Initial letter for the word *Miserere mei*, "Have mercy upon me," at the beginning of Psalm 51 (Vulgate Ps. 50) from the 12th-century Psalter of York. Seen here are David, with Bath-Sheba behind him, being admonished by Nathan. Uriah the Hittite lies dead, stoned by an Ammonite. Copenhagen, Royal Library, Thott, 143, fol. 68r.

MEL-MZ

MELAMED, EZRA ZION (1903–1994), Israel talmudic scholar and philologist. Born in Shiraz, Persia, Melamed was taken to Palestine by his father, R.R. *Melamed, when he was two. He worked at the Ministry of Education (1952–56), and was appointed professor of Bible at the Hebrew University (1964) and of Talmud at Bar Ilan (1961) and at Tel Aviv (1964) universities. He was elected to the Hebrew Language Academy in 1956 and to the Higher Archaeological Council in 1963. He was awarded the Israel Prize in 1987 for Torah literature and commentary on the sources. Melamed's major works are in the fields of talmudic literature: *Midreshei Halakhah shel ha-Tanna'im be-Talmud Bavli* (1943), in which he collected *beraitot* in the Babylonian Talmud based on verses from the Pentateuch, and *Ha-Yahas she-Bein Midreshei Halakhah la-Mishnah ve-la-Tosefta* ("Relations Between Halakhic Midrashim and Mishnah and Tosefta," 1967). Two related works were published posthumously: *Midreshei Halakhah shel ha-Tanna'im be-Talmud Yerushalmi* (2001) and *Midreshei Halakhah shel*

ha-Amoraim be-Talmud Yerushalmi (2004). Melamed devoted much labor to editing the scientific legacy of his teacher Jacob Nahum *Epstein, including *Mekhilta de-Rabbi Simeon bar Yoḥai* (1955), *Mevo'ot le-Sifrut ha-Tanna'im* (1957), *Mevo'ot le-Sifrut ha-Amora'im* (1962), and *Dikduk Aramit Bavlit* (1960). He also edited B. de Vries' *Mehkarim be-Sifrut ha-Talmud* (1968). He composed a special work in which he summarized the most significant achievements of modern Talmud scholarship: *Pirkei Mavo le-Sifrut ha-Talmud* (1973). He prepared textbooks and popular works, including *Pirkei Minhag ve-Halakhah* ("Chapters of Custom and Halakhah," 1955), and *Parashiyot me-Aggadot ha-Tanna'im* ("Chapters of Tannaitic Aggadot," 1955). Among his other writings are *Tafsir Tehillim bi-Leshon Yehudei Paras* ("Psalms in Judeo-Persian," 1968), *Millon Arami-Ivri le-Talmud Bavli le-Mathilim* ("Aramaic-Hebrew Dictionary of the Babylonian Talmud for Beginners," 1969), and a comprehensive glossary to the entire Babylonian Talmud (*Millon Arami-Ivri shel ha-Talmud ha-Bavli*, 1992), as

well as articles in scientific journals. Of special significance is his edition of Eusebius' geographical work *Onomastikon*, which he translated from the original (1938). Because of his involvement with the Persian and other Oriental communities (whom he served as honorary rabbi) and his familiarity with their traditions of custom and language, Melamed served as an important source on such community traditions.

[Menahem Zevi Kaddari / Stephen G. Wald (2nd ed.)]

MELAMED, MEIR (second half of 15th century), financier in Spain during the period of the expulsion. A Hebrew author of the period calls him the "king's secretary," apparently because he held office in one of the royal accounting departments. In official documents he is referred to as "Rabbi" and not "Don," as were most of the other Jewish tax farmers, which indicates that he was a scholar. He lived mainly in Segovia. In 1487 he succeeded his aged father-in-law Abraham *Seneor as chief administrator of tax farming in the kingdom. On June 15, 1492, he and Abraham Seneor were baptized with great ceremony at Guadalupe, Ferdinand and Isabella acting as godparents. As a Christian he adopted the name Fernando Núñez Coronel. On June 23, 1492, he was appointed chief accountant (*contador mayor*). He also became a permanent member of the royal council and was town councillor (*regidor*) in Segovia.

MELAMED, RAḤAMIM REUVEN (1854–1938), Persian rabbi and preacher. Born in Shiraz, he moved to Jerusalem in 1906, established a yeshivah in his own home, and served as rabbi to the Persian Jews. He wrote many commentaries in both Hebrew and *Judeo-Persian to the Pentateuch, the Scrolls, *Avot*, and portions of the Zohar: among them *Kisse Raḥamim* (1911), *Yeshu'ah ve-Raḥamim* (1912), *Ẓedakah ve-Raḥamim* (1926), *Ḥayyei Raḥamim* (1929), *Zikhron Raḥamim* (1930), and *Seder Leil Pesah* (in Hebrew and Persian, 1930), all published in Jerusalem. Some of his works were republished by his son, Ezra Zion *Melamed.

BIBLIOGRAPHY: M.D. Gaon, *Yehudei ha-Mizraḥ be-Erez Yisrael*, 2 (1937), 437–8.

[Walter Joseph Fischel]

MELAMED, SIMAN TOV (d. c. 1780), spiritual leader of the Jewish community in *Meshed. A poet, philosopher, and author of many treatises in Hebrew and *Judeo-Persian, he composed **azharot* (1896) in Judeo-Persian (portions of which were written in Persian, as well as Aramaic and Hebrew). A manuscript of his commentary to *Pirkei Avot* is in the possession of Hebrew Union College, Cincinnati, together with other of his writings. His major work is his philosophical-religious *Sefer Ḥayyat al-Rukh* (published 1898), which combines a commentary on Maimonides' teachings on the 13 articles of faith and a treatise on Israel's existence in the Diaspora and ultimate salvation. The work shows a strong influence of

the Sufic ideas of *Bahya ibn Paquda's *Hovot ha-Levavot* and other Jewish and Muslim medieval thinkers. In the tradition of Meshed's Jews, Siman Tov Melamed is also remembered as a staunch defender of Judaism in theological disputations which the Shi'a clergy arranged between him, Muslims, and Jewish converts.

[Walter Joseph Fischel]

MELANCHTHON (Schwarzerd), PHILIPP (1497–1560), German reformer and theologian. Born at Bretten in Baden, Melanchthon was a great-nephew of the Hebraist and Christian kabbalist Johann *Reuchlin, who taught him Hebrew and supervised his education at Pforzheim. In 1518, at the age of 21, Melanchthon was appointed professor of Greek at Wittenberg but within a year he had sided with Martin *Luther in the struggle with Rome, thus alienating Reuchlin, who later disinherited him. Melanchthon was Luther's principal assistant in translating the Old Testament into German (1523–34). Widely respected as a humanist and theologian, he favored the study of the Kabbalah, but condemned its later accretions. One of his addresses on the importance of Hebrew, *De studio linguae Ebraeae*, appeared in 1549. Although Melanchthon was influenced by Luther's antisemitism, he avoided its cruder excesses and in 1539, at the Frankfurt religious assembly, publicly denounced the blood libel that had resulted in the martyrdom of 38 Brandenburg Jews in 1510.

Manschreck, *Melanchthon, the Quiet Reformer* (1958); H. Sick, *Melanchthon als Ausleger des Alten Testaments* (1959); G. Kisch, *Melanchthons Rechtsund Soziallehre* (1967); Baron, *Social*², 13, 229 ff.

MELAVVEH MALKAH (Heb. מְלֻוּהַ מַלְכָּה; "escorting the queen"), term used to describe the meal and festivities at the end of the Sabbath. This gesture of farewell to the "queen" (Sabbath) is designed as the counterpart of the festivities which greeted her arrival. The origin of the custom has been traced to the Talmud. R. Ḥanina asserted that the table should be (festively) laid at the termination of the Sabbath, although only a small amount of food would be eaten (Shab. 119b). The *melavveh malkah* was later seen by both *Jacob b. Asher and Joseph *Caro to be the fulfillment of R. Ḥidka's injunction to celebrate four meals on the Sabbath (Shab. 117b). It was in the context of this injunction that the *melavveh malkah* later assumed the image of a virtually voluntary extension of the Sabbath. Isaac *Luria, for example, believed that not until the *melavveh malkah* was over did the sinful dead return to hell from their Sabbath rest, and the kabbalists and Ḥasidim were so reluctant to relinquish the honored Sabbath guest, that they used the *melavveh malkah* as a means of prolonging the Sab-

bath day as long as possible. They used the occasion to chant special **zemirot* and to relate hasidic tales. The *melavveh malkah* is also known as *se'udat David* ("King David's banquet"). As such, it serves as a reminder of the legend that King David, having been told by God that he would die on the Sabbath (Shab. 30a), celebrated his survival each new week with special joy (*Ta'amei Minhagim*).

One of the favorite *melavveh malkah* hymns is *Eliyahu ha-Navi* ("Elijah the Prophet"), attributed by some authorities to *Meir of Rothenburg. It welcomes the prophet as the herald of the Messiah. According to legend, Elijah is expected to announce the salvation of Israel at the first opportunity after the termination of the Sabbath. Medieval *paytanim* devoted several other *zemirot* to the *melavveh malkah* festivities. Among the most notable are *Be-Moza'ei Yom Menuḥah* by Jacob Menea (14th century); *Addir Ayom ve-Nora, Ish Ḥasid* by Jesse b. Mordecai (13th century); and *Amar Adonai le-Ya'akov*.

BIBLIOGRAPHY: Eisenstein, Dinim, 227; H. Schauss, *Guide to Jewish Holy Days* (1962), 27, 30, 35.

[Harry Rabinowicz]

MELBOURNE, capital of Victoria, Australia. The 15 Port Phillip Association members who founded Melbourne in 1835 included two Jews. Melbourne is today the only Jewish community of any size in the State of Victoria. During the 19th century however a considerable number of Jews settled in other centers in the State, but the country communities practically disappeared. The Melbourne Jewish community was established in 1841.

Early Metropolitan Settlement

Jews clustered around shops and businesses in the center of the city in Collins, Bourke, and Elizabeth streets and in 1847 opened the first synagogue (Melbourne Hebrew Congregation) in that area. The influx in the 1850s and 1860s led to settlement in working-class districts in the suburbs adjoining the city – Fitzroy, Carlton, Richmond, and East Melbourne. The East Melbourne Congregation was founded in 1857 with Moses Rintel as minister, most of the congregants being immigrants from Germany and Austria. At the turn of the century this congregation was led by the patriarchal figure, Rev. Jacob Lenzer.

There were continuous movements of Jews from their first areas of settlement to new areas. In the wake of such a group movement the St. Kilda Synagogue was opened in 1872. In the period before compulsory education the Melbourne Hebrew School was established as a day school in 1874 and continued until 1886, when it was closed because of financial difficulties. In 1888 the three congregations (Melbourne, East Melbourne, and St. Kilda) established the United Jewish Education Board, which conducted part-time Hebrew schools in various centers. As they moved from area to area, the Jews ascended in the social and occupational ladder and by 1900 the most popular occupations were textile manufacturing, general dealing, and skilled trades such as tailoring, watchmaking, and cabinetmaking. Small draper shop-owners were beginning to

acquire large retail stores. Carpenters were opening furniture factories. Less than 3% were in the professions. During the first decades of the 20th century there gradually developed a struggle for communal supremacy between the earlier immigrants who lived south of the Yarra River, and who were more prosperous and assimilated, and the more recent immigrants, mostly from Eastern Europe, who were concentrated north of the river, and who were Yiddish-speaking, with an Orthodox background, Yiddish culture, and strong Zionist leanings.

Concurrently, a change took place in the centers of Jewish activity. Whereas until the first decades of the 20th century life centered around the synagogues, in the next decades a shift took place, non-synagogal bodies being organized and gradually taking a more prominent place in communal leadership. The synagogues in the first decades of the 20th century were the Melbourne Hebrew Congregation (first at Bourke St. in the city; after 1930 at Toorak Road) and the St. Kilda Synagogue south of the Yarra, and the East Melbourne Synagogue and the Carlton Synagogue (established 1927), north of the Yarra. Some smaller *minyanim* had also been formed, notably the Woolf Davis Chevra, run by the family of J.E. Stone, and the Talmud Torah Hascola at North Carlton. A number of societies mainly in the hands of the south of the Yarra element were already in existence – the Philanthropic Society, Aid Society, Welfare Society, Sick Visiting Society, the Chevra Kadisha (founded 1910), the United Shechita Board, and the Beth Din. A number of bodies began to spring up north of the Yarra. In 1912 new immigrants had helped to form a center of Yiddish culture, the "Jewish National Library-Kadimah," which apart from its book collection held regular cultural meetings including Yiddish lectures and plays.

The Judean League of Victoria was founded in 1921 as a roof-organization for non-synagogal activity, sports, literary, cultural, social, and Zionist activity. Its headquarters in its heyday at Monash House, Carlton, was a vibrant center of Jewish activity every night of the week for three decades. Its founder and leading spirit was Maurice *Ashkanasy. The struggle between the two elements ended in 1948 with a democratic representation unifying the whole community and putting an end to the era of Anglo-Jewish patrician control and of the congregational dictatorship in communal affairs. The place of Melbourne (later Victorian) Jewish Advisory Board (established in 1921), a strictly synagogal body, was taken by the Victorian Jewish Board of Deputies (in 1948) which gave a new direction to communal activities, and brought about the formulation of a community viewpoint on all matters affecting both local Jewry, such as public relations, immigration, and a deepening of Jewish cultural values, and wider Jewish issues such as Zionism and antisemitism. There was also a move from voluntary philanthropy to organized professional social services. It operated through the following committees: education, social welfare, immigration, public relations, appeals coordination, youth, organization and statistics, and congregational. The struggle was fought out on a number of points, including the question of the *kashrut* of frozen meat

exported to Palestine, prepared under the supervision of the United Shechita Board and its chief *shohet* Rabbi I.J. Super (who served the community as *shohet*, *mohel*, and teacher for more than half a century), which was challenged by Rabbi J.L. Gurewicz, disciple of Chaim Ozer *Grodzinsky of Vilna and the respected leader of the Orthodox Carlton Synagogue in its heyday. The main issues however were the battle against anti-Zionist elements in the mid-1940s, the struggle for the establishment of a Jewish day school, the continuing cleavage between the Orthodox and the Liberals, a stubborn but losing battle for the greater use of Yiddish, the attitude to antisemitism, and the problem of public relations.

The Transformation of the Community

Between the late 1930s and the mid-1950s the Melbourne Jewish community was transformed, as were the other centers of Australian Jewish life, by a number of important interrelated events. Some of this change occurred before, when the traditional synagogues, mainly Anglo-Jewish in orientation, such as the Melbourne Hebrew Congregation and the St. Kilda Hebrew Congregation, which had provided communal leadership, were challenged by new synagogues representing either a stricter European Orthodoxy or the Reform congregation founded in 1930. A Yiddish-speaking component already existed, centered in Carlton, just north of central Melbourne, rather than in the traditional middle-class Jewish area of St. Kilda, south of the inner city. Institutions like the Jewish National Library–Kadimah, founded in 1912, and the Judean League, a center of cultural life and pro-Zionist activity, founded in 1921, emerged in Yiddish Carlton, whose inhabitants demonstrated the range of Jewish orientations and ideologies of troubled Europe.

There was no secular communal representative body until the foundation of the Victorian Jewish Advisory Board in 1938, an organization which changed its name in May 1947 to the Victorian Jewish Board of Deputies (VJBD), and, in October 1988, to the Jewish Community Council of Victoria. Although all local synagogues which wished to affiliate to the Board could do so, it also included a plethora of secular bodies, including Zionist and Yiddish groups. These representative bodies took a much more visible and direct role in lobbying on behalf of Jewish interests to the government and the media than was previously the case.

While (with many exceptions) the old Anglo-Jewish-dominated Melbourne community had been notably lukewarm on Zionism, the new community was, by and large, enthusiastically pro-Zionist, and, in the decade before the establishment of Israel, defended the creation of a Jewish state against influential local Jewish non-Zionists such as Rabbi Jacob *Danglow and Sir Isaac *Isaacs. Perhaps the most important manifestation of the new Jewish assertiveness in Melbourne was the foundation of Mt. Scopus College, the first Jewish day school, in 1949. Mt. Scopus was coeducational, and moderately Orthodox and Zionist in its orientation. By the 1980s eight full-time Jewish day schools, representing

various trends in the Jewish community, had been founded. The relatively large-scale migration to Melbourne of perhaps 35,000 Holocaust refugees and survivors, especially from Poland, dramatically changed the nature of the community, adding not merely to its pro-Zionist and Orthodox strength, but to its secular Yiddish and leftist elements. This in turn produced a number of major cleavages within the community, especially between the mainstream community and an allegedly pro-Communist communal defense body, the Jewish Council to Combat Fascism and Antisemitism, which resulted in the Council's expulsion from the VJBD in 1952, and notably bad relations between the Orthodox synagogues and the Reform movement (which included significant numbers of German and Austrian refugees). As well, Yiddish persisted as a significant Jewish *lingua franca* in Melbourne for decades after the War. By the mid-1950s, however – and certainly by the 1967 War – the Melbourne Jewish community had been transformed into one which was enthusiastically pro-Zionist, religiously pluralistic but with a large Orthodox majority, outspoken in defense of its interests, and keen to deter assimilation through the creation of a large Jewish day school movement. A number of individual activists responsible for these developments, such as Maurice *Ashkanasy, Alex Masel, and Ben Zion Patkin (1902–1984), the chief founder of Mt. Scopus College, should be mentioned here. Visitors to Melbourne were often amazed at the breadth and vigor of its institutions and it was often known as the “*shtetl* on the Yarra” – Melbourne's river – for its extraordinary preservation of many of the cultural, linguistic, and ideological matrices of prewar Europe. Melbourne was also often contrasted with Sydney, which had fewer Polish Holocaust refugees but more from Britain and Hungary, and was widely seen as less assertively Jewish than Melbourne, at least down to the 1990s. The rivalry between Melbourne and Sydney was found in many aspects of Australian life, and, in the case of the two Jewish communities, probably owed something to the more extreme nature of Victoria's left-wing, often anti-Israel, stance which emerged in the 1950s from local political developments.

The Contemporary Community

DEMOGRAPHY. Melbourne has experienced considerable and continuing growth during the postwar period. The number of declared Jews in Melbourne, according to the optional religious question in the Australian census, rose from about 22,000 in 1954 to 26,409 in 1971 and then to 35,383 in 1996 and 37,779 in 2001. Since this is based on responses to an optional question of religious affiliation (rather than ethnic identity), the actual number is certainly much higher, probably in the range of 50–55,000, just under 2% of Melbourne's population of about 2.9 million. Most Melbourne Jews tend to live in a small number of well-defined Jewish neighborhoods. Among the 17 postal code areas (equivalent to zip codes in the United States, but somewhat smaller in size) in Australia with the highest number of Jews in the 2001 census, nine were in Melbourne, including three of the top five. The largest and most

obviously Jewish areas of concentration are the Caulfield–St. Kilda East–Elsternwick districts, about five miles south of central Melbourne, where 18,216 Jews were identified in the 2001 census. This area contains many Jewish synagogues, institutions, and shops, and a large and visible Strictly Orthodox community. The other significant areas of Jewish concentration were adjacent to this core area: Bentleigh (2,667 Jews in 2001), to the east; the wealthy neighborhood of Toorak (1,611 Jews) to its north; and East Brighton (1,316 Jews) to its south. These neighborhoods became heavily Jewish just after World War II and have remained very stable ever since. There is little or no sign of Jewish suburbanization, as in many other Diaspora societies, nor any equivalent of “white flight,” as in the United States, away from decaying neighborhoods. The only major change in Melbourne’s Jewish demographic pattern since 1945 has been the decline to the vanishing point of the former area of East European Jewish settlement in Carlton, immediately north of central Melbourne, which, until the 1960s, contained many Yiddish-based institutions such as the Kadimah, the leading Yiddish cultural and social center. The Melbourne Jewish community has grown chiefly by immigration, welcoming successive waves of German Holocaust refugees and a very large flow of postwar Holocaust survivors, especially from Poland, and then more recent groups of South African and ex-Soviet immigrants, as well as a continuing settlement of Jews from the English-speaking world and elsewhere for normal professional purposes. Nevertheless, the stability of Melbourne Jewry, and other social characteristics, have given it some very favorable features. A 1991 random sample survey of the community, for example, found that the Melbourne Jewish fertility rate was apparently above the replacement level, a notable accomplishment for a middle-class Diaspora Jewish community.

CONGREGATIONS. In terms of congregational affiliation, Melbourne had about 50 synagogues in the early 21st century, of which four were Liberal (Reform) and one Masorti (Conservative), one Independent, and all the others Orthodox of various strands ranging from moderate Anglo-Orthodoxy to Strict Orthodoxy. The postwar era has seen a vast expansion in the range of congregational affiliation beyond the Anglo-Orthodoxy predominant before 1939, especially at the religious extremes. Relations between the Orthodox and Reform components of the community have been notably bad, as have, to a lesser extent, relations between different strands in Orthodoxy. In part for this reason, no postwar Melbourne rabbi has been able to act as recognized spokesman for the whole community, in the manner of Rabbi Jacob Danglow before the war. A number of rabbis, such as the Orthodox *Gutnicks, Yitzhak *Groner, and John S. *Levi from the Liberals, have been viewed by many as notable leaders, but none has been regarded as a consensual leader.

COMMUNAL LEADERSHIP. Instead, the leadership of the community has been vested in its representative body, known (1938–47) as the Victorian Jewish Advisory Board, then (1947–

88) as the Victorian Jewish Board of Deputies (VJBD); and since 1988 as the Jewish Community Council of Victoria (JCCV). Its president (elected annually, and normally serving a two-year term) and other office-holders are regarded as the community’s spokesmen to the media and government. The JCCV is composed of representatives of many Jewish organizations in Melbourne, including most synagogues, Zionist bodies, fraternal, women’s, and youth groups. There is no provision to elect individuals on a personal basis. The JCCV has at all times represented a consensual position in the community, strongly supportive of Israel as well as multiculturalism and the Jewish day school system. It monitors and combats antisemitism and extreme anti-Zionism. By its constitution, no religious question can be discussed, since any debating of religious issues is likely to be divisive. The JCCV, which meets on a monthly basis, works closely with the Executive Council of Australian Jewry (ECAJ), the national representative body of the community, and the Zionist Federation.

EDUCATION. Probably the major reason for the relative success of the Jewish community in Melbourne has been the Jewish day school system. Since 1949, nine full-time Jewish day schools have been established in Melbourne. (See *Australia for list.) In 1962, 1,480 students attended these schools, a total which rose to 4,840 in 1982, 5,492 in 1989, and about 6,000 in 2004. The experience of Melbourne has clearly been that education there strongly discourages assimilation and intermarriage. One of the major challenges confronting the Melbourne Jewish community is the ever-increasing cost of education at Jewish schools (which are private and fee-paying, although they receive some state funding). No long-term solution to this problem is yet in sight. Jewish interest courses exist at Monash University, but the underfunding of the tertiary and research sectors compared with the Jewish school system is also a notable and unfortunate feature of the community.

There are a number of Jewish museums in Melbourne which would be of interest to tourists. The Jewish Museum of Australia (26 Alma Road, St. Kilda) contains exhibits on Australian Jewry history. The Jewish Holocaust Museum and Research Centre (13 Selwyn Street, Elsternwick) has used Holocaust survivors as tour guides. Melbourne’s most prominent Jewish landmark is certainly the magnificent Melbourne Hebrew Congregation’s synagogue at Toorak Road and Domain Road, South Yarra.

COMMUNAL RELATIONS. Relations between the Melbourne Jewish community and the local state government of Victoria have generally been very good. Only very occasionally have difficulties arisen, for instance in the late 1970s when a strongly anti-Zionist and radical segment of the local Australian Labor Party supported a radical radio station, 3RC, whose license to broadcast to the Jewish community was questioned at a series of public hearings. By and large, however, relations between the Jewish community and successive Victoria governments have been harmonious. Relations with the local

media are also good, although the community has protested many times when Israel is unfairly criticized, as has become common, especially in the liberal media and on “talk-back” radio. Relations with other groups in the wider community are normally also harmonious, despite the existence of anti-semitic and anti-Zionist activists and the threat of terrorism, especially from extremist sections of Melbourne’s growing Muslim community.

Israel Porush and Yitzhak Rischin / William D. Rubinstein (2nd ed.)

MELCHIOR, family prominent in Denmark since the mid-18th century. Originally from Hamburg, where the family had lived since the 18th century, MOSES MELCHIOR (1736–1817) arrived in Copenhagen in 1750. He became a successful dealer in leather and tobacco and in 1795 founded the import-export firm of Moses and Son G. Melchior, which is still in existence. His son GERSON (1771–1845) took over the business on his father’s death, and enlarged it by importing sugar, rum, and tea. He was one of the leaders of the Copenhagen Jewish community. One of his sons, NATHAN GERSON (1811–1872), was a prominent ophthalmologist. He lectured at Copenhagen University and in 1857 became a director of the Ophthalmological Institute in Copenhagen. Another son, MORITZ GERSON (1816–1884), succeeded his father as head of the firm in 1845, establishing branches in the Danish West Indies and in Melbourne, Australia. Melchior was a member of the *landsting* (upper house of the Danish parliament) from 1866 to 1874 and was the first Jew to belong to the Danish Chamber of Commerce, becoming its president in 1873. Active also in the Jewish community, he served as a trustee and was made president in 1852. The writer Hans Christian Andersen was a friend and frequent guest in his house. His brother MOSES (1825–1912) succeeded him in 1884, opening a New York office in 1898. He was well known for his philanthropy, contributing to many Jewish and general causes. CARL HENRIQUES (1855–1931) took over the business after his brother’s death and expanded it. He organized many athletic associations and sports clubs in Denmark and became their patron. Like his brother, he was the president of the Copenhagen community (1911–29). His son HARALD RAPHAEL (1896–1973) succeeded him in the firm, which dealt in the import of coffee, tea, rice, cocoa, and vanilla.

BIBLIOGRAPHY: *Moses og søn G. Melchior, Et dansk handelshus gennem 6 generationer* (1961), Eng. summary 53–56; *Dansk Biografisk Haandleksikon*, s.v.; *Dansk Biografisk Leksikon*, s.v.

MELCHIOR, CARL (1871–1933), German banker. Melchior, who was born in Hamburg, studied law and later became a judge there. In 1900 he was appointed legal counsel to the bank M.M. Warburg and Co. and in 1917 became a partner in the bank. During World War I, he served as a captain in the German Army and was badly wounded. After his recuperation, he worked for the German government’s Zentraleinkaufsgesellschaft (ZEG), which was charged during the war with importing foodstuffs. Melchior always considered himself a patriot. From 1918 to 1919, together with Max M. Warburg, he took part as a German delegate in the financial and economic negotiations following the armistice. Melchior subsequently played a prominent role in the lengthy negotiations which eventually paved the way for Germany’s reacceptance into the community of nations and displayed a mastery of financial and legal issues, diplomatic tact, and attention to detail. As a Jew he was afraid to arouse antisemitism by holding official positions, so he tried to act more in the background. At the international conference in Spa in 1920 as an expert for the German government, together with Walther *Rathenau and Moritz Julius *Bonn Melchior created the “policy of fulfillment” as a strategy of how Germany should pay its reparations. After Germany’s admission to the League of Nations, Melchior became the only German member of the League’s finance committee and in 1928–29 its chairman. In 1929 he was one of the German delegates discussing the revision of the Dawes Plan, under which German reparation payments were scheduled. He also served as a member of the board of the Bank for International Settlements in Basle and in other political or economic functions concerning international financial affairs. In the early 1930s he hoped that integrating the NSDAP, which he detested, into the government would placate the Nazis. After the Nazis took power in 1933, he lost his positions on several company boards. Melchior became active in the preparation for the formation of the *Reichsvertretung der deutschen Juden. In November 1933 he died.

[Joachim O. Ronall / Christian Schoelzel (2nd ed.)]

MELCHIOR, MARCUS (1897–1969), chief rabbi of Denmark. Born in Fredericia of an old Danish family, Melchior received his rabbinical diploma in 1921 from the Hildesheimer Seminary. He served as rabbi in Tarnowice, Poland (1921–23), in Beuthen, Germany (1925–34), and as rabbi of the Danish refugees in Sweden (1943–45). From 1947 he was the chief rabbi of Denmark. Melchior endeavored to promote understanding between all the religious trends in Judaism, while personally advocating the modern Orthodox one. He supported Zionism short of advocating *aliyah*. The main spokesman of Danish Jewry before the

gentile community, Melchior was considered one of the prominent orators in Denmark. He supported the establishment of relations and furthering of understanding with West Germany. Among his books are *Jødedommen i vor tid* (1966²); *En jødedommens historie* (1962); *Levet og oplevet* (1965; *A Rabbi Remembers*, 1968; also Ger. tr.); and *Tænkt og Talt* (1967). He translated into Danish (1961) Shalom Aleichem's *Tevey de Milkhiger*. He was succeeded in the chief rabbinate by his son Bent.

MELCHIOR, MICHAEL (1954–), rabbi and Israeli politician. Born in Copenhagen, the son of Chief Rabbi Bent Melchior, Melchior studied in Israel at Yeshivat ha-Kotel after high school. He was ordained in 1980 and in the same year became the first chief rabbi of Oslo and was largely responsible for the community's renaissance (see *Norway; *Oslo). After six years he returned to Israel but continued to serve Norwegian Jewry. In Israel he entered politics and was elected to the Knesset in 1999 as a representative of Meimad, a moderate religious party aligned with the Labor Party. In the government he served as minister without portfolio, minister for Diaspora affairs, and deputy minister for foreign affairs.

MELCHIZEDEK (Heb.: מֶלְכִי צְדָקָה; "legitimate/righteous king"; the English spelling follows LXX Melchizedek as opposed to MT Malkizedek), king of Salem (or Jerusalem; cf. Ps. 76:3) according to Genesis 14:18–20. He welcomed *Abraham after he had defeated the four kings who had captured his nephew, Lot. Melchizedek brought out bread and wine and blessed Abraham. Finally, it is related that "he gave him a tithe of everything" although who gave the tithe to whom became a subject of considerable dispute (see below). The biblical account states that "he (Melchizedek) was priest of God Most High" (וְהוּא כֹהֵן לְאֵל עֵלְיוֹן). Melchizedek's priesthood was a source of numerous post-biblical speculations, which were intensified by the difficult verse Psalms 110:4: "The Lord has sworn/and will not repent/Thou art priest for ever/after the manner of Melchizedek" (אַתָּה כֹהֵן לְעוֹלָם עַל־דְּבַר־יְיָ מֶלְכִי צְדָקָה). It is generally believed that the Melchizedek mentioned here and the one in Genesis are the same. Some interpreters, however, maintain that the Melchizedek of Psalms is not a person but a title, "my righteous king," presumably because the name is written as two separate words (מֶלְכִי צְדָקָה).

The first post-biblical documents mentioning Melchizedek in various contexts appear from around the beginning of the Christian era. The earliest is probably the fragmentary scroll discovered in cave 11 at Qumran (11Q Melch or 11Q 13) and published by A.S. Van der Woude (in OTS, 14, 1965) and again with certain corrections by M. de Jonge and A.S. Van der Woude (in NTS, 12, 1966) and much studied since (bibliography in Brooke). Although this text "is a midrashic development which is independent of the classic Old Testament loci" (J.A. Fitzmyer, JBL, 86, 1967), it is clear that the eschatological and soteriological functions it attributes to Melchizedek draw on the perplexing figure of the biblical Melchizedek. In the Qumran text, Melchizedek is described as passing judg-

ment, in the time of the tenth or last Jubilee, on Belial and those of his sort. The judgment takes place in heaven, and immediately there follows the "day of slaughter" prophesied by Isaiah. Here, Melchizedek is both judge and executor of his own decree, and in all likelihood he is to be identified with the Angel of Light, who figures in the dualistic doctrine of the Qumran sect (I. Gruenwald, in: *Mahanayim*, 124 (1970), 94). He has also been identified with the Archangel Michael. Melchizedek is also mentioned in another Qumran text, the Genesis Apocryphon (22: 13–17), where the biblical story of the meeting between Abraham and Melchizedek is retold. Here it is Abraham who offers the tithe to Melchizedek: "And he [i.e., Abraham] gave him a tithe of all the goods of the king of Elam and his companions" (cf. Heb. 7:2 followed by the Christian translations of Genesis where, however, Melchizedek, not Abraham, is the subject of the verse). The question of who gave the tithe to whom was of considerable importance in rabbinical literature. In several places Melchizedek is stated to be a descendant of Noah, and is even identified with Shem the son of Noah. The same sources maintain that his priesthood was taken away from him and bestowed upon Abraham because he blessed Abraham first and only afterward blessed God (Gen. 14:19–20; cf. Ned. 32b; Lev. R. 25:6). Abraham's priesthood is also mentioned in connection with Psalms 110 (Gen. R., 55:6). In other rabbinical sources Melchizedek is mentioned among the four messianic figures allegorically implied by the "four smiths" of Zechariah 2:3. Melchizedek's messianic functions are also elaborated in two other literary documents. At the end of several manuscripts of the Slavonic Book of Enoch appears the story of the miraculous birth of Melchizedek as the son of Nir, Noah's brother. He is transported to heaven and becomes the head of a line of priests leading down to messianic days. There will presumably be another eschatological Melchizedek who will function as both priest and king. In symbolizing Melchizedek as Jesus in his three functions as messiah, king, and high priest (see below) the author's ingenuity combines all the motives singled out in the above-mentioned sources. A gnostic sect whose particular theological position is unknown called itself after Melchizedek.

[Ithamar Gruenwald]

In Christian Tradition

The two brief and somewhat enigmatic references to Melchizedek in the Bible provided the New Testament with a subject for typological interpretation. In the Epistle to the Hebrews (7:1–7), Melchizedek (king of justice – Zedek; of peace – Salem) is described as unique, being both a priest and a king, and because he is "without father, without mother, without genealogy"; he is eternal, "having neither beginning of days nor end of life." In this respect Melchizedek resembles Jesus, the son of God, and thus is a type of the savior.

Abraham, and therefore Levi "in the loins of his father" (*ibid.* 9–10), paid the tithe in submission to Melchizedek. Since in Christian tradition Jesus is high priest "after the order of Melchizedek" and "not after the order of Aaron" (*ibid.* 7:11, 17–21), Jesus' priesthood is excellent, superior to that of

Abraham's descent, and transcends all human, imperfect orders (Heb. 7:23–28; 8:1–6). To Christians the objection that Jesus, like Aaron, was “in the loins” of the patriarch, and consequently paid the tithe was met by the Church Fathers with the argument that Jesus, though descended from Abraham, had no human father.

MELDOLA, Sephardi family of rabbis and scholars. The family originated in the 15th century in Meldola, northern Italy; the legend that they descended from Spanish exiles cannot be substantiated. The first of the family to attain prominence was JACOB MELDOLA, rabbi in Mantua in the 16th century. His son SAMUEL MELDOLA or MENDOLA was both a rabbinic scholar and physician to the Mantuan court. In the next generation members of the family settled in Leghorn, entering thus into the tradition of Sephardi life. For the next 200 years they provided rabbis, printers, and leaders to the Sephardi communities in Holland, Italy, France, and England.

[Cecil Roth]

MELDOLA, RAPHAEL (1754–1828), British rabbi; son of Moses Hezekiah Meldola (1725–1791), professor of Oriental languages in Paris. Raphael was born in Leghorn, received rabbinical ordination there from H.J.D. *Azulai in 1796, became a *dayyan* in 1803, and in 1804/05 was appointed haham of the Sephardi community in London – an office vacant since the death of Moses Cohen d*Azvedo in 1784. Energetic and capable, he helped to reform the educational institutions of his community in the face of missionary activities, introduced a choir into the synagogue, and cooperated cordially with Solomon *Hirschel, the Ashkenazi chief rabbi. On the other hand, his belligerent nature was responsible for periodic friction with the members of his community. Notwithstanding his imperfect knowledge of English he corresponded extensively with Christian scholars. Before leaving Leghorn, he had published there *Huppah Hatanim* (1797), a handbook on the laws of marital life. He also published sermons and memorial poems: part of his catechism *Derekh Emunah (The Way of Faith)* appeared with his English translation after his death (1848). His son DAVID (1797–1853), who succeeded him as presiding rabbi though not as haham of the Sephardi community

in London, was one of the founders of the **Jewish Chronicle*, and ineffectively opposed the movement for religious reform among London Jewry in 1840. A grandson of Raphael's was the British scientist, Raphael *Meldola.

[Vivian David Lipman]

MELDOLA, RAPHAEL (1849–1915), British chemist and naturalist. Meldola was the grandson of Raphael *Meldola, the haham of the London Sephardi community. He worked at the Royal Mint (1868–71), with a firm of color manufacturers, and at the Royal College of Science. In 1875 he led a Royal Society expedition to the Nicobar Islands to observe a total eclipse of the sun. He spent several years as a schoolteacher and in industry and in 1885 became professor of chemistry at Finsbury Technical College, a position he held for over 30 years. Meldola's early investigations were in the fields of natural history and entomology as well as astronomy, but his main interest was dyestuffs. “Meldola's Blue” was the first oxazine dye, and he also discovered the first alkali green. In 1904 he published *Chemical Synthesis of Vital Products*. Meldola played an important role in the British chemical profession and was president of the Chemical Society and of the Institute of Chemistry, as well as a fellow and vice president of the Royal Society. After his death the Society of *Maccabees, of which he had been president, instituted the Meldola Medal of the Royal Institute of Chemistry in his memory.

[Samuel Aaron Miller]

***MELEAGER OF GADARA** (c. 140–70 B.C.E.) was of Syrian parentage and grew up in Tyre. The *Palatine Anthology*, which includes 130 of his love epigrams (vii. 419, 7–8), exhibits his knowledge of Eastern languages: “If you are a Syrian, Salam! If you are a Phoenician, Naidius! If you are a Greek, Chaire!” His Menippean satires, Cynic sermons in prose mingled with verse (a Semitic form called “maqāma” by the Arabs) are lost. In one of his epigrams (A.P. 5. 160), Meleager sighs for his sweetheart Demo who is naked in another's arms, and disparagingly concludes: “If thy lover is some Sabbath-keeper, no great wonder! Love burns hot even on cold Sabbaths,” an allusion (cf. *Rutilius Namatianus*) probably to the fact that from a pagan point of view the Sabbath, with its numerous prohibitions, was “cold,” i.e., “dull.”

***MELITO OF SARDIS** (c. 120–185 C.E.), bishop of Sardis (Asia Minor), Christian author, and the earliest known pilgrim to the Holy Land. Scholars found his description of the crucifixion of Jesus “in the *middle* of the city [of Jerusalem]” confusing. Clearly Melito was referring to the site in the context of the layout of Aelia Capitolina and not of the city from

the time of Jesus. Together with other bishops of Asia Minor, Melito continued to celebrate Easter on the 14th of Nisan, the eve of Passover. He visited Palestine in an effort to establish an accurate canon (Greek διαθήκη) of the Old Testament (from which he excerpted passages pertaining in some way to Jesus). His list of books (Eusebius, Hist. Eccles. IV, 26:13 f.) corresponds to the Hebrew canon (excluding Esther). Only brief quotations from Melito's works were known until the mid-20th century, when two papyrus copies of his homily on the Passion (*On Pascha*) were published. As a result of this discovery, Latin, Coptic, Georgian, and two Syriac translations of this treatise could be identified. The bishop delivered the treatise as a sermon after the biblical account of the Exodus was read on Easter, precisely the time when the Jews observed the Passover feast. The coincidence of observances and Melito's animosity toward Judaism caused his sermon, which was written between 160 and 170 C.E., to become one of the most important documents of early Christian anti-Judaism. After a theological introduction, Melito gives a dramatic description of Egypt's sufferings at the time of the Exodus. Influenced by the Midrash on Exodus 10:21, the darkness that engulfed Egypt is described as tangible. However, the events surrounding the Exodus were only a prefiguration of the Passion of Christ, the true Passover lamb. The earlier model no longer had validity and usefulness, because the prefigurations of the Old Testament had become a reality in the New Testament. The second part of the sermon is the oldest and one of the strongest accusations of deicide made against the Jews in early Christian literature. Jews are, among other things, described as having themselves crucified Jesus; and the murder is clearly defined as deicide: "God has been murdered, the King of Israel has been slain by an Israelite hand" (§96). In view of the tragic events suffered by the Jews of this period – the destruction of the Temple and the defeat of Bar Kokhba – Melito could say that, in consequence of the deicide, "Israel lay dead," while Christianity, "the broad grace," was conquering the whole earth. The sermon, nevertheless, attests the antiquity of the Passover *Haggadah*. Paragraph 68 of the sermon contains a Greek version of part of the introduction to *Hallel* in the *Haggadah*; and paragraphs 84–85 and 88 derive from the famous Passover litany "Dayyeinu."

[David Flusser / Shimon Gibson (2nd ed.)]

MELITOPOL, city in Zaporozhe district, Ukraine. Jews started to settle in Melitopol when it was proclaimed a town in 1842. In 1886 there were 2,021 Jews, and in 1897 6,563 Jews

and 454 *Karaites in Melitopol (45.7% of the total population). At the turn of the 19th century, Melitopol turned into an important city of metallurgical industries. Part of them, as well as other industries, belonged to Jews, and many Jewish workers were employed in them. On April 19, 1905, a mob attacked Jewish houses, but a Jewish *self-defense group of 300 Jewish and Christian youngsters managed to minimize the pogrom; 15 were wounded and 45 shops (Jewish and Christian) were robbed. In 1910 Melitopol had a *talmud torah* and two private schools for boys and two for girls. Joseph *Trumpeldor was active in the town and the first *haluzim* he organized left from there for Palestine. During World War I 2,043 refugees arrived in Melitopol, and were helped by a local aid committee. By 1926 the Jewish population had risen to 8,583 (33.6% of the total), then dropped to 6,040 (8% of the total population). In the 1920s there was a Yiddish school with 63 pupils, which was probably closed later in the 1930s. The ex-bourgeoisie who were denied state rights tried to learn trades and join artisan cooperatives, or went to farm in Birobidzhan or to established kolkhozes in the vicinity of the town. In 1938–40 a clandestine yeshivah operated, but when it was discovered, it moved to Kutaisi (Georgia). Melitopol was occupied by the Germans on October 5, 1941. On October 8 the Jews, about 1,800 families, were concentrated in a ghetto in the flourmill. Intermarried Jews and children from mixed marriage were freed. On October 10 and 15, the *Sonderkommando* 10a murdered 75 Jewish prisoners of war, and on October 11, 3,000 local Jews. The killings of Jews continued for a year, and on October 9, 1942, the Jewish spouses and children of mixed marriages were brutally killed. About 8,000 Jews, including those from nearby towns, and a few hundred Karaites were murdered. Melitopol was liberated on October 23, 1943. There were 2,500 Jews in 1959, and 1,800 in 1979. There was no synagogue. Most remaining Jews left in the 1990s.

MELNIKOFF, AVRAHAM (1892–1960), Israeli sculptor. Born in Russia, Melnikoff studied in Vienna and the U.S. He came to Erez Israel in 1918 and left for England in 1934, returning in 1960. Melnikoff was one of the pioneers of sculpture in modern Israel. His best-known work is his lion erected between Tel Hai and Kefar Giladi in memory of the defenders of Tel Hai (1926). This work, inspired by the sculpture of the ancient East, was the first modern monument in the country.

MELOKHIM-BUKH (*Sefer Melokhim*), anonymous 16th-century Yiddish epic. The epic's narrative material derives from the biblical book of Kings and its midrashic traditions (especially those concerning Solomon), while its poetic form and conception derive from the medieval German epic. It focuses less on battle scenes and more on ethical and didactic matters than the related **Shmuel-Bukh* (1544). Both authors were well versed in both the broad sacred text tradition of Judaism

and non-Jewish secular epic literature. Composed in four-line stanzas of two rhyming couplets (AABB), each line divided rhythmically into two half-lines of three primary accents each, the form derives from the stanza characteristic of the Middle High German *Nibelungenlied*. With its 2,262 stanzas, it is the longest poem in Old Yiddish literature. The basis of the entire extant text tradition is the edition of Augsburg, 1543.

[Jerold C. Frakes (2nd ed.)]

MELON, two plant species belonging to different botanical genera: the watermelon and the muskmelon.

(1) The watermelon (Heb. אַוַּטִּי'אָה, *avati'ah*) is the *Citrus vulgaris*. The Bible mentions it among the vegetables eaten by the Israelites in Egypt, for which they hankered in the wilderness (Num. 11:5). The Hebrew name may possibly be connected with the verb בָּטַט (*btt*) meaning to swell or grow. Watermelons were a familiar plant in Egypt, and a papyrus from the 21st dynasty preserves a pictorial representation of one. The *avati'ah* is frequently mentioned in rabbinical literature. It was comparatively cheap (Ma'as. 2:6) and was usually eaten when ripe, though some ate it as a vegetable while still unripe (Ma'as. 1:5).

(2) The muskmelon, *Cucumis melo*, is called in the Mishnah *melafefon* (מֵלָפֶפֶן), a name of Greek origin. It is not known if it was grown in biblical times and no Hebrew name exists for it. The Palestinian Targum identifies the biblical *avati'ah* with *melafefonya*, i.e., the muskmelon, but this does not appear likely, since in a number of places in the Tosefta and Talmud they are mentioned together (Tosef., Kil. 1:1). Some held that these two species do not constitute a mixed species (**kilayim; ibid.*) for “a man takes a seed from the upper part of the *avati'ah* and plants it – and it becomes a *melafefon*” (TJ, Kil. 1:2, 27a), i.e., these species may be interchangeable. This view was taken over from Greek and Roman agricultural folklore which assumed that the characteristics of species were subject to change. An echo of this view is found in the Palestinian Targum in the philological explanation of the name *melafefon* given by R. Judah: “A man takes one seed from the upper part of an *avati'ah* and one seed from the upper part of an apple and puts them into the same hole, they grow together and become a hybrid species, that is why in Greek it is called *melafefon*.” The Greek μηλοπέπον and the Latin *melo-pepo* both mean “apple-watermelon” probably because the taste of the muskmelon is reminiscent of both the apple and the watermelon. According to Pliny the *melo-pepo* originated in Campania from a species of cucumber which looked like a quince (Natural History 19:67). There is certainly no substance for these views, which are based on the polymorphism of the family Cucurbitaceae. The plant *Cucumis melo* var. *Chate*,

identified with the *kishut*, *kishu'im* (see *Cucumber), that belongs to the same botanical genus (and apparently even to the same species) as the muskmelon, is especially polymorphic. It could be that pollination between these two species gives rise to hybrids and is the reason for the *halakhah* that the *kishut* (*Chate* melon or cucumber) and the *melafefon* do not constitute *kilayim* (Kil. 1:2). Despite the ruling of the Academy for the Hebrew Language, modern Hebrew has adopted the name *melafefon* for cucumber.

[Jehuda Feliks]

MELTON, FLORENCE (1911–), U.S. community leader and philanthropic supporter of a variety of Jewish causes. Melton is best known for envisioning and establishing a highly successful program of serious adult Jewish learning called the Florence Melton Adult Mini-School. She was born in Philadelphia, Penn., and raised under the influence of her grandmother, whom she credited for much of her commitment to Jewish education and Jewish values. In 1930 she married Aaron Zacks, with whom she had two sons. In 1946 she and her husband founded the R.G. Barry Corporation, one of the world's largest manufacturers of soled slippers. She invented the first use of foam in footwear and revolutionized the industry. Zacks died in 1965 and in 1968 she married Samuel Mendel Melton of Columbus, Ohio, a successful businessman and philanthropist. Samuel Melton had endowed the Melton Research Center at the Jewish Theological Seminary of America and the Melton Centre at the Hebrew University of Jerusalem, and Florence Melton became an active partner in his philanthropic projects as she pursued her own parallel interests.

In the early 1980s Melton became convinced that although many Jews were accomplished in their careers, they lacked basic knowledge about Jewish history, philosophy, and religious practices. Hence she began to advocate for the creation of a program of study to help adults attain “Jewish literacy.” She envisioned a well-designed curriculum, taught by engaging and interactive teachers, open to students from across the various Jewish denominations. Adult students, in her view, would need to commit to two years of weekly study. Her ideas were met by skepticism; few people believed that contemporary adults were either interested in Jewish study or would want to view Jewish learning as seriously as her program proposed. Eventually she turned to the Melton Centre for Jewish Education at the Hebrew University, which agreed to recruit sites and develop the curriculum for the project. Melton's idea turned out to be prescient. Proving the skeptics wrong, Mini-Schools were established in more than 60 cities and thousands of adult students participated in the program. Through its carefully designed organizational structure and its commitment to a serious learning curriculum the Mini-

School became a model for adult education throughout the Jewish community.

In recognition of her communal leadership Melton received a number of awards, including honorary doctorates from the Hebrew University of Jerusalem and the Jewish Theological Seminary of America, the Scopus Award from the American Friends of the Hebrew University, and the Ohio State University Distinguished Service Award. She was inducted into the Ohio Women's Hall of Fame in October 1994.

[Barry W. Holtz (2nd ed.)]

MELTON, SAMUEL MENDEL (1900–1993), U.S. industrialist and philanthropist. Melton was born in Saros, Austro-Hungary. His family immigrated in 1904 to Toledo, Ohio. He established the Capitol Manufacturing and Supply Company in Columbus, as well as several pipe and nipple companies, which later merged with the Harsco Corporation (1968) and became a leader in the metals industry. Melton extended the Capitol Company to Israel in 1949 and deeded it to various Israeli institutions in 1955. Active in numerous communal and national Jewish organizations, he was a member of the UJA “cabinet” and the board of the Jewish Theological Seminary (JTS), where he founded the Melton Research Center in New York (1959) to develop Jewish educational materials. He established the Samuel Mendel Melton Foundation (1951); professorships in Judaica at Ohio State University and the Hebrew University in Jerusalem (1965); a vocational school in Bat Yam, Israel (1968); the Melton Center for Jewish Education in the Diaspora at the Hebrew University (1968); the Melton Building at the Hebrew University; the *Melton Journal* of the JTS; the Melton Fellowship; the Jewish History and Studies Center at Ohio State University (1976); and the Melton Coalition for Creative Interaction at the JTS, devoted to Jewish arts education (1993).

[Edward L. Greenstein / Ruth Beloff (2nd ed.)]

MELTZER, ISSER ZALMAN (1870–1953), talmudic scholar and yeshivah head. Born in Lithuania, Meltzer studied in Volozhin under Ḥayyim Soloveichik and Naphtali Ṭevi Judah Berlin, and later under the Ḥafeẓ Ḥayyim in Radin. All of these exercised a profound influence upon him, Soloveichik by his talmudic methodology, Berlin by his love for Erez Israel, and the Ḥafeẓ Ḥayyim by his humility and his ethical approach. In 1892 he married Beila Hinda, daughter of R. Faivel Frank of Ilukste. His wife possessed considerable scholarly abilities and throughout his life assisted him in transcribing his works and in arranging them for publication. In 1894 he was appointed by R. Nathan Ṭevi *Finkel one of the principals of the *Slobodka yeshivah and in 1897 the head of a yeshivah for advanced students in Slutsk, where Jacob David *Willowski was the rabbi. Hundreds of students flocked to the yeshivah, and when Willowski immigrated to Erez Israel in 1903 Meltzer succeeded him as rabbi of Slutsk. After the Bolshevik Revolution in 1917 the yeshivah moved to

Kletsk in Poland. Meltzer, however, refused to leave his community in Slutsk, despite his suffering at the hands of the Bolsheviks, including imprisonment for teaching Torah. In 1923 he left Russia for Kletsk and in the same year participated in the founding conference of the *Agudat Israel in Vienna, at which he was elected to the *Mōezet Gedolei ha-Torah*. In 1925 he became head of the *Ez Ḥayyim Yeshivah* in Jerusalem. In Erez Israel, he devoted himself almost entirely to the dissemination of Torah and the strengthening of yeshivot. As a fervent Zionist, he exercised a moderating influence in the councils of the Agudah. In 1935 his first work appeared, *Even ha-Ezel on the Mishneh Torah* of *Maimonides which is regarded as a fundamental work of its kind. Seven volumes appeared during his lifetime, the other posthumously. He also edited and wrote commentary to the novellae of Naḥmanides (1928/29).

[Mordechai Hacohen]

MELTZER, SHIMSHON (1909–2000), Hebrew poet. Born in Tluste (eastern Galicia; present-day Tolstoye), Meltzer immigrated to Palestine in 1933, after having taught in Horodenka (Gorodenka), Galicia. For a time he taught secondary school in Tel Aviv, but from 1937 he engaged in editorial work; first in the daily **Davar*, and later in the Am Oved publishing house and in the children's magazine *Davar li-Yladim*. From 1959 he was on the editorial staff of the Zionist Library publications of the Jewish Agency.

His first poems were published in *Ba-Derekh*, the magazine of the teachers' seminary in Lvov where he studied. After his arrival in Erez Israel his poetry appeared mainly in *Davar*, but also in various literary journals. He published a number of volumes of poems and ballads, including *Be-Shiv'ah Meitarim* (1939); *Me'ir ha-Keleizemar Na'asah Komisar* (1940); *Asarah She'arim* (1943); *Alef* (1945, 1963²), memoirs of the *heder*; *Sefer ha-Shirot ve-ha-Balladot* (1950); and *Or Zarua* (1966). Meltzer attempted to capture the folk flavor of Eastern European Jewry by using ḥasidic tales and motifs in his ballads. His collection of essays on literature is entitled *Devarim al Ofnam* (“Words and their Forms,” 1962). Meltzer translated extensively from Polish-Jewish writers, especially from Yiddish writers, dramatists, and poets. For English translations of his works, see Goell, *Bibliography*, 1033–38.

[Getzel Kressel]

MELUN, capital of the department of Seine-et-Marne, 26 mi. (42 km.) S. of Paris. The first explicit reference to Jews in Melun dates from the middle of the 12th century: in his will, Simon of Beaugency mentions a Jew of Melun among his creditors. From the beginning of the 13th century, there is evidence of a Rue des Juifs and an “*escole des Juifs*” (the synagogue). There is no record of a medieval Jewish community after the expulsion of the Jews from the Kingdom of France in 1306. Scholars of Melun took part in the *synod convened by *Samuel b. Meir (Rashbam) and Jacob b. Meir *Tam. Meshullam b. Nathan of Melun, previously from Narbonne, lived in Melun from 1150. During the second half of the 12th century, Jedidiah of Melun also lived in the town. Judah b. David of Melun was one of the four rabbis who confronted Nicholas *Donin at the famous *disputation organized by *Louis IX (St. Louis) in 1240. Preserved in the municipal library of Melun is a *mahzor* of the 14th century for the New Year and Day of Atonement according to the French rite (Ms. No. 14): it had previously been in the possession of the Carmelite monastery of Melun and is possibly of local origin. On the eve of World War II there was a very small community in Melun. It increased in the postwar period, mainly as a result of the arrival of Jews from North Africa, and numbered over 500 in 1969.

[Bernhard Blumenkranz]

MELVILLE, LEWIS (pen name of **Lewis Saul Benjamin**; 1874–1932), biographer. A prolific writer, he was best known for his books about the English novelist Thackeray, whose works he also edited (1901–07). *Farmer George* (1907) was an important account of the private life and character of George III. Lewis' other works include scholarly, yet good-humored, studies of figures such as John Gay (1921), Nell Gwyn (1923), and Beau Brummell (1924); and several anthologies.

MEM (Heb. מֵם; מ, מ), the 13th letter of the Hebrew alphabet; its numerical value is 40. In Proto-Sinaitic and early Proto-Canaanite inscriptions the *mem* was drawn as a pictograph representing water (*mayim*) װ or ן. In the later Proto-Canaanite script the vertical zigzag prevailed, which turned into ן in the tenth-century B.C.E. Phoenician script. Later, the *mem* consisted of a zigzag-shaped head and a downstroke ן. The Hebrew forms were: ן → ן (cursive) and ן (formal); hence the Samaritan ן. From the eighth and seventh centuries B.C.E., the Phoenician *mem* was written ן, which in the Aramaic became ן. In the late fifth century B.C.E. and later Aramaic cursive the downstrokes were bent leftward. Thus the medial ן and final ן variations evolved. These are prototypes of the Jewish medial ן and final ן *mem* forms. The Nabatean *mem* was drawn without lifting the pen ן and this led to the Arabic م. The ancestor of the Latin “M,” the Archaic Greek Μ developed from the early Phoenician *mem*. See *Alphabet, Hebrew.

[Joseph Naveh]

MEMEL (Lith. **Klaipėda**), a Baltic port in W. Lithuania. The town was founded in the 13th century; the earliest existing document in which Jews are mentioned is dated April 20, 1567, and refers to an edict expelling the Jews from the city. In 1664 the elector of Brandenburg permitted a Jewish merchant from the Netherlands, Moses Jacobson de Jong, to settle in Memel, and eventually Jews were allowed to visit the city for the annual trade fairs. Only after the emancipation of Jews in Prussia (1812) were they able to settle freely in Memel.

In the 19th century the community consisted of Eastern European and Prussian Jews. The former had settled in the port in connection with their trans-Baltic business and formed the majority of the Jewish population (in 1880 they accounted for 80% of the total number of Jews). In later years there was an increased influx of Jews from Germany. The number of Jews grew from 887 in 1867, to 1,214 in 1900, and to over 2,000 in 1910. Each group had its own synagogue and communal institutions, but the official community administration was run by German Jews. Israel *Lipkin (Salanter), founder of the Musar movement, lived and taught in Memel 1860–80, founding a *bet midrash* and societies for Torah study, and publishing here the short-lived periodical *Ha-Tevunah* (1861). Isaac *Ruelf, one of the spiritual leaders of German Jewry, was rabbi of Memel from 1865 to 1898 and devoted much effort to alleviating the plight of Russian Jews. Ruelf was succeeded by Emanuel Carlebach (until 1904), M. Stein (until 1915), L. Lazarus (until 1932), and S. Schlesinger (until 1939).

After World War I, the League of Nations adopted the Memel Convention (1924), whereby it became an autonomous region under Lithuanian rule. As the country's only port, it played an important role in the economic life of Lithuania, and there was a steady influx of Jews into the city in the interwar period. In March 1939 it had a Jewish population of approximately 9,000 (17% of the total). Most of the Jews were engaged in commerce but there were also a few industrialists. The Memel district also had a few Jewish-owned estates, some of which were made available for *hakhsarah*. On March 22, 1939, the Germans occupied Memel and incorporated it into the Reich. Most of the Jews managed to flee to *Lithuania, where they later shared the fate of their coreligionists. In 1970 the estimated Jewish population was less than 1,000. There was no synagogue, cemetery, or organized religious life.

[Joseph Gar]

MEMMI, ALBERT (1920–), French author and sociologist. Memmi, a native of Tunis, fought with the Free French during World War II. After completing his studies he returned to Tunis, where he became head of a psychological institute. In 1959, he joined the Centre National de la Recherche Scientifique in Paris, and became a teacher at the Ecole Pratique des Hautes Etudes where he was appointed a professor in 1966.

He specialized in the social effects of colonization, finding a similarity between the situation of the Jew and that of colonized peoples. Though an advocate of independence for the countries of the Maghreb, he was well aware that one of its consequences would be the mass exodus of North African Jewry. Memmi's first two books were novels, both largely autobiographical. *La statue de sel* (1953; *Pillar of Salt*, 1955), is the story of a North African Jew's emergence from a narrow Jewish society through the discovery of French culture, and his eventual disillusionment with an idealized Western humanism. *Agar* (1955; *Strangers*, 1958) describes the isolation of a Tunisian Jew, rejected by both Frenchmen and Arabs. Memmi was still dealing with the same problem a decade later in essays such as *Portrait d'un Juif* (1962; *Portrait of a Jew*, 1963) and its sequel, *La libération du Juif* (1966; *The Liberation of the Jew*, 1966). He portrays the Jew as a "shadow figure," neither wholly assimilated nor anxious to lose his distinctiveness, concluding that "Israel is our only solution, our one trump card, our last historical opportunity." Memmi's sociological studies appeared in various journals and in *Le Français et le racism* (1965). He published an *Anthologie des écrivains nord-africains* (1964) and a *Bibliographie de la littérature nord-africaine d'expression française 1945–1962* (1965). He also wrote essays on Jewish subjects for *L'Arche*, *Evidences*, and *Commentary*. His later works include *Dictionnaire critique à l'usage des incroyables* (2002) and a conversation volume with Catherine Pont-Humbert, *L'individu face à ses dépendances* (2005).

[Jacqueline Kahanoff]

MEMMINGEN, city in Bavaria, Germany. Jews were present in Memmingen by the second half of the 13th century, since the city statutes of 1270 contain references to Jewish money-lending activities. In 1344 the bishop of Augsburg excommunicated the city for nonpayment of its debts to a Jew; the burghers thereupon threatened to bury their dead in the Jewish cemetery. The Jews made their living in the city in 1373. By 1500, however, there were no *Judengasse*. The community was destroyed during the *Black Death persecutions of 1348, but Jews were again living in the city in 1373. By 1500, however, there were no longer Jews there. The privilege of *Judenfreiheit* ("freedom from Jews"), granted in 1541, was renewed in 1559. Many Jews who had formerly lived in Memmingen concentrated in Fellheim, a nearby village, and maintained a settlement there numbering 379 persons (63% of the population) in 1810 (during World War II it again served as a center for refugees). Jews from Fellheim often visited Memmingen for trading purposes during the 17th and 18th centuries. In 1862 the first Jew received citizenship in Memmingen. A community comprising 100 members was formed in 1875, and 20 years later it had grown to 231. A synagogue was dedicated in 1909. The community subsequently declined: from 194 in 1900, to

161 in 1933, and 104 on Jan. 1, 1939. The Jews, who were mainly textile manufacturers and livestock merchants, were severely hit by the Nazi boycott of Jewish business establishments, and considerable numbers emigrated despite the many obstacles they encountered. In 1938 the synagogue and Jewish homes were looted and destroyed, and in the spring of 1942 the community was liquidated. In 1947 some 125 Jews lived in Memmingen, but they later emigrated. In 1968 there were two Jews in the city. There are memorials to commemorate the former synagogue, the former Jewish community, and the Jewish citizens of Memmingen who were killed by the Nazis. In 2000 the museum of Memmingen set up a permanent exhibition on Jewish life in Memmingen.

[Larissa Daemmig (2nd ed.)]

MEMORBUCH, a community prayer book once common in Jewish communities throughout Central Europe. It consisted of three major parts:

- (1) a collection of prayers usually intoned by the reader while standing at the *almemar* (see **Bimah*) such as the order of blowing the *shofar* and reading the Scroll of Esther, different forms of the *Mi She-Berakh* prayer, etc;
- (2) a necrology of distinguished persons, either of local or of general Jewish importance;
- (3) a martyrology of persons and places.

The last has been subjected to minute research by scholars, particularly by S. *Salfeld. According to one view the *Memorbuch* received its name from being placed, for the convenience of the reader, on the *almemar*, while another holds that it is derived from the Latin *memoria*.

The custom of reading the names developed after the massacres of the *Rhine communities during the First Crusade; to this list were added the names of the martyrs of the *Rindfleisch massacres and other catastrophes. The list of martyrs who perished during the *Black Death persecutions (1348–49) was of such magnitude that mainly names of places were recorded. It became the custom to read off the list of thousands of names in ceremony on the Sabbath before Shavuot (when the massacres of the First Crusade took place); at a later date it was also read off on the Sabbath before the Ninth of Av although the author probably intended it to be read in part each Sabbath. Rabbi Jacob b. Moses Levi of Mainz (see *Moellin), the codifier of the Ashkenazi *minhag*, made the reading of the

full list obligatory for Rhenish communities while non-Rhenish ones were to read only the list of places. The *Memorbuch* of the Mainz community, begun by Isaac b. Samuel of Meiningen in 1296, was supplemented and became the complete and authoritative version for all other copies. (Salfeld considered the early version to be that of the Nuremberg community, a view not accepted by M. Weinberg, a later authority.) It was updated by mention of the catastrophes of 1492 in *Mecklenburg, and 1510 in *Brandenburg, and by the names of communities which perished in the *Chmielnicki massacres (1648). As no community could be complete without the *Memorbuch*, it was frequently copied in the 17th and 18th centuries.

The *Memorbuch* was expanded in the different localities to include names of esteemed local personages, lists of deceased, as well as prayers of purely local use and origin. It was therefore never printed and gradually fell into disuse in the mid-19th century, through the unification and standardization of services and ritual.

The earliest *Memorbuecher* (excluding that of Mainz) appeared in about 1600, but between 1650 and 1750 a large number were commenced (based on that of Mainz), for many communities were established in this period. The *Memorbuch* reflected the religious life of the community and accompanied it in its tribulations and migrations; refugees from Vienna (1670) continued using their *Memorbuch* in Fuerth; refugees from Fulda (1671) took theirs with them to Amsterdam and subsequently back to Fulda. Some communities had more than one *Memorbuch* (Fuerth Jewry had five complementary ones). *Memorbuecher* were particularly common among communities in rural areas; it is estimated that there were about 150 in Bavaria alone and a few hundred more in *Baden, *Wuerttemberg, *Hesse, *Alsace, and *Switzerland. The *Memorbuch* continues to serve the historian as an important source for the social and religious history of the Jews and is frequently cited.

MEMORIAL FOUNDATION FOR JEWISH CULTURE.

The Memorial Foundation was established with German reparations funds by Nahum Goldmann in 1965 with the mandate to raise up a new generation of scholars, intellectuals, rabbis, and cultural and communal leaders to replace the Jewish cultural elite annihilated in Europe during the Shoah.

The Foundation awards scholarships and fellowships to scholars, academicians, writers, artists, rabbis, educators, and communal workers. Funds are also provided to academic and scholarly institutions for research and publication. For the first few decades after its founding, special attention was paid to the Jewish communities in the former Soviet Union countries

where Jewish life had been suppressed for seven decades under Communist rule. The list of individuals and institutions who received the Foundation's support since its inception can be found on its Website, www.mfjc.org.

In addition to its support of communities and institutions, the Foundation has developed innovative programs to address needs not adequately met by the Jewish community globally. These include the International Nahum Goldmann Fellowship, which prepares communal, cultural, and professional leadership for Jewish communities around the world; reaching the Jewish unaffiliated; Jewish family education; and utilization of new technologies for Jewish culture and education. Currently the Foundation's programs extend to Jewish communities on six continents, reaching both individuals and institutions at the core of the Jewish community as well as Jews affiliated only marginally with Jewish life.

The Memorial Foundation for Jewish Culture is committed to the creation, intensification, and dissemination of Jewish culture worldwide, the development of creative programs to meet the emerging needs of the Jewish communities as they enter the 21st century, and service as a central forum for identifying and supporting innovative programs to ensure the continuation of creative Jewish life wherever Jewish communities exist. Its headquarters are in New York.

[Jerome Hochbaum (2nd ed.)]

MEMORIAL LIGHT (Heb. נֵר נְשִׁמָּה; "the light of the soul"), a light kindled on the anniversary of the death of a relative. It is lit on the eve of the anniversary, according to the Hebrew calendar, and should burn without interruption for 24 hours. A memorial candle is also kindled when a person dies (it is placed near his head until the burial) and during the seven-day mourning period, or according to some customs during the *sheloshim* ("30 days") after the death. In some communities, it is customary to kindle memorial lights on the eve of the *Day of Atonement.

It is generally believed that the custom of memorial lights, as well as that of **yahrzeit*, originated in Germany in the Middle Ages and spread from there to other Jewish centers. The medieval custom easily linked up with earlier notions of light as a symbol for the soul as found, e.g., in Proverbs 20:27, "The spirit of man is the lamp of the Lord" or in the story about R. *Judah ha-Nasi who asked on his deathbed that a light be kindled in his room after his death (Ket. 103a). In some synagogues memorial lights are lit on the anniversary of departed members of the congregation who have bequeathed money for that purpose. Near the lights (electrical bulbs are used nowadays), nameplates indicate the persons who are being commemorated.

MEMPHIS (from the Greek Menophreos which in turn was derived from the late Old Kingdom Egyptian *Mn-nfr*,

meaning “established and beautiful”), ancient city in Lower Egypt, on the west bank of the Nile, approximately 12 mi. (c. 19 km.) south of Cairo, lying partly under the site of the modern village Mit Riheina. According to tradition, Memphis was founded by the legendary Egyptian king Menes (probably the same as King Aha) in about 3100 B.C.E. The Egyptian name *Mn-nfr* originally designated the pyramid of King Pepi I (c. 2300 B.C.E.) at Saqqara, and was eventually extended to include also the town that grew up around it. By the end of the second millennium the name was probably vocalized “Menufi,” although a papyrus from the late 20th Dynasty (c. 1184–1087 B.C.E.), gives the variant reading *Mnf*, from which the Coptic *Menfi*, Arabic *Menf*, and Hebrew *Mof* were derived.

Until the founding of Alexandria, Memphis played a paramount role in Egypt. As the administrative capital of the Old Kingdom, it had many palaces and temples, particularly that of Ptah, the city’s creator god (with the Apis bull sacred to Ptah being venerated at Memphis); the remains of these structures can still be seen on the site. Literary texts, lavish in their praise and descriptions of the city, indicate that it was a cosmopolitan metropolis with a large, resident foreign population which included Jews (cf. Jer. 44:1); this has been confirmed by archaeological excavation. Foreign divinities worshiped at Memphis include Resheph, Baal, Astarte, and Qudshu. The eventual destruction of Memphis is predicted in Isaiah 19:13; Jeremiah 2:16; 46:14, 19; and Ezekiel 30:13. The city was not in fact destroyed, although it was besieged and taken by the Persians. Memphis was also the place where it was said Antiochus IV Epiphanes received the crown of Egypt. Archaeological excavations have brought to light the large Ptah temple, the palace of Apries, another large ceremonial palace, shrines of Seti I and Rameses II, an embalming house of the Apis bulls, tombs of the high priests, and various settlement remains. A project to record the scattered remains of Memphis through excavation and survey has been undertaken by D. Jeffreys and H.S. Smith for the Egypt Exploration Society since 1982.

MEMPHIS, city in Tennessee, U.S., with a Jewish population of 9,500 (.08 percent of the general population) in 2005.

Memphis was first settled in 1818 and the first known Jewish settler, David Hart, arrived in 1838. In the 1840s Jews began to settle in larger numbers, and they acquired land for a cemetery in 1848. In 1850 a Hebrew Benevolent Society was formed, and by 1853 the Jews were “regularly organized” for purposes of worship. In 1935 the Society changed its name to the Jewish Welfare Fund, and in 1977 it became the Memphis

Jewish Federation. In 1853, B’nai Israel Congregation (Children of Israel), with 36 members, was granted a charter by the state legislature. The congregation worshiped in rented halls until 1857, and in 1858 converted a bank building into a place of worship. The building was dedicated by Rabbi Isaac Mayer *Wise, the founder of American Reform Judaism, and would later be known as Temple Israel. Rev. Jacob J. Peres, a native of Holland, was the first spiritual leader. In 1860 the relationship between the congregation and Rev. Peres was severed and a new congregation, Beth El Emeth, was organized. From 1860 to 1870 R. Simon Tuska was rabbi of Congregation Children of Israel.

At this time, the city’s Jews, some 400 people, worked in banking, barbering, and auctioneering (including slaves); they even operated a racetrack. A good number ran several businesses simultaneously. A few entered the professions; most were small storekeepers who dealt in clothing and dry-goods, groceries and hardware. Memphis suffered little or no damage during the Civil War. Some Memphis Jews served in the army of the Confederacy. From 1863 to 1866 Congregation Children of Israel sponsored a nonsectarian school – Hebrew Educational Institute. The school was to provide educational opportunities during the disruption caused by the war. Following the death of Rabbi Tuska in 1870, Rabbi Max Samfield was elected rabbi of the congregation in 1871 and served until 1915. In addition to serving the congregation, Samfield published *The Jewish Spectator* from 1885 until his death. This paper served the Jews of Memphis and the mid-South.

In 1884 the Orthodox Baron Hirsch Congregation was organized and in 1891 converted a church as a place of worship. The first rabbi was Benjamin Mayerowitz. It became the largest synagogue in the United States. In recent years it moved to a new, smaller sanctuary to be within the area with the highest concentration of Jews in East Memphis. Congregation Anshei Sphard was organized in 1898. Beth Sholom, a Conservative congregation, was established in 1950 and in 1967 dedicated its new synagogue. Like many Jews in the Memphis community, Beth Sholom’s rabbi at that time, Rabbi Arie Becker, was well known for his involvement in the civil rights movement. Long-time Rabbi Zalman Posner was a *hasid* of the *rebbe*, but he served in a congregational role. Official Chabad Lubavitch of Tennessee was founded in Memphis in 1994. Under the leadership of Rabbi Levi Klein, Chabad quickly became an active part of Memphis Jewish life.

A B’nai B’rith Lodge was organized in 1856 and in 1927 the B’nai B’rith Home was established to serve the Jews of Memphis and the mid-South. It was completely rebuilt in the 1960s and dedicated in 1968 as the B’nai B’rith Home and Hospital. The Jewish Community Center was organized in 1949 and in 1968 dedicated a \$2,000,000 edifice, and the Jewish Historical Society of Memphis and the Mid-South was established in 1986.

Jews have been active in the economic, political, and civic life of the community. The Goldsmith family, leading

merchants, were known as benefactors of the community for three generations. The Jewish community was so well accepted in Memphis that in the 1920s, it chose not to build a Jewish hospital, fearing that it might alienate the non-Jewish medical community and lead to a restriction of their hospital privileges. Abe Plough, a native of Tupelo, Mississippi, was generally regarded as one of the foremost citizens of the community by virtue of his philanthropy. His company was bought out by Schering to form Schering-Plough, a pharmaceutical giant. He played an important role in settling the famous sanitation strike of 1968 that brought Martin Luther King, Jr., to town, the site of his assassination in April 1968, contributing money anonymously to offset the costs to the city of pay raises. Other families who generously supported the entire Memphis community include the Fogelman, Lipman, Lowenstein, Lemsky, and Belz families. The Jews have also served as presidents of the bar association and the medical society.

The Jewish population has remained relatively stable for more than 80 years. It has received 200 Holocaust survivors and 300 Russians. The community's hub shifted to East Memphis, the heart of Jewish life today.

The community boasts the Bornblum Judaic Studies Program, established in 1985 at the University of Memphis through the generosity of David Bornblum and Bert Bornblum. The program brings numerous scholars and lecturers to the community. As in many college towns, the town-gown gap is bridged by the Judaic Studies Program. There are two Jewish days schools: the Bornblum Solomon Schechter Conservative day school, and the Orthodox Margolin Hebrew Academy Feinstone Yeshiva of the South, which honors Harry Feinstone.

The Orthodox community of Memphis was described by Tova Mirvis in her highly acclaimed novel *The Ladies Auxiliary* (1999).

[James A. Wax / Michael Berenbaum (2nd ed.)]

MENAHEM (Heb. מְנַחֵם; "comforter"; in Assyrian inscriptions Me-ni-ḥi-im-me, Mi-in-ḥi-im-mu), king of Israel, c. 746/6–737/6 B.C.E., son of Gadi (11 Kings 15:17). Menahem seized the throne after assassinating *Shallum son of Jabesh (15:14). Shallum and Menahem may possibly have competed for the throne during the decline of the house of *Jehu. It is widely believed that both were among the officers from Gilead, a group which had been influential from the beginning of Jehu's reign (of. 11 Kings 9:1ff.; 15:25). Both Jabesh (the name of the principal city of Gilead) and Gadi (the name of a tribe) are designations pointing to the fact that both Menahem and Shallum were of Transjordanian origin. The struggle between the two was conducted with great cruelty. 11 Kings 15:16 states: "At that time Menahem sacked Tiphshah and all who were in it and its territory." Tiphshah is Thapsacus which is on the River Euphrates, east of Aleppo. From this statement it appears that Menahem's campaign extended to the Euphrates. However, most scholars

maintain that in light of the political-military situation of the Kingdom of Israel since the end of the reign of *Jeroboam II, it is not possible that Menahem ruled over such a large kingdom, and they therefore accept the Lucian version of the Septuagint, where Tappuah appears instead of Tiphshah (cf. Josh. 16:8; 17:8). In view of the biblical chronological data with regard to Menahem and *Pekah, several scholars concluded that Menahem ruled only in the mountain of Ephraim, while at the same time Pekah ruled in eastern Transjordan. It appears that Pekah first served as Menahem's military commander, but later rebelled with the help of Aram, and became an independent ruler in Gilead, although nominally he was still considered the military commander of Menahem and Pekahiah.

According to the biblical account, during Menahem's reign, Pul, the king of Assyria (i.e., Pulu, the name given to *Tiglath-Pileser III when he became king of Babylon in the latter part of his reign), extended his campaign into Israel; Menahem paid him 1,000 talents of silver in order to retain his throne (11 Kings 15:19). The annals of Tiglath-Pileser III mention "Menahem of Samaria" (the city; this designation may be considered as attesting the limited area of his administration) among the kings who paid tribute to Assyria in 738 B.C.E., immediately after the defeat inflicted by the Assyrian king on *Uzziah, King of Judah. It is questionable whether the biblical account of Menahem's tax and the account of Menahem's tax in the Assyrian source refer to the same event. It is Y. Yadin's opinion that the *Samaria ostraca belong to the last years of Menahem's reign and bear some relation to the tribute paid to the king of Assyria, to which every "mighty man" of wealth was required to contribute 50 shekels (11 Kings 15:20). Apparently the Assyrian recognition of Menahem as the vassal king of Israel strengthened his status and helped stabilize his regime. Menahem needed Assyrian support both against rebel bases within his domain and against neighboring states, including the state of Judah (cf. Hos. 5:8–11). It is possible that most of the prophecies of Hosea 4–14 reflect the period of Menahem (H. Tadmor).

[Jacob Licht and Bustanay Oded]

MENAHEM BEN AARON IBN ZERAH (c. 1310–1385), codifier. Menahem was born in Estella, Navarre, where his father had settled after leaving his native France, on the expulsion of the Jews in 1306. In 1328 riots broke out against the Jews of Navarre and the Estella community suffered severely. All of Menahem's family, including his parents and four brothers, were killed, and he himself was severely wounded, but his

life was saved by a Christian friend of the family. When he recovered, he went to Toledo and studied in the yeshivot there. Among his teachers were Joseph b. Shu'ayb and Judah the son of *Asher b. Jehiel (the Rosh). From Toledo he went to Alcalá and studied under Joseph b. al-'Aysh, succeeding him on his death in 1361. In Alcalá also, there were troubles and suffering. Fratricidal war had broken out in Spain between the two aspirants to the throne, Henry of Trastámara and Pedro the Cruel, and many Jewish communities suffered as a result. Menahem escaped to safety through the help of the royal courtier Don Samuel *Abrabanel, and Menahem praises him in the introduction to his *Zeidah la-Derekh*.

In Toledo Menahem compiled his *Zeidah la-Derekh*, a code of laws dealing in the main with the laws concerning the daily way of life. The work has an added importance on account of the introduction, which contains valuable historical material, including important details of the method of study in the yeshivot of France and Germany, as well as contemporary incidents in the history of the Jews in Spain. The book was designed as an abridged code for the upper classes who, because of their preoccupation with material concerns, had no time to refer to the sources. He writes reprovingly of those Jews who, because of the demands of the times, began to disregard the observance of the precepts. Although he shows great erudition in his knowledge of the Talmud and codes and was acquainted with the teachings of the earlier Spanish, French, and German scholars, he relies mainly for his halakhic rulings on those of Asher b. Jehiel.

Menahem gives much information about the different customs of the Jews of Spain, France, and Germany, as well as of various communities (see pp. 71, 82, 88, 104, 110, 116 in the Warsaw edition of 1880). He had some knowledge of medicine, and in the code he includes the need to preserve one's bodily health (see pp. 28–33; et al.). He also knew astronomy and believed in astrology (pp. 98–120). Although he criticized philosophy, he appears to have engaged in its study to some extent (104–48). In these sciences, however, Menahem merely gleaned from the works of others. His work reflects contemporary conditions. He complains that many of the youth, particularly children of the wealthy, were careless in the observance of the precepts and scoffed at the words of the sages, and some were even licentious in matters of sex (pp. 68–81). The book is divided into five *ma'amarim* ("articles"), which are divided into *kelalim* ("principles"), which are subdivided into chapters. The first *ma'amar* discusses prayer and the blessings; the second, the *halakhot* of **issur ve-hetter*; the third, laws of marriage; the fourth, the festivals; and the fifth, fasting and mourning, the Messiah, and the resurrection. It was first published in Ferrara in the printing press of Abraham Usque in 1554. In addition to his major work, three small works by Menahem are extant in manuscript – an abridgment of Bahya ibn Paquda's *Hovot ha-Levavot*, *Hilkhot Shehitah u-Vedukah*, and *Menahem Avelim* – it is possible however, that they are simply abridgments from his *Zeidah la-Derekh* (see A. Freimann, in: *Annuario di Studi Ebraici* (1934), 166ff.).

[Shlomo Eidelberg]

MENAHEM BEN HELBO (11th century), one of the first commentators on the Bible in northern France. Little is known of his life. He was the uncle of Joseph *Kara, who transmitted Menahem's comments to *Rashi. Apparently he lived for some time in Provence, and it is his influence which accounts for the presence of Arabic words as well as some Provençal forms of French in Rashi. Menahem was also called "Kara," which shows that his principal occupation was biblical commentary. He also wrote comments on the *piyyutim*. Menahem collected his commentaries in book form which he called *pitronim* ("solutions"). They covered all the Prophets and the Hagiographa, but not the Pentateuch upon which, apparently, he did not attempt to comment. His books are no longer extant as they were apparently superseded by Rashi's commentaries. Fragments, however, were collected by S.A. Poznański from quotations, especially by Joseph Kara, and also from the works of commentators in Germany (published by Poznański in *Festschrift N. Sokolow* (1904), 389–439 with Menahem's commentary on the *piyyutim*, and also separately).

Menahem was the first commentator in France to interpret the Bible according to the simple meaning of the text, although he also gave homiletical interpretations. He often limited himself to explaining difficult words and phrases, relying extensively on the Targum (e.g., Isa. 1:8). He employed many French words and terms in his commentary and had little recourse to grammar. Zunz is of the opinion that Menahem did not commit his comments on the *piyyutim* to writing, but transmitted his explanations of *Kallir's *piyyutim* orally. There is now evidence that he also wrote commentaries to other *piyyutim*.

BIBLIOGRAPHY: Abraham b. Azriel, *Sefer Arugat ha-Bosem*, ed. by E.E. Urbach, 4 (1963), 3–6.

[Avraham Grossman]

MENAHEM BEN JACOB (also known as **R. Menahem of Worms**; 1120?–1203), rabbi and liturgical poet in Worms. Menahem, whose tombstone bore the inscription *posek, darshan* ("preacher"), and *paytan*, was a member of the *bet din* of *Eleazar b. Judah, the author of *Roke'ah*, and Kalonymus b. Gershom. His relatives included Gershom *ha-Gozer and *Eliezer b. Joel ha-Levi. From the words of the latter, it appears that Menahem was influential in ruling circles. None of his teachings has been preserved, but 33 of his *piyyutim* are known. These include *yozerot*, *kinot*, and *selihot*, some of which were published in various places. Among them is the *kinah*, *Alelai Li Ki Va'u Rega Almon ve-Shakhol*, on the martyrs of Boppard of 1179 and of the islands of the sea (i.e., Britain) of 1190; the *piyyut Mazor Batah ha-Ir* refers to the siege of Worms by Emperor Otto IV in 1201. Some of his *piyyutim*

are signed “Zemaḥ,” which in *gematria* is equal to “Menahem.” In one manuscript he is mentioned as R. Menahem b. Jacob of Lutra (which is Bavarian Kaiserslautern in the Rhenish Palatinate); Zunz assumed that he was identical with Menahem b. Jacob, the *paytan* of Worms. If so, then Menahem was born in Lutra.

MENAHEM BEN JACOB IBN SARUQ (**Saruk**; tenth century), Spanish author and lexicographer. Born in Tortosa, he moved at an early age to Cordova, where Isaac, the father of *Ḥisdai ibn Shaprut, became his patron. After Isaac's death, Menahem went back to his native town for a short interlude, and then returned to Cordova, where he lived under the patronage of Ḥisdai and worked as his secretary. Besides eulogies on Ḥisdai's parents, Menahem composed Ḥisdai's famous letter to the king of the *Khazars. Ḥisdai encouraged him to compile his *Maḥberet*, a biblical dictionary in Hebrew. However, Menahem endured poverty because Ḥisdai was not a very generous patron. Later, when Menahem fell into disgrace, Ḥisdai even persecuted his former protégé and forced him to return to Tortosa. Here Menahem wrote a touching letter of complaint to Ḥisdai, a gem of epistolary style and an important historical document concerning its author's life.

Menahem's most important work, intrinsically and historically, is the *Maḥberet*, whose original name was probably *The Book of Solutions*. Because Menahem's dictionary was originally written in Hebrew, its style surpasses that of biblical dictionaries of greater quality translated into Hebrew from Arabic, such as Judah ibn *Tibbon's translation of *Ibn Janaḥ's *Book of Roots*. More importantly, because the dictionary was in Hebrew, it was also understood by Jews in Christian countries where it exerted great influence. For example, in France, the *Maḥberet* was used extensively by *Rashi. Menahem carefully refrained from linguistic comparisons between Hebrew and Arabic, presumably as Hebrew was considered a holy language. Menahem's theological concern is further reflected in his attempt to show that *ehyeh* which is referred to as a name for God in Exodus 3:14 is not derived from the verb *hayah* (“to be”).

Often original in terminology, the dictionary attempts, without reference to its predecessors, a systematic summation of the lexicographical and grammatical knowledge of the time. Menahem shows awareness of ellipses and pleonasm occurring in the Bible, and brings into relief poetic parallelism, or constructions in which, as he put it, “one half instructs us in the meaning of the other.” However, he did not have a systematic knowledge of grammar, and his approach tended to the empirical. Although Menahem carried out the investigation of the Hebrew roots systematically and built his dictionary accordingly, he thought that letters of the root that disappear

in conjugation are not radical, and therefore established, on the synchronic level, biliteral and even uniliteral roots, e.g., *nātâh*, root ṭ; *hikkâh*, root k. Thus, the *Maḥberet* can only be regarded as a summary of past achievements and it was, according to some authorities, reserved to Menahem's pupils to initiate the new period of linguistic research. Shortly after the *Maḥberet* appeared, it was vehemently attacked by *Dunash b. Labrat who claimed that certain definitions were likely to lead the reader to erroneous interpretations of *halakhah* and belief. The expectation that the dictionary would therefore become a source of heresy explains the bitterness of the attack. Menahem himself did not reply to Dunash's criticisms, but three of Menahem's pupils took it upon themselves to defend their master. One of the pupils was Judah ibn Daud whom some scholars think is identical with Judah b. David *Ḥayyuj, the great initiator of the theory of the triliterality of Hebrew roots, while other scholars consider this identification doubtful. However, Isaac ibn *Gikatilla, another of the three, was the teacher of Ibn Janaḥ, the greatest medieval Jewish lexicographer and philologist. The controversy between the two camps continued; Yehudi b. Sheshet defended his master Dunash against the attacks of Menahem's pupils, and the famous tosfist Jacob b. Meir *Tam in his *Book of Decisions* (appended to the Filipowski ed. of the *Maḥberet*) tried to prove that Menahem's definitions were valid. Several decades later, Rabbi Joseph *Kimḥi, the first of the philologists of the Kimḥi family, wrote *Sefer ha-Galu'i* in his own effort to settle the disputes, this time in light of Ḥayyuj's theory. A modern scholar, D. *Yellin, demonstrated that, from the scientific point of view, Dunash's criticisms were generally well founded (*Sefer Zikkaron le-A. Gulak ve-S. Klein* (1942), 105–14; *Leshonenu*, 11 (1941–43), 202–15).

[Joshua Blau]

MENAHEM BEN MICHAEL BEN JOSEPH, medieval Karaite scholar. He was author of a Hebrew polemical epistle in verse addressed to “Akylas the Proselyte, in care of Saa-

diah the Rabbanite,” dealing with the laws of slaughtering. S.P. *Pinsker, who first published the poem, assumed that it was directed against *Saadiyah Gaon and that therefore the author must have lived in the first half of the tenth century. His vocabulary, however, is that of a Byzantine Karaite of a later date, presumably the 12th century, and he is very likely identical with Menahem b. Michael, the author of several hymns included in the Karaite liturgy.

[Leon Nemoy]

MENAHEM BEN MOSES HA-BAVLI (d. 1571), rabbi and author in Erez Israel. Despite his surname (“the Babylonian”), Menahem appears to have come from Italy; his ancestors probably lived in Babylon. Until 1525 Menahem served as *dayyan* in Trikkola, Greece. In 1527 he was living with his family in Safed, among whose scholars his name is included. There, with his brother Reuben, he engaged in business connected with the wool-dyeing industry. After 1546 he moved to Hebron, apparently being among the Safed rabbis who renewed the Jewish settlement in that city in the middle of the 16th century. Menahem achieved renown through his *Ta’amei ha-Mitzvot* (Lublin, 1571), in which he briefly sets forth the reasons for the precepts. In the introduction Menahem refers to a lengthy work he had written called *Ta’amei Mitzvot ha-Arukot*. One of his responsa on divorce was published among those of Joseph *Caro to *Even ha-Ezer* (Salonika, 1598, 80a, *Dinei Gittin ve-Gerushin*, no. 10).

MENAHEM BEN SOLOMON (first half of 12th century), author of the midrashic work *Sekhel Tov*. Menahem’s country of origin is unknown. The foreign words in his book are Italian, but it is difficult to establish on this basis that he lived in Italy since he does not mention the *Arukhot* of *Nathan b. Jehiel of Rome though it was written about 50 years earlier. Similarly, all that is known of Menahem is that two halakhic responsa were addressed to him apparently by Solomon b. Abraham, the nephew of Nathan of Rome (included in the *Shibbolei ha-Leket*, pt. 2, still in manuscript). Menahem’s fame rests on his *Sekhel Tov*, an aggadic-halakhic midrashic anthology arranged according to the weekly scriptural readings. Only the first two parts of the book, to Genesis and Exodus, have been preserved and published by S. Buber (*Sekhel Tov*, 1900), who added a detailed introduction. However, many early scholars possessed complete manuscripts from which they frequently quote, particularly the author of the *Asufot* (in manuscript) who lived in Germany at the beginning of the 13th century. The *Sekhel Tov* was written, according to its author, in 1139, with the aim of explaining the verses in accordance with the Midrashim and

Hebrew philology. Apart from the talmudic and midrashic sources, the only works he quotes are the *She’iltot* of *Aḥa of Shabḥa, the **Halakhot Gedolot*, *Hananel b. Ḥushi’el, Isaac *Alfasi, and the Midrash *Lekah Tov* of Tobias b. Eliezer. Menahem’s comprehensive knowledge of *halakhah* is evident from his work; in some places he actually assembles collections of *halakhot* on specific subjects, such as the laws of the Sabbath, **eruv*, Passover (in the weekly portion *Yitro*), etc. Still more marked is his great interest in linguistic topics and Hebrew grammar, which in fact constitute the underlying basis of the whole work. Indeed, Menahem devoted another work to this subject, *Even Bohan*; only a minor part, of which fragments alone have been published, is extant in manuscript. This work was completed in 1143. It was divided into 50 *she’arim* (“gates”), constructed on a most complicated system. Only five of these “gates” remain, all of which deal with the study of the roots of Hebrew verbs, and they are of considerable importance for scriptural exegesis. The work mentions by name only the Targums of Onkelos and of Jonathan b. Uzziel, and also Eliezer *ha-Kallir, but it is based on the works of *Menahem ibn Saruq and *Dunash b. Labrat, although they are not mentioned by name. Menahem’s knowledge of grammar did not exceed theirs; like them he too assumed the existence of verbal roots of two and even of one letter, and his table of the conjugations is far from perfect. Besides these authors, he also used Saadiyah Gaon’s translation of the Scriptures. Some regard the book as the first attempt at a treatise on the Hebrew language.

[Israel Moses Ta-Shma]

MENAHEM THE ESSENE (first century B.C.E.), a contemporary of *Herod, to whom prophetic powers were attributed. Josephus relates how Menahem “had once observed Herod, then still a boy, going to his teacher, and greeted him as ‘king of the Jews.’” The pious Essene added, however, that Herod would abandon justice and piety and thus bring upon himself the wrath of God. When Herod had reached the height of his power, he sent for Menahem and questioned him about the length of his reign. Menahem succeeded in satisfying the king, albeit with an ambiguous answer, and hence (according to Josephus) Herod continued to hold all Essenes in honor. L. Ginzberg suggests that Menahem is to be identified with the Menahem mentioned in the Mishnah (Ḥag. 2:2). This Menahem was, together with *Hillel, one of the heads of the Sanhedrin, who left his post (presumably to join the Essenes) and was succeeded by *Shammai. There is little evidence, however, to support his view. Talmudic discussions of the Mishnah tend to describe the mishnaic Menahem in terms far more fitting to *Menahem son of Judah the Galilean, a patriot leader during the uprising of 66–70 C.E.

[Isaiah Gafni]

MENAḤEMIYYAH (Heb. מְנַחֵמִיָּא), moshav in northern Israel with municipal council status, southwest of Lake Kinneret, affiliated with Ha-Ihud ha-Ḥakla'i. Menaḥemiyyah was founded as a moshavah by the Jewish Colonization Association (ICA) in 1902, as part of the *ICA enterprise to establish villages in Galilee based on grain production. Its name is based both on the previous Arabic name of the site – Milḥamiyya – and the first name of Herbert *Samuel's father.

Menaḥemiyyah's progress was slow, and it suffered from the frequent attacks by Bedouins in the vicinity. In the 1920s, a gypsum quarry was opened nearby to supply the Haifa "Nesher" cement works. Later, World War II veterans ("Ya'el") joined the first settlers. Following the Israel *War of Independence (1948), new immigrants, mainly from North Africa and Romania, settled in Menaḥemiyyah. In 1969 the moshav had 585 inhabitants; in the mid-1990s – 1,240; and in 2002 – 1,100 on an area of 2.3 sq. mi. (6 sq. km.).

