The Tiberian system, unlike the other two, was a consolidated, complete system of disjunctive accents and conjunctive accents with defined functions, complete orderliness, and a very uniform textual transmission. This is the result of improvement after improvement, and it can be considered the zenith of the development of the graphemes in Hebrew.

5.3.3.0.1. *The Functions*. In addition to the two functions which the accentuation signs perform in the other systems – dividing the verse, and setting the melody of the reading of

the text – in the Tiberian system they also indicate the point of the stress in the word. This is very important not only for the correct reading of the Bible but also for recognizing the grammatical structure of the language: the Tiberian system of accentuation is the only means for establishing the stress structure of ancient Hebrew.

As a musical guide for reading, this system is also more sophisticated than the others: for actually one fixed sign would have been sufficient for indicating the lack of pause; and it was only for musical variation that different signs were established for words which are connected in different contexts, the conjunctive accents.

Its sophistication and completeness as a system of punctuation are manifest also in (1) the fact that its signs are attached to each and every word and they indicate different degrees of pause as well of juncture (= "zero" pause); (2) the fact that the value of each punctuation sign (= accent) is relative, and changes according to its position within the verse, the length of the verse, and the relationship to the other accents within it.

5.3.3.0.2. *The Principles of Parsing*. The principles of parsing of the system are varied:

(1) each division is always into two only – a dichotomy, i.e., the result of every division is always only two smaller units and never more;

(2) the dichotomy continues time after time in every one of the resultant units until there remain in each small unit only two words (which do not have to be divided) or until all the accentuation signs have been used and there are technically no more possibilities for indicating another division.

5.3.3.1. THE (21) PROSE BOOKS. The Tiberian accentuation signs are a system of dots and lines, some simple, others compounded. The names of the signs are in part Aramaic and in part Hebrew, and they sometimes refer to the melody or to the manner of reading, sometimes to the shape of the sign, and at other times to the hand movement which accompanied the melody in the ancient period (see 1.3.3.).

5.3.3.1.1. *Disjunctives*. מְ – סִילּוּק (cessation; also סוּף פְּסוּק – end of the verse). It occurs only at the end of a verse and it is located only on the stressed syllable (this is not to be confused with the *ga'yah* sign, which does not occur with the stressed syllable). מְ (originally מָ) – אֲתַנְחָה, אֲתַנְחָתָא, אֲתַנְחָה ("rest"). מְ – זָקָה קָטָן (זָקָה = erect, upright – perhaps referring to a hand movement or to the shape of the sign). מְ – זָקָה גְדוּל – אֲתַנְחָתָא, אֲתַנְחָתָא, אֲתַנְחָה (Aramaic: a [grape] cluster – refers to its shape). This is a postpositive sign – always written at the end of the word, but in some editions of the Bible it is placed an extra time on the stressed syllable in penultimate words. מְ – שְׁלִשְׁלֹת – אֲתַנְחָתָא (chain; refers to the shape of the sign and perhaps to the melody as well). A rare accent, it appears only seven times in the 21 books. מְ – טַפְחָא, טַפְחָא (perhaps "handbreadth" – refers to the hand movement, or perhaps to a (musical) stroke). מְ – רִבְעֵ (Ara-

maic: resting). פֶּשֶׁטָּא, פֶּשֶׁטָּא – מָ (extending, stretching; of either the melody or the sign, the line), sometimes named also יְתִיב (see below). A postpositive sign – always written at the end of a word and in penultimate (*mille'el*) words also on the stressed syllable (thus, by the exact manner of notation, it is differentiated from the conjunctive *azla'*). מָ – יְתִיב (Aramaic: settled down – referring to the melody or the pause). It is also used as a general name for this accent and the preceding one. A variant of the preceding accent in specific conditions, it is a prepositive accent – located always at the beginning of the word, and to the right of the lower vocalization sign. מָ (originally מָ) – צְנוּר, זֶרְקָא. The second is the ancient name (hook) and it refers to the original shape of the sign. The first is the common name and it means “throwing,” perhaps referring to the movement of the hand, or to a scattered melody. This sign is postpositive – placed precisely like the *segol* (see above). מָ – תְּבִיר (Aramaic: broken), תְּבִירָא, תְּבִירָא, referring to the broken melody. מָ (originally מָ) – תְּלִישָׁא גדולה (= plucking out). The meaning is not certain, and it appears to refer more to the hand movement than to the melody. *Gedola* distinguishes it from the conjunctive accent of the same name. The sign is prepositive, always placed at the beginning of a word, and in some editions of the Bible it is placed an additional time on the stressed syllable when the stress is not at the beginning of the word. מָ (originally מָ, מָ) – פִּזְרָא: it apparently does not refer to the melody, but to the sign (פִּזְרָא, Aramaic = whip). It is also called פִּזְרָא קָטָן. מָ (originally מָ) – קַרְנֵי פָּרָה (= cow's horns), referring to the ancient form of the sign. It is also called פִּזְרָא גדול. A variant of the preceding, it is a rare sign which appears only 16 times in the 21 books. מָ – גְּרֵשׁ, גְּרֵשׁ, גְּרֵשׁ, גְּרֵשׁ (“expulsor”), one of the ancient names for *ga'yah*, which moves (“expels”) the syllables apart; the term was applied to this sign because of its similarity to the shape of the *ga'yah* (a vertical line). One also finds it called גְּרֵשׁ קָטָן (*gereš qatan*) to distinguish it from the following accent. Its ancient name is טָרְסָא (Aramaic: bar) on account of its shape, and that name is sometimes used for this accent and the following one. מָ – גְּרֵשִׁים, גְּרֵשִׁים, a variant of the *gereš* in specific positions. מָ – מְנוּחָא לְגַרְמִיָּה – מָ, an abbreviation of the name מוֹנָח לְגַרְמִיָּה (“trumpet, horn [sustained] by itself”). The vertical line between the words separates this pausal accent from the conjunctive accent similar in shape (*munah*).

5.3.3.1.2. *Conjunctives*. מָ – מוֹנָח. This is an abbreviation of שׁוֹפֵר מוֹנָח, which was the name of one of the types of accents that were called by the name שׁוֹפֵר (horn, trumpet). The distinction between these types was not preserved, neither in the name nor in the sign. מָ – מְהַפֵּךְ. An abbreviation of שׁוֹפֵר מְהַפֵּךְ (“inverted horn”) or מְהַפֵּךְ or שׁוֹפֵר הַפּוֹךְ. It is always placed under the stressed syllable and to the left of the vowel sign, and thus it is differentiated from the disjunctive *yetiv*. מָ – מְיַרְכָּא (Aramaic: prolonging) and also מְאַרְכָּא, and מְאַרְיָד. In the ancient manuscripts it had the same shape as the *ga'yah* and caused confusion. מָ – מְיַרְכָּא כְּפֻלָּה – מָ (double): a rare conjunctive, found only 14 times in the 21 books. מָ – דְּרָגָא – מָ (“grade,” “scale”)

referring to the sign and perhaps to the melody (Ar. *daraja* = “to sing quaveringly”). Its rare name שִׁשְׁלֵת, שִׁשְׁלֵת (“chain”) perhaps goes back to a sign similar to a *šalšelet* (מָ) from which this sign was shortened. מָ – אָזְלָא, אָזְלָא, אָזְלָא (“going on”), the ancient name of the sign. Another name is קְדָמָא (“antecedent”), perhaps because it very often occurs before *gereš*. It is always written on the stressed syllable and it is thereby differentiated from the disjunctive *pašta'*. מָ (originally מָ) – תְּלִישָׁא קָטָנָה. The sign and the name are equal to those of the disjunctive and apparently denoted the same melody. The distinction is made by the position of the sign – postpositive, always at the end of the word, and in some editions of the Bible it is written an additional time over the stressed syllable in words with penultimate stress. מָ (originally מָ, מָ) – יָרַח בְּן יוֹמוֹ (“a day old moon”) referring to its ancient form (מָ) which is similar to the shape of a new moon (better: יָרַח). The ancient name is גְּלָגָל (“wheel”) also referring to one of the ancient shapes, perhaps the oldest. Since it serves as a conjunctive for *qarne parah* only, it is as rare, found only 16 times in the 21 books.

5.3.3.1.3. *Main Rules of Dichotomy by the Disjunctives*. The accentual division of verses is generally logical, its purpose being to guide the reader in his recitation. Therefore it is frequently subordinated to considerations of rhythm and even of melody. The length of the verse and the distance of the dichotomy from the end of the verse are sometimes likely to cause a division at variance with the division required according to the syntactical analysis.

The accent which indicates the end of the verse is always *silluq*. A verse is usually divided by *e'tnah*, sometimes by *zaqef*, and infrequently even by *tippeha* – all according to the length of the verse and the distance between the place of the division and the end of the verse. The further the division occurs from the end of the verse the more likely it is that an *e'tnah* will be used.

The two hemistichs which result, that of *e'tnah* and that of the *silluq*, are each likely to be further subdivided by a *zaqef* (*qatan* or *gadol*), at a certain distance from the *e'tnah* or the *silluq*, or by a *tippeha* near them. *Tippeha* is used as a prelude accent and must occur in any event after the *zaqef*. When many divisions are required the *zaqef* is likely to be repeated a few times. In place of the first *zaqef* of the hemistich of the *e'tnah*, a *segol* is likely to occur.

The *zaqef*'s hemistich (to its right) is likely to be divided by *pašta'*, and when long by *revia'*, and then a *pašta'* follows.

The hemistich of the *segol* is always divided by *zarqa'* (as a prelude), and when it is long, by a *revia'*, and then *zarqa'* will also occur after the *revia'*.

The hemistich of the *tippeha'* is likely to be divided by *tevir*, and when it is long also by *revia'*, and then the *tevir* will also come after the *revia'*.

The hemistich of the *revia'* is likely to be divided by *munah legarmeh*, *gereš*, *teliša' gedola* or *pazer*, all according to the distance of the division from the end of the hemistich. *Munah legarmeh* or *gereš* will occur close to its end and the

*pazer* at a distance from it. A *pazer* can be repeated if necessary.

The hemistichs of the *pašta*, *zarqa*, or *tevir* are likely to be divided by *gereš*, *teliša' gedola* or *pazer*, all according to the distance of the division from the end of the hemistich – *gereš* in a closer position and *pazer* at a distance. A *pazer* can be repeated if necessary.

The hemistichs of *pazer*, *teliša' gedola*, and *munah legarmeh* are not subdivided. That of *gereš* is sometimes divided, irregularly, by a *teliša' gedola* and *pazer*.

These main rules have many by-rules and laws of transformation of accents causing changes and the use of variant accents conditioned by musical considerations.

5.3.3.1.4. *Rules of Joining the Conjunctives.* For each of the disjunctives there is a specific conjunctive which is joined to it. This joining of the conjunctive is not always imperative and even the number of the conjunctives which are added to a disjunctive depends upon the context and the verse structure. Sometimes only one conjunctive is added, sometimes more, up to a maximum of six conjunctives with certain disjunctives. Below is a list of the conjunctives which can join each disjunctive, arranged in reverse order, from the disjunctive backward:

*silluq* – its conjunctive is *merka'*.

*etnah*, *zaqef qatan*, *segol* – conjunctives: *munah*, *munah*.

*tippeha'* – its conjunctive is *merka'* (14 times in the Bible: double *merka'*, *darga'*).

*revia'* – its conjunctives are *munah*, *darga'*, *munah*.

*pašta* – the conjunctives are *mahpak* (or *merka'*), *'azla'* (or *munah*), *teliša' qetanna*, *munah*, *munah*, *munah*.

*zarqa* – the conjunctives are *munah* (or *merka'*), *'azla'* (or *munah*), *teliša' qetanna*, *munah*.

*tevir* – its conjunctives are *darga'* (or *merka'*), *'azla'* (or *munah*), *telia qetanna*, *munah*.

*teliša' gedola* – the conjunctives are *munah*, *munah*, *munah*, *munah*, *munah*.

*pazer* – its conjunctives are *munah*, *munah*, *munah*, *munah*, *munah*.

*qarne parah* – the conjunctives (at least two) are *yerah ben yomo*, *munah*, *munah*, *munah*, *munah*, *munah*.

*gereš* – its conjunctives are *'azla'* (or *munah*), *teliša' qetanna*, *munah*, *munah*, *munah*.

*geršayim* – its conjunctive is *munah*.

*munah legarmeh* – conjunctives: *merka'*, *'azla'* (or *munah*).

5.3.3.2. THE (3) POETICAL BOOKS. 5.3.3.2.1. *Disjunctives.* *ן* – סילוק, to mark the end of a verse. *ן* – עולה ויורד – “ascending and descending”), referring to the melody. The upper sign is pretonic. *ן* (originally *ן*) – אהנה – *ן* – רביע. In ancient manuscripts it is a disjunctive accent replacing *etnah* as main divider of the domain of *silluq*. In later manuscripts and in printed editions it takes the shape of the following (*revia' mugrash*) and both are regarded as one and the same accent. Originally there were four disjunctive accents in which the

sign and the name *revia'* appear: *revia'*, *revia' mugrash*, *revia' gadol*, *revia' qatan*. *ן* – רביע מגרש – (*revia' gerešatum*), a relatively late term. Formerly it was called *tippeha'*, for its functions are similar to those of *tippeha'* in the other 21 books. The sign of the *gereš* (the first of the two marks) is prepositive. In the ancient manuscripts a distinction is made between a *revia'* which has a *gereš* (as shown here) and a *revia'* which does not (see above), which is also a disjunctive in the hemistich of the *silluq*, but is not preceded by *etnah* (it is a substitute for the *etnah* itself). The conjunctives of these two accents are different. *ן* – שלשלת גדולה – *ן* – רביע גדול – *ן* – *etnah* or *revia'* (which is a substitute for *etnah*). *ן* (originally *ן*) – זרקא, צינור – a postpositive sign, placed at the end of the word to differentiate it from another sign of a melody similar to it. *ן* – דחי – “thrust back”) referring to its being prepositive, which differentiates it from a similar conjunctive accent. Sometimes one also finds the names טפחה, טרחא and even יתיב for the disjunctive, no distinction being made between the names. In a few places the position of the stress was indicated by a sign similar to *gā'yah* or *merka'* (or even *tippeha'*). In some individual manuscripts the sign *ן* (*tevir* in the 21 books) is used instead of *dehi*. *ן* – רביע קטן – a minor disjunctive in the hemistich of *'ole we-yored*. There is no difference in shape between this sign and *revia' gadol*, but there is a difference in their respective conjunctives. *ן* (originally *ן*, *ן*) – פור. *ן* – אזלא לגרמיה – The vertical line after the word distinguishes this disjunctive from the conjunctive sign similar to it (*'azla'*). *ן* – מזהפך לגרמיה – *ן* – אזלא לגרמיה – a variant of the previous accent in specific conditions. The vertical line after the word distinguishes this disjunctive from the conjunctive which is similar to it (*mahpak*).

5.3.3.2.2. *Conjunctives.* *ן* – מירכא – *ן* – מונח – *ן* – עלוי – “elevation,” “raising”), an abbreviation of עלוי. This is the ancient name of one of the types of accents which were called *shofar* (horn, trumpet), and it was so named because of the ascending melody. Only in a relatively late period did it refer to the sign of the *shofar* which was written above, that is, upper, superior *shofar*. Another name is מונח מלמעלה – with the same meaning. *ן* – מהפך – *ן* – טרחא – a name apparently derived from טרח (“burden”) and meaning, consequently, laboring, heaviness. It is sometimes also called טפחה. It is always placed under the stressed syllable and it is thus differentiated from the disjunctive *dehi*. Some of the early scholars differentiated between three types of *tarha* according to the disjunctive which they join: before *silluq* – נטויה (“inclined”), מאילא (from the Arabic *mā'ilah* = “inclining,” see below, 5.3.3.2.1.); before *etnah* (or its substitute) – דחיה (= “thrust back”); before *revia' mugraš* (or *šalšelet gedola*) – שוכב (“reclining”). *ן* – אזלא – *ן* – גלגל – “wheel”). Two different signs merged in this one, but they are still found separately in ancient manuscripts: *ן* – the conjunctive for a *pazer* (and apparently the name *galgal* refers

to this; it is also used in the 21 books), and ׀ (in the form of an inverse ancient *ʿetnah*) – which is used as a conjunctive for *ʿole we-yored*. ׀ – שלשלת קטנה – a rare accent which appears only eight times in Psalms, Proverbs and Job.

5.3.3.2.3. *Main Rules of Dichotomy by the Disjunctives.* The relative brevity and parallel structure of most of the verses in Psalms, Proverbs, and Job were liable to cause monotony in the reading and even in the melody. In order to avoid this, special accents were used which allowed for more variety of tone than in the other books. These different accents based on the context, and even more on the syllable structure of the words themselves, helped reduce the monotony.

Here, too, the sign which marks the end of the verse is always *silluq*, although a few manuscripts do not mark it at all. A verse is divided by *ʿole we-yored*, or by *ʿetnah* and infrequently even by *reviaʿ* (which in later manuscripts and editions is then marked with additional prepositive *gereš*) – all according to the length of the verse and the distance of the point of division from the end of the verse. The further the division is from the end of the verse, the more *ʿole we-yored* is used.

The hemistich of *ʿole we-yored* is likely to be divided by *reviaʿ qaṭan* at the first word or by *šinnor* at the second word and by *reviaʿ gadol* at the third word and further. When the hemistich is divided by *reviaʿ gadol*, a *šinnor* or *reviaʿ qaṭan* will be used, in any event, for an additional division between it and *ʿole we-yored*.

The hemistich of *ʿetnah* is likely to be divided by *dehi*, and when it is long, by *reviaʿ gadol*, and then it is possible that *dehi* will also occur after the *reviaʿ gadol*.

The hemistich of the *silluq* which remains after the division by *ʿetnah* (or by *ʿole we-yored*), is divided again by *reviaʿ mugraš*; and when *reviaʿ mugraš* is far from the *silluq*, there is a second, smaller division made by the disjunctive *ʿazlaʿ legarmeh* or *mahpaḳ legarmeh* (according to the structure of the word and the context of the accents). In special situations *šalšelet gedola* will occur instead of *reviaʿ mugraš*.

The hemistich of *reviʿa mugraš* or *šalšelet gedola* is not further subdivided. However, when *reviaʿ mugraš* is used instead of *ʿetnah* (and it is then written in the ancient manuscripts without *gereš*), it is likely to be divided in the same manner as the hemistich of the *ʿetnah* (see above).

The hemistichs of the *reviaʿ qaṭan* and *pazer* are likely to be subdivided only by *ʿazlaʿ legarmeh* or *mahpaḳ legarmeh*. The hemistich of *ʿazlaʿ legarmeh* is never subdivided.

Often enough these rules, or at least some of them, are not put into effect because of very precise rules of transformation. These rules, which are based upon musical considerations, cause the exchange of one disjunctive for another, or the replacement of a disjunctive by a conjunctive. In most cases of substitution the conjunctive accents of the original division remain in their positions and it happens, therefore, that sometimes the conjunctives of one disjunctive serve another disjunctive, or even another conjunctive. In order to trace a verse's division one must therefore take the rules of transformation

into consideration. Sometimes even in a place where there is a conjunctive, the intention of the accentuators was a pause, and only the melody is that of the conjunctive. The opposite phenomenon – a disjunctive occurring for a musical reason in a place where no division is needed (prelude accent) – is very common in the accents of Psalms, Proverbs, and Job, and even more in the accents of the 21 books (see above).

5.3.3.2.4. *The Use of Conjunctives.* The rules of the conjunctives in Psalms, Proverbs, and Job became very slack with their transmission throughout the generations. While the musical side influenced their selection even more than in the 21 books, these rules were most complex and dependent upon the syllabic structure of the words, the number of conjunctives, and the distances from the disjunctive. Despite all these rules, the exceptions were still quite numerous. Furthermore, the reading tradition for the books of Psalms, Proverbs, and Job was not preserved by the various Jewish communities, and the system of the signs – and even more so, the rules behind them – were not understood by the scribes and printers, and they lacked all meaning for the readers. This accounts for the fact that as time passed the manuscripts – and even more so, the printed editions – differed from one another more and more, until complete confusion was reached in the rules of the conjunctives. The rules of the disjunctives also suffered, but to a lesser degree. Even in ancient manuscripts with an excellent textual tradition, the rules of the conjunctive are very complicated and sometimes there are no rules but different parallel possibilities for the conjunctive accents without any obvious causality. I. Yeivin has described the situation as found in the Aleppo codex (*The Aleppo Codex of the Bible* (1968), 281–350).

5.3.3.3. SPECIAL SIGNS. In addition to the accentuation signs, which have been treated until now, each of which indicates both a degree of pause and a melody (the noting of the place of stress in a word is restricted to the Tiberian system), there are a number of other signs used in the Tiberian system of accentuation, each for only one of the following purposes.

5.3.3.3.1. *Signs for Pause and not for Melody.* 5.3.3.3.1.1 *Paseq.* The sign ׀ (a vertical line between words; originally a small line ׀) – פסק (Aramaic: cutting off), פסיק (Aramaic: cut off); a symbol for punctuation only and not for melody. It occurs only after conjunctive accents and indicates a pause. One should consider it an additional improvement in the system of accentuation, for it is a sign used to complete the punctuation system after the system of the melody was stabilized. With regard to its phonetic influence upon the pronunciation of the word it is also like a disjunctive in that it voids the fricative nature of בגדכפת at the beginning of the following word; that is, it cancels the fricateness which is caused by the conjunctive accent near it. A distinction should be made between a *paseq* which is wont to occur after any one of the conjunctives as opposed to the similar sign which goes with one of the disjunctives: *šalšelet*, *munaḥ legarmeh*, *šalšelet gedola*,

*ʾazlaʾ legarmeh, mahpaq legarmeh*. With these disjunctives the sign is part of the accentuation. To distinguish between the two kinds, the masoretes arranged lists of the *paseqs* (פסיקתא) found in the Bible. The lists are not identical, but in general the number of *paseqs* reaches about 400. Already in Ben-Asher's *Dikduke ha-Te'amim* five rules for *paseq* were enumerated, and in effect it was possible to explain most of the *paseqs* in the Bible with the aid of a set of rules. Yet these rules did not always work, and one cannot explain why they were not applied in every instance.

The five *paseq* rules of Ben-Asher may be sorted into two main categories of means for perfection:

(1) In a unit of mostly two words, which according to the principle of dichotomy needs no further division, the *paseq* occurs nevertheless to indicate division for a definite, phonetic or punctuational-exegetic, reason:

(a) a phonetic need – to separate between equal or similar consonants at the boundaries of adjacent connected words in order to avoid assimilation and, consequently, wrong joining of the words. Mostly the sonorants ל, מ, נ are involved, e.g. מְעוֹרְתֵינִים | לְגִלִּים | בְּגָל | (Jer. 51:37);

(b) a punctuational need – to separate between a pair of identical or similar words, e.g., יוֹם | יוֹם (Gen. 39:10), הַמְּזוּל | הַמְּזוּל (Gen. 17:13);

(c) an exegetic need – to separate between words, one of which is a name of God, which are joined according to the accentuation needs, but their conjunction is liable to allow for a different understanding, in which God's name would be profaned, e.g. רָשַׁע | אֱלֹהֵי | אִם-תִּקְטֹל אֱלֹהֵי | (Ps. 139:19) – “if Thou shall kill, O God, the wicked,” (not “if you kill the wicked God”);

(d) an exegetic need – to separate between words in order to avoid an understanding arising from the division of the accentuation and which seems either wrong, impossible or unacceptable, e.g. אֵל | יִשְׁמַע | (Ps. 55:20), עֶשׂוּ | כִּלְהָה | (Gen. 18:21).

(2) in a unit of three words or more to separate words which should be separated according to the context, but for which proper disjunctives do not exist in the accentuation system to show this separation. This refers mainly to an additional division of the hemistichs of the smallest disjunctives – *pazer*, *tešā gedola* and sometimes *gereš* – which cannot be further divided with accent signs: e.g. וְתִשָּׂא אֹתֵי | בְּיַד-הָאֲרָץ וּבִיַד הַשָּׁמַיִם | רְיֹחַ | בְּיַד-הָאֲרָץ וּבִיַד הַשָּׁמַיִם (Ezek. 8:3).

Recently another early attempt to formulate rules for the occurrence of *paseq* was detected in Saadia Gaon's longer commentary to Exodus (Y. Ratzaby, *Rav Saadya's Commentary on Exodus* (Jerusalem 1998), pp. 224, 394–5), where he formulates five rules of his own, two of which do not coincide with Ben-Asher's rules (see Dotan, *Paseq*).

However, all the above are not rules for the placement of the *paseq*, but categories according to which one can classify and understand most of the *paseq* occurrences. Yet there are many places in the Bible which come under these classifications and a *paseq* is not found there. A relatively small part of the *paseqs* are not explained even according to these classifications, and there is no doubt that hidden explanations and

exegetical homilies played a part in the placing of the *paseq*, as with the accentuation signs.

5.3.3.3.1.2. Maqqaf. The sign ׀ (originally an extremely small line which joined words) – מַקְפֵּה, מַקְפֵּה (“binder”), is only a conjunctive sign and has no melody. It indicates that the word before it is connected to the next word; the first word has no accent of its own, and the melody indicated by the sign occurring with the word that follows it applies to it too. The *maqquf* usually connects two words, sometimes three or even four and the dominant melody is indicated by the accent of the last word. The *maqquf* can be classified into three main types:

(a) that which connects any type of small word, mostly prepositions and conjunctives, but also nouns, names, and other parts of speech, and makes it proclitic;

(b) that which connects a word whose stress is ultimate, although it is not a short word, to a word whose stress is at the beginning, in order to avoid adjacency of the stresses. By this connection the melody of the first word is voided, but it is doubtful whether its stress is completely cancelled. It seems that in these cases the stress regresses (נְסוּג אַחֲוֹר) and is sometimes indicated by a *ga'yah*; sometimes it is not indicated but the regression does exist in the pronunciation (latent regression);

(c) that which connects words which the accents (the conjunctives) were insufficient to connect, or some other difficulty in the accentuation left unconnected. This is another improvement in the system of accentuation, parallel to the *paseq*, but for conjunctive needs.

The rules of the *maqquf* are only partially fixed (especially for type a), and there are variants with regard to details between different editions of the Bible. There are also principle differences between the Poetic books (Psalms, Proverbs, and Job) and the Prose books of the Bible. In ancient manuscripts the *maqquf* was sometimes omitted, apparently through scribal error.

5.3.3.3.2. Signs for Melody and not for Pause. Signs for pause only are common to all 24 books of the Bible since they do not have any special melody. However, the signs for melody only are of necessity different in the two groups of books.

To this category belongs every conjunctive serving as a secondary accent in a word where another accent, disjunctive or conjunctive, marks the main stress. In this case the secondary conjunctive accents have no other function but melody. Signs serving solely for melody are the following:

5.3.3.3.2.1. The (21) Prose Books: (a) The sign ׀ (a sign similar in shape to *ʾazlaʾ* or *paštaʾ* occurring on a word with *zaqef qatan*) – it is called מַקְל (= “stroke,” “rod”) and also הַטָּר (“rod”), because of the shape of the sign. Other names are: דְּרָבֵן (“spur,” “goad”), or its Arabic parallel, *hamza*, whose Hebrew spelling הַמְזוּה was understood by copyists, who did not know Arabic, as a Hebrew noun with the article which they pronounced מְזוּה. We also know of the names מְתִיגָה (“bridling”) which was used equally for *ga'yah*, מְרָאָה מְקוֹם (“indicator”),

and פשט קטן because of its graphic similarity to the sign of the *pašta'*. The *maqql* is used in a word with *zaqef qatan* when there is no *pašta'* or *yetiv* before it as a prelude accent, and when the conjunctive *munah* does not precede the word or occur within it. That means that it is used as a sort of a prelude melody for *zaqef*, when the *zaqef* does not have another prelude accent in the form of *pašta'* or *munah*. The *maqql* is always located in the closed syllable which is furthest from the stressed syllable and separated from it by at least one syllable (a mobile *šewa* is considered a syllable for this purpose) and it never occurs in a syllable which has *g'ayah*; e.g., וְהִתְקַדְּשׁוּם (Lev. 20:7), שְׁמֹר־לְךָ (Ex. 34:11). In general the *maqql* is not used at the beginning of a word, except in special cases.

(b). The sign מ (a sign similar to a *tippeha'* which occurs in the same word with *etnah* or *silluq*) is called מַאֲיֵלָא and commonly pronounced מַאֲיֵלָא. Wickes believes that one should pronounce it מַאֲיֵלָא as Ar. *mā'ilah* from *māla* = to incline, to be inclined, and thus the name parallels the Hebrew names for this sign which are less common (דְּחוּיָהּ and גְּטוּיָהּ) and have the same meaning.

The *me'ayla* is one of the peculiarities of the Masorah. It has no rules and occurs under no special conditions 15 or 16 times in the Bible: five times with a *silluq*, 10 or 11 times with an *etnah*; and it is located at the position of the major *ga'yah* in the word (e.g., לְדֹרֹתֵיכֶם – Num. 15:21). Sometimes when the disjunctive applies to two words joined by *maqqaqf*, it is located in the original position of the accentuation sign of the first word (e.g., וְתִאמְרֵנָה לָהּ – Ruth 1:10). It thus serves as a secondary accent in a disjunctive word and one can assume that its melody was like that of the *tippeha'*, and hence the similarity of the signs. Indeed, where a *me'ayla* is used one never finds a *tippeha*, while a conjunctive accent of *tippeha'* can precede the *me'ayla*. Yet the opinion that the *me'ayla* is a disjunctive cannot be accepted. Most of the cases of *me'ayla*, but not all of them, can be explained as contamination of two versions, one with *maqqaqf* and one with the disjunctive *tippeha'*. In the works of the Masorah this sign is considered a conjunctive.

5.3.3.3.2.2. The (3) Poetical Books: (a) *Šinnorit*. The sign מ (originally מ) is called צַנּוּרִית (little *šinnor*), and its form is like that of the pausal accentuation sign *šinnor*, from which it is differentiated by the position of its notation. It is a pretonic sign and occurs in an open syllable adjacent to the stress in a word with the conjunctive *mahpak*, e.g. בְּתוֹכָהֶן (Ps. 39:12), גְּדוּל (Ps. 96:4), and rarely also in a word with the conjunctive *merka'* e.g. הוֹשִׁיעָה... הַצְּלִיחָה (Ps. 118:25). There is no doubt that it indicates a prelude melody for that of the conjunctive. Since it is joined only to the conjunctives, it is considered a “servant” for the “servants” (conjunctives), and it is thus also called עַבְד (‘‘slave’’). It occurs regularly in a word that has a *mahpak* – which is used as a conjunctive for these accents: *revia' gadol* and *azla' legarmeh* – on the first word that precedes them; *dehi* – on the second word preceding it; *silluq*, *etnah*, and *revia' (mugraš* – the substitute for *etnah*), on the third word preceding them. It does not occur regularly in a

word with *merka'*, and there are variants among the printed editions and manuscripts of the Bible. It is likely to be found mainly in a word with *merka'* which is used as a conjunctive before the accents *silluq*, *etnah*, and *revia' mugraš* – on the first word preceding them.

(b) *Metiga*. The sign מ, similar to the *maqql*, is known from a few manuscripts and from works of Masorah in which it is called *hamza* in Arabic and מתיגה in Hebrew, names which are also used for *maqql*. The *metiga* is a pretonic sign. It is used in a syllable adjacent to the stress of a word with a *merka'* which serves as the conjunctive for either the accent *silluq* or *revia' mugraš*, in the first word preceding it. Thus the *metiga* was used as a prelude melody for *merka'*. It disappeared from most manuscripts and from all printed editions of the Bible.

5.4. THE NON-CONVENTIONAL TIBERIAN SYSTEM

In many Bible manuscripts graphemes of the Tiberian system are used in different manner from that set by the Tiberian vocalizers. This was due to: (1) a tradition of pronunciation which differs from the Tiberian; (2) a different method of notation and different rules for the use of some of the Tiberian graphemes.

The most famous of these manuscripts is the Codex Reuchlinianus of the Prophets, which was written in 1105/6 C.E. There is no uniformity in these manuscripts and this system, unlike the conventional Tiberian system, is not consolidated. Thus, like the Babylonian and Palestinian systems, it came down to us in stages of development and its various characteristics are not found in every manuscript. Inconsistency in details of vocalization is found even in the same manuscript.

5.4.1. The Typifying Characteristics

This system is distinguished from the regular Tiberian system by elements whose origin is in a different tradition of pronunciation; and by Tiberian symbols which are used according to different principles. No manuscript contains all traits of both these characteristics, especially some of the second category, also occur at times in regular Tiberian texts.

5.4.1.1. THE PRONUNCIATION TRADITION. The main traits of a different tradition of pronunciation are as follows:

(1) The lack of distinction between *qameš* and *pataḥ* and between *šere* and *segol*; but even this typifying characteristic is not common to all manuscripts of this type.

(2) –י, –ב, –ל at the beginning of a word becomes –י, –ב, –ל.

(3) –? at the beginning of a word becomes – ?.

(4) The lack of furtive *pataḥ* before ה-, ע- (written as ה-, ע-), unless ĩ (י-) and in a number of manuscripts even ū (ו-) preceded them; also its absence before ה- (written as ה or ה only). Whether this characteristic is rooted in a different tradition of pronunciation is doubtful. Perhaps it is only a graphic variant in the system, that is, the consonants ה-, ה-, ע- in the final position are always pronounced with the preceding glide vowel, and there is no need to write it in. The *pataḥ*

only following *matres lectionis* ך, ם (before ן, ף), i.e., in a position where there are graphic conditions for its notation, reinforces this possibility.

5.4.1.2. VOCALIZATION. The principles of different notation in vocalization are:

(5) The principle of the *dageš lene* – that the *dageš* is placed in a letter at the beginning of a syllable which is preceded by one that ends in a consonant – is extended to the letters ך, ט, ל, מ, ן, ס, צ, ק, ש (hence it applies to all the letters except ך, ה, ן, ף, ץ, ך, ן, ף, ץ, ן, ף, ץ). The notation of the *rafeh* is correspondingly extended to these letters in an almost regular manner; it is added to a letter which is at the beginning of a syllable preceded by one that ends with a vowel. This characteristic is very frequent although its execution is not always perfect, and the symbols are also found outside the above conditions. In the opinion of Morag its function was to remove the doubt about the *šewa*: a *dageš* would indicate that the *šewa* preceding it (at the end of the preceding syllable) was quiescent, and *rafeh* would indicate that the *šewa* preceding it was mobile. From here the distinction was transferred to positions in which there is no *šewa* at the boundary of the syllables and also to the beginning of a word.

(6) A *dageš* in ך and ה indicates their consonantal nature; *rafeh* above them (ך̄, ה̄) indicates that they are *matres lectionis*.

(7) ך̄ – in the middle of a word indicates that the letter is a consonant; ך̄, ך̄, ך̄ – indicates its consonantal nature at the end of a word. ך̄ indicates its consonantal nature at the beginning and in the middle of a word; ך̄, ך̄, ך̄ – a consonant at the end of the word.

(8) The *mappiq* is written at the bottom of the *he* - ה̄.

(9) ש̄ = ש; ש̄ (or ש̄) = ש; and the *dageš* is written above the letter: ש̄ = ש with *dageš*, ש̄ = ש with *dageš*.

(10) Instead of *qameš* in a closed, unstressed syllable (our *qameš qatan*) ך̄ is written and in some isolated manuscripts ך̄.

(11) Instead of a mobile *šewa* preceding a consonantal *yod* with any type of vowel, a *hireq* is written (י̄), equivalent to actual Tiberian pronunciation.

(12) The consonants ן, ף are written with *šewa* even at the end of a word, and sometimes also the consonantal ה̄.

(13) When *hatefs* occur with ה̄, ה̄, and sometimes ך̄ too, the *šewa* sign is written above the vowel sign and within the letters: ה̄, ה̄, ך̄.

(14) With the letter ה̄ and sometimes also with ף̄ within a word, a *ḥataf pataḥ* occurs in place of quiescent *šewa*. It would seem that this is not a major change in pronunciation but in the notation only (which originated perhaps with the perception of a slight vocal glide adjacent to the ה̄). The nature of the *šewa* is established, as in the other cases, by the *dageš* or *rafeh* in the adjacent letter: ן̄ before a *dageš*, quiescent; ן̄ before a *rafeh*, mobile. This is not done consistently, however. The opposite tendency is seen in ancient manuscripts: a simple *šewa* is used everywhere, even in such positions where in the regular Tiberian system we would find definite *hatefs*.

5.4.1.3. ACCENTUATION OF THE (21) PROSE BOOKS. The following characteristics occur in the 21 books:

(15) Two different accents are used as conjunctives before *zaqef*: the regular *munaḥ* (ך̄) and the sign ך̄ (a type of inverse *mahpak*). The latter is used as the single conjunctive of *zaqef* when the stress is at the beginning of the word, or as the first of two conjunctives before *zaqef* in any situation of stress. In the other instances the regular *munaḥ* is used. These conditions fit those of the conjunctive שופר ך̄ (for its meaning see Dotan, ed., *Dikduke ha-Te'amim*, p. 341, note 108), which are found in various works of Masorah (for example, *Maḥberet ha-Tijān*, ed. Derenbourg, p. 95).

(16) No conjunctive occurs within a word with a *zaqef* even in cases where it should occur according to the regular Tiberian system.

(17) There is no *geršayim* (ך̄), and *gereš* (ך̄) is used instead in every instance.

(18) The sign of the conjunctive *darga* is similar to the *šalšelet* below the word (ך̄); cf. also the Aramaic name of *darga*, שישל (= chain), and even the Hebrew שלשל.

5.4.1.4. ACCENTUATION OF THE (3) POETICAL BOOKS.

(19) Instead of the disjunctive *deḥi* (ך̄), the sign of *tevir* (ך̄) is used with the same function.

(20) There are distinctions made between the types of *revia*: *revia gadol* ך̄ (like a doubled *gereš*, but the first mark is prepositive and the second is above the stressed syllable); *revia* (which is not preceded by *etnaḥ*) ך̄ or ך̄; and other signs and distinctions similar to these.

(21) There are deviations from the regular Tiberian system with regard to the rules of the conjunctives, and they are different in the various manuscripts.

(22) The use of *šinnorit* (in words with *mahpak* and *merka*) is more frequent and more consistent than in the regular Tiberian system, and also the *metiga* (above 5.3.3.3.2.2.) (in words with a *merka*) is more common.

More sign variations and markings of peculiarities as used in some manuscripts were brought by Yeivin (*The Accentuation*, 1992).

5.4.1.5. OTHER SIGNS. (23) To distinguish between the *legarmeh* signs (*munaḥ legarmeh*, *azla legarmeh*, *mahpak legarmeh*) and the *paseq*, there is ל̄ or פ̄ written in the margin among the masoretic notes almost regularly.

(24) The omission of the *maqḥaf* is more common than in the regular Tiberian manuscripts and apparently not necessarily because of oversight of the scribes.

(25) There is a much more extensive use of *ga'ya* than in the ancient Tiberian manuscripts, especially the different types of major *ga'ya*.

The above is thus a summarized list of the main differences found in most of the manuscripts. There are additional characteristics found in one or another isolated manuscript, which have not been listed above. These characteristics seem to indicate a definite tendency, but this tendency reveals itself

in various stages of development and crystallization, namely, a pronunciation other than that known as Tiberian, and the use of the Tiberian graphemes in a way differing from the common one found in conventional Tiberian manuscripts. However, the manuscripts differ even among themselves in regard to the degree of development or perfection in each of these two divisions. Some of them show marked differences from the Tiberian tradition of pronunciation, especially with regard to the pronunciation of the vowels, and others – a minority of the manuscripts – are closer to it, at times almost identical. Furthermore, in some manuscripts the non-conventional use of the Tiberian graphemes seems to be inconsistent, random, while others have a more complete and precise method approaching systematization which does not leave one letter without a symbol.

#### 5.4.2. An Analysis of the System

In all fairness it must be said that the variant usage of graphemes, the different graphic method, is in itself insufficient to separate this vocalization system from the Tiberian tradition. Yet, since this method is usually associated with the indication of non-Tiberian pronunciation, especially its substitution of *qameṣ* for *pataḥ* and *šere* for *segol*, and vice versa (characteristic 1 above) – all the others are not necessarily non-Tiberian characteristics – it is clear that this entire system is non-Tiberian. Even if isolated manuscripts have been found in which the free substitution of these vowel signs does not occur, their very scarceness and even their relative lateness testify to the fact that they constitute something of a further improvement of the system in order to bring it closer to the regular Tiberian system.

5.4.2.1. PALESTINIAN-SEPHARDI. The lack of distinction between *qameṣ* and *pataḥ* and between *šere* and *segol* is common to the Palestinian and to the Sephardi pronunciation traditions. The rest of the characteristics of pronunciation are not necessarily typifying for either of these two traditions. For example, characteristic 2 is also found in the Tiberian tradition itself in the school of \*Ben-Naphtali, and vestiges of it can even be discerned in manuscripts and various editions of the accepted Tiberian text, e.g., בִּיקְרוּתֵיךָ (Ps. 45:10); וְיִלְלֶת (Jer. 25:36); לִיקְהֵת (Prov. 30:17). It is difficult to decide one way or another even according to the graphic method. Most of the characteristics are neutral; some no doubt reflect ancient Tiberian characteristics (15, for example), while others are not necessarily specific to Palestine but are also found in the Babylonian tradition and sometimes in the Tiberian tradition as well (19, for example). Only two characteristics seem to be common to this system and the Palestinian – the way of noting the diacritical dots in the letters ה, ש, ז (characteristics 8,9). However, Palestinian manuscripts which follow this method of notation reveal clear signs of Tiberianization with regard to the notation of vowels, and diacritical signs such as these are not found in purely Palestinian manuscripts. The noting of the *mappiq* in the lower part of ה is also found, for instance, in the Tiberian vocalization of the Kaufmann manuscript of

the Mishnah. Then even this loose connection between the two systems loses its significance.

5.4.2.2. GEOGRAPHICAL AND CHRONOLOGICAL DISTRIBUTION. On the other hand, one must consider the fact that the manuscripts vocalized in this manner are most widespread in European libraries; even those from the *Genizah*, at least some of them, originated – as N. Allony has emphasized – in Western European countries (especially Germany), and not necessarily in the East. The dated manuscripts among them range from the 11<sup>th</sup> century to the 14<sup>th</sup>. The pronunciation of the vowels during that period among the Jews of Western Europe, including the Ashkenazi Jews of Germany and France, was similar to that of the Spanish (Sephardi) Jews. The system under discussion is just a further verification of this fact, which was first pointed out by Yalon (*Leshonenu*, 3 (1931), 204). Thus the tendency of the system is in this direction, too, toward the Sephardi-Ashkenazi pronunciation tradition, no less and perhaps more than its attraction toward the Palestinian pronunciation tradition.

#### 5.4.3. The Relationship to the Conventional Tiberian System

Various opinions have been expressed concerning the relationship of this system to the conventional Tiberian vocalization system. Different names for this system have also been offered according to these opinions.

5.4.3.1. BEN-NAPHTALI. Kahle focused on one characteristic (2) which is common to these manuscripts and to the Ben-Naphtali versions of the Tiberian tradition. Although he did not find additional principal characteristics common to this system and to the Ben-Naphtali tradition, and despite the fact that most of these manuscripts do not accord with a large part of the Ben-Naphtali readings, he did not hesitate to name the whole system “the Ben-Naphtali System.”

5.4.3.2. OTHER NAMES. It has become clear that this opinion is unfounded, and other suggestions have been offered in regard to the system. Some consider it a more primitive system than the conventional Tiberian and suggest that it be considered as “proto-masoretic” or “pre-masoretic” (thus Sperber and Díez Macho); others take it to be a more sophisticated system than the Tiberian, trying to reach complex phonetic notation, and therefore they date it later, hence it would be necessarily “post-masoretic.” Because of its connection with the pronunciation tradition of the Palestinian vocalization, it has been suggested to call it the “fuller Palestinian” system (Morag) or the “Palestinian-Tiberian” system (Allony and later also Morag). These two names are based on the assumption that the system under discussion is nothing more than an expansion of the Palestinian vocalization, that is, the transmission of the Palestinian pronunciation in a fuller manner with the aid of Tiberian signs. Yet even the theory of the lateness of the system has not universally been accepted, and the idea has formed that these manuscripts are not of a uniform nature. Díez Macho has suggested that the manuscripts be divided

into three groups according to their chronological-typological parallels to the Tiberian system, and then they would show both pre- and post-masoretic vocalization of this type.

Two other names which have been suggested are based on dissatisfaction with the chronological connotations of the names – which are no more typifying – and from the connection with the Palestinian system of vocalization, which is based on conjecture and interpretation of facts and not on actual facts. Since this is a system which differs from the traditional one, the name “non-masoretic” has been suggested (Yeivin). Yet this too misses the mark, for even if the system does not agree with our Masorah, which was universally accepted, it is still within the range of the concept Masorah, and even these manuscripts have their masoretic notes. A more recent suggestion was “Expanded Tiberian” (Yeivin) indicating the wider range of its graphemes but saying nothing about the nature of the system. According to the term “non-receptus” (Goshen-Gottstein) the system is one of two Tiberian systems which developed at the same time, both representing the same Tiberian reading tradition by different graphic systems. The difference between the two systems is that one was accepted (*receptus*) and the other was rejected. Following this opinion it is in that minority of manuscripts in which the free interchange of the vowel signs (characteristic 1) does not occur, that we find the main principle of our system; while the vast majority of manuscripts in which this interchange does occur shows no more than a late subsystem with characteristics of Sephardic pronunciation. Not only does such a presentation disagree with the facts, but it is also not fitting to describe a system which was accepted by large Jewish communities for hundreds of years, until the 15<sup>th</sup> century or perhaps later, as *non-receptus* only because it is not accepted today. Moreover, this system of vocalization was so thoroughly accepted in Western Europe that it was considered the official system of the Jews there and, as Allony has illustrated, they called it by the name *הניקוד שלנו* (“our vocalization”), as follows from the commentary to *Avot* in *Maḥzor Vitry* (see above, 5.1.). They presented it in explicit contrast to even the conventional Tiberian system as “ours.” They vocalized not only the Bible with it, but also prayer books, texts of *piyyutim*, Mishnah etc.

5.4.3.3. DEFINITION OF THE SYSTEM. Without going into the question of the relation of the system to the Palestinian or Sephardi tradition or into the question of the time of its growth and its relation to the accepted Masorah, we remain with one clear fact: this is a system which uses the Tiberian graphemes to denote a non-Tiberian pronunciation; it is a “non-Tiberian” use – that is, not accepted by the Tiberians – of the Tiberian graphemes. Thus the most fitting name is the “Tiberian Non-Conventional” system. This was a system which intended to present a Palestinian-Sephardi pronunciation by means of Tiberian graphemes. The terms “Palestinian” and “Sephardi” are nothing more than different names for a pronunciation tradition of five vowels and from this aspect they are synonymous. They differ from each other only with regard to the origin of

the system. From the widespread distribution of most of the manuscripts one can consider this is an attempt of Sephardim and of Ashkenazim whose pronunciation was Sephardic to use Tiberian symbols for their own pronunciation, i.e., “Sephardi vocalization,” which first developed in Europe. However, a similar pronunciation is known also in the East, mostly within the boundaries of Palestine; but its special system of notation – the Palestinian vocalization – was not sufficiently developed and when the Tiberian vocalization was instituted, those who practiced the five-vowel pronunciation adopted it for themselves, adapted it to their needs, improved it, and made it even more phonetic. Since this vocalization was fitting for every Sephardi pronunciation, it was transferred afterwards to Europe where it spread. If this was indeed the process, it was something of a repetition of the history of the Palestinian vocalization, which was also an adapted system for a five-vowel pronunciation that was originally set for a six-vowel pronunciation tradition (see above, 5.1.1.2.). Those who followed the Palestinian tradition of pronunciation repeated, therefore, the conduct of their ancestors who adopted a different vocalization system and adapted it to their needs. It follows from this that Hebrew never had a graphic system which was originally intended for a five-vowel pronunciation tradition.

#### 5.5. THE CONTAMINATION (MIXING) OF THE SYSTEMS

Although the non-conventional Tiberian notation is a mixture of Tiberian signs and non-Tiberian pronunciation, because of its other characteristics, its uniqueness, and the relative systematization of the manuscripts one must define it as a “system” in its own right. But, indeed, the principle of mixing the systems was not strange to the masoretes and the Hebrew scribes. It turns out that the various systems were not limited to closed communities with no contact between them. The cultural connection between the dispersed Jewish communities was close and active throughout the generations, and there is no doubt that this also included mutual influences in the realm of language between communities which were geographically or spiritually close. Of necessity the scribes everywhere were trained in the methods of writing Hebrew, as this language was the connecting link between the scattered Jewish communities. It is not only shapes of letters which are included in the methods of writing, but also the signs of the different vocalization systems. This knowledge of vocalization systems, the initial purpose of which was to gain a passive knowledge so as to understand written records from other places, ultimately led to the use of these signs to a greater or lesser degree, sometimes in order to complete the local method of writing and sometimes for other needs. See also above 3.2.4.2. Contamination of Masora.

##### 5.5.1. Transcriptions

One of the most extreme instances of the mixture of systems is seen in extant manuscripts of the Bible in Arabic transcription (Arabic script being in itself quite rare among medieval Jews) with Tiberian vocalization and accentuation signs. These manuscripts were common among the Karaites in the tenth

and 11<sup>th</sup> centuries and for a short time after, apparently to prevent the holy manuscripts in Hebrew script from being used as reading primers.

### 5.5.2. Process of Tiberianization

The major mixing is that of the vowel and accentuation signs. Indeed, most of the mixed manuscripts have as their general trend the increased use and dominance of the Tiberian system, both in pronunciation and in graphic notation. With regard to pronunciation, we see that this is the process of Tiberianization that was ever-increasing in all the vocalization systems (Palestinian as well as Babylonian) and affected the set of signs of the systems themselves. It left its traces also in both the phonology and the morphology of the language in each of the systems. In the appropriate sections above, references were made to the specific stages in both the Palestinian and the Babylonian vocalizations in which the influence of the Tiberian pronunciation increased. As time passed this admixture became part of the actual development of these vocalization systems.

### 5.5.3. Types of Mixture

There are several types of mixture in graphic notation:

(1) An a priori mixture made by the first scribe. One must examine the degree of mixture and its purpose:

(a) A systematic mixture for the purpose of completeness, adding a series of graphemes which do not exist in the original system of the scribe. An example is the Leningrad manuscript of the Prophets from 916, which is voweled and accented with the complex Babylonian system with a mixture of Tiberian signs for all the conjunctive accents, the *dageš*, the *rafeh*, the *maqṣaf*, and other Tiberian signs. Examples are also found, although to a lesser degree, in the Palestinian system which was mixed with Tiberian symbols, especially the signs of the conjunctive accents.

(b) A random mixture of signs from two systems, for no apparent reason, which sometimes seems to be merely the result of the expertness of the scribe in the two systems. There are examples of Palestinian/Tiberian and Babylonian/Tiberian mixtures.

(c) A mixture of isolated signs from a different vocalization system for the purpose of ornamentation, mostly in masoretic notes, but also in other instances. Examples of that are usually found in Tiberian texts in which isolated Babylonian signs (for example the Aleppo codex), or isolated Palestinian signs, as well as others had been added.

(2) A mixture for the purpose of changing the original writing by a later scribe (second, or third, etc.). Here, too, one must examine the goal:

(a) The correction of pronunciation by a later scribe in a manuscript which was vocalized originally according to a different pronunciation tradition. Manuscripts with Babylonian vocalization in which a later scribe changed the system to a Tiberianized Babylonian are an example of this type. There are also a large number of Yemenite manuscripts of this kind. Non-conventional Tiberian manuscripts which were corrected

to the conventional Tiberian are another example. For all of these we do not refer to additions only, but to erasures and major changes as well.

(b) Another purpose was the transition from one tradition of pronunciation to another, in most cases because of the passing of the manuscripts from hand to hand and the request of the new owners to add the vocalization according to their system. Generally, the former one was not erased; a new one was merely added alongside the old. The transition from Palestinian to Tiberian, Babylonian to Tiberian, and rarely from Babylonian to Palestinian, are examples of that. We also know of the systematic transcription from one vocalization system to another in the course of the copying of manuscripts which wandered from one place to another. Apparently there were special experts for this work, according to the testimony of that colophon (see above, 5.2.0.1.): “This *targum* was copied from a book which was brought from Babylonia and which was vocalized above [the line] with the vocalization of the land of Assyria and R. Nathan changed it ... and corrected it and copied it in the Tiberian vocalization.” Thus in copying the manuscript, they also “changed” its vocalization. A manuscript from faraway places required an adaptation of the vocalization; but when the entire manuscript was not re-copied, this adaptation already meant a contamination of the vocalization systems.

Changes like these were sometimes the work of several scribes who altered and corrected one after the other until one finds several hands having dealt with the vocalization of a single manuscript. The possibility of consistency would become less and less as more hands handled a manuscript. One who wishes to trace the methods of vocalization of mixed manuscripts such as these will find that he must learn to know the different scripts, the different colors of ink, and other such factors, in order to be able to distinguish between the various notations of each one of the vocalizers. The vocalization of these manuscripts cannot be considered uniform; the notation of each vocalizer must be investigated by itself.

## 5.6. THE SAMARITAN SYSTEM

The reading tradition of the Samaritans constitutes a branch of its own among the reading traditions of the Jews, both for Hebrew and Aramaic, and it developed as an independent offshoot, sometimes in contact with the local Hebrew tradition or traditions. The Samaritans cherished the exact transmission of the language from generation to generation no less, and perhaps even more, than the Jews, as it was a characteristic policy in their attempt at preserving and nurturing everything which had some Samaritan uniqueness in which they differed from the Jews. They also developed an entirely separate and distinct vocalization and accentuation system for themselves. It is possible that the impetus for this came from contact with the Jews and from an attempt to imitate them, but the development of the system and its details are different from the Jewish systems. In this matter, the vocalization system is distinct from the accentuation system; the former is built according to the pattern

of the Jewish systems and some of the signs are identical or similar to the Palestinian vocalization which originated in the same area as the Samaritan; the accentuation system, however, is of a type completely different from the Jewish systems and closer to the Syriac system (see below).

### 5.6.1. The Vowel Signs

5.6.1.1. THE PROBLEMS. The Samaritan vocalization system, like the primitive strata of the Jewish vocalization systems, does not mark all the vowels consistently, but mainly those which are likely to prevent error and especially those in syllables in which there are no *matres lectionis*. The number of manuscripts containing vocalization is extremely small and their use of signs is not uniform. In any event, it is difficult to establish the exact meaning of the signs, and it is known that their functions changed as time passed. In fact almost every sign refers to more than one vowel quality. Some of the Samaritan grammarians and masoretes already did not know the exact meaning of the signs and did not use them in their works except by rote and as a tradition of their teachers, and thus their testimonies are not uniform and do not agree with the traditional Samaritan pronunciation or with the structure of the language. For hundreds of years now these vowel signs have had no practical use. Only through a comprehensive historical-comparative investigation is it possible to trace the original use of the signs and their later applications and to follow the various layers which are discernible in the set of signs. Such an examination was made by Z. Ben-Ḥayyim and the following description is based upon his conclusions.

As in the other vocalization systems of Hebrew there is no indication of quantity in this system either and the suppositions of scholars who thought that they had found signs for length were based on false premises. Even the similarity of some signs to the Palestinian is only apparent. In fact, the two systems have only two signs in common; the two of one pair have different uses, while the other two are only somewhat similar. Since the two which are alike are basic grapheme signs (–, ′), which are likely to be adopted independently in any vocalization system, there is no need to assume borrowing or dependence of the Samaritan system upon the Palestinian, even though both of them were native to approximately the same region.

5.6.1.2. THE VOWEL AND DIACRITICAL SIGNS. There are ten signs in the Samaritan system: nine signs for vowels and one diacritical sign for the *dageš*. However, since some of the vowel signs are sometimes used with the function of a diacritical sign or embody within them a combination of a vowel sign and a diacritical sign, it is more convenient to deal with them together. Six of the ten signs belong to the ancient layer, that is, they are assumed to have been used at the beginning of Samaritan vocalization (there are no biblical manuscripts of this layer), and the others are substitutes and later developments. All ten are never used in one and the same manuscript. There are no dots at all in the Samaritan vocalization as known today, and the six basic signs all consist of lines and

angles, which are placed above the letter and a little to the left. According to the Samaritan grammarians the signs are parts of Samaritan letters.

י̇ – *i* (sometimes a kind of *e* which is derived from a final post-tonal *i*). The grammarians called it by the Arabic names of this vowel, *kasr* or *ḥafḍ*, and according to a Samaritan grammarian the sign is part of the letter adjacent to *yod* – i.e., *ṭet* (ט).

י̇ – *e*. One of the three types of the *fath*, called by the grammarians *fath al-nidāʾ* (the *fath* of exclamation), and they considered it part of the letter *ʾalef* (א).

י̇ – *ā* (according to Ben-Ḥayyim's notation). One of the three types of *fath*, called by the grammarians *fath al-ʾimāʾ* (the *fath* of indication), and they considered it part of the letter *he* (ה).

י̇ – *o, u*. This sign was called by the grammarians *ḍamm*, the Arabic name of the vowel, and they considered it part of the letter *waw* (ו). There was no need for two different signs since the two vowels are allophones in complementary distribution: *u* – only in an open tonal or pretonal syllable (and then it is long), *o* – only in an open, post-tonal syllable or in a closed syllable (and then it is always short).

י̇ – *a*. This is also one of the three types of *fath* and was called by grammarians *fath al-ʾihā* (the *fath* of brotherhood) and sometimes just by the name *fath*; they believed it to be part of the letter *het* (ח) or *ʾayin* (ע).

י̇ – A diacritical sign only, it indicates gemination (*dageš forte*). The grammarians called it by the name of the corresponding Arabic sign, *shadd*, and they considered the sign to be part of the letter *qof* (ק) of the Hebrew word *ḥazaq*, which indicated the *tašdīd* according to them.

These basic signs were used in a rather ancient period, according to Ben-Ḥayyim even prior to the Arabic-speaking period of the Samaritans. Obviously their Arabic names are later. As Arabic influence increased after the conquest, other signs penetrated the system; they can be seen as direct borrowings from the Arabic system of graphemes. These signs are not listed in the works of the grammarians:

י̇ – a stylized form of י̇, perhaps under the influence of the Arabic *fatha*. י̇ – a substitute for י̇, and it is actually the Arabic sign of *ḍamma*. In an even later period the precise use of part of these signs declined and was forgotten, especially the י̇ which indicates sometimes even *i*. Sometimes the sign came to mark the fuller pronunciation of a consonant in the environment of the vowel, e.g., to indicate the plosive pronunciation of *waw* (וּשָׁב *īšab*), or to indicate the gemination of the consonant. In the course of time, apparently not before the 13<sup>th</sup> century, the necessity arose to mark a pronounced *ʾayin* (as the outcome of either an original *ʾayin* or an original *het*) occurring almost always at the beginning of a word (as a result of two adjoining weakened gutturals: אה, אע, חה, הע). This sound has two signs. י̇ – *ā*, a prepositive sign. It is apparently a combination of the Arabic letter *ḡ* with the basic vowel sign for *a* – י̇. The combination י̇ is also found in a manuscript and it is apparently the source of the cursive combinations י̇.

כָּ – ‘a, a prepositive sign. It is but the Arabic letter ع. There were scribes who abstained from using an additional sign for the vowel, since the vowel of the consonant ‘ is always a in any event. This use of the Arabic letter ‘ayin as a diacritical sign is borrowed from the Arabic custom to use that letter as a diacritical sign. In Arabic, however, unlike Samaritan usage, it denotes a consonantal *alef* (that is, an *alef* which is to be pronounced almost like an *ayin*), this mark being in fact the sign of the *hamza* (ء) which is a shortened Arabic *ayin*. Moreover, Arabic manuscripts have been found in which a full *ayin* is used to indicate *hamza* (أ) just like the aforementioned Samaritan sign.

### 5.6.2. The Accentuation Signs

For Samaritan as well it can be clearly established – perhaps more clearly than for the other systems – that the accentuation signs are older than the vocalization signs: whereas all the names of the vowels are Arabic, all the names of the accents are Aramaic. Nonetheless, this does not constitute evidence of the origin of the vowel signs in the period of Arabic speech of the Samaritans, but simply that at the time when the accentuation signs already had names – and this was still in the period of Aramaic speech of the Samaritans – the vowel signs did not have names as yet. It follows from this that the set of vowel signs was not yet fixed at the time that the set of accentuation signs was already established and firmly set. The accents are called by the Samaritans סדרי מקרתה (*sēdāri maqrāta*, “arrangements of the Scripture”); they are ten in number and are listed in the works of Samaritan grammarians (see the edition of Ben-Ḥayyim). They are located always at the end of a group of words to which they apply. These are the signs and their names:

נָגַד – מָ: (“leading”); פָּסַק – מָ: (“cutting”); אָנְחוּ – מָ: (“rest”); שִׁאלָה – מָ: (“an order,” as Ben Ḥayyim has proved); זַעִיקָה – מָ: (“a question”); אֲתַמְחוּ – מָ: (“a wonder”); בַּעֲוֹ – מָ: (“a request”); זַעַף – מָ: (“a rebuke”); תּוֹרוּ – מָ: (“instructing”).

It is clear from the nature of the translations of the terms that the main function of the accents is that of pausal signs which indicate the types of speech in the syntactical units preceding them, and thus also indicate the manner of reading and the melody, but not in the detailed way of the other systems which indicate an accent for almost each word. Needless to say, they do not show the position of the stress in the word. In this function of an exegetical-syntactical guide to the text they are similar to the Syriac accents. The names of some Samaritan accents are etymologically related to the names of Syriac accents, e.g., (according to the order above): נְגוּדָא, מְנַחְתָּא, מְנַחְתָּא, מְנַחְתָּא, מְנַחְתָּא and others which are close to them in meaning, such as: פְּקוּדָא (= אֲרַכְנוּ) קְרוּיָא (= אֲרַכְנוּ), זַעִיקָה (= זַעִיקָה), מְדַמְרָנָא, אֲתַמְחוּ (= אֲתַמְחוּ) and perhaps also מְצַלְיָנָא (= בַּעֲוֹ).

The division of speech into different types is rooted in the writings of the medieval grammarians (already dating from Saadiah Gaon among the Jews) and goes back to Greek phi-

losophy (Aristotle). It is not, therefore, necessary to consider the Samaritan accentuation system as a borrowing from Syriac, although it might be that it is an imitation.

Already in ancient times the precise functions of the signs were forgotten and there is no regularity in their usage in the Samaritan manuscripts. One grammarian from the end of the tenth century (Ibn Dartha) still knew their exegetical-syntactical functions, but had nothing to say of the melody which accompanies them. No need to say that the reading handed down from generation to generation until today is not connected at all to any written system of accentuation signs, all the more so as there is no extant uniform system.

In the Samaritan orthography a dot is used regularly to separate words. This dot is neither an accentuation sign nor a regular punctuation (or conjunction) sign, but a continuation of the ancient orthographic custom of the Canaanite and Hebrew inscriptions in which the dot is used to separate words.

## 6. MASORETES AND GRAMMARIANS

The entire vast creation of the Masorah and the various systems of vocalization and accentuation are anonymous. The names of a few masoretes and even the works of some of them are indeed known, but there is no possibility of attributing the entire endeavor or even a part of it to any specific sage, in spite of all the attempts to do so. It is even an error to attribute the Tiberian vocalization, for example, to the family of masoretes of Asher the Elder, an opinion sometimes expressed. To the same degree it is an error to speak of the “Ben-Asher text” of the Bible when one is referring to the entire Tiberian version of the Bible.

A survey of the activity of anonymous works and of certain masoretes whose names are known can thus be done parallel to the survey of the development of the Masorah, but not combined with it. Knowing their approximate times a list of masoretes in assumed chronological order can be arranged, but the position of each in the general process of development or his contribution to the general creation of the Masorah cannot be established.

### 6.1. THE FIRST MASORETES

#### 6.1.1. Dosa ben Eleazar

The Masorah concerning the total number of verses in the Bible is attributed in a well-known masoretic note quoted in several sources – among them in a manuscript of *Okhlah we-Okhlah* – to Dosa ben Eleazar (apparently end of the fourth century-beginning of the fifth). He received it from his teachers from whom it goes back to Rav Hamnuna, the Babylonian *amora* (end of the third century) whom it reached from Palestinian sources more than one hundred years earlier. This is thus the first testimony, apart from various hints in talmudic literature, about masoretic activity, that mentions the names of sages and points to Palestine as the source and the example for the Babylonian sages.

### 6.1.2. Moses Moḥeh

Primacy is apparently granted by Solomon b. Yeruḥim (Jeroḥam) (a Karaite early in the tenth century) in his *Muqad-dimah* to the decalogue (Pinsker, *Likkute Kadmoniot*, p. 62) to the sages Rav מוזה (error in the manuscript: אהא) and to his son Moses (ובנו משה) as מתקני הנקוד הטבראני. Pinsker, however, has already pointed out that מתקני does not mean inventors (*Einleitung in des Babylonisch-Hebräische Punktationssystem*, p. 10). On the other hand, Rav Moses Moḥeh (not Moses ben Moḥeh) is known from a list of masoretes in the “Treatise on the Šewa”, and he is later than the eighth century; therefore on the testimony of Solomon is open to doubt. There is in any case no evidence about the inventors of vocalization.

### 6.1.3. Other Masoretes

Various masoretes are mentioned by name in works of Masorah and in masoretic notes. The details of their activities are not known and it is usually only the details of a reading which are cited with their names. One of the earliest of them is Phinehas Rosh ha-Yeshivah (no later than the first half of the ninth century and perhaps even earlier than that). It is known that he followed a system of marking the mobility of certain *šewas* by means of a *ḥaṭaf pattaḥ*. The most famous of the masoretes are the descendants of Asher the Elder (the Great), a family of five generations, the last two of whom were Moses and his son, Aaron Ben-Asher.

A schematic division of the early masoretes into three major generations was suggested by Yeivin (*Textus*, IX, כג–כד). The first generation (about the second half of the eighth century or even earlier) was still occupied mainly in matters pertaining to plene and defective spelling and *qere/ktiv*. In this context the schools of מערבאי and מדנהאי, and scholars like Moses Moḥeh and others are mentioned. The scholars of the second generation (not later than the middle of the ninth century) differed mainly in matters of *maqfeṣ* and conjunctive accents, and sometimes also in matters of vocalization. Among these scholars are משה מוזה (Moses Moḥeh – again!), Phinehas Rosh ha-Yeshiva and others. In the third generation (about the first half of the tenth century) mainly matters of *ga'ya* were the issue, rarely letters, vowels, and accents. Here the main actors are Aaron Ben-Asher and Moses Ben-Naphtali and their schools. This division can serve as a tentative outline for a general view.

## 6.2. AARON BEN-ASHER AND HIS PERIOD

### 6.2.1. Diquḏe ha-Te'amim

Precise details about a work of Masorah by the father Moses \*Ben-Asher are not known, but his son, Aaron, was the first masorete who in addition to manuscripts of the Bible and readings which are attributed to him also left a well-defined work of Masorah and grammar, ספר דקדוקי הטעמים. Aaron Ben-Asher collected in this book different rules regarding vocalization and accentuation from among the rules of the Masorah which were continuously being copied in the margins of the manuscripts of the Bible and in independent works

which were part of the Masorah literature. The collection of Aaron Ben-Asher is the first known by the name of the author. It is also the first such work compiled with a grammatical aim, and not just as a collection of masoretic peculiarities, whose compiler adapted it and added his own rules in order to make it correspond to his readings. The original version of the work was published in the Dotan edition (1967); the previous edition, of Baer and Strack (Leipzig 1879), included a wide collection from masoretic literature but did not pretend to reflect the scope of the authentic, original work. The central subject of the work is the problem of the *šewa*, its mobility in the context of certain accents and the methods of marking the *šewa*. However, other rules of vocalization and accentuation, which are not germane to the *šewa*, also occur.

### 6.2.2. His Other Works

Other works of his have not reached us, but it is known that he wrote a Masorah, and it is apparently the one which was added to one of the manuscripts of the Bible that he vocalized and to which he added the masoretic notes. He also arranged a list of words, ב' בתרי לישני (“two [words] of two meanings”), homophonic pairs from the Bible recently discussed by Dotan (*The Awakening of Word Lore*, 87ff.). There are also allusions to his having written an additional work concerning grammatical matters.

### 6.2.3. Biblical Manuscripts

The manuscripts of the Bible whose vocalization is attributed to Aaron Ben-Asher are as follows:

- (1) the Leningrad manuscript B19a, which was written in 1009 and whose vocalization was adjusted to the system of Aaron Ben-Asher, as attested by the colophon at its end;
- (2) the Aleppo Codex, of which less than two-thirds of Scripture remain, also has genuine vocalization which corresponds to the system of Ben-Asher, but it, too, was apparently not vocalized by him, although a later colophon which was added to the manuscript attributes the vocalization to him.

The British Library Pentateuch manuscript Or. 4445, which had also been attributed to Aaron Ben-Asher (Kahle and others), was established as a pre-Ben-Asher manuscript (Dotan, *Reflections*). Likewise the Cairo Codex of the Prophets, written in 895 C.E. by Moses Ben-Asher (father of Aaron), published in Madrid with its Masora, is no longer regarded as part of the Ben-Asher school, but on the contrary represents a text closely related to Ben-Naphtali.

### 6.2.4. Kitāb al-Ḥulaf

Some of the biblical readings of Aaron Ben-Asher are known from the work of Mishael b. Uzziel, *Kitāb al-Ḥulaf alladī bayn al-Mu'allimayn ben Asher wa-ben Naphtali* (“The Book of Differences between the two Masters, Ben-Asher and Ben-Naphtali”). This is a collection of the points of controversy and agreement between the two masters of the Masorah, which was collected – after their death – from manuscripts which they had vocalized. Some of the differences are stated in the form of rules and variants of principle, while the majority are

lists of details. The date of the author has not been established precisely (not before the first half of the 11<sup>th</sup> century nor after the 12<sup>th</sup> century). This work is an important source for the readings of Ben-Asher and the only one for the readings and the method of his famous disputant, Moses b. David Ben-Naphtali, from whose works nothing is extant, except for a few fragments of the Bible which perhaps reflect his method of vocalization. The lists of variants were copied and recopied many times in the Middle Ages and consequently a large number of errors were introduced. Even the first name of Ben-Naphtali became confused in the transmissions of the copies.

### 6.2.5. Ben-Naphtali

As a consequence of the decision in favor of the readings of Ben-Asher, as opposed to the readings of Ben-Naphtali, which originated in ancient times and was further strengthened by the support of Maimonides for the Ben-Asher version (albeit only with regard to the division of *parashiyyot setumot* and *parashiyyot petuhot* and for the manner of the writing of the songs in the Pentateuch), the readings of Ben-Naphtali were more and more rejected from most of the accepted versions of the Bible. As time passed even the details of his readings were forgotten, so much so that all exceptional readings which deviate from the accepted version were ascribed to him. For example, Elijah Levita identifies Ben-Naphtali (he calls him Jacob Ben-Naphtali) with the Eastern version (“*Madinḥaē*”) (*Masoret ha-Masoret*, the third introd., ed. C.D. Ginsburg, (1867), 114) and Pinsker still subscribed to that idea. Moreover, recently Kahle identified the non-conventional Tiberian system with Ben-Naphtali (see above, 5.4.3.1.). Actually, Moses Ben-Naphtali too is one of those who shaped the Tiberian version of the Bible and only within this framework are there differences between him and others over the minutest details, mainly over *ga’yot* and less over conjunctive accents and so on.

## 6.3. THE ANONYMOUS CODIFICATION OF THE MASORAH

Ben-Asher’s work of compilation draws on a vast literature which remains shrouded in anonymity. This literature is presented to us in bits and pieces on the pages of the Bible and in fragments of rules, just as it was handed down from generation to generation. Yet, even in very early times there were those, also anonymous, who collected it into larger works. One product of this type is the book *Okhlah we-Okhlah* (see above, 3.4.).

### 6.3.1. Hidāyat al-Qāri

#### 6.3.1.1. THE TREATISE AND ITS TRANSFORMATIONS.

6.3.1.1.1. *Hidāyat al-Qāri*. Another work of the above nature, originally written in Arabic, is *Hidāyat al-Qāri* (“The Direction of the Reader”), is a manual of instruction of the correct reading of the Bible and yet another step toward the formulation of grammar since it contains a system of rules based on masoretic notes and tries to introduce order and method into them. It has three main parts: the letters, the vowels, and

the accents for the 21 prose books and for the three poetical books, all parts being sets of rules for instructing the proper reading of the Bible – reading in the expanded sense: both pronunciation and melody; hence its name. The work used to be regarded as one of the main examples of the anonymous type of masoretic literature, until Eldar (*Art of Correct Reading*, p. 40–43) drew attention to a Geniza fragment where the work was ascribed to the eleventh-century Karaite grammarian, Abū al-Faraj Hārūn. This connection has not yet been corroborated by substantial evidence of grammatical affinity by Abū al-Faraj’s other works.

Most of the work, which is not extant in its entirety, is still in manuscript, but was extensively discussed by Eldar (*ibid.*). The manuscripts, however, are not uniform and it seems that the work passed through many transformations: abridgments, adaptations, and translations. An abridgment (*al-Muḥtaṣar*; partly published by Eldar, *Leshonenu*, 50 (1986), 214–31) or even abridgments were made from the original Arabic source. The shorter version was translated into Hebrew more than once, and by more than one translator. The abridgments and translations do not always contain the same parts of the work; even the original order of the parts changes and differs in the various versions. Moreover, parts of the work were adapted, especially from the Hebrew version, and were incorporated into other works as citations or as an integral part of new works. An attempt to reconstruct the history of the text of the work has been made by Eldar (*Art of Correct Reading*, 15–19) who tried to establish the precise relationship of all the transformations to one another and to the original.

6.3.1.1.2. *Horayat ha-Qore – European Branch*. As matters seem, the abridgement (*al-Muḥtaṣar*) wandered to various countries, Germany, Italy, Turkey, Yemen, and was translated into Hebrew several times independently, and adapted respectively in different ways. One abridgement brought to Mainz and translated into Hebrew also kept the Hebrew equivalent of the original title *Horayat ha-Qore* (“The Guidance of the Reader”). The abridgement that reached Italy came down to us in two Hebrew copies, the earlier one as *Toḳen Ezra*, and the later one bearing the name *Ta’ame ha-Miqra* (“The Accents of the Bible”). The latter attributed, undoubtedly by mistake, to R. Judah \*Ibn Ba’am (end of the 11<sup>th</sup> century). It is only this version that was published; in two parts (*Poetical Accents and Prose Accents*) in the middle of the 16<sup>th</sup> century by J. Mercerus (Mercier).

6.3.1.1.3. *‘Adat Devorim*. One transformation of the *Muḥtaṣar* is found in the Hebrew compilation *‘Adat Devorim* (“A Swarm of Bees”) which was written by Joseph ha-Qostandini (“from Constantinople”) not earlier than the second half of the 11<sup>th</sup> century. In it he incorporated large parts of the original work in Hebrew translation. It was published by R. Peretz (1984).

6.3.1.1.4. *Maḥberet ha-Tijān – Hebrew and Arabic Versions*. The original Arabic work wandered also to Yemen where two abridgements were made, one in Arabic and one in Hebrew.

While the first is a uniform text, the second is an eclectic work much enlarged by additions from other sources.

These most important adaptations, which went beyond the original to a certain degree and are copied together with Yemenite Pentateuchs (*tāj*), are usually named *Maḥberet ha-Tījān* (in Hebrew and in Arabic), which were both published: the first Hebrew version by Derenbourg with the mistaken title of *Manuel du lecteur* (1870), which is a translation of the name of the original work, but which certainly was not the title of the adaption; and the second, an abridged version in Arabic, by Neubauer, under the title *Petite grammaire hébraïque provenant de Yemen* (1891).

6.3.1.1.5. *Other Works.* There are quotations from the offspring of the work also in *Ḥibbur ha-Qonim* by R. Samson ha-Naqdan (first half of the 13<sup>th</sup> century); *Darkhe ha-Niqqud we-ha-Neginot* (attributed to R. Moses ha-Naqdan) as well as in other works also dependent remotely on *Hidāyat al-Qāri*.

6.3.1.2. ITS SOURCES AND TRADITION. 6.3.1.2.1. *Distribution, Chronology, and Pronunciation Tradition.* The various adaptations and translations of the work were found throughout the dispersed Jewish communities; among them are translations which were made in Germany, such as one of the versions of *Horayat ha-Qore*; some of the adaptations were made in Byzantium, as *ʿAdat Devorim* by Joseph ha-Qostandini, and some apparently in distant Yemen e.g., *Maḥberet ha-Tījān* (concerning the assumed Yemenite origin of the Hebrew treatise, see Dotan, ed., *Dikduke ha-Teʿamim*, p. 334, note 9). Undoubtedly these are not the only countries to which the work was brought. Adaptations of a work like this, by their very nature, leave an impression of their locale upon it, and sometimes the adaptation itself was made only in order to adjust the work to the local pronunciation and reading customs, etc. As it became clear after Eldar's studies, the original *Hidāyat al-Qāri* stems from Palestine and follows the Tiberian pronunciation and vocalization. There is no real basis to determine the exact date, but from one of the Arabic fragments it appears to have been written in Palestine, in the atmosphere of the conflict between the various traditions of pronunciation for dominance over the language. The author came to prove the superiority of his Tiberian tradition and its ancient roots. This fact is probably enough to make it necessary not to date him any later than the tenth century. From the stand he adopts in his readings and rules between the schools of Ben-Asher and Ben-Naphtali, it seems that he is indifferent to both of them, a fact which strengthens the dating suggested. Sometimes he goes his own way, although at times he reveals a closer affinity to the rules and detailed readings of Ben-Naphtali than to those of Ben-Asher.

6.3.1.2.2. *Influence of Local Elements.* These statements do not apply to the offsprings and adaptations of the original work, certainly not with respect to date and, apparently, not even with regard to pronunciation tradition. There remains room for investigation whether or not other elements penetrated it – the Sephardi, for example (as per Yalon's view).

One should not look for a common denominator between the original and its adaptations, nor even between the adaptations themselves. While every adapter, translator, and person who made an abridgment stressed that which was preferable to him and included it in his version – whether particularly the letters and the vowels or the accentuation, etc. – he sometimes omitted that which contradicted his own custom and even added, when necessary, material from the Masorah and from other sources. The result was that the original work, *Hidāyat al-Qāri*, branched out and became a large number of works whose common denominator was the systematization and codification of the minutiae of Masorah and their crystallization into clear rules for the reader – an important step toward systematic grammar.

### 6.3.2. Works on the Šewa

Another work of the above type, although apparently unconnected genetically with these works, is the Arabic treatise which deals with the rules of the *šewa*, which was published by Kurt Levy (1936), and is known in modern research as the “Treatise on the *šewa*.” In this case not only is the author anonymous, but the work has no title. The assumption is that it was written approximately in the middle of the tenth century. This work also contains directions to the reader, and more than any of the adaptations of *Hidāyat al-Qāri* it literally integrates quotations from the rules of the Masorah, and even their rhymes – some of those which were used by the author of *Dikduke ha-Teʿamim*. Unlike the other works this is a deep, comprehensive treatise on a subject which though narrow is central to the field of Tiberian pronunciation. It contains most of the information which we have on the *šewa*. A fragment in Arabic entitled סדר הסימונים, dealing with rules of vowel alternation (published by Allony, *HUCA*. 35 (1964)) was suggested by Eldar (*Teʿuda*, 6 (1988)) to have been part of one and the same anonymous grammatical treatise in which the *šewa* and the Hebrew vowels were discussed, perhaps together with other grammatical issues. Anonymous works of this type are rather numerous and most of them are still in manuscript and scattered in libraries. Only a few have been published, such as the anonymous treatise in Arabic on the *šewa* which Allony published (*Leshonenu* 12 (1943/44)). This anonymous literature is thus still far from being exhausted.

## 6.4. THE PERPETUATORS OF THE WAY OF THE MASORAH

Although most of the above works have a grammatical approach they are only on the threshold of grammar and can still be classified as Masorah literature. They do however constitute a start and the beginnings of grammatical works. Many grammarians in the Middle Ages had to depend, if albeit reluctantly, upon these works and they drew upon them. In almost every one of their writings one finds a connection to the Masorah and its literature. At the same time however there were sages who continued their work on the Masorah for its own sake, whether for the clarification of versions or

for the vocalization and the actual formation of the text. There were also scholars who gave Masorah a central place in their works and did not consider it a subordinate to grammar, vocalization, and accentuation. Only the most famous ones are discussed here, in chronological order.

#### 6.4.1. Meir ben Todros ha-Levi Abulafia

In his book *Masoret Seyag la-Torah* Meir ben Todros ha-Levi \*Abulafia (רמ"ה; D. 1244) deals mainly with plene and defective spelling in the Torah. His comments are arranged alphabetically in dictionary form according to the roots of the words. After them he adds excerpts from the Masorah which deal with various particles and the peculiarities in the writing of a Torah scroll, the form of the Songs, and the open and closed parashiyyot. His book was a basic work for scribes and for publishers in following generations.

#### 6.4.2. Jekuthiel ben Judah ha-Kohen ha-Naqdan

Jekuthiel's (abbr. as ריה"ב; first half of the 13<sup>th</sup> century) book *En ha-Qore* is a collection of masoretic-grammatical notes dealing with vocalization and accentuation for the Pentateuch and the Book of Esther. The work is arranged according to the order of the verses and includes a general introduction which deals with various methodological questions, such as the rules of the *ga'yot*. This book, with its rules and its vocalization variants, was the basis for a whole school of grammarians and editors of the text of the Bible.

#### 6.4.3. Menahem ben Solomon ha-Meiri

Ha-\*Meiri (1249–1316) was considered one of the *posekim* ("deciders") for everything connected with the writing of the Bible and scribal customs. His book *Kiryat Sefer* consists of two parts. The first contains the halakhic laws for writing a Torah scroll, and the second is a collection of Masorah issues having rules on reading and pronunciation, plene and defective spelling, open and closed *parashiyyot*, and various other matters of Masorah.

#### 6.4.4. Jacob ben Ḥayyim ibn Adonijah

\*Jacob ben Ḥayyim ibn Adonijah (15<sup>th</sup>/16<sup>th</sup> century) was the first to publish a text of the Bible which had been selected carefully from a large number of manuscripts and was accompanied by the notes of *Masorah Parva*, *Masorah Magna*, and *Masorah Finalis* (see 3.3.6.1.) which were likewise gathered and selected from many manuscripts. This text is the *Mikra'ot Gedolot* edition of the Bible which was published in Venice, in 1524–25, by Daniel Bomberg, who employed Ben Ḥayyim as a proofreader. This edition became known as the "accepted" version of the Bible, "the Masoretic Text," upon which everyone has relied and which all have copied and imitated. Even the Masorah which was published in this edition has been unjustly recognized ever since as the exclusive text of the Masorah. In fact Ben Ḥayyim's work has been considered as the codification of the Masorah, and for generations has been the only complete Masorah in print, up to the 20<sup>th</sup> century when the Ben-Asher codices (Leningrad and Aleppo) started to

appear in print. Ben Ḥayyim also printed for the first time other works together with the *Masorah Finalis*: the *Diqduq ha-Te'amim* of Aaron Ben-Asher (see 6.2.1); *Draki ha-Niqud ve-Hagiyot* attributed to Moses ha-Naqdan; various lists of Masorah, some of them resembling those in *Okhlah ve-Okhlah*, as well as lists of variants between the Western and Eastern traditions and between Ben-Asher and Ben-Naphtali for the Torah.

#### 6.4.5. Elijah Baḥur ben Asher ha-Levi (Levita)

Elijah \*Levita (1468/9–1549), a grammarian and lexicographer, is also worthy of being considered a masorete because of his book *Masoret ha-Masoret* which was published in Venice, in 1538. He presents a historical survey of the Masorah, the vocalization and the accentuation, and proves that they were not given at Sinai but were fixed by the masorettes. He also describes the Masorah, its methods, types and terminology along with examples. This book can be considered the prime work of the Masorah and a clear, convenient guidebook for the student.

#### 6.4.6. Menahem ben Judah di Lonzano

In his *Or Torah*, Menahem ben Judah di Lonzano (end of the 16<sup>th</sup> century), gives masoretic comments only on the Pentateuch. The work is arranged in the order of the biblical text. Apparently he uses the text of Ben Ḥayyim as his base and adds comments to make the text more precise also with regard to matters of orthography, but mostly on issues of vocalization, accentuation, and *ga'yahs*; this was done on the basis of many manuscripts and works of earlier scholars. Jedidiah Solomon Raphael of \*Norzi (see below) valued his opinion highly.

#### 6.4.7. Minḥat Shay

Jedidiah Solomon Raphael b. Abraham of Norzi (16/17<sup>th</sup> century) wrote the most important and the most comprehensive book dealing with Masorah. It contains an introduction and comments upon the entire Bible in the order of the text with regard to matters of Masorah, orthography, vocalization, accentuation, *ga'yahs*, the form of the Songs and the *parashiyyot*, even the tittles (*tagin*) of the letters and other exceptional items in the text. At times he even discusses questions of grammar and meaning. His comments bear upon almost every word about which there is room for error, a variant reading, or any other problem. Although his remarks are based mainly on the Bomberg Bible edition of 1546–48 and as Bester (*Addenda to Minḥat Shay*, 33–37) has shown, his book in fact constitutes a type of correction to and improvement of the Ben Ḥayyim text of the Bible. From his time on editors of the Bible have considered themselves permitted to make corrections in the text of the *Mikra'ot Gedolot* according to him. He called his book, which was finished in 1626, *גִּרְר פְּרִץ* ("the repairer of the breach"), but the title was changed by its first publisher (only in 1740–42 was it printed for the first time) to *מִנְחַת שַׁי* *Minḥat Shay* (שׁי being the initials of Solomon Jedidiah) and it remains known by that name. This book is the most famous of all the works of Masorah. A critical edition of

Minḥat Shay on the Torah was published by Z. Betser (2005, posthumously).

#### 6.4.8. The Yemenites

Two Yemenite scholars who were active at about the same period should be mentioned. Yaḥya \*Bashiri (abbr. נהרי"ב or נהריב"ש; end of the 17<sup>th</sup> century), was a well-known sage, scribe, copyist, and calligrapher; his work *Havazzelet ha-Sharon* on the letters of the alphabet and matters of Masorah, vocalization, and accentuation is extant in manuscript form. Comments in his name are also incorporated in the work of Yaḥya b. Joseph \*Šāliḥ (abbr. נהרי"ץ, second half of the 18<sup>th</sup> century), the other Yemenite scholar, who in his *Heleq ha-Diqduq* comments upon the whole Torah in the order of the text on matters of vocalization and accentuation, on other issues of Masorah and even, sometimes, on actual grammatical issues. The book is based upon the comparison of manuscripts, mostly Yemenite, and printed editions. This book holds the same position among the Jews of Yemen as *Minḥat Shai* among the other communities.

#### 6.4.9 Wolf Benjamin Ze'ev ben Samson Heidenheim

Wolf Benjamin Ze'ev ben Samson Heidenheim (abbr. ז"ר ו"ה; 1757–1832) marks a turning point in the chain of those who dealt with Masorah, in that besides working on the text of the Bible itself and producing new editions thereof he also systematically discussed problems of Masorah and its rules. He edited five different editions of the Pentateuch: *Torat Elohim* (only the beginning), *Me'or 'Enayim*, *Ezrat ha-Sofer*, *Moda' la-Bina*, and *Torat Moshe*, as well as the Book of Psalms and others. His editions are outstanding for their precision and his choice of the text is based upon ancient sources, both manuscript and print, especially on Jekuthiel ha-Kohen, Menahem di Lonzano, and Jedidiah Norzi. Very important textual and masoretic comments of his own accompany the text. In the Pentateuch *Me'or 'Enayim* he even printed the text of Jekuthiel's *En ha-Qore* in the margins. No less important is his contribution to the study of the Masorah and the rules of the accentuation in his book *Mishpete ha-Te'amim*, in which he lists, in great detail, the rules of the accentuation of the 21 books, in general according to citations from early sources beginning with Ben-Asher. He thereby consciously withdraws from the analytical approach of the Christian and Jewish scholars of accentuation and returns to the methods of the early sages, in his method of discussing accentuation and in the importance which he ascribes to a clear and well-established text. He laid down the foundations of the rules of the *ga'yah* and the *maqaf* in the last chapter of his book.

#### 6.4.10. Seligmann Isaac Baer

\*Baer (1825–1897) continued the way of Heidenheim and completed his activity. Baer continued in the area of clarification of the text of the Bible and edited a new version of the text for almost every book of Scripture, mainly for those which his predecessor did not publish: Genesis, all the Prophets and the

Hagiographa (called the Baer-\*Delitzsch edition, although the latter only added prefaces). In the investigation of the Masorah he completed the work of his predecessor and wrote precise rules for the accentuation of Psalms, Proverbs, and Job, in his book *Torat Emet*. This book is arranged on the pattern of *Mishpete ha-Te'amim*, but unlike it, it is almost entirely the work of the author and does not draw on earlier sources. Baer elaborated a rather consolidated system for the rules of accentuation and *ga'yahs* and other masoretic issues on the basis of early works and manuscripts. This study brought him to the conclusion that he was closely approaching the original "correct" version of the Bible. He edited the text of the Bible in the light of that conclusion and many of his readings are based exclusively on his own views. He did not hesitate to alter manuscript readings to fit his ideas, for example in the list of variances between the western and eastern traditions and between Ben-Asher and Ben-Naphtali, which he published from manuscripts in the appendices to his editions of the Bible, he adapted the Western readings and those of Ben-Asher which were in the manuscripts to the readings of his edition of the biblical text, since he was certain that he had succeeded in establishing the Ben-Asher version and that on the strength of it he could correct even the manuscripts' readings.

The Baer version was used for a long time, especially because of Delitzsch, as the accepted, "scientific" version, and the scientific grammars, such as \*Gesenius-\*Kautzsch, were based on it. Even the rules of accentuation in his *Torat Emet* are based, first and foremost, upon his own version of the Bible. This also applies to the detailed rules of the *meteg* which he published in German. Although taken from his predecessors, especially from Jekuthiel ha-Kohen and Heidenheim, and supplemented, these rules are actually a near-complete development of the theory of the *meteg* as Baer saw it. His approach to manuscripts is manifest in his edition of various texts including the *Diqduqe ha-Te'amim* of Aaron Ben-Asher. His treatment of the manuscripts and his corrections (without any indications to the reader) do not accord with modern methods of textual criticism. In his edition of *Diqduqe ha-Te'amim* he made little attempt to define the work or its scope. His main aim was to collect Masorah texts in order to clarify the "correct" text of the Bible.

#### 6.4.11. Later Scholars

Despite Baer's shortcomings (as stated above), his erudition and great expertness in the Masorah should not be underestimated. Other scholars of his time did not encompass the entire range in which Baer was active, and it is doubtful whether one should properly consider them along with the masoretes. S.D. \*Luzzatto and, more than he, W. Wickes, made a significant contribution to the study of accentuation and to the consolidation of its theory with regard to its grammatical description. In contrast to them, C.D. Ginsburg and P. Kahle played a major role primarily in publishing ancient texts from manuscripts: Ginsburg mainly published many texts of all types of Masorah; and Kahle, biblical texts in Tiberian vocalization (the Lenin-

grad manuscript – see above, 6.2.3.) as well as fragments of the Bible with Babylonian and Palestinian vocalization.

## MASORETIC ACCENTS (Musical Rendition).

### HISTORICAL DEVELOPMENT

In Jewish tradition, the formal reading of certain of the books of the Bible in worship and in study is carried out with a musical intonation linked closely with the masoretic accents of the text and governed by fixed rules and practices (see \*Masorah; in supplementary articles). Public reading from the Bible is attested much earlier than the establishment of the written systems of accentuation. In the Bible itself, such readings are mentioned only in connection with special occasions (cf. Deut. 31:12; 11 Kings 22:1–3; Neh. 8:8, 10:30). The practice was not a prominent part of the Temple liturgy but became so in the \*synagogue. Talmudic sources attest the detail with which the practice was regulated, citing the choice and order of the scriptural passages for Sabbaths and weekdays (Monday and Thursday) and the feasts, the qualifications of the reader, the translation of each verse into the vernacular, the *somekh* (“supporter”) who aided the reader, or the replacements of the lay reader by a specialist (sometimes the \*hazzan). As to the musical element, the sources merely say that the Bible was to be read and studied only by melodic recitation (cf. Meg. 32a; Song R. 4:11). It is doubtful whether the terms *pissuk/piskei te’amim* (the division by the *te’amim*) refer to the melodic element, al-

Figure 1. Hand movements indicating the accents and their melody, used as memory aids and prompting signs for the reader. Shown here are the movements still practiced in Rome. Several other communities preserve relics of a similar practice, although the movements are not identical. From I. Adler, "Histoire de la musique religieuse juive," in J. Porte (ed.), *Encyclopédie des musiques sacrées*, vol. 1, 1968, 472–3.

though they are connected with the aide-memoire movement of the reader's or *somekh's* hand (Meg. 3a; Ned. 37a; Hag. 6a; see Figure 1). The talmudic usage of the term *te'amim* is still not sufficiently clear; however, considering the strict regulation of every other element of the scriptural reading, it is inconceivable that the melodic rendition could have been left to the ad hoc invention or choice of the reader.

A comparison with the practices of "scriptural" reading in other religious traditions – such as Vedic recitation in India or Buddhist recitation in Japan and other countries – reveals that none is spoken or sung but they are "cantillated"; that this cantillation is based upon strict conventions handed down by oral tradition (which were described explicitly only in the respective Middle Ages of each culture); and, most important, that a basic similarity of constructive principles (not of melodic content) can still be recognized in all such practices throughout the Asian continent, including all Jewish traditions throughout the Diaspora. The melodic structure in all these traditions is of the kind defined by Curt \*Sachs as "logogenic," where the musical element is generated by the words, bonded to the verbal and syntactical structure, and subordinated to the communication of the text, with no attempt at musical autonomy.

This "pan-Asiatic" style must already have been present in cantillated Bible reading in the synagogue preceding the period in which the system of written accents began to be developed. The Tiberian system of accent signs and vowel signs and their functions was based on existing practices not only of the pronunciation and grammatical basis and syntactical structure of the text, but also of its musical rendition. The earliest surviving treatise of this system, \*Ben-Asher's *Dikdukei he-Te'amim*, mentions the *ne'imah* (melody) in the characterization of several of the accents. Neither this nor the preceding "Palestinian" and "Babylonian" systems seem to show the intention of establishing a complete correspondence between each accent sign and a specific and different melodic motive, which implies that no such correspondence existed in practice at that time, and that there was no intention on the part of the masoretes to create it artificially.

Figure 2. The earliest known notation of Pentateuch cantillation. Western Ashkenazi perhaps notated by Johann Boeschenstein. In J. Reuchlin, *De accentibus et orthographia linguae hebraicae*, Hagenau, 1518, fol [83b]–[87a]. First opening, fol. [83b]–[84a]. The motives are given in the tenor part, while the discantua, altus, and bassus parts are mere harmonizations in contemporary art-music style, added arbitrarily to enhance the presentation. Jerusalem, J. N. U. L.

 מַאֲרִיָּה; טְרַמָּא;  
 מַאֲרִיָּה; סוּף פְּסוּקָה;

EXAMPLE 2. "Table of Accents" for the Pentateuch, as read in the *heder* in Tunis, with different intonation from the one used regularly in the synagogue. Such a cantillated sequence of the accent names is used for *heder* instruction in many communities, often being called, from its initial motive, *lu'ah zarka* (*zarka table*). Transcribed by A. Herzog from a version recorded by him in Jerusalem in 1962. From A. Herzog, *The Intonation of the Pentateuch in the Heder of Tunis*, 1963, 9, ex. 3b.

Comparative studies of the living traditions of the present and the evidence gleaned from the medieval and later masoretic treatises reveal that only in the Ashkenazi Diaspora was the system developed and augmented with the aim of having each accent sign expressed by a distinct melodic formation. The farthest point along this path is reached by the Ashkenazi cantillation of the Torah. Even there, however, one finds different accent signs expressed by identical melodic formations (e.g., *segol*, *zakef*, and *tipeha* in the "Polish-Lithuanian" tradition), or identical accent signs expressed by different melodic formations (e.g., the *darga* preceding a *tevir* as against the *darga* preceding a *munah-revia*, in the Western Ashkenazi tradition). Other traditions are still more limited in their repertoire of distinct melodic motives and content themselves with the expression of the divisive accents, or even of the major divisive accents only. This style is probably not the result of any erosion or loss of knowledge, but may well be the surviving evidence of the earliest stages of the system, perhaps even of the Proto-Tiberian or Palestinian or Babylonian ones. In all traditions, the rendition of the accents of the prophetic books, the *haftarah*, and the Hagiographa is also partial and selective as is their rendition in the special style used for study in the *\*heder*.

### Practice

The musical rendition of the text in conformity with the accent signs is based on the convention (as described above) of each sign or group of signs representing a certain melodic motive. The graphic symbol does not stand for an absolutely predetermined sequence of tones. As in all music cultivated by oral tradition, the motives exist as "ideals" to be realized in performance, within certain margins of flexibility. Preservation of the "ideals," i.e., the style, is assured by several factors: the support of the well-defined and strict doctrine of the grammatical and syntactical functions of the accents; the deliberate teaching, by which the tradition is handed on from generation to generation; and the constant public practice of the system in the synagogue, where not only the layman's rendition (when "called up to read") but even that of the specialized reader, *ba'al kore* – not always, and in some communities never, identical with the *hazzan* – is always subject to the critical ear of the more learned members of the community. The margin of flexibility, on the other hand, makes it possible to link, or rather blend, the motives as they are recalled and enunciated successively by the reader so as to create a melodic organism. The style itself remains constant, but each reader may interpret it with a certain individuality and will never

EXAMPLE 3. "Table of Accents" for the Pentateuch, according to the Eastern Ashkenazi ("Poland-Lithuania") tradition. From S. Kisselgoff, A. Zhitomirsky, and P. Lwow (eds.), *Lider-Zamlbuch far der yiddisher shul un familje*, 1924, 133.

repeat his previous performance precisely when he reads the same passage upon another occasion.

Theoretically, the accent signs are divided into only two categories: the accents of the “twenty-one books” (טעמי א”ך) and those of the Psalms, Proverbs, and Job (טעמי אמ”ת). In practice, the musical renditions show a much greater diversity of styles. These are determined by

- (1) the text, i.e., the specific book, chapter, verse, or contents;
- (2) the liturgical circumstances;
- (3) the medium of performance;
- (4) regional stylistic traditions;
- (5) the above-mentioned margin for individual interpretation.

**STYLE DETERMINED BY TEXT.** Separate melodic conventions exist for the Pentateuch (Torah), the prophetic books (*haftarah*), and for several of the Hagiographa (cf. The Five \*Scrolls, Musical Rendition). These may not be interchanged, and explicit prohibitions are found in several rabbinic sources (e.g., *Sefer Hasidim*, par. 302). Nevertheless there is a kind of infiltration of motives from one book to the other, as evinced by the appearance of motives from the cantillation of the Torah in that of the *haftarah*. Some motives may also be common to more than one book, such as certain motives in the cantillation of the Book of Esther and Lamentations in the Ashkenazi tradition. In principle, however, each book has its distinct and characteristic “melody,” i.e., melodic style.

Most regional traditions have special “festive” styles for the reading of certain chapters or paragraphs – the Song of the

\*Sea, the \*Decalogue, and often also for the Blessing of Moses (Deut. 32) and the Priestly \*Blessing (Num 6:24–26), and also a “low” intonation for the “rebuking” text of Deut. 28:15–68. The Ashkenazi tradition is particularly rich in special intonations. A kind of “roster formula” is used for some verses in the story of the wanderings in the desert (Num. 10 and 33). Another intonation emphasizes the importance of certain single verses in the Torah (see A. Baer, *Baal T’fillah* (1883<sup>3</sup>), 39–40, nos. 117, 118, 121). Another one is used for the dramatic turning points in the Book of Esther (1:22; 2:4, 15, 17; 3:15; 4:1, 14; 5:7, 13:6, 10). Chapters and verses referring to calamities, such as several verses in the Book of Esther, are read in the style of the Book of Lamentations. Verses or parts thereof which denote supplication and the request for pardon are intoned in the style in which the Torah is read on the High Holy Days (see below). In the reading of the Book of Esther in the Ashkenazi tradition there is even one “quotation” from the prayer mode of the High Holy Days (Esth. 6:1) and another from that of the \*seliḥot (*ibid.* 6:3).

**STYLE DETERMINED BY LITURGICAL CIRCUMSTANCES.** During the three pilgrimage festivals the reading is more festive, with more ornamentations and prolongations. The atmosphere of the Ninth of \*Av influences the reading of the *haftarah* on the preceding Sabbath, the reading of the Torah on the Ninth of Av itself, which should be in a “low” voice and is sometimes rendered “almost without the accents,” and its *haftarah* (which is often read with a verse-by-verse translation into the vernacular – Arabic or Ladino). The Ashkenazim of Holland read the Torah on the Ninth of Av in a style related

**ובשרם יהיה לך כחזה התגופה וכשוק הימין לה יהיה: (שם יח. יח)**

**ויסעו מקדש ויבאו בני ישראל כל העדה הר ההר: (שם כ. כב)**

**על כן יאמרו המשלים באו חשבון חבנה ותכונן עיר סיחון: (שם כא. כז)**

EXAMPLE 4. Analytical presentation of three formations of the “tevir complex” in the combination of tevir, etnahta, and sof pasuk, in the reading of the Pentateuch, Eastern Ashkenazi tradition. From J. L. Ne’eman, *Zelile ha-Mikra*, vol. 1, 1955, 110.

to the *haftarah* style of the Polish-Lithuanian region. On the High Holy Days and Hoshana \*Rabba, the Ashkenazi tradition has a special style for the reading of the Torah (“in a low melody, as if plaintive,” as mentioned in the *mahzor* ed. Sabionetta, 1557). On the Sabbath nearest to the wedding day, among some Near Eastern communities, the section “And Abraham was old” (Gen. 24) is read in front of the bridegroom in a special festive style. Other modifications applied on Hoshana Rabba and Shavuot are described below.

