the *Mishneh Torah* by reporting the opinion of one of the judges who quarreled with him and refused to judge according to Maimonides: "As he does not adduce proofs from the sayings of the talmudic sages for his decisions, who is going to follow his opinion? It is far better to study Talmud. We will have nothing to do with his books and his writings." In Sheshet's view this opposition stems from the fact that until the *Mishneh Torah* the whole matter of legal decision was so confused that the vast majority of Jews, being ignorant of the Talmud, had to obey their judges, whereas now people had before them a clear and open code and were not dependent on judges alone (*ibid.*, 427).

Maimonides was aware of the criticism leveled against him, and responded to it by his *Treatise on Resurrection* (*Maqalah fi Tehiyat ha-Metim*, 1190–91). Maimonides' de-

fense of resurrection in that work was accepted at face value by such early critics as Ramah (Rabbi Meir b. Todros ha-Levi Abulafia), who then retracted his criticism. Ravad's critical glosses were incorporated into standard editions of the *Mishneh Torah*. So the first climax in the Maimonidean controversy subsided with Maimonides' death in 1204, but the criticism of the *Mishneh Torah* was preserved for later generations together with the Code itself.

### The Second Climax: 1230–1235 in Europe

What led to periodic controversies over Maimonides and philosophy? In the first period, as we have seen, it was Maimonides' enormous status which led towards the end of his life to the rapid availability in Hebrew of his works in Europe, including his *Guide of the Perplexed*, outside his own immediate sphere of influence. It was this almost immediate availability of his philosophical views in areas previously unexposed to philosophical culture which in turn aroused resistance. In the second period, external circumstances contributed to the flare-up of the controversy. Furthermore, whereas Maimonides himself was the subject of controversy in the first period, he was merely the catalyst for a much broader and fundamental controversy in the second period, when philosophy itself came under sharp attack. In addition, whereas Maimonides, however much his views were criticized in the earlier period, was personally highly regarded, in the later period the philosophers themselves were attacked and subject to suspicion.

Maimonides' works reached Christian Europe, chiefly in the southwest – Spain and Provence – entering a cultural and social climate very different from the one in which they had been created in the Arabic-Islamic culture of Egypt. As we have seen, Maimonides' authority in the *Mishneh Torah* had been criticized halakhically by Ravad and \*Moses ha-Kohen, among others. The Christian Reconquest was proceeding apace in the Iberian peninsula. Mystical tendencies and visionary approaches began to find explicit and strong expression in the developing \*Kabbalah of Provence and Spain. Jews everywhere were suffering from the impact of the \*Crusades, with martyrdom (\**Kiddush ha-Shem*) in their wake. Maimonides' grand attempt at a synthesis between the Jewish faith and Greek-Arabic Aristotelian philosophy was received with enthusiasm in some circles, mainly of the upper strata of Jewish society, and with horror and dismay in others, imbued with mysticism and dreading the effects of Greek thought on Jewish beliefs. The old and continuously smoldering issue of "Athens versus Jerusalem" conceived in the Talmud as the problem of "Greek wisdom" – *hokhmah yevanit* (BK 82b–83a; Meg. 9a–b), now burst into flames. Essentially the problem is one of the possible synthesis or the absolute antithesis between monotheistic revealed faith and intellectually formulated philosophy. Both faith, based on revelation, and philosophy, based on human reason, were understood to fundamentally contradict each other's methodology and undermine each other's authority. The rational method of inquiry, which in classical and medieval times was equated with science (the distinction

between philosophy and the natural sciences being a modern phenomenon), is an open system. It can lead to any conclusion, and the conclusion is justified and necessitated by the integrity of the method of inquiry itself, which can be replicated by others; furthermore, it is universal, transcending national, cultural, or religious differences. Faith, which differs from scientific knowledge precisely in that it involves an affirmation of truth without conclusive and demonstrative proof, basically is a closed system which reverses the process of inquiry: one begins with the conclusion, which is given as a revealed fact, which one can then subject after the fact to rational analysis and explication, but which cannot itself be rejected or denied. Faith, moreover, begins with revelation occurring within a particular national, cultural, linguistic, or religious context, and its authority is thus conventional, even if it claims to be ultimately universal in its significance and application.

This problem is common to Judaism, Christianity, and Islam. In the view of H.A. Wolfson, all of Western religious philosophy, whether in Hebrew, Latin, or Arabic “garb,” is essentially the same regarding the problematical relationship between revelation and reason. In Wolfson’s scheme, \*Philo was the first “synthetic” philosopher, and the greatest figure in the history of Western philosophy after Plato and Aristotle, because he attempted to synthesize biblical revelation (which did not know philosophy) and philosophy (which was pagan and did not know revelation), and all subsequent philosophy in the Middle Ages was “Philonic” in structure, until Spinoza destroyed that structure and made possible modern philosophy by freeing philosophy from revelation (Wolfson, *Philo: Foundations of Religious Philosophy in Judaism, Christianity and Islam* (1947)).

In all three traditions, therefore, tensions exist between rationalistic religious belief, inclining in the main toward synthesis, and mystic belief, which is largely opposed to it.

The problem was not new in Judaism. In Islamic countries in the tenth century it was in the main decided in favor of rationalism and synthesis. Maimonides was not the only one in the 12<sup>th</sup> century who expressly sought a synthesis between Greek philosophy and Judaism; a philosophic approach was attempted by Abraham \*Ibn Daud (see, e.g., his *Sefer ha-Emunah ha-Ramah* (1852), 2, 58), and he was preceded by a rationalist tradition of synthesis going back to \*Saadia Gaon and \*Samuel b. Hophni who denied the historical veracity of the incident of Samuel and the Witch of Endor.

Yet in Maimonides’ time radical changes were taking place in Jewish communities in Europe. The influence of the Christian environment became more pervasive. Increasingly, Christianity was involved in similar problems, as the conflict between Peter \*Abelard and \*Bernard of Clairvaux clearly shows. After the Crusaders captured Constantinople in 1204 (the year of Maimonides’ death), the Greek works of Aristotle became directly accessible to Western Christians, who no longer had to rely on Latin translations of the Greek texts made (often by Jews) from Arabic or from Hebrew versions based on Arabic translations from the Greek. The growing univer-

sities increasingly challenged the monasteries as centers of learning. While the traditional doctrines of the Church were being confronted by secular learning, Christian Orthodoxy was also challenged in the 12<sup>th</sup> and 13<sup>th</sup> centuries by “heresies,” especially that of Cathari and the related heresy of the rationalist Albigensians, who had begun in the 11<sup>th</sup> century to interpret Scripture allegorically and who denied the literal interpretation of the miraculous events of Jesus’ life and death that was central to Catholic dogma. Such “heresy” spread especially among the upper classes. The Church moved against both threats in the first decades of the 13<sup>th</sup> century. Against the threat of secular philosophy, the Church issued repeated bans on the study of Aristotle and commentaries on his works. Pope Innocent III launched the Albigensian Crusade, to eliminate the heresy (which he regarded as instigated by educated Jews). In 1231 the bans on Aristotle were renewed by Pope Gregory IX, who established the permanent Inquisition under the Dominicans, with the aim of completely eradicating Albigensianism. There were, in fact, certain parallels between the Christian Albigensian “heresy” and the Jewish philosophers of the day, at least in the eyes of their respective opponents, who accused them of indiscriminate allegorization of Scripture and of antinomian laxity in moral or ritual behavior. The stormy winds of anti-rationalism in the Christian environment were a contributing factor in the exacerbation of long existing, if usually dormant, tensions within the Jewish community.

Social upheavals in Jewish society during the 12<sup>th</sup> and 13<sup>th</sup> centuries also added communal tension to the spiritual strife. When Maimonides was still young, and most of his work as yet unwritten, \*Judah Halevi warned: “Turn aside from mines and pitfalls. Let not Greek wisdom tempt you, for it bears flowers only and no fruit.... Listen to the confused words of her sages built on the void.... Why should I search for bypaths, and complicated ones at that, and leave the main road?” (from his poem beginning “*Devarekha be-Mor Over Rekuhim*”).

Maimonides’ prestige and the external pressures thus combined in a volatile mixture for Jews in Europe. Despite common admiration for Maimonides and his all-embracing devotion to Torah and the Jewish faith, there was in reality no common language between the two radical positions. Gradually the opponents of Maimonides began to attack his very conception of a synthesis between Greek philosophy and Jewish faith.

Solomon b. Abraham of Montpellier, together with David b. Saul and \*Jonah b. Abraham Gerondi (a relative of \*Nahmanides) agitated against philosophy, and in 1232 succeeded in persuading the rabbis of northern France to issue a total ban on the study of philosophy, including Maimonides’ *Guide of the Perplexed* and *Book of Knowledge* (the first section, containing philosophical material, of the *Mishneh Torah*). The traditionalists’ arguments against philosophy were based on three oft-repeated claims (recurring in the later stages of the controversy as well), which were consistently denied by the philosophers: (1) *Theological* – The philosophers were depicted

as denying miracles, as regarding prophecy as a purely natural phenomenon, as undermining the authority of the Torah, and as rejecting traditional eschatology; (2) *Exigetical* – The traditionalists charged the philosophers with engaging in indiscriminate allegorization of Scripture and of denying the historicity of various biblical persons and events; (3) *Practical* – The philosophers were suspected of laxity in observance of the commandments.

The controversy of the 1230s also involved exchanges of letters, many between the philosopher and biblical exegete Radak (David \*Kimḥi) and the physician and courtier, Judah \*Ibn Alfakhar. Remarkably, the letters from both sides of the controversy were preserved in a collection *Iggerot Kena'ot*, “Letters of Zealotry” (published in *Kovez Teshuvot ha-Rambam*, Leipzig, 1859). When Kimḥi traveled about the communities of Provence to rally the supporters of Maimonides, he was greatly surprised to be answered by Judah ibn Alfakhar with a bitter attack on Maimonides’ very attempt to rationalize and explain away miracles and wondrous tales. Ibn Alfakhar was against half acceptance; logical proofs were not so important, “for each true proof needs great checking, since sometimes it may include misleading elements of that false wisdom called sophistry in Greek, and when a proof is joined to this it misleads even sages.” Maimonides’ “erroneous” intention was to explain matters according to the laws of philosophy and nature “so as to put the Torah and Greek wisdom together, to make out of them one whole.” He imagined that the one would live with the other like two loving twin deers. In reality this has resulted in sorrow and dissension, for they cannot live together on the earth and be like two sisters, for the Hebrew women are not like the Egyptian ones. To this our Torah says: ‘No, my son is the living one, and yours is the dead’ (1 Kings 3:22) and her rival angers her. I want peace; if I start to talk to them, they go to war” (letter to Kimḥi, *Iggerot Qena'ot*, 2a). Thus, through radical rationalistic argumentation, this physician and courtier in Spain rejects the synthesis of the physician and courtier in Egypt and the logical compromise it involves. As suggested by S. Harvey (1987), the dispute of the 1230s between Kimḥi and Alfakhar may well have served as the model for the book “The Epistle of the Debate” by Shem Tov ibn \*Falaquera, who was a participant in the next, third climax of the controversy.

The demand for logical consistency was also answered from the Maimonidean camp. Increasingly they inclined toward extreme allegoristic explanations of talmudic and even biblical expressions and tales. Their opponents accused them of even inclining to explain away as no more than symbols certain practical commandments, which need be fulfilled only by simple men, but not by educated people. The rationalists denied this. Social overtones became stronger. The anti-Maimonideans berated their upper-class opponents for their hedonistic, luxurious, and sinful way of life. The Maimonideans countered by accusing their adversaries with anarchy, harshness, ignorance, simplicity of mind, and of being under Christian influence.

The anti-Maimonidean camp turned to the great sages of northern France. Never having been acquainted with Aristotelian philosophy, they never felt the need for synthesis with it; therefore, they unhesitatingly pronounced a *herem* on Maimonides’ philosophical works. Some report that they excommunicated even parts of his halakhic code. In Provence and Spain the anti-Maimonidean camp was led by Solomon b. Abraham of Montpellier, \*Jonah b. Abraham Gerondi, the poet Meshullam \*da Piera, and above all Naḥmanides. The position of Naḥmanides is remarkable for its simultaneous flexibility in expression and rigidity of mental attitude. Seeing that the extreme anti-Maimonidean stance taken by the rabbis of northern France and by Solomon of Montpellier had no chance of finding support among the leading circles of Jewish society in Provence and Spain, he therefore advised the anti-Maimonidean camp to adopt a moderate stand in order to achieve at least what was possible. Writing to the north French rabbis (printed in: MGWJ, 9 (1860), 184–95) he expresses his devotion and admiration, but he humbly submits that they “are nourished in the bosom of [true] faith, planted in the courts of tradition,” and therefore had to understand Maimonides in his peculiar cultural and social circumstances. The situation he describes is actually that of Spanish and Provençal Jewish upper society in the early 13<sup>th</sup> century:

They have filled their belly with the foolishness of the Greeks ... they ... make fun ... of the trusting souls.... They did not enter profoundly into the ways of our Torah; the ways of alien children suffice for them. But for the words of [Maimonides], but for the fact that they live out of the mouth of his works ... they would have slipped almost entirely.

It is not only a matter of false spiritual pride and alien culture; it is also a case born of social necessity:

God save and guard us, my teachers, from such a fate. Look about and see: is there a pain like our pain? For the sons have been exiled from their fathers’ tables; they have defiled themselves with the food of gentiles and the wine of their feasts. They have mixed with them and become used to their deeds ... courtiers have been permitted to study Greek wisdom, to become acquainted with medicine, to learn mathematics and geometry, other knowledge and tricks, so that they make a living in royal courts and palaces.

This intrinsically hostile description of the life of the upper classes of Jewish society in Provence and Spain is given in order to put Maimonides in the light of a great talmudic sage who – argues Naḥmanides – would certainly and gladly have written and lived as the northern French rabbis did. Alas, it was not granted him: “Did he trouble himself for your sake, you geniuses of the Talmud? He saw himself compelled and constrained to structure a work which would offer refuge from the Greek philosophers.... Have you ever listened to their words, have you ever been misled by their proofs?” He goes on to explain that extremism would bring about an irreparable split. It is far better to educate gradually this misled society and bring it back to the right way of northern France, by par-

tial prohibitions only. The region most afflicted is Provence; Spain he considers to be in far better order.

Nahmanides was merely temporizing in his writings to the northern French rabbis. His true temper and the temper of the entire anti-Maimonidean camp is revealed in his commentary on the Torah, which is basically a mystical work against Maimonides and Abraham \*Ibn Ezra. The very concept of a system of laws of nature ordained by God in His wisdom to be admired by man through his reason, as expressed by Maimonides (see, e.g., *Mishneh Torah*, *Sefer ha-Madda*), he and his colleagues believe to be sheer heresy. The workings of nature are to be conceived of only and always as “hidden miracles.” God performs extraordinary \*miracles in order that we should understand the miraculous nature of all existence and life:

Through the great and famous miracles man recognizes the hidden foundation of the entire Torah. For no man has a share in the Torah of Moses until we believe that all our matters and accidents are miracles, the product neither of nature nor of the way of the world, whether for the multitude or for the individual; but if a man fulfills the commandments his reward will bring him success, if he transgresses them his punishment will strike him – all by divine decree (Comm. to Ex. 13:16).

Though their tactics might thus vary, dogmatics were radical and clearly defined on both sides. *Herem* was hurled against counter-*herem*, as the authority of northern France was met by the authority of local scholars and communal leaders in Provence and Spain. Emissaries of both camps traveled about, rallying their supporters. A profusion of letters and counter-letters, sermons and counter-sermons, commentaries and counter-commentaries poured out. The weapons in the campaign were polemics, original and translations, and the Ibn \*Tibbon and \*Anatoli families made their name in both. In the work of men like Jonah Gerondi the struggle against Maimonides was merged with a general reforming spirit in morals and community leadership. This battle was ended by a terrible shock when Maimonides’ books were burned by the \*Dominicans in 1232. Proponents and opponents of Maimonides and philosophy alike interpreted this calamity as a punishment for the opposition. Accordingly, Jonah Gerondi relented in his views and many adherents of the anti-Maimonidean camp followed suit.

The controversy returned to the Muslim countries in the East. Maimonides’ son, \*Abraham b. Moses b. Maimon, was outraged at what had happened in the West. He attacked “many overseas [scholars who are] mistaken. They cling to the literalistic sense of biblical verses, Midrashim, and *aggadot*. This pains our heart; at the sight of this our eyes have darkened, and our fathers are dumbfounded: How could such an impurity, so like the impurity of idol worship, come to be in Israel? They worship idols, deny God’s teaching, and worship other gods beside Him.” Flinging these accusations against Maimonides’ opponents in Europe, Abraham holds that through their exegetical explanations they are guilty of pagan-like anthropomorphism (*Millhamot ha-Shem*, ed by R. Margalioth (1953), 52). He compares their faith to that of the

Christians (*ibid.*, 55). Continuing his father’s line of thought, he attacks the European antirationalistic scholars for their exclusive devotion to talmudic studies only, while neglecting the philosophical and philological foundations of the faith (*ibid.*, 49). They are among “those that walk in the darkness of their understanding and in the paucity of their wisdom” (*ibid.*, 50). He expressly prefers Islamic surroundings and influence – conducive to a rationalistic-monotheistic faith – to a Christian environment, which influences men in the direction of antirationalism and anthropomorphism (*ibid.*, 51). Abraham restates the basic rationalistic principle of faith and exegesis:

Know ye God’s people and His heritage, that God differentiated men from animals and beasts through the reason, wisdom, and understanding which He granted them. He also differentiated Israel from the gentiles through the Torah He gave them and the precepts He commanded them. Hence reason preceded Torah, both in creation of the world, and in each and every one living in it. Reason has been given to a man since the six days of creation; Torah was given to man 4,448 years after creation. Should someone say to you, ‘But the sages have explained that the Torah was created two thousand years before the world,’ you should reply that this Midrash needs many commentaries to justify it. It is impossible to take it in its simple sense.... Reason was implanted in each and every one of the seed of Israel before his knowledge of Torah. Know and understand that it is because the child’s reason is not yet ripe, that God did not oblige him to fulfill commandments (*ibid.*, 57–58). In Abraham’s view, corporeal beliefs, rather than philosophy, constituted the true denial of the Torah.

While this blast was going forth from the East, extremists from the West caused the desecration of Maimonides’ tomb at Tiberias, which shocked not only the Maimonidean camp but also the majority of the anti-Maimonideans. When in the early 1240s the Disputation of Paris and the burning of the Talmud added shock to shock, public quarrels among Jews were set aside for several decades, and the second climax of the controversy came to an end.

It remains a much disputed point whether the Dominicans set fire to Maimonides’ writings on their own initiative, scenting heresy wherever they could find it, or whether their action resulted from a denunciation by Jews, as contemporary Maimonideans believed. Neither the social nor the cultural motivating forces of the controversy disappeared with the cessation of polemics. The rise of kabbalistic circles and literature (see \*Zohar) on the one hand, and the continuing philosophical activity and way of life of the upper and “professional” circles of Jewish society on the other implied a continuation and an intensification of the struggle between rationalists and anti-rationalists.

### The Third Climax: A Renewed Outbreak of the Controversy in 1288–1290

Whereas the controversy of the 1230s took place largely in southern France, within a Christian environment, most of the controversy towards the end of the 13<sup>th</sup> century took place in the Near East. Solomon Petit, a mystic and anti-rational-

ist, had first agitated against Maimonides in northern France and Germany, where he was supported in his attempts to ban the study of the *Guide* and the *Book of Knowledge*. In 1288, Petit immigrated to Acre, where he taught Kabbalah; many of his students had been students of Nahmanides after his emigration to Israel. In Acre, Petit continued to agitate against Maimonides and to urge the burning of his books, especially the *Guide*. But he met with consistent failure, and was himself banned no less than four times. Petit had fundamentally miscalculated: he was now living in the Land of Israel, which came under the jurisdiction of the *nagid* (governor) of Egyptian Jewry, David b. Abraham b. Maimonides. In the Arabic environment of the Near East, the Jews were long accustomed and exposed to philosophical culture, unlike the Jews of Christian Europe who had originally supported Petit.

Petit was also opposed in the west. The last known work of Shem Tov ibn Falaquera, *Mikhtav al Devar ha-Moreh* ("Letter Concerning the Guide") defended Maimonides against the attacks of Petit and others. In his "Letter," Falaquera mocks Maimonides' opponents in a poem: "I wonder about those who differ with Moses [i.e., Maimonides] / How they don't remember the punishment of Korah. / He is a true teacher, and his word / Is like fire; their word is like ice." Playing on Petit's name, Falaquera calls him a *peti* (fool). Falaquera argued that Maimonides was compelled to write the *Guide* because of widespread corporeal beliefs among the Jews, even among the great rabbis. But such people, wrong as they are, were not the perplexed for whom Maimonides had written his *Guide*. No wonder that Maimonides had been misunderstood – after all, even the Torah had been misunderstood. The masses of Jews in the Torah had rebelled against God and Moses; no wonder that they rebel against the Moses of today. The opponents of philosophy, Falaquera suggested, glorified in their ignorance of science and philosophy, and had to rely on faulty and misleading Hebrew translations of the *Guide* because they were ignorant of Arabic.

#### The Fourth and Final Climax: 1300–1306

When the controversy flared up again for the fourth and final time at the end of the 13<sup>th</sup> and beginning of the 14<sup>th</sup> century, the immediate catalyst was the extreme allegorical exegesis of certain rationalists. In the century since Maimonides' death, philosophy and science had become deeply entrenched in Jewish culture. Therefore, whereas in the 1230s the traditionalists sought a total ban on the study of philosophy, in the fourth and final climax of the controversy the traditionalists also accepted the validity of philosophy and science. They did not seek to ban totally the study of philosophy, but only to limit it, especially among the youth who lacked the intellectual and spiritual maturity to deal with its challenges to tradition. What they rejected was the philosopher's extreme allegorization of Scripture and alleged denial of creation and miracles, which they saw as basic to the affirmation of the Torah. The traditionalists also objected to the rationalists' use of astral magic for medical purposes; they saw such magic not as scientific

but as forbidden *avodah zarah* (idolatry). In particular, the controversy focused on the content of Jewish education and the question of the possibility or impossibility of synthesis between "Greek wisdom" and the Torah of Moses. Abba Mari Astruc ha-Yarḥi of Lunel turned to Rashba (Rabbi Solomon b. Abraham \*Adret) in Barcelona for guidance on the rationalists' allegorical interpretations, which he saw as heretical. Despite Astruc's strong partisan views, he preserved a collection of the exchange of letters from both sides in his *Minḥat Kena'ot*, "The Offering of Jealousy" (cf. Num. 5:15) (ed. M. Bisliches, Pressburg, 1838; reprinted Jerusalem, 1968; new and superior ed., H. Dimitrovsky, *Teshuvot ha-Rashba*, Jerusalem, 1990, 2 vols.). Astruc charged the philosophers with treating historical figures and events in the Bible purely symbolically, at the expense of their historicity; with regarding Plato and Aristotle, rather than the Torah, as the criteria of truth; with rejecting miracles and divine revelation; and with being personally lax in observance of Jewish law.

Although these charges, especially those of interpreting biblical figures purely symbolically and laxity in observance, were consistently denied by the rationalists, such as Menahem b. Solomon Meiri and Jedaiah b. Abraham Bedershi ha-Penini, they were on some level accurate. For example, Jacob b. Abba Mari Anatoli (1194–1296), the son-in-law of Samuel ibn Tibbon, in his book *Malḥam ha-Talmidim*, had interpreted the patriarchs and matriarchs allegorically, rather than historically. Abraham and Sarah symbolized form and matter; Lot and his wife symbolized the intellect and the body; Isaac symbolized the active soul, and his wife Rebecca the intelligent soul; Leah symbolized the perceptive soul, and her sons the five senses; Leah's daughter Dinah represented sensations induced by imagination; Joseph symbolized practical reason, while Benjamin symbolized theoretical reason. He also interpreted the seven-branched *menorah* (candelabrum) as representing the seven planets, the twelve tribes as symbolizing the constellations, and the Urim and Thummim of the high priest as representing the astrolabe.

The traditionalists feared that such views could only lead to laxity in observance. If the Torah is true only on a symbolic level, the commandments might also be interpreted purely symbolically, at the expense of their actual observance, which is based on the literal text. Nevertheless, their attacks on individual rationalists like Levi b. Abraham b. Ḥayyim of Vilefranche (who seems to have been the immediate catalyst of the outburst), were unwarranted, since these rationalists, as they themselves insisted in their own defense, did not in fact go beyond Maimonides' views or give up strict observance of the law, despite their radical allegorization.

Toward the end of the 13<sup>th</sup> century, a fierce dispute broke out in Provence between traditionalists and rationalists. While the main bone of contention was ostensibly radical rationalist allegorical exegesis of the Bible, the dispute actually flared up over the rationalist practice of healing with astral magic. Astral magic was included in the curriculum of medical studies in the universities. Paradoxically, it was thus the rational-

ist camp which employed astral magic in healing, and it was their use of such magic which the traditionalists, led by Abba Mari of Lunel, rejected as idolatrous *avodah zarah* and as prohibited by the *halakhah*.

Abba Mari tried to drag R. Solomon b. Adret (Rashba) into the argument, but failed. Rashba noted that he himself, before the anti-philosophical controversy had arisen, had unhesitatingly permitted the fashioning of effigies for medical purposes, and even while the controversy was still raging refused to issue an absolute prohibition of the medical use of astral magic. As against Maimonides' approach, denying the reality of sorcery, Rashba pointed out that both the Babylonian and Jerusalem Talmuds contain an abundance of magical material which violates no religious precept. Moreover, Rashba accused the opponents of sorcery of denying the possibility of miracles. To support his acceptance of the possibility that spirituality might descend upon amulets, he wrote:

And I say that it was the kindness of the Supreme Being at the start of Creation to create in his world things that would ensure the health of the created beings, that if the existents happen to fall ill or for any other reason deviate from their natural perfection, these [things] are ready to restore them to their realm or to make them healthy. And He placed these forces in the essence of things found in nature, as may be attained by study, such as medications and aids known to scholars of medicine, or in nature based on properties but not attainable by study. And it is not impossible that such a power should also be in speech, as in the case of amulets and similar things (*Minhat Kena'ot*, in Rashba, *Responsa*, ed. H.Z. Dimitrovsky, p. 302).

The possibility that stellar forces could be used to heal the sick was provided for in advance by God. Whether such practices were permissible or not depended, according to Rashba, on the magician's innermost intention: it was his awareness that God was the primary cause of recovery that legitimized the astral-magical practice. Thus, Abba Mari was unable to persuade Rashba to join him in condemnation of astral magic.

Through the 14<sup>th</sup> century, the dispute became increasingly acrimonious; at least four positions can be distinguished with regard to the status of astral magic:

(a) False and forbidden: The moderate rationalists rejected astral magic of any kind and therefore also considered it halakhically prohibited. They thus accepted Maimonides' firm negation of any reality of astral magic and his prohibition of its practices. These thinkers, then, took up Maimonides' approach in content, style, and language (Menaḥem ha-Meiri, David ha-Kokhavi). Some rationalists chose almost to ignore the issue, probably because they attached no reality whatever to astral magic (Joseph ibn Kaspi).

(b) Dubious and forbidden: This was the view of the traditionalists, who consistently battled the radical rationalists and in fact defined the latter group, *inter alia*, in terms of their employment of astral magic for medical purposes (Abba Mari, Jacob b. Solomon ha-Zarfati). They, too, prohibited the practice absolutely, as did the moderate rationalists, although they did not entirely deny the possible reality of astral magic.

Their most characteristic trait was the connection they perceived between the practice of astral magic and the magician's affinity for philosophy: in their view, a rationalist philosophy was bound to lead to the practice of astral magic.

(c) False in respect of its reality but psychologically effective, and forbidden: Some circles denied that astral magic could actually bring down stellar forces, but believed that there was some psychological benefit in the practice. Nevertheless, they, too, prohibited its use from the standpoint of Halakhah (Gersonides, Jedaiah ha-Penini of Béziers). In a sense, this might be considered an intermediate position, though it is closer to that of the moderate rationalists and its proponents were essentially a subgroup of the latter.

(d) Real and permitted: Certain thinkers believed in the absolute reality of astral magic (Nissim of Marseilles, Frat Maimon) and even considered it halakhically legitimate (Levi b. Abraham). For such thinkers, astral magic was a theological principle that could be used in interpreting various biblical passages.

All these issues provided the background for Rashba's ultimate decision to support a limited ban.

After much hesitation, and spurred on by the influence of Asher b. Jehiel, Rashba and the Barcelona community issued a *herem* on July 26, 1305, against "any member of the community who, being under the age of 25 years, shall study the works of the Greeks on natural science or metaphysics, whether in the original language or in translation."

Works by Jewish philosophers were excepted, as was the study of medicine. The ban was intended to prevent young men from being influenced by Greek philosophy to turn away "from the Torah of Israel which is above these sciences. How can any man dare to judge between human wisdom based on analogy, proof, and thought, and the wisdom of God, between whom and us there is no relation nor similarity? Will man, who is embodied in a vessel of clay, judge ... God his creator to say, God forbid, what is possible and what he cannot do? Truly this, sometimes leads to utter heresy" (Resp. Rashba pt. 1, no. 415). A ban was also pronounced against all who "say about Abraham and Sarah that in reality they symbolize matter and form; that the 12 tribes of Israel are [an allegory] for the 12 planets ... [and] that the Urim and Thummim are to be understood as the astrolabe instrument.... Some of them say that everything in the Torah, from *Bereshit* to the giving of the law, is entirely allegorical" (*ibid.*, no. 416).

The condemnation of extreme allegory did not arouse opposition, but the prohibition on the study of "Greek wisdom" until the age of 25 was sharply opposed on grounds of principle, though to Rashba and his group this formula was certainly in many respects a compromise. Among the many communities and individual sages in Provence and Spain who opposed the ban, the great talmudic scholar Menahem b. Solomon Meiri was one of the most eloquent voices. In his counter-*herem* (printed in excerpts in *Jubelschrift... L. Zunz* (1884), Heb. pt. 153-72) he reminded Adret of the failure of the early 13<sup>th</sup>-century attacks against Maimonides. Rejecting insinua-

tions that the study of philosophy causes heresy, he pointed to many talmudic scholars who were students of philosophy. Meiri stressed that sciences such as mathematics were necessary for the understanding of many passages in the Talmud. He regarded the prohibition against certain types of study as self-defeating: "Each individual [nature] will search for what suits him according to his natural inclination." This trait of human intellect and nature, he maintains, will even cause the second generation of the excommunicating community to seek ways out of this prohibition. Meiri was well aware that there was a more radical wing among the rationalists, which he opposed (see his commentary to Psalms, ed. by J. Cohn (1936), e.g., ch. 36, p. 78f., and many passages in his commentary to Proverbs and to Mishnah Avot).

Finally, Jedaiah b. Abraham Bedersi (ha-Penini) wrote Adret a "letter of apology" (*Ketav Hitnazzelut*) – actually a sharp attack against the anti-rationalists – basing himself on the spiritual greatness of Provençal Jews and praising rationalism and philosophy. He daringly proclaims:

My rabbis, please look into the mighty pattern of the benefits of philosophy to all of us, even to those who despise it. For it is extremely well-known that in ancient times anthropomorphism was widespread, one may say almost in the entire Diaspora of Israel ... but in every generation there arose *geonim* and sages – in Spain, in Babylonia and in the cities of Andalusia – who, thanks to their familiarity with the Arabic language, had the great opportunity to smell the perfume of the sciences, some much, some a little, for they are translated into this language. It is thanks to this that they began to elaborate and clarify many of their opinions on the Torah, above all as to the unity of God and the abolition of anthropomorphism, especially by the philosophical proofs taken from scientific works.

He goes on to list this rationalistic literature, from the days of Saadia Gaon onward (Resp. Rashba pt. 1., no. 418). This long epistle concludes:

Relinquish your *herem* for the heart of this people will not turn away from philosophy and its books as long as there is breath in their frame and soul in their bodies, especially as together with it [i.e., with devotion to philosophy], they are true to Torah and commandments. Even if they had heard it from the mouth of Joshua bin Nun they would never have accepted it, for they intend to do battle for the honor of the great teacher [i.e., Maimonides] and his works; and for the holiness of his teaching they will sacrifice fortune, family, and soul as long as there is a breath in their bodies. And thus they will teach and command their children in generations to come (*ibid.*).

On this sharp though inconclusive note, the great controversy of the early 14<sup>th</sup> century petered out. In any event, the expulsion of the Jews from France by King Philip IV on July 22, 1306, almost exactly one year after the Barcelona ban was issued, overshadowed the internal Jewish controversy. The greater external threat totally eclipsed a potential internal threat from philosophy. Like its predecessors, the Barcelona ban, as limited as it was in comparison to earlier bans, also proved ineffective and unenforceable, and to that extent, the rationalists had the last word in the controversy.

### Aftermath of the Controversy

The tension between rationalists and antirationalists never abated throughout the Middle Ages. Among the beleaguered Jews of 15<sup>th</sup>-century Christian Spain, Maimonidean rationalism was seen by many as the root cause of the misfortunes and the reason for \*apostasy. On the other hand, a man like Abraham \*Bibago, throughout his *Derekh Emunah*, defended rationalism, not only as being justified but as the very essence of Judaism. Proudly calling himself "a pupil of Maimonides," he believed that the Jewish people is the bearer of reason – weak in this world as reason is weak against the unreasonable passions. Generalizing the traditional rationalistic view, he stated:

The reasonable creature having reason has to study the sciences; and being a believer, he will study Torah and acquire faith and its roots and dogmas. The first study will be a kind of carrier and vessel to bear the second study. In the same way that life is an assumption and carrier by which humanity and speech are carried, so through the form of reason – by whose accomplishment one studies and acquires the sciences – Torah study will be assumed and carried. Thus faith will be complete and without doubt, and the one attitude [faith], will not conflict with the other [philosophy]. Therefore did the sage say, 'Reason and faith are two lights.' To solve all doubts we must explain that 'Greek wisdom' cannot be the above-mentioned wisdom of reason belonging to man insofar as he is a man. Hence it is a human wisdom and not a Greek one. The wisdom called [by talmudic sages] 'Greek wisdom,' must be something peculiar to the Greeks and not to another nation (see above, pt. 2, ch. 3, 46a).

That views like this were acceptable also among 16<sup>th</sup>-century Ashkenazi Jewry is proved by the fact that the *Sefer ha-Miknah* by \*Joseph b. Gershom of Rosheim is in reality a kind of synopsis of Bibago's *Derekh Emunah*. In Renaissance Italy Jehiel b. Samuel of \*Pisa wrote a detailed treatise (*Minḥat Kena'ot*) against rationalism, while the life and works of many of his contemporaries and countrymen constituted a clear espousal of it. In Poland-Lithuania in the 16<sup>th</sup>–17<sup>th</sup> centuries the tension between Maimonideans and anti-Maimonideans likewise continued, as evidenced, for example, by the dispute between Moses \*Isserles and Solomon b. Jehiel \*Luria (see Moses Isserles, Resp., nos. 687; and see also his *Torat ha-Olah*).

The problems of the synthesis between Judaism and other cultures, of the proper content of Jewish education, and of the right way to God – through reason or through mystic union – has remained, though formulations and expressions have changed considerably. The old hierarchical basis of Jewish leadership, wholeheartedly hated by Maimonides, has disappeared, but the leadership of the individual scholar, even after Maimonides, retained many hierarchical and sacral elements (see \**Semikhah*). The *Mishneh Torah* did not supersede the Talmud, and Maimonides' aristocratic opposition to monetary support for Torah study failed completely. So strong was his personality, however, that most of his opponents made great efforts to say that they opposed not Maimonides himself but some element of his teaching or, better still, some misguided

interpretation or citation of his work. The Maimonidean controversy is both very specifically at the heart of Jewish culture and, at the same time, part or a set of problems central to Judaism, Islam, and Christianity alike.

**MAIMONIDES, MOSES** (**Moses ben Maimon**; known in rabbinical literature as “**Rambam**”; from the acronym **Rabbi Moses Ben Maimon**; 1135–1204), rabbinic authority, codifier, philosopher, and royal physician.

#### BIOGRAPHY

The most illustrious figure in Judaism in the post-talmudic era, and one of the greatest of all time, Maimonides was born in Cordoba, Spain, to his father \*Maimon, *dayyan* of Cordoba and himself a renowned scholar and pupil of Joseph \*ibn Migash. He continues his genealogy, “the son of the learned Joseph, son of Isaac the *dayyan*, son of Joseph the *dayyan*, son of Obadiah the *dayyan*, son of the rabbi Solomon, son of Obadiah” (end of commentary to Mishnah); traditions extend the genealogy to R. Judah ha-Nasi. Posterity even recorded the day and hour and even minute of his birth, “On the eve of Passover (the 14<sup>th</sup> of Nisan) which was a Sabbath, an hour and a third after midday, in the year 4895 (1135) of the Creation” (*Sefer Yuhasin*). Maimonides’ grandson David gives the same

day and year without the hour (at the beginning of his commentary to tractate *Rosh Ha-Shanah*).

As a result of the fall of Cordoba to the \*Almohads in May or June, 1148, when Moses had just reached his 13<sup>th</sup> birthday, and the consequent religious persecution, Maimon was obliged to leave Cordoba with his family and all trace of them is lost for the next eight or nine years, which they spent wandering from place to place in Spain (and possibly Provence) until in 1160 they settled in Fez. Yet it was during those years of wandering, which Maimonides himself describes as a period “while my mind was troubled, and amid divinely ordained exiles, on journeys by land and tossed on the tempests of the sea” (end of commentary to Mishnah) that he laid the strong foundations of his vast and varied learning and even began his literary work. Not only did he begin the draft of the *Strāj*, his important commentary on the Mishnah, in 1158, but in that same year, at the request of a friend, he wrote a short treatise on the Jewish calendar (*Ma’amar ha-Ibbur*) and one on logic (*Millot Higgayon*) and had completed writing notes for a commentary on a number of tractates of the Babylonian Talmud, and a work whose aim was to extract the *halakhah* from the Jerusalem Talmud (see below Maimonides as halakhist). According to Muslim authorities the family became formally converted to Islam somewhere in the period between 1150 and 1160. But Saadia ibn Danan (Z. Edelman (ed.), *Hemdah Genuzah* (1856), 16a) relates that the Muslims maintain the same about many Jewish scholars, among them Dunash ibn Tamim, Ḥasdai b. Ḥasdai, and others. In any case in the year 1160 Maimon and his sons, Moses and David, and a daughter, were in Fez. In his old age ‘Abd al-Mu’min, the Almohad ruler, somewhat changed his attitude to the Jews, becoming more moderate toward those who were living in the central, Moroccan, part of his realm. It was probably on account of this that in 1159 or early in 1160 Maimon deemed it worthwhile to emigrate with his family to Morocco and settle in Fez. Living in Fez at that time was R. Judah ha-Kohen ibn Susan, whose fame for learning and piety had spread to Spain, and Maimonides, then 25, studied under him. Many Jews had outwardly adopted Islam and their consciences were troubling them, and this prompted Maimon to write his *Iggeret ha-Neḥamah* (“Letter of Consolation”) assuring them that he who says his prayers even in their shortest form and who does good works remains a Jew (*Hemdah Genuzah*, pp. LXXIV–LXXXII). Meantime his son worked at his commentary on the Mishnah and also continued his general studies, particularly medicine; in his medical works he frequently refers to the knowledge and experience he gained among the Muslims in North Africa (see Maimonides as physician). Here also he wrote his *Iggeret ha-Shemad* (“Letter on Forced Conversion”) also called *Iggeret Kiddush ha-Shem* (“Letter of the Sanctification of the Divine Name”). These letters of father and son, as well as Maimonides’ utterances after leaving Morocco, do not point to outrages and bloody persecutions. Although Maimonides in the opening lines of the *Iggeret ha-Shemad* most strongly deprecates the condemnation of the forced converts by “the self-styled sage

who has never experienced what so many Jewish communities experienced in the way of persecution,” his conclusion is that a Jew must leave the country where he is forced to transgress the divine law: “He should not remain in the realm of that king; he should sit in his house until he emigrates ...” And once more, with greater insistence: “He should on no account remain in a place of forced conversion; whoever remains in such a place desecrates the Divine Name and is nearly as bad as a willful sinner; as for those who beguile themselves, saying that they will remain until the Messiah comes to the Maghreb and leads them to Jerusalem, I do not know how he is to cleanse them of the stigma of conversion” (*Iggeret ha-Shemad*, in: Z. Edelman (ed.), *Hemdah Genuzah*, 11b–12a).

Maimon and his sons acted in accordance with this advice, as certainly did many others. Maimonides’ departure from the country of the Almohads is commonly assumed to have taken place in 1165; according to Saadiah ibn Danan (*Seder ha-Dorot*, in: *Hemdah Genuzah*, 30b.), it was promoted by the martyrdom of Judah ibn Susan, who had been called upon to forsake his religion and had preferred death to apostasy. R. Maimon and his family escaped from Fez, and a month later they landed at Acre. The day of his departure as well as that on which the ship was saved from a tempest were instituted as a family fast enjoined on his descendants, and that of his arrival in Erez Israel as a festival (E. Azikri (Azcari), *Sefer Haredim*; Maim. Comm. to *Rosh Ha-Shanah*, ed. Brill, end).

The family remained in Acre for some five months, striking up an intimate friendship there with the *dayyan* Japheth b. Ali. Together with him they made a tour of the Holy Land, visiting Jerusalem where Maimonides states, “I entered the [site of the] Great and Holy House and prayed there on Thursday the 6<sup>th</sup> day of Marḥeshvan.” Three days later they paid a visit to the Cave of Machpelah in Hebron for the same purpose. Maimonides also appointed both these days as family festivals. The family then left Erez Israel and sailed for Egypt. After a short stay at Alexandria they moved to Cairo and took up residence in Fostat, the Old City of Cairo.

Maimon died at this time either in Erez Israel or in Egypt. It has been suggested that the reason for the choice of Alexandria was the existence at that time “outside the town” of “the academy of Aristotle, the teacher of Alexander” to which “people from the whole world came in order to study the wisdom of Aristotle the philosopher” mentioned by Benjamin of Tudela (ed. by M.N. Adler (1907), 75). It is not certain what prompted the move to Cairo. That Maimonides’ influence was decisive in virtually destroying the hitherto dominating influence of the Karaites who were more numerous and wealthy than the Rabbanites in Cairo is beyond doubt (see below) and in the 17<sup>th</sup> century Jacob Faraji, a *dayyan* in Egypt, states that it was this challenge which impelled Maimonides to move to Cairo (see Azulai, letter M150).

For eight years Maimonides lived a life free from care. Supported by his brother David who dealt in precious stones, he was able to devote himself entirely to preparing his works for publication and to his onerous but honorary work as both

religious and lay leader of the community. His *Sirāj*, the commentary to the Mishnah, was completed in 1168. The following year he suffered a crushing blow. His brother David drowned in the Indian Ocean while on a business trip, leaving a wife and two children, and with him were lost not only the family fortune but moneys belonging to others. Maimonides took the blow badly. For a full year he lay almost prostrate, and then he had to seek a means of livelihood. Rejecting the thought of earning a livelihood from Torah (see his commentary on *Avot* 5:4, and especially his letter to Joseph ibn Sham’un in 1191, “It is better for you to earn a drachma as a weaver, or tailor, or carpenter than to be dependent on the license of the exilarch [to accept a paid position as a rabbi]”; F. Kobler (ed.), *Letters of Jews Through the Ages*, 1 (1952), 207) and he decided to make the medical profession his livelihood.

Fame in his calling did not come to him at once. It was only after 1185 when he was appointed one of the physicians to al-Faḍil, who had been appointed vizier by Saladin and was virtual ruler of Egypt after Saladin’s departure from that country in 1174, that his fame began to spread. It gave rise to a legend that Richard the Lionhearted “the King of the Franks in Ascalon” sought his services as his private physician. About 1177 he was recognized as the official head of the Fostat community. Ibn Danan says of him, “Rabbenu Moshe [b. Maimon] became very great in wisdom, learning, and rank.” In the so-called *Megillat Zuta* he is called “the light of east and west and unique master and marvel of the generation.”

These were the most fruitful and busy years of his life. His first wife had died young and in Egypt he remarried, taking as his wife the sister of Ibn Almali, one of the royal secretaries, who himself married Maimonides’ only sister. To them was born their only son Abraham to whose education he lovingly devoted himself, and an added solace was his enthusiastic disciple Joseph ibn Sham’un (not Ibn Akin, as often stated), whom he loved as a son, and for whom he wrote, and sent chapter by chapter, his *Guide of the Perplexed*. It was during those years, busy as he was with the heavy burden of his practice and occupied with the affairs of the community, writing his extensive correspondence to every part of the Jewish world (apart from the Franco-German area), that he wrote the two monumental works upon which his fame chiefly rests, the *Mishneh Torah* (compiled 1180) and the *Guide* (1190; according to Z. Diesendruck, in: HUCA, 12–13 (1937–38), 461–97, in 1185), as well as his *Iggeret Teiman* and his *Ma’amar Tehiyyat ha-Metim*.

The following passage in the letter to the translator of the *Guide*, Samuel b. Judah ibn \*Tibbon, in which he describes his multifarious cares and duties, with the aim of dissuading Ibn Tibbon from coming to visit him, has often been quoted:

I dwell at Miṣr [Fostat] and the sultan resides at al-Qāhira [Cairo]; these two places are two Sabbath days’ journey distant from each other. My duties to the sultan are very heavy. I am obliged to visit him every day, early in the morning; and when he or any of his children, or any of the inmates of his harem, are indisposed, I dare not quit al-Qāhira, but must stay during

the greater part of the day in the palace. It also frequently happens that one or two royal officers fall sick, and I must attend to their healing. Hence, as a rule, I repair to al-Qāhira very early in the day, and even if nothing unusual happens, I do not return to Miṣr until the afternoon. Then I am almost dying with hunger ... I find the antechambers filled with people, both Jews and gentiles, nobles and common people, judges and bailiffs, friends and foes – a mixed multitude who await the time of my return.

I dismount from my animal, wash my hands, go forth to my patients, and entreat them to bear with me while I partake of some slight refreshment, the only meal I take in the twenty-four hours. Then I go forth to attend to my patients, and write prescriptions and directions for their various ailments. Patients go in and out until nightfall, and sometimes even, I solemnly assure you, until two hours or more in the night. I converse with and prescribe for them while lying down from sheer fatigue; and when night falls, I am so exhausted that I can scarcely speak.

In consequence of this, no Israelite can have any private interview with me, except on the Sabbath. On that day the whole congregation, or at least the majority of the members, come to me after the morning service, when I instruct them as to their proceedings during the whole week; we study together a little until noon, when they depart. Some of them return, and read with me after the afternoon service until evening prayers. In this manner I spend that day.

The two major works will be described below, but something must be said of the two letters. The Arab ruler in Yemen, who, unlike the sultans in Egypt who were Sunnites, belonged to the sectarian Shi'ites, instituted a religious persecution, giving the Jews the choice of conversion to Islam or death. Not only did many succumb, but there arose among those Jews a pseudo-Messiah, or a forerunner of the Messiah who, seeing in these events the darkness before the dawn, preached the imminent advent of the Messianic Age. In despair the Jews of Yemen turned to Maimonides, who probably in 1172 answered their request with the *Iggeret Teiman (al-Risāla al-Yamaniyya)*. It was addressed to R. \*Jacob b. Nethanel al-Fayyumi, with a request that copies be sent to every community in Yemen. Deliberately couched in simple terms, "that men, women, and children could read it easily," he pointed out that the subtle attack of Christianity and Islam which preached a new revelation was more dangerous than the sword and than the attractions of Hellenism. As for the pseudo-Messiah, he was unbalanced and he was to be rejected. These trials were sent to prove the Jews.

The effect of the letter was tremendous. In gratitude for the message of hope, combined with the fact that Maimonides also used his influence at court to obtain a lessening of the heavy burden of taxation on the Jews of Yemen, the Jews of Yemen introduced into the \**Kaddish* a prayer for "the life of our teacher Moses b. Maimon" (Letter of Nahmanides to the rabbis of France, in: *Kitvei Ramban*, ed. by C.B. Chavel (1963), 341).

This remarkable tribute, usually reserved for the exilarch, has an indirect connection with the third of his public (as distinct from his private) letters, the *Ma'amar Tehiyyat ha-Metim*

("On Resurrection"; 1191). Maimonides wrote the letter with the greatest reluctance. It was the direct result of his *Mishneh Torah* and constituted his reply to the accusation leveled against him that in this work he denied, or did not mention, the doctrine of personal resurrection which was a fundamental principle of faith among the Jews of his time. An objective study of his work does lend a certain basis to the allegation. It is true, as he indignantly protests, that he included this doctrine as the last of his famous Thirteen Principles of Judaism, but in his *Mishneh Torah* the undoubted emphasis is on the immortality of the soul and not on individual bodily resurrection. That the allegation was not based upon mere malice or envy of his work is sufficiently proved by the fact that anxious queries were addressed to him from the countries in which he was most fervently admired, Yemen and Provence, and Maimonides answered them. Abraham b. David of Posquières wrote: "The words of this man seem to me to be very near to him who says there is no resurrection of the body, but only of the soul. By my life, this is not the view of the sages" (Comm. to Yad, Teshuvah 8:2). Some Jews from Yemen however, unsatisfied, wrote to \*Samuel b. Ali the powerful and learned *Gaon* in Baghdad who sent a reply, which although couched in terms of respect to Maimonides, vigorously denounced his views. It would appear that the vehemence of this reply was connected with Samuel's desire to assert his authority as *gaon* over Egypt, which he thought was being usurped by Maimonides. On the other hand, Maimonides held the exilarch Samuel (of Josiah b. Zakkai's line), the successor of the exilarch Daniel b. Hiṣdai, in higher esteem than the *gaon* Samuel b. Ali. Thus the relations between Maimonides and the *gaon* remained strained, although there was never open hostility. Joseph ibn Sham'un, in Baghdad, who had also queried Maimonides' views on resurrection, sent a copy of Samuel's reply to Maimonides and with great reluctance Maimonides felt himself compelled to write his *Ma'amar Tehiyyat ha-Metim* in which he asserted and confirmed his belief in the doctrine.

Maimonides was active as head of the community. He took vigorous steps to deal with the Karaites, and as a result brought about the supremacy of the Rabbanites in Cairo. On the one hand he emphatically maintained that they were to be regarded as Jews, with all the attendant privileges. They might be visited, their dead buried, and their children circumcised, their wine permitted; they were however not to be included in a religious quorum (Resp. ed. Blau, 449). Only when they flouted rabbinic Judaism was a barrier to be maintained. One was particularly to avoid visiting them on their festivals which did not coincide with the dates fixed by the rabbinic calendar. One of the inroads which they had caused in orthodox observance was with regard to ritual immersion for the \**niddah*. Their view that an ordinary bath was sufficient had been widely adopted among the Rabbanites. Maimonides succeeded in restoring rabbinic practice in this matter, but generally his policy toward the Karaites was more lenient in his later years, and was continued by his son Abraham. (For an

exhaustive treatment of this subject see C. Tchernowitz, *Toledot ha-Posekim* (1946), 197–208.)

Maimonides made various changes in liturgical custom, the most radical of which was the abolition of the repetition of the *\*Amidah* in the interests of decorum. With the completion of the *Guide*, Maimonides' literary work, apart from his extensive correspondence, came to an end. In failing health he nevertheless continued his work as head of the Jewish community and as court physician. (It is doubtful whether he actually held the appointment of *nagid* as is usually stated; see M.D. Rabinowitz, Introduction to *Ma'amar Tehiyat ha-Metim in Iggerot ha-Rambam*, 220–7.)

It was during this period however that he engaged in his correspondence with the scholars of Provence in general and with Jonathan of Lunel in particular. In some instances the border line between responsum and letter is not clearly defined (e.g., his letter to Obadiah the Proselyte, see below), but, as Kobler comments, the letters of Maimonides mark an epoch in letter writing. He is the first Jewish letter writer whose correspondence has been largely preserved. Vigorous and essentially personal, his letters found their way to the mind and heart of his correspondents, and he varied his style to suit them. But above all they reveal his whole personality, which is different from what might be expected from his *Mishneh Torah* and the *Guide*. The picture of an almost austere and aloof intellectual above human passions and emotions derived from there is completely dispelled.

Maimonides died on December 13, 1204. There were almost universal expressions of grief. Public mourning was ordained in all parts of the Jewish world. In Fostat mourning was ordained for three days and in Jerusalem a public fast and the Scriptural readings instituted concluded with the verse "the glory is departed from Israel, for the Ark of the Lord is taken" (1 Sam. 4:22). His remains were taken to Tiberias for burial, and his grave is still an object of pilgrimage.

### Influence

The influence of Maimonides on the future development of Judaism is incalculable. No spiritual leader of the Jewish people in the post-talmudic period has exercised such an influence both in his own and subsequent generations. Despite the vehement opposition which greeted his philosophical views the breach was healed (see *\*Maimonidean Controversy*). It is significant that when Solomon *\*Luria* strongly criticized Moses Isserles for his devotion to Greek philosophy, Isserles answered that his sole source was Maimonides' *Guide*, thus giving it the cachet of acceptability (Resp. Isserles 7). It was probably due to his unrivaled eminence as talmudist and codifier that many of his views were finally accepted. They were very radical at the time. To give but one example, the now universally accepted doctrine of the incorporeality of God was by no means accepted as fundamental before him and was probably an advanced view held by a small group of thinkers and philosophers. Even Abraham b. David of Posquières protested the statement of Maimonides that anyone

who maintains the corporeality of God is a sectarian: "Why does he call him a sectarian? Many greater and better than he accepted this idea [of the corporeality of God] basing themselves on Scripture" (Yad, Teshuvah 3:7). C. Tchernowitz (*Toledot ha-Posekim*, 1 (1946), 193) goes so far as to maintain that were it not for Maimonides Judaism would have broken up into different sects and beliefs, and that it was his great achievement to unite the various currents, halakhic and philosophical.

Maimonides is regarded as the supreme rationalist, and the title given by Aḥad Ha-Am to his essay on him, "*Shilton ha-Sekhel*" ("The Rule of Reason"; in: *Ha-Shilo'ah*, 15 (1905), 291–319) included in his collected works, *Al Parashat Derakhim* (1921), has become almost standard in referring to him, and so long as one confines oneself to his three great works, the commentary on the Mishnah, the *Mishneh Torah*, and the *Guide*, a case can be made out for this view.

In the *Mishneh Torah*, Maimonides rigidly confines himself to a codification of Jewish law, refraining almost entirely from allowing his personal views to obtrude. Where he does advance his own view to which he can find no talmudic authority, he is careful, as he explicitly states in a letter to Jonathan of Lunel, to introduce it with the words "it appears to me" (cf. Yad, Sanhedrin 4:11). From his knowledge of medicine he was aware that certain disabilities in animals which in the time of the Talmud were regarded as fatal were susceptible to cure, while some which were not so regarded were in fact fatal, yet he lays it down that the talmudic view must be applied (Sheḥitah 10:12 and 13). Among the few exceptions the most striking is his outburst against belief in witchcraft and enchantment. After faithfully giving in their minutest details the talmudic description of, and laws concerning, these practices, he adds: "All these and similar matters are lies and falsehood... it is not fitting for Jews, who are intelligent and wise, to be attracted by them or believe that they are effective... whosoever believes in them, and that they are true, only that the Bible has forbidden them, belongs to the category of fools and ignoramuses and is in the class of immature women and children" (*Avodat Kokhavim* 11:16). In his work on the calendar included in the *Mishneh Torah* (*Hilkhot Kiddush ha-Ḥodesh*) he maintains vigorously that one should have recourse to works written by non-Jewish astronomers (11:1–6). At the end of *Hilkhot Temurah*, he defends the search after reasons for the biblical commandments (4:13).

In the *Guide* he allows himself more freedom, but the main difference between the two works lies in their different purpose and aim. The *Mishneh Torah* was written for the believing Jew untroubled by the apparent contradictions between revealed law and current philosophy, and its aim was to tell him how he should conduct himself in his desire to live according to the law. The *Guide*, as its name conveys, was designed for those whose faith had been weakened by these doctrines and its aim was to tell him why he should adhere to traditional Judaism. This helps to explain the contradictions between the two.

In both works one sees only the unemotional man of intellect. It is in his letters that Maimonides emerges as the warm human being, his heart open to the suffering of his people, and expressing and responding to both affection and hostility. It comes almost as a shock to read in his letter to Japheth b. Ali, when he informs him of the death of his brother David, that he remonstrates with him for not sending a letter of condolence to him on the death of his father which took place 11 years earlier though he had received innumerable such messages from all over the Jewish world, repeating the complaint twice. The letter was written eight years after his brother's death, yet he writes, "I still mourn, and there is no comfort.... Whenever I come across his handwriting or one of his books, my heart goes faint within me, and my grief reawakens" and in that letter he continues that he will never forget those days which he passed in Erez Israel with his correspondent (Kobler 192–3). The personal human element is equally to the fore in the above-quoted letter to Samuel ibn Tibbon, while his letter-responsum to Obadiah the Proselyte reveals Maimonides' spirit to the full. It was surely only to his intimate disciple that he could open his heart and declare, "when I see no other way of teaching a well-established truth except by pleasing one intelligent man and displeasing ten thousand fools, I choose to address myself to the one man and take no notice whatsoever of the condemnation of the multitude" (Introduction to the *Guide*). On the other hand Maimonides is almost virulent in his opposition to songs and music: "song and music are all forbidden, even if unaccompanied by words ... there is no difference between listening to songs, or string music, or melodies without words; everything which conduces to the rejoicing of the soul and emotion is forbidden." It is immaterial whether they are in Arabic or in Hebrew. "A person who listens to foolish songs with musical accompaniment is guilty of three transgressions, listening to folly, listening to song, and listening to instrumental music. If the songs are sung with accompaniment of drinking, there is a fourth transgression, if the singer is a woman there is a fifth." The references in the geonic sources to singing are only to liturgical hymns (Resp. ed. Blau, 224. cf. 269; *Guide* 3:8; *Yad*, Ta'anit, 5:14). Despite this last permission he was opposed to the insertion of *piyyutim* in the prayers (180, 207, 254, 260, 261). If the ignorant insist on them and their ways prevail, they should be said before the *Shema*, the beginning of the essential service (207).

No praise can be too high for the outer form of his works, both in language and logical method. The *Mishneh Torah* was the only work which he wrote in Hebrew, and the language is superb, clear, and succinct. He regretted that he did not prepare Hebrew versions of his other works. In answer to Joseph b. Gabir's request written in 1191 that he translate the work into Arabic, not only does he state that it would thereby lose its specific character, but that he would have liked to translate his works written in Arabic into Hebrew (Kobler 199); and when the rabbis of Lunel asked him to translate the *Guide* into Hebrew, he stated that he wished he were young enough to do so (*ibid.*, 216).

The *Mishneh Torah* is a model of logical sequence and studied method, each chapter and each paragraph coming in natural sequence to its preceding one. More impressive is the fact that in his earliest work one can so clearly discern the seeds of the later, so that it can confidently be stated that his whole subsequent system and ideas were already formulated in his mind when he wrote it. The *Shemonah Perakim* which form the introduction to his commentary on *Avot* is almost a draft of the first portion of *Sefer Madda*, the first book of the *Mishneh Torah*. When attacked on his views on resurrection he pointed out that he had included it in the Thirteen Principles which he evolved in his commentary to the tenth chapter of *Sanhedrin*. The radical view found in the very last chapter of the *Mishneh Torah* that the messianic age is nothing more than the attainment of political independence in Israel is stated in detail in that same excursus, and his original view on the possibility of the reestablishment of the Sanhedrin, which he carefully puts forward as his own ("it appears to me") and which he qualifies by the statement "but the matter must be weighed up" (*Sanhedrin* 4:11), is already expressed in his commentary on the Mishnah (*Sanh.* 1:1).

[Louis Isaac Rabinowitz]

#### AS HALAKHIST

Maimonides' halakhic activity began during his youth with his commentary to some tractates of the Talmud (introduction to commentary to the Mishnah). Only fragments on several tractates have survived (see S. Asaf, in: *Sinai*, 6 (1940), 103–32, on *Shabbat*; M. Kamelhar (1956) on *Yoma*): the commentary to *Rosh Ha-Shanah*, published in its entirety (by J. Brill, 1865; Y.A. Kamelhar, 1906), is of doubtful authenticity (see M.J.L. Sachs, *Hiddushei ha-Ra-MBa-M la-Talmud* (1963), introd. 13–23). His *Hilkhot ha-Yerushalmi* ("Laws of the Palestinian Talmud"), alluded to in his commentary to the Mishnah (*Tamid* 5:1), is not extant; the authenticity of the fragments published by Saul Lieberman (1947) has been challenged (Benedikt in: *KS*, 27 (1950–51), 329–49). It is interesting to note, in view of the fact that his famous code, the *Mishneh Torah*, embraces the whole of Jewish law, both practical and theoretical, that in both these works he confined himself to the practical *halakhah*, his commentary on the Talmud being confined to the orders \**Mo'ed*, \**Nashim*, and \**Nezikin* and the tractate \**Hullin*, which deals with dietary laws.

#### Commentary to the Mishnah

It is through his commentary to the Mishnah that one can begin to review Maimonides as a halakhist. In his commentary, Maimonides sets out to explain to the general reader the meaning of the Mishnah, without having recourse to the involved and lengthy discussions in the *Gemara*, the language of which was more difficult than the Mishnah itself (*Mishneh Torah*, introd.). Out of the mishnaic and other tannaitic texts and corresponding passages in the *Gemara*, often widely scattered throughout the Talmud, Maimonides evolves the underlying principles of the subjects discussed, which a particular

Mishnah, chapter, or entire tractate presupposed. In some cases he interprets the Mishnah differently from the *Gemara* (cf. in Sanh. 1:1). It has been asserted that even during his early work as a commentator, Maimonides was at the same time a codifier, a role which he later successfully developed in the *Sefer ha-Mitzvot* and the *Mishneh Torah* (M. Guttmann, in: J. Guttmann et al. (eds.), *Moses ben Maimon*, 2 (1914), 306–30; idem, in: HUCA, 2 (1925), 229–68). Following his explanatory glosses to the mishnaic passage, Maimonides gave the halakhic decision in each Mishnah based on his reading of the discussion in the *Gemara*.

Of special significance are the lengthy introductions he included in his commentary. The general introduction which heads his commentary to the order of *Zera'im* is in reality an introduction to and history of the Oral Law from Moses until his own days. The introduction to *Avot*, known as the *Shemona Perakim* (“Eight Chapters”) is a philosophical and ethical treatise in which its author harmonized Aristotle’s ethics with rabbinical teachings. In the introduction to Mishnah *Sanhedrin* (10:1), which begins with the words “All Israel has a portion in the world to come,” Maimonides dealt at length with the fundamental doctrines of Judaism which are formulated in the Thirteen \*Articles of Faith. Especially extensive and exhaustive is the introduction to the difficult order *Tohorot*, in which Maimonides systematizes all that had been said in talmudic literature on the subject of ritual purity and impurity. The standard Hebrew translation, the work of a number of hands, is a poor rendering of the Arabic original. A new and more faithful translation was made by Y. Kafah, *Mishnah im Perush ha-Rambam ...* (1963–68).

### The Responsa of Maimonides

The publication of the critical editions of the responsa of Maimonides (ed. by A. Freimann, 1934; J. Blau, 1957–61) affords a better opportunity to appraise his role in the communal life of the Jews of Egypt and neighboring countries. The responsa, which were in the language of the questioner, whether Hebrew or Arabic, number 464; some of them soon found their way into halakhic literature. Although not all responsa bear the date of composition, it has been ascertained that Maimonides’ responsa extend from about 1167, a short time after his arrival in Egypt, until a little before his death. The questioners include prominent scholars like R. Anatoli and R. Meshullam, *dayyanim* in Alexandria; \*Jonathan ha-Kohen of Lunel; Joseph b. Gabir; Nissim of Damascus; and Samuel b. Ali, *Gaon* of Baghdad. From these responsa one learns of the growing tension between the *gaon* of Baghdad and Maimonides in connection with traveling on the high seas on the Sabbath, prohibited by Samuel b. Ali but permitted by Maimonides (ed. Blau, no. 308–9). Some of the responsa to Jonathan of Lunel, who was a disciple of \*Abraham b. David of Posquières, are in essence rejoinders to the latter’s criticisms, for his questions coincide with the language and style of these criticisms (ed. Freimann, introd. xlv = ed. Blau, 3 (1961), 43).

The bitter experience of his youth failed to nurture in Maimonides rabid anti-Muslim feelings, and he consistently declined to classify Muslims as idolators. Even the ritual practices connected with the Ka’ba stone in Mecca did not in his opinion deny Islam its purely monotheistic nature (ed. Freimann, no. 369 = ed. Blau, no. 448; see S. Baron, in: PAAJR, 6 (1935), 83f.). In reply to an inquiry by Saadiah b. Berakhot about the authenticity of the gnostic work, *Shi’ur Komah*, Maimonides writes: “Heaven forbid that such work originated from the sages; it is undoubtedly the work of one of the Greek preachers ... and it would be a divine act to suppress this book and to eradicate its subject matter” (ed. Freimann, no. 373 = ed. Blau, no. 117; see Scholem, *Mysticism* (1946<sup>2</sup>), 63ff.). Of special interest is his responsum to Obadiah the Proselyte (ed. Freimann, no. 42 = ed. Blau, no. 293), who inquired if he was permitted to say in the blessings and prayers, “Our God and God of our Fathers,” “Thou who has chosen us,” “Thou who has worked miracles to our fathers,” and similar expressions. Maimonides’ responsum, apart from its halakhic merit, is a unique human document displaying grave concern for the feelings of this lonely proselyte who was so unsure of himself. Obadiah was advised that he was to recite all those prayers in the same way as one born a Jew, that he must not consider himself inferior to the rest of the Jews. The major part of this responsum has been translated into English by F. Kobler (see also S.B. Freehof, *Treasury of Responsa* (1962), 28–34). These responsa, although confined to halakhic decisions, nevertheless display Maimonides’ views on matters of doctrine and fundamentals of Judaism.

### Sefer ha-Mitzvot (“Book of the Commandments”)

Maimonides found all previous attempts at enumerating the traditional 613 \*commandments unsatisfactory. He therefore composed the *Sefer ha-Mitzvot* in which he gave his own enumeration of the 248 positive and the 365 negative commandments. As an introduction to this work, he laid down 14 principles which guided him in the identification and enumeration of the commandments. He severely criticized the work of his predecessors, such as the enumeration of the \*Halakhot Gedolot and of R. Hefez, as well as those *paytanim* like Solomon ibn Gabirol, who composed the *Azharot*, religious hymns based on enumeration of the commandments.

Maimonides’ sharp criticism of the *Halakhot Gedolot* evoked a defense of the latter by Nahmanides, a staunch apologist “for the ancients,” who in his *Hassagot* strongly criticized Maimonides, accusing him of inconsistencies. He was also challenged by Daniel ha-Bavli, a disciple of Samuel b. Ali, the anti-Maimonist. His criticisms took the form of questions which he sent to Abraham, the son of Maimonides, who replied to them. The *Sefer ha-Mitzvot*, however, was generally accepted, and a whole body of literature was produced in defense of it, apart from the general works on the 613 commandments according to Maimonides’ classification and enumeration (see A. Jellinek, *Kunteres Taryag*, 1878).

The *Sefer ha-Mitzvot*, originally written in Arabic, was translated several times into Hebrew. The version by Abraham

ibn Ḥasdai is no longer extant, while the translation by Moses ibn Tibbon, in its critical edition by H. Heller, is accepted as the standard text (1946).

### The Mishneh Torah (“Repetition of the Law”)

The *Sefer ha-Mitzvot* was not an end in itself but an introduction to the *Mishneh Torah* (Responsa, ed. Freimann, no. 368 = ed. Blau, no. 447), on which Maimonides labored for ten successive years. The purpose of the work is explained by Maimonides:

In our days, many vicissitudes prevail, and all feel the pressure of hard times. The wisest of our wise men has disappeared; the understanding of our prudent men is hidden. Hence, the commentaries of the *geonim* and their compilations of laws and responsa, which they took care to make clear, have in our times become hard to understand, so that only a few individuals fully comprehend them. Needless to add that such is the case in regard to Talmud itself, both Babylonian and Jerusalem, and the *Sifra*, *Sifrei*, and *Tosefta*, all of which require, for their comprehension, a broad mind, a wise soul, and considerable study. Then one might learn from them the correct way to determine what is forbidden and permitted, as well as other rules of the Torah. On these grounds, I, Moses the son of Maimon the Sephardi bestirred myself, and relying on the help of God, blessed be He, intently studied all these works, with the view of putting together the results obtained from them ... all in plain language and terse style, so that thus the entire Oral Law might become systematically known to all without citing difficulties and solutions of differences of view ... but consisting of statements, clear and convincing, that have appeared from the time of Moses to the present, so that all rules shall be accessible to young and old ... (introduction to *Mishneh Torah*).

Maimonides then set for himself the task of classifying by subject matter the entire talmudic and post-talmudic halakhic literature in a systematic manner never before attempted in the history of Judaism. The *Mishneh Torah* was divided into 14 books, each representing a distinct category of the Jewish legal system. (In Hebrew 14 is *yad* and hence the alternative name of the work *Yad ha-Hazakah*, i.e., “the strong hand.”)

Even though the *Guide of the Perplexed* was written after the completion of the *Mishneh Torah*, Maimonides succeeded in incorporating many of its philosophic and scientific aspects into this purely halakhic work. Philosophy and science were handmaidens to theology. Hence Book 1 contains a complete system of metaphysics, Book 3 the astronomical calculations for reckoning the calendar, and Book 14 a discussion of the doctrine of the Messiah and a refutation of Christianity, Islam, and their founders. These digressions, which technically speaking are not halakhic in essence but rather ethical and philosophic, occur frequently in the halakhic writings of Maimonides.

Unlike the commentary to the Mishnah and *Sefer ha-Mitzvot* which were written in Arabic, the *Mishneh Torah* was written in a beautiful and lucid Hebrew, the like of which had not been known in halakhic literature since Judah ha-Nasi composed the Mishnah. The *Mishneh Torah* influenced the

language of later codes, including the *Shulḥan Arukh* (see J. Dienstag, in: *Sinai*, 59 (1966), 54–75).

**OPPOSITION TO THE CODE.** The entire structure, form, and arrangement of the *Mishneh Torah* was a cultural and historical phenomenon unprecedented in Jewish dogmatic jurisprudence (see \*Codification of Law) which both awed and shocked the scholarly world for centuries (see \*Maimonidean Controversy). The architectural beauty of its structure, its logical arrangement, and ready-reference nature were the main targets for criticism, for it was feared that students would turn away from the study of the Talmud and commentaries, the source and wellspring of dynamic halakhic creativity. The severest criticism came from Abraham b. David of Posquières, an older contemporary of Maimonides, who probably equaled him in talmudic scholarship. The most serious of his charges was that Maimonides neglected to cite the sources and authorities from which his decisions were derived:

He [Maimonides] intended to improve but did not improve, for he forsook the way of all authors who preceded him. They always adduced proof for their statements, citing the proper authority; this was very useful, for sometimes the judge would be inclined to forbid or permit something and his proof was based on some other authority. Had he known there was a greater authority who interpreted the law differently, he might have retracted... hence I do not know why I should reverse my tradition or corroborative views because of the compendium of this author. If the one who differs from me is greater than I, fine; and if I am greater than he, why should I annul my opinion...? Moreover, there are matters on which the *geonim* disagree and the author has selected the opinion of one... I should I rely on his choice... It can only be one that an overbearing spirit is in him (Abraham b. David's *Hassagot* to introduction of *Mishneh Torah*).

These charges were not motivated by personal animosity, as claimed by some scholars of the Haskalah period, for on many occasions Abraham b. David traces certain sources of laws in the Code or comments upon it. At other times he is overwhelmed by this compendium (see I. Twersky, in: *Sefer ha-Yovel ... Zevi Wolfson* (1965), 169–86). Abraham b. David's objections were shared by lesser-known scholars (I. Twersky, in: A. Altmann (ed.), *Biblical and other Studies* (1963), 161–82), who added their own criticism. During the 19<sup>th</sup> century, opposition to the *Mishneh Torah* was still a subject of controversy between S.D. Luzzatto, N. Krochmal, and others (J. Dienstag, in: *Bitzaron*, 55 (1967), 34–37).

In a series of letters Maimonides replied to his criticism that his intention in writing the *Mishneh Torah* was not to discourage talmudic studies, including the *halakhot* of Alfasi. On the contrary, he had lectured to his pupils on these subjects (A. Lichtenberg (ed.), *Kovez Teshuvot ha-Rambam* (1859), pt. 1, no. 140 p. 25, b–c). He regretted the omission of his sources and hoped to include them in a supplement (*ibid.*). Maimonides never realized this hope. However, practically every commentary on the *Mishneh Torah* attempted to trace its sources. If his aim in compiling the Code was “so that no other work should

be needed for ascertaining any of the laws of Israel," the more than 300 commentaries and novellae which have been written on it – and their number is growing – is an ironic phenomenon that could not have been anticipated by Maimonides. The *Mishneh Torah* did not become the definitive code its venerated creator had hoped. Actually, it surpassed his hopes, for it became the major source of halakhic creativity and talmudic research equaled only by the Talmud itself.

#### Maimonides the Halakhist in Modern Jewish Scholarship

Finally, it is interesting to note that no other halakhic authority has been the subject of so much modern Jewish scholarship as Maimonides. The tendentious, albeit subtle, anti-halakhic orientation of many of the exponents of the Wissenschaft school and the scholars of the Haskalah (including the leaders of Reform Judaism) has dampened, if not outright discouraged, intensive research in *halakhah* per se. Some of those who did engage in this discipline, such as A. Geiger, N. Bruell, J.H. Schorr, and others, were motivated by their anti-traditional bias and sought to undermine its authority and advance the cause of modernism and reform. The preoccupation of modern Jewish scholarship with Maimonides as halakhist is out of proportion to its interest in rabbinic literature and the stream of systematic studies on the subject has continued unabated.

[Jacob I. Dienstag]

#### PHILOSOPHY

Maimonides was, by general agreement, the most significant Jewish philosopher of the Middle Ages, and his *Guide of the Perplexed* is the most important philosophic work produced by a Jew. The Arabic original *Dalālat al-Hā'irīn* was completed about 1200 and shortly thereafter was twice translated into Hebrew as *Moreh Nevukhim*. The first translation, a literal one, was made by Samuel ibn Tibbon with Maimonides' advice and was completed in 1204. The second, a freer translation, was made by the poet Judah \*al-Ḥarizi a little later. In its Hebrew translations, the *Guide* determined the course of Jewish philosophy from the early 13<sup>th</sup> century on, and almost every philosophic work for the remainder of the Middle Ages cited, commented on, or criticized Maimonides' views.

While the *Guide* contained the major statement of Maimonides' position, his philosophic and theological views appeared in a variety of other writings, among which the most important are the three lengthy essays in his commentary to the Mishnah (see above), first book of the *Mishneh Torah*, *Sefer ha-Madda* which is devoted to God and His attributes, angelic beings, the structure of the universe, prophecy, ethics, repentance, free will and providence, and the afterlife, and the last section of the work, *Mishneh Torah*, *Hilkhot Melakhim* which includes a discussion on the Messiah and the messianic age.

#### Influences on Maimonides

In his philosophic views Maimonides was an Aristotelian (see \*Aristotle), whose philosophy also contained some neoplatonic elements, and it was he who put medieval Jewish philos-

ophy on a firm Aristotelian basis. But in line with contemporary Aristotelianism his political philosophy was Platonic. In his works he quotes his authorities sparingly (see "*Shemonah Perakim*," introduction, end), but in a letter to his translator Samuel ibn Tibbon (A. Marx, in: JQR, 25 (1934–35), 374–81) he indicated his philosophic preferences explicitly. In this letter he advises Ibn Tibbon to study the works of Aristotle with the help of the Hellenistic commentators \*Alexander of Aphrodisias and \*Themistius and of Maimonides' contemporary \*Averroes. It appears, however, that Averroes' commentaries reached Maimonides too late to have any influence on his *Guide*. He recommends highly the works of the Muslim al-\*Fārābī, particularly those on logic, and he speaks of the writings of the Muslim \*Avempace (Ibn Bāja) with approval. The works of \*Avicenna (Ibn Sīnā) in Maimonides' view are also worthy of study, but they are inferior to those of al-Fārābī. Of Jewish philosophers he mentions only Isaac \*Israeli, of whose views he disapproves, and Joseph ibn \*Zaddik, whom he praises for his learning, though he states that he knew only the man, not his work. He also mentions some other philosophers of whose views he disapproves. Al-Fārābī, Avempace, and Averroes interpreted Aristotle rationalistically, and it appears that Maimonides preferred their interpretations to the more theologically oriented one of Avicenna, though he relied on Avicenna for some of his views.

(For a full discussion of sources, see S. Pines, *Guide of the Perplexed* (1963), translator's introduction lvii–cxxxiv.)

Maimonides considered himself in the tradition of the Aristotelians, adapting and developing their teachings in accord with his own views; but he differed from them in the works he produced. While the Muslims had composed commentaries on Aristotle's works, summaries of his views, and independent philosophic treatises, Maimonides produced no purely philosophic work of his own, the early *Treatise on Logic* excepted. He held that the extant philosophic literature was adequate for all needs (*Guide* 2, introd., proposition 25, and ch. 2), and he devoted himself to specific issues, particularly those bearing on the interrelation of philosophy and religion.

#### Distinction between Intellectual Elite and Masses

Fundamental to Maimonides' approach is a division of mankind into two groups: an intellectual elite, who, using reason, can understand by means of demonstrative arguments, and the masses (including those scholars who study only religious law), who, using imagination, understand by means of persuasive arguments. In the light of this distinction Maimonides' works may be divided into two kinds: *Guide of the Perplexed*, addressed primarily to an intellectual elite, and his other writings, addressed to the masses.

This distinction had one further consequence for Maimonides. Maimonides identified *ma'aseh bereshit* (the account of the creation) and *ma'aseh merkavah* (the account of the divine chariot of Ezekiel) with physics and metaphysics respectively. According to the Mishnah, however (Ḥag. 2:1) one may not teach the former to two persons, nor the latter even to one,

unless he is wise and able to understand by himself. Maimonides codifies this as *halakhah* (Yad, Yesodei ha-Torah, 2:12; 4:10–13) and in his commentary to the Mishnah gives as the reason for the prohibition the current philosophical opinion that the teaching of abstract matters to someone who cannot grasp them may lead to unbelief.

This prohibition against the public teaching of *ma'aseh merkavah* and *ma'aseh bereshit* posed a problem. How could he write the *Guide*, a book devoted to these esoteric topics, when putting something in writing is equivalent to teaching it in public? Maimonides solved this problem by making use of certain literary devices. First, Maimonides addressed the book to his disciple, Joseph ben Judah ibn Sham'un, who after studying with him left for Baghdad. Hence, the *Guide* in its formal aspect is a personal communication to one student. Moreover Maimonides, in a dedicatory letter at the beginning of the *Guide*, relates Joseph's intellectual history, showing that he had acquired some philosophic wisdom and that he was able to reason for himself. Hence, Joseph had fulfilled the conditions necessary for studying the esoteric disciplines.

But Maimonides was well aware that persons other than Joseph would read his work. Hence, he had to make use of other devices. Invoking modes of esoteric writing also current among Islamic philosophers, Maimonides wrote his work in an enigmatic style. Discussing the same topic in different passages, he would make contradictory statements about it. He describes this method in the introduction to the *Guide*, where he speaks of seven types of contradictions which appear in literary works, stating explicitly that he will make use of two of them. It is left to the perceptive reader to discover Maimonides' true views on a given issue.

The enigmatic nature of the *Guide* imposed great difficulties on medieval and modern commentators, and two schools of interpretation arose. Some, such as Julius Guttman, while aware of Maimonides' method, consider him a philosopher who attempted to harmonize the teachings of religion with those of philosophy. Others, such as Leo Strauss, considered Maimonides a philosopher, whose views were in agreement with those of the rationalistic Aristotelians, and who expressed religious opinions largely as a concession to the understanding of the masses. For example, Maimonides, according to the first interpretation, believed that the world was created, while according to the second, his true view was that the world is eternal.

With all these distinctions in mind one may proceed to an exposition of Maimonides' philosophy based largely on the *Guide*.

### Purpose of the Guide

Maimonides wrote his work for someone who was firm in his religious beliefs and practices, but, having studied philosophy, was perplexed by the literal meaning of biblical anthropomorphic and anthropopathic terms. To this person Maimonides showed that these difficult terms have a spiritual meaning besides their literal one, and that it is the spiritual meaning that

applies to God. Maimonides also undertook in the *Guide* the explanation of obscure biblical parables. Thus, the *Guide* is devoted to the philosophic interpretation of Scripture, or, to use Maimonides' terms, to the "science of the Law in its true sense" or to the "secrets of the Law" (*Guide*, introd.).

### God

Maimonides' first philosophical topic is God. In line with his exegetical program he begins by explaining troublesome biblical terms, devoting the major portion of the first 49 chapters of the first part of the *Guide* to this task. Representative of his exegesis are his comments on the term "image of God" (*zelem Elohim*), found in the opening section of Genesis. Some have argued, Maimonides states, that since man was created in the image of God, it follows that God, like man, must have a body. He answers the objection by showing that the term *zelem* refers always to a spiritual quality, an essence. Hence, the "image of God" in man is man's essence, that is his reason but not physical likeness (*Guide* 1:1).

**DIVINE ATTRIBUTES.** Maimonides then takes up the question of God's attributes (*Guide* 1:50–60). The Bible describes God by many attributes, but it also states that God is one. If He is one in the sense of being simple, how can a multiplicity of attributes be ascribed to Him? Medieval philosophers held that attributes applied to substances are of two kinds: essential and accidental. Essential attributes are those that are closely connected with the essence, such as existence or life; accidental attributes are those that are independent of the essence and that may be changed without affecting the essence, such as anger or mercifulness. Medieval logicians generally agreed that accidental attributes introduce a multiplicity into that which they describe, while they disagreed concerning essential attributes. Some, such as Maimonides' contemporary Averroes, held that essential attributes are implicitly contained in the essence and, hence, do not introduce multiplicity; others held that they provide new information and, hence, produce multiplicity. Avicenna was an exponent of the latter view, holding that essential attributes, particularly existence, are superadded to the essence. Maimonides accepted Avicenna's position on this point. Maimonides came to the conclusion that accidental attributes applied to God must be interpreted as attributes of action, that is, if it is said that God is merciful, it means that God acts mercifully; and essential attributes must be interpreted as negations (or more precisely, negations of privations), that is, if God is said to be existing, it means that he is not nonexistent.

(See also \*God, Attributes of).

**EXISTENCE, UNITY, AND INCORPOREALITY OF GOD.** Prior to Maimonides, Islamic and Jewish \*Kalām philosophers had offered arguments for the existence, unity, and incorporeality of God and for the creation of the world. Maimonides summarized the teachings of the Kalām philosophers in order to refute them (*Guide* 1:71–76). In the case of the existence, unity, and incorporeality of God, Maimonides held that these are le-

gitimate philosophic issues, but that the Kalām philosophers, relying on categories of the imagination rather than reason, had not solved them correctly. In the case of creation he held that to demonstrate the creation or eternity of the world lies outside the competence of the human mind.

Maimonides prefaces his own proofs for the existence, unity, and incorporeality of God with 25 metaphysical and physical propositions, which he considers to have been demonstrated in the philosophic literature of his days. To these he adds a 26<sup>th</sup> proposition, namely, that the world is eternal. However, it appears that this proposition does not reflect Maimonides' own belief concerning the origin of the world (see below), but serves, rather, a methodological function. It can be seen readily, Maimonides implies, that if it is assumed that the world is eternal, the existence of God can still be demonstrated (Guide 2, introd.).

**EXISTENCE.** To demonstrate the existence of God, Maimonides makes use of four proofs current in his day: from motion, from the composition of elements (also a kind of argument from motion), from necessity and contingency, and from potentiality and actuality (causality). The common structure of all of them is that they begin with some observed characteristic of the world, invoke the principle that an infinite regress is impossible, and conclude that a first principle must exist. For example, Maimonides begins his first proof, that from motion, by noting that in the sublunar world things constantly move and change. These sublunar motions, in turn, are caused by celestial motions which come to an end with the motion of the uppermost celestial sphere. The motion of that sphere is caused by a mover that is not moved by another mover. This mover, called the Prime Mover, is the last member in the chain of causes producing motion. Maimonides uses the following example as an illustration. Suppose a draft of air comes through a hole, and a stick is used to push a stone in the hole to close it. Now the stone is pushed into the hole by the stick, the stick is moved by the hand, and the hand is moved by the sinews, muscles, etc., of the human body. But one must also consider the draft of air, which was the reason for the motion of the stone in the first place. The motion of the air is caused by the motion of the lowest celestial sphere, and the motion of that sphere, by the successive motions of other spheres. The chain of things moved and moving comes to an end with the last of the celestial spheres. This sphere is set in motion by a principle which, while it produces motion, is itself not moved. This is the Prime Mover, which for Maimonides is identical with God.

Maimonides then turned to the nature of the Prime Mover. Four possibilities exist: Either the Prime Mover exists apart from the sphere, and then either corporeally or incorporeally; or it exists within the sphere, and then either as distributed throughout it or as indivisible. It can be shown that the Prime Mover does not exist within the sphere, which rules out the last two possibilities, nor apart from it as a body, which rules out the third. Hence, it exists apart from

the sphere and must be incorporeal. Maimonides shows, further, that there cannot be two incorporeal movers. Thus, it has been established that the Prime Mover exists, is incorporeal, and is one.

Maimonides' proof from necessity and contingency rests on the observation that things in the world are contingent, and that they are ultimately produced by a being that is necessary through itself. This proof was first formulated by Avicenna and was rejected by Averroes (Guide 2:1; for a more popular discussion of Maimonides' conception of God, and his attributes, see *Yad, Yesodei ha-Torah*, 1–2).

### Creation

Maimonides next turned to the incorporeal intelligences of the celestial spheres which he identifies with the angels (Guide 2:2–12), and then to creation of the world (Guide 2:13–26). On the last subject he begins by enumerating three theories of the origin of the world: that of the Torah, that the world was created by God out of nothing; that of Plato and others, according to which God created the world out of preexistent matter; and that of Aristotle, according to which the world is eternal. A major portion of the discussion is devoted to showing that Aristotle's and his followers' proofs of the eternity of the world are not really proofs. From an analysis of Aristotelian texts Maimonides attempted to show that Aristotle himself did not consider his arguments as conclusive demonstrations but only as showing that eternity is more plausible than creation. Maimonides' own position is that one can offer plausible arguments for the creation of the world as well as for its eternity. From this it follows that a conclusive demonstration of the creation or the eternity of the world lies beyond human reason; the human mind can only offer likely, technically known as dialectical, arguments for either alternative. However, an examination of these arguments reveals that those for creation are more likely than those for eternity, and on this basis Maimonides accepts the doctrine of creation *ex nihilo* as his own. An additional reason is that Scripture also teaches creation. Maimonides' intellectual daring is apparent in his statement (ch. 25) that had the eternity of the world been demonstrated philosophically, he would not have hesitated to interpret the Bible accordingly, just as he did not hesitate to interpret anthropomorphic terms in the Bible allegorically. He also states that the principle of creation is the most important one after that of God's unity, since it explains the possibility of miracles and similar occurrences. It should be noted, however, that some interpreters understand Maimonides' esoteric teaching as propounding the eternity of the world.

If the world was created, will it come to an end at some future time? He answers in the negative and adds that the future indestructibility of the world is also taught in the Bible (Guide 2:27–29). Maimonides concludes this phase of the discussion with an explanation of the creation chapters at the beginning of Genesis and a discussion of the Sabbath, which in part is also a reminder of the creation.

### Prophecy

In the introduction to the *Guide* Maimonides incidentally discussed the nature of the prophetic experience, likening it to intellectual illumination. In the present section (Guide 2:32–48) he is interested in the psychology of prophecy and its political function. He begins by listing three possible theories of how prophecy is acquired: that of the unsophisticated believer, who holds that God arbitrarily selects someone for prophecy; that of the philosophers, according to which prophecy occurs when man's natural faculties, particularly his intellect, reach a high level of development; and that of Scripture, which specifies the same development of natural faculties but adds dependence on God, Who can prevent someone from prophesying, if He so desires. According to this last view, God's role in prophecy is negative, rather than positive.

Maimonides defined prophecy as an emanation from God, which, through the intermediacy of the Active Intellect, flows first upon man's intellectual faculty and then upon his imagination. While a well-developed imagination is of little significance for the illuminative experience of the prophet, it is central to his political function. In line with the views of the Islamic Aristotelians, particularly al-Fārābī, Maimonides conceives of the prophet as a statesman who brings law to his people and admonishes them to observe it. This conception of the prophet-statesman is based on Plato's notion, found in the *Republic*, of the philosopher-king who establishes and administers the ideal state. For Maimonides the primary function of prophets other than Moses is to admonish people to adhere to the Law of Moses; this requires that the prophets use the kind of imaginative language and parables that appeal to the imagination of the masses. Maimonides characterizes three personality types: philosopher, who uses only his intellect, the ordinary statesman, who uses only his imagination, and the prophet, who uses both.

Though he discusses the phenomenon of prophecy extensively, Maimonides mentions Moses, the chief of the prophets, only in passing in the *Guide*. However, in his halakhic writings he singles out Moses for special discussion. Moses, he states, differed so much from other prophets that he and they had virtually only the name "prophet" in common. Moses' prophecy is distinguished from that of the other prophets in four ways: other prophets received their prophecy in a dream or vision, Moses received his while awake; other prophets received their prophecy in allegorical form, Moses received his directly; other prophets were filled with fear when they received prophecy, Moses was not; other prophets received prophecy intermittently, Moses received it when he wished (*Hakdamah le-Ferek Helek*, Principle 7; Yad, Yesodei ha-Torah, 7:6; cf. Guide 2:35). Moses also differed from other prophets and legislators in that he conveyed a perfect law, that is, one that addressed itself not only to man's moral perfection but also to his intellectual perfection by requiring the affirmation of certain beliefs.

### Nature of Evil

Maimonides begins the third part of the *Guide* (introd. ch.

1–7) with a philosophic interpretation of the divine chariot (*merkavah*); this exposition brings to a close that part of the *Guide* that deals with speculative matters, that is, physical and metaphysical topics (Guide 3:7–end). Next he turns to practical philosophy, discussing evil and providence first.

Maimonides accepts the neoplatonic doctrine that evil is not an independent principle but rather the privation, or absence, of good. Like the Neoplatonists and other monists he had to accept this position, for to posit an independent principle of evil was to deny the uniqueness and omnipotence of God. There are three kinds of evil: natural evils, such as floods and earthquakes, which man cannot control, social evils, such as wars, and personal evils, the various human vices, both of which man can control. Natural evils are infrequent, and, hence, the majority of evil in the world, which is caused by man, can be remedied by proper training. Maimonides also argues against those who hold that the world is essentially evil, stating that if one looks at the world at large, rather than at one's own pains and misfortunes, one finds that the world as a whole is good, not evil (Guide 3:8–12).

### Divine Providence

Maimonides discusses divine omniscience and then turns to the related question of divine providence. He distinguishes between general providence, which refers to general laws regulating nature, and individual providence, which refers to God's providential concern for individual men. He lists four theories of providence that he rejects: the theory of Epicurus (see \*Epicureanism), which states that everything that happens in the world is the result of chance; that of Aristotle (really that of the commentator Alexander of Aphrodisias), which states that there is only general, not individual, providence; that of the Islamic Asharites (see \*Kalām), which states that the divine will rules everything – this is equivalent to individual providence extended to include all beings, animate and inanimate; and that of the Mu'tazilites (see \*Kalām), which states that there is individual providence extending even to animals but not to inanimate objects. Last, Maimonides discusses the attitude toward providence of the adherents of the Torah. They all accept man's free will and God's justice. To these principles some more recent scholars (Maimonides had in mind the *geonim*, most likely Saadiah) have added the principle of *yissurin shel ahavah* ("afflictions of love"), which explains that God may cause suffering to a righteous person in order to reward him in the hereafter. Maimonides rejected it, however, stating that only an unjust God would act in this manner, and asserted that every pain and affliction is a punishment for a prior sin. Finally, Maimonides gave his own position: there is individual providence, and it is determined by the degree of development of the individual's intellect. The more developed a man's intellect, the more subject he is to divine providence (Guide 3:16–21). Maimonides used this theory of providence in his interpretation of the Book of Job, in which the characters of that book represent the various attitudes toward providence discussed above (Guide 3:22–23).

### Nature of Man and Moral Virtue

Maimonides' final undertaking in the *Guide* is his explanation of the Law of Moses and its precepts. But this account is based on his philosophy of man, which he summarizes only in his "*Shemonah Perakim*." From this summary it is clear that Maimonides' philosophy of man was one current among Muslim Aristotelians. Man is composed of a body and a soul, the soul, particularly the intellect, being the form of the body. The soul, which is unitary, contains five basic faculties: nutritive, sensory, imaginative, appetitive, and rational. Of these faculties, the appetitive and rational are important for the good life and for happiness on earth and in the hereafter. Man attains happiness through the exercise of moral virtues to control his appetites and by developing his intellectual powers. In Maimonides' discussion of morality he follows Aristotle in holding that virtuous action consists of following the mean, but he holds that all should go to the extreme to avoid pride and anger (Yad, Deot, 2:3). While in his halakhic writings Maimonides embraced a morality of the mean, in the *Guide* he advocates a more ascetic life, and he particularly recommends curbing the sexual drive. As in Aristotelian thought, the moral virtues serve only a preliminary function, the final goal being the acquisition of intellectual virtues.

(For another discussion of Maimonides' moral philosophy, see Yad, Deot.)

### Law of Moses

In the *Guide* 3:26–49 Maimonides discusses the reasons of the commandments. Maimonides considers a distinction made by Mu'tazilite philosophers, \*Saadia among them. These philosophers had divided divine law into two categories: rational commandments, such as the prohibitions against murder and theft, which the human mind can discover without revelation; and revealed commandments, such as prayer and the observance of holidays, which are neutral from the point of view of reason and can be known only through revelation. Maimonides understands this position as implying that the revelational commandments come from God's will rather than His reason. Against this view, Maimonides argues that all divine commandments are the product of God's wisdom, though he adds that some are easily intelligible (*mishpatim*), and others intelligible only with difficulty (*hukkim*). However, Maimonides adds that particular commandments have no rational principle behind them and are commandments only because God willed them.

Maimonides postulates two purposes of the Law: the well-being of the soul (intellect) and the well-being of the body, by which he means man's moral well-being. The former is acquired through true beliefs; the latter, through political and personal morality. The beliefs which a man must accept are graded according to his intellectual ability. There are also true beliefs, such as the existence of God, His unity, and His incorporeality, which everyone must accept regardless of intellectual ability; and there are beliefs, such as that God gets angry at those who disobey Him, which have primarily a po-

litical function and are considered necessary beliefs. Ordinary men will accept the Law only if they are promised rewards or threatened with punishment, and it is the function of the necessary beliefs to provide such motivation. They are unnecessary for the philosopher, who obeys the Law because it is the right thing to do regardless of consequences.

Although reasons for general moral laws can readily be found, it is more difficult to explain the numerous ritual laws found in the Bible. Maimonides explains many of them as reactions to pagan practices, and he makes use of his extensive familiarity with such books as the *Nabatean Agriculture*, which describe such practices (see \*Commandments, Reasons for). Thus, for example, he explains the biblical prohibition against wearing garments made of wool and linen combined as a reaction to a pagan practice requiring priests to wear such garments. Maimonides also considers certain commandments as concessions to historical situations, such as those dealing with sacrifice. Worship without animal sacrifices is preferred, but it would have been unrealistic to require the Israelites leaving Egypt to give up sacrifices altogether. Hence the Bible commanded sacrifices, restricting, however, the times and places for them and permitting only priests to offer them. We should not infer from this, however, that Maimonides believed in a progressive development of Jewish law; in fact, he codifies all of rabbinic law in his *Mishneh Torah*. The *Guide* concludes with a supplementary section on the perfect worship of God and man's perfection.

### Eschatology

Eschatology is barely mentioned in the *Guide*, although Maimonides developed it fully in other works. Following traditional Jewish teachings, he deals with the Messiah and messianic times, the resurrection of the dead, and *olam ha-ba* ("the world to come"). He proceeds characteristically by stripping these occurrences of supernatural qualities as much as possible. The Messiah is an earthly king, descended from the house of David. He will bring the Jews back to their country, but his major accomplishment will be to bring peace and tranquility to the world, thereby facilitating full observance of God's commandments. The Messiah will die of old age and be succeeded by his son, the latter, by his son, and so on. No cataclysmic events will take place during messianic times, but the world will continue in its established natural order. Maimonides calculated the year of the coming of the Messiah ("*Epistle to Yemen*"), although he generally opposed speculations of this kind (*Hakdamah le-Ferek Helek*, principle 12; Yad, Melakhim, 12:2 – uncensored edition).

During messianic times the dead will be resurrected with body and soul reunited though later the human person will die again. (For his affirmation of this doctrine in reply to criticism that he rejected it, see above.) Undoubtedly, the central notion of Maimonides' eschatology is his account of *olam ha-ba*. In his view the intellect, but not the body, has an afterlife, and in that afterlife the intellect is engaged in the contemplation of God. Generally, he speaks of incorporeal intelligences

(plural), implying that immortality is individual, but there are passages which suggest that immortality is collective, that is, in the world to come there exists only one intellect for all mankind (*Hakdamah le-Ferek Helek*; Yad, Teshuvah, 8–10, Guide 1:41; *Treatise on Resurrection*).

### Basic Principles of Judaism

Maimonides' intellectualism is reflected in the formulation of 13 principles that in his view every member of the Jewish community is bound to accept (see \*Articles of Faith). Did he intend these principles as a means of developing the intellects of the masses, thus enabling them to share in *olam ha-ba*, or as a political expedient, that is, to make the masses aware of intellectual issues so that philosophers can live safely in their midst? Proponents of both views are found among Maimonides' interpreters (see A. Hyman, in: A. Altmann (ed.), *Jewish Medieval and Renaissance Studies* (1967), 119–44).

### Influence

Maimonides' *Guide*, as has been noted, profoundly influenced the subsequent course of medieval Jewish philosophy. Among the extensive literature that arose were numerous full and partial commentaries on the *Guide*, most of them still unpublished. However, four of these have been printed and they appear many times with the Hebrew text of the *Guide*. They are those of Profiat \*Duran (Efodi), Shem Tov ben Joseph \*Ibn Shem Tov, Asher \*Crescas, and Isaac \*Abrabanel. In addition, the following commentaries have appeared in print: *Moreh ha-Moreh* by Shem Tov ibn \*Falaquera, which also contains corrections of Ibn Tibbon's Hebrew translation based on the Arabic original (edited by M.L. Bisseliches, 1837); Yair Shiffman has published a critical edition of Shem Tov Ibn Falaquera's commentary *Moreh ha-Moreh* (Jerusalem, 2001); and a commentary by \*Moses Narboni (all three reprinted in *Sheloshah Kadmonei Mefareshei ha-Moreh*, 1961). Samuel ibn Tibbon composed a philosophic glossary on the *Guide* entitled *Perush me-ha-Millot ha-Zarot asher be-Ma'amarei ha-Rav*, which has also been printed many times. One aspect of the commentary literature is the attempt to reconcile Maimonides' views with the divergent ones of his contemporary Averroes. Of commentaries and notes that have appeared on the *Guide* in more recent times are those of Solomon Maimon's *Givat ha-Moreh* (edited by Samuel Hugo Bergman and N. Rotenstreich, 1966), the notes in S. Munk's French translation of the *Guide*, and the Hebrew commentary in Ibn Shmuel's edition.

In addition to its significance for medieval Jewish philosophy, the *Guide* also had a formative influence on modern Jewish thought. Maimonides provided a first acquaintance with philosophic speculation for a number of philosophers of the Enlightenment period and served as a bridge for the study of more modern philosophy. Moses \*Mendelssohn is a case in point. In addition, Maimonides became a symbol for their own philosophic endeavors; he had attempted to introduce the spirit of rationalism into Jewish teachings during

medieval times, just as they tried to do in their own time. Among modern thinkers influenced in some way by Maimonides are, in addition to Mendelssohn and Solomon Maimon (c. 1752–1800), Nahman \*Krochmal, Samuel David \*Luzatto (who opposed Maimonides' rationalism), S.L. \*Steinheim, Hermann \*Cohen, and \*Aḥad \*Ha-Am.

Maimonides exercised an extensive influence on Christian scholastic thought. Among these scholastics are \*Alexander of Hales, \*William of Auvergne, \*Albertus Magnus, Thomas \*Aquinas, Meister \*Eckhart, and \*Duns Scotus. These scholastics generally quote Maimonides by name, but sometimes they cite his views anonymously. Giles of Rome composed a treatise entitled *Errores philosophorum* about 1270 (edited by J. Koch, with an English translation by J.O. Riedl, 1944), the 12<sup>th</sup> chapter of which is devoted to a refutation of Maimonides' views. (For Maimonides' influence on scholastic philosophy, see B. Geyer, *Die patristische und scholastische Philosophie* (1928), index; E. Gilson, *History of Christian Philosophy in the Middle Ages* (1955), index; Gorge Hasselhoff, *Dicit Rabbi Moyses, Studien zum Bild Moses von Moses Maimonides im lateinischen Westen vom 13. bis zum 15. Jahrhundert* (Würzburg, 2004) Kaufmann, *Schriften*, 2 (1910), 152–89; Jacob Guttman, in: *Moses ben Maimon*, J. Braun et al. (editors), 1 (1908), 135–230; and see also other studies by Jacob Guttman, Issachar Joel, and Isaac Husik.)

In early modern times Maimonides influenced the secular philosophers Baruch \*Spinoza (see H.A. Wolfson, *The Philosophy of Spinoza* (1954), index) and Gottfried Wilhelm Leibnitz.

[Arthur Hyman]

### AS PHYSICIAN

Maimonides was probably first taught medicine by his father, but, as stated above, during the seven years which his family spent in Fez, Maimonides probably had the opportunity to pursue his medical studies and mingle with well-known physicians. In his "Treatise on Asthma" he describes discussions with the Jewish physician Abu Yūsuf b. Mu'allim and with Muhammad, son of the famous Avenzoar, and others. From his commentary on drugs it may also be concluded that he received his basic medical education in Morocco. He refers to "our physicians in the West" and to Morocco and Spain. Most of the names of drugs are given there not only in Arabic but also in Berber and Spanish. The only authors quoted by name are Spanish-Moroccan physicians (Ibn Juljul, Ibn Wafid, Ibn Samajūn), who lived one to two centuries before him, and his older contemporary al-Ghāfiqī. Maimonides was certainly very familiar with Arabic translations of the writings of Greek physicians as well as with the writings of the older Arab physicians, for he himself condensed some of them.

That Maimonides was highly regarded as a physician among the Muslims is evident from the statements of the historians Ibn al-Qiftī (c. 1248) and Ibn Abi Uṣaybi'a (c. 1270) as well as of the physician 'Abd-al-Laṭif of Baghdad, who visited Maimonides when he was in Cairo in 1201. A song of praise

which was written by a grateful patient, Sa'īd b. Ṣanā' al-Mulk, has been preserved by Ibn Abi Uṣaybī'a:

Galen's art heals only the body  
 But Abu-Amran's [Maimonides'] the body and the soul.  
 His knowledge made him the physician of the century.  
 He could heal with his wisdom the sickness of ignorance.  
 If the moon would submit to his art,  
 He would free her of the spots at the time of full moon,  
 Would deliver her of her periodic defects,  
 And at the time of her conjunction save her from waning.  
 (Translation taken from B.L. Gordon, *Medieval and Renaissance Medicine* (1959), 235.)

Moreover, from certain statements made by Ibn Abi Uṣaybī'a, it is clear to us that Maimonides also lectured on medicine and taught disciples such as his own son Abraham, as well as Joseph b. Judah ibn Sham'un, and Rashīd al-Dīn.

Maimonides classified medicine into three divisions: preventive medicine; healing of the sick; and care of the convalescent, including invalids and the aged. His medical teachings, based on the then prevailing humoral pathology as taught by Hippocrates and Galen, are of a strictly rational character. He disapproved strongly of the use of charms, incantations, and amulets in treating the sick, and was outspoken against any blind belief in authority. He encouraged his disciples to observe and reason critically and insisted on experiment and research. In his "Treatise of Asthma" Maimonides stresses that the physician is important not only during sickness but also when the body is healthy. Unlike any other craftsman, the physician must use art, logic, and intuition. Maimonides also added that the physician must be able to take a comprehensive view of the patient and his circumstances in order to make a diagnosis of both his general condition and of diseases of individual organs.

Except for part of his Galen compendium, all of Maimonides' medical writings, most of which were apparently written in Arabic in Cairo during 1190–1204, have been preserved. The majority of these works were translated into Hebrew and Latin and helped to spread his fame in the West.

(1) *Al-Mukhtaṣarāt* is a compendium of the works of Galen for teaching purposes, of which only three, in Arabic, have been preserved.

(2) A commentary by him on the *Aphorisms* of Hippocrates, which had been translated into Arabic by the ninth-century translator Ḥunayn ibn Ishāq, in general follows Galen's commentary; it has been only partially preserved in two defective Arabic manuscripts.

(3) *Fuṣūl Mūsā* ("The Aphorisms of Moses") is possibly the most famous and most widely quoted of all Maimonides' medical writings. It was translated into Hebrew under the title *Pirkei Moshe*, in the 13<sup>th</sup> century. In this work Maimonides included a large number of medical aphorisms and sundry information, mostly from Galen's own writings or his commentaries on Hippocrates, but also from Arab authors. On speaking of the relation between the right-hand part of the heart and the lungs (1:55), Maimonides seems to have touched

on the lesser circulation, without, however, venturing further afield. The passages in 1:19 as well as 8:57 and 62 strongly indicate that he was speaking of arterioles connecting the arteries and the veins.

(4) *Sarḥ asmā' al-ʿuqqār* is a commentary on drugs, the manuscript of which was found in Istanbul in 1932. It consists of 56 pages of 17 lines each. In the introduction Maimonides deals with the necessity of identifying drugs by their popular names. He then lists, in alphabetical order, about 350 remedies, mainly derived from plants. The Arabic names are often followed by Greek and Persian terms as well as colloquial Spanish, Moroccan, Egyptian, and Berber names. The so-called "Prayer of a Physician" was not written by Maimonides but was added later.

(5) *Fī al-Bawāsīr* is a work on hemorrhoids and was written for a young aristocrat.

(6) *Fī al-Jimā'a*, a treatise on sexual intercourse, was written for the sultan Omar son of Nur al-Dīn.

(7) *Maqāla Fī al-Rabw* ("Treatise on Asthma") was written in 1190. Maimonides regards bronchial asthma as largely due to nervousness, and believes that some people thus inclined react strongly to certain irritants. Correct diet and spiritual treatment, he says, have a beneficial effect on the asthmatic.

(8) *Kilāb al-Sumūm wa al-Mutaharriz min al-Adwiya al-Qitāla* ("On Poisons and Their Antidotes"), a very famous manuscript, includes a classic description of the various symptoms of poisoning and is of value even today. Maimonides is the first to distinguish between the various types of snake venoms and suggests the establishment of collections of antidotes in state pharmacies. For snakebites he advises cautery, local tourniquets, rest, and general treatment against shock.

(9) *Fī Tadbīr al-Ṣiḥḥa* ("Guide to Good Health"), a treatise on hygiene, is one of the most popular of Maimonides' works. It was written in 1198 for the Egyptian sultan Afḍal Nūr al-Dīn Ali, who suffered from attacks of depression accompanied by physical symptoms. Maimonides teaches that physical convalescence is dependent on psychological well-being and rest. He stresses the necessity of hygienic conditions in the care of the body, physical exercise, and proper breathing, work, family, sexual life, and diet, and suggests that music, poetry, paintings, and walks in pleasant surroundings all have a part to play toward a happy person and the maintenance of good health.

(10) *Maqāla Fī Bayān al-A'rāḍ* ("Explanation of Coincidences") was also written for the sultan Afḍal Nūr al-Dīn Ali, who requested an explanation of the causes of his continued depression. It is a short treatise on the subject, in 22 chapters.

In the formation of his opinions on man's spiritual well-being, Maimonides' scientific and psychological experiences are closely interwoven with his religious principles. Physical and biological rules are integrated with moral and ethical principles in his world of values. To integrate oneself consciously into the natural biological laws of the world represented for

Maimonides the fulfillment of the idea of walking in the paths of science and wisdom and achieving true knowledge and perfect bliss.

[Suessmann Muntner]

#### AS ASTRONOMER

Maimonides did not compose a systematic treatise on astronomy, but his competence in the subject is well illustrated by a number of passages in the *Moreh Nevukhim* (*Guide of the Perplexed*) and by his treatise on the calendar, *The Sanctification of the New Moon* (*Kiddush Rosh Hodesh* in *Mishneh Torah*). In the *Guide* there are references to technical aspects of Ptolemaic astronomy, and it is revealed that Maimonides' disciple Joseph ibn Sham'un had studied Ptolemy's *Almagest* under him. Maimonides states that he was acquainted with the son of Jābir ibn Aflaḥ of Seville (d. c. 1150), the author of a well-known astronomical text which takes exception to some Ptolemaic principles. He also refers to a lost work of Ibn Bāja (d. 1139), concerning the principles of astronomy, that he had obviously read with care. According to Maimonides, the physical difficulties of eccentric and epicyclic spheres need not concern the astronomer, whose task is merely to propose a theory in which the motions of the planets and the stars are uniform and circular, and conform to observation. In the *Sanctification*, Maimonides describes the calendric rules that were used in the time of the Sanhedrin, the rules of the fixed calendar that apply to this day, and the astronomical determination of the beginning of the month. The third section again shows Maimonides to be competent in the technical aspects of Ptolemaic astronomy, although he made no original contribution to the subject. In 1194 Maimonides wrote a letter addressed to the rabbis of southern France strongly denouncing \*astrology as a pseudoscience opposed to the true science of astronomy, an opinion rarely expressed by Jewish scholars in the Middle Ages. In this letter Maimonides stated that astrology was the first secular subject he studied, and that he had read everything available in Arabic on the discipline.

[Bernard R. Goldstein]

#### TRANSLATIONS

Among Maimonides' halakhic works, Y. Kafah published a new Hebrew translation of the *Sefer ha-Mitzvot* (1958) from the original Arabic, on which C.B. Chavel based his English version, *The Commandments: Sefer ha-Mitzvot of Maimonides*, 2 vols. (1967). An English translation of the entire *Mishneh Torah*, almost all of whose volumes have appeared as of 2005, is being published in the Yale Judaica Series (begun 1949). An edition with an English translation of the first two books of *Mishneh Torah*, based on the Bodleian (Oxford) codex, was published by Moses Hyamson in 1962.

The Arabic original of the *Guide* was edited, with a French translation, by S. Munk (*Le guide des égarés*, 3 vols. (1856–66); ed. by I. Joel, based on Munk's text, 1931). Samuel ibn Tibbon's Hebrew translation was first printed in Rome

before 1480, and again in Venice, 1551, Sabionetta, 1553, and frequently thereafter. Yehudah Even-Shemuel (Kaufmann) edited part of this text with introductions and a commentary in three volumes (1935–59). Yehudah Even-Shemuel (Kaufman) also published a full edition of the Samuel ibn Tibbon translation, but without commentary, in 2000. Y. Kafah published the Judaeo-Arabic original with a modern Hebrew translation in three volumes in 1972. Michael Schwarz published a modern Hebrew translation from the Arabic with a modern Hebrew commentary and bibliography in two volumes in 2002. The translation of Judah al-Harizi was edited, with notes, by L. Schlossberg in three parts (1851–79; 19123). Both versions were translated into Latin: that of Ibn Tibbon by J. Buxtorf (Basel, 1629) and Al-Harizi's edited by A. Justinianus (Paris, 1520). The *Guide* was translated into English by M. Friedlaender, 3 volumes (1885; 1904<sup>2</sup>; repr. 1956), and by S. Pines (1963), with introductions by L. Strauss, and the translator C. Rabin published an abridged translation with an introduction by J. Guttmann (1952). German translations were undertaken in the 19<sup>th</sup> century (R. Fuerstenthal, pt. 1, 1839; M. Stern, pt. 2, 1864; S. Scheyer, pt. 3, 1838), all based on the Hebrew version of Ibn Tibbon. There is also a modern Hebrew translation from the Arabic by A. Siman and E. Mani, and versions in Italian, Spanish, and Hungarian.

I. Efron published an English translation of Maimonides' *Treatise on Logic* (in: PAAJR, 8, 1938), together with part of the Arabic original and three Hebrew versions. He also published a revised edition of the full Arabic text (in Hebrew alphabet) based on the edition of M. Tuerker (in: PAAJR, 34 (1966), 155ff.). J. Gorfinkle translated the *Shemonah Perakim* into English under the title *The Eight Chapters of Maimonides on Ethics* (1966). The *Iggeret Teiman* was translated by Boaz Cohen, *Moses Maimonides' Epistle to Yemen* (1952), edited by A.S. Halkin. Translations by Abraham Halkin and discussion by David Hartman of *The Epistle on Martyrdom*, *The Epistle to Yemen*, and *The Essay on Resurrection* are found in *Crisis and Leadership: The Epistles of Maimonides* (1985). S. Muntner edited versions of many of Maimonides' medical works: *Perush le-Firkei Abukrat* ("Commentary on the Aphorisms of Hippocrates" (1961), with an Eng. introd. (*Pirkei Moshe bi-Refuah* ("Maimonides' Medical Aphorisms" (1959), with Eng. introd.); *Sefer ha-Kazzeret* (1940; *Treatise on Asthma*, 1963); *Sammei ha-Mavet* (1942; *Treatise on Poisons and Their Antidotes*, 1966); and *Hanhagat ha-Beri'ut* ("Guide to Good Health" (1957); *Regimen Sanitatis*, Ger., 1966). Volume 1 of *The Medical Aphorisms of Moses Maimonides* (ed. F. Rosner and S. Muntner) appeared in 1970. Selected letters of Maimonides are to be found in English translation in F. Kobler (ed.) *Letters of Jews Through the Ages*, 1 (1952), 178–219 (see also introduction, lx–lxi).

**BIBLIOGRAPHY:** It is recommended that for an ongoing bibliography of writings about Maimonides, the reader consult *Reshimat Ma'amarim be-Madda'ei ha-Yahadut* (*Index to Articles on Jewish Studies*), a journal that lists articles in European languages and Hebrew on an ongoing basis. This bibliographic journal is now available on the internet at <http://jnul.ac.il/rambi>. GENERAL: D. Yellin and I. Abra-

hams, *Maimonides* (1903; repr. 1936); J. Guttman et al. (eds.), *Moses ben Maimon, sein Leben, seine Werke und sein Einfluss*, 2 vols. (1908–14); Graetz-Rabinowitz, 4 (1916), 326–406, 459 n. 2, and appendix by A.E. Harkavy, 51–59; A. Cohen, *Teachings of Maimonides* (1927; repr. 1968); I. Epstein (ed.), *Moses Maimonides* (1935); B. **MAIMUNA**, celebration held by all Maghrebi Jews and many Eastern communities at the end of the last day of Passover which, according to tradition, is the anniversary of the death of \*Maimonides’ father \*Maimon b. Joseph who lived for a time in Fez. In every home, tables are set with food and drinks having a symbolic significance, varying according to local custom. These include fresh pitchers of sweet milk, garlands of leaves and flowers, branches of fig trees, and ears of wheat. Usually a live fish (a symbol of fertility) is placed on the table, swimming in a bowl. The menu includes lettuce leaves dipped in honey, buttermilk, and pancakes spread with butter and honey. There is a “lucky dip,” a bowl of flour in which golden objects are placed. In some places a plate of flour is set on the table with five eggs and five beans and dates set in it. In Oran, vessels of silver and gold are included in the table decoration. On this night people eat only dairy foods and wafers made of fried dough resembling pancakes, known as *muflita*. No meat is to be consumed. The Jews visit each other, taking gifts of food. On the day following the holiday, the actual day of Maimuna, people go out to the fields, cemeteries, or the beaches and organize large social gatherings. In modern Israel Jews of Moroccan extraction celebrate the day after Passover with communal outings and picnics, and a central gathering is held in Jerusalem. The exact meaning of the word Maimuna is unknown. A suggestion that it is connected with the name of Maimun, the king of the jinns, has been questioned by scholars. In an article in *Tarbiz* (41,2, Jan–March 1972), Y. Einhorn quotes new sources to support his contention that the name Maimuna is, in fact linked with the king of the jinns.

[Reuben Kashani]

**MAINE**, northernmost New England state, had an estimated Jewish population of 9,300 out of a total of 1,277,000 (0.7%) in 2001. More than 7,000 lived in the southern part of the State (in Portland, the largest city, Biddeford, Saco, Brunswick, and Bath). Other substantial communities were Bangor, approximately 1000; Lewiston-Auburn, approximately 500; Rockland approximately 200; Waterville, approximately 200; Augusta, approximately 200; and 200 in other parts of Maine in such communities as Calais, Gardner, Caribou, Rumford Falls, Old Town, Old Orchard Beach and Bar Harbor. A large Jewish summer population added considerably to this number but was difficult to estimate.

There were five congregations in Portland, including a Chabad center, three in Bangor, two in Augusta, and one each in Old Orchard, Biddeford, Augusta, Rockland and Bath.

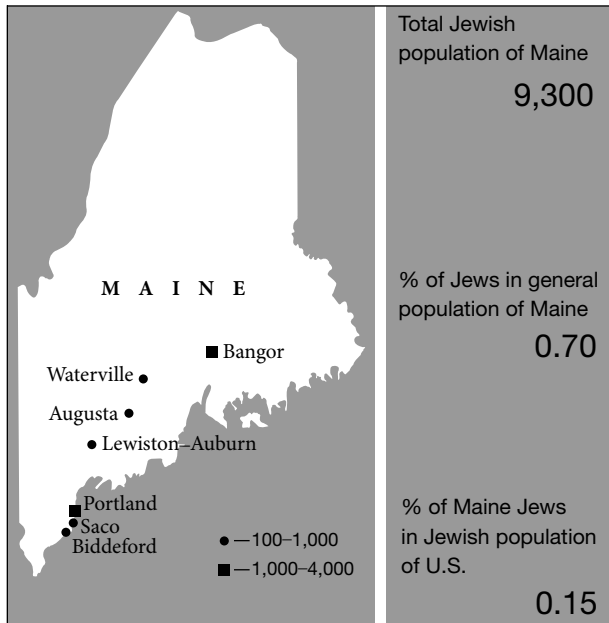

The Jewish Community Alliance of Southern Maine, located in Portland, and the Bangor Jewish Community Council are the two representative Jewish organizations in the State. The Cedars Nursing Home, the successor to the Jewish Home for the Aged in Portland, is the only such Jewish facility in Maine. Both Portland and Bangor maintained Jewish funeral chapels and Portland also maintained a Jewish Day School. There were Hillel Foundation groups at the University of Southern Maine, University of Maine in Orono and at the private Bates, Bowdoin and Colby Colleges. In addition, the history of Jewish life in Maine was maintained through the Judaica Collection at the Sampson Center for Diversity on the Portland campus of the University of Southern Maine and through the Documenting Old Portland Jewry project.

A Jewish Film Festival has been an annual event in Portland since 1999. Camp Modin, located in Belgrade and founded in 1922, is among America’s oldest overnight camps and New England’s oldest Jewish camp.

Susman Abrams (1743–1830), a native of Hamburg, Germany, was the first known Jewish resident of Maine. He came to the state in the post-Revolutionary period and lived in Waldborough, Thomaston, and finally in Union where he operated a tannery. Abrams married a Christian woman but did not himself convert to Christianity.

Maine had relatively few German or Sephardic Jewish residents. The Campanal and Decoster families, with Sephardic roots, have been prominent in Maine for several decades and Joseph M. Papo, who was the executive director of the Portland Jewish Federation in 1947–48, wrote the well-regarded book *Sephardim in Twentieth Century America: In Search of Unity* (1987).

German Jews were among the earliest Jewish residents of the state and began to settle in Bangor by 1829. Bangor developed numerous Jewish institutions and a Jewish cemetery was created in Waterville in 1830.

*Jewish communities in Maine. Population figures for 2001.*

These Jews, many of them originating in the Boston area, came to Maine as peddlers, walking the roads of the huge state and going from farm house to farm house to sell their wares. Haiman Philip Spitz was the first modern Jewish settler in the Bangor area and helped found, along with five other Jewish families, Congregation Ahawas Achim, which was officially formed in 1849, although the Rev. Isaac Leeser's *Occident and American Jewish Advocate* mentions the formation of a Bangor congregation in November 1847. Because of economic difficulties, the synagogue and most of the German Jews who founded it, disappeared by 1856. A second group of German Jews, who came to Bangor in the 1860s and 1870s, intermarried itself out of existence within a few years. Yet, Captain A. Goldman, most likely a member of one of the Bangor Jewish families, was the only known Maine Jew to give his life in the cause of the Union during the Civil War as a member of Maine's 17<sup>th</sup> regiment.

The first German Jew known to have settled in Portland was William M. Shine, who was born in Kempen, Prussia, in 1852 and arrived in Portland in 1867. By the 1870s, there were several German Jewish families in the Portland area. The first East European Jews began to arrive in Portland in 1866 and were peddlers like the German Jews who came to Maine a few decades before them. In 1875, the Portland Lodge of B'nai B'rith purchased a site in Cape Elizabeth. The site became the first Jewish cemetery in Portland, the Smith Street Cemetery, located in what later became a part of South Portland.

But there was little organization in the Jewish community of the time, that is until 1886 when Portland celebrated its centenary on July 4. Although only a handful of Jewish families lived in the community, as Bernard Aaronson designated to speak for the small Jewish community of the time

observed, "We number sixty families, and over the majority portion being of the middle or poorer class, yet content with their lot..."

That contentment was reflected in a sense of pious synagogue worship, a piety that earned Portland Jewry the nickname of the "Jerusalem of the North."

The first synagogue in Portland, Congregation Beth Judah, was founded in 1883, although informal *minyanim* were held a number of years earlier in private homes. In 1885, Reverend Israel Levine became Portland's first rabbi. A number of other synagogues were founded in the years after 1883. Congregation Shaarey Tphiloh, founded in 1904, is most likely the oldest extant synagogue in Maine, celebrating its centennial in 2004. One of the earliest Chassidic rabbis to settle in America, Rabbi Gershon Ackerman, a Brezner Chasid (from the Russian Polish town of Berezno), came to Portland in 1909 and lived in the city until 1928.

The Jews of Maine were fortunate in not having to endure a large amount of anti-Jewish sentiment. That was reserved for Maine's Catholic population, especially its French Catholic community. Know-Nothing activists in the 1840s burned down Catholic churches and tarred and feathered Catholic priests.

In the 1920s, the Ku Klux Klan of Maine, part of a rejuvenated national KKK movement, marched through the streets of several Maine communities, but aimed most of their animosity again at Maine's Catholics rather than the much smaller and less visible Jewish or African American communities.

But Maine's Jews were not immune from social restrictions. Many resorts, country clubs, and private social organizations still restricted Jews by formal or informal means. Finally, in the late 1960s, a number of non-Jewish politicians, including Maine's governor, Kenneth Curtis, decided to end, once and for all, these discriminatory practices. It was a non-Jew, Charles W. Allen (1912–2003), the father of Maine Congressman Tom Allen, a Portland lawyer and member of the Portland City Council, who led the struggle to force private clubs in Maine to open their memberships to Jews and African Americans.

Among the most important Maine Jewish family names, among others, are those of Stern, Bernstein, Povich, Berliawsky, Lown, Wolman, Lipman, Goldsmith, Marcus, Cohen, Cutler, Escovitz, Glickman, Unobskey and Alford. They, and many other families, have contributed to the success and continuity of Jewish life in Maine.

Other Maine Jews have established their imprint on the national scene as well. Hiram Abrams (1878–1926) was a co-founder of Paramount Pictures Corporation and founded the United Artists Corporation. Shirley \*Povich (1905–1997), born in Bar Harbor, was one of the best-known and beloved sports writers in American journalism who wrote for the *Washington Post*. Albert Abrahamson, born in Portland in 1905, was a professor of economics at Bowdoin College and held various positions in government including that of assistant director of the War Refugee Board, created in 1944 and the only Ameri-

can governmental institution that sought to rescue European Jews from the Holocaust.

Louise \*Nevelson (1899–1988) was born in Russia but came to America in 1904 and settled with her family in Rockland, Maine. She became one of the most famous American sculptors. Dahlov Ipcar (born in 1917) is the daughter of another famous American Jewish sculptor, William \*Zorach. She came to Maine in 1936 and settled in Georgetown. She is a renowned painter, illustrator, and soft sculptor. Linda \*Lavin (born 1937) is a movie, television, and Broadway actress. William S. \*Cohen (born 1940), the son of a Jewish delicatessen owner in Bangor, was elected to the United States Congress from Maine in 1972 and to the United States Senate in 1984. He was appointed the U.S. Secretary of Defense in 1997. Cohen's mother was not Jewish and when the rabbi insisted on conversion before his bar mitzvah, Cohen was angered and left Judaism.

[Abraham J. Peck (2<sup>nd</sup> ed.)]

**MAINTENANCE** (Heb. מְזוֹנוֹת, *meznot*), generally speaking, the supply of all the necessities of the party entitled thereto, i.e., not only food, but also matters such as medical expenses, raiment, lodging, etc. (Sh. Ar., EH 73:7; see \*Husband and Wife). When, however, the maintenance obligation is based on a personal undertaking (see below) and not on the operation of law, it will not cover raiment and perhaps not even medical expenses, unless the contrary is indicated by the terms of the undertaking (Sh. Ar., EH 114:12; *Rema*, HM 60:3; *Siftey Kohen* thereto n. 14). The liability of maintenance exists generally by virtue of law, but in the absence of any legal duty it may also be based on a voluntary undertaking (e.g., by the husband toward his wife's daughter by a previous marriage). Even though it is normally for an unfixed amount, such an undertaking will be binding and be governed by the general law of obligations (Sh. Ar., HM 60:2, contrary to the opinion of *Yad*, *Meḥirah* 11:6; see also \*Contract; \*Obligations, Law of).

The liability of maintenance by virtue of law is imposed on (1) a husband toward his wife; (2) a father toward his small children; and (3) the heirs of the deceased toward his widow. A divorced wife is not entitled to maintenance from her former husband (Sh. Ar., EH 82:6; see \*Divorce), nor, generally speaking, a betrothed woman from the bridegroom (Sh. Ar., EH 55:4 and *Rema* thereto). Only maintenance between husband and wife, as a liability by virtue of law, will be discussed below (see also \*Widow; \*Parent and Child).

#### Scope of the Maintenance Obligation

The husband's duty to maintain his wife is one of the duties imposed on him by virtue of his marriage as *obligatio ex lege*

(*Yad*, *Ishut* 12:2; Sh. Ar., EH 69:2). He has to provide her with at least the minimal needs for her sustenance in accordance with local custom and social standards (*Yad*, *Ishut* 12:10; Sh. Ar., EH 70:3). In addition and subject to the aforesaid, the wife's right to maintenance is governed by the rule that she "goes up with him but does not go down with him" (Ket. 61a; Tur, EH 70), i.e., the wife, regardless of the standard of living she enjoyed prior to the marriage, is entitled to a standard of living which matches that of her husband and to be maintained in accordance with his means and social standing. At the same time, she is not obliged to suffer having her standard of living reduced to one below that which she enjoyed prior to her marriage, at any rate not as compared with the standard of living customary in her paternal home with regard to family members backed by means similar to those available to her husband, even if he should choose a lower standard of living than he can afford (*Yad*, *Ishut* 12:11; Sh. Ar., EH 70:1, 3 and *Ḥelkat Meḥokek* thereto n. 1). In addition to providing for all the domestic needs of the common household and as part of his duty of maintenance in its wider sense, the husband must give his wife a weekly cash amount for her personal expenses, again in accordance with their standard of living and social custom (Sh. Ar., EH 70:3; *Ḥelkat Meḥokek* thereto n. 7). In return for this obligation, the husband is entitled to his wife's "surplus handiwork," i.e., to her earnings from work done beyond the call of her legal duty toward him (*Ma'aseh Yadeha*). The said obligation being imposed on the husband as part of his duty to maintain his wife, she may, of her own choice, waive her right to the weekly allowance in order to retain for herself such surplus earnings, just as she may waive her maintenance in order to acquire for herself the proceeds of her handiwork (*Ḥelkat Meḥokek* loc. cit.). The unspent balance of the money given the wife for her maintenance belongs to her husband, since he is only required to give her an amount sufficient for her needs (Ket. 65b; *Yad*, *Ishut* 12:13; *Pithei Teshuvah*, EH 70 n. 1). However, if such balance results from the wife's spending less than she requires for her own needs, it belongs to herself; she need not invest the amount of it and if she should do so, the fruits of such investment would belong to her alone (see \*Dowry). Another opinion is that money given by the husband for his wife's maintenance always remains his own, except insofar as she actually expends it on the household or on her own maintenance, and therefore any balance, even if saved, belongs to him (see *Rema*, EH 70:3; *Pithei Teshuvah*, EH 70 n. 1; PDR 2:229 and 289).

The wife's right to be maintained in the manner described above is independent of the fact that she may be able to maintain herself out of her own property and the fact that her husband may be in financial difficulties. She will accordingly not be obliged to sell her property or to use fruits thereof, to which her husband has no right, in order to facilitate his fulfillment of his obligation to maintain her, since he has undertaken the obligation on the marriage and it is also expressed in the *ketubbah* deed in the phrase, "I shall work and support you" (see below, Sh. Ar., loc. cit. *Pithei Teshuvah*, EH 70 n. 2; PDR 1:97, 101f.).

### Separated Parties

In general, the husband is only obliged to maintain his wife as long as she lives with him or, at any rate, if he is not responsible for the fact that they are separated (*Rema*, EH 70:12). Hence in the case of separation of the parties, it is necessary to establish which of them has left the common home.

WHEN THE HUSBAND LEAVES THE HOME. In principle the wife's right is not affected: "She was given to live and not to suffer pain" (Ket. 61a) and the husband remains responsible for her maintenance (*Mordekhai*, Ket. no. 273). To frustrate her claim, the husband must prove a lawful reason for his absence and refusal to maintain her, e.g., her responsibility for a quarrel justifying his departure (*Rema*, EH 70:12). However, even in circumstances where the husband is responsible for maintaining his wife despite their separation, it will nevertheless be presumed that he has left her with sufficient means to support herself for a reasonable period during his absence and therefore, in general, she will not be awarded maintenance during the first three months following his departure (Ket. 107a; Sh. Ar., EH 70:5). For the wife to succeed in a claim brought within this period, she must prove that her husband has left her without any means at all, or will have to rebut the above assumption in some other manner, e.g., by proving that her husband left the home as a result of a quarrel or with the intention of returning after a short interval but for some reason failed to do so (*Rema*, EH 70:12; *Beit Shemu'el* 70 n. 11; *Hut ha-Meshullash*, 1:6, 4).

The husband is not entitled to demand that his wife should work and support herself out of her earnings during his absence unless she has expressly or by implication consented to do this (Yad, *Ishut* 12:20; *Maggid Mishneh* thereto; Sh. Ar., EH 70:9; *Helkat Meḥokek* 70 n. 33). This is so regardless of whether or not she has been accustomed to working prior to his departure and handing over her earnings to her husband, according to law. The court will not of its own initiative investigate the matter of the wife's earnings from her own handiwork, but will take this into account only if it emerges out of the wife's own arguments. However, if after his return the husband can prove that the wife has been working and earning during his absence, he will not be obliged to repay a loan his wife has taken for her maintenance (see below), to the extent that he proves that she was able to support herself from such earnings during his absence. In this event he will similarly be entitled to demand that she refund to him all amounts she has recovered out of his property for the purposes of her maintenance (Yad, *Ishut* 12:16; Sh. Ar., EH 70:5).

When the wife is entitled to maintenance but her husband leaves her without sufficient means and she does not maintain herself out of her own earnings, she has the right to borrow for her maintenance and to hold her husband liable for the repayment of such a loan (Ket. 107b; Yad, *Ishut* 12:19; Sh. Ar., EH 70:8). This is not the case if prior to his departure she was supporting herself by her own efforts and remained silent when he publicly disavowed responsibility for debts she

might contract, thus seeming to have consented to this (*Rema*, EH 70:12; *Beit Shemu'el* 70 n. 32). The husband's duty to repay such a loan is toward his wife only and he is not directly liable to the creditor. If, however, the wife has no property of her own, or if for any other reason the creditor might have difficulty in recovering from the wife, he may claim repayment of the loan from the husband directly, in terms of the \**Shi'buda de-Rabbi Nathan* (permitting the creditor to recover the debt directly from a third party who owes money to the principal debtor if the creditor has no other means of recovering from the latter (Yad, *Ishut* 12:19; *Rema*, EH 70:8)).

If the wife has sold some of her own property to support herself, she will be entitled to recover from her husband the equivalent of the amount realized, provided that the facts do not demonstrate any waiver of this right on her part, such as an express declaration to this effect made by her before witnesses at the time of the sale, or if at that time there was a suit for divorce pending between the parties. If proof to this effect is forthcoming, the wife will not be entitled to recover anything from her husband since it is presumed that as long as the marriage tie is in existence, she will not do anything which might bring about its complete severance and will therefore also be prepared to waive her pecuniary rights against her husband (*Rema*, EH 70:8; *Beit Shemu'el* 70 n. 29; PDR 2:289, 291f.). Whenever the wife is not entitled to a refund of the amounts she has expended, during the period of her husband's absence, the earnings from her handiwork will be loans to her (*Rema*, EH 70:8).

Third parties who of their own accord assist the wife in respect of her maintenance are not entitled to be refunded for their expenditure – neither from the wife since she has not borrowed from them, nor from her husband since he has not instructed them to do so – but they are in the position of one who "has put his money on the horns of a deer" (*Rema*, EH 70:8; see also \*Unjust Enrichment). If the wife can prove that the assistance was given her in the form of a loan, the question of repayment will be governed by the aforesaid ordinary rules concerning a loan for purposes of the wife's maintenance, even if the assistance was given by her own parents (*Mordekhai*, Ket. no. 273).

WHEN THE WIFE LEAVES THE HOME. In principle the husband is not obliged to maintain his wife unless she lives with him (see above). Hence the mere fact of her leaving him, or her refusal to return to him after she has left him lawfully, provides the husband with a *prima facie* defense against her claim for maintenance, since by living apart from him she precludes herself from carrying out her marital duties, on due fulfillment of which her right to maintenance is dependent. Therefore, to succeed in a claim for maintenance in these circumstances, the wife must discharge the onus of proving facts justifying her absence from the marital home (*Rema*, EH 70:12; *Beit Shemu'el* 70 n. 34; PDR 6:33, 52f.). These may arise either from the husband's bad conduct toward her – e.g., his responsibility for a quarrel justifying in law her refusal to continue liv-

ing with him together in the marital home (*Beit Yosef*, EH 70, end; Sh. Ar., EH 70:12) – or from other circumstances which are independent of the husband's blameworthy conduct toward her, such as his refusal to comply with her justified demand to move to another dwelling or to live away from her husband's relatives who cause her distress (see \*Husband and Wife). In general it may be said that any reason sufficient to oblige the husband to grant his wife a divorce will entitle her to claim maintenance from him even though she may have left the home, since the fact that the husband is obliged to grant her a divorce means that he must acquiesce in their living apart; therefore her refusal to live with him entails no breach of her duties toward him. Moreover, by unlawfully withholding a divorce from his wife the husband prevents her from marrying someone else who could maintain her, and there is a rule that a husband who, contrary to law, prevents his wife from marrying another man renders himself liable to maintain her until he grants her a divorce (PDR 1:74, 77–80). If the wife leaves the home on account of a quarrel she has unjustifiably caused, and generally when she has no justifiable reason for living apart from her husband, she will not be entitled to maintenance from him.

For other cases in which the wife forfeits her right to maintenance, see \*Husband and Wife (s.v. *moredet*); \*Divorce.

#### Claim for Maintenance Cannot Be Assigned or Set Off

The husband is not entitled to set off against her claim for maintenance any pecuniary claim he may have against his wife, such as one arising from her sale, contrary to law, of her husband's property for purposes of her maintenance during his absence. His duty to maintain his wife means to provide her with the necessities of life with him, i.e., entails responsibility for her daily needs with regard to food, raiment, lodging, etc. This affords the wife a right against which pecuniary debts cannot be set off, since those two differ in their legal nature and her daily needs cannot be satisfied by a reduction of the debt she owes him (PDR 1:333, 338; 2:97, 99). If, however, the wife's claim is based on a right whose legal nature is purely pecuniary, e.g., her claim for repayment of a loan she has taken for her maintenance, there will be no bar to the husband setting off against such claim any other pecuniary claim he may have against her, if, for instance, she is indebted to him for a loan she obtained from him for the purpose of supporting her relatives – he may also set off such pecuniary claim against her claim with regard to payment of her *ketubbah* at the time of their divorce (see PDR 1 loc. cit.). The same reason that entitles the wife to receive actual payment of her maintenance prevents her from assigning this right to others (*Beit Shemu'el* 93 n. 18).

#### Arrear Maintenance

If the wife, although entitled to maintenance, does not bring an action for it in the court, she will be unable to claim maintenance for any period preceding the date of bringing her suit,

since it will be presumed that she preferred to suffer rather than unfold her troubles before the court and her silence will therefore be interpreted as a waiver of her right for such a period (Yad, Ishut 12:22; Sh. Ar., EH 70:11). This presumption may be rebutted by evidence showing that she insisted on her rights, e.g., that she demanded her maintenance from her husband and refrained from instituting action only because of his promise to comply without recourse to the court (*Rema*, EH 80:18; *Beit Shemu'el* 80 n. 27); institution of action has the same effect for any period thereafter even if a considerable amount of time elapses before judgment is given (*Rema* 70:5; *Beit Shemu'el* 70 n. 12; see also \*Limitation of Actions).

#### Non-payment of Maintenance: Consequences

On the husband's failure to maintain his wife in the manner to which she is entitled, the court – at her instance – will order him to do so, whether he refuses payment although he has the means to meet it or whether he lacks the means because he does not work although he is able to work and earn this amount. In other words, the husband will be ordered to pay maintenance in accordance with his potential working and earning abilities, and not necessarily his actual earnings, for he has undertaken in the *ketubbah* to work and to maintain his wife (*Rema*, EH 70:3; *Helkat Meḥokek* 70 n. 12). If he has sufficient for his own needs only for a single day, he must still share this with his wife since he is liable to maintain her “with himself” (*Rema*, EH 70:3). On the other hand, as he has to maintain her “with him” only, i.e., to no greater extent than he is able in respect of himself, he will be exempt from maintaining her if he cannot afford it because he is in a position of utter poverty and unable to work and earn for reasons beyond his control (*Pithei Teshuvah*, EH 70 n. 2; *Perishah*, ḤM 97 n. 41). For the same reason, inability to pay maintenance is excused on grounds of the husband's need to repay regular debts, these taking preference over the former (*ibid.*). If the wife should not wish to content herself with a claim for maintenance, she may possibly be entitled to demand a divorce.

#### In the State of Israel

Maintenance for the wife is a matter of personal status within the meaning of article 51 of the Palestine Order in Council, 1922, and is therefore governed by Jewish law (sec. 51 thereof) even when claimed in a civil court by virtue of section 4, Rabbinical Courts Jurisdiction (Marriage and Divorce) Law, 5713 – 1953. So far as a Jewish wife is concerned, the above position was left unchanged by the Family Law Amendment Maintenance Law, 5719 – 1959, which expressly provides that the question of her maintenance shall be governed solely by Jewish law (sec. 2; see Supr. PD 15 (1961), 1056, 1058). If the husband refuses to comply with a judgment of the court for the payment of maintenance, he may be imprisoned for a period not exceeding 21 days for every unpaid installment (Executive Law 5727 – 1967, sec. 70ff.); see also Imprisonment for \*Debt.

[Ben-Zion (Benno) Schereschewsky]

**Maintenance (*Mezonot*) in the State of Israel**

Maintenance payments in Israel are determined in accordance with Jewish law, as stipulated in Section 2 of the Family Law (Maintenance) Amendment Law, 5719 – 1959. In this respect, the position described above remained unchanged. This update will deal with a number of issues in which new arrangements were established in Israeli law, in both the rabbinical courts and the general courts.

MAINTENANCE UNDER THE LAW OF MEUKEVET MEHAMATO (A WOMAN PREVENTED FROM REMARRYING OWING TO HER HUSBAND'S REFUSAL TO GIVE HER A GET). In Jewish law – and in Israeli law, too, which applies Jewish law – the husband's obligation to pay maintenance derives from the fact of the marriage and the husband's undertaking in the *ketubbah* to provide for his wife – an obligation that terminates upon divorce. Accordingly, where the husband is obligated to grant a divorce – and refuses – the question arises as to how this refusal affects his maintenance obligation. Under Jewish law, even if the couple do not live together, the husband remains liable for maintenance, because his refusal to grant his wife a *get* prevents her from marrying someone else, thereby denying her maintenance from a potential husband. Furthermore, in such circumstances a different set of rules applies. By law, the husband owns the wife's handiwork (*ma'aseh yadeha*) – the fruits of his wife's labor – and practically, such fruits (e.g., income) are deducted from her maintenance. But when the maintenance obligation is imposed by reason of the husband's refusal to give a *get*, the latter is not entitled to deduct her income. The explanation is that the husband's ownership of his wife's handiwork against his obligation to support his wife derives from the consideration of ill-feeling (*eivah*). In other words – it was instituted in the interests of domestic peace (*shelom bayit*) between the spouses (see \*Husband and Wife). However, when the husband refuses to grant a *get* to the wife, there is no justification for entitling him to her earnings, because there is no longer an interest in fostering domestic harmony, but rather in terminating the marriage with a *get*. The Israeli Supreme Court thus ruled that a maintenance award based on the wife's inability to marry because of her husband is only applicable after the rabbinical court has ruled on divorce, in one of the following manners: forcing or obligating the husband to grant a *get*, as well as the more “moderate” case in which the court orders the parties to divorce. This principle was established by the Rabbinical Court of Appeals (*dayyanim* A. Goldschmidt, S. Yisraeli, J. Kapah; Appeal 205/5733, PDR 10, 294), and was adopted in a ruling of the Supreme Court (comments of President, M. Shamgar, CA 792/82, *Nuni v. Nuni*, 40 (3) PD 744, following Justice M. Elon, HC 644/79 *Gutman v. the Rabbinical Court*, 34 (1) PD 443, and the comments of Judge Y. Cahn in HC 661/77 *Haber v. the Rabbinical Court*, 32 (3) PD 324).

PROCEDURES. In 1975, a chapter dealing with maintenance was added to the Civil Procedure Regulations – Chapter 23 (3) of the Civil Procedure Regulations, 5723 – 1963. Its central

innovation was the requirement that every statement of claim or defense dealing with maintenance be supported by an affidavit. In addition, a detailed specification had to be submitted as an appendix to any claim or defense, detailing the complete assets and income of each party (including documentation, such as wage slips for an entire year), as well as the sums that, in that party's opinion, would meet the maintenance needs of the (rival) parties. Under these regulations, the District Court (which had jurisdiction over maintenance cases at that time) conducted an initial enquiry based on the material submitted, fixing temporary maintenance accordingly, without having to conduct a separate proceeding. These regulations also established sanctions for failure to comply with the regulations, by not attaching substantiating documentation, concealing particulars, or otherwise contravening the regulations. The sanctions ranged from orders to comply with the regulations, to the possibility of accepting the other party's claims (see, e.g., the ruling of the Jerusalem District Court, AM 470/03 *Anon. v. Anon.*; AM 789/05 *AD v. AY*).

The Civil Procedure Regulations 5744 – 1984 incorporated the same maintenance provisions in Chapter 21 (Regulations 259–266). In 1995 the Family Courts Law (see Family Courts Law, 5755 – 1995) was adopted and the powers of civil instances to adjudicate maintenance cases were transferred to the Family Court. Maintenance suits are now governed by the civil procedure regulations applying to all claims adjudicated in the Family Courts (Part 3.1 of the Civil Procedure Regulations, 5744 – 1984; Regulation 258A – 258GG).

Apparently, the enactment of procedure related regulations in the general court system, including with respect to the Family Court, led to the enactment of the new regulations governing rabbinical courts procedure (1993). Regulation 33 of these regulations determined that a maintenance claim must be submitted together with the form indicated in Regulation 211, and the defendant is instructed to follow suit when submitting his statement of defense. Pursuant to Regulation 211, special forms were prepared for maintenance claims in the rabbinical courts, in which, as part of the specification of data, the husband is required to declare the sums of maintenance paid prior to submission of the claim together with particulars of his income and property. A number of rulings have determined that failure to attach the specification of data form, or to properly complete it, may be taken into account when assessing the sincerity of the “inclusion” of a maintenance claim in a divorce suit in the rabbinical courts (see FF (Tel Aviv) 16981/96 *Dahan v. Dahan*; on the inclusion of maintenance with a divorce case, see \**Bet Din Rabbani* – Rabbinical Court in Israel).

ENFORCEMENT OF MAINTENANCE PAYMENT. The State of Israel enforced court maintenance awards by means of the Execution Office, pursuant to the provisions of the Execution Law, 5727 – 1967. This mechanism likewise enforces maintenance awards of rabbinical courts (see under \*Rabbinical Court; \*Execution, Civil).

Maintenance differs, in principle, from any other mon-

etary ruling. In a regular civil file, the court is only required to consider the question of whether the defendant is liable or not; the defendant's financial capacity to pay the sum of the claim does not affect his liability. On the other hand, liability for maintenance, in principle, is based on the financial capacity and situation of the liable party, and the sum of maintenance is fixed in accordance with a number of parameters, inter alia, the liable parties' financial ability to pay a particular sum of monthly maintenance (after he has borne his own expenses). This distinction affects the discretion exercised by the head of the Execution Office in determining how a debt is paid. Regarding a regular debt, the head of the Execution Office may, and is often compelled to, consider the debtor's financial situation, in view of which he determines whether he should pay the debt in one payment or in installments. Regarding a maintenance ruling, the head of the Execution Office does not have such discretion and must implement the court's ruling literally, inasmuch as the judicial forum that ruled on maintenance (a rabbinical court or the family court) has already considered this data and the sum of the maintenance ruling was determined on the basis of that data.

Another difference between collection of a financial debt as distinct from a maintenance debt relates to the use of imprisonment. The Execution Law and Supreme Court rulings restricted the cases in which imprisonment can be imposed against a person who fails to discharge his civil debt (see the detailed ruling of Deputy President Judge M. Elon in HC 5304/92, *Perach v. the Minister of Justice*, 47 (4) PD 715; see in detail: \*Execution, Civil). In contrast, Section 74 of the Execution Law determines that regarding a maintenance debt, the head of the Execution Office may, at the request of the person entitled to maintenance, issue an arrest warrant against the debtor, even without investigating his financial ability (one of the minimal terms required for imprisonment with respect to a civil debt). The Supreme Court emphasized the difference between collection of a maintenance debt and collection of a regular civil debt: the maintenance award is fixed by a judicial instance [after having consideration for the liable party's financial situation]; the dependency of the persons entitled to the maintenance on the maintenance payments for their sustenance; the fact that a maintenance ruling is not final and the debtor may apply to a rabbinical court or the family court to alter the amount of the maintenance if there has been a change of circumstances justifying its alteration (p. 731 of the *Perach* decision).

In addition, a special social welfare law was enacted in Israel enabling receipt of maintenance payments through the National Insurance Institute (The Maintenance (Assurance of Payment) Law, 5732 – 1972). According to this law, a person with a maintenance ruling in his favor (such as a spouse or child) may present a copy of the judgment to the National Insurance Institute and the latter will pay the maintenance sum on a monthly basis (subject to a statutory ceiling; see Section 4 of the law). The National Insurance Institute acts on behalf of the person entitled to maintenance, and concurrently initiates execution proceedings against the maintenance debtor.

In this way, those entitled to maintenance receive the monthly payment with dignity and without tension or pressure in the event of the maintenance debtor's failure to pay. This law is particularly effective when the maintenance debtor changes addresses and cannot be traced or absconds abroad. The difference between the sum awarded as maintenance by the Court (either Rabbinical or Family Court) and the sum actually paid by the National Insurance Institute, may be collected by the entitled party by opening a file in the Execution Office (see Section 10 of the law; AM 789/05 AD v. AY).

**MAINZ (Mayence; Heb. מַינֶזְץ, מַגְנֶזָּה, מַגְנֶזָּה),** city on the Rhine in Germany.

### The Medieval Settlements

Mainz is one of the oldest Jewish communities in Germany. It is presumed that Jews came to the city as merchants in the Roman era and may even have founded a settlement there. The date of the first medieval community is uncertain. A church council in Mainz declared in 906 that a man who killed a Jew out of malice must make amends like any other murderer, and presumably there were some Jews in the city at the time. The \*Kalonymus family of Lucca is believed to have moved to Mainz in 917, but the date is not completely reliable. Evidence of the existence of a Jewish community is indisputable only from the middle of the tenth century. Archbishop Frederick (937–54) threatened the Jews with forcible conversion or expulsion. They were in fact expelled by Emperor Henry II in 1012 after a priest had converted to Judaism. Soon after, however (according to Jewish sources only a month), they were allowed to return and continued to play a lively part in the trade of the city, which was a commercial center on the Rhine and Main rivers. An organized community was in existence in the late tenth century (when \*Gershom b. Judah was teaching in Mainz; his son apostatized in 1012), although land for a cemetery was not acquired until the time of the expulsion (gravestones dating from the 11<sup>th</sup>–14<sup>th</sup> centuries, discovered in 1922 in the fortified inner city, came from this cemetery). Many Jews left the city in 1084 after they had been accused of causing a fire in which their quarter was also damaged; settling in \*Speyer, they founded the community there.

At the beginning of the First \*Crusade (1096) the Mainz

*parnas*, Kalonymus b. Meshullam, obtained an order from Emperor Henry \*IV protecting the Jews, but nonetheless, and in spite of an armed and spirited resistance, on May 27 more than 1,000 died – some at the hands of the crusaders and many by suicide as an act of \**kiddush ha-Shem*. Kalonymus escaped with a group to Ruedesheim but committed suicide the next morning during an attack led by Count Emicho. The synagogue (first mentioned in 1093) and Jewish quarter were burned down on May 29. Twelfth-century Jews immortalized the Mainz martyrdom as an example of supreme \**akedah*. The community slowly recuperated in the following years after Henry IV had permitted those forcibly converted to return to Judaism, decreeing that the Jews were also to enjoy the “king’s peace” (*Landfrieden*). During the Second Crusade (1146–47) it suffered several casualties (see also \*Bernard of Clairvaux). During the Third Crusade (1189–92) the Jews of Mainz were unharmed because of the resolute protection of Frederick I Barbarossa; large numbers temporarily went into hiding in Munzanberg (near \*Friedberg). In 1259 Mainz Jews were ordered to wear the Jewish \*badge. In 1281 and 1283 numerous Jews fell victim to the blood \*libel; the synagogue was also burnt in these years. As a result of these repeated persecutions some Jews of Mainz, along with those of other German cities, wished, in 1285, to immigrate to Erez Israel under the leadership of \*Meir b. Baruch of Rothenburg; others escaped the boundaries of the empire. During the \*Black Death (1349) almost the whole community perished; some of them in a battle against the mob, and the majority (6,000 persons) in the flames of their burning synagogue and quarter, set on fire by their own hands in *kiddush ha-Shem*.

In the next decade (following the charter of the German Empire known as the Golden Bull of 1356) Jews again began to settle in Mainz. The community did not attain its former standing, even though a considerable number of Jews settled (in 1385 they presented the council with 3,000 gulden “out of gratitude” for its protection during the anti-Jewish disturbances that had broken out in various places). With the gradual transfer, in the later Middle Ages, of *Judenschutz* (“guardianship over the Jews”) to the cities, their financial obligations grew heavier. The Jewry taxes, granted to the city in 1295 and renewed in 1366, became henceforth ever more burdensome. In 1438 Mainz Jews left the city after a dispute with the council (they may in fact have been expelled); the synagogue and cemetery were confiscated and the tombstones utilized for building. In 1445 they were readmitted, only to be expelled in 1462; permitted to return in 1473, they were finally forced to leave the city ten years later. The synagogue was converted into a chapel.

### The Community in the Middle Ages

Until the second half of the 12<sup>th</sup> century, the Jews conducted lively mercantile activities and from a very early date attended the \*Cologne fairs. Discoveries in the area of the oldest Jewish settlement in Mainz provide evidence of commercial connections with Greece and Italy. From this period onward \*moneylending became of increased importance in Mainz, as in all

German communities. Records of the 12<sup>th</sup>, and especially of the 13<sup>th</sup> century, often reveal that churches and monasteries owed money to Jews. In 1213 Pope \*Innocent III released all Christians in the Mainz province who were about to set out on a Crusade from paying interest on debts to Jews. Mainz Jewry also suffered when Emperor \*Wenceslaus annulled debts owed to Jews (1390).

Until the Black Death, Jews were allowed to possess land in the city and were recognized as owners of houses. Mainz Jews were probably permitted to reside outside the Jewish quarter, for the protective wall, customary in other cities, was missing. A *Judengasse* is mentioned in 1218, and at the end of the century 54 Jewish houses are recorded. The Jewish community was led by a so-called *Judenbischof*, nominated by the archbishop, and by not less than four elders (*Vorsteher*) who together constituted the *Judenrat* (“Jews’ council”) from 1286 until the end of the 14<sup>th</sup> century. The supreme non-Jewish juridical authority was the archbishop (from 1209). A *yeshivah* was founded in the tenth century by the Kalonymides and became central under R. Gershon b. \*Judah and his pupils and contemporaries, Judah ha-Kohen, Jacob b. \*Yakar, Isaac ha-Levi, and Isaac b. \*Judah. Gershon’s \**takkanot* (“regulations”), which were applicable to the Rhenish cities, were acknowledged by all the other German communities and even by other European ones, thereby achieving the force of law, a fact which enhanced the reputation of Mainz. The chronicle of Solomon b. \*Samson recounting the *kiddush ha-Shem* of 1096 regards Mainz as the main, most ancient, and most famous Jewish community on the Rhine; he praises its learning and pious way of life (see A.M. Habermann (ed.), *Sefer Gezerot Ashkenaz ve-Zarefat*).

From the early 12<sup>th</sup> century on, \*Speyer, \*Worms, and \*Mainz (in Jewish sources named שׁוּמ *shum*), an abbreviation made up of the first letter of their names) were recognized as the leading Jewish communities in Germany. Synodal assemblies were held in Mainz (1150, 1223, 1250), in which primarily representatives of the three leading communities took part; their resolutions, the *takkanot Shum*, were acknowledged by the rest of the communities of Germany. The Mainz rabbi, Jacob b. Moses \*Moellin (1356–1427; known as Maharil), promulgated *takkanot* (chiefly concerned with ritual matters) aimed at the German and primarily the Rhenish communities. His collection of \**minhagim* (compiled by his pupil Zalman of St. Goar), which rely mainly on Mainz traditions, are connected with all German and some non-German communities and were used to a large extent in the Shulhan Arukh, *Orah Hayyim*. Outstanding among the many notable scholars and personalities in medieval Mainz are, in addition to those already mentioned, Nathan b. \*Machir b. Judah (c. 1100); \*Eliezer b. Nathan (c. 1150); \*Meshullam b. Kalonymus (c. 1150); \*Judah b. Kalonymus b. Moses (c. 1175); and Baruch b. Samuel (1200).

### Resettlement and the Modern Community

In the early modern era only a few Jews lived in Mainz. In

1513 the archbishop designated Weisenau, near Mainz, as the seat of the rabbinate for the diocese of Mainz, presumably because few resided in the city itself. These few were expelled in 1579, but a new community was reconstituted in 1583, reinforced by emigration from \*Frankfurt (1614), Worms (1615), and \*Hanau. A rabbi was subsequently engaged and a synagogue built (1639; see also \**Landesjudenschaft*). During the French occupation (1644–48), the Jews suffered and were subsequently subjected to ever-harsher restrictions. The permitted number of Jewish families was limited to 20, and later 10 (1671); they were allowed to inhabit one special street only (ghetto).

Influenced by the \**Toleranzpatent* (1784) of \**Joseph II*, the archbishop-electoral improved the legal position of the Jews and allowed them to open their own schools and attend general ones. After the revolutionary French occupation of Mainz (1792), the \**Leibzoll* (“body tax”) was abolished and on September 12 the gates of the ghetto were torn down. Until the end of the occupation (1814) the Jews of Mainz were French citizens (they sent delegates to the \*Sanhedrin in Paris). The Napoleonic edict of May 17, 1808, remained in force until 1848. After the German war of liberation (1813–15), Mainz passed to \*Hesse-Darmstadt. Full civil rights, promised in June 1816, were not granted.

In the mid-19<sup>th</sup> century, the community split when R. Joseph \*Aub introduced ritual reforms in the newly built synagogue (1853). The Orthodox founded the Israelitische Religionsgesellschaft, with its own synagogue, and engaged Marcus \*Lehmann as rabbi; he founded a Jewish school (a high school with instruction in foreign languages) in 1859. Until the Prussian law of 1876 regulating secession from religious communities, the Orthodox remained within the community and seceded only later. In modern times, too, a number of scholars originated from Mainz, notably Michael \*Creizenach; Isaac \*Bernays; Joseph \*Derenburg; and Ludwig \*Bamberger. Among the former communal institutions were the Israelite Home for the Sick and Disabled, the Jewish Sistership Organization for the Care of Jewish Antiquities, and the *talmud torah*. The Israelitische Religionsgesellschaft possessed a school (eight classes and 68 pupils), a library, and supplied religious instruction to 30 children. The communal budget totaled 220,000 marks in 1931. Twelve communities from the surrounding district were administered by the Mainz rabbinate. In the 19<sup>th</sup> century the Jewish population of Mainz increased, but its percentage of the general population remained steady: 1,620 Jews in 1828 (5.3% of the total population); 2,665 in 1861 (5.8%); 2,998 in 1871 (5.8%). From then on, both numbers and ratio declined, to 3,104 (3.7%) in 1900; 2,738 (2.5%) in 1925; and 2,730 (1.8%) in 1933.

### Holocaust and Contemporary Periods

On November 9/10, 1938, the main synagogue (including the museum and library) was looted and burnt down. The Orthodox and Polish synagogues suffered similar treatment. On May 17, 1939, only 1,452 Jews remained, 70% of whom were 40

years or over. A steady flow of emigrants was partly balanced by an influx of refugees from the countryside. In March and September 1942 the majority of the community was deported to Poland and \*Theresienstadt. On February 10, 1943, the final liquidation of the community, which had been moved to the hospital, took place. After the war, a new community was organized, which numbered 80 persons in 1948 and 122 in 1970 (with an average age of 53). In 1989 the Jewish community numbered 140, and about 1,000 in 2005. The increase is explained by the immigration of Jews from the former Soviet Union. In 2005 a second (liberal) Jewish congregation was founded with about 70 members. It is a member of the Union of Progressive Jews in Germany. The congregation wished to use the restored synagogue in Mainz-Weisenau, which was inaugurated in 1996, as a cultural and educational center on Jewish history and tradition for the citizens of Mainz. It also planned to build a new synagogue.

[Bernard Dov Sucher Weinryb / Larissa Daemmig (2<sup>nd</sup> ed.)]

**MAIORESCU (MAYER), GEORGE TOMA** (1928– ), Romanian poet and author. In *Ochii Danielei* (“Daniel’s Eyes”, 1963) the poem “*Amintiri îns-xingerate*” (“Bloodstained Memories”) is a nightmare evocation of his father’s death in a Nazi labor camp. This versatile writer’s other works include accounts of a journey to South America, a collection of love poems, and *Dialog cu secolul și cu oamenii săi* (“A Dialogue with Our Century and Its People”, 1967). He has been translated into more than 20 languages.

**MAIROVICH, ZVI** (1909–1974), Israeli painter. Born in Poland, he immigrated to Palestine in 1935, settling in Haifa. In 1947–48 he was a founder member of the *New Horizons* group. Mairovich arrived at abstractionism quite late. In his expressive compositions, there is always a portrait, a landscape, or a still life. He formed a link between abstract–lyrical painters, and Israel expressionists.

**MAISEL, ELIJAH HAYYIM** (1821–1912), Polish talmudist and rabbinic leader. Maisel studied at Volozhin and at the age of 20 was appointed rabbi of Gorodok. After serving for two years, he resigned the office, devoting the next ten years to study. After serving as rabbi in a number of small communities, he was appointed to the important rabbinate of Lomza, and then in 1874 to the even more important one of Lodz. He was an erudite scholar, with a great understanding of and sympathy for humanity. Though a *Mitnagged*, he was loved by the people of Lodz, most of whom were Hasidim. He was a firm and fearless leader, taking an active part in all the community's philanthropic and religious institutions, to assist which he devoted most of his income. When they lacked money, he would borrow and himself guarantee the repayment. If the wealthy members of the community refused to meet these debts, he changed his post, making it a condition that the new town paid his charitable debts in his old community. On one occasion the community of Bialystok offered to pay his debts in Lodz. However, not wishing to lose him, the community of Lodz immediately paid the debts. He kept open house and none who came for help was turned away empty-handed. Though lenient to others in personal religious matters, he strove with all his energies to prevent the breakdown of public religious life. He once stood on the Sabbath at the entrance of a Jewish shop until its owner promised to keep it closed in future.

[Mordechai Hacohen]

**MAISELS, ISRAEL AARON** (1905–1994), South African lawyer and communal leader. Born and educated in Johannesburg, Maisels was admitted to the bar in 1930. During World War II he served in the South African Air Force with the rank of major. In 1948 he became king's counsel and was leader of the Johannesburg, as well as the South African, Bar for several years. He successfully defended Nelson Mandela and 90 other people of all races in the "Treason Trial" which ended in 1961. He was appointed a judge of the High Court of Southern Rhodesia, retiring in 1963, and later acted as a part-time judge of appeal for Botswana, Lesotho, and Swaziland. He served as arbitrator in disputes of public concern. Maisels was at various times president of the South African Jewish Board of Deputies, the South African Zionist Federation, and the United Hebrew Congregation in Johannesburg.

[Louis Hotz]

**MAISELS, MOSES HAYYIM (Misha; 1901–1984)**, Hebrew writer. Born in Warsaw, Maisels, as a member of the staff of the Hebrew papers *Ha-Yom* and *Ha-Zefirah* in his native city, contributed numerous articles on contemporary and literary problems. In 1930 he emigrated to the United States where, from 1932, he was a member of the staff of *Hadoar* and, after the death of M. \*Ribalow, its editor. In 1959 he emigrated to Israel where he became one of the editors of Mosad Bialik, the scholarly publishing house of the Jewish Agency for Israel. His major work, *Mahashavah ve-Emet* (1939), is a two-volume essay: the first deals with philosophy in the past and its implications for the present; the second, with Judaism in the context of general philosophy. An abridged edition appeared under the pseudonym of M.H. Amishai (1961) and an English translation and condensation was published by A. Regelson under the name *Thought and Truth, a Critique of Philosophy* (1956). Among Maisels' translations are Upton Sinclair's *Oil*, published under the pseudonym of M. Avishai (1929); M. Balaban's Polish studies on the history of the Jews (1930–33), and on the Frankist movement (1934–35); and Louis M. Epstein's *The Jewish Marriage Contract* (1954). Maisels' passion for anonymity led him to publish under numerous pseudonyms.

[Eisig Silberschlag]

**MAISEL-SHOḤAT, HANNAH** (1890–1972), Israeli pioneer and educator, wife of Eliezer \*Shoḥat. Hannah Maisel was born in Grodno, Belorussia, and studied education, agronomy, and science in Russia, Switzerland, and France. Active in the Po'alei Zion movement in Russia, she settled in Erez Israel in 1909, and in 1911 founded the first women's agricultural farm in Kinneret on the shores of Lake Tiberias, with 14 pupils (among them the poetess \*Raḥel (Bluwstein)). In 1919, she established the first "Labor Kitchen" in Tel Aviv, and later the WIZO School for Home Economics. In 1920, she was elected to the first executive of WIZO, and in the following year she and her husband were among the founders of the first moshav, \*Nahalal. From the very first years of her *aliyah* Hannah Maisel-Shoḥat realized the importance of training the young women who had come on *aliyah* in agriculture and home economics, and her initiative, vision, and activity in this sphere constitute an important chapter in the history of the development of agriculture and education in Israel. In 1929 she founded the WIZO Agricultural High School in Nahalal and was its principal from its foundation until 1960. As a leader of the \*Mo'ezet ha-Po'alot (Council of Women Workers) she was one of the organizers of the first conference of the Labor Movement in Erez Israel.

[Benjamin Jaffe (2<sup>nd</sup> ed.)]

**MAIUMAS**, a popular licentious feast connected with water festivals undertaken in various places (13 according to Lev. R. 5:3, et al.); four localities were named after it (see below). Information about the Maiumas festivals is provided by Melalus

from Antioch in Syria. He relates that the festival in honor of Dionysus and Aphrodite was held every three years, lasted 30 days, and was celebrated with night-time stage performances. An imperial edict issued by the Emperor Commodus, who renewed the Olympic Games, included ceremonies from which income was to be channeled to the Maiumas rituals. According to Livia an attempt to prohibit the festivities – apparently by Julian the Apostate – was not a success.

(1) Maiumas near Gaza served as the port of that city. It is first mentioned in the Zeno Papyri (259 B.C.E.; Cairo Papyrus 59.006). In the fourth century it became a Christian city called Constantia Neapolis, and was consequently freed from dependence upon the pagan city of Gaza. It is identified with al-Minā, 2½ mi. (4 km.) from Gaza, on the Mediterranean coast. A synagogue with a mosaic pavement representing King David as Orpheus and dated to 508/9 C.E. was excavated there in 1967.

(2) A Maiumas located on the coast near Ashkelon is mentioned by Antoninus Placentinus. It is perhaps to be identified with Khirbat al-Ashraf at the entrance to the Shikma Valley (Wadi Sikrayr).

(3) Khirbat Miyāmās has been identified with Shuni, east of Caesarea, on the road linking Binyamina and Zikhron Ya'akov, identified as the village of Kfar Shumi (or Shami) from the third century C.E. mentioned in the Jerusalem Talmud (Ḥallah 58, 73). The site was probably referred to by the Bordeaux Pilgrim in 332 C.E.: "At the third mile from there [Caesarea] there is Mount Sina and there is a spring in which, should a woman bathe, she will fall pregnant." Since 1986 excavations have been conducted at the site by E. Shenhav on behalf of the Jewish National Fund. The Roman theater was uncovered and it consists of an orchestra, seating arrangements, vaults, and a pool, all of which together form an oval complex, containing stepped pools with mosaic floors, fountains, and a hostel apparently used by pilgrims. Storerooms and residential quarters were also exposed, as well as a large public building that may have served as a shrine during the water festivals performed at the site. Some of these festivities would have taken place within the semi-circular pool on the other side of the theater. This pool had a mosaic floor with built-in recesses for flags and was marked with lines and lanes. It is assumed that these denoted the directions of the water games and the positions taken by the players. Two inscriptions were exposed on the floor of the pool, one of which was complete and could be read as follows: "In the time of Flavius Marcianus son of Antipatris the most honorable consul the work of quarrying the mountain from the foundation was completed." The person mentioned may have been the governor of Caesarea in the fourth century C.E. Clearly the water games at the site continued during the early part of the Byzantine period.

(4) Betomarsea in the vicinity of Charachmoba (al-Karak) is called Maiumas on the Madaba Map and was connected in ancient sources to the Baal-Peor of Numbers 25:3–9.

[Michael Avi-Yonah / Shimon Gibson (2<sup>nd</sup> ed.)]

**MAJD AL-KURŪM.** Arab village in northern Israel, 10 mi. (16 km.) E. of Acre. In the Israel War of \*Independence, the village capitulated to Israel forces (Oct. 30, 1948). In 1964 Majd al-Kurūm received municipal council status. It has an area of 3.5 sq. mi. (9 sq. km.) and had a 1969 population of 3,690, most of whom were Sunnite Muslims. The village economy was based on hill farming, with olive groves, deciduous fruit tree orchards, and vegetables and local workshops, stone and marble quarries, and factories, particularly for food processing. By the end of 2002 the population of Majd al-Kurūm had tripled to 11,400 inhabitants, with income less than half the national average. Its site is assumed to be identical with the talmudic Bet Kerem ("House of Vineyards"), known for its fertile soil and rich water resources (Nid. 2:7; Tosef., Nid. 3:11).

[Efraim Orni]

**MAJDAL AL-SHAMS,** Druze village in the N. Golan, at the foot of Mt. Hermon. Under Israeli military administration after the \*Six-Day War (1967), Majdal al-Shams was the largest of all Druze villages in the region. In 1968 it had 3,500 inhabitants whose social and economic services were greatly improved after 1967. Profits from its rich fruit orchards increased and new sources of income were created in tourism, construction of new roads (e.g., the one leading from the village to the top of Mt. Hermon), etc. In 1982 Majdal al-Shams received municipal council status. The village is spread over 4.5 sq. mi. (12 sq. km.) and reached a population of 8,240 in 2002. Income was about a third of the national average. Majdal al-Shams maintained friendly contact with the Israeli administration and close contact with the Druze community in Israel, while maintaining its contacts with the Druze community across the border in Syria.

**MAJDANEK (Maidanek),** concentration and death camp on the southeastern outskirts of \*Lublin, Poland, in the Generalgouvernement, German-occupied Poland. It was also called Lublin-Majdanek and Majdan Tatarski, after the suburb of Lublin in which it was situated. Originally set up on July 21, 1941, for Soviet prisoners of war, it was soon turned into a camp for Jews and Poles with a maximum capacity for 35,000 inmates. Majdanek covered 667 acres; situated on the Lublin-Zamosc-Chelm Highway, it was ringed by two layers of barbed wire and guarded by 19 watchtowers, each 26.5 feet high. It contained 227 buildings, gas chambers, two gallows, and a small crematorium. The camp was divided into six sections which in 1943 contained a women's camp; a field hospital for Russian collaborators attached to the German army; a men's camp for Polish political prisoners as well as Jews from Warsaw and Bialystok; a men's camp for Soviet prisoners of war, civilian hostages, and political

prisoners; a men's hospital camp; and a section for further expansion.