[Efraim Orni / Shaked Gilboa (2nd ed.)]

MENAHM MENDEL BEN ISAAC (second half of 16th century), tax collector, architect, and builder in Kazimierz, near *Cracow. Menahem Mendel was born in Brest-Litovsk, and from 1560 to 1568 was the king's tax farmer in the Zhmud (Zemaitkiemis) region of Lithuania. In 1572 he moved to Kazimierz, and by 1581 he had become one of the elders of the *kahal*. From the early 1570s, he constructed flour mills and city walls, and was noted as a designer and builder of bridges. During the Polish campaign against Russia (1579–82), King Stephen Báthory was accompanied by Menahem Mendel, who built bridges over the Dvina and military installations for the sieges of Polotsk, Velizh, and Pskov. In 1587, since he had supported the defeated Austrian archduke Maximilian, he was compelled to leave Poland. Upon his arrival in Vienna, he was given a modest allowance by the court. On July 4, 1589, he proposed that Emperor Rudolph II finance the building of a bridge over the Danube, between Vienna and Nussdorf, at an estimated outlay of 30,000 *Rheingulden*. Menahem Mendel was to levy tolls to repay the investment. After two years of deliberations the project was deferred indefinitely and Menahem Mendel returned to Kazimierz. In 1592 King Sigismund III Vasa of Poland deputed him to arrange a match between the king's aunt, Ann Jagellon, and an Austrian archduke. All trace of Menahem Mendel vanishes after this point.

[Arthur Cygielman]

MENAHM MENDEL OF PEREMYSHLANY (b. 1728), ḥasidic leader. In his youth he joined the group of *Israel b. Eliezer, the Ba'al Shem Tov, and in the late 1750s is mentioned as a participant at a "third Sabbath meal" gathering (Israel *Loebel, *Sefer Vikku'ah* (Warsaw, 1798), 9b). In 1764, he went

to Erez Israel together with R. *Naḥman of Horodenko (Gorodenka) and settled in Tiberias. Before his emigration, he visited Cekinowka and Soroki, townlets on both banks of the Dniester, where he occupied himself in the "redemption of captives" (*pidyon shevuyyim*). He is identical with R. Mendel of Cekinowka mentioned in *Shivḥei ha-Besht* (Kapust, 1815), 19. As for the reason for his emigration, one of his intimates has written: "He emigrated to the Holy Land because emissaries started traveling to him urging that he occupy himself with community affairs" (A. Rubinstein, in: *Tarbiz*, 35 (1965/66), 177), which probably signifies that they came to him as a *zaddik* and miracle-worker (*Ba'al Shem) and he refused to assume such a role.

R. Mendel represents the extreme enthusiast among the first generations of the ḥasidic movement. His teachings abound in radical expressions which aroused violent opposition, such as: "One should not be exceedingly meticulous in every act performed, because this is the intent of the evil inclination; even if, Heaven forbid, one has sinned – one should not be overtaken by melancholy" (*Darkhei Yesharim* (Zhitomir, 1805), 4b, 5a). Like other disciples of the Ba'al Shem Tov, he considered devotion to God the pivot of ḥasidic doctrine and conduct. In contrast to others, however, he thought that Torah study and the practice of devotion were not compatible; study was therefore to be restricted so as not to restrain the process of approximation to the Creator. "If we divert our thoughts from devotion to God, and study excessively, we will forget the fear of Heaven ... study should therefore be reduced and one should always meditate on the greatness of the Creator." R. Mendel considered prayer the most suitable manner in which to achieve devotion, and that prayer must be restrained and not, as was the opinion of Ḥasidim of other schools, vociferous. In general, it was his view that devotional conduct should be based on contemplative concentration attainable by seclusion from society and cessation of all occupation. His principal teachings were published in his booklet *Darkhei Yesharim ve-hu Hanhagot Yesharot* (Zhitomir, 1805); in *Likkutei Yekarim* (Lvov, 1792); and in *Yosher Divrei Emet* (1905), of R. Meshullam Feivush of Zbarazh.

[Avraham Rubinstein]

MENAHM MENDEL OF SHKLOV (d. 1827), rebuilder of the Ashkenazi community of Jerusalem at the beginning of the 19th century; he was born in Shklov. His father was R. Baruch Bendet, who was a *Maggid*. Menahem Mendel was one of the outstanding pupils of R. *Elijah b. Solomon the Gaon of Vilna. He himself recounts: "I did not withdraw from his presence; I held onto him and did not leave him; I remained in his tent day and night; I went where he went, slept where he slept, and my hand never left his hand." After the death of his teacher in 1794 he worked with R. Elijah's sons on the arrangement and publication of his works. Through his initiative the following

of Elijah's works were published in the course of nine years: R. Elijah's commentary on Proverbs; his annotation on *Seder Olam Rabbah* and *Seder Olam Zuta*; his interpretation of the Shulhan Arukh, *Orah Hayyim*; his commentary on *Avot*, and others.

In 1808 Menahem Mendel immigrated to Erez Israel and settled in Safed where he established *battei midrash* for study and prayer and became the leader of the community of Ashkenazim-Perushim (followers of the Vilna Gaon), which then numbered around 150 persons. From Safed he maintained a correspondence with his friend R. *Israel of Shklov and entreated him to act on behalf of the economic consolidation of the community and even encouraged him to immigrate to Palestine. As a result of philosophical and traditional conflicts with the ḥasidic community of Safed, Menahem Mendel drew close to the Sephardi rabbis and their *bet midrash*.

When a plague broke out in Safed in 1812, he fled with others to Jerusalem. He probably reached the decision at that time to remain there permanently, but he set up his home in the city only in 1816. At the same time he rented the courtyard of the yeshivah of R. Ḥayyim ibn *Attar as a place for Torah study and prayer. This action should be seen as the renewal of the Ashkenazi community of Jerusalem, after a lapse of about 100 years. In his letters abroad he requested that **halukkah* funds be transferred to the new community. Here, too, however, he maintained friendly relations with the *rishon le-Zion* R. Solomon Moses Suzin who aided him in consolidating his community. Despite the numerous difficulties – resulting from the non-legalization of the residence of the Ashkenazim in the city – the Ashkenazim under Mendel's leadership continued to live in Jerusalem. After his death, his son Nathan Nata was appointed in his place. Mendel was a prolific author and wrote about ten books dealing mainly with the teachings of Kabbalah and mysticism.

[Joshua Kaniel (Mershine)]

MENAHEM MENDEL OF VITEBSK (1730–1788), ḥasidic leader active in Belorussia, Lithuania, and Erez Israel. He was a disciple of *Dov Baer the Maggid of Mezhirech, and headed a congregation in Minsk during the lifetime of his teacher; in *Zemir Ariḥim ve-Ḥarvot Zurim* (Warsaw, Bialystok, 1798), a pamphlet written by one of the **Mitnaggedim*, he is mentioned by the name of Mendel of Minsk. When the first wave of opposition to *Ḥasidism erupted (1772), he visited Vilna on two occasions – on the second occasion, accompanied by his disciple *Shneur Zalman of Lyady and attempted to meet *Elijah b. Solomon the Gaon of Vilna in order to point out to him the merits of Ḥasidism, but the Gaon refused to receive him and “he closed the door upon us twice.” Ḥasidic tradition also regards him as one of the leading spokesmen at the meeting which was convened in Rovno in the house of Dov Baer after the imposition of the *herem* on the Ḥasidim in 1772. The persecutions of the *Mitnaggedim* made him leave Minsk, and

in 1773 he settled in Gorodok, from where he spread Ḥasidism in the Vitebsk and Mogilev provinces (assisted by *Israel of Polotsk, *Abraham b. Alexander Katz of Kalisk, and *Shneur Zalman of Lyady).

In 1777 Menahem Mendel went to Erez Israel, accompanied by Abraham of Kalisk and Israel of Polotsk, at the head of a group of 300 persons, of whom only some were Ḥasidim. He became the leader of the ḥasidic *yishuv*, and sent emissaries to Russia in order to raise funds for its support. In Erez Israel ḥasidic immigrants also encountered hostility among the Jewish community, as a result of the initiative of some *Mitnaggedim*, who addressed special letters on the subject to Erez Israel. In the wake of the disputes which broke out, Menahem Mendel moved to Tiberias, where he erected a ḥasidic synagogue. He became related by marriage to one of the prominent Sephardim of Jerusalem. After his arrival in Erez Israel Menahem Mendel remained the spiritual leader of the Ḥasidim of Belorussia, who maintained a correspondence with him. He continued to guide them in their conduct and interpreted the principles of Ḥasidism to them. Menahem Mendel did not consider himself to be a *zaddik* who could bless his Ḥasidim with the bounties of Heaven. He regarded his function of *zaddik* as being restricted to teaching and guidance in divine worship and not as that of a “practical” *zaddik*.

Teachings

In his teachings, Menahem Mendel remained faithful to those of the Maggid. Following him, he regarded the *zimzum* (contraction) of divine emanation and its restriction as a condition for revelation, because that which is not limited cannot be conceived, just as thought is conceived by restriction and contraction into letters. The worlds were created by divine will as an act of mercy, by the contraction of the divine emanation, because of the deficiency of the recipients. “When one teaches a small child, he must be instructed in accordance with his young intelligence . . . in accordance with the ability of reception of his mind” (*Likkutei Amarim* (1911), 17a). Divinity is restricted in every place (the world is not His abode, but He is the abode of the world). It is the duty of man to adhere to the Divinity in the material creation and to redeem the Divine Presence from its exile in the material world. This can be achieved by various methods:

(1) By widening the conception of man as the wisest and most capable of understanding, “when he has attained wisdom and studies the Torah, he then creates new heavens and a new earth” (*ibid.*).

(2) By *devekut* (devotion) to God. Man is a part of the Celestial Divinity. The root of his soul is to be found in the world of **Azilot* (emanation) and he is therefore able to commune with God without the obstruction of any interruption or barrier. Menahem Mendel emphasizes prayer with devotion and *kavvanah* (intention). “With his prayer, he is a groomsmen who brings the Divine Presence before God” (*ibid.*, 31b). In order to attain the virtue of *devekut*: (a) “He must consecrate his person and his meditation to wisdom to the extent

that he, so to say, has no further existence," i.e., spiritual self-denial. (b) By self-abnegation in the moral aspect and by the cultivation of other ethical values, such as humility, compassion, etc. With the consciousness of his own worthlessness, he is to regard himself as naught so that he become enwrapped with awe (as a result of which he will rise to speculative contemplation), which is the gateway to love. This degree of love will attach him to all men and his spiritual elevation will be followed by the uplifting of all of them in perfect contact and *devekut*. His occupation in secular affairs is to resemble the coming and goings of a man who immediately returns to his home (i.e., to his condition of *devekut*).

(3) By the observation of the precepts it is within the power of man to knit together the whole of the world, to control it and exert his influence in the heavenly spheres; he should therefore accustom all his limbs to the precepts. When observing a precept, he must realize that the reward of the precept is the actual observance of the precept itself (the observance of the precept for its own sake). Similarly, he emphasizes that there must be fear of sin and not fear of punishment. The perfect fear is a sublime degree which surpasses *zimzum*; it is the fear of God's majesty, a constant fear before which all the other fears are contracted and "happy is the man that feareth always" (Prov. 28:14). He stresses the importance of faith even beyond logic and rational reason.

On worship through corporeality, he argues that one must not follow "the heretics who say that a man must be at a lower degree so that he may ascend from there, a drop which must needs precede a rise; may there not be such a thought in Israel" (*Likkutei Amarim*, 25b–26a).

His main works were *Peri ha-Arez* (Kopys, 1814); *Peri ha-Ez* (Zhitomir, 1874); *Ez Peri* (Lvov, 1880); *Likkutei Amarim* (Lvov, 1911). His letters appeared in *Nefesh Menaḥem* (Lvov, 1930).

MENAHEM OF MERSEBURG (first half of the 14th century), one of the leading scholars of Saxony, Germany. Menahem was a pupil of Isaac b. Ḥayyim of Oppenheim (apparently to be identified with the son of *Ḥayyim b. Isaac Or Zaru'a, who was a pupil of *Meir b. Baruch of Rothenburg). Menahem was renowned in his time as a talmudic scholar, and was particularly well known for his *takkanot* which determined relations between the individual and the community in all matters affecting the communal life of the Jew – especially in the subjects of taxation, personal injuries, and fines. Especially important was the *takkanah* in which he abolished the right of *me'un* (see *child marriage; responsa Judah Mintz (Venice, 1553) no. 13), which had been a cause of great tragedies in Jew-

ish family life, particularly as a result of the widespread custom of child marriage. Some 150 years later his *takkanah* gave rise to violent controversy when some wanted to explain it as having been instituted only in cases where the child had been influenced to exercise it (see Jacob *Falk). Solomon *Luria writes in the *Yam shel Shelomo to Yevamot* (13: 17): "It has become customary during recent years not to permit *me'un*, this having originated with Menahem, author of *Me'il Zedek*, who carefully weighed up and enacted many restrictive and preventive measures and was a great expert and scholar, and his *takkanot* and restrictions spread throughout the whole of Germany." Here the name of Menahem's book is mentioned; only fragments of it have been preserved. Quotations from it are found in talmudic works of the 15th and 16th centuries, particularly in those of Jacob *Weil and Solomon *Luria, as well as in the glosses of Moses Ḥazzan to the *Minhagim le-Kol ha-Shanah* of *Isaac of Tyrnau, and in the *Shitah Mekubbezet* of Bezalel *Ashkenazi. Jacob Weil describes Menahem of Merseburg as an eminent scholar in his generation living in Saxony. "He laid down many laws and decisions which he collected, and from them compiled an extensive work. That book is to be found in Saxony and the *minhag* of Saxony completely follows it. Many of these rulings have been extracted from his book and are in my possession..." (Resp. Maharyu 133). These words were written in reply to questioners who were unaware of Menahem's identity and turned to Weil for information. In fact, at the end of the printed editions of the responsa of Jacob Weil there is a small collection, extracted from the *Me'il Zedek*, entitled *Nimmukei Menaḥem Merseburg*. It is entirely devoted to the judicial relations between individuals and communities. Among Menahem's pupils was Yom Tov Lipmann *Muelhausen, author of *Seder Tikkun ha-Get* which was based on his tradition (*Yam shel Shelomo*, Git. 2:5).

[Israel Moses Ta-Shma]

MENAHEM SON OF JUDAH, patriot leader at the outset of the Roman War (66–70 C.E.). He was the son of Judah of Galilee, leader of the insurgents against the census of *Quirinus in 6 C.E. and must therefore have been well on in years at the time of the outbreak of the war. His most successful exploit was the capture of *Masada in the early stages of the war and his subsequent distribution of the contents of the armory to his followers. Menahem now led his forces to Jerusalem where the insurgents were besieging the royal palace and forced the Romans to surrender. Convinced that he could act as the leader of the rebels, he proceeded with a purge of the army, putting to death the former high priest *Ananias and his brother *Hezekiah. His assumption of power, however, was unacceptable to the Jerusalem insurgents (headed by Eleazar son of *Ananias) who, according to Josephus, were unwilling to fight for their freedom against the Romans only to become enslaved under a despot of lowly origin. When Menahem came to pray in the Temple Court, dressed in royal garb

and accompanied by an armed guard, Eleazar and his men attacked him. Menahem was killed, and his followers forced to flee (Jos., Wars 2:443 ff.). They regrouped themselves at Masada under *Eleazar son of Jair, a relative of Menahem, where they held out even after the fall of Jerusalem. The opposition of the Jerusalemites to Menahem and his followers was apparently due to a number of factors, among them the opposition of the Jerusalemites to revolutionary social changes and to the alleged messianic pretensions of Menahem. Geiger identifies Menahem with the Menahem mentioned in talmudic sources (TJ, Ḥag. 2:277d; Ḥag. 16b) and with the Menahem b. Hezekiah mentioned in the *aggadah* as the Messiah, born on the date of the destruction of the Temple (TJ, Ber. 2:4, 5a). Following the publication of the Dead Sea Scrolls, attempts have been made to identify the *Teacher of Righteousness mentioned there with Menahem the insurgent leader or his relative Eleazar son of Jair. These suggestions must be treated with reserve, pending further research.

[Lea Roth]

MENAHĒM ZIYYONI (late 14th–early 15th century), kabbalist and exegete who lived in Cologne, where he signed a document in 1382, probably as rabbi of the community. His father was R. Meir Ziyoni. Nothing else definite is known about his life, his career, or his teachers. He is known only through his major work, *Ziyyoni*, a homiletical commentary on the Torah (first printed in Cremona in 1559 and again there in the following year after the first impression had been destroyed by fire), and by the treatise *Zefunei Ziyyoni* (partly preserved in Ms.), one of the major early kabbalistic books dealing in detail with the powers of evil and demonology. Menahem Ziyoni was one of the few kabbalists in 14th-century Germany, and his work demonstrates that he was heir to two different esoteric traditions: the Spanish Kabbalah, including the *Zohar*, the *Sefer ha-Bahir*, and the exegetical works of Nahmanides; and the esoteric theology of the 12th–13th-century movement of the Ḥasidei Ashkenaz. He quotes frequently from Eleazar b. Judah of Worm's *Sodei Razayya*, referring to him as “*ish sodi*” (“my esoteric authority”). These two traditions are also reflected in his subject matter: the customary kabbalistic questions on the emanation of the *Sefirot* alongside the Ashkenazi-ḥasidic conception of the *Kavod* (“divine glory”) and its relationship to the prophets. He composed a *kinah* for the Ninth of Av which was incorporated in the Ashkenazi liturgy.

[Joseph Dan]

MENAḤOT (Heb. מִנְחֹת; “meal-offerings”), second tractate in the order *Kodashim*, in the Mishnah, Tosefta, and Babylo-

nian Talmud (there is no Jerusalem Talmud to this tractate). *Menaḥot* has 13 chapters and deals, as its name indicates, with the various meal-offerings in the Temple. Chapters 1–3 discuss in great detail the defects in the sacrificial act, especially wrongful intent and omission, which render the offering unfit (*pasul* or *piggul*). Chapter 4 continues with the same subject, listing instances of omissions which do not invalidate the offering; the last part deals with the meal-offering of the high priest (Lev. 6:13–16). Chapters 5 and 6 are mainly concerned with the preparation of the meal-offering. Chapter 7 deals with the loaves of the thanksgiving-offering (Lev. 7:12), of the consecration-offering (Lev. 8:26), and of the Nazirite-offering (Num. 6:15). Chapter 8 gives the ingredients of the meal-offering (flour, oil, wine, etc.) and the manner in which they were processed and prepared. Chapter 9 gives valuable information on the liquid and dry measures used in the Temple. Chapter 10 deals with the offering of the *Omer* (“sheaf of the waving”; Lev. 23:15–22), and Chapter 11 with the meal-offering of the barley of the new harvest (Lev. 23:16) and the shewbread (Lev. 24:5–9). Chapter 12 is mainly on vows concerning meal-offerings and drink-offerings. Chapter 13 discusses the problem arising out of sacrificial vows which were inaccurately defined. It also mentions, incidentally, the temple of *Onias. The Mishnah ends with a homily on the fact that the Bible employs the phrase “a sweet savor unto the Lord” equally with regard to offerings of cattle (Lev. 1:9), fowl (Lev. 1:17), and meal (Lev. 2:2) in order to emphasize that “it matters not whether one offers much or little, provided one’s heart is directed towards heaven.” The Tosefta, also 13 chapters, ends with a homily on the causes of the destruction of the Temple, and, quoting Isaiah 2:2–3, visualizes the future Temple as a universal one.

The first three chapters of the tractate have language patterns similar to the first four chapters of *Zevaḥim*. The similarity between Mishnah 3:1 and *Zevaḥim* 3:3 is especially striking. Epstein (Tannaim, 156 f.) points to various strata in the Mishnah: *mishnayot* 3:5–4:4 end are from the Mishnah of R. Simeon, while *mishnayot* 1:3–4 belong to Judah b. Ilai (cf. Zev. 1:2; 6:7). Mishnah 3:4, quoted in the name of Simeon, appears in the Tosefta in the name of his son Eleazar. Apparently Eleazar had recorded his father’s sayings together with his own, and thus the editor of the Tosefta attributed it to Eleazar. The Tosefta includes several groups of *beraitot*. Thus 1:2–4 contrasts the laws of *shehitah* (“slaughtering”), *kemizah* (“scooping out” with the hand), and *melikah* (“nipping” the neck of a bird). In the group 4:9–14 each of the passages starts with the word *kamaz* (“he scooped”), and the group 12:11–13:12 consists of laws concerning the dedication of offerings to the Temple. The Tosefta includes some aggadic material: Moses’ blessing of the nation after the erection of the Tabernacle (7:8); God’s evaluation of the sacrifices (7:9); an account of the golden tables, and candelabra, and of the shewbread of the Temple (11:6–18); and the corruption of the priests (13:18–21) and the sins that brought about the destruction of Shiloh and of the First and Second Temples: “Why was the First Temple destroyed? Because of the idolatry, incest, and shedding of blood

that prevailed. But at the Second Temple we know that they toiled in the study of Torah and were heedful of the tithes: why then were they exiled? Because they loved money and hated one another. This teaches that hatred of man for his fellow is heinous before the Omnipresent and is regarded as being as grave as idolatry, incest, and murder” (13:22). The Babylonian *Gemara* has some interesting aggadic passages. There is a remarkable story to demonstrate the merits of wearing *zizit* as a safeguard against immorality (44a); a most interesting homily of R. Ezra (53a); and passages on the Jewish attitude toward Greek culture (64b, 99b) and on the origin of the Temple of Onias (109b). Several of the *aggadot* in *Menahot* emphasize the spiritual implications of sacrificing. A poignant *aggadah* by R. Isaac states that when the poor offer God a meal-offering, in spite of its negligible value, God honors the giver as though he had offered up his soul (104b). Regarding its *halakhot*, large portions of the text are taken up by extraneous material; e.g., 28a–44b deal mainly with the *menorah*, *mezuzah*, *tefillin*, and *zizit*. In the printed editions the sequence of the chapters in the Babylonian Talmud differs from that of the separate Mishnah edition; the 10th Mishnah chapter is 6th, and consequently the mishnaic 6th, 7th, 8th, and 9th chapters become the 7th, 8th, 9th, and 10th respectively. *Menahot* was translated into English and published by the Soncino Press, London (1948).

[Arnost Zvi Ehrman]

***MENANDER OF EPHEBUS** (possibly second century B.C.E.) is probably identical with Menander of Pergamum quoted by Clement of Alexandria (*Stromateis* 1:114) as stating that “Hiram gave his daughter in marriage to Solomon at the time when Menelaus visited Phoenicia after the capture of Troy” (cf. *Laetus). He wrote a history of Phoenicia (in Ant. 8:144, Josephus says that Menander translated the Tyrian records from Phoenician into Greek) which included an account of *Hiram of Tyre, in whose reign “lived Abdemon, a young lad, who always succeeded in mastering the problems set by Solomon, king of Jerusalem” (Jos., Apion, 1:120; Ant. 8:146; cf. *Dios). Hiram also dedicated the golden pillar in the temple of Zeus, which, according to *Eupolemus (Eusebius, *Praeparatio Evangelica*, 9:34), was a present from Solomon. According to Josephus (Ant. 8:324), Menander also alluded to the drought which occurred during King Ahab’s reign.

***MENANDER OF LAODICEA** (third century C.E.), author of rhetorical works. He mentions that Jews from all over the world flock to Palestine for their festal assembly (*panegyris*).

MENASCE, DE, Egyptian family which went to *Egypt from Spain, by way of Erez Israel and *Morocco. The members of the De Menasce family played a significant role in the economic development of Egypt in the second half of the 19th century.

JACOB DAVID DE MENASCE (1802–1885) was president of the *Cairo Jewish community and leader of the Austrian

subjects in Egypt. He received the hereditary title of baron from the emperor Francis Joseph. In 1871 he settled in Alexandria, where he established the Menasce synagogue in 1873 and a large Jewish school (1881). He was the **sarraḥ* (banker) of the Giza quarter and before he settled in Alexandria was employed by Hasan Pasha Al-Manstrali as administrator of his large estates. Later, he founded an import-export company and opened branches of the company in Marseilles and Liverpool. His son BAKHOR DE MENASCE (1830–1884) was president of the *Alexandria community and active in Jewish philanthropy. Three of his sons became well-known: JACQUES (1850–1916), banker and head of the local community from 1889 to 1914, helped to found the Menasce hospital, financed jointly by his family and the community. In 1885 he opened in Alexandria a private secular school for boys and girls, in which the majority of the teachers were Catholic. FELIX (1865–1943) was president of the community of Alexandria from 1926 to 1933. In 1918 he founded the Zionist Pro-Palestine Society and aided pioneers traveling to Erez Israel through Alexandria. He was a baron and in 1938 was honorary president of the Alexandria community. Alfred (1867–1927) was a member of the Alexandria municipal council for many years and honorary consul of Hungary. In 1925, after a teacher in a Christian school had repeated stories of the *blood libel before Jewish pupils, he reacted by becoming the principal benefactor in the establishment of a Jewish vocational school in the city. He married a member of the Suarez family. Felix’s son GEORGES (b. 1900) was known in Egypt for his art collection and generosity, especially on behalf of Jewish causes. He settled in England. Another son, JEAN (b. 1910), who became a Jesuit priest in France, wrote a book on Ḥasidism (*Quand Israël aime Dieu*, 1931), following a visit to Poland. Members of the De Menasce family competed with the Aghion and Rollo families for leadership of the Alexandria community, which was divided into two parties, one of which was headed by the De Menasce family. In 1885 the family helped the Jewish hospital. Other members of the family were known especially as philanthropists: Abramino founded in 1917 a Jewish hospital in Cairo; Elie in 1920 made an important donation to the De Menasce school in Alexandria; Jacque Elie in 1930 founded the Society “Amelei Tora.”

[Haim J. Cohen / Leah Bornstein-Makovetsky (2nd ed.)]

MENDA, ELIEZER (1887–1978), journalist. Born in *Edirne, he studied between 1905–10 in the Ecole Normale Orientale, Paris. He was a teacher at the *Alliance Israélite Universelle schools in Edirne, Tetouan, and Tatarpazarcik. Between 1910–1925 he taught French and German in various lycées in Mersin, Adana, Konya, and İzmit. He contributed to different Ladino newspapers such as *El Judio*, *El Jugeton*, *El Telegrafo*,

La Boz de Oriente, and to French newspapers such *L'Aurore* and *Le Journal D'Orient*. In December 1950 he started publishing the Ladino newspaper *La Luz* with a partner, Robert Balli. Later on Balli left and started to publish his own newspaper, *La Luz de Türkiye*, while Menda continued with *La Luz* until 1972.

[Rifat Bali (2nd ed.)]

MENDEL, wealthy family prominent in Hungary in the late 15th and early 16th centuries. It appears that the family went there from Germany and they seem to have been in Buda from 1470. On the suggestion of the royal treasurer, the apostate János Ernusz, King Matthias Corvinus (1458–90) granted to members of the Mendel family the office of **Praefectus Judaeorum*. Probably the family was friendly with Ernusz or may even had been related to him. First to hold the office was JUDAH (c. 1470). He was succeeded by his son JACOB (1493–1522), who was particularly respected. A record of his seal, inscribed with his initials, still exists. Next in office was ISRAEL (1523–26), who was followed by ISAAC (1527–39). With the expulsion of the Jews from Buda to Turkey (1526; see **Budapest*) and the conquest of the town the family declined; the office of *Praefectus Judaeorum* also ceased to exist at that time. A prominent member of the family was MENDEL SCHWARTZ, one of the most important financiers of the Hungarian capital. He is mentioned for the last time in 1526. Members of the Mendel family were also to be found in other Hungarian towns, such as in Sopron, but those mentioned in Pressburg were almost certainly identical with the Buda branch, who also owned houses in Pressburg.

[Andreas Kubinyi]

MENDEL, ARTHUR (1905–1979), musicologist, critic, and conductor. Born in Boston, Mendel studied music theory and composition with Nadia Boulanger (1925–27) at the Ecole Normale de Musique in Paris. He was music critic of the *Nation* (1930–33), literary editor for G. Schirmer, Inc. (1930–38), editor of the American Musicological Society's journal (1940–43), associate editor of the *Musical Quarterly*, and editor of Associated Music Publishers (1941–47). From 1936 to 1953 he conducted the Cantata Singers, a small choir performing baroque music. He held lectureships at Columbia University (1949) and the University of California, Berkeley (1951), became chairman of the music department at Princeton (1952–67), and held the Henry Putnam University Professorship from 1969

to 1973. He was a member of the editorial boards of the Neue Bach-Ausgabe and of the new Josquin edition. His editions of the *St John Passion* brought him recognition as the foremost American Bach scholar of his generation. In his later years he investigated the possible applications of computer technology to musicological problems.

[Israella Stein (2nd ed.)]

MENDEL, HERMANN (1834–1876), music publisher and lexicographer. Born in Halle, Germany, Mendel edited a music journal, a series of operatic librettos with commentaries, and a book of folk songs. His chief work was his *Musikalisches Conversations-Lexikon* (1870–83), a music encyclopedia in 12 volumes, the last five of which were edited by August Reissmann after Mendel's death. He also published two books on **Meyerbeer* (1868, 1869).

MENDEL, LAFAYETTE BENEDICT (1872–1935), U.S. physiological chemist and pioneer in nutrition. Born in Delhi, New York, Mendel became professor at the Yale Sheffield Science School, and in 1921 professor of physiological chemistry at Yale University. He was the first person to study vitamin A, and first president of the American Institute of Nutrition. His contributions to scientific literature were concerned with proteins, nutrition, growth, and accessory factors.

MENDELS, MAURITS (1868–1944), Dutch Socialist politician. Born in The Hague to an Orthodox family, Mendels worked as a journalist, and from 1909 practiced as a lawyer in Amsterdam. As a member of the Dutch Social Democrat Party (SDAP) since 1899, he always operated on its left, Marxist wing. In Parliament (1913–19) and in the Senate (1919–37), Mendels specialized in legal affairs. He was known for his witty and astute speeches. Mendels sympathized with the Zionist cause. During Nazi occupation he did not go into hiding and he was deported to Theresienstadt. One day before his death on June 3, 1944, he noted down: "I would rather die as an old courageous lion than live as a vile and pitiable dog."

MENDELSON, ERIC (1887–1953), architect. He was born in Allenstein, Germany and was a member of the revivalist movement in European architecture from the 1920s onward. His early works, especially his sketches made during World War I and the buildings designed in the early twenties (such as the observatory near Berlin, 1920), are of an expressionist character. His later buildings are noteworthy, against the background of the contemporary style, for the originality of their shapes and their monumental nature. He built a large number of business-houses and large office blocks in Berlin and in other towns in Germany, as well as factories and dwelling-houses. When Hitler seized power in 1933, Mendelsohn left

Germany and worked in Britain and Palestine until the outbreak of World War II. Between 1934 and 1939, he built in Palestine the villa and library of Zalman Schocken in Jerusalem, the Anglo-Palestine Bank in Jerusalem, the Hadassah hospital on Mount Scopus, Chaim Weizmann's villa in Rehovot, part of the Hebrew University's Faculty of Agriculture at Rehovot, and the Haifa government hospital. When World War II broke out, he went to the United States, and from 1945 onward, built in various places. His works include the Maimonides Health Center in San Francisco, and many synagogues, in which he tried to achieve a monumental impression without adherence to any traditional style. These include synagogues in St. Paul, Minnesota; Washington, D.C.; Baltimore, Maryland; Dallas, Texas; Saint Louis, Missouri. He wrote the autobiographical *Letters of an Architect* (1967).

[Abraham Erlik]

MENDELSON, FRANKFURT MOSES (Moses ben Mendel Frankfurt; 1782–1861), Hebrew scholar and writer. Born in Hamburg, he received a traditional education but, under the influence of N.H. *Wessely, became attracted to Haskalah. He engaged mainly in literary work, writing in both German and in Hebrew. His main work is *Penei Tevel* (published posthumously in Amsterdam in 1872), a collection of poetry and prose in the style of the *maqāmāt* of Al-*Ḥarizi. The book contains satire, polemics, epic poems on biblical themes, and a history of the Hebrew Haskalah movement at the turn of the 18th century. He was an uncle of S.R. *Hirsch.

[Getzel Kressel]

MENDELSON, SHELOMO (1896–1948), Yiddish critic. Born in Warsaw, he early showed his brilliance in talmudic studies. While enrolled at Warsaw University, he taught Jewish history and literature at Polish secondary schools. From 1917 he was coeditor of *Dos Folk* and a leader of the Folk Party. In 1928 he joined the Bund and eight years later was elected to the Jewish *kehillah*. He immigrated to the United States in 1941 and joined the editorial board of *Undzer Tsayt*. In 1947 the Bund sent him to Europe, where he organized Jewish educational, cultural, and communal organizations. His articles on literature were published in various Yiddish journals. His literary criticism includes works on Solomon *Ettinger, H.D. *Nomberg, and J.J. *Trunk.

MENDELSON, JACOB BEN-ZION (1946–), *hazzan*. Jacob Ben-Zion Mendelson was born in New York to a well-known

family of cantors. He is the brother of the cantor Solomon *Mendelson, a former president of the Cantors' Assembly. He was a student of the Etz Haim Yeshiva in Brooklyn. He studied cantorial music with the cantors Moshe and David *Koussevitzky, William Bougcester, and especially Moshe *Ganchoff. He served as cantor in Riverdale, New York, at the Beth Torah Synagogue in Miami, Florida, in the Shaarai Tefila congregation in Flushing, New York, and from 1986 at Temple Israel in White Plains, New York. He appeared in concerts and in prayer services throughout the United States, and also at the Jerusalem congress of the Cantors' Assembly in honor of the 20th anniversary of the unification of Jerusalem. Cantor Mendelson was called mentor by an entire generation of cantors, having taught at the Hebrew Union College-School of Sacred Music, the H.L. Miller Cantorial School at the Jewish Theological Seminary, and the Academy of Jewish Religion. It is true to say that he was one of the most sought-after teachers in the world of *hazzanut*. He produced record selections from the prayer service in the style of the cantors Alter, *Ganchoff, and Rappaport. A documentary film dealing with the entire spectrum of cantorial music today, from the prism of Cantor Mendelson's career, was made for PBS and other venues. From 2002 he was president of the Cantors' Assembly.

[Akiva Zimmerman / Raymond Goldstein (2nd ed.)]

MENDELSON, JOSÉ (Yoysef; 1891–1969), Argentine Yiddish editor and writer. Born in Cherkassy (Ukraine), Mendelson had a traditional education from his father and was early recognized as a talmudic genius. His first publication was an article on Peretz *Smolenskin in 1912 in the Russian-Zionist monthly, *Di Yidische Hofenung*. In the same year, he immigrated to Argentina, where he taught Hebrew. With Z. Brokhes he co-edited the fortnightly, *Der Kolonist*, in which he also published articles on Yiddish and Spanish writers. He began writing for *Di Yidische Tsaytung* in 1917 and later edited the publication (1923–29); with Y. Helfman he edited the Yiddish monthly *Argentine* (1921). He also edited the anthologies *Oyf di Bregn fun La-Plata* ("On the Banks of La Plata," 1919), *50 Yor Yidische Kolonizatsye in Argentine* ("50 Years of Colonization in Argentina," 1939), and *Rashi-Bukh* ("Rashi-Book," 1940). A collection of his writings, *Amol in a Halbn Yoyvl* ("Once in Half a Lifetime"), was published in 1943. He translated many Russian, Spanish, French, and English novels into Yiddish. Among his other works were plays and writings about artists, sculptors, etc. From 1943, he directed the Hebrew-Yiddish Teachers Seminary in Buenos Aires.

MENDELSON, SOLOMON (1933–), *hazzan*. Solomon Mendelson was born in New York to a well-known family of cantors. Since 1954 he has been cantor of the Beth Shalom Synagogue in Long Beach, New York. At the Jerusalem congress of the Cantors' Assembly he was elected president of the assembly, which is the largest organization of cantors in the

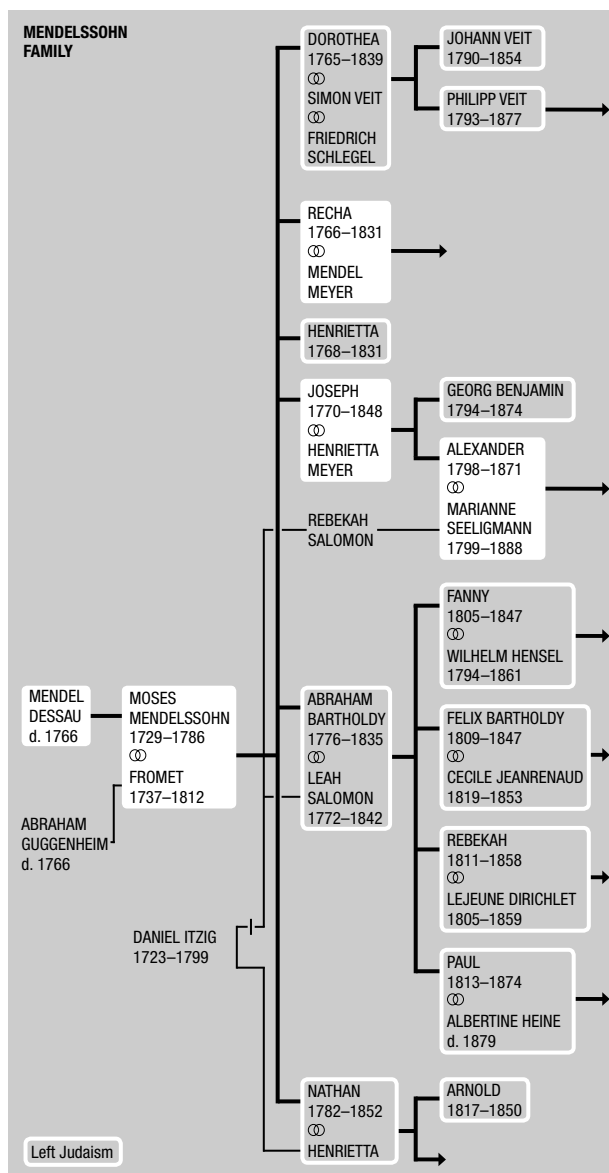

world. He was a member of the administration of the Cantorial School of the Jewish Theological Seminary and a teacher of the traditional style of the prayer services. He served in the U.S. Army with the rank of captain. Mendelson initiated and organized concerts of cantorial music. He assisted in the writing of new compositions in the areas of Jewish and cantorial music and was president of the Cantors' Assembly (1987–89). In 1994 the Jewish Theological Seminary awarded him the degree of Doctor of Music *honoris causa*. His brother is the cantor Jacob Ben-Zion *Mendelson.

[Akiva Zimmerman]

MENDELSSOHN, family of scholars, bankers and artists. The founder of the family was MOSES *MENDELSSOHN (1729–1786). His wife, FROMET (1737–1812), was a great-granddaughter of the Viennese Court Jew, Samuel *Oppenheimer. (See Chart: Mendelssohn Family).

Moses' eldest son, JOSEPH (1770–1848), had a banking business, at times in partnership with his brother ABRAHAM (1776–1835). The bank helped transfer the French indemnity after Napoleon's defeat, and was later active mainly in German and foreign railway issues and state loans, particularly Russian. Mendelssohn and Co. were bankers and correspondents for many foreign commercial banks, central banks, and governments, but did not launch any industrial ventures of their own. After World War I the bank opened an issuing house in Amsterdam. The Berlin house was absorbed by the Deutsche Bank in 1939. Joseph was the friend and patron of Alexander von *Humboldt, the naturalist, and for many years chairman of the corporation of Berlin merchants. He and his brother Abraham were co-sponsors of the enlightened circle of Jewish notables, Gesellschaft der Freunde. His nephew, Abraham's son, the composer FELIX MENDELSSOHN BARTHOLDY (for the Bartholdy see Felix *Mendelssohn) urged him to go through with his old project of an edition of his father's collected works, on the suggestion of F.A. Brockhaus, the noted publisher; in this he was aided by his son, GEORG BENJAMIN (1794–1874), professor of geography at Bonn University. Joseph himself contributed to this project, for which he wrote his father's biography. Of Joseph's sons, Georg Benjamin was baptized; ALEXANDER (1798–1871), head of the bank, remained a Jew. Through social contacts with the *Hohenzollerns, Joseph's grandson FRANZ (1829–1889) and Abraham's grandson ERNST (1846–1909) were elevated to the hereditary nobility.

In 1804, Abraham married Leah Salomon, granddaughter of Daniel *Itzig, and thereby became a naturalized Prussian citizen, ahead of the bulk of his coreligionists. He served for many years as municipal councilor without pay. A deist and rationalist by conviction he brought up his children as Protestants in order to improve their social opportunities. He and his wife embraced Christianity in 1822 "because it is the religious form acceptable to the majority of civilized human beings" (in a letter to his daughter Fanny). This decision to convert was influenced by the current *Hep! Hep! riots (1819).

Later Mendelssohn-Bartholdy descendants include ALBRECHT MENDELSSOHN-BARTHOLDY, editor of the *Europäische Gespräche* in Hamburg, who died in exile in England. Felix *Gilbert, a historian, at the Institute of Advanced Study, Princeton, New Jersey; the philosopher Leonhard *Nelson (1882–1927); KURT HENSEL, a West German diplomat posted to Tel Aviv in 1968. CARL MENDELSSOHN-BARTHOLDY (1838–1897), assisted by his uncle PAUL (1813–1874), wrote the first biography of his father Felix. Felix's nephew SEBASTIAN HENSEL (1830–1898) was the first family chronicler.

Moses' eldest daughter, Dorothea *Mendelssohn-Veit-Schlegel (Brendel, 1765–1839), was married twice: to the banker Simon Veit (see *Veit family) and to Friedrich Schlegel, man of letters. Her sons, Johannes *Veit (1790–1854) and Philipp Veit (1793–1877), were painters of the Romantic "Nazarene" school. HENRIETTE (Sorel; 1768–1831), Moses'

youngest daughter, resembled her father in character. She never married, having his deformity. She served as governess and teacher in Vienna and Paris, where she was head of a boarding school. The intellectual luminaries of the age, Madame de Staël, Spontini, Benjamin Constant, and the Schlegels formed part of her salon. In 1812 she became tutor to the French general Sebastiani's daughter. In that year, following her mother's death, she was baptized into the Catholic Church, taking the name Marie (a few years earlier she had rebuked her sister Dorothea for doing the same). Moses' youngest son, NATHAN, had a son, the physician Arnold Mendelssohn (1817–1850), a supporter and confidant of Ferdinand *Lassalle.

MENDELSSOHN, ARNOLD (1855–1933), composer and organist. Born in Ratibor, Germany, a collateral descendant of Felix *Mendelssohn, Arnold Mendelssohn studied law at Tübingen (1877) and pursued a musical education at the Institut für Kirchenmusik in Berlin (1877–80), where he studied organ with Karl August Haupt, the piano with Loeschhorn, and composition with Grell, Friedrich Kiel, and Taubert. Mendelssohn was organist of Bonn University (1880–82), conductor at Bielefeld (1882–85), professor at the conservatories of Cologne (1885–90) and Darmstadt (1890–1912) and from 1912 of the Hoch Conservatory at Frankfurt, where Paul Hindemith and K. Thomas were his students. Mendelssohn contributed to the renewal of interest in Lutheran church music both by his promotion of the works of Bach and Schütz and through his own compositions, rejecting the romanticized style of his contemporaries and evolving a purer and more appropriate polyphonic liturgical idiom. His compositions include the sacred choral works *Abendkantate* (1881) and *Geistliche Chormusik* (1926); operas, symphonies, chamber music, and songs. He edited Heinrich Schütz's oratorios, some of Monteverdi's madrigals, and wrote essays such as *Gott, Welt und Kunst* (ed. by W. Ewald, 1949).

MENDELSSOHN, FELIX (Jakob Ludwig Felix; 1809–1847), composer. Born in Hamburg, Felix was the grandson of Moses *Mendelssohn and the son of Abraham Mendelssohn, a suc-

cessful banker first in Hamburg and later in Berlin, and Lea Mendelssohn, the granddaughter of Daniel *Itzig (see *Mendelssohn family). His parents had their children baptized and later converted to Christianity themselves. Felix grew up in an intellectual, cultivated atmosphere. The Sunday morning concerts at his parents' Berlin home were notable occasions attended by many celebrities, and most of Mendelssohn's early music was written for these gatherings. Abraham Mendelssohn added the name Bartholdy (after a property that had belonged to his wife's brother) to the family name, stating that "A Christian Mendelssohn is an impossibility." He wished his son to go by the professional name of Felix M. Bartholdy, but he refused to comply and in 1829 conducted under the name Felix Mendelssohn. (His sister Rebecca often signed her letters Rebecca Mendelssohn Meden (the latter meaning "never" in Greek) Bartholdy.)

Mendelssohn advanced rapidly as a composer and pianist. His String Octet, completed in 1825, is a major work of chamber music. Two years later the first public performance of his overture to *A Midsummer Night's Dream* took place, and in 1829, Mendelssohn performed what some believe to be his greatest achievement: the revival of J.S. Bach's *St. Matthew Passion* (at the Singakademie in Berlin), which initiated the renewed popularity of Bach's works. That same year, he made the first of many journeys to England, where his popularity grew. This trip was the first episode in a three-year grand tour that included Scotland, Italy, Switzerland, and France. Some important works of this time, reflecting impressions of his travels, are the *Hebrides Overture* and the *Italian* and *Scotch* symphonies.

In 1833, Mendelssohn was appointed musical director of the Dusseldorf Music and Theater Society; he also supervised the city's church music and directed the subscription concerts of the Society's orchestra. Far more to his liking was his appointment as director of the Gewandhaus concerts in Leipzig in 1835. He continued to be identified with this city for the rest of his life. In 1835 he completed his oratorio *St. Paul* for the Lower Rhine Festival in Duesseldorf (May 1836). Then he traveled to Frankfurt to direct the Caecilien-Verein.

In 1840 Mendelssohn was the most famous living composer in Central Europe. It was therefore inevitable that Frederick William IV, who wished to ensure Prussia's cultural and political supremacy, would summon him to court. In spite of the frustrations of bureaucracy, Mendelssohn did accomplish some good work there, notably the complete incidental music to *A Midsummer Night's Dream*. During this period he also continued writing his many *Songs Without Words*, the most popular piano pieces of their genre. In 1843 he returned to Leipzig and founded the conservatory which became the most renowned institution of its kind in Germany in the 19th century. Mendelssohn's last years saw many triumphs, the greatest of which was the première of *Elijah* in Birmingham (1846). But his strenuous existence as pianist, conductor, composer, and pedagogue had worn him out prematurely. His sister Fanny's sudden death in May 1847 was a shock to his already weakened system, and he died six months later in Leipzig.

Fanny Caecile (Zipporah) *Mendelssohn (1805–1847) was unusually close to her brother Felix, and her marriage to the painter Wilhelm Hensel in 1829 did not weaken this bond. Felix relied upon her musical taste and advice, and six of her songs which were published along with his (without identification) are stylistically indistinguishable from his work. Under her own name, she published four books of piano pieces, two books of solo songs, and one book of part-songs. After her death, a few more piano pieces, some songs, and a piano trio in D major were published.

MENDELSSOHN, HEINRICH (1910–2002), Israeli zoologist. Mendelssohn was born in Berlin and studied zoology there at the Humboldt University. He immigrated to Erez Israel in 1933, continuing his studies at the Hebrew University. From 1947 to 1956 he served as director of the Biological and Pedagogical Institute of Tel Aviv, which became the department of zoology of Tel Aviv University. In 1961 he was appointed professor. Mendelssohn devoted most of his activity to nature conservation. He served as a member of the Nature Conservation Authority and chairman of the Israel Committee for Nature Preservation in Israel of the International Biological Program. He represented Israel on the International Conference of Ecology. He was awarded the Israel Prize in science in 1973.

MENDELSSOHN, KURT ALFRED GEORG (1906–1980), British physicist. Mendelssohn was born in Berlin and educated at Berlin University. Forced to leave Germany, he came to Oxford to work at Clarendon Laboratory in 1933 and was the first person to liquefy helium in Britain. Subsequently F.E. Simon, N. Kurti, and H. London came to Oxford and contributed with Mendelssohn to the establishment of the Clarendon Laboratory as an important center of low temperature research. With the advent of World War II the low-temperature apparatus had to be dismantled and Mendelssohn turned to various collaborative projects in medical physics. After the war he resumed his work on low temperatures in collaboration with a succession of gifted research students, many of whom built up graduate schools of their own after leaving the Clarendon, thus making their mark in low-temperature centers all over the world. In addition to his laboratory work Mendelssohn was closely involved with other low-temperature scientists at the international level. He was chairman and founding member of the International Cryogenic Engineering Com-

mittee and president of Commission A2 of the International Institute of Refrigeration. He was the founder and editor of the journal *Cryogenics*, an international journal of low-temperature engineering and research (1961–65). He was elected fellow of the Royal Society in 1951. As “extramural” activities he was especially interested in China and in the sociological and engineering backgrounds of the Egyptian and Mexican pyramids, publishing and lecturing widely on these topics.

[Bracha Rager (2nd ed.)]

MENDELSSOHN, MOSES (Moses ben Menahem, acronym RaMbeMaN, or Moses of Dessau; 1729–1786), philosopher of the German Enlightenment in the pre-Kantian period, early Maskil, and a renowned Jewish figure in the 18th century. Born in Dessau, son of a Torah scribe, Mendelssohn received a traditional Jewish education under the influence of David *Fraenkel, who was then rabbi of Dessau. When the latter was appointed rabbi of Berlin in 1743, Mendelssohn followed him there in order to pursue his religious studies and to acquire a general education. He earned his livelihood with difficulty while simultaneously studying Talmud diligently and acquiring a broad education in literature and philosophy. In addition to his fluent knowledge of German and Hebrew, he acquired knowledge of Latin, Greek, English, French, and Italian. His teachers were young, broadly educated Jews, such as the Galician immigrant Israel M. Zamosc, who taught him medieval Jewish philosophy, the medical student Abraham Kisch, who taught him Latin, and the well-born Berlin Jew, A.S. Gumpertz, who taught him French and English and in general served as a model of a pious Jew immersed in the larger intellectual world. During this period he met the writer and dramatist G.E. *Lessing (1754) and a deep and lifelong friendship developed between them. In 1750 he became a teacher in the house of Isaac Bernhard, owner of a silk factory; in 1754, he was entrusted with the bookkeeping of the factory and eventually he became a partner in the enterprise. Throughout his life he worked as a merchant, while carrying out his literary activities and widespread correspondence in his free time. Only in 1763 was he granted the “right of residence” in Berlin by the king. In 1762, he married Fromet Guggenheim of Hamburg, and they had six children (see *Mendelssohn family). In 1754 Mendelssohn began to publish – at first with the assistance of Lessing – philosophical writings and later also literary reviews. He also started a few literary projects (for example, the short-lived periodical *Kohelet Musar*) in order to enrich and change Jewish culture and took part in the early Haskalah. In 1763, he was awarded the first prize of the Prussian Royal Academy of Sciences for his work *Abhandlung über die Evidenz in metaphysischen Wissenschaften* (“Treatise on Evidence in Metaphysical Knowledge”). However, when the academy elected him as a member in 1771, King Frederick II refused to ratify its decision. In 1769, he became embroiled in a dispute on the Jewish religion, and from then on, he confined most of his literary activity to the sphere of Judaism. His most notable and enduring works in this area included the translation into

German and commentary on the Pentateuch, *Sefer Netivot ha-Shalom* ("Book of the Paths of Peace," 1780–83) and his *Jerusalem: oder, Ueber religiöse Macht und Judenthum* ("Jerusalem, or On Religious Power and Judaism," 1783), the first polemical defense of Judaism in the German language and one of the pioneering works of modern Jewish philosophy. An active intermediary on behalf of his own people in difficult times and a participant in their struggle for equal rights, he was at the same time a forceful defender of the Enlightenment against the opposition to it which gained strength toward the end of his life. In the midst of a literary battle against one of the leading figures of the counter-Enlightenment, he died in 1786.

Philosophy

Mendelssohn made virtually no claim to be an original thinker in the realm of philosophy. He considered himself to be little more than an exponent of the teachings of the Leibniz/Wolffian school, perhaps contributing a more felicitous and contemporary expression to the demonstrations of God's existence and providence and human immortality that had been propounded by Leibniz and Wolff and their other disciples. Here and there, however, he modestly acknowledged that he was providing a new version of an old argument or even saying something that had not been said before. Mendelssohn first acquired a wide reputation for philosophical acumen with the publication of his prize essay in 1763. The Berlin Academy's question was whether "the truths of metaphysics, in general, and the first principles of natural theology and morality, in particular," can be shown to be as securely established as those of mathematics. Mendelssohn answered that such principles "are capable of the same certainty" but are by no means as easily grasped. After discussing the obstacles to such comprehension, he went on to offer cosmological and ontological proofs for the existence of God. He sought to give the ontological argument an "easier turn" by reversing its usual course and arguing first for the impossibility of God's nonexistence and then against the notion that the most perfect being would enjoy a merely possible existence. In his later works, Mendelssohn continued to reformulate and refine these very same arguments. Following Leibniz, Mendelssohn argued in a number of writings that the combination of divine goodness and greatness known as providence brings into being "the best of all possible worlds." Like his mentor, he could maintain this position only by adducing the evidence of the afterlife. He first examined this question in his most celebrated philosophical work, *Phädon, oder ueber die Unsterblichkeit der Seele (Phaedo, or on the Immortality of the Soul, 1767; Eng tr., 1784)*, which borrows its form but not its substance from Plato's dialogue of the same name. Mendelssohn was encouraged in this project by his correspondence with Thomas Abbt (1738–1760), a professor at the University of Frankfurt, about the destiny of man and the fate of the soul after death. He placed in the mouth of his Socrates arguments that he had admittedly derived from his own recent predecessors, including such thinkers as the natural theologian Hermann Samuel Reimarus and the liberal

Protestant theologian Johann Joachim Spalding. Mendelssohn developed his thesis along Leibnizian lines: things that perish do not cease to exist; they are dissolved into their elements. The soul must be such an element or substance, rather than a compound, since it is the soul that imposes a unifying pattern on the diverse and changing elements of the body. Hence it is neither weakened by age nor destroyed by death. However, this line of argument demonstrates only that the soul is imperishable and not that it will retain its consciousness in a future state. This is guaranteed by the goodness of God, who could not conceivably have created rational beings only to deprive them after a brief interval "of the capacity for contemplation and happiness." Nor would God ever have aroused his rational creatures to desire eternal life had He not allotted it to them. It is, moreover, impossible to vindicate divine providence without reference to a future life. In Mendelssohn's later *Sache Gottes*, his reworking of the *Causa Dei*, Leibniz's abridgement of his Theodicy, he spelled out most clearly his principal difference with his philosophical mentor's conception of the afterlife. Unlike Leibniz, who had sought to show how most human souls were destined for eternal damnation even in the best of all possible worlds, Mendelssohn maintained that all posthumous punishments would be both corrective and temporary. Divine goodness guaranteed that every human being was destined ultimately to enjoy "the degree of happiness appropriate for him." Following Wolff, Mendelssohn affirmed that the fundamental moral imperative is a natural law obliging all rational beings to promote their own perfection and that of others. Unlike Wolff, he did not elaborate all the ramifications of this natural law. But he clearly saw perfection in much the same terms as Wolff, as an unending process of physical, moral, and intellectual development, leading naturally to the increase of human happiness. In sharp contrast to Wolff, Mendelssohn regarded liberty as an indispensable precondition of the pursuit of moral and intellectual perfection. Only a free person, he argued, can achieve moral perfection. For virtue is the result of struggle, self-overcoming, and sacrifice, and these must be freely chosen. Intellectual perfection, too, can be attained only by one who is free to err. So, in place of Wolff's tutelary state, Mendelssohn developed a contractarian political philosophy that left individuals largely free to define their own goals. Insisting above all on the inalienable liberty of conscience, he decried any state attempt to impose specific religious behavior or to discriminate against members of any minority faith.

In time Mendelssohn himself came to see weaknesses in the philosophical structure that he had once upheld unquestioningly. Confronted, toward the end of his life, by the irrationalism of F.H. Jacobi and by the new critical philosophy of Immanuel Kant, whom he called the "all-crusher," he felt compelled to acknowledge the insufficiency of rationalist metaphysics. In his fullest exposition of the philosophy to which he owed his allegiance, *Morgenstunden, oder Vorlesungen ueber das Dasein Gottes* ("Morning Hours, or Lectures on the Existence of God," 1785), he sorrowfully ceased to reaffirm its

irrefutable truth. Yet, whatever speculative reason might seem to teach, he now argued, common sense still sufficed to orient people and guide them along the path to the most important truths. Just what Mendelssohn meant by common sense has been a subject of much dispute, both among his contemporaries such as Thomas Wizenmann and Kant himself and among modern scholars. But, however he conceived of this faculty, it is clear that he did not believe that it would necessarily remain humanity's last resort. For, in the "cyclical course of things," providence would no doubt cause new thinkers to arise who would restore metaphysics to its former glory.

Critic of German Literature

During the period in which his first philosophical writings appeared, Mendelssohn also began to publish critical articles in the *Bibliothek der schönen Wissenschaften und der freien Künste* (1757–60), a periodical edited by the bookseller and publisher Friedrich Nicolai (1733–1811), his closest friend after Lessing. While his first reviews were mainly concerned with philosophical works, he also took up literary criticism which was published in Nicolai's second periodical *Briefe die neueste Literatur betreffend*, behind which Mendelssohn was a moving spirit. At this time German literature, which was still in an early stage of its development, was struggling for recognition and a position in the cultural life of Germany which was dominated by Latin and French. Nicolai, Lessing, J.G. Herder, and others accomplished a kind of cultural revolution by adopting German as the language in which to express their innovative ideas. Mendelssohn became a natural ally of these writers, who did not identify with the academic and intellectual establishment, which, in turn, looked upon them, "Nicolai's sect," with contempt and suspicion. Like them, Mendelssohn was not a member of the establishment; like them, he sought to renovate his spiritual world and was distinguished for his universal humanist aspirations, which, like them, he chose to express in German. Mendelssohn found himself so much at ease in this cultural milieu that he embarked upon an offensive war in support of the use of the German language, even venturing to criticize King Frederick II himself for the publication of a book of poems in French. "Will the Germans never be aware of their own value? Will they forever exchange their gold (i.e., their basic thinking) for their neighbors' tinsel?" (i.e., French literature). The aesthetic writings of Mendelssohn attest to the supreme value which he attributed to beauty and above all to poetry. Mendelssohn's philosophic style in German was recognized by all, including Lessing, Herder, and Kant, as one of the best of his time, but his talent for poetic expression was limited, a fact which he admitted himself.

The Dispute with Lavater

Mendelssohn's longstanding effort to keep his Jewishness out of the public eye was brought to an end by Johann Caspar Lavater (1741–1801), a Swiss scholar and Lutheran clergyman renowned for his writings on human physiognomy, who challenged him to clarify his religious position. As a young man, Lavater had met Mendelssohn in Berlin (1763) and had been

deeply impressed by his tolerant attitude toward Christianity, his appreciation of its moral value, and his general philosophic approach. In the summer of 1769, he translated into German a section of *La Palingénésie philosophique* by the Calvinist Charles Bonnet (1720–1793), professor of philosophy and psychology in Geneva, which to his mind had satisfactorily proved the truth of Christianity. Activated by his strong millenarian belief in the necessity of the Jews' conversion, Lavater dedicated this translation to Mendelssohn. He called upon him either to refute it publicly or "to do what wisdom, love of truth, and honor require, and what Socrates would have done had he read the treatise and found it irrefutable." Profoundly distressed by this challenge, Mendelssohn felt compelled to respond to Lavater in public, which he did in a polite and restrained but forceful manner (*Schreiben an den Herrn Diaconus Lavater zu Zürich*, 1770). Eschewing the two alternatives presented to him by his adversary, Mendelssohn instead explained why his religion and his philosophy as well as his marginal position in the world militated against his participation in interreligious polemics. The Torah, he maintained, was given solely to the people of Israel, who are therefore the only ones bound by it; all other men are only obliged to abide by the law of nature and the religion of the patriarchs embodied in the "Noachide Laws." A religion that does not conceive of itself as the exclusive path to salvation, Judaism is devoid of any missionary tendencies, discouraging even those who seek to convert. In general, said Mendelssohn, one should not challenge other people's fundamental religious conceptions, even if they are based on error, as long as they serve as the basis for social morality and do not undermine natural law. Finally, as a Jew in a country like Prussia where the Jews enjoyed only a limited amount of freedom, Mendelssohn felt that it was advisable to abstain from religious disputes with the dominant creed. "I am a member of an oppressed people," he said. Mendelssohn thus avoided dealing with the fundamental questions posed by Lavater; he did not publicly attack Christianity nor did he provide a comprehensive philosophical rationale for his adherence to Judaism.

Far from putting an immediate end to the matter, Mendelssohn's missive evoked a new response from Lavater, in which he simultaneously apologized for his intrusiveness and persisted in his conversionary efforts. Mendelssohn, however, once again refused to take the bait and did his best to bring the dispute to an amicable conclusion. Only in his *Gegenbetrachtungen über Bonnets Palingénésie* ("Counter-reflections on Bonnet's Palingénésie"), which remained unpublished until the middle of the 19th century, and in private letters, some of which were addressed to Bonnet himself, did he lay bare his objections to Christianity and articulate a defense of Judaism. The general debate that swirled around the controversy between Lavater and Mendelssohn continued until the beginning of 1771 and resulted in the publication of a large number of booklets and pamphlets, most of them sympathetic to Mendelssohn. This confrontation nevertheless upset Mendelssohn to such an extent that for over seven years

he suffered from a disease that prevented him from pursuing his philosophic studies.

Activities in the Realm of Jewish Culture

In the middle 1750s, at around the same time that his first German-language publications were seeing the light of day, Mendelssohn produced his earliest writings in Hebrew. They consisted of anonymous contributions to *Kohelet Musar* ("Preacher of Morals"), a periodical he co-edited with Tobias Bock. Although the two men managed to publish only two eight-page issues, their effort nevertheless constituted a revolutionary turning point in the development of Jewish culture. It marked the first occasion on which Jewish intellectuals attempted to introduce into their own culture an innovative form of publication then quite popular and influential in Germany, England, and elsewhere, the "moral weekly." Here some of the ideas of the moderate Enlightenment were first presented to Jewish readers in the Hebrew language known to the community's educated elite and couched in terms familiar to them. Above all, the publication by two laymen of a periodical aimed at the moral improvement of the Jewish population amounted to an unprecedented subversive measure in a world in which the rabbinical elite was acknowledged to be the absolute authority in such matters. The weekly called on the Jews to fill their lungs with the air of natural life, to observe freely the beauty of nature, to nurture their sense of aesthetics and harmony. It proclaimed their right to delight in a world that is, as Leibniz taught, the best of all possible worlds created by God. Man, "God's finest creature," is at the center of nature, and it is unthinkable that the Jew, of all people, should repress his humanistic traits. Man can discover the majesty of the Almighty and His powers by observing the creation of the great architect of the world. *Kohelet Musar's* transmission of such messages appear to have made no significant impression on the Jewish society of the 1750s but it did pave the way for the publication, decades later, of a much more influential successor, the maskilic journal *Ha-Me'assef*.

In the decades following this abortive effort Mendelssohn's writings in the Hebrew language were limited in number. In 1761 he published a commentary on Maimonides' *Millot ha-Higgayon* ("Logical Terms") and in 1769 or 1770 he published a commentary on the biblical book of Ecclesiastes. The former volume consisted of a republication of Maimonides' introduction to logic and philosophical primer together with an introduction and commentary designed not only to clarify Maimonides' work but to bridge the distance between medieval Jewish philosophy and the regnant philosophy of Mendelssohn's own day. The latter utilized the text of Ecclesiastes to expound in a popular form an essentially Wolffian teaching with regard to two principal tenets of natural religion, providence and immortality of the soul. At the end of the introduction to this commentary, Mendelssohn announced that if it were well received he would attempt to write similar works on Job, Proverbs, and Psalms but he never carried this plan to completion.

What Mendelssohn did instead was to translate books of the Bible into German. As early as 1770, in a letter to Michaelis, he had mentioned the publication of a German translation of Psalms, which would act as a counterbalance to the translations and commentaries written in the spirit of Christianity. After laboring on this work for 13 years, he finally published it in 1783. The principal work among his biblical translations was, however, the version of the Pentateuch that accompanied the *Bi'ur*, a commentary that he and a group of his associates, including Naphtali Herz *Wessely and Herz *Homberg, collectively composed (*Bi'ur*, 1780–83; see *Bible: Translations, German). This translation began, by Mendelssohn's own account, as a project for the instruction of his sons, yet he soon recognized its general utility. In his overall introduction to it he explained that it was designed to provide the younger generation of Jewish students with an alternative to the extant Yiddish translations, which failed to do justice to the beauties of the original, and the available Christian translations, which strayed too far from the Masoretic text and traditional rabbinic interpretations of it. Elsewhere, in a private letter to his non-Jewish friend August Hennings, Mendelssohn described the translation as a "first step toward culture" for his nation. The German text of the translation was written, in accordance with the custom that prevailed among German Jews, in Hebrew characters, and the commentary, *Bi'ur*, in Hebrew. In addition to serving, as David Sorkin has put it, as "a usable digest of the medieval literalist tradition," the commentary provided Mendelssohn with a venue for the articulation of the theological views that he was soon to spell out more systematically in Jerusalem.

Despite its declared conservative aims, the translation project faced opposition from the very moment that Mendelssohn and his collaborator Solomon Dubno published a sample of their work, entitled *Alim li-Terufah* (1778). Rumors of the protestations of R. Ezekiel *Landau of Prague and actual reports of the opposition of R. Raphael Kohen of Altona soon reached Mendelssohn along with the news of a plan to excommunicate him and a campaign to organize a united rabbinical front against the *Bi'ur*. Averse to any direct confrontation with his adversaries and fully committed to the principle of free speech, Mendelssohn sought to deter any action by Rabbi Kohen not by silencing him but through behind-the-scenes maneuvers. He prevailed upon his friend August Hennings to arrange for subscriptions to the *Bi'ur* to be taken out in the name of the Danish king, Christian VII, Rabbi Kohen's sovereign. Hennings' success in this endeavor greatly enhanced the prestige of the maskilic literary project and earned it a measure of immunity from its opponents' machinations.

Immediately after its publication the *Bi'ur* was adopted as a textbook for biblical instruction at the Freischule (free school) co-founded by the brothers-in-law David *Friedlaender and Daniel Itzig. While Mendelssohn was not directly involved in the founding of this school, he nevertheless supported it and also contributed to its revolutionary new textbook, the *Lesebuch fuer jüdische Kinder* ("Reader for Jewish

Children”), in which he published a translation of Maimonides’ 13 Articles of Faith. The last of Mendelssohn’s biblical translations to appear in print was his translation of the Song of Songs with commentary, which was published posthumously (1788).

Activities for the Improvement of the Civic Status of the Jews

Prior to the controversy with Lavater, Mendelssohn had not campaigned for the improvement of the civic status of the Jews, but from the 1770s onward he became something of an activist on their behalf. He willingly replied to anyone who came to him for counsel or guidance, endeavoring to assist within the limits of his means any Jew who had been overtaken by misfortune or who had become embroiled in difficulties with the authorities. He also came to the aid of beleaguered Jewish communities, taking advantage of his reputation in order to request help from various renowned personages whom he had befriended. After receiving an appeal for help from the tiny Jewish community of Switzerland in 1775, he enlisted none other than Lavater in a successful effort to forestall imminent anti-Jewish measures. When the community of Dresden was threatened by an expulsion order in 1777, he prevailed upon one of the leading officials of Saxony, who ranked among his admirers, to prevent any action against it. In the same year his brief on behalf of the community of Königsberg enabled it to refute the accusation that the *Aleinu* prayer was anti-Christian and led to the abrogation of the royal edict requiring the presence of a government-appointed “supervisor” in the city’s synagogue during the recitation of prayers. Yet Mendelssohn did not always see eye to eye with the people who requested his assistance. In 1772, when the duke of Mecklenburg-Schwerin issued an order to his Jewish subjects prohibiting the religious custom of immediate burial and requiring a three-day waiting period before interment, the local community called upon Mendelssohn to intercede on its behalf. He dutifully composed a memorandum to the duke in which he recommended that the Jews be permitted to maintain their existing custom as long as they obtained medical certification of death prior to burial. At the same time, he maintained in his correspondence with the Jews of Mecklenburg-Schwerin that their resistance to the duke was unwarranted, since the three-day waiting period was reasonable, prudent, and not without ancient precedent and talmudic justification. While his memorandum inspired the duke to replace his earlier edict with a regulation along the lines of his suggestion, his letter to the community met with the disapproval of the local rabbi. More importantly, it also aroused the ire of Jacob *Emden, who accused Mendelssohn of being too ready to relinquish the requirements of Jewish law and to adopt the ways of the Gentiles. Even in the face of Emden’s dire warnings that he was increasingly being regarded as someone who was edging toward heresy, however, Mendelssohn did not retreat from his position on this matter.

Mendelssohn’s involvement in the public debate on the civic status of the Jews commenced with a request emanating

from France. Cerf Berr, the leading figure in Alsatian Jewry, asked Mendelssohn in 1780 to write a memorandum on the question of the rights of the Jews to be submitted to the French Council of State. Believing that it was Gentiles – enlightened Christians who sought an improved society – who should raise this question, Mendelssohn turned to Ch.W. von *Dohm, who participated in the composition of the memorandum and shortly thereafter wrote his *Ueber die buergerliche Verbesserung der Juden* (*Concerning the Amelioration of the Civil Status of the Jews*, 1781), which became the classic work in the struggle for Jewish emancipation. Despite his broad sympathy with the aims of this volume, Mendelssohn was not completely satisfied with it in every aspect. He expressed his reservations in his introduction to a German translation of the apologetic tract composed a century earlier by *Manasseh Ben Israel, *Vindiciae Judaeorum* (1782). Contesting Dohm’s negative appraisal of the Jews’ economic role, Mendelssohn insisted upon the productivity and usefulness of Jewish merchants and middlemen. He rejected Dohm’s recommendation to preserve a limited judicial autonomy for the Jewish community and especially his argument that the community ought to retain the right of excommunication. According to Mendelssohn, the exercise of religious coercion of any kind was utterly unwarranted and incompatible with the spirit of “true, divine religion.”

The views of Dohm and Mendelssohn aroused criticism and controversies. Among the critics was J.D. Michaelis (1717–1791), a theologian and professor of Semitic languages, who decades earlier, in his review of Lessing’s play *The Jews* (1754), had denied that a Jew could exemplify a noble person. Now Michaelis argued that the Jews’ anticipation of the arrival of the messiah and their return to Zion together with their burdensome laws made it impossible for them to identify completely with their host country or to fulfill civic obligations, such as military service. Mendelssohn retorted that the Jews’ messianic hopes would have no influence whatsoever on their conduct as citizens and that they had in any event been expressly forbidden by the Talmud even to think of returning to Palestine on their own initiative. He brushed off concerns that the Jews would be unable to serve in the military by noting that they, no less than the Christians before them, would know “how to modify their convictions and to adjust them to their civic duty.”

Mendelssohn’s Jerusalem

Among the reactions to Mendelssohn’s introduction was a pamphlet, published anonymously in 1782, entitled *Das Forschen nach Licht und Recht in einem Schreiben an Herrn Moses Mendelssohn auf Veranlassung seiner merkwürdigen Vorrede zu Menasseh Ben Israel* (*The Search for Light and Right, an Epistle to Moses Mendelssohn occasioned by his Remarkable Preface to Menasseh ben Israel*). Now known to have been authored by a minor writer by the name of August Friedrich Cranz, the pamphlet accused Mendelssohn of having undermined the authority of Judaism with his blanket denial of the legitimacy of any form of religious coercion. “Clearly,” Cranz

wrote, “ecclesiastical law armed with coercive power has always been one of the cornerstones of the Jewish religion of your fathers... How then can you, good Mr. Mendelssohn, profess attachment to the religion of your forefathers, while you are shaking its fabric, by impugning the ecclesiastical code established by Moses in consequence of divine revelation?” On this occasion, Mendelssohn felt that it was his duty to answer his critic and wrote his *Jerusalem* primarily in order to do so. But the book ranged far beyond an answer to Cranz to articulate a full-blown philosophy of Judaism, the first to be developed in modern times.

STATE AND RELIGION. In the first part of *Jerusalem* Mendelssohn expounded a political theory clarifying the grounds for his opposition to religious coercion. His account of “the origin of the rights of coercion” belonging to the state restricted such rights to the sphere of transferable goods. This does not encompass convictions, inalienable by their very nature. Hence the state can never acquire the right to make any religious demands upon its citizens, and its grant of even the smallest privilege or exclusive right to members of any particular religion is entirely devoid of legitimacy. Mendelssohn nevertheless advised the state not to intervene directly but to “see to it from afar” that such subversive doctrines as “atheism and Epicureanism” are not propagated in its midst. And he declared churches no more entitled than states to resort to coercion in matters of faith, since “a religious action is religious only to the degree to which it is performed voluntarily and with proper intent.” Only after having thus reiterated and amplified his opposition to religious coercion of any kind did Mendelssohn refer to the claim of *The Search for Light and Right* that his own adherence to Judaism was incompatible with his liberal principles. Once he had restated Cranz’s argument, he acknowledged that it cut him to the heart but did not hasten to refute it. He first explained more systematically and in greater detail than ever before why he remained convinced of the veracity of Judaism and what he considered to be its nature and purpose.

JUDAISM. Drawing a fundamental distinction between the supernatural revelation of a religion and supernatural legislation, Mendelssohn identified Judaism exclusively with the latter. The former, he argued, does not truly exist, since God makes known the basic truths of religion – the existence and unity of God, divine providence, and the immortality of the soul – not by disclosing them miraculously to any particular group of people but by granting all men the degree of reason required to grasp them. Revelation could not, in any case, convince any man of the validity of something his reason could not understand. Nor would a just God ever have vouchsafed the truths indispensable to human happiness to some peoples and not to others. What distinguished the people of Israel was not their religion, with which they had presumably been imbued already prior to the Sinaitic revelation, but the unique laws, statutes and commandments that were given to them on that occasion. That God spoke at Sinai is for Mendelssohn a

vérité de fait, an established historical fact, because it was indubitably witnessed by the entire people of Israel. The best statement of the quintessence of the legislation He then revealed, according to Mendelssohn, was the one uttered by Hillel the Elder: “Love thy neighbor as thyself. This is the text of the law; all the rest is commentary.” But in *Jerusalem* Mendelssohn devoted his energies much less to an elucidation of the humanitarian dimension of biblical law than to a somewhat tentative explanation of the purpose for the rituals it prescribed.

Although humankind possessed from the outset the capacity to grasp on its own the fundamental truths of natural religion, Mendelssohn wrote, it eventually descended into idolatry. To account for this corruption of religion he resorted to what was, in Alexander Altmann’s opinion, “the least substantiated of all theories he ever advanced.” The primary cause of the religious deterioration of humankind was, according to this theory, hieroglyphic script. Men initially employed hieroglyphic signs derived from images of animals to symbolize the deity. In the course of time, however, they fell victim to their own misunderstanding and the manipulations of unscrupulous priestly hypocrites and came to regard these signs themselves as deities, to worship them and even to offer human sacrifices to them. In response to this debasement of humankind, Mendelssohn maintained, God ordained the ceremonial law of the Pentateuch. Through its eschewal of all imagery and its concentration on actions this law avoided the hazards of hieroglyphic script. Its main purpose, however, was not prophylactic but positive – to connect vital knowledge with required practices. The ceremonial laws “guide the inquiring intelligence to divine truths, partly to eternal and partly to historical truths” upon which Judaism is founded. God gave the commandments only to Israel, but He did not do so, according to Mendelssohn, for its sake alone. Israel was to be a priestly nation, a nation that “through its laws, actions, vicissitudes, and changes was continually to call attention to sound and unadulterated ideas of God and His attributes. It was incessantly to teach, to proclaim, and to endeavor to preserve these ideas among the nations, by means of its mere existence, as it were.”

At the conclusion of *Jerusalem* Mendelssohn indicated how his account of Judaism was meant to dispel the objections raised by “the Searcher after Light and Right.” Composed of religious doctrines acquired by purely rational means and a revealed legislation designed to remind its practitioners of these truths as well as their own people’s historical record, Judaism cannot be conceived as a religion authorizing temporal punishments for unbelievers or those who adhere to false doctrines. While it is true that the original constitution of Israel provided for a polity in which religion and state were identical and in which a “religious villain” was a criminal, this “Mosaic constitution” existed only once and has disappeared from the face of the earth. Since the destruction of the Temple in Jerusalem, religious offenses have ceased to be offenses against the state and the Jewish religion “knows of no punishment, no other penalty than the one the remorseful sin-

ner voluntarily imposes on himself.” Contemporary Judaism could thus be seen to be fully in accord with Mendelssohn’s own liberal principles, even if the original “Mosaic constitution” was not.

Jerusalem evoked little response in the Jewish community. Rabbis and maskilim alike paid only very limited attention to it. In the years following its publication Mendelssohn learned to his dismay that he would find few supporters for the positions he took in *Jerusalem*. Enlightened thinkers who shared his appreciation of natural religion were alienated by his reaffirmation of revelation and his insistence on the obligatory character of the ceremonial law. The orthodox rejected his absolute denial of the right of religious institutions to wield coercive authority, and the earliest representatives of what Isaiah Berlin called the “Counter-Enlightenment” assailed the very rationalism in which his arguments were rooted.

The “Panthéism Controversy”

Mendelssohn’s most consequential brush with the Counter-Enlightenment resulted not from the publication of *Jerusalem* but from his plan to produce an essay on the character of his lifelong friend, G.E. Lessing, who had died in 1781. Lessing, whose early support had been so crucial to Mendelssohn, had always been an interlocutor whom he cherished, even when they disagreed over matters of great importance, such as the views he had expressed in his *Die Erziehung des Menschengeschlechts* (*The Education of the Human Race*) on the nature of revelation and human progress. Lessing, for his part, had composed shortly before his death his famous play in support of religious toleration, *Nathan the Wise*, whose eponymous hero was unmistakably patterned after Mendelssohn himself. Upon learning in 1783 from one of his friends, Elise Reimarus, that Mendelssohn was on the brink of returning Lessing’s literary favor by writing an essay extolling his deceased friend’s character, Friedrich Jacobi, one of the avatars of the Counter-Enlightenment, claimed that Lessing had admitted to him during the last years of his life that he had been a Spinozist. What Jacobi wished to do was not so much to expose Lessing’s clandestine heresy as to point to Lessing’s intellectual evolution as evidence supporting his own general thesis that reason necessarily leads to nihilism. What he succeeded in doing was to deflect Mendelssohn from his original purpose and to force him to interpret Lessing’s alleged Spinozism in a way that warded off any distressingly close association between the thought of the Enlightenment and the philosophy of a man reviled almost everywhere as an atheist. Mendelssohn’s arduous efforts to do this in the face of Jacobi’s relentless attacks sapped his remaining strength. A few days after he sent to his publisher his last work on this subject, *An die Freunde Lessings* (“To Lessing’s Friends,” 1786), he died.

Appreciation and Influence

The Leibniz/Wolffian philosophy that Mendelssohn spent a lifetime defending did not long survive his own demise. Its foundations were undermined by Immanuel Kant – a fact that Mendelssohn recognized toward the end of his life. Nor

did the philosophy of Judaism that Mendelssohn outlined in the *Bi’ur*, *Jerusalem*, and elsewhere provide a satisfactory understanding of their religion for more than a few of the inquiring minds of the coming generations. Nor, finally, did Mendelssohn’s efforts to win equal rights for European Jews yield any immediate results. On the other hand, there is no doubt that Mendelssohn’s contribution to Jewish thought served as a reference point, focus, and challenge to later thinkers. From the standpoint of the history of modern Jewish philosophy, or the history of biblical translation and exegesis, Mendelssohn’s thinking with regard to the age of emancipation and secularization are of great importance. Thus on topics such as the place of the Jewish community in the modern state, the validity of *halakhah*, the belief in divine revelation, the relations between religion and community, the question of coercion in religious matters, and the status of the commandments, Mendelssohn not only asked questions, but also proposed answers that were of great significance for modern Jewish thought. Finally, his *Bi’ur* played an incalculably large role in fostering the development of the Haskalah in Eastern Europe.

Already in his own time Mendelssohn became a legend and in the centuries after his death he became a symbolic hero or villain to Jews of very different stripes. In the 19th century Jewish historians in Germany proudly placed Mendelssohn at the threshold of a new era in the history of the Jews, cementing his image as the founding father of the Haskalah and the patron saint of German Jewry. They placed special emphasis on his role as the first harbinger of a favorable turning point in Gentile-Jewish relations in the European states. The deep ties of friendship between Mendelssohn and Lessing were represented as the ideal model of the longed-for future, a symbol of the respectable status and legal equality finally obtained by German Jewry nearly a century after Mendelssohn’s death. Above all, this friendship represented in the eyes of German Jewish historians and thinkers the beginnings of a moderate integration of the Jews into German life, a social absorption that stopped short of complete assimilation. For Mendelssohn, as the chroniclers of his life and times correctly noted, knew how to parry all attempts to bring him over to Christianity. The writings of these historians and thinkers, for whom Mendelssohn was a cultural hero of enormous proportions, reflected the predominant image of Mendelssohn in the cultural memory of German Jewry. Mendelssohn was the Jew with whom it was easy to identify, the Jew who brought honor to Judaism, who proved that a modern Jew can simultaneously be a loyal German citizen at home in the German language and German culture and maintain his ties to the Jewish community and Jewish culture. In the eyes of many he was the prototype of the age of Jewish emancipation and integration into the middle class and served as a kind of entrance ticket into the state and society. Thus the historical Mendelssohn became a very precious resource to German Jews, who for many years had again and again to prove in the public arena their fitness to be accepted and to be treated no differently from members of

the majority. Mendelssohn became the ideal representative of those who dreamed of German-Jewish relations in far-reaching terms of “symbiosis.”

At the very same time that this Mendelssohn myth grew and flourished, the spokesmen of the more conservative camp in modern Jewish society developed a counter-myth. The members of this camp vigorously repudiated the ideas of change and transition in the fate of the Jews that were linked to the historical Mendelssohn and denied the necessity for breaking out of the confines of the traditional, religious Jewish way of life. They looked with alarm on the processes of modernization and dreaded a general collapse of the structure of Jewish life. The increasing focus on studies outside the realm of Torah, particularly philosophy, seemed to them to be the gateway to apostasy. In these people’s eyes Mendelssohn loomed as a demonic historical figure, a destructive force responsible for all the crises of the modern era: assimilation, the demolition of the traditional community, the loss of faith, religious permissiveness, and the weakening of the authority of the rabbinical elite. They painted a picture of the past diametrically opposed to that of enlightened, liberal Jewry.

Over the years, both Mendelssohn’s admirers and detractors have seen him through a similar lens: both the myth and the counter-myth assigned him the proportions of a giant possessing enormous power to set the wheels of Jewish history in motion. They identified him for better or worse as the man who represented, symbolized, and sparked all the forces of change of the modern era: Haskalah, religious reform, secularization, assimilation, and integration and the rest of the terms that generally describe the processes of modernization that have influenced the Jews over the course of the past two and a half centuries. In recent decades, however, modern scholarship on Mendelssohn has taken a more objective, balanced, and nuanced approach that has consisted of efforts to demythologize him without overlooking his importance. Mendelssohn is no longer considered to have been the founder of the Haskalah movement, which was actually initiated by the members of a younger generation, the most prominent among them being Isaac *Euchel. Scholars now view him less in emblematic terms than as a man whose life was highly complex and full of frustrations, conflicts, dreams, and disappointments.

Collected Works and Translations of Works

The Jubiläumsausgabe of Mendelssohn’s collected works (Stuttgart, 1971–2004) now includes 24 volumes. English translations include *Jerusalem and other Jewish Writings* (by A. Jospe, 1969), *Moses Mendelssohn: Selections from his Writings* (E. Jospe, 1975), *Jerusalem* (by A. Arkush, 1983), *Philosophical Writings* (D. Dahlstrom, 1997).

MENDELSSOHN HENSEL, FANNY CAECILIE (1805–1847), pianist and composer. Born in Hamburg, the eldest of four children of Lea and Abraham Mendelssohn, she was part of a close family circle that included many intellectuals, including her grandfather, Moses *Mendelssohn. Along with her siblings, Fanny was secretly converted to Christianity by her father, Abraham, in 1816. He and his wife were baptized in 1822. The name “Bartholdy,” which came from a family real estate holding, was then added to their surname to establish them as Christian and distinct from their Jewish extended family. The Mendelssohn Bartholdys distanced themselves from Judaism, but continued relationships with Jewish relatives. For them, Protestant Christianity reflected the highest levels of civilization, morality, enlightenment ideals, and toleration. Despite their conversions and dedication to German culture, the family experienced antisemitism at many levels.

Fanny was well educated. In 1820 she and her brother Felix *Mendelssohn, also a child prodigy, were admitted to the Sing-Akademie in Berlin under C.F. Zelter. While Fanny Mendelssohn displayed extraordinary musical talents, her professional ambitions were not encouraged. Although she and Felix both studied composition with Zelter, Fanny was always told that her future was to be a wife and mother. Felix, with whom she had a complex relationship, delighted in her musical compositions but discouraged their publication. Fanny advised Felix on his compositions and greatly aided him on various projects. The siblings had an important musical collaboration throughout their lives that has only recently been recognized.

Fanny met the artist Wilhem Hensel, the son of a Lutheran pastor, when she was 15. Despite her mother’s objections, they married in 1829 and had one child, Sebastian, in 1832. Her husband encouraged not only her piano playing but her composition and conducting.

Fanny composed lieder, cantatas, and instrumental works for her own family and friends’ entertainment. According to the fashion in Berlin, she held musical salons, *Sonntagsmusik*, at her family home, where she performed, conducted, and gave life to some of her own music. Over the years, her series grew in reputation and Berlin society, nobility, and famous personalities such as Franz Liszt attended and admired the skills of Frau Hensel.

In 1846, Mendelssohn composed her masterpiece, the *Trio in D Minor for Piano, Violin and Cello*, and in that same year, with Felix’s blessing, she published *Sechs Lieder*, Opus 1 (1846) and *Vier Lieder fuer das Pianoforte*, Opus 2 (1846). The following year she continued to release compositions, some of her *Gartenlieder: Sechs Gesange fuer Sopran, Alto, Tenor und Bass*, Opus 3 (1847), *Six Melodies for Piano*, Opus 4, no. 1–3 and Opus 5, no. 4–6 (1847). Additional works were published

posthumously but most of Mendelssohn's over 500 compositions remain unpublished. Those that were encountered skepticism, as it was then considered impossible for a woman to have the creative power to compose music with any depth. Fanny Mendelssohn died suddenly of a stroke while rehearsing for a concert. She had completed her last composition, *Bergeslust* (Mountain Pleasure), just the day before.

MENDELSSOHN-VEIT-SCHLEGEL, DOROTHEA (1764–1839), woman of letters and convert to Christianity. Born in Berlin, as Brendel, Dorothea was the eldest daughter of Fromet and Moses *Mendelssohn. She was taught German, French, music, and drawing, but seems not to have received a thorough Jewish education. Her friendship circle of Jewish girls included the future *salon hosts Rahel Levin *Varnhagen and Henriette de Lemos *Herz. Dorothea's parents arranged her engagement with Simon Veit, son of a prominent Berlin family, when she was 14 and the couple married in 1783. Two of their four children, Jonas and Philipp, survived to adulthood. Moses Mendelssohn died in 1786 believing his daughter was happily married.

During the 1790s, Brendel began to call herself Dorothea; she socialized with Christian intellectuals, hosting a reading club and joining a secret society. In 1797, Dorothea fell in love with Friedrich Schlegel (1772–1829), an up-and-coming literary critic, and after much introspection, she left her husband. When they were officially divorced in 1799, she received custody of Philipp. With her divorce Dorothea forfeited her right to live in Berlin; she became estranged from her Mendelssohn siblings, and lost many of her Christian friends. For years she led a peripatetic life with Schlegel, roaming from Jena to Paris to Vienna to Rome and back again to Vienna, where their home became a social and intellectual center.

In 1804, Dorothea became a Protestant and the couple married; four years later both she and Friedrich became Catholics. Although Dorothea's exit from Judaism was particularly stormy, ultimately four of the six Mendelssohn siblings became Christians, two of them Catholics and two of them Protestants. Neither of the siblings who remained Jewish was involved in Jewish institutions or causes.

Dorothea and Friedrich were often impoverished, and she did her part to support them by editing his work, publishing a novel, *Florentin* (1801), and editing and translating medieval texts. All of her work was published under her husband's name. Her novel has been edited by L. Weissberg (*Florentin. Roman, Fragmente, Varianten* (1987)). The Schlegels' letters have been edited by E. Behler (*Briefe von und an Friedrich und Dorothea Schlegel* [1980]). Schlegel's two sons with Veit also became committed Catholics and flourished in Rome as painters in the Nazarene style. After Friedrich died in 1829, Dorothea made peace with her Mendelssohn siblings and they provided financial support during her decade as a widow.

Scholars continue to ponder the significance of Dorothea Mendelssohn-Veit-Schlegel's life, trying to understand her at-

titude to Judaism and the motives for her two conversions. Her dramatic life journey demonstrates that Moses Mendelssohn's important Enlightenment legacy did not pass easily to his own children in a time and a place when baptism offered many attractions for bright and ambitious young Jews.

MENDES (Mendiz), family of rabbis and merchants in *Morocco and *Algeria of Spanish-Portuguese origin. JOSEPH MENDES (mid-16th century) was rabbi of the community of Spanish exiles (Heb., *megorashim*) in *Fez and a signatory of its *takkanot*. GIDEON (late 17–early 18th century), a merchant of *Amsterdam, served as consul of the Netherlands in Salé from 1703 and was active in promoting commerce and negotiating treaties with Morocco. His son JOSHUA was a merchant in Salé and in Amsterdam. A contemporary R. ISAAC was a rabbi and an international merchant in *Agadir and spent time in London trading with European countries. His son JACOB remained in Agadir and one of his daughters married the rabbi and thinker Khalifa b. *Malca.

MENDES (Mendez), family in England of Marrano origin. FERNANDO MOSES MENDES (1647–1724), a Marrano physician, arrived in London in 1669 and practiced there, in 1678 becoming court physician to Queen Catherine (the story that he arrived as physician to Catherine of Braganza, wife of Charles II, is due to a confusion with Antonio Mendes, who attended her on her return to Portugal in 1692 (see JHSET, 16 (1952), 226–7)). His wife was a professing Jew, but his reluctance to declare himself a Jew caused anger and distress among his wealthy relatives. He attended Charles II during his last illness and was highly respected. He remained a Catholic, although he was close to London's Sephardi community. His daughter CATHERINE (Rachel) (1679–1756), who married her cousin Anthony (Moses) da Costa, was the first known Anglo-Jewish portrait painter. Fernando's grandson, MOSES MENDES (c. 1690–1758), amassed a fortune as a stockjobber. Baptized and married to a gentile, he acquired a reputation as a successful dramatist and wit. His musical entertainment *The Chaplet* (London 1749, 1753, 1756) was the earliest published contribution of a Jew to English belles lettres, while his farce *The Double Disappointment* was presented at Covent Garden theater in 1760. His sons took their mother's name, Head, and the family passed out of Anglo-Jewish history, though achieving some prominence in English life; Moses' grandson, SIR FRANCIS BOND HEAD (1793–1875), for example, became lieutenant governor of Upper Canada. A kinsman of Moses, SOLOMON MENDES (d. 1762), was a patron and associate of writers.

[Vivian David Lipman]

MENDES, U.S. Sephardi family of rabbis. FREDERIC DE SOLA MENDES (1850–1927) was born in Montego Bay, Jamaica, where his father, ABRAHAM PEREIRA MENDES (1825–1893), was at that time rabbi. Frederic became preacher at the New Synagogue, London, in 1873 but in the same year was appointed to Congregation Shaarey Tefillah, New York. He served there for 47 years, as assistant to S.M. *Isaacs (to 1877) and then as rabbi (to 1920). Mendes led his congregation within the orbit of Reform and became a member of the Central Conference of American Rabbis. He was one of the founders of the *American Hebrew* (1879) and served as a member of the original editorial board of the Jewish Publication Society's English translation of the Bible. For a period he was an editor of the *Jewish Encyclopedia*. Frederic's brother HENRY PEREIRA MENDES (1852–1937) was born in Birmingham, England. In his early youth he was educated at Northwick College, a boarding school founded by his father in London which offered a combination of religious and secular education. Henry studied at University College, London, and took the medical degree at the University of the City of New York. Henry served as rabbi to the new Sephardi congregation of Manchester from 1874 to 1877 and then immigrated to New York to take up his post as *hazzan* and rabbi at Shearith Israel congregation, serving there until 1923. Championing an enlightened modern Orthodoxy, Mendes used his privileged position as rabbi at Shearith Israel to work closely with all sectarian and social elements in Jewish life. In facing the problems affecting Jewry, he followed his belief in *kelal Yisrael* (“the totality of Israel”). He was one of the founders and leaders of the Union of Orthodox Congregations of America, the Jewish Theological Seminary, the New York Board of Jewish Ministers, and – at the personal request of Theodor Herzl – the Federation of American Zionists. He was a prolific writer on Jewish and general themes for the *American Hebrew*, which he and his brother helped establish, and wrote scores of books and pamphlets. Some of his better-known books are *Looking Ahead* (1899), *Bar Mitzvah* (1938), *Esther and Harbonah* (1917), *Jewish Religion Ethically Presented* (1905), *Jewish History Ethically Presented* (1898), *Mekor Hayyim: Mourners Handbook* (1915), and *Derekh Hayyim: Way of life* (1934).