**STYLE DETERMINED BY THE MEDIUM OF PERFORMANCE.** When part of the regular prayer service, the reading of the Torah, *haftarah*, or Scrolls is always carried out by a single reader. On certain other occasions, however, the reading may become communal. On the night of Hoshana Rabba and Shavuot, when there are assemblies for “studying” the Torah, chapters or sections are cantillated in alternation by several members of the group. The style is an abbreviated version of the regular Torah style, or that of the study of the Torah in the *heder*. Cantillation by the entire congregation according to the accents is found in the Sephardi communities for the \**Shema Yisrael* (i.e., Deut. 5:7 and 11:19) during prayer and for the “Thirteen Divine Attributes” (i.e., Ex. 34:6–7) during the *selihot*. In the *heder*, the study of the Torah is traditionally carried out through constant, loud repetition by all the children together. This was done in many communities in a special intonation, related to the accents but more simple in structure than the one practiced by the adults in the synagogue. There are also other kinds of “*heder* tunes” based upon the sequence of accented (long) and unaccented (short) syllables in the text, similar to those found in the group recitation of passages from the Mishnah and other prose texts in many Near Eastern communities (cf. \*Talmud, Musical Rendition). It can be assumed that the “*heder* tunes” have remained unchanged for very long periods, since under these circumstances there is no inducement, or indeed any possibility, for personal expression and initiative and the melodic element is wholly subjugated to the pedagogical task.

**REGIONAL STYLISTIC TRADITIONS.** A.Z. Idelsohn’s assumption (see bibliography, and frequently repeated in later writings) that the living traditions of masoretic cantillation developed out of one common – i.e., pre-Exilic – base does not seem to be confirmed by a more thorough examination. This is one of the central problems in research of Jewish music (cf. \*Music, Introduction), and, by its very nature, this research is particularly prone to conscious or unconscious wishes to justify a foregone conclusion that there is, indeed must be, a common base. In the present state of research, it may tentatively be proposed that while the principle of cantillation as such is a common heritage (see introduction, above), the diverse regional and functional styles observable today stem from an albeit small number of distinct source styles. It can be assumed that several “melodies” for the reading of the Bible were current and equally legitimate at the time in which the forms of synagogal worship began to be stabilized. Later, by processes

Babylonian

Syrian

Sephardic (Amsterdam)

EXAMPLE 5. Exodus 12:21-22 as rendered in the “Babylonian” (Iraq), “Syrian,” and Amsterdam Sephardi communities. From A. Z. Idelsohn, *Melodien*, vol. 2, 1922, preface, 33, 34, 37.

which we are unable to reconstruct, some of these “melodies” and melodic elements were accepted as normative by one or several communities, were attached to specific books, and were sanctified by custom. It must always be remembered that the accent signs themselves are not, and never were, a sound script with the same possibilities and limitations of the music

EXAMPLE 6. Intonation of the Prophets, Yemenite tradition (Josh. 1:14). From A.Z. Idelsohn, *Melodien*, vol. 2, 1922, preface, 47.

notation which developed in Western Europe. They are only reference aids to the evocation of “motivic ideas” which, in themselves, are an orally transmitted patrimony. Some late medieval and renaissance writers mention the “style of the Sephardim,” but with hardly any concrete definitions which would enable its character to be understood (Simeon b. Zemah \*Duran, *Magen Avot*; the Karaite Elijah \*Bashyazi (1420–90)

in his *Sefer ha-Mitzvot* (ed. 1870), fol. 71 and 81; Elijah \*Levita in his *Tuv Ta’am*).

The living traditions of the present may be classified according to five major regional styles:

- (1) Yemenite,
- (2) Ashkenazi,
- (3) Middle Eastern and North African,
- (4) Jerusalem Sephardi,
- (5) northern Mediterranean local diverse styles.

(1) The Yemenite Style

This is particularly rich in distinct sub-styles for the biblical books and for particular chapters and in various divisions among single and group performers. One of the “*heder* tunes,” built upon the pentatonic scale, is related to the Ashkenazi Torah style.

(2) The Ashkenazi Style

This is the earliest to be documented in musical notation, in Johannes \*Reuchlin’s *De accentibus...* (1518) and soon afterward by several other scholars. The melodic elements have been pre-

EXAMPLE 7. Intonation of the Prophets, two western Ashkenazi traditions (Isa. 43:10; *ibid.*, 56:7). From A. Baer, *Ba'al Tefillah*, 1883<sup>3</sup>, 37-39.

served most tenaciously among the Western Ashkenazi communities, including southern Germany. The Eastern Ashkenazi Torah style (known as “Polish-Lithuanian”) is somewhat different from the Western one. The *haftarah* style is particularly developed in Eastern Europe, and is nowadays common to both the Eastern and Western Ashkenazi communities.

### (3) The Middle Eastern and North African Style

This is the style designated by Idelsohn as “Oriental.” Its distribution, with many sub-styles, ranges from Cochín to Algeria, through Persia, Bukhara, Iraq, Syria, Kurdistan, the Caucasus, and North Africa. There is a close connection between this and the styles of the European Sephardi communities in Italy, France, Holland, England, and America. It can also be traced in some Balkan communities (those of the “Romaniote” rite). Its influence is also noticeable in the intonation of the Song of Songs of the “Polish-Lithuanian” tradition. The earliest notation of this style was published in 1699 in the Hebrew Bible edited by Daniel Jablonski, to whom it was given by David de Pinna, a *parnas* in the Portuguese community of Amsterdam.

### (4) The Jerusalem Sephardi Style

This is the style designated by Idelsohn as “Oriental Sephardic.” It is found around the eastern shores of the Mediterranean, from Turkey and the Balkan communities to North Africa, and centered in Erez Israel. Due to the prestige of its association with Jerusalem and Erez Israel, it overlaid and frequently even ousted many local traditions throughout the Mediterranean countries. The Torah style in this tradition cannot represent the pre-expulsion Spanish tradition, since it is found neither in North Africa nor among the European Sephardim, but is based upon the Maqam *Sigah*. It seems to be a relatively recent development, but this phenomenon needs further study before a conclusion can be confirmed.

### (5) The Northern Mediterranean Styles

Several communities in this area, such as Rome and \*Carpentras (in Provence), have distinct local styles of their own. The Carpentras tradition survives only in notation (M. and J.S. Cremieu, *Zemiroth Yisrael*, c. 1887), since the community itself no longer exists.

In Israel, the “ingathering of the exiles” has caused a major deterioration in many of the local and regional traditions brought into the country, since the immigrants often could not keep up their homogenous associations centered around the synagogue. The breakdown of the traditional education system (there is no organized *heder* of any community except the East Ashkenazi) has also broken the chain of tradition. The regional styles tend to disappear, yielding to two dominant and dominating styles: the East Ashkenazi is gradually adopted in most Ashkenazi synagogues and the “Jerusalem Sephardi” prevails, especially for the reading of the Torah, in the synagogues of all the Near Eastern and North African communities. In the latter, the virtuoso status and ambitions of the *hazzan* or *ba’al kore* and the influence of the maqam-based Arabic art music

at present come near to completely eroding the traditional base of masoretic cantillation proper.

See also articles on the musical traditions of the various major communities.

Levin, in: JBL, 87 (1968), 59–70.

[Avigdor Herzog]

**MASSACHUSETTS**, New England state of the U.S. Massachusetts had a population of 6,357,000 in 2001, of whom 275,000 were Jews. Both the Jewish population and the state population have been relatively stable during the past 35 years. In 1917 the state’s Jewish population was 190,000; by 1937 it had risen to 263,000, dropping to 223,000 in 1959, and then rising over the following decade to 260,000. Nearly 80% of the Jews in the state live within an hour’s ride of \*Boston.

In 2000, the Greater Boston metropolitan area, embracing large sections of New England, was the sixth-largest Jewish metropolitan area in the United States, including some 10,500 Jews from the former Soviet Union, most of whom arrived after 1985. More than half of the community’s Jews were engaged in professional and technical work, and 40 percent of Jewish adults held advanced degrees. The number of Jews also significantly increases during the school year as the number of colleges and universities in the Boston area and in all of Massachusetts is high and the Jewish student population significant.

The shift from the older neighborhoods in and around Boston to the suburbs created substantial new Jewish communities in Newton-Wellesley-Brookline; Cambridge-Belmont-Lexington-Concord-Waltham-Woburn; Natick-Framingham; the Massachusetts Bay north shore towns of \*Lynn, Swampscott, Marblehead, Nahant, Salem, and Saugus; and the southern suburbs. Over the last generation thousands of Jewish scientists, engineers, and manufacturing entrepreneurs have found employment in the industrial complexes that line Route 128 west of Boston, and they have given a new élan to the Jewish communities that have sprung up in the expanded Boston suburbs. In the late 20<sup>th</sup> and the early 21<sup>st</sup> centuries the high-tech industries attracted many young Jews who easily made the transition from college to industry.

Beyond metropolitan Boston there were 35 cities and towns with 100 or more Jewish residents. The largest Jew-

*Jewish communities in Massachusetts. Population figures for 2001.*

ish populations were to be found in \*Springfield (10,000), \*Worcester County (12,000), \*Fall River (1,100), Andover (2,500), Amherst area (1,300), New Bedford (2,600), Lowell (2,000), Pittsfield and Berkshire County (4,000), Haverhill (2,300), and Holyoke (1,300). Several areas, which were once considered virtually off-limits to Jews, now have synagogues and thriving Jewish communities. Synagogue life on Cape Cod, including Martha's Vineyard and Nantucket, is active, and there is ongoing Jewish life during the winter months. Many Jews who had previously enjoyed the rich cultural life of the Berkshires have chosen to live there year-round and to participate in the active Jewish life now afforded in these communities.

At the beginning of the 21<sup>st</sup> century there were about 250 synagogues in 85 communities, most of them erected in the 1960s and beyond either as the first houses of worship in newly settled areas or as replacements for older sanctuaries in communities where Jewish residence antedated the massive move out of Boston.

### Early History

Aaron \*Lopez, a ship owner, was the first Jew naturalized in Massachusetts (at Taunton, 1752). In 1777 he founded the first Jewish community in Massachusetts, at Leicester near Worcester. The families of Lopez and of Jacob Rodriguez \*Rivera, numbering 61 people, stayed in Leicester until after the Revolution.

Massachusetts' first permanent Jewish community was established in the late 1830s in Boston, where Central European settlers established the state's first Jewish congregation, Ohabei Shalom, in the 1840s. For about 100 years the Boston Jewish community exercised a powerful influence on the growth of new settlements throughout the state.

The first Jews to take up permanent residence outside Boston were German and East European peddlers who replaced the itinerant Yankee traders in the 1840s and 1850s. Typical of these was Abraham \*Kohn, later a figure in the

Republican Party in Illinois. In 1842 and 1843, Kohn carried a pack through central and northern Massachusetts, praying alone in the fields, sometimes with his brother and partner, Judah, or with other Jewish peddlers he met on the way. Peddlers like Kohn settled down and became storekeepers; they were followed by tailors, watchmakers, cigarmakers, shoemakers, and dealers in dairy products, leather goods, provisions, lumber, and kerosene.

These merchants established themselves in the factory and mill towns, including Pittsfield (1850), where most were of German origin; Worcester (1860); Holyoke (1873; first congregation, Agudas Achim, founded 1895); Springfield (1881); Fall River (1881); Lawrence (late 1880s); Lynn (1893); and Haverhill (1897). Some Sephardi Jews lived in New Bedford, which has a Jewish cemetery said to date from the post-Revolutionary era, as late as the 1850s, when the first German Jews arrived. One of these was Leopold \*Morse, who served in Congress from a Boston district in 1877–85 and again in 1887–89. A burial society, Bnay Israel, was formed in New Bedford in 1857. The first Jewish burial took place the same year. East European Jews arrived in New Bedford about 1877, the earliest of them being Isaac Goodman and Simon Siniansky. The first *minyán* was formed in 1879; services were held in Siniansky's house. The first congregation, Ahabath Achim, was founded in 1893 and purchased a cottage house as its first synagogue. A new synagogue was dedicated in 1899. In 1898 Congregation Chesed Shel Emes was incorporated; it occupied a new synagogue building in 1903. Springfield also had a colony of Sephardi Jews in the 1830s, but the first Russian arrivals found no trace of them. German and Polish Jews arrived in Worcester in the late 1860s.

### Contemporary Life

Massachusetts is the home of several major national Jewish institutions: the nonsectarian \*Brandeis University, in Waltham, and the National Yiddish Book Center in Amherst and the Jewish Women's Archive in Brookline. The \*Menorah Society, the first Jewish intercollegiate movement, was organized at Harvard University in 1906.

Jewish students and Jewish studies give Massachusetts a unique flavor. In 2004 there were approximately 90 dedicated staff positions in Jewish studies at seven major private universities in the Boston area with over 30 more similar positions at the universities in Worcester and the Amherst area. Internationally renowned graduate programs in Jewish Studies are found at Massachusetts universities, including the only graduate Ph.D. program in Holocaust and Genocide Studies. The Hebrew College, which has moved from Brookline to Newton, now has a non-denominational rabbinic program with Arthur Green, a distinguished scholar of Hasidism, as its founding dean. Several universities had Jewish presidents in the last quarter of the 20<sup>th</sup> century and into the 21<sup>st</sup>. Among them, Harvard has a Jewish president, Lawrence \*Sommers, and MIT has had Jewish presidents. Brandeis has always had a Jewish president.

Jewish charitable institutions are coordinated by the Combined Jewish Philanthropies of Greater Boston and by counterpart organizations in 12 other cities, including Jewish welfare federations in Berkshire County, Merrimack Valley (serving Andover, Haverhill, Lawrence, Lowell, Newburyport and 27 surrounding communities), New Bedford, Northshore, Springfield, and Worcester.

Hillel Foundations are found at the following Massachusetts colleges: Amherst College; Babson College; Bentley College; Berklee College of Music; Boston College (a Jesuit University); Boston University; Brandeis University; Clark University; College of the Holy Cross (a noted Roman Catholic College); Curry College; Emerson College; Fitchburg State College; Framingham State College; Hampshire College; Harvard University & Radcliffe College; Hebrew College; Lesley University; Massachusetts Bay Community College; Massachusetts Institute of Technology; Mount Holyoke College; New England College; New England Conservatory of Music; Newbury College; Northeastern University; Quinsigamond Community College; Salem State College; Simmons College; Smith College; Springfield College; Suffolk University; Tufts University; Tufts University Veterinary School; UMASS Medical School; University of Massachusetts, Amherst; University of Massachusetts, Boston Harbor; University of Massachusetts, Dartmouth; University of Massachusetts, Lowell; Wellesley College; Wentworth Institute of Technology; Western New England College; Westfield State College; Wheaton College; Wheelock College; Williams College; and Worcester Polytechnic Institute. The presence of Hillel on campus was often symbolic of the Jewish presence. Brandeis has three chapels at the center of its campus – Catholic, Protestant, and Jewish – emblematic of the three great religions of mid-20<sup>th</sup>-century America. When the new Hillel at Harvard opened, a procession of Torah scrolls marched through the campus. One speaker said that the movement of Hillel from the periphery of the campus to its center reflected the journey of Jews at Harvard and indeed throughout American intellectual life.

Jewish community centers (JCCs) and YM-YWHA are affiliated with the Greater Boston Associated JCCs, and similar institutions are maintained in Framingham and Marblehead, Newton, North Dartmouth, Peabody, Springfield, Stoughton, Westboro, Worcester, Brighton, and Brookline. Jewish weeklies are published in the state: the *Jewish Advocate*, in Boston; *Metro-West Jewish Reporter*; the *Jewish Journal/North of Boston*; the *Jewish Chronicle*, in Worcester; and the national monthly *Sh'ma*, which is published by Jewish Family and Life in Newton.

George Feingold, who was the Republican nominee for governor when he died in 1958, was the first Jew to win statewide elective office, serving three terms as attorney general (1952–58). Springfield, Worcester, Holyoke, and Pittsfield (Daniel Englander, elected 1902) have had Jewish mayors. In 1961 Jacob J. Spiegel was named to the State Supreme Court, the first Jew to serve in that office. Abraham \*Ratshesky was ambassador to Czechoslovakia under President Hoover

(1930–32). David K. \*Niles was one of President Franklin D. Roosevelt's key White House aides and later served President Truman in a similar capacity (1942–51). Maxwell M. \*Rabb served as secretary to the cabinet under President Eisenhower (1953–58). Steven \*Grossman was chairman of the Democratic National Committee and ran unsuccessfully for governor as did Robert \*Reich, a Brandeis professor and former Clinton secretary of labor. Politics in Massachusetts is considered the domain of the Irish. Boston has never had a Jewish mayor. Remarkably there have only been two Jewish congressmen, Barney \*Frank and Leopold \*Morse. Franklin Delano Roosevelt appointed Charles E. Wyzanski, Jr., to the United States District Court; Richard Nixon appointed Frank H. Freedman; Jimmy Carter, Rya Zobel; Ronald Reagan appointed Mark L. Wolf; Bill Clinton, Nancy Gertner and Patti Saris. Three Jewish sons of Massachusetts have served on the Supreme Court: Louis \*Brandeis, Felix \*Frankfurter, and Steven \*Breyer.

**MASSADAH** (Heb. מַסָּדָה), kibbutz in northern Israel, in the Jordan-Yarmuk valley, affiliated with Ihud ha-Kevuzot ve-ha-Kibbutzim. Massadah was founded in 1937, during the Arab riots, as a \*stockade and watchtower by pioneers from Poland. In the Israel \*War of Independence the village had to be evacuated before the onslaught of the Syrian army (May 1948) and was completely razed, but the site was taken back 24 hours later by Israel forces and the kibbutz was rebuilt. After the \*Six-Day War (1967), the village came frequently under shelling. Its farming was based on avocado and palm plantations, citrus groves, field crops, and dairy cattle. The kibbutz also operated guest rooms. In 1968 the population of the kibbutz was 285. In the mid-1990s it rose to 350, but then dropped to 288 in 2002.

[Efraim Orni / Shaked Gilboa (2<sup>nd</sup> ed.)]

**MASSARANI, TULLO** (1826–1905), Italian author and statesman. Born in Mantua, Massarani studied law and painting, at the same time taking part in the conspiratorial struggle for the unification of Italy. As a result of the failure of the 1848 revolution and his collaboration with Mazzini's followers, he had to take shelter in Switzerland and later lived the life of a refugee in Germany and France. On the proclamation of the Kingdom of Italy in 1860 he returned to Milan. He was elected to parliament for three legislative periods (1860–67), and in 1876 was appointed senator. He also held municipal offices.

An extremely prolific writer, Massarani introduced the works of Heinrich \*Heine to Italian readers. He left a great

number of critical essays, historical, political, and autobiographical writings, translations and verse, which were collected after his death in 24 volumes (1906–11). Massarani's criticism does not delve beneath the surface, but reveals a broad and up-to-date culture in which scholarship is blended with a journalistic approach. Among his most important works are *L'idea italiana attraverso i tempi* (1869), *Eugenio Camerini, i suoi studi e i suoi tempi* (1877), and *Carlo Tenca e il pensiero civile del suo tempo* (1886). During his latter years he devoted himself to an original and erudite study of laughter (1900–02). Massarani's essays earned him a high reputation among European art critics, and in 1878 he was elected chairman of the international jury of art at the Paris Exhibition.

[Giorgio Romano]

**MASSARANO, JACCHINO OR ISACCHINO** (16<sup>th</sup> century), Italian choreographer. In 1583 he was commissioned to provide the dances for Bernardo Pino's *Gli Ingiusti Sdegni* which was performed by the Jewish Theater in Mantua in honor of the marriage of the duke's heir, Vincenzo Gonzaga, who was an intimate friend. The following year, when Vincenzo visited Ferrara, he was sent to supervise a similar performance there. In 1591, the poet Manfredi corresponded with Massarano and also commissioned him to supervise dances for him. When Giovanni Guarini's *Pastor Fido*, the most famous play of its day, was staged at the ducal palace in Mantua in 1598, Massarano was commissioned to supervise the "Blindfolded Dance" for the ballet. He was also appointed choreographer for one of the Jewish theater's biggest performances, *Accessi de Amor fatta* by Niccolò Grassi, in 1605, when 64 members of the company took part, and in the following year he choreographed the Tasso's *Delli Intregghi de Amor*. Massarano was also a composer, teacher, and singer. He was father of Abraham Massarano, historian and author of *Ha-Galut ve-ha-Pedut* (Venice, 1634).

**BIBLIOGRAPHY:** C. Roth, *Jews in the Renaissance* (1959), 284–5 and index; S. Simonsohn, *Toledot ha-Yehudim be-Dukkasat Mantovah*, 2 (1964), index and bibl.; A.D. Ancona, *Origini del Teatro in Italia* (1891<sup>2</sup>), index; E. Faccioli, *Mantova, la storia, le lettere, le arti* (1962).

**MASSARY, FRITZI (Friederike Massarik; 1882–1969)**, Vienna-born actress and singer. In 1903 she converted to Protestantism. Massary made a reputation in musicals on the Berlin stage and created numerous roles in works by Leo Fall, Oscar Straus, and others. After leaving Nazi Germany she appeared in London in Noel Coward's *Operette*, 1938, her last appearance on the stage. In 1939 she settled in California. Her husband and partner on stage was Max Pallenberg, the German actor. Her style as a singer served as a model for modern diseuses.

[Marcus Pyka (2<sup>nd</sup> ed.)]

**MASSEKHET** (pl. *Massekhtot*; Heb. מַסְכֶּת, pl. מַסְכְּתוֹת; lit. "a web," idiomatically a tractate; cf. Lat. *textus*), a main subdivision of each of the six orders, or *sedarim*, of the Mishnah. Each mishnaic order is divided into a number of *massekhtot*; each *massekhet* is divided into chapters, and each chapter into Mishnayot or paragraphs in the Babylonian Talmud and into *halakhot* in the Jerusalem Talmud. The total number of tractates of the entire Mishnah, which was originally 60, was subsequently, by a further minor subdivision, increased to 63. *Massekhet* also designates the corresponding *Gemara* tractates. Beginning with the *editio princeps* (1520–23, Venice), in all standard editions of the Babylonian Talmud each *massekhet* has a fixed number of folio pages. The most voluminous tractate, numbering 176 folios, is *Bava Batra*; the smallest is *Horayot* numbering 14. In the Jerusalem Talmud the original pagination of the tractates has been preserved only in the Venice edition of 1522–23, and in its later reprints. As there is no *Gemara* on all mishnaic tractates, the number of *massekhtot* in the Babylonian Talmud is only 37 and in the Jerusalem Talmud 39. Occasionally the term *massekhet* is also applied to rabbinical books outside the Talmud. See also \*Talmud; \*Mishnah; and Minor Tractates.

**BIBLIOGRAPHY:** Epstein, *Mishnah*, 981–3.

[Jacques K. Miklitzanski]

**MASSELL, SAM JR.** (1927– ), U.S. lawyer and politician. Born in Atlanta, Georgia, Massell received his Bachelor of Commercial Science degree from Georgia State University and a Bachelor of Laws from Atlanta Law School. He served as a flying instructor in the U.S. Army Air Force during World War II. He worked in the commercial real estate industry for 20 years and 13 in the travel business before stepping into the political arena. In 1961 he made his first attempt to win public office and was elected to the office of vice-mayor as a Democrat. He held the position until 1969 when he was elected Atlanta's youngest and first Jewish mayor with a victory margin provided by a white liberal and poor black coalition. In the course of the campaign Massell charged that members of the "power structure," meaning the corporations and civic groups who had long ruled Atlanta, were antisemitic. He served as mayor until 1974, when he lost the re-election.

From 1988 Massell was the president of the Buckhead Coalition, a group of CEOs of major companies in Buckhead, an upscale area of Atlanta. Serving as a chamber of commerce for the neighborhood, the coalition's first successful project, in 1989, was to have Georgia Highway 400 extended through Buckhead. Massell also spearheaded the creation of the Community Improvement District in Buckhead, wherein business property owners impose taxes on themselves to improve the community and then seek matching federal grants.

Active in Jewish affairs, Massell was a member of the American Jewish Committee, Jewish War Veterans, and the B'nai B'rith. He was also instrumental in breaking down ethnic and religious barriers in his community, bringing the Reform community together with the Conservative and Orthodox, as

well as reaching out to help integrate the Sephardic and Russian populations.

[Ruth Beloff (2<sup>nd</sup> ed.)]

**MASSERMAN, JULES HOMAN** (1905–1994), U.S. psychiatrist and psychoanalyst. Born in Chudnov, Poland, Masserman was taken to the United States in 1908. He grew up in Detroit, Michigan, and received his medical degree from Wayne University. Masserman first taught at the University of Chicago. In 1952 he was appointed professor of neurology and psychiatry at Northwestern University's medical school, where he taught until the 1970s and served for several years as co-chairman of the psychiatry department. Masserman's thought and experience in psychiatry and psychotherapy are set forth in his textbook, *The Principles of Dynamic Psychiatry* (1946, 1961) and in *The Practice of Dynamic Psychiatry* (1955). These works represent a theoretical and clinical attempt to correlate various physiological and psychological concepts of behavior into a comprehensive system (biodynamics), and to base a therapy upon this. He conducted many animal experiments to check, clarify, and extend psychological premises about human beings. He also added "un-defenses," such as the general delusion of invulnerability and immortality by which man denies danger and death, to the Freudian concepts of defenses against anxiety.

Masserman's later works include *Biodynamic Roots of Human Behavior* (1958), *Transcultural Problems of Youth* (1969), the autobiographical *A Psychiatric Odyssey* (1971), *Handbook of Psychiatric Therapies* (1972), *Man for Humanity* (1972), *Theory and Therapy in Dynamic Psychiatry* (1973), *The Psychiatric Examination* (with J. Schwab, 1974), *Psychiatry and Health* (1986), *Psychiatric Consultations for Public Organizations* (1989), and *Sexual Accusations and Social Turmoil: What Can Be Done* (with his wife, Christine Masserman, 1994).

He also directed many instructional motion pictures, such as *The Dynamics of Experimental Neurosis* (1944). He edited the annuals *Science and Psychoanalysis* and *Current Psychiatric Therapies*, and was associate editor of *Psychosomatics*. He was president of the American Academy for Psychoanalysis and of other learned associations, such as the American Society for Group Therapy, the American Association for Social Psychiatry, the American Society for Biological Psychiatry, the International Association of Social Psychiatry, and the American Psychiatric Association, and served as honorary president for life of the World Association for Social Psychiatry.

Masserman retired from his clinical practice in 1989 after fending off a flurry of accusations by former female patients of having been drugged and sexually abused. Although Masserman denied the allegations and no criminal charges were made, some of the malpractice cases were settled out of court and he was suspended from the Illinois Psychiatric Society for five years.

[Louis Miller / Ruth Beloff (2<sup>nd</sup> ed.)]

**MASSU'OT YIZHAK** (Heb. מִשׁוּאוֹת יִצְחָק), moshav shittufi on the Coastal Plain, 8 mi. (13 km.) N.E. of Ashkelon, affiliated to the Ha-Po'el ha-Mizrachi Moshav movement. Massu'ot Yizhak was originally founded in 1945 by pioneers from Hungary and Czechoslovakia as a kibbutz in the Hebron Hills, the second village in the Ezyon Bloc, under the name Massu'ot ("Beacons"). The name Yizhak was added in honor of Chief Rabbi I.H. \*Herzog in a ceremony attended by him. Along with the other three settlements of the Ezyon Bloc, Massu'ot Yizhak fell in the Arab Legion's onslaught (May 13, 1948), and was completely destroyed, its surviving defenders being taken to Jordan as prisoners of war. After their release and return to Israel, they established their village on the present site (1949), several years later deciding to go over to the moshav shittufi settlement form. In 1969 the village was based on intensive agriculture and had a metal factory. Over the years the metal factory was replaced by the successful Albaad wet wipes factory. Farming included dairy cattle, field crops, poultry, avocado plantations, and some smaller branches. The population in 1968 was 403; in 2002, 548.

[Efram Orni / Shaked Gilboa (2<sup>nd</sup> ed.)]

**MASTBAUM, JOEL** (1882–1957), Yiddish short story writer and novelist. Born in Miedzyrzec, Poland, he lived in Warsaw from 1905, and from 1906 published extensively in the Yiddish press: feuilletons, short stories, folk tales, travel impressions, and chapters of novels. In 1933 he immigrated to Palestine and wrote stories about life there, collected in *Yidn in Erets-Yisroel* ("Jews in Palestine," 1935). Overtaken by World War II while visiting Poland, he nonetheless managed to return to Tel Aviv and describe his 60 days under the Nazis. His short stories, which were collected in several volumes beginning in 1912, have a romantic tonality. His first novels, *Fun Roytn Lebn* ("Red Life," 2 vols., 1912), about the revolutionary youth of 1905, and *Marita's Glik* ("Marita's Fortune," 1919), about three Jewish generations in Poland, had several editions in Yiddish, and were translated into Hebrew. *Nokhemkes Vanderungen* ("The Wanderings of Nokhemke," 1925), an adventurous romance beginning in a Polish town and ending in Buenos Aires, was followed by *Naye Mentshn* ("New Men," 1926). From a projected trilogy of Palestine between 1933 and 1948 only the first volume, *Der Koyekh fun der Erd* ("The Power of the Earth," 1951), was published.

[Melech Ravitch]

**MASTEMA** (Heb. מִשְׁטֵמָה), the name of the devil in the Book of \*Jubilees. He is there identical with Satan and on one occasion the author speaks also (1:20) about spirits of Belial. Like other works originating in the broader movement within which the Dead Sea Sect came into existence, the Book of Jubilees is characterized by a dualistic trend, and in it the

devil Mastema plays a great role, being the opponent of the forces of righteousness. He is the chief of evil spirits. After the flood a tenth part of his spirits received permission from God to execute the power of his will on the sons of men and the other nine parts were imprisoned in the place of condemnation. Not God, but Mastema caused Abraham's testing by proposing that God should require Abraham to sacrifice Isaac in order to test his love and obedience. He, and not God, sought to slay Moses on his return to Egypt at the lodging place (Ex. 4:24) and he also helped the Egyptian sorcerers against Moses and slew all the firstborn in the land of Egypt.

The name is found in Hosea 9:7, 8 as a common noun meaning "enmity." It was not translated in the Greek version of the Book of Jubilees but transcribed in Greek characters, and thus it came into the Latin and Ethiopian versions of the book. But the normal meaning of the name is seen in the term "the prince of the Mastemah" (*sar ha-Mastemah*) in the same book, meaning also "the prince of enmity." The same title occurs in its Hebrew original in the introduction of the medieval Hebrew Book of Asaph the Physician in the same context as Mastema in Jubilees chapter 10, an additional indication that this introduction depends on a Hebrew Book of Noah written by an ancient Jewish author from the same circles as those in which the Book of Jubilees originated. Mastema, i.e., the Satan, is also mentioned in the (Greek) Acts of Philip chapter 13 (*Acta Apostolorum Apocrypha*, 2 (1903), 7). The common noun *mastema* occurs in the Dead Sea Scrolls in connection with Belial, another name of the Satan frequent in the Dead Sea Scrolls and similar literature, where he is also named "the angel of Mastema." Thus the term is typical of the whole dualistic trend in ancient Jewish literature.

Milik, and R. de Vaux, *Les petites grottes de Qumrân* (1962), 135; J. Licht (ed.), *Megillat ha-Serakhim* (1965), 93; J.M. Allegro, *Qumran Cave*, 4 (1968), 70.

[David Flusser]

**MASTER, ARTHUR M.** (1895–1973), U.S. cardiologist. Born in New York City, he graduated with an M.D. from Cornell University (1921). He received his clinical and research training in Mount Sinai Hospital, New York, and with Sir Thomas Lewis at University College Hospital, London, before his appointment as head of cardiology at Mount Sinai. During World War II he was consultant cardiologist at the National Naval Medical Center in Bethesda, Maryland (1942) and served with the U.S. Navy in the Pacific. He was appointed clinical professor of medicine at Columbia University, New York (1947). Master's clinical research concerned the development of the ECG (electrocardiogram) in the diagnosis of heart disease. The stress test named after him detected cardiac insufficiency during exercise and in principle remains a part of standard diagnostic procedures.

[Michael Denman (2<sup>nd</sup> ed.)]

**MASTIC**, the shrub *Pistacia lentiscus*, known as "medicinal mastic." It exudes a gum which in the Midrash is called *mastikhe*. It has been identified by some with the *lot* (AV "myrrh," JPS "laudanum") mentioned among "the choice products of the land" which Jacob sent to Egypt with his sons (Gen. 43:11; Gen. R. *ibid.*; but see \*laudanum). The Tosefta (Shab. 12:8) states that *mastikhe* may not be chewed on the Sabbath since it is a medicine. Dioscorides states, "Its gum serves for medicine and tooth powder. It is smeared on the skin of the face to make it shine. When chewed it sweetens the breath and contracts the gums. The best mastic comes from the island of Chios" (*De materia medica* 1:89). To the present day a special variety of the shrub whose gum is sold as medicinal mastic is grown on the island of Chios. It is widely distributed throughout Israel, particularly in the wadis of the Judean hills, but the medicinal properties of its sap have not yet been tested. It would appear that it is to be identified with *bakha* (pl. *bekha'im*) of the Bible (11 Sam. 5:23; 1 Chron. 14:14–15; AV "mulberry"; RV "balsam"), the name being connected with the "weeping" (*bokhim*), i.e., the excretion of the sap. The valley through which the pilgrims walked to the Temple was called *emek ha-bakha* (Ps. 84:7) because of the shrubs of that name growing there. The phrase was however regarded as meaning "the vale of tears" and it thus became a synonym for the exile.

[Jehuda Feliks]

**MAT, MOSES** (c. 1551–c. 1606), Galician rabbi. Mat was born in Przemysl where his father Abraham died a martyr's death. An intimate disciple of Solomon Luria, he taught in Belz. Subsequently he lived in Vladimir-Volynski, where his father-in-law resided and where Mat wrote his *Matteh Moshe*, a compendium of Jewish ritual law. The book was completed in 1584 and printed in Cracow about six years later, when Mat was already rabbi and head of the yeshivah of Przemysl. Later he lived in Lyuboml. He spent the last years of his life in Opotow. In 1590 Mat was one of the leading rabbis of Poland who signed an ordinance strictly forbidding the "buying" of rabbinical positions. Mat also wrote: *Taryag Mitzvot* (Cracow, 1581), a versification of the 613 commandments, which he composed at the age of 22; a commentary on the Pentateuch and on the Five Scrolls with a supercommentary on the commentary of \*Rashi on these books, both of which were published after his death by his son ABRAHAM under the title *Ho'il Moshe* (Prague, 1611); and *Minhagei Maharshal* (printed in the 1870 Przemysl edition of Jacob Zemaḥ's *Nagid u-Mezavveh*) which describes the customs and conduct of his teacher, Luria. Some of Mat's responsa are quoted or mentioned by his contemporaries Benjamin \*Slonik and Joel \*Sirkes. In his *Ho'il Moshe* he mentions novellae which he wrote on the treatise of *Yevamot*, but which have not been published.

[Tovia Preschel]

**MATALON, ELI** (1924–1999), Jamaican politician. Matalon, a member of a prominent Jamaican Jewish family of Syrian origin, was born in Kingston and served as an officer in the Royal Canadian Air Force during World War II. In 1971, he was elected mayor of Kingston and St. Andrew. When the People's National Party came to power in February 1973, he was appointed to the Upper House as minister of state attached to the Ministry of Education, with a seat in the cabinet. On the appointment of the minister of education as governor-general, Matalon resigned from the Upper House and successfully contested the constituency of Eastern Kingston and Port Royal thus rendered vacant, becoming the first Jew to be elected to the House of Representatives in independent Jamaica. He was subsequently appointed minister of education. Matalon was one of the founders of the Hillel Academy, a primary school sponsored by the Jewish community in 1969, and served as vice chairman from its inception until he was obliged to resign in March 1973, on his appointment to the cabinet. In 1974 Matalon was appointed minister of national security and justice, a newly created post, in the Jamaican government, retiring in 1976. In later years he lived in Miami, Florida, where he died.

**MATALON, RONIT** (1959– ), Israeli writer. Born to Egyptian-Jewish parents in a new immigrant town near Tel Aviv, Matalon later studied literature and philosophy at Tel Aviv University. She worked as a journalist at Israeli Television and the daily *Haaretz*. Matalon was a member of staff at the Camera Obscura School of Arts in Tel Aviv. Her first publication was a book for children, *Sippur she-Mathil be-Levayah shel Nahash* ("A Story Which Begins with a Snake's Funeral," German 1999). Following her first collection of stories, *Zarim ba-Bayit* ("Strangers in the House," 1992), she published her novel *Ze im ha-Panim Elenu* ("The One Facing Us," 1998), a complex, post-modernistic family saga, coalescing text and photo material, foregrounding feminine as well as ethnic concerns. Her second novel *Sarah Sarah* was translated into English in 2003.

Abramovich, "Reviving the Israeli Roots Novel," in: *Australian Journal of Jewish Studies*, 15 (2001), 89–103; idem, "Ronit Matalon's Ethnic Masterpiece," in: *Women in Judaism*, 3:2 (2003).

[Anat Feinberg (2<sup>nd</sup> ed.)]

**MATA MEḤASYA**, town situated in S. Babylonia, on the Euphrates River near \*Sura where the river divides into two. In geonic responsa Sura is often identified with Mata Meḥasya; thus Sherira Gaon in his famous letter at the end of the tenth century (ed. by B.M. Lewin (1921), p. 79, Spanish version) wrote that "after Rav came to Babylon in 219 he left Nehardea moving to a place where there was no Torah, viz., Sura, which is Mata Meḥasya" (the French version reads: "Sura which is

called Mata Meḥasya"). The same identification is found in the work of Benjamin of Tudela in the 12<sup>th</sup> century. However, it would seem that the two places are not identical. They were two separate settlements near each other; and elsewhere in his letter (p. 84) Sherira Gaon explicitly distinguishes between the two places, stating that the school of Huna, the pupil and successor of Rav in the academy of Sura, was situated "near Mata Meḥasya." The Talmud also clearly distinguishes between the two places (Beḥaz 29a). Mata Meḥasya is not mentioned in the Talmud before the time of \*Ashi, who headed the Sura academy in the years 367–427. He extended the academy and transferred it to Mata Meḥasya (pp. 90–92). Of its inhabitants Ashi said: "The people of Mata Meḥasya are 'stouthearted' (cf. Isa. 46:12), for they see the glory of the Torah twice a year [in the \*kallah months of Adar and Elul], and never has one of them been converted" (Ber. 17b). R. Mesharsheya praised the scholars of Mata Meḥasya, saying: "Rather sit on the rubbish heap of Mata Meḥasya than in the palaces of Pumbedita" (Hor. 12a).

[Moshe Beer]

**MATAS, DAVID** (1943– ), Canadian lawyer, writer, human rights activist, teacher. Matas was born in Winnipeg and had a conventional Jewish childhood in the city's South End. His was the first bar mitzvah in the Herzlia Synagogue in 1956. Following a B.A. in mathematics and economics at the University of Manitoba (1964) and an M.A. in economics at Princeton (1965), he traveled to Oxford for his legal education, receiving the B.A. (Juris) (1967) and B.C.L. (1968). Returning to Canada, he served as clerk to Chief Justice John Cartwright in 1968–69, as a member of the Canadian government's Foreign Ownership Working Group in 1969, and as special assistant to the federal solicitor general in 1971–72. After six years with a Winnipeg law firm, in 1979 Matas established a private practice in Winnipeg specializing in refugee, immigration, and human rights law. These areas, and his outspoken opposition to Nazi war criminals who found safe harbor in Canada, drove his professional, scholarly, and community activities. He argued several cases dealing with war crimes and hate propaganda before the Supreme Court of Canada, notably those of John Ross Taylor (1990), Imre Finta (1994), Canadian Liberty Net (1998), and Malcolm Ross (2001). He wrote numerous scholarly and journalistic articles and seven books on these topics, including *Justice Delayed: Nazi War Criminals in Canada* (1987), *Bloody Words: Hate and Free Speech* (2000), and *Aftershock: Anti-Zionism and Antisemitism* (2005), and taught courses in these areas at McGill University and the University of Manitoba. He was senior legal counsel to both Amnesty International Canada (from 1980) and B'nai B'rith Canada (from 1989), and was a member of the Canadian delegation to the UN General Assembly (1980), Task Force on Immigration Practices and Procedures (1980–81), Legal Committee on War Crimes of the Canadian Jewish Congress (1981–84), Manitoba Association for Rights and Liberties (1983–87), B'nai

B'rith's League for Human Rights (from 1983), Helsinki Watch Group (from 1985), International Defense and Aid Fund for South Africa (1990–91), Canada-South Africa Cooperation (1991–93), Canadian Council for Refugees (1991–95), International Center for Human Rights and Democratic Development (1997–2003), and the Canadian delegation to the UN Conference on an International Criminal Court (1998). His outstanding contributions were honored by the Manitoba Association for Rights and Liberties, National Council of Jewish Women, Lord Reading Law Society of Montreal, Shaare Zedek Hospital Foundation, League for Human Rights of B'nai B'rith, and Legal Education Association.

[James Walker (2<sup>nd</sup> ed.)]

## MATHEMATICS.

### Bible

The Bible does not deal directly with proper mathematical subjects; however there are some parts that do relate indirectly to different mathematical topics. These are widely discussed by the various commentators on the Bible and Talmud: the ratio of 300:50:30 between the three dimensions of Noah's ark (in the past, a basic ratio in shipbuilding), the mathematical model of a rainbow, the number of 220 sheep and goats sent by Jacob to Esau (220 as the first number of the smallest pair of amicable numbers), the calculations of the visibility of the crescent of the new moon, the total amount and volume of the daily \*manna, Moses' financial report on the donations for the building of the Tabernacle (*mishkan*), the commandment of keeping exact measures and balances, chance and probability in relation to the fair division of the land of Israel, lot-drawing to insure the fair division of holy duties and privileges, the curve of "projectile motion" in relation to the unintentional killing of a man by throwing a stone, the surprising distribution of the 12 tribes into two equal groups of six on Mt. Gerizim and Mt. Ebal, and more.

The members of the tribe of Issachar were known as "*Marei de-Hushbena*" – the masters of calculations – as their elders specialized in astronomical and calendar calculations. Christian scholars have dealt extensively with Bible mathematics. Among others, an early 18<sup>th</sup>-century scholar, J.J. Schmidt published an interesting tractate called *Biblicus Mathematicus* (Zuelligchau, 1732) in which many biblical-mathematical subjects are discussed, often based on Jewish sources. In another tractate there is a report on a request to the rabbinical court of Frankfurt to elaborate upon the issue of the geometry of the "Sea of Solomon" in the holy Temple. Many examples of biblical mathematics can be found in *Be'er Hetev* (Vilna, 1866), a commentary on Leviticus by R. Aryeh Huminer.

### Sefer Yezirah

According to ancient Jewish tradition, *Sefer Yezirah* is ascribed to Abraham, as stated at the end of *Sefer Yezirah*. Others ascribe the authorship of the current version of *Sefer Yezirah* to R. Akiba (second century). At its very beginning, "*sefar*" (arithmetic = the wisdom of mensuration and numbers) is

mentioned as one of three dimensions in which the world was created (\*Kuzari and others). *Sefer Yezirah* deals extensively with permutations and combinations of the 22 letters of the alphabet. The end of Chapter 4 concludes with the statement that the number of permutations of all the 22 letters of the alphabet – [22! = 1,124,000,727,777,607,680,000] – is a number "which the mouth cannot speak and the ear cannot hear." (It would take 3,564,182,926 people and more than 10,000 years to speak out this number, even at a rate of one number per second.) R. Joseph ben Kalonymos (the elder; mid-13<sup>th</sup> century), in his commentary to Chapter 2 – erroneously ascribed to R. Abraham ben David (1120–1198) – was one of the earliest to use the decimal system to express large numbers using Hebrew letters. This was noticed by R. \*Elijah of Vilna (1720–1797), who indicated that the Hebrew word "ג'ק" which appears in the calculations is actually the result of  $144 \times 22 = 3,168$ , written in Hebrew numerals.

### Mishnah and Talmud

The Mishnah and Talmud, dealing with all aspects of daily life, discuss many mathematical subjects. Yet the main reason for dealing with mathematics was mostly either to bolster the study of the Bible and its commandments or to clarify everyday applications of mathematical methods. As is clear from tractate *Avot*, the study and transmission of pure mathematical knowledge per se were matters of secondary importance. Nevertheless, for many practical halakhic issues, a considerable body of basic mathematical knowledge is required. The following are a few examples only: the basics of plane geometry in connection with the measuring of the Sabbath \**eruv* boundary (2,000 cubits) over hills and ditches (methods of leveling); elements of knot theory in relation to the Sabbath laws; the layout of family graves; the mathematics of calculating an optimal seeding area without violating the biblical laws of prohibition of sowing with mixed seeds; the number of grapes that are within a circle with a given radius (i.e., Gauss' circle lattice point problem); the mathematics of inheritance leading to geometric progressions and exponential equations; the calculation of square roots leading to irrational numbers; the mensuration of circular and polygonal geometric forms or the proper division of assets among people with different kinds of claims. Another well-known topic is found in tractate *Kinnim*, the last in the Mishnah order *Kodashim*. Among other things, it deals with the laws concerning the "confusion of birds," e.g., birds assigned as sin offerings mixed up with those assigned as burnt offerings. Especially the last chapter requires advanced algebra and logic. Among the more recent mathematical commentaries are those by Moshe Koppel of Bar-Ilan University (1998) and B. Engelman of the Nahal Sorek Nuclear Research Center (1992). Knowledge of basic trigonometry and astronomy was needed for the fixing of the new month by reckoning and calculating. The exact methods used by the rabbinical court (*bet din*) were not made public. It was Maimonides who described appropriate calculations in his "Laws of Sanctification of the New Month" in his *Mish-*

*neh Torah*. Many of these topics were discussed and elaborated upon by commentators throughout the ages. It has to be remembered that most of these scholars had acquired their knowledge autodidactically and lacked any formal education. From a comment by R. Hai Gaon on Mishnah *Kelim* (16:1; 24:7) it seems that the Pythagorean writing table (abacus) and “Indian arithmetic” (i.e., numeration system and numerals) were known and in use at this time (Smith 2, 177). Although the Mishnah and Talmud use an approximation of 3 for the better value of  $3.1415\dots$  for  $\pi$ , it is clear from various discussions in the Talmud, that the *\*amoraim* must have been aware of much better values for both  $\pi$  and  $\sqrt{2}$ .

The Mishnah and Talmud mention a few individuals as having outstanding mathematical knowledge. Rabban *\*Gamaliel*, who used a Heron-type of dioptra to reckon distances; R. *\*Eleazar Hisma* and R. *\*Johanan ben Gudgada*, whose vast mathematical knowledge was described as enabling them to estimate “the number of drops in the sea”; R. *\*Zadok*, who revealed to the Romans an advanced system of finger-calculation as well as the underlying mathematics of what later came to be known as the “Roman Statyra” (steelyard). R. *\*Joshua b. Haniah* – called the *Escolasticus* – was versed in astronomy and mathematics, R. *\*Abbahu* is mentioned as having calculated the length of the cycle of service of the different tribes in the Holy Temple. The *amora* *\*Samuel Yarhina’ah* was versed in calendar calculations. This enabled him to calculate the calendar for the Diaspora for more than 60 years in advance. Nevertheless this knowledge was called “simple calculation,” as it did not show a deeper understanding of Jewish law proper. In the name of the *amora* *\*Adda* a more accurate estimate of the duration of the seasons is reported. The Talmud also mentions a “*Kippah shel Hesbonot*,” i.e., a covered place outside Jerusalem serving people visiting the holy city in arranging their financial calculations and transactions.

**MISHNAT HA-MIDDOT.** Bible commentators of the Middle Ages mention the existence of a treatise called the *Baraita of 49 Rules (Middot)*. This treatise from the tannaitic era was said to contain geometrical formulas and calculations. It was Abraham ben Solomon, the son of R. Elijah of Vilna (the Gaon of Vilna) in his *Rav Pe’elim* (Warsaw, 1894), who first drew attention to this treatise, though no existing copy of it was known. In 1864 Moritz Steinschneider found a Hebrew mathematical manuscript, identified it as *Baraitat ha-Middot* and published it in 1864. A critical edition including the geometrical drawings omitted by Steinschneider was published by the mathematician Hermann Schapira in 1880 as *Mishnat ha-Middot*. Among others things, *Mishnat ha-Middot* contains the Pythagorean formula allowing the calculation of the square root of 2 and uses a value of  $3\frac{1}{2}$  for  $\pi$ . Haim Horovitz of Frankfurt tried to prove that this *Mishnat ha-Middot* was actually part of a Tosefta to the Mishnah tractate *Middot* (describing the measurements of the Holy Temple). This suggestion was later supported by the discovery of additional fragments and accepted by Solomon *\*Gandz* in his critical edition of the *Mishnat ha-*

*Middot*. This suggests that the *Mishnat ha-Middot* is one of the oldest known Hebrew mathematical works.

### The Era of the Geonim

R. *\*Nahshon bar Zadok*, who headed the yeshivah of *\*Sura* from 874 to 882, stated that the order of the weekdays on which any particular festival occurs in successive years repeats itself after a cycle of 247 years. Thus he was able to arrange these years and their characteristic dates in 14 tables. This system is known as “*Iggul de-Rav Nahshon*” (R. Nahshon’s cycle). R. Abraham Azulai (1570–1643) explains in *Nahshon Gaon’s* name the concept of “amicable” (or “friendly”) number pairs. He also mentions the common belief in the peacemaking powers of these pairs of numbers. This was known to Jacob and explains the number of 220 sheep and goats that Jacob sent to his brother. The suggestion has been made that R. Nahshon Gaon received this information from his contemporary Thabit ibn Qurra (836–901), a Sabbean mathematician in Baghdad famous for his work in amicable numbers. R. *\*Hai ben Sherira* (939–1038), head of the yeshivah of *\*Pumbedita*, in one of his responsa, explains the use of the Heron-type dioptra used by Rabban Gamaliel. His mathematical description of the various methods is practically identical to the way Heron himself described it in his book, including the accompanying diagram. This gives rise to the conjecture that R. Hai Gaon was familiar with the original source of Heron himself. The *gaon* who dealt most extensively with mathematical subjects was R. *\*Saadia ben Joseph* (892–942), head of the yeshivah of *Sura*. Examples are his commentary on *Sefer Yeziarah* and his *Sefer ha-Yerushot* (“The Book of Inheritances”). The latter is an extensive mathematical-halakhic text showing how to divide an inheritance according to Jewish law. Other figures from this era who commented on mathematical subjects were Rabbenu *\*Hananel ben Hushiel*, head of the yeshivah of *Kairouan* (980–1050), in his commentary to the Talmud and R. *\*Shabbetai Donnolo* (913–c. 982), an Italian physician and writer on medicine, in his *Tahkemoni*, a commentary on *Sefer Yeziarah*.

### 11<sup>th</sup> and 12<sup>th</sup> Centuries

**FRANCE.** The *\*tosafists* concentrated their literary efforts on the elucidation of the Bible and the Talmud and did not hand down much mathematical work per se. Although they had no formal education in mathematics, and in most cases had no possibility of learning from Greek or Latin sources, they did acquire some basic knowledge in an autodidactic way. Thus they commented on various talmudic discussions involving arithmetic and simple geometry. On the one hand their comments show a basic knowledge of arithmetic, e.g., in proposing several ways to calculate the connection between the basic halakhic unit of a  $\frac{1}{4}$  of a log (*revi’it*) and the required amount of 40 *se’ah* of pure water for the ritual bath – the *\*mikveh* – yet it seems that some of the *tosafists* were unaware of the Pythagorean law and did not have a good approximation of  $\pi$  or of irrational numbers like  $\sqrt{2}$  or  $\sqrt{5}$ . But evidently they were aware that surveyors used a better value than 3. They also used

a method of applying and proving the Archimedean formula for the calculation of the area of a circle based on the radius and the circumference. It is highly probable that they adopted the method of their Spanish contemporary R. \*Abraham bar Hiyya. His geometrical treatise *Hibbur ha-Meshiḥah ve-ha-Tishboret* (“Treatise on Mensuration and Calculation”) was written for the rabbis of southern France. \*Rashi (1140–1205), the forerunner of the tosafists, himself used a very interesting geometric method for calculating the square root, a method which had its sources in the Jerusalem Talmud. One of the tosafists, R. \*Asher ben Jehiel (called the “Rosh”; c. 1250–1327), raised the following question: Why does the Talmud, as a book of law, discuss an inaccurate approximation of 3 for the value of  $\pi$  rather than using a better value, which had been known for a long time? The place for such an excursus would be a geometry text and not the Talmud. In reply, he showed that the famous Mishnah in question (Er. 1:6) was not intended to teach a geometrical principle but rather to introduce the halakhic rule that in certain instances this approximate value of 3 should be used. After his escape from Germany to Spain, R. Asher ben Jehiel asked one of his disciples – the astronomer R. Isaac ben Joseph \*Israeli – to elaborate on the Pythagorean law and other geometric principles. It was in response to this request by R. Asher ben Jehiel that he wrote his famous trigonometric-astronomic treatise *Yesod Olam*.

SPAIN AND PORTUGAL. In Spain and Portugal Jewish intellectual and scientific growth continued to flourish. There was a lively exchange of mathematical knowledge between Jews and Arabs, and many Arabic mathematical ideas are reflected in Jewish literature. Likewise Jews contributed much to the Arabic corpus of scientific knowledge. Thus one finds much more elaborated mathematical ideas in both talmudic literature proper and original mathematical works.

Among the best-known mathematical figures of the 11<sup>th</sup> and 12<sup>th</sup> centuries was the above-mentioned Abraham bar Hiyya. Until the publication of *Hibbur ha-Meshiḥah ve-ha-Tishboret* in 1910, this mathematical magnum opus was known only in manuscript. This text is probably the earliest post-talmudic mathematical text per se. The author states that the reason he compiled the discourse was the lack of knowledge of geometry among the Jews of southern France. As he writes in his introduction, the text was meant to serve as a textbook for judges who had to deal with legal issues concerning the surveying and measuring of fields. Towards the end Bar Hiyya provides an interesting demonstration – using a model built from concentric circles of thin rope – of the Archimedean formula for the calculation of the circle’s area based on its radius ( $r$ ) and its circumference ( $c$ ) [ $\frac{1}{2} \cdot c \cdot r$ ], without actually using the value of  $\pi$ . It is this very demonstration that is used by the tosafists in their Talmud commentary. Bar Hiyya gives the fair approximation of 1.4143 ( $1\frac{2}{5} + \frac{1}{10}$ ) for the square root of 2 and 3.141593 for  $\pi$ . He was also among the first to introduce to Europe the complete solution of quadratic equations. This fine textbook was translated by Plato of Tivoli in

1145, just a few years after the death of Bar Hiyya, under the title *Liber Embadorum*.

Other works by Bar Hiyya dealing with mathematics are *Zurat ha-Arez* (“Form of the Earth”), a basic introduction to spherical trigonometry and astronomy, and *Sefer ha-Ibbur* (“Book of Intercalation”). Based on a statement by Maimonides, it seems that he knew this text. Another work of his is *Yesodot ha-Tevunah u-Migdal ha-Emunah* (“The Foundations of Understanding and the Tower of Faith”), an encyclopedia on arithmetic, geometry, optics, astronomy, and music. Parts of it were translated into Latin by the Hebraists Sebastian Münster (1488–1552) and his disciple Erasmus Oswald Schreckenfuchs (1511–1575).

ABRAHAM B. MEIR IBN EZRA. \*Ibn Ezra (1092–1167), a tosafist, was one of the most prolific commentators on the Bible, who at the same time also wrote extensively on mathematics. The best known of his mathematical contributions are *Sefer ha-Shem* (“Book of the Holy Name”), *Sefer ha-Eḥad* (“Book of the Number 1”), *Sefer Keli ha-Nehoshet* (“Book of the Copper Instrument [i.e., the astrolabe]”), and *Sefer ha-Mispar* (“Book of Numbers”). (Some 100 years later, Jacob b. Machir ibn Tibbon, known as Profatius Judaeus, invented an improved version of the astrolabe, known as the quadrant.) Ibn Ezra also translated into Hebrew the commentary of al-Biruni on al-Khwarizmi’s tables. In the introduction to this work he gives an historical account on the involvement of Jews in the introduction of Indian mathematics to the Arabic world. Ibn Ezra is one of the earliest Hebrew writers to introduce the “o,” which he called *galgal* (wheel). In his *Sefer ha-Mispar* Ibn Ezra presents many exercises, which also appeared more than 250 years later in the *Sefer ha-Mispar* of Elijah \*Mizraḥi. In addition, Ibn Ezra deals with the mathematics of inheritance and with the history of  $\pi$  and mentions perfect numbers. He is also famous for his “prisoner problem,” a mathematical puzzle first presented by \*Josephus Flavius in his *Jewish War* and which is often used in introductory courses in mathematical programming. Many scientific articles have been written on Ibn Ezra’s mathematical writings.

MAIMONIDES. Aside from a short tractate on calendar calculations, the works of Maimonides (1135–1204) are primarily nonmathematical. Yet in his Mishnah commentary Maimonides mentions that the ratio between the circumference of a circle and its diameter ( $\pi$ ) cannot be expressed as a ratio of two natural numbers, and that this fact is not due to a lack of our understanding but is in the very nature of this number. He further states that there is no possibility to know the exact value of this ratio, that mathematicians have written various treatises on this subject, and that the approximation used by scientists is  $2\frac{2}{7}$ . Yet in his halakhic *Mishneh Torah* Maimonides requires the use of the old talmudic (and Babylonian) approximation of 3. A similar statement by Maimonides relates to two other irrational numbers, namely  $\sqrt{2}$  and  $\sqrt[5]{5000}$ . It is interesting to note that in the Western world it was Lambert (1728–1777)

who first proved the irrationality of  $\pi$  in 1761. Much has been written in rabbinic literature about Maimonides' geometrical explanation of the *meshnayyot* in *Kilayim* 3:1 and 5:5. In his *Moreh Nevukhim* (*Guide of the Perplexed*), Maimonides mentions the difficulty in imagining the concept of the hyperbola and its asymptote, i.e., a curved line and a straight one, constantly approaching one another ad infinitum, without ever meeting. This subject – including the detailed explanations of the Jewish writers – was later elaborated by S. Motot, a 14<sup>th</sup>-century Jewish mathematician, and by Francesco Barozzi in his *Admirandum Illud Geometricum Problema, Tredicim Modis Demonstratum* (Venice, 1585).

### 13<sup>th</sup> and 14<sup>th</sup> Centuries

**LEVI BEN GERSHOM.** \*Levi ben Gershom (Rabag/Gersonides; 1288–ca. 1344) was probably the most advanced Hebrew mathematician of his generation. Widely known for his biblical commentaries, he dealt with all the three branches of Arabic mathematics: arithmetic, geometry, and trigonometry. An extensive corpus of research about Gersonides has come into being (spearheaded by Bernhard Goldstein of Yale University). A comprehensive bibliography on Gersonides has been published by Menachem Kellner of Haifa University (1992). Gersonides mentions both Abraham Ibn Ezra and Abraham bar Ḥiyya as sources from which he derived some of his knowledge. His arithmetical works – *Ma'aseh Ḥoshev* (“The Practice of Arithmetic”) and “De numeris harmonicis” have been studied since the publications of *Ma'aseh Ḥoshev* by R. Joseph Carlebach of Hamburg, and some years later, at the beginning of the 20<sup>th</sup> century, by Gerson Lange. A hitherto missing part of problems of *Ma'aseh Ḥoshev* has been published by S. Simonson of Stonehill College. In this treatise Gersonides deals with arithmetic, algebra, and combinatorics. The short tractate on harmonic numbers was written as a response to an inquiry by Philip of Vitry, the bishop of Maux, shortly before Gersonides passed away. Another mathematical work is a commentary on Euclid's *Elements*. Gersonides' text on trigonometry, *De sinibus, chordis et arcubus* (originally written in Hebrew but immediately translated into Latin) is a commentary on the relevant chapters of Ptolemy's *Almagest* and was originally part of Gersonides' major work *Milḥamot Adonai* (“The Book of the Wars of the Lord”), part v, ch. 1. It was omitted in the printed Venice edition of 1560. In it, Gersonides presents a proof of the theorem of sines. He had arranged for a translation into Latin which is still extant. Carlebach showed that Gersonides was the inventor of the “cross-staff” (sometimes called “bacculus” or “Jacob's staff”), a simple yet powerful surveying device which allowed nautical and astronomical measurements. Carlebach even reconstructed a model of this instrument following Gersonides' description. The Jacob's staff was in use until the 17<sup>th</sup> century.

**IMMANUEL BEN JACOB BONFILS.** Another Jewish mathematician of this era is Immanuel ben Jacob \*Bonfils of Tarascon (1300–1377), a contemporary of R. Levi b. Gershom. He is known as *Ba'al Kenafayim* after his astronomical tables

published under the name of *Shesh Kenafayim* (“Six Wings”). Bonfils taught astronomy and mathematics at Orange for some time. He also was one of the forerunners of exponential calculus, some 150 years before its adoption in Europe, as is evident from his *Derekh Ḥilluk*. A great number of his many mathematical and astronomical works are still in MS. A special volume on the history of science in the Middle Ages by G. Sarton was called *Six Wings* after Bonfils' astronomical tables.

Important findings relating to Jewish mathematics in the 12–14<sup>th</sup> centuries have been contributed by various researchers, among them G. Freudenthal, G. Safatti, T. Levy, and D. Zeilberger.

### 15<sup>th</sup> Century

**MOSES BEN ABARAHAM PROVENCAL.** Moses ben Abraham \*Provencal (1503–1575) was considered one of the greatest talmudists and most illustrious scholars of Italian Jewry in the Renaissance period. For many decades he was rabbi of the Italian community of Mantua, which therefore became a center of talmudic study. His mathematical knowledge is evident from his *Be'ur Inyan Shenei Kavvim*. In his *Guide of the Perplexed* Maimonides mentions the concept of the asymptote, a straight line constantly approaching a curved line without ever touching it, referring to the *Conics* of Apollonius. Provencal wrote a four-page Hebrew explanation of this subject, which was added to the Sabionetta (1553) edition of the *Guide of the Perplexed*. This *kuntres* (pamphlet), which became famous, was translated into Italian by Joseph Shalit (Mantua, 1550) and was included in the well-known volume on the concept of the asymptote by Francesco Barocius (Venice, 1586). The latter also contains geometric explanations by other Jewish commentators on the *Guide of the Perplexed*. The subject itself became a major topic of rabbinical mathematics and was discussed in rabbinical literature from the 14<sup>th</sup> to the 19<sup>th</sup> centuries. It has been suggested that Provencal was familiar with Simon Motot's book on algebra. In his pamphlet, Provencal includes an explanation of the Greek concept of the “mean and extreme proportion” (the “golden section”) and proofs related to the connection between the lengths of the sides of a regular hexagon and a regular decagon, both inscribed to the same circle. This concept, described by Euclid and mentioned by Joseph \*Albo in his *Sefer ha-Ikkarim*, inspired many discussions in the rabbinical literature, mainly because of the lack of knowledge of the proper definition of the Greek concept of “mean and extreme proportion.” Provencal specifically refers the reader to the source in Euclid's *Elements*.

**MORDECAI COMTINO.** Mordecai Comtino (1420–d. before 1487) was the teacher of R. Elijah ben Abraham \*Mizrahi. He was on friendly terms with the Karaites and was the teacher of two of their leaders, Caleb \*Afendopolo and Elijah \*Bashyazi. His literary output includes *Sefer ha-Ḥeshbon ve-ha-Middot* on arithmetic and geometry and commentaries on Abraham Ibn Ezra's *Sefer ha-Eḥad*, *Yesod Mora*, and *Sefer ha-Shem*, in which various mathematical subjects are discussed. His *Sefer ha-Ḥeshbon ve-ha-Middot* was known only in manuscript un-

til a careful analysis and partial translation was published by Moritz Silberberg of Schrimm in 1905. The plan of this treatise follows a statement of the Greek Nichomachus of Gerasa regarding the logical order of basic mathematical subjects. Following Ibn Ezra, Comtino introduces the full decimal numeration, including the “o,” which again he called “*galgal*” (the wheel). After introducing standard subjects in the first part, on arithmetic, Comtino deals with the measurement and division of plane figures and then proceeds to calculation of volumes of geometrical bodies and their parts. He also provides a detailed vocabulary of the different scientific terms. A special addition is the collection of problems part of which are borrowed from Ibn Ezra. Mizrahi in his *Sefer ha-Mispar* (see below) drew upon some of the problems presented by Comtino. Besides this, Comtino also dealt with the construction of astronomical instruments.

ELIJAH BEN ABRAHAM MIZRAHI. Mizrahi (Reem; c. 1450–1526) is known primarily from his famous supercommentary to Rashi’s Bible commentary. Mizrahi’s mathematical works are *Sefer ha-Mispar* (Constantinople, 1534), on arithmetic, and a commentary on Ptolemy’s *Almagest* (no longer extant). The former book became a standard text for the study of arithmetic. It deals with whole numbers, fractions, and mixed numbers, with the extraction of the square and cube roots, proportions, and arithmetical and geometrical problems. In his lengthy introduction he describes the importance of the study of mathematics as a bridge between the different sciences. *Sefer ha-Mispar* is based on Ibn Ezra’s *Sefer ha-Mispar* and the mathematical work of his teacher Mordecai Comtino (see above). A Latin abridgment by Sebastian Muenster was published by his disciple Schreckenfuchs (Basel, 1546). At the end of the 19<sup>th</sup> century an in-depth description of *Sefer ha-Mispar* (*Die Arithmetik des Elija Misrachi*) was published by Gustav Wertheim (Frankfurt, 1893). An excerpt and analysis of those of his mathematical problems related to physics (*Ueber physikalische Aufgaben* by Elia Misrachi) was prepared by E. Wiedeman in 1910.

MORDECAI B. ABRAHAM FINZI. \*Finzi (c. 1407–1476), a banker and mathematician, was known mainly for his mathematical and astronomical works, which included *Luhot*, tables on the length of days (published by Abraham Conat, Mantua, c. 1479), and an astronomical work entitled *Netiv Hokhmah* (unpublished). He translated into Hebrew the *Algebra* of the Arab mathematician Abu Kamil Soga (c. 850–930). In 1934, a young Jewish mathematician by the name of Joseph Weinberg, submitted a critical edition of Finzi’s translation as a thesis to the University of Munich. (Weinberg later was murdered by the Nazis.) An English translation of Finzi’s commentary on Abu Kamil’s *Algebra* was published in 1966 by Martin Levey. Finzi also translated into Hebrew various works on astronomy and geometry, wrote commentaries on some of them, described and explained recently invented astronomical instruments, and wrote treatises on grammar and mnemonics.

ABRAHAM BEN SAMUEL ZACUTO. \*Zacuto (1452–c. 1515) was known as a talmudic scholar, historian, mathematician, and astronomer. He was appointed professor of astronomy and mathematics at the University of Salamanca. His famous almanacs and astronomical tables became a principal base for Portuguese navigators. Thus, Columbus, whom he met in Salamanca, was able to garner important information before his famous expedition. Using the tables of Zacuto, Columbus was able to predict an eclipse of the moon and so save the lives of his men by demonstrating to hostile natives that he could shut out the light of the sun and moon. R. \*Levi ben Habib, a contemporary of Zacuto, remarks in one of his responsa that Abraham Zacuto wrote a commentary on the Talmud, from which he quotes a small geometrical explanation. Zacuto’s well-known *Sefer Yuhasin* contains several references to mathematics.

### 16<sup>th</sup> and 17<sup>th</sup> Centuries

DAVID B. SOLOMON \*GANS. The astronomer, mathematician, and historian David b. Solomon \*Gans (1541–1613) was raised and educated in the home of R. Moses \*Isserles, the Rema. He also belonged to the circle of \*Judah Loew ben Bezalel (the Maharal). Gans was in close contact with Tycho Brahe and Johann Kepler. Besides his history, *Zemah David*, Gans compiled an astronomical-mathematical textbook called *Nehmad ve-Na'im* (Jesnitz, 1743), an extract of which appeared in Prague in 1612 under the name of *Magen David*. In the preface to *Nehmad ve-Na'im* he presents an abridged history of the transmission of mathematics and astronomy among the Jews, based on Jewish sources. The main part is devoted to pre-Copernican celestial mechanics, whereas toward the end he introduces basic instrumentation as well as trigonometry and its applications in daily life, enriching the text with many contemporary examples.

MENAHM ZION PORTO (RAFA). Porto was an Italian rabbi born in Trieste toward the end of the 16<sup>th</sup> century; he died in Padua around 1660. He was an excellent mathematician and astronomer. His works were highly praised by Andrea Argoli and extolled in Italian sonnets by Tomaso Ercaloni and Benedetto Luzzatto. In 1641 Gaspard Scüppius, editor of the *Mercurius Quadrilinguis*, recommended Porto, in terms that were very complimentary to the rabbi, to Johannes \*Buxtorf (the younger), with whom Porto later carried on an active correspondence. Among other works, Porto published a “Handbook for the Merchant” (*Over la-Soher*, Venice, 1627), a compendium of basic arithmetic and many examples of business calculations for merchants. He also published a two-volume treatise of close to 400 pages – *הכמתם ובינתכם לעיני העמים* – *Porto Astronomico* – dealing with trigonometry and astronomy.

JOSEPH SOLOMON ROFE DELMEDIGO. \*Delmedigo (YaSHaR; 1591–1655) studied mathematics, mechanics, and astronomy under Galileo at Padua. His major work, *Elim* (Amsterdam, 1629), is a classic compendium of 16<sup>th</sup>-century mathemat-

ics, physics and astronomy, and scientific instruments. He describes his use of Galileo's telescope to observe the planet Mars. Delmedigo displays a profound knowledge of the Greek, Renaissance, and contemporary literature dealing with mathematics and physics. The first part of *Elim* contains mathematical discourses dealing with both classical problems of Greek mathematics like the solution of the famous Alexander problem leading to Diophantine equations, the trisection of angles using the Conchoid of Nichomedes, the calculation of the octagon, and post-Renaissance mathematics like the solution of the cubic equations or the "squaring" of a circle, and the  $355/113$  and Ludolphine approximations to  $\pi$ . In *Mayan Ganim* Delmedigo deals mainly with spherical trigonometry, with the proof and application of the law of sines, the history of trigonometry, the prosthaphaeresis (trigonometric formulas for the conversion of a product of functions into a sum or a difference), and the law of tangents of the sine function. *Gevurat Adonai* deals mainly with astronomy but has some mathematics as well. Another part, *Ma'yan Hatum*, is devoted mainly to the discussion of physical problems and paradoxes – mostly from Aristotle's *Mechanical Problems* – as well as to topics from early 17<sup>th</sup>-century classical physics.

JAIR HAYYIM BACHARACH. \*Bacharach (1638–1702), rabbi of Worms, had a keen interest in mathematics. His first volume of responsa, *Hut ha-Shani* ("Scarlet Thread," Frankfurt, 1679) contains a lengthy responsum (§98) dealing first with talmudic metrology and then, in the second part, with many mathematical subjects. His main source is *Gevurot Adonai* by Joseph Solomon Delmedigo (see above). He mentions Hero's formula for extracting the square root, the (Roman) system of finger calculation, the approximation of a circle's circumference by polygons, mathematical problems from the *Sefer ha-Mispar* of R. Elijah Mizrahi (see above), the famous Alexander problem from R. Joseph Solomon Delmedigo, and others. In his second volume of responsa *Havvat Ya'ir*, Bacharach deals at length with the Euclidean concept of "mean and extreme proportion" (the golden section) mentioned by R. Joseph Albo in his *Sefer ha-Ikkarim* (Responsa §111).

MOSES HEFETZ GENTILI. In both his *Hanukkat ha-Bayit* (Venice, 1696), on the architecture of the Temple, and *Melkhet Maḥshevet*, a commentary on the Torah (Venice, 1710), Gentili (1663–1711) presents material that reflects mathematical thinking. Referring to the weekly portion of Noah, he describes Descartes' mathematical model of the rainbow and in his commentary to the weekly Torah portion *Ma'asei*, he describes Tartaglia's model for the motion of a projectile. In *Hanukkat ha-Bayit* he makes extensive use of the "Pythagorean theorem" in discussing the structure of the altar.

ELIJAH BEN SOLOMON ZALMAN OF VILNA. Already in his very early life \*Elijah ben Solomon Zalman (the Vilna Gaon; 1685–1779) showed great interest in the study of mathematics and astronomy as an aid to furthering and deepening the study of Jewish law. In his halakhic commentary on the

Shulḥan Arukh he added a great number of notes which disclose his profound mathematical and astronomical knowledge. He encouraged his students to translate basic mathematical texts into Hebrew, and even wrote a small and very concise tractate on arithmetic, geometry, and trigonometry with an introduction to basic astronomy (*Ayil Meshulash*, 1834). An analysis and description of *Ayil Meshulash* was published by Elias Fink (*Elijah Wilna und sein elementar-geometrisches Compendium*, Frankfurt, 1903). Fresh interest in this compendium was aroused with the publication of a new edition with a modern Hebrew commentary. One of his students, Baruch \*Schick, a rabbi and physician, published various Hebrew texts on astronomy and medicine as well as a Hebrew translation of the first six books of Euclid's *Elements*.

RAPHAEL LEVI OF HANOVER. Raphael Levi \*Hanover (1685–1779) showed his mathematical talent already as a child, when studying at the Jewish orphanage. One day, upon returning from his studies, observing the construction of the new royal stables in Hanover, he was able to prevent a serious engineering mistake. This drew the attention of Leibniz, the famous mathematician, who after meeting the young Raphael Levi offered to pay part of his tuition and to tutor him privately in mathematics and astronomy. In the last paragraph of his *Tekhnat ha-Shamayim* (Amsterdam, 1756) on geometry, trigonometry, astronomy, and calendar-making, Levi describes and strongly supports the Copernican system. In an addendum, Raphael Levi's disciple Moses Titkin elaborates a few difficult talmudic passages connected to mathematics. In addition to the Hebrew works, Raphael Levi also invented a system of using logarithms in currency conversions and wrote two mathematical compendia in German: (1) *Wechsel-Tabellen Tractaetgen* (Hanover, 1746), tables for currency conversion, and (2) *Vorbericht vom Gebrauch der neuerfundnenen Logarithmischen Wechsel-Tabellen* (Hanover, 1747), a preliminary report on the use of the newly invented logarithmic currency conversion method. This latter text contains a good deal of advanced exercises and numerical examples. He also left a Hebrew manuscript of the first part of an introduction to algebra.

Among many other individuals who dealt with mathematical subjects were R. Yom Tov Lipmann \*Heller Wallerstein (1579–1654), a disciple of the Maharal, who used his extensive knowledge of mathematics and astronomy throughout the whole of his commentary *Tosefot Yom Tov* to the Mishnah. R. David \*Nieto of London (1654–1728), in his *Kuzari Sheni*, devoted a whole chapter to the explanation of some of the geometrical issues discussed in the Talmud and the commentary of the tosafists and many others.

### 18<sup>th</sup> Century

The expansion of general knowledge caused a shift in the content of rabbinical mathematics, from basic arithmetic and geometry only to a much broader scope of talmudic subjects related to mathematics. This was made possible by the availability of the Hebrew texts of Abraham Ibn Ezra, Elijah

Mizrahi, Joseph Solomon Delmedigo, and others mentioned above. Topics like cubic equations, arithmetic and geometric progressions, logarithms, spherical trigonometry (for calculations not connected directly to astronomy), the use of trigonometric tables, logarithms, and methods similar to calculus – like analysis of functions for maxima and minima – were used. This brought forth a great number of texts containing mathematical excursus.

At the beginning of the 18<sup>th</sup> century R. Samuel Schotten mentions in his *Kos ha-Yeshu'ot* (Frankfurt, 1711) his plan to publish a collection of talmudic-mathematical essays. His basic knowledge in mathematics enabled him to give several approbations to Hebrew astronomical texts. Some years later \*Jonathan of Ruzhany published his *Yeshu'ah be-Yisrael*, a commentary on the laws of *kiddush ha-ḥodesh* (concerning the blessing of the New Moon) in Maimonides' *Mishneh Torah* (Frankfurt, 1720). This tractate has an interesting appendix on some *halakhot* requiring basic mathematical knowledge. In the same year, Jonathan published a compendium of three astronomical works which naturally contain various mathematical elaborations. Some years later R. Emanuel Hai Rikki (1680–1744) published his *Hoshev Maḥashavot* (Amsterdam, 1727), an interesting halakhic-mathematical discourse of 70 short chapters based on an inquiry concerning the measurements of a *mikveh* (ritual bath). Within these discussions he elaborates the subject of measuring the circumference of a circle, the calculation of  $\sqrt{2}$ , and the concepts of asymptotes, and shows how to calculate and to graph two curved functions, each approaching the other without ever touching it. R. Jonah \*Landsofer's *Me'il Zedakah* (Prague, 1757) contains a responsum (§28) – an answer to an inquiry from a “learned man well versed in geometry” – elaborating the geometrical aspects of the altar in the holy Temple as discussed in the Talmud. This subject is often discussed in talmudic literature. In his answer, Landsofer shows his profound knowledge of the relevant texts and also provides a proof of the Pythagorean Theorem. This responsum follows the previous one (§27) dealing with the area calculations of various shapes, all of the size of a “lense.” In 1794, David Pivani published *Zikhron Yosef*, a textbook on arithmetic, geometry, and plane and spherical trigonometry. In the introduction he explains some of the geometrical aspects underlying Maimonides' commentary to the Mishnah *Kila'im* 5:5. Three years later, David Friesenhausen published his *Kelil ha-Heshbon* (Berlin, 1797), in collaboration with the Jewish Freeschool in Berlin. This text, an introduction to algebra, contains a variety of challenging examples and exercises. Among the more interesting topics are arithmetical and geometrical series, cubic roots, and Lambert's law concerning the brightness of an illuminated surface.

Towards the end of the 18<sup>th</sup> century and in connection with the social emancipation and the resulting assimilation of the Jews, Jewish mathematics began to develop into two main streams: the traditional Jewish talmud scholar who used mathematical knowledge mainly for the purpose of expounding religious subjects and the new type of a modern

mathematician of Jewish origin who pursues mathematics as an academic profession.

### 19<sup>th</sup> Century

The study of mathematics in the 19<sup>th</sup> century is widely characterized by the efforts of the \*Haskalah movement to introduce general secular education among the Jews. It was one of the goals of the Haskalah to show that the Jewish people too have a basic mathematical tradition. Therefore one finds regular contributions on mathematics in periodicals like *Sulamith* in German, *Ha-Me'assef*, *Ha-Zefirah*, and *Ha-Carmel* in Hebrew – dealing with the study of mathematics in the framework of talmudic studies or dealing with mathematical problems as such. One of the first texts of the 19<sup>th</sup> century was *Beirurei ha-Middot* by Tovia Segal of Horoshitz (Prague, 1807), on the geometry of Sabbath distances and diameters of levitical cities. This text contains an introduction to geometry and trigonometry using logarithms. At the beginning of the 19<sup>th</sup> century Meyer Hirsch published a textbook/collection of exercises on geometry, *Sammlung Geometrischer Aufgaben* (Berlin, 1809). This collection of problems was used in Germany for almost a century and contains a formula proposed by the 15<sup>th</sup>-century Simeon ben Zemah \*Duran. A little later (1828–31) Michael \*Creizenach, a teacher at the Frankfurt Philanthropin Reform school, published a series of textbooks on descriptive geometry, algebra, and technical geometry. In the first quarter of this century the first Hebrew article on “binary numbers” (a basic concept in computer engineering and digital electronics) was written by R. Zechariah \*Jolles. (The author passed away two years before George Boole published his paper taking up again the concept of “binary numbers” in 1854.) Jolles' paper is basically a translation and elaboration of Leibniz's famous paper on the same subject. It is included, among other mathematical writings, in his *Ha-Torah ve-ha-Hokhmah* (Vilna, 1913). In 1834 Hayyim Selig \*Slonimsky published his *Mosdei Hokhmah*, an introduction to mathematics. A second edition of David Friesensohn's *Kelil ha-Heshbon* was reprinted in Zolkiev in 1835. In 1845 the famous Leopold \*Kronecker (baptized 1863) began his brilliant career as mathematician after receiving his Ph.D. In 1856 the great historian of mathematics Moritz Cantor published his fundamental paper “Ueber die Einfuehrung unserer gegenwaertigen Ziffern in Europa” (“On the Introduction of Our Present Numerals in Europe”). Later on he published his monumental *Vorlesungen ueber Geschichte der Mathematik* (“Lectures on the History of Mathematics”), which is considered as marking the beginning of the modern history of mathematics. In keeping with the spirit of the Haskalah, the works of Joseph Solomon Delmedigo were reprinted (Odessa, 1865) as was *Shevilei de-Raki'a* by Eliah Hochheim (Warsaw, 1863). The editor of this tractate, Baruch Lowenstein, added a monograph of his own, *Bikkurei ha-Limmudiot* (“Firstlings of Mathematics”), discourses on various historical topics in Jewish mathematics. About the same time Zevi ha-Cohen \*Rabinowitz published his fine series of Hebrew texts on popular experimental physics, *Yesodei*

*Hokhmat ha-Teva* (Warsaw, 1865), including special parts on mathematics and a short bibliography of Hebrew mathematical works. In those years Yom Tov Lipman \*Lipkin – a son of the famous R. Israel \*Lipkin Salanter, the founder of the \*Musar movement – invented the “Lipkin linkage,” a mechanical device to transform circular motion into linear motion, and became a famous mathematician who contributed mathematical problems to the *Ha-Zefirah* periodical. In the last quarter of the 19<sup>th</sup> century the first modern systematic texts on Jewish mathematics appeared: Baruch \*Zuckermann’s *Das Mathematische im Talmud* (Breslau, 1878; see J. Szechtman, “Notes on Dr. Zuckerman’s ‘Introduction to his Mathematical Concepts in the Talmud,’” in: *Scripta Mathematica*, vol. 25 (1960), pp 49–62). The most important work in this field is Moritz \*Steinschneider’s series of articles on Jewish mathematics, published between 1893 and 1898 in Ennestrom’s *Bibliotheca Mathematica*. Part of these articles (covering the 9<sup>th</sup>–16<sup>th</sup> centuries) were reprinted as *Mathematik bei den Juden* in 1964. Additional relevant information can be found in Steinschneider’s contributions to the famous *Realencyclopaedie* by Ersch and Gruber. This was made possible with the opening of German and Italian libraries, allowing the study of ancient Hebrew mathematical manuscripts and books. In 1879 Hermann \*Schapira, at that time still a student in Heidelberg, edited and published a German translation of the *Mishnat ha-Middot*, discovered by Steinschneider in 1864. Towards the end of the 19<sup>th</sup> century Gustav Wertheim published *Elemente der Zahlentheorie* (Leipzig, 1887) and some years later an interesting monograph on the mathematics of Elijah Mizrahi (*Die Mathematik des Elia Misrahi*, Frankfurt, 1893). A year later Israel Michel Rabinowits of Paris published a Hebrew introduction to the Talmud containing an interesting appendix on the extraction of square roots, based on Heron’s algorithm, as well as a discussion of negative and irrational numbers (*Mavo le-Talmud*, Vilna, 1894).

## 20<sup>th</sup> Century

Jewish mathematicians continued to make major contributions throughout the 20<sup>th</sup> century and into the 21<sup>st</sup>, as is evidenced by their extremely high representation among the winners of major awards: 27% for the Fields Medal (the “Nobel Prize of Mathematics”) and 40% for the Wolf Prize. Of those still active around the outset of the 20<sup>th</sup> century mention may be made of Rudolf Otto Sigismund \*Lipschitz (1832–1903), whose contributions to mathematics and physical mathematics were mostly in the theory of numbers, the computation of variations, progressive series, and the theory of potential and analytic mechanics. With the French mathematician Augustin Louis Cauchy (1789–1857), he proved the theorem of prime importance in differential calculus and equations concerning the existing solutions to the equation  $dy/dx = f(x,y)$ . Herman \*Minkowski (1864–1909) is entitled to nearly all the credit for creating the geometry of numbers. He was one of the earliest mathematicians to realize the significance of \*Cantor’s theory of sets at a time when this theory was not appreciated by most

mathematicians. The later work of Minkowski was inspired by \*Einstein’s special theory of relativity which was first published in 1905. He produced the four-dimensional formulation of relativity which has given rise to the term “Minkowski space.” James Joseph \*Sylvester (1814–1897) dominated the development of the theories of algebraic and differential invariants, and many of the technical terms now in use were coined by him.

In Italy Vito \*Volterra (1860–1940) wrote numerous papers on partial differential equations, integral equations, calculus of variations, elasticity, and topology, and initiated the subjects of functionals and mathematical biology. Tullio \*Levi-Civita (1873–1942) developed the absolute differential calculus, which was the essential mathematical tool required by Einstein for his development (in 1916) of the general theory of relativity. Levi-Civita’s most important contribution in this field was the theory of “parallel displacement.” He also produced significant papers on relativity, analytical dynamics, hydrodynamics, and systems of partial differential equations.

Two outstanding French mathematicians were Jacques Salomon \*Hadamard (1865–1963), who produced important work in analysis, number theory, differential geometry, calculus of variations, functional analysis, partial differential equations, and hydrodynamics, and inspired research among successive generations of mathematicians, and Laurent \*Schwartz (1915–2002), whose work broadened the scope of calculus and brought Paul Dirac’s ideas of “delta functions” in quantum mechanics within the scope of rigorous mathematics. For this work he was awarded the Fields Medal in 1950.

Another winner of the Fields Medal was Paul Joseph \*Cohen (1934– ), for his fundamental work on the foundations of set theory. Cohen used a technique called “forcing” to prove the independence in set theory of the axiom of choice and of the generalized continuum hypothesis. Felix \*Hausdorff (1868–1942) was also an authority on set theory and its applications to sets of points and real analysis. His textbook *Mengenlehre* (Leipzig, 1935) is recognized as one of the great classics of set theory. The depth and simplicity of his research into fundamental problems was a source of inspiration in the rapid development of modern mathematics.

Johann Ludwig von \*Neumann (1903–1957) sought to develop the subject of quantum mechanics as a mathematical discipline, which led him to research in Hilbert space and the initiation of continuous geometry. In addition, Von Neumann made important contributions to measure theory, ergodic theory, continuous groups, topology, classical mechanics, hydrodynamic turbulence, and shock wave, and was a pioneer of game theory. Issai \*Schur (1875–1941) specialized in the theory of numbers, particularly with regard to finite groups and their representations. He is widely known as the author of “Schur’s lemma,” which states that the only operators that commute with a unitary irreducible representation are the scalar multiples of the identity operator. Schur is also credited with extending the finite group theory to compact groups, and is noted for his work in the representation theory of the ro-

tation group. André \*Weil (1906–1998) contributed widely to many branches of mathematics, including the theory of numbers, algebraic geometry, and group theory. Norbert \*Wiener (1894–1964) invented the science of cybernetics. As a mathematician, Wiener's main innovation was to develop a mathematics based upon imprecise terms reflecting the irregularities of the physical world. He sought to reduce these random movements to a minimum in order to bring them into harmony. During World War II, he applied his concepts to work connected with anti-aircraft defense, and this led to advances in radar, high-speed electric computation, the automatic factory, and a new science he created called cybernetics, a word he coined from the Greek word for "steersman," meaning the study of control. This followed his attempt as a mathematician to find the basis of the communication of information, and of the control of a system based on such communication. Wiener suggested the use of cybernetics in diagnostic procedures and indicated the similarity between certain types of nervous pathology and servomechanism (goal-directed machines such as guns which correct their own fixing malfunctioning). See also Benoit \*Mandelbrot and Robert \*Aumann.

**MATKAH, JUDAH BEN SOLOMON HA-KOHEN** (Ibn Matkah; first half of 13<sup>th</sup> century), author of the *Midrash ha-Hokhmah*, commonly considered the first of the great medieval Hebrew encyclopedias of science and philosophy. Judah was born in Toledo and belonged to the Ibn Shoshan family. He is listed in various books by the name Ibn Matkah. However, there seems to be little ground for maintaining this appellation, since in the sources it appears only once, in a 16<sup>th</sup>-century manuscript of the *Midrash ha-Hokhmah*, and there not in the body of the text but in an annotation at the top of the page.

Judah was a disciple of Meir ha-Levi \*Abulafia. At the age of 18 he became engaged in a correspondence with one of the scholars at the court of Emperor Frederick II, as a result of which he eventually moved to Italy. It is not known which position he held at the court, nor where he resided, perhaps in Lombardy. Around 1247 he composed the Hebrew version

of his encyclopedia, which, according to his own testimony, he wrote originally in Arabic when still in Spain. The Arabic original has not been preserved. The *Midrash ha-Hokhmah* consists of an introduction, two parts, and three treatises. The first part provides a survey of Aristotelian logic, natural philosophy, and metaphysics, primarily based on Ibn Rushd's Middle commentaries on these works, but occasionally also on other sources. The first treatise, an explanation of verses from Genesis, Psalms, and Proverbs, follows this part. The second part is devoted to geometry (based on Euclid's *Elements*), astronomy (based on Ptolemy's *Almagest* and al-Bitruji's *Principles of Astronomy*), and astrology (based on Ptolemy's *Quadripartitum*). To this part two treatises on the letters of the Hebrew alphabet and talmudic *aggadot*, respectively, are appended. Only the first treatise (Goldberg 1981) and the section on astrology (Spiro 1886) have been edited so far. There are two complete manuscripts of the work (Bodleian Library, Mich. 551 and Vatican ebr 338) and some 40 more of parts of the text; for a complete list see Manekin's Addendum in Harvey 2000, 475–79). It has not yet been established with certainty whether Judah ha-Kohen wrote other works (Langermann, in: Harvey 2000).

The *Midrash ha-Hokhmah* thus presents a combination of secular and religious knowledge. It constitutes the first systematic Hebrew survey of Aristotelian natural philosophy and metaphysics as interpreted by Averroes. In composing his encyclopedia Judah aimed at disseminating scientific secular learning, while at the same he sought to convey that true knowledge, or "divine wisdom," cannot be attained by Aristotelian metaphysics but by traditional Jewish religious learning. Throughout his work he displays a critical attitude towards Aristotelian philosophy. His encyclopedia should be seen as an attempt to delineate the value of secular knowledge against the background of the Maimonidean controversy and the debate about the permissibility of the study of secular science.

**MATLIN, MARLEE** (1965– ), U.S. actress. Born in Morton Grove, Illinois, Matlin lost most of her hearing at 18 months after a bout with measles. She learned English, Hebrew, and

sign language at Chicago's Congregation Bene Shalom / Hebrew Association for the Deaf and made her acting debut at age seven as Dorothy in a children's theater version of *The Wizard of Oz*. In 1987, at the age of 21, she won the Academy Award for Best Actress for her role as Sarah Norman in *Children of a Lesser God*, the youngest performer ever to receive the award and the only hearing-impaired person to be awarded the prize. Subsequently Matlin acted in numerous films, including *Walker* (1987), *It's My Party* (1996), *Hear No Evil* (1993), and *What the Bleep Do We Know?* (2004). She also appeared in numerous television series, including *Picket Fences* (1992), for which she won an Emmy; *ER* (1998); *Law and Order* (2004); *The West Wing* (2001, 2002, 2003, 2004, 2005); and *Desperate Housewives* (2005). When not acting, Matlin works with various charity organizations such as the Children Affected by AIDS Foundation, the Elizabeth Glaser Pediatric AIDS Foundation, the Starlight Foundation, and the Red Cross Celebrity Cabinet. Matlin is also the author of *Deaf Child Crossing* (2002), a novel based on her own childhood experiences. In 1993 Matlin married Kevin Grandalski (in Henry Winkler's back yard). Together, they have three children.

[Alex Frankel (2<sup>nd</sup> ed.)]

**MATLIN, MOSHE MEIR** (1855–1927), Orthodox rabbi. Born in Slutzk, Lithuania, he went to Kovno to study with Rabbi Isaac Elchanan Spector, who was chief rabbi of Kovno, and was ordained there. In 1891 he came to New York at the invitation of Rabbi Jacob Joseph to become a *dayyan* in the newly formed *bet din*. He then headed the *kashrut* supervision for Rabbi Jacob Joseph. For two decades he was a *mashgi'ah* for kosher meats and wine while teaching Talmud privately. When his son was ready for yeshivah he helped establish the Rabbi Isaac Elchanan Theological Seminary, named in honor of his mentor, and he offered lectures there though he was not a regular member of its faculty. He was also a founder of the Agudat ha-Rabbonim, which was linked to RIETS. Because of his deteriorating health, he tried moving to Montana and farming, but he could not attract others to so rural a life and apparently he was not a skilled farmer. He then moved to Sioux City, Iowa, where he served as a rabbi and *kashrut* supervisor for major meat companies.

[Michael Berenbaum (2<sup>nd</sup> ed.)]

**MATRIARCHS, THE.** The four “mothers” (*arba immahot*) of Jewish liturgy. In the Bible, \*Sarah, \*Rebekah, \*Leah, and \*Rachel are, somewhat asymmetrically, the wives of the three \*patriarchs, \*Abraham, \*Isaac, and \*Jacob. All except Rachel were buried in the Cave of Machpelah. Sarah is to be the mother of nations and kings (Gen. 17: 15–16), while Rebekah is to produce myriad offspring who will seize the city gates of the foe (Gen. 24:60). The matriarchs played significant roles in the Genesis story, especially to insure the succession of their sons to the divine promise first given to Abraham. Sarah in-

sists on the expulsion of Hagar in order to eliminate Ishmael as a rival claimant to Isaac (Gen. 21:10). Rebekah initiates Jacob's deception of Isaac so as to ensure that Jacob receive the birthright (Gen. 27). In Jewish tradition, the names of the matriarchs are specifically mentioned in the *Mi-she-berakh* prayer after the birth of a child and in the parental blessing of a daughter on the eve of Sabbath. However they are not named in other Orthodox liturgy. In recent times, under the influence of feminism, they are mentioned in prayers alongside the patriarchs in many non-Orthodox liturgies. Jacob's lesser wives Bilhah and Zilpah have not yet attained matriarchal status even among the heterodox.

## MATRIMONIAL PROPERTY.

### In Jewish Law

**GENERAL.** In Jewish law, spousal property relations are regulated by the *ketubbah*. Maimonides describes how, when a man marries, he undertakes to provide his wife with ten things and is entitled to four things (Yad, Ishut 11:1–4; see at length \*Husband and Wife). In general, according to Jewish Law each of the spouses has a specific role which determines the scope and nature of their respective rights to property and other rights and obligations. According to this view, the husband is analogous to a “foreign minister” or “finance minister” of the family and thus bears the legal obligation of supporting the family, which under Jewish Law is exclusively the husband's obligation. In order to discharge this obligation, he has possession and control of the property belonging to himself or his wife. Any property acquired during the course of the marriage is his, such that property bought with his own money belongs to him, while property bought by the wife with money that she earned is usufruct (*nikhsei melog*) – in other words, the principal belongs to her, while the control thereof, including the benefit of its proceeds, belongs to the husband, being intended for household needs.

### In Israeli Law

Since the early 1960s, a doctrine of “presumption of joint property between spouses” has developed in Israeli law. Initially, the Israeli Supreme Court recognized the presumption as governing the relationship between the couple vis-à-vis the estate tax authorities. Accordingly, where an apartment was registered exclusively in the name of a deceased husband, the Court ruled that half of it belonged to the wife, by force of the presumption of joint property, and therefore the husband's estate only included half of the apartment (CA 300/64 *Berger v. The Estate Tax Administrator*, 19(2) PD 240). Gradually however, the doctrine was recognized and applied in relations between the spouses themselves. The *Aftah* decision, delivered by a bench of five justices, is generally regarded as the landmark decision on this subject (CA 595/69 *Aftah v. Aftah*, 25(1) PD 561). Since then, Israeli case law regarding the joint property presumption has developed at all judicial levels, from the Family Court through to the Supreme Court. This has been regarded by some as an example of Israeli common law.

The doctrine, in essence, is based on the presumption that a couple living together harmoniously intend that all property acquired during the course of the marriage will be jointly owned in equal shares by both partners, even if registered in the name of one of them. The legal force of this presumption was originally based on what was perceived as the presumed intention of the parties. Case law notes that this intention is presumed even when the husband and wife have different levels of earnings, even when the wife does not work but takes care of the house and children, leaving to her husband the task of supporting the family. The parties were presumed to have intended that the family's income and its accumulated assets would be their joint property. Case law extended the scope of this presumption to include partnership in future assets, such as pension rights, continuing education funds, life insurance, etc. In the early stages of its development, the Court ruled that it applied to a couple's apartment, but that regarding commercial property, a greater level of proof was required to prove the intention of joint ownership. Over the years this distinction was abolished, and today the doctrine applies to all of the couple's assets, regardless of whether these consist of the couple's apartment or of other forms of savings, business assets, reputation, etc. At all events, the Supreme Court held that with respect to the couple's apartment, there could be cases in which it would be regarded as joint property even when purchased before the marriage, and part of the purchase price was paid during the course of the marriage (CA 806/93, *Hadari v. Hadari*, 48(3) PD 685).

As the doctrine developed, the empirical-consensual aspect was abandoned, and several judicial pronouncements indicated that the doctrine of joint spousal property is based on the principle of equality between spouses, in accordance with the general principles of the Israeli legal system, which regards equality as a fundamental value.

In 1973, the Spouses (Property Relations) Law, 5733 – 1973, was enacted. Pursuant to the law, a married couple constitutes a kind of obligatory delayed partnership that only finds expression when the marriage is terminated (by divorce or death). Until such time, the couples' assets are separated. Upon termination of the marriage (either through death or divorce), an accounting is made of the couple's assets; if more than half the assets are owned by or registered in the name of one of the spouses, that person pays half of the difference to his spouse (CA 1229/90 *Hanokh v. Hanokh*, 45(5) PD 584). Section 5(a) of the law explicitly provides that gifts and inheritances received during the course of the marriage are not considered as joint property.

There is disagreement in the case law as to whether the joint property presumption – which was a judicial, and not a legislative creation – applies to couples married after January 1, 1974 (the date that the new law came into force), or whether the only applicable law for the latter is contained in the provisions of the aforementioned law, that establishes an obligatory delayed partnership. This controversy is mainly relevant

when deciding on whether a party is entitled to claim half of the property prior to termination of the marriage, pursuant to the partnership doctrine, or whether a spouse's right to claim it arises only on the day that the marriage is terminated (on this matter see CA 1915/91, *Yaakobi v. Yaakobi*, 49(3) PD 529).

THE SUPREME COURT'S POSITION VIS-À-VIS RABBINICAL COURT DECISIONS. Since the early days of the State, the position of the Israeli Supreme Court has been that the rabbinical court must apply religious law, i.e., Jewish Law, not only in matters of personal status (e.g., the validity of marriages and divorces), but also in cases involving financial matters, insofar as “the nature of a Jewish religious court is to rule according to the religious laws of Israel” (CA 22/49 *Levanon v. Elmeliah*, 3 PD 68, 80; per Justice M. Silberg; see also HC 323/81 *Wilozni v. The Rabbinical Court of Appeals*, 36(2) PD 733, per Justice Menachem Elon). In its capacity as the High Court of Justice, the Supreme Court had traditionally taken this approach when confronting questions of whether to vacate rabbinical court judgments on financial and property disputes between couples. Questions of this nature were adjudicated by the rabbinical courts in accordance with Jewish Law, as part of their incidental jurisdiction, when arising in the course of divorce proceedings (see \*Bet Din, addendum). For example, one case concerned an apartment given by the husband to his wife during the course of a marriage, and subsequently registered by the husband in the wife's name. The rabbinical court was required to decide whether the gift was absolute or conditional, and in doing so it applied the Jewish Law, which in such a case presumed that the gift was conditional, having been given “subject to the understanding that if she leaves him, he would not be regarded as having given it to her.” The Supreme Court rejected the wife's argument that the rabbinical court exceeded the limits of its jurisdiction (HC 609/92 *Boehm v. The Rabbinical Court of Appeals*, 47(3) PD 288; per Deputy President Justice Menachem Elon).

Nonetheless, in a later decision, Justice A. Barak (then deputy president, and subsequently president of the Supreme Court) held that the Supreme Court's judicially created joint property doctrine must also be applied in the rabbinical court. His first argument was the obligation to act in accordance with the Woman's Equal Rights Law, 5711 – 1951, and the second, broader, argument was that the rabbinical courts are subject to the Israeli secular law with regard to property relations. Essentially, the underlying rationale of the decision is that Israeli civil law is territorial, and thus obligates all legal forums, including the religious or rabbinical courts (HC 1000/92 *Bavli v. The Rabbinical Court of Appeals*, 48(2) PD 221). (In accordance with this approach the Supreme Court also intervened when the rabbinical court ruled, in accordance with Jewish Law, on a matter involving an injunction against leaving the country. The Supreme Court's position was that the Israeli civil law should be applied, rather than the religious law on whose basis the rabbinical court had ruled – HC 3914/92 *Lev v. The Rabbinical Court of Appeals*, 48(2) PD 491.)

In an article published several years after his retirement from the bench, Professor Menachem Elon wrote a comprehensive critique of these decisions. Elon emphasized that the deviation from the Supreme Court's consistent position, whereby rabbinical courts rule in accordance with the religious law, was unjustified on a substantive level, as well as constituting a blow to the independence of the rabbinical courts and their ability to develop Jewish Law. In his article, Professor Elon proposed a number of options for the application of the joint property doctrine in accordance with Jewish Law (see \*Minhag; \*Dina de-Malkhuta Dina; and see Bibliography, Elon, "These Are Obiter Dicta" ("Eleh Hen Imrot Agav")). Professor Elon also warns that decisions such as these are liable to create tension between the various judicial forums, thereby jeopardizing the fundamental values of the legal system, which aspire, inter alia, to preserve peace and attain practical solutions to controversies between parties. Professor Elon further noted that decisions of this kind, while aspiring to harmony within the legal system, cause two other sources of disharmony: (a) between the law of the State and Jewish Law, which is the national law of the Jewish people, and (b) between the past (when the Jewish Law was developed) and the present and future, inasmuch as acceptance of Barak's position compromises the ability of the Jewish Law to develop, given that, in practical terms, the rabbinical courts in the State of Israel are the only forum in which Jewish Law is applied in an operative manner (see also the addendum to the entry \*Bet Din).