As with Auschwitz, but unlike the other major killing centers of Sobibor, Belzec, Treblinka, and Chelmno, Majdanek was also a slave labor and prisoner camp. Also, unlike the other major killing centers, which were used almost exclusively for the murder of Jews, Majdanek's prisoners were more diverse; many died from its primitive conditions, perhaps more than died in its gas chambers.

The camp commandants were the SS officers Karl Otto Koch (September 1941–July 1942), Max Koegel (August–October 1942), Hermann Florstedt (October 1942–September 1943), Martin Weiss (September 1943–May 1944), and Arthur Liebeschel (May until liberation on July 24, 1944).

The first transport, consisting of 5,000 Soviet prisoners of war, arrived in the autumn of 1941. They died of starvation and exposure. The camp population was mixed: Soviet prisoners of war, Polish farmers, Ukrainians, Byelorussians and, of course, Jews. The first groups of Jews arrived from Slovakia and the Protectorate of Bohemia and Moravia (15,000) and then Poland (36,500). Early in 1943, 6,000 Dutch and Greek Jews arrived, followed by 74,800 Polish Jews, mostly from \*Warsaw, \*Bialystok, and Lublin. Altogether 130,000 Jews were sent to Majdanek in 1942–43.

Until the spring of 1942 prisoners were usually shot in a nearby forest, but from October 1942 until the end of 1943, Majdanek had three gas chambers located in one building, which used both carbon monoxide and, like Auschwitz, Zyklon B gas to kill prisoners.

Jewish prisoners who were not killed immediately were employed in various work projects in the camp or in the Lublin area. If further workers were needed in 1942, some trains en route to Belzec were stopped and Jews able to work were removed before the train resumed its journey toward the death camp.

In May 1943 some 18,000 Jews from the Warsaw Ghetto were sent to Majdanek following the Ghetto Uprising and some ghetto factories were transferred there. They were not to stay long. In the summer of 1943, 10,000 able-bodied Jews were transferred from Majdanek for work in "Hasag" camp and Auschwitz.

Toward the end of 1943 a strong partisan movement developed in the Lublin district. Uprisings had taken place in Vilna and Bialystok, and even in the death camps of Sobibor (August) and Treblinka, unnerving the Germans. In retaliation, they carried out a massacre (euphemistically named the "Harvest Festival") of 42,000 Jews, some of whom had been brought from the nearby work camps. This "action" included the machinegunning of 18,000 Jews in a single day (November 3, 1943) in front of the ditches that the victims were made to dig to serve as their own graves.

Between 170,000 and 235,000 persons died or were killed at Majdanek. Most died because of the harsh conditions, starvation and disease, torture, forced labor, and despair. The number of victims of Majdanek's gas chambers is unknown.

When the camp was liberated by the advancing Soviet armies (July 24, 1944), only a few hundred prisoners of various nationalities were still alive. In their hasty evacuation, the Germans could not destroy the camp entirely and thus a clear remnant of the camps, barracks, gas chamber, and crematoria remained. The liberation of Majdanek was covered widely. Western correspondents had entered the death camp and written stories about it. H.W. Lawrence, a correspondent for the *New York Times*, wrote: "I have just seen the most terrible place on earth." These revelations were not given the credence they deserved.

Press coverage was intense. Roman Karman, a well-known Soviet correspondent, filed this report on August 21, 1944:

In the course of my travels into liberated territory I have never seen a more abominable sight than Majdanek near Lublin, Hitler's notorious *Vernichtungslager*, where more than half a million European men, women, and children were massacred ... This is not a concentration camp; it is a gigantic murder plant.

Save for the 1,000 living corpses the Red Army found alive when it entered, no inmate escaped alive. Yet full trains daily brought thousands from all parts of Europe to be coldly, brutally massacred.

In the center of the camp stands a huge stone building with a factory chimney – the world's biggest crematorium ... The gas chambers contained some 250 people at a time. They were closely packed ... so that after they suffocated they remained standing ... It is difficult to believe it myself but human eyes cannot deceive me...

In the postwar years the Polish authorities established a museum and research institute at Majdanek. Poland established an impressive memorial at Majdanek and made significant efforts to preserve the remaining buildings, which are used to portray what happened there. More than 500,000 shoes taken from prisoners filled one of the barracks.

In July 1944 the Polish-Soviet Investigation Commission began to look into the crimes of Majdanek; it published a report in September; 6 of the 1,300 people who had served at Majdanek were tried in November 1944, 4 of them were hanged. Between 1946 and 1948, 96 additional men were tried and between 1975 and 1980 16 former staff members, 6 of them women, were tried in West Germany.

**MAJOR, ERVIN** (1901–1967), musicologist and composer. Born in Budapest, the son of Julius \*Major, he studied composition with Zoltan Kodaly and Leo \*Weiner at the Budapest Academy of Music (1917–21) and philosophy at

the Budapest Scientific University (1920–24). In 1930 he received his doctorate for a dissertation on the relationship of popular Hungarian music to folk music. From 1926 to 1928 he was the editor of *Zenei Szemle* and later became a member of the editorial board of the periodicals *Muzsika* (1929–30) and *Magyar muzsika* (1935–36). He was also a librarian and lecturer of composition, music theory, and history at the Budapest Conservatory and at the Budapest Academy of Music. In 1951 he became a member of the musicological committee of the Hungarian Academy of Sciences. He was one of the founders of Hungarian historical musicology, specializing in the 18<sup>th</sup> and 19<sup>th</sup> centuries and in the tracing of Hungarian influence in the works of classical composers. He also contributed a number of central articles to the *Zenei lexikon* ("Music lexicon"; edited by B. \*Szabolcsi and A. Tóth, 3 vols. 1930, 1965<sup>2</sup>) and established successful methods of research, using public and private archives, periodicals, and collected editions of music. His compositions include chamber, piano, organ and choral works, and arrangements of old Hungarian melodies.

**MAJOR, JULIUS (Gyula Jacob; 1858–1925)**, composer, conductor, pianist, and teacher. Born in Kassa (Kosice), Major studied with Liszt, Volkmann, and Erkel. He wrote symphonies, concertos, lieder, and operas, many of which demonstrate a felicitous synthesis of the Hungarian national idiom and Western European forms. His teaching activities included founding and directing the State Music Teachers' College and the Hungarian Women's Choral Association.

**MAJORCA** (Sp. **Mallorca**), largest and most important of the Balearic Isles. It is difficult to determine when Jews first arrived in Majorca, but it may be assumed that the settlement was ancient because of the island's location at the crossroads of the maritime trade routes and its proximity to the coasts of both North Africa and the Iberian Peninsula. The presence of Jews on the nearby island of \*Minorca during the fifth century implies their presence on Majorca also, and several lead tablets (attributed to the fourth–fifth centuries) bearing the name of Samuel b. Ḥagi (or Ḥaggai) have recently been found. Practically nothing is known of the history of the island from the sixth to the eighth centuries – and even less of the history of the Jews there during that period. It appears that the Jewish settlement was destroyed when the Byzantine general Belisarius overcame the Vandals and took Majorca (534 C.E.). Similarly, few details are available on the period of the Muslim conquest. When the \*Almohads attacked southern Spain (12<sup>th</sup> century), refugees from Andalusia arrived in Majorca and it may be assumed that there were some Jews among them. The earliest evidence for the presence of Jews on the island during the Muslim period is from 1135, when Ramón Berenguer III, count of Barcelona, took some Jews of Majorca under his protection.

### The Beginning of Aragonese Rule

When James I of Aragon conquered Palma de Mallorca (1229–32), there were several Jews in his retinue, noteworthy being Bahye and Solomon Alconstantini, from Saragossa, whose knowledge of Arabic was greatly appreciated and when the distribution of properties took place after the conquest they were among the beneficiaries, notably Samuel \*Benveniste, *al-faquim* of Count Nuño Sánchez of Roussillon. Properties were also granted to Jews who settled in other parts of the island: Inca, Petra, and Montiori. In Palma (then named Majorca, like the island itself), a residential area was set aside for the Jewish settlers in the fortress of Almudaina which was later known as "the fortress of the Jews." With the consolidation of Christian rule, Jews arrived from Marseilles and other towns of Provence-Languedoc, from North Africa, and even from Alexandria in Egypt. The king, who controlled settlement on the island, undertook to protect the permanent residential area of the Jews in the same way as other places. The Jews, however, rapidly left the fortress of Almudaina, settling in the vicinity, a move which later led to disputes. Besides the communities mentioned above, there were others in Felanitx, Sineu, Alcudia, Sóller, and Pollensa. James I also gave letters of protection to Jewish settlers from North Africa, among whom was Solomon b. Amar of Sijilmassa (1247).

From the start the Jewish settlers integrated into the economy of the island; they owned Muslim, Turkish, and Tatar slaves, whom they were accustomed to convert to Judaism, although the civil authorities and the church issued a series of decrees designed to prevent this. The papal Inquisition was very active against Jewish merchants. Between 1276 and 1343, except for the years 1285–1298, the Kingdom of Majorca that included the Balearic islands and the counties of Roussillon and Ceradagne was independent. The independent kings of Majorca pursued more or less the same policy towards the Jews that was adopted in the Crown of Aragon. Under Sancho I (1311–24) the synagogue in the city of Majorca was converted into the church of Santa Fe. With the conquest of Majorca in 1343 by Pedro IV of Aragon, a period of great achievements began for the Jews of the island. From that year on, they developed ramified commercial activity. They engaged in the international maritime trade and became renowned for their skill in crafts such as gold- and silversmithery and shoemaking. In 1250 James I confirmed the rights of the Jewish settlers, granting them further privileges in conformity with his Jewish policy in the kingdom of Aragon. The problem of interest rates was one of the most severe in the relations between Jews and Christians on the island. Many royal ordinances dealt with the subject: restrictive decrees were issued; rates which had been fixed were cancelled; and occasionally the Jews were obliged to return the interest. In other matters, James I authorized the Jews of Majorca to address their complaints directly to himself and assured them of his protection. In 1254, he assessed their property, along with that of the Jews of Minorca and Ibiza, and constituted them as an independent taxation group. The community of Barcelona

nevertheless continued to influence the island communities in their administrative affairs, as well as in all other aspects of communal life. In 1269 the Jews of Palma were granted an important privilege authorizing them to purchase houses, vineyards, and any other property in and around the town and to live in the houses which they had acquired or rented. Toward the close of the 13<sup>th</sup> century, the Jews in Palma lived in the area between Temple and Calatrava streets and this quarter became the focus of Jewish life in the town until the destruction of the community.

During the early 1270s, James I authorized the Jews to trade on a credit system with the Christians in textiles, cereals, oil, linen, saffron, and other goods. The Jews of Majorca were already fairly prosperous during this period. About 1271 the community of Palma paid an annual tax of 5,000 sólidos. During the same year, together with those communities of Catalonia, \*Perpignan, and \*Montpellier, it granted the king the sum of 25,000 sólidos toward the expenses of his campaign in Leon. He nevertheless forbade Jews to live side by side with Christians (1273), although he authorized them to purchase new houses. James I also renewed the permit for a separate *shehitah* on the island. During this period, the preacher Raimon Lull, who wielded considerable power on Majorca, was active there, conducting religious disputations with the Jews with the aim of bringing them over to Christianity.

#### **From the Time of Alfonso III (1285–95) until the Rule of Pedro IV (1343)**

James I divided the kingdom of Aragon in his will, setting up the independent kingdom of Majorca under his second son James II (of Majorca). Reigning from 1276, James II confirmed the privileges which had been granted by his father. In 1285 his nephew Alfonso III seized the island from him, ruling it until 1295. Alfonso confirmed a series of privileges and decrees issued by James I and further exempted the Jews from various taxes. The Jews of Majorca granted the king a special allowance of 10,000 sólidos for his own use, and Alfonso authorized them to appeal to him against legal decisions taken by his officials, provided that the town's interests were not prejudiced by these appeals (1286). During that year, he also borrowed 20,000 sólidos from the trustees of the community. A year later, the Jews of Majorca had to assist the king with a special contribution of 30,000 sólidos. At the same time, Alfonso showed concern for the regular payments of the debts owed to them by Christians, although he occasionally granted to the latter a remission of debts for a given period. Continuing to make yearly demands for support from the Jewish community in addition to the annual tax, in 1290 he imposed a payment of 37,000 sólidos in reparation for the offense of taking excessive interest; he also collected 12,000 sólidos for the right of establishing a "Jewish street," surrounding it with a wall, and installing gates at the points of entry.

James II returned to the island in 1295, reigning there until his death in 1311, when he was followed by his son Sancho I. The situation of the Jews further deteriorated until the

island was reconquered by Pedro IV (1343). From the earliest days of the independent kingdom, they were compelled to pay tithes whenever they acquired land and houses from Christians. Anti-Jewish riots broke out in 1305, and in 1309 the first \*blood libel occurred on the island when several Jews were accused of the murder of a Christian child. Riots ensued; the king ordered the attackers of the Jews to be punished and the activity of Christians within the Jewish quarter to be restricted. During the same year, similar riots broke out in Inca and many Jews were killed. Nevertheless the island admitted several Jewish settlers who had been expelled from France (1306). Among these was R. Aaron ha-Kohen who studied under R. Shem Tov Falcón in Majorca and later wrote his *Orhot Hayyim* there. The king even sent an emissary to reassure the Jews of their security, and this assurance was reiterated by his son, Sancho I, in 1311. When several Christians from Germany arrived in Majorca in 1314 the community of Palma accepted them as proselytes (even though they had previously been rejected by the communities of \*Lérida and \*Gerona), thereby arousing considerable ill feeling on the island. Under the influence of Majorca's bishop, Sancho ordered the confiscation of the synagogue of Palma, which was converted into a church, and imposed a heavy fine on the community. A year later he ordered the confiscation of the property of the Jews of Palma, but left them with enough for subsistence. After the fine was paid, Sancho was again willing to take the Jews under his protection. During the same year, a long series of regulations dealing with Jewish matters was issued. The regulations concerned community administration, taxes on foodstuffs and wine, and commerce. It was prohibited to try Jews on their festivals; any Jew who expressed his desire to convert while imprisoned was to be confronted with two other Jews, before whom he had to declare that his conversion was of his own free will; if he reconsidered his decision, he would be authorized to remain a Jew. It was also stated that the Inquisition's investigations against Jews would not take place without the consent of the king; the trustees of the community would be authorized to seize those who disregarded communal regulations and imprison them; a Jew from abroad who came to trade in Majorca would be authorized to carry on to Minorca with his goods without having to pay any additional taxes. A year later, Sancho allowed the Jews of Majorca to import goods and property acquired in Moorish countries even though he was at war with them. He also authorized the erection of a new synagogue to serve as a house of prayer and *bet midrash* but stipulated that it be less splendid than the former building. In 1331 James III, Sancho's nephew, ordered the viceroy on the island to assist the Jews in the erection of the synagogue in spite of the opposition of Pope John XXII.

After the death of Sancho in 1325, the regent Philip, who ruled in the name of James III, confirmed the existing privileges of the Jews on the island and granted them civic rights. Treating them with tolerance, he stopped the legal action against several Jewish merchants accused of smuggling goods to North Africa (after the merchants had promised to pay

him a considerable sum) and in 1327 he prohibited the forced conversion of Jews and their pagan slaves. During the reign of James III (1327–43) a poll tax was imposed on the Jews of Majorca. When the Palma community refrained from paying this in 1332, the king imposed a fine on it; after some time, he reduced the fine for several families. In 1337 he granted the trustees of the Majorca community the right to punish those guilty of religious or moral offenses, but they were forbidden to expel them or to administer corporal punishment. In spite of the restriction in the rights of the Jews of Majorca to try cases of criminal law, the *dayyanim* strictly adhered to Jewish law and the customs of Spanish Jewry.

### The Organization and Administration of the Majorca Communities

Details of the organization of the Palma community have come down from the close of the 13<sup>th</sup> century. In its communal and religious life Majorcan Jewry was very much influenced by the Catalan Jewish communities. The rabbis of Majorca were in close contact with those of Barcelona. In its administration, too, the community followed in the footsteps of the community in Barcelona. In 1296 the community was authorized to elect three *muqaddimūn* or trustees; the right of jurisdiction over the Jews was at first in the hands of the communal leaders, who were even authorized to expel any Jew for disreputable conduct. Throughout the period of the independent kingdom, the community was generally headed by six trustees and an executive council of eight “good men,” though this council does not seem to have functioned regularly. In 1327, when the regent Philip allowed four of the trustees to dismiss a fifth who had been appointed by Sancho I, he recognized the exclusive right of the Jews of Palma to elect their own officers without any outside intervention, even from the king himself. When Pedro IV conquered Majorca in 1343, he confirmed the existing arrangements. When in 1348 the trustees wished to coopt one of the “small taxpayers” on to the committee distributing charity funds, one of the “large” taxpayers complained to Pedro IV who supported him, declaring that it was preferable that charity be distributed by those who had contributed it. In the inter-communal organization for the entire Crown of Aragon that met in 1354 it was felt that Majorca was important enough to be represented on the board. In 1356 Pedro confirmed a communal regulation excluding physicians and brokers from serving as trustees. At that time, the governor of the island appointed a “Council of Thirty” which functioned until 1374, when the king ordered that the former communal leaders were to be responsible for its administration. Members of the council were to be elected by the community itself, and assisted by members appointed on the recommendation of the wealthier taxpayers. Several regulations on the assessment of the communal taxes, which indicate an attempt to create a reasonably objective assessment system, were confirmed by Pedro in 1378. Under the influence of R. Jonah \*Desmaestre, Pedro issued in 1383 a series of instructions on the organization of communal life: the right to judge criminal law was re-

stored to the community; the right of individuals to draw up testaments was not to be infringed upon; Jews were not to be compelled to hold disputations with apostates; no Jew of Majorca would be exempted from communal taxes, nor would any extraordinary tax be imposed upon him; no Jew might claim office in the community nor would he be exempted from public office if such was imposed upon him. Confirming these regulations John I granted the trustees of Palma the additional right of trying criminal law cases with the assistance of five rabbis, either according to Jewish law or Roman law. The community of Majorca benefited from these regulations until its destruction in 1391. When the Jewish settlement on the island was renewed, it appears that these regulations were again applied until it ceased to exist.

### From the Reign of Pedro IV (1343–87) Until the End of the Jewish Settlement

After Pedro IV conquered the Balearic Isles (1343), the situation of the Jews of Majorca improved. The king's retinue included the physician Maestre Eleazar ibn Arduť of Huesca and Ḥasdai Crescas, the grandfather of R. Ḥasdai \*Crescas. Immediately after the conquest, Pedro exempted the Jews of Majorca from the taxes imposed upon them by James III and canceled the bonds for the payment of the poll tax. He reconfirmed the privileges which had been granted by James II, Alfonso III, and the regent Philip, and ordered that those Jews who had left the island and newcomers also be given favorable opportunities to settle there. One of the supporters of James III was an alchemist named Menahem who was brought to trial in 1345; later he entered the service of Pedro as alchemist, physician, and astrologer. In 1346, Pedro decreed that a separate quarter be built for the Jews in Inca, in order to prevent both undue familiarity and quarrels between Jews and Christians. However, it appears that this separation did not apply in practice. The island communities suffered extensively at the time of the \*Black Death and during the plagues which also broke out in the 1370s and 1380s. Rioting occurred as an aftermath of the plagues, and in 1374 the Christians called for the expulsion of the Jews from the island, but both the king and the infante John endeavored to restore order.

At the end of the 1340s, the Jewish physician and scholar Judah \*Mosconi (Leo Grech) left Greece to settle in Majorca. From then until the close of the century, a school of Jewish astronomers and cartographers developed on the island. Among them were Abraham \*Cresques (d. 1387), who was made a *magister mapa mundorum et buxolarum*, and his son Judah. Both were also granted by royal decree the privilege of appointing all the ritual slaughterers on the island. In 1359 R. Isaac \*Nifoci, an astronomer, was chosen as the companion of the king of Aragon (in 1390 he joined the rabbis of the island). In the 14<sup>th</sup> century Majorca became a center of Torah learning. \*Aharon ha-Kohen of Lunel wrote his *Orḥot Ḥayyim* there. At the end of the 1360s, R. \*Isaac b. Sheshet corresponded with R. Solomon Zarfati, the talmudist, who was invited to come to Majorca by Jucef Faquim. R. Vidal Ephraim Gerondi, as-

trologer to the infante John and Solomon Zarfati's rabbinical rival, died a martyr's death in 1391. During the 1380s, R. Jonah Desmaestre did much to strengthen religious observance on the island and acted as *rosh yeshivah* in Palma (Simeon b. Zemaḥ \*Duran was his son-in-law). Together with R. Ḥasdai Crescas, he undertook the reconstruction of the communities which had been destroyed during the persecutions of 1391. The physician Maestre Aaron Abdal-Ḥagg was also well-known; in spite of the prohibition of 1356, he was appointed as trustee of the community of Palma. In 1381 Pedro IV appointed Solomon b. Abraham Benallell as *mustaḥaf* ("town market supervisor") over the Jews of Majorca in appreciation of his services, also leasing him the right to manufacture soap on the island. Granting him a "rabbinical" position in Palma, he authorized him to appoint a ritual slaughterer or to slaughter for the requirements of the community.

During the second half of the 14<sup>th</sup> century, the island communities developed to the point of gaining the regard of the communities of Aragon, and in 1354 Majorca was invited to send a delegate to the supreme council of the communities of Aragon. In all this period, the Jews of Majorca carried on an intensive local trade and supplied goods from North Africa to the Spanish mainland. Others continued to engage in agriculture and crafts, but small craftsmen and owners of small plots of land were compelled to sell their land in times of difficulty; in an effort to help them Simeon b. Zemaḥ Duran (Resp. 1, no. 51) attempted to modify the Jewish \*usury laws so that they would be able to take loans. During the 14<sup>th</sup> century, the Jews of the island still owned slaves and the problems connected with their possession which had arisen during the 13<sup>th</sup> century persisted. Essentially the prominence of the leading Jewish merchants was based on their maritime trade in the Mediterranean, with Alexandria, Sicily, Sardinia, and other places. It was these merchants who imported grain to the island in times of famine and scarcity, although they were not shipowners; there was even a series of privileges which declared that Christian shipowners must not refuse cargoes loaded on their ships by Jews. Eminent among these merchants was Don Jucef Faquim (Joseph Ḥakim) whose family had arrived on the island in 1332. In 1365 he argued before the king that he should be exempted from taxes because his property consisted of goods scattered over many countries and these possessions were insecure; the king ordered the trustees to appoint two merchants to assess his payments. In 1370 Jucef Faquim supplied grain to the army, which was quartered on Sardinia. When the Jews of Majorca complained to Pedro IV in 1351 about sailors who took some of their number into captivity and removed them elsewhere if they were not redeemed in time, he ordered that the captives be set free against the payment of a ransom of 30 livres of silver. During this period Majorca Jews also engaged in moneylending and frequent governmental measures attempted to reduce the interest rates.

The form of the Jewish \*oath in force in Majorca, established by Pedro in 1352, required them to swear on a text containing the Ten Commandments only, without the ad-

dition of the reproof sections. In 1359 the king renewed the privilege which stipulated that Majorca Jews could not be tortured without explicit royal approval. In the same year, he authorized the Jews of North Africa to enter and to leave the island, against a payment of one-eighth of the price of goods which they bought or sold on the island. After the inhabitants of the town of Inca had attacked the Jews in 1373, many left the island. After several conversions had taken place, the Jews of Majorca complained to the king, who in 1373 ordered the bishop of Majorca to pay heed to the ancient decree concerning the conversion regulations (see above). In 1376 the Jews of Porreras were set upon by the local population. However, the following year Pedro intervened in favor of the Jews, ordering them to present their claims in person before the mercantile court (*consulado del mar*). During this period the king continued to impose compulsory loans on the Jewish communities (especially in 1380 and 1383).

### The 1391 Persecutions

When news of the anti-Jewish riots sweeping Spain in 1391 reached Majorca, the leaders of the Jews appealed to Francisco Sa Garriga, viceroy of John I, to find a way of preventing the outbreak of similar riots on the island. It was decided to cordon off the Jewish quarter and allow no weapons inside. As soon as they heard reports of the riots in Valencia, Jews began to leave the island and those who lived in the villages moved to the towns, into the fortified Jewish quarters. In Palma the riots broke out on July 10; youths bearing crucifixes infiltrated the Jewish quarter. Although the gates were closed the mob broke them down and massacred scores of Jews. The next day the authorities made attempts to mitigate the storm, but on August 2 the riots broke out again. The community of Inca was completely wiped out, as were those of Söller, Sineu, and Alcudia. Several leaders of the riots were captured, but the mob set them free; villagers traveled to the towns in order to share in the pillage. Many Jews died as martyrs, notably R. Vidal Ephraim Gerondi, and several distinguished personalities accepted baptism; among these were R. Isaac Nifoci, who later atoned for his act by emigrating to Erez Israel, and Judah Cresques, who became a prominent courtier. A list of 111 heads of families who were converted is still extant; they were given the names of their baptismal godfathers (several of the converts were named after the viceroy, Francisco Sa Garriga). In spite of the governor's prohibition on leaving the island, many Jews fled to North Africa, among them Simeon b. Zemaḥ Duran, who settled in Algiers and held rabbinical office there. Majorcan Jewish settlers in North Africa speak of a Jewish community of more than 1,000 families in Majorca, prior to the massacres. The figure seems exaggerated but indicates the prestige and splendor the community had in Jewish eyes. In September 1391 the peasants demanded that the surviving Jews be baptized or put to death; in rejecting this demand the authorities explained that Christianity sought to achieve conversion through free will and not by force. However, the peasants renewed their demands a month later,

and it appears that there were numerous converts at that time.

At the beginning of 1392, the authorities took steps to normalize the situation. The populace was ordered to hand back plundered property; surviving Jews and forced converts were required to provide within ten days a written list of the debts owing to them; the forced converts were called upon to appear before the viceroy and declare whether they desired to continue to live in the Jewish quarter or rent houses to Jews who had been left homeless; and the inhabitants were ordered to return the doors which they had removed from Jewish houses. The bailiff of Palma, one of the leaders of the riot, was executed in January 1392. Fearing that the island's peasants might rebel, the crown granted an amnesty to the rioters and canceled debts to Jews contracted over the previous ten years. Despite the governor's decree forbidding the forced converts to leave the island, many fled to North Africa and returned to Judaism; among them were members of the Najjār family. In January 1393, the governor prohibited further assaults on Jews; anyone molesting them would be hanged if he was of the lower class and flogged if he belonged to the nobility. Nevertheless, a new amnesty was granted to the rioters. As early as 1393, there are instances of the authorities prosecuting forced converts who had returned to Judaism.

In an attempt to reestablish the Jewish communities of the island, in 1394 the authorities invited 150 families from Portugal to settle there, and they arrived in 1395. At the same time the crown granted a writ of protection and exemption from special taxes to all Jews who had fled to North Africa and other places and wished to return to Majorca. However, their resettlement was doomed to failure. In 1413, Vicente \*Ferrer visited the island and induced several members of the community to accept baptism. Seeking to undermine the position of the Jews of Majorca, Ferdinand I issued in 1413 a series of restrictions resembling the 1412 decrees of Valladolid with an additional provision prohibiting the emigration of forced converts to North Africa. There was a slight alleviation in the situation during the reign of Alfonso V, who included the Jews of Majorca in his favorable decree of 1419 which ordered that copies of the Talmud be returned to the Jews; that the system of Jewish jurisdiction be set in order; that their synagogue be restored; and that they be exempted from forced attendance at sermons. A \*blood libel was perpetrated in Majorca in 1432, and in 1435 the community ceased to exist: 200 persons were converted and the remainder fled to join their coreligionists in North Africa.

### The Fate of the Conversos of Majorca

The papal Inquisition was already active in Majorca during the 13<sup>th</sup> century, but it was only from the beginning of the 15<sup>th</sup> that its activities really made themselves felt. In 1407 a \*Converso who had twice returned to Judaism was condemned to be burnt at the stake, and in 1410 Benedict XIII ordered that measures be taken against the Conversos of Majorca. Antonio Murta, the inquisitor of the Balearic Islands from 1420 to 1436, was responsible for the conversion of many Jews in

1435. The Spanish \*Inquisition began to operate in Majorca in 1488. From the start, many Conversos were brought back to the Church. Until the close of the 15<sup>th</sup> century, 346 trials were held and 257 persons were handed over to the secular arm for the death penalty. During the 16<sup>th</sup> century, especially after 1520, the tribunal's activities decreased, but they were resumed with renewed ferocity in 1675 and 1677. In 1675, a large group of Conversos from Majorca, referred to by the Inquisition as "Portuguese," was brought to trial. Martyrs included Alonso López; others were sentenced in absentia and burned in effigy. Among those sentenced in 1677 were Pedro Onofri Cortes and Raphael Valis, who were prominent members of the Converso community. The tribunal's activities reached their peak in 1691, when 86 Conversos (including 46 women) were sentenced and another 39 reconciled with the church. From then on its activities appear to have waned. By 1771 the Inquisition had sent a total of 594 Conversos to the stake and reconciled a further 460 with the church. During the 18<sup>th</sup> century, tribunal officials occasionally arrested Jewish travelers on the Balearic Isles on the suspicion that they were Conversos. In 1718 Jacob Cardozo Nuñez of Bayonne, and Samuel Nahon and his relative Solomon Nahon of Tetuán were arrested. Cardozo was imprisoned until 1721.

Conversos in Majorca were given the name of \**chuetas*, a name which persisted into the mid-20<sup>th</sup> century. They continued to live in separate quarters and all social and public advancement were denied to them. They formed a closed society in which the overwhelming majority secretly observed Jewish rites, for which they were often brought to trial. It was not until the end of the 18<sup>th</sup> century that the government attempted to alleviate their condition and in 1782 the Conversos were permitted to settle in any part of the town or the island; at the same time it became an offense to molest them by word or deed. After the French conquest of the island, the Inquisition was abolished in 1808 and the Conversos were granted further concessions. However, when Ferdinand IV returned to power (1814) the Inquisition was reintroduced and its final abolition barely improved the lot of the Conversos. In 1856 riots broke out against them once more when several prominent members of the community sought to join the exclusive *Circulo Balear* club. There was a renewed debate on the place of the *chuetas* within the island's society toward the close of the 19<sup>th</sup> century with the publication of the work of the priest José Tarongi in 1877, condemning their social ostracism and explicitly blaming the clergy for this. Also influential was the work of Vicente Blasco Ibañez, *Los muertos mandan* (1916). Jews began to take an interest in their condition. During the Republican regime in Spain (1931), a work by Garaó, *La Fe Triunfante*, was republished. Written a century before it sought to stress the Jewishness of the *chuetas* as grounds for their total rejection.

[Haim Beinart]

### The Jewish Quarter

The Jewish quarter of Majorca was famous for its size and prosperity. It was only at the beginning of the 14<sup>th</sup> century that

the locality known as the *call* came into being. It was then that the Jews were compelled to live in a separate district. Beforehand, many of the Jews had resided in the place called *Almudaina*. The new Jewish quarter was in the district of the Temple and Calatrava. The medieval Jewish quarter included the streets known today as C. del Sol, C. Montesión, C. Montserrat, C. Calatrava and all the streets connecting between them. In Majorca there were at least four synagogues, including the Mayor and the Menor or Nueva. The two famous *rimmonim* found in the cathedral are of Sicilian origin and were bought for the cathedral in 1493. In the Archivo del Reino de Mallorca there are two beautiful ketubbot.

### Contemporary Period

A small Jewish community – the first since 1435 – was established in 1971 in Palma de Mallorca, the capital of the island. This was the result mainly of the efforts of Mr. Alec Kesselman, then the supervisor of the *kasher* section of a hotel in Palma. In reply to his application the Spanish minister of justice gave approval to the establishment of the Comunidad Israelita de Palma de Mallorca on July 8, 1971. In addition to services held at a hotel there were weekly services in the Palacio de Congresos, Palma. The *kasher* section of the hotel was closed, however, in 1978. The community numbered around 300 people (although some estimates were higher): most were silver- and goldsmiths and a few were small merchants. Some were successful businessmen and a few even left for Spain, where they managed to find a place in Spanish society. In the early 2000s the community maintained a synagogue.

**MAJORITY RULE**, deciding a matter according to the majority opinion. In the field of the *halakhah* this rule is applied in three principal instances:

- (a) determination of the binding law according to (the view of) the majority of halakhic scholars;
- (b) adjudication of dispute by the majority decision of the courts' judges; and
- (c) imposition by majority decision of the community, or its representatives, of a communal enactment (see *\*Takkanot ha-Kahal*), binding on all members of the community. The basis for the majority rule is to be found in the exegesis of the scriptural phrase, *aḥarei rabbim le-hattot* (to "follow a multitude..." Ex. 23:2).

### In Deciding the *Halakhah*

In the Talmud the phrase *aḥarei rabbim le-hattot* was converted into a decisory canon: "where there is a controversy between an individual and the many, the *halakhah* follows the many" (Ber. 9a). The sages of the Talmud explained the existence of this rule as a practical necessity, for if the Torah had been given in the form of an exhaustive codex, "the world could not have existed" (TJ, Sanh. 4:2, 22a; cf. Mid. Ps. 82:3). The halakhic opinion that has prevailed is that the law is decided in accordance with the view expressed by a majority of the scholars, and this is so even if in a particular matter a heavenly voice (see *\*Bat-Kol*) should declare that the law is according to the minority opinion (BM 59a).

The individual may continue to express his opinion that the majority has erred, but may not instruct in practice according to the minority opinion; if he actually instructs others to follow the minority opinion, he becomes (when there is a Sanhedrin) a *\*zaken mamre* (i.e., a "rebellious scholar"; Maim., Yad, Mamrim, 3:5–6). If a majority of scholars should arrive at the same conclusion but each for a different reason, some scholars hold this to be a majority opinion which is binding while other scholars hold the contrary view (*Maggid Mishneh*, Ishit 7:12; Maharik, resp. nos. 41, 52, 94, 102).

Some of the *geonim* and *rishonim* took the view that a minority opinion is to be preferred above a majority opinion of scholars of lesser wisdom. This question first arose in a responsum of Hai Gaon concerning a court decision on the concrete matter in issue, and not as concerns deciding of the *halakhah* in general (*Ge'onim Kadmoniyim*, resp. no. 144; Ramban nov. Sanh. 23a; *Sefer ha-Hinnukh*, no. 67). Some of the scholars op-

posed this opinion, holding that the law is always as decided by the majority (*Haggahot Asheri*, Av. Zar. 1:3; *Siftey Kohen*, supplementary note to YD 242), while other scholars laid down that whenever the minority opinion is qualitatively superior to the majority opinion, the position is as if opinions are divided equally and either may be followed (Ramban nov. Sanh. 23a; Ritba, RH 14b). In the *Shulhan Arukh*, the most authoritative code of Jewish law, determination of the *halakhah* is generally made by application of the majority rule, the author (Joseph Caro) having adopted for himself the principle that the binding *halakhah* was to accord with the opinion held in common by any two of three great halakhists preceding him, namely Alfasi, Maimonides, and Asher b. Jehiel – or with the majority opinion selected on a different basis if a particular matter had not been dealt with by the three above-mentioned scholars. See \*Codification of Law.

### Decision by the Court

Within its plain meaning and read within its context, the above-mentioned scriptural passage (Ex. 23:2) has reference to a judgment of the court. The sages of the Talmud derived therefrom an additional interpretation relating to the field of criminal law – in which there is need for a specific majority, i.e., of two at least: “Thou shalt not follow after the many to do evil – I conclude that I must be with them to do well. Then why is it written [to follow] after the many to change judgment? [It means that] thy verdict of condemnation shall not be like thy verdict of acquittal, for thy verdict of acquittal is reached by the decision of a majority of one, but thy verdict of condemnation must be reached by the decision of a majority of two” (Sanh. 1:6 and cf. Mekh., Kaspā 20). Some scholars explain the need for a specific majority in matters of the criminal law on the basis that in matters of the civil law no judgment solely condemns or solely absolves, since any suit involves two litigants and what is to the one’s benefit is to the other’s detriment; whereas in criminal law matters the judgment is condemnatory, i.e., to the detriment of the accused (Tos. to Sanh. 3b).

A majority is only required in the event that a judicial decision has to be made in a concrete case before the court, whereas in deciding the *halakhah* in the criminal law field – outside the context of instant litigation – a simple majority of one suffices as it does in all other cases (Resp. Radbaz, *Li-Le-shonot ha-Rambam*, no. 1690).

The *amoraim* question how a judgment in a civil law matter, arrived at by majority decision, should be worded. It was decided, in accordance with the opinion of R. Eleazar, that the judgment must be written in the name of the court without mention being made of the names of the judges favoring one view or the other (Sanh. 30a; Maim., Yad, Sanh. 22:8); similarly, that a judgment given by a majority decision must be signed also by the judge dissenting therefrom (TJ, Sanh. 3:10; *Avkat Rokhel*, no. 19; Mabit, vol. 2, pt. 1, resp. no. 173; *HM* 19 – *Urim*, n. 4). Hai Gaon’s opinion (see above) that a preponderance of wisdom should be preferred above numeri-

cal majority, also with reference to court decisions, and even that the opinion of one individual may prevail against that of the many, remained generally unaccepted in later generations. Even those who favored wisdom above a numerical majority as the basis for deciding the *halakhah*, agreed that the majority opinion was to be preferred as the basis for a judgment by the court in the concrete matter before it (*Sefer ha-Hinnukh*, no. 67; Ramban nov. Sanh. 23a).

### Communal Decisions and Enactments

The view that has prevailed in Jewish law is that communal resolutions and enactments are passed by a decision of the majority and bind the minority (see Elon, in bibl., 11 n. 34).

This general view was dissented from by Rabbenu Jacob \*Tam, who held that only after an enactment had been passed by the whole community might the majority lay down fines for transgression thereof, and that the minority could not be compelled by the community to comply with a decision of the majority to which it had been opposed (*Mordekhai*, BK 179 and BB 480). The doctrine of *aharei rabbim le-hattot* has been relied upon by the scholars in support of the right to pass a communal enactment by majority decision (Rosh, resp. no. 6:5).

According to some of the scholars, the ordinances of a guild or an association – as distinguished from communal enactments – must be passed with the consent of all members in order to be binding (Ramban, nov. BB 9a; *Nimmukei Yosef*, BB 9a; *Lehem Rav*, no. 216).

In the case of a judicial tribunal, it was laid down that a majority decision is not binding unless all the judges have participated in the proceedings and the judgment is that of the majority of the full complement (Sanh. 5:5). Some scholars deduced therefrom that also a communal enactment passed by majority decision is not binding unless the minority has participated in the proceedings (Rashba, vol. 2, resp. no. 104; Maharik, resp. no. 180; Maharit, vol. 1, resp. no. 58). Since this ruling, if followed, might enable the minority to impose its will on the majority by absenting itself from the discussions of the community, it came to be laid down in the course of time that the decision of the majority shall be binding despite the minority’s nonparticipation in the discussions leading thereto. The scholars supported the conclusion either on the basis of a presumption that the absentee minority impliedly agrees to accept the decision of the majority which exerts itself to participate (*Mishpat Shalom*, no. 231; *ibid.*, *Kunteres Tikkun Olam*, “vav”), or on the basis that the minority impliedly delegates authority to the majority (*Hatam Sofer*, *HM*, resp. no. 116); custom too is relied upon by some scholars in support of the majority rule of those participating in the proceedings in communal legislation (Mabit, vol. 1, resp. no. 264). If the community has delegated authority to its representatives, the latter decide by majority decision, but only if the minority too is present (*Penei Moshe*, vol. 2, resp. no. 110; *Birkei Yosef*, *HM* 13:7).

[Shmuel Shilo]

### Halakhic Decision-Making and the Importance of Minority Opinions

The determination of practical *halakhah* by the majority does not contradict the concept of freedom of expression nor detract from the importance of any view, even if that view is a lone view.

Early Jewish law, as reflected in the sources, is characterized by its anonymity and its uniformity. Prior to the era of \*Hillel and \*Shammai, halakhic disputes were rare, since any problem which arose was resolved by the Sanhedrin, which enjoyed complete judicial authority (Sanh. 88b; Tosefta, Sanh. 7:1). From the generation after Hillel and Shammai – i.e., the beginning of the first century – and until the end of that century, following the destruction of the Second Temple and a concomitant decline in the status of the Sanhedrin, the halakhic world split into two schools of thought – the School of Hillel and the School of Shammai (see \*Bet Hillel and Bet Shammai). Each school practiced the law in accordance with its own beliefs, while differences even extended to legal questions with fundamental and basic ramifications:

When the disciples of Shammai and Hillel, who had insufficiently studied, increased in number, disputes multiplied in Israel and the Torah became as two Torot (*ibid.*).

Practically speaking, this period of pluralistic halakhic rulings could not continue for long, as it led to the possibility that families belonging to one school of thought could not marry into the other, thereby dividing the nation into two separate endogamous groups. At the beginning of the second century, when the center of Jewish law moved from Jerusalem to Yavneh, with Rabban Simeon ben Gamaliel II as its head, the original uniformity in practical application that had previously existed in the *halakhah* was restored.

In deciding between the opinions of the School of Hillel and the School of Shammai, the Sages ruled that “both are the words of the living God, but the law is in accordance with the School of Hillel” (TJ, Ber. 1d).

It was this trend toward deciding between opposing views that led to the early stages in the process of redaction of various legal collections which later constituted the basis for the redaction of the Mishnah. Nevertheless, during the process of redaction of the Mishnah, the divergent views and disputes among the various *tannaim* were preserved and recorded. One reason for this is stated explicitly in the Mishnah itself (Eduyyot 1:5), namely: that should a later court of law see fit to rule in accordance with the individual opinion, it would be at liberty to do so. In the words of the Tosefta: “Rabbi Judah says: Why is the minority view recorded [in the Mishnah] alongside the majority view.... So that a [later] court that agrees with the minority view can rely on” (Tosefta, Eduyyot 1:4).

Rabbi \*Samson of Sens (France, Palestine; 12<sup>th</sup> and 13<sup>th</sup> centuries) interprets the aforementioned sources as follows:

Even though the individual opinion was not accepted in the first instance, and the majority disagreed with the individual, a later generation may arise, the majority of whom might agree to the

opinion of the individual, and then the matter will be decided in accordance with their opinion. All of the Torah was transmitted to Moses in this fashion: there are considerations to purify and considerations to render impure. (Moses) was told: How long will we have to clarify every situation? He said to them: “The rule is according to the majority; however, both opinions are the words of the living God.”

According to this interpretation, there is no such thing as an absolute and unequivocal ruling. In every case there are multiple considerations. While the final ruling in halakhic decision-making is indeed determined by the majority, a different majority at another period in time might arrive at a different conclusion. In the Supreme Court of the State of Israel, this justification for citing minority opinions has been presented – on the basis of the sources cited above – as an explanation for the crucial need to present minority opinions in fundamental court rulings (FH 13/80 *Hendeles v. Bank Kuppat Ha'am* 35 (2) PD 785, p. 796; HC 669/85 *Kahane v. Knesset Speaker*, 40 (4) PD 393, 404–420 per Justice Menachem Elon).

An additional explanation, that is both connected to and founded on the previous one, is the pluralistic nature of the *halakhah* – not in terms of practical actions, but in terms of opinions. The *halakhah* accepts uniformity in halakhic decision-making as an operative necessity. On the theoretical plane, however, it considers each and every opinion as important, and it sees the importance of presenting the full spectrum of halakhic views. A sage who disputes the opinion of his fellows – even after the Sanhedrin has ruled against his opinion – may continue to adhere to his opinion, so long as he does not rule accordingly for others. Such a sage will not be considered to be a “rebellious elder” (Mishnah, Sanhedrin 11:2).

This position, which sees the multiplicity of opinions and the importance of transmitting all of those opinions to the learning community as a value, may be found in the words of halakhic authorities of later eras.

Rabbi Hayyim ben Bezalel Ashkenazi states that, if a halakhic authority were to rule in accordance with a particular opinion on one day, and in accordance with a different opinion on the next day – “this would not be evidence of any change or deficiency which would cause us to say that the Torah has become, God forbid, as two Torahs; on the contrary – such is the way of the Torah, and both are the words of the living God” (*Vikku'ah Mayim Hayyim* (Introduction), par. 7; Poland, 16<sup>th</sup> century).

Rabbi Solomon Ephraim of Lonshitz (*Keli Yakar*, on Deut. 17:2) applies the same statement to the legal decision of a judge in a case adjudicated before him. In his opinion, in every case there are considerations in either direction, and there is no absolute ruling of pure or impure, permitted or prohibited. That is why, when a court of law rules, we must always rely on its rulings; the court has ruled in accordance with the intellectual discretion of the majority of its members, a fact that endows their opinion with obligatory validity. This, however, does not detract from the essential truth of the op-

posing opinion, in and of itself. Rabbi Jehiel Michal Epstein (*Arukh ha-Shulhan*, ח"מ, Introduction; beginning of 20<sup>th</sup> century) sees the diversity of opinions as the glory of the Torah. He compares it to a choir made up of many voices:

For those who truly understand, all of the disputes of the *tannaim* and *amoraim*, the *geonim* and the *posekim* are truly the words of living God, and each of them have validity in the *halakhah*. In truth, that is the glory of our holy and pure Torah. All of the Torah is called "song," and the glory of a song is when the voices are different from each other. That is the essence of its beauty.

These words regarding the phenomenon of multiple opinions as an integral part of the world of the *halakhah*, have been cited and discussed at length in the rulings of the Supreme Court of the State of Israel by Justice Menachem Elon, in the Neiman case, in the Shakdiel case, and in the Kestenbaum case. In all of these cases he relied on those sources in order to establish the legitimacy of different and divergent opinions in the realm of *halakhah*, in the spectrum of political opinions in the State of Israel, and in the field of public administration in the State of Israel (EA 2/84 *Neiman v. Chairman, Central Elections Committee*, 39 (2) PD 225, 292–296; HC 153/87 *Shakdiel v. Minister of Religious Affairs*, 42 (2) PD 221, 263–264; CA 294/91; CA 294/91 *Burial Society v. Kestenbaum*, 46 (2) PD 464, 505–506).

**MAKAI (Fischer), EMIL** (1870–1901), Hungarian poet and playwright. Born in Mako, Makai was the son of Rabbi Enoch Fischer. In 1884 he entered the Budapest rabbinical seminary, but during his years there he spent much of his time writing. Finally, in 1893, after much heart searching and with the encouragement of the great Jewish poet József \*Kiss, he decided to give up his rabbinical studies and devote himself entirely to writing.

Makai began the first, exclusively Jewish phase of his literary career with a collection of lyric verse, *Vallásos énekek* ("Religious Hymns," 1888). This was followed by a biblical

drama, *Absalon* (1891), and *Zsidó költők* ("Jewish Poets," 1892), translations from the works of leading Hebrew writers in medieval Spain. These had an epoch-making effect on Hungarian literature, and established Makai's reputation as a poet. In 1893, his paraphrase of the Song of Songs (*Énekek éneke*) was published. Unlike almost all his contemporaries, Makai was an "urban poet," a type virtually unknown in Hungarian literature.

In his second, "worldly" phase of creative writing, Makai wrote primarily about love, notably in the collection *Margit* (1895). His plays include the three-act verse comedy *Tudós professzor Hatvani* ("The Learned Professor Hatvani," 1900), depicting the life of a humorous Faustian character. From 1892 Makai translated more than 100 operettas which, by reason of his masterly metrical technique, established the style of the Hungarian operetta. They included Abraham \*Golfaden's *Sulamit* and *Bar Kochba*, the former a major success on the Hungarian stage. A two-volume selection of Makai's writings was published in 1904.

[Paul Blau]

**MAKAROV**, town in Kiev district, Ukraine. Jews were first mentioned in 1721, and in 1765, 217 Jews were counted there as paying poll tax. Jews were occupied in leasing and trade in alcoholic beverages. The Jewish community had grown to 848 in 1847. During the 1840s, R. Nahum \*Twersky, the grandson of Menahem Nahum the Maggid of \*Chernobyl, established his court in Makarov and the town became a center of Hasidism. The number of Jews had risen to 3,953 (c. 75% of the total population) in 1897. From the second half of the 19<sup>th</sup> century there existed within the town boundaries a Jewish farm colony with 32 families, but it was destroyed during the Civil War. Most of the shops were in Jewish hands. On July 6, 1919, a band of peasants invaded the town and looted it for eight days, also killing a few Jews. On August 15–18 the Matveenko band killed 20 Jews and looted and burned down 20 shops. When this was followed in September of the same year by a pogrom which claimed over 100 victims, perpetrated by the soldiers of \*Denikin's army, the Jewish population left for \*Kiev and other towns in the vicinity. Only 152 Jews remained in Makarov in 1923. Some returned and in 1926 there were 585 (out of a total population of 2,943). In the 1930s many left for bigger cities, and in 1939 there were 269 Jews (out of a total of 3,368). Makarov was occupied by the Germans on July 10, 1941, and after a while 100 Jews were executed. The others hid but were found and 149 Jews were taken to Kiev and murdered, probably in Babi Yar. In 1970 the Jewish population was estimated at about 150 (30 families). The synagogue was unused, having been closed down by the authorities.

[Yehuda Slutsky / Shmuel Spector (2<sup>nd</sup> ed.)]

**MAKHSHIRIN** (Heb. מַכְשִׁירִין), eighth tractate in the order *Tohorot*, in the Mishnah and Tosefta. The word *makhshirin*, the causative *hiphil* form of *kasher* (“to be fit”), means “those things which render fit,” but it is here used in a technical sense. In accordance with Leviticus 11:34, 37–8, that food can become liable to ritual impurity only if it has been moistened by water, *makhshirin* is employed to refer to all liquids which have this quality. For the same reason, the tractate is sometimes called *Mashkim* (“Liquids”). It is laid down on the basis of verse 38 that there must be some intention or desire on the part of the owner that the food be so moistened, and the tractate deals primarily with these two points – the liquids which render food liable to ritual impurity and the intention of having the food moistened. Every possible cause of foods becoming moist is detailed – from rain, ordure, damp walls, absorption of water in the food’s vicinity, dripping through a leak in the roof, bilge water, steam caused by rain dripping on hot iron, the juice of grapes, etc. The tractate concludes (6:4–8) with a discussion of liquids other than water which render produce susceptible to impurity. Epstein has pointed to various layers which can be detected in *Makhshirin*. According to him 1:3 belongs to the Mishnah of R. Joshua; 1:4 to that of Akiva; 5:2 and 6:2 to Meir; and 6:3 to Judah b. Ilai, Akiva’s disciple. He maintains that Joshua’s ascription of Mishnah 6:4 (Ter. 11:2) to “the sages” is evidence that it is an early one. Mishnah 6:8 is interesting in that, although *mishnayot* and *beraitot* usually contain only the discussions of colleagues, this Mishnah also gives disciples’ questions and Akiva’s reply (cf. Epstein, *Tanna’im*, 88). The standard text of *mishnah* 5:1 deals with a drunken man who pushes someone into the water. S. Lieberman has shown that the text is corrupt. The correct reading should be “if he pushed him in order to injure him” (*leshovero*, לְשׁוֹבְרוֹ not *leshokhero*, לְשׁוֹכְרוֹ), and is one of several mishnaic references to the prevalent custom of dangerous water sports, of which the rabbis strongly disapproved. In the Tosefta there are some passages of historical interest. One tells of the overruling by the rabbis of Joshua b. Perahyah’s ruling declaring all Alexandrian wheat (a major source of supply) unclean (3:4) and the alterations made by the farmers of Sepphoris in their methods of harvesting in order to remove the suspicion of defilement from their produce (3:5–6). *Genizah* fragments of the tractate have been found and their alternate readings throw light on several passages (JLJG, 18 (1927), 28 ff.). Neusner (1980) devoted a study to the form-critical analysis of the Mishnah, using *Makhshirin* as his primary focus. The Mishnah of this tractate was translated into English by H. Danby (1933), while J. Neusner published a translation of both the Mishnah (1991) and the Tosefta (2002).

**MAKKABIM-RE’UT** (Heb. מַכְבִּיִּם־רְעוּת), urban community in central Israel, midway between Tel Aviv and Jerusalem. It received municipal council status in 1990. In 2002 its population was 10,700, occupying an area of 1.4 sq. mi. (3.5 sq. km.). In 2003 its municipality was united with that of the nearby city of \*Modi’in.

[Shaked Gilboa (2<sup>nd</sup> ed.)]

**MAKKEDAH** (Heb. מַקְדָּה), Canaanite city in the Shephelah which marked the farthest limit of the Israelite pursuit of the five kings who united to punish Gibeon but were defeated at Aijalon (Josh. 10). The kings fled to a cave at Makkedah where they were captured and executed by hanging in the Israelite camp. The city was afterward conquered and destroyed and, accordingly, the king of Makkedah is mentioned in the list of defeated Canaanite cities (Josh. 12:16). In the topographical description of Judah, it is located, with Lachish, in the southern Shephelah (Josh. 15:41). Eusebius places the city 8 mi. (c. 13 km.) to the east of Eleutheropolis (Bet Guvrin; Onom. 126:22 ff.). The identification of the ancient site is uncertain.

[Michael Avi-Yonah]

**MAKKOT** (Heb. מַכּוֹת; “Flagellation”), fifth tractate in the order *Nezikin*, in the Mishnah, Tosefta, and Babylonian and Jerusalem Talmuds. The tractate deals with three separate topics and is a continuation of the preceding tractate *Sanhedrin*, as it also deals with judicial punishments administered by the courts. The first chapter discusses the laws of plotting witnesses (“*zomemim*”; Deut. 19:16–20), the kind of testimony that constitutes such plotting, when such witnesses are punishable by the sentence they intended the court to impose upon the accused, and when their punishment is merely flogging. Chapter 2 contains an exhaustive treatment of circumstances under which the inadvertent murderer is banished to a city of refuge (Num. 35:6f.; Deut. 19:2f.), those liable and those exempt from banishment, the character of the cities of refuge and the protection they afford, and the connection between the death of the high priest and the return of the manslayer to his hometown (Num. 35:25). Chapter 3 gives a list of offenses for which the penalty is flogging; discusses whether flogging is incidental to offenses punishable by death, and describes in detail the imposition of the penalty. The tractate ends with an aggadic passage on the value to Israel of the commandments and a summation of the principles which inspire them. An interesting *mishnah* (1:10) deals with capital punishment: “R. Eliezer b. Azariah says: A Sanhedrin that effects a capital punishment once in 70 years is branded a destructive tribunal. R. Tarfon and R. Akiva say: Were we members of the Sanhedrin, no person would ever be put to death. [Thereupon] Rabban

Simeon b. Gamaliel remarked: If so, they [these rabbis] would multiply shedders of blood in Israel.”

The Tosefta consists of five chapters (ch. 2 is found only in the Erfurt manuscript published by Zuckerman). Chapter 1 of the Tosefta parallels chapter 1 of the Mishnah; chapter 2, Mishnah 2:1–4; chapter 3, the remainder of chapter 2; while chapters 4 and 5 correspond to chapter 3. De Vries maintains that the Mishnah and Tosefta in this case both derive from an earlier compilation which the Tosefta follows closely, but from which the Mishnah deviated considerably. In his opinion the Mishnah was originally divided into five chapters – as is the Tosefta – and that it was later abridged into three chapters. The Babylonian Talmud has *Gemara* on all three chapters, but the Jerusalem Talmud only on the first two. In addition, the Babylonian Talmud on *Makkot* is much richer in aggadic material. It concludes with the moving story of a group of rabbis who were shocked to see a jackal emerging from the recess of the Holy of Holies. All with the exception of Akiva, burst into tears, while he laughed. He explained his joy with the observation that with this calamity the worst prophecy about the Jews had been fulfilled, and one could now anticipate that the comforting prophecy of Zechariah, “There shall yet old men and old women sit in the broad places of Jerusalem” (Zech. 8:4), would likewise be fulfilled.

Although the printed editions of the Jerusalem Talmud have no *Gemara* to the third chapter, Lieberman has shown that such a *Gemara* existed, but since the topics with which it dealt were discussed in the *Gemara* to Mishnayot in other places, the copyists omitted these duplicated discussions from the third chapter of the tractate. In fact, the early authorities quote references from the Jerusalem Talmud to *Makkot* which do not occur elsewhere in the existing text. A fragment from the Jerusalem Talmud belonging to chapter 2 of *Makkot* and found in the Cairo *Genizah* has been published by S. Wieder. Published translations of the Mishnah include one in Latin, with extracts from the *Gemara*, by J. Coccejus (Amsterdam, 1629), one in German by H.L. Strack (1910), and one in English by Danby (1933). The Babylonian Talmud was also translated into English by H.M. Lazarus in the Soncino edition (1935). Although the imposition of the penalties discussed in *Makkot* was not practiced directly in the Diaspora, yet because of its importance for the theoretical discussion of criminal law it is much discussed and frequently referred to in rabbinic literature.

[David Joseph Bornstein]

**MAKLEFF**, family of Erez Israel pioneers.

ARYEH LEIB MAKLEFF (1876–1929) was born in the Grodno district of Russian Poland and settled in Erez Israel in 1891. At the age of 18 he moved from Jerusalem to Petah Tik-

vah and worked on his brother's land. Eventually he settled in Moza and put many years of labor into the vineyard planted by his father-in-law Yehiel Chemerinski, one of the founders of the Maḥaneh Yehudah quarter in Jerusalem. As an agricultural expert he was instrumental in choosing the land for Ḥuldah before the Jewish National Fund purchased it. For 25 years his home was the center of the settlement of Moza. During the riots of 1929, the sheikh of the nearby Arab village, Qālūnya, promised him that Moza would not be attacked. Nonetheless, the settlement was stormed by its Arab neighbors, and Makleff was killed along with his wife, BATYAH ḤAYYAH (b. in Jerusalem, 1877); his son, AVRAHAM (b. 1907); and his daughters MINNAH (b. 1905) and RIVKAH (b. 1910).

MORDECHAI MAKLEFF (1920–1978), Aryeh Leib's youngest son, survived the slaughter of his family by taking shelter in a neighbor's home and grew up to become chief of staff of the Israel Defense Forces. Born in Jerusalem, he received a religious education and graduated from the Reali school in Haifa in 1938. He joined the Special Night Squads led by Orde Wingate against Arab terrorists. In 1940 he joined the British army and was sent to officers' school. He saw action in World War II with the \*Jewish Brigade in Italy. In 1948 he was the commanding officer of the Haganah unit that captured Haifa and represented the Haganah in its negotiations with the Arabs of the city. He then took part in the battle for Mishmar ha-Yarden and the lightning operation to capture eastern Galilee. He headed the Israel delegation to the armistice talks with Lebanon and Syria. In 1949 Makleff became assistant chief of staff under Yigael \*Yadin, and in 1952 he received the appointment of chief of staff, a post which he held for a period of one year. In 1958 he became managing director of the Dead Sea Works, and ten years later was appointed director of the Citrus Marketing Board of Israel.

**MAKO** (Hung. **Makó**), town in S. Hungary. Jews were first authorized to settle in Mako in 1740. In 1748 they founded a *ḥevra kaddisha* in the town, and the community was probably organized at that time. A Jewish school was also opened. The first synagogue was erected in 1814, and the magnificent great synagogue was built in 1914. After 1868 the community was split into two factions and in 1870 the Orthodox built a synagogue. There were 158 Jews in Mako in 1773, earning their livelihood mainly from trade, especially in onions which grew abundantly in the surroundings. There were also Jewish craftsmen. From 154 in 1824 the Jewish population increased to 1,200 by 1858. The Jews numbered 1,928 in 1918, 2,380 in 1920, and 1,125 in 1941. The first rabbi of the town was Jacob Selig (1773). Others were Solomon \*Ullman (1826–1863), who maintained a yeshiva, and Enoch Fischer (1864–1896), the father of the poet Emil \*Makai. The last rabbis were the historian A. \*Kecskeméti (1898–1944) and M. Vorhand (Orthodox). The renowned journalist and publisher Joseph \*Pulitzer was born in this town. After the German invasion (March 19, 1944) a ghetto was set up for the 3,000 Jews of Mako and the surrounding area. All were transferred to Szeged at the end

of June and deported to \*Auschwitz, with some going to Austria; only around 600 returned to reestablish a community in 1949. The synagogue was demolished in the late 1960s. In 1970 there were 98 Jews in Mako.

[Alexander Scheiber]

**MAKOW MAZOWIECKI** (Pol. **Maków Mazowiecki**; Rus. **Makov**), town in Warszawa province (before 1795 Mazovia province), Poland. An organized Jewish community is traceable to the second half of the 16<sup>th</sup> century. At the end of the 17<sup>th</sup> century a Jew, Nachman ben Nathan, was executed as a result of a blood libel. King Augustus III (1733–63) confirmed the rights of the Jewish community. According to the 1765 census, 1,258 poll tax payers, of whom 827 lived in neighboring villages, were under the jurisdiction of the Makow *kahal*. Of the 113 Jewish families (431 persons) living in Makow, 54 owned their houses; 21 families earned their livelihood as craftsmen (tailors, carpenters, tinsmiths). The Jewish population numbered 2,007 (72% of the total population) in 1808; 4,090 (90%) in 1827; 4,100 in 1856; and 4,400 in 1897. Of rabbis in Makow in the 18<sup>th</sup> century the following are known by name: Moses ben Gershon, Abraham Abish and David ben Zion Jehezkel (d. 1815), *dayyan* and *Maggid*, who was a central figure in the historical controversy between Ḥasidim and *Mitnaggedim*. Of the 19<sup>th</sup> century rabbis mention should be made of Arye Leib Zunz, Eliezer Hakohen Lipschutz, and Judah Leib Graubard. Nathan Chilinowicz founded a yeshivah at the end of the 19<sup>th</sup> century which existed until 1939.

### Holocaust Period

At the outbreak of World War II, there were about 3,500 Jews in Makow Mazowiecki. Shortly after the German invasion of Poland, another 500 Jews settled there. At the end of 1940 several hundred young Jewish men were deported to the nearby forced-labor camp in Gasiewo. In September 1941 the ghetto was established. On Nov. 5, 1942, the Germans concentrated Jews still living in the smaller places of Makow county in the ghetto. A few days later (Nov. 14–18, 1942) the first deportation to the \*Treblinka death camp took place, and over 500 Makow Jews were exterminated there. On Dec. 8–12, 1942, all the remaining Jews (over 4,000) were deported to Treblinka and exterminated there. No Jewish community was reconstituted in Makow Mazowiecki.

**MAKUYA.** The word “Makuya” is the Japanese translation of the Hebrew phrase *Ohel Moed* אהל מועד, the meeting place between God and man, the dwelling place of God’s Shekhinah

(Ex. 29:42–43), and has been adopted by an indigenous Japanese group of Bible believers, strongly identified with the cause of Israel and believing that the Japanese people have historical connections with ancient Israel through the dispersion of the Lost Tribes. Makuya was founded in May 1948 by a charismatic leader, Abraham Ikuro Teshima (1910–73), who was then a successful businessman and ardent Christian believer. He emphasized the importance of the personal encounter with the Spirit of God and the return to the dynamic faith of the original Gospel of early Hebraic Christianity, as opposed to the dogmatic, institutionalized, European-dominated churches. He tried to revive the devastated spiritual condition of postwar Japan by proclaiming the words of the living God (Amos 8:11). He said, “The Bible is the light to all peoples and the biblical faith perfects all religions. Even today the God of Israel is living and vividly intervenes in the human society with his abundant goodness and mercy.” His followers believed that he was divinely endowed with spiritual power and prophetic vision, and attributed to him many miraculous deeds by his prayers. A commentator on the Bible and prolific writer, Teshima maintained that deeper understanding of the Jewish faith, its people and history, is essential to the full comprehension of the Bible. Makuya now counts some 50,000, mainly in Japan but also in the United States, Brazil, Mexico, Greece, Israel, and other Asian countries. Their religious life is somewhat akin to the early ḥasidic movement with characteristics of *hitlahavut* (exuberant joy) and total commitment to God. The religious thinkings of Rabbi A.I. \*Kook, Martin \*Buber, and Abraham \*Heschel are among the cherished elements of their belief. Their fervent love of the Bible and firm attachment to Zion brings hundreds of Makuya pilgrims annually to Israel. Over 250 Makuya students have been sent to Israeli kibbutzim to work together with the people of the Bible, and to study Hebrew and the biblical background. Some of them continue their academic studies in universities. They have published their first Hebrew-Japanese dictionary. The Makuya see in the establishment of the State of Israel – founded at the same time as their movement, as they stress – and the unification of Jerusalem a fulfillment of biblical prophecies. Israel is the experimental nursery of God and Jerusalem the capital of His universal kingdom; Divine history of redemption unfolds around the city of Zion. Whenever the Makuya get together they sing secular and religious Hebrew songs, many of them the songs of modern Israel. They adopt Hebrew names, observe the Sabbath, and keep a form of *kashrut*. They light candles on Friday evening, break *hallah*, and read from the *siddur*. Their view of the world is informed by a profound admiration for Israel and the Jewish people. Their love for Israel often finds practical expression: a Makuya volunteer was wounded in the 1967 Six-Day War and in the wake of the Israeli victory a Makuya “pilgrimage” marched through Jerusalem carrying a banner proclaiming “Congratulations on the Greater Jerusalem.” In the fall of 1973, in the aftermath of the Yom Kippur War and the Arab oil boycott, Teshima and thousands of his followers staged a massive pro-Israel demonstration in downtown

Tokyo. And in 1975, when the United Nations condemned Zionism as a form of racism and racial discrimination, they sent a petition of protest containing 37,000 signatures to the UN General Secretary. Makuya show great hospitality to visiting Israelis and Jews, and it is possible to find Makuya Hebrew speakers in most important Japanese towns. To some extent their admiration for Jews derives from the Christian part of their ideology. But, in addition, it springs from the national nature of Judaism – the idea that Judaism is the religion of the Jewish people – and from Zionism. The Makuya are intensely nationalistic and, in some ways, are looking towards the redemption of the Japanese nation which will be modeled upon the redemption of Israel.

**MALACH, LEIB** (pseudonym of **Leib Salzman**; 1894–1936), Yiddish poet and dramatist. Born in Zwolen, Poland, he had a traditional education, lived in Warsaw in 1907–22, and worked at various trades until his literary talent was discovered by the novelist H.D. \*Nomberg. From 1922 until his death in Paris, he lived in a number of countries, his longest stay being in Argentina. He began his literary career with songs and ballads, later turning to prose and drama. His travel sketches were widely read, and his drama *Ibergus* (“Overflow,” 1926) about white slave traffic helped in the struggle against this social evil in Buenos Aires. His novel *Don Domingo’s Kraysveg* (“Don Domingo’s Crusade,” 1930) is an epic of adventurous and idealistic Jewish life in Latin America.

[Melech Ravitch]

**MALACHI, BOOK OF**, the last (12<sup>th</sup>) book of the section of the Bible called \*Minor Prophets. In the Qumran fragment 4QXIIA, however, Malachi seems to be followed by Jonah. It contains “The pronouncement of the word of the Lord to Israel by Malachi” (Mal. 1:1). The Hebrew word (Heb. מַלְאָכִי (*mal’akhi*) means “My messenger.” According to A. von Bulmerincq, the word could be a shortened form of מַלְאָכִיָּהוּ (*mal’akhiyyah*, “messenger of the Lord”). However, since this name is not found elsewhere in the Bible, the Septuagint, in which it appears as *mal’akho* (“by the hand of His messenger”), is probably right in not regarding it as a personal name. The Targum follows the masoretic text, but adds a note to the effect that “My messenger” is \*Ezra: “by the hand of My messenger whose name is called Ezra the scribe.” The same tradition is mentioned and accepted by Jerome. Had Ezra been the author of the book, however, it is unlikely that his authorship would have been thus concealed. In fact, the occurrence of the word in the title is naturally explained as derived from Malachi 3:1: “Behold, I send My messenger” (cf. Mal. 2:7). It

is noteworthy that whereas the activity of Haggai and Zechariah is noted in Ezra 5:1; 6:14, no mention is made of Malachi, a further indication that the book, should be regarded as anonymous, the title having been added by the compiler who had given similar editorial titles to the anonymous oracles beginning with \*Zechariah 9:1 and 12:1. The reason behind the separation of the Book of Malachi from the preceding Book of Zechariah is that the “Malachian” chapters constitute a characteristic unit, different from Deutero- and Trito-Zechariah (Zech. 9–11; 12–14). The separation also provides a twelfth prophetic book, corresponding to the traditional twelve tribes of Israel.

The contents of the Book of Malachi fall into six clearly marked sections introduced by a statement of the Lord or of the prophet, which is then challenged by the people or the priests, and defended by the Lord Himself in words of reproach and doom. The Lord’s love for Israel, in contrast with His treatment of Edom, is emphasized at the outset (Mal. 1:2–5). The second speech reproaches the priests for their neglect of the sacrificial cult (1:6–2:9): their attitude should express a proper regard for the ritual of the Lord’s worship, yet any offering, however imperfect, has been thought good enough for His altar. In this, as no doubt in other matters, the priests show themselves unworthy of their forefather Levi, by misleading “the many” into sin with their lax rulings. Let the priests, therefore, take warning, and return to their ancient ideals. This section seems to have been subsequently expanded by the insertion of 1:11–14. The aspect of God as their common father should inspire correct relations between Jew and Jew, and not such conduct as repudiating Jewish wives for the sake of marrying non-Jewish women (2:10–16). In its present form, this speech reproaches the Jews for contracting mixed marriages. The view of Ch.C. Torrey (JBL, 17 (1898), 1–15) and F.F. Hvidberg (*Weeping and Laughter in the Old Testament* (1962)) that a reproach for the adoration of foreign gods is actually meant has little to commend it. A problem, however, arises from the secondary character of 2:11b–13a, or 11–12. Several modern scholars have challenged the genuineness of this passage for literary reasons and consider it a later addition. Without these verses, 2:10–16 contains no reference to mixed marriages, but rather attacks the abuse of divorce by Jews, exhorting them to remain loyal to the wives of their youth (cf. Prov. 5:15–20). If the sacredness and religious value of marriage are implied, the reproach indicates that men were divorcing wives casually and callously. It is also possible to read the section as an attack on divorcing Jewish women for the purpose of marrying gentile women, who are described as (2:11) “daughter of a foreign god” (see below). Such a union is opposed by “the One” (2:15) who desires “divine seed” (Hebrew *zera elohim*), elsewhere called “holy seed,” (Hebrew *zera kodesh*; Ezra 9:2), i.e., children who are not products of sexual intermingling with gentiles. The connection between loyalty to a Jewish wife and to God was facilitated by the characterization of marriage as *berit*, “covenant,” a notion first attested in Ezekiel 16:8.

The prevalence of wrongdoing had provoked skepticism about divine justice. The fourth section asserts against these doubts that the Lord is the God of judgment and will restore the rights of the people; His messenger is already at hand to purge indifferentism from worship and immorality from conduct (Mal. 2:17–3:5). A. von Bulmerincq's assumption that Ezra is the "messenger" of 3:1 is unlikely, because the conception here is rather that of a heavenly being. According to the next section, the people's neglect in paying tithes and other sacred dues has been punished with drought, locusts, and failure of crops; however, the punctilious payment of the withheld tithes will be rewarded with abundance (3:6–12). This fifth section thus enforces the duty of giving tithes. The last section promises the despondent pious Jews vindication for themselves and punishment for the ungodly ones on the Day of Judgment (3:13–21). Religion may seem useless, warns the author, but the Lord remembers His own, and will soon distinguish them openly from the irreligious. The book closes with an appeal to observe the Law that the Lord gave to Moses at Horeb, and with the announcement that the prophet Elijah will come before the threatened judgment (3:22–24). The appeal to the "Law of Moses" is part of the redactional process of Scripture in which Torah is declared superior to the Prophets and Hagiographa. Thus, Joshua 1, which opens the Prophets, emphasizes the book of Torah. Malachi, which ends the Prophets, closes with Torah, and Psalm 1, which opens the Hagiographa opens with Torah. These concluding words are likewise an addition, namely a later interpretation of 3:1, saying that the anonymous "messenger" is Elijah. Nonetheless, the addition shares with the body of the book its deuteronomic orientation: the book evidently regards the entire tribe of Levi as priestly, the closing appeal names Horeb instead of Sinai as the mount of revelation. These facts favor an early rather than a late post-Exilic date. Other features bear this out.

Like Haggai and Zechariah 1–8, the Book of Malachi is an expression of the changed outlook of prophecy in post-Exilic times. The topics noted above clearly relate the book to the post-Exilic period, when the Temple had been rebuilt (1:10; 3:1, 10), the province of Judea was ruled by a representative of the Persian government (1:8), and there had been time enough for the loss of earlier religious enthusiasm. The three main abuses attacked in the text are the degeneracy of the priesthood (1:6–2:9), intermarriage with foreign women (2:11), and the people's remissness in the payment of tithes (3:8). These abuses, especially the second and the third, are mentioned prominently in the Book of \*Ezra and Nehemiah, and are those which both reformers strenuously set themselves to correct (Ezra 9:2; 10:3, 16–44; Neh. 10:31, 33–40; 13:10–14, 23–29). The independent character of Malachi's attack against divorcing Jewish wives in order to marry foreign women (Mal. 2:10–16) suggests a date of composition prior to that of the work of Ezra (Ezra 9:2; 10:3, 16–44). This earlier date is made still more likely if the reproach against mixed marriages in Malachi 2:11b is a later insertion, one which precisely reflects

the preoccupations of the time of Ezra and Nehemiah. The time of Ezra's activity, unfortunately, is uncertain. Following A. van Hoonacker and S. Mowinkel, above all, many scholars have assumed that Ezra was not active under Artaxerxes I (in 458 B.C.E.), but under Artaxerxes II (in 398 B.C.E.; cf. Ezra 7:8). The problems of mixed marriages and unpaid tithes, however, existed also in the time of Nehemiah (Neh. 10:31, 33–40; 13:10–14, 23–29), i.e., between 445 and about 424, the year Artaxerxes I died (cf. Neh. 2:1; 13:6). The insertion of Malachi 2:11b–13a may thus date from that period, and it may reasonably be inferred, therefore, that the original Book of Malachi dates prior to the age of Nehemiah and Ezra. In fact, most modern scholars agree that the prophet prepares the way for the work of those reformers.

There is no evidence of sufficient strength to substantiate a later date. The assumptions of H. Winckler (*Altorientalische Forschungen*, 2 (1898), 531ff.) and O. Holtzmann (ARW, 29 (1931), 1–21), who date the book to the first half of the second century B.C.E., are highly speculative and, at the present state of knowledge, inadmissible. The opinion of A. von Bulmerincq, who identifies the "messenger" of Malachi 3:1 as Ezra, becomes still more doubtful if Nehemiah is considered to have preceded Ezra. The period of Nehemiah's absence at the Persian court in approximately 430 B.C.E. (Neh. 13:6) has been proposed as the time of composition by S.R. Driver (*An Introduction to the Literature of the Old Testament* (1897<sup>6</sup>), 357) and A. Gelin (*Introduction à la Bible*, 1 (1957), 572), but an earlier date is the most likely. One of the chief duties of the priest was still the proclamation of the Oral Law (Mal. 2:6–9), and not as yet the solemn reading of the Written Law, as in Nehemiah 8–10. In fact, the prophet seems to be influenced by earlier deuteronomistic theories concerning the priests; at the same time, it is doubtful whether he knew the Priestly Code regulations on tithes found in Numbers 18:20–32, where the tithe is designated in its entirety for the maintenance of the levites (whereas, according to deuteronomic legislation (Deut. 14:22–29; 26:12–15), the levites only took part of the tithe). It appears that the Priestly Code, in its present form, is not presupposed by the Book of Malachi.

An earlier date for the composition of Malachi is also suggested by the allusion to the destruction of Edom in Malachi 1:3–4. The Arab invasion of this Transjordanian kingdom cannot be dated with precision, but Edom was apparently entirely taken over by Arab tribes toward the end of the sixth century B.C.E. Since the remaining Edomites still expected a restoration of their ruined country (1:4), approximately 500 B.C.E. is a more probable date for the composition of the Book of Malachi than the first half of the fifth century. A.C. Welch even thought that the book dated from the age of the prophet Haggai (520 B.C.E.). The bad harvests and locust plagues alluded to in 3:11 would then reflect the same situation as in Haggai 1:6, 9–11; 2:16–17. However, the existence of the Temple as implied by Malachi indicates a somewhat later date. All things considered, it may reasonably be assumed that the book dates from approximately 500 B.C.E.

The work reflects the various currents of thought and modes of life in the Jerusalem of about 500 B.C.E., affording an interesting and valuable glimpse of the post-Exilic community in the period between the age of Haggai and Zechariah on the one hand, and the time of Nehemiah and Ezra on the other. The situation in Judea was one of depression and discontent. The expectations which earlier prophets had aroused had not been fulfilled. The return from Babylon had brought with it none of the ideal glories promised by Deutero-Isaiah. The completion of the Second Temple (515 B.C.E.) had been followed by disillusionment over the anticipated prosperity announced by Haggai in 520 B.C.E., by consequent indifference to worship, skepticism as to divine justice, and moral laxity. In view of these conditions, the message of Malachi is to reassert the true relation of the people to their God, and to recall the nation to religious and moral earnestness, especially in regard to questions of ritual and marriage. Yet the author is no formalist. Ritual observances are of value in his eyes only as expressions of spiritual service; for example, he supposes that God does not accept offerings presented by disloyal husbands (2:13b–14). Moral and social offenses are fiercely condemned by the prophet (3:5), and from the concept of the brotherhood of all Jews under one Father (2:10), he deduces the duties which they have toward each other, and the wrongfulness of the selfish practice of divorce prevalent in his day (2:14–16).

The Book of Malachi is a significant landmark in the religious history of Israel. Despite its emphasis on the observance of ritual, it shows genuine prophetic spirit. Its denunciation of those who divorced their Jewish wives to marry “the daughter of a strange god” reflects the prophetic ideal of a permanent covenant between God and His people, which had been represented as a marital relation since the days of \*Hosea. The denunciation also involves a protest against the influences of foreign marriages, the prohibition of which was to be made effective, at least in Yehud, by the reforms of Nehemiah and Ezra. The influence of the closing words of the book (3:22–24) on later messianic expectation is apparent in the Jewish post-biblical literature (Ecclus. 48:10; Suk. 52b; Mid. Ps. to 42:1; Targ., Lam. 4:22; Targ. Yer., Deut. 30:4) and in the New Testament (Matt. 17:3, 4, 10–13; 27:47, 49; Mark 9:4–5, 11–13; 15:35–36; Luke 9:30, 33; John 1:21, 25). In the New Testament the end of Malachi serves as a proof text to identify John the Baptist with Elijah.

[Edward Lipinski / S. David Sperling (2<sup>nd</sup> ed.)]

### In the Aggadah

The author of Malachi was considered the last of the prophets, along with Haggai and Zechariah. Upon their death, the spirit of prophecy departed from Israel (Yoma 9b). Malachi was identified with Ezra by R. Joshua b. Korḥa and with Mordecai by R. Naḥman. The sages, however, declared that Malachi was his proper name (Meg. 15a). Targum Jonathan to the words “by Malachi” (1:1) added the gloss “who is known by the name of Ezra the scribe.” R. Joshua validated this view-

point by explaining the references in Malachi to the “daughter of a strange god” (2:11) as identical with the “foreign women” described by Ezra (10:2; Meg. 15a). Malachi was a member of the Great Synagogue, and traditions were later reported in his name (cf. RH 19b).

**MALACHI, ELIEZER RAPHAEL** (1895–1980), U.S. Hebrew scholar and bibliographer. Born in Jerusalem, Malachi emigrated to the United States at the age of 17. A conscientious and diligent scholar, he began his literary career with original and translated stories, but in early life switched to scholarship. Though he wrote prolifically, he published only two books of essays: *Massot u-Reshimot* (1937), on contemporary and past writers, and *Zilelei ha-Dorot* (1940), on historical occurrences.

His first publication, as a boy of 15, was an essay on Hebrew newspapers, which appeared in Luncz's *Lu'ah Erez Yisrael* (1910). In 1913 he became a contributor to the newly established monthly *Hatoren*, where he exhibited his expertise as a bibliographer in his pioneering historical survey of the American Hebrew press, which he traced from its beginnings in the 1870s. Subsequently, the monthly published his bibliography of the writings of Mendele Mokher Sforim (Sholem Yankev \*Abramovitsh), which remains a model to this day. His succeeding work embraced Diaspora Hebrew periodicals, the Yiddish press, Hebrew poetry in America, Hebrew literature, historical essays, and individual bibliographies of Hebrew scholars and writers. His bibliographies of scholars include A.M. Luncz, J.N. Simhoni, S.A. Horodetsky, S. Krauss, N. Slouschz, S. Dubnow, A. Elmaleh, J. Schatzky, and S. Tchernowitz, the last of which also appeared separately as *Peri Etz Hayyim* (1946). His bibliographies of writers include such Haskalah figures as J.L. Gordon and Mendele Mokher Seforim and such late Hebrew writers as Bialik, Tschernichowsky, Shneur, Sokolow, Peretz, H. Zeitlin and Kabak, while his bibliographies of Hebrew writers in America – containing much information in a generally neglected field – include S.B. Maximon, N. Touroff, B.N. Silkiner, Z. Scharfstein, S. Halkin, M. Ribalow, and H. Bavli. The

latter was reprinted separately (*Zekher le-Hillel*, 1962). Malachi also published *Iggerot David Frischmann* (1927), a book of David Frischmann's letters, and *Iggerot Soferim* (1932), miscellaneous letters of other writers, with notes and introductions. In addition, he edited a book on the State of Israel and its history, *Yisrael* (1950). In 1955, Malachi's *Treasury of Hebrew Lexicography* appeared as an appendix to the American edition of Mandelkorn's *Concordance to the Bible*, in which Malachi provided detailed descriptions of all the biblical concordances and dictionaries that had been published in Hebrew and other languages. Some of his other work includes his bibliography of "Hebrew Educational Literature in America" (1944) and "History of the Hebrew Movement in America" (1974).

Regarded by many as the greatest Hebrew bibliographer of recent times, he was, in quantity alone, the most productive Hebrew bibliographer, having written thousands of articles. Malachi wrote mainly in Hebrew, but his body of work includes much material in Yiddish as well.

After Malachi's death, his papers – containing his collection of letters and documents – were transferred to the archive of the Ben-Zvi Institute in Jerusalem.

[Eisig Silberschlag / Ruth Beloff (2<sup>nd</sup> ed.)]

**MALACHI BEN JACOB HA-KOHEN** (d. 1785–1790), Italian scholar. Little is known of his life. He was the pupil of Abraham Ḥayyim Raphael Rodrigues and of the kabbalist R. Joseph \*Ergas, whom he succeeded as rabbi of Leghorn after the latter's death in 1730. He arranged Ergas' work *Divrei Yosef* for publication (Leghorn, 1742). He also drew up an order of service *Shivḥei Todah* ("Praises of Thanksgiving"; Leghorn, 1744), for the 22<sup>nd</sup> day of Shevat, an annual fast day proclaimed to commemorate the rescue of the Leghorn community from the earthquake of 1742. He lived to an old age, dying in Tripoli, where he had apparently served as an emissary for Erez Israel. Malachi is best known through his work *Yad Malakhi* (*ibid.*, 1767), which deals with the methodology of the Talmud and the codifiers. Part 1 contains principles of the Talmud in alphabetical order; Part 2, principles of the codifiers in chronological order; and Part 3, principles of various laws in alphabetical order. His novellae and responsa are found in the works of contemporary scholars. A manuscript of his responsa, *Teshuvot Yad Malakhi*, was published by E. \*Gruenhut in *Ha-Me'assef*, 5 (1900). Malachi was also a liturgical poet. He composed *Sefer Shirei Zimrah*, which includes poems and dirges, part of which was published by S. Bernstein (*Mizraḥ u-Ma'arav*, 3 (1929), 245–61). His poem written on the occasion of the inauguration of the synagogue in Leghorn in 1742 was also published in Piperno's *Kol Ugav* (Leghorn, 1846).

[Abraham David]

**MÁLAGA**, port in Andalusia, S. Spain. A Phoenician-Punic necropolis has been discovered there. In the Muslim period, the Jewish quarter was located in the eastern part of the city: the cemetery was on the slopes of Gibralfaro. In 863, at the time of the heresy of the bishop of Málaga, Hostegesis, he was alleged to have attached Jews from Málaga to the regional clerical councils as specialists in the principles of Christianity. Málaga served as a refuge for \*Samuel ha-Nagid and other Jews who reached there in 1013 after the Berbers captured Córdoba. Solomon ibn \*Gabirol was born in Málaga (c. 1021). In the mid-11<sup>th</sup> century the Jews numbered 200 out of a population of approximately 20,000.

When Málaga was captured by Ferdinand and Isabella in 1487 there were 100 Jewish families living there, and another group of 55 Jews were living in nearby Vélez-Málaga. All these were taken captive. The Jews of the kingdom had to pay 10 million maravedis for their ransom. Abraham \*Seneor and Meir of Segovia traveled through Andalusia to raise the money, and Solomon \*Ibn Verga was also active.

The Catholic Monarchs had already ordered in 1490 that Málaga should be settled by Christians. The Jews and Moors, excepting certain Moors named in the royal edict, were ordered to leave Málaga within 15 days. Sixty-two exiles whose names were stated left Málaga, most of them persons in poor circumstances. Judah b. Jacob \*Ḥayyat in his introduction to *Ma'arekhet ha-Elohut* records how on leaving Portugal in 1493 his ship was seized by Basque pirates and brought to Málaga, where local clergy attempted to convert the captives. The community of Málaga was revived in the early 1960s by Jews from North Africa. It has a community center and is affiliated to the organization of Jewish communities in Spain.

[Haim Beinart]

**MALAKH, ḤAYYIM BEN SOLOMON** (between 1650 and 1660–1716 or 1717), leader of the Shabbatean sect. Malakh was born in Kalish. Nothing is known about his early career, but he became a highly respected rabbinic scholar, kabbalist, and preacher. He was soon attracted by the Shabbatean movement and became closely associated with the Shabbatean prophet Heshel \*Zoref in Vilna. In 1690 he went to Italy, probably on a mission on behalf of the movement, staying there several months with Abraham \*Rovigo and Benjamin \*Cohen, the heads of the Italian Shabbateans. They studied the writings of Isaac \*Luria and \*Nathan of Gaza, and Ḥayyim Malakh

received their secret traditions concerning Shabbetai Zevi. From 1692 to 1694 he was back in Poland, active as a Shabbatean missionary among rabbinic circles. One of his students (about 1693) was the famous talmudist Mordecai Suskind Rotenburg, rabbi of Lublin. During this period he attracted the attention of R. Zevi \*Ashkenazi, the father of Jacob \*Emden, who became Malakh's bitter foe. Possibly because of a ban due to his heretical activity or possibly because of his own doubts concerning the Shabbatean theology, he went to Turkey. He stayed for two to three years with Samuel \*Primo in Adrianople, becoming his fervent follower and receiving the traditions and secrets of the circle of Shabbetai Zevi's personal pupils. He went to Bursa (Turkey) where some outstanding Shabbateans lived, and toward the end of his stay, had a vision which caused him to return to Poland and join another Shabbatean leader, \*Judah he-Ḥasid. He arrived in Zolkiew, late in 1696, and stayed for some time, finding many influential followers. From Zolkiew he sent a letter to his Italian masters informing them that he was leaving their camp since he had found the authentic spring of Shabbatean teaching in Turkey. It is quite possible that he went back to Turkey in 1697 where he seems to have met Abraham \*Cardozo in Adrianople. Malakh took Primo's side in the discussions with Cardozo whose speculative dissertations he refused to read. It is not clear whether at this time or later he came into contact with the young leader of the most radical wing of the \*Doenmeh sect in Salonika, Baruchiah Russo (Osman Baba), several of whose sayings were quoted by Malakh to one of his pupils (in a Shabbatean notebook, probably written in Damascus, now in Columbia University Library).

After his return he became one of the founders of the new "Association of the Ḥasidim" which advocated an immigration of ascetic scholars to Jerusalem to await the imminent coming of the Messiah. Privately this Messiah was understood to be Shabbetai Zevi whose return in 1706, forty years after his apostasy, had been predicted by Malakh. Apparently during these years, Malakh acquired the surname Malakh, "the angel." He became generally known by this title from the late 1690s on: whether this was because of his gifts as a preacher or because of his asceticism is unknown. Certainly he was considered the chief kabbalist of the group. In connection with the "ḥasidic" propaganda which attracted many secret Shabbateans in Poland, Germany, and the Hapsburg Empire, he spent some time in Germany and Moravia, where, at the end of 1698, he attended a council of the Shabbatean leaders of the Ḥasidim in Nikolsburg (Mikulov), an eyewitness report of which has survived. He also went to Vienna and announced that he would discuss the Shabbatean belief and teachings with any duly initiated kabbalist. Abraham \*Broda, the rabbi of Prague, sent his pupils, Moses Ḥasid and Jonah Landsofer, but the dispute, which lasted two weeks, ended inconclusively. Malakh then went to Erez Israel where, after the sudden death of Judah he-Ḥasid in October 1700, one faction of the Ḥasidim chose him as its leader. What exactly happened in the Shabbatean circle in Jerusalem is unknown or blurred by biased and half-

legendary reports. At any rate, internal dissensions between moderate and radical Shabbateans contributed to the break-up of the group, but the precise date of Malakh's expulsion from Erez Israel is unknown. It is probable that he went to Constantinople and again to Salonika, meeting with Baruchiah. Since that meeting Malakh acquired the reputation of being an emissary of the antinomian wing of Shabbateanism. This led to his prolonged persecution by the rabbinical authorities. A circular letter of the Constantinople rabbis, written in 1710, denounced him vehemently. He returned to Poland where he founded the radical sect in Podolia from which the Frankist movement sprang (see Jacob \*Frank), but he also served as an emissary for some Ashkenazi groups in Erez Israel. As such he is mentioned in the records of the community of \*Tiktin (Tykocin) in 1708. In public he denied any Shabbatean connections, preferring to divulge his doctrine in private. Forced to leave Poland, he wandered through Germany and Holland. In 1715 he was in Amsterdam where a letter from Abraham Broda, then rabbi of Frankfurt, urging Malakh's immediate expulsion arrived soon after his departure. He died shortly after his return to Poland in 1716 or 1717. He was generally considered an expert in Kabbalah and a persuasive spokesman for the Shabbatean movement after it was forced to go underground. None of his writings has survived.

[Gershom Scholem]

**MALAMAT, ABRAHAM** (1922– ). Israeli Bible scholar. Born in Vienna, Malamat settled in Palestine in 1935 and received his doctorate from the Hebrew University of Jerusalem in 1951 for a thesis on the history of the Arameans written under B. \*Mazar. He then spent two years at the Oriental Institute of the University of Chicago studying under the Sumerologist T. Jacobsen and the Assyriologist B. \*Landsberger.

Many of his writings are concerned with the relationship between the history of ancient Mesopotamia to Ancient Egypt and the Bible. He has made a major contribution through his discoveries of the relation of the ancient \*Mari documents to the study of the Bible. His record and study of Mari in the third and second pre-Christian millennia contributed to our understanding of the historical background of ancient Israel. Malamat argued that much of biblical historical narrative had "telescoped" events of long periods of time.

In 1954 he was appointed lecturer in Biblical and Ancient Jewish History at the Hebrew University of Jerusalem and professor in 1964. He taught there until his retirement in 1991. Malamat taught widely around the world and trained many students. He has served as editor of the Hebrew bulletin of the Israel Exploration Society and is a member of the board and scientific council of the Israel Society for Military

History, the international editorial board of the *Zeitschrift fuer die alttestamentliche Wissenschaft*, and the *Journal for the Study of the Old Testament*.

Malamud has published over 250 papers in Hebrew, English, and German. His Hebrew works include: *Israel in Bible Times – Historical Essays* (1983–1984); *Jeremiah, Chap. One – The Prophetic Call* (1954), and *The Arameans in Aram Naharayim* (1952). A full bibliography through 1993 is available in his jubilee volume published as *ErIsr*, 24 (1993). After his retirement Malamud was a fellow at the Dinur Center for Research in Jewish History at the Hebrew University. His later publications can be found on the website of the center.

**ADD. BIBLIOGRAPHY:** G. Galil, in: *DBI*, 2:113–14.

[Elaine Hoter / S. David Sperling (2<sup>nd</sup> ed.)]

**MALAMUD, BERNARD** (1914–1986), U.S. novelist. Born in New York City, Malamud began to teach in 1939, went west to Oregon State College (an experience used in his third novel, *A New Life*, 1961), and later taught at Harvard. Malamud was elected president of the American PEN Club for 1980. One of the most significant of the younger generation of mid-20<sup>th</sup> century American writers, Malamud was profoundly influenced by realistic novelists such as Dostoevski. His first novel, *The Natural* (1952), about the rise and fall of a baseball hero, was a brilliant tour de force, displaying a characteristic mixture of realistic detail, vernacular language, and free-ranging symbolism and fantasy. Malamud found his true voice, however, with his second novel, *The Assistant* (1957), and a collection of short stories, *The Magic Barrel* (1958). With magnificent virtuosity and integrity, he (like Saul \*Bellow) used a dialect of American English mixed with Yiddish, and succeeded in transferring to the American scene the intense moral concern, the comic yet pathetic irony, and the traditional situations of East European Jewish culture. Within the narrower Jewish world, he wrote with special love about the idealistic *shlim-mazel*, the obscure and the lonely and the suffering, as in the title story of *Idiots First* (1963); this is also the case with Morris Bober, the grocer protagonist of *The Assistant*. Another recurring theme is the relations between Jews and gentiles: the New York Italian assistant falls in love with Bober's daughter and finally becomes a Jew; stories set in Italy deal with love between Jewish men and gentile women; and "Angel Levine" and "Black is My Favorite Color" are concerned with Jews and blacks. Malamud was deeply conscious of the role of the Jew as a symbol of the human tragedy. All his concerns were fused, and grew in scope and significance, in *The Fixer* (1966), which won the National Book Award and the Pulitzer Prize in 1967 and was made into a motion picture. Yakov Bok, a Russian-Jewish handyman falsely accused of ritual murder, is based on Mendel \*Beilis, victim of the notorious Kiev Blood Libel of 1913. An obscure little man in flight from his heritage, Bok is thrust into a situation requiring unusual courage. The stages by which he comes to a full understanding of his responsibility, and develops the strength of will to face his ordeal, are powerfully described. Malamud said of this novel: "The drama

is as applicable to the American people as it is to the Russian." *Pictures of Fidelman* (1969), subtitled "An Exhibition," uses three previously collected stories, and adds three more, about the picaresque misadventures of an American-Jewish artist in Italy. In Rome, Milan, Florence, and Venice, Arthur Fidelman seeks both "perfection of the life" and "of the work"; in each city, he works at a different art or problem, and lives with a different woman. At the end, "Prometheus Fidelman" has learned his limitations: back in the U.S., "he worked as a craftsman in glass and loved men and women." In "Pictures of the Artist," a "Jewish refugee from Israel" named Susskind is imagined preaching a sort of parody of the Sermon on the Mount. *The Tenants* (1971), a novel of clashing aspirations and dislikes dramatized by a Jewish and an African-American writer, also represents the struggle of writers appropriating subjects and histories that exhaust their sense of the human. In *Dubin's Lives* (1979), arguably one of Malamud's finest works, Dubin, a biographer whose life is lived largely in books, is forced to confront the disruptive yet life-giving nature of passion. In *God's Grace* (1982), Malamud dramatizes the Jewish dialogue with a God of awe and the understanding we have of our own finitude. Allegorical, as well as dystopian, it deals with resignation to, as well as acceptance of, freedom within limitation. Its humor is that of the pathos of human existence, driven by power and its vanities. *The People and Uncollected Stories*, composed in the main of an unfinished novel about a Jew living with an Indian tribe, was published in 1989. *Conversations with Bernard Malamud*, edited by Lawrence Lasher appeared in 1991. Malamud's *The Complete Stories* edited by Robert Giroux was published in 1997.

Malamud's contribution to American-Jewish literature remains large. (He appears as the novelist E.L. Lonoff in Philip Roth's *The Ghost Writer*, 1979). Yet his achievement also seals an epoch in which the Jew was portrayed as helpless, and forced to justify his existence. Suffering, in much of Malamud's work, marked American-Jewish life. It also was the human condition. Malamud's Jewish characters are often victimized by their sense of self. They are also often diminished by their environment, by capitalism, and by political and social malevolence. His protagonists escape a constricting life at the cost of a deeper remorse: the abandonment of their authentic selves.

A new American-Jewish literary type, one willfully accepting conditions of success and ease in America, gains its strength against the background and achievement of Malamud's art.

[Sholom Jacob Kahn / Lewis Fried (2<sup>nd</sup> ed.)]

**MALAVSKY, SAMUEL** (1894–1983), \**hazzan*. Born in Smela, near Kiev, Ukraine, Malavsky sang as a *meshorer* (see \*Music) with various *hazzanim*. He went to the U.S. in 1914 and audi-

tioned for Josef \*Rosenblatt, thus beginning a lifelong association. Malavsky sang duets with Rosenblatt in concerts and on recordings as well as officiating as *hazzan* in many leading congregations. In 1947 he formed the Malavsky family choir, “Singers of Israel,” with his two sons and four daughters. They achieved great international popularity through their appearances in synagogues, concerts, and on recordings. Malavsky created a unique style for his family choir by introducing a strongly marked beat and syncopation into traditional Eastern European *hazzanut*.

**MALAYSIA**, federation of states in S.E. Asia formerly under British protection. A few Jews settled in Penang, of whom the first was Ezekiel Menassah from Baghdad, in 1895. Although remaining the only Jew in the whole area for nearly 30 years he continued Jewish observances, kept a *kasher* household and welcomed visiting coreligionists. Other Jews arrived there after World War I, mostly poor peddlers. During World War II the community was evacuated to \*Singapore, subsequently occupied by the Japanese. Of the Jews who settled in Penang after the war, some 20 families remained by 1963. Only three families lived there in 1969.

**BIBLIOGRAPHY:** I. Cohen, *Journal of a Jewish Traveller* (1925), 207–8.

**MALBEN** (Heb. initials מוסדות לטיפול בעולים נהשלים, *Mosedot le-Tippul be-Olim Neḥshalim* – “Institutions for the Care of Handicapped Immigrants”), agency of the \*American Jewish Joint Distribution Committee (JDC) for the care of aged, infirm, and handicapped immigrants in Israel. Its funds are derived mainly from the \*United Jewish Appeal. The mass immigration after Israel declared its independence included thousands of old people – often the last survivors of families destroyed by the Nazis; victims of tuberculosis acquired in the concentration camps or Middle East ghettos; and others physically or emotionally incapacitated by poverty, wartime suffering, or Nazi persecution. In 1949, Malben was founded by the JDC to relieve the Israel government of the burden of caring for these immigrants. It constructed a network of about a hundred institutions, converting army barracks and whatever buildings were available into old-age homes, hospitals, TB sanitariums, sheltered workshops, and rehabilitation centers.

Once emergency needs were under control, Malben began to consolidate its programs of direct care, while cooperating with other agencies to create more municipal and regional facilities for the aged and handicapped, and to develop indirect services which would enable elderly people to live on their own as long as possible. These measures include cash relief, constructive loans to help the aged and handicapped to earn a living, employment assistance, home medical care and housekeeping services, and the establishment of “Golden Age” clubs to provide elderly people with facilities for social and community life. Malben also cooperates with the government, the Jewish Agency, and the municipalities in the fields of mental health, chronic illness, and the care of physically and

mentally handicapped children and adults among the settled population. Between 1949 and 1968, Malben-JDC helped some 250,000 immigrants – every fifth newcomer and one in ten of the population – at a total cost of \$164 million. It maintained a hospital for chronic invalids, 12 old-age homes and villages with 3,000 beds, and extramural services for some 48,000 persons. By the end of 1975 all the homes, hospitals, and other programs initiated by Malben had been handed over to the government and local authorities.

[Misha Louvish]

**MALBIM, MEIR LOEB BEN JEHIEL MICHAEL WEISSER** (1809–1879), rabbi, preacher, and biblical exegete. The name Malbim is an acronym formed from Meir Loeb ben Jehiel Michael. Born in Volochisk (Volhynia), Malbim was a child when his father died. He studied in his native town until the age of 13, with Moses Leib Horowitz, among others. He married at the age of 14, but after a short time divorced his wife. He went to Warsaw, where he became widely known as the “*illui* from Volhynia.” From there he went to Leczyca, where he married the daughter of the local rabbi Ḥayyim Auerbach, who maintained him, and he was thus able to devote himself to literary work. In 1834 he traveled to Western Europe to obtain commendations from contemporary rabbis for his *Arzot ha-Ḥayyim* (1837), visiting, among other places, Pressburg, Amsterdam, and Breslau. In 1839, on the recommendation of Solomon Zalman Tiktin of Breslau, he was appointed head of the rabbinic court of Wreschen (district of Posen). From there he went to Kempen in 1840, where he remained for 18 years, and was therefore sometimes referred to as “The Kempener.” While in Kempen he was invited to the rabbinate of Satoraljaújhely in Hungary but refused the offer. He finally agreed to accept the call of the Bucharest community, and in the summer of 1858 he was officially inducted as chief rabbi of Romania.

In Bucharest, Malbim set new *kashrut* standards, imposed restrictions on the kosher butchers, constructed a new *eruv*, personally supervised the educational institutions in town and began to attract large crowds to his sermons. All of these activities, combined with his insistence that his congregants become more observant, resulted in friction between Malbim and the enlightened intellectuals in the Jewish community, who were actually wealthy, foreign nationals. When Malbim objected to the building of a new modern synagogue, the Choral Temple, because it would include an organ and choir like the Reform synagogues in Western Europe, his opponents complained to the authorities, claiming falsely that Malbim was preaching against Christianity. In 1860, he published the first volume of his commentary on the Pentateuch – on Leviticus. In the introduction he wrote a scathing attack against Reform Judaism. His son, Aaron, passed away in 1862. This personal tragedy had a severe effect on Malbim. At the same time, his rapidly deteriorating relations with the en-

lightened members of his community made his position precarious. Because of Malbim's uncompromising stand against Reform, disputes broke out between him and the communal leaders of the town, leading to his imprisonment. On Friday, March 18, 1864, Malbim was arrested and jailed. He was freed only on the intervention of Sir Moses Montefiore and on condition that he leave Romania and not return. Upon release, he was placed in a boat sailing down the Danube River. He was put ashore at the Bulgarian border town of Ruschuk. M. Rosen has published various documents which disclose the false accusations and calumnies Malbim's Jewish-assimilationist enemies wrote against him to the Romanian government. They accused him of disloyalty and of impeding social assimilation between Jews and non-Jews by insisting on adherence to the dietary laws, and said, "this rabbi by his conduct and prohibitions wishes to impede our progress." As a result of this the prime minister of Romania issued a proclamation against the "ignorant and insolent" rabbi for his effrontery in "publishing libelous letters against those eating meat from any butcher shop and he has preached against the idea of progress and freedom." In consequence the minister refused to grant rights to the Jews of Bucharest, on the grounds that the rabbi of the community was "the sworn enemy of progress" (from the official newspaper *Moniturul* March 6, 1864). Determined to refute the false accusations made against him, Malbim went to Constantinople to lodge a complaint against the Romanian government, which was then under Turkish domination. Following the rejection of his appeal and his failure to obtain the help of the Alliance Israélite Universelle (in transmitting a memorandum written in 1864 in Paris in which Malbim, with the help of Adolphe Crémieux, addressed himself to the Romanian ruler, stressing his patriotism), he was compelled to leave Romania (1864). During his wanderings in the following years he suffered persecution and calumny. He served as rabbi intermittently in Leczyca, Kherson (1869–70), Lunshitz (1870–71), and Mogilev (1872–75), and wherever he went he was persecuted by the assimilationists, the *maskilim*, and the *Ḥasidim*. The *maskilim* accused him of being an extremist and a rebel against the enlightenment. He was invited to Mainz, and on his way stopped at Königsberg, where he remained for about four years (1875–79). In 1879 he received an invitation from Kremenchug, Poltava oblast, to serve as its rabbi, but died in Kiev on his way there.

Malbim's fame and his immense popularity rest upon his commentary on the Bible, which was widely esteemed. His first published commentary was on the Book of Esther (1845), followed by one on Isaiah (1849). In 1860 his commentary *Ha-Torah ve-ha-Mitzvah* on the Sifra was published in Bucharest. His commentary on the Song of Songs, *Shirei ha-Nefesh*, was published first in Krotoszyn and then in Bucharest in 1860. The remaining commentaries to the books of the Bible were completed and issued during the years 1867–76. His commentary encompasses all of the books of the Bible except Lamentations and Ecclesiastes. Malbim's commentary on the Bible was motivated by his opposition to the Reform movement, which

in his view could potentially undermine the very foundation of Judaism. He began with Leviticus and the Sifra because the Reformers attacked the very idea of sacrifice and the halakhic Midrash on Leviticus as lacking any *peshat*. He wished to combat these Reform ideas in particular and in general to strengthen the position of Orthodox Judaism in the spheres of exegesis, knowledge of Hebrew, and the exposition of the Bible according to its plain meaning, and thereby counteract and weaken the Reformers in precisely those three spheres in which they had made appreciable achievements. In his long introduction to the commentary *Ha-Torah ve-ha-Mitzvah* (1860) on the Book of Leviticus and the Sifra, Malbim refers to the Reform Synod at Brunswick in 1844, calling it a gathering of "rabbis and preachers as well as readers who butcher their communities." Because of these Reformers' negative approach, Malbim decided that "it was time to act for the Lord, and to fortify the wall around the Law, Written and Oral ... so that violators could not assail and desecrate it." From that time he began to compose commentaries on the Bible with the aim of proving "that the Oral Law is the law given from heaven, and that all its words are necessary and implicit in the plain meaning of the verse and in the profundity of the language, and that the interpretation is only the plain meaning based upon accurate, linguistic rules."

His commentary to the Bible is based upon three fixed principles: In the text of the Torah and the figurative language of the prophets there are no repetitions of mere synonyms; consequently every word in a sentence is essential to the meaning in accord with the rules of the language despite the fact that they seem to be mere synonymous repetitions. Every statement conveys a sublime thought: all the metaphors are of importance and replete with wisdom for they are the words of the living God (introduction to Isaiah). In Malbim's opinion the sages had "important principles and fixed rules for the grammatical forms and the foundations of the language and of logic," according to which they understood all the words of the revelation transmitted at Sinai. He arranged these rules and principles in a special work, *Ayyelet ha-Shaḥar*, which he prefaced to his commentary on the Sifra. In it he noted 613 paragraphs (248 on linguistic usage and 365 in explanation of the verbs and synonyms) that are the foundations of tradition and the Oral Law. He stresses the superiority of the literal interpretation and complains that the commentators after David Kimḥi – except for Isaac Abrabanel – were exponents of homiletical exegesis "and no one exerted himself to breathe life into the verses by the literal method" (end of his introduction to Joshua). In his commentary on the Pentateuch, Malbim treated the narrative portions differently from the legal sections. His *peshat* commentary to the narrative portion is accompanied by questions which are the opening gambit to his exegesis. The commentary on the legal sections focuses more on the halakhic Midrash, explaining its connection to the straightforward meaning of the biblical text. Overall, his Pentateuchal commentary is accompanied by *Torah Or*, essays on the *aggadah* combined with Kabbalah and philosophy;

*Remazim*, hints of broader issues on the Tabernacle sections in Exodus; and *Ner Mitzvah*, which answers questions by other commentaries on the Midrash. While his commentary on the Pentateuch is meant more for scholars, the commentary on the rest of the Bible is aimed at a broader audience.

It should be noted that at the end of his commentary to Daniel, Malbim devotes himself to the calculation of the date of the redemption, which was to have been in the period 1913–1928: “We are writing these words in 1868 and according to our calculation the time of the redemption will be removed a further 60 years... for the rise of a scion of the house of David, the building of the Temple, and all the promises of the prophets will be fulfilled at the same time, and their luster will shine forth from the year 1913 to the year 1928, when the Temple will already have been established.”

The following of his talmudic works are noteworthy: *Arzot ha-Hayyim*, contains novellae and expositions on Shulḥan Arukh, *Orah Hayyim* (Part 1, on chapters 1–24, 1837; Part 2, on chapters 25–31, 1861), with the novellae of his son-in-law Elijah Joel Heilprin. The work, in three parts, comprises novellae on the responsa of Moses Isserles with source references and a pilpulistic exposition of the Shulḥan Arukh. Malbim provides a synthesis of *halakhah* and natural science on the one hand, as well as *halakhah* and Kabbalah on the other hand. *Yalkut Shelomo* (1938; 1966<sup>2</sup>) was a collection of his novellae on the tractates of the Talmud, published (1966<sup>2</sup>) after editing by Solomon Drillich, who also prepared and arranged a new edition of *Ha-Torah ve-ha-Mitzvah*, on the Pentateuch, with the title *Sefer ha-Torah ve-ha-Mitzvah ve-ha-Hinnukh*, in three parts (1967). *Alim li-Terufah* (1904) is a small work consisting of an exposition of the fourth chapter of *Hilkhot De’ot* in Maimonides’ *Mishneh Torah*. *Arzot ha-Shalom* (1838) contains nine sermons which reveal the profundity of his homiletical ideas. Characteristic of this work is the fact that the sermons are based upon biblical verses only and do not rely upon rabbinic dicta. Each sermon encompasses a specific subject and is preceded by a poetic introduction. This method was regarded by some as an innovation in sermonic literature. His oral sermons were distinguished by verbal precision and strict logic. His *Erez Hemdah* (Warsaw 1882) contains sermons on the Pentateuch and expositions of *aggadot*. His works on language, poetry, and logic include: *Ya’ir Or* (1892), on synonymous nouns and verbs, containing 662 synonymous nouns; selections from his commentaries on synonyms found in the *Likkutei Shoshanim* (1875), and *Ha-Karmel* (1900) and arranged by J. Greenbaum; *Yesodei Hokhmat ha-Higgayon* (1900), a textbook on logic in 20 chapters comprising a survey on the principles of logic; *Mashal u-Melizah*, first published by Jehiel Brill (1867) – an allegorical play in four acts that was a visionary poem on the vice of hypocrisy. His autobiography was published in serial form in *Ha-Levanon* (vol. 2, 1865). Throughout his works Malbim quotes ideas from both Jewish and non-Jewish philosophers, including Aristotle and Kant. However, it is very difficult to know if his knowledge of their works was firsthand or secondhand from other sources.

A number of Malbim’s works were translated into English. His commentary to Esther appears in two different editions: *Tournabout: The Malbim on Megillas Esther* (Southfield, Michigan, 1990), and *The Malbim Esther* (Southfield, Michigan, 1998). *Malbim on Mishley* is an abridged version published in Jerusalem (1982). *The Malbim Haggadah* appeared in 1993. E. Parkoff published *Fine Lines: A Study of the Torah’s Outlook on Human Suffering Based on Malbim’s Commentary on Iyov* (1994).

After his death, the Bucharest Jewish community built a Bet Midrash honoring Malbim. It became the center for Orthodox Jewish life in Bucharest until 1980 when it was destroyed by the Communist regime of Nikolai Ceacescu.

[Yehoshua Horowitz/ David Derovan (2<sup>nd</sup> ed.)]

**MALCA (ben, ibn Malkah)**, Jewish-Moroccan family name, known from the early 14<sup>th</sup> century through the kabbalist NISSIM IBN MALCA, the author of *Zenif Melukhah*. His son was the philosopher, Judah ben Nissim ibn \*Malkah. He was strongly influenced by neoplatonic doctrines and wrote several works of which only one has been published, *Uns al-Gharib*. This was completed in 1365 probably in Fez. Lengthy extracts from it were translated into French and published by G. Vajda (see bibl.).

JACOB BEN JOSEPH BEN MALCA (d. 1771) was a rabbinical authority in Morocco. At first, he was *daiyyan* in Fez, together with Judah \*Benatar and Jacob \*Abensur. Of a quarrelsome disposition, he was often in conflict with his col-

leagues, who nevertheless respected his profound erudition in the fields of rabbinical law and casuistry. During the famine which struck Fez in 1738 he moved to Tetuan, where he was appointed *av bet din*. He left a large number of decisions on various religious subjects, some of which have been published in the works of various Moroccan authors.

KHALIFA BEN MALCA (d. c. 1750) was a member of a wealthy family of Safi. He studied in Fez with Judah Benatar and Samuel \*Sarfaty and later continued his studies in his native town with Joseph Bueno de \*Mesquita, where Abraham ibn Musa and Jacob Abensur were his fellow students. Having lost his fortune, he settled in Agadir, where he represented Moses Guedalla of Amsterdam. He married Deborah, the daughter of the wealthy scholar Isaac \*Mendes. In 1728 a plague claimed many victims, among them his wife and one of his daughters. In 1737 he lost large sums of money when the community was plundered and its synagogue set on fire. He then traveled to Holland and London. He wrote a commentary on the *siddur* entitled *Kav ve-Naki*, and also wrote commentaries to the Shulḥan Arukh, which he entitled *Rakh va-Tov*. He was particularly remembered for his piety, and both Jews and Muslims regarded him as a saint. Up to the 1960s regular pilgrimages were still made to his tomb in Agadir.

[David Corcos]

**MALCHI, ESPERANZA** (d. 1600), \*kiera who served Safiye, favorite consort of Sultan Murad III (1574–95) and mother of Sultan Mehmed III (1595–1603).

Both Esperanza and her contemporary Esther \*Handali served in a period known as “The Women Sultanate,” when the strong ladies of the harem were involved in a variety of internal and external intrigues and became very influential in the Ottoman court. Besides being the main supplier of jewels and other luxury items to the harem, Esperanza was Safiye’s most trustworthy contact with the outside world. She influenced important nominations, mediated in diplomatic conflicts, supplied diplomatic intelligence, and communicated with foreign envoys on Safiye’s behalf. In a letter in Italian, dated November 16, 1599, addressed to Queen Elizabeth I of England, Malchi described herself as “a Hebrew by law and nation.” She mentions a previous gift that was presented to her mistress, the Queen Mother, by the English ambassador, and lists the gifts which are being delivered to Queen Elizabeth through the ambassador who is soon to depart to England. In return she requests the Queen of England to send “distilled waters of every description for the face and odoriferous oils for the hands [...] clothes of silk or wool, articles of fancy suited for so high a Queen as my Mistress.” The “articles for ladies” should be delivered discreetly through Esperanza’s hands only (Kobler, *Letters*, 393–94).

As a reward for her longtime services, Esperanza and her sons received various profitable concessions, among them the control of customs in Istanbul. Her great wealth and special privileges, as well as her undisguised influence on the Sultan’s mother and her interference in state matters gained her many enemies. On April 1, 1600, she was publicly stabbed to death by rebellious soldiers and her eldest son was killed the next day. Esperanza’s second son converted to Islam in order to save his life and a third son managed to escape. The family’s enormous fortune and estates were confiscated.

[Ruth Lamdan (2<sup>nd</sup> ed.)]

**MALDONADO DE SILVA, FRANCISCO** (1592–1639), Marrano martyr in Peru. Son of the physician Diego Nuñez de Silva (d. 1616) who was reconciled by the Inquisition in 1605, Francisco was born in Tucuman (now Argentina) and studied at the University of San Marcos in Lima, Peru. He was reared as a devout Catholic, and educated as a physician. His reading of the anti-Jewish *Scrutinium Scripturarum* by the apostate Pablo de \*Santa Maria (Solomon ha-Levi) led him to pose questions to his father on the relative merits of Judaism and Christianity. His father acknowledged that he was still a Jew at heart, and guided his son in studying Judaism. Maldonado was persuaded to become a secret Jew. After his father’s death he moved to Chile, where he married and in 1619 was appointed surgeon of the hospital in Santiago. He continued practicing Judaism, but was denounced to the Inquisition in 1627 by his two sisters, whom he had sought to convert. Despite continued efforts by the Inquisition to shake his faith, including 14 attempts by theologians to better him in religious debates, he held fast to Judaism. After each hearing he signed his testimony “Eli Nazareno, unworthy servant of the God of Israel, alias Silva.” He circumcised himself with a pocketknife and scissors and resorted to long and agonizing fasts. Though suffering from numerous ailments, he used an improvised rope made from corn husks to lower himself into other cells, where he found some Judaizers whom he fortified in their faith, also converting Catholics to Judaism. Using scraps of paper and a pen made from a chicken bone, he wrote several tracts in support of his beliefs. He was burned at the stake in Lima at the conclusion of the auto-da-fé of 1639. News of his death made a profound impact on writers like Isaac \*Cardozo and Daniel Levi (Miguel) de \*Barrios, although the latter confuses him with Tomás Treviño de \*Sobremonte.

**MALESHERBES, CHRETIEN GUILLAUME DE LA-MOIGNON DE** (1721–1794), liberal French statesman. As minister of the Maison du Roi in 1787, he was responsible with Turgot for the decree granting civic status to “non-Catholics,” thus opening the way for effective action by the Jews on their own behalf. Malesherbes’ main reason for wanting improved treatment of the Jews was his belief that it would lead to their conversion; he was opposed to the organized Jewish community, considering it as a state within a state. Jewish individuals were not free to convert, said Malesherbes, because they were so closely tied to the whole community. He therefore proposed that Jews be enabled to use public legal registers for their personal status, thus weakening their ties with Jewry. In spring 1788 Malesherbes set up an informal committee to study the question, coopting as advisers men well-disposed toward the Jews, including Pierre Louis \*Roederer. Eight Jewish leaders were summoned to the committee, among them \*Cerfberr for Alsace, Berr Isaac \*Berr for Lorraine, Abraham \*Furtado and D. Gradis for Bordeaux. The purpose of the committee was to conduct a preliminary inquiry on a new system for regulating the condition of French Jewry, and to prepare a memorandum. However, meetings were few and the differences between the two delegations, the “Portuguese” and the “German,” were so marked that they could not reach agreement. The “Portuguese” memorandum in answer to Malesherbes’ questionnaire on the current state of Judaism was later to influence the one presented by Napoleon’s representatives to the \*Assembly of Jewish Notables and the French \*Sanhedrin. In July 1788 the delegates returned home, without having come to any decision. Malesherbes remained a staunch royalist and was later guillotined.

**MALEV, WILLIAM S.** (1898–1973), U.S. Conservative rabbi. Malev was born in Homel, Russia, and immigrated to the United States in 1908. He received his B.A. from the City College of New York in 1919; as a student at the Teachers Institute, and president of the Jewish Teachers Association (1921–22), he was persuaded by Mordecai \*Kaplan to enter the rabbinate and was ordained at the \*Jewish Theological Seminary in 1925. Over the next 20 years, Malev developed three thriving synagogue centers in the New York metropolitan area: the Concourse Center of Israel (Bronx, 1925–27); Kingsbridge Heights Jewish Center (Bronx, 1927–28); and the Jamaica Jewish Center (Jamaica, 1928–46). In 1946, he moved to Houston, Texas, where he built Congregation Beth Yeshurun into the state’s leading Conservative synagogue and was instrumental in establishing the first day school in the Southwest United States. He was president of the Texas Kallah of Rabbis and a force on behalf of Zionism as the foremost regional orator

for the \*Zionist Organization of America. As president of the Houston Ministerial Association, and a weekly columnist for the *Houston Post*, Malev was a principal civic leader in interfaith and interracial affairs. He also lectured at the University of Houston. Primarily a shaper of Conservative Judaism in the Southwest, his major role in the framework of the national movement was as chairman of the \*Rabbinical Assembly’s Committee on College Youth (1945–46), established to build bridges between RA members and the next generation of American Jewish leaders.

[Bezalel Gordon (2<sup>nd</sup> ed.)]

**MALIK AL-RAMLĪ** (of Ramleh in Erez Israel; mid-ninth century), founder of the sect of Ramlites or Malikites. Like some other sectarians, Malik taught that Shavuot must fall only on a Sunday, that the fat tail of the sheep comes under the heading of forbidden fat, and that marriage to a niece is incestuous. Within a century or so the Ramlites vanished, probably having been absorbed into the larger sect of \*Karaites.

[Leon Nemoy]

**MALINES (Mechelen)**, transit camp established by the Nazis in Belgium, between its two largest Jewish communities, Antwerp and Brussels, in October 1941 to concentrate Jews before transporting them to Eastern Europe. An infrastructure was already in place and a railway line led directly to the camp, which became an antechamber to death. The camp was surrounded by local inhabitants. The first group of Belgium Jews was arrested on July 22 and taken to Breendonck and then to Malines. The first transport from Mechelen was on August 4, 1942, and arrived in \*Auschwitz on August 6. According to a list in the Mechelen archive, between August 4, 1942 and July 1944 there were 28 transports to the east with more than 25,257 Jews; some gypsies were transported in 1943 and 1944. All the inmates of the camp had to wear identification badges. The badges differed for the Jews in the camp. The various known symbols were: *T* = *Transport-Juden* (Jews who would be sent to the east), *Z* = citizens of the Allied countries or neutral countries, *E* = *Entscheidungsfalle*, borderline cases, whose identity required further investigation, *G* = *Gefährliche Juden* (dangerous Jews to be sent to punishment camps elsewhere). Jews who were married to non-Jews were sent to Drancy in German-occupied France. Members of the Committee for Jewish Defense (CJD) which was in contact with the Belgian resistance movement, and the Catholic fighters’ organization, penetrated into Mechelen a number of times in order to warn the inmates and try to liberate them. The organized Jewish community sent in packages. The camp was

finally liberated by the Allies in September 1944; a few hundred Jews had managed to survive.

**MALINO, JEROME** (1911–2002), U.S. Reform rabbi. Malino was born in New York City, earning his B.A. from City College in 1931. He was ordained at the Jewish Institute of Religion (later merged with Hebrew Union College, (HUC-JIR)) in 1935 and was awarded an honorary D.H.L. from Alfred University in 1958, as well as an honorary D.D. from HUC-JIR in 1960. After ordination, he became rabbi of the United Jewish Center in Danbury, Conn., a position he held for his entire career. In 1981, he was named rabbi emeritus and joined the faculty of HUC-JIR as adjunct lecturer in Homiletics; he had previously taught at Western Connecticut State University and been a member of the Commission for Higher Education for the state of Connecticut. For more than 40 years, he served as a chaplain at the federal correctional institution in Danbury (1940–83).

Malino was a leader of the \*Central Conference of American Rabbis on both regional and national levels. He served as president of the New England Region of the CCAAR (1961–63) and was the long-time chairman of its admissions committee (1964–73). A consistently outspoken proponent of rabbinic ordination for women, he was elected vice president of the CCAAR in 1977 and president in 1979. Following his two-year term of office, he chaired the Committee on Rabbinical Growth. He was also a member of the Alumni Overseers of the HUC-JIR, which honored him by establishing the Jerome Malino Award, bestowed on the best first-year student at JIR.

Malino, a member of the National Executive Committee of the Jewish Peace Fellowship, was a pacifist and supporter of conscientious objectors to military service, even during World War II – a controversial position for a rabbi at the height of the battle against Hitler. Moreover, his advocacy of non-violence extended to the theater of the Israeli-Palestinian conflict. Malino also served as president of the Institute of Religion in an age of science, delivered scholarly papers at its conferences, and contributed numerous articles to professional and religious journals. In 1988 Malino received the Rabbi Israel and Libby Mowshowitz Award from the New York Board of Rabbis.

[Bezalel Gordon (2<sup>nd</sup> ed.)]

**MALINOWSKI, JOSEPH BEN MORDECAI** (Troki; d. after 1625), Karaite scholar. Joseph was the pupil of Isaac b. Abraham \*Troki, and was the leading Karaite scholar in Poland-Lithuania after his teacher's demise in 1594. Malinowski completed Isaac's *Hizzuk Emunah* after Isaac's death. According to his correspondence (Mann, Texts, 1196–8), in 1624 he was a spiritual leader of Troki. As such he endeavored to organize the communal affairs of the Birzhe Karaite community. He established a number of ritual customs for Polish-Lithuanian communities, which were published in *Karaite Siddur 1* (Vilna 1890), 456–64. Some of them were close to Rabbanite practice. In 1624 he moved to Lutsk, evidently to become a spiritual leader of the community.

He had extensive knowledge of both Karaite and rabbinic scholarship. He wrote a book *Sefer Minhagim* (10s A 208, JNUL mic. 52984), concerning prayer, reading the Torah, etc. \*Manasseh Ben Israel's press printed his composition *Ha-Elef Lekha* (Amsterdam, 1643), a long mystical liturgical poem. Simhah Isaak \*Luzki wrote his commentary *Kevod Elohim* on it and they were published together (*Kevod Elohim*, Y. Algamil ed., Ramla 2000). His *Kizzur Inyan Shehitah* on the ritual slaughter of animals was printed together with Mordecai b. Nissan's *Dod Mordekhai* (Vienna, 1830). Joseph died in Lutsk. He composed several liturgical poems, some of which had been included in the Karaite *Siddur*.

[Leon Nemoj]

**MALKAH, JUDAH BEN NISSIM IBN** (fl. c. 1260), philosopher, probably living in Morocco. Three of his works written in Judeo-Arabic have been preserved. (1) *Uns al-Gharib* ("Familiarity with the Unfamiliar"), consisting of the author's own views and of a commentary on the *Sefer Yezirah*, preceded by a long introduction. One extract was published by H. Hirschfeld, *An Arabic Chrestomathy in Hebrew Characters* (1892), 19–31; an anonymous Hebrew abridgement was published by G. Vajda (1974); (2) a commentary on the *Pirkei de Rabbi Eliezer*, published by P. Fenton (*Sefunot* 21 (1993), 115–65); (3) *Tafsir al-Şalawāt*, a commentary on the liturgy (fragment). Besides these, Judah refers to a work which he wrote on astrology, which probably bore the title *Kitāb al-Miftāh* ("The Key Book").

The doctrine of Judah b. Nissim rests on two fundamental theses: the unknowability of God and universal astral determinism. From the first thesis flows a metaphysics of emanation having at its apex the prime intellect, to which the functions of the first cause, and consequently those of the God of religion, have been transferred. From the second thesis flows a view of the world according to which even revealed religions are completely determined by astral influences. In the light of this, the superiority of Judaism is that it is best adapted to the demands of astral determination. The only ones who can penetrate this mystery, however, are the philosophers who are adept in the allegorical exegesis of religious texts, whereas the masses are obligated to observe the letter of the law. Judah's philosophy is

in many ways similar to the Neoplatonic speculations adopted by the Islamic Ismā'īliyya in constructing their theology, but no precise historical connection can be established between them. His views on astral determinism are not alien to the Jewish thought of the Middle Ages (particularly that of Abraham \*Ibn Ezra and certain Averroists), but they are brought to conclusions which no one else had perhaps dared to formulate with such boldness. On the other hand, the deductions which Judah drew from the unknowability of God are similar to the Kabbalah. In fact, the author was familiar with the Kabbalah and referred to it; although, besides the *Sefer Yeẓirah*, he cites only the *Bahir* and the *Razi'el*. It has been possible to establish that he availed himself of the kabbalists of \*Gerona (\*Azriel, Jacob b. Sheshet \*Gerondi, and \*Naḥmanides), and even of the Zohar. Nevertheless, he did not consider the teachings of the Kabbalah superior to those of philosophy, but rather identified the Kabbalah with philosophy. More precisely, he regarded the Kabbalah as a particular symbolic expression of God's unknowability and of astral determinism. It appears that Judah had some influence on subsequent Jewish thought, especially on Samuel \*Ibn Motot and Joseph b. Abraham \*Ibn Waqar.

[Georges Vajda]

**MALKHI, EZRA BEN RAPHAEL MORDECAI** (d. 1768), Safed talmudist and emissary. Ezra was the son of a well-known physician and scholar in Jerusalem, who had emigrated from Italy. His brother, Moses, became head of the Safed community and he was a brother-in-law of \*Hezekiah da Silva and Moses \*Ḥagiz. In 1749–50 Ezra went to Turkey and the Balkans as an emissary of Safed. While in Salonika he published his *Malkhi ba-Kodesh* (Salonika, 1749), laws for the night of Passover, and a commentary on the *Haggadah*, together with some halakhic novellae. He appended a note apologizing for the many errors in the work because he could not stay in the town during the printing, but was again in Salonika in 1750 when he had halakhic discussions with Joseph Samuel Modigliano. Owing to the bad economic situation in Safed, Ezra did not return there on the completion of his mission, and was appointed rabbi of Rhodes, where he remained for the rest of his life. In 1752 his signature appears on the *takkanot* of the community. His other books are *Shemen ha-Ma'or* (Salonika, 1755), on the novellae of \*Zerahiah ha-Levi and \*Naḥmanides on *Bava Mezia*; *Ein Mishpat* (Constantinople, 1770), responsa, many of which were written during his mission, published by his disciple Raphael Jacob de Mayo; and *Einat Mayim* (Salonika, 1811), exposition and novellae on various tractates of the Talmud.

**BIBLIOGRAPHY:** Yaari, Sheluḥei, 438–40, 884.

[Avraham Yaari]

**MALKHI, MOSES** (b. Ezra?; mid-18<sup>th</sup> century), emissary of Safed, Malkhi had the distinction of being the first emissary of Erez Israel to visit the New World. He was in New York in the summer of 1759 for four and a half months, and it is assumed that he remained there at the request of the members of the Sephardi community “Shearith Israel” who had no rabbi, in order to arrange their religious affairs. In the account book of that community it states that they gave the emissary 18 pounds sterling for 18 week's accommodation and for provisions and traveling expenses to Newport, Rhode Island, which was then the wealthiest Jewish community in America. There he met the Christian theologian Ezra \*Stiles who was greatly interested in the emissary from Erez Israel. Stiles relates that Malkhi was born and brought up in Safed, and he sent a letter in Latin through him to one of the heads of the Greek Church in Erez Israel requesting exact information on the geography of the country and its inhabitants which he needed for his research on the \*Ten Tribes. This Malkhi must be distinguished from his namesake, Moses (b. Raphael Mordecai \*Malkhi). He may have been the son of Ezra \*Malkhi.

**BIBLIOGRAPHY:** Yaari, Sheluḥei, 446; D. de Sola Pool, in: *Brandeis Avukah Annual* (1932), 356–7; G.A. Kohut, *Ezra Stiles and the Jews* (1902).

[Avraham Yaari]

**MALKHI, MOSES BEN RAPHAEL MORDECAI** (d. 1747), head of the Safed community in the first half of the 18<sup>th</sup> century. Moses was a brother of Ezra \*Malkhi. He was head of the Jewish community of Safed for many years, and as such his signature appears first on the letters of appointment of various Safed emissaries. Malkhi was one of the intermediaries between Sheikh Zāhir al-Omar and Ḥayyim Abulafia for the renewal of the Jewish community in Tiberias in 1740. He died in Acre and was buried in Kafr-Yasif. In the letter of the community of Safed reestablishing the Jewish community of Kafr-Yasif written in Elul of that year, the tomb of “the distinguished rabbi Moses Malkhi of blessed memory” and that of Moses Ḥayyim Luzzato, who died that year in the plague in Acre and was buried in Kafr-Yasif, are listed together with those of *tannaim* and *amoraim*. It may be conjectured that Malkhi also died in that plague during a visit to Acre in connection with the affairs of the Safed community.

[Avraham Yaari]

**MALKHUYOT** (Heb. מַלְכֻיּוֹת; verses describing God's “sovereignty”), name of the first part of the central section of the \*Musaf prayer for \*Rosh Ha-Shanah. It consists of 10 verses, four from the Pentateuch, three from Psalms, and three from the Prophets; all of them proclaim God as King and anticipate the realization of His kingdom on earth. According to the Talmud (RH 32a), the number ten symbolized the ten praises sung by David (Ps. 150), or the Ten Commandments, or the “ten sayings” by which God created the world (cf. Avot 5:1). The *Malkhuyot* prayer and two similar sections, \*Zikhronot and

\*Shofarot, from the *Teki'ata de-Vei Rav*. At the end of each section during the Reader's repetition (and in some rites during the congregation's silent reading), the *shofar* is sounded. The recital of *Malkhuyot-Zikhronot-Shofarot* verses dates back to mishnaic times (cf. RH 4:5, 6) and was, most probably, part of the prayer service in the Temple. The Talmud, however, does not specify which verses had to be chosen for this purpose (RH 32a–b). The present selection and order of the verses are ascribed to the Babylonian scholar \*Rav (175–247 C.E.), as are the introductory and concluding passages.

**MALKIEL, THERESA SERBER** (1874–1949), U.S. labor and women's rights activist and socialist. Malkiel was born in Bar, Russia, in what is today western Ukraine. The daughter of a well-to-do Jewish family that immigrated to New York City in 1891, she was well educated and literate in German and Russian. Supporting herself with work in the garment industry, she was a member of the Russian Workingmen's Club and later a founder of the Infant Cloakmakers Union, serving as its president. She was active in various labor organizations in New York in the 1890s, including the Socialist Labor Party (SLP) and its Socialist Trade and Labor Alliance. In 1901, tired of the factionalism of the SLP, she joined the Socialist Party of America, which became her activist home for the next two decades.

Theresa married fellow socialist (and lawyer) Leon Malkiel in 1900; their daughter was born in 1903. Theresa Malkiel gave up wage work after the family moved to Yonkers, north of New York City, but remained committed to working women and socialist politics. She took a particularly active role as an advocate for women within the Socialist Party and in 1909 was elected to the Women's National Committee (WNC), the body that oversaw the Women's Department within the party. On the WNC, she became an advocate for the establishment of International Women's Day as an annual holiday to commemorate women and promote female suffrage. With her husband, she was a founder of the socialist newspaper the *New York Call*.

Malkiel also became a member of the Women's Trade Union League, a strong advocate of female suffrage, and an indefatigable campaigner for women's rights, within the Socialist Party and in the wider society. She was a strong supporter of the great Shirtwaist Strike in New York City in 1909–10, gave speeches at several major rallies, reported on the strike in the *New York Call*, and wrote a fictional account that appeared shortly after the strike's conclusion, *The Diary of a Shirtwaist Striker* (1910). In 1914 Malkiel led the Socialist Suffrage Campaign in New York, organizing meetings, writing pamphlets, and publishing a regular column in the *Jewish Daily Forward*. Two years later, Malkiel joined a national suffrage tour sponsored by the Socialist Party. The success of female suffrage with the passage of the Nineteenth Amendment led Malkiel to run an unsuccessful campaign for the New York State Assem-

bly as a Socialist candidate. For the remainder of her life she was active in adult education, founding the Brooklyn Adult Students Association. In 1932 she organized a summer camp for the education and naturalization of immigrant women at which she worked until her death.

Miller, "From Sweatshop Worker to Labor Leader: Theresa Malkiel, a Case Study," in: *American Jewish History*, 68 (1977), 189–205; E. Taitz, "Malkiel, Theresa Serber," in: P.E. Hyman and D. Dash Moore (eds.), *Jewish Women in America*, 2 (1997), 885–86.

[Thomas Dublin (2<sup>nd</sup> ed.)]

**MALKIEL, YAKOV** (1914–1998), U.S. philologist. Born in Kiev, Russia, educated in Berlin, Malkiel immigrated to the United States in 1940. From 1942 he was a faculty member at the University of California (Berkeley) and later professor of linguistics and Romance philology. In 1947 he became founder and editor-in-chief of the journal *Romance Philology*. He was president of the Linguistic Society of America in 1965. He was author of numerous articles and monographs dealing with historical linguistics, Hispanic lexicology, and the theory of etymology and lexicography, and he constantly attempted to mediate between general linguistics and Romance philology.

Among his works are *Studies in the Reconstruction of Hispano-Latin Word Families* (1954), *Essays on Linguistic Themes* (1968), *Yakov Malkiel: A Tentative Autobiography* (1988), and *Etymology* (1993). He edited *Directions for Historical Linguistics: A Symposium* (1968), with Winfred P. Lehmann.

[Jonas C. Greenfield / Ruth Beloff (2<sup>nd</sup> ed.)]

**MALLER, JULIUS BERNARD** (1901–1959), U.S. educationist and sociologist. Born in Vobolniki, Lithuania, Maller went to the U.S. in 1921. Having received both a secular and religious higher education, Maller's professional life was divided between teaching posts at Howard University, Washington, D.C., and Yeshiva University (1949–59). He was also active in Jewish organizations. Maller devised (1929) the "Guess Who" technique, a sociometric test for use with children. His personality tests, known as the "Maller Personality Sketches" (1936) and the "Maller Character Sketches" consisted of cards with descriptions of personality or character traits, to be sorted into groups. He demonstrated that intelligence test scores at the fifth grade level were closely related to socioeconomic levels. A close relationship was shown between delinquency, density of population, and economic level. His chapter on personality tests in *Personality and the Behavior Disorders* (1944) was adopted as a standard treatment. Later he became a consultant to various government agencies in addition to his interests in Jewish education, his work with Jewish service organizations and his teaching activities. His most important publications were: *Cooperation and competition: an experimental study of motivation* (1929); *Studies in the nature of character: volume 2; Studies in service and self-control* (with Hartshorne and May, 1929); and *Testing the Knowledge of Jewish History*

(1932). He was also a frequent contributor to Jewish educational periodicals.

[Menachem M. Brayer]

**MALLOW**, plant of the genus *Malva*. Six species are found in Israel, the most common, found in almost every part of the country, being the *Malva nicaensis*, *Malva silvestris*, and *Malva parviflora*. During the siege of Jerusalem in 1948 the citizens of Jerusalem picked them and prepared from them a variety of dishes. The mallow is popularly known by its Arabic name *khubeiza* which means “small loaf,” because its edible seeds are flat and round like Arab bread (*pittah*). Job characterizes “the juice of *hallamut*” (“mallow”) as insipid, so that even in his distress “my soul refuses to touch them; they are as the sickness of my flesh” (Job 6:6). Despite this, the name *hallamut* or *helmit* in the Mishnah appears to be connected with *halam* meaning “healthy.” It may be, however, the same as *lahmit*, through transposition of letters, which has the same connotation as its Arabic name “small bread.” The Mishnah refers to *helmit* as a vegetable (Kil. 1:8) and the *Arukh* of Nathan b. Jehiel identifies it with *Malva* (mallow). The leaves of some mallows are sensitive to light, and Rashi in his commentary on the vegetable *adani* (Shab. 35b) notes: “It is a vegetable called *malva* whose leaves turn to the sun. In the morning they incline eastward, at midday they are upright, and in the evening they incline westward.” The identification of the *hallamut* of the Bible with mallow is not certain, and it has been identified with many other plants. The JPS renders *hallamut* as “mallow” (AV: “white of egg”), while the AV renders *malu'ah* in Job 30:4 as “mallow” (JPS correctly as “saltwort”; see \*Orach).

[Jehuda Feliks]

**MALMÖ**, port in S. Sweden. The Jewish community, the third largest in Sweden, was founded by Polish Jews in 1871, when it numbered 250. In 1900 the congregation appointed its first rabbi, Dr Josef Wohlstein, and in 1903 the first synagogue was built. Most of Malmö's original Jews came from Germany and during the first two decades of the 20<sup>th</sup> century, many Jewish immigrants arrived from Poland, Russia, the Ukraine, and the Baltic countries. Many of these new arrivals settled in the nearby town of Lund, creating a separate but related Jewish community there. The closing stages of World War II saw the large-scale rescue of Danish Jews from German-occupied Denmark to Sweden by sea and at the end of the war, many thousands of survivors of Nazi concentration camps were brought to Sweden via Malmö. Many of these survivors, however, were in such poor health that they died on reaching Swedish soil, which explains the large number of Jewish “refugee graves” in Malmö. A monument to commemorate the victims of the Holocaust was later created at the cemetery by Willy Gordon, a well-known Swedish-Jewish artist. Over the

decades the community grew considerably, reaching a peak of around 1,700 in the late 1960s but subsequently declining to a 2004 figure of 1,200 despite the influx of immigrants from the former Soviet bloc, in particular from Russia, the Ukraine, Estonia, and even Kirgistan.

Haquinus Stridzberg's *Kohen Gadol sive Pontifex-Maximus Ebraeorum* was printed in Malmö in 1689.

**MÁLNAI, BÉLA** (1878–1941), Hungarian architect. After a period in which his work leaned towards Secessionism, he returned to historicizing neo-styles. His main work was the Czech-Hungarian Industrial Bank.

[Eva Kondor (2<sup>nd</sup> ed.)]

**MALOVANY, JOSEPH** (1941– ). Born in Tel Aviv, Malovany served as cantor at Tel Aviv's Bilu synagogue, cantor of the Israeli army, and then from 1963 to 1968 *hazzan* of the Yeoville synagogue, Johannesburg, and from 1968 to 1973 of the Edgware Synagogue, London. In 1973 he was appointed chief cantor to the Ateret Zevi Congregation of Fifth Avenue, New York. Malovany held music diplomas from the Tel Aviv Academy of Music and Great Britain's Royal Academy and Trinity College of Music. He was also honorary president of the Cantorial Council of America and past chairman of the board of the American Society of Jewish Music. He held the academic positions of distinguished professor of liturgical music at Yeshiva University and dean of the JDC Moscow Academy of Jewish Music. Malovany possessed a brilliant spinto tenor voice and was a much sought-after artist with orchestras and choirs worldwide. He was the possessor of an extensive discography of cantorial and contemporary Jewish music. On January 26, 2004, he received the honor of being knighted as Commander of the Legion of Honor by the president of Poland in appreciation of his musical contribution to the international and Polish communities. He was the first Jewish cantor to receive this award from Poland.

[Akiva Zimmerman / Raymond Goldstein (2<sup>nd</sup> ed.)]

**MALSIN, LANE BRYANT** (1879–1951), U.S. fashion innovator and entrepreneur. A gifted seamstress, Lena Himmelsstein immigrated alone to New York from Lithuania at 16. Not quite 20, she married Russian immigrant jeweler David Bryant, who died a few months after their son, Raphael, was born in 1900. Bryant supported herself and her son by sewing lingerie and other apparel from her apartment; in 1904 she applied for a bank loan to open a shop. From then on her name became Lane Bryant, either because a bank officer misspelled her name on a business account application or she signed her name incorrectly on that application and was too embarrassed to correct the mistake. Bryant pioneered a special line of maternity clothing which became increasingly popular. After

her 1909 marriage to Albert Malsin, who became her business partner, the couple started the first mail order catalog for maternity ware. By 1917 mail order revenues netted more than a million dollars and by 1950 their sales made them the sixth largest mail order retailer in the U.S. Lane Bryant's other major innovation was ready-made clothes for stout-figured women, and this clothing line was also a great success. Bryant opened the first of many branch retail stores in Chicago in 1915. When her husband died in 1923, Lane Bryant, Inc. was grossing \$5,000,000 a year.

Lane Bryant was committed to good customer service and employee benefits, offering her workers decent wages, profit sharing, group life insurance plans, and medical expenses. When the company went public she provided one-fourth of the stock for employee investment. An exemplar of corporate philanthropy, Bryant teamed up with the American Red Cross and provided any Lane Bryant customer with a wardrobe to replace clothing destroyed in a disaster; she was also a supporter of the Hebrew Immigrant Aid Society, New York Federation of Jewish Philanthropies, and other charities. She was survived by three sons, who continued to be involved with the business after her death, a daughter, and 12 grandchildren.

[Sara Alpern (2<sup>nd</sup> ed.)]

**MALTA**, Mediterranean island. That Jews were present there in Roman times is attested by the discovery of a catacomb with the symbol of the \**menorah*. There must have been a community under Arab rule (870–1090) and in 1240 there were 25 Jewish families there and eight in the neighboring island of Gozo. During the Middle Ages the two islands were part of the Kingdom of Sicily, and a great deal is known of their history from materials preserved in the Sicilian archives. The communities came to an end with the expulsion of the Jews from Sicily in 1492. From 1530 to 1798 the islands were ruled by the Knights of St. John, who in the course of their forays against the Muslims captured and brought back to Malta large numbers of Jewish prisoners. The Societies for Redeeming the \*Captives (Hevrot Pidyon Shevuyim) in Venice and elsewhere were mainly engaged in raising funds for ransoming the Jewish prisoners in Malta, where the Venetian society kept a permanent Christian agent. Under the latter's auspices, the Jewish slaves were able to maintain a synagogue for worship, and there was also a cemetery. A regular community, mainly deriving from North Africa, began to develop during the last days of the rule of the Knights and under British rule (from 1800). In 1804 the \*blood libel raised against the handful of Jews was firmly suppressed by the English poet S.T. Coleridge, then colonial secretary on the island. The community remained small, numbering 16 families in 1968 and 60 Jews in the mid-1990s. A synagogue was opened in Valetta in 1984.

[Cecil Roth]

#### Relations with Israel

Israel established friendly relations and cooperation with Malta even before the latter achieved independence in 1964.

In the late 1950s the leader of the Maltese Labor Party, Dom Mintoff, tried to mediate between Israel and Egypt, albeit unsuccessfully. In 1966 an Israel embassy was established with a resident chargé d'affaires, while Israel's ambassador in Rome also serves as nonresident ambassador to Malta. Israel experts assisted in the development of dairy, poultry, and afforestation projects. Trade with Malta has been modest.

**BIBLIOGRAPHY:** C. Roth, *The Jews of Malta* (1931; = off-print from *JHSET*, 12 (1928–31), 187–251); S. Assaf, *Be-Oholei Yaakov* (1943), 107–15; Roth, *Mag Bibl*, 113; idem, *Personalities and Events* (1961), 112–35.

**MALTER, HENRY** (1864–1925), rabbi and scholar of medieval Jewish philosophy. Malter was born in the village of Bonze, Galicia. His father was his teacher and provided him with the fundamentals of a rabbinic education. Hardly past childhood, Malter became interested in secular knowledge, having somehow obtained access to *Ha-Maggid*, a Hebrew periodical with a Haskalah viewpoint. At the age of 16 in search of broader knowledge he journeyed to Lyck and from there to Berlin. While earning his living by teaching Hebrew, he prepared himself for entering the university and at the same time continued his Jewish education at the Veitel-Heine-Ephraimische Lehranstalt. There he attracted the attention, and became the favorite pupil, of Moritz \*Steinschneider, who encouraged his interest in medieval Jewish bibliography and whose book in that field, *Juedische Literatur* (1850), Malter translated into Hebrew as *Sifrut Yisrael* (1897). With his work on the influence of the 11<sup>th</sup>-century Muslim philosopher Al-Ghazzali on Jewish thought, *Die Abhandlung des Abu Hamid al-Gazzali* (1894), Malter earned a doctorate in philosophy from the University of Heidelberg. In 1898 he received a rabbinical diploma from the Lehranstalt fuer die Wissenschaft des Judentums. The newly founded library of the Berlin Jewish community then invited him to become its librarian. He held this post for a year. Malter went to the United States in 1900 at the invitation of Hebrew Union College in Cincinnati to teach medieval Jewish philosophy. He also taught Bible and rabbinic law and literature, and at the same time served as rabbi at the Shearith Israel congregation in Cincinnati. However, he disagreed with the theological attitudes of American Reform Judaism and was, therefore, in conflict with Kaufmann \*Kohler, then president of Hebrew Union College; consequently, he left the college in 1907. Thereafter, in New York he collaborated with J.D. Eisenstein on the Hebrew encyclopedia *Ozar Yisrael*, contributing articles on Jewish literature, among others. With the opening of Dropsie College in 1909, Malter assumed the chair of talmudic literature which he occupied to the end of his life. He was a stimulating teacher in Talmud and particularly in medieval philosophy and ethics. Painstaking in his scholarship, Malter published a number of important essays in the *Jewish Quarterly Review* and elsewhere. His chief published work is *Saadia Gaon, His Life and Works* (1921). The study is based on a meticulous review of every fragment, including *genizah* material, by and about the head of the Sura academy in the tenth

century. It is a model of a biography of a scholar by a scholar: it deals with \*Saadiyah's eventful life, analyzes his works, and in a bibliographical section shows his influence by citing the numerous references to him in the course of the centuries. Two other books, both published posthumously, deal with the talmudic treatise *Ta'anit: Treatise Ta'anit of the Babylonian Talmud* (1928), critically edited on the basis of manuscripts and old editions, and *Massekhet Ta'anit min Talmud Bavli* (1930), a critical edition of the text with notes and explanations on the basis of 24 manuscripts. With Alexander \*Marx, Malter edited the *Gesammelte Schriften* of Moritz Steinschneider, of which only the first volume appeared (1925).

[Solomon Grayzel]

**MALTIN, LEONARD** (1950– ), U.S. film critic-historian. Maltin was born in New York to lawyer and immigration judge Aaron I. Maltin and singer Jacqueline Martin (née Gould). As a 15-year-old high school student in Teaneck, N.J., Maltin took over as the editor of the film magazine *Film Fan Monthly*. Circulation of the magazine increased dramatically under the young film aficionado, and at age 18 he was contracted to produce the annual paperback reference guide *TV Movies*, now released under the title *Leonard Matlin's Movie and Video Guide*. Maltin graduated from New York University in 1972 with a bachelor's degree in journalism. He joined the faculty at New School for Social Research in 1973, leaving the magazine in 1975. He joined the television entertainment magazine show *Entertainment Tonight* as a correspondent in 1982. He also hosted a daily radio feature on home videos, broadcast in Los Angeles on news station KNX. In 1995 and 1996, he served as president of the Los Angeles Film Critics Association. Maltin served as host, consultant, and writer for a variety of cable television programs and film retrospectives; as an adjunct professor at the University of Southern California's School of Cinema and Television from 1998; and adviser to the National Film Preservation Board from 1997. Other books by Maltin include *The Disney Films* (2000<sup>4</sup>), *Leonard Maltin's Family Film Guide* (1999), *The Great American Broadcast: A Celebration of Radio's Golden Age* (1997), *Leonard Maltin's Movie Encyclopedia* (1995), *The Little Rascals: The Life and Times of Our Gang* (1992), *Of Mice and Magic: A History of American Animated Cartoons* (1987), *Selected Short Subjects* (1983), *The Great Movie Comedians* (1978) and *The Art of the Cinematographer* (1978).

[Adam Wills (2<sup>nd</sup> ed.)]

**MALTZ, ALBERT** (1908–1985), U.S. playwright and novelist. Maltz, who was born in Brooklyn, wrote his first play in 1931 in collaboration with George Sklar. Entitled *Merry-Go-Round*, it was an exposé of corrupt Tammany politics in New York City. Maltz became associated with the left-wing Theater

Union for which he wrote an antiwar drama, *Peace on Earth* (with George Sklar, 1934), and *Black Pit* (1935). From the late 1930s he began writing novels, notably *The Happiest Man on Earth* (1938); *The Underground Stream* (1940); *The Cross and the Arrow* (1944), which was made into a motion picture; and *The Journey of Simon McKeever* (1949). He also published essays and the scenarios for films including *This Gun for Hire* (1942), *Destination, Tokyo* (1943), and *Naked City* (1948). In 1947, during the HUAC investigation of the motion picture industry, Maltz refused to “name names” and was indicted with several other Hollywood writers. He spent nine months in prison. After his release in 1951 he settled in Mexico. A later novel was *A Long Day in a Short Life* (1957). His *Afternoon in the Jungle: The Selected Short Stories of Albert Maltz* was published in 1970.

[Milton Henry Hindus]

**MALVANO, GIACOMO** (1841–1922), Italian diplomat. Born in Turin, he was secretary general of the foreign ministry from 1876 to 1885. Malvano was minister to Tokyo from 1887 to 1889 when he resumed the post of secretary general of the foreign office, which he held until 1907. Malvano was a senator from 1896 and later was appointed to the Council of State, eventually becoming its president. He was also president of the Italian Geographic Society for many years.

An opponent of Zionism, Malvano refused to assist Theodor Herzl on his visit to Rome (Jan. 26, 1904) on the ground that he was only “a modest civil servant.” Herzl ironically refers to him, “He is a clerk in the wholesale firm of ‘Italy, Inc.’”

[Giorgio Romano]

**MALZBERG, BENJAMIN** (1893–1975), U.S. psychiatric statistician and epidemiologist. Malzberg was born in New York City and from 1923 to 1928 served as statistician to the Department of Welfare of New York State. After serving on the Committee on State Hospital Problems, he moved to the New York State Department of Mental Hygiene in 1940, becoming the director of its statistical bureau in 1944, and its consultant in 1956. Malzberg performed numerous studies of a statistical and epidemiological nature. Among his early researches were “Mortality among Patients with Mental Disease” (1934); “Hereditary and Environmental Factors in Dementia Praecox and Manic-Depressive Psychoses” (with associates, 1938); “Social and Biological Aspects of Mental Disease” (1946). *Migration and Mental Disease* appeared in 1956, as did his important study *Mental Disease among Jews in New York State* (1960). *Mental Disease among Jews in Canada* appeared in 1963 and *Ethnic Variations in Mental Disease in New York State* in 1966. His studies also covered the mental health of African-Americans and alcoholic psychoses. In his studies of mental illness among Jews, Malzberg demonstrated a higher incidence of psychotic depression among Jews than among white non-Jews (as measured by hospital admissions). His research confirmed

the general knowledge that the incidence of alcoholism was very low among Jews.

[Louis Miller]

**MAMET, DAVID** (1947– ), U.S. playwright. Born in Chicago, Mamet received a B.A. from Goddard College in 1969 and taught playwriting there for a brief period. He started his theatrical career as an actor and director before his own plays were ever produced. He began writing for the stage in 1971 with *The Duck Variations*. In 1973, Mamet founded, along with three friends, his own theater company in Chicago (St. Nicholas) and remained its artistic director through 1975.

A primary theme running throughout his work is the question of whether moral people can exist in an excessively immoral world. The environment he depicts is often devoid of any emotion and spirituality, and morality, if it exists, is on the decline. The strong male characters for which Mamet is known find it difficult to survive let alone thrive in such a world. In fact, the characters that do thrive are typically devoid of morality as well. His dialogue is often a stylized, almost poetic, version of the streetwise speech found in noir films and novels.

Mamet's plays include *Sexual Perversity in Chicago* (1973), *Reunion* (1973), *Squirrels* (1974), *American Buffalo* (1976), *A Life in the Theater* (1976), *The Water Engine* (1976), *The Woods* (1977), *Lone Canoe* (1978), *Prairie du Chien* (1978), *Lakeboat* (1980), *Donny March* (1981), *Edmond* (1982), *The Disappearance of the Jews* (1983), *Glengarry Glen Ross* (1984), and *Speed the Plow* (1988), which received the Tony Award for Best Play of the Year, *Oleanna* (1993), *The Cryptogram* (1995), and *The Old Neighborhood: Three Plays* (1998).

Mamet received the New York Drama Critics Circle Award for *American Buffalo* (1977) and *Glengarry Glen Ross* (1984), for which he was also the recipient of the Pulitzer Prize for drama. The play depicts desperate salesmen and the extreme measures, from ethically questionable to positively illegal, to which they resort to sell undesirable units of real estate. Mamet has also written screenplays, among them *The Postman Always Rings Twice* (1979), *The Verdict* (1980), for which he received an Academy Award nomination for Best Screenplay Adaptation, *The Untouchables* (1987), *House of Games* (1987, also directed), *Things Change* (1988, also directed), *Glengarry Glen Ross* (1992, an adaptation of his play), *Hoffa* (1992), *The Spanish Prisoner* (1997, also directed), *Wag the Dog* (1997, adapted from Larry Beinhart's novel *American Hero*), *State and Main* (2000, also directed), and *The Heist* (2001, also directed).

The prolific author has also written novels, including *The Old Religion: A Novel* (1997), *Bar Mitzvah* (1999), and *Wilson: A Consideration of the Sources* (2001); children's books including *Passover* (1995) and *The Duck and the Goat* (1996); and nonfiction including *Writing in Restaurants* (1987), *Some Freaks* (1989), *The Cabin: Reminiscence and Diversions* (1992), and *Three Uses for a Knife: On the Nature and Purpose of Drama* (1998).

**ADD. BIBLIOGRAPHY:** C. Bigsby (ed.), *The Cambridge Companion to David Mamet* (2004); L. Kane, *Weasels and Wisemen: Ethics and Ethnicity in the Work of David Mamet* (1999).

**MAMISTABOLOB, ABRAHAM**, Georgian poet, born in the village of Staliniri, formerly Tskhinvali. A collection of his poems published in 1957 includes two poems based on Jewish themes, "Wedding in the Jewish Quarter" and "The Family."

[Mordkhai Neishtat]

**MAMLUKS** (lit. slaves), a military class which ruled \*Egypt from 1250 to 1517 and \*Syria (including \*Palestine) from 1260 to 1516. Under the Mamluk sultans in Egypt and Syria, local Jews often suffered at the hands of government officials and Muslim zealots, although at times the sultan and his representatives were also a restraining influence on fanatical mobs or leaders. The Mamluks were one of the most important dynasties in the history of medieval \*Islam, gaining fame for stopping the \*Mongol advance into Syria and for eradicating the Crusader presence in Palestine and elsewhere along the Syrian coast. They were great patrons of culture, and many buildings with the distinctive building style of the period are scattered throughout Israel, especially Jerusalem. Scholars divide the Mamluk era into almost two equal sub-periods: the Bahri period (1250–1382), when the dominant group was mainly composed of Qipchaq Turks; and, the Circassian period (1382–1517) when Mamluks from the northern Caucasus region were predominant, although Turks continued to play an important role. The latter period is often still mistakenly called the Burji period. Most Mamluk sultans were themselves Mamluks of slave origin, although some were the sons of sultans.

Military slavery, primarily of pagan Turks brought as youngsters from the Eurasian Steppe, had existed in the heart of the Muslim world since the ninth century. Later referred to as Mamluks (pl. *mamalik*), these soldiers of slave origin – particularly those who became officers – played an important role in the military and political life of many Muslim states. Turks were particularly favored since they combined hardiness, horsemanship, and archery which they had begun to learn in their Central Asian milieu. These nascent skills were reinforced by years of training in military schools in which the young Mamluks were enrolled after their conversion to Islam. Generally the sons of Mamluks were excluded from this military formation: Muslim rulers had learned that the sons of Mamuks had neither the hardiness nor loyalty of their fathers and therefore there was a continual import of young Mamluks to the centers of the Muslim world. In other words, the Mamluk system was a one-generational, continually replicating military elite. On the whole, Mamluks fought in organized units of mounted archers, and were generally loyal to their patrons, be they sultans or senior officers, although there were some notable exceptions.

Mamluks were certainly important in the armies of the \*Ayyubid sultans and princes, and, since the time of the dy-

nasty's founder Saladin (d. 1193), played a key role in the war against the Crusaders. In 1250, they overthrew their masters in Egypt; ten years later, in the aftermath of their victory over the Mongols at Ayn Jalut in northern Palestine, they gained control of all of Syria up to the Euphrates River, and embarked on a 60-year war against the Mongols, whom they successfully kept at bay. The Sultan Baybars I (1260–77) was the real architect of Mamluk power, expanding and strengthening the army, reforming the judicial system and generally bringing stability to the subjects of the state, in spite of his many wars against the Mongols and Crusaders. The latter culminated in the conquest of Acre in 1291. The Mamluk Sultanate was a relatively centralized state, governed from \*Cairo, although most of the military activities were in Syria. Although the Mamluk regime became increasingly oppressive and rapacious over the decades, it was never seriously threatened by internal opposition. There were, however, many cases of urban disorder and riots, often over food shortages or other economic matters. The position of the \*dhimmīs (“protected people,” i.e. Christians and Jews) was also a source of occasional disorder and dissatisfaction, not the least because of the many Christians (and some Jews) still employed in various government offices, some of them holding relatively high positions. Without a doubt, the Mamluk period saw an increase in anti-*dhimmī* feeling and the consequent decline of the position of these peoples. This appears to be a result of several factors: the militant rhetoric of the Mamluks themselves, engaged in holy war (*jihād*) for decades; the culmination of almost two centuries of war against the Crusaders; the apparent perception that the local Christians, while Arabic speakers, were secretly sympathetic to the enemies of the state, be they Crusaders or Mongols; the declining economic situation, which began to be felt from the mid-14<sup>th</sup> century onward, particularly after the outbreak of the Black Plague in the region in 1349; and perhaps the competition over government jobs in which members of the Muslim learned class had a particular interest. It should be noted that the lion's share of anti-*dhimmī* feelings were directed at the Christians of Egypt and Syria, a much larger group than the Jews and better represented in the government bureaucracy. The impression gained is that the acts and activities against the Jews were often side effects of steps taken against their Christian “colleagues.” It appears that, during the Mamluk period, there was a long-term islamization process among the Sultanate's Christian population (certainly among the Copts of Egypt). It is difficult to gauge the exact long-term impact of the Mamluk period on the size of the Jewish community, but there was some demographic decline caused by conversions and perhaps emigration, although apparently not to the same degree as among the Christians.

The paucity of the Cairo \**Genizah* documents from the Mamluk period indicates the great change in Egyptian Jewry; whereas these archives of Cairo Jewry contain many documents from the 11<sup>th</sup> and 12<sup>th</sup> centuries, there are relatively few preserved from the subsequent period. Perhaps rather than indicating only the decline of the Jewish community in Old

Cairo, it may reflect the weakening of Egypt's participation in the Mediterranean trade, which was the economic basis of this particular Jewish community. In any event, the numerous Arab chronicles and other sources for the Mamluk period contain much information on the Jews. From these and various Jewish sources we can reconstruct a picture of the main developments of the Jewish community in the main provinces of the Mamluk Sultanate. The difficulties experienced by the Jews were not only with the Muslim majority and authorities, but were also related to tensions within the community and “the depressed condition of community life” (M.R. Cohen). On the whole, we can say that during the Bah̄rī period there was a series of acute outbreaks of anti-*dhimmī* activity and measures, which also affected the Jewish population of the Sultanate. In the Circassian period, the anti-*dhimmī* (and therefore anti-Jewish) measures were generally less sweeping, but the Jews (and the Christians) suffered from both chronic and temporary harassments. The terms of the so-called Covenant of \*Omar are mentioned time and again during the period as the model which the *dhimmīs* were expected to follow, indicating perhaps that, between the anti-*dhimmī* measures enacted and mentioned in the sources, the non-Muslims lived under easier conditions. On the other hand, the repeated acts took their toll.

When Damascus was reconquered from the Mongols in 1260, there were riots against the local Christians, which spilled over to the Jews; the latter were soon curtailed when it was remembered that the Jews had not cooperated with the Mongols. Five years later the Christians in Cairo were accused of arson. Thereupon Sultan Baybars I (1260–77), who had just returned from Syria and the conquest of Caesarea and Arsuf from the Crusaders, assembled many Christians and Jews and ordered that they be burned alive, but released them on condition that they pay a heavy tribute in annual installments. These were, however, sporadic measures, which show how Jews could be caught up in what was originally a mainly anti-Christian activity. One act directed only against Jews was in \*Damascus in 1271. There the Sufi shaykh Khidr, a Rasputin-like figure who was the favorite of the sultan, attacked and expropriated the largest synagogue. However, this figure was known for his attacks on Christians too. It was mainly later that more concerted and widespread actions against the *dhimmīs* were taken, including the frequent dismissal of non-Muslim officials. One Arab chronicler, al-ʿAynī, notes that, already under Sultan Qalāwūn (1279–90), “the *dhimmīs* had been in a state of extreme humiliation and degradation.” Arab chroniclers sometimes mention only measures taken against Christians, but they state explicitly that Jews suffered during the dismissal of the officials in 1293 under Sultan al-Malik al-Ashraf Khalil (1290–93), which followed riots that broke out in Cairo in the aftermath of supposed overweening behavior by Christians. In 1301 the hatred of non-Muslims burst into severe persecution; riots occurred in several towns in Egypt and many Christians and Jews were compelled to adopt Islam, including all the Jews of Bilbeis, in Lower Egypt, accord-

ing to the Jewish-Egyptian chronicler of the Ottoman period, Joseph b. Isaac \*Sambari. All churches and synagogues in Cairo were closed; in Alexandria, houses of non-Muslims which were higher than those of their Muslim neighbors were destroyed. These were unprecedented acts. Furthermore, the government decreed that henceforth Christians must wear blue turbans; Samaritans, red; and Jews, yellow. The willingness of the Mamluk authorities in this case to countenance the anti-*dhimmī* disorders and to enact stringent sumptuary laws may have been strengthened by the embarrassing defeat at the hands of the Mongols in Syria at the end of 1299, so that this became a way of diverting attention and demonstrating to the population the Mamluk commitment to Islam. In 1309, however, under Byzantine pressure, several churches and a synagogue were reopened, so there were occasional rays of light in this difficult period. There were again riots against Christians in Egypt, in which Jews are not mentioned, except in so far as some Christians borrowed their clothes to escape the wrath of the mob. In 1354 there was another general persecution of the non-Muslims in Egypt. There were riots during which Christians and Jews were attacked in the streets, with the rioters “throwing them into bonfires if they refused to pronounce the *shahādātayn* [the Muslim profession of faith]” (D.P. Little). Jewish and Coptic leaders were forced to listen to a list of the sumptuary measures which theoretically had already been in force. Non-Muslim government officials were dismissed, even those who embraced Islam. This particular set of measures seems to have had some impact on the conversion of Copts to Islam; whether it affected the Jews in the same way is unclear.

The anti-*dhimmī* atmosphere was not only a result of riots or repeated enactments of sumptuary laws. The early Mamluk period saw the appearance of several anti-*dhimmī* polemical works, such as that by al-Ghāzī b. al-Wāsiṭī, as well as the *fatwas* (responsa) and essays by the famous, but uncompromising, scholar Ibn Taymiyya. In addition, sometime in the first century or so of Mamluk rule, a humiliating oath which Jews had to take when appearing in Muslim courts was reintroduced after a hiatus of some 500 years (the text of the oath, from al-Umarī’s *Tarif*, is found in Stillman, *Jews of Arab Lands*, 267–68).

In the second half of the 14<sup>th</sup> century restrictive laws and various vexations followed. Non-Muslim officials were dismissed in Damascus in 1356 and in 1363. At that time Jews and Christians were forbidden to ride horses and mules. They were allowed to ride donkeys only, using packsaddles and mounted so that both feet were on one side of the animal. In public baths they had to distinguish themselves by wearing little bells around the neck, and women had to wear one black and one white shoe. In 1365 Muslim zealots in Damascus searched Jewish and Christian homes for wine and poured the wine they found into the streets and rivers. Restrictive laws were again enforced; Jewish and Christian women were forbidden to frequent the public baths. Although the frequency of these ordinances proves that the discriminatory laws were

not systematically kept, it is evident that their periodic enactment humiliated Jews and Christians whose communities were sizably weakened and diminished by the end of the rule of the Bah̄rī Mamluks in 1382.

The image of the non-Muslim communities in the chronicles from the reign of the Circassian Mamluks (1381–1517) is somewhat different. With the end of the crusaders’ principalities, the non-Muslims were no longer accused of conspiring with the enemies of the sultan; hence, general persecutions of non-Muslims in Egypt and Syria were to a degree lessened. Nevertheless, the actions of the second Mamluk dynasty were in some ways even worse than its predecessor. The frustration of the population increased and the sultans were thus often inclined to enforce the restrictive laws on the *dhimmīs* or extort heavy contributions from them. Under Sultan al-Malik al-Muʿayyad Shaykh (1412–19), the authorities harassed the Jews and Christians in Egypt for drinking wine. In 1417 non-Muslims were ordered to dress simply in order that they not resemble Muslim judges. Furthermore, they were forbidden to ride swift asses. Two years later non-Muslim officials were again dismissed from government posts. Al-Malik al-Ashraf Barsbāy (1422–38) readily complied with the suggestions of Muslim zealots. Immediately after his accession he dismissed non-Muslim officials, and in 1426 he again demanded distinctive signs, ordering Jews and Christians to reduce the size of their turbans and put iron rings around their necks when going to public baths. Periodically, he sent officials to search the non-Muslim quarters of Cairo for wine. In 1442, during the reign of Sultan Jaqmaq (1438–53), the dais (referred to as a *minbar* in Arabic) of a synagogue in Cairo was destroyed when it was thought that it contained anti-Muslim blasphemies, and several other Jewish institutions as well as Christian buildings were also in danger of being damaged or ruined. This same sultan prohibited in 1448 non-Muslim physicians from treating Muslims, and in 1450 reinforced the regulations regarding their dress. In 1463 Sultan Khushqadam (1461–67) solemnly reinforced all the restrictive laws imposed on non-Muslims, with the exception of those which forbade them to be physicians and money changers. The last Mamluk sultans did not introduce new restrictions, but periodically imposed heavy tribute. Arab historians report that Qa’itbāy (1468–96) did this in 1488 and 1491 and that similar contributions were extorted from the Jews in 1500 and 1501. Yet, there was another side to late Mamluk attitudes towards the *dhimmīs* which should not be ignored, namely the occasional protection of the non-Muslims against the actions of intolerant Muslim religious figures or the mob. Thus, in 1473–75, the Mamluk authorities, eventually under the direct orders of the sultan, prevented the Muslim population of \*Jerusalem from expropriating a synagogue, although an enraged mob had destroyed it; the Jews were permitted to restore it. This episode shows that legalistic niceties were often enforced, and, even at a time of general anti-*dhimmī* feelings and measures, non-Muslims “could not be abused with impunity” (D.P. Little).

The decline of the Jews' situation in the Mamluk state in the second half of the 15<sup>th</sup> century, economically and demographically, is pointed out by the traveler Felix Fabri, as it is likewise vividly depicted in the letters of Obadiah of \*Bertinoro and his anonymous pupil, an Italian Jew who settled in Jerusalem at the end of the 15<sup>th</sup> century. In the capitals of Egypt and Syria there were still large communities, but in the other towns they had dwindled to small groups. Everywhere they were subject to legal discrimination and had to pay special taxes, e.g., on drinking wine. Their letters also stressed the general lawlessness and anarchy from which the Jews suffered (which was, however, not only the fate of the Jews, but also that of the Christians, and often the population at large). The authors of these travelogues, however, were not aware of the great change that Egyptian and Syrian Jewry had undergone under the impact of Mamluk rule. The flourishing Jewish middle class, once the mainstay of the Jewish communities, had greatly declined under the Mamluks (probably part of the general economic decline of the Sultanate, and not a result of an anti-Jewish policy) and most Jews had become poor. Social discrimination and the hostility of the upper classes caused many of the Jewish physicians and other well-situated Jews to adopt Islam. A relatively great number of biographies of these apostates appear in the writings of Arab historians of this period. On the other hand, the Mamluk sultans allowed the Jews to retain their judicial autonomy in cases of civil law, and until the end of their rule recognized the \**nagid* as head of all the Jewish communities in Egypt, Palestine, and Syria. The *negidim*, who had deputies in Jerusalem and Damascus, represented the Jews, \*Karaites, and Samaritans to the government. Until the end of the reign of the Bahri Mamluks, the post was held by the descendants of \*Maimonides. The last was David II. In the 15<sup>th</sup> century the post was filled by Jewish court physicians. The Mamluk sultans apparently did not interfere with Jewish settlement in Egypt and Syria after the expulsion from Spain in 1492. The economic decline and the overall brutalization of life in the Sultanate in the 15<sup>th</sup> century (and perhaps before) weakened the community and contributed to a worsening of relations within it, as seen by the *Genizah* document from 1442 published by M.R. Cohen in 1984. In general, in spite of the deterioration of the community, one can still state with a great deal of certitude that the legal conditions of the Jews in the Mamluk Sultanate were still superior to those of their fellow Jews in most of contemporary Europe. The economic, social, and demographic condition of the Jewish communities of Syria and Egypt was to improve discernibly under the \*Ottomans, who ended Mamluk rule and gained control over these countries in 1516 and 1517, respectively.