°**MENDES, ARISTIDES DE SOUSA** (1895–1964), Portuguese diplomat and Righteous Among the Nations. Born into

an aristocratic Portuguese family, Mendes chose a diplomatic career for himself. After filling posts in various capitals (including the United States and Europe), he was posted to Bordeaux, France, as the Portuguese consul-general. In May 1940, with the onset of the German invasion of France and the Low Countries, thousands of refugees, among them many Jews, headed for Bordeaux, hoping to cross into Spain in advance of the conquering German army and continue via Portugal to lands across the Atlantic Ocean. At this critical juncture, the Portuguese government, headed by dictator Antonio Salazar (who also filled in as foreign minister), forbade the issuance of Portuguese transit visas to all refugees, and particularly to Jews. This virtually also closed the Spanish border to the refugees. Against the grim background of France on the verge of collapse, and with the Germans within striking distance of Bordeaux, in mid-June 1940 Consul-General Mendes came face to face with Rabbi Haim Kruger, one of the fleeing Jews, who pressured him to urgently issue Portuguese transit visas. Rabbi Kruger rejected Mendes' initial offer to issue visas only to the rabbi and his family, insisting that visas also be issued to the thousands of Jews stranded on the streets of the city. After several days of further reflection, Mendes reversed himself and decided to grant visas to all persons requesting them. “I sat with him a full day without food and sleep and helped him stamp thousands of passports with Portuguese visas,” Rabbi Kruger related. To his staff, Mendes explained: “My government has denied all applications for visas to any refugees. But I cannot allow these people to die. Many are Jews and our constitution says that the religion, or politics, of a foreigner shall not be used to deny him refuge in Portugal. I have decided to follow this principle. I am going to issue a visa to anyone who asks for it – regardless of whether or not he can pay.... Even if I am dismissed, I can only act as a Christian, as my conscience tells me.” The Portuguese government dispatched two emissaries to bring the insubordinate diplomat home. On their way to the Spanish border, the entourage stopped at the Portuguese consulate in Bayonne. Here too, Mendes, still the official representative of his country for this region, issued visas to fleeing Jewish refugees, again in violation of instructions from Lisbon. It is estimated that the number of visas issued by Mendes ran into the thousands. To his aides, he said: “My desire is to be with God against man, rather than with man against God.” Upon his return to Portugal, Mendes was summarily dismissed from the diplomatic service and a disciplinary board also ordered the suspension of all retirement and severance benefits. He countered with appeals to the government, the Supreme Court, and the National Assembly for a new hearing of his case – but to no avail. After his dismissal, Mendes reportedly told Rabbi Kruger (whom he met again in Lisbon): “If thousands of Jews can suffer because of one Catholic (i.e., Hitler), then surely it is permitted for one Catholic to suffer for so many Jews.” He added: “I could not have acted otherwise, and I therefore accept all that has befallen me with love.” Bereft of any income, and with a family of 13 children to feed, Mendes was forced to sell his estate

in Cabanas de Viriato. When he died in 1954, he had been reduced to poverty. Two of his children were helped by the Jewish welfare organization HIAS to relocate to the United States. In 1966, Mendes was posthumously awarded the title of Righteous Among the Nations by Yad Vashem. After much pressure from private individuals and organizations, in March 1988 Aristides de Sousa Mendes was officially restored to the diplomatic corps by the unanimous vote of the Portuguese National Assembly, and the government thereafter ordered damages to be paid to his family.

[Mordecai Paldiel (2nd ed.)]

MENDÈS, CATULLE (1841–1909), French poet. Mendès was born in Bordeaux. His father was a banker of Sephardic origin and his mother a Catholic. At the age of 18 he went to Paris, where in 1861 he founded *La Revue fantaisiste* – the first of several journals issued by the French Parnassian poets. It stressed their anti-utilitarianism and their devotion to art. He also contributed to the serialized anthology *Le Parnasse contemporain* (1866–76), which he later described in *La Légende du Parnasse contemporain* (1884). A versatile, “decadent” poet, Mendès had a prolific output – some 150 volumes over four decades. They include verse collections – *Poésies* (3 vols., 1892), *Poésies nouvelles* (1893), and *Choix de poésies* (1925); neo-Romantic plays such as *La Femme de Tabarin* (1887), *Médée* (1898), and *La Reine Fiammette* (1899); and several novels, notably *Monstres parisiens* (1882), *Les Folies amoureuses* (1877), and *Zohar* (1886). Mendès also wrote short stories; a study of Richard *Wagner, of whose music he was the French champion; and, in collaboration with the lyric poet Ephraïm *Mikhaël, the dramatic poem *Briséis* (1899). The *Rapport sur le mouvement poétique français 1867–1900* (1902) reveals considerable critical insight. Mendès, who married the daughter of the poet Théophile Gautier (1811–1872), was killed in a railroad accident.

[Sidney D. Braun]

MENDES, DIOGO (b. before 1492–d.c. 1542), Marrano merchant, born in Spain, and descended from the *Benveniste family. With his brother Francisco (d. 1536), he established a business in spices and precious stones. He settled in *Antwerp, and on his brother’s death was joined there by the latter’s widow, later Gracia *Nasi. Mendes became a magnate in the spice trade and made large-scale loans to the governments of the Low Countries, Portugal, and England. Taking advantage of a network of factors and agents throughout Europe, he organized an “underground railway” to facilitate the flight of Marranos from Portugal, via the Low Countries (and sometimes England) to Italy and Turkey. In 1535, he and his sister-

in-law, Gracia Nasi, headed the group of *New Christians who sought the help of the papal nuncio to stop the activity of the *Inquisition in Portugal. Arrested in 1532 on a charge of Judaizing, Mendes managed to exculpate himself, but after his death in Antwerp, the same charge led to the sequestration of his property.

[Cecil Roth]

MENDES, SAM (1965–), U.S. stage and film director. Samuel Alexander Mendes was born in Reading, Berkshire, England, the son of Sephardic Jewish parents born on the Caribbean island nation of Trinidad. His father was the son of the writer Alfred Mendes, author of the novel *Black Fauns*, and part of the group around C.L.R. James and Albert Gomes which produced the literary magazine *Beacon* in the early 1930s. Mendes’ secondary education was at Magdalen College School, Oxford, and he later earned a degree from the University of Cambridge.

As a stage director, Mendes became known for his 1998 production of *Cabaret* starring Alan Cumming, in which he boldly reinvented the noirish musical, achieving a long-running hit in London and on Broadway. The Broadway production garnered four Tony awards, three Drama Desk awards, and other honors. As a film director he is best known for his debut film, *American Beauty*, for which he won an Academy Award for best director in 2000 and awards as best director from virtually every professional film organization.

Mendes got his start in the theater following his graduation from Cambridge in 1987 when he joined the Chichester Festival Theater. Soon after he directed Dame Judi Dench in *The Cherry Orchard*, which brought him a Critics’ Circle award for best newcomer. He joined the Royal Shakespeare Company in 1990, where he directed such productions as *Troilus and Cressida* with Ralph Fiennes, *Richard III*, and *The Tempest*. In 1992 Mendes became artistic director of the reopened Donmar Warehouse in London, where he directed many award-winning productions. During his tenure he won Olivier awards for best director for *Cabaret*, *The Glass Menagerie*, and *Company*. He also directed *The Sea* and *The Plough and the Stars*, both with Judi Dench, *The Birthday Party*, and *Othello*, for which he received another Olivier award. In 1998 he directed Nicole Kidman on Broadway in *The Blue Room*.

Among his other films are *The Road to Perdition* (2002), *Jarhead* (2005), and *The Kite Runner* (2006).

In 2000 Mendes was named a Commander of the British Empire.

[Stewart Kampel (2nd ed.)]

MENDÈS-FRANCE, PIERRE (1907–1982), French statesman. Born and educated in Paris, his university thesis *Le Redressement Financier Français en 1926 et 1927* (1928) attracted

considerable attention and his later study, *L'Oeuvre financière du gouvernement Poincaré* (1928) was used as propaganda by the left-wing parties and made Mendès-France one of the leading financial experts of the Radical party.

At the age of 16 Mendès-France joined the Radical Socialist Party and in 1932 was elected to the National Assembly, being its youngest member. In the same year he outlined an economic program for the party which was accepted at its conference at Toulouse. He supported the Popular Front government of 1936–38 and in 1938 was an undersecretary to the treasury. An advocate of resistance to the Nazis even before World War II, Mendès-France organized an opposition to the Vichy government after the fall of France and was imprisoned by the Pétain government. He escaped to England in 1941 and joined the Free French under General De Gaulle who later made him finance commissioner of Algeria. From 1944 to 1945 he was minister of economic affairs and in 1946 he was appointed French governor of the Bank for Reconstruction and Development. In the same year he returned to parliament and in 1954, after a series of cabinet crises, became prime minister with a huge majority of 419 out of 617 deputies.

As premier, Mendès-France offered France a “new deal,” promising to end the Indochina war, tackle the problems of European defense, and enact wide-reaching economic reforms. His prestige rose considerably when he ended the war and introduced the plan for a Western European Defense Community with a British military commitment for the defense of Europe. In February 1955 he was defeated over his North Africa policy to grant independence to Morocco and Tunisia and resigned. From January to May 1956 Mendès-France was minister without portfolio but resigned following disagreement with the prime minister, Guy Mollet, on the Algerian policy. He remained an important figure in French politics and frequently opposed De Gaulle’s policies. In 1968, he formed a new party, the Parti Socialiste Unifié, which he headed. Mendès-France was a consistent supporter of Zionism and outspoken in his championship of the cause of Israel. He was an ascetic in his private life and once aroused controversy when he urged Frenchmen to abandon their wine drinking for milk, his favorite beverage. He wrote extensively on politics and finance. His books are widely read and some have been translated into other languages. They include: *La Banque Internationale* (1930); *Liberté, Liberté Chérie* (1943); *The Pursuit of Freedom*, 1956); *Gouverner c’est choisir* (3 vols., 1953–58); and *La République moderne* (1962; *A Modern French Republic*, 1963).

[Moshe Rosetti]

MENDLOWITZ, SHRAGA FEIVEL (1886–1948), *rosh yeshivah*, U.S. educator, and Orthodox Jewish leader. Mendlowitz was born in Vilag, Austria-Hungary, on the Polish border. His mother died when he was 10, and he and his father moved to Rimanov. By the time he was 12, he was studying with Reb Aaron, *daiyan* of Mezo-Laboretz, who considered

him his top pupil. At 16 he studied with the rabbi of Chust, Moses Greenwald, and at 17 he moved to Unsdorf to study with Rabbi Samuel Rosenberg, author of the *Be’er Shemuel*, who became his role model. He then transferred to the yeshivah in Pressburg, where he studied with R. Simḥah Bunem Schreiber, a grandson of the Ḥatam Sofer.

In 1913, he left his family behind and moved to the United States. Known as a man who inspired his students, he served as a teacher-principal in the *talmud torah* of Scranton, Pennsylvania, for seven years. He returned to Europe after World War I to bring his family to Scranton. In 1920, he moved his family to Williamsburg, Brooklyn, in New York City. In 1921, he was engaged as the principal of Yeshiva Torah Vodaath (founded in 1917), one of only four yeshivahs in the city. He switched from Hebrew to Yiddish as the language of instruction and in 1926 opened a high school.

In 1923, Mendlowitz and the *hazzan* Yossele *Rosenblatt produced *Dos Yiddishe Licht*. Filled with comments and inspiring articles, it started as a weekly, became a daily, and folded in 1927. Mendlowitz was also one of the first people to insist on *mehizot* at Jewish weddings in America, and spoke out against dancing and mixed swimming, which were all accepted practices in those days.

He later organized a high school for secular studies under the auspices of the yeshivah, the second such school in the United States, after consulting with leading European rabbis. Mendlowitz also was happy to send Torah Vodaath students to other institutions of higher Jewish learning. In 1941, he set up a school in Spring Valley, New York, which was later to serve as a **kolel* for the graduates of Yeshiva Torah Vodaath. A committed member of the Agudat Israel World Organization, he became vice president in 1938 and personally raised large sums of money for the Ze’irei Agudah’s rescue programs during the war. In 1944, he founded *Torah Umesorah, a national society for Orthodox Hebrew day schools with Rabbi Reuven Grozovsky. His son-in-law, Rabbi Alexander Linchner, founded Boy’s Town Jerusalem and Merom Zion Institute as a result of Mendlowitz’s dying wish that something be done for Erez Israel.

[Jeanette Friedman (2nd ed.)]

MENDOZA, province in Argentina and capital city of the province.

The Province

According to data of Vaad Hakehilot as of 2005 there were some 550 families in the capital city of Mendoza and some 30–40 families in San Rafael, out of a total population in the province of about 1,579,651 (2001). Jews had settled in the province as agriculturists and plantation owners by the end of the 1880s. In 1904–05 Jews from Yekaterinoslav attempted to settle in Palmira, but after a short time found they could not meet the difficult terms of their settlement contract and were compelled to leave. A similar attempt to settle there in 1913 likewise failed. In 1943 there were Jews in 24 out of the 123 towns and villages in the province. In 1964 only San Mar-

tín, San Rafael, and the capital city of the province, Mendoza, had organized Jewish communities affiliated with the Va'ad ha-Kehillot (see *Argentina). The province is well known for its grapevines and since 1952 there has been industrial production of strictly kosher wine.

The City

In 1909 there were some 600 Jews in the city – approximately 500 from Eastern Europe and the remainder from France and Sephardim. The first community organization, Sociedad Israelita de Beneficencia, was established in 1910, and continues to function. Its membership in 1968 was 577 families. The Sociedad, which comprises the Ashkenazim of Mendoza, owns a large community building, a synagogue, and a cemetery, and plays an important role in the operation of all Jewish institutions in the city. In 1918 a Sephardi community – the Sociedad Israelita de Socorros Mutuos – was established. In 1943 it comprised about 60 families and has come to maintain its own synagogue and cemetery. The Sephardi and Ashkenazi organizations, however, cooperate in running the school, the Macabi Social Club, and the country club (purchased in 1954).

Various welfare institutions were established in the city but they became superfluous and no longer exist. The financial institution Asociación Israelita de Crédito Mutuo has become the Jewish bank Crédito de Cuyo with branches in other provinces. The bank and the Ashkenazi community cooperated in financing the erection of the Max Nordau Jewish School, which in 1968 had an enrollment of 277 students in kindergarten, elementary school, and high school. Local committees of the Jewish National Fund and of the United Jewish Appeal are active in Mendoza as well as the local committee of *DAIA, the umbrella organization of Argentinean Jewry. There formerly existed in Mendoza a pro-Communist group whose number was estimated in 1966 at 80 families; it maintained its own committee and a school, "I.L. Peretz." The majority of Jews in Mendoza are engaged in business and some own vineyards and fruit plantations. Jewish participation in the liberal professions and in the local university has been increasing.

[Daniel Benito Rubinstein Novick]

MENDOZA, DANIEL (1764–1836), English boxing champion. Born in Aldgate, London, Mendoza learned at a young age to defend himself with his fists. In 1780 he won his first professional fight. A natural middleweight, Mendoza became the father of scientific boxing by devising defensive moves that enabled him to fight against much heavier opponents. His ring success brought him to the attention of the Prince of Wales and he became the first boxer to receive royal patronage. Mendoza's ascendancy to boxing heights, and his acceptance by royalty, helped ease the position of the Jew in the English community. He proudly billed himself as "Mendoza the Jew." He opened his own boxing academy and became a teacher. He went on tour and gave boxing exhibitions in England, Wales, Scotland, and Ireland. Mendoza lost the title of English Champion to John Jackson on a ninth-round knockout on

April 15, 1795. He wrote *The Art of Boxing* (London, 1789) and *The Memoirs of the Life of Daniel Mendoza* (London, 1816). In 1954 Mendoza was one of the inaugural group chosen for the Boxing Hall of Fame in the United States.

[Jesse Harold Silver]

MENE, MENE, TEKEL, U-FARSIN, enigmatic inscription referred to in *Daniel 5:25, which appeared on a wall, written by a detached hand. The narrative in Daniel 5:1ff. relates that King *Belshazzar of Babylonia made a feast for 1,000 of his lords, wives, and concubines. During the feast, wine was drunk from the vessels which had been taken out of the Temple in Jerusalem, and the guests at the feast praised (or perhaps sang to – the Aramaic *shabbah le-* can mean either) the gods of gold and silver, bronze, iron, wood, and stone. Suddenly, the fingers of a man's hand appeared and were seen writing something on the wall of the king's palace. The king became alarmed and summoned all his wise men, but they were unable to read or interpret the writing. The queen then suggested that Daniel, a sage whom Nebuchadnezzar used to consult and found matchless, be brought before the king. Daniel was summoned to Belshazzar. After rebuking the king for his arrogance toward the Lord, for drinking wine from the holy Temple's vessels, and for worshiping man-made gods, Daniel read and interpreted the writing as follows: *mene, mene, tekel (teqel)*, and *parsin*. *Mene*: God has numbered (*menah*) the days of your kingdom and will bring it to an end; *tekel*: you have been weighed (*teqilta*) in the balance and found wanting; *parsin*: your kingdom has been divided (*prisat*) and given over to the Medes and Persians (*Paras*).

The narrative presents four basic problems. The first question concerns the actual designation of the words *mene, mene, tekel*, and *parsin*. C. Clermont-Ganneau was the first to suggest that the words refer to weights of monetary units. Thus, *mene* (Aramaic *mene*; Heb. *maneh*) is a mina; *tekel* (Aram. *teqel*; Heb. *shekel*) is the shekel; and *u-farsin* (of which the *u* is simply the copulative) is two half-minas. The word **שפרא** has been found on half-mina weights in bilingual Aramaic-Akkadian inscriptions and also occurs in the Talmud (Aramaic *peras*) in the sense of a half-mina. Most scholars have accepted Clermont-Ganneau's explanation of the words and at most add that the first *mene*, unlike the second (5:15), is the Aramaic passive participle (equivalent to the Heb. *manui*, "counted") and is to be read as, "it was counted: *mene, tekel* and *parsin*."

The second question to be asked is why the characters of the inscription baffled the Chaldeans, who should have been able to read easily a few simple Aramaic words. The narrative clearly indicates that the wise men could not decipher the writing, as the king promised a great reward for the man who read the writing (5:7). Daniel solved the riddle by first reading the script; only afterward did he explain it (5:25ff.). Talmudic sages suggest that the letters of the inscription were

written in reverse order or in accordance with the *Atbash* (see **Gematria*) sequence (Sanh. 22a). A. Alt proposes that only the initials and not the whole words were written, and he bases his view on the premise that it can be corroborated from archaeological evidence that names of weights were often designated by initials only; Aramaic contracts from the fifth century B.C.E. attest to this practice. Alt, therefore, assumes that what was written were the initials *MMTPP* (ממתפ"פ). H.L. Ginsberg points out that in the Aramaic contracts the word *tekel* is generally written *shkl* and abbreviated as *sh*, and it is possible that even after the more modern spelling *tkl* was adopted, the abbreviation *sh* was retained. Therefore the legend on the wall may have been not *MMTPP* but *MM Sh. PP*, which made it harder for the king's regular sages to recognize it as a series of abbreviations. Daniel, however, realized that the letter *shin* was the initial of the obsolete spelling *shkl*, for *tekel*, and so he read for the two *mem's* – *mene mene*, for the *shin* – *tekel*, and for the two *pe's* – *parsin*.

A third problem is the variance between the written version on the wall (5:25): *mene, mene, tekel*, and *parsin* and the words in Daniel's version: *mene, mene, tekel* and *peras* (5:26ff.). Most ancient versions (Vulg., Theod., and Jos., Ant., 10:239ff.) give the written version (verse 25) also as *mene, tekel, peras*. Since, however, Daniel interprets the last expression as meaning both *perisat* and *paras*, the Masoretic Text's version of verse 25 can be upheld, and the reading in verses 26 and 28 could be the result of haplography. The doubling of the word *mene* at the beginning, Ginsberg believes, was suggested by the doubling of *nafelah*, "fallen," in Isaiah 21:9, "Fallen, fallen is Babylon."

The fourth and last problem is concerned with what the words actually refer to. These words were probably used not only to indicate monetary values but also to express estimates of character. Thus, these words presumably referred to a situation of degeneration. God has weighed the kings of Babylon and has found them to be steadily decreasing in weight. P. Haupt and J.D. Prince hold that the phrase refers to Nebuchadnezzar (*mene*), Belshazzar (*tekel*), the Medes (*peres*, a half-*mene*, i.e., half the greatness of Nebuchadnezzar) and the Persians (*peres*, a half-*mene*, i.e., half the greatness of Nebuchadnezzar). E.G. Kraeling believes that the phrase was applied to the occupants of the neo-Babylonian throne after Nebuchadnezzar: Awêl-Marduk (Evil-Merodach), Labâshi-Marduk, Nabonidus, and Belshazzar.

[Daniel Boyarin and Moshe Zeidner]

MENE LAUS (d. c. 162 B.C.E.), high priest in the time of Antiochus Epiphanes. Menelaus was the brother of Simeon

and Lysimachus, both mentioned in II Maccabees. According to II Maccabees 3:4, Simeon and Menelaus belonged to the tribe of Benjamin, and Simeon did not therefore belong to a priestly family. This raises a difficulty and attempts have been made to amend the text, or to suggest that he belonged to a priestly family named Benjamin or Miamin (cf. I Chron. 4:24). It seems preferable to accept the reading found in some Latin manuscripts which reads "Bilgah" instead of Benjamin. Bilgah was the name of one of the priestly divisions (I Chron. 24:14) and probably Menelaus and his brothers belonged to it. The statement of Josephus (Ant., 12:238–9) that Menelaus was a brother of *Jason and a son of *Onias III, is certainly erroneous. Merelaus was one of the leaders of the Hellenists and one of the extremists among them. When sent by the high priest Jason to Antiochus Epiphanes, he intrigued against his principal, bribed Antiochus and received from him appointment as high priest (II Macc. 4:23–24). At the beginning of his tenure of office he plundered the Temple of its gold vessels (*ibid.*, 4:32). He also instigated the murder of Onias III (*ibid.*, 4:34). His appointment and policy aroused the opposition of the people and caused uprisings and disturbances. Jason attempted to seize the high priesthood back from him, but Menelaus succeeded in retaining power, chiefly with the assistance of the Syrians. He remained loyal to Antiochus and sent him large amounts of money. As leader of the Hellenists he must be considered responsible to a great extent for the persecution of Antiochus (see Bickermann in bibl.; cf. II Macc. 13:4). It seems, however, that later, when it became clear that this policy brought no advantage to the Hellenists, he was partly responsible for the more conciliatory policy of Antiochus Epiphanes (164 B.C.E.; II Macc. 11:29). Later he lost favor in the court of the Seleucids and on the advice of Lysias was put to death (apparently in 162 B.C.E.).

Tcherikover, *Hellenistic Civilization and the Jews* (1959), 70–74, 216–20, and index; E. Bickermann, *From Ezra to the Last of the Maccabees* (1962), 106f.

[Uriel Rappaport]

MENES, ABRAM (1897–1969), historian. Born in Grodno, Poland, Menes became engrossed in the problems of socialism early in his youth; at the age of 20 he founded an illegal *Bund branch in Grodno, which engaged in educational work and the distribution of illegal socialist literature. After World War I he devoted himself to public affairs, becoming the vice chairman of the Grodno Jewish community. After moving to Berlin in 1920, where he studied Jewish history and Bible, Menes, together with Nahum *Shtif and E. *Tcherikower, laid the foundations of *YIVO (the Institute of Jewish Research). In 1933 he moved to Paris, and became one of the leading contributors to the *Yiddish Encyclopedia*, writing on a wide range of historical subjects. He continued his work on the editorial board of the encyclopedia even after settling in the U.S. (1940), where he also joined the staff of the *Yiddish daily Forward*.

Menes' main area of interest in Jewish history was its economic and social aspects. Articles on these subjects, covering the talmudic period as well as late 19th-century Russian Jewry, appeared in YIVO's historical publications. Together with Raphael *Abramowitz, Menes wrote *Leyenbukh tsu der Geshikhte fun Yisroel* ("A Layman's History of Israel," 1923). Another favorite topic of his was the history of the Jewish Workers Movement and of socialism: *Der Onhoyb fun der Yidisher Arbeter-Bavegung un ir Shoyresh in Yidishen Folks Lebn*, published in the *Zukunft* (40 (1935), 539–44), is an investigation into the problems of socialism, in general, and in particular among the Jews. His essays on significant events in Jewish history, in both the preexilic and postexilic periods, were published in *Oyfn Sheydvveg*, an independent publication of Jewish culture, art and literature, and cultural philosophy, edited by E. Tcherikower and I. Efroikin. These essays mark a turning point in Menes' approach to Jewish history: "The time has come to amend Heine's youthful error and to replace 'le credit' with 'la religion' – the belief in man with the belief in God." Mention should also be made of his contribution, "Jewish History," to the volume "Jews" in the *Yiddish Encyclopedia*, in which he wrote on the biblical and talmudic periods. His articles in the *Forward* dealt to a large extent with Jewish holidays. His writings on the problems of methodology in Jewish history are of significance to scholars in the field.

Menes' writings on Jewish ethics, sociology, and philosophy continued to be based on the principle that "there can be no faith in man without a feeling of sanctity." Jacob Glatstein described Menes as a historian "who has introduced a new evaluation of Jewish history."

[Israel Ch. Biletzky]

°**MENGELE, JOSEF** (1911–1978), doctor of the Auschwitz extermination camp. Born in Guenzburg, Germany, he studied medicine and anthropology at the University of Munich, the University of Vienna, and the University of Bonn. At Munich he obtained a doctorate in anthropology (Ph.D.) with a dissertation in 1935 on racial differences in the structure of the lower jaw, supervised by Prof. Theodor Mollison. After his exams he went to Frankfurt, working as an assistant to Otmar von Verschuer at the Frankfurt University Institute of Hereditary Biology and Racial Hygiene. In 1938 he obtained a doctorate in medicine (M.D.) with a dissertation called "Familial Research on Cleft Lip, Palate and Jaw." (He was deprived of both academic degrees in 1961 and 1964, respectively.) Declared medically unfit to serve at the front in World War II, he was, at his own request, appointed doctor of the Auschwitz camp where, from 1943 to 1945, he initiated a series of cruel "medical" experiments which caused the death of many Jewish inmates. To perfect the master race he studied twins to see if the breeding of the German people could be improved and two members of the race could be obtained in a single pregnancy. He studied dwarfs and other abnormalities, in his mind to protect the German people and improve the species.

And while he was experimenting, he could be kind and generous to those who were specimens for his lab. He dreamed of scholarly prominence. He participated in the selection of tens of thousands of prisoners in the Birkenau camp (see *Auschwitz), whom he consigned to die in the gas chambers. The figure of Mengele decreeing life or death by a flick of his finger has become one of the symbols of the Holocaust; he was called by the camp inmates "the Angel of Death." But not all survivor recollections of Mengele are accurate. He could not have done all that he was credited with doing. Mengele did work with a "scientific team" recruited from among arriving physicians who faced the choice of *Selektion* or working with him. Several of these inmate physicians have written memoirs, and they are among the most important recollections of life inside Auschwitz. At one moment Mengele could be gracious, but not for long. He was unpredictable and everyone around him lived in constant fear. Thus, Dr. Olga Lengyel reveals that Mengele supervised the birth of a child with meticulous care. Within an hour mother and child were sent to the gas chamber. Dr. Gisella Perl, a Hungarian Jewish gynecologist, described the aftermath of one brutal killing by Mengele. "He took a piece of perfumed soap out of his bag and whistling gaily with a smile of deep satisfaction on his face, he began to wash his hands." Vera Alexander described brutal "scientific" experiments in which inmates were sewn back to back, wrist to wrist. And Dr. Miklos Nyiszli depicts the murder of 14 twins killed during one night.

When Mengele fled Auschwitz, according to Raul *Hilberg, he brought with him the records of his medical experiments, still believing that they might hold the key to his postwar prominence. According to one source, he also took these potentially incriminating records with him when he left for Argentina.

Until 1951 Mengele lived under his own name in various places in Bavaria, Germany. The name Mengele is proudly seen on farm equipment. It is a symbol of quality in Germany and elsewhere. Throughout the years the Mengele family funneled enough money to Josef to permit his survival, enough to elude capture but not quite enough to achieve comfort. Mengele was forced to move from Argentina to Paraguay and later to Brazil, where he lived his final years in seclusion, perhaps even in loneliness. He met his only biological son, Rolf Mengele, on two occasions after the war, once when he was introduced as "Uncle Fritz" and the second time when his son sought to understand his father, to comprehend his deeds, to come to terms with his motivations. Rolf had rejected his father and his politics.

Mengele was divorced from his first wife, Irene. They grew apart in the postwar separation. After his divorce he married his beautiful sister-in-law, Martha Mengele, the wife of his late brother, Karl, in what seemed like a merger to protect the family assets as well as a marriage. He raised his nephew Karl Heinz, the son of his brother, as his stepson and a surrogate son.

The search for him started only in 1953, after he escaped from Germany. It is known that in 1954 he was granted Ar-

gentinean citizenship. In Argentina he represented the Karl Mengele and Sons factory for agricultural machinery, a firm managed by his brother in Guenzburg. Mengele was traced by organizations of former Nazi victims, both Jewish and non-Jewish. His extradition was demanded by the government of West Germany, but Mengele escaped from Argentina. His disappearance was also, apparently, connected with the apprehension of *Eichmann. Various conflicting news items subsequently appeared in the world press concerning the whereabouts of Mengele. Mengele's name was often mentioned by witnesses at the Eichmann trial in Jerusalem and at numerous trials in West Germany, in particular at the *Auschwitz trials held in Frankfurt on the Main in 1963–65. He figures in Rolf Hochhut's play *The Deputy* (1963). He died in an apparent drowning in Brazil in 1978. Efforts were made to ascertain that indeed the corpse discovered was that of Mengele. Some suspected that the drowning was staged. But forensic evidence and dental records confirmed his death.

MENINSKY, BERNARD (1891–1950), English artist. Meninsky was born in Liverpool, the son of immigrants from the Ukraine. He studied at the Liverpool School of Art and the Slade School. In 1913 he became a founder member of the London Group. During World War I Meninsky served as an official war artist. In 1920 he became teacher of life drawing at the Westminster School of Art and the City of Oxford Art School. Retrospective exhibitions of his work were held in London in 1951 and 1958 and several of his paintings are held by the Tate Gallery.

ADD. BIBLIOGRAPHY: J. Russell Taylor, *Bernard Meninsky* (1990).

MENKEN, U.S. family. SOLOMON MENKEN (1787–1853), who was born in Westphalia, Prussia, arrived in the U.S. from Holland in 1820 and soon established a wholesale drygoods business in Cincinnati, where he was one of the first Jewish settlers. His eldest son, JULES MENKEN (1836–1890), was a lieutenant in the Cincinnati Home Guards during the Civil War. NATHAN DAVIS MENKEN (1837–1878), his second son, was a merchant and soldier. During the Civil War, he held the rank of cavalry captain and was cited for bravery. He later joined his younger brother's Memphis business. He died assisting victims of yellow fever during an 1878 epidemic. JACOB STANWOOD MENKEN (1838–c. 1900), Solomon's third son, was born in Cincinnati. A merchant and philanthropist, he founded the large Menken and Co. department store in Memphis in 1863, and was active in organizing the Children's Christmas Club and the first Southern kindergarten for blacks. S. STANWOOD MENKEN (1870–1954), Nathan's son and great-great-grandson of Haym *Solomon, was born in Memphis, Tenn. A lawyer and publicist, he was educated at Cornell and Columbia Law

School and admitted to the New York bar in 1894. Active in New York City politics, he organized the Hall of Records Association in 1896, the Democratic League (1908), and the National Security League of America (1915).

MENKEN (née Theodore), ADAH ISAACS (1835–1868), U.S. actress, known mainly for her flamboyant way of life. The first of her four husbands was a musician, Alexander Isaac Menken, whose name she kept after he divorced her. Her stage career began in 1856 in New Orleans. Probably not a great actress, she had an arresting stage personality, and displayed her dark, slim beauty with a boldness that created a sensation wherever she appeared. The first American actress to wear flesh-colored tights, she made her most spectacular appearance in the play *Mazeppa* (adapted from Byron's poem) in which she rode up a steep ramp strapped to a fiery horse. She mixed in the circle of American literary bohemians that included Walt Whitman, Bret Harte, and Mark Twain. In London in 1864 her *Mazeppa* angered the press, but she won the literati with her poems. Dickens, Charles Reade, and Rossetti were her friends. Swinburne described her as the world's delight and claimed she was his mistress. She enjoyed triumph in Paris in 1866, won over Gautier and George Sand, and became the mistress of the elder Dumas. Though she invented fanciful accounts of her origin, which was obscure, she took a militant pride in her Jewishness. In 1857 she led a protest against the exclusion of Jews from the House of Commons. She never performed on the Day of Atonement and kept a Hebrew Bible under her pillow. Her two books of poems, *Memoirs* (1856) and *Infelicia* (1868), teem with biblical allusions. She died in Paris, and Baron Lionel de *Rothschild erected a memorial on her grave in Montparnasse.

MENKEN, ALAN (1949–), U.S. composer. Born and raised in New Rochelle, New York, Menken was extremely musical as a child, learning to play the piano, violin, guitar, and accordion. However, it was not until he had graduated from New York University with a liberal arts degree that he decided to pursue a career in music. While attending the Lehman Engel Musical Theater Workshop, Menken first discovered and nurtured his passion for musical theater. As he unsuccessfully attempted to get his first musicals produced, Menken supported himself by writing and singing commercial jingles. His career changed forever when he met lyricist Howard Ashman, with whom he first collaborated on the WPA production of *God Bless You, Mr. Rosewater* (1979) and with whom he went on to create the score for the Broadway production of *Little Shop of Horrors*. Since his first Oscar nomination for best song for "Mean Green Mother from Outer Space" from the film version of *Little Shop of Horrors* (1986), Menken has won a series of awards almost too long to count, including Tony, Emmy, Grammy, and Oscar Awards. In fact, Menken is tied with legendary costume designer Edith *Head for most Oscar Awards

won – they both have eight. Menken has produced some of his best-known work since the late 1980s, composing the scores for such Disney films as *The Little Mermaid* (1989), *Beauty and the Beast* (1991), *Aladdin* (1992), and *Pocahontas* (1995).

[Casey Schwartz (2nd ed.)]

MENKES, ZYGMUNT (1896–1986), U.S. painter. Menkes was born in Lvov, Galicia. The artist's subjects included nudes, still-lives, portraits, and landscapes. While restoring rural churches, he studied art at the Industrial School in Lvov and the Academy of Fine Art, Cracow, beginning in 1912. He established a reputation as an artist in Poland before leaving that country. In 1922 he studied in Berlin with the Constructivist artist Alexander Archipenko. He arrived in Paris in 1923, where he joined the *École de Paris*, a circle of Central and East European ex-patriots which included Marc *Chagall, Amedeo *Modigliani, Jules *Pascin, and Chaim *Soutine. After finally setting in Paris, Menkes participated in such exhibitions as the Salon d'Automne (1924, 1925, 1927) and the Salon des Independants (1925–28) as well as exhibiting his work in a number of Parisian, British, and Canadian galleries. Menkes was well traveled, returning to Poland on a number of occasions, as well as visiting the United States in 1930 and Spain in 1925. In Poland, he exhibited with the New Generation and Keystone groups, while having solo shows in Lvov and Warsaw in 1930 and 1931. He moved to the United States in 1935, enjoying his first American one-man show a year later at the Sullivan Gallery in New York. Menkes eventually settled in Riverdale, New York. He also taught at the Art Students League in New York. Many New York galleries exhibited and sold Menkes' work: the Associated American Artists' Gallery (1936–54), Durand-Ruel Gallery (1941), and the Georgette Passedoit Gallery (1942). Like many other artists of his generation, his work was greatly influenced by that of Henri Matisse: Menkes often painted women in lushly decorated interior spaces animated by expressive line. Menkes' pictures, cheerful still lifes, especially of flowers, introspective portraits, and vivid landscapes have a decidedly French accent. He resisted the trend toward abstract art and never veered from recognizable subject matter. Primarily a colorist who often used rich, sensuous tones, his work showed an increasing tendency toward flatness and two-dimensionality later in his career. Menkes frequently used Jewish themes in his earlier work, depicting his memories of Poland with poignancy and nostalgia. One of his best-known canvasses is *The Uplifting of the Torah* (1928), in which a group of East European Jews are shown excitedly raising up a partly unrolled Torah scroll. Menkes considered this painting an homage to his family and upbringing. In the manner of Rembrandt, the figures in the composition are dramatically lit. Broad brushstrokes, distinctive in texture, reveal the ecstatic expressions of the worshippers, who gather in a circle around the sacred scroll. In 1943, he bore witness to the sufferings of the Jews of Europe, especially those in his native Poland, in *Uprising of Ghetto Warsaw*. Menkes' work is represented in the collections of the Brooklyn Museum of Art, the

Whitney Museum, the Hirschhorn Museum, Washington, D.C., the Pennsylvania Academy of Fine Arts, and the Walker Art Center, among others.

[Nancy Buchwald (2nd ed.)]

MENORAH (Heb. מְנוֹרָה; “candelabrum”), the name given to the seven-branched candelabrum which, according to the Bible, was a prominent feature of the *Tabernacle erected by the people of Israel in the wilderness, as well as in the Jerusalem Temple. In archaeological finds in Erez Israel and Syria dating from the Middle Bronze Period onward, lamps have been uncovered in the form of a deep bowl, with seven spouts on the rim for inserting wicks. At the high place (*bamah*) discovered at Nahariyyah, several bowls, similar to those of the Middle Bronze Period, have been found. Some lamp bowls have a clay, stone, or metal stand, thereby transforming them into *menorot*. At Taanach such a *menorah* has been unearthed, consisting of a small bowl with seven spouts, set on a stand whose circumference, narrowing in the middle to form a grip, broadens out at the bottom into a base for placing it on the ground.

The Tabernacle

Among the vessels of the Tabernacle mentioned in the Priestly Code, reference is made to a *menorah* of gold, whose form is given in two parallel passages (Ex. 25:31–40; 37:17–24). A pattern of this *menorah* was, it is related, shown by God to Moses at Mount Sinai (Ex. 25:40), as He also showed him the pattern of the Tabernacle and all its furniture (Ex. 25:9). Six branches, three on each side, curved upward from the *menorah's* central shaft, which stood on a base (Ex. 25:31; Num. 8:4) whose precise shape cannot be determined. The shaft and each of the branches were ornamented respectively with four and three carvings of cups made like almond-blossoms, each subdivided into a knop and a flower. Under every two branches that were of one piece a knop was carved on the central shaft, making a total of three knops “for the six branches going out of the *menorah*” (Ex. 25:35). These three knops were probably an integral part of the cups on the central shaft and not, as some (A.R.S. Kennedy, S.R. Driver, and others) hold, in addition to its four cups. The fourth cup was at the top of the central shaft, above the places where the branches joined it. The uppermost cups of the branches were similarly at their top, with all of them – as well as that of the central shaft – ending at the same height. The flowers on these uppermost cups served as receptacles for the seven lamps.

The entire *menorah* was carved from one ingot of gold, “beaten work” (Ex. 25:31), and its vessels, also of gold and including the lamps, were carved separately (Ex. 25:37–38). The *menorah* was placed in front of the veil (*parokhet*) “on the side of the Tabernacle toward the south ... over against the table” (Ex. 26:35; 40:24). When the lamps burnt they gave “light over against it” (Ex. 25:37) “in front of the *menorah*” (Num.

8:2–3), that is, the spouts of the lamps and the wicks faced northward, so that their shadow was cast on to the wall. The measurements of the *menorah* are not given in the Bible but the Talmud stated that its height was 18 handbreadths, which are three short cubits (Men. 28b; Rashi to Ex. 25:35). The use to which the Tabernacle *menorah* was put is described in the Priestly Code. The lamps (*nerot*) are said to have burned from evening to morning (Lev. 24:3), were lit at dusk and trimmed in the morning by the high priest (Ex. 30:7–8), and hence are called *ner tamid* (a perpetual lamp; Ex. 27:20; Lev. 24:2), that is, they were lit according to a fixed routine and for the nighttime only. This is specifically mentioned in connection with the lamp in the sanctuary at Shiloh (1 Sam. 3:3). However, in the Second Temple (see below) three of the lamps burned throughout the day, the rest being lit in the evening (Jos., Ant., 3:199).

The First Temple

In the Temple built by Solomon there were ten *menorot* of gold, five along the northern and five along the southern wall of the *Heikhal* (the hall; 1 Kings 7:49; 11 Chron. 4:7). These were ornamented with carvings of flowers and furnished with appliances of gold for tending the lamps (1 Kings 7:49–50), the number of which on each *menorah* is not stated. Some scholars hold that the passage listing the golden vessels made by Solomon for the house of the Lord (1 Kings 7:48–50) is a later addition; but this view should be rejected. All the vessels of gold in Solomon's Temple, including the ten *menorot*, were cut in pieces at the end of Jehoiachin's reign by the Chaldeans who entered the *Heikhal* during their siege of Jerusalem (11 Kings 24:13). Hence neither vessels of the *Heikhal* nor *menorot* are mentioned in the description of the Temple in Ezekiel's vision (Ezek. 41:1–4), for this description is apparently based largely on the actual appearance of the Temple in Jerusalem after the exile of Jehoiachin.

The *menorot* in Solomon's Temple may have had branches, and these may have numbered seven on each *menorah*. For the *Heikhal*, which Solomon built and which measured 40 by 20 cubits (1 Kings 6:2, 17), was too large for only ten lamps to give it adequate illumination. Hence it is probable that each of the ten *menorot* had not one but several lamps, arranged on a central shaft and on branches, and that they numbered seven. Further support for the similarity between the *menorot* of Solomon and the one in the Tabernacle is to be found in the fact that the former, too, were ornamented with carvings of flowers (7:49), resembling the latter which had "cups made like almond-blossoms" and flowers. Moreover, the *menorot* in Solomon's Temple were made of pure gold (*ibid.*, loc. cit. *zahav sagur*, apparently the equivalent expression for *zahav tahor* used in the Priestly Code; see Ex. 25:31, 39; et al.; see *Metals). The vessels of the *menorah* in the Tabernacle consisted of lamps, tongs, snuff-dishes, and oil vessels (Ex. 25:37–39; Num. 4:9); the first three are among those mentioned in connection with the *menorot* in Solomon's Temple (1 Kings 7:49–50).

In addition to the vessels in the *Heikhal*, there were others in Solomon's Temple treasuries whose collection was started already in the days of David (11 Sam. 8:10–11), and which were left as objects consecrated to God but not used in worship. The passage in the Book of Chronicles enumerating the gifts prepared for the Temple by David before his death refers to the *menorot* of gold and silver in the Temple treasuries (1 Chron. 28:15; and cf. 28:12). When the First Temple was destroyed the Chaldeans removed from it all these vessels, among which *menorot* are again included (Jer. 52:19), but they were not those of the *Heikhal*. No actual specimen of the *menorah* in the Tabernacle nor of one with a different number of branches has up to the present been uncovered in archaeological finds. Only reproductions of the *menorah* of the Second Temple are extant (see below).

Although according to the critical views the Priestly Code's account of the subject is legendary tradition, the artistic and architectonic elements of its description are undoubtedly based on an actual art style and derived from reality. Many scholars of the Wellhausen school held that the Tabernacle *menorah* was a literary projection of the one in the Second Temple. Their theory proceeds from that school's basic view that the Priestly Code was compiled at the beginning of Second Temple times, and hence its need to explain the entire Tabernacle as an imaginary reflection of the Second Temple. If, however, it is maintained that the Priestly Code was committed to writing earlier and is the production of the Jerusalem pre-Exilic priesthood, it must necessarily be held that the *menorah* described in it reflects a historic situation preceding the Second Temple. That the *menorot* in Solomon's Temple provided the pattern for the *menorah* in the Tabernacle is, indeed, not impossible.

The Second Temple

According to rabbinic legend, when the Temple was about to be destroyed the *menorah* was hidden away and it was later brought back by the exiles (see L. Ginzberg, *Legends of the Jews*, 4 (1913), 321; 6 (1928), 410–1). In reality, however, the *menorah* of the Tabernacle, as a hallowed emblem mentioned in the Pentateuch, had an influence on the interior of the Second Temple, in which from the outset one *menorah* as in the Tabernacle, and not ten, as in the Temple of Solomon, was placed. The *menorah* in the Temple of necessity had to conform to that in the Pentateuch, which became its archetype. The force that the *menorah* of the Tabernacle had in Second Temple times as a hallowed and binding emblem can be seen from the claim, incorporated by the Chronicler in Abijah's speech, that the people of Judah, keeping the commandments of the Lord, every night lit the lamps of the *menorah* of gold (11 Chron. 13:11). Elsewhere, however, the Chronicler repeats the evidence of the Book of Kings by stating specifically that in the First Temple there were ten *menorot* and not one (see above). This contradiction between the enduring and binding validity of the *menorah* mentioned in the Pentateuch and the ten *menorot* in Solomon's Temple was met by the Sages

with the above-mentioned statement that the *menorah* made by Moses was used during the entire existence of the First Temple, where all the *menorot* were placed on the south side, five on its right side and five on its left, and that of Moses in the middle (Men. 98b).

The golden *menorah* which stood in the Second Temple in the early stage of its history (it is referred to by Ben Sira – 26:17) was removed in 169 B.C.E. by Antiochus Epiphanes IV (1 Macc. 1:21). Judah Maccabee made new Temple vessels, including the *menorah*, after the cleansing of the Temple (1 Macc. 4:49–50; 11 Macc. 10:3). According to the Talmud the first one was made of iron overlaid with tin (or with wood): “When they grew richer they made it of silver; when they grew still richer, they made it of gold” (RH 24b, Av. Zar. 43b); according to Josephus (Ant., 12:238), however, it was made of gold from the outset. It was seen by Pompey and his men when they entered the Temple (*ibid.*, 14:7) and remained in Herod’s Temple until its destruction (Jos. Wars, 5:216–7). After the destruction of the Temple it was borne by the Romans in Titus’ triumphal procession (*ibid.*, 7:148–9) and depicted with the other vessels on the wall of the triumphal arch called after him (see below). Elsewhere, however (*ibid.*, 6:387–8), Josephus relates that during the siege of Jerusalem by Titus one of the priests went out and handed over to him two lamps of gold similar to the lamp in the Temple. On the erroneous assumption that the reference is to the *menorah*, some maintain that there were in the Second Temple several copies of the *menorah* of the *Heikhal*, one of which was carried in the triumphal procession (see below). In the Second Temple three of the lamps of the *menorah* burned throughout the day, the rest being lit in the evening (Jos., Ant., 3:199). The Talmud states that the priest who entered used to clean and trim the lamps except its two eastern ones which he found burning, and that its western lamp burnt continuously, and from it the priest relit the *menorah* at dusk (Tam. 3, 9; 6, 1; Sifra, Emor, 13, 7; Sif. Num. 59; Yoma 33a; et al.). If the western lamp was extinguished it was interpreted as boding ill for the future (Yoma 39b). Josephus (Apion, 1:22) similarly reports in the name of Hecataeus that on the Temple *menorah* there was a light which was never extinguished by night or by day. According to some, the western lamp mentioned by the sages refers to the second of the two easterly lamps, according to others, to the middle lamp, designated as “western” because its spout faced westward, that is, toward the inner sanctum, the Holy of Holies (see Rashi to Shab. 22b, and to Men. 98b; Maim. Yad, Beit ha-Behirah, 3, 8). According to the latter interpretation the tradition of the sages accords with Josephus’ statement (Ant., 3:199) that three lamps burnt throughout the day, that is, the two eastern and the western lamps.

[Menahem Haran]

Menorah on the Arch of Titus

The most important testimony for the form of the Temple *menorah* is the candelabrum on the Arch of Titus in Rome, which ought to be considered in conjunction with Josephus’ description. Only three sides of each octagon of the arch are visible.

They show reliefs within a threefold frame: in the middle shield of the upper cone two eagles face each other and hold a garland in their beaks; the other shields have different types of sea-monsters. The upper part of the *menorah* is, by and large, in accordance with biblical tradition and archaeological evidence. The hanging leaf-ornament of the middle shaft shows the Oriental (Persian) origin (cf. the pillars of Persepolis). The problem of the Arch of Titus *menorah* is, however, its pedestal, which consists of two octagonal casings, a smaller above the larger, giving a cone-shaped form. Though its proportions are rather large, it does not necessarily cast doubt on the fidelity of the sculptor, since this was a peculiarity of Roman – and later Christian – artists. What does make this representation of the pedestal suspect is that according to all Jewish sources (cf. Men. 28b) and archaeological finds the Menorah stood on three legs, usually lion’s paws. These paws are particularly distinct in the Nirim Mosaic (see below). The Bible speaks of the *yerekh* of the candelabrum (Ex. 25:31), which Rashi explains as a plate with three legs (see S. Shefer (ed.), *Enziklopedyah le-Inyenei ha-Mishkan...*, 1 (1965), 126 ff.), and so it appears in the wall painting of *Dura-Europos and perhaps on the coin of Mattathias Antigonus, the only ancient coin depicting a *menorah*. The few extant specimens of this coin are, however, badly preserved, one only showing, besides the plate, a rudimentary foot.

This divergence between the Arch of Titus and the sources has given rise to a lively controversy beginning with Relandus’ *De Spoliis...* (1716) which maintained, on the basis of the biblical prohibition of depicting animals, that the pedestal of the *menorah* on the Arch of Titus could not be an authentic reproduction. In point of fact, as E. Cohn-Wiener pointed out, there is a difference in style between the lower and upper parts of the *menorah*. The upper part, dating from the time of the later Hasmonean kings (see above), shows characteristics of late Hellenistic style, whereas the pedestal is typical of a later Roman style. Important too, is the evidence of Josephus, who must have seen the *menorah* often, both in Jerusalem and in Rome, and who has proved reliable in matters such as these, e.g., the Masada excavations. Whether his description supports or contradicts the authenticity of the Arch of Titus *menorah* depends on the interpretation of the relevant words used by him. According to W. Eltester (in bibl. cf. Michel-Bauernfeind’s edition of Josephus, Wars, 2, 2, 1969), the words translated from Greek, “the central shaft arose firmly from the pedestal,” seems to confirm the Arch of Titus representation which indeed gives this impression of weight and firmness. Another interpretation would be that the central shaft “stretched” out of its pedestal, that it was of one piece with it. This would not only be in accordance with the biblical injunction of Numbers 8:4 (cf. Ex. 25:31, 36; 37:17, 22), but also with Josephus’ statement preceding the above quotation that the *menorah* was different from those in general use. These were put together from separate parts (cf. Pliny, Nat. Hist. 34, 6, 11).

Various suggestions have been made to solve the difficulty. Chief Rabbi Isaac Herzog, after summing up all other

proposals, suggested that the original pedestal had been broken in the transport from Jerusalem to Rome and was replaced by the work of a Roman artist. Another hypothesis is that of W. Wirgin (IEJ 11, 1961, no. 3) who suggests that in order to carry the *menorah* in the triumphal procession without mishap, a Roman artist built a box-shaped covering from relief plates – well known from Roman censers – around the base to give it greater stability. A third suggestion is that the *menorah* on the Arch of Titus had as its model another *menorah*, perhaps one given as a gift to Rome by Herod. In fact Josephus (Wars, 6:388) relates that after the capture of Jerusalem, a priest handed to Titus “two lampstands similar to those deposited in the Temple.” The Talmud (Ḥag. 26b, 27a) also mentions duplicates and triplicates of all Temple vessels in case the original ones were defiled. The Jerusalem Talmud (Ḥag. 3:8; 79d) and the Tosefta (Ḥag. 3:35) report the cleansing of the *menorah* on the Sabbath which provoked the derision of the Sadducees. This would not have been done had there been a duplicate but in any case it does not solve the problem of the Arch of Titus, since the duplicate would have been an exact replica of the original.

Reproductions of the Temple Menorah

Though the *menorah* of the Arch of Titus was widely known – the medieval pilgrims’ guide *Mirabilis Urbis Romae* mentions the *arcus septem lucernarum* – it was not copied in late antiquity or the Middle Ages. While church candelabra and manuscript illustrations have animal feet, only one example of the Arch of Titus type is known: the Gothic candelabrum in Sta. Maria i Vulturella near Rome (see bibl. P. Bloch).

Several sketches of the *menorah* have been preserved from the time of the Second Temple in Jason’s Tomb, Jerusalem (see Rahmani, in: *Atiqot*, 1964, Plate XII no. 1 and 2), and in the two pieces of plaster excavated in the Jewish Quarter of the Old City of Jerusalem in 1969, an artisan’s sketch; three feet or triangle-basis are visible, but with knobs on them, a feature not corroborated by any other ancient literary or archaeological source (see the publication of this find by Li-hi Habas from 2003).

The Later History of the Menorah

Vespasian deposited the *menorah* together with the other booty in the special Peace Temple which he erected after the Jewish War (Jos. Wars 7:148–50; ARN¹ 41, 133). The subsequent fate of the candelabrum is uncertain. Procopius of Caesarea, the sixth-century Byzantine historian, in his introduction to the history of the Gothic War, reports that the “treasures of the Jews” were carried in Belisarius’ triumphal procession in Constantinople (Byzantium) after his victory over the Vandals, who had taken them to Carthage after their sack of Rome in 455. Procopius goes on to relate that a Jew had warned a high official at Justinian’s court not to keep the sacred vessels in Byzantium, as they had manifestly brought ill luck to Rome and Carthage, whereupon the Emperor had sent them hurriedly to Jerusalem, where they were deposited in one of the churches. As the result of the Persian and Arab invasions of

the seventh century, their fate once more became unknown. This story has little credibility; no other source, such as the reports of the pilgrims, can be adduced in its support, nor is the *menorah* mentioned explicitly in this story.

On the other hand, medieval sources speak of the presence of the candelabrum in Constantinople. The seventh-century apocalypse *Milḥemet Melekh ha-Mashi’ah* (“War of the King Messiah”) mentions Temple vessels deposited in the palace library of Emperor Julian. The learned emperor Constantine Porphyrogenitus (905–59) reports that a Heptalychnos, i.e., a seven-branched candelabrum, was lit for solemn processions. The imperial palace is said to have included a “Dome of the Seven-branch Candelabrum” It is not clear whether all these reports refer to the original *menorah* or a later copy. If the one or the other was really in Constantinople during the Middle Ages, it must have shared the fate of other ancient masterpieces when the town was sacked in 1204 in the course of the Fourth Crusade. It may appear odd that no reference to it is found in later medieval chronicles.

[Heinrich Strauss]

In Kabbalah

From the early days of Kabbalah, the *menorah* appears as a symbol of the structure of the *Sefirot*. As far as is known, it was *Asher b. David, in his *Perush Shem ha-Meforash* (published in *Ha-Segullah* (1932) pamphlet 2ff.), who first explained the *menorah* in kabbalistic symbolic terms as reflecting the world of the *Sefirot*. He was followed by *Baḥya b. Asher and especially by Menaḥem *Recanati and others. There is little difference between the interpretations of Recanati and Asher b. David. The basic idea is that the *menorah*, despite the fact it is composed of branches, bowls, etc., is not a combination of parts but is one solid whole made from “one bar.” Similarly, the world of the *Sefirot*, despite its multiplicity, is a unity. The seven branches symbolize the seven lower *Sefirot*. Asher b. David and, following him, Recanati, placed special emphasis on the middle branch, which is equal to the *Sefirah Tiferet* (“glory”), which is called the “middle line.” This *Sefirah* is directed toward the “attraction of the body” of man, in contrast to the other lower *Sefirot* which are directed toward the arms and legs. The middle branch, which stands on the *menorah* itself, toward which all the other branches face, therefore naturally stands for the “middle line.” This *Sefirah* is imbued with abundance flowing from above which is transferred from it to the others. The oil which is put in the branches and is the force for the light of the *menorah* signifies the dynamic stream influenced by the **Ein-Sof*. This stream is the inner soul of all the *Sefirot* which operate within every *Sefirah*. For the same reason – these kabbalists maintain – the Torah calls the seven lower *Sefirot* “lights” and days of the week according to Genesis. The oil as a symbol of the streaming of abundance from above is a commonplace idea in kabbalistic literature. There were kabbalists who explained that the oil and the light indicate the three higher *Sefirot*.

According to the view of several kabbalists that Divine Providence is exercised through the *Sefirot*. Recanati interprets

the saying of Zechariah (4:10): “These seven are the eyes of God,” to mean that God governs by means of the seven *Sefirot* symbolized by the seven branches of the *menorah*.

The *Zohar itself gives no details of the symbolic significance of the parts of the *menorah*. In the *Tikkunei Zohar* the symbolism differs from that of the kabbalists mentioned above. In one place the *menorah* symbolizes an angelic power outside that of the *Sefirot*. The wick stands for the last *Sefirah*, *Malkhut*, equated with the *Shekhinah*; the oil is the *Sefirah Yesod* (“foundation”); and the light is the *Sefirah Tiferet* (*Tikkunei Zohar*, Introd., 146, ed. R. Margulies).

In a 14th-century kabbalistic manuscript Psalm 67 is interpreted as signifying the *menorah* and the counting of the *Omer* (Vatican Ms. no. 214). A reproduction of the text of the psalm in the form of a *menorah* has since become widespread among Oriental Jews and appears both in prayer books and in the form of amulets on walls in homes and, especially, synagogues.

[Efraim Gottlieb]

THE MENORAH IN ART

After the destruction of the Temple the *menorah* became “the most important Jewish pictorial motif, and from an implement it became an emblem.” Out of 1,207 reproductions in the third volume of Goodenough’s standard work, *Jewish Symbolism in the Greco-Roman World* (see bibliography), no less than 182 are representations of the *menorah*. This number has considerably increased through later findings. Here only a short review of the various kinds of archaeological remnants together with the most important examples can be given (the numbers refer to Goodenough).

Synagogues

ACTUAL MENORAH. Upper part of brass *menorah* from En-Gedi (Barag-Porat, in *Qadmoniot* 3, 1970, 97–100, back-cover; see below).

STONE FRAGMENTS AND CAPITALS. Stone screen from Ashkelon (575, 576), from El Ḥamma (629), stones from Eshtemoa and Naveh (615, 618); Capitals in Capernaum (478), Beit Jibrin (542), and Caesarea (997, 998); on a column in Gaza mosque Djami-el-Kebir (584); and on stones in Pergamon (877), Priene (878), and Ostia.

MOSAIC FLOORS. In Beth Alpha (639); Hammath-Tiberias (in both these and many others are two *menorot* right and left of the Ark); and Maon (Nirim, see above; the Nirim *menorah* is reproduced on the Israel 50 lira banknote).

PAINTINGS. The only preserved example is in Dura-Europos, and it is a conical base with three feet near Ark (602). It appears twice in narrative paintings: Aaron in the Temple (Goodenough vol. 11, color-plate x), and Moses giving water to the tribes (color-plate xii).

On Tombs

SCULPTURES. In Bet She’arim, a *menorah* on the head of a warrior (56).

ON DOORS OF TOMBS. Ibelin: YMHEY 17 (1953), nos. 3 and 4; Kefar Yassif (44); Kefar Tamra, near Shefar Am (Haifa Municipal Museum), which shows the *menorah* on the top of a date tree.

FRESCO AND SARCOPHAGUS IN THE TORLONIA CATACOMB, ROME (817, 818). In the catacombs the *menorah* is often the only indication of Jewishness.

SARCOPHAGI IN VIGNA RANDANINI CATACOMB, ROME (789). Now in the Museo di Terme, the *menorah* is in a medallion, borne by two winged Victorias; on gentile sarcophagi such medallions show the head of the buried person or a Medusa. Here the *menorah* is the distinctive emblem of Judaism on an artifact common to other religions as well.

LEAD SARCOPHAGI IN THE ISRAEL MUSEUM, JERUSALEM. The same type as made for pagans, Christians, and Jews. On the Jewish sarcophagi (from Bet She’arim) *menorot* – in contradistinction to the ornaments – are pressed on the three sarcophagi (see bibl. Katz reproductions nos. 104, 120).

TOMBSTONES. Frequently in catacombs (e.g. Randanini and Monteverde in Rome: 33 example in Goodenough).

OSSUARIES. Ossuaries (rare): *menorah* (220, not certain): Ḥanukkah lamp (198).

Varia

GLASS-BOTTLES. Glass-Bottles: 391, 411, 424, 428, 961.

GOLD-GLASSES. From catacombs (963–974), with peculiar techniques: between two layers of glass is the golden design (mostly ritual objects, Ark, lions).

LAMPS. Bronze. K. Katz, *From the Beginning*, pl. 109, p. 126: Reifenberg Collection, now on loan to Israel Museum; ceramic lamps: with various numbers of holders for oil lamps, but very frequently with a *menorah* design (more than 40 reproductions in Goodenough).

AMULETS, SEALS, RINGS, CORNELIANS. On these small artifacts too, the *menorah* is the most frequent symbol indicating the Jewishness of the owner (1012–1027). A good example is a glass amulet (third–sixth centuries) showing a *menorah* among other ritualia (Hechal Shlomo Museum).

The Middle Ages

Representations of the *menorah* are found frequently in medieval manuscripts, Jewish and Christian, of both Spanish and Franco-German origin, depicted alongside other Temple vessels. Earlier even, and of particular importance in this context, is the one in the *Codex Amiatinus* (Italy, c. 500, see bibl. H. Strauss and P. Bloch), which no doubt still reflects an older, classical-Oriental tradition (cf. Strauss, in *Erez Yisrael*, 6, 1960, 126/7; Roth, *Warburg-Courtauld* 16, 1953, 37–38). B. Narkiss, *Hebrew Illuminated Manuscripts* (1969), reproduces (and describes in detail) five medieval manuscripts with *menorah* representations: Plate 1: Bible (Leningrad), probably from Egypt (Introduction, 23); Plate 6: Cervera Bible (Portugal, *ibid.*, and

note 53); Plate 16: Farhi Bible (Spain-Provence, Introduction, 23); Plate 23: British Museum (11639, Franco-German, *ibid.*, 28, note 95); and Plate 24: Pentateuch (French, *ibid.*, 26; note 96). In the British Museum plate, Aaron is twice depicted lighting the *menorah* (*ibid.*, 114a and 122b), the differences in style suggesting two artists. The frequency of this representation may be connected with the fact that it is based on Numbers 8:2–3 and with its ample treatment by the Midrash. All five examples reflect faithfully and impressively their local background: the first three, the influence of the iconoclastic Islamic art, including the playful one of the *Reconquista* in no. 2: the burning lights turned toward the center and the variant of the oil flowing in the same direction; while the last two show the influence of the late Gothic French environment with their wealth of figures and drolleries. Numerous seven-branched candelabra may also be found in medieval French, German, and Italian churches.

A hitherto unpublished *menorah* with its appurtenances (Ex. 25, 38) painted in gold and color, is contained in a Spanish 14th-century Bible-manuscript on parchment, which was shown in an exhibition of the Jewish National and University Library (Jerusalem April–May 1970, Catalogue No. 6). This *menorah* has three feet with rather rare knobs (as in the recently excavated piece of plaster from the Old City of Jerusalem, see above), and snuff dishes like goblets with coats of arms: the tongs hang from the outer branches of the candelabrum and are shown in perspective before and behind the branches. It is apparently the work of an artist of the late Middle Ages, already accustomed to perspective. It frequently appears as an emblem also on book plates showing *Hanukkah lamps, printers' marks, and community seals.

Modern Times

In modern times the *menorah* has continued to be used as a religious symbol, particularly in synagogue art: wall-paintings, stained glass windows, mosaics, and – in spite of the talmudic prohibition (see below) – as a seven-branched metal candelabrum. In imitation of the ancient mosaics, some synagogues place a *menorah* to the right and the left of the Ark. The *menorah* representations in modern American synagogues reveal the problem of expressing ancient symbols in terms of modern art. In many cases little is left of the original tree-and-branches motive, but in some this has been preserved, in spite of modern simplicity. Independently of the synagogue, Benno *Elkan created several tree-shaped bronze *menorot*, of which one stands in Westminster Abbey, London, and another in the vicinity of the Knesset building in Jerusalem. Marc *Chagall incorporated a lighted *menorah* and olive leaves (Deut. 33:24) in his Tribe of Asher window (Hadassah Synagogue, Jerusalem). The Warsaw Ghetto memorial (1963) embodies two outsize *menorot* flanked by lions. The U.S. Jewish artist Ben *Shahn, who is responsible for the mosaic in the Ohev Shalom synagogue in Nashville, Tenn. (Kampf, *ibid.*, 134–6), has produced as its sketch a *menorah* (with *shofar*) in tempera (Ben Shahn, 1966, no. 116) and another one as the colored frontispiece of

a Passover *Haggadah* illustrated by him (1965). Jankel *Adler has a *menorah* – together with several ritualia – in his “Jewish Still-Life” painted in the 1930s. In literature Stefan *Zweig devoted his short story *Der begrabene Leuchter* (“The Buried Candelabrum; 1937) to the saga of the *menorah*. The Arch of Titus *menorah* was adopted as the official symbol of the State of Israel, expressing the idea of Judaea Resurrecta, 2,000 years after the last Hasmonean prince had used the same symbol on his coins.

According to the Talmud it was forbidden to make an exact copy of the seven-branched candelabrum (RH 24b; Av. Zar. 43b; Men. 28b), and this prohibition is largely observed to the present day. On the other hand, the discovery of the upper part of a small bronze *menorah* during the excavations of a synagogue of the Byzantine period at En-Gedi (see above) shows that this prohibition was not always observed. It is possible that the bar of brass connecting the seven branches on their upper end which is also found in mosaic, stone-and-oil-lamp-representations of the same time (Bet Alfa, Ashkelon, oil lamp from Syria: Good-enough 3, p. 941) may have invalidated the above prohibition. J. Gutmann suggests that since the prohibition is found in a *baraita* in the Babylonian Talmud only, it was not accepted in Palestine. Gregorovius reports (*History of the City of Rome... 2, 2, 3*) that in the time of King Theodoric (c. 500) the Jews of Rome used to assemble in their synagogue on Sabbaths and festivals to the light of a gilded seven-branched candelabrum. The Hanukkah lamp, having eight branches, did not violate the talmudic law.

MENORAH (Illustrated Monthly for the Jewish Home), a German-language family journal for science, art, and literature, founded in Vienna in July 1923 by Paul J. Diamant. In his preface, Diamant defined the paper’s aims “in the first place to advance the efforts directed towards bridging the various, often conflicting tendencies within Jewry, hoping, on a cultural basis, to bring about the necessary harmony. We intend carefully to cherish the spiritual and artistic traditions, to look back to those times when Judaism was deeply rooted in genuine soil, unsophisticated by sickly questionings. We intend to cooperate – a lofty aspiration – in creating a homogeneous Jewish cultural atmosphere.” As a liberal-conservative Jewish paper, *Menorah* was primarily directed towards acculturated and educated bourgeois circles, including women and the younger generation, presenting the Jewish family as “the bulwark and prop of Judaism” at all times. While the journal sought to publish articles on all aspects of Jewish life (its main interest, however, lay in fields of Jewish religion and East European Jewish culture), it consistently maintained a high level of scholarship and of literary and artistic quality. Though “not tied to any party,” *Menorah* tended to support the Zionist *Revisionist movement and published articles by its leader, Vladimir *Jabotinsky. During the first year, some contributions even appeared in Hebrew and in English, thus facilitating the paper’s intended circulation throughout Western and Eastern Europe, the United States, and Palestine. However, the periodical does not seem to have been widely read.

In July 1924, *Menorah* passed into the hands of Norbert Hoffmann. He reorganized the paper, dropped its English subtitle (the Hebrew was kept until December 1925), and appointed new permanent staff members such as Nathan Birnbaum (Hamburg), Friedrich Matzner, and Robert Weiss (Vienna), Hoffmann’s wife, Fine, the composer Rudolf *Réti, the chess champion Richard *Réti, and W. Loewinger. Moreover, from July 1924, *Menorah* was jointly edited in Vienna and Frankfurt/Main, and from Oct. 1928 in Vienna and Berlin, then mostly as double issues every two months (until January 1929 together with the publisher Abraham *Horodisch). From

January 1926, *Menorah* was reduced in size and its German subtitle “Illustrierte Monatsschrift fuer die juedische Familie” changed to “Juedisches Familienblatt fuer Wissenschaft / Kunst und Literatur.” Frequently, artwork was included or special editions issued, such as on the Jews in Vienna (March 1926) and Silesia (May 1926), on Jewish hygiene (June/July 1926) and folklore (Oct. 1926), on the Jews in Poland (June/July 1927), on the artist Max *Liebermann (August 1927), on Mainz and the Maharil (December 1927), on the Jewish section (JSDP) of the International Press Exhibition “Pressa” in Cologne (June/July 1928), or on the Jews in Bavaria (Nov./Dec. 1928). In December 1932, *Menorah* ceased publication. Norbert Hoffmann, together with his wife, immigrated to Palestine in 1938. He died in 1977.

[Johannes Valentin Schwarz (2nd ed.)]

MENORAH ASSOCIATION AND MENORAH JOURNAL, U.S. Jewish campus organization and periodical. Both grew out of the Harvard Menorah Society, a Jewish campus group formed in 1906 by Henry *Hurwitz, at the time an undergraduate at the university. Influenced by the “new humanism” then being propounded in Cambridge by such figures as William James and George Santayana, the society sought to pursue the study of humanistic values in Judaism and to develop a positive intellectual relationship to Jewish tradition and belief. Similar groups soon formed on other American campuses, and in 1913 an intercollegiate Menorah Association was established which eventually numbered some 80 chapters. The association became largely defunct in the 1930s, but as the first attempt to establish an intercollegiate Jewish body of its kind it helped pave the way for such later organizations as the *B’nai B’rith Hillel societies.

The *Menorah Journal*, first published in 1915, was similarly dedicated to the promotion of a “Jewish humanism.” Appearing bimonthly from 1915 through 1927, monthly from 1928 to 1930, and irregularly thereafter until 1962 for a total of 157 issues in all, it featured articles and fiction by leading Jewish scholars, intellectuals, and writers, and reproductions of contemporary Jewish art. It served for several decades as a center for lively controversy in American Jewish life. The *Journal* lost much of its prominence in the years after World War II, but like the Menorah Association, it was in many ways the prototype of the successors that displaced it.

[Hillel Halkin]

MENTAL ILLNESS. Man has been subject to mental illness from the earliest known times. The Bible makes frequent ref-

erence to it among Jews, and describes recognizable types of mental disturbances. The reference in Leviticus 20:27, "A man also or a woman that divineth by a ghost or a familiar spirit..." apparently included the mentally ill and, almost definitely, people subject to hysterical conditions. In Saul's personality, a brooding homicidal paranoia was overlaid by suicidal depression. Some of the prophets seem to have experienced states of ecstasy, and there are indications of neuroses among them.

The legal tenets of the Talmud regarding mental illness indicate the existence of conditions ranging from grave types of psychoses to those which develop out of physical states. The writings of the noted Jewish physicians of the medieval period, which were generally based on their practice among Jewish patients, reveal that mental illnesses were frequently encountered. They included melancholia, mania, and other serious psychotic states, states of anxiety, and psychosomatic conditions. The "wonder" cures of the 18th-century folk healers (*ba'alei shem*) provide evidence of the hysterical nature of the emotional disturbances they treated. In dealing with possession by a dybbuk, which was of the same nature, they were carrying on the practice of the Kabbalists in Safed, in Erez Israel.

Toward the end of the 19th century mental disturbances were clearly classified into two major categories. The first is psychosis, where there is profound disturbance of perception (e.g., hallucination), thought (e.g., delusion), and mood (e.g., depression), and accompanying vagaries of behavior, but the patient does not understand that he is disturbed. The second category is neurosis (and deviations of personality), where the disturbance is less profound and the individual retains his perception of reality and knows that he is disturbed, but suffers from worry and guilt, or anxiety, or medically unexplained physical symptoms. Psychotic, neurotic, and "normal" personalities shade imperceptibly into each other and have more in common than appears from these categories. Thus agreement about diagnosis is not constant. Theories of the causes of mental illness fall into three main groups: physical (including genetic); psychological (which has to do with the control of instinct and the personal development of the child within the family); and social (which has to do with the effect of general social influence or stresses and deprivations). Modern theory seeks an explanation for many cases in a varying combination of all three factors.

In the study of mental illness, the analysis of large numbers by statistical methods (epidemiology), and comparison between groups, may provide clues to understanding its nature and causation and the mental health situation and needs of a particular group. The most important epidemiological method is the comparison of the incidence (frequency) of new cases. Incidence is measured as a rate: the number of new cases occurring per year in a given number of the population. In this article, incidence and all other rates are noted per 100,000 of the population concerned. A rough but fairly reliable incidence may be determined by calculating the rate of new cases hospitalized per year. More reliable information is obtained by noting all the cases which appear at both men-

tal hospitals and clinics. Prevalence of illness refers to all the cases – old and new – that exist at any given moment, either in an institution or at home. Prevalence is obtained by a total survey of the community.

Knowledge about mental illness among Jews at the present time is confined mainly to those in the United States and Israel, since by and large it is only in these countries that specific reference to Jews is made in hospital statistics. In Israel, statistics of mental illness are provided by the Mental Health Services of the Ministry of Health. The statistics available on the rates of mental disturbances among Jews and other significant observations about them through 1970 are presented here under three headings: psychoses; neuroses; and other indicators of mental ill health.

Psychoses

DEPRESSION. Depression (manic-depressive, affective psychosis – including involuntional melancholia in the aging) is a relatively significant mental illness among Jews. The U.S. statistics of the 1920s for manic-depressive and involuntional illnesses from hospitals in New York City, Illinois, and Massachusetts, showed Jews to have had slightly lower first-admission rates than non-Jews (including blacks). However, the painstaking work of Benjamin *Malzberg reveals that in 1949–51, Jews in New York State had a notably higher rate of first admission to private and public hospitals than white non-Jews (27 v. 15). These rates are crude, i.e., per 100,000 of the total population of all ages. The crude rate for Jews in Israel in 1958 was about the same (24) as for New York Jews. However, Jews in Israel born in Central and Eastern Europe had in 1958 twice the rates (50, 46) as for New York Jews of the same origin and descent. As usual, the rate is about twice as high in women as in men. On the other hand, in Israel in 1958, Asian-African-born Jews showed only half the rate of European-born Jews and Israel-born Jews even less. The Oriental-born rates were somewhat lower than that for New York Jews and probably only of a slightly higher order than for white non-Jews in New York. Israel-born Jews seem to have had the lowest rates of all these groups, despite the higher proportion among them of those of European rather than Oriental descent.

The Israel rates of first admission for psychotic depressive conditions in 1966 seem to bear out all these conclusions and show that (1) European-born Jews in Israel have a notably higher rate (45) than their non-Jewish European counterparts (Sweden: 21); (2) Asian-African-born Jews in Israel have a markedly lower hospital rate (23) than those born in Europe, lower than the known rate for Jews in New York, and resembling that for European non-Jews; (3) Israel-born Jews of both European and Afro-Asian descent show an even lower rate (16) than the Afro-Asian-born and, *a fortiori*, a lower rate than European-born immigrants. Israel-born Jews have a lower rate than those known for Jews and even non-Jews in New York State. Israel-born Jews in 1966 had a clearly lower crude rate than Swedes (1964) and New Zealanders (1967), the ratio being 6:21:27. The rate for Israel-born over the age of 15

was only 17. The age-specific rate for the population over 15 is a finer measure than the crude rate, since mental illness usually manifests itself after that age. To these conclusions must be added Malzberg's proof of the higher incidence of depressive psychosis in New York State among Jews of European birth and descent than among non-Jews.

The hypothetical reasons for the higher incidence of depressive psychoses in Jews of European birth in Israel and those of European birth and descent in the U.S. may well include the family and social tensions accompanying their profound, achievement-oriented ethical system. This has been incorporated in their personality as a sense of individual conscience and responsibility, the control of aggression, and sobriety. This psychosocial system does not allow for easy solutions and the camouflage of problems by the use of alcohol and other reality-denying behaviors. Furthermore, it is known that closed Orthodox societies in the West tend to produce more depression. The very high incidence of depression among European-born Jews in Israel is undoubtedly the result of persecution and concentration-camp experiences, underlain by tendency to depression and exacerbated by migrational upheavals.

The hypothesis that there is a hereditary element in the Jewish tendency to depression is probably not tenable in the light of the moderate rate among Asian-African-born Jews. The apparent generational change manifested as a lower incidence of this psychosis in Israel-born Jews also argues against genetic causes. The speculation that the higher incidence is the result of the known readiness of Jews to seek psychiatric help cannot hold much water. The high rates for European-born Jews as compared to Asian-African-born Jews in Israel, where all psychotics have an almost equal chance of hospitalization, rule out that factor. It is certain, therefore, that European Jews have a higher rate of psychotic depression than non-Jews. Research in Israel has proved that Jewish women, like all women, have a depression rate about 100 percent higher than men. In 1966, the rate for Israel-born women (27), because of the particularly low rate for Israel-born men (7), was four times as high as for men.

SCHIZOPHRENIA. This form of insanity is characterized by profound disturbances such as hallucinations, delusions, and social withdrawal. In this universally found psychosis, the crude rates of first hospitalizations were approximately the same for Israel Jews in 1958 (39) as those given by Malzberg for New York Jews in 1949–51 (36). However, closer examination reveals marked differences in the Israel Jewish population. In 1958, Asian-African-born immigrants of 15-plus showed a considerably higher incidence of first admissions for schizophrenia (57–80) than Central-European-born (44) and East-European-born (34), Israel-born (81) had the highest incidence. Among the Asian-African-born, Yemenite immigrants had the lowest rate and Turkish the highest.

The high rate of schizophrenia in the Israel born is difficult to explain and may have something to do with the inter-

generational adjustment between them and their foreign-born parents, and with the pressures of mass immigration. However, in 1966 the Israel-born rate in the population over the age of 15, while it had declined, was still the highest (67). In that year the incidence in the Asian-African-born had fallen to 51, indicating that their former high rates were due to transient stresses of immigration and sociocultural change. In 1966 the Asian-African rates were only slightly higher than the European-American, and definitely lower than the Israel-born ones. The total European-American-born crude rate in Israel in 1966 stood at 45, which is about the same as the European-born rate for 1958, but appreciably higher than the earlier-known rate for New York Jews. In every case the schizophrenic rate in Israel Jews still appears to be higher than earlier rates for non-Jews. The general urban crude rate in the U.S. in 1929–31 was 27. In New York in 1949–51 it was 32 for non-Jews. In New Zealand in 1963–67 the general crude rate was 21, while the figures for Jews in Israel in 1958 and 1966 were 39 and 37, and higher if "psychotic episodes" are included. In Israel, among the Asian-African-born the male rate predominates, while among the European-American-born the female rate is in excess of the male.

PARANOIA. This generally rather firm diagnostic category has often been said to be more common in Jews than in non-Jews. Malzberg's work in New York did not bear this out. However, in Israel in 1958, higher first admission rates were diagnosed among European-born Jews (10) and among the Asian-African-born (8–20). The latter was probably a reaction to migration and change, and not always true paranoia. The Israel-born had the same rate in 1958 as Jews and white non-Jews in New York (0.7). In New Zealand in 1967 the rate was 1.0. More recent information indicates no abatement, but rather an increase, in the rates of paranoia diagnosed and treated among the foreign-born Israelis. It was especially marked in women of European-American origin (21 for the 15-plus age group).

It should be noted that among Jews in Israel in 1966 the incidence of all psychoses of a functional, or non-organic nature (schizophrenic, effective, psychotic episode, paranoid) was approximately the same for the Israel and Asian-African-born (107 and 100 respectively for the 15-plus) and for European-American-born (121). As elsewhere, foreign-born immigrants in Israel in the 15-plus group have higher total rates of first admission to hospital than the native-born, but the differences are not very significant (1966: Israel 188, Asian-Africa 218, European-American 226).

Malzberg showed that Jews have about the same total rate of first admissions as white non-Jews. The Israel rate was later discovered to be about 12 per cent higher than both. In the Midtown Manhattan study, *Mental Health in the Metropolis* (1962), Leo Srole and Thomas Langner found that Jews showed a far higher prevalence of all treated disorders than Protestants and Catholics, but for cases normally treated in hospital approximately the same rate as Protestants and less

than Catholics. Jews generally had the lowest rate for serious impairment of mental health. Because Jews were found less frequently in the lower socioeconomic strata, their seriously impaired rates were lower. This leads to the conclusion that the rate of the more severe conditions for which treatment was sought in the U.S. was not greater among Jews than among non-Jews. In Israel, European-American-born Jews had a definitely higher rate for all psychoses (including organic conditions) than Jews of other origins.

Neuroses and Allied Conditions

The available hospital statistics in New York City (Bellevue Hospital, 1938) and in New York State (Malzberg's study, 1949–51) indicate a higher rate of neuroses in Jews than in non-Jews. A higher rate of neuroses for Jews was reported among military selectees in Boston in 1941–42. The rate for first admissions to Illinois State mental hospitals, however, was lower for Jews.

Leo Srole notes that in the early 1950s the prevalence rate of treated neuroses for Jews was twice that of Catholics and Protestants. In the Manhattan study, Jews also yielded considerably higher patient rates for disorders usually treated in an ambulatory facility. While in the community survey they showed the lowest seriously impaired rate, their mental health was generally not as satisfactory as that of Catholics and Protestants, from which it is to be concluded that neurosis rates in New York are higher among Jews than among non-Jews.

In Israel in 1958 Jews had a hospital first admission rate which was definitely higher for neuroses than Jews in New York (1949–51, 21 v. 12). Furthermore, the Asian-African-born had generally twice the rate (15-plus) of the European- and Israel-born. The highest rate (65) was among those born in Iran, who had particular adjustment problems and also showed an apparently greater tendency to paranoid reactions. In 1966 the general Israel rate for neuroses was even higher than in 1958 (30), but the two groups of immigrants had approximately the same rate (± 40). This is accounted for by the steep rise in the first admission rate for neurosis among European immigrants and some subsidence in the rate among Oriental immigrants.

Concentration-camp survivors, while generally known to have made a good social adjustment in Israel, were in a large proportion of cases deeply affected by the trauma they had suffered. Their emotional reactions often included anxiety, depression, and difficulty in reestablishing relations. Kibbutz-born Israelis appear to have the usual emotional disturbances, and in average proportions. They do not, however, manifest homosexuality or delinquency.

For personality (character, behavior disorders), Malzberg's study of hospitalization showed a crude rate slightly less for Jews in New York (1.5) than for white non-Jews. Israel Jews in 1958 showed a very much higher hospital incidence rate. The Asian-African-born in Israel showed remarkably high rates in the population over the age of 15 (36–48), as did the Israel-born (50), when compared to the European-born

(15–25). This accords with their rates for schizophrenia, and like these they decreased in 1966 (Asian-African-born 25, Israel-born 23). This indicates that these reactions were the product of immigration and social upset and that they were reduced after social adaptation. In 1958 and 1966 the rates for personality disorders among the European-American-born were the lowest in Israel (9).

Other Indicators of Mental Ill Health

ALCOHOLISM. Jews are traditionally known for their sobriety. In the 1920s their rate for arrests for drunkenness in Warsaw was 30 v. 1,920 for Christians. In 1925 the rate of admission to public and private mental hospitals in New York City was 0.1 for Jews and 5.9 for non-Jews. A similar picture held in Massachusetts and Illinois State hospitals. In the Boston examination of military selectees, Jews had the lowest incidence of alcoholic psychosis of all ethnic groups. Malzberg found only two cases during a three-year period (1950–52) in Canada, where the Jewish population was 240,000. He also states that he found an intemperate employment of alcohol in 2.2 percent of Jewish first admissions in New York as against 18 percent of non-Jewish first admissions. In the New Haven psychiatric census of 1950, no alcoholic Jews were found among the patients at any treatment site.

In a census in Israel in 1964 analyzing cases found in mental hospitals, only 21 (0.3 percent) presented alcoholic problems. In 1966, however, a total of 152 alcoholic cases were admitted to the hospital (2 percent of all cases admitted). This was the total crude rate of 6.6 (for men 12.5), which resembles the earlier rates for non-Jews in the U.S. (urban total rate 7, males 12). However, this rate constituted about one in ten of which only four were Israel-born; 26 were from Europe-America (rate 3) and 44 from Asia-Africa (rate 7). It is evident, therefore that alcoholism in Israel is a problem relating almost entirely to male immigrants, especially those from Asia and Africa. However, social changes in the country and the growing consumption of alcohol may conceivably increase its incidence, in spite of the intense social cohesion in Israel.

It is possible that a part of the real incidence of neurosis and depression in many non-Jewish populations is masked by or expressed through alcoholic overindulgence. In Jews it may well be that emotional difficulty is expressed through neurosis and depression rather than through the escape into and physical self-destruction of alcoholism (see *Drunkenness).

DRUG ADDICTION. Drug addiction is relatively speaking not new or uncommon among Jews in Israel. In 1966 and 1967 91 Jews with a primary diagnosis of addiction were admitted to hospital for treatment. Thirty-two of these cases were admitted for the first time (23 males, 9 females). They were composed equally of immigrants from Europe-America and Afro-Asia, with only five or six Israel-born. In 1970 there were probably somewhat more than 400 hard-core addicts in Israel. Drug addiction is known to be associated in the underworld with criminality and with pimping and prostitution, but a few of

the cases were related to medical treatment. The New Haven study of 1950 revealed no drug addicts among Jews. A comparison of half-year figures for 1966 with 1970 shows a rise of first admissions related to drugs (from 20 to 39) with an especial increase of the number of younger Israel-born Jews. In 1970, despite the absence of statistical study, the abuse of drugs was known to have spread to groups of Jewish youth in the U.S. A few who visited Israel after the Six-Day War required treatment. Some of the older immigrants to Israel from North Africa and the Middle East had been in the habit of smoking marijuana, but it became much less evident among them in Israel and was not used by their children except among delinquents and small marginal groups. Following the Six-Day War, with the occupation of the West Bank and the flood of volunteers and students from North America, the use of marijuana increased in marginal groups. The occasional and apparently temporary use of a small amount of marijuana even appeared among groups of pupils at secondary schools.

Suicide

Emile *Durkheim demonstrated at the end of the 19th century that Jews had a lower suicide rate than Protestants and Catholics. It was estimated that in 1925 the suicide rate for Jews in New York was ten as compared to a similar general average yearly rate for the period 1950–59 in the U.S., a rate of three in Ireland, and one of 23 in Denmark. In Israel in 1952–58 the general rate was ten (and 15 for the population above 15 years of age in 1949–59). While the suicide rate in Israel represents a mid-point between extremes in other nations, it has special characteristics. The female rate relative to the male rate is unusually high. In European countries males usually have a suicide rate three or four times that of females. In Israel in the years 1949–59, female rates were never less than half that of males and in two of those years equaled that of males. This has been explained as a result of the social equality and shared burdens of the sexes in Israel. A slackening of religious Orthodoxy may be a factor, but high female ratios are not found in other egalitarian societies. It is more probably a result of the high incidence of depression, especially among older Western women in Israel. Since 1949 at least 70 percent of female suicides have occurred in women over the age of 31, which is also the age associated with the onset of depression.

The high ratio of suicides in women as compared to men among Jews in Europe can be seen from a report by Arthur *Ruppin in 1940. Of the suicides of Jews in Warsaw between 1927 and 1932, 49.4 percent were women. Ruppin ascribes this to the difficult psychological situation of Jewish girls who, in the secular environment of the Polish capital, had lost touch with their Orthodox parents. Another striking fact is the very low suicide rate in Israel among the Asian-African- and Israel-born. However, attempted suicide is becoming more frequent among young women from Oriental homes in Israel. This is probably related to the psychological conflict described by Ruppin, who ascribes rising rates of suicide among Jews generally to growing secularity. Where Durkheim quotes a rate of 18

for Jews in Prussia in 1890, Ruppin gives a rate of 50 for 1926. Since 1956 the suicide rate in Israel has gradually declined. In 1964 it was 12 for the population above the age of 15, while the rate for the general population was 7.6. This decrease may also be related to the general readaptation which followed the absorption of the mass immigration of the early 1950s.

Criminality and Delinquency

While no statistics exist, criminality was known to be rare among Jewish communities in the Diaspora and has generally been so in Erez Israel as well. However, delinquency has been found, especially among the less privileged Oriental, near-slum groups in Israel's cities. Striking evidence of the stress which followed the mass immigration is seen in the high rates of crimes of violence (murder, attempted murder, and manslaughter) and causing death by negligence from 1949 until about 1956–57. The rate for murder dropped from 45 in 1949 to one in 1962. The total rate of these crimes of violence decreased from 20 in 1950 to five in 1960. This again indicates adaptation after the tensions caused by mass immigration (but see below).

The percentage of juvenile delinquency rose from 0.7 in 1949 to 1.0 in 1957. The proportion was higher for Oriental groups. In 1957 children of all groups of immigrants constituted 69 percent of the delinquents. Delinquency and criminality are not encountered among kibbutz-born children. The incidence of juvenile delinquency among Oriental groups indicates problems which at times arise out of cultural and social changes in their families. On the other hand, the palpable increase in delinquency among children from a "good" socioeconomic background highlights the difficulties being encountered by some developed city families in the modern, technologically advanced society of Israel.

[Louis Miller]

Later Figures

At the end of 2002, 5,439 psychiatric patients were occupying hospital beds in Israel and during the year around 58,000 outpatients had been treated in government clinics. Hospitalization resulting from drug and alcohol abuse reached 19,528. In this regard the estimate of 400 addicts in the country in 1970 cited above, reflecting even then the gradual introduction of drugs into the country after the Six-Day War, underscores the extent to which Israel in the early 21st century had evolved a drug and alcohol culture. Hundreds of thousands can be said to be users of illegal drugs of one kind or another. Similarly the sharp rise in criminality and delinquency (see *Crime) are further indications of Israel's new realities.

MENUHIN, HEPHZIBAH (1920–1981), pianist. Born in San Francisco, Menuhin began to study piano at an early age, giving her first recital in 1928. She continued her studies in Paris with Marcel Ciampi. There, in 1934 she made her debut with her brother Yehudi *Menuhin, thus starting a long partnership in sonata recitals. She toured widely as a recitalist in most of the major cities of Europe and America, visiting Israel with her brother in 1950. Her playing had a clean, clear approach abjuring frills.

Among her recordings are works by Schubert, Mendelssohn, Bach, Beethoven, and Bartók. In 1938 she married and settled in Australia. In 1954 she moved to Sydney, where she gave concerts and opened her home to anyone in need. Three years later she settled in London. With her second husband, Richard Hauser, she set up the Center for Human Rights and Responsibilities. After her death, a Hephzibah Menuhin Memorial Scholarship fund for young pianists was established in conjunction with the NSW State Conservatorium of Music.

[Naama Ramot (2nd ed.)]

MENUHIN, SIR YEHUDI (1916–1999), violinist and conductor. Menuhin was born in New York, the son of parents who had left Palestine to settle in the U.S. He himself spoke Hebrew in his early years. He started to learn the violin at the age of five and appeared as soloist with the San Francisco Orchestra when he was seven. He was taken to Europe in 1927, and continued his studies with Georges Enesco and with Adolf Busch. By 1929, he captivated Paris, London, and New York, and made his first gramophone records. He had played the Bach, Beethoven, and Brahms violin concertos under Bruno *Walter in Berlin, and performed 75-year old Elgar's violin concerto under the composer's baton in London and Paris. In 1935 he retired for almost two years to California. During World War II Menuhin gave an estimated 500 performances for U.S. and Allied Forces. In 1944 he was the first Allied soloist to play in liberated Paris and in 1945 he was invited to play in Moscow. He paid the first of several visits to Israel in 1950.

Menuhin had increased the scope of his musical involvement. His second career, as a conductor, was initiated with the Dallas SO in 1947 and became a regular feature of his activities. He established and directed music festivals in Switzerland (1957) and later in England (Bath and Windsor). He established a school for musically gifted children. Menuhin's admiration for Indian music prompted an important musical friendship with Ravi Shankar. He became an active member of UNESCO's International Musical Council of which he served as president. In 1970 he was awarded the Jawaharlal Nehru Prize for International Understanding. He received degrees, doctorates, and fellowships from universities around the world and state honors from 17 countries. After adopting British citizenship in 1985 he was knighted, and in 1987 he was awarded the Order of Merit. Among the many composers who wrote

specially for him were Ernst *Bloch, Béla Bartók, Paul *Ben-Haim, and Sir William Walton. He published several books including the autobiography *Unfinished Journey* (1977), *Life Class of an Itinerant Violinist* (1986), and *The Violin* (1996). Yehudi Menuhin's sisters, Hephzibah *Menuhin (1920–1981) and YALTA (1921–2001), both gifted pianists, appeared with him in chamber music recitals and in concert tours.

ME'OT HITTIM (Heb. מְעוֹת הַטִּימִים; “wheat money”), collection made before *Passover to ensure a supply of flour for unleavened bread (*mazzot*) for the poor. Residence in a town for 12 months obliged one to contribute to or entitled one to receive communal funds known as *Kimḥa de-Fiša* (“flour for Passover”; TJ, BB 1:6, 12d). In medieval Europe it was customary for the communal rabbi and seven notables to draw up a list of those eligible to donate and to receive the tax, at the beginning of the month of Nisan. The custom was codified by *Isserles (OH 429:1). In modern times, the term has been broadened to include all the holiday needs of the poor at Passover (e.g., wine, fish, meat).

MEPHIBOSHETH (Heb. מְפִיבוֹשֶׁת), a son of Jonathan and a grandson of Saul; called Merib-Baal (מְרִיב־בַּעַל) or Meribaal (מְרִיבְעַל) in the genealogy of the house of Saul (1 Chron. 8:34; 9:40) where the name is parallel to Eshbaal (see *Ish-Bosheth). The original form in 1 Chronicles is obviously, *boshet*, “shame” having deliberately been substituted for *ba'al*, “lord,” which later generations objected to because it was the name of the pagan god Baal. Mephibosheth, the sole heir of the house of Saul (cf. 11 Sam. 9:1ff.), became lame at the age of five as the result of a fall from the hands of his nurse when she hurriedly picked him up in order to flee after receiving the news of the death of Saul and Jonathan (11 Sam. 4:4). David treated Mephibosheth compassionately, refusing to deliver him over to the Gibeonites to be hanged with the other descendants of Saul (21:7), inviting him to eat at the royal table, and restoring him to the fields of Saul (9:1ff.). These kindnesses toward Mephibosheth can be explained as the fulfillment of David's oath to Jonathan (1 Sam. 20:15, 42; 11 Sam. 21:7) and perhaps even of his oath to Saul (1 Sam. 24:22). The story telling of David's generosity, however, makes no mention of the oaths, perhaps thereby implying that David's magnanimity was motivated not only by his oath but also by a plan to keep the descendants of the preceding dynasty under observation and to impress upon his own monarchy the stamp of continuity and legitimacy. Reasons of state become particularly evident in David's attempts to draw closer to the Benjamites and those who had been allied with Saul (11 Sam. 3:19; 9:4–5; 17:27; 19:17, 18, 21; 1 Chron. 12:1–9). During Absalom's revolt Mephibosheth did

not take any action and apparently remained loyal to David (II Sam. 19:25–32). *Ziba failed in his attempt to impute to Mephibosheth the ambition of receiving the monarchy from the people (II Sam. 16:1–4; 19:25–30).