**RABBINICAL COURT'S RESPONSE TO THE SUPREME COURT'S POSITION.** In their respective responses to the *Bavli* decision, the *dayyanim* of the Rabbinical Court of Appeals were divided. Rav Shlomo Dikhovsky opined that the rabbinical courts were obligated to rule according to the joint property doctrine by force of the rule "*dina de-malkhuta dina*" (see his article cited in Bibliography). He contended that halakhic rulings should be consonant with the halakhic view that *dina de-malkhuta* also applies in Israel. Moreover, the rule applies equally to legislation enacted in a democratic regime and to laws that are the product of judicial legislation. Inasmuch as the Israeli Supreme Court and the Knesset itself views court decisions as a part of the binding legal system of the State, there is no difference between judicial decision and legislation. Therefore, in his opinion, such case law should not be subject to the distinction that the halakhic authorities make between explicit legislation – to which "*dina de-malkhuta dina*" applies – and to rulings that are the result of local judicial discretion, in which the rule is inapplicable. All citizens of the State are cognizant of the "joint property rule" and guide their conduct accordingly, giving it the status of a custom (see \*Minhag). Moreover, the fact that it is anchored in Jewish practice militates in favor of its acceptance by force of "*dina de-malkhuta dina*." Such is the case regarding the joint property doctrine, insofar as it derives from case law. Rabbi Dikhovsky finds halakhic anchorage for the Supreme Court's doctrine of joint property

in the pre-nuptial written conditions (*tena'im*) agreed upon by the couple. The *tena'im* provide that the couple "will have equal control of their assets, and will not smuggle or hide them from one another, but rather will live together in love and affection." Based on his interpretation of this document, R. Joseph Colon (Resp. Maharik, no. 57), imposed a ban on a husband who smuggled assets from his wife. Rabbi Dikhovsky contends that an additional step should be taken, by declaring that in our generation the presumption regarding the couple is not confined to their reciprocal trust that neither of them will smuggle assets away, but rather is broader, and confers the wife actual control over half of the assets acquired by her husband (in this matter he also relies on *Resp Maharsham* 1.45, dealing with a gift that the wife received from her sister).

The Spouses (Property Relations) Law, 5733 – 1973 provides that the law also applies to rabbinical courts, in the absence of explicit agreement that the religious law will apply (Section 13 of law). Following the enactment of this law, the presumption is that every couple who married after its enactment knew that this was the legal position, and thus consented to premise their financial relations on the joint property rule. Under such circumstances, the rule of "*dina de-malkhuta dina*" should clearly be applied to such couples, and the rabbinical court should rule according to the joint property doctrine, and certainly to its delayed version regarding couples married after January 1, 1974.

When the parties agree to have their property disputes governed by secular law, that agreement should be honored, and the rabbinical courts should apply the joint property doctrine, by force of that agreement. Rabbi Dikhovsky ruled accordingly when on appeal, he overturned a decision of the Regional Rabbinical Court that refused to apply the joint property doctrine even though both of the parties had previously signed an agreement that the rabbinical court would rule according to this doctrine. In addition to the rationale of honoring the parties' expressed will, Rabbi Dikhovsky warned that failure on the rabbinical court's part to apply the joint property doctrine is liable to impair its status, and result in the loss of its jurisdiction over financial and property matters, even in its current limited format (the decision in its entirety is published after the article in *Tehumin*, 18 (1998), 18ff.).

A different opinion on the matter was expressed by Rabbi Avraham Sherman – also a *dayyan* on the Rabbinical Court of Appeals (see *Tehumin*, 19 (1998), 32–40; 20 (1999), 205–20). In his view, legislative enactments and legal pronouncements that stem, not only from the imperative of creating an orderly society and correcting faults occasioned by particular circumstances, but which rather reflect the world view of the legislators and the judges of the state courts, do not fall within the ambit of "*dina de-malkhuta dina*," because this contradicts the world view of the Torah. Empirically, it cannot be claimed that the "joint property doctrine" is a custom accepted by all, nor may one, on that basis, make a presumption that all married couples marry with the intention of distributing their assets

equally. Furthermore, it is difficult to anchor the joint property doctrine in Jewish Law. When the law concerned is one that is intended to regulate the financial relations between a husband and wife, and not the well-being of the society and the State, the rule of “*dina de-malkhuta dina*” does not, according to this view, apply. Rabbi Sherman argues with Rabbi Dikhovsky regarding the significance of the written conditions, but the main thrust of his argument is on the theoretical level: is it appropriate to adopt the Supreme Court’s ideology, which is classified, in his view, as “the laws of the [non-Jewish] nations,” or to act according to the original Jewish law without deviating from it.

According to Rabbi Sherman, it is precisely the Supreme Court’s rationale for the joint property doctrine – namely, that it is a revolutionary step that alters relations within society, and intended to promote and ensure social justice based on gender equality – that justifies rejection of this doctrine by the rabbinical courts, which should rather continue to adhere to the traditional position of Jewish Law. He adds that it is precisely the application of the joint property doctrine, supplemented by the husband’s continued exclusive obligation to support his wife and children, which creates inequality and, rather than equalizing the parties’ status, confers a preferred status on the wife.

APPLICATION OF JOINT PROPERTY PRESUMPTION TO “COMMON LAW” SPOUSES. Another question that the Israeli legislature and case law was required to address in this (and other) contexts concerns the phenomenon of couples that were not married in a religious or civil ceremony, but live together as a couple and raise families. In the beginning of the 1980s the Supreme Court decided by majority that the joint property presumption applies to such couples, relying on its conclusion that their way of life attested to their intention to be partners in their property (CA 52/80 *Shahar v. Freedman*, 38 (1) PD 443, *per* justices Barak, Bach). In his dissenting minority opinion, Justice Sheinbaum argued that the joint property presumption should not be extended by way of judicial legislation to include common law spouses. Justice Sheinbaum reasoned that the parties had knowingly and intentionally decided to live as a couple without binding themselves by a ceremony of marriage. As such, in the absence of a formal agreement between them, the application of the joint property presumption would not be consistent with their expectations and anticipations regarding the nature and consequences of their connection, to which they had given expression by their failure to enter into the binding legally recognized marriage. Furthermore, the aforementioned law of 1973 omitted granting any recognition of the “common law spouses” or “common law marriages” and hence there is no justification for applying the presumption by way of judicial legislation.

In later rulings the Supreme Court extended the scope of the joint property presumption as it applied to common law marriage, stating that it was not limited exclusively to their

domestic assets, but also covered their commercial assets, although a higher level of proof should be required to persuade the court to apply the joint partnership presumption with respect to commercial assets or other non-domestic assets (CA 4385/91 *Salem v. Carmi*, 51 (1) PD 337).

The Supreme Court further held that where one of the partners in a common law marriage was killed in an accident, the surviving partner should be entitled to the same compensation (as a dependent) awarded by law to a surviving spouse who was legally married to the deceased (CA 2000/97 *Lindorn v. Karnit*, 55 (1) PD 12).

The common law spouse’s right to the pension of a government employee, or of a soldier killed in action, was already recognized by Knesset legislation in the early years of the State of Israel.

### Conclusion

Israeli law’s approach to gender equality is not unique to the question of spousal assets, but rather is broader in its scope. In the early 21<sup>st</sup> century, the Supreme Court considered equality as one of the constitutive values of Israeli law, and found anchorage for it in the Basic Law: Human Dignity and Freedom (notwithstanding that this subject is not explicitly mentioned in this law; see \*Human Dignity and Freedom). In a famous decision concerning the matrimonial property of a couple that immigrated from Iran, President Barak stated that according to the principle of good faith, it is presumed that the couple intended that the infrastructure of their relationship would be based on the basic principles of the legal system of Israel, one of which is the principle of equality. Therefore, by applying the doctrine of joint property, a social goal is accomplished, leading to the promotion of social justice (CFH 1558/94 *Nafisi v. Nafisi*, 50 (3) PD 573, 605).

We have noted the various approaches of the *dayyanim* of the Rabbinical Court of Appeals. It remains to be seen how the rabbinical courts will in fact rule in matters regarding spousal assets. In any event, the rabbinical courts (the regional and the Rabbinical Court of Appeals) decided that where each of the spouses owned an apartment prior to their marriage, there is no presumption of joint property, and they based their judgment on section 5 of the Spouses (Property Relations) Law. When their ruling came before the Supreme Court, President A. Barak did not interfere with their ruling, and rejected the petition against the Rabbinical Court (HC 3995/00 *Anon. v. Rabbinical Court of Appeals*, 56 (6) PD p. 883).

[Moshe Drori (2<sup>nd</sup> ed.)]

**MATSAS, JOSEPH** (1918–1986), Greek merchant, partisan, and researcher, the foremost Jewish intellectual in Greece after World War II. Matsas lived most of his life in Ioannina and devoted himself to his city, to his Jewish community, and to the research of the Jews in Ioannina and Greece.

Coming from a line of merchants, he owned a glass product store in the heart of the Ioannina bazaar, where Ioanniote Jewish merchants had worked and thrived for generations. By the beginning of World War II, he had finished his studies in philosophy at Aristotle University in Thessalonika (Salonika) and was teaching high school in a village near Kilkis. When the ghettoization process started in Salonika in late January–early February 1943, the youth of the Jewish community started to flee in small numbers to the mountains in order to join the partisans. The Jews were welcomed by the military arm ELAS, which belonged to the leftist resistance movement EAM (The National Liberation Front), and Matsas was one of the first to leave to join.

After facing great difficulties in escaping from Salonika, crossing rivers and avoiding German-controlled bridges, he reached the partisans. Since he had been a fighting soldier in the Greek army in the Albanian campaign, he was integrated into ELAS as fighting combatant, together with nine other Jews in a unit of 40 men. At the end of 1943, he went with his unit to Western Macedonia where the allies dropped equipment to them by parachute. In general, his unit lived under difficult circumstances in the mountains of Pieras, Vermious, and Pindou.

After the war Joseph Matsas established himself in Ioannina. In 1945 he was president of the Ioannina Jewish Council and in 1947 Matsas became the secretary of the Jewish community.

Matsas's main scholarly contribution lay in his research on the language, culture, and ancient traditions of the Romaniot Jews of Ioannina. His research into Judeo-Greek was a pioneering and valuable scholarly effort. In Ioannina in 1953 he published *Yianniotika Evraika Tragoudia* ("Greek Jewish Songs"), which consisted of 16 hymns taken from two manuscripts written between 1853 and 1870, translated into modern Greek. In 1955 he also published *Ta Onomata Ton Evraion Sta Ioannina* ("The Names of the Jews of Ioannina").

In the field of poetry he researched Judeo-Greek *kinot* (elegies) from Corfu from as early as the 13<sup>th</sup> century. He uncovered valuable collections of centuries-old Judeo-Greek *\*piyyutim* from Ioannina and contributed research and documentation to Jerusalem's Ben-Zvi Institute on Judeo-Greek poetry and language. He published several articles on the unique festivities of the Sicilian Purim celebrated in Ioannina.

**MATSAS, NESTORAS** (1932– ), Greek author, painter, and motion picture director. Born in Athens, Matsas was in hiding during the Nazi occupation of Greece. During this time he was baptized into the Greek Orthodox Church, but his Jewish background and tragic memories of the war were to find expression in several of his books. When he was only 16 some of his stories appeared in the periodical *Nea Estia*. In 1950 he published three plays: *Animenei* ("Unmarried"), *Fleghomeni batos* ("Burning Bush"), and *Yiom Kipur* ("Yom Kippur"). *Animenei*, written in collaboration with K. Asinakopoulos, was a considerable stage success. His first novel was *Klisti ourani* ("Closed Heavens," 1955), a story of life in the slums of Athens. He also published several volumes of short stories. Two of Matsas' most significant earlier works are on Jewish themes. *I meghali irini* ("The Great Peace," 1957), a collection of three short novels, dealing with an Athens Jewish family, is dedicated to the author's father "who sleeps in the barren earth of Auschwitz." Another novel, *O Messias* ("The Messiah," 1959), describes the tragic fate of a Greek Jew who survives imprisonment in Dachau but who, on his return to Greece, entertains the delusion that he is the Messiah. Other books by Matsas include two children's novels, the prizewinning *Khoris aghapi* ("Without Love," 1960) and *To koritsi me t'asteria* ("The Girl with the Stars," 1968); *To paramithi tou Theofilou* ("The Fairy Tale of Theophilus," 1963), a fictional biography of a Greek painter that was awarded the National Prize for literature; *Plevsate vorios Sporadhon Skyiathos* ("Travel North to the Sporades, Scyathos," 1964), verse written in the style of the Psalms and containing "Letters from Joseph to the sleeping Rebecca"; and *O mikros stratiotis* ("The Little Soldier," 1967), an anti-war novel. Later in his literary career, he returned to chronicling his Holocaust experience in hiding in Athens in his book *I Istorია Ton Hamenon Peristerion: Imerogio Enos Paidou Ston Emfilio* ("The History of the Lost Pigeon: Diary of a Boy in the Civil War," 1995). He also wrote the popular biography of Alexander the Great titled *To Hirografo Tis Babilonas, Megalexandro Apomnimonevmata* (1980), which was translated into French as *Les Memoires D'Alexandre Le Grand, d'apres Le Manuscrit de Babylone* (1983). Matsas wrote the scripts for many documentary films and directed feature films.

**MATT, C. DAVID** (1887–1951), U.S. rabbi. Born in Kovno, he was raised in Philadelphia where he came with his family in 1890. C. (Calman) David Matt grew up in Rabbi Bernard Levinthal's synagogue; Levinthal's sons Rabbi Israel Levinthal and Judge Louis Levinthal were literally life-long friends and spoke at his funeral. He went to public school, Yeshiva Mishkan Israel, and Gratz College. He earned his B.A. in 1909 at the University of Pennsylvania and was ordained at the Jewish Theological Seminary in 1913.

As a young rabbi he served in Adath Jeshurun in Minneapolis, the first English-speaking rabbi the then 18-year-old Orthodox congregation ever had, and oversaw the transition toward a newly emerging Conservative Judaism. He laid

plans for a new building and organized the religious school. He was the associate editor of the *American Jewish World*. During World War I, he served as a volunteer representative of the Jewish Welfare Board at Fort Snelling. After 15 years he left for Beth David in Buffalo (1927–29), where he served two years, and then went back to Philadelphia, where he served as rabbi of the West Philadelphia Jewish Community Center. He remained there for the rest of his life. Matt was an ardent Zionist and served as president of the Philadelphia Board of Rabbis and of the local Rabbinical Assembly.

Matt's columns appeared in the *American Jewish World* and the *Anglo-Jewish Press*. His work also included texts of radio sermons, 1920s–1950. He worked as an arbitrator in the Jewish community in Philadelphia, particularly during a dispute among *mohelim*. Also of note is his list of yeshivot in Europe and Palestine in the 1930s, with estimates of the sizes of their student bodies. These reflect Rabbi Matt's efforts to raise money for the yeshivot. He had, in the words of Israel Levinthal, "a poetic soul, which made him a dreamer and interpreter of Israel's fondest hopes in beautiful verse." Louis Levinthal spoke of his "simplicity, his earnestness and sincerity."

He made his mark as a poet and published his sermons. Among his five children were Rabbi Herschel Matt, himself a sensitive poet and liturgist. His grandson Daniel Matt is translating the Zohar into English in a multi-year project that has gained wide respect. C. David Matt's papers are found at the Jewish Theological Seminary.

**MATTATHIAS**, priest from the village of Modi'in, and first leader of the uprising of the \*Hasmoneans against \*Antiochus IV Epiphanes (167 B.C.E.). A number of discrepancies appear regarding the genealogy of Mattathias, and it is not certain that he was a native of Modi'in. According to 1 Maccabees 2:1 Mattathias was "the son of Johanan, son of Simeon, a priest of the family of Joarib" (הוֹרִיבִי; cf. 1 Chron. 24:7) who "moved away from Jerusalem and settled in Modi'in." Josephus twice alludes to Mattathias' background. In *Antiquities* 12:265 he is described as "living in Modi'in in Judea... the son of Johanan, the son of Simeon, the son of Asamonaius, a priest of the family of Joarib, and a native of Jerusalem." In *Wars* 1:36 Mattathias is called simply "son of Asamonaius, a priest of a village called Modi'in." It appears that the name "Asamonaius" or "Hasmonean" is a family title, although later rabbinic tradition regards "Hasmonai" as a particular person e.g. "... neither did I abhor them" [Lev. 26:44] – in the days of the Greeks, when I raised up for them Simeon the Righteous and Hasmonai and his sons, and Mattathias the high priest" (Meg. 11a; some variants however omit "Hasmonai and his sons"). The anachronistic description of Mattathias as high priest is also found in tractate *Soferim* (20:6, ed. M. Higger (1937), 346), and was inserted into the special prayer recited on Hanukkah.

Although a number of minor differences exist, the general descriptions of Mattathias' activities, transmitted by Josephus and in 1 Maccabees are fairly similar. A company of Greek officers arrived at Modi'in with the intention of forcibly implementing the king's ordinances regarding sacrifices to idols. As Mattathias was held in high esteem by the villagers, he was ordered to begin the sacrificial offerings. When Mattathias refused, another Jew proceeded to fulfill the officer's command. Mattathias then attacked and killed both that Jew and the Greek officer at hand (named Appeles in Jos., Ant.; Bacchides in Jos., Wars), and together with his sons and a number of similarly minded fellow countrymen sought refuge in the desert and mountains of Judea. One such group of fugitives was attacked on the Sabbath. Refusing to defend themselves on the day of rest, the group, numbering about 1,000, was almost totally annihilated. This led Mattathias to decree that defensive military action is permissible on the Sabbath (cf. M.D. Herr, in: *Tarbiz*, 30 (1961), 243–4). Both 1 Maccabees and Josephus further attribute to Mattathias the circumcision of all those uncircumcised children brought up under the influence of enforced Hellenization. Mattathias led the rebellion for only one year, and before his death appointed two of his five sons to continue as leaders of the revolt: \*Judah Maccabee was declared military commander and Simeon the \*Hasmonean counselor. Of Mattathias' other three sons, \*Johanan b. Mattathias and \*Eleazar b. Mattathias both met violent deaths during the early years of the uprising while \*Jonathan, who succeeded Judah, was killed by treachery in 161 B.C.E.

[Isaiah Gafni]

**MATTATHIAS** (or **Mattityah ben Moshe?**; 15<sup>th</sup> century), Spanish or Provençal Hebrew poet. Mattathias has sometimes been identified with \*Mattathias ha-Yizhari, one of the masters who represented the Jewish communities of Aragon at the Tortosa disputation (1413–14) and the author of a commentary on Psalm 119 with references to the disputation, a commentary to *Pirkei Avot* (preserved only in part), and a lost homiletical commentary to the Pentateuch. This identification is not accepted by all scholars. Z. Malachi has even shown that it is very unlikely.

The \**maqāma Ahituv ve-Zalmon*, attributed to Mattathias and written before 1453, was inspired by the religious \*disputations held in Spain. Its action is simple. The pagan queen of a legendary island sends three messengers, Zalmon, Eker, and Ahitub, to inquire into the religions of the world. Seven years later, the messengers return and engage in a stormy discussion. Zalmon, who was in Hebron and became converted to Islam, accepts the arguments of Ahitub, himself converted to Judaism in Spain, and becomes a Jew. Eker, converted to Christianity in Constantinople, argues in favor of that reli-

gion; however, since the queen and her court, persuaded by Ahitub, have also adopted Judaism, Eker hangs himself in anger, bringing the story to an end. Most of this narrative is still in manuscript.

Another allegoric *maqāma*, *Begidat ha-Zeman*, in which the characters receive symbolic names, that was likewise written around 1450, also bears the name of a poet known as Mattathias; it is almost certain that both *maqāmāt* were written by the same author. Both narratives, with clear pedagogic, apologetic, and moral purpose, resemble each other in style and vocabulary. The second is written in the first person and the personal element is important. The author repents the sins of his youth, describing his experiences so that his tale might serve as a warning. It was printed in 1560 (Tihingen) and three more times before the end of the 17<sup>th</sup> century. Z. Malachi has found in this composition some autobiographical clues: according to him, the book was written in 1450 in Aix-en-Provence, when the author was 50 years old; he was probably born in Spain and left for France at the age of 19, becoming familiar with Ashkenazi culture.

[Yonah David / Angel Sáenz-Badillos (2<sup>nd</sup> ed.)]

**MATTATHIAS BEN SIMEON**, son of \*Simeon the Hasmonean. During the winter of 135 B.C.E., Mattathias, together with his mother and brother Judah, was seized at a banquet given in Simeon's honor by his son-in-law \*Ptolemy, who was governor of Jericho. Simeon was killed, probably at the instigation of the Syrian monarch Antiochus VII Sidetes, but a third son of the high priest, John \*Hyrcanus, managed to escape. Ptolemy withdrew to the nearby fortress of Dok, where the two brothers and their mother were tortured in full view of the grief-stricken Hyrcanus, who was unable to take the stronghold. When the sabbatical year came around, it was impossible to maintain an army for any great length of time, and Hyrcanus was forced to withdraw. Ptolemy thereupon killed the woman and her two sons and fled to Philadelphia (but according to Maccabees they were slain together with their father; 1 Macc. 16:15 ff.; Jos., *Wars*, 1:54 ff.; Jos., *Ant.*, 13:228 ff.).

**BIBLIOGRAPHY:** Schuerer, *Hist.*, 66; Graetz, *Hist.*, 1 (1891), 530.

[Isaiah Gafni]

**MATTATHIAS HA-YIZHARI** (14<sup>th</sup>–15<sup>th</sup> century), Spanish scholar. He was a descendant of a Narbonne family which immigrated to Aragon after the expulsion from France in 1306. Mattathias, who had a profound knowledge of philosophy,

was apparently a pupil of Ḥasdai \*Crescas. A commentary on Psalm 119 is attributed to him (Venice, 1546, partly translated into Latin by Philippe d'Aquin, Paris, 1629). Mattathias also wrote a number of other works, including a commentary on *Avot* (extant in Ms.) and homiletical explanations to the Pentateuch, known only by later references. It is possible, however, that at least some of them were written by an earlier Mattathias ha-Yizhari, perhaps his grandfather. He played a prominent but not overly courageous part in the Disputation of \*Tortosa (1413–14), where he was one of the representatives of the Saragossa community.

**BIBLIOGRAPHY:** Baer, *Spain*, index; Renan, *Ecrivains*, 432 f.; S. Buber, *Midrash Tehillim* (1891), introd.; A. Pacios López, *Disputa de Tortosa* (1957), index.

**MATTERSDORF** (official name since 1924, **Mattersburg**; Hung. **Nagymarton**), town in \*Burgenland, Austria; one of the "Seven Communities," and after 1813 one of the "Five Communities." The town was traditionally divided into two districts, Izraelita-Nagymarton and Keresztény ["Christian"]-Nagymarton. The Jewish neighborhood comprised a separate administrative unit (see \**Politische Gemeinden*) until 1902. Jews are traditionally believed to have settled there in about 800 or 1222. A tablet on the synagogue wall dates its building to 1354. At any rate, Jews were already living there before the Turkish conquest in 1526, when Mattersdorf absorbed numerous refugees from \*Sopron. In 1569 there were 67 Jews living in 11 houses. After 1622 the community came under the protection of the Esterházy family. In 1694 the Esterházy granted the Seven Communities letters of protection, subsequently renewed four times and newly formulated in 1800. Some of the Jews were expelled by Leopold I in 1671 but were allowed to return in 1675. The community was looted several times by the Turks. In 1744, some 352 Jews inhabited 30 houses; in 1770, 179 Jewish families were registered; in 1785, some 767 persons lived in 43 houses; permission was granted to build 12 more houses in 1818. They paid fees to the towns of Sopron and Wiener \*Neustadt for the right to trade within their boundaries. In 1848 there were 1,500 Jews in the town (one-third of the total population). From the beginning of the 20<sup>th</sup> century their numbers declined due to emigration to larger towns; in 1902 they had fallen to 752 and at the time of the *Anschluss* (1938) to 511.

The centuries-long autonomy gave rise to a powerful communal regime, which regulated not only religious but also economic and social life. Among the prominent rabbis who served the community were Gershon b. Abraham \*Chajes; Jeremiah \*Mattersdorf; Issachar Baer b. Samson \*Bloch; Moses \*Sofer; and Simon \*Sofer. The Mattersdorf yeshivah attracted students from all over Europe. In 1938 the Nazis destroyed the synagogue and other communal institutions and damaged the Jewish quarter. Part of the community emigrated and the remainder were deported to the death camps. The remains of the Jewish quarter were demolished during development projects, and by 1970 only an old cemetery was left to com-

memorate this ancient community. About 7,000 documents from the community's archives have been preserved in the central state archives in Eisenstadt. A Kiryat Mattersdorf was founded in Jerusalem in 1963, and some of its inhabitants originated from there.

[Yehouda Marton]

**MATTERSDORF, JEREMIAH BEN ISAAC** (d. 1805), Hungarian rabbi and author. Born in Oswiecim, Galicia, Mattersdorf originally had the family name of Rosenbaum, but took the name Mattersdorf after serving as rabbi of the community of that name in Burgenland. He was appointed rabbi of Mattersdorf (now Mattersburg) around 1770 and stayed there until about 1801, when he went to Abaujszanto, remaining there until his death. Mattersdorf was renowned for his extensive knowledge of *halakhah*. His spiritual authority extended beyond the borders of Hungary. In 1791 he gave his approbation to the edition of the Talmud published by Joseph Hraschanszky, who called him one of the most distinguished rabbis of the generation. In Mattersdorf he headed a yeshivah which had among its students Aaron \*Chorin, the pioneer of religious reform in Hungary. Among Mattersdorf's works is a commentary to Ḥayyim Shabbetai's *Moda'a ve-Ones* (Lemberg, 1798) under the title *Moda'ah Rabbah*, published along with his son Joab Mattersdorf's commentary *Moda'ah Zuta*. He gave approbations to a number of works, and is mentioned in the responsa of Moses \*Sofer. L. Loew states that he wrote the comments on the *Sha'arei Shibbolet* of Isaac b. Reuben, but this work has been attributed to other authors.

**BIBLIOGRAPHY:** L. Loew, *Gesammelte Schriften*, 2 (1890), 257; M. Pollák, in: *IMIT*, (1900), 164–6; J.J.(L.) Greenwald (Grunwald), *Ha-Yehudim be-Hungaryah* (1913), 53f.; P.Z. Schwartz, *Shem ha-Gedolme-Erez Hagar*, 1 (1913), 51b no. 243.

[Yehouda Marton]

**MATTHAU, WALTER** (1920–2000), U.S. actor. Born in New York to Russian immigrant parents, Matthau started out selling soft drinks and playing bit parts at a Yiddish theater at age 11. After graduating from Seward Park High School, he worked as a forester, gym instructor, and boxing coach for police officers. During World War II he served on an Army Air Force bomber in Europe and returned home a sergeant with six battle stars. Afterwards he attended acting classes and performed on Broadway. Matthau appeared in more than a dozen Broadway plays, among them *Anne of the Thousand Days* (1949), *Will Success Spoil Rock Hunter* (1955), *Once More, with Feeling* (nominated for a Best Actor Tony, 1959), *A Shot in the Dark* (won a Tony Award for Best Supporting Actor, 1962), and *The Odd Couple* (Best Actor Tony, 1965).

Matthau made his film debut in *The Kentuckian* in 1955 and from then acted in more than 40 films, including *Gang-*

*ster Story* (1960), *Lonely Are the Brave* (1962), *Charade* (1963), *Fail-Safe* (1964), *Goodbye, Charlie* (1964), *Mirage* (1967), *Hello Dolly!* (1969), *Cactus Flower* (1971), *A New Leaf* (1972), *Plaza Suite* (1972), *Charley Varrick* (1973), *Pete 'n Tillie* (1974), *The Laughing Policeman* (1974), *The Taking of Pelham One Two Three* (1974), *Earthquake* (1974), *The Bad News Bears* (1976), *House Calls* (1978), *Hopscotch* (1980), *California Suite* (1980), *Little Miss Marker* (1981), *Pirates* (1986), *JFK* (1991), *Dennis the Menace* (1993), *I.Q.* (1994, as Albert Einstein), *I'm Not Rappaport* (1996), and *Hanging Up* (2000).

In 1966 Matthau won an Oscar as Best Supporting Actor for his role as "Whiplash Willie" Gingrich in *The Fortune Cookie*, co-starring with Jack Lemmon with whom he appeared in a number of films, including *The Odd Couple* (1968), *The Front Page* (1974), *Buddy, Buddy* (1981), *Grumpy Old Men* (1993), *Grumpier Old Men* (1995), and *The Odd Couple II* (1998). Matthau was nominated twice for Best Actor Oscars, for his roles in *Kotch* (1971) and *The Sunshine Boys* (1975).

Matthau appeared in several TV movies, such as *Awake and Sing!* (1972), *The Incident* (1990), *Mrs. Lambert Remembers Love* (1991), *Incident in a Small Town* (1994), and *The Marriage Fool* (1998).

[Jonathan Licht / Ruth Beloff (2<sup>nd</sup> ed.)]

**MATTHIAS BEN THEOPHILUS**, the name of two high priests at the close of the Second Temple period.

#### **Matthias ben Theophilus I (early first century C.E.)**

MATTHIAS BEN THEOPHILUS I was for all practical purposes the first high priest originating from Erez Israel to be appointed by Herod after \*Aristobulus III. He succeeded \*Simeon b. Boethus, the king's father-in-law, and preceded Joezer b. Boethus (see \*Boethusians). Josephus notes that Matthias was a Jerusalemite (Ant., 17:78). He also relates that on one occasion Matthias was prevented from officiating on the Day of Atonement through being ritually unclean, and \*Joseph b. Elem had to officiate in his place (*ibid.*, 165). This incident is also recorded in the Talmud (Yoma 12b; TJ, *ibid.*, 1:1, 38d). Herod, although on his deathbed, replaced Matthias as he held him partially responsible for the disorders in the Temple caused by the two patriots, Judas b. Sepphoraeus and Matthias b. Margalus. It would appear that Matthias was connected in some way with the house of \*Anan and presumably it was no coincidence that one of Anan's sons was named Matthias (Jos., Ant., 19:316, 342) and another \*Theophilus (*ibid.*, 18:123; 19:297). It is possible that the elder Anan married the daughter of Matthias.

#### **Matthias ben Theophilus II (late first century C.E.)**

MATTHIAS BEN THEOPHILUS II was appointed high priest by Agrippa II in succession to \*Joshua b. Gamala (*ibid.*, 20:223). It seems probable that he was the son of Theophilus b. Anan. His period of office witnessed the outbreak of the Jewish War (66 C.E.).

Schalit, *Koenig Herodes* (1969), 635, 638. MATTHIAS BEN THEOPHILUS II: Graetz, *Hist*, 2 (1893), 249ff., 752ff.; Schuerer, *Gesch*, 2 (1907<sup>4</sup>), 273, no. 27; Klausner, *Bayit Sheni*, 5 (1951<sup>2</sup>), 24, 235.

[Menahem Stern]

**MATTIAH (Mattityahu) BEN HERESH** (second century C.E.), *tanna*, mentioned twice in the Mishnah (Yom. 8:6, Avot 4:15), and a few times in the tannaitic midrashim. One tannaitic midrash lists Mattiah among a group of scholars who fled Ereẓ Israel (apparently after the fall of \*Bethar), who, as they were leaving, were overcome with the love of Ereẓ Israel, tore their clothes, and proclaimed, tears streaming from their eyes, that one who dwells in Ereẓ Israel is as if he has fulfilled all the commandments of the Torah (Sif. Deut. 80). Another tannaitic midrash (Mekh. of R. Ishmael, Baḥodesh 7) relates that Mattiah once went to visit R. Eleazar Hakapar in Lydda to inquire about one of R. Ishmael's teachings. According to the Babylonian Talmud (Sanh. 32b) Mattiah founded a yeshivah in Rome, and, according to the Talmud, when \*Simeon b. Yoḥai visited Rome to protest to the emperor against the Palestinian governor's emergency decrees, Mattiah consulted him on points of *halakhah* and *aggadah* (Me'il. 17a; Yoma 53b).

In Mishnah Yoma (8:6) Mattiah applies the principle that Sabbath prohibitions may be overruled in order to save human life to a specific case, but he is not accredited as the author of the principle itself (cf. Tosef. Shab. 15:17, Yoma 85b). He is quoted in both the Babylonian and Jerusalem Talmuds (e.g., Yev. 61b; TJ, Sanh. 10:1, 27c). His most famous maxim is: "Be a tail to lions, and not a head to foxes" (Avot 4:15; in TJ, Sanh. 4:10, 22b), which stands in contrast to the Roman proverb, "Be a head to foxes, rather than a tail to lions" (cf. Zohar Ḥadash, Song, 18b). In the later *aggadah* Mattiah's piety became legendary. The *Tanḥuma* relates that on one occasion, he deliberately blinded himself rather than be seduced by Satan (who appeared to him in the guise of a beautiful woman). He only accepted healing at the hands of the angel Raphael, after a divine promise that he would not be tempted again (Yal., Gen. 161).

[Stephen G. Wald (2<sup>nd</sup> ed.)]

**MATTNAH** (second half of third century C.E.), Babylonian *amora*. He studied under \*Samuel (Mar Samuel) and was considered one of his outstanding pupils (Er. 6b; Mak. 3b). He quotes numerous halakhic decisions in his name (Ket. 43b; Nid. 27a; et al.) He also studied under \*Rav (Shab. 24a). He was a younger colleague of Judah b. Ezekiel (Kid. 70b), and when, after the death of Rav and Samuel, R. Judah taught at Pumbedita, Mattnah taught at the neighboring town of Popuna (Ḥul. 139b). He is one of the authors of the tradition that the fourth blessing of the Grace after Meals ("He who is good,

and bestows good") was instituted by the rabbis after permission was granted to bury the slain of \*Bethar, whose bodies had miraculously not decomposed (Ber. 48b). Mattnah had three sons, Aḥadboi, Tobi, and Ḥiyya (Nid. 60b; BB 151a), all of whom were scholars. Among the sages of the next generation who were his pupils and who quote decisions in his name was R. Zeira (Ber. 36a). Another *amora* called Mattnai lived in the fourth century. He was a pupil of Ḥisda (Kid. 32a), and a colleague of Abbaye (Ket. 35b).

**BIBLIOGRAPHY:** Hyman, *Toledot*, 915–7.

**MATTUCK, ISRAEL I.** (1884–1954), Liberal rabbi. Born in Lithuania, he came as a child to the United States with his family and grew up in Worcester, Massachusetts. A graduate of Harvard University, he was ordained at the Hebrew Union College in 1910 having only spent two years in residence. He held a pulpit in Far Rockaway, New York, for a year and then went to England to serve a young congregation, the Liberal Synagogue in London. He served as senior minister for 36 years and then after 1947 was minister emeritus. Under his leadership the synagogue grew into one of the largest synagogues in London. The building that he helped build was bombed in World War II, but Mattuck lived to see it restored and rededicated. He was succeeded by his disciple and son-in-law Rabbi Leslie Edgar.

He was a leading figure, perhaps the leading figure in English Liberal Jewry, its philosopher and its public face. He was known as one of the "Three Ms": Montagu, Montefiore, and Mattuck. He helped form the Union of Liberal and Progressive Synagogues and helped establish the World Union for Progressive Judaism in 1926 and served as its first chairman from 1926 until his death. He was chairman of the Society of Jews and Christians. He compiled and edited the Liberal prayer book, first in three volumes in 1923–26 and in a revised edition in 1937.

He is the author of several books: *What Are the Jews* (1939); *The Essentials of Liberal Judaism* (1947); *Jewish Ethics* (1953); and *The Thought of the Prophets* (1953). His last two works were written after a long illness that afflicted his body, but left his mind as clear and lucid as ever.

He also edited *Aspects of Progressive Jewish Thought* (1955), which was dedicated in honor of Leo Baeck's 80<sup>th</sup> birthday. It was published posthumously.

[Michael Berenbaum (2<sup>nd</sup> ed.)]

**MA'TUK, SULAYMAN BEN DAVID** (18<sup>th</sup> century), *paytan* and astronomer who lived in Baghdad. Ma'tuk was a descendant of R. Ma'tuk, the *nasi* of the Jewish community of 'Ana. The latter fled to Baghdad with his family in the first quarter of the 17<sup>th</sup> century, under the threats of the tyrannical governor who had persecuted the community. Of Sulayman's *piyyutim*, 16 are known, and about half of them were included in books published in Baghdad and India; they are

still familiar to Iraqi Jews. During the lifetime of his grandson R. Judah b. Jacob, the family name was changed to Yehuda. The family's descendants include two modern scholars, the brothers R. Isaac Yahuda and Prof. Abraham Shalom \*Yahuda.

**BIBLIOGRAPHY:** A. Ben-Jacob, *Yehudei Bavel* (1965), 95.

[Abraham Ben-Yaacob]

**MATZ, ISRAEL** (1869–1950), U.S. manufacturer, philanthropist, and patron of Hebrew literature and scholarship. Matz, who was born in Kalvarija, Russian Poland, immigrated to America in 1890. He became an accountant, later entering the drug business. In 1906 he founded the Ex-Lax Company and served as its president. Long an admirer of Hebrew authors, Matz aided Eliezer \*Ben-Yehuda in the publication of his Hebrew-language thesaurus. From 1922 to 1925 he was publisher of the Hebrew monthly *Ha-Toren*, edited by Reuben \*Brainin. Matz was also a founding patron and honorary chairman of the Hebrew monthly *Bitzaron*. He established the Israel Matz Foundation in 1925 for the support of Hebrew authors. A pioneer Zionist, in 1928 he founded a company in Palestine called Gan Ḥayyim for the development of an orange plantation. Matz also contributed to various schools of higher learning.

[Jacob Kabakoff]

**MATZAH** (*mazzah*; **matzo**; Heb. מצה), unleavened bread made from one of five species of grain – wheat, barley, spelt, rye, and oats – mentioned in the Torah, and the only bread which is permitted for use during \*Passover. *Matzah* (pl. *matzot*) is the object of a specific commandment calling for *matzah* to be eaten on Passover because the children of Israel “baked the *matzot* of the dough which they had brought forth out of Egypt, for it was not leavened; because they were thrust out of Egypt and could not tarry” (Ex. 12:39) – the speed with which *matzot* are prepared identifies it with the bread made in the Bible, when there was no time to prepare ordinary bread (cf. Gen. 18:6; 19:3). To fulfill the biblical precept on the first night of Passover, the *matzah* must be made from “guarded” grain, and must be processed with the intent – *kavvanah* – of fulfilling the commandment. Only grains capable of fermentation are valid for the manufacture of *matzah*, and such grains are therefore limited to the five species. In practice, however, only wheat has been used historically.

Ashkenazi *matzah* is a hard thin wafer, while Sephardim make softer, thicker *matzot* by using a much more watered batter. This soft *matzah* does not have a long shelf life, which necessitates baking and freezing it shortly before Passover, and indeed, before the advent of freezers, Sephardim baked *matzah* daily during the holiday.

*Matzah* is referred to as *leḥem oni*, “the bread of affliction” (Deut. 16:3). On this basis the \*Karaites, who interpreted the Bible literally, make *matzah* only from barley, which was used to make the poor man's bread. The same phrase is used

in the talmudic discussion of whether *matzah* made from flour mixed with wine, oil, honey, or eggs instead of water may be used on Passover. Although it is not regarded as fermenting if there is no admixture of water, *matzah* made from any such ingredient is forbidden on the first night since it constitutes “*matzah ashirah*,” the “*matzah* of opulence,” in contrast to the “bread of affliction” (Pes. 36a). Generally, *matzah ashirah* was permitted only for the sick or the aged (OH 462). Rashi, and subsequent Ashkenazi decisors (*posekim*), give credence to the concern that liquids other than water increase the rate of fermentation, and therefore prohibit healthy people from using egg *matzah*, i.e., *matzah ashirah*, for all of Passover. In recent years, people with celiac – an intestinal disorder with a dangerous reaction to the gluten in wheat – have been able to fulfill the *mitzvah* with oat *matzah* made from a specific non-gluten strain of oats. Spelt *matzah* is also commercially available for people with medical needs.

### The Duty of Eating *Matzah*

Whereas the prohibition against eating *ḥamez* or having it in one's possession applies to the whole of Passover, the positive commandment of eating *matzah* generally applies only to the first night (in the Diaspora the first two nights). According to R. \*Elijah of Vilna, one fulfills a commandment to eat *matzah* on the other days of Passover as well. In Temple times, this duty was based on the verse “with *matzah* and bitter herbs shall they eat it,” i.e., the Paschal lamb, and is also based on the verse “In the evening ye shall eat *matzot*” (Ex. 12:18). In many circles, only “*matzah mitzvah*,” i.e., *matzot* baked on Passover eve, is used at the *seder*. This is reminiscent of the Passover sacrifice, which in Temple times was offered on Passover eve and eaten at the *seder*. There is also the widespread custom of eating only “*matzah shemurah*” on the night of the *seder*, although some, as a special act of piety, eat it throughout the festival.

One must abstain from eating *matzah* on the eve of Passover beginning with sunrise on the 14<sup>th</sup> of Nisan, but a long-time ḥasidic custom was also adopted to abstain beginning at Purim a month before, while others refrain for two weeks starting with Rosh Ḥodesh Nisan.

### The Flour

The manifold precautions which must be taken at the various stages of the *matzah*'s production are designed to prevent any fermentation whatsoever of the flour. The flour suitable for the baking of *matzah* can be divided into three categories of decreasing stringency:

(1) “guarded flour,” which is closely supervised from the time the wheat is harvested and is used for the preparation of *matzah shemurah*;

(2) “Passover flour,” where supervision to prevent fermentation begins with the milling of the wheat;

(3) “ordinary flour,” which does not have supervision until the point of being mixed and is used to make “ordinary,” or machine, *matzah*.

### The Preparation

Under normal conditions of climate and temperature, flour mixed with water begins to ferment in approximately 18 minutes. Should the water be above room temperature, however, the process is accelerated, but it can be delayed by the continual manipulation of the dough. In order to prevent water from becoming too warm, only “*mayim she-lanu*” – “water which has rested” (Pes. 42a) – i.e., water which has been left in a vessel overnight to reach room temperature – is used in the baking of *matzah*, and thereafter the mixture of flour and water is constantly manipulated until it is ready for baking. Care must be taken that the whole process from kneading to final baking does not exceed the 18 minutes. No ingredients other than flour and water are permitted for Passover *matzah*. Although it is accepted by most decisors that salt is not a fermenting agent, its use in *matzot* is forbidden in order to prevent fermentation (Sh. Ar., OH 455:5). Some Yemenites, however, do have the custom of baking their Passover *matzah* using salt.

Over decades, special equipment was developed for the baking of hand-made *matzah*, which can be found almost universally throughout the Jewish world. Immediately after the flour is first mixed with water, the relatively dry batter is kneaded using a specially designed smasher, in which the batter is placed on a flat surface and a hinged bar is used to pummel the dough. The dough is then flattened by using rollers made only of solid pieces of wood or metal without crevices, to prevent the possibility of pieces of dough getting wedged and becoming *hamez*. Perforation of the dough, after being rolled into shape and before baking, enables air bubbles to escape, and prevents the dough from rising and swelling during baking. The holes are made by rolling a small wheel with sharp teeth attached to a handle, known as a “reddler,” back and forth across the dough.

### Machine-made *Matzah*

The industrial revolution combined with a growing urban population across Europe resulted in the amounts of traditional hand-made *matzah* produced being insufficient to provide enough *matzot* for everyone in need. The result was the introduction in 1838 of the first primitive machine that rolled *matzah*. Twenty years later, a bitter halakhic debate ensued over its permissibility, owing to the fear that the machine process might cause fermentation, and also whether a machine was able to fulfill the requirement of *matzah* being made with the proper intent. The dispute continued for more than half a century, until the machines improved technically and the rabbinic authorities began to accept those superior machines. Today the tons of world *matzah* – over \$100 million in sales – are produced primarily by two major companies in the U.S.: Manischewitz, which built the first *matzah* factory in the United States, and Streit’s, as well as a dozen factories in Israel.

A major shortage of *matzah* for the Jews of Russia occurred in 1917 with the collapse of czarist rule and the takeover by the Communists, and again beginning in 1929, with

the collectivization of farms by Stalin. The crisis became so severe that world Jewry was called upon to help provide the Passover needs of the Jews of Russia. During the two world wars, the widespread mobilization of Jewish soldiers created an additional need for *matzah* distribution never before experienced in modern Jewish history. Organizations such as the American Jewish Joint Distribution Committee and the Jewish Welfare Board provided *matzot* for them and for needy Jews around the globe.

[Ari Greenspan, Ari Z. Zivotofsky, and Elli Wohlgelernter (2<sup>nd</sup> ed.)]

**MATZENAUER, MARGARETE** (1881–1963), contralto, later soprano, singer. Born in Temesvár (then Hungary), Matzenauer grew up in musical surroundings and began to study singing at an early age, first in Graz and later in Berlin. Her operatic debut was in Strasbourg (1901) and she remained there for three years; she then sang contralto roles at the Munich Court Opera, specializing in Wagnerian roles and also appearing at Bayreuth. From 1911 to 1930 she was a leading singer; both in soprano and contralto ranges, although after 1914 she called herself a soprano. Matzenauer was most famed for the grandeur and richness of her Wagnerian tones, but she also sang in other operas, notably by Verdi, Strauss, and Janacek. After her Carnegie Hall farewell in 1938, she retired to California, where she lived until her death.

[Max Loppert (2<sup>nd</sup> ed.)]

**MAURITIUS**, island in the Indian Ocean about 500 mi. E. of Madagascar, where Jewish refugees from Central Europe – passengers of the *Atlantic* – were put into detention during World War II after being forcibly deported from Palestine by the British as “illegal” immigrants (see \*Patria). On their arrival in Mauritius (Dec. 26, 1940), they numbered 1,580 persons; 1,320 landed in Haifa on Aug. 26, 1945, after the ban on their return was rescinded; 128 died while in Mauritius; 212 men joined the Allied forces, 56 of whom entered the \*Jewish Brigade. About 60 children were born after the original strict regulation on separation of the sexes in the camp was abolished. The detainees consisted of a Maccabi-He-Ḥalutz transport from Czechoslovakia, remnants of the Jewish community of Danzig, and a transport launched from Vienna. They were interned in the town of Beau Bassin, the men in a former prison, the women in adjacent huts of corrugated iron. They were not brutally treated, but were afflicted by tropical diseases, such as malaria, and by a lack of suitable clothing; food was often inadequate. Considerable moral and material assistance was given by Jewish organizations, particularly the South African Jewish Board of Deputies, the South African Zionist Federation, and the Jewish Agency. The detainees conducted manifold communal and cultural activities; they struggled for release and retransfer to Palestine through the

Zionist Association of Mauritius, to which about 70% of the detainees belonged. Their struggle was supported by official Jewish institutions which regarded the “Exile in Mauritius” as a political challenge and an infliction of needless suffering upon refugees from the Holocaust through the implementation of the anti-Jewish Palestine White Paper of May 1939. The ultimate liberation of the detainees was hailed as a moral and political success for the Zionist movement.

[Aharon Zwergbaum]

In 1946 the St. Martins Jewish Cemetery, where Jewish detainees who died on the island during the war are buried, was entrusted to the South African Jewish Board of Deputies. Since that date the SAJBD, in cooperation with local benefactors (both Jewish and non-Jewish) and in recent years in partnership with the African Jewish Congress, has overseen its maintenance, including an extensive restoration project in 2001. Towards the end of the 20<sup>th</sup> century, a steady trickle of Jews began settling in Mauritius. In 2004, there were an estimated 60 Jews living permanently there. These were primarily engaged in tourism (three leading hotels were under Jewish management), agriculture, and the diamond and burgeoning textile industries. Plans were afoot for the opening of a Jewish community center, incorporating a synagogue, in the first half of 2005.

[David Saks (2<sup>nd</sup> ed.)]

### Relations with Israel

In 1960, while Mauritius was still a British colony, Israel, represented by a consul general, extended it technical aid particularly through scholarships for young Mauritians to study medicine in Jerusalem and technical assistance on the spot. Mauritius became independent in 1968 and joined the United Nations. An Israel delegation attended the celebration, and full diplomatic relations were established between the two countries, Israel's ambassador in Tananarive (Malagasy) serving as non-resident ambassador to Mauritius. Offers for new scholarships in Israel, as well as Israel assistance by experts in agriculture and other fields, were accepted by Mauritius. Mauritian professionals trained in Israel founded a Mauritius-Israel Friendship Society. Strong Indian influence in Mauritius, as well as Muslims of Pakistani origin who constitute 20% of its population, make themselves felt in Mauritius' attitude and policy toward Israel. The general attitude to Israel, however, is basically friendly, with the elder generation still remembering with sympathy the Jewish refugees from Europe exiled there in 1940, and the mutual relations between the countries remained fruitful.

**BIBLIOGRAPHY:** Zwergbaum, in: *Yad Vashem Studies*, 4 (1960): 191–257; idem, in *Gesher*, 66 (March 1971), 92–104; D. Trevor, *Under the White Paper* (1948), index; M. Basok (ed.), *Sefer ha-Ma'p'ilim* (1947), passim; *Yad Vashem, Ha-Sho'ah ve-ha-Gevurah be-Aspak-laryah shel ha-Itonut ha-Ivrit – Bibliografyah*, 2 (1966), 12871–970.

**MAUROIS, ANDRÉ** (originally **Emile Herzog**; 1885–1967), French biographer, novelist, and essayist. Born in Elbeuf, Mau-

rois was descended from Alsatian industrialists who moved to Normandy after the Franco-Prussian War. Raised in a staunchly patriotic home, he experienced antisemitism as a student at the time of the \*Dreyfus Affair and was influenced by the philosopher Alain (Emile Chartier). He spent ten years in his father's factory and his experiences there were later used in his fiction. A French liaison officer and interpreter with a Scots division during World War I, he published a light-hearted book about his British army comrades, *Les Silences du Colonel Bramble* (1918; Eng. tr., 1919) using his pseudonym, André Maurois, for the first time. He followed it with *Les discours du docteur O'Grady* (1922). Maurois earned a reputation as an acute interpreter of the English scene and as an outstanding biographer. During the 1920s and 1930s he published *Ariel, ou la vie de Shelley* (1923; Eng. tr., *Ariel*, 1924); *La vie de Disraeli* (1927; Eng. tr., 1927); *La vie de Lord Byron* (1930; Eng. tr., 1930), and historical works such as *Edouard VII et son temps* (1933; Eng. tr. 1933) and *Histoire de l'Angleterre* (1937; Eng. tr., 1937). In writing his biographies, Maurois combined documentation, erudition, and imagination, to unfold the psychological development of his subjects. His books in this genre include studies of Voltaire (1935), Chateaubriand (1938; Eng. tr., 1938), George Sand (1952; Eng. tr., 1953), and Hugo (*Olympio*, 1954). Two outstanding biographies were *A la recherche de Marcel Proust* (1949; *Proust, a biography*, 1950) and *Prométhée, ou la vie de Balzac* (1965). Maurois also wrote short stories and several semiautobiographical novels, notably *Bernard Quesnay* (1926; Eng. tr., 1927); *Climats* (1928); *Whatever Gods May Be*, 1929; and *Le cercle de famille* (1932; *The Family Circle*, 1932). In the first of these he told the story of his refugee Alsatian family.

After the armistice of 1940, Maurois supported the Vichy regime, but then violently opposed Hitler and fled to the U.S., where he taught at Princeton until the end of the war. He claimed that the Jews of the Diaspora had to choose segregation, assimilation, or some difficult intermediate path. Himself a convinced assimilationist, he nevertheless remained interested in problems of Jewish identity, to which he referred in the first part of his *Mémoires* (1942; *I Remember, I Remember*, 1942). In later years he confessed to “a deep sadness” within himself and praised the intellectual enrichment which the Jews had brought to French literature. Maurois' other works include: *Aspects de la biographie* (1928; Eng. tr., 1929); *Magiciens et logiciens* (1935; *Prophets and Poets*, 1935); *Histoire des Etats-Unis* (2 vols., 1943–44; Eng. tr., 1948); and *Histoire de la France* (1947; Eng. tr., 1949); and the autobiographical works *Portrait d'un ami qui s'appelle moi* (1959) and *Mémoires 1885–1967* (1970). His collected works appeared in 16 volumes (1950–55). He was elected to the French Academy in 1938.

**BIBLIOGRAPHY:** G. Lemaître, *André Maurois* (Eng., 1939); Chaigne, in: A. Maurois, *Poésie et action* (1949); J. Suffel, *André Maurois* (Fr., 1963).

[Sidney D. Braun]

**MAURRAS, CHARLES** (1868–1952), French nationalist writer and antisemitic politician. In association with \*Daudet,

Maurras founded L'Action française – both the newspaper and the movement by that name. His call for a return to the traditional values of “la vieille France” and his extreme political attitudes are reflected in all his books, especially *Quand les Français ne s'aimaient pas* (1916), *Mes idées politiques* (1937), and *La contre-révolution spontanée* (1943). Maurras' love of monarchy, hierarchy, and the rural virtues was paralleled by his hatred of the republic, democratic institutions, and the “*métèques*” (a word he coined himself), i.e., recently naturalized foreigners, and above all the Jews. He believed that the Jews – together with their allies the Freemasons, the Protestants, and the *métèques* – sought to control the entire political life of France. The Dreyfus Affair (which obsessed him for the rest of his life) was for him the supreme example of Jewish dominance. Nevertheless, his passion for the French nation did not prevent Maurras from welcoming Hitler as a savior from democracy and the Jews, and he hailed the German invasion of France in 1940 as the “divine surprise.” When the Jews in occupied France were forced in May 1942 to wear the Jewish badge, Maurras regarded it as a suitable opportunity to rid France, too, of the “Jewish scourge.” For his subsequent collaboration with the Germans, Maurras was condemned in January 1945 to life imprisonment.

**MAUSS, MARCEL** (1872–1950), French ethnologist, sociologist, historian of religion, and polyhistorian. Born at Epinal, Mauss was a nephew of Emile Durkheim, who guided his education and greatly influenced him. His early interests were mainly philosophy and the history of religion. He taught the latter subject throughout his life, but enriched the entire domain of social science and contributed to the growth of the French school of anthropology. Mauss was professor of the history of religions of noncivilized peoples at the Ecole des Hautes Etudes in Paris and also taught at the Collège de France. In 1925 he helped to found the ethnological institute of Paris University, of which he became joint director. He worked with his uncle in both practical and theoretical studies, carrying forward some of Durkheim's basic ideas such as the total social fact, collective representations, and the correspondence of morphological social structure with moral, legal, and symbolic facts. He was one of the team of young scholars assembled by Durkheim for his journal *L'Année sociologique* (1898–1913), and directed its section on religion. He revived the journal after World War I. Of Mauss's works on anthropology, the best known outside France is *Essai sur le Don* (1926; *The Gift*, 1954), an elaborate study of the relation between exchange patterns and social structure. Mauss was active in French political life participating in the support of Dreyfus, and in the socialist and cooperative movements. He never recovered from the mental breakdown caused by the brutalities of the German occupation, though he published two more works before his death.

[Ephraim Fischhoff]

**MAUTHAUSEN**, Nazi concentration camp in Austria, 12½ mi. (20 km.) S.E. of Linz, established in April 1938 shortly after the annexation in March of Austria to the Third Reich. The SS employed its prisoners in the local granite quarry called “Wienergraben,” that was incorporated into the camp. Initially, Mauthausen served as a concentration camp for Austrian anti-Nazis. The first commandant was Albert Sauer. Its commander from February 1939 to May 1945 was Franz Ziereis about whom it was stated that “he gave his son 50 Jews for target practice as a birthday present” (see Presser, p. 54). Starting as a satellite of Dachau, Mauthausen became an independent camp in the spring of 1939, and expanded continually, with several satellites of its own throughout Austria (Gusen, Ebensee, and others) by the end of the war. After the outbreak of World War II Mauthausen became a camp for anti-Nazis from all over occupied Europe and in 1940 was graded category III, the harshest category of concentration camps (Dachau was in category I). Mauthausen received the so-called “protective custody” prisoners whose “return was not desired” (RU = *Rueckkehr unerwuenscht*; see Camps, Concentration and Extermination). Himmler specially ordered the death of a prisoner in Mauthausen to be communicated to his family only after incineration. The camp had the highest death rate for those in “protective custody” of all the concentration camps. Mauthausen was used for political prisoners. Of over 10,000 Spanish Republicans who were interned there early in 1941, handed over by the Vichy regime, only 1,500 were still alive after one year.

*Mauthausen and its satellite camps. Based on H. Marsalek and J. Kohl, Wegweiser durch das ehemalige Konzentrationslager Mauthausen (1960).*

Work conditions were intolerable; the prisoners had to carry heavy stones up the 186 steps of the “Wienergraben.” It was called Death’s Way. In November 1941 Russian prisoners of war began arriving, destined for immediate death through overwork and starvation. Though able bodied and trained for military combat, they did not engage in an uprising until February 1945; their revolt was unsuccessful and many were killed. The camp authorities used a special measuring installation to shoot their victims in the nape of the neck. Prisoners were also killed by phenol injections or gassed at the euthanasia installation at Hartheim until a gas chamber was constructed in one of Mauthausen’s three sections. From the beginning of 1942 prominent citizens from occupied territories arrested under the “night and fog decree” were brought there. Recaptured prisoners of war were executed under the “bullet decree” (*Kugel-Erlass*). When prisoners of other camps were caught for clandestine activities, those not immediately executed were sent to Mauthausen for punishment. Following Heydrich’s death, hundreds of Czech prisoners were killed.

In May 1941 about 400 Jewish “hostages” from Amsterdam arrived via Buchenwald; they were all killed within three days in the forced-labor quarry which also served as a site for execution. There were another two shipments of Jews from Holland to Mauthausen (end of 1941 and 1942) who were killed after a short time in the camp. Up to 1944 Jews were never allowed to live for more than three days. When in early 1945 the camps in the East were evacuated, thousands of prisoners from Auschwitz, including Jews, were brought to Mauthausen; thousands of Hungarian Jews who had slaved building fortifications at the so-called “Southeast Rampart” were also brought to camp. The name of Mauthausen was particularly feared by Holland’s Jews, and the Germans took advantage of this fear to suppress resistance to their measures against the Jews. Jews in Mauthausen were singled out for especially cruel treatment compared to that given non-Jews (see *Anklageschrift in der Strafsache gegen Fritz Woehrn et al.* (1968), 98–102, 228–35). Shortly before the capitulation it was planned to murder all Mauthausen prisoners in a subterranean aircraft-construction hangar in Gusen, but the plan was not carried out. Mauthausen was liberated by U.S. troops in May 1945. In the main camp the prisoners had rebelled. Zierris hid in the camp but was shot by a U.S. patrol several days later when he tried to escape. According to camp records – and they may be an understatement – 199,404 were interned at Mauthausen; 119,000 died. Of those who died, as often due to work conditions and lack of food as to the gas chambers or killing fields, 38,120 were Jews.

[Yehuda Reshef]

**MAUTHNER, FRITZ** (1849–1923), German journalist, author and philosopher. Mauthner, who was born in Horice, Bohemia, came of an assimilated family and remained estranged from Judaism. His *Erinnerungen* (1918) provides a fascinating account of his early upbringing in Prague, portraying also the situation of Jews between three cultures and languages – German, Czech, and Jewish – within the national conflict in Bohemia. After law studies at Prague he settled in Berlin, where he became editor of the *Magazin fuer Literatur* and wrote reviews for the *Berliner Tageblatt*, which he directed from 1895. A naturalistic writer and a socialist, he was a co-founder of the *Freie Buehne*, but later turned to writing historical fiction and philosophical works. Mauthner first attracted attention with *Nach beruehmten Mustern*, witty parodies of 22 of his contemporaries including Berthold Auerbach, Gustav Freytag, Paul Heyse, and Richard Wagner, which he wrote for the *Deutsches Monatsblatt* from 1879, before they were published as a book in 1897. This was followed by many novels, novellas, satirical sketches, and fairy tales. One of these is the novel *Der neue Ahasver. Roman aus Jung-Berlin* (1882), in which he showed how assimilation was rejected by antisemitism. While he was successful as a satirical journalist, and much less so as a novelist, he was highly regarded – and remained so – for his philosophical works, which had a great influence on modern philosophy (e.g., Ludwig Wittgenstein) and literature (e.g., Hugo von Hofmansthal). His main work were the *Beitraege zu einer Kritik der Sprache* (3 vols., 1901–2), on which he worked from 1893. Following Friedrich Nietzsche as well as Ernst Mach and arguing that thinking never allows access to reality but is always mediated by language, he dealt with the psychology and science of language, and with the role of grammar and logic. In his *Woerterbuch der Philosophie, neue Beitrage zu einer Kritik der Sprache* (2 vols., 1910) he expanded his work on philosophical ideas; here he subjected more than 200 philosophical concepts to critical examination. A militant agnostic, Mauthner was denied academic appointments because of his anti-religious stand and political views. He radicalized his skepticism in his last literary work, *Der letzte Tod des Gautama Buddha* (1912), preaching an areligious, skeptical mysticism without God, as well as in his last and encyclopedic, philosophical work, *Der Atheismus und seine Geschichte im Abendlande* (4 vols. 1920–23), where he claimed that all dogmas – religious or scientific – were mere human inventions and that their origin, efflorescence, and decline had their basis in history. Mauthner then sought to show how the West had begun to shake off the once dominant concept of God. His work was thus intended to trace the disintegration of this concept, an “anthropomorphic illusion” that had held peoples spellbound for several millennia. From 1911 until his death he lived in Meersburg at Lake Constance, where he also edited the *Bibliothek der Philosophen*.

bacher, *Fritz Mauthner und die deutsche Literatur um 1900* (1977); K. Arens, *Functionalism and Fin de Siècle. Fritz Mauthner's Critique of Language* (1984); E. Leinfellner, *Fritz Mauthner* (1995).

[Sol Liptzin / Andreas Kilcher (2<sup>nd</sup> ed.)]

**MAUTNER, KONRAD** (1880–1924), Austrian folk song collector, publisher of important primary sources on folk song and music, folk art and costume, and industrialist whose family was of Bohemian origin. In 1893, his father Isidor founded the largest textile business of the monarchy. Konrad Mautner studied in Vienna with private teachers and in Schotten high school. In 1902 he left for a year in the U.S., where he worked for his father's textile concern. In 1909 he married Anna Neumann, his cousin, whose family comprised large-scale silk manufacturers. She was, like her husband, talented and interested in art. With the advent of the Nazis the family had to leave Austria. From his childhood, Mautner used to spend his vacations with his parents in Goessl on Grundsee, where he practically grew up together with local inhabitants. In 1910 he prepared for publication a collection of the "Steyerische Rasplwerk," folk songs, as a documentation of his happy childhood and youth years in that region. Verlag Staehelin and Lauenstein, publisher of limited editions, produced this material in a luxury edition of 400 copies. The volume included old songs and street verses that Mautner heard and sang in Gössl and which he transcribed and illustrated by hand drawings. This volume was the first Austrian musical village monograph, which because of its naiveté transmitted the picture as a whole. Since it was based on personal memory, it was held at that time to be of no importance, because of the doubt as to whether the songs were authentic according to the criteria of folk song research of that time. Today, however, its significance is realized. Later, Mautner was in close contact with the professional world, and published one more volume from Salzkammergut, a town in the Austrian province Steiermark, as well as numerous journal articles. In 1914, the Musical Historical Center of the War Ministry used him (together with other professional people) for collecting soldiers' songs. He worked together with Viktor von Geramb on the book of native costumes in Steiermark (*Steirische Trachtenbuch*) that was published only after his death. Mautner's articles in the field of folk song research are characterized by precise observation of the subject and artistic intuition as well as by early use of technical facilities (phonograph, etc.).

**MAWZA'**, a town situated in the Tihāma in west \*Yemen about 97 km southwest of Taiz, in an inhabited area of land which the streams of rainwater provide with sweet water. Consequently, the land is quite fertile. The town is one of the oldest ports in Yemen, connecting the country with Africa and the Indian Ocean. The temperature and humidity there are very high. The town is famous for its tombs and domes. It was connected with a crucial event in the history of the Jews of Yemen in 1679, which remained in the historical mem-

ory of the Jews of Yemen as *Galut Mawza'* ('The Expulsion of Mawza'), when apparently all of them were expelled to the salty and barren stretch of land off the town, notorious for its harsh, hot climate. The expulsion, ordered by Imam Aḥmad ibn Ḥasan (1676–1681), was the culmination of a series of anti-Jewish measures responding to the Jewish messianic movement in Yemen in 1666/7 among the followers of \*Shabbetai Zevi. After a long and comprehensive debate by the Muslim scholars of both religious schools, the Zaydi and the Shāfi'i, Imam Ismā'il (1646–1676) confirmed their ruling that by the fact that a group of Jews in Yemen had taken some practical steps to materialize the Jewish vision of messianic redemption, the whole community had violated the agreement of \**dhimma* with the Muslim kingdom. The full meaning of that ruling was that they were no longer entitled to government protection and that no Jews were permitted to live there anymore. Imam Ismā'il decided then to expel all the Jews from his country but left the practical implementation to his heir Imam Aḥmad. Immediately after this the new imam ordered the destruction of all synagogues and prohibited public prayer by Jews. As the Jews rejected the offer to convert and to live in Yemen as Muslims, Imam Aḥmad commanded in 1679 that all Jews leave their places and be sent by boat to the Muslim Moghul kingdom in India. But for some reason, probably practical difficulties, this plan could not be carried out and the Jews stayed for more than one year near Mawza'. This event was the worst calamity that befell the Jews of Yemen in their long history. The houses that the Jews had left behind were destroyed or sold cheaply, and all their valuables were either lost or stolen. Many died en route, and those who reached Mawza' suffered from disease and starvation; as many as two-thirds of the exiles did not survive. The Jews also lost many of their ancient traditions as they could not carry with them most of their old manuscript writings nor their communal books and archives. The event was well documented in both Muslim sources as well as in Jewish ones, especially in the poems of R. Shalem \*Shabazi, Yemenite Jewry's greatest poet who went into exile with his coreligionists. The expulsion deprived Yemen of all its Jewish artisans, and the Muslim population soon came to realize that they could not do without them. Step by step the Jews started to return to their places, but were forced to build new neighborhoods outside the town walls. The district governors petitioned the central authorities in \*San'a to bring the Jews back, and a year after their expulsion the Imam permitted their return. During the aftermath of the expulsion the Jewish communities sank into a deep social, economic and spiritual crisis (many hundreds converted to \*Islam), from which they recovered only after many years.

[Yehuda Ratzaby / Yosef Tobi (2<sup>nd</sup> ed.)]

°**MAXIMILIAN I** (1459–1519), king of Germany from 1486 and Holy Roman emperor from 1493. His Jewish policy, like that of his father, \*Frederick III, was erratic and motivated by

financial considerations. In 1496 he expelled the Jews from \*Carinthia and \*Styria, after the estates there had undertaken to reimburse him for the loss of Jewish taxes, but he permitted them to settle in \*Burgenland. He forbade Jews to live in \*Vienna, with the exception of his agent Hirschel of Zistersdorf, with whom he “had to have patience” because he was so much in his debt. In 1509 he gave power to Johannes \*Pfefferkorn to confiscate Jewish books and to destroy those which were offensive to Christianity. Reversing this decree in 1510, he ordered expert opinions to be asked from the universities as well as from Johannes \*Reuchlin, Victor von \*Carben, and Jacob van \*Hoogstraaten. After banning Reuchlin’s *Augenspiegel* in 1512, a year later he ordered both sides to keep silent. He issued a decree forbidding rabbis to apply the \**herem* (ban) against those appealing to gentile courts. Under his rule, \*Joseph (Joselmann) b. Gershom of Rosheim became the *shtadlan* of German Jewry, and in Moravia the first \**Landrabbiner* was appointed.

MAXIMILIAN II (1527–1576), from 1564 ruler of the Hapsburg dominions and Holy Roman emperor, successor to \*Ferdinand I. His policy toward the Jews was generally lenient, though he suspected them of supporting the Turks. In 1567 he reaffirmed the charters of Bohemian Jewry, promising to maintain their rights to practice trades they had previously engaged in, and issued decrees against usury. Foreign Jews were forbidden to trade in his dominions without explicit license. Against the will of the local ruler, in 1570 he permitted the Jews free passage through the duchy of \*Brunswick (Braunschweig), and asked the \*Worms municipality not to harass its Jews because their rights were long standing. While permitting seven families to settle in Vienna in 1571, a year later he decided to concentrate them in one building in the center of the city for easier surveillance, then expelled them in the same year. Maximilian was the first to grant a Jewish craftsman, a diamond cutter from \*Breslau (Wrocław), a permit to pursue his craft. The baptized Jew, Paul Rizius (Ricci, d. 1542), was his court physician.

[Meir Lamed]

**MAXIMON (Maximowski), SHALOM DOV BER** (1881–1933), essayist and educator. Maximon, who was born in Skvira, left Russia at the age of 21 and traveled to Galicia, Switzerland, France, and England. In London he met Aḥad Ha-Am who exerted a permanent influence on his writings. He was also befriended by Brenner who published his first article in *Ha-Me’orer*. In New York, he was employed by the Bureau of Jewish Education and edited a paper for children, *The Jew-*

*ish Child*. He was also one of the founders and editors of the monthly *Ha-Toren* in 1913 and edited the pedagogical journal *Shevil ha-Hinnukh* for two years (1927–29). He was a member of the faculty of Hebrew Union College School for Teachers in New York and in 1930 was appointed registrar of Hebrew Union College in Cincinnati, Ohio. Maximon contributed articles to Hebrew periodicals in Europe and Palestine. Most of his articles were collected in his book *Gevilim* (“Rolls of Parchment,” 1925).

[Eisig Silberschlag]

**°MAXIMUS, MAGNUS CLEMENS (Maximus the Usurper; d. 388 C.E.)**, Roman emperor 383–388. A native of Spain, Maximus was proclaimed emperor by the army in Britain in 383. To secure his position Maximus invaded Gaul and occupied it, defeating the western emperor Gratian. In a treaty negotiated with the eastern emperor Theodosius, Maximus received recognition of his conquests in return for an assurance that he would honor the sovereignty of Valentinian II (Gratian’s brother) in Italy, Western Illyricum, and Africa. He violated his promise and he invaded Italy in 388. Theodosius together with the Franks, Goths, Alanis, and Huns took up arms against him, and within two months Maximus was deserted by his troops and forced to take refuge in Aquileia. He subsequently capitulated and was executed in August 388.

The relationship between Maximus and the Jews is difficult to establish because of the paucity of sources available. The only substantial document of relevance is a letter sent by St. Ambrose to the emperor Theodosius in December of 388. In it, St. Ambrose admonishes Theodosius for his punishment of those involved in the burning of a synagogue in the East. He argues that the imperial punishment imposed upon those involved in the crime should be rescinded, and that the local bishop who instigated the affair should not be held financially responsible for the renovation of the synagogue. St. Ambrose reminds Theodosius of the many offenses committed against Christians by the “scheming Jews,” and goes on to suggest that penalties for civic offenses should be viewed differently when there are religious considerations. He further asks the question: “Shall a place be provided out of the spoils of the Church for the disbelief of the Jews?”

To illustrate his point Ambrose utilized the recent example of Maximus. According to Ambrose, Maximus condemned the burning of a synagogue in Rome on the basis that it was a breach of public order. Ambrose records the hostile reaction of the Roman people to this course of action, their charges that Maximus had converted to Judaism, and their grim prophecies of Maximus’ downfall. Ambrose clearly hoped that Theodosius would profit from the mistake of his former adversary, and adopt a more lenient attitude toward those involved in Jewish persecutions.

[John M. O'Brien]

**MAXWELL, ROBERT** (1923–1991), British publisher. Maxwell was born Jan Ludvik Hoch, son of a poor Jewish farm laborer, in Solotvino in the Carpathians, then part of Czechoslovakia. Although his family was Orthodox, he appears to have abandoned Judaism at about the time he left his native village and traveled to Budapest. Maxwell later stated, “I ceased to be a practicing Jew just before the war... I certainly do consider myself a Jew. I was born Jewish and I shall die Jewish.” After the German occupation of Czechoslovakia in March 1939, Maxwell made his way to Hungary where he was arrested at the end of the year. He escaped and made his way to southern France where he joined members of the free Czech forces with whom he was transported to Britain in 1940. After a spell in the Czech Legion and the British Pioneer Corps, he joined the North Staffordshire Regiment in 1943 and served with distinction during the campaign in Northern Europe. He was decorated with the Military Cross in 1945 and had risen from the rank of corporal to captain by the end of the war. He served with the Allied Control Commission in the British Zone of Occupation in Germany in the department of Public Relations and Information Services Control. At this time he also engaged in commercial activities and following his demobilization in 1947 he entered business, specializing in import and export between Britain and Eastern Europe where he established extensive connections. He first entered publishing by way of an agreement to distribute German scientific periodicals in 1947. Two years later he acquired Pergamon Press, although he lost control of the company for a time in the early 1970s when his business activities were subjected to a critical report by the Department of Trade and Industry. In 1981 he bought the British Printing and Communication Corporation, of which he was chairman, and in 1984 acquired Mirror Group Newspapers (MGN). As chairman of MGN he became the publisher of several mass-circulation titles. Pergamon Press was the world’s largest distributor of scientific periodicals. Between 1964 and 1970, Robert Maxwell was Labour Member of Parliament for Buckinghamshire. By the 1980s, Maxwell had acquired a major international business empire, which included *The Daily Mirror* and *The People* newspapers in Britain, the *New York Daily News*, and the famous publisher Macmillan, as well as a range of firms in Europe. In 1990, Philip Beresford’s *Book of the British Rich*, the predecessor to the *Sunday Times*’ “rich lists,” claimed that Maxwell was then Britain’s tenth richest man, worth an estimated £1.1 billion. He was active in various philanthropic causes and was chairman of the National AIDS Trust. In 1986 he was involved in the financing of the Commonwealth Games in Edinburgh and had an interest in several football clubs, notably Oxford United and Derby County. Most of his own family perished

in the Holocaust and in 1988, he provided £1 million to fund the major international conference on the Holocaust, “Remembering for the Future,” which took place in London and Oxford. Maxwell had business interests in Israel – Pergamon Media purchased a 45% stake in Modi’in Publishing House which owned the Israeli daily newspaper *Ma’ariv* – and invested in Scitex, Keter Publishing House, and Teva Pharmaceutical Industries Ltd.

Maxwell’s downfall apparently came through unwise expansions and, unusually for a successful tycoon, overly generous payments for the acquisition of new assets, together with a secretive operating style in which no one but Maxwell himself understood the complexities of his business empire. Components of his business empire ran into difficulty in the business downturn of the late 1980s, and he was accused of raiding the assets of others to support them, including the MGN’s pension fund. By the second half of 1991 the British Fraud Squad had compiled a lengthy dossier on Maxwell, and rumors of his true position increasingly surfaced in the press. On 5 November 1991 Maxwell disappeared from his yacht near the Canary Islands. His death caused a worldwide sensation. It has never been ascertained whether his death was caused by suicide, accident, or murder, and many conspiracy theories later came to the fore, especially those in which various intelligence agencies (including the Israeli Mossad) were responsible for his death. At his death, his debts totaled at least £400 million, with some estimates putting his total debt as high as £2.2 billion.

Like many self-made tycoons, Maxwell was widely regarded in a negative light. Consequently, his very notable record of charity and the scale of the business empire he briefly organized have largely been forgotten.

[David Cesarani. / William D. Rubinstein (2<sup>nd</sup> ed.)]

**MAXY, MAX HERMAN** (1895–1971), Romanian artist, and director of the Art Museum of the Socialist Romanian Republic. Maxy was born in Brăila, educated at a Jewish school and studied at the school of Belle Arté. He completed his studies in Berlin and in 1925 exhibited with the “November Group.” In the 1930s he exhibited in Rome, Paris, the Hague, and Brussels. He designed sets and costumes at the company of Vilna for *The Night in the Old Market* of \*Peretz and Shabbetai Zevi.

**MAY, ELAINE** (1932– ), U.S. screenwriter, director, and actress. Born Elaine Berlin in Philadelphia, Pennsylvania, to Yiddish theatrical actor Jack and actress Jeannie Berlin, May began acting on stage as a child in the Yiddish theater run by her father. She married Marvin May in May 1949; the couple had one daughter together, Jeannie Berlin, before divorcing. May studied at the University of Chicago and Playwrights Theater

in 1950. She then joined the Compass Players in 1953 and began working with fellow member Mike \*Nichols in 1955. Along with Alan \*Arkin, Barbara Harris, and Paul Sills, Nichols and May went on to found the improvisational group the Second City. In 1957, the pair developed a nightclub act based on sophisticated parodies of popular culture and mock interviews. Nichols and May spent the next few years appearing in cabaret shows, on television programs, and on Broadway with their show *An Evening with Mike Nichols and Elaine May* (1960). The pair produced several albums together, even winning a Grammy in 1961, the same year they amicably brought their partnership to an end. In 1967, May appeared in the films *Bach to Bach*, *Enter Laughing*, and *Luv*. May honed her playwriting through the 1960s, and in 1969 produced her one-act play *Adaptation*. Her first credited screenplay was *A New Leaf* (1971), which she costarred in and directed. In 1972, May directed Neil Simon's *The Heartbreak Kid* (1972). When May came in over budget and past deadline on a film she wrote and directed, *Mikey and Nicky* (1976), Paramount tried to remove her from the project. Her next screenplay, *Heaven Can Wait* (1978), an update of *Here Comes Mr. Jordan* (1941), was cowritten with its star Warren Beatty. While the film received mixed reviews, it did well at the box office and received an Academy Award nomination. But May won the Oscar that year as best supporting actress in *California Suite* (1978). While uncredited, May helped rewrite *Reds* (1981) and *Tootsie* (1982). May and Beatty reunited for *Ishtar* (1987), a project so marred by cost overruns that it became one of the largest financial failures in motion picture history. May wrote the screenplay for *The Birdcage* (1996), an adaptation of *La Cage aux Folles* directed by Nichols, and the pair teamed up again for *Primary Colors* (1998), which earned May another Oscar nomination. In 2000, she appeared in the Woody Allen film *Small Time Crooks*.

[Adam Wills (2<sup>nd</sup> ed.)]

**MA'YAN BARUKH** (Heb. מַעֲיָן בְּרוּךְ), kibbutz on the Israel-Lebanese border near the Tannur waterfall, affiliated with Iḥud ha-Kevuzot ve-ha-Kibbutzim. It was founded in 1947 by South African and Rhodesian World War II veterans, joined by Israel-born youth and immigrants from the United States, Great Britain, and other countries. Its founding at the time was regarded as an act of defiance against the British administration which imposed martial law on Tel Aviv and the Jewish sectors of Jerusalem. In the Israel \*War of Independence (1948), the kibbutz resisted strong Syrian contingents who attempted to penetrate into the Huleh Valley, and in the years preceding the \*Six-Day War (1967) Ma'yan Barukh was repeatedly shelled by the nearby Syrian positions. Its economy was based on fruit orchards, irrigated field and garden crops, and dairy cattle. The kibbutz maintained a local museum. Its name, "Baruch's Spring," commemorates Baruch (Bernard) Gordon, a South African Zionist. In the mid-1990s, the population was approximately 360, dropping to 305 in 2002. The kibbutz operated a steel factory and ran its dairy farm in partnership with kibbutz \*Loḥamei ha-Getta'ot. The kibbutz also

operated guest rooms and water recreation facilities at the nearby Jordan River.

[Efram Orni / Shaked Gilboa (2<sup>nd</sup> ed.)]

**MA'YAN ZEVI** (Heb. מַעֲיָן זְבִי), kibbutz in central Israel, on Mt. Carmel near Zikhron Ya'akov, affiliated with Iḥud ha-Kevuzot ve-ha-Kibbutzim. It was founded in 1938, initially as a \*stockade and watchtower settlement, by pioneers of Maccabi ha-Za'ir youth from Germany, Austria, and Czechoslovakia. In 1969 Ma'yan Zevi had 540 inhabitants. In the mid-1990s the population was 612, dropping to 491 in 2002. The farm economy was based on avocado plantations, citrus groves, and field crops, carp ponds below on the Carmel Coast plain, and dairy cattle and poultry. The kibbutz also operated factories for optical equipment (Scopus, Meprolight, the latter specializing in military and security needs). The name, "Spring of Zevi," commemorates Zevi Henri Frank, a director of the \*Jewish Colonization Association (ICA) in Palestine.

[Efram Orni / Shaked Gilboa (2<sup>nd</sup> ed.)]

**MAYBAUM, IGNAZ** (1897–1976), Reform rabbi and theologian. Born in Vienna, Maybaum served as rabbi at Bingen (Rhineland), Frankfurt on the Oder, and Berlin. In 1939 he immigrated to England. From 1947 to 1963 he was minister of the Edgware Reform Synagogue (London) and lecturer on theology and homiletics at the Leo Baeck College (established 1956). In addition to publications in his German period (*Partei-befreites Judentum*, 1935; *Neue Jugend und alter Glaube*, 1936) he wrote books in English including *Synagogue and Society* (1944); *Jewish Mission* (1951); *Sacrifice of Isaac* (Leo Baeck College Publication, no 1, 1959); *Jewish Existence* (1960); *The Faith of the Jewish Diaspora* (1962); and *The Face of God after Auschwitz* (1965). In his writings Maybaum considers the theological and religious problems presented by the Holocaust and the dual existence of the Jewish people in the Diaspora and its ancient homeland. He was a nephew of Sigmund \*Maybaum.

**BIBLIOGRAPHY:** JC (Feb. 24, 1967), 13.

**MAYBAUM, SIGMUND** (1844–1919), rabbi and lecturer on homiletics. Born in Miskolc, Hungary, Maybaum studied at the yeshivot of Eisenstadt (under I. \*Hildesheimer) and Pressburg (Bratislava) and at the university and rabbinical seminary of Breslau. He officiated as rabbi in Dolni-Kubin, Hungary (1870–73), and Zatec, Bohemia (1873–81). In 1881 he was called to Berlin, where from 1888 he also lectured on homiletics at the \*Hochschule fuer die Wissenschaft des Judentums. In 1903 he was appointed professor. Active in the association of rabbis in Germany, in 1897 Maybaum was among those rabbis who protested against the idea of convening the Zionist Congress in Germany. His works include *Die Anthropomorphien und Anthropopathien bei Onkelos und den spaeteren Targumim* (1870), *Die Entwicklung des alt-israelitischen Priestertums* (1880), *Die Entwicklung des israelitischen Prophetentums* (1883), and *Juedische Homiletik* (1890). His important article

on the life of Leopold \*Zunz appeared in 1894 (in the 12<sup>th</sup> report of the Hochschule). Maybaum was an excellent preacher and his sermons were published in several volumes. A jubilee volume was published on the occasion of his 70<sup>th</sup> birthday.

[Nahum N. Glatzer]

**MAYER, ARNO JOSEPH** (1926– ), U.S. historian. Born in Luxembourg, Mayer fled the Hitler menace and found refuge in the U.S. (1940). He served in the U.S. Army in World War II, during which time he was assigned the duty of tending to Wernher von Braun after the German rocket scientist was taken into custody by the American forces. Following his military service, Mayer studied at the Geneva Institut des Hautes Études Internationales and received a Ph.D. in political science from Yale University. After teaching at Brandeis and Harvard, he was a professor of history at Princeton from 1961 to 1999. Upon his retirement, Mayer became professor emeritus of history at Princeton. His research was in the field of 20<sup>th</sup>-century diplomacy.

His major works include *Political Origins of the New Diplomacy, 1917–1918* (1959), which deals with the impact of the military stalemate; *Politics and Diplomacy of Peacemaking* (1967), a study of Wilson's war aims and the effect of Communism upon them; *Dynamics of Counterrevolution in Europe, 1870–1956* (1971); *The Persistence of the Old Regime: Europe to the Great War* (1981); *Why Did the Heaven Not Darken? The "Final Solution" in History* (1988); and *The Furies: Violence and Terror in the French and Russian Revolutions* (2000).

[Ruth Beloff (2<sup>nd</sup> ed.)]

**MAYER, DANIEL** (1909–1996), French socialist politician. Born in Paris, Mayer was a journalist by profession, and wrote for the socialist newspaper *Le Populaire*. After the fall of France during World War II, he reorganized the Socialist Party, clandestinely editing the *Populaire*, and after the liberation became its general secretary. Mayer was a member of the Chamber of Deputies from 1946 to 1958 and from 1946 to 1949 held a number of ministerial offices – labor, public health, and veteran's affairs. He was also president of the parliamentary committee on foreign affairs. He left parliament in 1958 to devote himself to the League for Human Rights of which he was president. In July 1977 he was elected president of the World Federation of the Human Rights League. Mayer was an active figure in Jewish affairs as president of ORT. When French policy toward Israel took a hostile turn, Mayer emerged as a vigorous defender of the Israeli cause both as a speaker and writer. His publications include *Etapas yougoslaves: producteur citoyen, homme* (1962); *Pour une histoire de la gauche* (1966); and *Les Socialistes dans la Résistance* (1968).

[Shulamith Catane]

**MAYER, GUSTAV** (1871–1948), German historian. Born in Prenzlau (Brandenburg), Mayer studied economics in Berlin

and Freiburg and later worked as a journalist. Because of his criticism at the end of World War I his academic career came to a standstill and only in 1920 did he become professor of history, democracy, and socialism at the University of Berlin. He wrote extensively on socialism and the history of the German labor movement. Gustav's unbiased writings contributed to the appreciation of the historical significance of \*Lassalle, \*Marx, and his friend Friedrich Engels, about whom Mayer wrote an important biography. Among his books were: *Johann Baptist von Schweitzer und die Sozialdemokratie* (1909); *Die Anfaenge des politischen Radikalismus im vormaerzlichen Preussen* (1912); *Der deutsche Marxismus und der Krieg* (1916); *Aus der Welt des Sozialismus* (1927); *Bismarck und Lassalle, ihr Briefwechsel und ihre Gespraechen* (1928); *Friedrich Engels, eine Biographie* (2 vols., 1933; Eng., 1936). When the Nazis came to power Mayer emigrated to Holland where in 1949 his *Erinnerungen – Vom Journalisten zum Historiker der deutschen Arbeiterbewegung* was published. He refused to go back to Germany after World War II because he felt that German-Jewish symbiosis had failed.

**MAYER, LEO ARY** (1895–1959), Orientalist. Born in Stanislav (Austrian Poland), he settled in Palestine in 1921 and was successively inspector of antiquities and librarian and keeper of records for the Department of Antiquities. In 1925 he was appointed lecturer in the Institute of Oriental Studies of the Hebrew University of Jerusalem. From 1932 to 1958 he was professor of Near Eastern art and archaeology there. He held numerous positions: head of the Institute of Oriental Studies; dean of the faculty of humanities; rector of the Hebrew University (1943–45); president of the Israel Exploration Society (1940–59); and president of the Israel Oriental Society. With E.L. Sukenik, he excavated the Third Wall of Jerusalem and with A. Reifenberg the Eshtemoa synagogue. Mayer specialized in Islamic art, costume, epigraphy, and numismatics. His published works include *Saracenic Heraldry* (1933), *Mamluk Costume* (1952), bibliographies of Jewish art and numismatics, and a comprehensive work on Muslim artists, *Islamic Architects and Their Works* (1956). A museum of Islamic art and culture in Jerusalem was named after him.

[Michael Avi-Yonah]

**MAYER, LEOPOLD** (1827–1903), U.S. community leader and businessman. Mayer, who was born in Abendheim, Germany, immigrated to the United States in 1850. Settling in Chicago, he engaged in private tutoring of Hebrew and German and

became known as “Lehrer Mayer.” Mayer exerted great influence on the development of the new Jewish community in Chicago, particularly in religious education and in the movement toward Reform Judaism. In 1851 he conducted the first bar mitzvah service at Kehillath Anshe Maarab (K.A.M. Congregation) and also was a founder of the Hebrew Benevolent Society. In the former, Mayer advocated reforms in worship, including the adoption of the “living language German” in the ritual and preaching, but was unsuccessful in this effort. In 1859 he joined eight others, including Bernard \*Felsenthal, to form the Jewish Reform Society (Juedischer Reformverein), which in 1861 founded Sinai Congregation, the first Reform congregation in the city. Mayer actively espoused the Union cause in the Civil War, and, with several other Jews, raised \$10,000 to outfit a Jewish company of 100 recruits who formed the Concordio Guard. Later he and his brother entered the banking business.

[Morris A. Gutstein]

**MAYER, LEVY** (1858–1922), U.S. attorney. Mayer was born in Richmond, Virginia, and was brought up in Chicago. He graduated from Yale Law School, and in 1876 he became assistant librarian of the Chicago Law Institute, a position he held for six years. During this period he edited and revised the works of Judge David Rorer on interstate law, published as *American Interstate Law* (1879). Mayer became associated with the law firm Kraus, Mayer, and Stein, which he ultimately headed when it became Mayer, Meyer, Austrian and Platt. His major interest was corporation law, and he became one of the leading corporation lawyers in the country. He was a founder of many U.S. and international corporations and was identified with some celebrated law cases. Mayer served as a member of the State Council of Defense of Illinois during World War I. He was a member of the American Economic Association and the American Academy of Political Science. He was associated with the Zion Temple in Chicago and was secretary of the Zion Literary Society.

[Morris A. Gutstein]

**MAYER, LOUIS BURT** (1885–1957), U.S. motion picture executive. Born in Russia, he was taken to Canada at the age of two. In 1907 Mayer bought a burlesque theater in Haverhill, Massachusetts, began showing films there, and soon owned all the theaters in the city. Moving to Hollywood in 1918, he formed the Louis B. Mayer Pictures Corporation, which merged to form Metro-Goldwyn-Mayer in 1924, with Mayer as vice president in charge of production. His bold use of talent and his gift for understanding public taste made MGM enormously successful. He made *The Merry Widow* in 1925, and he turned the early Goldwyn production of *Ben Hur* (1927) into one of the greatest of silent pictures. A string of money-making successes included *The Good Earth* (1932), the *Andy Hardy* series, and *Treasure Island* (1950).

Mayer was a great exponent of the star system. In addition

to “finding” Greta Garbo and Greer Garson, he helped to establish such stars as Norma Shearer, Lon Chaney, Joan Crawford, and Clark Gable. The powerful “L.B.,” as he was called, liked films with children and presented such child stars as Jackie Cooper, Mickey Rooney, Peter Lawford, Judy Garland, and Elizabeth Taylor. He also knew how to find managerial talent. At MGM, where he remained a power until 1951, he had a series of brilliant production men, from Irving Thalberg to Dore Schary. For seven years he was the highest paid executive in the United States. From 1931 to 1936, he was president of the Association of Motion Picture Producers.

[Harvey A. Cooper]

**MAYER, RENÉ** (1895–1972), French politician who was prime minister of France in 1953. Born in Paris, Mayer became a lawyer and fought in the French Army in World War I. In 1919 he was made an auditor in the Conseil d’Etat and was later given a senior post as Maître des Requêtes. He lectured at the Ecole Libre des Sciences Politiques from 1922 to 1932. He was vice president and secretary-general of the Chemins de Fer du Nord and from 1933 to 1940 was administrator of Air France, but in September 1940 was compelled by the Vichy government to give up these positions and shortly afterward he joined the Resistance. Mayer became a member of the French Committee for National Liberation in 1943 and in the following year was made minister of transport in the provisional government. He was elected to the National Assembly as a Radical Socialist in 1946 and was made minister of finance in the Plevin cabinet (1947–48). From 1949 to 1951 he was minister of justice in successive governments and after serving as minister of finance for a second term (1951–52), he became prime minister in January 1953. As prime minister, Mayer based his policy on friendship with Great Britain and a strong European defense community. His government fell the following May and Mayer was later active in the movement for European integration, becoming chairman of the Coal and Steel Authority (1955–58). Mayer played an active part in Jewish affairs and was a member of the Central Consistoire of French Jews. He was a member of the executive of the \*Alliance Israélite Universelle and, after 1946, its vice president.

[Shulamith Catane]

**MAYER, SIR ROBERT** (1879–1985), British patron of music and philanthropist. Mayer was born in Mannheim, Germany, the son of a hops merchant. He emigrated to Britain at the age of 17, working as a stockbroker and then as a successful non-ferrous metal dealer. Through his non-Jewish wife, a soprano singer and music patron, Mayer himself became involved as an organizer and sponsor of musical concerts for children, a series which spread throughout Britain and became well known. In 1932, in collaboration with Sir Thomas Beecham, he founded the London Philharmonic Orchestra. Mayer devoted

his long life to introducing children to music and to assisting young musicians. He was a supporter of many other charitable causes, including the Anglo-Israel Association. Mayer was knighted in 1939 and was made a Companion of Honour (C.H.) in 1973. He also received many other honors, dying at the age of 105. Mayer wrote an autobiography, *My First Hundred Years* (1979).

[William D. Rubinstein (2<sup>nd</sup> ed.)]

**MAYER, SALLY** (1875–1953), Italian Jewish leader and philanthropist. Born in Alsheim, Germany, Mayer settled in Italy in 1891 and gave a great impetus to the paper industry of the Vita family, which, thanks to his activity, became one of the country's most important economic concerns. He was also active in Jewish and Zionist affairs. After World War II, he became president of the Milan Jewish community, the second largest in Italy, to which he devoted himself with great energy. He rebuilt the synagogue of Milan, destroyed in an air raid, and reopened the Jewish school there. All other Jewish and Zionist organizations in Milan and Italy, however, also benefited from his generosity and dynamism. Mayer was also a patron of non-Jewish welfare institutions in Milan and in Abiate Guazzone, where his paper mills were located.

His son, ASTORRE MAYER (1906–1977), born in Milan, graduated as an engineer and carried on and expanded his father's enterprises in both the industrial and Jewish fields. For some years he was president of the Italian Zionist Federation and led the Jewish community in Milan. He also was honorary consul general of Israel there. He was president of the Standing Conference on European Jewish Community Service and other Jewish welfare and cultural institutions. Mayer also promoted important industries in Israel, the foremost being the Haderah Paper Mills, of which he was a founder.

[Giorgio Romano]

**MAYER, SALLY** (1882–1950), Swiss Jewish leader and representative of the \*American Jewish Joint Distribution Committee in Switzerland. Mayer was born in Switzerland where he established a successful knitwear factory. He was a member of the Municipal Council of St. Gallen and chairman of the Association of Jewish Communities in 1936. During his term of office, the Association joined the World Jewish Congress. In 1938 he was involved in negotiations with the Swiss government regarding the immigration of Jews but could not overcome the anti-immigrant feeling in Switzerland and thus Swiss policy remained restrictive. In October of that year the Swiss requested that the passport of Jews from Germany be marked with the letter J to distinguish it from non-Jewish passports. During World War II Mayer was appointed director of the Swiss office of the American Joint Distribution Committee, in which capacity he maintained contact with the Jewish commu-

nities in German-occupied territories and was responsible for the transmission of funds from the JDC. The initial sum at his disposal was a paltry \$6,370 in 1940, less than half that sum in 1941. After the Japanese occupation of China in 1941, he was responsible for the transmission of JDC funds for maintaining approximately 25,000 refugees in Shanghai under Japanese occupation. With the United States at war, American money could not be transmitted directly to enemy countries. A ruse was worked out where the Joint supported the Swiss Jewish Community's efforts to help their own refugees and the Swiss Jewish community would funnel funds to China. He was also involved in attempts to rescue Jews from the Germans. He participated in the Europa Plan of 1942 with the working group in Slovakia whereby, on payment of two to three million dollars provided by Jews in free countries, the remaining million Jews in Europe were to be saved from extermination. In his bitter memoirs Rabbi Michael Dov Weissmandel accused Mayer of ineffectiveness and bad faith. In reality his options were limited as the Joint in Lisbon did not approve the transaction, so Mayer was forced to send Swiss money illicitly to Bratislava. When adequate sums were not available, Mayer proposed that the money be deposited in blocked accounts in Switzerland until the end of the war. The negotiations dragged on until August 1943, when they were broken off on the orders of Himmler. With the knowledge of Himmler, Mayer negotiated with an S.S. delegation headed by Kurt Becher for the ransom of Jews from Hungary. His hands were tied by the American and Swiss governments, which would not permit the transfer of money and the Joint dissociated itself from these negotiations. Still Mayer arranged for a meeting between Becher and the representative of the \*War Refugee Board, the arm of the American government committed to rescue and the only arm of the American government with the freedom to negotiate with the enemy. He could not provide substantive funds and he provided some equipment to buy some time. He was able to achieve a significant – albeit meager – result. Two transports numbering 1,391 – mostly Hungarian Jews – arrived in Switzerland from Bergen-Belsen, while 17,000 others were brought to Vienna.

After the war, he was accused from many sides. Hungarian Jewish leaders accused him of not meeting the Nazi ransom. He, in turn, accused them of financial impropriety. He continued to work for the JDC after the war, working with survivors and with the JDC efforts in Hungary and Romania.

The accusations hurled at him are a manifestation of the desperate conditions of his accusers and their inability to perceive how limited – how few – his options were. To the outside world, Mayer may have seemed the gateway to Jewish power; he lived with the reality of his own powerlessness, especially when judged by the scope of the needs he was asked to meet.

[Michael Berenbaum (2<sup>nd</sup> ed.)]

**MAYIM AḤARONIM** (Heb. מַיִם אֲחֵרֹנִים; lit. “latter waters”), term for the ritual washing of the hands after a meal, and before the recitation of the Grace After Meals. The two-fold injunction “Sanctify yourselves and be ye holy” (Lev. 20:7) was interpreted as commanding ritual ablution both before the meal and before the recitation of the Grace After Meals (Ber. 53b). The *amoraim* even contended that *mayim aḥaronim* was more important than washing before the meal (Yoma 83b; Ḥul. 106a). According to the Talmud, the duty was particularly insisted upon in order to prevent the danger of touching one’s eyes with the salt which was used as a condiment during the meal (Ḥul. 105b). Because the variety of salt referred to by \*Judah b. Ḥiyya in the Talmud was a particularly potent one (*melah sedomit*, “salt of Sodom”), containing an admixture of the acrid potash of the Dead Sea, *tosafot* (*ibid.*) maintained that the duty did not apply in France, where this particular salt is not to be found. This view is contested, however, by the Shulḥan Arukh (Oḥ 181:10). No blessing is said before the performance of *mayim aḥaronim* (Sh. Ar., Oḥ 181:7).

**MAYKAPAR, SAMUIL MOYSEYEVICH** (1867–1938), pianist, composer, teacher, and writer. Born in Kherson, Ukraine, Maykapar graduated from the Law School of St. Petersburg University (1890) and from the St. Petersburg Conservatory as a pianist in 1893. From 1894 to 1896 he continued his studies with Leshetitzky in Vienna. The period 1898–1910 was divided between Moscow (1898–1901), Tver (where he founded a music school, 1901–03), and Germany (1903–10). From 1910 to 1930 he taught in the St. Petersburg Conservatory (from 1917 as a professor). Maykapar often worked as a concert pianist, in ensembles with Auer and Grzhimali. His short piano pieces for children remain popular, especially *Biryulki* (“Spillikins”), *Bagatelles*, and *The Marionette Theater*. He also composed chamber music and a sonatina for violin and piano. His writings include *Muzykal’nyi slukh: ego znachenie, priroda, osobennosti i metod pravil’nogo razvitiia* (“The Musical Ear: Its Significance, Nature, Peculiarities and a Method of Proper Development,” 1890, 1915<sup>2</sup>); a study on Beethoven (1927), an autobiography, *The Years of Study* (1938), and other works.

**BIBLIOGRAPHY:** B. Volman, *Samuil Moiseevich Maikapar: Ocherk zhizni i tvorchestva* (1963); K. Petrova, “Komzitor, posvyativshiy svoe tvorchestvo detyam,” in: *Muzykal’naya zhizn’*, 14 (1961).

[Marina Rizarev (2<sup>nd</sup> ed.)]

**MAY LAWS**, a series of “temporary laws” applying to Jews confirmed by Czar Alexander III in May 1882 and repealed in March 1917 by the revolutionary provisional government. The pogroms which broke out in southern Russia in 1881 brought the Jewish problem into prominence. Reports by higher government officials placed the blame on the Jews and pointed to the failure of the relatively liberal policy of Alexander II. On the basis of these reports, the minister of the interior Ignatiev wrote to Czar Alexander III:

The principal, indeed exclusive cause of this [anti-Jewish] movement is the economic situation; over the last 20 years the Jews have gradually gained control of commerce and industry; they have also acquired, mainly by purchase or lease, much land, and by their unity they have generally made every possible effort to exploit the general population, especially the impoverished classes. They have thus fomented a wave of protest, which has taken the unfortunate form of violence. Now that the government has firmly suppressed the riots and lawlessness in order to protect the Jews, justice demands that it immediately impose severe regulations which will alter the unfair relations between the general inhabitants and the Jews and protect the former from the harmful activity of the latter.

Accordingly, on Aug. 22 (Sept. 3), 1881, the czar ordered the formation of special committees in the districts inhabited by Jews. Composed of representatives of the various classes and communities and presided over by the governor of the province, the committees were to determine “which kinds of Jewish economic activity had a harmful effect on the lives of the general inhabitants.” This directive predetermined the attitude adopted by the committees. During their deliberations of September–October 1881 accusations against the Jews were made by the representatives of the peasants and townspeople, while the Jewish representatives endeavored to defend themselves. Their conclusions were passed on to a special committee formed to draft legislation. While the latter was in session during the winter of 1882, an anti-Jewish campaign was fomented by the press (with the support even of the Russian revolutionary movement *Narodnaya Volya*) and there were renewed outbreaks of violence in towns such as Warsaw and Balta. With the consent of the government, Jewish leaders assembled twice in St. Petersburg (September 1881 and April 1882) to discuss the government proposals, the most far-reaching of which suggested a planned mass emigration of Russian Jewry or the settlement of many Jews on the plains of Central Asia. Against these extreme measures some intercessionary moves were made behind the scenes, and outraged liberal public opinion in Western Europe also had some influence.

As a result, the “temporary regulations” of May 3 (15), 1882 stated: (1) Jews are forbidden to settle outside the towns and townlets; (2) deeds of sale and lease of real estate in the name of Jews outside the towns and townlets are canceled; and (3) Jews are prohibited from trading on Sundays and Christian holidays. The “temporary laws” satisfied the demands of the Russian rural merchant class that sought to be rid of its Jewish rivals in the villages of the Ukraine and Belorussia. In effect they were a contraction of the \*Pale of Settlement, since Jews were confined to towns and townlets only. These laws were binding in the 15 “Russian” provinces of the Pale of Settlement (but not in the provinces of the “Kingdom of Poland”). Until 1904 they also applied to those Jews who had been granted the right of residence throughout the empire (with the exception of university graduates). The police were charged with the implementation of these laws, which became a source of constant police extortion and harassment of Jews still living in the villages. Over the years, the May Laws were

interpreted with increasing severity. Thus in 1887 the Jews living in villages prior to 1882 were forbidden to move from one village to another.