**MAMPSIS**, city in the Negev. According to Eusebius it was situated between Hebron and Elath, one day's march from Thamara (Onom. 8:8). The Madaba Map shows it between Beersheba and Thamara and calls it Maps. Ptolemy also refers to it as Maps. It appears in the episcopal lists of Palaestina tertia. Mampsis is identified with Kurnub where excavations were conducted by A. Negev from 1966. The town, which is surrounded by a wall, consists of three hillocks. On the western side of the town are the remains of a palace including a guard room, audience hall, records room, and stairs leading to an upper story with balconies; nearby is a tower with office rooms. A complex of residential buildings extending over 1,900 sq. yds. (1,600 sq. m.) on the eastern hill included stables with mangers. Some of the rooms were decorated with frescoes; a hoard of 10,400 Roman tetradrachms was discovered there. Mampsis was apparently settled in about 50 C.E. and continued into Byzantine times; its ruins include two churches. A Nabatean and a Roman military cemetery were found nearby. The remains of several dams were found in the vicinity. New excavations conducted at the site in the 1990s revealed additional Nabatean-Roman remains, including buildings, pottery, and middens.

**MAMRAM** (or **Mamran**; מַמְרָא, מַמְרָנִי, מַמְרָנִי, מַמְרָנִי, מַמְרָנִי and at times abbreviated to מַמְרָנִי), a form of promissory note distinguished by its brevity. In Hebrew sources it is mentioned for the first time during the 12<sup>th</sup> century in the *tosafot* of \*Elhanan

b. Isaac of Dampierre to the tractate *Avodah Zarah*. There is evidence of its use in Poland from the 14<sup>th</sup> century at least, but it was only during the 16<sup>th</sup> century that it became the distinctive promissory note used by Jewish merchants in their internal trade. There are various opinions on the etymological origin of this term, the most important being: a derivation from the Hebrew word *המיר* (*hemir*, “to change”); a contracted form of the Latin *in memoriam*; and a derivation from the word *membrana*, which in medieval Latin signified a scrap of parchment. The signature of the debtor appeared on one side of the document, while, on the other, in the same place as the signature, the sum owed and the date of payment were recorded. According to the regulations of the community councils, the document had equal validity with the ordinary handwritten promissory note even though the lengthy traditional formula was absent. Since the name of the creditor was not mentioned in the *mamram*, it was payable to the person who presented it to the debtor. As a result, the *mamram* was purchased by one person from another by simple transfer without any written documentation. The brevity of the *mamram* and the possibility of its easy transfer gave it a great advantage over the ordinary bill, encouraging its popularity. It was most common in Poland, especially during the 16<sup>th</sup> century, and the trading of *mamramim* became a frequent occurrence.

Another kind of *mamram* frequently employed in Poland during the 16<sup>th</sup> century was the blank *mamram* (in Polish *membran goly*). Its principal feature was that neither the amount of the debt nor the date of payment were mentioned. The signature of the creditor appeared on one side and the other side was blank. It is evident that a document of this kind could only exist in a society where the honesty of the debtor was taken for granted. The blank *mamram* came to satisfy the demands of the commerce practiced by the Jews of Poland during that period and it was particularly suited for use at the large fairs then held in the country. The merchant did not bring large sums of cash to the fairs because of the many dangers attendant on his journey and many deals were concluded at the fairs on short notice. Thus the merchant was in need of credit during that time and the *mamram* document satisfied his requirements. Through its use merchants could borrow unlimited sums, which in turn permitted the orderly development of business. The *mamramim* thus fulfilled the functions later provided by banks. The blank *mamram* was also different in that it was signed not by the debtor but by the person providing the credit. When in need of funds, the debtor sold it and thus received the amount he required. Because the halakhic basis of the blank *mamram* was highly dubious, some eminent rabbis objected to it and invalidated it and its use. Most authorities sanctioned it, however, because “it has already become the custom in these lands to collect by it according to the regulations of the countries.” It was still in use among Polish Jews in the first half of the 19<sup>th</sup> century.

**MAMRE** (Heb. מַמְרֵא), oak grove near \*Hebron which was one of the favorite dwelling places of Abraham (Abram; Gen. 13:18); it is also the name of one of the clans of Hebron which was an ally of Abraham (14:13, 24). At Mamre, Abraham learned of the captivity of Lot and received the three angels (14:13; 18:1). It is described in Genesis 23:17 as having Machpelah “before” it; elsewhere, it is identified with Hebron (23:19; 35:27). In the time of Josephus, a tree some distance north of Hebron was assumed to be the “terebinth” of Abraham (Ant., 1:186; Wars, 4:533). In the Mishnah (Ma’as. 5:2), the site appears as Elath, one day’s journey from Jerusalem, and in the Talmud (TJ, Av. Zar. 1:4, 38d) and the Midrash (Gen. R. 47:10) as Butnah (Butnan), the site of a famous trade fair where Hadrian sold the captives of the Bar Kokhba War into slavery. Later Christian sources refer to the site as a place of prayer; Constantine built a church there (which is shown on the Madaba Map). Jews, Christians, and pagans worshiped together there until the Arab conquest. The site is now identified with Rāmat al-Khalīl, 2 mi. (3.2 km.) north of Hebron. E.A. Mader, excavating there in 1926–28, cleared a Herodian enclosure wall, some blocks of which measure 14 × 4 ft. (4.3 × 1.2 m.). At its southwest corner was a well into which pilgrims threw gifts and money. In the eastern part of the enclosure, Constantine built a basilica measuring 60 × 50 ft. (19 × 16 m.), with a double narthex, a nave, and two aisles. Pottery from the ninth and eighth centuries B.C.E. indicates that the site was inhabited under the kings of Judah.

[Michael Avi-Yonah]

**MAMZER** (Heb. מַמְזֵר), usually translated as “bastard.”

#### Definition

“If she cannot contract a legally valid marriage to this man, but can contract a legally valid marriage to others, her offspring [from the former] is a *mamzer*. Such is the case when a man has sexual relations with any of the *ervot* [“forbidden”; see \*Incest] in the Torah” (Kid. 3:12; cf. Yev. 4:13). Thus, a *mamzer* is the issue of a couple whose sexual relationship is forbidden according to the Torah and punishable by \**karet* or death. Because of this a marriage between them is void (Sh. Ar., EH 4:13), and thus, for example, the issue of a union between brother and sister or between a man and a woman validly married to another at the time is a *mamzer* (see \*Adultery; Yev. 45b; Maim., Yad, Issurei Bi’ah 15:1; Tur and *Beit Yosef*, EH 4; Sh. Ar., EH 4:13). On the other hand, in Jewish law – unlike in other systems of law – the mere fact that a child is born (or conceived) out of lawful wedlock does not make him a *mamzer* and he is not an illegitimate child, i.e., one whose status or rights are impaired. The parents of the *mamzer* are

indeed unmarried – either in fact or since they are so considered in law because of an absolute legal bar to a marriage between them – but unlike a man and a woman who, from the legal point of view, can marry each other but do not want to, the parents of the *mamzer*, owing to the said legal bar, cannot marry each other even if they want to. If one parent is non-Jewish this fact alone does not make the child a *mamzer* (see \*Marriage; Yev. 45b; Maim., Yad, Issurei Bi'ah 15:3; Tur, EH 4; Sh. Ar., EH 4:19).

### Consequences of the State of *Mamzerut*

These are twofold and relate to marriage and to personal status.

(1) Marriage. The Bible lays down: “A *mamzer* shall not enter the congregation of the Lord” (Deut. 23:3), i.e., a marriage between a *mamzer* (male or female) and a legitimate Jew or Jewess is prohibited. If such a marriage is nevertheless contracted, it is legally valid but must be dissolved by divorce (see \*Marriage, Prohibited). A marriage between two *mamzerim* is permitted (Yev. 45b; Kid. 69a; 74a; Maim., Yad., Issurei Bi'ah 15:33; Sh. Ar., EH 4:24) and so also is a marriage between a *mamzer* and a proselyte (Yev. 79b; Kid. 67a and *Rashi* thereto; 72b–73a; Maim., Yad, Issurei Bi'ah 15:7; Sh. Ar., EH 4:22).

(2) Personal status. The offspring of a *mamzer* (whether male or female) and a legitimate Jew or Jewess are also *mamzerim*, since “*mamzerim*... are forbidden and forbidden for all time, whether they are males or females” (Yev. 8:3) and the rule is that in the case of a prohibited union the offspring follows the status of the “defective” parent (Kid. 3:12; see \**Yuhasin*). On the other hand, as the offspring of a union between a Jew and a gentile takes the status of the mother, a child born of a *mamzer* and a gentile mother will be gentile and not a *mamzer*; thus after proper conversion to Judaism, he will acquire the status of a legitimate proselyte and the fact that his father was a *mamzer* will be wholly irrelevant (Kid. 67a, *Rashi*; Maim., Yad, Issurei Bi'ah 15:3; Tur and *Beit Yosef*, EH 4; Sh. Ar., EH 4:20).

Except with regard to marriage, as stated above, the personal status of a *mamzer* does not prejudice him in any way. His rights of inheritance are equal to those of any other heir (Yev. 22b; Maim., Yad, Naḥalot 1:7; Sh. Ar., ḤM 276:6). His birth releases his father's wife from the obligation of \*levirate marriage and *ḥalizah*. The *mamzer* is eligible to hold any public office, the highest (i.e., that of a king), for he remains “thy brother” and “from among thy brethren shalt thou set a king over thee” (Deut. 17:15; Tos. to Yev. 45b). Furthermore, according to the Mishnah, “a *mamzer* who is a scholar [*talmid ḥakham*] takes precedence over a high priest who is an ignominious [*am ha-arez*]” (Hor. 3:8).

### *Asufi* (“a Foundling”)

Sometimes a doubt may arise whether a child is legitimate or not and therefore he has the status of “doubtful” *mamzer*. One such case is that of a foundling, i.e., a child found abandoned in a public place when the identity of neither parent is known; in this case it is unknown whether the parents are

legitimate or *mamzerim* (Kid. 4:12; Maim., Issurei Bi'ah 15:13; Tur, EH 4; Sh. Ar., EH 4:31). If such a child is found in or near a place inhabited by both Jews and gentiles, so that it is impossible to know even if he is of wholly Jewish parentage or not, he is considered both a “doubtful” *mamzer* and a “doubtful” gentile, so that if he later marries a Jewess and then afterward she wants to marry another man, she will require a divorce because of this latter doubt (Ket. 15b; Maim., *ibid.* 15:25; Tur, EH 4; Sh. Ar., EH 4:33). If, however, such a child is found in or near an exclusively Jewish place, he is assumed to be of wholly Jewish parentage; but as the identity and hence the status of such parents (whether *mamzer* or legitimate) is unknown, he is considered a “doubtful” *mamzer* (Kid. 74a; Maim., Issurei Bi'ah 15:21; Sh. Ar., EH 4:31–36). Thus, he cannot marry either a legitimate Jewess (because he may be a *mamzer*) or a female *mamzer* (because he may in fact be legitimate). However, the suspicion of *mamzerut* only attaches to him if the circumstances in which he was found were such as to cast doubt on the status of legitimacy of his parents; for instance if it was clear that they did not care for his survival. If there is any indication at all that he was abandoned out of necessity, such as hunger or in time of war, or if there are some signs of minimal concern for his welfare and future, such as his being circumcised, clothed, or abandoned in a place (like a synagogue) where he is likely to be comparatively safe from danger or any other place where people are more likely to find and take care of him, then it is assumed that his parents are of unimpeachable status and so is he. Therefore no suspicion of *mamzerut* will be attached to him (Kid. 73b; Maim. Yad, Issurei Bi'ah 15:31; Tur, EH 4; Sh. Ar., EH 4:31).

### *Shetuki* (lit. “Undisclosed”)

The other case where the status of “doubtful” *mamzer* may arise is that of a child known to be born of an unmarried Jewish mother who either refuses to disclose the identity of the father or claims not to know it (Kid. 69a; Maim., Yad, Issurei Bi'ah 15:12). Since the father's status is unknown, the child is likely to be considered a “doubtful” *mamzer* (Kid. 74a; Maim., *ibid.*; *Arukh ha-Shulḥan*, EH 4:47). However, if the majority of the inhabitants of the district and of those who habitually visit there are Jews of unimpeachable status, it will be presumed that the father was also of such unimpeachable status and therefore no suspicion of *mamzerut* will be cast on the child (Tur, *Beit Yosef*, Bah EH 6 (at the end); Sh. Ar., EH 6:17–18; *Beit Shemu'el* 6, n. 31; but cf. Maim., Issurei Bi'ah 18:13–15; *Arukh ha-Shulḥan*, EH 4:34). The mother can always avert the suspicion of *mamzerut* being cast on her child by declaring that the father was a legitimate Jew or a gentile. In the latter case the child takes its status from the mother (i.e., he is a Jew; Kid. 74a; Maim., Yad, Issurei Bi'ah 15:12, 14; Sh. Ar., EH 4:26; *Arukh ha-Shulḥan*, EH 4:30, 31, 56).

### Karaites

Halakhic problems concerning a “doubtful” *mamzer* have arisen in connection with the \*Karaites because, while their form of *kiddushin* (*kiddushei-kesef* or *kiddushei bi'ah*) may be

valid according to Jewish law (see \*Marriage) their method of divorce does not accord with the *halakhah*, as their *get* (bill of divorce) is not in the form prescribed by the sages. Accordingly, a Karaite woman divorced by such a *get* is not properly divorced and remains a married woman (*eshet ish*) so that any child she bears to another man whom she marries on the strength of such a *get* is a *mamzer*. Since it is impossible to determine who, throughout the generations, remarried on the strength of such invalid divorce, Jewish law casts the suspicion of “doubtful” *mamzer* on all members of that community (*Beit Yosef*, EH 4 – end; *Darkhei Moshe*, EH 4, n. 14; Rema, EH 4:37; *Turei Zahav*, EH 4, n. 24; *Ba’er Heitev*, EH 4, n. 49). Some *posekim*, however, did permit marriages between Karaites and Rabbanite Jews on varying halakhic grounds and such marriages were particularly prevalent in the 11<sup>th</sup> and 12<sup>th</sup> centuries. Especially noteworthy is the permission to contract such a marriage granted by David b. Solomon ibn Abi Zimra who based his decision on the grounds that the *kiddushin* of the Karaites are also invalid according to *halakhah*, as they are deemed to have taken place without witnesses, the witnesses of the *kiddushin* being disqualified according to *halakhah* (Resp. Radbaz, nos. 73 and 796). Thus, according to him, no stigma of *mamzerut* is to be attached to a child of a woman who married, was divorced, and then married another man, all in accordance with Karaite rites only, since – in Jewish law – she is regarded as never having been married at all. On the strength of this argument and for some additional reasons arising out of the specific circumstances of the case, in 1966 a rabbinical court in the State of Israel permitted the marriage of a non-Karaite Jewess to a Karaite man by whom she had become pregnant (see also *Ozar ha-Posekim*, EH 4, n. 175).

[Ben-Zion (Benno) Schereschewsky]

### Rabbinic Efforts to Avoid Declaring Mamzer Status

The *mamzer* rule is intended to deter adults from violating the severe prohibitions against proscribed sexual relationships. The result, that the offspring of such illicit behavior bear the punishment of their parents’ act, seems to contradict a major principle of Jewish law which punishes only the sinner (see \*Punishment). The Midrash expounds on this problem (Lev. R. 32, ed. Margolis, 32:8), in its comments on the verse, “I further observed all the oppression that goes on under the sun: lo, the tears of the oppressed, and there is none to comfort them; their oppressors have power – and there is none to comfort them” (Eccl. 4:1).

The Midrash elucidates the verse as follows: “I further observed all the oppression’ – *Hanina*, the tailor, relates this verse to *mamzerim*: ‘I further observed all the oppression’ – ‘These are the *mamzerim*. ‘Lo, the tears of the oppressed’ – [of] their mothers. [Other versions: their fathers.] They transgressed, and we banish these unfortunates? This person’s father engaged in illicit sexual relations, but this person – what has he done? Of what relevance is it to him? ‘There is none to comfort them,’ but ‘their oppressors have power’ – this is the Great Sanhedrin of Israel that comes upon them with the

power of the Torah and banishes them in the name of [the verse], ‘no *mamzer* shall be admitted into the congregation of the Lord’ (Deut. 23:3). ‘There is none to comfort them’ – the Holy One, blessed be He, said: I must comfort them, for in this world there is a defect in them, but in the world to come... [they are] of pure gold.”

This Divine comfort in the world to come does nothing to alleviate the *mamzer*’s present condition. Thus, to reduce this injustice, the Sages developed a series of rules and presumptions so that even when there is only a remote possibility that a person is not a *mamzer*, they could legitimate him and avoid the stigma of *mamzerut* with its dire implications. Thus, a married woman, even if “it is rumored that she has been unfaithful to her husband, and everyone’s tongue is wagging about her – her children are not suspected of being *mamzerim*.” The explanation is the legal presumption that “most of her [the married woman’s] acts of intercourse are with her husband” (Sot. 27a; Yad, Issurei Bi’ah 15:20; Sh. Ar, EH 4:15).

The Sages established an additional presumption, that a fetus could spend up to 12 months in the uterus, to enable the attribution of a child’s paternity to its mother’s husband. Thus, if a wife has cohabited with her husband at any time within the 12-month period prior to her child’s birth, paternity is ascribed to him (Yev. 80b; Yad, *ibid.*, 15:19; Sh. Ar., EH 4:14).

Even when the mother explicitly declares that she was impregnated by someone other than her husband, her declaration is inadmissible (Sh. Ar., EH 4:29). Admittedly, in relation to a father’s declaration that he is not the father of a child, the rule according to most authorities is that his declaration is valid. This claim is called “*yakir*” – based on the verb in Deut. 21:17, “He shall acknowledge [*yakir*] the first-born, the son of the hated, by giving him a double portion,” i.e., the father recognizes that son as his firstborn. However, R. Simeon Kayyara of the geonic period in his *Halakhot Gedolot* limits the father’s authority to grant “recognition” to determination of birthright, so that in any other case, a father’s testimony rendering his son a *mamzer* is invalid: “Even if his wife is most licentious, most acts of intercourse are ascribed to the husband” (end of section 29, *Hilkhot Arayot*).

In addition, the Mishnah cites a tradition that “Eliyahu will not come [in the future] to declare the pure, impure – nor to declare the impure, pure; nor to distance those who are near or to draw near those who were distanced, but only to distance those drawn near by force and to draw near those distanced by force” (Eduyyot 8:7). R. Obadiah of Bertinoro interprets the citation as meaning that Eliyahu will only distance those who are publicly known to be tainted but were forcibly intermingled among the Jewish People, “but where there is a tainted individual in a particular family, but this is not publicly known, owing to the family having intermingled [into the Jewish community], Eliyahu will let it remain so and let the family retain its presumption of legitimacy.” This was the basis for the Rema’s ruling (Sh. Ar., EH 2:5) that if a per-

son learns that one of the progenitors of a particular family is tainted by *mamzerut*, he may not reveal this, “but rather he should allow the presumption of their legitimacy to remain intact, for all the families that have become assimilated into Israel are legitimate in the future.”

TISSUE TYPING AND THE ESTABLISHMENT OF PATERNITY. The Talmud (BB 58a) records a case where a man learns that nine of his children are *mamzerim* and only one is his real child. Before his death, the man bequeathed his property to his real child, but he did not know who the real child was. When the case was brought before R. Bena’ah, he ordered a test to determine which son, according to his characteristics, was the legitimate heir. *Sefer Hasidim* (section 232) discusses a method, considered scientific by the standards of the time for determining paternity. Rabbi Samuel Strashun (*Haggahot ha-Rashash*) comments on the talmudic source that R. Bena’ah refrained from employing the “scientific” test mentioned in *Sefer Hasidim* because by doing so he would have revealed that the other sons were *mamzerim*.

With the development of scientific means for identifying family relations by genetic testing of tissues, these principles have become more significant. Rabbinical courts have considered the validity of a scientific test that produces results that contradict juridical presumptions of Jewish law, such as the one mentioned above, that “most acts of intercourse are attributed to the husband.” Rabbi Shlomo Dikhovsky (File 866/41 PDR 13, 51) rules that one must accept tissue typing intended to establish paternity for purposes of ruling on child support payments (see “Maintenance”), but for establishing *mamzerut* one may disqualify reliance on tissue typing because it is not infallible (p. 60). The Rabbinical Court of Appeals has ruled in a number of cases that even for determining maintenance payments, tissue typing to establish paternity may not be used as an absolute criterion, and there is also a need for supporting evidence.

This question was brought before the Israeli Supreme Court (CA 548/78, *Sharon v. Levi*, 35 (1) PD 736 per Justice Menahem Elon), that ruled that in Israeli courts tissue typing for establishing paternity should be admitted as evidence. The court emphasized, though, “that tissue-typing would not, in every case, establish paternity.” Moreover, in certain instances the court may decide not to make use of this test, when the test is liable to label a minor as “tainted,” e.g., when a married woman claims that while she was married she became pregnant by someone other than her husband, and that the person by whom she became pregnant is the father of her child. If true, this statement of the married woman would result in the minor being stigmatized as a *mamzer*. In this or in similar cases involving the establishment of status, “proof provided by tissue typing is insufficient to establish paternity” (p. 748 of decision). Thus, in such cases, paternity shall be established based on the juridical presumption assumption that “most acts of intercourse are ascribed to the husband.” This ruling is based on Jewish law’s sensitivity to a

person being stigmatized and branded by *mamzer* status and the halakhic principles of making various legal presumptions to avoid such stigmatization. Further on its ruling, the court cites some of the Jewish law sources cited above upon which it based its ruling.

In another ruling (CA 1354/92, *Attorney General v. Anon.*, PD 48(1) 711, per Justice Menahem Elon), based on these considerations, the court ruled that even when both parents give their consent to tissue typing for establishing the parenthood of a minor, such a test should not be conducted if there is risk involving the minor’s best interests, inter alia raising doubts about his legitimacy, and these interests supersede the interest in investigating the truth.

The court added (pp. 739–40) that although the rabbinical courts have no reason to suspect that such testing would determine an individual’s status as a *mamzer*, since only rabbinical courts have the authority to declare someone a *mamzer*, there are two reasons for discouraging such testing.

First, acceptance of such findings in a civil court might socially brand the minor, sufficient reason for prohibiting the testing. Secondly, there is no certainty that the rabbinical court will not change its stance and decide to recognize such results as sufficient to supersede the juridical presumptions assumptions cited above: “Since no one can assure us that if indeed the test is performed and if it indicates that the mother’s husband is not the father of the minor, a rabbinic court would not consider the results and rule accordingly. As we have seen, the *halakhah* relies on various presumptions assumptions and fictions to preclude the tainting of a child as a *mamzer*, by reason of his married mother having been impregnated by someone other than her husband. But as we noted, according to *halakhah* as well, when it is clear that the child cannot be the offspring of the mother’s husband, such as a case in which it has been proved that for 12 months there were no relations between the husband and wife, even the *halakhah*, for lack of alternative, declares the offspring a *mamzer*. Thus, several rabbinical courts have ruled against relying on tissue typing for proving paternity” (p. 740).

## MAN, THE NATURE OF.

## IN THE BIBLE

## Names of Man

The idea of man is expressed in the Bible by a number of words that reflect various aspects of his nature. The following are the most important.

**ADAM:** collective, “men, human beings,” also (in prose, with the article) “mankind,” *Homo sapiens*, in distinction to other creatures (Gen. 6:7), or to God (Isa. 2:17). It is occasionally used of individuals (Neh. 2:10); etymologically it may be compared with Arabic *anqm*, “creatures,” “mankind.” The plural is *bene adam*.

**ISH:** “husband,” “male,” “individual” (Gen. 2:23–24; 13:16; 41:33; Hos. 2:18 [16]); very often used in collective sense (Josh. 9:6). In certain passages it has the meaning of “servant” or “soldier” (1 Sam. 23:3, 12; cf. the expression *ish ha-Elohim*, “man of God”). The antithesis in Psalms 49:3[2] between *bene adam* and *bene ish* apparently contrasts “men of low degree” with “men of high degree.” Its etymology is uncertain. The plural *anashim* is evidently from the same root as *enosh*.

**ENOSH:** mostly a collective denoting the human race. Occasionally it is used of individuals (Isa. 56:2; Jer. 20:10). In antithesis to God it connotes frail, mortal man (Isa. 51:7, 12; Ps. 90:3; Job. 28:4). The word is probably related to the Arabic *anisa*, Ugaritic *ans* (“to be friendly, social”), Aramaic *enash*, and Arabic *insām* (pl. *unās*, coll. *nās*). Other cognates show that it cannot be related to Arabic *anutha*, “to be weak.”

**GEVER:** the adult male being in contrast to women and children (Ex. 10:11; Josh. 7:14). In poetry it often has a more general sense. The stem means “to be strong, mighty.”

**METIM:** used only in plural, “males,” “men,” “people” (Gen. 34:30; Deut. 2:34; 4:27). In Isaiah 3:25 it may mean “warriors.” The singular occurs in Ugaritic and other cognate languages and is possibly to be seen in names like Methushael and Methuselah.

According to this terminology, man is conceived as both strong and weak, as a member of the human race and of the family unit, and as an individual.

## Psychological Terms

Further insight into the nature of man is furnished by certain psychological terms that describe different aspects of the human personality. *Nefesh* can denote the essence of any living creature (Gen. 2:7); it may even be equated with the blood (Gen. 9:4; cf. Lev. 17:11). It signifies the “individual,” “ego,” “person” (Gen. 46:26; 1 Sam. 1:26; Job 16:4), and hence even “body” (Ex. 21:23). *Ruah* “spirit,” is sometimes synonymous with *nefesh* (Gen. 6:17), but is also distinguished from the latter. It represents power and energy (Ex. 35:21; Isa. 31:3) that comes to man from without; it provides the impulse to higher life and finds expression in special skill (Ex. 28:3), might, or leadership (Judg. 3:10; Isa. 11:2). *Neshamah*, “breath,” is not only the vitalizing element breathed into man by God (Gen. 2:7), but the divine spirit and lamp – the soul – within him (Prov.

20:27). In contrast to these spiritual aspects of man, *basar* signifies his physical nature, the living body (Gen. 2:23, 24), and, as such, it symbolizes human frailty (Isa. 40:6).

The Bible also regards certain organs as the seat of given psychological attributes. *Lev*, the “heart,” is the center of thought (Ps. 45: 2[1]), conscience (1 Sam. 24:6[5]; Job 27:6), and emotion (love: Deut. 6:5; anger: Deut. 19:6; joy: Isa. 30:29; hatred: Lev. 19:17; courage: Jer. 48:41, and the like). By synecdoche, the heart represents the whole inner life of man (Gen. 6:5; Ps. 51:10; Ezek. 36:26; Prov. 4:23). *Kelayot*, the “kidneys” (in artificial “biblical” English “veins”), are likewise the source of emotion and conscience, and in conjunction with “heart” describe the fundamental character of man (Jer. 12:2; Ps. 7:10; 16:7; 26:2). *Meayim*, “bowels,” are the seat of overpowering feelings (Isa. 16:11; 63:15; Lam. 1:20); modern versions sensibly substitute “heart” for “kidneys” or “bowels” in such contexts. *Kaved*, “liver,” also means “being” (Lam. 2:11; cf. \*Heart). *Rahamim* – from *rehem*, “womb” – means “compassion” (Deut. 13:18). *Yad*, “hand,” is often used in a conative sense, indicating “power” (Deut. 2:7, 24; 32:36). Other shades of psychological significance are expressed by other parts of the body, e.g., face, eyes, ears, head, and so forth.

This extensive nomenclature points to the complexity of the human personality, but is not exhaustive. The complete picture of man’s nature as envisaged by the Bible can only be seen in the full context of scriptural evidence.

## Man’s Origin

The key is to be found in the story of man’s origin (Gen. 1:27; 2:7). He is not a descendant of the gods (as in certain pagan mythologies); the term child(ren) used with reference to man in relation to God (Deut. 14:1; Ps. 2:7) has in Scripture a metaphorical connotation. Nor is man the product (as some philosophical systems hold) of the blind forces of nature. He is the artifact of God, fashioned purposefully out of two diverse elements: his body is of the earth, but it is animated by the divine breath of life (Gen. 2:7). Yet man is not a dichotomy of body and soul (a view characteristic of Orphism and Platonism), and certainly not a trichotomy (1 Thes. 5:23). His is a multifaceted unitary being – *nefesh hayyah*, “a living person” (Gen. 2:7). Of particular significance is the concept that all human beings, irrespective of ethnic and cultural differences, stem from two common ancestors, Adam and Eve. Humanity, despite its diversification, is essentially a single family, and men remain brothers even in the face of hate and murder (Gen. 4:9–10). To this inherent Brotherhood and equality of all, even slaves (unlike the Greek view) were no exception (Job 31:13, 15). Furthermore, the world was divinely planned to be one of creaturely peace, harmony, and understanding; man, as well as other living beings, was not to destroy his fellow creatures even for food (Gen. 1:29–30; 2:19). The permission granted to Noah to eat flesh was a sad concession to a world that had lost its original idealism (Gen. 9:3). Monogamy is clearly viewed in the creation story as the proper state of marriage. Women play a pivotal role in numerous bibli-

cal stories, and there are women prophetesses, like Deborah and Huldah.

### The Image of God

However, the Bible does not merely stress the creatureliness of man. It depicts him as the peak of creation. He climaxes the ascending course of the six days' work of the Beginning. He is formed by special resolve (Gen. 1:26) and in a unique manner (Gen. 2:7), and attracts to himself three of the six occurrences of the stem *bara'* ("to create") in the creation story. However, his crowning glory is contained in the statement that he was made in the divine "image" and "likeness" (for a suggested distinction between the two words see I. Epstein, in *bibl.*, 224), which endows him with unique worth. Man alone among the creatures is capable of sustained thought, creativity, and awareness of God; the light of God is immanent in his spirit (Prov. 20:27). Hence he is given dominion (the "image" is the symbol of the Deity's presence) over the earth (Gen. 1:26, 28) and is privileged to commune with God and enjoy His fellowship (Gen. 2–3). In the language of later rabbinic literature, he became a "partner" of the Creator (Gen. R. ed. H. Albeck (1940), 73; cf. *Shab.* 10a). The dualism of man's status and significance within the unified framework of his psychophysical being is given unmatched expression by the Psalmist: "What is man that Thou art mindful of him... Yet Thou hast made him little less than the angels" (literally, "God-like beings"; 8:4–5).

### Free Will

There is still another aspect of the divine image reflected in man, which plays a crucial role in the profound parable of the Garden of Eden. In a supreme act of self-limitation the Absolute God gave man freedom of moral choice. He could will to do right or wrong, to obey or disobey his Maker. It was heaven's greatest gift to man: he was not to be an automaton. However, the immediate consequences were calamitous. Man rebelled against the Creator; he introduced disharmony into the universal harmony. Sin was born and in turn begot suffering and death. History had begun. Israel was the first people to evince a sense of the historic.

While the Bible is unequivocal in its assertion of the reality of human responsibility for evil (Eccles. 7:29) and in condemning sin trenchantly as estrangement from and treason against God (this is the meaning of the story of Eden), it is no less emphatic in its affirmation of God's grace (Ps. 103:13–16) and readiness to forgive (Num. 14:20; Jer. 33:8). Sin is never final. It is punished, or rather punishes itself. However, retribution is part of the divine redemptive process. It helps man to seek atonement, which the divine love never fails to vouchsafe (Ezek. 33:11).

The road of redemption, however, is hard and long. Outside the Garden of Eden man's iniquity reaches new depths. Brotherhood as well as "sonship" are destroyed. Cain's example was widely imitated (Gen. 6:11). It almost seemed that the making of man was a divine error (Gen. 5–6), which only the

Flood could expunge. At this point, however, a new providential principle manifests itself – the elective factor. The family of Noah is chosen from a doomed generation to be saved and to save the world. Later Abraham is elected to be a source of blessing to all mankind (Gen. 12:3). Israel, the seed of Abraham, were chosen to be "a kingdom of priests and holy nation" (Ex. 19:6). Though themselves far from perfect (Deut. 9:5), they were destined to become a light to the world (Isa. 60:3), illuminating the way of ethical and spiritual truth. To this end God made a covenant with Israel at Sinai (Deut. 5:2), which found detailed expression in the Torah. Religious and secular precepts are inextricably intermingled in the Law, for human life is a unity and must be dedicated to God's will in all its diversified aspects. God is served in the righteousness of human relationships – in love between man and man, which reflects God's image – as well as in divine worship. When the "image" is wronged, religious service becomes an abomination (Isa. 1:13–17). The path toward God is further delineated and interpreted by the Prophets, and even by figures (like Abraham, and Job, and some of Psalmists) who question God's moral government of the world. Revelation – the word of God understood in its broadest sense – is the great antidote to sin, leading man to repentance and regeneration. The relevance of this biblical teaching is not confined to Israel. In a deep sense, the Bible tells the story of Everyman in all generations. Even when Israel is the focal point of the Bible's concern, the universal concept of mankind is never ignored (Amos 9:7; Isa. 19:24–25). Israel's significance derives from its relationship to all humanity, whose significance, in turn, flows from man's relation to God. History is thus seen as the moral and spiritual drama of the human species.

### The Afterlife

The beginning of that drama, with its hope and tragedy, was enacted in Eden. Inevitably the question arises: Where will the denouement take place? Has human life a divinely designed goal? Later Jewish theology, elaborated in apocryphal and rabbinic literature, answers these questions (solving at the same time the problem of theodicy) on the individual level, by postulating the belief in the afterlife. There the disembodied soul is judged, the wicked are condemned, and the righteous are rewarded with eternal bliss. This doctrine is unknown to Scripture. There is an unmistakable finality about the biblical conception of death (Ps. 146:4; Job 7:9; Isa. 38:18). The Bible is primarily concerned with the world; it seeks heaven upon earth in the form of the kingdom of God (Zech. 14:1), and continued life in descendants rather than in personal immortality (11 Sam. 7:12). Nevertheless death does not mark the complete extinction of existence. The dead continue to live a shadowy, ghostlike existence in Sheol, a region of darkness and silence deep within the recesses of the earth. Yet the dead are not without consciousness (1 Sam. 28: 15ff.; Isa. 14:9ff.), nor beyond God's judgment (Ps. 139:8). Two holy men escaped death altogether: Enoch (Gen. 5:24) and Elijah (11 Kings 2:11). In Job there is a yearning for continued life af-

ter death (14:13ff.; 19:26); in certain psalms the definite hope is expressed that death will not end the human fellowship with God (49:16; 73:24ff.). Whether resurrection is envisaged in Isa. 26:19ff. is a matter of exegesis, but it is certainly envisaged in Daniel 12:2. The preexistence of the soul is first taught in the Apocrypha (Wisd. 8:19ff.), but Jeremiah was “a thought of God” (B. Duhm) before ever he was formed in the womb (Jer. 1:5). Thus the Bible lacks a definite theology of the after-life, and belief in resurrection is still vague and inchoate. Yet Scripture contains undoubted intimations of immortality, on which future epochs built their religious doctrines.

### The End of Days

The true goal of history, however, is to be sought in “the end of days.” It will be the age of regeneration, when the work of creation will be completed in accordance with God’s original plan. Man and God, and man and man, will be reconciled. The treason man perpetrated in the Garden of Eden will be transmuted into universal voluntary obedience to God’s will, and the crime of Cain will be atoned for in a state of international peace and brotherhood (Isa. 2:2–4; Micah 4:1–5). The immature knowledge man acquired from the forbidden fruit will give way to a higher wisdom. For inherently knowledge is good (Prov. 8); it is man’s unwise use of it that vitiates it (Eccl. 1:18). A new earth and a new heaven will issue from the new heart and spirit of man (Isa. 65:17; Ezek. 36:26), and human communion with God will be restored (Joel 3:1–2). The Garden of Eden will, as it were, become worldwide, and the pristine glory of the reflected image of God in man will be renewed. The end of days is undated. It is an elusive horizon; yet its advent remains a prophetic certitude.

[Israel Abrahams]

## IN RABBINIC THOUGHT

### The Physical Nature of Man

The process of human gestation, and especially the preservation of the embryo, prompted the sages to the observation that these were evidence of both God’s skill and solicitude in the fashioning of man (Ber. 10a; Nid. 31a; Lev. R. 14:3, 4; 15:2, 3; 34:3). The fact that every hair of man’s head is fed through a separate root is cited as further evidence (BB 16a). Man receives five parts of his body from each of his parents, and ten parts from God. From his father, he receives bones, veins, nails, brain, and the white of the eye; from his mother, skin, flesh, blood, hair, and the pupil of the eye. To his formation, God contributes breath, soul, light of countenance, sight, hearing, speech, touch, sense, insight, and understanding. Hence, the rabbinic saying that there are three partners in man – his father and mother and God (Kid. 30b; Nid. 31a; Tj, Kil. 8:3, 31c; Eccl. R. 5:10, 2). A late Midrash (Mss. *Midrash ha-Ḥefez*) describes the human body as possessing ten orifices, including the navel. The marvel is, the Midrash continues, that when the child is in the embryonic state, the navel is open and the other orifices are closed but, when it issues from the womb, the navel is closed and the other orifices are opened.

In the totality of his physical structure, man constitutes a microcosm (see \*Microcosm and Macrocosm). An elaborate parallel, covering 30 items, is drawn between the various components of the human body and similar features in the physical world (ARN<sup>1</sup>:31). A hardly less complex parallel is found to exist between the organs of the human body and the structure and vessels of the Tabernacle (Mid. Tadshe, Beit ha-Midrash, Jellinek, vol. 3, 175f.; cf. the New Testament denomination of the human body as a tabernacle, II Cor. 5:1, 4; II Pet. 1:13, 14). A simpler summation of man’s physical being is deciphered in the word *adam* (“man”) as being an acronym (\**notarikon*) for “dust” (*efer*), “blood” (*dam*) and “gall” (*marah*; Sot. 5a). They give a remarkably accurate enumeration of the 248 organs of the human body (Oho. 1:8). It may be fairly said that the rabbinic reflection on the complex mechanism of man’s physical structure served as occasion for admiring reverence for the skill and wisdom with which God created him. Indeed, its unknown aspects suggested the argument that if man does not know his own body, he certainly cannot fathom God’s acts (San. 39a). But for all its marvelous mechanism, it is destined, save for the soul, to return to the earth from which it originally came. Only one tiny bone remains indestructible and, in the time of resurrection, will serve as the nucleus out of which the body will be restored (Gen. R. 28:3; Eccl. R. 12:5; see \**Luz of the Spine*).

Nowhere in rabbinic literature is there any denigration of the human body so characteristic of contemporary Platonic, Stoic, and Gnostic thought. On the contrary, since even the body is conceived as having been created in the image of God, man is duty bound to honor it by maintaining it in a state of cleanliness. No less an authority than \*Hillel termed such action a religious duty (Lev. R. 34:3).

### Character

Since Genesis describes Adam as having been both created in God’s image (1:27) and formed out of the dust of the earth (2:7), the sages declare that man possesses both heavenly and earthly qualities. In four respects, he is said to resemble the animals and the angels respectively. Like the angels, he possesses the power of speech, intelligence, upright posture, and glance of the eye. In his physical aspects, he resembles the animals (Gen. R. 12:8; 14:3). Indeed, God created man because he was not completely satisfied with either the angels or the animals. The former failed to satisfy him because they lacked the evil inclination. The animals, on the other hand, lacked the good inclination. God therefore created man, who possesses both a good and evil inclination and is confronted with the need to exercise free will. This is the origin of the ambivalent character of man. If he pursues evil, he is likened to an animal; if he chooses the good, he is likened to an angel (Gen. R. 14:3, 4). The contradictory nature of man is highlighted by the legend describing the sharp difference of opinion evoked by God’s taking counsel with the angels as to whether or not man should be created. The angels that favored his creation contended that man would be affectionate and a doer of jus-

tice. Those who opposed his creation claimed that he would be quarrelsome and riddled with falsehood (Gen. R. 8:3–9; in the qualities of lovingkindness, righteousness, peace, and truth are hypostatized).

Man's moral ambivalence derives from the two inclinations within him: the good inclination (*yezer tov*) and the evil inclination (*yezer ra*) (see Inclination, \*Good and Evil). The fact of human individuality exhibits God's power, for although all men are cast from the same mold since all are descendants of Adam, no two men are alike (Sanh. 4:5). Their physical differences are to be noted in their voice, taste, and appearance (ARN<sup>1</sup> 4).

In their attitude toward possessions, men fall into four distinct categories, ranging from the average to the wicked and the saint (Avot 5:10). It is assumed, as a legal principle, that all men become excited when their property is at stake (Shab. 117b, 153a). This concept is further reflected in the dictum that every artisan is hostile toward his fellow craftsmen (Gen. R. 19:6). It is assumed further, as a matter of legal principle, that in money matters no man is likely to regard himself as culpable (Ket. 105b). The rabbis look askance at him who has an excess of material things. They conclude that such a situation can only produce deplorable moral consequences (Tosef., Sot. 3:6; Ber. 32a; Sanh. 108a; Gen. R. 26:5; 28:6). Indeed, when a man is poor, he can be relied upon to have trust in God. Riches incline him to trust in his money and thus displace his piety (Tanḥ. Naso 28). For all the rabbinic recognition of the powerful influence of the economic motive on human conduct, a certain basic honesty is assumed as characteristic of all men. Hence, the assumption is made that a man makes no legal monetary claim unless there is some substance to it (Shevu. 40b), and that a man is not brazen as to deny outright the existence of his debt in the presence of his creditor (BM 3a). A man's basic character is recognizable by his drinking (how he behaves when under the influence of liquor), by his rectitude in financial transactions (Rashi's interpretation) and by his anger (to what extent he is able to control his temper). To this generalization, some add, also by his laughter (his good humor; Eruv. 65b).

### Man and Woman

The difference in the origin of man and woman described in Genesis served the sages as points d'appui for their observations on the contrast between the character and psychology of man and woman. The latter, having been fashioned from a more durable substance (man's rib-bone) than man (dust of the earth), can more readily withstand disagreeable circumstances and possesses greater inurement to pain (Tanḥ. Toledot 8). A woman, moreover, is blessed with greater native intelligence (instinct?; Nid. 45b). Whose intelligence matures sooner is a matter of opinion (*ibid.*). A man is more hospitable towards guests and more generous than a woman (Sif. Num. Shlah 100). An aggrieved man is more readily reconcilable than a woman (Nid. 31b). Peculiarly characteristic of woman is her proclivity to tears (BM 59a) and an inordinate

curiosity (Toh. 7:9). At the time of her creation, God, anticipating woman's faults, sought to obviate them. He knew that she would be arrogant, wanton-eyed, an eavesdropper, a tattler, a meddler, and a gadabout. Hence, he fashioned her from a chaste part of man's body that is free of these faults (Gen. R. 18:2; 45:5).

### Destiny

The phenomena experienced in the theophany afforded the prophet Elijah (1 Kings 19:11–12) are interpreted as symbolic of the four worlds through which man must pass. The wind symbolizes the evanescent quality of the life of this world. The earthquake represents the day of death, since on it man quakes and trembles. Fire is the symbol of man's judgment in Gehenna. The "still small voice" is the Last Judgment (Tanḥ. Pekudei 3). A more elaborate articulation of the worlds (i.e., stages) through which man passes in this life describes seven distinct phases. Each phase is marked by its own characteristics, few of which are flattering (*ibid.*). All of life is clouded over by uncertainty, for a man goes on his way and knows not whether good or evil awaits him (Tan. Toledot 12). A trace of a tragic view of human destiny is to be discerned in a few rabbinic statements. Throughout his lifetime, man is caught in the impossible dilemma of either obeying his Creator (*yozer*) or his evil inclination (*yezer*). Whatever he chooses, he finds himself perpetually at odds with the other (Ber. 61a–b). Though man enters and leaves the world surrounded by love, both his entrance and exit are marked by sighing and weeping (Eccl. R. 5). The vanity of human ambition is expressed in the observation that man comes into the world with his fists clenched, as if to say, "I will grasp the whole world"; he leaves with palms outstretched, as if to say, "See what I am carrying away" (*ibid.*). Wherever man dies, there the earth will accept him, for the first man was created by God from dust gathered from the four corners of the earth (San. 38a–b; Tan. Pekudei 3). Whether it were better for man to have been born or not to have been born is the subject of a prolonged controversy between the schools of Shammai and Hillel. The debate terminates with the decision that it would have been better for man never to have been born. But once having entered the world, "let him scrutinize his deeds" (Er. 13b). The pessimistic conclusion is unique and has no parallel in rabbinic literature. (Talmudic commentators have sought to temper it by interpretation. See Maharsha to Mak. 23b, and Urbach, in bibliography, pp. 224–6.)

### Significance

Rabbinic thought considers all creation as having been called into being for the sake of man (Gen. R. 8:3–9); he is the only creature formed directly by the hand of God (Alphabet of R. Akiva 59); he was created last because he was to have dominion over all (Gen. R. 19:6). One man is worth the whole of creation (ARN<sup>1</sup> 31). R. Akiva is moved to exclaim: "Beloved is man who was created in the image (of God); still greater was the love in that it was made known to him that he was cre-

ated in the image of God" (Avot 3:15). Man's likeness to God, a doctrine meant to emphasize the singular position of man in the world, is a common doctrine in rabbinic Judaism and occurs in a wide variety of contexts. (However, one meets the occasional notion that man was created in the image of the angels and not in that of God; (Gen. R. 14:3; 21:5). (See Ginzberg, op. cit. in bibliography, vol. 5, p. 65, note 6 for a proposed explanation of this extraordinary view.) Man's superiority over the angels is to be found in his superior wisdom (Num. R. 19:3) and in his possession of free will (Gen. R. 21:5). In poetic fashion, man is termed God's candle in the world (Tan. B. Gen. 28).

**MANĀKHAH**, city in \*Yemen amid the high mountains of Ḥarāz (2200 m), 90 km S.W. of \*San'a, on the way to \*Ḥudaydah. Manākhah was a prominent commercial center and Jews from the surrounding villages would gather together on the weekly market day there, when the local Jews would also abandon their workshops and engage in trading. The Jewish community of Manākhah, one of the largest in Yemen, actually started to gain importance and size in the 1850s through Jews who had fled from \*San'a owing to the worsening political situation, which explains the fact that the way of life in Manākhah was the same as in San'a. In the last generation it numbered 600 Jews. It was also the richest Jewish community in Yemen, excluding \*Aden. Many of the Jews were businessmen, in import and export; some of them monopolized the coffee trade and even owned land. Nevertheless, they were careful to maintain an external appearance of abject poverty, and their poor houses had the appearance of prisons. In this way the local Jews could maintain good relations with the Muslims. Others were craftsmen: gold- and silversmiths, ironsmiths, carpenters, and tanners. The Jews lived in their separate walled-off neighborhood and had three synagogues. There was a local three-judge *bet din*, serving as a spiritual center for the Jewish population of nearby and far-off towns and villages, such as Muḍmār, Jirwāh, and Hawzān. The authority of the temporal leader (*āqīl*), appointed and paid by the Muslim government, was usually stronger than that of the chief rabbi. Some of the local Jewish families took part in the smuggling of Jewish orphans from San'a to the Holy Land.

[Yosef Tobi (2<sup>nd</sup> ed.)]

**MANARAH** (Heb. מְנַרְהָ; derived from the Ar. al-Manara; for a time the Hebrew name Ramim, "heights," was used), kibbutz near the Israel-Lebanese border on the Naphtali Ridge of Upper Galilee, affiliated with Ha-Kibbutz ha-Me'uhad. Its founding in 1943 by pioneers from Germany and Israel-born youth was a bold enterprise. The settlers had to climb a 5 mi. (8 km.), steep footpath to reach the site – 2,990 ft. (920 m.) above sea level – and withstand isolation in a place where the winter is snowy and stormy, and where no water sources are present in summer. In the Israel \*War of Independence (1948), the settlers held out under enemy siege. In violation of the cease-fire arrangements the surrounding positions were occupied by irregular Arab forces commanded by Fawzi al-Qāuqī (October 1948). The area and all of Galilee were liberated by Israel's Operation Hiram. In the first years after 1948 the water problem was solved when a pumping installation was built to bring water from the Einan Springs in the Ḥuleh Valley 2600 ft. (800 m.) below. A highway was paved and the kibbutz, in addition to its hill farming (mainly deciduous fruit), received fields and carp ponds in the valley. Manarah also had a metal factory for electricity grids and control panels, an amplifier rental service, guest rooms, and a big, modern chicken run. In 2002 its population was 248. The crusader castle ruins of Hūnīn (Chateau Neuf) are located nearby.

**MANASSEH** (Heb. מְנַשֶּׁה), elder son of \*Joseph and the name of one of the 12 tribes of Israel. Manasseh was born to Joseph in Egypt by \*Asenath, daughter of Poti-Phera (Gen. 41:50–51). The name is said to be symbolic of Joseph's turn of fortune. Manasseh is distinguished by several traditional historical peculiarities. Whereas ten of the tribes (or 11 if Levi is included) are conceived as immediate sons of Jacob, Manasseh and \*Ephraim are presented as the sons of Joseph and, thus, as the grandsons of Jacob. This feature of the tradition is in part a device to retain the number 12 as normative for the tribal roster. There are in fact two basic versions of the tribal roster:

(1) the enumeration which counts Joseph as one tribe and includes Levi and

(2) the enumeration which subdivides Joseph into Ephraim and Manasseh and omits Levi. It is commonly believed that the former is the older reckoning dating to the time when Joseph was still a single tribal entity and when Levi was as yet a secular tribe. The second is assumed to stem from a later period when Joseph broke into two segments and Levi became a priestly tribe and was dropped from the tribal roster. However, it may also be argued that the tribal league of 12 members did not become the normative until David made the old tribes into administrative subdistricts of his kingdom, in which case the version including Ephraim and Manasseh was older. Once the kingdom divided after Solomon's reign, the 12-fold tribal roster became a sacral tradition and Levi had to be included for religious reasons. To retain the number 12, Ephraim and Manasseh were coalesced under the heading

Joseph. This bracketing of Ephraim and Manasseh as Joseph within the 12-tribe roster points, however, to an older affinity between the two tribes reflected in some texts (e.g., Gen. 41:50–52; 48:8–22; Deut. 33:13–17; Josh. 17: 14–18). Ephraim and Manasseh were geographically contiguous, occupying the fertile mountains and small plains extending northward from Bethel to the plain of Jezreel in the region later to be known as Samaria. Manasseh lay to the north of Ephraim. The relationship between the two tribes is portrayed in the Bible as ethnic; they migrated into the central highlands as one people who later divided under the decentralizing pressure of settlement in rather different geographical-agricultural and cultural-political zones. It is, however, conjectured by some scholars that they were ethnically distinct and had entered the land separately, but were closely linked in a common religious conversion. The decision on this point depends largely on whether Ephraim and Manasseh are seen as Exodus tribes or are regarded as early converts to the religion brought to them by Levi or other tribes. The rivalry and struggle for priority between Manasseh and Ephraim is strongly attested to in the traditions. In most tribal lists Ephraim is named first, which reflects its political predominance as epitomized in the leadership of Ephraimites (e.g., Joshua and Jeroboam 1). By contrast, some lists name Manasseh first (Num. 26:28–37), which accords with the genealogical claim that Manasseh was the firstborn of Joseph (Gen. 41:50–52). This discrepancy between Ephraim's genealogical subordination and its historical dominance has been harmonized by inserting an etiology that accounts for the greater blessing which Jacob gave to Ephraim (Gen. 48:17–20). That Manasseh is sometimes represented as having priority probably points to its larger territory and population, to the prominence of the Manassite city of Shechem, and to the tribe's political leadership under Gideon.

Yet another traditional historical peculiarity of Manasseh is its stylization as a “half-tribe” in the central highlands west of Jordan and as a “half-tribe” in the highlands east of Jordan. It appears that colonists from the Manassite holdings in the Samarian highlands crossed the Jordan eastward and settled on the slopes of the Gilead Mountains from the Jabbok River northward to the Sea of Galilee. Since the biblical account of the conquest tradition pictured all Israel as entering the Land of Canaan from the east as a unit, the presence of Israelites in Transjordan is explained by an initial occupation of Transjordan by two and a half tribes: Reuben, Gad, and the half-tribe of Manasseh (Num. 32). There are scholars, however, who believe that all these Transjordan settlements were the result of movements from the western highlands eastward across the Jordan. Historically, the Transjordan settlement was relatively light and always tenuous prior to the monarchy; even under the monarchy it was precarious except when a strong king secured the frontiers against the Arameans, Ammonites, and Moabites. The colonization of Transjordan by Manassites was matched by Ephraimite colonization in the same region (Judg. 12:4; II Sam. 18:6), and it is strongly suspected that Reuben and Gad were either offshoots of more established tribes in

*Territory of the tribe of Manasseh. After Y. Aharoni in Lexicon Biblicum, Dvir Co. Ltd, Tel Aviv, 1965.*

the western highlands or transplants of reduced or decimated tribes originally located in cis-Jordan. That Manasseh alone was credited with territory on both sides of the Jordan is probably an index of its greater success in colonization.

Another name for Manasseh was Machir (Judg. 5:14). Machir elsewhere is credited as a major clan within Manasseh, the latter's “firstborn” and “the father of Gilead” (Gen. 50:23; Josh. 17:1). If Machir was the original name of the tribe, Manasseh would have been introduced once colonization had extended the group holdings and the need was felt for a more inclusive term. The adoption of the term Manasseh would probably also have been a function of the desire to relate the tribe more closely to Ephraim, the two being regarded as “sons of Joseph.”

Manasseh's territorial holdings as described in Joshua 17 and in Judges 1:27–28 appear in an account of the tribal allotments at the time of the Conquest, which some exegetes regard as an incomplete and mutilated sketch of the tribal administrative subdistricts of David's kingdom. The boundary of Manasseh with Ephraim to the south is given with some precision. The borders with Issachar and Asher to the north have been obscured as a result of redaction of the sources. Similar uncertainty exists in delimiting the Transjordan holdings of Manasseh in relation to Gad. It is doubtful whether, before the time of David, Manasseh settled the coastal plain on the west, the Carmel highlands on the northwest, the plain of Jezreel to the north, or the plain of Beth-Shean on the northeast. In Transjordan, Manassite colonization, it is supposed, hardly penetrated beyond the crest of the Gilead Mountain Range and perhaps some distance up the Jabbok Valley. The major settlements in west Manasseh, prior to the expansion under David, were Shechem, Dothan, Tirzah, Thebez, Arumah, Ophrah, Bezek, and Arubboth. In east Manasseh the major towns were Jabesh-Gilead and Abel-Meholah. The settlements of Succoth, Penuel, Zarethan, and Zaphon, located

in or around the Jabbok Valley and its juncture with the Jordan, may also have been Manassite, although some of them are attributed to Gad. Among the clans of Manasseh (Josh. 17:2–3) are Canaanite cities, such as Shechem, some of which probably remained non-Israelite down to David's time, even though surrounded by Israelites. The approximate position of several of the clans in the west Jordan highlands can be plotted on the basis of their occurrence as place names in the Samaria Ostraca (Albiezer, [A]sriel, Helek, Hoglah, Noah, Shechem, Shemida).

[Norman K. Gottwald]

### In the Aggadah

Manasseh emerges in the *aggadah* as his father's right-hand man. He was sent by Joseph to spy on his brothers after they entered Egypt (Tanḥ. B., Gen. 202). He is identified as the interpreter between Joseph and his brothers (Gen. 42:23) when his father feigned ignorance of Hebrew (Gen. R. 91:8), and it was he who overcame Simeon despite his martial prowess and cast him into prison (Tanḥ. Va-Yiggash, 4). As the steward of his father's house, Manasseh also prepared the repast for Joseph's brothers (Tar. Pseudo-Jon. Gen. 43:16), and was later sent to search the sacks for the silver cup (Tanḥ. B., Gen. 197). On the flag of the tribe of Manasseh was embroidered a wild ox, an allusion to Deuteronomy 33:17, which refers to Gideon (Judg. 6:11), a descendant of Manasseh (Num. R. 2:7).

For the relationship between Ephraim and Manasseh see \*Ephraim in the *Aggadah*.

**MANASSEH** (Heb. מְנַשֶּׁה; perhaps “one who causes [an earlier deceased, child] to be forgotten”), king of Judah (698–643 B.C.E.), son of \*Hezekiah. Manasseh ascended the throne at the age of 12 and reigned for 55 years (II Kings 21:1). In those years Assyrian power reached its pinnacle; Manasseh's reign coincided with more than half of Sennacherib's (705–681 B.C.E.), all of Esarhaddon's (680–669), and most of Ashurbanipal's (668–627). During most of Manasseh's reign, Judah was a submissive dependent of Assyria. Manasseh is mentioned, together with 22 kings of Syria, Palestine, and Cyprus, in one of Esarhaddon's inscriptions relating that he imposed forced labor upon them, making them convey timber and stones for the construction of his palace in Nineveh (Pritchard, Texts, 291). Most of these kings, including Manasseh, are also mentioned in one of Ashurbanipal's inscriptions which recounts that their armies accompanied him to Egypt in his campaign against \*Tirhakah (687; Pritchard, Texts, 294). Several scholars hold that part of Manasseh's army remained in Egypt as a

garrison, and that they were the first inhabitants of the Jewish settlement in \*Elephantine. Further evidence of Judah's subordination to Assyria is found in a fragment of an inscription from the period between Sargon and Esarhaddon, which lists the tribute of Judah after that of Ammon and Moab, the amount of the former being smaller than that of the latter. This probably relates to the period after \*Sennacherib's campaign in Judah, when the country was impoverished.

The Book of Kings does not mention any political events during Manasseh's reign, but in Chronicles it is stated that, because he did what was displeasing to the Lord, the Lord caused the Assyrian officers to oppose him and put him in chains, transporting him to Babylon, where he submitted to God's will and was returned to Jerusalem and his throne (II Chron. 33:10–13). To the degree that there is any historical validity to the story, the imprisonment was probably brought about by an attempted revolt against Assyria, and not by foreign religious practices, which would be a sign of submission to Assyria. The tradition that he was transported to Babylon appears strange, unless the Assyrian king happened to be there in response to a Babylonian revolt. It is likely that Manasseh was involved in the revolts which broke out against Assyria at the time of Shamash-shumukin's revolt in Babylon against his brother Ashurbanipal (668–631). Further evidence of Manasseh's efforts to overthrow Assyrian domination may be seen in the fortification of Jerusalem and his appointing of officers over all the walled cities in Judah (II Chron. 33:14), although these events may refer to a later period. The account of Manasseh's return from imprisonment to the throne is given credence by the policy of Ashurbanipal, who, having exiled rebellious Egyptian princes to Assyria, came to favor Neco (671–663), the father of Psammetichus I, and returned him to Egypt as vassal ruler.

Manasseh abolished the religious reforms of his father Hezekiah and introduced alien rites into the Temple (II Kings 21:3). It has been argued that this course was forced upon him by the Assyrian overlords. Ashurbanipal imposed religious duties upon several Chaldean states in southern Mesopotamia after crushing their attempted revolt. (However, his actions in defeated territories need not be conclusive evidence concerning his policies in lands ruled by his vassals. (For a nuanced discussion, see Cogan 1993). It is significant, though, that none of the negative cultic activities attributed to Manasseh is Assyrian. Instead it appears that whereas Hezekiah had been an adherent of the “Yahweh-alone” party (Smith), Manasseh supported the majority position that ignoring other gods with a long history of worship in Israel was perilous. Indeed, the severe territorial losses suffered by Hezekiah could have been attributed to his excessive zeal for monolatry, just as the fall of Judah in 586 was attributed to Josiah's reforms by the exiled Judahites in Jeremiah 44 (Cogan). The abolition of Hezekiah's reforms was therefore part of the internal struggle in Judah between those who had supported a policy of acceptance of the ancient native cults and perhaps some newer Syro-Palestinian ones dating from the time of Ahaz, and the devout circles around the prophets. It was a ruthless struggle, and

Manasseh is described as having shed “very much innocent blood ...” (II Kings 21:16). According to II Chronicles 33:12 ff., Manasseh fully repented upon his return from Babylon, but this does not agree with II Kings 21:16, which relates that he died without repenting. It appears unlikely that the destruction of Jerusalem would have been so emphatically attributed to the sins of Manasseh had he completely repented as described in Chronicles.

[Jacob Liver / S. David Sperling (2<sup>nd</sup> ed.)]

### In the Aggadah

Manasseh's mother was the daughter of the prophet Isaiah, and married King Hezekiah after his miraculous recovery (Ber. 10a). Manasseh and his brother Rab-Shakeh soon showed their total dissimilarity from their parents. Once, when Hezekiah was carrying his two sons on his shoulders to the schoolhouse, he overheard their conversation. One said, “Our father's bald head might do well for frying fish.” The other rejoined, “It would be good for offering sacrifices to idols.” Enraged by these words, Hezekiah threw his sons to the ground. Rab-Shakeh was killed by the fall, but Manasseh escaped unhurt (Dik. Sof., Ber. 10a). His name is derived from נִשָּׁח (*nashah*; “he forgot”), in that he forgot his God and indulged in idolatry, murder, and other abominable acts (Sanh. 102b). After his father's death, Manasseh began to worship idols. He destroyed the altar and set up an idol with four faces, copied from the four figures on the divine throne of Ezekiel, so that from whatever direction a man entered the Temple he saw a face of the idol (Sanh. 103b). Manasseh also made another idolatrous image so heavy that it required 1,000 men to carry it. New bearers were employed daily because the king had each group executed at the end of the day's work (*ibid.*). He expunged the name of God from the Scriptures (*ibid.*) and delivered public lectures whose sole purpose was to ridicule the Torah (Sanh. 99b). He also committed incest by violating his sister (Sanh. 103b).

Manasseh sat in judgment on his own grandfather, Isaiah, and condemned him to death. The indictment against him was that his prophecies contradicted the teachings of Moses. Isaiah refused to defend himself, knowing that his efforts would be of no avail and preferring that his grandson act out of ignorance rather than from wickedness. He fled for safety and when he pronounced the Ineffable Name a cedar tree swallowed him up. Manasseh ordered that the tree be sawn in two, causing the prophet's death (Yev. 49b). Manasseh was carried off to Babylon in the 22<sup>nd</sup> year of his reign (SOR 24) and there placed in a heated oven. In his torture, he prayed in vain to the idols he had formerly worshiped, and at last besought the God of his fathers. The angels pleaded with the Almighty not to accept his penance. The plea was not accepted, God saying, “If I do not accept him I will be closing the door of repentance in the face of all repentant sinners.” Immediately a wind arose and carried Manasseh back to Jerusalem (TJ, Sanh. 10:2, 28c).

Manasseh is included among those who have no share in the world to come. Despite his restoration to Jerusalem, the

rabbis felt that he had forfeited eternal life because of his previous sins. R. Judah, however, held that he was also restored to his portion in paradise (Sanh. 10:2). Manasseh possessed a profound knowledge of the Torah and could interpret Leviticus in 55 different ways (Sanh. 103b). He justified his actions by pointing to the corrupt behavior of his times. R. Ashi once announced a lecture about him, saying, “Tomorrow, I shall speak about our colleague, Manasseh.” That night, the king appeared to Ashi in a dream and asked him a ritual question which Ashi could not answer. Manasseh then revealed the solution to him. Amazed by the king's scholarship, R. Ashi asked why one so erudite had worshiped idols. Manasseh answered, “Had you lived at my time, you would have caught hold of the hem of my garment and sped after me” (Sanh. 102b).

**MANASSEH, PRAYER OF**, brief penitential psalm incorporated among the books of the \*Apocrypha. According to II Chronicles 33:11 ff. Manasseh, king of Judah, repented his sins when he was taken to Babylonia in fetters (cf. also II Baruch 6:4:8). Shortly before the beginning of the Christian Era, an unknown author drew up a prayer appropriate for the occasion. Its style is comparatively simple and clear, concise and expressive, breathing throughout a spirit of deep and genuine religious piety. Its contents may be summarized as follows: O, God whose might and mercy are immeasurable (verses 3–7a), Thou hast promised forgiveness not for the righteous but for sinners (verses 7b–8). I have committed many iniquities and am now weighed down with sin. Therefore I confess my transgressions, and implore forgiveness (verses 11–13). Thou wilt save me in Thy mercy, and I will praise thee continually. For all the host of heaven sings thy praise, and thine is the glory for ever. Amen (verses 14–25). It is disputed whether the prayer was composed in Hebrew, Aramaic, or Greek. The theology and literary style of the prayer appear to be more in accord with the teachings of Palestinian than of Hellenistic Judaism. The two main ideas that permeate the prayer are the infinite mercy of God, and the efficacy of true repentance.

The position of this ancient prayer in biblical texts varies considerably. Its first appearance in literary history is in the *Didascalia Apostolorum*. In several Greek manuscripts (including codex B, 5<sup>th</sup> century C.E.) it is included among the 14 odes appended to the Psalter. In medieval manuscripts of the Vulgate it often follows II Chronicles. Several Syriac, Armenian, Ethiopic, and Old Slavonic manuscripts have the prayer, some at the close of the Psalter, some at the end of II Chronicles. Among printed Bibles its position varies. In

editions of the Vulgate printed before the Council of Trent, the prayer stands after 11 Chronicles; in official printings of the Vulgate after the Council, it is placed in an appendix after the New Testament. In Luther's German Bible it stands at the close of the Apocrypha. Among English versions it usually stands among the Apocrypha before 1 Maccabees, although in the Geneva Bible (1560), widely used by the Puritans, it is included among the canonical books, following 11 Chronicles. The Roman Catholic Douai Bible of 1609–10 places it in an appendix after 11 Maccabees.

[Bruce M. Metzger]

**MANASSEH (Menasseh) BEN ISRAEL** (1604–1657), Amsterdam scholar, printer and diplomat. Manasseh, who was born a Marrano in Lisbon or La Rochelle, was baptized as Manoel Dias Soeiro. According to an unreliable document of the Portuguese Inquisition, he was born on the island of Madeira. His father, Gaspar Rodrigues Nuñez (a nail-seller), escaped from Lisbon after appearing as a penitent in an *\*auto-da-fé* and settled in 1613/14 in Amsterdam, where he took the name Joseph b. Israel and called his two sons Ephraim and Manasseh respectively and his daughter Esther. His mother, Antonia Soeira took the name Rachel. Manasseh made prodigious progress in his education. He became a member of the *Ḥevrah* for Talmud Torah at the age of 12, began to frequent the *yeshivot* when he was 14, made his first public oration in Portuguese when he was 15, and at 17 wrote his first book, *Safah Berurah*, a grammatical work (unpublished and known from two manuscripts). He succeeded R. Isaac *\*Uzziel* as preacher to the Neveh Shalom congregation in 1622. In 1623 he married Rachel Abarbanel. They had three children, Gracia (Hannah), Joseph, and Samuel. His extraordinarily extensive knowledge in the theological rather than the talmudic sphere and his linguistic abilities made him a forerunner of the Jewish scholars of the 19<sup>th</sup> century who attempted to present Judaism in a sympathetic manner acceptable to the Christian world. He founded the earliest Jewish Hebrew printing press in Amsterdam (1626), where he continued to publish works in Hebrew, Yiddish, Latin, Spanish, Portuguese (and some in Dutch or English) for the remainder of his life. The first book of his press, a Hebrew Sephardi prayerbook, appeared on January 1, 1627 (13 Teveth 5387). It was financed by Ephraim Bueno and Abraham Sarphati and corrected by Isaac Aboab da Fonseca. Today it is known in only very few copies. *Penei Rabbah*, his index to the Midrashim, appeared in 1628. In 1628–29 he published Joseph Solomon Delmedigo's *Sefer Elim* and *Mayan Gannim* on religious, metaphysical and scientific matters with mathematical illustrations. Some chapters were prohibited by the Portuguese *parnasim*. He issued a number of Hebrew and Spanish biblical texts (from 1627 to 1654), Sephardi and Ashkenazi prayerbooks in Hebrew, Spanish, and

Yiddish (from 1630 to 1650) and several Hebrew editions of the *Mishnah* (1631–32; 1643–44; 1646). The first part of his *Conciliador* (1632, in Spanish; 1633 in a Latin translation by Dionysius Vossius), reconciling apparently discordant biblical passages, gained him a great reputation in Christian circles (the remaining three parts appeared in Spanish only, 1641–51). This was followed by a series of works also largely directed to non-Jews: *De Creatione* (1635, Latin only); *De Termino Vitae* (1634, Latin only); *De Resurrectione Mortuorum* (1636); and *De Fragilitate Humana* (1642). Beside other minor works, he produced *Thesouro dos Dinim*, a code of Jewish law for returned Marranos (1645–47); *Piedra Gloriosa*, with (in a few copies) containing four etches by Rembrandt (1655); and *Nishmat Hayyim* (1651) on the nature of the soul. The Manasseh b. Israel press, which was not always in his own hands, published about 80 titles. For these works, as well as his synagogue sermons (at which gentile scholars and notables were often present), he was regarded in the world of scholarship as the leading representative of Hebrew learning. In May 1642 he was honored to deliver an official address of welcome to Queen Henrietta Maria of England, her daughter Mary, and their hosts Stadtholder Frederick Henry and his son William (II) in the Portuguese synagogue at the Houtgracht. Manasseh published his address in the same year in Portuguese (*Gratulaçaõ*), Latin, and Dutch. He had close personal relationships with luminaries such as Gerardus Joannis Vossius and especially with his son Isaac, Hugo *\*Grotius*, Petrus Serrarius, Caspar Barlaeus, Claudius Salmasius, Paul Felgenhauer, Samuel Bochart and many more. He boasted to have written more than 200 letters to all his friends and relations, which he intended to publish separately. This never happened. Very few of these letters have survived as autographs, of which the Amsterdam University Library possesses six. Though continuing to serve the Amsterdam community in various capacities, he was never its official chief rabbi. In 1640, when he intervened in a quarrel between the synagogue authorities and his brother-in-law, Jonas Abrabanel, he was put under the ban. Despite his publishing activities, his income was never adequate, and in 1640 he planned to immigrate to *\*Brazil*. When after the Puritan revolution the return of the Jews to England was proposed, Manasseh took a prominent share in the negotiations. In 1650 he dedicated the Latin edition of his work, *The Hope of Israel*, describing the reported discovery of the *\*Ten Lost Tribes* in South America, to the English parliament in an effort to solicit their goodwill. At the same time, he entered into discussions with various Englishmen by correspondence and in person, on the possibility of permitting the return of the Jews; this, in his view, had messianic implications, because it would complete the dispersion of the Jews to *Kezeh ha-Arez* ("the end of the earth"), the medieval Hebrew term for Angle-Terre (cf. Deut. 28:64). Because of political circumstances and his own health, Manasseh did not avail himself of an opportunity to go to England in 1652, though his friend Manuel Martinez (David Dormido *\*Abrabanel*) and his son Samuel Soeiro conducted some negotiations on his behalf. Eventually however, he went

there in 1655, and submitted his petition to \*Cromwell for the recall of the Jews. Although this was not formally granted, assent was given to a subsequent petition which merely asked for permission to establish a synagogue and acquire a cemetery. This arrangement eventually proved providential, since it placed no conditions on the return of the Jews. During his stay in England, Manasseh wrote *Vindiciae Judaeorum* (1656) to defend the Jews against the attacks which were then being made on them. He was bitterly disappointed at the apparent frustration of his hopes, although Cromwell showed his personal sympathy by granting him a pension of £100 a year. He returned to Holland in the autumn of 1657, but died at Middelburg shortly after his arrival. He was buried at the Portuguese cemetery Beth Haim at Ouderkerk on the Amstel, where his tomb (restored by British Jews in 1960) can still be visited. The historical facts about Manasseh b. Israel in R. Menasse's novel *Die Vertreibung aus der Hölle* (2001) are unreliable. His portrait was engraved by Salom Italia (1642). Whether a portrait etching by Rembrandt of 1636 (Bartsch 269) represents Manasseh is doubtful, and painted portraits of Manasseh by Rembrandt or by Ferdinand Bol are not known.

[Cecil Roth / A.K. Offenberg (2<sup>nd</sup> ed.)]

**MANASSEH BEN (PORAT) JOSEPH OF ILYA** (1767–1831), one of the forerunners of the \*Haskalah in Lithuania and Russia. He was born in Smorgon, Lithuania, and was renowned as a child for his remarkable memory and intellectual precocity. He received a talmudic education in the home of his father, who was a *dayyan*. In 1784 he married and went to live in the house of his father-in-law, a wealthy merchant in Ilya. Manasseh was among the disciples and intimates of \*Elijah b. Solomon Zalman, the Gaon of Vilna, and became friendly with Joseph Mazal from Viasyn, who owned an excellent Hebrew library including scientific and research works. Gradually he reached theoretical and practical conclusions tending toward increasing rationalism and called for some change in *halakhah*. In his works, his attitude to Talmud study is based on these conceptions. In several places, for example, he challenged the Talmud and Rashi's understanding of certain pronouncements

of the Mishnah. He regarded natural sciences with respect and was critical of the Kabbalah. Demanding the abrogation of halakhic commands that were not an integral part of the basic, early law and that people could not carry out in actual life, he advocated the principle of alteration and leniency in *halakhah*, according to changing trends. He likewise called for a changed and orderly curriculum of traditional studies (see also \*Judah Loew b. Bezalel): first the Bible, Mishnah, and *Gemara* and, for talented youth, secular studies as well.

Manasseh has been credited with the invention of several agricultural machines which the unsophisticated environment rejected. Raising the problem of the poor in Jewish society, he called for justice for them, as "the overwhelming majority of these people lack their basic needs, are hungry and thirsty, have no garment against the cold, and their spirit is faint within them." Social responsibility and service for society he regarded as a duty, even at the cost of personal advantage. He attacked the custom of *kest*, by which a newly married couple was supported for several years by the wife's parents, since he was in favor of productivization. Regarding trade as "robbery," he called for "proper leadership" to enable the Jewish masses to earn their livelihood through crafts. From time to time he suggested that the leading rabbis confer to deliberate on the problems of a "general improvement" of Jewish conditions and culture. Manasseh was persecuted. A rabbinical convention deliberated his excommunication and he was prevented from going to Berlin. He therefore completed his studies in the Polish and German languages at home and read antiquated scientific works in those languages, thus gaining a sketchy knowledge in this field. To make a living, he later worked as a private teacher in various places in Russia and Galicia. It was then that he became acquainted with Nachman \*Krochmal and other Galician *maskilim*.

Manasseh was a prolific writer, but it was not easy for him to publish his writings, because none of them was issued with approbation of the rabbis. His *Pesher Davar* (Vilna, 1807) was burnt by many rabbis. When he attempted to publish his principal work, *Alfei Menasheh*, in Volhynia, the printer burned the manuscript and the copies that had already been printed as soon as he became aware of the content of the work; when it was printed in Vilna (1822), the author was required to omit a paragraph which alluded to reforms in *halakhah*. His *Binat Mikra* (Grodno, 1818), written in the form of unsystematic novellae, deals with the cantillation marks of the Bible as factors in syntax and meaning. In his pamphlet *Sama de-Hayyei* (Yid. trans. *Lebn-Mittel*), he sought to present his views to the people at large and to outline "proper and useful behavior for life in this world." Though he had intended to publish additional pamphlets, no more appeared, possibly because of the opposition of the rabbis and community leaders. After *Sama de-Hayyei*, Manasseh published anonymously the pamphlet *Shekel ha-Kodesh*, in which he apologized to those who considered him "a nonconformist in several matters," and suggested that his opponents "choose several men who would be willing to clarify their opinions with me."

Manasseh visited *hadarim* and encouraged young men to study mathematics and sciences. In 1827 the Jews of his native town elected him as their rabbi, but he resigned after a year, refusing to be involved in the cruelty of the \*Cantonist mobilization. He died in a cholera epidemic. Most of his literary remains were destroyed in the fire which broke out in Ilya in 1884, but some extracts appeared in the second volume of *Alfei Menasheh* (1904), published by his grandson Isaac Spalter, head of a yeshivah in Smorgon. Circles of pupils and admirers cherished his memory, and using this tradition, M. \*Plungian, one of the first Lithuanian *maskilim*, wrote his biography of Manasseh, *Ben-Porat* (Vilna, 1858). \*Maskilim of the 19<sup>th</sup> century (M. \*Lilienblum, R.A. \*Braudes, and others) used Manasseh's opinions against rabbis of the old school.

**MANCHESTER**, city in northern England. Its Jewish community, the second largest in Britain, dates from about 1780, the first synagogue being founded by two brothers, Lemon and Jacob Nathan, formerly of Liverpool. A cemetery was acquired in 1794 and the first local charity was the Manchester Jewish Philanthropic Society (1804) which provided winter relief for poor resident Jews. After a temporary schism in the congregation in 1840, a more serious split followed during the rabbinate of S. \*Schiller-Szinessy and led to the establishment of a Reform synagogue in 1856. Two years later, the original community moved to its new synagogue (“the Great”) on Cheetham Hill still in use in the 1970s. The early settlers and community leaders came mainly from Liverpool and included a tailor, a pencutter, and an optician. Nathan Meyer \*Rothschild's first residence in England was in Manchester, from where he exported cotton goods from 1798 to 1805. The second half of the 19<sup>th</sup> century brought to the city substantial merchants from Central Europe, some political refugees from the 1848 liberal risings in Europe, Romanian Jews fleeing from the 1869 persecutions, and in the 1870s young men escaping service in the Russian army. In 1871, small groups arrived from North Africa and the Levant, areas connected with the Manchester cotton industry, forming the nucleus of the flourishing 20<sup>th</sup>-century Sephardi congregations of south Manchester. The most significant influx, however, resulted from the great Russo-Polish immigration of 1881–1914. The Jews of Manchester spread northward, settling in the adjacent city of Salford and in the suburban districts of Prestwich and Whitefield. In the 20<sup>th</sup> century, the south Manchester Jews spread into the suburban areas of Cheshire.

Some of the earlier immigrants became waterproof-garment manufacturers, an industry developed by Jews which flourished until it was superseded by the technologically su-

perior “rainproof,” in the manufacture of which Jews were not prominent. The Russo-Polish immigrants followed the usual immigrant trades of tailoring and capmaking. There were also large numbers of jewelry travelers, hawkers, and street-traders. Communal institutions proliferated. The first Jewish school was founded in 1842, and by 1904, 2,300 pupils were being educated in Jewish schools. A Board of Guardians on the London pattern was founded in 1867. Many small *hevrot* were opened by immigrants. A weekly journal, the *Jewish Telegraph*, is published there. In the 20<sup>th</sup> century, Manchester had its own *bet din* and *shehitah* board and a Jewish hospital. The representative body, the Council of Manchester and Salford Jews, had 68 synagogues and organizations affiliated to it. At its peak around 1910, Manchester's Jewish population was estimated at 35,000. It probably remained at just under this figure until about the 1970s, when a decline was obvious.

As Manchester was the home of Chaim \*Weizmann from 1904 to 1916, the city became the training ground of some of the outstanding British Zionists, personalities prominent also in British life: Lord Simon \*Marks, Harry \*Sacher, Leon \*Simon, \*Rebecca and Israel \*Sieff. In civic life, too, Jews played an increasingly important role. Nathan and Sarah \*Laski were followed by a large number of Jewish lord mayors of both Manchester and Salford. Several Jews were Labor members of parliament for Manchester constituencies, especially after 1945, including Leslie and Harold \*Lever and Frank Allaun. The novelist Louis \*Golding lived in Manchester and set several of his novels in the city. Even in the very recent past Manchester produced a number of communal leaders with a power base separate from London Jewry, such as Sir Sidney \*Hamburger.

In the mid-1990s, the Jewish population numbered approximately 27,000. According to the 2001 British census, the first to include an optional religious question, Manchester's Jewish population totaled 21,733. It still contained more communal institutions than any British city apart from London. The community was headed by a Jewish Representative Council of Greater Manchester and Region. There were about 32 synagogues, all but three of which were Orthodox. The Orthodox community, which included a highly visible Strictly Orthodox community, maintained a local Council of Synagogues, a *Beth Din*, and a range of institutions. Remarkably, Manchester also had no fewer than 16 Jewish day schools, ranging from Strictly Orthodox to Liberal. There was also a well-presented Manchester Jewish Museum on Cheetham Hill Road. The history of the community down to recent times has been fairly well chronicled by historians such as Bill \*Williams.

**MANCHURIA**, N.E. region of China, adjacent to the Soviet Union. After the Russian Revolution of 1917 many refugees sought shelter in Manchuria, including some 5,000 Jews. Most of them gravitated to \*Harbin, but small groups settled in Dairen, Mukden, and other cities. Those Jews who were not employed by the Chinese Eastern Railway worked as educators, physicians, or merchants. The Japanese occupied Manchuria (1931–45); as Axis partners during World War II they accepted the antisemitic policy of their Nazi ally and their treatment of the Jews was oppressive. After the Japanese defeat in 1945, civil war broke out in Manchuria between the Chinese Nationalists and the Communists. Those Russian Jews who did not succeed in escaping before the Communist takeover eventually returned to the Soviet Union.

[Rudolf Loewenthal]

**MANCROFT**, family of British politicians. ARTHUR MICHAEL SAMUEL, first BARON MANCROFT (1872–1942), English politician and philanthropist. Born into a wealthy family long-settled in the Mancroft district of Norwich, Arthur Samuel became head of one of the family shoe manufacturing concerns but retired in 1912 to devote himself to public affairs. He contributed large sums and devoted service to various causes in Norwich, including the Castle Museum and Picture Gallery, and was lord mayor of Norwich from 1912 to 1913. During World War I he worked at the War Office and later at the Ministry of Supply where he dealt with arms contracts. Samuel was elected to Parliament as a Conservative from 1918, and became parliamentary secretary to the Board of Trade and minister for the Department of Overseas Trade. From 1927 to 1929 he was financial secretary to the Treasury. In 1932 he was made a baronet and in 1937 was raised to the peerage as Baron Mancroft. His writings include the biography *Piranesi* (1910), *The Herring: Its Effect on the History of Britain* (1918), *The Mancroft Essays* (all written under the name Arthur Michael Samuel), and numerous articles on economic and financial matters. While not active in communal affairs, Lord Mancroft occasionally defended Jewish interests in and out of Parliament.

Lord Mancroft was succeeded by his son, STORMONT MANCROFT, the second baron Mancroft (1914–1987). He was undersecretary to the Home Office from 1954 to 1957, when he became parliamentary secretary to the Ministry of Defense. He entered the cabinet as minister without portfolio, but resigned in the following year. In 1964 Stormont Mancroft was the central figure in a controversy which broke out when he was appointed chairman of the Board of the Norwich Union Insurance company, with which his family had long been associated. Although he had never shown any Jewish or Zionist

interests, he was removed from the post as a concession to Arab pressure.

[Vivian David Lipman]

**MANDATE FOR PALESTINE.** The mandate system was established after World War I by the Treaty of Versailles for the administration of the former overseas possessions of Germany and parts of the Turkish Empire. Its purpose was to implement the principles of Article 22 of the Covenant of the League of Nations, which said in paragraph 4:

Certain communities formerly belonging to the Turkish Empire have reached a stage of development where their existence as independent nations can be provisionally recognized, subject to the rendering of administrative advice and assistance by a Mandatory until such time as they are able to stand alone. The wishes of these communities must be a principal consideration in the selection of the Mandatory.

Class A of the mandates included former Turkish provinces constituted as Palestine, Iraq, and Syria. The first two were assigned to the administration of Great Britain and the third to France. The mandates for Iraq and Syria ended in 1932 and 1936, respectively, their main purpose having been to prepare the countries to be able “to stand alone.” The mandate for Palestine differed from the other “A” mandates in that its primary purpose was the establishment of a national home for the Jewish people, as stated in its preamble, paragraph 3, “putting into effect the declaration originally made on November 2, 1917 [the \*Balfour Declaration] by the Government of His Britannic Majesty, and adopted by the other Allied Powers ...” Moreover, the reason for the establishment of a national home for the Jewish people in Palestine is related to the recognition of “the historical connection of the Jewish people with Palestine and to the grounds for reconstituting their national home in that country” (para. 3). Great importance was attached to the wording of this paragraph, as it made it clear that Palestine was not just a country in which a national home should be built, but was taken as the historic land of the Jews. Therefore the national home is to be reconstituted, and not just constituted, there (see \*White Papers).

The second article of the mandate makes it the responsibility of the mandatory power, i.e., Great Britain, to place “the country under such political, administrative, and economic conditions as will secure the establishment of the Jewish national home, as laid down in the preamble.” To this is added the aim of “the development of self-governing institutions,” an intentionally vague phrase that implied the gradual preparation of Palestine for self-rule as a process parallel to the establishment of the Jewish national home (particularly when compared with the Mandate for Iraq (Mesopotamia)). The fulfillment of the main purpose of the Palestine mandate was to be assured by establishing “an appropriate Jewish Agency for the purpose of advising and cooperating with the Administration of Palestine,” by facilitating Jewish immigration into Palestine, encouraging close settlement by Jews on the land (art. 6), and “facilitating the acquisition of Palestin-

ian citizenship by Jews" (art. 7). The Zionist Organization was recognized as such an agency until the establishment of the \*Jewish Agency in 1929 (art. 4).

The Hebrew language was recognized as one of the three official languages of the country (art. 22). The Mandate was also to safeguard the "civil and religious rights of all the inhabitants of Palestine, irrespective of race and religion" (introd. and art. 2) and to set up the judicial system so that it assured the rights of all and respected the "personal status of various peoples and communities" and that religious interests (in particular waqfs) be "fully guaranteed" (art. 9). Also many other articles dealt with religious autonomy for the various religions strongly emphasizing this as one of the important functions of the mandate (see arts. 13, 14, 15, 23). Each community was allowed to maintain its own schools in its own language (art. 15); and no modification of the mandate was possible without the consent of the League of Nations (art. 27). According to Article 25 of the mandate, "In the territories lying between the Jordan and the eastern boundary of Palestine as ultimately determined, the Mandatory shall be entitled, with the consent of the Council of the League of Nations, to postpone or withhold application of this mandate as he may consider inapplicable," and by virtue of this saving clause, Transjordan was severed from the territory destined to include the Jewish national home (see \*White Papers).

The mandate for Palestine was given to Great Britain at \*San Remo on April 25, 1920, and a civil administration (which superseded the British Military Administration), headed by Sir Herbert \*Samuel, was effected on July 1, 1920. The mandate itself was ratified by the Council of the League of Nations on June 24, 1922. A special American-British Palestine Mandate Convention was ratified in March 1925, as the United States was not a member of the League of Nations. In this convention the United States agreed to the terms of the mandate and Great Britain agreed that no modification in these terms would be possible without the assent of the United States (art. 7); thus any modification in the mandate needed the assent of both the League of Nations and the United States. The mandate terminated with the establishment of the State of Israel on May 14, 1948.

Laqueur (ed.), *The Israel-Arab Reader* (1969), 34–61; U.S. Department of State, *Mandate for Palestine* (1927, 1931<sup>2</sup>); Ch. Weizmann, *Trial and Error* (1949), 347–64 and index; N. Bentwich, *The Mandates System* (1930); B. Joseph, *British Rule in Palestine* (1948).

[Daniel Efron]

**MANDEL, ARNOLD** (1913–1987), French author and journalist. Of Polish immigrant parentage, Mandel was born in Strasbourg. A libertarian radical until World War II, Mandel rediscovered his Jewish identity as a soldier in North Africa in 1940, and then in occupied France. He fled to Switzerland, where he was interned until 1944, after which he fought in the Maquis. From 1945, Mandel was one of the chief spokesmen

for French Jewry. Under the influence of Samson Raphael \*Hirsch and of ḥasidic mysticism, he returned to neo-Orthodoxy. His knowledge of Yiddish and of Jewish lore made him one of the few able interpreters of Yiddish literature in France. A prolific writer, Mandel defined the originality and distinctiveness of Jews – particularly French Jews – in the modern world. His works deal mainly with his search for identity in a gentile world, and with his intellectual and spiritual quest for a Judaism both modern and Orthodox. They include *L'Homme-Enfant* (1946); *Chair à Destin* (1948); *Les Temps incertains* (1950); *Les Vaisseaux brûlés* (1957); *Le petit livre de la sagesse populaire juive* (1963); *La Voie du Hassidisme* (1963); and *Les Cent Portes* (1968). Mandel contributed to most Franco-Jewish periodicals, particularly *La Terre retrouvée*, *Evidences*, and *L'Arche*.

[Pierre Aubery]

**MANDEL, ELI** (1922–1990), Canadian author. Mandel is among the most challenging writer-critics to gain prominence as part of the explosion of Canadian literary activity in the 1960s. Born in Estevan, Saskatchewan, he served in the Canadian armed forces during World War II. His first book, *Trio*, appeared in 1954, just after he completed his Ph.D. in literature at the University of Toronto. This division of labor, between working poet and active scholar and teacher, was a pattern he maintained throughout his career. In the middle 1950s Mandel taught at the *Collège militaire royal de Saint-Jean*; from 1957 until 1967 he was at the University of Alberta. He spent the remainder of his career at York University.

Mandel's published work, which reflects his varied interests and talents, includes poetry collections, volumes of personal and critical essays, as well as a number of important poetry and critical anthologies that both reflected their times and influenced the course of Canadian literary studies. The bulk of Mandel's anthologizing work took place in the early 1970s, when the Canadian literary scene was undergoing impressive growth and change, alongside the rise of a new cultural nationalism. In his published criticism, Mandel addressed a wide area of Canadian intellectual trends, from the influence of Northrop Frye to the linguistic and political implications of postmodernism. He also contributed to discussions related to regionalism and the role of ethnic writing.

Jewish themes appear intermittently in Mandel's work, but they are not central as they are in the writings of Leonard \*Cohen, Irving \*Layton, and A.M. \*Klein. Most interesting are a 1984 essay entitled "Auschwitz and Poetry," in which Mandel explores his own efforts to address the Holocaust in his art, as well as a remarkable text called *Out of Place* (1977), which explores Mandel's family history in the Jewish prairie farming colony of Hirsch in southern Saskatchewan. In *Out of Place* Mandel juxtaposes the particularity of Jewish prairie life with questions of Canadian history, memory, and landscape, making use of a poetic method that is spare and lightly ironic. The outcome, like much of Mandel's work, is a surprisingly original view of Canadian cultural life.

Mandel's awards include the Governor General's Award in 1967 for his collection *An Idiot Joy*.

Ravvin, "Eli Mandel's Family Architecture: Building a House of Words on the Prairies," in: R. Menkis and N. Ravvin (eds.), *The Canadian Jewish Studies Reader* (2004): 266–82; A. Stubbs, *Myth, Origins, Magic: A Study of Form in Eli Mandel's Writing* (1993).

[Norman Ravvin (2<sup>nd</sup> ed.)]

**MANDEL, GEORGES (Louis** (not Jeroboam as represented by antisemites) **Rothchild**; 1885–1944), French statesman, born in Chatou, near Paris. Mandel became a close associate of Georges Clemenceau in 1903, after joining Clemenceau's staff at *LAurore*, a radical daily newspaper which campaigned for the rehabilitation of Alfred \*Dreyfus. When Clemenceau became prime minister in 1906, he appointed Mandel head of his office (*chef de cabinet*), a position Mandel held until 1909, and again from 1917 to 1919 in Clemenceau's war cabinet. At the peak of World War I Mandel was put in charge of the trials dealing with treason and defeatism. In 1920 he was elected a deputy and after 1935 he was appointed minister a number of times. As cabinet minister he urged France's speedy rearmament to meet the threat of German National Socialism and in 1936 he opposed Germany's remilitarization of the Rhineland. As minister of the interior in Paul Reynaud's government (from May 1940 to the fall of France), Mandel ordered the arrest of numerous suspected Nazi sympathizers and also interned Jewish refugees from Germany and Austria. After the retreat of French troops, he opposed Pétain's and \*Laval's policy of capitulation and collaboration. Pétain had Mandel arrested in Bordeaux, but upon his release he went to Morocco to organize the renewal of combat. Arrested a second time, Mandel was taken to prison in France and assassinated by the Vichy militia in 1944. Mandel did not participate in Jewish community life.

[Lucien Lazare]

**MANDEL, MARVIN** (1920– ), U.S. politician. Mandel, born in Baltimore, Maryland, the son of East European immigrants, was raised in an Orthodox, Yiddish-speaking home. After graduation from Johns Hopkins and the University of Maryland (1942) and service in the army during World War II, Mandel practiced law in Baltimore until his election to the lower house of the Maryland legislature in 1951. In 1963 he was chosen speaker of the Maryland House of Delegates, and also served as chairman of the Maryland State Democratic Committee. As speaker, he was credited with helping push through the legislature tax reform, a fair housing law, and the repeal of the state anti-miscegenation law. When Spiro T. Agnew, Maryland's Republican governor, was elected vice president of the United States in 1968, Mandel was elected governor

(Democrat) by legislature vote. Reelected twice (in 1970 and 1974), he served as governor until 1979. He also served as chair of the Comprehensive Health Planning Agency (1969); the Governor's Executive Council (1969–79); the Board of Public Works (1969–79); and the Maryland Council on the Environment (1970–79). In addition, Mandel was a member of such entities as the State House Trust (1969); the Hall of Records Commission (1969–70); the Maryland Highway Safety Coordinating Committee (1969–79); the Maryland Education Council (1969–79); and the Southern Regional Education Board (1969–79).

In 1977 Mandel was found guilty of mail fraud, racketeering, and bribery, for which he served 19 months in prison. He was pardoned by President Ronald Reagan; in 1989 the Supreme Court overturned his conviction.

Among his honors and awards, Mandel received the House of Delegates Thomas Kennedy Award in 2002. From 2003 he served as chair of the Governor's Commission on the Structure and Efficiency of State Government and a member of the Board of Regents for the University System of Maryland. A former state commander of the Jewish War Veterans, Mandel was active in Jewish communal affairs.

**MANDEL, SHELOMOH** (1909–1981), \**hazzan*. Mandel was born in Nowy Zanz, Galicia. He studied *hazzanut*, the specific melodies and musical style of the solo cantorial singer, under Moshe Steinberg and Moshe \*Koussevitzky in Vilna and music at the Warsaw Conservatory. After serving as *hazzan* in Warsaw and Cracow he was appointed to the Berea synagogue in Johannesburg in 1934, remaining there until he immigrated to Israel in 1974. Of a *hasidic* background, he incorporated *hasidic* melody into the traditional melodies. Among his records is one of the whole Passover Haggadah. He taught *hazzanut*.

[Akiva Zimmerman (2<sup>nd</sup> ed.)]

**MANDELBAUM, BERNARD** (1922–2001), U.S. rabbi, educator, community leader, administrator. Mandelbaum spent the better part of his professional life as one of the most important figures in the Conservative movement in the 20<sup>th</sup> century. He was born in Brooklyn, New York, received a B.A. degree from Columbia University in 1942, and was ordained at the Jewish Theological Seminary (1946), obtaining there a Doctor of Hebrew Letters degree in 1953.

Following his ordination, Mandelbaum spent 27 years at the seminary serving, inter alia, as professor of homiletics, instructor of Midrash, registrar and dean of students at its Rabbinical School, director of the seminary's department of religion and psychiatry, World Brotherhood, American Student Center in Jerusalem and Schocken Institute for Jewish Research, and program editor of *The Eternal Light*, an NBC television show. Mandelbaum, ultimately, became provost and, in

1966, in anticipation of the retirement of Louis \*Finkelstein as chancellor, was elected to serve as president of the seminary, seemingly anointed as Finkelstein's successor.

While already in the mid-1950s there were stirrings within the Conservative movement to reform the prayer book and introduce a full measure of egalitarianism at worship services, 1966 became a fateful year for the seminary as it searched for a replacement of Finkelstein as chancellor. Two factions among the conservative leadership arose, one which supported Mandelbaum for the chancellorship, not only because of his intellectual credentials, proven leadership and dedicated service to the seminary, but because he was fully committed to preserving the traditional roots of Conservative Judaism. The stronger faction aspired to bring to the seminary a worthy leader who would be more amenable to the changes they sought, such as the ordination of women, through a more liberal interpretation of the *halakhah*. When Dr. Gerson D. \*Cohen was selected over Mandelbaum as chancellor, the stage was set for an accelerated ideological shift in Conservatism.

Mandelbaum became president emeritus of the seminary in 1973, and accepted leadership roles, thereafter, in the American-Israel Cultural Foundation, serving as its president (1973–77) and then as executive vice president of the Synagogue Council of America and director of its Institute for Jewish Policy Planning and Research.

Among his published works are *Assignment in Israel* (1960); *Pesikta De Rav Kahana: A Critical Edition* (1962); *The Maturing of the Conservative Movement* (1968); *To Live With Meaning* (1973); *Add Life To Your Years* (1974); *Art and Judaism: Conversation Between Yaakov Agam and Bernard Mandelbaum* (1981); and *From the Sermons of Milton Steinberg*, 2 volumes (1954–63).

**MANDELBAUM, DAVID GOODMAN** (1911–1987), U.S. anthropologist. Born in Chicago, he studied at Northwestern and Yale Universities. Mandelbaum joined the faculty of the University of Minnesota and from 1943 to 1946 served in the U.S. Army in India and Burma. In 1946 he moved to the University of California at Berkeley, becoming professor and serving as a director of educational resources in anthropological projects (1959–62). His major interests were the ethnology of Southeast and South Asia, anthropological theory, and applied anthropology. He was one of the first cultural anthropologists to undertake ethnographic research in Burma. In addition to his extensive fieldwork in southern India, he worked with the Plains Cree and Chippewa Indians in the U.S.

**BIBLIOGRAPHY:** His works include *The Plains Cree* (1940), *Soldier Groups and Negro Soldiers* (1952), *Change and Continuity in Jewish Life* (1955), and *Society in India* (1970). He edited *Culture, Language, and Personality* (1956) and *Resources for the Teaching of Anthropology* (1963). **ADD. BIBLIOGRAPHY:** P. Hockings, *Dimensions of Social Life: Essays in Honor of David G. Mandelbaum* (1987).

**MANDELBERG, AVIGDOR (Victor; 1870–1944)**, physician; delegate to the Second Russian Duma. Born in Berdichev, Mandelberg graduated from the faculty of medicine of the University of Kiev (1893) and settled in St. Petersburg, where he took a part in the organization of workers' circles and their intellectual activities. He was exiled for his activities to Irkutsk, eastern Siberia, in 1899 for four years, and while there, he joined the Social Democratic Labor Party, playing an active role in its organization in Siberia. Upon his release he attended his party's second congress as a delegate of the Siberian alliance and joined the Menshevik faction. He then returned to Siberia, took part in the revolutionary activities of 1905, and was elected to the Second Duma (1907), avoiding any collaboration with the three other Jewish delegates, who had joined the Kadet faction (the Russian Liberals). After the dismissal of the Second Duma and the arrest of the Social Democrats, he escaped abroad. He lived in Italy and returned to Russia with the outbreak of the revolution of 1917. When the Bolsheviks came to power, Mandelberg left for Siberia, emigrating to Palestine in 1920. He was chief physician of Kuppas Ḥolim of the \*Histadrut and one of the founders of the League against Tuberculosis. In 1941 he helped found the League for Friendship with the Soviet Union (v League) and was a member of its central committee. Among his works should be mentioned: *Iz perezhitogo* ("Experiences," 1910) and *Me-Ḥayyay* (1942).

**BIBLIOGRAPHY:** Ha-Ligah li-Ydidut Yisrael-S.S.S.R., *Dr. Avigdor Mandelberg, Dappim le-Zikhro* (1946).

**MANDELBROT, BENOIT** (1924– ), U.S. mathematician, scientist, and educator. Born in Warsaw, Poland, the nephew of the expert in mathematical analysis Szolem Mandelbrojt, Mandelbrot moved to France with his family in 1936. The need to avoid detection during the German occupation of France in World War II greatly disturbed his education, but he gained admission to the Ecole Polytechnique – one of France's leading science schools – after the occupation ended in 1944. After graduating in 1947, he gained an M.Sc. in aeronautics at the California Institute of Technology. It was in the doctoral thesis he presented for his 1952 Ph.D. at the University of Paris that Mandelbrot first used scaling, a concept that refers to the manner in which the fine details of patterns replicate those patterns' large-scale irregularities. This was to become the unifying theme of his work. He was J. von Neumann's postdoctoral fellow at the Institute of Advanced Study in Princeton when he realized that the \*Hausdorff-\*Besicovitch fractal dimension is not an esoteric notion of mathematics but can be used to measure roughness numerically. Mandelbrot's interdisciplinary bent led him to join IBM and apply his theories successfully to both the problem of random noise on telephone circuits and that of fluctuations in stock-market prices. In the latter case, he was able to offer a highly effective statistical method for predicting such fluctuations' riskiness over a range of time scales. Over time, his theory of fractals was

found to be applicable to a very wide variety of phenomena, from turbulence to the dispersion of blood vessels through the body. Increasingly, it came to be recognized that fractality reveals an important and hitherto unrecognized characteristic of nature and natural development as a whole. The theory exerts a profound influence upon modern scientific theory, helping to provide descriptions of anything from the behavior of the human heart under stress to the shapes of mountains and clouds or the pattern of water seepage into the soil, in addition to forming a key tool in modern chaos theories. Mandelbrot synthesized these views in his book *The Fractal Geometry of Nature* (1982). The Mandelbrot set that Mandelbrot discovered and that is named in his honor is called the most complex orderly object in mathematics. Many of its properties are understandable even to young students but have not yet been proven rigorously. Early on, Mandelbrot's eclectic and wide-ranging approach meant that he was often regarded with suspicion by a scientific establishment that valued compartmentalization and specialization in a single field, but the undoubted value of his discoveries have led to wide recognition of his importance. He has been IBM Fellow and Sterling Professor of Mathematical Sciences at Yale, has held many visiting positions, and received many awards.

[Rohan Saxena / Gali Rotstein (2<sup>nd</sup> ed.)

**MANDELKERN, SOLOMON** (1846–1902), Russian lexicographer, Hebrew poet, and translator. Mandelkern was born in Mlynów and in his youth was among the Ḥasidim of Menahem Mendel of Kotzk. However, he soon came under the influence of Haskalah. At the age of 19 he divorced his very pious wife and went to study at the newly founded rabbinical seminaries of Vilna and Zhitomir. He also studied Semitic languages at the University of St. Petersburg. From 1873 to 1880 Mandelkern served as assistant to the government-appointed rabbi at Odessa, being one of the first to preach in Russian. During this period he studied law at the university and compiled a history of Russia, *Divrei Yemei Rusyah* (3 vols., 1875), on behalf of the “\*Society for the Promotion of Culture among the Jews of Russia.” Because of his personal animosity toward the editor of the periodical *Ha-Meliz*, Alexander \*Zederbaum, Mandelkern submitted a false report of a \*blood libel in Bessarabia for publication in it. When this was discovered, the periodical was forced to suspend publication, and Mandelkern, to leave Russia. He studied at Jena and afterward settled in Leipzig, where he devoted himself to research. An early supporter of Ḥibbat Zion and Herzl's Zionism, he attended the first Zionist Congress in Basle in 1897. Mandelkern's great contribution to Jewish scholarship is his monumental Bible concordance *Heikhal ha-Kodesh* (1896, 1959<sup>8</sup>; abridged edition, *Tavnit Heikhal*, 1897), the fruit of 20 years of scholarly labor. This concordance was a great improvement on its predecessors and was the first to follow the Jewish arrangement of the Hebrew Bible. In later editions of the work by F. Margolin and M. Goshen-Gottstein (1967<sup>7</sup>) and H.M. Brecher and A. Avrunin (1955, with an English introduction by A.M.

Freedman and Hebrew bibliographical essay on concordances by A.R. Malachi) many of its imperfections were corrected. Mandelkern had also begun to work on a Talmud and Midrash concordance, which, however, remained fragmentary and has not been published. Mandelkern's output as a writer, poet, and translator of poetry was equally considerable. They include an early ode to Czar Alexander II, *Teshu'at Melekh Rav* (1866), on his escape from an attempted assassination; a love poem *Bat Sheva* (1866), which earned him praise from Adam ha-Kohen (1896<sup>2</sup>); aphorisms, *Hizzim Shenunim* (1864); and an anthology *Shirei Sefat Ever* (3 vols., 1882–1901), which contained apart from his own poetry translations of great poets from various languages. He also translated Byron's *Hebrew Melodies* into Hebrew as *Shirei Yeshurun* (1890); Mapu's *Ahavat Ziyon* into German, *Thamar* (1885; 1897<sup>2</sup>, without mentioning the author), and *Ashmat Shomeron* as *Suende Samarias* (1890); and into Russian *Bogdan Chmielnicki* (1878) and Lessing's *Fables* (1885). Mandelkern expended great mental and physical efforts producing his works and soliciting buyers for his concordance, even traveling to the U.S. in 1899, and late in his life suffered mental illness. He also became increasingly interested in the theory and practice of spiritualism.

**BIBLIOGRAPHY:** Klausner, Sifrut, 5 (1956<sup>2</sup>), 243ff., incl. bibl.; S. Verba, in: *Hadoar*, 32 (1953), 524–5; G. Bader, *ibid.*, 829; R. Malachi, *ibid.*, 35 (1956), 93ff., 115; Y.H. Zagorodski, in: *Sefer ha-Shanah*, 4 (1903), 291–300.

**MANDELSHTAM, LEONID ISAAKOVICH** (1879–1944), Soviet physicist. Mandelshtam was born in Odessa and entered the New Russian (Novorossiyskiy) University in Odessa in 1897. He was expelled one year later for taking part in student protests and completed his education at the University of Strasbourg. He returned to Russia in 1914; in 1918 he was appointed professor at the Odessa Technical Institute. In 1925 he became professor of physics at Moscow University. Mandelshtam's main scientific works were in the fields of optics, theory of oscillations, and radiophysics. In his work *Ob opticheskoi odnorodnykh i mutnykh sredakh* (“On optically isotropic and cloudy media,” 1907) he disproved J.W. Rayleigh's theory about molecular dispersion of light and showed that the medium must be anisotropic to be able to disperse light. He made several important contributions to the nonlinear theory of oscillations, and together with N.D. Papaleksi invented a new method of creating electrical oscillations. In radiophysics Mandelshtam solved several problems of propagation of radio waves over the surface of the earth. He also proposed the idea of exact distance measurements with the help of radio waves and together with Papaleski built radiointerferometric distance measuring devices. He also wrote papers about statistical and quantum physics and relativity theory, the philosophical basis of which has been criticized lately by the scientific community. From 1931 to 1936 Mandelshtam served as coeditor with Abram Fyodorovitch \*Joffe of *Khimicheskii Zhurnal*, the journal of the Russian Physico-Chemical Society, Leningrad.

Mandelstam was awarded the Stalin Prize in 1942 for his work on nonlinear oscillations and propagation of radio waves. In 1945 the Academy of Sciences established two prizes in his name for the best work in physics and radio-physics.

[Gerald E. Tauber]

**MANDELSHTAM, NADEZHDA YAKOVLEVNA** (1899–1980), Russian writer and philologist. Mandelstam was born in Saratov, to a lawyer father who was the son of a \*cantonist and turned to Russian Orthodoxy, and a Jewish mother who was a physician. She herself was baptized as a child. She was educated in Kiev, where she studied art in the studio of the painter A. Ekster and worked as an assistant stage designer. In 1919, she met the poet O.E. \*Mandelstam, whom she married in 1921. She assisted her husband in his translation work, herself translating from English. After his exile and death, she preserved his manuscripts and helped to prepare them for publication. In 1956, she was awarded the degree of Candidate of Philological Sciences for her dissertation *Function of the Accusative in Anglo-Saxon Poetic Monuments*. Mandelstam achieved considerable literary fame in the West following publication of her remarkable memoirs, *Hope against Hope* (1970). Her second book of memoirs, *Vtoraya Kniga* (1972), was translated into English as *Hope Abandoned* (1974). After her death her friends collected her poems, commentaries, and other materials into a third book of memoirs, published in Paris in 1987. Mrs. Mandelstam lived in Moscow. She was buried at services conducted by the Russian Orthodox Church, with which she identified all her life.

**MANDELSHTAM, OSIP EMILYEVICH** (1891–1938?), Russian poet. Mandelstam was born in Warsaw but as a child moved with his parents to St. Petersburg, where his father, a scion of an obscure Kurland branch of the well-known Mandelstam rabbinic family, was a leather merchant and taught himself German and Russian, becoming a student of Schiller, Goethe, and Koerner. His mother, Flora Osipovna née Verbovsky, was born and educated in Vilna, belonging to an enlightened and assimilated Jewish family related to the Wengeroffs. A piano teacher and of discriminating literary taste, she passed on to her son her love for music and Russian literature.

Mandelstam grew up in St. Petersburg. In 1907 he finished the Tenishev School, one of the best and most modern and liberal private institutions in Russia. His teacher for Russian literature was Vladimir Gippius, a pioneer of the Russian Symbolist movement. Between 1907 and 1910 he traveled in France, Germany, Italy, and Switzerland, spending one term at the Sorbonne and two at Heidelberg, where he studied Old French. Forced to interrupt his education abroad owing to financial difficulties, he converted to Lutheranism in order to be able to enter the University of St. Petersburg.

During these years Mandelstam attended the poetic circle (*Proacademia*) of the learned Symbolist poet Vyacheslav Ivanov. His earliest poems, enclosed with his letters to Ivanov, were recently found in the latter's archives in Russia and published in the West. In these poems, as well as in the pieces selected for his literary debut in 1910 (in the pages of *Appolon*, a trend-setting journal of art and letters), young Mandelstam emerges as a thoughtful preserver of the European Symbolist heritage and a courageous seeker of new means of poetic expression, combining Verlaine's *musique* with a conscious and creative stock-taking of the 19<sup>th</sup>-century Russian poetic vocabulary (especially that of Pushkin and Tyutchev), which receives a new and unexpected meaning in the framework of his complex symbolism.

In 1911 Mandelstam joined the Guild of Poets (*Tsekh poetov*). Its founder N.S. Gumilev, whom Mandelstam had earlier met in Paris, became his closest friend and literary associate, as did another member of the Guild, Anna Akhmatova. By 1912 Mandelstam's Symbolist apprenticeship was over. Gumilev proclaimed a new poetic trend, Acmeism, demanding a "more stable balance of forces" in poetic texts and a "more accurate definition of the subject-object relationship" than the mystically inclined Russian Symbolists could provide. To these demands Mandelstam added, in his programmatic essay "*Utro akmeizma*" ("The Morning of Acmeism"; written c. 1913 but published only in 1919), the requirement that "the conscious meaning of the word, Logos," be redefined in formal aesthetic terms and granted "equal rights" with such constructive elements of poetry as rhythm, sound texture, etc. Employing the already existing cultural codes to effect shifts of meaning, Acmeism, after some initial crises, developed into a major trend in modern Russian poetry and a powerful rival of Futurism, which sought to emancipate the poetic language from everyday meanings by purely linguistic means. In Mandelstam's own poetry the semantic potentialities with which the poetic word is endowed through the history of its use in other poetic contexts are activated by means of elliptical riddle-like quotations that force the reader to turn to their sources in order to find a frame of reference (the so called "subtext") in terms of which an Acmeist text has to be decoded.

The essential features of this method are already evident in the compact and erudite poems of Mandelstam's first collection, *Kamen* ("The Stone," 1913; 2<sup>nd</sup> and 3<sup>rd</sup> eds., greatly enlarged, 1916 and 1923); the title of the book represents an etymologically justified anagram of the Greek work *akme* ("sharp point," "summit,") from which Acmeism derived its name. During World War I, Mandelstam published, in addition to *Kamen*, several remarkable literary and historical essays ("Chaadayev," "François Villon," "On the Interlocutor," etc.). The revolution of 1917 found Mandelstam in St. Petersburg. His attitude toward the Bolshevik takeover, as reflected in his poetry, gradually changed from initial revulsion ("When the October favorite of fate prepared for us/A yoke of violence and malice ...") to manly acceptance of whatever "the vast, clumsy, squeaking turn of the rudder" might bring. In the spring of

1919 Mandelshtam moved to Kiev, where he met his future wife, Nadezhda Yakovlevna Khazina (see previous entry). After the arrival of the White Army, which brought in its wake a terrible pogrom, Mandelshtam moved to the Crimea, where he was jailed by General Wrangel's counterintelligence, but was freed shortly after through the intervention of a friendly White colonel. He left the Crimea for Tiflis, and was promptly jailed again as a Red spy, this time by the Menshevik secessionist government of Georgia. In the fall of 1920 Mandelshtam returned to Soviet Russia in the company of I. \*Ehrenburg. Later, despite the execution of Gumilev on conspiracy charges, followed by a political drive against Acmeism, Mandelshtam and Akhmatova staunchly refused to emigrate. In 1922–23 Mandelshtam's second collection of poetry appeared first in Berlin (under the title *Tristia*, given in Mandelshtam's absence by M. Kuzmin), then in Moscow (*Vtoraya kniga*, "The Second Book"). Three longer poems composed by him in 1923, "The Horseshoe Finder," "The Slate Ode," and "1 January 1924," marked a turning point in Mandelshtam's art. Their artistic and intellectual complexity and tragic power remain unsurpassed in modern poetry.

After 1923 Mandelshtam's name disappeared from the lists of contributors to literary periodicals, and during the rest of the decade he was effectively silenced as a poet and confined himself almost entirely to prose (the publication of his collected poetry in 1928 was brought about by the personal intervention of N.I. Bukharin). A collection of autobiographical essays, *Shym vremeni* ("The Noise of Time," 1925), described by Prince Svyatopolk-Mirsky (D.S. Mirsky) as "one of the most significant books of our time," was followed by the long story "Egipetskaya marka" ("The Egyptian Stamp," 1928), and, in 1930, by "Chetvertaya proza" ("Fourth Prose"), which could not be printed in the U.S.S.R. During these years Mandelshtam was forced to make a living as a translator and in 1928 became the victim of a vicious campaign, in the course of which he was accused of "plagiarism" by A. Gornfeld, a minor literary critic (these events are described in "Fourth Prose").

In 1930, following a trip to Armenia (see *Puteshestviye v Armeniyu*, 1933), Mandelshtam resumed writing poetry, some of which he succeeded in publishing. However, in May 1934 he was arrested for having written an epigram on Stalin and sentenced to three years' exile in Cherdyn in the Urals. There Mandelshtam attempted to commit suicide as he developed hallucinations and other symptoms of mental disorder following interrogation and torture at the Lubyanka prison. An intercession by Bukharin, the last one, resulted in his transfer to a less severe place of exile, Voronezh, where, in 1935–37, he wrote his last book of poetry (known as *The Voronezh Notebooks*).

In 1937 Mandelshtam was allowed to return to Moscow. Arrested again on May 1, 1938, he was sentenced without trial to five years' hard labor and, according to unverifiable reports, died of inanition either in the Vtoraya Rechka transit camp near Vladivostok on December 27, 1938 (the "official" date of his death), or early in 1940 in a labor camp on the Kolymar River.

A major part of Mandelshtam's unpublished work was saved by the heroic efforts of his widow. Some of the Voronezh poems appeared after his "rehabilitation" in Soviet literary journals, and his *Razgovor o Dante* ("Talking about Dante"), edited by L. Pinsky and A. Morozov, was published in Moscow in 1967. However, the edition of his collected poetry, announced on three occasions by the series "Biblioteka poeta," never materialized.

In the U.S., the collected works of Mandelshtam were published by G. Struve (*Sobraniye sochineniy*, 1955; *Sobr. soch.*, 1–3, 1965–71, 2 editions).

During the 1960s intensive studies of Mandelshtam's work gained momentum in various scholarly centers, e.g., Cambridge, Mass. (R. Jakobson and K. Taranovsky, and their students), Moscow (V.V. Ivanov and his colleagues), Tartu (members of the Summer School on Secondary Modeling Systems), Uppsala (N.A. Nilsson), etc.

### Jewish Themes in His Art

Unlike another modern Russian poet of Jewish origin, B. \*Pasternak, Mandelshtam never renounced his spiritual Jewish identity. However, his attitude toward the world of Judaism was marked by the tragic ambivalence that no great Jewish writer working in European literature could ever escape. His autobiographical essays, *Shym vremeni*, contain a painfully frank description of an assimilated Jewish childhood in a great center of European culture, with its vulgar official brand of Judaism, ostensible pride in Jewish history, and deep day-to-day shame. He never learned Hebrew but appreciated "the admirable equilibrium of its vowels and consonants in the clearly enunciated words, which imparted an invincible power to the chants." Of the Yiddish language, he wrote with tenderness: "... that melodious, always surprised and disappointed, interrogative speech with sharp pitches on half-stressed syllables."

In his earliest poems Mandelshtam spoke of himself as "a rustling reed growing out of an evil and muddy pool to breathe forbidden life" and then sinking back into "the cold and boggy abode," "the beloved ooze" (1910). In 1915, the same image appeared in his poem about Christ (never included in his collections): "He reigned and drooped, as a lily, into the native pool, and the depth, in which stems sink, celebrated its law." In the poem about his mother's funeral (1916), Mandelshtam contrasted the "terrible yellow sun" illuminating the Jewish temple with the black sun of Apocalyptic Christianity rising at the gates of Jerusalem (the black and yellow colors of the *tallit* are associated in his poetic vocabulary with Judaism). Religious critics made much of Mandelshtam's so-called Christianity as reflected in a number of his poems and essays. In point of fact, however, Mandelshtam turned with equal enthusiasm to Chaadayev's Catholic universalism, Kautzky's Marxism, Florensky's Orthodoxy, Greek mythology, neoplatonic mysticism, medieval nominalism, the heresy of the Russian "Name-Praising" sect, and the evolutionary theories of Goethe and Darwin in his search for an "integral world view"

and an “internal sense of rightness” without which he found writing poetry unthinkable. In *Tristia*, Mandelshtam actually wrote: “I drink the cold mountain air of Christianity”; but this opposition between the “water” of Judaism and the “air” of Christianity was canceled in 1923 by a belated admission: “Air can be as dark as water ... Air is mixed as thickly as earth ...” (“The Horseshoe Finder”).

Mandelshtam’s realization that the Jewish predicament cannot be escaped by turning to alien cultures and religions was expressed with greatest force in his 1920 poem addressed to Leah, the exegetic symbol of creative life. Here he predicts the eventual return of his muse to the bosom of Judaism, a reunion that he describes as “incestuous”:

Return to the incestuous bosom, whence, Leah, you have come,  
because you have preferred the yellow dusk to the sun of Il-  
ion.

Go! Nobody shall touch you. Let the incestuous daughter  
drop her head on her father’s breast.

Yet a fatal change must be accomplished in you: you shall  
be Leah, not Helen. You have been so named not because

It is harder for royal blood than for any other blood to  
course in veins. No! You shall fall in love with a Jew, disappear  
in him – and so be it.

Ten years later, in “Fourth Prose,” Mandelshtam wrote with a conviction born out of hard-earned experience: “I insist that writerdom, as it has developed in Europe, and above all in Russia, is incompatible with the honorable title of Jew, of which I am proud. My blood, burdened with the inheritance of sheep breeders, patriarchs, and kings, rebels against the thieving gypsyishness of the writing tribe.”

The motif of the prodigal son’s return to the faith and the land of his fathers found its final culmination in the “Canzona” (1931): “I shall leave the land of the Hyperboreans to fill with vision the outcome of my fate. I shall say ‘selah’ to the head of the Jews for his raspberry-colored caress.”

Some of Mandelshtam’s writings have appeared in translation: *The Prose of Osip Mandelstam*, transl., with a critical essay, by C. Brown (1967); “Talking About Dante,” *Books Abroad*, Special Issue: A Homage to Dante (1965), 25–47; “Fourth Prose,” transl. by C. Brown, in *Russia’s Other Writers* (1970), 130–45; *Gedichte* (transl. by Paul Celan, 1959).

**BIBLIOGRAPHY:** N. Nilsson, in: *Scande-Slavica*, 9 (1963); B. Bukhshtab, in: *Russian Literature Triquarterly*, 1 (1971), 263–82; K. Taranovsky, in: *Calif. Slavic Studies*, 6 (1971), 43–48; *Slavic Forum* (1975); V. Terras, in: *SEJ*, 10 (1966), 251–67; O. Ronen, in: *Studies Presented to R. Jakobson...* (1968), 252–64; essays by S. Broyde, D. Harris (ed.), *The Complete Critical Prose and Letters of Osip Mandelstam* (1978).

[Omri Ronen (2<sup>nd</sup> ed.)]

**MANDELSON, PETER** (1953– ), British politician. One of the best-known and most controversial of recent British politicians, Peter Mandelson was the son of a Jewish father; his mother was the daughter of Herbert Morrison (Baron Mor-

ison of Lambeth), Britain’s deputy prime minister and then foreign secretary under Clement Attlee from 1945 to 1951. Mandelson was educated at Oxford and worked as a television producer; he was elected to Parliament in 1992, holding his seat until he resigned in 2004. “Mandy,” as he is widely known, became campaign manager (and chief “spin doctor”) of Tony Blair, the center-left politician who became leader of the Labour Party in 1994 and was elected prime minister with a huge majority in 1997. Some within the Labour Party resented Mandelson’s enormous influence. From 1997 he served as Blair’s minister without portfolio, responsible for building London’s Millenium Dome for 2000, and then entered the cabinet in 1998 as secretary of state for trade and industry. Later in the same year, he was forced to resign over an allegedly improper loan he had received. He returned to the cabinet in 1999 as secretary of state for Northern Ireland, but in 2001 was again forced to resign over an alleged impropriety regarding a businessman seeking British citizenship. In 2004 Blair appointed Mandelson Britain’s European commissioner responsible for trade.

[William D. Rubinstein (2<sup>nd</sup> ed.)]

**MANDELSTAMM, BENJAMIN** (1805–1886), Hebrew author. Born in Zagare, the older brother of Leon \*Mandelstamm, he received both a traditional and a secular education. In the 1840s, he moved to Vilna and became one of the extremists in Haskalah circles. In a memorandum which he presented to Max \*Lilienthal when the latter visited Vilna in 1842 during his survey of the condition of Russian Jewry, Mandelstamm accused Russian Jewry of six faults which were responsible for their backwardness: (1) Russian Jews do not speak the Russian language, but rather some confused tongue; (2) they dress quaintly; (3) they do not participate sufficiently in the arts; (4) nor in the crafts; (5) they have no factories; and (6) they are neither farmers nor herdsmen.

The only solution recognized by Mandelstamm was harsh governmental intervention “forbidding the printing of the Talmud, completely removing from circulation books on the Kabbalah and Ḥasidism, dissolving the *heder* thus removing the teachers (*melammedim*) who devour the children, and educating the children of Israel in Russian.” When the enlightened community of Vilna established its own synagogue (*Tohorat ha-Kodesh*), Mandelstamm criticized it sharply for not daring to reform its liturgy and religious customs. In 1877 his writings and memoranda were published in Vienna under the title *Ḥazon Binyamin ben Yosef mi-Ma’aleh ha-Shekedim* (*Ḥazon la-Mo’ed*) with an introduction by Perez \*Smolenskin, a collection of great importance for the history of the Russian Haskalah during the 1840s. Mandelstamm also published a collection of aphorisms entitled *Mishlei Binyamin* (in *Ha-Asif*, 1885 and 1886).

[Yehuda Slutsky]

**MANDELSTAMM, LEON (Aryeh Loeb; 1819–1889)**, writer and adherent of the \*Haskalah in Russia. Born in Zagare (Lithuania), Mandelstamm had a thorough religious and general education. In 1840 he became the first Jew to enroll at a Russian university (Moscow) and in 1844 graduated in Oriental languages from the University of St. Petersburg. His research concerned the history of political regimes in ancient Israel. During his student years, he produced a book of poetry in Russian (1840). In 1846, after further studies at German universities, Mandelstamm was appointed in charge of Jewish affairs in the Ministry of Education in succession to M. \*Lilienthal. He was mainly concerned with establishing a network of government schools for Jews, and supervising the Jewish *heder* and *talmud torah* schools. For this purpose he traveled extensively throughout the \*Pale of Settlement and prepared textbooks; these were published by means of funds raised through the \*candle tax, and even private Jewish teachers were required to buy them. The books, which contained texts accompanied by German translations, included selections from the Mishnah, an anthology of Maimonides' writings, the Bible along with the *Biur* of Moses \*Mendelssohn and his pupils, and the *Kevod Melekh* of R. Jehiel \*Heller, which stressed the Jew's religious duty to respect secular kings and rulers. Mandelstamm was dismissed in 1857 as a result of attacks by his opponents among the *maskilim* and wealthier Jews of St. Petersburg who accused him of wasting funds and engaging in activities for his own profit. During his period in office, Mandelstamm corresponded with and met Haskalah leaders and prominent Hebrew writers, often arranging for them to be given posts. After losing his job, he lived for many years in Germany where he engaged in trade and in contracting. He wrote for both the Jewish and general press, and published, in German, several collections of studies in Bible and Talmud. The translation of the Pentateuch into Russian which Mandelstamm had produced in Germany was forbidden in Russia because of the general prohibition on scriptural works which were not approved by the Church. In 1872, however, permission was given to import and reprint his work there, provided that the translation was accompanied by the original Hebrew version. Toward the end of his life Mandelstamm returned to St. Petersburg where he died forgotten and in poverty.

[Yehuda Slutsky]

**MANDELSTAMM, MAX EMMANUEL (1839–1912)**, ophthalmologist and leading member of the Zionist and Territorialist movements in Russia. Mandelstamm was born in Zagare, Lithuania. His father Ezekiel Mandelstamm, the brother of Leon \*Mandelstamm and Benjamin \*Mandelstamm, was an educated merchant who wrote a biblical lexicon entitled *The Book of Names* (1862). Mandelstamm was among the first Rus-

sian Jews to study in a Russian high school, but he received his main education at the German University of Dorpat (Estonia). After he completed his medical studies at Kharkov University, he continued his studies in ophthalmology in Berlin. Upon his return to Russia he opened a clinic in Kiev and became well known as an expert ophthalmologist throughout southern Russia. Mandelstamm also served as a lecturer in ophthalmology at Kiev University, but he left the university when his candidacy as an associate professor was not approved.

The pogroms in southern Russia at the beginning of the 1880s moved Mandelstamm into the field of Jewish public activities. He was the head of the Committee to Support Victims of Pogroms. At the conference of representatives of Jewish communities in St. Petersburg in 1881, he was the only one to support emigration from Russia as a radical solution to the problems the Jews faced there. From that time, emigration from Russia became the basis for his outlook on public affairs. In 1883 he participated along with L. \*Pinsker, M.L. \*Lilienblum, and H. Shapira in a meeting in Odessa at which the foundations of the \*Hibbat Zion movement in Russia were laid. His wide-ranged organizational work then began and came to an end only after sharp opposition from the authorities.

Mandelstamm joined the Zionist Organization at the First Zionist Congress and from then on was one of \*Herzl's most devoted associates and one of the most faithful political Zionists among the Russians. Herzl depicted him in *Altneuland* as the first president of the Jewish state – “an ophthalmologist from Russia, Dr. Eichenstam.” He was elected to the Zionist Actions Committee and at the Second Zionist Congress was appointed deputy of the Kiev district. At the Sixth Zionist Congress, Mandelstamm was among the enthusiastic supporters of the \*Uganda Scheme and fought for its acceptance even at the \*Kharkov Conference. He organized the supporters of the plan to meet the challenge of the Russian Zionists. After the Seventh Zionist Congress he joined I. \*Zangwill and participated in the founding conference of the Jewish Territorial Organization (JTA). The pogroms that accompanied the first Russian Revolution (1905–06) strengthened his conviction that it was imperative to organize the flight of the Jews from Russia through Territorialism. He headed the emigration office established by the Territorialists in Kiev that concerned itself basically with organizing the emigration of Jews destined for \*Galveston, Texas (under the Galveston Plan) with the aim of creating a Jewish Territorialist center in the southern United States.

**MANDL, SAADIA (1931– )**, architect. Born in Novi Sad, Yugoslavia, he arrived in Palestine in 1938. He studied at École des Beaux Arts, Paris, and at the Archeology School,

London, spending his internship period in Rome, Paris, and Stockholm.

In 1960 he opened an independent office in Haifa; during 1968/9 he resided in Jerusalem, where he held the position of dean of the Bezalel Art School. In later years he worked from Tel Aviv / (Old) Jaffa, which he helped to reconstruct. For his achievements he was awarded the Rokach Prize. He was chief architect of the Caesarea Development Corporation and from 1965 served as chairman of the Council for the Preservation of the Architectural Heritage. For his projects in Jerusalem, he received the Uri Rozen Prize, together with Yaari and Fraenkel, and the Sandberg Prize, together with Eli Gross, "for the renewal of the Neveh Sha'anun quarter."

Mandl was considered one of the outstanding modern architects of Israel.

[Zvi Loker (2<sup>nd</sup> ed.)]

**MANDRAKE** (Heb. מַנְדְּרִיקָה (*dūdā'īm*)), *Mandragora officinarum*, a plant of the nightshade family native to the Mediterranean region and related to the deadly *Atropa belladonna*. The mandrake is best known for its large, brown roots that can extend several feet into the ground and branch off into thick, bizarre shapes, even crudely resembling the human form. Since antiquity, the mandrake has been credited with aphrodisiac and fertility-producing powers as well as the ability to induce sleep, relieve pain, or serve as a purgative; it is one of the most frequently mentioned plants in folklore, preserved in literature from the Mediterranean basin from antiquity to the modern era.

The earliest reference may be in Ugaritic literature of the 14<sup>th</sup> century B.C.E., where the term is found in relation to the goddess of love and war, Anat, whose brother Baal sends her a message concerning peace, love, and "passion" (*ddym*). Mandrakes appear twice in the Bible, in contexts suggesting that the plant had properties conducive to sex and conception. Perhaps in a word-play with *d(w)d*, "love," it is mentioned in the Song of Songs (7:14) as having an odor that would arouse the lovers' passion. The well-known story of Rachel and the mandrakes in Genesis 30:14–17 indicates that this plant was believed to aid conception, for the barren Rachel gives her sister and co-wife Leah a night with their husband Jacob in exchange for mandrakes procured by Leah's son Reuben. The text reports that Rachel subsequently became pregnant when God heeded her. Her use of mandrakes provides an example of the magico-medical means for dealing with problems inherent in the reproductive process, part of women's religious culture in ancient Israel as in most traditional societies. That Rachel resorts to the ancient equivalent of a fertility drug is not at all contradictory to the overarching notion that divine providence is involved in overcoming barrenness; prayer along with actions we would consider magic were understood as complementary ways for women to become pregnant.

Post-biblical lore and legends refer less to mandrake's aphrodisiac qualities and more to its other medicinal properties. Digging for mandrake roots was thought to be danger-

ous, with the animal pulling out the roots meeting a vicarious death for its master (Jos. Wars, 7:183ff.), a risk also found in other ancient writers, such as Theophrastus and Pliny. The Talmud's prohibition against reciting biblical verses while uprooting mandrakes (TJ Shab. 6:2, 8b), may allude to their supposedly lethal quality. Maimonides (*Guide*, 3:29) mentions that superstitious people are "deluded" about them.

[Jehuda Feliks / Carol Meyers (2<sup>nd</sup> ed.)]

**MANÉ-KATZ** (originally **Emanuel Katz**; 1894–1962), French painter. Mané-Katz was born in Kremenchug, Ukraine. In 1913 he went to study in Paris. He returned to Russia during World War I, working and exhibiting in Petrograd. After the October Revolution of 1917 he returned to Kremenchug, where he taught art. As the city was the scene of continued fighting during the Civil War, there was little chance for him to work and in 1921 he migrated to Paris. He painted assiduously, and a decade later won a Gold Medal at the Paris World's Fair for his painting "The Wailing Wall." In 1939, Mané-Katz was mobilized and on the fall of France was imprisoned briefly by the Germans. He managed to get to the United States, but returned to Paris after the war. Mané-Katz was an eminent Jewish representative of the School of \*Paris. His output was prodigious. He painted so fervently and with so little concern for detail that he seems to be carried away by his own exuberance. His color is sometimes blatant, but rarely coarse. His smaller works, particularly those of the 1920s, show an intensity of expression and a baroque ecstasy. The subject matter of his early works is exclusively Jewish – ḥasidic rabbis, talmudic students, fiddlers and beggars of the Pale of Settlement with meager bony faces and deep-set eyes, the same haggard figures placed against an almost barren background. He later painted the sights of Paris, orchestras, bullfights, the scenery of the Riviera, portraits, and numerous flower pieces, usually with a childlike delight in raw colors. He made several sculptures. He died in Israel and left his collection, including many fine specimens of Jewish ritual art, to the city of Haifa.

[Alfred Werner]

**MANESSIER DE VESOUL (Menssier de Vezou;** d. 1375), "procureur-général" and "commissaire" of the Jews of Langued'Oyl (central and northern France) during the reign of \*Charles v (1364–80). He was a member of the family of Hélot de Vesoul, a banker of that town during the early 14<sup>th</sup> century, and in 1349 he himself was expelled from Vesoul. It was Manessier who, in 1359, negotiated with Charles, duke of Normandy (subsequently King Charles v) for the return of the

Jews to France and then acted as the financial intermediary between the Jews of northern France and the monarchy – to his own personal profit as well. In 1374 he secured a further ten-year extension of the Jewish right of residence in France. When the Jews were once more obliged to wear a distinctive \*badge, he and all his family were exempted. It is not certain whether it was this Manessier or a namesake who was involved in a lawsuit in 1365. After his death (between June 28 and October 1375), his children, his eldest son in particular, succeeded to his functions and privileges (which included complete exemption from the payment of taxes). When his son Joseph was converted to Christianity in 1382, he recovered the family properties, which had previously been seized. Nothing is known of the family after this.

[Bernhard Blumenkranz]

**°MANETHO** (third century B.C.E.), Greco-Egyptian historian. Manetho, native of Sebennytos, \*Egypt, served as priest in Heliopolis. Thoroughly versed in Egyptian lore, he was also associated with the religious policy of the Ptolemaic dynasty, in particular with the introduction of the cult of Serapis. Manetho was the first Egyptian to give an account of the history of his country in Greek. A number of fragments from this work are preserved in *Contra Apionem* of \*Josephus, who apparently did not draw from Manetho's work at first hand, but from extracts in Hellenistic Jewish historians. The fragments fall into two categories, the first of which describes the origin of the rule of the \*Hyksos in Egypt (Jos., *Apion* 1:73ff.). Manetho (in accordance with later Egyptian accounts) writes that the Hyksos were a nation of alien conquerors who set fire to Egyptian towns, razed the temples of the gods, and treated the natives with cruelty. After their expulsion from Egypt, the Hyksos crossed the desert on their way to Syria, and in "the country called Judea" built a town, which they named Jerusalem. Although Manetho does not mention the Jews by name, he is clearly referring to them. Josephus himself distinguishes between the first group of fragments of Manetho's writings and the second (*ibid.*, 1:228ff.), "where he had recourse to fables and current reports." In this second group of fragments it is stated that the Egyptian king Amenophis wished to be granted a vision of the gods and on the advice of his namesake, Amenophis son of Paapis, decided to purge the country of lepers and other polluted persons. He collected 80,000 people and sent them to work in the quarries east of the Nile. Afterward, acceding to their request, he assigned them Avaris, the ancient capital of the Hyksos, for settlement. Here they appointed as their leader one Osarsiph, a former priest of Heliopolis. Osarsiph decreed that his people should neither worship the gods nor abstain from the flesh of animals revered by the Egyptians, and cultivate close connections only with members of their own confederacy. Similarly, he sent representatives to the inhabitants of Jerusalem, who had been expelled from Egypt. Osarsiph's people defeated the Egyptians

in a concerted effort, their behavior to the inhabitants being far worse than that of the Hyksos in their day. Here Manetho identifies Osarsiph with Moses.

Some historians completely deny the authenticity of Manetho's entire Osarsiph story, while some object only to his identification of Moses with Osarsiph. However, there are no convincing reasons for doubting the intended identification. The Osarsiph story throughout has much in common with such Egyptian tales as the "Prophecy of the Lamb" or the "Potter's Oracle," which could easily be fused with anti-Jewish elements. The biblical account of the Exodus challenged the Egyptians to provide a suitable answer, and anti-Jewish feelings were common in Egypt even before its conquest by the Greeks. It is therefore unnecessary to postdate Manetho's account to the later Ptolemaic period. The descriptions of the historian \*Hecataeus show how easily the story of the Exodus was assimilated into the tale of the expulsion of the strangers because of calamities visited on the Egyptians. Nor was Manetho necessarily the first to combine the story of the lepers with Moses and the Jews. A synthesis, similar though not completely identical, is encountered in subsequent writers. Nevertheless, Manetho may undoubtedly be considered a central figure in the emergence of the anti-Jewish polemical writings of Alexandrian-Greek literature.

[Menahem Stern]

**°MANETTI, GIANNOZZO** (1396–1459), Hebraist and humanist. Manetti acquired a wide knowledge of Hebrew language and literature and was even taught to speak Hebrew by a Jewish teacher (later baptized) who lived with him. Manetti took lessons also from a Florentine Jew named Immanuel (probably the loan-banker Manuelo of San Miniato), giving him instruction in philosophy in exchange. Many of the Hebrew manuscripts in the Vatican library were originally in Manetti's possession. He made a Latin translation of the Psalms, which he defended against its critics in a five-volume work. In 1447 Sigismondo Malatesta of Rimini organized a religious \*disputation at his court between Manetti and Jewish scholars.

**MANEVICH, LEV YEFIMOVICH (Izrailovich: pseud. Eten (Etienne), 1898–1945), Soviet intelligence agent. Be-**

tween 1910 and 1917 Manevich lived and studied in Geneva. In 1918 he volunteered for service in the Red Army and joined the Communist Party. From 1918 to 1920 he was the commissar of an armored train, the commander of a special unit. He graduated from the Higher School for Staff Service of the Command Staff (1921) and the Military Academy (1924). He served in the Intelligence Directorate of the Red Army (GRU – Glavnoye Razvedovatelnoye Upravlenie) from 1935 with the rank of colonel. From the mid-1920s until 1936 he carried out intelligence activities, mainly in Austria, Germany, Italy, and Spain. In 1936 he was arrested by Italian counterintelligence and sentenced to 12 years imprisonment. However, even in prison he continued to collect and transmit valuable information. In 1943 he was handed over to the Nazis and imprisoned in the concentration camps of Mauthausen and Melk and Ebensee. Although severely ill, he exhibited great willpower and courage by participating in the anti-fascist underground. In May 1945 he was liberated by the American army but died later that year. In 1965 he was posthumously awarded the honor of Hero of the Soviet Union.

[*The Shorter Jewish Encyclopaedia in Russian* (2<sup>nd</sup> ed.)]

**MANGER, ITZIK** (1901–1969), Yiddish poet, dramatist, novelist. Born in Czernowitz, his first poem was published in 1921 in the Romanian Yiddish journal *Kultur*, and his first book of poems was *Shtern Oyfn Dakh* (“Stars on the Roof,” 1929), where he combined folksong and bardic simplicity with sophisticated stanzaic structures and technical skill. The poems express delight in the entire universe and find beauty and value even in suffering and sorrow. In 1929 Manger moved to Warsaw, where he published more mature poems in *Lamtern in Vint* (“Lantern in the Wind,” 1933). In his *Khumesh Lider* (“Bible Poems,” 1935), patriarchal figures are portrayed as Eastern Europe *shtetl* Jews. Thus when Abraham welcomes the three angels, he is the pious Reb Avrom, in a silk skullcap and smoking a pipe; in speaking to Sarah, colloquial Yiddish expressions naturally spice his conversation. Manger’s *Megile-Lider* (“Scroll Songs,” 1936) recast the traditional Purim play as dramatic lyrics. He added new incidents and characters to the biblical narrative, such as the rivalry between the tailor’s apprentice Fastrigosse and King Ahasuerus for the love of Esther. These ironic and sentimental lyrics were enthusiastically received when staged as a musical in Israel in 1967 and again in the United States (in English, 1968; music by Dov Seltzer). Manger also adapted \*A. Goldfaden’s plays for a post-Goldfaden generation; most successfully *Di Kishfemakheren* (“The Witch”) and *Dray Hotsmakhs* (“Three Hotsmakhs,” 1936, 1937). He paid tribute to Goldfaden, Eliakum Zunser, Berl Broder, and other predecessors with imaginative essays in *Noente Geshtaltn* (“Intimate Portraits,” 1938, 1961; also in *Shriftn in Proze* “Writings in Prose,” 1980). His most piquant tale is the imaginative novel, *Dos Bukh fun Gan-Eydn* (1939; English tr. by L. Wolf, *The Book of Paradise*, 1965), in which Shmuel-Abba, formerly an angel and now a newborn, relates his prenatal adventures in Paradise. The story is a satire on

the imagined Eden and the harsh realities of Jewish life and human foibles.

Manger was most productive in Warsaw, where he also published *Felker Zingen* (“People Sing,” 1936), *Demerung in Shpigl* (“Twilight in the Mirror,” 1937), *Far Yugnt* (“For the Young,” 1937), *Velvl Zbarzher Shraybt Briv tsu Malkele der Sheyner* (“Velvl Zbarzher Writes Letters to Malkele the Beautiful,” 1937). He left Warsaw in 1938 for Paris. After unsuccessful attempts to reach Palestine and the United States, he escaped to London where he published *Volkns ibern dakh* (“Clouds over the Roof,” 1942), *Hotsmakh Shpil* (“Hotsmakh Play,” 1947), and *Der Shnayder-gezeln Notte Manger Zingt* (“The Tailor-Apprentice Notte Manger Sings,” 1948). In 1951 he moved to New York, where his volume of selected poems *Lid un Balade* (“Poems and Ballads”) was published in 1952, and then in 1967, to Israel. His poems were translated into Hebrew, the principal European languages (English in S. Betsky, *Onions and Cucumbers and Plums* (1958), and in J. Leftwich, *The Golden Peacock* (1961)), and were included in the UNESCO anthology of world poetry in 1961. His short story “The Adventures of Hersh Summerwind” is in I. Howe and E. Greenberg, *Treasury of Yiddish Stories* (1965), 438–46. New translations of his work continued to be published.

[Sol Liptzin / Helen Beer (2<sup>nd</sup> ed.)]

**MANHEIM, BILHAH** (1929– ), Israeli sociologist specializing in the sociology of work and considered one of the leading scholars in the field. At the Industrial Engineering Faculty of the Technion she taught many executives how to manage human resources. Manheim was born in Germany and immigrated to Israel with her family in 1936. She received her B.Sc. from the University of Kansas in 1951. In 1953 she completed her M.A. and in 1957 her Ph.D. from the University of Illinois. From 1957 she taught sociology at the Technion and from 1959 to 1969 she lectured at Haifa University. In 1980 she became a professor at the Technion. From 1981 until her retirement in 1997 she directed the Yigal Allon Chair for Human Sciences in Work. During these years she was visiting professor at universities in the U.S. and Australia. She was also a member of several academic societies and associations as well as public bodies. She published many articles and a number of books, such as *The Influence of Reference Groups and Membership Groups on the Self-Image* (1957) and *The Human Fac-*

*tor in Work* (co-author, 1965). In 2003 she was awarded the Israel Prize in sociology.

[Shaked Gilboa (2<sup>nd</sup> ed.)]

**MANI** (**Mana II**; fourth century C.E.), Palestinian *amora*. His teachers were firstly his father \*Jonah, R. Yose (TJ, Ter. 8:9, 46a; Sanh. 3:6, 21a), and then R. Judah III (TJ, Pes. 6:1, 33a; Bezah 1:1, 60a); he also referred to Hezekiah as his teacher (TJ, Ber. 3:5, 6d, et al.). He visited Caesarea where he attended lectures by R. Isaac b. Eliashib (Ta'an. 23b) and other scholars of that town (e.g., Oshaya b. Shemi, Zerikah, etc). In his early years he lived in Tiberias, but later R. Ḥanina (or Hananiah), the head of the academy in Sepphoris, retired in his favor (TJ, Pes. 6:1, 33a) and he remained there until his death (Eccl. R. 11:3). He held halakhic discussions with Zeira II (Mak. 22a). Z. Frankel dates his death in 399 C.E. (the view of I. Halevy that it was before 355 is untenable). It is not known whether he outlived R. Judah III (the statement in Weiss, Dor, vol. 3, p. 102 is due to a mistranslation of a passage in TJ, Ber. 3:1, 6a: "When R. Judah's sister died, Mani did not attend her funeral"). He appears to have been strict and uncompromising in his halakhic rulings, and he expressed his strong doubts as to the correctness of the permission granted by his father and R. Yose for bread to be baked on the Sabbath for the army of Ursicinus (c. 353 C.E.; TJ, Sanh. 3:5, 21b), despite that fact, in a case of extreme emergency he permitted the bakers of Sepphoris to sell their bread in the market on the Sabbath for the army of Proclus (*ibid.*; see Lieberman, in: JQR, 36 (1946), 352–3). He also refused to agree that agricultural activity take place during the sabbatical year in a place called Yabluna on the grounds that it was not in Erez Israel proper. On one occasion he strongly disapproved of his teacher, Judah, making appointments for money (TJ, Bik. 3:3, 65d). Most of his teachings are in *halakhah*, but the few in *aggadah* are of great interest. He explained Saul's reluctance to exterminate the Amalekites, including their children and cattle, on the grounds that they were innocent according to the Torah (Yoma 22b). He also taught that reciting the *Shema* at its proper time was greater than studying the Torah (Ber. 10b). Mani was apparently not altogether easy to get on with. Not only was he not on good terms with the patriarch and his household, who distressed him so much that he had to pray for relief, but in his domestic life he was also unhappy (Ta'an. 23b).

In addition to R. Mani, there was an earlier *amora* called Mana and it is not always certain which is meant. In Ecclesiastes Rabbah 5:4–5 both are found.

[Harry Freedman]

**MANI**, family in Iraq and Erez Israel. According to family tradition, the family is of Davidic origin and its name is an acrostic of *Mi-Geza Nezer Yishai*.

ELIJAH BEN SULEIMAN (1818–1899), one of the best-known Iraqi rabbis, was born in Baghdad, where he studied

at the Beit Zilka rabbinical academy and was one of the outstanding pupils of R. Abdallah \*Somekh. In 1856 he settled in Erez Israel, first in Jerusalem, but two years later he moved to Hebron. He played a prominent role in the development of the Jewish community there. In 1865 he was appointed chief rabbi of Hebron and retained this post until his death. By nature an unassuming and generous man, he was outspoken and adamant in matters of religious observance. He made several journeys on behalf of the Hebron community: to India in 1873; Egypt, 1872 and 1878; and Baghdad 1880. In 1879–80 a fierce argument broke out between R. Elijah and two prominent members of the community, Mercado Romano and R. Raḥamim Joseph Franco, which split the community into two factions. In the end R. Elijah's views prevailed. R. Elijah wrote several books dealing with traditional and mystical Jewish studies. Of these, the following were published: *Zikhronot Eliyahu*, a collection of religious precepts, arranged in alphabetical order, of which two parts appeared (Jerusalem, 1936, 1938); and *Karnot Zaddik* (Baghdad, 1867). Many of his responsa were published in the Jerusalem *Me'assef* and in the writings of contemporary rabbinic scholars.

[Abraham Ben-Yaacov]

SULEIMAN MENAHEM (1850–1924), Elijah's eldest son, was appointed *rosh av bet din* in Hebron when his father died. After the death of Ḥayyim Hezekiah \*Medini, he was elected chief rabbi of Hebron. ISRAEL (1887–1966), the son of SHALOM EZEKIEL, Elijah's second son, studied law in Paris. During the British Mandate he was appointed magistrate (1927) and district judge in Jaffa (1932). In 1936 he became the first Jewish judge in the newly established Tel Aviv district court. ISAAC MALCHIEL (1860–1933), Elijah's fourth son, became a district judge in Hebron. He was an enthusiastic supporter of \*Herzl. In 1901 he moved to Jerusalem to practice law. From 1926 to 1929 he was district judge in Jaffa. His sons-in-law were Daniel \*Auster and Giulio \*Racah. ELIJAH MOSES (1907– ), great-grandson of Elijah, during the Mandatory regime served as a lecturer in the Jerusalem law school. In 1948 he was appointed judge in the district court of Jerusalem, and from 1962 he served as a justice of the Supreme Court of Israel. His brother ABRAHAM (1922– ) was professor of physics at the Hebrew University of Jerusalem. MAZAL (Mathilda) \*MOSERI was the daughter of Isaac Malchiel.

**BIBLIOGRAPHY:** M. Mani, *Rabbi Eliyahu Mani* (1936); A. Ben-Yacov, in: *Ḥemdat Yisrael ... le-Zekher Rabbi Ḥ. Ḥ. Medini* (1946), 89–97; O. Avisar (ed.), *Sefer Hebron* (1970), 100–7, 132–4, 153–4.

**MANI, EZRA** (1913–2005), Israeli lexicographer. Born in Bagdad, Iraq, where he received his elementary education in Jewish schools and in the Ahiever youth movement, whose goal was to spread the Hebrew book, he immigrated to Israel in 1934, taught Arabic, enlisted in the IDF in 1948, and served in the Intelligence Department of the IDF, in which he was a colonel. Though he did not receive any academic training, he is the author of *The Mani Dictionary* on Arabic military terms and of their Hebrew equivalents, including 10,000

entries based on Arabic documents, military reviews, TV, films, and colloquial Arabic from several Arab countries. This dictionary aids Intelligence operations and to date only exists in a computerized on-line internal IDF edition. His work is considered highly original by international standards. Mani received the Israel Prize in 1976 for services to Arabic linguistics and was the first military officer to have won this prize.

**MANICHAISM**, a system of religious beliefs and doctrines named after Mani or Manes (c. 215–275), who lived and taught in Persia. In his youth he seems to have associated with Jewish-Christian (Elchasaite) sectarians. Manes was put to death for his heretical doctrines, but his teachings spread from the Middle East to Rome and to North Africa where they had numerous adherents in the fourth century. Manichaean documents have also been found in Chinese Turkestan. A curious mixture of diverse gnostic, Persian-Zoroastrian, and other dualistic doctrines (see \*Dualism), Manichaeism preached a severe asceticism, including vegetarianism, and survived in small and often clandestine sects into the Middle Ages.

Several heretical movements in medieval Christianity are thought to have been influenced, directly or indirectly, by Manichaean sects. Manichaean doctrines seem to have been very influential also during the first centuries of Islam, as witnessed by the anti-dualistic polemics of orthodox apologists and theologians. Dualistic attacks on traditional teachings appear in the ninth and tenth centuries and had to be countered by a polemic reminiscent in some ways of the early rabbinic polemic against gnostic dualism (*shetei rashuyyot*). Saadia argues against dualism both in his *Book of Beliefs and Opinions* and in his polemical tract against Ḥīwī al-Balkhī. The dualism, however, which he attacked was not just of the Zoroastrian type but seems to have been indebted to contemporary Manichaeism.

**BIBLIOGRAPHY:** G. Widengren, *Mani and Manichaeism* (1965); J. Darmesteter, in: *REJ*, 28 (1889), 1–15; H. Puech, *Le Manichéisme* (1949).

[R.J. Zwi Werblowsky]

**MANI LEIB** (pseudonym of **Mani Leib Brahinsky**; 1883–1953), Yiddish poet. Born in Nizhyn (Chernigov district, Ukraine), Mani Leib arrived in the U.S. in 1905 after having participated in the Russian revolutionary movement. He immediately began publishing poems in New York's leading Yiddish periodicals and in the anthologies of the American Yiddish literary movement *Di Yunge*, which had impressionistic, art-for-art's-sake poetic principles that Leib helped to establish and followed faithfully. Largely eschewing social concerns, he crafted formally unified poems that affirmed a belief in the ability of art to compensate for human suffering. His "sound poems" drew renewed attention to the Yiddish language through their skillful use of alliteration and repetition. His most prolific year was 1918 when 11 of his collections appeared. His ballads and tales were incorporated into the

Yiddish school curriculum and formed the basis of his widespread popularity. In 1925 he was coeditor, with Zishe \*Landau and Reuben \*Iceland, of *Inzel* ("Island"), one of the principal anthologies of *Di Yunge*. His reputation continued to grow after his death, when several volumes were published: *Lider un Baladn* ("Songs and Ballads," 2 vols. 1955); *Sonetn* ("Sonnets," 1961); the former volume was reprinted in 1963 with parallel Hebrew translations by Shimshon Meltzer, and an introduction by Itzik \*Manger, who was in many respects a kindred spirit. The second volume of *Lider un Baladn* contains a short autobiographical sketch as well as an extensive bibliography. Mani Leib's lifelong relationship with the poet Rochelle Weprinsky is documented in *Briv: 1918–1953* ("Letters: 1918–53," 1980).

**BIBLIOGRAPHY:** Reizen, *Leksikon*, 2 (1927), 306–10; LNYL, 5 (1963), 450–7; J. Glatstein, *In Tokh Genumen* (1956), 113–21; S.D. Singer, *Dikhter un Prozaiker* (1959), 5–54; A. Tabachnik, *Dikhter un Dikhtung* (1965), 140–69. **ADD. BIBLIOGRAPHY:** H. Bass, *Mani Leib: Monografye* (1978); R. Wisse, *A Little Love in Big Manhattan* (1988).

[Sol Liptzin / Alisa Braun (2<sup>nd</sup> ed.)]

**MANILOW, BARRY (Barry Alan Pincus; 1943– )**, U.S. singer, producer, and songwriter. Born in New York, Manilow graduated from Eastern District High School in Brooklyn, after which he attended the Juilliard School of Music. Manilow entered the music business writing commercial jingles, such as "I'm stuck on Band-Aids." He became rich singing the popular "You Deserve a Break Today" (1973) commercial for the McDonald's hamburger empire. Soon after, Manilow became Bette Midler's record producer and then turned performer himself. His first record, *Mandy* (1974), went straight to number one on the charts and sold four million singles. Manilow then adapted a Chopin sonata and turned it into the hit song "Magic" (1975). Subsequently he recorded a long succession of top-selling singles (not all of which he wrote), such as "It's a Miracle" (1975), "I Write the Songs" (1976), "This One's for You" (1976), "Weekend in New England" (1976), "Looks Like We Made It" (1977), "Copacabana" (1978), "Can't Smile without You" (1978), "Even Now" (1978), "Ready to Take a Chance Again" (1978), "What a Friend You Turned Out to Be" (1983), and "Sometimes When We Touch" (1997). Rated the number one adult contemporary artist of all time, Manilow had an unprecedented run of 25 consecutive Top 40 hits in the 1970s and 1980s. In 1978, five of his albums were on the charts at the same time, a record that has been equaled only by Frank Sinatra and Johnny Mathis.

Among his innumerable honors and awards, Manilow won a Grammy ("Copacabana," 1978); an Emmy (*The Barry Manilow Special*, 1977); and a Tony (*Barry Manilow on Broadway*, 1977); and he was nominated for an Academy Award (Best Song: "Ready to Take a Chance Again" in *Foul Play*, 1978). In 2002 he was inducted into the Songwriters Hall of Fame in New York.

In 1994 his two-act musical *Barry Manilow's Copacabana – The Musical* premiered in the U.K. His next theatrical project, *Harmony*, was a musical based on the true story of

the Comedian Harmonists, a talented group of male singers (three of whom were Jewish) who performed in Nazi Germany until 1934.

With more than 30 albums to his credit and reportedly having made his last grand tour, Manilow signed a long-term contract with the Las Vegas Hilton theater, performing *Barry Manilow: Music and Passion*.

Manilow wrote the autobiographical *Sweet Life: Adventures on the Way to Paradise* in 1987.

**BIBLIOGRAPHY:** P. Butler, *Barry Manilow: A Biography* (2001); M. Strunk, *The Whole World Sings: The Fans behind Barry Manilow* (1999); A. Clarke, *The Magic of Barry Manilow* (1981); T. Jasper, *Barry Manilow* (1981).

[Jonathan Licht / Ruth Beloff (2<sup>nd</sup> ed.)]

**°MANIN, DANIELE** (1804–1857), Italian patriot. Manin's father belonged to the Jewish Medina family who had been converted to Christianity. In 1848 he became president of the revived Venetian Republic and was ultimately appointed "dictator." The revolutionary government which he headed distinguished itself by its moderation and financial profits. His cabinet included two Jews: Leon Pincherle as minister of agriculture and Isaac Pesaro Maurogonato as minister of commerce. After leading fruitlessly the heroic resistance of the city in the long siege by the Austrians, he went into exile in Paris, where he died.

[Giorgio Romano]

**MANISCHEWITZ, HIRSCH** (1891–1943), U.S. Orthodox rabbi, business executive, and philanthropist. Manischewitz, who was born in Cincinnati, Ohio, was educated in Palestine at several yeshivot during 1901–14. While there he helped organize charitable organizations, and, upon his return to Cincinnati in 1914, he continued his philanthropic activities, serving as president of the Orthodox Jewish Orphan's Home. With his brothers he helped maintain the Rabbi Ber Manischewitz Yeshivah of Jerusalem from 1914 until 1943. Moving to New York in 1931, Manischewitz served from that time until his death as an officer of the family B. Manischewitz Baking Co. and helped to build it up into one of the largest manufacturers of Jewish food products in the United States. He was the U.S. representative of over 30 Palestinian and European institutions and organizations of Jewish higher learning. He also served as vice president of the Mizrahi Organization of America, and executive board member of Yeshiva College and of the Orthodox Jewish Congregations of America and Canada.

**MANISSA**, identical with the ancient Magnesia, today the chief town of the Turkish province bearing the same name,

N.E. of \*Izmir. A Jewish community probably existed in Manissa from the first century C.E., but there is no extant information on it. During the Byzantine period, there was a congregation in the town and a synagogue, Eṣ ha-Ḥayyim. After the Ottoman conquest of Istanbul, according to the Surgun system, the Sultan Mehmet II transferred the Jews of Manissa to Istanbul and the Jewish community of Manissa ceased to exist. After 1492, however, groups of Jews expelled from Spain arrived in Manissa; they founded two congregations and two synagogues, Lorca and Toledo. Later, as a result of a dispute which broke out in the town, a third congregation, Shalom, was established. At the end of the 15<sup>th</sup> century, there were more than 100 Jewish families in the town. Rabbi Eliahu Mizrahi writes in a responsum dated after 1504: "But in our case, while in the town of Magnesia people from these places stay there only occasionally, the Sephardim came and settled by themselves without any strangers among them." In the 16<sup>th</sup> century there was a yeshivah in Manissa, and in the second half of that century the physician and scholar Rabbi Shem Tov Melamed lived and wrote there and in Üsküb. A document from the year 1530/31 notes 88 Jewish families and 33 Jewish bachelors in the city. In 1543 a regulation was passed by the Toledo and Lorca congregations in which they forbade the establishment of a new congregation for a period of 20 years. In the 16<sup>th</sup> century there existed in the community a society for the ransoming of captives and a *hevra kaddisha* society, a cemetery, and other charity institutions. In 1575, according to a Turkish document, there were 117 Jewish households and 10 bachelors in the city.

In the 17<sup>th</sup> century there were three synagogues in Manissa before the large-scale emigration from the city. The Jews of Manissa suffered from the attacks of the Cellali gangs at the beginning of the century. These bands attacked Manissa in 1632 and plundered the Jewish community, and most of the Jews lost their property. With the rising importance of Izmir, and as a result of a plague which broke out in the town in 1617, many families left for Izmir. During this period the local rabbi was R. Aaron \*Lapapa. Many Jews followed \*Shabbetai Zevi's movement in 1665–66. During the 17<sup>th</sup>–19<sup>th</sup> centuries there existed in Manissa an Ashkenazi congregation and a Sephardi one. Three Jewish cemeteries and some tombstones from the 17<sup>th</sup> century have survived, the oldest of which is dated 1646. In 1671 the community was very poor and could not pay taxes to the government, because most of the Jews had left the city. In 1702 the traveler Tourenfort found in Manissa three synagogues, and another traveler, Pococke, wrote in 1733 that most of the merchandise in the city was concentrated in the hands of the Jews. The old charity institutions existed throughout the \*Ottoman period and for halakhic questions the Jews of Manissa turned frequently to the rabbis of Izmir. In 1692 the Hebron emissary Rabbi Nissim Rozilio visited the community. In the responsa literature of the 16<sup>th</sup> and 17<sup>th</sup> centuries many regulations and *minhagim* of the community are recorded. Many old *minhagim* and traditions are mentioned in the 19<sup>th</sup> century by Rabbi Ḥayyim Falaji of Izmir. A known rabbi in

the community in the 18<sup>th</sup> century was Raphael Abraham Mazliah (d. 1784).

At the beginning of the 19<sup>th</sup> century, the synagogues were renovated and a plot of land was consecrated for a new cemetery. In 1837, 200 Jews died of the plague. In 1838 the Jewish community numbered about 1,200, and in 1873 about 3,000. The main families of the community in the 19<sup>th</sup> century were Alazraki, Algranati, Gomel, Danon, Mazliah, Franco, Cohen, Levy, Ben-Djoya, Polity, Ninio, Nahom, Shikar, Shochet, Gargir, Lere'ah, Pessuah, Ashkenazi, Azar, Shalom, Buenavida, Israel, Dayan, Saban, Sinsolou, Cherkerdji, Conforte, Misriel, Tobi, Beja, Mendes, Janon, Gagin, Sereno, Armaltes, Gayero, Faradji, Cheres, Mizrahi, Gourdji, and Uziel. There were blood libels against the Jews in the town in 1883 and 1893. In 1892 the first school for boys was founded, and in 1896 this was followed by a school for girls. Both were administered by the \*Alliance Israélite Universelle. Rabbi Baruch Kalomity (d. 1825) was active in Manissa and Izmir. The rabbis of the community in the second half of the 19<sup>th</sup> century and at the beginning of the 20<sup>th</sup> were Abraham Mazliah (d. 1861); Moshe Mazliah, the author of the halakhic book *Em ha-Banim* (died in Jerusalem); David Gomel (d. 1904); and Ḥayyim Mazliah (d. 1906). The last *hakham bashi*, Rabbi Ḥayyim Nahum, was born in Manissa. At the end of the 19<sup>th</sup> century many local Jews immigrated to America, Egypt, South Africa, and other places. At the beginning of the 20<sup>th</sup> century the Jewish community numbered about 2,000, out of a total population of some 40,000. During this period two additional synagogues were built. The president of the community in 1908–18 was Bechor Abraham Gomel. After the conquest of the region by the Greeks in 1919, the Jews continued to support the Turks. They did not fly the Greek flag on their institutions and did not attend the Congress (August 1922) which demanded autonomy for Izmir and its surroundings. When the Greeks retreated in 1922, a great fire broke out in the town, as a result of which a number of Jewish institutions, including the yeshivah, were destroyed. In the late 1930s the community numbered only 30 families. The principal occupations of the Jews were commerce – the export of agricultural products (fruit, tobacco, and raisins) and the import of manufactured goods – and crafts – tailoring, shoemaking, money changing; there were also some farm owners. A few Jews served as physicians in the government hospitals, as judges, and as translators in the foreign consulates of the town. In the mid-20<sup>th</sup> century many families immigrated to the U.S., South Africa, Egypt, and Israel. By 1970 no Jews were living in Manissa. In a work by the Turkish writer Nazim Hikmet, written in 1936, there appears a historical character, a Jew who had converted to a heretical sect for which he gave his life. This Jew was Samuel, who was known by the name of Torlak Kemal of Manissa.

[Abraham Haim / Leah Bornstein-Makovetsky (2<sup>nd</sup> ed.)]

**MANITOBA**, midcontinent province of Canada, bordering on North Dakota and Minnesota to the south, Ontario to the east, and Saskatchewan to the west. In 1877 the first known Jewish residents of Manitoba were Reuben Goldstein, a peddler, and Edmond Coblentz, a clerk, one of three brothers from Alsace-Lorraine. The 1881 Canadian census listed 33 Jews in Manitoba, 21 of them in Winnipeg. Among those outside Winnipeg were Dr. Hiram Vineberg, originally from Montreal and medical health officer in Portage la Prairie, and Harry Wexelbaum, a hotel operator in West Lynne.

In the spring of 1882, Manitoba's Jewish population expanded more than tenfold with the arrival of 350 refugees fleeing czarist pogroms and promised "free" homesteads. Land had previously been assigned for Mennonites, Icelanders, Scottish, and French settlers but no land was allotted for the Jews in spite of a request by Alexander Galt, Canadian high commissioner in London. Most of the new arrivals were housed in Winnipeg immigration sheds while earlier Jewish residents started an immigrant aid committee and raised \$360 for immediate needs. But the newcomers did not wait for charity; men soon found work hauling lumber, women took domestic jobs, and by mid-June, 150 Jewish men were employed laying track across the prairies for the Canadian Pacific Railway. Others took to peddling and trading. The arrival of these Russian Jews was not favorably received in the Winnipeg media. The *Manitoba Free Press* commented: "... they are not likely to be of any great value to the country."

It took two years until land was found for the Jews, 300 miles west, at Moosomin, beyond the Manitoba border. By this time just 27 families were still willing to go on the land. This settlement, dubbed "New Jerusalem," was declared a failure after several years, but some of the failed farmers returned to Winnipeg to launch successful business enterprises and to help found synagogues and schools.

In 1887, land was first assigned to Jewish farm settlers within Manitoba, at Niverville, 30 miles southeast of Winnipeg, and after the turn of the century in Bender Hamlet and Camper, 70 miles north of Winnipeg. Closer to Winnipeg several Jewish farmers set up dairy farms. At one time there were reported to be Jewish merchant and farm families living in 118 Manitoba towns and villages outside Winnipeg. However, in 1961 Jews were reported living in just three – Portage la Prai-

rie, 111; Brandon, 101; and Flin Flon, 60. In 2004, descendants of Jews who live in one farming town, Winkler, organized a memorial event and dedicated a plaque to the memory of 15 Winkler Jewish pioneer families who lived there between 1890 and 1914. Among Winkler-born Jews was Israel Nitikman, a judge of the Manitoba Court of Queen's Bench, and Ernest Sirluck, president of the University of Manitoba in 1970–76. As in Winkler, most Jews in smaller communities eventually moved on, especially to Winnipeg.

The total number of Jews in Manitoba, including Winnipeg, grew from 31 in 1881, to 791 in 1891 and to 1,514 in 1901. By 1911 the number ballooned more than sevenfold to 10,741, then by more than half again to 16,669 in 1921. The population of Jews in Manitoba eventually reached 19,341 in 1931 and remained steady until 1971 when population numbers began a decline to 15,215 in 2001. The vast majority of these Jews lived in Winnipeg, the center of Manitoba Jewish life.

Jewish religious services in Manitoba were first held on Yom Kippur in 1879, in a private Winnipeg home. Regular Sabbath services began after the arrival of the Russian Jews in 1882. Some Jewish laborers celebrated Rosh Ha-Shanah that year in a tent at a railway station 40 miles from Winnipeg; they raised \$100 among themselves to order a *Sefer Torah* and a *shofar* from New York. Synagogues also were established in Brandon in 1906, Portage la Prairie in 1908 and, meeting the needs of summer vacationers, in Winnipeg Beach in 1951. The first two synagogues have long been closed; the latter opens every summer. In the past, several smaller Jewish communities, including Winkler, also had synagogues or at least organized High Holiday services.

With the vast majority of Manitoba Jews congregated in Winnipeg, arguably the greatest area of Jewish impact in Manitoba was in politics – federal, provincial, and municipal. As early as 1882, Harry Wexelbaum served as a municipal councilor in West Lynne, before that community merged with the neighboring town of Emerson. Later Samuel Rosner served as mayor of Plum Coulee. In Flin Flon in Northern Manitoba, with only 60 Jews in a population of 10,200 residents during the 1960s and 1970s, Jack Freedman served as mayor for more than 10 years. Harry Trager was mayor of the neighboring town of The Pas, which could not muster a *minyan* among its 5,031 population.

Serious political activity took place in Winnipeg, where Jews often sparred politically with one another. In 1904, Moses Finkelstein of the Conservative Party was the first Winnipeg Jew elected to the city council, where Jews served continuously for most of the 20<sup>th</sup> century. In 1910, S. Hart Green (Liberal) was elected to the Manitoba Legislature, the first Jew to sit in a Canadian provincial assembly. In 1912, Alter Skaleter (Conservative) was elected to the city council, serving for five years, and was succeeded by Labour candidate Abraham A. Heaps. Heaps was a leader in Winnipeg's 1919 General Strike, and was arrested with other strike leaders. In 1926 he was elected Labour Member of Parliament from the heavily Jewish Winnipeg North riding and served until 1941. Max Steinkopf, a lawyer

and leader in the YMHA and B'nai B'rith, was elected to the School Board in 1916. He supported the anti-strike Committee of 1000, which was formed in response to the 1919 General Strike. In 1920, Steinkopf was defeated by Labour candidate Rosa Alcin. In 1927 and again in 1932, William Tobias (Conservative) was elected to the Manitoba legislature. Marcus Hyman (Labour) was elected and, of special note, sponsored the first group libel law adopted in Canada. In 1959 Maitland Steinkopf became the first Jewish cabinet minister in Manitoba under Conservative Premier Duff Roblin; he declined to run again in 1966 but continued to serve the province in his capacity as chair of the Manitoba Centennial Corporation until his death in 1970.