[Samuel Abramsky]

In the *Aggadah*

Mephibosheth was an outstanding scholar. David called him “My teacher,” and consulted him on all matters (Ber. 4a), and in the Talmud his name, used metaphorically to denote a noted scholar (Erub. 53b; “out of my mouth, humiliation”), indicated that he humiliated even David by his learning (*ibid.*). Nevertheless, David saved his life (cf. II Sam. 21:7) by praying that Mephibosheth should not be made to pass before the Ark and thus risk being condemned to death as were the rest of Saul’s sons (Yev. 79a). Because David gave ear to Ziba’s slander against Mephibosheth, the Temple was destroyed T1, Yev. 4a). The later division of the kingdom was a punishment for David’s decision that Mephibosheth and Ziba were to divide the land (II Sam. 19:29; Shab. 56b).

MER, GIDEON (1894–1961), Israeli expert on malaria and epidemiologist. Mer was born in Ponevez (Panevezys), Lithuania, and gave up the study of medicine in 1913 to immigrate to Palestine. On the outbreak of World War I he was expelled by the Turkish authorities as an enemy alien and went to Egypt, where he responded to *Trumpeldor’s call for volunteers to found a Jewish brigade. He was one of the first to join the Mule Corps and served with distinction at Gallipoli. After the war, Mer obtained work in the anti-malaria service under Professor *Kligler, who persuaded him to return to Europe to complete his medical studies. In 1928, at the invitation of the Hebrew University of Jerusalem, he rejoined Kligler on the staff of the malaria research station at Rosh Pinnah, and in 1935 was appointed professor.

In World War II, Mer served as an expert on malaria first with the Australian army in the Middle East and then with the British forces in Iraq, Persia, and Burma. In Burma he carried out the first large-scale experiments on the use of DDT. After the war he returned to Rosh Pinnah and in 1948 served as brigade medical officer in the Palmaḥ. With the founding of the State of Israel Mer was appointed head of the department of preventive medicine of the Israeli army, but returned to his research station at Rosh Pinnah in 1951. Mer’s work in the field of malaria control earned international recognition. His greatest contribution to the study of the bionomics of anophelines was his method of age grouping of the female anopheles by the size of the ampulla of the ovary.

MERAB (Heb. מֵרָב; probably from the root *rbb*), the eldest daughter of King *Saul (I Sam. 14:49). Saul promised Merab as a wife for *David, upon the condition that David fight Saul’s wars against the Philistines (18:17–18). Saul did not fulfill his part of the bargain (18:19). Instead he gave Merab to *Adriel the Meholathite, and *Michal, her younger sister, became the wife of David. The conditional promise of marriage is similar to I Samuel 17:25, where Saul promises his daughter to the person who defeats Goliath. II Samuel 21:8 mentions the five sons of Michal and Adriel. The text should, however, read Merab instead of Michal on the basis of the Lucianic version of the Septuagint, the Peshita, and two masoretic texts.

MERANO, town in the province of Bolzano, N.E. Italy, near the Austrian border. Only around the middle of the 19th century did a few Jewish families, mainly from Central Europe, settle in Merano, the area having been under *herem* since 1475 (see *Trent). In 1905, a community was constituted in Merano, encompassing the communities of Trent and Bolzano. In 1918 Merano passed from Austrian to Italian rule. In 1931, 780 Jews lived there, many of whom were foreign citizens. During World War II the Jews in Merano had to face the hostility of the German-speaking population, as well as the Nazi occupation: 25 Italian Jews from Merano are known to have died in the extermination camps; many more were executed or disappeared. There were 64 Jews in Merano in 1945, and about 30 in 1970.

[Sergio Della Pergola]

MÉRAY, TIBOR (1924–), author and journalist. At first a dedicated supporter of the Rákosi regime after World War II, Méray later joined Imre Nagy’s revisionists and, when the 1956 revolution collapsed, fled to Paris. There he edited the radical newspaper *Irodalmi Ujság* and, during the Six-Day War of 1967, wrote in support of Israel. *The Enemy* (1958), confessions of a party hack, was a satire on Stalinism. *Thirteen Days That Shook the Kremlin* (1958) described the Hungarian Revolution. *The Revolt of the Mind: A Case History of Intellectual Resistance behind the Iron Curtain* appeared in English in 1975.

MERCHANT, LARRY (1931–), U.S. sports broadcaster and writer, known for his acerbic style of commentary. Merchant was born in Brooklyn, New York. His father ran a laundry and dry-cleaning business; his mother was a legal secretary. Merchant received a journalism degree from the University of Oklahoma in 1951, and after serving as a reporter for *Stars and Stripes* while in the Army, he began his journalism career in 1954 as sports editor of the *Wilmington News* in North Carolina. He was named sports editor of the *Philadelphia Daily News* at 26, and moved to the *New York Post* as a sports columnist in 1965. He left the *Post* a decade later and moved into television, becoming the HBO boxing commentator in 1978. HBO officials said they wanted Merchant to become another Howard *Cosell, himself an outspoken sportscaster. In a 2003

interview, Merchant said: “It’s not my job to be a cheerleader. I’m skeptical of hype.” He covered many of the top boxing events of the late 20th century, including Sugar Ray Leonard vs. Thomas Hearns, and Mike Tyson vs. Michael Spinks. In 1985, Merchant received the Sam Taub Memorial Award for Excellence in Boxing Broadcast Journalism. He was inducted into the World Boxing Hall of Fame in 2002. He wrote the award-winning HBO documentary series “Legendary Nights,” which focused on famous boxing matches. Merchant played himself in two movies that featured boxing scenes, the 2001 remake of *Ocean’s 11* and *I Spy* in 2002. He is the author of three books on sports: ... *And Every Day You Take Another Bite* (1971), *The National Football Lottery* (1973), and *Ringside Seat at the Circus* (1976).

[Alan D. Abbey (2nd ed.)]

°**MERCIER, JEAN** (**Joannes Mercerus**; d. 1570), French Hebraist. Born in Uzès, near Nîmes, Mercier was a pupil of François Vatable, whom he succeeded as professor of Hebrew at the Collège Royal, Paris, in 1546. Unlike his master, Mercier was a prolific writer, publishing works on Hebrew and Semitic grammar, Latin translations and editions of the Targums, Bible commentaries, and other books of Jewish interest. Owing to his sympathy with the Reformers during the French religious wars, Mercier was obliged to take refuge in Venice in 1567 and, after returning to France, he died of the plague. One of his best-known works was the *Libellus de abbreviaturis Hebraeorum, tam Talmudicorum quam Masoritarum et aliorum rabbinorum* (Paris, 1561), later exploited by Guy *Le Fèvre de la Boderie, which reveals Mercier’s interest in the Kabbalah and cites scholars such as *Reuchlin and *Galatinus. However, from remarks in his commentary on Genesis (Geneva, 1598), published after his death by Théodore de Bèze, his enthusiasm for later kabbalistic literature clearly waned. Mercier translated almost the whole of Targum Jonathan b. Uzziel on the Prophets; and he wrote annotations to Santes *Pagnini’s *The-saurus (Ozar Leshon ha-Kodesh*; Lyons, 1575, etc.). His other works include *Besorat Mattei* (1955), a Hebrew version of the gospel of Matthew; *Luḥei Dikduka Kasda’ah o Arama’ah: Tabulae in grammaticen linguae Chaldaeae* (Paris, 1560); *Aseret ha-Devarim: Decalogus*, with the commentary of Abraham Ibn Ezra, in Hebrew and Latin (Lyons, 1566–68); and the posthumous *De notis Hebraeorum liber* (1582), revised by another French Hebraist, Jean Cinquarbres (Quinquarborus; d. 1587). Among those who studied under Mercier was the Huguenot leader and author Philippe de Mornay (Du Plessis-Mornay, 1549–1623).

[Godfrey Edmond Silverman]

MERCURY (**Mercurius**; in talmudic literature מֶרְקוּלִיִּם, **Merkulis**), Roman god of merchants and wayfarers, identical with the Greek god Hermes. The rabbis of the Talmud discussed Mercury more than any other pagan deity and

apparently considered him almost synonymous with idolatry. Thus, where one *baraita* states, “He who sees Mercurius should recite ‘Blessed (be God) who has patience with those who transgress His will’” (Ber. 57b), the parallel source reads simply, “He who sees idolatry...” (Tosef., *ibid.* 7[6]:2). Similarly, the Midrash interpreted the general prohibition against erecting statues or pagan monuments (Lev. 26:1) as referring to statues of Mercury on the roads (Sifra, Be-Har 9:5). The rabbis were also aware of certain modes of worship connected with Mercury, and thus the Mishnah proclaims: “He that throws a stone at a Mercurius is to be stoned, because this is how it is worshipped” (Sanh. 7:6). The trilithon, or three stones erected as part of the Mercurius, was also known, and therefore “R. Ishmael says: Three stones beside a Mercurius, one beside the other, are forbidden, but two are permitted” (Av. Zar. 4:1). So well known, in fact, was Mercurius worship in Palestine that it is mentioned even in popular proverbs: “As one who throws a stone at Mercurius is guilty of idolatry, so one who teaches a wicked pupil is guilty of idolatry” (Tosef., Av. Zar. 6[7]:18). Rabbis were constantly confronted with Mercury, and according to one talmudic account, a Mercurius was erected in the field of R. Simeon, son of Judah the Patriarch, but he succeeded in having it dismantled by the local authorities (TJ, Av. Zar. 4:1, 43d).

[Isaiah Gafni]

MERCY (Heb. רַחֲמִים), a feeling of compassion tempered with love, which engenders forgiveness and forbearance in man and which stimulates him to deeds of charity and kindness. This quality, inherent in man’s attitude toward his loved ones, is an essential characteristic of God who “pitieth like a father” (Ps. 103:13; Isa. 49:15; Ex. 20:6; 34:6; Micah 7:8), and of the descendants of Abraham, renowned for their compassion. As God is known as *Raḥamanah* (“the Merciful”), so are the people of Israel distinguished as “merciful sons of merciful fathers” (Yev. 79a). In accordance with the tradition of the *imitation of God – “as He is merciful so be you merciful” (Shab. 133b) – mercy transcends familial bounds to encompass the entire range of human relationships (Ecclus. 18:13; Gen. R. 33: 1). Just as God is bound by His covenant of mercy with His people (Deut. 13:17; 30:3; II Kings 13:23), so is the Jew bound by specific commandments to act mercifully toward the oppressed, the alien, the orphan, the widow, indeed, every living creature (Deut. 22:6; 25:4; Prov. 19:17; Git. 61a; Moses Cordovero, *Tomer Devorah*, ch. 3). The exercise of mercy is the fulfillment of a covenantal obligation, and, in turn, enhances moral sensibility (Suk. 49b; BB 9b). The stress placed upon maintaining charitable institutions in Jewish communal life is an outgrowth of this view of mercy. Man’s recognition of God as “the Merciful One” finds its verbal expression in his prayers (Num. 19:19; Ps. 106:1), wherein he implores God to deal compassionately even with the undeserving man (Ex. 34:7; Sot. 14a; Ber. 7a). Because of the imperfection of every mortal, even such righteous men

as Abraham are dependent on God's mercy. Recognizing human frailty, God forgives transgressors, especially those who themselves are forgiving (Ecclus. 28:2; Shab. 151b; BM 85a; Ex. R. 12:1). The firm belief that "it is because of the Lord's mercies that we are not consumed, because His compassions fail not" (Lam. 3:22) has sustained the Jewish people through many periods of travail (Hos. 12:7). God's mercifulness does not negate the principle of divine justice, but rather complements it and reinforces its efficacy (see *God, Justice and Mercy of). In analyzing the 13 attributes by which God manifests Himself, the rabbis point to the positive interaction of mercy and justice in God's relation to the world (RH 17a, b; Lev. R. 29:3). This combination of justice and mercy in God is denoted in the two names of God, *Elohim*, and *YHWH*, the first of which designates justice, the second, mercy. God resolves the tension between strict judgment and mercy in favor of the latter (Ps. 89:3; Prov. 20:28). Philo expresses this in his statement: "God's pity is older than his justice" (Deus, 16). Judaism can thus demand of its judges the seemingly contradictory qualities of impartiality and compassion (Ex. 23:3; Ket. 9:2; Sanh. 6b). The principle of mercy assumes an overriding significance in the administration of Jewish law, where rules of equity qualify strict legalism: "... execute the judgment and show mercy and compassion every man to his brother" (Zech. 7:9).

[Zvi H. Szubin]

MERCINA OF GERONA, 15th century author of a Hebrew liturgical poem, rich in biblical allusions, that begins, "Blessed, Majestic, and Terrible," discovered by A.M. Habermann in the manuscript of a medieval Spanish *mahzor*. She is described in the manuscript as "a woman of virtue" – the lady Mercina, the Rabbiness from Gerona." Mercina's plea for divine redemption for the faithful of Israel is also an acrostic: the first word of each of the five verses starts with a letter of her name. Since the Jewish community of Gerona disappeared after the expulsion of 1492, the poem was evidently written before that date. Mercina is one of only two known female Hebrew poets in medieval Spain; her predecessor was the tenth-century wife of *Dunash ben Labrat.

[Cheryl Tallan (2nd ed.)]

MEREMAR (d. 432), Babylonian *amora* of the end of the fourth and beginning of the fifth centuries. According to the *Sefer Kabbalah* of Abraham *Ibn Daud, Meremar succeeded

Ashi as head of the academy of Sura (427–32). He was a pupil of the elder Ravina (Yev. 75b) and transmitted to the younger Ravina in the name of the latter's father the teachings of Joseph (Ned. 60b) and of Papi (Ned. 90a). He transmitted a statement once in the name of R. Dimi (Git. 19b), but he could hardly have known him personally, since Dimi lived in the first half of the fourth century. Among his colleagues were Mar Zutra (Suk. 45a) and Ashi (Ber. 30a). His pupil the younger Ravina, who visited him later in Sura (Pes. 117b), is mentioned frequently (Shab. 81b; Git. 19b; BM 72b, 104a; et al.), and Aḥa of Difti (Ber. 45b; Hul. 47a) is also apparently a pupil of Meremar. He was succeeded as head of the academy by Idi b. Avin. Meremar had a son Judah who was a colleague of Mar b. Rav Ashi and the above-mentioned Aḥa (Ber. 45b).

[David Joseph Bornstein]

MERETZ, Israeli parliamentary group and political party. Meretz first emerged as a ten-member parliamentary group on March 9, 1992, through the merger of the Citizens Rights Movement, *Mapam, and *Shinui. The three parties were united on the issues of peace, religion and state, and human rights issues, but differed on social and economic issues, with Mapam and the CRM following a socialist line, and Shinui a liberal one.

Meretz ran in the elections to the Thirteenth Knesset, under the leadership of Shulamit *Aloni, receiving 12 seats, and emerged as the third largest party in the Knesset. It joined the government formed by Yitzhak *Rabin, and received three ministerial posts, increased to four after Shas left the government on the eve of the signing of the Oslo Accords in 1993. As long as Shas remained in the government, there was constant pressure on its part that Aloni be removed from the Ministry of Education and Culture, to which she had been appointed minister, owing to what Shas considered lack of sensitivity to the religious sector. As a result Aloni was replaced in the ministry by Amnon *Rubinstein, and received a portfolio that combined Communications, Science, and the Arts. As a staunch supporter of an agreement between Israel and the PLO, Meretz supported the Oslo Accords, but was only marginally involved in their formulation. In addition to attending to the portfolios that were in its hands, Meretz continued throughout the Thirteenth Knesset to be active in the field of civil and human rights, within Israel proper and in the territories, and even before Rabin's assassination warned against the growing strength of the religious extreme right-wing movements. Following Rabin's assassination, Meretz blocked an attempt by Prime Minister Shimon *Peres to bring the NRP into the coalition and thus give it an effective veto on any future peace moves. Meretz joined Haim *Ramon when he established the list Ḥayyim Ḥadashim ba-Histadrut, in the Histadrut elections, and some of its members played an active role in the reorganization of the Histadrut after those elections. In the elections to the Fourteenth Knesset in 1996, Meretz, led by

Yossi *Sarid, received nine seats, and remained in the opposition. In February 1997 it registered as a party, and its three bodies ceased to exist as separate parties. In the elections to the Fifteenth Knesset Meretz received ten seats, and entered the government formed by Ehud *Barak, receiving three portfolios, but it left the government in June 2000, because Sarid was displeased by Barak's efforts to pacify Shas, and went into opposition. In the elections to the Sixteenth Knesset Meretz received only six seats, despite the fact that Yossi *Beilin and Yael *Dayan, who had failed to enter the *Israel Labor Party list for the elections to the Sixteenth Knesset in a realistic place, joined the Meretz list. This failure led to Sarid's resigning the party leadership. In the elections for the party's leadership held in February 2004, Yossi *Beilin beat MK Ran Cohen, and the party changed its name to "Ya'had and the Democratic Choice." In the summer of 2005 "Meretz" was brought back into the party's name. In the 2006 elections it won five seats.

[Susan Hattis Rolef (2nd ed.)]

MERGENTHEIM (Bad Mergentheim), city in Wuerttemberg, Germany. Jews settled in Mergentheim in the first half of the 13th century; 16 Jews were murdered during the *Rindfleisch massacres of 1298. Jews are mentioned again in 1312; they suffered during persecutions in 1336 and again during those of the *Black Death in 1349 when a number of Jews were martyred. They reappeared in the city, however, in 1355, and during the next century prospered, in large part through moneylending. The Jewish population remained small throughout the 14th and 15th centuries. In 1516 there was only one Jew in the city, but by the end of the century the population rose again. In 1590 a cemetery plot was put to use in Unterbalbach for the Jews of that town as well as those of surrounding communities, including Mergentheim. This cemetery was enlarged in 1702 and remained in continuous use throughout the modern period. During the early 17th century, only *Schutzjuden were permitted in the city; all other Jews were restricted to an eight-day stay. Throughout the century, every attempt was made by the municipal authorities to restrict Jewish economic activities. Nonetheless, the Jewish families managed to build a synagogue in 1658; this was enlarged in 1762. By 1700 there were 40 Jewish residents, among them the Court *Jews Calman Model and Hirsch Manasses. At this time Jewish commercial interests included trade in horses, livestock, corn, and wine. By the end of the century these had expanded into wholesale trade and banking. In 1728 Mergentheim became the seat of the *Landrabbiner, an office filled with distinction between 1742 and 1763 by Naphtali Hirsch Katzenellenbogen (see *Katzenellenbogen Family). In 1799 there were 90 Jews; 110 in 1830; 176 in 1869; 250 in 1886; and 276 in 1900. In 1933 there were 196 Jews.

On November 9/10, 1938, Jewish stores and homes were demolished; the rabbi, M. Kahn, was physically assaulted and the interior of the synagogue destroyed. By 1939 there were only 87 Jews left in the city. In 1941 and 1942, 41 Jews were deported to concentration camps. The community's Torah

scrolls and sacred objects were saved from destruction and turned over to an American army chaplain after the war. In 1946 the synagogue was renovated but shortly thereafter was closed again and subsequently demolished. All that remained of the Mergentheim Jewish community in 1990 was the cemetery in Unterbalbach. There is a memorial to commemorate the former synagogue.

MERHAVYAH (Heb. מְרַחֲבָיָה; "God's Wide Space"), (1) kibbutz in the Jezreel (Harod) Valley, Israel, E. of Afulah and at the foot of Givat ha-Moreh, affiliated with Kibbutz Arzi Ha-Shomer Ha-Za'ir. In 1909, the first holding in the Jezreel Valley was acquired at Merhavayah by Jews through the efforts of Yehoshua *Hankin on behalf of the Palestine Land Development Company. Initially, a group of *Ha-Shomer established a farm there (1911). They persevered in spite of the malaria and the attempts of the Turkish authorities and their Arab neighbors to make them leave the place. Merhavayah soon became a workers' cooperative according to Franz *Oppenheimer's ideas. During World War I, German pilots set up a temporary camp there. The cooperative dispersed after the war and another group founded a settlement, joined by veterans of the *Jewish Legion, which, however, did not succeed. In 1929 a group of Ha-Shomer ha-Za'ir pioneers from Poland established its kibbutz on the site. It became the movement's organizational center, including the Kibbutz Arzi secretariat, archives, printing press, and the Sifriat Poalim publishing house. In 1969, the kibbutz, with 550 inhabitants, based its economy on intensive farming, and also had a factory for plastic pipes and a metal workshop. In the mid-1990s, the population of the kibbutz was approximately 620, growing further to 675 in 2002. In the 2000s the kibbutz economy was based on two industries, plastics and wood, and a resort with an amusement park and events garden. Farming included field crops, citrus groves, and dairy cattle. The "Big Yard" featured restored houses built between 1912 and 1916, a visitors center, and a museum in memory of Meir *Yaari, one of the Kibbutz Arzi Ha-Shomer ha-Za'ir's leaders. (2) Moshav founded on part of the Merhavayah lands in 1922 by a group of Third Aliyah pioneers from Eastern Europe. Merhavayah, affiliated with Tenu'at ha-Moshavim in 1969, engaged in intensive agriculture with field and garden crops, dairy cattle, and poultry as prominent branches. In 1968 its population was 42, jumping to 285 in the mid-1990s and 630 in 2002 after expansion.

[Efram Orni / Shaked Gilboa (2nd ed.)]

MÉRIDA, city in W. Spain, capital of the ancient Lusitania. Located at an important road junction, it had one of the oldest communities in Spain. A folk legend relates that the Jewish settlement there dated from the arrival of captives brought by Titus after the destruction of the Second Temple; the exiles were “the nobles of Jerusalem ... among them there was a maker of curtains [for synagogue arks] by the name of Baruch who was also skilled in silk-work. These people remained in Mérida where they raised families ...” (Ibn Daud, *Sefer ha-Qabbalah*, ed. by G. Cohen (1967), 79). There was a Jewish settlement in Mérida in the late Roman and Visigothic periods. A Jewish tombstone inscription in Latin, probably dating from not later than the fourth century, embodies Latin translations of Hebrew formulas commonly found on Jewish tombstones of the period. After the Arab conquest, there was an important Jewish community in Mérida. Its prominent families included those of Ibn Avitur and Ibn al-Balia.

During Christian rule the Jewish quarter was situated near the Church of Santa Catalina, formerly the synagogue. From 1283 the tax paid by the community was 4,000 maravedis. The Jews in Mérida suffered during the 1391 persecutions, and a *Converso group existed there during the 15th century. However the amount of tax paid by the community in 1439 (2,250 maravedis) shows that it was relatively flourishing. Because of its proximity to the Portuguese border, the exiles from Mérida went to Portugal when the Jews were expelled from Spain in 1492.

[Haim Beinart]

MERIDOR, DAN (1947–), Israeli politician and lawyer, member of the Eleventh to Fifteenth Knessets. Meridor was born in Jerusalem, son of Eliahu Meridor, who served in the Fourth to Sixth Knessets on the *Ḥerut Movement and *Gaḥal lists. Dan Meridor went to school in Jerusalem and finished the Hebrew Gymnasium High School in 1965. He served in the army in the Armored Division and then studied law at the Hebrew University of Jerusalem. After completing his degree he went into private law practice in Jerusalem. In 1973 he joined the Ḥerut Movement Executive, where he was viewed as one of the “Ḥerut princes” – sons of the movement’s founders. He failed to get onto the *Likud list to the Ninth Knesset in 1977. After the elections he was offered several positions in the government but rejected them all. During Operation Peace for Galilee, after the resignation of Arie Na’or as government secretary, Meridor was appointed in his place, serving in this position until being elected to the Eleventh Knesset in 1984. He referred to the Sabra and Shatilla massacre in Lebanon as “the ugly accident.” In the government formed by Yitzhak

*Shamir after the elections to the Twelfth Knesset in 1988 Meridor was appointed minister of justice. In that position Meridor took a clear liberal line on issues of human rights and the rule of law, actively promoting the passing of Basic Law: Human Dignity and Freedom, and Basic Law: Freedom of Occupation, which were viewed as the first stage in the passing of a complete bill of human rights. Meridor also insisted that human rights and the rule of law be preserved with regards to the Palestinians in the West Bank and the Gaza Strip in the difficult period of the first Intifada. As a result he gained many political enemies in the extreme right. He continued to push for the passing of additional basic laws in the field of human rights, and promoted Basic Law: Legislation in the Thirteenth Knesset, when the Likud was in opposition. In the primaries in the Likud for a new leader after the 1992 electoral defeat, Meridor supported the candidature of his friend Ze’ev Binyamin *Begin opposite Binyamin *Netanyahu, despite Begin’s more right-wing positions. In the government formed by Netanyahu after the elections to the Fourteenth Knesset in 1996, Meridor was appointed minister of finance in which role he advocated a further liberalization of the economy, and the privatization of government-owned companies, the banks whose shares were held by the government since the 1983 bank crisis, and state lands. Meridor resigned from the government in June 1997 after expressing his dissatisfaction with the appointment of Ronnie Bar-On as attorney general, and Netanyahu’s treatment of the issue, and owing to growing tension with the governor of the Bank of Israel, Prof. Ya’akov *Frankel, on his interest rate and foreign exchange policies. In February 1999, Meridor was one of several leading members of the Likud, including Yitzhak Mordechai and Roni *Milo, who left the party to form the new Center Party. The new party gained six seats in the elections to the Fifteenth Knesset. Meridor was not appointed as a minister in the government formed by Ehud *Barak in 1999, which was joined by the Center Party, and was appointed chairman of the Foreign Affairs and Defense Committee, until he joined the government formed by Ariel *Sharon in 2001 as minister without portfolio. The Center Party began to disintegrate after the elections for prime minister of February 2001, and though Meridor had decided to return to the Likud, he formally remained part of the Center Party parliamentary group.

Throughout his political career Meridor was known for his honesty, mild temper, and gentlemanly demeanor, which while gaining for him a good deal of respect, also led to his being presented by satirists as a weak figure, and made it very difficult for him to contend with the new atmosphere that developed in the Likud Conference before and after the elections to the Sixteenth Knesset. As a result he decided not to run for a place on the Likud list to the Sixteenth Knesset, and to return to his private law practice.

Dan Meridor’s brother, Salai, was chairman of the Jewish Agency.

MERINIDS (Banu-Marin), Berber dynasty ruling over Morocco and parts of Algeria from the mid-13th century to 1472. Their capital and center of operations was the city of *Fez. From the 1390s, the Jewish population under the dynasty increased significantly as a result of the flow of Jewish refugees from areas re-conquered by the Christians in Spain from the Muslims. Important Jewish communities expanded in Fez and Taza. The King Abd al-Haqq (murdered by Muslim fanatics in 1465) appointed Harun, a Jewish physician, as vizier (minister). Members of the Jewish elite served as vital trade and diplomatic intermediaries between the Merinid court and Portugal, then a key military and commercial power with strategic interests inside Morocco. Although several Merinid kings manifested compassion and even generosity toward the Jews, the same was not true of all of them, and it most certainly was not the case with ordinary Muslims, who resented the growing Jewish political and economic influence. Jews were periodically harassed and beaten by Muslims and were prohibited from residing anywhere near Muslim holy sites.

[Michael M. Laskier (2nd ed.)]

MERKABAH MYSTICISM or **MA'ASEH MERKAVAH** (Heb. מַעֲשֵׂה מֵרְכָבָה), the name given to the first chapter of Ezekiel in Mishnah *Hagigah*, 2:1. The term was used by the rabbis to designate the complex of speculations, homilies, and visions connected with the Throne of Glory and the chariot (*merkavah*) which bears it and all that is embodied in this divine world. The term, which does not appear in Ezekiel, is derived from 1 Chronicles 28:18 and is first found with the meaning of Merkabah mysticism at the end of Ben Sira 49:8: "Ezekiel saw a vision, and described the different orders of the chariot." The Hebrew expression *zanei merkavah* should possibly be interpreted as the different sights of the vision of the chariot in Ezekiel, chapters 1, 8, and 10 (according to S. Spiegel, in: *HTR*, 24 (1931), 289), or as the different parts of the chariot, which later came to be called "the chambers of the chariot" (*hadrei merkavah*). It has been suggested (by Israel Lévi in his commentary on Ben Sira, *L'Ecclesiastique*, 1 (1898), and 2 (1901)) that the text be corrected to *razei merkavah* ("secrets of the chariot"). The divine chariot also engrossed the Qumran sect; one fragment speaks of the angels praising "the pattern of the Throne of the chariot" (Strugnell, in: *VT*, 7 supplement (1960), 336). In Pharisaic and tannaitic circles Merkabah mysticism became an esoteric tradition (see *Kabbalah) of which different fragments were scattered in the Talmud and the Midrash, interpreting *Hagigah* 2:1. This was a study surrounded by a special holiness and a special danger. A *baraita* in *Hagigah* 13a, which is ascribed to the first century C.E., relates the story of "A child who was reading at his teacher's home the Book of Ezekiel and he apprehended what *Hashmal* was [see Ezek. 1:27, JPS "electrum"], whereupon a fire

went forth from *Hashmal* and consumed him." Therefore the rabbis sought to conceal the Book of Ezekiel.

Many traditions relate to the involvement of Johanan b. *Zakkai, and later of *Akiva in this study. In the main, details about the conduct of the rabbis in the study of Merkabah are found in the Jerusalem Talmud *Hagigah* 2 and the Babylonian Talmud, *Shabbat* 80b. According to the manuscript of the latter source the prohibition on lecturing to a group was not always observed and the tradition adds that a transgressor, a Galilean who came to Babylonia, was punished for this and died. In the Babylonian Talmud, *Sukkah* 28a, Merkabah mysticism was put forward as a major subject (*davar gadol*) in contrast to the relatively minor subject of rabbinic casuistry. Traditions of this type are found, for example, in *Berakhot* 7a, *Hullin* 91b, *Megillah* 24b, and at the beginning of *Genesis Rabbah*, *Tanḥuma*, *Midrash Tehillim*, *Midrash Rabbah* to Leviticus, Song of Songs, and Ecclesiastes. Several traditions are preserved in *Seder Eliyahu Rabbah* and in small tractates, such as *Avot de-Rabbi Nathan* and *Massekhet Derekh Erez*. In contrast with the scattered fragments of these traditions in exoteric sources, books, and treatises collecting and developing *Ma'aseh Merkavah* according to the trends prevailing in different mystic circles were written at the latest from the fourth century on. Many of the treatises include early material but numerous additions reflect later stages. *Re'iyot Yehezkiel*, the major part of which was found in the Cairo *Genizah* (published in S.A. Wertheimer, *Battei Midrashot*, 2 (1953²), 127–34), depicts historical personalities and the context is that of a fourth-century Midrash. Scraps of a second- or third-century Midrash on the *Ma'aseh Merkavah* were found in pages of the *Genizah* fragments. These sources do not yet show any sign of the pseudopigraphy prevailing in most surviving sources; in these the majority is formalized, and most of the statements are attributed to Akiva or to Ishmael. Several of the texts are written in Aramaic, but most are in Mishnaic Hebrew. A great deal of material of this type has been published (mostly from manuscripts) in collections of minor Midrashim such as A. Jellinek's *Beit ha-Midrash* (1853–78), S.A. Wertheimer's *Battei Midrashot*, E. Gruenhut's *Sefer ha-Likkutim* (1898–1904), and H.M. Horowitz' *Beit Eked ha-Aggadot* (1881–84). *Sefer Merkavah Shelemah* (1921) includes important material from the manuscript collection of Solomon Musajoff. Some of the texts included in these anthologies are identical, and many are corrupt.

The most important are:

(1) *Heikhalot Zutrati* ("Lesser *Heikhalot*") or *Heikhalot R. Akiva*, of which only fragments have been published, mostly without being recognized as belonging to the text. The bulk of it is in a very difficult Aramaic, and part of it is included in *Merkavah Shelemah* as "Tefillat Keter Nora."

(2) *Heikhalot Rabbati* ("Greater *Heikhalot*," in *Battei Midrashot*, 1 (1950²), 135–63), i.e., the *Heikhalot* of Rabbi Ishmael, in Hebrew. In medieval sources and ancient manuscripts the two books are at times called *Hilkhot Heikhalot*. The division of *Heikhalot Rabbati* into *halakhot* ("laws") is still preserved in several manuscripts, most of which are divided into 30 chap-

ters. Chapters 27–30 include a special tract, found in several manuscripts under the title *Sar Torah*, which was composed much later than the bulk of the work. In the Middle Ages the book was widely known as *Pirkei Heikhalot*. The edition published by Wertheimer includes later additions, some of them Shabbatean (see G. Scholem, in *Zion*, 7 (1942), 184f.). Jellinek's version (in *Beit ha-Midrash*, 3, 1938²) is free of additions but suffers from many corruptions.

(3) *Merkavah Rabbah*, part of which is found in *Merkavah Shelemah*, mostly attributed to Ishmael, and partly to Akiva. Perhaps this work contained the most ancient formulation of *Shi'ur Komah* ("the measurement of the body of God"), which later was copied in manuscripts as a separate work that developed into *Sefer ha-Komah*, popular in the Middle Ages (see G. Scholem, *Jewish Gnosticism...* (1965), 36–42).

(4) A version of *Heikhalot* which has no name and was referred to in the Middle Ages as *Ma'aseh Merkavah* (G. Scholem, *ibid.*, 103–17). Here statements of Ishmael and Akiva alternate.

(5) Another elaborate treatise on the pattern of *Heikhalot Rabbati*, but with differing and partly unknown new details; fragments have been published from the Cairo Geniza by I. Greenwald, *Tarbiz*, 38 (1969), 354–72 (additions *ibid.*, 39 (1970), 216–7);

(6) *Hekhalot*, published by Jellinek (in *Beit ha-Midrash* (vol. 1, 1938²), and later as *III Enoch or the Hebrew Book of Enoch* (ed. and trans. by H. Odeberg, 1928). Unfortunately Odeberg chose a later and very corrupt text as a basis for his book, which he intended as a critical edition. The speaker is R. Ishmael and the work is largely made up of revelations about Enoch, who became the angel Metatron, and the host of heavenly angels. This book represents a very different trend from those in *Heikhalot Rabbati* and *Heikhalot Zutrati*.

(7) The tractate of *Heikhalot* or *Ma'aseh Merkavah* in *Battei Midrashot* (1 (1950²), 51–62) is a relatively late elaboration, in seven chapters, of the descriptions of the throne and the chariot. In the last three works a literary adaptation was deliberately made in order to eradicate the magical elements, common in the other sources listed above. Apparently they were intended more to be read for edification rather than for practical use by those who delved into the Merkavah.

(8) The Tosefta to the Targum of the first chapter of Ezekiel (*Battei Midrashot*, 2 (1953²), 135–40) also belongs to this literature.

A mixture of material on the chariot and creation is found in several additional sources, mainly in *Baraita de-Ma'aseh Bereshit* and in *Otiyyot de-Rabbi Akiva*, both of which appear in several versions. The *Seder Rabbah de-Bereshit* was published in *Battei Midrashot* (1 (1950²), 3–48), and in another version by N. Séd, with a French translation (in *REJ*, 3–4 (1964), 23–123, 259–305). Here the doctrine of the Merkavah is connected with cosmology and with the doctrine of the seven heavens and the depths. This link is also noticeable in *Otiyyot de-Rabbi Akiva*, but only the longer version contains the traditions on creation and the Merkavah mysticism. Both extant

versions, with an important supplement entitled *Midrash Alfa-Betot*, were published in *Battei Midrashot* (2 (1953²), 333–465). M. Margaliot discovered additional and lengthy sections of *Midrash Alfa-Betot* in several unpublished manuscripts. Again, these works were arranged more for the purposes of speculation and reading than for practical use by the mystics. The doctrine of the seven heavens and their angelic hosts, as was developed in Merkavah mysticism and in cosmology, has also definite magical contexts, which are elaborated in the complete version of *Sefer *ha-Razim* (ed. by M. Margalioth, 1967), whose date is still a matter of controversy.

In the second century Jewish converts to Christianity apparently conveyed different aspects of Merkavah mysticism to Christian Gnostics. In the Gnostic literature there were many corruptions of such elements, yet the Jewish character of this material is still evident, especially among the Ophites, in the school of Valentinus, and in several of the Gnostic and Coptic texts discovered within the last 50 years. In the Middle Ages the term *Ma'aseh Merkavah* was used by both philosophers and kabbalists to designate the contents of their teachings but with completely different meanings – metaphysics for the former and mysticism for the latter.

[Gershom Scholem]

MERNEPTAH (Egyptian, Mr-n-Pth; "the beloved of Ptah"), king of Egypt (reigned c. 1224–1214 B.C.E.). Most scholars believed that Merneptah was the pharaoh of the *Exodus until the discovery of the "Israel" stela at Thebes in 1896. This stela, dated to the fifth year of Merneptah's reign, states in the second line that "Israel is laid waste, his seed is not." Since in this part of the stela "Israel" is the only name containing the Egyptian determinative sign of a people and not of a land, many scholars have presumed that at this time Israel was a nomadic people located somewhere in or near Palestine. However, others think that this may be merely due to a scribal error. Although the major historical texts of Merneptah deal with the repulsion of a Libyan invasion of the Egyptian Delta in the fifth year of his reign, the concluding lines of the "Israel" stela and his use of the epithet "reducer of Gezer" in a Nubian inscription may attest to the crushing of a revolt in Palestine early in his reign. A few other miscellaneous texts of the period (notably *Papyrus Anastasi 1*) show that the Egyptians had a thorough geographic, topographic, and toponymic knowledge of Palestine and Syria, particularly along the main arteries of traffic.

[Alan Richard Schulman]

MERODACH (Heb. מֶרֶדַח), a Babylonian god (Jer. 50:2), whose name also enters into the composition of the personal names *Merodach-Baladan (= Berodach-Baladan; II Kings 20:12; Isa. 39:1), *Evil-Merodach (II Kings 25:27; Jer. 52:31), and *Mordecai.

See *Marduk.

MERODACH-BALADAN (Heb. מֶרֶדַח בַּלְאָדָן; Akk. ⁴Marduk-ap-la-iddin; “Marduk has given a son”), Babylonian king (722–710 B.C.E.). Assyrian inscriptions place the origin of Merodach-Baladan in the land of Bit-Iakin, a Chaldean kingdom near the coast of the Persian Gulf (“Sealands”). This is more probable than Merodach-Baladan’s claim that he was the son and legal heir of the Babylonian king Eriba-Marduk. In 731 B.C.E., Ukin-zer of Bit Amukkani, a Chaldean, wrested the kingship of Babylonia from the pro-Assyrian king Nabu-nadin-zer. Merodach-Baladan, who also had designs on the kingship, supported the Assyrian king Tiglath-Pileser III, against Ukin-zer. He was thus able to strengthen his position among the Chaldean tribes, increase his influence in Babylonia, and forge an alliance with Elam, without interference from Tiglath-Pileser III or Shalmaneser V, both of whom exercised sovereignty over Babylonia (729–722 B.C.E.).

With the death of Shalmaneser V, Merodach-Baladan seized the Babylonian throne (722/721 B.C.E.). This marked the beginning of violent struggles between Merodach-Baladan and the Assyrians. By 720, Sargon II was preparing for war against Merodach-Baladan, who had the support of the Elamites. Conflicting reports have been preserved of this battle, which took place in the plain of Dêr, east of the Tigris. Merodach-Baladan ruled Babylonia until 710, when, through neglect and economic exploitation, he incurred the enmity of the native Babylonian population in the large urban centers which had been loyal to him, although he enjoyed the support of the Chaldean and Babylonian tribes which were largely concentrated in the southern part of the country.

Therefore, it is not surprising that when Sargon II waged war against Merodach-Baladan in 710, he was warmly received by the urban population. Sargon defeated Merodach-Baladan’s armies and conquered his fortresses, causing Merodach-Baladan to flee south to Bit-Iakin, where he waited for an opportunity to regain the throne. Seeing in the widespread disturbances that arose after the death of Sargon (705) the opportunity to resume his rule over Babylonia, Merodach-Baladan, in 703, with the support of the Elamites and much of the Babylonian population, reestablished his rule there. He found an ally in *Hezekiah, who was at that time planning a revolt against Assyria, exploiting the latter’s political goals for his own benefit. Hezekiah could help Merodach-Baladan by distracting the attention of the Assyrians to the west. This appears to be the background of the biblical narrative concerning the goodwill delegation sent by Merodach-Baladan to Hezekiah of Judah in 701 B.C.E. after Sennacherib’s campaign there (II Kings 20:12–19; Isa. 39:1–8; II Chron. 32:31). However, it is doubtful that political conditions in Palestine after the Assyrian

campaign were favorable for Merodach-Baladan and Hezekiah to form an alliance.

In 703 B.C.E. Sennacherib conducted a campaign against Merodach-Baladan, defeating the Elamite and Babylonian armies surrounding Kish. Merodach-Baladan fled to the “Sealands,” and from there continued to rule over Bit-Iakin and the southernmost part of Babylonia. After Sennacherib returned from his campaign in the west in 701, he waged war against Merodach-Baladan (700). The Chaldeans were no match for the Assyrians, and Merodach-Baladan fled further along the Persian Gulf to the region bordering on Elam, dying there in 694.

[Bustanay Oded]

In the *Aggadah*

Merodach-Baladan is praised for honoring his father. He added his father’s name Baladan to his own when acting as regent during the incapacity of his father, and signed documents in the name of both his father and himself (Sanh. 96a). When told that the sun had reversed its course on the day that Hezekiah miraculously recovered from his illness, he acknowledged the superiority of God, though previously he had been a sun worshiper. He thereupon addressed a letter to Hezekiah the original introduction of which was “Peace to Hezekiah, Peace to the God of Hezekiah, and Peace to Jerusalem.” Realizing, however, that he had been disrespectful in not placing God first, he took steps and recalled his messengers in order to change the wording. As a reward he was told: “You took three steps for the honor of My name ... I will therefore raise up from thee three kings [Nebuchadnezzar, Evil-Merodach, and Belshazzar], who shall rule from one end of the world to the other” (Est. R. 3:1).

MERON, city located just north of the Wadi Meirun on one of the eastern spurs of Mt. Meron (map ref. 191/265) at an elevation of 2,450 ft. (750 m.) above sea level around the ancient synagogue. It is not to be confused with Merom, as in the “waters of Merom” in the Hebrew Bible (Josh 11:5, 7), near where Joshua defeated Jabin, King of Hazor, or the city which appears in the list of Caananite cities conquered by Thutmose III, Meron is also frequently confused with the site of Meroth (map ref. 199/270), which is most likely the one mentioned in Josephus as being fortified in 66 C.E. on the eve of the great revolt against Rome (*Wars* 3: 573; *Life* 188) and excavated in the 1980s by Z. Ilan.

Meron may be identified with the rabbinic town of that name which is associated with Rabbi *Simeon bar Yoḥai (Tosef. Dem. 4.13) and his son Eleazar, who are believed to be buried there. It is also listed as one of the towns or villages of the priestly courses (I Chron. 24; Mish. Ta’an. 4.2, etc.) where the family of Jehoiarib was located. By medieval times Meron

was an important pilgrimage site associated with the festival of *Lag ba-Omer and influenced by the mystical traditions that emerged in nearby Safed, just 6 miles (9 km.) away. R. Moses Basola mentions the festival as early as 1522. The name Meron also appears in this connection in the various poems of Kalir and other liturgical authors.

The synagogue site was first surveyed and documented in the important work of Kohl and Watzinger published in 1916, though 19th century explorers and travelers knew the ruin as well. The site was excavated between 1971 and 1977 by Eric M. Meyers and an American team and their finds were published in 1981. A subsequent Israeli salvage excavation was carried out by N. Feig and published in 2002. One of the most important observations to be made is that there was a very modest settlement in the late Hellenistic period, ca. 200–63 B.C.E., and the Early Roman period represented even less in scant remains. No evidence for Josephus' fortification was uncovered in any excavation, which has led the excavators to abandon the idea that Meron and Meroth of Josephus were one and the same place. The heyday of occupations was the rabbinic period, or the Middle-Late Roman era, from ca. 135–363 C.E., the latter date the year of the great earthquake that contributed to the abandonment of the site; and significant remains of domestic buildings and structures survive from this period as do important agricultural installations. The main building identified with this period is the great synagogue on the summit, which is a long basilical structure with the familiar triple doorway on the Jerusalem-facing wall. A shallow portico with six columns was attached to the southern façade wall. The interior of the synagogue has two rows of eight columns, making it the longest of the Galilean synagogues, and while no trace of a Torah Shrine was found it is likely that one stood on the interior of the southern wall. Most of the remains of the building had been robbed in antiquity, and only a small attached room along the southeastern corner has survived. In its rubble foundations were found materials from the third century, allowing the excavators to posit a date for the construction of the building in the third century C.E. It may be assumed that its final period of use came in ca. 363, when the rest of the town was abandoned.

Remains from the lower city show a vibrant town with shops and living complexes that reflect the indigenous life style of the Land of Israel in late antiquity, with many industrial and agricultural installations dotting the interior spaces of the town in the rabbinic period. Olive oil production was very common in the region and its importance is reflected in the material culture of Meron. A room full of charred foodstuffs, possibly intended as **hekdes*, was found in one of the more upscale homes in the lower city, as was a *mikveh* in another, pointing to a community that observed Jewish laws.

After the abandonment of the site in the second half of the fourth century the site was reoccupied in the 13th–14th century, while some evidence for the 15th century also exists along with the evidence of pilgrim travelers such as Rabbi Obadiah of *Bertinoro (1495). In the 16th century Meron was a Muslim

village with approximately 500 souls with an economy similar to the ancient one and based on the cultivation of wheat, fruit, and olives. In early modern times cotton was also raised, and there were some 60 known olive presses known to have been in operation at this time.

[Eric M. Meyers (2nd ed.)]

The modern moshav Meron, at the foot of Mt. Meron, affiliated with the Ha-Po'el ha-Mizrachi Moshavim Association. Founded in 1949, near the yeshivah and remnants of the ancient Meron synagogue, by immigrants from Hungary and Czechoslovakia, it specialized in hill farming, with deciduous fruit orchards, dairy cattle, and poultry as major branches. In the mid-1990s, the population was approximately 605, increasing to 805 in 2002.

MERON (originally **Maierzuk**), **HANNA** (1923–), Israeli actress and star of the *Cameri Theater in Tel Aviv. Born in Berlin, she appeared on the German stage and in Fritz Lang's movie "M" as a child before going to Palestine in 1933. She trained at the Habimah Studio, served in a British army entertainment unit during World War II, and in 1945 joined the newly founded Cameri Theater. She was subsequently responsible for some of the company's greatest successes. Her realistic portrayal of the title role in *Pick-Up Girl* shocked some and delighted others. Possessing incisive style and vitality, she was particularly successful in modern, sophisticated comedy. She also distinguished herself in a wide range of parts that included Micka in Moshe Shamir's *He Walked in the Fields*, Eliza in *Pygmalion*, Rosalind in *As You Like It*, Elizabeth in Schiller's *Mary Stuart*, and the title role in Ibsen's *Hedda Gabler*. She was active in the management of the Cameri Theater and helped to shape its policy. In 1968, she played the lead in the musical *Hello Dolly*. In 1970, she lost a leg as a result of an Arab attack in Munich airport on Israeli passengers. However, on her recovery she resumed her performances on the Israeli stage, giving many striking performances, among them her role in *Medea* and as the ultimate slattern in *The Effect of Gamma Rays on Man-in-the-Moon Marigolds*. A recording of her beautiful reading of poetry accompanied a ballet of the *Batsheva Dance Company. She was awarded the Israel Prize for arts (theater) in 1973. She also appeared in a popular TV sitcom ("Relatives, Relatives") and has directed plays at Tel Aviv University and the Beit-Zvi acting school. In December 2003 she was honored on her 80th birthday by the Herzliyyah Theater, where she served as a founder-director. She was married to the late Ya'akov *Rechter, who received the Israel Prize for arts (architecture) in 1972.

[Michael Avi-Yonah]

MERRICK, DAVID (1911–2000), Broadway producer. Merrick was born in St. Louis, Mo., as David Margulois, the youngest child of a salesman. His parents were divorced when he was seven and he bounced among relatives through adolescence. A good student, he won a scholarship to Washington University in St. Louis, then went to St. Louis University, where he studied law, a trade that would help him in his tough theatrical contract negotiations. His marriage to Leonore Beck, whom he had met in school, and who had a modest inheritance, allowed the couple to leave St. Louis for New York in 1939. A year later, he invested \$5,000 in a forthcoming comedy, *The Male Animal*. The play was a hit, and David Merrick, taking a new name inspired by the 18th-century English actor David Garrick, was born.

For a quarter of a century that ended with his last blockbuster, the musical *42nd Street* in 1980, Merrick was the dominant showman in the Broadway theater. In a typical season during the 1960s he produced a half-dozen or more plays and musicals. His productivity and profitability were unmatched by any single impresario in the history of New York's commercial theater. Among his successes were some of the most popular musicals of his era, including *Gypsy*, *Hello, Dolly!*, and *Promises*, *Promises* as well as *42nd Street*, one of the longest-running productions in Broadway history. He introduced Woody *Allen to Broadway as a playwright (*Don't Drink the Water*) and actor (*Play It Again, Sam*) and produced the 1962 musical *I Can Get It for You Wholesale*, which catapulted the 19-year-old singer Barbra *Streisand to stardom. His productions also gave signature roles to Ethel Merman (Mama Rose in *Gypsy*) and Carol Channing (Dolly Levi in *Hello, Dolly!*) and he worked with nearly every major songwriter of the Broadway musical's heyday. Merrick presented Laurence Olivier in his most celebrated postwar performance (as Archie Rice in *The Entertainer*), the breakthrough dramas of John Osborne (*Look Back in Anger*), Brian Friel (*Philadelphia, Here I Come!*), and Tom Stoppard (*Rosencrantz and Guildenstern Are Dead*), as well as two pivotal Royal Shakespeare Company productions directed by Peter Brook, *Marat/Sade* and *A Midsummer's Night Dream*.

Merrick became famous for baiting critics, his own stars, and his fellow producers, all to promote his wares. He gloried in his image as "the abominable showman." When Al *Hirschfeld drew a "particularly unflattering caricature of him as a Grinch-like Santa Claus," Merrick reproduced the image on his annual Christmas card.

Merrick was famous for masterstrokes of publicity. In 1967, when the audiences for *Hello, Dolly!* began to decline, he

successfully replaced the entire cast with an all-black company headed by Pearl Bailey and Cab Calloway. When the musical *Subways Are for Sleeping* got poor reviews in 1961, he turned to the phone book, found men with the same names as the seven daily newspaper critics, invited them to see the show, and then got them to endorse it with such raves as "the best musical of the century." When Gower Champion, the musical director and choreographer of *42nd Street*, died early the day of the opening, Merrick kept the news secret so he could announce it from the stage at the curtain call, to the screams and tears of a devastated cast and first-night audience. Again, Merrick assured the show's notoriety and success.

[Stewart Kampel (2nd ed.)]

MERRICK, LEONARD (1864–1939), English novelist, and short-story writer. Born of a London family named Miller, Merrick at first tried to make a career on the stage. His first novel, *Violet Moses* (1891), crude in technique, especially in its portrayal of Jewish types, was not included in his collected works. He won attention in 1898 with *The Actor-Manager*, followed by *The Quaint Companions* (1903), the story of a black tenor and his white wife; he also wrote *Conrad in Quest of his Youth* (1903), and *The Position of Peggy Harper* (1911). Merrick's best achievement was his three volumes of short stories, *The Man Who Understood Women* (1908), *A Chair on the Boulevard* (1921), and *While Paris Laughed* (1918), where he excelled in the delineation of French Bohemian types as seen through English eyes. Merrick developed a humorous and satiric style, but his stories were later criticized as too contrived. He never won popularity, but was highly regarded by his fellow writers, a number of whom, including Wells, Hewlett, Barrie, and Pinero, wrote prefaces to the collected edition of his works, issued in 1918. In 1945 George Orwell wrote an introduction to a never published reprint of Merrick's *The Position of Peggy Harper*. Merrick still attracts interest because of his willingness to deal with unusual themes, such as the issue of miscegenation in *Peggy Harper*.

[Lewis Sowden]

MERRILL, ROBERT (1917–2004), U.S. baritone singer. Born in New York City, Merrill studied with his mother, Lillian Miller Merrill, then, from 1936, with Samuel Margolies. His professional career began in popular music, at the Radio City Music Hall (1943); but he made his operatic debut in 1944, in *Aida*. The following year, having won an audition contest sponsored by the Metropolitan Opera Company, he made his debut there as Germont in *La Traviata*, and remained one of its leading singers, except for the season 1951–52, owing to his appearance in a Hollywood film, of which the Metropolitan's general manager, Rudolph Bing, disapproved. Merrill was a Verdi and Puccini singer of great power and richness and a favorite performer of Arturo Toscanini's last years. Among his recordings are famous arias from *Carmen*, *The Barber of Seville*, *La Traviata*, *Hamlet*, and *L'Africaine*, and songs.

[Max Loppert]

MERSEBURG, city in Germany. The Jewish community of Merseburg was one of the oldest in Germany. As early as 973 Emperor Otto II granted Bishop Gisiler authority over “the Jews, the merchants, and the mint in the city.” King Henry II renewed this privilege in 1004. In 1234 three Jews lent 80 silver marks to the burgrave of Merseburg. In 1269 the convent of Pegau sold properties to repay debts to Merseburg Jews. In this period R. Ezekiel of Merseburg addressed a number of halakhic queries to Meir b. Baruch of *Rothenburg. Another scholar of the period was R. Samuel of Merseburg. The cemetery of the community dated at least from 1362. The assertion that there was a persecution in 1349–50 rests on a confusion between similar names of localities. In a Hebrew source *Menahem of Merseburg, author of *Nimmukim*, was a leading German rabbi in the second half of the 14th century. In 1434 the Jews of the Merseburg bishopric paid 100 gilders coronation tax to King Sigismund II; in 1438 a 3% income tax to King Albert II; and in 1440 a coronation tax again. At an unknown time thereafter the Jews left the city, which underwent economic decline and internal tension. In 1556 the Saxon historian Ernst Brotuff wrote, “Formerly many Jews lived in Merseburg who had their own synagogue with a courtyard in the small street west of the Cathedral chapter.” In 1565 Merseburg came under the rule of Saxon, where no Jews were tolerated, and in 1815 under Prussia, which lifted the restrictions in the new territories only in 1847. By 1849, some 34 Jews lived in Merseburg; there were 23 in 1871; 16 in 1880; 20 in 1903; 29 in 1905; 20 in 1913 (five families); and 40 in 1925. They were affiliated with the Jewish community in Weissenfels. Records for the years 1933–45 are missing. No Jews settled in Merseburg after 1945.

[Toni Oelsner]

MERSIN, city in *Turkey, on the Mediterranean coast in Cilicia, capital of the province of Icel; population (2004), 587,800. In ancient times there was a Jewish community in the town. In 107 B.C.E., some of its Jewish inhabitants were transferred to the Bosphorus region by Mithridates IV, king of Pontus. No information is available on the existence of a Jewish community during the Middle Ages. From the 19th century, however, there were a number of Jews in the town who had come from various Turkish towns (especially *Salonika) and were engaged in commerce. In 1909, there was a *blood libel, in which one of the heads of the local Gateno family was accused of using Greek blood for the baking of *matzah*. The accusation was withdrawn after the intervention of the Greek

patriarch of *Istanbul. During the late 1930s the community consisted of about 35 families, some of which were newcomers from such inland towns as Urfa, Maras, Antep, and Kilis. With the establishment of the State of Israel most Jews left to settle there. In 1977 there were still 43 Jews in Mersin, divided into groups according to origin (Ladino or Arabic as a second language). Most of them were merchants. There was a synagogue but no rabbi.

[Abraham Haim / David Kushner (2nd ed.)]

MERTON, family of British and German industrialists and philanthropists. ABRAHAM LYONS MOSES (1775–1854), whose sons later dropped the name Moses and called themselves Merton, shared in the founding of the Jews' Orphan Asylum and with Henry Solomon endowed a number of almshouses in 1838. RALPH MERTON (1815–1883), his son, settled in Frankfurt and joined the metal firm of his father-in-law, Philip Abraham Cohen, after whose death Merton expanded the company and renamed it Metallgesellschaft. It became one of the most important metal and metallurgical concerns in Germany. He maintained close business relations with his brother, HENRY R. MERTON (1848–1929), who headed Henry R. Merton and Co. of London, which held a dominant place in England parallel to that of Metallgesellschaft in Germany. Both firms had strong associations with the American Metal Company in New York. Because of its connections with the German firm, the British Merton company was liquidated during World War I and reorganized as two separate firms under the names of H. Gardener and Co. Ltd. and the British Metal Corporation. Both H. Gardener and Co. and the British Metal Corporation were later incorporated into a new company, the Amalgamated Metal Corporation Ltd. Ralph Merton's son, WILLIAM (WILHELM) MERTON (1848–1916), who was born in Frankfurt, became the head of the Metallgesellschaft in Frankfurt. A generous philanthropist, he founded the Academy for Social and Commercial Sciences which later formed the basis of the University of Frankfurt in Frankfurt and supported the institution for many years. Under Hitler, the Merton family lost control of the Metallgesellschaft and took refuge in England. A relative, SIR THOMAS RALPH MERTON (1888–1969), was professor of spectroscopy at Oxford University. He made notable contributions to the development of the spectroscope, and, significantly, to the modern radar screen, the latter credited with helping Britain win the Battle of Britain in 1940. He was treasurer of the Royal Society from 1939 to 1956 and was knighted in 1944. In 1958 he was awarded the Rumford Medal of the Royal Society.

[Morton Mayer Berman]

MERTON, ROBERT C. (1944–), U.S. economist and educator; co-recipient of the 1997 Nobel Memorial Prize for economics. A New York City native, raised in Hastings-on-Hudson, N.Y., Merton was the middle child of renowned sociologist Robert K. Merton and Suzanne Carhart. In 1966 Merton received his B.S. in engineering mathematics from Columbia University and an M.S. in 1967 from Caltech for applied mathematics. He switched his focus to economics and transferred to the Massachusetts Institute of Technology (MIT) on a full fellowship and completed his Ph.D. in 1970; subsequently, he began his teaching career at MIT's Sloan School of Management where he taught through 1988. Upon leaving MIT he moved to the Harvard Business School where, in 1998, he was named its first John and Natty McArthur University Professor.

As a youth, mathematics was his favorite school subject and the love of both numbers and baseball led him to memorize all the big-leaguers' statistics. While his mother provided him with his practical life knowledge, his father served as his enduring intellectual adviser despite his choice of a starkly divergent academic path.

Searching for real-life applications of mathematics is what lured Merton to the field of economics. His research while a member of MIT's faculty led to his 1973 paper "The Theory of Rational Option Pricing" (appearing in the *Bell Journal of Economics*) not long after Myron Scholes and Fischer Black advanced their landmark option-pricing formula in the *Journal of Political Economy*. Together, the men successfully tested the system in the live market with their mutual fund, Money Market/Options Investment, Inc., activated in 1976. The ramification on Wall Street of their mutually supporting theories on valuing stock options was considerable and served as the backbone to the formation of enormous "derivatives" markets. This watershed in economics was finally honored in 1997 when Merton and Scholes were bestowed with the Nobel Memorial Prize in economic sciences.

Merton's success was tempered by the 1998 collapse of his and Scholes' Long-Term Capital Management (LTCM), the Greenwich, Conn.-based hedge fund of which they were two of several founders in 1993. Undeterred, he co-founded Integrated Finance Limited (IFL), an international investment firm based in New York City in 2003, and also serves as its Chief Science Officer; in that same year, Dimensional Fund Advisors, an investment management company, chose Merton as a member of its board of directors/trustees. He served on numerous corporate boards, held the presidency of the American Finance Association in 1986, and was awarded many honorary degrees from various universities. Along with the scores of articles appearing in professional journals during his three decades in academia, Merton wrote several books including *Continuous-Time Finance* (1990) and *Finance* (1998), co-authored with Zvi Bodie. In 2004 Merton donated his MIT and Harvard lecture notes on finance theory to the Professional Risk Managers' International Association (PRMIA) for the purpose of training financial risk managers.

[Dawn Des Jardins (2nd ed.)]

MERTON, ROBERT KING (Meyer Schkolnick; 1910–2003), U.S. sociologist. Born in Philadelphia, Merton received his B.A. from Temple University in 1931 and his M.A. (1932) and Ph.D. (1936) from Harvard. A student of George R. Simpson, Pitirim Sorokin, and Talcott Parsons, he taught at Harvard and Tulane universities. From 1941 he taught at Columbia University, where for 35 years he collaborated with Paul Lazarsfeld, with whom he co-developed the Bureau of Applied Social Research. Merton was president of the American Sociological Association and a member of the board of the Center for Advanced Study in the Behavioral Sciences at Stanford University.

Merton, whose thinking was influenced by Marx, Durkheim, Simmel, and Weber, was one of the leading American theorists in the social sciences. Merton studied the sociology of science itself; in 1942 he developed an "ethos of science," which challenged the prevailing public perception that scientists were eccentric geniuses who were not bound by normal social constraints. Essentially, he interpreted the task of sociology as the understanding of the ways in which social structures shape and channel the values, attitudes, and actions of persons. Among the numerous concepts first formulated or felicitously reformulated by Merton are "theories in the middle range" (as against sweeping theories in the grand style); "manifest and latent functions"; "self-fulfilling prophecy," elaborating a theorem of W.I. Thomas; "role model"; "deviant behavior"; and focus groups. His most significant contributions can be located in four areas. First, he provided an objective analysis of various kinds of deviant behavior, which has been widely used in research on delinquency, criminality, and social movements. Second, he made significant contributions to the sociology of science, especially about the impact of religion on science, about multiple discoveries in science, rivalry among scientists, and unintended consequences of scientific discoveries. Third, he was interested in the study of bureaucracy, partly refining Durkheim's concept of "anomie," partly complementing Max Weber's structural approach with an analysis of the psychological consequences of bureaucratic organization. Fourth, he advanced the study of adult socialization, focusing especially on the activation of attitudes by key personalities and on the concept of the reference group. Generally, he emphasized the interdependence of theory and research; the collection of essays that he published under the title *Social Theory and Social Structure* (1957²) is one of the most influential books in American sociology.

In 1994 Merton was awarded the National Medal of Science by President Bill Clinton, becoming the first sociologist to receive that honor.

Other significant publications of Merton include *Science, Technology, and Society in Seventeenth Century England* (1938); "The Sociology of Knowledge," in Gurwitsch and Moore, *Twentieth Century Sociology* (1945); *Mass Persuasion* (1946); *Continuities in Social Research* (1950); *Focused Interview* (with M. Fiske and P. Kendall, 1952²); *Social Theory and Social Structure* (1957); *On the Shoulders of Giants* (1965); *Con-*

temporary Social Problems (with R. Nisbet, 1966²); *On Theoretic Sociology* (1967); and *The Sociology of Science* (1973). He was one of the editors of *Reader in Bureaucracy* (1952) and wrote numerous papers, chiefly dealing with topics of the sociology of knowledge.

[Werner J. Cahnman / Ruth Beloff (2nd ed.)]

MERV (modern **Bāīram Alī**), ancient city in Turkmenistan. According to a tradition reported by the 12th-century Muslim historian al-Bayhaqī, Ezra the scribe is said to have traveled from Palestine to Merv, building a synagogue which was still in existence in the 11th century. In connection with tax reforms carried out in the time of the caliph Omar II (717–20), a certain Akiva the Jew, of Merv, is mentioned as being responsible for the collection of taxes from the Jews there. That a Jewish community continued in existence is attested by a disputation held in Merv in 1336 between Christian monks and one of the leaders of the community, and by a *Judeo-Persian dictionary composed there in 1473. Nineteenth-century European travelers (J. *Wolff, E.N. *Adler, etc.) refer to the numbers and occupations of the Jews in Merv. After the forced conversion of the Jewish community in *Meshed (1839), many **jadīd al-Islām* converts found refuge in Merv. No recent information is available.

MERZBACHER, family of numismatists. **ABRAHAM MERZBACHER** (1812–1885), rabbi, banker, numismatist, and bibliophile, was born in Baiersdorf (near Erlangen), Bavaria. His education at the yeshivah in Fuerth and the universities of Erlangen and Munich was followed by a short career as rabbi of Ansbach. Although running a business in antique books and prints in Baiersdorf, Merzbacher lived in Munich from 1833. In 1846 he became an associate of the banking firm J.N. Oberndoerffer, owned by his father-in-law at Munich, which was also the leading German coin dealer, and later the house of Rollin et Feuarent in Paris – Rollin was a foremost European expert in numismatics. He exposed the “Becker Counterfeits,” a famous case of counterfeiting of ancient coins. He became an expert on Polish medals, and also took a special interest in Jewish coins and medals, building up a valuable collection. In 1873 he retired from business and turned to collecting rare Jewish manuscripts and prints to assist R.N.N. *Rabbinovicz in his monumental *Dikdukei Soferim (Variae Lectiones in Mischnam et in Talmud Babylonicum, 1876ff.)*, also financing its publication. His library grew to over 4,000 volumes, including 156 manuscripts and 43 incunabula, and eventually

became part of the city library of Frankfurt (see *Libraries). Merzbacher was also active in the Jewish community, becoming a member of the central committee of the Alliance Israélite Universelle. He held several leading positions in the Munich Jewish community and used to practice – gratis – as a *mohel*. Merzbacher's son **EUGEN** (1845–1903) also became a numismatist. Born in Munich, he took the *shekel as subject for his thesis (*De Siclis... 1873*). Merzbacher had a vast knowledge of classical and modern coins, but his main interest was in Jewish numismatics. He started a successful business in coins and numismatic books in Munich in 1881.

[Arie Kindler]

MERZBACHER, GOTTFRIED (1843–1926), German explorer. Born in Baiersdorf, Bavaria, Merzbacher grew up in a family of highly respected businessmen and bankers. He founded a successful fur business in Munich in 1868. He retired and sold his business in 1888 at the age of 45 which allowed him to concentrate on his true passion: the scientific research of mountain areas. Merzbacher, an accomplished mountaineer explored in Africa, North America, the Caucasus, and from 1892 climbed mountains in Arabia, Persia, and India. He published the reports of these expeditions in scientific journals. From 1902 to 1908 he climbed the Central Tien Shan range of Asia and his findings were published by the Bavarian Academy of Sciences. His book *Aus den Hochregionen des Kaukasus* (1901) became a classic. One of his last trips led him to the Bogdo-Ola mountain range. There a ridge was named after him in 1927. In 1901 Merzbacher received an honorary doctorate from the University of Munich. In 1907 he was appointed Royal Professor.

[Andreas Heusler (2nd ed.)]

MERZBACHER, LEO (1810–1856), first U.S. Reform rabbi. Merzbacher, who was born in Fuerth, Bavaria, studied rabbinics under R. Moses Sofer. He went to the United States in 1841 and took up a teaching position with Congregation Rodeph Shalom in New York. In 1843 Congregation Anshe Chesed, New York, appointed him preacher and teacher at a monthly salary of six dollars. A sermon critical of the practice of married women covering their hair led to nonrenewal of his appointment, whereupon his partisans in the congregation united with the recently formed Cultus Verein to establish Congregation Emanuel with Merzbacher as its rabbi (1845). The reforms made by the new congregation were minimal in character. Confirmation was introduced in 1848 and Merzbacher compiled a shortened prayer book in 1855. He was one

of the founders of the Independent Order of True Sisters. Sickness limited Merzbacher's activities, and he seems to have had little impact either on his own congregation or on the New York Jewish community.

[Sefton D. Temkin]

MERZER, ARIEH (1905–1966), Israeli artist specializing in repoussé reliefs, mainly in copper and silver. Born in a small town near Warsaw, Merzer studied art in Warsaw and began his career as an artist there. From 1930 he lived and worked in Paris. After the occupation of France he was detained in a concentration camp, but in 1943 managed to escape and made his way to Switzerland. At the end of 1945 he immigrated to Erez Israel where he lived alternately in Holon and Safed. He was one of the founders of the Safed artists' colony.

Merzer revitalized the ancient technique of hammered metal which has a long tradition in the Jewish creative arts, especially in the decoration of ceremonial objects. His style reflects the Jewish popular art of Eastern Europe, and his subjects were drawn from the Jewish lore of the past: the ghettos and *shtetls* of Poland whose culture he knew from his youth. His work includes scenes of Jewish feasts and religious ceremonies, daily life, genre and figures of craftsmen, as well as illustrations of folksongs and of stories by the great Yiddish writers.

In Safed he found an atmosphere not unlike that of the small towns of the Diaspora. The Ashkenazi and Sefardi inhabitants of Safed are depicted in their traditional garb, their earthly simplicity strongly recalling the Jews of the ghetto. Many of his works reflect everyday scenes of Safed, its Old City, its famous synagogues, narrow lanes, and ancient stone houses with wrought-iron railings. He also depicted stories of the Bible as he saw them in his imagination when he first studied them as a child in the *heder*. Biblical heroes are shown as real characters from the Eastern European Jewish world, those very Jews whom he had encountered in his childhood flavored with Oriental elements with which he was impressed after his arrival in Erez Israel. Occasionally he also addressed himself to contemporary Israeli subject matter, but the bulk of his work is a testament of love to a way of life that has disappeared.

Ornamental elements are emphasized in his reliefs by the frequent use of symmetry especially notable in the decorative effects of the backgrounds, in details and elaborated patterns. He frequently designed animals, plants, and ornamental motifs taken from the rich resources of Jewish folk art. He combined tactile values of the figures, which are the main components of his depictions, with pictorial effects in the backgrounds and landscapes. His work, deeply rooted in Jewish folklore, has a charming simplicity and a naive air and represents a direct continuation of the traditional Jewish folk art.

[Mira Friedman]

MESELSON, MATTHEW (1930–), U.S. biologist. Born in Denver, Colorado, he was educated at the University of Chicago, the University of California at Berkeley, and the Califor-

nia Institute of Technology, where he was research fellow in chemical biology (1957–60). He moved to Harvard University (1960) where he became professor of biology (1964–76) and Thomas Dudley Cabot Professor of the Natural Sciences and Principal Investigator from 1976. He also directed a laboratory program at the Josephine Bay Paul Center in Woods Hole. His research concerned the relationship between DNA structure and the control of gene function and replication, the repair of defective DNA, and related regulatory mechanisms in molecular genetics. He studied the microscopic animal bdelloid rotifer, with the part objective of elucidating the evolutionary disadvantages of asexual reproduction. His paper with Franklin Stahl (1958) described the first experiments confirming the Watson-Crick model of DNA replication and is a classic landmark in the history of molecular biology. Later he collaborated with Sydney Brenner and Francois Jacob (1961) in identifying transfer RNA, a crucially important molecule in protein synthesis. His experimental example and teaching skills continue to influence the development of modern biology. From the Vietnam War Meselson worked to prohibit chemical and biological weapons. In 1990 he co-founded with Julian Robinson and directed the Harvard Sussex program based mainly at Harvard University and the University of Sussex dedicated to arms limitation. In 1994 he and his collaborators revealed that the anthrax epidemic in Sverdlovsk in the former U.S.S.R. originated in a military facility. His many honors include membership in the U.S. National Academy of Sciences, foreign membership of the Royal Society of London, the Linus Pauling Prize, the Leo Szilard Award of the American Physical Society, the Scientific Freedom and Responsibility Award of the American Association for the Advancement of Science, and the Lasker Award for Special Achievement in Medical Science (2004). He served on many national and international councils concerned with scientific policy and education.

[Michael Denman (2nd ed.)]

MESENE, the land of southern Mesopotamia extending from about 24 mi. (40 km.) below Kut al-Amāra to the Persian Gulf. This area was also called Characene, a term giving political identification derived from Charax Spasinu, name of the fortified capital city of the district. During the late Middle Ages the name was replaced by that of the new capital and port of the district, Basra. The economy of Charax depended on her role as the main port and relay point for east-west trade on the upper Persian Gulf. During the first and second centuries C.E. overland trade developed via Mesene with the Nabatean city of *Petra and with the Syrian desert emporium of Palmyra (Tadmor), and through these centers with the rich Roman west.

A Jewish community existed in Mesene from at least the late Parthian period. During the reign of Artabanus v (209–27 C.E.) a Jewish merchant of Meṣḥān converted Izates, prince of Adiabene, to Judaism. At this time a second Jewish merchant of Meṣḥān similarly converted a number of women of that city (Jos., Ant. 20: 2, 4).

In talmudic sources of the third century C.E. the Jews of Babylonia refer to Mesenean Jews as imprudent (Kid. 49b), unfit and of tainted descent (Kid. 71b), since “whosoever did not know his family and his tribe made his way there” (Yev. 17a). Marriage between Babylonian Jews and the Jews of the northern Mesenean city of *Apamea was forbidden (Kid. 71b). The city of Meṣḥān (Charax) is described as being lower than hell, and Harpania, a second city of Mesene (perhaps a variant spelling of Apamea), as being lower still than Meṣḥān (Yev. 17a). This hostility shown by Babylonian Jews may have been caused, in part, by the adoption of elements of Mandeanism by the Jews of Mesene. It has also been noted that the practice of allowing the Jewish dead of Harpania to lie while the shroud was woven (Sanh. 48b) would indicate an adaptation by the Jews of that city of the Zoroastrian practice of exposing a corpse before burial (see Obermeyer, 197). A possible preference by Mesenean Jews for the Jerusalem Talmud may have further contributed to their being disliked by the Jews of Babylonia.

MESHA (Heb. מֶשָׁא), king of Moab in the ninth century B.C.E. (see *Moab). The name is formed from the root *yšc*, “to deliver, save.” In II Kings 3:4 it is stated that Mesha was a sheep breeder. He was subjugated by *Ahab and paid him tribute. After Ahab’s death, the king of Moab, most likely Mesha, revolted and ceased paying tribute (II Kings 3:4–5; cf. II Kings 1:1). *Jehoram son of Ahab conducted a military campaign against Moab to subjugate it (II Kings 3:6ff.).

Most of the information on Mesha is contained in the stele which he erected at Dibon (see *Mesha Stele). The first three lines of the inscription mention that Mesha’s father Chemoshyat, whose name is known from a stele found in Kerak (Kir of Moab; W.L. Reed and F.V. Winnett, in: *BASOR*, 172 (1963), 6), ruled over Moab for 30 years, and that Mesha succeeded him. Mesha resided at Dibon, situated north of Arnon, and called himself “King of Moab, the Dibonite.” The stele then relates how *Omri, king of Israel, took possession of the land of Medeba in the northern part of the plain, and subjugated Moab “his days and a part of the days of his son, forty years.” The phrase “his son” obviously refers to Ahab. However, all the days of Omri and Ahab together are considerably fewer than 40 years. Moreover, the Bible relates that the king of Moab revolted after Ahab’s death, rather than during his lifetime. Among the many attempts to explain the discrepancy between what is recorded in the Bible and in the Mesha Inscription, the most acceptable theory is that the number 40 is not to be taken literally, but is the conventional length of a generation (cf. Num. 32:13; Ps. 95:10). Mesha apparently revolted twice, once during the reign of Omri’s son Ahab, as is related in the stele, and once after Ahab’s death, as is stated in the Bible. If this theory is correct, the following sequence of

events can be proposed: Moab revolted against Israel following the division of Solomon’s kingdom, or at the latest in the days of Baasha. The Moabites even reached north of the Arnon and captured the plateau, including the land of Medeba. The king’s residence was established at Dibon, at the latest in the days of Mesha’s father. Omri waged war against Moab, recapturing Medeba and several cities in the plateau. For various reasons, the Israelite king preferred to leave Dibon in Moabite hands and was content to receive yearly tribute as a token of subjugation. In Ahab’s time, Mesha revolted against Israel. It is not clear if Ahab fought against Mesha, since the stele contains the expression “king of Israel” (lines 10–11, 18), which may refer to either Omri or Ahab. It is more likely that the reference is to Omri (cf. line 7), since Ahab was occupied with wars against the Arameans (but see *Ben-Hadad). Mesha first concentrated upon preparing fortifications for a confrontation with Israel. He secured communications between Dibon and Moab proper by building roads across the Arnon (line 26). He fortified Aroer, strengthened the acropolis (*qarḥoh*) of Dibon, and prepared the city for withstanding a siege by digging ditches and building a cistern (*šwh*; vocalization uncertain) inside the city. Upon the death of Ahab, Mesha exploited Israel’s defeat at Ramoth-Gilead and the weakness of *Ahaziah son of Ahab; he erupted northward, capturing all the cities of the plain. He reached Nebo, which he destroyed, killing its population of 7,000 people, “because I consecrated it to Ashtar-Chemosh.” Jehoram, king of Israel, combined forces with *Jehoshaphat, king of Judah, and the king of Edom and invaded Moab from the south, through Edom (II Kings 3:20), reaching the city of Kir-Hareseth in the heart of Moab. The battle in the city of Horonaim in southern Moab and its capture by Mesha, which is related at the end of the inscription, should be connected with this campaign. The biblical account agrees, stating that Jehoram’s campaign ended in failure and that he was forced to withdraw without conquering Moab. The Bible attributes the failure to a ritual act performed by the king of Moab: “Then he took his eldest son that should have reigned in his stead and offered him for a burnt offering upon the wall. And there came great wrath upon Israel; and they departed from him, and returned to their own land” (II Kings 3:27).

[Bustanay Oded]

MESHA STELE, an inscribed basalt stele, measuring about 40 inches (one meter) high and about 28 inches (70 centimeters) wide, erected by *Mesha, king of Moab, at Dibon (today, Dhībān), probably in the third quarter of the ninth century, B.C.E. The shape of the stele, with a flat base and rounded top, is characteristic of those erected by kings of that period. Unlike many other memorial inscriptions, the Mesha stele has no relief on the upper part. It was found at Dibon in 1868 by F.A. Klein, a Prussian missionary. Prior to its acquisition by the Louvre, it was smashed by Bedouins, who, observing the great interest it aroused among Europeans, assumed that it contained a treasure or ghost. The inscription was deciphered with

the aid of a squeeze made by Clermont-Ganneau of all but the last few lines. The language of the inscription is Moabite, which is closely related to Hebrew, though it diverges from it in several grammatical features. The alphabetic Canaanite-Hebrew script is well shaped and clear; the words are separated from each other by dots, and the sentences by vertical lines. Mesha dedicated the stele to his deity Chemosh out of gratitude for the latter's deliverance of the Moabites from Israelite rule, and for his help in the conquest of the plain. The stele (lines 4–9) relates, "As for Omri, king of Israel, he humbled Moab many years [lit. days], for Chemosh was angry with his land. And his son followed him and he also said 'I will humble Moab.' In my time he spoke [thus], but I have triumphed over him and over his house, while Israel hath perished forever" (cf. 11 Kings 1:1; 3:4–5). However, by describing the events in the first person, Mesha's real intention was probably to perpetuate his own victories over Israel.

[Bustanay Oded]

MESHECH (Heb. מִשְׁכַּח), a nation from Asia Minor, identified today with Muški of Assyrian sources (beginning about the 12th century B.C.E.) and with Μόσχοι of classical sources. In the table of nations (Gen. 10:2; 1 Chron. 1:5) Meshech appears after Javan and Tubal as one of the sons of Japheth. Meshech, again with Javan and Tubal, is mentioned in Ezekiel 17:13 as slave traders and merchants of copperware. This description appears to be historically accurate. The mention of Meshech together with Tubal and *Gog (Ezek. 38:2–3; 39:1), derives from the legend about Gog which gained currency in the time of Ezekiel.

BIBLIOGRAPHY: E.A. Speiser, *Genesis* (1964), 66; R.D. Barnett, in: CAH², vol. 2, ch. 30 (1966), incl. bibl.; EM, 5 (1968), 531–2, incl. bibl.

MESHED (pronounced and written **Mashhad** in Persian), a city situated in northeast *Iran, capital of the province *Khurasan. This is one of the few cities in Iran where the beginning of its Jewish settlement is documented. It is also one of the two holy Muslim cities in Iran where Ali-Reza, the eighth Imam of the Shi'ites, is buried (818 C.E.). (The other one is Qomm (the burial place of his sister, Fatimah)). Nāder Shah was unintentionally the cause of Jewish settlement in Meshed. It is well documented that two kings, Shah *Abbās I and Nāder Shah, transferred people from one region to the other, mostly for economic and security reasons. After his famous war with India, Nāder Shah brought over a large amount of treasures and housed them in Kalāt-e Nāderi (1741), about 100 km. north of Meshed. Being a Sunni, he did not trust the Shi'ites to guard his house of treasures. He ordered that Jews be brought to Kalāt-e Nāderi to guard the house. Consequently, Jews were uprooted from their native towns and villages in

*Gilān, Deylamān, and *Kazvin areas to be transferred to Kalāt-e Nāderi. They marched in several groups, one of which reached the Kalāt, while the two others, on their way to Kalāt, arrived in Meshed and the city of Sabzvār. Actually Jews were on the march to Kalāt when Nāder Shah was murdered (June 1747) and they were thus left alone at their temporary stations. Therefore, it is probable that by sheer accident a group of Jews was compelled to settle in Meshed some time before the king's murder. Jews were not allowed to settle inside the holy city; they were given a piece of land outside the wall. The place, which formerly belonged to the Zoroastrians, was called 'Id-gāh. In their new home the Jews prospered, especially in trading with neighboring cities and settlements. Joseph Wolff, a Christian missionary, reported in 1831 that Jews mingled too much with the Muslims and that among them one could also find Jewish Sufis who possessed the *Koran and Sufi books of poetry (pp. 133 ff.). Some of the leaders of the Jewish community of Meshed, according to certain official documents, collaborated with the British authorities in the areas of Khurasan, *Afghanistan, and *Bukhara.

On March 27, 1839, Muslims attacked the Jewish quarter where about 2,000 Jews lived. They killed some 35 and wounded many more, insisting that they embrace Islam (see document concerning this event: ms 948 in Netzer, 1985, p. 89; Ben-Zvi, plate 10). Soon afterwards ritual arrangements were made and the Jews performed the necessary procedures for conversion. The converts were known as *Jadīd al-Islām* (in short: *Jadīd*) meaning New Muslims. They were ordered to close their synagogues and schools, and to abandon all Jewish practices. They were to change their Jewish names to Muslim ones, attend mosques regularly, participate in all Muslim rituals, and perform the pilgrimage to the holy Muslim sites in Karbala and Mecca. They were also very cautious not to engage in intermarriage. As *anusim*, almost all of them lived a double life: they continued to keep all the Jewish laws and customs such as *kashrut*, prayers, observance of the Sabbath, Passover, Day of Atonement, and other Jewish holidays. Some families left Meshed to live as Jews in Herat and other nearby cities. Some found their way to India, the Land of Israel, South Africa, London, and New York. Many of these immigrants prospered and became rich. In *Jerusalem, they settled in the Bukharan Quarter, where they contributed to its construction and also built two synagogues there.

Reporting in 1850 and 1884, respectively, both Benjamin II and Neumark, tell us about the difficult life of the 400 *anusim* families of Meshed. From time to time their cryptic life was noticed by the Muslim authorities, which led to pogroms in the Jewish quarter. The severest of these occurred in 1891 and in 1902. Immigration to the Land of Israel increased year by year. Though the *Pahlavi regime (1925–79) brought some degree of peace and freedom to the Jews of Meshed, and officially they were not obliged to remain Muslims, the Muslim inhabitants of Meshed still continued to call them *Jadīd al-Islām* and expected them to remain loyal to their new religion. However, during the Pahlavi regime, they built their

own synagogues in *Teheran and Meshed. They especially benefited from the protection granted them by the Red Army during World War II, when Meshed and Khurasan were occupied by Russia (1941–46). On Passover 1946, while the Russian army was leaving the city, the Jewish quarter was once again attacked by Muslims, who this time intended not only to kill and injure the Jews but, equipped with fuel, to burn all the Jewish houses. Thanks to the protection they received from the local officials and some Tudeh members of Meshed, the disaster was averted. According to Landshut in 1948 2,500 Jews lived in Meshed. This number was reduced to 30 persons by 1973. The major cities where the Jews of Meshed now conduct community life with their own synagogues are Jerusalem, Tel Aviv, Milan, London, and New York.

[Amnon Netzer (2nd ed.)]

MESHEL, YERUHAM (1912–2002), Israeli trade union leader, member of the Ninth and Tenth Knessets. Meshel was born in Pinsk in Belorussia. He went to a reformed *heder*, and later studied at the Tarbut Hebrew gymnasium in Pinsk. As a youth he joined the Ha-Shomer ha-Za’ir movement. He settled in Palestine in 1933, and worked as an agricultural laborer, and in construction. During World War II Meshel was the representative of the Histadrut in British army camps. In 1943–47 he was head of the Metal Workers Union, in 1947–61 head of the Factory Workers Department of the Histadrut, and in 1961–69 head of the Histadrut’s Trade Union Department. In 1969 Meshel was elected deputy secretary general of the Histadrut responsible for Social Security, and in 1973 was elected secretary general, succeeding Yitzhak *Ben-Aharon. He remained in this position until 1984. He became head of the Institute for the Study of the Labor Movement named after Pinhas *Lavon in 1987. He wrote *Shelihut ve-Derekh* (1980).

[Susan Hattis Rolef (2nd ed.)]

MESHULLAM BEN JACOB OF LUNEL (12th century), Provençal scholar. A master of *halakhah*, Meshullam also occupied himself with secular studies. He was a wealthy man and philanthropist, and together with his sons provided for the support and maintenance of the disciples and scholars who flocked to his *bet ha-midrash*. Benjamin of Tudela describes him and his five sons as being “great and wealthy scholars, Joseph, Isaac, Jacob, Aaron, and Asher the ascetic, who had no concern with worldly matters, but devoted himself to study day and night, fasting and refraining from eating meat, and

an outstanding talmudist, together with their brother-in-law Moses” (*The Itinerary of Benjamin of Tudela*, ed. by E.N. Adler (1907), 3). Around them there gathered an outstanding group of talmudic scholars and seekers after knowledge, who became known as “the company of Lunel.” In consequence *Lunel became famous as an important center of study. Many of them and their disciples were among the great scholars of that generation, including Samuel b. Moses, “the lion of the group,” who apparently was head of the *bet din*, *Abraham b. Isaac of Narbonne, author of *Ha-Eshkol*, his son-in-law *Abraham b. David of Posquières, and *Samuel b. David. This center even attracted scholars from Spain. As Judah ibn *Tibbon notes, Meshullam was distinguished in fields of study other than Talmud. This was in contrast to Jewish scholars before him in Christian countries, who occupied themselves essentially with the Talmud, either because they regarded it as their sole avocation or because of lack of books on general sciences (which were then written in Arabic). Meshullam sponsored the translation of books on grammar, theology, rhetoric, ethics, and parables (cf. introduction to the *Hovot ha-Levavot* of *Bahya b. Joseph ibn Paquda, translated by Ibn Tibbon on the instruction of Meshullam). Meshullam himself also composed halakhic works, as well as books on “parables of wisdom and ethics” that are no longer extant. He is known to have written a book called *Issur Mashehu*, on minute quantities of forbidden foods, mentioned by Solomon b. Abraham *Adret in his novellae to *Hullin* (93b, Jerusalem, 1 (1963), ed. 227). From a fragment of the *Issur Mashehu* of Abraham b. David of Posquières published by S. Assaf (*Sifran shel Rishonim* (1935), 185–98) “which I wrote before my teacher Meshullam” it is clear that Abraham b. David wrote it in answer to a work of the same title by Meshullam so as to discuss critically the latter’s views. It was recently discovered and published by Y. Kafah in the responsa of the Rabad which he edited (1964, 241ff. no. 207). According to Solomon ibn Verga (in *Shevet Yehudah*), Meshullam died in 1170, but the date is not certain.

[Shlomoh Zalman Havlin]

MESHULLAM BEN KALONYMUS (10th–11th century), rabbi and *paytan*. Born into a rabbinical family from *Lucca, his grandfather was R. Moses the Elder who was taught by Abu Aaron the secrets of the Kabbalah. Meshullam’s father (see *Kalonymus family) was a well-known talmudic scholar and *paytan*. His teacher was *Solomon b. Judah ha-Bavli. Meshullam himself was a famous talmudist and liturgical poet, often called “the Great.” His works include a commentary on *Ethics of the Fathers*, of which only one extract is extant; responsa, dealing with explanations of talmudic passages and with matrimonial, legal, and ritual matters and including a responsum against the Karaites; and liturgical poems, of which

the best known are a composition for the morning service of the Day of Atonement and “*Ammiz Koah*,” the version of the **Avodah* adopted in the Ashkenazi rite. His responsa, apart from their intrinsic value, are important sources of information for the social and economic history of the Jewish communities of pre-Crusade Europe. He is the first author in Europe to mention the commercial law of Ma’arufya. His answers are usually brief and concise, and devoid of argumentation. His decisions are based mainly on the Babylonian Talmud but also refer to the writings of the *geonim*. Both *Gershom Me’or ha-Golah and *Rashi held Meshullam in high regard. The center of Meshullam’s activity is uncertain. Responsa by *Sherira and *Hai Gaon point to Italy as does the title “of Rome” sometimes given him. Later he settled in Mainz where his tombstone was discovered. His works helped to establish Rhineland scholarship and stimulated the development in France and Germany of a powerful poetical tradition.

[Yonah David]

MESHULLAM BEN MOSES (c. 1175–c. 1250), scholar of Béziers and one of the most prominent scholars of Provence in the 13th century. Meshullam, born in Lunel into one of the distinguished families of Provençal Jewry, went to Béziers with his father, Moses b. Judah, one of the leaders of the community and friend of *Abraham b. David of Posquières and *Zerahiah ha-Levi Gerondi. Meshullam’s maternal grandfather was *Meshullam b. Jacob of Lunel. His sister’s son was *Meir b. Simeon ha-Me’ili of Narbonne, author of *Ha-Me’orot*. Among Meshullam’s grandsons were the renowned 14th-century talmudists and scholars of the *Lattes family. Meshullam typifies the remarkable Provençal blending of Torah and general culture. He is known to have taken a definite stand against the new trend favoring the study of Kabbalah, then making inroads among the Jews of Provence, and supported his sister’s son, Meir, in his opposition to the *Sefer ha-Bahir*. Meshullam was highly regarded in France and Spain, and even *Naḥmanides, when he complained to Meshullam of the baseless aspersions emanating from Béziers against the family of Jonah *Gerondi, couched his remarks in highly respectful terms (*Kitvei ha-Ramban*, ed. by C.B. Chavel (1963), 360–4). There is a reference to correspondence between them in Naḥmanides’ novellae to the tractate *Eruvin* (still in manuscripts). *Jedaiah ha-Penini, who studied in Meshullam’s yeshivah at the age of 15, has left an account of his master’s eminence and wisdom, along with a very detailed and impressive description of the program of study in the yeshivah which closed with Meshullam’s death.

Meshullam is chiefly renowned for his *Sefer ha-Hashlamah*, designed to complete the *halakhot* of Isaac *Alfasi, explaining its difficult passages, adding *halakhot* that do not

appear in it, updating it with the Provençal tradition of scholarship, and dealing with criticisms of the work, including those of Zerahiah ha-Levi Gerondi in his *Ha-Ma’or* – all this in order to give it uncontested authority. Indeed, Menahem *Meiri, who wrote more than 50 years later, refers to Alfasi in the same breath as the *Sefer ha-Hashlamah*, thus showing it to be the standard version of Alfasi in his locality (see introduction to Meiri’s commentary on *Avot* ed. by B.Z. Prag, 1964). Meshullam based his work chiefly upon the teachings of the earlier scholars of Provence, and shows especially high regard for Abraham b. David of Posquières, though he does not hesitate to disagree with him on occasion.

Publication of *Sefer ha-Hashlamah* was begun during the last century and the greater part of it, comprising the orders *Mo’ed* and *Nezikin*, and the tractate *Hullin*, has already appeared. Those chiefly responsible for its publication were Judah *Lubetzky – *Nezikin* (Paris, 1885–87; Warsaw, 1907), with an extensive commentary, *Torat ha-Hashlamah*; Moses Herschler in the series *Ginzei Rishonim* (1962–); and Abraham Ḥaputa, who also added an extensive commentary, *Reshit ha-Hashlamah* (1961–). The *Sefer ha-Hashlamah Yevamot* was published in the Vilna (Romm) edition of the Talmud under the title *Tosafot Ḥad mi-Kamai*. Some of Meshullam’s *hassagot* on Maimonides to *Shabbat*, *Eruvin*, and *Shevu’ot* (in J. Lubetzky, *Bidkei Battim*, 1896), show he was apparently unaware of Abraham b. David’s *hassagot* on Maimonides.

BIBLIOGRAPHY: Meshullam b. Moses of Béziers, *Sefer ha-Hashlamah le-Seder Nezikin*, ed. by J. Lubetzky, 1 (1885), introd.; idem, *Bidkei Battim* (1896); Neubauer, in *REJ*, 20 (1890), 244–8; I. Twersky, *Rabad of Posquières* (1965), 252f.