Examining the legislation concerning the Jews between 1883 and 1888, the Pahlen Commission condemned the “temporary laws” and advocated that they be abolished, but its recommendations were rejected by the government. At the beginning of the 20<sup>th</sup> century, criticism of the “temporary laws” was voiced by the generally anti-Jewish Russian ministers of the interior Sipyaghin and \*Plehve. It was decided on May 10, 1903, to authorize Jewish residence in 101 villages, which in the meantime had developed and in practice became townlets. On the outbreak of World War I, there were 300 villages of this kind. Echoes of the May Laws are found in the Jewish literature of Russia (cf. Shalom Aleichem, *Tevye der Milkhiger*; H.N. Bialik, *Ha-Hazozerah she-Nitbayyeshah*; S. Ben-Zion, *Hayyim shel Parnasah*, etc.).

[Yehuda Slutsky]

**MAYMERAN (Maimoran, Mimran)**, family of rabbis and diplomats in \*Morocco and \*Algeria, originally from \*Marrakesh. R. MEIR MAYMERAN (early 17<sup>th</sup> century) of Erez Israel sent a letter recommending Isaac Cansino to collect funds in \*Oran (Algeria) for his *hekdeshe* (“poor house”). Maymeran was the head of a largely \*Shabbatean Marrakesh community in the second half of the 17<sup>th</sup> century. The two best known members of the Maymeran family were JOSEPH (d. 1683) and his son ABRAHAM (d. 1723), who served as financial advisers to the ruler Moulay Ismail (1672–1721) in \*Meknès. Joseph was instrumental in formulating and negotiating the commercial treaties between Morocco and the Netherlands in 1682. According to the priest Busnot, Joseph played a major role in bringing Ismail to power, but Ismail caused Joseph’s downfall with an “accident.” Abraham succeeded his father as the king’s favorite, continuing the negotiations with the Dutch and obtaining commercial privileges from the British and French as well. Abraham was involved in ransoming captives in 1688, and like his father was the head of Moroccan Jewry, on whose behalf he attempted to lighten the king’s heavy taxation. His rival in the community was Moses \*Benatar. Abraham’s nephew SAMUEL negotiated with the English and the Dutch, and a relative, Moïse, dealt with the French.

(eds.), *Essays Presented to Chief Rabbi Israel Brodie...* (1967), 161–2; P. de Cenival, in: *Hesperis*, 5 (1925), 176f.; I.D. Abbou, *Musulmans andalous et judéo-espagnols* (1953), 309–12; SIHM, index.

**MAYNARD, FREDELLE BRUSER** (1922–1989), writer. Born in Foam Lake, Saskatchewan, to Boris and Rona Bruser (née Slobinsky). She studied English literature (Honors B.A., University of Manitoba (1943); M.A., University of Toronto (1944); Ph.D., Radcliffe College, Harvard University (1947)).

Maynard belongs to a generation of Jewish Canadian women writers that included Miriam Waddington and Adele Wiseman. She is perhaps best known for *Raisins and Almonds* (1972) and *The Tree of Life* (1988), two autobiographical works in which she asks “Who am I?” and emphatically concludes: “Woman and Jew, I am also my parents’ child.” The interest of these volumes thus lies in their combination of a vivid portrayal of family dynamics with a pointed representation of the social conditions that affect the life of a Jew and a woman at a particular historical juncture. Maynard’s recollections of her gentle artist-turned-shopkeeper father in *Raisins and Almonds* are presented against the backdrop of her experience of growing up “Jewish and alien” in the small towns of western Canada during the 1920s and 1930s. *The Tree of Life* explores Maynard’s complex relationships with her mother, sister, her gentile husband, the artist Max Maynard (they divorced shortly after the publication of *Raisins and Almonds*), and two daughters Rona and Joyce, while also demonstrating the repercussions of a pervasive gender discrimination that made academic employment unattainable even for somebody with her stellar record. Discouraged but not defeated, Maynard began a successful journalism career that would span four decades, writing about education, child care and development, health and medicine, and family relationships in Canadian and American publications such as *Good Housekeeping*, *Ladies’ Home Journal*, *Family Circle*, *Woman’s Day*, *Chatelaine*, *Parents*, and *Reader’s Digest*. During the 1970s and 1980s Maynard was the initiator and host of two popular Ontario parenting shows one of which was *Parents and Children*. Maynard also published two books on parenting and child care: *Guiding Your Child to a More Creative Life* (1973), and the controversial *The Child Care Crisis* (1985), in which she advocated stay-at-home parenting over day-care during a child’s formative years. Further light on Maynard’s life is shed by autobiographical writings by her daughters, including Rona Maynard’s personal journalism in various magazines (she was editor of *Chatelaine* for ten years until 2005), and Joyce Maynard’s memoir *At Home in the World* (1998). Maynard’s papers are at the University of Manitoba Archives and Special Collections.

[Bina Toledo Freiwald (2<sup>nd</sup> ed.)]

**MAYSE-BUKH** (“Book of Stories”; Heb. מַעֲשֵׂה, “story”). Like many other folk-books, the *Mayse-Bukh* is a vast anonymous collection of stories and folktales, legends and oral traditions handed down from generation to generation orally and later recorded in writing in Yiddish. The book contains much from the talmudic *aggadah* and Midrash, here translated into the vernacular and copied and recopied by various writers who also adapted and judaized material from other traditions.

The *Mayse-Bukh* was first published in Basel in 1602 under the title *Eyn Shoen Mayse Bukh* by Jacob b. Abraham of Mezhirech (also known as Jacob Pollak or Bukhendler), who is known to have been a compiler of religious textbooks, printer, publisher, and bookseller. The *Mayse-Bukh* with its

255 stories was compiled in the latter part of the 16<sup>th</sup> century, certainly not before 1580, the year when the book *Kaftor va-Ferah* by the mystic Jacob Luzzatto was published in Basel, from which the author of the *Mayse-Bukh* borrowed several stories to supplement his collection. However, it is clear that much of the narrative lore included in the book derived from earlier generations; extant manuscripts of Yiddish *mayses* (“stories”) bear witness to a lively and continuous productivity in the field of creative narrative traditions.

The *Mayse-Bukh* is part of the folk-literature in Yiddish designed for the use of the common man untutored in the holy language and its literature, and for women who for the first time had access to a written language and through it to education. The rhetorical style mirrors the transition from an oral to a literary tradition. The collection became quite influential, in that the *mayse* became such a foundation for later prose narrative that, even up to the present, Yiddish authors have continued to draw inspiration from it. The book aims to provide a substitute for the widely circulated popular secular literature of the period, which the compiler of the *Mayse-Bukh*, like many others before him, considered impious. His collection, intended to replace this literature and provide a new kind of “*aggadah* in the vernacular,” is permeated with a spirit of piety to strengthen the reader’s faith.

The *mayse* corresponds to the Christian *exemplum* and serves to teach conduct and ethical principles, while also providing entertainment for the masses. As such, the *Mayse-Bukh* follows the example of numerous medieval Hebrew collections designed to inculcate a moral dictum by way of a narration. It thus had a powerful influence on Old Yiddish didactic literature. The moral of the story was usually appended at the end of the tale and concluded with the hope for an early arrival of the Messiah. Despite his piety, the compiler of the *Mayse-Bukh* did not resist the trend of his time, but, according to popular taste, he included various anecdotes, merry tales and fabliaux, often in keeping with the Italian or French *conte* and German fable collections, with their licentious, sometimes satirical, tone. The author drew profusely on non-Jewish sources, altering the plot or its characters where possible and adapting the tale to suit a Jewish sensibility. In this rich collection, Eastern themes mingle with Western material, and midrashic stories with legendary lore. A product of its times and a reflection of its own problematics, the *Mayse-Bukh* provides a key to understanding Ashkenazi literature, culture, and society in their Germanic context of the early modern period. Between the first edition of Basel in 1602 and the year 1763, 12 subsequent editions were published. Even in the 19<sup>th</sup> century several shorter and modernized versions appeared. The popular *Mayse-Bukh* nourished to a great extent ethical literature in Yiddish and served as a model for similar collections which were later composed and incorporated into folk-literature.

The *Mayse-Bukh* consists of three parts. The main section is devoted to stories from Talmud and Midrash, drawn in part from the *Ein Yaakov*. The second contains a cycle of 27 legends and narrative traditions centered around R. Samuel and his

son R. \*Judah he-Ḥasid (the “Pious”), the great mystics of medieval Germany, and the authors of the *Sefer Ḥasidim*. These stories early entered the oral tradition and were later recorded in Hebrew as well as in Yiddish. The third part consists of a variety of narrative material: medieval stories about \*Rashi, \*Maimonides, and the story of the Jewish pope.

See Yiddish \*Literature, \*Exemplum.

[Jacob J. Maitlis / Astrid Starck (2<sup>nd</sup> ed.)]

**MAYSLES, ALBERT** (1926– ) and **DAVID PAUL** (1932–1987), U.S. directors. Born in Brookline, Massachusetts, the brothers attended Brookline High School and studied psychology at Boston University. Albert taught psychology at Boston University in the late 1940s and in 1955 traveled to the Soviet Union to make his first film, *Psychiatry in Russia*. In 1956, David worked as a production assistant on the Marilyn Monroe films *Bus Stop* and *The Prince and the Showgirl*. In 1957, the brothers took a motorcycle trip together from Munich to Moscow. While in Poland, they focused on the student protest movement as the subject of their first film together, *Youth in Poland*. The next documentary for the brothers, *Primary* (1960), focused on the 1960 Democratic primary election campaigns of Kennedy and Humphrey. In 1962, they formed their own production company, Maysles Films, Inc., which made commercials and industrial films to support their *cinéma vérité* style of documentary filmmaking. Their next films were *Showman* (1962) and *What's Happening: The Beatles in the USA* (1964). In 1965, they released *Meet Marlon Brando*, which followed the actor during publicity interviews, and received a Guggenheim Fellowship. The brothers found themselves caught in the middle of a debate on objectivity in documentary filmmaking with the release of the National Society of Film Critics award-winner *Salesman* (1968), which portrays four door-to-door high-pressure Bible salesmen in Boston who sell to poor Catholic families. They returned to rock 'n' roll with *Gimme Shelter* (1970), a film that follows Mick Jagger and the Rolling Stones on a North American tour and ends with the infamous concert at Altamont Speedway in California during which a murder occurred. The Maysles' *Grey Gardens* (1975) portrayed Jacqueline Kennedy Onassis' cousins, Edith and Edie Beale, an eccentric mother and daughter living in a decaying East Hampton mansion. The brothers also produced films on celebrated artists Christo and Jeanne-Claude, including the Academy Award-nominated *Christo's Valley Curtain*

(1974) and *Running Fence* (1978). David died of a heart attack in New York in 1987. Later that year, Albert received the Emmy Award for the brothers' *Vladimir Horowitz: The Last Romantic* (1986). Albert continued to direct such films as *Christo in Paris* (1991), *Abortion: Desperate Choices* (1993), *Umbrellas* (1994), *Letting Go: A Hospice Journey* (1996), and *The Gates – A Project for New York City* (2005).

[Adam Wills (2<sup>nd</sup> ed.)]

**MAYZEL, MAURYCY**, last president of the Warsaw Jewish community before the Holocaust (1937–39). In the elections held in 1936, after \*Agudat Israel had been in power for six years, the \*Bund increased its strength to become the largest party. As the three most prominent groups (the Zionists, the Orthodox, and the Bund) could not reach agreement on the establishment of an effective administration, the government dissolved the community council. Mayzel was appointed community president, and a committee of independent personalities, including Adam \*Czerniakow, Mark Lichtenbaum, Kaminer (Orthodox), and the lawyer Zondelewicz, was formed to assist him. Mayzel himself was a leader of the merchants' association and an assimilationist in outlook. The attitude of the parties' delegates and the public toward the government appointment was negative. Mayzel was essentially an administrator who sought to assure regular and vital services while obeying the instructions of the authorities; the latter supported him in the face of violent criticism from the public and the Jewish press. Mayzel promoted the publication of the important trilingual organ of the Warsaw community *Głos gminy Żydowskiej* (1937–39). When the Nazis invaded Poland, he fled from Warsaw; the mayor of Warsaw appointed Adam Czerniakow in his place.

**BIBLIOGRAPHY:** H.M. Rabinowicz, *Legacy of Polish Jewry* (1965), 123–4. **ADD. BIBLIOGRAPHY:** R. Sakowska, "Z Dziejów Gminy Żydowskiej w Warszawie 1918–1939," in: *Warszawa drugiej Rzeczypospolitej*, 4 (1972); A. Guterman, *Kehillat Varshah bein Shetei Millhamot* (1997), index

[Moshe Landau]

**MAYZEL, NACHMAN** (1887–1966), Yiddish editor, literary critic, and historian. Born in Kiev, Mayzel stemmed from a family of rabbis and rich Kiev merchants and was related to the Yiddish novelists Dovid \*Bergelson and \*Der Nister, whose fame he helped to spread. He made his debut with essays in Hebrew (1905) and in Yiddish (1909), and, after the Revolution of 1917, founded the publishing house, Kiev Farlag, which issued more than 100 books. He also edited periodicals and anthologies of the Kiev Culture League. Settling in Warsaw in 1921, he helped to found its Culture League and continued his

activity as editor and literary critic. He later described this dynamic period in his volume *Geven Amol a Lebn* ("There Used to Be a Life," 1951). In 1924 he co-founded and co-edited the weekly *Literarische Bleter*, which exerted a significant influence upon Yiddish literary activity in Poland between the two world wars; he also played a central role in organizing the Yiddish Pen Club (1927). He participated in the Jewish World Congress of Culture (1937) in Paris, which launched *YKUF*, the international Yiddish Culture League. Immigrating to New York in 1937, he furthered the growth of *YKUF*'s American section and edited its monthly organ *Yidische Kultur* from 1939 to 1964, and then settled in Israel at Kibbutz Alonim. Mayzel was a prolific writer, composing more than 40 books and hundreds of major articles. *Noente un Vayte* ("Close and Distant People," 2 vols., 1924–26) contained his most valuable early articles. His studies on I.L. \*Peretz and on Sholem Yankev \*Abramovitsh contributed important new knowledge. His book *Dos Yidische Shafn un der Yidisher Shrayber in Sovetnfarband* ("Yiddish Creativity and Yiddish Writers in the Soviet Union," 1959) surveyed, in 20 essays, Russian Yiddish literature from 1917 until the tragic autumn of 1948 when Yiddish cultural institutions were liquidated and their leaders silenced. In his last years in Israel he completed studies on Chaim \*Zhitlowsky (1965) and on the influence of national literatures upon each other, with special emphasis on the influence of foreign literatures upon Yiddish writers (1966).

[Sol Liptzin]

**MĀZANDARĀN**, region called Tabaristān in the early Islamic period, situated in the southern part of the Caspian Sea, north of Alborz Mountains and east of Gilān. Its length extends to a maximum of 320 km. and its width to 96 km. The oldest reference to the existence of Jews in Māzandarān is in the Persian Chronicle of Eskandar Beg (vol. 2, pp. 900–1) which points to the transfer by Shah \*Abbās I of 100,000 non-Muslim captives of Georgia to Māzandarān and Farah-Ābād south of Caspian Sea, most probably around 1616/17. Farah-Ābād is also mentioned in the Chronicle of \*Bābāi ben Lutf (17<sup>th</sup> century), as if it was built by the transferred Jews of Georgia. There is no mention of Jews in Farah-Ābād during the 19<sup>th</sup> century. The cause of their disappearance is not known.

Another important city in Māzandarān is Bārforush, whose name was changed by the Iranian Majles to Bābol around 1935. According to Fraser (1826), Farah-Ābād was a large, prosperous city of 200,000 inhabitants. On his second trip (1838), he was not impressed by the city which was populated by only 30,000 inhabitants. No reason was given for this drastic change, but it is possible that the main reason was the deviation in trade routes to Europe from Bārforush to Rasht. H.A. Stern, a Christian missionary who visited the

Jewish community of Bārforush in 1852, gives us the following information: “150 Jewish families live among 20,000 inhabitants. They have six synagogues. In the past they suffered bitter persecutions. They constantly quarrel among themselves and for this reason some of them have willingly embraced Islam.” Stern also writes, “The sorrows and sufferings of the living [the Jews of Bārforush] being, however, insupportable and overwhelming enough, their enemies to satiate their intense and inhuman hate, with an invective cruelty which makes the heart recoil, and the soul shudder, exhume ten, fifteen, or even twenty, recently deceased Israelites, and these amidst wild shouts and pious ejaculations they consume on a lofty funeral pyre.” Stern calls this “a savage exhibition of bigotry and fanaticism.” About 14 years after Stern’s visit, the Muslims of the city attacked the Jews in their Mahalleh, killed 18 men and 6 women, and wounded many of them. Two of the 18 were burned to death with inflammable material. The rest of the Jews fled to find shelter in the jungles around the city. The horrible news reached the British consul, A.H. Mounsey, who complained to Nāser al-Din Shah. The shah simply announced he could do nothing against the fanatical Muslim clergy. The massacre of Bārforush Jews also drew the attention of the Jewish leaders in Paris.

There were in Māzandarān other towns where Jews lived, such as Sāri, Āmol, and a few other small settlements. During the first half of the 20<sup>th</sup> century many Jews left Bārforush and other towns of the province and went to live in Tehran. After 1948, a majority immigrated to Israel. There is no mention of Jewish communities in Bārforush or in any other places in Māzandarān after the 1979 Islamic revolution in Iran.

[Amnon Netzer (2<sup>nd</sup> ed.)]

**MAZAR, AMIHAI** (1942– ), Israeli archaeologist, with a specialist interest in the Bronze and Iron Ages, and the relationship between archaeology and biblical history. Born in Haifa, Mazar began his studies in 1966 at the Hebrew University of Jerusalem, completing his Ph.D. in 1976, and serving there as lecturer from 1977 to 1981 (as well as at the Ben-Gurion University, Beersheba). A senior lecturer at the Institute of Archaeology at the Hebrew University from 1982, Mazar was appointed associate professor in 1986 and from 1994 was the incumbent of the Eleazar Sukenik Chair in the Archaeology of Israel. Numerous academic duties included serving as head of the Institute of Archaeology (1995–98) and as a member of the Archaeological Council of Israel (1994–99) and the Council of the Israel Antiquities Authority (2001–5). Follow-

ing his survey of the aqueducts of Jerusalem in 1968, Mazar conducted important excavations at Tel Qasile (1971–74, and later in 1982–90), at Tel Batash, biblical Timnah (with G.L. Kelm, 1977–89), and at Giloh near Jerusalem (1978–82). From the late 1980s Mazar directed the Beth Shean Valley Archaeological Project, with excavations at Tel Beth-Shean (1989–96) and, more recently, excavations at Tel Rehov (from 1997). A frequent participant in international scientific meetings and conferences, Mazar was a prolific writer with many scientific papers, monographs, and books to his credit. He is probably best known to students of archaeology as the author of *Archaeology of the Land of the Bible* (ca. 10,000–586 B.C.E.), which was published in English in 1990, with subsequent translations into Portuguese, Russian, and Japanese. Important monographs have also appeared under his authorship on the Tel Qasile and Tel Batash excavations. Mazar participated in the important tenth/ninth-century chronology debate (see his paper “Iron Age Chronology: A Reply to I. Finkelstein,” in: *Levant*, 29 (1997), 157–67). Mazar’s strength in his publications was in the reasoned and balanced approach he took to archaeological materials, one which has influenced many of the younger generations of Israeli archaeologists. Mazar is regarded as a very loyal mentor to his students.

[Shimon Gibson (2<sup>nd</sup> ed.)]

**MAZAR (Maisler), BENJAMIN** (1906–1995), Israeli archaeologist and historian. Born in Ciechanowicz in Poland, he studied at the universities of Berlin and Giessen. In 1929 he settled in Palestine, becoming the secretary of the Jewish Palestine Exploration Society (1929–43). Mazar joined the staff of the Hebrew University in 1943 and in 1951 he was appointed professor of the history of the Jewish people in the biblical period and the archaeology of Palestine. He was appointed rector of the university in 1952 and president in 1953, holding both positions until 1961. In 1959 he became president of the Israel Exploration Society. He was also chairman of the Archaeological Board of Israel and a member of the Israel Academy of Sciences and Humanities. In 1968 he received the Israel Prize for Jewish Studies. Mazar directed archaeological excavations at \*Ramat Raḥel (1931), \*Bet She’arim (1936–40), Tell Qasile (1949 ff.), and \*En-Gedi (1957–66). He conducted the historic excavation along the outside of the southern and western sections of the Temple enclosure in Jerusalem and the Tyropoeon Valley (1967 ff.). Besides over 300 articles, including excavation reports, Mazar has published *Untersuchungen zur alten Geschichte und Ethnographie Syriens und Palästinas* (1930); *Toledot ha-Meḥkar ha-Arkheologi be-Erez Yisrael* (“History of Palestine Exploration,” 1935); *Toledot Erez Yisrael* (“History of Palestine” part I, 1937); *Israel in Biblical Times – a Historical Atlas* (1941); and the first volume of *Beth Shearim* (1944, 19572). He headed the editorial board of the biblical encyclopedia *Enziklopedyah Mikra’it* (1950–89). An important collection of Mazar’s articles was assembled in S. Ahituv and B. Levine (eds.), *The Early Biblical Period: Historical Studies*

(1986). Over a period of two generations Mazar trained most of the Israeli archaeologists and Bible scholars.

[Michael Avi-Yonah / S. David Sperling (2<sup>nd</sup> ed.)]

**MAZE, IDA** (1893–1962) Yiddish poet. Born near Kapuly, Belarus; she arrived in Canada with her family in 1907, eventually settling in Montreal. Her family, the Zhukovskys, were distantly related to Sholem Yankev \*Abramovitch (Mendele Mokher Sforim) and were intellectual though poor. She began writing poems of grief in 1928, following the death of her eldest son. These poems were collected in *A Mame* (“A Mother,” 1931). Throughout her career the majority of her poems were either for children or about her children (she had two surviving sons); some of them took in natural themes. Her talents lay chiefly in her ability to write engrossing, fluid, and sometimes urgent rhythms and rhymes. Her later books were *Lider far Kinder* (“Poems for Children,” 1936), *Naye Lider* (“New Poems,” 1941) and *Vaksn Mayne Kinderlekh* (“Grow, My Little Ones,” 1954). An autobiographical novel, *Dinah*, was published posthumously (1970). More important than her own output, however, was her role in the Montreal Yiddish artistic community which centered around the Jewish Public Library. Her apartment served as a literary salon for writers at every level, the more famous coming simply to read aloud and find literary companions while the lesser known workshopped their poems with a critical audience. In addition to this, Maze spent most of her time arranging visas, work permits, or actually finding jobs for the Yiddish-speaking refugees who came through Montreal. Although much of her aid went to Yiddish writers, she was as generous with the lesser as with the major talents. Canadian historian David Rome reported her appeal on behalf of one struggling poet: “He needs help, not only because he is penniless and his family is falling apart, but because he doesn’t have a speck of talent” (Massey, 54). These endeavors earned her the nickname “the mother of Yiddish writers.” Among those who spent a great deal of time in her apartment were Melech \*Ravitch, Rokhl \*Korn, and J.J. \*Segal. Visitors from the United States included Kadya \*Molodowsky, Moyshe \*Nadir, and H. \*Leivick. The English-language poet Miriam \*Waddington, whose family spoke Yiddish at home, attended these salons as a teenager. Maze’s impact seems to have largely consisted of imparting by example her ideas about literature: its place as a feature of everyday life, in which every member of society is equally implicated and from which every individual of whatever talents could draw his or her own intellectual sustenance.

[Faith Jones (2<sup>nd</sup> ed.)]

**MAZEH, JACOB** (1859–1924), Zionist leader and Hebrew writer. Born in Mogilev, Belorussia, he was orphaned in child-

hood and given a traditional education in his grandfather’s home. Later he read and was influenced by the Haskalah, in particular by the works of E. \*Zweifel. At the age of 16, he entered a Russian secondary school in \*Kerch, Crimea, and in 1886 completed his studies at the law faculty of the Moscow University. After the pogroms of 1882, he joined the \*Hibbat Zion movement and was one of the founders of the Benei Zion Society (1884). In his article *Elleh Hem ha-Ashamot* in \*Ha-Meliz (1888) Mazeh rebuked his generation for negligence in the education of their children, charging exorbitant rates of interest, forging currency, evading public welfare activities, despising work, and “lack of positive love of our fathers.” He represented the Benei Zion at the founding conference of the Committee for the Support of Farmers and Craftsmen in Palestine (Odessa, 1890), and organized a group of wealthy men for settlement in Erez Israel. Traveling there as their emissary, he even opened negotiations for the purchase of the \*Mahanaïm tract of land in Galilee for the project, which was brought to a halt as a result of the Moscow expulsion (1891).

In 1893, after S.Z. \*Minor was removed from his position as \**kazyonny ravvin* (government-appointed rabbi) of the Moscow community, Mazeh was appointed as his successor. Being both a *maskil* and a man steeped in Jewish tradition and nationalism, he was an exception to the usual type of *kazyonny ravvin*. He became the spiritual leader of his congregation and its representative before the local authorities, who were noted for their hatred of the Jews. A brilliant orator, Mazeh was well known for his numerous activities in Jewish public life, which included the promotion of Hebrew culture and the founding of the Hovevei Sefat Ever Society. His appearance as the defense expert on Jewish law at the \*Beilis trial in Kiev (1912), when he refuted the evidence of the prosecution “experts”, made him famous among Jews everywhere. After the 1917 Revolution, he was a deputy at the all-Russian Constituent Assembly representing the Jewish National List and was also among the founders and devoted workers of the \*Tarbut organization. He supported the \*Habimah theater during its early years. With the establishment of the Soviet regime, Mazeh interceded with the authorities in order to assure the rights of Hebrew language and culture. In 1920 he participated in the last Zionist Council of Russia. He refused to sign the declaration of the representatives of the various religions in which they denied that religion was persecuted in the U.S.S.R. In his last years, deprived of his functions under the Communist regime, Mazeh wrote his memoirs, which are marked by dignity and humor. He was unable to complete them as he became blind in 1922. The chapters which were brought out of Russia and published in Erez Israel (*Zikhronot*, 4 vols., 1936) are a valuable source for the history of Russian Jewry and Hebrew literature. Mazeh wrote under the pseudonyms Saadiah, Jacob ha-Kohen, Aharoni, and Kochav. Thousands of local Jews took part in his funeral in Moscow.

[Yehuda Slutsky]

**MAZER**, U.S. family of business executives. ABRAHAM MAZER (1876–1953) was born in Goshcha, Ukraine. He went to the United States at the age of 17 and started a paper business in Hartford, Connecticut, later managing it from New York City. In 1952 the company, the Hudson Pulp and Paper Corporation, had a sales volume of \$36 million and plants in four states, and held half a million acres of woodland in Florida and Maine. Mazer played a leading role in the United Jewish Appeal, the Federation of Jewish Philanthropies, and the Jewish National Fund. He supported Yeshiva University in New York and the Hebrew University of Jerusalem, and founded the Abraham Mazer Free Loan Bank of Israel. His three sons, JACOB (1898–1968), JOSEPH M. (1899–1979), and WILLIAM (1905–1998), took over the corporation's executive posts. They were active in Jewish charity work, taking a special interest in undertakings benefiting Israel. The family sponsored the American-Israeli Paper Mills in Hadera, Israel.

**MAZKERET BATYAH** (Heb. מְזַכְרֵת בַּתְיָה; “Memory of Batyah”), moshavah with municipal council status, in the Coastal Plain of Israel southeast of Rehovot. Its name commemorates Baron Edmond de \*Rothschild's mother. It was the first village founded upon Baron Edmond de Rothschild's initiative (1883), and was known up until the early 1900s mostly by the name of Ekron (see \*Kiryat Ekron). The name Ekron was given in the desire to identify the moshavah with the biblical site \*Ekron from which the neighboring Arab village 'Aqir (أقير) also took its name. Baron Rothschild worked to give the village a truly rural character, and was aided by the \*Hibbat Zion movement in bringing some Jewish families who had been farmers in Russia to settle at Mazkeret Batyah. Until the 1940s, when rich groundwater reserves were tapped, the village's progress was slow, not only because little water was available but also because of bad communications. After the change, citrus groves became prominent. New immigrants settled there and more arrived in the first years after 1948. A further phase of expansion began in the mid-1960s and by 1969 the village had 845 inhabitants. By the mid-1990s the population had risen to 3,410, more than doubling to 7,300 in 2002, on an area of 2.7 sq. mi. (7 sq. km.). Residents earn their living in farming, industry, and commerce and also work outside the settlement.

[Efraim Orni / Shaked Gilboa (2<sup>nd</sup> ed.)]

**MAZLI'AH** (Heb. מַזְלִי'ה), moshav in central Israel, near Ramleh, affiliated with Tenu'at ha-Moshavim. Founded in 1950 by \*Karaites from Egypt, it was named after Sahal b. Mazli'ah, a Karaite leader who lived in Jerusalem, and it is one of the principal Karaite centers in Israel. In 1969 Mazli'ah had 690 inhabitants, rising to 1,030 in 2002 after expansion. Residents earned their livelihoods in farming (about 20 active farms), small enterprises, and work outside the settlement.

[Efraim Orni / Shaked Gilboa (2<sup>nd</sup> ed.)]

**MAZLI'AH BEN SOLOMON HA-KOHEN** (d. 1139), the first of the Egyptian *geonim*. His father, R. \*Solomon b. Elijah ha-Kohen, left Tyre and settled in Hadrak (near Damascus), where he founded the Yeshiva Erez ha-Zevi. Upon his father's death, R. Mazli'ah, who had no doubt studied at the yeshiva when it was still in Tyre, headed this institution. For some unknown reason R. Mazli'ah left Syria and arrived in Fostat in 1127. The yeshiva which he founded within the synagogue of the Jerusalemites occasionally rivaled that of Damascus because its leaders felt that it also possessed the right to refer to itself as yeshivat Erez ha-Zevi (i.e., of Erez Israel). R. Mazli'ah assumed the title of *rosh yeshivat Ge'on Ya'akov* (“rosh yeshiva of the Glory of Jacob”). It appears that his spiritual influence was important and that it extended to the whole of Yemen. Many letters and documents issued by his *bet din* are extant. Upon his death, he was succeeded by R. Moses b. Nethanel ha-Levi, who was his deputy and *av bet din* in the yeshiva.

[Abraham David]

**MAZANUT** (Heb. מַזְרָנוּת; “abutter”), the right of preemption available to the owner of land over the abutting land of his neighbor, when the latter is sold. The rule is not a provision of strict law but is derived from a rabbinical enactment to compel any prospective purchaser to yield to the abutting neighbor, in terms of the Pentateuchal injunction to “do that which is right and good in the eyes of the Lord” (Deut. 6:18; see also BM 108a and Rashi *ibid.*). For the other prospective purchaser does not sustain a great loss, since he will find land elsewhere, and should not burden the abutting neighbor with property in two separate localities. The right of the *mazran* (“abutting neighbor”) is a proprietary right (*in rem*) in the neighboring land itself (*Nimmukei Yosef* BM *ibid.*), similar to the right of a creditor in the case of lien or mortgage and other *jura in re aliena*. In applying this enactment, the scholars did not impose on the purchaser a duty to resell the land to the abutter, but rather endowed the abutter with the right to receive the land on the conclusion of the (putative) sale – without any additional act of acquisition being required – the purchaser thus becoming the agent of the abutter in regard to all the conditions of the sale to which the former agreed. Accordingly the purchaser is subject to all the laws governing an agent and holds the land in question on behalf of the abutter, the latter only acquiring actual title to it if and when he pays the price paid by the purchaser and fulfills the remaining terms agreed by the purchaser. As the abutter's right originates from the purchaser's obligation to “do what is right and good,” if the latter is a non-Jew – to whom the obligation is not applicable – the corresponding right will also not accrue to the abutter (Rashi to BM 108b). The abutter also forfeits his preemptive right if he had indicated, by speech or conduct, that he does not wish to avail himself thereof (Sh. Ar., ḤM 175:32).

The abutter's right or preemption, being an application of the equitable principle to "do what is right and good," is a flexible right (Resp. Rashba vol. 1, no. 915) and does not prevail where it is not supported by the factors of "right and good." Thus the law of *mazranut* does not apply if the exercise of the preemptive right would cause loss to the seller or purchaser or any loss to the public in general, or if the abutter were to derive no benefit therefrom. Consequently, the law of *mazranut* is not applicable to a gift (BM 108b) as the recipient cannot get another gift in its stead and he would therefore suffer a loss (Ran, Kid. 59a). For the same reason the right of preemption is precluded when the purchaser is a woman since "it is not fitting for her to search in many places." Nor does the right exist in the following cases: when the purchaser is a co-owner of the land together with the seller, or if he is the mortgagee, for a sale of the land to such parties invokes the factors of "right and good" in their own cause; when the coins offered by the purchaser are of greater weight or more marketable than those offered by the abutter, for here the seller would lose; when all the seller's assets are sold to a single purchaser, lest the sale as a whole is prejudiced; when the landowner sells a distant field in order to purchase one that is nearer, or when the land is sold to defray funeral expenses or taxes or to provide maintenance for a widow, or when an orphan's land is sold, for in such cases the seller would suffer if he waited for the abutter. Furthermore, an abutter who wishes to cultivate the land must yield to a purchaser who wishes to build a house there, as public interest prefers habitation. Similarly, the preemptive right is excluded whenever its exercise would cause a loss in any other manner to the seller or purchaser, provided only that the judge is satisfied that there is no evasion of the abutter's right (*ibid.*).

The law of *mazranut* is mentioned neither in the Mishnah nor in the Palestinian Talmud, but only in the Babylonian Talmud by the *amoraim* of Babylonia. It may be assured that in Erez Israel conditions were not such as to justify the application of the preemptive right on the equitable ground of doing "right and good." The scriptural injunction teaches that the standards of proper conduct between man and his fellow are determined in accordance with the prevailing circumstances of the time and place and the scholars applying it created different rules accordingly (*Maggid Mishneh* to Maim. Yad, Shekhenim concl.). In post-talmudic times the right of preemption was customarily applied (in France, Germany, Spain, and in the Orient) and, in many places, also in relation to buildings even though it is doubtful whether the law was so extended in the talmudic period (*Piskei ha-Rosh* BM 9:34). In modern times the law of *mazranut* has been less and less frequently applied although the rabbinical courts of the State of Israel have given several decisions in which various problems have been determined in accordance with these laws.

In the State of Israel the law of *mazranut* was abolished by the Israel Land Law, 1969.

[Shalom Albeck]

**MAZUR, ELIYAHU** (1889–1973), communal worker and businessman in Poland and Israel, son of Zevi Meir Mazur, rabbi in Zagorow and later in Warsaw. His public activity encompassed political, economic, and social fields. He was a member of both the world executive of \*Agudat Israel and of its executive board in Poland. He served as president of the Jewish community council (*kehillah*) of Warsaw from 1931 to 1937, when Maurici \*Meisel was appointed commissar by the government. He also acted as director of the administrative council of the Hakhmei Lublin yeshivah. Mazur was the largest importer of rice in Poland, and he established rice-processing factories in the port of Gdynia. He was a member of the board of the Polish chamber of commerce. In 1940 he escaped from Poland and immigrated to Erez Israel, where he continued to pursue his public and economic activities. He set up a diamond factory with his brothers in Tel Aviv, becoming a central figure in the country's diamond industry. In 1948 he was elected to the first \*Knesset as a delegate of Agudat Israel.

[Yitzchak Arad]

**MAZUR, JAY** (1932– ), U.S. labor leader. Mazur was born and raised in the Bronx, the son of immigrants, and spent his professional life in the organized labor movement. He became president of the International Ladies Garment Workers Union, spearheaded its historic merger with the Amalgamated Clothing & Textile Workers Union, and was elected first president of the merged group, the Union of Needletrades, Industrial and Textile Employees (UNITE). Mazur, whose father was a coat presser, joined the ILGWU when he was 18, focusing on organizational and educational efforts for Dressmakers' Local 22. He graduated from the ILGWU's Training Institute in 1955 and became director of organization and education for Belt-makers' Local 40. While rising through the ranks, he resumed his formal education at night, earning a B.A. in Industrial Relations from the City University of New York in 1965 and an M.A. in Labor Studies from Rutgers University in New Jersey in 1977. He was appointed managing secretary of the Blouse, Skirts & Sportswear Workers' Local 23–25, then the union's biggest local, in 1977, embarking on a hard-fought campaign to organize workers in New York City's Chinatown. In 1983 he was named general secretary-treasurer of the ILGWU. He succeeded Sol C. \*Chaikin as president in 1986, inheriting a union with a declining membership. Increased competition from low-wage countries, a surge of imports, and the growth of multinational apparel and textile firms had further depressed membership in the two leading garment unions. From a combined peak of almost 1 million in the 1960s, membership tumbled to about 355,000 by the mid-1990s. In 1995 Mazur and ACTWU president Jack Sheinkman were able to merge

both unions and Mazur was named UNITE's first president. Even though membership kept shrinking, falling to 250,000 in the next decade, the merger helped both unions survive at a critical time. It gave them a greater voice in government and social affairs and a stronger negotiating position with management. Mazur, who was on the executive boards of the AFL-CIO and the Central Labor Council, retired from UNITE in 2001 and was succeeded by Bruce S. \*Raynor, but his efforts on behalf of workers did not stop. He was a vocal opponent of free trade, and a passionate lobbyist for anti-sweatshop legislation, a higher minimum wage, and the right of workers to organize. A leading advocate for the rights of immigrants, he was named to the boards of the Work in America Institute and the International Rescue Committee and appointed a vice president of the National Immigration, Refugee and Citizenship Forum. In 1999, President Clinton appointed him to the Advisory Committee for Trade Policy and Negotiations. He was on the presidium of the International Textile, Garment & Leather Workers Federation, president of the National Committee of Labor Israel-Histadrut, and a member of the Council of Foreign Relations. He was also a member of the U.S. Holocaust Memorial Council and the U.S.-South Africa Business Development Committee.

[Mort Sheinman (2<sup>nd</sup> ed.)]

**MAZURSKY, PAUL** (1930– ), U.S. director, producer, screenwriter, and actor. Born in Brooklyn, New York, Mazursky began work in films as an actor, playing a small part in Stanley Kubrick's first film, *Fear and Desire* (1953), and a juvenile delinquent in *The Blackboard Jungle* (1955). He then turned to writing for television (*The Danny Kaye Show*) in collaboration with Larry Tucker. They also helped create the pilot for the TV series *The Monkees*. In 1968, Mazursky and Tucker wrote the screenplay for *I Love You, Alice B. Toklas*. In 1969, Mazursky directed his first film, *Bob & Carol & Ted & Alice*. He and Tucker also wrote the screenplay, which earned them an Oscar nomination. Mazursky followed this by directing a host of motion pictures, many of which he also wrote and produced. His films include *Alex in Wonderland* (1970); *Blume in Love* (1973); *Harry and Tonto* (Oscar nomination for Best Screenplay, 1974); *Next Stop, Greenwich Village* (1976); *An Unmarried Woman* (Oscar nomination for Best Picture and Best Screenplay, 1978); *Willie and Phil* (1980); *Tempest* (1983); *Moscow on the Hudson* (1986); *Down and Out in Beverly Hills* (1986); *Moon over Parador* (1988); *Enemies: A Love Story* (Oscar nomination for Best Screenplay, 1989), based on an Isaac Bashevis Singer short story; *Scenes from a Mall* (1991); *The Pickle* (1993); and *Faithful* (1995).

For television he directed the TV movies *Winchell* (1998) and *Coast to Coast* (2004).

Mazursky wrote *Show Me the Magic: My Adventures in Life and Hollywood*, a collection of autobiographical anecdotes (1999).

[Jonathan Licht / Ruth Beloff (2<sup>nd</sup> ed.)]

**MAZUZ, MENI** (1955– ), Israeli attorney general. Mazuz immigrated to Israel with his family shortly after his birth

in Tunisia, settling in the town of Netivot. He completed his legal studies magna cum laude at the Hebrew University of Jerusalem and did his law clerkship in the High Court of Justice department of the State Attorney's Office (which processes petitions to the Supreme Court in equity matters). In 1981, he received his law license and appeared as an attorney in both civil and criminal matters at the State Attorney's Office. He later became responsible for the High Court of Justice department. In 1992–95 Mazuz served as legal advisor and member of the Israeli delegation in negotiations with the Palestinians and Jordanians and headed the legal team which negotiated the Gaza and interim agreements with the Palestinians. In 1994, he was appointed deputy attorney general. He specialized in military and security matters related to the Israel-Palestine entity relationship, international peace and agreements, the Population Registry, and local council planning and building. Mazuz initiated legislative efforts regarding the Court Law which led to a reform in the Israeli judicial system. He wrote legal commentary on this subject and also played a leading role in legislation amendments to the General Security Law, which deals with the status, authority, and supervision of Israel's intelligence community.

In February 2004, Mazuz was appointed attorney general and undertook an administrative reorganization of the office to achieve a clear separation between the prosecutor and the political system. During his first year in office he reviewed traditional positions of the government in various fields. He emphasized alternate methods of law enforcement and limitations on the connection between elected officials and members of the elective body and adapted an egalitarian approach to single-sex couples in regard to social and property rights.

During his term in office, he initiated substantial reforms in several fields, including appointment and supervision of civil servants, budgetary allocations for political parties, and creation of the state agency responsible for monitoring and supervising the Planning and Construction Law. His decisions on various subjects, including the security fence between Israel and the Palestinian West Bank, emphasized the obligation of the State of Israel to recognize human rights and international principles of law.

[Leon Fine (2<sup>nd</sup> ed.)]

**MAZZUVAH** (Heb. מַצְוֵבָה), kibbutz near the Israel-Lebanese border S.W. of Ḥanitah, affiliated with Iḥud ha-Kevuzot ve-ha-Kibbutzim. Founded in 1940 by \*Youth Aliyah graduates originating from Germany and Austria, Mazzuvah joined Ḥanitah and \*Eilon as a third border outpost in western Galilee. In its initial years, the kibbutz was confronted with the task of heavy reclamation work on its hilly soil, a lack of water and high incidence of malaria, and with sea winds damaging fruit orchards. By 1948 most of these difficulties had been overcome. In 1969, Mazzuvah's economy was based predominantly on hill farming (fruit orchards) and a spinning mill. Later it developed citrus groves, fruit orchards, and poultry

farming. The spinning mill closed down in 2003, causing a severe economic crisis in the kibbutz. In the mid-1990s, its population was approximately 600, dropping to 507 in 2002, with about a third above the age of 70. The name dates back to talmudic times (Tosef., Shev. 4:9; TJ, Dam. 2:1, 22d); and is preserved in the Arabic name for the site, Khirbat Ma'sūb. Remnants were found of antique buildings, including a Greek tomb with a Greek and Phoenician inscription dating from 222–221 B.C.E. testifying that an Astarte sanctuary had been erected at the spot.

[Efraim Orni / Shaked Gilboa (2<sup>nd</sup> ed.)]

**ME-AM LO'EZ**, an 18<sup>th</sup>-century ethico-homiletical Bible commentary in \*Ladino, the outstanding work of Judeo-Spanish literature. The commentary, conceived on an encyclopedic scale, was begun by Jacob \*Culi, who felt that, after the chaos left by the \*Shabbetai Zevi heresy, there was a need for the re-absorption of the masses into Orthodox Judaism. Because of their ignorance of the Hebrew language they had no access to traditional literature, and gradually turned away from religious observance. As is clear from his preface to the first volume, on Genesis, this is what Culi had in mind when, in about 1730, he undertook the writing of this work. His aim was to popularize Jewish lore by means of extracts from the Mishnah, Talmud, Midrash, Zohar, and the biblical commentaries – in fact all the branches of rabbinical literature – translated into the Ladino vernacular. Culi originally intended to call his work *Beit Ya'akov*, but quoting from Psalms 114:1, “When Israel went forth out of Egypt, the house of Jacob from a people of strange language,” he finally called it by the original Hebrew of that phrase, *Me-Am Lo'ez*. Written in an unpretentious, popular style and in an attractive form, *Me-Am Lo'ez* was to put the elements of Jewish life at the disposal of people unable to use the sources. It deals with all aspects of Jewish life, and often with life in general, with history, ethics, philosophy, and biblical exegesis. It comments on the prescriptions of the Law and clarifies them with a profusion of detail. Culi's idea was to compile the first part of his commentary around the weekly portion of the Pentateuch, assembling, verse by verse, all the material that had any bearing on the section. This was linked together by anecdotes, legends, historical narrative, and folklore. The easy, colloquial style of the work gives it a conversational quality. Culi's popular style that fully suited his educational goals was unique in the way he dealt with aggadic Midrash. He did not quote the names of the rabbinic sages or the verses found in Midrash. He freely retold the stories in his own language, often combining a number of sources into one fluid story. On the other hand, he was loyal to his sources. Almost 300 years after Columbus, Culi still writes about the sun circling the earth, based on the Midrash. The first volume of *Me-Am Lo'ez* was published in Constantinople in 1730. No work designed to instruct the Jewish masses had ever proved so popular. In Turkey printing of the work was done a few pages at a time, distributed prior to Shabbat, and then bound when the volumes were complete.

When Culi died in 1732 he was about to publish his commentary on the first part of Exodus. He left many unfinished manuscripts on the other books of the Bible, which later writers used as the basis for their continuation of his work. Isaac b. Moses Magriso completed the volumes on Exodus (2 vols., Constantinople, 1733, 1746), Leviticus (1753), and Numbers (1764). Isaac Behar Argseti wrote only a part of his commentary on Deuteronomy (1772). Both Magriso and Argseti followed Culi so faithfully that the *Me-Am Lo'ez* on the Pentateuch may be considered a unified work. Using the same method, others sought to cover the rest of the Bible and complete the undertaking. Joseph di Trani of Constantinople wrote on Joshua (2 vols., 1850, 1870); Raphael Hiyya Pontremoli on Esther (1864); Raphael Isaac Meir ibn Venisti on Ruth (1882); Isaac Judah Abba on Isaiah (1892); Nissim Moses Abod on Ecclesiastes (1898); and finally Hāyym Isaac Sciaky worked on the Song of Songs (1899). There may have been other volumes, written in the spirit of Culi, that are no longer extant or that were destroyed before printing. One such work was Isaac Perahyah's commentary on Jeremiah, lost in the 1917 fire in Salonika. The commentaries on Genesis and Exodus were the most popular. There were at least six editions of Genesis between 1730 and 1897, and eight of Exodus between 1733 and 1884. The different places of printing show the popularity of the work among the Sephardim of Turkey and the Balkans, and there was even a partial Arabic translation in North Africa. Those who did not own the expensive complete set (sometimes given as a dowry) studied it in reading groups. For a long time the *Me-Am Lo'ez* was the only literature for thousands of Sephardi Jewish families, and its reading was often considered a religious duty. It was so well thumbed by generation after generation that very few sets remain in existence. The *Me-Am Lo'ez* played a role in Sephardi culture parallel to, but wider than, that of the Yiddish \**Zēenah u-Re'elah* in the Ashkenazi world, its main difference being that it was not intended primarily for women. As a vast synthesis of everything that had been written in Hebrew, the *Me-Am Lo'ez* was directed to all – men, women, and even children. A Hebrew translation was undertaken by Shmuel Yerushalmi, titled *Yalkut Me-Am Lo'ez*. From 1967 through 1979, he published 20 volumes, which included his own “*Me-Am Lo'ez*” commentary on the books of Samuel, 1 Kings, Ecclesiastes, Ruth, and the Song of Songs. All of *Yalkut Me-Am Lo'ez* has appeared in English translation (New York, 1977–94). In addition, an edition in Latin transliteration was initiated by the Ibn Tibbon Institute at Granada University, Spain (*Me'am Lo'ez, El gran comentario bíblico Sefardí*, vol. 1, 1964). Unfortunately, the apparent lack of knowledge of Ladino and Turkish led to an edition with many inaccuracies. *Yalkut Me-Am Lo'ez* has been translated into a number of other languages, including Russian. Thus, *Me-Am Lo'ez* continues to be a source of knowledge and inspiration to this day.

[Henri Guttel / David Derovan (2<sup>nd</sup> ed.)]

**MEARS, OTTO** (1841–1931), U.S. railroad builder. Mears was born in Russian Lithuania and was brought to California in 1854. He served in the Civil War. In 1865 he settled in Saguache County, Colorado, as a merchant, later becoming county treasurer and Indian commissioner. He was a road and railroad builder, constructing most of the principal roads in southwest Colorado, building a railroad in Ouray County in 1888, and participating in building and later serving as president of the Denver and Rio Grande Southern Railway. Mears was a presidential elector (1876), lieutenant governor (1883), and state capitol commissioner (1889). A monument honoring him is near Ouray.

[Robert E. Levinson]

**MEAT** (Heb. בָּשָׂר, *basar*), the flesh of animals permitted for consumption. (For its meaning as human flesh and symbolic connotation, see \*Flesh.) The Talmud points out (Sanh. 59b) that according to the biblical account the consumption of meat was forbidden from Adam until Noah (Gen. 1:29) and was specifically permitted first to Noah (*ibid.* 9:3). Apart from this, however, there is no suggestion of vegetarianism in the Bible. On the other hand, meat is never included among the staple diet of the children of Israel, which is confined to agricultural products, of which the constantly recurring expression in the Bible is “grain and wine and oil” (Deut. 11:14), or the seven agricultural products enumerated in Deuteronomy 8:8. (It has however been suggested that Deuteronomy 11:15 refers to the eating of meat.) In point of fact, meat was regarded in the Bible as a luxury for which the children of Israel would yearn “when the Lord enlarges your territory” (Deut. 12:20), and the lusting of the children of Israel after the “fleshpots of Egypt” (Ex. 16:3 and Num. 11:4) was regarded as highly reprehensible. From Deuteronomy 12:20–22, R. Ishmael (Ḥul. 16b–17a) deduces that during their sojourn in the wilderness the children of Israel were permitted to eat only meat from an animal which had actually been sacrificed and that it was only when they entered the Land of Israel that “meat of desire,” i.e., the meat of all permitted animals, could be eaten as desired without the animal being sacrificed. R. Akiva, however, inter-

prets it to mean that in the wilderness any method of killing an animal, even stabbing (*nehirah*), was permitted, but that after their entry into the land only the meat of animals which had been slaughtered by *sheḥitah* could be eaten. All agree, however, that the reference is only to “cattle” which could be offered as sacrifices, but that the meat of “beasts” (nondomesticated animals, the “gazelle and the hart”) was freely permitted (cf. Deut. 12:22). That the flesh of birds was permitted is clear from Exodus 16:13 and Numbers 11:31–33. The only limitation on the consumption of meat to non-Jews (“the children of Noah”) is the prohibition against meat cut from a living animal (based on Gen. 9:4; see \*Noachide Laws). For Jews however only the flesh of “clean” animals was permitted, and that, only after *sheḥitah* and the removal of forbidden blood and fat. The seething of meat in milk was forbidden (Ex. 23:19 et al.) and interpreted to include eating meat and milk together or deriving any benefit from it. It has been suggested that this prohibition is because such practices were connected with heathen fertility rites (Maim. *Guide* 3:48; see \*Dietary Laws). In the talmudic period, meat was regarded as the diet of the well-to-do, and as a feature of festive occasions rather than a staple diet. It was regarded as obligatory only on Sabbaths and festivals since “there is no joy without meat and wine” (Pes. 109a). The immensely wealthy Eleazar b. Azariah laid it down that only a person who possesses 100 *maneh* may eat meat daily; otherwise it should be eaten only on the Sabbath. In the amoraic period, however, it seems to have become more common. In Erez Israel, R. Johanan said that owing to the prevailing physical weakness, “whoever has a penny in his pocket should run to the shopkeeper” (to buy meat daily), while the Babylonian Nahman said that one should even buy it on credit (Ḥul. 84a). Its nutritive value was recognized. It was specially recommended for pregnant women as they would thus have robust children (Ket. 60b–61a). On the basis of homiletical exposition of Leviticus 11:46, R. Judah ha-Nasi suggested that only those engaged in the study of the Torah were permitted to indulge in meat (Pes. 49b). Poultry was more highly regarded as a delicacy than meat, and meat than fish (Num. R. 21:25). Of poultry the most delectable was the chicken, of meat, the ox (BM 86b). Among the things to be avoided by a convalescent, since they “bring on his sickness again in a severe form,” are “beef, fat meat, roast meat, and poultry” (Ber. 57b). As the consumption of meat was associated with joy, abstention from it was a symbol of mourning. For the same reason meat is not eaten by a mourner on the day of burial or in the period of national mourning from the first until the Ninth of \*Av (Sh. Ar., OH 551:9). After the destruction of the Temple there were those who sought to adopt asceticism, including abstention from meat, but it was strongly opposed (BB 60b).

[Louis Isaac Rabinowitz]

**MECHOULAM, RAPHAEL** (1930– ), Israeli organic chemist. Mechoulam was born in Sofia, Bulgaria. He received his

M.Sc. in biochemistry from the Hebrew University of Jerusalem (1952) and his Ph.D. at the Weizmann Institute, Rehovot (1958). After postdoctoral studies at the Rockefeller Institute, New York (1959–60), he was on the scientific staff of the Weizmann Institute (1960–65) before moving to the Hebrew University of Jerusalem, where he became professor (1972) and Lionel Jacobson Professor of Medicinal Chemistry from 1975. He was rector (1979–82) and pro-rector (1983–85). His main research interests concern the chemistry and actions of *Cannabis sativa* (marijuana) constituents and related substances (endocannabinoids) synthesized naturally in body tissues, particularly in the nervous system. This work has important implications in physiology, as the endocannabinoids represent a new type of neuromodulators, and in medicinal chemistry, as these compounds are exploited for their actions in psychiatric, neurological, and inflammatory diseases and as appetite-promoting agents. In 1994 he was elected a member of the Israel Academy of Sciences. His honors include the Kolthof Prize in chemistry from the Haifa Technion (1994) and the Israel Prize in chemistry (2000).

[Michael Denman (2<sup>nd</sup> ed.)]

**MECKLENBURG**, former duchy in Germany. Before the middle of the 14<sup>th</sup> century Jews were to be found in Wismar, Rostock, Parchim, Krakow, Guestrow, Schwerin, Friedland, and perhaps also in Borzenburg and Malchin. A Jewish community is first mentioned in 1279 at Rostock and there were communities from around the same time in Parchim and Guestrow. The other cities had only a few families. The Jews were allowed to engage only in moneylending. A Jew, Salathiel, bought a house and loaned money to the duke and to the city of Schwerin. Accusations of desecrating the \*Host in Krakow am See (1325) and Guestrow (1330) and the \*Black Death persecutions in Rostock, Parchim, and Wismar practically wiped out Mecklenburg Jewry. After another accusation of desecrating the Host, in Sternberg in 1492, 27 Jews were burned at the stake and all Jews were expelled from the duchy.

From 1679 Jewish merchants from Hamburg, often of Sephardi extraction, were granted letters of protection and commercial privileges, and some became Court Jews. One of them, Michael Hinrichsen (Portugies) of \*Glueckstadt (d. 1710), court jeweler and tobacco agent, settled in Schwerin, where he rapidly gained ascendancy. He employed a rabbi so that he might study Talmud with him, and opened a synagogue in his home. He was the first Jew in Germany to be freed (in 1701) from payment of the \**Leibzoll* ("body tax") for his lifetime. His descendants continued to hold leading positions in Mecklenburg economic and public life for five generations. The first *Landesrabbiner*, Jeremias Israel, appointed in 1763, was a member of his family. A growing number of communities were established by privileged Jews and their households despite a 1755 enactment making illegal all forms of landholdings. Tax records of 1760 show 141 taxpaying Jews residing legally in the duchy. In this period the history of Mecklenburg Jewry

is linked with that of O.G. Tychsel (1734–1816), Orientalist, professor, and unsuccessful missionary, who meticulously recorded the history of the local Jews as well as supporting their emancipation. A ducal order (May 30, 1772), that burials be postponed for three days in order to eliminate the possibility of "false" deaths, induced the Jews of Mecklenburg to apply to Moses \*Mendelssohn, who advised them to erect burial halls, a decision which was contested by more Orthodox rabbis.

On Feb. 22, 1811, M.R. Hinrichsen and I. Mendel presented a petition for emancipation. Although the estates demanded basic reforms in Judaism, the liberal duke, Franz Friedrich I (d. 1839), nonetheless issued an emancipatory edict two years later (March 25, 1813), based on the Prussian model. Markets were not to be held on Jewish holidays and support was given to Jewish rights within the German Confederation. On Sept. 11, 1817, under pressure from the estates, the duke suspended emancipation. During the \*Hep! Hep! disturbances (1819) troops had to be called in to Guestrow to suppress the riots. The estates continued to oppose the duke's liberal attitude toward individual Jews and rejected a law of 1830 granting the Jews occupational and economic liberties. In 1847 the estates at last supported emancipation, which endured briefly until 1850; the Jews were not fully emancipated until 1869.

In 1839 statutes were enacted granting autonomy to rabbinical organizations. A year later Samuel \*Holdheim was elected *Landesrabbiner* and introduced far-reaching and controversial reforms. Holdheim was active in the struggle for emancipation and succeeded in having the degrading medieval formula of the Jewish \*oath changed. He was followed by the even more radical David Einhorn (1847–51), whose denial of circumcision as a prerequisite of Judaism was attacked by Franz \*Delitzsch, the Christian missionary and scholar. For the sake of peace, and on the order of the government, the rabbinate was subsequently filled by Orthodox rabbis.

Mecklenburg Jewry increased from 2,494 persons in 1810 to 3,318 (0.64% of the total population) in 1845. The small communities (11 with more than 100 persons in 1850) subsequently declined numerically, and due to the emigration of Jews to the big cities, the larger ones did not grow. The numbers decreased to 1,413 (0.22%) in 1910 and to 1,225 in 1932. Rostock, the largest city, which excluded Jews until 1867, was then the main community, with about 350 members, followed by Guestrow (120), Parchim (48), and Schwerin (200). The fate of Mecklenburg Jews during World War II was similar to that of the rest of German Jewry. In 1990, very few Jews resided in the state of Mecklenburg.

**MEDALIE, GEORGE ZERDIN** (1883–1946), U.S. lawyer and Jewish community leader. Medalie was born in New York's Lower East Side to Russian immigrants. He served as assistant district attorney of New York County (1910–15). Subsequently founding his own law firm, Medalie also served in various advisory and public legal capacities. As U.S. attorney for the Southern District of New York from 1931 he vigorously prosecuted racketeers and smugglers. One of several assistants whom he later helped attain public careers in elective office was Thomas E. Dewey. Medalie himself was the Republican nominee for the U.S. Senate in 1932. In 1945 Dewey, then governor of New York, appointed him to an interim term as associate justice of the Court of Appeals, the highest state court. Medalie was prominent in local legal associations and was a leader of the New York Jewish Community. He was on the board of directors of both the Joint Distribution Committee and the UJA. As chairman of the American Jewish Committee's Overseas Committee, he devoted his efforts to securing equal rights for Jews in the countries to which they returned after World War II. From 1941 to 1945 he served as president of the Federation of Jewish Philanthropies. As president of the Jewish Board of Guardians in 1931 Medalie gave strong support to the development of psychiatric casework. He was chairman of the Mayor's Committee on Unemployment Relief during the Depression and served on many other government committees.

**MEDALISTS.** Pewter, seal, and gem engraving were traditional Jewish professions, often handed down from father to son through several generations. By the 18<sup>th</sup> century, this practice had developed into medal engraving and Jewish medalists were employed at several Protestant courts of northern Germany and Scandinavia. Members of the \*Abraham-Abramson family were among the leading 18<sup>th</sup>-century medalists. The Jacobson family rose to prominence at Copenhagen in the same period. Philipp \*Aron, active from about 1750 to 1787, and his brother Abraham (1744–1824), did portrait medals for the courts of Mecklenburg and Stockholm, as did Meir Loeser and his son Nathan at the turn of the century. About the same time Abraham Jacobs and Abraham Heilbut spent their active careers working in their native Hamburg. An important 18<sup>th</sup>-century Russian medalist was Samuel \*Judin, while the \*Simon family flourished in Belgium and France. The three \*Wiener brothers from Belgium are considered among the finest 19<sup>th</sup>-century medalists, as were Avenir and Abraham \*Griliches in Russia. France was the home of several distinguished 19<sup>th</sup>-century Jewish medalists such as René Stern, court engraver to Napoleon III, and E.A. Soldi. One of the few Jewish medals by the French sculptor Emmanuel

Hannaux has an excellent portrait of Narcisse \*Leven, president of the Alliance Israélite Universelle. S.F. \*Beer engraved the commemorative for the Second Zionist Congress. Aaron Kohn (early 19<sup>th</sup> century, Germany) is noteworthy for his religious medals, such as his 1817 \**Tashlikh* prayer and his 1837 circumcision medals. In the same period Asher Wappenstein (1780–1852) of Vienna engraved patriotic commemoratives. I.W. Loewenbach of Munich struck Bavarian nationalist medals from the 1820s through the 1860s. He also did the earliest German synagogue medal, issued in 1826 for the new synagogue at Munich. H. Oppenheim is well known for his medals dealing with his home city of Frankfurt on the Main. On the other hand, Leo Horovitz, son of the Frankfurt rabbi Marcus \*Horovitz, concentrated mainly on Jewish subjects. Dutch Jewish medalists of this period were M.C. de Vries Jr., A.L. Snoeck, and Jacques \*Elion, the last having been preceded by his father Samuel Cohen Elion. Two Americans, both born in the Austrian Empire, achieved distinction. One was Moritz \*Furst; the other, Isidore Konti, a gifted sculptor as well, struck the 1905 commemoration of the 250<sup>th</sup> anniversary of Jewish settlement in the United States. Among 20<sup>th</sup>-century Jewish medalists are Victor D. \*Brenner (U.S.), Benno \*Elkan (Germany and England), and Harald Salomon (Denmark). Fulop O. Beck (b. 1873) is considered one of the best medalists of the 20<sup>th</sup> century; though baptized he executed medals for many important Jews. Ede Telcs (1872–1958), also a Christian convert, became the official medalist for Hungary during World War I. Other noted 20<sup>th</sup>-century Jewish medalists include the Germans Hugo Kaufmann and Arnold \*Zadikow; the Austrians Emil Fuchs and Arthur Loewental; the Dutch Loecki Metz; the Hungarian István Csillag; the French Boris Bernstein, Simon Goldberg, and Esther Gorbato; Paul \*Vincze, in England, as well as the Americans Abram Belskie, Michael Lantz, Albert W. Wein, and Adolph Block. The American sculptors Leonard Baskin and William \*Zorach have done occasional medals. Boris \*Schatz, Ivan Sors, F.J. Kormis, and A. Eisenberg are known for their medals of Jewish subject matter. Israel had a new group of medalists, including Miriam Karoli, Zvi Narkiss, Gabriel and Maxime Shammir, the team of Rothschild and Lippmann ("Rcli"), Alex Berlyne, Mordechai Gumpel, Jacob Zim, Josef Bass, and Moshe Zipper.

See \*Medals.

[Daniel M. Friedenberg]

**MEDALS.** The significance of Jewish medals is both historical and artistic; they illustrate the history of the Jews in the widest sense of the word. (See Table: Jewish Medals). Opinions widely

differ on the classification of Jewish medals. Bruno Kisch (see bibliography) gives the following classification:

1. Symbolic representation, biblical personages and scenes, imitation shekels, and biblical medals. (This group should really not be included among Jewish medals, since in most cases they were made neither by, nor for Jews.)
2. Medals referring to political events in connection with Jews, such as the granting of religious freedom, Zionistica, etc.
3. Medals referring to Jewish communities, inaugurations and jubilees of synagogues, or institutions, schools, etc.
4. Medals of Jewish personalities, such as rabbis, physicians, philanthropists, etc.
5. Marriage and anniversary medals, tokens, amulets.

Though no medals exist from talmudic or biblical times, the Talmud (BK 97b) speaks of portrait coins bearing the likeness of biblical personages. Probably the oldest Jewish medal extant (1497 or 1503) is one associated with the name of Benjamin b. Elijah Be'er the physician, with a long and enigmatic Hebrew inscription with a text also in Greek and Latin, surrounding what may be intended to represent a Roman emperor. In the 16<sup>th</sup> century, during the Renaissance, portrait medals were made by or for rich Jewish families. The best known of these is that of Gracia \*Nasi (1556), in all probability the younger of the two ladies known by that name. Dating roughly from the same period are the portrait medals of Elijah de Latas (or Lattes; 1552) and Abramo Emanuele Norsa (1557). Mention may be made also of the medals struck for Marranos in Antwerp, such as Luis Perez (1597) and Ursula Lopez, widow of Martin Perez (1580).

At the end of the 17<sup>th</sup> century, the so-called "Korn Jude" medals are found, a typical example of antisemitica. These medals, made of silver, copper, and tin, all show more or less the same picture: on the front a bearded man wearing a Jew's hat, a stick in his hand, and carrying a sack of grain on his back, on which sits the devil who rips the sack open. Around this picture is the inscription "Du Korn Jude" and under it a date with the word *Theurezeit*. On the reverse side is a corn measure and the verse (Prov. 11:26): *Wer Korn inhaelt, dem fluchen die Leuthe. Aber Seegen kommt ueber den, der es verkauft, Sprueche* ("He that withholdeth corn, the people shall curse him; but blessing shall be upon the head of him that selleth it," Proverbs). Other examples of antisemitic medals are the "Federjude" medals of the same period. The figure represented is a Jew in a feather hat, carrying a large sack on his back and a money bag in his hand. Similarly anti-Jewish feeling in Germany is expressed by the medals struck on the occasion of the execution of Jew "Suess" \*Oppenheimer in 1738. The medals are in silver, lead, and bronze. In the 18<sup>th</sup> and 19<sup>th</sup> centuries baptism was for many Jews a way out of the difficult circumstances in which they lived, and this led to the striking of baptismal medals. Among such is a satiric medal in silver, circa 1700. On the front is a clergyman holding a Bible, who pours water on the head of a kneeling Jew carrying a millstone around his neck. On the reverse side is

an antisemitic text, and on the rim *Wenn die Maus die Katze frisst, dan wird ein Jud ein wahrer Christ* ("When the mouse eats the cat, then a Jew becomes a true Christian"). Political accusations against the Jews were also known. When in 1686 the city of Ofen (the old German name for Buda, see \*Buda-pest) was captured from the Turks by Leopold I of Austria, the Jewish community was massacred. As a memento of the event a satiric medal was struck showing a Turk and Jew melting metal in a furnace, the Turk holding the tongs and the Jew the bellows, while ingots appear at the bottom. "Who mints money for peace now that the Turk and Jew are tired of war?" is the ironic inscription.

Two medals were struck on the occasion of the fire in the Judengasse at Frankfurt on the Main in 1711, one in three variants. That with the variants by Christian Wermuth is one of the most vicious antisemitic pieces extant. In 1735 a medal

"Israel Liberata" coin celebrating the 10<sup>th</sup> anniversary of the State, 1958. The reverse is a facsimile of a "Judaea Capta" coin recording Vespasian's conquest in 70 C.E. Courtesy Israel Government Medals and Coins Corporation, Jerusalem.

Israel medal marking the 30<sup>th</sup> anniversary of the beginning of immigration blockade-running, 1964. Courtesy Israel Government Medals and Coins Corporation, Jerusalem.

## Selective List of Jewish Medals

### 1. Renaissance Medals

- 1503 (or 1497) Benjamin ben Elijah Be'er (medallion)  
 1552 Elijah de Latas (De Lattes) and his mother, Rica de Latas  
 1556 Gracia Nasi  
 1557 Abramo Emanuele Norsa (Norcia)

### 2. Jewish Emancipation Medals

- 1745 Repeal of Edict of Maria Theresa expelling Jews from Prague and Bohemia  
 1781 Edict of Toleration of Emperor Joseph II  
 1782 idem, issued by Dutch Jews after Emperor visited the Netherlands (four variants)  
 1790 Homage to Landgrave Ludwig X of Hesse and Darmstadt  
 1790 Homage to Landgravine Louise Caroline Henriette of Hesse and Darmstadt (two variants)  
 1796 Emancipation of Jews in Batavian Republic (i.e. Holland)  
 1805 Alexander I of Russia frees Jews from a special tax  
 1806 Sanhedrin of Napoleon  
 1808 Enfranchisement of the Jews of Westphalia (by Abraham Abramson)  
 1836 Homage to Gabriel Riesser (for role in German Jewish emancipation)  
 1840 Montefiore and Crémieux at Cairo on behalf of Jews held in accusation of ritual murder (The Damascus Affair)  
 1846 Jubilee of emancipation of Jews in The Netherlands  
 1848 Emancipation of Jews in the Kingdom of Sardinia (Dedication to Count Roberto d'Azeglio)  
 1848 Commemoration of the German Revolution (a plank listed on medal is "Emancipation of the Jews")  
 1854–55 Presentation by Italian Jews to Albert Cohen, 15<sup>th</sup> Sivan 5614, on his receiving assurances from Sultan Abdal-Mejid that the Jews in Palestine would receive equal rights with Christians  
 1860 Proclamation of Right for Jews in Galicia, Bukovina, and Cracow to buy real estate (for Franz Joseph I)  
 1864 Intercession in Morocco of Sir Moses and Lady Judith Montefiore  
 1881 100<sup>th</sup> Anniversary of Joseph II's Edict of Toleration

### 3. Commemorative Medals (Including a few antisemitic because of their importance)

- 1670 300<sup>th</sup> Anniversary of the alleged desecration of the Host at Brussels. This medal was reissued in 1820, on the 450<sup>th</sup> anniversary and then again in 1870, the last being philosemitic  
 1686 Participation of the Jews in the defense of Ofen (Buda) against Austria (two variants)  
 1696 Satire on the followers of Shabbetai Zevi (Christian in origin)  
 1700 The Useless Baptism of Jews  
 1711 Fire in Frankfurt on the Main Ghetto (three variants by C. Wermuth; separate one by Johann Linck)  
 1721 Fires in the Frankfurt Ghetto  
 1738 Hanging of Jew Suess (five variants); also portrait  
 1791 Wilhelm (Jewish) School in Breslau, Jewish  
 1800 Inauguration of the Adat Jeshurun (Reform) Synagogue in Amsterdam  
 1810 Building of the Bordeaux Synagogue  
 1826 Dedication of the New Synagogue in Munich, by I. W. Loewenbach, Jewish medalist  
 1841 Hamburg Jewish Hospital (Solomon Heine on obverse as benefactor)  
 1841 Opening of the Jewish Home for Aged at the Hague; by J. Weiner, Jewish medalist  
 1841 Opening of the New Maastricht Synagogue  
 1841 25<sup>th</sup> Anniversary of the Jewish Loan Institute at Hamburg  
 1843 Laying of the Foundation Stone of the Hebrew National School at Birmingham  
 1843 First Jewish Girl's Confirmation at Warsaw; by Eichel, Jewish medalist  
 1848 Destruction of the Rothschild Chateau at Surenne

### 4. Important Early Tokens

- 1671 and 1714 Burial Pass permits for the Amsterdam Hevra Kaddisha  
 1679–1812 English "Jew Brokers" Medals  
 c. 1780 Moses Benjamin Foa  
 1780–1793 Lord George Gordon as a Jew (nine variants)  
 1790 Daniel Mendoza (five variants)  
 1791 Mendoza and Ward

### 5. Important Portrait Medals Before 1850

- 1735 Eleazar b. Samuel Shmelka, welcomed as rabbi by Ashkenazi community of Amsterdam (by Joel, Jewish medalist)  
 c. 1774 Moses Mendelssohn (by Jacob Abraham and son, Abraham Abramson)  
 1793 Daniel Itzig's 70<sup>th</sup> Birthday (by Abraham Abramson)

**Selective List of Jewish Medals (cont.)**

1794	Homage to Marcus Herz (by Jacob Abraham and Abraham Abramson)
1803	73rd Birthday of Lipmann Meyer (by Anton Friedrich Koenig)
c. 1816	Memorial to Gershom Mendes Seixas (by Moritz Furst)
1836	Memorial to Nathan Mayer Rothschild (pub. by Hyam Hyams)
1837	Memorial to Ludwig Boerne (by H. Oppenheim)
1837	Elias Henschel (Breslau): 50 <sup>th</sup> Anniversary of graduation as doctor (by Lesser – possibly a Jew)
1939	Johann Stieglitz
1842	Memorial to Chief Rabbi Solomon Hirschel (pub. by Hyam Hyams)
1844	70 <sup>th</sup> Birthday of Solomon Mayer Rothschild
1846	"Rachel," Elisa-Rachel Felix
1847	Giacomo Meyerbeer
1847	Jubilee of Ḥakham Isaac Bernays of Hamburg

was struck in Amsterdam – by Joel Levi – with a Hebrew text to mark the arrival there of Eleazar of Brody, who had been invited to become rabbi of the Ashkenazi congregation. A portrait of Moses \*Mendelssohn, one of the forerunners of the Emancipation in Germany, was made about 1774 jointly by the Jewish medalist Jacob Abraham (1723–1800) and his son, Abraham Abramson (1754–1811). The Emancipation of the Jews was the occasion of commemorations and frequently led to the striking of medals. (The most important medals in this group are listed in Section 2 of the appended list.) The Emancipation of the Jews caused a revival of Jewish communities especially in Western Europe, and an extensive development of Jewish intellectual life. In Germany and Austria, in particular, hundreds of medals were struck on the occasion of various events.

Large numbers of Jewish medalists and sculptors were engaged in the making of medals. Besides the German and Dutch medals there are also a number of French, Italian, and English medals, many American and a few Polish, Scandinavian, and Russian ones.

[Arthur Polak]

**In Israel**

The first commemorative medals and coins were issued in Israel in 1958 on the tenth anniversary of the state, as part of the activities of the Anniversary Committee set up by the Prime Minister's Office. In 1961 a special Israel Government Coins and Medals Corporation was set up, whose charter provides for a board of directors on which a number of ministries are represented and which appoints a director general. State medals are struck for the following purpose: to commemorate events of national or international significance in the field of culture, science, history, and the various stages of Israel's development and achievement. In keeping with Jewish tradition, living personalities are not commemorated. Commemorative coins are issued by the Bank of Israel and are legal tender, while official state medals are the monopoly of the Coins and Medals Corporation. Apart from the purposes mentioned, these coins and medals have a great publicity value both among Diaspora Jews and in official circles of other states. They earn revenue and foreign currency for the

Israel treasury; the income is earmarked for the restoration and preservation of historical sites in Israel.

The first medal issued in 1958 was the Liberation Medal showing the Roman "Judaea Capta" coin on the obverse and "Israel Liberata" on the reverse. This was followed by the Valor medal of 1959, with the symbol of the Israel Defense Forces on the obverse and the Trumpeldor Memorial on the reverse. A medal of the same year commemorated the jubilee year of the founding of Tel Aviv, while a Bar Kokhba medal was struck in 1960, after the Bar Kokhba letters were found in the Dead Sea Caves. More than 100 subjects had been commemorated by 1970, among them the Warsaw Ghetto Rising (1963), Masada (1964), the Rothschild family (on the opening of the new Knesset, 1966), the Sinai Campaign (1966), the Jewish Legion, the Balfour Declaration (1967), and El Al Airlines (1969). There is also a very popular bar mitzvah medal (1961).

Commemorative coins are issued every year on the occasion of Israel Independence Day (1958– ). A series of Ḥanukkah coins was struck (1958–63), as well as special gold coins to mark the Herzl centenary (1960), the Six-Day War of 1967, and the reunification of Jerusalem (1968). Half-shekels (1961, 1962) to be donated to charity on Purim, and Redemption of the Firstborn shekels (1969) for the *Pidyon ha-Ben* ceremony have been struck for religious use.

Each medal and coin is accompanied by an illustrated prospectus, in various languages, telling the story behind the medal, as well as numismatic technical details such as mintage figures, metal, weight, diameter, name of the artist, and the place of striking. In order to distinguish state medals from privately issued medals, official medals carry on their edge the emblem of the state and the words "State of Israel" in Hebrew and in English and are engraved with serial numbers. After minting the designated number of medals, the dies from which they were struck are destroyed in the presence of official witnesses. Official catalogs are issued periodically by the corporation and are also published in the *Israel Numismatic Bulletin*.

[Yitzhak Avni and Israel Sedaka]

**MEDEM, VLADIMIR** (pseudonym **M. Vinitski**; 1879–1923), prominent \*Bund leader in Russia and Poland. He was born in Libau (Liepāja), Courland, to an army medical officer, who was an extremely assimilationist liberal and had him baptized into the Orthodox Church. In his youth Medem regarded himself as a Russian, and the influence of his association with Jews at the secondary school of Minsk was only revealed later. He studied law in Kiev, became acquainted with the writings of Plekhanov and Lenin, and identified himself ideologically with Marxism. As a result of his role in a students' strike (1899), he was expelled from the university, and after a brief term of imprisonment was exiled to Minsk under police supervision. He was influenced there by leaders of the Bund: Gershuni, Temin, and Kaplan. His interest in the Jewish masses was now aroused and he felt himself attracted to them. This evolution, which led him to join the Bund, became for him the way back to Jewish identity. It was precisely this lengthy journey which later won him admiration within the Bundist masses. He was a member of the Bund committee of Minsk and wrote for its organ, *Der Minsker Arbeter*.

After being imprisoned and suffering from a kidney disease, he succeeded in escaping to Berne, Switzerland. He was active in the Russian student circles there and at the end of 1901 was elected first secretary of the Bund organization abroad. He represented the Bund at the Second Convention (1903) of the Russian Social Democratic Party in London. After the convention he was appointed to the Committee Abroad of the Bund. During the years 1905–08, Medem was also active in Russia as one of the leading contributors and editors of the Bund newspapers *Posledniya Izvestiya* and *Nashe Slovo*. At the Seventh Convention (1906) of the Bund, he was elected to its central committee. He was deeply concerned with the national question, and it was he who formulated the so-called neutralist attitude toward the future fate of the Jewish nation which was adopted by the Bund as its official position ("neutralism"). It was only in 1910 that he began to retreat from this position and recognized the need for a positive attitude on the national future of the Jews. He was among the first to call for an active interest by the Bund in the Jewish community organization (*kehillah*); he demanded actual action in the question of Yiddish schools, the right to rest on the Sabbath, and the right of employment for Jewish workers. He played an active role in the revival of the Bundist press during the years 1912–13 (*Lebnsfragen*, Vienna, and *Di Tsayt*, St. Petersburg). In 1915, as a result of the Russian retreat during World War I, he was freed before completing a two-year term

of imprisonment in Warsaw. During the German occupation he was the ideological leader of the Bund in Poland. He began to speak and write in Yiddish. His anti-Zionist writings became increasingly violent, but he renewed the demand for Jewish national-cultural autonomy. He was even in favor of collaboration with middle-class elements in the field of Yiddish culture. During the years 1919–20, when pro-Communist tendencies gained the upper hand within the Bund, Medem found himself isolated in his violently critical attitude toward Bolshevism and its methods. At the beginning of 1921 he immigrated to the U.S. where he contributed to the Jewish daily, \**Forward*. His autobiography (*Fun Mayn Lebn*, 2 vols., 1923) is of both literary and historical value. Cultural and educational institutions in Poland were named after him.

[Moshe Mishkinsky]

**MEDES AND MEDIA** (Heb. מֵדַי; in Akkadian inscriptions: *Madai*), a people of Indo-Iranian origin, closely related to the Persians, who inhabited the mountainous area of Iran and the northeastern and eastern region of Mesopotamia. The Medes, located in the Kermanshah-Hamadān (Ecbatana) region, are more prominent in Assyrian texts than the Persians. The Assyrian kings distinguish two groups of Medes inside the empire, and the distant Medes (*madaya rūqūti*). In the biblical passage enumerating Noah's sons, Madai, the progenitor of the Medes, like those of other Indo-Iranian peoples, is included among the sons of \*Japheth (Gen. 10:2). In datable sources Medes are first mentioned in the historical inscriptions of the Assyrian kings of the end of the ninth century B.C.E., Shalmaneser III and his son Shamshi-Adad v. The Assyrian kings in military campaigns against Media, which then stretched southeast of Lake Urmia, inflicted heavy losses on its population. Although the Medes did not as yet have a central kingdom, they succeeded in repelling the Assyrian kings in sporadic encounters and by evasive tactics. In the eighth century B.C.E., \*Tiglath-Pileser III, in his campaigns, which extended from \*Ararat (Urartu) to the mountains south of the Caspian Sea, subdued the Medes. Annexing Media to Assyria, he deported 65,000 of its population, whom he replaced with inhabitants of other countries. However, in the days of \*Sargon II, at the end of the eighth century B.C.E., Media, under the leadership of a Median called Dayaukku, revolted against Assyria. In Sargon's military operations conducted in 716–15 B.C.E. against the centers of revolt, Dayaukku was captured and exiled to Hamath in Syria, whereupon 22 Median rulers, submitting to the sovereignty of Assyria, presented a gift to the king. Dayaukku is undoubtedly identical with Deioeces, who is mentioned by Herodotus (1:96–101) as having united the tribes of Media and as having been its first king, reigning for 53 years. However, according to contemporary Assyrian sources, he was merely the forceful local chieftain of a region lying between Assyria

and Ararat. Apparently a later tradition attributed to him a royal title and the establishment of the Median Empire. Media became a united empire under the leadership of Kaštarita (according to the Persian pronunciation; in Assyrian: *Kaštarītu*), who formed a military pact against the Assyrians in the region of the Zagros Mountains and rose to be king of Media (in the first half of the seventh century B.C.E.). The present tendency is to identify Kaštarita with Phraortes king of Media who, according to Herodotus (1:102), reigned 22 years, subdued the Persians, and was killed when advancing on Nineveh. Having consolidated their position at the end of the reign of Ashurbanipal king of Assyria (668–627 B.C.E.), the Medes, in the wars between Babylonia and Assyria in the days of the last Assyrian kings (626–616 B.C.E.), joined forces with the Babylonians, attacked Nineveh, and, after conquering it, assisted in the capture of Haran. The Medes (called in contemporary Babylonian documents *Ummān manda*, an old traditional term for barbarians) were then ruled by Cyaxares (i.e., native Huvaxšra; in Babylonian sources: *Umakištar*), who, Herodotus reports (1:100–4), defeated the Scythians. After the overthrow of Assyria, Cyaxares extended his sway over the northern part of the Assyrian Empire, as well as over large sections of Iran, Armenia, and Asia Minor. When unable in 500 B.C.E. to conquer Lydia, Cyaxares, through the mediation of the kings of Babylonia and Cilicia, made a treaty with the Lydians. This consolidation of Media under Cyaxares, constituting as it did a danger to Babylonia, finds expression in utterances of the prophets of Israel who saw in the army of Media a relentless foe rising to destroy Babylonia (Isa. 13:4–6, 17–19, 21:1–10) and uniting with other northern peoples to bring about, at God's command, the overthrow of the kingdom of the Chaldeans (Jer. 51:11–14, 25–36). Astyages (Ass. *Ištumēgu*) the son of Cyaxares and the last king of Media (584–550 B.C.E.) attempted to oust Babylonia from the region of Haran. However, after \*Cyrus king of Persia had revolted against Astyages and defeated him, Media became part of the Persian Empire (550 B.C.E.). The revolts which broke out against Persian rule at the beginning of \*Darius I's reign were unsuccessful, and Media was incorporated into two Persian satrapies (the 11<sup>th</sup> and the 18<sup>th</sup>). Nevertheless it occupied an honorable and special position in the Persian Empire, as is reflected in the biblical combination (in Esther and Daniel) of "Persia and Media" or "Media and Persia," e.g., "the seven princes of Persia and Media" (Esth. 1:14); "the kings of Media and Persia" (10:2); or "the laws of the Persians and the Medes" (1:19). The Bible apparently expresses a view, then prevalent, about the part played by the two empires in the historical events preceding the fall of Babylonia. According to this view, not only did the one empire supplement the work of the other but the Persian Empire was the natural heir of Media. Echoes of this view appear in Daniel's vision of the destruction of Babylonia by the Medes and Persians (Dan. 5:26–28; cf. 6:1, 29; 8:20) as well as in the prophecies in Isaiah and Jeremiah concerning the overthrow of Babylonia by Media (see above). It is difficult to reconcile elements of the literary sources with archaeological evidence.

Ecbabtana has not yet been excavated but three other sizable Median sites of the seventh century were deserted by the sixth. No Median writing has been found, though some words that are either Median or part of Medo-Persian *koinē* have been identified in Old Persian inscriptions, nor has any distinctively Median style in art been identified.

[Samuel Abramsky / S. David Sperling (2<sup>nd</sup> ed.)]

**MEDIATION**, an alternative means for the resolution of disputes in which the mediator, a neutral professional, meets with the parties to the dispute and aids them in reaching an agreed upon resolution. Unlike a judge, the mediator has no authority to render a decision in the dispute. In the mediation process, the parties are given the opportunity to express themselves, to voice their arguments, and to reach, by themselves, a solution that is appropriate for them.

Mediation is appropriate for the resolution of most types of disputes, be they commercial disputes, private disputes, disputes regarding the family, or even public disputes and international disputes between states.

Jewish legal literature contains many sources that refer to disputes. Many of these sources point to the increase in litigation and consider the use of the judicial process, terminating in a definitive judicial decision as the preferred method to resolve disputes.

Alongside this approach, there are many sources that refer approvingly to making peace between parties, whether this is achieved by a *dayyan* (rabbinical court judge) in the rabbinical court who works out a "compromise" between the parties (see \*Compromise), or by means of mediation that takes place outside the court. It seems that it was not coincidental that the Israeli legislature, in Section 2 of the Foundations of Law Act, 5740 – 1980, provided that "peace" is one of the values according to which the court is obligated to act in the case of a lacuna, a unique provision in comparison to legal systems in other countries. Thus, where the court encounters a legal question which must be resolved, and it is not addressed in legislation or case law and cannot be resolved by way of analogy, the court is instructed to decide "in light of the principles of freedom, justice, equity and peace of the Jewish tradition."

An expression of the important role of “peace,” alongside that of “law” as a means to dispute resolution, may be seen in the Book of Zechariah, 8:16, “...execute the judgment of truth and peace in your gates.” The Mishnah in *Avot* elaborates upon this verse, stating: “The world exists on three foundations: On truth, on judgment, and on peace.” The verse from the Book of Zechariah served as the basis for the teaching of the sages in the Mishnah, as follows: “What is the judgment that contains peace? Let it be said: it is compromise.” The Maharsha – Rabbi Samuel Edels, a rabbinic sage in Poland in the 16<sup>th</sup> century – commented as follows: “Compromise is arrived at with the agreement and willingness of both of the parties, which is not the case with judgment.” (For further explication of this subject see the opinion of Justice Menachem Elon in CA 61/84 *Biazi v. Levi*, 42(1) PD 446.)

As opposed to modern legal systems that view the court as a central means for conflict resolution, the Torah commands each individual – and not just the legal institution – to try to bring about accord between opponents in a dispute. An expression of this is found in the Mishnah in tractate *Pe'ah*, that is recited daily in the morning prayers: “These are things that have no measure [that the reward for them is immeasurably great] ...a person enjoys their interest in this world and the principle awaits him in the world to come: ... and making peace between people and between a husband and his wife” (the last phrase, “between a husband and his wife,” does not appear in all of the ancient manuscripts of the Mishnah, but is found in some of the versions of the prayer and is common in the Sephardi and the Eastern versions of the prayer).

In his classic commentary on the Mishnah, the author of *Tiferet Yisrael*, Rabbi Israel Lipschutz (Germany, 18<sup>th</sup> century), discusses the special expression “bringing peace” rather than “making peace,” and he comments as follows:

Bringing peace – even if the two parties do not desire it, one should go to the trouble of persuading them to come together and bring about peace between them. And this is the reason that the *tanna* did not say “to make peace” but rather “to bring peace,” in other words, to bring counsel from afar in order to compel them by his soft words to bring peace between them.

In the Midrash, the figure of Aaron the Priest, about whom it was said in the Mishnah (*Avot* 1:12) that he “loved peace and pursued peace,” serves as the archetype for the commandments of bringing about peace. The Talmud even contrasts between Moses, the head of the judges and Aaron’s brother, and Aaron, who serves as a symbol for mediators seeking to resolve disputes outside of court: “Moses used to say: The law must be carried out to its fullest, but Aaron loved peace and pursued peace, and made peace between people.” Rashi commented “Because he would hear the disputes between them *before they came before him for a judgment*, he would pursue them and impose peace between them.” In other words, as is the case with modern day mediation proceedings, the “mediator,” Aaron the Priest, met with the parties

before the legal hearing and outside of the “court,” in order to spare them the pain and suffering that accompany the legal proceedings.

The end product of mediation, unlike a legal proceeding, is not a legal decision in which one side prevails and the other side feels that he has lost, but rather the end of the conflict and its resolution in a “peaceful” manner, in which both sides feel that they are satisfied.

An interesting description of the mediation process is found in *Avot de-Rabbi Nathan* (12:3): “Two people had quarreled with one another. Aaron went and sat with one of them. He said to him: My son, look what your friend has done, his heart is distraught and he has torn his clothes (out of sorrow regarding the quarrel), and he is saying: Woe is to me, how will I raise up my head and look at my friend? I am embarrassed in his presence, because I am the one who wronged him. And he [Aaron] sits with him until he removes the jealousy from his heart. And Aaron then goes and sits with the other party and says to him: My son, see what your friend has done, his heart is distraught and he has torn his clothes and he is saying: Woe is to me, how will I raise up my head and look at my friend? I am embarrassed in his presence, because I am the one who wronged him. And he [Aaron] sits with him until he removes the jealousy from his heart. And when they met [the two opponents who carried on the dispute between them], they embraced and kissed one another.”

According to the description in this Midrash, Aaron the Priest uses a technique similar to that used by contemporary mediators, of holding separate mediation meetings alongside the joint meetings, with the goal of aiding the parties to end the dispute. In this respect as well, the difference between the mediation process and a court proceeding, which has to be held in the presence of both of the parties, is readily apparent.

It is not unusual for a dispute between parties to be so serious that the two parties cannot communicate with each other. Due to the lack of trust between them, each one is suspicious of the other and holding separate meetings allows them to express themselves freely in front of the mediator and to talk about their feelings in a calm and non-threatening atmosphere, without worrying that what they say will be conveyed to the other party. In this manner, the mediator can assist each of the sides to identify his interests and needs, and to understand the interests of the other party. In the case described in *Avot de-Rabbi Nathan*, the mediator uses “neutral” language, while emphasizing points that are likely to lead to a resolution of the dispute. Aaron the Priest emphasizes the sorrow of the other party to create an opening to decrease the tension between the parties and to encourage discussion between them. Unlike a judge, the mediator does not express an opinion regarding the dispute before him. He abstains from “awarding grades” to the parties to the dispute, does not appraise their character, and does not judge their deeds. His role is purely one of assisting in carrying out the negotiations between them to resolve the dispute.

### In Court Decisions in Israel

Israeli law accords a wide degree of expression to the desired place of reaching a compromise by the court, relying on the position of the Jewish Law sources regarding this matter (see, for example, CA 807/77 *Sobol v. Goldman*, 33(1) PD 789, per Justice Elon and HCJ 2222/99 *Gabai v. The Rabbinical Court of Appeals*, 54(5) PD 401; see \*Compromise). However, a distinction must be made between a compromise arrived at by a judge and a mediation proceeding handled by a neutral professional outside of the courtroom. Section 79c of the Courts Law [consolidated version], 5744 – 1984, refers to mediation, along with compromises that take place within the court, as appropriate proceedings for the resolution of disputes. Pursuant to that section, “the court may, with the agreement of the parties, transfer a matter in litigation to mediation.” If the parties reach an agreement in the mediation, the court is authorized to give the agreement the force of a judgment. Detailed regulations have been enacted to govern the mediation process.

[Elisheva Hacohen (2<sup>nd</sup> ed.)]

**MEDICINE.** From the beginning of their history until modern times Jews have exercised a tremendous influence on the development of medical science. They have always been solicitous in their care for the sick and held the medical profession in great esteem. In ancient times medicine and religion were closely connected. The priests were the custodians of public health. The dispute as to the propriety of human interference in sickness – regarded as divine retribution – ceased to trouble the Jews, because they came to regard the physician as the instrument through whom God could effect the cure. Jewish physicians therefore considered their vocation as spiritually endowed and not merely an ordinary profession. By the same token, great demands were made of them, and the ethical standards have always been very high.

The importance of medicine and physicians among the Jews is best seen in the long line of rabbi-physicians, that started during the talmudic period and continued until comparatively recently. Various factors were responsible for this combination of professions. Medicine was sanctioned by biblical and talmudic law and had an important bearing upon religious matters. Since teaching or studying the word of God for reward was not considered ethical, the practice of medicine was most often chosen as a means of livelihood. This trend was further strengthened by the fact that during the greater part of the Middle Ages the Jews were excluded from almost all other occupations, including public office, and medicine was left as one of the few dignified occupations by which they could earn their living.

Jews have contributed to medicine both by the creation of new medical concepts and by the transmission of medical knowledge. It was through the medieval Jewish physician-translators that the medical knowledge of the East and much of ancient Greek medical lore was preserved and transmitted to the West. A general survey of Jews in medicine may be divided into three broad periods:

(a) biblical and talmudic times, which covers the period from antiquity until roughly the fourth to fifth centuries C.E.;

(b) a middle period from approximately the sixth century C.E. to the beginning of the 19<sup>th</sup> century; and

(c) the 19<sup>th</sup> and 20<sup>th</sup> centuries, during which Jews throughout the world have excelled not only in the practice of medicine but in all fields of medical research and teaching. It is significant that over 20% of all winners of the Nobel Prize for medicine up to the end of the 1960s were Jewish.

The high standard of medical science in Israel must be mentioned. Not only have Israeli physicians successfully met the challenge of medical problems in a developing country with a mixed population, but they have continued the ancient Jewish medical tradition by teaching and giving practical aid to those developing countries striving to attain the scientific levels of the 20<sup>th</sup> and 21<sup>st</sup> century.

### IN THE BIBLE

The main source of information on ancient Hebrew medicine is the Bible, which refers to medicine as it pertains to religious or civil laws or when important characters are involved. No general ancient Hebrew medical documents are extant, although the Talmud reports that King \*Hezekiah canceled the “Medical Book” (Ber. 10b; Pes. 56a) and that a scroll on pharmacology was lost. From earliest times, the Jewish faith sought to suppress \*magic customs and practices in every field of life, including those concerned with the health of its members. The Hebrews were doubtlessly influenced in their medical concepts and practices by the surrounding nations, particularly by Egypt, where medical knowledge was highly developed. Prevailing superstitions and beliefs in magic medicine were far less accepted and practiced by the Jews, however, than by their neighbors. But like their contemporaries, the ancient Hebrews attributed health and disease to a divine source.

Healing was in the hands of God and the role of doctors was that of helpers or instruments of God. There are numerous references to physicians and men of healing throughout the Bible. It is always implied, however, that although man may administer treatment, it is God who heals: “I am the Lord that healeth thee” (Ex. 15:26). The title *rofe* (“healer”) was therefore never adopted by ancient Jewish physicians; where it occurs it invariably refers to foreign doctors, who were usually assumed to be helpless because they were not aided by God. Pharmacists and midwives are also mentioned. Hebrew priests had no authority as physicians but rather held the position of health wardens of the community, charged with enforcing the laws pertaining to social hygiene.

The uniqueness of biblical medicine lies in its regulations for social hygiene, which are remarkable not only for their period but even by present-day standards. Hygiene and prophylaxis became religious dogmas intended for the welfare and preservation of the nation. Of the 613 commandments, 213 are of a medical nature. Prevention of epidemics, suppression of prostitution and venereal diseases, frequent washing, care of the skin, strict dietary and sanitary regulations, rules for sexual life, isolation and quarantine, the observance of a day of rest – the Sabbath – these and other provisions inhibited the spread of many of the diseases prevalent in neighboring countries.

The Hebrews were aware of the fact that contagious diseases are spread by direct contact as well as by clothing, household utensils, etc. To prevent the spread of epidemics or infectious maladies they therefore compiled a series of sanitary regulations. These included precautionary or temporary isolation, quarantine, burning or scalding of infected garments and utensils, thorough scrubbing and smoking out of houses suspected of infection, and scrupulous inspection and purification of the diseased person after recovery (Lev. 13–14). Anyone coming into contact with a corpse or carrion, or suffering from purulent discharges from any part of his body, also required a thorough cleansing of himself and his belongings before being allowed back into the encampment (Num. 19:7–16; Lev. 15:2–13). The garments, weapons, and utensils of soldiers returning to the camp after a battle had to be thoroughly cleansed and disinfected to prevent the spread of diseases possibly picked up during contact with the enemy (Num. 31:20, 22–24). The danger of infectious bowel diseases spreading through excrement was also recognized and the Bible instructs how to keep the camp clean (Deut. 23:13–14).

### Diseases and Remedies

Many diseases are mentioned in the Bible. Among them are *shaḥefet* – phthisis (Lev. 26:16); *ʿafolim* – leishmaniasis (Deut. 28:27); *yerakon* (*yeraqon*) – ikterus (Deut. 28:22); *sheḥin poreʿah aʿvabuʿot* – pemphigus (Ex. 9:9); *zav* – gonorrhoea-leukorrhoea (Lev. 15); *dever* – pest (Deut. 28:21); *shivron mot-nayim* – lumbago (Ezek. 21:11); *nofel ve-galui ʿenayim* – epilepsy (Num. 24:4); *rekav* (*reqav*) *ʿazamot* – osteomyelitis (Prov. 14:30). Although not specifically mentioned by name, eye diseases such as blepharitis ciliaris and gonorrhoeal ophthalmia undoubtedly existed, and senile cataract probably occurred frequently among the ancient Hebrews: “Now the eyes of Israel (Jacob) were dim for age so that he could not see” (Gen. 48:10). The dimness of sight rather than blindness is indicative of cataract. Various forms of skin disease are referred to in Deuteronomy: “The Lord will smite thee with the boil of Egypt, and with the emerods, and with the scab, and with the itch, whereof thou canst not be healed” (Deut. 28:27). The Hebrew word *zaraʿat*, which has been translated as leprosy, was probably a generic term for a number of skin ailments, many of which were considered curable (Lev. 13). However, leprosy in the modern sense was also known, and

rigid quarantine, which did not exclude kings (11 Chron. 26:21), was imposed on lepers. The term *maggefah* refers to plague, epidemics, and contagious diseases in general, very often of a venereal type. A bubonic plague described in 1 Samuel 5 mentions rodents, who are known to be carriers of the disease. Various types of wounds are mentioned: *makkah* is the generic term for wound; *makkah teriyyah* is a festering wound; *makkah ʿanushah*, a wound which will not heal, often fatal; *pezaʿ*, a stab wound; *ḥabburah*, a boil or hematoma; and *mazor*, a septic boil.

With the one exception of the incurable serpent bite (Num. 21:9), biblical remedies and treatments are all of a rational character and do not involve incantations or magic rites, nor do they include the so-called “filth pharmacy.” Biblical therapeutics consisted of washing; the use of oils, balsams, and bandages for wounds and bone fractures; bathing in therapeutic waters (11 Kings 5:10), especially in the case of skin diseases; sun rays, medicated drinks, etc. Among medicaments mentioned by name are myrrh, sweet cinnamon, cassia, galbanum, niter, and the mandrake (*dudaʿim*) which was considered to possess aphrodisiac properties. The modern method of mouth-to-mouth artificial respiration was also known, as testified by the accounts of Elijah and Elisha (1 Kings 17:22; 11 Kings 4:34–35). The only surgical operations mentioned are circumcision and castration, and these were not specifically Jewish practices. \*Embalsming, though unusual, was not forbidden.

### Anatomical Knowledge

The Hebrew had more than a passing knowledge of anatomy. This is attested by the language used in instructions concerning methods of sacrifice and by passages of poetry where the names of organs and limbs are used metaphorically. The heart is mentioned frequently as the seat of emotion and intellect, and the functions now ascribed to the brain were then thought to emanate from the heart. No word for brain is mentioned; the word *moʿah* in Job refers to marrowbone.

It is interesting to note that the Bible has a distinctive nomenclature for parts of the body and types of illnesses. Thus, for example, body defects or deformities are described solely by words constructed in the *piʿel* grammatical form: *ʾit̄ter* – paralyzed, left-handed; *ʾillem* – dumb; *ʾivver* – blind; *ʾpisseʿah* – lame; *gibben* – hunchback. Descriptions of mental or nervous diseases appear in the *piʿalon*-form: *dikkaʿon* – depression; *shiggaʿon* – madness; *izzavon* – nervousness; *ʾivvaron* – mental blindness; *shikkaron* – drunkenness. Somatic illnesses appear in the *paʿelet* (*paʿalat*) form: *dalleket* (*dalleqet*) – inflammation; *shaḥefet* – tuberculosis; *yabbelet* – acne; *ʾazzevet* – neuritis; *baḥeret* – leukoderma, vitiligo; *sappaḥat* – psoriasis; *zaraʿat* – lepra, skin diseases; *gabbahat* – loss of hair. Trauma of the body is formed according to the *paʿul* model: *shavur* – fractured; *ḥaruz* – split; *maʿukh* – crushed; *natuk* (*natuq*) – dis-jointed; *razuz* – smashed; *zaruʿa* – infected; *pazuʿa* – wounded. Many anatomical terms have the ancient two-letter root, while most Hebrew words derive from three letters. Thus **לָב** *lev* –

heart; דם *dam* – blood; פה *peh* – mouth; חך *hekh* – gums; שן *shen* – tooth; יד *yad* – hand.

**THE TALMUDIC ERA**

The period surveyed in this section extends roughly from the second century B.C.E. to the sixth century C.E. The historical events of that period had a profound influence on the thought and way of life of the Jews and consequently on the development of Jewish medical art as well. As a result of the Babylonian Exile, of Greek rule followed by the Hasmonean Wars, the rise of Christianity and the Exile after the destruction of the Second Temple, the Jewish community became wide open to influences from neighboring countries and to foreign philosophies, which had their effect on every walk of life, including medicine.