Three prominent left-leaning politicians, Morris A. Gray, David Orlikow, and Saul M. Cherniack, began political careers as Winnipeg School Board representatives before moving to the city council and then to the Legislature. In 1962 Orlikow was elected to the House of Commons, and in 1969 Cherniack became one of three Jewish cabinet ministers in Manitoba's first New Democratic Party government, along with Saul A. Miller, who had been mayor of suburban West Kildonan, and Sidney Green. In the early 1970s, Sidney J. Spivak served as leader of the opposition Progressive Conservative Party, and Israel H. Asper sat in the Legislature briefly as leader of the Liberal Party before going on to become a media mogul and philanthropist. In 1986 Mira Spivak was appointed a Progressive Conservative senator from Manitoba; from 2004 she sat as an independent. In 2000 Anita Neville (née Schwartz), former School Board member, was elected to Parliament as a Liberal and re-elected in 2004. Also in 2004 Israeli-born Sam Katz, an entrepreneur and entertainment and sports promoter, was elected as the first Jewish mayor of Winnipeg.

[Abraham Arnold (2<sup>nd</sup> ed.)]

**MANKIEWICZ, HERMAN JACOB** (1897–1953), U.S. journalist, playwright, and screenwriter. Mankiewicz was born in New York City. In 1905, the family moved to Wilkes-Barre, Pennsylvania, where his father was an editor for a German-language newspaper and his mother worked as a dressmaker. In 1917, Mankiewicz graduated from Columbia with honors, having written a humor column for the *Spectator*. He worked as managing editor for the *American Jewish Chronicle* until 1918, when he enlisted as an Army flying cadet, but joined the Marines and served as a private first class. After the war he spent several years in Europe, collecting stories about the Red Cross for the organization's press office and as a correspondent for a variety of publications. Upon Mankiewicz's return to New York, he worked for the *New York World*, and in 1923 he joined the drama department of the *New York Times*. Along with Dorothy Parker and Ben Hecht he became a member of the Algonquin Round Table. In 1925, he was hired as the first drama critic for the *New Yorker*, a position he held for one year. Soon after, Paramount Publix Studios extended an invitation to him to join the first wave of screenwriters heading west. By 1933, he was working for Metro-Goldwyn-Mayer,

having written or collaborated on a variety of films, including *Dinner at Eight* (1933) and the Marx Brothers' *Monkey Business* (1931) and *Horse Feathers* (1932). By 1939, his penchant for gambling led to his dismissal from the studio. Orson Welles hired Mankiewicz to adapt Mercury Theater dramatizations. It was during this time that Mankiewicz developed and wrote *Citizen Kane* (1941). Although the film earned him an Oscar for best original screenplay and restored his reputation in Hollywood, it was seen as a betrayal by his friends William Randolph Hearst and Marion Davies. By the end of the 1940s his health was declining and he became a recluse by the 1950s. Mankiewicz died of uremic poisoning in Los Angeles.

[Adam Wills (2<sup>nd</sup> ed.)]

**MANKIEWICZ, JOSEPH LEO** (1909–1993), U.S. film writer, producer, and director. Born in Wilkes-Barre, Pennsylvania, Mankiewicz worked on scripts for Paramount, MGM, and Fox. He received Academy Awards for *A Letter to Three Wives* (Best Director and Best Screenplay, 1949) and *All About Eve* (Best Director and Best Screenplay, 1950).

His early screenwriting credits include *Skippy* (Oscar nomination for Best Adaptation, 1931), *Million Dollar Legs* (1932), *Manhattan Melodrama* (1934), *Our Daily Bread* (1934), *Forsaking All Others* (1934), and *I Live My Life* (1935).

Mankiewicz produced such films as *Fury* (1936), *The Shopworn Angel* (1938), *The Philadelphia Story* (Best Picture Oscar, 1940), *The Feminine Touch* (1941), *Woman of the Year* (1942), and *The Keys of the Kingdom* (and screenplay, 1948). In 1952 he formed Figaro, Inc., and produced, wrote, and directed *The Barefoot Contessa* (Oscar nomination for Best Screenplay, 1954) and *The Quiet American* (1958). Films he directed include *Dragonwyck* (and screenplay, 1946), *Somewhere in the Night* (and screenplay, 1946), *The Ghost and Mrs. Muir* (1947), *No Way Out* (Oscar nomination for Best Screenplay, 1950), *People Will Talk* (and screenplay, 1951), *5 Fingers* (Oscar nomination for Best Director, 1952), *Julius Caesar* (1953), *Guys and Dolls* (and screenplay, 1955), *Suddenly Last Summer* (1959), *Cleopatra* (and screenplay, 1963), *The Honey Pot* (and screenplay, 1967), *There Was a Crooked Man* (1970), and *Sleuth* (Oscar nomination for Best Director, 1972).

Mankiewicz's films are characterized by their intelligence, sophistication, and witty dialogue, and a number of them demonstrate his masterful use of the flashback.

His brother HERMAN (1897–1953) was a screenwriter and producer. His son Tom is a writer and director and his son Christopher is a producer.

[Jonathan Licht / Ruth Beloff (2<sup>nd</sup> ed.)]

**MANKOWITZ, WOLF** (1924–1998), English novelist and playwright. Mankowitz was born and raised in London's East End. He studied English at Cambridge, then, like his father, became an antique dealer, revealing his expertise in *Wedgwood* (1953), *The Portland Vase* (1952), and *A Concise Encyclopedia of English Pottery and Porcelain* (1957) with R.G. Haggard. He turned increasingly to literature and wrote a number

of books inspired by his childhood recollections of the East End. These include *A Kid for Two Farthings* (1953), the title of which was suggested by the Passover allegorical ditty *\*Had Gadya; Make Me An Offer* (1952); *The Boychick* (1954); and *The Mendelman Fire* (1957). In his early writing, Mankowitz's Jewishness was somewhat muted, revealing itself merely in a preference for Jewish characters. His typical mingling of humor and pathos comes out strongly in the play, *The Bespoke Overcoat* (1955), a Jewish reworking of a Russian tale by Gogol. Like several of his other stories, this was made into a motion picture. Mankowitz was primarily a humorist with a talent for elaborating anecdotes, but he gradually developed a more astringent tone in his writing, e.g., *Expresso Bongo* (1960), a satire on the world of "pop" music, and in his satirical novel about film-makers, *Cockatrice* (1963). He later devoted himself to screen-writing and to publicity work in support of the Hasidic sect of Lubavitch. Mankowitz was the author or co-author of a number of well-known screenplays, including *The Day the Earth Caught Fire* (1961), *Casino Royale* (1967), and *The Hireling* (1973).

**BIBLIOGRAPHY:** S.J. Goldsmith, *Twenty 20<sup>th</sup> Century Jews* (1962), 69–75; JC (March 22, 1968).

**MANN, ABBY** (1927– ), U.S. screenwriter. Born Abraham Goodman in Philadelphia, Pennsylvania, the son of a Russian Jewish immigrant jeweler, Mann grew up in a working-class area of East Pittsburgh, a largely Catholic area, and attended Temple University and New York University. Mann wrote dramas for such 1950s television programs as *Playhouse 90* and *Studio One*, and is considered a leader in the genre of the made-for-television movie; social justice issues are Mann's main inspiration. He received an Academy Award for his screenplay for *Judgment at Nuremberg* (1961), based on the postwar trial of Nazi judges. Reuniting with *Nuremberg's* director, Stanley \*Kramer, Mann wrote *A Child Is Waiting* (1963), about special-needs children, and then adapted the Katherine Anne Porter novel *Ship of Fools* (1965). Mann took Emmys for *The Marcus-Nelson Murders* (1973), the pilot for the series *Kojak*, as well as for *Murderers Among Us: The Simon Wiesenthal Story* (1989) and *Indictment: The McMartin Case* (cowritten with his wife, Myra Mann, in 1995). In 1975, Mann developed *Medical Story*, a short-lived series that cast a light on the medical world. Ten years after the assassination of Martin Luther King, Jr., Mann explored whether there was a conspiracy to kill the civil-rights leader in the miniseries *King* (1978). In 1985, he wrote *The Atlanta Child Murders*, a case that focused on Wayne Williams, a black man accused of killing young boys after procuring them for his gay father.

[Adam Wills (2<sup>nd</sup> ed.)]

**MANN, ABRAHAM AARON OF POSNAN** (mid-17<sup>th</sup> century), Hebrew writer. Mann, who was a *hazzan* in Poznan, wrote a short work, *Urim ve-Tummim* (Amsterdam, 1653), dealing with such matters as the proper way to fulfill the ethical commandments, repentance, and the way to achieve the

state of *\*devekut* and the love of God. Instructions are also given regarding correct social behavior, in accordance with Jewish ethics, based directly on talmudic and midrashic ideas. The work is divided into short paragraphs (each beginning with a different letter of the alphabet), arranged in a *notarikon* system forming the author's name several times. The work likewise includes a short ethical poem, also arranged in a *notarikon* system, and, at the end, several brief sermons.

[Joseph Dan]

**MANN, DANIEL (Daniel Chugerman; 1912–1991)**, U.S. director. Mann was born in New York and began his career in entertainment as a musician in resorts. He served in the army in World War II, was trained at Neighborhood Playhouse in New York, began directing television productions, and was later a director for theater and for movie adaptations of the same plays, including *Come Back*, *Little Sheba* (1950; 1952), and *The Rose Tattoo* (1951; 1955). On Broadway, he also directed *Paint Your Wagon* (1952), *The Immoralist* (1954), and *A Loss of Roses* (1959).

Mann directed such films as *I'll Cry Tomorrow* (1955), *The Teahouse of the August Moon* (1956), *The Last Angry Man* (1959), *Butterfield 8* (1960), *Ada* (1961), *Five Finger Exercise* (1962), *Who's Been Sleeping in My Bed?* (1963), *Our Man Flint* (1965), *Judith* (1966), *For Love of Ivy* (1967), *Willard* (1971), *A Dream of Kings* (1971), *Maurie* (1973), *The Revengers* (1973), *Lost in the Stars* (1974), *Interval* (1974), *Journey into Fear* (1975), and *Matilda* (1978).

On the small screen, Mann's directorial credits include the miniseries *How the West Was Won* (1977) and the TV movies *Another Part of the Forest* (1972), *Playing for Time* (1980), *The Day the Loving Stopped* (1981), and *The Man Who Broke 1,000 Chains* (1981).

[Jonathan Licht / Ruth Beloff (2<sup>nd</sup> ed.)]

**MANN, DELBERT (1920– )**, U.S. director. Born in Lawrence, Kansas, Mann served in the U.S. Air Force during World War II and entered the theater as stage manager and then director for repertory and summer playhouse productions. From 1949 to 1955 he directed a number of television dramas, including Playhouse 90 and Omnibus productions, and in 1955 directed the movie *Marty*, from his television adaptation of Paddy Chayevsky's drama. It earned him an Academy Award for Best Director. Mann also directed the movies *Bachelor Party* (1957), *Separate Tables* (1958), *Desire under the Elms* (1958), *Middle of the Night* (1959), *Dark at the Top of the Stairs* (1960), *The Outsider* (1961), *Lover Come Back* (1961), *That Touch of Mink* (1962), *Dear Heart* (1964), *A Gathering of Eagles* (1964), *Quick Before It Melts!* (1965), *Kidnapped* (1971), *The Pink Jungle* (1968), *Birch Interval* (1977), and *Bronte* (1983). In 1968 he began working outside the United States, directing movies premiered on television and then shown in movie theaters, including *Heidi* (1969), *David Copperfield* (1970),

*Jane Eyre* (1971), and *All Quiet on the Western Front* (1979), for which he was nominated for an Emmy.

Mann's TV films include *All the Way Home* (1981), *The Member of the Wedding* (1982), *The Last Days of Patton* (1986), and *Incident in a Small Town* (1994). He also wrote *Looking Back ... At Live Television and Other Matters* (1998).

Mann served as president of the Directors Guild of America (1967–71). In 2002 the DGA awarded him an Honorary Life Member Award.

[Ruth Beloff (2<sup>nd</sup> ed.)]

**MANN, FREDERIC RAND (Maniyevich; 1903–1987)**, U.S. public figure. Mann, who was born in Gomel, Russia, was taken to the U.S. at the age of two. A successful businessman, he had a varied public career. He was appointed a member of the U.S. Mint Assay Commission in 1943, served as director of commerce and city representative of Philadelphia, and as a Pennsylvania commissioner of the Delaware River Port Authority. President Johnson appointed Mann the first U.S. ambassador to Barbados (1967) and U.S. special representative to the Caribbean islands of Antigua, Dominica, Grenada, St. Lucia, and St. Kitts-Nevis (1968). Active in Jewish affairs, Mann was vice president of the American Committee for the Weizmann Institute of Science, a founder of the Israel Philharmonic Orchestra, which is housed in the Mann Auditorium in Tel Aviv bearing his name, and treasurer of Dropsie College in Philadelphia.

The Mann Center for the Performing Arts in Philadelphia, built in 1976, also bears its benefactor's name. One of the largest outdoor amphitheaters in the United States, it seats 4,000 under cover and an additional 10,000 in the open air.

**MANN, HERBIE (Herbert Solomon; 1930–2003)**, U.S. jazz flautist. When Mann began his career as a flute player in the early 1950s, he was essentially the only flautist playing jazz. A product of the Manhattan School of Music, he sought models in the world of Latin music, where the flute was a much more common sound. As Mann said in interviews, "When [accordionist] Mat Matthews gave me an opportunity to record jazz on flute [in 1952], there was no tradition of straight-ahead jazz on the flute.... When Symphony Sid [Torin], the DJ in New York suggested I add conga drums, ... the audience understood where the flute was. It was jazz, but it was Latin jazz." The Latin-jazz fusion would prove to be merely the first of many hyphenate jazz styles Mann would explore. He would register bestselling records playing jazz-funk, jazz-rock, disco-inflected jazz, Brazilian jazz, and jazz-reggae. After he was diagnosed with inoperable cancer in 1998, he even went back to his own musical roots, playing East European Jewish-influenced material. Mann's enormous commercial success was a mixed blessing; jazz purists frequently dismissed his records and playing for their ease, bordering on glibness. Regardless of the merits of his own playing, he established the flute as a jazz instrument.

Hodges, Daniel, "Herbie Mann," in: *Contemporary Musicians*, Vol. 16 (1996); J. Newsom, "Herbie Mann's New Groove," in: *The Port Folio* (July 9, 2002).

[George Robinson (2<sup>nd</sup> ed.)]

**MANN, JACOB** (1888–1940), scholar of the \**Genizah* period and of the Jews under the \*Fatimids, and particularly of the *Genizah* fragments. The son of a *shoḥet* from Przemyśl, Galicia, where he received a traditional Orthodox education, Mann went to London in 1908 where he pursued his secular studies. At the same time he pursued rabbinic studies at Jews' College and qualified for the ministry in 1914. Soon after, he began publishing learned papers, including his excellent series, "The Responsa of the Babylonian Geonim as a Source of Jewish History" (in *JQR*, 7 (1916/17); 11 (1920/21)). The field in which he was later to distinguish himself as a great scholar was *Genizah* research. Mann for the first time undertook to collect and explain all the documents from the period preceding the Crusades to the fall of the Fatimids. His book, *The Jews in Egypt and in Palestine under the Fatimid Caliphs* (2 vols., 1920–22; reprinted with introd. by S.D. Goitein, 1970), was a masterpiece *sui generis*. By establishing the dates of a great number of the largely undated *Genizah* documents, Mann provided the chronological framework for the history of the Jews in the Near East. He revealed the great role played by the \*Jerusalem gaonate in the period before the Crusades and shed new light on the various forces within the Jewish communities then living in the lands ruled by the Fatimids. Although Mann neglected the Arabic documents, abstained avowedly from drawing general conclusions, and was mainly interested in the communal history of the Jews, his work is of lasting value as a great collection of hitherto unknown sources, which he ably deciphered and annotated. After the first volume of the above-mentioned book appeared, Mann went to the United States, first as lecturer at Hebrew College in Baltimore and a year later as professor at Hebrew Union College in Cincinnati. There he taught Jewish history and Talmud and continued his research. His second major work, *Texts and Studies in Jewish History and Literature* (2 vols., 1931–35, repr. 1970), contains various documents concerning European Jewry and Geonica and texts elucidating the history of the \*Karaites in the Near East and in Eastern Europe. In the last years of his life Mann embarked on the study of one of the most difficult branches of Hebrew literature, the Midrashim. In his work, *The Bible as read and preached in the Old Synagogue; a study in the cycles of the reading from Torah and Prophets, as well as from Psalms and in the structure of the Midrashic homilies*, he tried to establish the dependence of the Midrashim from the chapters of the Torah and from the *haftarot* which were read on the Sabbath on cycles of three and one-half years respectively. The first volume of the book was published in 1940. Material left by Mann for the second volume was prepared for publication by Isaiah Sonne; after the

latter's death the work was continued by Victor Reichert; it appeared in 1966.

**BIBLIOGRAPHY:** R. Mahler, in: *Yivo Bleter*, 16 (1940), 170–81, incl. bibl.; 17 (1941), 92.

[Eliyahu Ashtor]

**MANN, MENDEL (Mendl Man; 1916–1975)**, Yiddish novelist and painter. Mann was born in Płonsk, Poland. When his art education in Warsaw was interrupted by the Nazi invasion, he fled eastwards and enlisted in the Red Army, in which he witnessed the siege of Moscow and the occupation of Berlin. After the war he settled in Łódź and published a volume of verse, *Di Shtilkayt Mont* ("Silence Calls," 1945). Following the Kielce pogrom, he moved to Regensburg in 1946, where he edited a Yiddish DP newspaper. He immigrated to Israel in 1948, where he published *Oyfgevakhete Erd* ("Awakened Earth," 1953), a collection of stories reflecting the lives of Jewish refugees living in a former Palestinian village. From 1949 he was a co-editor of *Di Goldene Keyt*. The novel, *In a Farvortztn Dorf* ("In an Abandoned Village," 1954), is based on the life of Zionist emigrants to Palestine from Jewish villages in the vicinity of Płonsk. His most outstanding work is a trilogy of novels reflecting his wartime experiences. The constituent volumes are *Bay di Toyern fun Moskve* (1956; *At the Gates of Moscow*, 1963), *Bay der Vaysl* ("At the Vistula," 1958), and *Dos Faln fun Berlin* ("The Fall of Berlin," 1960). The action deals with fighting on the Eastern Front seen through the eyes of Jews serving in the Red Army (whose contribution is minimized to indulge Stalin's prejudice), the reactions of the Russian and Ukrainian population as the Nazis approach Moscow, the instinctive patriotism of ordinary Soviet soldiers and their aspirations for greater freedom after the war. The Nazi leaders are portrayed as histrionic charlatans. Further important prose works are *Nakht iber Glushino* ("Night over Glushino," 1957), *Di Gas fun Bliendike Mandlen* ("The Street of Almond Blossoms," 1958), a collection of stories set in Palestine, *Al Naharoy's Poyln* ("By the Rivers of Poland," 1962), and a further volume of stories, *Der Shvartser Demb* ("The Black Oak," 1969). In 1961 Mann moved to Paris and became the editor of *Undzer Vort*. He built up a significant art collection and became a friend of Marc Chagall. In 1963 he edited the Yiddish section of *Sefer Plonsk ve-ha-Sevivah*, the Płonsk memorial volume. There were exhibitions of his paintings in the 1930s in Warsaw and in 1967 in Paris. His works have been extensively translated into French and German.

[Josef Schawinski / Hugh Denman (2<sup>nd</sup> ed.)]

**MANN, THEODORE R.** (1928– ), U.S. attorney and communal leader. Mann was born in Czechoslovakia, and came

to the U.S. with his parents in 1929. After studying at various yeshivot in New York, he graduated from Pennsylvania State University and Temple University's School of Law. He was the editor of Temple University's *Temple Law Quarterly*. He clerked in the U.S. 3<sup>rd</sup> Circuit Court of Appeals and then taught at the University of Pennsylvania Law School.

For 31 years he was a senior partner at the law firm of Mann, Ungar, Spector & Labovitz, concentrating on securities fraud litigation, anti-trust litigation, and other complex commercial issues. Mann played a leading role in several major civil rights and church-state separation cases. He successfully argued cases involving the admissions policy of Girard College and challenges to Bible reading in the public schools. He also argued before the U.S. Supreme Court in *Lemon v. Sloan*, a case challenging public aid to parochial schools, and in several Sunday "blue law" cases. Mann joined the WolfBlock law firm, serving as Of Counsel in the Business Litigation Practice Group in the company's Philadelphia office.

Long active in Jewish communal affairs, he served as president of the Jewish Community Relations Council of Greater Philadelphia and of the Greater Philadelphia Council of the American Jewish Congress and as national vice president of the Congress. He was also chairman of the Jewish Council for Public Affairs and the Israel Task Force of the National Jewish Community Relations Advisory Council. Mann succeeded Rabbi Alexander M. Schindler as president of the Conference of Presidents of Major American Jewish Organizations, holding office until 1980. He also held official positions with the National Conference on Soviet Jewry, the American Jewish Congress, and the Executive Committee of the Israel Policy Forum. He was the founding chairman of Project Nishma and of Mazon: A Jewish Response to Hunger. In 2000, the Jewish Council for Public Affairs presented Mann with the Albert Chernin Award for his "exemplary voluntary service to the field of Jewish community relations and the leading role he has taken in defending the First Amendment and religious freedoms for all Americans."

[Ruth Beloff (2<sup>nd</sup> ed.)]

°MANN, THOMAS (1875–1955), German novelist and the leader of Germany's anti-Nazi intellectuals. Mann married Katia Pringsheim (1883–1980), whose parents were both of Jewish background: Alfred Pringsheim (1850–1941), professor of mathematics at Munich University, and Hedwig Dohm (1855–1942), the daughter of the famous feminist and author Hedwig Dohm (born Hedwig Schlesinger, 1831–1919), who had married in Berlin in 1853 the political and satirical publicist Ernst Dohm (formerly Elias Levy, 1819–1883), editor-in-chief of the satirical periodical *Kladderadatsch*.

It was the Berlin Jewish publisher, Samuel \*Fischer, who launched Thomas Mann on his literary career. He introduced Jewish characters in many of his masterpieces, such as *Koenigliche Hoheit* (1909, *Royal Highness*, 1916), *Der Zauberberg* (1924; *The Magic Mountain*, 1927), and *Doktor Faustus* (1947; Eng., 1949). He withdrew his short story "Blood of the Wal-

sungs" (Waelsungenblut, 1905), the original conclusion of which could be considered antisemitic, from publication after protests of his father-in-law and published it only as a private printing and with a different ending in 1921. Before the rise of Hitler he rarely wrote on Jewish matters, but his 1907 essay "Solving the Jewish Question" stood in the tradition of emancipation ideology by advocating mixed marriage and conversion. When Jacob \*Wassermann, in 1921, voiced his despair at the prevalence of antisemitism in Germany, Mann answered his fellow-novelist that Germany was the country least suited for the growth of this evil. But from 1922 Mann warned of the Nazi danger. He called Munich as early as 1923 "the town of Hitler" and fought actively against the danger ("Kampf um Muenchen als Kulturzentrum," 1926; "Deutsche Ansprache. Ein Appell an die Vernunft," Berlin, 1930). When Hitler came to power, Mann, unlike his brother Heinrich (1871–1950) and his children, at first remained silent about the Nazi regime, hoping that it would not last too long. To wait things out he chose voluntary exile in southern France and Switzerland. In January 1936 he broke his silence on the persecution of German Jews in a leading article in the *Neue Zuercher Zeitung*. While disclaiming the appellation "philo-Semite," Mann expressed his repugnance for German antisemitism as the product of a racial myth designed for the rabble, and urged Jews not to despair: having survived many storms in the past, they would outlive this new oppression too. As a Czechoslovak citizen from November 1936, the Nazis deprived him of German citizenship in December, because of his "solidarity with Jewish associates." In response to the stripping of his title of Dr. h.c. of the University of Bonn, Mann warned in his published reply already in January 1937 of the coming war. During the early Nazi years he was at work on his prose epic *Joseph und seine Brueder* (4 vols., 1933–42, *Joseph and his Brothers*, 1934–45), the most profound treatment of this biblical theme in literature. He went to the United States in September 1938, teaching as an honorary professor at Princeton University, and moved to California in 1941. From the beginning of World War II he broadcast from America through BBC London 55 speeches to German listeners ("Deutsche Hoerer!"). In 1942, when news of the extermination of the Jews reached him, Mann broadcast the information, hoping it would reach German listeners. In 1943 he called attention to the "maniacal resolution" of the Nazis to exterminate the Jews totally. He begged the United States not to cling bureaucratically to its immigration laws while millions of Jews were being massacred, but to prove by a modification of those laws that the war was indeed being waged for humanity and human dignity. He lived in California until 1952, when he moved to Switzerland. His public views on the Jewish question from the years 1936–48 were published in 1966 (*Sieben Manifeste zur juedischen Frage*, ed. by W.A. Berendsohn).

His eldest child, ERIKA MANN (1905–1969), trained as an actress, directed *Die Pfeffermuehle*, an anti-Nazi cabaret, from January 1933. She went into exile in February 1933 and was in the U.S. from 1936, became a war correspondent, and

eventually settled in Switzerland. Her works include *Zehn Millionen Kinder. Die Erziehung deutscher Jugend im Dritten Reich* (1938) and *Das letzte Jahr* (1956), a biography of her father. She was an outspoken critic of post-World War II German democracy. Her brother, KLAUS MANN (1906–1949), an anti-Nazi writer and journalist, published two journals (*Die Sammlung*, 1933–35; *Decision*, 1941–42) and resumed his career in the U.S. Army as a propagandist. He wrote various novels and an autobiography, *The Turning Point* (1944; German ed., 1952). He and his sister also published *Escape to Life* (1939), about the talented victims of Hitlerism. Klaus Mann committed suicide in Cannes.

[Sol Liptzin / Dirk Heisserer (2<sup>nd</sup> ed.)]

**MANNA** (Heb. מַן), referred to as “bread from heaven” (Ex. 16:4; cf. Ps. 105:40). Manna is described in Exodus as coming down in the wilderness of Sinai within the area of the Israelites’ encampment every morning except on Sabbaths in the form of “a fine, scale-like thing, fine as the hoarfrost on the ground.” The Israelites collected “an Omer a head,” which they ate within 24 hours, for if left until the next morning it bred worms and rotted. When the sun shone on the ground the manna melted. The double portion collected on the sixth day, however, did not rot and sufficed also for the Sabbath when no manna fell. In form “it was like coriander seed, but white; and the taste of it was like wafers made with honey.” For 40 consecutive years the Israelites ate the manna, “until they came to the land of Canaan” (Ex. 16:26–36).

Some, drawing an analogy between the manna and the quails, which also miraculously descended to the children of Israel, contend that, like the latter, the manna was a phenomenon of nature which sometimes occurs in the wilderness of Sinai. Something similar is stated by Josephus (Ant. 3:26ff.): “And to this very day all that region is watered by a rain like to that which then the Deity sent down for men’s sustenance.” As early as from the time of St. Anthony (c. 250–355 C.E.), Christian pilgrims tell of a tradition, current among the monks of the monastery of St. Catherine in Sinai, that the biblical manna comes from the secretion of insects on the branches of tamarisk trees, which to this day grow in the wadis of the southern Sinai mountains. Bodenheimer has suggested a similar explanation of the origin of the manna. Two genera of coccidae parasitize on tamarisk trees of the species *Tamarix mannifera*. On those growing in the Arabah Valley, in the lowlands of the southern Negev, and in Sinai, there are large numbers of the coccus *Najacoccus serpentinus minon*, which is covered with

a pocket in the form of an elongated tube in which it lays its eggs. Another coccus, the *Tradutina mannipara*, lays its eggs in a cone-like pocket. These two coccidae extract the sap, rich in carbohydrates, of the branches of the tamarisk, the excess carbohydrates which their bodies cannot absorb being secreted in the form of drops of transparent liquid that congeal into white globules, composed chemically of glucose, fructose, and a very small quantity of pectin. The globules melt in the heat of the sun. A large proportion of these globules of “manna” is eaten by ants, which collect them in their nests. In years of plentiful rain, the Sinai Bedouin, who also call the globules *man*, gather as much as 600 kilograms (about 1,300 lbs.) of them, which they use as a substitute for honey.

Although there is some resemblance between this “manna” and that described in the Pentateuch, and despite the importance of the early tradition supporting that identification, it is very doubtful whether this is the manna of the Bible, lacking as it does several features of the biblical food. There is the additional fact that the nutritional value of the “manna” produced by the cocci of the tamarisk is very slight, since it contains no proteins at all, whereas the Pentateuch speaks of the manna as “bread” and as a basic food. And finally, the quantity of this “manna” is not enough to feed a tribe or even a family, let alone a nation wandering in the wilderness. Some identify the biblical manna with the *Lecanora esculenta*, a species of lichen, large quantities of which are sometimes borne by winds to the central Asian steppes and to the heights of the Atlas Mountains. This species, however, has thus far not been found in the Arabian Peninsula or in the neighborhood of Israel.

[Jehuda Feliks]

### In the Aggadah

Manna was one of the ten objects created in the twilight on the eve of the Sabbath of Creation (Avot 5:6). It was ground by the angels in heaven (Tanḥ. B., Ex. 67), where manna is constantly being prepared for the future use of the pious (Ḥag. 12b). Manna deserved its name, “bread of the angels” (lit. “bread of the mighty” לֶחֶם אַנְגֵּלִים, Ps. 78:25) because those who ate it became equal to the angels in strength. Furthermore, like angels, they had no need of relieving themselves since the manna was entirely dissolved in their bodies (Tanḥ. B., Ex. 67), and it was not until they sinned by complaining about the taste of the manna that they once again had to relieve themselves like ordinary mortals (Yoma 75b). Each day sufficient manna to sustain the Jewish people for 2,000 years fell (Tanḥ. B., Ex. 66), and this spared the Israelites the need of carrying it during their wanderings, and thus also enabled them to enjoy it while it was still hot. Receiving a new supply every day constantly made them turn their hearts to God for their daily bread (Yoma 76a).

Before the manna fell, a north wind swept the surface of the desert, which the rain then washed clean; dew next descended and was congealed into a solid substance by the wind so that it would serve as a table for the manna which next fell from heaven; it was then covered by another layer of dew

which protected it from vermin and insects (Mekh., Va-Yassa, 4). The manna fell directly in front of the homes of the righteous, but the average person had to go out and gather it, and the wicked had to go far from the camp to attain their share (Yoma 75a). At the fourth hour of the day when the manna melted, it formed a river from which the righteous will drink in the hereafter. The heathens also attempted to drink out of these streams, but the manna that tasted so delicious to the Israelites had a bitter taste in their mouths. They could enjoy it only indirectly, by catching and eating animals that drank the melted manna; even in this form it was so delicious that the heathens cried, "Happy is the people that is thus favored" (Tanḥ. B., Ex. 67). There was no need to cook or bake the manna. It contained the flavor of every conceivable dish. One had only to desire a specific food, and the manna assumed its taste (Yoma 75a). To the child it tasted like milk, to the adolescent like bread, to the old like honey, and to the sick like barley steeped in oil and honey (*ibid.*). The manna exhaled a fragrant odor, and served the women as perfume and cosmetics. Together with manna, precious stones and pearls also fell down from heaven to the Israelites (Yoma 75a).

The amount of manna gathered by each family was found to correspond to the number of its members. This rendered the manna useful in solving many difficult problems. For instance, when two people came before Moses, one accusing the other of having stolen his slave and the other claiming to have bought the slave, Moses deferred his decision to the following morning, when the quantity of manna in their respective houses revealed to whom the slave truly belonged (Yoma 75a). When, many centuries later, the prophet Jeremiah exhorted his contemporaries to study the Torah, they responded by saying, "How shall we maintain ourselves?" The prophet then brought forth the vessel with manna which had been placed in the Temple, and exclaimed: "O generation, see ye the word of the Lord; see what it was that served your fathers as food when they applied themselves to the study of the Torah. You, too, will be supported by God in the same way if you will devote yourselves to the study of the Torah" (Mekh., Va-Yassa, 6). When the destruction of the Temple was imminent, the vessel with manna was concealed along with the Ark and the sacred oil. In the messianic period, the prophet Elijah will restore all those hidden objects (*ibid.*).

**MANNE, MORDECAI ZEVI** (1859–1886), Hebrew lyric poet and artist. Born near Vilna, he was sent at the age of 13 to study at yeshivot in Minsk. After his talent for painting was discovered he went to Vilna and enrolled at its school of art. He taught himself Russian and general studies, and wrote his first poems, lyrical studies of nature. In 1880 he was accepted as a student at the Academy of Arts in St. Petersburg. On the

recommendation of A. \*Zederbaum, Manne's studies were subsidized by A. Kaufman, a wealthy communal leader, and he served as his Hebrew secretary. He contributed poems and articles to *Ha-Meliz* and *Ha-Zefirah* under the pen name Ha-Mezayyer ("the painter"; also Heb. acronym of – Mordecai Zeviyelid Radoshkewitz). In 1884 he went to Warsaw and contributed to Nahum \*Sokolow's *Ha-Asif* and S.P. \*Rabbinowitz' *Keneset Yisrael*, designing the covers of both anthologies. A victim of tuberculosis, his health deteriorated after 1884. At the end of his life he wrote a popular poem, *Masat Nafshi*, wherein he expressed his longing for Palestine. Only some of his poems and articles were published during his lifetime; his collected works appeared after his death, edited by his friend A.L. Schoenhaus (1897).

Manne's poetry displays an individual lyricism, and he is at his best in descriptions of nature, in which his talents as writer and painter fuse. His poems are clearly influenced by the classical Russian and German poetry which he translated extensively. In his critical articles he wrote that "the poem and the poetic phrase have no purpose outside themselves, they are in themselves a purpose." Manne dreamed of "artists who loved their people and their religion," and who would devote themselves to depicting the beauty, the sacred values, and the history of Israel. A list of his works translated into English appears in Goell, *Bibliography*, p. 34.

[Yehuda Slutsky]

**MANNE, SHELLY (Sheldon; 1920–1984)**, U.S. jazz drummer, club owner. Manne's father and two uncles were drummers so he had percussion in his blood. Although New York-born, he is most strongly associated with the "West Coast school" of post-WWII jazz and spent most of his career in Los Angeles and its environs. He got his first professional experience on transatlantic cruise ships, then played for Raymond Scott and Les Brown. But the big breakthrough for Manne came when he was hired as Stan Kenton's drummer in 1946. He enjoyed two successful stints with Kenton, proving that a swift, sure drummer could make even the Kenton behemoth swing. In between he played with Woody Herman and small groups headed by Charlie Ventura and Herman alumnus Bill Harris. After leaving Kenton for good in 1952, he relocated to the West Coast, where he was much in demand for studio work. But he continued playing live jazz whenever possible, fronting his own band, Shelly Manne and His Men. From 1960 to 1974 he was owner of and frequent performer at his own Los Angeles club, Shelly's Manne-Hole. After the club folded, he co-founded the LA 4 combo, which would last until his death 10 years later. Manne was a highly intelligent player, modest

but self-assured. He stated his own rules for drummers in a 1955 piece in *Down Beat*: "I'm not in favor of the bombastic approach to drumming. A display of technique leaves me cold if a good line, good sound, and sensitivity are ignored."

[George Robinson (2<sup>nd</sup> ed.)]

**MANNES**, family of musicians. **DAVID MANNES** (1866–1959), U.S. violinist and conductor, was interested in civic betterment. In 1912 he founded the Music School Settlement for Colored People, New York. In 1916 he founded the David Mannes School of Music, with a faculty of eminent musicians. He published an autobiography, *Music is My Faith* (1938). He married **CLARA DAMROSCH MANNES** (1869–1948), a pianist and the daughter of conductor Leopold \*Damrosch. His son, **LEOPOLD \*MANNES** (1899–1964), a pianist and teacher and inventor, succeeded his father as director of the Mannes School.

**MANNES, LEOPOLD** (1899–1964), U.S. pianist and co-inventor with Leopold \*Godowsky of the Kodachrome color process. He was born in New York, the son of David Mannes, the violinist and conductor of the New York Symphony Orchestra. He studied musical composition in Rome and was an accomplished pianist. He worked with Godowsky and together they found a successful method of producing color film. They experimented in the Eastman Kodak Laboratories in Rochester, New York. In 1939 Mannes left Rochester and joined his father as codirector of the Mannes School of Music. In 1953 he reorganized it as Mannes College of Music of which he was president.

**MANNHEIM**, city in Baden, Germany. Jews first settled in Mannheim (which was founded in 1606) around 1652, and the first rabbi, Naphtali Herz, served from 1657 to 1671. The community was granted a highly favorable charter in 1660. A cemetery was acquired a year later (in use until 1839), and a synagogue and *mikveh* were built in 1664. In 1663 there were 15 Jewish families in the town, two of them Portuguese, founders of a Portuguese community that later maintained its own schoolteacher and enjoyed particular privileges. In 1674 the *hevra kaddisha* (*Kippe*) was established. By 1680 there were 78 Jewish families in Mannheim; in 1689 they aided the burghers in the defense of the city against the French; on its destruction, they took refuge in the communities of \*Heidelberg and \*Frankfurt. Eighty-four families had returned to the city by 1691 when a new charter was issued. Modeled on the first one, it included the Portuguese, fixed the number of tolerated families at 86 (increased to 150 in 1698), established an interest rate of 5%, and abolished the yellow \*badge. The charter of 1717 (also including the Portuguese) raised the number of tolerated families to 200 and permitted an interest rate of

10%. The favorable position of the Jews there is expressed in a contemporary reference to Mannheim as "New Jerusalem." There were many local followers of \*Shabbetai Zevi in the community, vigorously opposed by its rabbi, Samuel Helmann (1726–51). In 1708 the synagogue and *heder* (*Klaus*), donated by Lemle Moses Rheinganum, was consecrated and later endowed with 100,000 gulden (it remained in use until 1940). Soon after, it was enlarged considerably. An unsuccessful attempt was made when the Jewish charter was renewed in 1765 to establish a separate Jewish quarter. Political emancipation came in 1807, followed by full civil rights in 1862. The main synagogue was consecrated in 1855. A public elementary school was in existence between 1821 and 1870. The number of families increased from 225 in 1761 to 247 in 1771, and the number of Jews in Mannheim rose from 940 in 1801, to 4,249 in 1885; 6,402 in 1913; and 6,400 (2.3% of the total population) in 1933. The community issued a monthly bulletin (1922–38) and maintained a *Lehrhaus* (school for adults) between 1922 and 1938, as well as numerous charitable, cultural, and social organizations. Jews were active in the social, cultural, and political life of the city.

The interior of the synagogue was demolished on April 1, 1933. By 1938 only 3,000 Jews remained. On November 10, 1938, the main synagogue was burnt, and the community was forced to transfer the remains of 3,586 bodies interred in the old cemetery to the public one. On October 22, 1940, some 2,000 Jews were deported to the concentration camp of \*Gurs, and the remainder to Auschwitz a year later. After World War II, Jews returned to Mannheim; they numbered 68 in 1945; 386 in 1970; and 338 in 1977. A new synagogue was opened in 1957. In 1987 a new community center with a synagogue was consecrated. The Jewish community numbered 400 in 1989 and more than 500 in 2005.

[Louis Lewin / Larissa Daemmig (2<sup>nd</sup> ed.)]

**MANNHEIM, HERMANN** (1889–1974), lawyer and criminologist, pioneer of the teaching of criminology in Britain. Born in Russia of German parents, Mannheim was educated in Germany. He combined his work as a judge in the Berlin

criminal and appeals court with that of a professor of criminal law at Berlin University. When in 1933 his career in Germany came to an end, he had already achieved a position of both judicial and academic eminence. In 1934 Mannheim settled in England where he continued his studies in the sociological and psychological problems connected with crime and punishment and introduced the systematic teaching of criminology into British universities. His courses at the London School of Economics, where the post of reader in criminology was created for him in 1946, were attended by social scientists, lawyers, psychologists, and psychiatrists from all over the world. In those years Mannheim already wrote some of his influential books, among them: *The Dilemma of Penal Reform* (1939), *War and Crime* (1941), and *Criminal Justice and Social Reconstruction* (1946, 2<sup>nd</sup> ed. 1949, 3<sup>rd</sup> ed. 1967). He took a leading part in the establishment and the development of almost every important scientific and public activity aiming at the study of crime, the understanding of the offender, and the peno-correctional treatment of delinquents and criminals. For several years he served as president of the scientific committee of the International Criminological Society. He was co-founder and coeditor of the *British Journal of Criminology* (1950–66) and of the International Library of Criminology. The London Institute for the Study and Treatment of Delinquency and the Howard League for Penal Reform were among the causes to which he dedicated his life. In 1955 he published (together with L.T. Wilkins) his *Prediction Methods in Relation to Borstal Training*, the first examination in Britain of the efficacy of penal methods. The Home Office adopted its findings in the administration of the Borstal and prison services. His textbook, *Comparative Criminology* (2 vols., 1965), is the definitive statement on the study of crime in the United States, Britain, and Continental Europe, dealing with the causes of crime, the sociological, psychological, and physical factors involved, and also critically analyzing the various methods used in criminological research. He edited *Pioneers in Criminology*, which has become one of the basic readings for the student of criminology in the Anglo-Saxon world.

[Zvi Hermon]

**MANNHEIM, KARL** (1893–1947), sociologist. Born in Budapest, Mannheim was a student of Max Weber in Heidelberg. He was professor of sociology in Frankfurt in 1930, emigrating in 1933 to London, where he taught at the London School of Economics until his death.

Combining influences coming from Marx, Dilthey, and Max Weber, Mannheim became – together with the philosopher Max Scheler – the initiator of the sociology of knowledge. This branch of sociology is based on the conviction that cognition is not a purely intellectual act but formed by vital relations that are non-theoretical in character and largely defined by the position of the actor in the social structure.

Cognition is based on volition and volition, in turn, on the antecedents and concrete circumstances of a person's life. Mannheim denied that this view was leading to sociological relativism or to a disparagement of the spirit; rather, in his opinion, the mind was to be set free by the recognition of the nonrational roots of a consciousness.

After his emigration, Mannheim's interest turned largely toward the problem which was posed by the rise of Nazism, namely, how democracy in a period of mass movements could be prevented from sliding into totalitarian dictatorship. Mannheim's thesis was that *laissez-faire* liberalism, through loosening all societal bonds, would carry with it the danger of totalitarianism and that a fighting democracy would have to "plan for freedom"; the intention ought to be to guarantee the values of personality by means of social regulation. He even went so far as to suggest the cooperation of sociology and theology to that end. Mannheim's early work, *Ideologie und Utopie* (1929; Eng. trans., 1936), opposes "utopian" thinking, carried by the discontented and emphasizing change, to "ideological" thinking which is essentially conservative in nature. Still earlier appeared *Die Strukturanalyse der Erkenntnistheorie* ("The Structural Analysis of Knowledge"; 1922), "Das Problem einer Soziologie des Wissens" (in: *Archiv fuer Sozialwissenschaft und Sozialpolitik*, 53 (1925), 577–652), and "Das Konservative Denken" (in: *Archiv fuer Sozialwissenschaft und Sozialpolitik*, 57 (1927), 68–142; 470–95). The major works of Mannheim's second period are *Man and Society in an Age of Reconstruction* (1940) and *Diagnosis of Our Time* (1943). Three posthumous publications were: *Freedom, Power and Democratic Planning* (1950), *Essays on Sociology and Social Psychology* (1953), and *Systematic Sociology* (1958). Mannheim was the founder of the International Library of Sociology and Social Reconstruction, which published many well-known monographs. He had an important unofficial influence on some aspects of British government policy such as the 1944 Education Act. Mannheim contracted pneumonia and died at the age of only 53.

[Werner J. Cahnman]

**MANNHEIM, LUCIE** (1899–1976), actress. Born near Berlin, she became a leading actress at the Volksbuehne, Berlin and from 1924 to 1930 appeared at the Staatstheater, Berlin where one of her roles was Nora in Ibsen's *A Doll's House*. After the Nazis came to power, she settled in England where she appeared on the London stage, repeating her success as Nora. After World War II she frequently appeared in Germany. She

also appeared in a number of British films, including Alfred Hitchcock's *The 39 Steps* (1935).

**MANNHEIMER, ISAAC NOAH** (1793–1865), Vienna preacher and creator of a moderate, compromise Reform ritual. Born in Copenhagen, he was the son of a Hungarian *hazzan*. He received his general education at the local secular school and studied Hebrew literature and Talmud with R. Gedaliah Moses, the liberal pedagogue of Copenhagen. While attending the university of Copenhagen he continued with his talmudic studies. When in 1816 the Danish government issued regulations for Jewish religious instruction, he was appointed head teacher of religion (*Hauptkatechet*) and entrusted with the task of examining his students and preparing them for confirmation. The first confirmation took place with considerable fervor on May 9, 1817, with the accompaniment of organ music and in the presence of high state and university officials. He held services every Wednesday evening for adherents of Reform \*Judaism that were characterized by the total elimination of the Hebrew language and the use of music by Christian composers. Mannheimer preached in the Danish language, much to the dismay of the traditional majority of the community who lodged an official protest with the government. In 1821 he went to Berlin to conduct services in the Reform synagogue, then to Vienna, and back to Copenhagen. He finally left Copenhagen to preach in 1823 in Hamburg and then went to Leipzig. At the suggestion of Lazar \*Biedermann, he was asked in 1824 to officiate at the new Seitenstetten Synagogue in Vienna. Since Jews in Vienna were not permitted to constitute a community at that time, he was officially known as headmaster of the religious school. Mannheimer became one of the leading preachers of the 19<sup>th</sup> century, attracting all segments of the Jewish population; he adhered to an inspirational rather than didactic concept of preaching. His sermons, in which the *aggadah* was translated into modern terms, remained classical in form and content, yet they were the least rule bound and formalistic of contemporary sermons. Moreover, he was not reluctant to acknowledge his debt to Christian masters of the art of preaching. In his mature years in Vienna he rejected radical Reform and adopted a middle course in his service, eliminating some traditions without destroying their essence. He insisted on Hebrew as the language of worship, retained the prayers of Zion and Jerusalem, did not incorporate organ music into the service, and vigorously defended circumcision as a ritual of fundamental importance. In creating a form of worship known as “worship according to Mannheimer” (or “the Viennese rite”) he prevented a split in the community, and became a pioneer in this type of service in the communities of Austria, Hungary, and Bohemia. His service was also imitated in some German communities.

Despite his moderate Reform tendencies, Mannheimer was strongly attacked by the \*Orthodox community. He helped to foster reforms in religious education, retaining Hebrew as an important element and introduced birth, marriage, and death registers into the community. He also helped to found

a number of charitable and cultural organizations and fought for the rights of the Jews in general society; with great persistence he sought to gain legal recognition of the Viennese community. Together with 24 Austrian rabbis he achieved the abolishment of the oath more \*judaico, although his own modified form was not fully accepted. In 1842 he successfully defeated the proposal of Professor Rosas to limit the number of Jewish medical students.

During the revolution in 1848 Mannheimer delivered an eloquent eulogy on two of its Jewish victims who were buried together with Christian victims in a Christian cemetery (March 17). On March 31, 1848 he published a “Declaration on the Jewish Problem” and submitted an effective draft law to the political commission. In the same year the city of Brody elected him to the Reichstag, where, in cooperation with A. \*Fischhof and the rabbi D.B. \*Meisels, he succeeded in obtaining the removal of the “Jews’ tax.” Nevertheless, he warned the Jewish community against pleading on its own behalf. Jewish emancipation, he said, might be discussed, but only after it had been broached by the non-Jews. In the Reichstag he made a striking plea for abolishing the death penalty. The Vienna community, whose subservient attitude to the government he criticized, tried to restrict his liberal activity, in part out of concern that his outspokenness might embroil them with the increasingly reactionary forces in the government. They even sought to censor his utterances in the Reichstag. Reluctantly Mannheimer eventually withdrew from political life.

Mannheimer’s most important literary work is the exemplary German translation of the prayer book and the festival prayers (Vienna, 1840, later in a number of editions). Of his sermons there have been published *Pradikender holdne ved det mosaiske Troessamfunds Andagts övelser i Modersmaalet i Sommerhalbaaret 1819* (Copenhagen, 1819), and *Gottesdienstliche Vortraege ueber die Wochenabschnitte des Jahres* (vol. 1, on Genesis and Exodus, 1834); *Gottesdienstliche Vortraege gehalten im Monat Tishri 5594* (1834). A posthumous edition of additional sermons was published by B. Hammerschlag (1876). Some of his sermons on Genesis and Exodus were translated in Hebrew by E. Kuttner and published under the title *Mei No’ah* (1865). Of importance, too, are his *Gutachten fuer das Gebetbuch des Hamburger Tempels* (1841), and *Gutachten gegen die Reformpartei in Frankfurt a. M. in Angelegenheit der Beschneidungsfrage* (1843).

[Bernard Suler]

**MANNHEIMER, THEODOR** (1833–1900), Swedish banker. Mannheimer is regarded, together with A.O. Wallenberg, a

non-Jew, as the founder of modern Swedish banking. Born in Copenhagen, he settled in Göteborg, Sweden in 1855 and began his business career in the grain trade. He turned to banking later and by 1864 had become managing director of the newly founded Skandinaviska Kreditaktiebolaget (Scandinavian Joint Stock Credit Company, now known as the Skandinaviska Enskilda Banken, or SEB), the first of its kind in Sweden. Under Mannheimer's leadership Skandinaviska Banken soon became Sweden's most important financial institution, chiefly concerned with placing securities for industry and transport. Mannheimer was also deeply involved in railway and mining enterprises. From 1870 to 1876 and from 1881 to 1894 he was a member of the Göteborg municipal council.

**BIBLIOGRAPHY:** *Svenska män och kvinnor*, 6 (1949).

[Hugo Mauritz Valentin]

**MANOAH OF NARBONNE** (end of 13<sup>th</sup> and first half of 14<sup>th</sup> century), Provençal scholar. No biographical details are known of him. Even the name of his father is uncertain (see Hurvitz in bibl.). Some (Geiger, according to Isaac b. Sheshet, resp. no. 85, and Samuel b. Meshullam Gerondi, *Ohel Mo'ed* pt. 1, Jerusalem 1886 ed., 88b) are of the opinion that his father's name was Simeon; others (Zunz, Gross, and the New York-Schulsinger publishers of Maimonides' Yad) without giving reasons state that it was Jacob. A third view is that there were two scholars named Manoah – one, the subject of this article, whose patronymic is unknown, and a second, the son of Simeon, mentioned in the above responsa, who was the author of *Hilkhot Terefot*. Manoah's teachers were Meir b. Simeon ha-Me'ili and Reuben b. Hayyim. Internal evidence suggests that he was active in Narbonne (ch. 12 of *Hilkhot Tefillah*: "the custom of this town, Narbonne" quoted in the *Shem ha-Gedolim* of Azulai).

Of his works in the sphere of rabbinical literature, that on Maimonides' *Mishneh Torah* on the laws of leavened and unleavened bread, *shofar*, the Day of Atonement, *sukkah*, and *lulav* has been published (Constantinople, 1718; with the commentary of Simeon Sidon, 1879). An additional portion on the laws of the reading of the *Shema*, prayer, and the priestly and other blessings is extant in manuscript (Moscow-Guenzburg no. 123). This may be the manuscript seen by H.J.D. Azulai (*Shem ha-Gedolim*, 1 (1852), 126 no. 46). An excerpt from this section was published by Hurvitz in *Talpioth*, 9 (1965). This work is much quoted by Joseph Caro in his *Beit Yosef* and *Kesef Mishneh*.

[Shlomoh Zalman Havlin]

**MANOR, EHUD** (1941–2005), Israeli songwriter. Manor was born in Binyaminah. He began writing songs in the late 1960s, and immediately became very popular and productive, often collaborating with song composer Nurit \*Hirsh as in "Ba-Shanah ha-Ba'ah" (1970). In the 1970s and 1980s Manor wrote songs for many musicians with a personal style, includ-

ing Matti Caspi ("Brit Olam," 1976); Hanan Yovel ("Dor," 1984). and Boaz Sharabi ("Halevay," 1986). He made many contributions to song festivals such as "Abanibi" (1978), winner of the Eurovision song contest. He also produced Hebrew versions of various foreign songs, such as the Brazilian "Eretz Tropit Yafah" (1978). In later years, Manor continued to work with artists of the older generation, but also with younger ones and even adopted the Mediterranean style, as in "Hayiti be-Gan Eden" (1999). He also translated many musicals, including *Hair* (1971) and *Chicago* (2004) as well as the plays *L'Ecole des femmes* (1987); and *Twelfth Night* (1989). Over the years, Manor edited and presented numerous productions as well as radio and television programs, especially those featuring popular songs (Israeli and foreign). Although a large part of Manor's output consists of light songs, his most famous ones achieve deep resonance on a national level, like "Ein li Eretz Aheret" (1984), and several are highly personal, like "Ahi ha-Tza'ir Yehudah" (1969) and "Yemei Binyaminah" (1974). In 1998, Manor was awarded the Israel Prize for lifetime achievement in the field of Hebrew song. His song collections and writings include *50 Hits by Ehud Manor and Nurit Hirsh* (1969), *Mi Ra'ah et Beni – Children's Songs* (1989), *Ein li Eretz Aheret – Shirim ke-Biografiah* (2003), and with Zippora Shapira *Children's Rhymed Dictionary* (2001).

**MANOSQUE**, town in the department of Basses-Alpes, S.E. France. Jews are mentioned in Manosque from 1240. In 1261 the community was already sufficiently numerous to maintain two butcher's stores. Before the \*Black Death in 1348, there were about 30 Jewish families in Manosque. The Jews owned at least one synagogue and cemetery. They lived in their own street, the Carriera Judaica, on the site of the present Rue Bon-Repos. When an epidemic broke out in 1364, the services of a Jewish physician were still called for. However, from 1370 on there were frequent anti-Jewish disturbances, the most violent in 1455 and 1495. In 1498 the town expelled its Jews.

[Bernhard Blumenkranz]

**MANS, LE** (Heb. מַנְס), capital of the department of Sarthe, in western France. A Jew, Vaslinus, is mentioned as a moneylender there between 1104 and 1115. In 1138, the Jews of Le Mans were attacked by local inhabitants. They lived in the quarter formed by Rues Marchande, Saint-Jacques, Falotiers or de Merdereau, Barillerie, Ponts-Neufs and de la Juiverie, and owned a synagogue and a cemetery (in the parish of Sainte-Croix), which was also used by other Jews in the vicinity. They probably also had their own market and a hospital. Another attack upon Jews may have occurred around 1200, since several Jewish converts are found in Le Mans in 1207, and in 1216,

Berengaria, the widow of Richard the Lion-Hearted, Lady of Le Mans, disposed of the so-called “school of the *Juiverie*,” i.e., the synagogue. Records show the existence of a Jewish quarter during the second half of the 13<sup>th</sup> century, the Jews of Le Mans then being under the jurisdiction of the bishop. Reference to Jewish scholars of Le Mans is found in rabbinical literature from the end of the ninth century, the most celebrated being \*Avun the Great (tenth century) and Elijah b. Menahem ha-Zaken (11<sup>th</sup> century). The Jews were expelled from Le Mans in 1289 at the same time as the Jews of Maine and Anjou. During World War II many of the Jews in Le Mans were deported. A new community was formed after the war, many of its members coming from North Africa. It numbered 400 in 1969. A stained-glass window dating from the 12<sup>th</sup> century depicting the allegorical defeated Synagogue can be seen in the Cathedral of Le Mans.

[Bernhard Blumenkranz / David Weinberg (2<sup>nd</sup> ed.)]

**MANSFELD, ALFRED** (1912–2004), architect. Born in Russia, he went to Paris in 1933 and in 1935 to Erez Israel and worked from 1936 as an independent architect, mainly in Haifa. He designed and built several housing schemes in Haifa (including Ramat Hadar), and also various public buildings, including the Institute for Jewish Studies of the Hebrew University in Jerusalem (Mount Scopus) and the Hydraulic Institute of the Technion (with M. Weinraub). In 1963, his design for the international airport at Lydda was awarded first prize. He designed and built (in partnership with Dora Gad, interior decorator), the Israel Museum in Jerusalem (1959–65). From 1949, he lectured at the Faculty of Architecture of the Technion, and from 1954 to 1956 he was dean of the faculty. In 1966 he received the Israel Prize.

[Abraham Erlik]

**MANSO, LEO** (1914–1993), U.S. painter and educator. Manso trained at the National Academy of Design, New York City, from 1930 to 1934, the Educational Alliance, and the New School for Social Research. He taught at Cooper Union, Columbia University from 1950 to 1955, and New York University. Working as a book illustrator early in his career, Manso took the position of art director at World Publishing in New York, and in 1943, worked for Simon & Schuster illustrating book covers. He made his summer studio and home in Provincetown, Mass., in 1947 and assisted in the organization of Gallery 256, the period's first regional artists' cooperative. Manso's early work reflects the influence of Abstract Expressionism: he exhibited with the American Abstract Artists, whose members included Josef Albers and Ben Nicholson. Describing himself as an “Abstract Impressionist,” Manso's light-suffused art of this period testifies to his study of the Im-

pressionists, especially Claude Monet, as well as such painters as J.M.W. Turner and Sung artists. Manso stated that his work possessed two themes: a concern with landscape and an endeavor to find a visual equivalence for certain philosophical ideals. His work developed from landscapes with rapid, thick, expressive brushwork in an Abstract Expressionist vein, such as *Bay/Dusk* (1954) and *Grey Sun* (1957) to more serene images composed of related planes of tone. Manso's collages, such as *Tanka III* (1968) are small and intimate, owing a debt to the artist's study of quattrocento Italian artists and to the collages of his friend and contemporary Robert Motherwell. To study the expressive qualities of color, Manso studied Persian miniatures, Romanesque and Etruscan art, and such modern artists as Paul Klee and Pierre Bonnard. Manso traveled widely: to Mexico in 1945, where he met the artists Jose Clemente Orozco and Rufino Tamayo, to Maine the following year, to Haiti in 1958, to India, Nepal, and Africa in the early 1970s, to Italy in 1975, and again to Rome in 1980 and 1981. In 1979–80, he was artist-in-residence at the Accademia Americao, Prix-de-Rome. Manso experimented with the use of simple geometric forms, making circular supports, as in his *Vista I (Valley of Katmandu)* (1974), or contained large triangles within the rectangular format of the canvas or paper. The title of a 1984 collage, *Firenze*, refers explicitly to the artist's beloved Italy. The composition features tones of russet, ocher, and lavender in overlapping planes of delicate texture further enunciated by the inclusion of a handwritten letter and envelope dated 1846. Manso counted among his friends the artists Milton Avery, Jacques Lipschitz, and Kurt Seligmann. Manso participated in many group and solo shows since 1946: in New York City; Rome; Provincetown, Massachusetts; Washington, D.C.; the San Francisco Museum; and the Museum of Modern Art, among other venues. His work is owned by private collectors and by many museums, including the Museum of Modern Art, New York, the Museum of Fine Arts, Boston, the Whitney Museum, the Hirschhorn Museum, and the Glicenstein Museum, Safed, Israel.

[Nancy Buchwald (2<sup>nd</sup> ed.)]

°**MANŞÜR (Al)**; full name: **al-Mansur Ibn Abi Amir**; in Christian sources, **Almanzor**; d. 1002), chamberlain (Ar. *ḥājib*) of Caliph Hishām II (976–1013) of Spain. Al-Manşūr in effect ruled \*Umayyad Spain as virtual dictator and in 996 assumed royal titles. His reign marked the climax of the Umayyad political, economic, cultural, and military supremacy in Spain. A religious fanatic, al-Manşūr embarked on a lengthy and successful campaign against the Christians in northern Spain (against Catalonia in 985), in which he ruthlessly destroyed Christian holy places. He, however, did not harm the Christian and Jewish communities in his domain. The responsa of R. Hanokh of Cordoba attest to the conver-

sions of Jews to Islam under al-Manṣūr, who intensified and increased Muslim preaching and other religious activities. Spain was extremely prosperous during his reign and Jewish immigration therefore increased. The Jews came mainly from North Africa (present Morocco and Algeria), together with many \*Berbers, whom al-Manṣūr employed in his military campaigns. The military security and economic stability contributed to an efflorescence of Jewish culture, *halakhah*, poetry, etc. (see \*Spain). The 12<sup>th</sup>-century historian Abraham \*Ibn Daud recalls "King" al-Manṣūr's appointment of Jacob \*Ibn Jau, a wealthy and opportunistic silk merchant, to the position of *nasi* in charge of all Jewish communities in his domain. Al-Manṣūr empowered Ibn Jau to collect taxes from whomever he desired. He had Ibn Jau imprisoned one year later for not collecting enough money from the Jews. Al-Manṣūr's son 'Abd al-Malik al-Muẓaffir succeeded him, thus founding the Amirid dynasty.

**MANSURA (El Mansura; al-Mansura; Al-Mansurah)**, town in Lower Egypt, on the right bank of the eastern arm of the Nile. Founded during the 13<sup>th</sup> century, Mansura has become an important center for the cotton commerce in modern times. There was a Jewish community from the 16<sup>th</sup> century. In 1583 and 1597 there were Jewish written deeds in Mansura. Around 1560 the physician Eleazar Scandari received the position of *\*sarraf* (banker) of \*Mahalla al-Kubra and Mansura. The Jewish population grew under \*Ottoman rule and by the 17<sup>th</sup> century there was an organized community led by the rabbis Elijah Shushi (Shoshi) and Shabbetai ha-Kohen. During the middle of the 19<sup>th</sup> century, Jacob \*Saphir found 40 families in the town, most of whom had come from \*Cairo and \*Dami-etta. During the second half of the 19<sup>th</sup> century, when blood libels were brought against Jews in various Egyptian towns, the Jews of Mansura were also accused. In 1877 during Passover, the Jews were accused of having slaughtered a Muslim child in order to use his blood for the baking of *mazzot*. In the mid-19<sup>th</sup> century 40 Jewish families lived there. At the end of the century, the number of Jews was about 500 and continued to increase at the beginning of the 20<sup>th</sup> century. In 1901 the \*Cairo rabbis declared the new *kiddushin* regulation in Mansura and other cities. A well-organized community was set up in 1918 and educational and charitable institutions were established. An \*Alliance Israélite Universelle school was inaugurated in 1903. In 1917 the Jewish community reached 586 people, its number continuing to increase. A Zionist association was also founded in the town. After World War I there was a decrease in the population. In 1927 there were still 563 Jews there, but a few years later there were only 150 to 200 Jews left, and by 1971 the community no longer existed.

**MANSURAH, SAADIAH BEN JUDAH** (19<sup>th</sup> century), Yemenite scholar living in \*San'a. He was author of *Sefer ha-Maḥashavah*, which appeared under the title *Sefer ha-Galut ve-ha-Ge'ullah* (1955), which consists of seven sections written in rhymed prose. Like the *Sefer ha-Musar* of R. Zechariah al-Dāhri, it describes the hardships endured by the community of San'a in his time. The principal hero is Eitan ha-Ezraḥi (i.e., Abraham the Patriarch) and the narrator Ḥazmak (i.e., Saadiah, after the "Atbash" method of interchanging Hebrew letters) is the poet himself. The narrator tells the founder of the nation of the misfortunes of Yemenite Jewry, and the latter in turn relates the servitude of Israel in the Egyptian exile. He deals with the exiles into which Israel was sent, with the return to Zion and the redemption of the people. The last section consists of eulogies of the rabbis of \*Yemen and the author himself. Mansurah also wrote poems and prayers, the subject of which is exile and redemption, as well as an introduction to Yemenite poetry. In the field of *halakhah*, he wrote *Sha'ar ha-Moda'it* on the laws of *shehitah* and *terefot*.

**BIBLIOGRAPHY:** S. Mansurah, *Sefer ha-Galut ve-ha-Ge'ullah* (1955), introd.

[Yehuda Ratzaby]

**MANSURAH, SHALOM BEN JUDAH** (d. c. 1885), Yemenite scholar. A member of one of the distinguished families of \*San'a, Mansurah was the brother of the poet Saadiah \*Mansurah. In addition to his knowledge of the Torah, he also engaged in popular and natural medicine and was renowned as a practical kabbalist. In 1854 he was appointed leader of the Jews of San'a. Three of his works on Torah and *halakhah* (in manuscript) are known. In addition to his own writings, he corrected many works of others. His notes in the margins of books, both published and in manuscript (especially those of R. Yihya Ṣalah), are numerous.

**BIBLIOGRAPHY:** A. Korah, *Sa'arat Teiman* (1954), 45.

[Yehuda Ratzaby]

**MANTINO, JACOB BEN SAMUEL** (d. 1549), physician and translator. Mantino was apparently of Spanish origin but he spent most of his life in Italy. After graduating in medicine at Padua in 1521, he developed a flourishing practice in Bologna, Verona, and Venice, especially among the upper classes. At the same time he became known for his translations from Hebrew into Latin of philosophical works, mainly those of Averroës and Avicenna. In the stormy debate on the annulment of the marriage between Henry VIII of England and Catherine of Aragon he opposed Henry's supporters, thus earning the gratitude of Pope Clement VII, and at his request Mantino was appointed lecturer in medicine in Bologna in

1529. In 1533 the pope invited him to Rome where, unlike his protector, Mantino took a strong stand against the messianic claims of Solomon \*Molcho. In 1534 Pope Paul III appointed him his personal physician and in 1539–41 professor of practical medicine at the Sapienza in Rome. In 1544 he returned to Venice. Five years later he left for Damascus as personal physician of the Venetian ambassador. He died soon after his arrival there.

**MANTUA**, city and province in N. Italy, an important Jewish center in late medieval and modern times.

### History

The first record of a Jewish settlement in Mantua dates from 1145, when Abraham \*Ibn Ezra lived there for a while. A small Jewish community existed during the heyday of the city-republic. Sometime after the Gonzaga had become lords of Mantua, Jewish bankers were invited to start operations in the capital and province. Subsequently the Jewish population increased, reaching 3,000 by 1600. The merchant and artisan population soon outnumbered the bankers. Some 50 Jewish settlements of varying size flourished in the province, the major ones being \*Bozzolo, \*Sabbioneta, Luzzara, Guastalla, Viadana, Revere, Sermide, and Ostiano. The Jews were protected by a series of privileges granted them by popes, emperors, and the Gonzaga rulers. A Christian loan bank (*\*monte di pietà*) was established in Mantua in 1486 to compete with Jewish banking, but initially at least had little success. Anti-Jewish riots took place at Mantua in the 15<sup>th</sup> century, fostered by the Church and aided and abetted by the business competitors of the Jews. There was also an isolated case of \*blood libel in 1478. At the end of the 15<sup>th</sup> century the regulation imposing the Jewish \*badge was introduced in Mantua. Rioting in 1495, after Duke Francesco Gonzaga's indecisive encounter with the French forces at Fornovo, resulted in the confiscation of the house of the leading Jewish banker in the city, Daniel \*Norsa, and the erection of the Church of the Madonna della Vittoria on the site. David \*Reuveni visited Mantua in 1530, but failed to obtain the support of either the ruler or the Jews. Two years later Solomon \*Molcho was burned at the stake there.

The Counter-Reformation began to affect the Jews of Mantua adversely in the last quarter of the 16<sup>th</sup> century. Restrictive measures and anti-Jewish propaganda culminated in riots and murder. The worst outrage occurred in 1602, when seven Jews were hanged on a charge of blasphemy at the instigation of a Franciscan rabble-rouser. Some ten years later the Jews of Mantua were confined to a ghetto. The worst disaster in their history befell Mantuan Jewry in 1629–30, when they were despoiled of their possessions during the sack of the city by the German troops and then banished. A moving

account of the disaster and of the return of the survivors is the contemporary *Ha-Galut ve-ha-Pedut* ("Exile and Deliverance") by Abraham Massarani (Venice, 1634). The events of 1630 decimated the Jewish community which never quite recovered its former importance. In 1708 the duchy of Mantua came under Austrian rule. In the last quarter of the 18<sup>th</sup> century Mantua became the chief center in the struggle for Jewish civil rights in Austrian Lombardy. On the Jewish side were ranged R. Jacob \*Saraval of Mantua and Benedetto \*Frizzi of Ostiano who had to contend with the lawyer G.B. Benedetti of Ferrara and G.B.G. d'Arco, a political economist. During the 18<sup>th</sup> century the Jewish population increased: In 1707, 1,723 Jews lived in Mantua and in 1764, 2,114. In 1754 the guild of silversmiths threatened the Jewish ghetto and the Jews were maltreated for a month in spite of the defense of ducal troops. When in 1797 the French revolutionary army captured Mantua the ghetto was abolished, its gates were torn down, and the ghetto square was renamed Piazza della Concordia. After its recapture by the Austrians in 1799, however, several Jewish "revolutionaries" were banished from Mantua, among them Issachar Ḥayyim Carpi of Revere, who described the events in his *Toledot Yizḥak* (1892). The French again ruled Mantua from 1801 to 1814 and R. Abraham Vita \*Cologna of Mantua was among the foremost personalities in the Napoleonic \*Sanhedrin. During the last period of Austrian rule in Mantua (1814–66) there occurred yet another blood libel (1824), and in 1842 anti-Jewish riots took place. A number of Jews from Mantua began to immigrate to Milan from the end of the 18<sup>th</sup> century mainly because of greater professional and socio-cultural activities.

The Jews of Mantua, like their coreligionists elsewhere in Italy, took an active part in the Italian Risorgimento. Among them were Giuseppe \*Finzi of Rivarolo, one of the "martyrs of Belfiore," and the writer Tullo \*Massarani. When Mantua was incorporated in the Kingdom of Italy (1866) the last restrictions affecting the Jews were removed. At that time the Jewish population reached 2,795, its highest figure since 1603. Subsequently migration and assimilation reduced the community. In 1931 the community numbered only 669 Jews, mainly because of immigration to Milan and other Italian cities and also because of assimilation. The anti-Jewish measures of the Fascist regime (see \*Italy) seriously affected the Jews of Mantua, coming to a climax under the German domination in 1943–45. A concentration camp was set up in Mantua. From the province of Mantua 44 Jews were deported to the death camps, and over 50 Mantuan Jews perished. Only some of the survivors returned to Mantua after the war. By 2000 fewer than 100 Jews lived in Mantua, but in spite of the number they maintained one of the former synagogues with services. Thanks to the active and economic support of the Mantua municipality and funds from the Italian State Ministry of Culture the Jews carried out cultural activities and were able to maintain their rich archive and library, inventoried and in part deposited at the City Hall Library of Mantua.

### Cultural Life

During its heyday in the 16<sup>th</sup> and 17<sup>th</sup> centuries the community of Mantua made important contributions to the development of Jewish communal institutions in Italy. The assembly of all taxpayers elected a “large” council, which in turn elected a “small” or executive council of seven to ten members. Alongside these, several smaller executive committees functioned. The chief officers were two *massari* (ממונים). Communal regulations, especially those pertaining to taxation, were published in Hebrew at regular intervals, as were also sumptuary laws for the restriction of ostentation in clothing and festivities. The synagogues of Mantua included the Great Synagogue of the Italian rite, and several smaller synagogues of the Ashkenazi and Italian rites. The community maintained a public school system and welfare institutions, including medical services for the poor. The rabbinical court had extensive powers until the grant of Jewish emancipation. Its procedure was laid down in the *Shuda de-Dayyanei* (“Judges’ Verdict”) of 1677–78.

Mantua was an important Jewish cultural center during the Renaissance in Italy. Prominent scholars in the 15<sup>th</sup> century included Judah Messer \*Leon, rabbi, physician, and philosopher; R. Joseph \*Colon, the greatest rabbinical authority in Italy; Mordecai \*Finzi, mathematician, astronomer, doctor, and banker; and Baruch de Peschiera, scholar and merchant. Abraham \*Conat, a physician and talmudist, founded at Mantua about 1475 one of the first Hebrew printing presses; the first dated work issued was the *Tur Oraḥ Ḥayyim* (1476). His wife, Estellina, assisted him as a printer. Other Hebrew printers active at Mantua included Samuel Latif (1513–15), Joseph b. Jacob Shalit and Meir Sofer, both of Padua, Jacob ha-Kohen of Gazzuolo (1556–76), Samuel Norsa and his sons Isaac and Solomon (16<sup>th</sup> century); the Perugia and d’Italia families (17<sup>th</sup> and 18<sup>th</sup> centuries). The Hebrew press in Mantua was the second largest in Italy after Venice. Sixteenth-century scholars included Azariah de’ \*Rossi, author of *Me’or Einayim*; the versatile Abraham Yagel \*Gallico; R. Azriel \*Diena of Sabbioneta; the preacher Judah \*Moscato; several members of the \*Norsa (Norzi) family including Jedidiah Solomon Norsa, author of *Minḥat Shai*; the Provençal brothers \*Moses, \*David, and Judah, rabbis and scholars; Abraham Colorni, engineer and inventor; members of the \*Finzi, \*Cases, \*Fano, \*Rieti, and Sullam families; the \*Portaleone family, physicians for three centuries; and Judah Leone b. Isaac \*Sommo, playwright, poet, and author of the famous “Dialogues on the Theater.” Mantua was the most important center of Jewish participation in the Renaissance theater. The community provided its own theater company, which put on comedies and other plays for court performances throughout the 16<sup>th</sup> and early 17<sup>th</sup> centuries. The Jews of Mantua were also active in music and the dance. The greatest Jewish composer in Mantua and the first composer of modern Jewish music was Salamone de’ \*Rossi, whose sister “Madama Europa” acted on the Mantuan stage. Other Jewish musicians, dancers, and actors at Mantua included Abramo Dall’ \*Arpa and his nephew Abramino; Isaac Massarani; Angelo de’ Rossi; and Simone Basilea. In the 17<sup>th</sup> and 18<sup>th</sup> cen-

turies there lived at Mantua the Basilea family of rabbis and scholars, including Solomon Aviad Sar-Shalom \*Basilea; Judah Briel, rabbi and polemicist; Moses \*Zacuto, mystic and poet; Samson Cohen Modon, rabbi and poet; Jacob Saraval, rabbi, polemicist, traveler, and preacher; the brothers Jacob and Immanuel \*Frances, poets; the Cases family, rabbis, physicians, and scholars; and Samuel \*Romanelli, poet and playwright. Outstanding modern Jewish personalities include Marco \*Mortara, rabbi and bibliophile; Tullo Massarani, writer; and Vittore \*Colorni, jurist and historian.

°MANUEL I (1469–1521), king of Portugal 1495–1521. He was termed Manuel the Great because of the achievements of his reign: Vasco da Gama’s discovery of the sea passage to India via the Cape of Good Hope (1498) and the acquisition of Brazil (1500). For the Jewish citizens, however, Manuel’s reign brought an end to their life in Portugal. Initially Manuel was well disposed to Jews. He retained the esteemed Abraham b. Samuel \*Zacuto as his astronomer, and removed the Jewish disabilities imposed by his predecessor John II. But in 1496 the king entered a politically motivated marriage with Princess Isabella of Spain, daughter of \*Ferdinand and Isabella, who made their consent conditional to Manuel’s ridding Portugal of the Jews. On Dec. 4, 1496, an edict was passed ordering every Jew to leave Portugal before November 1497, on penalty of death. Manuel assured the Jews of every assistance in travel and free departure with their belongings. As the mass emigration got under way, Manuel realized that the loss of his Jewish citizenry would have dire economic results for Portugal. To stem the departures, he ordered all Jews desiring to emigrate to come to Lisbon, supposedly for embarkation. When some 20,000 had convened in Lisbon, Manuel herded them together for forced conversion. On May 30, 1497, he decreed that the Conversos would be free from the Church’s discipline for 20 years. When the king learned soon after that the Conversos were emigrating in large numbers, he quickly withdrew their liberty to dispose of property and emigrate. When some 4,000 of the \*New Christians were massacred by a Lisbon mob in 1506, Manuel responded by executing the Dominican friars who had incited the riot, and restored all previous rights and immunities to the New Christians, only to reverse his decision in the year of his death.

**MANUEL, FRANK EDWARD** (1910–2003), U.S. historian. Manuel was born in Boston. He was professor of history at Brandeis from 1949 to 1965 and at New York University, and then again at Brandeis from 1977 to 1986. Upon his retirement from Brandeis, he was named professor emeritus. Manuel's chief field of specialization was the history of ideas. Regarded as one of the most respected scholars of European intellectual history of the last century, Manuel was well known for his study of utopias of the 18<sup>th</sup> and 19<sup>th</sup> centuries. He also wrote about modern history, Christian-Jewish intellectual relations, psychohistory, and eminent thinkers such as Isaac Newton and Karl Marx. His book *Realities of American-Palestine Relations* (1949) was an important contribution to the understanding of American policies in Palestine from 1832. His *Utopian Thought in the Western World* (1979), which he co-authored with his wife, Fritzie P. Manuel, won the American Book Award in History, the Melcher Award, and Phi Beta Kappa's Ralph Waldo Emerson Award.

Manuel's other publications include *The Age of Reason* (1951), *The 18<sup>th</sup> Century Confronts the Gods* (1959), *The Prophets of Paris* (1962), *Shapes of Philosophical History* (1965), *A Portrait of Isaac Newton* (1968), *The Changing of the Gods* (1983), *The Broken Staff: Judaism through Christian Eyes* (1992), and *A Requiem for Karl Marx* (1995).

[Ruth Beloff (2<sup>nd</sup> ed.)]

**MANUEL I COMNENUS**, Byzantine emperor (1143–1180). He added humiliating procedures to the standard \*oath *more judaico* requiring that the Jew spit on his circumcision. But he also continued to permit the Jews to use the older and less offensive formula of the oath. Manuel confirmed Jewish access to ordinary courts, giving them recourse to the protection of imperial law, thus abolishing the practice of having Jews summarily tried by a minor local official. Manuel had a Jewish physician who may have influenced him to moderate his position toward the Jews. The economic and cultural life of Byzantine Jewry during Manuel's reign is described by Benjamin of Tudela.

[Andrew Sharf]

**MANUSCRIPTS, HEBREW**, term which includes religious and secular books, as well as letters and documents written on papyrus, parchment, hides, and paper in Hebrew characters, sometimes using them for the writing of languages other than Hebrew, e.g., Aramaic, Yiddish, Ladino, etc. Hebrew manuscripts have been preserved in archives and public and private libraries. It has been estimated that there are about 60,000

manuscripts (codices) and about 200,000 fragments, most of which have come from the Cairo \**Genizah* (and a certain number from the Judean Desert).

#### 500 B.C.E.–500 C.E.

Documents and letters, some with accurate dates, have been preserved from the period of 500 B.C.E. to 500 C.E. The most important of them are a collection of \*papyri from Yeb (\*Elephantine) and Assuan in Egypt (494–407 B.C.E.); papyri from Edfu, also in Egypt, are thought to belong to the third century B.C.E., as are parts of the Book of Jeremiah and fragments of 11 Samuel among the \*Dead Sea Scrolls. The other scrolls from the Judean Desert are regarded as dating from the second century B.C.E. to the Bar-Kokhba War (132–135), including some written or dictated by him (see bibl. nos. 1–5).

#### 500–1500

No material is available which can be proven with any certainty as belonging to the first centuries of this period. The oldest manuscripts of the period date from the end of the ninth century. Information has been published on a biblical manuscript in St. Petersburg dated to 846. On the other hand, some of the fragments found in the Cairo *Genizah* belong, without doubt, to the beginning of this period and possibly even to the end of the previous one. The development of Hebrew paleography should make it possible to determine with greater accuracy the dates of these most valuable fragments.

**BIBLE AND BIBLE EXEGESIS.** The oldest dated biblical manuscripts are: Prophets as vocalized by Moses b. Asher, which was found in the Karaite synagogue of Cairo and written in Tiberias in 895; Latter Prophets, with Babylonian punctuation, in the Saltykov-Shchedrin Library in Leningrad (No. 3), now the Russian National Library, was copied in 916; and a Pentateuch which was copied by Solomon b. Buya'a (who also prepared, according to a note at its end, the so-called *Keter Aram Zova*, later vocalized by Aaron b. Asher) in 929 and vocalized by his brother Ephraim b. Buya'a (it appears that both were active in Tiberias). This particular *Keter Aram Zova* (*keter*, "crown" being an appellation for a Bible codex; *Aram Zova*, "Aleppo") is at the Ben-Zvi Institute, Jerusalem (see bibl. nos. 5–7). There are biblical manuscripts in the Saltykov-Shchedrin Library and others, which, according to their \*colophons, were written during the tenth century, but doubts have been raised as to the reliability of these colophons. Finally, there is the Bible manuscript (St. Petersburg B 19A) which was written in 1009 in Egypt. The text is complete and the date appears to be authentic.

**MISHNAH, TOSEFTA, TALMUD, AND HALAKHIC MIDRASHIM.** The oldest dated manuscripts of the Mishnah are: Paris Manuscripts 328/9, the complete text with Maimonides' commentary and written and vocalized by Joab b. Jehiel, the "Physician of Beth-El," from the province of Cesena (Italy), between 1399 and 1401. Individual orders (*sedorim*), written and vocalized (in part) from 1168 (*Zera'im*, *Nezikin*, *Kodashim*), are in Oxford (nos. 393, 404), and *Mo'ed* of the same set is in the Sas-

soon Library (no. 72). Not dated but definitely early works are: Kaufmann Number 50 (facsimile edited by G. Baer, 1929) and Parma Number 138. The oldest Tosefta manuscripts are Erfurt Number 159, which was thought to have been written in 1150, and Vienna Number 46. The oldest dated halakhic Midrashim are Sifra of 1073 (Vatican Library, no. 31) and Sifra of 1291 (Oxford, no. 151), which also includes the *Mekhilta*. The only manuscript of the Jerusalem Talmud, which was written in 1299 by Jehiel b. Jekuthiel b. Benjamin, the Physician, is at Leyden. There is also only one complete extant manuscript of the Babylonian Talmud (Munich, Bayerische Staatsbibliothek, Cod. Heb. 95). It was written "on the twelfth of the month of Kislev, in the year 103 of the sixth millennium" (1342) by Solomon b. Samson, probably in France (facsimile edited by H. Strack, 1912). At the end of this manuscript several minor tractates are added. Individual tractates from 1176 and after have been preserved in the Library of Florence, as well as a manuscript from 1184 in the Hamburg Library and in the Jewish Theological Seminary Library (Av. Zar., 1290).

**AGGADIC MIDRASHIM.** Among the extant manuscripts of aggadic Midrashim are *Genesis Rabbah* and *Leviticus Rabbah* from 1291 (*Bibliothèque Nationale* of Paris, no. 149). There is a manuscript from the same year of the *Pesikta de-Rav Kahana* in the Bodleian. The Parma Library possesses a manuscript from 1270 (no. 1240) which contains *Song of Songs Rabbah*, *Lamentations Rabbah*, *Tanḥuma*, *Pesikta Rabbati*, *Midrash Proverbs*, and others.

**MISCELLANEA.** Thousands of medieval manuscripts in the fields of philosophy and Kabbalah are extant; these are as numerous as those in medicine, astronomy, astrology, geography, and other natural sciences. A considerable number of these manuscripts are translations from Greek, Arabic, and other languages spoken and written in the countries of the Diaspora. Polemics, poetry, philology (grammar, dictionaries, *masorah*), history, sectarian literature, *halakhah* (responsa, novellae, codes, ritual compendiums), ethics, and homiletics are well represented, as is liturgy (*siddurim* and *maḥzorim*). Due to their constant use many tens of thousands of them were stored away in *genizot* after being worn and damaged. Occasionally autographs were also preserved, i.e., either manuscripts from the hand of the author, such as Maimonides' Mishnah commentary and miscellaneous writings (ed. S.D. Sassoon, 1966), or confirmations of the correctness of the copy as the one added by Maimonides to a copy of his code: "Corrected from my [original] copy, I, Moses, son of Maimon of blessed memory" (Oxford Ms. 577).

#### 1500–1970

Manuscripts of this last period are also extant; some of them were published, some not. A considerable number of the manuscripts of this period were written in countries where there were no Hebrew presses (e.g., the Yemen). They were either contemporary works or those of earlier periods, but some were copied from printed works which had reached them

from Western countries and are therefore of no original value. Manuscripts written by the authors themselves are of special importance because of their corrections. They make it possible to reconstruct the original text and compare it with other copies, either handwritten or printed editions. Early authorities, who wrote in the early years after the appearance of printing, made use of manuscripts of classic books and commentaries. In later centuries this practice naturally waned.

#### Owners and Other Lists

At the beginning and the end of manuscripts it was customary to note the name of the owner, with a formula such as "a man should always sign his name in his book lest a man from the street come and say it is mine." Owners, who usually were scholars, often added notes of their own to the text. At times, the names of several generations of a single family appear in these lists, and well-known names in Jewish literature and history are found among the owners, e.g., a manuscript of Maimonides' *Guide* (1472, Parma 660) belonged successively to David, Abraham, and Moses Provençal (father, son, and grandson).

Modern manuscript catalogs generally register these notes and lists in detail. The same pages were also used to commemorate family and general events, and documents which are sometimes of great historical value were also copied on them, although they may have no connection with the contents of the manuscript. Among this material are lists of books describing whole or parts of private collections. Such lists shed light on the cultural standards of various periods and environments. The prices of the manuscripts which are mentioned in them are of particular interest (see \*Book trade).

#### Collection of the Material

The Institute for the Photography of Hebrew Manuscripts was founded in 1950 by the Israel Government (Ministry of Education and Culture) in order to enable a comparative processing and registration of all possible material. In 1962 the institute was placed under the authority of the Hebrew University and became affiliated with the National and University Library. During its 20 years of activity the Institute has photographed – mainly in the form of microfilms – approximately half of the collections of manuscripts and fragments scattered throughout the libraries of the world. The most important works which had not been previously published in the form of facsimiles were enlarged by the Institute, as were all the fragments which reached it. Some of the material has been listed in the publications of the Institute (bibl. nos. 24–27). The Jewish Theological Seminary of America houses the Louis Ginzberg Microfilm Collection, which aims at the microfilming of important Hebrew manuscripts from all over the world. The list below cites all libraries containing over 100 Hebrew or Samaritan manuscripts. The numbers of the manuscripts and fragments are given in parenthesis, and the names of the authors of the catalogs and the year of their publication are given after the colon. The numbers of the manuscripts given here are not always identical with those which are classified in the catalogs, as additions were acquired after their publication.

AUSTRIA. VIENNA: *Nationalbibliothek* (216; 308 fragments): A.Z. Schwarz (1925); *Bibliothek der Isr. Kultusgemeinde* (215): A.Z. Schwarz-Oesterreich (1932; 40 Mss. transferred to the Jewish Historical Institute, Warsaw).

DENMARK. COPENHAGEN: *The Royal Library* (244): N. Allony-E. Kupfer (1964).

ENGLAND. CAMBRIDGE: *Trinity College Library* (160): H. Loewe (1926); *University Library* (1,000; 100,000 fragments): S. Schiller-Szinessy (1876); *Westminster College Library* (3,000 fragments). LEEDS: *University Library* (371): C. Roth (Alexander Marx Jubilee Volume; 1950). LETCHWORTH: *D.S. Sassoon Collection* (1,220): D.S. Sassoon (1932). LONDON: *Bet Din and Bet Ha-Midrash* (161): A. Neubauer (1886); *British Museum* (includes the first part of the Gaster Collection, 2,467; 10,000 fragments): G. Margoliouth (1899–1935); *Jews College Library* (Montefiore Collection: 580); H. Hirschfeld, in: *JQR* (1902–03). MANCHESTER: *John Rylands Library* (second part of the Gaster Collection: 750; 10,000 fragments): E. Robertson (only the Samaritan Mss.; 1938–62). OXFORD: *Bodleian Library* (2,650; 10,000 fragments): A. Neubauer-A.E. Cowley (1886–1906).

FRANCE. PARIS: *Bibliothèque de l'Alliance Universelle* (338; 4,000 fragments): M. Schwab, in: *REJ* (1904, 1912); B. Chapira, in: *REJ* (1904); *Bibliothèque Nationale* (1459); H. Zotenberg (1886); *Ecole Rabbinique de France* (172): M. Abraham, in: *REJ* (1924–25). STRASBOURG: *Bibliothèque Nationale et Universitaire* (176; 292 fragments): S. Landauer (1881).

GERMANY. BERLIN: *Preussische Staatsbibliothek* (510): M. Steinschneider (1878–97); N. Allony-D.S. Loewinger (1957). FRANKFURT: *Stadt- und Universitätsbibliothek* (400; 10,000 fragments): R.N.N. Rabbinowitz (1888); N. Allony-D.S. Loewinger (1957; including the Merzbacher Collection; 10,000 *Genizah* fragments lost during World War II). HAMBURG: *Stadtbibliothek* (476); M. Steinschneider (1878; including the Levy Collection). MUNICH: *Bayerische Staatsbibliothek* (476): M. Steinschneider (1895); E. Roth (1966).

HUNGARY. BUDAPEST: *Hungarian Academy of Sciences* (Kaufmann Collection: 595; 600 fragments): M. Weisz (1906); D.S. Loewinger-A. Scheiber (1947); *Library of the Jewish Theological Seminary* (315; 400 fragments): D.S. Loewinger (1940).

ITALY. FLORENCE: *Biblioteca Mediceo Laurenziana* (187): A.M. Biscioni (1757). LEGHORN: *Talmud Torah* (134): C. Bernheimer (1915). A part transferred to the Jewish National and University Library in Jerusalem. MANTUA: *Comunità Israelitica* (167): M. Mortara (1878). MILAN: *Biblioteca Ambrosiana* (183): C. Bernheimer (1933). N. Allony-E. Kupfer (*Aresheth*; 1960). PARMA: *Biblioteca Palatina* (1,552): G.B. De-Rossi (1803); P. Perreau (1880). ROME: *Biblioteca Casanatense* (230): G. Sacerdote (1897). *Biblioteca Apostolica Vaticana* (see Vatican, below). TURIN: *Biblioteca Nazionale* (247): B. Peyron (1880). (A great part destroyed by fire in 1904.)

ISRAEL. JERUSALEM: *National and University Library* (6,000): G. Scholem (1930); B. Joel (1934). N. Ben-Menahem

(120); *Hechal Shlomo* (150): J.L. Bialer (1966–69); *Mosad ha-Rav Kook* (1,000): N. Ben-Menahem in: *Aresheth*, 1 (1959), 396–413; *Ben-Zvi Institute* (1,100); *Schocken Library* (400). RAMAT GAN: *Bar Ilan University Library* (Margulies Collection: 750). TEL AVIV: *Bialik House* (200).

NETHERLANDS. AMSTERDAM; *Portugeesch Israelitisch Seminarium Etz Haim – Livraria D. Montezinos* (160): N. Allony-E. Kupfer (1964); *Universiteitsbibliotheek* (Rosenthaliana; 305); M. Roest (1875); N. Allony-E. Kupfer (1964). LEIDEN: *Bibliotheek der Universiteit* (118): M. Steinschneider (1858).

POLAND. WARSAW: *Jewish Historical Institute* (1,500): E. Kupfer-S. Strelcyn (*Przegląd Orientalistyczny*; 1954–55). WROCLAW (formerly Breslau): *Jewish Theological Seminary of Breslau* (405): D.S. Loewinger-B. Weinryb, 1965 (partly transferred to the Jewish Historical Institute in Warsaw).

SWITZERLAND. ZURICH: *Zentralbibliothek* (238): L.C. Wohlberg (1932); N. Allony-E. Kupfer (1964).

U.S.A. CINCINNATI: *Hebrew Union College Library* (1,500). LOS ANGELES: *University Library* (Rosenberg Collection from Ancona; the third part of the Gaster Collection, etc., 400). NEW HAVEN: *Yale University Library* (300): L. Nemoj (*Journal of Jewish Bibliography*; 1938–39). NEW YORK: *Columbia University* (1,000); *Jewish Theological Seminary of America* (10,000; 25,000 fragments): E.N. Adler (1921); *JTS Registers* (1902ff.); *Jewish Institute of Religion – Hebrew Union College* (200); *Jewish Teachers Seminary Library* (120); R.H. [David Samuel Loewinger / Ephraim Kupfer]

### Judaica and Hebraica Manuscripts in Russia

BACKGROUND. Dr. A.I. Katsch first visited the Soviet Union, Poland, and Hungary in 1956, when he arranged for the micro-filming of several thousand manuscripts and rare documents of Judaica and Hebraica in various collections in those countries. It was the first, and so far the only, such undertaking by a Western scholar. In subsequent journeys behind the Iron Curtain in 1958, 1959, 1960, 1969, and 1976, he augmented this collection, which was then housed at the \*Dropsie College, Philadelphia.

In this article Prof. Katsch gives an account of the five major collections of Judaica that are to be found in Lenin-

grad and Moscow as the situation was prior to the dissolution of the Soviet Union. Today the Russian collections are accessible to scholars.

**INTRODUCTION.** Shortly after the Russian Revolution, the majority of the private collections of rare manuscripts on Judaica and Hebraica, which had been gathered over the centuries by Jewish scholars, disappeared. The only collections which remained were those in the possession of the Czarist government.

These collections constitute a bibliographer's paradise. They consist of a number of individual archives which include those of Israel \*Zinberg, Daniel \*Chwolson, Abraham Baer \*Gottlober, David \*Maggid and Shalom \*Aleichem.

There is also valuable Hebraica material in the Academy of Tbilisi, the capital of Georgia; in the government library of Yerevan, the capital of Armenia; in Kiev, Vilna and the synagogues of Moscow and St. Petersburg.

Apart from those, however, the Russian collections consist of five major collections: the Baron David Guenzburg Collection, the Friedland Collection, the Two Firkovitch Collections, and the Antonin Genizah Collection.

**THE GUENZBURG LIBRARY.** The \*Guenzburg Library was founded by Joseph Yozel Guenzburg (1812–78) and added to by his son Horace (1833–1909) and his grandsons David (1857–1910) and Alfred (1865–1930).

David Guenzburg was a brilliant scholar and an outstanding Orientalist who was reputed to have a knowledge of 34 languages. He founded the famous Guenzburg Academy in St. Petersburg. He was, however, also actively involved in all matters affecting the Jewish community.

In collaboration with Vladimir Stasoff, David published *L'Ornement Hébraïque*, a collection of artistic reproductions from the ancient Hebrew manuscripts in the St. Petersburg collection. In assembling their library the Guenzburgs had the help and advice of such experts as Adolf \*Neubauer, who was the custodian of the Oriental Department of the Bodleian Library, and the scholar Raphael Nathan Nata \*Rabbinovicz, the author of *Dikduke Soferim*.

In 1865, while the collection was in France, the renowned bibliographer Senior \*Sachs was appointed its custodian. Ten years later he began work on a catalog to be called *Reshimat Sefarim Kitve-Yad be-Ozar ha-Sefarim Shel Guenzburg* (list of manuscripts in the Guenzburg Library). The planned catalog was designed in such elaborate detail that it took 48 pages to describe the first two manuscripts. Realizing that this approach was impractical, Sachs then prepared a brief handwritten list of 831 items for the use of the family. This was apparently completed in 1887, when the Guenzburgs moved the collection from Paris to St. Petersburg, and it is now housed in the Russian State Library in Moscow. (Sachs himself, pensioned by the family, remained in Paris until his death on Nov. 18, 1892.)

A second handlist of items 832 to 1,908 was later prepared and catalogued, probably by a later scholar, by book size rather than by subject matter. Copies of these two handlist volumes

are extremely rare. A Russian translation of the first 831 titles is now available in the Russian State Library. The actual number of titles may be as high as 5,000, because most of the codices list several items. However, not all the manuscripts listed in the handwritten catalogs are extant, since some were lost during the moving of the volumes from one place to another.

The manuscripts in the Guenzburg collection deal with a great variety of subjects, including Bible, Mishnah, Talmud, Responsa, Midrash, Kabbalah, philosophy, medicine, astronomy and mathematics. The biblical literature consists of 40 texts, 30 translations and 180 commentaries. Among the latter are Rashi, Ibn Ezra, Kimḥi, Naḥmanides, Levi b. Gershom and Jacob ben Asher.

The section dealing with Mishnah, Talmud and Halakhah is rich in quality and quantity (350 items) and also contains a number of works of the Gaonic period. The Responsa material includes the names of Rabbenu Gershom, Alfasi, Rashi, the Tosafists, Maimonides, David ha-Nagid, Abraham B. David, Naḥmanides, Solomon ben Adret (Rashba), Meier of Rothenberg, and Asher b. Yeḥiel. Hebrew poetry, secular and religious, is represented by Judah Halevi, Solomon ibn Gabirol, Abraham ibn Ezra, Judah Al-Ḥarizi and Immanuel of Rome. Some of the prayerbook manuscripts are illuminated in beautiful colors.

The collection includes a vast literature on the Shabbetai Zevi movement, works by Aristotle, as well as philosophical treatises in Hebrew (or Judeo-Arabic) by Averroes, Maimonides, Al-Ghazālī, Isaac Israeli, Jacob Anatoli, Crescas and others. Some of these works are no longer extant in the languages in which they were originally written. The Guenzburg collection includes important works on astronomy and mathematics and about 40 volumes on medicine. In addition, there are works by 19<sup>th</sup>-century Hebrew authors and scholars which are now of great value, since most of the unpublished manuscripts of the leading Jewish scholars of the 19<sup>th</sup> century were destroyed in the Holocaust. Of special interest are works by the biblical scholar Wolf Heidenheim (d. 1832), by his disciple S. Baer (d. 1897), and by the first Hebrew novelist, Abraham Mapu.

**FRIEDLAND COLLECTION.** The Friedland collection, housed in the Oriental Institute of the Academy of Science in St. Petersburg, contains unique manuscripts on the Bible: biblical commentaries in Judeo-Arabic, Persian, Turkish and other Middle Eastern languages; lexicography; ethics; astronomy; theology; philosophy; music; and historical material such as travel narratives, documents, archives and records of Jewish communities in Middle Eastern countries. There is a great deal of Karaitic literature. One of the rare Bibles, consisting only of the Later Prophets, bears the date 847 C.E.

A manuscript catalog begun by the late Yonah Y. Ginzburg was completed several years ago by A.M. Gasov-Ginzburg. The Oriental Institute in St. Petersburg, formerly under the direction of K.B. Starkova, has prepared an eight-volume catalog describing in detail the entire manuscript collection.

This catalog lists the following: 339 items dealing with Bible, commentaries and lexicography; 291 items dealing with philosophy, ethics, mysticism and theology; 332 items dealing with mathematics, physics, astronomy, medicine and music; 215 items dealing with Karaite and liturgical works; 149 items of material on the Golden Age of Spain and literature of the Middle Ages, such as responsa, letters, records and documents.

The circumstances under which the Friedland collection was assembled, and its subsequent presentation to the Imperial Institute of St. Petersburg, is of more than passing interest and merits that it be given in some detail, especially in view of the fact that it explains the contents of this invaluable library.

Moses Aryeh Leib Friedland (1826–99) was a prominent Jewish leader in Czarist Russia and corresponded with all the leading rabbis of Russia in his endeavors to ease the economic and political plight of the Jews of the country during the era of the “Cantonists,” when Jews were confined to the \*Pale of Settlement and professions and trades were closed to them. Moreover, following the Congress of \*Vienna (1814–15) some two million Jews were added from the Duchy of Warsaw or the Kingdom of Poland and draconic steps were taken by the authorities to uproot them from their settlements and change their way of life.

Into this oppressive and tyrannical atmosphere was tossed the complicated and stormy question of the *Haskalah*, the “enlightenment” movement which, according to its proponents, was to secure new standing for the Jews as a people, by means of an orderly and suitable process of integration into the life of the state. Against this background one can appreciate Friedland’s leap into the battle occupying his people, which was one of the factors contributing towards the acquisition of his huge library.

Friedland did not belong to the same upper social class as the Guenzburgs. Starting from humble beginnings he traveled through the vast Russian steppes under the most trying conditions and in face of real danger, and he learned at first hand the joy of succeeding by dint of one’s own labor. He felt the need to broaden the curriculum of education among Jews in Russia, by introducing into the *yeshivah* curriculum secular subjects and the Russian language. Convinced that this was the only way to salvation for the Jewish masses in Russia, Friedland ardently espoused the cause of the *Haskalah* and engaged in a voluminous correspondence with the great rabbis of the time in an attempt to persuade them to modernize their curriculum. Friedland’s brother, Meir, was connected by marriage to Dr. Azriel \*Hildesheimer. Friedland saw in his brother the ideal combination of religious and secular learning he strived for. Wherever he traveled in Russia he recorded accurate statistics concerning the size of the Jewish population, its communal institutions and his reason for demanding enlightenment and accepting the government’s regulations, for under the circumstances that prevailed it was no longer possible to conceal from the authorities what was happening in Jewish communal life. All this had a direct bearing on the

content of his library. Among his manuscripts is the *Kol Ne-gidim* in four volumes, which is a veritable treasure house of information on the Jewish community of Russia during the 19<sup>th</sup> century. It consists of hundreds of letters, correspondence with the leading rabbis of his time dealing with their history and the many problems facing them. Included are the following references:

(1) The leaders of Russian Jewry at the time of Poliakoff, Guenzburg and others.

(2) Friedland’s suggestion to include the teaching of the Russian language in Yeshivat Mir similar to the program in Yeshivat Volozhin.

(3) The rabbinical authorities – their attitudes to the introduction of secular education into the *yeshivot*.

(4) The Petersburg Congress of leading rabbis.

(5) The condition of Russian Jewry in Siberia, the Ukraine and elsewhere.

(6) The government requirement that every rabbi study the Russian language for six years.

(7) The controversy over deleting liturgical poems (*piyyutim*) and *kinot* in the prayers.

(8) The plan of Rabbi Isaac Jacob \*Reines to establish a special *yeshivah* at Lida.

(9) The controversy between Rabbi Jacob Lifshitz and the leaders of the enlightenment movement.

In addition to these Friedland set himself the task of gleaning the treasures of Jewish learning in order to disseminate through them a knowledge of this heritage. He amassed a large collection of books, some of them extremely rare, at his own expense. These books were not limited to any one field or subject. His library was quantitatively large and qualitatively valuable, which was considered unique in the sphere of private libraries. Included also was a complete collection of the books of the Talmud, both early and late; books of rabbinical decisions (*poskim*); books of research and responsa in *halakhah*; books of meditation and thought; and numerous volumes of “enlightenment” books. Among the manuscripts in this collection are copies of Maimonides’ *Guide to the Perplexed*, with numerous variants, two translations of the Koran in Hebrew by Jacob b. Israel Halevi, works by Tanḥum b. Joseph ha-Yerushalmi, Isaac b. Judah ibn Ghayyat, Judah Halevi, Solomon ibn Gabirol and Judah Al-Ḥarizi.

In the foreword to *Kehillat Moshe*, St. Petersburg 1896, S. Wiener wrote: “Moshe [Aryeh Leib Friedland], in addition to his good deeds for the general welfare of his people, and for the welfare of the individual in his support of several thousand families who bless his name, as the best known and most famous throughout the dispersion, this man also managed to build an everlasting sanctuary for the works of Jewish scholars. In this he has been eminently successful for he has collected in his home more than 14,000 of the finest works and has placed them as eternal witness for permanent safe-keeping forever for all generations to come, in a building of the Asiatic Museum of the Imperial Academy of Science in St. Petersburg where, together with the museum’s collection, the

number of volumes listed will exceed 24,000.” In my archives there is a personal letter written by S. Wiener to a friend of his, a learned scholar in Warsaw, on 12 Tevet 1891, in St. Petersburg, in which he says: “The number of books being published in the holy tongue [Hebrew] is about 10,000, and there are about 400 handwritten manuscripts. There is no treasure that compares with this except in Oxford and in London; this one is third in quantity and value.” Friedland’s library included “the collection which the learned grammarian Ber Bamfi of Minsk gathered throughout his life (he died on 28 Adar 1888). He spent a vast fortune on locating and building up a library of new and old and even rare volumes in all the subjects of Jewish learning and literature, the like of which has never before been seen in our city” (Naphtali Maskileison, *Alon Bachut, Ha-Meliz*, 1888, No. 53).

Friedland’s library also contained the collection of books of Elieser Lipman Rabinowich who died in Heshvan 1887 (see *Ha-Meliz*, No. 147). It contained also the choicest volumes collected by the prominent man of wealth, Shmaryahu Zuckerman of Mogilev (died in 1879), among which is the *Mekhilta* with the commentary on *Zeh Yenaḥameinu*, which the Gaon of Vilna studied and revised with his own hand (Wiener’s foreword to *Kehillat Moshe*). Likewise included in Friedland’s library were “about 2,000 volumes from the superb and valuable collection assembled throughout his life by the excellent bibliographer Joseph Mazal of Wiazin” (*ibid.*) as well as priceless volumes from various collections acquired for Friedland in Europe and other places. Friedland prized his library and was fully cognizant of its importance and value. In the initial stage he attended to his collection himself, but in the course of time – as it expanded and became more ramified – he engaged people specifically to catalog and classify the works according to subjects and to supervise and direct the progressive completion of the collection by acquiring every rare and priceless volume available in order to render his library complete.

In 1880 there appeared in *\*Ha-Meliz* an announcement which aroused consternation throughout the Jewish community. It declared that Friedland had decided to transfer his invaluable library to the Imperial Institute in St. Petersburg. It created a storm of controversy; it was considered by some as a betrayal of the Jewish people, especially since access to the institute was forbidden to Jews. Only one rabbi in Russia, Rabbi David ben Samuel \*Friedmann of Karlin, at that time an active member of the \*Hibbat Zion movement, while expressing his concern and sorrow at this step, tried to reason him out of it and proposed to Friedland that he transfer his library to Jerusalem. In a deeply moving letter he praised him for the labor and expense invested in this collection. The fact, however, that it would be housed in an institution closed to the Jews would result in “these volumes and the wisdom of their authors remaining locked up in darkness... Therefore, my advice to you is to establish a Jewish library in Jerusalem, the holy city, under the supervision of its rabbis, both Sephardi and Ashkenazi.” He went into meticulous detail relevant to the implementation of his proposal: the binding of

books, cataloging, means of keeping it up to date, budget requirements, librarians.

Rabbi Friedman’s letter aroused a responsive chord in Friedland’s heart. He regretted, however, that the suggestion had come too late; had it come earlier he would have accepted it.

In point of fact, Friedland was aware of the probable fate of his library, insofar as its use for Jews was concerned, if he gave it to St. Petersburg, since the authorities had closed the Jewish library in Warsaw and the Strashun Library in Vilna, and he sent 1,500 volumes of his library to the Great *Bet Hamidrash* of Dinaburg. To his consternation and dismay, however, he discovered that they had not even been taken out of their containers and he went to the expense of putting up shelves and appointing a librarian. But when the authorities refused to pay the wages of the librarian, he finally decided to give it to the St. Petersburg Institute. It was open daily and its “personnel consisted of people who regard Jewish learning very highly.” Moreover, the authorities added to it some 3,000 duplicate copies of works already in their possession and undertook to appoint a special official in charge. The famous Russian Orientalist, Paul K. Kokovtsov, undertook the responsibility for its care and maintenance. Friedland consoled himself with the hope that circumstances would change. He believed that, housed within the Asiatic Museum, his library was destined to be used extensively. Many would study the volumes and contemplate their contents and would, through them, develop a familiarity with and esteem for the people which had produced men of such spirit and wisdom. The transfer of the library to the governmental institute was therefore, in Friedland’s eyes – under the circumstances which then ruled the life of the Jews of Russia – a form of the most superior kind of “intercession” because as he saw it: “We shall find favor in the eyes of the government, for the benefit of our people, just as our Father Jacob placed the entire camp before him, when he went to face Esau, to ensure his safe journey.”

Thus did the Friedland Library find its home in St. Petersburg.

THE FIRKOVITCH AND ANTONIN COLLECTIONS. The Firkovitch and Antonin collections are housed in the Russian State Library in St. Petersburg and contain principally *genizah* material.

*The Firkovitch Collections.* A native of the Crimea, Abraham \*Firkovitch (1786–1874) was imbued with the notion that the Karaites of Babylonia were descended from the Ten Lost Tribes who had settled in the Crimea in the 6<sup>th</sup> century B.C.E. In his quest for documentary proof, he traveled throughout the Caucasus and the Middle East, exploring the *genizot* of ancient Jewish communities, and eventually assembled the most extensive collection of Hebrew, Samaritan and Karaite manuscripts in the world, which was acquired in 1859 by the Imperial Library of St. Petersburg.

Some noted authorities, who checked the collection, accused him of tampering with dates on the manuscripts in or-

der to prove his "theory" about the Karaites. Yet even his most severe critics admit that the manuscripts are extremely rare. Thus A. Harkavy and H.L. Strack wrote in 1875: "Though we, in the interest of science, deplore the numerous falsifications mentioned in our catalog, we gladly admit that A. Firkovitch, by the successful results of his tireless zeal for collecting manuscripts, assured himself everlasting recognition in the fields of Bible studies, Karaite, and rabbinic literature." A considerable portion of the Firkovitch I collection consists of copies and molds of inscriptions found on old Jewish tombstones, mostly assembled by him while in the Crimea. These inscriptions are, in some cases, the only evidence we possess of the existence of Jewish settlements in early Crimean history. In the main, this collection consists of extremely valuable Hebrew, Karaite and Judeo-Arabic manuscripts originating in Palestine, Egypt, Syria, and the Crimean Peninsula. When Firkovitch visited these places, the manuscripts there were still plentiful and he was able to make a choice selection. He kept the material in his possession for a good many years, studying and classifying it. He gradually compiled a handwritten catalog, which he attached to the memo when he offered to sell the collection to the Russian government in 1856. Firkovitch's catalog contains 830 items, in addition to several hundred letters and documents.

The biblical manuscripts of this first Firkovitch collection, catalogued by Harkavy and Strack, consist of five Torah scrolls written on leather, 41 scrolls written on parchment, 76 manuscripts in codex form, and 23 manuscripts containing text and translation in Aramaic, Arabic, Persian, and Tatar.

Of particular importance in the Firkovitch collection is the section dealing with disputations between the Karaites and Rabbinites.

Included are a manuscript of the *Hizzuk Emunah* by the Karaite scholar Yizhak b. Abraham, and by Moses b. Ezra, dealing with the history of Hebrew poets of the Middle Ages, containing material not found elsewhere, and the archives of Judah al-Ḥarizi.

A large number of the manuscripts deal with poets who lived in Palestine, Egypt, and Syria.

In addition to the first Firkovitch collection, another small collection of important Hebrew manuscripts came into the possession of the Imperial Library in St. Petersburg around the year 1863. This was the collection of the Society for History and Antiquity in Odessa. Since it contained manuscripts originally belonging to Firkovitch, the authorities of the library demanded that it be added to the Firkovitch collection. Harkavy-Strack included in their catalog of the Odessa collection 35 Torah scrolls and 20 in codex form.

This important acquisition of unique manuscripts immediately placed Russia in a favorable position for Hebrew manuscript study, especially in biblical research. The announcement of this collection and the first reports of its contents aroused great excitement among biblical scholars and manuscript collectors. According to Firkovitch's description, and supported by Prof. Daniel Chwolson, there were in this collection 13 Bi-

bles belonging to the period from the 5<sup>th</sup> to the 9<sup>th</sup> centuries and 15 Bibles of the 10<sup>th</sup> century. In his memorandum to the Russian government, Chwolson stated: "In the future, no edition of biblical text should be considered without consulting these important early manuscripts."

The Firkovitch Collection II was acquired by the Russian Imperial Library in 1876. For a long time little was known of its contents, nor was the exact origin of its material certain. Although Firkovitch himself did not provide this kind of information, there is no doubt that the greater part of it came from the *genizot* of the old synagogues in the Crimea. A substantial number of the fragments appears to have come from the Cairo *genizah* in Egypt. A detailed description of the contents of the Firkovitch II collection was given by the late Prof. P. Kahle, who examined the material while on a visit to Leningrad. According to Kahle it includes: 1,582 items of biblical fragments with *masorah* written on parchment; 725 items of biblical material written on paper; 159 items of scrolls of the Bible on leather or parchment; over 6,000 Hebrew and Judeo-Arabic fragments; and 344 non-biblical manuscripts. The material in the Firkovitch collections and the other Hebraica collections in Russia undoubtedly comprise the largest biblical manuscript collection in the world.

*The Antonin Collection.* The Antonin *genizah* collection was acquired by the Russian Archimandrite, Antonin Kapustin, who lived in Jerusalem from 1865 until his death in 1894. When he learned about the discovery of the Cairo *genizah* he was among the first to be on the scene and was able to acquire a choice selection of material. Upon his death, this material went to the Government Library at St. Petersburg. The Antonin collection occupies an outstanding place, not so much for its quantity as for its quality. The fragments deal with the Bible, biblical translations in Aramaic and Judeo-Arabic, Karaite polemics, historical documents, *Kabbalah*, liturgy, medicine, theology, philosophy and *Ketubot*. They are written in Hebrew, Arabic, Judeo-Arabic, and Samaritan. The late Prof. S. Assaf in his book *Gaonic Responsa* (1929) lamented the fact that the Antonin material in Russia was not accessible to scholars, nor was a catalog available. As a result of many visits to the U.S.S.R. this author was able in 1963 to prepare and publish the only catalog of the entire Antonin material.

According to my classification, the Antonin *genizah* collection of 1,189 items represents 36 subjects ranging from biblical texts to *Zohar*, including such rare items as the Bible in Samaritan, Ibn Ezra's commentary on the Bible, and medical notes in Arabic. The proportions of these various subjects is interesting. Half the collection consists of biblical literature; liturgical material comes next with one-sixth; Talmud, Midrash, *Halakhah*, with one-seventh. This uneven proportion is due to the fact that the sacred books were in wide use among the people. Each household possessed a Bible and one or more prayerbooks. Each scholar had a Talmud and some midrashic and *halakhic* books, whereas the other non-sacred books were confined to special individuals only. The reason that so much

non-religious material was found in the Cairo *genizah* at all is that the synagogue at Fostat-Cairo was also used for the offices of the rabbinical courts, where they kept the community archives. Later all this became part of the general *genizah*. Furthermore, the placing of discarded material in the *genizah* was not officially controlled; individuals merely sent their unwanted old books and papers to the *genizah*. No one examined the contents before they were stored away. Thus among the *genizah* contents are private papers, business letters and accounts, and a great number of documents in Arabic script. Prof. Harkavy, in evaluating the Antonin *genizah*, noted: "... the Hebrew and Arabic fragments ... have the same origin as the material of the second Firkovitch collection, namely, from the *genizot* of Egypt. They complement each other to a great degree. Together they add great honor and glory to the Royal Public Library."

**MA'ON** (Heb. מַעֲוֹן, biblical Maon).

(1) City in Judah, the dwelling place of Nabal (1 Sam. 25:2, 3); there was also a desert of the same name (1 Sam. 23:25). Maon belonged to the seventh district of Judah (Josh. 15:55). In talmudic sources it is called Maon of Judah to distinguish it from Bet Maon near Tiberias (Mekh. Yitro 1). The place is identified with Tell Ma'in, about 4 mi. (7 km.) S.E. of Yaḥta.

(2) The Maonites, a tribe, oppressed Israel along with the Zidonians and the Amalekites (Judg. 10:12). This tribe may be identical with the Meunim whose tents were destroyed by the Simeonites (1 Chron. 4:41) and were later defeated by Uzziah, king of Judah (11 Chron. 26:7). The area in which this tribe was located is in dispute.

(3) Site southwest of Gaza, called Menois in Roman times. It was the westernmost point of the Palestinian limes (Codex Theodosius 7:4, 30; *Notitia Dignitatum in partibus Orientis* 34:19, 2). The place is shown on the Madaba Map (mid-sixth century). Eusebius mistakenly identified it with the Madmannah of Joshua 15:31 (Onom. 130:7). It is now identified with Ḥorvat Ma'on (Khirbat al-Ma'in) near Nirim, southeast of Gaza. A kibbutz called Ma'on was established near the site in 1949. Remains of mosaic pavements and other debris show that the area contained an extensive settlement from the fourth century C.E. onward. The most interesting building is a synagogue which was excavated in 1957–58. It is oriented toward the northeast and consists of a hall, 14.8 × 11.8 m., with two rows of four columns forming the nave and two aisles. In the vicinity was a ritual bath (*mikveh*). The stone-paved aisles and narthex form a sort of ambulatory around the mosaic-paved nave. The design of the mosaic shows a vine trellis issuing from an amphora flanked by peacocks; the trellis forms medallions within which pairs of various animals are represented. The section of the pavement nearest to the apse has symbolic designs: two palm trees with doves at their bases and above them a menorah with two *etrogim*, a *shofar*, and a *lulav*, flanked by two lions. The Aramaic inscription mentions the congregation as a whole and three individual donors of a gold *dinar* each. The pavement, which dates to the early sixth century, has an interesting parallel in a church pavement found at nearby Shellal. They were both, according to Avi-Yonah, made in the same workshop in Gaza (see recently Ovadia on this matter).

[Michael Avi-Yonah / Shimon Gibson (2<sup>nd</sup> ed.)]

**MAOR, GALIA** (1943– ), president and CEO of Bank Leumi. Maor received an M.B.A. from the Hebrew University of Jerusalem and began her banking career at the Bank of Israel in 1963. She filled a long series of positions from assistant to the manager of open markets to adviser to the director general. From 1982 to 1987 she served as the supervisor of banks. During her time in that position, the banks’ manipulation of their own share prices was revealed in a major scandal. She retired from the Bank of Israel in 1989 and worked for two years as a consultant for the Somech-Haikin accounting firm. In 1991 she joined Bank Leumi, first as deputy CEO and from 1995 as CEO. Maor is considered a top-flight manager who led Bank Leumi to numerous successes, positioning it second after Bank Hapoalim in the hierarchy of Israeli banks. In 2004 she was ranked 36<sup>th</sup> in Forbes’ list of the world’s most successful women.

[Shaked Gilboa (2<sup>nd</sup> ed.)]

**MA’OR KATAN (Lucerna, Lutzerner, Luzerner)**, family of physicians in Vienna and Prague in the 17<sup>th</sup> century, who intermarried with the \*Fraenkel-Teomim family. The family is well known mainly because of their internal correspondence from 1619, preserved in the Viennese imperial archives. The first of the family, MOSES BEN LOEB (d. 1605), was elected in 1570 and 1573 as physician of the Frankfurt community. He presented a certificate by the *bet din* of Mantua that he belonged to the Freistaedtl family there. His son, JUDAH LEIB (Leva, Leo Lucerna Hebraeus Aulicus; d. 1635), was physician and at the same time rabbi in Vienna. He built himself a synagogue in his house, and left unpublished books. His grandson, Menahem Mendel \*Auerbach, describes him in his *Atteret Zekenim* (1702), para. 572. Another son, AARON, was employed by the Prague Jewish community in 1619 as physician, attending Christians as well. Through his mother and his wife he was related to Yom Tov Lipmann \*Heller, who in his *Ma’adanei Melekh* on *Hullin* 66b acknowledges information supplied by Aaron. Besides attaining the degree of doctor of medicine he was also a doctor of physics and philosophy from the university at Padua, and was the only Jewish physician fully recognized by the Vienna medical faculty.

[Meir Lamed]

**MA’OZ ḤAYYIM** (Heb. מְעוֹז חַיִּים), kibbutz in central Israel, in the Beth-Shean Valley near the Jordan River, affiliated to Ha-Kibbutz ha-Me’uḥad. It was founded in 1937 during the 1936–39 Arab riots, as the first \*stockade and watchtower village east of Beth-Shean, by four groups, three of whom set out a few months later to establish further kibbutz outposts: \*Kefar Ruppim, \*Mesillot, and \*Neveh Eitan. Most of the founders of Ma’oz Ḥayyim were Israel-born. In the Israel \*War of Independence (1948), the kibbutz held an advanced defense position; it again suffered repeated shelling in the period after the \*Six-Day War (1967). The kibbutz economy was based on field crops, fruit orchards, carp ponds, dairy cattle, and a factory for packaging materials. Nearby, the Ma’oz Bridge (known in Arabic as Jisr e-Shaikh Husain) spans the Jordan, over what is assumedly the ford used by the Midianites in their flight from Gideon’s army; by Pompey in 63 B.C.E.; by the Arab-Muslim army in 635 C.E.; and by Saladin in 1187 when he invaded the country. Today the bridge serves a transit point between Israel and Jordan. The name, “Ḥayyim’s Stronghold,” commemorates Ḥayyim \*Sturman, a Ha-Shomer veteran killed by Arabs on a land-purchasing mission in the Beth-Shean Valley. In 2002 the population of Ma’oz Ḥayyim was 596.

[Efram Orni / Shaked Gilboa (2<sup>nd</sup> ed.)]

**MA’OZ ZUR** (Heb. מְעוֹז צוּר (יְשׁוּעָתִי); “O Fortress, Rock (of My Salvation)”, see: Isa. 17:10), initial words and title of a hymn sung, in the Ashkenazi ritual, in the synagogue and at home after the kindling of the \*Ḥanukkah lights. The song originated in Germany probably in the 13<sup>th</sup> century (Zunz. Lit Poesie, 580); the author is an otherwise unknown poet by the name of Mordecai as shown by the acrostic of the first five stanzas. Some scholars identify him with Mordecai b. Isaac, the author of the Sabbath table hymn *Mah Yafit*. The original *Ma’oz Zur* consists of six stanzas, the first expressing Israel’s messianic hopes for the reestablishment of the ancient Temple worship. The following three stanzas praise God for the deliverance of Israel from the Egyptian bondage, from the Babylonian exile, and from \*Haman’s plot. The fifth stanza summarizes the miracle of Ḥanukkah, and the last one is a plea for the speedy redemption of Israel. The reference in it to *Admon* – as a synonym for Edom – has been understood to refer to the German Emperor Frederic Barbarossa (1121–90 C.E.). This last verse is now omitted and does not figure in most *siddur* editions, though its acrostic חַזָּק (*ḥazak*, “strong”), seems to show that it is part of the original composition. Another six verses have been added to *Ma’oz Zur* in the course of time by various authors, the first, so it is claimed, by Moses \*Isserles. The theme of these additions, too, is a plaint against persecution by Edom and Ishmael (Christians and Arabs), and a prayer for divine vengeance and redemption. An English version of this hymn, called *Rock of Ages*, was written by M. \*Jastrow and G. \*Gottheil. It differs slightly from the original Hebrew text, with its strong plea for vengeance. Some editions of British prayer books (J.H. Hertz, 1963, p. 950) changed the Hebrew text itself. In Conservative and Reform

synagogues the English version is sung in addition to or instead of *Ma'oz Zur*.

### Musical Rendition

The most commonly sung melody of *Ma'oz Zur* is of West European Ashkenazi origin and may be dated from around the early 15<sup>th</sup> century. E. \*Birnbaum and A.Z. \*Idelsohn, on the basis of the similarity of isolated motives, related it to a group of early Protestant chorales and a German soldiers' song. There is a much closer correspondence in the entire melodic line to the church melody *Patrem omnipotentem* which appears in several Bohemian-Silesian manuscripts, the earliest of which is dated 1474. The earliest notation attesting to the use of the melody for *Ma'oz Zur* so far located is found in the manuscript of Judah Elias of Hanover (1744) as a "melodic reminder" in settings of *Hodu* for Ḥanukkah. The first printed version appears in Isaac \*Nathan's *Hebrew Melodies* (1815) set to Byron's "On Jordan's Banks." None of the standard sources of the 19<sup>th</sup> and early 20<sup>th</sup> centuries has the repetition of the last sentence of the stanza, which is a recent and inept "improvement." In Ashkenazi usage, from the beginning of the month of Kislev onward and during the week of Ḥanukkah, various prayers are also sung to the *Ma'oz Zur* melody or feature its motives. Other melodies also exist, but their distribution is limited. The melody of the Tedesco (German-Italian) Jews was first notated by the gentile composer Benedetto Marcello in his *Estro poetico-armonico* (Venice, 1724, 1803<sup>2</sup>). It is still sung in Italy, and sometimes also in Israel and the United States. However, the standard West European Ashkenazi melody has become the dominant and representative one, in spite of objections to its "non-Jewish" character.

**MAPAI** (Hebrew acronym for **Mifletet Po'alei Erez Yisrael**), a social-democratic workers party that existed in 1930–68. The party was founded in 1930 through a union between \*Aḥdut ha-Avodah and \*Ha-Po'el ha-Za'ir as "a Zionist Socialist party faithful to the ideal of national redemption and the ideal of socialism in the homeland." Among its founders were Berl \*Katznelson, David \*Ben-Gurion, Yitzhak \*Ben-Zvi, and Yosef \*Sprinzak. Mapai soon became the dominant party in the labor movement, and in the *yishuv* as a whole. It obtained 27 out of 71 seats in Asefat ha-Nivḥarim (the Elected Assembly of the *yishuv*) in 1931, and 165 out of 201 at the 1933 \*Histadrut convention. At the 18<sup>th</sup> Zionist Congress in 1933, the labor delegation was the largest, numbering 138 out of 318 delegates, and four Mapai members – David Ben-Gurion, Eliezer \*Kaplan, Moshe Shertok (\*Sharett), and Berl \*Locker – were elected to the ten-member Jewish Agency Executive, which Ben-Gurion chaired from 1935 to 1948. Mapai's approach to socialism was pragmatic rather than Marxist. Its aim was not so much the accrual of power by labor as a gradual advance, in Ben-Gurion's phrase, *mi-ma'amad le-am* ("from class to people"). It regarded labor as the central force in the nation, responsible for the achievement of national aims, and called for the unification of all the labor parties. Its main political rivals were the \*General Zionists and the right-wing \*Revisionists on the one hand, and the left-wing \*Ha-Shomer ha-Za'ir on the other, and it established an historical alliance with the religious \*Mizrachi and \*Ha-Po'el ha-Mizrachi and, later on, with the more moderate General Zionists. It was the leading member in the World Union (Ha-Iḥud ha-Olami) of \*Po'alei Zion, and was a member of the Second (Socialist) International.

The party was divided over the Peel Commission's partition plan of 1937, but finally decided to accept the principle of partition. Later, it opted for the establishment of a Jewish

Commonwealth in Palestine after the War – a position that was approved by the \*Biltmore Conference in 1942. Mapai called for participation by Jewish military units in the British army to fight the Nazis in World War II, combined with opposition to the restrictions of the 1939 White Paper on Jewish immigration and land settlement. It advocated self-defense through the \*Haganah under the authority of the Jewish national institutions (Jewish Agency and Va'ad Le'ummi), and the use of physical resistance and even armed force to combat British measures against clandestine immigration, while opposing terrorist reprisals against individual Arabs and all-out rebellion against the Mandatory government.

A leftist group in Mapai, Si'ah Bet ("Faction B"), criticized the reformist tendencies of the majority, who held all the key positions. The struggle came to a head in 1942, when the Mapai convention prohibited factions within the party. As a result, Si'ah Bet broke away in 1944, supported by over half of the Kibbutz ha-Me'uhad, and formed the Tenu'ah le-Ah'dut ha-Avodah. Despite the split, Mapai retained its absolute majority in the Histadrut, though reduced from 69.3% in 1942 to 53.8% in 1944. It remained the strongest party in Asefat ha-Nivharim (63 delegates out of 171 in 1944), and retained a dominant position in the Jewish Agency Executive.

During the preparations for the establishment of the State, Mapai was allotted ten seats out of 37 in the National Council and four out of 13 in the National Administration, which became the Provisional State Council (legislature), and the Provisional Government respectively when the State of Israel was proclaimed. It won 46 out of 120 seats at the elections to the First Knesset in 1949, 45 in the elections to the Second Knesset in 1951, 40 in the elections to the Third Knesset in 1955, 47 in the elections to the Fourth Knesset in 1959, and 42 in the elections to the Fifth Knesset in 1961. It ran together with Ah'dut ha-Avodah-Po'alei Zion in the elections to the Sixth Knesset in 1965 in the Alignment list, which won 45 seats. Mapai, and later the Alignment, had the support of two to five members of associated Arab minority lists.

It was the dominant force in all the Israeli governments until 1968, holding, among others, the portfolios of Prime Minister, Defense, Foreign Affairs, Finance, Education, Agriculture, and Police. In the Jewish Agency, it held the chairmanship of the Executive and headed most of the central departments. In the Histadrut it maintained its absolute majority until 1965 and its representatives held leading positions in all its organs. Mapai nominees headed most of the local authorities. There was a Mapai mayor in Jerusalem in 1955–65, in Tel Aviv from 1959 to 1968, and in Haifa from 1951 to 1968.

Mapai was badly shaken by the \*Lavon Affair that began as the *Esek Bish* in 1954. The affair finally led to a split in the party in 1965 when Ben-Gurion and a group of followers that included Moshe \*Dayan and Shimon \*Peres, broke away from Mapai and established a new party by the name of \*Rafi. A year after the Six-Day War Mapai, Ah'dut ha-Avodah-Po'alei Zion, and Rafi became a single party called the \*Israel Labor

Party. In the institutions of the new party Mapai received 57% of the seats, while the other two received 21.5% each.

[Misha Louvish / Susan Hattis Rolef (2<sup>nd</sup> ed.)]

**MAPAM** (Hebrew acronym for **Miflegat ha-Po'alim ha-Me'uhedet** – The United Workers' Party), an Israeli Zionist-Socialist party, founded in 1948, when Ha-Shomer ha-Za'ir merged with \*Ah'dut ha-Avodah-Po'alei Zion.

In its early days Mapam advocated radical socialist positions, based on class struggle and links with international socialism, but at the same time it also called for the concentration of the majority of the Jewish people in Erez Israel. Its declared aims were the achievement of socialism in Israel through the democratic hegemony of the labor movement; the establishment of publicly owned enterprises; communal land settlement in the form of kibbutzim; state ownership of the land; cooperation with private capital while condemning all forms of profiteering and "parasitism"; a planned economy to ensure full employment, and the attainment of an egalitarian society.

In 1951 it was the main force behind the violent seamen's strike in the ZIM shipping company, which was viewed by many as an attempted revolt against the \*Mapai establishment.

In the early period Mapam also advocated a pro-Soviet policy. Nevertheless, during the 1952 \*Slansky Trial in Prague, at which the Zionists were accused of espionage and subversion in the Communist countries, a prominent Mapam member, Mordechai Oren, was arrested and received a 15-year prison sentence. Despite the antisemitic flavor of the trial in Prague, and the Jewish doctors' trial in Moscow, the pro-Soviet group within Mapam advocated that the party support the position of the Soviet Union. In 1954, a small pro-Soviet group within Mapam, led by Moshe \*Sneh, broke away from the party, and joined the Israel Communist Party (МАКІ). In the same year Ah'dut ha-Avodah-Po'alei Zion decided to break away from Mapam as well and reestablish an independent party. The background to this decision was criticism of the pro-Soviet line and Mapam's decision to accept Arab members into its ranks. Mapam advocated cooperation with the Arab working class and the belief that Israel could achieve peace with its neighbors by integrating into the Middle East. Mapam continued to run as an independent list until 1969, and then in the elections to the Seventh to the Eleventh Knessets ran within the framework of the Alignment together with the \*Israel Labor Party.

Mapam was not a member of the government until after the elections to the Third Knesset in 1955, but then was a member of all the Mapai and Labor Party-led governments

until 1977. Both of Mapam's historic leaders, Me'ir \*Ya'ari and Ya'akov \*Hazan, supported its entering the Alignment with the Labor Party, which greatly dampened what remained of the party's radical zeal. This trend strengthened after the elderly leaders retired from membership in the Knesset in 1974, after the elections to the Eighth Knesset. In 1974 Mapam Minister of Health Victor \*Shem-Tov proposed, together with Aharon \*Yariv of the Labor Party, a formula for the holding of negotiations with Palestinians, who would recognize Israel's right to exist, be willing to live in peace with Israel, and refrain from performing acts of terror. However, the Yariv-Shem-Tov formula was not accepted at the time by the Government, though almost 20 years later it constituted the basis for Israel's willingness to sign the Declaration of Principles with the PLO.

Following the elections to the Eleventh Knesset in 1984, when the Labor Party decided to enter a National Unity Government with the Likud, based on parity and a rotation in the premiership, Mapam decided to leave the Alignment, but only after the coalition agreement had been signed. Mapam ran independently in the elections to the Twelfth Knesset, and then joined with the Civil Rights Movement, and \*Shinui in establishing \*Meretz, in which it constituted the socialist component. In February 1997 the three components of Meretz joined into a single party, and Mapam ceased to exist as a separate party. Meretz was a member of the government formed by Yitzhak \*Rabin in 1992, in which Mapam's Ya'ir \*Tsaban served as minister of immigration absorption. Though Tsaban exerted little influence on the Government's policies in the sphere of economics and the peace process, he was active in the spheres of religion and state and social issues. In the years 1994–97 Hayyim Oron of Mapam was treasurer of the Histadrut, after running in the 1994 Histadrut elections on Haim \*Ramon's Hayyim Ḥadashim ba-Histadrut list.

Traditionally the party's power came from the Kibbutz ha-Arzi kibbutz movement, on the one hand, and organized urban groups, on the other. Until the 1980s it was the first group that was dominant. Later on the latter gained the upper hand. Mapam's gradual loss of strength was a function of the general deterioration of the Left in Israel.

Mapam's secretary generals since its foundation were Me'ir Ya'ari, 1948–71; Me'ir Talmi, 1973–79; Victor Shem-Tov, 1979–85; Eleazar Granot, 1985–97.

Its Knesset representation was as follows: First Knesset – 19; Second Knesset – 15; Third Knesset to Fifth Knesset – 9; Sixth Knesset – 10; Seventh Knesset – 9; Eighth to Eleventh Knesset within the Alignment: Eighth Knesset – 8, Ninth Knesset – 4; Tenth Knesset – 7; Eleventh Knesset – 6; Twelfth Knesset – 3; Thirteenth to Fourteenth Knesset within Meretz: Thirteenth Knesset – 4; Fourteenth Knesset – 3.

Until 2005 Mapam published a daily newspaper, \**Al ha-Mishmar*, which closed down for financial reasons, as well as a weekly in Arabic, *Al Marsad*.

[Susan Hattis Rolef (2<sup>nd</sup> ed.)]

**MAP MAKERS.** The first reference to a map is found in Ezekiel 4:1. The prophet is bidden to outline on an unburned brick, a plan of a city under siege, such as is found on Babylonian monuments. Nearer to real map making is a rudimentary map of the borders of Erez Israel which Maimonides attached to one of his responsa (ed. Freimann, no. 346, 311).

The earliest examples of real maps known to have been designed by Jews belong to the so-called portolano maps, which are charts of the coastlines of the oceans, mostly of the Mediterranean, designed for the use of navigators. Portolanos are first mentioned in connection with reports on the second Crusade of Louis IX, king of France, in Tunisia in 1270. They were drawn with surprising precision and distances are also remarkably accurate. These maps, whose origin is still somewhat of a mystery, may preserve an ancient Greek and Byzantine tradition of sea charts, with Jews serving, as in other branches of science, as intermediaries between antiquity and the Middle Ages. Jews on the Spanish island of Majorca, as well as from Alexandria and Safed, have signed their names as makers of portolanos.

#### The 14<sup>th</sup> and 15<sup>th</sup> Centuries

Abraham \*Cresques, cartographer and maker of portolanos, worked at Palma in Majorca, then part of the kingdom of Aragon. As the “master of maps and compasses” to the king of Aragon, he is said to have produced in 1376–77, together with his son, the six large leaves of the “Catalan Atlas,” which were presented by his sovereign to Charles VI of France. His son Judah, also a geographer and cartographer, was forcibly baptized in 1391 and christened Jaime (or Jacome) Ribes de Majorca; he became director of the nautical observatory at Sagres. Another Jewish cartographer of Majorca – who is conjectured to have belonged to Abraham Crescas' family – was Hayyim ibn Rich. He, too, was converted at the time of the persecutions in 1391, adopting the name Juan de Vallsecha. He was probably the father of the Gabriel de Vallsecha who made another famous *mappa mundi* in 1439 – now one of the treasures of the Institute of Catalan Studies in Barcelona; it belonged to Amerigo Vespucci – in which the meridian of the Azores is used for the first time in the history of cartography. Another Majorcan cartographer of Jewish birth was Mecia de Viladestes, a map of whose (dated 1413) is preserved in the Bibliothèque Nationale in Paris.

#### Other Jewish Map Makers

Judah Abenzara (or ibn Zara) is known as the maker of three portolano maps (Alexandria, 1497, in the Vatican College Library, Cincinnati; and the third with his signature followed by the words “Safed in Galilee, October 1505”). Gerard de Jode (de Judeis; 1509–1591), a maker of maps and publisher in Antwerp, was apparently of Jewish origin. A not very successful competitor of Abraham Ortelius, he published single maps and at-

lases. His work was based on sound geographical knowledge and was executed with elegance and technical perfection. His son Cornelius de Judeis (1558–1600) was his partner and successor. Abraham b. Jacob was an engraver at the end of the 18<sup>th</sup> century in Amsterdam. He engraved the map of Palestine in the Passover *Haggadah* which was printed by Moses Wesel in Amsterdam in 1696. It was the first map with Hebrew lettering. Aaron b. Ḥayyim of Grodno's map of Palestine appeared in his *Moreh Derekh* (Grodno, 1839<sup>2</sup>), which was printed by Meir Isaac Bajarski. Ḥayyim Solomon Pinia of Safed made a pictorial map of the Holy Land, which was edited by Joshua Alter b. Moses b. Phinehas Feinkind of Turek and lithographed by S. Litmanowitz in Turek (near Kalisz, Poland) in 1875; the text is in Hebrew. Another edition with a supplementary German text is lithographed on fabric.

[Herrmann M.Z. Meyer]

**MAPS OF EREZ ISRAEL.** Graphic descriptions of Erez Israel relating to its topography and history and based on factual data, are not only extremely valuable sources for the reconstruction of the physiographic and anthropogenic conditions prevailing there at the time they were drawn, but are also nearly always far more important as documents which give evidence on contemporary developments of cartography in general. In this respect the cartographic representation of Erez Israel differs fundamentally from that of any other country. The main reason for that was its unique status and its special significance for believers in the three monotheistic religions which had such a decisive influence upon the culture and history of the Occident. Consequently Erez Israel became a main – at times almost a sole – object of cartography for several countries. There are innumerable maps depicting the “Holy Land,” and they date back to the very dawn of cartography. Another important aspect is that there is no major break in the cartographic representation of Erez Israel over more than a millennium and a half; thus the subsequent depictions of the country reflect the general developments of cartography and at times are even the principal reason for it. This resulted from the fact that the “Holy Land” was treated as a very special, even unique, geographical-historical and even cosmological object, involving specific problems as to adequate cartographic expression and therefore necessitating techniques and means that were not applied at all, or applied only partially and usually much later in maps dealing with other countries.

#### **Erez Israel in Ancient Cartography**

Only four map-like documents dating back to classical times are known at present. Of these only one has been preserved in the original (Madaba Map mosaic), while the three others exist in medieval copies only.

**MADABA MOSAIC.** This mosaic, partly destroyed when a church floor in Madaba was unearthed, is a typical pictorial map whose subject is the biblical countries, i.e., besides the land of Israel – to which it is mainly devoted – it depicts parts of Lower Egypt, Sinai, and southern Syria. For further details see \*Madaba Map. It became one of the most important and reliable sources for the reconstruction in particular of the anthropogenic landscape of Erez Israel in the Byzantine period.

**THE PTOLEMAEUS MAPS.** In the maps which are ascribed to Claudius Ptolemaeus, a second-century Alexandrian cartographer, and which are drawn presumably to illustrate his treatise *Γεωγραφικὴ ὑφήγησις* (preserved only in medieval copies), Erez Israel is represented in the map entitled “The fourth part of Asia.” Its scale is very small; nevertheless, it is of great value since it contains much information pertinent to Erez Israel in the period of the Antonine dynasty. From the cartographic point of view its greatest importance lies in the fact that (as will be detailed below) it changed thoroughly all the fundamental long-held clichés concerning the representation of the Holy Land, and introduced northern orientation and an exact scale by the use of the longitude and latitude grid.

**THE PEUTINGER TABLE (TABULA PEUTINGERIANA).** The Peutinger Table seems to have been one of the very common road maps in use in the Roman Empire. The original table seems to have been drawn in the third century, and the extant copy probably dates from the 13<sup>th</sup> century. It is exceedingly long in proportion to its width (682 × 33 cm.), and its main subject, to which all other details are subordinated, is a communications network of the contemporary Roman Empire, specifically emphasizing its stations and the distances between them. Originally drawn in one piece, it was apparently cut into a series of sections of equal size later on. Erez Israel is depicted on it in the lower portions of the sections IX and X. It is assumed that the copy does not differ appreciably from the original; the most pronounced variances are, significantly, several “Christian” additions localizing, illustrating, and explaining sights and events of Christian-biblical interest and thus mainly found in the portion depicting Erez Israel and the adjacent regions. It has been assumed, therefore, that this preserved map was copied in order to serve as a guide to pilgrims traveling to Erez Israel and Rome. The map is not drawn to any scale, and the location of the provinces represented on it is dictated merely by the space provided by the elongated shape of the map which led to extreme distortions in their outlines and situation.

**THE “SAINT JEROME MAPS.”** There are two maps known as the Saint Jerome Maps, both of these copies drawn in the third century. They are included in a manuscript in St. Jerome's *De hebraicis quaestionibus et interpretationibus nominum Veteris et Novi Testamenti*, and their contents provide evidence that the originals were produced at the time of the Church Fathers, but not necessarily by Jerome himself. Both are rather crude

black-ink sketches very generalized in style and content, and were thus important as precursors of a great number of maps drawn by monks in the medieval period. One of the drawings depicts the Roman Empire according to its division into provinces, emphasizing the places of special interest to Christians. As a portion of this map is missing, only the northern part of Erez Israel appears on it: the Mt. Hermon area and the sources of the Jordan (designated here as “Jor” and “Dan” – a toponymic deduction from the name of the river that prevailed throughout the Middle Ages). The second sketch contains both the whole of Erez Israel and the adjacent countries, Egypt, Syria, and Mesopotamia. Some of the most characteristic features of almost all the “scholastic” medieval maps are also present here: Erez Israel occupies the central part of the drawing and is represented out of all proportion to the surrounding countries, which appear as small unimportant appendages. Similarly, only places and topographical features of biblical interest appear on this map sketch.

### In the Middle Ages

Although in general, cartography in the Middle Ages was of a low standard, cartography of Erez Israel reached a peak in this period, both in quantity and quality. For several centuries, Erez Israel was the sole, or at least the most important and prominent, subject of map making. Two kinds of maps existed in the Middle Ages:

a) World maps (*mappae mundi*), almost all of which were of an abstract nature, and were largely the work of monks. Their purpose was to explain and illustrate contemporary ecclesiastical views of cosmography and geography, which, rather than being based on a knowledge of reality, were based on the Scriptures, as interpreted by the Church Fathers and the scholastics, as well as by the writings of ancient polyhistorians such as Pliny, Pomponius Hella, and Solinus. Not only was the content of these world maps decisively influenced by the Bible, even their shape (a circle or rectangle) was a result of dogmatic interpretations of certain biblical passages. The world maps are “oriented,” i.e., their top denoted the East, the presumed site of Paradise (which is shown on many of these maps as a geographical actuality). In all the maps, Erez Israel occupies a prominent place, in many instances as much as a sixth of the entire space (as for example in the famous “Anglo-Saxon” map). In some of the maps, which are so abstract in conception and drawing as to represent mere cartograms, Erez Israel takes up so much space that the other countries tend to appear as insignificant background only. The description of Erez Israel on these maps consists entirely of biblical topography, with an addition of explanations and traditional identifications of places. Furthermore, from the beginning of the Crusades up to the 16<sup>th</sup> century, Jerusalem, believed to be the “navel of the world,” was placed at the very center of all world maps. This of course, dictated the whole framework, structure, and composition of the map, fulfilling the role played in present maps by the reference location of the poles and the equator. The proportionally great detail of the

historio-geographical and physiogeographic facts in which traditional particulars of Erez Israel were depicted or verbally denoted on the maps (such as Mt. Gilboa, Mt. Tabor, various springs, caves, trees, holy places, etc.), however, made it necessary to invent new forms for expressing such details, and this seems to have had a lasting effect upon the development of symbols and signs used in maps in the following centuries. Among medieval maps there were many sketchlike maps of Jerusalem that were generalized and geometrical and served as guides to pilgrims and Crusaders.

b) The portolano maps, which appeared in the late Middle Ages, were used mostly for purposes of navigation and were probably derived from charts developed as early as the Byzantine period. Many Jewish cartographers were involved in the production of this kind of map, in particular those of the Catalan school, centered in Majorca. The most renowned representatives of this school were Abraham and Judah (Jaime) Cresques; the latter drew the Catalan Atlas, the most beautiful and advanced project of the portolano cartography. Although on these maps Erez Israel no longer occupies a disproportionate amount of space, it continues to exhibit many specific aspects, both as to content and cartographic execution. Since these maps were sea charts aimed at serving navigation, they concentrated primarily on the delineation of coastlines and the location of ports, and show hardly any details of the interior, except perhaps for a flag (banner?) signifying the political control of the country. An exception is made in the case of Erez Israel, for which the relevant portion of the map shows great inland detail, such as the Jordan and its lakes, holy places, and important churches and monasteries. The Red Sea is shown in red or crimson (whereas other bodies of water are shown in blue or light green); a white strip marks the site where the Israelites are presumed to have crossed the Red Sea. It has become increasingly certain that the portolano maps served as the basis of the few regional maps made in the Middle Ages (at least the few that have been preserved). All of these maps (with one exception, which also contains Britain; see the Matthew Paris map, below) have Erez Israel as their subject. Considering the period in which they were made, these are exceptional maps: (1) They are the outcome of either direct observation or factual and critically adapted information. (2) Their contents are of a topical nature, describing Erez Israel during and after the time of the Crusader Kingdom of Jerusalem, though they also contain many details based on biblical tradition – so important for every Christian pilgrim in the Middle Ages but not corresponding to the reality of the country and in contrast to the factual content of the map. (3) They generally serve a practical purpose, i.e., as guides for armies or pilgrims. (4) Some of the maps and techniques exhibit specific features that denote marked progress in cartography and were used in the maps of other countries only much later.

The outstanding medieval maps of Erez Israel that have been preserved are the following: (1) A large map (2,080 sq. cm.), preserved at Florence, that is extraordinary not only with regard to its delineation of the coast, which corresponds

closely to reality as is the rule with portolano maps, but also as to its wealth of detail. The details, however, are of a much lower standard; for example, the markings of locations – which is a major subject of all medieval maps – are out of proportion to the areal extension of the map. The map is oriented to the East, in contrast to the portolanos, thus reflecting the prevailing influence of the *mappae mundi* and their affinities. (2) A sketch map of Erez Israel at Oxford, whose portolano origin is evidenced by its orientation to the North. It contains a great number of topical details, including some based on observation, such as a unique description of the road leading from the coast to Jerusalem. (3) Another map kept at Florence, outstanding in the quality of its illustrations and colors, but inferior in content to the two maps mentioned above. Because of its highly heraldic and ornamental designs and its wonderful coloring, it represents one of the most pronounced examples of the artistry employed in the late Middle Ages. (4) A map drawn by Matthew Paris of England (1250 c.e.), outstanding for its unique description of the road system and its allusions to caravan traffic between Erez Israel and Syria. Some places, especially Acre, the most important Crusader fortress, are depicted in great detail in a separate small vignette. Paris was also the author of an illustrated road guide (England to the Holy Land) which is unique in cartography. The map has the form of a long strip and signifies with miniature designs the stops along the route between the two countries; the stops were usually churches or monasteries that pilgrims customarily visited, and even the roads leading from one stop to the next are indicated by two parallel lines. (5) Medieval cartographic presentation of the Holy Land reached its climax in a series of maps and sketches attached to a memoir by the Venetian Marino Sanuto, appealing for a renewal of crusading (*liber secretorum fidelium crucis*). The map appendage consists of a map of Erez Israel, a rather stereotyped *mappa mundi*, a map of the Near Eastern countries, and a detailed, extremely accurate sketch of Acre, and a far more conventional one of Jerusalem. It is now established that at least the maps of Israel and of the Near East were drawn by Pietro Vesconte, a noted portolano cartographer. The map of Erez Israel is an astounding piece of work, anticipating various future cartographical developments by several centuries. It is not only relatively exact in scale – a characteristic common to most portolanos as far as the coasts are concerned – but also exhibits a grid of longitudinal and latitudinal lines equally spaced throughout at the distance of 1 “leuca” (approx. 2,500 meters). The location of the towns and villages, at least those existing at the time, is rather exact, as are the sites of most topographic features represented in the map. Another extraordinary feature is the wealth of information (besides the usual indication of biblical sites, the areas assumedly occupied by the tribes of Israel, and pertinent remarks and explanations derived from the Bible) on the contemporary situation, based, as were the above-mentioned features of the map, on the author’s personal observation and/or intensive study of the memoir. Because of its relative accuracy and abundance of detail, the map served as a

pattern for other maps during the Renaissance period; however, its grid was generally replaced by the Ptolemaic latitude and longitude grid. (6) A map drawn by William Wey in the 15<sup>th</sup> century. It is a typical medieval depiction of Erez Israel, in which all the elements of medieval presentation of this country are incorporated and superbly executed, in particular the pictorial embellishments and the coloring (illumination).

#### **Erez Israel in Arab Cartography of the Middle Ages**

In general, medieval Arab maps were more exact, more detailed, and more comprehensive than European maps, but in technique they were far more uniform and stereotyped, employing outlines and symbols of a strictly geometric nature. In Arab maps, Erez Israel did not occupy the most prominent place. The best and most comprehensive Arab map of Erez Israel was made by Idrissi, whose cartographic works represent a mixture of Moslem and Western European style and content.

#### **In Modern Times**

The cartographical representation of Erez Israel underwent some fundamental changes in modern times: 1. As a result of constantly growing geographical knowledge (gained from the works and maps of Ptolemaeus) and the extensive discoveries of whole continents, accompanied by the development of the sciences, in particular those dealing with the earth – its astronomical position, movements, and surface nature, Jerusalem could no longer be regarded as the “navel of the world” and ceased to be used as the center of world maps. 2. The mathematical and astronomical fixing of locations – by means of lines of longitude and latitude – based upon the method used by Ptolemaeus and arrived at by exact measurements, made it possible to establish the proper outlines of the countries and their relative size. Each map was now based on a distance scale and it was no longer possible to exaggerate the size of Erez Israel in comparison with the other countries of the world. 3. However, whereas the maps of other countries usually contained only details of a contemporary nature, maps of Erez Israel retained their historical character. The main purpose of these maps was to describe the topographical and geographical background of the events described in the Bible and the Gospels, and they ignored the actual landscape of the country, and in particular, the anthropogenic features (villages, roads, etc.). For this reason, a contemporary map of Erez Israel (*tabula moderna*) was usually attached to the Ptolemaeus maps, made to a much larger scale, orientated to the East, and containing many traditional topographical designations. Most of these maps were based on that of Sanuto. Nevertheless, for a variety of reasons, maps of Erez Israel retained their special importance in the early modern period: (1) For various historical and religious reasons (the Reformation, Bible translations), the invention of printing made maps of Erez Israel the most popular and most widely distributed maps; they were also the first to be produced in print. (2) The competition resulting from the wide demand for maps of Erez Israel that provided the location of sites mentioned in the

Bible, caused these maps to become generally the most splendid and beautiful ones produced in this period; this applies particularly to the signs and symbols used on the maps, the decoration of the margins, and the cartouche, i.e., the part of the map separated by an ornamental enclosure containing the title of the map, its author, the scales, sources, and so on. The historical content, that seemed to illustrate the background of the Bible and Gospels with the little contemporary geographical detailing that was available during the Renaissance period, made it possible to experiment with the maps and even led to innovations as regards scales, symbols, shading, coloring (illumination), etc. Thus the first indication of magnetic variation was made on a map of Erez Israel.

**EREZ ISRAEL IN THE ERA OF ATLASES.** The magnificent atlases produced during and after the Renaissance, in Western and Central Europe, usually contained at least two maps of Erez Israel, which were the works of different cartographers and were scarcely compatible with each other. One of the maps forms an integral part of each atlas and is usually based on Ptolemaeus; it is oriented to the North, contains some slight changes in the delineation of the coast and some additional relief features and hydrographic details, and a wealth of place-names mentioned in the Scriptures, in the works of Josephus and so on. Thus, in essence, the map depicts Erez Israel as it is shown in "The fourth part of Asia" by Ptolemaeus. There are numerous instances, however, in which the Erez Israel map in the atlas is oriented to the East and is much closer in content and nature to the Sanuto map, with the important addition of the use of the astronomic longitude and latitude grid derived from Ptolemaeus. The second map of Erez Israel (and sometimes even a third, produced by yet another cartographer) is found among the numerous addenda (*additamentum*) that were attached to the atlases in this period. Important Erez Israel maps in this period were produced by Ortelius, Mercator, Tilemanus Sigenensis, Laicstein, Blaeu, Janszon, Homann, Sanson, Seutter, de Lille, Bonne, and d'Anville. The maps made by the last three cartographers mentioned (who represent the French school) were superior to others in the precision of their content and may be regarded as the most advanced maps prior to those of the 19<sup>th</sup> century. There were also maps of Erez Israel that were attached to the numerous cosmographies published in this period (of which that by Sebastian Münster was the most widely distributed). Even more important, as a source for the maps appearing in the atlases, were the various works on Erez Israel, which contained maps made to a large scale. Among these, mention should be made of the works of Jacob Ziegler, Adrian Adrichomius (1590), and last and most important, Hadrianus Relandus' *Palaestina ex monumentis veteribus illustrata*, which contains a number of detailed and relatively precise maps, especially one showing the relief and the consequent physiographic division of the country in the coastal plain, the mountains, the Valley of the Jordan, and the Transjordan plateaus. Only a single map of Israel, made in 1483 by Bernard Breitenbach, is based entirely on the author's personal

observation and describes the country as he saw it. Combining both the medieval and modern cartographic style, the map enjoyed great popularity.

### **In the 18<sup>th</sup> and 19<sup>th</sup> Centuries**

The first mapping of Erez Israel based partly on topographical survey was made in connection with Napoleon's campaign in Egypt and Erez Israel. The main result of this was a series of 47 maps of Egypt, Sinai, and Erez Israel, named the Jacotin maps after their author (1810). Six of the maps depict parts of Erez Israel, especially those parts through which the army passed on its invasion of the country. The scale is 1:100,000, and the maps show precise details of the areas where measurements were taken by means of the trigonometric methods that had developed in Europe by this time (based on the theodolite and the principle of triangulation). Thus, even the representation of relief on these maps was relatively exact and adequate. Relative differences in height and the diverse gradients of the slopes are shown by hachuring (i.e., expressing the gradient of the slope by discontinuous, proportionally dimensioned lines extending down from the summit to the base of the slope; the steeper the slope the shorter but thicker the hachure line and vice versa), and in general, the rest of the details shown on the maps, i.e., symbols and so on, are of a high standard. Some of the place-names are given in Arabic script, in addition to Latinized transcription. For a period of about 50 years these were the maps used in the exploration of the country.

Toward the end of the 18<sup>th</sup> century and in the first half of the 19<sup>th</sup> century, Erez Israel became the subject of numerous exploratory voyages and expeditions, as though it was still "unknown territory." Although the emphasis was on the archaeological and historical aspects of the country, much attention was also paid to its natural conditions including its physiography. In particular, interest was centered on the Jordan Valley and the Dead Sea, because they formed the lowest depression on earth. The works produced by such itinerant scholars and explorers as Seetzen, Burckhardt, Buckingham, and Robinson generally included sketch maps of some areas and sites, and an overall map of the country. Outstanding among these maps is the one attached to Robinson's work, drawn by Kiepert, the well-known German cartographer. An American naval expedition, led by Lynch, executed a map survey of the Jordan River and the Dead Sea. All these works were summarized in *Erdkunde von Asien* ("Geography of Asia"), the famous work by Ritter, which also contains a comprehensive list of all known maps of Erez Israel, from ancient times up to the 19<sup>th</sup> century. A companion to Ritter's work, the atlas by Zimmermann, contains detailed maps of Erez Israel, to the scale of 1:333,333. All the maps listed above were used as an important source for the study of the landscape of Erez Israel in the first half of the 18<sup>th</sup> century. The final work of this period of individual research and mapping was the map of Van de Velde (scale 1:315,000), one of the most beautiful maps of Erez Israel of this time.

In the second half of the 19<sup>th</sup> century, the existing maps were felt to be insufficient to meet the requirements of the growing interest in the country, especially for archaeological purposes. The Palestine Exploration Fund (PEF) was established in Britain to carry out a systematic survey of Erez Israel "from Dan to Beer Sheba." The work of the fund was preceded by a survey of the coastline and the adjoining hinterland, ordered by the British Admiralty (1858–62). They established not only the exact outline of the coastline but also a fixed number of points that were of great help in the survey that followed. An early project undertaken by the Fund was a survey of the Sinai Peninsula, aimed at establishing the route of the Exodus and the location of Mt. Sinai. The maps of Jebel Katerina (the presumed location of Mount Sinai) and Jebel Serbal, whose relief is expressed by form lines, are among the finest maps of the entire area. The first undertaking of the Fund in Erez Israel proper was a survey of Jerusalem and its surroundings (1864), carried out with a precision hitherto not applied in the Near East. In the resulting maps the relief was presented by the hachuring method. In 1871 an expedition of the Fund, led by Conder and later on by Kitchener, embarked upon the main mapping project. The survey encompassed the entire country, from the Qasimiye River up to south of the Dead Sea, and resulted in a set of 26 sheets, made to the scale of 1:63,360 (inch to mile), as on the British topographical maps, and based on a precise triangulation (two base-lines), leveling (Acre–Sea of Galilee, Jaffa–Dead Sea), and altimetric measurements. The relief is represented by means of shading and tinting. In many instances the height is also given in figures; rivers and springs are shown in blue; the various kinds of vegetational cover are indicated by accordant symbols, as are also anthropogenic features. The maps are particularly accurate in the location of the many existing ruins of ancient places of settlement; much effort was also devoted to establishing the names of places and their proper transliteration. The Fund published its *Memoirs*, and they serve to this day as an important geographical and historical source.

"The Survey of Western Palestine" was followed by efforts to carry out a similar survey of Transjordan, which, however, failed for a variety of reasons. Only the Deutscher Palaestina Verein eventually carried out a survey of Gilead, executed to the same scale as the maps of PEF. The maps of the PEF and, to some extent, the German maps too, served as a basis for Erez Israel maps that were produced up to the conquest of Palestine by the British. Among later maps based on those of the PEF, the most important was the Bartholemew map, in which the relief is expressed by contour lines and the subsequent altitude zones are also indicated by varying coloring. In World War I the existing maps were adapted to military requirements, with the help of aerial photography. The maps employed by the British army were made to a scale of 1:40,000, those of the German army to 1:50,000. Shortly before World War I a survey of the Sinai Peninsula was carried out by Newcombe, to a scale of 1:125,000; this included the Negev and the relief was represented by contour and form lines. Shortly af-

ter its establishment, the Mandatory government embarked upon a new survey of the country, using up-to-date methods. Two series of maps were printed, one a topo-cadastral set, made to a scale of 1:20,000, and the other a topographical set made to a scale of 1:100,000. This survey was also restricted to the area of Erez Israel extending from the northern political boundary to somewhat south of Beersheba, and consisted of 16 sheets. In these maps the relief was presented by contour lines with a vertical interval of 25 meters. Agricultural areas appear in green and the hydrographic network in blue. The mapping was executed with comprehensive triangulation and fieldwork. Other maps produced by the Mandatory government were maps of the major cities and villages (scale 1:10,000) and a geographical map of the country (1:250,000). During the Mandatory period, efforts were also made to produce a Hebrew map of the country (Press, Brawer, Lief). These were necessarily adaptations of 19<sup>th</sup>-century maps and those issued by the government Survey Department but they made important contributions to the proper identification of localities, and the use of historical place-names and Hebrew transliteration. With the establishment of the state, "Survey of Israel" became one of its basic governmental institutions in view of the country's ever-expanding exigencies, in particular those connected with economic-demographic planning. These were met by extensive triangulation, leveling which also resulted in a dense altimetric network, new additions (Hebrew) of totally revised and updated map series 1:20,000 and 1:100,000, largely improved not only by the above-mentioned measurements but also by the thorough use of photogrammetric techniques. The 100,000 series is continuously supplemented by a far more comprehensive one at a scale of 1:50,000. The Israel Atlas (Heb. 1956–64) and its English edition (1970) – the latest additions to the series of "National Atlases" – summarize both the history and the development of the cartographic representation of the country and its present state in all the fields given to cartographic expression. In the early 21<sup>st</sup> century, the Survey of Israel was responsible for producing new maps in various fields, such as historical maps, topographical maps, regional maps, general maps, satellite maps, etc. The recent maps were produced with new techniques such as GIS (Geographical Information Systems) and satellites. The Survey of Israel was also in charge of the updating of the Israel Atlas.

[Isaac Schattner]

**MAPU, ABRAHAM** (1808–1867), creator of the modern Hebrew novel. One of the principal exponents of the Haskalah movement in Eastern Europe, he is best known for his first and most successful novel *Ahavat Ziyyon* (“The Love of Zion,” Vilna, 1853), which represents a turning point in the development of modern Hebrew literature. The son of an indigent and scholarly teacher, Mapu was born in Slobodka, a poverty-stricken suburb of Kovno, where he early acquired a reputation as a brilliant student, and, having mastered much of the talmudic learning of the day, he was considered fit for independent study at the age of 12. Following his marriage at 17, Mapu continued his studies in the home of his wealthy father-in-law in Kovno. After a brief flirtation with Ḥasidism, he resumed an interest in Kabbalah and mysticism, previously fostered by his father. This occasioned a period of close contact with Elijah \*Ragoler. The chance finding of a copy of the Psalms with a Latin translation in Ragoler’s home aroused his interest and he taught himself Latin, virtually an unknown study among pious Jews in Eastern Europe. Eventually he acquired a fair proficiency in French, German, and Russian, in spite of the prevailing hostility in Orthodox Jewish circles to the learning of languages. These studies plus an interest in such equally neglected subjects as Bible, Hebrew grammar, and modern literature laid the foundations of his subsequent achievements.

Throughout his life Mapu struggled to maintain his family. He became a teacher of young children and was invited in 1832 to tutor the children of a wealthy merchant in the nearby town of Georgenberg. While separated from his family for two or three years, he was drawn to the Haskalah movement, and, on his return to Kovno, he began to disseminate its doctrines among the local youth. In 1837 Mapu moved his family to Rossyieny, where he taught for about seven years. In spite of his economic hardship, Mapu found the cultural atmosphere of Rossyieny attractive. There his friendship with Senior \*Sachs engendered a profound interest in the history of ancient Israel. In an attempt to improve his finances Mapu returned to Kovno in 1844. His wife died in 1846, and the following year he moved to Vilna to tutor the son of the wealthy but unlettered Judah Opatov. Despite Vilna’s reputation as a great center of Haskalah, Mapu found the city no more congenial than the house of his harsh employer. On learning of Mapu’s appointment to teach at a government school in Kovno in 1848, Opatov assaulted him physically. Mapu, deeply humiliated, fled the house. He avenged the insult by modeling the character of the boorish upstart, Ga’al, in his novel *Ayit Zavua* (“The Hypocrite”) on his former employer. From the Hebrew writers of Vilna, however, Mapu acquired the taste for Romanticism which permeates his novels.

As the new post proved permanent, Mapu settled in Kovno and remarried in 1851. For about ten years domestic happiness and improved financial circumstances coincided with his most fruitful literary period. His growing reputation was enhanced in 1857 by the personal congratulations of the Russian minister of public institutions, Norov, a singular honor which induced Mapu to include a poem in Norov’s honor in the introduction to his lost novel *Hozei Hezyonot* (“The Visionaries”). But from 1860 his health began to fail beneath the burdens of overwork and persecution by the pious opponents of Haskalah who managed to influence the censors to delay or even forbid his publications. His meager resources were further undermined by his second wife’s long illness, from which she died in 1863. His later years were relieved only by a short visit to St. Petersburg in 1861, where his first acquaintance with opera appealed to his romantic imagination. The loneliness of his last years was aggravated by a disease of his fingers, which made every line he wrote an agony.

Although Mapu was 45 when *Ahavat Ziyyon* was published he seems to have labored on the novel, despite its modest length, for more than 20 years. While the plot may well have been originally modeled on the allegorical dramas of M. Ḥ. \*Luzzatto, the influence of Senior Sachs directed Mapu’s attention toward the Bible, so that the first Hebrew novel also became the world’s first novel in a biblical setting. *Ahavat Ziyyon* won immediate acclaim, and its continued popularity is attested by at least 16 editions, as well as translations into many languages including English, French, German, Russian, Arabic, Judeo-Arabic, Judeo-Persian, Ladino, and Yiddish. The more liberal spirit prevailing in Russia during the early reign of Alexander II prompted Mapu to choose a contemporary setting for his second novel *Ayit Zavua*. Of the five parts comprising this long and rambling novel, the first was published in Vilna in 1858, the second in 1861, and the third in 1864. A second edition containing all five parts appeared posthumously in Warsaw in 1869. About ten editions show its popularity. Mapu had been simultaneously composing a third novel, *Hozei Hezyonot*, depicting the period of the pseudo-Messiah, \*Shabbetai Zevi. Reputed to have been in ten complete parts, the work was sent to the censor in 1858, together with the first two parts of *Ayit Zavua*. Whereas the publication of the latter was subject only to irritating delays, the campaign of the fanatical opponents of Haskalah persuaded the censor to forbid publication of *Hozei Hezyonot* altogether. The manuscript disappeared, and only a seven-chapter fragment remains. Mapu never completely recovered from this loss. To avoid the persecution of his opponents, he reverted to a biblical background for his fourth and last novel, *Ashmat Shomron* (“The Guilt of Samaria,” Vilna, first part, 1865; second part, 1866). Again, this achieved some ten editions.

Apart from his novels, Mapu published several books designed to improve the clumsy educational methods of his day. Two of his textbooks, *Ḥanokh la-Na’ar* and *Der Hausfranzose*, appeared in Vilna in 1859. The former outlines the author’s method for teaching elementary Hebrew, while the latter

comprises a primary textbook for the study of French. Written in German but with Hebrew characters, it constitutes an interesting example of the attempts made by the exponents of Haskalah to broaden the cultural interests of the Jewish community. A third textbook, *Amon Pedagog* (Koenigsberg, 1867), again deals with the teaching of Hebrew. But even within the framework of a textbook, his creative talent emerges in the form of a story, later published separately by J. Klausner under the title *Beit-Hanan* (Jerusalem, 1920), which is unfolded section by section to illustrate the rules to be explained. *Amon Pedagog* served as a standard textbook until the end of the century, and went through five editions.

Mapu's creativity contains both strongly imitative and highly original features. The influence of the Bible is naturally most conspicuous in the setting, style, and language of the two historical novels, *Ahavat Ziyon* and *Ashmat Shomron*, which depict life in ancient Israel in the days of Isaiah. In lesser measure it also extends to *Ayit Zavua* which portrays contemporary Jewish life, mainly in his native Lithuania. Aspects of his novels were derived from other sources, principally Hebrew and French writers. His limited inventiveness is demonstrated by his frequent borrowing of dramatic devices and by the many repetitions and similarities which occur in his stories.

Of the Hebrew writers who influenced Mapu, M.H. Luzatto's example may be discerned in the plots, dramatic devices and symbolic names, as well as in the didactic and ethical ideas, and the interest in nature. From N.H. \*Wessely, whom he held in almost equal esteem, Mapu derived less specific but no less important elements, such as the linguistic narrative possibilities inherent in the Bible. Moreover, the social and educational reforms advocated in Wessely's series of open letters *Divrei Shalom ve-Emet* found an enthusiastic echo in Mapu's novels, especially *Ayit Zavua*. Among Hebrew prose writers, the Galician exponents of Haskalah, J. \*Perl and I. \*Erter exerted considerable influence on Mapu. From their satires on the shortcomings of society, he learned how to use melodrama and farfetched incidents. The letters and dreams which Perl and Erter frequently introduce as convenient media for their satirical purposes are a characteristic feature of Mapu's novels. Many of his characters embody their demands for radical changes in outlook and occupation in Jewish society.

Mapu's novels also owe a considerable debt to the French romantic novelists, the elder Dumas and Eugène Suë. Like Dumas, Mapu turned his attention to the national past, infusing an historical situation with heroism and romantic love, and introducing historical personages side by side with his own creations. From Dumas, Mapu learned the art of creating atmosphere and of clothing his plots in a romantic historical mantle while the influence of Eugène Suë is particularly noticeable in Mapu's novel of contemporary life. But whereas the violence and intrigue encountered in Suë's *Mystères de Paris* are perfectly in keeping with its background of the Paris underworld, the attempt in *Ayit Zavua* to superimpose such elements on a backcloth of Jewish society in Eastern Europe,

which was characterized by sobriety, timidity, and a rigid control of the passionate emotions, is primarily responsible for the incongruity of the setting and the plot.

The original and creative element in Mapu's writings does not lie in the external forms of his novels. The structure, dramatic techniques, and characterizations and stereotypes personifying vice and virtue, all lean heavily on previous writers, and all display grave weaknesses and limitations. For Mapu's own generation, however, the plots, particularly of the historical novels, were the most attractive and fascinating aspect of his work, both because this literary medium was unknown in Hebrew literature and because the adventure and excitement provided so striking a contrast to the colorless lives of most of his readers. The vivid descriptions of heroism and action, the free expression of emotion, and above all the colorful scenes of a people living unrestricted in its own land inflamed the imagination of a life-starved generation. His success in arousing imagination and emotion and his ability to transfuse a somewhat dry and intellectual literature with the feelings of heroism and romantic love constitute the most striking elements of his achievement. By fostering pride in the national past and focusing attention on the land of Israel, Mapu provided an emotional stimulus for generations of young readers. Indeed, the contribution of his novels to the rise of the Jewish national movement from which Zionism later emerged must be regarded as an important factor in modern Jewish history.

Mapu's use of language was equally remarkable. The restricted vocabulary of biblical Hebrew and its limited dialogue seriously curtail its suitability for the modern novel. The narrative power of the biblical story stems, moreover, from its tantalizing brevity and its ruthless pruning of extraneous detail. The Bible story relates a series of events in sequence of time, with little analysis or speculation. It presents a skeleton narrative, leaving the reader to supply the flesh and blood. But the novel demands techniques of a different kind. It is expansive and has to supply those very elements and details which the Bible is so careful to omit. Yet Mapu adopted a medium for expansion whose main strength lies in strict omission, knowingly risking the constant comparison of his own creation with the lofty grandeur of the original. Mapu attempted to solve the problem of language by using his material to the full. The entire Bible became a source for his invention. His style constitutes a fusion of elements of the prose and the poetry of the Bible. Appropriating and refashioning at will, he molded the material to suit his purpose, while retaining much of its original spirit. In spite of the frequent introduction of entire phrases and complete images, he avoided the danger of producing a jumbled patchwork of biblical snippets. So smoothly do they merge with the texture of his own style that the result is neither an imitation nor a parody of the Hebrew Bible. This sensitivity to language is one of the most attractive features of his novels. But Mapu was well aware that he had stretched his material to the limit. In *Ayit Zavua* he deliberately introduced post-biblical elements, and himself protested that bibli-

cal Hebrew was not an adequate vehicle of expression for the modern novel. His writing may be regarded as the consummation of the neobiblical style advocated by the exponents of Haskalah. No major Hebrew novelist attempted to emulate his achievements.