[Israel Moses Ta-Shma]

MESHULLAM BEN NATHAN OF MELUN (12th century), talmudist in northern France. Meshullam was born in Narbonne, where he eventually became a member of the *bet din* of *Abraham b. Isaac of Narbonne. From there he went to head the community of Melun. Meshullam became involved in a long and bitter dispute with Jacob *Tam, who accused him of abrogating ancient customs and replacing them with new ones; of introducing many lenient rulings; of exaggerated emendment of the text of the Talmud; of slighting *Rashi and French scholars in general; and of unwarranted independence in *halakhah*. Tam cited, among other instances, permitting a gentile to touch wine-vinegar, permitting ritual immersion for women in the daytime because of the danger from attacks by gentiles at night (an accusation denied by Meshullam), and abrogating the blessing over the Sabbath candles. Tam’s complaint to the community of Melun resulted in a lengthy correspondence between the two men, which has in part been preserved (*Sefer ha-Yashar le-Rabbenu Tam*, Responsa vol. ed. by F. Rosenthal (1898), nos. 43–50). Meshullam defended himself vigorously against all the accusations of Tam, accusing him (though in much milder language) of essentially the same things and refusing to accept the slightest external interference in matters of Torah. The fact that Meshullam could

base himself on existing halakhic traditions which differed in origin from those held by Tam, and his mastery of the Talmud, stood him in good stead in his dispute with Tam, the greatest scholar of his generation. Meshullam is frequently mentioned in the printed *tosafot*. Meshullam's son, Nathan, and his descendants after him (with the family name of Official) were renowned as the family of the *Mekanne'im* ("Zealots") because of its many noted polemicists, who, for several generations, engaged in disputes with high church dignitaries.

[Israel Moses Ta-Shma]

MESHULLAM FEIVUSH HELLER OF ZBARAZH (d. c. 1795), Galician ḥasidic author, descendant of Yom Tov Lippmann Heller, disciple of Jehiel Michel of Zloczow. Though there are numerous ḥasidic legends about Heller, few authentic biographical details are available. In his youth he ministered to the early ḥasidic masters Menahem Mendel of Pere-myshlany and Dov Ber, the Maggid of Mezhibezh, to both of whom he refers in his writings. A fellow disciple of Jehiel Michel, Ḥayyim of Czernowitz, records teachings in his name. Heller's importance in the history of ḥasidic thought is due to his little booklet *Yosher Divrei Emet*, first published as part of the anthology of ḥasidic teachings entitled *Likkutei Yekarim* (1792, 1974; published separately 1905, by Samson Heller of Kolomyja, Heller's descendant). It is possible that Heller is to be identified, in fact, with the anonymous editor of the *Likkutei Yekarim*. *Yosher Divrei Emet* is in the form of two epistles to a friend, describing in detail the ḥasidic way as taught by the Ba'al Shem Tov and his disciples.

In Heller's view, the main thrust of Ḥasidism focuses on the need for complete attachment to God (*devekut*) as the aim of the religious life, to which all else must be subordinated. This involves the "stripping off of corporeality" (*hitpashtut ha-gashmiyyut*), which means not so much the living of an ascetic life, but a thorough detachment from worldly delights, even when engaging in the things of the world. Eating, drinking, earning a living, the marital act, should all be engaged in, but as a duty, under compulsion, as it were, with the mind not on the physical enjoyment but on God as the source of all. In Heller's bold illustration, the man in love with a woman, when he sees her dress, has no thoughts for the dress itself but only of the reminder which it provides of his passion for his beloved. *A fortiori*, when a man studies the Torah and offers his prayers, there should be no trace of self-interest. Hence Scripture says: "Say unto wisdom: 'Thou art my sister'" (Prov. 7:4). Man's attitude to the Torah should be one of pure disinterested love, like that of brother and sister, not like that of man and wife. Heller's novel interpretation of *Torah li-Shmah* ("Torah for its own sake") is: "Torah as its name implies," i.e., Torah means "that which shows forth"; the aim of all Torah study is for man to come near to God, who is shown forth through the Torah.

Consequently, the distinction between *nigleh* ("the revealed things") and *nistar* ("the secrets") must not be understood in the conventional sense as referring, respectively, to the Talmud and Codes and the Kabbalah. A "secret" for Heller is that which cannot be communicated. It is a religious experience. Therefore one who studies the Kabbalah merely as an intellectual endeavor has to his credit only the *nigleh* aspect of study, whereas one who studies the Talmud and Codes as a means of experiencing the Divine attains to the far higher stage of *nistar*. The distinction between *nigleh* and *nistar* is not between two different types of subject matter but between different approaches to the study of the same material. Heller is severely critical of the rabbinic scholars of his day, whom he accuses of being immersed in worldly lusts and ambitions. They fondly imagine that the study of the Torah constitutes in itself the love of God and fail to appreciate that without loss of selfhood and complete detachment from the world there can be no love of God, the true aim of Torah study.

On the other hand, the ḥasidic *zaddik* can, for Heller, do no wrong. The ḥasidic master, Zevi Elimelech of Dynow (*Igra De-Pirka*, No. 15) reports that Heller's disciples told him of their master's saying that one who scrutinizes too closely the deeds of a *zaddik* is like one who gazes too closely at the sun, and he will suffer the same fate in that his eyes will become dim.

With Heller there begins the rejection of the early ḥasidic doctrine of the elevation of extraneous thoughts, i.e., the idea that when a wayward or sinful thought enters the mind during prayer, it should not be pushed away but raised to its source in God. Heller considers this to be a dangerous doctrine, but is unable to deny it completely, since it was taught by the early masters; he consequently adopts the rationalization that the practice was never intended for ordinary folk but only for the greatest of saints. By a similar rationalization, Heller urges the abandonment of the Lurianic *kavvanot* in prayer, except in rare instances. Luria was thinking of himself and his great contemporaries; for the modern man, the *kavvanot* would frustrate the aim of *devekut*.

[Louis Jacobs]

MESHULLAM PHOEBUS BEN ISRAEL SAMUEL (1547–1617), Polish rabbi. Meshullam's exact birthplace is unknown. Before becoming *av bet din* in Cracow, he held a similar position in Brest-Litovsk. It appears that in 1590, while in Brest-Litovsk, he introduced regulations to prevent work being done on the Sabbath. These regulations afford an insight into the economic situation of the Jews of Poland and Lithuania in the 16th and 17th centuries. They were first published in an abbreviated form in *Kevod Ḥakhamim* (Venice, 1700) by Judah Leib Pořovitz, and then more fully by I. Sonne (see bibliography). Although the year of Meshullam's arrival in Cracow is not certain, his presence there is recorded in 1609, when he gave a

ruling as to which *haftarah* should be recited when the New Moon of Av falls on a Sabbath. While in Cracow, he participated in the meetings of the *Council of Four Lands, and it is possible that even the aforementioned regulations gained the approval of the council. A recognized and respected halakhic authority, Meshullam gave numerous rulings on synagogue customs. The most famous of his disciples was Joel *Sirkes. Meshullam had a wide knowledge of languages other than Hebrew and was well versed in medical matters, as is evident in his responsa on these subjects. Nothing is known of his family and children except that he had two sons: SAMUEL, who became *av bet din* in Przemyśl, and JOSEPH (d. 1648), who was *av bet din* in Cracow. Meshullam died in Cracow.

Few of his works remain but his responsa are found in contemporary works, including those of *Meir b. Gedaliah of Lublin, in *Turei Zahav* by *David b. Samuel ha-Levi, and in *Bayit Ḥadash* by Joel Sirkes. Meshullam's work, *Sefer Shemot Gittin*, on the names used in bills of divorce, is mentioned by Abraham *Rapaport in his *Eitan ha-Ezrahi*. Meshullam also edited responsa by Moses b. Isaac *Mintz from manuscripts in his possession.

BIBLIOGRAPHY: J.M. Zunz, *Ir ha-Zedek* (1874), 49–52; Sonne, in: *Horeb*, 2 (1935), 237–46; Halpern, Pinkas, 22, 63, 456, 483–8; Ben-Sasson, in: *Zion*, 21 (1956), 183–206; Feldman, *ibid.*, 34 (1969), 90–97; Lewin, in: *Sinai*, 65 (1969), 109.

MESHULLAM ZALMAN HA-KOHEN (late 18th and early 19th century), preacher and moralist in Fuerth, Bavaria. His first work, *Bigdei Kehunnah* (“Priestly Garments,” Fuerth, 1807), contains responsa on various laws in the Shulḥan Arukh and *novellae on the talmudic tractates *Gittin* and *Bava Mezia*. *Nahalat Avot* (“Heritage of our Fathers,” Fuerth, 1811), his second work, was written when the author was 70 years old. Utilizing the form of the ethical will, the book was intended to educate both the author's children and pupils. After an introduction in rhymed prose, the work comprises sermons on ethical subjects – both personal and social – the commandments, and devotion to God.

MESHWI (or **Mishawayh**, a form of Moses) **AL-‘UKBARI** (second half of the ninth century), Jewish sectarian of Ukkbara, near Baghdad. Later *Karaites refer to him as Meshwi Ba‘albaki, since his followers emigrated from Babylonia to Syria in the tenth century. No details are known of the life of Meshwi, founder of a sectarian movement whose members are known as Mishawayhites. No writings of his are known, and his opinions and teachings have been preserved only in the writings of his opponents. His teachings differed in many ways from Rabbinic and Karaite Judaism. This is particularly evident in his calendar computations. According to Meshwi, the first day of Passover must always fall on a Thursday, Shavuot on a Sunday, and the Day of Atonement on a Saturday. As he claimed that the day spanned from dawn to dawn, his followers observed the Sabbath from the dawn of Saturday to the dawn of Sunday. He also claimed that no sacrifices were

offered at the Tabernacle on Saturdays, interpreting Numbers 28:10 to mean that the burnt-offering must be sacrificed on Friday for Saturday. Many deviations from tradition were ascribed to him by his opponents: in his commentary on Leviticus Saadiah Gaon refers to Meshwi's permitting the fat of animals which were not sacrificed at the altar to be eaten. The 11th-century Karaite scholar, Tobias b. Moses, attacked him as a heretic for declaring many pentateuchal laws void. Meshwi may have been influenced by his contemporary, the heretic Hiwi al-Balkhī. Remnants of the Mishawayhites survived until the 12th century; *Benjamin of Tudela, who met them in Cyprus, relates their heretical manner of observing the Sabbath, and Abraham *Ibn Ezra, in his commentary on Exodus 16:24 and in his epistle on the Sabbath, refers to their interpretation of Genesis 1:5 and their observance of the Sabbath. It is striking that the interpretation of *Samuel ben Meir (Rashbam) of Gen. 1:5 corresponds to that of Meshwi.

MESILLAT ZION (Heb. מִסְלַת צִיּוֹן; “Roadway to Zion”), moshav affiliated with Tenu‘at ha-Moshavim in the foothills of Judea on the highway leading to Jerusalem, near the entrance to the Sha‘ar ha-Gai gorge (the moshav's initial name was Sha‘ar ha-Gai). Mesillat Zion was founded in 1950 initially as a “work village” whose inhabitants were employed in land reclamation and in planting the nearby Martyrs' Forest and other woodlands. Its inhabitants originated from Cochin, India. The moshav's economy was based on vineyards, deciduous fruit orchards, poultry, and flowers. In the mid-1990s, the population was approximately 350, increasing to 585 in 2002 after expansion.

[Efraim Orni]

MESILLOT (Heb. מִסְלוֹת; “Roadways”), kibbutz in central Israel, at the foot of Mt. Gilboa, affiliated with Kibbutz Arzi Ha-Shomer ha-Za‘ir. It was founded in 1938 as a tower and stockade village by pioneers from Bulgaria who had participated in establishing *Ma‘oz Ḥayyim and worked there. The kibbutz' economy was based on intensive field crops, fruit orchards, citrus groves, dairy cattle, carp ponds, poultry, a plant nursery, and guest rooms. In 2002 the population was 423.

MESKIN, AHARON (1898–1974), Israel actor, a founding member of *Habimah. Meskin was a Russian government official, when in 1917, he heard of the establishment of the Habimah studio in Moscow and applied for admission. He played his first major role in 1924 as *The Golem* in H. Leivick's play of that name and from that time ranked as a leading member of the company. He subsequently played many leading roles, both in Israel and on tour abroad, among his

most effective being Othello and Shylock. A tall man with a rough-hewn face and a striking deep voice, Meskin endowed his roles with dignity and humanity. In 1960 he was awarded the Israel Prize. He was the first chairman of the Israel section of the International Theater Institute.

MESOPOTAMIA. The original article in the first edition of the *Encyclopaedia Judaica* traced Mesopotamian history to its earliest beginnings and provided a detailed survey of Mesopotamian literature and institutions. With the availability of such tools as J. Sasson et al. (eds.), *Civilizations of the Ancient Near East* (CANE, 1995), the ETANA website, and A. Kuhrt, *The Ancient Near East c. 3000–330 B.C.* (2 vols., 1995) the need for such comprehensive coverage in this Encyclopaedia is less acute. Accordingly, the present revision concentrates on those elements of Mesopotamian history and culture most relevant to understanding the Bible and ancient Israel and Judah.

HISTORY

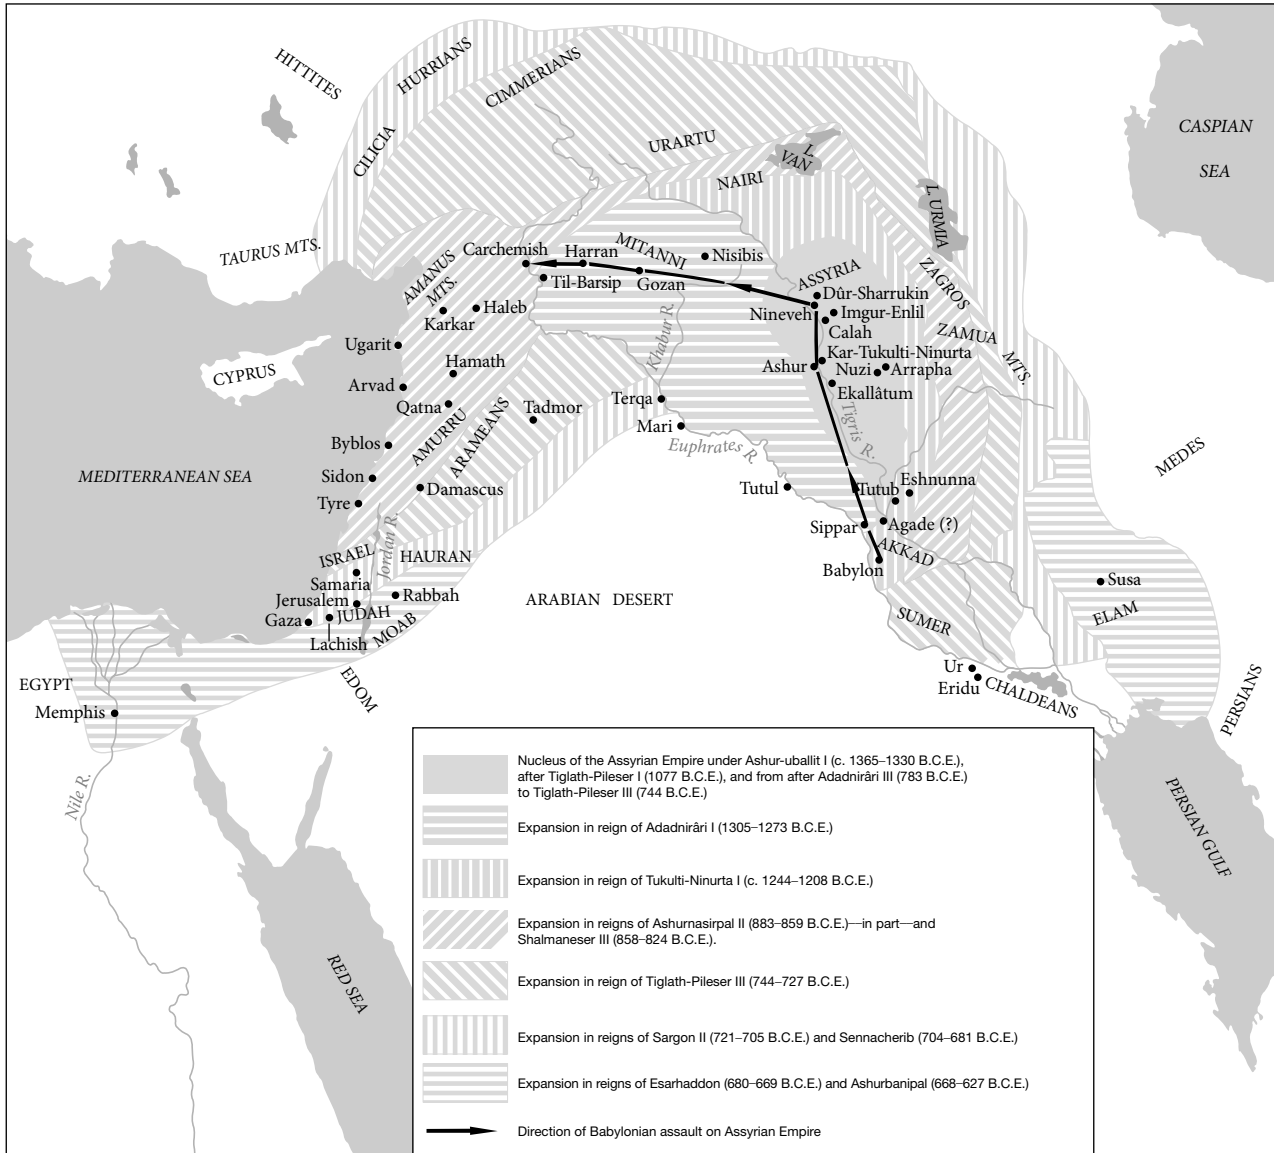

THE AMORITE PERIOD C. 2000–1800 B.C.E.

Within the limits imposed by the nature of the evidence, the beginning of the second millennium may be characterized as

the era of the *Amorites. Amurru (or Amaru) was, in its earliest cuneiform attestations, simply a geographic name for the west, or for the deserts bordering the right bank of the Euphrates. This area, which stretched without apparent limit into the Syrian and Arabian Deserts, was traditionally the home of nomadic tribes of Semitic speech who were drawn to the civilized river valley as if by a magnet and invaded or infiltrated it whenever opportunity beckoned. In the process they became progressively acculturated – first as semi-nomads who spent part of the year as settled agriculturalists in an uneasy symbiosis with the urban society of the irrigation civilizations, and ultimately as fully integrated members of that society, retaining at most the linguistic traces of their origins. It was thus that, perhaps as early as about 2900 B.C.E., the first major wave of westerners had entered the Mesopotamian amalgam, and under the kings of Kish and Akkad became full partners in the Sumero-Akkadian civilization that resulted. When, however, the Akkadian sources themselves spoke of Amorites, as they did beginning with Shar-kali-sharri about 2150, they were alluding to a new wave of invaders from the desert, not yet acclimated to Mesopotamian ways. Such references multiply in the neo-Sumerian texts of the 21st century, and correlate with growing linguistic evidence based chiefly on the recorded personal names of persons identified as Amorites which shows that the new group spoke a variety of Semitic, ancestral to

later Hebrew, Aramaic, and Phoenician. All these languages (and some other dialects) are therefore called West Semitic (or Northwest Semitic) by modern linguists, to distinguish them from the East Semitic, or Akkadian, language spoken in Mesopotamia. The latter, used side by side with the non-Semitic Sumerian, and often by one and the same speaker, was heavily influenced by Sumerian and developed along lines of its own; but it also reacted to the Amorite impact and split into two fairly distinct dialects: Babylonian in the south and Assyrian in the north.

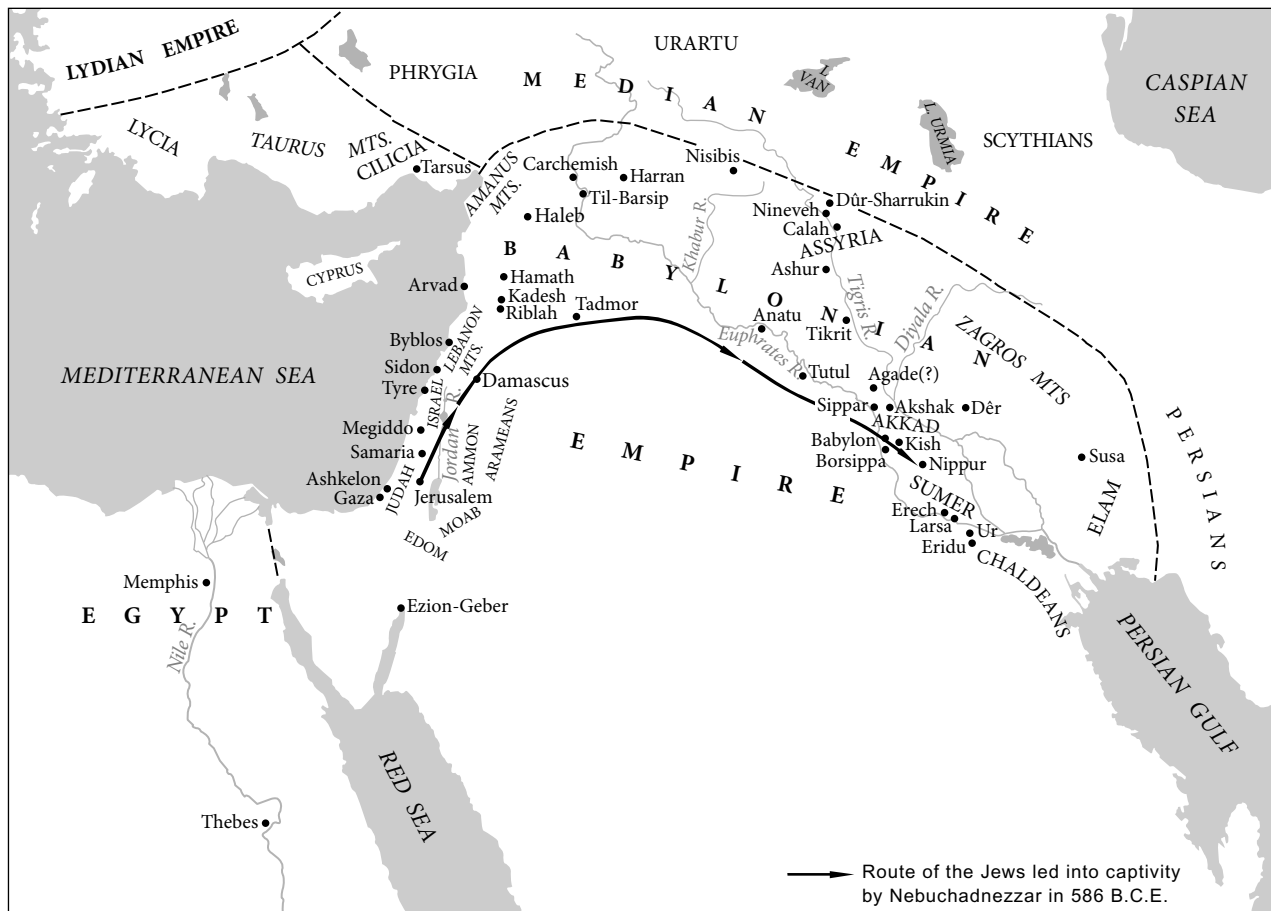

Amorite influence was not, however, confined to the linguistic level. Many cultural innovations of the second millennium, notably in religion and art, can be traced to the new immigration. Since the migrations moved in the direction of Syria-Palestine as well as of Mesopotamia, it is not surpris-

ing that numerous common traditions – linguistic, legal, and literary – crop up at both ends of the Asiatic Near East hereafter. Among these common traditions, those of the semi-nomadic wanderings preserved in the patriarchal narratives in Genesis, and elsewhere in the Hebrew Bible, deserve special notice. The glimpses they provide of tribal organization, onomastic practices, kinship patterns, rules of inheritance and land tenure, genealogical schemes, and other vestiges of nomadic life find analogies in cuneiform records. Yet they are preserved within the framework of a polished literary narrative too far removed from the times it presumes to describe to command uncritical confidence. Nonetheless, it is in this period, that it can be said, that the Levant (that is, the area of Syria-Palestine) begins at this time to emerge from prehistory into history.

The pattern established by the Amorites was to characterize Near Eastern history down to the present: it was only when the natural arenas of centralized political power in Mesopotamia and Egypt were in eclipse that the intervening area, destined by geography for division into petty states, enjoyed an opportunity to make its influence felt in unison. The simultaneous collapse of the Sargonic empire of Akkad and the Old Kingdom in Egypt provided such an opportunity, and already Shulgi of Ur had to construct a defensive wall, presumably at the point where the Tigris and Euphrates flow closest together, to deflect unwanted barbarians from the cities that lay to the south. Shulgi was succeeded by two of his many sons, Amar-Sin and Shu-Sin, each of whom reigned for nine years. Like him, these conducted most of their military campaigns in the east, across the Tigris, but Shu-Sin greatly strengthened the wall, calling it "The one which keeps Didanum at bay" in a direct reference to the Amorite threat. He managed thereby to postpone the final reckoning, and even enjoyed divine honors in his lifetime beyond those of his predecessors. His son Ibbi-Sin, however, was less fortunate, and in native Mesopotamian traditions was remembered as the model of the ill-fated ruler. Unable to withstand the simultaneous onslaughts of Elamites and Subarians from the east and Amorites from the west,

he appealed for help to Ishbi-Irta of Mari only to end up with Ishbi-Irta extorting ever more powers for himself until he was able to found a dynasty of his own at Isin, and subsequently allowing the capital city of Ur to be sacked and Ibbi-Sin to be carried off to exile and ultimate death and burial in Elam.

The fall of Ur about 2000 B.C.E. did not mark so clear a break in the historical continuum as has sometimes been assumed. Ishbi-Irta paid homage to the Sumero-Akkadian traditions of the Ur III dynasty, reigning as king of Ur and perpetuating such time-honored practices as the cult of the deified king, the patronage of the priesthood and scribal schools of Nippur, and the installation of royal princes and princesses as priests and priestesses at the principal national shrines and of loyal officials as governors of the principal provinces. However, whether with his consent or not, these governors were now increasingly of Amorite stock, and wherever possible aspired to royal status for themselves and independence for their city. The latter course particularly characterized the situation beyond the immediate range of his control, notably at Ashur, Eshnunna, Dêr, and Susa beyond the Tigris, as well as upstream on the Euphrates and its tributaries. From Ashur and northern Mesopotamia, a lively trade soon car-

Map 3. The Empire of Nebuchadnezzar II (604–562 B.C.E.). Based on M.A. Beek, *Atlas of Mesopotamia*, Nelson, London, 1962.

ried Amorite and Akkadian influence even further afield, into Cappadocia.

Closer to home, the traditional central control was at first maintained, but even here the loyalty of the provinces was shortlived. For most of the 20th century, Ishbi-Irra's descendants at Isin were unchallenged as the successors of the kings of Ur, but before it was over, the Amorite governors of the southeast, probably based at the ancient city of Lagash, asserted their independence in order to protect the dwindling water resources of that region. Under Gungunum, they established a rival kingdom at Larsa which soon wrested Ur from Isin. In short succession, other Amorite chieftains established independent dynasties at Uruk, Babylon, Kish and nearly all the former provinces of the united kingdom, until Isin effectively controlled little more than its own city and Nippur. With the more distant marshes long since under Amorite rule, the 19th century was thus characterized by political fragmentation, with a concomitant outburst of warfare and diplomacy that embroiled all the separate petty states at one time or another.

The "staging area" for the Amorite expansion was probably the Jabel Bishri (Mt. Basar) which divides or, if one prefers, links the Euphrates River and the Syrian Desert. From here it was a comparatively short and easy march down the river to Babylonia or across the river to Assyria. The way to Egypt was not only longer but led through more hilly and intractable land. This may be one reason that the Amorite wave was somewhat longer in reaching the Egyptian border. When it did reach it, it confronted just such a wall as Shu-Sin (c. 2036–2028) had built "to keep Didanum at bay": in one of those curious parallels that punctuate Ancient Near Eastern history, they met the "Wall-of-the-Ruler, made to oppose the Asiatics and crush the Sand-Crossers," and attributed to the founder of the 12th Dynasty. But the extraordinary revitalization of the Egyptian monarchy by this dynasty (c. 1990–1780) was the real reason that the Amorite wave broke harmlessly at the Egyptian border and the characteristic petty statism that it brought in its train was deferred for two centuries.

THE ERA OF HAMMURAPI (1800–1600 B.C.E.)

With the beginning of the 18th century B.C.E., the political geography of the Asiatic Near East can for the first time be rendered with reasonable accuracy, and many previously blank spots filled in. This was a period of intense commercial and diplomatic activity, punctuated by military campaigns and sieges conducted at considerable distances from home. The fortuitous recovery of archives from many diverse sites reveals a host of geographic names, and many of these can be approximately located, or even identified with archaeological sites, with the help of occasional itineraries. Such itineraries were guides to travelers or, more often, records of their journeys or of campaigns, comparable to the "War of the four kings against the five" in Genesis 14, by marauding armies, and come closest to maps in the absence of any real cartography.

No small-scale map can, of course, show all the minor vassal and petty states in all their complexity. Even the larger

kingdoms and city-states add up to a bewildering number. However, certain patterns can be detected. The Syrian desert was populated by loosely organized tribal groupings still maintaining a largely nomadic way of life; the mountainous border regions beyond the Tigris and the Upper Euphrates were being organized under various non-Semitic peoples who came under varying degrees of Mesopotamian cultural influence; the "Fertile Crescent" itself (that is, the valley of the two rivers together with the eastern Mediterranean littoral) was firmly in the hands of urbanized Amorite rulers. Within this great arc, the largest and most central position was occupied by the kingdom of Shamshi-Adad I (c. 1813–1783), and, at the turn of the century, he seemed the most commanding position. From his capital at Shubat-Enlil, he kept a close eye on his two sons, who ruled their provinces from Mari and Ekallâtum, respectively. The vast archives of *Mari have revealed the intricacies of administration, diplomacy, and warfare of the time as well as the highly personal character of Shamshi-Adad's rule. The crown prince at Ekallâtum, whom he held up to his younger brother as a model, had inherited much of the wealth of nearby Ashur, amassed in the profitable trade with Anatolia in the previous century. Nonetheless, it is misleading to call Shamshi-Adad's realm, as is sometimes done, the first Assyrian empire, for his empire was not based on Ashur, and the petty kingdom of Ashur that survived his death was in no sense an empire.

The main challenge came from the south. The way had been paved by the kingdoms of Warium and Larsa. Warium, with its capital at Eshnunna in the valley of the Diyala River, included the ancient center of the Akkadian empire (and perhaps even preserved its Sumerian name, Uri, in Akkadianized form), while Larsa controlled the ancient Sumerian cities. These two Amorite kingdoms had succeeded in subjecting most of the independent city-states of Sumer and Akkad, and thus turned the tide of particularism that had followed the collapse of the Ur III empire. They directed their expansionist policies into separate spheres of influence: Eshnunna north and west into Assyria and upper Mesopotamia, Larsa eastward to the ancestral lands of its last dynasty in Emutbal and beyond that toward Elam. That they avoided an open clash was, however, due even more to the existence, between the two, of a relatively small state that nonetheless maintained its independence from both and was destined shortly to succeed and surpass them as well as Shamshi-Adad.

The city of Babylon was a relative newcomer among the members of the old Sumero-Akkadian amphictyony, though later, to match its subsequent importance, it claimed a fictitious antiquity reaching back to antediluvian times. It was strategically located near the narrow waist of the Tigris-Euphrates valley where the two rivers come closest together and whence the capitals of successive Mesopotamian empires have ruled the civilized world from Kish and Akkad down to Ctesiphon and Baghdad. Throughout the 19th century, it was the seat of an independent dynasty which shared (or claimed) a common ancestry with Shamshi-Adad and whose rulers enjoyed long

reigns and an unbroken succession passing smoothly from father to son. In 1793, the succession of this first dynasty of Babylon (also known simply as the Amorite Dynasty) passed to *Hammurapi (1792–1750). Hammurapi was one of the great rulers of history, a man of personal genius and vision who left an indelible impress on all his heirs.

At first Hammurapi's prospects seemed anything but favorable. A celebrated Mari letter phrased his situation in classic terms: "There is no king who is all-powerful by himself: ten or 15 kings follow in the train of Hammurapi of Babylon, as many follow Rim-Sin of Larsa, as many follow Ibal-pi-El of Eshnunna, as many follow Amut-pi-El of Qatna, and 20 kings follow in the train of Yarim-lim of Yamhad" (G. Dossin, *Syria* 19 [1938], 105–26). A lesser personality would have fallen victim to the struggles between these and other major powers of the time, but by an adroit alternation of warfare and diplomacy, Hammurapi succeeded where others had failed. He maintained the friendship of Rim-Sin until his 30th year, when, in defeating him, he fell heir as well to all that Larsa had conquered. He avoided challenging Shamshi-Adad, another older contemporary, but defeated his successor two years after disposing of Rim-Sin. Three years later, he conquered Mari, where Zimri-Lim had reestablished a native dynasty after the Assyrian defeat. Eshnunna and the lesser states across the Tigris fell to Hammurapi's armies before the end of his reign, and only the powerful kingdoms beyond the Euphrates—notably Yamhad and Qatna – escaped his clutches. He was a zealous administrator, and his concern for every detail of domestic policy is well documented in his surviving correspondence. He is most famous for his collection of laws which, in the manner initiated by Ur-Namma of Ur, and elaborated in the interval at Isin ("Code of Lipit-Ishtar") and Eshnunna, collected instructive legal precedents as a monument to "The King of Justice." That was the name he gave to the stelae inscribed with the laws which were erected in Babylon and, no doubt, in other cities of his kingdom. Fragments of several, including a well-preserved one, were carried off centuries later as booty to Susa, where they were rediscovered in modern times; some of the missing portions can be restored from later copies prepared in the scribal schools, where the laws of Hammurapi, recognized as classic, were copied and studied for over a thousand years more. Framed in a hymnic prologue that catalogued his conquests, and an epilogue that stressed his concern for justice, the laws do not constitute a real code. They are not noticeably adhered to in the innumerable contracts and records of litigation from this and subsequent reigns. However, they remain the starting point for the understanding of Babylonian and all Near Eastern legal ideals. Many of their individual formulations, as well as their overall arrangement, are paralleled by the casuistic legislation of Exodus and Deuteronomy.

It is important, in spite of all this, to see Hammurapi's achievement in its proper perspective. His reunification of Mesopotamia, consummated at the end of his reign, survived him by only a few years. His son and successor had to surrender much of the new empire before he had ruled more

than a decade. The extreme south was lost to a new dynasty, sometimes called the First Sealand Dynasty; across the Tigris, Emutbal and Elam regained their independence; and the Middle Euphrates was soon occupied by Hanean nomads from the desert and by Kassites (see below). The enduring legacy of Hammurapi lies rather in the legal, literary, and artistic realms, where his reign marked both the preservation and canonization of what was best in the received traditions and a flowering of creative innovations.

THE SACK OF BABYLON AND THE DARK AGE (1600–1500 B.C.E.)

As the fall of Akkad ushered in the end of the Early Bronze Age, so the end of the Middle Bronze Age was marked by the capture of Babylon and Memphis. The two great capitals fell to different captors, but a common source may have set in motion the train of events that culminated in their defeat, for to the north of both the high civilizations, an entirely new ethnic element had made its entry onto the stage of history early in the Middle Bronze Age: the *Hittites. These first-attested bearers of Indo-European names played a minor role in the 19th and early 18th centuries, when Hattic princes ruled Anatolia and Assyrian traders crisscrossed the highlands. But, the last Assyrian caravan is attested about 1770 (under Zimri-Lim of Mari); the centers of their trade were destroyed, and by about 1740, the Hittites were able to forge a united kingdom out of the remains of the Hattic principalities. Hattusilis I (c. 1650 – 1620) felt strong enough to rebuild the city of Hattusas (from which he took his throne name) in spite of the curse laid on it a century earlier by its Hattic conqueror, and to rule a growing Anatolian kingdom from this relatively remote northern base inside the great bend of the Halys River. Soon his ambitions extended beyond the Anatolian highlands southward to the fertile plains that beckoned from across the Taurus Mountains. Cilicia fell into his power first, and the Cilician gates opened the way through the Amanus Mountains, the last natural barrier on the way south. However, the Mediterranean coastal route was barred by the Amorite kingdom of Yamhad, centered on Haleb (Aleppo) and still retaining some of its vigor. After neutralizing this threat, Hattusilis, and more particularly his adopted son Mursilis I, therefore directed their principal efforts against the Hurrian kingdom of Carchemish which controlled the Euphrates. After a long and apparently successful siege of the Hurrian stronghold at Urshu, the Hittites found that they could march unopposed down the rest of the Euphrates all the way to Babylon itself. Here they put an end to the rule of Samsu-ditana (c. 1625–1595), last of the descendants of Hammurapi, and to the Amorite dynasty (or First Dynasty) of Babylon. The great city was sacked and its humiliation completed when the cult statues of its god Marduk and his consort Sarpanitum were carried into captivity.

The Hittites themselves did not press their advantage: 750 miles in a straight line away from Hattusas, Mursilis had overextended himself, and hastened home only to meet his death at the hands of a palace conspiracy that plunged the

Hittite kingdom into several generations of turmoil and weakness. The immediate beneficiaries of the sack of Babylon were rather the rulers of the Sealand, who moved north from their independent stronghold in the old Sumerian south and, in the wake of the withdrawing Hittites, seized Babylon for themselves and thus qualified for inclusion in the Babylonian King List as the Second Dynasty of Babylon. However, their occupation, too, was destined to be transitory: within a couple of years the city was occupied by the Kassites, who moved downstream from their foothold in the Kingdom of Hana on the Middle Euphrates. With their arrival in Babylonia proper, a curtain of silence descended over the documentation from that area; for the first time since the invention of writing, there is a nearly total eclipse of cuneiform textual evidence, and for the rest of the 16th century, the Asiatic Near East was plunged into a true dark age.

In the meantime the Amorite kingdoms of the Mediterranean littoral also reacted to the stirrings set in motion by the Hittites. Cut off from their kinsmen in the east, they evolved distinct variations of the common cultural traditions. In the north, these crystallized around *Ugarit, a strategically located center of commerce and industry which was also a seat of learning. It devised an alphabet with an order of letters ancestral to, and essentially identical with, the order of the letters of the Hebrew and Western alphabets. Using this script, Ugarit produced a rich religious and mythological literature, with many features that show up later in biblical poetry. Further south, the biblical corpus itself enshrined much of the common heritage in the distinctive medium of the Hebrew language and Israelite conceptions.

THE FEUDAL ERA (1500–1400 B.C.E.)

The map of the Near East presented a very different appearance in 1500 than it had 300 years earlier. In place of numerous small and medium-sized Amorite states, a few large non-Semitic royal houses now ruled the Fertile Crescent with the help of a nobility based on the ability to maintain horses, equipment, and retainers. The indigenous Semitic population was, at least for the time being, reduced either to the status of a semi-free peasantry or to that of roving mercenaries. A parallel may nonetheless be drawn with the earlier situation, for just as geography seemed to favor Shamshi-Adad I at the beginning of the 18th century, so now it served to favor a kingdom similarly centered in the triangle formed by the tributaries of the Khabur River in Upper Mesopotamia. Somewhere in this Khabur Triangle, at a site still not rediscovered, lay the city of Washukkanni, capital of an empire which stretched clear across northern Mesopotamia from the Mediterranean in the west to beyond the Tigris in the east. The empire, called Mitanni, was headed by a small aristocratic ruling class whose names identify them as Indo-Aryans, i.e., as the western branch of a migration that was at the same time overflowing India. They invoked “Indian” deities and perfected the raising of horses and horse racing, employing in part an Indo-Aryan terminology. (For hesitations about the Indo-Euro-

pean dominance see Kuhrt, 296–98). However, the kingdom which they ruled was primarily a Hurrian state, for it was the Hurrian stratum of the population that made up the bulk of its chariot-nobility.

The Hurrians had begun to settle, and even rule, on the northern and eastern frontiers of Mesopotamia even before the end of the Akkadian empire (to whose fall they may have contributed). They began to enter Mesopotamia proper in increasing numbers in the neo-Sumerian and Old Babylonian periods. They ruled minor localities like Shushara (Shashrum) under Shamshi-Adad I and left their mark at Mari in the form of Hurrian incantations. However, it was only now, with the creation of the Mitanni state, that they took advantage of their strategic location to assume a commanding position. The center of their power in the Khabur region was known as Hani-galbat. To the east they claimed sovereignty over the client kingdoms of Assyria and Arrapha, to the west over those of Mukish and Yamhad. Most of the documentation comes from these client states rather than from the center of the empire. In particular the archives of *Nuzi and *Alalakh have yielded vast numbers of texts from the realms of family law and public administration respectively. Together they throw valuable light on the newly emerging institutions of a society thought (by some scholars) to have had a direct impact on the institutions of pre-monarchical Israel. The cultural unity of the extensive Mitanni domain is also attested archaeologically: an elegant pottery style designated variously as Khabur, Mitanni, or Nuzi ware characterizes the ceramic remains of sites of this period throughout the area.

A separate Hurrian state grew up at the same time northwest of Mitanni: in the fertile plain later known as Cilicia, the kingdom of Kizzuwatna united the areas lying between Mitanni and the Hittite lands of Anatolia. It served both as a buffer between them in political and military terms and as a bridge in cultural terms. It was, at least in part, by this road that Hurrian literary and religious influences reached Asia Minor, where they were soon to play a major role. The Hurrians, however, were important beyond that as transmitters and transmuters of the older traditions of Babylonia, many of which, according to one theory, reached the West – that is, Hittites and Phoenicians, and via these ultimately also Greeks and Hebrews, respectively – in Hurrian guise.

The prestige of Babylonian culture at this time was in marked contrast to its political eclipse. The country was now securely in the hands of the Kassites, who had already controlled the Middle Euphrates for over a century (c. 1735–1595) before they seized Babylon, and who went on to rule Babylonia proper (which they gave the name of Kar-Duniash) for over four centuries thereafter (c. 1595–1157) – longer than any other dynasty. However, these were centuries of political stagnation for Babylonia. The Kassites were foreign invaders of uncertain ethnic affiliation who eagerly adopted, and adapted themselves to, the literary and artistic heritage of the ancient civilization to which they had fallen heir. They conquered the Sealand in the south about the beginning of the 15th century, thus prob-

ably recovering the surviving remnants of Sumerian learning (both scholars and texts) that had found refuge there at the time of the sack of Babylon. Under Kurigalzu I they built a great new administrative capital named Fortress of Kurigalzu (Dur-Kurigalzu) in the strategic narrow waist of the valley, dominated by a traditional stepped tower (ziggurat), the best preserved example of its kind from within Mesopotamia. They adjusted their northern frontiers with varying fortunes in occasional battles with the emerging Assyrians, and one of their 15th-century kings even met on friendly terms with Pharaoh Thutmose III on the Euphrates. They evolved an essentially feudal society, which secured, while at the same time diluting, the royal power through grants of land and remission of taxes to favored retainers. But by and large they were content to depend on their inherited Babylonian prestige in order to seek a place for themselves in the shifting kaleidoscope of Late Bronze international relations.

This prestige had, in some sense, never been higher. Throughout the Near East, the cuneiform script was being put to use in one form or another, and Akkadian was becoming the language of international diplomacy. In order to master the Akkadian script and language, scribal schools arose as far away as Anatolia and Egypt, and their curriculum followed to some degree the Babylonian model. A fragment of the Gilgamesh Epic, found at *Megiddo, indicates that this was true also of Palestine. Many of the great scribal families of later Babylonia traced their ancestry to Kassite times, and it was probably at this time that the major works of cuneiform literature were put into their canonical form. Thus it was through the patronage of Kassite overlords, and the mediating role of the Hurrians (see above), that traditional Sumero-Akkadian literature and learning spread far and wide from its ancestral home.

In the West, meantime, military and political hegemony was also passing out of the hands of Semitic-speaking peoples. A new dynasty of Theban rulers, the 18th, had succeeded by the middle of the 16th century in driving the *Hyksos (largely consisting of Amorite elements) from Egypt and reuniting the country. Thutmose III (1490–1436) carried Egyptian arms as far as the Euphrates and reduced all the intervening city-states to vassalage. His greatest victory was won on the very first campaign, when he defeated the armies of the Asiatics, combined, if not exactly united, under the prince of Kadesh (better; Kedesh), at the great battle of Megiddo, the first “Armageddon” (the graecized form of Har Megiddo, “hill of Megiddo”). With Retenu, as the Egyptians called Palestine and Southern Syria, firmly in his grasp, Thutmose III even challenged the armies of Mitanni and eventually extracted a treaty that recognized a common frontier running between Hama and Qatna (c. 1448). His successors continued to maintain the Asiatic empire by repeated incursions into Palestine and Syria to receive the submission of loyal vassal princes and secure that of the recalcitrant ones. Sporadic finds of cuneiform tablets from Palestine (Taanach, Gezer) seem to include royal exhortations to this effect.

Thus the subjection of the indigenous Amorites was completed before the end of the 15th century throughout the Near East. There was, however, one exception to this rule. Since the emergence of the Amorites, cuneiform texts from very diverse regions had begun to make mention of a group of people called *Ḫabiru with ever increasing frequency until, by the 15th century, they appear in texts from all over the Near East. On philological grounds, these Ḫabiru can be conclusively equated with the ‘Apiru of the Egyptian texts and less likely, with the Hebrews of the Bible. Their name was explained, tellingly if not scientifically, as meaning “robbers,” “dusty ones,” or “migrants,” respectively. These Ḫabiru were thus not an ethnic but a social entity: though largely of Amorite stock, they constituted that portion of the population unwilling to submit to Amorite rule or, subsequently and more particularly, to that of their non-Semitic conquerors. Instead they chose to serve as roving mercenaries under successive masters, or, alternatively, to band together in order to impose their own rule in areas beyond the reach of the various imperial armies. The latter was particularly true of the wooded hill country of Syria and Palestine.

There they maintained a tenacious and much maligned independence even while the great powers were dividing up the cleared lowlands.

THE EMERGENCE OF ASSYRIA (C. 1400–1200 B.C.E.)

The last two centuries of the Near Eastern Bronze Age witnessed a new cosmopolitanism which flowered under courtly patronage in the 14th century only to disintegrate under the rude assaults of mass migrations in the 13th. The pace of international diplomacy quickened dramatically in the “Amarna Age” (see *El-Amarna); Akkadian became the lingua franca of the Near East (see above) as attested by school texts, correspondence, and treaties from Amarna itself and elsewhere; dynastic marriages were the subject of protracted negotiations and reflected not only the raised status of women (or at least of princesses) but also the international outlook of the ruling strata. This outlook was no doubt fostered by the common practice of educating vassal princes at the great courts – Egyptian, Hittite, or Babylonian – where they served at the same time as hostages for their fathers’ loyalty. The delicate balance of power thus constructed on the novel ideas of international negotiation and accommodation survived even the ambitions of particularly strong rulers, such as Suppiluliumas of the Hittites (c. 1375–1335). However, it was not equal to the threat from below: in the end it succumbed to the tidal waves of diverse new ethnic groups which broke on all the shores of the Near East and destroyed the last vestiges of the age of diplomacy. The momentous events that characterized the waning Bronze Age involved Mesopotamia in general, and in particular set the stage for the emergence of Assyria, the only Asiatic power that survived intact into the Iron Age.

The emergence of Assyria as a major Near Eastern power can best be dated to the accession of Ashur-uballit I (c. 1365–1330), who first claimed the title “king of the land of

Ashur.” Ashur was the name of the god held in special reverence by the Assyrians, and of the ancient city built by his worshipers on the Tigris. For a thousand years before Ashur-uballit’s accession, the city had been ruled by a long succession of foreign masters as a minor province, in succession, of the great empires of Akkad, Ur, Eshnunna, Shubat-Enlil, and Washukkanni.

In all this millennium, Ashur had enjoyed the status of an independent city-state only once, in the brief interlude following the fall of Ur (c. 2000–1850). At that time its citizens displayed their vitality by their extensive and sophisticated trading operations deep into Anatolia; many thousands of “Cappadocian” tablets, inscribed in the Old Assyrian dialect, have left an enduring record of this trade. However, even in periods of political subservience, the Assyrians maintained a clear sense of their own identity. Foreign rulers were given native genealogies or, by an equally pious fiction, local governors were elevated to royal status by the later historiography. The Assyrian historians should not, however, be accused of willful distortion; rather, they were giving formal expression to a very real sense of continuity which centered on the worship of Ashur, the deity from whom their city took its name. They thus provide an instructive parallel to the Israelite experience as canonized in the Bible. In both instances, it was the reality of an unbroken religious tradition which permitted an ethnic group to lay claim to the memories or monuments surviving from the Middle Bronze Age and to link them to later political institutions.

In Assyria, these institutions got their chance when Mitannian power began to collapse in the middle of the 14th century, under the combined impact of Hittite pressure and the progressive disengagement from Asiatic affairs by the Egyptian pharaohs of the Amarna period, since Egypt, as the principal ally of Mitanni, was the only effective counterweight to Suppiluliumas’ ambitions. Ashur-uballit took advantage of the situation to throw off the Hurrian overlordship of Mitanni. Disdaining that of Kassite Babylonia which claimed to have inherited it, he began to negotiate on a footing of equality with all the great powers of his time, as well as to show the Assyrian mettle in battle, chiefly with the Kassites. Indeed, the fortunes of Assyria and Babylonia were henceforth closely linked; dynastic intermarriages and treaties alternated with breaches of peace and adjustments of the common border in favor of the victor. A synchronistic king list recorded these contacts in the first systematic attempt to correlate the histories of two discrete states before the Book of Kings (which made the same attempt for the Divided Monarchy). This synchronistic style was cultivated by the Assyrian historians along with other historical genres, while the court poets created a whole cycle of epics celebrating the triumphs over the Kassites. The Assyrian kings, portrayed in heroic proportions, figured as peerless protagonists of the latter, and generally claimed the upper hand in these encounters. However, a deep-seated respect for the older culture and religion of Babylonia, which they regarded as ancestral to their own, constrained them from following up on their advantage at first.

This restraint was dropped by Tukulti-Ninurta I (c. 1244–1208), one of the few intriguing personalities in the long line of Assyrian kings who were more often so true to form that they are barely distinguishable one from another. So far from respecting the sanctity of Babylon, he took its defeated king into Assyrian captivity together with the statue of Marduk its god, razed the walls of the city, and assumed the rule of all of Babylonia in his own person. At home, he claimed almost divine honors and, not content with an extensive building program at Ashur, he moved across the Tigris to found a whole new capital, which he named after himself. But in all this he aroused increasing enmity, both for the sacrilege against Babylon and for the heavy exactions of his military and building programs. A reaction set in and, led by the king’s own son and successor, the more conservative party imprisoned the king in his new capital and set fire to it. The fame of Tukulti-Ninurta was such that garbled features of his reign are thought to be preserved in both biblical and Greek literature. Thus he is supposed (by some scholars; but cf. above, on Narâm-Sin) to have suggested the figure of Nimrod, the conqueror and hunter of Genesis 10; the “King Ninos” who built “the city of Ninos,” according to one Greek legend; and the Sardanapalos who died a fiery death in his own city, according to another. Separating fact from legend, it is clear that his death ushered in a temporary eclipse of the newly emergent Assyrian power that was destined to last for almost a century.

The Assyrian eclipse starting about 1200 was only one phase, and a relatively mild one at that, of the upheaval that marked the end of the Bronze Age throughout the Near East, and whose principal cause was the wave of mass migrations that engulfed the entire area. If there was any one event that may be said to have unleashed these movements, it may conceivably have been the sack of Troy, about 1250 B.C.E., and the subsequent fall of the Mycenaean cities of the Greek mainland. The survivors of these catastrophes fled by sea and are collectively known as Sea Peoples. They came, however, not across the open water, but along the coasts, seeking new lands to conquer and settle wherever the established powers were too weak to withstand them, and leaving their names scattered across the Mediterranean littorals and islands to this day, from Cilicia and Philistia (Palestine) in the east to Sicily, Etruria (Tuscany), and Sardinia in the west. The populations displaced by their arrival fled elsewhere to spread the process in a chain-like reaction, until confronted by corresponding migrations from an opposite direction. Thus the Hurrians of Cilicia fled northeast into Hittite Anatolia, putting an end to the Hittite empire there; the Hittite refugees in turn moved southeast into the former Mitanni area of northern Syria. Here they encountered a wave of Semitic-speaking seminomads now moving north from the Syrian desert. These were the *Arameans, with whom the Hittites reached an accommodation resulting in an Arameo-Hittite symbiosis in the petty Syrian city-states of the early Iron Age, who probably spoke Aramaic but used a dialect of Hittite (probably Luwian, written in “hieroglyphic Hittite”) for many of their monuments.

Further south, the Canaanite (or Amorite) population of Canaan displaced by the *Philistines meanwhile encountered the Israelites, while further to the east, the waning dynasty of the Kassites finally succumbed to Aramean and other pressures by 1157 B.C.E. Thus in the short span of a century, the Near East took on a wholly new aspect, and new protagonists were to rule its destinies in the Iron Age.

THE EARLY IRON AGE (C. 1200–750 B.C.E.)

For several centuries, the political history of Babylonia and Assyria after 1200 had little noticeable impact beyond the borders of Mesopotamia, and cannot, therefore, claim the attention of historians in the same measure as earlier periods, some of which contribute in crucial ways to our understanding of all history. The international power vacuum of the time enabled the rise and consolidation of the smaller Levantine polities including Israel and Judah. Occasional royal figures stand out for specific achievements; their names, in consequence, were copied by later kings and thus in some cases passed into the Bible. *Merodach-Baladan I (1173–1161), for example, was the last Kassite king who still exercised effective control over Babylonia; a considerable number of boundary stones (*kudurru*'s) attest to the vitality of the land which characterized this dynasty's relations to its feudal retainers. Nebuchadnezzar I (1124–03) was the outstanding ruler of the Second Dynasty of Isin which succeeded the Kassites in Babylonia. He is generally thought to have retrieved the statue of Marduk from captivity (see above), elevated Marduk to his role as undisputed head of the Babylonian pantheon, and commissioned the so-called Epic of Creation (*Enuma eliš*), actually a hymnic exaltation of Marduk, often cited for its parallels to the biblical versions of creation, though in fact more nearly relevant to the exaltation of the God of Israel in the Song of the Sea (Ex. 15).

His younger Assyrian contemporary, Tiglath-Pileser I (c. 1115–1077), was a worthy adversary who reestablished Assyria's military reputation and, while respecting the common frontier with Babylonia in the south, and holding off the warlike mountaineers on Assyria's eastern and northern borders, laid the foundations for her "manifest destiny" – expansion to the west. An Assyrian campaign down the Tigris to the Babylonian frontier and then up the Euphrates and Khabor rivers to rejoin the Tigris north of Ashur had become an annual event by the time of Tukulti-Ninurta II (890–884); the petty chieftains of the Arameo-Hittite lands west of Assyria learned to expect swift retribution if they did not pay the tribute exacted on these expeditions. The "calculated frightfulness" of Ashurnasirpal II (883–859) was graphically impressed on his visiting vassals by the reliefs he carved on the walls of his new palace at Kalhu (biblical Calah).

Under Shalmaneser III (858–824), the Assyrian policy took on all the earmarks of a grand design. The repeated hammer blows of his armies were directed with an almost single-minded dedication and persistence against Assyria's western neighbors and brought about the first direct contact between Assyria and Israel. The battle of *Karkar in 853 pitted Shalma-

neser against a grand coalition of Western states, including Israelites, Arameans, Cilicians, Egyptians, Arabians, Ammorites, and Phoenicians. King *Ahab of Israel contributed significantly to the infantry and more especially the chariotry on the allied side, which held the Assyrians to a draw if it did not actually defeat them. Ahab died within the year, but the coalition survived with minor changes, and met Shalmaneser four more times (849, 848, 845, and 841). Only after the last of these encounters could the Assyrian king truthfully claim the submission of the western states, and the triumphal march across the now prostrate westland by "Shalman" (i.e., Shalmaneser) was recalled more than a century later in the first explicit, if elliptic, biblical reference to an Assyrian king (Hos. 10:14) other than the legendary Nimrod. The extinction of the Israelite house of Omri ensued in the same year, together with the accession of *Jehu in Israel, the Omride Queen *Athaliah in Judah, and *Hazeal in Damascus. The prompt submission of Jehu and other kings is graphically depicted on Shalmaneser's Black Obelisk which conceivably preserves not only the first but the only contemporary pictorial representation of an Israelite figure known from the Bible.

Shalmaneser's reign nevertheless ended in disaster. His last six years (827–822) were marked by revolts at home and the loss of all his western conquests abroad, and not until 805 did Assyria reassert itself there. It was Adadnirâri III (810–783) who, by relieving the Aramean pressure, was regarded as a veritable deliverer in Israel (II Kings 13:5), and his stele from Tell al-Rimah records the grateful tribute of *Jehoash of Israel (797–82) among others. However, Assyria was not yet strong enough to reclaim its western conquests. Urartu (biblical *Ararat), a state based around Lake Van in the later Armenia, rallied the remnants of the Hurrian populations who had fled upper Mesopotamia in the wake of the mass migrations at the end of the Bronze Age, and now sought to restore its influence in Northern Syria. Throughout the first half of the eighth century, Assyrians, Arameans, and Urartians thus fought each other to a standstill in Syria while the Divided Monarchy briefly regained the economic strength and territorial extent of the Solomonic kingdom. Israelite tradition reflected the memory of these four decades of her resurgence and Assyrian weakness by attaching the legend of the near-collapse of Nineveh to *Jonah, a prophetic contemporary of Jeroboam II (793–753; sole rule 781–53) or, conversely, by assigning the Jonah of legend to the reign of Jeroboam (II Kings 14:25).

THE LATE IRON AGE (C. 750–540 B.C.E.)

The last two centuries of Mesopotamian independence under Akkadian-speaking rulers restored first Assyria and then Babylonia briefly to a preeminent position in the Near East, and brought these lands into almost constant contact with the West. They left an indelible impress on both Hebrew and Greek sources which, until the decipherment of cuneiform were, in fact, virtually the only materials for the recovery of Mesopotamian history. The accession of Nabunassar (Nabonassar) in Babylonia in 747 seems to have been regarded by the

native sources themselves as ushering in the Mesopotamian revival. The scribes of Babylon inaugurated a reform of the calendar which systematized the intercalation of a 13th month, on the basis of astronomical calculation rather than observation, seven times in every 19 years, according to the so-called Metonic cycle; taken over later by the Jews, it continues as the basis of the Jewish lunisolar calendar to the present. Babylonia was by now divided largely between urbanized Chaldeans and still mainly rural Arameans, and since the Chaldeans soon became the principal experts of Babylonian astronomy, the very word *Chaldean came to be equated with “astronomer, sage” in Hebrew (Dan. 2:2), Aramaic (Dan. passim), and Greek. These astronomers now began to keep monthly diaries listing celestial observations together with fluctuations in such matters as commodity prices, river levels, and the weather, as well as occasional political events. Perhaps on the basis of the last, they also created a valuable new historiographic record, the Babylonian Chronicle, into which they entered the outstanding events of each year. In the Ptolemaic Canon, the “Nabonassar Era” was recognized as a turning point in the history of science by Hellenistic astronomy. Nonetheless, Nabonassar himself was but a minor figure. When he enlisted the help of his greater Assyrian contemporary Tiglath-Pileser III (744–727) in his struggles against both Chaldeans and Arameans, the step proved as fateful as did that of *Ahaz of Judah (735–716; sole ruler 731–716) against the Syro-Ephraimite coalition. Tiglath-Pileser III was a usurper, the beneficiary of still another palace revolt that had unseated his weak predecessor. He and his first two successors changed the whole balance of power in the Near East, destroying Israel among many other states, and reducing the rest, including Judah, to vassalage. They found Assyria in a difficult, even desperate, military and economic situation, but during the next 40 years they recovered and consolidated its control of all its old territories and reestablished it firmly as the preeminent military and economic power in the Near East. Only the outlines of the process can be given here.

Tiglath-Pileser’s first great campaign against the West (743–738) involved organizing the nearer Syrian provinces under Assyrian administration, regulating the succession to the king’s liking in a middle tier of states, and waging war against the more distant ones. The semiautonomous Assyrian provinces were broken up into smaller administrative units, and their governors thereby deprived of the virtually sovereign power which the interval of royal weakness had allowed them to assume. The Urartians were conclusively driven out of northern Syria, and the northern and eastern frontiers were pacified (737–735). The second great campaign to the west (734–732) was in response to Judah’s call for help according to II Kings 16:7 (cf. II Chron. 28:16) and reduced Israel to a mere fraction of its former size as more and more of the coastal and Transjordanian lands were incorporated in the growing empire or reduced to vassalage. If Israel was allowed to remain a vassal for now, it was because the king’s attention was briefly diverted by the rebellion of Nabu-mukin-zeri (Mukin-zeri) in

Babylonia (731–729). When this was crushed, Tiglath-Pileser himself “seized the hands of Bel,” that is, he led the statue of Bel (Marduk) in procession in the gesture of legitimation and ostensible submission to the Marduk priesthood that was traditionally demanded of Babylonian kings. As the first Assyrian king who ventured to take this step since the ill-fated Tukulti-Ninurta I, he was duly enrolled in the Babylonian King List (see above) under his nickname of Pulu, a name that passed, more or less intact, also into the later biblical and Greek accounts of his reign (II Kings 15:19; I Chron. 5:26).

His short-lived successor, Shalmaneser V (726–722), followed this example, reigning in Babylon as Ululaia, but left few records of his reign in Assyria. His greatest achievement was the capture of Samaria in 722 and the final incorporation of the Northern Kingdom into the Assyrian empire, but the event is better attested in the Babylonian Chronicle and the Bible (cf. especially II Kings 17:6; 18:10) than in the Assyrian annals. He is thoroughly overshadowed by his successor. Sargon II of Assyria (721–705) took the name of the great founder of the Akkadian empire and lived up to it. He founded the last royal house of Assyria, called Sargonid after him. Perhaps the most militant of all the neo-Assyrian kings, he conducted a major campaign every single year of his reign (or had his annals edited to this effect); he frequently led the army in person and commissioned elaborate reports of his exploits en route in the form of “open letters” to the god Ashur; he even died in battle on his last campaign, a fate unknown for Mesopotamian kings since Ur-Namma of Ur. His major opponents were Merodach-Baladan II, the Chaldean who tenaciously fought for Babylonian independence; the Elamites, allied with Babylon at the great battle of Dêr before the Iranian foothills (720); the supposedly impregnable island fortress of Tyre, which he finally reduced to submission; and Egypt, which for the first time was defeated by an Assyrian army and forced to pay tribute. The rump kingdom of Judah was no match against a figure of this stature, and *Ahaz wisely heeded Isaiah’s counsels of caution. When the accession of *Hezekiah (715–687) restored the anti-Assyrian party in Judah, retribution was not slow in coming. In 712, Sargon dispatched his commander in chief (*turtānu*; cf. the *tartan* of Isa. 20:1) against Ashdod, a city allied with Judah, which was captured. The recent discovery of steles of Sargon at Ashdod, on the one hand, and in western Iran (Godin Tepe) on the other, typify the monarch’s far-flung exploits, as does his death on the northern frontier.

The accession of Sennacherib (704–681) marked a new phase in Assyrian imperialism. No longer did the Assyrian army march annually towards new conquests. Only eight campaigns occupied the 24 years of the new monarch, besides two conducted by his generals. Assyrian power was approaching the natural limits of which it was capable, and new thrusts into distant border regions were probably defensive in inspiration. Although the warlike ideals of their forebears continued to color the records of the later Sargonid kings, the impression of sustained militarism that they create is an exaggerated one. The real spirit of the time is revealed, on the one

hand, by such marvels of civil engineering as Sennacherib's aqueduct at Jerwan and, on the other, by the greatly increased attention to administrative matters reflected in the growing amount of royal correspondence. Literature and learning too came into their own, and the vast library assembled by Ashurbanipal at Nineveh is only the most dramatic expression of the new leisure.

The new *Pax Assyriaca* was, of course, not unbroken by military campaigns. Sennacherib's unsuccessful siege of Jerusalem in 701 is well known from both the Assyrian and biblical accounts (11 Kings 18:13–19:37; Isa. 36–37). His generals campaigned against Cilicia and Anatolia (696–695), while his successor Esarhaddon (680–669) is perhaps most famous for his conquest of Egypt. Esarhaddon had succeeded to the throne in the troubled times following his father's assassination (cf. 11 Kings 19:37; Isa. 37:38), and was determined to secure a smoother succession for his own sons. The vassals of the empire were therefore forced to swear to abide by his arrangements, and the treaties to this effect, excavated at Calah, have proved a new key to the understanding of Deuteronomy. The king's planning at first bore fruit, and for 17 years his designated successors ruled the empire side by side, Ashurbanipal from Nineveh and Shamash-shum-uk-îm from Babylon. However, in 652, war broke out between the two brothers. After four years of bloody warfare, Ashurbanipal emerged victorious, but at a heavy price. The *Pax Assyriaca* had been irreparably broken, and the period of Assyrian greatness was over. The last 40 years of Assyrian history were marked by constant warfare in which Assyria, in spite of occasional successes, was on the defensive. At the same time the basis for a Babylonian resurgence was being laid even before the final Assyrian demise.

Ashurbanipal had installed a certain Kandalanu as loyal ruler in Babylon after crushing his brother's rebellion. When this regent died in 627, however, Babylonia was without any recognized ruler for a year. Then the throne was seized by Nabopolassar (625–605), who established a new dynasty, generally known as the neo-Babylonian, or Chaldean dynasty. Although the Assyrian military machine continued to be a highly effective instrument for almost 20 years, Nabopolassar successfully defended Babylonia's newly won independence and, with the help of the Medes and of *Josiah of Judah (639–609), finally eliminated Assyria itself. The complete annihilation of the Assyrian capitals – Nineveh, Calah, Ashur, Dur-Sharrukin – between 615 and 612 is attested in part by the Babylonian Chronicle and even more tellingly in the contemporaneous world can still be measured in the prophecies of *Nahum, and possibly of *Zephaniah. Only Egypt remained loyal to Assyria, and Pharaoh Neco's efforts to aid the last remnants of Assyrian power at Haran under Ashur-uballit II (611–609) were seriously impaired by Josiah at Megiddo in 609. The last Assyrian king fled Haran in the same year, and Assyrian history came to a sudden end.

Four years later, the Battle of *Carchemish (605) consolidated the Babylonian success with a defeat of the Egyptians

by the crown prince, who presently succeeded to the throne as Nebuchadnezzar II (604–562) (see Map 3). The Chaldean empire fell heir to most of Assyria's conquests and briefly regained for Babylonia the position of leading power in the ancient world. Nebuchadnezzar's conquest of Jerusalem and Judah, with the exile of the Judean aristocracy to Babylonia, is the most famous of his many triumphs, but his own inscriptions prefer to stress his more peaceful achievements. These certainly matched his foreign conquests. He reconstructed Babylon in its entirety, filling it with magnificent temples and palaces and turning the city into one of the wonders of the ancient world. Its fame traveled far and wide with those who had seen it, and even after its destruction by Xerxes in 478, its ruins fired the imagination of later ages. Even Nebuchadnezzar's contemporaries were moved by his achievements to catalog the topography of the restored capital in all its details, thus providing an unrivaled description of an ancient city. Among its more noteworthy sights were the ziggurat (*ziqquratu*), the famous hanging gardens, and the museum attached to Nebuchadnezzar's new palace. Here the king and his successors brought together statues, stelae, and other inscribed relics of the then already long antiquity of Mesopotamia. This neo-Babylonian interest in the monuments of the past thus complemented the neo-Assyrian efforts to collect the literary heritage of Babylonia that climaxed in the creation of the library of Ashurbanipal.

The same antiquarian interest characterized the rule of Nabonidus (555–539), who succeeded to the throne of Babylon after the three brief reigns of Nebuchadnezzar's son, son-in-law, and grandson. He was not related to the royal Chaldean house, although he was the namesake of a son of Nebuchadnezzar, whom he had served as a high diplomatic official as early as 585. The biography of his mother, Adad-guppi, is preserved on inscriptions from Haran, from which we learn that she lived for 104 years (650–547). Her long devotion to Haran and its deity may help to explain her son's similar, but more fateful, preoccupation. Virtually alone among the former Assyrian strongholds, Haran recovered some of its old glory under the neo-Babylonians and survived for many centuries thereafter as the center of successive forms of the worship of the moon-god Sin. According to Adad-guppi's biography, Haran lay desolate (that is, in the possession of the Medes) for 54 years (610–556) until, at the very beginning of the reign of Nabonidus (555–539), a vision informed him, in words strangely reminiscent of Isaiah 44:28–45:1, that Marduk would raise up "his younger servant" Cyrus to scatter the Medes. In obedience to the divine injunction, Nabonidus presently rebuilt the great temple of Haran, and reconsecrated it to Sin. At the same time, he singled out the other centers of moon worship, at Ur in Babylonia and at the oasis of Temâ in Arabia, for special attention. The latter move, which carried Babylonian arms for the first time all the way to Yatrib (modern Medina), was particularly fateful. Though it may have been inspired by reasonable strategic or even commercial considerations, it was regarded as an act of outright madness by the Babylonians and

as a self-imposed exile of the king by later legend. The Book of *Daniel associates this sojourn of seven years (or, in the cuneiform sources, ten years) in the desert with Nabonidus' more famous predecessor, Nebuchadnezzar, but new finds from Qumran show that other Jewish traditions linked it with the correct king. In any case, his sojourn in Arabia was resented by the population of Babylon, and the veneration of Sin there and at Haran and Ur was regarded as a veritable betrayal of Marduk, the national deity. Led by the Marduk priesthood, Babylon turned against Belshazzar, the son whom Nabonidus had left behind at the capital, and delivered the city into the waiting hands of Cyrus the Persian. In a bloodless conquest (539), he assumed control of all of Babylonia and rang down the curtain on the last native Akkadian state.

ASSYRIOLOGY

Assyriology in its widest sense is the scientific study of all those civilizations which employed one or another of the cuneiform scripts; defined more narrowly, it is the study of the languages, literature, and history of ancient Babylonia and Assyria. Because the earliest documents were found in excavations in Assyria (northern Iraq), the discipline received the name "Assyriology." The native language of both Assyria and Babylonia (southern Iraq) was Akkadian, with "Assyrian" and "Babylonian" referring to the respective dialects.

EARLY EXPLORATIONS OF CUNEIFORM SITES

The collapse of the Assyrian and Babylonian civilization was so complete that its cities and remains were either wiped off the earth or buried under it, and its peoples, art, languages, and writings were erased from the memory of history. The very names of its cities, rulers, and gods were forgotten except in sundry local traditions, in the neglected works of Arab geographers, and in scattered and garbled allusions in the Bible and in Greek literature. Only the finds of modern archaeology have been able to reveal the character, achievements, and enormous contribution of this civilization and its great contribution to the civilizations that came after it.

EARLY EXCAVATIONS IN ASSYRIA

In 1842, the first English and French expeditions began a determined search for the lost cities and treasures of Mesopotamia that occupied the next four decades. Its most conspicuous successes were scored in the northeastern part of the country, ancient Assyria, and the whole field of study thus newly opened soon acquired the name of Assyriology. The first spectacular discoveries were made at Khorsabad, where Paul-Emile Botta excavated D-r-Sharrukin, the great capital city built by *Sargon II of Assyria at the end of the eighth century B.C.E. (1843–44) The paintings and drawings made in situ by E. Flandin for Botta's five magnificent volumes (1849–50), and the original sculptures with which the Louvre opened its Assyrian Gallery in 1847 opened Western eyes to the grandeurs of Assyrian archaeology. From 1852 to 1855, Victor Place resumed the French efforts at Dur-Sharrukin. In the meantime

an Englishman, Austen Henry Layard, had already begun to excavate the other great Assyrian capitals, beginning with Kalah (Nimrud) in 1845, Nineveh (the twin mounds of Kuyunjik and Nebi Yunus) in 1846, and Ashur (Qal'at Sherqat) in 1847. The seven seasons of excavation by Layard were crowned with very impressive discoveries of the palaces of *Sennacherib and Ashurbanipal at Nineveh and the palace of Ashurnasirpal at Kalah, of the many stone reliefs and colossal statues which stood at their gates; the great majority of these were transferred to the British Museum and elicited wide public response. Layard was succeeded in 1851 by his assistant Hormuzd Rassam, a native of Mosul. By 1854, the latter had succeeded in recovering the bulk of the great library of Ashurbanipal at Nineveh, which to this day remains the most important single source of Akkadian literature. Thereafter, the Crimean War brought all excavation in the area to a temporary halt. In 1872, George Smith, who examined cuneiform texts for the British Museum, discovered a version of the flood narrative which was recognized later as the 11th tablet of the Gilgamesh Epic, and interest in further excavations was renewed. For four years Smith continued to mine the vast treasures of the library at Nineveh until an early death overtook him on the way back to Aleppo (1876). From 1878 to 1882, H. Rassam renewed his activities in Nineveh, but interest in Assyria was for the time being exhausted as attention was directed instead to Babylonia.

THE RECOVERY OF THE SUMERIANS

Until the 1870s, impressive results were not had from the archaeological investigation of the southern half of Mesopotamia. However, in 1877 Ernest de Sarzec began to unearth Lagash (Tellöh) "The mound of the tablets," and by 1900 he had laid bare a whole new civilization whose very existence, adumbrated by the Assyrian tablets, had until then been a matter of dispute: the Sumerian civilization. These excavations and those which succeeded them helped to bring to light a whole new millennium in human history. American excavations at Nippur, meanwhile (1889–1900), uncovered the religious capital and center of learning of the Sumerians, with a library rivaling that of Ashurbanipal in importance, and antedating it by more than a thousand years. The origin of the Sumerians is unknown, and their non-Semitic language seems to have no affinities with other known languages. Other Babylonian expeditions before World War I identified numerous other ancient sites apart from Babylon, such as Sippar, Borsippa, Shuruppak, Adab, and Kish. Improvements in stratigraphic techniques in the field and the cumulative evidence of the inscriptional finds permitted the gradual construction of a chronological sequence and the recognition of certain significant cultural epochs. The extensive French excavations at Susa in Elam, begun in 1897, also proved significant, for this ancient capital of Elam was for millennia a faithful mirror of Mesopotamian influences, and the repository of some of its most precious booty, notably the "Stele of *Hammurapi" inscribed with his laws. The American-led invasion of Iraq in 2003 led to wide-

spread looting, illegal sale of antiquities, and the destruction of significant elements of the archaeological record.

TRENDS AND PROSPECTS

New centers and new names have contributed their share to postwar Assyriology. American influence has been strongest in the lexical field, with Benno Landsberger and the Oriental Institute at Chicago leading the way (*Materialien zum sumerischen Lexicon*, and *The Assyrian Dictionary* (almost complete in 2005), and the recovery of Sumerian Literature by S.N. Kramer and Thorkild Jacobsen. Vigorous studies are also being pursued in the homelands of the cuneiform sources, notably Turkey and Iraq. There are very active centers in Germany, France, and Italy, and also in Austria, Holland, Finland, and Israel.

Substantial syntheses of the materials already recovered are likely to occupy the attention of most Assyriologists for some time to come. In textual terms, such syntheses include (1) critical editions of literary or "canonical" compositions; (2) tabular compendia of the data contained in economic or "archival" tablets, using computer technology where necessary to cope with the large numbers of texts and entries; (3) new editions of the historical, religious, and votive texts of all periods and areas, together with the monuments on which they are found, to serve as a sound basis for the chronological outline on which all other historical judgments must rest. When these three fundamental syntheses have been achieved, the way will be open for the modern interpretation of the cuneiform evidence and its full integration into the record of human achievement.

[William W. Hallo]

The comprehension of the Bible has greatly benefited from the utilization of the results of Assyriological investigations. The following survey serves only as a collection of examples of contributions of Assyriology to biblical studies, as well as discussing Mesopotamian culture in more general terms.

HISTORY AND CHRONOLOGY

A great deal of historical information concerning the Near East during the period 626–594 B.C.E. is derived from a group of tablets known as the Babylonian Chronicle. Of immediate value is the chronological data provided by these tablets. According to the chronicle, the battle of Carchemish which is mentioned in Jeremiah 46 as taking place in the 5 fourth year of *Jehoiakim of Judah, was fought in the spring of the year 605 B.C.E. The month of Elul in the same year marks the accession of Nebuchadnezzar to the throne of Babylon. According to the Babylonian method of reckoning regnal years, Nebuchadnezzar's first year started in April 604 B.C.E. It is also learned from these tablets that on the second day of Adar in the seventh year of the reign of Nebuchadnezzar, which corresponds to March 15/16, 597 B.C.E. according to the Gregorian calendar, King *Jehoiachin of Judah surrendered the city or Jerusalem to the Babylonians, after ruling for only three

months (II Kings 24:8–20). These dates serve as fixed points for those scholars who wish to calculate the chronology of the last years of the Kingdom of Judah. Among other features of interest to Bible scholars found in the Babylonian Chronicle is the tablet that covers the events of the years 616–608 B.C.E., during which time the Assyrian capital of *Nineveh fell to the Medes and Babylonians, and so provides us with background information to the prophetic book of *Nahum. Another feature of interest is the description of the defeat and flight of the Egyptian army after the battle of Carchemish, which is remarkably similar to the description of the same event in Jeremiah 46. It should not be assumed that a reference in cuneiform sources to a person or event recorded in the Bible will automatically amplify or clarify the biblical notice. It is entirely possible that such evidence may only complicate an already complex problem. Nevertheless, any discussion of a particular problem must take into account any evidence available from Mesopotamian sources.

A great deal of effort has been expended in order to establish the chronology of the mid-monarchial period in Israel. *Ahab, king of Israel, is the earliest biblical personage mentioned in cuneiform historical sources. According to a stele of Shalmaneser III, king of Assyria, Ahab was alive in the year 853 B.C.E. He was in fact one of the major participants in the battle of Karkar which was fought in that year. This battle which temporarily checked the Assyrian invasion of Syria is, curiously enough, not mentioned in the Bible (see *Karkar). An important synchronism between Assyria and Israel is to be found in the stele of Nergal-ereš (L. Page, in: *Iraq*, 30 (1968), 139 ff.). According to this stele Joash, king of Israel was on the throne of Israel in the year 802 B.C.E. According to the Masoretic Text of the Bible, 57 years elapsed from the death of Ahab until Joash ascended the throne. The Assyrian evidence points to a period of 51 years between the two kings. In order to solve this problem, some scholars resorted to various Greek versions and the Assyrian sources. A similar situation surrounds that event whose shadow looms large in the prophetic literature of the last century of the existence of the Judahite kingdom, namely, the defeat of *Sennacherib before the gates of Jerusalem in 701 B.C.E. The biblical account of this event is to be found in II Kings 18–19 as well as in Isaiah 36–37. Sennacherib's own record of this event is also available. The biblical account of the siege appears to be inconsistent. According to II Kings 18:13–16, *Hezekiah, king of Judah, surrendered to Sennacherib and paid tribute to him. The Assyrian account in the main agrees with this account, though it differs on the amount of the tribute paid by Hezekiah.

[Aaron Skaist]

LAW

CUNEIFORM LAW

The term cuneiform law has usually been understood to denote the legal practice, and the records bearing on that practice, in those cultures or political entities in the Ancient Near East that used Sumerian or Akkadian cuneiform as their

written medium. Taken in this sense, the realm of cuneiform law embraces not only the heartland of the cuneiform world, that is, ancient Sumer, Babylonia, and Assyria, but also the Elamite territory to the east of the Mesopotamian plain, the Syrian coast, and its immediate hinterlands from northern Syria down to Palestine, and especially the Hittite Empire which included practically all of Asia Minor. It must not be thought that these territories together constituted a homogeneous area in which a fairly uniform type of legal structure was in force. The homogeneity consists rather of the uniformity, or near uniformity, of a literary tradition that began in the scribal schools of southern Mesopotamia and spread with time to all the territories which are included in the definition of cuneiform culture. In all the areas thus named, cuneiform was employed as the regular written medium, at least for some period of time between 3000 and 300 B.C.E.

In the Ancient Near East the notion of “law” was inseparable and virtually indistinguishable from “justice” and the judicial process, and the idea of “law” suggested to the Mesopotamian mind – and, more or less, to the consciousness of all the peoples of the Ancient Near East – violations of existing obligations, including obligations to the state and society as well as private (i.e., civil) ones, but not the obligations themselves, insofar as the Mesopotamians did not think in terms of “law” in the context of specific regulatory institutions. The documentary sources from which knowledge of cuneiform law may be derived are to be divided into a number of categories. Primary among them are the large number of private records of judicial cases which were heard in, and adjudicated by, the courts. These cover many kinds of incidents and situations, most of which fall within the realm of property law. Litigations, as far as they are preserved, deal primarily with the disposition of family property and suits which may arise among members of a family or between two families over rightful ownership of certain real estate or other property. Contracts between individuals concerning sale, rental, and marriage and adoption agreements also constitute an important category for knowledge of cuneiform law. Here, too, the topic for the most part is property. A lesser number of documents fall into the category of private legal records, such as litigations concerned with matters that may be designated as private torts or crimes, which ought preferably to be subsumed under the more generic name, wrongs. For the present purpose, wrongs may be understood as invasions against persons or property by someone who held no prior claim or right against the victim or the object of this action. Punishments for such acts are not distinguished in terms of the category of the act itself, but rather in terms of the degree of seriousness of the offense or the amount of aggravating circumstances involved in it and could vary all the way from the requirement of simple restitution or pecuniary fine to the capital penalty.

Cuneiform private and public correspondence includes references to judicial or quasi-judicial acts that have a bearing on the practice of law in ancient Mesopotamia. The correspondence of private persons very often contains reports

about dispositions of property in accordance with established customs, or possibly some references to legal action, which usually concerned questions of property. The correspondence of officials, including that of rulers, naturally concerned every area of political and economic administration, as well as other subjects, and occasionally mention materials directly pertinent to the subject of law. Among these are to be found the relatively scarce references to situations which would fall under the rubric of criminal law, as opposed to civil matters, with which all the other categories of private documents are almost exclusively concerned. Thus among the letters of Hammurapi of Babylon and of his older contemporary Rim-Sin of Larsa there are references to official corruption and how the king dealt with it, and a royal order for the execution of an individual charged with homicide.

The category of material that may be defined as literature provides still another source of information about the legal institutions of the area. From sources such as proverbs, didactic compositions of various kinds, wisdom literature, and even from epics and legends, may be culled a not inconsiderable amount of information about legal behavior in ancient Mesopotamia.

Although these categories of documents constitute the only body of evidence for the actual practice of law in the cuneiform civilizations, the private documents must be utilized in a systematic way for the reconstruction of the real legal institutions of these societies themselves. It is often difficult also to assess the degree to which usages and procedures observed in the private documents represent true and fast “rules” or at least established custom; they may represent nothing more than the momentary whims of kings and officials without having the status of fixed rules or precedents. This condition contrasts with the formal legal corpora, which at least pretend to represent rules designed for application in all like cases and conditions, and which certainly represent the consensus on ideal moral and legal practice within the societies for which they were propounded.

By far the largest source of information, and the one which has usually been considered the primary source for knowledge of the legal institutions of ancient Mesopotamia, has been that formed by the so-called legal codes, most famous of which is the document known as the “Code of Hammurapi.” Many fundamental questions may be raised as to the propriety of construing these legal codes as a reflection of the true legal institutions they purport to represent. There is sufficient evidence to indicate that these documents are more appropriately to be viewed not as legal codes in the strict sense but as representing a very special genre of literature of the oldest that were cultivated in Mesopotamian civilization. This view is based on both internal analysis of the documents themselves and external evidence. We cannot enter here into a detailed presentation of the case for our position; it will be sufficient to indicate that these so-called codes bore little relation, if any, to the ongoing legal practice in the very areas where they were formerly assumed, to have been in force.

Nevertheless, this article will be concerned with these codes more than with any other genre of text bearing on Mesopotamian legal institutions, for the simple reason that they are fairly straightforward, have for the most part been carefully edited, and are readily accessible to layman and scholar alike. Moreover, despite our reservations about their reliability as indicators of legal conduct in ancient Mesopotamia, they do form an important clue to the legal thinking that prevailed in that civilization at different times. In addition, inasmuch as we have almost no actual case law surviving from ancient Israel (there is a judicial plea from Mesad Hashavyahu and documents from the Jewish colony at Elephantine in Egypt of the fifth century B.C.E.), it makes sense to compare the two theoretical corpora, the Mesopotamian law codes and the Bible.

The major bodies of legal rules are listed below, in chronological order. The “middle chronology,” which sets Hammurapi’s reign at 1792–1750 B.C.E. will be followed; the “high” chronology sets these dates about 60 years earlier, the “low” about 60 years later; the letters enclosed in brackets are the abbreviations which will be used to refer to individual corpora in the ensuing discussion:

The Laws of Ur-Nammu of Ur [LU] (21st century B.C.E.)

The Laws of Lipit-Ishtar of Isin [LL] (c. 1950 B.C.E.)

The Laws of the Kingdom of Eshnunna [LE] (c. 1800 B.C.E.)

The Laws of Hammurapi of Babylon [LH]

(c. 1792–1750 B.C.E.)

The Assyrian Laws [AL] (c. 1400–1100 B.C.E.)

The Hittite Laws [HL] (c. 1400–1300 B.C.E.)

There are in addition lesser groups of laws of diverse dates and origins, such as a very fragmentary group from Cappadocia of the Old Assyrian period (c. 1900 B.C.E.), scattered groups of Sumerian laws, and a small group of laws from the Neo-Babylonian period.

The legal corpora exhibit many similarities both in style and content. There is a remarkable unanimity of expression throughout, whether the language of the individual corpus be Sumerian – as are LU and LL – Akkadian, or Hittite. This unanimity, which can be traced to the traditions of the scribal schools, manifests itself in duplications of thought and verbal formulation. Most of the rules are presented as sets of postulated acts or circumstances viewed as having occurred in the past or constituting an existing condition, followed by the prescribed sanction for each respective set of circumstances, which is to be viewed as the “decision.” Depending on the type of case at hand, the sanction may be penal, civil, or simply in procedural prescription for a case which consists of some “unusual” circumstances not involving any “wrongs.” Sometimes the judgment consists only of a denunciatory characterization of the offense without specification of the penalty to be imposed, a phenomenon largely restricted to the Hittite code. Variations in the circumstances of what may be essentially a single situation are treated for the most part as separate “cases” since they entail appropriate variations in their respective rulings.

The usual arrangement of the rules in the corpora is by groups dealing with the same general topic. There appears to

be no discernible rationale, however, for the order in which these larger groups or topics are taken up. In some cases, after a subject has been treated in a number of rules presumably considered adequate by the authors or editors of a legal corpus, the transition to the next topic is effected by some suggestive similarity or common element between the first rule of the new subject and the preceding rule. It may be noted that LH, of all the cuneiform law corpora, appears to be the most rationally organized. The arrangement there is by topical, rather than by legal principles, but even this rationale is not uniformly followed. In the other corpora the arrangement seems to be much more arbitrary both as to the order of the topics treated and the order of the individual rules comprising a given topic.

The division of the different corpora into legal “clauses,” “laws,” or “paragraphs” is in some cases dictated by ruled lines inscribed on the original tablets, as in the case of AL, HL, and the excerpt tablets of LL, while the division into separate “laws” of LE and LH is the work of the first modern scholars who edited these texts, no indication for such divisions being given in the originals. Generally speaking, a single set of circumstances and the ruling that applies to it are treated as a separate “law” or “paragraph.” AL, however, often combines sets of varying circumstances of a single basic situation, together with their appropriate rulings, into a single “paragraph.” Thus Tablet A of AL, ruled off into some 60 sections in the original text, contains in fact many more separate rules or “laws” than that. HL, on the other hand, sometimes divides into two “paragraphs” what is essentially a single rule, and sometimes two unrelated rules are combined into a single paragraph. The numbering of the laws or “paragraphs” in the separate law corpora must therefore not be taken as more than a rough approximation of the actual number of distinct rules contained in each corpus; the standard numbering is best viewed as an aid to facilitate modern reference, with the actual number of separate rules to be determined by closer textual analysis in each case.

Apart from the agreement among the various corpora on the classes of subjects chosen for inclusion in their texts, and the more specific literary relationship among the corpora of Lower Mesopotamia, there is also substantial agreement among the corpora with respect to the sanctions that apply in the individual cases. Especially noteworthy in this connection are those cases where the sanctions are pecuniary, the damages often being identical or very close in amount among the several corpora. Such points of agreement constitute a more reliable index of the degree of uniformity of legal custom and usage in the Ancient Near East than those cases and fields in which penal sanctions apply, e.g., the sexual offences, such as rape (only of women who are married or preempted for marriage [“engaged”] by payment of a bride-price), adultery, and incest, all of which involve the death penalty; for these latter are acts which in almost any civilized society would be treated as the gravest of offenses, warranting the summary death of the offender. In all the codes, including the Bible, the death

penalty is most often meted out for sexual offenses (E. Good, *Stanford Law Review* 19 (1967), 947–77).

Wherever the law corpora treat homicide and bodily injuries in any detail, it is evident that they distinguished between premeditated acts, non-intentional acts, accident, and negligence, the penalties increasing in direct proportion to the degree of guilt, with injuries or deaths which are the result of negligence regarded as more serious than accidental or even non-intentional acts. Homicide resulting from negligence such as faulty house-building that caused the death of an occupant, was treated as a serious offense, and could bring the death penalty to the builder or a member of his family. However, the owner of a dangerous animal such as a goring ox was subject only to pecuniary damages. Talionic punishments (“an eye for an eye”) appear to have been an innovation in the Laws of Hammurapi, since the earlier corpora prescribe only pecuniary damages for injuries resulting from assault and battery. Even in LH the talionic penalty was limited to assaults upon the upper classes, which is an indication that such actions were viewed more gravely than similar acts against the lower classes. However, it should be stressed that talionic punishments and penalties of physical mutilation are rarely attested in documents referring to actual cases, and very likely were hardly ever resorted to. The victim of an eye gouging would have in most cases preferred monetary compensation. The talionic rules in the biblical law collections are probably equally to be viewed as an ideal principle of justice and equity. The non-talionic laws of Ur-Namma 18–22 (M. Roth, *Law Collections from Mesopotamia and Asia Minor* (1995), 19) permit a rich man to maim anyone so long as he pays the stipulated fines. The talionic punishments subject the offender to physical punishment.

An offense may be termed “criminal” when it is viewed as inimical to the well-being of the society as a whole and when the sanction is imposed by the public authority and not necessarily in the interest of any private party who may have been directly injured by the offending act. A “religious” offense, if subject to regular and predictable sanction, was thus a criminal offense. According to these criteria, sorcery is a criminal offense. It is already so treated in LH, which prescribes the penalty of death by drowning (i.e., through the river ordeal) and can be traced through LH, AL, HL, and finally in biblical law. Blasphemy and sedition, and insurrection appear to constitute another group of offenses treated early as criminal, e.g., AL 2 (blasphemy and sedition by a woman), and HL 2:173 (opposing the decision of the crown and the elders). The character of the offense in the example from HL is clearly indicated by the inclusion in the same paragraph of the case of the slave who rebels against his master. This, in turn, indicates that the offense of the wife in LH 143, for which she was to be cast into the water, involved some overt act of disloyalty to her husband in addition to profligacy, and from this it may be assumed a fortiori that similar acts of disloyalty or sedition against the crown or the religious order were dealt with in Babylonia with at least equal severity.

It is often noted that the legal corpora of the Ancient Near East are almost exclusively concerned with “secular” or “civil” law, in contrast to the biblical corpora in which “civil” and “cultic,” or religious, rules are intermingled without apparent differentiation. HL, however, includes a number of cultic rules organized as a consecutive group, which indicates that the compiler of the corpus was conscious of the distinctive character of this group of rules. All the offenses in this group deal with violations, in one way or another, of real property, but the interesting feature of all of these rules is that there is no mention of any pecuniary or related form of penalty for these acts (apart from restitution wherever applicable); the expiation of these wrongs consists solely of ritual purification and sacrificial offerings. The conclusion is therefore inevitable that in Hittite society the institution of private real property was invested with the aura of religious sanctity, transgressions against which constituted a ritual defilement as well as a civil injury.

It may be said that the reason the law corpora of the cuneiform civilizations of the Ancient Near East appear to us to deal almost exclusively with “civil” or secular law is not that the compilers of these corpora deliberately excluded religious subjects from their interest, but that “religious” laws were almost totally irrelevant for the general public; the public was rarely in a position to commit purely “religious” offences. Because the Torah in its final form is the product of the theocracy of the period of the Second Temple, we find the intermingling of “religious” and “secular” laws. The Torah makes no distinction between “religious” and “civil” offenses, nor, in terms of its own ideological orientation, would it have been meaningful for its writers to have introduced such distinctions into their legal structure.

The most common Akkadian term relating to the sphere of law is *dinum*. The often-expressed notion that this term denoted statutory law is in error. The term *dinum* denotes a case which is actually or hypothetically before the court. It comprises the statement of the facts of a given case, the court proceedings in its adjudication, and the verdict or decision of the real or hypothetical judge. The rules which comprise the Laws or Code of Hammurapi, for example, are nothing but a collection of hypothetical cases and their respective rulings as propounded by Hammurapi in his role of the supreme judge. They do not constitute law in that they cannot, and probably were not even intended to, serve as binding precedents for similar cases.

Another term which had wide currency in the Old Babylonian period, particularly during the dynasty of Hammurapi, is *šimdatum*, which in the older literature on the subject has been taken to mean “statutory laws.” It occurs most often in the expression “according to the royal *šimdatum*” or simply “according to the *šimdatum*.” The two phrases may be used interchangeably, and must have the general sense of “according to the regular, or established, procedures [governing the specific situation].” The *šimdatum* is, therefore, to be understood as the entire established body of legal tradition, of

which some aspect is to be invoked in the particular instance where the *šimdatum* is alluded to. When a text refers to the “*šimdatum* of the king” the phrase is to be understood in the broad sense as, e.g., “the laws of the crown, of the realm” of which the particular reigning monarch is only the guardian, not the author.