**Sources and Influences**

The sources for this period are the Apocryphal books, Greco-Roman writings of Jews and non-Jews, the Mishnah, the Jerusalem and Babylonian Talmuds, the Midrashim, and, in part, the recently discovered Dead Sea Scrolls. None of these sources is a medical book as such. Except for a few cases, such as the praise of medicine and the physician by \*Ben Sira, medical matters are dealt with mainly to illustrate points of ritual, or civil and criminal law. In the Talmud, a few medical matters are dealt with extensively in the tractates *Hullin*, *Nega'im*, and *Bekhorot*. The influence of Persian and Babylonian magic medicine is clear from references to \*amulets, the \*evil eye, \*demons, etc. The Greek influence on Jewish medical thought was considerable, but we find that the scholars were not blind adherents of the humoral pathology, but rather followers of anatomic pathology. This was doubtless based on their experiments and observations of sick animals before and after slaughter, as well as on their studies of human bodies and corpses. One of the interpretations given to the name of the sect known as \*Essenes is רופאים, “healers.” Their medicine mainly influenced Christian medicine and medical thought. They studied and collected herbs and roots for healing purposes, though their chief remedies were prayer, mystic formulas, and amulets. Abiding faith was all that was considered necessary for curing physical and mental diseases as well as chronic defects such as blindness, lameness, and deafness. The medicine mentioned in the New Testament is almost entirely of this type of miracle cure. By contrast, the attitude of Jewish scholars of the time, and later those of the Talmud, is generally a scientific one.

The talmudic attitude toward the sanctity of human life and the importance of health is expressed in numerous statements: “The saving of life (*pikku'ah nefesh*) takes precedence over Sabbath” (Yoma 85a). “Whoever is overzealous in fasting should be regarded as a sinner” (Ta'an. 11a). It was also decreed that when treating the sick or a woman in childbirth, even though no danger to life was involved, the sanctity of the Sabbath could be profaned.

**Status of the Physician**

The Talmud does not regard calling upon a physician for medical aid as a failure to rely upon God to restore health: “Who-

ever is in pain, let him go to the physician” (BK 46b). The profession of physician – as an instrument of God – was held in high esteem: “Honor the physician before need of him. Him also hath God apportioned.... The skill of a physician shall lift up his head; and he shall stand before nobles ...” (Ecclus. 38). The Talmud enumerated ten things that must be in a city where a scholar lives, and these include a physician and a surgeon. From this statement it may also be concluded that the number of practicing physicians was relatively great.

Specialists as known in Egypt did not exist. However, the Talmud names two types of physician, *rofe* and *rofe umman* (“skilled physician” and “surgeon”). Patients visited the physician in his home and not, as in Greece, in the marketplace. A special regulation was therefore enacted which required anyone renting premises to a physician to obtain the prior agreement of his neighbors, since the cries and noise of visiting patients might disturb them (BB 21a). \*Hospitals were apparently nonexistent in this period, although certain temple halls, and later on, parts of the poorhouses and synagogues, were set aside for the sick. However, mention is made of operation rooms, which had to be walled with marble for cleanliness – “*battei shayish*.” There were communal or district physicians, whose duties included assessing the character and extent of any physical disability sustained in cases of injury in order to determine damages (Sanh. 78a). They were also required to judge the degree of physical endurance of a person sentenced to corporal punishment (Mak. 22b). “The victim of an assault could refuse to be treated by a physician coming from a distance since he would not be sufficiently concerned with the welfare of his patient” (BK 85a).

A physician had to receive adequate fees, and free medical service was not approved because “a physician who takes nothing is worth nothing” (BK 85a). At the same time, Jewish physicians had special consideration for the poor and needy – a tradition which was maintained throughout the centuries. Abba Umana (fourth century C.E.) was reputed as a physician and a charitable man. In order not to discourage needy patients he would hang a box on the wall where anyone could put in, unnoticed, the fee he thought he could afford for medical treatment. Abba Umana refused to take fees from poor students and would return them their money so that they could use it for convalescence (Ta'an. 21b). If, in spite of every care, a licensed physician injured a patient or caused his death, he was not – as among many other peoples – held guilty (Sanh. 84b). Jewish physicians were apparently organized in some type of guild which had as its insignia the *harut* – the branch of a palm or a balsam bush (Jews at that time regarded balsam as the best remedy for wounds; cf. Pliny, Hist. Nat., 12:54).

Jewish doctors had an excellent reputation and practiced throughout the then-known civilized world. A physician Theudas is mentioned in *Bekhorot* (4:4) as a famous doctor from Alexandria. Aulus Cornelius \*Celsus, writing in the first century C.E., refers to salves compounded by skilled Jewish physicians. \*Galen reports on the Jewish physician Rufus Samaritanus in Rome in the first-second centuries C.E. Similar

references are made by Marcellus Empiricus, Aetius of Amida, and Paulus of Aegina. Pliny (Hist. Nat., 37.60.10) mentions a “Babylonian physician – Zechariah,” undoubtedly a Jew, who dedicated his medical book to King Mithridates. The emperor Antoninus Pius (86–161 C.E.) requested R. Judah ha-Nasi to supply him with a physician for his house slaves from among his circle of students. The personal physician of St. Basil (c. 300 C.E.) was the Jew, Ephraim. The bishop Gelasius refers to his Jewish physician Telesinus as his “trusted friend.” At the same time, numerous restrictions against Jewish doctors were already being promulgated by Christian bishops and emperors. These only serve to show how large the number of practicing Jewish physicians was at the time.

The study of medicine was included in the curriculum of talmudic schools and many Talmud scholars were themselves physicians. Among them were R. Ishmael, R. Ḥanina b. Dosa, R. Hananiah b. Ḥama, Joseph ha-Rofe of Gamla, Tobiah ha-Rofe of Modi’in, and Minjomi (Benjamin). The most distinguished of them was \*Samuel b. Abba ha-Kohen, also called Mar Samuel Yarḥina’ah (165–257), to whom many remedies and much anatomical knowledge is attributed. He was also the personal physician of the Persian king, Sapur. In addition, the Talmud mentions *askan bi-devarim*, which might be described as a research scientist, who occupied himself more with the study of animal and human anatomy and physiology than with the actual practice of medicine.

### Talmudic Anatomy

The preoccupation with regulations concerning ritually unclean meat, the physical qualifications for priesthood, rules concerning menstruous women, defilement, etc., accounts for the extraordinary anatomical knowledge of talmudic scholars. For full details see \*Anatomy.

### Talmudic Embryology

A great deal of material on this subject can be found in the Talmud and in the Midrashim, some of it of an imaginary or legendary character but most of it surprisingly accurate. Abba Saul describes the development of an embryo in its sixth week (Nid. 25b). Simlai describes the parts, posture, and nourishment of an embryo in the womb. Scholars accepted the opinion that the embryo is a living organism from the time of conception (Sanh. 91b). In contrast to Aristotle, who regarded the seed as a mosaic of individual creative factors corresponding to each of the parts of the human body and assumed that each limb is derived from the parallel limb of the father, the talmudic scholars regarded the seed as one single summary of all the creative forces of the organism and did not acknowledge the individual influence of one limb on the embryo. “The seed is mixed, otherwise blind would beget blind and one-limbed a one-limbed” (Ḥul. 69a). The Talmud also accepts the equal share of the male and female in forming the organism.

### Pathology and Etiology

In examining the ritual fitness of animals and the cleanliness and purity of members of the community, talmudic scholars

had numerous opportunities of observing and diagnosing diseases. They described various pathological conditions of the lungs and knew the existence of pulmonary infections (Ḥul. 47b). Disturbances of the circulatory system were recognized by the paleness or flush of the body (Yev. 64b). The diagnosis of certain skin diseases was determined according to the form, temperature, and secretion of the wound and the color of the hair round it. The observation of such a wound could last up to three weeks (Neg. 10). Scholars were able to recognize macula of the cornea, keratitis, and detached retina (Bekh. 38a). R. Ishmael describes diphtheria as an epidemic disease which causes painful death through strangulation. The pathology of hemophilia as a lack of viscosity in the blood preventing coagulation is described, and the circumcision of an infant in a hemophilic family was forbidden. It was also recognized that the female is the transmitter of this disease (Yev. 64a; Ḥul. 47b). A large number of lung, liver, kidney, and stomach diseases were described as being caused by worms (Ḥul. 48a; Shab. 109b; Git. 70a). Lack of fluids was thought to lead to digestive disturbances (Shab. 41a). It was recognized that fear accelerates the pulse and causes heartbeats (Sanh. 100b); that falling from a great height may cause fatal internal injury (Ḥul. 42a); that injury to the spinal cord causes paralysis (Ḥul. 51a); and that restraint of the gall causes jaundice. Fevers and colds were thought to be caused by negligence (BM 107b). According to R. Eleazar the gall (humor) and according to Mar Samuel the air (pneuma) could cause disease. It was generally accepted that blood is the chief cause of disease (BB 58b). Overeating, excessive drinking of intoxicants, and sexual excesses were also thought to cause disease. It was realized that animals and insects, in particular flies, are carriers and transmitters of infectious diseases (Ket. 77a), and that contaminated water may also cause illness (Av. Zar. 30a).

### Remedies, Treatments, and Surgery

The medicines mentioned in the Talmud include powders, medicated drinks, juices, balsams, bandages, compresses, and incense. Meat and eggs were considered to be the most nourishing foods (Ber. 44b); fried food or food containing fat was regarded as difficult to digest (57b). The eating of vegetables throughout the year and the drinking of fresh water at every meal were recommended (*ibid.* 57b; 40a). Baths and mineral waters were regarded as general strengthening tonics and as therapeutics for certain skin diseases (Shab. 40a; 109a; Ket. 77b). Herbs were used for constipation and purges were recommended in serious cases, except for pregnant women (Pes. 42b). The use of opium as an analgetic and hypnotic drug was known, and warning was given against overdosing (TJ, Av. Zar. 2:2, 40d). Anything useful for healing purposes was permitted at any time, even on the Sabbath (Ḥul. 77b). Surgeons operated in special halls – “*battei shayish*” (see above). “Sleeping drugs” – *sammei de-shinta* – were used as anesthetics. From descriptions of operations we learn of trepannings, amputations, and removal of the spleen (cf. Sanh. 21b; Ḥul. 57a; Git. 56a). A cesarean was also performed, but it is not clear whether

the operation was done on a living or on an already dead body. In general, the life of the mother had priority and therefore the killing of a fetus during a difficult birth was allowed (Tosef., Yev. 9:4). Wound edges were cut in order to ensure complete and clean healing (Hul. 54a). Surgeons wore special operation aprons (Kelim 26:5).

### Hygiene and Prophylaxis

The main contribution of talmudic medicine lies not so much in the treatment of illness but rather, as in the Bible, in the prevention of disease and the care of community health. The hygienic measures advocated were of a practical as well as of a religious, ethical nature. A principle which recurs a number of times is that “bodily cleanliness leads to spiritual cleanliness” (Av. Zar. 20b; TJ, Shab. 1:3, 3b). Hygienic regulations applied among other things to town planning, climatic conditions, social community life, family life, and care of the body. Mention is made of a disinfectant composed of seven ingredients used for cleansing infected clothing (Zev. 95a). A town was required to have a physician and a bathhouse. Clothing had to be changed before eating. Mar Samuel declared that diseases may be carried by caravans from land to land (Ta’an. 21b). Members of a family with a sick person among them were to be avoided. The digging of wells in the neighborhood of cemeteries or refuse dumps was forbidden (Tosef., BB 1:10). It was forbidden to drink uncovered water for fear of snake venom (Av. Zar. 30a). Food had to be fresh and served in clean dishes. Kissing on the mouth was discouraged, and kissing only on the back of the hand was recommended in order to prevent contagion. During epidemics, the population was advised to avoid crowding in narrow alleyways because of the danger of contagion in the air. For body care, the Talmud recommends physical exercises, massage, sunlight, employment, and above all cleanliness. Mar Samuel states: “The washing of hands and feet in the morning is more effective than any remedy in the world” (Shab. 108b). Excesses of any kind were regarded as harmful. The Talmud also concerned itself with the health of future generations and forbade marriage to epileptics or the mentally retarded (Yev. 64b; 112b). Surprisingly enough, talmudic pathology had very little influence on medieval medicine, not even on such outstanding physicians as \*Maimonides and Isaac \*Israeli, who were certainly well versed in the Talmud. The medical authority of Galen was so preeminent that all other medical theories and practice were regarded as banalities or even heresy. Scholars warned against the unselective use of talmudic remedies because they are not equally effective in all countries and at all times. Nonetheless, the hygienic laws and regulations of the Talmud, as well as many of its anatomical and pathological findings, appear in the light of modern knowledge to have enduring validity.

### THE MIDDLE PERIOD

The medieval period of Jewish history does not coincide exactly with the common historical definition of the Middle Ages in Western civilization, but may be said to extend from

the second-third centuries C.E. until the 19<sup>th</sup> century when, in most Western countries, Jews were granted full emancipation.

The large variety of climates, environments, and customs to which the Jewish people were exposed during their migrations in exile naturally had a profound influence on the development of their medical thought and knowledge. Thus, for example, there is a description of *diabetes mellitus* in the writings of Maimonides. According to him, this was a disease quite common in the warm Mediterranean countries with which he was acquainted but practically unknown in Northern Europe. Talmudic scholars give a precise description of *ratan* (“filariasis”) and its treatment – a malady unknown in Europe. Similarly, the prevalence of eye diseases in the Orient greatly encouraged the development of ophthalmology and, when Jewish eye doctors migrated to Europe, they quickly acquired an excellent reputation among their Christian colleagues.

However, the merit of Jewish doctors of that period lay not only in their individual achievements as physicians, but in their work as translators and transmitters of Greek medicine to the Arabs and later on of Arab medicine to Europe. Jewish scholars, and among them physicians, had command of the three most important scholastic languages of the time – Latin, Arabic, and Hebrew – and, in some cases, Greek. This enabled them to translate most of the Arab and Greek medical works into Hebrew and Latin or vice versa. Knowledge of Hebrew was considered extremely important in the study of medicine. The English scholar Roger \*Bacon (c. 1220–c. 1292) declared that Christian physicians were ignorant in comparison with their Jewish colleagues because they lacked knowledge of the Hebrew and Arabic in which most of the medical works were written. Vesalius, the great 16<sup>th</sup>-century anatomist, made a point of learning Hebrew to facilitate his studies, and gives Hebrew terms together with their Greek equivalents in his work *Fabrica* (see also \*Frigeis, Lazaro De). Mosellanus, in his rectorial address at the University of Leipzig in 1518, urged Christian medical students to learn Hebrew so that they might study the medical lore “hidden in the libraries of the Jews.” The close religious and family ties linking the various Jewish communities also helped to spread medical knowledge and facilitate rapid communication. As merchants and travelers the Jews met the best minds of their period and became acquainted with drugs, plants, and remedies from many parts of the world.

Nevertheless, although Jewish physicians were frequently held in great esteem by their non-Jewish colleagues as well as by kings and bishops, they suffered from persecution and restrictions, especially in the Christian world. From the fourth century C.E. onward there were innumerable regulations, papal bulls, and royal ordinances forbidding Jewish physicians to practice among non-Jews, to hold official positions and, later on, to study at universities. The fact that, despite these threats and restrictions, Jewish physicians continued in their profession and even held high positions at the courts of the very authorities who preached against them, attests to the es-

teem with which they were regarded for their medical skill. In this respect the Muslims were much more tolerant: although persecutions of Jews erupted from time to time in Muslim territories, physicians were not singled out, and consulting them was not forbidden.

The large number of Jewish physicians during these centuries may also be explained by the fact that Jews still regarded the medical profession as a spiritual vocation compatible with the career of a rabbi. Many scholars took up the medical profession as an honorable way of earning a living. This was made comparatively easy because the curriculum of talmudic schools often included the philosophies and sciences of ancient and contemporary times. Very often, therefore, medieval Jewish physicians were simultaneously rabbis, scholars, scientists, translators, grammarians, or poets, and as men of wide general knowledge they frequently attained high official positions in the countries in which they lived.

### The Byzantine Era

While Greek science and culture declined in the Byzantine Empire and the Jews living there suffered under oppression, Jewish, as well as Nestorian and Jacobite, physicians and scholars sought to save what they could of Hellenistic science. The Babylonian talmudic centers of Sura and Pumbedita flourished at this period. Although the teaching languages of the period were Hebrew, Syrio-Aramaic, and Persian, it was Greek medicine which was taught, strongly influenced by Hebrew, Babylonian, Persian, and Indian traditions. This becomes apparent from the medical work left by Asaph b. Berechiah, called \*Asaph ha-Rofe or Asaph Judaeus, who lived about the sixth century C.E. somewhere in the Middle East. Together with Johanan b. Zavda, Judah ha-Yarḥoni, and other Jewish scholars, he founded a medical school. His work, the oldest known medical book written in Hebrew, encompasses all the then-known wisdom of Greek, Babylonian, Egyptian, and Persian medicine, as well as something of Indian medicine. His medical technique is based on old Hebrew traditions. No Arab influence is apparent, which points to the fact that the book was composed before the seventh century. Most of the remedies mentioned were known in the Middle East generally. The book includes chapters on anatomy, embryology, physiology, hygiene, fever and pulse lore, urology, and a rich antidotarium. The oldest known Hebrew translation of the *Aphorisms* of Hippocrates, as well as chapters of Dioscorides and Galen, are also to be found in it. The book contains a “physician’s oath,” modeled on Hippocrates but far surpassing it in ethical content. The book of Asaph is not only significant to modern historians: it had considerable influence on medical history, particularly as far as Hebrew medical terms are concerned.

### The Arab Period in the East

Following the Arab conquest of the Middle East and Spain, Jewish communities and centers of learning started to flourish at Faiyum in Egypt, Kairouan in Tunisia, and Cordova in Spain. Studies often included ethics, philosophy, sciences,

and medicine. Students acquired experience in medicine by assisting practicing physicians. About a hundred years after the Arab conquest of the Middle East, the name of the Jewish physician Māsarjuwayh of Basra is mentioned as the first of a long list of men who translated a great number of Greek and Syrian works into Arabic. Unfortunately all his works have been lost, and he only appears as a frequent reference. Rabbān al-Ṭabarī (Sahl), a Jew converted to Islam who lived in Persia at the beginning of the ninth century, was a noted physician, mathematician, and astronomer. He was the first to translate \*Ptolemy’s *Almagest* into Arabic. His son Ali al-Ṭabarī Abu al-Ḥasan, also a convert, served as court physician to caliphs from 833 to 861, and was renowned as an ophthalmologist. His *Paradise of Wisdom* dealt with medicine, embryology, astronomy, and zoology and was one of the first original Arabic medical textbooks. He is best known as the teacher of the Arab physician Rhazes. One of the most outstanding medical personalities of the period was Isaac Judaeus (Isaac Israeli). He is believed to have been the first medical author in Arabic whose works were brought to Europe, and his books on fever, diet, uroscopy, and the ethical conduct of physicians were regarded as classics for several hundred years. His outstanding pupils were Abu al-Jazzār (a non-Jew) and \*Dunash b. Tamim. It was said of him that he “lived a hundred years, was unmarried, shunned riches, and wrote important books more precious than silver or gold” (Sa’id b. Ahmad, tenth-century Arab scholar). Israeli’s books were first translated into Latin by the monk Constantinus Africanus (1020–1087) and were all printed in Lyons in 1515.

Jewish physicians also flourished in Europe during this period. Among them was Zedekias (d. 880), the first registered Jewish doctor in Franco-Germany. He was personal physician to Louis the Pious and to his son Charles the Bald, and was known as the “wonderful physician” (Muenz).

### The School of Salerno

From the ninth to the 12<sup>th</sup> century a medical study center existed in Salerno in southern Italy uninfluenced, either deliberately or by accident, by the Arab culture which penetrated into Southern Europe. The beginnings of the School of Salerno are associated with the name of the distinguished Jewish physician Shabbetai \*Donnolo, of Oria, Calabria. His most famous medical work, *Sefer ha-Yakar*, lists 120 different remedies and their composition. Greek medicine is often referred to and Hebrew terms such as those used by Asaph ha-Rofe are frequently found in it. There is, however, no evidence that the author knew or accepted Arab medical wisdom, even though by that time many Arabic medical works had reached southern Italy by way of the Saracens of Sicily. It is interesting to note that *Sefer ha-Yakar* was also the first Hebrew prose written on European soil. References to other Jewish physicians practicing in Salerno and to Hebrew as a language of instruction are to be found in various records of the time. Benjamin of Tudela (12<sup>th</sup> century) refers to the physician Elijah whom he met when visiting Salerno. On the whole, however, the Jews

who transmitted Arab philosophy and medical science had little influence on the School of Salerno, which endeavored to uphold the Greek medical tradition.

### The Arab-Spanish Period

The Jews played an influential part in the cultural history of the period, starting with the Arab conquest of Spain in the eighth century and ending with their final expulsion from Granada in the 15<sup>th</sup> century. As statesmen, physicians, mathematicians, philosophers, and poets they attained high positions at the courts of both Moorish and Christian princes. At the Caliphate of Cordova (tenth century) was \*Ḥasdai ibn Shaprut who, together with a monk, translated Dioscorides from Greek into Arabic. About a century later, Ephraim b. al-Zafran served as physician to the caliph of Egypt. Zafran was a renowned author and bibliophile and left a library of over 20,000 books. Another famous Jewish physician of the 11<sup>th</sup> century was Salāma ibn Ramḥamūn who lived in Cairo and whose works include a treatise on the causes of scant rainfall in Egypt and another discussing why Egyptian women grow stout early in life. \*Judah Halevi (end of 11<sup>th</sup> century), the famous Spanish poet-physician, exerted great influence on his contemporaries and on later generations. Jonah ibn Bikhlarish (11<sup>th</sup> century) of Andalusia, court physician to the sultan of Saragossa, was one of the first Jewish scholars to learn Latin. In about 1080 he compiled a dictionary of drugs in Syriac, Persian, Greek, Latin, and Spanish which is believed to be the earliest work of its kind. Sheshet b. Isaac \*Benveniste, who served as court physician to the king of Barcelona, was the author of a famous gynecological treatise in Arabic. The most important Jewish physician-philosopher of the period was Maimonides. Born in Cordova, he fled with his family to North Africa and soon attained a worldwide reputation as a religious legislator, philosopher, and physician. In 1170 he became personal physician to the family of Sultan Saladin of Egypt and continued to serve them until his death. Maimonides wrote ten medical works, of which the most important ones were *Pirkei Moshe* ("Aphorisms of Moshe") and *Regimen Sanitatis*. Maimonides' whole concept of medicine is based on the conviction that a healthy body is the prerequisite for a healthy soul. This enables a man to develop his intellectual and moral capabilities and leads him toward the knowledge of God and thus to a more ethical life. He regards healing as the art of repairing both the defects of the body and the turmoil of the mind. A physician must therefore have not only the technical knowledge of his profession, but also the intuition and skill to understand the patient's personality and environment. Maimonides divides medicine into three main fields: preventive medicine – the care of the healthy; the curing of the sick; and the care and treatment of the convalescent, including the aged. Though leaning heavily on the medical teachings of the ancient Greeks, Maimonides warns against blind belief in so-called authorities and upholds the value of clear thought and experiments. His medical observations, diagnoses, and methods of healing mentioned in his works on asthma, poisons, his medical re-

sponsa, and commentaries on the *Aphorisms* of Hippocrates contain innovations in their day and many of them are still valid. Maimonides wrote his medical books in Arabic: most of them were soon translated into Hebrew and Latin.

### Southern France

At the end of the 12<sup>th</sup> and the beginning of the 13<sup>th</sup> century, Jewish centers of learning were established in southern France – in Avignon, Lunel, Montpellier, Béziers, and Carcassonne. Conditions for Jews in these regions were generally somewhat better than those in Spain, although they did not escape restrictions, expulsion, and persecution. For a period of two to three hundred years, papal bulls and Synod decrees alternated in forbidding and then allowing Jewish physicians to practice their profession. The principal service rendered by Jewish scholars of southern France, many of whom had emigrated from Spain and Portugal, was the translation of Arabic works into Hebrew and Latin. Since some of the original Arabic works had been lost, it was only through their Hebrew translations that they were preserved. The important early 11<sup>th</sup>-century medical work, the Canon of \*Avicenna, was translated into Latin and Hebrew a number of times. The work of translation was accompanied by great scholarly activity. The medical school of Montpellier owed its foundation largely to Jewish scholars, and various records mention "private" schools in which Hebrew law, science, and medicine were taught for a stipulated fee. During the 15<sup>th</sup> and 16<sup>th</sup> centuries, when certain universities were closed to Jews, Hebrew translations of Arabic and Greek medical works were made specifically for Jewish medical students.

The most notable of the long list of distinguished translators was the \*Tibbon family (Judah b. Saul, Samuel, Moses), who during the 12<sup>th</sup> and 13<sup>th</sup> centuries translated most of the well-known scientific and philosophic works, including those of Maimonides, from Arabic into Hebrew. Other eminent translators of the period were Jacob b. Makhir (Prophatius Judaeus), a member of the Tibbon family; Zerahiah ibn Shealtiel Ḥen; and Jacob ha-Katan, translator into Hebrew of Nicolaï's antidotarium and of Averroes' treatise on diarrhea. Of special interest is Abraham Shem Tov of Tortosa, who practiced in Marseilles toward the end of the 13<sup>th</sup> century. His works, especially his translation of Abu al-Qāsim al-Zahrāwī's *al-Tatzrif*, are of particular importance because he introduced a new Hebrew terminology based mainly on terms used in the Talmud. In other works he deals with the necessity of studying basic sciences with apprenticeships in hospitals, and with the behavior required of the physician when visiting patients, especially poor ones. Another distinguished translator-physician was Moses Farrachi b. Salem (Ferragut) of the 13<sup>th</sup> century. He studied medicine at Salerno, and at the request of the king of Naples translated Rhazes' *Continens* and other Arabic medical works into Latin.

Jewish influence was so strong that in Montpellier, portraits of Jews were included in the marble plaques commemorating the early masters of the university. Apparently there

was also a Jewish school of medicine in Lunel, which did not, however, attain the eminence of the University of Montpellier. A large part of the information on the early history of the latter and its relations with Jewish scholars is to be found in the history written by one of its graduates, Jean \*Astruc (1684–1766), a man of Spanish-Jewish descent, later professor of medicine there and subsequently physician to Louis xv. The Saporta family, also of Marrano descent, has a prominent place in the history of Montpellier during the 16<sup>th</sup> century. Louis (I) Saporta came from Lerida, was appointed city physician in Marseilles in 1490, and from 1506 to 1529 served as professor at Montpellier University. His son Louis (II) studied medicine there, and his grandson Antoine became successively royal professor, dean, and chancellor of the university (1560). His great-grandson Jean became professor in 1577 and vice chancellor in 1603. The family then immigrated to the French colonies of America and the name does not appear in the later history of Montpellier. The Sanchez family, already well-known in Portugal and Spain, also became prominent in medicine in southern France. The most distinguished member was Francisco \*Sanchez (1562–1632), who was appointed professor of medicine and philosophy at Montpellier and later at Toulouse, and published many medical treatises. Jean Baptiste Silva (1682–1742), a native of Bordeaux who graduated in medicine from Montpellier, became physician to the grand duke of Bavaria, Prince Luis Henry of Conde, and Voltaire.

Benvenutus Grapheus, from Jerusalem, one of the most famous eye doctors of the Middle Ages, lived in the 12<sup>th</sup> century. He taught and practiced in Southern Europe and probably also in Salerno. His observations of and recommended cures for eye diseases prevailing in Southern Europe and other Mediterranean countries are of extraordinary accuracy and his works, which were translated into many European languages, were the most popular textbooks on ophthalmology of the period. There were also Jewish women physicians practicing at this time. Among them was Sarah La Migresse, who lived and practiced in Paris toward the end of the 13<sup>th</sup> century. In Marseilles a record has been found of an agreement signed in 1326 between Sara de Saint Gilles, widow of Abraham, and Salvat de Bourgneuf, whereby the former undertook to teach the latter “Artem medicine et physice,” and to clothe and care for him for a period of seven months. In return, Salvat agreed to turn over to his teacher all his fees as physician during that period. Sarah of Wuerzburg received a license from Archbishop Johann II in 1419 and developed a lucrative medical practice. Rebekah Zerlin of Frankfurt (c. 1430) became famous as an oculist.

### Christian Spain and Portugal

During the major part of the 13<sup>th</sup> and 14<sup>th</sup> centuries Jewish physicians in Catholic Spain enjoyed the protection and support of the reigning monarchs though toward the end of that period the Inquisition became more active. The list of prominent physicians of that period is a long one and only a few can be mentioned here. One of the most important was al-Fakhār

(d. 1235), who received the title of *nasi* (“prince”) at the court of Ferdinand III in Toledo. Another, Nathan b. Joel \*Falaquera (second half of 13<sup>th</sup> century), wrote a medical book in Hebrew on the theory and practice of medicine, therapeutics, herbs and drugs, and hygiene. He used medical and botanical terms found in the Talmud. Abraham b. David Caslari of Narbonne and Béziers was the author of *Aleh Refu'ah* (“The Leaf of Healing,” 1326), a treatise on fevers, divided into five books, to be used as a vademecum on these matters, and of a treatise on pestilential and other fevers, written in 1349 when the Black Death decimated the population of Provence, Catalonia, and Aragon. In 1360, Meir b. Isaac \*Aldabi, a native of Toledo who went to Jerusalem in the middle of the 14<sup>th</sup> century, completed his comprehensive *Shevilei Emunah*, a collection of philosophic, mystic, and talmudic teachings including chapters on human embryology, anatomy, physiology, pathology, and rules of health.

**AFTER THE EXPULSION.** At the end of the 15<sup>th</sup> century the Jews were expelled from Spain and Portugal. Even before that many eminent physicians had immigrated to North Africa, Turkey, Greece, Italy, and Holland. Many were forced converts and some continued to practice in Spain and Portugal until the 18<sup>th</sup> century, despite their precarious position in those countries, where they were under constant threat of persecution. It is a historical fact that the Marranos and their descendants were leaders and pioneers in medicine in Europe and Asia for several centuries, from the Renaissance until modern times. Many of them distinguished themselves particularly in medical literature. The 16<sup>th</sup> century was a time of immense exploration, discovery, and progress. During this period – the beginning of the medical renaissance – many distinguished Jewish physicians, fleeing the Iberian Peninsula, won a worldwide reputation in other lands. Among them was \*Amatus Lusitanus, who studied and practiced in Salamanca, Lisbon, Antwerp, Italy, and Greece and whose life was a saga of adventurous flights from one country to another. His principal works were *Centuria*, the description of 700 cases of disease, and a translation of and commentary on Dioscorides. He is also famous for his unrelenting battle against superstition and medical quackery.

**SOME DISTINGUISHED FAMILIES.** Abraham b. Samuel \*Zacuto, called Diego Roderigo, was born in the Spanish city of Salamanca in 1452 and immigrated to Portugal and Tunis, where he became famous as a physician and astronomer. His great grandson, \*Zacutus Lusitanus, born in Lisbon in 1575, became a physician in Salamanca and later fled to Amsterdam, where he became one of the foremost critics of his time. He wrote a history of medicine in 12 volumes, *De medicorum Principum*, and was also known for his code of ethics for physicians, *Introitus medici ad praxim*.

Dionysus Brudus (1470–1540), a physician at the Portuguese court who later lived in Antwerp, wrote important works on Galenism and on phlebotomy. His son Manuel Bru-

dus practiced in Venice, England, and Flanders and published works on diet for febrile diseases which were widely read. Luiz Mercado (16<sup>th</sup>–17<sup>th</sup> century) of Valladolid wrote a medico-philosophical work *De Veritate* (1604), as well as numerous works on fevers, gynecology, pediatrics, hereditary diseases, and infectious maladies. Isaac \*Cardozo, born in Portugal in 1610, became court physician to King Philip IV in Madrid. The 15<sup>th</sup>-century physician and poet Francesco Lopez de Vilalobos was one of the first to describe lues (syphilis). In 1498 he also published a description of bubonic plague. Roderigo \*Lopez was an internist and anatomist who fled the Inquisition in 1559 and became physician to Queen Elizabeth I of England. In 1594 he was accused of plotting to poison Elizabeth and sentenced to death.

The family of de \*Castro produced many distinguished physicians. The most famous was Roderigo de Castro (c. 1550–1627), author of a gynecological work, *Universa Muliebrium Medicina*, and physician to the king of Denmark and various German dukes and princes. His son Benedict de Castro (b. 1597) started practicing in Hamburg and later became physician to the queen of Sweden. He was the author of *Apologia*, a medico-historical work which described the achievements of Jewish doctors and defended them against antisemitic charges. Orobio de Castro fled the Inquisition and settled in Amsterdam, where he became a famous physician and leader of the Jewish community. Jacob de Castro Sarmiento (1692–1762), born in Portugal, settled in England and was admitted as a fellow of the Royal Society in 1730. His work *Agua de Inglaterra* reveals a profound knowledge of the therapeutic properties of quinine. The 18<sup>th</sup>-century Jacob Rodrigues \*Pereira was a pioneer in the education of deaf-mutes. Born in Spain, of Marrano parents, he escaped the Inquisition, settled in Bordeaux, and embraced Judaism. At the age of 19 he started his campaign for improving the status of the deaf-mute, and continued in his chosen task for 46 years, showing great ability in teaching speech to the congenital deaf-mute. He invented a sign language for the deaf and dumb. The fate of Antonio Ribeira Sanchez illustrates how far-reaching was the influence of Jewish physicians at that period. A Portuguese Marrano, he fled from the Inquisition to Holland at the beginning of the 18<sup>th</sup> century and became the pupil of the famous Dutch physician, Boerhaven. In 1740 he went to Russia as personal physician to the czarinas Elizabeth and Catherine II. However, when his Jewish origin became known he was threatened with death and with great difficulty escaped to Paris, where he became an eminent physician and introduced sblimat into the therapy of syphilis.

A large number of Jewish physicians also settled in Turkey, where private citizens as well as sultans, viziers, and pashas valued their skill and medical knowledge and their high standard of ethics. In the 15<sup>th</sup> century Joseph \*Hamon, a Granada physician, went at an advanced age to Constantinople, where he became court physician. For almost a century some member of the Hamon family held the position of court physician and exercised great public influence. Marrano

physicians were also among the East India pioneers. Foremost among them was Garcia de \*Orta, born in Portugal. In 1534 he went to India and there studied and collected Oriental plants and drugs. His *Colloquios dos simples Drogas e cosas medicinas de India*, which appeared in 1563 in the form of dialogues, is not only the first but also the most important contribution on this subject to European medicine of that time. Twelve years after his death his body was exhumed and burnt by the Inquisition as a suspected Jew. To this same group belongs Cristoval d\*Acosta (1515–1580), a Marrano physician and botanist born in Mozambique, who lived and traveled in India and in the Middle East. He completed and enlarged the work of de Orta.

### Italy

Numerous Italian Jewish physicians were also rabbis and leaders of their communities, especially in Rome, Ferrara, Mantua, and Genoa. The Italian universities, notably those of Padua and Perugia, were among the few that allowed Jews to enter the medical faculties at a time when most other European universities were closed to them. The Jewish communities of Italy were also enriched by the influx of Jewish and Marrano scholars and physicians fleeing the persecution of the Inquisition in other countries. At various periods Jews acted as personal physicians to popes, cardinals, bishops, and dukes. Thus Pope Nicholas IV (1287–92) had at his court the physician Isaac b. Mordecai, better known as Maestro Gajota. In 1392 Boniface IX made Angelo, son of Manuele the Jew, his physician and familiar. Immanuel b. Solomon, known as \*Immanuel of Rome, was a practicing physician of note, who wrote on various physical and psychic ailments. \*Hillel b. Samuel of Verona, who practiced in Ferrara, was a physician and translator of distinction. Another famous physician and translator was \*Kalonymus b. Kalonymus, a native of Arles in southern France who later moved to Rome. He translated some of Galen's writings from Arabic into Hebrew and became famous for his accuracy and literary style. Special privileges and tax exemptions usually accompanied the appointment of court physicians. However, the periods of leniency to Jews were usually followed by periods of restriction and persecution. It has been suggested that the popularity of Jewish physicians in Italy in spite of the innumerable restrictions, the bitter attacks, and the calumnies was due to the superstitious belief of Christians in the "magic" arts of the Jews. They also admired Jewish doctors for their unselfish devotion to their calling, and it is not irrelevant that there was a scarcity of Christian physicians, especially during times of epidemic.

THE 15TH AND 16TH CENTURIES. A number of distinguished Italian Jews appeared in the field of medicine during the 15<sup>th</sup> and 16<sup>th</sup> centuries. Saladino Ferro d'Ascoli (15<sup>th</sup>–16<sup>th</sup> century) was acknowledged as the leading pharmacist of his time, and his work on pharmacology was the basic textbook for all pharmacists until the 18<sup>th</sup> century. Bonet de \*Lattes (d. 1515), a native of Provence, became physician to Popes Alexander VI and Leo X. He also served as judge of the highest Italian court

of appeal and rabbi to the Jewish community of Rome. Philotheus Eliajus Montalto (d. 1616) fled to Italy from the Portuguese Inquisition. In 1606 he became physician to the Grand Duke Ferdinand of Florence and in 1611 personal physician to Queen Marie de Medici of France. By order of the queen he was buried in a Jewish cemetery in Amsterdam. His work *Archipathologia*, dealing with diseases of the nervous system and mental disturbances, was widely used in his time and often referred to by later medical writers. Roderigo de Fonseca in the 16<sup>th</sup> century earned his reputation by his clear diagnoses and descriptions of internal diseases, fevers, surgery, and pharmacology. Benjamin \*Mussafia distinguished himself as physician, philologist, scholar, and rabbi. He served as personal physician to the Danish king Christian IV. One of the most outstanding personalities of the time was Rabbi Jacob \*Zahalon, born in Rome and later physician in Ferrara. In his book *Ozar ha-Hayyim* he described contemporary hygienic measures as well as the bubonic plague in Rome in 1656. He used numerous new Hebrew medical terms and redefined the moral obligations of the Jewish physician to his profession. Joseph Solomon \*Delmedigo studied medicine in Padua and was a pupil of Galileo. After many years of study and travel he settled in Poland and became personal physician to Prince Radziwill. He is famous as a rabbi, physician, philosopher, and mathematician. During the 17<sup>th</sup> and 18<sup>th</sup> centuries the family of Conegliano became prominent as physicians and medical teachers in Venice. David de Pomis (1525–1593) of Spoleto became physician to Pope Pius IV. Apart from various medical treatises, he wrote the famous *De Medico Hebreo Enarratio Apologica*, a scholarly defense of the Jewish physician. The Jewish community in Italy, however, declined during the second half of the 17<sup>th</sup> and the 18<sup>th</sup> centuries. Only with the French Revolution and the conquest of Italy by Napoleon did the Jews of Italy come into their own again.

### The Northern Countries

In the northern countries – Germany, Poland, Russia – there were Jewish physicians of note only from the middle of the 17<sup>th</sup> century onward, many of them refugees from the countries of the Inquisition. However, as early as the 11<sup>th</sup> century a medical book had been written in Hebrew by R. Saadia of Worms. Gradually, the universities of the German states opened their doors to Jews. Around the middle of the 17<sup>th</sup> century the grand duke of Brandenburg permitted Jews to enter the University of Frankfurt on the Oder. One of the first to study there was Tobias b. Moses \*Cohn of Metz. However, he was unable to obtain his degree and therefore went to Padua to receive his M.D. He practiced in Poland and later became physician to five successive sultans in Constantinople. His *Ma'aseh Tuviyyah* is almost an encyclopedia and includes medicine, sciences, philosophy, and part of a dictionary. From the beginning of the 18<sup>th</sup> century the number of practicing Jewish physicians in Germany, Czechoslovakia, England, and Poland increased. Jewish physicians of that period include Marcus Eliezer \*Bloch, a famous general practitioner in Ber-

lin during the mid-18<sup>th</sup> century; Gumperz (Georg) Levison, who distinguished himself as a practitioner, medical author, and organizer in England and in Sweden during the second half of the 18<sup>th</sup> century; Elias Henschel, a pioneer in modern obstetrics; and Marcus \*Herz, an outstanding philosopher, teacher, and physician.

[Suesmann Muntner]

## THE MODERN ERA

### 19<sup>th</sup> Century

When Joseph II of Austria proclaimed the Act of Tolerance in 1782 and when, shortly thereafter, the French Revolution brought in its wake emancipation to Jews throughout Western Europe, the gates of European medical schools were thrown open to Jewish students. The importance of the contribution made by Jewish doctors to subsequent medical progress is enormous. The quality and quantity of this contribution is reflected in rosters of Nobel laureates and winners of other awards, dictionaries of eponymic syndromes and diseases, and lists of medical authors and investigators. Spanning nearly two centuries and extending over many lands, Jewish participation in modern medicine defies rigid categorization within frameworks of countries and centuries. Frequent demographic changes have occurred as a result of global events which did not always coincide with the “turn” of a century. In fact, a future historian might choose the 1930s as the watershed decade, during which the mainstream of Jewish medical activity became diverted from Europe to America, coinciding with the rise of American medicine vis-à-vis that of Europe.

The geographic distribution of Jews practicing medicine in the 19<sup>th</sup> century reflected the incongruity between the size of Jewish communities and their number of medical practitioners and scientists. Because of restrictions practiced by Russian medical schools, the youth of the world's largest Jewish community went abroad to pursue their medical studies. Those who returned had to pass special examinations in order to obtain a license. Not until 1861 were they admitted to the army and civil service, and only in 1879 were they granted permission to live beyond the \*Pale of Settlement. Even when Jewish physicians successfully overcame the main restrictions and hardships, they were rarely permitted to participate fully in university-centered medical activities.

On the other hand, Jewish doctors were extensively involved in the academic-scientific life of Central and Western Europe. In Austria and Germany, this involvement did not, however, come about suddenly. Although the gates of the universities were open for admission, the inner doors to academic recognition remained partially closed during the first half of the century. At best, a Jew could hope to become a *privatdozent* or a “titular” professor. And even after the struggle for academic recognition had been won, Jews were not welcome in “establishment”-controlled specialties, such as surgery. As a result they tended to cultivate fields that did not attract their non-Jewish colleagues.

An outstanding example of this trend is dermatology-venereology. When Ferdinand von Hebra took over the Kraetze Klinik in Vienna, he was able to recruit only Jewish assistants, some of whom – Moritz \*Kaposi, Isador Neumann (1832–1906), and Heinrich Auspitz (1835–1886) – became world famous. In Germany, where dermatology was often referred to disdainfully as “Judenhaut,” Paul \*Unna, Oskar \*Lassar, and Josef \*Jadassohn established reputations as pathfinders in their specialty. In Switzerland Bruno Bloch (1878–1933) made Zurich an international teaching center. The predilection for neglected fields may also account for Jewish preeminence in biochemistry, immunology, \*psychiatry, and in hematology, histology, and microscopic pathology – sciences which were collectively referred to at the time as “microscopy.” The microscope attracted Jewish physicians, many of whom combined the study of microscopy with the practice and teaching of clinical medicine. Outstanding among these men were Ludwig \*Traube, a great teacher and pioneer of experimental pathology, anatomy, and neurohistology; Robert \*Remak, a pathfinder in embryology, neurohistology, and electro-therapy; Moritz \*Romberg, the founder of neuropathology; and the surgeon Benedict \*Stilling, whose discovery of nerve nuclei was a turning point in basic neurology. These investigators laid the foundation of modern neurology, which numbered among its great names Leopold \*Auerbach, Ludwig \*Etinger, and Herman \*Oppenheim – discoverers of many neurologic disorders now bearing their names.

Microscopy was also pursued by investigators who were exclusively devoted to basic science. To this category belong the histologist-anatomist Jacob \*Henle, who anticipated the germ theory of infection; Gabriel \*Valentin, who enriched every branch of basic science; the histologist-pathologist Julius \*Cohnheim, who proved that pus cells are derived from the blood; the physiologists Hugo \*Kronecker, Rudolf \*Heidenhain, Nathan Zuntz, and Hermann \*Munk, who were trailblazers in this field; and Carl \*Weigert, whose novel concepts and staining techniques advanced many sciences, particularly bacteriology. Jewish contributions to bacteriology date back to the botanist Ferdinand Cohn (1828–1898), who established the vegetable nature of bacteria (1853). These contributions increased during the latter part of the century when bacteriology and the allied science of immunology became integral parts of medicine. Jews became conspicuous in the discovery of bacteria and the development of immunologic methods for diagnosing and preventing bacterial infection. Prominent in this field were Fernand \*Widal, who devised a test for typhoid fever and for its prevention; Mordecai Waldemar \*Haffkine, who prepared vaccines against cholera and plague; August von \*Wasserman, who researched anti-toxins and antisera; and Nobel laureate Paul \*Ehrlich, the father of hematology, chemotherapy, and theoretical immunology.

At the same time, clinical medicine was also receiving Jewish contributions. Among the outstanding internists were Heinrich von \*Bamberger, for his contributions to cardiology; Hermann \*Senator, for his work on the kidney; and Ottomar

Rosenbach (1851–1907), for his researches in functional disease and psychotherapy. Outstanding pediatricians were Edward Hensch (1820–1910) who described a bleeding disease named after him; Adolf \*Baginsky who investigated nutrition and infectious diseases; and Max Kassowitz (1842–1913) who shed light on congenital syphilis and rickets. Jews were also prominent in otolaryngology, a specialty founded by Adam \*Politzer, and in ophthalmology, with the contributions extending from 1810, when George Gerson (1788–1844) investigated astigmatism, to the close of the century, when Karl \*Koller began to use local anesthesia in the treatment of eye diseases. Obstetrics and gynecology owe much to Samuel \*Kristeller, Wilhelm Freund (1833–1917), and Leopold \*Landau for new concepts, observations, and operative techniques. X-ray therapy was founded in 1897 by Leopold Freund (1868–1944). Even surgery, a specialty not too accessible to Jews, numbered many notables. Anton Wolfer (1850–1917) performed the first gastroenterostomy in 1881, James Israel (1848–1926) pioneered urologic surgery, and Leopold Von Dittel (1815–1898) devised new surgical techniques and instruments. Jewish doctors also contributed to the history of medicine. Noted historians were August \*Hirsch, Judah \*Katzenelson, and Julius \*Pagel.

It is apparent from some of the aforementioned names that Jewish contributions to medicine were not confined to German-speaking countries. In France, many Jewish doctors attained eminence. Julius Sichel (1802–1868) established the first eye clinic in Paris in 1830; Michel Levy (1809–1872) introduced new concepts in the field of public health; Georges Hayem (1841–1933) pioneered hematology; and Fernand Widal made a world impact with his work on the detection and prevention of typhoid fever. In Denmark the great anatomist Ludvig \*Jacobson and the pioneer in occupational diseases, Adolph \*Hannover, were active during the first half of the century; and the epidemiologists Carl \*Salomonsen and “the father of pediatrics in Denmark,” Harold Hirschprung (1830–1916), during the second. Holland was the home of the physiologist Van Deen (1804–1869); Italy of the anatomist-physiologist-psychiatrist, Cesare \*Lombroso, whose views on criminology have now been discredited; and Poland, of the anatomist Ludwig \*Hirsfeld, the neurologist Samuel Goldflam (1852–1930), and the ophthalmologist Ludwig \*Zamenhof, the creator of Esperanto. England knighted its greatest laryngologist Sir Felix \*Semon. Even restrictive Russia honored the distinguished ophthalmologist Max \*Mandelstamm with the title “Privatdocent” and the physiologist, Elie de-\*Cyon, with a professorship (1872).

In America, where the Jewish community was small and medical science was not yet advanced, Jewish contributions to medicine were modest, and as often related to organization, administration, and the foundation of hospitals as to scientific pursuits. The ophthalmic surgeon Isaac Hays (1796–1879) was editor of the influential *American Journal of Medical Sciences* (1827) and one of the founders of the American Medical Association. Jacob da Silva \*Solis-Cohen, a pioneer in laryngology who performed the first laryngectomy for laryngeal cancer

(1867), was the acknowledged “father” of organized instruction in his specialty. Another “father” – that of American pediatrics – Abraham Jacobi was the founder of the American Pediatric Society and in his later years (1910), the president of the American Medical Association. Jewish doctors were also active in establishing and staffing Jewish hospitals that provided training for Jewish interns and residents. In time these hospitals became important research centers affiliated with medical schools that absorbed many Jewish students.

### Challenges to Jewish Medical Scientists and Clinicians

Medicine has undergone profound changes since the start of the 20<sup>th</sup> century. Advances in medical science have gradually transformed clinical practice from a largely pragmatic skill based on anecdotal experience into a discipline underwritten by verified laboratory and clinical observations. The increasing pace of scientific discovery continues to offer therapeutic possibilities of unprecedented complexity and expense. Medical teaching has changed from apprenticeship to individual teachers with varying degrees of skill and knowledge to organized instruction in universities with courses and teachers with appropriate academic credentials. Before the 1950s patients were rarely given explanations for their illnesses and treatment. Patients now have ready access to medical knowledge and expect to be involved in decisions about their clinical management. They also have increasing expectations in terms of the standards of medical care. Change in attitude and technical advances have made ethics an integral part of clinical practice. In general, an overview of the Jewish contribution to medicine in modern times must consider advances in scientific knowledge, the application of this knowledge to clinical practice, medical education, the organization of medical practice, and the proper education and participation of patients.

Medicine in the Jewish world must take account of four special factors. Firstly, clinical decisions are often influenced by Jewish ethics that differ in varying degree from the constraints related to other forms of religious adherence. Secondly, antisemitism culminating in the Holocaust profoundly affected the lives of Jewish medical scientists and doctors. Thirdly, there is a strong incentive to apply research and clinical skills to diseases to which Jews are genetically predisposed (see \*Hereditary Diseases). Finally, the establishment of the State of Israel created the need for sophisticated medical research, teaching, and services in a region of initially endemic infectious diseases in the face of massive immigration, wars, and continuing terrorism.

### Contributions to Medical Science

Advances in clinical medicine have followed progress in the biomedical sciences and the development of novel technologies. Biomedical research in the last quarter of the 20<sup>th</sup> and the beginning of the 21<sup>st</sup> centuries is characterized by better understanding of the molecular and pathological processes, the deciphering of the human genome, and the elucidation of complex intra-cellular processes. These have led to the engineering of disease-specific and targeted therapies and the de-

velopment of non-invasive technologies. Jewish researchers and clinicians have made significant contributions to these advances.

Jewish contributions to the advances in basic science that have transformed medical practice are considered in the entry \*Life Sciences. Often the implications of these discoveries for medicine are not initially apparent. There are additional areas of scientific research that are from the outset more clearly relevant to medicine to which Jews have made important contributions. However in medical as in scientific research it has become increasingly difficult to single out specifically Jewish contributors to a global enterprise that is for the most part now carried out by large, interdisciplinary teams, often working in different institutes.

**INFECTIOUS DISEASES.** At the beginning of the 20<sup>th</sup> century infections were the major causes of human morbidity and mortality. Increased understanding of immunity and natural resistance to infection lead to diagnostic and eventually therapeutic advances. August von \*Wasserman introduced the first diagnostic test for syphilis (1906).

Bela \*Schick devised a diagnostic test for detecting exposure to *C. diphtheriae*, the cause of diphtheria. Michael \*Heidelberger’s work on antibody structure and function laid the basis for protection against and treatment of infections with preformed antibody (passive immunization). Developments in vaccine production (active immunization) made it possible for Jonas \*Salk and Albert \*Sabin to produce vaccines with the potential ability to eliminate poliomyelitis.

Advances in drug production also reduced the threat of infection. \*Ehrlich’s dream of a “magic bullet,” which would selectively destroy bacteria as salvarsan does spirochetes, has been partially realized by the discovery of sulfonamides and antibiotics. In 1940 Sir Ernst Boris \*Chain isolated penicillin, the first naturally occurring antibiotic to be discovered. Streptomycin was isolated in 1944 and neomycin in 1948 by Selman \*Waksman of Rutgers University. Harry Eagle (1905–1992) and Maxwell Finland (1902–1987) made important contributions to progress in antibiotic therapy by devising accurate methods for measuring the potency, anti-bacterial specificity, and safety of antibiotics. Unfortunately, microbial resistance to antibiotics threatens to reverse the relative security achieved in the golden age of drug treatment. Stanley Farber discovered one important mechanism in the development of antibiotic resistance, namely the ability of gene fragments called plasmids to confer resistance on previously susceptible bacteria. Combating infection also depends on the efforts of scientists who understand the biology and epidemiology of infection, as exemplified by the research of Baruch \*Blumberg and Barry Bloom. Astute clinical observation is also part of the process of controlling infections, as illustrated by Saul Krugman’s elucidation of the many causes of “infectious hepatitis.”

**CELL BIOLOGY AND CANCER.** The links between cell biology and cancer research are prime examples of the contributions of basic research to medicine. For example the formation of new

blood vessels (angiogenesis) is essential for tumor growth and metastasis. Judah \*Folkman's discoveries in this field point the way to new forms of treatment that may interdict this process. The application of basic genetics to the biology of malignant cells has illuminated many areas of cancer research where inherited or acquired mutations are fundamentally important. A pertinent example is the work of Bert Vogelstein (1949– ) in understanding the molecular basis of colo-rectal cancer. Long-held hopes of manipulating patients' immune system to reject cancer have been greatly encouraged by the innovative work of George \*Klein.

**BLOOD DISORDERS.** Advances in immunology have improved our understanding of many hematological diseases and have also influenced clinical practice. Gerald \*Edelman's research on immunoglobulin structure clarified the nature of myeloma and other neoplastic diseases characterized by abnormal immunoglobulin production. The discovery and classification of blood groups by Karl \*Landsteiner, and his associates Philip \*Levine and Alexander Wiener (1907–1976), rationalized the hitherto haphazard and dangerous practice of blood transfusion. Their findings also revealed the nature of blood disorders resulting from immune attacks on blood group antigens, notably hemolytic disease of the newborn. Jewish investigators have contributed to the solution of other hematological problems. William \*Damashek was responsible for the logical classification of many immune-mediated and neoplastic blood diseases and was also an innovator in treating leukemia with anti-proliferative drugs. Robert B. Epstein (1928– ) collaborated with E.D. Thomas in the first successful bone marrow transplantation. Louis Klein \*Diamond made major advances in classifying and characterizing many blood disorders of infancy and childhood. Ernest Jaffe (1925– ) contributed to the understanding of hemoglobin synthesis. Ernest Beutler (1928– ) elucidated many facets of iron metabolism in red cell formation and proposed a means of tracing the cellular origin of many bone marrow-derived diseases. Maxwell \*Wintrobe developed hematology as a laboratory and clinical discipline.

**IMMUNOLOGICAL DISEASES.** Jewish scientists have made outstanding contributions to understanding the molecular basis and clinical manifestations of disordered immunity, a field that has assumed increasing importance in allergy, transplantation medicine, and auto-immunity. Alexander \*Besredka of the Pasteur Institute in Paris was a pioneer in allergy research. Current understanding of the pharmacological basis of allergic disorders owed much to the findings of Baruj \*Benaceraf. Ernest Witebsky (1901–1969) and Felix Milgrom (1919– ) made important observations on immune mechanisms underlying auto-immune diseases. Robert Schwarz (1928– ) introduced new experimental and therapeutic strategies based on the concept that the immune system in auto-immunity loses the ability to distinguish between self and non-self, a defect termed "loss of tolerance." Peter \*Lachmann helped delineate the role of a disturbed complement system in these

diseases. Fred \*Rosen (1930–2005) was a world authority on the management of inherited immunodeficiency diseases in childhood. The availability of monoclonal antibodies arising from Cesar \*Milstein's work has provided immense benefits for research and clinical practice in many fields.

**NUTRITIONAL DISEASES.** Casimir \*Funk introduced the idea of vitamin (which he called "vitamines") deficiency to nutrition and medicine. He recognized that beriberi is caused by nutritional deficiency and he also isolated nicotinic acid, a member of the vitamin B complex. Joseph \*Goldberger deduced that pellagra is a disease resulting from vitamin deficiency. In the 1920s Alfred Hess, working in parallel with Harry Steenbock, started the important field delineating the relationship between vitamin D deficiencies, rickets, and other bone disorders.

**METABOLIC DISEASES.** Progress in understanding metabolic diseases went through many transformations of approach and technique in the 20<sup>th</sup> century to which Jewish scientists and physicians made crucially important contributions. Mapping biochemical pathways in health and disease has depended on laboratory discoveries in experimental animals, the introduction of ethically acceptable methods of investigation in humans, improved techniques of laboratory analysis, and the adaptation of molecular genetics to this field.

The high prevalence rate of many metabolic diseases in Jewish populations makes this an area of especial Jewish interest. Diabetes mellitus, now recognized as occurring in two main forms, is a compelling example. In 1899, Oskar Minkowski (1855–1931) demonstrated the association of diabetes with the pancreas, and in 1920 Moses Barron (1883–1961) described observations of the pancreas that suggested the experimental approach that led to Banting and Best's momentous discovery of insulin. Rachmiel Levine (1910–1998) showed that insulin promotes the transport of glucose from blood to cells, a process termed "the Levine effect." Progress in other fields was helped by observations by Jewish biochemists such as Seymour Reichlin and more fundamentally by the description of major metabolic pathways by Max \*Meyerhof and Hans \*Krebs and many others. A key example of the interrelationship between genetic predisposition to metabolic problems such as type II diabetes, disorders of lipid metabolism, and obesity is provided by the observations of Jeffrey Friedman, Sir Philip \*Cohen, and other investigators.

**ENDOCRINE DISEASES.** Endocrine diseases illustrate the need to draw together many disciplinary themes in order to understand disease mechanisms and predisposition to these diseases. Jewish medical scientists have contributed to the genetic, metabolic, pharmacological, and immunological studies needed to explore the basis of endocrine diseases such as diabetes and thyroid disease. However, central to advances in this field was the development of precise methods for measuring hormone levels for research and clinical purposes. Rosalyn Sussman \*Yalow and Andrew \*Schally were

largely responsible for the assay techniques that made these measurements possible and which also accelerated research in many other fields.

**HEART, LUNG, AND KIDNEY DISEASES.** The fields of cardiovascular, pulmonary, and renal diseases have many pioneering Jewish contributors. Arthur \*Master introduced the concept of coronary insufficiency and the “Master Step Test” for its detection; Louis Katz (1897–1973) elucidated the principles of cardiovascular hemodynamics, metabolism, and electro-physiology, research fields also enriched by Simon Dack (1908–1994), Richard Bing (1909– ), Eugene Braunwald (1929– ), and Eliot Corday (1913–1999). Michel Mirowski (1924–1990) invented the automatic implantable cardiofibrillator (AICD) which transformed the management of life-threatening cardiac arrhythmias. The gradual introduction of surgical methods of treating cardiovascular problems necessitated the development of increasingly sophisticated biotechnology to which Adrian Kantrowitz (1918– ) has made many indispensable contributions. New approaches to the study of pulmonary circulation have been introduced by Alfred P. Fishman (1918– ). Arthur Maurice Fishberg (1898–1992) correlated the pathological and clinical manifestations of kidney disease. In 1934 Harry Goldblatt (1891–1977) demonstrated the mechanism of secondary hypertension caused by renal vascular disease. Kurt Lange (1906–?) investigated immunologic, biochemical, and pathological facets of kidney disease in children.

**GASTROENTEROLOGY.** At the turn of the 20<sup>th</sup> century, Max Einhorn (1862–1953) and Samuel Weiss (1885–?) were amongst the first clinicians to develop gastroenterology as a medical specialty. In 1931 Burrill \*Crohn described the inflammatory bowel disease named after him and Heinrich Necheles (1897–1979), Joseph Kirsner (1909–?), and Leon Schiff (1901–?) extended our understanding of the pathophysiology and therapy of many gastrointestinal and liver diseases. Increasing knowledge produced a need to establish departments devoted to research and treatment of patients with these disorders of the kind set up by Henry \*Janowitz at Mount Sinai Hospital, New York.

**NEUROLOGY.** Progress in clinical neurology is largely dependent on increased understanding of brain structure and function. Jewish scientists have participated in this problem from the early days of Joseph \*Erlanger’s research on nerve conduction to Richard \*Axel’s dissection of the pathways relevant to olfactory function. Among the clinical neurologists who made the first attempts to correlate disease and basic pathology were Bernard Alpers, who studied neuro-syphilis and vascular degenerative diseases; Benjamin Boshes, who investigated Parkinson’s disease; and Leo Alexander who investigated multiple sclerosis. Israel \*Wechsler compiled one of the first systematic textbooks on clinical neurology (1927) which became a standard work.

**DERMATOLOGY.** The longstanding interest of Jewish physicians in skin diseases might traditionally be said to have begun with the Bible. Marion Sulzberger (1895–1983), a pupil of

Bruno Bloch of Zurich, Stephen Rothman (1894–1963), Herman Pinkus (1905–1985), and Louis Forman were amongst the first dermatologists to appreciate the need to underpin merely descriptive diagnosis with systematic observations of pathological changes readily observed in this most accessible of human organs. Edmund Klein (1922–1999) was an early winner of the Lasker Award for Clinical Medical Research in recognition of his pioneering treatment of skin diseases, and especially pre-malignant diseases.

**RHEUMATOLOGY.** Rheumatology is a relatively young but important clinical specialty because of the high incidence of debilitating joint diseases especially in the elderly. The prospects for controlling rheumatoid arthritis have been greatly increased by the successful application of monoclonal antibody techniques. Morris \*Ziff was influential worldwide in establishing the essential links between basic science and clinical practice in this discipline.

**PEDIATRICS.** The demanding technical and psychological challenges of health care in infancy and childhood have intrigued many Jewish scientists and clinicians. In the early stages of its development, Abraham Jacobi (1830–1919) was largely responsible for the emergence of pediatrics in the U.S. Isaac A. \*Abt and Julius Hess (1876–1995) were pioneers in child nutrition and care of the premature infant. Henry \*Koplik added to knowledge of infectious diseases in children, and Louis \*Diamond contributed to pediatric hematology. Sidney Farber (1903–1973) transformed the outlook for childhood leukemia by introducing new anti-proliferative drugs and a regime of comprehensive management. The universally known Dana-Farber Cancer Institute commemorates his achievements. In addition, Alexander Nadas (1913–2000) was a pioneer in pediatric cardiology and Henry Shwachman (1910–1986) was among the first clinical scientists to appreciate the complexities of cystic fibrosis.

**SURGERY, OBSTETRICS, AND GYNECOLOGY.** Jewish doctors have made many contributions to the rapidly developing scope of surgery, obstetrics, and gynecology. Charles Elsberg (1871–1948) introduced new methods in the treatment of spinal-cord tumors. Markus \*Hajek of Vienna devised new techniques in nasal and laryngeal surgery. A pioneer in thoracic surgery, Max Thorek (1880–1960) founded the International College of Surgeons, and Irving Cooper (1922–1985) introduced an operative procedure for the treatment of Parkinson’s disease. In obstetrics, Joseph de Lee (1869–1942) contributed an authoritative textbook and original papers and was an outstanding teacher and clinician. Isidor S. Rubin (1883–1958) made many important contributions to gynecology, including the test for fallopian tube patency when investigating sterility. Lord Robert \*Winston’s achievements include a worldwide reputation for his contributions to solving the problems of female infertility.

**RADIOLOGY.** U.S. Jewish radiologists have enriched every branch of their specialty. Outstanding contributions have been

made by Hymer Friedell (1911– ) to radiation biology, by Harold G. Jacobson (1912–2001) to neuroradiology, and Leo Rigler (1896–1979), who was president of the American Radiologic Society, to the radiology of the chest and abdomen. Gustav \*Bucky invented the X-ray diaphragm that bears his name.

**DRUGS AND THERAPEUTICS.** Advances in pharmacological knowledge and drug design, testing, and production have transformed the management of virtually every acute and chronic disease. In addition to the development of anti-microbial agents, this is an area to which Jewish scientists and clinicians have made so many contributions that selected examples must suffice. Isidor Ravdin (1894–1972) was a pioneer in anti-cancer chemotherapy. Gertrude \*Elion developed the immunosuppressive drug azathioprine, the first anti-viral drug acyclovir, and allopurinol used to treat gout. Ralph Alexander \*Raphael's discoveries illustrate how a profound understanding of organic chemistry can be translated into innovative drug design active against a wide range of diseases. Josef Fried (1914–2001) developed anti-inflammatory steroids and Gregory Goodwin \*Pincus (1903–1967) and Carl \*Djerassi developed the first successful female, oral contraceptive drugs. The successful career of Max \*Tishler (1906–1989) also showed the increasing importance of combining scientific and entrepreneurial skills in drug development. This point is emphasized by the increasing dominance of bioengineering companies able to exploit advances in genetics and other fields. The innovative achievements of Robert S. \*Langer are a pertinent example. Jewish scientists have also made key contributions to anti-HIV treatment. They include Jerome Horwitz, who synthesized the first drug that inhibits the viral enzyme reverse transcriptase, and Irving Sigal (1953–1988), who first showed the efficacy of drugs which inhibit viral proteases. Sigal died in the terrorist bombing of Pan Am flight 103.

**PATHOLOGY.** Jewish pathologists made important contributions at the stage when pathology was developing from an observational skill into one demanding more widely based scientific insight and knowledge. The efforts of Hans Popper (1905–1988) and Fenton Schaffner (1920–2000) clarified the pathology of liver disease. David Spain (1913– ) in cardiac pathology and Averill Liebow (1911–1978) in pulmonary pathology performed a similar service. Benjamin Castleman (1906–1982) described the pathology of the parathyroid glands and a proliferative disease of the immune system which bears his name and is a paradigm for many, more common diseases of a similar nature. Paul \*Klemperer's imaginative interpretation of the damage inflicted by “connective tissue diseases” laid the basis for what are now known as multi-system autoimmune diseases.

**PUBLIC HEALTH.** Jews helped to lay the foundations of public health and hygiene in the U.S. and elsewhere. Sigmund Goldwater (1873–1942) founded the first occupational disease clinic in New York in 1915. His contemporary Milton J. Rosenau (1869–1946) promoted important measures for pre-

venting epidemics of infectious diseases in the Americas and elsewhere. Jeremiah Stamler (1919– ) was one of the first investigators to conduct epidemiologic studies on environmental factors influencing coronary heart disease.

**HISTORY OF MEDICINE.** While many Jewish doctors were making history, some were writing it. Outstanding early historians were Max Neuberger (1868–1955) in Austria, Charles \*Singer in England, Arturo Castiglioni (1874–1953) in Italy, and Harry \*Friedenwald, Victor Robinson (1886–1947), and Saul Jarcho (1906–2000) in the U.S.

**EDUCATION AND PUBLICATION.** Jews have played a prominent part in the interrelated fields of medical education and publication. Abraham \*Flexner is still remembered for his “Flexner Report” (1906), which charted the subsequent course of medical education in the United States. After World War II a steadily increasing number of Jews have joined the teaching staffs of medical schools. Many have also contributed to teaching as textbook authors and by editing medical journals. The well-known medical editor, Morris \*Fishbein, edited the *Journal of the American Medical Association* (1924–49) and played a leading role in shaping American healthcare policies. Alexander Gutman (1902–1973) edited the *American Journal of Medicine* and Alfred Soffer (1922– ) was editor of *Chest*. Subsequently there has been an at least commensurate increase in the numbers of Jewish medical scientists and teachers needed to meet the enormous demand for journals, books, and education at all levels.

Advances in research and education have also created a demand for medical scientists with the rare combination of the research expertise and administrative skills needed to run vast institutions of unprecedented complexity. Jewish scientists with these capabilities include Arnold Levine at the Rockefeller, Walter \*Bodmer, Sir Gustav \*Nossal, Harold \*Varmus, and Philip Fialkow at the University of Seattle.

### **Jewish Medicine in the Diaspora**

**UNITED STATES.** The early years of the 20<sup>th</sup> century witnessed a continued immigration to the U.S. that changed the “ethnic” and cultural pattern of American Jewry and its medical representation. The first Jewish doctors in the U.S. were of Sephardi origin. During the second part of the 19<sup>th</sup> century Jewish immigrants from Germany assumed leading roles in communal affairs and medicine. Russian Jews, who began emigrating after the pogroms of the 1880s, added a third element, which was destined to grow in numbers and influence. Later, the U.S. gained new immigrants from the Jewish population that had moved to East European countries when these broke away from the Russian and Austro-Hungarian empires after World War I. These Jews were again unsettled by unfavorable economic and political conditions.

Jewish emigration from Europe to the U.S. yet again increased sharply in the 1930s with the rise of the Nazi Party. After World War II the majority of those who escaped the Holocaust immigrated to the United States or Israel. Physicians

who found refuge in America arrived at a propitious time. The 1930s and 1940s marked the beginning of the current golden age of scientific medicine, ushered in by the discovery of antibiotics and cortisone and advances in molecular biology and medical technology. With the decline of traditional European centers, the United States became the new world center of scientific and medical activity with Jewish immigrants joining the country's extraordinarily creative universities and institutes. Rid of vestiges of intolerance and receptive to new talent, the country's medical establishment and public welcomed the newcomers. Jewish hospitals, such as Mount Sinai in New York and Michael Reese and Mount Sinai in Chicago, as well as non-Jewish hospitals, research foundations, and universities absorbed many of them into the mainstream of medical progress. By the 1980s Jewish physicians in the United States greatly outnumbered those in other countries. In the State of New York alone there were 7,500 practicing Jewish doctors compared with 5,500 in Israel and 3,000 in France. Overall 9% of U.S. physicians were Jewish, compared with a 3% representation in the general population. More than 17,000 of the approximately 27,000 U.S. Jewish physicians in private practice resided in the thickly populated states of New York, California, Illinois, Pennsylvania, New Jersey, and Massachusetts. Of these, approximately 4,700 were general practitioners, 6,500 specialists in general medicine and its branches, 3,000 in surgery, 2,900 in obstetrics and gynecology, 1,000 in ophthalmology, 800 in radiology, 650 in dermatology, and 600 in otolaryngology. However the distribution among medical specialties was uneven. Whereas only 5% of doctors in occupational medicine were Jewish, they comprised 20% of general physicians and more than 30% of psychiatrists. This predominance in numerical terms is likely to have persisted but is difficult to quantify and compare with earlier periods. There has been increasing specialization marking the virtual demise of the "general internist" and the current Jewish population is less homogeneous compared with the initial immigrant Jewish population. However, the Jewish contribution to U.S. and thereby to medicine worldwide should not be assessed simply in terms of the numbers of practicing physicians but should also take account of Jewish contributions to medical science and education.

**CANADA.** Jewish doctors and medical scientists in Canada also benefited from the opportunities available in the U.S. to improve the provision of medical services and education. Their numbers included the pediatrician Alton Goldbloom (1890–1962) and Arthur Vineberg (1903–1988), who developed techniques for improving blood circulation to diseased heart muscle.

**WESTERN EUROPE.** The countries of Western Europe other than Germany and Austria had long settled Jewish communities whose numbers were increased by refugees from Russia at the beginning of the 20<sup>th</sup> century and from Nazi persecution in the 1930s. Jewish doctors are well represented in clinical practice and in academic centers. Their contributions

to medicine and medical science in the United Kingdom are reflected by the high national honors accorded to Sir Ludwig \*Guttmann for his work on rehabilitation, and to Lord \*Cohen, Lord Rosenheim, Lord Turnberg, Sir Raymond Holfenberg, and Sir George Alberti for their achievements in clinical medicine, teaching, and research. French scientists made important contributions to the formative stages of molecular biology and the contributions of Jewish medical scientists in France are illustrated by the achievements of Jean Hamburger (1909–1992) in renal transplantation. Switzerland's Jewish community of indigenous and refugee medical scientists has included Tadeus \*Reichstein, who isolated cortisone, and Pierre Rentchnick (1923– ), the foremost authority on public health and hygiene in a country which traditionally takes these subjects very seriously. Sweden sheltered the Nobel Prize winner Robert \*Barany and is now the home of the cancer research specialist George \*Klein and of the endocrinologist Carl Luft, well-known for his research on diabetes. The Jewish medical academic communities of Germany and Austria were extinguished by the Nazis and the preeminence of these countries in research and practice thereby passed to the countries where Jewish refugees settled.

**RUSSIA AND THE FORMER SOVIET UNION.** World War I, the Russian Revolution, and the \*Balfour declaration had demographic and political consequences that profoundly influenced Jewish participation in medicine. Many Russian Jews moved to large university centers, where they had been forbidden to reside. As a result of this movement and of the new policy of open university admissions, the number of Jewish doctors greatly increased. Unofficial admission quotas reappeared during the later years of Stalin's rule. However, neither their number nor their achievements can be readily determined because of the isolation of Russian Jewry from the Western world.

**POLAND AND EASTERN EUROPE.** Despite poor economic conditions, Jews in pre-Hitler Poland maintained 40 hospitals where many of the country's 3,500 Jewish doctors provided services. Poverty, backward technology, and a hostile academic environment prevented Jewish scientists from attaining the achievements reached by their colleagues in Western Europe. Still, their contributions were far from negligible. Edward Platau, the doyen of Polish neurologists, researched meningitis and brain tumors. Adolf Beck investigated nerve physiology and Henry K. Higier explored the autonomic nervous system. Samuel Goldflam studied reflexes and the diseases myasthenia gravis and periodic paralysis. Zygmunt Bychowski investigated traumatic epilepsy and multiple sclerosis. Anastazy Landau was prominent in metabolic research, Stanislaus Klein in hematology, Seweryn Sterling in social medicine, and Gerszon Lewin in tuberculosis. Aron Solowie-szyk, who was killed during the Warsaw ghetto rising, was prominent in surgical research. But the scientific potential of Jewish doctors in Poland was not destined to develop. During the German occupation, Jewish doctors devoted their ener-

gies to caring for people doomed to starvation, torture, and death. Many distinguished themselves by acts of dedication and heroism and over 2,800 were killed. The tragic events in Poland were paralleled by similar developments in other German-occupied territories.

**SOUTH AMERICA AND MEXICO.** In the early part of the 20<sup>th</sup> century, geographic remoteness meant that Jewish contributions to medicine in Latin America received less recognition abroad than they deserved. Nevertheless, the large communities in South America were reinforced by immigration from Europe ensuring that Jewish medical scholarship thrived, even if not to the extent enjoyed by colleagues in North America. Since World War II the opportunities to contribute to advances in medical research have suffered from political instability and periods of economic decline. In Argentina, where Jewish immigration began in 1889, the figure of the pioneer physician Noah Yarchi is still remembered and revered. The doctors who followed in his footsteps helped sustain the health and morale of the colonists and the early settlers in the cities. With the establishment of the Ezra Hospital in Buenos Aires in 1921, a center was provided for medical activity; it grew in importance as the Jewish population increased. Jews have been prominent in every phase of the professional and academic life of the country; Professor Quiroga was president of the Academy of Medicine of Buenos Aires and Ricardo Rodriguez dean of the Medical Faculty of La Plata. Jewish physicians published the journal *Archives de Medicina Argentina-Israel*.

For a long period the Jewish population in Brazil was 140,000, and much lower in other Latin American countries. Jewish participation in medicine increased significantly after the arrival in the 1930s and 1940s of refugee doctors who brought the sophisticated approach of European medicine. Many Jewish physicians rose to eminence. Victor Soriano of Montevideo, Uruguay, was the editor of the *World Journal of Neurology*. Mexico had 120 Jewish doctors in 1970, many of whom attained professional distinction. Characteristic of the medical pioneers' sense of Jewish identity was their publication of the medical journal *Ars Medici* early in the century, when their numbers were very small.

**SOUTH AFRICA.** At the peak of communal activity South Africa had about 750 Jewish doctors who made major contributions to medical research, education, and practice. Among these were Philip \*Tobias, president of the Royal Society of South Africa, Maurice Shapiro, the immuno-hematologist who became head of the country's transfusion services, the gynecologist S. Joel Cohen, the physician M.M. Sussman, the cardiologist Valva Shrir, and the surgeon Jack Wolfowitz. The plastic surgeon Jack Penn (1909–1996) carried out many facial reconstruction operations on Israeli soldiers wounded in the War of Independence and subsequently became honorary visiting professor of plastic surgery at the Hebrew University of Jerusalem. During the period of political uncertainty before the country achieved independence many doctors immigrated to the United Kingdom, the U.S., and Israel. Those achieving

distinction include Israel Chanarin, the hematologist and expert on megaloblastic anemias, and Anthony Segal, the authority on the white blood cells called neutrophils.

### Medical Science and Practice in Israel

Sussman \*Muntner, Joshua O. \*Leibowitz (1895–1993), who was professor of medical history in the Hebrew University of Jerusalem, and David Margalit have fully described the history of medicine in Palestine under the Mandate and in the early years of the State of Israel. At the beginning of the 20<sup>th</sup> century infectious diseases were rampant in Palestine. Clinics established by European Jewish communities provided medical care for the Jewish population of Jerusalem. These clinics became hospitals that expanded to meet the needs of a modern city, notably Bikkur Holim, established in 1843, and Sha'arei Zedek, established in 1902. Fortunately for the needs of the Jewish population, physicians were prominent in the Zionism movement since its inception. The first Jewish physician in Palestine, Simon Fraenkel, was sent to Jerusalem in 1843 by Moses Montefiore. Menahem Stein was the first Jewish doctor in Jaffa (1882), Hillel \*Joffe the first in Haifa (1890), and Bathsheba Yunis (1880–1947) the first in Tel Aviv. Leib Pashkovsky was the first surgeon to settle in Palestine (1906). In 1912, the year a medical association was founded in Tel Aviv, there were 35 Jewish doctors in the country, the majority specially trained in ophthalmology, dermatology, and parasitology in order to cope with the country's most prevalent diseases. Prominent among the early specialists were the ophthalmologist Aryeh \*Feigenbaum, the dermatologist Aryeh Dostrovsky (d. 1975), and the bacteriologist and founder of the Pasteur Institute in Jerusalem (1913), Israel J. Kligler. Other notable doctors were Aryeh Boehm, who was responsible for many improvements in public health, and the otorhinolaryngologist Moshe Sherman, founding president of the country's first Medical Association. Although public health remained a major preoccupation, increased control of malaria, rabies, trachoma, and other infectious diseases allowed more scope for other specialties to develop.

After the Balfour Declaration, the number of Jewish physicians in Palestine increased sharply and their pace of immigration accelerated with each wave of persecution in Europe. Health services improved under the Mandate with an expanded network of clinics and public health measures including an immunization program. Thus a medical infrastructure was in place when the State was established which could cope with the added demands of immigration and the War of Independence. With subsequent expansion, Israel had approximately 27,000 physicians in the early 21<sup>st</sup> century, so that the ratio of doctors to population has become one of the most favorable in the world. The country had some 47,000 nurses, of whom 50% were registered. As a result Israel had a very low infant mortality rate (7.5 per 1,000 live births) and long life expectancy (79.1 years on the average for women and 75.3 years for men). Medical care is provided by a network of hospitals and clinics, many affiliated to the health funds, the

Ministry of Health, or other organizations like \*Hadassah and \*Magen David Adom. The hospitals and medical services are also geared to deal with the emergencies arising from wars or terrorist attacks.

Mental health, rehabilitation, and social support services are also highly developed.

Advanced methods of treatment developed elsewhere in the world have also been promptly introduced into Israeli clinical practice. The Hadassah Hospital carried out its first successful *in vitro* fertilization (“test-tube baby”) in 1982 and heart transplantation in 1983.

The Israel Medical Association, founded in 1929, helped to raise the standards of the profession and to improve service to the public during the difficult years of economic hardship and political and military tension. The Association’s official organ, *Harefuah*, founded in 1913, has maintained a high scientific and journalistic standard. The Non-Resident Fellow Project of the Association has helped forge close links with Jewish doctors in the Diaspora. There is also an extensive network of academic exchanges and collaboration between institutes and individuals in Israel and other countries.

Medical research and education have had a consistently high priority, even before the establishment of the State. Moshe Prywes (d. 1999), editor of the *Israel Journal of Medical Sciences*, founded in 1965, contributed to medical education, and Hanoch Midwitsky to the promotion of postgraduate studies. Most medical research is now carried out at the country’s four medical schools, namely the \*Hebrew University of Jerusalem (founded in 1949), \*Tel Aviv University (founded in 1965), \*Ben-Gurion University (founded in 1974), the \*Haifa Technion (founded in 1969), and their affiliated hospitals. Biomedical science is performed in the relevant faculties of these universities, at \*Bar-Ilan University, which does not have a medical school, and at the \*Weizmann Institute of Science.

The first research priority was the control of infectious diseases. Saul \*Adler, a world authority on parasitology and tropical medicine, directed research on amebiasis, leishmaniasis, and relapsing fever. Zvi \*Saliternik was responsible for the elimination of malaria and the parasitic disease schistosomiasis. Subsequently attention could be turned to the disorders prevalent in the developed world and to genetic disorders prevalent in various Israeli populations. Clinical research was linked to improving teaching and patient care in all branches of medicine.

Chaim Sheba, surgeon-general of the Israeli army, oversaw the rise in medical standards. Bernhard and Hermann \*Zondek continued their endocrinologic research, interrupted by the European upheaval, and Moshe \*Rachmilewitz, professor of medicine at Hadassah Hospital Medical School, carried out much-cited studies of folate and vitamin B<sub>12</sub> deficiency and metabolism. Bracha \*Ramot organized a modern hematological service at the Tel Hashomer (Sheba) Hospital and undertook a systematic program of investigation of the prevalence and management of inherited disorders of hemoglobin synthesis. Andre de Vries (1911–1996) was a distinguished phy-

sician and hematologist at the Beilinson (Rabin) Hospital. Karl Braun initiated research programs in cardiology and Lipman \*Halpern in neurology. Under the leadership of Bruno Lunenfeld (1927– ), the Tel Hashomer (Sheba) Hospital became a world center in research and treatment for female infertility. In the same institute Baruch Padeh had laid the foundations for clinical genetics in the country. David Erlick in Haifa improved techniques of renal transplantation. Isaac Michaelson developed ophthalmological services at Hadassah Hospital and used his expertise to treat patients with trachoma and other sight-threatening diseases in Africa. Michaelson was thereby amongst the first who initiated Israel’s continuing medical collaboration with disadvantaged countries. He was also amongst the first clinical scientists to realize the importance of angiogenesis (new blood vessel formation) in retinal disease; an international medal and series of conferences have been named in his memory.

Latterly the pace of research has quickened and there is room to mention only a few of the outstanding contributors. Rina \*Zaizov (1932–2005) organized a national center for pediatric oncology. Marcel \*Eliakim of Hadassah Hospital has made important advances in the field of liver diseases. Yehezkiel \*Stein of the same hospital is an international authority on lipids and atherosclerosis (vascular degeneration). Mordechai Pras of Tel Hashomer Hospital is an international expert on amyloidosis and Rami \*Rahamimoff’s work on nerve transmission in health and disease is also universally respected. The advances in basic immunology made by Michael \*Sela and Ruth \*Arnon at the Weizmann Institute have been adapted to many promising strategies for treating multiple sclerosis and auto-immune diseases. Michel \*Revel’s research on the antiviral interferon system also has important clinical implications. Irun Cohen’s immunological studies at the Weizmann Institute on experimental and clinical auto-immune diseases and novel ideas on treating these diseases have attracted continued international attention. Stem cell research is an active area of research carried out in a fully coordinated program involving the country’s major academic research centers and biotechnology companies. Sophisticated medical bioengineering is also an area of intense research activity.

The current organization of medical departments in acute care hospitals in Israel has changed from the classical European model with its fully autonomous medical wards to broader-based departments in which all medical sub-specialties are represented, providing comprehensive, multi-disciplinary medical care. In parallel with the remarkable developments in new therapeutic approaches a more realistic view has grown of scientific medicine’s limitations and an understanding of the patient’s rights. This has introduced a new field in medicine that includes palliative care, safeguarding the quality of life of patients and their families, and their right to be involved in decisions affecting medical management and the end of life. This progressive approach is now being adopted by the Israeli public and medical community with appropriate legal backing. There has also been striking progress in the

provision of medical teams able to participate in disaster relief anywhere in the world.

[Samuel Vaisrub / Michael A. Denman, Yaakov Naparstek, and Dan Gilon (2<sup>nd</sup> ed.)]

### INTRODUCTION

The issues involved in medicine and *halakhah* are basic concerns, discussed and debated in every society today. Their analysis and resolution encompass many issues, related to law and values, justice and ethics, philosophy, and way of life. This is true of every society which examines its path and strives to shape its own identity.

The subjects involved in medical *halakhah* are a living, vital element in Jewish law and in the life of the Jewish people – “living” and “vital” in the most literal sense, pertaining to the content of life and its very being. The worlds of *halakhah* and of medicine are interconnected with one another. For generations many of the greatest rabbis, *posekim*, and Jewish thinkers have been physicians by profession.

Moreover, the questions, principles, and proposed solutions in the fields of medicine and healing touch upon the life of every single person. Hence, the discussion and debate concerning them and the questions involved in their application and their resolution are the concern of the public at large. This being so, a good portion of the subjects of medicine and therapy, the difficulties inherent in them and the solutions proposed, are not merely a matter for theoretical discussion, restricted to the world of experts and professionals, but are matters of concern to the entire society, collectively and individually. It follows that analysis of these matters is greatly influenced by various commonly held worldviews, which influence the thinking of everyone in society, both collectively and individually. As a result, analysis of medical practice and therapy, of what is permitted and prohibited, as well as the pursuit of solutions that are correct and appropriate according to both halakhic and human criteria – are all highly influential in educating the public and forming the attitudes of the individual. These are issues of immediate relevance,

with which our society is constantly concerned, studying them and analyzing them. It is therefore proper that the matters written and spoken on these matters be intended not only for professionals, but for the general interested public as well, as this material is of the utmost importance for anyone seeking an understanding of the ways of the Creator, the greatness of His Torah, and the depths of faith, and who wishes to understand the meaning of Torah, of faith, and of Judaism.

### Judicial Decision – A Value Determination

Any concrete issue in the area of law and medicine that reaches the courts and thus requires a judicial decision, must of necessity require establishing a position regarding morals and values. Most issues of law and medicine that come before the court do not involve monetary obligations or financial rights, nor do they touch upon rights of ownership or criminal liability in terms of an offense against an explicit or implicit provision or section of the law. Rather, their aim is generally to establish a duty, right, or permit which is fundamentally rooted in value or moral judgments, which have been infused with a legal definition. This is particularly true of those cases in which the judicial decision involves not only law and medicine, but also involves the special realm of the family unit, the relationship between parent and child, and the relationship between spouses.

These questions have been explicitly addressed in the literature dealing with these issues, and in the decisions of Justice Menachem Elon in the Israeli Supreme Court. In the introductory comments of his decision in the case of the minor Yael Shefer (CA 506/88, *Yael Shefer, Minor by way of her mother v. State of Israel*, 48 (1) PD 87, 96–97), which will be discussed below, Justice Elon wrote the following:

The subject at hand is a very difficult one. It reaches the depths of human values and ethics and the heights of the philosophical thinking of generations past and present. The issue touches upon the cultural and spiritual make-up of our society. Indeed, we have postponed giving our opinion in this case so that we might fully examine the nature and essence of these values, thereby fulfilling the command: “Be moderate in judgment.” [...] “Against your will you are created, and against your will you are born; against your will you live, and against your will you pass on.” Such was stated in the teachings of the Sages. [...] “Against our will” we sit to decide the case before us. The angel of judgment stands above us and commands: “Decide!” The judge is required to adjudicate even such controversial matters so that the patient may be informed of his rights and duties, so that the physician may know what his profession forbids, permits, and requires him to do, and so that all those who assist the patient – to whatever extent – may understand their rights and obligations. “Against our will” we adjudicate all these matters, for we are not at all confident that we have fully mastered all these fundamental issues, or that we are equipped with all of the information and knowledge that we need to decide our case. Nevertheless, we cannot abdicate our judicial responsibility, and we must probe, weigh, and state our opinion.

Further on we will examine a number of general principles, as

expressed in the Knesset legislation and case-law, especially in the rulings of the Israeli Supreme Court.

THE VALUES OF A JEWISH AND DEMOCRATIC STATE. When dealing with the subject of medicine and law we confront the inherent tension of the fact of Israel being a Jewish state and its being a democratic state (for expansion on this point see: \*Values of Jewish and Democratic State). In the *Shefer* case (pp. 106–107) Justice Elon defined the values of the Jewish state:

The interpretation of the values of the State of Israel as a Jewish state is thus determined by the values of the Jewish tradition and the legacy of Judaism – that is, the conclusion reached through a study of the basic values contained in the sources of the Jewish tradition and Judaism’s legacy. In carrying out this interpretative endeavor we will be fulfilling the wishes of the legislator in defining the values of the State of Israel as a Jewish state [...] by giving the appropriate interpretation of the values of the State of Israel as a Jewish state [...].

Regarding the synthesis between the values of Judaism and those of democracy, especially in the sensitive realm of medicine and law, Justice Elon contended that in a situation of conflict between the Jewish component and the democratic component, priority should be given to the Jewish component. Hence he wrote (*ibid.*, 167–70):

As instructed by the legislature in the Basic Law: Human Dignity and Freedom, we have examined the values of a Jewish state and those of a democratic state in the vast and multifaceted areas of medicine, *halakhah*, and law. As required, we have analyzed the sources of both systems in detail, and have examined the meta-principles of each system and the basic rules derived from these principles – both expansive and restrictive. And conducting this analysis, we are instructed to arrive at a synthesis that will achieve the dual-value goal of the Basic Law: Human Dignity and Freedom – to anchor in the laws of the State of Israel its values as a Jewish and democratic state. The natural way of achieving this synthesis is to find the common ground between the Jewish and democratic systems – the principles that they share, or at least those that can be used to integrate the two systems [...], since active euthanasia negates the essence of the State of Israel as a Jewish state, as we observed above, the synthesis between the two norms – “the values of a Jewish and democratic state” – requires us to give preference to conclusion that would be reached by applying the values of a Jewish state, and to *use these values* to interpret the phrase “the values of a... democratic state.” [...]

The values of a Jewish state, whose roots are planted in the basic concepts of the dignity of the human being created in the image of God, the sanctity of life, and the prevention of pain and suffering, concepts which have stood the test of generations and which have nurtured and sustained the entire world – are the true guidelines for arriving at the correct synthesis between the values of a Jewish and democratic state.

### In the Image of God

A person’s fundamental right to physical and mental well-being and integrity bears a special character in Jewish law, stemming from its basic conception of the source of a man’s right to his life, body, and dignity. In this respect Justice Elon wrote

the following in EA 2/84 *Neiman v. Chairman, Central Elections Committee*; Avneri v. Chairman, Central Elections Committee, 39 (2) PD 225, 298:

The foundation of the worldview of Judaism is the concept of the creation of man in the image of God (Genesis 1:27). This is how the Torah begins, and from it the *halakhah* derives fundamental principles concerning the worth of every human being, whoever he may be, and the right of every person to equal and loving treatment. He [R. Akiva] would say: "Beloved is man, for he was created in the image [of God]; but it was an act of greater love that it was made known to him that he was created in the image [of God], in that it is stated (Genesis 9:6): 'In His image did God make man.'"

Jewish law generally, and especially over the last few generations with the tremendous advances in medicine and its needs, has encountered a plethora of problems that emerge as a result of the conflict between the value of the sanctity of life and the value of prevention of pain and suffering and other considerations. However, the point of departure and the basic foundation for this confrontation was always, and has remained, the meta-value of the sanctity of life, and the combination of the right and duty to preserve the image of God. In the *Shefer* case, Justice Elon elaborated on the principle of Man's creation in the Image as the guiding conception in the subjects related to medicine and law, writing inter alia (pp. 115–116):

The basic right to bodily integrity and mental well-being has a special meaning in Jewish law, which stems from its basic philosophical outlook regarding the source of one's right to life, bodily integrity, and dignity [...] The creation of man in the image of God is the basis of the value of each person's life. "Therefore the creation of humankind started with the creation of a single individual, to teach that whoever removes a single soul from this world is regarded as if he had caused the whole world to perish; and whoever keeps one single soul alive in this world is regarded as having preserved the whole world" (Mishnah, Sanh. 37a, as cited in Yad, Sanhedrin 12:3; see also Menachem Elon, *Ha-Mishpat ha-Ivri* (1988<sup>3</sup>), p.1426, and n. 303). As we stated elsewhere (LA 184/87, 151, 184, *Attorney General v. Anon.*, 42 (2) PD 661, 676): "the fundamental principle that must guide the court is that we are not authorized or allowed to make any distinction based on the 'worth' of an individual – whether poor or rich, physically healthy or disabled, psychologically strong or mentally ill. All human beings, created in the image of God, are equal in value." The creation of man in the image of God is the underlying foundation of the supreme value of each person's life, and it is the source of the fundamental rights of human dignity and freedom. (See. Cr. A. 2145/92, *State of Israel v. Guetta*, 46 (5) PD 704, 723–724.) The principle that "In His image did God make man" – every man, no matter who he is – whose source is as stated, is in the world of Judaism, has been accepted by many varied cultures and legal systems, as the foundation for the supreme value placed on human life. The only exceptions are those cultures which historically have discriminated between one man and another, between the physically healthy and the disabled, psychologically strong and mentally ill (such as in the philosophy of Plato or the Greek city of Sparta; see *infra* par. 59 [...]).

"In His image did God make man" is the philosophical and analytical basis for the unique approach of Jewish law regarding the supreme value of the sanctity of human life – the sanctity of the divine image in which man was created – and the many consequences that follow in various areas of the law, including the important areas with which we dealt in the instant case. As we shall see, Jewish law has grappled, especially in recent times, with the tremendous advances in medicine, and with the many problems that have arisen as a result of the clash between, inter alia, the value and sanctity of life and the value of preventing pain and suffering. Yet the lodestar is and has been the supreme value of the sanctity of human life, and the right and obligation to protect the divine image of humankind.

#### PHYSICIAN'S DUTIES AND PATIENTS' RIGHTS

Initially, during the tannaitic era, it was established that it is permitted for a physician to heal. The Talmud derives this from the verse (Exod. 21:19): "He shall cause him to be thoroughly healed" – This teaches that the physician is given permission to heal" (Bava Kamma 85a). This implied rejection of the approach prevalent in various philosophies and religions at that time, and later as well, even in some statements by Jewish thinkers, that one should not heal a person whom God has made ill, because there should be no intervention in what Heaven has decreed (Rashi, at BK 85a, s.v. *Nitna reshut; Kitvei Ramban*, Chavell ed. (Jerusalem 1964), vol. 2: *Torat ha-Adam*, at 42). Other tannaitic halakhic rules established that an expert physician who inadvertently caused damage is exempt, as a matter of public policy (Tosefta, Git. 4:6, Zukerman ed.), for otherwise physicians would be unwilling to perform their duties (Resp. *Tashbez*, vol. 3 no. 82).

During the period of the *rishonim* the view was articulated that the physician's work is not only permitted, but is an obligation and constitutes the fulfillment of a commandment. Maimonides held that this is based on the duty to save life found in Jewish law whereby a person is obliged to save his fellow man who is in danger, "with his body, his money, or his knowledge (Yad, Nedarim 7:8). According to Nahmanides, "any physician who is knowledgeable is obligated to heal, and if he refused to do so he is considered to have shed blood" (*Sefer Torat ha-Adam, Kitvei ha-Ramban*, ed. Chavel, 2:41–42). Thus, the permission given the physician to heal also has the status of a commandment (*mitzvah*), intended to dispel the physician's hesitation at the prospect of healing others due to his fear of erring and injuring others (see Resp. *Da'at Kohan*, no. 140). Another principle operating in the context of the physician and treatment in Jewish law is based on the verse "Love your fellow as yourself." In *Sharon v. Levi* (CA 548/78, *Sharon v. Levi*, 35 (1) PD 735, at 755) Justice Elon wrote as follows:

It is instructive to observe how this basic right was viewed in Jewish law. "One who strikes a blow causing damage less than a *perutah* (i.e., that did not cause any real injury) transgresses a negative commandment (Sanh. 85a; Yad, Hovel u-Mazik 5:1–3). Even if the victim consents to being struck, his consent has no validity (BB 92a; Sh. Ar., HM 420:1ff.; *Shulhan Arukh Ha-Rav*

הַמ, *Hilkhot Nizkei Guf ve-Nefesh ve-Dineihem* 4; according to the law, it is also forbidden for a person to injure himself – בַּק, *Yad*, ad loc.). This being so, on what basis can one person let blood of his fellow, even if it is necessary to do so in order to heal him? In the view of the *amora* R. Matna (*Sanh.* 84b) permission to do so is not based on the consent of the patient, whether expressed or implied, for the consent, as stated, is immaterial. Rather, it is a rule derived from the verse “Love your fellow as yourself” (*Lev.* 19:18), from which one can infer, as Rashi put it, that “each Jew was cautioned not to do to his fellow that which he does not want done to himself” (Rashi, *Sanh.* 84a, s.v. *ve-ahavta le-re'akha kamokha*; see also *Kitvei ha-Ramban, Torat ha-Adam* (ed. Chavell, Mossad ha-Rav Kook), 41–42; M. Elon, “*Ha-Halakhah ve-ha-Refu'ah ha-Ḥadishah*,” in: *Molad*, 4 (NS), 27 (1971), 228, 232).

The philosophic-halakhic basis for permission to wound a sick person in order to cure him as deriving from the fundamental Biblical command “Love your fellow as yourself” is cited by Nahmanides as a guiding accepted principle in the context of the physician and medicine in the world of *halakhah*: “The person who wounds another to cure him (for medical treatment) is exempt, and it constitutes the performance of a positive precept, as it states ‘Love your fellow as yourself’” (*Torat ha-Adam, ibid.*, p. 43).

Rabbi Eliezer Waldenberg, a leading contemporary authority in the area of halakhic-medical law, wrote the following comment on these words of Nahmanides:

We require that the commandment to heal be inferred from the verse (“Love your fellow as yourself”), and it is insufficient to rely on the principle that “nothing stands in the way of saving a life” to justify the physician’s privilege to wound in order to heal (referred to by Nahmanides, and cited by the Tur and Shulhan Arukh), because the inference from “Love your fellow as yourself” teaches that there is an obligation to heal even when there is clearly no danger to life, but only pain or danger to a limb.

### The Physician and the Judge

Both Nahmanides and Rabbi Kook (*Torat ha-Adam, ibid.* p. 41–42; Resp. *Da'at Kohan*, no. 140 (Rabbi Abraham Isaac \*Kook – the first chief rabbi of Israel)) drew an illuminating analogy between the physician treating a patient and a judge presiding over a court. The judge’s duty to judge the people in each generation and in all matters is portrayed in the Talmud as giving rise to a soul-searching dilemma, phrased as follows (*Sanh.* 6b):

The judges should know whom they are judging, before Whom they are judging, and Who will exact punishment from them, for it is stated: “God stands amidst the community of God, in the midst of judges (*elohim*) He will judge” (*Psalms* 82:1). Similarly, regarding Jehoshaphat it is stated: “He charged the judges: Consider what you are doing, for you judge not on behalf of man, but on behalf of the Lord” (*II Chronicles* 19:6). Perhaps the judge will say, “Why do I need this anguish?” Therefore it is stated, “And He [God] is with you when you pass judgment” (*Chronicles*, ad loc.; Rashi, *Sanh.* 6b – “For He is with your hearts, as your hearts incline as to the matter”). A judge can only rule in accordance with what his eyes see. (Rashi adds,

*Sanhedrin*, ad loc., “If he attempts to render a just true judgment, he will not be punished.”)

Similarly, the work of a physician imposes great responsibilities and corresponding demands on his conscience, accompanied by much anguish. For this reason, Nahmanides concludes that the laws pertaining to a physician who is as careful as he should be when dealing with life-and-death situations are the same as those applicable to a judge who seeks to render a just and true judgment. If they are unaware that they have made a mistake, they are both exempt, by both human and divine law.

Yet in one fundamental respect – which goes to the root of the matter – the physician’s responsibility is greater than that of the judge. If an authorized judge (one who judges “with the permission of the court”) becomes aware of his inadvertent mistake, he remains exempt even by divine law. By contrast, if a physician becomes aware of his unintentional mistake, while he remains exempt by human law, he is nevertheless liable by divine law. Indeed, if his mistake caused someone’s death, he is subject to the penalty of exile [to a city of refuge]. The physician and the judge are partners to the heartbreak and ethical dilemmas inherent in their work. Each of them attempts to ease these agonizing dilemmas by following his conscience, based on “what his eyes see” or, as formulated by R. Menahem ha-\*Meiri, by acting according to “what his eyes see, his ears hear, and his heart understands” (*Bet ha-Behirah, Ketubbot* 51b). See also Maimonides (*Guide* 3:34), who writes that the judge adjudicates in accordance with a general norm, whereas the physician treats each patient in accordance with his own specific condition and sickness. This is the essence of the physician’s duty which obligates him to cure the specific ailment that confronts him, according to the particular circumstances and condition of the patient.

Regarding the analogy between the physician and the patient, Justice Elon made the following comments in the *Shefer* case (*ibid.*, pp. 108–9):

It should be noted that the principles governing the professional behavior of the physician intertwine law and ethics, compliance with the strict law and going beyond the law (*lif-nim mi-shurat ha-din*), the nature of the *halakhah*, and the nature of the world. Following the example set by Nahmanides’ *Torat ha-Adam*, these principles appear in separate sections in the later halakhic codes – *Arba'ah ha-Turim* of Jacob b. Asher and the *Shulhan Arukh* of Joseph Caro (YD, beginning of sec. 315ff.). Incidentally, it bears mention that Maimonides’ *Mishneh Torah* does not contain any codification of the laws relating to the physician. Maimonides comments on this matter in the fourth chapter of *Hilkhot De'ot*, but only to deal with the proper regimen required to maintain a healthy body. It is certainly instructive that these codifiers, who as a general rule do not include in their codes those laws that have no practical relevance, and hence do not codify such laws as those relating to the exile of an unintentional murderer to a city of refuge, nevertheless include the rule that a physician who causes death and then becomes aware that he has erred should be exiled (*Tur and Sh. Ar, ḤM* 425:1). They do so in order to demonstrate the

deep responsibility born by the physician, in that even when there is no legal sanction, he is liable, in cases of negligence, to be exiled to a city of refuge, to grieve and to give an accounting of his life. This dilemma of medical practice – where, on the one hand, there is the commandment not to refrain from healing others while, on the other hand, there is the sense of “why do I need this trouble?” – has become greater and more pronounced as a result of the tremendous advances in modern medicine and in light of contemporary legal and philosophical thinking concerning fundamental rights and meta-principles. Today – even more so than previously – both the judge and the physician continue to be partners to this dilemma. Both carry the responsibility and both seek to do justice in their profession, each in his own field – the judge to reach a truly correct decision and the physician to achieve true healing. This guideline of searching out the essential truth – the full meaning of which will be explained below – serves as a road-map – complex and difficult, yet indispensable – for resolving the important, grave, and complex questions that lie at the doorstep of the physician and judge alike. As is generally the case with regard to such basic questions, there are fundamentally different approaches that create a profound sense of awe as one proceeds to grapple with and apply them.