Although aesthetically the least satisfying, it was *Ayit Zavua* with its emphasis on social and educational reform that exerted the most influence on subsequent Hebrew writers. The realistic elements of Mapu's social novel may be traced in the words of many writers, including P. \*Smolenskin, J.L. \*Gordon, R.A. \*Braudes, M.D. \*Brandstaedter, and S.J. \*Abramovitch (Mendele Mokher Sforim), all of whom furthered the positivist and social aspects of his work. Indeed, the realistic novel depicting the problems of contemporary society has continued to occupy a dominant position in Hebrew literature.

For the Hebrew reader, Mapu's first novel, *Ahavat Ziyyon*, was uniquely influential. It opened the prospect of a free and independent life to a people hopelessly fettered by political, social, and economic restrictions. Its significance lies in the fresh possibilities of art and life which it revealed, and in the new awareness it promoted. As the first Hebrew novel, it represents the first expression of a people's longing for a fuller and better life. The English translations of \**Ahavat Ziyyon* were published under various titles: *Amnon, Prince and Peasant*, tr. by F. Jaffe (1887); *In the Days of Isaiah*, tr. by A.M. Schapiro (1902; the same translation was published later under the title *The Shepherd Prince* in 1922 and 1930); *The Sorrows of Noma*, tr. by J. Marymont (1919). His letters were published by B. Dinur under the title *Mikhtevei Avraham Mapu* (1971). Following the 1928 edition of Mapu's works in five volumes, further editions were published in 1945 and 1953.

[David Patterson]

**MAQĀM**, and its regional equivalents – *maqom*, *mugham*, *dastgah* and *tbā'* – designate characteristic modal scales that are identified by a multitude of individual names like *rast*, *bu-zurk*, *segah*, *dil bayāt*, etc. In a broader sense the *maqām* concept is also associated with a series of compositional princi-

ples, including the use of melodic types that are characterized by tonal material and motifs as well as a series of conventions prevalent in major centers of the world of Islam, from India to North Africa. In its most sophisticated form the concept of *maqām* and its principles are applied to many compound and cyclic vocal and instrumental compositions with contrasting parts that include various levels of improvisation. This is for instance the case of the *shashmaqom* in Uzbekistan and Tajikistan, the *Azarbaidjani maqām*, the Persian *radif*, the Turkish *fasil*, the Egyptian *wasla*, the *Irāqī maqām* and the North African *nuba* and *tbā'*. The modal scale includes a complex of rules. It is conceived as combination of several small groups of notes, whether of the same intervallic structure or not, called genera (*ajnās*, s. *jins*). As a result of this characteristic, many combinations can be created theoretically, but only a limited number have been admitted or commonly accepted and are known by their individual names. Part of the modal scale is linked to a definite pitch, and a group of notes transposed is considered to be a different entity and consequently may receive a new name. In brief, the tonal material and the structural rules are put at the disposal of the musician who in playing and singing invents new variants, improvises, and adds musical ornamentations. In addition to this, ethical and cosmological speculations are linked to the concrete application of the *maqāmāt* in diverse circumstances. Aleppan Jews are very fond of this linkage.

It has been proposed, with weighty arguments, that the puzzling designations found in the headings of many \*Psalms (“upon the *sheminit*,” “upon *yonat-elim-rehokim*,” etc.) may not be names of instruments, scales, or prototype melodies, but of *maqām*-like melodic schemes; and such are probably also the superscripts and subscripts of the song texts found in Assyrian and Babylonian cuneiform documents.

The Near Eastern Jewish communities use the local *maqāmāt* for the creation and classification of many of their liturgical and paraliturgical melodies. Even the cantillation of the masoretic accents is submitted to a “maqamic correlation,” and is obviously affected by it in its melodic content. The following selection of “maqamic correlations” is based mainly on the research of A.Z. \*Idelsohn; *maqām Sīgah* can be correlated with the Pentateuch, Ruth, Ecclesiastes, Esther, and the \**Amidah* for the High Holy days; *maqām Bayāt* with the prophetic books and Lamentations; *maqām 'Ajām* (Persian name: *Naurūz*, “The New Year's Day”), associated with exaltation, magnificence, and actual or symbolic wedding functions and ceremonies, with *Simḥat Torah*, *Shavuot*, the seventh day of Passover, and *Shabbat Shirah*; *maqām Nawa* with Sabbath Eve (cf. \**Lekhah Dodi*) and Sabbath morning; and *maqām Šabā* with circumcisions and prayers on Sabbaths on which the weekly portion of the Bible mentions circumcision.

In several Near Eastern communities the prayer of each Sabbath and festival has its own appropriate governing *maqām*. The Aleppan \**bakkashot* singing is entirely governed by a sophisticated maqamic organization, and between the single or grouped *bakkashot* there is a *petihah* (opening – a

vocal improvisation), a verse or a psalm serving as a melodic vehicle for modulation from one *maqām* to the other. This attains its zenith in the performance of the sabbatical psalm (Ps. 92) wherein each verse is sung on a different *maqām*. Such modulations are also made in the solemn recitation of the Ten Commandments, the *hazzan* displaying his virtuosity by skillfully passing through the maximum number of *maqāmāt*. The Moroccan *bakkashot* are organized into a series of *piyyutim* corresponding to the number of Sabbaths between Succot and Passover, each having its appropriate *tbā'*.

All the above are unwritten conventions. The written indication of the *maqām* is found in all manuscript and printed collections of *piyyutim* produced in the Near East since the time of Israel \*Najara, who was apparently the first to compose and organize his *piyyutim* according to this system. In his *Zemiroth Yisrael* the poems are divided by *maqāmāt*, in the following order: *Husseini, Rast, Dūgah, Sigah, Nawa, Busilik* (a Turkish *maqām*), *Husseini, Naurūz-‘Ajam, Uzāl, and Iraq*. The practice has continued to this day, and even recent songs have been fitted into the system, so that in the collection *Shirei Yisrael be-Erez ha-Kedem* of the Adrianople community (Constantinople, 1922) the anthem \**Ha-Tikvah* can be found in *maqām Nihawand*.

[Bathja Bayer / Amnon Shiloah (2<sup>nd</sup> ed.)]

**MAQĀMA** (pl. *maqāmāt*), a narrative in rhymed prose, a collection of short independent stories interlaced with short metrical poems. The *maqāma* originated in about the tenth century C.E. with the Arab poet Ibn al-Fātiḥ Aḥmad ibn Ḥusaynī (Al-Hamdḥānī) and reached its peak with al-Ḥarīrī of Bosra (c. 1054–1112). It was imitated in different languages (Persian, Hebrew, Syriac) and times. Derived from the Arabic word *maqām* (“place”; cf. Hebrew *makom*), *maqāma* refers to the public place where people gathered to listen to rhetoric; it has been translated also as “assemblies” or “sessions,” alluding to the meetings themselves. In Hebrew the accepted name for this genre is *maḥberet* (pl. *maḥbarot*). In all the languages in which it was written it meant a relatively later variation in respect to the conventions of poetry that usually preceded this genre in prose. In later times it was considered no less valuable, and even more difficult, than poetry, involving its own style, content, and peculiarities. The *maqāma* was a very imaginative art of writing, full of extravagant, mannered rhetoric with a large amount of humor, and its stories included realistic or caricatured characters that could never have been introduced in a poem. It was also less formal and conventional than poetry, more realistic, like many other cultural manifestations of medieval society. However, the literary study of these compositions, and of Hebrew rhymed prose in general, has been, in the words of D. Pagis, “sorely neglected.”

The classical *maqāma* was created when a narrator described the particular behavior of a talented and quick-witted hero, skillful at mockery and jest, who appeared at the “place,” in the middle of the “assembly,” flaunting his erudition, particularly in language and literature, and delighting listeners (and ultimately readers) with humorous remarks and stories. At the “place” he frequently encountered an acquaintance of similar abilities or the narrator himself. The two, pretending not to know each other, would engage in an amusing conversation which culminated in the mutual recognition of their friendship.

Hebrew classical *maqāma* has a rather fixed structure, with different episodes or adventures of the protagonist told by the literary narrator. A narrative frame, creating a background and describing the scene, and a more or less conventional conclusion, encloses the details of the different episodes. The language used is pure biblical Hebrew, constituted many times by a mosaic of biblical quotations (*shibbuz*) that receive a completely new meaning.

Shortly after they were introduced as spoken expressions, *maqāmāt* were put into writing. In the course of time other humorous stories and pieces in rhymed prose began to be called *maqāmāt* even though they did not contain the typical gay talk of the classical *maqāma*. Scholars today, however, have very different attitudes in respect to the use of the name “*maqāma*” for all kinds of narrative texts in rhymed prose. It is true that even the Arabic *maqāma* changed notably with different times and places: for instance, in al-Andalus artistic storytelling created new forms, including long narratives with single plots. In Hebrew literature from the 12<sup>th</sup> to 15<sup>th</sup> centuries there are narratives that do not have all the characteristics of the classic Arabic *maqāma*, and it is disputed among researchers whether we should use the same name for this kind of composition, or if they have to be classified as *maqāma*-like narratives, as many literary historians prefer today.

The author of the first known Hebrew *maqāma* is Solomon ibn Zakbel (\*Ibn Sahl) who lived in Muslim Spain during the first half of the 12<sup>th</sup> century. Later authors of Hebrew works in this genre are Joseph \*Ibn Zabara, who wrote *Sefer ha-Sha'ashu'im* and \*Judah ibn Shabbetai, who wrote *Minḥat Yehudah Sone ha-Nashim*. However, the greatest writer of the Hebrew *maqāma* is Judah \*Al-Ḥarizi. After translating into Hebrew, under the title *Maḥbarot Itti'el*, the *maqāmāt* of Al-Ḥarīrī (adapting their content and language to his audience), he wrote in Hebrew the *Taḥkemoni*, which contains 50 *maqāmāt*. Al-Ḥarizi said that he composed this book to prove that it was possible to use Arabic literary forms in Hebrew. Al-Ḥarizi greatly influenced such later Hebrew poets as Abraham ibn Ḥasdai, Jacob b. Eleazar, and Immanuel of Rome. Particularly worthy of mention is Isaac ibn \*Sahula whose *Meshal ha-Kadmoni* (compiled in 1281), based on Jewish themes, was written in conscious contrast to the Arabic *maqāmā*. Following some Arabic models, from the 13<sup>th</sup> century a special type of *maqāmāt* also appears in Hebrew: the symbolic or allegoric one, represented, for instance, by the “Scroll of the Fawns”

by Eliyahu ha-Kohen (ed. by Z. Malachi, 1986), continued in some narratives of Mattathias (15<sup>th</sup> century) or Tanhum Yerushalmi (Orient, 16<sup>th</sup> century).

The Hebrew style of the *maqāma*, especially of those written in later periods, has occasionally appealed to contemporary authors, the best example being Bialik's *Alluf Baʿlut ve-Alluf Shum* ("Lord Onion and Lord Garlic").

[Abraham Meir Habermann / Angel Sáenz-Badillos (2<sup>nd</sup> ed.)]

**MAQUEDA**, small town in Castile, central Spain, on the territory of the Order of \*Calatrava. Because of the resemblance to the biblical name of Makkedah (Josh. 10: 10, 28, etc.), some Jewish commentators (cf. Isaac \*Abrabanel's commentary to Kings) asserted that the Spanish city had been founded by Jews from Makkedah who had been exiled by Nebuchadnezzar. Conversely, Moses \*Arragel tried to demonstrate to the head of the Order of Calatrava that Makkedah in Erez Israel had been founded by the king of Maqueda in Spain. The beginning of Jewish settlement in Maqueda probably coincided with the transfer of the region to the ownership of the Order of Calatrava in 1177.

In 1238, Ferdinand III ordered the community to make the Church an annual payment of 30 denarii symbolizing the amount of money received by Judas Iscariot. In 1290 the community paid an annual tax of 11,162 maravedis. During the reign of Ferdinand IV (1295–1312), the tax was reduced from 8,000 to 5,000 maravedis to dissuade the Jews from leaving Maqueda. Alfonso XI confirmed this reduction in 1316, but the amount of tax for services collected from the Jews there remained unchanged. The Jews earned their livelihood from the same occupations as the other inhabitants of the region, including agriculture.

During the persecutions of 1391 its two synagogues were sacked. In 1415, the antipope \*Benedict XIII answered an appeal sent by the apostate rabbi of the community, who had been maintained from the vineyards and fields which it owned and was left without means of subsistence. Benedict authorized him to take possession of the synagogue appurtenances and property.

By the beginning of the 15<sup>th</sup> century, the community had been reestablished, and in 1430 Moses Arragel completed there the translation of the Bible into Spanish commissioned by Don Luis de Guzman, head of the Order of Calatrava. The role played in 1464–65 by R. Maymaran, rabbi of Maqueda, in persuading Conversos to return to Judaism, emerges from the trial of Ḥayyim Fichel by the Inquisition held at \*Huesca in 1489. The community still paid 50,000 maravedis in taxes in 1491. The status of the community may be gauged from the fact that a meeting of representatives of the communities of Castile was convened there in the fall of 1484, when important decisions concerning the practice of usury by the Jews in the kingdom were passed. After the decree of expulsion of 1492 was issued, Ferdinand ordered that inquiries should be made among the Jews of Maqueda to discover whether they were ready to adopt Christianity. The king ordered that watch should be kept over the synagogue until its future was decided and that a register should be made of Jewish property, of the debts owed to Jews, and those they owed to others. In the folklore of the Sephardim, stories were preserved about simple-minded Jews of Maqueda of the same type as those recounted about the Jews of \*Chelm.

[Haim Beinart]

**MAR** (Aram. מַר; lit. "lord"), a term of respect and endearment used in addressing an important person. Daniel addressed the king as *mari* ("my lord"; Dan. 4:16). The rabbis related that King \*Jehoshaphat rose from his throne upon seeing a scholar, embraced him, and exclaimed, "My master, my master; my teacher, my teacher" (Ket. 103b; Mak. 24a). In Babylonia *mar* was used as a deferential and respectful form of address. A son reporting his father's teachings was urged to say, "thus said my father, my master" (Kid. 31b). When \*Rav acted as interpreter for Shila, the latter asked him to cease, proclaiming Rav his "master" upon perceiving his greatness (Yoma 20b). Abbaye referred to his uncle and teacher, Rabbah b. Nahamani, simply as *Mar*, without adding any name (Pes. 101a). Tavyomi's colleagues always called him *Mar* and he is therefore always referred to in the Talmud as "\*Mar bar Rav Ashi" (Kid. 31b). *Mar* finally became a title preceding the name, and it became customary in Babylonia to call scholars *mar* and not *rav*. This was particularly so in the case of the two famous contemporaries of Rav, Mar \*Samuel and Mar \*Ukba,

as well as Mar \*Zutra. When a passage already quoted in the Talmud is quoted again for the purpose of further elucidation, it is introduced with the words “*Mar said*,” which in the context merely means “It has been stated above” (e.g., Bet. 2a).

In modern Hebrew *Mar* is used as a term of address like the English “Mister.”

**BIBLIOGRAPHY:** Hyman, *Toledot*, 897ff.; J. Schechter, *Ozar ha-Talmud* (1963), 244.

**MAR BAR RAV ASHI** (d.c. 468), Babylonian *amora*. Mar was the son of \*Ashi. According to one passage he signed his name in a letter “Tavyomi” (BB 12b), Mar apparently being a title of honor. He is extensively quoted in the Babylonian Talmud. He possessed great authority, and according to a tradition found in Rashi (to Hül. 76b) the *halakhah* follows him except in two cases. He studied under his father, who headed the famous academy of Mata Meḥasya, near Sura. On the death of Ashi, Mar stayed on under his successor Maremar (Ber. 45b). His companions were Ravina (the younger, Ber. 36a), Judah b. Maremar, and Aḥa of Difti (Ber. 45b). In 455 he became head of the academy after competing for the post with \*Aḥa. The *aggadah* describes his appointment as an example of prophecy having been given to fools. Mar was standing in the manor of Maḥoza when he heard a lunatic exclaim: “The man to be elected head of the academy of Mata Meḥasya signs himself Tavyomi.” He quickly went to Mata Meḥasya and arrived in time to sway the voting in his favor (BB 12b). The *aggadah* also relates that Mar had great knowledge of the ways of demons and great power over them (Hül. 105b). Sherira Gaon in his letter reports that in the time of Mar, King Yezdegerd III, who was hostile to the Jews, was swallowed by a dragon while he was in his bed (ed. by B.M. Lewin (1921), 95). Mar had a brother Sama and a sister, and a dispute between them over the bequest of their father was arbitrated by Ravina (Ket. 69a). He was a wealthy man (Git. 7a). He was succeeded by Rabbah Tosfaʿa.

**BIBLIOGRAPHY:** Bacher, *Trad*, index; Hyman, *Toledot*, 897–9; H. Albeck, *Mavo la-Talmudim* (1969), 445f. **ADD. BIBLIOGRAPHY:** A. Cohen, “Mar Bar Rav Ashi and his Literary Contribution” (Hebrew) (Ph.D. Dissertation, Yeshiva University (1980)).

[David Joseph Bornstein]

**MAR BAR RAVINA** (מר בר רבינא), a fourth-century Babylonian *amora*, famous for his saintly character. In his youth, he was carefully tended by his mother, who provided him with clean garments every day, so that he could study in comfort (Er. 65a). Although well-to-do, he lived austere, fasting by day except on Pentecost, Purim, and the eve of the Day of Atonement (Pes. 68b). At his wedding, a note of seriousness was struck by Rav Hamnuna Zuta who, when asked to sing for the guests, chanted to them, “Alas for us that we are to die” (Ber. 31a). An even sadder note was injected at his son’s wedding when Mar, seeing that the company was in a merry mood, deliberately broke a precious cup to dampen their spirit (Ber. 30b–31a). This is probably the origin of the custom of

breaking a cup at a Jewish wedding ceremony. He held that even gentiles who observed the seven Noachide laws did not thereby earn any heavenly reward (Av. Zar. 2b–3a). He also had an extremely low opinion of Balaam – the arch-prophet of the gentile world – whom he charged with bestiality (Sanh. 105a) and singled out as the only major sinner against whom biblical passages could be expounded so as to discredit him (Sanh. 106b). Mar bar Ravina had a reputation as a pious, God-fearing man (Ber. 39b; Shab. 61a), who regarded the profanation of God’s name as the most heinous sin (Kid. 40a). He was also credited with miraculous escapes from grave perils (Ber. 54a). Characteristic of his piety was his prayer which is still recited at the conclusion of the Eighteen Benedictions: “O my God, keep my tongue from evil and my lips from speaking guile. And to them that curse me may my soul be silent; yea, let my soul be as the dust to all. Open my heart in thy law, and let my soul pursue thy commandments ...” (Ber. 17a).

[Moses Aberbach]

**MARBURG**, city in Hesse, Germany. A document dated May 13, 1317 – the first to mention Jews in Marburg – indicates that they then had an organized community and a synagogue, and lived in a special quarter. The community was annihilated during the \*Black Death persecutions (1348/49), but Jews were living in the town once more by 1364. In the middle of the 15<sup>th</sup> century they were apparently expelled from Marburg; the synagogue was demolished in 1452 and the cemetery passed into non-Jewish hands. The Jewish population eventually returned, only to be driven out again by a decree of 1523. However, in 1532 Duke Philip abolished the decree and permitted the Jews to reside there for a six-year period. In subsequent years the number of Marburg Jews remained low: six families in 1744 and eight in 1776. Jews from outside the town were permitted to remain there only during the annual fairs. The number of Jews increased during the course of the 19<sup>th</sup> century, reaching 512 (2.5% of the total population) in 1905. From 1823 Marburg was the seat of the district community organization and later of the district rabbinate. The community maintained a synagogue (built in 1897), a school, a convalescent home, and a number of other institutions. Hermann \*Cohen, professor at the local university, founded the Marburg school of Neo-Kantianism. In 1933 there were about 325 Jews in Marburg. On November 10, 1938, the synagogue was burned down. By May 17, 1939, only 143 Jews remained; ten survived the war, while the rest left or were deported in 1941–42. About 300 Jews lived in Marburg between 1945 and 1948; but by 1959 only 50 remained, and by 1961 the number had shrunk to 15. In 1989 a new community center was inaugurated. The building was provided by the municipality of Marburg. The Jewish community numbered 30 in 1989 and about 350 in 2005. Most of the members are immigrants from the former Soviet Union. Since the community center was too small to accommodate the increased membership, a new one

was opened in 2004. This building, too, was provided by the municipality of Marburg.

[Larissa Daemmig (2<sup>nd</sup> ed.)]

**MARCEAU, MARCEL** (1923– ), French mime. Marceau was born in Strasbourg, the son of a butcher who was executed by the Nazis during World War II. Marceau worked for the French underground, helping Jewish children to cross the border into Switzerland. In 1944, he entered Charles Dullin's School of Dramatic Art and studied with Etienne Decroux (1898–1991). He made his debut as *Harlequin* in Jean-Louis Barrault's production of *Baptiste* in 1947. That same year he formed his own company and created his famous character "Bip," a flour-faced clown always in conflict with the physical world. He wrote *The Story of Bip*, which was published in 1976, and celebrated Bip's 50<sup>th</sup> anniversary in 1997. Marceau, who is the best-known exponent of modern mime, toured either as a solo artist or with a small company in many parts of the world. In his U.S. tours in 1955–56 and 2000 he also made many television appearances. His silent eloquence and unique synthesis of corporeal mime with 19<sup>th</sup> century pantomime captured the public's imagination wherever he appeared. Most of Marceau's programs consisted of small sketches featuring "Bip," but in 1951 he created an extended drama, *The Overcoat*, based on the novel by Gogol. He also made a number of films. In 1971 he collaborated with the Hamburg Ballet on a version of *Candide*. Marceau described mime as "the art of expressing feelings by attitudes and not a means of expressing words through gestures." In 1998, French President Jacques Chirac named Marceau a Grand Officer of the Order of Merit. He was elected a member of the Academies of Fine Arts in Berlin and Munich, the Academie of Beaux Arts in France, and the Institut de France.

[Selma Jeanne Cohen / Amnon Shiloah (2<sup>nd</sup> ed.)]

**MARCK, SIEGFRIED** (1889–1957), German philosopher. Marck, who was born in Breslau, became a professor there

in 1924. After the Nazis came to power, he taught at Dijon, France, and from 1940 in Chicago. Marck's thought derives from the Marburg neo-Kantians. He compared the fundamental concepts of Kant, Hegel, and Marx in his *Kant und Hegel* (1917) and *Hegelianismus und Marxismus* (1922). He applied \*Cassirer's and \*Kelsen's concepts in his *Substanz und Funktionsbegriff in der Rechtsphilosophie* (1925). His main work, *Die Dialektik in der Philosophie der Gegenwart* (2 vols., 1929–31), develops his own "critical dialectic." Marck also wrote *Der Neuhumanismus als politische Philosophie* (1938), and *Grosse Menschen unserer Zeit* (1954).

**BIBLIOGRAPHY:** *National Cyclopaedia of American Biography*, 43 (1961), 257–8.

[Richard H. Popkin]

**MARCKWALD, WILLY** (1864–1950), German organic chemist. Marckwald was born in Jakobskirch, Silesia, and was professor at Berlin University from 1899. He was also director of the chemistry department of the university's physico-chemical institute. In 1910 he was appointed a privy councillor and was president of the German Chemical Society from 1928 to 1931. When the Nazis rose to power, he escaped to Brazil. Marckwald's scientific papers dealt with the physical properties of organic compounds, stereochemistry, and radioactivity. He was the first to isolate the element polonium in pitchblende, which helped toward the discovery of radium. He observed changes caused by light in the color of certain compounds, and called this phenomenon "phototropy."

Marckwald wrote *Ueber die Beziehungen zwischen dem Siedepunkte und der Zusammensetzung chemischer Verbindungen* (1888), *Die Benzoltheorie* (1898), and *Radium in Biologie und Heilkunde* (1911–12).

[Samuel Aaron Miller]

**MARCOSSON, ISAAC** (1876–1961), U.S. journalist and author. Born in Louisville, Kentucky, Marcossion worked on *World's Work*, *Saturday Evening Post*, and *Munsey's Magazine*. Specializing in finance, he wrote several books on business and commerce. He was in St. Petersburg during the Russian Revolution and recorded his observations in *Rebirth of Russia* (1917). He also wrote *Adventures in Interviewing* (1920), *The Turbulent Years* (1938), and an autobiographical work, *Before I Forget: A Pilgrimage to the Past* (1959).

**MARCOUSSIS** (originally **Marcous**), **LOUIS** (1883–1941), French painter. Marcoussis was born in Warsaw. As a student at the Academy of Fine Arts in Cracow he was one of the avant-garde Young Poland group which was strongly inclined to French culture. In 1903 he moved to Paris to study. When his father was no longer able to support him, he lived by contributing frivolous drawings to *La Vie Parisienne* and *L'Assiette au Beurre*. Marcoussis visited the United States in 1934 and his engravings were shown in New York and Chicago. When the Germans occupied Paris in 1940 Marcoussis and his wife happened to be staying in a village in central France where he was able to live in safety until his death the following

year. Marcoussis is listed generally among the cubists. Yet in his early still lifes, the element of fantasy is stronger than the purely analytical one. He was an excellent print-maker, who made illustrations for books by Gérard de Nerval, Guillaume Apollinaire, and Tristan Tzara. In his portraits, he abandoned cubism for a tight classical style.

**BIBLIOGRAPHY:** J. Lafranchis (ed.), *Marcoussis* (Fr., 1961).

[Alfred Werner]

**MARCULEȘTI**, Jewish agricultural colony in Bessarabia. It was founded in 1837 on an area of 549 hectares leased from a private owner by 239 settlers from Podolia. In 1888 the land was acquired by the settlers, but because of the \*May Laws of 1882 it was registered under the name of a Christian property owner. According to the census of 1897 there were 1,336 Jewish inhabitants. However, the survey conducted by the \*Jewish Colonization Association in 1899 records 292 families (1,534 individuals), of whom 123 were landowners (with an average of 4.5 hectares to a family). After the railway to Odessa was laid, and a station was built close to Marculesti, an impetus was given to trading mainly in farm products. The settlement gradually lost its agricultural character, and turned into a typical Jewish town. Under the agrarian reform in Romania in 1922, 105 Jews in Marculesti received plots of land. In 1901 a school was opened which was directed by the writer Shelomo \*Hillels. Of the 541 members registered in the local loan fund in 1925, 195 were farmers. In 1930 the Jewish population numbered 2,319 (87.4% of the total). \*Tarbut elementary and high schools functioned there during the 1930s. The colony was destroyed when the Germans and Romanians invaded Bessarabia in July 1941, after its incorporation within the Soviet Union. On the 8<sup>th</sup> of that month, about 1,000 Jews living there were murdered. In September–November 1941 a transit camp was established in Marculesti for Bessarabian Jews who were deported to \*Transnistria. Ada \*Maimon and Rabbi Y.L. \*Maimon (Fishman), who served as the rabbi of the colony from 1900 to 1905, were born in Marculesti.

[Eliyahu Feldman]

**MARCUS, AARON** (1843–1916), scholar, writer on Kabbalah and Ḥasidism. Marcus was born and educated in Hamburg, studied at the yeshivah of Boskovice (Moravia) but also acquired a wider philosophical education. In 1861 he left for Cracow where he joined the Ḥasidim. Between 1862 and 1866 he made several long visits to the ḥasidic rabbi of Radomsk, Solomon Rabinowicz. He later maintained close relations with many ḥasidic leaders in Poland and Galicia. A major part of his literary work (mainly in German but with a small amount in Hebrew) was devoted to the defense of Ḥasidism and an explanation of ḥasidic doctrines and Kabbalah. His work testifies to great erudition, but has proved unacceptable by the current standards of modern critical scholarship. In his work he defended traditional Judaism against modern Bible criticism and scientific materialism. At the same time, he tried

to find confirmation for new insights in philosophy and science in Jewish religious literature, particularly in the writings of Ḥayyim b. Moses \*Attar, M.Ḥ. \*Luzzatto, and Ḥabad Ḥasidism. Marcus was one of the few Orthodox Jews in Germany who totally adopted Ḥasidism in theory and practice. He published: *Hartmanns inductive Philosophie des Unbewussten im Chassidismus* (2 pts., 1889–90); *Der Chassidismus* (under the pseudonym Verus, 1901, 1927<sup>3</sup>); *Barsilai, Sprache als Schrift der Psyche* (1905); an edition of Jacob of Marvège's responsa *She'elot u-Teshuvot min ha-Shamayim* with a commentary *Keset ha-Sofer*, 1895, 1957<sup>2</sup>); *Keset ha-Sofer* (Bible annotations, largely in Ms., 1912); and *Juedische Chronologie* (vol. 1, posthumously, 1935). From 1898 to 1899 Marcus edited *Krakauer Juedische Zeitung*, a paper he published as a vehicle for his ideas. He became an enthusiastic supporter of Theodor Herzl and his *Judenstaat* (see his *Theodor Herzls Judenstaat...*, 1897; second ed. 1919 with a eulogy of Marcus), thus becoming one of the pioneers of religious Zionism, though later he turned toward the anti-Zionist Agudat Israel.

Marcus, *A. Marcus, die Lebensgeschichte eines Chossid* (1966); G. Scholem, in: *Behinot*, 7 (1954), 3–8.

[*Encyclopaedia Judaica* (Germany)]

**MARCUS, BERNARD** (1929– ), U.S. entrepreneur, philanthropist. Born to Russian immigrant parents, Marcus grew up in a tenement in Newark, N.J., wanting to be a doctor. After high school, he could not afford medical training. Instead, he worked his way through Rutgers University and earned a degree in pharmacy. After college he worked at a drugstore and a cosmetics company. By the late 1970s he had worked his way up to chairman of Handy Dan, a home-improvement chain in California. He and one of his colleagues there, Arthur M. \*Blank, were fired in 1978 over disagreements about the chain's future. Marcus and Blank decided to go into the home-improvement business themselves. After surveying four cities, they settled on Atlanta, Ga., as their home base, believing that it had the right market and real estate conditions to test their theory that consumers would flock to big stores offering a broad selection of home-improvement products, low prices, and friendly, knowledgeable service. In 1979 they opened three Home Depot stores. In their first year, on \$7 million in sales, they lost \$1 million. But they persevered and in 1981 they went public. By the early years of the 21<sup>st</sup> century, Home Depot had more than 1,500 stores in the United States, Canada, Puerto Rico, and Mexico, becoming the world's largest home-improvement retailer. With a familial structure, embracing all employees with stock options and other incentives, plus a harsh sense of competition, Home Depot helped drive Handy Dan, the Blank-Marcus nemesis, out of business. Becoming the do-it-yourself giant, providing everything from screws to electrical wiring to appliances and lawn supplies, Home Depot had more than 150,000 employees and more than \$30 bil-

lion in sales. Although Marcus, the older of the founders, was chairman for more than 20 years, he and Blank saw eye to eye on almost everything. Marcus was a hands-on visionary, but he also was known for sparring with investment bankers and for telling jokes at company dinners.

Marcus and Blank became philanthropic leaders in Atlanta. While Blank gave to the Atlanta Symphony Orchestra, youth projects, and many Jewish organizations, Marcus devoted more than 20 years to the City of Hope, a cancer research center. He is also a major supporter of the nation's largest rehabilitation hospital for spinal care patients, the Shepherd Spinal Center, and a new wing of that hospital was named in honor of his wife, Billi. The Marcus Developmental Resource Center provides services and information to disabled individuals and their families. Marcus spent several years in the early years of the 21<sup>st</sup> century designing and building a \$200 million aquarium, known as the Georgia Aquarium. It will have 100,000 fish, including giant groupers, octopuses, and two white beluga whales. The star attraction will be two whale sharks, the world's biggest fish, which can exceed 40 feet in length.

Marcus has given significant sums to Jewish causes. A Jewish community center in Atlanta is named for him and he was one of the founders of the U.S. Holocaust Museum. In 2000, Marcus and the governor of Georgia led a delegation to major Israeli cities to try to persuade Israeli technology companies to make Georgia their home. Marcus was international chairman of the Israel Democracy Institute, an independent political research organization in Jerusalem, and often visited Israel for both business and pleasure. He attends a philanthropic roundtable of the major American Jewish philanthropists that includes Edgar and Charles Bronfman, Michael Steinhardt, and Leslie Wexner among others.

[Stewart Kampel (2<sup>nd</sup> ed.)]

**MARCUS, DAVID DANIEL** (1902–1948), U.S. soldier, commander of the Jerusalem front in the Israel \*War of Independence. Marcus was born on New York City's Lower East Side. In 1920 he entered the West Point Military Academy, graduating in 1924. He also studied law, and, when he left the army in 1927, was employed in the U.S. Attorney General's Office. In 1934 Mayor Fiorello La Guardia invited him to join the New York City Department of Correction, and in 1940 he was sworn in as a commissioner of correction. After the outbreak of World War II in Europe he rejoined the army with the rank of lieutenant colonel as divisional judge advocate and divisional headquarters' commander. In 1943 he was called to the Civil Affairs Division of the War Department and attended the meetings of the "Big Five." On D-Day he volunteered to participate in the airborne assault, parachuting into Normandy despite his lack of previous training. In 1945 he was on the staff of General Lucius D. Clay's military government in Germany. Recalled to Washington, he was appointed head of the War Crimes Branch. In 1947 he retired from the army with the rank of colonel and returned to legal practice, after being awarded a number of major U.S. and British decorations.

At the request of the \*Jewish Agency and the \*Haganah, he went to Palestine at the end of January 1948, serving as David \*Ben-Gurion's military adviser under the *nom de guerre* of Mickey Stone. He immediately perceived the special spirit and conditions of the new Israel army which was emerging from the underground. After a brief visit to the United States, he returned to Israel in May 1948 and on May 28, 1948, was appointed commander of the Jerusalem front. Marcus was the first officer to receive the new rank of *alluf* (Major General). Before dawn on June 11, he went outside the perimeter fence of his headquarters in Abu Ghosh and was accidentally killed by a sentry. His body was transferred with military honors to the United States and buried at West Point. A village in Judea, Mishmar David, is named after him.

[Jehuda Wallach]

**MARCUS, ERNST** (1856–1928), German jurist and philosopher. Marcus studied law and was a judge. As a philosopher, he was a Kantian who opposed the new interpretations offered by H. \*Cohen and L. \*Nelson. For Marcus the "thing-in-itself" remained central, deducible from reason. He developed a theory of the *a priori* "organism" which the "I" constructs. He wrote many works on Kant including *Kants Revolutionsprinzip* (1902); *Das Erkenntnisproblem* (1905), *Die Beweisfuehrung in der Kritik der reinen Vernunft* (1914), and *Kants Weltgebaeude* (1917). He also wrote *Theorie einer natuerlichen Magie* (1924). Using Kant's theory, Marcus criticized Einstein in his *Kritik des Aufbaus der speziellen Relativitaetstheorie* (1926) and in *Die Zeit-und Raumlehre Kants* (1927).

**BIBLIOGRAPHY:** S. Friedlaender, *Der Philosoph Ernst Marcus als Nachfolger Kants* (1930); idem, *Kant gegen Einstein* (1932).

[Richard H. Popkin]

**MARCUS, FRANK** (1928–1996), German-born playwright. Marcus emigrated to Britain in 1939. Originally an actor, Marcus had his own first play produced in 1950. His later works include *The Formation Dancers* (1964), *Cleo* (1965), and *The Killing of Sister George* (1965), a drama about lesbianism that was made into a successful motion picture.

**MARCUS, JACOB RADER** (1896–1995), U.S. rabbi and historian. Marcus was the first trained historian of the Jewish people born in America and the first to devote himself to the scholarly study of America's Jews. Through the American Jewish Archives, which he founded in 1947, and through the many books that he published during his long life, he defined, propagated, and professionalized the field of American Jewish history, achieving renown as its founding father and dean. At the time of his death, he was also the oldest and most beloved member of the Reform rabbinate and the senior faculty member at Hebrew Union College-Jewish Institute of Religion (Cincinnati), where he had taught for some three-quarters of a century.

Born in New Haven, Penn., at the age of 15 Marcus came to Cincinnati's Hebrew Union College where he pursued rabbinical studies and simultaneously attended high school and then the University of Cincinnati where he specialized in Jewish history. Following service in World War I, he was ordained in 1920. He went on to obtain his Ph.D. in 1925 at the University of Berlin in general history. In Berlin, he was profoundly influenced by the historian Simon Dubnow and by the techniques of Fritz Baer.

During his time abroad, Marcus also visited Palestine. He then returned to Hebrew Union College, where he taught successfully for the next 70 years. Legions of students credited him for helping to sustain them through rabbinical school, and many of these same students turned to him again later, as rabbis, for help with their congregations or their personal problems. His students reciprocated, electing him president of the Central Conference of American Rabbis in 1949 and lifetime honorary president of the Conference in 1978.

Marcus's most important early publications consisted of a monograph on Israel \*Jacobson (1928), and a popular, derivative history of German Jewry (1934). In 1938, he published a volume of carefully edited documents titled *The Jew in the Medieval World*. In 1947, he published his last significant scholarly study of German Jewry, *Communal Sick-Care in the German Ghetto*.

In the 1940s, Marcus shifted his attention to American Jewish history. During the next half-century, he worked systematically to establish American Jewish history as a scholarly discipline. He founded both the American Jewish Archives (1947) and the American Jewish Periodical Center (1956) on the campus of Hebrew Union College (Cincinnati). He served as president and later honorary president of the American Jewish Historical Society. He collected and published thousands of pages of edited primary sources. He created reference tools and a semi-annual scholarly journal, *American Jewish Archives* (1948– ). He also authored *Early American Jewry* (2 vols, 1951–53), *Memoirs of American Jews* (3 vols., 1955), *The Colonial American Jew 1492–1776* (3 vols, 1970), *United States Jewry 1776–1985* (4 vols., 1989–1993), and *The Jew in the American World: A Source Book* (1996). To ensure that his work continued, he left his entire fortune in trust for the American Jewish Archives, renamed the Jacob Rader Marcus Center of the American Jewish Archives in his memory.

**BIBLIOGRAPHY:** S.F. Chyet, "Jacob Rader Marcus--A Biographical Sketch," in: *Essays in American Jewish History to Commemorate the Tenth Anniversary of the Founding of the American Jewish Archives under the Direction of Jacob Rader Marcus* (1958), 1–22; R.M. Falk, *Bright Eminence: The Life and Thought of Jacob Rader Marcus* (1994); G.P. Zola (ed.), *The Dynamics of American Jewish History: Jacob Rader Marcus's Essays on American Jewry* (2004), which includes a full bibliography of his writings.

[Jonathan D. Sarna (2<sup>nd</sup> ed.)]

**MARCUS, JOSEPH** (1897–1977), Hebrew scholar. Born in Derevno, Russia (Vilna province), Marcus was taken to the

United States in 1910. He was ordained by the Jewish Theological Seminary in 1924. After briefly holding several rabbinical positions, he assisted Israel \*Davidson in the preparation of the latter's *Ozar* ("Thesaurus of Medieval Hebrew Poetry"); later he assisted \*Bialik and \*Rawnitzki in preparing their editions of the poems of Ibn \*Gabirol and Moses \*Ibn Ezra, copying for them poems from the Seminary's *genizah* collection. In the course of this work (1929), Marcus discovered a leaf from a hitherto unknown Hebrew manuscript of \*Ben Sira (Ecclesiasticus). After holding positions in various Jewish libraries, followed by a brief return to the rabbinate, Marcus became librarian and instructor in medieval Hebrew literature at the Hebrew Teachers College of Boston in 1946. In 1963 he settled in Israel, where he became librarian at the Mosad ha-Rav Kook in Jerusalem.

Marcus' works include *A Fifth Manuscript of Ben Sira* (1931); *Ginzei Shirah u-Fiyyut* ("Liturgical and Secular Poetry of the Foremost Medieval Poets," 1933); *Studies in the Chronicle of Ahimaaz* (1934); *Iggerot Bialik* (1935); *Yozerot le-Arba Parashiyot* (1965); and studies on the poetry of Isaac \*Ibn Ghayyat.

[Raymond P. Scheindlin]

**MARCUS, RALPH** (1900–1956), U.S. scholar of Hellenistic Judaism. Born in San Francisco the son of the talmudic scholar Moses Marcus, Marcus was educated at Columbia, where he wrote his doctoral dissertation on *Law in the Apocrypha* (1927), and at Harvard where he studied with Harry A. Wolfson (1925–27). He taught at the Jewish Institute of Religion, at Columbia (1927–43), and at the University of Chicago (1947–56).

Marcus is best known for editing, translating, and annotating four volumes of Josephus and two of Philo in the Loeb Classical Library series. His notes show an unusual wealth of lexical and historical knowledge, and his translations are accurate and lucid. His invaluable appendixes on select points in Josephus are careful, critical monographs. His bibliographies in these volumes and in separate works (PAAJR, 16 (1946/47), 97–181; *Jewish Studies in Memory of G.A. Kohut* (1935), 463–91) show his mastery of the literature and his critical acumen. He successfully undertook the extraordinarily difficult task of translating Philo's *Quaestiones et Solutiones* from the Armenian and restored the Greek in numerous places.

Marcus' lexicon to Josephus, continuing the work of Thackeray, reached the letter *epsilon*. His 62 articles excel in etymologies, grammatical and lexical points, and in utilizing his vast knowledge of the various languages of the classical and Jewish worlds. Marcus intended to write a history of the Jews during the Second Temple period, and many of his most fertile ideas for future work in the field are found in his "The Future of Intertestamental Studies" (in: H.R. Willoughby's *The Study of the Bible* (1947), 190–208). Marcus also wrote semi-popular articles on Hellenistic Judaism for L. Finkelstein's *The Jews* and L.W. Schwarz's *Great Ages and Ideas of the Jewish People* as well as for the *Encyclopaedia Britannica*. In the

controversy between H.A. Wolfson and E.R. Goodenough on Philo, Marcus strongly supported Wolfson's contention that Philo closely parallels Pharisaic Judaism (*Review of Religion*, 13 (1949), 368–81). Toward the end of his life Marcus became much involved in the controversies surrounding the Dead Sea Scrolls. He connected the Qumran Covenanters with the Essenes and discerned in them a strong gnosticizing flavor.

**BIBLIOGRAPHY:** G.E. von Grunebaum, in: *JNES*, 16 (1957), 143–4; *BRE*, 3 (1958), 44–46, a list of his works.

[Louis Harry Feldman]

**MARCUS, RUDOLPH ARTHUR** (1923– ), chemist and Nobel Prize winner. Marcus was born in Montreal, Canada, and educated there at McGill University. He taught at the Polytechnical Institute of Brooklyn, N.Y., 1951–64, at the University of Illinois, 1964–1978, and at the California Institute of Technology, where he became the Arthur Amos Noyes Professor of Chemistry in 1978.

Marcus was awarded the Nobel Prize in chemistry in 1992 for his mathematical analysis of the cause and effect of electrons jumping from one molecule to another, ideas which he developed from 1956 to 1965. When electrons in molecules in a solution jump from one molecule to another, the structure of both molecules changes. The occurrence of this change temporarily increases the energy of the molecular system, resulting in a “driving force” for electron transfer. It was only in the 1980s that Marcus' theories were finally confirmed by experiments. His work has been useful in understanding many complicated chemical reactions, among them photosynthesis. Marcus is also well known for his theory of unimolecular reactions in chemistry, the RRKM theory, which more than 50 years after its development is still the standard theory in the field. It treats the fragmentation of high-energy molecules, as in the atmosphere and in combustion. His research also ranges from the strange fluorescent behavior of nanoparticles to the anomalous isotopic composition of the ozone in the stratosphere and of the earliest solids in the solar system.

**MARCUS, RUTH BARCAN** (1921– ), U.S. logician and philosopher who played a key role in many of the philosophical debates of the second half of the 20<sup>th</sup> century. Born and educated in New York City, Ruth Barcan received her B.A. in mathematics and philosophy from New York University in 1941. After her marriage to Jules Alexander Marcus, she earned her Ph.D. in philosophy from Yale in 1946. While raising her four children, she held various postdoctoral fellowships and visiting positions, including a Guggenheim Fellowship (1953–54). In 1957, she became an assistant professor at Roosevelt University in Chicago; two years later she was promoted to associate professor. From 1964 to 1970, she served as professor of philosophy and department chair at the newly established University of Illinois at Chicago, building up her department to attain national recognition. After three years as professor at Northwestern University (1970–73), she returned to Yale in 1973 and remained there as Reuben Post Halleck

Professor until her retirement in 1992. Thereafter, she continued as a senior research scholar at Yale and as distinguished visiting professor at the University of California at Irvine.

Widely recognized as a leading figure in the field of philosophical logic, Barkan was well known for her contributions to modal logic, especially the Barkan formula, as well as her work on the philosophy of logic and language, epistemology, and ethics. She published numerous articles and essays over a period of 50 years, many of which appeared in the highly regarded collection of her works, entitled *Modalities* (1993). She received many prestigious awards and fellowships, including fellow of National Science Foundation (1963–64); the Center for Advanced Study, University of Illinois (1968–68); the Center for Advanced Study in the Behavioral Sciences at Stanford (1979); Wolfson College, Oxford (1985–86); Clare Hall, Cambridge (1988); and the National Humanities Center (1992–93), as well as the Medal of the College de France (1986). The University of Illinois awarded her an honorary doctorate of humane letters in 1995. Marcus was actively involved in many professional organizations, serving as president of the Association for Symbolic Logic (1983–1986) and vice president of the Institut International de Philosophie (1989–92), as well as chair of the National Board of Officers of the American Philosophical Association (1977–83).

**MARCUS, SIEGFRIED** (1831–1898), German inventor, born in Malchin. Marcus joined the Berlin engineering firm of Siemens und Halske in 1848 and worked on the establishment of telegraphic communication between Berlin and Magdeburg. In 1852 he settled in Vienna, where from 1860 he had his own laboratory. In 1864 he patented a petrol-driven automobile. A car he built in 1875 was preserved in the Vienna Industrial Museum. His patents included an electric lamp (1877), telegraphic relays, a microphone, a loudspeaker, electric fuses for submarine mines, and other devices which were developed by others in later years.

[Samuel Aaron Miller]

**MARCUS, STANLEY** (1905–2002), U.S. retailer. Marcus was two years old when his family founded Neiman Marcus, but it was his merchandising talent that made the store an internationally known symbol of quality, service, luxury, and exclusivity. Born in Dallas, Texas, he was the eldest of four sons. A high school graduate at 16, Marcus entered Amherst College in Massachusetts. When a fraternity refused to admit him after learning he was a Jew, he transferred to Harvard College and joined a Jewish fraternity. He earned a B.A. from Har-

vard in 1925 and attended Harvard Business School for a year. He wanted to go into the book business, but his family persuaded him to join the family store, which had been founded in 1907 by Marcus's father, Herbert; his uncle, Abraham Lincoln Neiman; and his aunt, Carrie Marcus Neiman. Marcus did so in 1926 as secretary-treasurer and a director. In 1927 he created the first weekly fashion shows to be staged in an American department store. When business slumped during the Great Depression, he reached out to the middle-income market as well as Neiman Marcus's more affluent customers, declaring, "We want to sell the millionaire, his young daughter – and his secretary." He was appointed executive vice president in 1935 and was among the first retailers outside New York to advertise regularly in national fashion magazines. In 1938, he launched the Neiman Marcus Awards that are given annually to fashion luminaries. The following year, Neiman Marcus mailed its first holiday catalog, a promotion that became a well-publicized annual event, attracting international attention with such sumptuous offerings as Chinese junks, "his and her" airplanes, and a Black Angus steer, either "on the hoof" or as steaks. Marcus also initiated a series of annual "fortnights," two-week extravaganzas that featured the products of a specific country or region, a promotion widely copied by other retailers. In 1950, when his father, Herbert, died, Marcus succeeded him as president. In 1969, he helped engineer the sale of the company to Broadway-Hale Stores, a merchandising conglomerate, and a major expansion program was soon under way. In 1973, he became chairman and chief executive officer and was succeeded as president by his son, Richard. Marcus became chairman emeritus in 1975 and established his own consulting company. He was inducted into the Advertising Hall of Fame in 2000, only the second retailer to be so honored. Marcus wrote two popular books about his experiences at Neiman Marcus, *Minding the Store* (1974) and *Quest for the Best* (1978). Feisty and forthright, he was an outspoken liberal in generally conservative Dallas. In 1963, following the assassination there of U.S. President John F. Kennedy, he took out full-page newspaper ads called "What's Right With Dallas" that asked residents to respect "differing points of view" and to reject "the spirit of absolutism for which our community has suffered." From the mid-1980s until 1999, he wrote a weekly column in the *Dallas Morning News*, sounding off on everything from fashion to civil rights to the image of his native city.

His family's business, which had eventually become part of Harcourt General, was spun off in 1999 as the Neiman Marcus Group, a discrete entity that included Bergdorf Goodman and NM Direct. By 2005, the original Neiman Marcus store in downtown Dallas had evolved into 35 units throughout the U.S. with annual sales that had grown from \$20.6 million when Marcus became president to more than \$3.5 billion.

[Mort Sheinman (2<sup>nd</sup> ed.)]

**°MARCUS AURELIUS ANTONINUS** (121–180 C.E.), Roman emperor, 161–180 C.E., adopted son and successor of Antoninus Pius; the ideal philosopher-king as envisaged by political thought of the period. Ironically enough, the years of his reign were spent in war defending the borders of the Roman Empire. In 164–5 C.E., Aurelius' general Avidius Cassius captured Seleucia and the Parthian capital Ctesiphon, bringing the Mesopotamian Jews temporarily under Roman rule. When Cassius later proclaimed himself emperor in Syria, the Jews are supposed to have supported him, as a result of which Aurelius "crushed them by means of his preses and legates" (Marcellinus, 23:3). Aurelius held a highly unfavorable opinion of the Jews of Palestine. After passing through the country on his way to Egypt, where he was harassed by their importunities and turbulence, he exclaimed "I find these people [the Jews] to be worse than the Marcomanni, the Quadi, and the Sarmatae!" (*ibid.*, 22:5). There may be an allusion to Marcus Aurelius in the \*Sybilline Oracles (5:51). Possibly some characteristics of this philosopher-emperor find expression in the portrayal of the \*Antoninus found in the Talmud.

[Uriel Rappaport]

**MARCUSE, HERBERT** (1898–1979), philosopher and social theorist. Born in Berlin, Marcuse studied in Berlin and Freiburg, where he was influenced by Heidegger. In World War I he served in the German army and, as a delegate from his unit, participated in the abortive German revolution of 1918–19. In his works, elements of Schillerian aesthetics, existentialist ontology, and utopian political thought are combined with a modified Marxist outlook and a modified Hegelian (dialectical) method to produce what Marcuse calls "Critical Theory": a critical, "negating" analysis of prevailing social, political, and cultural institutions and theories.

A member of the Frankfurt Institut fuer Sozialforschung, Marcuse left Germany in 1933, moving with the Institute to Geneva, then (1934) to New York. His first important work, "Neue Quellen zur Grundlegung des historischen Materialismus" (in *Die Gesellschaft*, vol. 9, 1932), an interpretation of the then newly discovered "Economic and Philosophical Manuscripts" of Karl Marx, established him as a pioneer in the exploration of "Marxist Humanism." He contributed to the Institute's *Studien ueber Autoritaet und Familie* (1936) and wrote a number of critical essays for its journal, notably "Der Kampf gegen den Liberalismus in der totalitaeren Staatsauffassung" (in *Zeitschrift fuer Sozialforschung*, vol. 3, 1934), in which Fascist-Nazi ideology is shown to be the ideology of capitalism in its monopolistic phase, and thus not so much antagonistic to, as an outgrowth of, liberalism – the ideology of capitalism in its (earlier) competitive phase.

After serving in the OSS and the State Department (1941–50), Marcuse was a fellow, successively, of the Russian research centers at Columbia and at Harvard. His first full-fledged academic appointment was in 1954, as professor of

politics and philosophy at Brandeis University. He left there in 1965 to become professor of philosophy at the University of California, San Diego.

In *Reason and Revolution; Hegel and the Rise of Social Theory* (1941, 1954<sup>2</sup>), Marcuse contrasted the negative (critical) social theory stemming from Hegel with the positive (positivistic) social theory founded by Comte. Marcuse next undertook a number of critical studies: of Freud's pessimistic theory that civilized society is necessarily repressive (*Eros and Civilization*, 1955); of Russia's Stalinized Marxism (*Soviet Marxism*, 1958); and of the repressive nature of a successful capitalist society (*One-Dimensional Man*, 1964.) Such a society, Marcuse argues, can satisfy material wants and employ industrial skills while it suppresses genuinely human needs and faculties and reduces man to a single, conformist dimension in order to maintain the established order and to secure the production of a surplus for the benefit of the ruling elements.

In later years Marcuse became something of a hero and an authority to many members of the \*New Left. His essay on "Repressive Tolerance" (in H. Marcuse et al., *Critique of Pure Tolerance*, 1965), in which he argues that only progressive (i.e., radical) values and movements ought to be tolerated, while toleration should be denied to repressive (i.e., rightist) values and movements, was influential among young radicals.

Marcuse's critique of a capitalist system which satisfies – and tolerates – only those needs that it itself generates (precisely because it can satisfy them to its profit) while it perpetuates domination and exploitation is resumed in *An Essay on Liberation* (1969). He also wrote *Studies in Critical Philosophy* (1973) and *The Aesthetic Dimension* (1978).

Katz, *Herbert Marcuse and the Art of Liberation* (1982); M. Schoolman, *The Imaginary Witness* (1980); P. Robinson, *The Freudian Left* (1969).

[Heinz Lubacz]

**MARCUSE, LUDWIG** (1894–1971), German essayist. Born in Berlin, Marcuse began his career as a drama critic and as the biographer of Buechner (1922) and Strindberg (1924). During his last years in Germany, he also published perceptive biographies of \*Boerne (1929) and \*Heine (1932). The implicit parallels between Heine's age and his own are prominent in the latter. In 1933 he emigrated to France, visited the Soviet Union, and escaped to the U.S. in 1939. In 1945 he became professor of German literature and philosophy at the University of Southern California. After 1949 he visited Germany several times and resettled there in 1962. He was increasingly drawn to the history of ideas: significant works in this field are his *Pessimismus, ein Stadium der Reife* (1953) and *Amerikanisches Philosophieren* (1959). These are stylized, luminous histories of ideas, written for the literate layman. In his autobiographical *Mein zwanzigstes Jahrhundert* (1960) he records a vast array of intellectual experiences, and presents a kaleidoscope of personalities in Germany, France, the U.S., and Israel.

[Harold von Hofe]

**MARCUSE, MOSES** (late 18<sup>th</sup> century), physician and Yiddish writer who grew up in Germany. In his book *Sefer Refu'ot* ("Book of Medicines," 1790) he claims to have studied medicine at the University of Koenigsberg, but his name does not appear in the University's matriculation lists. In 1774 he went to Poland and practiced medicine in several communities. The declared aim of *Sefer Refu'ot* was to transmit elementary knowledge of hygiene in Yiddish to those to whom no doctor was available. The book appears to have gone into a second edition, but only three copies have survived, and it has become a bibliographical rarity. Large extracts from it were published by Noah Prylucki (*Zamlbikher*, 2 (1917), 1–55). Marcuse goes beyond purely medical information; as an early pioneer of enlightenment among Eastern European Jews, he calls for a change of occupations among Jews and for a different type of education. The book is important for Jewish cultural history since it records customs, living habits, and economic conditions among the Jewish masses, familiar to him as a practicing physician.

**MARCZALI, HENRIK** (1856–1940), Hungarian historian. Marczali was born in Marcali, where his father, Mihály Morgenstern, was rabbi. At the University of Budapest he gained distinction as a lecturer and historical scholar, but because he refused to renounce Judaism, he was denied a full professorship until 1895. Marczali was the first Jew to obtain a chair at Budapest University. He was elected to the Hungarian Academy of Sciences in 1893, but was dismissed from his post in 1924. A historian of the positivist school and a pioneer of source criticism in Hungary, Marczali wrote many works, notably the three-volume *Magyarország története II, József korában* (1885–88; *Hungary in the Eighteenth Century*, 1910); *A magyar történet kútjainak kézikönyve* ("Handbook of the Sources of Hungarian History," 1901); and *Az 1790/1-diki országgyűlés* ("The Sessions of the Diet During the Years 1790–91," 1907). Internationally recognized as one of Hungary's outstanding historians, Marczali also edited volumes 2–4 of the *Monumenta Hungariae Judaica* (1937–38).

[Alexander Scheiber]

**MARDIN**, town in Southeast Turkey; population (2004), 71,100. A Jewish community existed in Mardin from the Middle Ages to the 20<sup>th</sup> century. In 1291 Abinadab b. Saadiah Halevi of Mardin copied \*Maimonides' *Moreh Nevukhim* (*Guide of the Perplexed*) in Arabic. During the middle of the 14<sup>th</sup> century, a Jew of Mardin named Najīb al-Dawla Abraham b. Yeshu'ah held a government position (Neubauer, *Cat*, nos. 180, 1249). At the beginning of the 19<sup>th</sup> century the number of Jews was small, but an ancient synagogue and holy places, such as the so-called Cave of the Prophet Elijah, were preserved. In 1827 the traveler \*David D'Beth Hillel found in the town "about six locally born, poor Jewish families with a small synagogue." \*Benjamin II relates that in 1848 there were 50 Jewish families, most of whom worked on the land. They spoke Hebrew and their leader was the *nasi* Mu'allim Moses. The number of families remained unchanged during the second half of the century, but the community was dispersed during the 20<sup>th</sup> century.

[Abraham Ben-Yaacob]

**MARDUK** (Heb. מַרְדּוּךְ, Jer. 50:2), patron deity of the city of Babylon. Although known as a minor god as early as the third millennium, Marduk became an important local deity at the time of the advent of the First Babylonian Dynasty as can be seen mainly from the literary introduction of the \*Hammurapi Stele and other documents. However, he was elevated to the rank of the chief deity and national god of Babylon only during the Middle Babylonian period and especially during the reign of Nebuchadnezzar I (c. 1100 B.C.E.; post-Kassite period) and not, as is commonly assumed, during the reign of Hammurapi (1848–1806 B.C.E.). This can be ascertained from the diffusion during the Old and Middle Babylonian periods of the name Marduk as a component of personal names or as a titular deity in legal and other procedures. Apart from its appearance in Jeremiah 50:2, the name Marduk is found in the Bible in personal names such as \*Evil-Merodach and \*Merodach-Baladan. In Jeremiah 50:2, the name of Marduk is paralleled by the word *bel* (Heb. בַּל), a transliteration of the Akkadian attribute of Marduk, *bēlum*, "lord" (Sumerian *EN*), which he inherited in the second millennium from Enlil, the "former" most powerful god of the Mesopotamian pantheon. (According to the Old Babylonian conception expressed in the introduction to the Hammurapi Code, he received at this time only the *illilūtu*, the governorship of the people, which had formerly rested on Enlil.) The origin of Marduk's name is unknown but there are some suggested etymologies, the most accepted being from Sumerian (A) MAR. UTU (K), "the young bull [or calf] of Samaš [Utu] the Sungod." This explanation was well known in the Babylonian tradition. (For "the 50 names of Marduk" see below.) Another etymology, put forward by Th. Jacobsen, is "the son of the storm" (or "maker of storm"?), Marud(d)uk, which brings the form of his name closer to the Aramaic-Hebrew transliteration. Abusch understands the

name to reflect original Sumerian *amar.uda.ak*, meaning "Calf of the Storm," because Marduk was never a solar deity.

Marduk's rise to the status of national god was slow but exceptionally comprehensive. It is very possible that, apart from being an historical process, his elevation was deeply influenced by his connection – not entirely proven – with Enki (Ea), the benevolent god of wisdom, incantations, and the sweet waters of the deep (Sum. *ABZU*, Akk. *apsû*), from Eridu, the most ancient holy city of Sumer.

This connection with Enki was maintained in the theology and practice of the cult of Marduk, e.g., in his identification with Asalluhi, the son of Enki, active in healing or exorcistic incantations, and in the naming of his temple in Babylon *Esagila* ("the house of the [high] raised head") after that of Enki in Eridu. Thus Marduk emerges as a national and popular god of the "second [younger] generation," who exercises influence in every walk of life as the healer and saviour of the Babylonians. In this capacity he appears in incantations, prayers, hymns, philosophical poems (e.g., *Ludlul bēl nēmeqi*, "Let me praise the God of wisdom," a variant of which was known also in Ugarit, see \*Job), and epics such as the *Erra Epic*, where the "disappearance" of Marduk because of displeasure wreaks havoc in the world and brings about the temporary rule of Erra, the god of destruction.

Marduk is the hero of *Enūma eliš* ("When above ..."), the Babylonian creation myth. In this myth the Son of the Storm is appointed by the gods to lead the fight against Tīāmat (Heb. תְּהוֹמַת, "Ocean") who has planned to destroy them. In the struggle between these two personified natural elements, Marduk gains the upper hand. At the end of the didactic-cultic epic the assembly of gods praises Marduk with 50 name-exegeses and builds the *Esagila* in his honor.

*Enūma eliš* was read aloud in front of Marduk's statue during the *akītu* (New Year; see Klein), Babylonia's most important festival. In these ceremonies the statues of Marduk and his son Nab – (Heb. נַבּוּ) were carried from Marduk's temple in Babylon to the house of the *akītu* festival outside the city walls. The elaborate ritual of this festival, known chiefly from a late (Seleucid) edition, greatly influenced many theories about supposed parallel developments in the Israelite cult (see \*Psalms, \*Kingship).

The cult and theology of Marduk began its expansion during the renewed expansion of Babylonian culture beyond Babylon in the Middle Babylonian-Assyrian period. Marduk was accepted into the Assyrian royal pantheon after Aššur and other important gods. The Babylonian elaboration of the theology of Marduk, which expressed itself also in speculative identification and the absorption of the functions of other gods into that of Marduk (this was not exclusive to Marduk), as well as the identification of Marduk with the Babylonian national entity, had momentous consequences in that in the course of time Marduk became identified as a symbol of Babylonian resistance to Assyria. The conception of Marduk decisively influenced the cult of Aššur who was also elevated to a parallel or even higher position. Thus, for example, in

the Assyrian version of *Enūma eliš*, Aššur takes the place of Marduk. The tension between the two nations resulted in a most decisive dislike of Marduk in the middle of the first millennium. After the “experiments” of \*Tiglath-Pileser III and \*Sargon, who were kings of Babylon in every respect, came \*Sennacherib who during most of his reign was uniformly anti-Babylonian and “anti-Marduk,” and who expressed this by destroying Babylon and *Esagila*. The emblems and statues of Marduk went into “captivity” many times. The return of the statue of Marduk, which was always connected with Babylonian resurrection, was interpreted as a theological change of destiny and as a punishment inflicted by Marduk on Babylon’s enemies, as in the case of Sennacherib. Thus, this antagonism became a major issue in the entire destiny of the Ancient Near East in the middle of the first millennium. A very striking example of this antagonism is found in an Assyrian satirical, quasi-theological composition (correctly reinterpreted by W. von Soden) which, far from being an “apotheosis” of the “dead and resurrected Marduk” (as was suggested earlier), is a “mock trial” of Marduk ending probably with his “execution,” as a god who – from the point of view of the Assyrians and other peoples – caused much enmity and treachery (see below). This trial is a “logical” continuation of that of the god Kingu and of his execution in *Enūma eliš*, where Marduk was the judge.

In the time of the final Assyrian period (Esarhaddon, Ašhurbanipal) and the Neo-Babylonian Dynasty, from Nabopolassar on, and again in the Early Persian period (Cyrus), Marduk was the chief god of Babylon. Because they opposed the oppressive measures of Nabonidus, the last Neo-Babylonian king, the priests of Marduk were those who made possible the peaceful occupation of Babylon by Cyrus (539; see also \*Babylon; \*Mesopotamia).

#### Marduk in the West and in the Bible

Marduk is first mentioned in the West (Syria-Palestine) in Akkadian documents from Ugarit (Middle Babylonian period around 1350; see: *Ugaritica*, 5 (1968), 792) where, as mentioned, one version of the philosophical treatise *Ludlul bel nēmeqi* was known. Also there is an incantation letter against *nambul* (“The Wrong”; “The Bad”) directing him to appear before Marduk. The first appearance of Marduk in Palestine occurs in the same period and takes the form of the personal name of Šulum-Marduk in the \*el-Amarna letters (EA). According to EA 256:20, as interpreted by Albright (in *BASOR*, 89 (1943), 12 ff.), the royal house at Aštartu (the contemporary king being A-ia-ab (= Job)) was called “The House of Šulum-Marduk.” (Another reading for “house” is advocated by Moran, 309, but the name Šulum-Marduk remains.) Marduk was known also among the Hittites, and Middle Babylonian cylinder seals dedicated to him have been found at Thebes, Greece. In the first millennium Marduk’s name appears in Assyrian and Aramean treaties from Sefire that were concluded with King Mati’ilu of Arpad (COS II, 213). In the Bible, apart from Marduk (see above), Bel (his appellative attribute) to-

gether with his son Nab – (see above) is mentioned in Isaiah 46:1 and Jeremiah 51:44. In both these prophecies divine judgment (not the judgment of a “rival” as in the case of Aššur) is pronounced against a symbolic polytheistic entity within the framework of a particular stage in history. The historical placement of these verses is difficult. Nevertheless, the announcement of biblical-prophetic judgment is consistent with the attitude of the other antagonists to Marduk and Babylon, described above.

[Pinhas Artzi and Raphael Kutscher]

**MAREK, PESACH (Piotr; 1862–1920)**, historian of Russian Jews and Yiddish folklorist. After completing his law studies at the University of Moscow, Marek was among the founders of the Benei Zion society of the Moscow Zionists in 1884. Among his studies published in the journal \**Voskhod* were articles on Jewish printing in Russia (1888), on the history of Moscow’s Jews (1893, 1895, 1896), and on the Jewish Community Council of Belorussia (1903). His most important contribution was *Di Yidishe Folkslider in Rusland* (“Yiddish Folk Songs in Russia,” 1901), which he compiled with Saul \*Ginsburg. This volume laid the foundation for later studies in the field. Marek’s sketches for a history of Jewish education in Russia, published in 1909, embraced the period from 1844 to 1873 and dealt with both traditional and secular systems of education. Marek also wrote for Russian-Jewish historical periodicals and was a contributor to the Russian Jewish encyclopedia. Due to the famine he moved to Volsk, Saratov district, and there he finalized his two works “The History of Religious Struggle” in two volumes, and “The History of the Jewish Intelligentsia in Russia.”

[Yehuda Slutsky]

**MARESHAH** (Heb. מְרֶשֶׁת, Marissa), city in Judah connected with the families of Shelah and Caleb (1 Chron. 2:42; 4:21). It was in the fourth district of the territory of the tribe of Judah (Josh. 15:44). Mareshah was one of the cities fortified by Rehoboam (11 Chron. 11:8–9). It was the home town of the prophet Eliezer the son of Dodavahu (11 Chron. 20:37) and possibly also of the prophet Micah (Micah 1:1; Jer. 26:18). In Persian or Hellenistic times, a Sidonian colony settled there and it served as an administrative center (Zeno Pap.

Plan of the Hellenistic city of Mareshah, dating from the second century B.C.E. From F. J. Bliss and R. A. S. Macalister, *Excavations in Palestine*, London, 1902.

59006, 59015, 59537). Its population, however, was mostly Edomite, and as such, Mareshah served as a base for the Seleucid armies at war with Judah Maccabee, who ravaged its territory (1 Macc. 5:66; 11 Macc. 12:35). John Hyrcanus conquered it with the rest of Idumea and it remained in Hasmonean possession until Pompey. In 40 B.C.E., shortly after its “liberation” by Pompey, the Parthians completely destroyed it (Jos., Ant., 12:353; 14:75, 364; Wars, 1:269). After the destruction of the city, Bet \*Guvrin became the center of the region. Robinson identified it with Tell Şandaḥanna, south of Bet Guvrin. Bliss and Macalister, excavating there in 1900, uncovered the Hellenistic stratum, which contained a city wall nearly square in plan (measurements, at its widest points: 520 ft. (156 m.) wide from east to west; 500 ft. (150 m.) wide from north to south). Inside, the town was laid out in the so-called Hippodamic plan, with streets intersecting at right angles. This plan was slightly distorted at a later stage of the town’s existence. In the eastern part of the town were a marketplace and a temple. Ptolemaic inscriptions, pottery, and excretion texts on limestone tablets were the main finds. In 1902, Hellenistic tombs with paintings and inscriptions were found near Mareshah. The principal tomb is decorated with representations of real and mythological animals; the inscriptions are of one Apollophanes, head of the Sidonians at Mareshah, and his family. The tomb was used from the second to the first century B.C.E. and the inscriptions indicate a gradual assimilation of the Sidonians into the Idumean and Jewish populations there. Other tombs of similar character were found in 1925 and 1962.

[Michael Avi-Yonah]

### Later Excavations

Excavations undertaken in the 1980s and 1990s by the Israel Antiquities Authority under A. Kloner’s direction uncovered many underground installations quarried in the limestone bedrock (oil presses, columbaria, tombs, and a sanctuary) connected to villas of the Lower City surrounding the tel (acropolis). The exploration of the largest (northwestern) tower of the Hellenistic fortification of the acropolis showed that it was inserted inside the glacis of the Persian period fortification, which, itself, modified the Iron Age II wall (of the eighth century B.C.E.). Its construction is dated to the turn of the third–second century, at the time of the Seleucid conquest of the area over the Ptolemies. An outer wall (*proteichisma*) surrounded the bottom of the tel, and an insula of the Lower City, attached to its face, consisted of a network of shops, with some craft installations, and dwellings above them. The Lower City was probably built under Antiochus IV (according to the so-called Hippodamic plan), but limited activities took place there already in the Iron Age, Persian, and Early Hellenistic periods. The rich finds comprised local and imported wares, among which the amphoras are evidence for the relation of the Levant with the main production centers of wine, oil, and probably fish products of all the Mediterranean, especially in the second half of the second century B.C.E. (Asia Minor, the Aegean, the Black Sea, Italy, and North Africa). Many ostraca were also found, including the copy of a wedding contract between Idumean families, written in Aramaic. The chronological distribution of the coins and the Rhodian amphora stamps provides a refinement of the historical events. The consequences of the destruction by Judah Maccabee lasted until the second half of the second century B.C.E., when a significant revival of the activities is evidenced by the discovery of an inscribed standard of measures, *in situ* inside a shop, made under the responsibility of two agoranomes in 143/2 B.C.E. The war of the Seleucid brothers Antiochus VIII and Antiochus IX initiated the decline of the city, the wealth of which was based on trade and agricultural production (oil and cereals), and in connection with the nearby port of Ascalon. The entrances of some of the houses were sealed, evidence for abandonment at the time of the conquest by John Hyrcanus, who did not destroy the city. The conquest took place probably in two stages: the first right after 113/2 B.C.E. – as evidenced by a funerary inscription and a hidden hoard of silver coins from Ascalon, both dating to that same year – and then around 108/7 B.C.E. – as evidenced by the last series of many inscribed lead weights, endorsed by the agoranome of that same year. This latter stage was most likely followed by the conversion of the inhabitants who remained in Idumea. The reduced occupation under the Hasmoneans seems evidenced by the two *mikva’ot* uncovered on the acropolis by Bliss and Macalister. The re-foundation by Gabinius in 57–55 B.C.E. was marked by the mint of coins under his name in Mareshah. However, no material evidence dates to the period of the Parthian destruction, in 40 B.C.E. Mareshah appears to have been an Idumean city administered according to the Greek tradition

(polis). This is strengthened by the recent discovery of a fragment of a civic inscription on stone, the first of its kind in the whole Southern Levant.

**MARGALLOT (Margulies), MORDECAI** (1909–1968), scholar of midrashic and geonic literature. Margalot was born in Warsaw and immigrated to Palestine as a child; he studied at the Mizrahi Teachers' Seminary in Jerusalem and he was one of the first graduates of the Hebrew University. He taught rabbinical literature at the Hebrew University 1950–57, and from 1958 midrashic and geonic literature at the Jewish Theological Seminary in New York.

In 1938 he published a scholarly edition of *Ha-Hillukim she-Bein Anshei Mizrah u-Venei Erez Yisrael* ("Differences in Religious Customs Between Babylonian and Palestinian Jewries"), a small compilation, which in his view was written in Palestine about the year 700 C.E. This was followed in 1942 by an edition of *Halakhot Kezuvot* ascribed to \*Yehudai Gaon, which, according to Margalot, was composed in southern Italy in the middle of the ninth century.

He also edited *Midrash ha-Gadol* on Genesis (1947) and Exodus (1956); *Hilkhot ha-Nagid* (1962), on Samuel ha-Nagid as halakhist, and *Sefer ha-\*Razim* (1966), a treatise on magic from the talmudic period, which he reconstructed from fragments found in various libraries. This work provided new, important insights into Jewish magic and mysticism. His major work was a critical edition of *Midrash Va-Yikra Rabbah*, 5 vols. (1953–60), which is considered to be a model of critical editing of a midrashic text. Margalot also contributed to scholarly publications and was the editor of two popular biographical dictionaries, one on the sages of the Talmud and the *geonim*, *Enziklopedyah le-Hakhmei ha-Talmud ve-ha-Ge'onim*, 2 vols. (1946), and the other of later rabbinical scholars, *Enziklopedyah le-Toledot Gedolei Yisrael*, 4 vols. (1946–50).

Margalot's wife Rachel wrote *Ehad Hayah Yeshayahu* (1954, 1956<sup>2</sup>), a defense of the unity of the Book of Isaiah.

[Tovia Preschel]

**MARGALLOT, REUBEN** (1889–1971), rabbinic scholar and author. Born in Lemberg (Lvov), Margalot qualified as a rabbi, but remained in business, eventually as a bookseller. Having been active in the Mizrahi movement in Lvov, he settled in Israel in 1935, becoming librarian of the Rambam Library in Tel Aviv. He devoted several studies to ḥasidic lore such as

*Or ha-Me'ir* and *Marganita de-R. Meir* (1926, 1964); and *Hil-lula de-Zaddikaya* (1929, 1961). At a later stage he turned to Kabbalah, producing a monumental annotated edition of the Zohar (1964<sup>4</sup>), of the *Tikkunei Zohar* (1948), of M.Ḥ. Luzzatto's *Zohar Ḥadash* (1953), and of the early kabbalistic work *Sefer ha-Bahir* (1951). He also wrote *Sha'arei Zohar* (1956), a comparative study of the Zohar's system. Margalot also wrote on the \*Emden-\*Eybeschuetz controversy and received a reply from G. Scholem (1941).

Earlier he had also published sermons and homiletical material and annotations to Ḥayyim b. Moses \*Attar's pentateuchal commentary *Ner la-Ma'or* (1932, 1959). He wrote biographies of S. Edels (1912); of Ḥayyim b. Moses Attar (1925); of Maimonides' son Abraham (1930), whose *Milhamot Adonai* he published in 1953; as well as *Le-Toledot Anshei Shem bi-Lvov* (1950), on the scholars of his native city. On Talmud and *halakhah* Margalot wrote among others *Margaliyyot ha-Yam* (novellae on tractate *Sanhedrin*, 1958) and *Nefesh Ḥayyah* on the Shulḥan Arukh *Orah Ḥayyim* (1954<sup>2</sup>). Of special interest is a study of the halakhic aspects of a political resettlement of Erez Israel (*Kavvei Or*, 1921) written under the impact of the Balfour Declaration. Among halakhic studies in a more modern vein and idiom are his *Yesod ha-Mishnah va-Arikhatah* ("Foundations of the Mishnah and Its Redaction," 1956<sup>4</sup>); and *Meḥkarim be-Darkhei ha-Talmud* ("Studies in Talmudic Methodology," 1967). Also of importance are his editions of medieval texts, particularly his annotated *Sefer Ḥasidim*, attributed to Judah b. Samuel (12<sup>th</sup> century), first published in 1924 and republished many times since. Margalot also prepared an edition of the responsa of the tosfist \*Jacob of Marvège (*She'elot u-Teshuvot min ha-Shamayim*, 1957<sup>3</sup>); of the disputations of Naḥmanides with Pablo Christiani in Barcelona in 1263 (with a biography of Naḥmanides, 1929); and of Jehiel of Paris of 1240 (1928, 1944). He received the Israel Prize in 1957 for his research on Kabbalah and Ḥasidism.

**BIBLIOGRAPHY:** Kressel, *Leksikon*, 2 (1967), 421–3.

**MARGALIT, DAN** (1938– ), Israeli journalist. Margalit graduated from the Hebrew University of Jerusalem and entered journalism in 1960 working at *Ha-Olam ha-Zeh*, a satirical political news magazine put out by Uri \*Avneri, and then at *La-Ishah*, the women's magazine. In 1964 he joined *Haaretz* covering political and parliamentary affairs, first as a Knesset reporter covering parliamentary committees and later as a political columnist. In 1977, as the paper's Washington correspondent, he disclosed that Leah Rabin had an illegal foreign bank account, the disclosure of which resulted in the fall of the Rabin government and elections which brought the Likud to power for the first time. Well connected to the country's political leaders, in the 1980s Margalit began a parallel career as host of Education Television's *New Evening* daily interview program on current affairs, and in the 1990s as host of *Politika* (later *Politika* on Israel's Channel 2), a round-table talk show in front of a live audience on topical issues. The program, while earning high ratings, often got out of hand

as participants tried to shout one another. An endearing but probing style made Margalit a popular and controversial interviewer. In 2004, following differences with the Channel 2 management, he moved to Channel 10 to present a similar program, *Politika-Plus*. In 2001 he left *Haaretz* for *Maariv* as op-ed editor and political columnist, after having served briefly in 1992 as *Maariv's* editor following its purchase by Ofer \*Nimrodi.

[Yoel Cohen (2<sup>nd</sup> ed.)]

**MARGALIT, MEIR** (1906–1974), actor. Born in Ostroleka, Poland, Margalit immigrated to Erez Israel in 1921 and worked as a laborer in the \*Gedud ha-Avodah. He began to appear on the stage as an amateur in his school days and was a member of the drama circle of the Gedud formed by Manya Arnon. He joined the Ohel studio established by the Cultural Committee and became one of its first members when it became the \*Ohel theater. In his long acting career he played leading roles. He received the Israel Prize for arts in 1964.

**MARGARETEN, REGINA** (1862–1959), pioneer in the American kosher food industry. Born in Miskolc, Hungary, Margareten came to the United States with her husband, father, mother, and four brothers in 1884. Out of the small bakery the family opened on the Lower East Side of Manhattan came Horowitz Brothers & Margareten, which continues to manufacture matzot, noodles, and other kosher products. Regina Margareten took over management of the business after her father's death in 1885 and achieved further authority after her husband's death in 1924. As of her 95<sup>th</sup> birthday she continued her daily work as treasurer and a director of the company located in Long Island City, Queens. Her 1957 birthday celebration included some 400 family members from all over the world, including children, grandchildren, great-grandchildren, and great-great-grandchildren. A philanthropist, Margareten was active in over 100 institutions. She was president of Daughters of Zion for over 50 years. Upon her death in 1959 the faculty, the Board of Directors, and students of Yeshiva Torah Vodaath and Mesivta called her "a noble woman whose long lifetime of good deeds provided a model for all Jewry" (*New York Times*, Jan. 19, 1959).

[Sara Alpern (2<sup>nd</sup> ed.)]

**MARGARITA (Margalita), ANTON** (b. c. 1490), apostate and anti-Jewish writer. Although the son of a rabbi, Samuel son of Jacob \*Margolioth of Regensburg, while he was still a Jew, denounced the Regensburg community to the authorities. He converted to Catholicism in 1522, and later became a Protestant. He was a lecturer in Hebrew at Augsburg, Meissen Zell, Leipzig, and from 1537 until his death, at Vienna University. In his first anti-Jewish book, *Der Gantz Juedisch Glaub...* (first published in Augsburg, 1530), Margarita modeled himself on similar writings by the apostates Johannes \*Pfefferkorn and Victor von \*Carben. In an attempt to ridicule the religious precepts of the Jews, their customs,

and their habits, he accused them of lacking charity, of reviling Christianity (in the \*Aleinu prayer), and finally of treason. The large number of Jewish prayers in his own translation included in the book reveal his ignorance of Jewish writings (as noted by Johann \*Wagenseil in his Latin translation of tractate *Sotah* (Altdorf, 1674), 1105) and his scanty knowledge of Hebrew. The book formed the basis of a religious disputation between \*Joseph (Joselmann) b. Gershom of Rosheim and Margarita held at the Diet of Augsburg of 1530 at the instance of Emperor \*Charles v. When Joseph of Rosheim succeeded in proving that the apostate's allegations were unfounded, Margarita was imprisoned and later banished from Augsburg. However, his book was reprinted many times (Frankfurt, 1544, 1561, 1689; Leipzig, 1705, 1713) and was widely read. It particularly influenced Martin \*Luther, who quoted it many times in his *Von den Juden und ihren Luegen*. Margarita was also the author of *Dar Muschiach Schon Khomen* (1534).

[Bernard Suler]

**MARGET, ARTHUR W.** (1899–1962), U.S. economist. Born in Chelsea, Massachusetts, after serving with the U.S. army during World War I he taught at Harvard and at the University of Minnesota. In World War II he again joined the armed forces and rose to the rank of lieutenant colonel. After the war he was chief of the finance and economic division of the United States element of the Allied Commission for Austria and during 1947–48 was chief of the United States finance division in Paris. In 1950 he joined the Board of Governors of the Federal Reserve System in Washington and became the director of its international finance division. In 1961 he resigned and went to Guatemala as regional adviser to the State Department's Agency for International Development. His major publication is *The Theory of Prices*, 2 vols. (1938–42).

[Joachim O. Ronall]

**MARGHITA** (Hung. **Margitta**, also **Margita**; referred to by the Jews as מארגארעטען (**Margaretten**)), town in Transylvania, W. Romania. Until the end of World War I and between 1940 and 1945 it formed part of Hungary. Jews began to settle there during the 18<sup>th</sup> century. A geographical-historical description of Hungary which was published in 1799 mentions Jewish inhabitants among the Hungarians and Romanians. The first Jewish settlers appear to have come from the neighboring village Petra. A community headed by a rabbi has probably existed by the close of the 18<sup>th</sup> century. The synagogue was erected in 1862. In 1885 the community also became a center for the Jews of the surrounding region. The Jewish popula-

tion numbered 944 (18% of the total population) in 1900 and 1,623 (26.7%) in 1930.

From its inception the community was an Orthodox one. The influence of Ḥasidism was felt, particularly between the two world wars. The rabbis of the community included R. Joshua Aaron Zevi Weinberger, author of the *Mahariaz responsa* (first half of the 19<sup>th</sup> century); his descendants succeeded him in the rabbinical office until the liquidation of the community. For a short period, from 1850, R. Hillel \*Lichtenstein was rabbi of the town. The students of the community's yeshivah included some who came from far away, and their numbers occasionally rose to 350. The last rabbi, who perished in the Holocaust, was R. Mordecai Azriel Weinberger; he was also the last head of the yeshivah. A Jewish press functioned in Marghita between the two world wars.

After 1940, when the city was returned to Horthiite Hungary, the Hungarian-speaking local Jews discovered that the official and public attitude towards them had changed, and that Hungarian antisemitism was no better than its Romanian variant, which they had experienced during the inter-war period.

At the time of the Holocaust, in the summer of 1944, the local Jews were taken to the district capital of \*Oradea-Mare and deported from there to Auschwitz. After the war some Jews returned to the town, numbering about 500 in 1947. Their numbers gradually decreased through emigration to Israel and other countries, so that they were finally reduced to 10 families in 1970 (out of a total population of 12,000), and their number continued to drop, mostly through immigration to Israel and old age.

[Yehouda Marton / Paul Schweiger (2<sup>nd</sup> ed.)]

**MARGO, BORIS** (1902–1995), U.S. painter, graphic artist, and educator. Margo taught art at many leading American universities. Born in Wolotschisk, Ukraine, Margo studied at the Polytechnik of Art in Odessa, the Workshop for the Art of the Future (Futemas) in Moscow, and the Analytical School of Art in Leningrad. His wife was the painter and printmaker Jan Gelb. After receiving a degree from the Polytechnik, he worked as a muralist in Montreal and then moved to New York City in 1930. There, he studied and then taught at the Roerich Museum, founded by Russian Nicolas Roerich. For a time, he was artist Arshile Gorky's assistant. In 1943, he attained American citizenship, and worked in New York City and Provincetown, Massachusetts. Early in his career, Margo developed a method of printmaking called *cellocut*, a technique in which celluloid dissolved in acetone is poured onto any smooth support, including brass, aluminum, cardboard, and copper; when solidified the plastic can be worked in various ways, such as scraping and gouging with etching and woodcut tools. Margo often combined cellocut with painting and monoprinting. The titles of an exhibition of his cellocuts at the Brooklyn Museum in 1947 suggested an involvement with science and human achievement: *Yellow Dawn* (1944), *Genetic Field* (1946), and *Radar Outpost* (1947). Like Max Ernst, he applied

decalcomania in painting, for example in his work *Enchanted Beach* (1938). In this process, paint on one surface is pressed and transferred to another surface, creating variously shaped and textured patches of pigment. This Surrealist imagery of *Enchanted Beach* depicts a ravaged, apocalyptic landscape, perhaps a reference to the bombed and war-torn landscapes of Germany and England; the composition is strewn with architectural ruins in and around which emerge ill-defined biomorphic shapes in earth-toned colors. However, the reference to magic and water reveals a hope for renewal even in the face of human suffering and devastation. *Enchanted Beach* shares stylistic features with the Surrealist works of Yves Tanguy, Max Ernst, Salvador Dali, Joan Miro, and Arshile Gorky, among others. In the 1950s, Margo's work often featured a thin vertical or horizontal line which possesses both an atmospheric and spiritual quality. Margo founded galleries in Orlando, Florida, and Provincetown, Mass. He received his first solo show at the Artists Gallery, New York, in 1939. Since then, Margo's work has been exhibited in a number of solo and group shows, at the Brooklyn Museum, Betty Parsons Gallery, the Museum of Modern Art, and the Whitney Museum, among other venues. In 1946, he received the Mildred Boericke Purchase Prize, First Award for cellocut print, Philadelphia Print Club. The Brooklyn Museum awarded him a Purchase Print Award in 1947, 1953, 1955, 1960, and 1964. In 1988, he was a recipient of a Pollock-Krasner Foundation Grant. His work is owned by many American museums, including the Museum of Modern Art, the Whitney Museum, the Art Institute of Chicago, and the National Museum of American Art, Washington, D.C.

[Nancy Buchwald (2<sup>nd</sup> ed.)]

**MARGOLIES, ISAAC BEN ELIJAH** (1842–1887), Polish rabbi and author. Born in Kalvarija, S.W. Lithuania, the son of a rabbi, Margolies devoted himself in his early youth solely to talmudic studies. After his marriage in 1862 to the daughter of a prominent member of the community of Merech in Vilna province, he took up residence there and began to take a keen interest in the Haskalah. This interest aroused the hostility of anti-Haskalah zealots, which, together with reverses in his father-in-law's business, compelled him to seek employment elsewhere. After spending some 15 years as a teacher, particularly in the house of Ezekiel Jaffe in Kovno, Margolies was appointed rabbi of Druskinnikai in Grodno province. There too he was persecuted by the opponents of the Haskalah, and two years later he accepted the invitation of the congregation of Anshei Kalvarija in New York, where he became renowned as a public lecturer and teacher. Margolies is the author of two works, *Ma'oz ha-Talmud* (1869) and *Ma'oz ha-Yam* (1871), in

which he uses his outstanding talmudic knowledge to defend the Talmud against its critics. He is also the author of *Sippurei Yeshurun* (1877), an anthology of aggadic and talmudic literature written in a pleasant and easily readable Hebrew. Margolies contributed to the Hebrew periodicals *Ha-Maggid*, *Ha-Shahar*, *Ha-Meliz*, and *Ha-Zefrah*.

**BIBLIOGRAPHY:** *Ha-Asif*, 4 (1887), 72–74 (first pagination); *American Hebrew*, 32 no. 1 (Aug. 12, 1887), 8.

[Anthony Lincoln Lavine]

**MARGOLIES, MOSES ZEVLUN** (1851–1936), U.S. Orthodox Rabbi. Rabbi Margolies was born in the small Lithuanian city of Meretz, not far from Kovna and Slobodka. On his father's side, he was the grandson of Rabbi Abraham Margolies, chief of the *bet din* of Telshe, and of Rabbi Wolf Altschul, chief of the *bet din* of Lutzan who traced his lineage to Rashi. On his mother's side, he was the grandson of Reb Eliyahu Kroszcer, the brother-in-law of the Vilna Gaon. Ordained by his uncle and by Rabbi Yom Tov Lippman Halpern, the rabbi of Bialystok in the year 1876. He served as rabbi of Sloboda for 12 years. In 1889 he was invited to assume the chief rabbinate of Boston. In 1906 he was called to the rabbinate of Congregation Kehilath Jeshurun in New York, a post which he held until his death. His primary occupation was study. The Talmud was always open on the dining room table. He began study at five in the morning and he would make a *siyyum* on the completion of the whole Talmud every year on the *yahrzeit* of his mother. It meant that he covered seven pages of the Talmud every day. Rabbi Margolies introduced the system which supervised the distribution of kosher meat in New York City. He served as president of the Union of Orthodox Rabbis of the United States and Canada. He founded the New York Kehillah and the Central Relief Committee (later absorbed by the American Jewish Joint Distribution Committee). An early Zionist, Rabbi Margolies was a member of the Mizrahi Organization of America. He also served as president of the Rabbi Isaac Elchanan Yeshiva (which ultimately became Yeshiva University) for several years, presiding over the ordination of a generation of Orthodox rabbis.

Gifted with a sharp and crisp wit, he used it not to entertain people but to drive home a point and to help solve a problem. He was consulted by people of all religious persuasions on both personal matters and communal issues. On one occasion, he was consulted by the impresario Meyer Weisgal who had scheduled a performance of "The Romance of a People" at the Polo Grounds in New York on a Saturday night in late August which coincided with the first *selihot* (penitential service). The performance was to start 8:00 in the evening which, at that season of year, would involve violating the Sabbath. Weisgal wanted the rabbi to grant absolution for the Sabbath violation. "Mr. Weisgal," the rabbi responded, "You came to the wrong Moses; I would have to refer you to the original Moses. He was the one who gave us the Sabbath." A wise and witty observation ended the inquiry.

Rabbi Margolies' natural inclination in deciding questions of Jewish law was toward leniency and tolerance. He had the scholarly erudition which enabled him to back up his decisions with abundant halakhic sources. His openness to all brought him into contact with many of the lay and rabbinic leaders of the wider Jewish community. He once shared a platform at a Zionist meeting with Rabbi Stephen S. Wise who was delivering an address. Wise turned to the rabbi and then to the audience and said "Look what Zionism can do. It can bring to the same platform a goy like me and a sage like Rabbi Margolies."

His last public appearance just months before his death was at a Madison Square Garden rally against Hitler's Nuremberg laws. He had to be carried on to the stage. His hands trembled, but his voice never wavered, as he read his message. When he finished, 20,000 people rose to their feet in reverence and appreciation. He was known to many as the RaMaZ (an acronym for Rabbi Moses Zevulun). The Ramaz School in New York was established one year after his passing in 1937 by his grandson, Rabbi Joseph H. \*Lookstein and Congregation Kehilath Jeshurun. It was named for him as an everlasting memorial to a giant of scholarship and leadership in the Jewish community.

[Haskel Lookstein (2<sup>nd</sup> ed.)]

**MARGOLIN, ANNA** (pseudonym of **Rosa Lebensboym**; 1887–1952), Yiddish poet and journalist. Born into a maskilic family in Brest-Litovsk, Belorussia, Margolin studied in the Odessa Jewish gymnasium. She came to the United States for the first time in 1906 and, working as a secretary for the philosopher Dr. Chaim \*Zhitlowsky, began to publish in the Yiddish press. Subsequently, as secretary for the Yiddish anarchist newspaper *Di Fraye Arbeter Shtime*, she published short stories under the pseudonym Khava Gros. She lived in London, Paris, and Warsaw (1910–11). After she married the writer Moyshe Stanvski, the couple immigrated to Palestine, but the marriage was short-lived, and, after she bore a son, she left her husband, returning first to Warsaw, and then, in 1914, to New York. As a writer and editor for the Yiddish newspaper *Der Tog*, Margolin wrote a weekly column, "In der Froyen-Velt" ("In the World of Women") under her own name, as well as articles under the pseudonym Clara Levin. In 1919 she married the Yiddish poet Reuben \*Iceland. She began to write poems under the pseudonym Anna Margolin in 1921, which she published in the prominent Yiddish papers and literary journals of the day in New York, Warsaw, and other Yiddish centers. She published a single volume of her own poems, *Lider* ("Poems," 1929) and edited an anthology, *Dos Yidische Lid in Amerike* ("The Yiddish Poem in America," 1923). Her poems received the warmest acclaim from her contemporary Yiddish critics. Both then and now, Margolin has been perceived as the quintessential modernist woman poet. Poems in English translation appeared in: Leftwich, *The Golden Peacock*; I. Howe and E. Greenberg (eds.), *A Treasury of Yiddish Poetry* (1969); I. Howe et al. (eds.), *Penguin Book of Modern Yiddish Verse*

(1987); M. Kay et al. (eds.), *The Tribe of Dina: A Jewish Women's Anthology* (1989); A. Kramer (ed.), *A Century of Yiddish Poetry* (1989); R. Whitman (ed.), *An Anthology of Modern Yiddish Poetry: Bilingual Edition* (1995); J. Chametzky et al. (eds.), *Jewish American Literature: A Norton Anthology* (2001).

[Kathryn Hellerstein (2<sup>nd</sup> ed.)]

**MARGOLIN, ARNOLD** (1877–1956), Ukrainian lawyer. Born in Kiev, the son of a rich sugar manufacturer, Margolin was well-known for his role in pogrom trials, and especially in the \*Beilis case. He was disbarred for his stand against the czarist court authorities but his rights were restored after the revolution. After M. \*Mandelstamm's death in 1912, Margolin became, together with Dr. I. Jochelman, the leader of the Territorialist Organization in Russia (see \*Territorialism). In 1918 he was appointed associate justice of the highest Ukrainian court, and later deputy minister of foreign affairs in the Ukrainian government. Although he resigned in March 1919 after the \*Proskurov pogrom, he nevertheless defended the \*Petlyura government, considering that the pogroms were perpetrated only by the Black Hundreds (see \*Union of Russian People) and other agitators. In 1919 he became the diplomatic representative of the Ukrainian government in England, and in 1922 he left London for the United States, where he was a journalist and lecturer. He was admitted to the bar association of Massachusetts in 1929 and to that of Washington, D.C., in 1936. Margolin wrote several books, among them *Ukraina i politika antanty* ("Ukraine and the Policy of Entente," 1922), *The Jews of Eastern Europe* (1926), and *From a Political Diary* (1946).

**BIBLIOGRAPHY:** E. Tcherikower, *Di Ukrainer Pogromen in Yor 1919* (1965), 186–9; J. Frumkin (ed.), *Russian Jewry* (1966), 164, 199.

**MARGOLIN, ELIEZER** (1874–1944), one of the commanders of the \*Jewish Legion during World War I. Born in Belgorod, Russia, Margolin settled in Erez Israel with his family in 1892 and lived in Rehovot. He was outstanding in agricultural labor and in affairs of self-defense. With the death of his parents and the difficult economic situation in the country, he went to Australia in 1900 and worked in agriculture and trade there. During World War I he joined the Australian army. He was noted for his heroism on the Gallipoli front (1915–16) and became acquainted with Vladimir \*Jabotinsky and the volunteers of the Zion Mule Corps from Erez Israel. He was transferred to the French front under the command of General \*Monash and achieved the rank of lieutenant colonel. Jabotinsky met with him in London and offered him the command of the Second Battalion of the Jewish Regiment, which consisted mostly of Jewish volunteers that had arrived from the U.S. and Canada, the 49<sup>th</sup> Royal Fusiliers (among its mem-

bers were Izhak \*Ben-Zvi and David \*Ben-Gurion). Margolin accepted the offer and, with the agreement of the military authorities, arrived in Palestine in the summer of 1918 as commander of the battalion. He also cultivated friendly relations with the Erez Israel volunteers of the third battalion of the Jewish Legion, disregarding the norms of military hierarchy. His battalion broke through the Turkish front on the Jordan River and captured the Transjordanian town of Salt, of which he was made military governor.

In December 1919, when the Legion was officially given its Jewish name, First Judeans, with the seven-branched *menorah* as its symbol, Margolin became its commander. Margolin constantly struggled against the hostile attitude toward the Legion of the British military command and military authorities in Palestine. But his sense of order could not be gainsaid; he never revealed his deep relationship to the *yishuv* and the first nucleus of its self-defense network to the outside world. With the riots that broke out in Palestine in the spring of 1920, the armed legionnaires were dispersed, with Margolin's knowledge, throughout the Arab villages, an act that prevented further bloodshed. Margolin argued with his superior officers for his right to command the Legion in this manner, an attitude that was not usually accepted in military circles.

With the gradual dismantling of the Legion, the British Military High Command decided to establish the Palestine Defense Force, composed of a Jewish and an Arab unit. Margolin was destined to be the commander of the Jewish unit (March 1921). Riots again broke out in Jerusalem and Tel Aviv-Jaffa (spring of 1921), and on May 1 Joseph \*Brenner and his friends were killed. Jewish legionnaires, including discharged ones, took arms out from the military camp in Sarafand without Margolin's knowledge and used them to stop the riots. Margolin arrived in Tel Aviv on May 2, mobilized both in-service and discharged soldiers, and provided them with arms from the military stores. This act served as a pretext to abandon the plan of the Palestine Defense Force and finally disband the Legion. Margolin resigned from the army, rather than face a court martial, returned to Australia, and went into business. Throughout his life he longed to return to Erez Israel. In 1950 his remains were transferred to Israel and reinterred in Rehovot. A childhood friend from Rehovot, the Hebrew author Moshe \*Smilansky, described Eliezer Margolin in one of his stories, named after the Arab and Bedouin nickname for him, "Hawaja Nazar."

**BIBLIOGRAPHY:** Tidhar, 5 (1952), 2324–25; M. Smilansky, *Mishpahat ha-Adamah*, 3 (1951), 167–76; B. Dinur (ed.), *Sefer Toledot ha-Haganah*, 1–2 (1954–63), index; Ever Hadani, *Am be-Milhamto* (1953<sup>3</sup>), 178–81; E. Gilner, *War and Hope: A History of the Jewish Legion* (1969), index.

[Getzel Kressel]

**MARGOLIN, JULIJ** (1900–1971), Israeli publicist, writing in Hebrew and Russian. Born in Pinsk (Belorussia), the son of a physician, Margolin spent his youth there and in the Ukraine. After World War I, he studied philosophy in Berlin. In 1936

he settled in Tel Aviv with his family and worked as a writer and journalist. However, when on a private visit to Poland in the summer of 1939, he was arrested by the advancing Russians after the outbreak of World War II and sentenced to five years in labor camps for alleged infringement of passport regulations. Margolin wrote three works in the labor camps: *The Theory of the Lie*, *The Doctrine of Hate*, and *On Liberty*, but they were discovered during a search of his effects before his release and were destroyed.

After his return to Erez Israel in 1947, Margolin wrote a factual account of his horrifying experiences; this was one of the most detailed reports published until then on conditions in Soviet labor camps. The book first appeared in a French translation under the title *La Condition Inhumaine*, and later in New York in the Russian original, and in 1968 in a German edition.

In Israel, Margolin worked for various periodicals. He founded an Israel Association of Former Prisoners of Soviet Labor Camps and during his last years he was involved in various activities in support of Jewish emigration from Soviet Russia. He also wrote *A Tale of Millenia: A Condensed History of the Jewish People*, which appeared posthumously with a foreword by Michael Zand.

**BIBLIOGRAPHY:** E. Gottgetreu, in: *Allgemeine Juedische Wochenzeitung* (Feb. 12, 1972); H. Reichmann, *To the Memory of a Friend* (Russian, 1971).

[Erich Gottgetreu (2<sup>nd</sup> ed.)]

**MARGOLIN, MOSES** (1862-?), Zionist writer. After completing his studies at the University of St. Petersburg, Margolin was appointed secretary of the editorial board of the Russian *Entsiklopedicheskiy Slovar* ("Encyclopedic Dictionary") of Brockhaus-Efron and of several other Russian encyclopedias. He was active in Jewish public life, in the \*Society for the Promotion of Culture among the Jews of Russia, the \*Jewish Colonization Association, and other organizations. In 1904 he was one of the editors of the Russian-language Zionist newspaper, *Yevreyskaya Zhizn*. In his studies in Jewish history Margolin attempted to demonstrate the legitimacy of the historic development of the Jewish people. He deals with this in *Osnovnye techeniya v istorii yevreyskago naroda* ("Basic Trends in the History of the Jewish People," 1900, 1917<sup>2</sup>) and in *Yevreyskaya zemlya* ("A Jewish Land," 1918). Under the Soviet regime Margolin belonged to the small group of Jewish intellectuals who attempted to continue their research work in Jewish history; he contributed until 1930 to the publications which these circles published. No information about his subsequent fate is known.

[Yehuda Slutsky]

**MARGOLIOT, MOSES BEN SIMEON** (d. 1781), Lithuanian rabbi and commentator on the Jerusalem Talmud. Margoliot was born in Kedziniai, near Kovno, Lithuania. His pupils included \*Elijah of Vilna, then a boy of seven. Margoliot served as rabbi in several communities in the Samogitia region of Lithuania.

His main claim to fame rests on his important commentary on the Jerusalem Talmud, to all intents and purposes the first of its kind. His commentary is divided into two parts: *Penei Moshe*, an explanation of the text; and *Mareh ha-Panim* which gives the parallel passages in the Babylonian Talmud, and attempts to explain the differences between the two with regard to both text and content. Only part of his commentary, to the order *Nashim* (Amsterdam, 1754), and to the order *Nezikin* and the tractate *Niddah* (Leghorn, 1770), was printed with the text in his lifetime. His commentaries to the remaining tractates were published after his death (to *Berakhot*, Leghorn, 1785?) and the full commentary was not published until 80 years after his death, together with the text of the Talmud (Zhitomir, 1860-67). It has become the standard commentary on the Jerusalem Talmud and has been printed in almost every edition, affording ample evidence of Margoliot's vast erudition in Talmud and rabbinic literature as a whole. He paid careful attention to problems of the text, and had at his disposal many early manuscripts. He was the first to realize the vital importance of the Tosefta for an understanding of the Jerusalem Talmud, and he had an ancient manuscript of it which was superior to the printed text of his day both in completeness and accuracy. Margoliot also endeavored to acquire the knowledge of the natural sciences requisite for a proper understanding of the Jerusalem Talmud. In 1779, when he was nearly 70 years of age, his name is found among the students enrolled in the botanical department of the University of Frankfurt on the Oder. His interest in botany was undoubtedly due to his desire better to understand the agricultural laws in Erez Israel found in the order of *Zera'im* in the Jerusalem Talmud, but to which there is no \**Gemara* in the Babylonian.

Margoliot's commentary is one of the two standard commentaries on the Jerusalem Talmud, of much greater importance than that of David \*Fraenkel, and has become indispensable to the student. From his introduction to the commentary, it is clear that he wandered from country to country. For several years he served as a rabbi in Amsterdam, during which time his commentary to the order *Nashim* was printed. He was in London for some time before 1754, and was in Leghorn when his commentary to the order *Nezikin* was published there. The statement by Joshua Heschel \*Lewin in his book *Aliyyot Eliyahu*, 28 that Margoliot traveled to Vilna after the publication of his commentary to *Nashim*, and there met R. Elijah of Vilna, must be regarded with reservation, because the latter never saw his commentary. In his commentary, Margoliot mentioned two of his works: *Be'er Mayim Hayyim*, a commentary to the tractates *Shabbat* and *Eruvin*, and *Penei ha-Menorah*, on the Pentateuch. He died in Brody, Galicia.

[Abraham David]

**MARGOLIOTH (Margoliouth, Margulies, Margolies, and various other spellings), family that traditionally traces its de-**

scent from \*Rashi. The name derives from *margalit* (מרגלית), Hebrew for “pearl.” The earliest identifiable member of the family was Jacob of Regensburg (see Jacob \*Margoloth). Jacob’s son Samuel may be identical with SAMUEL MARGOLIOTH, nominated elder of Great Poland and Masovian Jewry in 1527 by Sigismund I. Samuel’s son was Anton \*Margarita, the apostate anti-Jewish writer. Another son, MOSES (1540?–1616), was rabbi at Cracow and head of the yeshivah there. NAPHTALI MARGOLIOTH (b. 1562) embraced Christianity in 1603, as Julius Conrad Otto. He became professor of Hebrew at Altdorf and later returned to Judaism. Samuel’s grandson MENDEL (d. 1652), rabbi at \*Przemysl, had eight sons, all distinguished talmudists. The most outstanding member of this line, which was widely dispersed throughout Eastern Europe, was EPHRAIM ZALMAN \*MARGOLIOTH. There was a MOSES MARGULIES among the first inhabitants of the Vienna ghetto, founded in 1620. His son, MORDECAI (Marx Schlesinger), was leader of the Vienna community at the time of the 1670 expulsion. Some members of the family settled permanently in Eisenstadt. Those who later returned to Vienna called themselves Margulies-Jaffe and registered themselves as “Schlesinger.”

**BIBLIOGRAPHY:** J. Mieses, *Die aelteste gedruckte deutsche Uebersetzung des juedischen Gebetbuches aus dem Jahre 1530...* (1916); B. Wachstein, *Die Grabschriften des alten Judenfriedhofs in Eisenstadt* (1922); L. Loewenstein, *Geschichte der Juden in der Kurpfalz* (1895), 93.

**MARGOLIOTH, EPHRAIM ZALMAN BEN MENAHEM MANNES** (1760–1828), rabbi and author. Ephraim studied under his uncle, Alexander Margoloth, rabbi of Satanov, Isaac of Ostrow, author of *Berit Kehunnat Olam*, and Ezekiel \*Landau. In his youth he was rabbi of Ohanov, but later left the rabbinate, according to some reports declining an offer of the rabbinate of Frankfurt. Ephraim settled in Brody and went into business, in which he was highly successful. He owned commercial establishments in Vienna and it was said of him: “From the time of the minister Saul \*Wahl there has not been Torah and wealth such as belong to Margoloth.” He spent most of his time in study, leaving the conduct of his business to his partner Simeon Dishze. He also studied esoteric works with a group of kabbalists at Brody, and had a sound knowledge of history. Margoloth wrote many books and exchanged responsa with the greatest rabbis of his time, with some of whom he maintained close relations. He was involved in the controversy caused by Joshua Heshel \*Zoref’s book *Ha-Zoref* and established the fact that it had strong leanings toward Shabbateanism. He also contended with the communal leaders of Brody over the leniency extended to the wealthy *parnasim* under the prevailing system of communal taxation and demanded their full participation in community expenditure.

Margoloth gave his approbation to a great number of books, including many by ḥasidic rabbis. His own works, which appeared in many editions, and many of his halakhic decisions have been accepted.

His works include *Beit Efrayim*, part 1 entitled *Peri Tevu’ah*, with commentary *Rosh Efrayim* (Lemberg, 1809); part 2 Shulḥan Arukh, *Yoreh De’ah* (*ibid.*, 1810); responsa *Beit Efrayim* (*ibid.*, 1818); and another collection of responsa *Beit Efrayim* (Brody, 1866); *Shem Efrayim*, on Rashi’s commentary to the Pentateuch and *haftarot* (Ostrow, 1826); *Zera Efrayim* on the *Pesikta Rabbati* (Lemberg, 1853); *Yad Efrayim*, on Shulḥan Arukh, *Orah Ḥayyim* (in Dubno ed. of Shulḥan Arukh, *Orah Ḥayyim*, 1820). He also wrote *Ma’alot ha-Yuḥasin*, a genealogical book on the families Landau, Margoloth, etc. (Lemberg, 1900). R. Zevi Hirsch \*Chajes of Zolkiew was among his pupils.

**BIBLIOGRAPHY:** J.A. Kamelhar, *Dor De’ah*, 2 (1928), 145–9; Rubinstein, in: *Hadorom*, 4 (1958), 3–13; Rabinowitz, in: *Zion*, 6 (1941), 80–84; *Arim ve-Immahot be-Yisrael*, 6 (1955), 65–66.

[Itzhak Alfassi]

**MARGOLIOTH, JACOB** (d. between 1499 and 1512), rabbi of Regensburg (Ratisbon), originally from \*Worms. In 1497 he corresponded with Johannes \*Reuchlin on kabbalistic literature. Margoloth was considered a halakhic authority by his contemporaries and praised by them. His son SAMUEL, father of the apostate Anton \*Margarita, succeeded him as rabbi of Regensburg until the expulsion in 1519; he subsequently moved to Posen (Poznan), where he served as *av bet din* of Great Poland until after 1537. Another of Jacob’s sons, ISAAC EIZIK (d. 1525), was a member of the *bet din* of R. Jacob \*Pollak of Prague. Jacob’s *Seder Gittin ve-Ḥalizah* has been preserved in two copies, one made by his son Isaac (Bodl. Ms. 2010/3) and the other by his son SHALOM SHAKHNA under the title *Yam she-Asah Shelomo* (Bodl. Ms. 803). Part of his work was printed at the end of *Tur Even ha-Ezer* (Berlin, 1702). A privilege of Frederick III dated 1487 mentions a second JACOB MARGOLIOTH (d. before 1492), of Nuremberg. A halakhic declaration by him is noted in the responsa of R. Judah \*Minz (no. 13), on the legality of a declaration of refusal (*me’un*) to marry. R. Elijah \*Capsali named Jacob Margoloth as one of the supporters of R. Moses \*Capsali in his bitter controversy (1475–80) with R. Joseph \*Colon (*Liklutim Shonim*, 1869, p. 16), but it is unclear to which of the two he was referring.

**BIBLIOGRAPHY:** M. Wiener, in: *MGWJ*, 12 (1868), 345–51; S. Wiener, *Pesak ha-Ḥerem shel ha-Rav Ya’akov Pollak* (1897), 67–68; Graetz-Rabinowitz, 6 (1898), 436–7; A. Freimann, in: *Festschrift... Marx, *Studies in Jewish History and Booklore* (1944), 123, no. 66; R. Straus, *Urkunden und Aktenstuecke zur Geschichte der Juden in Regensburg* (1960), no. 672.

[Abraham David]

**MARGOLIOTH, JUDAH LOEB** (1747–1811), rabbi and preacher, one of the precursors of the Haskalah in Eastern Europe. Margoloth, who was born in Zborov, Galicia, served as rabbi in various East European communities and from 1805 in Frankfurt on the Oder. He was familiar with medieval and

contemporary Hebrew scientific literature as well as with contemporary Haskalah literature. In his books of sermons, he emphasized social justice and criticized the rich. He opposed Ḥasidism but also objected to the study of philosophy which he regarded as undermining faith. Thus he criticized \*Mendelssohn for advocating freedom of ideas in Judaism in his book, *Jerusalem*, but advocated the study of Hebrew grammar, the sciences, and mathematics. He wrote *Or Olam al Ḥokhmat ha-Teva* ("Light of the World – On Science," Frankfurt on the Oder, 1777). The main point of the book is the classification of the "wisdoms" into science, mathematics, physics, and metaphysics; and the art of leading men: politics, economics, and ethics. The book was well received and was enthusiastically praised by Russian and Polish rabbis. His other works include interpretations of the Torah, responsa, sermons, and linguistic studies. Margolioth's books give expression to the mood of Eastern European Jews in the early days of the Haskalah, and demonstrate the initial willingness among certain Orthodox elements to accept social reforms and even secular studies, but their disillusionment when they witnessed the radical results of Enlightenment.

[Yehuda Slutsky]

**MARGOLIOUTH, DAVID SAMUEL** (1858–1940), classical scholar and Orientalist. Born in London the eldest son of the convert missionary Ezekiel Margoliouth, Margoliouth was educated at Winchester and at New College, Oxford, where he gained two first class degrees and won the probably unprecedented total of 11 university prizes; later he was a fellow of New College (1881–89). In 1889 he was appointed professor of Arabic at Oxford University (apparently without knowing Arabic, although he quickly mastered the language), holding the position until his retirement in 1937. In 1899 he was ordained and in 1913 he became moderator in Oriental languages at London University, where he also delivered the Hibbert lectures. Margoliouth was honored by many learned societies; in 1915 he was elected as a member of the British Academy, and from 1934 to 1937 he was president of the Royal Asiatic Society. Margoliouth was an outstanding scholar in the fields of Islamic history and literature and was an important editor of medieval Arabic texts. Among his extensive writings the following are of particular Jewish interest: *A Commentary on the Book of Daniel by Jepheth ibn Ali...* (edited and translated, 1889); *The Place of Ecclesiasticus in Semitic Literature* (1890); *The Origin of the "Hebrew Original" of Ecclesiasticus* (1899); and *Relations Between Arabs and Israelites Prior to the Rise of Islam* (Schweich lectures 1921, published 1924). He also edited Whiston's English translation of Josephus (1906).

**ADD. BIBLIOGRAPHY:** ODNB online.

**MARGOLIOUTH, MEIR OF OSTRAGA (Ostrog;** d. 1790), ḥasidic rabbi in Poland; a disciple of \*Israel b. Eliezer the Ba'al Shem Tov. He was descended from a celebrated rabbinical family. From a very early age he and his elder brother became devoted and loved disciples of the Ba'al Shem Tov. R. Meir, who gained a reputation as one of the greatest scholars of his age, served as rabbi in Jaslo and later in Horodenka (Gorodenka); in 1755 he was appointed rabbi in the Lvov region and in 1777 was appointed *rabbi Ostraha*, a title officially confirmed by the King of Poland, Stanislas II Augustus, which established his authority over all the rabbis of the district. He wrote works on *halakhah* and Kabbalah, and also long didactic poems. His great prestige helped to promote Ḥasidism, which at that time gave it important support. He had five sons, all of whom became noted rabbis and scholars. His works are *Meir Netivim* (Polonnoye, 1791–92); *Sod Yakhin u-Vo'az* (Ostrog, 1794); *Derekh ha-Tov ve-ha-Yashar* (Polonnoye, 1795); and *Kotnot Or* (Berdichev, 1816).

**BIBLIOGRAPHY:** M. Biber, *Mazkeret li-Gedolei Ostraha* (1907), 198–209, 270–3; S. Buber, *Anshei Shem* (1895), 137–49, 202.

[Adin Steinsaltz]

**MARGOLIOUTH (Margalita), MOSES** (1818–1881), English priest. Margoliouth, who was Jewish by birth, was born in Suwalki, Poland. In his youth he studied in yeshivot, and in 1837 he left Poland for Liverpool, where, under the influence of Jewish converts to Christianity, he himself became a Christian in 1838. After his studies at Trinity College, Dublin (1840–44), he served as curate in Liverpool (1844). From 1877 until his death he served as vicar in Little Linford in Buckinghamshire. Among his works are *The Fundamental Principles of Modern Judaism Investigated* (1843 with Margoliouth's autobiography); *The History of the Jews of Great Britain* (1857); and *A Pilgrimage to the Land of My Fathers* (1858), a travelogue of Palestine. He was probably, but not certainly, a relative of the father of David Samuel \*Margoliouth, whose close friend he was.

His nephew, GEORGE MARGOLIOUTH (1853–1952), like his uncle Moses Margoliouth, converted to Christianity and became an ordained priest of the Church (1881). Margoliouth excelled in biblical and Oriental studies and was in charge of the Hebrew, Syriac, and Ethiopic manuscripts of the British Museum from 1891 to 1914. His works included *The Liturgy of the Nile* (Palestine Syriac Text, Translation and Vocabulary; 1896); *The Palestine Syriac Version of the Holy Scriptures* (London, 1897); and the *Catalogue of the Hebrew and Samaritan Manuscripts in the British Museum* (3 vols.; 1909–15), which has served scholars as a key bibliographical guide to this most important collection.

[Alexander Tobias]

**MARGOLIS, GAVRIEL ZEV** (1847–1935), rabbi of and leading figure in the rejectionist wing of American Orthodoxy. Born

in Vilna, he studied with Rabbi Joshua of Vilna, the uncle of the Ḥafeẓ Ḥayyim. He continued with Rabbi Jacob Beirat before entering the yeshivah of Volozhin. He was ordained in 1869 and then worked with Rav Eizele Charif to publish a commentary on the Jerusalem Talmud, titled *Noam Yerushalmi*. He went on to become head of the Rabbinical Court in Dobrova and after two years moved to Yahnovka. He then returned to Grodno where he was the leading halakhic authority, succeeding his father-in-law Rabbi Nahum Kaplan. He combined the life of a scholar and communal leader. He was one of the rare rabbis to embrace Ḥovevei Zion and was a delegate to the Second Zionist Congress in Basel. When secular leadership dominated the Zionist movement, Rabbi Margolis became alienated.

After the pogroms of 1903 he fiercely opposed the Jews who had embraced the revolutionary movement and received death threats. He wanted to declare them no longer members of the Jewish community; a harsh but more moderate proposal passed the gathering of rabbis in Cracow. Political conditions were such that he welcomed and accepted an offer from Boston and arrived in the United States in 1907. Four years later, he moved to New York as rabbi of Adath Israel, a Lower East Side congregation, a position he held for almost a quarter of a century. He arrived in the United States after having served for almost 40 years as a European rabbi and was not about to accommodate himself to the American situation too easily.

He opposed Orthodox participation in the Kehillah and would not cooperate with the Agudat Harabbonim regarding *kashrut*; he thus established a separate movement Kenneset Harabbonim and attracted some significant colleagues to the fledgling organization.

He initially supported RIETS and welcomed its creation. He was one of the speakers at its opening in 1915, but as it embraced secular learning and sought to become a college and not only a yeshivah, his support turned to opposition. Moshe Sherman said: “The major thrust of his efforts to transplant the European world of Jewish piety and observance to the United States proved to be difficult” – at least in his generation when Americanization was the primary interest of immigrants and especially of their children.

He published *Shem Olam* (1905); *Torat Gavriel*, 5 volumes (1910, 1925, 1926); *Agudat Ezov* (1924); *Ginzei Margoliot Shir ha-Shirim ve-Rut* (1921); and *Ginzei Margoliot Kohelet ve-Eikkah* (1925).

**BIBLIOGRAPHY:** J. Hoffman, “The American Rabbinic Career of Rabbi Gavriel Zev Margolis” (M.A. Thesis, 1992); M.D. Sherman, *Orthodox Judaism in America: A Biographical Dictionary and Sourcebook* (1996).

[Michael Berenbaum (2<sup>nd</sup> ed.)]

**MARGOLIS, MAX LEOPOLD** (1886–1932), U.S. biblical and Semitic scholar. Born in Russia, Margolis received a thorough training in Bible and Talmud as well as in modern sciences and languages in his native country and in Berlin. In 1889 he went to the United States. His first field of specialization was the text-criticism of the Talmud to which his dissertation was de-

voted. His earliest work reveals meticulous attention to detail, thorough mastery of the subject, rigorous application of the inductive method, and brilliance and solidity in the conclusions. At the end of his fellowship year at Columbia University, Margolis was invited by Hebrew Union College in Cincinnati to serve as assistant professor of Hebrew and biblical exegesis. During his incumbency he published his *Elementary Textbook of Hebrew Accidence* (1893), a succinct and original contribution to Hebrew grammar and phonetics, as well as several works dealing with Reform Jewish theology. In 1897 he went to the University of California at Berkeley to teach Semitic languages and in 1905 returned to Hebrew Union College as professor of biblical exegesis. He resigned from Hebrew Union College in 1910, after he and other faculty members differed with the College president regarding educational philosophy and Zionism – Margolis was a strong Zionist. He went to Europe to complete his work on his pioneering and still classic *Manual of the Aramaic Language of the Babylonian Talmud*, which appeared both in English and in German (1910). The Jewish Publication Society chose Margolis to be secretary of the Board of Editors and editor-in-chief of their new translation of the Bible into English. To this major task he devoted himself until 1917. After the translation appeared, his mimeographed *Notes on the New Translation of the Holy Scriptures* (1921), which served as the basis of the work, appeared in a tome of 646 pages for private circulation. When Dropsie College was opened in Philadelphia, Margolis became professor of biblical philology, a position he occupied from 1909 until his death. Two brief popular works *The Story of Bible Translations* (1917) and *The Hebrew Scriptures in the Making* (1922) were never expanded into full-length scholarly treatments because his energies were increasingly absorbed by his vision of a truly critical edition of the Septuagint. Choosing the Book of Joshua, he collated all the existing Greek manuscripts and by dint of minute and brilliant analysis established the principal recensions of the Septuagint, which he called Palestinian, Egyptian, Syrian, Constantinopolitan, and Mixed. On the basis of these he then recreated what he regarded as the original septuagintal text. While some scholars have differed with his underlying theory as to the nature of the Greek translation, *The Book of Joshua in Greek* (1931) is considered a work of brilliant scholarship. In the area of septuagintal studies, he also published scores of technical papers. In the field of biblical exegesis he published a brief but valuable English commentary on Micah, *Holy Scriptures with Commentary: Micah* (1908), and Hebrew commentaries on Zephaniah and Malachi in the Kahana Bible Commentary Series (1930). The book by which he is perhaps most widely known is a one-volume *A History of the Jewish People* (1927, 1962<sup>2</sup>) written in collaboration with Alexander Marx. Within the confines of a single volume the multitude of details of nearly 40 centuries of Jewish history were compressed with conciseness, clarity, and completeness. Moreover, the entire work is informed by a broad philosophic grasp of the subject, a rare balance and objectivity of treatment, and a warm love for the Jewish people and its heritage.

**BIBLIOGRAPHY:** R. Gordis (ed.), *Max Leopold Margolis: Scholar and Teacher* (1952), includes an annotated bibliography of Margolis' writings.

[Robert Gordis]

**MARGOLIS-KALVARYSKI, HAIM** (1868–1947), pioneer and administrator of Jewish settlement in Erez Israel. Born in the province of Suwalki (then Russian Poland) where his parents were landowners, Margolis-Kalvaryski was active from his youth in the \*Hibbat Zion movement. After studying agriculture in Montpellier, France, he went in 1895 to Erez Israel and became the secretary of \*Benei Moshe in Jaffa. He taught at the \*Mikveh Israel Agricultural School and later worked at \*Mishmar ha-Yarden on behalf of Baron Edmond de \*Rothschild's administration. In 1900 he became administrator of the settlements that the \*Jewish Colonization Association (ICA) founded in Lower Galilee. Margolis-Kalvaryski established a training farm for the settlers at Sejera and brought over Russian peasant families who had converted to Judaism. Between 1901 and 1905, Margolis-Kalvaryski founded the settlements Sejera (\*Ilaniyah), \*Yavne'el, \*Kefar Tavor, Beit Gan, and \*Menaḥemiyah. In 1906 he was appointed manager of the settlements in Upper Galilee.

In 1913 he and Nahum \*Sokolow met Arab leaders in Damascus to try to reach an understanding between them and the Zionist Movement. During World War I he defended the settlers imprisoned and persecuted by the Turks and helped establish collective settlements including \*Ayyelet ha-Shaḥar, \*Tel Hai, \*Maḥanaim, and \*Kefar Giladi. In 1920 Margolis-Kalvaryski negotiated with the short-lived Arab government in Damascus and attempted to save the settlements in Upper Galilee from attacks through negotiations with local Arab leaders. He became manager of the ICA settlements in northern Palestine, a member of the Palestine Government Advisory Council, and a member of the Va'ad Le'ummi (until 1929). Between 1923 and 1927 he was head of the Arab Bureau of the Zionist Executive and between 1929 and 1931 headed the joint bureau for Arab affairs of the \*Jewish Agency Executive and the Va'ad Le'ummi.

Margolis-Kalvaryski saw Erez Israel as a common homeland for Jews and Arabs belonging to a Middle East federation. He was a founder of \*Berit Shalom and similar groups which sought to reach agreement with the Arabs. In his later years he opposed official Zionist policy, which, in his opinion, was not sufficiently active in this direction. He wrote on Arab-Jewish relations in *She'ifoteinu*, 2, 3 (1931–33) and in *Be'ayot ha-Zeman* (1948). The moshav Margaliyyot in Upper Galilee is named after him.

**BIBLIOGRAPHY:** *Be'ayot ha-Zeman*, no. 27 (1947); A. Ever-Hadani, *Ha-Hityashevut ba-Galil ha-Tahton* (1955), 18–162; M. Smilansky, *Mishpaḥat ha-Adamah*, 3 (1954), 176–84.

[Yehuda Slutsky]

**MARGOSHES, SAMUEL** (1887–1968), Yiddish journalist, editor, and Zionist leader. Born in Galicia, he early joined the Zionist movement, and immigrated to the United States in

1905. From the Jewish Theological Seminary he received his rabbinical degree in 1910 and later a doctorate in Hebrew literature. From Columbia University he received his doctorate in philosophy. After engaging in various communal, educational, and relief activities before, during, and after World War I, he began his long association with the New York Yiddish daily *The Day* in 1922. He served as editor (1926–42), English columnist, and commentator on Jewish events.

Margoshes espoused the causes both of Zionism and of Diaspora Jewry. For him the survival and growth of the Jewish people everywhere were of prime importance. The strengthening of the State of Israel, while a necessary means to achieve this objective, was for him not an end in itself. Hence, he emphasized the need for Yiddish as well as Hebrew, and the building of an American center of Judaism as well as the Israel center, both interdependent and influencing each other's development, economically, politically, and spiritually. As vice president of the Zionist Organization of America, he participated in World Zionist congresses and served on the Zionist General Council for many years.

[Sol Liptzin]

**MARGOULIES, BERTA (O'Hare; 1907–1996)**, U.S. sculptor. Margoulies was born in Lubitz, Poland. The artist's early life was marked by frequent emigration: to Belgium shortly before its invasion by Germany in World War I, to Holland, and then to England. She went to the U.S. in 1921, graduating from Hunter College in 1927. In 1928, she received a fellowship from the Gardner Foundation in Boston, which enabled her to travel to Paris for two years of study at the Académie Julien and Académie Calorossi; she also studied at the École des Beaux-Arts for a brief period. In 1931, she returned to New York City; she supported herself as a social worker while opening an art studio and taking classes at the Art Students League. The New Deal offered Margoulies many opportunities to further her career: she completed a head of Andrew Jackson for the Works Progress Administration and received a commission from the Treasury Section of Fine Arts for *Postman, 1691–1775* (1936), an historically accurate aluminum statue for the Washington, D.C., Post Office Building. Margoulies' and sculptor Concetta Scaravaglione's *Railway Mail* form part of ten aluminum figures positioned in the entrance lobby to the building. In addition, Margoulies sculpted *Woman and Deer* for the 1939 New York World's Fair garden court. With funds provided by the U.S. Treasury Department, Margoulies completed a painted plaster relief entitled *Stillman Foote Acquires Homestead of John Harrington* for the Canton, Ohio, Post Office in 1939. The following year, the artist fashioned *Tomato Sculpture*, a wall-mounted terracotta sculpture commissioned for the Monticello, Arkansas, Post Office. In the composition, male and female figures work side by side to cultivate and harvest tomatoes, a crop associated with Monticello. Margoulies' sculptures, some fashioned of beaten lead and bronze, often

depicted human figures. Her simplification, stylization, and exaggeration of sculpted anatomy indicates her work's affinity with expressionism, especially that of Ernst Barlach, Kathe Kollwitz, Paula Mondersohn-Becker, and Jacques Lipschitz, among other artists. The gently smiling face of the sculpture *Walnut Boy* (1947) suggests early Greek sculpture, while the features of *Young Girl* (1936), especially her long nose and mask-like eyes, calls to mind Modigliani paintings of seated figures or Karl Schmidt-Rottloff's *Male Head* (1917). Many of her pieces possess overtly social and political themes, such as the bronze sculpture *Mine Disaster* (1942), a loosely pyramidal shaped grouping of figures awaiting news about the fate of fathers, husbands, and brothers. She also completed many pieces with Jewish themes and motifs: *Blessing Candles*, *Wailing Wall*, and *Promised Land*, the latter depicting a figure reminiscent of Moses with arms upraised. Margoulies won an Avery Award from the Architectural League in 1937, another award from the Society of Arts and Letters in 1944, and a fellowship from the Guggenheim Foundation in 1946. She lived in New Jersey and Massachusetts. Margoulies' work has been collected by the Des Moines Art Center, Whitney Museum of American Art, the Neuberger Museum, State University of New York, and Salisbury University, Maryland, among other places.

**MARGULES, MAX** (1856–1920), Austrian meteorologist. Born in Brody, Margules lectured in Vienna on mathematics and physics from 1880 to 1882. His refusal to convert to Christianity blocked his academic advancement and he left the university to become secretary of the Central Institute of Meteorology in Vienna. He held this post for 24 years. In 1906, still refusing to convert and disappointed with his lack of academic success under the Austro-Hungarian academic system, he retired on early pension. He left the field of meteorological research, set up a chemical laboratory in his home, and concentrated on independent research. The post-World War I inflation rendered his small pension insufficient to live on, and he died from malnutrition.

Margules' first group of writings dealt with the changes of barometric pressure and their diurnal double fluctuations due to inner oscillations and waves in the free atmosphere of the earth. The second group of writings dealt with the effect of hot and cold air masses on climate. In the 1890s, he organized a network of closely spaced stations in a 60-kilometer circumference around Vienna, fitted with thermo-barographs. He showed the progress of the cold and hot waves of pressure and storms, and was able to arrive at an understanding of the phenomenon. In 1901 he showed that the kinetic energy in storms would have to be much greater in order to be produced by the pressure gradient. His conclusion later replaced the accepted theory on the generation of winds. Margules

published his most important work on the energy of storms in 1903 (in *Jahrbuch der Zentralanstalt fuer Metereologie und Geodynamik*). Here he replaced "the energy of the storm" with the "potential energy of distribution of masses on the vertical plane" known as the Margules equation. This introduced a three-dimensional distribution of energy in place of the previously accepted two-dimensional distribution. He stressed that the study of air masses in their space expansion led to an understanding of their movements and proved the impossibility of understanding the problem according to methods of surface barometers only.

[Dov Ashbel]

**MARGULIES, EMIL** (1877–1943), lawyer and Zionist leader. Born in Sosnowiec, Poland, Margulies became an ardent Zionist as a young man and, after his settlement in Bohemia, had a great share in the development of Zionism there and in the west Austrian district. At the Tenth Zionist Congress (1911), he submitted a new statute for the Zionist Movement. Throughout his life he was a "political" Zionist, and in 1923 he was co-founder of the Radical Zionist Fraction (Democratic Zionists), fighting against the enlargement of the \*Jewish Agency by non-Zionists. Parallel to his Zionist activities, Margulies was one of the principal founders of the Czechoslovak "Jewish Party," of which he became president for a time. He also actively participated in the work on international minority problems and was a Jewish representative to the Congress of National Minorities. Margulies attained world renown through his action in the \*Bernheim Petition. In 1939 he settled in Palestine, where, together with some colleagues, he opened an office for legal advice.

[Oskar K. Rabinowicz]

**MARGULIES, SAMUEL HIRSCH** (1858–1922), rabbi and scholar. Margulies was born at Brzezan in Galicia; he was a descendant of Rabbi Ephraim Zalman Margolioth. \*Margulies laid the foundations of his talmudic-rabbinical knowledge at home. In 1878 he entered the university and the Jewish Theological Seminary at Breslau. In 1883 he took a degree in Semitic Languages at the University of Leipzig. He served from 1885 to 1887 as rabbi of the Congregation *Neue Shalom* in Hamburg; from 1887 until 1890 he was the rabbi of the congregation at Weilburg, in Hesse-Nassau.

When in 1889 the Jewish community of Florence advertised in Jewish newspapers in Italy, France, and Germany that the position of chief rabbi was vacant, Margulies answered the call and he was appointed chief rabbi of Florence. Margulies' dealings with the Jewish community of Florence were not too easy at the beginning. The community looked with a suspicious eye at the foreign rabbi with distinctive Zionist ideas. Nevertheless, his personal charm as well as his teaching abili-

ties soon established him as the undisputed spiritual leader of Florence's Jewish community.

When in 1899 the \*Collegio Rabbinico Italiano was transferred to Florence, Margulies became its head, and thus trained several generations of Italian Jewish spiritual leaders. Altogether he did much to revive Jewish life and consciousness in Italy and to foster contacts between Italian and other European Jewries. He founded *Rivista Israelitica* in 1904, the learned journal of his seminary (1904–15), and was one of the initiators of the weekly *Settimane Israelitica* (later named *Israel*). Margulies also established several charitable institutions in Florence.

Margulies published several essays in Berliner's *Magazin* and in the *Monatsschrift*; he wrote *Saadja Alfajūmi's Arabische Psalmen-Uebersetzung*, published at Breslau in 1884, an edition of Saadiah's Arabic translation of the Psalms from a Munich manuscript with German translation and commentary; From his German period there are also *Zwei Pesach-Predigten*, published at Frankfurt-on-the-Main in 1888, and *Dichter und Patriot*, on the life and work of D. Levi, published at Treves in 1896. His later writings include "Schwertlied Ezechiels" (also in Hebrew, in *Scripta Universitatis... Hierosolymitanarum...*, 1 (1923)); articles in his own (*Rivista Israelitica*) and other periodicals; and volumes of sermons, among them *Discorsi Sacri* (1891, repr. 1956). An autobiographical note appeared in his *Discorsi e Scritti vari* (1923).

Margulies was a leading advocate of the 1920 "Jewish Commune" experiment in Florence, which caused disagreements between Zionists and non-Zionists Jews. Margulies died on Purim day, 1922, while he was talking to the children of the Jewish School.

[Umberto (Moses David) Cassuto / Samuele Rocca (2<sup>nd</sup> ed.)]

**MARGUL-SPERBER, ALFRED** (1898–1967), German author, translator, journalist. Margul-Sperber grew up in a German assimilated family in Bukovina. After World War I, during which his family fled to Vienna, Margul-Sperber went to Paris and New York (1920–24). Returning to Bukovina, he started to work as journalist for the *Czernowitzer Morgenblatt*, soon becoming an important figure in the literary circles of Czernowitz and Vienna. In 1934 he published *Gleichnisse der Landschaft*, the first of 14 volumes of poetry which made him widely known not only for his description of the (symbolic) landscape of Bukovina, but also, especially later, as a political writer, with such poems as "Der Neger Jessy Owens U.S.A. er laeuft den olympischen Weltrekord, Fackellaeufer" (1936) and "Gespraech mit einem Kind. Aus Hitlerdeutschland 1936" (1941), in which he criticized racism and Nazism. In 1940 Margul-Sperber fled from Soviet troops to Bucharest.

As a leftist intellectual he was highly regarded after 1945 in Romania, writing in the style of social realism. Poems like "Auf den Namen eines Vernichtungslagers" (ca. 1959), "Aus dunkelsten Tagen, Der Tod Mosis," and "Nach einer chassidischen Sage und Das Ostermahl" (1941) reflect the Holocaust. At the same time, Margul-Sperber was a promoter of young German Jews writing in German like Rose \*Auslaender and Paul \*Celan, whom he influenced in his early work.

[Andreas Kilcher (2<sup>nd</sup> ed.)]

**MARḤAB AL-YAHŪDĪ IBN AL-ḤĀRITH** (d. 629), warrior of Arabia, renowned for his courage. His family is said to have been of Ḥimyarite origin and several other members gained fame as warriors. They were mentioned by many Muslim historians, and were noted for their outstanding courage. Marḥab's two brothers, al-Ḥārith and Yāsir, distinguished themselves in the \*Khaybar war against \*Muhammad. Zaynab, a woman famous in Islam, who attempted to poison Muhammad to avenge the death of her husband, father and uncle in that war, was also a member of the family. Arab sources refer to him as Marḥab al-Yahūdī (Marḥab the Jew), omitting mention of his father's name. The references to the woman Zaynab are somewhat confused. One source states that al-Ḥārith was "Zaynab's father and Marḥab's brother" (al-Maqrīzī, 1:314). The same source, however, refers to Zaynab as "Zaynab the Jewess, al-Ḥārith's daughter, and Marḥab's sister." Marḥab and his brother, Yāsir, both composed poetry in the *rajaz* meter. Arab historians and biographers of Muhammad state that Marḥab died in a duel during one of the battles at Khaybar. The story, as preserved by the ninth-century historians al-Wāqīdī and Ibn Hishām, states that, during the siege by Muslim forces of one of the Khaybar fortresses, Marḥab threw a heavy millstone over the walls of the fort, killing Maḥmūd ibn Maslama. His cousin Ali ibn Abu Ṭālib promptly challenged Marḥab's brother to a duel and killed him. Marḥab, singing an *urjūza* (poem in *rajaz* meter), then came to avenge his brother's blood and met Maḥmūd ibn Maslama's brother, Muhammad ibn Maslama. In the duel Marḥab's sword stuck in his adversary's shield and Mūhammad then struck Marḥab a mortal blow. Marḥab's second brother, Yāsir, was also killed in a duel, while Zaynab's husband fell in battle. The distraught Zaynab, having lost her husband and her brothers, attempted to poison Muhammad in revenge, but he was saved by his foresight. There are conflicting traditions as to whether Muhammad had Zaynab killed, or released her after her conversion to Islam.

[Shmuel Moreh]

**MARḤESHVAN** (Heb. מַרְחֶשְׁוָן), the post-Exilic name of the eighth month of the Jewish year, frequently shortened to Heshvan (Heb. חֶשְׁוָן). Its pre-Exilic name is Bul (1 Kings 6:38). The name occurs in the *Antiquities* of Josephus, *\*Megillat Ta'anit*, and later branches of rabbinic literature, but nowhere in the Bible. It is believed to be etymologically connected with *Arahsammu*, the Assyrian for “eighth month.” The zodiacal sign of this month is *Scorpio*. Like *\*Kislev*, it consists of 29 or 30 days in either common or leap years (see *\*Calendar*). The 1<sup>st</sup> of Marḥeshvan never falls on Sunday, Tuesday, or Friday. In the 20<sup>th</sup> century, Marḥeshvan, in its earliest occurrence, extended from October 6<sup>th</sup> to November 4<sup>th</sup> (3<sup>rd</sup>), and, in its latest, from November 4<sup>th</sup> to December 3<sup>rd</sup> (2<sup>nd</sup>). Historic days in Marḥeshvan comprise: (1) 6<sup>th</sup> of Marḥeshvan, the marking of the blinding of King Zedekiah at the command of Nebuchadnezzar (11 Kings 25:7), once observed as a fast (Meg. Ta'an. 13); (2) 7<sup>th</sup> of Marḥeshvan, the commencement in Erez Israel of the Prayer for *\*Rain*, inserted in the ninth benediction of the *\*Amidah* prayer (Ta'an. 1:3); (3) 17<sup>th</sup> of Marḥeshvan, the commencement of the Flood (Gen. 7:11), and of a series of fasts by pious individuals in their intercession for rain in years of drought (Ta'an. 1:4); (4, 5, 6) 23<sup>rd</sup>, 25<sup>th</sup>, and 27<sup>th</sup> of Marḥeshvan, formerly commemorative of the respective victories of the Hasmoneans and Pharisees over the Greeks, Samaritans, and Sadducees (Meg. Ta'an. 8).

[Ephraim Jehudah Wiesenberg]

**MARI**, one of the principal centers of Mesopotamia during the third and early second millennia B.C.E. The archaeological and epigraphical discoveries there are of prime significance for the history of Mesopotamia and Upper Syria. The Akkadian-language documents from Mari date from the Old Babylonian period and are thus centuries earlier than those of the Hebrew Bible. However, the residents of Mari were western Semites, ultimately related to the Israelites and Arameans who first surface in the late second millennium but who are best known from the first. In consequence, although there is no demonstrable direct connection with the history of ancient Israel as was once thought (see *\*Genesis* and *\*Patriarchs*), there are numerous linguistic, cultural, and social data from Mari that aid us in the study of ancient Israel and the Bible. Mari (sometimes *Ma'eri* in the cuneiform sources) was located at Tell Ḥarīrī, at present some 1.5 mi. (2.5 km.) west of the Euphrates, near Abu Kemal, around 15 mi. (25 km.) north of the modern Syrian-Iraqi border. It was in an optimal position for contacts with the West and its location on the river artery, yet immediately adjacent to the

desert, was decisive in the shaping of its fortune and character.

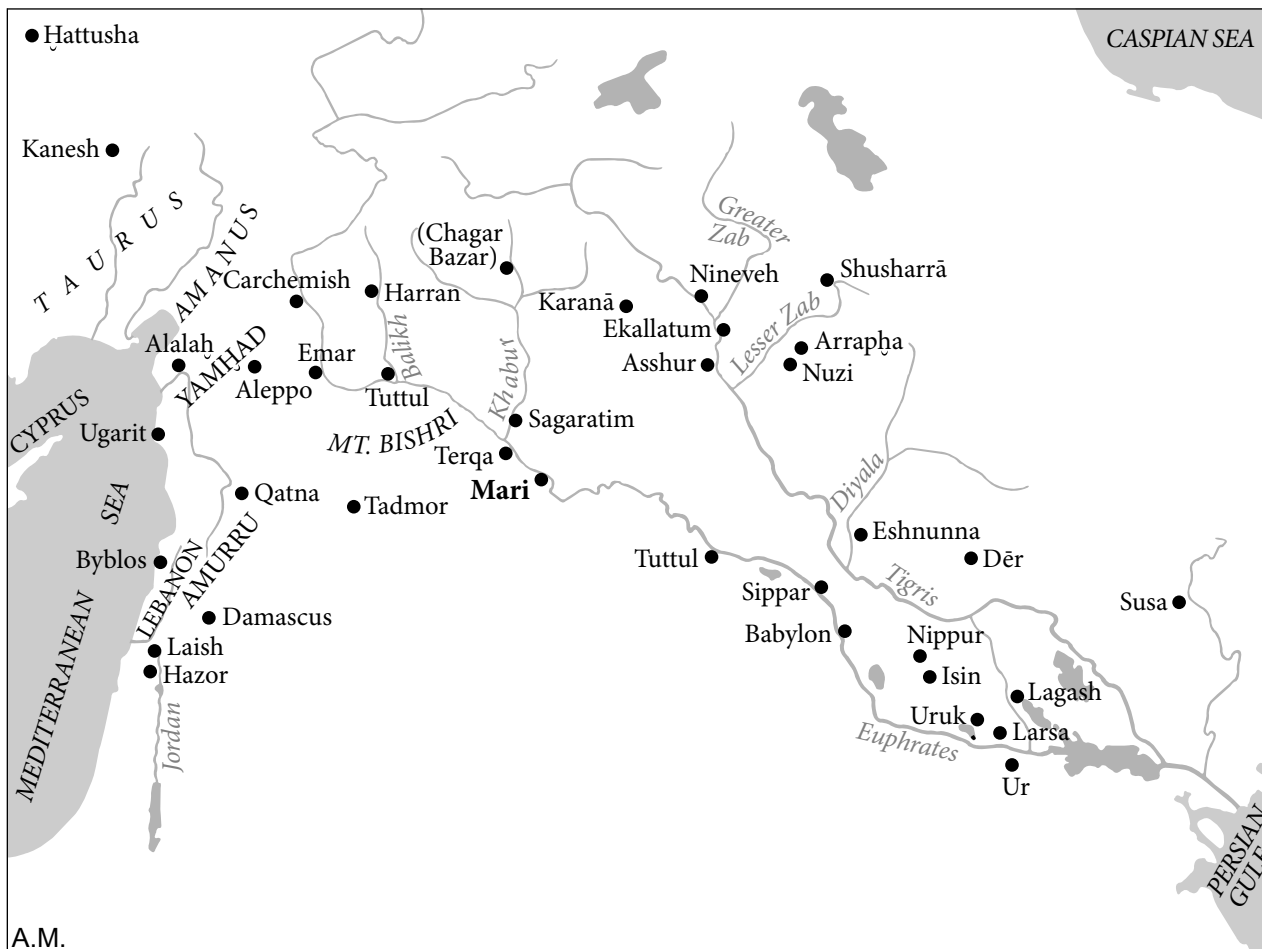

### A. Excavations and Discoveries

The French excavations at Mari were instituted in 1933 under the direction of A. Parrot and exploration continued as regularly as the international situation allowed. The archaeological evidence indicates that Mari was founded in the fourth millennium B.C.E. at the very beginning of the Early Dynastic period (ED I), reaching a cultural-artistic peak during the first half of the third millennium B.C.E. Dating to this period (known as “Early Dynastic II–III,” or “pre-Sargonic”) are a ziggurat and several sanctuaries: including a temple where the earliest list of the Mari pantheon was discovered, temples to Shamash, Ninḥursag, and Ishtar, and the pair of temples of Ishtar and Ninni-Zaza. In the latter three, there came to light many inscribed statues of local kings (such as Lamgi-Mari, Iku-Shamagan, and Iblul-Il), lesser royalty, and courtiers. Although Sumerian culture was predominant, the character of the cultic installations, the appearance of bearded figures in art, and especially the occurrence of particular divine and private names are all clearly indicative of a basic Semitic element from earliest times, with Semitic rule there centuries before the rise of Akkad.

Since 1964, the excavations have revealed two superimposed palaces from pre-Sargonic times, most impressive in themselves, including a royal chapel with an earthen altar (cf. Ex. 20:24), the sacred tradition of which was preserved even in the Old Babylonian palace built there some 700 years later (see below). Within the palace complex, a jar came to light containing a “treasure” including a lapis lazuli bead with a votive inscription mentioning Mesannepada, founder of the First Dynasty at Ur. This indicates a close contact between Mari and Ur at an early date, as do other finds from Mari, such as shell inlays essentially identical with those of the “Ur Standard” (war panel). The pre-Sargonic palace was destroyed either by Eannatum of Lagash (mid-25<sup>th</sup> century B.C.E.) or, rather, by Lugal-zaggesi of Uruk (mid-24<sup>th</sup> century B.C.E.).

After Sargon's conquest, in the second half of the 24<sup>th</sup> century B.C.E., Mari became a vassal city within the empire of Akkad; among the epigraphic evidence from this period are the names of two daughters of Naram-Sin, king of Akkad. In the final two centuries of the third millennium B.C.E., Mari was a sort of loose dependency of Third-Dynasty Ur, flourishing anew under (local) governors who bore the title *šakkanakku* (eight of whom are known by name). Indeed, a ruler of Mari is known to have given his daughter in marriage to a son of Ur-Namma, king of Ur.

The pre-eminence of Mari throughout the third millennium B.C.E. is well reflected in epigraphic sources: in the Sumerian King List it appears as the seat of the tenth postdiluvian dynasty; in the inscriptions of Eannatum mention is made of the penetration and repulse of forces from Mari as far south as Lagash; and it also appears in the inscriptions of Sargon and Naram-Sin of Akkad. At the close of the third mil-

The Near East in the Mari Age.

lennium B.C.E., Ishbi-Irra, “a man of Mari,” founded the Isin Dynasty and facilitated the collapse of the empire of Third-Dynasty Ur. After an obscure period of two centuries (from which several economic texts and 32 inscribed liver models are known), Mari reached its final period of glory in the 18<sup>th</sup> century under West Semitic rule. This latter was quashed by Hammurapi, king of Babylon, and Mari never regained its former position.

In the 13<sup>th</sup> century, Tukulti-Ninurta I conquered the meager settlement there and stationed a garrison in the city for a short time. The uppermost layer on the site dates to the Seleucid-Roman period.

In the second half of the second millennium B.C.E., Mari was still sufficiently important to be mentioned in the \*Nuzi documents (horses and chariots were sent there), in recently found texts at \*Ugarit (“Ishtar of Mari” in an alphabetic text, and in an epithet of another deity in a Hurrian text), and in the Egyptian geographical lists of Thutmosis III and probably also of Ramses III. The land of Mari appears in the neo-Assyrian geographical treatise describing Sargon’s Akkadian empire (on the basis of which W.F. Albright identified Mari with Tell Ḥarīrī, long before the start of excavations there).

Finally, Mari is mentioned in a Greek itinerary, in the (Aramaic) form *Merrhan*.

**THE OLD BABYLONIAN PALACE AND ROYAL ARCHIVES.** The main discoveries at Mari are from the period of its domination by the West Semitic dynasties, in the last quarter of the 19<sup>th</sup> century and the first half of the 18<sup>th</sup> century B.C.E. (according to the middle chronology; or 64 years later according to the low chronology). Several temples of this period were built over corresponding sanctuaries of pre-Sargonic times – the temples of Ishtar, Ninḫursag, and Shamash; a temple of Dagan, also known as the “lions’ temple” (from bronze lions found flanking its entrance), was founded by the late third millennium B.C.E. This latter deity, the biblical \*Dagon, held a prime position in the West Semitic pantheon, and at Mari bore the titles “King of the Land” and “Lord of all the Great Gods.”

The outstanding architectural discovery from this period, however, is the royal palace – a structure of unparalleled magnificence and widespread fame in its time. This residence, enlarged successively by each of the West Semitic rulers at Mari, reached its zenith under Zimri-Lim, with an area of about eight acres and including over 300 chambers, corridors, and

courts. Besides the private quarters for the royal family and entourage, there are administrative offices, a scribal school, quarters for visiting dignitaries, a royal chapel, a throne room, and a reception chamber. Service areas included guard quarters, workshops, and storerooms. Special elegance was provided in several halls and courts by multicolored frescoes depicting chiefly ritual and mythological scenes, including an investiture of a king (Zimri-Lim?) in the presence of several deities. This ceremony takes place in an idealized garden, its trees guarded by “cherubim” and symbolically watered by four streams flowing from a single source – all reminiscent of the biblical Paradise story. Many of the figures in these murals are depicted as typical West Semites.

The discovery of greatest impact on historical and biblical research comprises the more than 20,000 cuneiform tablets from the several archives in the palace (there was no library), written in the Babylonian language (see below). The original discovery has been supplemented since 1979 by fragments of a few thousand documents discovered by Margueron’s excavations. The earliest publication of the documents was begun by the Assyriologists G. Dossin (dean of the Mari epigraphers), M. Birot, J. Bottéro, Mme. M.L. Burke, A. Finet, J.R. Kupper, and the late G. Boyer and Ch.F. Jean, mostly in the series *Archives royales de Mari* (ARM). In the early years, the texts appeared in two parallel series, not necessarily at the same time: one containing cuneiform copies, and the other with transliterations, French translations, brief notes, and some form of commentary or glossary. Thanks to computer printing technology, the more recent publications often include hand copies and high-quality photographs alongside texts. The texts published so far (through ARM 29 (2005)) have shed much light on the administrative, economic, cultural, and political facets mainly of Upper Mesopotamia and Upper Syria in the 18<sup>th</sup> century B.C.E. – regions previously known only vaguely.

The archives were found to be distinguished according to subject. The political-diplomatic archives include correspondence between the king of Mari and his agents, both at the palace and abroad, as well as with foreign potentates. They provide the earliest insight into the complexities of “suzerain-vassal” relationships, diplomatic protocol, and the fluctuating alliances and plots rampant in the Ancient Near East. A noteworthy class of letters is the unusually extensive women’s correspondence published, in ARM, 10, revealing the prominent role of women in activities of the realm. The outstanding case is that of Shibtu, Zimri-Lim’s queen (chief wife), who enjoyed the king’s utter confidence, representing his interests during his absence from the city and exercising considerable influence in her own right.

The majority of documents are economic or administrative in nature, dealing with the maintenance of the palace, official trade abroad, lists of goods, and rosters of persons in royal employ (such as a list of nearly 1,000 captives [?] from the Harran-Nahor region engaged in the manufacture of clothing for the palace). Of a unique category are the some 1,300 tablets containing lists of daily provisions for the palace, often

summarized by month. Though dealing only with “vegetarian” foodstuffs and beverages, they shed light on Solomon’s “provisions for one day” and possibly also his monthly quantities (cf. 1 Kings 4:22–23, 27 [5:2–3, 7]; cf. also Neh. 5:17–18). The royal table at Mari, known to have entertained hundreds of guests on occasion, was served by spacious kitchens – in one of which were found numerous molds for preparing fancy cakes some bearing animal and goddess motifs (cf. Jer. 44:19).

Dozens of legal tablets were also found, mostly contracts concerning transactions and loans of silver or grain (ARM, 8), revealing that the palace served as a sort of exchange. Of exceptional interest is an adoption contract which ensured the “primogeniture” of the “eldest” (i.e., first adopted) son, stipulating that he receive a double portion of the inheritance; this is in full accord with biblical law (cf. Deut. 21:15–17).

The very few literary and religious compositions found at Mari include a lengthy Ishtar ritual in Babylonian, as well as six texts in Hurrian. That Hurrian was used occasionally in diplomatic correspondence is known from the only other tablet at Mari in that language, a letter written to Zimri-Lim.

### B. Mari under West Semitic Rule

The origins of the West Semitic, or “Amorite,” dynasties are shrouded in darkness, though there are clues pointing to North Syria for the local line at Mari. Thus, the theophoric name element *-Lim* (perhaps derived from the word for “folk,” “people”; cf. Ugaritic *l'im* and Heb. *Le'om*) is found at both Aleppo, in the dynastic name Yarim-Lim, and Mari, in the royal names Yagid-Lim, Yaḥdun-Lim, and Zimri-Lim. It is also present in the name of Yashi-Lim, ruler of Tuttul (probably the one at the mouth of the Balikh River), and Ibbit-Lim, ruler of Ebla (probably Tell Mardikh), both several generations earlier than the above. Furthermore, the title “king of Mari, Tuttul, and the land of Ḥana” was borne by both Yaḥdun-Lim (Disc Inscription) and Zimri-Lim (cf. a fragmentary inscription from Terqa, between Tuttul and Mari). And, indeed, the site of ancestor worship for both the local and the “Assyrian” dynasties at Mari lay at Terqa, around 44 mi. (70 km.) to the northwest, at the mouth of the Khabur River. Hence, the immediate origin of the West Semitic rulers at Mari would appear to be in the Terqa region.

THE REIGN OF YAHDUN-LIM. The historical figure of Yagid-Lim, founder of the local dynasty at Mari, is vague, and none of his records have been found, though there is a seal of one Qīšti-Iliba who calls himself servant of Yagid-Lim (RIME 4: E.4.6.7). Nor have many tablets from the reign of his son, Yaḥdun-Lim, been published, though in 1965 an archive of some 300 of his economic texts came to light. It is known, however, that Yaḥdun-Lim was able to stabilize his kingdom, establishing his dominance over the entire Middle Euphrates region, as is evident from the dozen known year-formulas and especially the two extant royal inscriptions from his reign (RIME E4.6.8; E4.6.8.1).

The shorter inscription (the “Disc Inscription”) relates that Yaḥdun-Lim fortified Mari and Terqa, founded a fortress

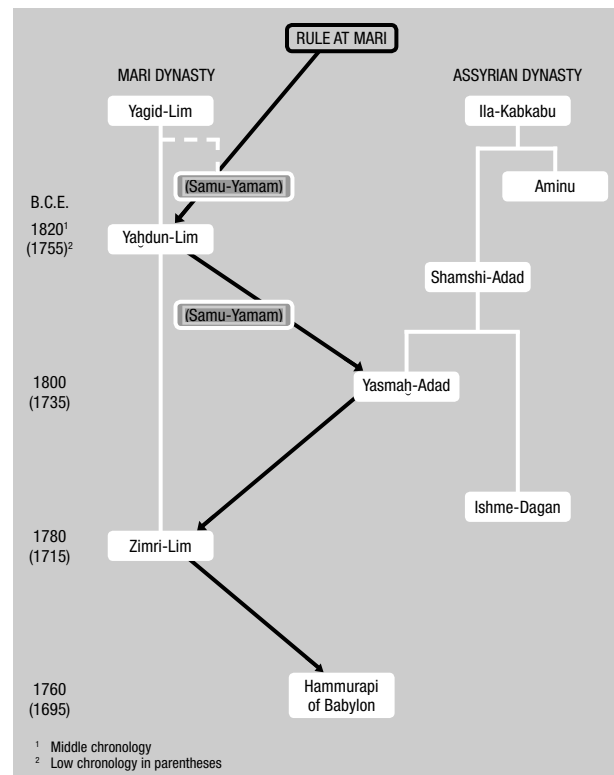

on the desert fringe (naming it after himself – Dur-Yahdun-Lim), and laid out an extensive irrigation system (boasting that “I did away with the water bucket in my land”). The other text, the Foundation Inscription of the Shamash temple, is a splendid literary composition relating his campaign to the Mediterranean coast and the “Cedar and Boxwood Mountain,” where he obtained several types of choice wood, “and made known his might.” However, this was probably only a passing episode and not a lasting conquest. Thirty-five economic texts published in 1970 are dated by two year-formulas for one Sumu-Yamam, an obscure character who ruled at Mari either before or after Yahdun-Lim. Also elusive is his kinship – whether to the local dynasty or otherwise – for the few other references to him, such as in a “letter to a god” (ARM, 1, 3), are inconclusive. This same letter also reveals the assassination of Yahdun-Lim (or Sumu-Yamam) in a court conspiracy, much to the benefit of Shamshi-Adad, scion of a rival West Semitic dynasty, who established himself in Assyria, swiftly gaining control over large portions of Mesopotamia.

**THE ASSYRIAN INTERREGNUM.** Yahdun-Lim’s removal facilitated a take-over by Shamshi-Adad, who installed his son, Yasmaḥ-Adad, as viceroy at Mari. Under his father’s tutelage, Yasmaḥ-Adad reorganized the local administration, cultivated ties with neighboring lands, and secured his flank against marauding nomads. Though his brother Ishme-Dagan, upon succeeding to the throne of Assyria, promised to maintain the protective policy of their father, Yasmaḥ-Adad was left adrift only three or four years later, when he was defeated by Eshnunna, a West Semitic kingdom beyond the Tigris. Altogether, Assyrian control of Mari lasted some 20 years.

**THE KINGDOM OF ZIMRI-LIM.** Thus, the stage was set for the advent of Zimri-Lim, the son of Yahdun-Lim, who in the interim had lived in exile under the wing of Yarim-Lim, king of Yamḥad (capital, Aleppo). Yarim-Lim, who had become Zimri-Lim’s father-in-law, was most instrumental in restoring him to the throne of Mari. Thirty-two year-formulas are known for Zimri-Lim’s reign – though many of them may have been alternate designations for the same year, for (chronologically) he cannot have ruled for so long a period. Zimri-Lim’s reign, during the tumultuous interval between Assyria’s decline and the rise of the empire of Hammurapi, marks Mari at its apogee. It is this period which is best represented by the archives found at Mari which provide a thorough insight into the organization of the kingdom. Interestingly, several of Zimri-Lim’s letters have been found in the royal archives at Tell el-Rimah (between the Upper Khabur and the Tigris), probably to be identified with the city of Karana, mentioned in the Mari correspondence. Mari had become a principal political force in Mesopotamia, alongside Babylon, Larsa, Eshnunna, Qatna, and Yamḥad (as is known from a contemporary political report). Relying heavily on his diplomatic cunning, Zimri-Lim developed an elaborate intelligence system – within his sphere of influence and beyond it. Frequent alliances, as with Yamḥad and Babylon, were designed to meet the danger

of the moment – e.g., now against Eshnunna, then against Elam. His military endeavors were directed mainly against the hostile tribal federation of the Yaminites (the previously subdued Ḫanean tribes were already in his service; for both, see below). This political situation crystallized hand in hand with the development of economic ties branching out as far as the island of Dilmun (in the Persian Gulf), Elam (in the east), Arrapha and Shusharra (in southern Kurdistan), Capadocia (in the north), Phoenicia and Palestine (in the west), and even Kaptara (Crete, in the Mediterranean). Indeed, tolls from caravan and riverine trade were one of Zimri-Lim’s principal sources of income. This golden age at Mari came to an abrupt end, however, when Hammurapi turned on his former ally and conquered the city in his 32<sup>nd</sup> year, during the consolidation of his empire (in 1759 B.C.E. – middle chronology; or 1695 B.C.E. – low chronology). Two years later he ordered the razing of the city to the ground.

**MARI AND THE WEST.** Mari was bound closely with the lands to the west – Syria, and even northern Palestine – in economy, politics, culture, religion, and ethnic background. Already noted were the ties between the local dynasty at Mari and that of the kingdom of Yamḥad; Zimri-Lim’s queen, Shibtu, was from Aleppo and he appears to have held land there, which was either a patrimony or received as a dowry. Similarly, the rival Assyrian dynasty at Mari secured political ties in the west through the marriage of Yasmaḥ-Adad to a princess from Qatna, Yamḥad’s southern adversary. Another form of contact with the west is the already-mentioned campaign by Yahdun-

Lim and the later expedition by Shamshi-Adad to the Levant. Zimri-Lim is also known to have visited various places in the west: Yamḥad, where he had presented a statue to “Adad the great god of Aleppo,” and Ugarit, where he was accompanied by a select bodyguard (*šabum beḥru*; see below).

The region farther southwest is only sparingly mentioned in the Mari archives, but references are found to Byblos on the Phoenician coast and the land of Amurru in southern Syria (the Apum of the Mari texts is most probably only that in the Khabur region, and not the one around Damascus, known from the contemporary Egyptian Execration Texts and various later sources). In northern Palestine, Hazor is noted several times in the Mari archives as the destination of diplomatic and economic emissaries. In one instance, emissaries passing through Mari are on their way to Yamḥad, Qatna, and Hazor, and a fourth place whose name is broken (the traces in ARM, 6, 23:23 may perhaps be restored to read “Megiddo,” rather than “Egypt” as is sometimes proposed, which surprisingly does not appear in the Mari archives). In an economic document, Aleppo, Qatna, and Ugarit are listed, alongside Hazor (“Ibni-Adad, king of Hazor”) and Laish (“Waritaldu at Laish,” the later Dan north of Hazor), as destinations of large consignments of tin, a commodity of major importance among the exports to the west (it being alloyed with copper to produce bronze). On the other side of the ledger, Mari imported from the west horses and fine woods (from the Qatna region), various precious vessels of Syrian and “Cretan” style, Cypriot copper, fabrics, and garments (especially from Aleppo and Byblos), and large quantities of foodstuffs, such as honey, wine, and olive oil.

### C. Mari and the Bible

The Mari documents bear indirectly upon Israelite history geographically; the “patriarchal homeland” (Aram-Naharaim, so called at a later date) lay within Mari’s horizons; ethnolinguistically, the Hebrews were of the same West Semitic (or Amorite) stock as that strongly manifest at Mari (see above); and sociologically, for the descriptions of tribalism comprise the most extensive insight into the nomadic and settled phases of the Israelite tribes.

1. PATRIARCHAL HOMELAND. The cities of Harran and Nahor (cuneiform *Nahūr*), in the Upper Balikh Valley – which figure in the Bible as ancestral habitats of the Patriarchs – are well documented as important dependencies controlled by governors from Mari (one of whom, Itur-asdu at Nahor, is the subject of ARM, 14). Both cities were foci of tribal foment: at the temple of Sin in Harran, a treaty between the “kings” of Zalmaqum and the Yaminites was sworn against Mari; while at Nahor reinforcements had often to be called in to quell local uprisings inflamed by the \*Habiru. Alongside the West Semitic peoples in this region was a considerable Hurrian element (note the typically Hurrian name of King Adalshenni, who at one time gained control over Nahor), which may well have left an imprint upon the initial ethnic and cultural composition of the Hebrews. The picture revealed in the Mari archives,

of far-reaching tribal migrations (such as those of Yaminite groups) and caravan conditions between the Euphrates region and Syria-Northern Palestine, provides an analogy for the biblical narratives of the patriarchal wanderings between Aram-Naharaim and Canaan.

2. ETHNO-LINGUISTIC AFFINITIES – THE WEST SEMITIC IDIOM. Evidence for the West Semitic (or \*Amorite) origin of the majority of the people figuring in the Mari documents is revealed in the onomasticon (name-stock) and specific linguistic features of the Mari dialect. Many of the hundreds of proper names known from the Mari texts are paralleled in the Bible, especially in the patriarchal narratives and the Exodus-Conquest cycle, which demonstrate a strong archaizing tendency. At Mari, where Yahweh was unknown, these names occur often with (other) theophoric (god-bearing) components; e.g., Jacob and Ishmael – i.e., *ḥaqba-ḥammu/-aḥim/* etc. and *Yasmaḥ-El/-Adad/-Ba’al/* etc. The names of the Israelite tribes of \*Levi and \*Benjamin also seem to have their parallels. Thus, the tribal designation at Mari, *DUMU.MEŠ-yamin(a)*, “Yaminites,” bears the same connotation as Benjamin – “son(s) of the South,” i.e., southerners, and it is preferable to render the logogram for “sons” as West Semitic *bini-yamina* a form conveniently homophonous with the Hebrew *Binyamin*. The West Semitic imprint on the standard Old Babylonian (OB) dialect of the Akkadian language in use at Mari is evident to a certain extent in phonology, morphology, syntax, and, especially, vocabulary. The lack of terms in OB for certain specific features in the society and way of life of the population of the Mari region necessitated the frequent adoption of West Semitic expressions in the shape of either Akkadian words employed in new, West Semitic connotations or out-and-out loanwords from the West Semitic – words well represented in biblical Hebrew (often in exalted language, as also at Mari). Besides the linguistic yield, a comparative study of the West Semitic loanwords at Mari and their Hebrew cognates may broadly illuminate the nature of the societies involved. Thus, a list of such lexical items would include the following:

Geographical terms – *ḥamqum* = Hebrew *‘emeq*, “valley”; *k/qašum* = Hebrew *qazeh*, “(desert) frontier”; *ḥen* (as a place-name) = Hebrew *‘ayin*, “spring”; points of the compass – *aqdamātum* = Hebrew *qedem*, “east”; *aḥarātum* = Hebrew *aḥar*, *aḥor*, “west”; north and south were preserved in the tribal names *DUMU.MEŠ-sim’al* = Hebrew *semol*, and *DUMU.MEŠ-yamina* = Hebrew *yamin*; fauna – *ḥa(ya)rum* = Hebrew *‘ayir*, “donkey foal”; *hazzum* = Hebrew *‘ez*, “goat”; *ḥiglum* = Hebrew *‘egel*, “calf” (referring to a zoomorphic vessel at Mari); flora – *suḥrum* = Hebrew *se’orah*, “barley”; *ḥimrum* = Hebrew *ḥemer*, “a fermented drink”; military terms – *be(h)rum* = Hebrew *bahur*, “(select) trooper”; *bazaḥātum*, “military outpost” (cf. Heb. root *bz’*); *sag/qbum*, “guard” (later Heb. *zaqif?*); note perhaps *madārum* = later Hebrew *mador* (?), “dwelling place”; *mas/škabum* = Hebrew *mishkav*, “a lodging”; probably *sablum* = Hebrew *sevel*, “corvée”; and *yagātum* = Hebrew *yagon*, “sorrow.”

A series of West Semitic terms is also found for tribal organization and institutions (see below, Nos. 3 and 4), which were quite foreign to contemporary Mesopotamia and therefore found no adequate means of expression in the pure Babylonian lexicon; cf., e.g., the set of terms for various tribal units: *gāyūm* = Hebrew *goy*; *hibrum* = Hebrew *hever*; and perhaps *ummatum* = Hebrew *ummah*. West Semitic verbs unknown in standard Babylonian Akkadian but with cognates in biblical Hebrew include the following: *hakūm*, “to wait”; *halūm*, “to be ill”; *harāšum*, “to be silent”; *nahālum*, “to inherit, apportion”; *naqāmum*, “to avenge” (only in personal names); *qatālum*, “to kill”; *šapātum*, “to judge, govern” (and see below).

3. PATRIARCHAL TRIBAL SOCIETY. The Mari archives provide the most abundant and fruitful source material concerning West Semitic tribes of any Ancient Near Eastern source – shedding invaluable light on Israelite tribal society, its structure and organization, as well as its institutions. The wide range of the tribes mentioned at Mari – from fully nomadic to fully sedentary – and their confrontation with the indigenous population, bear directly upon an understanding of the gradual process of the Israelite settlement in Canaan and their ensuing relationship with its inhabitants. The most revealing material at Mari concerns the broad tribal federations of the Ḫaneans and Yaminites. The former were concentrated principally along the Middle Euphrates and comprised an appreciable segment of the general population (and of the army) of Mari. Indeed, the Middle Euphrates region became known as the “land of Ḫana,” and “Ḫana” was applied also to a type of soldier and a kind of wool. The name, which was basically gentilic, also came to denote in general the generic concept of a (semi-) nomad; it seems to be in this sense that Zimri-Lim was called “king of the Ḫaneans,” in parallel to “king of the Akkadians” – which together reflect the two main population strata, seminomadic and indigenous sedentary (see below). The Yaminites were in general less settled and posed the greater threat in this period, both to the rest of the population and to the authorities. In their subtribes (Ubrabu, Amnanu, Yaḥruru, Yariḥu, and the affiliated Rabbeans), they were dispersed over a wide arc from the city of Sippar (and even as far south as Uruk) and the eastern banks of the Tigris around to the Khabur and the Balikh valleys up to the Euphrates bend, where their main concentration lay. In the west, they had crossed the Euphrates toward Mount Bisir (Jabal Bishri) and encroached upon the land of Amurru in southern Syria. Little mention is made in the Mari archives of the *DUMU.MEŠ-sim'al*, the “sons of the north,” who roamed the “upper country” in the Harran region, or of the Sutu, the fully nomadic tribe which appears more often in subsequent history. This latter ranged in the Syrian steppe and the Bishri mountains, raiding the adjacent oasis of \*Tadmor (spelled *Tadmer* at Mari) on at least one occasion. The Mari archives are surprisingly silent on the “Amorites” as a definite tribal entity (though one reference is made to a *gāyu Amurum* as a sub-clan of the Ḫaneans); in general, the designation (both spelled phonetically and in

the logogram *MAR.TU*) is restricted to the land of Amurru, far to the west, or to the military titles “great-of-Amurru” and “scribe-of-Amurru” (the latter only at Mari).