Finally, there occurs frequently in legal contexts the term *mīšarum* or *mēšarum*; it denotes the quality of “equity” or “balance,” “equilibrium” and, hence, “justice.” The achievement and maintenance of this “balance” is viewed as the primary function and duty of the king. The periodic royal decrees and edicts which are sometimes referred to as *mīšarum* acts are specific measures directed towards this end. In different periods and different reigns the content of these measures would vary in accordance with the immediate situation. Hence the name *mīšarum* edict does not describe a measure of a specific or fixed content, but is something of an epithet attached to measures announced by the king, usually early in his reign, which are designed to remedy particular economic imbalances, and which thereby seek to assure the populace that the new ruler has truly dedicated himself to the advancement and maintenance of justice. These measures entailed cancellation of certain types of debts, release from certain kinds of tenant obligations, and freedom from servitude for debt. Not all obligations were cancelled for all the people on such occasions, but the edict specified the classes of persons, cities, and types of obligations which were to be affected by each act. References to such acts are found in the year-dates of the rulers of the Old Babylonian period, but to date only two texts are known which are devoted to the specific measures that such royal pronouncements entailed. These are the edicts of Samsu-iluna (c. 1750 B.C.E.), Hammurapi’s son and successor, and of Ammi-šaduqa (c. 1650 B.C.E.), the fourth successor to the throne in Babylon after Hammurapi, and next-to-the-last of the line. It must be kept in mind that such edicts were directed by the promulgating authority to the immediate situation only, and were in no way intended to become the permanent “law of the land.” Nor was there any rule which dictated the issue of such decrees at regular intervals, or for having the provisions contained in them take effect automatically at such times, as was the case of the biblical rules for the *Sabbatical year and the Jubilee.

One might conclude by characterizing law in ancient Mesopotamia as being essentially a congeries of local customary systems, which kings periodically attempted to make uniform or “reform” for administrative efficiency. These attempts, however, were at best of limited effectiveness even at the time of their promulgation. Doubt may even be raised concerning the degree to which the so-called lawgiver intended to have his precepts enforced and whether he disposed of a bureaucracy that was really capable of assuring such enforcement. These law codes, however, remain of prime historical value as an index to the morals, ethical notions, and institutions prevailing at the time of their publication.

[Jacob Finkelstein]

The centrality of law in life is a theme common to both Israel and Mesopotamia. There are, in fact, laws that are common to both societies, even in their wording. Thus, the Laws of Eshnunna paragraph 54 reads: “If an ox is known to gore habitually and the ward authorities have had the fact made known to its owner, but he does not have his ox dehorned [?] it gores a man and causes [his] death, then the owner of the ox shall pay two-thirds of a mina of silver” (trans. by A. Goetze, in: AASOR, 31 [1956]); Roth, *Law Collections*, 67), and the code of Hammurapi paragraph 251 reads, “If a man’s ox is a gorer and his ward authorities had informed him that it is a gorer but he did not cover its horns or tie up his ox and that ox gores a free man and causes his death he shall pay one half mina of silver.” A parallel law is to be found in Exodus 21:29: “If, however, that ox has been in the habit of goring, and its owner, though warned, has failed to guard it, and it kills a man or a woman – the ox shall be stoned and its owner, too, shall be put to death.” Mesopotamian law, apart from the monetary penalty that the owner must pay, contains no penalty provision as far as the ox is concerned. Hebrew law requires that the owner of the ox be executed (according to Ex. 21:30 he can redeem himself), and that the ox likewise be executed. Moreover, the ox is to be killed by being stoned, and its flesh is not to be eaten.

Yet these laws, as similar as they may appear to be, reflect the basic difference between the Israelite and Mesopotamian legal systems. The codes of Mesopotamia are essentially secular codes in that they treat only matters concerning the conduct of one human being towards another. The relationship between the human and the divine is not regulated, nor are religious sanctions used to back up the essentially secular laws. In Israelite legal theory as articulated in the Bible, religion and law are intertwined. All law ultimately derives from God. Violations of religious law are punishable by human courts, and religious sanctions are applied as well as secular sanctions. Mesopotamian law contains no provisions regarding the goring ox itself. Israelite law requires that the ox be stoned, and its flesh is not to be eaten. The underlying principle of biblical law derives from the concept of the sanctity of human life connected with a certain concept of divinity as expressed in Genesis 9:5–6, “For your own life-blood I will require a reckoning: I will require it of every beast; of humans too, will I require a reckoning for human life, of every human for that of his fellow-human! Whoever sheds the blood of a human, by a human shall his blood be shed; for in His image did God make the human.” In the law of the goring ox this concept finds full expression in the penalty meted out to the ox.

[Aaron Skaist]

LITERATURE

Ancient Mesopotamian literature commonly refers to the vast – and as yet far from complete – body of writings in cuneiform script which has come down from Ancient Mesopotamia. It is mostly found on clay tablets on which the writing was impressed when the clay was still moist. The writing

reads, as does the writing on a printed English page, from left to right on the line, the lines running from the top of the page downwards. There are indications, however, that cuneiform writing once read from top to bottom and then, column for column, from right to left. The tablets when inscribed were usually allowed to dry naturally, occasionally, if durability was of the essence, they were baked at a high temperature to hard ceramic.

Except for a few excerpts in ancient classical writers from a book by the Babylonian priest Berossus, nothing at all was known either about cuneiform or the literature written in it until explorations and excavations – beginning shortly before 1800 C.E. – focused attention on the cultural treasures that lay hidden in the ruined city mounds of Mesopotamia. Mesopotamia, which corresponds to present-day Iraq, was in antiquity divided into a northern part, Assyria, and a southern part, Babylonia, also called Karduniash or Chaldea. The border between them ran approximately east-west a little above modern Baghdad. In still earlier times, Babylonia too was divided into a northern part, Akkad, and a southern part, Sumer, the dividing line running east-west a little above Nippur. Reliable copies of cuneiform inscriptions had been brought back by Carsten Niebuhr, only survivor of a Danish expedition in 1767 C.E. In 1802 C.E. a young German teacher, Grotefend, made the first substantial advance in decipherment of the difficult script. He was followed by the Englishman Rawlinson, who independently had reached conclusions similar to Grotefend's. With Rawlinson, the Irish scholar Hincks should be mentioned. Around 1860 C.E. the decipherment was essentially achieved.

Of the greatest importance, both for the help it proved in the decipherment and for the interest it created in wider circles, was the fortunate fact that English excavations at Nineveh came upon the remnants of a great library collected around 600 C.E. by one of the last Assyrian kings, Ashurbanipal. Historical texts from this library, as well as inscriptions found in other Assyrian palaces, threw new light upon personages and events dealt with in the Bible: occasionally Assyrian words would help the understanding of a difficult biblical idiom and, most striking of all, a story about the Deluge, remarkably similar to the biblical account, was among the finds.

Unfortunately, the importance of the tablet find did not immediately dawn on the excavators, so no efforts were made to keep together fragments that were found together; rather everything was simply dumped in baskets. As a result, scholars to this day are hard at work piecing fragments of Ashurbanipal's library together, and the finding of a new "join" is a source of great joy and satisfaction.

The content of the library was rich and varied, ranging from literary works in the strict sense of belles-lettres, to handbook literature codifying the knowledge of the times in various arts, sciences, and pseudo-sciences. Of particular importance for the decipherment were the lexical texts found. They gave precious information about how the multi-value cuneiform signs could be read. They also contained gram-

matical and lexical works dealing with a new and unheard of language, ancient Sumerian. This language, which preceded Akkadian (that is Assyrian and Babylonian) as vehicle of ancient Mesopotamian culture, has no relative among known languages and would almost certainly have proved impenetrable had not the Library of Ashurbanipal provided ancient grammars, dictionaries, and – most important of all – excellent and precise translations from Sumerian to Akkadian, its many bilingual texts.

Comparable in many ways to the find of the Library of Ashurbanipal was the find to the south, in Nippur, of what was at first believed to be a temple library belonging to Enlil's famous temple there, Ekur. Further exploration has shown, however, that the tablets in question come from private houses, and it seems probable that they represent the "wastepaper baskets" of scribal schools carted over and used simply as fill in the rebuilding of private houses.

The content of these – also mostly broken and fragmentary – tablets is the early Sumerian literature as it survived in the schools, during the period when Sumerian culture was coming to an end in the first centuries of the second millennium B.C.E. Here too, a great task of reconstructing the works involved from fragments awaited the scholars, a task still far from complete. Besides the two large finds here described, mention should also be made of important discoveries of texts in smaller libraries in Ashur found by the German excavation there, and a later, surprising find of tablets in the mound of Sultan Tepe by an English expedition.

SUMERIAN LITERATURE

General Character

The earliest evidence of writing from Mesopotamia – or indeed from anywhere – dates back to around the middle of the fourth millennium B.C.E. to the period known variously as the Protoliterate period or Uruk IV. Before this, however, literature doubtlessly existed in Mesopotamia in oral form, and as such it probably continued alongside written literature for long spans of time. The uses of writing were from the beginning those of aiding memory and of organizing complex data, as is well illustrated by the two genres that comprise the earliest written materials: sign lists and accounts. In time, new genres evolved from these genres: lexical texts, derived from sign lists; contracts and boundary stones, derived from accounts of gifts that accompanied a legal agreement to serve as a testimony to it; and, as a new departure, monumental inscriptions: votive and building inscriptions; and the letter, originally, as shown by its form, an aide-mémoire for the messenger delivering it as an oral message.

The use of writing as a means to organize and remember data underlies such genres as date lists and king lists. However, it is quite late that this power to organize complex data is fully utilized, with the creation of canonical series and handbooks, a development which begins in Old Babylonian Times and culminates in the Kassite period around the middle of the second millennium B.C.E.

The oral literature, in the meantime, while continuing in its own medium, must gradually have explored the possibilities of using writing as an aid in memorizing. While the innately written genres were, as has been seen, in general oriented toward serving as reminders and organizing data, the genres which originated as oral genres, and only secondarily took written form, had as a whole a different aim. A magical aspect may be distinguished in oral literature, retained in its pure form in the genre of incantation, where the spoken word is meant to call into actual existence that which it expresses; the more vivid the incantation, the more effective it is, a fact which accounts for its being cast in literary, or even poetic, language and form. The incantation was the province of a professional performer, the incantation priest (Sum. *mašmaš*, Akk. *ašipu*). A very similar magical purpose also seems to underlie other genres rooted in oral tradition. Myth, epic, and hymns to gods, temples, and kings, all had the purpose of praising somebody or something, and in so doing – as in a blessing – of enhancing or calling into being in the object of the praise, the virtues ascribed to it. This magical dimension of praise can still be seen to be very much alive in the short hymns of praise or blessings spoken by the incantation priest to the various materials he uses in his magical ritual, the so-called *Kultmittelgebete*, blessings intended to call up in these materials the powers and virtues attributed to them in the blessing. The praise takes in myths and epics the form of narrative presentations of great deeds of gods and heroes, originally, seemingly, to achieve by presenting them a vitalizing of the power to which they testify. In hymns, the praise usually takes the more static form of description of great qualities.

The praise genres were the province of a professional performer, the bard, Sumerian *nar*, Akkadian *nāru*, who sang to the accompaniment of a small lyre-like instrument held in the hand. The basic character of the myths, epics, and hymns he recited is indicated by the standard ending for them found over and over again; *zag-mi NN*, “Praise be NN” where NN is the name of the god, hero, or temple sung about. On the basis of the praise it offered up, the lyre was also called *zag-mi*, “praise.” The bard (*nar*) was a cherished member of the court of the Sumerian ruler and is depicted reciting at royal banquets, on monuments from around the middle of the Early Dynastic Period.

A praise of a special kind was the lament, the praise of values lost. The lament genre may plausibly be assumed to have originated as lament for human dead and from there to have been extended to use in the rituals marking the death of the god of fertility in his various forms, and to rituals seeking the rebuilding of a destroyed temple. Actually, however, only very few elegies for human dead have come down to us, and on the whole, examples of laments of any kind do not antedate the Third Dynasty of Ur. The genre of laments was the province of a professional performer, the elegist (*gala*). He was, like his colleague the bard, a fixture at the Sumerian rulers’ courts, ready to soothe the dark moments for his master by his elegies. He played, as the texts show, a major role at funerals.

Besides the genres mentioned, there were a number of others which made their way from oral into written form, most of them, as far as one can judge, of a popular and informal character with no professional performers in charge of them, but presented as occasion arose by whoever felt like it. Among these were love songs, generally placed in the mouth of women and dealing with gods and kings; wisdom texts, including proverbs and disputation texts pitting different evaluations against one another; didactic compositions such as the so-called Farmer’s Almanac; letters to gods with prayer for personal misfortune; and copies of royal diplomatic correspondence, of royal inscriptions of various periods, of legal decisions by courts, and others not lending itself easily to literary classification.

The Agade period (ca. 2340–2159) in which rulers of Semitic origin adopted Sumerian culture, introduced a distinctive type of votive inscription detailing military achievements. From later copies two works credited to the daughter of Sargon of Akkad, Enheduanna, the first named author in history, who served as high priestess of the moon-god Nanna in Ur, are known. One is a series of short hymns to each of the major temples of Sumer and Akkad, the other is a long, impassioned plea to the goddess Inanna. The short Gutian period that followed the Agade period is notable mainly for works produced when it ended. A vivid account by Utu-hegal of Uruk of his war of liberation against the Gutians to “return the kingship of Sumer into its own hands” survives in later copies. To Utu-hegal’s reign may also be assigned the composition of the great Sumerian King List, though other scholars prefer a slightly later date. To the end of the Gutian domination belong, furthermore, the famous cylinders A and B of Gudea, inscribed with a hymn to the temple of Ningirsu in Girsu as rebuilt by Gudea. They recount in wonderfully pregnant classical language the divine command to build, the building itself, and lastly the organization of the divine staff serving the needs of Ningirsu and the feast marking the completion of the work.

The perfection and ease of style in the Gudea cylinders show that Gudea’s reign was a golden age of literature. In fact under him and in the following period of Ur III, may be placed the main burst of creativity that created Sumerian literature as now known and as it was preserved and handed on in the schools of the Isin-Larsa and Old Babylonian periods which followed Ur III.

The Standard Body of Sumerian Literature

An outline of the content of Sumerian literature as it took form around the period of the Third Dynasty of Ur (c. 2113–2000 B.C.E.) and was added to and transmitted in the schools of the following Isin-Larsa Period (c. 2000–1763 B.C.E.) can most conveniently be given in terms of the genres discussed in the general section above.

MYTHS, EPICS, AND HYMNS. *Myths.* The Sumerian myths seem to be devoted to a relatively small number of major deities only; Enlil, Ninurta, Enki, Inanna, and Dumuzi are the

central figures in most of them. The myths about Enlil include the following:

(1) “Enlil and Ninlil: The Birth of the Moon-god,” which tells how Enlil when he was young took Ninlil by force, was banned from Nippur by the assembly of the gods and set out for the Netherworld. Ninlil, who had become pregnant with the moon-god, followed him and on the road, in various disguises, Enlil persuaded her to lie with him to conceive another child to take the moon-god’s place in the Netherworld. Thus three further divine children were engendered, all chthonic in character.

(2) “Enlil’s wooing of Ninlil,” a second, more conventional version of Enlil’s wooing of Ninlil when she was yet a young girl in her mother’s house in Eresh. Even in this tale Enlil is depicted as impetuous, but here he commits no wrong.

(3) “The Creation of the Pickax,” a short tale relating how in the beginning Enlil forced Heaven apart from Earth to make room for things to grow, fashioned the pickax with which he broke the crust of the earth in *Uzumua*, “Where Flesh was grown,” a sacred spot in Nippur, to uncover the heads of the first men growing out of the earth like plants, and how he then let the other gods share in the use of the pickax and the human workers.

The myths about Enlil’s son Ninurta, god of the plow, of the thunderstorms in spring, and of the yearly floods, are mainly two.

(1) *Lugal-e*, a myth telling how Ninurta went to war in the mountains to the east against the *Asakku*, a demonic being engendered on Earth by Heaven, whom the plants had elected king. After a pitched battle Ninurta was victorious. He then built the near ranges, the *hursag*, as a dam, directed the waters from the mountains into the Tigris to provide irrigation water for Sumer, presented the *hursag* as a gift to his mother Ninlil when she came to see him, and gave her the name Ninhursaga(k), “Queen of the *hursag*.” After that Ninurta sat in judgment on the stones, some of which had opposed him viciously in the war. His judgments on them determined the character and qualities they now have. The section about the dolerite, a stone imported by Gudea for his statues, suggests that the myth was written, or perhaps added to, in his reign.

(2) A second myth about Ninurta known as *An-gim-dim4-ma* tells how Ninurta, as he nears Nippur in full panoply of war, is met by Enlil’s vizier Nusku, who bids him lessen his clamor and not disturb Enlil. Ninurta answers huffily with a long boastful speech, but is calmed down and is made to enter Nippur peacefully by his barber, Ninkarnunna.

(3) A third myth “Ninurta’s Pride and Punishment” seems to tell that Ningirsu, at Enki’s behest, captured the thunderbird Ansud who had stolen the tablets of fate from Enki. He had obviously hoped thus to obtain the tablets for himself, but when Ansud released them from its claw they returned to Enki in Apsu. Ninurta then, by bringing on a flood, sought to take over from Enki by force, but was outwitted and imprisoned in a pit dug by the tortoise, where Enki severely chided him for his ambitions.

It may be questioned whether the myth just told is best considered a Ninurta or an Enki myth. Clearly its sympathies are with the latter. Clever Enki, the god of the fresh waters in rivers and pools, was one of the most beloved subjects of the mythmakers. Among tales about him may be mentioned the following:

(1) “Enki and Ninhursaga” in which Enki presented the city on the island of Tilmun (modern Bahrain) to Ninhursaga, provided it with water and made it an emporium. He then united with Ninhursaga, engendering a daughter with whom in time he united, again engendering a daughter, and so forth. At last, when he has lain with Uttu, the spider, goddess of weaving, Ninhursaga removes his semen from Uttu’s body and throws it on the ground. Seven plants grow up and Enki in time appears, names, and eats the plants. This makes him very ill, but eventually Ninhursaga is mollified and helps him give birth to the seven goddesses which have grown in his body from the plants. The myth ends with their being married off.

(2) “Enki and Ninmah” tells how the gods complained about having to do the hard work of irrigation agriculture, how Enki had his mother Namma give birth to man to relieve them, and how at the party to celebrate Namma’s delivery Ninmah, another name for Ninhursaga, boasted that she could alter man’s shape for good or bad at will. Enki accepted the challenge, saying that he could find a living for anything she might make, and then fashioned five freaks of various kinds, for all of whom Enki provided a job. When the roles were reversed, however, and Enki tried his hand at mischief, the being he created was afflicted with all the ills of old age, which thus came into the world, Ninmah being unable to do anything to help.

(3) As organizer of the world, Enki appears in “Enki and World Order” in which at Enlil’s behest he organized the world much as one would organize an estate, determining first the character of the major cities in Sumer, then arranging for the sea, the rivers, clouds, and rain, then instituting economies such as agriculture, herding, etc., placing appropriate gods in charge, and lastly having to pacify the goddess Inanna, who did not think she had been given enough offices.

(4) The text which would be called the “Eridu Prehistory,” which deals with the creation and settling of humans, creation of animals, the antediluvian cities, and the flood, is probably to be classed as an Enki myth since he is the hero of the Flood story. It is he who warns his worshiper Ziusudra against Enlil’s wrath afterward.

As popular with the mythmakers as Enki, or even more so, was his granddaughter Inanna, city goddess or Uruk and one of the most complex figures in the Mesopotamian pantheon. She seems to combine features of a goddess of stores, a rain-goddess, and a goddess of the morning and evening star. The myths picture her as a young unmarried girl of the aristocracy, proud, willful, jealous, and power-hungry.

(1) In one of the myths about Inanna, “Inanna and the Powers of Office,” she is pitted against her wily grandfather Enki. Arriving on a visit to him in Eridu, she is properly feasted

and Enki, drinking deep, confers in his expansive mood one important office after another upon her. When he wakes up sober next morning he rues his prodigality, but Inanna is gone. He still tries to stop her boat and get the offices back but in vain, and Inanna triumphantly brings them into Uruk.

(2) The myth of “Inanna and Ebeh” tells of the victory of Inanna over the mountain Ebeh (modern Jabel Hamrin) and consists mainly of a series of speeches glorifying her prowess in one form or another.

(3) Another myth, “Inanna and Bilulu,” tells how Inanna hears about the killing of her young husband, Dumuzi, composes a paean in his honor, and then sets about avenging him on his killers Bilulu and her son Girgire.

(4) The longest of the myths about Inanna is the one called “Inanna’s Descent.” It tells how Inanna took it into her heart to descend to the Netherworld to wrest control of it from her elder sister Ereshkigal. The venture ended in disaster and Inanna was killed and changed into a cut of meat gone bad. Her loyal handmaid, Ninshubur, seeking help for her, finally obtained it from Enki, who fashioned two beings who were to win Ereshkigal’s favor by expressing compassion for her. They did so, and when in return she granted them a wish, they asked for the meat that was Inanna and brought her back to life with food and water of life that Enki had given them. Still Inanna was not permitted to leave the Netherworld unless she could provide a substitute for herself, and so a posse of Netherworld deputies were sent along with her. As they met persons close to Inanna on their way – all dressed in mourning for her – she balked at giving them over to the demons. Only when in Uruk they found her young husband Dumuzi festively dressed and enjoying himself, did hurt and jealousy make her turn him over to the deputies. He, terrified, appealed to the sun-god, Utu, Inanna’s brother and Dumuzi’s brother-in law, to change him into a gazelle that he might escape his pursuers. Utu did so, and Dumuzi escaped but was again captured. This repeated itself three times, but in the end there was no way out for Dumuzi, who was taken to the Netherworld. His sister, Geshtinanna, seeking him, found him there with the help of the Fly, and the myth ends by Inanna rewarding or punishing the Fly – it is not clear which – and dividing the stay in the Netherworld between Dumuzi and his sister so that they alternate, each of them spending half a year only in the Netherworld, the other half they are up with the living.

The myth about Dumuzi’s repeated flights and captures, which forms the second half of “Inanna’s Descent” exists also, with only slight modification, as a separate tale,

(1) “Dumuzi’s Dream,” which relates how Dumuzi had an ominous dream, and sent for his sister Geshtinanna, who interpreted it as foreboding his death. Attempting to hide from the deputies who came to carry him off, Dumuzi was betrayed by a colleague and caught. His subsequent appeal to Utu, his escape, etc., runs parallel to the story in “Inanna’s Descent.” A more cheerful myth is

(2) “Dumuzi’s Wedding,” which begins by relating how Inanna sends messages to her bridal attendants, including the

bridegroom, Dumuzi, inviting them to bring their gifts. They do so, and the story goes through all the stages of a Sumerian wedding: the bridegroom arriving with his gifts, the bride having her bath and dressing in all her finery before opening the door to him, which is the symbolic act concluding the marriage, Dumuzi leading his bride to his own home, stopping on the way to visit his own tutelary god, and his reassuring of his nervous young bride that she will not be asked to work hard or do any tiring tasks in her new house.

Epics. The epics, which deal with great and memorable deeds of men rather than of gods, are more immediately accessible than the myths, which often presuppose a knowledge of what the gods stand for, which is not easily come by. Most of the epics that have come down to us center around rulers of the First Dynasty of Uruk. This was the dynasty from which the kings of the Third Dynasty of Ur thought themselves descended, and it seems likely that what has been transmitted is in effect a choice aimed at the taste of that court, perhaps as it changed with time from one king to the next.

Closest to the effect of primary epic with its emphasis on martial valor and honor is perhaps the following:

(1) The epic tale “Gilgamesh and Agga (Akka; COS I, 550–52).” It tells how Gilgamesh, vassal ruler of Uruk under Agga of Kish, persuades him to resist performing its corvée duties with weapon in hand. Agga and his longboats soon appear before Uruk’s walls. Only Gilgamesh himself is valiant enough to make a successful sortie. He cuts his way to Agga’s boat and takes Agga captive. Having thus proved himself, however, he grandly sets Agga free and even reaffirms his overlordship, all in gratitude for the fact that on an earlier occasion Agga had taken Gilgamesh in when the latter sought his protection as a fugitive.

(2) Also in some degree warlike in spirit, but with distinct romantic overtones of the strange and the far away, is the tale of “Gilgamesh and Huwawa,” which tells how Gilgamesh, to win fame, undertakes an expedition against the terrible Huwawa in the cedar mountains in the west. The adventure nearly ends in disaster, but by deceit Gilgamesh gets Huwawa in his power and, when he is nobly inclined to spare him, Huwawa rouses the anger of Enkidu, Gilgamesh’s servant, who promptly kills him.

(3) A mythical element enters into the tale of “Gilgamesh and the Bull of Heaven.” The city goddess of Uruk, Inanna, has offered Gilgamesh marriage and has been rudely refused. To avenge herself, she asks the loan of the fierce “bull of heaven” from her father Anu. Anu reluctantly grants her wish. Contrary to expectations, however, the bull does not manage to kill Gilgamesh, but is itself slain by him and Enkidu.

(4) Gilgamesh exhibits a quite different friendly, attitude toward Inanna in another story, “Gilgamesh, Enkidu, and the Netherworld.” In this tale, Inanna finds a tree drifting on the river, pulls it in, and plants it, in the hope of making a bed and a chair from its wood when it is fully grown. By that time, however, the tree has been taken over by the Ansud bird, the

demoness Lilith, and a great serpent. In her disappointment she turns to Gilgamesh, who scares off the unwelcome guests, fells the tree, and gives her wood for her bed and chair. From the tree stub and the branches he makes what seems to be a puck and stick for some hockey-like game, and celebrates the victory with a feast. At the feast, however, a waif, who has no one to take care of her, utters a cry of protest to the god of justice and fairness, Utu, and Gilgamesh's puck and stick fall into the Netherworld. Enkidu offers to go down and bring them up and Gilgamesh instructs him in how to behave so as not to be held back down there. Enkidu, however, disregards the instructions and so must remain in the Netherworld. All Gilgamesh can do is to obtain permission for Enkidu's ghost to come up to see him. Enkidu's ghost then ascends through a hole in the earth, the two embrace, and in answer to Gilgamesh's questions Enkidu tells him in detail how people are treated in the hereafter.

(5) A badly damaged tale called "The Death of Gilgamesh" will be dealt with later when the genre of elegiac epic is discussed.

To the romantic epic with its penchant for the strange and fantastic belongs also the "Lugalbanda Epic," the hero of which is listed in the Sumerian King List as the successor of Enmerkar and predecessor of Gilgamesh, separated from the latter by one Dumuzi, a fisherman from Kuar. According to other traditions, Lugalbanda was the father of Gilgamesh.

In the epic called after him Lugalbanda is still a young man. It relates how Enmerkar calls up his army for a campaign against the city of Aratta in the eastern highlands. On the march, Lugalbanda falls seriously ill and is left to die in a cave (*hurrum*) in the mountains by his fellows. He partly recovers, however, and begins fervently to pray to the gods for help. The gods hear his prayers and as he roams the mountains he comes upon the nest of the thunderbird, Ansud, gains its favor, and is granted, at his own wish, supreme powers of speed and endurance. The bird also helps him find his way back to the army, and there, among his comrades, Lugalbanda completely recovers. The army reaches Aratta and begins a long siege of it. However, after a while Enmerkar's zest for the task wanes and he wishes to send a message back to Uruk to Inanna, upbraiding her for no longer caring enough for him; she must choose between him and her city Aratta. There is, however, no messenger who dares undertake the hazardous journey. At last Lugalbanda volunteers, and successfully carries the message to Inanna. She receives him well, hears Enmerkar's message, and advises Enmerkar to catch a certain fish on which Aratta's life depends. Thus he will put an end to the city. Its craftsmen, handiwork, copper and moulds for casting, he can then take as spoil.

There are two other epics of which Enmerkar is the hero: "Enmerkar and Suhkesdanna" and "Enmerkar and the Lord of Aratta." The first of these is a romantic epic verging on fairy tale. It tells how Ensuhkesdanna of Aratta sent messengers to Enmerkar in Uruk, demanding that he submit to Aratta since Ensuhkesdanna could provide a temple of lapis lazuli and a

richly adorned couch for the rite of the sacred marriage with Inanna, while Enmerkar had but a temple of mud brick and a bed of wood to offer. The demand is, as could be expected, proudly refused, and Ensuhkesdanna then wishes to obtain his demands by force of arms. The assembly in Aratta is not willing to support him in this, however, and so he is temporarily at an impasse. Then an incantation priest (*mašmaš*) and magician at his court offers to use his powers to have a canal dug to Uruk and to have the inhabitants load their possessions on boats and haul them to Aratta. Ensuhkesdanna is delighted and rewards him richly. The magician then sets out from Aratta, and arriving on his way at Nidaba's city Eresh near Uruk he persuades – since he can speak the language of animals – the cows and goats there to stop giving milk, thus interrupting the cult of Nidaba. At the complaint of the herders, a learned amazon goes up against him in a sorcerer's contest in which both cast fish spawn into the river and pull out animals: the magician, a fish, and the amazon, a bird, which flies off with the fish; the magician, an ewe and its lamb, the amazon, a wolf that runs off with them, and so forth. After the fifth try the magician is exhausted, it becomes dark before his eyes, and he is all confused. The amazon chides him, saying that while his wizardry is plentiful, his judgment is sadly lacking in that he has tried his wizardry against the holy city of Nidaba. So saying, the amazon seized his tongue in her hand and, denying his plea for mercy on the grounds that his crime was sacrilegious, killed. Word of his fate reached Aratta, and Ensuhkesdanna, much sobered, acknowledged the preeminence of Enmerkar.

The other epic about Enmerkar makes of the rivalry between Enmerkar and the lord of Aratta a battle of wits, a test of which of them is most competent as ruler. In its scale of values, peaceful compromise seems to win out over military solutions. It begins by telling how Enmerkar appealed to Inanna to make her other city, Aratta, subject to Uruk, so that its people would bring down stone and other precious building materials as tribute to Uruk for Enmerkar's temple building. Inanna grants his wish, tells him to send a messenger to Aratta to demand submission, and withholds rain from Aratta, in order to put pressure on it to submit. The ruler of Aratta at first rejects the demand, but when he is told that Inanna sides with Enmerkar he accedes pro forma: he will submit if Enmerkar will send grain to relieve the famine caused by the drought, but this grain must not be sent in sacks, it must be loaded into the carrying nets of donkeys. Enmerkar complies with this seemingly impossible demand by sending sprouted grain and malt, but is set a new similar, seemingly impossible condition. After he had complied with that and still another, he loses patience, however, and threatens to destroy Aratta. His angry message is too long for the messenger to remember, and so to help him Enmerkar invents the letter. When the messenger arrives in Aratta with the written letter and the lord of Aratta is pondering it to think of a new subterfuge, the god of rainstorms, Ishkur, apparently knowing nothing about what is going on, drenches the region around Aratta, producing a bumper crop.

At this point, unfortunately, the text is incompletely preserved. From what we have, however, it is possible to gather that the conflict was resolved by the invention of trade and a peaceful exchange of goods follows. Thus Enmerkar is able to obtain his coveted building materials through peaceful means.

The later Dynasty of Agade, with its heroic figures Sargon and Narâm-Sin, formed a second, minor focus for the epic tradition. Sargon, the founder of the dynasty, figures in an unfortunately very fragmentary text in which he seems to have made the wife of his Sumerian opponent Lugal-zagge-si his concubine, but under what circumstances is not clear. Another, as yet unpublished, story tells how he was protected by Inanna at the court of Ur-Zababa of Kish when he was serving there as cupbearer. The figure of Narâm-Sin seems to have become the type of the self-willed human ruler challenging the gods in his hubris. The epic tale called “The Fall of Agade” tells, after describing the might and prosperity of Agade, how Narâm-Sin, wishing to rebuild Enlil’s temple Ekur in Nippur, failed to obtain favorable omens that would allow him to do so. Yet, against Enlil’s will, Narâm-Sin mustered his forces and began demolishing Ekur. Enlil in his anger called in the wild Gutian mountaineers, who disrupted all communication in the country and produced dire famine. Lest the whole country be destroyed, the major deities of Sumer then appealed to Enlil and succeeded in having the punishment focused on Agade as the actual offender. It was thoroughly cursed by the gods so that it would never again be inhabited.

Hymns to Gods. Praise, with its attendant effects of enhancement and expression of allegiance to persons and to values, can take descriptive as well as narrative form and becomes then hymnal rather than mythical or epic. Mesopotamian literature focused such hymnal praise particularly on three subjects: gods, temples, and kings. The resultant genres are not, however, kept rigidly apart, and sections of a hymn to a god may well be devoted to praise of his temple, just as hymning a temple generally includes praise of its divine owner. The royal hymns abound in addresses to the gods to assist and protect the king hymned.

Among major hymns directed to gods, there is reason to mention first the great hymn to Enlil of Nippur called *Enlil suraše*. It tells how Enlil chose Nippur as his abode, describes its sacred character so fiercely intolerant of all evil, moves on to Enlil’s temple in it, Ekur, describes the latter’s rituals and sacred personnel, and then Enlil himself as the key figure in the administration of the universe, planning for the maintenance and well-being of all creatures; it ends with a brief acknowledgement also of Enlil’s spouse, Ninlil, who shares his powers with him.

Another remarkable hymn is a hymn to the sun-god Utu, which praises him as maintainer of justice and equity in the universe and the last recourse of those who have no-one else to turn to. Utu’s sister, Inanna, is hymned as the evening star in a hymn of ten sections. It describes her role in judging human conduct, and ends with a description of her rite of the

holy marriage as performed under Iddin-Dagan of Isin with the king embodying her divine bridegroom, Dumuzi. Other hymns dealing with this rite may be considered actual cult texts. Most likely they accompanied a performance of the ritual acts, for often they furnished a running account of what is done in the rite as seen by an observer at close quarters.

A very remarkable and ancient hymn to Inanna (COS I, 518–22) was written, according to Sumerian tradition, by a daughter of king Sargon of Agade, Enheduanna, who was high priestess of the moon-god Nanna in Ur. In the hymn, she has been driven out by enemies, feels abandoned by her divine husband Nanna, and turns in her distress to Inanna, the divine protector of her father and her family – and also, at that time, holder of the kingship of the gods. The description of Inanna in this hymn is that of a goddess of rains and thunderstorms.

Other hymns to goddesses of notable literary qualities are a long hymn to the goddess Nanshe in Nina emphasizing her role as upholder of morals and ethics, a long hymn to the goddess Nininsina praising her powers to heal and to drive out demons of disease, and a hymn to the goddess Nungal in Nippur, a prison goddess with strong Netherworld affinities. The hymn to her describes in detail the features of her temple, which serves as a place of ordeal and place where she judges and imprisons evildoers. It then moves into a self-praise by the goddess in which she lists her various functions and those of her husband Birtum. Many more such hymns could be mentioned, but these may suffice as examples of the genre and of the variety of treatment it allows.

A particular group of hymns to gods deserves, however, special mention: the “processional hymns.” These are hymns meant to be sung as accompaniment on the occasion of ritual processions of the gods and on ritual journeys to visit other deities in other cities. Occasionally, as in the case of the composition called “The Journey of Nanna to Nippur,” they approach narrative form, describing the stages of the journey by boat and Nanna’s cordial reception by Enlil in Nippur before launching into a long catalog of the blessings bestowed upon him by Enlil to take along home to Ur. Somewhat similar hymns celebrate, respectively, Inanna’s and Ninurta’s journeys to Eridu, and a hymn of this kind, verging on both the myth and the hymn to temples in “Enki Builds Eengurra,” which tells how Enki built his temple in Eridu, then traveled by boat to Nippur, where he invited the gods to a party to celebrate the completion of his new home, and where his father Enlil spoke the praise of it.

Hymns to Temples. Praise of temples looms large, as we have mentioned, in many of the hymns to gods. It may also be the main theme of a hymn. Such hymns to temples would seem to have been represented already in the Fara and Abu Salabikh materials. A particularly noteworthy example of the genre is a cycle of hymns to all the major temples in Sumer and Akkad composed by the already mentioned Enheduanna and faithfully copied in the schools for centuries afterwards. Even older,

is the much copied “Hymn to the Temple of Kesh,” which is already represented in the Abu Salabikh materials. The finest example of the genre is, however, a hymn which never entered the standard body of school literature: the great hymn to the temple of Ningirsu in Girsu, E-ninnu, written on the occasion of its rebuilding by Gudea. The hymn was originally written on three large clay cylinders, of which the second and third are preserved. It describes in detail the communication of Ningirsu’s wishes to Gudea in a dream, the care taken to check that the god’s message was correctly understood and to carry out the task correctly, the bringing of building materials from afar, the actual building process step for step, and finally the occupation of the new temple by Ningirsu, the appointment of its divine staff, and the concluding “housewarming party” for the gods.

Hymns to Kings. A suitable subject for hymning was also the king, and a great many royal hymns are extant. The oldest examples of the genre deal with Ur-Namma, the first king of the Third Dynasty of Ur. A high point of productivity was reached with his successor, Shulgi, who figures in more than 20 hymnal compositions, and the genre continues to be productive through the first half of the succeeding Isin Dynasty, at which point it begins to peter out. The last example is a hymn to Abi-eshuh of the First Dynasty of Babylon. The content of the genre is varied in the extreme. Many of the hymns deal with the election of the king by the assembly of the gods, or with divine favors showered upon him. Some contain appeals to the gods on the king’s behalf, and some – the royal hymns in the narrower sense – contain a sustained praise of the king, his abilities, e.g., as warrior or as scholar, his virtues, e.g., his sense of justice and fairness, and the prosperity he brought to the country. Frequently these hymns take the form of self-praise and are put in the mouth of the king himself.

Love Songs. Love songs, of which Sumerian literature has quite a few, may perhaps also be considered hymns of praise, albeit of a special distinctive character. Some of these are put in the mouth of the divine lovers, Dumuzi and Inanna, or deal with episodes of their courtship, in some the beloved is the king, particularly Shu-Sin of the Third Dynasty of Ur. These songs praise his physical attractions and express the longing and love of the girl who sings of him. It seems not unlikely that a considerable number of these songs were the work of a poetess in the circle around Shu-Sin; one would guess the *lukur* priestess Kubatum.

ELEGIACS. Whereas the praise in myths, epics, and hymns is directed toward extant values, in the elegiac genres it is focused on values lost and longed for. In elegiacs corresponding to the myth are narrative accounts of the death of gods; in those corresponding to the epic, accounts of the death of kings and heroes; and in those corresponding to the hymn, dirges for gods, temples, and kings, and in very rare cases for ordinary human dead.

Elegiac Myth. A number of works whose central theme is the death and loss of gods may be characterized as elegiac myths. Among these are first of all a number of cult texts from the cult of the dying gods such as Dumuzi and Damu, apparently meant to be sung as accompaniment to ritual acts such as, e.g., processions into the desert to Dumuzi’s deserted fold. An example of such an elegiac is “The Wild Bull Who Has Lain Down,” in which Inanna seeks her dead husband, killed by the men of the Bison in the mountains. Another example is “The Bitter Cry For Her Husband,” which tells of the attack on Dumuzi’s fold, his escape, and his death as he tries to swim to safety across the swollen Euphrates in its flood. Many others could be quoted. Perhaps the longest such composition is *Edinna u saga*, “In the Desert in the Early Grass,” a Dumuzi text with long insertions of related Damu materials. It tells of the disappearance of the god, and follows his mother and sister as they search for him. It relates how the rough deputies of the Netherworld tore him away from his mother in Girsu on the Euphrates, how she is determined to stand in the gate of their superior claiming her son back, how she asks the cane-brake about him, and how she finally takes the road of no return to the Netherworld. Eventually, it seems, it is his sister rather than his mother who reaches him there. A somewhat similar narrative dealing with Damu describes how his sisters wish to board the boat on which he is taken captive and bound to the Netherworld by a deputy from there, and how on arrival there the deputy’s superior frees Damu. While these and other compositions seem to have been used in the cult, purely literary accounts of the attack on Dumuzi and his death are also found. One such is “Dumuzi’s Dream” of which we spoke above under myths.

Elegiac Epic. Elegiac epic may be defined as epic tales centering around the death of a king or hero, which do not, however, treat that death as heroic, but rather as pure loss. Such tales are “The Death of Gilgamesh,” which we mentioned earlier. It treats of the death and burial of Gilgamesh and contains a long address to him by Enlil, in which Enlil tries to reconcile Gilgamesh to his mortality. Of particular interest in that it shows how old the traditions on which the epic genres build are, is the fact that this text has preserved memories of the ancient custom of having the servants of a ruler follow their master also in death. This custom, which existed in the times of Gilgamesh, is also attested to by the finds in the royal graves of Ur excavated by L. Woolley but must have been abandoned long before the times of the Third Dynasty of Ur. Another work in this genre is “The Death of Ur-Namma,” which tells of the death and burial of Ur-Namma, of the honored role he is given in the Netherworld, and, in spite of this, his unhappiness about all he left behind him unfinished.

Laments for Gods. Lament for the dead god was a central part of the cult of most dying gods and many such laments are preserved. To the Dumuzi cult belongs the moving lament by his mother in “A Reed-Pipe – My Heart Plays a Reed-Pipe

(Instrument) of Dirges for Him in the Desert” and many others. Most often there is an element of narrative, reflecting the fact that these laments were part of the ritual of going to the god’s destroyed fold in the desert. The Damu laments likewise tend to alternate with narrative sections, but the lament of Aruru for her lost son, and the lament of Lisin are examples of pure laments.

Laments for Temples. As the loss of gods and kings was mourned, so were the great public disasters: destruction of cities and their temples at the hand of enemies. The lament was intended to soothe the emotions of the bereaved god and channel them, and thus prepare the way for divine will to restoration. To the genre of lament for destroyed temples belongs what is perhaps the highest achievement of Sumerian poetry, the magnificent and deeply moving “Lament for the Destruction of Ur,” which deals with the capture and destruction of the city by the Elamites and the Sua people that ended the Third Dynasty of Ur. The vivid and very detailed, but much less powerful, “Lament for Ur and Sumer” (COS 1: 535–39) deals with the same event. Among later laments there is the long “Lament for Nippur and Ekur” connected with the restoration of Ekur by Ishme-Dagan, which ends with a long section in which Enlil promises to restore the temple. Other laments for Ekur and for Inanna’s temple in Uruk, E_Aanna, popular in later times, go back to the end of the Isin-Larsa period. As in the Dumuzi laments, so in the laments for temples, narrative and lyrical sections alternate, the dramatic events around the day of destruction being told in all their stark detail.

Dirges. Laments for kings and heroes in non-narrative lyric form have not so far been found, but two examples of dirges for ordinary mortals succeeded in entering the standard body of literature. They were written by a certain Ludingirra, one in honor of his father, the other on occasion of his wife’s death.

WISDOM LITERATURE. Wisdom literature is not committed from the outset as are, each in its way, the encomiastic and elegiac works, but is rather discriminating and evaluative.

Disputes. One of the most popular forms of entertainment and humorous examination of standard values was the dispute or logomachy, which seems to have flourished particularly under the rulers of the Third Dynasty of Ur, several of whom are referred to by name in these works. The usual pattern is a mythological introduction setting the action in the beginning of time, which is then followed by a lengthy dispute about their respective merits by the two contestants. Sometimes the end of the tale is a judgment by a god or the king, but other settings occur, and the text may launch directly into the debate. Examples of works in this genre are “Summer and Winter,” “Silver and Copper,” “Ewe and Grain,” “Plow and Hoe,” “Shepherd and Farmer,” and others. As a rule, the more lowly contestant carries the day. A special group of such disputes have the school or the life of a scribe as a setting. Among these are “A Scribe and His Disappointing Son,” in which a father details

the many failings of his son – one senses that he has spared the rod too much – as also “The Overseer and the Scribe,” in which the scribe lists the numerous services a scribe performs in a large household, “Enkimansum and Girniisag,” a dispute between an obstreperous student and his tutor, and “The Dispute between Enkita and Enkihegal,” which, as the disputants get more and more heated, deteriorates into a mere slanging match. It would seem that the ancient listeners must have derived a good deal of vicarious enjoyment from hearing of quarreling and listening to the unrestrained flow of bad language, for in this genre such things are frequent. Another example of it, perhaps the worst, is a vitriolic slanging match known as “Debate Between Two Women.” The most interesting evaluative work of Sumerian wisdom literature is, however, probably the one called “Man and His God,” in which a man complains about his god’s neglecting him and the bad luck dogging him as a consequence. It is a Sumerian precursor, in some sense, of later treatments of the motif of the just sufferer and the earliest indication of awareness of the problem we have.

Apodictic and Didactic Wisdom Texts. Apodictic statements of do’s and don’ts characterize the extensive proverb genre, which comprises actual proverbs, as well as all kinds of saws, turns of phrase, etc. and also includes short fables with pointed morals. A large collection of such saws was attributed to Shuruppak, father of the Sumerian hero of the Flood, Ziusudra, and appear in the composition “The Instructions of Shuruppak” as this wise father’s counsels to his son. This composition was, as mentioned, already in existence in the Abu Salabikh materials. The composition commonly called the “Farmer’s Almanac,” which is cast in the form of a father’s – the plow-god Ninurta’s – advice to his son, and describes in order all the standard activities to be carried out by a good farmer during the year, is apodictic and didactic insofar as it presents a norm for the activities of the farmer. Formally similar in many ways is the composition called “Schooldays,” in which a schoolboy takes time out on his way to school to tell a questioner where he is going so early in the morning, and what he usually does in school.

INCANTATIONS. The genre of incantations continues, and substantial collections of individual incantations begin to be made. There are three major types of incantation: (1) The first is the legitimation type, in which the incantation serves to identify the incantation-priest as the messenger and agent of a god-usually Enki – and as under his protection. It ends with a formula conjuring the demons in the name of heaven and earth. A similar type of incantation is (2) the so-called prophylactic type, which first describes the evil doings of the demons, then orders them to depart. Lastly (3) the Marduk-Ea type describes first the evil done by the demons, then how Asalluhe/Marduk sees it and asks his father Enki’s/Ea’s advice. Enki then states what ritual acts will serve as cure.

VARIA. A variety of other types of writings, not easily classifiable, are found with works of the genres here listed. Mention

may be made of such things as copies of royal inscriptions, of royal diplomatic correspondence, of noteworthy letters of various kinds – among them appeals to deities for help in illness and misfortune – riddles, copies of legal deliberations and decisions in the assembly of Nippur, lists of medical prescriptions, of legal formulas, and copies of law codes, among them those of Ur-Nammu and Lipit-Ishtar. In general these various memorabilia are examples of specific utilization of the organizing and mnemotechnical powers in writing. Not infrequently they stand at the beginning of new handbook genres developing in the second and first millennia.

OLD-BABYLONIAN LITERATURE

Cuneiform writing seems to have been used to write Akkadian very early, perhaps already toward the end of the Protoliterate period. Apart from votive inscriptions and royal monumental inscriptions, however, there is little evidence of Akkadian literary activity. Economic texts, contracts, deeds, letters, a few incantations with perhaps a fragment of a royal hymn, seem to be all. It is not until Old-Babylonian times, around 1700 B.C.E., that more substantial literary activity in Akkadian is attested; quite possibly sparked by a tradition of, and an appreciation for, oral literature among the West Semitic Amorites, who by that time had entered Mesopotamia in large numbers and had furnished such a key ruling dynasty as the First Dynasty of Babylon.

Old-Babylonian literature is, however, clearly written in the country and builds in large measure on Sumerian materials. However, it treats these materials freshly, with notable originality and literary power.

The genres represented are first myths, with works such as the “Poem of Agushaya” which tells how Ea created the goddess Saltu, “Strife,” to challenge the warlike goddess Ishtar (Agushaya) and the “Myth of Anzu” about the thunderbird which stole the tablets of fate from Enlil, and with them his powers of office. More impressive than these, though, is the remarkable “Myth of Atrahasis,” which deals both with the creation of humans and their near destruction by flood (COS 1, 450–53). The gods in those early days had to toil themselves as agricultural workers. After a while, in the first record in history of a strike, they rebelled and rioted in front of Enlil’s temple in Nippur. Eventually a compromise was worked out by Enki: a god – presumably the ringleader in the rebellion – was to be killed, and from his flesh and blood man was to be created to take upon himself the toil of the gods. After a while, however, mankind grew so numerous and made so much noise that Enlil found it impossible to sleep. He tried various means to diminish their number and noise, but without lasting effect. Eventually he persuaded the other gods to bring on the Flood and thus to wipe out humanity entirely. Enki, however, as might have been expected, warned his protégé Atrahasis and had him save himself and his family and all species of animals in a big boat. Enlil’s anger when he found that a human being had survived was appeased by Enki, who instituted a variety of measures – orders of nuns who were not to

conceive and give birth, barren women, and demons killing newborn children – which would serve to hold man’s numbers permanently within bounds. Man, the myth seems to say, must know his limitations. He has his place and his useful function in the Universe and will be tolerated by the powers that rule existence, as long as he does not make himself obnoxious to them. The genre of epics is represented by a fragment of the “Epic of Etana” (COS 1, 453–57). Etana was the first king, and was carried up to heaven on the back of an eagle he had helped and befriended in order to fetch the plant of birth-giving so that his son could be born. Of special interest are a number of fragments dealing with Gilgamesh.

Hymns to gods and goddesses are well represented. One may mention the Papulegarra Hymn and a hymn to Ishtar with a prayer for Ammi-šaduqa. Examples of a new genre, the penitential psalm, which has parallels and perhaps antecedents in the Sumerian “Letters to Gods,” makes its appearance. To the genre of love songs, or possibly that of disputes, may be counted a humorous dialogue between a girl and her somewhat naive young man. The dispute genre shows a debate between the tamarisk and the palm. Among the handbook genres mention may be made of the Akkadian “Laws of Eshnunna” and the famous “Code of Hammurapi.” They continued – and show distinct influences of – the earlier Sumerian codes of Ur-Nammu and Lipit-Ishtar. Completely new is the prolific genre of omnia, which clearly shows work of considerable length and advanced organization of the materials; also the genre of “Mathematical Problem Texts” with the famous Plimpton Tablet, which shows understanding of the laws governing the so-called Pythagorean Theorem, and the Sumerian grammatical texts, which operate with a most ingenious organization scheme, the one column grammatical paradigm.

STANDARD BABYLONIAN LITERATURE

The Old-Babylonian period was followed by a dark age, concerning which little evidence is available. What happened to literature at this time is therefore in some measure a matter for surmise only, but it would seem that a process of selection took place. Only certain works and certain kinds of works survived; others, whether by accident or for reasons of changing taste, were dropped. At the same time there are indications of considerable literary activity during the later half of the Kassite period, from about 1400 B.C.E. onward. The nature of this activity was to a great extent ordering and canonizing, utilizing more fully the possibilities for organizing and preserving large and complex bodies of data. At this time, therefore, major series were put together and a standard text established for genre after genre. The result was an emphasis on the informational and utilitarian aspects of literature, rather than on its aesthetic qualities, which is evident not only in the relative number and length of texts in the belletristic and the more practically oriented genres and the vigor and productivity of the latter, but also in the fact that genre like hymns, laments, and prayers through the setting of the texts in instructional

framework appear to move toward what have been called the handbook genres. In the belletristic genres proper the spirit of the age leads toward the establishing of relatively large epic cycles such as, e.g., the 12-tablet Gilgamesh epic, trend which was already discernible in the standard body of Sumerian literature. The standard Babylonian Gilgamesh Epic, for instance, will, with its 12 tablets have covered well over 3,000 lines when complete. Similarly, the appreciation of repetition and ornate description seems to grow. In the genre of laments, for instance, a composition can often be followed from its concise form in the time of standard Sumerian literature to a vastly enlarged, interminably repetitious form which almost makes such narrative elements as it has impossible to follow, in standard Babylonian literature. In part, perhaps such treatment is explicable from the use of the text for recitation in which the music is the main concern. Improved organization, greater length, and less terse language are noticeable also in the genres which specifically grew out of the use of writing to make lasting records: royal memorial inscriptions, legal deeds and contracts, and so on, and which are thus essentially evidential in character. A feature of considerable interest is the occurrence of a tradition about individual authorship of literary works at this time. The works of the standard Babylonian literature may, then, conveniently be considered under the headings of belletristic, handbook, and evidential genres.

Belles Lettres

MYTH. A certain number of Sumerian myths were translated into Akkadian, seemingly already in Old-Babylonian times, and continued to be copied. Among these were the two Ninurta compositions, *Lugal-e*, which as has been mentioned, seem to date back to Gudea or earlier, and *An-gim-dim4-ma*; a bilingual creation myth.

Among Akkadian works, such myths as the one about Anzu and the Atrahasis myth continued to be copied. New additions were the "Dynasty of Dunnum," a tale about the earliest generations of gods, who cheerfully murdered their fathers to take over rule of the world, and then married their mothers or sisters; the myth of "Nergal and Ereshkigal" (COS I, 384–90), which relates how Nergal became lord of the Netherworld and subdued and married its queen, Ereshkigal; and the "Erra Epic" (COS I, 404–16), which describes how Erra tricked Marduk into letting him take over rule of the universe and then embarked upon a veritable orgy of rioting and killing. He was finally pacified by his vizier Ishum, but still had the gall to pride himself on having left "a remnant" and not wiped out everybody. The "Myth of Adapa" (COS I, 449) also deserves mention. Adapa refused, at his master Ea's clever advice, the food of life and water of life offered to him in heaven when he was called to account there before Anu for having broken the wing of the south wind with a spell. Ea, clearly, did not want his clever servant to be other than mortal.

The most substantial and impressive literary work that should be mentioned here is, however, the Babylonian epic of creation *Enuma eliš* (COS I, 390–402). Scholars differ con-

siderably in their dating of it and estimates range from Old-Babylonian times down to shortly after 1000 B.C.E. It can be assumed that in essentials it is a creation of late Old-Babylonian times, but that what has been preserved is a late redaction from approximately the beginning of the first millennium B.C.E. It tells how in the beginning there was only Tiamat, the Sea, and Apsu, the sweet waters under the earth. As their waters mingled the gods were born of them. The gods, as embodiments of activity, found themselves in basic conflict with their first parents. Provoked beyond endurance by the gods, Apsu, at the first, determined to destroy them, but was subdued by Ea with a spell and killed. Ea's son Marduk, playing with the winds which his grandfather Anu had given him, further provoked Tiamat and her brood, and she was brought to attack the gods. She raised an army and placed her second husband, Kingu, in command. Marduk, chosen champion, "king," by the gods, met her in battle and defeated her. Out of her carcass he then created the present universe. Kingu, after he had been indicated as fomenter of the rebellion, was killed, and Marduk had Ea create man from his blood to take over the hard menial work and leave the gods free. Marduk then pardoned those gods who had sided with Tiamat and distributed all the gods as administrators in heaven and on earth. To show their gratitude, the gods then for the last time took tools in hand and built Babylon, the city Marduk had asked for. Here in his temple Esagil they all gathered for a feast and assembly to appoint him permanent king and to celebrate his powers and virtues in 50 names by which they named him, one after the other. The postscript to *Enuma eliš* suggests that it be read to princes, and it is in fact a paean in praise of the ideal absolute monarch as personified in Marduk. When later in the first millennium the benevolent despot became a rarity in Babylonia, the despot pure and simple seems, in the figure of Erra, to have been a more believable symbol of the power ruling existence. In fact, the Erra Epic looks almost like a deliberate attack on *Enuma eliš* and its political optimism.

EPIC. Of older Sumerian epics that of Lugalbanda – at least its second half – survived as a bilingual. An Akkadian translation of the end of "Gilgamesh, Engidu and the Netherworld" was appended mechanically to the late version of the Gilgamesh Epic as its 12th tablet, probably by a copyist rather than by the author of the version. Of Akkadian epics the Etana Epic and the Narâ m-Sin Epic survived. An epic about Sargon's campaign into Asia Minor, *Šar tamhari*, "The King of Battle," would seem to have been first composed in Old-Babylonian times. The Gilgamesh Epic, which may have existed as an epic in Old-Babylonian times and which in part builds on Sumerian materials, was reworked traditionally by one Sin-liqi-unninni into the standard later version which has been preserved from Ashurbanipal's library. A completely new epic of this time is a warlike epic about Tukulti-Ninurta's wars with Babylonia.

WISDOM LITERATURE. New and notable contributions to the genre of wisdom literature are two long poems, *Ludlul bel*

nêmeqi, “Let me Praise the Expert” (COS I, 492), which treats the theme of the righteous sufferer, and the Theodicy (COS I, 492–95), which deals with the problem of the worldly success of the wicked. The proverb tradition continues, and new material is added, especially, it appears, fables. The genres of disputes also continued with new compositions such as a “Dispute between the Horse and the Bull.” A new creation – based on the omen form – is a text warning rulers against mistreating Babylon and its citizens. It dates most likely from early in Sennacherib’s reign. Humor seems to be represented – outside of the proverb literature – by the so-called “Dialogue of Pessimism” (COS I, 495–96), an ironical dialogue between a fickle master and his slave, and by the story of a poor man getting his revenge on an abusive official called “The Poor Man of Nippur.”

Handbook Literature

INCANTATIONS AND PRAYERS. Numerous large series of incantations belong to the collections recording the lore that a capable incantation-priest (*ašipu*) ought to control. Of the better known of those which have come down may be mentioned *Utukke limnuti*, “The Evil Demons,” against demons of diseases; *Bit rimki*, “The Bath House,” containing ritual and incantations for purifying the king by means of lustrations; the series “Mouthwashing”; and the series *Maqlu* and *Šurpu*, devoted to the burning of witches in effigy and other white magic; and many more. Individual prayers were sorted under the incantation priest: various new types of prayer, with hymns to gods as their introductory part, developments of the penitential psalm, and prayers classed as incantations. To a large extent treatment of illness that was considered to be caused by evil demons was the task of the *ašipu*, who thus overlaps in function with the physician or *asu*, who worked mainly with medicaments of various kinds. It is often difficult to distinguish between his handbooks and those of the *ašipu*.

LAMENT. The lament genre with its laments for great public disasters continued to be in the hands of the *kal-* (Sumerian *gala*) or “elegist.” As mentioned, the laments tended to grow in length and to become more and more repetitious. They also tended to be held in more general terms and lost the close connection with identifiable historical events which characterized the older laments for destroyed cities...

OMEN. A new Akkadian genre was in Old-Babylonian times the omen. In the following centuries the collections of omens, their systematization, and the systematic extension of possible ominous data, grew. The handbooks for the use of the *barû*, the “seer,” were numerous. There were series dealing with omens from the shape of the liver of sacrificial animals, from dreams, from monstrous births, from ominous happenings of all kinds in city and country, astronomical omens, omens from wind and weather, and so on.

PHILOLOGY. To the *dupšarru* (Sumerian *dubsar*), the “scribe,” may be ascribed particularly the continuing tradition and de-

velopment of the lexical texts, which began back at the very beginning of writing as sign lists. This genre grows considerably both in new works and in the sophistication of lexical treatment. One may mention the large series arranged according to sign-form *ea-A-nâqu* and its expanded version *-A-nâqu* and the great series of realia organized in terms of logical classification: *Urra-hubullu*. Noteworthy are also the Akkadian synonym list and the examples of lexical and grammatical commentaries to individual works. With the lexical texts go the grammatical treatises. Here the older type of paradigm texts is replaced with a more radical analysis into grammatical elements in so far as such could be represented in a syllabic script.

SOCIAL INSTITUTIONS

Like present-day governments, governments in the ancient world, whether Mesopotamia or Canaan, placed a great deal of emphasis on the need for statistical, especially demographic, information. One of the best ways of obtaining such information was by means of a *census. Scholars have been bothered by certain aspects of the census as noted in the Bible (Ex. 30:11–16; Num. 1:1 19), and questioned the need on the part of the participants in the census for ritual expiation (Heb. *kip-purim*; see **Kipper*).

Documents discovered in the royal archives of *Mari in northern Mesopotamia have greatly helped to clarify the problem. In one letter discovered in the archives the following order is given: “Let the troops be recorded by name” (G. Dossin, *Archives royales de Mari*, 1 (1950), no. 42, lines 22–24; cf. Num. 1:2). In other words, a list of names was to be prepared. Such lists are also available from many other sites in the Ancient Near East. The technical term for a census at Mari was *tēbibtum*, “purification” (according to other scholars, “expert counting”). At Mari as in the Bible there appears to be a connection between census and purification. It is known that in Mesopotamia there existed a definite fear among the people of having their names put on lists. The similarity between the census and the books of life and death caused a feeling of discomfort about a census. There is much in common between the institution of the census in Mari and in Israel. The purposes of the censuses were similar: they served as military lists and for the division of property. So too, some of the technical terms associated with the census are similar: Hebrew *pqd* and Akkadian *paqādum*, “to count”; Hebrew *kippurim* and Akkadian *ubbubum* “purification.” Censuses in Israel, as in Mari, were taken by writing down the names, as noted in Numbers 1:2: *be-mispar shemot*, “according to the number of the names.” It is likely then that the reason for the expiation connected with the census in Israel was the same as in Mari. There is a reference to a *book of life in the Bible (Ex. 32:32–33), when Moses, pleading for Israel after they sinned with the golden calf, says “Erase me from the book that You have written.” The concept of a book of life and death is well known among Jews in the mishnaic period. Its antecedents go back to the biblical period (S. Paul, *JANES* 5 [1973], 345–53).

RELIGION

It has sometimes been claimed that the religion of Mesopotamia was based on premises totally different from those underlying the religion of Israel. But we must distinguish between the religious ideals of the Bible and the practices of ancient Israel. The biblical prophets portray themselves as a minority who tolerate the worship of no god other than Yahweh, whereas their opponents worship other gods alongside Yahweh (e.g. Jer. 7:8–11). Depending on who controlled the Yahweh temples it was possible for Yahweh to entertain visiting gods in his temple just as Marduk might do in Babylon (11 Kings. 21:4–5). In the area of religious institutions it is likely that materials from Mesopotamia will be helpful. A case in point is the temple. In Mesopotamia the temple was conceived as a house of the god, comparable to the house of a noble or king. The temple housed the statue of the god, thought to contain the essence of the god. The temple building itself, and its symbolism, was considered a reflection of the cosmic abode of the god. The rites of worship consisted mainly in ministering to the physical needs of the gods. The Israelite temple is in many ways similar to the Mesopotamian temple at least in its external aspects. The Hebrew language employs vocabulary similar to that of its neighbors. Thus the temple is a “house” or “palace,” while to worship is “to serve” or “to work.” Like its Mesopotamian counterparts, the Israelite temple made use of cosmic symbolism. Scholars in recent years have begun to question the axiom that the cult of Yahweh was aniconic. The fact that Deuteronomy 4:12–19 fulminates against making an image of Yahweh (see already Hazzekuni a.l.) suggests strongly that the practice was known. Judges 17–18 indicates the presence of an image of Yahweh in the temple of Dan (especially Judg. 17:1–6). As such, the role of the cult statue in Mesopotamia may yet illuminate a similar phenomenon in ancient Israel. Apostolic prophecy once considered unique to ancient Israel is now known from *Mari as well as from Neo-Assyrian sources (SAA IX) proximately closer to the days of the Hebrew monarchy. The use of blood sacrifices in the Israelite cults differentiates from the Mesopotamian cults in which the gods were fed a diet that was vegetarian in the main.

The culture of Mesopotamia pervaded the ancient Near East. Ancient Israel and Judah spent centuries in the shadow of Mesopotamia. Biblical law, language, literature and religion were all influenced by Mesopotamian civilization. Through the intermediacy of Aramaic, the Akkadian language continued to make an impact on the Jews of Babylonia. As such, Assyriology is significant, not just for its own sake, but for the study of the Bible and Judaism.

MESQUITA, family name of prominent American and European Sephardim of Marrano descent. The merchant **LUIS DE MESQUITA** (or *Amesquita*), of Segovia, Castile, took up residence in Mexico and was reconciled at an **auto-da-fé* there in 1646. **BENJAMIN BUENO DE MESQUITA**, who went to Jamaica from Portugal in the 1660s, petitioned the English authorities for the right to trade with the crown, which foreign merchants could not ordinarily do. Permission was granted in 1664, but soon thereafter he and two sons were banished from Jamaica on an extraneous charge. He then went to New York where he died in 1683 (the earliest date on any tombstone in New York's Jewish cemeteries). **JOSEPH BUENO DE MESQUITA**, one of these sons, became prominent in New York and around 1700 had important financial dealings with Lord Bellamont, the colonial governor. On behalf of Congregation Shearith Israel he purchased a burial ground, the Chatham Square cemetery, from William Merett. Joseph's will gives the name of the other brother, **ABRAHAM BUENO DE MESQUITA** who was then living at Nevis in the British West Indies. The name *Mesquita* appears also in Europe. **MOSES GOMEZ DE MESQUITA** (1688–1751) was haham of London's Spanish-Portuguese Jews from 1744.

MESSEL, German family. **AARON MESSEL** (1784–1848) founded the banking house of A. Messel & Co. in Darmstadt which his son **SIMON BENJAMIN MESSEL** (1817–1859) continued. Simon's son **L.E.W.L. MESSEL** (1847–1915) apparently left Judaism. He settled in England, and his granddaughter **ANNE** was mother of Anthony Armstrong-Jones, Earl of Snowden, who in 1960 married Princess Margaret, sister of Queen Elizabeth II of England. **RUDOLPH MESSEL** (1848–1920) also settled in England where he was a successful chemist and engineer. **ALFRED MESSEL** (1853–1909) distinguished himself as an architect in Germany. He renounced Judaism in the 1890s. **OLIVER MESSEL** (1904–1978), a grandson of L.E.W.L. Messel, achieved distinction in England as a theatrical producer, stage designer, and painter.

MESSEL, ALFRED (1853–1909), German architect, born in Darmstadt. He built apartments, public buildings, banks, the Pergamon Museum, and the villa of Eduard Simon. His most famous work, the Wertheim department store in Berlin, built in 1897, was the first store to be constructed entirely of stone, steel, and glass. An extension made in 1904 is overlaid with neo-Gothic decoration, but the basic design of repeated verticals proved to be a prototype of the modern store.

MESSERER, ASAF MIKHAILOVICH (1903–1992), dancer and teacher of the Bolshoi Ballet, Moscow. Messerer, who was born in Vilna, graduated from the Bolshoi School in 1921 and was soon dancing important roles, including Siegfried in *Swan Lake*. He had a brilliant technique, performing feats of virtuosity seldom accomplished by men. He revolted against traditional mime, which he replaced with expressive acting, and was equally brilliant in *danseur-noble* parts, and in demi-character roles. His first choreographic work, in collaboration with Igor Moiseyev, was a new production of *La fille mal gardée* (1930). He restaged the last act of *Swan Lake* in 1936, and his later works include *Sulla* (1952) and *Ballet School* (1962). Messerer retired from dancing in 1954, but remained with the Bolshoi company as a teacher and principal choreographer. **SULAMITH MESSERER** (1908–2004), Asaf's sister, was also a dancer and teacher for the Bolshoi Ballet. She entered the company from the Bolshoi School in 1926. Her first important role was that of Lise in *La fille mal gardée* (1929). Other outstanding roles were those of Swanilda in *Coppélia* and Kitri in *Don Quixote*. She was an athletic dancer more suited to demi-character than classical roles. She became a teacher in the Bolshoi School in 1938, and continued as a principal instructor after retiring from dancing in 1950. Asaf Mikhailovich and Sulamith Messerer received the title of People's Artist of the U.S.S.R. The ballerina Maya *Plisetskaya was their niece. In 1980 Sulamith Messerer defected to England, continuing to coach there.

[Marcia B. Siegel]

MESSIAH, an anglicization of the Latin *Messias*, which is borrowed from the Greek Μεσσίας, an adaptation of the Aramaic *meshi'ha* (Aram. מְשִׁיחָא), a translation of the Hebrew (*ha-melekh ha-mashi'ah* (Heb. הַמֶּלֶךְ הַמְּשִׁיחַ), "the Anointed [King]"; a charismatically endowed descendant of David who the Jews of the Roman period believed would be raised up by God to break the yoke of the heathen and to reign over a restored kingdom of Israel to which all the Jews of the Exile would return. This is a strictly postbiblical concept. Even *Haggai and *Zechariah, who expected the Davidic kingdom to be renewed with a specific individual, *Zerubbabel, at its head, thought of him only as a feature of the new age, not as the author or even agent of its establishment. One can, therefore, only speak of the biblical pre-history of messianism. It may be summarized as follows: *Stage 1*. At the height of David's power there appears the doctrine that the Lord had chosen David and his descendants to reign over Israel to the end of time (11 Sam. 7; 23:1–3, 5) and had also given him dominion over alien peoples (11 Sam. 22:44–51 = Ps. 18:44–51; Ps. 2). To quote 11 Samuel 22:50–51 (= Psalm 18:50–51; all the arguments against dating this composition later than the age of David seem forced):

(50) For this I sing Your praise, O Lord among the nations/and hymn Your name://

(51) "He who grants wondrous victories to his king/and deals graciously with his anointed (*mashi'ah*), with David,

and with his offspring, evermore.”//David is here, as Saul was before him (1 Sam. 24:6; 26:9; 11 Sam. 1:14, 16), and as he expects descendants of his to be after him, the Lord’s anointed in the sense that he was anointed as a sign of consecration to the Lord (see *Kingship, *Oil), not, of course, in the sense of “the Messiah” described at the beginning of this article. Because anointing is an act of consecration, Deutero-*Isaiah speaks of Cyrus as the Lord’s “anointed” in the purely derived sense of a non-Israelite-king chosen by the Lord for a great destiny and a great mission (Isa. 45:1). Thus “Stage 1” of the prehistory of messianism is the doctrine that David’s present position of power will endure throughout his lifetime and be inherited by an endless chain of succeeding links in his dynasty. Stage II began with the collapse of David’s empire after the death of Solomon. There arose the doctrine, or hope, that the House of David would again reign over Israel as well as Judah and again exercise dominion over neighboring nations. This hope was expressed

(a) probably by reinterpretation of compositions like Psalm 18 in a prophetic sense and

(b) in so many words in prophecies like Amos 9:11–12; Isaiah 11:10; Hosea 3:5 (the phrase – a Judahite interpolation – “and (the Israelites will seek) their king David”); Ezekiel 37:15ff., especially verses 24ff. (and see *Isaiah A, Panel 3, Field A, on Isa. 9:1–6 [2–7]). *Stage III.* Isaiah’s shifting of the emphasis from the perpetuity of the dynasty to the qualities of the future king: the foundation of his throne will be justice, he will be distinguished by his zeal for justice, and, finally, he will be charismatically endowed for sensing the rights and wrongs of a case and for executing justice. (See not only the passage in *Isaiah just cited on Isa. 9:1–6 [2–7], but also Isaiah B I, 4 on Isa. 16:4–5 and, in particular, *Isaiah A, Panel 3, Field B on Isa. 11:1ff., where the origins of this idea are discussed). The “Immanuel prophecy” in Isaiah is completely irrelevant, so far as one can see and the echoes of ancient Canaanite-Ugaritic mythology that have been “discovered” there are as dubious as those in the figure of the Ancient of *Days in Daniel 7. Without “stage III” in its biblical prehistory, the development of the postbiblical idea of “the Messiah” would not have been possible.

[Harold Louis Ginsberg]

Second Temple Period

The title “Messiah” (Heb. מָשִׁיחַ) as a designation of the eschatological personality does not exist in the Old Testament; it occurs only from the time of the Second Temple after the Old Testament period. However for ancient Judaism the idea of eschatological salvation was more important than the concept of Messiah. Hence there are books from the Second Temple period where the Messiah does not occur, even if they refer to eschatological salvation. Such a book, for instance, is the Book of *Tobit, in which the salvation of Jerusalem, the return of the Diaspora, and the conversion of nations to the God of Israel is described but a personal Messiah is lacking. The same also applies to the Book (Wisdom) of Ben *Sira and probably the Book of Daniel. In the latter, the messianic figure of the son of

*man is explained as a symbol for the holy ones (or saints) of the Most High (chap. 7). In the Assumption of *Moses (chap. 10) the eschatological figure is the angel of God but a human agent of the salvation is not mentioned. It seems also that in the more ancient form of the *Amidah* a personal messiah was not mentioned, but only the hope of the return from the Diaspora and the building of the eschatological Jerusalem and the Temple. Even in such ancient Jewish prayers where the concept of Messiah occurs the word *mashiāh* is lacking.

In the time of the Second Temple there was a greater variety of messianic figures than later. The Old Testament Book of Zechariah already makes mention of two messianic figures, the high priest and the messianic king. This idea did not disappear from the rabbinic literature where the priest of righteousness (*Kohen zedek*) is sometimes mentioned together with the Davidic king Messiah. These two figures, the priest and the king, are important for the eschatology of the Dead Sea *Sect, the eschatological high priest being more important than the scion of David. The third figure occurring in the Dead Sea *Scrolls with the two messiahs is the prophet of the Last Days. Thus in the Dead Sea Scrolls there are three messianic figures which correspond to the three main functions of the ideal Jewish state, in which kingdom, priesthood, and prophecy shall exist (see 1 Macc. 14:41). The three eschatological figures of the Dead Sea Scrolls are therefore based upon a broader ideological concept. These three figures are reflected later in the theological concept of the ancient Jewish sect of the Ebionites (see Jewish Christian *sects) according to which Jesus united in himself the function of king, priest, and prophet. The importance of the Davidic Messiah in Judaism who weakened or caused the disappearance of the other messianic figures was the outcome especially of the Old Testament heritage because the eschatological king is hinted at in the Hebrew Bible.

The oldest description of the eschatological king is in the third book of the Sibylline Oracles (c. 140 B.C.E.) and in the Vision of Seventy *Shepherds in the Book of Enoch which was written approximately a decade earlier. However the prevalence of the Davidic Messiah in the apocryphal literature became common from the time when the Maccabean Aristobulus I accepted the title of a king. This was seen as a usurpation of the rights of the family of David; hence as a reaction, the Davidic Messiah received his central importance as can be seen from the Psalms of Solomon written approximately in 63 B.C.E. (especially in the 17th Psalm). The other component of the political messianic hope in Judaism was caused by the Roman occupation, and so in later books the Davidic Messiah is the only figure which occurs. He thus appears in IV Ezra and in the Syrian Apocalypse of Baruch. A further proof of the expectation of the Davidic Messiah can be found in the New Testament where Jesus is identified with the Davidic Messiah. Even the name “Christians” and the word “Christos” are Greek translations of the word “Messiah” (Christos = the anointed one). This hope was not only an abstract one: from the first century C.E. there were messianic *movements centered on

messianic pretenders. Such a list of messianic pretenders occurs in Acts 5:36–37. One of the names there is Judas the Galilean, who was the founder of the *Zealots. Thus this movement was centered on a family with messianic pretensions. Josephus (Wars 2:444–448) states that Judas' son, Menahem, was murdered in the Temple, being "arrayed in royal robes." Apparently after Judas' death his partisans transferred the status of pretender to the kingship to his son.

The most important historical messianic figure was surely Bar *Kokhba, though he himself did not sign as king and names himself only *nasi*. He was already seen by others as the messiah, and it is important that on his coins his name also occurs with that of a priest Eleazar. Both Josephus and the Talmud also mention other messianic pretenders from the first and beginning of the second centuries C.E. The first messianic interpretation of a biblical verse occurs in the Greek translation of the Pentateuch (Num. 24:17) where the word "scepter" is translated in the Greek by "man" (see also the Greek translation of Num. 24:7). The Greek translation of the Pentateuch dates back to the third century B.C.E. Possibly the designation of the Messiah as "man" is a proof that the special concept of son of man already existed in the early third century B.C.E. Philo, who did not like to refer explicitly to the eschatological hopes of Israel, mentions the hope of the coming of the Messiah in connection with this Greek interpretation of the biblical verse. The above shows that messianic concepts were manifold in the time of the Second Temple, and there were even numerous aspects to the function of the Messiah. All depended upon the spiritual and theological approach of the various Jewish trends, but the Messiah or messiahs were always human beings, even if sometimes supernatural qualities were connected with them. The political aspect, if it prevailed, did not always eliminate the supernatural. However, the Messiah was always an agent of God and never a savior in the Christian meaning. The Davidic origin of the kingly Messiah was supposed; but, as it seems, the messianic pretender had to prove his authenticity by his deeds – in the period of the Second Temple Davidic descendants were not traceable.

[David Flusser]

Messiah in Rabbinic Thought

In rabbinic thought, the Messiah is the king who will redeem and rule Israel at the climax of human history and the instrument by which the kingdom of God will be established. While the Bible stresses the nature of the age called the "end of days," the rabbis focus as well on the person of their regent, who gives the messianic age (*yemot ha-mashi'ah*) its very name. "Messiah" (*Mashi'ah*) means "anointed" and in the Bible can refer either to a king or a priest. The *aggadah* restricts the term to the eschatological king, who is also called *malka meshi'ha* ("king messiah") in the Targums, *ben David* ("son of David"), and *mashi'ah ben David* ("Messiah, son of David"). The Messiah was expected to attain for Israel the idyllic blessings of the prophets; he was to defeat the enemies of Israel, restore the people to the Land, reconcile them with God, and introduce

a period of spiritual and physical bliss. He was to be prophet, warrior, judge, king, and teacher of Torah.

A secondary messianic figure is the Messiah, son of (i.e., of the tribe of) Joseph (or Ephraim), whose coming precedes that of the Messiah, son of David, and who will die in combat with the enemies of God and Israel. Though some (e.g., Torrey, Segal) claim that this figure is described in pre-Christian apocalyptic and apocryphal works, most scholars note that the first unambiguous mentions of this doctrine occur in tannaitic passages of uncertain date (Suk. 52a) and in the Targums (Pseudo-Jon., Ex. 40:11; Pesh., Song 4:5). The genetic function of the doctrine is similarly unclear: Messiah ben Joseph has been seen as the symbolic embodiment of the reunification with the ten tribes of Israel, as the Samaritan Messiah, and as a figure whose martial character and death testify to the impact of the abortive revolt under Bar *Kokhba upon the Jewish imagination.

There are a number of developmental accounts of the messianic idea. Klausner argues that the nationalist-naturalist base of the idea was "spiritualized" after the political and military debacle of the Bar Kokhba revolt; Mowinkel claims virtually the same results due to the acceptance of apocalyptic and spiritualizing elements. It is true, on the whole, that the later Midrash is more extravagant and inventive than the earlier sources in the elaboration of many messianic motifs; the relative sobriety of the earlier sources contrasts markedly with the portrait drawn in the apocalyptic literature. The earliest sources speak little of messianic origins. Subsequently there is the belief that he was born at Beth-Lehem (cf. Micah 5:1) or Jerusalem on the day of the Temple's destruction. He is then hidden – either in Rome or (in the later Midrash) in heaven, where he pines over the agony of people and his own impotence – to come forth at the time of the Redemption. Some have him present at the creation of the world; for some the "name" (i.e., concept) of the Messiah existed before creation; in yet others (assumed late), the Messiah himself exists before the world (PR 36:161).

The prophetic books do not all assume a personal messiah, nor do they identify him. The rabbis agree he is of Davidic lineage (based on Hos. 3:5 and Jer. 30:9), nor is this idea necessarily post-Bar Kokhba. Some expected a resurrected David, and others a messiah named David. Hezekiah, king of Judah, was a potential messiah: Johanan b. Zakkai announced the "coming" of Hezekiah in what some take to be a messianically oriented deathbed declaration. The name Menahem b. Hezekiah, which may refer to an anti-Roman patriot rebel or may simply be symbolic of "comfort," is also found. Various *amoraim* derive the name of the Messiah from the names of their masters; there is also a puzzling identification of the Messiah and Judah *ha-Nasi (Sanh. 98b). The messianic "name" is sometimes meant descriptively, as when Yose ha-Gelili said that the Messiah's name is *Shalom* ("peace"). The early sources do not mention a "suffering Messiah." In the Targum to Isaiah 53:3–6 suffering is the historical lot of the people, who are reconciled to God by the prayers of Messiah; the toils of Messiah

are those of constructive achievement. Third-century sources speak of a suffering Messiah, or a leprous Messiah; still later, his suffering atones for Israel (Sanh. 98b; PR 37:162b). The vicarious atonement of all righteous for the wicked is a general aggadic theme, however.

The Messiah is generally assumed to be man, though writ large. As such, he can come either riding a donkey, in subdued fashion (cf. Zech. 9:9), or triumphantly riding the clouds (Dan. 7:13). That the Messiah is fully human is dramatically shown by Akiva's knowledge of the rebel leader, Bar Kokhba, as the Messiah. (Yet Akiva also declared that the Messiah would occupy a throne alongside God). One talmudic source does apparently attribute immortality to Messiah (Suk. 52a), and the Midrash (mostly later) singles him out among the immortals of Paradise. The Messiah does not displace either God or Torah in rabbinic thought. Thus, Hillel (fourth century) can deny the coming of Messiah (for which he is rebuked), though he doubtless expected Israel's redemption. So too, the Midrash can declare that the ultimate author of redemption is not Messiah but God, and His kingship is stressed in the liturgy as well (Mid. Ps. to 31:1; 36:1; 107:1).

[Gerald J. Blidstein]

The Doctrine of the Messiah in the Middle Ages

Jewish ideology in the Middle Ages did not receive from the ancient period a coherent, unified concept of the Messiah, messianic times, and the signs of the messianic age. Apocalyptic literature of the Second Temple period (see above) differed greatly from the biblical concept of the Messiah and his times, and talmudic literature and the various Midrashim included many contrasting views about this problem. In the Middle Ages messianic ideas were a product of medieval thought and experience, based on some ancient sources, but developed within medieval Hebrew literature and thought. During the last decades of Byzantine rule in Palestine, in the last years of the sixth century and the beginning of the seventh century, the political upheavals in the Middle East – especially the continuous wars between the Byzantines and the Persians – gave rise to a body of messianic literature, which was destined to play a major role in shaping the image of the messianic age in the eyes of medieval Jewry. The most important work which was written at that time was the Book of *Zerubbabel. In this pseudepigraphical work Zerubbabel, the last ruler of Judea from the House of David, tells his visions concerning the happenings at the end of days and the time of the Messiah. According to this work, the appearance of the Messiah will be preceded by the appearance of a satanic king of Rome, who will be the son of Satan and a stone sculpture of a woman; his name will be *Armilus (= Romulus, the first king of Rome who will also be the last). Armilus will conquer the whole world, vanquish all the traditional enemies of Rome, especially Persia, and will unify the whole world under his religion. He will be a spiritual Satan as well as an emperor. According to the descriptions, the writer seems to see in him a new incarnation, or a new appearance, of Jesus. The whole world will believe in him and see him as god and emperor, except the Jews. The war

of the Jews against this monster will be conducted, at first, by the Messiah son of Joseph, assisted by a woman named Hephzibah. The Messiah son of Joseph will gather all the Jews to Palestine and Jerusalem, but Armilus will overcome him and kill him; Jerusalem will be saved by Hephzibah. Then Hephzibah's son, the Messiah son of David, will arise, overcome Armilus, and the messianic age will begin.

It is possible that this story, which is rich in detailed descriptions of the persons and the wars, and contains detailed dates for all the occurrences included in it, was written under the influence of the great victories achieved by the Byzantine emperor, Heraclius, against the Persians; for a Jew living in Palestine at that time it seemed that the emperor was about to conquer the whole world and reunite the empire with the Christian religion. The author believed that the Messiah was not going to overcome an enfeebled, divided Roman-Christian empire, but that his victory should be against an empire which would be physically and spiritually as strong as possible. Only after such unity is achieved by a Christian "messiah" can the Jewish Messiah appear and overcome the enemy.

A vast literature developed around the Book of Zerubbabel – apocalyptic literature describing the end of the Diaspora, the wars of the Messiah, and the final victory. It is difficult to date the various works in this literature; some of them may even be earlier than the Book of Zerubbabel. One of the most important works in this apocalyptic literature is the "*Otot Mashi'ah*" ("The Signs of the Messianic Age"), in which ten occurrences are described as foreshadowing the imminent appearance of the Messiah. This literature had an enormous impact upon medieval Jewry.

One of the main characteristics of this apocalyptic literature is the complete absence from it of any doctrinal religious or ideological elements. In these works the future is described as an inevitable end of the world as known and the beginning of a new one. In none of these works is there any explanation as to why anything is going to happen, or what a Jew should do in order to help in the great task of bringing about the redemption. The apocalyptic future is given as a story, not as a theological doctrine. This fact became very meaningful in the Middle Ages, when Judaism was divided between conflicting ideologies and theologies; there was nothing in this apocalyptic description which could make it unacceptable to any Jewish ideology. A philosopher, an Ashkenazi Ḥasid, a kabbalist, or a rabbinic traditionalist, could accept the apocalyptic future as described in the Book of Zerubbabel and related works. Thus the appeal of this body of literature became universal to all Jews, in all countries, in both medieval and early modern times. Another characteristic which helped these ideas to be accepted and believed by all Jews is that this literature contained many elements taken from biblical and talmudic sayings about the messianic age. There was no conflict between the texts from ancient times and the apocalyptic literature of the early Middle Ages; what was fragmentary and incomplete in the ancient texts was developed in the latter into a com-

plete, coherent picture, in which it was as easy to believe as if it sprang directly from the traditional sources.

This does not mean that other, non-apocalyptic concepts of the messianic age did not exist in the Middle Ages among Jewish thinkers. Thus, for instance, whereas Eleazar *Kallir, in describing the messianic age, used images similar to those in the apocalyptic literature, his predecessor and probable teacher, the *paytan* *Yannai, used more quiet, non-apocalyptic images in referring to the redemption. Most of the philosophers did not accept the apocalyptic picture, even though Saadiah *Gaon, the first systematic Jewish philosopher, included in his *Book of Beliefs and Opinions* a paraphrase of the Book of Zerubbabel when describing the messianic age. *Maimonides and his followers regarded the coming of the Messiah as a political deliverance of the Jews from the rule of the gentiles, without any upheaval in the order of the world and without any apocalyptic elements. Maimonides also opposed messianic speculation, and rejected rumors from Yemen and other places that a Messiah had come (see Messianic *Movements). However, other philosophers held different opinions. Abraham bar Hiyya, a rationalist philosopher with neoplatonic tendencies, wrote a major work, *Megillat ha-Megalleh*, attempting to establish, by astrological calculations, the date of the coming of the Messiah.

Messianic speculation and attempts to find such dates were a constant feature of Jewish culture in the Middle Ages and early modern times. Dozens of dates were proposed as the dates of the beginning of the redemption, which was divided into many stages; sometimes different dates for different stages were also given. Sometimes the dates set for redemption coincided with great upheavals in the world and terrible persecutions of the Jews – like the beginning of the persecutions by the crusaders (1096), the years of the Black Death in Europe, the Expulsion from Spain (1492), or the persecutions in Poland and the Ukraine (1648). But, even though one date after the other was refuted, the explanation was that the Jews were not sufficiently righteous to accept the Messiah, and a new date was set. The generations preceding and following the Expulsion from Spain were especially rich in such speculations, but in fact every age engaged in such speculations, with very little differences in method and ideological concepts.

Among the theological movements in the Middle Ages the ideas of apocalyptic eschatology clashed with the ideas of personal eschatology, the personal reward that a devout person will receive upon his death in the next world. Evidently, when emphasis was put upon personal redemption in the Garden of Eden the descriptions of national deliverance upon the coming of the Messiah tended to be somewhat blunted. This may have been one of the reasons why Maimonides and his school de-emphasized the apocalyptic nature of the redemption. However, among the masses of the people, belief in the apocalyptic redemption did not diminish.

A good example for this conflict can be found in the movement of the Hasidei *Ashkenaz in the late 12th and early 13th centuries. In their popular works the teachers of Ashkenazi

Hasidism, Judah he-Hasid and Eleazar b. Judah of *Worms, explained the dangers of engaging in messianic speculation and in the belief in false messiahs. Several passages in the *Sefer Hasidim* are dedicated to this question. However, from other sources, esoteric works, and contemporary documents, a different picture is obtained. It was believed that Judah he-Hasid knew when the Messiah was to come, but he died before he could reveal it to his disciples. Judah himself explained in one of his esoteric works that there are a few righteous people in every generation who know this date, but they have to keep it a secret; there is no doubt that he included himself among them. A passage describing the appearance of the Messiah was deleted from the *Sefer Hasidim*, but is found in manuscripts. There is a document from the Cairo *Genizah* from which it can be learned that when a person appeared claiming to be the Messiah, the community appealed to Eleazar of Worms for advice, and he seemed to believe in the veracity of the miracles worked by that person. Even though Ashkenazi Hasidism put the main emphasis on personal redemption, belief in messianic speculation and the imminent appearance of the Messiah was still very strong even among their leaders.

From the 13th century on, especially after the publication of the *Zohar*, messianic speculation and messianic belief was centered in kabbalistic literature, and culminated in the great kabbalistic-messianic movement, Shabbateanism.

[Joseph Dan]

In Modern Jewish Thought

Classical Reform in the 19th century reinterpreted the doctrine of the Messiah in two ways. First, it substituted the belief in a messianic age for the belief in a personal Messiah. Secondly, the messianic hope was severed from its traditional associations with a return of the exiles to Zion, these associations being viewed as too particularistic. The destruction of the Temple and the exile of the Jewish people were seen not as calamities but as affording greater opportunities for the fulfillment of Judaism's "mission" to all mankind. The whole world would become perfected and, through the example of Judaism, monotheism would be the religion of all men. Progress in the Western world, in terms of greater liberalism, Jewish emancipation, social reforms, and better educational facilities, was hailed as the dawn of the messianic age of which the prophets had dreamed. References to a return to Zion were erased from the prayer book. The principles regarding the Messiah in the Reform "Pittsburgh Platform" (1885) read: "We recognize in the modern era of universal culture of heart and intellect the approaching of the realization of Israel's great messianic hope for the establishment of the kingdom of truth, justice, and peace among all men. We consider ourselves no longer a nation, but a religious community, and therefore expect neither a return to Palestine, nor a sacrificial worship under the sons of Aaron, nor the restoration of any of the laws concerning the Jewish state."

The Reform vision of messianism as a perfect world just around the corner and of the Jews as the brave carriers of a

universalistic message ready to be heeded by all was rendered hollow by the rise of Zionism with its stress on the Jews as a nation and its emphasis on a physical return to Palestine, culminating in the emergence of the State of Israel; the threat of antisemitism and the Holocaust in which six million Jews were murdered; and the disillusionment that set in after the two world wars. Even as early as 1937 the "Pittsburgh Platform" was considerably modified by a conference of Reform rabbis in Columbus, Ohio. A statement by the conference dealing with the messianic question reads: "In all lands where our people live, they assume and seek to share loyally the full duties and responsibilities of citizenship and to create seats of Jewish knowledge and religion. In the rehabilitation of Palestine, the land hallowed by memories and hopes, we behold the promise of renewed life for many of our brethren. We affirm the obligation of all Jewry to aid in its upbuilding as a Jewish homeland by endeavoring to make it not only a haven or refuge for the oppressed but also a center of Jewish culture and spiritual life. Throughout the ages it has been Israel's mission to witness to the Divine in the face of every paganism and materialism. We regard it as our historic task to co-operate with all men in the establishment of the kingdom of God, of universal brotherhood, justice, truth and peace on earth. This is our messianic goal."

There is a tendency among some modern Jewish thinkers to invoke once again the traditional idea of messianism as a direct, divine intervention, in which a "new heart" will be created for men, rather than as automatic human progress towards an ideal state. Even a determined non-supernaturalist like Mordecai Kaplan can write (*Questions Jews Ask* (1956), 183): "We can no longer believe that any person or semi-divine being, is divinely destined to rule as the Messiah and usher in the millennium. Nevertheless, the idea of the Messiah can still figure symbolically to express the valid belief in the coming of a higher type of man than this world has yet known." Will Herberg (*Judaism and Modern Man* (1951), 227–35) is typical of the new school of thought. History cannot redeem itself. It proceeds and ends in catastrophe from which it must be redeemed by God. Even the most perfect world state could do no more than enforce peace throughout the world, but the hatred and conflicts among men would remain. The "peace" in the messianic age dreamed of by the prophets is, on the other hand, an inner harmony that needs no external sanctions. To attempt to reduce the prophetic vision of perfection to the level of perfectionist utopianism is to throw confusion into both practical politics and the ultimate insights of religion. It is not surprising, therefore, to find voices raised, also outside the Orthodox camp, in favor of retaining the doctrine of the personal Messiah sent by God.

Orthodoxy retains unimpaired the traditional doctrine. The Messiah is a scion of the House of David. He will reign in Jerusalem, will rebuild the Temple, and will reinstitute the sacrificial system. Many Orthodox rabbis were at first opposed to Zionism in that it seemed to substitute a purely human redemption for the redeemer sent by God. But with the

establishment of the State of Israel the widely held Orthodox view was to see the events in Israel as *athalta de-geulla*, "the beginning of the redemption," i.e., the foundations laid by humans, under God's guidance, ready to receive the building to be erected by God's direct act. Among Orthodox rabbis there is no lack of speculation on the meaning of contemporary events in the light of the messianic hope. Thus M. Kasher (*No'am*, 13 (1970), end) has tried to read: "Then the moon shall be confounded, and the sun ashamed; for the Lord of hosts will reign in Mount Zion, and in Jerusalem, and before His elders shall be glory" (Isa. 24:23) as a prophetic vision in which the moon landings coincide with the establishment of the State of Israel. In the writings of A.I. Kook the argument is advanced that the Jewish people had become too "spiritual," too remote from the world. To pave the way for the Messiah the concrete realities of a modern state based on Jewish principles of justice and compassion are essential. Kook accepted the theory of evolution even in the moral sphere in that it is evidence of the movement of the whole of creation toward its ultimate fulfillment, as in the messianic hope (*Orot ha-Kodesh* (1938) v, 19–22).

MESSIANIC MOVEMENTS.