### **The Patient’s Obligation to be Healed and his Right to Choose Medical Treatment**

In the world of Judaism, just as the physician is obligated to heal, so too, as may be seen from our above discussion, the patient is obligated to be healed. Moreover, one who refrains from being healed violates the Scriptural verses “You shall guard yourselves well” (Deut. 4:15) and “For your own life-blood I will require a reckoning” (Gen. 9:5). The obligation of a person to be healed from a life-threatening illness takes precedence over almost all of the commandments of the Torah. When a physician determines that to become cured one must desecrate the Sabbath, a patient who refuses to accept treatment involving the desecration of the Sabbath “is considered to be ‘a pious fool,’ ...we compel him to do [what the physician has ordered]” (Resp. Radbaz, vol. 4, no. 1339; Sh. Ar., OH 328:10, and commentaries ad loc.). In such circumstances, preferring observance of the commandment over medical treatment is considered “a commandment performed through sin” (Resp. Mahari Asad, OH no. 160). The patient’s wishes are to be followed, however, when he seeks to improve the medical care he is receiving, but the physicians disagree with him. This is based on the verse “The heart knows its own bitterness” (Prov. 14:10; Yoma 82a–83a; Sh. Ar. OH 618:1; A. Steinberg (ed.), *Enziklopedyah Refu’it Hilkhahit*, vol. 2, pp. 24–26, 443–45).

According to Jewish law, the patient is not only obligated to seek a cure, he also has a basic right to receive treatment from a physician of his choice whom he trusts. This rule is derived from the teachings of the Sages, and became established *halakhah* in the Shulhan Arukh, which rules that “If Reuben vowed not to benefit Simeon, and Simeon fell ill, Reuben may treat him... even with his own hand, even if there is another physician who can treat him” (Sh. Ar., YD 221:1).

In relation to this ruling, Justice Elon wrote the following in the *Tamir* case (APP 4/82 Cr. App. 904/82, *State of Israel v. Tamir*, 37 (3) 205–206:

It is well-established law, based on the principle of the personal liberty of every person created in the image of God, that no person’s bodily integrity may be infringed without his consent [...]. This basic right includes the right to select the physician to whom his treatment will be entrusted; making such a choice is integral to his fundamental right to maintain his bodily integrity and mental well-being and not to be “harmed” thereby except with his consent [...]. An instructive expression of this principle may be found in the teachings of our Sages. The Mishnah states (Nedarim 4:4): “If one was forbidden to derive benefit from another person... he may [nevertheless] be cured by him,” i.e., when one person vowed not to benefit from another person, or his fellow man vowed not to benefit to him, he may nevertheless benefit from the medical services of the other person, for the duty to heal and the right to be healed in body and soul “is a commandment” (Yad, Nedarim 6:8). The Jerusalem Talmud states that this rule not only applies where there is only one physician available – i.e., the fellow from whom he has vowed not to receive benefit – but even if another physician is available, and he may avail himself of the medical treatment of the other physician, the patient may nevertheless choose to consult the doctor from whom he vowed not to receive any benefit, for “not every person is able to cure him” (*Nimmukei Yosef* to Rif, Nedarim 41a). This is in accordance with the codified rule that “If Reuben vowed not to benefit Simeon, and Simeon fell ill, Reuben may treat him ... even with his own hands, even if there is another physician who can treat him.” In medical treatment, the personal trust between the patient and the physician of his choice is extremely important, for which reason “even if there is another physician who can treat him, that physician [i.e., the one from whom he vowed not to benefit], if qualified, is under a duty to treat him, for the saving of life is sacred” (*Ritba*, to *Rif*, Ned. 41b).

OBLIGATION AND REFUSAL TO RECEIVE MEDICAL TREATMENT. The fundamental rule of Jewish law regarding the physician’s duty to treat, and the patient’s obligation to be cured, is subject to a number of qualifications, which have proliferated in our generations and which limit the possibility of treating a patient against his will. R. Jacob Emden, one of the leading halakhic authorities of the 18<sup>th</sup> century (*Mor u-Kezi’ah*, OH 322), laid down the following conditions under which the patient is obligated to seek a cure and under which “he is not listened to, if he rejects suffering and chooses death over life.” Accordingly, the duty only applies where the physician is familiar with the sickness “in absolute and clear certainty,” the case concerns a patient who at that time was referred to as “a patient with a clear sickness and obvious wound”; the treatment that the physician wishes to use was “definitively checked and certain”; and the patient’s life is in danger. In the event that these conditions do not exist, the patient’s consent is required for medical treatment, and he is permitted to refuse medical treatment. In contemporary times, many *posekim* have dealt with these cases, enumerating additional cases in which the patient’s consent is required. R. Moshe Feinstein, one of the great halakhic decisors of our generation (see re-

sponsum of R. Moshe Feinstein quoted in *Piskei Halakhah Refuah u-Mishpat*, ed. S. Shachar (1989), p. 101), wrote that, when giving treatment against a patient's will, in addition to the need for a high probability of success, account must also be taken of the negative influence of treatment given against his will. According to another opinion, if the patient can be expected to suffer even after the medical treatment, providing grounds for assuming that he would not have agreed to such medical treatment before it was given, then it cannot be administered in the first place without the patient's consent (*ibid.*, 104). Another view was that, given the large number of cases in which there was no certain medical opinion, all non-consensual medical treatment should be avoided, unless there is a definite danger of death (A. Steinberg (ed.), *Enziklopedyah Refu'it Hilkhaitit*, vol. 2, Informed Consent, p. 30, nn. 86–87; cf. Rabbi S. Raphael, "Kefiyat Tippul Refu'i al Holeh," in: *Torah she-Beal Peh*, 33 (Jerusalem, 1992)).

#### EUTHANASIA

In recent years a number of factors have combined to bring the subject of \*euthanasia to the forefront of discourse in the world of medicine and *halakhah*. The awesome advancement in science and medicine resulting from technological progress has facilitated the prolongation of human life in its final stages. However, this prolongation has not always led to improvement in the quality of life, and on occasion even sentences people to grave physical and mental pain. Doctor-patient relations have also undergone a metamorphosis, from the paternalistic approach whereby the doctor decides what is best for the patient, to an approach based on patient autonomy, whereby the competent patient can decide for himself, and his informed consent is therefore required for any medical proceeding. A large number of people are involved in the treatment of a terminally ill patient, of different cultural backgrounds and outlooks, and consequently bringing with them varied opinions as to how to treat the terminally ill patient. The general public today is also far more concerned with moral problems pertaining to medicine in general, and specifically those relating to the terminally ill. Limited medical resources do not always suffice to provide all possible medical options for all those requiring it, and occasionally these, too, are considerations in the decision making process in relation to these patients.

We shall now present the sources underlying the halakhic approach to this subject, and the manner in which the *halakhah* relates to the subject in modern times in general, and in the State of Israel in particular. In the *Shefer* case (*Shefer v. State of Israel* 48 (1) PD 87, 131–132), Justice Elon wrote the following:

There have always been serious and complex moral problems regarding the end of one's stay on this earth. Jewish law includes various rules dealing with the medical care to be given, as well as other issues of civil and religious law, concerning the person who is terminally ill or dying (= *goses*). Jewish law distinguishes between these states, but there are disagreements as to their precise definitions and halakhic consequences. In

any event, this is not the place to elaborate.... Regarding this terminal state, Jewish law emphasizes the importance of even ephemeral or brief life (*hayyei sha'ah*), so long as "the candle flickers..." This is also true in non-Jewish cultures, evidence of which we find as early as the Hippocratic oath, which states, *inter alia*: "I will not give poison to any person, even if he requests it; and I will not offer it." Some cultures, however, did not have this approach...

These medical-legal problems, involving fundamental questions of values, have grown more complex and difficult in recent years, provoking much discussion and dispute in the medical and legal communities, as well as among philosophers, clergymen, and the general public. On the one hand, the awesome advance in science and medicine resulting from technological progress has allowed the prolongation of life, by preventing the spread of disease and by various artificial means; on the other hand, the *prolongation* of life has not always led to improvement of its *quality*. At times, prolongation of life brings with it physical and mental pain, and the disruption of day-to-day life. In addition, a patient in such circumstances today may find himself in a hospital or other institution, attached to various machines which keep him alive, and not – as in the past – within the walls of his own home, with his family and loved ones in the natural environment in which he lived and flourished. Those who must deal with these problems are primarily the patient himself and his family, in addition to physicians, legal scholars, clergymen, and philosophers. The problems that arise involve grave and fundamental moral, religious, and ethical questions. The basic question is: who understands all of these factors sufficiently to be competent to decide what is the proper life span of a person and whether to shorten or to refrain from prolonging it.

#### The Bible

The prohibition on taking a human life is one of the gravest offenses in the Torah, and mankind as a whole was admonished against this offense at the dawn of its history: "Who-soever sheds the blood of man, by man shall his blood be shed, for in His image did God make man" (Gen. 9:6; see at length in \*Homicide, and \*Noahide Law). The Bible records a case which serves as a proof text for the view that killing a man even where it is clear that there is no chance that he will continue to live is nevertheless murder. At the end of the war between the Israelites and the Philistines during the days of Saul, Saul understood that the Philistines were about to kill him, and therefore decided to kill himself with his own sword. Scripture relates that Saul only injured himself after this attempted suicide, and then asked an Amalekite youth to complete the act. Saul's condition at that stage was analogous to that of a terminally ill patient, who clearly and lucidly requested the hastening of his death in order to redeem him from his suffering. The Amalekite youth complied with his wishes and killed him. Nevertheless, David subsequently ruled that the Amalekite youth was liable for the death penalty as a murderer (1 Sam. 31:3–4; 11 Samuel 1 and 16; see Radak and Ralbag, *ad loc.*) From this Biblical story it emerges that the active killing of a person who is dying is forbidden, even under those conditions, and even if the patient requested it (Ralbag, *ibid.*, *Sefer Hasidim*, ch. 315; Ralbag and Radak fur-

ther suggested interpreting that in fact the youth did not actually kill Saul, but rather just said that in order to find favor in David's eyes).

### In Talmudic Literature

As a rule, so long as the person's soul has not departed he is regarded as alive. The treatment of the terminally ill is dealt with directly in tractate *Semaḥot*, which stipulates those actions that may be performed on a dead person, and which are forbidden with respect to a living person: "A *goses* is considered a living person in all respects... One may not bind his jaws... one may not move him... one may not close the eyes of the dying [patient]. Whoever touches or moves him sheds blood..." (Semaḥot 1:1–4; Shab. 151b).

The Mishnah in Tractate *Yoma* (8:6) states that "Any chance of saving a life takes precedence over the Sabbath." Accordingly, in the event of a landslide, where there is a chance that a person is trapped beneath the debris, the debris should be removed until it is certain that no living person is trapped thereunder. Tractate *Yoma* 85a adds that, even if the person found under the debris was mortally wounded, and it is clear that he will soon die, one continues to desecrate the Sabbath to save him by removing the debris. Thus, this source indicates that even short-term life is considered life. The halakhic decisors of the present generation disputed whether this source implies that everything possible should be done to prolong life, even if only temporary, or whether the laws of the Sabbath do not necessarily provide a basis for the duty to prolong life (Resp. *Ziz Eli'ezer*, 5; *Kuntres Ramat Rahel*, 28; Resp. *Minḥat Shelomo*, 91.24).

Regarding a person about to die and experiencing intense suffering, the aggadic sources adopt a different attitude. The Talmud (Av. Zar. 18a) relates the story of R. Hanina b. Teradyon (second century C.E.) who was taken to be executed by the Romans as punishment for publicly teaching Torah. In order to ensure that the execution would be protracted and particularly cruel, the Romans soaked pads of wool in water and placed them over his heart "to delay the departure of his soul." When the executioner offered to stoke the flame and hasten his death by removing the pads, R. Hanina agreed, and swore that by that act the executioner had secured his place in the World to Come. The halakhic decisors offer a variety of explanations for the positive attitude taken by the Talmud to this act, but the story itself indicates that when a person is about to die and experiencing intense suffering, it is permitted to hasten his death even by way of a positive action – e.g., increasing the flame, and even by an act of "removing the impediment" – here, taking away the sponges.

Another case cited by the Babylonian Talmud (Ket. 104a) describes the death of R. Judah ha-Nasi, who towards his death was in unbearable pain. His students succeeded in preventing his death by their incessant prayers for Heavenly mercy. His handmaid, noting the intensity of his suffering, threw a jar on the ground, thereby momentarily causing them to cease praying, and at that moment Rabbi Judah died. This story has been

cited as proof that it is permitted to avoid prolonging the life of a terminally ill patient (*Iggerot Moshe*, ח"מ, vol. 2 no. 73.1).

### Halakhic Rulings

The halakhic rulings sharply distinguish between the active hastening of death, which is forbidden, and the removal of a life-prolonging impediment, which is permitted under certain conditions.

The various acts cited above as being prohibited in respect of the *goses* are enjoined because they are liable to actively hasten the death of the terminally ill (see Sh. Ar., YD 339:1; s.v. \**goses*; *Talmudic Encyclopaedia* (Heb.), 5, 393 ff.).

Actively hastening death is forbidden even in cases where the patient is suffering acutely: "It is forbidden to hasten his death, even if he is dying and both he and his relatives are suffering intensely" (*Hokhmat Adam*, 91.14), "and even if we see that he is suffering intensely, and that it is better for him to die, we are prohibited from performing any act to hasten his death" (*Arukh ha-Shulḥan*, YD 339:1; *Nishmat Avraham*, YD 339:4).

This prohibition applies even where the patient himself requests it, an analogy being drawn from Maimonides' ruling that one may not take ransom from a murderer in order to exempt him from the death penalty, even if the blood avenger (i.e., the victim's relative who may exact the murderer's life as retribution for the murder) agrees, because "the life of the victim is not the property of the 'blood avenger,' but rather belongs to God" (Yad, *Roze'aḥ u-Shemirat ha-Nefesh* 1:4).

On the other hand, the prohibition on passive euthanasia is not absolute and the *halakhah* distinguishes between various forms of passive euthanasia, the prevention of suffering to the patient being a paramount consideration. R. Judah he-Ḥasid (Ashkenaz, 12<sup>th</sup> century; *Sefer Ḥasidim*, ch. 723 (ed. Mossad ha-Rav Kook)) addresses the issue and rules that, even though it is forbidden to perform any action that hastens death, there is no place for actions that delay a natural death. "We do not act to delay a person's death. For example, if a person is dying and there is a man chopping wood near his house so that the soul cannot depart, we remove the woodchopper from there. Moreover, we do not place salt on his tongue to prevent his death. But if he is dying and he says that he cannot die until he is placed somewhere else, he is not to be moved from there (i.e., from where he is)."

According to this view, artificially delaying the soul's departure causes unnecessary pain and suffering to the *goses*: "Do not feed the *goses*, for he is unable to swallow, but water should be put into his mouth...and one does not shout at the time of the soul's departure, so that the soul does not return and suffer unbearable pain..." (*ibid.*, 234).

Joshua Boaz ben Simon Baruch (Italy, 16<sup>th</sup> century) in his glosses on Alfasi, מ"ק 26b, in *Shiltei ha-Gibborim*, in explaining this passage in *Sefer Ḥasidim* states that it is permitted to discontinue an external act which prolongs the life of the *goses*, but it is forbidden to move him from his place and place him elsewhere, or to do any other action in order to hasten his

death (*ibid.*, 234). This opinion was codified and incorporated into the ruling of the Rema, at Sh. Ar., YD 339:1.

The life-preserving measures dealt with in these sources essentially reflect popular beliefs prevalent in those days. The task facing contemporary authorities was to translate and apply these examples to the life-preserving measures utilized by modern medicine. In that context, it was held that an artificial respiration machine or other artificial life-support mechanisms are analogous to the “grain of salt”; thus it was held that they can be removed in order to discontinue the artificial prolonging of the dying patient’s life. Therefore, “once the physicians have determined that he cannot be cured (i.e., it is clear that he will not recover), it is clearly permissible to disconnect the patient from the machine to which he is connected.” Furthermore, it was even held that “not only is it permitted to disconnect the respirator, *but there is an obligation to do so*. For man’s soul is the property of God and has not God already taken the soul from this person, for as soon as the machine is removed he will die. And quite the opposite, by using the artificial respirator we leave his soul inside him and cause it (the soul, not the dying person) pain due to its inability to depart from the body and arrive at its resting place” (Rabbi H.D. Halevi, bibliography). A similar ruling was given by R. Eliezer Waldenberg (Resp. *Ziz Elièzer*, vol. 13, no. 89; cf. R. Solomon Zalman Auerbach, Resp. *Minhat Shelomo*, 91.24).

R. Ovadiah Hadayah (Resp. *Yaskil Avdi*, YD, vol. 7, no. 40) held that a *goses* is “any patient regarding who all the physicians have given up hope and have determined that he will not recover from his sickness.”

In other responsa, Rabbi Moses Feinstein (Resp. *Iggerot Moshe*, YD, vol 2., no. 74, 73.1, 74.1) and Rabbi Auerbach (Resp. *Nishmat Avraham*, Yad Vashem, 245) make additional distinctions relating to this question, such as the distinction between medical assistance that actually alleviates the patient’s suffering (such as oxygen), which it is mandatory to administer to him, and administering other medicines, and the distinction between standard medical treatment, which the doctors are duty bound to continue administering to the patient, and non-standard medical treatment.

Summing up the position of Jewish law on this subject, Justice Elon wrote in the *Shefer* case:

In Jewish thought, various overarching principles and values operate within the context of this momentous and complex labyrinth of *halakhah* and medicine. Such principles include the sanctity of human life, based on the meta-principle of man’s creation in the image of God; the fundamental precept to “love your fellow as yourself”; the alleviation of pain and suffering; the obligation of the physician to cure and of the patient to be healed; the right of the patient to refuse medical treatment; the decision-making approach of “her ways are pleasant ways”; the requirement that “the laws of our Torah must accord with reason and logic”; as well as other principles discussed above.

The point of departure in the extensive, difficult, and complex area of law and medicine is the supreme value of the sanctity of life. This supreme value is based, as stated, on the meta-principle of man being created in the image of God, with

all that implies. Therefore, the standard of the *worthiness* of a person does not exist, nor could it exist. The law for a physically or mentally handicapped person is the same as that for a healthy person; we do not measure the degree of health of the body or mind. Similarly, no standard exists with respect to the *length* of a person’s life. The same rules apply to a person who has only a short period to live and one who is expected to live a long life: the flickering candle still burns and illuminates. Therefore, *actively* hastening death, or acting to shorten life – even if termed “mercy killing” – is absolutely forbidden, even at the behest of the patient. The obligation, in such situations, is to ameliorate the patient’s pain and suffering in every possible way.

The situation is different with regard to *passive* euthanasia, the non-prolongation of life, known in Jewish law as the “removal of the impediment.” Passive euthanasia is permitted and, according to some authorities, even mandatory in certain cases, after taking into account such factors as the fundamental principle of minimizing the patient’s physical and mental pain and suffering, the wishes of the patient, the negative consequences of treating the patient against his will, and the various types of treatment – ordinary or extraordinary, natural or artificial, etc.

Similar considerations apply when considering the necessity for consent by the patient. In principle, the obligation of treatment is incumbent upon both the physician and the patient, especially when the treatment is necessary to save the person’s life. However, apart from those cases involving immediate danger to life, this principle has been progressively limited, and in various situations the patient... may not be treated against his will.... The consideration of individual autonomy in the decisions of the halakhic authorities came about largely as a consequence of momentous developments in our generation in the field of medicine and the struggle of the halakhic authorities to deal with them. At times, what is determinative is not the opinion of the physician... but rather that of the patient himself, for it is forbidden to “actively cause him to suffer.” Great significance is accorded to the adverse effect that undesired treatment may have on the patient: “The very fact that he is compelled [to undergo the operation] will further endanger him.” This illustrates the methodology of the *halakhah* – it develops and creates itself through the process of case-by-case decision making.

All these and similar questions dealt with by a growing body of contemporary halakhic responsa attest to the diversity of halakhic views on these difficult, tragic questions pertaining to the relationship between the sanctity of life and prevention of pain and suffering, both mental and physical, with all their implications.

### In the State of Israel

The question of shortening, or failing to prolong, the life of a terminal patient has engaged many scholars and writers in the realms of *halakhah*, medicine, philosophy, and law. Over the past few years, with the development of new technological and diagnostic measures at the disposal of the medical system, the courts are often required to decide on these questions. Section 309 of the Israeli Penal Law criminalizes active euthanasia – i.e., an act that causes the shortening of a patient’s life – classifying it as murder. The Israel Supreme Court addressed the issue of the scope and essence of this offense in the *Shefer* case (CA 506/98 *Yael Shefer v. State of Israel*, 48 (1) 87), giving

a leading judgment on the subject. The case concerned a little girl suffering from Tay-Sachs, an incurable genetic disease, and it was undisputed that her days were numbered. Her request (filed by her mother as her guardian) was that in the event of her condition deteriorating, the hospital should refrain from administering life-prolonging treatment. Justice Menachem Elon dealt at length with the aforementioned sources and analyzed the problem from the perspective of the need to strike a balance between the Jewish values of the State of Israel and its democratic values. The court held that, in that case, the mother's request to allow discontinuation of treatment could not be granted, because on the basis of the medical testimony presented to the court, the child was not suffering, her dignity was preserved and, as such, the sanctity of her life, even in its state of being terminally ill, was the sole and determinant value, and any interference and harm to life contravened the values of a Jewish, democratic state.

For additional judgments dealing with this subject, see: OM 528/96 *Bibes v. Tel Aviv-Jaffa Municipality* (Tel Aviv District Court); OM 2242/95 A.A. v. *Kuppat Holim Kelalit*, 2 PDM, 1995, 235; OM 1030/95 *Gilad v. Soroka* (Beersheba District Court).

In order to discuss and formulate a bill regulating policy in this area, the Ministry of Health appointed a committee, headed by Prof. Abraham Steinberg (referred to as the Steinberg Committee). In 2002, the Asher Committee published conclusions. The report discussed the moral, religious, medical, psychological, social, and legal aspects of the problem, and formulated a draft bill. This bill deals with the various categories of dying patients, including those who are legally competent and those who are not, the different forms of treatment, the status of professional caregivers and of the family, and establishes frameworks for the solution of individual problems, as well as for adoption and review of decisions. The draft bill on the subject conformed with the approach of Jewish law to this subject, and was adopted by the Israeli Legislature as binding law in December 2005.

The section defining the purpose of the Terminally Ill Patient Law, 5766 – 2005 (Section 1) stipulates as follows:

(a) The purpose of this law is to regulate the medical treatment of a patient regarding whom it was determined that he is terminally ill, pursuant to the principles set forth in this Law, based on an appropriate balance between the value of the sanctity of life and the value of individual autonomy and the importance of quality of life.

(b) This law is based on the values of the State of Israel as a Jewish and democratic state, and fundamental principles in the realm of morality, ethics and religion.

Basic Principle of the Law (Section 2):

In prescribing the medical treatment for a terminally ill patient, his medical condition, his will, and the degree of his suffering are the exclusive considerations.

The law provides the following definition of a terminally ill patient (Section 6):

(a) An authorized physician may determine that a patient is terminally ill, if satisfied that the patient is suffering

from an incurable illness, and that his life expectancy, even upon receiving medical treatment, does not exceed six months.

(b) An authorized physician may determine that a terminally ill patient is dying if satisfied that his medical condition is such that a number of vital systems in his body have ceased to function, and that his life expectancy, even upon receiving medical treatment, does not exceed two weeks.

The law explicitly prohibits active euthanasia, or assisted suicide, or discontinuation of ongoing medical treatment:

12. Nothing in the provisions of this law shall permit any act, even if constituting medical treatment, that is intended to kill, or which will almost certainly result in death, irrespective of whether or not it was motivated by kindness and compassion, and irrespective of whether or not it was at the request of the terminally ill patient, or of any other person.

13. Nothing in the provisions of this law shall permit any act, even one constituting medical treatment, that contributes to assisted suicide, irrespective of whether or not it was motivated by kindness and compassion, and irrespective of whether or not it was at the request of the terminally ill patient, or any other person.

14. Nothing in the provisions of this law shall permit the discontinuation of the medical treatment of the terminally ill, which is liable to cause his death, irrespective of whether or not he is legally competent [...]

Nevertheless, the law does allow the physician to refrain from providing medical treatment to a terminally ill patient (§8) or to refrain from the renewal of medical treatment (§14):

8 (a). Where a legally competent terminally ill patient does not want his life prolonged, his will should be honored and medical treatment withheld [...]

14. [...] However, it is permitted to refrain from the renewal of medical treatment, which was disrupted inadvertently or not in contravention of the provisions of any law, and it is similarly permitted to refrain from the renewal of periodic medical treatment [...]

The law also regulates the treatment of a terminally ill minor (§§19–21), and of a terminally protected person. Moreover, the law regulates the methods whereby a terminally ill patient can give advance living notice of his wishes concerning the medical treatment that he wishes to receive (ch. 5 of the law). The law further appoints an institutional committee, comprising inter alia a clergyman of the same religion as the patient, to rule on doubtful situations pertaining to the treatment of the terminally ill patient.

#### ORGAN TRANSPLANTATION

Organ transplantation is a new medical technology for the replacement of organs, parts of organs, or tissues that have reached terminal failure, by organs, parts of organs, and tissues that are functional. The transplanted organ may be taken from one part of the person to another, from one person to another, or from an animal to a human being. The transplanted organs

may be artificial or natural, complete (e.g., kidney, heart, liver, etc.), or partial (e.g., heart valves, skin, bone, etc.).

The basic issues involved in organ transplant in Jewish law depend upon the classification of organ being transplanted, being divided into four categories: (a) whether transfer of an organ from the body of the deceased is permitted – a question that arises primarily with respect to cornea and heart transplants; (b) determining the moment of the donor's death – an important issue in the context of heart transplants; (c) whether or not a person is permitted to endanger himself to save his fellow-man – a question that arises in the context of kidney transplant and other transplants involving a donation from a living person; and, if it is permitted, is he obligated to do so; (d) whether a child or person who is otherwise legally incompetent may serve as a donor.

### Cornea Transplants

The questions raised by cornea transplants are common to all forms of transplant in which the transplanted organ is taken from the dead donor. Under what circumstances may an organ removed from a dead person's body serve for the recuperation of another person (see \*Medical Experimentation)?

The *posekim* discuss whether the removal of an organ from a dead person violates the prohibition of deriving benefit from the dead person, the majority opinion being that it does not (Resp. Radbaz, vol. 2, no. 648; *ibid.*, vol. 3, no. 648 (1009); Resp. *Shevet Yehudah*, pp. 313–22). It was further ruled that there was no prohibition of postponing burial entailed in transplants from a dead person to a living person (see: Deut. 21:22–23; Sanh. 44b, and other sources), nor is it considered as neglect of the positive precept of burying the dead organ, because the organ is restored to functionality by the act of being transplanted into a live body, and is hence not classified as “flesh of the dead” (Resp. *Shevet Yehudah*, *ibid.*; Resp. *Seridei Esh*, vol. 2, no. 120; Resp. *Yabi'a Omer*, vol. 3, YD no. 22). The *posekim* also discussed whether the removal of an organ from the dead person's body transgresses the prohibition of mutilating the dead body. According to one view, in order to avoid this prohibition there is a need for a prior living consent to the act (Resp. *Shevet Yehudah*, *ibid.*), and according to another view, it is permitted to remove the organ even without prior living consent in cases of great need, even if it does not involve the saving of a life (H.D. Halevi, in: *Asia*, 4 (1983), 251–59).

Most contemporary halakhic decisors take the view that, if, when confronted by a patient requiring a transplant, his condition is defined as life threatening (*pikku'ah nefesh*), and if the donor agreed while still alive to have his organs taken, it is permitted to remove his organs after his death to transplant them into a live person; there are those who even rule that this is a *mitzvah* – i.e., a religious duty. The family must, however, consent to the removal of an organ from their deceased relative, for purposes of a transplant (Resp. *Iggerot Moshe*, YD 174:4).

### Heart and Liver Transplants

The central issue involved in the context of heart and liver transplants is determination of the moment of death. Today, both the heart and the liver can only be transplanted if the donor's circulatory system is still functional. From the moment the heart stops beating, the blood stops circulating and it is no longer possible to transplant that heart. Thus, in order to successfully transplant a heart, the state of death must be determined prior to the cessation of heartbeat in the donor's body. The question then arises as to whether a person suffering from irreversible brain damage or from actual brain death, but whose heart continues to beat, is considered halakhically alive or dead. Accordingly, the question of whether heart or liver transplants can be permitted touches on the question of determination of the moment of death according to the *halakhah*. In any event, the life of a terminally ill or dying patient cannot be artificially prolonged solely to enable use of his organs for transplanting purposes, because one life may not be set aside to ensure another life (*ein dohin nefesh mipnei nefesh*), and the life of the dying person may not be set aside for the sake of the healthy person's life (Resp. *Iggerot Moshe*; *Minhat Yitzhak*).

According to certain authorities, it is absolutely forbidden to remove an organ from a person defined as brain dead (Resp. *Ziz Eli'ezer*, vol. 10, nos. 25, 85, and 86; *Iggerot Moshe*, YD 2:174), while others permit it (Israeli Chief Rabbinate; see *Te'humim*, 7 (1986), 187–92).

### Kidney Transplants

A kidney transplant is performed, inter alia, by a healthy person donating one of his kidneys to another person whose kidneys are non-functional. The question that arises here is whether the donor is permitted to place himself in danger in order to save another. Since, as stated, the donation is from a living person, an additional question sometimes arises – whether a kidney may be taken from a person who is unable to express his consent, such as a child or a mentally incompetent individual and, if so, who is entitled to consent on his behalf?

An important principle in Jewish law is that “whoever could have rescued, but failed to do so, transgresses the commandment, ‘Do not stand idly by the blood of your fellow’” (Lev. 19:16; see Sanh. 73a; Yad, *Roze'ah* u-*Shemirat ha-Nefesh* 1:14–16; Tur, *HM* 426). Maimonides stated that this prohibition is “one of the most severe, because whoever destroys one single soul... is regarded as if he had destroyed the entire world, and whoever preserves a single soul... is regarded as having preserved the entire world” (Yad, *ibid.*; regarding the halakhic duty to save life in a similar context, see the comments of Justice Beiski, Cr. App. 527/85 *Kurtam v. State of Israel*, 40 (3) PD 673, at 696–97).

When there is no danger to the rescuer, his obligation is absolute. The difficult question is: To what extent is a person required, or perhaps, allowed, to endanger his own life to save another's? This question has troubled the halakhic authorities.

Some hold that a person must expose himself to a possible danger, when necessary to rescue his fellow from a danger that is certain (*Beit Yosef* to Tur, *ḤM* 426); but many disagree (*Sema*, to Sh. Ar., *ḤM* 426, par. 2). A recent halakhic authority aptly summarized the law as follows: “It all depends on the circumstances. One should weigh the situation carefully and not be overly self-protective ... Whoever saves a single person is regarded as if he saved an entire world” (*Arukh ha-Shulhan*, *ḤM* 426:4. For sources discussing this difference of opinion, see: R. Ovadiah Yosef, “*Teshuvah be-Heter Hashtalat Kilyah*,” in: *Dinei Israel*, 7 (1976), 25–43; idem, “*Be-Din Terumat Kilyah*,” in: *Halakhah u-Refu'ah*, 3:61–63; idem, *Resp. Yehaveh Da'at*, vol. 3, no. 84).

The removal of an organ from a person's body in order to save another person's life is discussed by the halakhic authorities in the context of danger to the donor. But this discussion entails a further inquiry: Is there any basis at all for obligating a person to donate an organ to save someone else? The following answer was given by the outstanding halakhic authority, David ibn Zimra (Radbaz), a 16<sup>th</sup>-century rabbi of Egypt and Israel, against the tragic-heroic background of the Diaspora, and the government's treatment of its Jewish minority (*Resp. Radbaz*, vol. 3, no. 1052): “You have asked me... [what should one do] if the government says to a Jew: ‘Allow us to sever one of your limbs, which will not cause your death, or we will kill your fellow Jew!’”

Radbaz answered that, even if it is certain that the amputation is not life-threatening, there is no obligation to allow it. One is *permitted* to allow the amputation, and it would be an act of great piety to do so. Radbaz's summary is instructive: “and furthermore, it is written ‘Her ways are pleasant ways’ (Prov 3:17). [This means that] the laws of our Torah must accord with reason and logic. How then can we suggest that a person should allow his eye to be blinded or his arm or leg amputated in order that someone should not be killed? Therefore, I do not see such an act as a legal obligation, but as one of pious behavior. Happy is the lot of anyone who can bring himself to do such a thing. [But] if there is any possible danger to his life, he would be a pious fool, because his doubt has priority over the certainty of his fellow.” (Regarding the principle of “Her ways are pleasant ways” in the determination of *halakhah*, see: Menachem Elon, *Ha-Mishpat ha-Ivri* (1988), 3:323 ff.; idem, *Maft'e'ah ha-She'elot ve-ha-Teshuvot shel Hakhmei Sefarad u-Zefon Afrikah*, *Maft'e'ah ha-Mekorot* (vol. 1, 1981), Introduction, p. 25.)

The removal of a person's organ in order to save his fellow, even if not involving danger to the donor, cannot be compelled, because it violates the principle that the ways of the Torah are pleasant, and “the laws of our Torah must accord with reason and logic.” Based on this, it is inconceivable that a person could be compelled to donate an organ from his body to save another person, although such behavior would be considered an act of piety, on a voluntary basis, and it is desirable that a person do so, beyond the letter of the law (see also *Resp. Radbaz*, vol. 5 of *Leshonot ha-Rambam*, no. 212 (1682),

and the attempt to reconcile these two responsa, which goes beyond the scope of this article).

This responsum of Radbaz is one of the central texts in the discussion among contemporary halakhic authorities regarding a kidney donation for transplantation in the body of another person. The issues considered include that of potential risk to the donor, whether an individual may wound himself, and similar halakhic questions. Opinions differ. Some forbid kidney donation (*Resp. Ziz Eli'ezer*, vol. 9, no. 45; vol 10, nos. 25, 7, 28; and cf. Weiss, *Resp. Minhat Yizhak*, vol. 6, no. 103), but most authorities hold that, although one is not obligated to donate, it is an act of great piety when there is no risk to the donor (M. Feinstein, *Resp. Iggerot Moshe*, *YD*, vol. 2, no. 174:4; responsum of R. Solomon Zalman Auerbach, quoted in *Nishmat Avraham*, *YD* 157:4, at 66–67 (1985); responsa of R. Ovadiah Yosef, sources cited above; Rabbi H.D. Halevi, in: *Assia*, 4 (1983), 251–59; Rabbi Y. Silberstein, in: *Halakhah ve-Refu'ah*, 4 (1985), 156–57; Rabbi S. Dikhovsky, *Ne'ot Desheh*, 2:154–155). In our generation those who ruled that it was forbidden for a living person to donate a kidney claimed that it may be dangerous, and it is forbidden to a person to put himself in a state of danger (*Ziz Eli'ezer*; *Resp. Minhat Yizhak*). There were those who permitted a living person to donate his kidney, regarding it as an act of piety, but there is no obligation to do so (*Resp. Iggerot Moshe*, *YD*, vol. 2, no. 174:4). And among those who permit it there were those who ruled that the donation of a kidney from a living person is not only permitted, but it constitutes a *mitzvah*, and failure to fulfill it violates the prohibition of “Do not stand idly by the blood of your fellow,” because the risk is minimal and the chance of the remaining kidney being damaged in the future is sufficiently remote so as not to be regarded as even being remotely dangerous (see Rabbi Ovadiah Yosef, in: *Dinei Yisrael*, 7 (1976), 25–43; *Resp. Yehaveh Da'at*, vol. 3, no. 84).

### Legally Incompetent Person

In certain cases the most appropriate donor in terms of tissue classification is a legally incompetent person. There is no halakhic permission for the removal of a kidney from a legally incompetent person for the purpose of a transplant. This is the case when dealing with one who is mentally incompetent. This prohibition applies unless it is clear that the legally incompetent person derives clear benefit from the donation, and it is performed exclusively for his benefit, and provided that there are no other means of ensuring that benefit (*Justice Elon, LCA 184/87, 698/86 Anon. v. Anon. 42 (2) PD 661*. See also: Rabbi M. Meiselman, *Halakhah ve-Refu'ah*, 2 (1981), 114, who wrote that if the majority of sons or brothers donate kidneys to their relatives, there is a presumption based on common sense that the legally incompetent person would also have given his consent. Justice Elon rejected this view).

Regarding blood and bone marrow donations, it was ruled that these are permitted since they do not involve any danger, and the material regenerates. It is therefore a *mitzvah* for members of a family to volunteer to do so when required in

order to save a life, and in such cases lenient rulings are given even with respect to the legally incompetent person (*Nishmat Avraham*, YD 349:3). If the donor refuses, according to some authorities he cannot be compelled, the donation being considered as an act of piety, while according to other authorities, he can be compelled (Resp. *Shevet Halevi*, vol. 5, no. 219).

In the famous case of *Anon. v. Anon.* (LCA 184/87, 698/86 *Anon. v. Anon.* 42 (2) PD 661), Justice Elon discussed the issue of whether it is permitted to remove the kidney from a mentally disabled adult to be transplanted in his father-guardian's body and, if so, who has the authority to grant such permission, and under what conditions and circumstances. In keeping with his judicial practice, Justice Elon relied on precedents from Jewish law (as shown above) and on the legal sources and practices of other democratic states, attempting to synthesize between them. Justice Elon concluded his judgment in this case as follows (*ibid.*, 689–90):

The general rule is that the sole criterion for allowing the removal of a kidney from the protected person's body for transplantation is whether the removal benefits the *protected* person. The court must weigh up and balance, in accordance with the conditions detailed above, the extent of the benefit to be gained by the protected person as a result of the transplant into the donee's body, against the damage that may be caused to him by the removal of the kidney and the fact that he will be left with only one kidney. The balancing process must be based on the specific circumstances of the protected person, in his current condition, as it may be in each particular case that comes before the court. The court will allow the transplant only if the result of this balancing definitively establishes that the transplant will clearly and substantially benefit the protected person [...].

How can the court perform this balancing? One can point to a number of tests, which are not exclusive, but will be applicable in most situations.

(A) *Factors in Assessing the Benefit to the Protected Person*

1. The extent of the protected person's dependence on the support of the donee;
2. The existence of alternatives to assure the support and necessary care of the protected person at a level comparable to that which he would receive as a result of donating the kidney. These include other possible donors, whether dialysis is a sufficient remedy, and whether there are sources of support, without the donee;
3. The likelihood – both relative to the alternatives and absolutely – that the transplant will be successful and, if so, the extent to which it will increase the donee's life expectancy, and the significance of that increase for supporting the protected person;
4. The life expectancy of the protected person and the number of years during which he will need support and, in particular cases, his interest in helping his family members or in avoiding guilt feelings, when this interest is clearly proved. This interest must exist at the time of the transplant, if only to a limited extent, and must be expected to increase progressively.

(B) *Factors in Assessing Harm to the Protected Person*

1. Physical damage and side effects
  - (a) due to the surgery;
  - (b) due to being left with one kidney.

2. Mental damage to the protected donor
  - (a) as a result of the surgery and hospitalization;
  - (b) as a result of the removal of the kidney without his understanding or consent.
3. Limitation on his future actions as a result of being left with one kidney, taking into account his situation as a mentally disabled individual, both from the point of view of protecting his health and considering the fact that he will not be preferred for dialysis or transplant should he ever need it.

In light of the circumstances of the particular case, the Supreme Court ruled against the transplanting of the kidney of the mentally disabled son into his father. Justice Elon concluded his opinion with the following observations (*ibid.*, 700–1):

The question before us is difficult and painful. We have a father, devoted to his son, who removed him from an institution and cared for him with love and dedication. We have no doubt that the father's request for the kidney was made because he was told that his son would not be hurt and because he was convinced that it was in the son's best interest that his father enjoy a long life and continue to care for him. But we, as a court, are instructed, by law and morality, to look at the total picture in this situation. We must keep in mind that at issue is the invasion of a person's body and the removal of one of his vital organs – an organ which does not regenerate and for which there is no substitute. Moreover, the donor does not understand what is happening to him and what is being taken from him. How disingenuous and possibly even cynical it is to use the term “donation” to describe the taking of a kidney under these circumstances.

Scholars and thinkers have discussed the social, familial, and psychological pressures operating when an individual needs to decide whether or not to donate a kidney to a family member. Indeed, even when referring to a totally healthy person, it is doubtful that the proper term is “donation,” since a donation is essentially linked to the idea of “if his heart so moves him” (Exodus 25:2). A fortiori, there is certainly doubt in our case, under the aforementioned circumstances. Not only is there no donation here made out of generosity, but this is a prime example of coercion. This is a serious matter that could severely damage the cultural and spiritual fabric of our society. As a court, we are the “father” of the legal incompetents, of those who do not understand and cannot consent or decide on their own, and we must protect those unfortunates to maintain their dignity as human beings. As such, we are not superior to the father before us, who sired the child and cared for him his whole life. We would never think that. But we are appointed by law to weigh all the considerations – legal, halakhic, and ethical – that arise in these situations, and in this respect, and only in this, do we take precedence over the father. By examining all the considerations and balancing them, we have concluded that we should not allow the removal of the kidney from the son for the father. We again urge that all efforts be made to obtain a transplant for the father from a cadaver so that he can continue caring for his son.

**Trafficking in Organs**

Commerce and organ donation are contradictory concepts; “doing business” with human organs conflicts with fundamental spiritual and ethical values. Recently, learned schol-

ars, halakhists, philosophers, and ethicists have discussed the reasons for prohibiting the sale of human organs. For example, it is customary to pay for the donation of blood to a blood bank, because the body replenishes the blood, and the donation does not endanger the donor. The same is true for donations of bone marrow. But giving up a kidney in exchange for money raises grave doubts and difficulties. The essential question here is: Where will the “slippery slope” end? Societal, psychological, and economic pressures may bring us to an “organ market” of “spare parts,” and to a situation where the bodies of the poor become “supply depots” for the rich. The actuality is that the rich will not sell any of their bodily organs but the poor – even when they have no relationship with the donee – are likely to sell their organs to rescue themselves from poverty and need. This is an ominous prospect from the perspective of human dignity and value. Therefore, as a general rule, we should avoid setting foot on this slippery slope, and any allegedly exceptional circumstances should be evaluated case by case and with great care (Elon, *ibid.*).

In the year 2003 Knesset Member Zahava Gal-On presented a draft bill to prevent trafficking in organs, known as the “Bill to Outlaw Trafficking in Organs.”

THE LEGAL POSITION IN ISRAEL. The Anatomy and Pathology Law, 5713 – 1953 defines the ways in which organs may be removed from a cadaver for transplant purposes:

6. Anatomical-pathological operations

(a) A physician may operate on a body in order to ascertain the cause of death or to use a part thereof for the curative treatment of a person if it has been confirmed by a certificate signed by three physicians authorized on that behalf in accordance with the regulations that the operation serves one of the said purposes.

(b) (1) The body of a deceased person shall not be dissected before the expiration of five hours after notice of the death is given to a relative. Sabbaths and Jewish holidays or, in the case of a non-Jewish relative, the Sabbaths and holidays of his community, shall not be included in the count of the said five hours.

(2) Notwithstanding the provisions of paragraph (1), where the dissection is required in order to use a part of the body for the curative treatment of a person, reasonable notice to such effect shall be given to a relative before the dissection.

(c) (1) Where the need to use a part of the body of a deceased person to save a person’s life becomes apparent, the period referred to in subsection (b) shall be replaced by the period up to the latest time at which it is possible to remove the part from the body for use as aforesaid. If notice under subsection (b) cannot be given by the said time, owing to the impossibility of locating a relative, a dissection under this subsection may be performed provided that a reasonable attempt to give notice has been made.

(2) Without prejudice to the generality of the provisions of paragraph (1), the use of the cornea of a deceased person for a transplant to save a person from blindness, the use of a part of the body of a deceased person to prevent a defect of vision or hearing, and the use of a kidney or of skin tissues of a de-

ceased person for a transplant to save a person’s life are uses of parts of a body for the saving of a life.

6A. Restrictions

(a) Where a deceased person has left any relatives, his body shall not be dissected under section 6 – except under circumstances referred to in section 6(c) – unless the following two requirements are also met:

(1) the spouse or, in the absence of a spouse, the children or, in the absence of children, the parents or, in the absence of parents, a brother or sister of the deceased has or have consented;

(2) no relative of the same degree of relationship as a consenting relative, and no relative of the degree which, in the circumstances of the case, is next in the order of degrees appearing in paragraph (1), have objected in writing.

(b) Where the person in his lifetime objected in writing to his body being dissected, then, notwithstanding the provisions of section 6 or any consent of a relative under subsection (a), the dissection shall not be performed.

(c) Where the person consented to his body being dissected, it may be dissected notwithstanding any objection by a relative.

(d) In the circumstances referred to in section 6(c), a body may be dissected unless the person in his lifetime objected in writing to his body being dissected or unless his spouse or one of his parents or children objects thereto in writing.

(e) Where the person has left no relatives, his body shall not be dissected unless he consented thereto in his lifetime.

(f) The provisions of this section shall be in addition to those of section 6.

The law provides (§6D), that “the provisions of section 6A shall not apply in wartime or at the time of a large scale terrorist act or an accident or disaster causing numerous casualties.” Furthermore, Section 6A established a penalty of three years’ imprisonment for a person transgressing the provisions of the law.

An additional aspect of organ transplants from a dead body dealt with in Israeli case law is the determination of the moment of death. The question of the moment of death was dealt with by the Israeli courts in the context of criminal law. In one of the cases the court was required to determine responsibility for the death of a person who was shot in the head, mortally wounded, and rushed to hospital, where the doctors succeeded in saving his life by connecting him up to the life-support machines. With his family’s consent, the victim was subsequently disconnected from these devices. The question arises: Who was responsible for his death – the gunman or the doctor? Did the victim’s disconnection from the life-support system sever the causal connection between the victim’s death and the murderer’s act?

Another case in which the same question arose was the *Belker* case. In 1986 an indictment was submitted against Yehzekel Belker for attacking his wife, throwing her out of the window of their fourth floor apartment, and causing her mortal injury. The woman was rushed to hospital, and when efforts to save her had all failed, her death was established on the basis of brain death. The deceased remained connected to the life-support machines until her family living abroad con-

sented to the donation of her organs. When her husband was indicted for murder, he claimed that the woman's death was not the result of his attack, but rather, was the direct result of her being disconnected from the respiratory machine by the medical staff. Ruling on this claim required the court to address the question of the moment of death, and to decide as to whether the medical determination of brain death should also be regarded as a legal determination. The District Court ruled that brain death is death for all intents and purposes, on which basis it convicted him of murder. The husband appealed to the Supreme Court (Cr. A. 341/82) 42 (1) *Nathan b. Yehzekel Belker v. State of Israel* PD 1) which ruled (per Justice Beiski) that, in accordance with the accepted rules for determination of death (as established by the Harvard Committee), and provided that the determination of death was made by an independent medical team not belonging to the team performing the transplant and/or the team actually treating the patient, a determination of brain death is considered as death for all intents and purposes. In such a case a death certificate may be issued and medical treatment terminated. Such a determination of death is in turn valid for all other legal or social purposes, including an indictment for murder. The Court recommended that the issue of determination of death be regulated by legislation. In this context, Justice Strasbourg-Cohen's comments bear mention. She ruled that, even had the trial court adopted the previous criterion of cardiac death, the doctor's action in disconnecting the life-support machines would not have severed the causal connection between the act of the accused and the death of the deceased. Absent the actions of the accused, the final result would not have occurred, and had the doctors not interfered, the death would have occurred immediately following the attack.

The Ministry of Health issued a Director-General circular, updated several times, stipulating provisions for the determination of brain death. The circular was published in 1996 (Director-General Circular 10/96; the most recent as of 2005), the first section of which cites portions of the Supreme Court judgment with respect to the validity of brain death determination. The second section provides guidelines for the categories of examinations to be conducted for diagnosing death. The circular stipulates a series of preconditions, necessary conditions, and auxiliary tests for determining brain death.

#### ARTIFICIAL INSEMINATION

Artificial insemination is the medical procedure whereby sperm is injected into the vagina or womb of the woman without the act of sexual intercourse. A distinction is made between three categories of artificial insemination, in accordance with the source of the sperm: (1) husband insemination – where the husband contributes the sperm; (2) donor insemination – where a man who is not the wife's husband is the donor or where the sperm is taken from a sperm bank; and (3) mixed insemination, using a mixture of the husband's sperm with that of a donor. The processes of fertilization in the woman's womb, pregnancy, and birth, continue naturally

after the artificial insemination, as in any normal impregnation. Artificial insemination can only take place under conditions in which there is no defect in the woman's fertility, either anatomically or physiologically (see below: fertilization outside the body – *In Vitro* Fertilization). Rabbi Eliezer Waldenberg begins his lengthy responsum on this topic with the following comments:

Physicians have recently invented a new method by which a woman can become pregnant via artificial means, without sexual intercourse. Sperm is obtained from a donor, and when a woman desires to become pregnant without intercourse she is inseminated artificially, becomes pregnant, and gives birth. This method is most often used when a married couple is unable to have children due to an impediment on the part of the husband. While they do not wish to get divorced, the wife desires to have a child. In these circumstances, some physicians perform artificial insemination so that the wife may become pregnant and give birth. The question asked is whether such a procedure is permissible under Jewish law, and what is the status of the resulting child.

In considering the procedure of artificial insemination, modern halakhists refer to aggadic precedents indicating that the talmudic and mishnaic Sages were aware of the possibilities of impregnation other than by way of natural means. Inter alia they cite the *aggadah* of the birth of Ben-Sira from Jeremiah's daughter, who conceived from her father's seed that remained in the bath in which she bathed (see: *Helkat Mehokek*, EH 1:8; *Mishneh la-Melekh* on Yad, Ishut 15:4; Hidda, *Birkei Yosef* (vol. 2, 1989), EH 1:14; Rabbi D. Bardugo, Resp. *Mishpatim Yesharim* (1891), vol. 1, no. 396).

#### Moral and Halakhic Considerations

We already mentioned above that issues of *halakhah* and medicine generally pose a plethora of moral and halakhic questions, particularly where they involve technological innovations. For this reason, halakhic discussion of these issues is not confined to conceptual issues alone, but also encompass policy considerations. One such consideration relates to the uncertainty surrounding the issue of the lineage (*yihus*), of the child born as a result of using donor sperm. This uncertainty conflicts with the basic halakhic aspiration for certainty in matters of lineage, i.e., certainty regarding the family they belong to (see Rashi, Yevamot 42a, s.v. *u-le-zarakha aharekha*). There are also several other general policy issues, transcending the problematics of lineage. The morally-based questions and fears that have typified the dialogue on these questions throughout the world are of equal concern to modern halakhists. They too are apprehensive about the danger of crossing of traditional borders, coming in the wake of scientific progress. For example, it has been stated that bringing children into the world should be the result of spousal relations involving marital love and intimacy, and not of mechanical laboratory techniques (see P. Shiffman, *Dinei Mishpahah be-Yisra'el*, 2 (1989), 105; E. Jacobovitz, *Ha-Refuah ve-ha-Yahadut* (1966), 235). In this context, the following comments of Rabbi E. Waldenberg are germane:

And especially when we have already read that the final result of test-tube fertilization is that sooner or later it will lead to the creation of a test-tube baby, i.e., the entire pregnancy will take place and terminate outside the woman's body, in the test tube itself, by way of simulating the conditions inside the womb; and then, by means of an astonishing procedure known as cloning, human beings will be produced by the implantation or transposition of the nucleus from a mature cell into an enucleated human egg, after which the reproductive process of the regular cell operates and continues to develop into an embryo, and this is the name that they give to a complete biological creation, in accordance with certain previously determined parameters to reproduce the specific characteristics desired by its creators. And if this happens – can such infants be called “offspring,” with full lineage to their progenitors who wish them to be considered their genetic offspring? For in addition to the abnormal form of production and bringing children into the world, it also causes the destruction and loss of the human image, and chaos will reign with respect to the whole field of procreation, which will become a laboratory devoid of any humaneness. This problem has already been predicted by scientists, who have expressed their deep anxiety over the anticipated scenarios – a new generation will emerge and all those witnessing it will exclaim “new ones have come, who were unimagined by their forefathers, [so that we] see creatures of this kind, almost without free choice, and human form.”

**ARTIFICIAL HUSBAND INSEMINATION.** Various *posekim* take the view that the husband is forbidden to emit semen for the purpose of inseminating his wife, due to the prohibition of “destruction of seed,” because at the time of masturbating for the purpose of ejaculating the semen, its emission is in vain, and the fact that the physician subsequently uses the semen for fertilizing the woman is to no avail. Furthermore, there is a possibility that the woman will not be fertilized by that semen, and as a result the semen will retroactively transpire to have been emitted in vain. However, the predominant halakhic opinion is that the procedure does not involve “destruction of seed” when emitted by the husband for purposes of fertilization, because the procedure is a remedial one, for purposes of a *mitzvah*, and it does not matter whether the end is attained by natural means or otherwise. At the same time, a number of limitations were imposed: the permission is limited to parties who have been childless for a period of ten years, and who in the absence of fertilization are liable to divorce. Two physicians must decide that the procedure is effective, i.e., that the woman does not suffer from any fertility problem and that there is a reasonable chance that the husband's sperm will succeed in impregnating the wife; the doctors must take special care not to exchange the husband's sperm for another person's sperm. In the event that fertilization is prevented due to early ovulation of the woman, as a result of which she is unable to purify herself from her *niddah* status at the appropriate time to allow fertilization by natural means, there are opinions that permit husband artificial insemination. The *posekim* also debated the question of whether the husband fulfills the commandment of procreation in the case of artificial insemination. The accepted view is that the husband does so, because

the commandment is not dependent on the act of intercourse, but rather on the result of the birth of a live fetus.

**NON-JEWISH DONOR INSEMINATION.** A different set of problems arises in Jewish law regarding artificial insemination from a donor other than the husband. The central question is whether artificial insemination is permitted at all with the sperm of a man other than the husband, and if not, are there any circumstances in which it is permitted, and subject to what limitations. Is the woman thereafter permitted or forbidden to her husband, as in the case of an adulterous wife, and what is the lineage and the status of the child?

*Non-Jewish Donor.* While all *posekim* agree that *de jure* there should be no insemination even from a non-Jewish donor, there are nevertheless those who permit it in the case of sad, despairing parents who yearn for a child. A child born under these circumstances is a Jew for all intents and purposes.

**JEWISH DONOR INSEMINATION.** There is broad halakhic consensus that artificial insemination of a woman from the sperm of a Jewish donor is prohibited. A variety of reasons are given for this prohibition: some moralistic, based on the classic model of the family in the Jewish philosophy, and others halakhic, related to the uncertainty of the identity of the donor-father. At the same time, the halakhists dispute whether a married woman impregnated by a Jewish donor is prohibited to her husband. One view is that a woman artificially impregnated by semen of a donor is not prohibited to her husband, because there was no act of forbidden intercourse involved, and Torah law only forbids a woman to her husband and to her lover if an act of forbidden sexual relations was involved. Among the supporters of this view were the Sephardi chief rabbi, Rabbi Ouziel (Resp. *Mishpetei Uziel*, EH 19); Rabbi M. Feinstein (Resp. *Iggerot Moshe*, EH, nos. 10, 11, 71); Rabbi Y. Breisch (Resp. *Helkat Yaakov*, vol. 1, no. 24); Rabbi E.Y. Waldenberg (Resp. *Ziz Eli'ezzer*, vol. 3, no. 24); Rabbi Y.Y. Weinberg (Resp. *Seridei Esh*, 6), and other leading *aharonim*. The position prohibiting the wife to her husband is based on the interpretation of the biblical verse, “you shall not lie carnally with your neighbor's wife,” as extending to any implantation of semen in the woman's womb. Among the proponents of this view are R. Jonathan Eybeschutz (*Benei Ahuvah*, Ishut, 15); Rabbi J.L. Zirelson (Resp. *Ma'arkhei Lev*, 73); and the rabbi of Satmar, R. Yoel Teitelbaum (“*Teshuva bi-devar Hazra'ah Melakhutit be-Zera Ish Aher*,” in: *Ha-Ma'or*, 16:9–10 (Sept.–Oct. 1964), and others.

The *posekim* also disputed the question as to whether the child was regarded as the child of the sperm donor, in which case he would be prohibited against marrying members of the sperm donor's family, he would be the donor's heir, and the donor would be regarded as having fulfilled the commandment of procreation. Some ruled that the child would be regarded as his real son, while others argued that this ruling only applied for purposes of stringency and not for leniency, i.e., that the child was forbidden from marrying, for example, the

daughter of the sperm donor, but does not inherit him. The *posekim* were divided over whether, in the event of his marrying the daughter of the donor, his offspring would in turn be considered a *mamzer*.

**ANONYMOUS DONOR.** Where the donor's identity is unknown – e.g., when taken from a sperm bank – it has been suggested that, even according to the view that the offspring of artificial insemination is not a *mamzer*, in such a case he would be classified as a *shetuki* (“undisclosed”); see: \**Mamzer/shetuki*). Some *posekim* wrote that, in the case where the sperm comes from outside of Israel, where there is a non-Jewish majority, it may be presumed that the sperm belongs to a non-Jew and therefore the offspring is legitimate.

Where the sperm is mixed with that of the husband, the *posekim* wrote that it should be regarded as if it was exclusively the outside donor's sperm, because the husband's sperm is inactive and the mixture is intended to placate the husband psychologically. In such a case, the husband is also regarded as having transgressed the prohibition of “destruction of seed.”

#### Artificial Insemination in Israeli Law

The Israeli legislator enacted the Public Health (Sperm Bank) Regulations, 5739 – 1979, under which “No person shall manage a sperm bank, or be engaged therein, unless that sperm bank was recognized by the director, and in accordance with the conditions of recognition. The director shall not recognize a sperm bank unless it is managed in a hospital and as a part thereof. For purposes of the regulation, “manager” has the same definition as in section 1 of the Public Health Regulations, *viz.* the director general of the Ministry of Health, or person empowered by the director to enact these regulations.” Following Supreme Court consideration of the matter, a clause limiting the rights of unmarried women to receive treatment for *in vitro* insemination treatment was repealed, so that today, subject to certain conditions, an unmarried woman is entitled to receive a sperm donation.

**ARTIFICIAL INSEMINATION IN HALAKHIC CASE LAW.** The first decision on this subject was given by the Jerusalem Rabbinical Court on November 6, 1975, and published by the *av bet din*, Rabbi Eliezer Waldenberg (presiding with Rabbis Y. Cohen and Y. Attiah) in his book *Ziz Elièzer*, vol. 3, no. 97. The litigants in the regional rabbinical court were a childless couple. Without her husband's knowledge, the wife had been treated by a doctor who performed an artificial insemination procedure from a sperm bank. The treatment led to positive results, and the woman became pregnant from foreign donor sperm. Upon becoming aware of this, the husband filed for divorce. The woman conceded the truth of his claims, but claimed in her defense that a medical examination had confirmed that the husband was sterile, and unable to father a child. She had requested that her husband agree to adoption, but had received a negative answer. Wanting a child of her own, she had taken a path that enabled her to become pregnant. The Bet Din was confronted with the legal question as

to whether the woman's consent to be artificially inseminated from donor sperm without her husband's knowledge provided grounds for divorce, even though it had not yet ruled on the question of whether the wife was forbidden to her husband, having become impregnated in that manner. Another question to be decided was the legal import of the husband's refusal to adopt, against the background of his infertility. The Bet Din Court accepted the husband's claim, compelled the wife to receive a *get*, and further ruled that the woman had forfeited her *kettubah*. Following is an excerpt from the judgment:

In consenting to the sperm of another man to be injected into her, the woman betrayed both her husband and God, and she is therefore obligated to receive a *get* from her husband. She cannot stipulate any financial conditions prior to the giving of the *get*, nor request that her husband transfer the apartment currently under both of their names into her name alone.

In explaining the reasons for its decision, the head of the Rabbinical Court (*av bet din*), presented a comprehensive excursus on the issue of artificial insemination and its halakhic ramifications, concluding that there could be no greater abomination. Notwithstanding the opinion that the wife was not forbidden to her husband when she resorted to this method with her husband's consent, it was not disputed that the wife was obliged to receive a *get* when the treatment and the pregnancy were without his knowledge. The upshot of this ruling was that the wife had no recourse to the defense plea that her husband had refused her request to adopt despite his proven infertility. Because: “if she required a solution to the problem then she had the opportunity of coming to the Rabbinical Court and making that claim, and to request that her husband be compelled to give her a *get pitturin*, and she would have found an attentive ear.” The Rabbinical Court thus took a positive view of the defendant's desire for a child of her own, to the extent of being willing to compel her husband to divorce her, had she so requested. But, “there is a vast chasm between this, and the commission of an act ‘that undermines the very foundations of the family unit between her and her husband, and which the halakhic authorities had unanimously condemned.” According to the Bet Din the wife's yearning for children did not ameliorate the gravity of her action, which was all the more severe in that she had concealed it from her husband. Regarding that point, it added the following remarks in its decision:

At all events, should the husband desire to give her a *get* for that reason – namely, that she had undergone artificial insemination without his knowledge, even though she had not become pregnant thereby – the wife should be compelled to receive a *get pitturin*, both because of the halakhic dispute in this matter as stated, and furthermore, because the actual commission of this abomination in her body without her husband's knowledge places her in the category of a woman who has transgressed Mosaic law and Jewish practice, and the law applying to her should therefore be the same... Moreover, there is also a view that the act itself makes her prohibited to her husband, and the husband can therefore claim, “I choose to abide by that opinion,” and he cannot be forced to give a *kettubah*.

The last (as of 2005) Rabbinical Court decision on the matter was also given in the Regional Rabbinical Court of Haifa, on 6<sup>th</sup> Av, 5737 – 1977. The parties were a husband and wife with a four-year-old mentally retarded child, diagnosed as having a particularly low intelligence level. The child was born following the woman undergoing artificial insemination from donor sperm. The husband consented to this treatment due to the fact, not denied by the parties, that he was unable to fertilize the wife. Both parties petitioned the Bet Din. The wife requested the Bet Din to order the husband to pay maintenance for herself and the child, asking for a high sum, in accordance with the rule *olah imo* (lit., “she goes up with him”) – i.e. that her maintenance increases by reason of his high earnings, and by reason of the treatment of the retarded child who required special equipment. The husband filed for a *get*, claiming that his wife’s act was a ground for divorce, because the artificial insemination from the sperm of a donor was tantamount to an act of sexual license, making the wife forbidden to her husband. As such, there were grounds for exempting him from her maintenance, and he was therefore also exempt from the obligation of child support. The Bet Din was requested to rule on the question of whether the defendant could be compelled to pay child support when it was not disputed that the plaintiff’s (wife) child was not the defendant’s (father) child. The question arose: What is the legal significance of the defendant’s consent to this medical procedure? The Bet Din in the first instance dismissed the husband’s divorce suit, obligating him to pay maintenance for the wife and child support for the child, whose treatment necessitated huge expenses. Explaining the reasons for its decision, the Bet Din expressed its opinion:

...in support of the opinion that denies even a shadow of illicit sex in the act of artificial insemination, which might have provided a ground for divorce or even the forfeiture of maintenance. And as the foremost decisors of our generation have ruled [...] the exemption from maintenance applies – when the insemination was performed in defiance of the husband’s will and without his being aware of it. From this it may be inferred quite simply that, if it was done with his consent, and he was aware of it – he is liable to support the child born from that insemination.

Regarding the wife’s claim for maintenance, the Bet Din added another reason:

Since he agreed to this procedure, he assumes all of the obligations arising therefrom, according to the law of a guarantor, and there is no doubt that under these circumstances expression is given to all of the conditions that would compel a guarantor (even though it could be claimed that he assumed an undertaking for normal offspring, and that his undertaking was limited to those circumstances, but since he did not limit his undertaking he should also be liable for irregular expenses which are occasioned by the offspring).

Does this decision support the conclusion that, in the Bet Din’s opinion, artificial insemination from a donor with the husband’s consent does not constitute illicit sexual relations which would prohibit the wife to her husband and obligate her

to receive a *get*? This would seem to be the reasonable conclusion, subject to some degree of reservation based on the fact that the decision does not indicate whether the Bet Din in principle negates the very act of artificial insemination, or whether under the special circumstances of the case, in which the husband consented to the treatment, it is removed from the category of illicit sexual relations or, in the words of the Bet Din “denies even a shadow of illicit sex in the act of artificial insemination.” At all events, in our opinion, the Bet Din does not view the aforementioned act as constituting grounds for divorce, because the wife was not prohibited to her husband as is a woman who is unfaithful to the husband while married to him. However, since the Bet Din did not see how it could oblige the defendant to support a child who was not his own, based on the law of child support, it was forced to obligate him by force of the law of a guarantor. It therefore emerges that the husband’s consent has practical significance with respect to maintenance. In other words, his consent is tantamount to an implicit assumption of liability for all of the financial consequences of the act of insemination.

An interesting comparison may be drawn between the aforementioned rulings of the rabbinical courts and the ruling of the Israeli Supreme Court. In the sole decision given to date in a civil court concerning the issue of artificial insemination from the sperm of a donor the husband’s consent to the treatment was one of the main foundations. The litigants were a married couple that had remained childless after several years of marriage, due to a defect in the husband’s ability to produce functional sperm cells, and a disturbance in the woman’s ovulation process. With the husband’s consent, the woman underwent artificial insemination, which was successful, and the woman gave birth to a daughter. About one year later disputes erupted between the spouses and, after failing to reconcile their differences, the woman filed a maintenance action against her husband, on behalf of herself and for her daughter. In the course of the trial, the couple was divorced, and the court was thus left to adjudicate the daughter’s child support suit against her father. The District Court obligated the father to pay child support, and the father appealed the decision to the Supreme Court (CA *Salma v. Salma*, 448/79, 34 (2) PD 778). President Y. Kahn wrote the judgment, in which he accepted the “additional reason” invoked by the District Court, and which was the basis of the judge’s decision to obligate the father to pay child support. He wrote as follows:

By agreeing to his wife undergoing artificial fertilization, the defendant agreed to the addition of another person to his family... the defendant’s consent should be regarded as including an implicit undertaking to support the minor that would be born as a result of the fertilization... When a person agrees to his wife being fertilized by way of artificial fertilization, he agrees and undertakes by implication both to his wife and for the benefit of the child to be born, to support and feed the minor to be born from that fertilization.

Two things may be inferred from this decision: (a) When the husband consents to his wife’s fertilization by artificial insemination

nation from the sperm of a donor, he undertakes to bear all of the consequent costs – financial and otherwise – with respect to the child to be born from that act; (2) The husband's undertaking to his wife for child support, which flows from his consent to this form of treatment, is unrelated to the legal connection that existed at the time of the suit, or thereafter, between the child's mother and the defendant.

In a recent ruling handed down by the Israeli Supreme Court (HC 2458/01 *Mishpahah Hadashah v. Committee for Approving Surrogate Agreements* (not published)) on the topic of *in vitro* fertilization (see below), Justice England referred to the position of Jewish law regarding this issue:

When dealing with a case of a donor to a married woman, importance attaches to the donor's identity [and the] the distinction between a Jewish donor and a non-Jewish donor. According to all opinions, it is halakhically prohibited to use, *de jure*, the sperm of another Jew. In principle, sperm insemination of a Jewish donor who is not the husband of the married woman is regarded as disgraceful and an abomination. See Rabbi E.Y. Waldenberg, Resp. *Ziz Eli'ezzer*, vol. 3, no. 27; Rabbi Y. Breisch, Resp. *Helkat Yaakov* (1992), EH 12; Rabbi Y.Y. Weinberg, Resp. *Seridei Eish* (1999), vol. 1, no. 79. Halakhically speaking, certain *posekim* take the view that the offspring from donor sperm is a *mamzer* for all intents and purposes. Others rule that he is of doubtful *mamzer* status. There are also those who rule that, in the absence of intimate relations, i.e., without prohibited intercourse, the offspring is categorically not a *mamzer*. For a discussion of the opinions of the first view, see, e.g., Rabbi E.Y. Waldenberg, Resp. *Ziz Eli'ezzer* (1967), vol. 9, no. 51; Resp. *Yaskil Avdi*, *ibid.* For the second view, see Rabbi S.Z. Auerbach, "Hazra'ah Melakhutit," in: *Noam*, 1 (1958), 145, 165. For the third view, see Rabbi Moses Feinstein, Resp. *Iggerot Moshe* (1961), EH, vol. 1, no. 61; Resp. *Helkat Yaakov*, *ibid.* For additional sources, see Rabbi D.M. Kroizer, "Hazra'ah Melakhutit," in: *Noam*, 1 (1958), pp. 111, 119f.

There are authorities who hold that, where the donor is unknown, the offspring is a "shetuki" regarding whom there is also a doubt regarding *mamzerut*. See Resp. *Seridei Eish*, *ibid.*; Resp. *Helkat Yaakov*, *ibid.*, notes to EH, 20, n. 11.

Another grave concern regarding the anonymous donor pertains to the possibility of a future marriage of a brother and sister. See Resp. *Iggerot Moshe*, *ibid.*; Resp. *Seridei Eish*, vol. 1, no. 69; Resp. *Ziz Eli'ezzer* (1951), vol. 3, no. 27.

Regarding a non-Jewish anonymous donor: All of the *posekim* agree that *ex ante* his sperm should not be used, for the act is disgraceful. Nevertheless, in this case there is no halakhic fear of *mamzerut* or marriage of a brother and sister. Consequently, the procedure of artificial insemination was permitted for cases in which the parents are in a state of acute distress and greatly desire a child. For this view, see the aforementioned article Resp. *Iggerot Moshe*, *ibid.*, and the article cited of Rabbi S.Z. Auerbach. For the view that prohibits this treatment under all circumstances, see: Resp. *Helkat Yaakov*, *ibid.*, EH, no. 14; Rabbi Y.Y. Weiss, Resp. *Minhat Yizhak* (1939), vol. 4, no. 5; cf. Resp. *Seridei Esh* (1966), vol. 3, no. 5. In the case of an unmarried woman, while there is no fear of *mamzerut*, there is still the fear of a sister and brother marrying, and the offspring being a *shetuki*. A compilation of the various problems raised in the letters of the *posekim* appears in A. Steinberg, *Enziklopedyah Hilkhait Refu'it* (1988), entry: *Hazra'ah Melakhutit*, pp. 148–61.

## IN VITRO FERTILIZATION (SURROGATE MOTHERHOOD)

*In vitro* fertilization is the act of fertilizing the woman's eggs outside the woman's body by means of sperm cells and, after fertilization, returning the fertilized embryo to the woman's womb, or freezing the embryo for the purpose of returning it at a later stage. The offspring of that procedure is popularly known as a "test-tube" baby, referring to the initial stage of fertilization in the test-tube. A woman carrying an embryo for another woman, with the intention of giving her the child born to that woman, is called a surrogate or host mother. All of the scientific, halakhic, moral, and legal issues pertaining to husband or donor sperm required for fertilizing an egg in a Petri dish are identical to those arising in the context of artificial insemination (see above Artificial Insemination). This entry discusses those unique aspects of *in vitro* fertilization that do not exist in artificial insemination.

The halakhic discussion in the entry on *in vitro* fertilization is introduced by Prof. Rabbi Abraham Steinberg with the following statement:

Notwithstanding the immense medical-technological progress in the field of *in vitro* fertilization, as in the field of genetic engineering, none of this contradicts the basic foundations of Judaism, and the belief in the creation of the world and of humankind exclusively by the Almighty. In all these procedures, the creation involves making "something from something," and there is no possibility of creating "something from nothing." ...The Jewish outlook does not accept the conception that demands the preservation of the law of nature, and therefore eschews human and technological interference in natural processes. To the contrary, humankind is a partner to the Almighty in the improvement of the world in all realms.

### *In Vitro* Fertilization Between Husband and Wife

Several halakhic authorities permit *in vitro* fertilization between a husband and wife provided that all precautions are taken to prevent the mixing of the husband's sperm with alien sperm, and provided that the couple have no other possibility of building their family. According to the permitting authorities (see inter alia, *Nishmat Avraham*, EH, 1.e.3) a "test-tube" baby for all intents and purposes continues his parents' lineage, and halakhically this procedure is deemed identical to artificial insemination. Accordingly, those who permit artificial insemination between husband and wife also permit *in vitro* fertilization. However, certain halakhic authorities prohibited this procedure, based on moral considerations: for example, the fear that it would create reproductive-social havoc, and the fear of mixing up sperm and the consequent defiling of the sanctity and purity of lineage in the Jewish people. There are also those who prohibited it on halakhic grounds, even between a husband and wife. One explanation for the distinction between *in vitro* fertilization and artificial insemination is that in the latter the sperm is injected directly into the woman's womb, so that the procedure does not involve destruction of seed should the procedure be unsuccessful, whereas in the case of *in vitro* fertilization the seed is placed

in a Petri dish, so that if the fertilization is unsuccessful, it is considered as seed destruction. A second explanation is that the need for artificial insemination is generally the result of the husband's infertility and according to certain views, the prohibition of destruction of seed does not apply to a sterile male. In *in vitro* fertilization, the problem is generally the woman's, and therefore the prohibition on seed destruction is valid regarding the husband. Those authorities permitting it claim that the prohibition of seed destruction does not apply when performed for the purpose of bringing a child into the world, and that even in natural intercourse some of the sperm is spilt and lost. Therefore, in *in vitro* fertilization, since it is intended to bring a child into the world it is not considered as being a vain emission of sperm.

### **In Vitro Fertilization by Egg Donation**

The very act of *in vitro* fertilization using a donor egg involves several prohibitions, the gravest of which is the fear of social havoc, confusion of lineage, and the possibility of incest between the egg-donor's children. Certain stringent authorities also wrote that the prohibition is not on the act per se, but that it is seen as one that ought to be avoided *ab initio*. In any event, every effort must be made to ascertain the identity of the donor, and to enact whatever regulations are required to avoid any mishaps in this regard.

Where the woman donated the egg, which was subsequently fertilized in a test tube, the fertilized embryo then being implanted in the womb of another woman, the question of the definition of maternity arises. Whom does the *halakhah* view as the child's mother: the biological mother (egg donor) or the host mother, in whose womb the embryo develops?

Some posekim take the view that the genetic mother has the status of mother in terms of *halakhah* (see I. Warhaftig, "Kevi'at Imahut – be-Shulei ha-Devarim," in: *Tehumin*, 5 (1984), 268). Nevertheless, the majority view is that halakhically, the host mother is considered as the mother (see Rabbi Z.N. Goldenberg, "Yihus Imahut be-Hashtalat Ubar be-Rehem shel Aheret, *ibid.*, 248; *Ziz Eli'ezzer* (1992), vol. 19, no. 40). Finally, there are some authorities who contend that both women are seen as related to the progeny, specifically for purposes of definition of incestuous relations (see Z. Lev, "Tinok Mavhenah – Ma'amad ha-Em ha-Pundeka'it," in: *Emek Halakhah*, 2 (1989), 163, 169).

The view of most *posekim*, that the surrogate mother is also considered the mother from a halakhic perspective, relies inter alia on an ancient aggadic tradition that this kind of situation occurred between the matriarchs Rachel and Leah in their respective pregnancies with Dinah and Joseph. According to the tradition, in her final pregnancy, Jacob's wife Leah was carrying a son in her womb. At that time Jacob had already fathered ten sons: six from Leah's womb, two from Bilhah, and two from Zilpah. This meant that, had she given birth to the son in her womb, he would have been the 11<sup>th</sup> son of Jacob (who was predestined to have a total of 12 sons), and Rachel would only have been able to give birth to one son. Leah did

not want Rachel to have only one son, which would have reduced her stature to below that of the handmaids, who had two each, so she prayed that she not give birth to the son, so that Rachel would be able to give birth to the two sons who were still to be born. According to one version of the *aggadah*, the embryo in Leah's womb turned into a girl (Ber. 60a), while according to another version, the switch of gender was attained by another method. After praying that she not be the one to give birth to the male child in her womb, the sisters' embryos were switched: the male in Leah's womb going into Rachel's womb, and the female in Rachel's womb to Leah (see *Midrash Sekhel Tov* (ed. Buber), Gen. 30, s.v. *ve-ahar yaledah*).

### **In Vitro Fertilization in Israeli Legislation**

In 1987 special regulations concerning *in vitro* fertilization were enacted – The National Health (*In Vitro* Fertilization) Law 5727 – 1987. In 1996 the State of Israel enacted the Agreements Relating to the Carrying of Embryos (Approval of the Agreements and Status of Offspring) Law, regulating the subject of surrogacy. The Israel Supreme Court (HC 2458/01 *Mishpa'ah Hadasha v. the Approvals Committee for Surrogacy Agreements*) (not yet published), addressed the question of whether these legislative arrangements for carrying embryos, which prima facie do not apply to a woman without a male spouse, are not discriminative. The court did not rule on the matter, referring it back to the Legislature.

The Israeli Supreme Court delivered two long and detailed rulings on the subject of *in vitro* fertilization in general, and specifically, on the right of parenthood (CA 5587/93 *Daniel Nahmani v. Ruthy Nahmani et al.*, 50 (4) PD 661). After a number of years of childless marriage, and after Ruthy Nahmani had undergone a total hysterectomy, rendering her unable to become pregnant by natural means, the couple decided to bring a child into the world by way of *in vitro* fertilization. The eggs taken from Ruthy's womb were fertilized by the sperm of her husband, Danny, and frozen in the hospital. The couple contracted with an American institution for the purpose of locating a surrogate mother who would carry their child. However, prior to reaching that stage, Danny left their domestic home, went to live with another woman, created a new family, and fathered a daughter while still legally married to Ruthy, who refused to accept a divorce. Ruthy turned to the hospital with the request to be given the fertilized eggs in order to continue the surrogacy proceeding. When the hospital refused her request, she applied to the Haifa District Court, which granted her request. In its first adjudication on the appeal against the District Court's decision, the Israeli Supreme Court accepted Danny Nahmani's appeal in a majority decision. In a further hearing (CFH 2401 /95 *Ruthy Nahmani v. Danny Nahmani et al.*, 50 (4) PD 661) the previous decision was reversed and Ruthy Nahmani's appeal was accepted in a majority decision.

Regarding the issue of abortion in Jewish law, see separate entry \*Abortion.

[Menachem Elon (2<sup>nd</sup> ed.)]

**MEDINA** (Ar. **Madīna**; ancient name, **Yathrib**), city in fertile valley of the \*Hejaz in northern \*Arabia. Along with \*Tayma and \*Khaybar, Medina was a leading Jewish community in ancient Arabia. Prior to the expulsion of most of Medina Jewry by \*Muhammad (620s) the oasis was largely inhabited by Jews. According to legend, the Jewish community dates from Moses’ war against the Amalekites, the Babylonian Exile (c. 586 B.C.E.), Antiochus IV’s persecutions, and the defeat by Rome (70 C.E.). In any case, by the early centuries of the Christian era the population of Medina consisted mostly of Jewish tribes (according to some Arabs, up to 20 tribes), either of Judean-Palestinian, mixed Judeo-Arab, or Arab proselyte origin. Remains of their life survive, including castles, courtyards, and wells, the first of which were dug by the \*Naḍir tribe who inhabited the best lands and cultivated date palms west of the city. The two other major tribes were the \*Qurayza, who occupied an area in the southeastern part of the town, and the \*Qaynuqā’, who were among the earliest settlers and resided in the central market. Other tribes included the Thalaba (northeast of the city) and the Anī, a tribe of Arab proselytes who lived in the Qubā area (south of Medina). There was a continuous Arab migration

to the area and many Arab tribes assimilated into the Jewish milieu, accepting Judaism and acquiring skills such as writing, which up to that time was known only by Jews. The two major Arab tribes, the Aws and the Khazraj, settled in the area, coming from South Arabia in the middle of the fifth century. They came because the breaking of the Ma’rib dam had ruined their lands. Some of the Arabs lived among the Jews, others in areas far from Jewish settlement. They were subjects of the Jewish tribes. The Khazraj gained some independence from the Jews in later times after a bloody battle, which according to legends broke out as a result of the Jewish king Faytun’s demand to exercise the *jus primae noctis* on Arab subjects. Henceforth domination of Medina gradually passed to Arabs; the Jewish tribes aligned themselves with the Aws or the Khazraj, who threatened to confiscate the Naḍir lands. Fighting between these two major tribes and their Jewish clients (Naḍir and Qurayza with Aws; the Qaynuqā’ with the Khazraj) characterized the sixth century and is recalled in Arabic poetry, including that of the Jew \*Samuel b. Adiya. The bloody battles ended with the victory of the Aws and peaceful settlement with the Khazraj. Shortly before Muhammad’s arrival in Medina the Jewish population had reached between 8,000 and 10,000, forming a majority of the city’s inhabitants. The presence of so large and vital a Jewish community (though Arabic in language, customs, and behavior) provided an atmosphere conducive to the acceptance of monotheism among Arabs. Hence, Muhammad’s message found a receptive audience among many Arabs and a few Jews. Most Jews, however, scorned Muhammad, deriding his prophetic pretensions and adaptations of biblical material. Concerned about the effect of such vehement opposition, Muhammad began to expel the Jewish tribes with whom he had formerly signed an agreement. The Qaynuqā’ and the Naḍir were expelled from Medina in 624 and 626, respectively. The Qurayza men were annihilated in 627 and the women and children were sold into slavery. The Jewish tribes apparently did not assist one another or unite against the common enemy, each meeting its fate as an individual tribe. The small Jewish population which remained in Medina was powerless and could not cause Muhammad much trouble. The community eventually dwindled and died out.

[Zēv A. Maghen (2<sup>nd</sup> ed.)]

**MEDINA, AVIHU** (1948– ), lyricist and composer. Medina was born in Tel Aviv to Yemenite parents. His mother's family arrived in the country in 1906 and settled in Jerusalem; his father, who came from Yemen in 1939, was a *hazzan*. Avihu graduated from Kibbutz Kissufim High School. After his military service (1970), he began writing lyrics and composing their melodies. His first song, "Al Tira Yisrael," won the third prize in the first festival of Oriental communities' songs held under the auspices of Israel's state radio in 1971. For the next ten years he was to receive first prize in a number of festivals. Among the songs he wrote are "La-Ner ve-la-Besamim" ("For the Candle and the Perfumes"), "Kinnor David, Barekheni" ("Bless Us"), "Peraḥ be-Ganni" ("Flower in My Garden"), "Al Tashlikheni" ("Don't Cast Me Away"), "Shabbēhi Yerushalayim" ("Praise Thee Jerusalem"), "Bein ha-Tov la-Ra" ("Between Good and Evil"). His songs were performed by some of Israel's best artists, such as Shimi Tavori, Zohar Argov, Boaz Sharabi, Ofra Haza, Eyal Golan, Deklon, and many others.

In 1991 Avihu began singing his own songs. In 1994 Omanut La'am awarded him the "Silver Cylinder," which is the crowning prize for the most popular artist. In 1995 he received the Writers and Composers Prize for lifetime achievements in the field of light music. Avihu Medina has released nine albums – the ninth, *Ein Li Mano'ah*, in 2004 – and a book of songs, *Simanim shel Derekh*.

Medina, a leading figure in the period of Ethnicity, devoted much of his time to the promotion of "Mediterranean Israeli music." He believes that "it is a style born of traditional and cultural Jewish roots and of the Israeli experience in all its forms."

He is the chairman of the Israeli song department on the Committee for Art and Culture.

[Nathan Shahar (2<sup>nd</sup> ed.)]

**MEDINA, SAMUEL BEN MOSES DE** (known by the acronym *Maharashdam*; 1506–1589), rabbi, halakhic authority, and communal leader of \*Salonika. Medina was descended from a distinguished family of scholars which originated from Spain. He was one of the three outstanding \**posekim* of Salonika of the 16<sup>th</sup> century, the others being Joseph ibn \*Lev and Solomon b. Abraham ha-Kohen. Medina was dogged by misfortune throughout his life. Orphaned in his childhood, his sister and two of his sons-in-law died in his lifetime and the burden of the maintenance of his widowed daughters and their many children fell upon him. The death of his elder brother, a man of means who had educated him and supported him financially, added to these burdens. The death of his eldest son left a permanent mark on him and affected his health. He was obliged from time to time to undertake journeys, in all probability in order to improve his financial position. Until his position in Salonika was established, he devoted himself completely to study, finding in it consolation for his sorrows. Medina founded a yeshivah in Salonika in which he introduced the system of teaching of the great Spanish talmudic scholars from the time of Isaac \*Campanton and his succes-

sors. It had many disciples, a number of whom became famous and he himself says that some of them were worthy of heading yeshivot themselves. They include Aaron Abayuv, Joseph ibn Ezra, Abraham di Boton, David Naḥmias, and Abraham ibn Aruz. The yeshivah was supported by Donna Gracia Mendes (\*Nasi) and was highly praised by his contemporaries.

Medina was the accepted halakhic authority both in his own and succeeding generations for European Turkey and the Balkans. Queries were addressed to him from all parts of the Ottoman Empire and Italy and his published responsa number over 1,000. Jacob Alfandari (*Maggid me-Reshit*) compares him and Solomon ha-Kohen to "Maimonides and the Rosh (Jacob b. Asher) in their time." Ḥayyim \*Shabbetai says of him: "He was an expert judge and of encyclopedic knowledge and one must not deviate an iota from his decisions" (*Torat Ḥayyim* 3:70). Some even went so far as to take an oath by the names of these two rabbis to give authority to their decisions (Aaron Sasson, *Torat Emet* 80). Although many scholars such as Isaac Adarbi, Moses of \*Trani, Jacob Samut, and even his own maternal grandson Samuel Ḥayyun disagreed with him, his decision always prevailed. His decisions were incorporated in those of Eastern European scholars in later generations. For historians his responsa constitute a most important source for the period in all its aspects, and his decisions are often quoted in modern times by judges in Israel in support of their decisions.

Medina's personality and character emerge clearly from his many responsa. He imposed his authority on litigants by the power of his personality and succeeded in enforcing just compromises even when there was no basis for them in law. This firmness and self-confidence were revealed even in his youth (cf. J. Caro, *Responsa Avkat Rokhel*, 219). They find striking expression in his stern rebuke to the scholars of Safed, who included Caro, for presuming to intervene in the affairs of the community of Salonika (Resp. YD 80) and he did not refrain from sharp and vigorous language, especially in his polemics.

Medina was original in his method. He would give a decision in accordance with his own judgment when he found no precedent in the *halakhot* of his predecessors. Utterly fearless, he was alert to all problems which arose from the special circumstances of his time and place, and many of his responsa deal with the social and economic problems which exercised the minds of his contemporaries. Medina applied himself to the communal organization of the Spanish exiles, which he established on a solid juridical basis. In the controversies which reigned in Salonika and elsewhere as a result of the glaring gap between the rich and the poor, Medina maintained the right of the wealthy members of the community to regulate the direction of communal affairs. According to him it was not numbers but quality which counted and it was right that, as had been the custom in Spain, the leadership of the community should be in the hands of those who bear its financial burden, providing they were loyal to religious principles. With all his respect for local custom, he strove to make it accord with the

*halakhah* as he saw it. Where that custom differed from that in force in Spain, he justified the latter on halakhic grounds and encouraged its gradual adoption, whether in the liturgical usage or in matters of *shehitah*, etc. Unlike his predecessors his consistency in this matter did not meet with great opposition. Medina's decisions with regard to \**anusim* are important and are stamped with the same original approach as he showed in other matters for which there was no legal precedent. He regarded the community of Salonika and especially its educational institutions as being in a unique position, and as a result demanded a greater financial support for them than for the institutions in Erez Israel.

Side by side with his intensive halakhic activity Medina filled certain communal offices. He was the rabbi of the most important and largest congregations of Iberian communities in Salonika among them those of "Gerush" (i.e., of the exiles) and Lisbon, and went to Constantinople on missions on behalf of Salonika. He was called on to decide in the serious disputes which arose in Salonika and other communities, and succeeded in preventing schisms. His authority is seen in the fact that his signature appears on the majority of the communal regulations (*haskamot*) which have come down. Unlike many of his contemporaries of Spanish provenance Medina did not engage in Kabbalah, nor did he enter deeply into philosophy and secular studies. He was the man of *halakhah* and the communal leader par excellence. Despite his often unsatisfactory financial position he refused to take advantage of the exemption from taxes granted to scholars. Toward the end of his life legends were woven about him.

Medina's responsa were published during his lifetime in two volumes (Salonika, 1585?-87) and an improved edition in three volumes (Salonika, 1594-98). A considerable number also appear in the works of other scholars, while others are still in manuscript. Thirty of his sermons were published in *Ben Shemu'el* (Mantua, 1622) and his novellae on a number of tractates of the Talmud are still in manuscript.

Medina's son Moses was a man of means and a scholar. He was responsible for the founding of a Hebrew printing press in Salonika in 1594 and published his father's responsa. He succeeded his father as rabbi of the Portugal community in Salonika.

Moses had two sons, Judah and Shemaiah. The former, a *dayyan* in Salonika, was murdered by an assassin hired by a Jew because of a verdict given against him. This tragedy caused his brother, who was also a scholar and communal leader of Salonika, to move to Venice where he became one of its scholars. He published his grandfather's *Ben Shemu'el*, and some of his poems were published in *Hadashim la-Bek-arim* (Mantua, 1622).

[Joseph Hacker]

**MEDINA, SIR SOLOMON DE** (c. 1650-1720), army contractor and the first professing Jew in England to receive a knighthood. He was born in Bordeaux as Diego de Medina, but lived in Holland until William of Orange's invasion of England in 1688, which he helped to finance. An English example of the \*Court Jew, he was principal army contractor to the duke of Marlborough during the War of the Spanish Succession (1701-14), supplying money, provisions, and particularly intelligence. These transactions ultimately contributed to the duke's downfall. Medina was active in and contributed generously to the London Sephardi community but died abroad in poverty. He is wrongly identified with the Jew whose bankruptcy was blamed by \*Voltaire for his financial difficulties.

[Vivian David Lipman]

**MEDINACELI**, town in Castile, N. Spain, near Sigüenza. A Jewish community existed there as early as the 12<sup>th</sup> century. The *fuero* ("municipal charter") of Medinaceli gave the Jews a status equal to that of the Christians and Moors in legal matters. In the 13<sup>th</sup> century the community numbered 20 to 30 families. Jewish occupations included agriculture, viticulture, commerce, and crafts. In 1280 Abraham of Medinaceli made an agreement, valid for four years, with the bishop of Sigüenza to open and exploit salt mines (see \*Salt Trade). The bishop was to supply Abraham with the necessary equipment, finance the project, and provide him with lodging. In 1290 the communities of Medinaceli and Sigüenza together paid annual taxes and services amounting to 34,217 maravedis, which indicates considerable prosperity. The community continued to exist throughout the 15<sup>th</sup> century. It was taxed 91 castellanos in 1485 as a contribution to the war against Granada. The synagogue, which passed to the Church after the expulsion of the Jews from Spain in 1492, was restored by the government.

[Haim Beinart]

**MEDINA DEL CAMPO**, town in N. Castile, between \*Olmedo and Rueda. The Jewish community was particularly prosperous during the 13<sup>th</sup> century: in 1290 its annual tax amounted to 44,000 maravedis. By the 14<sup>th</sup> century the community consisted of between 50 and 100 householders. In 1313 the regulations on Jewish affairs of the regional council of \*Zamora were applied to Medina del Campo. They covered

the employment of Christians in Jewish homes, the distinctive badge to be worn by the Jews, the prohibition on practicing medicine, interest rates, and the dismissal of Jews from public functions. Nothing is known of how the community fared during the persecutions of 1391, but afterward a \*Converso community existed there. In 1459 Medina del Campo was the center of the activities of the monk \*Alonso de Espina against Conversos suspected of practicing Judaism. During that year he found 30 Conversos who had undergone circumcision. Some of the Conversos prepared to depart for North Africa. One of them, the physician Magister Franciscus, circumcised himself and immigrated to Erez Israel. Therefore, like \*Huesca and Ciudad Real, in the 1450s and 1460s Medina del Campo was a center for the return to Judaism. After the edict of expulsion (1492), those who left the town presumably crossed the borders of the kingdoms of Navarre and Portugal. The last rabbi of the community was Isaac Uzziel, who probably settled in Salonika after the expulsion.

**BIBLIOGRAPHY:** Baer, Spain, index; Baer, Urkunden, 2 (1936), index; B. Llorca, in: *Sefarad*, 2 (1942), 119; A. Marx, *Expulsion of the Jews from Spain* (1944), 85, 100; Suárez Fernández, Documentos, index.

[Haim Beinart]

**MEDINA DE POMAR**, town in Castile, N. Spain. The Jewish settlement here was one of the flourishing communities in 13<sup>th</sup>-century Castile. Like other Jews in the area, Jewish residents of Medina de Pomar owned vineyards and lands and engaged in commerce and crafts. Joseph Nasi and Abraham \*Benveniste de Soria, both of Medina, supplied grain and money to the army stationed on the border in 1429–30. On March 12, 1475, two Jewish cloth merchants, Josi Leal and Moses Sasson, complained that the authorities had prohibited visiting Jews from trading and buying goods in Medina. Conversely in 1490 the Jews of Medina complained to the crown that the Bilbao municipal council had banned visiting Jews from staying there overnight and that they had therefore been unable to attend the fair at Medina del Campo. After the edict of expulsion of the Jews from Spain in 1492, the Jews of Medina de Pomar asked the crown for redress because the Christians had refused to pay their debts. Ferdinand and Isabella ordered the municipal authorities to deal with the matter expeditiously to enable the Jews to leave on time.

[Haim Beinart]

**MEDINAH**. In Hebrew writings emanating from the Muslim-influenced areas, *medinah* is used to mean city. In Ashkenazi culture, especially in the later Middle Ages and early modern times, *medinah* denotes a region embracing several or many communities organized as a territorial unit for the purpose of \*autonomy and leadership.

**BIBLIOGRAPHY:** J. Katz, *Tradition and Crisis* (1961), 122–34.

**MEDINI, ḤAYYIM HEZEKIAH BEN RAPHAEL ELIJAH** (1832–1904), rabbi. Medini was born in Jerusalem. He studied under Isaac \*Covo and Joseph Nissim \*Burla. His father died in 1853, and in that same year he traveled to Constantinople where he stayed for 14 years. For a while he earned his living as a private tutor but lectured publicly without remuneration. He attracted many disciples, some of whom later became rabbis. From 1867 to 1899 he was rabbi of Karasubazar in the Crimean peninsula and succeeded in raising the previously low spiritual standard of the community. He instituted local *takkanot*, abrogated strange customs or amended and restored them to their proper origin, and founded schools and yeshivot. He opposed \*Firkovich, showing that his claim that the people of Crimea were descended from the Karaites was without foundation. He was an ardent Zionist, and in his works there are many passages extolling the virtue of settling in Erez Israel, the forthcoming redemption, and on the duty of settling in Israel and supporting its poor. He became seriously ill in 1878 and it seems that he was then given the additional name of Ḥayyim. In 1899 he returned to Jerusalem where he was received with great honor. His books won for him a reputation, and religious and halakhic problems were addressed to him from the whole Jewish world. In 1901 he heard that there was a proposal to appoint him \**rishon le-Zion* (Sephardi chief rabbi), but unwilling to accept this office, he moved to Hebron where he served as rabbi until his death. He founded a yeshivah there, meeting part of its maintenance from his private resources. His fame as a man of saintliness spread to the non-Jews who honored him and regarded him as a wonder worker.

Medini's fame rests principally on his *Sedei Hemed*, which he began in the Crimea, a halakhic encyclopedia of exceptional originality, 13 of the 18 volumes of which were published during his lifetime (Warsaw, 1891–1912). It is one of the most monumental halakhic works, and is still extensively used. It contains rules of talmudic and halakhic methodology, an alphabetical list of the various laws, and responsa. In addition, it contains bibliographical research and articles on the lives of Jewish scholars and of the history of Erez Israel. At the beginning of volume 14 is his lengthy ethical will which reflects his lofty spiritual and moral stature. He wrote a supplement to it, entitled *Pakku'at ha-Sadeh* (in *Ha-Méassef*, 5, Jerusalem (1900), supplement). Among his other works are *Mikhtav le-Ḥizkiyyahu* (Smyrna, 1868), talmudic novellae and responsa on *Orah Ḥayyim*; *Or Li* (*ibid.*, 1874), novellae and responsa – published anonymously in memory of his only son who died in 1868; *Ne'im Zemirot* (Warsaw, 1886), *piyyutim* which it was the custom to recite every morning. Several of his poems were published at the beginning of *Sedei Hemed*, volume 6. Many of his responsa and approbations are to be found in the works of contemporary rabbis.

Ben-Jacob, in: *Hed ha-Mizrah*, 3 (1944/45), no. 30; M. Benayahu, *ibid.*; L. Jung (ed.), *Men of the Spirit* (1964), 107–21.

[Abraham Ben-Yaacob]

**MEDITATION** (Heb. *Hitbonenut*), a term which first appears in kabbalistic literature, from the middle of the 13<sup>th</sup> century, referring to protracted concentration of thought on supernal lights of the divine world and of the spiritual worlds in general. Many sources, however, in this connection use the terms *\*kavvanah*, or *\*devekut* (“cleaving”) of thought to a particular subject, and of “contemplation of the mind.” The kabbalists did not distinguish between the terms meditation and contemplation – a distinction prevalent in Christian mysticism. In the kabbalistic view, contemplation was both the concentrated delving to the depths of a particular subject in the attempt to comprehend it from all its aspects, and also the arresting of thought in order to remain on the subject. The arresting and delving in spiritual contemplation do not serve, therefore, to encourage the contemplating intellect to advance and pass on to higher levels, but first of all to gauge to the maximum its given situation; only after having tarried in it for a protracted period does the intellect move on to a higher step. This, then, is contemplation by the intellect, whose objects are neither images nor visions, but non-sensual matters such as words, names, or thoughts.

In the history of the Kabbalah a different contemplation preceded this one: the contemplative vision of the *\*Merkabah*, for which the ancient Merkabah mystics of the tannaitic and amoraitic period strove, and which was described in the *Heikhalot Rabbati* of the *heikhalot* literature. Here the reference is to an actual vision of the world of the chariot which reveals itself before the eyes of the visionary. Therefore the term *histakkelut* is used here in the exact sense of the Latin term *contemplatio* or the Greek *theoria*. The contemplation of the Merkabah mystics, in the first period of Jewish mysticism, provided the key, in their opinion, to a correct understanding of the heavenly beings in the heavenly chariot. This contemplation could also be achieved by way of preparatory stages which would train those who “descend to the Merkabah” to grasp the vision and pass on from one thing to another without being endangered by the audacity of their assault on the higher world. Even at this stage, the vision of the Merkabah is bound up with immunization of the mystic’s senses against absorption of external impressions and concentration through an inward vision.

In the Kabbalah, the conception of the ten *Sefirot*, which reveal the action of the Divine and comprise the world of emanation, was superimposed upon the Merkabah world. This contemplation of divine matters does not end, according to the Kabbalah, where the vision of Merkabah mystics ended, but is capable of ascending to greater heights, which are no longer the objects of images and vision. The concentration on the world of the *Sefirot* is not bound up with visions, but is solely a matter for the intellect prepared to ascend from level to level and to meditate on the qualities unique to each level. If meditation activates at first the faculty of imagination, it continues by activating the faculty of the intellect. The *Sefirot* themselves are conceived of as intellectual lights which can only be perceived by meditation. The Spanish kabbalists in the 13<sup>th</sup> cen-

tury knew of two types of meditation: one which produces visions similar in kind if not in detail to the visions of the Merkabah mystics, and the second which leads to the communion of the meditating mind with its higher sources in the world of emanation itself. *\*Moses b. Shem Tov de Leon* describes in one of his books how an intuition of the third *Sefirah* (*Binah*) flashes up in the mind through meditation. He compares this to the light which flashes up when the rays of the sun play on the surface of a bowl of water (MGWJ, 1927, 119).

The instructions on the methods to be employed in performing meditation form part of the hidden and secret teachings of the kabbalists which, apart from some general rules, were not made public. The kabbalists of Gerona mention it in connection with the description of the mystic *kavvanah* in prayer, which is described as a meditation concentrating upon each word of the prayer in order to open a way to the inner lights which illuminate every word. Prayer, according to this idea of meditation, is not just a recitation of words or even concentration on the contents of the words according to their simple meaning; it is the adherence of man’s mind to the spiritual lights and the mind’s advancement in these worlds. The worshiper uses the fixed words of the prayer as a banister during his meditation which he grasps on his road of ascension so that he should not be confused or distracted. Such meditation results in the joining of human thought to the divine thought or the divine will – an attachment which itself comes to an end, or is “negated.” The hour of prayer is, more than any other time, suitable for meditation. *\*Azriel of Gerona* said: “The thought expands and ascends to its origin, so that when it reaches it, it ends and cannot ascend any further ... therefore the pious men of old raised their thought to its origin while pronouncing the precepts and words of prayer. As a result of this procedure and the state of adhesion which their thought attained, their words became blessed, multiplied, full of [divine] influx from the stage called the ‘nothingness of thought,’ just as the waters of a pool flow on every side when a man sets them free” (*Perush ha-Aggadot*, 1943, 39–40). In such meditation, which progresses from one stage to another, there was also a certain magic element, as can clearly be deduced from the detailed description in another piece by *Azriel* called *Sha’ar ha-Kavvanah la-Mekubbalim ha-Rishonim*. Meditation does not only ponder and penetrate its object; it has the power to bring about changes in its object and likely to cause transformations as it reaches the common root of opposing extremes. In most descriptions of the methods of meditation which were preserved from the golden era of Spanish Kabbalah, however, this magic element was concealed or completely glossed over in silence.