*Patterns of Settlement.* The tribal society depicted in the Mari archives is essentially dimorphic, i.e., it encompasses both nomadic and urban modes, with their inherent distinctions and interactions, social as well as economic. Tribal groups would sometimes undergo a gradual process of sedentation, splitting into partly settled and partly nomadic factions (cf. ARM 8, 11), or leading a life of transhumance – in the steppe or desert in the grazing season and in urban bases during the “off” months.

Depending on the stage of sedentation, the Ḫaneans and Yaminites dwelt in towns and hamlets (both designated at Mari as *ālāni*, literally, “cities”; the term *kaprum*, “village,” is rare in this context) and engaged in urban-agricultural pursuits (as well as herding), or in temporary encampments (*nawūm*) and engaged in purely pastoral pursuits. At Mari, the standard Babylonian word *nawūm*, “desert, uncultivated field,” or even “a savage,” took on the West Semitic connotation of a pastoral abode, precisely the connotation of the Hebrew *naweh* (primarily in poetic usage in the Bible). An illustration of this dual mode of life, is found in the distinctions *Ḫana ša nawīm*, loosely, “steppe Ḫaneans,” and *hibrum ša nawīm*, the nomadic faction of a partly settled clan (in this case, of Yaminites).

Another type of settlement originating among nomadic and seminomadic populations was the *ḥašārum* (pl. *ḥaširātum*), which, rather than an enclosure for sheep or cattle (as usually assumed), denotes a dwelling place, as does the cognate Hebrew term *ḥazerim*, referring to settlements of the Ishmaelites, the Avvites, and the “sons of Kedar” (Gen. 25:16; Deut. 2:23; and Isa. 42:11 (cf. Jer. 49:33), respectively).

*Tribal Leadership.* The Mari archives indicate that tribal leadership was in the hands of family heads (cf. the biblical *bet-av*, “family,” the basic unit of the patriarchal tribal organization), called *abū bītim*, “father of the household” (pl. at Mari *abūt bītim*, a West Semitic form, equivalent to Heb. *ʾivot*). The actual tribal rulers were elevated from among these family heads, leading to the use of the term *abū bītim* for certain officials, and occasionally *abū* served as a synonym for “tribal chiefs,” e.g., *abū ḫana* and *abū ldamaraš*. As in pre-monarchical Israel, the council of the “elders” (*šibūti*) appears in the Mari documents as a central institution, deciding on matters of war and peace, functioning in treaty making, and representing the tribe before the authorities.

A capital role in the tribal organization, unknown outside the Mari texts, is that of *sugāgum/suqāqum* (meaning unknown), whose function is somewhat vague. He may have been a sort of mukhtar, chief of a tribal unit or village appointed (or at least approved) by the Mari authorities from among the local leadership; this office (*sugāgūtum*) was sometimes purchased with money or sheep.

At the head of the tribal hierarchy stood the “kings” (Akk. *šarru*, p. *šarrāni*), who usually appear in the Mari texts as wartime leaders – again suggesting a special West Semitic connotation (in this case, military), much like the Hebrew *sar*. Thus, Yaḥdun-Lim’s royal inscriptions record that he defeated “seven kings, fathers (*abū*) of Ḥana” and, on another occasion, “three Yaminite kings.” This plurality of “kings” must be understood as referring to subtribal rulers that collectively comprised the tribal leadership; such a structure is also found among the Midianites (Num. 31:8; Judg. 8:12), the early Arameans (1 Sam. 14:47), and perhaps the Edomites (Gen. 36:31ff.).

#### 4. TRIBAL TRADITIONS – FUNCTIONAL AND RELIGIOUS.

The convergence of the West Semitic tribes at Mari with urban Mesopotamia involved a dual process of friction and strife alongside symbiosis and mutual adaptation; this interaction between a tribal heritage and an established civilization was characteristic also of the settlement of Israelite tribes in Canaan. In Mari, this was especially evident at the court, where despite the process of assimilation of Sumero-Akkadian civilization, much of tribal tradition was still preserved. The advice of the palace prefect to Zimri-Lim on a point of protocol may thus be interpreted: “[If] you are the king of the Ḥaneans, you are, moreover, a ‘king of the Akkadians.’ [My lord] should not ride horses [i.e., in tribal fashion]. May my lord drive in a wagon and mules [i.e., in a “civilized” manner], and may he [thus] honor his royalty” (ARM, 6, 76:20–25). This same distinction is found, too, at the early Israelite court, though there the mule was ridden (11 Sam. 13:29; 18:9; 1 Kings 1:33) and the horse yoked to the chariot (1 Sam. 8:11; 11 Sam. 15:1; 1 Kings 1:5).

Tribal heritage from the nomadic phase did persist in spite of the curbs of sedentation and acquiescence to royal administration of Mari. Tribal customs and institutions, legal, military, and political procedures, and ritual or religious practices all find expression in the Mari texts. These traditions, largely unknown outside Mari, serve to illuminate early Israelite practices. Here are some of the major points.

*Making a Covenant.* In the largely illiterate society of the tribe, treaties were concluded not by means of documents but solely by symbolic acts – in the cases recorded in the Mari texts, by the ritual of “killing an ass-foal” (note the purely West Semitic expression applied here – *ḥa(ya)rum qatālum*). (Another symbolic expression in this context is *napištam lapātum*, “to touch the throat.”) In one case, a possible ploy was made to introduce other animals into the ritual: in a report on a peace treaty made between the Ḥaneans and the land of Idamarāš, a Mari official in the Harran region tells his king that “they brought to me a whelp and a goat, but I obeyed my lord and did not give (permission for the use of) a whelp and a goat. I caused ‘the foal, the young of a she-ass’ (cf. Gen. 49:11; Zech. 9:9) to be slaughtered” (ARM, 2, 37:6–12). The Bible mentions a parallel ceremony, involving the cutting in two of young

animals (cf. the covenant between God and Abraham – Gen. 15:9–10; and one with the leaders of Judah during the Babylonian siege of Jerusalem – Jer. 34:18–19). In all these ceremonies, the common denominator is the ritual sacrifice of young and tender animals.

*Census.* The Mari authorities used to take periodic censuses of the tribes, both nomadic and settled. This activity was denoted by the terms *ubbubum* (D-stem of *ebēbum*), “to cleanse,” and its derivative *tēbibtum* (literally, “cleansing,” “purification”), and is most likely West Semitic in origin. The purpose of the census seems to have been military conscription, taxation, and land distribution, although at least originally it was accompanied by a ritual of purification, similar to that associated with the census of the Israelites in the wilderness (which involved a tax, the payment of which was regarded as a ritual expiation, Heb. *kippurim*; cf. Ex. 30:11–16). Some scholars, however, view the *tēbibtum* as a purely administrative procedure to clear persons or property of legal or financial claims (as would be indicated by the fact that it is carried out by secular, not religious, officials).

*Patrimony.* The Mari legal documents employ, inter alia, the West Semitic term *naḥālum*, “to inherit or apportion,” in referring to land transfers effected within a quasi-familial inheritance framework and not in the normal sales procedures. This type of transaction was inherently a part of the patriarchal tribal system, in which land ownership was not on an individual basis but was a patrimony (*niḥlatum* at Mari = Heb. *naḥalah*). The patrimony could not, theoretically, be transferred other than by inheritance, and, therefore, various means were contrived to circumvent this rule. The Israelites upheld a similar custom, where the patrimony was considered an inalienable possession, “the Israelites must remain bound each to the ancestral portion of his tribe” (Num. 36:7; cf. Lev. 25:13, 25–28; 1 Kings 21:1ff.; Ezek. 46:16–18).

*The “Judge.”* The Mari documents employ several derivatives of the West Semitic root *špt* (verb: *šapātum*; participle: *šāpiṭum*; abstract nouns: *šiptum* and *šāpiṭūtum*), which may serve to elucidate the biblical cognates *šafot*, *šofet*, and *mishpat*, usually translated as “judge” (verb and noun) and “norm or law,” respectively. However, neither in the Mari documents nor in the Bible is the primary connotation of these terms judicial (for which the Akkadian employs *dayānu*); rather, they connote the much broader concept of governorship and rule. Thus, the *šāpiṭum* and his counterpart in the Book of Judges, the *šofet*, were actually prominent tribesmen who had acquired an authority far exceeding that of a mere “justice” (and cf. the later Punic *suffetes*). The expression *šiptam nadānum/šakānum*, met with in the Mari documents, corresponds to the biblical *sim mishpat*, “lay down a ruling” (by a duly authorized person) employed in connection with the authoritative acts of a Moses, a Joshua, and a David (cf. Ex. 15:25; Josh. 24:25; 1 Sam. 30:25).

*The Ban.* A peculiar expression at Mari, *asakkam akālum* (lit. “to eat the *asakku*”), refers to the infringement of a taboo or the profaning of something revered, and may be a loan translation of some West Semitic concept paralleling that of the biblical ban (*\*herem*). The *asakku* of a particular deity, and/or king, is frequently invoked in penalty clauses of contracts, in oaths, and in royal decrees as the sacrosanct and inviolable element. The closest parallel between Mari and the biblical practice is in the imposition of the ban on spoils of war (cf., e.g., the Achan incident, Josh. 7). However, whereas the biblical ban functioned on a purely religious plane (whatever was banned was exclusively God’s), the taboo at Mari was applicable also on a human level, and its infringement there, though theoretically still considered a capital offense, was expiated by payment of a simple fine.

*God of the Father.* Among the central religious concepts of the Hebrew Patriarchs is the “God of the/my/your/his father,” i.e., a personal, innominate deity, revered by subsequent offspring (cf. Gen. 28:13; 31:5, 29, 42, 53; 32:10; 49:25; Ex. 3:6, 15; 15:2, etc.). A direct parallel occurs in one Mari text, where the king of Qatna swears “by the name of the god of my father” (ARM, 5, 20:16; and cf. Gen. 31:53), and in another where Hammurapi (undoubtedly Yarim-Lim’s successor as king of Aleppo) is appealed to “by the name of (the god) Adad, Lord of A[leppo] and the god of [your] father” (ARM, 10, 156:10–11). It is significant for the biblical comparison that both instances are in the west, as are all other references to such a deity outside Mari – in the slightly older Assyrian tablets from Cappadocia, the later texts from Ugarit (in Akkadian, Ugaritic, and Hurrian), and, again at Qatna, in temple inventories and in an Amarna letter sent from there.

[Abraham Malamat]

*Prophetic Revelation.* One phenomenon at Mari that has drawn the attention of biblicalists is that of apostolic prophecy, in which individuals, male and female, deliver messages, often unsolicited, in the name of a god. Before the discovery of Mari the Hebrew phenomenon of apostolic prophecy had tended to be viewed in isolation, and often treated as a unique phenomenon.

At Mari we can distinguish between the intuitive manticism of the apostolic prophet, and the mechanical manticism of the diviner who examines the entrails of animals, primarily sheep livers, for divine messages and decisions. His learned arts are considered authoritative, as shown by the fact that he is regularly called upon to authenticate the message of the prophet, often an ecstatic. The Mari prophets are often professionals, but sometimes ordinary people. The professionals are (1) *āpilu* (masculine) *āpiltu* (feminine), “answerer,” attested once as *aplū*, “the one answered”; (2) *muhhū* (masc.)/*muhhātu* (fem.), “ecstatic”; (3) *assinnu*, a cultic functionary of a goddess, possibly a eunuch; (4) *qammatum*, etymology uncertain, perhaps referring to a distinctive hair style; (5) *na/ābū* (see \*Emar), the least attested but closest etymologically to *nabi*, the most common biblical word for “prophet.” Derived from

the verb *nabū*, “call,” this is either a passive participle, “the one called,” or an active participle, “the caller.” It is noteworthy that in our extant texts the *muhhū* prophecies in the name of two gods in whose name the *āpilum* does not prophesy: Itur-Mer, the chief god of Mari, and the goddess Anunitum.

All the male and female divinities in whose name prophecies are delivered are high gods. Some of the goddesses, Belet-Ekallim; Anunitum, and Diritum, are manifestations of Ishtar, worshipped in Mari and its surroundings. Dagan is the god to whom the most prophecies (16) are attributed, followed by Hadad (7). Among the goddesses the most frequent is Anunitum.

In most instances the prophets spoke their words in those temples to which they were connected. This suggests that these prophets routinely prophesied in their temples, and that only a small number of their prophecies have reached us. In addition, it is likely that most of the prophecies directed to the king were uttered publicly in the royal palace and did not require reduction to writing, in contrast to those prophecies communicated from afar by royal officials, and accordingly, preserved for posterity. Only the activity of the *muhhū* is attested outside Mari; at Andarig, Babylon, and Yamhad (Aleppo). Sometimes the prophets specify that they are god’s messenger by use of the verb *šapāru*, “send,” the semantic parallel of *šālah*, regularly said of the Hebrew prophets and by them. In one case a prophet describes his mission by the verb *šuhuzu*, “instruct,” indicating that he was instructed to deliver his message.

The Mari letters provide important descriptions of the circumstances in which prophecies were delivered. The writers describe the prophet’s arrival, his standing up in order to deliver the prophecy and the like, as well as the verb used by the prophet to describe the message. What follows are some specific examples describing the delivery of the message arranged by prophetic category.

*āpilum:* He is described variously as speaking, as coming and speaking, standing up and speaking, and standing and shouting at length at the gate. Sometimes he comes to the palace gate and writes his message to the king; or he dictates his prophecy to a reliable scribe. Finally, he may come and claim that the god has sent a message to the king through him.

*muhhū:* The method of delivery agrees in some respects with that of the *āpilum* but differs in others. Of the *muhhū* it is said simply that he delivers his message, or, he comes and delivers his message, or, he comes and speaks emotionally and forcefully. He calls out repeatedly. It must be noted that his activity is never described by the verb *namhū*, “to act crazed,” “to become ecstatic,” which demonstrates that the verb is never used of a professional ecstatic, but only of an *assinnum* or any ordinary man or woman overcome by ecstasy (see below). Prophecy described as being “given” (*têrtam nadānum*) is uttered by the *muhhū* and the *assinnum*, but never by the *āpilu*.

Ordinary people: A woman speaks her message; a married woman comes and says that Dagan sent her. Someone’s

daughter or serving girl becomes ecstatic (*namhû*) and speaks. An unidentified man becomes ecstatic and speaks.

Virtually all the prophecies that have reached us were uttered either in Mari when Zimri-Lim was away, or were uttered elsewhere in the kingdom when Zimri-Lim was at Mari. We may assume that ordinarily when the prophet spoke directly to the king his words were not committed to writing, and accordingly, are not preserved. At the same time it should be noted that all of the royal officers, commanders, and priests were obligated to provide the king with all information relevant to the welfare of the kingdom that reached him. Some of these functionaries were bound by oath to convey that information orally or in writing. Apparently, this is why they felt the need to convey the prophetic messages to the king. Some examples follow of the writers of the prophetic letters and the prophets involved:

1) *āpilum*: The writers of the letters hear a prophecy and relate it to the king, or send it in writing to the king. At times the *āpilum* himself sends his words in writing to the king either directly or through an intermediary. He may also write to the queen, who delivers the message in writing to the king.

2) *muhhûm*: In contrast to the *āpilum*, the *muhhûm* never writes the king, but he may speak to the king directly. In most cases someone who has heard his words writes them down and sends them to the king. The queen writes to the king about a prophecy that she has heard personally, or she relates that someone who heard the prophecy of the *muhhû* has written her about it. There are instances in which a priest or a governor hears a prophecy in a temple and writes it down and sends it to Bahdi-Lim, governor of Mari who rewrites it and sends it to Zimri-Lim.

3) *qammatum*: The *qammatu* comes to the (female) letter-writer who writes the king.

4) *assinnu*: Someone who heard his words writes the king, or, he comes to the queen and she writes the king.

5) The category of prophecy has not survived: Someone hears a prophecy and writes the king, as required by his position. Sometimes the prophet speaks to Queen Shibtum and she writes to Zimri-Lim. Finally, a female prophet turns to Itur-Asdu, a prefect of Zimri-Lim at Nahur who sends her words to Zimri-Lim.

There are instances in which a god speaks from the throat of the prophet in the first person:

1) *āpilum*: One formula describes how the *āpilum* quotes the words of the god: Thus (says) the *āpilum* of Shamash: Thus (says) Shamash; or: Abiya the *āpilum* of Addad, Lord of Halab (Aleppo), came to me and thus he said to me: Thus (says) Adad. In contrast, sometimes the *āpilum* speaks through the throat of the prophet: The *aplû* / *āpilû* of Dagan of Tutul stood up and said thus: "I shall gather you ... I shall hand you over." This is true as well of the prophecies of Adad, Lord of Kalassu, and Adad, Lord of Halab. In both cases they speak from the throat of the *āpilum*.

Thus far, the Mari texts have not yet produced an Amos

or a Hosea. Nonetheless, one finds the same kind of prophetic call for social justice known from the Bible. Letter A.1968 (Roberts, 166–69) reports that Abiya the *āpilum* of Halab sent to Zimri-Lim reminding him the king that it was the god who restored him to his ancestral throne and had given the king the weapons with which the god had fought the sea(!) It was the god who anointed Zimri-Lim so that none might stand in his way. The god then commands the king, "When someone who has a lawsuit calls to you saying, 'I have been wronged,' stand up and judge his lawsuit" (Akkadian: *dīnšu din*). Similarly, in A.1121+ A.2731 (Roberts, 172–77), an *āpilum* sends to the king: "When an oppressed man or woman calls out to you, 'render their judgment'" (Akkadian: *dīnšunu din*).

The very manifestation at Mari of intuitive divination – revealing a consciousness of prophetic mission among West Semitic tribes in a period predating Israelite prophecy by centuries – places the history and investigation of Near Eastern prophecy in general, and both earlier and later biblical prophecy in particular, in an entirely new perspective (see also \*Prophets and Prophecy).

### MARIAMNE (Mariamme).

MARIAMNE I (60?–29 B.C.E.) was the daughter of \*Alexander the son of Aristobulus, the granddaughter of John Hyrcanus, and the second wife of \*Herod. Herod's aim in contracting this marriage was to establish his standing with the royal house. Herod was only betrothed to her, but not yet married, when in 40 B.C.E. he was forced to flee to Idumea from Antigonos, who was supported by the Parthians, and he had placed Mariamne together with the other women of the royal household in the fortress of Masada for safety. When Herod's sovereignty over Judea was ratified by the Roman senate on the recommendation of Mark Antony, he went in 37 B.C.E. to Samaria to marry Mariamne while his army was still besieging Jerusalem. Herod's love for Mariamne was unbounded, but it was met by hatred of him on her part, because Herod had put to death practically all the members of her family. Aware of Herod's feelings for her, she was bold enough to speak harshly to him, which others feared to do. In addition to this, however, her anger was directed against the rise of the new dynasty which had replaced her own – the \*Hasmonean – and this caused her to act disdainfully toward the members of the royal Idumean family, particularly to Herod's mother and his sister Salome. As a result these two harbored a grudge against her and were malevolently provocative toward her, fabricating such libels about her as that she had sent her portrait to Antony in Egypt.

When Herod went to visit Antony he entrusted his wife to Joseph, the husband of Salome, ordering him to put Mariamne to death should Antony sentence him to death. Joseph informed Mariamne of this with the intention of showing her how great was the love Herod bore her. When Herod returned from his journey he discovered from Mariamne that Joseph had revealed this secret order to her. According to one account in Josephus, it was then that in his rage Herod ordered both Joseph and Mariamne to be put to death. A parallel account,

however, is given by Josephus in the section dealing with Herod's journey to Octavius at Rhodes after the battle near Actium. The first story belongs to the period before 31 B.C.E., while the second is later. It seems that both stories were true, but that the execution of Mariamne took place in 29 B.C.E., and that on the previous occasion Herod did not go so far as to murder his wife. Mariamne bore Herod three sons and two daughters. One of the sons died in his youth. The other two, Alexander and Aristobulus, were executed on the order of their father in 7 B.C.E.

MARIAMNE II (d. circa 20 B.C.E.), the daughter of Simeon b. Boethus the high priest, was the third wife of Herod. She belonged to a priestly family from Alexandria. Her son, also named Herod, was designated to succeed to the throne after Antipater. It was because of this that although Mariamne II knew of Antipater's intentions to kill his father, she held her peace. As a result, when the plot of Antipater was discovered, Herod erased from his will the name of his son Herod II as his heir and sent Mariamne away.

[Abraham Lebanon]

MARIANOS (sixth century), artist who – together with his son Ḥanina – designed the pictorial mosaic floor of the Bet Alfa (Ḥefzi-Bah) synagogue near Beth-Shean. Their names also appear in an ornamental mosaic floor adjoining a synagogue at Beth-Shean. They are known only through these two mosaics. The inscription in Greek at Bet Alfa reads: “May the craftsmen who carried out this work, Marianos and his son Ḥanina, be held in remembrance.” Below this inscription, a partially destroyed Aramaic legend dates the mosaic to the reign of the Byzantine emperor Justin (I), viz., 518–527 C.E. It is clear that, as local Galilean artists, they worked in the standard Greco-Oriental manner of the time, combining Eastern frontality, patterning, and lack of modeling and perspective, with Western costumes, composition, and mosaic technique. The similarity of their work to mosaics in other sixth-century synagogues of the Palestinian littoral indicates that they followed standard patterns. The style of their work appears to reflect rug designs. In the Bet Alfa mosaic the motifs of the border designs and of two of the three panels, that of the zodiac and of the holy symbols, are paralleled elsewhere (e.g., the sixth-century synagogue of Tiberias). The third panel located just inside the entrance to the prayer room depicts the sacrifice of Isaac, combining an artistic and symbolic complexity that belies the direct, seemingly naive manner in which the mosaic is worked. (See \*Bet Alfa.)

\*MARIA THERESA (1717–1780), empress of Austria from 1740, the first female heir to the Hapsburg throne as a result of the “Pragmatic Sanction” (1713). She continued the hostile policy of \*Charles VI, her father, against the Jews. Her passionate hatred, nurtured from childhood, culminated in the expulsion of \*Prague Jewry (1744), which she revoked in 1748 after international intervention on behalf of the Jews. She declared in 1777 that she knew “no worse plague for the state than this nation, because of its deceitfulness, its usury,” and noted that the Jews “bring the state more harm than good.” She granted audiences to Jews from behind a partition. In spite of this, she profited from the services of such individuals as Diego d’Aguilar, Israel von \*Hoenigsberg, and Wolf Wertheimer. Pursuing a mercantilist policy on the advice of Joseph von Sonnenfels she granted special privileges to Jews, allowing them to establish factories with the condition that gentile labor be employed. She forbade the baptism of Jewish children against the will of their parents, and in 1754 issued the *General Polizey Ordnung* (“statute”) for Moravian Jewry based on the long-standing *Shai Takkanot*. In 1742 she confirmed the judicial autonomy of Lombardian Jewry (reconfirmed in 1752 and 1764), and in 1744 refrained from carrying out her intention of expelling the Jews from \*Naples. In 1753 she permitted the reestablishment of a prayer room at \*Usov (Maehrisch-Aussee) and in 1762 reconfirmed the privileges of Mantuan bankers. The unified toleration tax introduced in 1749 in Hungary was called “*malke-geld*” (“queen money”); it was fear for the loss of the revenue from this tax that induced the empress to prohibit the spread of blood libels in 1764. Despite her concern for ensuring the revenues of the kingdom, her hatred of the Jews found frequent expression. In 1746 she ordered the expulsion of Jews from Buda (Ofen; see \*Budapest) and \*Timisoara, and in 1774 she expelled the Jewish community from \*Hodonin (Goeding), her private domain. In 1752 she had a census taken of the Jews living in Vienna, checked personally on them every three months lest their number multiply illegally, and in 1764 issued a new statute for Lower Austria. Her reign was characterized by the attempt to modernize and centralize the country. As a result of the annexation of the former Polish territories Galicia (1772) and Bukovina (1775), the Hapsburg monarchy became the country with the largest population of Jews.

**MARI BEN ISSUR** (first half of the fourth century), Babylonian *amora*. Mari's father was a non-Jew who became converted to Judaism after his son was conceived and was henceforth known as Issur the Proselyte (BB 149a). According to Rashi (Bet. 16a, BM 73b) his mother was Rachel, the daughter of Samuel (Mar or Samuel Yarḥina'ah) who had been taken captive (Ket. 23a); Mari is therefore identical with the Mari b. Rachel and the "Mari, the son of Samuel's daughter" who are often mentioned in the Babylonian Talmud, and he was called after his mother because of his non-Jewish paternity. This view is upheld by Samuel b. Meir (Rashbam to BB 149a) but is contested by the *tosafot* (ad loc.) since according to the Talmud the daughters of Samuel were ransomed from captivity in Erez Israel and married Simeon b. Abba, one after the other, all dying shortly after the marriage (Ket. 23a; TJ, Ket. 2:6, 26c). Moreover there is a chronological difficulty in identifying the daughter of Samuel, who died in 256, with the mother of Mari, who died in the second half of the fourth century. Issur, after his conversion to Judaism, became friendly with R. Safra (BM 31b) and particularly with Rava and under their influence Mari attended the *bet midrash* and devoted himself to study. Issur left Mari 12,000 *zuz* which he deposited with Rava (BB 149a). Mari had two sons: Mar Zutra and Adda Saba, contemporaries of Ashi (Kid. 65b).

[David Joseph Bornstein]

**MARIBOR** (Ger. **Marburg**), town in Štajersko (Steiermark) province of Slovenia. Jews lived there from the Middle Ages, arriving from the north, mostly from the Rhineland area. They were moneylenders and artisans, known only by their first names, such as Meyer, Isaac, or Mosch (Moses). Among the moneylenders was an Abraham ben Jacob, and Rabbi ben Petahya Isserlein as well as his grandchildren are on record in the 14<sup>th</sup> century.

Jews lived in a ghetto from 1277; they had to wear a yellow badge. Rabbi Isserlein, locally mentioned as Israel Marburg, worked in Maribor some time in the 1430s. The Jewish physicians, Hayyim and Michael, are noted in documents. To arbitrate disputes between Jews and Christians, a special court was established, consisting of eight judges, four of them Jewish, presided over by a Christian. Later, however, a one-man office, called *Judenrichter* (Judge of the Jews), came into existence.

In 1465 the Jewish quarter was surrounded by a wall, parts of which still exist, called "Židovski stolp" (Jew's tower). It formed part of the city's fortifications. By the edict of Emperor Maximilian I of March 1496 all Jews were expelled. They migrated to Burgenland in the north or westward to Trieste and Istria, some even wandering to Poland. In 1501 the syna-

gogue was converted into the Church of All Saints. Only in the second half of the 19<sup>th</sup> century were Jews re-admitted to Maribor. They were linked at first to the Graz community (Austria), later to that of Varaždin (Croatia). In the early 1930s about a hundred Jews were noted.

No Jews now live in Maribor. The synagogue was preserved and renovated and is used as a cultural center.

**MARIENBAD** (Czech. **Mariánské Lázně**), town in W. Bohemia, Czech Republic. The first Jew settled in Marienbad in 1820; prior to this time Jews only went to Marienbad during the health cure season. The Jewish community grew, as did the town, during the 19<sup>th</sup> century, drawing its settlers mainly from the Drmouly (Duerrmaul; see \*Chodová Planá) and \*Lázně Kynžvart (Koenigswart) communities. Many foreigners also settled there. Instrumental in the development of Marienbad was the professor and balneologist Samuel Basch, whose statue was removed by the Nazis, and reerected in 1970. On the initiative of Prague notables a Jewish hospice with a prayer room was built in 1861, with the help of gifts from Jewish visitors. Another balneologist, Heinrich Enoch \*Kisch, also lived in Marienbad, contributing greatly to its development. He was the head of the Jewish hospice and a street was named for him. In 1875 a congregation was constituted and in 1884 a synagogue was dedicated. Marienbad was very popular among Russian Jewry at the end of the 19<sup>th</sup> century. According to the municipal election statute (in force until 1918), no Jew could be elected to the municipal council. The community numbered 405 in 1930 (3.3% of the total population). In 1937 the great assembly (*Keneset ha-Gedolah*) of \*Agudat Israel was held in Marienbad. The World Council of Agudat Israel was held there in 1947. At the time of the Sudeten crisis (1938) most of the community left the town; those who remained were arrested by the Nazis. The synagogue was burned down and its site is now a park. In 1945 a community was refounded. It was made up mostly of Jews from Carpatho-Russia who had opted to live in Czechoslovakia rather than in their country of birth. Some were demobilized soldiers of the Czechoslovak army in the Soviet Union. It numbered 196 in 1949. For a period of time there was a yeshivah for survivors of the Nazi persecutions in the town. In 1970 Marienbad was a center of Jewish life in Czechoslovakia as its Jewish old-age home (with a prayer room and a *kasher* restaurant) had about 100 residents from all over the country. The old age home and prayer room were closed in 1972.

**MARIJAMPOLE** (Rus. **Mariampol**), city in S. Lithuania. In 1856 there were 2,853 Jews in Marijampole; in 1897 there were 3,268 (c. 49% of the total population); and on the eve of World War I, 5,000. Many of them were admitted to Russian boys' and girls' secondary schools. In addition to the traditional *hadarim*, a "reformed *heder*," where Hebrew was the language of instruction, was established. During World War I the Jews were expelled and a number were imprisoned for allegedly collaborating with the enemy. In 1923 there were 2,545 Jews (21% of the total). The majority of them earned their livelihood from trading in agricultural produce and small industry. There were also some landowners and smallholders. The Jews of Marijampole engaged in extensive nationalist political and cultural activities. They established welfare and cultural institutions of a high standard, including the first Hebrew secondary school in Lithuania (1919). There was also a farm which provided training for *halutzim* in the vicinity of the city. When the Germans occupied the city in 1941, the Jews were concentrated in a local ghetto together with other Jews from the surrounding area. Over 7,000 of them were massacred at the beginning of September 1941.

[Dov Levin]

**MARIL, HERMAN** (1908–1986), U.S. painter. Born in Baltimore, Maryland, Maril painted seascapes and landscapes, often of the Cape Cod area. He studied at the Maryland Institute of Fine Arts, participated in federal works projects during the Depression, and painted during his World War II military service. He taught painting, drawing, and watercolor at the University of Maryland until his death, while exhibiting in galleries in New York, Washington, D.C., and Baltimore. He created lyrical works in oil, watercolor, and ink which referenced landscape, seascape, and sports subjects with various levels of modernist abstraction. Maril's careful, balanced compositions are characterized by rich, even sensuous color, large, simplified shapes and forms, and a flattened picture plane. The artist worked in the American Scene style in the 1930s but soon developed a personal idiom which incorporated the tenets of modernism: spare, broad swathes of color, emphasis on facture, flattened forms, and a purging of details. While working in the 1950s Maril never adopted an Abstract Expressionist style, but continued to develop his robust, individualized vision, indebted to the socially attuned work of such artists as Raphael Soyer, Ben Shahn, and Lyonel Feininger. His subjects range from Matisse-inspired goldfish in a bowl, to farmyards and skyscrapers. While working in New York in the 1930s, he met a number of other artists, including Soyer, Marsden Hartley, Mark Rothko, and Chaim Gross. In 1935, the art critic Olin Dows characterized Maril's abstract art as possessed of a personal style, despite his indebtedness to Picasso, Braque, and Mondrian, among other artists of the first quarter of the 20<sup>th</sup> century. While living in Cape Cod and Baltimore, Maril traveled to California, Mexico, Italy, and Spain. His acquaintance with Duncan Phillips,

founder of the Phillips Collection in Washington, D.C., boosted the artist's success and visibility, garnering him exhibitions, WPA projects, including a post office mural in Scranton, Penn., and notice by Eleanor Roosevelt, who hung one of his paintings in the White House. With another nod to Matisse, Maril's work between the 1950s and his death prominently feature open windows and doors, which interweave exterior and interior on the surface of the work. The Phillips Collection owns 13 of Maril's works. Maryland University College in Adelphi, Md., has exhibited a permanent retrospective of Maril's work since 1986. Over 60 museums in the United States and Europe own examples of Maril's work, including the Baltimore Museum, the Cleveland Museum, the Corcoran Gallery, the National Museum of American Art, the San Francisco Museum, the Whitney Museum, and the Walters Art Museum.

[Nancy Buchwald (2<sup>nd</sup> ed.)]

**MARINI, SHABBETHAI HAYYIM** (Vita; c. 1690–1748), rabbi, poet, and physician. Born in Padua, Marini studied there under Isaac Hayyim Cohen de \*Cantarini, whom he succeeded in the rabbinate of the town. Marini was renowned for his sermons which fascinated not only members of the Jewish community but many educated Christians as well. He was also held in high esteem as a physician.

Marini's main work is a Hebrew translation of the first three books of Ovid's *Metamorphoses*, based on the Italian paraphrase by Giovanni Andrea dell' Anguillara. Originally Marini planned a joint translation with Isaiah \*Bassano. Marini, however, completed the translation alone, and it is not certain whether Bassano's 100 octaves are included in Marini's 850. The translation, entitled "*Shirei ha-Halifot le-Oved*," was to have been published in Mantua, but Marini died when only one sheet had been printed. The original manuscript of the translation is in the municipal library in Mantua (Ms. 77 Comunità Israelitica). Others are: Parma, de Rossi, Ms. 1110 Budapest, Kaufmann Ms. 547; British Museum, Ms. Add. 26916, Vienna, Ms. 91. A longer excerpt of the translation was published in S.D. Luzzatto's letters.

Marini also wrote numerous poems for special occasions, including an elegy on the death of his teacher Cantarini and a wedding poem which could be read either as Italian or as Hebrew. The Mantua and the Vienna manuscripts of the Ovid translation contain 34 of Marini's poems (mostly sonnets), and a fragment of his poetic paraphrase of \*Pirkei Avot. Isaiah Romanin wrote an elegy on Marini's death (Oxford, Bodleian Library, Ms. Mich. 439, fol. 376).

[Jefim (Hayyim) Schirmann]

**MARINOFF, JACOB** (1869–1964), Yiddish poet, editor, and publisher. Born in Russia, he received a traditional *kheyder* education. He immigrated to England, then the U.S. and lived briefly in Denver, where he worked with \*Yehoash and Dr. Chaim Spivak to found the Jewish Tuberculosis Sanatorium. From 1895 he contributed poems to Yiddish periodicals. In 1909 he and Joseph \*Tunkel cofounded *Der Groyser Kundes*, a journal of political and social satire, internationally important also as a watchdog of the Yiddish press and of Jewish institutions. Among the contributors to the weekly were \*Sholem Aleichem, Yehoash, A. \*Reisen, M.L. \*Halpern, and M. \*Nadir, as well as cartoonists Z. Maud, S. Raskin, and L. Israel (Lola). Marinoff wrote three volumes of verse: *Shpil un Kamf* ("Play and Struggle," 1938), *Mir Veln Zayn* ("We Want to Be," 1944) and *Shtark un munter* ("Strong and Hearty," 1947) and coedited a collection, *Humor un Satire* ("Humor and Satire," 1912, from *Der Groyser Kundes*).

[Sol Liptzin / Edward Portnoy (2<sup>nd</sup> ed.)]

**°MARITAIN, JACQUES** (1882–1973) and **RAÏSSA** (1883–1960), French writers who took a positive stand on the Jewish issue during the Nazi era. Raïssa Oumansoff, a Russian Jew, was taken to Paris as a child, and there in 1904 she married Jacques Maritain, a Protestant by birth and a former disciple of Henri \*Bergson, who became one of the foremost protagonists of neo-Thomism. Having lost touch with their respective religions, the Maritains became Catholics in 1905. These experiences were sensitively narrated by Raïssa Maritain in *Les grandes amitiés* (1941; *We Have Been Friends Together*, 1942). The conversion, which pained and scandalized their families, paradoxically induced the young couple to meditate on the Jewish destiny. Raïssa's poems, essays, and diary reveal a very pure, mystical approach, the source of which she described: "My maternal grandfather was a Ḥasid, and my father's father was a great ascetic sage. This is my inheritance." Through Raïssa, Jacques Maritain learned that "inspiration and spiritual sources of life come from the people chosen by God." When the times demanded that he speak up for the Jews, the philosopher became the man of action. From the moment the Nazi persecutions began, Maritain spoke out and he continued to champion the Jews while an exile in the U.S. during World War II, as French ambassador to the Vatican after 1945, and following the establishment of the State of Israel. Jacques Maritain's many articles and statements on the subject (1926–61) were collected by the author in a single volume, *Le Mystère d'Israël* (1965).

**BIBLIOGRAPHY:** J. Maritain (ed.), *Journal de Raïssa* (1963); D.A. and I.J. Gallagher, *The Achievement of Jacques and Raïssa Maritain: a Bibliography, 1906–61* (1962).

[Brother Marcel-Jacques Dubois O.P.]

**MARITIME LAW.** The Talmud discusses many laws concerning shipping, and sea and river journeys – such as the sale of ships, instances of shipwreck salvage and rescue, rules of passage at sea, lading and charter agreements, and also various details of the laws of the Sabbath and ritual purity applicable to ships. Such laws do not, however, serve to create a distinct branch of maritime law proper, since they are interwoven into the wider principles of the laws of \*contract and \*damages (contrary to the view expressed by J. Dauvillier, in *Revue Internationale des Droits de l'Antiquité*, 6 (1959), 33–63). Although in this field special shipping customs, if any, are followed, this is no more than an application of the general principle of contract law relating to local or trade customs (Rashba, Resp., vol. 2, no. 268).

With regard to the sale of ships, as with other sales, reference is made to accessories which are customarily sold with the ship and others which are considered as being independent and must therefore be purchased separately (BB 5:1). It is also stated that it was the practice of shipowners to receive not only the hire for the ship but also payment for its loss if shipwrecked (BM 70a). On arrangements for sea traffic it is stated: "Where two boats sailing on a river meet; if both attempt to pass simultaneously, they will sink; whereas if one makes way for the other, both can pass [without mishap]. Likewise if two camels met each other while on the ascent of Beth-Horon [which is a narrow pass; see Josh. 10:10 and 11]... if one is laden and the other unladen, the latter should give way to the former; if one is nearer [to its destination] than the other, the former should give way to the latter. If both are equally near or far, make a compromise between them, and the one [to go through] must compensate the other" (Tosef. BK 2:10; Sanh. 32b). If a person hires a ship for carriage of cargo and it sinks in mid-journey, he must pay for half the journey; if, however, he hires a specific ship for shipping a specific cargo, he loses the hire if he has already paid for it but is not obliged to pay if he has not already done so (BM 79b and Tos.). In a case where a man hired boatmen to deliver goods, stipulating that they guarantee against any accident (see \*Ones) occurring on the way, and the river dried up during the journey, it was held that the boatmen had not guaranteed against this possibility since such an accident was not foreseeable (Git. 73a).

Various *halakhot* were decided with regard to shipwrecks. Thus when a boat is in danger of sinking and part of the cargo is thrown overboard to lighten the vessel, the resulting loss is not apportioned equally amongst the cargo owners, nor is it calculated according to the value of the goods of each owner, but the loss is apportioned according to the weight of the cargo of each owner – provided that this does not conflict with local maritime customs (BK 116b). In one instance a donkey being transported threatened to sink the boat and was thrown

overboard, whereupon it was decided that no compensation was payable to its owner, since the deed was justified on the grounds of self-defense, the donkey being considered as pursuing with intent to kill (BK 117b). An interesting *halakhah* concerning maritime insurance is related: “The sailors can stipulate that whoever loses a ship shall get another one, but if the boat was lost due to his own negligence or if he sailed to a place to which boats would not normally sail, he would not be provided with another boat.” The same rule applies also to carriers on land (Tosef. BM 11:26; BK 116b).

In the post-talmudic period many responsa dealt with trade customs (see e.g., Rashba, Resp., vol. 2, no. 268), some of them marine customs. Solomon b. Abraham \*Adret (Rashba), who lived in Barcelona, where the well-known collection of marine customs *Consulat de Mar* was compiled, records the custom of depositing goods with a merchant traveling by sea for the latter to trade therein at the risk of the depositor – leaving the sailor exempt from liability for accident (his resp. vol. 2, no. 325; vol. 1, no. 930 and cf. no. 924). Also mentioned is the custom of paying the full wages, even if the journey for which the employee was hired was not completed due to accident overtaking the employer (Rashba, Resp., vol. 6, no. 224).

In the State of Israel maritime law is based on Israeli legislation, conforming with the law of the maritime nations in those matters and also with Ottoman-French laws and English law.

[Shalom Albeck]

**MARIX, ADOLPH** (1848–1919), U.S. naval officer. Born in Germany he was taken to the United States by his father, Henry Marix, who was an official translator to the U.S. Treasury. Adolph Marix was appointed to the U.S. Naval Academy at Annapolis and in 1872 joined the judge advocate-general's department. He commanded a number of ships between 1894 and 1898 including the U.S.S. *Maine* until shortly before its mysterious sinking in the Bay of Havana. Marix was appointed judge advocate in the court of enquiry into the sinking, and his findings led to the U.S. declaration of war on Spain. Subsequently, he was president of the navy board which experimented in the use of submarines and in 1908 was promoted to rear admiral, the first Jew to attain that rank.

**MARK, BERNARD (Berl)** (1908–1966), scholar and historian. Born in Lomza, Mark studied law at Warsaw University. Prior to World War II, he published articles in Polish and Yiddish on literary history and edited left-wing periodicals. Between 1932 and 1939, he published a two-volume work in Yiddish entitled *Geshikhte fun di Sotsiale Bavegunen in Poyln* (“The History of Social Movements in Poland,” 1938–39). During World War II, he lived in the Soviet Union, where he was active on the Jewish \*Anti-Fascist Committee, and in the Związek

Patriotów Polskich (“Polish Patriots’ Union”). In Moscow he published his first work on Jewish anti-Nazi uprisings in Poland. Upon returning to Poland (1946), he published a series of essays and collections of documents on Holocaust subjects. In 1949, Mark was appointed director of the \*Jewish Historical Institute in Warsaw, and editor of its *Bulletin* and *Bleter far Geshikhte*. In 1954 he was appointed an associate professor. Mark visited Israel in 1957 and lectured at the Second World Congress of Jewish Studies. He strengthened the ties between the Jewish Historical Institute and research institutions in Israel, e.g., \*Yad Vashem and the Central Archives for the History of the Jewish People (Jerusalem). His main works are *The Extermination and the Resistance of the Polish Jews During the Period 1939–1944* (1955); *Dokumenten un Materialien vegn Oyfshtand in Varshever Geto* (1953); *Der Oyfshtand in Varshever Geto* (1963), translated into Polish, German, and Dutch; *Di Yidishe Tragedye in der Poylisher Literatur* (1950); *Di Umgekumene Shrayber fun di Getos un Lagern un Zeyere Verk* (1954); *Der Oyfshtand in Byalistoker Geto* (1953<sup>2</sup>); and *Di Geshikhte fun Yidn in Poyln* (1957). **ADD. [Nathan Eck]

**MARK, JULIUS** (1898–2002), U.S. Reform rabbi. Mark was born in Cincinnati, where he earned his B.A. from the University of Cincinnati in 1921 and was ordained at Hebrew Union College in 1922. He served as rabbi of Temple Beth El in South Bend, Ind. (1922–26), and the Vine Street Temple in Nashville, Tenn. (1926–48) before becoming rabbi of New York City's Temple Emanu-El. Under Mark's leadership, Emanu-El more than doubled in size (to 3,200 families) and grew to become the largest Jewish congregation in the world. During World War II, he joined the U.S. Navy and served for several years as Jewish chaplain to the Pacific Fleet, rising to the rank of lieutenant commander on the staff of Fleet Admiral Chester W. Nimitz. Returning to civilian life, he served on the executive committee of the United States Commission for UNESCO; as a life trustee of the Federation of Jewish Philanthropies; on the boards of the National Conference of Christian and Jews and the Anti-Defamation League; as honorary vice chairman of the Lighthouse for the Blind; and as honorary president of the American Jewish Encyclopedia Society. He also joined with the clergy of neighboring churches to work for social justice in New York City.

In the service of Reform Judaism, Mark was a member of the governing board of the World Union for Progressive Judaism, a member of the Executive Board of the \*Central Conference of American Rabbis, and chairman of the CCAR-UAHC Commission on Justice and Peace. He also served two terms as president of the \*Synagogue Council of America. For his many contributions, he received the Human Relations Award of the Methodist Church (1963); the Gold Medallion for Courageous Leadership of the National Conference of Christian and Jews (1966); Clergyman of the Year Award from Religious Heritage

of America (1969); and repeated recognition from the State of Israel Bonds Organization (1967, 1968, 1970). Five colleges and universities awarded him honorary doctorates in law, divinity, humanities, sacred theology, and humane letters. Among the books Mark wrote was *Reaching For the Moon* (1959). Rabbi Ronald B. Sobel and Sidney Wallach edited a collection of papers entitled *Justice, Justice Shalt Thou Pursue* on the occasion of Mark's 75<sup>th</sup> birthday, as an expression of gratitude of the Jewish Conciliation Board with whose services and leadership Mark has long been identified.

[Bezalel Gordon (2<sup>nd</sup> ed.)]

**MARK, MARY ELLEN** (1940– ), U.S. photographer. After growing up in suburban Philadelphia, Mark earned a bachelor's degree in painting and art history but decided she was not good enough to be a painter. She then earned a master's in photojournalism at the University of Pennsylvania, having chosen photography almost at random, she said, and falling in love with the camera the moment she held one in her hand. "From the very first night, that was it," she said. "I became obsessed by it. I knew immediately it would be my life's work. I knew I had a chance of being good at it." The camera proved her ticket to independence.

After traveling around Europe, Mark sought work in the late 1960s shooting film stills for Hollywood productions. It led to her first large-scale project. While shooting at the Oregon State Mental Hospital in 1973 for *One Flew Over the Cuckoo's Nest*, she befriended the hospital's director and was permitted to spend time living with and shooting the women of the institute's maximum security Ward 81 in 1976. This series of photographs is sentimental and disturbing at the same time, and fulfilled Mark's goal to portray the lives of "people who haven't had the best breaks in society." The book *Ward 81* was published in 1979. "For years I'd planned to go live in a mental hospital," she said. "I wanted to see if I could feel something of what it was like to be set aside from society." At her own expense, she lived in the state's only locked ward for women. "I think I was interested because my father had several nervous breakdowns and was hospitalized several times," she said.

With a special affinity for working with women, she turned her attention to the brothels of Bombay, India, in 1978. She encountered violent resistance from some of her would-be subjects, but she befriended a few, leading to a series of color photographs published as *Falkland Road: Prostitutes of Bombay* in 1981. She said the book "was meant almost as a metaphor for entrapment, for how difficult it is to be a woman." She did a series on Mother Teresa of Calcutta for *Life* magazine, published as *Photographs of Mother Teresa's Missions of Charity in Calcutta* in 1985 as well as a series depicting street children in Seattle who turn to prostitution and drugs as a means of getting by. That work led to the film *Streetwise*, directed and photographed by her husband, Martin Bell; it was nominated for an Academy Award. It was in Seattle, in 1983, that she befriended a 12-year-old, Erin Blackwell ("Tiny"), a child prostitute whom she photographed over the years as

Tiny had five children with five different fathers. She first photographed the Damm family of Los Angeles, a husband, wife, and two children, in 1987, after they had been thrown out of a shelter and were living in their car. In one picture, the mother and father sprawl in the front seat of the car as the children peer anxiously out the back window. In 1994, with two more children and the parents seriously into drugs, the family was again Mark's subject, squatting in squalor but still a family, at a rundown ranch in Llano, California. In October 2003 she published *Twins*, featuring 20 × 24 Polaroid prints of twins.

Mark published 14 books and won many awards, including the second Cornell Capa Award of the International Center of Photography, and her images have been shown worldwide.

**MARK, YUDEL** (1897–1975), Yiddish educator, philologist, and author. Born in Palanga, Lithuania, Mark became active in Jewish politics while studying at Petrograd University (1915–18). In Libava (Liepaja), Latvia, he organized the local branch of the Yidishe \*Folkspartei, later becoming the secretary-general of the Jewish National Council in Lithuania (1923), and secretary and vice president of the Folkspartei in the same country. From 1930 to 1934 he was the editor of the daily *Folksblat*. Mark was the founder (1920) and principal of the Yiddish Real-Gimnazye of Vilkomir (Ukmerge), the first of its kind in Lithuania, and between 1927 and 1930, taught Yiddish at various schools and seminaries. After settling in the U.S. in 1936, Mark continued his activity in the field of Yiddish education. He settled in Israel (Jerusalem) in 1970.

Mark's first literary publication appeared in the Kovno (Kaunas) daily *Nayes* (1921), and he subsequently contributed extensively to a wide range of Yiddish political, literary, and educational publications, such as *Eynheytlekhe Folkshul* (1922). In addition he edited various Yiddish periodicals. His books include a Yiddish school grammar, *Shul-Gramatik* (1922), various textbooks on Yiddish language teaching, Yiddish literature, Jewish history (*Der Yidishe Poyps*, c. 1947; *Dovid ha-Reuveni un Shloyme Molkho*, 1941), biography, as well as children's books in Yiddish. Among his translations into Yiddish are works of Thomas Mann and Erich Maria Remarque. He also edited various books, notably the *Groyser Verterbukh fun der Yidisher Shprakh* (2 vols., 1961) jointly with Judah A. \*Joffe; further volumes were in preparation (1971).

Among Mark's attainments as a linguist are his numerous studies on Yiddish grammar and style, on the Hebrew-Aramaic component in the Yiddish language, and his stylistic analyses of the Yiddish authors. He was also the editor of the \*YIVO's *Yidishe Shprakh* (1941–68).

**MARKAH** (Heb. מַרְקָה; fl. second half of fourth century C.E.), well known and venerated Samaritan poet who wrote in Aramaic. The great esteem in which he is held by Samaritan tradi-

tion is shown by his epithet “Founder of Wisdom” in the Samaritan chronicle *Tolidah* or “Fountain of Wisdom” (Yanbū‘ al-Ḥikma) in that of \*Abu al-Fat and by the legend that the name Markah (מרקה) was bestowed upon him because it has the same numerical value as the name Moses (משה), which no other human being is allowed to bear. Actually, Markah is an Aramaized form of the Latin name Marcus. According to the Samaritan chronicles, he was the son of the liturgical poet Amram Darah whose byname, Tūta, is explained as a development of the Latin name Titus.

Like his father, Markah wrote liturgical poems, part of which belong to the earliest portions of the Samaritan common prayer book, the *Defter* (see \*Samaritan Language and Literature). His style is more elaborate than that of his father, and none of his poems is composed in the style of “Verses of Durran” (see \*Amram Darah). The verses of his poems are arranged in an alphabetic acrostic and the number of lines in each verse is nearly always equal. Once his name is contained in the acrostic of the first four verses of a poem. Through his terse and polished style, he succeeds in conveying the fiery religious feelings of his soul. That is why many of his expressions became fixed figures of speech used by later Samaritan poets.

The work that established Markah’s fame and gained him the epithet “Founder of Wisdom” is his great midrashic composition *Meimar* or *Tevat Markah*, a compendium of exegetical and theological teachings. It is divided into six books, the main subjects of which are the wonders revealed to Israel from Moses’ call to Israel’s victory at the Red Sea; a commentary on Exodus 15; a commentary on Deuteronomy 27:9–26; the commission of Joshua and instructions to various classes of the people, whereby priests are witnesses to Israel and to themselves; a commentary on Deuteronomy 32; Moses’ death; speculations about the 22 letters of the alphabet. There are many thoughts and figures of speech shared by this work with Markah’s poems. All extant manuscripts, the earliest dating from the 14<sup>th</sup> century, contain recognizable later additions.

Cowley, *Samaritan Liturgy*, 2 (1909), xx–xxi and index; J. Macdonald, *Memar Merqah*, 2 vols. (1963), incl. bibl.; J. Bowman, *Transcript of the Original Text of the Samaritan Chronicle Tolidah* (1955), 16b; Abū’l-Fath ibn Abī’l-Ḥassan al-Sāmīrī, *Annales Samaritani...*, ed. E. Vilmar (1865).

[Ayala Loewenstamm]

**MARKEL, LESTER** (1894–1977), U.S. journalist who was responsible for changing the nature of the Sunday newspaper. Born in New York City and trained at Columbia University’s School of Journalism, Markel was from 1923 to 1964 Sunday editor of the *New York Times*. It was he who conceived the idea of separate Sunday sections, which would bring the reader the news in greater depth than was possible in daily papers. He was personally responsible for the *Times Magazine*, the “Book Review,” and the “Arts and Leisure” section. In 1935 he instituted the “News of the Week in Review,” a report in

perspective of the week’s events, which won Markel and the *New York Times* a Pulitzer Prize. Markel wrote and lectured widely. In 1951, he founded the International Press Institute to foster the free flow of information and freedom of the press in general. In 1964, he became associate editor of the *New York Times* and head of its department of public affairs. He also started a television series in which he and others discussed the news in depth.

[Stewart Kampel]

**MARKEL-MOSESOHN, MIRIAM** (1839–1920), Hebraist, translator, and journalist, who exercised a profound influence on the *maskilim* of her day, particularly Judah Leib \*Gordon (1831–1892) who dedicated to her “Kozo shel Yod” (The Tip of the Yod), his 1876 poem satirizing the treatment of women in traditional Jewish society. Born in Volkovyski (Vilkaviskis), Lithuania, to Ḥayyah and Shimon Wierzbolowki, an affluent merchant, Markel-Mosesohn underwent rigorous training in Hebrew language and literature from an early age with the assistance of private tutors and also received a thorough grounding in secular subjects, including German and French.

Miriam married Anshel Markel-Mosesohn (1844–1903) when she was 24 and the groom 19. The couple, whose 40-year marriage was childless, shared a love for Hebrew and was committed to its revival. Anshel supported his wife’s literary efforts, granting her freedom and financial backing to travel to pursue the publication of her work. Markel-Mosesohn corresponded briefly with Abraham \*Mapu and maintained a 20-year professional and personal correspondence with Gordon, although the two never met. With Gordon’s support, the first volume of Markel-Mosesohn’s Hebrew rendition of the German history book *Die Juden und die Kreuzfahrer unter Richard Lowenherz* by Eugen Rispart appeared in 1869 as *Ha-Yehudim be-Angliyah*. The second volume of the translation was not published until 1895, apparently because of Markel-Mosesohn’s poor health and financial problems. In 1887 she briefly became the Viennese correspondent for *Ha-Meliz*, the newspaper Gordon edited; however, after publishing only four articles, she abruptly renounced authorship, claiming “my desire and my ability are not one and the same.”

Markel-Mosesohn succeeded in entering the rarefied, male world of Hebrew letters during the very period in which the language was being revived, but the strict pronouncement and observance of gender differentiations by the leaders of the \**Haskalah*, distinctions which Markel-Mosesohn herself accepted, precluded her from obtaining the status of *maskil*. Copies of Markel-Mosesohn’s letters to Judah Leib Gordon and other literary papers are housed at the Jewish National and University Library Archive, Hebrew University of Jerusalem.

[Carole B. Balin (2<sup>nd</sup> ed.)]

**MARKET DAYS AND FAIRS.** The nomadic nature of early medieval trade and the wide-ranging contacts of Jewish merchants throughout the period made Jewish traders early and eager participants in market days and fairs, in spite of the religious and social problems attendant on such participation, especially in Christian countries. As merchants were prominent in European Jewish leadership and \*autonomy, fairs were suitable meeting places for deliberating Jewish affairs. Around 825 Archbishop \*Agobard complained that the day on which the \*Lyons weekly market was held had been changed from Saturday to suit Jewish traders. In the following three centuries there are many references in both Hebrew and Christian sources to Jews attending fairs, particularly in cities of the Rhineland such as Cologne and \*Treves. \*Gershom b. Judah mentions a fair at a sea or river port during which the assembled merchants from various communities enacted an ordinance. \*Champagne and \*Provence, believed to be where the fairs began, had many Jewish communities, whose members in all probability participated in them. Jewish attendance at markets and fairs decreased after the era of the \*Crusades when moneylending and pawnbroking became the major source of Jewish livelihood in northwestern and central Europe. In other areas, where the trade in goods formed an important Jewish occupation, their attendance continued.

The 16<sup>th</sup> century, in Eastern and subsequently in central Europe, witnessed the creation of economic and social patterns adapted to the attendance of large numbers of Jews of various fairs and markets. In \*Poland-Lithuania it was expressly forbidden to fix the dates of fairs and markets on the Sabbath or Jewish holidays. The Jews' commercial rights at fairs and markets were the only ones not challenged by competing Christian merchants. When persecutions in 1539–40 resulted in Lithuanian Jews ceasing to travel to fairs, the nobility appealed to the king to suppress the persecutions at once. One of the most important fairs was the "Gromnice" (February 2), when many Jewish merchants and heads of communities convened at \*Lublin; much trade was done and debts and taxes were gathered. Other fairs took place in \*Brody, \*Gniezno, \*Gdansk (Danzig), \*Torun, \*Lvov, and \*Cracow, and there were innumerable lesser ones as well. As the fairs bore the names of their patron Christian saints, these became common usage and were inscribed on official and business documents. The distinctive creation of Polish Jewry, the \*Councils of the Lands, was an outgrowth of a *bet din* which officiated at the Lublin fairs. Meetings of the councils took place there regularly, twice a year, during the 16-day spring and summer fairs; sometimes they were held during the \*Jaroslaw fairs in the fall. The Lithuanian Council also convened during fairs, and common sessions took place at \*Leczna. One of the tasks of the Councils was regulating the nomination of a \*parnas and \*dayyan for the duration of the fair. As both positions carried wide powers, they had to be judiciously distributed among the contending lands. In Poland-Lithuania the social aspects of the fair were as significant as the economic and communal leadership ones. N.N. \*Hannover described a mid-17<sup>th</sup>-cen-

tury fair: "the head of the yeshivah journeyed with all his pupils to the fair on market day ... and at each fair there were hundreds of heads of yeshivot, thousands of pupils, and tens of thousands of youths and Jewish merchants.... And whoever had an eligible son or daughter went to the fair and arranged a match, for everyone could find one to his liking. And at every fair hundreds of matches were made, and sometimes thousands; and the children of Israel, men and women, wore kingly vestments at the fair" (*Yeven Meẓulah*, 1966, 86f.). Meir b. Gedaliah (Maharam) of \*Lublin (1558–1616) described another aspect of Jewish life at the fairs: "It is a regular custom that at every fair a place is determined as a synagogue for daily prayer, and every Sabbath scholars and yeshivah students and leaders of the land and people congregate there and read the Torah" (Responso, 84).

Jews had been expelled from Breslau in 1455, but they were never absent from the fairs. In 1537 the municipal council opposed an attempt by Ferdinand I to levy a special poll tax on Jewish visitors to the fairs. A century later, at the request of the textile guilds and the imperial authorities and despite the opposition of the local merchants, Jews were permitted to be in the town a few days before and after the fairs. In 1697 the authorities divided the Jews into five categories whose duration of stay depended on the scope of their economic transactions.

Jews attended the fairs as a corporation of merchants based on their communities or countries of origin. These corporations were also responsible for nominating their officials: a *parnas ha-yarid*, in charge of keeping order and representing the fair corporations; a *dayyan ha-yarid*, who held regular judicial authority and was empowered by the chief rabbi of the land (first mentioned in 1698); supervisor of ritual law; and *shames (shammash)*, the distinctive Breslau functionary, who was permitted to remain between the fairs and guarantee the continuity of business transactions. First mentioned in 1673, he was elected by his *Judenschaft*, authorized by the Councils of the Lands, recognized by the Breslau municipal council, sworn in, and allowed to wear a sword. In 1696 there were ten *shamosim* at the fair, one each for the four Polish lands and one for Bohemia, \*Moravia, \*Glogau, \*Posen, \*Leczna, and \*Zuelz. The number of Jewish visitors at a fair in 1685 was 332, and they practically monopolized Polish trade, particularly in textiles, silks, spices, tobacco, and above all in furs.

Jewish attendance at fairs within the Austrian Empire was encouraged by Emperor \*Maximilian I, who in 1494 permitted Jews to attend markets in the imperial cities from which they had been expelled on payment of three florins *Mautgeld* ("body tax"; see \*Leibzoll). This right, confirmed by his successors in return for extraordinary taxation, became the legal cornerstone of Jewish economic activity. \*Joseph II eventually abolished the *Leibzoll* and declared all markets open to Jews (1782/83). In practice, however, many restrictions remained in force until 1848. At \*Brno, for example, the Jews were allowed to enter through only one gate (*Judentor*) at fixed hours, were restricted to one market, and forced to lodge in one inn, the

*Neue Welt* in the Krona suburb. They struggled for many years for the right to erect stalls. Complaints by Christian merchants against underselling and inferior wares were continuously raised, and peddlers (called *pinklerjuden*) were particularly harassed at the Brno fairs. The Council of Moravia regulated the supervision of dietary laws at the fairs, distributed stalls before the fairs commenced, and prohibited the Jews from being at the fair on the day before it opened. There was a tendency to establish Jewish communities near locations of major and minor markets and fairs.

There were a great many fairs in central Europe. Many Jewish calendars recorded dates of fairs, which Jews attended as peddlers who both bought and sold wares, as merchants buying goods wholesale for retailing, and sometimes as popular performers like jugglers. Registers of the special scales for weighing feathers at the \*Linz markets of 1594 and 1603 show that there were 131 Jewish traders in feathers and only 12 Christian dealers. Other important commodities were leather, skins, old clothes, and new clothes and textiles imported from Bohemia. In 1714 Bohemian "*Federjuden*" had to have special permission to attend because of the plague. About 300 Jews dealing in similar articles attended the \*Krems fairs annually; in 1701 the Moravian Jews boycotted it because a Jew had been arrested as a thief.

The records of Zurzach fairs in Switzerland mention the *Judengeleit* (*Leibzoll*), a tax of between 7 and 19 batzen according to age and wealth which was a considerable source of income. The number of Jews attending grew from about 150 in the mid-18<sup>th</sup> century to about 200 at its close; most foreign Jews were from Gailingen, \*Hohenems, and communities in \*Baden, \*Alsace, and Swabia, which were composed primarily of peddlers and merchants. More than three-quarters of the households of the nearby communities of Endingen and \*Lengnau attended these fairs. Although Jews were not tolerated throughout most of Switzerland, they were allowed and encouraged to attend the fairs, particularly the \*livestock merchants. In France in 1741, the controller-general of finances wrote a circular letter to all provincial governors asking them about the commercial activities of the Jews. Unanimously they replied that Jews should not be excluded from the fairs and markets because they helped keep down prices. The monopolistic guilds were forcing up prices, while the outside merchants, who came for the duration of the fair, forced them down. An endemic source of strife and litigation between Jews and local merchants and the authorities was the constant attempt to sell outside the market, or not on market days, or on the way to or back from markets, or to remain in the area after the fair was over. In Italy Jews were to be found at the major fairs and often participated in the festive processions which inaugurated them. The community of \*Mantua bought and erected stalls at the fairgrounds for its members; there was an unsuccessful attempt to prohibit their use in 1740. A Jewish community had the right to tax Jewish merchants attending the fairs for the use of communal amenities. In 1720 the Jewish communities of the duchy of Parma tried, without

success, to tax Jewish merchants attending the Parma city fairs (where there was no community). A long dispute (1748–51) between the community of \*Verona, which had attempted to exact a business tax from foreign visitors at the fairs, and the communities of Mantua, \*Ferrara, and \*Modena ended with rabbinical authorities in Italy and Germany deciding against Verona's action.

European rulers were aware of the economic benefits resulting from Jewish participation in fairs. Joachim II, elector of \*Brandenburg, expelled the Jews in 1510 but subsequently allowed them to attend fairs. After the 1573 expulsion from Brandenburg, Posen Jews regularly received permission to attend the \*Frankfurt on the Oder fairs. Elector Frederick William (1640–88) encouraged Polish Jews to attend fairs in his realm long before he admitted 50 Jewish families from Austria to settle and trade freely throughout his lands (1671). Though Jews were rigorously excluded from \*Saxony, the internationally important \*Leipzig fairs needed Jews to participate in large numbers. Between 1675 and 1764, 82,000 Jews attended the bi-annual \*Leipzig markets; their number fluctuated according to political and economic factors, but grew steadily from about 400 a year in the mid-17<sup>th</sup> century to twice that amount by the end of the century and continued to grow; they generally constituted about one-fifth of the total attendance. Their number increased from an average of 1,073 in the 1780s to 3,370 in the 1800s and 6,444 in the 1830s, when they formed around one-quarter of the participants. Between 1675 and 1764 the majority of Jewish participants came from Central Europe, though the number of East European Jews was increasing slowly, eventually amounting to one-third of the total Jewish attendance in the early 19<sup>th</sup> century. The attendance lists of the fairs offer a true mirror of 18<sup>th</sup>-century Jewish society. Members of the leading families attended (see \*Bacharach, \*Fraenkel, \*Gomperz, \*Ephraim, Itzig families, and Samuel \*Oppenheimer, David \*Oppenheim, and Samson \*Wertheimer). \*Glueckel of Hameln recorded her husband's transactions at fairs with Jost \*Liebmann, the Court Jew. The leading \*Court Jews of the day, Alexander David, Behrend \*Lehmann, and Leffmann \*Behrends, were also present. Jewish visitors to Leipzig congregated in the Bruehl, which became in effect a Jewish quarter for the duration of the fairs. The *Landrabbiner* of \*Anhalt had rabbinical jurisdiction there and those who died at the fair were buried in Dessau. At Leipzig Jews bought wares worth about half a million thalers annually between 1773 and 1775, primarily textiles. Officially they sold wares worth one-fifth of that amount, but the sales figure was not the true one, for the "sales tax" (*Wagegold*) was 1% of all sales; it was not until 1813 that it was reduced to 0.5%, the same as the Christian tax. In addition the city exacted a high entrance fee. "*Volljuden*," who did not enjoy special privileges and protection and were the majority, paid six thalers each and three for a wife or servant. Jewelers paid eight thalers and cooks (*Judenkoch*) ten thalers and 12 groschen.

In the \*Pale of Settlement and Austrian Galicia the market square and the regular market days became the center of

the *shtetl* and the heart of its economy. To a large extent the economic and social life in these townships was regulated by buying from peasants and selling to them on the fixed market day in the appointed place; taverns were therefore erected around the market square. Jewish emigrants carried over this type of market (with some changes) into large cities in Western Europe; an example is the Petticoat Lane Market in London.

[Henry Wasserman]

**MARKISH, PERETZ** (1895–1952), Soviet Yiddish poet, novelist, and playwright. Born in Volhynia, Markish received a traditional Jewish education and prepared for entrance to a university. He began writing Russian poetry at age 15 and Yiddish poetry in 1918–19, when he published in the Kiev journals *Eygnis* and *Baginen*, whose contributing writers and editors broke with past models of artistic representation to craft a new revolutionary Jewish culture. Markish stood out among other Yiddish poets, like David \*Hofstein and Leib \*Kvitko, for his creative admixture of German expressionism and Russian futurism. His first book of poetry, *Shveln* (“Thresholds,” 1919), made his reputation as *the* poet of the new generation. He moved briefly to Moscow before leaving for Warsaw in late 1921, where he helped found the Yiddish modernist movement through his participation in the literary group, *Khalyastre* (“The Gang”), and by co-founding *Lit-erarishe Bleter*. His poem “Hunger” appeared in the second edition of the Moscow *Shtrom*, and in 1922 he published *Di Kupe* (“The Heap”), an epic poem that commemorated the 1921 pogroms that swept the Ukraine. In 1926, he returned to Moscow, where he became one of the most prolific writers of Soviet Jewish letters, publishing in the Kiev journal *Royte Velt* and the Minsk journal *Shtern*. Markish’s career reflected a general shift away from modernism and poetry to socialist realism and prose, as demonstrated in his first novel, *Dor*

*oys, dor ayn* (“Generations,” 1929), which describes the tension between modernity and tradition in a Jewish family during the Revolution. Markish quickly rose to a position of power in the Union of Soviet Writers (established 1932), and during the Great Purges of 1936–38 he denounced defendants at one of the trials in a poem whose publication showed Markish to be firmly established within the Soviet system. During World War II, he wrote the play *Kol Nidre*, and in 1942 joined the leadership of the Jewish \*Anti-Fascist Committee (JAF), which served as the center of Jewish cultural life during and after the war. Markish’s last major work, the 1948 epic poem *Milkhome* (“War”), chronicles a wide spectrum of wartime experiences, focusing particularly on the plight of the Jews. In January 1949, during the antisemitic anti-cosmopolitan campaign, several major cultural figures who worked in Yiddish, Markish included, were arrested. In 1952, he and several others were convicted of anti-Soviet activities, spying, and bourgeois nationalism and were shot. Rehabilitated after Stalin’s death, Markish’s poems were again published in 1957 (in Russian translation only). His novel of Polish-Jewish heroism during World War II, *Trit fun Doyres* (“The Footsteps of Generations,” 1966), was published posthumously in Soviet Russia; ironically, the novel is replete with praise for the regime and political system.

**MARKON, ISAAC DOV BER** (1875–1949), Russian scholar and librarian. Markon was born in Rybinsk on the Volga and studied at the St. Petersburg University under D. \*Chwolson and at the \*Hildesheimer Rabbinical Seminary and the University of Berlin. He was librarian at the Imperial Public Library in St. Petersburg (1901–17), instructor at the Higher Courses of Oriental Studies (1908–11), instructor and later professor of Jewish studies at the university in St. Petersburg (1917–20), and professor at the Belorussian University at Minsk (1922–24). He also served for a time on the scholars’ advisory committee for the Czarist Ministry of Education. For four years he was an editor of the Russian Jewish encyclopedia *Yevreyskaya Entsiklopediya* and planned the publication of a new encyclopedia, *Ozar ha-Yahadut*, of which a prospectus appeared in 1914. He founded and edited the quarterly *Ha-Kedem* (with A. Sarzowski) which appeared from 1907 to 1909 in Hebrew and German. Markon left Russia for Berlin in 1926 where he joined the editorial staff of the *Encyclopaedia Judaica* and the *Eshkol Enziklopedyah Yisre’elit*, in charge of the departments of \*Karaism and bibliography. For a time he also lectured at the Rabbinical Seminary. In 1928 Markon was appointed librarian of the Hamburg Jewish community. As he

was a Jewish Soviet citizen, he was expelled from Germany in 1938. He went first to Holland and in 1940 escaped to England, where he joined Montefiore College at Ramsgate.

Markon's first step in Jewish scholarship was his prize-winning comparison of Christian canonical with talmudic and Karaite marriage law (Russ., 1901). In the same field are his *Me-korot le-Korot Dinei Nashim* (about laws relating to women) 1, pt. 1 (1908) and various editions of Karaite works. Markon also published a study of the Slavonic glosses in the *Or Zaru'a* by Isaac b. Moses of Vienna (1906). With D. Guenzburg he edited the *Festschrift... A. Harkavy* (1908). Autobiographical reminiscences by Markon appeared in *Mezudah* (2 (1944), 187ff.; 3 (1945), 341ff.; 4–6 (1948), 474ff.) as well as in some of his letters in G. Kressel (ed.) *Genazim* (1 (1961), 244ff.).

**BIBLIOGRAPHY:** Kressel, *Leksikon*, 2 (1967), 429.

**MARKOVA, ALICIA** (1910–2004), British-born prima ballerina who joined Diaghilev's Les Ballets Russe in 1925 when she was just 15 years old. She was one of the famous "Baby Ballerinas" of the company. Her real name was Alice Lillian Marks, a name which, for Diaghilev, was not Russian or at least not French enough to appear in his company's programs. So without being asked, she was named Markova. Many years and famous roles later, she became – by order of Queen Elizabeth – Dame Alicia.

Markova created many of the central roles in the ballets of Balanchine, Ashton, and other contemporary choreographers. In 1931 she was back in her native London and joined the first professional ballet company in the U.K., the Ballet Rambert, founded and directed by another daughter of a Jewish family, one more dancer whose name was changed by Diaghilev because Miriam Rambam-Ramberg sounded too Jewish and not Russian enough and thus became Marie \*Rambert. With this company Markova danced for many years as well as with the Vic-Wells Ballet, which later became The Royal Ballet.

Markova danced the leading roles in the classics as well as in new, contemporary works, such as Ashton's *Facade*, Tudor's *Lysistrata*, and De Valois' *The Rake's Progress*. She was the prima ballerina of the London Festival Ballet in the 1950s. She stopped dancing in 1962 and in the years 1963–69 Markova was the ballet director for the New York Metropolitan Opera Ballet.

**BIBLIOGRAPHY:** IED, vol. 4, 267–71.

[Giora Manor (2<sup>nd</sup> ed.)]

**MARKOVITS, RODION (Jakabs, 1888–1948)**, author and journalist. Following capture by the Russians during World War I, Markovits later became a political commissar in the International Brigade fighting with the Red Army after the October Revolution. His *Szibériai garnizon* (1927; *Siberian Garrison*, 1929) enjoyed worldwide success in translation. Two later works were *Aranyvonat* ("The Golden Train," 1929) and *Reb Áncslí és más avasi zsidókról szóló széphistóriák* ("Reb Anshel and Other Jewish Stories," 1940).

**MARKOWITZ, HARRY M.** (1927– ), economist and Nobel Prize winner. Born in Chicago, Markowitz received his higher education, B.A. through Ph.D. (1954), at the University of Chicago. He was on the research staff of the Rand Corporation and technical director of Consolidated Analysis Centers, both in Santa Monica, California. After serving as a professor at UCLA (1968–69), he moved to New York where he was president of the Arbitrage Management Company (1969–72), worked as a private consultant (1972–74), and was a member of the research staff of T.J. Watson Research Center of IBM (1974–83). From 1982 he was been the Speiser Professor of Finance at Baruch College of City University of New York. From 1990 he was research director at Diawa Securities Trust.

In 1990 he shared the Nobel Prize in economics with William Sharpe of Stanford University and Merton Miller of the University of Chicago "for their pioneering work in the theory of financial economics." For Markowitz, the Nobel award was in honor of his theory, first defined in the 1950s, of "portfolio choices," which showed that investors would do best if they built up a diversified investment portfolio. His theory sought to prove that a portfolio that mixes assets in order to minimize risk and maximize return could be practical. His techniques for measuring risk associated with various assets, and his techniques for mixing assets, became standard investment methods. His work on portfolio theory paved the way for financial microanalysis to become an accepted area of research in economic analysis.

Markowitz also developed Simscript, a computer language that is used to write economic-analysis programs.

Books by Markowitz include *Portfolio Selection: Efficient Diversification of Investment* (1959), *Mean-Variance Analysis in Portfolio Choice and Capital Investments* (1987), and *The Theory and Practice of Investment Management Workshop* (with F. Fabozzi and L. Kostovetsky, 2004).

[Ruth Beloff (2<sup>nd</sup> ed.)]

**MARKS, HARRY HANANEL** (1855–1916), British journalist and politician. Born in London, Marks was a son of David Woolf Marks (1811–1909), a prominent Reform rabbi. He took up journalism in the U.S. and worked five years on the *New York World* and *Daily Mining News*. Returning to England in 1883, he established and edited *Financial News* and wrote a book, *Small Change, or Lights and Shades of New York* (1882). In 1889–98 he was a member of London County Council and was elected a Conservative member of Parliament in 1895–1900 and 1904–09. Marks was a bitter anti-Zionist. In 1879, however, he wrote a satirical work denouncing antisemitism, *Down With the Jews! A Meeting of the Society for Suppressing the Jewish Race*.

**ADD. BIBLIOGRAPHY:** ODNB online; D. Porter, "Trusted Guide for the Investing Public: Harry Marks and the *Financial News*, 1884–1916," in: *Business History*, 28 (1986), 1–17; DBB, 4, 133–35.

**MARKS, HAYMAN** (1772–1825), early U.S. merchant and Mason. Marks, whose place of birth is unknown, was among

the early Jewish settlers of Richmond, Virginia. Mention of him is found in several documents involving litigation. A well-known citizen of Richmond, he was one of the signers of a petition to the Virginia legislature asking for the incorporation of a bank there. Marks later moved to Philadelphia, where he became active in Congregation Mikveh Israel, ultimately becoming its president (1815–18). Marks was known to be a member of the Masonic fraternities of both Richmond and Philadelphia. His wife was Grace Judah, of the New York \*Judah family.

**MARKS, MARCUS M.** (1858–1934), U.S. clothing manufacturer, civic official, and philanthropist. Marks was born in Schenectady, N.Y., and joined his father's clothing manufacturing firm, M. Marks and Son, which he later headed (1890–1913). From 1913 to 1917 Marks served as Manhattan borough president under the reforming mayor John P. Mitchel, establishing open public markets, welfare work, and joint trial boards for civil service employees. He was active in a variety of public causes. He was president of the National Daylight Association in 1917. As president of the National Association of Clothiers, he promoted the idea of cooperation among merchants, particularly in labor relations. As a member of Theodore Roosevelt's Nobel Prize Committee on Industrial Peace, Marks mediated many labor disputes. He was a founder and leader of several peace groups, of the Educational Alliance, of the Hospital Saturday and Sunday Association, and of the Tuberculosis Preventorium for children. An advocate of university exchange study between the U.S. and Europe, he served as chairman of the selection committee of the Institute of International Education.

**MARKS, SAMUEL** (1845–1920), South African industrialist and financier. Marks, who was born in Neustadt-Sugrind, Lithuania, emigrated to the Cape in 1868. With the Lewis brothers, he founded the firm of Lewis and Marks, which eventually controlled large industrial and mining undertakings in the Transvaal. The partners began as traveling traders ("tochers"). When diamonds were discovered they moved to Kimberley, where they opened the first general store in a prefabricated wooden building brought from the Cape by wagon. Lewis and Marks established themselves in the Transvaal in the 1880s, first on the Barberton gold workings and later on the Rand and in Pretoria. Marks, who was popularly known as Sammy, was noted for his salty humor and his fondness for biblical quotations. He understood the Boer outlook, particularly that of his friend President Kruger. He assisted the Transvaal government financially, obtained industrial concessions, and acquired land on the Vaal River on which he founded the town of Vereeniging. He developed rich coal deposits in the area, established fruit farms, and planted extensive forests. He also started the manufacture of bricks, glass, and leather goods and pioneered the steel industry. In 1897 Marks accompanied a deputation to Kruger asking, with indifferent results, for the repeal of laws which placed disabilities upon Jews in common

with other non-Protestants and *uitlanders* ("foreigners"). In the conflict between the Boers and the British he commanded the respect of leaders on both sides and was a mediator in the negotiations which ended the South African War in 1902. He served as a senator in the first Union Parliament in 1910. Marks donated £10,000 for the statue of President Kruger which now stands in the center of Pretoria. In 1896 he helped endow the first chair in Hebrew studies at the South African College, later the University of Cape Town, and in 1905 founded a Hebrew school in Pretoria.

**MARKS, SIMON, BARON** (1888–1964), British businessman, philanthropist, and Zionist. Born in Leeds, Simon Marks was the son of Michael Marks, who emigrated in 1882 from Russia to the U.K. where he began as a peddler. In 1884 he opened a market stall in Leeds and later a number of Penny Bazaars in the Midlands. They grew into the great multiple-store chain of Marks & Spencer Ltd. Simon Marks was elected chairman of the board in 1917 and from then on, until he died at his office desk, steered the firm to phenomenal commercial and financial success. His close business associate was Israel Moses (later Lord) \*Sieff; they had married each other's sisters. The high quality of their goods and business probity set a tradition in British retail merchandising. Indeed it was said that they were largely responsible for a quiet revolution in British life by raising living standards through making high quality goods available at popular prices. "Marks and Sparks" remains probably the best-known and most famous of all British high street retail chains, although its founding families largely severed their direct connection with the firm in the 1980s.

From their mid-20s Marks and Sieff were loyal and devoted supporters of Chaim \*Weizmann in his Zionist activities originally in Manchester and later in London, and were joined by other members of their families. In 1919 Marks went as secretary of the Zionist delegation to the Versailles Peace Conference. Later he became chairman of the Keren Hayesod Committee, vice president of the Zionist Federation and in 1950 was elected a member of the Zionist Executive. He was president of the Joint Palestine Appeal at his death. Marks participated with Weizmann and the Zionist leadership in political negotiations with successive British governments and in other Zionist efforts until the State of Israel was established. He and Lord Sieff were leading contributors to the Daniel Sieff Research Institute (1934) and later in the Weizmann Institute of Science (1949) both at Rehovot, Israel. Their personal and family trust benefactions to public causes in Britain and Israel totaled tens of millions of pounds over six decades. The Marks and Sieff families were reputed to have been the greatest donors to Zionist causes in the Diaspora.

Marks rendered distinguished public service in the period between and during both world wars. He helped to found

the Air Defense Cadet Corps in Britain in 1938 and headed wartime production coordination in the London and south-east England area. He was also an adviser to the Ministry of Petroleum Warfare and one of the first directors of British Overseas Airways. In 1944 he received a knighthood and 1961 was created a baron.

**MARKSON, AARON DAVID** (1882–1932), Hebrew author and educator. Born in Lithuania, Markson went to the United States in 1904, and taught Hebrew in New York and other cities. He contributed essays and stories to Hebrew periodicals, edited a miscellany *Mi-Keren Zaviv* (1921), and translated Mark Twain's *The Prince and the Pauper* (1923). His writings were posthumously collected in *Kitvei A.D. Markson* (1938), which also contains autobiographical material, a brief memoir by his daughter, and evaluations of his work by several authors.

[Eisig Silberschlag]

**MARKUS, LUDWIG** (1798–1843), historian. Born and educated in Dessau, Germany, he studied medicine at the University of Berlin, but abandoned it to take up philosophy and astronomy. In 1825 he moved to Paris, and from 1830 until 1838 he taught German at the Royal College at Dijon.

Markus was an active member of the Society for Jewish Culture and Science in Berlin, and one of his lifelong passions was the study of the Falashas (\*Beta Israel) of Abyssinia. This earned him Heinrich \*Heine's sobriquet, "King of Abyssinia." He wrote *Histoire des Wandalas* (1836) in which he traced the rise and collapse of the Vandal empire in Africa, and in 1842, published *Géographie ancienne des états Barbaresques*. Suffering from recurrent fits of depression, especially after the death of his mother, he moved back to Paris 1838 and died there penniless in an insane asylum. Baroness de Rothschild paid for the funeral, and Heine wrote an obituary.

**MARLÉ, ARNOLD** (1889–1970), German actor. Born in Prague, Marlé trained in Munich and was active as an actor and director in Munich and Hamburg. In 1933 he left Germany for Czechoslovakia, working at the German Theater in Prague from 1934 to 1937. In the 1930s, he accompanied Leopold Jessner's group to Holland and London. In 1939 he immigrated to London. He began appearing in English-language films in 1942 and later also played in television series and on the British and American stages. His wife, Lilli Freud-Marlé, whom he married in 1917, was a niece of Sigmund \*Freud, and became known as a reciter of poetry in various European cities.

[David Rees (2<sup>nd</sup> ed.)]

**MARLI, SAMUEL (Raphael) BEN MAZLI'AH** (d. 1617), Italian rabbi and author. One of the outstanding scholars of Italy, Samuel, like his father, served in a variety of offices in the Mantua community and was in charge until his death of collecting funds for Erez Israel. In 1587 he was appointed rabbi of the community and was apparently also the head of a yeshivah. According to S.D. Luzzatto, his name means "of Arles." During the time Marli was rabbi, the Jews of Mantua were confined to a ghetto prepared for them at their own cost, and Marli was one of the members of the committee which dealt with matters affecting the ghetto. His signature is found on many of the community's documents and regulations. He was highly praised by the scholars of his time, and although he published no works, a few of his responsa and letters have been published in the works of his contemporaries and preserved in manuscript. Some of his *piyyutim* were published in the *Ayyelet ha-Shaḥar* and in the *Siddur mi-Berakhah* of Italian rite (Mantua, 1653), as well as later in Schirman's *Mivḥar ha-Shirah ha-Ivrit be-Italyah*. Marli prepared and may have published a special essay which is still in manuscript, "to demonstrate to the nations and princes that a Jew is not permitted to curse or to act wrongly toward any man." He is also mentioned among those who supplied Azariah dei Rossi with material for his *Me'or Einayim*, and was among the rabbis who forbade the use of the *mikveh* of Rovigo (Moses Porto in: *Palgei Mayim*, p. 55). Hananiah Eliakim Rieti composed a eulogy on his death.

[Itzhak Alfassi]

**MARLOWE, CHRISTOPHER** (1564–1593), English playwright. *The Jew of Malta* (c. 1590) portrays the monstrous Jew, Barabas; T.S. Eliot described the play as a savage farce. Indeed it has elements of melodrama and exaggeration which suggest that Marlowe was not completely serious in his portrayal of the Jew. Barabas is a rich merchant whose wealth is expropriated and whose house is turned into a nunnery by order of the governor of Malta. In revenge, Barabas indulges in an orgy of slaughter, poisoning his daughter Abigail, her lover, and many others. Malta being besieged by the Turks, Barabas enters upon a career of political intrigue, first betraying the island to the enemy and then plotting the destruction of the Turkish commander. But Barabas is himself betrayed and perishes in a boiling cauldron. The story represents a mingling of traditional antisemitism (in the Middle Ages the Jews were often charged with poisoning the wells) with the late 16<sup>th</sup>-century taste for the "political thriller." Barabas, a disciple of Machiavelli, practices political stratagems with a view to gaining power in the state. From this point of view his Jewishness is no more than incidental, the main interest being focused on

his "Italian" villainy. Barabas' conspiracy with the Turks may have been suggested by the career of Joseph \*Nasi. *The Jew of Malta* was almost certainly in Shakespeare's mind when he wrote *The Merchant of Venice* some years later. Like Shakespeare's Jew, Barabas has a beautiful daughter who becomes a Christian, and a comic servant, Ithamore, who directs the audience's laughter against the Jew. This latter feature may be a relic of the medieval religious drama in which the Devil was frequently accompanied by a comic figure, the Vice. In spite of his negative portrayal of the Jew, Marlowe undoubtedly projected into the portrait some of his own restlessness as well as his notorious dislike of the Establishment. But Marlowe's work differs markedly from Shakespeare's depiction of Shylock in being two-dimensional, in contrast to Shakespeare's ambiguous and three-dimensional portrayal of his Jewish character.

Eliot, *Selected Essays* (1932), 118–25; H. Sinsheimer, *Shylock* (1947), 51–54; H. Levin, *Overreacher: a Study of Christopher Marlowe* (1954), index; H. Fisch, *Dual Image* (1959), 25–29. **ADD. BIBLIOGRAPHY:** ODNB online.

[Harold Harel Fisch]

**MARMOR, KALMAN (Zevi; 1879–1956)**, Yiddish scholar and activist. Born in Mishagola, near Vilna, he immigrated to Switzerland in 1899, where he studied at the universities of Freiburg and Berne, before settling in the U.S. in 1906. He joined the Po'alei Zion, co-founded the World Union of Po'alei Zion, and became the editor of its weekly, *Der Yidisher Kemfer*. In 1914 he joined the American Socialist Party and in 1919 the American Labor Alliance, which became the Workers Party and later the Communist Party. Marmor began his literary career in 1901 in *Der Yidisher Arbeter*, published by the Bund, and contributed to Yiddish periodicals in Europe and the U.S. In 1922 he joined the New York Yiddish Communist daily *Morgen Frayhayt* and remained a contributor until his death.

From 1933 to 1936, he lived in Kiev, working in the Institute for Jewish Studies of the Ukrainian Academy of Sciences, where he prepared editions of the works of Aaron \*Liebermann, Joseph \*Bovshover, and David \*Edelstadt. His monograph on Liebermann, as well as the collection of Liebermann's works which he annotated and translated into Yiddish, were lost when the Institute was liquidated by the Soviet government in 1936. As a U.S. citizen, Marmor was freed, having rescued Liebermann's letters, which were later published in New York. The first two volumes of his edition of the works of David Edelstadt, written from an extreme party perspective, were published in Moscow in 1935. The manuscript of the third volume found its way to the YIVO Institute in New York. In his long career Marmor was a committed Zionist, Po'alei-Zionist, Socialist, and Communist, an expert on the history of Yiddish and Hebrew literature, on Jewish, Arabic, and Greek philosophy, and on the history of socialist and revolutionary movements; he was a productive writer, an able researcher and collector of historical material. His publications include

*Der Onhoyb fun der Yidisher Literatur in Amerike* (1944), *Dovid Edelshtat* (1950), *Yoysef Bovshover* (1952), *Yankev Gordin* (1953), his autobiography, *Mayn Lebns-Geshikhte* (2 vols., 1959), and his 10-volume edition of the complete works of Morris Winchevsky (1927).

[Elias Schulman / Jerold C. Frakes (2<sup>nd</sup> ed.)]

**MARMOREK, ALEXANDER (1865–1923)**, bacteriologist and Zionist leader. He was born in Mielnice, Galicia, and studied in Vienna and at the Pasteur Institute in Paris, where he became assistant and subsequently *chef de travaux*. Early in his studies, he discovered an antidote (antistreptococcus) against puerperal fever. In 1903 he addressed the Paris Académie de Médecine and claimed the discovery of the toxin of the tubercle-bacillus and of the antituberculosis vaccine. This discovery was hotly debated in expert circles and was finally accepted as an invariably successful cure if prescribed up to a certain stage of the disease. With this discovery, Marmorek also initiated the serum study that led to the modern treatment of typhus and diabetes. Marmorek was also an ardent Zionist. In Vienna he belonged to \*Kadimah, the first students' society to join \*Herzl after the publication of *Der Judenstaat*. With his brothers Oscar and Isidor, he belonged to the circle of Herzl's closest friends and was repeatedly consulted on political steps contemplated by the Zionist leader. He was elected member of the Zionist General Council at the first 11 Zionist congresses (1897–1913). After Herzl's death Marmorek remained an adherent of Herzl's political Zionism and, next to Max \*Nordau, became the foremost spokesman of the opposition, when "practical" Zionists assumed the movement's leadership in 1911. After World War I he strongly opposed \*Weizmann's policies and refused to participate at the 12<sup>th</sup> Zionist Congress (1921). In his articles and speeches he emphasized that the Palestine Mandate was not the fulfillment of Herzl's idea of a Jewish state. Marmorek was chairman of the French Zionist Federation and one of the co-founders of *L'Echo Sioniste*, the Zionist monthly published in Paris. He founded the Jewish Popular University in Paris, chiefly for the benefit of foreign Jews who settled there. As a foreign national he was unable to remain in Paris during World War I and served as a doctor with the Allied armies in Eastern Europe.

His brother OSCAR (1863–1909) was an architect and Zionist leader. Born in Skala, Galicia, he studied in Vienna and Paris. He built a great number of important buildings in Vienna and Austria and also some synagogues, in which he attempted a style based on his studies of old Jewish architecture. He attained fame through his pavilion "Venice in Vienna" at the world exhibition of 1900 in Vienna.

Oscar Marmorek joined Herzl after the publication of *Der Judenstaat* and was elected to the Zionist Executive at the first six Zionist congresses. He was a co-founder of *Die \*Welt*.

Herzl depicted him in *Altneuland* as Architect Steineck. He died by his own hand.

**BIBLIOGRAPHY:** D. Jacobson, *A. Marmorek* (Fr., 1923); JC (July 20, 1923); *Die Welt* (April 16, 1909); L. Jaffe, *Sefer ha-Congress* (1950), 339–40; M.I. Bodenheimer, *Prelude to Israel* (1963), index; M. Schach, *Asher Ittam Hithalakhti* (1951), 123–42.

[Oskar K. Rabinowicz]

**MARMORI, HANOKH** (1948– ), Israeli graphic artist and editor. Marmorstein studied history and theater at the Hebrew University of Jerusalem and graphic design at the Bezalel Academy of Arts. A satirist, he began his writing career on the university newspaper, contributed to the popular television satirical program *Niku'i Rosh* (“Clearing the Head”), and co-wrote a satirical column in the political weekly *Ha-Olam ha-Zeh*. In 1980 he joined the Schocken newspaper chain, first as the founding editor of the Tel Aviv local newspaper *Ha-Ir*. In 1984 he moved to *Hadashot*, the failed Schocken attempt to launch a popular newspaper, where he was occupied in writing mostly for the newspaper’s magazine and supplements. In 1988 he was appointed deputy editor of the *Haaretz* daily newspaper, and following the death of its veteran editor Gershon \*Schocken in 1991 was appointed to succeed him. Deploying his graphics background, Marmorstein succeeded in turning a dullish newspaper into one with an attractive layout, but without losing its character as a thoughtful and stimulating maker of opinion. A daily culture and entertainment supplement and a weekly book supplement were added, together with expanded news coverage, notably in the fields of economics and sport. Notwithstanding his close ties with Amos Schocken, who succeeded his father Gershon Schocken as publisher, differences eventually arose between the two men. Disagreements within the editorial board over the Intifada beginning in 2000 found Schocken taking a more left-wing position together with some other board members while Marmorstein took a more centrist view. In 2004 Schocken’s plans to further enlarge the economics section of the paper into a separate entity called “The Market,” outside the editor’s direct responsibility, led Marmorstein to resign. He left active journalism to head the Department of Visual Communications at the Bezalel Academy of Arts. In 2004 he was awarded the Sokolow Prize for journalism.

**MARMORSTEIN, ARTHUR** (1882–1946), rabbi, scholar, and teacher. Born in Miskolc, Hungary, Marmorstein was descended from a long line of Hungarian rabbis known not only for their talmudic learning but also for their familiarity with secular literature. He studied at the yeshivah of Pressburg and the rabbinic seminaries of Budapest and Berlin. After visiting libraries for some time in England, Italy, and France, transcribing manuscripts, Marmorstein served for six years as rabbi at Jamnitz (Jemnice), Czechoslovakia. From 1912 until his death he taught at Jews’ College, London. Marmorstein’s scholarship embraced many subjects. His initial training at the universities was in Semitics, with special emphasis on Assyriology. He was

particularly fascinated by the aggadic sections of the Talmud and by liturgy. Though Marmorstein contributed to many areas of Jewish scholarship, he is noteworthy for his studies in rabbinic theology, the subject of his two important volumes *Doctrine of Merits in Old Rabbinic Literature* (1920) and *Old Rabbinic Doctrine of God* (2 pts., 1927); both were reprinted in one volume with an introduction by R.J. Zwi Werblowsky (1968). Other important essays on rabbinic theology by Marmorstein were collected and published under the title *Studies in Jewish Theology* (1950). Marmorstein’s work is characterized by painstaking detail in the collection of sources, which are important for the study of rabbinic religion.

[Alexander Tobias]

**MARMUR, DOW** (1935– ), rabbi, teacher, author. Marmor was born in Sosnowiec, Poland, an only child in a Po’alei Zion (left) family. In 1939, the family moved to the Lvov region, escaping the German invasion. They were deported to Siberia in 1940 by Soviet authorities but, following Operation Barbarossa, released and found refuge in Uzbekistan, where they remained until their repatriation to Poland in 1946. Although largely unschooled, the young Marmor had already learned four languages.

The family moved to Gothenburg, Sweden in 1948, where Marmor not only learned Swedish but English, German, and Hebrew as well. Attracted to Liberal Judaism, he entered the Faculty of Religion at the University of Stockholm in 1956, the same year he married Fredzia Zonabend, a survivor of the Lodz ghetto. Not feeling fulfilled at university, Marmor and his wife moved to London, where he entered the Leo Baeck College. Under the tutelage of several luminaries, including Ignaz \*Maybaum, he graduated in 1962 and was already serving as rabbi of South-West Essex Reform Synagogue in Ilford. In 1969, he became rabbi of North-Western Reform Synagogue in Alyth Gardens and in 1983 moved to Toronto to become rabbi of Holy Blossom Synagogue, the largest Reform congregation in Canada. He remained at Holy Blossom until his retirement in 2000.

Marmor wrote six books, notably *Beyond Survival* (1982); *The Star of Return* (1991); and an autobiography, *Six Lives* (2004). He has written extensively in newspapers and journals, taught at St. Michael’s College, University of Toronto, and was a fellow of Massey College, University of Toronto. An ardent Zionist, he also served as the first chair of ARZENU, the international movement of Reform Zionists; president of ARZA Canada, the Association of Reform Zionists of America; vice president of the Canadian Zionist Federation, and as a member of the executive of the World Zionist Organization. After retirement, he became Interim executive director of the World Union for Progressive Judaism in Jerusalem.

Marmor was a champion of progressive social causes in Canada and Israel, where he remained sympathetic to the

peace movement. He was founder of the Polish-Jewish Heritage Foundation of Canada, which seeks to build bridges between Poles and Jews.

**MAROR** (Heb. מָרוֹר), the traditional “bitter herb” which the children of Israel were commanded to eat with unleavened bread and the paschal offering both in Egypt (Ex. 12:8) and “throughout their generations” (Num. 9:11). The plural, *merorim*, occurs in the Bible in the verse: “He hath filled me with *merorim*, he hath sated me with wormwood” (Lam. 3:15), referring to a bitter vegetable, parallel to wormwood (cf. Deut. 32:32). The rabbis included under *merorim* plants whose common features are “bitterness, possessing sap, with a grayish appearance” (Pes. 39a), meaning wild or cultivated vegetables, with leaves of a silvery-grayish-green color, that have a milk-like sap and leaves with a bitter taste. This definition can apply to a number of plants, particularly some of those belonging to the family of Compositae. Thus the Tosefta and the Talmud (*ibid.*) enumerate a number of such vegetables with which the duty of eating *maror* on the night of the *seder* can be fulfilled. The Mishnah enumerates five: *ḥazeret* (“\*lettuce”); *olshin* (“chicory,” see \*vegetables); *tamkiah* (according to Maimonides, “wild chicory” but impossible to identify with certainty); *ḥarḥavina*, a plant of the family of Umbelliferae, of which the most common is *Eryngium creticum*; and *maror*. Some of the Compositae are called *murār* or *marāra* in Arabic. In the Jerusalem Talmud *maror* is described as a “bitter vegetable with a silvery appearance, and possessing sap” (Pes. 2:5, 29c; the same description as the Babylonian Talmud gives for all the varieties of *merorim*). These characteristics agree most with the plant *Sonchus oleraceus*, called in Arabic *murār*. This is a weed, widespread in gardens, fallow fields, and on the roadsides throughout Israel. Its soft leaves are at times eaten as salad by the poor, some also eating the juicy root. The plant is filled with a milk-like sap, the underside of the leaves is a bluish-silvery color, and the green plant has a bitter taste and is hardly edible. According to Pliny, “this is a healthy food, recommended as a remedy for various ailments” (*Historia Naturalis* 22:88–90; 26:163). The Samaritans use only the leaves of the wild lettuce *Lactuca scariola* for *maror*.

°**MARR, WILHELM** (1819–1904), German antisemite. Marr, the son of a famous theater personality, was of Lutheran descent; the still frequently heard assertion that he was Jewish has no basis in fact. His political career began among left-wing exile circles in Switzerland, from which he was expelled in 1843. Back in his native Hamburg, he participated as an ultraleftist in the revolution of 1848. But the return of the old regime persuaded Marr to “resign from the democratic movement” and to spend the next decade trying to establish him-

self in North and Central America. By the time he came back to Hamburg, his political outlook had changed completely. No longer the champion of progressive causes, he used his undoubted journalistic skills to champion black slavery, condemn proletarian emancipation, and to attack Jews. In 1862, his *Der Judenspiegel* (“A Mirror to the Jews”) made a racially based argument against Jewish equality. The pamphlet provoked slight interest and soon disappeared. Seventeen years later, however, when Germany was in the throes of economic and social turmoil, Marr returned to the so-called Jewish Question with his influential bestseller, “The Victory of Jewry over Germandom, Considered from a Non-Religious Point of View,” which went through 12 editions, all in 1879. He repeated many of his arguments from 1862, but now they appeared in a world-historical context, lodged in a systematically racist framework, and were made all the more potent because of the author’s insistence that Jews had been engaging in an 1,800-year worldwide conspiracy against gentiles that was about to culminate in their absolute victory. In the last edition of the book, Marr recruited members for his Antisemiten-Liga (Antisemites’ League). Although his attempt to form a political organization dedicated to solving the Jewish Question failed almost immediately, Marr alerted more powerful forces in German society to the utility of antisemitism as a tool of political mobilization. Both the word and the movement entered German and then European political culture at this time, never again to leave it. The irascible Wilhelm Marr, on the other hand, already 60 years old, was soon cast aside by antisemites of the younger generation. He died in obscure poverty in 1904.

**MARRAKESH**, one of the former capitals of \*Morocco, situated at the foot of the High Atlas Mountains. The city was founded in the latter half of the 11<sup>th</sup> century by the \*Almoravid dynasty. A Jewish community was established there soon thereafter, coming from different parts of southern Morocco. Many were subsequently barred from inhabiting the city while others were persecuted by the \*Almohads in the 12<sup>th</sup> century and had to disperse. A Jewish community was revived there during the course of the 13<sup>th</sup> century but Jews faced further persecution, death, and expulsion. Only under the Merinid dynasty in the latter half of the 13<sup>th</sup> and 14<sup>th</sup> centuries were Jews permitted to resettle in Marrakesh and their numbers grew in the late 15<sup>th</sup> century through the arrival of Sephardi refugees expelled from the Iberian Peninsula. Nevertheless, the main group of Marrakeshi Jews originated from the Atlas Mountains. Iberian Jews (Spanish and Portuguese), however, took control of communal affairs. From 1557 onward, the Sa'di dynasty concentrated all the Jews in a Jewish quarter of their own, known as the *mellah*. While the Jewish com-

munity numbered approximately 25,000 in mid-16<sup>th</sup> century, thousands perished throughout that century in epidemics. The Saḍi sultans, who were descendants of the Prophet \*Muhammad and originated from the Arabian Peninsula, enlisted the Jews of Marrakesh as their trade agents and entrusted to them the management of local industries. With the ascendance of the Alawite dynasty in the latter half of the 17<sup>th</sup> century, its sultans, also descendants of the Prophet, did not always display tolerance toward the Jews of Morocco. This was evidently the case with Sultan Mulay Isma'il, who in the 1670s exposed the Jews of Marrakesh to horrible atrocities.

In the 18<sup>th</sup> century Marrakesh lost its status as the central capital of Morocco in favor of \*Fez. Notwithstanding, commercially and economically, the city preserved its position as a vital center for southern Morocco. There were flourishing *yeshivot* in Marrakesh and bustling activity by talmudic scholars belonging to the prominent Corcos and Pinto families, as well as kabbalists. The Jews under the Alawite sultans in the late 18<sup>th</sup> and throughout much of the 19<sup>th</sup> centuries played a preponderant role in the local economy and their social and political situation improved markedly. There were efforts by fanatical Muslim leaders to forcibly convert Jews to Islam, but the intervention of international Jewish organizations such as the Paris-based \*Alliance Israélite Universelle (which also opened schools in Marrakesh at the beginning of the 20<sup>th</sup> century) and European consuls stationed in Morocco, foiled their efforts.

Under the leadership of Si Madani al-Glawi, the governor of Marrakesh and its environs, who belonged to the “great families” connected with the Alawite dynasty and the *makhzan* (Moroccan government), the Jews of southern Morocco enjoyed much influence. In 1908–09, while entrusted by the *makhzan* to bolster Alawite influence in the south and Marrakesh, Glawi, who then served as the sultan’s chief minister (grand *wazir*), bestowed on the Marrakeshi Jewish elite considerable economic and social privileges. He also lifted exorbitant taxes imposed on the Jews of Marrakesh and Taroudant in the period immediately preceding his rise to power. Glawi maintained intimate social and economic ties with the leader of the Jewish community in Marrakesh – the illustrious Joshua Corcos of the influential \*Corcos family. The latter community president was perhaps the most important Moroccan Jewish leader in many centuries.

Under French colonial domination (1912–1956), in which the French protectorate collaborated with the Alawite dynasty in managing Moroccan affairs, the position of the Jews improved immeasurably. They were now exposed to modern ideas through French education, employment in private and public administration, and the liberal professions. Zionist influences penetrated the community in the interwar years like other political currents prevalent in the modern Jewish world.

Until 1920 the Jewish quarter of Marrakesh was the largest in Morocco. The 1920s and 1930s changed this. Although the Jewish population of Marrakesh was greater than in Fez or \*Tangier, \*Casablanca on the Atlantic coast emerged steadily

as the largest and most important Jewish community through internal migrations from all parts of the country. Thus, if in 1912, 15,700 Jews dwelt in Marrakesh (compared to 7,000 in Casablanca), and 25,646 in 1936 (compared to 38,806 in Casablanca), in 1951, five years before the end of French colonial presence, the Jews of Marrakesh numbered 18,500 whereas Casablanca Jewry was 75,000 strong. The reason for the decline in the Marrakeshi Jewish population was attributed to internal migration to Casablanca and other coastal cities and to *aliyah* under the auspices of the Jewish Agency. As in other major Moroccan cities, Jewish bodies such as the American Jewish Joint Distribution Committee, the ORT vocational network, the Alliance Israélite Universelle, educational departments of Oẓar ha-Torah, and the Jewish Agency extended their activities and offered vital services. These efforts either helped those Jews who stayed behind to improve their lot, or facilitated their integration into French, Canadian, and Israeli societies. In 2005, there were several dozen Jews left in Marrakesh.

**MARRANO**, term of opprobrium used to denigrate the New Christians of Spain and Portugal. Various origins for the term have been suggested. These include the Hebrew *marit ayin* (“the appearance of the eye”), referring to the fact that the Marranos were ostensibly Christian but actually Judaizers; *moḥoram attah* (“you are excommunicated”); the Aramaic-Hebrew *Mar Anus* (“Mr. forced convert”); the Hebrew *mumar* (“apostate”) with the Spanish ending *ano*; the Arabic *mura'in* (“hypocrite”); and the second word of the ecclesiastical imprecation *anathema maranatha*. However, all such derivations are unlikely. The most probable, as clearly shown by Farinelli’s study, is from the Spanish word meaning swine, a word already in use in the early Middle Ages, though Y. Malkiel argues plausibly for a derivation from the late Arabic *barrān*, *barrānī*, meaning an outsider or stranger, and a coalescence of this word with the term marrano “pig, pork” derived from Latin *verres* “wild boar.” The term probably did not originally refer to the Judaizers’ reluctance to eat pork, as some scholars hold. From its earliest use, it was intended to impart the sense of loathing conveyed by the word in other languages. Although romanticized and regarded by later Jewry as a badge of honor, the term was not as widely used, especially in official circles, as is often believed. In Latin America as a rule it is not found in official documents and there is little evidence of its unofficial use in most places.

[Martin A. Cohen]

**MARRANO DIASPORA.** New \*Christians began to leave \*Spain in the wake of the mass conversions of 1391 and \*Portugal after the forced conversions in 1497. The tide of emigration ebbed and flowed, but was always stimulated by the advent of new disasters, such as the introduction of the \*Inquisition into Spain in 1481 and Portugal in 1536, and the recrudescence of intensive persecution of the Marranos, as in Portugal after 1630. To stem this continuing exodus, as early as the last decade of the 15<sup>th</sup> century the authorities in both countries issued decrees prohibiting the emigration of New Christians, and these were frequently renewed. Even the so-called irrevocable permission to emigrate which the New Christians purchased from Philip III in 1601, during the union of Spain and Portugal, was short-lived, being rescinded in 1610. However, these decrees were frequently evaded: Marranos regularly left the Peninsula clandestinely, or secured permission to take business trips abroad from which they never returned. There are even cases of their leaving for the ostensible purpose of making a pilgrimage to Rome. Once the authorities became aware of such stratagems they tried to intercept Marranos as they moved through Europe to places where they could practice Judaism openly, and men like Jean de la Foix in Lombardy acquired notoriety for his inhuman treatment of those who fell into his hands. There were even instances where the highest authorities in the Peninsula closed their eyes to New Christian emigration, particularly when it involved their settling in Latin \*America, where their skills and enterprise were desperately needed. Furtively and openly, in trickles and in torrents, thousands of New Christians left the Iberian Peninsula during the nearly three and a half centuries of the Inquisition's power.

Not all the New Christians leaving the Peninsula were secret Jews. Many were devout Catholics and had no intention of changing their faith; others were religiously ambivalent or even apathetic. Some of these may have shared the general insecurity of all New Christians in the Peninsula; some may have feared implication in inquisitional proceedings because of the activities of their relatives or friends; some may have wished to hide their Jewish origins in foreign lands; and others may simply have been attracted by new challenges and opportunities. It was people like these who evoked apologies for Judaism such as Samuel \*Usque's classic *Consolaçam às tribulaçoens de Israel* (1553; *Consolation for the Tribulations of Israel*, 1965), intended to persuade them to return to their ancestral religion. At the same time, considerable numbers of the New Christians were Marranos, or secret Jews, and were passionately dedicated to Judaism. This was particularly true of the Portuguese New Christians. By the 16<sup>th</sup> century the term "Portuguese" was already synonymous with the word "Jew" in much of Europe, Asia, and Latin America. During the Inquisition's extended sway over the Peninsula, the emigrating Marranos could plan to travel to four different kinds of countries: Muslim lands, Protestant territories as they came into being, Catholic countries outside the jurisdiction of Spain and Portugal, and Catholic countries within the peninsular orbit.

### Muslim Countries

These were the most natural places of refuge for Marranos seeking to live openly as Jews, for they were the archenemies of the Christians and Spain and Portugal were particularly hated. \*Morocco had already become a haven of refuge for both Jews and Conversos at the end of the 14<sup>th</sup> century, but many more Jews and Marranos were attracted to the Ottoman \*Empire at the end of the 15<sup>th</sup> century and during the 16<sup>th</sup>. Sultan Bayazid \*II (Bajazet II; 1481–1512) mocked King Ferdinand for impoverishing Spain and enriching the Ottoman Empire through his expulsion of the Jews. In the 16<sup>th</sup> century numerous cities in the Ottoman Empire had Jewish settlements, among them \*Cairo, \*Jerusalem, \*Safed, \*Damascus, \*Constantinople with some 50,000 Jews, and \*Salonika where the population of the Marranos exceeded that of the other Jews and the non-Jews as well.

### Protestant Countries

Next to the Muslim countries the Protestant lands offered the best prospects, for here too the Catholics were detested, and the Inquisition was a hated institution because it was no more tolerant of Protestant heretics than Judaizers. In places like \*England and \*Hamburg and other German cities, Marranos began their existence as titular Catholics and secret Jews before the Reformation. They continued in this double life long after those areas had broken with Rome, for the Protestant authorities were not eager to grant official acknowledgment to the presence of Jews in their midst. In Hamburg, destined to become one of the wealthiest and most productive Marrano centers, the settlement of Jews was not officially authorized until 1612 and Jewish public worship not until 1650. In England, where Jews had been expelled in 1290, the Marranos who settled originally in \*London and \*Bristol were never officially acknowledged as Jews. Spokesmen for the Marranos, both Christians and Jews, including Manasseh Ben \*Israel, failed in their efforts to secure the formal recognition of Jewish resettlement. Rather than being officially granted, the resettlement was "connived at": the question was simply ignored and Marranos were allowed to live undisturbed as Jews. Actually this connivance, or de facto resettlement through official silence, proved salutary for the Jews, since the failure to grant official permission for their presence made it impossible to impose particular disabilities on them. From the middle of the 17<sup>th</sup> century at least, the Marranos were treated like all other nonconformist citizens. In 1664 the crown granted Jews an official charter of protection, thus further facilitating the development of the Marrano community. The ex-Marranos and their descendants continued to be the dominant element in British Jewry until the 19<sup>th</sup> century.

In \*Amsterdam the Marranos did not arrive until around 1590, some 11 years after the Union of Utrecht (1579) and the birth of the United Provinces of the Netherlands as a Protestant state. Here too they had to wait until 1615 before Jewish settlement was officially authorized, but the Marranos in Amsterdam differed from those in other Protestant countries in

that they openly practiced Judaism almost from the moment of their arrival. Thanks to the Marranos, Amsterdam became one of the greatest Jewish centers in the world in the 17<sup>th</sup> century; it had some of the finest academies and produced some of the greatest Jewish thinkers. Amsterdam was also a haven for oppressed Jews from other places, including France in 1615 and Eastern Europe after the \*Chmielnicki massacres (from 1648). Erstwhile Marranos from Holland were among the first settlers in Surinam and Curaçao, where a substantial Sephardi community came into being after 1650. Other former Marranos were also found in Barbados and in other parts of the West Indies, including Martinique and the Leeward Islands.

### Other Catholic Countries

The Catholic lands outside the control of Spain and Portugal did not offer so secure a haven as the Ottoman Empire or the Protestant countries, but they had the advantage of being outside the orbit of the peninsular Inquisitions. At the same time these areas were not without their inherent dangers, in the form of envy or rooted prejudice on the part of the local population, pressures from the Spanish and Portuguese Inquisitions upon the local authorities, and even the possibility of persecution galvanized by local initiative, and, in the case of the Papal States, an indigenous Inquisition. As a result, the existence of many of these Marrano communities, even if unclouded and prosperous for a time, was seldom free from molestations.

In the Papal States the Marranos' presence was noticeable in places like \*Rome and even more so the seaport of \*Ancona, where they thrived under benevolent popes like Clement VII (1523–34), Paul III (1534–49), and Julius III (1550–55). They even received a guarantee that if accused of apostasy they would be subject only to papal authority. But Paul IV (1555–59), the voice of the Counter-Reformation, dealt them an irreparable blow when he withdrew all protection previously given the Marranos and initiated a fierce persecution against them. As a result of the anti-Marrano campaign, 25 Judaizers were burned alive in the spring of 1556; 26 others were condemned to the galleys, and 30 more who had been arrested were liberated only after they had paid a substantial bribe. Thanks to the intervention of the Marrano patroness, Gracia Mendes \*Nasi, the sultan at Constantinople secured the release of all Marranos who were his subjects. Plans were laid to boycott Ancona and transfer all the Marranos' former business to neighboring \*Pesaro, in the friendlier territory of the duke of Urbino, but the project failed, and the duke even expelled the Marranos from his territory. A document of 1550 indicates that there were some Marranos among the Spanish and Portuguese merchants in Florence who traded on a large scale with Spain and her colonies. In \*Ferrara, under the house of Este, the Marranos formed a large and thriving community by the middle of the 16<sup>th</sup> century, one of the most notable in their entire Diaspora. The dukes protected them until 1581, when Duke Alfonso II, bowing to ecclesiastical pressure, allowed many of them to be arrested. Three were eventually sent

to Rome to be burned at the stake in February 1583. Marranos settled in \*Venice in the 15<sup>th</sup> and early 16<sup>th</sup> centuries but were subjected to decrees of expulsion in 1497 and again in 1550. Thereafter the city policy began to change. Venice not only welcomed Marranos but kept the Inquisition at bay. Theologians like Paolo Sarpi even claimed that the Judaizers were outside the jurisdiction of the Inquisition because they had been baptized by force. Equally fortunate was the situation in the grand duchy of \*Tuscany. In an attempt to woo the Marranos to Pisa and \*Leghorn, Ferdinand II issued a charter in 1593 granting them protection against harassment in matters of faith. As it was in decline at the time, Pisa did not attract many Marranos, but Leghorn did: the community there thrived and by the end of the 18<sup>th</sup> century its population approached 5,000. Emmanuel Philbert granted a special privilege to induce Jews to settle in the duchy of Savoy, intending mainly to settle Marranos from Spain and Portugal in Nice in order to develop the city into a central trading port with the East. The privilege enraged Philip II of Spain, who considered the whole plan as seriously damaging Spain's interests in the Mediterranean as well as an incitement to Marranos to return to Judaism. The joint pressure of Spain and the Holy See led to the rescinding of the privilege and on Nov. 22, 1573 the duke ordered a group of Marranos who had returned to Judaism to leave his territory within six months. This decree was probably not put into effect until 1581 when Charles Emmanuel I ordered the expulsion of all Portuguese Jews from the duchy.

In \*France the Marranos had to maintain some semblance of Catholicism for more than two centuries, but they were seldom molested in their secret practice of Judaism. Though they were called "New Christians" or "Portuguese merchants," their Jewishness was an open secret. In the large settlements they lived in their own quarters, had their own burial grounds, developed their own schools and communal institutions, and even trained their own rabbis after first importing them from abroad. In the course of time they gradually reduced their Catholic practices and eventually abandoned Church marriage and even baptism. In 1730 they were officially recognized as Jews. Their more formal communities were situated at \*Bordeaux and \*Bayonne and there were numerous lesser settlements in such places as \*Toulouse, \*Lyons, Montpellier, La \*Rochelle, \*Nantes, and \*Rouen. Bayonne was the center of a cluster of communities, including \*Biarritz, \*Bidache, \*Peyrehorade, and \*Saint-Jean-de-Luz. In this last town the Marranos had the misfortune of being expelled in 1619, and then, after a partial return, seeing the town captured by the Spaniards in 1636.

### Other Territories

But in the far-flung Spanish and Portuguese possessions, in the Aragonese territories of \*Sicily, \*Sardinia and \*Naples, in \*Hapsburg territories like Flanders, or the colonial territories in the Far East or in the Americas, the situation of the Marranos was always precarious. There they lived continually under the shadow of the Inquisition; even where a tribunal of the

Holy Office was not in operation, there were episcopal Inquisitions and occasional inquisitional “visitors” sent from the home countries to galvanize the search for heretics. Sicily and Sardinia, with Inquisitions introduced in 1487 and 1493 respectively, were practically free of Judaizers by the middle of the 16<sup>th</sup> century. There was opposition to introducing the Spanish Inquisition into Naples, but the papal Inquisition took over and managed to destroy most of the Marrano community by the middle of the 17<sup>th</sup> century. The situation of the Marranos was no less precarious in \*Antwerp, where they began to arrive early in the 16<sup>th</sup> century, frequently to begin a trek across Europe to the Ottoman Empire. In 1526 New Christians’ stay in the city was restricted to a 30-day period and though settlement was fully authorized 11 years later, Judaizing was strictly prohibited. With the decline of Antwerp, the center of Marrano life in the Low Countries shifted to Amsterdam.

In their colonies the Portuguese set up an Inquisition at \*Goa and the Spaniards established one in the \*Philippines. Episcopal Inquisitions were always present in Latin America: \*Brazil never had a formal tribunal, but tribunals were established in the Spanish colonies at Lima (\*Peru, 1570), Mexico City (1571), and Cartagena (1610). Latin America in particular attracted considerable numbers of New Christians. The advantage of these territories was that they offered the New Christians a familiar culture and the possibility of direct even if infrequent contact with the mother countries. For New Christians wishing to live fully as Catholics, the distances from the Peninsula and the sparseness of the population of most of the territories aided in the obliteration of the record of their Jewish origins. On the other hand, these factors also facilitated the Marranos’ practice of Judaism.

### Activities of the Marranos

Religious considerations were important in determining the direction of the flight of many of the Marranos, but they were not the only ones. Of great and sometimes decisive importance were the economic and social opportunities available in the various lands open to them at the time of their escape. These opportunities often made it more desirable for Marranos to continue living as secret Jews in Catholic lands (even those under Spanish and Portuguese domination) than to seek a refuge where they could practice Judaism openly. Conversely, in each of the territories where the Marranos – or for that matter all New Christians – appeared, they were allowed to enter and remain because they served definite economic, social, and political ends. In almost every one of their new homes they quickly rose to prominence in international and domestic trade, and banking and finance. They helped to establish great national banks and were prominent on the stock exchanges. They played an important role in large trading companies, such as the Dutch East Indies and West Indies Companies, and even in the rival company established at Portugal to help oust the Dutch from Brazil. As well as insurance companies, they established manufacturing plants for soap, drugs, and other items, and made signal contributions in minting, handicrafts, arma-

ments, and shipbuilding. In the area of international trade they assumed virtual dominance and controlled, frequently to the point of monopoly, the traffic in such commodities as coral, sugar, tobacco, and precious stones. The Marranos’ common background and culture, their presence in the leading commercial centers, and often their ties of kinship, enabled them to establish an efficient and closely knit international trading organization. Great banking and trading families, like that founded by Francisco Mendes at Lisbon, had branches throughout Europe. The Marranos’ international connections served to stimulate communications between nations and their separate competitive development. In this way the activities of the New Christians fostered the stability of their countries of settlement and facilitated their transition from a medieval to a modern economy. The Marranos also attained prominence in the professional life of the lands of their dispersion. From their midst came great diplomats like João Miguez, the duke of Naxos (Joseph \*Nasi), and his mother-in-law, Gracia Mendes Nasi (Beatriz de Luna), who also distinguished herself as a great philanthropist and patron of the Jewish arts, as well as the equally colorful Diego Texeira de Sampaio (Abraham Senior \*Texeira). The Marranos produced scientists like Immanuel Bocarro Frances, distinguished physicians like Amatus \*Lusitanus (Juan Rodrigo), Elijah Montalto (Felipo Rodrigues), and Antonio Ribeiro Sanchez, and a host of other distinguished names in secular literature, theater, and music.

Reciprocally, many of the states and nations in their Diaspora gave the Marranos an opportunity to develop their own institutions and culture. The printing press became a foremost instrument in the development of this culture. Ferrara’s press, which published the famous translation of the Bible into Spanish and Samuel Usque’s *Consolaçam as tribulaçoens de Israel* in Portuguese in addition to liturgical and other works, was the center of Marrano culture in the middle of the 16<sup>th</sup> century. By the end of the 16<sup>th</sup> century, Venice had the leading press and in the next century it was situated in Amsterdam. Other cities, too, like Leghorn, Hamburg, and London, had important presses, and printing in numerous smaller places helped to spread further Jewish culture. Especially noteworthy is the extensive literature published by these presses. Including prayerbooks and sermons, books of precepts and customs, translations into Spanish and Portuguese of classics in Jewish philosophy and thought, apologetical works and polemics, and also novels, poetry, and plays, it was particularly directed toward the Marranos who had left the Iberian peninsula and sought to find themselves in Judaism, although still assailed by doubts.

Marrano writers of note are far too numerous to mention them all. Among the more important ones were such men as the apologists Immanuel \*Aboab, Saul Levi \*Morteira, Lorenzo \*Escudero (Abraham Ger or Abraham Israel Peregrino), Isaac \*Cardozo, Isaac Orobio de \*Castro, and David \*Niето; poets like David Abenatar \*Melo, Daniel Lopez \*Laguna, Solomon Usque, João (Moses) Pinto \*Delgado, and Daniel Levi (Miguel) de \*Barrios; playwrights like Antonio Enriquez \*Go-

mez and Antonio Jose da \*Silva; and versatile writers like the prolific Joseph Penso de la \*Vega, writer of plays, short stories, and one of the earliest and most comprehensive treatises on the stock exchange. Many Marranos also attained fame outside the Jewish fold. The aristocracy of many societies in Europe and the Americas was enriched by these people and their descendants. Frequently, like Benjamin \*Disraeli, they attained the highest diplomatic, military, and administrative positions. Like their Jewish counterparts, they also made a name for themselves in the business and cultural world.

An authentic Marrano community was discovered by Samuel \*Schwartz in Portugal in 1917; and from time to time there emerge individuals or even groups whose faith is not Jewish who have retained some of the practices and customs of the Marranos, at times even without awareness of their Jewish ancestry.

[Martin A. Cohen]

**MARRE, SIR ALAN** (1914–1990), British civil servant. Alan Marre, the son of Joseph Moshinsky, a tobacconist in London's East End, won a scholarship to Cambridge and entered the British civil service in 1936. Marre rose in the administrative civil service to become second permanent under-secretary in the Home Office Department when, in 1971, he was appointed Britain's second ombudsman (officially, the parliamentary commissioner for administration), holding the post until 1976. As ombudsman, Marre investigated complaints of maladministration by government departments, an unusually sensitive post. In addition, in 1973–76 he was also the first health service commissioner, performing a similar role for the British health service. Marre also headed a number of other well-known investigations, especially the government inquiry into the welfare of children affected by thalidomide who had not benefited from previous financial settlements. He was knighted in 1970.

#### CONTEMPORARY INNOVATIONS

#### THE CONCEPT

In Jewish teaching, marriage is the ideal human state and is considered a basic social institution established by God at the time of creation.

#### In the Bible

The purposes of marriage in the Bible are companionship and procreation: "It is not good that the man should be alone; I will make him a help-mate for him ... Therefore shall a man leave his father and his mother, and shall cleave unto his wife, and they shall be one flesh" (Gen. 2:18, 24); and "Be fruitful, and multiply, and replenish the earth ..." (Gen. 1:28). The biblical conception of marriage is essentially monogamous (Gen. 2:24), and although in biblical times polygamy was common among the upper classes (Judg. 8:30; II Sam. 5:13; I Kings 11:1–8), the many references to marriage in the \*Wisdom literature seem to take it for granted that a man had only one wife (Ps. 128; Prov. 12:4; 18:22; 19:14; 31:10–31; Eccclus. 25:1; 26). The prophets using marriage as a metaphor for God's attachment to Israel (Isa. 61:10; 62:5; Ezek. 16; Hos. 2:21–22; also Song of Songs, if interpreted metaphorically) clearly have monogamous marriage in mind, since God did not enter into such a special relationship with any other people.

Marriages were usually arranged by parents (Gen. 21:21; 24; 28:2), but the bride's consent was asked on occasion (Gen. 24:5, 58), and romantic unions were not uncommon (Gen. 29:20; Judg. 14; I Sam. 18:20; II Sam. 11:2–4; I Kings 2:17; II Chron. 11:21). It was usual to marry within the clan (Gen. 24:4; 28:2; 29:19), and in a leviratic situation (\*levirate marriage) this was obligatory (Gen. 38:9; Deut. 25:5; Ruth 3:12–13). Certain marriages, involving close relatives (Lev. 18; 20; Deut.

23:1–8; 27:20–23), priests, widows, and divorced women (Lev. 21:7; Deut. 24:4), are forbidden. While marriages outside the clan occurred, they were strongly opposed both as a measure against idolatry (Ex. 34:15–16; Deut. 7:3–4; 28:4), and to preserve Jewish distinctiveness (Ezra 9:12; 10:17; Neh. 10:31; 13:23–28). Fruitfulness in marriage is a great blessing and childlessness a tragedy and disgrace (Gen. 8:17; 9:1, 7; 13:16; 17–18; 22:17; 30:1–23; Ps. 127:3–5; 128). Marriage is the means to true companionship: “Whoso findeth a wife findeth a great good” (Prov. 18:22; cf. 12:4; 14:1; 19:14; 31:10–31); “live joyfully with thy wife whom thou lovest” (Eccles. 9:9). But where marital harmony no longer prevails (particularly in the case of the wife’s \*adultery), the marriage can be dissolved by \*divorce (Deut. 24:1–4), though Malachi (2:14–16) warns that God deplores the resort to divorce.

### In Sectarian Teaching

The Essenes in general rejected worldly pleasures, including marriage, and practiced continence (Jos., Wars, 2:120). The Covenanters of Qumran did not appear to have been strictly celibate as once was thought. It is clear that some members married and had children (*Zadokite Document*, 20:7–8; 13:20; *Damascus Document*, 4:7). The *Order of the Community* ruled that a young man should not have intercourse before 20 years of age (1:4–11). Archaeologists have found the remains of a few women and children at Qumran but it is not clear to what extent this indicates marriage. The New Testament has a negative attitude to the sexual impulse and regards celibacy as a higher ideal than marriage (Matt. 19:10; 1 Cor. 7). Marriage is a concession to human weakness (1 Cor. 7), but once entered into, it is a sacrament dissolved only by death (Matt. 19:16; Mark 10:9); though some hold that Jesus allowed divorce in cases of adultery (Matt. 5:31–32; 19:9; Mark 10:12; Luke 16:18).

### In Rabbinic Literature

In contrast, rabbinic teaching sees celibacy as unnatural. It is not he who marries who sins; the sinner is the unmarried man who “spends all his days in sinful thoughts” (Kid. 29b). Marriage is not only for companionship and procreation; it also fulfills one as a person: “He who has no wife is not a proper man” (Yev. 63a); he lives “without joy, blessing, goodness ... Torah, protection ... and peace” (Yev. 62b); he may not officiate as high priest on the Day of Atonement (Yoma 1:1), and probably not as \**sheli'ah zibbur* on the High Holy Days (Isserles to Sh. Ar., OH 581:1, based on Yoma 1:1 and Yev. 37b). Sexual desire is not evil or shameful. When regulated and controlled in marriage, it serves beneficial ends: “Were it not for the *yezer ha-ra* (“evil inclination” here sexual urge), no man would build a house, marry a wife, or beget children” (Gen. R. 9:7). He who, by denying his legitimate instincts, fails to produce children “is as if he shed blood, diminished the Image of God, and made the *Shekhinah* depart from Israel” (Sh. Ar., EH 1:1, based on Yev. 63b–64a), and he will have to account for his actions in the world to come (Shab. 31a). Marriage is so important that a man may sell a Torah scroll in order to marry (Meg. 27a) and a woman will tolerate an unhappy mar-

riage rather than remain alone (Yev. 113a; Kid 7a). One should never approach marriage lightly. To make a successful match is as hard as the parting of the Red Sea (Sot. 2a, et al.), and it requires the infinite wisdom of God himself (Gen. R. 68:3). Hence, although in one view a person’s marriage is predestined (Sot. 2a), the individual must choose wisely: “Hasten to buy land; deliberate before taking a wife” (Yev. 63a). Marriage should not be for money (Kid. 70a), but a man should seek a wife who is mild-tempered, tactful, modest, and industrious (Sot. 3b), and who meets other criteria: respectability of family (Ta’an. 4:8; BB 109b), similarity of social background (Kid. 49a) and of age (Yev. 44a; Sanh. 76a–b), beauty (Ber. 57b; Yoma 74b), and a scholarly father (Pes. 49b). A man should not betroth a woman until he has seen her (Kid. 41a). Early marriage is preferred: “18 for marriage” (Avot 5:21). If one is not married by 20, God curses him (Kid. 29b–30a). Only a person intensively occupied in Torah study, e.g., \*Ben Azzai, may postpone marriage (Yev. 63b; cf. Ket. 63a; Sot. 4b); though in Babylon it was suggested that one should first marry and then study (Kid. 29b). A practical order of procedure, derived from Deuteronomy (20:5–7), states; “First build a house, then plant a vineyard, and after that marry” (Sot. 44a). As far as a girl is concerned, if her father does not find her a husband while she is young (from the age of 12), she may become unchaste and he will have transgressed the commandment in Leviticus 19:29: “Profane not thy daughter to make her a harlot” (Sanh. 76a).

Polygamy, while theoretically still possible, was discouraged, and was almost unknown among talmudic rabbis. Marriage was not a sacrament in the Christian sense, since its dissolution through divorce, though regrettable, was possible. It is \**kiddushin*, a sacred relationship (analogous to \**hekdes*), whereby the wife is consecrated to her husband and forbidden to all others during the duration of the marriage (Kid. 2a–b). At the same time, it is not a mere legal contract devoid of spiritual content. Thus, while the husband acquires rights over his wife’s *ishut* (“wifeness”), though not over her person, and he undertakes duties toward her, e.g., supplying her with food and clothing, and adhering to the conjugal rights (Ex. 21:10), both parties must seek to raise their marriage to the highest level by means of mutual consideration and respect. The husband must deny himself in order to provide for his wife and children (Hul. 84b). He must not cause his wife to weep (BM 59a). If he loves her as himself and honors her more than himself, he will merit the blessing in Job (5:24) “And thou shalt know that thy tent is in peace” (Yev. 62b). If husband and wife are worthy, God will dwell with them; otherwise, there will be a consuming fire between them (Sot. 17a; PDRE 12). The rabbis, like the prophets, use marriage to symbolize other perfect relationships: e.g., God and Israel, Israel and the Torah, and Israel and the Sabbath.

### In Medieval and Modern Times

The positive attitude of the rabbis to marriage was maintained in post-talmudic literature and Jewish practice. Asceticism and

celibacy continued to be rare. Polygamy was finally prohibited among Ashkenazi Jews by a ban attributed to R. \*Gershom b. Judah (see \*Bigamy; \*Monogamy). Early marriage became general practice. Divorce, though relatively easy to obtain, was not common, partly due to the social pressures of the closed Jewish society since the family was firmly established as the basis of Jewish life (see I. Abrahams, *Jewish Life in the Middle Ages* (1932<sup>2</sup>), 99ff.). With the cultural changes which followed the emancipation, the Jewish marriage rate tended to be lower than the non-Jewish one, divorce and mixed marriage increased, early marriage was uncommon, and the urban Jewish birth rate fell (see A. Ruppin, *The Jews in the Modern World* (1934), 277f., 316ff.; J. Freid (ed.), *Jews and Divorce* (1968)). These trends intensified after World War II as environmental attitudes were increasingly being reflected among Western Jewry. Marital stability has been relatively less and traditional moral codes have been questioned. To counteract these tendencies, Jewish communities are promoting marriage education and guidance, largely through rabbis and social welfare agencies.

#### MARRIAGE CEREMONY

##### In the Bible

There is hardly any data about the marriage ceremony in the Bible. The act of marriage is called simply "taking" ("when a man taketh a wife," Deut. 24:1; "and there went a man of the house of Levi, and he took a daughter of Levi," Ex. 2:1). However, from the story of Jacob and Leah it is obvious that some sort of celebration took place: "And Laban gathered all the people of the place and made a feast" (Gen. 29:22) and later, when Jacob complained that he had been cheated and demanded Rachel, the daughter for whom he had worked, he was told: "Wait until the bridal week of this one is over and we will give you that one too" (Gen. 29:27). No details are recorded as to the nature of the feast or the bridal week. The same is true in the case of Samson (Judg. 14:12) except that there it is said that the groom posed a riddle to his companions and gave them the seven days of the feast to solve it. It appears that processions for both the bride and groom were a central part of the celebrations and were accompanied by music (Ps. 78:63; I Macc. 9:39) and there is ample reference to special marriage attire and adornment. From Deuteronomy 22:15 it seems that the exhibition of evidence of the bride's virginity (the blood-stained sheet) was part of the ceremony. It is reasonable to presume that even in the earliest times the act of marriage must have been accompanied by some ceremony; the biblical authors, however, give no direct description of it and usually refer to it only in passing or as a figure in their imagery.

##### In the Talmud

In the talmudic period – and presumably for a considerable time before then – the marriage ceremony was in two parts. The first, called *kiddushin* or *erusin* (betrothal; but see below, Legal Aspects, for the difference between this concept and

what is commonly called betrothal), was effected by the bridegroom handing over in the presence of two witnesses any object of value (more than a *perutah*) to the bride and reciting the marriage formula, "Behold, you are consecrated unto me with this ring according to the law of Moses and Israel." On this occasion two benedictions were recited, one over wine and the other for the actual act. The second reads: "Blessed art Thou, O Lord our God, King of the universe, who has hallowed us by Thy commandments, and hast given us command concerning forbidden marriages; who hast disallowed unto us those that are betrothed (to us – variant in some rites), but hast sanctioned unto us such as are wedded to us by the rite of the nuptial canopy and the sacred covenant of wedlock. Blessed art Thou, O Lord, who hallowest Thy people Israel by the rite of the nuptial canopy and the sacred covenant of wedlock" (Hertz, Prayer, 1011). This benediction is already recorded in the Talmud (Ket. 7b), and since cohabitation of the bride and groom was forbidden until the second ceremony, the *nissu'in* (see below, and Legal Aspects), which in the case of a virgin usually took place a year later, it appears that the benediction was in fact a warning to the betrothed couple not to cohabit until that ceremony.

The second part of the ceremony took place at a later date and was called *nissu'in* (marriage proper). It was also called *huppah* (see below) after either the groom's house to which the bride was led or the canopy, symbolic of that house, under which the ceremony took place. Originally *nissu'in* was effected by the bride entering the groom's house and cohabiting with him. On the occasion of the *nissu'in* a series of benedictions was recited (see below). After this stage the couple were completely married and liable to all the responsibilities and privileges of that state (see also below, Legal Aspects).

There is ample evidence in the Talmud that the wedding ceremony was accompanied by great rejoicing and some times even hilarity. The question of how one should dance before the bride was discussed and even occasioned a difference of opinion between the schools of Hillel and Shammai (Ket. 16b–17a). Although Rashi interprets the phrase "*keizad merakdim*" used there as meaning "what does one say" in order to fit the continuation of the text, the phrase must be understood in its literal sense "how does one dance." Judah b. Ilai is recorded as having danced before the bride with a myrtle branch and Samuel b. Rav Isaac was rebuked by his colleagues for having performed what seems to have been a juggling dance. The Talmud, however, justified his behavior entirely. Rav Aha went so far as to dance with the bride on his shoulders, something which astonished the other rabbis (Ket. 17a). Indeed the custom of shattering a glass at the marriage ceremony (see below) stems, according to the medieval commentators, from Mar berei de-Ravina and Rav Ashi who deliberately smashed expensive glassware at their sons' weddings in order to reduce the unseemly hilarity of the rabbis who were present (Ber. 31a). Until the destruction of the Temple both the bride and groom wore distinctive headdresses, sometimes of gold (Sot. 9:14, 49a; Git. 7a; for details see \*Crowns, Decorative Head-

dresses, and Wreaths). For the marriage of a virgin (as opposed to a widow or divorcee) special rites took place. She went out in a *hinnumah* (variously interpreted as a bridal veil or a special bridal litter used in the marriage procession); dried corn was distributed to the children (Ket. 2:1); games were played before the bride; a goblet of tithe wine was passed before her; according to some, a sealed (opened for a widow or divorcee) barrel of wine was used instead (Ket. 16b). The performance of all these ceremonies was sufficient evidence that the bride had been a virgin and was thus entitled to the larger *ketubbah* (see \*Virgin). The bridal procession took precedence over a funeral procession and King Agrippa was praised by the rabbis for giving right of way to a bridal procession although his, being the royal procession, had precedence. At Tur Malka the disturbances which destroyed the town were started, according to talmudic legend, when Roman legionnaires took the hen and rooster which led a marriage procession as a fertility symbol (Git. 57a). Participation at the marriage ceremony and celebrations was considered a *mitzvah* and he who entertained the bride and groom was compared to one who had sacrificed a thanksgiving offering (Ber. 6b). The groom was required to devote at least three days to the preparation of the wedding feast and even if a parent of the bride or groom died on the set day of the marriage its consummation took place and the funeral was held afterward (Ket. 3a). The wedding of a virgin originally took place on a Wednesday (Ket. 1:1). This is explained in the Babylonian Talmud by the fact that the court sat on Thursdays and thus if the groom claimed that the bride had not been a virgin he could immediately complain to the court. However, it does appear that superstition was involved and that Wednesday was considered an auspicious day (cf. TJ, Ket. 1:1). A widow was married on Thursday so that her husband should devote at least three days to her without going back to his work. However, even in talmudic times the requirement that weddings be held on specific days fell into disuse for which a variety of reasons is given. It seems that in talmudic times the exhibition of the stained bridal sheet was discouraged. Originally the *shushbinim* ("friends," i.e., groomsmen) were appointed to ensure that no trickery was employed by either side (Tosef., Ket. 1:4 and Ket. 12a). For a virgin seven festive days were celebrated which, for the bride and groom, had something of the status of a religious holiday. The marriage benedictions were recited at meals (for details see below) and neither bride nor groom was allowed to mourn.

#### Post-Talmudic Period

The most important development in the marriage ceremony was the joining of the two parts, *erusin* and *nissu'in*, into one ceremony performed at one time. This took place during the Middle Ages and was presumably because of the uncertain and perilous conditions in which the Jews lived. It was also exceedingly inconvenient to have an interval between the two ceremonies since on the one hand the parties were prohibited from cohabiting while on the other all the stringencies of the married status applied to them. Thus from the beginning of

the 12<sup>th</sup> century it became customary to perform both ceremonies together, a practice which has been universally followed except for a few Oriental communities (see Freimann, bibl., 29 ff.). Other developments are the addition of various prayers to the ceremony, the inclusion of a sermon by the officiating rabbi and, in some present-day communities, the invocation of a blessing on the bridal couple.

The ceremony may be performed anywhere. In many communities – particularly Sephardi and Oriental – it is performed inside the synagogue although there are halakhic opinions against it. In some places it is performed in the hall where the subsequent festivities are held and among some circles (ultra-Orthodox Jews and Ḥasidim and generally among Ashkenazim in Israel) it is invariably performed in the open. This latter custom is perhaps due to the fact that ideally the ceremony takes place after nightfall and the stars above are associated with God's assurance to Abraham that He would "make your descendants as numerous as the stars of heaven" (Gen. 22:17; see Isserles to Sh. Ar., EH 61:1). In the western hemisphere Sunday is a popular day for weddings because of the convenience to the guests, while Tuesday is favored in Orthodox circles because of the repetition of the sentence "And God saw that this was good" in the biblical account of the creation on that day (Gen. 1:10, 12). However, any day of the week is valid except Sabbath; also festivals, the three weeks between the 17<sup>th</sup> of Tammuz and the Ninth of Av, and the *sefirah* period between Passover and Shavuot (there are exceptional days in the last-mentioned period, notably Lag ba-Omer: see \*Omer). According to the general Sephardi custom marriages are not performed on Lag ba-Omer but are performed from the following day onward. Usually a person in mourning for a parent does not marry until the year of mourning is out although in certain circumstances it is permitted to marry earlier (Sh. Ar., YD 392). There are no specific requirements for the way in which the bride and bridegroom dress. It is customary for the bride to wear white and for her to have a headdress and a veil. The bridegroom in some Orthodox circles wears a *\*kitel* either as an evocation of death or since his wedding day is compared to the Day of Atonement when the *kitel* is worn. In some communities the bridegroom wears a *tallit*, as does, in some, the officiating rabbi. In many Oriental communities brides wear elaborate costumes richly embroidered and ornamented which were loaned from bride to bride; the Yemenite bridal costume is an outstanding example (see also \*Dress).

The ceremony is presently performed as follows. Before being led to the *huppah* (wedding canopy; see below) the bridegroom, in the presence of witnesses, undertakes, by an act of *kinyan* (see \*Acquisition) the obligations of the *ketubbah*. This is done by the groom taking a piece of cloth, handkerchief, or some other object from the officiating rabbi, lifting it, and returning it. The witnesses then sign the document and in many communities (including the State of Israel) the groom also signs. The groom is then escorted to the place where the bride is waiting (many modern synagogues have a

special bride's room) and lets down her veil over her face, at which time the rabbi or cantor pronounces the blessing invoked on Rebekah "O sister! May you grow into thousands of myriads" (Gen. 24:60). This ceremony is known in Yiddish as "*bedeken di kale*" (lit. "covering the bride") and is not practiced by Sephardi Jews. The groom is then led to the *huppah* by his and the bride's father (or two other male relatives or friends if he or the bride has been orphaned) and stands facing Erez Israel, in Israel itself facing Jerusalem, and in Jerusalem facing the Temple site. The bride is then led to the *huppah* by her mother and the groom's mother, usually to the accompaniment of a blessing of welcome chanted by the rabbi or cantor, the text of which is: "He Who is supremely mighty; He Who is supremely praised; He Who is supremely great; May He bless this bridegroom and bride." It is customary among Ashkenazim for the bride to be led in seven circuits around the groom which is presumably to be associated with the magic circle to ward off evil spirits. The bride then stands at the right hand of the groom, and, where customary, the rabbi delivers the sermon; the ceremony proper then begins. The rabbi recites the blessing over a goblet of wine and the marriage blessing (see text above) after which the father of the bridegroom gives the goblet to the bridegroom and he drinks, and then the mother of the bride gives the bride the goblet, from which she drinks. In many communities the officiant gives the goblet to the bride and groom. The groom then places the ring (see below) on the forefinger of the bride's right hand and recites the marriage formula (see above). In some communities the glass is crushed by the groom at this stage. The *ketubbah* is then read out loud by the rabbi or some other man whom the bridal couple wish to honor. In many communities it is read in the original Aramaic and followed by a précis in the vernacular; in Israel a Hebrew précis is often substituted. The purpose of the reading of the *ketubbah* is to divide between the two parts of the ceremony. The celebrant (rabbi, cantor, or some other person) then recites the seven marriage benedictions (see below) over a goblet of wine. In many places it is customary to have different men recite the different benedictions. The father of the bride then gives the groom to drink from the goblet and the mother of the groom does likewise to the bride. In most rites the groom crushes a glass under his right foot and where customary the rabbi invokes the \*priestly blessing. The couple are then escorted to a room where they remain alone for some time, usually breaking their fast together (see below, Legal Aspects, for reasons). The breaking of the glass by the groom is explained by some authorities as a token of the seriousness desirable in even the most happy moments (see above, In the Talmud); however, the act has become understood over the ages as a sign of mourning for the destruction of Jerusalem. In some communities the bridegroom threw the glass against a special wall instead of treading on it. It has been suggested that originally the glass was broken to frighten away evil spirits. In some rites the memorial prayer, *El Maleh Rahamim*, is recited for departed parents if either member of the couple is an orphan.

THE MARRIAGE BENEDICTIONS. These benedictions, commonly known as the *Sheva Berakhot* (Heb. "seven benedictions" – when recited with the benediction over wine) are recorded in the Talmud (Ket. 7b–8a) where they are called *Birkat Hatanim* ("the bridegroom's benediction"). When recited under the *huppah* the benediction for wine precedes the other six which are:

1) "Blessed art Thou ... who hast created all things to Thy glory.

2) ... Creator of man.

3) ... who hast made man in Thine image, after Thy likeness, and hast prepared unto him, out of his very self, a perpetual fabric. Blessed art Thou, O Lord, Creator of man.

4) May she who was barren (Zion) be exceedingly glad and exult, when her children are gathered within her in joy. Blessed art Thou, O Lord, who makest Zion joyful through her children.

5) O make these loved companions greatly to rejoice, even as of old Thou didst gladden Thy creature in the garden of Eden. Blessed art Thou, O Lord, who makest bridegroom and bride to rejoice.

6) Blessed art Thou ... who hast created joy and gladness, bridegroom and bride, mirth and exultation, pleasure and delight, love, brotherhood, peace, and fellowship. Soon O Lord, our God, may there be heard in the cities of Judah, and in the streets of Jerusalem, the voice of joy and gladness, the voice of the bridegroom and the voice of the bride, the jubilant voice of bridegrooms from their canopies, and of youths from their feasts of song. Blessed art Thou, O Lord, who makest the bridegroom to rejoice with the bride" (Hertz, Prayer, 1013).

This series of benedictions raises some problems from the point of view of their formulation since normally only the first should begin with the formula "Blessed art thou ...." Rashi (to Ket. 7b–8a) gives the following explanation. The first benediction is not for the bridal couple but in honor of the assembled congregation; the second is a benediction in honor of the creation of Adam and the next three are for the couple being married, while the last is an invocation for all Israel including the couple. The series begins with the blessing over wine because of its festive nature. The blessings are recited at the marriage ceremony and at every meal during the next seven days at which there is "a new face," i.e., somebody who was not present at any previous recitation for that couple. This rule applies to all the seven days except the Sabbath, which is itself considered to be a "new face." At the meals the series is recited immediately following the Grace after Meals, which itself is introduced by a special invocation. The series then ends with the benediction over the wine and both the bride and groom and the person who led the Grace drink from the wine. A *minyan* (ten males) is required for the recitation of the marriage benedictions both at the *huppah* and after the grace; if no *minyan* is present the last of the marriage benedictions may be recited as long as there are three males (Sh. Ar., EH 62 and see also: \*Grace after Meals). In talmudic times special formulas were added to the grace after meals for some

considerable period before the actual wedding and after it. The present-day custom is limited to the recital of the benedictions for the seven-day period immediately following the wedding, except in the case of a marriage between a widower and widow when it is recited on the first day only.

**HUPPAH** (HEB. הַפֶּה). The term originally referred to the bridal canopy or the bridal chamber (Gen. R. 4:4) and sometimes to the wedding itself (Avot 5:21). In ancient times the *huppah* was the tent or room of the groom into which, at the end of the betrothal period, the bride was brought in festive procession for the marital union (cf. Ps. 19:6; Yad, Ishut 10:1). In talmudic times it was customary for the father of the bridegroom to erect the *huppah* (Gen. R. 28:6; Ber. 25b; Sanh. 108a). In \*Bethar (near Jerusalem) the custom was to make the staves or beams of the *huppah* from a cedar and pine tree which were planted for this purpose at the birth of male and female children respectively (Git. 57a). The *huppah* was sometimes made of precious scarlet and gold cloth (Sot. 49b; TJ, Sot. 9:16, 246). The Talmud tells that God made ten *huppot* for Adam and Eve and that He will build such *huppot* for the pious in the world to come (BB 75a). In the early Middle Ages, the *huppah* was not usually used at weddings; this is obvious from the phrasing of Isserles (Sh. Ar.) who regarded it as a novelty (Isserles to Sh. Ar., YD, 391; *ibid.*, EH 55:1). In France the groom covered the bride's head with his *tallit* as a symbol of his sheltering her. This custom was based upon the words of Ruth to Boaz: "Spread ... thy cloak over thy handmaid; for thou art a near kinsman" (Ruth 3:9). This ceremony was also called *huppah* and was the custom among the Jews of North Africa. Since in talmudic times the *huppah* was the place of marital union and therefore required privacy, medieval responsa dealt with the question whether the act of entering the *huppah* was sufficient to constitute marriage or whether it was only to be regarded as a symbol which would still require the couple to retire in privacy (cf. Tos. to Suk. 25b and see below, Legal Aspects). In the late Middle Ages the *huppah*, consisting of a cloth spread on four staves, was placed inside the synagogue (Isserles to Sh. Ar., YD 391:3), but later it was moved to the courtyard of the synagogue, either because it was deemed improper to have the *huppah*, as a symbol of the marriage tent, erected inside the synagogue or because of the need to accommodate the wedding party (and see above). In modern Israel, for the weddings of soldiers on active duty, the *huppah* often consists of a \**tallit* which is supported by four rifles held by friends of the bride and groom.

**THE RING.** Although the act of marriage can be effected in different ways (see below, Legal Aspects) it has become the universal Jewish practice to use a ring, except in a very few Oriental communities where a coin is used. The ring, which must belong to the bridegroom, should be free of any precious stones but can be of any material (usually it is of gold or some other precious metal) as long as its value is more than a *perutah*, the smallest denomination of currency in Talmud times. In the ceremony the groom gives the ring to the bride as an

act of acquisition and the bride, by accepting it, becomes his wife. Generally the groom places the ring on the forefinger of the bride's right hand; there are, however, many varied customs as to which finger the ring is placed on. In some Reform and Conservative congregations in the U.S. the "double ring" ceremony is practiced in which the bride also gives a ring to the groom and recites a marriage formula. Since, according to the *halakhah*, it is the groom who is acquiring the bride, this innovation raises serious halakhic doubts which, according to some authorities, even affect the validity of the marriage.

[Raphael Posner]

**VARIOUS CUSTOMS.** The marriage ceremony marks a crucial period in man's life cycle and it is only natural that it became surrounded by a multitude of different customs which generally had one of two purposes: to protect the couple from malignant spirits and to invoke God's blessing of fertility on the marriage. Many of the customs were adopted by the Jews from their non-Jewish environment and thus some are of almost a universal character. Many customs, however, are merely manifestations of the goodwill and joy felt at the happy occasion. Among Ashkenazi Jews the most widely practiced customs, besides breaking the glass which has been interpreted as a defense against evil spirits (but see above) are that the women leading the bride to the *huppah* carry lighted candles as do other members of the marriage party and that the bride makes seven circuits around the groom under the canopy. It is customary for the bride and groom to refrain from seeing each other for a time preceding the wedding. The actual duration of this period varies in the different communities from about one week to one day, i.e., that of the wedding itself until the ceremony. The bridegroom has precedence over all others to be called to the Torah reading on the Sabbath before the wedding (a ceremony known as *oyfrufn* in Yiddish) and in some Ashkenazi communities the bride, if she is an orphan, visits the cemetery some time before the wedding. The bride and groom usually fast on the day of the wedding itself until after the ceremony unless it takes place on a day when fasting is forbidden, such as a new moon. A peculiar custom, common in Eastern Europe as well as in Oriental communities, was for the bride and groom to attempt to tread on the other's foot at the end of the ceremony, the one who succeeded thus being assured of dominance in their life together. In many places among both Ashkenazim and Sephardim it was and is customary to throw rice, wheat, nuts, and candies at the groom on various occasions during the marriage cycle: at the wedding itself, and particularly when the groom was called to the Torah reading on the Sabbath prior to the wedding. The bride's entry into her future home was marked by many ceremonies. In Libya and Djerba the groom would drop an earthenware pitcher of water from the roof and the bride would enter the house by walking through the water and broken pottery. In Jerusalem the Sephardim used to break a specially baked cake, called *ruskah*, above the heads of the bride and groom, while in Baghdad a loaf was cut above the head of the groom.

In Afghanistan a fowl was slaughtered to mark the occasion. In Djerba the bride broke open eggs on the doorposts of the house and in Daghestan and Gruzia (Russian Georgia) the doorposts were smeared with butter and honey. In Salonika the groom would stand at the head of the stairs when the bride first entered the house and scatter sweetmeats, rice, and coins at her feet as she came in. In Georgia the groom would set a white fowl free from the roof of the house on that occasion and drop rice, wheat, and raisins on the bride's head. In Libya the groom broke the glass at the wedding ceremony when it was almost full of wine which would spill on the floor as a sign of plenty; whereas the groom in Georgia would put the wedding ring into the glass of wine after he had drunk from it, give it to the bride to drink, extract the ring, and formally present it to her with the declaration. In Kurdistan the bride would hold a male infant as the assembled guests called out "May your first be a boy too." In Morocco fish was always served at the wedding meal and the subsequent festivities as a fertility symbol and in Salonika the groom would buy live fish and put them in water in a brass bowl; on the eighth day after the wedding the bride jumped three times over this bowl to the blessings of the guests "May you be as fertile as the fish." In Persia the groom would plant three sticks in the courtyard of his house and uproot them on the sixth day after the wedding and throw them behind him to ward off evil spirits. In most Oriental communities the *hinnah* is celebrated the night before the wedding. In this ceremony the women of both families and female friends (men are entirely excluded) gather at the home of the bride and there her hands are painted with red henna. This ceremony is to ward off the evil eye and is sometimes accompanied by a ceremonial compounding of the dye by the bride's mother and feeding the bride seven times during the evening. Among the mountain Jews of Libya nearly all weddings take place two days before Sukkot. On the second day of the festival all the grooms participate in foot races symbolic of "And he is as a bridegroom coming out of his chamber, and rejoiceth as a strong man to run his course" (Ps. 19:6). Afterward celebrations are held at their homes. In all communities the groom is honored on the Sabbath after his wedding at the synagogue, where he is given precedence to be called to the reading of the Torah. In some communities special *piyyutim* are recited on this occasion and in many the groom is seated in a place of honor with a ceremonial canopy spread above him (Kurdistan). In Libya a second Torah scroll is taken out and an additional section (Gen. 24:1-4) is read. This is also the custom in Tunisia where the section is translated into Arabic. In Tunisia the groom is invited to the bride's home on the Sabbath preceding the wedding and has to find a roast chicken which has been especially hidden. On the fifth day after the wedding a competition between bride and groom is arranged in which they each have to dissect a large cooked fish for serving. The groom is always at a disadvantage in that he is given a blunt knife. In some communities (Afghanistan and, in a modified form, Yemen) it was sometimes customary to arrange a private wedding ceremony the night before

the announced day. On the morrow the announced ceremony would also be held. This was in order to outwit evil spirits or malicious persons who had cast spells on the couple. At the ceremony it was also common for a relative of the couple to hold a pair of scissors and cut paper or cloth for its duration. In Kurdistan the officiating rabbi would publicly warn the assembled guests not to cast spells. The custom of examining the bride's linen after the first night for spots of blood as a proof of her virginity was very widespread and is still practiced in some Oriental communities. The mother of the bride would preserve the sheet or underclothing to uphold the family honor if later required.

#### LEGAL ASPECTS

In Jewish law, marriage consists of two separate acts, called *kiddushin* and *nissu'in* respectively. The *kiddushin* (also called *erusin*) is an act performed by a man and a woman which leads to a change in their personal status, i.e., from bachelorhood to a personal status which remains unchanged until the death of either party or their \*divorce from one another. However, the *kiddushin* alone does not bring about all the legal consequences of this change of status, as all those will follow only from a further act between the parties, namely the *nissu'in*. The common usage of the term *erusin*, which refers merely to *shiddukhin*, i.e., engagement (see \*Betrothal), is therefore not identical with its legal meaning.

#### Modes of Effecting Kiddushin

There are three ways of effecting a *kiddushin*, namely by way of *kesef* ("money"), *shetar* ("deed"), or *bi'ah* ("cohabitation").

**KESEF.** The bridegroom, in the presence of two competent witnesses, transfers (see \*Acquisition) to his bride money or its equivalent – today normally an unadorned ring – to the value of at least one *perutah*, for the purposes of *kiddushin*. It is customary for the bridegroom – after the officiating rabbi has recited the *Birkat ha-Erusin* – to place the ring on the bride's right-hand forefinger while addressing her with the words: *Harei at mekuddeshet li be-tabba'at zo ke-dat Moshe ve-Yisrael* ("Behold, you are consecrated unto me by this ring, according to the law of Moses and of Israel"; Kid. 2a; 5b; *Rema* Sh. Ar., EH 27:1); i.e., by transferring the ring to the bride the groom signifies his intent to reserve her exclusively to himself and by accepting it she signifies her consent. Hence it is necessary that the ring belong to the bridegroom and not to the bride, since a person cannot alienate something that is not his own, nor can a person acquire something that already belongs to him (Kid. 5b; 6b; 47a; Sh. Ar., EH 27:1, 7; 31:2).

**SHETAR.** In the presence of two competent witnesses, the bridegroom hands over to the bride a deed in which is written, besides the names of the parties and the other particulars required for the purposes of a *kiddushin* by *shetar*, the words, "Behold you are consecrated unto me with this deed according to the law of Moses and of Israel" and the bride accepts the

deed with the intention of thereby becoming consecrated to the bridegroom (Kid. 9a; Sh. Ar., EH 32:1, 4). Delivery of the deed is therefore not merely evidence that the *kiddushin* has taken place before, but is the means whereby the tie is created, and in this respect it differs from the *\*ketubbah* deed which the bridegroom has to give to the bride after completion of the *kiddushin* (see also *\*Civil Marriage*).

בי'אח. If a man in the presence of two competent witnesses, addresses to a woman the words, "Behold you are consecrated to me with this cohabitation according to the law of Moses and of Israel," and in their presence he takes her into a private place for the purpose of *kiddushin*, she will, upon their cohabitation, be reserved to him (Kid. 9b; Sh. Ar., EH 33:1). Although valid this mode of *kiddushin* was regarded by the scholars as tantamount to prostitution, and they decreed that any person employing it was punishable by *\*flogging* (Kid. 12b; Yad, Ishut 3:21; Sh. Ar., EH 26:4; 33:1). On the other hand, this mode of *kiddushin* has served as the basis for the halakhic presumption that a man does not cohabit with a woman for the sake of prostitution (Git. 81b; *Rema* EH 33:1), and for the various rules founded on that presumption see *\*Husband and Wife*; *\*Divorce*.

In practice, in present times, only *kiddushei kesef* is observed since the other two modes of *kiddushin* have long become obsolete. The version "Behold you are reserved ... according to the law of Moses and of Israel" (which does not appear in the TB and is only found in the Tosefta (Ket. 4:9) and in the TJ, where the version is "according to the law of Moses and of the Jews" (*Yehudai*; Ket. 4:8)), means that the bridegroom reserves the bride unto himself "according to the law of Moses" – i.e., the law of the Torah – "and of Israel" – i.e., in accordance with the rules of the halakhic scholars as applied in Israel, so that the *kiddushin* shall be valid or void in accordance with the regulations laid down by the scholars (Yev. 90b; Ket. 3a; Git. 33a; *Rashi* and Tos. ad loc.; see also *Rashbam* and Tos. to BB 48b). The version thus formulated provided the basis for the *halakhah* which empowered and authorized the scholars, in certain circumstances, to invalidate a *kiddushin* retroactively in such a manner that even if it was not defective in principle it was deemed to be void *ab initio*. The question whether this power to make regulations for the annulment of the *kiddushin* is conferred also on the rabbis of the times after the redaction of the Talmud has remained in dispute. One opinion is that a *kiddushin* which is valid according to talmudic law, even though it is celebrated contrary to a *takkanah* which expressly prohibits the celebration of a *kiddushin* in any manner except as therein provided (e.g., in the presence of a rabbi and a quorum of ten), will not be declared void *ab initio* and the woman will not be free to marry another man unless she first obtains a divorce (out of precautionary stringency; Resp. Ribash no. 399; see also Resp. Rashba, vol. 1, nos. 1185 and 1206 where no absolute decision is arrived at; Resp. Ḥatam Sofer, EH 1:108; ET, 2 (1949), 137–40; Elon (1988), 2:686–712; Elon (1994), 2:846–79; see also *\*Agnah*, *\*Takkanot*).

### The Nissu'in

The act of *nissu'in* requires that the bride, after completion of the *kiddushin*, be brought to the bridegroom under the *huppah* before two competent witnesses, for purposes of the marriage proper, i.e., the *nissu'in* "according to the law of Moses and of Israel." There are different opinions concerning the import of the term *huppah*. One view is that the bride must be brought to the home of the groom for the *nissu'in* (Ran to Ket. 2a; *Beit Shemu'el* 55, no. 4), an interpretation forming the basis of the present custom of bringing the bride to a place symbolizing the domain (*reshut*) of the bridegroom, i.e., to the place where a canopy is spread across four poles and where the bridegroom is already waiting. According to another opinion *huppah* embraces a private meeting (נִשּׁוּ'ין) between bridegroom and bride, at a place set aside for the purpose, as an indication of their marriage proper (Ket. 54b; 56a; Rosh 5:6; Yad, Ishut 10:1, 2; Isserles EH 55:1; 61:1; Sh. Ar., EH 55:2). In order to dispel doubt, custom requires that, in addition to *huppah*, the couple also have the said private meeting.

### Legal Consequences

As already indicated, the legal consequences of the act of *kiddushin* differ from those of the act of *nissu'in*. The *kiddushin* creates a legal-personal tie between the parties which can only be dissolved upon divorce or the death of either party, and the *arusah* ("affianced bride") is regarded as a married woman (*es-het ish*) for all purposes under the *de-oraita* law, which thus renders invalid a *kiddushin* between herself and any other man (Kid. 5; Yad, Ishut 1:3; Sh. Ar., EH 26:3). The *arus* too is prohibited, as is a married man proper, from taking an additional wife, and although in his case the prohibition stems not from the *de-oraita* law but from the *herem de-Rabbenu Gershom* (see *\*Bigamy*), the prohibition for the *arus* is as stringent as it is for a married man proper (*Rema* EH 1:10; *Ozar ha-Posekim* EH 1, n. 65; other scholars differ, see *Taz* EH 1, n. 15). *Kiddushin* alone, however, does not serve to call into being the mutual rights and duties existing between husband and wife (see *\*Husband and Wife*), and, in particular, cohabitation between them is prohibited (*Rashi*, Ket. 7b; Sh. Ar., EH 55:1, 6). This prohibition is also contained in the Consecration Blessing in the words, "and has prohibited us the *arus* but has permitted us those who are married to us by *huppah* and *kiddushin*" (see Ket. 7b and Sh. Ar., EH 34:1). The *arus* is also not liable for the maintenance of his bride except after the lapse of 12 months from the time of the *kiddushin*, or any lesser period of time agreed upon between them, and then only if he has failed to marry her notwithstanding her demand and readiness to be married to him (Ket. 2; 57a; Sh. Ar., EH 55:4; 56:1, 3 and commentaries). The *arusah* also has no *ketubbah*, unless the bridegroom executed such a deed in her favor at the *kiddushin* stage (Ket. 54b; Sh. Ar., EH 55:6). The absolute change in their personal status, with all the rights and duties it entails, is created by the *nissu'in*.

### Manner of Celebrating Kiddushin and Nissu'in

In order to avoid irregularities which might possibly bring

about complications, custom decrees that the *kiddushin* be solemnized by a rabbi who supervises that everything is done according to law. It is also the generally accepted custom that there shall be present at least a *minyan* (ten men). Custom further decrees that the bridegroom shall always recite the above-mentioned formulation in the precise words, "Behold, you are consecrated ... etc."; although post-factum the *kiddushin* will not be invalidated if any like version with a similar content is used, any change in the recognized version should be avoided at the outset (Yad, Ishut 10:6; Resp. Rosh 37:1; Sh. Ar., EH 55:3 and *Rema* EH 61). The presence of two competent witnesses at both stages of the marriage ceremony is mandatory; as they do not merely serve as eyewitnesses but their presence is an essential part of the legal act, their absence will invalidate both the *kiddushin* and the *nissu'in*. Hence if a man and a woman acknowledge that there were not two witnesses present at their marriage, their acknowledgement (*hoda'ah*) that they are married will not serve as a basis for determining that this is the case (Kid. 65a; Yad, Ishut 4:6; Sh. Ar., EH 42:2). Conversely, if two competent witnesses testify to the celebration of a marriage between a particular couple, they will be regarded as duly married notwithstanding their own denial of the fact (Warhaftig, 132, 139). For a full description see above. Theoretically, *kiddushin* being an act of legal effect, it may also be performed between the parties through an agent; i.e., the bridegroom may appoint an agent to enter, on his behalf, into a *kiddushin* with a particular woman and the woman may do likewise for the purpose of accepting *kiddushin*. However, it is a *mitzvah* for each personally to take and be taken in marriage (Yad, Ishut 3:19; Sh. Ar., EH 35; 36). Similarly, in principle, the couple may celebrate a conditional *kiddushin* in such a manner that, provided all the rules applicable to conditions are observed (Sh. Ar., EH 38:2) and the condition itself fulfilled, the *kiddushin* will be valid from the start, or from the time of fulfillment of the condition, in accordance with the stipulation of the parties, but will be invalid if the condition is not fulfilled (Sh. Ar., EH 38). However, on account of the possible complications arising therefrom, and the stringency of the laws concerning a married woman, no conditions are permitted in *kiddushin* or *nissu'in*.

### Legal Capacity of the Parties

Since marriage is an act of legal effect, it can be celebrated only by parties who have legal capacity. Hence if one of the parties to a marriage is a minor, acting independently, it will be invalid. In Jewish law a male is a minor (*katan*) until the age of 13 years; from the age of 13 years and one day he is a major (called *gadol*) and only then may he contract a valid marriage (Kid. 50b; Yad, Ishut 2:10; 4:7; Sh. Ar., EH 43:1). A female is a minor (*ketannah*) until the age of 12 years; from the age of 12 years and one day until the age of 12½ years she is called a *na'arah* (Yad, Ishut 2:1). Although as a *na'arah* she is considered a major (*gedolah*; Yad, Ishut 2:6), her marriage (when she is acting independently) will only be valid if she is orphaned of her father, but if he is alive, since a *na'arah* remains under

her father's tutelage (*reshut*), her marriage, when she is acting independently will be valid only after the tutelage ceases to exist, namely when she becomes a *bogeret*, i.e., when she reaches the age of 12½ years and one day (Kid. 43b; 44b; Yad, Ishut 2:2; 3:11–13; 4:8; and Gerushin, 11:6; Sh. Ar., EH 37:11; 155:20, 21; see also \*Legal Capacity). As regards the validity of a marriage entered into by a minor represented by his parents, see \*Child Marriage.

For the same reason, i.e., lack of legal capacity, a marriage to which an idiot (*shoteh*) is party will be invalid when it is clear that such a party is a complete idiot (Yev. 69b; 96b; Sh. Ar., EH 44:2; 67:7). However, if such person be of sound, although weak, mind his marriage will be valid (Tur and *Beit Yosef*, EH 44; the statement attributed to Isserles, in Sh. Ar., EH 44:2 is apparently a printing error; see *Beit Shemu'el*, ad loc., n. 4; *Helkat Mehokek*, ad loc. n. 2). In case of doubt as to the soundness of a person's mind, as when he has lucid intervals, his *kiddushin* will, out of apprehension, be regarded as a doubtful *kiddushin* and the parties will not be permitted to marry anyone else except after their divorce (out of precautionary restriction *גט מחומרא* (Sh. Ar., loc. cit.). A \*deaf-mute (*heresh*, Yad, Ishut 2:26) is precluded, by Pentateuchal law, from entering into a *kiddushin* since his/her legal capacity is the same as that of the minor or the idiot. However, the scholars regulated that a *kiddushin* entered into by a deaf-mute shall be valid (Yev. 112b; Yad, Ishut 4:9; Sh. Ar., EH 44:1), but they did so without creating any obligations between parties to such a marriage. Hence if one of the parties is a deaf-mute, none of the legal obligations flowing from marriage will devolve on them – neither the obligation of *ketubbah* (i.e., in places where no *ketubbah* deed is written), nor of a *ketubbah* condition, nor of maintenance (Sh. Ar., EH 67:8–10), except possibly where a deaf-mute expressly undertakes these pecuniary obligations in the *ketubbah* deed (PDR 8:65, 69–71, 74–77). The *herem de-Rabbenu Gershom* does not apply to a husband who was a deaf-mute at the time of his marriage, nor does a deaf-mute's express undertaking not to take an additional wife or not to divorce his wife against her free will have any binding force, since he is incapable of undertaking obligations – at any rate as regards matters of a non-pecuniary nature (PDR loc. cit.).