Basic Elements

The pattern on which Jewish messianic movements were based crystallized in the late Second Temple period and furnished Jews in following generations with certain basic elements. These, when confronted by certain typical challenges, culminated in messianic movements of varying scope. The term "messianic movement" in Jewish history applies to a movement centered around or expressing the yearning for

a king or leader of the house of David and for a new ideal political existence for the Jewish people that would serve as a reassertion of independence and cause their return to Erez Israel, as well as acting as a model and focus for a united and better mankind. Experiencing the miracle of Jewish redemption, mankind would attain an ideal world where true faith and real harmony would prevail. Jewish prayers for redemption, while seeking the advent of the king and the kingdom, also ask “may they all blend into one brotherhood to do Thy will with a perfect heart,” and express the hope that with this change of heart, “Thou shalt reign over all whom Thou hast made, Thou alone” (in evening service (*Arvit*) for Rosh Ha-Shanah). This formulates the abiding hope of the Jew while in the **galut*. The basis of the movements is intense longing for the messianic era. Up to the 18th century it was both an article of faith and an emotional necessity among Jews to hope constantly for the immediate advent of the Messiah. Yet this persistent element did not of itself necessarily lead to the emergence of such movements. Jewish messianic history includes periods and religious trends in which people experienced intense and wholehearted hopes for the Messiah while being lukewarm toward active messianic movements. Thus the *Karaites throughout the Middle Ages had a deep-seated feeling of being in exile; Karaite settlers in Jerusalem in the tenth century called themselves *Avei Zion (“Mourners for Zion”), organizing their life and patterning their thought on the basis of this attachment to Zion. Yet only one Karaite messianic movement is known for certain. The Rabbanite **Ḥasidei Ashkenaz* longed for the Messiah, yet only rarely is any active striving for a Messiah mentioned in their relatively extensive writings. Indeed, some of the expressions they use appear to satirize computations of the date of the coming of the Messiah (J. Wistinetzki (ed.), *Sefer Ḥasidim* (1924), 461, no. 1706). They even warned their readers: “If you see that a man has prophesied the advent of the Messiah, know that he is engaged either in sorcery or in dealings with devils; or that he uses the power of the Divine Name.... One has to say to such a man: ‘Do not talk in this manner’... eventually he will be the laughingstock of the whole world ... they teach him calculations and secrets to bring shame on him and on those who believe him” (*ibid.*, 76–77, no. 212).

This attitude displayed by mystics and ascetics in opposing activist messianism finds even sharper expression in the views of the 13th-century mystic, Naḥmanides. In his disputations with the representatives of Christianity, Naḥmanides told the Spanish king at *Barcelona in 1263:

Our Law and Truth and Justice are not dependent upon a Messiah. Indeed, you yourself are more important to me than a Messiah. You are a king and he is a king. You are a gentile sovereign and he is a king of Israel. The Messiah is but a king of flesh and blood like yourself. When I serve my Creator under your jurisdiction, in exile, torment, and subjection, exposed constantly to universal contempt, I merit great reward; for I offer of my own flesh a sacrifice to God, and my reward in afterlife will be

so much the greater (*Kitvei Rabbenu Moshe ben Naḥman*, ed. by H.D. Chavel, 1 (1963), 310).

The basic consideration put forward here is that the greatness of the individual suffering under alien rule can be as rewarding as redemption. In a work addressed to Jews Naḥmanides wrote:

Even if we thought that it is the will and purpose of God to afflict us with political enslavement on this earth [forever], this would in no way weaken our adherence to the precepts of the Torah, for the sole rewards which we anticipate are those of the world to come – the beatitude of the soul which, having escaped hell’s torments, enjoys the bliss of paradise.

He continues that he believes in the Messiah and redemption because it is true and because it gives him comfort to face the adversities suffered by the Jewish people; but this is not a necessary or sustaining element of his Jewish faith (*Sefer ha-Ge’ullah*, pt. 2; *ibid.*, 279–80).

The extreme wing of modern *Orthodoxy in Judaism and most of the adherents of *Neo-Orthodoxy – in particular *Agudat Israel in the period before the Holocaust and, later, *Neturei Karta – continued, under changed and secularized conditions, old attitudes of messianism which were half-hearted toward a messianic movement. Messianic-prompted efforts have been made toward an ingathering of the Jews without an express connection with either Erez Israel or political independence (see Anan b. David, *Sefer ha-Mitzvot*, ed. by A. Harkavy (1903), 6–7). Jacob *Frank in the 18th century had a savage desire for armed Jewish power and a Jewish settlement on the land – but all this was to be achieved on the soil of Poland. Thus, the modern movement of *territorialists can claim some ancient though rare precedents in traditional Jewish messianic trends.

Within this ideological framework and set of attitudes, the emergence of an active messianic movement required a challenge that would break through the tranquility of the regular messianic hope to turn it into fervent and directed effort, and create a revolutionary constellation. There were elements in Jewish historical consciousness encouraging such active responses to various and widely differing challenges. One element basic to Jewish messianism is anticipation of the “birth pangs of the Messiah” (*hevlei Mashi’ah*) – the time of troubles and turbulence that precedes his coming. Hence, periods in which terrible massacres of Jews occurred (e.g., during the *Crusades or the *Chmielnicki massacres) have also been periods of fervent messianic expectations and movements. Jewish historical conception – and for that matter Christian also – interpreted Daniel’s apocalyptic vision of the four evil beasts (7:2ff.) as denoting four successive evil empires. The fourth will be succeeded by the everlasting dominion of “one like unto a son of man.” He will be given “dominion and glory and a kingdom that all the peoples, nations, and languages should serve Him.” This conception enabled Jews to view great historical and political transformations – the fall and rise of empires and kingdoms, or revolutions and counterrevolutions –

as the death throes of the fourth and last beast-kingdom and the harbingers of the messianic eternal kingdom.

The person to lead the messianic movement – the Messiah himself – was viewed from two different angles. Jews – in particular since the parting of the ways with Christianity – saw the Messiah as a man and not God; in the first place, as a national king. But here the agreement ends. Some, like *Maimonides in the 12th century, stressed that the Messiah will himself die even though his life will be a long one. He will first be tested as the successful warrior-king of Israel and proved its lawful ruler by devotion to Torah. Mankind will follow this new exemplary Jewish state. Nature will not change its laws, though society will become perfect (Yad, Melakhim (1962), 417). Along with this rationalistic conception of the Messiah, there is also a miraculous one, in which the person of the Messiah sometimes attains semi-divine heights. The 17th-century pseudo-Messiah, *Shabbetai Zevi, concluded a letter:

I will have to give full reward to all those who believe truly, men, women, and children – from the Lord of Peace and from me, Israel your Father, the bridegroom coming out from under the marriage canopy, the husband of the dear and virtuous Torah, this beautiful and virtuous matron, the man set on high, the Messiah of God, the lion of the upper regions and the deer of the high regions, Shabbetai Zevi (his letter to Venice, in: J. Saspertas, *Zizāt Novel Zevi*, ed. by I. Tishby (1954), 129).

The rationalistic attitude sometimes reached the extreme of conceiving a Messiah-like political leader. The 14th-century rationalist, Joseph b. Abba Mari ibn *Kaspi, theorizes about:

The imminent actual possibility of our coming out from this *galut*, becoming free to rule ourselves, without a Lord. Thus, while being confined as slaves in Egypt, God took us out from there with a high hand. Now why should not this be even easier for Him in these days? Is there no longer any material available with which this Creator may create a man like Moses, or even of smaller stature, who shall come before the kings and they will give in to him, as Pharaoh gave in the end, though in the beginning Pharaoh hardened his heart to him (*Tam ha-Kesef*, ed. by Last (1913), 44ff., sermon 8).

The miraculous conception of the Messiah evolved a complex of superhuman traits, anticipated actions, and achievements; the Messiah is to take the crown from the head of the alien sovereign by his virtue of appearance alone and redeem and avenge the Jews by miraculous means.

According to the rationalistic image of the Messiah, he should be “a very eminent prophet, more illustrious than all the prophets after Moses” (Maim., *Iggeret Teiman*, ed. A.S. Halkin (1952), 87). In Maimonides’ view prophecy necessitated the highest intellectuality. These criteria were not accepted by most of the messianic movements, whose leadership was largely charismatic. It is related of a pseudo-Messiah who appeared around the end of the seventh century, *Abu ‘Isā (Isaac b. Jacob al-İşfahānī), that, “the most wonderful thing about him in the opinion of his followers is the fact that although he was, as they say, an illiterate tailor and could neither read nor write, he produced books and pamphlets without having

been instructed by anyone” (Jacob al-Kirkisānī’s account of the Jewish sects, ed. by L. Nemoj, in: HUCA, 7 (1930), 328). Not many of the messianic claimants had such humble intellectual beginnings, but practically none of them was regarded by his contemporaries as preeminent among scholars of his day, though some were known as considerable scholars. The most widespread of the messianic movements, that of Shabbetai Zevi, had for its leader a man of less than 40 years old, while its great prophet, *Nathan of Gaza, was 21 when he announced the Messiah and died at the age of 36. It is hardly surprising that men of rationalistic bent rarely saw the embodiment of their ideal in the actual messianic claimants who arose, whereas those inclined to follow a Messiah seldom found a man to rouse them in the Maimonidean ideal. This generally created a situation in which the supporters and opponents of the movement were driven into two opposing camps.

The messianic movements envisioned the coming of the Messiah as an historic breakthrough, a new lease of divine grace, and, according to some theories, as a basic change in the cosmos and divine relationships. Hence a phenomenon accompanying many messianic movements was some proposed change in the way of life of Jews. This ranged from the extreme innovations introduced by the New Testament of early Christianity, through minor variations in the law introduced by early medieval messianic movements, up to the orgiastic tendencies and activities of the Shabbatean movement and even more of the Frankists.

The Movements

EARLY MANIFESTATIONS. Some consider the events surrounding *Zerubbabel of the house of David and his mysterious disappearance (c. 519/518 B.C.E.) as the first messianic movement. The charismatic leadership of the first *Hasmoneans and the devotion they inspired is by rights part of the messianic movement cycle, but for the open question of the claims of this house as opposed to the claims of the house of David. The political and moral ferment created with the rise of *Herod and his house, and even more so with the advent of undisguised Roman rule in Judea, led to the emergence of many messianic leaders and influenced new concepts concerning their aims and leadership. *Jesus of Nazareth was one of many Jews who in this turbulent period claimed to be bringing redemption to the people and who were eventually crucified for announcing their message. *Judah the Galilean told Jews about ten years before the birth of Jesus that it was shameful for them to be “consenting to pay tribute to the Romans and tolerating mortal masters after having God for their Lord” (Jos., Wars, 2:118). Judah and his comrade, “the Pharisee Saddok,” were regarded by the hostile *Josephus as the founders of the Zealots. They had “a passion for liberty that is almost unconquerable since they are convinced that God alone is their leader and master” (Jos., Ant., 18:23). With these men there began a heroic and tragic line of short-lived kings, martyred leaders, and brave fighters for freedom. Combating both the Romans and the Herodians, they developed the concept of

inaugurating the reign of the “Kingdom of Heaven” for God’s elected people here and now. There were many such leaders; it is almost certain that not all of them are mentioned in the extant sources. It is difficult to be certain about their ideas and types of leadership, for the accounts of their activities are subject to distortion either by uncritical admirers or by tendentious enemies. In the case of some of them, not only Jesus, miraculous elements enter the conduct of their leadership. Of *Theudas it is related that he influenced “the majority of the masses to take up their possessions and to follow him to the Jordan River.” He stated that he was a prophet and that at his command the river would be parted and would provide them an easy passage (Jos., Ant., 20:97ff.; see also Acts 5:35–39). For this, he and many of his followers paid with their lives, about 45 C.E. Also mentioned is a Jew from Egypt, “who had gained for himself the reputation of a prophet”; followed by “about thirty thousand” Jews, he went to “the Mount of Olives. From there he proposed to force an entrance into Jerusalem” and to free it from the Romans. Many of his followers were killed in battle (Jos., Wars, 2:261ff.). How he was regarded by the Romans appears clearly from the fact that the Christian apostle *Paul was mistaken for him (Acts 21:37–38). It is almost certain that *Menahem b. Judah was considered a Messiah by the Zealots, as possibly was *Simeon Bar Giora.

The unflinching heroism displayed by the warriors in the great revolt against the Romans (66–70/73 C.E.) is comprehensible only in the context of a messianic movement. Some consider that the reason why the Jews did not despair when their messianic leaders had fallen in battle was because of their belief in the Messiah in the person of the son of Joseph (see *Messiah), who is destined to fight and die before the coming of the Messiah in the person of the son of David. Even Josephus – who tried to conceal the messianic motives of the great revolt – once had to reveal that “what more than all else incited them to the war was an ambiguous oracle, likewise found in the sacred Scriptures, to the effect that at that time one from their country would become ruler of the world” (Wars, 6:312; cf. Tacitus, *Historiae*, 5:13, and Suetonius, *Lives of the Caesars*, Vespasian, 4). The *Qumran scrolls also point to messianic hopes and suffering as activating factors in the life and thoughts of this sect, though lacking the Davidic element.

As the great revolt, the precedent of many types of messianic leadership and activity, lay crushed, many new concepts of messianic challenge and response entered the Jewish mind and imagination as the legacy of this period. One trend of Jewish messianism which left the national fold was destined “to conquer the conquerors” – by the gradual Christianization of the masses throughout the Roman Empire. Through Christianity, Jewish messianism became an institution and an article of faith of many nations. Within the Jewish fold, the memory of glorious resistance, of the fight for freedom, of martyred messiahs, prophets, and miracle workers remained to nourish future messianic movements.

Jewish messianic revolt against the Roman Empire did not cease with the severe defeat of 70 C.E. The Jewish revolt

against Emperor *Trajan in 115–17, which spread like wildfire through Egypt, Cyrenaica, and Libya, had a messianic king-figure at its head. *Simeon Bar Kokhba was at first only one of several messianic figures, though he became the dominating one in the uprising of 132–35 C.E. It is related that the great *tanna*, *Akiva, “when he saw [him] would say: ‘This is the king Messiah’” (TJ, Ta’an. 4:8, 68d). It was only after the death of this semi-legendary figure that the messianic movements began to aim at redeeming the Jews and carrying them back to renewed greatness. Symptomatic of this change is the story about the Jew who appeared in 448, approximately, in Crete and, “said that he is Moses and promised the many Jews on this island to bring them through the sea without ships to Judea.” He fixed a certain date for this miracle, and ordered them to jump into the sea; several of them drowned (Socrates Scholasticus, *Historia Ecclesiae*, 12:33).

Early Middle Ages

The challenge of the appearance of the victorious Arabs and the Muslim caliphate on the world scene gave rise to a new upsurge of Jewish messianic movements. They again assumed a warlike temper, while utilizing social tensions within the Jewish community and some of the military tactics used among Muslims to attain their aims. About 645 there is mention of a Jew who “asserted that the Messiah had come. He gathered around him weavers, carpet makers, and launderers, some 400 men. They burned down three [Christian] sanctuaries and killed the chief of that locality.” The leader of these craftsmen was crucified, after his followers and their families had been massacred (Nestorian Chronicle, as quoted in: Baron, *Social*², 5 (1957), 184). Similar movements relying on miracles are recorded in Muslim Spain and its vicinity in the eighth to ninth centuries.

Much more significant was the movement led by the above-mentioned Abu ‘Isā. His teachings include many significant halakhic variations. According to the Karaite sources, he followed the Rabbanite rite and laws in many matters for tactical reasons so that the Rabbanites did not persecute his followers. Abu ‘Isā acknowledged the prophecy of Jesus and Muhammad, regarding them as prophets for their own followers only. This practical motivation and tendency to temporize was belied by the direction his movements took: Abu ‘Isā led a battle and fell in the fighting, though some of his followers later believed “that he was not killed, but entered a hole in a mountain and was never heard of [again]” (Kirkisānī, ed. by L. Nemoy, in: *HUCA*, 7 (1930), 328, 382–3). Those who followed him in the Islamic lands in the eighth to ninth centuries, like *Yudghan and Mushka, resembled him in inaugurating changes in aspects of religion and in their warlike spirit.

The Later Middle Ages

With the *Crusades, certain new features in messianism appeared. In the Balkans a general movement of repentance was induced by crusader violence. At *Salonika, in 1096, Jews and Christians reported “that Elijah... had revealed himself openly, and not in a dream, to certain men of standing.” People saw

“many signs and miracles.” There was widespread excited anticipation. It was reported that, under the impression that the redemption was at hand, “the Jews were idly neglecting their work.” They sent letters to Constantinople to appraise them of the good news. Other communities sent to inquire about it. There was also a rumor “that all the Byzantine congregations were together in Salonika, and would leave from there” for Erez Israel (J. Starr, *The Jews in the Byzantine Empire 641–1204* (1939), 203–6 no. 153). This was apparently a messianic movement without a Messiah. Jews were united by general feelings of excitation, rumors, and indeterminate tidings.

Maimonides heard that a miracle-working Messiah had appeared – at Lyons in France or Leon in Spain – about 1060. He also heard a tradition that in approximately 1100 a man had been influenced by a dream to proclaim himself Messiah. The man, Ibn Aryeh, was flogged and excommunicated by the community leaders, and with this the affair ended. In the first half of the 12th century messianic ferment was strong in Jewish communities everywhere. About 1121, *Obadiah, the Norman proselyte, met a Karaite *Kohen*, Solomon, who prophesied that within two-and-a-half months all the Jews would be gathered together in Jerusalem, “for I am the man whom Israel is waiting for.” The proselyte was amazed that a man of Aaronide descent should claim messiahship: “It is 19 years since I entered the Covenant and I never heard that Israel is looking for redemption at the hands of a son of the tribe of Levi – only at the hands of the prophet Elijah and the King Messiah of the seed of King David” (J. Mann, in: *Ha-Tekufah*, 24 (1928), 336–7). This encounter in the Near East reveals how deep-rooted, even in the case of a proselyte, was the concept that the Messiah should be of Davidic descent, whereas in sectarian circles the ancient sectarian concept of an Aaronide Messiah (as shown in the *Dead Sea Scrolls) still persisted.

More or less about the same time, in 1120/21, there was messianic excitation in Baghdad centered around a young prophetess (see S.D. Goitein, in: *JQR*, 43 (1952/53), 57–76). In 1127 approximately the same occurred in Fez, Morocco, where the man, Moses Al-Dar’i, a great scholar – and admired by Maimonides even after he proclaimed his messiahship – announced the coming of the Messiah.

He told them that the Messiah was about to appear on the first night of Passover. He advised them to sell all their property and to become indebted as much as possible to the Muslims, to buy from them a thing worth a dinar for ten dinars, and thus to fulfill the words of the Torah [Ex. 12:36], for after Passover they would never see them. As Passover came and went and nothing happened, these people perished for they had sold all their property and their debts overwhelmed them (*Iggeret Teiman*, 103).

Nevertheless, Maimonides expressed satisfaction that this Moses managed to escape to Erez Israel:

There he died, may his memory be blessed. As has been told to me by those who have seen him when he left, he prophesied all that happened later on to the Maghreb Jews, the main outlines as well as the details (*ibid.*, 103).

The story is not only remarkable in demonstrating the influence wielded by the Messiah on large groups of Jews, and their obedience to his instructions, but also instructive since this movement occurred soon after the visit to Fez of Muhammad ibn Tumar, the founder of the *Almohads, and the public discussions he held there with the leaders of the Muslim establishment. Maimonides’ attitude to Moses, his blessing him after his death, and his statement that his prophecies were true, reveal that even such a consistent rationalist could be inconsistent with regard to messianic movements.

The first half of the 12th century also saw the remarkable messianic movement led by David *Alroy. Though the dates and personalities are very confused in the sources mentioning this event, they all indicate that it occurred in the first half of the 12th century, and in the remote eastern districts of the Muslim Empire. Most traditions indicate his great and widespread influence and an extensive campaign of written and oral propaganda. All of them agree about the military character of the movement. The apostate to Islam, *Samuel al-Maghribi, relates that Alroy attempted to take the fortress of Amadiyah, in the mountains of Azerbaijan, by the stratagem of having masses of his believers enter the fortress with hidden weapons (tactics resembling those used by the earlier Muslim founder of the Assassins, Hasan ibn al-Sabbah, with regard to the fortress of Alamut). The apostate adds that:

When the report about him reached Baghdad two Jewish tricksters, cunning elders, decided to forge letters by Menahem to the Jews of Baghdad bringing them the good tidings which they had been expecting since of yore; that he would appoint for them a certain night in which all of them would fly to Jerusalem. The Jews of Baghdad, their claim to sagacity and pride in craftiness notwithstanding, were all led to believe it. Their women brought their moneys and jewels in order that it all might be distributed on their behalf, as charity to those whom the two elders considered deserving. In this manner the Jews spent the bulk of their wealth. They donned green garments and on the night gathered on the roofs expecting, he asserted, to fly to Jerusalem on the wings of angels. Women began to weep over their nursing infants; what if the mothers should fly before their children or the children before their mothers? The children might suffer because of the delay in feeding (*Iḥām al-Yahūd: Silencing the Jews*, ed. and trans. by M. Perlmann (1964), 73).

Despite its obvious intention to ridicule, this tale cannot be dismissed out of hand, for this readiness among Jews to believe in miracles is also found in Maimonides’ story about the movement in North Africa.

About 1172 a Messiah appeared in the Yemen. Maimonides’ hostile reaction to him shows that he had a clear and proclaimed revolutionary social aim, incomprehensible to Maimonides:

He told them that each man shall distribute all his money and give to the poor. All those who obey him are fools and he is a sinner; for he acts against the Torah. For according to our Torah a man should give as charity only part of his money and not all of it.... No doubt his heart and mind that have misled him to say that he is a Messiah have also brought him to tell the peo-

ple to leave all their property and give it to the poor. Thus they will become poor and the poor rich, and according to his law they [the former poor] will have to return to them [the now impoverished rich] their money. In this fashion money will go back and forth between rich and poor unceasingly (*Iggeret Teiman*, 89).

Maimonides advised the communities to proclaim him a madman or put him to death (*ibid.*, 93, 95). Later on, in a letter to the scholar of Marseilles, Maimonides related further details about the movement and its end. By this time he knew that the man in the Yemen was only:

saying that he is a messenger to smooth the path for the King Messiah. He told them that the Messiah [is] in the Yemen. Many people gathered [around him] Jews and Arabs and he was wandering in the mountains.... He gave them new prayers.... After a year he was caught and all who were with him fled." Asked by his Arab captor for proof of the divine source of his message, the Yemen Messiah "answered him: 'Cut off my head and I will come back to life immediately,'" and so he was killed. Maimonides heard that there were still many foolish people in the Yemen who believed that he would arise and lead them yet (A. Marx, in: *HUCA*, 3 (1926), 356).

In the 1240s a new source of messianic excitation accompanied the rumors and hopes centering around the news of the Mongol advance into European countries. Meshullam da Pierra in a poem was certain that:

in our days the kingdom shall be renewed for the lost nation and the scattered communities. Tribute will be brought to the son of David, and gifts to my counts and dukes. My Temple will be rebuilt.... There are tribes that have been exiled and now they have left the land of the living. Proof that God has sent them is that many rulers have come to harm.... Babylonia, Aleppo, and Damascus were taken [by the Mongols in 1260].... My Savior has broken through the mountainous wall.

To about the same time should be ascribed the information that "women in the land of Canaan [i.e., Bohemia] were reciting the entire Book of Isaiah by heart and ignorant people knew by heart all the prophecies of consolation" (J. Wistinetzki (ed.), *Sefer Hasidim* (1924), 77 no. 212).

Spain and the Marranos

At the end of the 13th century the kabbalist Abraham b. Samuel *Abulafia saw himself as the Messiah or the harbinger of the Messiah and tried to spread the word through apocalyptic writings. Solomon b. Abraham *Adret had to oppose the "prophet of Avila" who prophesied the coming of the Messiah in 1295 and had a large following in Avila. There is some information that there was an upsurge of messianic excitation around 1350 (see *Shemariah of Negroponte). The catastrophe of the persecutions of 1391 in Christian Spain led to widespread messianic ferment. In the vicinity of Burgos there appeared a prophet who foretold the imminent coming of the Messiah. At the Disputation of *Tortosa the Christian protagonist claimed that "in our day R. Ḥasdai *Crescas has announced a report and preached to congregations in the synagogues that the Messiah had been born in Cisneros, in the kingdom of Castile."

Crescas entertained, it would seem, even more earthly hopes. He imagined the realities of the Second Temple period "as if the king of Egypt, who now reigns over the land of Israel, were to grant permission to Jews living elsewhere in his empire to go and rebuild the sanctuary, on the condition that they submit to his rule" (in his *Or Adonai*). In a letter of that time from which all proper names have been carefully deleted, it is related that a certain teacher taught that the calamities of the period should be seen as the birth pangs of the Messiah; there was a proliferation of confused messianic tidings:

This one writes about the Lord's Messiah, that he shall surely come by Passover time, and that one says: 'Behold, he stands already at our walls....' Another declares that if the Feast of Tabernacles should arrive and there is yet no Messiah, then surely it is God's will to have us die and to harden our hearts from his fear. But before he has done talking, yet another comes and says: 'It is rumored that a prophet has arisen in Israel who has seen a vision of the Almighty.... The Lord revealed himself in a dream at night and assured him of great amelioration: misery and grief shall flee the years wherein we have seen evil shall be no more; lo, this presages good, this proclaims salvation' (Baer, Spain, 2 (1966), 158–62).

As the position of the Jews in Christian Spain steadily deteriorated, messianic hopes were kept alive. The fall of Constantinople in 1453 awakened great messianic hopes and speculations both in the communities of Spain and among Ashkenazi Jewry. Among the forced converts (**anusim*) men and women prophesied the coming of the Messiah. Letters from the Constantinople community related tales about the birth of the Messiah, the place of his activity, and mode of living. A mother and daughter told their Converso friends: "The gentiles do not see us [do not understand us], for they are blind and know not that the Lord our God hath decreed that for a time we should be subject to them, but that we shall now surpass them [have the upper hand], for God hath promised us that after we go to those lands [overseas], we shall ride on horses and pass them by" (*ibid.*, 292–5). Even on the eve of the expulsion of the Jews from Spain, both Jews and *anusim* actively harbored these hopes. About 1481 a Converso told a Jew, when at his request the latter read the messianic prophecies to him: "Have no fear! Until the appearance of the Messiah, whom all of us wait for, you must disperse in the mountains. And I – I swear it by my life – when I hear that you are banished to separate quarters or endure some other hardship, I rejoice; for as soon as the measure of your torments and oppression is full, the Messiah, whom we all await, will speedily appear. Happy the man who will see him!" One Marrano was certain that the Messiah would possess the philosopher's stone and be able to turn iron into silver. He also hoped that "in 1489 there will be only one religion" in the world. Even after the expulsion many Marranos expressed these hopes and were punished for them by the Inquisition (*ibid.*, 350 ff.).

Ferment in the 16th to 18th Centuries

In the 16th century there were numerous expressions of messianic expectation. In 1500–02 Asher *Lemlein (Lammlin)

preached repentance and the imminent coming of the Messiah. He had great influence. The grandfather of the chronicler David *Gans “broke up the oven that he had for baking *mazzot*, being sure that next year he would be baking *mazzot* in the Holy Land” (*Zemah David*). From the end of the 15th century tales originating in and letters from Jerusalem show messianic hopes centering around the *Ten Lost Tribes of Israel. Joseph *Hayyun commenting on the verse “In his days Judah shall be redeemed and Israel will live secure” (Jer. 23:6) wrote:

He [Jeremiah] said that Judah shall be redeemed and not that Israel shall be redeemed, for Israel need no redemption for they are not in *Galut*. I mean the Ten Tribes, for they are a great people and they have kings – according to what has been told about them – but Judah needs redemption, whereas [the people of] Israel will then live secure in Erez Israel, for now they are not living so secure as they are abroad. What is more, they fight continuously with the gentiles around them (his commentary to Jeremiah, British Museum, Add. Ms. v 27, 560, fol. 106).

The great Mishnah commentator Obadiah of *Bertinoro wrote in 1489 from Jerusalem to his brother in Italy:

Jews have told us that it is well known, as related by reliable Muslim merchants, that far away, a journey of 50 days through the desert, there lies the famous *Sambatyon River; it surrounds the whole country where the Children of Israel live like a thread. It throws up stones and sand, resting only on the Sabbath. The reason why no Jew goes to this country is because they avoid desecrating the Sabbath. According to their tradition all of them – the descendants of Moses – are saintly and pure like angels; there are no sinners among them. On the outer side of the Sambatyon River there are Children of Israel as numerous as the sands of the seashore, kings and lords, but they are not as saintly and pure as those living on the inner side of the river (A. Yaari, *Iggerot Erez Yisrael* (1943), 140).

Obadiah believed in the existence of a Jewish realm beyond and around the miraculous river which was not only independent and strong but also consisted of two circles of life – an inner, more holy one, and an open, less holy one. Messianic expectations in this period centered actively around these images and fantasies as shown, for example, in the writings of *Abraham b. Eliezer ha-Levi from Jerusalem.

With the advent of David *Reuveni and Solomon *Molcho many Jews were convinced that they were seeing and hearing a prince of those tribes and one of his devoted companions. About the same time many Jews pinned their hopes on Martin *Luther as a man who had come to pave the way for the Messiah through gradually educating the Christians away from their idolatrous customs and beliefs. In Safed, messianic hopes were strong in the circles around Isaac b. Solomon Ashkenazi *Luria and Hayyim b. Joseph *Vital. The latter once dreamed:

I stood on the peak of the great mountain to the west of Safed ... over Meron village; I heard a voice announcing and saying, ‘The Messiah is coming and the Messiah stands before me.’ He blew the horn and thousands and tens of thousands from Israel were

gathering to him. He said to us, ‘Come with me and you shall see the avenging of the destruction of the Temple.’ We went there; he fought there and defeated all the Christians there. He entered the Temple and slew also those who were in it. He commanded all the Jews and told them, ‘Brethren, cleanse yourselves and our Temple of the defilement of the blood of the corpses of these uncircumcised ones and of the defilement of the idolatry that was in it.’ We cleansed the Temple and reconstructed it as it was, the daily burnt offering was brought by the arch-priest who looked exactly like my neighbor Rabbi Israel (his *Sefer ha-Hezyonot* (1954), pt. 2, no. 2, p. 41).

This blend of the Safed reality and messianic visions of war and glory expresses the intensity of messianic hopes in kabbalistic circles that found expression in Shabbetai Zevi in the 17th century. Most communities became involved with Shabbetai Zevi and the messianic movement he led in the 1660s. In it many aspects of the messianic movements reached their highest expression, to be faced by crisis: his followers fervently believed that the Messiah would achieve a miraculous victory and were cruelly disappointed when Shabbetai Zevi collapsed before the terror of punishment; the masses of his followers repented, but repentance proved of no avail. The movement stimulated Jews to feelings of liberation, but they remained subjugated; orgiastic aspects developed which discredited the movement. The movement led by Jacob Frank in the 18th century introduced the elements of nihilism, licentiousness, and severance of the connection between messianism and Erez Israel.

Scholars are divided as to whether in its origins Ḥasidism bore traits of a messianic movement or whether it was on the contrary a kind of sublimation of messianism.

The Modern Period

In modern times the *Haskalah (Enlightenment) and *Reform wings of Judaism increasingly tended to regard their activity in spreading pure and rational monotheism as a kind of collective movement of messianic “mission.” In his letters Leopold *Zunz referred many times to the European revolution of 1848 as “the Messiah.” Even many Jews who left the faith tended to invest secular liberation movements with a messianic glow. Martin *Buber expressed the opinion that the widespread Jewish activity in modern revolutionary movements stemmed both from the involvement of the Jew with the state and his criticism of it through his messianic legacy (see *disputations).

Zionism and the creation of the State of Israel are to a large extent secularized phenomena of the messianic movements. The ideology of the Zionist religious parties, *Mizrachi and *Ha-Po’el ha-Mizrachi, tends to regard them – in particular the achievements of the State of Israel – as an *athalta di-ge’ulla* (“anticipation and beginning of redemption”), thus retaining the traditional concepts held by messianic movements in conjunction with the new secularized aspects of the State and its achievements.

Jewish messianism, though appearing in many shapes and permutations, has been and continues to be an activist element in world culture. For Jews it has retained, through the leaders and movements to which it has given rise, the life-force of cha-

risma, and the binding spell of Jewish statehood and kingship to be realized immediately through God's will, through the passion and devotion of His people. Some have spoken of "the price" that Jews and Judaism have had to pay for disappointment and disenchantment after every failure of the messianic movements. Against this are to be set the benefits that these visionary movements gave to a suppressed people – in inspiring them to activity, revitalization, and a sense of sacrifice.

For a late 20th century manifestation of this phenomenon, see *Chabad and *Schneerson, Menahem Mendel.

MESSINA, seaport in Sicily. Around the year 1171, Benjamin of *Tudela found 200 (families of?) Jews in Messina. Between 1279 and 1282 the community received the famous kabbalist Abraham *Abulafia, who gave instruction there to two disciples, Abraham and Nathan. In 1347 some Jews of Messina were accused of the ritual murder (see Blood *Libel) of a Christian boy and consequently sentenced to death, an event which was commemorated by a marble inscription in the cathedral. At that time, the Jews lived in a separate quarter called the Paraporto or Giudecca. Although the various communities in Sicily were under the jurisdiction of the *dienchelele, at one stage the Jews of Messina were exempt from it. Their community was administered by councillors (*proti*), who, with the assent of the elders, had the authority to excommunicate offenders against Jewish law. When he was *dienchelele*, Moses *Bonavoglia (Hefez) of Messina intervened with Alfonso V in 1428 on behalf of the Sicilian Jews and succeeded in having the order concerning conversionist sermons revoked: in 1440 he constructed an assembly hall for the synagogue. In 1487–88 Obadiah of *Bertinoro was in Messina for some months. He gives a vivacious account of the conditions of the community in a letter to his father in Città di Castello. A manuscript of *Nahmanides' commentary on the Pentateuch, revised and corrected by the scholars of Messina, formed the basis of the 1490 Naples edition. There were 180 Jewish families in the city in 1453. When the Jews were expelled from Sicily in 1492, some 2,400 of them left Messina. In 1728, permission was given for the return of Jews to Messina and the reestablishment of a synagogue, but the experiment was unsuccessful.

MESSING, SHEP (1949–), U.S. soccer goalie. Messing was born in the Bronx, the third of five children of Elias, a lawyer, and Anne, a teacher. The family moved when Messing was two to Roslyn, Long Island, where he was a wrestling, soccer, and track & field star at Wheatley High School, setting a county record in the pole vault at 13 ft. 6 in. and winning the county championship in soccer his senior year in 1967. He spent two years at New York University, being named to the All-American soccer team his second year. After tasting his first international competition as goalie for the U.S. Maccabiah team in 1969, Messing transferred to Harvard College, graduating in 1972. After playing for the U.S. Pan American team in 1971, Messing was the starting goalie on the U.S. Olympic team at the 1972 Munich Games. He signed with the New York Cosmos, playing one game in 1973 and eight games in 1974 before leaving for the Boston Minutemen for the 1975 season. He led the league that year with six shutouts. The following season Messing returned to the New York Cosmos, helping to lead them to the championship in the Soccer Bowl in 1977. A flamboyant goalie who once posed for *Playgirl* magazine, Messing was in the forefront of the late 1970s soccer boom in the United States. He played with the Oakland Stompers in 1978 and with the Rochester Lancers in 1979 before retiring from the North American Soccer League after appearing in 120 games for four teams. He then played six seasons for the New York Arrows of the Major Indoor Soccer League, leading the team to the championship in the league's first four seasons of existence. Messing rejoined the Cosmos in 1985 when the team switched to the MISL, his last season playing professionally. After retiring, Messing began a career in broadcasting. He is the author of *The Education of an American Soccer Player* (1978).

[Elli Wohlgeleinter (2nd ed.)]

MESSINGER, RUTH WYLER (1940–), U.S. political leader, activist, and organizational philanthropist. The daughter of Wilfred and Majorie Goldwasser Wyler, Messinger was a third-generation New Yorker who received university degrees from Radcliffe College and the University of Oklahoma. In her early career she worked as a teacher, social worker, and administrator. She was married to Eli C. Messinger (from whom she was later divorced), and had three children.

Messinger served 20 years in New York City government, beginning in 1977, including 12 years on the City Council advocating for children, public education, campaign financing reform, gay rights, and small businesses. In 1990 she began eight years of service as Manhattan Borough president. Messinger became the first woman to be selected as the Democratic Party's candidate for mayor in 1997 and ran a campaign focused on improving public education. Throughout her 20 years in public service she worked extensively on issues of foster care, domestic and other violence against women, campaign finance, waterfront development, and tax policy. Messinger also founded the first non-profit facility in New York serving women with AIDS and their children.

In 1998, Messinger assumed the role of president and executive director of the American Jewish World Service, a humanitarian organization providing non-sectarian grassroots development and emergency relief to people in developing nations. Under Messinger's leadership, AJWS expanded its scope and visibility, creating new programs in the areas of education, outreach, and service. In 2000, Messinger also launched the Women's Empowerment Fund (WEF) through the AJWS, supporting projects in 18 countries that provide funds to grassroots women's groups in the developing world. Messinger is an active member of the Society for the Advancement of Judaism and has worked in an advisory capacity with the Jewish Fund for Justice. She served as national chair of the advisory council of the National League of Cities and president of Women in Municipal Government. Messinger has also been a board member of the Jewish Foundation for Education for Women, a board member of Project Enterprise, and a member and president of the board of Surprise Lake Camp, a Federation of Jewish Philanthropies camp for New York City area children.

MESTEL, JACOB (1884–1958), Yiddish poet, actor, journalist, playwright, and theater director. Born in Zlochev, Galicia, his first lyrics appeared in the Lemberg (Lvov) *Togblat* and were collected in the booklet *Ferkholemt Shoet* ("Dream Hours," 1909). He gained his first professional theatrical experience in Vienna (1910–14), and after serving as an officer during World War I, he directed the Freie Juedische Volksbuehne (1918–20). Immigrating to the United States in 1920, he joined Maurice *Schwartz's Yiddish Art Theater in 1923, and then directed his own group Artef, where he experimented with bold theatrical innovations. From 1926 he and Jacob *Ben-Ami produced Yiddish plays in New York and on tours which included South America. Author of *Literatur un Teater* ("Literature and Theater," 1962), he co-edited the leftist monthly *Yidische Kultur* and the first three volumes of Zalman Zylbercweig's *Leksikon fun Yidishn Teater*. From 1950 to 1958 he was editor of the IKUF publishing house.

METALS AND MINING.

In the Bible

Six metals are mentioned in the Bible and in many passages they are listed in the same order: gold, silver, copper, iron, tin, and lead. Antimony is also mentioned. The metals are

referred to in various contexts, including methods of mining, metallurgical processes of extracting the metal, and preparing finished products. The strategic and economic importance of metals and of metal craftsmen is stressed. The prophets employ figures of speech based on the properties of metals and the stages of their treatment. These metals have been uncovered in excavations in Erez Israel in the form of vessels and slag. At Tell Jemmeh, Tell Kasila, Timnah, and other sites, furnaces for smelting iron and copper have been found dating from different periods. The only explicit biblical reference to a foundry is to that of King Solomon "in the plain of Jordan ... in the clay ground" where Temple vessels were produced (1 Kings 7:46). Utensils for smelting are mentioned mainly as metaphors – "But you the Lord took and brought out of Egypt, that iron blast furnace" (Deut. 4:20). Isaiah speaks of refining silver in a furnace (Isa. 48:10); while Proverbs (27:21) describes the refining of gold and silver in a furnace. Ezekiel compares Israel with the process of refining metals: "The house of Israel has become dross unto Me; all of them, silver and bronze and tin and iron and lead in the furnace, have become dross" (Ezek. 22:18). The prophet was apparently well acquainted with the technical process of refining and smelting silver, and describes how silver is extracted from its ores by means of bellows, leaving slag behind. The working of metals was executed by special smiths and craftsmen, the first of whom was "... Tubal-Cain, who forged all implements of copper and iron" (Gen. 4:22). The Bible speaks of the high qualifications necessary for the specialized metalwork of the Tabernacle: "I have endowed him with a divine spirit of skill, ability, and knowledge ... to make designs for work, in gold, silver, and copper" (Ex. 31:3–5). Solomon was forced to bring the craftsman Hiram from Tyre to work in copper (1 Kings 7:13–14). The Bible describes the Philistine monopoly of metalsmiths and their strategic importance: "Now there was no smith to be found throughout all the land of Israel; for the Philistines said, 'Lest the Hebrews make themselves swords or spears'" (1 Sam. 13:19). The great importance attributed by Nebuchadnezzar to craftsmen and smiths is evident in his deporting them from Jerusalem together with Jehoiachin's army to prevent a possible revolt (11 Kings 24:15–16). The methods of working metal after its extraction varied according to the type of metal and the use to which it was put: casting, hammering, gilding, preparing metal, wires, etc.

GOLD (Heb. *zahav*). Gold is one of the rare metals found as an element in nature. It is extracted from the earth by a process of collecting and washing. Specialized goldsmiths employed two methods in working gold. The first consisted of beating it with a hammer into very thin sheets which was possible because of the gold's softness. The sheets were used for, among other things, gilding, and also for making gold wire: "They hammered out sheets of gold and cut threads..." (Ex. 39:3). The second method consisted of melting the gold and then casting it (Ex. 25:12). In the process of melting, the gold was also refined; refined gold, which was necessary for certain

purposes (1 Chron. 28:18), is apparently identical with “pure gold” (Ex. 25:17).

In various biblical passages words are mentioned that are explained as synonyms of gold: *segor* (Job 28:15); *paz* (Ps. 21:4; Lam. 4:2); *ketem* (Prov. 25:12); *haruz* (Ps. 68:14; Prov. 3:14); and *bazer* (Job 22:24; sometimes understood as “gold ore” or “ingots”). In addition, there are adjectives describing gold, some of which may designate types of gold. The various kinds of gold mentioned in the Bible are summarized in the Talmud (Yoma 44b–45a): “There are seven kinds of gold: gold; good gold (Gen. 2:12); gold of Ophir (1 Kings 10:11); fine gold (*ibid.* 10:18); beaten gold (*ibid.* 10:17); pure gold (*ibid.* 6:20); gold of Parvaim (11 Chron. 3:6).” In the talmudic discussion concerning the different types of gold, Ophir gold is said to be derived from the place name *Ophir, whereas the other adjectives are said to designate metallic or commercial qualities of gold: *zahav mufaz*, “fine gold,” because it resembles *paz* (“a shining jewel”); *zahav shahut*, “beaten gold,” because it is spun like thread (Heb. *hut*); *zahav sagur*, “pure (lit. “locked”) gold,” indicates such fine quality that when its sale begins all the other shops lock up; *zahav parvaim*, “gold of Parvaim,” is said to look like the blood of a bullock (Heb. *par*), but it may also designate a place-name.

The Bible mentions various places from which gold was brought into Erez Israel. Scholars do not agree as to the identification of most of these places but in all probability they include the countries in which gold mines were located in the biblical period: Egypt, Sudan, Saudi Arabia, and India. Among the places cited is the “land of *Havilah” (Gen. 2:11–12), which scholars locate either in southeast Sudan, northwest Ethiopia, or in the southern Sinai Peninsula. The location of Sheba (1 Kings 10:6–10) is also disputed (see *Sabea); some scholars place it in Ethiopia and others consider it the name of one of the regions or tribes in southern Arabia. Ophir, which was reached by ships from Ezion-Geber (1 Kings 9:26–28; 10–11; 22:49), is identified by *Josephus with India, but, like Havilah and Sheba, it has also been located in Saudi Arabia. Uphaz has not been identified (Jer. 10:9). Parvaim (11 Chron. 3:6) is either a place in Arabia or an adjective describing gold as in the talmudic explanation mentioned above.

As early as the patriarchal period, gold was used for manufacturing jewelry and fine vessels (Gen. 24:22) whose value was measured by the amount of gold they contained. Gold was a symbol of wealth and position and served as capital but not as a means of payment. Silver served as currency, but gold bullion as payment is mentioned only once in the Bible: “So David paid Ornan 600 shekels of gold by weight for the site” (1 Chron. 21:25; but cf. Num. 22:18; 24:13; 11 Sam. 21:4; 1 Kings 15:19; Ezra 8:25f.). The Mishnah explains that “Gold acquires silver, but silver does not acquire gold” (BM 4:1), i.e., gold is valuable as property while silver is a means of payment. At the time of the Exodus from Egypt, the Israelite women borrowed from their neighbors “objects of silver, and gold, and clothing” (Ex. 12:35). Aaron broke off golden earrings to make the golden calf (*ibid.* 32:3). The fullest descriptions of the use of gold are

found in the accounts of the building of the Tabernacle in the desert and of Solomon’s Temple. In the Tabernacle, gold leaf and gold casts were used, for which the gold was contributed by the Israelites: “And these are the gifts that you shall accept from them: gold, silver, and copper” (Ex. 25:3). The finest craftsmen executed the work (*ibid.* 31:4). Solomon obtained gold for the Temple and his palace from the booty taken in King David’s wars (11 Sam. 8:7; 12:30) and from trade with Ophir on Hiram’s ships (1 Kings 9:28). Gold vessels of all kinds denoted wealth and nobility and were also important in ritual. At the same time, the principal idols were made of gold and silver and the prophets inveighed against the worship of these graven images (Isa. 30:22). The wealth and prestige of silver and gold in the form of property and of idols were used as symbols by the prophets: “Neither their silver nor their gold shall be able to deliver them...” (Zeph. 1:18). Wealth and gifts of splendor were associated with gold: the Queen of Sheba brought Solomon “... very much gold” (1 Kings 10:2); “and the whole earth sought the presence of Solomon to hear his wisdom ... every one of them brought articles of ... gold” (*ibid.* 10:24–25). The shields of Solomon’s guard were made of gold (*ibid.* 14:26), and when Ahasuerus made a great banquet for the nobility of his court, he served them from “golden goblets” (Esth. 1:7).

SILVER (Heb. *keseif*). The main minerals in which silver appears in nature are natural silver and silver sulfides. Silver is commonly found in association with gold and copper, and sometimes with lead. Silver was known to man in earliest antiquity; articles of silver have been found in Erez Israel from as early as the Middle Bronze Age. Silver mines in ancient times were located in Spain, Egypt, and Anatolia. According to the Bible, silver, like other metals, was brought by Solomon from *Tarshish (11 Chron. 9:21) and Arabia (9:14). Silver was extracted from its ore by smelting, with the use of bellows, and the slag containing lead was separated from the silver (Jer. 6:29–30). Job was acquainted with the technical process of extracting silver: “Surely there is a mine for silver, and a place for gold which they refine” (Job 28:1). Ezekiel also describes the method of extracting silver and mentions slag containing bronze, iron, lead, and tin (Ezek. 22:20–22).

Because of the high value of silver, it was used as a means of payment from earliest times, in preference to gold which was extremely soft. Payment in silver took the form of bullion (“400 shekels of silver,” Gen. 23:15) or was weighed on scales. The biblical verse “Here, I have with me the fourth part of a shekel of silver” (1 Sam. 9:8) clearly indicates the use of coins. The Temple tax was also paid in silver coins (“a half-shekel,” Ex. 30:13). In the Bible the shekel designates a unit of weight (Heb. *mishkal*), from which the term *shekel is apparently derived. Weighing the silver was replaced by standard units of weight, which became *coins; later the coins were counted, as, for example, “I herewith give your brother 1,000 pieces of silver” (Gen. 20:16).

Silver was also used for making vessels for the Tabernacle and the Temple. It was a symbol of wealth and position as in

the description of the palace of Ahasuerus "... silver rings and marble pillars, and also couches of gold and silver..." (Esth. 1:6). When "all the kings of the earth" came to hear Solomon, they brought him gifts of gold and silver (11 Chron. 9:23–24). The most outstanding description of a king's wealth is the chariot bought in Egypt by Solomon for 600 shekels of silver (1 Kings 10:29). Job describes kings and counselors "who filled their houses with silver" (Job. 3:15). Among biblical figures of speech and similes based on silver is: "Your silver is become dross" (Isa. 1:22), i.e., the very valuable metal is transformed into something worthless like the slag formed during its reduction. The smelting and refining of silver are used as symbols of the Israelites: "For Thou, O God, hast tested us; Thou hast tried us as silver is tried" (Ps. 66:10). Trade in silver becomes a symbol of trade in general; although it is an honest trade, it is transcended by the acquisition of wisdom "For the gain from it is better than gain of silver" (Prov. 3:14).

COPPER (Heb. *neḥoshet*). The copper referred to in the Bible is not pure copper but an alloy of copper and tin. This alloy – bronze – was the most useful and important metal from the beginning of the third millennium B.C.E. to the 13th century B.C.E. when it began to be replaced by iron. Copper mines in the ancient Near East were located in Cyprus (from which the name copper is apparently derived), Sinai, and Egypt. It was the main metal extracted in Erez Israel in antiquity and is the only one mined there today. Copper is usually extracted from sulfide minerals, and partly from silicates, and carbonates; very small amounts of native copper are also found.

The Arabah contains copper mines in three main centers: (1) Faynān (biblical Punon, Num. 33:42), around 25–30 mi. (40–50 km.) south of the Dead Sea in the eastern Arabah; (2) the area of Wadi Abu Khushayba, around 8 mi. (13 km.) southwest of Petra; (3) and in the Timnah-Amram region which also extends southwest of Elath. The copper deposits appear in the form of concentrates in the white Nubian sandstone with a base of *Evronah* complex formation of the Lower Cretaceous period. The concentrates are connected with the layer of fossilized trees in the sandstone and are composed mainly of sulfides, carbonates, silicates, and copper oxides. They have a high copper content which reaches as much as 30–40%. N. Glueck, the first to describe these deposits in detail, attributes the beginning of copper mining and smelting activities to the Kenites, Kenizzites, and Kadmonites (Gen. 115:19), who inhabited the area and were related to Tubal-Cain (i.e., the Kenite), the first metalsmith (*ibid.* 4:22). In Glueck's opinion they were nomadic tribes who wandered in the Arabah and were metallurgical specialists. He also associates the Edomites with the metal industry and its trade through the Arabah and the Red Sea. The area was conquered by David, and Solomon continued to work the mines and develop international trade, mainly by way of Ezion-Geber; his metallurgical industry was located in the plain of the Jordan "in the clay ground between Succoth and Zarethan" (1 Kings 7:46). Glueck suggests that copper was even exported from the

Arabah by Solomon, and also that the protracted wars between Judah and Edom during the period of the Kingdom of Judah were over control of the copper mines in the Arabah.

Excavations carried out between 1959 and 1969 by the Arabah Expedition headed by B. Rothenberg concluded that the copper mines in the Timnah area are not to be attributed to the time of Solomon. Rothenberg distinguished three periods at the site: the Chalcolithic period (fourth millennium B.C.E.), the Early Iron Age, and the Byzantine period (third–fourth centuries C.E.). Rothenberg suggests that Egyptian kings in the 14th–12th centuries B.C.E., and not the kings of Israel and Judah, sent mining expeditions to the Arabah, and that the copper mines and the smelting installations were operated by the Egyptians together with the Midianites, Kenites, and Amalekites. Among the finds in an Egyptian temple discovered in Timnah was a copper snake which dates it to the time of the Exodus. According to the excavator, the Kenites and the Midianites employed highly developed methods of copper production that ceased with the Israelite Conquest; only commercial activities, and not production, were undertaken in the period of the Monarchy by way of Ezion-Geber and the Red Sea to Ophir and Sheba. Rothenberg also emphasizes that a metallurgical center was located in the Succoth-Zarethan area where imported raw copper was made into finished products (1 Kings 7:46). The copper was extracted from its ore by smelting in an oven and then cast. Heat was produced by charcoal from acacia trees which grow in the Arabah.

Much copper was used in manufacturing vessels for the Temple and especially for the Tabernacle: clasps, sockets, rings, posts of the enclosure, lavers, etc. (Ex. 26–36). The biblical description of copper weapons indicates a highly developed military culture, e.g., the description of Goliath: "He had a helmet of bronze on his head, and he was armed with a coat of mail, and the weight of the coat was 5,000 shekels of bronze" (1 Sam. 17:5–7). Copper was fashioned into a symbol for the Israelites in the desert in the form of a serpent of copper made by Moses (Num. 21:9; see *Copper Serpent); it was preserved by the Israelites up to the time of Hezekiah who destroyed it, calling it *Nehushtan (11 Kings 18:4). The destruction of the Temple is emphasized by the removal of the copper; after the Temple was burnt, the Babylonians destroyed all the objects in it and carried away a great many copper objects to Babylonia and "the bronze of all these vessels was beyond weight" (11 Kings 25:13, 16). In its use in vessels for the Tabernacle and Temple and for weapons, copper symbolized strength and rigidity – "The skies above your head shall be copper" (Deut. 28:23). It also denoted drought – "I will make your skies like iron and your earth like copper" (Lev. 26:19). The word for chains (*neḥushtayim*) is also derived from copper. Not only the heaven and earth but also the Israelites are compared with rigid copper: "your forehead copper" (Isa. 48:4).

IRON (Heb. *barzel*). Job was acquainted with the technical process of extracting iron from iron ore: "iron is taken out of the earth" (Job. 28:2). Isaiah described the smith's technique of

working iron with the help of charcoal to produce steel suitable for making vessels (Isa. 54:16). The Bible speaks of Tubal-Cain as the first metalsmith (Gen. 4:22; see above discussion of copper). Some scholars identify the family of Japheth, to whom Tubal-Cain was related, with peoples who inhabited the coast of the Black Sea. Iron was first exploited by the Hittites in Asia Minor and it was brought to Syria and Erez Israel by Phoenician merchants. Another source of iron was Tarshish, and “massive iron” was brought from Vedan and Javan (Ezek. 27:12–13, 19).

The Early Iron Age in Erez Israel corresponds roughly with the period of the Philistines (from c. 1200 B.C.E.). The iron in the hands of the Philistines may have been connected with their maritime trade and with imports by merchants from the north. Iron mines were apparently located in the mountains of iron in the hill region of Edom (Josephus mentions an “Iron Mountain” near Gerasha) and also in southern Lebanon, but these were probably of little importance. Iron was used primarily for weapons, and ironsmiths were thus of prime importance in the military organization. The Philistines succeeded in securing control of all the smiths – apparently ironsmiths: “Now there was no smith to be found throughout the land of Israel” (1 Sam. 13:19). Whoever needed the services of ironsmiths for sharpening everyday tools, such as agricultural implements, was forced to go to the Philistines. Iron implements (a plow and a spade) have been found at Tell Jamma and also furnaces for smelting iron; the earliest finds come from Tell al-‘Ajūl where a dagger with an iron blade and copper handle were also discovered. As early as the biblical period, iron was employed extensively in everyday life: war, agriculture, building, religion, trade, and household utensils. Iron weapons included chariots (Josh. 17:16); horns (1 Kings 22:11); swords and spears (1 Sam. 13:19; 11 Sam. 23:7); “iron objects” (Num. 35:16); and fetters (Ps. 105:18); while iron agricultural tools included sledges (Amos 1:3) and yokes (Jer. 28:14). In building, iron was used in door bars (Isa. 45:3), nails for doors of gates (1 Chron. 22:3), and hammers and axes (1 Kings 6:7); in religion, it was used for statues of gods (Dan. 5:4); and in trade, for weights (1 Sam. 17:7). Household utensils made of iron included bedsteads (Deut. 3:11) and pens (Job 19:24).

Iron often appears in figures of speech in the Bible, but it mainly symbolizes the material from which instruments of war were made. Its use was prohibited in building an altar (Ex. 20:25): “an altar of unhewn stones, upon which no man has lifted an iron tool” (Josh. 8:31). The Mishnah elaborates: “for iron was created to shorten man’s days, while the altar was created to lengthen man’s days; what shortens may not rightly be lifted up against what lengthens” (Mid. 3:4). Solomon carried the ban against using stones hewn with iron in building the altar even further when he built the Temple, “so that neither hammer nor axe nor any tool of iron was heard in the Temple,” while it was being built (1 Kings 6:7). In the Talmud a discussion is held on whether the prohibition against the use of iron tools applied only to the Temple site or to the quarry as well (Sot. 48b), for Solomon built three rows of hewn stone in the

inner court (1 Kings 6:36). In the description of David’s battle with Goliath, spiritual values are contrasted with iron weapons symbolizing war, as Goliath appears with a sword, spear, and javelin, opposite David’s faith in God (1 Sam. 17:45, 47). Iron also denotes strength: “iron yoke” (Deut. 28:48), “your neck is an iron sinew” (Isa. 48:4), and has a special meaning in Psalms 107:10.

TIN (Heb. *bedil*). Tin was known to, and utilized by, the ancient Egyptians. There was an extensive international trade in tin that was alloyed with copper to make bronze – the copper of the Bible. Tin was mentioned by Ezekiel as one of the products imported by the Phoenicians from Tarshish (27:12). It appears in the Bible together with the other metals, gold, silver, copper, iron, and lead, for example, in connection with the laws of their purification after being captured as booty (Num. 31:22). Tin is mentioned by Ezekiel as one of the components of the slag obtained by reducing silver from its ore (22:18–22) and by Isaiah: “smelt away your dross as with lye, and remove all your tin” (1:25). No specific tin vessels are mentioned in the Bible.

LEAD (Heb. *oferet*). The ancient sources of lead were Asia Minor and Syria, and it was included among the metals brought by the Phoenicians from Tarshish (Ezek. 27:12). Lead galena is found today at the foot of Mount Hermon; however, nothing is known of its extraction in antiquity. Because of its high specific gravity, it served as weights for fishermen’s nets – “they sank like lead in the majestic waters” (Ex. 15:10), from which the simile “to sink in water like lead” is derived. The plumb line may also have been made of lead (Amos 7:7). Lead served also as a cover of utensils because of its high specific gravity (Zech. 5:7–8). The verse, “. . . that with an iron pen and lead they were graven in the rock for ever!” (Job. 19:24), seems to indicate that as early as biblical times, lead was used for writing; because of the softness of lead, writing implements were made of stone filled with lead. Lead is mentioned several times in the Bible together with the other metals (e.g., Num. 31:22). Lead, or lead minerals, may have been used for cosmetics and dyes.

ANTIMONY (Heb. *pukh*). No objects made of antimony are known, but it appears in copper alloys. Unlike the other metals, the Bible does not mention antimony as a metal but only its use as a mineral – as eye shadow. Kohl for painting the eyes (11 Kings 9:30; cf. Ezek. 23:40) is translated in the Vulgate as stibium.

[Uri Shruga Wurzbarger]

In Rabbinic Literature

Rabbinic literature – the Talmuds in particular – contains a wealth of information on metals and metallurgy (though not on their primary production by mining), on the use of the various metals in manufacture, on metal artifacts, and so on. The growth of terminology as well as the use of terms borrowed from Greek, Latin, and even Persian is an indication on the progress from biblical times in the refining process and

in the use of metals, though the basic metals remained more or less the same. As distinct from the Bible, rabbinic literature has generic terms for metals, generally *mattekhet* from the biblical root (*ntk*, “to smelt”), and in the Middle Ages also *metilin* or *metil* from the Greek μέταλλον or Latin *metallum*. Metals mentioned in rabbinic literature are gold, silver, copper (brass and bronze), iron, tin, lead, and antimony or stibium. A number of terms exist for metal sheets, bars, or lumps: *es-het* or *ashashit niska* (“cast metal”), particularly a bar of silver or gold; *ḥarakhah* (“lumps of metal [iron ore]”), before smelting; *milela* for gold ore as broken in the mine; *peitalon* (Gr. πέταλον; “metal or gold leaf”), for which there is also a Hebrew word (*tas*); and also the more general term *golem* (pl. *gelamim*), meaning any raw, unfinished material. There is also a whole range of terms for old and broken metal which could be used again, the most general of which is *gerutei* (pl. *gerutaot*) or *gerumei* (in Gr. γρύτη), “junk iron” still used in modern Hebrew for junk, rubbish, but other derivations have been suggested (see S. Krauss in JE, 8, 515 and Kohut, *Arukh ha-Shalem*, s.v.). *Asimon* (Gr. ασημος) is uncoined bullion or coins on which the stamping has worn off.

The social standing of metalworkers was high, but they maintained fine distinctions between them, with the gold- and silversmith (*zehavim*, *kassafim*) ranking higher than the ordinary smith (*nappah*); see the description of the separate seats occupied by different craftsmen in the great synagogue of Alexandria in *Sukkah* 51b. The metalworker is called *nappah* as he has to blow (*nafah*) the fire with the *mappu'ah* (“bellows”) in order to soften the metal. The gold- and silversmith is also called *mezaref*, though this is occasionally applied to the copper-smith as well. For fuel, the smith used *peham* (charcoal), which he had to make himself, and the *pehami* is therefore both the charcoal burner and the blacksmith (see the story of R. Gamaliel's visit to the home of R. Joshua b. Hananiah, who was a needle maker; Ber. 28a). For the smelting of gold, straw was used as fuel. When taken from the fire with *zevat* (“tongs,” see Avot 5, 6), the metal was beaten with the *pattish* (“hammer”) or *kurnas* (Gr. κέρων) on the *saddan* (“anvil”) made by the *sadna'ah*. The term “beat with the hammer” became typical for every kind of manufacture. Rabbinic literature contains many further details on the various activities of the blacksmith and other instruments which he uses (see Krauss, *Tal Arch*, 2 (1911), 299ff.). There is an equally great variety of implements and vessels, which were made from the various metals. Metals were used in every kind of manufacturing process, in agriculture, for domestic and personal needs, for weapons and armaments, for coins, and Temple use. Gold and silver were the main raw material of women's ornaments (*ibid.*, 307ff.).

GOLD. Both Talmuds and some Midrashim have slightly differing lists of seven varieties of gold, most of which occur already in the Bible (TJ, Yoma 4:4, 41d; Yoma 44b; Num. R. 12:4; Song R. 3:10, no. 3; for the talmudic discussion on the various names for gold see above, in the biblical section). Vari-

ous information is given on the smelting of the gold used for the making of the **menorah* by Moses (TJ, Shekalim 6:4, 50b), Solomon, and in the Second Temple (Song R. 3:10, no. 3). According to the Midrash, gold had, in any event, been created for its use in the Temple (Ex. R. 35:1). It does not deteriorate (Me'il. 5:1, 19a). In Solomon's time, weights were made of gold (PDRK 169a). The gold (and silver), which the Israelites carried away from Egypt, is a frequent subject of *aggadah* (see Ber. 32a). So are the golden tables of the rich (Shab. 119a; Ta'an. 25a; Tam. 32a). The members of the Sanhedrin of Alexandria sat on golden chairs in the famous basilica (Suk. *ibid.*, and parallels). Famous, too, is the golden ornament (*Yerushalayim shel zahav*) which R. Akiva gave to his wife (Shab. 59a). His colleague R. Ishmael had a bride fitted with a golden tooth to make her more attractive (Ned. 66b; cf. Shab. 6, 5). Rich men in Jerusalem would tie their *lulavim* with threads of gold (Suk. 3, 8) and offer their first fruits in baskets of silver or of gold (Bik. 3, 8).

SILVER (Heb. *kesef*). The term *argentariyya* and similar forms (Gr. ἀργεντάριος, Lat. *argentarium*) is used in TJ, *Peah* 8:9, 21b and the Midrash (PDRK 106b) for table silver (and gold) and *martekha* for silver slag (Git. 69b).

COPPER, BRASS, BRONZE (Heb. *Nehoshet*). The word *beronza* (“bronze”) is found in medieval rabbinic literature (Heilprin, *Seder Dorot*, 1 (1905), 104). The Greek word χαλκός which like *nehoshet* means copper as well as the alloys brass and bronze, though later the latter only, is used in the Babylonian Talmud (BK 100b) for copper caldron (so also in Gr.; see Jastrow, *Dict.*, s.v.); in the Jerusalem Talmud (BB 4:6, 14c) for the copper (caldron) room in a bathhouse; the Targum often used the form *karkoma* (χαλκωμα), Greek for anything made of copper, etc. (see S. Krauss, *Griechische und lateinische Lehnwoerter* (1898), 299). The term *peliza* (a kind of bronze, see JE, 8, 516) is used in *Bava Kama* (113b, Ms., see Rabbinowicz, *Dik Sof*, BK 140). According to the Midrash (Lev. R. 7:5; Tanḥ., Terumah 11), the copper covering on the altar of the Tabernacle would miraculously not melt in spite of the perpetual fire. Bronze tablets were used to inscribe international treaties, such as the one between Judah Maccabee and Rome (1 Macc. 8:22; Jos., *Ant.*, 12:416) and his brother Simeon and Sparta (1 Macc. 14:18). Mishnah *Parah* (12:5) mentions a “hyssop of brass.” Nathan b. Jehiel's *Arukh* quotes from the lost *Midrash Yelammedenu* the term *konekhi* (Gr. κόγχη), a copper shell or bowl (for oil). Corinthian bronze (*kelinteya*), famous for its quality and shine, was used for the Nicanor gates of the Herodian Temple (Eliezer b. Jacob, Yoma 38a; Tosef. *ibid.* 2:4).

IRON (Heb. *barzel*, *parzel*, *parzela*). As to the sources of iron ore, the Palestinian Targum translates the place names Kadesh and Wilderness of Zin (Sinai) as “Mountain of Iron” (Num. 33:36; 34:4). The Mishnah (Suk. 3:1) and Josephus (War, 4:454) mention an Iron Mountain near Gerasa in Transjordan (Avi-Yonah, *Geog.*, 162). Indian iron was used for making weapons (Av. Zar. 16a), and Indian swords were the very best available

(Tanḥ., Va-Eṯḥannan 6). *Parzelayyah* is used as a generic term for iron tools (Lev. R. 24:3; TJ, Nid. 2:6, 50b, as a simile for a sharp mind). He who bathes in hot water without showering himself afterward with cold water is like iron that has been treated in the fire without being put into cold water afterward (Shab. 41a). According to R. Eliezer, it is permitted on the Sabbath to cut wood on which to burn coal to forge a knife for a circumcision which is to occur on that day (*ibid.* 19:1, 130a). The Talmud speaks of *even sho'evet*, a magnetic stone which attracts iron (Sot. 47a).

TIN. The terms used for this metal are either *ba'az* or *avaz*, *kassitera*, *kassiteron*, and *gassiteron* (Gr. κασίτερος). Both *ba'az* and *kassitera* are used in the same passages (Men. 28b and elsewhere), which implies that they were two different metals or kinds of the same metal. The Temple *menorah* was not to be made of them, but when the Hasmoneans cleansed the Temple and needed a new *menorah* (the golden one having been carried off by Antiochus IV), they made it of seven spears plated with tin (*ibid.*). It was forbidden to make weights out of metal – tin and lead being mentioned specially – because metal wears away (BB 89b and Tos. ad loc.; Tosef., *ibid.* 5:9). The traveler Pethahiah of Regensburg (12th century) reports that in Babylonia people were summoned to synagogue by a tin instrument. In the later Middle Ages up to modern times tin was used extensively for artistic *ritual objects such as Ḥanukkah *menorot*, *seder*, *Kiddush*, and *Havdalah* plates, etc.

LEAD. Lead is called *avar* in rabbinic literature, also *karke-misha* in the Palestine Targum (Num 31:22; Job 19:24). *Ḥullin* 8a (cf. Neg. 9:1) mentions “lead from its source” as a naturally hot substance causing injury. The water reservoirs below the Temple Mount were said to be lined with lead (Letter of Aristeas 90). Lead was also used as a writing material (Shab. 104b, see Rashi). A wick of hot lead was used to carry out the death sentence by burning (Sanh. 52a), and water pipes were made of lead (Mik. 6:8). The term *alsefidag* (of Persian origin) is used in geonic literature for white lead (Kohut, Arukh, 4 (1926), 82).

ANTIMONY OR STIBIUM. Antimony or stibium, called *koḥal*, was used in the form of a powder for painting the eyelids (verb *kaḥol*). From the word *koḥal* the modern Hebrew word for blue (*kaḥol*) is derived. Both the noun and the verb are used in many talmudic passages (e.g., Shab. 8:3; 10:6, 80a; Ket. 17a). A species of hyssop is called *ezov koḥalit* (Neg. 14:6 and elsewhere), probably after a district (Kid. 66a) in Transjordan (see Jastrow, Dict., s.v.), which may, in turn, have derived its name from the metal; cf. the “hyssop of brass” in *Parah* 12:5, mentioned above.

ḤASHMAL. The mysterious *hashmal* (Ezek. 1:4; 8:2) is interpreted in *Ḥagigah* (13a–b) as fire-spouting dragons. Translators called it amber or galena (lead-ore), while in modern Hebrew it has become the word for electricity (cf. S. Munk (ed.), *Guide des égarés*, 2 (1961), 229 n. 4).

VALUE OF METALS. The relative value attached to metals can be seen from the pages concerning the Temple *menorah* (Men. 28b), where they are listed either in descending order – gold, silver, tin, lead – or ascending order – iron, tin, silver, gold. The relative value of metals depended on the currency situation, the coins made of less valuable metal being considered currency in relation to those of the more valuable one, which is then considered commodity but not currency (see BM 4:1; Mishnah lists gold, silver, and copper in descending order, whereas the same Mishnah in the Jerusalem Talmud (BM 4:1, 9c) puts silver before gold).

SYMBOLISM OF METALS. The symbolism of metals representing the Four Kingdoms in Daniel 2 and 3 is expanded in *Exodus Rabbah* (35:5), “Gold is Babylon; silver is Media; copper is Greece; iron is Edom (Rome); etc.” A symbolic meaning is found by *Midrash Tadshe* 11 in the fact that of the two altars in the Tabernacle and Temple one was overlaid with gold (the soul) the other with copper (the body). On account of the Golden Calf, gold became a symbol of sin, and therefore a *shofar* mouthpiece was not to be overlaid with gold (RH 27a; cf. Maharil, *Hilkhot Rosh Ha-Shanah*), nor did the high priest officiate on the Day of Atonement in the Holy of Holies in his golden vestments but in white linen ones (*ibid.* 26a). At the same time, the gold plate on the incense altar of the Tabernacle and Temple was to atone for the sin of the Golden Calf (Yal., Ex. 368). Iron is also a metaphor for strength of character, and a scholar who is not as hard as iron is no scholar (Ta'an. 4a; cf. Men. 95b concerning Rav Sheshet). Similarly the Evil Inclination may be as hard as iron, but the Torah, which is likened to an (iron) hammer (Jer. 23:29), will smash it (Suk. 52b; see Tos. ad loc.). Some students may find their studies as hard as iron (Ta'an. 8a), but two scholars studying together sharpen each other's mind as one piece of iron sharpens the other (*ibid.* 7a). As wine cannot be preserved in golden or silver vessels but only in the humblest of vessels (earthen ones), so the words of the Torah will not be preserved in one who is in his own eyes like a gold or silver vessel but only in one, who is like the lowliest of vessels (Sif. Deut. 48).

Jews as Metalworkers and Miners

A study of the part played by Jews in the mining and metal industries proves that there has been too great a tendency to minimize their participation in the promotion and development of these branches. It is true that the objective restrictions which kept the Jews off the land and prevented their ownership of it, especially in medieval society, contributed in no small measure to limiting their opportunities of exploiting natural resources in general and various metals in particular. Yet despite all this the Jews succeeded, at different times and in various countries, in penetrating several branches connected with the mining of metals, their contribution to the advance of the industry being at times of great significance.

PRE-MODERN PERIOD. Very little information on the exploitation of the earth's resources has come down to us from the

mishnaic and talmudic periods. Until the end of the fourth century there were copper mines at Punon, at the south of the Dead Sea, and *Jerome (340?–420) testifies that mining was discontinued there during his lifetime. The literature of these periods frequently mentions coal and copper refiners; it may be assumed that the “refiner” mentioned in the Mishnah (Ket. 7:10) is merely a copper smelter. As mentioned, the separation of Jews from the land in the Middle Ages had implications for the mining industry. In those times mining was frequently connected with agricultural labor, and thus in Germany, for instance, there were farmers who were engaged in extracting iron ore in their free time. It is therefore evident that since the Jews were cut off from agriculture their opportunities for extracting metals were limited. Added to this, in Christian Europe minerals were considered crown property, so that private ownership of mines was impossible. Yet in spite of all these restrictions Jews were to be found in various branches of the mining industry, as lessees and managers, traders in metals, and even miners. As for precious metals, there can be no doubt that their employment as minters of coins, especially in absolutist Europe at the time when *Court Jews flourished, brought them into direct contact with gold and silver mining (see *Mintmasters and Moneyers). A similar state of affairs prevailed with regard to the extraction of precious stones (see *Diamond Industry and Trade), since the Jews were prominent in the international trade in luxury goods and in purveying them to royal courts, at least from the days of the Carolingian kingdom up to the time of the absolutist states in modern Europe. In such countries as Spain and Poland, where Jews played an outstanding part as colonizers, they were prominent as lessees of salt mines (see *Salt Production).

There were also Jews in different countries throughout the Middle Ages who were engaged in extracting both heavy and light metals of various kinds. In England, for instance, Jews had worked in tin mining in Cornwall in 1198. Joachim *Gaunse appeared in 1581 and suggested to the English government new methods for processing copper. When it became known that he was a Jew from Prague, he was arrested by the authorities and his fate is unknown. In Sicily, there was a long tradition of Jewish activity in the mines from the times of the emperor Tiberius, who sent 4,000 Jewish youths as slaves to the mines. Jews were commonly engaged there not only in the manufacture of metalware but also in mining silver and iron. In spite of the opposition of the local authorities, a royal decree of 1327 ordered Sicilian officials to support Jewish mine prospectors and miners. At the beginning of the 15th century two Jews of *Alghero received special authorization to exploit the resources of the region, on condition that half the output be handed over to the crown. Attempts by Jews to extract metals in Germany are also known: in 1625 Duke Frederick Ulrich of Brunswick asked the theologians of the University of Helmstedt if he might be allowed to hand over the lead trade to two Jews and authorize them to move freely through his state for that purpose. After the members of the faculty had agreed, these Jews mined lead from the Harz Mountains.

MODERN PERIOD. In modern times the part played by Jews in the mining and metal industries of Germany reached considerable dimensions. After Aron Hirsch (1783–1842) had established a firm for buying and selling copper in 1805, Halberstadt became the cradle of the modern German nonferrous metal trade. In 1820 he became a partner in founding copper enterprises in Werne and Ilsenburg. When his son Joseph (1809–1871) joined the business, its name was changed to Aron Hirsch and Son. In 1863 they acquired the copper works of Heegermuehle, near Eberswalde. A branch was established in New York in 1894 and the firm began to take an interest in the metal enterprises of France, Belgium, and England and the mines of Australia, America, and Eastern Asia. At the close of the 19th century Aaron Siegmund Hirsch initiated the establishment of the zinc enterprises of *Vladivostok. The firm of Hirsch Kupferund Messingwerke A.G. was founded in 1906; World War I and the economic crisis of 1929–32 caused it to be liquidated in 1932. Dr. Emil Hirsch (1870–1938) then founded a new enterprise in Berlin, the Erze und Metalle Hirsch A.G., with a branch in Amsterdam, but the firm was liquidated when the Nazis came to power. Philipp Abraham Cohen, a descendant of the Hanover banking family, transferred the family business to Frankfurt in 1821. In Hanover they had been connected with the mining enterprises in the Harz Mountains. Philipp Abraham Cohen's son-in-law established the metal-trading firm of Henry R. Merton and Co. in London. In the meantime the Frankfurt firm extended its scope and traded in American copper and tin from the Dutch Indies. This enterprise was also involved in the nickel and aluminum trades, and until 1873, when the Deutsche Gold und Silber-Scheideanstalt was established, in the silver trade too. In 1881 the branches in England and Frankfurt established the Metallgesellschaft, Frankfurt on the Main, which became the leading German firm in the metal trade. Among other enterprises, they established the Usine de Désargentation (de-silverizing plant) in Hoboken, near Antwerp. In 1896, together with the firms of Hirsch and Beer, and Sondheimer and Co., they undertook zinc and lead mining. The Metallurgische Gesellschaft (Lurgi) was established in 1897; together with the Metallgesellschaft, it founded the Berg und Metallbank A.G. in 1906. Once the firm had successfully overcome the post-World War I crisis, branches were established in Amsterdam, Basle, Brussels, Copenhagen, Madrid, Milan, Prague, Stockholm, and Vienna. It was liquidated as a Jewish firm when Hitler came to power.

The Jews of Russia, too, had considerable achievements to their credit in the mining of certain metals and in associated industries. In 1807 there were 253 Jewish copper and tin workers in Minsk, Kiev, and Yekaterinoslav, that is, 6.8% of the Jewish craftsmen in these towns. ICA (*Jewish Colonization Association) statistics of 1897 reveal that there were then 15,669 Jewish smiths and 11,801 Jewish craftsmen in the various branches of the metal industry. The Jews were also well represented in the development of the industry: in Moscow four metal factories were established by Jews between 1869 and 1878, and a further two factories in the Moscow area be-

tween 1878 and 1880. Of the 96 large iron and tin plants in Odessa in 1910, 88 belonged to Jews. The laws of 1882 and 1887 excluded the Jews from the mines, but in spite of this they played a considerable role in the gold mines. Descendants of exiles and Jewish settlers in Siberia were among the pioneers of gold mining there. The director of the largest gold-mining enterprise in Russia in 1913, Lena Goldfields Co., was Baron Alfred Guenzburg; Jews were represented in the Gold Mining Co., and also in the platinum mines: of the five directors of the A.G. Platinum enterprise in 1912, two were Jews.

In the U.S. there were several prominent Jewish firms engaged in copper extraction. In 1813 Harmon *Hendricks established in Belleville, New Jersey, the Soho Copper Rolling Mills, later known as the Belleville Copper Mills. His descendants were prominent in the metal trade. In 1891 Meyer *Guggenheim (1828–1905), formerly a peddler and dry-goods merchant, acquired copper mines and then established an enterprise in Aguas Calientes, Mexico. Together with his sons he founded the mining company of M. Guggenheim's Sons. In 1901 they merged with the American Smelting and Refining Co. and the Guggenheim sons directed the enterprise. The firm initiated the acquisition and development of a copper mine in Alaska, developed copper mines in Mexico, and even extended its activities to Australia, Canada, and Africa.

Coal, which had been practically unknown in medieval Europe, was introduced into various branches of industry in England at the beginning of the 17th century because of the rise in the price of firewood. The Industrial Revolution increased the importance of coal, which came into use in the other countries of Europe during the 18th and the beginning of the 19th centuries. In Eastern and Central Europe the Jews were pioneers in developing coal mines. In Poland, prospecting by Solomon Isaac of *Bytom led to the establishment of two large coal mining enterprises in 1790: the Krol mine near Chorzow and the Królowa Ludwika mine near Zabrze, which were worked for about 50 years. Between 1874 and 1879 many Jews studied at the mining school of Tarnowskie Gory; they were later employed as miners and engineers in Upper Silesia. Jews participated in the wholesale coal and iron trade until World War II. The large coal concern of *Katowice was a development of the important coal firm of Emmanuel Friedlander and Co. Their activity in the coal mines led them to develop an interest in mining other metals and brought them into various branches of the metal industry. In 1805 there were three copper foundries in Podolia employing 42 Jewish workers; in Warsaw a Jewish iron factory, which employed 200 Jewish workers, was established in 1848. Until 1938, when the cartel organizations introduced their policy of ousting all factories not connected with international concerns, the iron foundry of Cracow belonged to Jews. In the wholesale iron trade, the old-established Warsaw firms of Priwess, and Freilach and Carmel were prominent; both prospered between the two world wars. According to the census of 1931, 1,462 Jews were employed in the mines (including 853 miners), 33,318 Jews were employed in metal foundries and in the

metal and machinery industries (9,185 manual workers), and 4,209 Jews in the minerals industry (1,440 manual workers). The great majority of the Jews employed in the metal branch (73.9%) were craftsmen.

The Jews of Germany, too, were active in the coal industry in that country; many of them entered it via the coal trade or real estate business. Fritz Friedlaender-Fuld (1858–1917), an apostate, extracted coal in the Rybnik region. Eduard Arnhold (1849–1925), who had been director of the Caesar Wollheim coal firm, supervised a considerable part of the mining industry of Upper Silesia. Paul Silberberg succeeded his father as director of a lignite mine (Fortuna) in 1903.

In various parts of Czechoslovakia the Jews were the first to extract coal. The first person to exploit the coal mines of Ostrava-Karvina (Moravia), in 1840, was David Gutmann of Lipnik nad Bevcu (see Wilhelm von *Gutmann). After obtaining the support of the Rothschild family, who owned iron works in Vitkovice, they established joint iron and mining enterprises there. At the beginning of the 20th century some of the coal mines of Kladno were owned by Jews, among them Leopold Sachs. The *Petschek family was active in the development of the lignite coal mines, particularly in northern Bohemia. Their competitor and former employer was Jakob *Weinmann.

[Jacob Kaplan]

In South Africa Jews were among the pioneers in the exploitation of South Africa's mineral resources. They were early in the field when industrial development started during the second half of the 19th century, and they remained prominent in the opening up of the country's coal, diamond, gold, and base metal mines. Jews like Barney *Barnato, the *Joel brothers, Lionel *Phillips, the *Beit brothers, and the *Albu brothers were among the prospectors, explorers, diggers, and financiers who flocked to the diamond fields at Kimberley in the 1870s. Sammy *Marks began coal mining on a large scale in the Transvaal and laid the foundations of the steelworks at Vereeniging. When the industrial focus moved to Johannesburg with the discovery of gold there in 1886, the Kimberley Jews played a foremost role in the creation of the great mining groups which developed the Witwatersrand. Here Sir Ernest *Oppenheimer created the powerful Anglo-American Corporation, headed the De Beers group, and stabilized the diamond market through the Diamond Corporation. Oppenheimer also pioneered the copper industry in Northern Rhodesia (now Zambia) and after World War II led the development of the new goldfields in the Orange Free State and in the Eastern Transvaal. During this period A.S. Hersov and S.G. Menell created the Anglo-Vaal mining and industrial group. Jewish financiers also promoted the exploitation of platinum, manganese, and asbestos deposits.

As for the oil industry (see *Petroleum), which was first developed in the second half of the 19th century, not only did the Jews participate in it (especially in Central and Eastern Europe) but Jewish industrialists were among the first to engage in the commercial exploitation of petroleum products.

From the above it is clear that the notion that Jews succeeded in forming part of the metal industry in the Diaspora only in secondary branches, close to the consumer, ignores the specific part they played in developing the primary branches. Even if this part was not quantitatively significant, there is no doubt that it was qualitatively important. It would appear that in those times and countries in which Jews were able to enter these branches of industry they engaged in them with great success.

Jewish Craftsmen in the Metal Trades. Many successive generations of Jews were engaged in various crafts connected with the metal industries. This continuity of occupation could be preserved chiefly in Muslim countries, where the Jews were enabled to conduct a more varied economic life than in Christian Europe. This was also true of such countries as Spain and Sicily which, although conquered by the Christians, still preserved modes of life from the days of Muslim domination. Jews were especially noted for arms manufacture. Jewish armorers are mentioned in the Mishnah (Av. Zar. 1:6), and Josephus describes the preparation of arms during the Jewish War (see, e.g., Jos., Wars, 3:22). *Dio Cassius, the historian of the second to third centuries C.E., relates that before the *Bar Kokhba War Jewish smiths deliberately manufactured defective weapons so that they would be rejected by the Romans and could later be used by Bar Kokhba's soldiers. From this account it can also be deduced that the Romans conscripted Jewish craftsmen to manufacture their arms. When *Muhammad gained control of *Medina, in southern Arabia, many of the weapons he obtained for his army were manufactured by local Jewish artisans. The "coats of mail of David" (probably named after a Jewish smith) were then famous in Arabia. The Jews of Portugal, too, excelled in this craft; their expulsion in 1496 brought a considerable number of them to Turkey, where they made a significant contribution to strengthening the military might of the Ottoman Empire.

The agent of the king of France in Constantinople during the first half of the 16th century tells of the numerous Marranos who revealed to the Turks the secrets of manufacturing cannons, guns, warships, and war machines. Obadiah of *Bertinoro found many Jewish copper and ironsmiths in *Palermo in 1487. When an expulsion decree was issued against the Jews of Sicily, in the wake of the expulsion from Spain, the local authorities complained that tremendous loss would result "because almost all the craftsmen" in Sicily were Jews; their expulsion would deprive the Christians of "workers who manufacture metal utensils, arms, and ironware." A similar complaint was heard in Portugal as a result of the expulsion order of 1496.

Many Jewish craftsmen and artisans were engaged in the metal industry in Christian Spain. In 1365 three Jewish smithies are mentioned in Toledo, and there were also Jewish workshops in Avila, Valladolid, Valdeolivas near Cuenca, and Talavera de la Reina; a Jewish tinsmith, Solomon (Çuleman) b. Abraham Toledano of Avila, is mentioned in a document of

1375; at the close of the 14th century Jewish smiths were called upon to repair the copper fountain of Burgos. Before 1391 many Jewish smiths, engravers, and goldsmiths lived in Barcelona. From a Saragossa register of 1401 we learn that there were many Jewish engravers and artisans in copper and iron. The local engraver's synagogue was used for the meetings of the community administration.

Jewish metalworkers continued to pursue their crafts along traditional medieval lines in various Muslim lands, where manual occupations were often despised and therefore pursued by religious minorities, particularly Jews. The report of the French consul on the condition of the Jews in Morocco at the close of the 18th century speaks of Jewish armorers there. The traveler *Benjamin II relates that Jews were employed in the iron industry in Libya in the middle of the 19th century. There are also reports on Jewish smiths who manufactured horseshoes there at the beginning of the 20th century. R. Hayyim *Habshush, who guided the researchers Joseph *Halevy and Eduard *Glaser in their search for ancient manuscripts in Yemen during the second half of the 19th century, was a coppersmith. Visiting that country in the late 1850s, R. Jacob *Saphir found many Jewish smiths. Yom Tov Zemaḥ reports that in 1910 the three remaining Jewish smiths of San'a were compelled to move to the provincial towns because of unemployment.

METAPHYSICS, the philosophic discipline that deals with ontology and cosmology. The Jews through the end of the medieval period did little original work in metaphysics, drawing mainly on other, primarily secular, authorities. The major systems employed were *Platonism, *Kalam, *Neoplatonism, and *Aristotelianism, which appear in Jewish works largely in mixed form, containing elements borrowed from one another as well as from other philosophies, such as *Stoicism.

Moreover, the Kalam only constitutes a metaphysics in the broadest sense. While there was no one period in which any one of these metaphysical systems was exclusively subscribed to by the Jews, the periods of dominance for each were: Platonism, the first centuries before and after the Common Era; Kalam, the tenth century; Neoplatonism, the 11th and 12th centuries; and Aristotelianism, the 12th century through the end of medieval times. The foremost representatives respectively among the Jews employing these systems were *Philo, *Saadia, Solomon ibn *Gabirol, and *Maimonides. The Jewish philosophers were primarily interested in meeting the challenges that various metaphysics presented to their Judaism and their understanding of revelation. Metaphysics, pursued scientifically through reason, produced ostensibly different conclusions about God, the universe, and salvation from those conveyed by the literal meaning of Scriptures. The religious thinker who valued human reason and did not wish to repudiate what was considered its profoundest activity met the challenge by reconciling and synthesizing metaphysics with Scripture. This was usually accomplished by partially limiting the validity of metaphysics, and partially by interpreting the literal meaning of Scriptures. Philo, in his great works of metaphysical and scriptural synthesis, formulated the basic methods for reconciling reason and revelation, which were employed throughout medieval philosophy not only by the Jews, but by the Muslims and Christians as well. It may be noted that not all Jews acquainted with metaphysics found its claims to truth convincing. Thinkers such as *Judah Halevi and Ḥasdai *Crescas met the challenge of metaphysics, not by reconciliation, but with trenchant critiques of its conclusions. As the validity of metaphysical knowledge in post-Cartesian thought came increasingly under attack from within philosophy itself, which concentrated primarily on the problems of epistemology, there existed little need for Jewish thinkers to meet speculative claims in the grand medieval style. However, in modern thought new challenges arose from rationalism and idealism, the scientific and empirical philosophies, and from existentialism which required the continued involvement of Jewish thinkers in philosophic thought.

[Alvin J. Reines]

METATRON (Matatron), angel accorded a special position in esoteric doctrine from the tannaitic period on. The angelology of *apocalyptic literature mentions a group of angels who behold the face of their king and are called “Princes of the Countenance” (Ethiopic *Book of Enoch*, ch. 40, et al.). Once Metatron’s personality takes a more definitive form in the literature, he is referred to simply as “the Prince of the Countenance.”

In the Babylonian Talmud Metatron is mentioned in three places only (Ḥag. 15a; Sanh. 38b; and Av. Zar. 3b). The first two references are important because of their connection

with the polemics conducted against heretics. In *Ḥagigah* it is said that the *tanna* *Elisha b. Avuyah saw Metatron seated and said, “perhaps there are two powers,” as though indicating Metatron himself as a second deity. The Talmud explains that Metatron was given permission to be seated only because he was the heavenly scribe recording the good deeds of Israel. Apart from this, the Talmud states, it was proved to Elisha that Metatron could not be a second deity by the fact that Metatron received 60 blows with fiery rods to demonstrate that Metatron was not a god, but an angel, and could be punished. This imagery recurs frequently in different contexts in Gnostic literature and is associated with various figures of the heavenly realm. It is however thought that the appearance of Metatron to Elisha b. Avuyah led him to a belief in *dualism.

The story in tractate *Sanhedrin* also confers on Metatron a supernatural status. He is the angel of the Lord mentioned in Exodus 23:21 of whom it is said “... and hearken unto his voice; be not rebellious against him... for My name is in him.” When one of the heretics asked R. *Idi why it is written in Exodus 24:1 “And unto Moses He said ‘Come up unto the Lord,’” instead of “Come up unto Me,” the *amora* answered that the verse refers to Metatron “whose name is like that of his Master.” When the heretic argued that, if that were so, Metatron should be worshiped as a deity, R. Idi explained that the verse “be not rebellious against (תמר) him” should be understood to mean “do not exchange (תמירני) Me for him.” R. Idi added that Metatron was not to be accepted in this sense even in his capacity as the heavenly messenger. Underlying these disputations is the fear that speculations about Metatron might lead to dangerous ground. The Karaite *Kirkisānī read in his text of the Talmud an even more extreme version: “This is Metatron, who is the lesser YHWH.” It is quite probable that this version was purposely rejected in the manuscripts.

The epithet “lesser YHWH” is undoubtedly puzzling, and it is hardly surprising that the Karaites found ample grounds for attacking the Rabbanites over its frequent appearance in the literature they had inherited. The Karaites viewed it as a sign of heresy and deviation from monotheism. The use of such an epithet was almost certainly current before the figure of Metatron crystallized. The explanations given in the latter phases of the *Heikhalot* literature (Hebrew *Book of Enoch*, ch. 12) are far from satisfactory, and it is obvious that they are an attempt to clarify an earlier tradition, then no longer properly understood. This tradition was connected with the angel Jahoel, mentioned in the *Apocalypse of Abraham* (dating from the beginning of the second century), where it is stated (ch. 10) that the Divine Name (Tetragrammaton) of the deity is to be found in him. All the attributes relating to Jahoel here were afterward transferred to Metatron. Of Jahoel it is indeed appropriate to say, without contrived explanations, that his name is like that of his Master: the name Jahoel contains the letters of the Divine Name, and this therefore signifies that Jahoel possesses a power exceeding that of all other similar beings. Apparently, the designation “the lesser YHWH” (יהוה הקטן) or “the lesser Lord” (אדני הקטן) was first applied to Jahoel. Even

before Jehoel was identified with Metatron, designations such as “the greater Jaho” or “the lesser Jaho” passed into Gnostic use and are mentioned in various contexts in Gnostic, Coptic, and also in Mandaean literature, none of which mentions Metatron. The name *Yorba* (יורבא) in Mandaean in fact means “the greater Jaho” but he has there been given an inferior status as is characteristic of this literature in its treatment of Jewish traditional concepts.

Two different traditions have been combined in the figure of Metatron. One relates to a heavenly angel who was created with the creation of the world, or even before, and makes him responsible for performing the most exalted tasks in the heavenly kingdom. This tradition continued to apply after Jehoel was identified with Metatron. According to this tradition, the new figure took over many of the specific duties of the angel *Michael, an idea retained in certain sections of the *Heikhalot* literature up to and including the Kabbalah. The primordial Metatron is referred to as Metatron Rabba.

A different tradition associates Metatron with Enoch, who “walked with God” (Gen. 5:22) and who ascended to heaven and was changed from a human being into an angel – in addition he also became the great scribe who recorded men’s deeds. This role was also already delegated to Enoch in the Book of Jubilees (4:23). His transmutation and ascent to heaven were discussed by the circles who followed this tradition and elaborated it. The association with Enoch can be seen particularly in the *Book of Heikhalot*, sometimes also called the *Book of Enoch*, of R. Ishmael Kohen ha-Gadol, or the Hebrew *Book of Enoch* (H. Odeberg’s edition (see bibl.) includes an English translation and a detailed introduction). The author links the two traditions and attempts to reconcile them. But it is clear that chapters 9–13 allude to the primordial Metatron, as Odeberg points out.

The absence of the second tradition in the Talmud or the most important Midrashim is evidently connected with the reluctance of the talmudists to regard Enoch in a favorable light in general, and in particular the story of his ascent to heaven, a reluctance still given prominence in the Midrash *Genesis Rabbah*. The Palestinian Targum (Gen. 5:24) and other Midrashim have retained allusions to Metatron in this tradition. Instead of his role of heavenly scribe, he sometimes appears as the heavenly advocate defending Israel in the celestial court. This transposition of his functions is very characteristic (Lam. R. 24; Tanh. *Va-Ethannen*; Num. R. 12, 15). A number of sayings of the sages, in particular in *Sifrei*, *Parashah Ha’azinu*, 338, and Gen. R. 5:2, were explained by medieval commentators as referring to Metatron on the grounds of a corrupt reading of Metraton instead of *metator* (“guide”).

In certain places in Merkabah literature, Metatron completely disappears and is mentioned only in the addenda that do not form part of the original exposition, such as in *Heikhalot Rabbati*. The descriptions of the heavenly hierarchy in *Massekhet Heikhalot* and *Sefer ha-’Razim* also make no mention of Metatron. On the other hand, Metatron is a conspicuous figure in the *Book of the Visions of Ezekiel* (fourth

century) although he is mentioned without any reference to the Enoch tradition. This source mentions a number of the other secret names of Metatron, lists of which later appear in special commentaries or were added to the Hebrew *Book of Enoch* (ch. 48). Explanations of these names in accordance with ḥasidic tradition are given in the *Sefer Beit Din* of Abraham Ḥamoy (1858), 196 ff., and in another version in the *Sefer ha-Ḥeshek* (1865). According to the traditions of certain Merkabah mystics, Metatron takes the place of Michael as the high priest who serves in the heavenly Temple, as emphasized particularly in the second part of *Shi’ur Komah (*Sefer Merkavah Shelemah* (1921), 39 ff.).