A detailed elaboration of the doctrine of meditation is to be found particularly in the teachings of Abraham *\*Abulafia*. The whole of his *Hokhmat ha-Zeruf* was designed, he believed, to teach a lasting and safe approach to meditation. It consists principally of instruction concerning meditation on the Holy Names of God and, in a wider sense, meditation on the mysteries of the Hebrew alphabet. This meditation, which

is not dependent on prayer, was described in his more important manuals as a separate activity of the mind to which man devotes himself in seclusion at given hours and with regular guidance by an initiate teacher. Here again the point of departure is the mortification of the activity of the senses and the effacement of the natural images which cling to the soul. Meditation on the holy letters and names engenders pure rational forms in the soul, as a result of which man is able to comprehend the exalted truths. At certain stages of this meditation, there appear actual visions, such as are described in the work *Ḥayyei ha-Olam ha-Ba* for instance, but these are only intermediate stages on the road to pure contemplation of the mind. Abulafia negates from its very start the magical element which was originally attributed to such meditation.

The difference between the Christian and the kabbalistic doctrines of meditation resides in the fact that in Christian mysticism a pictorial and concrete subject, such as the suffering of Christ and all that pertains to it, is given to the meditator, while in Kabbalah, the subject given is abstract and cannot be visualized, such as the Tetragrammaton and its combinations.

Instruction in the methods of meditation were widespread in the works of early kabbalists and these methods continue to be found after the expulsion from Spain among several kabbalists who were influenced by Abulafia. An anonymous disciple of Abulafia has left (in *Sha'arei Zedek*, written in 1295) an impressive description of his experiences in the study of this meditation. The works *Berit Menuḥah* (14<sup>th</sup> century) and *Sullam ha-Aliyyah* by Judah \*Albotini, one of the exiles from Spain who settled in Jerusalem, were also written in the same spirit.

The most detailed textbook on meditation into the mystery of the *Sefirot* is *Even ha-Shoham* by Joseph ibn Ṣayyah of Damascus, written in Jerusalem in 1538 (Ms. National and University Library, Jerusalem; see G. Scholem, *Kitvei Yad be-Kabbalah* (1930), 90–91). The kabbalists of Safed paid much attention to meditation, as is evident from *Sefer Haredim* (Venice, 1601) of Eleazar \*Azikri, from chapter 30 in Moses \*Cordovero's *Pardes Rimmonim* (Cracow, 1592), and the *Sha'arei Kedushah* of Ḥayyim \*Vital, part 3, chapters 5–8, propounds his doctrine on the subject. Here the magic aspect attached to meditation is once more emphasized, even though the author explains it in a restricted sense. The last steps in the ascension of the meditating mind which seeks to bring down the influx of the supernal lights to earth require meditative activities of a magic nature, which are known as *Yihudim* ("Unifications"). The practical importance of these doctrines, whose influence can be recognized throughout the whole of late kabbalistic literature, should not be underrated. The doctrines of adhesion and meditation in 18<sup>th</sup>-century Ḥasidism are also definitely based on the form given to them in Safed. This doctrine was not written down in its entirety in the writings of Isaac \*Luria's disciples and its major part was preserved orally. In Jerusalem's kabbalistic yeshivah Bet El practical guidance on meditation

was handed down orally for about 200 years and the initiates of this form of Kabbalah refused to make the details of their practice public knowledge.

[Gershom Scholem]

**MEDNICK, MARTHA TAMARA SCHUCH** (1929– ), U.S. psychologist and pioneer in the psychology of women. Mednick was born in New York City to working-class immigrant parents from Eastern Europe. She received B.A. and M.A. degrees from the City College of New York. In 1952 she joined her husband, Sarnoff Mednick, as a graduate student at Northwestern University, receiving a Ph.D. in clinical psychology in 1955. Mednick made a number of moves based on her husband's career, had two daughters, and did some collaborative work with him, first on a personality test and later on a measure of creative thinking. By the time of their divorce in 1964, Mednick was affiliated with the Institute for Social Research at the University of Michigan. Shortly afterward, she became a member of the psychology department at Howard University, was appointed a full professor in 1971, and remained there until her retirement in 1995.

Mednick was very important as a mentor and a pioneer in the psychology of women. In 1972, she co-edited with Sandra Schwartz Tangri a special issue of the *Journal of Social Issues* entitled "New Perspectives on Women," which she later expanded into the book *Women and Achievement* (1975). She helped establish and served as president of the psychology of women division of the American Psychological Association (1976–77) and was also president of the Society for the Psychological Study of Social Issues (1980–82). Her research focused on race, class, and sex issues in the psychology of achievement. Many of her studies were published with students from Howard University and a list of these students reads like a *Who's Who* of African American women psychologists. Mednick received the Carolyn Wood Sherif Award from the Division of the Psychology of Women in 1988 for her teaching, mentoring, and scholarship in this field.

Mednick was also important in facilitating contact between American and Israeli feminist psychologists. With Marilyn Safir, a psychologist at the University of Haifa, and Dafna Izraeli, a sociologist on the faculty of Bar-Ilan University, Mednick organized the first international interdisciplinary congress on women held at Haifa University in 1981. The collection of papers from the first conference, entitled *Women's Worlds* (1985), highlighted research by Americans, Jewish Israelis, Palestinian, and Arab women.

**BIBLIOGRAPHY:** M.T.S. Mednick, "Autobiography," in: A.N. O'Connell and N.F. Russo (eds.), *Models of Achievement: Reflections of Eminent Women in Psychology*, vol. 2 (1988), 245–59; G. Stevens and S. Gardner, *The Women of Psychology*, vol. 2 (1982).

[Rhoda K. Unger (2<sup>nd</sup> ed.)]

**MEDRES, ISRAEL JONAH** (1894–1964), Yiddish journalist. Born in Lekhovich (Lyakhovichi), Minsk province, Belorussia, Medres studied at the Lida Yeshivah before immigrating to Montreal. From 1922 to 1964 he was a full-time staff writer for the Montreal daily, *Der Keneder Adler* (*The Jewish Daily Eagle*). His numerous articles (many reprinted in Yiddish publications worldwide) and two books, *Montreal fun Nekhtn* (“Montreal of Yesterday,” 1947) and *Tsvishn Tsvey Velt Milk-homes* (“Between Two World Wars,” 1964), provide a wealth of information about almost every aspect of Jewish immigrant life in early 20<sup>th</sup>-century Canada.

**MEDVED, MICHAEL** (1948– ), author, radio personality. Medved was born to physicist David Bernard and chemist Renate Medved (née Hirsch) in Philadelphia, Penn. At the age of six, he moved with his family to San Diego, California, where David worked as a defense contractor for Convair. The family later moved to Los Angeles, where Medved attended Palisades High School. Medved began his undergraduate work at Yale University at 16 and graduated with a Bachelor of Arts degree in U.S. history from Yale University in 1969. He attended Yale Law School from 1969 to 1970 and taught at a Hebrew day school in New Haven, Conn. Medved worked as creative director and advertising copywriter for Anrick, Inc. in Oakland, Calif., from 1972 to 1974. Ten years after his graduation from high school, Medved and his fellow Palisades alumna David Wallechinsky interviewed their fellow classmates for the best-seller *What Really Happened to the Class of '65?* (1976). Medved moved to Los Angeles to write NBC's adaptation of his book. In 1978, he co-wrote the book *The 50 Worst Films of All Time* with his brother Harry Medved, which led to the sequels *The Golden Turkey Awards: The Worst Achievements in Hollywood History* (1980), *The Hollywood Hall of Shame: The Most Expensive Flops in Movie History* (1984), and *The Son of Golden Turkey Awards* (1986). In 1979, Medved published *The Shadow Presidents: The Secret History of the Chief Executives and Their Top Aids* (1979). In 1980, Medved dropped his affiliation with the Democratic Party and joined the GOP. Medved became CNN's film critic from 1981 to 1983. He spent a year with a hospital staff and published *Hospital: The Hidden Lives of a Medical Center Staff* (1983), a bestseller that detailed the emotional problems of doctors and nurses. Medved and his second wife, Diane Elvenstar, a clinical psychologist and writer, were active in Pacific Jewish Center, a Traditional Jewish congregation in Venice, Calif., that Medved co-founded to attract unaffiliated Jews. In 1985, Medved served as co-host with Jeffrey Lyons of the Public Broadcasting Service program *Sneak Previews*, a position he held for 12 years. In 1993, Medved became chief film critic for the *New York Post* and Hollywood correspon-

dent for London's *Sunday Times*. Medved's criticism of Hollywood earned him guest spots on the conservative radio program hosted by Rush Limbaugh. Soon after Medved accepted an offer from a Seattle talk radio program to host his own daily three-hour show and moved to Washington state in 1996. By March 1998, Medved was broadcasting nationally to 40 stations, and by October 1999 his show was heard on 100 stations.

[Adam Wills (2<sup>nd</sup> ed.)]

**MEDVEDEV, MIKHAIL (Meyer Yefimovich Bernstein;** 1852–1925), tenor. The son of a rabbi, he appeared as a boy *meshorer* and was encouraged by \*Shalom Aleichem to study singing. While still a pupil at the Moscow Conservatory, he was chosen by Tchaikovsky and Nicolai Rubinstein for the first performance of the role of Lensky in *Eugene Onegin* (1879). He was a soloist at the Kiev Opera from 1881, at the Bolshoi Theater in Moscow from 1891 to 1892, and then at the Petersburg Imperial Opera. He toured the United States (1898–1900) and taught at Moscow, Kiev, and Saratov. Medvedev was admired both for his voice control and for his dramatic interpretations.

**MEDZIBEZH (Medzhibozh; Pol. Miedzyborz; Yid. Mezhibezh)**, small town in Khmel'nitsky district (former Kamenets-Podolski district), Ukraine; until 1793 in Poland and then under Russia, until 1917 in the province of Podolia. Large fairs were held there which attracted many Jewish merchants. The Jewish community of Medzibezh is one of the oldest in the Ukraine – Jews are mentioned there in 1518 – and until the \*Chmielnicki persecutions of 1648 one of the largest in Podolia. During the first half of the 17<sup>th</sup> century, Joel \*Sirkes officiated as rabbi. The community suffered severely at the hands of the Cossacks in 1651, 1664, and again at the beginning of the 18<sup>th</sup> century. In 1765 there were 2,039 Jews registered in the community of Medzibezh and the nearby villages. The founder of Ḥasidism, \*Israel b. Eliezer Ba'al Shem Tov, made the town his seat from about 1740 until his death in 1760 and was buried there. The *zaddikim* \*Baruch b. Jehiel, Israel's grandson, and R. \*Abraham Joshua Heschel of Apta also lived and were buried there. From 1815 to 1827 a printing press published ḥasidic and kabbalistic works in Medzibezh. From 1,719 in 1847 the number of Jews grew to 6,040 (73.9% of the total population) in 1897, then fell to 4,614 (58.2%) in 1926. In the 1920s there existed a Jewish Council, a Yiddish newspaper was published, and a Jewish kolkhoz was founded. In 1939 the number of Jewish population dropped to 2,347 (52% of the total population). The town was occupied by the Germans on July 8, 1941. Later a ghetto was established, and on September 22, 1942 (Yom Kippur), 2,588 Jews were murdered by the Germans and Ukrainians. The murders continued until October 31, when the last Jews were killed.

**MEED, BENJAMIN** (1918– ), leader of Holocaust survivors in the United States. Meed was born Benjamin Miedzyrzecki in Warsaw, Poland, and at the age of 16, he joined the Jewish Labor Bund. After the creation of the Warsaw Ghetto, he obtained false papers and escaped to the Aryan side where he lived posing as a Pole. His parents survived hiding in a hut on an old cemetery. At one point Meed intended to go to the Hotel Polski for its promise of emigration but his brother pleaded with him to take his place. Meed consented and his brother was never heard from again. Around this time, he married Feyge (Vladka) Peltel (see \*Meed, Vladka), also a member of the Bund and an important courier and arms purchaser for the resistance. After the Warsaw Ghetto Uprising, he continued to work with the Bund helping provide hiding spaces for other Jews.

The couple immigrated to the United States in 1946, where Meed became a businessman and importer. In 1966, he helped form and became president of the Warsaw Ghetto Resistance Organization (WAGRO) and devoted the remaining years of his life to representing the survivors. He organized the annual Yom Hashoah ceremony in New York City, the largest such gathering in the United States, that brought American presidents and Israeli prime ministers to Temple Emmah El. When the survivors wanted to organize their first gathering in Jerusalem in 1981, Meed helped organize the \*American Gathering of Jewish Holocaust Survivors, which brought together nearly 5,000 survivors and their children. Meed also pioneered the Registry of Holocaust Survivors, which facilitated the reunion between survivors long thought to be lost to each other. The Registry now contains more than 100,000 entries organized by name – original and maiden as well as current – city of birth, camps of incarceration, and cities of postwar habitation.

In 1983 a gathering was held in Washington, DC, where 20,000 survivors assembled. Meed hosted President Ronald Reagan, Vice President George H.W. Bush, and the Senate and House leaders, who addressed the survivors in front of the Capitol and on the National Mall. Subsequent gatherings were in Philadelphia, New York, and Miami, and again in Washington, to celebrate the 10<sup>th</sup> anniversary of the \*United States Holocaust Memorial Museum. Meed was instrumental in creating the Museum; first serving on the Advisory Council of the President's Commission on the Holocaust and later on the United States Holocaust Memorial Council where he chaired the Days of Remembrance Committee and the pivotal Content Committee that assured the presence and participation of Holocaust survivors, most especially after Elie Wiesel resigned as chairman in 1986. His role became more central as there was fear that without Wiesel the *neshamah*, the soul, of the Museum, would flounder. Under Meed's leadership, the Committee brought together scholars and survivors, communal leaders and Council members to assure the intellectual, aesthetic, historical, and spiritual content of the Permanent Exhibition.

[Michael Berenbaum (2<sup>nd</sup> ed.)]

**MEED, VLADKA** (1921– ), World War II resistance fighter and educator. Born Feyge Pelte in Praga (Warsaw district), Poland, she joined the youth arm of the Jewish Labor Bund at age 14 and was thereafter active in its activities through the time of the creation of the Warsaw Ghetto. She then joined the ZOB (Jewish Fighting Organization) when it was formed after the great deportations of the summer of 1942, when more than 265,000 Jews were shipped from Warsaw to Treblinka. Because of her flawless Polish and red hair, Meed could pass as non-Jewish. She worked as a courier, smuggling arms into the ghetto and helping children escape out of it.

Meed's mother and brother were among those who were deported. She recalled: "There was very little left to fear ... I was depressed and apathetic." However, despair gave way to fierce determination after she heard Abrasha Blum, a member of the Jewish Coordinating Committee that sought to unite the diverse political factions of the ghetto, give a rousing speech calling for armed resistance. As a courier she used the name Vladka, a name she kept even in freedom. Among her most important missions was to smuggle a map of the death camp of Treblinka out of the ghetto in the hope that solid information about the killing would spur a serious response in the West. She brought dynamite into the ghetto, which required not only courage, but also money to "grease" the path in and out. After the Ghetto Uprising she continued supplying money and papers for Jews in hiding.

In her writings she alludes to the loneliness and pressure of her double life only in passing: "You can be my friend," she said to Benjamin Miedzyrzecki (Meed), who was also passing as an Aryan and who would later become her husband, "because if I don't come back, I want someone to care that I am missing." She married Benjamin Meed in 1943 and was the only member of her family to survive the Shoah.

Immediately upon arrival in the United States in 1946, Meed traveled extensively as a living eyewitness to the Uprising. In 1948 she published "On Both Sides of the Wall," in Yiddish, one of the earliest accounts of the Ghetto Uprising and still one of the most compelling.

When her husband, Benjamin Meed, assumed leadership of the survivor community, Vladka Meed organized a teacher training program, co-sponsored by the \*Jewish Labor Committee and the \*American Gathering of Jewish Holocaust Survivors, one of the earliest such programs that took American teachers from the public school system and brought them to Poland and Israel to experience a Seminar on the Holocaust and Resistance. For almost 20 years, she unflinchingly led the mission, which was suspended during the Intifada and resumed in 2005. Meed helped produce a dedicated and informed cadre of teachers throughout the United States. Central to this program were the direct testimonies of survivors, none more impressive than Vladka Meed's.

[Michael Berenbaum (2<sup>nd</sup> ed.)]

**MEEROVITCH, MENACHÉ** (1860–1949), member of \*Bilu and one of the key figures in Jewish settlement in Erez Israel.

Born in Nikolayev, south Russia, Meerovitch graduated from a government institute as an agronomist. After the 1881 pogroms in south Russia, he participated in the establishment of the first \*Hibbat Zion association in Warsaw and joined the Bilu society. At the end of 1882 he went to Constantinople and took part in the activities of Bilu's political bureau, which was trying to obtain Turkish consent to Jewish agricultural settlement in Erez Israel. He then joined his comrades at \*Rishon le-Zion and was active in the settlement's public life.

Meerovitch, who used the pen name Mi-Ziknei ha-Yishuv, wrote letters and articles on life in Erez Israel that were published in the Russian Jewish press, the Yiddish- and German-language Zionist press, and Hebrew papers. He was one of the first to discuss practical agricultural problems and, in 1893/94, edited the first agricultural paper in the country, *Ha-Ikkar* ("The Farmer"). In his Russian book *Opisaniye Yevreyskikh Koloniy v Palestine* ("A Description of the Jewish Settlements in Palestine," 1900), he summarized the achievements of Erez Israel agriculture in its first 25 years.

Meerovitch was active in the work of the Hibbat Zion association in Jaffa and headed it from 1903 to 1904. He was among the founders of Aguddat ha-Koremim (Vintners Association) in 1903 and of the Judean Settlement Association in 1913. During World War I he participated in the Jewish community's representative body to the Turkish authorities. From 1918 to 1920 Meerovitch was a member of the Va'ad Le'ummi. His articles and memoirs are of great importance to the historian of Jewish settlement in Erez Israel. Some were collected in book form during his later years: *Hevlei Tehiyyah* ("Pangs of Resurrection," 1930); *Me-ha-Shevil el ha-Derekh* ("From the Path to the Road," 1935, with an annotated list including an index of his articles); *Minhat Erev* ("Evening Rest," 1940); *Mi-Bilu ad va-Ya'apilu* ("From Bilu to Immigration," 1947). The moshav Talmei Menasheh in the Coastal Plain is named after him.

[Yehuda Slutsky]

**°MEGASTHENES** (c. 350–290 B.C.E.), ambassador of Seleucus Nicator at the court of the Indian king, Chandragupta. Megasthenes wrote a work on India idealizing the Indians. He apparently included in this work idealized descriptions of the Jews, whom he probably knew firsthand while at the court of Seleucus, to judge from his statement that both the Jews and Brahmans had already taught everything concerning nature that was taught by the ancient Greek philosophers.

**MEGGED, AHARON** (1920– ), Israeli writer. Born in Wloclawek, Poland, his family immigrated to Palestine in 1926. He joined kibbutz Sedot Yam and worked at the port of Haifa. Megged left the kibbutz in 1950 and settled in Tel Aviv where he edited the journal *Ba-Sha'ar*. Together with a number of friends, he founded the biweekly literary magazine *Massa*, which became the weekly literary supplement of the daily

*La-Merhav*. From 1960 to 1971 he served as Israel's cultural attaché in London.

In his prose, which often has strong autobiographical elements, Megged moved from the realism of his early works to surrealism and back to realism. His first short story collection, *Ru'ah Yamim* ("Sea Winds," 1950), was inspired by life in Sedot Yam. *Hedvah va-Ani* ("Hedvah and I," 1964), a realistic novel, tells of the misfortunes of a kibbutz member who had to leave the kibbutz, much against his will, at the insistence of his wife. The protagonist is the first example of Megged's antihero, so typical of his later writings. Lonely, tortured by thoughts of his shortcomings, fearing above all ridicule and abasement, the antihero is always the outsider in an otherwise congenial and united society. In *Mikreh ha-Kesil* (1960; *Fortunes of a Fool*, 1962), he is the only "good man" who fails to join the "society of the wicked." Megged's most ambitious work, the novel *Ha-Hai al-ha-Met* (1965; *The Living on the Dead*, 1970), describes in unflattering terms modern Israeli society, and makes the accusation that the great expectations of the first pioneers have not been fulfilled by their successors. One of the most prolific and popular Hebrew writers, Megged mirrors the changes in Israeli society, highlighting moral standards and appealing for tolerance. *Masa be-Av* ("A Journey in the Month of Av," 1980) reflects on the Yom Kippur War and its repercussions; *Ga'agu'im le-Olga* ("Longings for Olga," 1994) depicts the unique relationship between a clerk with literary ambitions and a young Russian woman who becomes his muse; while *Dudaim mi ha-Arez ha-Kedoshah* ("Love-Flowers from the Holy Land," 1998) is the story of Beatrice, a devout Protestant who arrives in Palestine in 1906 in order to paint pictures of flowers mentioned in the Bible and gets entangled in local Arab-Jewish affairs. In *Foygelman* (1987; *Foygelman*, 2003), Megged portrays the fate of a Yiddish poet who hopes to find a new home and a sympathetic readership in Israel and encounters instead a total lack of interest in Yiddish as well as in the Diaspora past. Some of Megged's novels deal with authors and writing, describing with a fine sense of humor, often satirically, the literary milieu. Thus, for instance, the novel *Ha-Gamal ha-Me'ofef ve-Dabbeshet ha-Zahav* ("The Flying Camel and the Golden Hump," 1982; German translation, 1991) which focuses on the animosity between an Israeli writer and his neighbor, a literary critic, or *Nikmat Yotam* ("Yotam's Vengeance," 2003), which tells the story of a frustrated translator of Greek classics into Hebrew. Like many of Megged's novels, *Yarhei ha-Devash shel Profesor Lunz* ("The Honeymoons of Professor Lunz," 2004) is a satire on Israeli society, relating the story of a bizarre marriage between an aged scholar of ancient Eastern studies and his second wife, Ayala, a student 50 years his junior.

Megged, a member of the Academy of Hebrew Language, was president of the Israel Center of PEN (1980–87). He received the Bialik Prize, the Brenner Prize, and the Agnon Prize and in 2003 was honored with the Israel Prize for literature. His stories and novels have been translated into several languages and his plays, including *Genesis*, *Hannah Szenes*, and

the comedy *I Like Mike*, have been produced in Israel and abroad. "Tears" is included in G. Abramson (ed.), *The Oxford Book of Hebrew Short Stories* (1996); "Hannah Senesh" in M. Taub (ed.), *Israeli Holocaust Drama* (1996); "The Name" in G. Ramras-Rauch and Y. Michman-Melkman (eds.), *Facing the Holocaust* (1985); "The First Sin," in H.S. Joseph, *Modern Israeli Drama* (1983). A list of his works translated into English appears in Goell, Bibliography, and further information is available at the ITHL website at [www.ithl.org.il](http://www.ithl.org.il).

His brother MATTI (Matityahu) MEGGED (1923–2003), poet and literary critic, wrote a number of works that made their mark on the modern Hebrew literary scene. *Ha-Migdal ha-Lavan* (stories, 1949) and *Or ha-Soreg* (novel, 1953) are among his best-known fictional works; *Ha-Drama ha-Modernit* (1966), a collection of essays on drama, and *Dostoevski, Kafka, Beckett* are critical works. He lectured on Hebrew literature at the University of Haifa.

Aharon Megged's wife, EDA ZORITTE-MEGGED (1926– ), began publishing essays in 1955. She published her first novel, *Periḥah Afelah* ("Somber Blossoming"), in 1969. Four novels followed, including a novel about Herzl's wife (*Ishto ha-Menuḏah*, 1997; German translation, 2001) and *Ahavat Hayyim* (2000). Zoritte also wrote a monograph on Nathan Alterman (1973), and biographies of the poets Amir Gilboa and Avot Yeshurun.

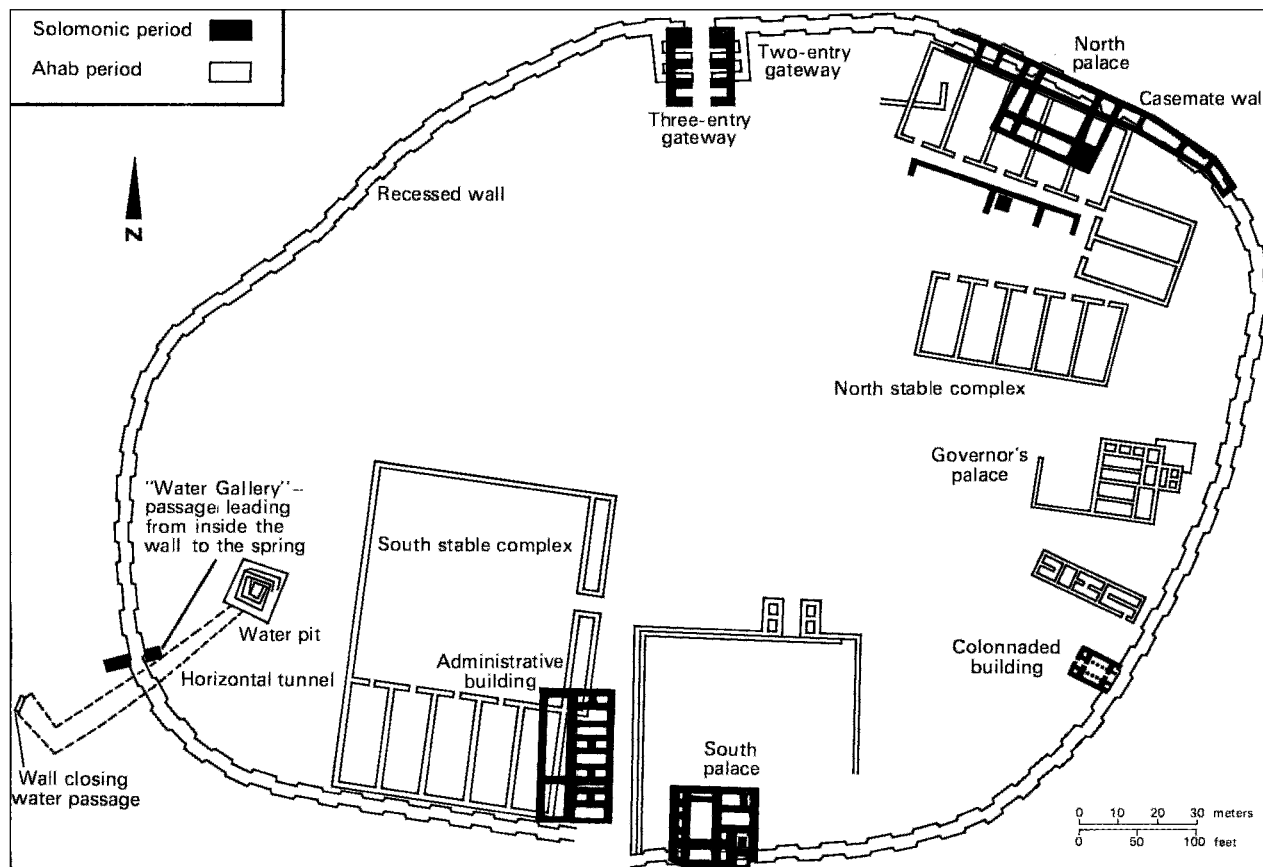

Aharon Megged's son EYAL MEGGED (1948– ), poet and novelist, was born in New York and grew up in Tel Aviv. He studied philosophy and art history and published his first collection of poems in 1972. This was followed by further poems, stories, and five novels, including *Barbarossa* (1973), *Ḥesed Ne'urayikh* ("Early Grace," 1999; German, 2005), and *Hayyei Olam* ("Everlasting Life," 2001).

[Gitta (Askenazy) Avinor / Anat Feinberg (2<sup>nd</sup> ed.)]

**MEGIDDO** (Heb. מגידו), ancient Canaanite and Israelite city, identified with Tell al-Mutasallim on the southern side of the Jezreel Valley, approximately 22 mi. (35 km.) S.E. of Haifa. The site was excavated in 1903–05 by G. Schumacher and in 1925–39 by the Oriental Institute in Chicago, under the direction of C.S. Fisher, P.L.O. Guy, and G. Loud. Small additional soundings were made by Y. Yadin in 1960 and later years. A Tel Aviv University-led expedition under the direction of I. Finkelstein and D. Ussishkin renewed the excavations in 1992. The excavations revealed the existence of over 20 levels, beginning with the Neolithic and Chalcolithic periods. In the Early Bronze Age the first temples were built, as well as a round high-place and a wall, 26 ft. (8 m.) thick. The temples consist of a monumental temple with long corridors, dating to the Early Bronze I (c. 3000 B.C.E.), and three later temples, of the megaron type, dating to the Early Bronze Age III, in the second half of the third millennium B.C.E. The Middle Bronze Age city was surrounded by a strong system of earthworks – embankment and glacis. The construction of the great "Migdal" temple in the cultic compound may also date to this period. A statue of an Egyptian official called Thuthotep, which was found in the excavations, was interpreted by some scholars as indicating that an Egyptian governor probably resided there at that time. The transition from the Middle to the Late Bronze was seemingly peaceful. In approximately 1469 B.C.E. Pharaoh Thutmosis III appeared before the walls of Megiddo, after passing through the Aruna Valley giving the city access to the coast. He overcame a coalition of Canaanite city-states and captured the city after a siege of seven months. From then until Stratum VII the city remained under Egyptian sovereignty. In the el-Amarna period, the king of Megiddo, Biridiya, was hard pressed by the Apiru and Labayu of Shechem (EA, 242–5). The Late Bronze Age city witnessed the erection of an elaborate palace as well as continuity in the "Migdal" temple. A hoard of ivories found in the palace reveals Egyptian, Hittite, Aegean, and local cultural influences. A cuneiform tablet which dates to this period contains a fragment of the Gilgamesh epic. Late Bronze Megiddo also yielded inscriptions from the days of Ramses III and Ramses VI, meaning that it was not destroyed until the second half of the 12<sup>th</sup> century B.C.E. Dramatic evidence for the destruction of this city was found in the palace and the nearby gate. The next city, Stratum VI (late 11<sup>th</sup> and early 10<sup>th</sup> centuries B.C.E.), had many features similar to that of the previous one. Its material culture continued late second-millennium traditions. This city too was destroyed in a fierce conflagration.

Plan of Megiddo in the time of Solomon and Ahab (tenth-ninth century B.C.E.). Based on Encyclopedia of Archeological Excavations in the Holy Land, Jerusalem, 1970.

According to biblical tradition, Megiddo did not fall to Joshua, although its king was defeated (Josh. 12:21; cf. Josh. 17:11–13; Judg. 1:27–28). Solomon built the city (1 Kings 9:15) and included it in his fifth district (1 Kings 4:12). According to archaeologist Yigael Yadin, the Iron Age gate with three guardrooms is identical in plan with the gates at Hazor and Gezer and therefore should be related to the biblical testimony on the building activities of King Solomon. Two palaces built of well-hewn ashlar masonry and probably adorned with proto-Aeolic capitals were also associated by Yadin with King Solomon. Other scholars date the Megiddo gate to the ninth or eighth century and the two palaces to the ninth century. According to this view they should be associated with the Northern Kingdom of Israel. The next city at Megiddo was largely occupied by two units of five rectangular stables and one unit of two stables, with feeding troughs between pillars and a supposed capacity of 450 horses. Yadin attributes these stables to the time of King Ahab, who rallied 2,000 chariots against Shalmaneser III at the Battle of Karkar. Other scholars date them to the days of Jeroboam II, in the first half of the eighth century. A rock-cut water installation, probably built in the days of this city, consists of a shaft 81 ft. (25 m.) deep, with stairs leading to a horizontal tunnel 224 ft. (70 m.) long and to a spring in the slope of the hill, which was thus con-

nected with the city inside the walls. The Israelite city perished in 732 B.C.E. with the conquest of Tiglath Pileser III. The Assyrian king made Megiddo the capital of a province, which included Galilee and the Jezreel Valley. Stratum III features the remains of the Assyrian city. It was rebuilt on a uniform plan, with two large public buildings in the Assyrian style. Stratum II probably dates to the second half of the seventh century B.C.E. King Josiah of Judah was killed by Pharaoh Necho at Megiddo. To this event can be attributed the association of war with the Megiddo Valley in Zechariah 12:11 and with \*Armageddon in Revelation 16:16. The last settlement at Megiddo was a small city of the Persian period. Field Marshal \*Allenby defeated the Turks at Megiddo in 1918. On his visit to Israel in 1964 Pope Paul VI was received by President Shazar at Tell Megiddo. In 2005 Megiddo was registered as a World Heritage Site.

[Michael Avi-Yonah / Israel Finkelstein and David Ussishkin (2<sup>nd</sup> ed.)]

**MEGILLAH** (Heb. מגילת; “scroll”), designation of each of the five scrolls of the Bible (\*Ruth, \*Song of Songs, \*Lamentations, \*Ecclesiastes, \*Esther). When the scroll is not specifically named, the term *Megillah* most commonly refers to the scroll of Esther which is read on \*Purim.

See Scroll of \*Esther; \*Scrolls, Five.

**MEGILLAH** (“Scroll”), tenth tractate in the order *Mo'ed*, in the Mishnah, Tosefta, and Babylonian and Jerusalem Talmuds. *Megillah*, in four chapters, deals with liturgical readings from the Bible, especially with the reading of the \*Scroll of Esther on \*Purim to which the word *megillah* particularly refers, and with related subjects. The regulations concerning the reading of the Scroll of Esther on Purim are largely dealt with in the first two chapters of the tractate. Chapter 1 is primarily concerned with determining on which day of Adar the *megillah* is to be read, there being a difference between walled cities on the one hand and open towns and villages on the other. Only the first half of this chapter (*mishnayot* 1–4) deals with the *megillah*, while the remainder (5–11) is a collection of various *halakhot*, which were included because they are all introduced by the same formula (“The only difference between A and B is ...”). According to J.N. Epstein (*Tanna'im*, 257) this group belongs to the Mishnah of R. Akiva (Tosef. 1:7–21, gives a similar but longer group of such *halakhot*). Chapter 2 first discusses the appropriate way of reading the *megillah*, e.g., whether reciting by heart and reading in a language other than Hebrew are valid. It goes on to deal with the technicalities of writing a *megillah* to be used for public reading, e.g., whether it must be written on parchment, or whether paper may be used. Among other questions discussed is the qualification of the reader, and whether women or minors are fit to read it. There is also much extraneous matter in this chapter. Chapter 3 starts with a discussion on the sanctity of the synagogue and its appurtenances, but its main contents are the public readings from the Pentateuch and *haftarah*. Chapter 4 continues with the main subject but deals with other liturgical questions (e.g., public reading of the *Shema*, priestly blessings, etc.). The sequence of the chapters as set out above is the one found in current editions of the Mishnah, Jerusalem Talmud, and Tosefta, but in the Babylonian Talmud the order of the last two chapters is reversed. The reason is that since the first Mishnah of chapter 4 opens with the words “He who reads the *megillah*,” it was thought appropriate that this chapter follow the first two, which deal mainly with the *megillah*.

Various strata can be detected in the Mishnah. In addition to the above-mentioned groups from the Mishnah of R. Akiva, R. Johanan attributes Mishnah 1:1 to Akiva (Meg. 2a). According to Epstein, Mishnah 2:6 belongs to Eleazar b. Simeon (cf. Men. 72a), Mishnah 3:1 is from the *mishnayot* of Menahem b. Yose, and Mishnah 3:6 from that of Judah b. Ilai; according to the *Gemara* (9b) the second part of 1:9 is Meir's, while its first part is of unknown origin. The order of the paragraphs in the Tosefta to *Megillah* usually corresponds to that in the Mishnah. It includes a vivid description of gatherings

in Jerusalem for the performance of *mitzvot* (4 (3):15). There is a great deal of *aggadah* in the Babylonian Talmud. Deserving of particular mention are geographical notes (5b–6b), the observations on the origin of the Targums (3a) and of the Septuagint (8b–9b), the extensive aggadic Midrash to Esther, which is practically a complete Midrash to the Book of Esther (10a–17a), and the arrangement of the \**Amidah* (17b–18a). Of linguistic interest is the reference to the confusion of the letter *alef* with *ayin* in certain places, and the problem of correct pronunciation of the letters *he* and *het*. There is less aggadic material in the Jerusalem Talmud than in the Babylonian. Unlike the latter, the Jerusalem Talmud does not give any *aggadot* about the story of Purim. It does, however, deal with the problem of the inclusion of the Book of Esther in the canon (1:7, 70d), and also has lengthy discussions on the laws of writing Torah scrolls and on the divine names (1:11, 71b–72a). It also gives the list of dates included in \**Megillat Ta'anit* (1:6, 70c).

[Arnost Zvi Ehrman]

**MEGILLAT SETARIM** (Heb. מגילת סתרים; lit. “concealed scroll”). On two occasions (Shab. 6b; BM 92a), \*Rav mentions that he found a *Megillat Setarim* in the academy of R. Hiyya containing laws in the name of Isi b. Judah. The first is that there are 39 principal categories of work (*avot melakhah*) forbidden on the Sabbath, but culpability is incurred only on account of one (this is the actual statement quoted, although the Talmud finds it inconceivable and emends it to “there is one for which culpability is not incurred”). In the second he states that the law in Deuteronomy 23:25, “When thou comest into thy neighbor's vineyard, then thou mayest eat grapes until thou have enough at thine own pleasure,” applies to anyone entering the vineyard, and not only to a laborer employed there, on which Rava commented, “Isi would make it impossible to live,” since a man would soon have his vineyard stripped, and there also the statement is then qualified as a result.

Rashi (ad. loc.) explains that the scroll was concealed because it was forbidden in general to commit the Oral Law to writing but since these laws were not generally taught, they were written down to save them from oblivion. I.H. Weiss is of the opinion that they contained views which Judah ha-Nasi rejected, and they were kept concealed out of respect for him, but this view is most improbable. All the *beraitot* were excluded from the Mishnah, and they contained many views that he had rejected, yet there is no suggestion that they were suppressed. Kaplan maintains that these scrolls were kept concealed because their contents were unsuitable for publication, and in addition he suggests that “concealed” means that they were written in a cryptic manner to conceal their meaning. However, there is nothing particularly cryptic in the language of the passages quoted. Nevertheless, it certainly would have been dangerous to make these laws widely known, and that would also explain why these are the only laws mentioned.

**BIBLIOGRAPHY:** I.H. Weiss, *Dor*, 2 (1904<sup>4</sup>), 168–9; M. Kaplan, *Redaction of the Babylonian Talmud* (1933), 277–8.

[Harry Freedman]

**MEGILLAT TA'ANIT** (Heb. lit. “scroll of fasting” but see below), a list of 36 days on which there were significant victories and happy events in the history of the Jews during the Second Temple, as a result of which the rabbis forbade fasting on them, as well as, in some cases, the delivery of memorial addresses for the dead (*hespedim*). The title should therefore be taken as meaning “the scroll of (the days of prohibited) fasting.” The work received its present form close to the time of the destruction of the Second Temple or at the latest during the Bar Kokhba era. It is written in Aramaic and with extreme brevity. According to a tannaitic source (Shab. 13b), it was compiled by “Hananiah b. Hezekiah (b. Garon) and his company,” but the appendix to the *megillah* gives the author as Eliezer, the son of this Hananiah, one of the leading rebels against the Romans (Jos., Wars, 2:409). S. Zeitlin regards it as a literary remnant of the rebel party. If this is accepted, the purpose of the list of victories was to strengthen the spirit of heroism and faith in the success of the revolt. The value of the *megillah* for historical research lies in the parallels it provides to the facts and dates mentioned in Josephus. In the period following the conclusion of the Talmud a scholium was appended to the *megillah*, written in mishnaic Hebrew and based upon the Hebrew original of I Maccabees, the talmudic literature, and various oral traditions unknown from any other source. The historical value of this appendix is limited. In the course of time copyists and editors added notes and explanations, taken in particular from the Babylonian Talmud, so that two versions evolved, a Sephardi and an Italian.

The dates included in the *megillah* from before the Hasmonean era are the second Passover (14<sup>th</sup> Iyar) and Purim. Those from the Hasmonean era are the 23<sup>rd</sup> of Iyyar when the defenders of the \*Acra left Jerusalem, an event mentioned in I Maccabees 13:49–53; the 14<sup>th</sup> of Sivan, “the seizure of the citadel Zur,” identified by Graetz with Beth-Zur conquered by Simeon the Hasmonean (see I Macc. 11:65–66; 14:33); the 15<sup>th</sup> and 16<sup>th</sup> of Sivan, in memory of the conquest of Beth-Shean and the valley (of Jezreel) by the sons of John Hyrcanus (see Jos., Ant., 13:280; Jos., Wars, 1:66); the 23<sup>rd</sup> of Marḥeshvan when they removed the *soreg* from the Temple (according to the appendix, it meant a place “which the gentiles built, on which they stationed harlots”); the 25<sup>th</sup> of Marḥeshvan, in memory of the capture of Samaria by John Hyrcanus and his sons (see Jos., Wars, 1:64; Jos., Ant., 13:275–81); the 21<sup>st</sup> of Kislev, “the day of Mt. Gerizim,” in memory of the destruction of the Samaritan temple by John Hyrcanus (see Jos., Ant., 13:255/6); the 25<sup>th</sup> of Kislev, Ḥanukkah, for which festival the appendix mentions several reasons, including that when the Hasmoneans were victorious and found all the temple vessels ritually unclean, “they brought seven iron spits, covered them with white metal, and commenced the lighting”; the 28<sup>th</sup> of Shevat, when King Antiochus was driven out of Jeru-

salem (according to the appendix, the reference is to Antiochus IV (Epiphanes), but it is probable that it actually refers to Antiochus VII (Sidetes) of the time of John Hyrcanus; see Jos., Ant., 13:245); and the 13<sup>th</sup> of Adar, the day of Nicanor, in memory of the defeat of this Syrian commander (see I Macc. 7 and II Macc. 15). The dates from the period of Roman rule over Judea include the third of Kislev, when the “emblems” (the images of the Emperor) were removed from the Temple court, apparently in the time of Pontius Pilate (see Jos., Wars, 2:169), and the 22<sup>nd</sup> of Shevat, when the edict of Gaius Caligula ordering the erection of a statue of him in the Temple was rescinded (see Jos., Wars, 2:195–203). From the period of the Jewish war with Rome are the 25<sup>th</sup> of Sivan, when the tax collectors were removed from Judea and Jerusalem, apparently a reference to the suspension of the tax payment to the emperor in 66 C.E., a matter mentioned in the long speech of King Agrippa (Wars, 2:345–401); and the 17<sup>th</sup> of Elul, when the Romans departed from Jerusalem, although it is not known to what incident this refers.

A number of dates appear to allude to victories of the Pharisees over the Sadducees, but the details are not clear, and apart from two days, the 12<sup>th</sup> of Adar, “the day of Trajan,” which some connect with the emperor Trajan, and the 28<sup>th</sup> of Adar, which the appendix attributes to the abrogation of Hadrian’s edicts, the *megillah* contains no events after 67 C.E. These memorial days were observed until the third century, but later “*Megillat Ta’anit* was rescinded” (TJ, Ta’an. 2:13, 66a; RH 18b). A 13<sup>th</sup>-century manuscript of the work is extant in the Palatine library in Parma (De Rossi collection no. 117). *Megillat Ta’anit* was first published in Mantua in 1513. A critical edition, with an introduction and commentary, was published by H. Lichtenstein (see bibl.). A new critical edition, *Megillat Ta’anit – Version, Interpretation, History*, was published by Vered Noam in 2003.

[Nahum N. Glatzer]

**MEGILLAT YUḤASIN** (Heb. מִגִּילַת יוֹחָסִין; “genealogical scroll”), a work mentioned by *tannaim* and *amoraim* as having been found in Jerusalem and containing genealogical information on traditions of importance in *halakhah* and in *aggadah*. Simeon b. Azzai (the *tanna* living at the beginning of the second century C.E.) relates that he found a *Megillat Yuḥasin* “in Jerusalem in which was written: so and so is a \*mamzer from a married woman” (Mishnah Yev. 4:13). A *baraita* in the Babylonian Talmud (Yev. 49b) adds in his name that this *Megillat Yuḥasin* also included the following two traditions: “the Mishnah [teaching] of Eliezer b. Jacob is little but well sifted; [King] Manasseh killed [the prophet] Isaiah” (Yev. 49b). Similarly Levi (the *amora* of the end of the third century) states that he found in the *Megillat Yuḥasin* in Jeru-

salem details of the family origin of Hillel, Yose, Nehemiah, Hiyya, Yannai, and others (TJ, Ta'an. 4:2, 68a; Gen. R. 98:10; ed. Theodor-Albeck, 1259). Josephus too (Apion, 1:30ff.) testifies to the existence of genealogical documents in Israel, particularly of priestly families. According to him, the priests in Egypt and in Babylon notified the center in Jerusalem of details of their marriages and of the patriarchal families into which they married. The Talmud (Pes. 62b) also mentions a "Sefer Yuhasin," but it does not appear to have any connection with the aforementioned *Megillat Yuhasin*. It is difficult to determine its exact nature from the data given in the Talmud, but it seems to have been a kind of Midrash or *baraita* to the Book of Chronicles. According to Rashi (Pes. 62b), the work contained "reasons for the Laws of the Torah," but from a statement of \*Amram Gaon (*Ozar ha-Ge'onim* to Pes., p. 80, no. 190) it seems that the work served as a commentary and supplement to the genealogical lists in the biblical books. The Talmud there states that Simlai requested Johanan to teach him *Sefer Yuhasin* but the latter refused to accede to his request. It also states in the name of Rav that from the time the *Sefer Yuhasin* was concealed the sages became weak and their vision was dimmed.

[Yitzhak Dov Gilat]

**MEHILAH** (Heb. מְחִילָה; "waiver"), the renunciation, repudiation, abandonment, or surrender of some claim, right, or privilege. *Mehilah* may be the waiver of a present right or \*lien or the waiver of the right to a future increment; in the latter case, it is usually referred to as *silluk* (TJ, Ket. 9:1, 32d; Ket. 83a).

#### Range of Applicability

*Mehilah* cancels any debt, lien, or \*obligation regardless of origin. Thus, debts arising out of \*loans, \*sale, \*leasing and hiring, \*labor, \*partnership, and \*surety; liens on \*property put up as collateral; obligations originating in \*contract or \*tort – all are effectively cancelled by *mehilah* on the part of the creditor. Nor is the effectiveness of *mehilah* curtailed by the form of the obligation; it applies with equal vigor whether the obligation is an oral or written one, whether it is attested to by witnesses or not (Gulak, *Yesodei*, 2 (1922), 111–4, 162f.).

*Silluk*, i.e., the waiving of future accretions, however, is only of limited effectiveness. This is due to the general reluctance of Jewish law to grant effective control over things that have as yet not come into existence (*davar she-lo ba la-olam*; see \*Contract). Thus, if, on the one hand, a person possesses a present right, claim, or lien, *silluk* cannot dissolve it; only *mehilah* can do so. If, on the other hand, the future right, claim, or lien is so remote as to have no specific relationship to this particular person, his *silluk* is equally ineffective since it pertains to *davar she-lo ba la-olam*. However, if the future right, claim, or lien, although not in existence, has by the operation of circumstances at least achieved a likelihood of accruing to a specific person, then his *silluk* is effective. Thus, the ability of a man to waive the rights of usufruct in his wife's property depends upon the status of his relationship with her;

if he has already married her (*nissu'in*), his claim on her usufruct is a present one; hence his waiver must be in the form of *mehilah*, and his *silluk* is no longer effective. If he has not entered into the first stage of \*marriage (*erusin*), the usufruct in her property has as yet not come into existence (it is a *davar she-lo ba la-olam*); hence it is sufficiently remote as to vitiate the effectiveness of either form of waiver, that of *mehilah* and that of *silluk*. If, however, he has entered into the first stage of marriage (*erusin*) but has not yet consummated the marriage (*nissu'in*), the right of usufruct, although not yet in existence, has achieved sufficient likelihood of accruing to him as to have endowed him with the power, not of *mehilah*, but of *silluk* (Ket. 83a–84a, and codes).

The effectiveness of *silluk* with regard to obligations (i.e., rabbinic origin; see \**Mishpat Ivri*) that have as yet not come into existence is undisputed among the early authorities (\**ris-honim*; see \*Authority, Rabbinical). Its effectiveness with regard to obligations which are *mi-de-oraita* (i.e., biblical origin; see \**Mishpat Ivri*) that have as yet not come into existence presented these scholars with two major difficulties:

(1) it is an established rule of law that conditions contrary to biblical law are void (BM 7:11).

(2) The Talmud rules that biblical rights of succession, which are *mi-de-oraita*, such as those of a son to inherit his father's estate (in contradistinction to the right of a husband to inherit his wife, which is *mi-de-rabbanan*), cannot be waived (cf. Ket. 83a). The first difficulty was overcome by the limitation of the rule to non-monetary conditions on the one hand, and by the limitation of the power of waiver to monetary obligations on the other. The second limitation was overcome by construing *mi-de-oraita* rights of inheritance as being unique in that they inhere in the heirs even before the death of the owner of the estate; hence *silluk*, as the waiver of future rights, is impossible (*Kezot ha-Hoshen* 209 n. 11).

Waiver is limited to rights; it is ineffective as a mode of transfer of real property or of chattel (*Rema*, HM 241:2).

#### Legal Analysis

It has been pointed out that in the realm of rights, where it is effective, waiver does not constitute a transfer; rather it is mere withdrawal. A creditor who waives his claim does not transfer his right to the debtor and thereby extinguish the claim; on the contrary, he withdraws his right or removes his lien from the debtor and his estate. The effectiveness of *mehilah*, therefore, is independent of the wishes of the debtor. Thus, if a creditor waives the debt due to him and the debtor refuses to avail himself of the waiver, the waiver nevertheless takes effect. Had *mehilah* been viewed as a kind of transfer, it would have failed to take effect inasmuch as the debtor, as transferee, had declined (cf. Herzog, *Instit*, 2 (1939), 229). The juridical basis of waiver is the insistence of the law that the obligatory nature of monetary obligations is always dependent upon the will of the party to whom the obligation is due; the suspension of this will, e.g., by waiver, automatically extinguishes the obligation (Maimonides, nov., BB 126b).

### Formal Requirements

*Mehilah* requires no formal mode (*mehilah einah zerikhah kinyan*; Yad, Mekhirah 5:11 and Ishut 17:19; Tosef to Sanh. 6a, s.v. *zerikhah*). It is effective by parole alone. Some authorities, however, do require a formal *kinyan* to validate the waiver of a creditor who retains possession of the debtor's promissory note (cf. commentaries to Sh. Ar., ḤM 12:8; see also \*Acquisition). There is no formal requirement that witnesses validate a waiver of indebtedness. The function of witnesses is evidentiary, preventing the creditor from subsequently denying his act of waiver or from alleging that the act was made in jest. For this purpose, the witnesses need not have been formally appointed; their mere presence suffices (Sh. Ar., ḤM 81:29).

### Implied Waiver

Waiver may be express or implied. Thus, the mere declaration of the creditor that the debtor owes him nothing absolves the latter of all obligation; for although he knows that the creditor's statement is incorrect, it is nevertheless construed as an implied waiver (Sh. Ar., ḤM 75:11; *Rema*, ḤM 40:1; but cf. *Siftei Kohen*, ḤM 81, n. 72). Asher Gulak has pointed out the similarity between this waiver implied in the creditor's denial of the debtor's indebtedness with the *acceptilatio* in Roman law. This was an oral form of dissolving obligations by having the debtor ask the creditor, "What I have promised you, have you received it (*habesne acceptum*)?" and the creditor answering, "I have (*habeo*)."<sup>7</sup> The effectiveness of the Roman *acceptilatio* was limited, however, to the dissolution of obligations created by verbal contracts (*verbis*); it was ineffective in dissolving obligations created by real (*re*) and written (*litteris*) contracts. This limitation does not exist in Jewish law where the creditor's declaration of receipt of payment dissolves all obligations, regardless of origin (cf. Gulak, *Yesodei*, 2 (1922), 112f.). Implied waiver serves as the operational rationale of a number of legal rules. Thus, the rule that monetary conditions contrary to law are valid is justified on the grounds that the parties entering into the agreement governed by said conditions have implicitly waived their (monetary) rights (Rashi, Kid. 19b; see also \*Contract). Similarly, the rule that overreaching (*\*ona'ah*) that involves less than one-sixth of the fair price need not be returned to the injured party is explained on the basis of an implied waiver on the part of the latter (Yad, Mekhirah 12:3; cf. Sma., ḤM 227 n. 2). Again, the lapse of the right of a widow who no longer lives on her husband's estate to collect her *ketubbah* after 25 years, in localities where written *ketubbot* are not used, is based upon implied waiver (Ket. 104a; Yad, Ishut 16:23; see also \*Limitation of Actions).

### Legal Rules Limiting its Effectiveness

Some of the legal rules governing waiver may be summarized as follows:

(1) The power of waiver applies to claims estimable in money (*manona ityahiv li-mehilah*); it is thus inapplicable to modes of effectuating marriage and divorce (Kid. 7a; Git. 64a).

(2) Waiver need not be made in the presence of the debtor, but the debt does not lapse until the waiver has come to his knowledge (*Arukh ha-Shulhan*, ḤM 241:4; but cf. Herzog, *Instit*, 2 (1939), 231f.).

(3) If co-debtors are named in one promissory note and the creditor waives the obligation of one of them, the other's obligation remains intact and is actionable (opinion of Sh. Ar., ḤM 77:6; disputed by \**Rema*, ad loc.). If the debtors are correal, however, i.e., where each is bound severally to discharge the entire liability, the creditor's waiver of the obligation to one of them cancels the liability of all (*ibid.*).

(4) A waiver of the lien on an obligation, retaining, however, the obligation itself, must be accomplished by a *kinyan* in order to be effective (*Derishah*, ḤM 111, n. 10).

(5) A creditor may effectively waive part of the obligation, or he may postpone the date of payment by waiving the time stipulated in the *\*shetar* (Sh. Ar., ḤM 66:24, and *Siftei Kohen*, *ibid.*, n. 83).

(6) A waiver, in order to be effective, must be related to an object that is definite or to a quantity that is fixed; obligations that are vague, limitless, or unknown are unaffected by *mehilah* (Yad, Mekhirah 13:3; Sh. Ar., ḤM 232:7).

(7) Waiver is ineffective if made through error (see \**Mistake*; Tos. to BM 66b, s.v. *hatam*; cf. Herzog, *Instit*, 2 (1939), 299); if made under duress (see \**Ones*, Tos. to BB 48a, s.v. *amar*); if made in jest (Yad, Mekhirah 5:13 and Ishut 17:19); and if made by minors and, presumably, by \*deaf-mutes and mentally incompetents (BM 22b).

(8) The effectiveness of *mehilah* is disputed in cases where the creditor retains possession of the debtor's promissory note or his \*pledge, some authorities requiring a formal *kinyan* to supplement the waiver by parole (Sh. Ar., ḤM 12:8; 241:2; and commentaries).

**BIBLIOGRAPHY:** I.S. Zuri, *Mishpat ha-Talmud*, 5 (1921), 25; Gulak, *Yesodei*, 1 (1922), 159; 2 (1922), 111–4, 162f.; Herzog, *Instit*, 2 (1939), 115, 132ff., 229–33, 299f.; Elon, *Maft'e'ah*, 123–9.

[Aaron Kirschenbaum]

**MEHIZAH** (Heb. מֵחִזָּה; "partition"), designation of the partition screen in synagogues between the space reserved for men and that, generally in the rear or upstairs, for women. The origin of the *mehizah* derives from the talmudic description of the festivities (*Simhat Beit ha-Sho'evah*) held on the second evening of the feast of Tabernacles in the court of women of the Temple (Suk. 5:2; Mid. 2:5). The Talmud states that men and women were allotted separate space (Suk. 51b–52a; Tosef., Suk. 4:1). Further sources for the separation of the sexes, as practiced in traditional synagogues, are to be found in midrashic literature like *Pirkei de-Rabbi Eliezer* 41, where it is stated in the name of R. Pinḥas that men and women stood separately when the Israelites assembled at Mount Sinai to receive the Ten Commandments (see also *PDRE* 23). Remains of galleries discovered in ancient Palestine synagogues have been taken as belonging to the women's sections.

Most European synagogues of the Middle Ages had a separate women's gallery called *Weibershul* fenced off by an iron grille or a non-transparent curtain. In synagogues where there was no balcony, the *mehizah* was made of latticework serving as a partition between the seats of the men in front and those of the women in the rear. References to the custom of *mehizah* in the Middle Ages can be found in the responsa literature of that period such as \*Mordecai b. Hillel's commentary to Shab. 3, note no. 311, where it is stated "We are permitted to erect on Sabbath the partition-curtain between men and women during the time of the sermon" (see also *Sefer ha-Maharil* of Jacob Moellin (ed. Cremona (1565), 38a, 50b, 59b). The abolition of the *mehizah* by the Reform movement in Europe in the early part of the 19<sup>th</sup> century was strongly opposed by the leading rabbinic authorities in Hungary and Poland, such as Moses \*Sofer, Moses \*Schick, and Elijah \*Guttmacher, who regarded this innovation as an illicit change and, consequently, ruled that any synagogue without *mehizah* is unfit for prayer.

In most Conservative synagogues in the United States, the *mehizah* has been abolished and men and women sit together, or, in some cases, one side of the synagogue is reserved for the men and the other for the women, without an actual partition. In Reform synagogues the segregation of men and women has been entirely abolished based on the fact that the Bible nowhere commands the separation of men and women during public worship or assemblies (see Deut. 31:12; Neh. 8:2-3). These modern trends met with vigorous opposition in the 1950s on the part of Orthodox Jewry in the United States, which has come to regard the retention of the *mehizah* as a cardinal principle and as a mark of the preservation of the Orthodox character of the synagogue. In several congregations the Orthodox minority turned to the courts for legal redress and were granted relief by court orders enjoining the synagogue board from changing the status quo, as in the case of congregation Beth Teflas Moses of Mount Clemens, Michigan (Court Order of Sept. 21, 1959). Similar litigations were dealt with by the state courts in New Orleans, Louisiana and by the Superior Court of Pennsylvania (no. 178, October Term, 1954), all of which ruled in favor of the party demanding the retention of the *mehizah*.

[Meir Ydit]

**MEHLSACK, ELIAKIM BEN JUDAH HA-MILZAHGI** (c. 1780-1854), Polish talmudist. "Milzahgi" is a derivation of Mehlsack, the German name for Samila in Poland where Eliakim was born. He settled in Galicia and lived his last years in Lvov and Brody under the patronage of Isaac Berish Blu-

menfeld of Brody, devoting his life to Jewish scholarship. In 1837 he published *Sefer Ravyah* (= Rabbi Eliakim b. Judah ha-Milzahgi), a criticism of the *Gottesdienstliche Vortraege* of \*Zunz and the *Toledot* of Solomon Judah \*Rapoport. Unlike Zunz, who conceded the correctness of some of Mehlsack's remarks, Rapoport took umbrage at them and replied scathingly in *Kerem Hemed* (6 (1841), 96-109). Although he wrote almost 70 books, only *Sefer Ravyah* was published. Mehlsack also published an attack against the forgeries of A. \*Firkovich in the German-Jewish press. Most of his works were about Talmud and Kabbalah, but *Mirkevet Esh* ("Train of Fire") argues that one is permitted to travel by train on the Sabbath. The manuscript was sent to S. \*Holdheim, the leading Reform rabbi, who reproduced parts of it in a German-Jewish periodical. According to Gershom Scholem, Mehlsack's unpublished study of the Zohar, *Zoharei Ravyah*, at the Hebrew National and University Library is the most significant book written on the Zohar during the 19<sup>th</sup> century. Extant also is his commentary on the Book of \*Raziel (London, Jews College Ms. 347). His treatise on the principle of the Kabbalah and a commentary on the *Pesikta de-Rav Kahana* have not survived.

Joel (eds.), *Kitvei Yad be-Kabbalah* (1930), 40 no. 13; Zunz-Albeck, *Derashot*, 20-21; S.D. Luzzatto, *Iggerot Shadal*, ed. by E.S. Graeber, pt. 4 (1882), 602-5.

[Zvi Avneri / Getzel Kressel]

**MEHRING, WALTER** (1896-1981), German poet and author. The son of the well-known journalist Sigmar Mehring (1866-1915), Walter Mehring was born and raised in Berlin. He studied art history in Berlin and Munich. A friend of Kurt \*Tucholsky, he joined the Berlin branch of the Dada movement, wrote political cabaret pieces, and published his early expressionistic poems in Herwarth \*Walden's *Sturm* from 1916. They were collected in his first books, *Das politische Cabaret* (1919) and *Ketzerbrevier* (1921), which revealed his writing to be "heretical," meaning critical and provocative. During the Weimar Republic Mehring, who became a brilliantly witty spokesman of the moderate left, worked on the staff of the *Weltbuehne* as its correspondent in Paris, where he lived from 1922 to 1928. His satirical light verse followed the tradition developed by Wedekind, Ringelnatz, and Brecht, and his *chansons* dealt with the life of the vagabond, symbolizing the disillusionment of his age. Mehring's best-known collection of poems is *Die Gedichte, Lieder und Chansons des Walter Mehring* (1929), notable for its sarcastic criticism of contemporary society. In his comedy *Der Kaufmann von Berlin* (1929), which was staged by Erwin Piscator and outraged the Nazis, Mehring took on the subject of Shylock to describe the pogroms against the East European Jews in the Berlin Scheunenviertel in 1923. Confronting the beginning of persecution, he wrote *Arche Noah s.o.s.* (1931). On their accession to power in 1933, the Nazis planned to arrest Mehring, who, having been warned, managed to escape to Paris, and from there to Vienna in 1934 and after the "Anschluss" in 1938 back to Paris. In 1941 Meh-

ring fled to New York, escaping from an internment camp in Southern France. There he remained from 1941 until after World War II, living under difficult conditions but continuing to write such books as *No Road Back* (1944) and *The Lost Library* (1951; *Die verlorene Bibliothek. Autobiographie einer Kultur*; 1952), both published in English and German. *The Lost Library*, meaning the library of his father, is an analysis of the face of the Nazi catastrophe, of the tragic failure of the intellectual culture of liberalism and optimism among 19<sup>th</sup>-century German Jews. After the war, Mehring returned to Europe, living mostly in hotels in Switzerland (Ascona and Zuerich, where he died). Here he recollected the avant gardist culture of the Weimar Republic in several books (e.g., *Verrufene Malerei*, 1958; *Berlin-Dada*, 1959) and reissued his *Ketzerbrevier* (1974) in an expanded version.

[Rudolf Kayser / Andreas Kilcher (2<sup>nd</sup> ed.)]

**MEHTA, ZUBIN** (1936–), conductor. Mehta, the son of the conductor Mehli Mehta, was born in Bombay. He received training in violin and piano as a child and formed an ambition to conduct. He started his professional career in Vienna and England. Mehta was then music director of the Montreal Symphony Orchestra (1962–67) and chief conductor of the Los Angeles Philharmonic Orchestra (1962–68). He was the youngest person to hold such an appointment with a leading orchestra in the U.S. and the first in North America to share a joint appointment with two major orchestras. Mehta made his debut at the Metropolitan Opera in 1965 (*Aida*) and his London opera debut with *Otello* in 1977. He was musical director of the New York Philharmonic Orchestra (1978–91), and from 1998 of the Bavarian Staatsoper in Munich. He also served as music director of the Maggio Musicale Fiorentino. Though non-Jewish, Mehta played an important role in the musical life of Israel. He first appeared with the Israel Philharmonic Orchestra in 1961 and the close contact between him and the orchestra was maintained ever since. The IPO appointed Mehta music advisor in 1969, music director in 1977, and music director for life in 1981. He conducts the orchestra in subscription concerts, special concerts, and major national events, and in concerts in development towns, kibbutzim, and army camps. During both the Six-Day War and the Yom Kippur War he canceled all engagements and hastened to Israel to conduct special concerts and to generally identify himself with Israel. He also conducted the IPO on worldwide tours of Europe, North and South America, and the Far East. Mehta realized a longtime ambition in 1994, when he brought the IPO to India. He won countless awards and distinctions in many countries. In Israel he was awarded honorary doctorates and the Hebrew University also named a wing of the Musicology Department after him and his father. Mehta was also awarded

a special prize at the Israel Prize presentations for 1991 and he was the recipient of the Wolf Foundation Prize for Music (1995–96). He was an Honorary Citizen of Tel Aviv-Yafo. Mehta conducted an encore from *Tristan and Isolde* with the Israel Philharmonic in 1981, but a Holocaust survivor interrupted his performance. Mehta halted the performance and since then has never included Wagner's music in his performances in Israel. His numerous recordings range from a cycle of Mahler symphonies and operas by Verdi and Puccini to works by contemporary American composers. Mehta's performances generally favored romantic warmth of expression and voluptuous sonority, combined with bold attack and rhythmic vigor and reinforced by boundless self-confidence.

[Naama Ramot (2<sup>nd</sup> ed.)]

**MEI AMMI** (Heb. מֵי אַמִּי), kibbutz in central Israel, in the Iron Hills of Samaria, affiliated with Ha-No'ar ha-Ziyyoni, founded in 1963 as a \*Naḥal outpost on the pre-1967 Jordanian border. In August 1967 a civilian group took over the village, whose construction – including the reclamation of its hilly land – was aided by the Jewish community of Miami, Florida. Accordingly, the name chosen, meaning “Water of My People,” is similar in sound to Miami. In the mid-1990s, the population was approximately 185, increasing to 208 in 2002.

[Efraim Orni]

**MEIDNER, LUDWIG** (1884–1966), German painter. Meidner was born in Bernstadt, in Silesia. At 19, he went to Breslau to study art. For a time he eked out a living in Berlin, sketching for fashion magazines, but in 1906–08 studied in Paris. In 1908 he returned to Berlin where in 1912, with Jakob \*Steinhardt and Richard Janthur, Meidner founded the group *Die Pathetiker*.

Though an ardent pacifist, Meidner was drafted into the German army, and served throughout World War I. In January 1918 he was given furlough to attend his one-man show of prewar paintings in Berlin. One of its major features was the oil, “I and the City,” in which he presented himself as a large, tortured, brooding figure, with exploding streets, factories, and tenements in the background. The show caused a great stir and Meidner suddenly became one of the foremost representatives of expressionism in Central Europe. After the war, Meidner was prominent in the *Novembergruppe*, an association of artists and intellectuals eager to bridge the gap between the public and the nation's creative minds.

Meidner was deeply attached to Judaism, and for a time during the early Nazi period taught drawing at the Jewish Yawne secondary school in Cologne. In 1939 he escaped to England. During the air raids on London he served as night watchman in a morgue. Here, for a few pounds each, he painted portraits of deceased people from photographs. In 1952 he returned to Germany, and for a time lived in the Jewish Old Age Home in Frankfurt. A portrait commission by

the German president Theodor Heuss led to his rediscovery; this enabled him to have a studio for the last years of his life. On his 80<sup>th</sup> birthday in 1964, he was awarded the Grosses Verdienstkreuz of the Federal Republic of Germany. Meidner's most important works are those painted before World War I. Apart from his apocalyptic landscapes and his Jewish themes, his most significant creations are his disturbingly intense self-portraits and portraits of friends. His wife, Elsa Meidner, also made a reputation as a painter.

[Alfred Werner / Jihan Radjai-Ordoubadi (2<sup>nd</sup> ed.)]

**MEIER, JULIUS** (1874–1937), U.S. governor. Meier was born in Portland, Oregon. He became president and general manager of his family's mercantile firm, Meier and Frank Company in Portland. Meier developed the Columbia River highway system. During World War I, he was northwest regional director of the Council of National Defense. When his former law partner, the Progressive Republican candidate for governor in 1930, died during the campaign, Meier reluctantly agreed to run as an Independent against a regular Republican and a Democrat and won. During his term as governor (1931–35), he fostered conservation of the state's natural resources, formation of the state police system, and establishment of a non-political judiciary, and he demanded rigid economies in state expenditures. While governor, he served as president of Congregation Beth Israel in Portland (1933–35), which his father had helped to found.

[Robert E. Levinson]

**MEIER, RICHARD** (1934– ), U.S. architect. Meier was born in Newark, N.J. Fifty years later in 1984, he became the youngest winner of the Pritzker architecture prize, one of the most heralded awards for architects. The road to this award and to many important architectural commissions began after Meier graduated from Cornell University in 1957. He worked for the firms of Skidmore, Owings and Merrill and Marcel Breuer before establishing his own firm in 1963.

Meier made his early mark with the designs for private residences, which recall the light and geometric designs of the Bauhaus, especially the form established by Mies van der Rohe as well as the Constructivists. Japanese architecture from the 17<sup>th</sup> century was also important in formulating Meier's aesthetic. The architect has suggested the strong influence of Le

Corbusier in his work. Meier's early important commissions were for the Smith House in Darien, Conn., built between 1965 and 1967, followed by the Douglas House at Harbor Springs, Mich. in 1973, and the Shamberg residence, planned for two people, at Chappaqua, N.Y., from 1972 to 1974. He converted the Bell Telephone laboratories in Manhattan to 383 apartments and went on to design the Atheneum in New Harmony, Ind., 1975 to 1979, to much acclaim. In museum design, Meier has created striking designs in the Museum of Decorative Arts in Frankfurt (1981–84), the High Museum of Art in Atlanta (1981), the Museum of Contemporary Art in Barcelona (1992–95), and the Getty Museum in Los Angeles (1997).

Meier emphasizes white as an essential color in his design, which accentuates the power of the visual form. Meier's buildings are striking, especially against a simple grass landscape, as in the case with the Atheneum, the Des Moines Art Center extension, or the High Museum, where the whiteness and architectonic characteristics of the form are juxtaposed to the green landscape, resulting in a powerful but restful aesthetic. All of Meier's works stand as sculptural forms as well as functional buildings.

Meier's most contested building is the Getty Museum in Los Angeles. Sitting on the hillside that overlooks both Los Angeles and Santa Monica, the Getty is a series of buildings that seeks to bring together a huge and eclectic art collection. Driven by the immense resources of the Getty Foundation and the size of the collection, the museum space, comprised of six buildings, has been compared to an acropolis. To some, the scale of the project served to limit the architect's powers of invention. The uniformity of Meier's usual white exterior was compromised in part by a beige travertine.

[Stephen C. Feinstein (2<sup>nd</sup> ed.)]

**MEIJER, JACOB** (“Jaap”; 1912–1993), Dutch-Jewish historian. Born into an impecunious provincial Jewish family, Meijer received a stipend to attend the Ashkenazi Teachers and Rabbinical Seminary in Amsterdam from the age of 13. He later studied at the University of Amsterdam, and in 1941, one of the last Jewish students allowed to do so, took his Ph.D. with a thesis on the 19<sup>th</sup>-century Amsterdam Sephardi author and poet Isaac da \*Costa. He survived two years in Bergen-Belsen concentration camp (1943–45). From 1945 on he taught history at municipal high schools, including a number of years in Paramaribo, Dutch Guyana, and in Haarlem.

With strong Jewish awareness, he wrote several books on Dutch-Jewish history, particularly on the 19<sup>th</sup> and early 20<sup>th</sup> centuries. His works include *Het verdwenen ghetto* (“Walks through the Prewar Jewish Quarter of Amsterdam,” 1948), *Het Jonas Daniel Meijerplein* (“Three Centuries of Amsterdam Jewry,” 1961), *Erfenis der Emancipatie* (“Dutch Jewry in the First Half of the 19<sup>th</sup> Century,” 1963), *Zij lieten hun sporen achter* (“Jewish Contributions to Dutch Culture,” 1964), *Van*

*Israeliten tot Israëliers* (“150 Years of Jewish History in The Netherlands,” 1965), and *De zoon van enn Gazzen* (“The Life of Jacob Israel de Haan,” 1967). He also published two volumes of *Encyclopedia Sefaradica Neerlandica* (1950), covering the letters A-C and D-F; the project was never completed.

Meijer also wrote monographs on Dutch-Jewish personalities, such as on the bibliographer and first librarian of the Bibliotheca Rosenthaliana, Meyer \*Roest, and Chief Rabbi J.H. \*Duenner, and contributed regularly to Dutch periodicals, general and Jewish. In addition, from 1968 on, he published many volumes of poetry – in Dutch and in the dialect of the region of his birth, East-Groningen – under the pen-name Saul van Messel.

**BIBLIOGRAPHY:** L. Dasberg and J.N. Cohen (eds.), *Neveh Ya'akov*, Jubilee Volume presented to Dr. Jaap Meijer on the occasion of his 70<sup>th</sup> birthday (1982); I. Cornelissen, *Een dwarsliggende Jood, Jaap Meijer* (1995).

[Henriette Boas]

**MEIJERS, EDUARD MAURITS** (1880–1954), Dutch jurist who as professor of law at Leiden University from 1910 to 1950 influenced several generations of Dutch lawyers. Born in Den Helder, Meijers was admitted to the bar in 1903. He practiced law in Amsterdam until 1910, when he was made professor of civil and private international law at Leiden University. He served this university both as dean and rector. After 1928 he was substitute counselor in the High Court of Justice at The Hague. Meijers' numerous books were largely devoted to the history of civil law. His work *The Labor Contract* (1908) became a standard treatise on the subject and was followed by *Legal Decisions Regarding the Law on Labor Contracts* (1909). His textbook on succession, *Le droit ligurien de succession en Europe occidentale* (1928), and his *L'Histoire des principes fondamentaux du droit international privé à partir du Moyen Age* (1934) brought him further distinction. Following the Nazi invasion of Holland, Meijers was dismissed from his post and was sent to the \*Westerbork and \*Theresienstadt camps for the duration of the war. His arrest led to a public demonstration by students at Leiden. The dean, Professor R.P. Cleveringa, gave a famous address, protesting against Meijers' arrest. Cleveringa himself was imprisoned for this speech. After World War II, Meijers was commissioned to draft a new civil code for Holland, but died before its completion. He was chairman of the Royal Dutch Academy of Sciences from 1945 until 1949.

[Henriette Boas / Bart Wallet (2<sup>nd</sup> ed.)]

**ME'ILAH** (Heb. מֵעִילָה; “sacrilege”), eighth tractate in the Mishnah, Tosefta, and Babylonian Talmud order *Kodashim*. *Me'ilah* contains six chapters and deals with the unlawful use and enjoyment of *hekdesh* (i.e., things consecrated to the Temple, especially sacrifices). The scriptural basis is Leviticus 5:15–16, which lays down that a person inadvertently committing a trespass “in holy things” shall bring a guilt offering,

make restitution for the loss caused, and pay an additional fine. Chapters 1 and 2 discuss the various offerings and sacrificial portions to which the law of *me'ilah* applies, and define the moment from which an offering is considered *hekdesh* for the purpose of this law. Chapter 3 is concerned with exceptional instances of illicit enjoyment of *hekdesh*, which are not affected by the law of *me'ilah*. Chapters 4 and 5 include the problem of determining the minimal value of misappropriation to which the law applies, and especially whether illicit enjoyment that causes no loss to *hekdesh* constitutes *me'ilah*. Chapter 6 deals with trespass by proxy. The Tosefta is divided into three chapters. The Babylonian *Gemara* enlarges on the teaching of the Mishnah but, with the exception of the remarkable \*Ben Temalyon story (17b), there are no aggadic digressions. *Me'ilah* was translated into English in the Soncino edition of the Talmud (1948).

[Arnost Zvi Ehrman]

**°MEINERTZHAGEN, RICHARD HENRY** (1878–1967), British soldier, administrator, and supporter of Zionism. Meinertzhagen was the son of a successful non-Jewish German merchant in London; his mother was the sister of Beatrice Webb, the famous socialist. He was educated at Harrow and became an army officer. During World War I he served on the East African front and was on the staff of General \*Allenby's army, which conquered Palestine. He was chief political officer in Palestine and Syria in the postwar military administration, and in a dispatch to the Foreign Office (1919), accused the military administration of hostility to the principles of the \*Balfour Declaration, expressing the view that Arab opposition to Zionism would not last once it was known that the British government was determined to carry through its pledge of a national home to the Jewish people. He joined Herbert \*Samuel's staff when the latter was appointed high commissioner of Palestine. Meinertzhagen was also attached to the British delegation to the Paris Peace Conference as an advisor (1919–20), and from 1921 to 1924 he was military advisor to the Middle Eastern Department of the Colonial Office. He remained a firm friend of Zionism, and his *Middle East Diary 1917–1956*, published in 1959, is a valuable record as well as source for correcting the misinterpretations of history related to the Balfour Declaration and the subsequent period. He was also an enthusiastic ornithologist, and his book *Birds of Arabia* (1954) threw much light on the bird life of Palestine.

[Moshe Rosetti]

**°MEINHOLD, JOHANNES FRIEDRICH** (1861–1937), German Bible scholar. Meinhold studied with August Dillmann, with Franz Delitzsch the biblicist, and with his son the Assyriologist Friedrich Delitzsch of Babel-Bibel notoriety. Meinhold taught at Greifswald and Bonn. He wrote on the history of the Hagiographa (1889) and on the compilation of Daniel (1884, 1889), maintaining that the basic corpus of Daniel (2:4b–6:29)

was composed around 300 B.C.E. and that Daniel 1:2–2:4a and 7–12 were added in the Hasmonean period. His views on the role of Israelite wisdom and prophecy, the documents contained within the Hexateuch, and the composition of Ruth reflect the strong influence of the classical Wellhausen school. It also characterizes his *Einfuehrung in das Alte Testament*, “Introduction to the Old Testament” (1919, 1932<sup>3</sup>). In addition to studies on Genesis 14 (1911), the Decalogue (1927), and the role of the biblical Sabbath (1905), he wrote a history of the Jewish people (1916). His *Jesus und das Alte Testament* (1896) clashed with accepted Christian positions, but his *Altes Testament und evangelisches Christentum* (1934), an apology for keeping the Hebrew heritage within the Christian tradition, argued that the national ethical religion of Israel was fulfilled in the primitive church’s faith in resurrection. He was also co-editor with Hans Lietzmann of the Hebrew-Greek text of Amos for *Kleine Texte für theologische Vorlesungen und Übungen*, “Short Texts for Theological Lectures and Exercises.”

[Zev Garber]

**MEININGEN**, city in Germany. The medieval Jewish community suffered persecutions in 1243 because of a blood \*libel, in 1298 during the \*Rindfleisch disturbances, and during the \*Black Death massacres in 1349 when it was destroyed. The synagogue was transformed into a chapel in 1384. Jews continued to live in nearby villages, which in 1803 were incorporated into the newly created duchy of Saxe-Meiningen. The duchy’s Jewry law of 1811 laid down disabilities regarding residence, marriage permits, and economic pursuits. Only a few Jews were allowed to live in Meiningen itself; after the \*Hep! Hep! riots (1819) only one family remained. By 1844, only 29 persons lived there. At that time 1,500 Jews lived in the duchy; the seat of the rabbinate was in the nearby village of Walldorf, where 550 Jews lived (35% of the total population) in 1844, when the ducal authorities approved the Saxe-Meiningen synagogue regulations stressing religious reforms. The Saxe-Meiningen Jewry law of 1856 granted citizenship to Jews owning substantial business, and that of 1868 to all the duchy’s Jews. By 1870, some 470 Jews lived in Meiningen; 490 in 1898; 359 in 1913 (2.08% of the total); 293 in 1925 (1.6%); and 192 in June 1933. In 1871 the rabbinate was transferred to Meiningen, a cemetery was acquired in 1874, a synagogue was consecrated in 1883, and a *hevra kaddisha* was founded in 1885. In 1856 Jewish and Christian financiers founded the Central-German Credit Bank in Meiningen. The banks of B.M. Strupp (formerly a merchandise firm) and D. Mannheimer (founded in 1871) were important in industrial financing far beyond the duchy’s limits. Gustav Strupp (1851–1918) was chairman of both the Chamber of Commerce and the Jewish community, and was a member of the Landtag (1903–18). From the 1870s Jews were admitted to the bar, and some were appointed judges. Antisemitism was strong in Meiningen: the antisemitic vote in 1898 and the Nazi vote in 1932 far exceeded the national average. The synagogue was burnt in 1938, and by the end of that year only a few Jew-

ish families remained, with 16 children attending the Jewish school. Records on deportations are missing. No Jews returned to Meiningen after 1945. The Jewish cemetery, which had been damaged by the Nazis in 1938, was restored by the municipality of Meiningen. In 1988 a memorial was consecrated to commemorate the destroyed synagogue.

[Toni Oelsner / Larissa Daemmig (2<sup>nd</sup> ed.)]

**MEIR** (second century C.E.), *tanna*, one of the leaders of the post-Bar Kokhba generation. Essentially a halakhist, he played a decisive part in the development of the \*Mishnah. His main teacher was \*Akiva, by whom he was apparently ordained (TJ, Sanh. 1, 19a), but he also studied under \*Ishmael. According to a Palestinian amoraic aggadic tradition he was also a disciple of Elisha b. Avuyah (Ruth R. 6; Ecc. R. 7; TJ, Hag. 2:1, 87b), but Meir’s connection to these traditions is in all likelihood more literary than historical (see \*Elisha b. Avuyah, and cf. Tosef., Dem. 2:9). Meir is mentioned in most of the talmudic traditions that describe the reestablishment of the center of learning in the Galilee after the Bar Kokhba revolt. Thus he is listed as one of the five ordained by Judah b. Bava at the cost of his life (Sanh. 14a), and also among the scholars who gathered at Usha to reconstruct the religious life of the people (Song R. 2:5, no. 3). He was also described as having been active at Bet Rimmon when the renewed calendar arrangements were made (TJ, Hag. 3:1). Though these traditions have been viewed by some as representing distinct historical events, they should more properly be viewed as a family of related traditions with definite lines of literary dependence between them, as has been recently argued convincingly (Oppenheimer, 78–79).

According to the *aggadah*, Meir was a descendant of proselytes. One tradition holds that his real name was Nehorai (the Aramaic form of Meir), but that he was called Meir (“the Illuminator”) because he “enlightened the eyes of the sages of the *halakhah*” (Er. 13b; see Dik. Sof.), though little historical credence should be accorded this tradition (see \*Nehorai).

An *aggadah* in the Babylonian Talmud (Hor. 13b–14a) relates that when Simeon b. Gamaliel was appointed *nasi*, R. Nathan was appointed *av bet din*, and Meir, *hakham*. According to this tradition Simeon b. Gamaliel took steps to strengthen the status and honor of his office at the expense of

these two other sages, which Meir and Nathan took as a personal affront. Nathan and Meir engaged in a conspiracy to discredit Simeon b. Gamaliel and to remove him from office. Their plan was foiled and Simeon in turn attempted, unsuccessfully, to have them removed from the *bet ha-midrash*. Nevertheless, as a punishment for their opposition to the *nasi*, it was decreed that all subsequent statements made by Meir and Nathan should be introduced anonymously, the former being quoted merely as “others say,” and the latter as “some say” (Hor. 13b–14a). While some scholars have held that this story accurately reflects the forms of communal leadership practiced during the late tannaitic period, and have also accepted it as evidence for a power struggle between these well-known historical figures, Goodblatt has shown quite convincingly that this story is in fact a late Babylonian elaboration and embellishment of certain earlier Palestinian traditions (cf. *TYMK* 3:1, 81c), and has little or no historical value.

The Talmud ascribes to R. Johanan the statement that “an anonymous *mishnah* represents the view of Meir following that of Akiva” (Sanh. 86a), but the authenticity of this statement is doubtful and its proper interpretation remains somewhat unclear (cf. TJ, Yev. 4:11, 6b). According to tradition, Meir frequently spoke in praise of living in Erez Israel: “Whoever lives permanently in Israel and speaks the holy language ... he is assured of a share in the world to come” (TJ, Shek. 3:4, 47c). Meir died in Asia (probably Ezion-Geber). Before his death he ordered that his body be taken to Erez Israel, and requested that until then his bier be put on the shore in order that it may be lapped by the sea that washes the shores of Erez Israel (TJ, Kil. 9:4, 32c). His extreme attitude in demanding study of Torah emerges clearly in the saying: “Whoever forgets one word of the Torah is accounted by Scripture as if he had forfeited his life” (Avot 3:8), and the Talmud ascribes to him the statement that a gentile who occupies himself with the Torah is the equal of a high priest (BK 38a; Av. Zar. 3a), and also states that he required that one should not be satisfied with acquiring knowledge of the Torah, but should also teach it to others (Sanh. 99a). Three hundred fox *\*fables* are ascribed to Meir, of which three are given (Sanh. 38b). In connection with the definition of the concept of *am ha-arez*, Meir takes a more stringent view than his colleagues. According to Meir anyone not eating ordinary food in ritual purity belongs to the category of the *\*am ha-arez* while his colleagues apply the term only to someone who disregards the duty of giving tithes. On the other hand the words ascribed to him in the Talmud, “Whosoever marries his daughter to an *am ha-arez* is as though he bound her and laid her in front of a lion” (Pes. 49b), are almost certainly pseudoepigraphic, and do not represent the views of the historical Meir (Wald). Together with the study of Torah, Meir stresses the importance of labor: “A blessing rests only upon labor” (Tosef., Ber. 7:8); “A man should always teach his son a clean craft” (Kid. 4:14). He similarly stresses the importance of prayer: “‘And it came to pass as she prayed long’ [1 Sam. 1:12], this implies that whoever prays long is answered” (TJ, Ber. 4:17c; et al.). According to the Talmud

his contemporary, Yose b. Ḥalafta, called him: “A great man, a holy man, a modest man” (TJ, Ber. 2:7, 5b), while Simeon b. Lakish called him “holy mouth” (Sanh. 23a).

According to the *aggadot* of the Babylonian Talmud, Meir was married to *\*Beruryah*, the daughter of the martyred *\*Hananiah b. Teradyon*. After the Bar Kokhba War her sister was taken to a brothel from where Meir rescued her (Av. Zar. 18a). According to a legend quoted by Rashi (Av. Zar. 18b), *Beruryah* herself was seduced by one of the scholars. None of these traditions, however, seem to have any historical basis (see *\*Beruryah*). According to another late aggadic tradition (Midrash Proverbs 31) his two sons died simultaneously while he was busy in the college.

[A'hron Oppenheimer / Stephen G. Wald (2<sup>nd</sup> ed.)]

**MEIR (Myerson, née Mabovitch), GOLDA** (1898–1978), *\*Mapai* leader and Israeli prime minister in 1969–74; member of the First to Eighth Knessets. Meir was born in Kiev, Russia, where her father was a skilled carpenter. In 1906 the family migrated to the United States and settled in Milwaukee, where she graduated from high school and enrolled in the Milwaukee Normal School for Teachers. In 1915, as a youth, she joined *\*Po'alei Zion*. In 1921 Meir settled in Palestine with her husband, Morris Myerson, and the two joined kibbutz Merḥavyah, where they remained until 1924. Meir soon became involved in political and social activities within the *\*Histadrut*. In 1928 she became the executive secretary of *Mo'etzet ha-Po'alot* (Women Workers Council), and was sent as an emissary to the Pioneer Women's Organization in the United States from 1932 to 1934.

Upon her return to Palestine in 1934, she was invited to join the executive committee of the *Histadrut*, and in 1936 became head of its Political Department. Simultaneously with her work within the *Histadrut* Meir was active in *Mapai*. When Moshe *\*Sharett* was arrested by the British on Black Saturday in June 1946, Meir was appointed to serve as acting head of the Political Department of the Jewish Agency. After *Sharett* was released, he was sent to the United States to take charge of the struggle for the partition plan at the UN, and Meir remained as the head of the Political Department in Jerusalem, in which capacity she served until the establishment of the State in May 1948.

In January 1948, she went to the United States to enlist the help of American Jewry in the struggle against the Arabs. Four days before the proclamation of Independence, on May

10, 1948, she met secretly with King Abdullah in Transjordan, in an effort to come to an agreement with him on the partition of Palestine between his kingdom and the Jewish state and to keep the Arab Legion out of the approaching military attack on the new state. After the establishment of the state she was appointed Israel's first diplomatic representative to Moscow, a post she held until April 1949. Her presence at the Great Synagogue of Moscow on the High Holidays in September/October 1948 caused great excitement among Soviet Jews.

After the elections to the First Knesset in 1949, to which she was elected on the Mapai list, Meir was appointed minister of labor, in which capacity she was responsible for the initiation of very large-scale public works to offer rudimentary employment to masses of new immigrants. In 1956, after Moshe Sharett resigned from the post of minister for foreign affairs that he had held since 1948, Meir assumed the post, which she held until 1965. As foreign minister she attended the annual opening sessions of the United Nations, and defended Israel's participation in the \*Sinai Campaign. She played an active role in establishing friendly relations with the newly independent black African states, extending technical assistance to them and visiting several of them. After the elections to the Sixth Knesset in 1965 Meir was appointed secretary general of Mapai. In this capacity she played an active role in establishing the \*Israel Labor Party in 1968 through the union of Mapai, \*Rafi, and \*Ahdut ha-Avodah, becoming the first secretary general of the new party. After the death of Levi \*Eshkol in February 1969, and despite the fact that she suffered from blood cancer, Meir was chosen as Israel's fourth prime minister. Soon after becoming prime minister Meir visited President Richard Nixon in Washington, and subsequently led the Labor Alignment to an impressive victory in the elections to the Seventh Knesset. Though she once again formed a National Unity Government with Gaḥal, a year later Gaḥal left the coalition owing to its objection to her willingness to consider the Rogers Plan, which proposed a settlement between Egypt and Israel based on an Israeli withdrawal from territories it had occupied in 1967. However, in later years Meir was accused of missing an opportunity to reach a settlement with Egyptian President Anwar Sadat, and thus of avoiding the \*Yom Kippur War. During her premiership, and despite the fact that Israel did not have diplomatic relations with the Soviet Union, Meir played an active role in the struggle to get the latter to open its gates to Jewish immigration to Israel – a struggle that was partially successful for several years. At the same time she did not demonstrate any sympathy toward the social protest movement of the Israeli “Black Panthers,” who were protesting the discrimination against Israel's citizens of Oriental origin, characterizing their leaders as “not nice.” Her failure to take the distress of this part of the Israeli population seriously was to have devastating political consequence for the Labor Party in later years. In 1972 Meir was elected deputy chairman of the Socialist International, in which capacity she served for two years.

The Yom Kippur War, which took the Israeli leadership

by surprise, signaled the beginning of the end of Labor hegemony in Israeli politics in general, and of Meir's political career in particular. Though the Labor Party was not defeated in the elections for the Eighth Knesset held on December 31, 1973, and Meir succeeded, after lengthy and difficult negotiations, in forming a new government with the \*National Religious Party and the \*Independent Liberal Party, one month after the new government was approved by the Knesset, she resigned. The immediate background to her resignation was the Interim Report of the Agranat Commission of Inquiry concerning the causes of the outbreak of the Yom Kippur War. Though the report put the blame for the lack of preparedness on the military leadership, there was growing public dissatisfaction with the political leaders, and Meir submitted her resignation as prime minister on April 11, 1974, and in June resigned her seat in the Knesset. In 1975 Meir was awarded the Israel Prize for special service to the state and society. Though after her resignation she assumed the status of “elder statesman” until her death four years later, her departure, together with the fact that neither Moshe \*Dayan nor Abba \*Eban were given ministerial positions in the government formed by Yitzhak \*Rabin in June, marked the end of an era. However, before Rabin formed his government, Israel with the mediation of U.S. Secretary of State Henry \*Kissinger and under Meir's leadership, had signed Interim Agreements with Egypt (January 18, 1974) and Syria (May 31, 1974), both involving Israeli withdrawal from territories in return for new security arrangements – the first implementation of the “territories for peace” principle, that three and a half years later was to lead to the Peace Treaty between Israel and Egypt. At a meeting with Egyptian President Anwar Sadat on his historic visit to the Knesset on November 20, 1977, Meir joked with him about his having referred to her as “the old lady.” Meir passed away on December 8, 1978. In her will she requested that no eulogies be delivered at her funeral and no institutions be named after her. Nevertheless, a year after her death, the city of New York named a square on Broadway after her. A year before she passed away a two-act play called *Golda*, by William Gibson, appeared on Broadway, and in 2003 a one-woman play, titled *Golda's Balcony*, by the same playwright, turned into a hit and ran in several cities in the U.S.

Her writings appeared in H. Cristman (ed.), *This Is Our Strength: Selected Papers of Golda Meir* (1962); Israel Shenker and Mary Shenker (eds.), *As Good As Golda: The Warmth and Wisdom of Israel's Prime Minister* (1970); *Beit Avi* (Hebrew, 1972); Marie Syrkin (ed.), *Golda Meir Speaks Out* (1973); and an autobiography, *My Life* (1974).

**MEIR, JACOB** (1856–1939), Sephardi chief rabbi of Erez Israel. Born in Jerusalem, the son of a well-to-do merchant, Caleb Mercado, Meir studied Talmud under Menahem Bekhor Isaac and Kabbalah under Aaron Azriel. In 1882 he was sent to Bukhara, as the first emissary to visit that country. Meir, enthusiastically welcomed, was instrumental in encouraging the immigration of Bukhara Jews to Erez Israel. In 1885, 1888, and 1900 he visited Tunisia and Algeria as an emissary. In 1888–99 he was a member of the *bet din* of R. Jacob Saul \*Elyashar in Jerusalem. Meir was one of the promoters of the revival of spoken Hebrew in Palestine. Under Turkish rule, he often interceded with the authorities on behalf of the Jewish community; he also encouraged the construction of new Jewish quarters of Jerusalem. In 1899 he was appointed deputy head of the *bet din* of R. Raphael Isaac Israel. In 1906 he was a candidate for the chief rabbinate of Jerusalem, in succession to Elyashar, but his opponents, supported by the *hakham bashi* in Turkey, prevented his election. In 1908 he was elected chief rabbi of Salonika, where he remained until 1919. He was elected chief rabbi of Jerusalem in 1911, but the Jews of Salonika prevented him from assuming the office. When in 1921 the chief rabbinate was established in Palestine, Meir was elected (together with Rabbi A.I. Kook) as chief rabbi of Palestine with the title of *rishon le-Zion*. He was decorated by the sultan of Turkey and by the kings of Greece and England, and was awarded the French Legion of Honor. Meir even received decorations from Hussein, king of the Hejaz. Two manuscripts of his were lost in a fire in Salonika. To celebrate his 80<sup>th</sup> birthday, his friends published *Zikhron Me'ir* in his honor.

**MEIR BA'AL HA-NES, TOMB OF**, a building on the shores of Lake Kinneret. According to R. Moses \*Basola “people gathered there for prayer morning and night, stating that it was the tomb of one called R. Meir who took a vow that he would not lie down until the Messiah came, and was buried there in an upright position.” At present it is a large building consisting of two *battei midrash* (one for Ashkenazim and one for Sephardim) covering the tomb. Some scholars connect the grave with the *tanna* \*Meir, who established his school in Tiberias (TJ, Hag. 2:1) and has a miracle related about him (Av. Zar. 18a/b). There are however different traditions about his place of burial, as he died in Esia, an area near Ezion Geber, close to Eilat, and said “Place my bier (*arsa*) on the sea shore”

(TJ, Kil. 9:4, 32c). In the 13<sup>th</sup> century the tomb was connected with R. Meir Kazin, or Meir b. Jacob who immigrated to Erez Israel with Jehiel of Paris (see Vilnay in bibl.). The name of Meir b. Isaac, author of \**Akdamut* for Shavuot, has also been connected with it (*Ozar Yisrael*). It is customary to arrange a great celebration at his grave on the 14<sup>th</sup> of Iyyar (Second Passover) which is comparable to the one in \*Meron on Lag ba-Omer. These celebrations began in 1867. The tomb was exceptionally well publicized in the Diaspora by the emissaries of Erez Israel, as well as in their emissarial *iggerot* (letters). Beginning with the 18<sup>th</sup> century a Meir Ba'al ha-Nes box was found in almost every Jewish home, and housewives dropped small change into it just before kindling the Sabbath lights. Due to the miraculous deeds connected with the tomb, it was customary to contribute money, candles, or oil for lighting as a specific protection against all kinds of ailments and dangers; it was also done in the hope of finding something lost, of having children, or of driving away evil thoughts. It is clear, however, that the box also symbolized the longing for Erez Israel (for the way in which the money was distributed, see Vilnay in bibl.). Craftsmen created art objects connected with Meir Ba'al ha-Nes. In spite of the opposition on the part of both rabbis and *maskilim* to the celebration and the boxes, the practice still continues.

[Meir Havazelet]

**MEIR BEN BARUCH HA-LEVI** (d. 1404), German scholar; colleague of Abraham \*Klausner. Meir came from Fulda. His chronology is obscure, but it is now generally held that his first rabbinic post was in Erfurt, where Hillel “Ha-Zaken” of Erfurt was his pupil, and that he subsequently became rabbi of Frankfurt, moving to Nuremberg in 1383, and returning two years later to Frankfurt. In 1391 he was imprisoned as a result of a false accusation and upon his release in 1392 became rabbi of Vienna, where he appears to have remained until his death. Meir is frequently mentioned in the works of the leading scholars of his own and the following generation, among them Jacob \*Moellin, Judah \*Minz, Israel \*Isserlein, and Israel \*Bruna, who cite his customs and rulings (under the name Maharam Segal or Maharam Sal) regarding them as authoritative. Meir's central role in Jewish life of the 14<sup>th</sup> century is reflected by the part he played in the celebrated dispute about 1393 between Johanan \*Treves and Isaiah b. Abba Mari, the pupil of Johanan's father, Mattathias Treves. When Johanan was appointed to succeed his father as chief rabbi of France, Meir conferred upon Isaiah – who was apparently the greater scholar – the title *morenu*, which authorized him to assume the chief rabbinate in place of Johanan. This inter-

vention of Meir, a German, in the affairs of the French community, aroused the opposition of many leading scholars, including \*Isaac b. Sheshet, who nevertheless refers to Meir with extraordinary respect. This incident has led some scholars to believe that it was Meir who reinstated ordination in Germany, but the view is now regarded as very doubtful.

[Israel Moses Ta-Shma]

**MEIR BEN BARUCH OF ROTHENBURG** (c. 1215–1293), teacher, scholar, tosafist, and supreme arbiter in ritual, legal, and community matters in Germany. He was born in Worms into a family of scholars, many members of which were important leaders in the communities of Germany. In his responsa he mentions two uncles and 12 other relatives bearing the title *Ha-Rav*, a title reserved, in this period, for talmudic scholars of high standing, mainly for heads of yeshivot. Meir often quotes their opinions and legal decisions in order to bolster his own views; hence they must have been well-known and highly esteemed scholars. Meir's father Baruch was an outstanding member of this scholarly family. He was credited with a wide knowledge of talmudic lore, was a member of the *bet din* of the community of Worms, and was often chosen to act as judge. He also bore the honorific title *Ha-Rav*; several halakhic decisions were recorded in his name; and his epitaph, preserved to this day, was written in highly laudatory terms. His teaching and guidance contributed greatly to the intellectual growth of his son. At the age of 12 Meir joined the well-known school of R. Isaac b. Moses, the author of the *Or Zarua*, in Wuerzburg, where he studied for about six years. While in that city Meir also studied under R. Samuel b. Menahem, in whose name, in later years, he quoted important decisions in law and ritual. Subsequently Meir moved to Mainz, where he studied under his relative R. Judah b. Moses ha-Kohen. Finally, he went to France and studied under the great tosafists \*Samuel b. Solomon of Falaise, also known as Sir Morel of Falaise, and \*Jehiel of Paris, known as Sir Vivo. Meir was in France in 1240 when these two teachers took part in the famous disputation with Nicolas \*Donin over the Talmud. He was still there two years later, in 1242, when he witnessed the public burning of the Talmud, on which occasion he wrote his famous elegy *Sha'ali Serufah ba-Esh*, "Inquire, oh thou who art burned by fire, about the welfare of those who mourn for thee..." which is included to this day in the *Kinot* of the Ninth of \*Av according to the Ashkenazi rite.

After this occurrence Meir returned to Germany and within a few years settled in Rothenburg, where he remained for more than 40 years, until 1286. Students flocked to his school from all the communities of Germany and its neighboring countries. Occasionally he would visit other towns for

private or community business, but his home and his famous school remained in Rothenburg. His fame as a great talmudic authority spread rapidly even to other countries. In 1249, when a serious dispute arose between the communities of Bohemia and those of Moravia regarding the payment of taxes by these communities, the matter was referred to Meir for final settlement. Apparently at this early period he was already reputed to be the greatest scholar of his generation. For nearly half a century Meir acted as the supreme court of appeals for Germany and its surrounding countries. Rabbis, judges, and members of courts of arbitration sent him their questions regarding law and ritual. Individual complaints that the local courts decided contrary to talmudic law were also sent to him. He was the arbiter between communities and their members, between settlements and new settlers, and between various communities in their mutual relationships. They turned to him during their greatest crises. About a thousand of his responsa have survived, more than the combined number which have been preserved from all the other tosafists. Meir is unique among the tosafists and other great scholars of his time in his preserving a record of his responsa. The careful preservation of legal decisions leaves little room for modification or debate. Meir was motivated in this regard by the tumultuous times he lived in.

Meir sent his responsa to the communities of Germany, Austria, Bohemia, Italy, France, and even to Solomon b. Abraham Adret of Spain. In his lucid style and terse language he gave short, clear, and unequivocal answers to the inquirers. Sometimes he complains of the large number of responsa he is forced to write, apologizes for abbreviating the introductory greetings, is impatient with long and drawn-out questions, occasionally displays genuine anger when a case is repeatedly brought up before him because of persistent litigants, flares up in spirited temper when a litigant threatens to apply to the secular courts, and allows his passion to rise to a crescendo when confronted with serious crime. Sometimes he complained that those who addressed their queries to him overestimated his prerogatives as a talmudic scholar, and asked him to decide matters over which he had no jurisdiction. He was often unwilling to answer queries dealing with taxation, since the laws of taxation depended principally on local custom and procedures. He was very careful not to become involved in disputes and quarrels of the communities. Nevertheless, his opinion was often earnestly sought in matters involving community rights and taxes "in order to avoid the outbreak of a great quarrel."