[Ben-Zion (Benno) Schereschewsky]

### *Kiddushin* Conducted by Deception, Fraud, or in Jest

The tannaitic literature (Kid. 3:1; 58b) states that if a person sent an agent to betroth a wife for him, and the agent went and betrothed her for himself, the betrothal is valid, except if "he [the agent] treated him (the principal) deceptively." The talmudic commentators explain that this statement emphasizes that although the act was fraudulent, it does not invalidate the *kiddushin*, which are valid by Pentateuchal law, nor do the rabbis invalidate the *kiddushin* because of the agent's fraudulent act against the principal prior to the *kiddushin* (Tos. ad loc; Nov, Rashba Kid. 58b). Fraudulent *kiddushin* include frauds against the woman, e.g., where a man betroths

a woman in jest or coercively, or by giving her a ring in the presence of two witnesses, but against her will or understanding. Although the woman's consent is absent in these cases of *kiddushin*, the rabbis require the woman to accept a *get* (bill of divorce), in view of the doubt that perhaps these *kiddushin* are valid (see \*Agunah). This requirement of a *get* led to problems of *iggun* when the husband refused to give a *get* (see \*Agunah). As a result, to prevent fraudulent *kiddushin*, many Jewish communities enacted regulations regarding marriage ceremonies and how they should be conducted, such as conducting the *kiddushin* in the presence of ten persons, in the presence of a rabbi, etc. Such regulations appear as early as the geonic period (S. Assaf, *Teshuvot ha-Geonim*, para. 113, p. 101), and later in Ashkenaz (the Franco-German center) and in North Africa. The regulations enacted in the geonic period annulled all *kiddushin* conducted contrary to these rules. At later periods, sanctions were imposed on the offenders, but halakhic authorities were hesitant and questioned their authority to annul such *kiddushin*. A responsum by the sages of 12<sup>th</sup>-century Ashkenaz (Resp. Raban, EH, vol. 3 no. 47:2) reflects the differences of opinion between the sages of Worms and Speyer, and those of Mainz. The former argued that since the one who fraudulently betrothed the woman acted "improperly," the act of *kiddushin* should be invalidated and annulled. In contrast, the sages of Mainz reasoned that after the completion of the Talmud, rabbis are no longer empowered to annul *kiddushin*, and thus such a step could not be taken (see \*Agunah; \*Takkanot). When a similar case was brought before the Rosh (Resp. Rosh 35:2), he ruled that the sages are not empowered to annul the *kiddushin*, but since the *kiddushin* were fraudulent, similar to other instances in which the *geonim* ruled that the husband may be forced to give his wife a bill of divorce, the husband may be compelled to divorce his wife, and this would not be a coerced *get* (*get me'useh*; see \*Divorce). In another responsum, he rules that when *kiddushin* is performed contrary to a regulation enacted by the community stating explicitly that *kiddushin* performed in opposition to the regulation would be annulled, these fraudulent *kiddushin* may be annulled (*ibid.* 35:1). Rashba took a similar view, and stated that in places where such a regulation had not been enacted, the rabbinical court should impose fines and even corporal punishment in order to deter fraudulent *kiddushin* (Resp. Rashba, vol. 1, no. 551).

### Doubtful Kiddushin

The legal status of certain *kiddushin* is sometimes doubtful. Tannaitic literature provides two categories of cases of factual doubt which create doubtful *kiddushin*. In the first case the doubt relates to whether the *kiddushin* was conducted properly, for example whether or not the object given for *kiddushin* was in fact worth a *perutah* (Tos. Yev. 5:3). In the second case the doubt is created by a dispute in the public perception of the act that was performed, for example, the suspicion that the object used for the betrothal, while not worth a *perutah* in that particular location, may be worth a *perutah* somewhere

else. The result would be that while the woman would not be regarded as betrothed in one location, she would be regarded as betrothed in another location, and hence the *kiddushin* is considered doubtful (Kid. 12a). Doubtful *kiddushin* may also ensue from a legal doubt, when it is not known, or there was no decision, whether a certain act of *kiddushin* was valid or not; such a case is treated stringently, and the woman is doubtfully betrothed. For example in a situation where a man gave the money for *kiddushin*, but the woman (instead of the man) recited the sentence to be said after the giving of the money (see above; Kid. 5b).

In some instances in the post-talmudic literature, a majority of *posekim* rule that even when the *kiddushin* do not take effect, for instance, *kiddushin* in the presence of only one witness (Rema EH 42:2), stringency is appropriate (Yad, Ishut 4:6; *Semag*, Hilkhot Kiddushin), and we should consider such cases as doubtful *kiddushin*. Accordingly, it was ruled that due to the severity of relations with a married woman: "in these generations they imposed all the stringencies of the *posekim* in divorce and marriage" (Resp. Radbaz, vol. 4, no. 129; Resp. Maharashdam, EH 13), except for in cases where the *kiddushin* was additionally flawed, or would cause the woman to become an *agunah*, in which case stringency is not applied (Resp. Maharashdam, *ibid.*).

Determining *kiddushin* as doubtful results in stringencies in two directions. On the one hand, in order to be married to another man, the woman requires a *get* and on the other hand, if another man betroths her, he too is considered doubtfully betrothed to her. In practice, under certain circumstances, if the parties wish to marry, they are required to conduct a second *kiddushin*; and if they do not desire to continue a shared life, the husband might be compelled to give her a *get*. Incidental to divorce, the woman might be prohibited to marry a Cohen (see \*Marriage, Prohibited), which has led many authorities to criticize the proclivity to stringency in determining doubtful *kiddushin* and ordering divorce as a precautionary measure (*get le-humra* – גט לחומרה; Resp. Maharshah, no. 21; Resp. Radbaz, no. 382).

A national rabbinical conference held in Jerusalem in 1950 instituted the "*herem de-Yerushalayim*," which, inter alia, enacted that "no Jewish man and woman may engage in *kiddushin* and *erusin* [= *kiddushin*] other than by a proper wedding ceremony, with a quorum of ten men, which is then recorded in the offices of the rabbinate in every location. This prohibition carries with it a severe *herem* (= ban) by which any man who betrothed a woman, other than in a proper wedding ceremony, must divorce his betrothed with a bill of divorce in accordance with Jewish law." The *herem de-Yerushalayim* is recognized by Israeli law as part of the binding Jewish law for marriage (HC 130/66, *Segev v. Rabbinical Court of Appeals*, 21 (2) PD, p. 505, 525, per President Agranat). Today, most marriages are conducted under the supervision of a rabbi authorized by the Chief Rabbinate, and therefore the question of doubtful *kiddushin* can generally arise only in one of the following instances:

1. Civil marriage. For civil marriage and its validity as doubtful *kiddushin*, see \*Civil Marriage.

2. Cohabitation without marriage (*yedu'im ba-zibbur*). See \*Concubine.

3. Private marriage. The *herem de-Yerushalayim* does not state that privately conducted *kiddushin* would be declared null and void. The Israeli Supreme Court has often addressed questions concerning the status and validity of private marriages. These marriages may be performed for any of a variety of reasons; for example, when because of various prohibitions (see \*Marriage, Prohibited), the parties cannot be married by the Israeli rabbinat, and the parties circumvent this by conducting a full but private marriage ceremony. Another example is when parties who are able to be married by the rabbinat prefer not to have a rabbinically approved ceremony. These cases are a focus of friction between the rabbinical courts (that have exclusive jurisdiction in marital law) and the civil courts. The rabbinical court refuses to recognize such marriages, on the grounds of not “aiding transgressors.” In contrast, the civil court system recognizes marriages of parties forbidden by Jewish law to be valid. In this context the civil court distinguishes between the “religious” component, which prohibits the conducting of the marriage, and the legal component, which despite the religious prohibition, gives legal validity to such unions. This distinction is derived from the rabbinical court’s perception that such marriages are, minimally, “doubtful marriages,” which, as a precautionary measure, require divorce. However, the recognition afforded by the civil court only affects the legal civil status of the couple (such as the registration of the marriage), and not the enforcement of the parties’ mutual obligations from such a marriage. In the event of a private marriage, when the parties were eligible for a rabbinical marriage, but chose otherwise, the Supreme Court refused to validate such marriages and declare that the parties could register as married. The Supreme Court was guided by its perception of public policy stating that: “This judicial policy of invalidating private marriages is founded on the principle of maintaining the public good, proper administration, and basic social order, which are especially significant in determining the validity of the status of the marriage and the consequences ensuing from this status, for both the relationship between the parties and their relationship with the public as a whole” (CA 32/81, *Zonen v. Shtal*, 37(2) PD, p. 766; Justice Menachem Elon).

[Menachem Elon (2<sup>nd</sup> ed.)]

### In the State of Israel

Matters of marriage in the State of Israel are governed by Jewish law, in accordance with the provisions of sections 1 and 2 of the Rabbinical Courts Jurisdiction (Marriage and Divorce) Law, 5713/1953. As regards the customs relating to the celebration of *kiddushin* and *nissu'in*, *takkanot* were issued at an Israeli rabbinical conference in 1950, imposing a strict ban on anyone solemnizing *kiddushin* and *nissu'in* contrary to the accepted customs.

By virtue of the Marriage Age Law 1950 (as amended in 1960) a woman may not be married before the age of 17 years. This law further renders it a punishable offense for any person to marry a woman under the age of 17 years (it is no offense for the bride), or to solemnize or assist in any capacity in the celebration of the marriage of such a woman, or for a father or guardian to give her away in marriage, unless prior permission of the competent district court has been obtained – the latter being empowered to give this on the grounds specified in the law (see \*Child Marriage). No minimal age is specified for the bridegroom. This offense, although punishable, has no effect on the personal status of the parties; i.e., if the marriage is valid according to Jewish law, the fact that the offense has been committed will in no way affect the validity of the marriage, whether the question arises in relation to a matter of Jewish or of civil law, in the rabbinical or in the civil courts. However, in the event of a marriage with a woman below the said minimum age, the law provides that application may be made to the rabbinical court – by the persons and in the circumstances specified in the law – in order to oblige the husband to grant his wife a divorce. It must be emphasized that this provision does not create grounds for action for divorce under Jewish law, so that in fact it is a dead letter, for in matters of divorce the rabbinical courts apply Jewish law only.

[Ben-Zion (Benno) Schereschewsky]

The Marriage Age Law was amended in 1988, and the Law currently has the same age requirement for both males and females.

### CONTEMPORARY INNOVATIONS

Several opposing tendencies have brought significant changes to Jewish wedding practices during the last quarter of the 20<sup>th</sup> century, particularly in North America. One trend is characterized by the recovery and reinstatement of certain traditional nuptial rituals, often as part of a rejection of a growing conformity of Jewish marriage customs to Protestant models during the 1950s–70s. Thus, in the early 21<sup>st</sup> century, it is not uncommon for both bride and groom to immerse in the \**mikveh* during the week prior to the wedding. The *badeken* ceremony is frequently performed following a *tisch* for the groom, and there may be a *tena'im* ceremony where the mothers of the bride and groom break a plate.

At the ceremony itself Wagner’s *Lohengrin* Wedding March has generally been replaced by Jewish music and brides, and often grooms, now walk to the *huppah* with both parents, rather than the bride on the arm of her father. The use of some form of *ketubbah* has been reinstated in the Reform movement, alongside several of the traditional *sheva berakhot* (wedding benedictions). Brides and grooms from all movements often prepare wedding booklets explaining aspects of the traditional Jewish wedding ceremony so that their Jewish and non-Jewish guests will be able to follow the proceedings.

On the other hand, there has also been an effort to make the traditionally unilateral wedding ceremony as egalitarian

as possible. With the exception of the Ashkenazi custom of circling the groom seven or three times, sipping wine twice, and putting out a hand for the ring to be slipped on her finger, the Jewish bride is passive during a traditional Jewish wedding ritual and in the preparatory ceremonies that precede it, as when the *ketubbah* is signed and witnessed. The most common egalitarian innovations include replacing the traditional language of the *ketubbah* with reciprocal wording concerning the obligations of bride and groom to each other (this innovative *ketubbah* may be in Aramaic, Hebrew, or English, or a combination of two or more of these languages); both bride and groom participate in *kinyan* and sign the *ketubbah* prior to the *huppah*; the groom circles the bride after the bride circles the groom; a double ring ceremony with both bride and groom speaking and placing a ring on the other's finger (usually the groom says the traditional formula and the bride says some variation of it or recites a verse from the Song of Songs); and the inclusion of women among those eligible to officiate, read the *ketubbah*, and say one of the *sheva berakhot*.

Since 1990, more radical departures from *halakhah* have also become frequent. Within the Reform, Reconstructionist, and Humanist movements, these may include the use of specially written *ketubbot* at interfaith weddings and at gay and lesbian commitment ceremonies and marriages, where the couple often stands under a *huppah* and breaks a glass. Some of the interfaith ceremonies are syncretistic, which has elicited protests from the liberal and progressive denominations, as well as the more traditional movements.

**MARRIAGE, PROHIBITED.** A marriage is prohibited whenever there is a legal impediment to a *kiddushin* (see \*Marriage) between the particular parties. In some cases the prohibition has the effect of rendering the marriage, if it is celebrated nevertheless, null and void *ab initio*; in other cases it does not invalidate the marriage, but provides a ground for having it terminated by divorce.

#### Prohibited and Void

This category includes (1) marriages which are גְּלוּי עֲרֵיֹוֹת (*gillui arayot*) according to pentateuchal law, i.e., punishable by \**karet* or death, namely: (a) marriages between parties related to one another within the prohibited degrees of kinship: i.e., the marriage between a man and his mother, daughter, sister, and certain other relatives (Lev. 18:6ff.; Kid. 67b and codes); the marriage between a man and the sister of his wife is also void during the latter's lifetime (i.e., even after divorce), as is marriage with his brother's widow (except in the case of the levirate widow) or divorced wife: such marriages are punishable by *karet* (Yad, Issurei Bi'ah, 2:1, 9; Sh. Ar., EH 15:22, 26; 44:6; see also \*Levirate Marriage); and (b) marriage between a man and a married woman, such \*adultery being punishable by death (see also \*Bigamy); (2) A marriage with a non-Jewish partner (Sh. Ar., EH 44:8; see also Mixed \*Marriage); (3) Other cases enumerated in Shulhan Arukh, *Even ha-Ezer* 15.

#### Prohibited but Valid

In this category are included marriages which, although prohibited, do not constitute *gillui arayot* according to pentateuchal law and therefore are valid and not terminable unless by the death of either party or by divorce (Sh. Ar., EH 15:1; 18; 44:7). Since these marriages are nevertheless prohibited and remain tainted with the prohibition during their subsistence, their dissolution by divorce is generally compelled, whether or not either or both of the parties consented to, or had prior knowledge of, the true situation. Marriage prohibitions of this kind derive either from the pentateuchal law imposed and

punishable as a plain prohibition only (Yad, Ishut 1:7) or from the rules laid down by the scribes, i.e., marriage prohibited, as “incest of a secondary [minor] degree,” not by the Torah but only by rabbinical enactment (*ibid.*, 1:6; Sh. Ar., loc. cit.). The following are examples of such prohibitions:

(1) A married woman who has sexual relations with anyone but her husband becomes prohibited to the latter as well, and also to her lover even after her divorce from her husband (Sotah 27b; Sh. Ar., EH 11:1; 178:17). If she has had sexual relations of her own free will, she is prohibited to her husband forever, i.e., he must never remarry her after divorce from him even if in the meantime she has not married anyone else (Sh. Ar., EH 13). If she has been raped (see \*Rape), she is prohibited to her husband only if he is a priest, but, if he is an ordinary Israelite, she is permitted to him. He need not divorce her and, if he has done so, he may remarry her provided she has not married someone else in the meantime (Sh. Ar., EH 6:10, 11). Similarly, the adulteress is also prohibited for all time from marrying her lover, i.e., even after divorce from her husband or his death (Yev. 24b and Rashi ad loc.; Sh. Ar., EH 11:1). This is because her lover has destroyed her family life, inasmuch as, owing to the adultery, he has rendered her prohibited to her husband. By the same token, and, because the wife of an ordinary Israelite does not become prohibited to her husband when someone else has sexual relations with her against her own free will, some scholars are of the opinion that, although beforehand she is prohibited to such a lover in order to penalize him, if they have nevertheless married each other, he will not be compelled to divorce her (Sh. Ar., EH 11; *Ba'ér Heitev* n. 5 and *Beit Shemu'el* n. 2; but cf. *Rema*, EH 159:3, and *Ba'ér Heitev* n. 6; *Ozar ha-Posekim*, EH 11:1, n.44).

(2) A divorcee who has remarried and her second marriage has also been terminated (by divorce or death) is therefore prohibited to her former husband, in terms of an express prohibition in pentateuchal law (Deut. 24:4).

(3) A priest is prohibited by an express prohibition in the pentateuchal law from marrying a divorcee, a *zonah*, or a \**halalah* (see Lev. 21:7; Sh. Ar., EH 6:1). This prohibition is still in force (*Rema*, EH 3:6; PDR 5, 219, 221) despite the lack of certainty that all those known as priests are in fact the descendants of Aaron, for all of them are merely presumed to be priests (Yad, Issurei Bi'ah, 20:1). A divorced woman remains prohibited to a priest even if after her divorce she has remarried and become a widow (*Hokhmat Shelomo*, EH 6:1; Sh. Ar., EH 66:11, Isserles, *Helkat Me'hokek*, 66, n. 41). A priest is forbidden to remarry even his own former wife (Resp. Ribash n. 348; see also \*Divorce). For the purposes of the above prohibition, the term *zonah* is not to be interpreted in its ordinary sense – i.e., a woman who has sexual relations other than within matrimony (Yev. 61b). Here it refers to a woman who is not a Jewess by birth, such as a proselyte, and also to a woman who has cohabited with a man to whom she must not be married by virtue of a general prohibition (i.e., not one relating to the priesthood as such) e.g., if she has cohabited with a non-Jew or a \**mamzer* (Yev. 61a and Rashi; Sh. Ar., EH 6:8).

(4) A Jewish man or woman must not marry a *mamzer* (*et*). For details see \**Mamzer*.

(5) A married man is prohibited, according to the decree of Rabbenu \*Gershom, to marry another woman while his marriage still subsists. If contracted, the second marriage is valid but the parties will be compelled to divorce (see \*Bigamy).

(6) Marriage with a divorcee or widow is prohibited before the lapse of 90 days from the date of her acquiring her new status; in order to avoid doubt concerning the descent of her offspring; similarly, for the good of her child, it is forbidden to marry a pregnant woman or nursing mother until the child has reached the age of 24 months (Sh. Ar., EH 13:1, 11–14; for further instances of prohibited, but valid marriages see Sh. Ar., EH 15).

### Legal Consequences of Prohibited Marriages

FAMILY LAW ASPECTS. So far as the parties themselves are concerned, no legal consequences at all attach to a marriage which is forbidden as *יִצְוָה* (incestuous) according to pentateuchal law, and there is therefore no need for them to be divorced (Sh. Ar., EH 15:1, and Ha-Gra thereto, n. 3; Sh. Ar., EH 44:6); their children will be *mamzerim*. Only a marriage of a married woman to another man, although invalid, requires that the woman obtain a divorce not only from her husband but also from the paramour (see \*Divorce; \*Bigamy; \**Agunah*).

In the case of prohibited but valid marriages either party is entitled to demand a divorce, whether or not either or both parties were aware of the impediment at the time of the marriage or at any time thereafter. In case of the other party's refusal, divorce may be compelled, except in the case of a marriage contracted within 90 days of dissolution of the wife's previous marriage (*Rema*, EH 13:10). The need for divorce is also relaxed with reference to marriage with a pregnant woman or nursing mother (PDR 4:60). On the status of children born of such marriages, see \**Yuhasin*.

CIVIL LAW ASPECTS. Since the law requires that a prohibited marriage be dissolved, there is no place for the imposition of reciprocal marital rights and duties which are designed to sustain the marriage. In principle this is the position whenever the husband has married his wife without knowing that she is prohibited to him (*לֹא הִכִּיר בָּהּ*, *lo hikkir bah*). However, if he has done so knowingly, there will be no justification for his release from a husband's marital duties, and these he must fulfill, with the exception of those likely to impede dissolution of the marriage. This distinction between the husband's knowledge or lack of it is drawn mainly in regard to the most important cases of prohibited but valid marriages, i.e., cases of plain prohibition (*אִשְׁרֵי לֵאוֹ*, *issurei lav*); (for the prohibitions concerning other cases of prohibited marriage, see Sh. Ar., EH 116:2 ff.). Since a man who marries without knowing that his wife is prohibited to him is released from all the marital duties of a husband, the wife will not be entitled to receive her “main” or minimal \**ketubbah* and therefore also not to fulfillment of

the *ketubbah* conditions since “the *ketubbah* conditions are as the *ketubbah* itself” (Ket. 54b and Rashi ad loc. s.v. *tena’ei ketubbah*; see also \*Husband and Wife). Similarly, the wife will not be entitled to \*maintenance, either during the husband’s lifetime or as his \*widow (Yad, Ishut 24:2; Sh. Ar., EH 116:1). In the same way, the wife too will be released from all her matrimonial duties, since these are imposed on her by law only in return for her husband’s actual fulfillment of his duties toward her (see \**Ketubbah*; \*Husband and Wife; \*Dowry). The husband will, however, remain liable for her *ketubbah* “increment” (*tosefet ketubbah*), as this is not an obligation imposed on him by law but one that he has voluntarily undertaken to fulfill for as long as she is willing to remain his wife, and this the law has forbidden her to do, independently of her own will in the matter (Yad, Ishut 24:3; Taz, EH 116, n. 3).

In cases where the husband knowingly contracts a prohibited marriage, the scholars regulated that in principle he should not be released from any of the matrimonial duties imposed upon the husband by law. Hence, in these circumstances he, or his estate, will be liable to his wife or widow for her *ketubbah* (including the *tosefet*) as well as its conditions as in every regular marriage. However, since everything should be done in order to bring about the dissolution of such prohibited marriages, the scholars further ruled that the husband was exempt from maintaining his wife during his own lifetime, in order to discourage her from remaining his wife (Sh. Ar., loc. cit. and Taz n. 1). He will consequently not be entitled to her handiwork, since he is entitled to this only in return for actually maintaining her. Divergent opinions are expressed in the codes concerning the husband’s usufruct of his wife’s property. According to some of the *posekim* the husband does not have this right, since it is in return for the obligation to ransom his wife from captivity, a duty which does not hold in the case of a prohibited marriage (see \*Dowry) as marital life with her is forbidden to him; therefore the husband must return the equivalent of any benefit he may have derived from this source (see, e.g., Yad, Ishut 24:4 and *Maggid Mishneh* ad loc.). Other *posekim* are of the opinion that only when the wife is taken captive must the husband make available for purposes of her ransom, the equivalent of the fruits of her property that he has enjoyed, but otherwise he will be exempt from compensating her in this regard (see, e.g., *Ḥelkat Mehokek* n. 4 and *Beit Shemu’el* n. 2 to EH 116). Since the marital rights afforded by law to the wife in respect of her husband are conditional on the existence of corresponding legal duties of her husband toward her and, in the same way, the wife’s duties to her husband do not exist independently but are in return for her enjoyment of her rights against him (Yad, Ishut 12: 1–4) – a position which depends on his knowledge or ignorance of the prohibited nature of the marriage – her knowledge or ignorance in this respect is of no legal significance.

#### In the State of Israel

Apart from rules of private international law, the problem of prohibited marriages is governed by Jewish law (see sects. 1, 2

of the Rabbinical Court Jurisdiction (Marriage and Divorce) Law, 5713/1953.

**MARRUS, MICHAEL R.** (1941– ), Canadian historian, author. Marrus was born in Toronto, Canada. He is one of the foremost Canadian historians of modern Europe, specializing in the Jews of France and in the Holocaust. He received his B.A. at the University of Toronto in 1963, and his M.A. and Ph.D. at the University of California, Berkeley in 1964 and 1968, respectively. In 1968 he joined the Department of History at the University of Toronto and served as dean of the School of Graduate Studies from 1997 to 2004. He was the Chancellor Rose and Ray Wolfe Professor of Holocaust Studies from 2000. Marrus was also affiliated with St. Antony’s College (Oxford), the University of California, Los Angeles, the Hebrew University of Jerusalem, and the University of Cape Town. He was the recipient of numerous awards, including appointment as a fellow in the Royal Society of Canada and a Guggenheim Fellowship; he was a fellow of the Holocaust Royal Historical Society. Marrus published more than 100 articles, reviews, and books. His most notable works include *The Politics of Assimilation: A Study of the French Jewish Community at the Time of the Dreyfus Affair* (1971); with Robert Paxton, *Vichy France and the Jews* (1981); *The Unwanted: European Refugees in the Twentieth Century* (1985); *The Holocaust in History* (1987); and *Mr. Sam: The Life and Times of Samuel Bronfman* (1991). He was editor of *The Nazi Holocaust: Historical Articles on the Destruction of European Jews* (15 vols., 1992) and *The Nuremberg War Crimes Trial, 1945–46: A Documentary History*, (1997); and coeditor of *Contemporary Antisemitism: Canada and the World* (2005). Among his most important contributions to the study of the Holocaust are his works dealing with the Vichy government and the Third Reich, the Nuremberg War Crimes Trial, and the role of the Vatican during the Holocaust. In 1999 Marrus was appointed to an interfaith team of historians, the Catholic-Jewish Historical Commission on the Vatican and the Holocaust, charged with examining the role played by the Vatican during the Holocaust.

**MARSALA**, town in Sicily. Though Jews probably lived in Marsala in Roman times, the first mention of them is made in the city statutes of the Norman period restricting the rights of Jews and Muslims with regard to property claims. In 1282, after the Sicilian Vespers, King Peter II of Aragon ordered the restitution of property of the Jews of Marsala lost during the upheavals of the uprising. In 1321, following the complaints of the Jews in the area of Val di Mazara (which included Marsala), the Infante Peter ordered the officials in Marsala to prevent the bishop and church in Mazara from exercising jurisdiction

over the local Jews because they belonged to the Crown according to their status as serfs of the Royal Chamber. The Jews are then mentioned in a royal decree of 1374, in which approval was given for the enlargement of the synagogue. Toward the end of the 14<sup>th</sup> century the community protested against the abuses inflicted on them by the citizens, who forced them to attend church functions, and stoned them when they returned to their own quarter. Royal decrees of 1402 and 1405 exempted the Jews from the authority of the bishop, restored the ritual bath which had been confiscated, and restricted the taxes paid by the Jews to one-tenth of those imposed on the whole town. Every year, on October 16, councillors (*proiti*) were elected to administer the community affairs. On the expulsion of the Jews from Sicily in 1492, about 2,600 Jews were forced to leave the town. The synagogue was converted into a church.

**MARSCHAK, JACOB** (1898–1977), U.S. economist. Born in Kiev, Marschak taught at the University of Heidelberg from 1930 to 1933. From 1933 to 1939 he lectured at All Souls College, Oxford, and was the director of its Institute of Statistics. During this period, his articles on measurement of economic variables and estimation of economic relationships provided the foundation for the field of econometrics. In 1940 he became professor of the graduate faculty of the New School for Social Research in New York City, which he left in 1942 to teach at the University of Chicago, directing at the same time the Cowles Commission for Economic Research (1943–48). In 1950 he became a consultant of the RAND Corporation and a member of an inter-society committee on the training of social scientists in mathematics. He was a professor of economics at Yale from 1955 to 1960. His major interests were microeconomics, econometrics, and business administration. In 1960 he went to teach at the University of California at Los Angeles, with a joint appointment as professor in the School of Business Administration (now Graduate School of Management) and the Department of Economics. He became professor emeritus at UCLA in 1965 and served as director of the Western Management Science Institute (1965–69).

Over the years, Marschak served as president of the Econometric Society; vice president of the American Statistical Association; fellow of the American Academy of Arts and

Sciences; member of the National Academy of Sciences; and president of the American Economic Association.

In the 1920s Marschak helped a number of his fellow Russian intellectual exiles to establish a life for themselves in the United States. In the 1930s he took part in assisting scholars who were refugees from Nazi Germany. Subsequently, he helped the newer emigrant intellectuals from the Soviet Russia.

Marschak’s publications include *Kapitalbildung* (with Walther Lederer, 1936), *Economic Aspects of Atomic Power* (co-editor, 1950), *Studies in Econometric Methods* (with W.C. Hood et al., 1953), *Income, Employment, and the Price Level* (1965), *Economic Theory of Teams* (with R. Radner, 1972), and *Economic Information, Decision, and Prediction* (1974).

**BIBLIOGRAPHY:** C.B. McGuire, *Decision and Organization: A Volume in Honor of Jacob Marschak* (1972).

[Joachim O. Ronall / Ruth Beloff (2<sup>nd</sup> ed.)]

**MARSEILLES**, capital of the department of Bouches du Rhône; second largest town in France. The earliest recorded presence of Jews in Marseilles can be traced to the sixth century. In 574 there was a sufficient number to provide asylum for the Jews who fled from \*Clermont-Ferrand to escape the coercive measures by Bishop \*Avitus to convert them. In 591 Bishop Theodore of Marseilles also attempted to compel the Jews of the town to accept baptism, but Pope \*Gregory I intervened in their favor. Although scant information is available on the Jews of Marseilles during the early Middle Ages, the importance of their settlement there is confirmed by the names of sites alluding to them. At the close of the tenth century there is mention of a *valle Judaica* in an area of fields and vineyards and at the end of the 11<sup>th</sup> century, of a vineyard named *rua Judaica*. During the 12<sup>th</sup> century, the Jews formed two communities; one in the upper part of the town, which was under the jurisdiction of the bishop; the other in the lower town, which belonged to the viscount. Both communities were placed under the authority of the bishop. (It was this right which Frederick I Barbarossa ratified for Bishop Peter in 1164.) The two communities are mentioned by the traveler \*Benjamin of Tudela, who also indicates that the yeshivot and the scholars were established in the upper town. As might be expected, the merchants settled in the lower part in the vicinity of the port. There they traded with Palestine, Egypt, North Africa, Spain, and Italy, dealing mainly in wood, spices, textiles, metals, pharmaceuticals, various products for dyeing, and slaves. Commercial partnerships with Christians were very common. They rarely engaged in moneylending, although toward the end of the 12<sup>th</sup> century they did advance loans to the Monastery of Saint Victor and to the squire of Trets. In 1257 the statutes of Marseilles granted Jews the status of citizens. Nevertheless they were subject to some important restrictions. Jews were prohibited from working in public on Christian festivals, or from taking an oath in a lawsuit against Christians, and no more than four Jews were allowed to embark on a ship

bound for Egypt. By at least the middle of the 14<sup>th</sup> century, all the Jews of the town had united into a single community, led by three officers who administered the schools, the three synagogues, the almshouse, and the *mikveh*.

In the 14<sup>th</sup> century, Jews were granted equality with other citizens of Marseilles, yet they continued to have special privileges. Thus, although it was forbidden for all other citizens to sell flour in any place but on the bridge, a municipal ordinance of 1359 authorized Jews to sell or buy flour for unleavened bread (*mazzot*) in the Jewish quarter. Similarly, an ordinance issued in 1363 stipulated that whereas all other inhabitants were to sweep the street before their houses on Saturday, Jews were permitted to do so on Friday. Finally, in 1387 Jews were exempted on evenings of Jewish festivals from the general obligation to walk about with a lamp after curfew.

Although they lived in an international trading port, the Jewish population remained relatively stable. For much of the Middle Ages, new arrivals in the town constituted little more than 10% of the population. (An important exception was in 1351, after an influx caused by the \*Black Death persecutions, when the percentage of new arrivals in the community reached 30%.) Although Jews did not generally participate in the maritime trade, limiting their transactions mainly to Spain, they were well represented in the town's urban commercial life, many of them acting as brokers. The Jewish surname Sabonarius has led to the belief that it was the Jews who introduced the soap industry to Marseilles. They had a virtual monopoly over coral craftsmanship, although those engaged in this occupation made very little money. Poorly off, too, were the Jews who earned their livelihood as laborers, porters, stonecutters, and tailors. Since they dealt only in small sums, even Jewish moneylenders were not noticeably wealthy. Jews did, however, distinguish themselves in the medical field, the number of Jewish physicians in the town often exceeding that of their Christian colleagues. During the 15<sup>th</sup> century, Jewish economic life experienced a setback and economic activity was reduced to the retail trade, mainly the sale of wheat and textiles. Jews also suffered more than the rest of the population when the town was plundered by the Aragonese in 1423. Most of them became impoverished, and struggled to recover economically.

Late in 1484 and early in 1485, shortly after the incorporation of \*Provence into France (1481), the Jewish quarter of Marseilles was attacked. In the wake of plunder, destruction, and murder, the Jews of Marseilles began to flee. In 1486, however, the municipal council curbed their emigration and drew up an inventory of their belongings. The ensuing period is marked by severe upheavals in the composition of the community, as reflected in the extant lists of the heads of families; at least one half of the community's members were relatively new arrivals. Jews from Spain began to arrive in large numbers, particularly after 1491. Many shipowners in Marseilles amassed fortunes as a result of their expulsion in 1492. Spanish Jews hired vessels at exorbitant prices to transport them to Italy and Constantinople, and many of these ships called

at the port of Marseilles. At times, the exiles attempted to remain in the city without the authorization of the municipal council. A general expulsion order for Provence was issued in 1500 and enforced in 1501. For about 20 years, conversions increased considerably as great numbers of Jews chose baptism to evade expulsion.

The 12<sup>th</sup>-century Jewish traveler Benjamin of Tudela refers to Marseilles as a "town of learned men and scholars." Among those he mentions is R. \*Isaac b. Abba Mari of Marseilles, a renowned commentator and author of prayers. Several members of the Ibn \*Tibbon family also lived in Marseilles, or were born there. (Records of a rabbinical lawsuit in this family about 1250 mention family relationships and marriages between the Jews of Marseilles and those of \*Naples, \*Aix-en-Provence, and \*Montpellier.) \*Nissim b. Moses of Marseilles was the author of a commentary – which some regard as "almost rationalist" – on the Pentateuch, entitled *Sefer ha-Nissim* or *Ma'aseh Nissim*. Samuel b. Judah ha-Marsili (also known as Miles Bonjudas), born in Marseilles in 1294, translated several philosophical and scientific works from Arabic into Hebrew. Other scholars born in the city include Judah b. David (also known as Bonjudas Bendavi or Maestre Bonjua), a talmudist and physician of the late 14<sup>th</sup>/early 15<sup>th</sup> century, and the talmudist and commentator Jacob b. David \*Provençal (second half of the 15<sup>th</sup> century), both of whom emigrated to Italy.

In the second half of the 17<sup>th</sup> century, a second community was established in Marseilles for a brief period. As a result of an edict issued by Louis XIV in 1669, which granted tax exemption to the port of Marseilles, two Jews of Leghorn, Joseph Vais Villareal and Abraham \*Athias, settled there in 1670 with their families. Their commercial success rapidly attracted other Jews. The local authorities soon protested against the presence of Jews and particularly objected to the existence of two places of Jewish worship. They obtained an expulsion order which was carried out in 1682. Despite successive renewals of the expulsion order, a new community was founded in 1760. About 1768, it owned a small synagogue and in 1783, it erected a cemetery. Although the community's membership remained relatively stable, a split occurred at the end of 1790, and both the municipality and the civil court were called upon to intervene to settle the differences. Forcibly reunited, the community established a new synagogue and a cemetery in 1804. The community was then composed of about 300 members, of whom over one third were living in poverty. The Jewish population increased rapidly to 450 in 1808, 1,000 in 1821, and 2,500 in 1865. As a result, several new institutions were established, including schools for both boys and girls, a poorhouse, and a synagogue on the Rue de Breteuil that remains in use today.

#### **Holocaust Period and After**

Between 1940 and 1942, Marseilles, along with \*Lyons, was the city in the southern or "free" zone where the greatest number of Jews and Jewish organizations and institutions found sanctuary from the German invasion. After the Allied landing in

North Africa and the German occupation of France in November 1942, there was a vicious hunt for Jews in Marseilles, which led to mass arrests and deportations. At the same time, the resistance movement increased its activities in the city. The synagogue on Rue de Breteuil was pillaged, the facade destroyed, the prayer books and the Torah scrolls burned. With the defeat of the Germans, about 5,000–10,000 Jews remained in Marseilles. The population, which was comprised of refugees from Provence and Alsace, immigrants from Eastern Europe, and Sephardi Jews from the eastern Mediterranean and from North Africa, gradually rebuilt the community and its institutions, including the Rue de Breteuil synagogue. The former military camp of Grand Arenas near Marseilles became a transit camp for Jewish survivors migrating to Palestine. Beginning in 1956, the city attracted Jewish immigrants from North Africa, and in 1962 it became their main port of entry into France. In 1969, there were an estimated 65,000 Jews in Marseilles. In 1987, the Jewish population stood at 70,000, making it the third largest Jewish community in Western Europe. Although the community's buildings and institutions expanded, they could not keep pace with the population growth. In 2002 Marseilles and the immediate vicinity was said to have over 40 synagogues. It also had three community centers, a Jewish primary school, an \*ORT vocational school, and a network of institutions and organizations including youth movements, kosher restaurants, and *mikva'ot*. A consulate general of Israel was located in Marseilles.

[Bernhard Blumenkranz / David Weinberg (2<sup>nd</sup> ed.)]

**MARSHAK, SAMUEL YAKOVLEVICH** (1887–1964), Zionist and Russian poet. Marshak was born in Voronezh. Though his father received a solid religious education, Marshak himself seems to have experienced traditional Judaism only when he lived, as a child, with his observant grandparents in Vitebsk. There, for two years, he studied Hebrew with a teacher by the name of Khalameyzer, whom he lovingly remembered and described in his childhood reminiscences *V nachale zhizni* (“At Life’s Beginning,” 1960). But it seems that he mastered Hebrew, as well as ancient and modern Jewish literature, sufficiently well to be able to translate it into Russian. Marshak received his formal education in Russian high schools in St. Petersburg and also in the Crimean town of Yalta, where he lived in Maxim \*Gorki’s house.

According to his second autobiographical note “*O sebe*” (“About Myself”), published posthumously as an introduction to the eight-volume collection of his writings, he “began being published in almanacs in 1907.” But actually his first verse had already appeared in Russian-language Jewish journals (*Yevreyskaya Zhizn*, *Molodaya Iudeya*) in 1904–07, all of them enthusiastically Zionist, such as poems on the death of \*Herzl (“*20 Tammuz*” and “*Na grobe*”), poems based on biblical themes (from Ezekiel and Song of Songs), on midrashic legends, about the Spanish Inquisition, and programmatic Zionist poetry (especially for youth), etc. Later he published his poetry, including translations from \*Bialik, in the Zionist *Razsvet*, in which, after a visit in 1911 to Erez Israel, he also published his observations and impressions of the various Jewish communities in the country. In his poem “Palestina,” published in 1916 in *Yevreyskaya Zhizn*, he contrasted the Jewish plight in Russia during World War I to the elation he experienced in Erez Israel. His poem “*Ierusalim*,” which depicts his journey to the Holy City, was included in the Russian-language anthology of Jewish poetry *Safrut* (1918). The *Evreyskaya Anthologia* (“Hebrew Anthology”), which appeared in Moscow in 1918, edited by L. \*Jaffe and V. \*Khodasevich, published Marshak’s translations from Bialik, Z. \*Shneur and D. Shimonovich \*(Shimoni).

As a high school student, during his stay in Gorki’s house in Yalta, he was active until the summer of 1906 in organizing Zionist youth circles of *Molodaya Iudeya* (“Young Judea”). Under the influence of the clandestine \*Po’alei Zion delegate, Isaac Shimshelovich (later Izhak \*Ben-Zvi, the second president of Israel), Marshak became an activist of the illegal Po’alei Zion movement, and his address at Gorki’s house even served as a liaison between the center of the movement in Poltava and its delegate in the Crimea. According to Ben-Zvi’s letters, seized by the Czarist police, Marshak was active in organizing the Po’alei Zion branch in Yalta and the distribution of *Yevreyskaya Rabochaya Khronika* (“Jewish Workers’ Chronicle”). During his stay in London (1912–13) Marshak was still in touch with Po’alei Zion, and Ber \*Borochov mentions him in one of his letters to a London friend. Thus, from his high school days in Yalta until after the Russian Revolution, when he participated in the editing of the Russian-language anthologies of Jewish literature in Moscow, Marshak was a dedicated Zionist. This chapter in his life has been completely omitted from Marshak’s biographies and autobiographical notes published in the Soviet Union.

[Matityahu Minc]

Most historians of Russian writing would probably accept Marshak’s designation by his friend Maxim Gorki as the founder of Soviet children’s literature. His first children’s book was *Detki v kletke* (“Children in a Cage,” 1923). There is hardly a Russian child or young adult who does not know some of Marshak’s verse by heart. His nursery rhymes, songs, and verse form part of the Soviet kindergarten and school curriculum, and his plays have long been among the mainstays of the Soviet children’s theater. There are few ideological elements in

his verse, in which he usually exhorts children to be truthful, to obey their parents, to study diligently, and to be kind to animals. Four volumes of his writings, including his first autobiographical note, appeared in 1957–60. Marshak was also famous as a translator of the great European poets, including Shakespeare, Blake, Byron, and Heine.

Marshak's sister, YELENA YAKOVLEVNA ILINA (pen name of Liya Yakovlevna Preis, 1901–1964), was a well-known children's writer in her own right, and his brother, M. ILIN (pen name of Ilya Yakovlevich Marshak, 1895–1953), was probably the best-known Soviet writer of popular science, particularly for children. He won the Stalin Prize four times (1942, 1946, 1949, 1951), and the Lenin Prize in 1962.

[Maurice Friedberg]

**MARSHALL, DAVID SAUL** (1908–1995), Singapore labor politician, lawyer, and diplomat. Marshall was born of a Sephardi family of Iraqi origin. He went to London to study, and, after being admitted to the English bar, returned to Singapore to practice law. He entered politics as a member of the Legislative Assembly and became president of the Workers' Party. When the island was granted partial independence in 1955, Marshall led the United Labor Front party to victory in the elections and became chief minister and minister for commerce, serving in these positions until 1956. Marshall was president of the Singapore Jewish Welfare Board from 1946 to 1953. From 1978 to 1993 Marshall served as Singapore's ambassador to France, Spain, Portugal, and Switzerland.

[Moshe Rosetti]

**MARSHALL, LOUIS** (1856–1929), lawyer and communal leader. Born in Syracuse, New York, the son of German-Jewish immigrants, Marshall graduated from Syracuse High School and served a two-year apprenticeship in a local law office. In 1876 he left for New York City where he completed the two-year Columbia Law School course in one year. Returning to Syracuse, Marshall joined a prominent law firm and in 1894 became a partner in the leading New York firm of Guggenheimer, Untermyer, and Marshall.

Marshall specialized in constitutional and corporate law. Many of the numerous cases that he argued before the U.S. Supreme Court were of major constitutional significance. His legal eminence was recognized by appointment or election to three constitutional conventions in New York State (1890, 1894, and 1915). Although he never sought public office, he was at one time seriously considered for appointment to the Supreme Court. A leading supporter of the Republican Party, Marshall participated in local and national politics, led in the establishment of the New York State College of Forestry, and served on numerous non-sectarian committees and boards.

In New York City, Marshall joined the German-Jewish elite and quickly became the chief spokesman for this group in

matters affecting the Jewish community at home and abroad. His national leadership became evident in 1911 during the successful campaign against the United States-Russian Commercial Treaty of 1832, which was being used by the Czarist regime to discriminate against American Jews. Marshall's eloquence, legal knowledge, and skillful management, joined with intense public pressure, resulted in congressional action leading to abrogation of the treaty. In 1912 Marshall became president of the American Jewish Committee and held this post until 1929. During World War I, he participated in a bitter internal power struggle within the Jewish community over the establishment of an American Jewish Congress in preparation for peace negotiations. Playing a key role as mediator, Marshall joined the Jewish delegation to the Paris Peace Conference in 1919, where he supported the granting of national minority rights to the Jews of the new East European states.

Marshall vigorously attempted, without success, to block the American publication of the antisemitic Protocols of the \*Elders of Zion, imported from Europe in the immediate post-war years. American Jewry was shocked when the *Dearborn Independent*, a publication owned by Henry Ford, embarked in 1920 on a crusade to popularize and elaborate the distortions and misrepresentations emanating from the *Protocols*. Unable to dissuade Ford directly, Marshall utilized quiet pressure and influential intermediaries in an attempt to abate this antisemitic campaign. Finally, in 1927, after lawsuits brought by individuals maligned by the *Independent*, Ford agreed to cease his attacks and to sign a formal apology to the Jews prepared by Marshall.

Marshall participated in the legal defense of Leo \*Frank, who was convicted and subsequently lynched in Georgia for a murder he allegedly committed in 1913. He played a significant part in the campaign to delay the imposition of progressively harsher immigration-restriction legislation. His intervention in 1922 helped reverse Harvard University's announced intention to impose a quota system on Jewish students. He quietly opposed the powerful Ku Klux Klan and vigorously condemned the perpetrators of the Massena ritual murder libel in 1929.

Marshall was a dedicated Jew. He served as president of Temple Emanu-El in New York, the most important Reform Jewish congregation in the United States. At the same time, he served as chairman of the board of directors of the \*Jewish Theological Seminary. During World War I, he was president of the American Jewish Relief Committee and helped organize and guide the \*American Jewish Joint Distribution Committee. Although not a political Zionist, Marshall acknowledged the need for Palestine as a center of Jewish settlement, especially after the United States severely limited immigration in the early 1920s. He cooperated with Chaim \*Weizmann in attempting to arrange a *modus vivendi* which would allow wealthy and influential non-Zionists to share in the support of Palestine without actually becoming Zionists. Weizmann's and Marshall's efforts, opposed by Stephen Wise and other American Zionists, finally came to fruition after many years of dis-

cussion. In August 1929, shortly before Marshall's fatal illness, a pact was ratified in Zurich for the establishment of a \*Jewish Agency, which would include both Zionists and non-Zionists in the management of Jewish colonization in Palestine under the terms of the British mandate. Marshall's death was a blow to the full implementation of the venture, but his work helped create a tradition of American non-Zionist support that was of great value in the crucial decade after World War II.

Believing in the indivisibility of civil rights, Marshall was a consistent champion of other minorities. Active in the National Association for the Advancement of Colored People, he fought major legal battles on behalf of blacks. In 1920, alarmed at hysterical anti-Bolshevism, Marshall defended five socialist assemblymen, who were refused their seats in the New York State Legislature.

Marshall's period of leadership coincided with the great era of mass Jewish immigration to the United States and the integration of the immigrants into an urbanized, industrialized society. Representing the native Jewish establishment, he nevertheless displayed a remarkable sensitivity to the needs and desires of the Jewish immigrants, encouraging, guiding, criticizing, but not patronizing. Aided by American democratic traditions and the political power of Jewish voters, Marshall generally used the traditional methods of intercession and quiet diplomacy to achieve his ends. While not uniformly successful, his dignity, sincerity, devotion, and strength combined to produce what a contemporary called "the foremost leader of American Judaism... the American Jew par excellence."

His son, GEORGE MARSHALL (1904– ), conservationist, served as an economist with the National Recovery Administration from 1934 to 1937. Marshall devoted his efforts to the cause of conservation. He was managing editor of *The Living Wilderness* from 1957 to 1961 and was a director of the Sierra Club and the California Conservation Council.

Another son, JAMES MARSHALL (1896–1986), lawyer and educator, studied law at Columbia University and was associated with his father's firm, Guggenheimer, Untermyer, and Marshall from 1920 to 1930. After independent practice from 1930 to 1934, he became a member of the firm of Marshall, Bratter, Greene, Allison and Tucker. In addition to numerous other civic responsibilities, Marshall was a member of the New York City Board of Education from 1938 to 1952 and served as its president from 1938 to 1942. Active in Jewish communal life, he held important posts in the American Jewish Committee, Joint Distribution Committee, Jewish Publication Society, and American Friends of the Hebrew University.

A third son, ROBERT MARSHALL (1901–1939), served as director of the forestry division of the U.S. Office of Indian Affairs from 1933 to 1937. He became chief of the division of recreation and soil conservation of the U.S. Forest Service and held the position until his death.

°**MARSUS, C. VIBIUS**, successor to Petronius as Roman governor of Syria (42 C.E.). Marsus appears to have regarded the Judean king Agrippa I with more than the average Roman suspicion toward Jewish leaders and went so far as to inform the emperor \*Claudius of these suspicions. When Agrippa began to fortify the walls of the northern side of Jerusalem, the act was immediately reported by Marsus to the emperor. Claudius ordered the immediate cessation of the fortification, suspecting that a revolution was at foot. Marsus again intervened in Judean affairs when he disbanded the meeting of vassal kings convened by Agrippa at Tiberias. From that time, according to Josephus, Agrippa was at odds with Marsus. Marsus was succeeded in Syria by Cassius Longinus in 45 C.E.

**BIBLIOGRAPHY:** *Jos., Ant.*, 19: 316, 326–7, 240–2, 363; 20:1; Pauly-Wissowa, 2<sup>nd</sup> series, vol. 16 (1958), 1973–75 (under the name C. Vibius Marsus).

[Isaiah Gafni]

**MARTHA**, daughter of Boethus, mentioned in Mishnah Yev. 6:4 (cf. Sifra, Emor ch. 2:6) as a widow who was betrothed to \*Joshua b. Gamla. According to this Mishnah, Joshua, who was subsequently appointed high priest, was nevertheless permitted to consummate the marriage. Martha's sons are mentioned in Tosef. Yoma 1:14 as priests serving in the temple, but it is not clear whether these are the children of Joshua b. Gamla, or of her first husband, who may also have been a priest. A tannaitic midrash already uses Martha as a paradigmatic figure of an extremely wealthy widow (cf. Yer. Ket. 5:11, 30b), and the Talmud (Yev. 61a) relates that she paid King Yannai a small fortune in order to assure that Joshua b. Gamla would be appointed as high priest. In the *aggadot* concerning the fall of Jerusalem (Git. 56a), Martha is portrayed as one of the wealthiest women in the period preceding the destruction of the Temple (70 C.E.), who was forced during a time of famine to venture out on her own to seek a morsel of food. When some excrement came into contact with her skin she died, thus fulfilling the prophecy of Moses in Deut. 28:56. Presumably the traditions concerning Miriam, daughter of Boethus (Lam. R., 1:47), whose family rose to a position of prominence in Herod's time, are also a later literary development of the tannaitic traditions concerning Martha, daughter of Boethus.

[Stephen G. Wald (2<sup>nd</sup> ed.)]

°**MARTI, KARL** (1855–1925), Swiss-German Bible scholar. Marti studied at Basel in Switzerland with Emil Kautzsch, and with Franz Delitzsch at Leipzig in Germany. He taught at Basel university (1881–91) and was professor of theology (from 1895) and of Semitic philology (from 1901) in Bern(e) until his death. Marti wrote critical studies on Jeremiah (1889) and Zechariah (1892), and a concise grammar of biblical Ara-

maic (1896; 19112). He edited the second edition of A. Kayser's *Theologie des Alten Testaments* (1894; 19075), bearing the title *Geschichte der israelitischen Religion*, a critical evaluation of biblical religion based on the \*Wellhausen-Graf reconstruction of Israel's history. Though a staunch Wellhausenian with regard to the biblical texts, Marti paid more attention to the ancient Near Eastern world in which they were produced. In the *Kurzer Hand-Commentar zum Alten Testament*, of which he was a co-editor, he wrote the volumes on Isaiah (1900), Daniel (1901), the Minor Prophets (1904), and the introductory volume, *Die Religion des Alten Testaments unter den Religionen des vorderen Orients* (1906; *The Religion of the Old Testament*, 1907). In the series *Die Heilige Schrift des Alten Testaments* he annotated Deuteronomy (1909), Daniel, and the books of Joel, Obadiah, Zechariah, Haggai, and Malachi of the Minor Prophets (1910). Among his numerous articles on biblical studies and Judaica there is a strongly biased one on the nature of the Christian mission to the Jews ("Zur Judenmission," in: *Kirchenblatt für die reformierte Schweiz*, 1886). Yehezkel \*Kaufmann was a student of his.

**BIBLIOGRAPHY:** For a bibliography of K. Marti's writings until 1923, see: W. Baumgartner, in: BZAW, 41 (1925), 323–31. **ADD. BIBLIOGRAPHY:** C. Begg, in: DBI, 2:132.

[Zev Garber / S. David Sperling (2<sup>nd</sup> ed.)]

°**MARTIAL** (**M. Valerius Martialis**; c. 40–104 C.E.), Roman epigrammatist. Martial ridiculed the Jewish rite of circumcision (*Epigrammaton*, 7:55) and speaks mockingly of women who fast on the Sabbath (*ibid.*, 4:4). In common with other classical writers (e.g., Augustus, Strabo, Pompeius Trogus, Persius, and Petronius), Martial confuses the Sabbath with a fast day, probably the Day of Atonement. He referred to licentious Jews who shared vices with their fellow Romans (*ibid.*, 7:30). Martial scolded a circumcised rival poet from Solymae (Jerusalem) for plagiarizing his verses, while criticizing them (*ibid.*, 11:94). In common with other Roman satirists (e.g., \*Juvenal), he depicts unfavorably Jewish life in Rome, expressing indignation at the constant growth of that community which he considered strange.

**BIBLIOGRAPHY:** Reinach, *Textes*, 287–9; M. Radin, *The Jews among the Greeks and Romans* (1915), 302, 325–6, 329–30.

[Solomon Rappaport]

°**MARTIN**, name of five popes, two of whom were significant in Jewish history.

**MARTIN IV** pope 1281–85. Although he employed a southern French Jewish physician, Martin IV was generally repressive in his actions concerning the Jews. He directed the inquisitors to proceed against lapsed Jewish converts (March 1, 1281), and issued an instruction to the archbishops and bishops of France not to hamper the work of the Inquisition, even suspending the right of sanctuary in the case of Jewish converts suspected of falling away from the faith. A series of articles specifying reforms for Portugal (1284) is partly concerned with the position of the Jews.

**MARTIN V** pope 1417–31. On the whole Martin V was well-disposed toward the Jews. In the first two years of his reign he confirmed the Jews of Germany, Savoy, and Rome in their former privileges, and received favorably a delegation of Italian Jews and another from Spain. In 1419 (and again in 1422 and 1429) he issued a bull protecting the Jews in their synagogues. He resisted the imposition of the \*badge, but ordered the Jews to abstain from work on Sundays and feast days. His aim seems to have been to encourage the fullest possible intercourse between Jews and Christians, excepting from his protection only those Jews who conspired to overthrow the Christian faith. His personal relations with Jews appear to have been good: he employed Elijah b. Shabbetai Be'er as his physician and gave the Jewish physicians in the Papal States every encouragement in the practice of their profession. Martin may have been the pope who discussed theology with Aaron b. Gerson Abulrabi of Catania. To some extent he seems to have striven to moderate the worst excesses of the Inquisition. In 1418, after receiving a complaint that the Jews of Avignon practiced sorcery, infected simple Christians with Jewish superstitions, and demanded interest at a rate of 10%, he instructed the local inquisitor to proceed against them, but he soon attempted to restrain the inquisitor's zeal. The same situation was repeated in his dealings with John of \*Capistrano, against whose excesses many of his edicts of protection were probably directed. Thus in 1422 he issued an edict forbidding forcible baptism, since "a man who is known to have undertaken Christian baptism unwillingly rather than of his own accord cannot be supposed to possess true Christian faith," but barely a year later he was induced to withdraw it. In May 1427 John of Capistrano persuaded the queen of Naples (Johanna II) to cancel the privileges of the Jews in her kingdom, but Martin's intervention resulted in the repeal of this edict in the following August.

[Nicholas de Lange]

**MARTIN, BERNARD** (1928–1982), U.S. rabbi and educator. Martin was born in Seklence, Czechoslovakia, and educated in the U.S. He was ordained as a rabbi at Hebrew Union College in 1951, receiving his M.H.L. degree with highest honors. He pursued a combined career as pulpit rabbi and scholar, and received a doctorate in philosophy from the University of Illinois in 1960.

Martin served as rabbi of Sinai Temple in Champaign, Ill., from 1951 to 1957, with a leave of absence to serve as a chaplain in the U.S. army in Japan from 1953 to 1955. He was associate rabbi of Sinai Temple in Chicago from 1957 to 1961 and then senior rabbi of Mount Zion Temple in St. Paul, Minn., until 1966. He held a "centrist" position in the Reform rabbinic, welcoming increased use of Hebrew and ritual, while urging the formulation of "a statement of Jewish theological

belief that will satisfy both the mind and heart of the groping and intellectually sophisticated contemporary Jew.” Martin also served on the boards of Jewish and civic organizations in St. Paul, including the Jewish Fund and Council, Talmud Torah, Jewish Community Center, Council on Religion and Race, and Zionist District.

In 1966, Martin accepted a professorship at Case Western Reserve University in Cleveland, where he became chair of the department of religion in 1967 and Abba Hillel Silver Professor of Jewish Studies in 1968. He was active in the American Academy for Jewish Research, Academy for Jewish Philosophy, and American Academy of Religion, among others, and served from 1975 to 1981 as editor of the *CCAR Journal*, published by the Central Conference of American Rabbis.

Martin’s first book was *The Existentialist Theology of Paul Tillich* (1963). He then developed a specialty in the Russian Jewish existentialist Lev Shestov, editing *Great Twentieth Century Jewish Philosophers* (Shestov, Rosenzweig, Buber, 1969) and *A Shestov Anthology* (1970), and translating Shestov’s *Athens and Jerusalem* (1966), *Potestas Clavium* (1968), and *Speculation and Revelation* (1982). Martin’s works on Judaism include *Prayer in Judaism* (1968), *Contemporary Reform Jewish Thought* (ed., 1968), *A History of Judaism* (vol. 2: *Europe and the New World*, 1974), *Movements and Issues in American Judaism* (ed., 1978), and a historical novel on Shabbetai Zevi, *That Man from Smyrna* (1978). Martin translated and edited Yiddish works, including literary historian Israel Zinberg’s magnum opus, *A History of Jewish Literature* (12 vols., 1972–78) and Dovid Bergelson’s novel, *When All is Said and Done* (1977).

[Mark L. Smith (2<sup>nd</sup> ed.)]

**MARTIN, DAVID** (1915–1997), Australian poet and novelist. Born Ludwig Detsinyi in Budapest, Martin was educated in Germany, but left in 1935 with the rise of Nazi power, spending a year on a kibbutz in Erez Israel. He fought in the Spanish Civil War, and lived in London from 1938, working for various newspapers and the European Service of the B.B.C. He moved to Australia in 1949, and was briefly editor of the *Sydney Jewish News*. His works include verse collections such as *Battlefields and Girls* (1942); *From Life* (1953); and *The Gift* (1966); and the novels, *Tiger Bay* (1946); *The Stones of Bombay* (1950); *The Young Wife* (1962); and *The King Between* (1966). Martin contributed stories, criticism, and occasional verse to Jewish publications in England, the U.S.A., and Australia. One of his best-known poems, “I am a Jew,” was published in his *Collected Poems, 1938–1958* (1958). His other major Jewish works are a play, *The Shepherd and the Hunter* (1946), dealing with the Palestine problem in the 1940s, and the autobiographical novel, *Where A Man Belongs* (1968), which deals with aspects of contemporary Jewish life. Martin was a member of the Australian Communist Party from 1951 until 1959 and remained on the left until the end of his life, advocating

a policy of “armed neutrality” for Australia in the 1980s. He wrote an autobiography, *My Strange Friend* (1991).

[Greer Fay Cashman]

**MARTIN, TONY** (**Alvin Morris**; 1912– ), U.S. actor and singer. Born in San Francisco, Martin sang over a national radio network in 1932, and was signed for the popular radio show of George Burns and Gracie Allen. His lilting tenor and good looks led to film contracts.

After the Japanese attack on Pearl Harbor in December 1941, Martin enlisted in the U.S. Armed Forces, serving first in the Navy and then with the Army in the Far East. He also sang for a time with the Army Air Forces Training Command Orchestra directed by Glenn Miller. He received several military honors, including the Bronze Star.

Martin combined his singing with acting, notably in the film *Casbah* (1948), in which he played Pepe Le Moko, the jewel thief. Some of Martin’s other films include *Follow the Fleet* (1936), *Banjo on My Knee* (1936), *Sing and Be Happy* (1937), *Kentucky Moonshine* (1938), *Ziegfeld Girl* (1941), *Till the Clouds Roll By* (1946), *Two Tickets to Broadway* (1951), *Easy to Love* (1953), *Here Come the Girls* (1953), *Deep in My Heart* (1954), and *Let’s Be Happy* (1957).

Martin had a successful recording career as well. His biggest hit song was “There’s No Tomorrow” (adapted from the classic Italian song “O Sole Mio”). Some of his other popular hits include “South of the Border,” “It’s a Blue World,” “Tonight We Love,” “To Each His Own,” “It’s Magic,” “La Vie En Rose,” “I Get Ideas,” “Domino,” “Kiss of Fire,” “Stranger in Paradise,” and “Walk Hand in Hand.”

Martin was active on radio from the 1930s to the 1950s on shows such as Walter Winchell’s *Lucky Strike Hour*, along with his own programs. He then moved to television, where he appeared on variety shows and hosted *The Tony Martin Show* (1954–56). In 1955 he was nominated for an Emmy for Best Male Singer.

Martin married actress Alice Faye in 1936; they divorced in 1940. He married dancer/actress Cyd Charisse in 1948. He formed a nightclub act with Charisse in 1964, and for many years the couple performed on the cabaret circuit in the U.S. and abroad.

[Ruth Beloff (2<sup>nd</sup> ed.)]

**MARTINEZ, FERRANT**, archdeacon of Écija, one of the leading anti-Jewish agitators in Castile during the last quarter of the 14<sup>th</sup> century. Preaching in public in \*Seville, Martínez demanded that the 23 synagogues in the town should be destroyed and the Jews confined to their own quarter. As vicar-general of the archbishop of Seville, he secured the right of jurisdiction over the Jews of the town and its environs and demanded their expulsion from Écija and other rural districts. In 1378 the Jewish community of Seville appealed to King Henry II of Castile, but his letter to the archdeacon commanding him to desist was ignored. The Jews turned to his

successor John I in 1382 but John's edict of 1383 also did not deter Martínez. In 1388 the Jewish community of Seville finally resolved to summon the archdeacon before the supreme court of the crown. In his defense, Martínez claimed that his actions were beneficial to Church and crown and that he had acted with the consent of his superior, the archbishop. Due to the intervention of Queen Leonora in favor of the archdeacon, little resulted from the trial. Even the archbishop of Seville's prompt removal of Martínez from office was fruitless, for after the deaths of King John and the archbishop in 1390 the archdeacon was reinstated to his former position. Immediately after his reinstatement, he ordered that all synagogues within his jurisdiction be destroyed. The intervention of King Henry III, who demanded that Martínez rebuild the synagogues and resign from office, went unheeded. As a result of his continued activities, riots broke out throughout Castile in 1391 and spread rapidly to Aragon. In the ensuing destruction and massacres, many Jews were forced to accept baptism. In 1395 Martínez was imprisoned on the order of the king, but he was soon released; after his death the people revered him as a saint.

**BIBLIOGRAPHY:** Baer, *Urkunden*, 1 (1929), 699ff.; 2 (1936), 210ff., 231ff., 244ff.; Baer, *Spain*, 2 (1966), index s.v. *Ferrant Martínez*.

°**MARTÍNEZ DE OVIEDO, GONZALO** (d. 1340), major-domo (*dispensero de la casa del rey*) of King Alfonso XI of Castile. He instigated the proposal to expel the Jews from the kingdom of Castile. When in the royal service, Martínez enjoyed the protection of the Jewish courtier Joseph de \*Écija. According to Solomon \*Ibn Verga in *Shevet Yehudah*, he was jealous of his Jewish master and petitioned the king to sell him Joseph and nine other Jews, including the physician Samuel \*Ibn Waqar. The king granted his request and the two courtiers R. Joseph and R. Samuel died under torture in prison. Martínez' influence increased until he was appointed head of the Order of Alcántara. When Abu al-Malik, son of the sultan of Morocco, declared war on Castile in 1339, Martínez advised Alfonso to expel all the Jews from the kingdom and confiscate their property. In spite of the objections of some of the court ministers, the king accepted his suggestion and the Jews of several towns were arrested and their property seized. Martínez led the troops who defeated the Moroccan army, but after his victory he lost favor with the king, probably as a result of the intervention of Alfonso's mistress Doña Leonor de Guzmán; he was arrested, charged as a traitor, and executed by royal command. Ibn Verga relates that all the tyrant's property was sold to Jews and his ring handed over to the courtier Moses, probably Moses \*Abzardiel.

**BIBLIOGRAPHY:** Baer, *Spain*, 1 (1961), 354ff.; S. ibn Verga, *Shevet Yehudah*, ed. by A. Shochat (1947), 53ff.

°**MARTINI, RAYMOND** (1220–1285), Spanish Dominican friar and polemicist. Born in Subirat, Catalonia, Raymond lived for a long time in a monastery in Barcelona, tempo-

rarily also in Tunis where he engaged in missionary activity among Jews and Arabs. He studied Hebrew and other Oriental languages at the college of Murcia, founded to train selected friars in the conduct of religious disputations with Jews and Muslims for the purpose of converting them to Christianity. Raymond was able to read rabbinical writings with ease. He took an active part in the disputation with Naḥmanides at \*Barcelona in 1263 where Pablo \*Christiani was the Christian spokesman (see \*Barcelona, Disputation of). In 1264 he was appointed a member of the first censorship commission to examine Jewish books for passages allegedly offensive to Christianity. After the disputation of Barcelona, Raymond Martini became one of the chief executors of the anti-Jewish policy of the church.

Raymond's main work is his *Pugio Fidei* ("The Dagger of Faith"; c. 1280), divided into three parts of which the second and third are devoted to anti-Jewish polemics. The last part contains extracts from the Talmud, the Midrash, and later rabbinical writings (Rashi, etc.). The book is clearly an attempt to regain the ground lost after the Christian failure in the disputation of Barcelona. Raymond's polemics are innovative in that he derives his "proofs" of the truth of Christianity or falsehood of the Jewish faith not solely from the Old Testament but mainly from the Talmud and other rabbinical literature. Thus, according to Raymond, Jesus is also announced as Messiah in the *aggadah*, and the talmudic passage, according to which "the commandments will be abolished in the Hereafter" (Nid. 61b) after the advent of the Messiah, heralds the abrogation of the Jewish laws after the advent of Jesus. Furthermore, Raymond claims that the emendations to the Bible undertaken by Ezra's collaborators and cited in the Talmud as *tikkun soferim* have distorted the original text. But his own interpretation of the aggadic text was not always correct, and by arbitrary grouping of sentences out of their original context he often gave them a christological meaning.

*Pugio Fidei* became the most important and widely circulated medieval anti-Jewish polemic, and supplied polemical source material to disputant friars, Christian scholars, and Jewish apostates (see \*Nicholas of Lyre, \*Abner of Burgos, \*Pablo de Santa Maria, \*Arnold of \*Villanova, Joshua \*Lorki (in his *Hebraeomastix*, especially for the disputation of \*Tortosa)). The manuscript, which was lost for a long time, was brought to light by Justus Scaliger and published by Joseph de Voisin under the title *Pugio Fidei... adversus Mauros et Judaeos* (Paris, 1651). A second edition was published by I.B. Carpzov (Leipzig, 1678), who added an anti-Jewish preface "Introductio in Theologiam Judaicam" and a biography of the author. Another anti-Jewish book written by Raymond Martini, *Capistrum Judaeorum*, was less important and never printed.

Solomon b. Abraham \*Adret took part in a disputation with Raymond or with one of his disciples. Adret wrote a small apologetic work refuting Raymond's main fictitious proofs from the *aggadah* for the validity of Christianity, without mentioning the author's name or work. These refutations, as well as a detailed defense of *tikkun soferim* against charges of forg-

eries of the biblical text, are also included in Adret's aggadic commentary *Hiddushei Aggadot* (see: Rashba, Resp., 4 (1958), nos. 31 and 187, and J. Perles, 30–56, Heb. sect.).

[Bernard Suler]

**MARTON, ERNÖ JECHEZKEL** (1896–1960), editor and leader of Transylvanian and Hungarian Jewry. Born in Dicsőszentmárton (now Târnăveni, Romania), Marton was the son of the city's rabbi. Toward the end of World War I, he participated in Hungarian public life and in 1918 he was appointed general secretary to the district governor. But he quickly left this position, moved to Kolozsvár, and took part in the “Zionist revolution” that was then taking place among the Jews of Transylvania. He joined the group that established the Hungarian-language Zionist newspaper *Uj Kelet* (“The New East”) and was soon appointed editor in chief (1919). From then until his death he was editor of the paper (in Cluj and later in Tel Aviv). Marton was elected to major posts in the Zionist movement in Transylvania.

Marton was one of the founders and leaders of the Jewish Party in Romania and succeeded in convincing Romanian politicians to view the Jews of Transylvania as a national minority. In 1919 he was elected to the city council of Cluj on behalf of the Jewish Party and was appointed vice mayor. In 1932 he was chosen on the same list as a member of the Romanian parliament, where he defended the rights of the Jews.

During World War II, with the reannexation of Cluj to Hungary (1940), the publication of *Uj Kelet* was discontinued. Marton moved to Budapest and joined the executive of the Hungarian Zionist Movement. In 1944, when the Nazis occupied Hungary, he moved to Bucharest and organized rescue activities on behalf of Hungarian Jewry. He renewed his ties with Romanian politicians and designed a program for the large-scale rescue of Hungarian Jews. With the liberation of Hungary, Marton headed a convoy to Budapest to organize welfare programs for the survivors of the ghetto. In 1946 Marton settled in Palestine. Two years later, together with David Dezső Schoen, he renewed publication of *Uj Kelet* in Tel Aviv. He also founded the World Federation of Hungarian Jews and was its first chairman. In addition to numerous articles that appeared for decades in his newspaper, he also published books of ideological problems of Zionism. His most important work is *A magyar zsidóság családfája* (“Family Tree of Hungarian Jewry,” 1941), in which he developed new theories on

the history of the Jews in Hungary. The book also appeared in English translation in *Hungarian Jewish Studies* (1966), 1–59.

**BIBLIOGRAPHY:** B. Vágó, in: *Hungarian Jewish Studies* (1966), 177–222.

[Yehouda Marton]

**MARTOV, JULIUS (Iulii Osipovich Tsederbaum;** 1873–1923), Russian revolutionary, leader of Menshevism. Born in Constantinople, where his father represented the Russian Steamship Co. and trade companies, Martov was the favorite grandson of Alexander \*Zederbaum, the Hebrew writer and founder of *Ha-Meliz*, but his father, Osip, was a conscious assimilationist. Active in revolutionary student circles in St. Petersburg, Martov was arrested and exiled to Vilna, where he worked from 1893 to 1895 in the Jewish social democratic organization (which in 1897 became the \*Bund). In a programmatic address (later published as *A Turning Point in the History of the Jewish Labor Movement*), Martov urged the creation of a “separate Jewish workers’ organization to lead the Jewish proletariat in the struggle for its economic, civil, and political emancipation”; it would use Yiddish as its language of agitation and champion “equality of rights for Jews.”

Returning to St. Petersburg in October 1895, he joined \*Lenin as co-founder of the “Union of Struggle for the Emancipation of the Working Class,” was arrested in 1896 and was exiled to Siberia. After his term of exile, Martov, together with Lenin and Alexander Potresov, founded the Marxist journal *Iskra* and joined its editorial board abroad (1901–05). He participated in *Iskra*'s crusade against revisionism and “economism” and, reversing his earlier stand on the Jewish question, vigorously opposed the national “separatism” of the Bund, urging Jewish socialists to “assist the organization of the vast majority of the [Russian] proletariat” rather than waste their revolutionary talents on their “own little corner” in the \*Pale of Settlement.

Martov broke with Lenin at the Second Congress of the Russian Social Democratic Party (1903), opposing his bid for personal domination of the party. He led Menshevik opposition to Lenin's scheme of a narrow party of professional revolutionaries, advocating a broad, inclusive workers' party adapted to Russian semi-illegal conditions.

During the 1905 Revolution Martov returned to Russia, worked in the St. Petersburg soviet and edited Social Democratic newspapers. In 1906–12 he lived abroad, mainly in Paris, where he edited the Menshevik *Golos sotsialdemokrata*. He supported cooperation with the Bolsheviks and sought to combine legal with underground activities.

During World War I Martov was a central figure of the pacifist Zimmerwald movement. He thwarted Lenin's attempt to turn the movement into a Bolshevik-dominated tool for civil war and the destruction of the Second International. Upon his return to Petersburg on May 9, 1917, Martov led the faction of Menshevik-Internationalists, who opposed the “defensist” policies of the Menshevik majority and advocated the establishment of a popular front government.

After the Bolshevik seizure of power in October 1917, Martov, together with Raphael Abramowitz, urged the creation of a socialist coalition government in a vain attempt to prevent the Bolsheviks from establishing a minority dictatorship. He became the leader of a vociferous, semi-loyal opposition that tried to function in the Soviet system by making the Bolsheviks respect their own Soviet constitution. Martov denounced the Bolshevik terror, whether directed against “bourgeois” newspapers, liberal parties, the Czar’s family, church dignitaries, or Socialist Revolutionaries, and thus became the revolution’s “true voice of conscience.” But he supported the Soviet regime against counterrevolution and foreign intervention. When the Menshevik Party was finally outlawed, Martov was allowed to leave Russia (1920). He settled in Berlin to lead the Mensheviks in exile and assist the underground Menshevik remnant in Russia. He edited the *Sotsialistichskii Vestnik* and was a leader of the short-lived “Vienna International,” which tried to thwart the Comintern’s bid to take over the Western independent left-wing parties.

Brave, honest, and gentle, and a beloved figure of Russian and European socialism – even the Bolsheviks mourned him as their “most sincere and honest opponent” – Martov personified the dilemma of revolutionary socialists with humanitarian and democratic commitments when facing the amoral authoritarianism of Lenin and the Soviet regime.

Martov believed that the advent to socialism would also solve the problem of the Jewish people. He was deeply shaken by the pogroms of 1905–06 and by the Beilis trial, remained personally involved in the struggle against antisemitism, and wrote a little book, *Russkii narod i evrei* (“The Russian People and the Jews,” 1908).

His works, fragmentary and scattered, include *Istoriia Rossiiskoi sotsial-demokratii* (“History of the Russian Social Democracy,” 1918; published in German translation as *Geschichte der russischen Sozialdemokratie*, Berlin, 1926); *Obshchestvennye i umstvennye techeniia v Rossii 1870–1905* (“Social and Intellectual Trends in Russia 1870–1905,” 1924); *Razvitie krupnoi promyshlennosti i rabochee dvizhenie v Rossii* (“The Development of Heavy Industry and the Workers’ Movement in Russia,” 1923). He was chief editor of the monumental Menshevik study *Obshchestvennoe dvizhenie v Rossii v nachale XX veka* (“The Social Movement in Russia at the Beginning of the 20<sup>th</sup> century,” 4 vols., 1909–14), which is his major scholarly achievement. His moving autobiographical *Zapiski sotsialdemokrata* (“Notes of a Social Democrat,” 1923) is his literary masterpiece.

[Israel Getzler]

**MARWICK, LAWRENCE** (1909–1981), librarian and Oriental scholar. Born in Poland, Marwick immigrated to the

United States in 1929. During World War II he served in the U.S. intelligence corps. From 1948, for more than 30 years, he was head of the Hebraic section of the U.S. Library of Congress. After the war he was the assistant director of the Board of Jewish Education in St. Louis. In 1954–56 he lectured in Arabic and Islamic studies at Dropsie College and from 1961 in modern Hebrew literature and Arabic at New York University. Marwick was a member of the American Academy of Jewish Research and the board of governors of Dropsie College.

He wrote *A Handbook of Diplomatic Hebrew* (1957) and edited Solomon B. Jeroham’s *Arabic Commentary on the Book of Psalms, Chapters 42–72* (1956). He also wrote *Biblical and Judaic Acronyms* (1979) and compiled *Diplomatic Hebrew: A Glossary of Current Terminology* (1980).

In 1993 the Library of Congress published *Yiddish American Popular Songs, 1895 to 1950*, a bibliographic catalog of Yiddish music based on Marwick’s work. He had compiled entries of more than 3,000 Yiddish songs from the Catalog of Copyright Entries. Focusing on Yiddish-American plays and sheet music that had been deposited in the Library of Congress for copyright registration but were virtually unknown to scholars, Marwick’s work provides a historical perspective on the evolution of Yiddish music in America. Musicologist Irene Heskes completed the volume for publication.

[Ruth Beloff (2<sup>nd</sup> ed.)]

**MARX, ADOLF BERNHARD** (1795–1866), German musicologist. Born in Halle, he was originally a lawyer, but in 1830 became professor of music at Berlin University, a post that had been intended for but declined by the 21-year-old Felix Mendelssohn. In 1850 he helped to found the school still known as the Stern Conservatory and taught there till 1856. He wrote operas, lieder, a piano sonata, a symphony, and an oratorio *Moses* (1843), but achieved no importance as a composer. His theoretical and critical works, however, retain their value, the most important being a four-volume work on composition, *Die Lehre von der musikalischen Komposition* (1837–47); *Ludwig van Beethoven, Leben und Schaffen* (1859); *Gluck und die Oper* (2 vols., 1863); and a work on the interpretation of Beethoven’s piano works (1863). Marx’s memoirs, *Erinnerungen aus meinem Leben*, were published in two volumes in 1865, and a collection of his articles appeared in three parts, from 1912 to 1922.

**BIBLIOGRAPHY:** K.E. Eicke, *Der Streit zwischen Adolph Bernhard Marx und Gottfried Wilhelm Fink um die Kompositionslehre* (1966); Baker, *Biog Dict*; s.v.; Grove, *Dict*; MGG; Riemann-Gurlitt.

[Alfred Einstein]

**MARX, ALEXANDER** (1878–1953), historian, bibliographer and librarian. Born in Elberfeld, Germany, Marx grew up in Koenigsberg (East Prussia). His studies were interrupted by a year in a Prussian artillery regiment where he excelled in horsemanship. Later he studied at the University of Berlin and at the \*Rabbiner-Seminar (Berlin), marrying in 1905 Hannah

the daughter of D.Z. \*Hoffmann, rector of the Seminar. In Berlin, he was influenced by Moritz Steinschneider. In 1903 Marx accepted Solomon Schechter's invitation to teach history at the Jewish Theological Seminary of America and be its librarian.

His mastery of the materials of history and of languages became proverbial. He published articles in many languages and was at home in classical and Semitic languages. Marx contributed monographs and articles to journals on a wide variety of subjects, published two volumes of collected essays (*Studies in Jewish History and Booklore* (1944); *Essays in Jewish Biography* (1947)), and with Max L. \*Margolis wrote *A History of the Jewish people* (1927, 1962<sup>2</sup>). This pioneering work, stressing economic and social life, organization and legal status, offers the general reader a soundly researched, authoritative, and objective Jewish history in one volume. Marx amassed a private collection of 10,000 books. The JTS library on his arrival in 1903 contained 5,000 volumes and 3 manuscripts. At his death it possessed 165,000 books and over 9,000 Hebrew, Samaritan, Aramaic, and Yiddish manuscripts, comprising the largest Judaica collection in the world. Marx's ability to determine a manuscript's age merely by looking at it was legendary. His annual reports of the library's growth, containing a detailed description of materials acquired, were eagerly awaited by bookmen and scholars.

In 1926 Marx was elected to the Medieval Academy of America; he served as president of the American Academy for Jewish Research (1931–33), president of the Alexander Kohut Memorial Foundation, vice president of the American Jewish Historical Society, and member of the publications committee of the Jewish Publication Society of America.

His sister, Esther, married S.Y. \*Agnon.

[Morris Epstein]

His brother MOSES (1885–1973) was also a bibliographer and librarian. Best known for his contributions to the field of Hebrew incunabula and 16<sup>th</sup>-century Hebrew printing, he was a founder of the Soncino Gesellschaft and a Berlin publisher. He issued, inter alia, bibliophile editions of early works by his brother-in-law S.Y. Agnon, and co-edited with Aron Freimann in the 1920s the *Thesaurus Typographiae Hebraicae Saeculi xv*. In 1926 he went to the United States and joined the staff of the Hebrew Union College Library in Cincinnati. Retiring as head cataloger in 1963, he served briefly as curator of rare books and then settled in Israel. Much of Marx's research in early Jewish printing remained unpublished.

Freimann* (1935), 91–96; *Gershon Soncino's Wanderyears in Italy* (1936), index; *Sefer ha-Yovel li-Khevod A. Marx* (1943), 1–10 (introd.).

**MARX, KARL** (1897–1966), German editor and publisher. Born in Saarlouis, Marx served in the German army in World

War I and then worked as a freelance writer for the Havas news agency. He was prominent in politics during the Weimar period, particularly because of his work in the organization of German democratic youth movements. In 1933 he fled Germany and eventually reached England. He returned to Germany in 1946 and was co-founder of a Jewish communal paper for the British zone that later became the *Allgemeine Unabhaengige Juedische Wochenzeitung* (Dusseldorf), which advocated reparations and diplomatic relations with Israel and opposed neo-Nazi manifestations.

Juden in Deutschland 1945–1950* (1995), 179–85.

[Monika Halbinger (2<sup>nd</sup> ed.)]

**MARX, KARL HEINRICH** (1818–1883), German social philosopher and the chief theorist of modern socialism. Marxism became in the 20<sup>th</sup> century a new creed for hundreds of millions of socialists, often hardening into a dogma, particularly in the communist movement and in the Soviet Bloc, the People's Republic of China, and other communist countries. Born in the Rhineland town of Trier (then West Prussia), Marx was the son of Jewish parents, Heinrich and Henrietta Marx. Heinrich Marx became a successful lawyer, and, when an edict prohibited Jews from being advocates, he converted to Protestantism in 1817. In 1824, when Karl was six years old, his father converted his eight children. Karl Marx was educated at the high school in Trier and studied history and philosophy at the universities of Bonn and Berlin. He was strongly influenced by Hegel's philosophy and joined a radical group known as the Young Hegelians. In 1841 he received his degree of doctor of philosophy at the University of Jena where he presented his dissertation on the “*Differenz der demokratischen und epikureischen Naturphilosophie*.” When his connection with the Young Hegelians prevented him from obtaining a teaching position at the University of Bonn, he turned to journalism. He became the editor of the liberal Cologne daily *Rheinische Zeitung* in 1842. In the following year he married Jenny von Westphalen, daughter of a high Prussian official. Soon afterward, the *Rheinische Zeitung* was suppressed and the young couple went to Paris where Marx expected to edit the *Deutsch-Franzoesische Jahrbuecher*. In fact only one issue was brought out (1844).

The young Marx's ideas attracted the attention of older radicals and socialists. Moses \*Hess, one of the editors of the *Rheinische Zeitung*, wrote in a letter to the German-Jewish writer Berthold \*Auerbach: “Dr. Marx, as my idol is called, is still a very young man; he will give medieval religion and politics their last blow. He combines the deepest earnestness with the most cutting wit. Imagine Rousseau, Voltaire, Holbach, Lessing, Heine, and Hegel united in one person. I say united, not lumped together – and you have Dr. Marx.” While

evolving from his philosophy as a Young Hegelian to his own concept of man as creating himself by labor, he transmitted in his writings a passionate yearning for a new, free society in which socialist man will transcend the imposed “alienation” from state – controlled society and from his labor and its fruits. An article contributed to the *Deutsch-Franzoesische Jahrbuecher* by Friedrich Engels led to a lifelong friendship between Marx and Engels. Engels, a fellow Rhinelander of socialist and Hegelian leanings, was the son of a wealthy industrialist with factories in Germany and England and was able to support Marx financially for the rest of his life. Marx, who maintained personal friendly contact with Heinrich \*Heine, was one of the editors of *Vorwaerts*, a German newspaper published in Paris, which contained sharp attacks against the Prussian government. Its ambassador in Paris protested and Marx was expelled from France.

He went to Brussels where he wrote “*Misère de la philosophie, Response a la philosophie de la misère de M. Proudhon*” (1847), an attack on the Utopian social order advocated by Proudhon. Marx argued that the capitalistic society leads to the strengthening of the proletariat, a class which of necessity must become revolutionary and must overthrow the contemporary social organization based on exploitation. Socialist theorists should not waste their time in describing how society should be ideally built, but rather analyze what is going on in the present world.

In 1845, while in Brussels, Marx was forced to renounce his Prussian citizenship, and thus became “stateless.” (Sixteen years later he vainly tried to regain it with the help of Ferdinand \*Lassalle. He also applied for British citizenship, but the Home Office rejected his application (1874) on the grounds that “this man was not loyal to his king.”) Marx cooperated with the “League of the Just” which became “The League of the Communists” (Bund der Kommunisten) which had its headquarters in London. He attended its second congress in London at the end of 1847 and together with Engels presented a new program for the League called *The Communist Manifesto*. It was published in February 1848 under the title *Manifest der Kommunistischen Partei* and rapidly became the best known work of modern socialism. It began with the words “A specter is haunting Europe – the specter of Communism,” and postulated that “the history of all hitherto existing society is the history of class struggles. Freeman and slave, patrician and plebeian, lord and serf, guild-master and journeyman, in a word, oppressor and oppressed, stood in constant opposition to one another, carried on uninterrupted, now hidden, now open fight, a fight that each time ended, either in a revolutionary reconstitution of society at large, or in the common ruin of the contending classes.” It ended with the words, “The proletarians have nothing to lose but their chains. They have a world to win. Working men of all countries, unite!” A month after the publication of the Manifesto, Marx was expelled from Belgium and went to Paris. He left for Cologne soon afterward, following the outbreak of revolution in Germany, and became editor of the Cologne daily *Neue Rheinische Zeitung*. When

the revolution failed and political reaction set in, he was expelled first from Cologne and then from Paris. He settled in London soon afterward where, in spite of the financial assistance that he received from Engels, he led the hard life of a political exile until his death.

From 1852 to 1861 Marx partly supported himself by being the London correspondent of the *New York Tribune*, commenting on current world affairs. He also drafted a resolution of English workers congratulating Abraham Lincoln on his election as president of the United States. For years he was an almost daily visitor to the British Museum Library, where he studied the great economists, many governmental “Blue Books” on industrial and labor relations, gathering material for his magnum opus “*Das Kapital, Kritik der politischen Oekonomie*” the first volume of which appeared in Hamburg in 1867. (Volumes 2 and 3 were completed and edited by Engels in 1885 and 1893 respectively.) Marx’s other writings include *Die Klassenkaempfe in Frankreich 1848–1850* (1850; Eng. translation *The Civil War in France*, 1852); *Der achtzehnte Brumaire des Louis Bonaparte* (1852), and *Zur Kritik der politischen Oekonomie* (1859; Eng. trans. *Critique of Political Economy*, 1904).

Marx was not only a theoretician, he also took active part in the labor and socialist movement, and especially in the International Workingmen’s Association (The First International), being a leading member of its General Council. But he lacked the qualities of a popular leader and his followers constituted a small minority of the association.

### Marx’s System

Marx had an exceptionally powerful mind and a rare capacity for research; his knowledge was encyclopedic. His influence on the modern world has been compared to that of the great religions, or Newton and Darwin. His work is the more difficult to understand as *Das Kapital* remained unfinished, and certain aspects of his doctrine only slightly sketched. His (and Engels’) system – Marxism – is also known under the names of “economic” or “materialistic determinism,” “dialectical materialism,” or “scientific” (as opposed to “utopian”) socialism. From Hegel he took the dialectical method, but ultimately applied it in a sense opposite to Hegel’s idealist philosophy.

In what Marx calls “the social production” men enter into relations that are indispensable and independent of their will. These “relations of production” correspond to a definite stage of development of the material powers of production. The totality of these “relations of production” constitutes the real basis on which rises a legal and political “superstructure,” and to which correspond definite forms of social consciousness. The consciousness of men does not determine their existence, but on the contrary, is determined itself by their social existence. At a certain stage of their development, the “material forces of production” come in conflict with the existing “relations of production” or – what is but a legal expression of the same thing – with “the property relations” within which

they had been at work before. From forms of development of the forces of production these relations turn into their fetters. Then comes the period of social revolution. With the change of the economic basis the entire immense superstructure is more or less rapidly transformed. The bourgeois relations of production are the last antagonistic form of the social process of production, the productive forces in the womb of bourgeois society creating the material conditions for the ultimate socialist solution of that antagonism.

Marx's theory of value, which he considered as the very basis of his whole economic theory, was critical of all of past political economics (even of the Ricardian). The value of a commodity, according to Marx, is determined by the amount of labor socially necessary for its production. Of indispensable importance in the system is Marx's concept of "surplus value." The activity of the capitalist employer is represented by the formula  $M-C-M^1$ . With money ( $M$ ), he buys the commodities ( $C$ ) needed for production, and then sells the finished product for money ( $M^1$ ). It is evident that  $M^1$  is larger than  $M$ , else the whole process would involve no more than gratuitous trouble to the capitalist. Thus the labor power produces more than its value. This surplus value is the evidence and measure of the exploitation of the laborer by his employer.

### Marx and the Jews

Marx's father Heinrich, whose original name was Hirschel ha-Levi, was the son of a rabbi and the descendant of talmudic scholars for many generations. Hirschel's brother was chief rabbi of Trier. Heinrich Marx married Henrietta Pressburg, who originated in Hungary and whose father became a rabbi in Nijmegen, Holland. Heinrich received a secular education, obtained a law degree, detached himself from his family and eventually also from his religion. Marx's mother spoke German with a heavy Dutch accent and never learned to write a grammatical letter in German. Intellectually she had little in common with her husband and son.

Karl Marx's attitude to Jews and Judaism has been discussed from different points of view, and therefore it is not surprising that it evolved into what was later described as "self-hatred," too. At the age of 15 he was solemnly confirmed and became deeply attached to Christianity and German culture. Great influence on him was exercised by his future father-in-law, Baron Johann Ludwig von Westphalen, who was a neighbor of his family. But later his relations with other members of his wife's aristocratic family became strained. For them he was a Jew, an atheist, a nonconformist, a man lacking in good manners.

Marx's first essay in the *Deutsch-Franzoesische Jahrbuecher* was entitled *Zur Judenfrage* ("About the Jewish Question"), in which he criticized Bruno Bauer's book on the topic. Bauer had insisted that the Jewish question was essentially a religious one, insoluble unless the Jews gave up their faith and joined the society of the state as atheists or non-Jews. Although Marx favored political emancipation of the Jews, he

used violent anti-Jewish language to present his view. Judaism for him was synonymous with the hated bourgeois capitalism. "The chimerical nationality of the Jew is the nationality of the merchant, of the moneyed man generally..." "What is the secular basis of Judaism? Practical need, self-interest. What is the worldly cult of the Jew? Huckstering. What is his worldly god? Money ... Out of its entrails bourgeois society continually creates Jews.... Emancipation from huckstering and from money, and consequently from practical, real Judaism, would be the self-emancipation of our era." Marx's essay is a striking evidence of his complete ignorance of Jewish history and culture, an ignorance surprising in light of his otherwise encyclopedic knowledge. Marx expressed his antagonism to Jews on a number of occasions: in his "Thesis on Feuerbach," in his articles for the *New York Tribune*, and in *Das Kapital*. In his private correspondence there are many derogatory references to Jews, who were for him the symbol of financial power and capitalist mentality, and also to Ferdinand Lassalle to whom he referred in his letters to Engels in typical antisemitic clichés. The only sympathetic account of Jews to emerge from Marx's pen is that which described their life and tribulations in the city of Jerusalem (*New York Tribune*, April, 15, 1854).

Compared with this point of view, which positions Marx in an antisemitic context, new research has emphasized the fact that he did not criticize Jews as Jews but as representatives of capitalism. These studies point to his closeness to other contemporary Jewish intellectuals like Moses Hess in *Ueber das Geldwesen* (1845).

For six years Marx lived in London at 28 Dean Street, the house of a Jewish lace dealer. While on a holiday, he met the Jewish historian Heinrich \*Graetz in Carlsbad and sent him his book on "The History of the Commune" as a present. Two years prior to his death the wave of anti-Jewish pogroms occurred in Russia (1881) and the influx of Jewish immigrants into London began. But there is no evidence of Marx's reaction to these events. His beloved daughter Eleanor, however, who acted as his secretary, considered herself Jewish, took interest in her ancestors, and had a warm appreciation for the Jewish workers in the East End of London. (She committed suicide in 1898 after an unhappy marriage to Edward Aveling.)

Marx's Jewish origin became a catalyst of anti-Jewish emotions. Already his rival in the First International, the Russian anarchist Michael \*Bakunin did not refrain from anti-Jewish outbursts while attacking Marx. Later it served right-wing propagandists, particularly the fascist and Nazi regimes of the 1930s and 1940s, as a means to spice their anti-socialism with outright violent antisemitism. They used the term "Marxism" as denoting a sinister, worldwide "Jewish" plot against their national interests. In the Soviet Union, where Marxism-Leninism became the obligatory ideology, Marx's Jewish origin was generally mentioned in research works and encyclopedias until the 1940s, but from the later 1940s, when \*Stalin's policy became anti-Jewish, it has been studiously concealed.

### Collected Editions

The Marx-Engels (later the Marx-Engels-Lenin, and still later Marx-Engels-Lenin-Stalin) Institute in Moscow started in 1927 the publication of an academic edition of the collected works of Marx and Engels. In 1935 the publication was interrupted. There appeared the following: *Marx-Engels, Historisch-kritische Gesamtausgabe; Werke, Schriften, Briefe* first part: *Saemtliche Werke und Schriften mit Ausnahme des "Kapital"* (7 vols., 1927–35); third part: *Der Briefwechsel zwischen Marx und Engels* (4 vols., 1929–31). The volumes published thus far include the writings of Marx and Engels up to 1848 and all the known correspondence between Marx and Engels, 1844–83. The early volumes were edited under the direction of D. Ryazanov. An earlier collection is Franz Mehring's edition, *Aus dem literarischen Nachlass von Karl Marx, Friedrich Engels und Ferdinand Lassalle* (4 vols., 1902). D. Ryazanov edited the *Gesammelte Schriften von Karl Marx und Friedrich Engels 1852 bis 1862* (2<sup>nd</sup> ed., 1920). For a bibliography of Marx's works, see Ernst Drahn, *Marx-Bibliographie* (2<sup>nd</sup> ed., 1923). Reliable and good selective bibliographies on Marx, Engels, and cognate subjects are found in Donald Drew Egbert and Stow Persons (eds.), *Socialism and American Life* (vol. 2, 1952, pp. 34ff., and passim). After World War II a new edition of Karl Marx' and Friedrich Engels' works, *Werke* (ed. by the Institute of Marxism-Leninismus beim ZK der SED), was published in the German Democratic Republic in 39 volumes and one supplementary volume in two parts and two index-volumes from 1956 until 1971 (abbrev. MEW). Another similar new edition of Karl Marx' and Friedrich Engels' works was begun in 1975 as *Gesamtausgabe* (ed. by Institut fuer Marxismus-Leninismus beim ZK der KPDsU and the Institut fuer Marxismus-Leninismus beim ZK der SED), and continued, after the fall of the Communist regime in Russia and East Germany, by the International Marx-Engels Foundation in Amsterdam (Abbrev. MEGA<sup>2</sup>).

[Schneier Zalman Levenberg / Lars Lambrecht (2<sup>nd</sup> ed.)]

**MARX BROTHERS**, U.S. theatrical comedy team. Zany and irreverent, their wild and impromptu humor appealed to lowbrows and intellectuals alike. Originally, there were five Marx Brothers. All were part of a vaudeville act called "Six Musical Mascots" (their mother, Minnie, a sister of the vaudeville actor Al Shean, was the sixth). The brothers, all born in New York, were CHICO (LEONARD, 1891–1961), HARPO (ADOLPH, later ARTHUR, 1893–1964), GUMMO (MILTON, 1894–1977), GROUCHO (JULIUS, 1895–1977), and ZEPPPO (HERBERT, 1901–1979). When their mother left the act, they became "The Nightingales" and played in vaudeville as singers and comedians until they reached the Palace Theater in New York in 1918. They made their Broadway debut in 1924 in a revue called *I'll Say She Is*. By that time, the brothers had developed a distinct comic style. CHICO donned a pointed hat over a deadpan face and affected an Italian accent. He was also an accomplished piano player, and he frequently broke the comedy with a turn at the keyboard. HARPO, with a battered hat over a frizzled wig of blond curls, never spoke during the act. He used two means to communicate – a bulb horn on stage and a romantic harp. He played the harp at concerts as well as in films. GROUCHO, wearing a swallowtail coat, chewing a long cigar and wearing a large black moustache, was master of the insult. After the brothers' film career had ended, Groucho confirmed his reputation as a wit as the master of ceremonies on a TV weekly quiz show. ZEPPPO, the straight man of the team in the movies, left the act in the early 1930s, and became a successful theatrical agent. GUMMO, who was in the act only briefly, also became a successful agent. Their succession of stage and film comedies – such as *The Cocoanuts* (1929); *Animal Crackers* (1930); *Horsefeathers* (1932); *Duck Soup* (1933); *A Night at the Opera* (1935); and *A Night in Casablanca* (1946) – were considered cinema classics which continued to attract audiences on their many replays. Harpo's autobiography, *Harpo Speaks*, appeared in 1961. Groucho wrote *Groucho and Me* (1959), an autobiography, and *Memoirs of a Mangy Lover* (1963). His prolific and unconventional correspondence was published as *The Groucho Letters* in 1967. The Library of Congress asked him for the letters and papers, which included the manuscripts of his books. In one celebrated letter, he wrote Gov. William Scranton of Pennsylvania in 1964 to tell him he had heard him mispronounce a Yiddish term. "If you are going to campaign in Jewish neighborhoods," Groucho counseled, "rhyme mish-mash with slosh."

The comedy world of Groucho, Chico, and Harpo was

wildly chaotic, grounded in slapstick farce, lowbrow vaudeville corn, free-spirited anarchy, and assaults on the myths and virtues of middle-class America. Groucho was larger and more antic than life. His humor was based on the improbable, the unexpected, the outrageous. *Animal Crackers* gave Groucho his most celebrated character, Capt. Jeffrey T. Spaulding, a bumbling African explorer (“My name is Captain Spaulding, the African explorer,” Groucho sang, “did someone call me schnorrer?”). Groucho was a master of the ad lib and refused to follow the scripts of his plays and movies, although some of them were turned out by such masters of comedy as George S. Kaufman and S.J. Perelman. Groucho supplemented his meager formal education by reading omnivorously. For some years he carried on a correspondence with the poet T.S. Eliot, and in 1965 he was invited to speak at a memorial for Eliot. Typically, he used the occasion to say something outrageous: “Apparently Mr. Eliot was a great admirer of mine – and I don’t blame him.”

**MARYAN** (pseudonym of **Pinchas Burstein**; 1927–1977), U.S. painter. Born in Nowy-Sacz, Galicia, Poland, the artist was deported at the age of 12 to concentration camps, including Auschwitz. All of his family perished in the camps. Maryan survived but with one leg amputated. He spent three years in German displaced persons camps, working as a stage designer for detainee-organized Jewish drama groups. In 1948 he immigrated to Israel, studying art for a short period at the New Bezalel School of Art, Jerusalem. In 1950, he traveled to Paris and attended the École des Beaux-Arts, where he studied lithography. In Paris, he was briefly affiliated with the CoBra group, as well as the artists of the École de Paris. Paris also exposed Maryan to the influence of such artists as Pierre Soulages, Victor Brauner, and Jean Dubuffet. Maryan relocated to New York in 1962, where he became a successful artist and illustrator. He attained American citizenship in 1969, further changing his name from Maryan to Maryan S. Maryan. The artist’s unsettling compositions, what he termed “truth-paintings,” depict traumatized, ravaged, and distorted figures posed frontally in a shallow space, references in part to Maryan’s recollections of the Holocaust. In the 1950s, Maryan composed Jewish figures with prayer shawls and phylacteries. Later, these religious adornments are abstracted, contributing to the striped bloated appendages characteristic of so much of Maryan’s mature compositions; they also recall the striped garb of concentration camp prisoners. Many of Maryan’s figures are bound, twisted, and penetrated, with mouths agape, genitals sometimes visible in a show of both exhibitionism and terrible vulnerability. His figures exude all manner of bodily fluids from every orifice, often in large, stylized drops. Beginning in the 1960s, Maryan titled his biomorphic figures “Personages” in reference to their theatrical aspects.

Many of these compositions reference the Holocaust directly: for example, his 1962 painting *Personage* depicts a mocking Nazi stormtrooper tinted a garish yellow. This figure mockingly challenges the viewer at some ominous game, suggested by the blood-red chess pieces positioned at the end of a tilting table. The artist continued the motif of the Nazi soldier in many works in 1962–63, repeating an iconography of hat, armband, and repugnant facial features. Maryan’s “Personages” often bear some sort of insignia or suggestions of military authority. However, the artist unmoors these singular, isolated figures from any narrative content, mocking their authority, and depicting them as impotent and ridiculous. Maryan subverts the distinction between torturer and sufferer, master and servant, self and other, often combining these players into a single figure. Maryan made a film in 1975 entitled *Ecce Homo*. In addition to stock images of famous persons ranging from Pope Pius XI to Moshe Dayan and Jesus, the film featured a series of Maryan’s drawings, and the artist himself in various costumes relating his memories of the concentration camps. He illustrated Kafka’s *The Trial* in a 1953 edition, *Golem* (1959), and *La Ménagerie Humaine* (1961). In 1956, the French government commissioned him to design a tapestry for the Monument to the Unknown Jewish Martyr in Paris. His work influenced Philip Guston and Peter Saul. From 1949, Maryan had numerous solo shows in such cities as Jerusalem, Paris, Amsterdam, Munich, New York, and Chicago. His art is represented in museums around the world, including the Art Institute of Chicago; the Musée national d’Art Moderne, Paris; Museum Moderner Kunst Stiftung Ludwig Wien, Vienna; the Museum of Modern Art, New York; the National Museum of Modern Art, Washington, D.C.; the Nationalgalerie, Staatliche Museen, Berlin; and the Tel Aviv Museum of Art.

**MARYLAND**, state on the E. coast of the U.S., one of the 13 original states. A one-crop tobacco economy and the existence of few major towns caused Jews, with rare exceptions, to avoid the colony during the first century and half after its establishment in 1634. David Ferreira, a Jewish tobacco trader from New Amsterdam, appeared in Maryland as early as 1657 and later the same year colonial records mention a Jewish physician, Jacob Lumbrozo, who was also engaged in trade. Lumbrozo, a colorful figure who was often in conflict with his neighbors, was arrested in 1658 for blasphemy after offending Christians colonists during a conversation about religion. He was released before trial, however, due to the proclamation of a general amnesty. After the 1740s, with the growth of commerce in the colony, individual Jews appeared in Annapolis, Fredericktown (now Frederick), and a

*Jewish communities of Maryland. Population figures for 2001.*

few other towns, but a Jewish community with supporting institutions did not emerge until the period of the American Revolution, when Baltimore became one of the region's leading ports and attracted several Jewish families. By 1825, there were about 150 Jews in the new state. Although Baltimore Jews like Solomon \*Etting and Jacob \*I. Cohen, Jr., achieved a degree of prominence in the larger, non-Jewish community, the state constitution barred them from holding public office unless they would submit to a Christian oath. This requirement was finally removed with the passage of the 1826 "Jew Bill," which was championed by the non-Jewish legislator Thomas Kennedy.

Between 1830 and 1870 over 10,000 Jews, primarily from Germany and other areas of Central Europe, settled in the state. Eastern European Jews began to trickle into Maryland during the 1850s and arrived in large numbers from the 1880s. While the vast majority of Jewish immigrants were drawn to Baltimore, Jews also settled in smaller towns as peddlers and merchants. In 1853, the first congregation outside Baltimore was established in Cumberland, an important trading and transportation center in the western part of the state. By the time mass immigration ended in the mid-1920s, there also existed congregations in Frederick, Hagerstown, Annapolis, Frostburg, Brunswick, and Salisbury. Statewide, the Jewish population reached about 40,000 in 1900 and grew to 65,000 by the end of the immigrant period.

In the years following World War II, Jews entered more fully into the life of the general community and were among the state's top officeholders. Marvin \*Mandel, a Baltimore native, served as governor from 1969 to 1979. This period was one of great demographic change, with more than 50,000 Jews from Washington, D.C., settling in the nearby Maryland suburbs of Montgomery and Prince Georges counties. By 1998, this region was home to 104,500 Jews and had come to rival Baltimore and its surroundings (Jewish population 94,500) as the state's largest Jewish population center. Jews also increasingly established themselves in areas outside the Wash-

ington suburbs and Baltimore, with 10,000 residing in Howard County, almost 2,000 in Annapolis, and more than 1,000 in Frederick and in Harford County. Overall, the estimated Jewish population of Maryland in 2001 was 213,000 out of a total of 5,311,000.

**MARZOUK, MOSHE** (1926–1955), \*Cairo-born \*Karaite Jew of Tunisian origin who was tried by a military court in Cairo on charges of spying for Israel and was executed on Jan. 31, 1955. In 1954 three Jews were arrested in \*Egypt and accused of setting fire to the USIS Library in \*Alexandria. Their arrest led to the discovery of a spy ring in Egypt and the imprisonment of ten other Jews, among whom were Marzouk and Samuel Azaar. Two of the prisoners managed to escape and the others were brought to trial on Dec. 10, 1954. According to the indictment, the accused had gathered information for Israel, carried out acts of sabotage, and spread false reports in Egypt designed to create public unrest. During the course of the trial, Max Bennet – described as the leader of the ring – committed suicide, after which Marzouk became the chief suspect. It was alleged that he had organized the Cairo group, had been trained in Israel, and had arranged wireless transmissions to Israel.

During his student days at the Cairo Medical School, Marzouk had become convinced that the future of all Egyptian Jews lay in their migration to Erez Israel. He dedicated his life to the realization of his Zionist ideals and, while working as a doctor at the Jewish Hospital, organized the self-defense of the Cairo Jewish Quarter, helped to send young Jews to Israel, and, although he himself could have left, stayed at his post and worked for Israel.

**SAMUEL AZAAR** (1929–1955), native of Alexandria of Turkish parentage, had been active in Zionist youth movements at an early age. A youth of great promise, he was awarded a scholarship that enabled him to study electronic engineering. Like Marzouk, he chose to stay in Egypt and carry out his mission. During the trial he was described as the head of the Alexandria group and was accused of operating an underground workshop to manufacture sabotage devices.

The trial of the ten defendants came to an end on Jan. 27, 1955. Two were acquitted, six were sentenced to prison terms ranging from five years to life, and Marzouk and Azaar were sentenced to death. In Israel, "Kedoshai Kahir" (the Martyrs of Cairo) as they came to be known were honored and commemorated in various ways.

**MASADA** (Heb. מַסָּדָה, *Mezadah*), Herod's palatial fortress and the last stronghold during the Jewish War against Rome (66–73/74 C.E.).

### Geography

Masada is situated on an isolated rock plateau on the eastern fringe of the Judean Desert near the western shores of the Dead Sea, south of En Gedi. It is a mountain bloc that rose and was detached from the fault escarpment, surrounded at its base by two wadis. The rhomboid shaped rock is approximately 1,950 ft. (600 m.) long and approximately 1,000 ft. (300 m.) wide in its center. The plateau at its top rises 1,475 ft. (450 m.) above the Dead Sea level. The site was close to two ancient routes: one that crossed the center of the Judean Desert leading to southern Moab and one that connected Edom, Moab, and the Arava Valley with En Gedi and Jerusalem. The remote location and natural defenses of Masada made it an exceptional fortified site during the Second Temple period. The natural approaches are steep and arduous and include the "snake path" mentioned by Josephus on the east, and approaches on the cliff's northern and southern sides.

The name Masada appears in Flavius Josephus' writings in Greek transcription. It derives from the Hebrew and Aramaic word *mezad* ("stronghold"). Masada is mentioned in a divorce deed and an *ostrakon* (inscribed pottery sherd) that were uncovered in the Murabba'at caves.

### Sources

The only significant source of information about Masada is the writings of Flavius \*Josephus (Ant., 14, 15; Wars, 1, 2, 4, 7). Josephus was the commander of Galilee during the First Jewish Revolt, who later surrendered to the Romans at \*Jotapata (Yodfat). At the time of Masada's siege he was in Rome, where he devoted himself to chronicling the history of the Jews and thereafter the occurrences of the revolt. He presumably based his narration upon the field commentaries of the Roman commanders that were accessible to him. Masada is also briefly mentioned by Strabo (*Geography* 16, 2:44) and Pliny the Elder (*Natural History* 5:17, 73), which was the source for Solinus (third century C.E.?) and Martianus Capella (c. 400 C.E.).

### History

Josephus provides us with two versions regarding the identity of the founders of the fortress at Masada. In one passage he attributes the first construction to "ancient kings" (Wars, 4:399). According to another passage, Masada was first fortified by "Jonathan the High Priest" (Wars, 7:285). Scholars disagree as to the identity of this Jonathan – whether he was referring to the brother of Judah Maccabee (mid-second century B.C.E.) or Alexander \*Yannai (103–76 B.C.E.), who was also called Jonathan.

During an uprising against the house of Antipater, Masada came under the rule of Felix in 42 B.C.E. It was \*Herod who soon seized back control of the fortress (Ant., 14:296; Wars, 1:236–38).

In 40 B.C.E. Herod fled from Jerusalem to Masada with his family to escape from Mattathias Antigonus, who had been made king by the Parthians. He left his family, his brother Joseph, and 800 men there to defend it against a siege by Antigonus (Ant., 14:361–2; Wars, 1:264, 267). According to Josephus the defenders almost died of thirst during the siege but were saved when a sudden rainstorm filled the creeks and pits on the summit of the rock. Herod, returning from a trip to Rome, raised the siege and carried his family off to safety (Ant., 14:390–91, 396, 400; Wars, 1:286–87, 292–94). As a result: "Herod furnished this fortress as a refuge for himself, suspecting a twofold danger: peril on the one hand from the Jewish people, lest they should depose him and restore their former dynasty to power; the greater and more serious from Cleopatra, queen of Egypt" (Wars, 7:300). During his reign, Herod transformed Masada into a palatial fortress, providing it with luxurious palaces, bathhouses, well-stocked storerooms, cisterns, all encircled with a casemate wall.

Following the death of Herod in 4 B.C.E. the site was in the boundaries of Herod Archelaus' kingdom. After his removal from power by the Romans and the annexations of Judea to the Roman Empire in 6 C.E. it can be assumed that a Roman garrison was probably stationed there until the outbreak of the First Jewish Revolt in 66 C.E. Masada was captured "by stratagem" in that year by a band of *sicarii* under the command of \*Menahem son of Judah (Wars, 2:408, 433). This group was named after a curved dagger, the *sica*, which they carried. After Menahem was murdered in Jerusalem, his nephew, \*Eleazar ben Jair, fled Jerusalem to Masada and became the commander of the rebel community on the mountain until its fall in 73/74 C.E. Masada became a place of refuge for a heterogeneous population, apparently including *Sicarii*, Essenes, and Samaritans. \*Simeon bar Giora also stayed there for a time. The last of the rebels fled to Masada from Jerusalem in 70 C.E. In 73/74 C.E. the Roman governor, Flavius Silva, marched against Masada. After a siege that lasted a few months, the Romans breached the wall of the fortress and set ablaze the inner wood and soil wall. When the hope of the rebels dwindled, Josephus put in Eleazar ben Jair's mouth two speeches in which he persuaded his followers to take their own life rather than fall into the hands of the Romans. Josephus narrated these occurrences that ended in the mass suicide of 960 men, women, and children and the burning of the buildings and stores of food. The gloomy end of Masada was told by two women who together with five children survived by hiding in one of the cisterns. After Masada's conquest, Silva left a garrison there.

The Church Fathers note that during the Byzantine period a monastery was established in a place named "Marda," which some scholars identify with Masada (Cyril of Scythopolis, *Vita Euthymii* 11; Johannes Moschus, *Pratum Spirituale* 158).

### History of Exploration

Masada was identified for the first time in 1838 by the Americans E. Robinson and E. Smith who viewed the rock which the

Arabs called al-Sabba through a telescope from En Gedi. The site was first visited in 1842 by the American missionary S.W. Wolcott and the British painter Tipping and next by members of an American naval expedition in 1848. Ten years later, F. de Saulcy drew the first plan of Masada. C. Warren in 1867 heading the “Survey of Western Palestine” climbed Masada from the east along the “snake path” and in 1875, C.R. Conder, on behalf of the survey, drew plans which were the most accurate up to that time. Sandel discovered the water system in 1905. The first detailed study of the Roman camps was made by A.V. Domaszewski and R.E. Bruennow in 1909. Others followed in the beginning of the 20<sup>th</sup> century, foremost among them, the German A. Schulten, who surveyed Masada for a month in 1932. Aerial photographs were the basis for the studies of C. Hawks (1929) and I.A. Richmond (1962).

The major impetus for the extensive excavations of the site was provided by Israeli scholars, especially S. Guttman, who correctly traced the serpentine twistings of the “snake path” and with A. Alon studied Herod’s water system (1953). He also excavated and restored the walls of one of the Roman camps (Camp A). Large-scale Israeli surveys were conducted in 1955 (headed by M. Avi-Yonah, N. Avigad, Y. Aharoni, and S. Guttman) and again in 1956 (headed by Y. Aharoni and S. Guttman) which established the general outline of the buildings and prepared new plans of the rock. Masada was mainly excavated between 1963 and 1965 by Y. Yadin with a large staff of archaeologists and thousands of volunteers from all parts of the world. Large percentages of the built-up area of the mountain were uncovered as well as probes in Camp F, and restoration of the buildings was carried out at the site simultaneously. A small-scale excavation was conducted by E. Netzer in 1989. Excavations were resumed on top of Masada in 1995 under the direction of E. Netzer and G. Stiebel on behalf of the Hebrew University of Jerusalem. Several seasons were conducted between 1995 and 2000, focusing on the Northern Palace complex, the northwestern sector of the site, the Roman breach, the eastern section of the casemate wall, the Byzantine church, and water installations throughout the mountain. In 1995, a short season was conducted in Camp F and the Roman ramp under the direction of G. Forester, B. Arubas, H. Goldfus, and J. Magness.

### Archaeology

**EARLY PERIODS.** As in many Judean Desert sites, evidence of a Chalcolithic occupation (mid-fifth–fourth millennium B.C.E.) including botanical remains, textiles, mats, and pottery sherds were found in a small cave on the lower part of the southern cliff. Few sherds, but no architectural remains, were uncovered on the plateau from the Iron Age II (tenth–seventh centuries B.C.E.).

The nature of the Hellenistic presence at Masada is still enigmatic. None of the buildings uncovered to date may be attributed to the pre-Herodian era but possibly two cisterns, located in the eastern sector and the southeast cliff. In addition, merely one oil lamp derives from that period of time.

However, Josephus’ testimony concerning the identity of the founders of Masada need not necessarily be taken as contradictory, for it may be narrating sequential occurrences, as indeed emerges from the numismatic finds. The dozen Ptolemaic coins from the third century B.C.E., mainly of Ptolemy II, appear to agree with the reference to “ancient kings” (Wars, 4:399) as the original builders, while the allusion to “Jonathan the High Priest” (Wars, 7:285), clearly a Hasmonean ruler, is supported by the discovery of four coins of John \*Hyrcanus I (130–104 B.C.E.) and dozens of Alexander Yannai’s coins (103–76 B.C.E.).

**HERODIAN PERIOD.** Two square enclosures, facing the outlet of the “snake pass,” were noticed in aerial photographs. Although claimed to represent the camp of the pioneer force of the Roman army during the siege of 73/74 C.E., the larger enclosure of the two clearly antedates Camp C and appears to reflect indeed a chronological rather than technical stage. Being a camp of an earlier episode it was seemingly erected during the siege that Mattathias Antigonus laid against Herod’s family and supporters in 40 B.C.E.

The major construction period of Masada was under King Herod’s rule. Netzer demonstrated that the works were carried out in three chronological phases. During the first were built three small palaces, the core of the Western Palace, a building in the upper terrace of the Northern Palace, and soldier barracks, all exhibiting a structure with a central courtyard, as well as three dovecotes (*colombaria*). The Northern Palace complex, consisting of the public storerooms, the large bathhouse, and Northern Palace, the expansion of the Western Palace, and the water system were seemingly erected during the second phase, while the main feature to be constructed in the third phase was a casemate wall (double wall divided into rooms) that enclosed the perimeter of the plateau. The stone for the constructions derives from two sources: the walls were built from the local dolomite stone which was cut in quarries on top of the mountain and in the huge water cisterns, whereas the more elaborate architectonic features, such as the pillar drums, capitols, and architrave’s parts, were shaped from non-local softer stone. A large group of iron chisels from that period was uncovered at the site. The mason markings, of Hebrew letters, visible on all pillar drums, indicate the origin of the stone cutters.

*The Northern Palace Complex.* Herod constructed the most important buildings in the northern part of Masada – the highest point of the rock (“acropolis”). The Northern Palace was serviced by public storerooms, administrative buildings, and large bathhouse.

The main entrance to the Northern Palace complex was through its south part, near Building no. VIII, which seemingly served as the “commandant’s residence.” The excavations of Netzer and Stiebel revealed the varied features of the main entrance, the dominant building of which is a large hall that occupies the eastern part of the courtyard. It was originally

decorated with stucco reliefs and apparently served as a reception hall for Masada's visitors. Together with the "commandant's headquarters," west of the courtyard, this hall formed a lavish entrance, that made it possible to monitor the incoming goods and visitors.

*Northern Palace.* Josephus gives a detailed account of a royal palace situated beneath the walls of the fortress. This palace enjoyed improved climate conditions and commanded a magnificent view of the surroundings as far as En Gedi. It was built in three tiers, the upper containing the living quarters whereas the lower ones were designed for pleasure. The upper terrace is an extension of the narrow tip of the summit and contains a large semicircular balcony bounded by a double wall. A four-room building south of it with two rooms on each side of a court was apparently Herod's private abode. It is decorated by a typical Roman-style black and white mosaic floor in geometric designs. The walls and ceilings were decorated with frescoes. To the south a great white plastered wall separated the palace from the rest of Masada and left only a narrow passageway at its eastern end for a staircase. Columns had probably stood on the facade of the building and around the semicircular balcony. G. Forester showed that the plan of the upper terrace was directly influenced by villa Farnesina in Rome, which is attributed to Marcus Agrippa, Herod's benefactor and close friend in Rome. Descent to the lower tiers was through a flight of stairs, parts of which survived in the middle and lower terraces. The middle terrace, approximately 65 ft. (20 m.) beneath the upper one, contained two concentric circular walls which served as a platform for a columned building. A staircase on the west led to the upper level and on the east stood a large room with traces of frescoes; between them was a roofed colonnade, seemingly a library. This terrace was apparently designed for relaxation and a leisurely enjoyment of the view. The bottom terrace, approximately 50 ft. (15 m.) below the middle one, tapers to a narrow point; great supporting walls were built to form a raised, nearly square platform which was surrounded by low walls forming porticoes. Both the inner and exterior walls contained columns composed of sandstone drums plastered and fluted to resemble large monolithic columns. Frescoes on the lower part of the walls were painted to imitate stone and marble paneling. In the eastern corner of the terrace was a small bathhouse built in Roman style.

One of the difficult aspects in the study of the past is to determine the exact time of transition. Herod represents such a case, for in his time Roman trends diffused into the dominant Hellenistic style. Hence, the upper terrace of the Northern Palace was built in Roman style, while the middle terrace is completely Hellenistic in nature. The lower terrace was furnished with a Roman-style small bathhouse.

*Bathhouse.* South of the Northern Palace was a large bathhouse with four rooms and a court built in traditional Roman style. The bather would enter the dressing room (*apodyte-*

*rium*), from which one could have enjoyed the tepid room (*tepidarium*), hot room (*caldarium*), and cold room-stepped pool (*frigidarium*).

The floors of all rooms, except the last, were decorated by mosaic floors which were later replaced by pink and black triangular tiles (*opus sectile*), while the walls were decorated by frescoes. A Greek inscription praising the tyche was found on the walls of the dressing room. This room underwent changes during the revolt when an immersion pool and a bench made from dismantled pillar drums were constructed there. The largest room, the hot room, was heated through a *hypocaust* system beneath it and its floor stood on about 200 tiny columns, mostly made of bricks. A furnace drove hot air which heated the floor and the double walls that were furnished with clay pipes. Hot water flowed into a bathtub and quartz fountain set in the room's niches.

The bathhouse was used by the rebels and a charcoal graffiti of the *Legio x Fretensis* indicates the presence of the conquering Roman soldiers.

*Storerooms.* Under the northeastern corner of the synagogue building, Netzer and Stiebel uncovered, in 1995, a storage cave from the early days of King Herod's reign. Sixteen storage jars were found *in situ*, alongside wine amphoras. The cave appears to antedate the construction of the large storeroom complex. It was presumably destroyed in the severe earthquake of 31 B.C.E., the damage of which is discernible at Qumran.

During the second construction phase public storerooms were built east and south of the bathhouse. The long and narrow rooms were designed to hold food, liquids, and weapons: "For here had been stored a mass of corn, amply sufficient to last for years, abundance of wine and oil, besides every variety of pulse and piles of dates" (Wars, 7:296). The discerning taste was evident in the contents of the storerooms, which included a uniquely large number of inscription-bearing vessels (*tituli picti*). Among the inscribed jars was a group noting a shipment of wine to Herod, King of Judea, in 19 B.C.E. (the year of the consul C. Sentius Saturninus), from southern Italy by a supplier named Lucius Lanus. Indeed, Josephus mentions that Herod had a special wine servant. In a manner appropriate to a gourmet like Herod, one inscribed vessel was found to exhibit the name of the celebrated fish sauce *garum* – a product of southern Spain. Fish bones from this delicacy were found adhering to the inner face of this vessel. Following the Roman custom, the king ended his banquets with apples imported from Cumae, Italy.

It seems that valuable goods, like jars containing balsam, or weapons and raw materials sufficient to equip 10,000 warriors, were stored in a group of three storerooms that is situated in the southwest wing of the Northern Palace complex. The entrance to these storerooms was monitored by a guard room. Weapons from Herod's time were found at Masada, most notably a sheathed *gladius Hispaniensis* (Spanish sword) and several groups of dozens of spare armor scales.

Near these storerooms was located the service entrance to the Northern complex. Interestingly, the expedition of Netzer and Stiebel excavated courtyard 174, under the floor of which two early phases corresponding to the first and second Herodian building phases were uncovered. It is the first time that stratified material in sealed archaeological contexts from Herod's time was found.

*Western Palace.* On the western side of Masada Herod erected the Western Palace complex. Covering an area of nearly 37,500 sq. ft. (4,000 sq. m.) it is the largest building found on the site. Yadin attributed ceremonial functions to this Palace, a notion rejected by Netzer, who assigned this function to the Northern Palace. The Western Palace was a self-sufficient unit and consisted of four wings: official wing ("the core"), storeroom wing, service wing, and administrative wing.

The official wing was built around a large central court with a large reception hall leading into a room interpreted by Yadin as the throne room. This notion is based on four depressions in the plastered floor in which the legs of the canopied throne may have been set. In the hall was a magnificent, richly colored mosaic pavement with circles and border ornaments of plant and geometric designs. Recently a charcoal "blueprint" of this mosaic was found on a nearby plastered wall. This wing also contained service rooms as well as bathrooms with tubs, a steeped cold water pool, and other installations, all paved with mosaics. During the period of the revolt, parts of the Palace were clearly used for public functions by the rebels' community, such as a storeroom, bakery, and smithies (see below).

*Water System.* One of the most impressive engineering projects at Masada is the water system Herod constructed to ensure an adequate supply of water. The system included dams that diverted floodwater of the two wadis, west of Masada, into two plastered channels that fed a dozen large cisterns. The cisterns were hewn on two parallel levels into the rocky slope. Each cistern had a capacity of up to 140,000 cu. ft. (4,000 cu. m.) and together could hold about 1,400,000 cu. ft. (40,000 cu. m.). The cisterns are mostly square in shape and have two openings, one leading from the aqueduct and a second, higher one connected with an inner staircase for drawing out water. Pack animals then bore the water up to the cisterns on the mountain-top. The pass leading from the upper level of the cisterns ended in a gate just south of the Northern Palace ("water gate"). Another pass led from the lower level to the "snake pass."

*Casemate Wall.* Towards the end of his reign, Herod enclosed the entire summit of Masada, except for the northern tip, with a casemate wall (a double wall with the inner space divided into rooms). Its circumference measures about 1,530 yards (1,400 m.) which corresponds exactly with the 7 *stadia* of Josephus' description. About 70 rooms, 30 towers, and four gates were found in the wall. The gates consisted of a square room with two entrances, benches along the walls, stone slab pavements, and "masonry-style" stucco decoration. They in-

clude the "snake path" gate in the northeast; the western gate in the middle of the western wall, the location in which the Byzantine gate was later erected; the southern ("cistern") gate which led to a group of cisterns; and the northern ("water") gate near the bathhouse which served mainly for bringing water from the upper row of cisterns and was probably also the gate for the northern part of Masada.

From the period when the Roman garrison was stationed at Masada between the time of Herod and the Jewish War hundreds of coins were found from the reigns of Herod Archelaus, Agrippa I, and all Roman procurators.

#### **Period of the Revolt (66–73/74 C.E.)**

The site of Masada appears to be a microcosm of the material culture of Second Temple Judea and even beyond. The many finds from this brief eight/seven-year period throw much light on the character of the rebels, their way of life at Masada, and the end of the Jewish War. The rebels made use of the casemate wall's rooms for dwelling. They divided the rooms into small units and erected clusters of shacks constructed of mud and small stones adjoining the wall and other buildings. Cooking stoves and niches for the cupboards were built into the wall. In rooms which had not been burned remains of their daily life were strewn on the floors: clothing, leather, baskets, glass, stone and bronze objects, etc. Piles of charcoal with remnants of personal belongings indicate that they had collected all their possessions at the end and had set fire to them. Hundreds of coins and several scroll fragments were found in the rooms. The towers on the wall seemingly served mainly as public rooms or workshops. One of the workshops in the western casemate wall (L. 1276) was identified as a tannery. However, ecological considerations and the nature of the plastered installations and cross beams discovered there indicate this tower had been transformed into a laundry.

The Herodian palaces were not used for dwellings but rather functioned as command posts, public buildings, etc. Their decorative architectural parts were dismantled for building materials and furniture: floors, roofs, columns, tables, etc. A prominent place was given to the Western Palace. The biggest storeroom at Masada (L. 502) was used for storing food. When excavated, lines of vessels were found, each of which was marked by an *ostrakon* declaring the purity or impurity of the line. Next to this storeroom was located the central bakery of Masada (L. 493). A huge oven (*furnus*, פּוּרְנָה) with two grinding posts on each side of the door was uncovered. This domed oven, 3 m. in diameter, was capable of producing hundreds of loaves of bread, the distribution of which was seemingly done in a centralized manner in the nearby courtyard (L. 401), where many receipts mentioning bread were found. These ostraca instruct that on day x was the handing over of y amount of loaves to z, the head of an extended family or group of people, who was always a male, manifesting the patriarchal atmosphere of the period. Two smiths, in which iron trilobite arrowheads were forged, are reported from the Western Palace as well.

**MATERIAL CULTURE.** The historical narration of Josephus and even more the archaeological finds indicate that the community of the rebels was in fact rather heterogeneous and dynamic in nature.

**Coins.** Numerous coins struck during the Jewish War (66–70 C.E.) were found both in large hoards (of 350, 200, and 100 coins) and in small numbers. Mostly ordinary bronze coins, they also include 37 silver shekels and 35 half-shekels representing all the years of the war and including the rare Year Five. This was the first discovery of shekels in a dated archaeological stratum.

**Epigraphy.** Outside Qumran, the site of Masada yielded the largest collection of epigraphic finds in Israel. The collection consists of several hundreds of Hebrew- and Aramaic-inscribed ostraca and 14 parchment documents and one papyrus in Paleo-Hebrew characters.

**Ostraca.** More than 700 ostraca were found, mostly written in Hebrew or Aramaic. Since they can be dated exactly between 66 and 73/74 C.E. they are of great paleographic value and they also shed much light on the organization of life at Masada and the national and religious character of the defenders who scrupulously observed the ritual laws. About half of them were found near the storerooms. These bore single or several letters in Hebrew and may have been connected with the rebels' community rationing system during the siege. Others indicate tithes and names on others may be those of priests or levites.

**Scrolls.** Parts of 14 biblical, apocryphal, and sectarian scrolls found at Masada are the first scrolls discovered outside of caves in a dated archaeological stratum. The biblical scrolls are mostly identical with the Masoretic Text but some show slight variations. These include parts of the books of Psalms, Genesis, Leviticus, Deuteronomy, and Ezekiel. Apocryphal scrolls include part of the original Hebrew text of the Wisdom of Ben Sira 39–44, dated to the first century B.C.E., and several lines of the Book of Jubilees.

A fragment of a sectarian scroll of the Songs of Sabbath Service is identical with a scroll found at Qumran. Other small fragments exhibit phrases that appear to be sectarian in nature. It is important for dating the Dead Sea Scrolls and because it indicates that members of the Dead Sea Sect (apparently Essenes) took part in the Jewish War.

This applies also to a papyrus scroll noting in Paleo-Hebrew script the idiom "Har Gerizim" (Mount Gerizim), which is the holy mountain of the Samaritans, the location of their temple. This indicates the presence of Samaritans amongst the rebels' community at Masada.

**RELIGIOUS LIFE.** *Mikva'ot (Ritual Baths).* Masada was the first site in which ritual immersion pools (*mikva'ot*) were recognized as such, an installation that came ever since to be a *fossile directeur* of Jewish settlements. The plastered, commonly stepped, pool had a source for rainwater that flowed

directly into it. A relatively large number of *mikva'ot* was uncovered at Masada. Two were constructed in the southeastern sector of the casemate wall (L. 1197, 1162), one in the Northern Palace complex's administrative wing (L. 151), and near the synagogue (L. 1301). Another *mikveh* was documented in a cave in the southern cliff (L. 2006/1), in small palace XI (L. 601), and near the middle terrace of the Northern Palace (L. 67). To this group we may add two plastered pools, from the time of the revolt, that were built in the Large Bathhouse (L. 105, 104). It was suggested that during the revolt the stepped pools were in the *frigidaria* of the lower terrace of the Northern Palace (L. 8), in the Large Bathhouse (L. 107), and in the Western Palace (L. 546), and in the courtyard of the Large Bathhouse (L. 103, 112).

A unique public *mikveh*, with a dressing room, in the walls of which locker-like niches were used for the depositing of the bathers' clothes (L. 625), was excavated near Building XI. The *mikveh* that was constructed during the time of the revolt differs from any other example at Masada and is much akin to the examples uncovered at Qumran.

*The "Essenes' Quarter."* Interestingly, the entrance of this immersion complex turns towards Building XIII. The closest structure, situated in the northern annex of Building XXI, is a hall built in the time of the revolt (L. 809). This is an elongated hall with a bench extending along three sides of the wall and a low bench along its axis. The excavators named it *bet midrash* (religious school). However, its features appear to concur well with the "dining hall" at Qumran, a structure that according to the accounts of Pliny the Elder and Josephus was used by the Essenes for ritual activity. Hence it may be proposed to identify this area as the "quarter of the Essenes" at Masada, the presence of which is further attested in the characteristic sectarian documents that were found at the site.

*Synagogue.* A rectangular building located in the northwestern sector of the casemate wall was seemingly used as a stable in the first half of the first century C.E. During the time of the revolt its plan was transformed into a large hall with two rows of columns in the center and a back service room. A series of four peripheral tiers of plastered benches were built along the walls. The building was identified by Yadin as a synagogue. Examples from that period of time are known from Herodium and more decidedly at Gamala. This identification was further supported by the discovery of parts of two biblical scrolls, Ezekiel and Deuteronomy, buried in pits dug into the floor of the back room (possibly a *genizah*; a ritual deposition of religious documents). An ostrakon inscribed *ma'aser kohen* ("priest's tithe") was uncovered in the main hall.

*Human Remains.* Twenty-five skeletons of men, women, and children were found thrown in a heap in a small cave on the southern cliff. Although the skulls were reported by Yadin to be of the type found in the Bar Kokhba caves in Naḥal Ḥever, the fact that pig bones were found with the skeletal remains may suggest according to Zias that they belong to the Roman

soldiers killed in 66 C.E. Skeletal remains of three individuals were uncovered in the lower terrace, including a woman's scalp and braids and leather sandals. They were claimed by Yadin to represent a rebels' family. However, the condition of the three skeletons and the fact that many protein-rich bones are missing may indicate that the bodies were dragged there by hyenas.

**THE ROMAN SIEGE.** Despite the fact that Masada was the last rebel stronghold in Judea, it seems that the Roman considerations for commencing the Masada campaign, three years after the triumphant parade celebrating the victory over Judea took place in Rome, were not security but rather financial gain. The rebels' presence at Masada, which formed a base for raids, endangered a highly profitable resource – the balsam plantations of En Gedi. According to Pliny the Elder within five years of the suppression of the revolt, a staggering sum of 800,000 sesterces was obtained from the perfume trade in Judea. Indeed, the balsam trade is mentioned in two Latin military documents from Masada.

The Roman siege system at Masada appears to be one of the most complete and best preserved in the Roman world. Under the command of Flavius Silva a Roman force of 7,000–8,000 soldiers deployed around Masada in eight camps. The fortress was surrounded with a 2.17 mi. (3.5 km.) long siege wall (circumvallation), the flat eastern sector of which was fortified by towers to prevent the nearly 1,000 rebels from escaping and attacking the Roman force. All of the architectural elements of this system were of dry-constructed fieldstone. Taking into consideration the historical information concerning the length of the siege works at Jerusalem and the calculations of the working capacities of trained soldiers it seems that the construction of the camps and siege wall at Masada did not exceed a period of two weeks. The Roman military body consisted of the Legion X Fretensis and six auxiliary units. The legionaries were garrisoned in the two large camps, one in the east (B) and one in the northwest (F) which served as Silva Flavius' headquarters. A rare pay record of a legionary cavalryman, one Gaius Messius, was uncovered at Masada. The six small camps were located at strategic points around the base of the mountain commanding the ascents and possible escape routes. Camp H, which was built south of the fortress on higher elevation, allowed the Romans to observe part of Masada's summit. Communication was ensured by a trail that climbed the fault escarpment and connected all camps. Surveys, aerial photographs, and excavations of the camps indicate that the soldiers were housed in leather tents which were pitched over low walls and secured by iron pegs. In many of the *contubernia* (eight-man tents) a raised bench was found along their walls. Small hearths, for cooking, were built in front of the tent units. Three larger ovens, which were presumably intended for bread baking, were found west of Camp F. Water was apparently brought in from the oasis of En Gedi by Jewish captives.

Roman military attention focused on a narrow section of the west wall of the fortress. The main undertaking was to pro-

vide the platform for the effective operation of the battering ram against Masada's wall. For this end an assault ramp (*agger*) was erected. Hewn from the nearby white spur, a mass of earth and stones that was stabilized by tamarisk and date-palm branches was laid on the natural spur of the western slope. A stone platform paved the head of the ramp in order to allow the 60-foot siege tower to be raised. The siege engines were most likely constructed in a secured courtyard ("bauplatz") located west of the ramp. Roth's work suggests that the completion of the entire siege works at Masada would have been achieved in a matter of two months.

During the excavations of Netzer and Stiebel's expedition four rooms of the Western casemate wall were excavated for the first time. The section directly above the ramp is entirely missing, in all likelihood being breached by the action of the battering ram. According to Josephus the rebels built an inner wall made up of wooden beams and soil. Mapping the burn pattern of the buildings at Masada, E. Netzer proposed that the lack of conflagration signs in many of the structures was the result of an intentional dismantling of the ceilings for the purpose of the inner wall's construction. *Ballista* balls shot from torsion artillery machines, arrowheads, and slingshots were found in the breach's immediate environs, testimony to the battle that raged there. The defenders' return fire included slingshots, arrows, and large rolling stones. This was seemingly the purpose of the scavenged wagon's wooden wheel that was found on the floor of the adjacent tower. There were apparently few casualties on the Roman side. A unique Latin medical care manual details the treatment of wounded and sick Roman soldiers. One typical burial of a Roman soldier, consisting of a cooking pot that contained cremated human remains, was found west of Masada.

*The Mass Suicide.* According to Josephus, when the Romans penetrated the fortress, they came face to face with the multitude of nearly 1,000 dead rebels. Apparently, this act of suicide was honored by the conquerors. The discovery of a group of ostraca near the Large Bathhouse, each inscribed with a single name and all written by the same person, including the name "ben Jair" (son of Ya'ir), led Yadin to the conclusion that these were the lots described by Josephus. According to his account the last ten survivors at Masada drew lots to choose who would kill the other nine and then himself. It should be noted that over 200 ostraca were also found in this location, and they all seem to be more likely part of the administrative organization of the rebels (tags or coupons) rather than the actual "lots." This notion is seemingly strengthened by the recent discovery of an ostrakon bearing one of the names that appears in the "lot" group by Netzer and Stiebel. Nonetheless, the association of the "ben Jair" tag with the commander of the rebel community seems to be very likely.

*The Aftermath.* After the fall of Masada a Roman garrison cleared the site; scattered remains of this activity were found on top of Masada. This garrison erected a small camp within

the boundaries of Camp F, in which it was stationed for several decades (F<sub>2</sub>). The latest coin that was uncovered at the site is a silver coin from Trajan's days dating from 112 C.E.

### Byzantine Period

Following the abandonment of the site in the early second century C.E. Masada remained uninhabited for a few centuries. During the fifth century C.E. a monastery (*laura*) was founded at Masada, after a series of earthquakes had caused considerable damage to many of the buildings. Some of the scholars identify this monastery with a site named Marda (lit. "fortress"), noted by the Church Fathers. The group of hermits erected a small church with mosaic pavements of which little remains aside from a rich colored floor in a side room with medallions containing representations of a basket with a cross, fruits, and vegetal designs. These mosaics were locally manufactured. Remnants of this production were discovered near Building XII at the center of Masada. Fragments of the church's marble screen and window glass were uncovered in and near the building. West of the church was a refectory and kitchen. These last occupants of Masada dwelt in small stone cells scattered over the summit and in caves. With the rise of Islam in the seventh century C.E. this settlement apparently ceased to exist.

### Modern Era

In many respects the perception of the episode of Masada by Israeli society, throughout the 20<sup>th</sup> century, mirrors the history of the state. The Hebrew translation in 1923 of *The War of the Jews* by Josephus, as well as the poem "Masada" by Lamdan published in 1927, brought Masada closer to the hearts of the young people in the country's Jewish community. S. Guttman, who led numerous trips to the mountain, was particularly instrumental in transforming Masada into a symbol of defiant resistance and the choosing of death over a life of slavery, in particular for Zionist and, later, Israeli youth. This trend appears to have climaxed in the late 1960s–early 1970s, when one of its manifestations was the swearing of the oath of allegiance by the recruits of Israel's Armored Corps on the summit of the site: "Masada shall not fall again." However, the last three decades witnessed a gradual shift in public perception, which was now determined more by political affiliation. Since the opening of Masada's National Park (1966) and the construction of a cable car (1971), it has become one of Israel's most visited tourist sites. In 2001 Masada was inscribed on the UNESCO World Heritage List.

[Guy D. Stiebel (2<sup>nd</sup> ed.)]

°MASARYK, JAN GARRIGUE (1886–1948), Czechoslovak diplomat and statesman, son of president Thomas G. Masaryk. From 1925 to 1938 Masaryk was his country's envoy in London, but resigned after the Munich Pact (Sept. 30, 1938), which compelled Czechoslovakia to give up the Sudetenland. In 1940 he was appointed foreign minister of the Czechoslovak exile government in London and retained the post after Czechoslovakia's liberation in 1945 and after the Communist takeover on Feb. 25, 1948. On March 10, 1948, his corpse was found beneath the window of the Czernin Palace in Prague, in which the Foreign Ministry was situated. It is still controversial whether he was murdered for political reasons or committed suicide. During his stay in London he formed ties of friendship with Chaim Weizmann and became an ardent supporter of Zionism. He fought against antisemitism during and after the Nazi period. In one of his speeches, Masaryk stated: "Every antisemite is a potential murderer whose place is in prison." Due to his intervention, Czechoslovakia allowed the Jewish refugees of the \*Berihah to cross its territory and actively supported the proposal to establish a Jewish state. He believed that "to establish a Jewish state is one of the greatest political ideas of our time." In the years of Israel's War of Independence (1948–49) Masaryk assisted in arranging the export of Czechoslovak weapons to the struggling state. The Mauser rifles with the Czech lion were known as "Czech rifles" and played an important part in the defense and conquest of the Jewish part of Jerusalem and other localities where critical fighting took place.

[Chaim Yahil / Yeshayahu Jelinek (2<sup>nd</sup> ed.)]

**MASARYK, THOMAS GARRIGUE** (1850–1937), Czech philosopher and statesman, first president of \*Czechoslovakia from its foundation (1918) until his retirement (1935). Born into a poor family in Hodonin (southern Moravia), as a child he was imbued with the popular Catholic antisemitism of his surroundings and was brought up to believe in the \*blood libel. Impressions gained from Jewish schoolmates and a peddler made him change his opinions, a stage which he expressed in a sketch, *Ná pan Fixl* (“Our Mr. Fuechsel”). He studied at Vienna University where Theodor \*Gompertz was one of his teachers. In 1882 he was appointed professor of philosophy at the newly founded Prague Czech University. He founded his “Realistic Party” and was elected to the Austrian parliament in 1907, and again in 1911. In his *Scientific and Philosophical Crisis of Contemporary Marxism* (1898) he asserted that, contrary to Marx’s definition, Jews are a homogeneous nation, although they have given up their language. Masaryk conceived Zionism mainly in the moral sense. Impressed by the views of \*Aḥad Ha-Am, he published in 1905 an essay on him. Believing that it was impossible to be a Christian and an antisemite, Masaryk considered that it was his duty to eradicate antisemitism from his people. In 1899 he took a leading stand in the \*Hilsner blood libel case, “not to defend Hilsner, but to defend the Christians against superstition,” publishing two pamphlets on the affair (see bibliography of Hilsner). He was attacked by the antisemitic mob and his university lectures were suspended because of student demonstrations against him. Similarly, in 1913 he came to the defense of Menahem Mendel \*Beilis. He was enthusiastically received by U.S. Jewry upon his visit there in 1907. As a political émigré during World War I, he established connections with Jewish and Zionist leaders such as Louis Brandeis, Julian Mack, Louis Marshall, Stephen Wise, and the Bohemian-born congressman Adolf Joachim Sabath as well as with Naḥum Sokolow and later Weizmann. When elected president of Czechoslovakia (1918) he declared that Jews would enjoy equal rights with other citizens and expressed sympathy with Zionism. He also supported the claims for recognition of the right of a Czechoslovak citizen to declare his nationality as Jewish.

By his personal example Masaryk did much to combat antisemitism in Czechoslovakia. In 1927 he visited Palestine, taking a special interest in the new settlements, their social problems and aspirations, and the newly established Hebrew University. In 1930 a Masaryk forest was planted near Sarid, and in 1938 \*Kefar Masaryk, a settlement founded by pioneers from Czechoslovakia, was named after him. Tel Aviv conferred honorary citizenship on him in 1935.

[Chaim Yahil]

**MĀSHĀʿALLAH** (Heb. **Manasseh**) **B. ATHAÑ** (754–813), astronomer. Mashāʿallah was probably born in Egypt, which is possibly the reason why he was also called al-Miṣrī, the Egyptian, but part of his life was spent at the court of the caliphs al-Manṣūr and al-Maʿmūn in Damascus. His name appears in many different versions, such as Macha Allah al Mesri, Mashallah, Messahalla, Messahalac, Messalahach, Masalla, Mescallath, Macelama, Macelarama – mainly due to distortions in Latin manuscripts.

Mashāʿallah was one of the earliest independent and original scientific thinkers and scholars. His main efforts led to the transfer of astronomical knowledge from the East to the West by means of later translation; he also adapted Arabic data for the Cordoba astronomical tables. Unfortunately, none of his writings appears to have survived in the original texts and the main source is Latin translations, some of which give rise to confusion, since they list the same works under different titles. Mashāʿallah may also have written an interesting astrological treatise in Hebrew *Sheʿelot*, which was translated about 1146–48 by Abraham \*Ibn Ezra. In 1493 and again 1519 there appeared in Venice a smaller treatise on lunar and solar eclipses, *Epistola de rebus eclipsium et de conjunctionibus planetarum in revolutionibus annorum mundi...* translated by Johannes Hispalensis from a Hebrew text. Some of the available manuscripts list 12 short chapters, all beginning with the words “Mashāʿallah says...” His treatise on the astrolabe was translated into Latin and English (R.T. Gunther, *Chavuv and Messahalla on the Astrolabe* (1929). A crater on the moon is named after him.

Carmoly, *Arabic Astronomical and Astrological Sciences in Latin Translation* (1956), 23–38.

[Arthur Beer]

**MASHĀʿIRĪ, AL-**, family in Iraq. The al-Mashāʿirī family members in Babylonia during the 13<sup>th</sup> century included some distinguished personalities who occupied important positions in the state. They are mentioned by \*Eleazar b. Jacob in his poems (see *Divan R. Eleazar b. Jacob ha-Bavli*, Jerusalem, 1935). They included: ISAAC MUHADHDHIB AL DAWLA IBN AL-MASHĀʿIRĪ and his sons, ELEAZAR, ELIEZER, and OBADIAH (poem 8); and ELEAZAR AMĪN ABU (OR IBN) MANṢŪR IBN AL-MASHĀʿIRĪ and his sons, EZEKIEL, YESHUʿAH, and ISAAC (poem 185). The nature of their public positions is unknown. In the Arabic chronicle of Ibn al Fūṭī, a Jewish state official named MAHADHDHIB AL-DAWLA NAṢR MASHĀʿIRĪ is mentioned. In 1284 during the rule of the \*Mongol governor Arghūn (1284–91), he was appointed adviser in affairs of the state to the government dīwān. In 1289, when \*Saʿd al-Dawla ibn al-Ṣāfi became vizier of the Mongolian Empire, he, in turn, appointed Muhadhdhib al-Dawla Naṣr as commissioner of Babylonia. Muhadhdhib occupied this position until his assassination in 1291. Some scholars believe that he is the same person as the above-mentioned Isaac Mahadhdhib al-Dawla.

[Abraham David]

**MASHASH, SHLOMO** (1909–2003), Sephardi rabbi. Mashash was born in \*Meknes, Morocco, and received his rabbinic education in Yeshivat Pahad Yitzhak. In 1931 he was appointed head of the Jewish school and *talmud torah* in Meknes, remaining there until 1949, simultaneously serving as head of the local yeshivah until 1947. In 1937 he founded a society Dovev Siftei Yeshenim for the purpose of publishing works of early rabbinic authorities still in manuscript, and in 1944 established an institution for the training of religious officials.

In 1949 Mashash was appointed *dayyan* in the Regional Beth Din of \*Casablanca, in 1959 chief rabbi, and in 1977 he was appointed Sephardi chief rabbi of \*Jerusalem.

Mashash published a number of rabbinical works, most of which include the word *Shemesh* – an anagram of his name – in the title. They include *Mizrah Shemesh* on ritual law (Casablanca, 1962), *Tevuot Shemesh* on the Shulhan Arukh, and *Beth Shemesh* on the Talmud and \*Maimonides.

**MASHGIAH** (Heb. מַשְׁגִּיחַ; “overseer” or “inspector”), designation of the person entrusted by the rabbinate with the supervision of *kasher* butcher shops, food factories, hotels, and restaurants. He is to ensure that the food products sold or prepared in those places comply with the requirements of the traditional \*dietary laws. The *mashgi'ah* must be an observant Jew and know all the particulars of the dietary laws. He is, however, not competent to decide on his own whether a product is *kasher* or not. In some places the *mashgi'ah* is also called *shomer* (i.e., “watchman”).

**MASHIV HA-RUAH** (Heb. מַשִּׁיב הָרוּחַ; “He causes the wind to blow”), a phrase in the \*Amidah prayer, inserted after the first verse of the second blessing. It has two variants. The one for the winter season, “Thou causest the wind to blow and the rain to fall” is said from the last day of \*Sukkot (after the Prayer for \*Rain) until the last day of \*Passover (until the Prayer for \*Dew), and “who causest the dew to descend” is recited during the summer months in Erez Israel, but only in the Sephardi ritual elsewhere. The praise of God as the dispenser of rain is referred to in the Mishnah (Ber. 5:2; Ta'an. 1:2) which ordains that it should be mentioned together with resurrection of the dead, as the sustenance of the living and the resurrection of the dead are both manifestations of the *gevurot* (“powers”) of God. Another prayer for rain is recited in the ninth blessing of the *Amidah*.

**BIBLIOGRAPHY:** Elbogen, *Gottesdienst*, 44ff., 518ff.; JE, 5 (1903), 643–5.

**MASIE, AARON MEIR** (1858–1930), physician. Born near Mogilev, Belorussia, Masie studied at the yeshivah in Mir and moved to Berlin in 1878, where he joined the Union of

Hebrew Socialists, founded by Aaron \*Liebermann. In 1879 he was sentenced to a term in prison together with his comrades. Set free, he went to Zurich where he attended the Institute of Technology and came under the influence of Russian socialists, leading to his activity in the student revolutionary movement. Deeply affected by the 1881 pogroms, Masie actively supported the idea of a Jewish state. He joined the Jewish nationalist movement, and decided to study medicine so that he might have a profession which would be useful in Erez Israel. Graduating in 1887, he went to Paris where he specialized in ophthalmology, and in 1888 he settled in Rishon le-Zion. There he was appointed medical officer for the Rothschild settlements in Erez Israel.

From 1900, he lived in Jerusalem where he was active in medicine and in various cultural spheres. He was mainly interested in the revival of Hebrew and saw his life task in the development of a Hebrew terminology in medicine and in the natural sciences. A member of the Va'ad ha-Lashon, he advised Eliezer \*Ben-Yehuda in medical terminology. He published a monograph, *Maḥalat ha-Shivtah* (“Meningitis,” 1910), and articles in *Ha-Zefirah*, *Ha-Or*, *Ha-Refu'ah* (vol. 2, 1923), and *Leshonenu* (vols. 1 and 2, 1928–30). Masie's dictionary of medical terms, *Sefer ha-Munahim li-Refu'ah u-le-Madda'ei ha-Teva*, was completed by S. \*Tchernichowsky and published posthumously in 1934.

Smilansky, *Mishpaḥat ha-Adamah*, 3 (1951<sup>2</sup>), 106–17; J. Saphir, *Ḥalutzei ha-Tehiyah* (1930), 50–55; Munker, in: KS, 12 (1935/36), 19–28, no. 70.

[Joseph Gedaliah Klausner]

**MASKILEISON (Maskil le-Eitan), ABRAHAM BEN JUDAH LEIB** (1788–1848), Russian rabbi and author. Born in Radoshkovich, Belorussia, Maskileison studied under his father, who was *av bet din* of Khotimsk in the district of Mogilev. Abraham served as *av bet din* in Novogradok. Toward the end of his life he moved to Minsk, where he died. He lived in poverty all his life. He was the author of *Maskil le-Eitan* (Vilna, 1818), novellae to the tractates of orders *Mo'ed* and *Kodashim*. His reputation as a result of this work was such that the title of his book (from Ps. 88:1) became his own designation and family name. *Be'er Avraham* (1844), his novellae to tractate *Berakhot* and the order *Mo'ed*, was published by his son Aaron. In the introduction Abraham lists the seven aims of the work among which were to give explanations of those passages of Talmud in which the tosafists found difficulties, an exposition of those passages of Rashi where the tosafists disagree with him, and a profound examination of those laws of Maimonides for which the commentators were unable to find sources.

Some of his works were published posthumously: *Nahal Eitan* (1855), published by his son Naphtali, contains novellae on the first two parts of Maimonides' *Mishneh Torah* as well as novellae by Maskileison's brother Moses Nisan, compiled

when he was 16. *Mizpeh Eitan*, novellae and glosses to tracts of the Talmud, was published in the Zhitomir edition of the Talmud (1858–64). It was subsequently republished in the Vilna Talmud with additional material to the author's manuscript entitled *Tosefet Merubbah. Yad Avraham* (Vilna, 1880) is on the Shulḥan Arukh, *Yoreh De'ah*. His glosses and novellae on Maimonides' *Mishneh Torah* were assembled from various manuscripts and collected in the *Yad ha-Ḥazakah* (1900) under the title *Yad Eitan*. Comments and novellae on the *Ein Ya'akov* were assembled in *Ahavat Eitan* (1883–84). His notes on the *Sifrei* were published in S. Luria's edition (1866).

His sons included Aaron, Moses Nisan, and Naphtali. MOSES NISAN was *av bet din* of the community of Shumiachi and author of the *Hikkrei Halakhot* (1875), consisting of 32 halakhic studies, *piḥulim*, and *novellae*. Particularly well known was NAPHTALI (1829–1897), a book dealer and an accomplished scribe and poet, to both talmudists and *maskilim*. His main work is his critical edition, with additions, of the *Seder ha-Dorot* (1877–82) of Jehiel \*Heilprin. Aaron's son was ABRAHAM ISAAC MASKILEISON (1840–1905), born in Smolevichi, where in 1874 he was appointed rabbi, an office he held for 15 years. He then served in Haslovich. He was a member of Ḥovevei Zion. In 1904 he was appointed rabbi of Stoytitz where he remained until his death. He left works in manuscript which were lost. Reuven \*Katz, the chief rabbi of Petah Tikvah, was his son-in-law.

Harkavy, *Le-Ḥeker Mishpaḥot* (1953<sup>2</sup>), 5–15; R. Katz, in: A. Maskileison, *Maskil le-Eitan* (1966<sup>2</sup>), introd.; *Yahadut Lita*, 3 (1967), 71; Kressel, *Leksikon*, 2 (1967), 431f.

[Yehoshua Horowitz]

**MAŞLI'AH ŞĀLIH** (d. 1785), Babylonian liturgical poet. He and his son NISSIM (d. after 1816) wrote poems and *piyyutim* on various subjects. Some of these were published in regular and festival prayer books according to the rite of the Jews of \*Baghdad and its surroundings. Others were published by A. Ben-Jacob in *Shirah u-Fiyyut shel Yehudei Bavel ba-Dorot ha-Aḥaronim* (1970) which includes poems written in the Spanish meter in honor of events and personalities (rabbinical emissaries, etc.). Şaliḥ held the rabbinical seat of Baghdad from 1773 to 1785, and enquiries were addressed to him from \*Syria, Persia, Kurdistan, and other places on halakhic problems and community organization. Torah novellae of the father and the son are to be found in the works of their contemporaries.

**BIBLIOGRAPHY:** A. Ben-Jacob, *Yehudei Bavel* (1965), 121–4.

[Abraham Ben-Yaacob]

**MASLIANSKY, ZVI HIRSCH** (1856–1943), popular Yiddish orator, the most eloquent and influential *Maggid* on the American scene at his time. Masliansky was born in Slutsk, Belorussia. He taught at the Polish *talmudei torah* and at the yeshivah of Pinsk (1882–90), where one of his students was

Chaim Weizmann. Stirred by the pogroms of 1881, he became a proponent of the idea of a return to Zion. He was active in Ḥibbat Zion, and fellow-Zionists M.M. Ussishkin, M.L. Lilienblum, Aḥad Ha-Am, and L. Pinsker encouraged him in his activity as a wandering preacher of Zionism. His fame as an impassioned orator spread rapidly throughout Russia. Compelled to leave the country in 1894, he undertook a lecture tour of Central and Western Europe and in 1895 emigrated to New York. During the three decades that followed, he helped popularize Zionism, wielding a great influence upon Yiddish-speaking immigrants, especially through his Friday evening sermons at the Educational Alliance on East Broadway. He combined the qualities of a *maggid* and those of a modern speaker. He was able to hold the attention of a popular audience and scholars as well. His imposing figure further strengthened the impression he made. He was also active in U.S. Zionist organizations.

Masliansky founded and coedited the daily *Die Yidische Velt* (1902–05). His Yiddish sermons were published as *Maslianskys Drosches fir Shabosim un Yomim Toyvim* (2 vols., 1908; Eng. tr. *Sermons by Reverend Zevi Hirsh Masliansky*, 1926). He also published a memoir, *Fertsik Yor Lebn un Kemfn* ("Forty Years of Life and Struggle," 1924), and a collection of Hebrew articles, *Kitvei Masliansky* (1929).

**BIBLIOGRAPHY:** L. Lipsky, *Gallery of Zionist Portraits* (1956); Rejzen, *Leksikon*, 2 (1927), 321–4; LNYL, 5 (1965), 467–70; EZD, 3 (1965), 293–8; M. Danzis, *Eigen Licht* (1954), 223–8; M. Zablotski and J. Massel, *Ha-Yizhari: Toledot Zevi Hirsh Masliansky* (1895).

[Sol Liptzin]

**MASLOW, ABRAHAM H.** (1908–1970), U.S. psychologist. Maslow was professor and chairman of the psychology department at Brandeis University from 1951. He was president of the American Psychological Association. Maslow was best known as a personality theorist, interested in motivational structure. In his work, he conceptualized within a phenomenological frame of reference that emphasizes the inherent goodness of man. He postulated a hierarchical theory of human motivation, wherein needs arrange themselves in a hierarchy from basic biological needs to those of self-esteem and self-actualization. Maslow's books include: *Principles of Abnormal Psychology* (1951) with B. Mittelmann; *Motivation and Personality* (1954); *New Knowledge in Human Values* (1959); and *Toward a Psychology of Being* (1962).

[Manny Sternlicht]

**MASLOW, SOPHIE** (1911– ), U.S. dancer and choreographer. Maslow was born on the Lower East Side of New York. She joined the Martha Graham company in 1931 and became a member of the New Dance Group in the mid-1930s and its artistic director in 1968. From 1942 to 1954 she performed in the Dudley-Maslow-Bales trio and choreographed many works for that company. Maslow's first works reflected social unrest, exemplified by *Dust Bowl Ballads* (1941) and *Folksay* (1942). *The Village I Knew* (1949), based on a story by \*Sha-

lom Aleichem, portrayed a Jewish village in Czarist Russia. She re-staged this work when she worked in Israel with the \*Bat-Sheva company (1950). Her other works were *Manhattan Transfer* (1953); *Champion* (1948); *Celebration* (1954), based on Israeli song and dance material; and *Poem* (1963). From 1951 she frequently choreographed the annual Hanukkah Festival at Madison Square Garden. In 1991 she received the Award of Artistry of the American Dance Guild.

[Amnon Shiloah (2<sup>nd</sup> ed.)]

**MASNUT, SAMUEL BEN NISSIM** (13<sup>th</sup> century), talmudist and leader of Aleppo Jewry. Scarcely any biographical details are known of him, even the place from which his family originated being uncertain since some manuscripts mention Toledo and others Sicily. Judah \*Al-Ḥarizi, who visited Aleppo about 1218, waxed eloquent in praise of “Samuel b. Rabbenu Nissim of Aleppo.” He wrote a special composition in his honor called *Iggeret Leshon ha-Zahav* (published by Z.H. Edelman in *Divrei Hefez*, 1853). Because of the similarity of the names and the places, scholars are inclined to regard the two as identical, in spite of an explicit statement by Samuel in one of his commentaries (Dan. 7:25) to the effect that it was written in 1276, which would make him about 90 years old at the time. Masnut’s renown rests on his extensive midrashic commentary, *Ma’yan Gannim*, which apparently embraced most, if not all, of the Bible. The following parts have been published: Genesis (1962), which the editor entitled *Midrash Bereshit Zuta*; Job (1889); and Daniel and Ezra (1968). His commentary on Chronicles is extant in manuscript and is remarkably similar verbally to the commentary of David \*Kimḥi. Fragments of his commentary on Numbers have also been preserved. Masnut’s work is totally unlike other midrashic commentaries, even those of \*David ha-Nagid and Jacob b. Hananel \*Sikili – who were near him in place and time and bear some resemblance to him – in that he rarely uses his own words in the presentation of his commentary. It is, in effect, a verbal amalgam of different and independent midrashic sources woven together into a unique exegetical fabric. His familiarity with halakhic and aggadic sources (for which he rarely gives references) is quite exceptional. His books contain important halakhic material for research on the history of \*halakhah, the texts of the Talmuds and the Midrashim, and particularly the various Aramaic \*targumim, of which he made frequent use. A *piyyut* by Masnut for the morning service of the Day of Atonement has been preserved in the liturgy of Algeria and Tunisia.

**BIBLIOGRAPHY:** Samuel b. Nissim Masnut, *Ma’yan Gannim ... al Sefer Iyyov* (1889), introd. by S. Buber (ed.); idem, *Midrash Bereshit Zuta* (1962), introd. by M. Kohen (ed.), and 331–8; idem, *Ma’yan Gannim ... al Sefer Daniel ve-Sefer Ezra* (1968), introd. by S. Land and S. Schwarz, and 164–71; A. Kasher, in: *De’ot*, 23 (1963), 59–62.

[Israel Moses Ta-Shma]

**MASON, JACKIE** (1931– ), U.S. comedian. Born in Sheboygan, Wisconsin, and raised on the Lower East Side of Manhattan, Mason (Jacob Maza) was ordained a rabbi, in a family

of rabbis, before he became a comedian. His three brothers were rabbis and their father, grandfather, and great-grandfather were rabbis, too. In the early 1960s, Mason was one of the country’s hottest comics, appearing frequently in night-clubs and on television. He delivered his bold monologues in a Yiddish-inflected New York voice, and became instantly recognized for his sharp and funny comments on Jewish and American life. He became a regular on the nation’s leading variety program, *The Ed Sullivan Show*, only to fall into disfavor in 1962 during a live telecast when Sullivan interpreted a finger gesture Mason made as a lewd insult. Mason was ousted from the show and although he sued Sullivan for libel and won, he did not appear on the show again for 18 months. The incident cast a pall over Mason’s career for more than a decade. But in 1984, Mason opened in Los Angeles in a one-man show, *The World According to Me!*, and convulsed audience after audience. He moved the show to Broadway in 1986, and it had a run of more than two years. Mason won a Tony Award and other honors, and the show toured the United States and Europe for two years. Mason returned to Broadway with the one-man shows *Jackie Mason: Brand New* (1990), *Jackie Mason: Politically Incorrect* (1994), *Love Thy Neighbor* (1996), *Much Ado About Everything* (1999), and *Prune Danish* (2002). He also had a variety of small film roles and his distinctive “Jewish” voice appeared in voice-overs and in animated cartoons. Mason, who had strong conservative political views, had several radio and television interview programs, often teaming with the divorce lawyer Raoul Felder, with whom he published *The Jackie Mason, Raoul Felder Survival Guide to New York* (1997) and *Jackie Mason and Raoul Felder’s Guide to New York and Los Angeles Restaurants* (1996). Mason’s offhand and tasteless comments sometimes got him into trouble. In 1991, when David Dinkins, an African-American Democrat, was campaigning for mayor of New York City, Mason called him “a fancy *shvartze* with a mustache.” After protests from groups like the National Association for the Advancement of Colored People, Mason apologized.

[Stewart Kampel (2<sup>nd</sup> ed.)]

**MASORAH.** This article is arranged according to the following outline:

## 1. THE TRANSMISSION OF THE BIBLE

### 1.1. THE SOFERIM

#### 1.2. WRITTEN TRANSMISSION

##### 1.2.1. Methods of Writing

###### 1.2.1.1. THE ORDER OF THE BOOKS

###### 1.2.1.2. SEDARIM AND PARASHIYYOT

###### 1.2.1.3. SECTIONAL DIVISIONS (PETUḤOT AND SETUMOT)

## 1. THE TRANSMISSION OF THE BIBLE

The transmission of the Bible is as old as the Bible itself, according to the ancient tradition in *Avot* that “Moses received the Torah from Sinai and handed it on to Joshua and Joshua to the elders and the elders to the prophets and the prophets handed it down to the men of the Great Assembly” (*Avot* 1:1). This concept of “Torah” which is handed down from generation to generation includes all of the Bible as it developed, with all the components which accompanied it and were added to it and which also shared in its holiness. As the form of the Bible became increasingly canonized and set in all its specific details, the tradition of reading the text and its exact pronunciation grew and became closely attached to it, developing together with it, and being handed down from father to son through the generations.

## 1.1. THE SOFERIM

The work of the transmission of the Bible was by its very nature destined to be in the hands of \*scribes (*soferim*), transcribers who were skilled in the exact copying of the Bible and were therefore legally recognized as people knowledgeable in Torah, and who were accomplished scholars of it. The term *soferim*, which in the beginning was a term for scholars of the Torah in general (*divre soferim*, *Sanh.* 11:3), in time became limited to those scholars who specialized in the Written Law and in its exact transmission. Some were transcribers, and in this capacity they were called also כותבנים (*kotvanim*; “skilled *kotvanim* were in Jerusalem,” *TJ, Meg.* 1:11 (71d)) or לבלרים (*lavlarim* – *librarius* = *libellarius*; thus, “R. Meir was a *lavlar*”; *Eruv.* 13a), while others were teachers and instructors of school children (“and the *sofer* (scribe) teaches according to his way”; *Tosef. Meg.* 4:38). The main interest of these scribes was the preservation of the text of the Bible, and they are credited with a number of rules and regulations which were established for this purpose. It is not known who those scribes were, but some of the scholars of the Talmud are conspicuous by their special interest in every legal discussion dealing with the problem of the text of the Bible, its transcription, and its teaching, such as R. \*Meir (*TJ, Ta'an.* 1:1 (64a); *TJ, Meg.* 4:1 (74d); *Eruv.* 13a; *Sot.* 20a et al.), R. Hananel (*TJ, Meg.* 1:11 (71c, d); *Meg.* 18b et

al.), and R. \*Samuel b. Shilat (*TJ, Meg.* 71c, d; *BB* 8b, 21a; *Ket.* 50a). This preoccupation with the exact transmission of the Bible gradually became important, and the term *sofer* tended to lose its original connection with *sefer* (“book”) and came to designate all learned people. Thus the original meaning of the term became obscured through its connection with the act of counting by the preservers of the text, as stated in the Talmud (*Kid.* 30a): “Therefore the ancients were called *soferim* (סופרים), because they counted (היו סופרים) all the letters in the Torah...” Originally the activity of the *soferim* and the preservers of the exact version of the Bible was an oral one. The main point of their work was instruction in the reading of a text lacking vocalization and accentuation signs, and passing this reading on orally from generation to generation. Since the text was holy it was not permissible to add anything to the skeleton of the letters of the Bible, and only a small part of what they established as reading aids was noted in the sacred text, that is, the very text which to this day has served for the public reading prescribed by the *halakhah*. It can be said that those items which did penetrate into the holy text did so during the very earliest period of its development with the result that they too became sanctified. Anything which did not find a place in the text itself, such as the vocalization and the accentuation signs and the various masoretic notes, at first had to be transmitted orally, and even when they were committed to writing they were still not allowed to be introduced into the sacred text.

## 1.2. WRITTEN TRANSMISSION

There are two types of items which penetrated into the holy text itself:

(1) those connected with the methods of writing the text – the pages, the lines, the marking of the lines, the division into sections, the manner of setting out the songs (*Shirat ha-Yam*, *Shirat Ha'azinu*, and others), and the order of the books;

(2) irregularities in the script and in the actual writing – dots above the letters, suspended letters, isolated *nuns*, large letters, small letters, and the like.

## 1.2.1. Methods of Writing

Most of the matters connected with the writing of the Bible are closely regulated by the *halakhah* and the customs of earlier generations. This applies especially to the Torah. Since it serves for the public reading in the synagogue it must comply with exact ritual conditions, without which the reader and the listener do not fulfill the religious duty of reading the Torah. These laws and customs became established during the time of the Talmud and were collected after a time in the tractate *Soferim* (which was presumably edited not later than the eighth century C.E.), and in the legal compilations of the rabbinic authorities (such as *Maim. Yad*, *Hilkhot Sefer Torah*). These instructions deal with the actual form of the book (the scroll, the size of the parchment and the pages), the writing (the size and shape of the letters, the addition of \**tagin* [tittles,

crowns] on the letters שׁעטנ״ז ג״ץ – Men. 29b), the writing materials (the parchment and ink), the manner of writing (marking guidelines, structure of lines), the arrangement of the text (the spacing of letters and words, the division into sections, the linear arrangement of the songs in the Torah, *Shirat ha-Yam*, *Shirat Haʿazinu*, the beginnings of the columns – the first letter generally being *waw*, except for ביהשמ״ו) and other topics connected with the laws of the reading and the care of the scroll. These laws apply only to scrolls which are intended for public reading, not those which are not for ritual use.

Since these matters are governed by the *halakhah*, they are not considered part of that which is usually called “Masorah,” although they are also, by their very nature, included among all the matters connected with the writing of the Bible that are handed down from generation to generation. Although the term “masorah” today includes all the matters connected with the writing and recitation of the Bible, it is not permitted to write them in a copy intended for public reading. These items could be written in the margins and even in the text itself only after some time, when people began to make copies of the Bible in the form not of a scroll but of a codex (מצחף) meant for the everyday study and teaching of the Bible.

1.2.1.1. THE ORDER OF THE BOOKS. The order of the books of the Bible and the division of the texts into sections is the same for the scrolls and the codices. The oldest arrangement of the 24 books of the Bible is mentioned in a *\*baraita* (BB 14b) and adopted also by Maimonides (Yad, *Hilkhot Sefer Torah* 7:15). In it, the order of the Pentateuch and the Early Prophets is the same as it is commonly accepted today, but the order of the Latter Prophets is: Jeremiah, Ezekiel, Isaiah, and the Minor Prophets – the order which was kept later in the German and the French manuscripts (sometimes also with Isaiah preceding Ezekiel), as opposed to the Oriental and Spanish manuscripts whose order is that which is common today.

The order of the Hagiographa as found in the *baraita* (and also by Maimonides, Yad, *Hilkhot Sefer Torah* 7:15) is Ruth, Psalms, Job, Proverbs, Ecclesiastes, Song of Songs, Lamentations, Daniel, Esther, Ezra (and Nehemiah), Chronicles – but this order was followed in only a few isolated manuscripts. In the manuscripts of the Oriental and Spanish masoretes the order is as follows: Chronicles, Psalms, Job, Proverbs, Ruth, Song of Songs, Ecclesiastes, Lamentations, Esther, Daniel, Ezra (and Nehemiah); while in the German-French manuscripts and in most of the printed editions of today the order is: Psalms, Proverbs, Job (the term אבנ״ת comes from the initials of these three in reverse order), Song of Songs, Ruth, Lamentations, Ecclesiastes, Esther, Daniel, Ezra (and Nehemiah), Chronicles. See *\*Bible: Canon*.

1.2.1.2. SEDARIM AND PARASHIYYOT. The accepted order of the books rejects the Babylonian tradition, as listed in the *baraita*, in favor of the Palestinian and other traditions. However, the Babylonian tradition was followed in the divi-

sion of the Torah into short units for recitation in the synagogue (see *\*Torah, Reading of the*). In Palestine the reading of the Torah was completed once in three years (see *\*Triennial Cycle*) and therefore the Pentateuch was divided into 154 (or, according to another version, 167) weekly portions called סדרים (*sedarim*). In Babylonia the full cycle of the reading of the Torah was completed in one year, so that the Torah was divided into 54 פרשיות (*parashiyyot*), weekly portions (סדרות or *sedres* in Yiddish) and that division is followed today, in continuance of the Babylonian tradition. The *sedarim* which served in the Torah as units for the (Palestinian) weekly portions for public ritual reading were applied to break also the text of the whole Bible into small units. However, since in the Prophets and Hagiographa this division was hardly necessary for use even in ancient times, except for some definite small parts (*haftarot*, *megillot*, etc.), there are differences in manuscripts as to the exact location of the divisions and even in the number of *sedarim*.