The type of question sent to Meir speaks eloquently of the position he held in the esteem of his contemporaries. The great majority of Meir's responsa deal with business transactions, real estate, inheritance, marriage contracts, partnerships, agents, sureties, trustees, community government, community property, settling rights, and taxation. The preponderance of queries regarding civil cases and their abundance are eloquent proof of his importance as a communal leader of the first rank. Nevertheless, the opinion of many modern historians to the contrary notwithstanding, Meir held no official position as

judge, as head, or as chief rabbi, of German Jewry as a whole. He was neither elected to such a position by the communities, nor was he appointed to it by the emperor. It is true that during the last two decades of his life he often took a somewhat authoritative stand in his relation to the communities. He once convoked a synod of the communities and scholars, and urged them to adopt an ordinance to the effect that a rebellious wife when divorced should forfeit her right to her *ketubah*. On one occasion he wrote to the Jews of Wuerzburg that they should change their customary procedure in the sale of real estate, and the change was adopted in spite of the fact that some members of that community were reluctant to abandon their ancient practice. In a responsum Meir wrote: "On many occasions have individuals, whose wealth consisted of ready cash, desired to transfer the burden of taxation to real estate owners, but we did not permit them to do so." This seems to imply that in such cases Meir exercised the authority of a chief rabbi, although a thorough study of his responsa proves that he held no such official position.

Meir's responsa reveal a great deal about the various hardships Jews of his time had to endure. One particularly poignant question came from a Jew from Koblenz who admitted to killing his entire family to prevent them from falling into the hands of a Christian mob. Just before taking his own life, he was saved. His question was how he could do penance for his horrendous act. Meir responded that many scholars had acted similarly during the First Crusade. To require special penance would defame them and the permission they granted their students to act in a similar manner.

It is very difficult to determine if Meir was strict or lenient overall in his legal decisions. Whenever possible, he tried to combine the opposing sides of the argument into one harmonious ruling. This did not mean compromise. Rather, both opinions were upheld and merged. For example, there was a controversy surrounding the question as to whether Rosh Ha-Shanah was two separate days or one "long" day. Meir ruled that the *sheheheyanu* blessing should be recited on both nights according to the opinion that each day of Rosh Ha-Shanah is separate and distinct. However, Meir required that a new garment be worn or a new fruit be eaten on the second night, thus providing an alternative reason for reciting the *sheheheyanu* blessing, in accordance with the opinion that both days of Rosh Ha-Shanah are one.

As business became increasingly sophisticated in the Middle Ages, the primary Talmudic precedents became less and less relevant. While Meir and his contemporaries continued to rely on talmudic law and precedent for their rulings, Meir in particular realized that he had to be flexible in his strict application of talmudic law if the Jews were going to survive in the new economic environment. To do otherwise would have forced Jewish business to separate their commercial lives from their religious and communal lives, with potentially disastrous results.

Many of Meir's responsa deal with the relations between Jews and Christians. These rulings deal with a very wide range

of subjects, including eating food cooked by a gentile; *yayin nesekh*, wine produced by gentiles; the halakhic status of the Catholic Church and Christian religious items; charging gentiles interest; relations with Jews who converted to Christianity; and the problems of Jewish life in a Christian society, such as business partnerships with gentiles. A good example of such responsa is the question of a woman whose husband died leaving her in a situation normally requiring the *halizah* rite necessary for the cancellation of a levirate marriage. The difficulty arose from the fact that her brother-in-law was a devoted convert to Christianity. Meir released her from the obligation of the *halizah* rite.

Meir was highly honored and in many cases his word was law. He enjoyed this authority, however, on account of his scholarship; because many leaders of the German communities had been his students who owed him respect and even obedience; and because the Talmud was the "constitution" of community government, and Meir, the greatest scholar of the land, was its best and most authoritative interpreter. His authority was based on his knowledge of talmudic law and on his intellectual attainments, both of which enabled him to arrive at a correct decision in questions of law or ritual. Thus he once wrote to the leaders of the Rhine communities in high-spirited defiance: "You, the aforementioned community leaders, probably delude yourselves with the idea that since your permission is required before a person may divorce his wife, no scholar is permitted to render decisions in ritual law unless he receives your authorization. No, this is not true, for the Torah is free to anyone who is capable of arriving at a correct decision" (I.A. Agus (ed.), *Teshuvot Ba'alei ha-Tosafot* (1954), 143). In the community of Rothenburg, however, Meir probably did hold an official position as judge, cantor, and head of the yeshivah. His house in Rothenburg was probably provided for him by the community since it contained 21 rooms, including a *bet midrash* and rooms for his students. He did not depend on his salary for a livelihood, engaging in business. The major part of his time, however, was devoted to his studies, his students, and his correspondence with the leaders of the communities.

Meir's role in the final formulation and fixing of the law and the ritual of Ashkenazi Jewry can hardly be overestimated. His numerous responsa – collected, copied, and seriously studied for generations – greatly influenced the work of codifiers of the subsequent centuries and thus helped standardize legal procedure and civil law. He introduced certain modifications in the ritual of prayer and religious *\*minhag* in the synagogue and at home, and instituted many customs which later became standard practice throughout Germany and Eastern Europe. His impact on the life, the organization, and the behavior of subsequent generations was exercised mainly through the work of his students, who followed him everywhere – at home, in school, in the synagogue, and even in prison. They studied his behavior, customs, and ceremonies, and later recorded their observations in their halakhic works together with Meir's decisions on law and ritual. One

student in particular, R. Samson b. Zadok, was a veritable Boswell. In his *Tashbez*, he described in great detail Meir's customs and practices from the moment he rose in the morning until he went to bed at night, on weekdays, Sabbaths, and festivals. This book became popular in Germany, Austria, Bohemia, and Poland, and its details were eventually incorporated in the codes.

Meir's influence, therefore, was exerted along three main channels:

(1) His students became the leaders of a number of communities in Germany, Austria, and Bohemia, and imprinted his views upon the life of the members of these communities and the surrounding territories;

(2) He had a profound influence on his most eminent student, Asher b. Jehiel, and on the latter's son Jacob, the author of the *Arba'ah Turim*, and thus directly affected the final *halakhah* incorporated in the Shulḥan Arukh;

(3) The *Mordekhai*, *Agudah*, *Haggahot Maimuniyyot*, *Sha'arei Dura*, and *Tashbez*, classical works compiled by his students mainly on the basis of his decisions, responsa, and customs, were thoroughly studied by the scholars of succeeding generations and thus became the foundation for the work of R. Moses Isserles, who incorporated the Ashkenazi usage in the Shulḥan Arukh. By far the greatest number of the views and decisions of Isserles incorporated in the above-named code stem directly or indirectly from the work and practices of Meir.

In the more than 80 of his responsa dealing with public law and community government, Meir gave the clearest and most incisive expression and explanation of the ideas of human freedom, government by consent, limitation of the power of the majority, and group responsibility – that formed part of Jewish law on the highest level of comprehension – of any other Jewish scholar before him or since. The principles of Jewish public law that man is absolutely free, that the legitimacy of government is derived solely from the free and uncoerced consent of the governed, and that the legislative power of the majority is limited to certain areas only and cannot encroach upon the private and inalienable rights of the individual were most forcefully and most clearly explained in his responsa. He thus greatly strengthened the democratic form of government of the communities – a form they derived traditionally from the forefathers of Franco-German Jewry – and it was eventually copied by the municipal governments and the guilds of the burgher class that arose in close contiguity with these Jewish communities. Thus in the 15<sup>th</sup> century, in the legislation intended for the benefit of the whole group the principle “majority rules” was applied, while particular legislative acts that encroached upon the rights and the immunities of the individual, such as taxes, did not become law unless unanimous agreement by the membership of the group was achieved (Otto v. Gierke, *Das deutsche Genossenschaftsrecht*, vol. 2, pp. 230–2, and 478–9). This division of legislation into two categories and the requirement of unanimity in the second category, which paralleled in practically every detail the

form of community legislation, so clearly described by Rabbi Meir, could only have been the result of direct copying by the burghers and town communes of the community system of government that antedated their own by several centuries. Meir's peaceful life as a scholar and teacher was rudely interrupted by the turbulent political events that followed the termination of the interregnum and the election of Rudolph I of Hapsburg as emperor of Germany. In order to reestablish the right of the emperor to tax the Jews, which during the interregnum of 1254–73 had been claimed by the local dukes, Rudolph I began to press the claim that the term *servi camerae* (“serfs of the treasury”) – which in the 13<sup>th</sup> century began to gain ascendancy as the legal description of the political status of the Jews – really meant that the Jews were the slaves of the treasury of the empire, that their persons and their possessions were therefore the property of the treasury of the empire, and that the emperor therefore possessed the right to tax the Jews over and above the taxes they paid to the local rulers; and in 1286 he did impose such a tax on them. As a result thousands of Jews decided to leave Germany. Meir, especially outraged at this attempt to enslave the Jews, became the leader of the widespread exodus. In the spring of 1286, he “set out to go across the sea together with his family, his daughters, and his sons-in-law.” However, while he was waiting for his followers in Lombardy, he was recognized by an apostate who informed against him, with the result that the ruler of that town, Count Meinhardt of Goerz, arrested Meir and delivered him to Rudolph I. The emperor put him in prison, first in Wasserburg and then in Ensisheim, until the day of his death. His imprisonment was actually a singular form of house arrest. In jail, Meir had access to his books and his students were frequent visitors. Indeed, he continued to issue responsa while imprisoned, although he complained that he often did not have the requisite texts at hand to fully research a particular issue. The Jews made great efforts to effect the release of their beloved teacher – at one time agreeing to pay 23,000 pounds of silver to the emperor, but stipulating that the money was a payment of ransom and not of taxes – but without success. Rudolph I was determined to use the great devotion of the Jews to their teacher to force them to admit the right of the emperor to tax them. However, since a payment of taxes would be an admission that they were slaves, the Jews found it impossible to agree. Meir, therefore, remained in prison, and even after his death in 1293, his body was not delivered to the Jews until 1307 when it was redeemed by Alexander b. Salomo Wimpfen for a large sum of money and buried in Worms.

Rabbi Meir, the last of the tosafists, wrote *tosafot* and novellae to 18 tractates of the Talmud – the *tosafot* to *Yoma*, in the printed text of the Talmud, are from his pen; commentaries to the two orders of the Mishnah *Zera'im* and *Tohorot*; compendia of laws for special purposes, such as *Hilkhot Eruvin*, *Halakhot Pesukot*, *Hilkhot Berakhot*, *Hilkhot Semahot*, *Hilkhot Shehitah*, *Hilkhot Hatmanah*; a collection of customs connected with the marriage ceremony and with the wording of the *ketubbah*; and, most important, nearly 1,000 responsa

found in the following collections which differ to a great extent in content: Cremona, 1557; Prague, 1608 (reprinted in Sudilkov, 1835, and in Budapest, 1895); Lemberg, 1860; and Berlin, 1891–92; aside from those incorporated in the works of his students. Some of his responsa were published from manuscripts by I.Z. Kahana (Jerusalem, 1943) and by I.A. Agus (see bibl.). Meir also composed liturgical poems (in addition to the above-mentioned “Inquire thou who art burnt by fire...”) and a collection of masoretic explanations (in I.Z. Kahana’s *Teshuvot, Pesakim u-Minhagim*, 1 (1957), 3–41).

[Irving A. Agus]

**MEIR BEN ELIJAH** (early 19<sup>th</sup> century), author of the ethical and educational work, *Nahalat Avot* (“The Inheritance of the Fathers,” Vilna, 1835). Although written in the form of an \*ethical will – the author seemingly directing his teachings toward his own sons – the book is intended for the ethical betterment of the general public. Meir’s principal concern is demonstrating the way to achieve reverence toward God, but he also deals with man’s struggle against his own evil inclination, the best methods by which to educate one’s children, proper behavior at home and in the synagogue, and social and religious ethics. The book is prefaced by a *piyyut*, with the *notarikon* of the author’s name, and two opening statements, one encouraging sinners to repent, and the other insisting on repeated study of ethical literature. Among his major sources are the \*Zohar and *Sefer Ḥasidim*, which he quotes frequently; the *Shenei Luhot ha-Berit* by R. Isaiah ha-Levi Horowitz; and a more contemporary source – *Nefesh ha-Ḥayyim* by R. Ḥayyim of \*Volozhin. In addition, Meir mentions *Ma’alot ha-Torah*, a work composed by his grandfather. Meir also wrote a commentary on the tractate *Avot, Derekh Avot*, printed in Vilna, 1836.

**MEIR BEN ELIJAH OF NORWICH** (13<sup>th</sup> century; also called **Meir of England**), liturgical poet and *ḥazzan*. Meir’s family came from France, and his father was apparently a *dayyan*. Meir lived in Norwich and was among those exiled from England in 1290. His *piyyut Oyevi bi-Me’erah Tikkov* (“Thou wilt curse mine enemy with execration”) was composed on this exile, as its heading states: “For the severity of the exile and the killings, the imprisonment, and the destruction of property.” A great Torah scholar, Meir was the only

known English *paytan*. His *piyyutim* contain some elements of the Ashkenazi *piyyut* and some of the Spanish. Strong phrases on the suffering of the nation find their expression through his poetry. His *piyyut* for Passover, *Mitnasse ba-Marom al Keruvo* (“Uplifted on High upon His Cherub” called by him “Who is like Thee”), is one of the longest acrostics in the Hebrew *piyyut*. Besides the alphabet, autobiographical information is also contained in the acrostic. Meir’s secular poems, which he called *ḥaruzot* (“stanzas”) – 16 in all, with an additional poem explaining the form and the construction of the poems – are written in the meter of the Spanish-Hebrew poetry, but do not have its glitter and originality. Sent to one of his friends, the poems were arranged in an order unknown in the poetry of others, namely in four parts (“*banim*”) following the letters of his name Meir (*Benei M(-em), Benei A(-lef)*, etc., i.e., poems whose stanzas begin with the letters *mem, alef*, etc.). The first two letters of each stanza are also repeated at the end of the stanza.

[Abraham Meir Habermann]

**MEIR (Moses Meir) BEN EPHRAIM OF PADUA** (d. 1583), scribe, printer, and teacher in Mantua. Meir was presumably born in Padua but lived in Mantua, where he served in various communal capacities. Meir’s exceptional talent and his skill as a scribe were attested to by his disciple, Abraham \*Portaleone. Meir noted down detailed descriptions of all 43 Torah scrolls written by him. Questions addressed to his close friend, Moses b. Abraham \*Provençal, the rabbi of Mantua, indicate Meir’s rabbinical scholarship, as does his treatise on the diacritical marks of the Torah, *Rimzei ha-Tagim*. In 1556 Meir founded a printing establishment at Mantua, in collaboration with Jacob b. Naphtali of Garolo (d. c. 1570), and his considerable contribution to the printing of Hebrew books included the first edition of the Zohar (1558–60).

**BIBLIOGRAPHY:** D.W. Amram, *The Makers of Hebrew Books in Italy* (1909), 323–33; Kaufmann, in: *JQR*, 11 (1899), 266–90; S. Simonsohn, *Toledot ha-Yehudim be-Dukkasut Mantovah*, 2 (1964), 531f.

**MEIR BEN ḤIYYA ROFE** (1610?–1690?), scholar and emissary of Hebron, Palestine. Born in Safed, the son of \*Ḥiyya Rofe, Meir was orphaned in boyhood. He studied in Hebron, leaving about 1648 as an emissary to Italy, Holland, and Germany. On his return journey, he stayed for two years in Italy to publish *Ma’aseh Ḥiyya* (Venice, 1652), his father’s talmudic novellae and responsa. In Amsterdam he had influenced the wealthy Abraham Pereira to found a yeshivah in Hebron to be called *Ḥesed le-Avraham*, of which Meir himself became a

scholar. Meir was in Gaza in 1665 when \*Nathan of Gaza began to prophesy on the messianism of \*Shabbetai Zevi. In a subsequent letter to Amsterdam, to Abraham Pereira, he wrote that “Nathan of Gaza is a wise man fit for the divine presence to rest upon him,” and urged Pereira to come to Gaza. Pereira reached Venice, but returned to Holland. Meir maintained his belief even after Shabbetai Zevi’s conversion in 1666. In 1672 Meir left, again as an emissary of Hebron, for Turkey. He stayed for a time in Adrianople, where he was in contact with Shabbetai Zevi. On Shabbetai’s exile to Albania in 1673, Meir returned to Gaza where he stayed with Nathan and even copied his writings for his own use. He then traveled again to Italy, and from 1675 to 1678 resided in the home of the Shabbatean Abraham \*Rovigo. Throughout his stay in Italy Meir did much to encourage those who believed in Shabbetai Zevi and spread the writings of Nathan of Gaza. During the last ten years of his life he was recognized as the outstanding scholar of Hebron.

[Avraham Yaari]

**MEIR BEN ISAAC OF TRINQUETAILLE** (12<sup>th</sup> century), Provençal scholar. Knowledge of Meir is largely derived from Menahem b. Solomon \*Meiri’s introduction to his commentary on *Avot*. Born in Carcassonne, the young Meir b. Isaac was brought by his father to Posquières to study under \*Abraham b. David, and after many years Meir became his pupil-colleague. Meir’s retort to his teacher, when the latter attempted to force his opinion upon him in a halakhic matter, has become well known: “Do not make light of my honor. For if you are unique among teachers, I am unique among pupils.” From Posquières Meir apparently went to Trinquetaille, near Arles. In Meir’s comprehensive work (*Sefer ha-Ezer*), written in defense of the *halakhot* of Isaac \*Alfasi against the *hassagot* of \*Zerahiah b. Isaac ha-Levi (the author of *Ha-Ma’or*), the influence of Meir’s great teacher who wrote a similar book is clearly recognizable. Although the book has not been preserved, it is quoted by the *rishonim* – among them \*Manoah b. Jacob (who also mentions Meir’s *Hibbur ha-Mukzeh*) and \*Estori ha-Parḥi, Meir’s great-grandson. Menahem b. Solomon Meiri also claims family connection with him. Meir’s son, NATHAN OF TRINQUETAILLE, was a well-known scholar and a disciple of the eminent tosafist \*Isaac b. Abraham. He later became the teacher of \*Naḥmanides, Samuel b. Isaac ha-\*Sardi, and Meir b. Simeon ha-Meili. Naḥmanides, Sardi, and Estori ha-Parḥi in particular, quote Nathan frequently. From their quotations it is clear that Nathan wrote a comprehensive work on civil law which was divided into *she’arim* (“gates”) as well as a commentary on the Torah. Nathan’s commentary on tractate *Shevu’ot* is always mentioned.

[Israel Moses Ta-Shma]

**MEIR BEN ISAAC SHEL’AḤ ZIBBUR** (also called *Nehorai*; d. before 1096), preacher and liturgical poet of Worms. Meir was considered authoritative in the sphere of liturgy and custom among the Franco-German communities. He appears also to have compiled a customal for the whole year. Many of the great scholars of Germany and France in his own and in the following generations frequently mention him with esteem and cite his words: Rashi in his prayer book and in his commentary to Scripture, the \*tosafists, Simḥah of Vitry in the \**Mahzor Vitry*, \*Abraham b. Azriel in his *Arugat ha-Bosem*, Jacob \*Moellin in his customal, and others. Several legends were created about him. Meir compiled \**piyyutim* and \**seliḥot* in Hebrew and Aramaic, more than 50 of which are extant. A number of his *piyyutim* for the festivals were accepted by the Franco-German and Polish communities and were published innumerable times in *maḥzorim* and among *seliḥot*. The best known of his *piyyutim* is the Aramaic \**Akdamut Millin*, which is customarily said to the present day in Ashkenazi communities during Shavuot after the reading of the first verse of the Torah reading (Ex. 19:1); a number of scholars, however, introduced the custom of saying it before the reading of the Torah. It was translated into Hebrew by Gabriel \*Polack (*Literaturblatt des Orients* (2 (1850), 554–5) and *Ben Gorni* (1851, 52–55)), and by others as well. It has also been translated into other languages (into English by Joseph Marcus in *Mahzor*, United Synagogue of America, 1927). \*Menahem b. Ḥelbo wrote commentaries on Meir’s *piyyutim*. Two of his sons – Jacob and Isaac – are known; the latter perished in the pogroms of 1096.

Azriel, *Arugat ha-Bosem*, 4 (1963), index; Davidson, Ozar, 4 (1933), 432; D. Goldschmidt, in: KS, 34 (1958/59), 391–2; H. Schirmann, in *Divrei ha-Akadeemyah ha-Le’ummit ha-Yisre’elit le-Madda’im*, 3 (1969/70), 36–37, 55, 61–62.

[Abraham David]

**MEIR BEN SAMUEL OF RAMERUPT** (c. 1060–c. 1135), one of the first tosafists of northern France. Meir’s teachers were the scholars of Lorraine, Isaac ha-Levi of Worms, \*Eliezer of Mainz, and \*Rashi, whose daughter, Jochebed, he married. Of his sons, three, who were also his pupils, are especially known – \*Samuel b. Meir (Rashbam), \*Isaac b. Meir, and Jacob b. Meir \*Tam. His son-in-law was Samuel of Vitry, father-in-law of the tosafist \*Isaac b. Samuel ha-Zaken. For a certain period Meir apparently dwelt with his father-in-law in Troyes, but he moved to Ramerupt during Rashi’s lifetime, founding a *bet ha-midrash* there. He is sometimes designated *ha-yashish* (“the venerable”) or “the father of the rabbis.” Meir wrote commentaries to the Talmud, similar to those of his father-in-law and of his son Samuel. One extant section of his commentaries was incorporated in the commentary of Rashi to the Talmud and some of his *tosafot* are included in the *tosafot* of the standard Talmud editions. Halakhic statements by him are quoted in the *Sefer ha-Yashar* of his son Jacob Tam,

in the *Or Zaru'a*, in the *Sefer ha-Ittur*, and elsewhere. Biblical comments by him are quoted by his son Samuel in his commentary to the Pentateuch. These are permeated by a spirit of literal exegesis and it is probable that the son was influenced in this by the father. The present text of \**Kol Nidrei* is the result of amendments introduced by him into the original formula. There are extant responsa written to him by Rashi, and also a responsum written by them jointly. Meir also composed a *selihah*, *Avo Lefanekha* ("I come before Thee").

**BIBLIOGRAPHY:** Urbach, *Tosafot*, 38–42, and index.

[Zvi Kaplan]

**MEIR BEN SAMUEL OF SHCHERBRESHIN** (Pol. *Szczebrzeszyn*; mid-17<sup>th</sup> century), *paytan* and chronicler who lived in a small town near Lublin, Poland. His known writings consist of *Shir Mizmor le-Yom ha-Shabbat* ("Psalm for the Sabbath," Venice, 1639) and a rhymed account in Hebrew of the \*Chmielnicki persecutions of 1648–49, written during the summer of 1650, and which is to be read "at all times, but especially during the three weeks of mourning between the 17<sup>th</sup> of Tammuz and the Ninth of Av and on the 20<sup>th</sup> of Sivan," the latter being the fast day in commemoration of the persecutions. The work was published during the same summer in Cracow, under the title *Zok ha-Ittim* ("Sufferings of the Times"). In the spirit of the accounts of the sufferings during the First \*Crusade (1096), the author describes the persecutions of his own day as related to him by fugitives and, in part, as he witnessed them himself in Zamosc and the surrounding region in the summer of 1649. *Zok ha-Ittim* is of greater historical importance than the other Jewish chronicles of these persecutions, which were mostly written and published some time after the events by refugees in distant places who could not, for various reasons, give all the details.

**BIBLIOGRAPHY:** H.Y. Gurland, *Le-Korot ha-Gezerot al Yisrael*, 4 (1889–90), 7–61; Halpern, in: *Zion*, 25 (1960), 17–56. **ADD. BIBLIOGRAPHY:** *Gezerot Tah ve-Tat: Yeven Mezulah: Zok ha-Itim: Megilat Efav: Selihah le-ha-Tosefot Yom Tov* (repr. 2004).

[Israel Halpern]

**MEIR BEN SIMEON HA-ME'ILI** (first half of 13<sup>th</sup> century), Provençal talmudist and communal leader. Meir's main center of activity was \*Narbonne, and he cites many of its customs in his works. His principal teacher was his uncle, \*Meshullam b. Moses, and Meir frequently cites him and his customs. He also studied under Nathan b. Meir of Trinquetaille. There are references to his connections with Naḥmanides, another pupil of Nathan b. Meir. Among his other activities, Meir engaged in disputations with Christian ecclesiastics and was one of the chief speakers in a delegation of the Jewish leaders of Narbonne and Capestang who interceded with the cardinal of Narbonne concerning discriminating laws which it was proposed to issue against the Jews. He was spokesman of the community at the court of the emperor, and before ministers and church leaders. According to Gross and Scholem, his work *Milḥemet Mitzvah* (Ms. Parma, cat. De Rossi (1803)

no. 155, only part of which was published; see below) was written between 1230 and 1240. The work itself, however, gives the date 1245, and it seems to contain matters of a still later date (see Gross in: *MGWJ*, 30 (1881), 296). The work contains an account of his disputation with the bishop of Narbonne, a defense of Judaism against the allegations of Christians, explanations of biblical verses dealing with the coming of the Messiah, and a commentary on the \**Shema* and the 13 divine attributes. Meir also appears in this work as a vehement opponent of a certain circle of kabbalists, to whom he attributes heretical views. Questioning the authenticity of *Sefer ha-Bahir*, he sharply criticizes its contents, together with other kabbalistic works. These criticisms were included in an "epistle" sent to "our rabbis in every town." His work was also directed against the ideas of some kabbalists based on works which, according to Meir, were forgeries attributed to well-known scholars. At the end of this epistle he gives Meshullam's commendation to his activity.

Only latterly have his works begun to be published, under the title *Sefer ha-Me'erot*: novellae to (1) tractates *Berakhot* and *Pesaḥim* (1964); (2) to *Shabbat* (1964); (3) *Mo'ed Katan* and *Hullin* (1964); (4) *Eruvin* (1967); (5) *Yoma*, *Sukkah*, *Bezah*, *Rosh ha-Shanah*, *Ta'anit*, and *Megillah*, and the minor tractates (1967). His commentary on the \**hoshanot* was published in *Sefer ha-Mikhtam*, edited by A. Sofer (1959). The *Milḥemet Mitzvah* contains five sections (504 columns) and a fragment of it was published by G. Scholem (bibl.) and the end of section four with part of section five in *Sefer ha-Me'erot*, volume one. Also known are his novellae to the order *Kodashim* (mentioned by Bezalel Askenazi in *Kelalei ha-Talmud* no. 37; A. Marx, in: *Festschrift ... D. Hoffmann* (1914), Heb. pt. 181); *Me'or Torah*, a commentary on the weekly portions of the Pentateuch; sermons (for Passover, the New Year, and Tabernacles in the manner of the sermons of Abraham b. David and Naḥmanides); and a pamphlet called *Meshiv Nefesh* defending Maimonides' *Hilkhot Yesodei ha-Torah* in his *Mishneh Torah* against his critics.

[Shlomo Zalman Havlin]

**MEIRI, MENAHEM BEN SOLOMON** (1249–1316), Provençal scholar and commentator of the Talmud. Meiri was born in Perpignan where he spent his whole life. His family, regarded as one of the most distinguished in Provence, originated from

Carcassonne and Narbonne. Few biographical details are known of Meiri. In his youth he was orphaned of his father, and his children were taken captive while he was still young (Introduction to *Kiryat Sefer*), but no details of this personal tragedy are known. Meiri's principal teacher was \*Reuben b. Ḥayyim. His reference to \*Jonah Gerondi as "my teacher" does not necessarily mean that he studied under him; it may merely mean that he studied his works. Among the contemporary scholars with whom he maintained close ties was Solomon b. Abraham \*Adret; they exchanged many responsa and Adret's teachings assisted him in the writing of his monumental work. Meiri was one of the participants in Adret's polemic against Maimonides which ended in Adret's excommunicating any person who read philosophical works in his youth. In a letter to Abba Mari b. Moses Joseph, who handled the entire affair and collected the relevant correspondence, Meiri disassociated himself from the attitude of Adret and his colleagues, upholding freedom of thought for the scholars of each country, and freedom from intervention by outside scholars. Extracts from Meiri's letter (republished by D. Kaufmann along with the reply by Joseph b. Simeon in the name of Abba Mari under the title *Hoshen Mishpat* in the *Jubelschrift... L. Zunz*, 1884; Heb. sec. 142–74), reveal his great interest in philosophy and other secular sciences, and reflect his pride in the local scholars who had acquired proficiency in them.

Meiri occupies a central position in the sphere of the talmudic creativity of Provence, not only due to his extraordinary literary fecundity and the comprehensive scope of his works, but also because he summarizes the teachings of his predecessors during the previous three centuries. In effect he puts the seal upon the literary efforts in this area of Jewish culture. His literary activity covered halakhic rulings, talmudic exposition, biblical exegesis, customs, ethics, and philosophy. The vast majority of Meiri's works remained in manuscript until very recently, probably on account of their exceptional length, which made it practically impossible to copy them in full. A small number of his books were published in the second half of the 18<sup>th</sup> century and the majority of them – from the beginning of the 20<sup>th</sup> century up to the present day. A great contribution to this project was by A. \*Sofer (Schreiber). An exception is his commentary to the Book of Proverbs which was first published in Portugal in 1492, and then included in the *Kehillot Moshe* edition of *Mikra'ot Gedolot* (Amsterdam, 1724).

Meiri's chief work is the gigantic *Beit ha-Beḥirah* on the Talmud, in which he was engaged from 1287 to 1300. In it he summarizes the subject matter of the Talmud, giving both the meaning and the *halakhah* derived from it. It follows the order of the Mishnah. The work covers the orders of *Mo'ed*, *Nashim*, and *Nizikin*, and the tractates, *Berakhot*, *Ḥallah*, *Ḥullin*, *Niddah*, *Tamid*, *Middot*, and *Mikva'ot*. *Beit ha-Beḥirah* has been republished almost in its entirety in recent years from a single complete manuscript (Parma). Of particular interest is the introduction to his commentary on *Avot*, in which he gives the names of all the people who form the chain of tradition of Torah study from Moses to his own time. It contains

valuable material for the knowledge of the history of Torah study in Spain and Provence, and was copied out in full and completed (updated) to his own time by Isaac \*Lattes in his *Sha'arei Ziyon* (ed. by S. Buber, 1885). In 1995, the introduction to *Avot* was updated from manuscript and published with the title, *Seder ha-Kabbalah*. This edition includes the commentary of Ḥayyim Falagi.

Meiri follows an original method of exposition. He develops his theme from its origin and for this reason he assigns a separate section to the Mishnah and explains it before turning to the later development and discussions in the later literature. Each tractate and its individual chapters are preceded by a short preface outlining the subject in general terms. The discussion begins with a presentation of the fundamental principles involved and proceeds with an explanation of the opinions of each of the *amoraim*. The author in conclusion sums up and collates these opinions, giving the relevant *halakhah* as he sees it. An abundance of comments handed down by German, Provençal, and Spanish scholars with their different interpretations are incorporated, but each one is given separately to prevent confusion on the part of the reader. Meiri was one of the few rabbis of his time to make extensive use of the Jerusalem Talmud in order to clarify the parallel discussions in the Babylonian Talmud, and his works are therefore of added importance for research on the Jerusalem Talmud and its variant readings. Meiri's style contributes much to the lucidity of his presentation. His Hebrew is accurate, precise, and simple. In addition, he succeeded in finding the golden mean between the generally contradictory aims of expository comprehensiveness and halakhic definitiveness. These features endeared the *Beit ha-Beḥirah* to scholars and its volumes are now repeatedly republished in spite of their great length.

Meiri adopted the unusual practice of designating his predecessors by epithet rather than by name, e.g., "the greatest of authors" (Maimonides), "the greatest of *posekim*" (Alfasi), "the early scholars of Narbonne," "the former scholars of Catalonia," and "the great scholars of Provence." As a result it is difficult now to determine to whom he is referring, especially as he often employs the same epithet for many scholars who, in his opinion, belong to the same "genre." Contrary to the common conception of the Meiri's commentary as purely anthological, similar to the later work *Shitah Mekubbezet* by Bezalel Ashkenazi, the Meiri quotes only those opinions that are germane to the discussions, either to refute them or to bolster his own ideas. His admirable style makes it impossible to detect the verbatim quotations which no doubt he gives from the sources, since it became one harmonious whole. He employed this method only in *Beit ha-Beḥirah*.

In addition to *Beit ha-Beḥirah*, Meiri wrote commentaries on the Talmud which were expository rather than halakhic in orientation. Although the manuscripts in this group of a number of tractates are still extant, none has been published, except for the commentary to *Avot* and the *Beit ha-Beḥirah* to the tractate *Bezah* (ed. by I.S. Lang and K. Schlesinger, 1956), which apparently belong to this group.

Meiri wrote several other important works. His first, written in his youth, was *Hibbur ha-Teshuvah* devoted entirely to ethics and repentance. It clearly reveals the influence of the *Malmad ha-Talmidim* of Jacob \*Anatoli, the first Provençal scholar to stimulate interest in the meaning of the precepts as distinct from their observance. It may be assumed that toward the end of his life Meiri revised the work, which in its present form, bears the character of a well constructed sermon book. Extracts from it were published in various places; it was published in its entirety for the first time in 1950.

Meiri's commentary to Proverbs, and even more, his commentary to Psalms (1936), reveals all his exegetical and stylistic characteristics as well as his love for explicit meaning, *peshat*. In them he draws upon the Midrashim and the accepted ethical and wisdom literature of the Middle Ages, such as \**Ben ha-Melekh ve-ha-Nazir* and *Muserei ha-Filosofim*, and also makes frequent use of the works of the great grammarians, such as Abraham \*Ibn Ezra, Jonah \*Ibn Janah, and the \*Kimḥi family. Corrections to the text of the commentary to Psalms were published in *Kobez al Jad*, New Series, 4 (1946), 229–40. Another of his works, *Kiryat Sefer* (1863–81), contains the laws of writing the \**Sefer Torah*, including lists of those words written *plene* and those written defectively, and of the “open” and “closed” sections of the Torah. *Kiryat Sefer*, composed in 1306, was considered for many years as one of the three basic works on the laws of writing a *Sefer Torah* – all the great *posekim* and masoretes making use of it. *Kiryat Sefer* was based upon Provençal and Spanish traditions as well as upon a copy of a *Sefer Torah* written by Meir \*Abulafia for his own use. However, 150 years after Meiri's death, more and more of Abulafia's manuscripts of *Masoret Seyag la-Torah* were circulated, which did not correspond with the *Sefer Torah* Meiri had written and as a result the reliability of *Kiryat Sefer* began to be called into question. Meiri wrote *Magen Avot* (ed. by I. Last, 1909) to uphold the customs of Provence in general and Perpignan in particular, against those of Spain, particularly Gerona, held by \*Naḥmanides and brought by his disciples to Provence after its annexation to Spain during the reign of John I (1213–76). In its 24 chapters, each devoted to the discussion of a different custom, Meiri asserts the value and superiority of these local traditions as against the great authority of Naḥmanides.

The Meiri subscribed to the Maimonidean philosophical tradition that views intellectual achievement as the highest human goal. The pinnacle of this achievement is the ability to discriminate between truth and falsehood. The intellectual understanding must be coupled with a religious sense of ultimate redemption. The most fundamental religious concepts – fear of God, love of God and *devekut*, cleaving to Him – are all inexorably linked to the processes of awareness and understanding. In his commentary to Proverbs, the Meiri gives expression to just those ideas (Meshi Zahav edition, Jerusalem, 1969, p.25). The Maimonidean tradition greatly influenced other aspects of the Meiri's thought, including the nature of God and of the World to Come.

The Meiri rejected the opinion of many of the disciples of Maimonides, who felt that the publication of his *Mishneh Torah* made Talmud study superfluous. He viewed Talmud study as an integral aspect of Jewish religious study. This is evidenced by his monumental commentary on the Talmud. He did agree, though, that the essence of Talmud study was to derive applicable Jewish law. Nevertheless, the Meiri was one of a small group of medieval sages who dealt extensively with the non-legal, aggadic portions of the Talmud. Here, too, the Meiri's explanations were rational and logical, just like his halakhic discussions.

Modern scholars disagree as to the significance of the Meiri's attitude towards non-Jews that differed from almost all other medieval sages. E.E. Urbach argues that the limited legal application made by the Meiri limits the idea's significance (Urbach, in: *Perakim be-Toledot ha-Hevrah ha-Yehudit bi-Ymei ha-Beinayim u-ve-Et ha-Hadashah*, 1998, 34–44); J. Katz (*Zion*, 46:2 (1981), 243–46); and G. Blidstein (*Binah*, 3 (1994), 119–33) argue that the Meiri's idea was a totally new way of viewing the gentiles of his day: The Meiri differentiated between idolaters and gentiles who were religious people, *gedurim be-darkhei ha-datot*, “restricted” by ways of religion. This concept recognizes that the medieval Christians were not idol worshippers, but people who believed in God, observed religious practices (albeit far from those of Judaism) and were therefore *gedurim*, “disciplined” by moral values. This concept was used in Jewish polemics and debates with the Christians before the Meiri's time. However, his contribution was to apply it sparingly to those laws meant to prevent close contact between idolaters and Jews. Thus, while the Talmud does not obligate a Jew to return a lost item to a non-Jew, the Meiri claims that this only applies to idolaters. When dealing with gentiles who are not idolaters, there is actually an obligation to return the lost item (Meiri, *Bava Kama*, p. 330).

The Meiri's view of gentiles stemmed, in part, from his view of history as a progression away from idolatry to morality. He applied this same idea to women. Contrary to Asher ben Jehiel, who viewed women as basically wanton, the Meiri thought them to be moral and even more sin-fearing than men. As a result, he deemed as irrelevant various Talmudic dicta predicated on the immorality of women. The Meiri's comments on the *Berakha* no. 3 of *Sheva Berakhot* (Meiri, *Ke-tubbot*, p. 38) reveal that women were created with the same *zelem Elohim* as men. He is the only medieval thinker to explicitly state this. Contrary to almost all of the other medieval and renaissance rabbinic scholars, the Meiri calls women *ḥasidot* (pious ones; Meiri, *Ta'anit* 30b) and is of the opinion that they share in God's providence, equally with all of God's creatures (Meiri, *Sotah*, p. 46–47). Meiri also permits women to recite the blessings for *mitzvot* that they are not obligated to perform (Meiri, *Haggigah*, p. 31–32). He also permits women to don *tefillin*. The Meiri valued the desire of women to advance toward perfection through the fulfillment of *mitzvot*. Indeed, there was no other medieval rabbinic sage that had such a high opinion of women's potential, both morally and

intellectually. This attitude was successfully translated by the Meiri into all of his halakhic decisions regarding all the legal issues involving women.

In recent years many collections of extracts from Meiri's works, arranged according to subject, have been published, including a commentary to the Passover *Haggadah* (1965; ed. by M.M. Meshi-Zahav); *Sefer ha-Middot* (idem (ed.), 1966), a guide to proper conduct; and an anthology of his biblical expositions (1957), by J.I. Gad. Meiri stands out as the embodiment of the highest qualities which characterized Provençal Jewry: greatness in Torah combined with a leaning toward, and an appreciation of, philosophy, secular erudition, and the sciences in general; unswerving attachment to custom and tradition coupled with a high-minded tolerance of gentile society; and brilliant Torah creativity, brought to expression in fluent, even poetic Hebrew. Meiri was also the last Provençal scholar to embody this synthesis.

[Israel Moses Ta-Shma / David Derovan (2<sup>nd</sup> ed.)]

**MEIR JEHIEL HA-LEVI (Holzstock, Holzstick) OF OSTROWIEC** (1851–1928), ḥasidic rabbi and scholar. Meir Jehiel was born to a poor family of humble origin, but through his outstanding gifts became one of the foremost leaders of Orthodox Jewry. He was a pupil of Elimelech of Grodzisk and like him settled in Ostrowiec, where many thousands of Ḥasidim became his disciples. Meir Jehiel was acknowledged as one of the greatest scholars of his age, and for a time no important decision on *halakhah* or Jewish life was made without consulting him. His form of Ḥasidism was original; his sermons were based on complicated equations from *\*gematria* by which he interpreted many texts in *halakhah* and *aggadah*. He was of an ascetic turn of mind and made a long series of fasts over 40 years. As he did not permit his books to be printed in his lifetime, only a fraction of his sayings and writings has been

preserved. His son EZEKIEL (1887–1943), rabbi of Nasielsk, was his successor. Some of his sayings are found in *Or Torah*, edited by his disciple Judah Joseph Leibush (1920), and in M. Nomberg's *Omer Man* (1912).

[Adin Steinsaltz]

**ME'IR SHEFEYAH** (Heb. מְאִיר שֵׁפְיָהּ), agricultural school and youth village in central Israel, on the southern slope of Mt. Carmel near \*Zikhron Ya'akov, founded in 1892 by Baron Edmond de \*Rothschild to provide farmsteads for the sons of Zikhron Ya'akov settlers. In 1904, after the Kishinev pogrom, Israel \*Belkind established a home at Me'ir Shefeyah for orphans of the pogrom. In World War I, the Herzlia High School was transferred there from Tel Aviv when the Turkish authorities ordered the city's evacuation. In 1923 a youth village was set up, which was included in the 1930s in the network of \*Youth Aliyah. The population, including pupils, reached about 450 in 1969. In 2002 the population was 412. The name is composed of the Hebraized form of the former Arabic name of the place, and the name of Mayer Amschel \*Rothschild.

[Efraim Orni / Shaked Gilboa (2<sup>nd</sup> ed.)]

**MEIR SIMḤAH HA-KOHEN OF DVINSK** (1843–1926), talmudic scholar. His brilliance was such that he is said to have annotated the halakhic work of a distinguished rabbi when only 13 years old. At the age of 17 he went to Eishishok where he studied under R. Moses Danishevsky. Meir Simḥah married the daughter of Zevi Paltiel, a wealthy man from Bialystok who supported him while he continued his studies under the local rabbi, Yom Tov Lipman Halpern, the author of *Oneg Yom Tov* (1880). With the publication of his work, *Or Same'ah* on Maimonides (1902–26), Meir Simḥah became widely renowned as an outstanding talmudic scholar and commentator. His novellae *Or Same'ah* to *Bava Kamma* and *Bava Me'zia* were published in Jerusalem (1948), and his novellae to most of the tractates of the orders *Nashim* and *Nezikin*, together with some responsa and occasional notes, were printed in 1967 from a manuscript identified as his in the Jewish National and University Library. In these fundamental and classic works of rabbinic literature, he shed new light on the Talmud and codifiers, displaying vast erudition, great depth, and profound logic. On the advice of R. Jacob Ḥarif of Zagare and R. Joseph B. \*Soloveichik of Brest-Litovsk, he was invited to become rabbi of Dvinsk, a position he occupied for 40 years. Meir Simḥah earned the high esteem of all communal circles, not only in Dvinsk, but far beyond its borders. In 1906 he declined the offer of a rabbinical position in Jerusalem, as a result of the entreaties of the community of Dvinsk who wrote to the leaders in Jerusalem that were he to leave, “not only would we, God forbid, be destroyed, but also the entire Diaspora. For he is the authority able to answer anyone who enquires concerning the word of the Lord. It is not for you, people of Jerusalem, to do such a thing.” In 1911 he presided jointly with Isaac Jacob Rabinovitz, the rabbi of Ponevezh, over the Central Committee of Rabbis, the representative body of

Russian Jewry in its relations with the government. During World War I most of the Dvinsk community fled, and only a few of the poorest inhabitants remained. Meir Simḥah stayed with them, declaring that as long as there were nine Jews in the city, he would be the tenth.

In his work on the Pentateuch, *Meshekh Hōkhmah* (1927), he drew freely on his vast knowledge of the two Talmuds and of the halakhic and aggadic Midrashim, giving new and profound interpretations. The book, which contains original reflections, attained wide popularity. *Zera Avraham* (1929) by Abraham Luftvir consists of an exchange of correspondence between Luftvir and Menahem \*Zemba, and also includes some fine specimens of Meir Simḥah's responsa to him.

**BIBLIOGRAPHY:** *Yahadut Lita*, 3 (1967), 65f.; S.Y. Zevin, *Ishim ve-Shitot* (1966<sup>3</sup>), 155–87.

[Mordechai Hacohen]

**MEISEL (Meisl, Meysl, Miška, Akhbar, Maušel, Konír), MORDECAI (Marcus, Marx) BEN SAMUEL** (1528–1601), Prague financier, philanthropist, and head of the Jewish community. He was considered by \*Graetz the “first Jewish capitalist in Germany.” Although the source of his fabulous wealth is not known, it enabled him to finance large transactions in support of \*Rudolph II, to whom he was appointed counselor, during the Turkish wars. His business was based on the special privilege granted him to loan money not only against pledges but also against promissory notes and real estate. (The illegality of such practices according to Bohemian law was one of the pretexts for confiscating Meisel's estate, which amounted to over half a million florins, after his death.) He also acted as purveyor of luxuries and art objects. Meisel is first mentioned in business relations with his father-in-law, Isaac Rofe (Lékař), in 1569. Another of his business associates was Veit (Ḥayyim) Vokatý. He used his wealth for philanthropic activities of all kinds; the epitaph on his tombstone records: “None of his contemporaries was truly his equal in deeds of charity.” With the support of his first wife, Eve, he built the Meisel Synagogue in 1597, for which Rudolph II granted him tax immunity and the right to display in it the “flag of David.” Rudolph further decreed that the synagogue might not be entered by officers of the law. It remained Meisel's property until his death, when it was taken over by the community. (From 1963 it housed the synagogue silver collection of the Jewish State Museum.)

Meisel purchased land for the expansion of the Jewish cemetery and the construction of a *bet tohorah* (where the dead were prepared for burial). He financed the building of a hospital, a *bet midrash*, a *mikveh*, and a *Klaus*. The tradition that he also built the Jewish town hall cannot be proved. He had the streets of the Jewish quarter paved and donated large sums to all other charities, especially for the ransoming of captives. He also sent money to Jerusalem and granted considerable loans to the Cracow and Poznan (Posen) communities (possibly because of their connections with \*Judah Loew b. Bezalel).

About Meisel's second wife, Frumet (d. 1625), there is diverse information. On one hand, she is said to have supported him in his philanthropic activities, and on the other hand, she is reported to have refused Meisel's dying request to give to Judah Loew a large sum for his charities. That she was Meisel's wife is not mentioned on her gravestone. When Meisel died, childless, he willed his property to his two nephews, both named Samuel. Although the emperor was represented at Meisel's funeral, all Meisel's property was seized in the name of the emperor, his heirs tortured to make them disclose any “concealed” assets, and Meisel's will itself declared void. A lawsuit was initiated, to which the entire community became a party, claiming the right to part of the inheritance because it had been forced to pay interest on it. In the course of this lawsuit, the *herem* was pronounced on the impoverished Meisel family and one of them was refused burial. Although the main part of the estate burned down in the conflagration of 1689, an agreement between the community and the family was not reached until 1699.

[Meir Lamed]

**MEISEL, MOSES BEN MORDECAI** (c. 1758–c. 1838), Torah scholar and *maskil*; born in Vilna. In his youth Meisel was one of the disciples closest to the Vilna Gaon \*Elijah b. Solomon Zalman. He was familiar with German literature and became deeply interested in the writings of Moses \*Mendelssohn. However, he was also in secret contact with R. \*Shneur Zalman of Lyady, the founder of the \*Chabad movement, and when this became known, he fled to Germany, fearing persecution by the Vilna religious establishment. During the Napoleonic Wars he conferred with the representatives of the French government on several occasions. After acceding to R. Shneur Zalman's request to stop these talks with people close to Napoleon, he was suspected of collaborating with the Russian army and was compelled to flee. He went to Erez Israel but returned to Lithuania after the French defeat. During the early 1820s he went once more to Erez Israel and in his last years was closely associated with Sir Moses \*Montefiore. He wrote *Shirat Moshe* (Shklov, 1788), on the 613 precepts. Meisel died in Hebron.

[Arthur Cygielman]

**MEISEL, NOAH** (1891–1956), Latvian politician, born in Nesvizh, Belarus. From his student days Meisel was a member of the \*Bund. In World War I he served in the Russian army as a medical officer. After Latvia became independent (1918), he

was appointed municipal health officer in Daugavpils (Dvinsk) and also served as a member of the city council and the Jewish community council. Later, he was elected to the Latvian parliament, where he represented the Bund. After the Fascist takeover (1934) he was arrested together with other Socialist deputies and spent some time in prison. He visited the United States, but did not stay there, returning to Latvia. In 1940, when the Soviet forces overran Latvia, Meisel was arrested – as were other Socialist and democratic leaders – and deported to the far north of the U.S.S.R., where he eventually died.

[Joseph Gar]

**MEISELS, DAVID DOV** (1814–1876), Polish rabbi. Meisels was the son of Aryeh Judah Jacob who served as *av bet din* of Piotrkow and Kilatow. He was known in his youth as a prodigy (*illui*). He was appointed *av bet din* of Dobra at the age of 18 and later served in the same capacity at Nasielsk. From 1851 until his death he was rabbi of Lask. He was regarded as one of the outstanding talmudists of his generation and gained the deep respect of the ḥasidic rabbi of Gur, Isaac Meir, author of the *Hiddushei ha-Rim*. Meisels' important works, published by his sons, are *Ahavat David*, on the laws of invalid witnesses (1884); *Hiddushei ha-Radad*, novellae on tractate *Pesahim* (1891); *She'elot u-Teshuvot ha-Radad*, responsa on *Orah Ḥayyim* and *Even ha-Ezer* (1903); and *Binyan David*, on the Book of Lamentations (1913). Of his sons, JACOB, author of the *Toledot Ya'akov*, succeeded his father as rabbi of Lask; PHINEHAS ELIJAH served as rabbi of Rakov and ZE'EV WOLF was a distinguished Ḥasid at Tarnow.

[Arthur Cygielman]

**MEISELS, DOV BERUSH** (1798–1870), rabbi and Polish patriot. Scion of one of the most ancient families of Cracow, he was a descendant of Moses \*Isserles. He studied under his father Isaac, who was rabbi of Kamenets-Podolsk, Ukraine. After his marriage to the daughter of the wealthy Solomon Borenstein, he settled in Cracow, where he opened a bank in partnership with Horowitz, the bank bearing the names of both partners. In 1832, after a difficult struggle against R. Saul Landa, Meisels was elected rabbi of the town. R. Saul Landa and his followers did not recognize this election and they established their own *bet din*. The divergences of opinion between the two *battei din* were tremendous; what one of them permitted the other prohibited. Both rabbis vigorously fought the emergence of the Haskalah in Cracow and they were violently attacked by the *maskilim* in the pages of their *Algemejne Tsaytung*. During the period of his rabbinate in Cracow, and even before then, Meisels played a central role in the communal life of the Jews of Cracow. Being extremely wealthy, he distributed the whole of his rabbinical salary to charitable in-

stitutions, thus gaining the esteem of the masses. Many of the inhabitants of Cracow, which was then under Austrian rule, joined the Polish Revolt which broke out in Warsaw in 1830 against Russian rule. Meisels supported the rebels and he personally financed the purchase of arms and the expenses of the rebels. In general, Meisels was an enthusiastic Polish patriot and he proved it on several occasions.

During the revolution of 1844, Meisels again supported the rebels. At a central prayer service held in the synagogue, Meisels called upon the congregation to join the rebels and to support them, even taking part in mass demonstrations in the street. In 1846 he was elected to the Senate of the Cracow Republic (the Free City of Cracow) and in 1848 was a member of the Polish delegation to the Austrian emperor which appealed for the liberation of the political prisoners. In the elections to the Austrian parliament which were held on December 31, 1848, Meisels was elected as the first Jew, obtaining a large majority over the other Jewish candidates. During the same year, he was also elected as one of the 40 councilors of the municipality of Cracow. In 1851, Meisels lent his assistance to projects for Jewish agricultural settlement, but these did not materialize. In parliament, Meisels joined forces with the Radicals. His sharp reply of: "*Juden haben keine Rechte*" – "Jews have no Right(s)" – to the speaker of parliament who had asked him why he sat with the Leftists has become renowned. In 1854 his great rival, R. Saul Landa, died and two years later, Meisels became chief rabbi of Warsaw. He was received with much enthusiasm by all circles, though his election followed upon a violent dispute. In Warsaw, he also fought together with the Poles, joining their demonstration and assisting the Polish patriots.

In November 1861, he was arrested for closing the synagogue of Warsaw in defiance of the czarist authorities and was compelled to leave the town after a lengthy imprisonment. London and Amsterdam offered him their rabbinical seats, but in 1862 he was authorized to return to Warsaw, which he preferred. He was again expelled and deported to Cracow, but he was pardoned and returned to Warsaw – but from then he engaged exclusively in study. When he died in Warsaw, the whole population attended the funeral, as a manifestation of the desire for Polish independence; the Russians prohibited the publication of obituaries on him, in revenge for his political activities against them. Meisels published *Hiddushei Maharadam* (Warsaw, 1870), consisting of novellae on the *Sefer ha-Mitzvot* of Maimonides. His son, ISRAEL, was *dayyan* in Cracow and rabbi in Shedletz (Polish: Siedlce) from 1858–67. He then returned to Cracow, where he died in 1875. His second son, SOLOMON, lived in Vienna.

[Itzhak Alfassi]

**MEISELS, SAUL** (1911–1990), *hazzan*. Meisels was born in Galicia where his father was a ḥasidic *hazzan*. Meisels immigrated to the United States in his youth and sang as a child in cantorial choirs. He studied music with the well-known synagogue composer Max Helfman, and received his vocal training at Juilliard. For 37 years he was the *hazzan* of Temple on the Heights in Cleveland. He was president of the Cantors Assembly and in 1965 organized the first International Conference of Musicians and Cantors, which was held in Israel. Meisels specialized in renditions of Yiddish folk songs and appeared in numerous concerts of *hazzanut*, and sang Yiddish folk songs, songs from the Jewish theater, and modern Israeli songs. In his performances he was accompanied by his wife, Ida Ruth, a well-known arranger of Yiddish folk songs. Meisels made recordings of cantorial works composed by Sholom Secunda, and was a recording artist for RCA Victor and Tikvah Records.

[Akiva Zimmerman / Raymond Goldstein (2<sup>nd</sup> ed.)]

**MEISELS, UZZIEL BEN ZEVI HIRSCH** (1743–1785 or 1786), ḥasidic rabbi in Poland. Meisels was a member of an old rabbinic family in Poland, and a descendant of Moses \*Isserles whom he calls “my grandfather” in his works. He served as *av bet din* in Rychwal (Bogatynia), Ostrowiec, and Nowy Dwor. Attracted to Ḥasidism he became a disciple of \*Dov Baer, the Maggid of Mezhibezh, and with his brother Isaac became one of the propagators of Ḥasidism in Poland. A considerable portion of his teachings in the yeshiva has been lost. His works include *Ez ha-Da'at Tov*, novellae on tractates *Ketubbot* (1863) and *Shabbat* (1866); *Menorah ha-Tehorah* (1883/84), on *Tur*, *Orah Hayyim*, *Hilkhot Shabbat*; and *Tiferet Zevi* (1803), on tractate *Bezah*. The rest were published posthumously by his grandchildren in *Tiferet Uzzi'el*. This work includes selections on the Bible and moralistic ḥasidic sermons, combined with kabbalistic themes, though even these reflect the style of the halakhist, and contains many sayings of the founders of Ḥasidism. Meisels was called עבד ה' (“Servant of the Lord”), *eved* being the initial letters of Uzziel ben Dreizel (his mother’s name).

[Pnina Meislish]

**MEISL, JOSEPH** (1883–1958), historian and archivist. Born in Brno, he became an official of the Berlin Jewish community in 1908, rising to general secretary, and was later librarian of the community’s important library. After the Nazis seized power, Meisl settled in Jerusalem. There he founded (and to 1957 directed) the \*General Archives for the History of the Jewish People (see \*Archives). Before and after World War II he was able to transfer valuable archival material from Central and Eastern Europe to the archives.

Writing mainly in German, Meisl made considerable contributions to Jewish historiography. His works include *Geschichte der Juden in Polen und Russland* (3 vols., 1921–25); *Haskalah, Geschichte der Aufklärungsbewegung unter den Juden in Russland* (1919), a history of the Haskalah movement in Russia;

and *Die Juden im Zartum Polen* (1916). He also wrote studies on well-known Jewish historians: H. \*Graetz (1917), S. \*Dubnow (1930), and his father-in-law S.P. \*Rabbinowitz (Heb., 1943). In 1939 he published his study of Sir Moses \*Montefiore’s (abortive) endeavors to raise the educational and economic standards of Jerusalem Jewry, while his important edition of the minute books of the Berlin Jewish community, 1723–1854 (*Pinkas Kehillat Berlin*) was published posthumously in 1962 by Shaul Esh. Meisl was a coeditor of the *Festschrift zu S. Dubnows siebzigstem Geburtstag* (1930).

**MEISSEN**, former margravate in Saxony, city near Dresden, Germany. Jews are mentioned as resident in the margravate of Meissen in the first decade of the 11<sup>th</sup> century. An organized community in the city of Meissen dates only from the 12<sup>th</sup> century, when a synagogue and a cemetery were maintained. The Jews lived at first in a *Judendorf* outside the city walls near the “Jewish gate.” In 1265 Duke Henry the Illustrious enacted a liberal decree securing the Jewish community undisturbed participation in the city’s life for some 80 years. During this period they made their living as pawnbrokers and moneylenders. Their communal life flourished, and they established the first Jewish school in Saxony. In 1330 Emperor Louis IV transferred the protection of the Jews in Meissen to Frederick the Grave of Thuringia. During the \*Black Death persecutions of 1349 the community was destroyed. Although it was never reestablished within the city itself during medieval times, Jewish moneylenders and tradesmen remained as taxpayers within the margravate. A partial expulsion took place in 1411, but the decree was rescinded in 1415. In 1425 Frederick the Warlike granted them protection for a yearly fee; however, during the course of the Hussite Wars (see \*Hussites), Frederick the Mild ordered the expulsion of all Jews from Meissen and Thuringia in 1430. They were not permitted entry into Saxony as a whole until the end of the 18<sup>th</sup> century. The modern community in the city of Meissen was founded in the 19<sup>th</sup> century, but it never achieved the status of its medieval counterpart. The city had a population of 32 Jews in 1890 that remained stable until 1904, but by 1933 all of them had been absorbed by \*Dresden.

**MEITAR** (Heb. מֵיטָר), urban settlement located in southern Israel, near Beersheba. It received municipal council status in 1987. In 2002 its population was 6,100, occupying an area of 6.5 sq. mi. (17 sq. km.).

[Shaked Gilboa (2<sup>nd</sup> ed.)]

**MEITNER, LISE** (1878–1968), physicist and one of the small group responsible for the discovery of atomic fission. Born in Vienna, she moved to Berlin in 1917 and there joined the distinguished chemist Otto Hahn, with whom she worked in collaboration, researching into radioactive substances. Lise Meitner was one of the first women to become a professor at the University of Berlin (1926). From 1917 she was for over 20 years head of the physics department in the Kaiser Wilhelm Institute for chemistry in Berlin.

After the *Anschluss* in 1938, she left Germany and settled in Stockholm, working on the staff of the Nobel Institute. There she received a letter from Hahn describing his discovery with Fritz Strassmann that, when a uranium atom was disintegrated by a neutron, an atom of barium was thereby produced. While holidaying near Gothenburg in December 1938, she discussed this with her nephew, Otto \*Frisch, who was working in Denmark with Niels \*Bohr. The two physicists immediately realized the significance of Hahn's work, which meant that the uranium atom was split into roughly equal parts, accompanied by a tremendous release of energy. Frisch called this "fission," a term borrowed from biology. Lise Meitner visited the United States after 1945, but returned to Sweden and became a citizen in 1949. Both before and after World War II she received many honors. She eventually retired to Cambridge, England, where she died.

[Maurice Goldsmith]

**MEITUS, ELIAHU** (1892–1979), Hebrew poet, writer, and translator. Born in Kishinev, Meitus studied at the Sorbonne but during World War I returned to Russia. After the war he served as headmaster of a Hebrew gymnasium in Bessarabia, and later taught in the teachers' seminary in Jassy (Romania). In 1935 he settled in Palestine, where he taught literature in secondary schools. His first poem appeared in *Ha-Shilo'ah* (1910), when he was studying in Odessa. He came to the attention of Bialik, then the literary editor of that periodical, and became a member of the "Odessa group" of Hebrew writers. Subsequently, Meitus published poems and articles in the Hebrew press in Russia, Romania, and elsewhere. After he settled in Palestine, Meitus' writings appeared regularly in the newspapers, particularly in the daily *Al ha-Mishmar*. He translated extensively (from French, Romanian, Russian, and Yiddish), mainly works of fiction, but also poetry and nonfiction. Four collections of his poetry have appeared, including *Shirim* (1943), *Balladot mi-Nof ha-Yaldut* (1954), and *Bi-Kezeh ha-Gesher ha-Sheni* (1967, sonnets). He also compiled an anthology of modern Hebrew poetry, *Shiratenu ha-Hadashah* (1938).

[Getzel Kressel]

**MEKHILTA DEUTERONOMY** (MD) is a halakhic Midrash of the school of R. Ishmael, the exact scope of which has not been determined, since the greater part of this Midrash is not extant. One of the *Genizah* fragments of MD indicates that its first unit ended with Deut. 1:30, and its second unit began with Deut. 3:23, as does *Sifre Deuteronomy* (SD). This might indicate that its other sections, as well, were essentially parallel to those of SD. In four *Genizah* fragments MD is divided into "parashot," each of which includes an average of four to five verses. In a later fragment, that originated in Yemen, the Midrash is divided into verses ("סל' פס" – end of verse), but this was probably not an original division, and was influenced by the common division of SD that was prevalent in Yemen.

Hoffmann was the first scholar to methodically demonstrate that R. David ha-Adani used MD in his composition of *Midrash ha-Gadol*, and, following this premise, also began to reconstruct the former. Schechter then published four *Genizah* leaves of MD, *Re'eh*, which he identified in Oxford and in Cambridge. On the basis of these leaves, and a reexamination of *Midrash ha-Gadol*, Hoffmann began a second reconstruction of MD in his book *Midrash Tanaim*, which was published in two volumes (Berlin, 1908–09).

In this edition, still used by scholars to the present day, Hoffmann printed in one font all the passages from *Midrash ha-Gadol* that differ in a pronounced manner from SD, and used a second font for all the *Midrash ha-Gadol* passages that resemble SD, and whose identification as MD he regarded as doubtful. Several times during the course of his edition, however, Hoffmann changed the fonts marking the similar or varying passages (on pp. 1–24, 63–180, large type = a passage different from SD, small type = a passage similar to Sif. Deut.; on the other hand, on pp. 24–62, 180–252, large type = a passage similar to SD, small type = a passage different from SD).

There are many drawbacks to this edition. As has been proven from the *Genizah* fragments, a large portion of MD was not quoted in *Midrash ha-Gadol*, and the part that was cited was on occasion reworked by Adani, or was corrupted by the copyist of the only manuscript of *Midrash ha-Gadol* that was available to Hoffmann. Hoffmann often included in his edition Midrashim that the author of *Midrash ha-Gadol* had undoubtedly copied from SD, BT, *Mishnat R. Eliezer*, the *Mishneh Torah* of Maimonides, and other sources. Hoffmann generally voices his doubts concerning the authenticity of such passages, but the reader must conduct his own examination of each passage with this issue in mind.

Several additional passages from MD came to light after the publication of *Midrash Tanaim*. Schechter published a *Genizah* fragment consisting of two leaves from MD, *Re'eh*. Kahana later succeeded in identifying two additional fragments, each of two leaves, from MD, *Devarim-Va-Etanan* and *Ha'azinu-Ve-Zot ha-Berakhah*, along with a lengthy quotation from MD, *Ekev* and *Ha'azinu*, that appears in an early collection in the *Genizah*. The second fragment that Schechter published from the Cambridge *Genizah* collection was the subject of a second, and more exacting, edition by Epstein,

and new editions of *Midrash ha-Gadol* on Deuteronomy have been published, based on several manuscripts. These editions, and other manuscripts of *Midrash ha-Gadol*, enable us to correct many of the corruptions that entered *Midrash Tana'im*. A considerable number of expositions from MD were inserted in the Western textual versions of SD, and others are preserved in quotations by medieval sages that have been discovered in recent years. It would seem, however, that the circulation of MD was already quite limited in the medieval period.

The direct passages from MD discovered to the present contain only some five percent of the Midrash, a fact that severely hinders its research. The most detailed description of MD and its nature as a Midrash from the school of R. Ishmael was written by Hoffmann, after he completed his edition of *Midrash Tana'im*, and Epstein engaged in a concise discussion of MD following the new edition of one of its passages. It should be mentioned that the halakhic material in the three fragments that were published by Schechter is notable for its lengthy and detailed expositions. The aggadic material of MD also is characterized by a certain degree of lengthiness, in comparison to the parallel material in SD. At times the version of the aggadic exegeses in MD is superior in its language, style, and content to that of the parallel expositions in SD, which occasionally suffer from nonuniformity of style, vague expositions that lack inner logic, and a number of corruptions shared by all the manuscripts. Some of the differences between MD and SD apparently are a consequence of the varying worldviews of the redactors of these Midrashim (see, e.g., the outline of the differing attitude by the redactors of these Midrashim to the non-Jewish peoples).

[Menahem I. Kahana (2<sup>nd</sup> ed.)]

**MEKHILTA OF R. ISHMAEL** (Aram. מְכִילְתָּא דְרַבִּי יִשְׁמָעֵאל) halakhic Midrash on Exodus.

*Mekhilta de-Rabbi Yishmael* (MY) is a Midrash from the school of R. Ishmael to the Book of Exodus. The word “mekhilta” means “a measure,” and its attribution to R. Ishmael was initially by R. Samuel ben Hophni and R. Nissim Gaon (the attribution of M1 to the midrashic school of R. Ishmael is an innovation solely by scholars in recent generations; and it is only by chance that this notion corresponds with the name given the Midrash by several *rishonim*). M1 does not contain an exposition for the entire narrative section of Ex. 1–11; it rather opens with the first laws of the Book of Exodus in 12:1, and continues with the uninterrupted exegesis of the halakhic and aggadic passages until 23:19, before ending with the exposition of two short halakhic passages on the Sabbath in Ex. 31 and 35. All this indicates a close association between M1 and the halakhic material in Exodus, although the precise criteria for determining which material in Exodus will be the subject of an exposition and which will be passed over are unclear, since it also includes Midrashim on lengthy aggadic sections, while, on the other hand, it skips a number of halakhic passages.

M1 is divided into nine *masekhtot*: *Pasha* (Ex. 12:1–13:16); *Va-Yehi Be-Shalah* (13:17–14:31); *Shirta* (15:1–21); *Va-Yassa* (15:22–17:7); *Amalek* (17:8–18:27); *Ba-Hodesh* or *Debiri* (19:1–20:26); *Nezikin* (21:1–22:23); *Kaspa* (22:24–29); *Shabbatta* (31:12–17; 35:1–3). Each *masekhta* is divided into a number of *parashot*, each of which is in turn divided into *halakhot*, numbered with the letters of the *alef-bet*. Each *parashah* ends with a summation of the number of *halakhot* contained in it, the *masekhtot* conclude by mentioning and summing up the *parashot*, as well, and the entire Midrash ends with a summation of the *masekhtot*. These summations are presented by means of allusions to each *parashah* in Aramaic, which is also the language of the division into *masekhtot*, *parashot*, and *halakhot* (the division is preserved in its entirety only in the *Genizah* fragments).

Two critical editions of M1, that do not refer to each other, have been published: the edition by H.S. Horovitz, which was posthumously edited and completed by I.A. Rabin (Frankfurt, 1931); and the edition by J.Z. Lauterbach, which was published in three volumes (Philadelphia, 1934–35). These editions rightly received favorable reviews by E.Z. Melamed, who reviewed the Horovitz edition, and by S. Lieberman, who evaluated the Lauterbach edition.

Horovitz chose the printed version as the basic text for his edition, at times emending and completing it in accordance with other textual versions. He provided a detailed listing of the textual variants found in the two complete manuscripts of M1, Oxford 151 and Munich 117; in the Leghorn 1801 edition, that is based, inter alia, on the emendations by Soliman Ohana; in the many quotations in *Yalkut Shimoni* and in *Midrash Hakhmamim*, which include most of M1; and in other indirect testimonies, primarily the Midrashim *Lekah Tov*, *Sekhel Tov*, *Tanhuma*, and *Sefer ve-Hizhir*. Horovitz also

added a concise but thorough critical commentary, with references to the parallels.

The Lauterbach edition is more eclectic. The editor generally preferred the common version of the two manuscripts in his determination of the text. In addition to the textual versions that were available to Horovitz, Lauterbach used a few pages from the *Genizah*, ms. Rome Casanatensa H 2736 on *Masekhta de-Shirta*, and ms. Oxford 2637 on *Yalkut Shimoni*. The variant readings were recorded in an extremely selective manner, and the references to the parallels are listed separately.

Both editions suffer from the absence of a prior methodological discussion regarding the character of the various textual versions and the mutual relations between them. Consequently, the editors were unaware of the direct dependence of the printed Venice 1545 edition on the printed Constantinople 1515(?) edition, that was indicated by Melamed; the common source of the Western mss., as was concluded by Finkelstein; and, mainly, the relative superiority of ms. Oxford to the other texts that they possessed, as was first noted by Lieberman. The lack of a comprehensive evaluation of the character of the textual versions is also apparent in the tendency of the editors to base the text of M1, especially its difficult passages, on the adapted and emended versions of *Midrash Hakhamim*, which, as its name implies, is a "Midrash" by an Italian sage from the 15<sup>th</sup> century who relied in great measure upon the M1, but not a direct textual version.

Additional versions of M1 came to light after the publication of these two editions. Especially noteworthy among these are ms. Vatican 299, which preserves about half of the *Mekhilta*, and some 80 pages from the Cairo *Genizah*. The importance of the latter lies in the Eastern and early textual tradition that is reflected in the majority of them, and that is generally superior to the later Western textual tradition that is presented in the direct M1 texts on which the two critical editions were based. In many instances, the original version is preserved only in the *Genizah* fragments, and in other places the Eastern *Genizah* version confirms the shared reading of the Western manuscripts, also for very difficult versions, that might possibly attest to intentional intervention in the original traditions of the M1 by its later redactors or the earlier copyists.

M1 was interpreted during the medieval period by several *rishonim*, but only one of these commentaries is extant, and only partially, in ms. Mantua 36. The publication of M1 was followed by a number of short emendations and commentaries written with the aid of manuscripts, and a number of lengthy commentaries by *aharonim* that were based solely on the printed version, along with quotations appearing in *Yalkut Shimoni*. The most important of the latter are *Shevut Yehudah* by R. Judah Najar and *Berurei ha-Middot* by R. Isaac Elijah Landau, which were closely followed by two scholarly commentaries: *Middot Soferim* by Isaac Hirsch Weiss, and *Me'ir Ayin* by Meir Friedmann (Ish Shalom). Friedmann's work laid the groundwork for the editions by Horovitz and Lauterbach, who were greatly aided by it. After the publication of the two

editions, *Masekhta de-Shirta* was the subject of a new commentary by Goldin, and Kahana published a new edition of *Parshat Amalek* that included a detailed discussion that sought to prove the originality of the aggadic material preserved in M1, relative to the secondary material in MS (Mekhilta of R. Simeon Ben Yoḥai).

The general nature of M1 and its sources has been examined and described by scholars of halakhic Midrashim, and has been the subject of numerous monographs examining its diverse sources, its attitude toward the Mishnah and to MS, its narrative traditions, its conceptual worlds, and other topics.

[Menahem I. Kahana (2<sup>nd</sup> ed.)]

**MEKHILTA OF R. SIMEON BEN YOḤAI** (Aram. מְכִילְתָּא דְּרַבִּי שִׁמְעוֹן בֶּן יוֹחָאִי (דְּרַבִּי שְׁמַעוֹן בֶּן יוֹחָאִי) (MS), a halakhic Midrash on Exodus from the school of R. Akiva, which is attributed to R. Simeon b. Yoḥai because of his exposition at the beginning of the book. Several *rishonim* knew this Midrash by other names, such as “*Mekhilta de-Sanya*”; “*Mekhilta*”; “*Sifri*”; “*Sifri de-Vei Rav*,” and others. This Midrash was subsequently lost, and only portions were found by modern scholars. Meir Freidmann (Ish Shalom) was the first to collect the quotations from MS that were known in his time, and his list was augmented by a number of items by Hoffmann in his pioneering study of the tannaitic Midrashim. Israel Lewy then discovered that large portions of the Midrash had been cited by R. David ha-Adani in *Midrash ha-Gadol* on Exodus, and Schechter published a few fragments from MS itself that he uncovered in the Cairo *Genizah*. The first edition of MS was published by Hoffmann (Frankfurt, 1905), based on *Midrash ha-Gadol* and a small number of *Genizah* fragments identified by Schechter. The next edition, published by Epstein and Melamed in 1955, is based on 95 MS leaves or fragments of leaves discovered in the *Genizah*. The rest of the Midrash (approximately one third) was reconstructed using four manuscripts of *Midrash ha-Gadol*. A few additional MS fragments were subsequently published, transcriptions of all the new *Genizah* fragments which came to light, and also a new edition of *Parshat Amalek* of MS based on new manuscripts.

The introduction to the Epstein-Melamed edition contains a description of the MS manuscripts and their main distinguishing features, but the principles guiding the editors were not presented, nor did the editors include a focused and orderly treatment of the signs and symbols used in the edition. The manuscripts were generally copied in this edition in an admirably accurate manner, and only in rare instances should the transcription, which was based on photographs, be corrected on the basis of the original manuscripts. It should be noted, however, that the largest copy of MS, on the basis of which some 65 pages were published, is not an excellent manuscript, being only of second-rate quality, and written in the 13<sup>th</sup> century in Spain. About another 15 pages are not from direct MS manuscripts, but are fragments that survived from two copies of abridged midrashic collections from MS. Consequently, the textual tradition of MS set forth in the major portion of the edition is not an especially reliable one, and is plagued by many copyist’s corruptions and mistakes.

The editors correctly noted the striking disparity between the certain MS fragments that were discovered in the *Genizah* and the doubtful passages, that they printed in smaller type. Most of the doubtful reconstructions, that encompass about one third of the edition, were based on *Midrash ha-Gadol*,

and the editors were forced to complete the rest based on the parallel material in *Mekhilta de-Rabbi Ishmael* (MI), *Sifra*, *Midrash Tannaim*, and other Midrashim. Obviously, error could hardly be avoided in such a complex labor of reconstruction, and in his review of the edition, Margalioth referred to a few passages that were incorporated within the text on the basis of *Midrash ha-Gadol*, but that do not originate in MS, but in *Mishnat Rabbi Eliezer*, *Avot de-Rabbi Natan*, or the Babylonian Talmud. A similar situation holds for the completion of missing passages in the *Genizah* fragments on the basis of *Midrash ha-Gadol* (which were printed within brackets, in normal type), whose origin in MS is extremely doubtful. On the other hand, the Epstein-Melamed edition omitted several other passages from *Midrash ha-Gadol* whose origin in MS has now been proven from new quotations from MS cited by several *rishonim*, such as R. Hafez ben Yazlī’ah and the Karaite authority Jeshua ben Judah.

MS begins with a lengthy exposition concerned with a single topic: the choosing of Moses as the agent who shall redeem Israel, and Moses’ response to this selection. This midrashic exposition is composed of two developed literary units (pp. 1–4/3; 4/3–7/9), each of which is focused on the first verse of the weekly Torah reading (*sefer*) according to the custom of the Land of Israel with which it opens: Ex. 3:1; Ex. 6:2, that are the only two lemmas in these units. The phenomenon of constructing an entire Midrash around the opening verses of the weekly *sefer* as practiced in the Land of Israel appears only very rarely in the tannaitic Midrashim, but is a frequent occurrence in the amoraic Midrashim and in the versions of *Tanhuma*. The deficient extant documentation hinders our determining if MS included additional hermeneutical units on chapters 6–11 of Exodus. At any rate, *Midrash ha-Gadol* preserved midrashic interpretations that apparently originated in MS, beginning with the halakhic subjects in Ex. 12:1; and starting with verse 3 in this chapter, MS is documented in a *Genizah* fragment published by Abramson. MS continues to expound the verses, in order, at least until Ex. 23:19, after which the exact scope of the Midrash is unclear. Based on *Midrash ha-Gadol*, Melamed reconstructed MS on Ex. 23:20–24:10, and selected verses from chaps. 30, 31, 34, and 35 of Exodus in his edition, but several of these quotations clearly do not originate in MS; this issue requires further study.

The Epstein-Melamed edition does not include a commentary, and the parallels, as well, were listed only in a partial fashion. Many interpretations of the Midrashim of MS appear in the edition by Hoffmann and in Kasher’s glosses in *Torah Shelemah*, but these cannot fill the need for an orderly and detailed critical commentary of MS in its entirety. As regards the research of MS, see the introduction to the edition, in which Melamed published Epstein’s general essay on the MS, which paid special attention to the question of its redactors. Melamed added his own discussion concerning the terminology and vocabulary of MS, the names of the rabbis it cites, its method of quoting sources, and its characteristic hermeneutical methods. The second edition contained an additional

short chapter on “Mishnah and *Baraita* Quotations in *Mekhilta de-Rabbi Simeon b. Yoḥai*,” and the appendices to the edition included various subject indices that aid in the further study of this Midrash.

Most scholars concur that the halakhic portion of MS was redacted fairly late. This opinion was first expressed by Epstein, who wrote at the end of his Introduction: “The MS is from the school of R. Akiva, and is later than all halakhic Midrashim (חמ) (making much verbatim use of *Sifra*, *Sifrei*, and *Tosefta*), and many *halakhot* are incidentally connected in the Midrash. All this points to a late date.” Based on an orderly study of the section of the Hebrew slave in the two *Mekhillot*, Judah concluded that MS was redacted after M1. De Vries took this premise a step further, and asserted that MS contains a reworking of *baraitot* from M1, and not parallels or a common source. Levine examined several halakhic topics in MS, and reached an even more far-reaching conclusion, that the activity by the redactor of MS closely resembles that of the *amoraim* in the area of interpretations of the Mishnah. He, like them, clarifies the halakhic concepts in the Mishnah, expands it, draws parallels to it, and examines the relationship between one mishnah and another by the use of certain interpretations of *mishnayot* or *baraitot*. On the basis of this analysis, Levine wrote that, apparently, the redactor of MS was himself an *amora*, while emphasizing that further study is required as to whether conclusions could be drawn regarding MS as a whole on the basis of an examination of these specific details. An investigation of Levine’s proofs shows that almost all were based on extremely tenuous speculation, and not on solid evidence, on the basis of which we could determine the text of the sources available to the redactor of MS, on the one hand, and the nature of their reworking, on the other. Objections could also be raised concerning the quality of De Vries’ proofs of the use by MS of M1. An examination of the singular character of MS therefore requires further study, that would have to include a new and consistent examination of its terminology, the names of the rabbis it mentions, and its prevalent hermeneutical methods that at (albeit extremely rare) times seem also to include several elements seemingly characteristic of the other school, that of R. \*Ishmael.

The aggadic material in MS fundamentally resembles the parallel material in M1. An orderly examination of the parallel aggadic material of *Parshat Amalek* demonstrates the primacy of the tradition in M1, in comparison with that of MS, which apparently was fashioned by redactors who sought to inform the midrashic expositions with a more developed literary and ideational nature, somewhat freed from their rigid linkage to the verses. Along with the ideational development of several of the Midrashim in this section in MS, the latter occasionally exhibits stylistic hyperbole, exegetical diffusion, a tendency to relate unattributed interpretations to specific rabbis, and possibly even an attempt to artificially rewrite disagreements. Some of the Midrashim in MS exhibit a simplification of content that borders on popularization, and the accentuation of motifs that concentrate on elementary principles of the reli-

gious experience, such as emphasizing the importance of obedience to the word of God, sermonizing about the observance of the commandments and avoiding sin, reinforcing the standing of prayer, and promising the good end that awaits Israel, along with the tribulations that shall befall its enemies.

A comprehensive characterization of the aggadic material of the two *Mekhillot* would require a detailed examination, which has not been conducted to date. Nonetheless, a partial examination of other *parashot* in the MS reveals findings similar to those in evidence in *Parshat Amalek*. The literary nature of the first aggadic unit that appears only in MS, and not in M1, which resembles in a certain sense the genre of *Tanhuma*, also reflects the literary adaptation that is characteristic of the aggadic material of MS and the relatively late time of its fashioning. The same is true for some of the aggadic material that is incorporated within the halakhic sections, and for a portion of the halakhic material that is included in the aggadic passages.

A geonic response (probably by R. \*Sherira and R. \*Hai) attributes a quotation from MS to the rabbinic teaching that appears in the “other *sifrei de-vei Rav* [all חמ, except for *Sifra*];” “and thus all the *tannaim* learned, without exception,” and compares it with a citation from M1, which they termed “*Mekhilta de-Erez Israel*.” This led scholars to conclude that MS was the primary *Mekhilta* that the “*tannaim*” (i.e., the teachers of *baraitot*) taught at the time in Babylonia, while M1 was more widespread in the Land of Israel; it was not studied in Babylonia (at least not in the yeshiva of Pumbedita), and the *geonim* cited it from a written book. This could possibly be related to the manner in which MS was transmitted, and, in fact, the TB frequently quotes Midrashim similar or identical to MS. In either event, the history of the transmission of MS is to be separated from the question of the venue of its redaction, and there is no reason to move the latter from Erez Israel to Babylonia.

[Menahem I. Kahana (2<sup>nd</sup> ed.)]

**MEKHLIS, LEV ZAKHAROVICH** (1889–1953), Soviet army officer. Born in Odessa, Mekhlis was conscripted into the czarist army and during World War I served in an artillery regiment. He joined the Red Army in 1919 and served through the civil war of 1918–21, becoming military commissar of a brigade, a division, and an army group in the Ukraine. In 1930 he graduated from the Institute of Red Professors. For several years Mekhlis was an official of the Communist party central committee and after 1930 worked on the newspaper *Pravda*. He was head of the Red Army’s political administration from 1937 to 1940 when he became U.S.S.R. people’s commissar of state control. Following the outbreak of World War II, Mekhlis served in the Red Army in 1941–42, again as head of political administration of the army, vice commissar of defense, and from July 1942 to 1945 as member of various front war councils. He was promoted to lieutenant-general on December 6, 1942, and to colonel-general on July 29, 1944. His many decorations included the award of four Lenin medals. After the war he served for a short period as U.S.S.R. minister of state control. He died on February 13, 1953, and his body was interred in the Kremlin wall.

[Mordechai Kaplan / Shmuel Spector (2<sup>nd</sup> ed.)]

**MEKIZE NIRDAMIM** (Heb. מְקִיזֵי נִרְדָּמִים; “rousers of those who slumber”), the first society for the publication of medieval Hebrew literature in every branch of intellectual activity, in scholarly editions. The aim of the society was both to propagate a knowledge of Jewish scholarship and to establish personal contact between scholars. The structure of the society – which still continues – provided for a board of directors, consisting of the best qualified scholars in their field, and annual subscriptions from members. The Mekize Nirdamim was founded in 1862 by E.L. Silbermann in Lyck, founder-editor of the first Hebrew weekly *\*Ha-Maggid*, with the cooperation of Chief Rabbi Nathan M. \*Adler (London), M. \*Sachs (Berlin), and S.D. \*Luzzatto. There was a certain amount of opposition – for a variety of reasons – which included a lack of faith in the possibility of the renaissance of Jewish culture, an opposition to the publication of non-rabbinic texts, and an opposition in principle to the exclusive use of Hebrew, which was established as a rule by the society, and/or an opposition

to its founders by such scholars as A. \*Geiger and M. \*Steinschneider. Support was found, however, among Polish and Russian scholars and even in rabbis such as Samuel and Mattityahu \*Straschun, S. \*Ganzfried, and M.L. \*Malbim, and by 1864 the number of subscribers, from a great many countries, stood at 1,200. In the same year the first four publications were issued, among them the first installment of S.D. Luzzatto’s edition of Judah Halevi’s *Diwan*. The adherence of Moses \*Montefiore in 1865 brought with it the support of many who had been aloof. After a decade’s activity, there was a pause until, in 1885, the society resumed its work in Berlin, guided by A. \*Berliner, A. \*Harkavy, and others. It was then that the series *Kobez al Jad* was initiated (26 volumes by 1970), devoted to the publication of smaller manuscripts and documents. In 1934 the seat of the Mekize Nirdamim was transferred to Jerusalem. By 1970, 110 works had been issued. S.Y. \*Agnon served as president of the society (1954–70), and was succeeded by Gershom \*Scholem. Very distinguished scholars, such as Y. Baer, H. Schirmann, E. Urbach, etc., served as members of the executive committee. Sh. Abramson and E. Fleischer continued the publication of important books on Hebrew medieval literature in the last decades of the 20<sup>th</sup> century and the beginning of the 21<sup>st</sup> with such books as Eleazar ha-Bavli’s *Diwan* (ed. H. Brody, 1971), *Responsa and Decisions of the Sages of Germany and France* (ed. E. Kupfer, 1973), Moses Ibn Ezra’s *Kitāb al-Muḥādara wal-Mudhākara* (ed. A.S. Halkin, 1975), *Midrash Bereshit Rabbati* (ed. Ch. Albeck, 1984), *Rabbi Jehudah berabbi Benjamini’s Carmina Cuncta* (ed. Sh. Elizur, 1988), *Teshuvot ha-Rambam* (ed. J. Blau, 1989), *Pinkas Kehillat Shnaitakh* (ed. M. Hildshaimer, 1992), *Perush Kadum le-Midrash Va-Yikra Rabbah* (ed. M.B. Lerner, 1995), and *Ma’aseh Nisim: Perush la-Torah* (ed. H. Kraisel, 2000).

**BIBLIOGRAPHY:** *Hevrat Mekize Nirdamim: 1864–1964* (1964), includes complete bibliography of books published by the society.

[Israel Moses Ta-Shma]

**MEKLENBURG, JACOB ZĒVI** (1785–1865), rabbi and biblical commentator. Meklenburg was born in Inowroclaw, Poznan. Unwilling to enter the rabbinate, he engaged in business, but in 1831, after his business had failed, he accepted an invitation from the community of Koenigsberg to serve as their rabbi, and he remained there until his death. An opponent of religious reforms, he fought against the reformist ideas advocated in his community by Joseph Lewin Saalschuetz.

Meklenburg’s major work was a commentary on the Pentateuch, *Ha-Ketav ve-ha-Kabbalah*, in which he sought to demonstrate the conformity between the oral tradition and the written law. His commentary, which contains numerous original interpretations, was first published in Leipzig in 1839. It was reprinted twice during his lifetime, with his additions and included a German translation of the text of the Pentateuch based on Meklenburg’s commentary, by Jonah Kossmann. A fourth printing was begun some time before Meklenburg’s death, but was interrupted because of differences between the publisher and the printers. In 1880, Abra-

ham Berliner published a new edition with additional material from manuscripts left by the author. Meklenburg was also the author of a commentary on the prayer book, *Iyyun Tefillah*, first published in 1857 with the *siddur* of R. Jacob \*Lorbeerbaum of Lissa; it, too, was reprinted several times. A number of rabbinic works carry introductory notes or approbations by Meklenburg.

[Tovia Preschel]

**MEKNÈS**, town in \*Morocco. Jews settled in the region of Meknès before the advent of \*Islam. A Hebrew inscription has been found and the remains of a synagogue were uncovered in the excavations of Volubilis, which is near Meknès. A *kinah* of Abraham \*Ibn Ezra mentions Meknès among the communities which suffered at the hands of the \*Almohads. A chronological note testifies that such persecutions occurred in 1140, and adds that in 1247, during the wars of the \*Merinids, many Jews lost their lives or were forcibly converted to Islam, while in the earthquake of 1340 “several courtyards caved in, as well as the synagogue and the *bet ha-midrash* of R. Jacob.” According to traditions preserved in writing, the “Mahrit” synagogue, still existing in Meknès, was first built in the 13<sup>th</sup> century, destroyed in the earthquake of 1630, and rebuilt in 1646 by the \*Toledanos upon their arrival in Meknès. It is similarly stated that the “Tobi” synagogue was built in 1540. It would therefore seem that Jews already at that time lived in the present mellah area as well as in the Medina in which an “Aaron Street” is, according to tradition, named after the then-leader of the community. The sharif Mulay Ismail (1672–1727), the real founder of the \*Alawid dynasty, moved his capital to Meknès and granted the Jews additional land for construction of buildings. The \**nagid* Abraham Maymerān and other wealthy Jews then built luxurious houses. Christian emissaries from Europe who stayed in them were astonished by their beauty. Near the mellah, Ismail built a beautiful quarter for his officials and servants.

From then until the 19<sup>th</sup> century the community of Meknès was one of the best developed and organized in Morocco. It was a city of *hakhamim* and authors, as well as merchants and men of action who frequently visited \*Tetuán, \*Salé, \*Rabat, and \*Fez on their affairs. The community was organized and its institutions functioned accordingly. The taxation on meat, wine, and other products constituted a source of income for the community, which with the addition of local donations, was able to supply the minimal requirements of the needy and those engaged in studies. The community maintained regular relations with Erez Israel, whose emissaries returned home with considerable funds. The education of the children was entrusted to many teachers; at a more advanced age the youths were employed in the crafts or commerce, while the more talented pursued their studies in yeshivot.

As capital of the country and residence of the sharifs (rulers) Meknès was also the center of Jewish activities at the

court. The leaders of the Meknès community acted as *negidim* (see \**Nagid*) of Moroccan Jewry and agents of the sharifs. Among them were members of the \*Maymerān family (Joseph and his son Abraham), as well as the Toledanos, the Ibn Attars, the Ben Māmāns, the Ben Quiquis, and others. The most prominent rabbinic scholars and *dayyanim* in Meknès during the 18<sup>th</sup>–20<sup>th</sup> centuries come from the Berdugo and Toledano families, many of whom wrote responsa. From 1790 and during the 19<sup>th</sup> century Meknès lost its importance as the capital and the Jewish community suffered pogroms frequently. There was an important change for the better in the situation of the Jews with the formal establishment of the French Protectorate in 1912. From then on the Jews enjoyed relative security and economic stability, as well as elementary human rights. There were also changes in the field of religious education with the arrival of R. Ze'ev Halperin, a Russian scholar who came from Britain in 1912. He introduced reforms in the system of study of the yeshivot and gathered the young men of the town, for whom he founded a *kolel avrekhim* (advanced yeshivah), the first of its kind in Meknès and probably the whole of Morocco. He founded an *Ez Hayyim* society for laymen which organized regular studies and whose members supported the young men of the Bet El yeshivah with their contributions. As a result of this activity the yeshivah produced a nucleus of *hakhamim* who later officiated as rabbis in Meknès and other communities. The fame of Meknès yeshivot spread far and they attracted students from many parts of the country. After World War II, a Chabad yeshivah was founded (in conjunction with \*Ozar ha-Torah).

The government allocated new areas near the mellah for the Jews to live in, and a new quarter, known as the “new mellah,” was built. The construction was modern, being scattered and not surrounded by a wall. Many beautiful synagogues were also built, including the “Toledano” and Joseph Mrejen synagogues, as well as a large Jewish school, Em ha-Banim, in which all the children of the community studied (the needy were exempted from the payment of tuition fees). Its expenses and the salaries of the teachers were provided from community funds. In 1947 approximately 1,200 pupils attended this school. The \*Alliance Israélite Universelle built two large schools, one for boys and another for girls, which were attended by about 1,500 boys and girls in 1950. According to the 1947 census the Jewish community numbered 15,482 (about 3,000 others were not included in the census for various reasons). Most of the Jews of Meknès immigrated to Israel after the establishment of the state and both the old and the new mellahs are now inhabited for the most part by Muslims.

[Haim Bentov]

### Contemporary Period

The Jewish population of Meknès, which numbered 12,445 in the 1951 census report, dropped in 1960 to 10,894 (according to the census of that year), and in 1968, after the large-scale emigration of Moroccan Jewry, to about 2,000–3,000. During the 1950s the Jewish schools had 3,182 pupils, but the number

dropped off in the 1960s. Most of the charitable and social welfare organizations, which included branches of WIZO and the World Jewish Congress, were closed. In 1970 the Meknès community, although reduced, was one of the more vital of the Moroccan provincial communities. A considerable Jewish petite bourgeoisie lived there with communal life centering on the two main synagogues. Only a few dozen Jews remained in the old mellah, and most lived in the modern Jewish neighborhood. More than three decades later, the Jewish community numbered no more than 120 Jews. In September 2003 radical Islamists, apparently belonging to the pro-al-Qa'ida association Salafiyya Jihādiyya, responsible for the suicide terrorist attacks in Casablanca several months earlier, stabbed to death 75-year-old Elie Afriat in Meknès. Since then members of the local community have lived in fear of further Islamist actions against them.

**MEKOROT** (Heb. “Sources”) **WATER COMPANY**, company established in 1937 as a joint undertaking of the \*Histadrut, the \*Jewish Agency, and the \*Jewish National Fund, to develop a water supply project in the western part of the Valley of Jezreel. Its first managing director was Levi \*Eshkol. After World War II, Mekorot extended its operations to a regional project in the Negev and a smaller project in central Israel. During the \*War of Independence (1948) it constructed an emergency water supply system for Jerusalem and, after the war, embarked upon a major development program encompassing the entire country. In 1962 Mekorot officially became Israel's National Water Supply Agency.

In the early 1950s the projects executed were mainly connected with ground and spring water. In the mid-1950s further major regional projects were carried out. In the later 1950s and early 1960s the main emphasis was upon the National Water Carrier (Jordan Project), and subsequently systems utilizing flood runoff and reclaimed sewage were constructed. From the early 1960s the company also operated abroad, mainly in the construction of water supplies in developing countries. In 1967 it opened the Shapdan, the sewage system for all Gush Dan (Tel Aviv area). In 1989 it opened a third water line to the Negev, which transported filtered water from the Shapdan. In 1995 it opened a fourth water line to Jerusalem, and in 1997 it opened the desalination plant in Elath supplying 80% of the city's water. Subsequently it opened other desalination plants in various locations.

The Israel government was a shareholder in the company from 1948 and held one-third of the shares in 1967. Another third was held by the Histadrut, and the rest equally by the Jewish Agency and the Jewish National Fund. The company operates as a government firm, meaning that it operates as an independent business enterprise under the supervision of the Governmental Companies Authority. In 2000 the company's budget was NIS 5.6 billion. It supplies 90% of the country's drinking water and 70% of all water (1.3 billion cu. m.). The company operates over 800 pumping stations, with over 2,400 pumps, over 1,200 wells, and 10,500 kms. of large-diameter pipes. It employs 2,100 workers all over Israel. Company salaries are known to be among the highest in the public sector.

Mekorot owns SHM – Electrical Mechanic Services, operating water infrastructure projects. It also advances various projects with private firms. The government had declared its intention to privatize Mekorot but met with opposition from both the workers and others.

THE HISTORY OF THE MAPPING OF THE HOLY LAND EPITOMIZES THE HISTORY OF CARTOGRAPHY.

EVINCING THE LONGEST UNBROKEN SEQUENCE OF MAPPING IN THE WORLD, THE

HOLY LAND HAS BEEN THE FOCUS OF INTENSE INTEREST FOR COUNTLESS GENERATIONS OF CARTOGRAPHERS

UNDER ITS VARIOUS NAMES—CANAAN, THE PROMISED LAND, PALESTINE, OR TERRA SANCTA.

TWO PRINCIPAL CARTOGRAPHIC TRADITIONS DOMINATE THIS FASCINATING HISTORY: THE RELIGIOUS,

BASED ON THE BIBLE AND ITS EXEGESES; AND THE CLASSICAL, BASED ON

PTOLEMY'S WORK, WHICH LAID THE FOUNDATIONS FOR MODERN CARTOGRAPHY.

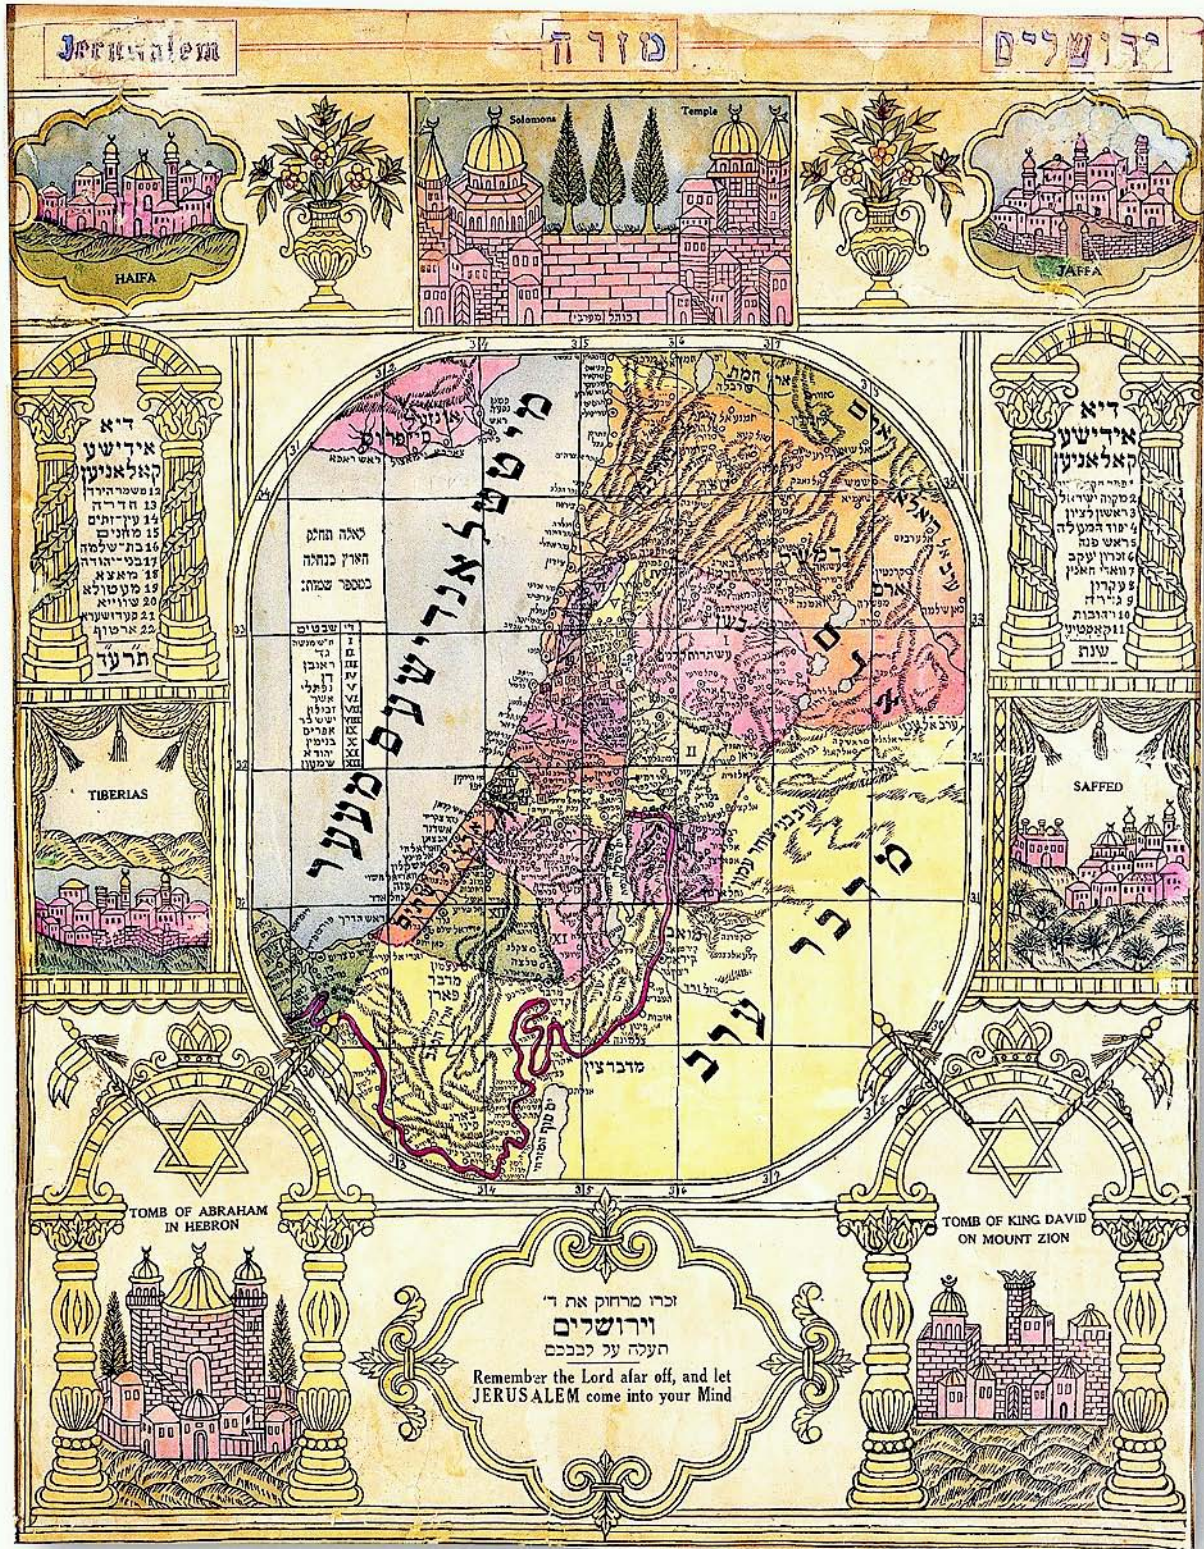

## HOLY LAND IN MAPS

Frans Hogenberg, Flemish, 1535–1590. Map of Jerusalem, the Holy City. Hand-colored etching, 330 x 418mm.

From Georg Braun and Frans Hogenberg, *Civitates Orbis Terrarum*, Cologne, 1575. Gift of Karl and Li Handler, Vienna. Collection, The Israel Museum, Jerusalem. Photo © Israel Museum, Jerusalem/Ilan Sztulman.

Mizrach (East)—Ornamental plaque to be hung on an eastern wall in one's house, orienting people toward Jerusalem. Illustrated with a map of the Land of Israel and the holy cities and sites. Colored lithograph on paper, Jerusalem, 1914. Collection of Isaac Einhorn, Tel Aviv.

ABOVE: Willem Janszoon Blaeu, Dutch, 1571–1638. *Terra Sancta quae in Sacris Terra Promissionis olim Palestina* (The Holy Land known in the Scriptures as the Promised Land, former Palestine), after Jodocus Hondius Jr., Dutch, after Laicstain-Schrott, Hand-colored engraving, 1629, 386 x 503 mm. From *Le theatre du monde ou nouvel atlas*, 1640. Gift of Karl and Li Handler, Vienna. Collection, The Israel Museum, Jerusalem. Photo © The Israel Museum, Jerusalem/Ilan Sztulman.