1.2.1.3. SECTIONAL DIVISIONS (PETUḤOT AND SETUMOT). The division of the body of the text into sections is an ancient one, and unlike the above-mentioned division into *sedarim* and *parashiyyot*, involves the very copying of the text whether in a scroll or a codex. These sections are of two kinds, with the type of space preceding them varying:

(1) a *parashah petuḥah* (open *parashah*) which starts at the beginning of a line, the preceding line being left partly or wholly blank (in some manuscripts and print editions this is indicated by פ);

(2) a *parashah setumah* (closed *parashah*) which begins at a point other than the start of a line, whether the preceding section ended in the preceding line (at its end or not) or whether it ends in the same one, in which case a space of approximately nine letters is left between the two sections (in some print editions this is noted by ס). This ancient division is attested to in the Babylonian Talmud (Shab. 103b): “a *parashah petuḥah* should not be made *setumah*, a *setumah* should not be made *petuḥah*.” *Sifra* to Lev. 1:1; 1:9 asks: “And what purpose did the פיסקות (sections) serve? To give Moses an interval to reflect between *parashah* and *parashah* and between issue and issue.” Despite their antiquity different traditions or customs developed on the matter of the *parashiyyot*, as to the placing and number of each type. In printed editions today there is a great degree of uniformity in the Torah due mainly to the halakhic fixing of this issue and that of the shape of the songs by Maimonides following *\*Ben-Asher* (Yad, *Sefer Torah* 8:4).

### 1.2.2. Irregularities in the Writing

Various irregularities in the actual shape of the writing are part of the copied text. These go back to early sources and are discussed here in their assumed chronological order.

1.2.2.1. EXTRAORDINARY POINTS. There are dots over 15 words in the Bible and sometimes also under them, one dot over each letter of the word or over some of the letters. The words are distributed as follows: ten in the Torah (in the

tenth place in the Torah, Deut. 29:28, the dots in most traditions cover 11 letters of three words – all but the last letter – לָנוּ וּלְבָנֵינוּ עַד, four in the Prophets, the dots being above in each case, and one word with a varying number of dots in the Hagiographa (לִי לֵא; Ps. 27: 13), where there are dots also beneath the word. There are different traditions on the details. (See the full lists in the *Masorah Magna* for Numbers 3:39, and in *Okhlah we-Okhlah* (ed. S. Frensdorff, 1864), §96, with the additional bibliography there.) These dots are a very ancient tradition, the evidence concerning some of them going back to the second century C.E.; see, for example, R. Yose in the Mishnah (Pes. 9:2) concerning the *he* with a dot, in the word רַחֲקָה (Num. 9:10). A comprehensive list of the location of these dots in the Torah is already found in *Sifre Numbers* chap. 69 (ed. Horovitz p. 64–65), R. \*Simeon bar Yoḥai being mentioned there; and further evidence is to be found in the Talmud and in the Midrashim. (The references were noted in the *Arukh ha-Shalem* under “*naqad*” and to these should be added Ber. 4a; Naz. 23a; Hor. 10b.) There have been various theories put forth concerning the origin and meaning of these dots (see L. Blau, *Masoretische Untersuchungen* (Strassburg, 1891), 6–40; *Zur Einleitung in die Heilige Schrift* (Budapest, 1894), 113–20; R. Butin, *The Ten Nequdoth of the Torah* (Baltimore, 1906, repr. New York, 1969); S. Lieberman, *Greek and Hellenism in Jewish Palestine* (Jerusalem 1962), 182–184). However, they do not belong to the system of vocalization and they also appear in Torah scrolls designated for public recitation.

1.2.2.2. “ISOLATED” LETTERS. The isolated letters (אותיות מנוזרות) are the nine signs which appear between verses – in the Torah before and after the section of יהי בנסע הארץ (Num. 10:35–36), and seven in Psalms, chapter 107 (there are differences of opinion as to their exact place and number.) Rather than being referred to by the name אותיות (letters), they are already called סימניות (signs) in a *baraita* (about the Torah – Shab. 115b: ARN 34, 4; about Psalms – RH 17b). Their form was not fixed in the ancient sources and the scribes were quite liberal in the manner in which they marked them. There is early evidence that these *simaniyyot* were nothing but simple dots. This is the impression given by *Sifre Numbers*, ch. 84 (ed. Horovitz, p. 80), already in the name of R. Simeon (second century C.E.). As time passed, these signs assumed various shapes and changed names accordingly. In tractate *Soferim* (prior to the eighth century) 6: 1, it is called, according to the version of various manuscripts, שיפור (horn) – perhaps the sign really resembled a *shofar*, “and it appears indeed in the section on travels (יהי בנסע) – or שיפור (spit), which is reminiscent of the sign of the ὀβελός (= spit). In *Diqduqe ha-Te’amim* (ch. 2) the term אותיות מנוזרות is found, and according to \*Dunash b. Labrat it is האותיות המנוזרים (*Teshuvot al Menaḥem*, ed. Filipowski, p. 6a). The term is neutral and does not indicate the shape of the sign, and according to the basic meaning of its root it refers to letters which are separated from the consonantal text. In the manuscripts the sign developed into the

shape of a reversed *nun*. It is not known whether all of it was reversed 𐤊 (see *Okhlah we-Okhlah*, §179), or only its top or bottom, and there was much confusion about it in the commentaries (see *Minḥat Shai* on Num. 10:35; *Naḥalat Ya’akov* on tractate *Soferim* 6:1). There were even those who wrote it into the text itself in the place of regular *nuns* of the text (see also Ginsburg, *The Massorah*, vol. 2, p. 259, §15a). Later the names of these signs, too, were interchanged with the name for the regular reversed *nun* (see below 1.2.2.5). Hence the *otiyot menuzzarot* became נזריות מנוזרות (see *Masorah Magna* to Ps. 107:23), which was explained, following גורו אחר, “they turned backward” (Isa. 1:4), to mean reversed *nun* (*Minḥat Shai* on Ps. 107:23), though there is no linguistic support for this interpretation. If the opinion already expressed in ancient sources regarding the signs in the Torah is generally accepted, that is, that the purpose of these signs is to separate the section “when the ark set forward” as if it were a book by itself, there is no similar consensus of opinion concerning the signs in Psalms (see S. Lieberman, *Greek and Hellenism in Jewish Palestine* (Jerusalem 1962), 178–181).

1.2.2.3. SUSPENDED LETTERS. There are four suspended letters אותיות תלויות in the Bible: the *nun* of מנשה (Judg. 18:30), and the *ayin* in the words מייער (Ps. 80: 14), רשעים (Job 38: 13), and מרשעים (Job 38:15). The tradition concerning them is quite ancient, going back to the third century C.E. (see \*Samuel b. Naḥman in TJ, Bet. 9:3, 13d: ARN 34, 4) and to later sources. In most instances midrashic explanations on these suspended letters are also mentioned.

1.2.2.4. LARGE AND SMALL LETTERS. The custom of writing some letters differently – smaller or larger than usual – never became halakhically fixed. Thus there are several discrepancies between the various manuscript texts of the Bible. Even the lists of the Masorah are not uniform: Ginsburg compared some ten different lists (*The Massorah*, vol. 4 (1905), 40–41). The number of large letters is greater than the number of small letters. One of the large letters is already indicated in the Talmud (Meg. 16b) in the name of R. Johanan (third century C.E.). In *Soferim* 9:1–7 at least four large letters and one small one are mentioned. Their number grew as time passed, but in the older manuscripts, such as those of \*Aleppo and Leningrad, there are still relatively few of these letters.

1.2.2.5. OTHER ODD LETTERS. For these there is generally no evidence in ancient sources. The Talmud (Kid. 66b) mentions in the name of R. Naḥman (third century C.E.) וי”ז קטיעה a *waw* with a crack in the middle, but it is not certain that they did not mean a *waw* which was cut short, that is, a small *waw*. Maimonides (Yad, Sefer Torah 7:8) lists “[and] odd letters like winding (לפופות) *pes*, and the crooked (עקומות) letters.” The *Masorah Parva* mentions a נון עקומה (“crooked *nun*”: ואני, Ex. 3:19), as well as נון הפוכה (“an inverted *nun*”; בחרן, Gen. 11:32), and קופין דבוקין (“attached *qufin*”: בקמיהם, Ex. 32:25; see also *Okhlah we-Okhlah*, §161). The *Masorah Marginalis* of the

Venice Bible (1525) states that the second lamed in the word עשויה כמגירה וזקופה ואין לה כובע בראשה (Num. 1: 22) “is shaped like a saw, stands upright, and has no cap on its head”). Seligman \*Baer described at length the shape of the various odd letters in his book *Tiqqun ha-Sofer we-ha-Qore* (Roedelheim (1875<sup>2</sup>), p. 18 of supplement).

### 1.3. ORAL TRANSMISSION

Apart from these matters which mainly are connected with the very writing of the Bible – and there could not be copying without their clear establishment – all of the other issues were originally part of oral transmission. The notes concerning the text of the Bible and the instructions for its proper pronunciation and its exact copying were handed down orally from generation to generation before they were set down in writing. It may be assumed that these notes were permitted to be written down and were actually committed to writing with the institution of the use of the codex among the Jews – apparently in the sixth or seventh century C.E. Therefore one must differentiate quite clearly between the oral Masorah which is endless and cannot be defined even though there are allusions to it and evidence thereof, and between the written Masorah whose notations were written in the margins of the codices and which is called simply “the Masorah.”

#### 1.3.1. Ancient Evidence

In addition to the main evidence offered by the very existence of the text which was passed down from father to son and from teacher to student, there is an explicit statement about the oral transmission in the name of R. Isaac (about the third generation of Palestinian *amoraim*, at the end of the 3<sup>rd</sup> century C.E.): “R. Isaac said, מקרא סופרים ועטור, סופרים וקריין ולא כתיבן ולא קריין were handed down as Law to Moses at Sinai” (Ned. 37b–38a). All the items listed there are thus considered as coming from a most ancient period, when it was not yet possible to list the items – there were neither signs to use (vocalization and accentuation) nor permission to write down such signs.

1.3.1.1. MIQRA’ SOFERIM. The saying of R. Isaac continues with an explanation: מקרא סופרים – ארץ שמים מצרים. Despite all the explanations which have been given to *miqra’ soferim* (see the comment attributed to Rashi which is probably that of \*Gershom b. Judah Me’or Ha-Golah and see R. Nissim ad. loc.), it seems that *miqra’* is to be taken in its literal meaning – the correct “reading” of the words as handed down by the scribes. The three words cited above are an example of the possibilities for various readings of words whose pronunciation can be known only by the transmitted reading of the *soferim*. Similar to this is the principle in the Talmud (Sanh. 4a and elsewhere) that the text as read (with vowels) is authoritative למקרא, that is, the accepted pronunciation is to be followed in establishing the meaning of the text (as opposed to למסורת, i.e., the consonantal text – the actual letters – is authoritative; see below).

1.3.1.2. ITTUR SOFERIM. The other items listed by R. Isaac are also a very ancient tradition which was not permitted to be written down and which was transmitted orally from generation to generation: *ittur soferim* are apparently omissions (עטר “to remove” in Aramaic; see *He-Arukh* s.v., quoting R. \*Hai b. Sherira, and additional explanations in *Minhat Shai* to Num. 12:14) of the conjunctive *waw* as evidenced by the examples which are listed there: אחר תעברי – עיטור סופרים (Gen. 18:5), אחר תלך (Gen. 24:55), אחר תאסף (Num. 31:2), אחר תאסף (Ps. 68:26), אחר תאסף (Ps. 36:7). Possibly other omissions are also to be included.

1.3.1.3. QERE WE-LA’ KETIV; KETIV WE-LA’ QERE. The last two items – words which are to be read although they are not written (*qaryan we-la’ ketivan*) and conversely, words which are not to be read although they are written (*ketivan we-la’ qaryan*) – issues which are discussed later on – are also an ancient tradition and could not be written down until long after the statements were made. They are listed thus: – קריין ולא כתיבן איש דכאשר ישאל איש בדבר האלהים (II Sam. 8:3); פרת דבלכתו (II Sam. 16:23); באים דנבנתה (Jer. 31:37); לה דפליטה (Jer. 50:29); אלי דהשעורים (Ruth 3:5); אלי דהגורן (Ruth 2:11); את דהגד הוגד (Ruth 3:17); וכתבן ולא קריין – נא דיסלח. הלין קריין ולא כתבן (II Kings 5:18); וזאת דהמצוה (Deut. 6:25); ידרך דהדורך (Jer. 51:3); הלין כתבן; אם דכי גואל (Ruth 3:12); חמש דפאת נגב (Ezek. 48:16); ולא קריין. This list in *Nedarim*, like the two which preceded it, is a sample and not complete. It is also not in complete agreement with the detailed lists of the Masorah for our texts. A correct list is found, for example, in *Okhlah we-Okhlah*, §97 and in it there are ten *qere we-la’ ketiv* (it does not include Ruth 2:11), and eight *ketiv we-la’ qere* (and it does not include Deut. 6:25).

1.3.1.4. QERE. Although ordinary *qere* notes were not explicitly mentioned in the Talmud, it is clear that they too are to be included in *miqra’ soferim*, and the tradition of the *qere*, that is, words which are to be read differently from the form in which they are written, is ancient and returns to oral transmission.

#### 1.3.2. The Verses

The above also applies to the division into verses. Here too we have an ancient tradition (so ancient that it is generally in agreement with the Samaritan reading) which was handed down orally. This antiquity is evident from the meaning of *miqra’ soferim* which really means the complete reading including the transmitted vocalization and the transmitted division. Undoubtedly the division of the text into minimal units – the verses, and even the division of every unit into its parts, the accents – is also part of correct transmitted division. This transmission, like all oral transmission, while it strives for great precision and generally achieves it, still contains some doubtful instances and contradictions between different transmissions which have to be decided.

There is evidence in talmudic literature for the existence of the tradition of division into verses, a division which was handed down orally and was not permitted to be marked in

the text. Evidence similarly exists about a tradition of internal verse division by accentuation and about differing traditions concerning both division of the text into verses and the division within verses and about reaching decisions concerning these differences.

One statement was repeated in three main versions as seen in the table below.

A comparison of sources in the rabbinic literature on ancient oral traditions regarding the biblical text: division into verses, vocalization, accentuations, etc.

Upon study one clearly sees the difference between the two Babylonian sources (vs. 1) and the two Palestinian sources, TJ and Gen. R. (vs. 2, 3). In the Babylonian sources there is no mention of הכרעים (“decisions”) or הכרעות וראיות (“decisions and proofs”) and there is a difference between the Babylonians and the Palestinians in the method of study and interpretation of ראשי פסוקים (ראשי) and טעמים (פסקי). Their common factor is that in all of them the verses, the accents, and the traditions (masorot) are linked to Ezra the Scribe, i.e., to a very early period.

Regarding the division into verses there is even earlier evidence, from the Mishna: “He that reads in the Torah may not read less than three verses (פסוקים); he may not read to the interpreter more than one verse (at a time), or, in the Prophets, three” (Meg. 4:4); and there is the statement in Kiddushin 30a, that derives from the period of the tannaim (Bacher, 92 ערכי מדרש), which lists, among other things, the middle verse of the Torah (והתגלה; Lev. 13:33).

There is evidence of some confusion as to the verse division in some sections: Rav. Joseph [third century C.E.] asks “to which half does והתגלה belong?” (the reference is to the word *we-hitgallah* which is considered to be the middle of the

Torah with regard to verses; does it belong to the first or the second half?). \*Abbaye answered him: “Verses can be counted” (in contrast to what was said before about *plene* and defective spelling, about which R. Joseph states that in Babylonia they are not experts in it and that it is therefore impossible to establish the number of the letters of the Bible). Rav Joseph replied: “We are also not expert in the division of verses, because when Rav Aha bar Ada came [to Babylonia], he said that in the West [i.e., Erez Israel] they divide this verse into three: And the Lord said to Moses: “Behold I come to you in a thick cloud” (Ex. 19:9)” (Kid. 30a). It follows, therefore, that the Babylonian scholars were also not expert in the division of the text into verses. It can be assumed that the Palestinians were more particular than the Babylonians in the transmission of the text of the Bible. Indeed, there are considerable differences between the number of verses recorded in the Talmud and our texts of the Bible. (See Kid. *ibid.*: The Rabbis taught: “there are 5,888 verses in the Torah” – according to the Masorah the number is 5,845.) For Psalms and Chronicles the numbers are completely different and there was, apparently an error somewhere. In any event, this statement is the primary source about the difference in the text between the Palestinians and the Babylonians.

The term ראשי פסוקים (“beginnings of the verses”) in contrast to פסוקים (“verses”) in the above quotation does not indicate a substantive difference between the two countries but is a terminological difference only. The division into verses requires the notation of either the beginnings or the ends of the verses and it makes no difference which. The term “beginnings of the verses” from the Palestinian sources has a continuation in additional, later Western sources, e.g., *Soferim* 3:7: “A book which he punctuated, wherein he marked the beginnings of

TB Megillah 3a and TB Nedarim 37b	TJ Megillah 4:1 (74d)	Genesis Rabbah 36
<p>אמר רב איקא בר אבין אמר רב חננאל אמר רב: מאי דכתיב (נחמיה ה, ח) ויקראו בספר תורת האלהים מפורש ושום שכל ויבינו במקרא. ויקראו בספר תורת האלהים – זה מקרא, מפורש – זה תרגום, ושום שכל – אלו הפסוקים, ויבינו במקרא – אלו פסקי טעמים, ואמרי לה: אילו המסורות.</p> <p>Rav Iqa bar Abin said in the name of Rav Hananel who spoke in the name of *Rav: What does it mean ‘And they read in the book of the Law of God, distinctly; and they gave the sense, and caused them to understand the reading’ (Neh. 8:8)? ‘And they read in the book of the Law of God,’ refers to מקרא (biblical text); ‘distinctly’ refers to תרגום ([Aramaic] ‘translation’); ‘and they gave the sense’ refers to הפסוקים (the verses); ‘and caused them to understand the reading’ refers to the פסקי טעמים (the division(s) of the accents); others however say that this refers to המסורת (the tradition(s)).</p>	<p>רבי זעורא בשם רב חננאל: ויקראו בספר תורת זה המקרא, מפורש זה תרגום, ושום שכל – אילו הטעמים, ויבינו במקרא – זה המסורת, ויש אומרים: אילו ההכרעים, ויש אומרים: אילו ראשי פסוקים.</p> <p>R. Ze’ora said in the name of R. Hananel: ‘and they read in the book of the Law of God’ refers to מקרא; ‘distinctly’ refers to תרגום; ‘and they gave the sense’ these are הטעמים (‘the accents’); ‘and caused them to understand the reading’ refers to המסורת (‘the tradition’), and some say to ההכרעים (‘the decisions’) and some say to the ראשי פסוקים (‘beginnings of the verses’).</p>	<p>רבי יודן אמר: מיכן לתרגום, ה”ה ויקראו בספר תורת האלהים – זה מקרא, מפורש – זה תרגום, ושום שכל – אילו הטעמים, ויבינו במקרא – אילו ראשי פסוקים. רבי חייא בן לולייני אמר: אילו תנאות [נ”א: ההכרעות והראיות]. רבן דקיסרי אמרי: מיכן למסורות.</p> <p>R. Yudan said: herefrom (is understood) the <i>targum</i>; ‘and they read in the book of the Law of God’ refers to מקרא; ‘distinctly’ refers to תרגום; ‘and they gave the sense’ these are הטעמים (‘the accents’), ‘and caused them to understand the reading’ refers to ראשי פסוקים (‘the beginnings of the verses’). R. Hiyya b. Luliyani said: these are the תנאות (another reading has ההכרעות והראיות). The rabbis of Caesarea said: herefrom (are understood) the מסורות (traditions).</p>

the verses, should not be (publicly) read.” Similarly *Diqduq ha-Te’amim*, chapter 10, has “the chapter of the beginnings of the verses.” In contrast there is an indication for the actual marking of the beginnings of the verses in Babylonia itself (of a later period, of course) as found in texts using the Babylonian vocalization system (see Kahle, M.d.O. text, 35a).

Differences with regard to the details of the verse division existed not only between the West and the East, but within the same tradition itself. Sometimes there are differences between the division into verses and the division into sections, which is older; the פסקא באמצע פסוק (“paragraphs [which end] within verses”) are evidence of that (e.g., Gen. 35:22; Num. 26:1 (some texts = 25:19), etc.). However, there are differences in detail between printed texts and manuscripts.

### 1.3.3. Accentuation

There is evidence for the antiquity of the accents earlier than the above mentioned source (1.3.2.) and again the reference is not to the written signs, which were set relatively later, but to the tradition of reading the verses with the necessary accents and pauses, which was passed from generation to generation. A teacher of children should not receive payment for teaching Torah, but he can take שכר פיסוק טעמים (“a fee for [teaching] accentual division”; Ned. 37a). Even here, as with all oral transmission, doubts developed concerning the parsing and the accentual division and it is possible that the word הכרעים (הכרעות, תנאות) refers to just that in the Palestinian version of the above-mentioned saying. Thus there are words in the biblical text whose syntactical adhesion is undecided; “Issi b. Judah said: there are five verses in the Torah the construction of which is uncertain: שאת (Gen. 4:7); משקדים (Ex. 25:34); מחר (Ex. 17:9); ארור (Gen. 49:7); וקם (Deut. 31:16)” (Yoma 52a/b). For similar doubts, see, for example, TJ, *Beṣah* 2:4 (61c) for 1 Chr. 29:21; Yoma 52a for 1 Kings 6:19; *Bava Meṣia* 58a for Lev. 5:21; *Bava Meṣia* 73b for Lev. 25:46. Most instructive is the question of R. \*Ḥisda (Hag. 6b; Yoma 52b): “Rav Ḥisda asked: How is this verse (Ex. 24:5) written? ‘And he sent the young men of the children of Israel and they offered burnt offerings,’ meaning sheep; ‘and they sacrificed peace offerings of oxen to the Lord’; or were both types of sacrifices of oxen? [i.e., does the word “oxen” refer to the second half of the verse only and thus the peace offerings were oxen but the burnt offerings were not, but sheep, or does the word “oxen” refer to all the verse and thus both the burnt offerings and the peace offerings were oxen?] What difference does it make (what they sacrificed on that occasion in the wilderness)? Mar \*Zutra said לפיסוק טעמים (the division of the accents [= punctuation]); i.e., this question has no practical relevance, other than for the issue of correct punctuation, that is, how one is to read the verse and where to pause in it.

This tradition of reading with stress and pauses involved the tune with which one should read the Bible. According to R. Johanan (Meg. 32a): “He who reads (קורא) without melody (נעימה) and studies (שונה) without a tune (זמרה) is referred to by the verse ‘And wherefore I gave them statutes which were

not good...’ (Ezek. 20:25).” This evidence of reading the Bible and the Mishnah (שונה) with a tune has an even more ancient basis, at least as far as the Bible is concerned. Thus the reason of R. Akiva for the custom of “Why do people not clean themselves with the right hand but rather with the left hand” is “Because one shows the תורה טעמי with it [the right hand]” (Ber. 62a). The טעמי תורה (“accents of the Torah”) which are shown by hand are the signs of conducting with the movements of the hand according to the tune, as attested to by Rashi (Ber. 62a): “*Taame Torah*: The tunes of the reading accents of the Pentateuch, the Prophets, and the Hagiographa, whether by signs in the book, whether by raising the voice, and with the notes of the melodies of the tune of *pashta’* and *darga’* and *shofar mahpakh*; he (the reader) moves his hand according to the melody; I have seen readers who come from the land of Israel do it.” This is, therefore, an ancient custom which was followed in Palestine still in the days of Rashi (the 11<sup>th</sup> century). There is also explicit evidence of the custom in *Maḥberet ha-Tijān* (J. Derenbourg, *Manuel du lecteur* (1871), p. 108): “And know that the grammarians have a hand movement for every accent in addition to the melody articulated by the mouth...” This custom continues among Yemenite Jews to this day.

During the entire period of the Talmud the accents had no written signs and it is generally accepted that the invention of the vocalization signs took place at the same time as the invention of accentuation signs. At the only place where סימני טעמים (“accent signs”) are mentioned in the Talmud (Eruv. 21b) the term is usually interpreted according to this assumption: “Rava explained: what is the meaning of ‘he also taught the people knowledge; yea, he pondered, and sought out and set in order many proverbs’ (Eccl. 12:9)? ‘He taught the people knowledge’ means he taught them with סימני טעמים (accent signs).” “Accent signs” are explained as not being necessarily written signs (see Rashi ad loc.). Yet, perhaps the term “accent signs” may be understood in its literal meaning? There is no clear evidence either way and it is not impossible. However, if it is to be understood as accent signs, one must date the invention of the accent signs to an earlier period – that of \*Rava, about the first half of the fourth century.

### 1.3.4. The Masorah

The Masorah referred to in the above sources (1.3.2) as *masoret* or *masorot* has already been discussed. Undoubtedly, it means the traditions concerned with the writing of the text with regard to plene and defective orthography. There is evidence in talmudic literature to this effect, such as the principle that יש אם למסורת (Sanh. 4a and elsewhere); that is, the spelling as handed down in the tradition (*masoret*) is decisive, i.e., the tradition of writing with or without the *matres lectionis* (as opposed to יש אם למקרא “the reading of the text is authoritative” – i.e., the common reading and pronunciation – see above). It seems that the statement of R. Akiva, מסורת סייג לתורה “*masoret* is a fence for the Torah” (Avot 3:13), also refers to the same thing, i.e., that the written text as handed down with all the details is a fence of defense for

the Torah. Even in this matter we learn of the precision of the Palestinians, as from the statement of R. Ishmael to R. Meir who was a scribe (Eruv. 13a): “Be careful in your work, for your work is the work of the heaven; lest by your omitting one letter or adding one letter the whole world be destroyed.” In contrast to this there is the lack of precision on the part of the Babylonians, as admitted by Rav Joseph, the Babylonian *amora* (Kid. 30a): “They [the Palestinians] are expert in חסרות ויתרות (= defective and plene spelling, *matres lectionis*); we are not expert.”

This is the source of the lists of differences between the Palestinians and the Babylonians – the differences between מערבאי (Westerners) and מדרבאי (Easterners) – which are mainly variants in spelling and in the manner of the writing (in one or two words). These lists, which include about 200 to 250 variances – there are differences between the various manuscripts as to number and detail – cover mostly the Prophets and the Hagiographa and less the Pentateuch.

The care about the orthography and the *matres lectionis* is the justification for the rule לַמְסוֹרֶת וְשֵׁי אֵם לְמִסוֹרֶת and opened the way for many homiletical interpretations based on the spelling of the letters (especially when it allows for a reading different from that of the traditional pronunciation). The largest collection of this type of interpretation is in “*Midrash Ḥaserot wi-Yerot*” (from the ninth or tenth century) which is devoted completely to it. Even earlier than this the sages had arranged lists for remembering words which are written with and without *matres lectionis*, e.g., *Soferim*, ch. 7. They are, in fact, the beginnings of the lists of the written Masorah which are based on the short and sketchy notes on peculiarities of spelling or form in the text, marked in the margins of the books. With that we come to the written Masorah.

## 2. THE MASORAH AND THE BEGINNINGS OF GRAMMAR

The purpose of the Masorah, whether it be oral or written, was clearly and undoubtedly the precise preservation of the holy text. This purpose was the primary thrust for the occupation with grammar after a period of many years. In this respect the development and growth of Hebrew grammar is different than that of other ancient grammars; although it was influenced by them – to a smaller or greater degree – it differs from them in its motivation and its beginnings.

### 2.1. GENERAL

Other peoples also came to occupy themselves systematically with language and grammar because of the need to preserve their holy texts: the Indians on the one hand and the Arabs, to some degree, on the other.

#### 2.1.1. The Indians

From the time the Indians felt that they were drawing further and further away from their ancient language, Sanskrit, the language of the Vedas, their holy writings, and that they were facing the danger of forgetting that language and that thus the

holy writings were liable to be forgotten or – at least – to be corrupted, they turned to the study of the ancient language as a means for preserving the holy writings. Their approach was analytical (the word “grammar” in Sanskrit is *wyākaraṇa* = analysis) and they analyzed the holy text into small units in order to recognize each unit and to write it down so that it would not be forgotten. This is actually a descriptive method which establishes the minimal units – mainly morphological and phonological – and lists them in all their details. The inventory lists of Sanskrit are in fact the perfect means for realizing the goal which the Indian grammarians had set for themselves, the preservation of their holy texts in the ancient, original language.

The greatest Indian grammarian of the ancient period was Panini, whose descriptive grammar became known in Europe only in the 19<sup>th</sup> century and greatly influenced modern linguistics and the structural-descriptive school. However, Panini lived in the fourth century B.C.E., and he certainly had no influence on the Hebrew Masorah. The aim was the same – preservation of texts – and such an aim does not stem from foreign influence but is an internal, original need. The means, therefore, for achieving this goal would be completely different in each case.

#### 2.1.2. The Arabs

While the Arabs are much closer to the Jews, both geographically and chronologically, their principal motive was the need to preserve the language, and not particularly their holy writings. The territorial expansion of the Arabs and the consequent dominance of Arabic in all the area of their empire exposed the language to the penetration of foreign influences from the languages of the conquered peoples. The purity and clarity of Arabic was in danger and a call went out in the first years after the Islamic conquests – it mentions the name of the fourth caliph, Ali – to make efforts to maintain its purity (*luḡa faṣīḥa*). The first Arabic grammarians set the rules of the language on the basis of the language of their ancient poets and the Koran. The religious power of the Koran, which is written in the dialect of the Quraysh tribe, the tribe of the prophet, and its distribution among the believers made its language – with all the adjustments made in it – into the model Arabic language. Thus the preservation of the language of the holy writings was not the main purpose of the grammarians, but rather the preservation of the purity of Arabic against foreign influences of non-Arabs who adopted Arabic as their language and spoke it. Due to the status of the Koran in Islam, knowledge of the Arabic language and grammar became a religious science, one of whose purposes was also the correct interpretation of the Koran and the other holy writs (the \*Hadith).

At this point the aims of Hebrew and Arabic grammar have become identical, but the beginnings are completely different, both as far as motivation and early methodology are concerned. The oral Masorah for the preservation of the text of the Hebrew Bible was a living study for the Jews for hundreds of years before their contact with Islam and before the

necessity for dealing with the language systematically was felt. However, the situation is analogous to some degree. In the same way that the Arabs came to study the language because of an internal, practical need, yet drew the methodological tools from outside, mainly from Greek language science, the Jews came to deal with language – with the Masorah – from an internal, practical need, and in that they preceded the Arabs. However, they also took the methodological tools for the development of grammar as a science at a later period from outside, mainly from the Arabic grammar.

### 2.1.3. The Syrians

Alongside these two peoples, the Indians and the Arabs, among whom the science of language developed, mention must be made of the Syrians, who were not very original in their treatment of language but who do have a point in common with the Jews. The Syrians were influenced both by the Arabs and by the Greeks. Next to the Indians, the Greeks are in reality the originators of the science of language, without any connection to a holy text but from a philosophical approach to literature and speech. The first grammatical works of the Syrians are translations from the Greek, yet for all the lack of originality in Syrian literature, including grammar books – and perhaps because of it – a need was felt for preserving the text of the holy writings, the Peshitta, in all details concerning its reading and pronunciation. This aim became intensified all the more when Syriac ceased to be a spoken language and, later, even a literary medium. In this it has something in common with Hebrew, and there are several points of contact between the Syrian Masorah and the Hebrew written Masorah. Like Hebrew, Syriac developed a system, or a set of systems, of dots and other signs to mark vowels, accents, and other diacritical marks. These systems became more and more sophisticated as time passed. One of the challenges of research into the Masorah has been the establishment of the relationship between the two traditions, the Hebrew and the Syrian, i.e., which is the original and influenced the other, and which came later and imitated the other. This applies to the method of notation, to the signs themselves and to the terminology. This question cannot be decided unequivocally, but in any case, it is clear that the beginning of the Hebrew Masorah – that oral system which is as ancient as the public reading of the text of the Bible and which was finally written down – undoubtedly precedes the Syrian Masorah, for the translation of the Peshitta is relatively late. The fact that Syriac manuscripts with diacritical marks from the fifth century have been found and that they therefore precede the dated Hebrew manuscripts which have vocalization and accentuation signs by about 300 years cannot affect this basic consideration.

## 2.2. AMONG THE JEWS

### 2.2.1. The Codex

When did the Masorah begin to be committed to writing? Since we do not have ancient dated manuscripts, one must accept external proofs. As already stated, the prerequisite for writing the Masorah systematically was the institution of a

change in the means of writing and the abandonment of the common use of the scroll. The codex is a more sophisticated form for writing than the scroll; it consists of units of leaves of parchment or paper which are placed – bound – between two plates of wood. Every unit had a number of sheets, most often apparently five (hence the Hebrew word קוֹנְטֵרֵס, *qunteres* (= *quinternus*)). The codex was already in use by the Romans in the fourth century C.E. and perhaps earlier. It is first mentioned in Jewish literature in the *Halakhot Gedolot*, that is, in the eighth century and at the latest in the first half of the ninth century, by the name מִיִּצְחָף (*mizḥaf*) which is borrowed from the Arabic *muṣḥaf*. A codex is not valid for the public ritual reading of the Torah, and it has wide margins where different notes could be marked.

### 2.2.2. Dating

Despite the fact that actual evidence for the conditions necessary for the writing down of the Masorah is rather late, there is clear evidence from other sources that the Masorah was committed to writing prior to the eighth century. This evidence can be considered reliable in the light of the fact that scrolls which were invalid for ritual reading also served, as it seems, for the noting of Masorah. Scrolls of this type were also found in the Cairo \*Genizah. The evidence points to a period of 200 years within which vocalization and accentuation signs were initiated: not before the sixth century nor later than the seventh.

The *terminus a quo* is based on a number of facts:

(1) Jerome (end of the fourth century-beginning of the fifth) states explicitly (in his commentary on the Bible) that the Jews did not have signs to note the vowels (he does not speak of accents).

(2) In the Jerusalem Talmud (which was completed in the first half of the fifth century) and in the Babylonian Talmud (which was completed at the end of the fifth century) there is no mention of vowel and accentuation signs; similarly there is no mention of them in the earliest Midrashim. This evidence of silence is undisputed, especially in the light of interpretations like that in *Song of Songs Rabbah* on the sentence (Songs 1:11) תוֹרֵי זָהָב נַעֲשֶׂה לָךְ עִם נִקְדוֹת הַכֶּסֶף “We will make thee circlets of gold (תוֹרֵי זָהָב) with studs (*nequddot*) of silver (נִקְדוֹת הַכֶּסֶף): ‘With studs of silver’ – R. \*Abba b. Kahana said these are the letters. R. \*Aḥa said these are the words. Another interpretation: ‘We will make thee circlets of gold’ means the writing; ‘with studs of silver’ means the stylus lines (drawn on the parchment).” In this context a homiletic interpretation of נִקְדוֹת to signify vowel points is obviously called for, yet none is found. Evidence from late Midrashim is obviously not reliable; for example in *Exodus Rabbah*, ch. 2:6 (to Ex. 3:4) פֶּסֶק (*paseq*) is actually mentioned, but this Midrash is later than the tenth century. It follows, therefore, that the use of the vowel and accentuation signs was not instituted before the sixth century.

The *terminus ad quem* is established by a number of indirect proofs:

(1) Phinehas Rosh ha-Yeshivah is one of the early masoretes about whose work in Masorah and vocalization there is definite knowledge, and he lived in the first half of the ninth century at the latest. This suggests that vocalization and accentuation signs were already in use before then.

(2) Asher b. Nehemiah (the grandfather of Aaron Ben-Asher) lived apparently at the same time as Phinehas, and his grandfather Asher was the “great elder,” the founder of the dynasty of famous masoretes who dealt with vocalization and accentuation signs like his descendants. This Asher the Elder must have lived in the second half of the eighth century at the latest, which means that the vowel and accentuation signs were fixed before that time.

(3) In the ninth century there was already no definite knowledge as to who invented the vowel and accentuation signs, and so we hear from Natronai Gaon of Babylonia (d. 858) in his prayer book, *Me'ah Berakhot*: “The vowel signs (*niqqud*) were not given at Sinai but the sages marked them for signs.” Thus in the first half of the ninth century, although vowel and accent signs were known and accepted, the inventors were already unknown. It can be assumed therefore that the institution of their use preceded that time by several centuries. In the eighth century there were sages dealing with punctuation (see above); the latest possible time for the first use of vocalization and accentuation signs is therefore the seventh century.

### 2.2.3. The Invention of Punctuation

Today there is general agreement as to when the use of punctuation (including accentuation signs) was begun, but this was not always so. All scholars agreed that the tradition of pronunciation and the tradition of reading with pauses and melody are ancient, and that (without going into any detailed explanation of the phrase “law handed down to Moses at Sinai”) they were handed down by the earliest sages. An allusion to this is the talmudic expression *miqra' soferim* (see above 1.3.1.1.), which is also considered as law handed down to Moses at Sinai.

### 2.2.4. Karaites and Rabbanites

There was, however, a difference of opinion with regard to the graphic signs, a point which was part of the general controversy between the \*Karaites and the \*Rabbanites. The Karaites, who did not accept the Oral Law as binding and whose whole heritage stems from the Bible as it stands (*תפישו באוריתא שפיר*), naturally considered the text of the Bible holy in its entirety – including every detail of vocalization and accentuation. The Karaite view found its most complete expression in Judah \*Hadassi's book *Eshkol ha-Kofer* (written in 1149): “And the Torah scrolls should be pointed with vowels and accents... for without vowels and accents God did not give them... for the writing of our God was ‘graven upon the tablets’ (Ex. 32: 16) so was their writing full with vowel and accent signs and not lacking in vowel and accent signs” (Judah b. Elijah Hadassi. *Eshkol ha-Kofer* (1836, repr. 1969), 70a).

But the Rabbanites considered only the consonantal text to be holy, and the inclusion of vowel and accent signs makes a scroll invalid for public ritual reading. Therefore, as far as they are concerned the signs are late. This view is expressed in the statement of Natronai Gaon, “the vowel signs were not given at Sinai but the sages marked them by signs.” A fuller statement is that of Simḥah b. Samuel of Vitry, France, a disciple of Rashi, in his *Mahzor Vitry* (written about 1100): “for the descriptions of the melodies were said to Moses: which tears out (*תולש*), stands straight (*זוקף*), sits (*יושב*), stands (*עומד*), goes up (*עולה*), goes down (*יורד*), and leans (*מונח*) [referring to accent names]; but the signs of the melodies (= accents) were set by the *soferim*” (ed. by S. Hurowitz (Nuremberg, 1923), p. 462).

However, the Rabbanites were not unanimous; some shared the Karaite view, others thought that the punctuation signs were ancient and if Moses did not receive them at Sinai, at least it was Ezra the Scribe who set them. The matter was explicitly decided by Abraham \*Ibn Ezra in *Sefer Zahot* (ed. Lippmann, p. 7a): “Thus is the custom of the Tiberian sages, and they are the source, for from them came the masoretes and we received all the punctuation from them.” The whole question was again clarified by R. Elijah Baḥur \*Levita in *Masoret ha-Masoret* in the third introduction (ed. Ginsburg, p. 121–31). Following them, it was generally accepted – with the exception of a few dissenters (J. Bachrach, *Ishtadalut im Shedal*, Warsaw, 1896–97) – that the vocalization and accentuation signs were invented by the masoretes.

## 3. THE WRITTEN MASORAH

The written Masorah can be divided into categories:

(1) the masoretic notes in the margins of the text and the longer lists which accompany the text or are appended to it – the *Masorah* in the narrow sense;

(2) the graphemes which, by their very nature, are of two types: (a) the vocalization signs; (b) the accentuation signs.

As far as chronology is concerned, it is difficult to differentiate between the two main categories and particularly between the two types of graphemes. It can be assumed that once it was permitted to write on the manuscript of the text itself, signs were permitted to be used. However, for reasons of convenience, we shall treat them here in three separate paragraphs.

### 3.1. THE MASORAH (NARROW SENSE)

#### 3.1.1. The Term

The early sages explained the term as deriving from *מסר* (“to hand over”), i.e., something which was handed down from generation to generation: the text of the Bible which is precisely transmitted (as stated e.g. by Elijah Levita at the beginning of his third introd. to *Masoret ha-Masoret*; ed. Ginsburg, 102–3). Others explained the term and the related one *מסרת* as derived from the root *אסר* (“to bind”; cf. commentaries to Ezek. 20:37, \*מַאֲסֵרֶת > מִסְרֵת), that is, something which

is bound and gathered: the detailed instructions for reading joined together to the text (thus Bacher and Levias). Most convincing is the explanation of S.D. \*Luzzatto, who proves that *מסורת* and *סימן* (“sign”) are synonyms, arrived at by extended meaning. At first they said “he handed (*מסר*) a sign (*סימן*) to them” and later the sign which was transmitted was called *masoret*. The expression *מסורת סייג לתורה* (“*masoret* is a fence for the Torah”) thus means that the devices concerning the writing with and without *matres lectionis* (and also those for the talmudic laws) are a fence – an aid – for remembering the Torah. The expression *יש אם למסורת* (see above, 1.3.4.) is also nicely explained according to this, i.e., that the written sign or the letter is authoritative.

Z. Ben-Hayyim has suggested a new explanation which seems plausible. He has demonstrated that the verb *מסר* can also mean “to count” (*ספר*) both in Hebrew and in Samaritan Aramaic. Indeed, counting was a large part of the work of the masoretes, according to the Talmud (Kid. 30a): “Therefore the early sages were called *soferim* for they counted (*היו סופרים*) all the letters of the Torah...” In the period following the Talmud the term “*sofer*” more and more came to refer to a skilled scribe and copyist of the Bible, while the wisdom required in the work and the understanding and exact knowledge of the text needed a special name, and for that a noun from the root *מסר* synonymous to *ספר* began to be used, i.e., *מסורה*, *masorah* (and this without detracting from the older meaning of *masoret* = sign). The form *מסורה* which is found in a poem of Hai Gaon (d. 1038) is from Palestinian Aramaic where it serves as a participle, that is in Hebrew *מוסרת* (“counting”), and it is this name which fits the skill of noting the peculiar details in the biblical text. This form was even translated correctly in various participial forms in Hebrew *מוסרה*, *מסרה* (these two in the plural in the Leningrad Codex of 1009) and in Arabic *māsira* (*Kitāb jāmi‘ al’alfāz* by David b. Abraham Alfāsī in the tenth century). From then on the verb is used in the basic conjugation, *qal*, *מסר* (in the colophon to the Aleppo Codex and in manuscripts of the second collection of Firkovich in St. Petersburg: no. 9 – the beginning of the tenth century; no. 39 – from the year 989; and no. 144 from the year 1122) and in the *pe’el* conjugation (in a manuscript in the same collection: no. 17 – from the year 930) with the meaning “to write Masorah.”

### 3.1.2. Definition and Scope

In the Masorah (in the narrow sense) everything that is written outside of the biblical text, but accompanies it, is included. This is even stated in one of the oldest chapters which describe the Masorah, “and he commanded to write one outside (*מבחוץ*) and one inside” (*Dikduke ha-Te’amim*, ed. Baer-Strack §8, and cf. §63, and *Mahberet ha-Tijān* ed. D. Derenbourg, 127, 129–31), and it seems that the term *החיצונים* (“the external ones” – *Dikduke ha-Te’amim*, ed. Dotan, ch. 2) includes all the notes listed outside of the text. These notes vary in their degree of importance to the text, antiquity, trustworthiness, and degree of agreement in various manuscripts. It is therefore convenient to follow here an external-technical division

of these notes and not one based on their nature. The modern commonly accepted technical division is the following:

(1) *Masorah Parva* (Small Masorah);

(2) *Masorah Magna* (Great Masorah) which is further divided into: (a) Marginal Masorah and (b) Final Masorah (written at the end of the text).

## 3.2. THE MASORAH PARVA (QETANNA)

The notes of the *Masorah Parva* are expressed in extreme brevity and generally by abbreviations. These notes are listed in the manuscripts at the margins of the biblical text, mostly at the right or left. There is a small circle (or star) in the text over the word to which the note of the Masorah is directed. In the fragments of the Bible with Babylonian punctuation, the *Masorah Parva* is sometimes written in small letters between the lines of the text, each comment above the word to which it refers.

### 3.2.1. The Qere and Ketiv

The most important notes in the *Masorah Parva* for the purpose of the reading are those of *qere* (including *qere we-la’ ketiv* and *ketiv we-la’ qere*, “read although not written,” and “written but not read,” respectively; see above, 1.3.1.3.). Initially all the notes were written together, but in a few manuscripts and especially in printed editions, the notes concerning *qere* were emphasized more than the others.

3.2.1.1. METHODS OF NOTATION. *Qere* קרי (the passive participle in Aramaic = the read [Hebrew אקרוא]) means the form of the word as it should be read – ignoring the written letters. The vocalization and the accentuation signs which are diacritical marks for correct reading are adjusted, therefore, only to the form which is read and not to the written form. Yet there is an ancient custom, which was followed in most of the printed editions, to write the vowel and accent marks of the *qere* upon the skeleton of the letters of the *ketiv* קתיב (= the written) and to write the consonantal skeleton of the form which is read without its vocalization and accentuation signs as a masoretic note in the margin: for instance, inside the text (Josh. 20: 8) גלון and in the margin: גולן (= קרי = “read”); inside the text (Isa. 36:12) שנינהם and in the margin קרי רגליהם קרי. When the change involves only one or two letters sometimes only this difference is shown, e.g., לְכַשְׁדֵּיָא (Dan. 2:5) and in the margin: לְכַשְׁדֵּיָא (= קרי = “read”).

3.2.1.2. THE DEVELOPMENT. The older method of marking the *qere* was to note in the margin, or in the Babylonian system to mark sometimes between the lines, only that portion of the word in which there is a change. This method is quite frequently used in the Palestinian system. The full word containing the variant reading is found in relatively later texts.

3.2.1.3. THE SYMBOLS. There is noticeable development also in the manner of notation. In the earliest stage only the letter which was different was noted in the margins (when the *qere* indicated a change in letter), such as in the Palestinian vo-

calization אַעבֹרֵד (Jer. 2:20), and in the margin ךֿ (that is, *qere*: אַעבֹרֵד). In the course of the development there was noted alongside the form of the *qere* in the margins – in all the vocalization systems – a sign resembling a final ךֿ or a ךֿ whose meaning has not been explained. It has been suggested that if it is a *nun* it refers to the word קִרְן (in Aram. “they are reading”), or it is an abbreviation of נִוּסָהָא (“version”). If it is the letter *zayin* it may refer, as Yeivin suggested, to the Greek term זִיטִימָא (= ζήτημα = “the sought for, the desired [reading],” a term found once in an ancient masoretic list (Ginsburg, *Masorah*, 3, p. 278; *Diqduqe ha-Te’amim*, ed. Dotan, p. 73) not exactly in the sense of *qere*. There is, however, no proof for these suggestions since the full word is never found instead of the symbol in a *qere* note. It seems that it is nothing more than a sign which was generally agreed upon and not a letter of the alphabet (cf. another sign of the Masorah, which came to resemble a reversed *nun* – see above 1.2.2.2.).

As time passed קִרְי or its abbreviation קִ (was written in addition to this sign alongside or under the *qere* version. In Babylonian manuscripts קִרְן (“reading”) is also found written out. In these texts the sign כֶּתִיב (“*ktiv*”) too is occasionally found written over the forms of the *ktiv* which are in the text itself. Another notation found in a few manuscripts and used in each of the punctuation systems to note the *qere* where one letter in the *ktiv* form is extra, is יִתִּיר, for example, אֲנִישָׁא (Dan. 4:14) in the margin: יִתִּיר וְ. A note of this type also may, sometimes does denote a spelling with *matres lectionis*, such as הֶקֶים (Dan. 3:5, 7) in the margin: יִתִּיר וְ; also עֲלִינָא (Ezra 4:18) in the margin: יִתִּיר וְ.

3.2.1.4. VOCALIZATION OF THE QERE. In the manuscripts there are different methods for attaching the vocalization of the *qere* to the skeleton of the letters of the *ktiv*. In some the order of the vowels as they should be is retained and no attention is paid to the letters such as וּמְבַלְהִים (Ezra 4:4) *qere* וּמְבַלְהִים; in others each vowel is attached to its proper letter according to the *qere* and thus the order of the vowels is distorted: וּמְבַלְהִים. This, however, does not happen in every instance. Sometimes there is inconsistency within the same manuscript.

3.2.1.5. QERE WE-LA’ KETIV (READ AND NOT WRITTEN). The *qere we-la’ ktiv* notations indicate the reading of a word which is not in the written text. In the space in the text where the word is to be read, its vowels and accentuation signs are generally written in (although sometimes they are not marked at all). In some manuscripts the word *qere* alone is written outside of the text.

3.2.1.6. KETIV WE-LA’ QERE (WRITTEN AND NOT READ). The *ktiv we-la’ qere* notations are those which direct the reader not to read a word which is written in the text, and thus it appears in the text without vowels or accentuation signs. In this case too there are instances where the phrase לא קִרְי alone is noted. This term or its abbreviation, לֶקֶ, may also refer to individual letters; in other words it is an abbreviated method

for noting a *qere* form which differs from the *ktiv* only in the omission of letters, for example, אֲרִתְהִשְׁסָתָא and in the margin: אֶלֶק (Ezra 8:1, Leningrad Ms.) that is, לא קִרְי (= aleph not read), namely, read אֲרִתְהִשְׁסָתָא.

3.2.1.7. THE SCOPE OF QERE. There are differences between manuscripts and between printed editions with regard to the number of *qere* notations; some versions mark the *qere* very frequently while others do so rarely. This refers of course to those instances where the remark concerning *qere* is not required and the reading can be understood without it, especially when the difference is with quiescent letters, like כְּנֹ (Deut. 33:9); הַמִּוֹרָאִים (11 Sam. 11:24), etc. Some manuscripts note *qere* for these and some merely have a masoretic note, חָסֵר (*haser*), מַלְא (*male’*), or יִתִּיר (*yattir*), etc. Some make no comment at all. Thus there is no fixed number of *qere* notations in the Bible. Elijah Levita, for example, counts 848 cases (*Masoret ha-Masoret*, the third introduction, ed. Ginsburg, p. 115), and he is not a maximalist.

### 3.2.2. Types of Qere

Essentially there are four or five main types of *qere* notations in addition to *qere we-la’ ktiv*, which are really words omitted from the text, and in addition to *ktiv we-la’ qere*, which is actually not a *qere* but a *la’ qere* instruction (“not read”).

3.2.2.1. EUPHEMISMS. Strong language is changed to euphemisms. This is a substitution which dates back to the time when Hebrew was a spoken and understood language. Evidence for this type of change is already found in the Tosefta (Meg. 4:39–41): “Every derogatory written expression is replaced by one of refinement, e.g., ‘Thou shalt betroth a wife and another man shall ravish her (ישגלנה)’ (Deut. 28:30): every place where ישגלנה is written, they read ישכבנה (shall lie with her); ‘with the boil of Egypt, and (בעפלים) [unknown disease]’ (Deut. 28:27); every place where בעפלים is written, they read it as בטחורים... (with the hemorrhoids).” Cf. a better version in Meg. 25b.

3.2.2.2. CORRECTION OF FORMS. Archaic forms or grammatically exceptional forms are substituted by a standard one, e.g., the suffix of the second person feminine – קראתי > קראת (Jer. 3:4); לכי > לך (11 Kings 4:2); בניכי > ובניך (11 Kings 4:7), and, e.g., the suffix of the verb in the perfect, plural third person feminine נצתו > נצתה (Jer. 2:15), etc.

3.2.2.3. CORRECTION OF ERRORS. Errors, or what appeared to the masorettes to be errors, are corrected. These are likely to be of various types, as metathesis, substitution of letters, the omission or addition of letters, changes in the division of the words, the substitution of whole words, and so on, such as ותראנה < ותראנה (1 Sam. 14:27); יך < יך (1 Sam. 4:13); ויעש < ויעש (1 Sam. 14:32); הזאתה < הזאתה (Jer. 26:6); השלל < השלל (Sam. 14:32); שם הפלשתים < שמה פלשתים (11 Sam. 21:12); העיר < העיר (11 Kings 20:4) and so on.

3.2.2.4. MALE’ AND HASER (PLENE AND DEFECTIVE). Changes in the spelling because of *matres lectionis*. It is with

regard to this group that variants in the different manuscripts are the most frequent. Some manuscripts note them as a version of *qere*, whereas others ignore them, because it is possible to read the *ketiv* with the vowels of the *qere* and not make an error (for examples see above, 3.2.1.7.).

3.2.2.5. QERE PERPETUUM. In addition to the above types of *qere* there are others which are not noted at all, the *qere perpetuum*. These were handed down orally from generation to generation and one must observe them even though there is no *qere* notation concerning them. In these instances the vocalization of the *qere* is attached to the *ketiv*. Among there are the name of God, which is read differently from the way in which it is written; in the Torah the feminine third personal pronoun is הוּא (except for 11 places where it is היא) is written in the Torah without the *he* (except for one place, Deut. 22:19); the name of the city Jerusalem is written without the second *yod* (except in five places) but it is always read ירוּשָׁלַיִם; the name יששכר is always read יִשְׁשַׁכָּר (Issachar) – at least in the Ben-Asher version – see below). Some have suggested to consider other forms as examples of *qere perpetuum*, for example, שְׁתִּים, שְׁנִים which are supposed to be שְׁתֵּי, שְׁנֵי, (see \*Gesenius §17c, 97d), but there is no evidence for this.

### 3.2.3. The Masoretic Notes

The other notes of the *Masorah Parva* point out forms in the text concerning which there is some apprehension that the reader or the scribe-copyist will err, that is, spelling with or without the *matres lectionis* (plene or defective), certain vowels or accentuation signs, certain grammatical forms, the joining of certain particles, the unusual combination of words, and so on. In most of the masoretic notes the view is descriptive-comparative and not normative. In general the question is not what is the standard form and does the item in question deviate from it, but rather what is the common form and is the item in question different from the common form – whether or not it be standard or exceptional itself – and does the item belong to the majority or the minority. This last principle necessitates the constant enumeration of the forms in the various divisions of the text (in the entire Bible, in one of the three parts of the Bible, in a book, or even in a specific section), and reference to this number.

3.2.3.1. TERMINOLOGY. Below is a list of the common terms in the Masorah and their usual abbreviations. From the definitions and examples the nature of the notes of the *Masorah Parva* will become clear. It is to be noted that most of the terms of the Masorah are Aramaic, which in fact is itself an indication of the time of the creation of this terminology: לֵּ = לִיתָא, לִיתָא (‘‘there is none [like it]’’): בְּצִלְמוֹ (Gen. 1:27), לֵּ (the word in this form does not occur again in the Bible); גְּ, דְ, etc., ‘‘enumeration’’: וְשִׁמְיָם (Gen. 2:4), וְ (this word with the conjunctive *waw* occurs four times in the Bible); מִלָּא = מִלָּא, מִלָּ (‘‘plene,’’ i.e., with *matres lectionis*): בְּעֶצְבוֹן (Gen. 3:17), לֵּ וּמִלָּ (= לִיתָא ומִלָּא), the word does not occur again in the Bible and here it is written with the *waw*: בְּ מִלָּא דְמִלָּא (= בְּ מִלָּא דְמִלָּא, תּוֹלְדוֹת (Gen. 2:4),

this word is found twice in the Bible with two *waws*); תִּירִי (‘‘plene’’; see above, 3.2.1.3.): וּמִהָקִים (Dan. 2:21), לֵּ וְיִתִירִי (the word does not occur again and here it is written with *yod*); חֶסֶר = חֶסֶר (defective, ‘‘deficient,’’ i.e., without *matres lectionis*): גְּהִנֵּךְ (Gen. 3:14), לֵּ וְחֶסֶר (occurs only here and written without *waw*); רִישׁ פֶּסוּקָא or רִישׁ פֶּסוּקָא = רִישׁ (the beginning of a verse); אֶל-הָאֵשָׁה (Gen. 3:16), לֵּ וְרִפֵּ (this combination appears nowhere else at the beginning of a verse); דְסָמִיכִי = דְסָמִיכִי, דְסִיכִי (these two words are found together 10 times); חֵיתָא = חֵיתָא (Gen. 1:25), דְסִיכִי (these two words are found together 10 times); בְּתוֹרָה = בְּתוֹרָה (in the Torah) (Gen. 2:20), טִ מִלָּאִי בְּתוֹרָה (this word is written in the Torah nine times with the *waw*); אֲוִרִיתָא = אֲוִרִיתָא (Aramaic for Torah); וְשִׁמְנָה (Gen. 5:7), חֶסֶר (without the *waw* throughout the whole Torah); בְּסִפְרָא = בְּסִפְרָא, בְּסִי (in this book of the Bible); בְּבִסְפֵּי (occurs twice in the Book of Genesis); בְּנִבְיָאִים or בְּנִבְיָאִי = בְּנִבְיָאִי (in the Prophets); יִ מִלָּאִי בְּנִבְיָאִי (occurs 10 times in the Prophets with the second *waw*); בְּכַתְּוִבִיבִי or בְּכַתְּוִבִיבִי = בְּכַתְּוִבִיבִי (in the Hagiographa); הָלוֹא (Ruth 2:8), מִלָּאִי בְּכַתְּוִבִיבִי (nine times with *waw* in the Hagiographa); בְּעִנֵּי, בְּעִנֵּי (in this context); זִ בְּעִנֵּי (Gen. 5:8) (this combination occurs seven times in this section, i.e., in the section of the generations from Adam to Noah. In contrast, וְיָהִי כְלִי-יָמֵי occurs there three times); בְּלִישְׁנָא = בְּלִישׁ, בְּלִישׁ (in the language, i.e., 1. root, basic form; 2. meaning):

1. הִ מִלָּאִי בְּלִישׁ (Gen. 21:7) (there are five words from the same root written with two *yods*). This is the only occurrence of this form, but there are four others from the same root יָנַק which are written with two *yods*: מִיָּנִיקוֹת (Gen. 32:16), לְהִיָּנִיק (1 Kings 3:21), מִיָּנִיקוֹתֶיךָ (Isa. 49:23), וְיָנִיקוֹ (Lam. 4:3), and see *Minhat Shai* to Ex. 2:9.

2. וְיָגֵל (Gen. 29:10), בְּ בְתָרִי לִישׁ (the word occurs twice in this form, with two meanings. Here it means ‘‘and he rolled’’ – the *hif'il* of גָּלַל; in Ps. 16:9 it means ‘‘and he rejoiced’’ the *qal* of גָּלַל). בְּטַעַמָּא = בְּטַעַמָּא, בְּטַעַמָּא (with the accent): וְיָאֲמָר (Gen. 22:2), יִיִד בְּטַעַמָּא (this word occurs 14 times with this accent).

In addition to this group of terms there are also basic grammatical expressions: דָּגֶשׁ (*dageš*) and רַפֵּי (*rafēh*), מִלְרַע (*millerā'*) and מִלְרַעִיל (*mille'el*) and זָכָר (masculine) and נְקִבָּה (*feminine*), קָמֶץ (*qames*) and פַּתָּח (*pataḥ*), and the names of the other vowels and accentuation signs. For a more comprehensive list of terms see Yeivin, *Introduction to the Tiberian Masorah*, pp. 80–120.

### 3.2.4. The Babylonian Masorah

The *Masorah Parva* and the *Masorah Magna* are appended also to texts of the Babylonian system (see 5.2.). They are slightly different from the Tiberian system (see above), but the main difference is in the very paucity of masoretic notes – for most of the parts of the Bible there is no Masorah or there is very little – and in their terminology.

3.2.4.1. TERMINOLOGY. Some of the terms are the same in the two systems; the following are the most important terms which are unique to the Babylonian Masorah: דְקָרָן = דְקָרָן (Aram. ‘‘which is read’’) = in most cases equal to Tiberian

ל', בעל' = בעלמא (in the whole Bible [opposed to a part of it]; there is no exact parallel for it in the Tiberian system); 'של = שלמא, ("complete") = Tiberian מל' (a Babylonian term found in some Tiberian Mss., especially the earliest ones, e.g., British Library, Or. 4445). The Babylonian system is particularly different in that there is almost no counting of words in it except for that implied by the terms דק'.

Some grammatical terms are named differently, such as the following names of vowels: מיצ' פומא = מיצ' פומא, (Aram. "contraction of the mouth") = *qames*; מיקפץ פומא = *ditto* = *qames*; מיפתח פומא ("opening of the mouth") = *pattah*; so too some of the names of the accents: אתנח = *etnah*; סיחפא = *segol* and other accents with similar pausal value); אוק' (a major disjunctive); *zaqef*. Other grammatical terms named differently are קיפ' = *rafef* (= מלרע = ניגרא = ניגרא = מלעיל in all its usages); קיפ' = *rafef* (= מלרע = ניגרא = ניגרא = מלעיל in all its usages). For a comprehensive list and discussion of the Babylonian Masoretic terminology see I. Yeivin, *Babylonian Masorah*, pp. 54–55; Y. Ofer, *Babylonian Masorah*, pp. 39–59; N. Reich, *Shalshelet*.

3.2.4.2. CONTAMINATION OF MASORAH. In some cases we find a mixture of the Masorah. Some Tiberian codices show a certain degree of Babylonian influence in terminology or even in essence. The best example of sporadic absorption of Babylonian terms is the Tiberian Pentateuch codex London Or. 4445 (see Dotan, *Babylonian Residues*), and isolated cases may be found in other manuscripts too (e.g., the Aleppo codex). The best example of a Tiberian codex where the essence, the very readings, of the Masorah is by nature often Babylonian or close to Babylonian is the Pentateuch codex Gottheil 14 (ל<sup>ב</sup>), which was apparently an adaptation of the Babylonian Masorah (see Breuer, *Masorah Magna* ל<sup>ב</sup>).

The contamination of Masorah is also found in the opposite direction, where a Babylonian manuscript is mixed with Tiberian Masorah (Tiberianization). The most representative example is the codex Petropolitanus of the Latter Prophets (dated 916).

### 3.2.5. The Palestinian Masorah

In the texts vocalized in the Palestinian system there are almost no masoretic notes, except for the *qere* notations. In the few fragments where there are masoretic notes, they are the same as in the Tiberian system; most common are the basic terms: דגש', בט', בס', דגש', חס', מל' (מל'), and also the letters used for numbers. All of these signs are generally written between the lines above the relevant words, but occasionally also in the margins.

### 3.2.6. Deviating Versions

3.2.6.1. MADINḤA<sup>2</sup>E. Other opinions are also cited in the Masorah. The degree to which they are mentioned obviously depends upon the masorete or transcriber of the manuscript. The most common case is the mention of the Babylonian version מדנחאי (Easterners), as opposed to the מערבאי (Westerners), for example, למערבאי חס' למדנחאי מ"ל (1 Sam. 1:3) ופנחס (= de-

fective according to the Westerners [Palestinians], plene [with *yod*, ופניחס] according to the Easterners [Babylonians]).

3.2.6.2. VERSIONS OF PARTICULAR MASORETES AND MANUSCRIPTS. Some masorettes are even referred to by name in the Masorah, e.g., in the Leningrad manuscript of 1009: Ben-Asher (Dan. 7: 10), Ben-Naphtali (Isa. 44:20), Rav Phinehas Rosh ha-Yeshivah (Job 32: 3), the Tiberians בעלי טבריה (Prov. 3:12). In some manuscripts Moshe Moḥeh and others are mentioned too. In the margins one finds sometimes variants of Biblical manuscripts which served as exemplary models and upon which it was customary to rely. Thus, for example, in the Leningrad manuscript the מחזור (רבה) is mentioned and in other manuscripts ספרי אספמיא (the Tiberians ספר הללי, and others (the term ספר מוגה does not apparently refer to a specific manuscript). Citing variant versions was intended either to reinforce the version of the text or to bring to the attention of the reader another version which is, in the opinion of the masorete, also worthy of being considered.

3.2.6.3. SEVIRIN. There is another type of variant version which is different from all these in that it is cited in order to be rejected, i.e., in order to prevent possible error by the reader. These variants, which are occasionally more reasonable than the text, are called סבירין, סבירין (*sevir*, *sevirin* = "there are some who believe [that the text is...]"). סבירין ומטעין ("there are those who believe and err [that the text is...]"). and in the Babylonian Masorah מיש' בהון, דמשתבשין בהון (= there are some who err in them), דחוי ליה, דחוי (= which fits it [the text] better). For example, ג' סבירין יצאה: השמש יצא על-הארץ (Gen. 19:23) (in three places יצא is written and some think better to read it יצאה; they are not correct and it is not to be read that way). ב' סבירין בכל ומטעים: ונתן פדין נפשו ככל אשר יושת עליו (Ex. 21:30) (in two places some think it should be read בכל instead of ככל and they are wrong). There are also cases where the term מטעים is a warning about a possible error and not a record of a version.

The number of cases of *sevirin* is not uniform and varies from dozens of *sevirin* in some of the older manuscripts to about 350 in later editions (such as the C.D. Ginsburg edition of the Bible). These differences stem from the fact that some manuscripts completely ignore the *sevirin* version in many places, while others bring the errant version, *sevirin*, as *ketiv* and the correct version as *qere*. Although the origin of some of these variants is clearly ancient, it seems that the number of logically possible – but rejected – variants increased with time and the copying of the manuscripts.

## 3.3 THE MASORAH MAGNA (GEDOLA)

A large part of the notations of the *Masorah Parva*, with the exception of the *qere* notations and the indications of unique forms (ל'), etc., occur in greater detail in the *Masorah Magna*. In principle the *Masorah Magna* is a detailed explanation and expansion of the *Masorah Parva*; it does, however, contain additional notes, the abbreviations of which do not occur in the *Masorah Parva*.

3.3.0.1 METHOD OF NOTATION. Owing to its length the *Masorah magna* was not written at the side of the text but in either the upper or lower margin of the page, or in both, and, in a few manuscripts, also in the side margins. The *Masorah Magna* is a continuous text of a few lines on every page, and not like the *Masora parva* where letters and abbreviated words are written opposite the relevant word in the text. However, sometimes there was not enough space on the page and the scribes would leave part of it, especially the long lists, for the end of the book.

The details of the *Masorah Magna* generally include the citation of all the words or parts of the verses which contain a certain form, for which only the number is listed in the *Masorah Parva*: for example: וְנָח (Gen. 6:8) – *Masorah Parva*: פ"ר"ג (it occurs three times in this form – with the conjunctive *waw* – at the beginning of a verse); *Masorah Magna*: וְנָח בֶּן שֵׁשׁ מֵאוֹת שָׁנָה, וְנָח ג' ר"פ וְנָח מֵצֵא חָן וְנָח דְּנִיָּאל וְאִיּוֹב (Ezek. 14: 20).

### 3.3.1. The “Simanim” (Mnemonic Devices)

The detailing of the verses or parts of verses is often introduced by the term וְסִימָנֵיהֶן (= “and their sign”) or its abbreviation, וְסִימָנֵי. This term (in addition to its later use for denoting chapters of the Bible) serves mainly to mark the mnemonic devices which the masoretes fixed for remembering the itemized biblical verses. These devices are of various types. Sometimes they are like the devices in the Talmud which are made up of initials. For example, in order to remember the sequence in which the seven nations are listed the masoretes gave various arrangements of initials as *siman*:

כַּתְּמַפְסֵס = הַכְּנַעֲנִי וְהַחִתִּי וְהָאֱמֹרִי וְהַפְּרִזִּי וְהַחִיטִּי וְהַיְבוּסִי  
כַּתְּמַפְסֵס = הַכְּנַעֲנִי מִמִּזְרַח וּמִיָּם וְהָאֱמֹרִי וְהַחִתִּי וְהַפְּרִזִּי  
וְהַיְבוּסִי בְּהַר וְהַחִיטִּי

כַּתְּמַפְסֵס = הַכְּנַעֲנִי וְהַחִתִּי וְהָאֱמֹרִי וְהַפְּרִזִּי וְהַיְבוּסִי וְהַגְּרִגִּשִׁי (Neh. 9:8)

Likewise the *siman* for the words וְיַחֲיֵי־שֵׁת (Gen. 5:6), *Masorah Magna*: וְיַחֲיֵי שֵׁת ה' בְּטַעַם וְסִי שֵׁלֵנִי עַד שֵׁת יִרְדַּ לְמַךְ נֹחַ עֶבֶר, i.e., in the generations from Adam to Noah (Gen. 5) and from Noah to Abraham (Gen. 11) only five names occur bearing this accent – *zaqef gadol* – and the mnemonic device for remembering these names is שֵׁלֵנִי. The device for listing the daughters of Zelophehad (Num. 26:33 and Jos. 17:3) (מַחֲלָה וְנַעֲמָה וְנַחֲלֵה וְנַחֲלֵה מִלְכָּה וְתַרְצֵה) מוֹחֲמִי is found both in the Tiberian and in the Palestinian *Masorah Magna*, and it is at variance with other *simanim* – מְנוּיִי (Num. 27:1), and מְתוּיִי (Num. 36:11). Another example: יְבָחָר (Josh. 9:27) – *Masorah Magna*: יְבָחָר ה' קִמְצִין בְּקִרְיָאָה וְסִי שֵׁלֵשׁ פְּעָמִים בְּשָׁנָה יִרְאֶה כָּל זְכוּרָךְ (Deut. 16:16), זְכוּרָךְ (Deut. 31:11), הַמְּסַכֵּן תְּרוּמָה עֵץ לֹא יִרְקַב, וְלִמְזֻבָּח ה' עַד הַיּוֹם בִּיהוֹשֻׁעַ (Isa. 40:20), וְסִימָנֵי שְׁבוּ־הֵם, מִי זֶה הָאִישׁ יִרָא (Ps. 25:12), vocalized with *qames* occurs five times in the Bible, and from those five instances we derive the mnemonic (שְׁבוּ־הֵם): שֵׁלֵשׁ בְּבוֹא וְלִמְזֻבָּח הַמְּסַכֵּן מִי

Frequently, however, the mnemonic device is not a set of initials, but a full Aramaic sentence, in which each word rep-

resents a verse: Thus, on the word וְטוֹב (1 Sam. 2:26) the *Masorah Magna* reads: וְטוֹב ה' קִמְצִין בְּקִרְיָאָה וְסִי וְאֵל הַבְּקָר רִץ אַבְרָהָם וְשָׁמוּ שְׂאוּל, וְהִנְעֵר שְׂמוּאֵל (1 Sam. 2:26), וְיִקַּח בֶּן בְּקָר הוֹסֵפֶת, וְיִמְצְאוּ מִרְעֵה שֶׁמֶן, בַּחֹר וְטוֹב וְסִי בְּלִשׁוֹן תְּרֻגוֹם שְׂמוּאֵל טִלְיָא בַּחִירָא רַהֵט, חֲכָמָה וְטוֹב וְאִשְׁכַּח חֲכָמָתָא. Namely, the word וְטוֹב vocalized with *qames* is found five times in the Bible, and the substitution of an Aramaic word for each of the five verses (not necessarily in the order of occurrence in the Bible) results in an understandable sentence: הַנְּעֵר שְׂמוּאֵל (= שְׂמוּאֵל טִלְיָא, “the lad Samuel”; 1 Sam. 2:26); רָץ (= “ran”; 1 Sam. 9:2), בַּחֹר (= “chosen man”; 1 Sam. 9:2); רַהֵט, וְיִמְצְאוּ / וְיִמְצָא (= “and he found / and they found”; 1 Chron. 4:40), חֲכָמָה (= “wisdom”; 1 Kings 10:7); thus (the *siman* in Aramaic is: “the chosen lad Samuel ran and found wisdom”).

This type of *siman* is very frequent and there is more than a bit of sophistry and amusement in it. There are even longer *simanim*, as e.g., the mnemonic for the word לָאוּר (Micah 7:9) is: צוּחַ סַמִּיא וְסָבַר לְמִיפְק בְּצַפְרָא וְקַם בְּלִילָא (= the blind one called out and hoped to get out in the morning and got up at night). For the word לָו (Gen. 17:18) there is a sentence of 22 words, and even longer ones are extant. In some manuscripts devices like these were found even in Arabic (A. Dotan, “Masora in Arabic Translation”).

### 3.3.2. Accumulative Masorah

The most common notations of *Masorah Magna*, discussed so far, apply to forms of words which occur a number of times in the Bible. There is another type of *Masorah magna* notations which list words that occur only once and which are marked in the *Masorah Parva* by לִית. In recent research such lists are termed “Accumulative Masorah” (in Hebrew: מְצַרְפֵּת), for they list together unique words of a certain common peculiarity, such as a common beginning, e.g., an initial letter *teth*: תֵּת, a common ending, e.g., יֵת; a common vocalization, e.g., a *qames* in words starting with *shin*: שָׂאָג, שָׂדָד, שָׁלַח, שָׁכַב, שָׁלֵשׁ etc.; or even a common combination of words, e.g., combinations with הארץ etc. Sometimes an Accumulative Masorah may consist of pairs (זוּגִין) of unique similar words or combination of words differing in only one detail from each other, e.g. words with or without an initial *waw*: נְשִׂאתָנִי/וְנִשְׂאתָנִי, נְדַמָּה/וְנִדְמָה, נְמַלִּיךְ/נְמַלִּיךְ etc.; or e.g., combinations with or without *he* in the second word: אֲנִשִּׁי שֵׁם/אֲנִשִּׁי הַשֵּׁם, אֲשֵׁרִי אִישׁ/אֲשֵׁרִי הָאִישׁ, אַחֲיִכֶם אַחַד/אֲנִשִּׁי שֵׁם/אֲנִשִּׁי הַשֵּׁם, אַחֲיִכֶם אַחַד etc.; and many more variations of accumulation of unique words or sometimes even pairs of unique words. The items in these lists may have no definite order or they may be arranged by order of their occurrences in the Bible or alphabetically or by the order of some other principle (A. Dotan, *The Awakening*, pp. 31–44).

### 3.3.3. The Babylonian Masorah

The Babylonian *Masorah Magna* does not differ from the Tiberian in principle, but it is more limited in scope and methods of expression. In contrast to the Babylonian *Masorah Parva*,

which is written in ancient manuscripts, especially in those vocalized with the simple Babylonian vocalization, between the lines, the *Masorah Magna* is recorded in the margins at the sides or the top and bottom. In texts vocalized according to the composite Babylonian system, there was not enough space between the lines; the *Masorah Parva* was written at the sides and the *Masorah Magna* at the top and bottom. In all the periods there were mixed texts, influenced by other vocalization systems, and this influence finds expression in the masoretic notes, in their terminology, and even in their methods of writing. A detailed description is now available in Y. Ofer, *Babylonian Masora*.

### 3.3.4. The Palestinian Masorah

The Palestinian *Masorah Magna* is even more limited in scope. Its few notes are mainly written in the bottom borders and occasionally at the top, too. The *Masorah Parva* is written in the side margins or between the lines. In its content – terminology and methods of expression – the Palestinian Masorah is closer to the Tiberian than to the Babylonian, although the influence of the Tiberians must be taken into account. In scope it is closer to the Babylonian Masorah and is even shorter than the latter, which is undoubtedly due to its very early date.

### 3.3.5. Agreement between the Masorah Magna, The Masorah Parva and the Text

In essence the *Masorah Magna* complements the *Masorah Parva* – particularly in the Tiberian Masorah, which has been transmitted to us in sufficient quantity to allow a comprehensive study – and it is entirely logical to expect a fixed relationship between the two, as between any text and its extension. However, only rarely is this the case.

3.3.5.1. LACK OF AGREEMENT. There are many instances where there are notes in the *Masorah Parva* for which there are no counterparts in the *Masorah Magna* and vice versa. Furthermore, sometimes there is disagreement between the masoretic notes and the version in the text itself; for example, one finds occasionally the gloss לית מלא (not found elsewhere *plene*) in the margin, while in the text the word is actually written defectively, without *matres lectionis*.

3.3.5.2. METHODS OF COPYING. These differences between the two Masorahs themselves and between them and the sacred text increased as time passed. In early manuscripts such instances are still rare, but in later manuscripts they become more common. The cause is to be found in the method of copying the manuscripts. The precision was preserved as long as the manuscripts of the Bible text were copied by experts, each one a skilled craftsman – the scribe in the writing of the consonantal text and the learned masorete (המלמד) in the placing of the vowels, the accentuation signs, and the masoretic notes – a division of labor that was maintained generally in the earliest period, the ninth, tenth, and 11<sup>th</sup> centuries, and perhaps even later. In this way the masorete did his work on a consonantal skeleton which was transcribed for him by an expert scribe. When the consonantal text did not agree in ev-

ery detail with the Masorah that he followed, he was able to correct the writing (mainly to add or remove *waws* or *yods*). Even so there were discrepancies between the text and the Masorah. For the masorettes, even the most expert, generally did not create the Masorah, but merely transmitted it as they had received it from their forerunners, sometimes adding new notes or amending notes that were inadequate. They undoubtedly used older manuscripts and older lists of Masorah from which they transferred the notes – obviously with deep understanding – onto the new copy in front of them. As the years passed the masoretic material increased by virtue of the innovations and additions of each generation, while the selectiveness of the masorettes became less and less severe. The degree of coordination between the various notes of the Masorah itself and between the Masorah and the text of the Bible decreased as the quantity of the masoretic notes grew. Furthermore, the separation between the two types of notes, the *Masorah Magna* and the *Masorah Parva*, was not maintained and more and more long notes of the type of the *Masorah Magna* were recorded in the margins, the place of the *Masorah Parva*.

3.3.5.3. THE NON-CRYSTALLIZATION OF THE MASORAH. It can be said that there never was one single uniform Masorah. One can assume that the early, great masorettes composed an exact Masorah which fitted a specific text of the Bible. A version like this was, therefore, “the Masorah of so-and-so,” but not THE Masorah. Even though no such perfect version is extant, we do know that they existed; for example, the Masorah of Ben-Asher וקאל פי מאסרתה (“and he said in his Masorah”). Versions of this type served as exemplary models for later masorettes, but some of them followed the principle that the more models the better, which ultimately had an unfortunate effect.

3.3.5.4. ORNAMENTATION OF THE TEXT. As time passed copying the text became a less intelligent work, and there were copyists who lacked all understanding of the Masorah, to the extent that some of them used the material of the Masorah for mere ornamentation of the text. They created frames for the text out of the lines of the Masorah; they sketched geometric patterns, pictures of animals in the margins of the pages; they even wrote names, such as the name of the scribe or that of the owner, using masoretic notes as fillers. The masoretic material was not copied to fit each page of text exactly, but according to aesthetic and space criteria. In some places the copyist stopped the copy in the middle of a masoretic note for lack of space, or copied an irrelevant note to fill the space. Manuscripts like these, some of which are most ornate, are worthless for the study of the Masorah.

### 3.3.6. Jacob ben Ḥayyim ibn Adonijah

3.3.6.1. EDITING AND ARRANGING THE MASORAH. Jacob b. Ḥayyim ibn Adonijah of Tunis (c. 1470–c. 1538) tried to correct this situation. He was employed as a proofreader in the printing house of Daniel \*Bomberg in Venice at the beginning of

the 16<sup>th</sup> century. He collected a large number of manuscripts of the Bible and from them edited a new clear version of the Masorah. He corrected the errors in it and adapted it to that text of the Bible which seemed to him to be the most correct version. In addition he arranged most of the notes of the *Masorah Magna* in the alphabetical order of the words to which they are directed and printed them in a lexical list at the end of the Bible. The Masorah of Ben Ḥayyim was printed with the second edition of the Rabbinic Bible published by Bomberg – *Miqra'ot Gedolot*, Venice 1524–25, and it was issued in a scholarly edition by S. Frensdorff, *Die Massora Magna* (Hanover and Leipzig, 1876; repr.: New York, 1968).

3.3.6.2. CROSS REFERENCES. Besides his correction of errors, Jacob b. Ḥayyim's innovation was to introduce cross references for parallel comments and to add the systematic list at the end. This was the first attempt to arrange all the masoretic notes alphabetically.

3.3.6.3. HIS TERMINOLOGY. In this arrangement every alphabetical unit is called a מערכת (*ma'arekhet*) and the whole came to be called מסורה מערכתית (*Masorah ma'arakhit*). Ben Ḥayyim himself named the collection at the end מסורה גדולה or מסורה רבתי while for the marginal notations he used the name מסרה or מסורת alone or מסרה אמצעית (middle Masorah; see his introduction, ed. Ginsburg, pp. 82–83). This terminological differentiation, like his systematic arrangement, is unique to Ben Ḥayyim. Yet he was not the first in moving part of the *Masorah Magna* to the end of the text. The early Masorah copyists had already preceded him in that in the ancient manuscripts. They had had to draft long lists for which there was no room on the pages; and so they copied them together at the ends of the books. In the manuscripts, therefore, there was no essential difference between the lists of the *Masorah Magna* on the page and those at the back of the book, but for practical reasons, the lists which were longer and more comprehensive in their content were recorded at the end.

3.3.6.4. THE ACCEPTED TERMINOLOGY. This situation necessitates precision in our concept of the terminology of the Masorah. A differentiation must be made between ancient manuscripts and the codified orderly Masorah of Ben Ḥayyim, which had been for many years the one referred to when one speaks of Masorah. One can say that the *Masorah Magna* is divided into a marginal Masorah and a final Masorah. In the ancient manuscripts the final Masorah includes summation lists, which deal with complete books or sections of books (see below), and long systematic lists of Masorah for which there was no place in the margins. In Ben Ḥayyim's work the final Masorah includes a lexical arrangement of most of the words, discussed in the *Masorah Magna* sometimes with the details of the masoretic notations.

### 3.3.7. Summary Lists

The summary lists which are at the end of the books (and sometimes at the beginning) are tallies of the verses, the *para-*

*shiyot* (weekly portions) and the *sedarim* of the books and parts of the Bible, and also the totals of words and letters, the mid-point in the count, the quarter point, and so on. In ancient manuscripts there are also general summation lists taken from various sources, like the names of the authors of the books (BB 14b), the chronology of the books ("the number of the years of the books"), a list of the prophets who prophesied about Israel, a list of the 18 emendations of the scribes (תיקוני סופרים; found in different Midrashim), a list of large and small letters in the Bible and other peculiarities, a list of the *paseqs* (as opposed to the accent *legarmeh*), a list of *patahs* with *etnah* and with *sof pasuq* (instead of the pausal form which requires *qames*) and so on.

### 3.4. THE INDEPENDENT MASORAH

Fragments of manuscripts were discovered in the Cairo *Genizah* which appear to be remnants of independent works of Masorah; that is, works which contain masoretic notes in the order of the books of the Bible but without an accompanying biblical text. It is possible that these works go back to a very ancient period, perhaps even to the time when it was not permitted to write the Masorah in the margins (see above, 2.2.2.). Such fragments were also discovered of the Babylonian Masorah and a few of the Palestinian Masorah. Some of these works contain topical lists of Masorah, i.e., lists arranged according to specific subjects, like exceptional spellings, specific issues about vocalization, unique words, and so on. One independent work in which the notes do not follow the text of the Bible but are arranged systematically according to topics is *Okhlah we-Okhlah*. This work has the widest scope of all those known to us, comprising almost 400 lists of Masorah. The lists, arranged alphabetically, contain unique words with a common characteristic, or pairs of words which differ from each other in one detail, extraordinary spellings, vocalizations, or accents, and so on. The book gets its name from the first two words of the first list, which enumerates alphabetically pairs of unique words, one occurring with the conjunctive *waw* and the other without it. This list begins with the pair אָנְלָה, וְאָנְלָה. The book was also known to the early scholars by the name of מסורת הגדולה (*Masoret ha-Gedola*), and in Arabic אלמאסרה (*al-māsirah* – the Masorah) by Saadia Gaon in his Grammar book, and אלמאסרה אלכבירה (*al-māsirah al-kabirah* = the great Masorah) by David ben Abraham al-Fāsi in his dictionary. The name *Okhlah we-Okhlah* is mentioned already by Jonah \*Ibn Janāh in his dictionary (*Sefer ha-Shorashim*, entry חלך). The book was first published by S. Frensdorff (Hanover, 1864) according to the Paris manuscript; it was published again by F. Díaz Esteban (Madrid, 1975) according to the first part of the Halle manuscript and later by B. Ognibeni (Madrid-Fribourg, 1995) according to the second part of the Halle manuscript. Most of the lists in this book are known from other sources in the marginal Masorah or from independent manuscripts, but here they are more complete and were apparently taken, in part, from an ancient source. However, the work also contains lists from relatively late periods, and it follows that the

book is not a uniform work, a fact which can be strengthened by the existence of more than one version of the book. The exact date of its editing has not been established, though there is evidence of its antiquity and it was certainly not edited later than the tenth century.

**3.5. THE MASORAH TO TARGUM ONKELOS**

Masoretic notes were also appended to Targum \*Onkelos, which was considered the official translation of the Torah for the purpose of public reading and which, therefore, also came to be considered sacred to some extent. The purpose of these notes was to preserve the text of the Targum exactly and to achieve precision in the manner of translation from the Hebrew original: which Aramaic roots are used in translating the same Hebrew root, and the number of times that each translation occurs, etc. It counts the words much less than does the biblical Masorah. It does list changes in vocalization and in pronunciation of the Targum and even discrepancies between various versions of translation, such as the Nehardean and Suran, and it takes a position against other possibilities (possible errors, משתבשין, מטעין). Since the main interest of this Masorah was the manner of translation, terms such as דמתרגמין and דמיתרגם (= which is translated) and their abbreviations are quite common. An example is שבו (Gen. 22:5): 'באורי ג' אוריכו' ("שבו is translated אוריכו (= wait, instead of תיבו = sit) three times in the Torah") – שבו נא בזה (Gen. 22:5); שבו לנו בזה (Ex. 24:14); שבו נא בזה (Num. 22:19).

The Masorah notes of the Targum were sometimes written in manuscripts on the margins of the Targum and sometimes in lists in independent works arranged according to the order of the biblical text. The Targum also has a Tiberian Masorah as well as a Babylonian one with Babylonian vocalization. The terminology of this Masorah, whether Tiberian or Babylonian, does not differ much from the terminology of the biblical Masorah.

**4. THE DIACRITICAL POINTS**

The written Masorah was divided here into two categories (see above, 3.). We have dealt with the first – the notes and the abbreviations which accompany the text externally or are appended to it – Masorah in the narrow sense. We now turn to the second category – the graphemes – i.e., the system of signs (the vowel and accentuation signs) which are added to the letters in order to constitute, together with them, a complete orthographic system including all the information necessary for exact reading and recitation.

Just as the Masorah in the narrow sense began with a relatively few early attempts at abbreviated notes and developed into a large sophisticated system of short and long notes and even complete rules, it can be assumed that the graphemes also had their beginning in a few signs which were most necessary for reading and for distinguishing between similar forms, and only in the end, after long development, became a fully crystallized system of vowel and accentuation signs. For this as-

sumption, in the opinion of many scholars, there is proof in vestiges from the ancient period.

**4.1. GRAETZ'S THEORY**

According to this opinion, in the period before the invention of vowel signs as they are known, diacritical points were used in Hebrew to distinguish between words which were identical in writing – homographic – but whose pronunciation differed by one vowel. A dot above the word marked the pronunciation with the fuller vowel; a dot under the word noted the pronunciation with the weaker vowel. There are, however, no manuscripts in which there is any trace of these signs, and their very existence is postulated only by the theory of Graetz.

**4.1.1. Details of the Proof**

4.1.1.1. ANCIENT USAGE OF "MILLE'EL" AND "MILLERÁ". Graetz found in various lists of the Masorah in *Okhlah we-Okhlah* that the terms מלעיל (*mille'el*) and מלרע (*millera'*) were used, in addition to their regular common meanings, (paroxytone and oxytone), in other meanings as well. These lists (§§ 5, 11, 45, 46, 47, 48, 49, 50) in Frensdorff's edition contain unique homographic pairs which differ in one vowel only. One member of the pair is called *mille'el* and the other *millera'*. It is evident that these terms do not have a fixed but a changing meaning, and they mark the difference between vowels. Thus the following are so termed:

Mille'el		Millera'	
אָדָן	(Neh. 7:61)	אָדָן	(Ezra. 2: 59)
אָמָר	(Ezek. 25:8)	אָמָר	(Prov. 25:7)
בְּמַעַל	(Neh. 8:6)	בְּמַעַל	(Josh. 22:22)
הַמְשַׁל	(Jud. 9:2)	הַמְשַׁל	(Job 25: 2)
לְשׁוּבוֹיִם	(Isa. 61:1)	לְשׁוּבָאִים	(Joel 4: 8)
קָרְאֵנִי	(Jer. 13:22)	קָרְאֵנִי	(Job 4:14)
יְחִינֹו	(II Kings 7:4)	יְחִינֹו	(Hos. 6:2)
נִתְּןָ	(Judg. 6:28)	נִתְּנָ	(II Chron. 33:3)
נִתְּנָ	(Gen. 38:9)	נִתְּנָ	(II Kings 23:11)
זָרַע	(Ps. 97:11)	זָרַע	(Lev. 11:37)
נִפְלוּ	(I Sam. 29:3)	נִפְלוּ	(II Sam. 1:10)

All of these are in list no. 5 in *Okhlah we-Okhlah* (which is also cited in the terminal Masorah in the *Miqra'ot Gedolot* of Jacob b. Ḥayyim, letter *alef*, list no. 24). It can be seen that forms with *qameṣ*, for example, are sometimes called *mille'el* (-נִתְּנָ, זָרַע, נִפְלוּ) and sometimes *millera'* (אָדָן, אָמָר, -לְשׁוּבָאִים); this is not an indication of a definite marking of the vowel, but only its relation to the vowel which is parallel to it and which can occur in that position. Thus in the list the vowel *o* is called *mille'el* while the *millera'* is *ā* (this Tiberian vowel is parallel to the two types of *qameṣ*, called today *qameṣ gadol* and *qameṣ qatan*, but which in the Tiberian pronunciation constituted one vowel quality – see below), *a*, and *e*; the vowel *u* is contrasted to *ā*, *a*, *e*, *i*; and the *ā* is contrasted to *a*, *e*, *i*.

In some lists of pairs of unique homographs the terms signify other contrasts:

Mille'el	Millera'
וִיחִי (Ezek. 37:10)	וִיחִי (Ezek. 37:9)
בְּחֶרֶט (Ex. 32:4)	בְּחֶרֶט (Isa. 8:1)
לִנְבֵאִים (Jer. 23:9)	לִנְבֵאִים (Amos 2:11)
וַיַּעֲדֵהוּ (I Kings 21:13)	וַיַּעֲדֵהוּ (I Kings 21:10)
וַתִּלְבַּב (II Sam. 13:8)	וַתִּלְבַּב (II Sam. 13:6)
כְּחֶתֶן (Isa. 61:10)	כְּחֶתֶן (Ps. 19:6)
וְאֶקְהָה (Zach. 11:13)	וְאֶקְהָה (Gen. 18:5)
כְּאֶרְוִים (Songs 5:15)	כְּאֶרְוִים (Num. 24:6)
וּבְקָר (Ps. 55:18)	וּבְקָר (Ex. 16:7)

from lists no. 11, 45–50 of *Okhlah we-Okhlah* (ed. Frensdorff).

Here too the forms with a *pattah*, for example, are sometimes called *mille'el* (בְּחֶרֶט, וִיחִי, etc.) and sometimes *millera'* (כְּאֶרְוִים, etc.), and here too it only indicates the relationship to the vowel parallel to it which can possibly occur in that position. Consequently, in these lists, the forms called *mille'el* are those whose formative letters (ל, כ, ב, ו) have a vowel (a, ā, ε), in contrast to those forms called *millera'* in which the formative letter has a *šewa* or one of its morpho-phonological substitutes (*u, a, i*).

4.1.1.2. THE DIACRITICAL POINT IN SYRIAC. These uses of the terms *mille'el* and *millera'* did not seem to Graetz to fit their regular meaning in which they are also used in the lists of the Masorah such as *Okhlah we-Okhlah* (ed. Frensdorff), lists no. 32, 51, 225, 226, 372 and 373. However, this manner of distinguishing between homographs of different pronunciation did exist in Syriac and a dot was used to mark this distinction: a dot above a word (more precisely, above the letter) marked a fuller, stronger pronunciation, and a dot below it marked a finer, weaker pronunciation or even the complete lack of a vowel; thus, for example, the Syriac words עבדא, מן, הגון, מן, קטל, מלכא, טבא, הו, הי, הגון, מן, when they are marked with a dot above, their (Eastern) pronunciation is <sup>e</sup>ʿvādā, qāṭel or qatfel, malkā, ṭāvā, hau, hāi, hānōn, mān, but when they have a dot beneath them the pronunciation is: ʿavdā, qʿtal, melkā, ṭebbā, hū, hī, hennōn, men.

4.1.1.3. DEVELOPMENT IN HEBREW. By analogy to Syriac, Graetz reached the conclusion that in Hebrew the terms *mille'el* and *millera'* also indicated the place of a dot above or below the word, and that they thus served also in Hebrew to mark the “fuller” vowel in contrast with the “weaker” vowel. The nature of the concepts “full” and “weak” and their synonyms have been explained in various ways by different scholars: some of them considered it to be a quantitative concept (long/short – thus Frensdorff), others a qualitative one (dull, closed/bright, open – Kahle). This distinguishing dot had in Hebrew the additional function of marking contrasts in stress: on the penultimate syllable and on the ultimate one. This last use was not found in Syriac and constitutes therefore an additional development in Hebrew. However, this use too is ancient, being found in older sources of the Masorah: cf. David b. Abraham (middle of the tenth century), *Kitāb Jāmi' al-ʿAlfāz* (ed. Skoss. vol. 1, p. 185, l. 149f.).

Graetz's theory on the source of the terms *mille'el* and *millera'*, and subsequently as to the origins of the vowel signs in Hebrew, has been unanimously accepted.

#### 4.1.2. Refutation

However, in the entire inventory of Hebrew manuscripts there is not one example of dots above and below to mark such a distinction, especially not the distinction between different vowels. The very existence of these dots is unproven, based on a supposition which itself is open to doubt. The theory assumes diacritical dots which were borrowed from Syriac but which in fact did not remain in Hebrew; only the terms remained. These, however, do not exist and never did exist in the supposed source language, Syriac. One cannot explain the “disappearance” of the diacritical dots from Hebrew by pointing to the full Tiberian vocalization which made them superfluous, for the same process would apply just as well to Syriac, and yet, there the dots remained alongside the vocalization. Furthermore, a single example was discovered in a manuscript in which the point of stress in a word is noted by a dot under the word even on the penultimate syllable (cf. Rabin's comment in *Textus II*, p. 106. n. 11). While it is doubtful whether one can learn about a system from one lone example, clearly such an example can serve as evidence to the contrary.

### 4.2 MILLE'EL AND MILLERA'

#### 4.2.1. Development of the Usage

4.2.1.1. TONAL MEANING. It is possible to offer a satisfactory explanation for the two meanings without involving non-existent diacritical dots, both for the vocalic and tonal meanings. With regard to the tonal meaning, the use of למעלה, למעלה, למעלה, למטה, למטה, למטה, to indicate earlier and later locations in a continuous text is an ancient usage in Hebrew which goes back to rabbinic Hebrew. This use is rooted in general writing practice and is widespread and accepted in most languages (cf., Eng.: below, above; Fr.: ci-dessous, ci-dessus; Lat.: infra, supra) to note different places in the linear sequence of the written text. These terms were actually begging to be used and in any event are self-evident. Certainly there is no need to revert to the Syriac orthographical customs to explain them.

4.2.1.2. VOCALIC MEANING. The vocalic meaning of *mille'el*/*millera'* goes back to an ancient idea concerning the theory of vowels in Hebrew which was stated in the fifth chapter (concerning the vowels) of *Kitāb Faṣiḥ Luḡat al-ʿIbrāniyyin* by \*Saadia Gaon. According to this theory the vowels are arranged as a scale, at the top of which is the *holem* and at bottom the *hireq*. Such an arrangement of the vowels fits a certain morphological theory which is not relevant here, and in any event. There were a number of other such arrangements which were based on different principles, as Z. Ben-Ḥayyim has shown. One of them was based on the phonetic principle of the origins of the vowels *o, u, ā, a, ε, e, i*. The vowels are arranged as a scale (from the top to the bottom): each vowel is above (*mille'el*) those which follow it and below (*millera'*) those which precede it. Thus *qameš* is *millera'* in relation to

*holem* and *šuruq*, and *mille'el* in relation to *pataḥ*, *šere*, and *hireq*; *pataḥ* is *millera'* in comparison to *qameš* and *mille'el* in comparison to the *šewa* and its alternates. The vocalic use of the terms *mille'el* and *millera'* which is also undoubtedly ancient, can thus be explained.

4.2.1.3. CONNECTION BETWEEN THE MEANINGS. Which meaning of this pair of terms preceded the other is still difficult to establish; it is possible that there is a connection between them by way of homographic pairs, such as, וְנִקְרָא (Num. 5:28) / וְנִקְרָא (Isa. 3:26), which appear in the *had millera' we-had mille'el* list of pairs (*Okhlah we-Okhlah*, list no. 51). Although the reference in this list is to the tonal meaning of the terms, in this specific pair the vocalic sense would also be applicable.

#### 4.2.2. The Babylonian Terms

The terms וְנִגְרָא and דִּגְרָא (of doubtful etymology), which are used in the Babylonian Masorah as parallel to *mille'el* and *millera'*, have a tonal meaning, that is, paroxytone and oxytone. Yeivin (*The Hebrew Language Tradition as Reflected in the Babylonian Vocalization*, pp. 246–53) cites additional occurrences of the Babylonian terms with different meanings (some of them doubtful) but none of these cases exhibits a vocalic meaning parallel to the Tiberian terms (Yeivin, p. 253).

#### 4.2.3. The Parallel Usage of Qameš and Pataḥ

However, in place of the pair of terms *mille'el* and *millera'* in the vocalic sense, the terms קָמֶץ and פְּתוּחָא are used. This use is found in a manuscript (published by Ginsburg, *The Massorah*, 2 (1883), 310–311, §§ 606a, 606b) in which there are two versions of the list of Masorah which appears in a fuller and more precise form also in *Okhlah we-Okhlah* (§5). Instead of the terms *mille'el* and *millera'* the terms *qameš* and *pataḥ* are used: there they are not the names of specific vowels but are used in a relative sense like *mille'el* and *millera'*: i.e., a more contracted (קָמֶץ) vowel versus a more open (פְּתוּחָא) vowel.

### 4.3. RELATIVE NOTATION

#### 4.3.1. Vowels

This use of the terms *qameš* and *pataḥ* belongs to a most ancient period in which they did not as yet serve to note definite vowels. The vestiges of this use, both of the terms *qameš* and *pataḥ* and the terms *mille'el* and *millera'*, indicate that in the period which preceded the invention of vowel signs a system of relative notation of vowels was followed. In a period when no vowel notation existed it was necessary to indicate the vowels which distinguish between homographs, generally in homographic pairs. There was, however, no need for a complicated system of terms (and there is no evidence for signs); a relative distinction was sufficient: a vowel higher in the scale of vowels (further back in pronunciation), more closed, in contrast to the other possibility, lower, more open.

#### 4.3.2. Accents

This custom of relative notation and marking also existed apparently for the accentuation signs; the vestiges of rela-

tive terms like אוֹקוּמִי, which marks a major disjunctive, may serve as an indication. It is possible that the terms שִׁירִיא (not שִׁירִיא; see N. Reich, *Shalsholet*) and נִגְרָא (when used as an accent's name), and others, had this connotation: it is even possible that the origin of the accentuation signs was in signs which had a relative meaning only (see below). In summation: among the Hebrew vocalization signs there are no diacritical dots of the type which were used in Syriac, and it is doubtful if there ever were. The only signs known in Hebrew are the defined marks of vocalization and accentuation.

## 5. VOCALIZATION AND ACCENTUATION

There are three graphic systems of vocalization and accentuation for Hebrew: Palestinian, Babylonian, and Tiberian. There is no imperative connection between the pronunciation traditions in Hebrew and the graphic systems which were used; one graphic system is not necessarily specific to one of the traditions of pronunciation, and therefore a certain tradition of pronunciation is not necessarily limited to one system of notation. One can assume, though, that each one of the systems developed against the background of one defined tradition of pronunciation. Only graphic systems are relevant to this discussion since they are part of the development of the written Masorah (but see \*Pronunciations of Hebrew).

The vocalization and accentuation signs in each system constitute a complete indivisible set of graphemes to guide the reader in exact reading, including not only the correct pronunciation of the words but also the correct intonation of the verses and, as pointed out above, precise cantillation. This being the case, the accentuation and vocalization will be treated together in each one of the systems. The period in which punctuation began has already been discussed above (2.2) and, as has been stated, it is not possible to establish exact dates. However, the postulate of a relative date for each of the systems in relation to the other two has been accepted. The Tiberian system is the most sophisticated and complete in the items which it transmits, and there is no doubt that, in the state in which it is known, it is the most recent (for details, see below). Most scholars tend to believe that the Palestinian is the older of the other two systems. However, since these two systems developed in different countries, Babylonia and Palestine, and since at the beginning of their development there was no contact between them, and since the signs differ in the two systems (letters in the Babylonian and dots in the Palestinian), it is impossible to arrive at a definite decision in this question on the basis of the data available today. In line with the generally accepted opinion the Palestinian system is discussed first; however, this is not meant to indicate a view on the relative dating of the systems.

### 5.1. THE PALESTINIAN SYSTEM

5.1.0.1. THE TERM. This system is so named because many of the texts in which it is used show signs of Palestinian origin (mainly the *piyyutim*). The term נִקְוֹד אֶרֶץ יִשְׂרָאֵל is already found in *Mahzor Vitry* (ed. Hurwitz, Nuremberg (1923), 462)

in the commentary on *Avot* attributed to Jacob b. Samson (12<sup>th</sup> century) of France; however there is no proof that this term refers to the system called Palestinian.

5.1.0.2. THE STATE OF TRANSMISSION. The Palestinian is not a crystallized system. Almost every one of the manuscripts has a number of individual and characteristic traits with regard to the use of signs. It is possible to point to the common and similar aspects but not to all the deviations of each manuscript. For what we find in the manuscripts is actually a system in development. Scholars endeavor to fix the date of a text on the basis of the degree of progress shown by the use of the signs in it: the oldest manuscripts (apparently from the eighth century) have generally very few signs, sometimes no more than one or two for a word and sometimes not even that; and even the latest of them never reach the stage of fully marking each vowel and its nuances, as is the case in the Tiberian system.

5.1.0.3. TYPES OF TEXTS. In this matter a distinction must be made between texts of the Bible, at times including an Aramaic translation, as opposed to texts of *\*piyyut*. The amount of vocalization is generally fuller in the latter, while the biblical texts, which had a strong tradition of reading, have relatively fewer vocalization signs but many accentuation signs. It seems that the precise cantillation was likely to trouble the educated reader more than the pronunciation of the biblical words. Therefore, vowel signs in ancient biblical texts are mainly in places where there was room for error in the reading and at points where the orthography allowed different pronunciations. When the spelling is plene, with *waw* or *yod*, one almost never finds vowel signs in ancient manuscripts.

Additional evidence of the fluency of the reader of the Bible text is offered by the סירוּגין (intermittences) texts. These are manuscripts written in a system of abbreviation in which generally only the first word of every verse is written in full and of the rest only the important words, or those which cause problems, are indicated by one or three letters of each with the vowel or accentuation sign, or both, as a mnemonic device. Manuscripts of *serugin* are already mentioned in the Talmud (e.g., Git. 60a). and Rashi certainly saw examples of them, for he comments: "At the beginning of the text [= the verse] was written the full word and at the end initials." It is clear that these texts of *serugin* with the vowel and accentuation signs served as an aid to the reader when he read from a text complete but unvocalized (because of its sanctity), and to the reader or copyist who knew the text by heart and needed only a few reminders.

As time passed this high standard of knowledge declined and more notations were needed. This need is also evidenced in the later manuscripts where there are more signs and by the fact that in some of the manuscripts signs were added by a second hand. Sometimes there is evidence that signs were added by a third and fourth hand, depending on the transfer of the manuscript to owners whose knowledge of reading was less developed. For that reason there are many Palestinian

manuscripts which contain vocalization by several hands, into which signs of other vocalization systems, with more detailed notation, have been mixed (see below, 5.5).

### 5.1.1. The Vowel Signs

In the presentation and explanation of the signs one must refrain as much as possible from drawing parallels with the Tiberian system, at least as long as the influence of this system or the Tiberian tradition of pronunciation is not being discussed, since at times the signs are anchored in a different reading tradition, i.e., with different grammar, and the comparison is likely to give a distorted impression. The values of each sign will therefore be described by phonetic signs, out of a desire to be faithful – as much as it is possible today – to their original pronunciation. The presentation is schematic, deviations of details, even quite numerous, are neglected for the sake of clarity.

5.1.1.1. THE SIGNS. The following are the vowel signs (they are located above the letter and a little to the left of it) and reference here is to quality only. There is no marking for quantity (length) in this system.

יָ = *i*. This is the only sign which has hardly any changes in form or meaning in the different manuscripts.

יְ or יֶ = *e* in all its nuances. The first sign is the most common and in the ancient manuscripts it is used exclusively, but there are manuscripts in which both signs are used side by side without distinction. In individual, relatively late manuscripts there is a distinction or the beginning of a distinction, apparently through the influence of the Tiberian system, so that יְ parallels *šere* and יֶ parallels *segol* and sometimes mobile *šewa* as well.

יִ or יֵ = *a* in all its nuances (if it did really have different nuances). In the ancient manuscripts the two signs are used side by side with precisely the same meaning. In some relatively late manuscripts there is a distinction, apparently through the influence of the Tiberian system, so that יִ is parallel to *pataḥ* and יֵ parallels the Tiberian *qameṣ* in all its variations, even in a position where it parallels in certain traditions (such as the Sephardi and apparently the Palestinian) not *a* but *o*. A *qameṣ* of the latter type is marked in ancient texts by the sign for the vowel *o* (יֹ). The transition stage between the original use of the signs and this completely "Tiberianized" usage can be found in a number of manuscripts in which one can see the beginning of Tiberian influence. They evidence a tendency to use those signs as parallels to the Tiberian *pataḥ* and *qameṣ*, whose value was therefore *a*, and also – and this applies especially to the sign יֶ – as parallels to the *qameṣ* pronounced in other traditions, as stated above, with a nuance of *o* ("*qameṣ qatan*"). This Tiberian influence is not necessarily in regard to pronunciation, i.e., that the sign expresses in effect the same pronunciation as the signs יֶ, יֵ, יִ, but is mainly a graphic analogy, that is, the sign יֶ (in the main) parallels the Tiberian sign יֶ in all of its pronunciations, and one cannot deduce anything regarding a change in the pronunciation of the Palestinian text.

ו̇ = *o* in all its nuances. In relatively late texts, which were under the Tiberian influence, the vowel *o*, which paralleled the Tiberian *qameṣ* in a closed, unstressed syllable (“*qameṣ qatan*” and others like it) was removed from the range of this sign. Kahle’s supposition that this sign marks the vowel *u* in exceptional manuscripts is not proven, for it seems that there we have a different realization of the phoneme *u*, that is, a different pronunciation of the form (for example רְחֹצֵת, Ezek. 16:4, does not necessarily show the pronunciation to be as the Tiberian רְחֹצֵת, but rather רְחֹצֵת, a form which is incidentally found in the Babylonian tradition, and before *reš* in the Tiberian tradition, for example קְרָצֵת, Job 33:6).

ו̇ (and in individual mss. ו̇) = *u*. There are a number of instances, especially in *piyyutim*, of the use of this sign in place of the Tiberian *holem*. However, that is no proof that the sign marked the vowel *o*. It seems more likely that there is here a different realization of the phoneme *u* under specific conditions. Therefore, it represents differences in the pronunciation tradition and not differences in notation. There is evidence for the allophonic realization, although not strictly parallel, of the phonemes of the back vowels also from other pronunciation traditions, such as the Samaritan tradition (which is Palestinian as well) in which, as Z. Ben-Ḥayyim has demonstrated, *ō* is an allophone of *ū* in closed syllables. Therefore there was no need to distinguish graphically between the two vowels (see below 5.6.); and as much is evident, although less consistently, from the Greek transcriptions of biblical Hebrew, from Galilean Aramaic, and from mishnaic Hebrew, in which, equally, as E.Y. \*Kutscher has shown, *o* is an allophone of *u* (apparently, mainly short unstressed).

There is no sign for the *šewa* and when there is a sign in a place where we would expect *šewa* – though in most cases there is no sign – it is always a sign of one of the vowels (mostly *e* or *a*).

5.1.1.2. HISTORY OF THE SYSTEM. The Palestinian system is basically phonematic and it does not make finer distinctions than to note the five cardinal vowels, at least in its most ancient stage as known to us. There are no nuances of vowels and no notation of quantity. Yet one cannot ignore the fact that six signs are used to denote the five vowels. That is, there are two signs of equal value to mark *a*. (The two signs for the noting of *e* are, as stated, the product of a relatively later stage). This is unimaginable in a primitive, economic graphic system such as this. Dietrich’s attempt to account for the duplication by reasons of calligraphy (ו̇ only above *lamed*, ו̇ above the other letters) agrees neither with the manuscripts nor with the manner of this system in notation (compare the clear and definite distinction between ו̇ and ו̇). One cannot escape the conclusion that the signs of the Palestinian system were not used, in the manuscripts which came down to us, in their original function. In their original employment there were of necessity two different vowels, probably *ā* and *a*, designated by two different signs. For this reason only, two distinct signs were fixed. However, no vestiges have remained from this period,

or from this use of the signs. The system was adopted by vocalizers whose tradition of pronunciation did not distinguish between the two vowels (exactly as occurred afterwards with the Tiberian vocalization), and they used the two signs indiscriminately. The original Palestinian system, which we do not have, was therefore not similar to the Sephardi tradition of pronunciation but was closer to the Tiberian tradition. It was closer, but not however identical; for in its original form it had only one *e* vowel and not two. Thus it was a tradition of pronunciation which had six vocalic qualities, as opposed to the Tiberian tradition which had seven qualities and the Sephardi which had five. The influence of the Tiberian tradition upon relatively later texts of the Palestinian system is, therefore, something of a restoration of the original situation, at least with regard to the signs ו̇ and ו̇.

### 5.1.2. The Diacritical Signs

In addition to the vowel signs there are also a number of diacritical marks to distinguish between different pronunciations of the same letter. These marks occur in the Palestinian texts with even less frequency than the vowel signs.

5.1.2.1. ŠIN-SIN. To distinguish between the two pronunciations of the ש, the marks ש̇, ש̈, ש̉, ש̊, ש̋ are used for *šin*, and in contrast to them ש̌, ש̍, ש̎, ש̏, ש̐ are used for *sin*; in addition, mostly in the texts of *piyyutim*, there is yet another sign for *sin*, ש̑, with its variations ש̒, ש̓, which has no counterpart in a sign for *šin*. In the other texts, too, in most of the places where there is a sign to distinguish between the two pronunciations, it indicates the *sin* alone.

5.1.2.2. MAPPIQ AND DAGEŠ. The last sign mentioned, with its variations (◌̑, ◌̒, ◌̓), is not specifically a sign to mark *sin*, but a general diacritical mark which serves to distinguish between different pronunciations of the same letter. Thus, it is also used to mark the consonantal pronunciation of a letter which may also be quiescent, mostly consonantal *he* (גְּבוּהַ), not only for the *he* with *mappiq* at the end of a word (כַּפִּיָּה), sometimes also the consonantal *waw* (וַעֲנוּתֶךָ) and the consonantal *alef* ([מֵאֵל] מֵה). In addition, though in fewer instances, it denotes a *dageš*, originally only the geminative *dageš* (*hazaq, forte*) and later, perhaps under Tiberian influence, also the explosive *dageš* (*qal, lenē*). It is also found at times even in places where the Tiberian vocalization is likely to have the *dageš* of *ʾate meraḥiq* (or *deḥiq*; גִּיבִלְלָהּ לֹ, גִּיבִלְלָהּ לֹ); it is marked, according to Levias, even in the last letter of the first word (חֲנֹהּ בַה). It is infrequently used in an exceptional manner, as a *dageš* at the beginning of a syllable which was preceded by a syllable that ended with a laryngeal (*h* or *ʿ*), such as וַאֲחֶמֶל, a use which is found at times also in manuscripts in the Tiberian system (with a *dageš* sign).

5.1.2.3. RAFEH. The opposite of the above signs is ◌̑, which is apparently a development of ◌̑ in which form it is also found sometimes (and it is thereby close to the Tiberian *rafeh* sign). This sign denotes the opposite of the *dageš*, both *lene* and *forte*, especially where there is the possibility of error in the

reading and there is need to emphasize the lack of *dageš*. In a few manuscripts this sign is used mainly in its ancient form (◌̄) to cancel extra *waws* and *yods* in the *scriptio plene* of the *piyyutim*, and in its later rounded form (◌̅) also to note quiescent *ʾalef* in biblical manuscripts. Because of this it is difficult to accept the opinion (of Kahle and others) that in a few manuscripts where this sign occurs above the letters *waw*, *he*, *het*, and *ʾayin* it marks precisely their consonantal pronunciation (i.e., consonantal *waw*, and *he*, *het*, and *ʾayin* which did not become silent). With regard to the *h*, *ḥ*, and *ayin* there are only a few examples and at least a part of them allow for a different explanation. As to the letter *waw*, on the face of it the sign refers to a consonantal pronunciation. However, one should not consider the sign's purpose to mark consonantal pronunciation, which is the opposite of its meaning in all of its other contexts, but rather as a sign which indicates the *rafeh* pronunciation of the *waw* [v], actually just like a fricative (*rafeh*) א, namely, ו̄ = א̄. This indeed was the pronunciation of the *waw* by Palestinians according to the testimony of Mishael b. Uzziel (*Kitāb al-Khulaf*, ed. Lüpschitz, 20; similar indirect evidence in David b. Abraham, *Kitāb Jāmiʿ al-ʿAlfāz*, ed. Skoss, 2 (1945), 451 and likewise in other sources). Emphasis like this of the pronunciation of *waw* by the sign ◌̄ is likely to serve as a counter-direction for the Babylonian pronunciation of the *waw* as [w], a pronunciation which is also attested to by Mishael b. Uzziel, or perhaps it was a counter-direction to the consonantal plosive pronunciation of the *waw* as [b], a pronunciation which was common in Palestine itself, though by the Samaritans.

Alongside of the sign ◌̅ and its variants for the noting of a pronounced consonant, a dot under *he* (◌̇) is used in some biblical texts – and in a few isolated manuscripts a dot in the *he* itself (◌̈) as in the Tiberian system – to note the consonantal nature of the *he*, apparently already through Tiberian influence.

In summation, unlike the relative consistency of the vocalic notation, there was relatively little uniformity in the diacritical marks of the Palestinian system. This is quite natural, since all that was needed was a distinguishing sign, and not necessarily an agreed one, to indicate the other possible pronunciation, generally, the less frequent one, of the letter: *šin* versus *sin*, consonantal, *waw* and *yod*, consonantal *he*, etc.

### 5.1.3. The Accentuation Signs

5.1.3.1. FORMATION AND CHRONOLOGY. The accentuation signs are apparently more ancient than the other two types of signs, and anyhow older than the vowel signs (some reasons advanced in 1.3.3.). This is substantiated by perhaps the most decisive proof: the use of a single isolated dot to mark some of the accentuation signs. In the notation of the vowels and among the other diacritical marks the single dot is not used at all. It stands to reason that the single dot was already used for another purpose, for the notation of accents.

In addition to this, most of the signs in the oldest extant manuscripts of the Bible are accentuation signs and only here

and there is a vowel sign inserted; obviously, one reason – among others – is that the correct punctuation and cantillation of the biblical text posed a more serious problem for the reader than the pronunciation. On the other hand, the set of accentuation signs differs from that of the vowel signs in that it is less uniform, and less governed by rules. It is difficult to generalize from all of the biblical manuscripts, or even the majority of them, that a specific accentuation sign was always used for the same purpose. This means that different signs were used to mark the same accent in different manuscripts – a situation which does not exist among the vowel signs. It follows that what we have is a set of accentuation signs along different stages of development, and we possess neither any manuscript nor any set of accentuation signs about which we can state with certainty that it is the ultimate stage of development, i.e., the set of Palestinian accentuation signs.

In spite of this, one may yet claim that the vowel signs are older than the accentuation signs, since the vowel signs are already fixed and uniform even in the most ancient manuscripts, while the accentuation signs are seen to be continually changing in the manuscripts. This claim, though, is only apparently valid. According to this supposition the abstention from the use of the single dot in vocalization would be unimaginable, since it is a diacritical mark which is just waiting to be used and is quite natural (as found in the writing systems of other languages). Furthermore, the double usage of a few signs, such as ◌̄, ◌̅, ◌̇, which mark both vowels and accents, would not be understandable.

It seems that the two sets of signs had two cycles of growth: (a) the growth cycle of the accentuation signs (the older) in the biblical text; (b) the growth cycle of the vowel signs (relatively later) in non-biblical texts, mainly in *piyyutim*. The essential difference between the two types of texts, with the different nature of the demands that each made on the reader, as well as the different expectations of the reader from each type of text, evidently brought about the divergent crystallization of the two sets of signs.

(a) The Bible was the first text which required additional signs as reading aids. Chronologically their addition may have preceded even the beginnings of the ancient *piyyut*. These aids consisted only of the most primitive, simple mark – the single dot – and their function was to guide the educated reader, who was generally fluent in the pronunciation of the words, as to the manner of punctuation and cantillation of the verses. However, this notation did not necessarily have to be unequivocal, since, as is well known, the accentuation signs in the more developed systems, too, are relative, i.e., they designate the measure of pause in one place in a verse in relation to a greater or smaller measure of pause in another place in the same verse. It follows that in the highly developed accentuation systems (not in the Palestinian) each accentuation sign denotes the relativeness of the punctuation. Yet one need not assume that this rule necessarily held in earliest times. It seems likely, and there is evidence for it, that one specific sign served to mark pauses of different strength (see for example

the many uses of the sign  $\text{—}$  precisely in the most ancient manuscripts). In the most primitive system it was sufficient, therefore, to note the very fact that there is a pause, without necessarily indicating its degree; for that purpose there was no imperative need for a uniform set of signs (cf. the section on diacritical signs – 5.1.2. – which also did not necessarily have to be uniform, for the same reason). It is only natural that scribes would not consider themselves bound to a specific set of signs, even an older and more prestigious one, and that they improvised and varied the notation system. As time passed they added signs, to indicate differences and note the degrees of the pause. They also did not refrain from using the double dot and the line, which are more complex forms, and which in part had in the meantime been fixed for other functions in the cycle of non-biblical texts.

(b) The other growth cycle of signs occurred in non-biblical texts, the *piyyut*. Here, too, additional signs were needed as reading aids. The main problem with *piyyut* was however not in the punctuation, but in the actual reading of relatively new texts, which had not been handed down from generation to generation but had recently been written in a difficult language not always understood by the reader. Here a system of vowel signs was imperative, and had to be, by its very nature and for its main purpose, unequivocal: each sign had to have, at least originally, only one function and only one meaning, so that it should note only one vocalic quality (or, to be more precise, one range of a set of vocal nuances which the reader felt to be one vowel – in other words: a phoneme). At the time that these signs were fixed for the vowels – six signs (to denote six qualities; see above, 5.1.1.2.) – they were apparently free of any other significance even in the area of accentuation. These signs remained unchanged, except for slight variations ( $\text{ֿ}$ ,  $\text{ֿ}$ ), without the slightest deviation in function, except for changes which took place following modification in the tradition of pronunciation ( $\text{ֿ}$ ,  $\text{ֿ}$ , cf. above, 5.1.1.1.).

Alongside this stability and regularity in the use of the vowel signs there arose in the growth cycle of the biblical texts, sets of accentuation signs which were relatively “free”: as they developed and more signs were added, no attention was paid to the other growth cycle, in which rules had already been established concerning the vowel signs. As long as the two systems were not mixed no difficulties were encountered, but when the punctuators of biblical texts added vowel signs to the Bible they sometimes found themselves forced to use vowel signs which had in the meantime come to be used as accentuation signs in the system which they followed. This is the source of the duplicate use of a few signs in some of the biblical texts.

5.1.3.2. THE (21) PROSE BOOKS. The identification of the Palestinian accent signs with Tiberian equivalents should perhaps *prima facie* be avoided, as was the case with the vocalization signs. However, with regard to the actual division of the verses of the Bible there are, in general, no major differences between Palestinian manuscripts and the Tiberian text; therefore in this case the Tiberian terminology can be used to identify

the accentuation signs. This will, however, be done only after the presentation (independent of the Tiberian system) of the function of each sign.

5.1.3.2.1. *Disjunctives*. The largest disjunctive which separates a verse from the one which follows it (henceforth  $D_1$ ) is in most cases not marked at all. The external technical marks (generally two dots – a colon) are sufficient to note the end of a verse. In the few instances where the end of a verse is indicated by an accentuation sign, use is made of the basic sign  $\text{—}$  – the single lower dot  $\text{ֿ}$ , which also notes a number of other pauses. It denotes the main divider of a verse into two, its prelude accent, the divider of the first half of the verse and, placed in different positions, the single dot also indicates a number of other accents.

This can be presented in a schematic way approximately as follows:

An average verse is generally divided into a main division by  $\text{ֿ}$  (henceforth  $D_2$ , with the function of *’etnah*), its prelude accent (henceforth  $D_{2p}$ , in the function of *tippeḥa* and identical with  $D_{1p}$ ) being  $\text{ֿ}$ . This main disjunctive,  $D_2$ , is also missing at times, yet less frequently than the last disjunctive in the verse,  $D_1$ . Generally, however, the scribes show a great degree of consistency with the notation of the prelude accent of both of them,  $D_{1p}$ ,  $D_{2p}$  (henceforth  $D_{1-2p}$ ). In some manuscripts instead of the lower dot of  $D_2$  the sign  $\text{ֿ}$  or  $\text{ֿ}$  or, in the Tiberianized texts,  $\text{ֿ}$ , is used. Instead of the dot of the prelude accent  $D_{1-2p}$ , which occurs in a number of texts also inside the letter,  $\text{ֿ}$ , the sign  $\text{ֿ}$  or  $\text{ֿ}$  is found in some texts; i.e. in the function of *tippeḥa-’etnah*,  $\text{ֿ-ֿ}$  occur in some manuscripts, and in others  $\text{ֿ-ֿ}$ , while in others  $\text{ֿ-ֿ}$  instead of the most common pair  $\text{ֿ-ֿ}$  or  $\text{ֿ-ֿ}$ .

A secondary division of each one of the two parts remaining after the first division (henceforth  $D_4$  – the function of the *zaqef*) is sometimes also noted by a lone dot above the word  $\text{ֿ}$ , but in some manuscripts a specific sign was used for this  $\text{ֿ}$ , and in certain others not necessarily Tiberianized ones – even  $\text{ֿ}$ . Yet even in the manuscripts in which the sign is  $\text{ֿ}$  and is identical with the main pausal form,  $D_2$ , it is easy to distinguish between them with the aid of the prelude accent (henceforth  $D_{4p}$  – the function of *pašta*) which always has the same form  $\text{ֿ}$ , irrespective of the form of the major disjunctive  $D_4$ .

When the first part of the verse is very long it is likely to be divided by a special major disjunctive (henceforth  $D_3$  – with the function of *segol*) which is generally noted by a single dot above the word,  $\text{ֿ}$ . In a number of manuscripts it had a special place set aside for it, above the word and to the left, that is, as a postpositive sign  $\text{ֿ}$ , or as a single lower dot  $\text{ֿ}$ . The prelude accent  $D_{3p}$  (with the function of *zarqa*) is also a postpositive sign in the form of  $\text{ֿ}$  or  $\text{ֿ}$ , sometimes identical with its major disjunctive,  $\text{ֿ}$ , and sometimes occurring as a sub-linear point  $\text{ֿ}$  or  $\text{ֿ}$ .

When there is a need for an additional division in the domain of the prelude accent  $D_{1-2p}$  the accent adjacent to it

will be  $\text{ז}$ , and in one manuscript  $\text{ז}$  (henceforth  $D_{1-2p}D$  – with the function of the *tevir*).

An additional division larger than the prelude accents in the domain of the accents  $D_3$ ,  $D_4$ ,  $D_{1-2p}$  is designated by  $D_5$ , (with the function of *revia'*) which was marked  $\text{ז}$  or  $\text{ז}$  or  $\text{ז}$ . The domain of this accent and the domain of the prelude accents  $D_{3p}$ ,  $D_{4p}$ ,  $D_{1-2p}$  are likely to be subdivided by a series of accents of lesser pausal strength which have various forms, and they are (in the order of their frequency and their increasing pausal strength):  $\text{ז}$  or  $\text{ז}$  or  $\text{ז}$  (a sort of *gereš*),  $\text{ז}$  or  $\text{ז}$  or  $\text{ז}$  (a sort of *munah legarmeh*),  $\text{ז}$  or  $\text{ז}$  or  $\text{ז}$  (a sort of *teliša' gedola*),  $\text{ז}$  or  $\text{ז}$  or  $\text{ז}$  or  $\text{ז}$  or  $\text{ז}$  (a sort of *pazer*). All of these signs have similar functions, and it is difficult to establish with certainty their Tiberian parallels, both because of the lack of consistency of marking them and because of the possibilities of interchange among them even within the “precise” Tiberian system itself. Furthermore, particularly with regard to these accents, which are low in their pausal strength, the penetration of Tiberian influence can be recognized, such as  $\text{ז}$  (similar to *pazer*) and  $\text{ז}$  (similar to *teliša'*). On the other hand, it is difficult to establish with certainty the origin of some of the signs, of which at least a number may be thought, to the same degree, to have originated in the Palestinian system and from there moved to the Tiberian. This theory is offered as a supposition for some of the signs which are parallel to *teliša' gedola* and to *pazer*, but seems almost certainly correct for the sign parallel to *gereš* ( $\text{ז}$  or  $\text{ז}$ ).

5.1.3.2.2. *Conjunctives*. While the marking of the disjunctive accents was never complete and words which require a pause are quite often found without a pausal sign, the necessary joining of words was never marked regularly but only in relatively rare instances. The sign for joining is either a dot between words ( $\text{ז} \cdot \text{ז}$ ) or, infrequently, a short, small slanted stroke ( $\text{ז} / \text{ז}$ ) and is independent of the nearby pausal accents. This marking for joining of words is quite random; sometimes it appears to point up the need for connection, but one cannot always find an explanation for it. It occurs both in positions which in the Tiberian system would have a conjunctive accent (*mešaret*: lit. servant) and in those which would have a *maqfaf*. It is doubtful however whether one can consider it an accentuation sign in the full sense of the word. There is only one exception to the above: in a number of manuscripts the sign  $\text{ז}$  is specifically used for words which in the Tiberian system have the conjunctive accent *teliša' qetanna*. It is possible that this mark is the beginning of the emergence of a conjunctive accent, i.e., a sign which indicates not only the punctuation, but also a specific melody. However, this is by no means certain since the sign also occurs in positions where a slight pause might be called for according to the context. Thus, even this mark may be no more than a pausal accent, albeit a very slight one, which corresponds to a conjunctive accent in the Tiberian system. This is not true of the sign  $\text{ז}$ , which occurs with great consistency in one manuscript and corresponds there to the Tiberian conjunctive *merka*. Other signs such as

$\text{ז}$ ,  $\text{ז}$  have no fixed function in isolated manuscripts and it is difficult to draw conclusions concerning them.

The Palestinian system is also the most primitive of all the systems in that the marks are not placed over the stressed syllable; that is, one of the three functions of the accents had not yet been developed in it. This use of the accentuation signs did not reach even the texts which were already influenced by the Tiberian system. It is, however, customary in the  $\text{ז}$  (intermittences; see also 5.10.3) texts where the accent is naturally marked on the single letter which represents the word, which is usually a letter of the stressed syllable. (Concerning the use of the Tiberian signs within the Palestinian system, especially in the domain of conjunctives, see below, 5.5.)

The names of the accents in the Palestinian system are not known and there is no way of connecting the names known to us from various masoretic notes with them.

5.1.3.3. THE (3) POETICAL BOOKS. The accentuation signs for Psalms, Proverbs, and Job are very rare in the Palestinian system and occur in very few manuscripts. The following are the signs and their functions in verse division.

5.1.3.3.1. *Disjunctives*. The major disjunctive, which separates one verse from the next ( $D_1$ ), is never marked. If it has a prelude accent ( $D_{1p}$ ), it is marked  $\text{ז}$ . The verse itself may be divided into a main division ( $D_2$ ) by  $\text{ז}$  and sometimes also by  $\text{ז}$  (with the function of *'ole we-yored*), the prelude of which is  $\text{ז}$  on the first word ( $D_{2p1}$  with the function of *revia' qatan*) or  $\text{ז}$  or  $\text{ז}$  on the second word ( $D_{2p2}$  with the function of *šinnor*). However, in most instances, since the verses are short, they are not divided by the major disjunctive ( $D_2$ ), but by the smaller disjunctive ( $D_3$ ) which is marked  $\text{ז}$  (with the function of *'etnah*), the prelude accent ( $D_{3p}$ ) of which is  $\text{ז}$  (with the function of *dehi*). The disjunctive  $D_3$  is sometimes marked also  $\text{ז}$ , apparently when there is no prelude accent  $D_{3p}$  preceding it. Even when  $D_3$  divides the verse it is noted only infrequently in the manuscripts because it is self-evident, both from the arrangement of the text (generally there is a space in the line at the point of the main division) as well as from the notation of the prelude accent  $D_{3p}$ , which announces a  $D_3$  even when it is not marked (see above concerning the omission of  $D_1$ ). A major disjunctive within the domain of  $D_2$  and  $D_3$  is  $D_4$  which is marked as  $\text{ז}$  (with the function of *revia' gadol*). This sign is therefore common to  $D_{1p}$ ,  $D_{2p1}$  and  $D_4$  and thus parallels the three *revia'*s of the Tiberian system: *revia' mugraš*, *revia' qatan*, and *revia' gadol*, respectively. Additional signs, occurring infrequently, with the function of minor disjunctives are:  $\text{ז}$  (as *mahpak legarmeh*),  $\text{ז}$  (with the function of *'azla' legarmeh*) and once  $\text{ז}$  (perhaps with the function of *pazer*). A sign similar to the last or  $\text{ז}$  (or perhaps  $\text{ז}$ ) denotes on one occasion a disjunctive (with the function of *šalšelet gedola*).

5.1.3.3.2. *Conjunctives*. The connection between the words is marked even less consistently in the poetical books than in the other 21 books of the Bible. However, when it is marked, a dot between the words in the middle of the line is used ( $\text{ז} \cdot \text{ז}$ ) and

sometimes also a dot is added above the first word (נ · ז). This sign is not dependent on the context of disjunctives, except for ז which is specifically used for words that have in the Tiberian system a conjunctive *mahpaḳ* (cf. above, the sign of the *mahpaḳ legarmeh*). In one place it is possible that ז serves as the parallel of the Tiberian conjunctive *šalšelet qeṭanna*.

## 5.2. THE BABYLONIAN SYSTEM

5.2.0.1. THE TERM. This system was called Babylonian in accordance with references by a number of early scholars. The following are the most important and the most unequivocal; they undoubtedly refer to a specific vocalization system and not to a different pronunciation tradition:

(1) \*Nissi b. Noah (a Karaite scholar of the 11<sup>th</sup> century): “to learn points (= vowels), conjunctives, accent pauses, defective and plene spellings of the people of Šin‘ar” (= Babylonians; S. Pinsker, *Lickute Kadmoniot, Zur Geschichte des Karaismus und der karaeischen Literatur*, Vienna, 1860, p. 87);

(2) the colophon of a manuscript of the Torah with Targum Onkelos from 1311 (Parma, De Rossi Library, no. 12): “this Targum was copied from a book which was brought from Babylonia and which was pointed above [the line] with the vocalization of the land of Assyria, and R. Nathan b. R. Machir b. R. Menahem of Ancona... changed it, corrected it, and copied it to the Tiberian vocalization” (Zunz, *Zur Geschichte und Literatur*, p. 110).

5.2.0.2. EXPANSION AND CHRONOLOGY. The name “Babylonian vocalization” refers to the birthplace of the system and not to the expansion of its use. There is no doubt that it was used beyond the borders of Babylonia and reached, according to Jacob al-*\*Kirkisānī* (937), Persia, the Arabian Peninsula, and Yemen; Yemenites have used manuscripts with Babylonian vocalization until today. We are not dealing here with the Babylonian tradition of pronunciation, but only with the graphic system.

The most ancient dated manuscripts which are vocalized in the Babylonian system, including accentuation signs, are a Cairo *Genizah* fragment now in Cambridge which was written in Persia, in 904 (H.P. Rueger, vT, 16 (1966) 65f.), and a complete manuscript of the latter Prophets from the year 916 (Peterburg, the first Firkovich collection, no. B 3 = Petropoli-tanus). The early date of the latter does necessarily indicate a relatively ancient state of vocalization and accentuation.

The texts with Babylonian vocalization show great development, more than is found in any other system; and they can be classified into a number of groups according to various criteria, such as that of I. Yeivin (*The Hebrew Language Tradition as Reflected in the Babylonian Vocalization* (1985), pp. 21–23) who discerned three stages: the ancient, the intermediate, and the later; and he divides the linguistic material into five types according to characteristics of pronunciation, beginning with the ancient Babylonian pronunciation (type v) and continuing to the completely Tiberian pronunciation with Babylonian signs (type i).

5.2.0.3. MADINḤA’E READINGS. It would stand to reason that the texts vocalized in the Babylonian system should correspond to the Madinḥa’*e* (Eastern) versions of the Masorah, although they include almost no vocalization issues but mostly differences of plene and defective spelling, differences of *qere* and *ktiv* and differences in division of words. That is why Elias Levita (*Massoreth Ha-Massoreth*, edit. C.D. Ginsburg, p. 113) considered the official lists of variants (חילופין) between the Westerners and the Easterners (for Prophets and Hagiographa only) as preceding the invention of the vocalization and accentuation signs. However, there are many manuscripts vocalized in the Babylonian system which contain many readings that correspond to the Western (*Ma’arva’e*) versions and vice versa. Still, in the Babylonian sources a large number of readings, sometimes the majority, correspond to the Eastern (*Madinḥa’e*) tradition and they correspond with it more than any Tiberian manuscripts do. It can be assumed that mistakes occurred in the transmission of the lists of variants between *Ma’arva’e* and *Madinḥa’e*, and also one cannot ignore the possibility that perhaps the term *Madinḥa’e*, like its counterpart, *Ma’arva’e*, was a broad geographical concept, and that a universally accepted, uniform text for all the minute details never did exist, neither in the West nor in the East. It follows therefore that a list of variants based on one of the versions can neither invalidate nor establish the Babylonian nature of any source.

Everything stated above concerning the consolidation and uniformity of the Palestinian system applies also to the Babylonian system, although not to the same degree. This system also came down to us in different stages of development, and in it too there are great differences between the various manuscripts; here, too, the punctuation is not complete, and there are differences between manuscripts with regard to the degree of punctuation in them.

### 5.2.1. The Vowel Signs

5.2.1.1. THE SIMPLE SYSTEM. There are two sets of signs in Babylonian vocalization:

- (a) the regular Babylonian set, which consists (in part) of lines, whose origin is in letters, and (in part) of dots;
- (b) a set which consists entirely of dots and is relatively rare.

5.2.1.1.1. *The Signs*. The signs are located in each case above the letter and to the left of it:

ז = *i* is used in both sets and it sometimes has the shape of a small *yod*. ז = *e* is used in both sets. ז is used in the regular set and it is shaped like a small *‘ayin* with different angles (also ז); in the dot set its counterpart is ז. The phonetic value of the sign has not been sufficiently clarified. It occurs in positions which correspond to the *pataḥ* and *segol* in the Tiberian system, and it might have been pronounced like one of them, that is, *a* or *e* (in which case that vowel of the two which is not extant in the Babylonian system would have merged with its remaining companion). It seems, however, more reasonable that it was pronounced as a medium vowel between *a* and *e*, and this has been the pronunciation of Yemenite Jews until

today in certain circumstances. The sign is called in the Babylonian Masorah *פיתוח פומא* (“opening of the mouth”) or *פיתח* (“opening”) for short.  $\dot{\text{ו}}$  is used in the regular set and has the shape of *ʾalef* with one leg missing; in the dot set  $\dot{\text{ו}}$  (or  $\dot{\text{ב}}$ ) serves as its counterpart. Apparently the phonetic value of the sign was *ā* and it corresponds to the Tiberian *qames* (the opinion that its value was *ā* is untenable). Its names in the Babylonian Masorah are: *מיקפץ פומא* or *מיצף פומא* for short; “contraction of the mouth”) and sometimes *אימצא* ( $\dot{\text{א}}$  for short) from the root *אמץ*, whose meaning is also “bringing together” (see Yalon, *Leshonenu*, 32 (1968), 2–4).  $\dot{\text{ו}}$  = *o* is used in both sets.  $\dot{\text{ו}}$  = *u* is used in the regular set and it sometimes has the shape of a small *waw*. Its counterpart in the dot set is  $\dot{\text{ב}}$ .  $\dot{\text{ב}}$  = *šewa*. It is called *חטפא* ( $\dot{\text{ח}}$  for short) in the Babylonian Masorah. This sign denotes both mobile and quiescent *šewa*, although the mobile *šewa* is marked more frequently. In only a certain type of manuscript it is the sign for mobile *šewa* exclusively, and the quiescent *šewa* is not marked at all. The realization of the Babylonian *šewa* may have been close to its Tiberian equivalent (see 5.3.1.2).

5.2.1.1.2. *The Two Sets and Syriac*. The dot set is used exclusively in only a few manuscripts. Generally it was mixed with the signs of the regular set. Both of these sets have counterparts in the two Syriac vocalization systems: the vocalization system of Eastern Syriac, which is one of dots, and that of Western Syriac, which is a system of signs made up of letters (albeit Greek). Two of the signs have the same form in the Babylonian dot set and in the Eastern Syriac system and their functions are surprisingly similar:  $\dot{\text{ו}}$ ,  $\dot{\text{ב}}$  – the first denotes *ā* in Syriac and *a/e* in the Babylonian; the second signifies *a* in Syriac and *ā* (in the opinion of some, *ā*) in the Babylonian. Kahle believes that this indicates a connection between the Babylonian system and the Eastern Syriac, though not in the known form which goes back to the eighth century, but to an earlier stage of which there are no traces. It is difficult to accept this theory, since in the meantime we have come to know from the material reviewed by J.B. Segal (*The Diacritical Point and the Accents in Syriac*, pp. 152–3) the shapes of signs dating even earlier than the eighth century. From this material it is clear that in the seventh century and even earlier the form of the sign for the vowel *ā* in Syriac was  $\dot{\text{ו}}$  (and not  $\dot{\text{ב}}$ ). The possible solution lies, therefore, in one of two directions: either the Babylonian system followed the late stage of Syriac, i.e., after the eighth century (but such a late date for the formation of the Babylonian system does not seem reasonable and even Kahle did not consider it), or the influence was in the opposite direction and it was the Syriac that followed the Babylonian.

5.2.1.1.3. *The Antiquity of the Two Sets*. Kahle feels that of the two Babylonian sets the dot set is the older, because it is simpler, because it is similar to the vocalization of Eastern Syriac (but see above), and because it is found in its purest state in a relatively early manuscript. The regular set developed, in his opinion, from the dot set. Yeivin does not agree, especially

since there are older manuscripts than the one mentioned in which the regular set is used. In his opinion the dot set is just another set, ancient in itself, but not necessarily older than the regular set. It is possible that the two sets were used at the same time and that the dot set was used in a certain geographical area or by a specific school. His opinion seems reasonable. Furthermore, only the regular set, which uses letters, combines with the Babylonian accentuation, which too uses letters, to form a complete system. In any event, the dot set was preserved only briefly and was rejected in favor of the regular set. Two of its signs, however, ( $\dot{\text{ב}}$ ,  $\dot{\text{ו}}$ ) were preserved in the regular set with a special function (see below).

5.2.1.2. THE COMPOUND SYSTEM. As time passed, the Babylonian vocalization system was improved and signs were added to indicate further differentiations, mainly to note the special nature of the vowel which was influenced by the syllable structure (not, however, quantitative signs). The special signs which were added are, for the most part, graphemes composed of two signs. The system that evolved was the compound Babylonian vocalization system.

5.2.1.2.1. *The Signs*. There are a few signs *under* which there is an additional horizontal line when the vowel occurs in an unstressed syllable closed with a *šewa*, and a horizontal line *above* them when the vowel occurs in an unstressed syllable, open or closed by *dageš forte*. The details of the signs are not uniform in all the manuscripts. There are manuscripts which contain special signs and exceptional forms, and it is difficult to find two manuscripts whose use of vowel signs is completely identical. The main signs which occur rather frequently are the following:

- (1) a sign to mark a vowel in an open, unstressed syllable (including syllables where the Tiberian vocalization has a *hataf* with a laryngeal consonant) or an unstressed syllable closed by quiescent *šewa*:  $\dot{\text{ו}}$  (= *i*),  $\dot{\text{ב}}$  (= *e*),  $\dot{\text{ב}}$  (= *a*),  $\dot{\text{ו}}$  (= *o*),  $\dot{\text{ב}}$  (= *u*);
- (2) a sign to mark a vowel occurring in an unstressed syllable closed by *dageš*:  $\dot{\text{ו}}$  (= *i*),  $\dot{\text{ב}}$  (= *a*),  $\dot{\text{ב}}$  (= *u*).

5.2.1.2.2. *Perfect and Non-Perfect*. Yeivin differentiates between perfect and non perfect compound vocalization. In the former there are special signs for each type of syllable and they are used consistently. In the latter, the sets of signs are incomplete, that is, there is a special sign for only one type of syllable, or the special signs are used only for certain vowels and not for all of them, or the simple and compound signs are mixed together without differentiation. The phenomenon of lack of perfection is found in three types of manuscripts:

- (1) ancient ones, in which the compound vocalization had not yet reached its full maturity;
- (2) manuscripts in which there is a mixture of the two systems;
- (3) late manuscripts in which only some signs of the compound vocalization were chosen for use.

5.2.1.2.3. *Tiberian Influence*. The increase of Tiberian influence in late manuscripts is evidenced in grammatical forms

and in the reading tradition, and is even found in the set of graphemes. This is particularly noticeable in late manuscripts in which there are attempts to introduce a special sign parallel to the Tiberian *segol*. For this they used:

(1) ֿ (in place of ֿ) as the parallel of *segol*, and this in addition to its function as the equivalent of the Tiberian *šere*; this sign sometimes occurs as an addition to the original sign and above it (ֿ) to note the nuance with which one is to pronounce ֿ;

(2) ֿ (an inverse Tiberian *segol*);

(3) ֿ – the parallel to ֿ from the dot set, which by way of differentiation was specifically used for the *segol*.

### 5.2.2. The Diacritical Signs

Certain additional diacritical marks are used to distinguish between different pronunciations of the same letter.

5.2.2.1. ŠIN-SIN. To mark  $\psi = \xi$  a small *šin* above the letter is used (ֿ) and to mark  $\psi = \acute{s}$  a small *samek* is placed above the letter (ֿ). These signs are rarer than the vowel marks, especially in ancient manuscripts. Only in some relatively late manuscripts do they occur almost regularly.

5.2.2.2. MAPPIQ, DAGEŠ, RAFAH. The consonantal nature of a *he* at the end of a word (*mappiq*) is sometimes marked by a small *he* above the letter (ֿ).

A *dageš* is marked by placing a small *gimmel* above the letter (ֿ and later also ֿ) which perhaps alludes to its Babylonian name *דגישא* (abbreviated as *דגיש*, *דיג*). The first letter of the name was not chosen as usual, since a small *dalet* (ֿ) is used as one of the accentuation signs (another proof that the system of accentuation signs is the earlier).

The *rafah* nature of a letter is sometimes marked by a small *qof* above the letter (ֿ), which is an abbreviation of its Babylonian name *קפיא* (abbr. *קיפ*) and means “light” according to H. \*Yalon (*Sinai, Sefer Yovel* (1958), 239).

These signs are ambiguous, since they show both gemination (*dageš forte*) or the lack of it and note the plosive pronunciation of *בגדכפ* (*dageš lene*) or their pronunciation as fricatives. They are used only infrequently, mainly in places where a misunderstanding might arise. In manuscripts using the dot set exclusively, these marks are not added.

To mark *ʿate meraḥiq* (or *deḥiq*) a dot in the center of the line between the words is used in a few manuscripts: *לִּילֵהּ לָנוּ* (Josh. 24:29), which means that the dot is not a *dageš* (cf. Dotan, in *Fourth World Congress of Jewish Studies*, 2 (1968), Hebrew part, 105), although in some manuscripts, some of them late, the sign of a *dageš* or its substitute (the preceding vowel marked by the sign for a syllable closed by a *dageš*) is given in these instances.

### 5.2.3. The Accentuation Signs

5.2.3.1. THE NATURE OF THE NOTATION. Unlike the Palestinian system of accentuation signs, the Babylonian accentuation signs have reached us as a series of fixed marks above the letter, most of which are small letters or parts of them. The division of the verses according to the Babylonian Masorah

sometimes differs, especially in ancient manuscripts, from the Tiberian division, and at times a comparison with the Tiberian system is liable to give a false impression. Some of the Babylonian signs have slightly different functions in different manuscripts and it seems that a shift of their pausal strength occurred with the passage of time. This together with the fact that in the relatively late manuscripts, especially in those vocalized with the compound vocalization, accentuation signs are marked over the stressed syllable, make it possible to classify the manuscripts as earlier or later according to their use of the accentuation signs. This classification tallies in general, but not always, with that of the vowel notation.

In the Babylonian system there are no conjunctive accents at all. However, there are manuscripts, mainly those vocalized with compound vocalization, in which the vocalizer or a second hand wrote in the conjunctive Tiberian signs, and they obviously are placed with the stressed syllable.

As opposed to the Tiberian situation there is no difference in principle between Prose and Poetical books. The same signs are used in both, but the degree of subdividing the verses is not as great in the Prose books and the possible arrangements of the accentuation signs are not as numerous because of the brevity of the Poetical verses.

5.2.3.2. TYPES OF ACCENTUATION. A gross, incomplete classification into three types of manuscripts according to their use of accentuation signs was suggested by A. \*Spanier (1927). The functions of the accentuation signs are presented here in a general way according to the most ancient situation (group *a*) and will be followed by the main changes in the functions of the signs in the groups which Spanier called *a*, *b*, and *c*. A more precise grouping was suggested by R. Shoshani (2003), who maintains a fourfold subdivision: early *a*, later *a* as one group; and *b* and *c* as parts of the latest group.

5.2.3.3. THE ACCENTS. There is no accentuation sign for the last word in a verse. Sometimes there is no sign separating the verses but occasionally there is a sign at the end of the verse, in group *a* mostly: occasionally signs such as  $\overset{\circ}{\text{—}}$  or  $\overset{\circ}{\text{—}}$ , and sometimes, at the beginning of the verse (cf. *Soferim* 3:7), a sign like  $\circ$  or  $\wedge$ . The main pause of the verse is marked by  $\overset{\triangle}{\text{—}}$  (סִיחָפָא); equal to the sign of the Tiberian *etnah*, but above the line; this and the next sign are the only Babylonian signs not shaped as letters). The next largest pause, whether within the domain of  $\overset{\triangle}{\text{—}}$  or within the domain of the end of the verse, is marked by  $\overset{\perp}{\text{—}}$  (apparently an abbreviation of the accent name *זקף* or *זיקפא*). As the main or single pause within the domain of  $\overset{\perp}{\text{—}}$ ,  $\overset{\perp}{\text{—}}$  is used (perhaps an abbreviation of *תיברא*), and when it is not the only one and there is place for an additional pause after it,  $\overset{\perp}{\text{—}}$  is used (like a slanted *nun*) as a final, small pause before  $\overset{\perp}{\text{—}}$ . The accent  $\overset{\perp}{\text{—}}$  is not imperative, and when there is need for only one pause, even a small one, in the domain of  $\overset{\perp}{\text{—}}$  it will be  $\overset{\perp}{\text{—}}$ . The smallest pause before  $\overset{\triangle}{\text{—}}$  is  $\overset{\vee}{\text{—}}$  (רִימִיא), and this accent serves as a prelude before  $\overset{\triangle}{\text{—}}$ . In general  $\overset{\triangle}{\text{—}}$  is not marked, but only its prelude  $\overset{\vee}{\text{—}}$  (which is also sometimes omitted). The smallest pause before the final word of the verse is  $\overset{\perp}{\text{—}}$ , sometimes  $\overset{\perp}{\text{—}}$  or

𐤊 (apparently abbreviations of 𐤍𐤎 or its Aramaic 𐤍𐤎𐤁, in one manuscript 𐤊), and it therefore parallels 𐤊 which precedes 𐤊. Another disjunctive within the domain of both 𐤊 as well as the end of the verse – occurring after 𐤊 and weaker than it, and before 𐤊 or 𐤊 and stronger than they are – is 𐤊 (apparently an abbreviation of 𐤍𐤎). This sign is likely to be repeated several times when necessary (perhaps this is the origin of its name *hazer*). The 𐤊 is likely to divide the domain of 𐤊 (and may be repeated) when this is the main or only pause in the domain of 𐤊. 𐤊 (apparently an abbreviation of 𐤍𐤎) is used as a pause in the domain of 𐤊 and in that of 𐤊. Sometimes 𐤊 (perhaps an abbreviation of 𐤍𐤎 = the Tiberian accent *legarmeh*) is used as a pause in the domain of 𐤊. The accent 𐤊 (a half-*shin* or a broken *shin*, perhaps alluding to the accent name 𐤍𐤎 or 𐤍𐤎) parallels the Tiberian accent *segol*, but, unlike it, may appear also in the second half of the verse after the accent 𐤊, instead of the first 𐤊 in the half-verse. The accent 𐤊 is divided by 𐤊 or by 𐤊, or by the sequence 𐤊 𐤊 (with 𐤊 being the stronger of the two), and sometimes 𐤊 (? 𐤍𐤎); some see it as parallel to 𐤍𐤎 – *zarqa*) is the last divider before 𐤊. The accent 𐤊 (similar to a half *tet*) is used as a small disjunctive within the domain of 𐤊 or 𐤊.

In group *a* the accentuation signs are not placed over the stressed syllable. The accent 𐤊 and its prelude accents are used not only in place of the Tiberian *segol* (i.e., as a substitute for the first *zaqef*) but also in the second half of the verse (as a substitute of the first *zaqef* after 𐤊).

In group *b* the accentuation signs are placed on the stressed syllable. The accent 𐤊 is weaker in pausal strength than 𐤊. The accent 𐤊 always parallels the Tiberian *segol*. There are additional changes compared to group *a*, mostly of minor importance.

In group *c* everything is the same as in group *b* except that the accent 𐤊 is split. It is used only within the domain of 𐤊 and 𐤊, while in the domain of 𐤊, 𐤊 (apparently an abbreviation of 𐤍𐤎) is used instead.

As indicated, there is no separate set of accents for the three Poetical books. The same accents are used, but their actual distribution is affected by the constant brevity of the verses in these books. In principle there is no difference. Thus there is no accentuation sign for the final word of the verse. The separation between the verses is marked as in the other books. The main pause is noted by 𐤊, which is generally omitted, and the notation of the pause preceding it is sufficient. The second half of the verse is divided by 𐤊, and often, when the verse is very short, 𐤊 is the main divider of the whole verse (without 𐤊). Because of the brevity of the verses the 𐤊, the divider before 𐤊, may be used as the only divider of the verse. Such and similar situations may occur also in short verses of the Prose books.

This is not, therefore, a different system of notation, as in the Tiberian, but the utilization of the same signs as in the Prose books in a more limited manner, in accordance with the special conditions required by the short verses of Psalms, Proverbs, and Job.

### 5.3. THE TIBERIAN SYSTEM

#### 5.3.1. The Vowel Signs

Unlike its predecessors, the Tiberian vocalization has reached us as a consolidated, uniform, and complete system, although in some isolated and exceptional manuscripts there are remnants of other systems, such as the Palestinian sign 𐤊 to denote *o* (cf. Kahle, *Masoreten des Westens*, 1 (1927), 35).

5.3.1.1. THE VOWELS. There are seven vowels, for which there are eight signs, and it is clear that they do not indicate quantity in any way. This system, like its predecessors, was used by different communities and by people who had different traditions of pronunciation and who interpreted the signs and read them accordingly. In the Tiberian tradition in which the signs were created, their phonetic values are approximately as follows:

𐤊 = *i*; 𐤊 = *e*; 𐤊 = *ε*; 𐤊 = *a*, this sign is generally under the letters like the others, but when it serves as a furtive *pataḥ* in the ancient manuscripts, it precedes the letter (𐤍𐤎). 𐤊 = *â*: the original shape of the sign is a line and a dot under it. Only in printed books were they joined. Some believe (as Abraham ibn Ezra already did in *Sefer Zəhot*, ed. G.H. Lippmann, p. 3b) that the sign 𐤊 denotes the combination and mixture of the two vowels *a*, *o*, in order to indicate a vowel which is somewhere between the two, i.e., a back *a*. However, the sign was fixed from the start and was used as one vowel of definite quality. Only later and in the Sephardic tradition was it considered a representation of two vowels: *a* (a wide *qameš gadol*) and *o* (*qameš qatan*); 𐤊, 𐤊 = *o*, when adjacent to a *waw* the vowel is placed over it; 𐤊, 𐤊 = *u*, the two signs have exactly the same value. When a *waw* was adjacent to the letter in the biblical text it was marked with a dot; when there was no adjacent *waw* it was marked with three dots below. The vocalizers neither added to nor deleted from the sanctified orthography of the Bible.

5.3.1.2. THE ŠEWA AND THE ḤAṬEFS. Besides the eight signs, an additional one is used, 𐤊, to indicate the furtive nature of the consonant. This furtiveness does not have a fixed value but changes according to the position of the sign within the word. Sometimes it indicates total furtiveness – a “zero” vowel (quiescent *šewa*) and sometimes it indicates a partial furtiveness of a vowel (mobile *šewa*). The nature of the furtive vowel changes again according to the position of the sign within the word according to the Tiberian tradition: preceding a laryngeal, it resembles the vowel of the laryngeal; preceding a *yod* it becomes *i*; in all the other cases, it is pronounced *a*. On the rare occasions when this sign is accompanied by a *gaʿyah* (*šewa-gaʿyah*; see below 5.3.2.2.6), it is pronounced as a full vowel (according to the above conditions).

This sign therefore has many functions: it can denote the lack of a vowel, a furtive or very short vowel, or any full vowel. In this it differs from the whole Hebrew graphemic system. One can explain its function by the theory that it was first used to divide a word into syllables, that is, as a sign to indicate the boundaries of a syllable. A sign of this type is

likely to appear in a variety of phonetic garb according to the structure of the syllable and its position between the syllables adjacent to it within the word (in general: at the end of a syllable – quiescent, at the start of a syllable or as an independent syllable – mobile). This sign, which was basically a punctuation sign within the word, is apparently borrowed from the Syriac accentuation system, where such a sign (albeit within the line) with a similar name (*šewaya*) is a divisional accent, i.e., a sentence divider.

When the vocalic nuance of this sign is fixed in one of the three vowels, *a*, *e*, *ā* it combines with the respective vowel sign  $\dot{\text{ק}}$ ,  $\dot{\text{פ}}$ ,  $\dot{\text{א}}$  and its phonetic value is then the furtive, short pronunciation of these vowels.

5.3.1.3. THE NAMES OF THE VOWELS. For the Tiberian system, more than for any other system, the names of the vowels (the ancient Hebrew term for them is מלכים “kings” and later תנועות as a loan translation of the Arabic *ḥaraka* = movement) can be traced. Apparently several series of names were applied to them in the beginning (according to the changing needs and conditions). As time passed the names became intermingled and in masoretic notes and in the works of the earliest grammarians we find the terms from different series being used side by side. One can schematically reconstruct the series approximately as follows:

(1) The most primitive series has no names, but a number of sounds which express the vowels: אֵי, אִי, אֹי, אָי, אֶה, אִה, אֹה, אָה, אֶא, אִא, אֹא, אָא. One can assume that the vowels were thus called even before the invention of the vowel signs, these names being used orally and could not be written simply for lack of graphic signs for them. Only after the introduction of vocalization did it become possible to use these appellations in writing, and then we do find them, though rarely.

(2) A series in which the vowels are named according to the labial movements, whether closed or open, and the names were therefore derived from קמץ (close, contract) and פתח (open). These terms and their derivatives (such as קמצה, פתחה and so on) were first used in a broad sense – a closed vowel versus an open vowel. *Qameš* thus applied at first to the vowels *ā*, *e*, while *pataḥ* (sometime also פשט) applied to the vowels *a*, *ε*. As time passed special names were determined for *e* – קמץ קטן and for *ε* – פתח קטן (also [צבחד] פשט צבחר), while *qameš* and *pataḥ* marked only one vowel each, *ā*, *a*. Later we find these special names: קמץ שלם (*kāmil* in Arabic), רחב, גדול and also פתח גדול פום. פתח גדול פום also apparently belongs to this series for *u*, and perhaps also מלא פום for *o* (in a later period in Europe מלופום is used to indicate *o*). It is difficult to establish the name of the vowel *i* in this series; perhaps it was שפילתא (= the low one) because it stands lowest in the scale of the vowels.

These names also are not directly connected with vowel signs. It is therefore possible that, like the above primitive series, they were instituted before the invention of the vowel signs; but some of the names were used in a later period as well.

(3) In the third series the vowels are named according

to their symbols: נקודה אחת (“one point”; *i*), שתי נקודות (“two points”), שלוש נקודות (“three points”), נקודה בתוך הוי’ (“a point within the *waw*”; *u*), נקודה עליונה (“upper point”; *o*), and similar names in Aramaic and Arabic. Only *qameš* and *pataḥ* were employed as before. These names of course, came into use after the invention of vowel signs and while they made for a brevity of language – as for example, when a word was said to have שש נקודות (“six dots”) by which term two *segols* were meant, and so on – there is ambiguity (two dots =  $\dot{\text{ב}}$ ,  $\dot{\text{ג}}$ , three dots =  $\dot{\text{ב}}$ ,  $\dot{\text{ג}}$ ) and apparently because of this the series did not prevail.

(4) This series of names, in use until the present day, is based on the type of sound produced (some of the names are in Aramaic):  $\dot{\text{ב}}$  – חרק (“a squeak”);  $\dot{\text{ג}}$  – צרי (from the Aramaic for “splitting,” i.e. “splitting of the lips”);  $\dot{\text{ד}}$  – חלם (meaning “completeness,” i.e., a vowel using the whole mouth, *mela’ pum*);  $\dot{\text{ה}}$ ,  $\dot{\text{ו}}$ ,  $\dot{\text{ז}}$  – שרק (“whistle, hiss”). Only  $\dot{\text{מ}}$  – סגול (“cluster” in Aramaic) stems from the similarity of the sign to a cluster [of grapes]. *Qameš* and *pataḥ* also continued to be used in this system. The orthography of the new names is without *matres lectionis*, and there has been disagreement as to their forms. Often they were segholate names:  $\dot{\text{ב}}$ ,  $\dot{\text{ג}}$ ,  $\dot{\text{ד}}$ ,  $\dot{\text{ה}}$ ,  $\dot{\text{ו}}$ ,  $\dot{\text{ז}}$ , and also  $\dot{\text{צ}}$ ,  $\dot{\text{ר}}$  and even  $\dot{\text{צ}}$ . From approximately the 11<sup>th</sup> century the custom of introducing the indicated vowel within the name began to spread, and from then on the orthography  $\dot{\text{ב}}$ ,  $\dot{\text{ג}}$ ,  $\dot{\text{ד}}$ ,  $\dot{\text{ה}}$ ,  $\dot{\text{ו}}$ ,  $\dot{\text{ז}}$ ,  $\dot{\text{ח}}$ ,  $\dot{\text{ט}}$ ,  $\dot{\text{י}}$  became common. Since the time of the \*Kimḥis the name קבוץ שפתיים or קבוץ is specifically used for the sign  $\dot{\text{מ}}$ . This name was formerly a synonym for *šuruq* and as a translation of the Arabic *damm* (contraction), it also indicated the *o*, *u* group of vowels.

The name *šewa* (שוא known also by the spellings שבא, שבה, שוה) for the sign  $\dot{\text{נ}}$  is relatively newer than the other names, for when Saadiah Gaon uses it for the first time he finds it necessary to describe it: *šewa ʿa’ni nuqṭatayn qā’imatayn* (“*šewa*, that is, two upright dots”; commentary to *Sefer Yeziarah*, 4:3), which he does not do for the other names. The name חטף is apparently older than *šewa*, although after a certain time it was used specifically for the *šewas* which are joined to a vowel, *ḥataf pataḥ*, *ḥataf segol*, *ḥataf qameš*.

### 5.3.2. The Diacritical Signs

5.3.2.1. THE PRONUNCIATION OF CONSONANTS. 5.3.2.1.1. *Šin-Sin*. The single dot is employed as a diacritical sign to distinguish between the two pronunciations of ש: ש = š, this dot sometimes is assimilated into a preceding *holem* (מקשה); ש = ś, this dot is sometimes assimilated into the *holem* of the same letter (שנא).

5.3.2.1.2. *Dageš*. A dot within the letter marks both a plosive *dageš* (*lene*) in בגדכפת and also the geminative *dageš* (*forte*) in all of the letters except אההע”ר. An unusual *dageš* does occasionally occur in the *reš* (but there is no connection between it and the various statements concerning the double pronunciation of the *reš*, in which a *reš* with *dageš* is also mentioned). According to the Masorah the *dageš* occurs also in the *alef* four times in the Bible (although there are manuscripts in which it

occurs more often) but these seem to belong to the category of *Mappiq*. Therefore the *dageš* in בגדכפ"ת is ambiguous (*lene* or *forte*) and its function is determined only by the context. The term דגש and its synonyms (דגשה etc.) are explained according to Syriac, in which the verb *degaš* = to pierce, to make a hole. If this etymology is correct, the name was adopted in the Tiberian vocalization because of the sign's shape and thence it was borrowed into the Babylonian Masorah.

A special type of *dageš* is that of *ate merahiq* (or *dehiq*), which in origin is not a geminative *dageš* but a dot used to mark the separation of two connected words, so that they should not be joined together (cf. Dotan, in *Fourth World Congress of Jewish Studies*, 2 (1968), Hebrew part, 101–5, and see especially n. 23). Because this dot is identical with the sign of the *dageš*, as time passed it was taken to be a *dageš forte*, denoting geminate pronunciation, and is so pronounced in various communities.

5.3.2.1.3. *Rafeh*. The sign of the *rafeh* (בַּ) is the opposite of the *dageš lene* and indicates the lack of the *dageš* in the spirant בגדכפ"ת. It does not occur regularly even in ancient manuscripts. In addition to this main function, it is sometimes used in an irregular manner above the letters א and ה to note quiescence, and also, infrequently, to mark the lack of *dageš forte*, that is, to point out the lack of gemination of certain letters. The frequency of this sign varies in the different manuscripts, and with the passage of time it stopped being used altogether since it was tautological.

5.3.2.1.4. *Mappiq*. Another dot marks the consonantal nature of a final *he*. Generally this dot is located in the center of the *he* (הּ), but there are manuscripts in which it is written in the lower part (הֲ), or even under it (הִ).

Additional usages of the signs enumerated here, such as *dageš lene* in letters other than בגדכפ"ת, or a *mappiq* in the letters *alef*, *waw* and *yod*, etc., are found in exceptional manuscripts, and they must be considered as the influence of a vocalization system which was not accepted (see below 5.4).

5.3.2.2. THE GA'YAH. The sign הַ which is generally written to the left of the vocalization sign (in ancient manuscripts also sometimes at the right) is a reading aid that serves various purposes, but basically it can be considered a device to improve the phonetic structure of a word. The condition for such use is sometimes rooted in the musical-accentual context of the word.

5.3.2.2.1. *The Name*. The ancient, original name is געיה (געיה, געיה, געיה, געיה, געיה, געיה = "to cry aloud") and the masoretes distinguished various types. As time passed its usage changed in the manuscripts; the scribes used to note more of one type and less of another. This situation continued until grammarians tried to organize the method of notation according to rules and norms, part of which were artificial, while others had no basis in the realities of ancient manuscripts. The first to organize the rules of *ga'yah* was Jekuthiel b. Judah ha-Nakdan (יהב"י), who lived in the first half of the 13<sup>th</sup> century.

In the most general way one can distinguish between the main types of *ga'yah* as follows:

5.3.2.2.2. *Minor Ga'yah*. A minor *ga'yah* occurs in a closed syllable. There are many varieties of this type, and the distinction between them is a matter requiring detailed description. One of the most common types, whose definition is already found in *Dikduke ha-Te'amim* by Aaron Ben-Asher, is the *ga'yah* that occurs in a closed syllable which is the third before the stress when the syllable adjacent to the stress is a furtive syllable (that is, a clear mobile *šewa* or a *hatef*), or the *ga'yah* which occurs in a closed syllable that is the fourth before the stress when the syllable adjacent to the stress and also the third before it are furtive syllables: הַקְנַעְנִי, הַדְבָרִי.

There is no certainty as to how this *ga'yah* was realized but it seems that it marked some delay in the pronunciation or melody, or in both. Its special phonological conditioning was also instrumental in phonetic realization, particularly of the *šewa*. For example, הַתְּפִלָּה – the *ga'yah* in the *he* also indicates a mobile *šewa* for the ל.

This type is already called געיה קטנה (minor *ga'yah*) in ancient sources connected with *Dikduke ha-Te'amim* and is apparently the name for all the *ga'yot* of this type. The minor *ga'yah* is the most common in the best ancient manuscripts, among them Leningrad B19a and the Aleppo codex, and it has a greater degree of regularity than the other types of *ga'yah*. In spite of this, however, the reason for these *ga'yot* was not clear, nor apparently were their precise conditions understood, although their connection to the accentuation system was obvious and they occur more often with disjunctive than with conjunctive accents. Because of this lack of clarity, and perhaps also because of uncertainty concerning the realization of the *ga'yot*, the scribes disregarded them when they were copying and their frequency diminished as time passed. Unlike the type listed below, which generally did affect pronunciation, the minor *ga'yah* seemed without a defined purpose and difficult to understand.

5.3.2.2.3. *The Terminology*. Strangely enough, the confusion as to its purpose led Jekuthiel ha-Nakdan to establish the name of the minor *ga'yah* as געיה כבדה ("heavy" [in the sense of: difficult] *ga'yah*) as he himself states (*Sha'ar ha-Metigot*, ed. Gumpertz, in *Leshonenu*, 22 (1958), 142): "Therefore I called them heavy, for the heart of many sages is heavy for not having understood them and they did not show them in their function ... and the second [reason] that I called them heavy and different from the first ones is that the gate which is open for the light ones is closed for these which are heavy..." This name, used by a few scholars even today, thus has no justification, despite Yeivin's opinion (*The Aleppo Codex of the Bible* (1968), p. 93, n. 3). In fact, there is evidence that such a name in Arabic was used precisely to indicate the following type of *ga'yah*.

The process of the decline of the minor *ga'yah* was slower in the Sephardi manuscripts, and Jekuthiel ha-Nakdan (apparently of Prague) already declares that it had disappeared from most of the non-Sephardi manuscripts.

one syllable at least between it and the stressed syllable, just like the major *ga'yah*.

On the other hand, there is rather general agreement in the notation of the *šewa-ga'yah* in ancient manuscripts, and in that it bears a similarity to the minor *ga'yah*. Yet, unlike the minor *ga'yah*, *šewa-ga'yah* was not rejected from the text; it is still copied today in most of the editions of the Bible. The reason for this is that because of its relative rareness and because of its special method of notation (next to the *šewa* and not next to a vowel like the other two types of *ga'yah*) it was considered an anomaly and an exceptional sign, and like the other exceptional signs of the Masorah it was treated with special respect.

5.3.2.2.7. *Ha'amadah*. This is a *ga'yah* of a special type which perhaps does not merit the name *ga'yah*, though it is noted in the same manner. It is better to call it, for the purpose of differentiation, by the name given by Jekuthiel ha-Nakdan and following him, by Wolf \*Heidenheim, הַעֲמָדָה ("causing to stop"); although this name is used also for *ga'yah* in other places).

The function of the *ha'amadah* is to emphasize, perhaps by a slight pause, the pronunciation of a sound which was likely to be swallowed. This danger threatens unstressed sounds at the end of a word which is connected to the following one, and in these instances *ha'amadah* is likely to occur (and its function is then similar to that of the *dageš* of *ate merahiq* – see above, 5.3.2.1.2.). It is a relatively rare sign and there is no consistency in its notation. In this position, that is, in an unstressed syllable at the end of a word which is connected to the following (whether by a *maqaf* or by a conjunctive accent) which is (generally but not always) stressed at the beginning, it is likely to occur before a laryngeal consonant, e.g., סִלְחָ לָהּ (Deut. 29:19); נִשְׁבַּע־לִי (Gen. 24:7); הִשְׁמַע עָם (Deut. 4:33) – and even with another consonant where the stress is retracted from it, mainly when the vowel is *šere*, e.g., נִבְלַ צִיץ (Isa. 40:7); נִצַּעַ נִצַּעַ (Prov. 1:19); or sometimes even with other vowels and without the retraction, e.g., פִּדְנָה אָרָם (Gen. 28:5), וַיִּנְקְרוּהוּ רִבְשׁ (Eccl. 2:11), וַיַּבְרִיךְ אֱלֹהֵי אֲרָם (11 Kings 1:13), וַיַּבְרִיךְ אֱלֹהֵי אֲרָם (Deut. 32:13).

In ancient manuscripts the *ha'amadah* is found more than in the recent editions of the Bible. But even in the ancient texts there are no fixed rules and there is disagreement among the manuscripts. Yeivin (*The Aleppo Codex of the Bible* (1968), 180ff., 271ff.) described and discussed the situation in the Aleppo codex and in related manuscripts.

### 5.3.3. The Accentuation Signs