One can, thus, detect different aspects of Metatron’s functions. In one place he is described as serving before the heavenly throne and ministering to its needs, while in another he appears as the servitor (*na’ar*, “youth”) in his own special tabernacle or in the heavenly Temple. In the tannaitic period, the duty of the “prince of the world” formerly held by Michael was transferred to him (Yev. 16b). This conception of Metatron’s role as the prince of the world since its creation contradicts the concept of Metatron as Enoch who was taken up to heaven only after the creation of the world.

It is already observed in *Shi’ur Komah* that the name Metatron has two forms, “written with six letters and with seven letters,” i.e., מיטטרון and מיטטרון. The original reason for this distinction is not known. In the early manuscripts the name is almost always written with the letter *yod*. The kabbalists regarded the different forms as signifying two prototypes for Metatron. They again distinguished between the various components that had been combined in the Hebrew *Book of Enoch* in their possession. They identified the seven-lettered Metatron with the Supreme emanation from the *Shekhinah*, dwelling since then in the heavenly world, while the six-lettered Metatron was Enoch, who ascended later to heaven and possesses only some of the splendor and power of the primordial Metatron. This distinction already underlies the explanation given by R. *Asher b. David to *Berakhot* (see G. Scholem, *Reshit ha-Kabbalah* (1948), 74–77; and idem, *Les Origines de la Kabbale* (1966), 225–31).

The origin of the name Metatron is obscure, and it is doubtful whether an etymological explanation can be given. It is possible that the name was intended to be a secret and has no real meaning, perhaps stemming from subconscious meditations, or as a result of glossolalia. To support the latter supposition are a number of similar examples of names with the suffix –on: *Sandalfon (סנדלפון), Adiriron (אדירירון), etc., while the doubling of the letter *t* (טט) is characteristic of names found in the Merkabah literature, e.g., in an addition to *Heikhalot Rabbati*, 26:8. Among numerous etymological derivations given (see Odeberg, 125–42) three should be mentioned: from *matara* (מטרא), keeper of the watch; from *metator* (מיטטור), a guide or messenger (mentioned in *Sefer he-Arukh* and the writings of many kabbalists); from the combination of the two Greek words *meta* and *thronos*, such as *metathronios* (μεταθρόνιος), in the sense of “one who serves

behind the throne.” However, the duty to serve the heavenly throne was associated with Metatron only at a later stage and does not agree with the earlier traditions. It is highly doubtful whether the “angel of the Countenance” entering “to exalt and arrange the throne in a befitting manner” mentioned in *Heikhalot Rabbati* (ch. 12) can in fact be Metatron, who is not mentioned at all in this context. The Greek word *thronos* does not appear in talmudic literature. The origin of the word, therefore, remains unknown.

In contrast to the lengthy description of Metatron found in the Hebrew *Book of Enoch*, in later literature the material relating to him is scattered, while there is hardly a duty in the heavenly realm and within the dominion of one angel among the other angels that is not associated with Metatron. This applies particularly to kabbalistic literature (Odeberg, 111–25). Extensive material from the Zohar and kabbalistic literature has been collected by R. Margalioth in his work *Malakhei Elyon* (1945, 73–108). In books dealing with practical Kabbalah there are no incantations of Metatron, although his name is frequently mentioned in other incantations.

[Gershom Scholem]

METCHNIKOFF, ELIE (1845–1916), Russian biologist, born at Ivanovka, near Kharkov. Metchnikoff’s father was an officer of the Imperial Guard; his mother was Jewish (her family name was Neakovich). After graduating from the University of Kharkov he went to Germany for further training in biology. A succession of important discoveries in embryology earned Metchnikoff a reputation for originality and acuteness of observation, and in 1870 he was appointed professor extraordinary at the University of Odessa.

The political upheavals and persecution of the Jews that followed the assassination of Czar Alexander II led Metchnikoff to leave Odessa in 1882. He went to Messina, a place especially favorable for the study of marine organisms. Here, during the course of studies on jellyfish and sponges, he began to turn his attention to the remarkable behavior of certain amoeba-like cells that ingest and destroy foreign particles in the body. Metchnikoff developed the theory that these cells, which he named “phagocytes,” served to engulf and digest bacterial invaders of the organism. He set forth this thesis in an essay “The Struggle of the Organism Against Microbes” (1884).

In 1888 Pasteur invited him to Paris and gave him a laboratory at the Ecole Normale. When the Pasteur Institute was established, Metchnikoff became its subdirector. To this laboratory Metchnikoff attracted large numbers of investigators, whose research established the validity of the phagocytosis theory.

Metchnikoff later became interested in the problems of biological aging. In *Etudes sur la nature humaine* (1903; *The Nature of Man*, 1904) he advanced the idea that senile changes result from toxins produced by bacteria in the intestine. To

prevent these “unhealthy fermentations,” Metchnikoff advocated the inclusion of sour milk in the diet. In 1908 Metchnikoff shared the Nobel Prize for medicine with Ehrlich for his work on immunity.

[Mordecai L. Gabriel]

METHUSELAH (Heb. מְתוּשֶׁלַח), patriarch of mankind, son of *Enoch, father of *Lamech, and grandfather of *Noah (Gen. 5:21–25). The name has been variously explained as meaning “man of the weapon” or “man [worshiper] of [the deity] Salah.” Methuselah in the genealogy of Seth (Gen. 5:2–21, P) is the counterpart of Methusael in that of Cain (4:18, J). The parallel is even more exact in the Septuagint which transcribes “Methuselah” in both instances. Methuselah according to the Bible lived 969 years, longer than any of the pre-Abrahamic fathers of the human race. Babylonian tradition attributes exaggerated longevity – tens of thousands of years – to its heroes. U. Cassuto believes that the Bible wishes to negate the fantastic figures which attribute to kings a longevity that is unnatural to human beings and that makes them godlike. Not even Methuselah attained the age of 1,000 years, a single day of the Almighty (Ps. 90:4). If the biblical story be compared with the prevailing Babylonian tradition, the many years of Methuselah seem a modest, even a short life-span. The Bible diminished the exaggerated ages attributed to people in the Ancient Near East, but still preserved the tradition of assigning extraordinary longevity to great men.

METMAN-COHEN, YEHUDAH LEIB (1869–1939), educator in Erez Israel. Born in Ostiya, a village in Ukraine, Metman-Cohen was ordained as a rabbi. He joined *Benei Moshe, and in 1904 settled in Erez Israel, where he became headmaster of the school in *Rishon le-Zion. In 1906, he founded the first Hebrew high school in Jaffa, the Herzlia Gymnasium with 17 pupils and four teachers, and directed it until 1912; he was its headmaster again during World War I. Metman-Cohen was one of the founders of Tel Aviv (1909) and one of the initiators of Ir Gannim (1913), which eventually became *Ramat Gan. His publications included textbooks on the teaching of technical subjects in Hebrew and works on Hebrew language.

His wife, FANIA (1874–?), was one of the first teachers at the Hebrew high school in Jaffa and was active in the Women’s Federation for Equal Rights.

[Abraham Aharoni]

***METTERNICH, PRINCE KLEMENS WENZEL VON** (1773–1859), Austrian statesman. A supporter of Jewish rights in the German Confederation and abroad – although in Aus-

tria itself he did little for the Jews – at the Congress of Vienna he consistently supported the liberal policy of Karl August von *Hardenberg and Wilhelm *Humboldt (see Congress of *Vienna). He repeatedly warned the senate of *Frankfurt on the Main not to infringe upon the rights of its Jewish community and sent letters of protest to *Hamburg, *Luebeck, and *Bremen when they deprived their Jewish citizens of their civil rights. During the 1819 *Hep! Hep! riots he cautioned the Frankfurt authorities against letting matters get out of control. Metternich ordered his diplomatic agents to reveal France's complicity in the 1840 Damascus *blood libel affair. A frequenter of the sophisticated Jewish salons of Vienna, he associated, for business and pleasure, with the patrician Jewish banking families to such a degree that the *Rothschilds were suspected of aiding his escape from revolutionary *Vienna in 1848. His right-hand man, Friedrich von Gentz, was also sympathetic to Jewish causes.

METULLAH (**Metulah**; Heb. מְטוּלָה, מְטוּלָה), northernmost Israel village (moshavah). It stands on the Israel-Lebanese border, on the hill chain connecting the Naphtali Ridge with the *Hermon Massif and separating the *Huleh Valley from the Iyyon Valley in Lebanon. Metullah was founded in 1896, on Baron Edmond de *Rothschild's initiative, by young settlers specially chosen for their ability to defend the isolated site. The name Metullah is derived from the Arabic.

Metullah progressed slowly until the 1950s, when water and electricity were supplied to the village, and new immigrants settled there. The village's economy was based on deciduous fruit orchards, vineyards, field crops, and cattle, but it also served as a summer resort. From 1977 until the Israeli withdrawal from Lebanon in 2000, the moshavah served as a transit point for Christian Lebanese citizens working in northern Israel. The population at the end of 1969 numbered 350, rising to 950 in the mid-1990s and 1,480 in 2002, with a new neighborhood constructed to accommodate newcomers. The settlement has municipal council status and an area of 0.8 sq. mi. (2 sq. km.). Income still derives mainly from the orchards (apples, pears, apricots, cherries, plums, and nectarines) and tourism, featuring a big sports center with an ice-skating rink.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

METZ (Heb. מֵיץ), capital of the Moselle department, in the northeast of France. Even if Simon, bishop of Metz in 350, was really of Jewish origin (as a later source claims), it does not prove that Jews were present in the town during that pe-

riod. However, their presence is confirmed from at least 888; a *Church Council held in Metz at that date forbade Christians to take meals in the company of Jews. There is a reference that predates the 11th century to a Jew called David perhaps renting a vineyard. It was in Metz that the series of anti-Jewish persecutions accompanying the First Crusade began, claiming 22 victims in the town in 1096. Foremost among the local scholars in the early Middle Ages was *Gershom b. Judah ("Light of the Exile"). Although he lived mainly in Mainz, he was born in Metz, as was his disciple Eliezer b. Samuel. Another local scholar was the tosafist David of Metz. The medieval Jewish community occupied its own separate quarter, the *Vicus Judaorum*, whose memory is perpetuated in the street named "Jurue." In 1237, every Jew who passed through Metz was compelled to pay 30 deniers to the town, but was not permitted to remain there. In the 15th century successive bishops, whose residence had been transferred to Vic, tolerated the Jews under their jurisdiction and granted them privileges (1442). In Metz itself, however, the Jews were allowed to stay only three days.

After the French occupation (1552), the first three Jewish families were admitted to reside there as pawnbrokers (1565/67). They were soon followed by others, and in 1595, 120 persons established a community that Henry IV and his successors took under their protection. Thanks to the influx of Jews from the Rhine areas, the community increased to 480 families in 1718 and almost 3,000 persons in 1748. Assigned to the Rhimport quarter, it established a self-governing body with elected trustees. Community officials levied numerous taxes that grew more burdensome after the introduction of the Brancas tax (1715), which had originated as gifts given by the community mainly to the duke of Brancas. The debts of the community became enormous, reaching 500,000 livres at the time of the French Revolution. With the consent of the king, community leaders chose a chief rabbi who was often renowned for his erudition. Among the rabbis invited to lead the community were Jonah Teomin-Fraenkel of Prague (1660–69), Gabriel b. Judah Loew *Eskeles of Cracow (1694–1703), and Jonathan Eybeschuetz (1742–50) – chosen from abroad. The chief rabbi judged lawsuits between Jews but from the 18th century the parliament sought to assume this right. To this end, it ordered a compendium of Jewish customs to be deposited in its record office (1743).

From the beginning of the 17th century the community owned a cemetery, a synagogue, and a poorhouse. In 1689 free and compulsory elementary schooling was introduced, and in 1764 a Hebrew press began publishing. The Jews were restricted in their economic activities by legal disabilities, however. While an oligarchy developed that achieved great wealth, the masses remained mired in poverty. Hostility toward the Jews reached its peak at the time of the execution of Raphael *Lévy (1670) for alleged ritual murder. Nevertheless, before the Revolution the jurists Pierre Louis Lacretelle (1751–1824) and Pierre Louis *Roederer of Metz, future members of the National Assembly, called for granting Jews full rights. The lat-

ter organized the famous concourse of the academy of Metz on this subject Jewish emancipation (1785). In 1792 Marquis de Lafayette, who commanded the army at Metz, proclaimed the religious freedom of the Jews. The proclamation was later suspended during the Reign of Terror (1794). The *consistory created in Metz in 1808, which included Moselle and Ardennes, served 6,517 Jews. The yeshivah (Ecole Centrale Rabbinique), which became the Rabbinical Seminary of France in 1829, was transferred to Paris in 1859. The synagogue, which had been destroyed earlier, was rebuilt in 1850, as was the almshouse in 1867. After the German annexation of Alsace-Lorraine (1871) about 600 Jews immigrated to France. Immigrants soon arrived from other parts of Germany as well. After 1918, when the region reverted to France, there was a massive influx of immigrants from Eastern Europe and from the Saar region. The Jewish population of the city numbered about 2,000 in 1866; 1,407 in 1875; 1,900 in 1910; and 4,150 in 1931.

[Gilbert Cahen / David Weinberg (2nd ed.)]

Hebrew Printing

In 1764 Moses May set up a Hebrew printing press in Metz. In association with the royal printer Joseph Antoine, May published a Yiddish translation of Daniel Defoe's *Robinson Crusoe* (1764) and the first edition of Bezalel *Ashkenazi's *Asefat Zekenim* (*Shitah Mekubbezet*, to tractate *Bezah*, 1765). These works were followed by a large number of rabbinic and liturgical works, including the outstanding rabbis of Metz, such as Aryeh Leib b. Asher's novellae *Turei Even* (1781). May's effort to publish a small-scale edition of various talmudic tractates from 1768 onward led to his financial ruin. His son-in-law and successor Godechau-Spire printed several volumes of "enlightened" literature in Hebrew, such as a volume of riddles by Moses Ensheim (1787). May and his successors were active until 1793. Other Hebrew printers in Metz were Ephraim Hadamar and Seligmann Wiedersheim and successors. The Wiedersheim press continued to publish until 1870, when the German annexation of Alsace-Lorraine led to its closure.

Holocaust Period and After

Under German occupation in World War II, Metz, like the rest of Moselle and Alsace, was made judenrein following the flight of the population and the particularly brutal expulsions carried out by German troops. About 1,500 Jews died after being deported, among them rabbis Bloch and Kahlenberg. German soldiers plundered and defiled the two synagogues and destroyed the workhouse. The great synagogue was used as a military warehouse. After the liberation, the reorganized Jewish community began a slow process of reconstruction. In 1970 Metz had about 3,500 Jews (including some 40 families recently arrived from North Africa) and a well-organized communal body. Metz was the seat of the consistory of Moselle, which comprised 24 communities with a total of about 5,500 Jews; the largest communities were Thionville with 450; Sarreguemines with 270; Sarrebourg with 180; and Forbach with 300. In Metz itself, in addition to the great synagogue (Ashkenazi rite) with a seating capacity of 700, there are four

smaller places of worship, including one Polish and one Sephardi. The community also ran a Talmud Torah, a kindergarten with a kosher canteen, a workhouse, a mikveh, and a *hevra kaddisha*. In 1987, the Jewish population of Metz was estimated to be about 4,000.

METZGER, ARNOLD (1892–?), German scholar and author. Metzger was born in Landau in the Palatinate and began his career at the Hochschule fuer die Wissenschaft des Judentums in Berlin, where he taught from 1934 to 1937. In the face of rising Nazism he escaped to England, and then spent time in the United States where he became associated with Simmons College, Boston. After the war he returned to Germany, accepting a professorship in philosophy at the University of Munich. Much of his writing treats those areas of philosophy that touch on psychology; his contributions center on the phenomenology of recollection, perception, and the longing for death. His early books include *Phaenomenologie und Metaphysik* (1933); better known are his works on free will and determinism, *Freiheit und Tod* (1955), on transcendentalism, *Daemonie und Transzendenz* (1964), and on the ramifications of technology for the human personality, *Automation und Autonomie* (1964). His later interests include existentialism, social philosophy, and the American pragmatic school in juxtaposition to the German metaphysical schools. In this connection he wrote "William James and the Crisis of Philosophy" (*In Commemoration of William James*, 1942).

METZGER (Metzger-Lattermann), OTTILIE (1878–1943), contralto. Born in Frankfurt, Metzger was a student of Selma Nicklass-Kempner in Berlin and made her debut at Halle in 1898. She sang and was the leading contralto at the Hamburg Stadttheater (1903–14) and appeared in Wagner operas at Bayreuth, gaining a reputation as a singer of dramatic parts. Her great roles there were Erda and Waltraute in *Götterdaemmerung*. Between 1916 and 1921 she sang with the Dresden Staatsoper. She toured in Austria, England (at Covent Garden she made her debut in 1902, singing in Wagner's *Die Meistersinger*, *Siegfried*, and *Tristan*), and the United States (1914–15), and appeared with the German Opera Company at the Manhattan Opera House, New York, in 1922–23. She taught in Berlin until the Nazi rise to power, took refuge in Brussels, and was deported to Auschwitz in 1942, where she met her death.

ADD. BIBLIOGRAPHY: Grove online.

MEUNITES (Heb. מְעֻנִיִּים), an Arab tribe which lived on the border of the kingdom of Judah. Along with “the Philistines ... and the Arabians that dwelt in Gur-Baal” (11 Chron. 26:7), the Meunites paid a tax to *Uzziah king of Judah. At about the time of Hezekiah, the Meunites were attacked by the tribe of Simeon, which reached “to the entrance of Gedor, even unto the east side of the valley” (1 Chron. 4:39–41). An inscription of the Assyrian king Tiglath-Pileser III indicates that at about this time (eighth century B.C.E.) the Meunites lived near the Egyptian border, which extended to the “Brook of Egypt” (Wadi el-Arish). There is no basis for J.A. Montgomery’s identification of the Meunites of Chronicles with the Mineans, one of the south Arabian kingdoms whose economic activities and settlements reached as far as the oases in northern Arabia, or for A. Musil’s location of them in the region of Ma’an in southern Transjordan. These theories are based upon references to the M(ε)νῶνιοι in the Septuagint and in works of the classical historiographers of the third century B.C.E. and later; the conditions reflected in these sources are later and do not conform to those of the eighth century B.C.E.

[Israel Eph’al]

MEVASSERET ZION (Heb. מְבַשֶּׁרֶת צִיּוֹן “Herald of Zion”), Israel urban settlement with municipal council status, 5 mi. (8 km.) W. of Jerusalem. The settlement’s area extends over 2.2 sq. mi. (5.6 sq. km.). On a 2,600 ft. (799 m.) high hilltop the Romans erected a fortress, Castellum, to secure the road to Jerusalem. The Crusaders renewed it, calling it Castellum Belveer. This strategic spot became a small Arab village which preserved the ancient name (al-Qastal). During the Israel *War of Independence (1948), it changed hands in heavy battles, but finally (April 9) fell into Jewish hands. In 1951 the settlement Ma’oz Zion (“Stronghold of Zion”) was established at the foot of Qastal Hill to house immigrants from Iraqi Kurdistan who worked in the nearby *Solel Boneh stone quarry, reactivated after the War of Independence. They developed fruit gardens and auxiliary farms. In 1956 a laborers’ garden suburb, Mevasseret Yerushalayim, was established east of Ma’oz Zion, on a ridge close to the armistice lines of the time and north of *Moza. Its inhabitants found employment partly in the fruit orchards, in the Arazim Valley stretching south and east of Mevasseret Yerushalayim, and partly in Jerusalem. In 1963 Ma’oz Zion and Mevasseret Yerushalayim merged into one municipal unit, Mevasseret Zion, which in 1969 had 4,160 inhabitants. In the mid-1990s, the population was approximately 14,400, increasing to 20,800 in 2002. From 1978, 11 new neighborhoods were created there under the settlement’s continual expansion. It attracts many Jerusalem residents, mainly secular, as an upscale location. It also has the largest immigrant absorption center in Israel, hosting 1,100 *olim*.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

MEVORAKH BEN SAADIAH (11th century), **nagid* and leader of the Jewish community in Egypt. Mevorakh was a descendant of a family of scholars and physicians, and was him-

self a distinguished scholar; therefore, he is referred to in letters as *Sanhedra Rabba* (“member of the Sanhedrin”). His fame as a physician was such as to gain him an appointment at the Egyptian royal court. He succeeded his brother Judah as *nagid* in about 1080. At that time *David b. Daniel b. Azariah arrived in Egypt to wrest the leadership from the heads of the Egyptian community. He instigated others to bring false accusations against Mevorakh and forced the latter’s banishment from the Egyptian capital to Fayyum and later to Alexandria. After some time Mevorakh succeeded in proving his innocence, and was reinstated as court physician and *nagid*. His triumph over David b. Daniel was complete by 1094. He wielded much influence with al-Malik al-Afḍal, the *Fatimid regent, and remained in his position until the beginning of the 12th century.

[Eliyahu Ashtor]

MEVORAKH HA-BAVLI (11th century), *paytan* and poet. Although his family was Babylonian, Mevorakh lived in Erez Israel or its surroundings. In the Cairo **Genizah*, parts of his *divan* were found, including both religious and secular poems, some of which have been published by various scholars. He was one of the first poets in the Oriental countries supported by philanthropic contributions, and, in his poems, explicitly appeals for support, adding praise for those who furnish it. In one of his poems, he mentions the philanthropist Abraham b. Samuel, from whom he requested a “night shroud” (i.e., a sheet), and, in another, one of his friends, R. *Abiathar b. Elijah ha-Kohen, the author of *Megillat Evyatar*. An acrostic bearing the name of the recipient, Yasa (?) ha-Kohen, appears in still another poem.

MEXICO, federal republic situated south of the United States of America with a population of 97,483,412 (2000) inhabitants and a Jewish community of about 40,000 (2000), most of whom live in Mexico City.

Colonial Period

The Jewish presence in Mexico began with the Spanish conquest led by Hernán Cortés in 1521. Many secret Jews and “Conversos” sought refuge in the newly conquered lands, and in this way a significant movement toward “La Nueva España” (New Spain – the name of Mexico in the colonial period) was initiated. There were two kinds of Conversos arriving in the “New World,” first, the Crypto-Jews (also called disrespectfully “Marranos”) who had been forced to convert and continued their traditions in secret and were looking for a better economic situation and a way to evade the persecution of the Inquisition’s Tribunal. Many of those belonging to this group were accused before the Tribunal and their records

were kept at the “Archivo General de la Nación” (Mexican National Archive), so that their history can be tracked. Also, there were those who were truly converted and integrated who hid their origin and their blood “impurity.” The latter were the ones that most frequently gave away the Crypto-Jews and were incorporated to the Church structure; remarkable examples, among many others, were Fray Bartolomé de las Casas, Fray Alonso de la Veracruz, and Fray Bernardino de Sahagún.

Following the arrival of the Conversos in the New World, we can divide their history into three periods: from the discovery to the conquest (1492–1519); from 1519 until the establishment of the Inquisition Tribunal in New Spain in 1571; and from 1571 to 1810 during which the Tribunal functioned. The first stage was initially characterized by the abandonment of Spain, owing to the expulsion decree. Many Crypto-Jews and New Christians decided to sail with Columbus and other expeditions in order to discover new routes; they even financed these trips. Some remained in the newly discovered islands, while some returned and motivated others they knew into joining this adventure. Until 1502 the migratory restrictions were minimal. From then on, however, the Crown allowed access to the newly discovered lands only to the descendants of Christians who counted no converts among their ancestors or, in other terms, were “pure blooded” (*limpios de sangre*), meaning that the children of the Jews, the Moorish, the newly converted, and those processed by the Inquisition were not able to sail in official missions such as that of Nicolás de Ovando in 1502. Yet, beginning in 1511 restrictions became flexible owing to the need to populate the new lands with craftsmen, leading to an increase of the number of Conversos with a professional license as well as of businessmen. The commerce in false documents attesting to “pure blood” increased as well, allowing the sailing of a large number of Crypto-Jews heading toward the “Indias.”

In the second period many Crypto-Jews participated with Hernán Cortés in the conquest of the mainland and in the defeat of the Aztec Empire situated in Tenochtitlan. We know about them because of the process against four of them that took place in 1528: two of the Morales brothers, Hernando Alonzo and Diego de Ocaña, were burnt at the stake and the other two received minor punishments. During this stage a significant arrival of Conversos took place, mainly from Madrid and Seville. They arrived as soldiers, conquerors, and colonizers. There is information that by 1536 there were in New Spain Crypto-Jewish communities in Tlaxcala and Mérida and there are files and records of the procedure against Francisco Millán, a bartender who sold Sabbath wine to the community and informed on a large amount of correigionists. Along with the development of the mining districts, the Crypto-Jews’ settlements became diversified as well, such as in Taxco, Zacualpan, Zumpango del Rio, Espíritu Santo, and Talpujahuá (1532), Los Reales del Monte in Pachuca, Atotonilco (1544), Zacatecas (1547), and Guanajuato (1554). By the end of the 16th century some small communities were

Main Jewish communities of Mexico in 2005.

known in Guadalajara, Puebla, Querétaro, Oaxaca, Veracruz, Michoacán, and elsewhere.

The Conversos lived in specific neighborhoods and on certain streets; some dedicated themselves to the local trade, but they traded also with foreign countries, especially with Manila and the Philippines; these last ones ascended the social scale and married with “old” Christian Spaniards.

The third stage was initiated in 1571, a time by which the Crypto-Jewish communities were already consolidated. By the funding of the “Nuevo Reino de Leon,” created in the northeast of Mexico by a New Christian called Luis de Carvajal y de la Cueva (who went by the nickname of “El Viejo” (The Elder)), and due to a concession of the Crown and as a reward to him for his pacifying the Chichimecas, a hundred Spanish families arrived there, most of them from a Crypto-Jewish origin.

During these years of economic progress, some Conversos from Portugal arrived; they were descendants of the Jews who had been expelled from Spain. Despite the fact that they had come to Mexico only ten years earlier, in 1589, one of their spiritual leaders, García González Bermejo, was discovered, judged, and condemned to death. In the same period there were some “autos-da-fé,” capable of shocking the whole community of New Christians in Mexico. In 1590 a large number of Crypto-Jews were prosecuted, especially those coming from Portugal and Seville; among them were Hernando Rodríguez de Herrera and Tomás de Fonseca Castellanos. In 1596, 46 Conversos were prosecuted, and as a result a few from the Carvajal family were sent to the stake, among them Luis de Carvajal “El Mozo” (The Young) who had become one of the spiritual leaders of the community. In 1601, 45 Crypto-Jews were sent to trial and between 1574 and 1603, 115 “judaizantes” were prosecuted. Also Indians were prosecuted, accused of being adepts in Judaism, quite possibly converted by their Crypto-Jewish masters so they would not give them away. The proceedings present a clear view of the Conversos’ everyday life, their meetings, the way they practiced their traditions, their occupations, and their active participation within the

colonial society. Among their crafts particular notice may be given to the shoemakers, tailors, silver craftsmen, engravers, barbers, doctors, painters, wagon riders, musicians, lawyers, and solicitors.

From 1625 to the end of the 17th century, the migration of the Conversos and their descendants from Spain and Portugal diminished, and the persecution of the wealthy Crypto-Jews increased – actions that benefited the wealth of the Inquisition, which confiscated their assets. The inquisitors prosecuted over 200 people between 1620 and 1650 and from 1672 to 1676 a hundred more. Most of the accused came from Portugal, owing to the separation of the two kingdoms in 1640, which provoked increased persecution of Portuguese by Spain. Typical cases were those of Domingo Márquez, deputy major of Tepeaca in 1644, and Diego Muñoz de Alvarado, who was chief magistrate in Puebla de Los Angeles and accumulated a large fortune to the extent of having his own commercial ships.

The Faith Prosecutions did not stop. In 1646, 46 Conversos were prosecuted and were obliged to make a public “reconciliation” with the Church; in 1647 there were 21; 40 in 1648; and finally, on April 11, 1649, 35 were prosecuted out of which eight were executed by burning. From that moment the reconciliated were deported to the Iberian Peninsula to prevent them from reinitiating their Jewish practices for lack of surveillance. Among the deported were Captain Macías Pereira Lobo, sent to trial in 1662; Teresa Aguilera y Roche, wife of New Mexico’s governor; Bernardo López de Mendizábal, judged in 1662; Captain Agustín Muñoz de Sandoval, sentenced in 1695; and a Crypto-Jewish monk tried in 1706 called Fray José de San Ignacio.

From the beginning of the 18th century through to the achievement of Independence (1821), migration disappeared and religious persecution diminished. The Crown and authorities of New Spain took care to prohibit the reading of books from European encyclopedia writers that had liberal and democratic ideas. By then the assimilation of Crypto-Jews into the society was much greater, causing the loss of Jewish customs and traditions due to the lack of contacts with outside political allies. Oral tradition survived in some cases, albeit deformed, and some objects went from generation to generation without a link to their ritual meaning. Some families did not forget their origins, and such was the case of a university professor, Francisco Rivas, who, by the end of the 19th century, published a journal called *El Sábado Secreto* (“The Secret Saturday”), in which he declared himself to be a descendant of Conversos from the Colonial period.

Despite the fact that the Inquisition ended symbolically as well as physically regarding Judaism, there are still some groups in Mexico that define themselves as Jews descending from the Crypto-Jews. The main congregations identified as such are the ones at Venta Prieta in Pachuca, Hidalgo, and Vallejo – a northern neighborhood of Mexico City. The members of those communities at Venta Prieta and Vallejo, named *Kahal Kadosh Bnei Elohim* (the leader of the latter in 2005 was Dr. Benjamín Laureano Luna), who have “mixed blood” and

Indian features, claim that their genealogy comes from the colonial period. However, there are scholars like Loewe and Hoffman that who conclude that they are not Crypto-Jews but descendants of a protestant Evangelical church called “Iglesia de Dios” (Church of God). When the modern Jewish community got in touch with them in the 1940s, the problem of their inclusion or exclusion into the community arose. On the basis of anthropological studies by Rafael Patai, this community received attention from foreign Jews, who made several trips in order to support and teach them normative Jewish practices. The ambiguity in the relations remains, and the attitudes from the different community sectors are varied, from the religious and cultural acceptance to open rejection.

19th Century: From the Independence to 1900

When Mexico started its independent life in 1821, the decrees and legislation of the new Republic maintained Catholicism as the sole and official religion, despite the abolition of the Inquisition. Religious prejudices promoted by the church did not disappear and Catholics kept blaming Jews of “deicide” (God killers). The Mexican governments during the first 50 years of autonomy reached commercial and political agreements with some European companies that belonged to Jews, and it is possible that some of the latter lived temporarily or permanently in the country, though there was no community lifestyle. Religious freedom was proposed by a generation of liberals by the middle of the 19th century, under the leadership of Benito Juárez. His political and economic modernization project was established in articles 5 and 130 of the 1857 Constitution, which neither affirm religious freedom explicitly nor deny it.

At the time of the arrival of Maximilian of Austria as Emperor of Mexico (1864–67), some Jews from Belgium, France, Austria, and Alsace came with his court; they even talked about the possibility of building a synagogue, but the project was not accomplished, so religious services were held in private homes. One of the most outstanding personalities was Samuel Basch, chief surgeon at the Military Hospital at Puebla and personal doctor to the emperor in 1866. It was Basch who took Maximilian’s remains to Vienna and after that published “Mis recuerdos de México” (“My memories of Mexico”). With the end of the empire most of these Jews returned to their countries.

During the “dictadura Porfirista” (dictatorship of President Porfirio Díaz, 1876–1911), the country was peaceful and foreign investors saw Mexico as a business option. Some foreign companies’ representatives were Jews from France, Austria, Germany, Italy, Belgium, the United States, and Canada; however they did not identify themselves publicly as Jews. Assimilation prevailed among these Jews, manifested in intermarriage and integration into aristocratic society, with nationality as the most important aspect of their identity.

By the end of the 19th century, Jews from Russia and Galicia arrived in Mexico, and they were associated by the European Jewish press with colonization projects. In 1891, when the *Baron Maurice de Hirsch Fund was established in New York

and the *Jewish Colonization Association (ICA) in London, several plans for the establishment of extensive Jewish farming settlements in Mexico were proposed. However, this was not accomplished due to the negative reports that were given by the experts who were sent to evaluate this possibility. They thought that the potential settlers would not be able to compete with the cheap local labor work. In 1899, when the first immigrants from Syria reached Mexico, the above-mentioned Francisco Rivas Puigcerver started with his weekly journal *El Sábado Secreto* (later called *La Luz del Sábado* – “Shabbat Light”), dedicated to Sephardi history and language.

Immigration and Community Organization (1900–50)

The deterioration in the quality of life of the Jews in the Turkish-Ottoman Empire, caused by political instability and the frequent wars with which they had to contend on their borders, forced the different Jewish communities to look for more appropriate geographical and economic arenas. Sephardi Jews from the Middle East, the Balkans, and Turkey (Ladino speakers), as well as Jews from Syria and Lebanon (Arab speakers), were the first interested in recreating a Jewish life in Mexican grounds.

Jews coming from Damascus and Aleppo maintained daily prayers and rituals inside private homes, owing to the fact that families had known each other previously and kinship was the basis for their strong union. Parallel to the informal gathering among the Syrian Jews, scattered Ashkenazim living in Mexico tried to organize a community. In 1904 a group called “El Comité” (The Committee) organized the Rosh Ha-Shanah services on the premises of a Masonic Lodge. After this event, there were several attempts at community organization, but it was not until 1908 in which the Union of American Hebrew Congregations, which was interested in establishing a Jewish community in Mexico to avoid illegal immigration to the United States, sent Rabbi Martin Zielonka to organize a congregation in Mexico. “The Committee” was then summoned and with the 20 attendees the “Sociedad de Beneficencia Monte Sinai” was established. However, the activities of this group were not fruitful, because many of them left the country with the outburst of the Mexican Revolution in 1910.

In 1912 the Alianza Monte Sinai – AMS re-constituted itself under Isaac Capon’s initiative. Born in Turkey, he was aware of the need to have a Jewish cemetery, since upon the death of his mother she had to be buried in a Catholic graveyard. All of the Jewish residents in Mexico, including the Syrians, participated in the initiative, and thanks to the good relationship between one of its members, Jacobo Granat, with the president at that moment, Francisco I. Madero, the AMS received permission from the authorities for the acquisition of the first Jewish cemetery. In 1918 AMS bought a house on Jesus Maria Street in the center of Mexico City where they decided to build a synagogue. The day when President Venustiano Carranza gave his authorization signature became a memorable one, because it was the first time the existence of

a Jewish community was recognized by law. AMS kept itself united with ups and downs for a decade, during which religious services and financial and social assistance were given to the new immigrants, including Hebrew classes, kosher meat, a *mikveh*, and the services of a *mohel*.

Between 1913 and 1917 the revolutionary conflict caused a decrease in the Jewish population. The victorious Carranza’s regime, however, adopted liberal policies guided by the secular principle of religious freedom and, within this context, the formal recognition of the Jewish community, as well as other religions, meant the reconfirmation of modern ideology. After World War I, Jewish immigration continued, Sephardim as well as Ashkenazim, mainly from Eastern Europe. Their number in 1921 was estimated at around 12,000 persons, about 0.1% in a country of 12 million inhabitants. Many of these Jews used Mexico only as a stopover on their way to the United States. With the establishment of immigration quotas in the United States in 1921, which became stricter in 1924, many Jews decided to stay in Mexico.

The first Jewish immigrants from Europe arrived in Mexico in 1917 through the United States. They were young men who spoke Russian and Yiddish, who had evaded their military service and sustained political ideologies such as Zionism, Jewish Nationalism, and Socialism. They founded the first Jewish cultural organization in Mexico: the Young Men’s Hebrew Association (YMHA), working as a club dedicated to the promotion of culture, sports, and society. This model was followed by some Jewish communities in the province, and during the 1950s also by the “Centro Deportivo Israelita” (CDI; Jewish Sport Center). In the 1920s the YMHA, with its headquarters at Tacuba street no. 15, in the center of the city, became a place for social gatherings and for economic assistance to the new Ashkenazi immigrants.

Prayer in the synagogue and religious services for the Jewish residents in Mexico City started in 1922. At that time over half of the Jewish population came from Turkey, Syria, Lebanon, and the Balkans. Nevertheless, Jews from Eastern Europe started to arrive by the thousands from Russia, Poland, Lithuania, Austria, Germany, Hungary, and Czechoslovakia, encouraged by the effects of World War I, the Russian revolution, and the economic depression in the area. In the 1920s alone approximately 9,000 Ashkenazim and 6,000 Sephardim increased the Jewish population to 21,000 persons.

An organizational readjustment occurred in this decade, characterized by the diversity in cultural patterns brought by the immigrants from their respective countries of origin. The differences in languages, in religious rituals, and in daily habits were obvious, especially among those who came from Europe and the Middle East. The Ashkenazi separation from the AMS was completed in 1922 when they decided to hold their religious services by themselves and to create their own organizations. The religious, ideological, and cultural plurality expressed in the welfare organizations, periodic publications, and artistic and cultural expressions show the dynamism of a community in the process of formation. In 1922 Nidhei Israel

was created in order to take care of the religious needs (such as prayer, *talmud torah*, *kashrut*, *hevrah kaddisha*, and others). This institution became the Kehilá nucleus that was established with official recognition in 1957. After some attempts begun in 1923, the Zionist Federation was established in 1925, with the different ideological trends of the Zionist Ashkenazi Jews. In the 1920s and the 1930s there were also active Bundist and Communist organizations. The Sephardim formed their own Zionist organization, Bnei Kedem, in 1925, because they did not feel comfortable in meetings where the predominant language was mostly Yiddish. In 1924 the Yiddishe Shul – Colegio Israelita de Mexico was founded, the first of a wide network of Jewish day schools still in operation.

In 1924 Jews from Turkey, Greece, and the Balkans – Ladino speakers – decided to separate from the AMS and establish their own community and welfare association “La Fraternidad” in order to help their fellow countrymen with economic, medical, and social aspects. In 1940 the “Union Sefaradí” was founded, with the fusion of “La Fraternidad,” the women’s mutual aid society “Buena Voluntad,” and the youth organization “Unión y Progreso.” Since then, this community has had a day school (founded in 1943), two synagogues, and a cemetery as well as a formal administrative structure.

The AMS was left actually in the hands of the Syrian Jews. Those who came from Aleppo (halebies), however, did not actively take part, because they had their own places of prayer and their own *talmud torah*, so that their economic participation was very limited. They even built their own synagogue, “Rodfe Sedek,” in 1931, and in fact were separated from the AMS. Problems arose when they wanted to make use of the cemetery and they were required to update the payment of their membership fees. The halebies founded their own communal and administrative institutions and bought their own grounds for a cemetery. In 1938 Sedaká uMarpé was founded, a charity society that grouped together the diverse institutions of men, women, and youth, as well as the observant groups that were in charge of the religious services, assistance, and social activities. On the other hand, the AMS, managed by the Damascenes since the second half of the 1920s, changed its statutes in 1935 and became an exclusive organization for this sector. By the end of the 1930s, the limits of the community structures were defined, so that community affairs administration would be taken care of by institutions organized according to their origin, and the original culture would be recreated within them, preserving the identity of the first immigrants.

ECONOMY AND SOCIAL STRATIFICATION. Since their arrival, Jewish immigrants dedicated themselves to commerce, mainly as peddlers. Before 1940 the Mexican population was basically rural, so that salesmen had to carry the goods to the smaller towns and not only to the urban centers. For this reason there were Jews who preferred to stay in the provinces and prospered as itinerant salesmen or with fixed or semi-fixed shops in the markets, even though most of them lived in the capital. Along with other foreign merchants, they intro-

duced the credit system sales, which made it easier for their customers to enhance their lifestyle and acquire goods which otherwise would have been impossible to get. They sold shoes, socks, ties, fabrics, thread, stockings, ribbons, and some other consumer goods necessary for domestic use. In the second half of the 1920s, the B’nai B’rith contributed economically, together with the Ashkenazi associations, to incorporate immigrants; it gave them credit to start as merchants, taught them Spanish, and organized their social life.

In the 1930s, and as a result of the unemployment caused by the economic effects of the Great Depression of 1929, anti-semitic and xenophobic movements promoted attacks against the vendors at “La Lagunilla” market. Antisemitism forced the small Jewish merchants to install their own commercial spaces as well as to establish small manufacturing workshops in order to protect themselves from the attacks of ultra-right nationalist groups, in the long run resulting in their economical ascendance. During this process the Banco Mercantil, founded by Jews in 1929 on the basis of a loan fund, financed the acquisition of machinery for the textile industry and industrial input assets. In 1931 the Cámara Israelita de Industria y Comercio (Jewish Industry and Commerce Chamber) was created in order to coordinate the economic efforts of the Jews and to serve as a representative organ of the Jews vis-à-vis the Mexican authorities and the society at large.

IMMIGRATION AND ANTISEMITISM. Mexican migratory policy turned from an open attitude to a restrictive one based on racial selection. Before the Mexican revolution there were practically no regulatory laws. In the 1920s, presidents Obregón and then Calles, in their national reconstruction goal, invited the Jews to move to Mexico with the purpose of promoting the economic development of the country. However, in 1927, the Mexican Congress approved new legislation on immigration according to racial criteria, considering the assimilation capacity of the immigrants into the *mestizo* (mixture of Indian and Spanish) races of the country as well as the country’s economic absorption capacity and the immigrants’ contribution toward its productive development. In 1929 the entrance of workers was prohibited and in 1936, the Population Law established differential quotas according to the national interest (racial assimilation and economic potential), elaborating tables with restrictions to the admission of certain foreign groups. German and Austrian Jews, who fled the racial laws of the Nazi government, had difficulties in entering the country, despite the intensive efforts made by the Jews on the local and international levels. For the Polish and Romanians only ten visas per year were available, clearly insufficient facing the scope of the European problem. Throughout the period of Nazi persecution (1933–45) Mexico accepted only 1,850 Jews.

The increase of antisemitism, expressed in the attacks of fascist groups, such as the “Camisas Doradas” (Golden Shirts), reinforced the unity of the Jewish community to resist the situation. The result of this union was the creation of the Comité Central Israelita de México (Central Jewish Committee

of Mexico) in 1938 as an umbrella institution of all the existing Jewish organizations, becoming the only representative body recognized as the legitimate Jewish representative by the government, as well as by international Jewish institutions the world over, such as the *Joint Distribution Committee and the *World Jewish Congress. In 1944, the Anti-Defamation League was created within the *Comité Central*, becoming better known by the name of its journal *Tribuna Israelita*, with the objective of preventing antisemitism. The tumultuous antisemitic attacks from the ultra-right were silenced in 1942 when Mexico declared war on the Axis powers.

The 1940s in Mexico were outstanding, because it was the starting point for a sustained economic growth that lasted for over 30 years. World War II promoted the export of food and basic goods into the United States as well as the strengthening of the Mexican internal market. The imports substitution program, launched by the government, stimulated the creation of industries in a protected economic environment. The Jews saw in this project the opportunity for improvement, so they established manufacturing factories, especially in the textile field. Their economic status improved and the occupational areas that participated were also diversified. A survey performed in 1950, among the Ashkenazi sector, found 52 occupations in different fields, especially commerce and industry and also professions such as medicine, engineering, and the sciences.

Jewish Education

In many cases the community institutions organized schools of Jewish studies for the children of their members. They established *talmudei torah* and *Kutabim* (complementary traditional schools), and also day schools in which general studies were imparted together with subjects of Jewish culture. At the beginning the Jewish studies were learned in Yiddish, Arabic, or Spanish, together with rudimentary knowledge of Hebrew. The first day school was the Yiddishe Shul – Colegio Israelita de Mexico, established in 1924 by Meir Berger. During the first decade Jewish studies were taught in Yiddish. In the 1930s a few attempts were made to teach in Hebrew but they failed. Since then the school has defended Yiddish as a fundamental cultural current of Judaism. In the 1940s many new schools were established, according to the ideology of the founders and the parents, and also according to the community of origin of the families. Two schools were established in 1942: the Hebraist school Tarbut by Avner Aliphaz and Yeshaiah Austrikan, and the Ashkenazi religious school Yavneh. They were followed by the Hebraist schools of the Sephardi community (1943) and that of the AMS (1944). All these schools adhered to the Zionist movement or sympathized with it, and after 1948 they were among the most important vehicles for the linking of the communal identity with Israel. In 1946 a Teacher's Seminary was established in the Yiddishe Shul by its new principal, Avraham Golomb. In 1947 the day school Sedaká uMarpé of the Aleppan community was founded and functioned until 1951 without a curriculum in Jewish stud-

ies. In 1950 Avraham Golomb left his former school and established a new Ashkenazi school – the Naye Yiddishe Shul I.L. Peretz – Nuevo Colegio Israelita with a Yiddishist trend and inclination towards the Bund. The Sephardi School, the Monte Sinai School, and the Teacher's Seminary adhered to the Zionists and adopted the educational politics sent from Israel to the Diaspora. The schools were connected to the Vaad haHinuch (educational council), that was linked with the Jewish Agency and the State of Israel. The Jewish Agency assigned to the schools in the 1950s, 1960s, and 1970s Israeli *sheliḥim* – teachers and principals – to teach Hebrew, Yiddish, and Jewish culture, and to bring the schools closer to the Jewish state. Since then the schools have employed Israeli educators on their own.

ZIONISM. The events that marked world Jewish history in the middle of the 20th century, the Holocaust and the creation of the State of Israel, were present in the life of the Jewish Mexican community and its leaders. Zionism was the flag identifying Mexican Jews vis-à-vis the national society. The Jewish efforts to achieve the legitimation of the national Jewish aspirations and the obtaining of a favorable vote from Mexico on the partition of Palestine in the United Nations in November 1947, was the main challenge for the Zionist sector. The coordination, unification, and efforts were manifested in the creation of the Zionist Emergency Committee and the Emergency pro-Palestine Jewish Committee, representative organizations of the Jewish community before the Mexican society. The legitimate demands that accompanied the Zionist ideals as a national liberation movement, gave a positive image of Judaism, compensating for the impact of previous anti-Jewish expressions and demonstrations, despite the abstention of Mexico in the United Nations in 1947.

The creation of the State of Israel in 1948 had concrete effects within the internal dynamic of the Ashkenazi sector; the organized unification of the Zionist parties and groups became a reality in 1950. The Zionist Federation of Mexico became the framework in which the different sectors coordinated their efforts thanks to the links established with Israel. The new state replaced the Zionist party organizations with government institutions, a process that the Zionists in Mexico also followed as they developed community institutions. Since then, Israel became the central issue for the secular Jewish solidarity and identification. Within the Sephardi community, the Zionist youth organizations were very active. In the case of Sedaká uMarpé and AMS, Zionism introduced a new element of identity and Jewish pride, and gave meaning to their work on behalf of the State of Israel.

Consolidation of the Jewish Community in Mexico

1950–2000

During the first half of the 1950s the Club Deportivo Israelita (CDI) was created, becoming the largest organization of Mexican Jewry, with the affiliation of Jews from all the community's sectors, becoming one of its most inclusive institutions. The objective of the CDI was to stimulate physical and cultural ac-

tivities allowing the association of children, youngsters, and adults. Around 15,000 Jewish families are members of the CDI, including some non-affiliated.

The two main communities that consolidated outside Mexico City and its metropolitan area since the 1930s are Monterrey and Guadalajara, consisting of approximately 150 families each. Having created institutions that include synagogues, schools, recreational facilities, and their own cemetery, both maintain religious institutions and organizations for women and men, where Ashkenazim and Sephardim gather in the same community space. In Tijuana there is also a community of 70 families that since 1943 had been closely linked to the U.S. community of San Diego. Some Jewish families also live in Veracruz, Puebla, and Cuernavaca, however, with no representative institutions. In the 1990s, in Cancún, community life has been promoted among the 70 families that moved to that city.

In the 1950s and the 1960s the Jewish institutions were consolidated. The fast economic ascent of the Jewish families, made possible the change of residential neighborhoods in Mexico City: from the downtown area and “Colonia Roma” to “Condesa” and “Polanco”; for this reason some new community facilities were built, such as large and elegant synagogues, new school buildings, new community centers, and places for the youth movements. These were the years in which the religious attachment diminished because the Jewish core identity remained linked to Zionism, coinciding with the secularization process with which Mexican society was experimenting along with its fast growing urban modernization. It is quite significant that during this period there emerged the only two Conservative synagogues that exist in Mexico City: Bet Israel created in 1953 by American Jews, and Bet El founded in 1963 by Ashkenazi Jews who were not able to find in the religious legacy of their parents a meaningful Judaism, and decided to be separated from the Kehilá in order to practice more modern religious forms that were closer to their reality. However, in the Ashkenazi sector as well as among the Sephardim, there remained vigorous nuclei of religious Orthodox families who continued the rites and practices preserving the different modalities according to the original tradition of the immigrants.

SOCIAL INTEGRATION AND IDENTITY. The socioeconomic improvement placed the Jews in the upper levels of the Mexican society and their cultural practices resembled those of the elite. Many sent their children to American schools to learn English, intermingled with Mexican entrepreneurs to do business, and made frequent trips to the United States. The Jews learned how to adapt themselves into the Mexican political system; they registered their institutions according to the national schemes, e.g., the welfare societies were registered in the Secretaría de Salubridad y Asistencia (Health and Welfare Ministry). However, an asymmetric relationship with the government prevailed, since it recognized the Jews as citizens, but did not consider them as a distinct group, although in fact it

did treat them as such. This situation was reproduced in the next generations, which were perceived as foreign as their parents had been, despite the cultural synthesis with which they were experimenting, and they remained suspect of maintaining dual loyalty, to the Jewish people and to the Mexican nation, which in a way took away their credit as legitimate Mexicans. This constant questioning led the Jewish community to live as an enclave, at the margins of the political and social life of the country. The isolation of the Jews was the result of an internal attitude of wanting to preserve the social community living space, and an external one due to the rejection of the general society to admit differences.

By the 1970s the anti-Zionist government policy was expressed in the international arena, when in 1975 the president of Mexico, Luis Echeverría, proposed, before the United Nations General Assembly, that Zionism was a form of racism. The Mexican-Jewish community had very little influence on trying to alter this proposal, which was approved by the majority with the support of the Arab nations and their allies of the Third World. Diplomatic relations between Mexico and Israel became tense and the tourism boycott of the American Jews against Mexico had an influence on the change of the Mexican position towards Zionism. This change came in 1992 when another Mexican president, Carlos Salinas de Gortari, proposed at the United Nations General Assembly to abrogate this resolution, a proposal that was approved.

The third Jewish generation in Mexico lived in a hard national economic context, marked by a crisis that returns every six year, which means they have to confront a constant challenge to the maintenance of the social status acquired by their parents. In the 1980s and 1990s, Mexico and the world were facing changes in the economic model toward an open economy. Not all the Jews adapted themselves successfully. Just like other small- and middle-sized merchants and industrialists in the country, they suffered from the consequences of the international competition for which they were not prepared. The opening of the Mexican markets provoked a strong readjustment in the textile industry and a great recession in the construction field, areas in which a large number of Jewish entrepreneurs were involved. The collapse of enterprises and the consequent loss of jobs among the Jews led to more employees and professionals and fewer company owners. Facing this situation, all the community organizations started a program known as “Fundación Activa” which gives training and tutorial assistance for self-employment and for the creation of micro-enterprises that do not require large investments. This and other assistance programs contributed to the stability and cohesion of the Mexican Jewish community and helped to maintain its institutional diversity and its demographic and socioeconomic level, preventing poverty and/or migration.

From the 1990s Mexican Jewry experienced an increase of religiosity in some of the community's sectors, that may be associated with this economic, political, and cultural trend in the global and national environment. The number of syn-

agogues and especially of *midrashim* and *kolelim* (religious adults' study centers for bachelors and married men respectively) rose, in particular in the most Orthodox sector, the Maguén David Community, formerly the Aleppan Sedaká uMarpé. This trend is a new development in the religious life in Mexico, since it is linked to the ultra-Orthodox movements from Israel, in which there is a kind of synthesis of the religious tradition of the communities of Middle Eastern origin with the Ashkenazi tradition.

A significant change in the relations between the Jewish community and the Mexican State was felt after the creation of the "Ley de Asociaciones Religiosas y Culto Público" (Religious Associations and Public Cult Law) in 1992. Until the 1990s, the Jewish minority had adapted to the limited space given by the State, registering itself as civil associations. Since the 1940s, the relations between State and Church were based on the agreement, according to which the government did not interfere in the affairs of the Church in exchange for the recognition of the Church in the sociopolitical hegemony of the State. This relation was also applied to the Jewish case. This was illustrated in the increase in Jewish schools during the 1940s, which besides the official program taught Jewish history, Bible, and tradition which could be interpreted as religion. The State tolerated this kind of expression even though it was forbidden by law.

The reforms of 1992 in the Constitution, related to the legal recognition of the religious institutions and their public activities, attempted to normalize the common practices. This kind of legality recognizes the legitimacy of group consolidation through the religious identification. The religious associations became another channel of collective expression. The religious and ideological diversity in the society increased in correlation with a greater democratization of political and cultural life. Gradually the participation of the Jews in these areas is becoming wider and less questioned everyday, and the presence of Jews in senior official posts is becoming more frequent.

In the Beginning of the 21st Century

As we have seen, the Jewish community in Mexico is highly organized within well-defined communities according to the origin of the first immigrants; each of these groups is represented at the Comité Central de la Comunidad Judía de México (Central Committee of the Jewish Community of Mexico) which is in charge of maintaining the relations with government authorities as well as with the social and cultural organizations in the country. Tribuna Israelita is the executive arm of the Comité Central in anti-defamation duties, preventing and denouncing antisemitism and violence against Jews.

DEMOGRAPHY. According to a socio-demographic study of the Jewish community in Mexico, performed by request of the Comité Central in 2000, the number of families and their percentage per sector is as follows: Maguén David: 2,630 families (25.8%), Monte Sinaí: 2,350 (23.0%), Kehilá Ashke-

nazí: 1,870 (18.4%), Sephardi Community: 1,150 (11.3%), Bet El: 1,080 families (10.6%), CDI: 340 families not affiliated to other sectors (3.3%); Bet Israel: 260 (2.6%), Guadalajara: 250 (2.5%), and Monterrey: 250 families (2.5%), which gives us a total of 10,180 families.

Demographic tendencies show a larger growth in the non-Ashkenazi sectors that became the majority of the Jewish population in Mexico. Almost all the Jews marry Jewish spouses. According to the socio-demographic study of the Jewish population performed by DellaPergola and Lerner in 1991, between 5% to 10% of the marriages are exogamic. Marriages within the community of origin are the most frequent, even though every day there are more inter-communal marriages. The main Jewish residential neighborhoods are located in the northeast of the Metropolitan area: 28.6% live in Las Lomas, 21.8% in Tecamachalco, 21.6% in Polanco, 16% in La Herradura, and the rest in Hipodromo-Condesa, Narvarte, Satélite, and other neighborhoods.

The occupational structure is as follows, according to the data of 1991: 53% of the economically active people are in the managerial sector as owners of businesses and directors, 27% professionals, 11% office employees, 5% merchants, and 4% handcraft workers. The analysis of this data by age groups confirms the well-known upward economic mobility of the Jewish population as well as the tendency toward a larger professional sector in the new generations. The total of the work force is divided into three groups according to the branch of production: industry (35%), commerce (29%), and services (28%) and two groups with minor incidence, which are construction (3.5%) and personal services (4%). The family and social networks have an important influence in the integration pattern of the working force in economic activity and represents 75% of the work location grounds.

JEWISH EDUCATION AND JEWISH CULTURE. The Jewish education network, with over a dozen schools in Mexico City, has professional educators and shows high academic levels. It is estimated that more than 80% of the Jewish children attend Jewish day schools from kindergarten to secondary school. Some of these day schools have Jewish religious studies as in a yeshivah. The Jewish curricula of these day schools include Hebrew language and literature, Jewish history, Bible, tradition, and in some of them Yiddish language and literature. There is a Jewish pedagogic college – Universidad Hebraica – which prepares new professionals for Jewish education. The Universidad Iberoamericana (a private university) offers a study program on Jewish Culture linked to disciplinary studies in the Humanities. The educational level in the Jewish community has increased considerably: in 1991, 57% of the Jews in the 30 to 64 age group were university graduates, as compared with 8.5% for those older than 65. Most frequently, people with graduate and postgraduate studies are found among the members of the Bet El and Bet Israel congregations (49%) and in a slightly lower proportion in the Kehilá Ashkenazi (38%). Conversely, the presence of people with university studies is

lower in the Maguén David and Monte Sinaí communities (18 and 10% respectively). However these differences tend to diminish in the younger generations. In addition to education, community life dynamics are expressed in a variety of social and cultural activities. Besides the activities performed by each of the community sectors, there are also inter-communal organizations, such as the women's associations WIZO, Na'amat, and the Mexican Federation of Jewish Women or the Mexican "Friend Associations" of the Israeli universities.

There are around 16 youth movements with approximately 2,000 members, most of them identified with the State of Israel. Each year several hundred Mexican Jewish youngsters visit Israel in groups organized by the schools. The Federación Mexicana de Universitarios Judíos (FEMUJ) and the Federación de Universitarios Sionistas de Latinoamérica (FUSELA) have a significant presence in the community. Since 1948, nearly 4,000 Mexican Jews have made *aliyah*.

The Jewish press is diverse but mainly dedicated to inner community matters. The news or ideological publications typical of the 1940s and the 1950s, mainly in Yiddish, no longer exist. Each community sector has its own bulletins and periodic magazines. There are some independent organs such as *Foro* magazine distributed through subscriptions or *Kesher* with free distribution in all the communities and the Centro Deportivo Israelita. The Jewish journalists and writers association meet and express themselves through the community press.

The Jewish museum named Tuvia Maize is dedicated to the history of the Jewish community in Mexico and to the Holocaust. At the Ashkenazi Kehilá there was established a Centro de Documentación e Investigación (Center for Documentation and Research); it preserves historical documents of the Jewish Community in Mexico, as well as books in several languages, that were part of private libraries of the first immigrants, and promotes the publication of documentary books and researches.

Another important cultural site is the Centro Deportivo Israelita (CDI), which besides having excellent sports facilities, has an art gallery, a theater, and a banquet hall. This is the location of the most important Annual Jewish Dance and Music Festival in Latin America.

RELIGIOUS LIFE. In Mexico City there are around 25 synagogues and an equal number of small places for prayer and study that belong to the most Orthodox sectors in the community. Two of the synagogues are Conservative, and all the others are Orthodox. The level of religious observance has increased by 4% from 6.7% Orthodox Jews, according to the results of the socio-demographic study of 1991, to 10.7% according to that of 2000. Most of the Mexican Jews consider themselves as traditionalists (76.8%) while the non-observant, secular, and atheist Jews comprise 12.5%, according to the data of 2000. When analyzing figures per community, Maguén David presents the lower index of traditionalists (66%) and an equal number of Orthodox (17%) and non-observants (17%), which shows a tendency toward polarization of the religious

and the non-religious. In contrast, 86% of those affiliated to Bet El considered themselves traditionalist. The most popular ritual practice is the Passover *seder* celebrated by 93% of the population within the family. In second place is the Yom Kippur fast observed by 89%, and after that, Hanukkah festivities in which 71% perform the ritual of candle lighting, while the frequency of other religious practices is reduced to half or less. In relation to the regular observance of Shabbat, 12% rest, 49% eat kosher meat, and 19% separate their dishes.

RELATIONS WITH ISRAEL. Mexico abstained in the vote of November 29, 1947, on the Partition of Palestine. On April 4, 1952, Mexico recognized the State of Israel, and shortly afterwards the two countries established diplomatic relations, opening embassies in both countries. At the beginning, Mexico adopted a policy of neutrality, abstaining from voting at the international forums where Middle East affairs were dealt with. However, since the Six-Day War in 1967, this position changed and Mexico frequently votes against Israel. The most delicate moment was the above-mentioned equation of Zionism with racism in the 1970s abrogated in the 1990s.

Commercial exchange between the two countries was very low until the end of the 1970s (with an annual average of under \$2 million). In the 1980s its scope started to increase, with an average of \$25 million annually (14.8 exports from Israel and 11.3 imports). In the 1990s, bilateral relations improved: cultural agreements were signed, and there were visits from ministries and functionaries of both countries. Israel has provided technical and scientific counseling to certain areas of agriculture and industry in Mexico, and Israel also buys manufactured products, food, and Mexican oil. Nevertheless, the volume of trade remained close to the same level. In 2000 a Free Trade Agreement was signed between both countries when President Ernesto Zedillo visited Israel, and ever since, economic exchange has increased. Exports from Israel jumped to \$212 million and imports grew to 17 million. This unbalanced relation between exports and imports has continued since then. The total volume of commerce in 2001 was over \$169 million (155.6 exports and 13.5 imports), in 2002 close to \$212 million (191.6 and 20.2), in 2003 over \$246 million (228.7 and 17.6), and in 2004 more than \$362 million (340.5 and 22.1).

MEYER, ANNIE NATHAN (1867–1951), U.S. educator, activist, and writer. Born in New York City to a family of early colonial stock (see *Nathan family), Meyer was an autodidact. Dissatisfied with the lack of serious educational opportunities for women in New York, Meyer determined to found a college for women within Columbia University, advocating her cause on the speaker’s platform and in the press. When she had obtained substantial financial contributions, she negotiated with the trustees of Columbia University, and, in just two years, her efforts were realized. In 1889, two years after her marriage to ALFRED MEYER, a prominent New York physician, Barnard College opened, and Meyer became its lifelong trustee. The Meyers had one daughter who died tragically in 1924.

Although Annie Meyer considered herself a feminist, she opposed the women’s suffrage movement. Decrying unintelligent use of the vote, she called for the inclusion of an educational clause in the suffrage bill. Meyer was the prolific author of plays, novels, social studies, magazine articles, and art reviews, including *Barnard’s Beginnings* (1935) and *Women’s Work in America* (1891; rep. 1972). Her first novel, *Helen Brent, M.D.* (1892), celebrated a woman who chose medicine over marriage. However, Meyer idealized motherhood and expressed her opposition to mothers who worked for self-fulfillment in two plays dealing with that theme, *The Dominant Sex* (1911) and *The Advertising of Kate* (produced on Broadway in 1921). Another play, *Black Souls* (produced and published in 1932), dealt with hypocrisy and race relations in the American South. Her autobiography, *It’s Been Fun*, appeared in 1951.

Meyer was an active lecturer and publicist who spoke to both Jews and African Americans about the “challenge of prejudice” and the need for pride in one’s heritage. True to her principles, she sponsored and supported several Jewish and African-American students at Barnard, including writer Zora Neale Hurston. Early in the 1930s, she recognized the dangers of Nazism and clashed publicly with several prominent New Yorkers whom she accused of antisemitism. Though she was not acknowledged in her lifetime as Barnard College’s founder,

she never lost her enthusiasm for the school, even as she devoted her energies to literature and social justice causes.

[Myrna Goldenberg (2nd ed.)]

MEYER, BARON DE HIRSCH (1900–1974), lawyer, banker, and philanthropist. Born in Wisconsin, he lived in Miami from 1925.

In 1933, with Harry Lipton, he established the Miami Beach Federal Savings and Loan, known later as Financial and Federal, as well as the Dade Federal, which Lipton took over. These federally backed firms were an important factor in revitalizing Florida’s economy. Meyer and his business associate Leonard Abess controlled the City National Bank Corporation and held real estate interests all over the state.

In addition to his successful business involvements, Baron de Hirsch Meyer was active in general communal activity and in almost all Jewish organizations and institutions. He was among the founders of Mount Sinai Hospital on Miami Beach, which he served as president, then as board chairman and chief fundraiser for many years.

[Gladys Rosen]

***MEYER, EDUARD** (1855–1930), German Bible critic and historian. Born in Hamburg, Meyer was professor of ancient history at the universities of Breslau (from 1885), Halle (from 1889), and Berlin (1902–22). While he supported *Wellhausen’s critical views on Pentateuchal composition, in his *Die Entstehung des Judenthums* (1896, 1965²) he opposed Wellhausen’s position concerning the authority of the documents mentioned in Ezra and the list of names referred to in Nehemiah, suggesting that a late date for Ezra does not allow for the development of Judaism as is known from the sources. In writing his classic *Geschichte des Altertums* (5 vols., 1884–1902; 1925–58²) he examined all available documentary evidence but failed to appreciate the contributions of archaeologists in regard to early Phoenician and Israelite history. He wrote, among other things, on the culture and history of the Sumerians (*Sumerier und Semiten in Babylonien*, 1906) and the Hittites (*Reich und Kultur der Chetiter*, 1914). He was one of the first to interpret the papyrus finds from Elephantine, and his *Die aeltere Chronologie Babylonien, Assyriens, und Aegyptiens* (1925) reached very sound conclusions which are still widely referred to by students of the chronology of the ancient world. His *Ursprung und Anfaenge des Christentums* (3 vols., 1921–23) dealt with the history of Judaism and early Christianity, and it reflected the bias of classical biblical criticism, which respected prophetic Judaism, but saw talmudic Judaism as a fossil of rabbinic casuistry.

[Zev Garber]

MEYER, ERNST HERMANN (1905–1988), musicologist and composer. Born in Berlin, Meyer studied musicology in Berlin and Heidelberg, and composition with Paul Hindemith and

Hanns *Eisler. He immigrated to England in 1933 and returned to Germany in 1948 to become professor of music sociology at the Humboldt University in East Berlin. An authority on the music of the 16th and 17th centuries, he wrote *English Chamber Music* (1946), *Musik im Zeitgeschehen* (1952), and *Aufsätze ueber Musik* (1957). He composed ballet and chamber music, and a cantata, *Das Tor von Buchenwald* (1959). His teachings and compositions followed the principles of socialist ideology.

MEYER, EUGENE (1875–1959), U.S. banker, government official, and newspaper editor and publisher. Born in California, he formed the banking firm of Eugene Meyer, Jr., and Co. in 1901. For 16 years he played a leading role in developing oil, copper, and automotive industries. During World War I he entered government service as an adviser on nonferrous metals to the War Industries Board. In 1918 he was named managing director of the War Finance Corporation, and under President Hoover he served as governor of the Federal Reserve Board and organized the Reconstruction Finance Corporation (1932). He was also the first chairman of the Reconstruction Finance Corporation. In 1933, he bought the then moribund *Washington Post* at a public auction, pumped new life into it, absorbed the *Washington Times-Herald*, and raised the *Washington Post* daily circulation to 400,000. After World War II, Meyer accepted an appointment by President Truman to become first president of the International Bank for Reconstruction and Development, and continued to serve on various commissions under President Eisenhower. The *Washington Post* Company, owner also of *Newsweek* magazine and a number of radio stations, was later headed by Meyer's daughter, Katherine *Graham.

[Irving Rosenthal]

MEYER, HANS JOHANNES LEOPOLD (1871–1944), Austrian organic chemist. Meyer was born in Vienna and worked at German University of Prague (1897–1933) where from 1911 he was professor of chemistry. His books include *Anleitung zur quantitativen Bestimmung der organischen Atomgruppen* (1897), *Analyse und Konstitution* (1908, 1938⁶), *Bohmisches Porzellan und Steingut* (1927), and *Lehrbuch der organischen chemischen Methodik* (4 vols., 1933–40). Meyer died in Theresienstadt.

MEYER, JONAS DANIEL (1780–1834), Dutch jurist and public figure. Meyer was a grandson of Benjamin *Cohen, a prominent Dutch Jew and friend of William V of Orange. A child prodigy, Meyer was awarded the LL.D. at the age of 16 for a thesis on the American revolutionary Thomas Payne, whom he attacked for the latter's disapproval of religious ceremonies, particularly those of the Jews. Meyer was the first Jew in Holland to be admitted as a lawyer. In 1808, Louis Napoleon – then king of Holland – appointed Meyer director of the *Royal Gazette*, a member of the Institute of Sciences, and a court magistrate in Amsterdam. Within the Jewish community Meyer was a member and from 1809 president of the High

Consistory (1806–10), and subsequently after the annexation of Holland to France member of the Amsterdam consistory. In 1813 Meyer was elected as a member to the Amsterdam municipal council.

Meyer retained most of his positions under King William I of Orange until he resigned from all public and Jewish functions in 1817. In 1815 the king appointed him secretary of a government committee for the drafting of a new Dutch constitution, but antisemitic prejudice prevented him from being appointed to higher positions and he returned to private practice. He appeared in 1820 on behalf of Louis Napoleon in a lawsuit against William I. In 1827 Meyer returned to public life as secretary of a royal commission to prepare a new Dutch history. He was given the Order of the Netherlands Lion – the first Jew to receive this award.

In 1808 Meyer was largely instrumental in reuniting the old Ashkenazi congregation of Amsterdam and the dissident liberal congregation of Adath Yeshurun. He was chairman of a commission for drafting a program for Jewish schools in Amsterdam and together with his friend Carel *Asser, Meyer drew up a report disclosing the appalling social and educational situation of the Jews of Amsterdam. In 1873, a square separating the Sephardi and the main Ashkenazi synagogues in the center of the Jewish quarter of Amsterdam was named after him. Meyer's legal works include *Principes sur les questions transitaires* (Amsterdam, 1813) on legal problems which arose from the introduction of the Code Napoléon in Holland, and *Esprit, origine et progrès des institutions judiciaires des principaux pays de l'Europe* (6 vols., 1819–23), a history of legal institutions in England, France, Holland, and Germany. He was a member of the French Academy, the Royal Academy in London, of the academies of Brussels, Göttingen, Batavia, and Torino, and of the Dutch Society for Literature.

[Henriette Boas / Bart Wallet (2nd ed.)]

MEYER, LEON (1868–1957), French politician. Born in Le Havre, Meyer was a cousin of the Jewish anti-Dreyfusard journalist, Arthur Meyer. Having established a position for himself as a coffee merchant, he was elected to the city council in 1912 and as mayor of Le Havre in 1919. In 1921 Meyer became a radical-socialist member of the Chamber of Deputies and served as undersecretary of state in two administrations, first in 1925 and again in 1929. In 1932 he became minister of mercantile marine, in which post he made a substantial contribution to France's shipbuilding industry and to the development of the port of Le Havre. An outspoken critic of the Popular Front coalition of 1936, in which the radical socialists participated, Meyer fell out of favor with his own party. He devoted himself entirely to local politics until the fall of France in 1940, after which he took no further part in public affairs.

[Shulamith Catane]

MEYER, LUDWIG BEATUS (1780–1854), Danish lexicographer. Born in Germany, Meyer was a teacher in Stockholm before he settled in Copenhagen in 1803. He retired from a high civil service post in 1821 and turned to scholarly pursuits, publishing a guide to German poetry (1823). His *Lexicon* (1837) of foreign words and phrases in Danish became a standard work and, under the title *Meyers Fremmedordbog*, was often reprinted.

MEYER, MARSHALL T. (1930–1993), rabbi, educator, social activist. Meyer was born in New York City, grew up in Norwich, Connecticut, and attended Dartmouth College and the Jewish Theological Seminary, where he was ordained in 1958 and served as secretary of Rabbi Abraham Joshua Heschel. With his wife, Naomi, Meyer left for Argentina in 1959 to become the assistant rabbi at Buenos Aires's Congregación Israelita de la República Argentina. Meyer's sharp intellect, his outreach to youth, and his social activism quickly earned him distinction. In 1963 he founded Comunidad Bet-El, which within a few years became the leading Conservative synagogue in Argentina and the model upon which future Conservative synagogues would be built throughout Latin America.

Anticipating the Conservative movement's emergence and expansion throughout Latin America, Meyer founded the Seminario Rabínico Latinoamericano in 1962, the first non-Orthodox Latin American institution of higher Jewish studies. Meyer also supervised the translation into Spanish of a *siddur* for weekdays and Shabbat, and of the *mahzor* for the High Holy Days. In addition, he undertook the translation into Spanish of dozens of important volumes on theology and works by important Jewish authors. Meyer published the journal *Maj'shavot* which contained original articles by Latin American authors. He was committed to interfaith dialogue and was a member of a group that included several leading liberation theologians.

During the years 1976–83, when Argentina was ruled by a military junta, Meyer became one of the foremost critics of the junta's violation of human rights. Meyer visited detainees in jails and made himself available to relatives of the *desaparecidos*, those who had been kidnapped by the security forces and held in clandestine jails throughout the country. Shabbat services at Bet El were overflowing with worshippers who came to hear Meyer's reality-revealing sermons at a time when the junta severely controlled the media, with families of *desaparecidos* who came in search of comfort. Meyer was member of the Asamblea Permanente por los Derechos Humanos and part of a small network of human rights defenders and foreign ambassadors who worked to save the lives of hundreds by arranging hiding places for them and ensuring their safe passage out of the country. Meyer's own home was, on more than one occasion, such a place of refuge.

Meyer was awarded the Medal of San Martín, the highest Argentine honor upon the nation's return to democracy in 1983. During 1984, Meyer participated in the Comisión Nacional Sobre la Desaparición de Personas – CONADEP, the na-

tional commission which documented thousands of human rights abuse cases to be utilized at the courts and to be disseminated through the book *Nunca más* ("Never Again").

In 1985, Meyer was invited to instill new life into Congregation Bnai Jeshurun (BJ), an Ashkenazi synagogue in New York City. Through a combination of lively religious services and a dynamic social action program BJ grew dramatically in numbers and in prominence. At the time of his death in 1993, BJ had become a model for many other synagogues throughout the U.S. Meyer's disciples and graduates of the Seminario Rabínico Latinoamericano, renamed in his memory in 1994, occupy pulpits and Jewish communal positions throughout Latin America, in Israel, and in the U.S. He received honorary doctorates from the Jewish Theological Seminary, Kalamazoo College, Dartmouth College, the University of Buenos Aires, and HUC-JIR.

[J. Rolando Matalon (2nd ed.)]

MEYER, MARTIN ABRAHAM (1879–1923), U.S. Reform rabbi and scholar. Meyer, who was born in San Francisco, California, was ordained by the Hebrew Union College in 1901. Meyer served as rabbi of Congregation Beth Emeth, Albany, New York (1902–06); Temple Israel, Brooklyn, New York (1906–10); and Temple Emanu-el, San Francisco (1910–23). From 1911 to 1923 he was lecturer in Semitics at the University of California. During World War I, Meyer became a supporter of both Zionism and the movement for an American Jewish Congress. In 1918–19 he served with the Red Cross in France. Meyer, who was associated with several social service organizations in San Francisco, served as president of the Big Brothers movement and the California Conference on Social Work, and as a member of the California Commission of Charities and Corrections (1911–20). He helped to organize small Jewish communities in the area, was director of the Jewish Education Society of San Francisco and of the Pacific Coast branch of the Jewish Chatauqua Society, and was a board member of several national Jewish organizations. Meyer's publications include several articles on the condition of the Jews in Palestine; *History of the City of Gaza from the Earliest Times to the Present Day* (1907); and the two-volume *Methods of Teaching Post-Biblical History and Literature* (1915).

[Sefton D. Temkin]

MEYER, MICHAEL A. (1937–), U.S. historian. Born in Berlin and brought to the United States in 1941, Meyer was educated at the Hebrew University of Jerusalem, the University of California, Los Angeles (B.A. 1959), Hebrew Union College-Jewish Institute of Religion (HUC-JIR), Los Angeles (B.H.L. 1960), and HUC-JIR, Cincinnati (Ph.D. 1964). He

taught at HUC-JIR, Los Angeles, 1964–67, and from 1968 at HUC-JIR, Cincinnati, where he was named Adolf S. Ochs Professor of Jewish History. He also taught regularly at HUC-JIR in Jerusalem and was a visiting professor at UCLA, Antioch College, the University of Haifa, Ben-Gurion University, and the Hebrew University. Meyer served as chairman of the International Association of Historical Societies for the Study of Jewish History and was one of the founders of the (American) Association for Jewish Studies and its president in 1978–80. He was also the international president of the Leo Baeck Institute.

Meyer has been called “the dean of German-Jewish historians,” and he has said that “my awareness of being one of the *nizzolei ha-Shoah* – those saved from the Holocaust – has deepened my commitment to things Jewish and to the study of German-Jewish history.” He was considered perhaps the leading authority on Reform Judaism, about whose future he expressed optimism. His major work is *Response to Modernity* (1988), a history of the Reform movement through the 1970s, which won the National Jewish Book Award; it has become a standard work and has influenced all subsequent scholars on the subject. He has also edited (with Michael Brenner) a comprehensive four-volume history of modern German Jewry, sponsored by the Leo Baeck Institute, which is also recognized as a landmark work (its first volume won the National Jewish Book Award in 1997). In 1996 Meyer was awarded the Zeltzer Scholarship Award in Historical Studies by the National Foundation for Jewish Culture, in recognition of his stature and influence.

Meyer published many scholarly articles and edited a volume of the papers of Leo Baeck. His books include *The Origins of the Modern Jew: Jewish Identity and European Culture in Germany, 1749–1824* (1967), *Response to Modernity: A History of the Reform Movement in Judaism* (1988), *Jewish Identity in the Modern World* (1990), *Ideas of Jewish History* (edited, 1974), *German-Jewish History in Modern Times*, 4 vols. (edited with Michael Brenner, 1996–98), *The Reform Judaism Reader: North American Documents* (edited, with W. Gunther Plaut, 2001), and *Judaism within Modernity: Essays on Jewish History and Religion* (2001).

[Drew Silver (2nd ed.)]

MEYER, PAULUS (alias **Pawly**; originally **Kremenetzki, Eliezer Baruch Ashkenazi**; 1862–?), renegade who published testimony claiming that he had witnessed a ritual murder. Meyer, a native of Ostrow (Poland), acted during the 1880s as a Protestant missionary among the Jews in Germany. He came into conflict with the *Judenmission* there and published pamphlets against it, attacking H.L. *Strack and others. In 1892 missionary periodicals identified him as an impostor and swindler and he was expelled by the police from Prussia and Saxony. Meyer went to Vienna in 1893 and contacted Joseph *Deckert. On August *Rohling’s recommendation, Deckert suggested to Meyer that he write a “scientific” book on the *blood libel. On May 11, 1893 the *Vaterland* published a let-

ter by Meyer in which he claimed to have been present at a ritual murder in his native town in 1875, naming several participants. Joseph Samuel *Bloch took up the case. With the assistance of Nahum *Sokolow and Hayyim Selig *Slonimski, he discovered the persons accused by Meyer and, in some cases, their heirs. Joseph Kopp, who had represented Bloch in the Rohling controversy, persuaded them to sue for defamation of character. Throughout the trial Meyer denied having written or signed the letter or been responsible for its contents, although he admitted that the handwriting was that of his fiancée. The jury found him, Deckert, and the *Vaterland* guilty and they received a nominal sentence. The outcome, however, was symbolically important in the context of the antisemitic agitation of the 1890s.

[Meir Lamed]

MEYER, RICHARD JOSEPH (1865–1942), German inorganic chemist. Meyer was born in Berlin. In 1896 he joined the Pharmacological Institute of University of Berlin and was professor of chemistry there until 1933. He was a member of international commissions on nomenclature and atomic weights and wrote *Bibliographie der seltenen Erden* (1905), *Analyse der seltenen Erden und der Erdsäuren* (1912), and sections of Ullmann’s *Encyclopaedie der Chemie* (1914). He edited several editions of the standard Gmelin-Kraut *Handbuch der anorganischen Chemie*.

MEYER, RICHARD MORITZ (1860–1914), German literary historian. Born and educated in Berlin, Meyer became professor (without salary) of literature at Berlin University in 1901. His books enjoyed a remarkable popularity extending far beyond his immediate scholarly circle. His prizewinning biography of Goethe in three volumes was published in 1895. He wrote a monograph on Nietzsche, *Nietzsche. Sein Leben und sein Werk* (1913). Meyer’s outstanding achievements were his *Die deutsche Literatur des 19. Jahrhunderts* (1900; popular edition, 1912) and *Die deutsche Literatur bis zum Beginn des 19. Jahrhunderts* (ed. O. Pniower, 1916; enlarged edition ed. by Hugo *Bieber, 1923).

Meyer; mit Dokumenten,” in: *Berliner Hefte zur Geschichte des literarischen Lebens*, 1 (1996), 37–99; H.H. Mueller, “‘Ich habe nie etwas anderes sein wollen, als ein deutscher Philolog aus Scherers Schule.’ Hinweise auf Richard Moritz Meyer,” in: W. Barner and C. König (eds.), *Juedische Intellektuelle und die Philologien in Deutschland 187–1933* (2001), 93–102; idem, T. Kindt and H.H. Mueller, in: C. Koenig (ed.), *Internationales Germanistenlexikon*, 2 (2003), 1218–1230.

[Rudolf Kayser]

MEYER, SELIGMANN (1853–1926), German rabbi and communal worker. Meyer was born in Reichelheim, Hesse

and studied at the University of Giessen. In 1876 he moved to Berlin where he attended the Orthodox rabbinical seminary established by Azriel *Hildesheimer, at the same time working on the staff of the Orthodox Jewish weekly, *Juedische Presse*.

He received his doctorate in 1878, was ordained rabbi in 1881, and a year later was appointed rabbi of *Regensburg where he remained until his death. As a result of his communal activities Regensburg became a center of Orthodoxy. Meyer devoted himself particularly to the *Deutsche Israelitische Zeitung*, a religious monthly family journal, which he founded in 1884 and which he edited until his death.

[Henry Wasserman]

MEYER, TORBEN LOUIS (1909–2005), Danish journalist and author. Born in Copenhagen, Meyer joined the *Berlingske Tidende* daily in 1930 and after World War II edited Jewish journals, notably *Jodisk Samfund* (from 1947) and later *Jodisk Orientering*. He wrote *Flugten over Øresund* (1945), a vivid account of the escape of Danish Jews to Sweden in October 1943. Other books include a two-volume study of the Danish composer Carl Nielsen (1947–48) and *Musikalske selvportrætter* (1966). He also translated works of Bernard *Malamud into Danish.

MEYER, VICTOR (1848–1897), German organic chemist. Meyer, the son of a Berlin textile printer, obtained his doctorate at Heidelberg *magna cum laude* before he was 19. He worked with Bunsen at Heidelberg and Baeyer in Berlin, and in 1872, despite his youth, was appointed professor of general chemistry at the Zurich Polytechnic. He was professor at Goettingen University from 1885 to 1889 and at Heidelberg from 1889 until his death. Meyer invented the term “stereochemistry” and made basic contributions in the field of organic compounds. As well as being one of the foremost organic chemists of his generation and an outstanding lecturer and speaker, he was an accomplished musician, but he was dogged by ill-health and committed suicide. Meyer’s biography was written by his brother, RICHARD EMIL MEYER (1846–1926), who was also an organic chemist of distinction. He held professorships at the Technische Hochschule of Braunschweig and at Heidelberg and was editor of the *Jahrbuch der Chemie* from 1891 to 1918.

[Samuel Aaron Miller]

MEYERBEER, GIACOMO (**Jacob Liebmann-Beer**; 1791–1864), German composer, remembered mainly for his spectacular operas. Meyerbeer was born in Berlin, where his father Jacob Herz Beer was a prominent banker; his brothers were Wilhelm *Beer and Michael *Beer. His musical gifts appeared early, and his grandfather Liebman Meyer Wulf was so impressed with the boy’s genius that he made him his sole heir on condition that he added “Meyer” to his name. After studying with the composer Clementi, he went to live and work with the Abbé Vogler in Darmstadt. There he composed his first opera, *Jephthas Geluebde*, which was performed at Munich

in 1813 with moderate success. His next dramatic work, *Die beiden Kalifen*, was a failure when produced in Vienna in 1814. Discouraged, Meyerbeer went to Italy. Between 1818 and 1824 he composed a series of successful Italian operas, among the most popular being *Romilda e Costanza*, *Semiramide riconosciuta*, *Emma di Resburgo*, and *Il crociato in Egitto*. His change of name from Jacob to Giacomo symbolized his “conversion” to the new Italian style.

In 1826, Meyerbeer was invited to the first performance of *Il crociato* in Paris. Its favorable reception led to his later career as a composer of French grand opera. His first in a series of brilliant successes in this genre, *Robert le Diable*, was produced in 1831, and within a year it was being presented in many European cities. Meyerbeer, aided by his librettist Eugène Scribe, gave the public what it wanted: a sensational story, novel stage effects, showy singing, and colorful orchestration. This formula was repeated many times, most notably in *Les Huguenots* (1836), *Le Prophète* (1843), and *L’Africaine* (*Vasco da Gama*; 1838–64), first produced in French and English a year after the composer’s death. While vigorously promoting his own career, Meyerbeer was always ready to help other composers. For example, he warmly recommended Wagner’s *Rienzi* for production in Dresden, and during his period as royal director of opera in Berlin (1842–47) he introduced the *Flying Dutchman* to the repertoire there. Wagner, however, violently attacked the music and personality of his one-time friend. Meyerbeer remained faithful to Judaism. Meyerbeer’s popularity continued for some years after his death – in 1895 *Le Prophète* attained its 150th performance in London – but his reputation declined in the 20th century.

Kapp, *Meyerbeer* (1920); A. Hervey, *Giacomo Meyerbeer* (1913); MGG, s.v.; G. Meyerbeer, *Briefwechsel und Tagebuecher*, ed. by H. Becker, 2 vols. (1960–70).

[Dika Newlin]

MEYERHOF, MAX (1874–1945), ophthalmologist and medical historian. He was born in Hildesheim, Germany. In 1903 he went to Egypt and served as chief of the Khedivial Ophthalmic Clinic. He returned to Germany in 1914 to serve as a medical officer in the German army and after the war settled in Hanover as a practicing oculist. He returned to Cairo in 1923 and stayed there until his death. During his lifetime, Meyerhof published over 300 books, monographs, and treatises on ophthalmology and medical history. He made special studies of the various eye diseases endemic in Egypt and North Africa, especially of trachoma and its complications, of glaucoma, lepra of the eye, etc. His book *Ueber die ansteckenden Augenleiden Aegyptens* appeared in 1909. He also wrote on the history of ophthalmology and pharmacology among Spanish Muslims and Jews and did research on medieval Arab medi-

cine from unpublished documents in Cairo and other libraries. He edited and translated the Arabic text of the famous medieval ophthalmologist Ḥunain ibn Iṣḥāq, *The Book of the Ten Treatises on the Eye* (1928), and was one of the first to study Maimonides as a physician; he translated and published for the first time Maimonides' glossary of drugs *L'Explication des noms de drogues* (1940). In recognition of his many services as an oculist and medical historian, Meyerhof received many honors and decorations from medical societies all over the world. Meyerhof also contributed to the organization of medical care for the poor in Egypt.

[Suessmann Muntner]

MEYERHOF, OTTO (1884–1951), German biochemist and Nobel Prize winner. Meyerhof, who was born in Hanover, was first concerned with psychology (he wrote a book *Contributions to a Psychological Theory of Mental Diseases*) and philosophy (he edited a journal *Abhandlungen der Friesschen Schule*, mainly for neo-Kantian philosophers), and worked in Krehl's clinic and at the Marine Zoological Laboratory in Naples. In 1913 he joined the University of Kiel, where he became professor of physiological chemistry (1918–24). In 1923 Meyerhof was awarded the Nobel Prize in physiology and medicine (shared with A.V. Hill) "for his discovery of the fixed relationship between the consumption of oxygen and the metabolism of lactic acid in the muscle." An associated phenomenon is known as the Pasteur-Meyerhof effect. In 1924 Meyerhof became head of a division in the Kaiser Wilhelm Institute of Biology in Berlin-Dahlem, and in 1929 head of the department of physiology in the Institute for Medical Research in Heidelberg. He elucidated the roll played by ATP (adenosine triphosphate) in energy transfer in biological systems and introduced the term "energy coupling." He was forced to leave Germany in 1938, and became director of research at the Institut de Biologie Physicochimique in Paris. When the Germans conquered France, he escaped, first to southern France, and then to America. He then became research professor of physiological chemistry at the University of Pennsylvania's medical school.

[Samuel Aaron Miller]

MEYERHOFF, HANS (1914–1965), U.S. philosopher. He was born in Brunswick, Germany, and went to the U.S. in 1934. From 1943 to 1948 he worked for the U.S. government. From 1949 on he taught philosophy at the University of California at Los Angeles. He wrote *Time in Literature* (1955), an analysis of scientific and literary renderings of time. He edited *The Philosophy of History in Our Time* (1959), and translated works by Max Scheler and Paul Friedlander. His publications in-

clude articles on philosophy, literature, psychology, and politics. He died in an automobile accident. A free speech plaza at the Los Angeles campus of the University of California is named after him.

[Myriam M. Malinovich]

MEYERHOFF, HARVEY (1927–), U.S. businessman, communal leader, philanthropist. The middle child and only son of Joseph and Rebecca Witten Meyerhoff, Harvey "Bud" Meyerhoff was born in Baltimore, Maryland. He attended Baltimore public schools and the University of Wisconsin at Madison. He settled in Baltimore and joined his father in the family-owned firm known as the Property Sales Company (later the Joseph Meyerhoff Corporation). As a partner, Meyerhoff led the firm to focus on developing shopping centers and apartment buildings, and oversaw the merger of the Meyerhoff Corporation with Monumental Life Insurance Company, which became Monumental Properties, Inc. in 1969.

In 1987 Meyerhoff was appointed by President Ronald Reagan to succeed Elie Wiesel as chairperson of the United States Holocaust Memorial Council (USHMM). When he assumed office, expectations were high but little had been achieved with regard to constructing a building, developing the permanent exhibition, and raising the requisite funds. Meyerhoff strengthened the organization's fund-raising efforts and met its fiscal goals, pushed for distinctive architectural treatment of the museum building, and navigated complex matters of exhibition content.

Meyerhoff's leadership of the USHMM came in the midst of a long career of service to his native city of Baltimore and its Jewish community as well as national causes. He served as chairman of the Johns Hopkins Hospital (1987), the Central Maryland United Way Campaign (1975), and the Associated Jewish Charities Campaign. He was president of the board of trustees of Baltimore's Park School, a non-sectarian, private elementary and high school, from 1972 to 1975. He played a leadership role in such diverse organizations as the National Conference of Christians and Jews, Maryland Region; the United Jewish Appeal; the Baltimore County Advisory Committee on Mass Transportation; the Baltimore Convention Bureau; the Baltimore League for the Handicapped (president, 1961–64); the National Association of Homebuilders Research Foundation (president, 1965–66); and the United States Rent Advisory Board.

Meyerhoff's wife, LYN (1927–1988), was also a prominent community leader. Long active in Maryland and national Republican politics, she was appointed by President Reagan in 1983 as a United States public delegate to the United Nations 38th General Assembly. She was also very active in many philanthropic initiatives including the National Aquarium, the Digestive Disease Center at Johns Hopkins Hospital, and the Baltimore Symphony Orchestra. Harvey and Lyn Meyerhoff were following in Joseph Meyerhoff's footsteps when they established a charitable foundation, The Harvey M. and Lyn P. Meyerhoff Fund, in 1972. Seven years later, they broke new

philanthropic ground by setting up a separate fund to be administered jointly by their four children, who named their fund The Children of Harvey M. and Lyn P. Meyerhoff Philanthropic Fund. It was joined in 1999 by an additional fund known as The Grandchildren of Harvey M. and Lyn P. Meyerhoff Philanthropic Fund.

[Karen L. Falk (2nd ed.)]

MEYERHOFF, JOSEPH (1899–1985), U.S. businessman, communal worker, and philanthropist. Meyerhoff was born in a small town near Poltava, Russia, and was taken to the United States in 1906, settling with his family in Baltimore, Maryland. From 1921 he headed his own building and real estate firm, which developed new communities, especially in the Baltimore area, and shopping centers in many cities. Meyerhoff was associated with the United Jewish Appeal (UJA), of which he was general chairman (1961–64) and a member of the executive committee thereafter. In 1961, while serving with the UJA, Meyerhoff established the Israel Education Fund, in conjunction with the government of Israel and the Jewish Agency.

He also served with the PEC Israel Economic Corporation, of which he was president (1957–63), and later as chairman of the board and the executive committee. He also was chairman of the Israel Education Fund of the UJA (1965–67). He served on the board of directors of many national and international Jewish organizations and institutions, including the Hebrew University in Jerusalem (1961–67). A philanthropic leader in his local Baltimore Jewish community, his local interests included the Sinai Hospital of Baltimore, of which he served as vice president and chairman of the board (1943–59), and Associated Jewish Charities and Welfare Fund Campaign of Baltimore, of which he was general chairman (1951–52). Meyerhoff served the state of Maryland as chairman of the State Planning Commission (1956–63), as member of the State Board of Public Welfare (1953–57), and in other capacities.

Many organizations and facilities in Israel and the United States bear the benefits of his benevolence. Some of those that bear his name include the Joseph Meyerhoff Family Charitable Funds; the Joseph Meyerhoff Library at Baltimore Hebrew University; and Hillel's Joseph Meyerhoff Center for Jewish Learning.

MEYER-LÉVY, CLAUDE (1908–?), French architect. Born in Paris, Meyer-Lévy established his reputation with his Yachting Pavilion at the Paris World Fair of 1937, and the French National Pavilion at the San Francisco Golden Gate Exposition of 1939 which he designed with E.T. Spencer. His synagogue at Strasbourg (1958), seating 1,700 people, was the largest to be built in Europe after World War II. It is a reinforced concrete structure containing a rectangular hall with an apse and galleries. The building takes the traditional form of the classical basilica.

MEYEROWITZ, HERBERT VLADIMIR (1900–1945), South African artist. Born in St. Petersburg (Leningrad), Meyerowitz specialized in decorative sculpture. His main work was done in South Africa, where he pioneered in wood-carving and architectural decoration, such as the memorial doorway (1930) at the South African National Gallery in Cape Town. In 1943 he established the West African Institute of Arts, Industries, and Social Sciences in Accra with funds from the colonial government, and became the acting director.

MEYEROWITZ, JOEL (1938–), U.S. photographer. Born in the Bronx, New York, Meyerowitz was working as an advertising director when one day in 1962 he quit his job to go out shooting on Fifth Avenue in Manhattan. In most of his early work, as a street photographer, he worked exclusively in color, treating the street as theater rather than as a landscape. Meyerowitz was instrumental in changing the attitude toward the use of color photography from one of resistance to nearly universal acceptance. Meyerowitz first exhibited at the Museum of Modern Art in 1963 in a show on which John Szarkowski's "The Photographer's Eye" was based, and he showed there, or under the Modern's auspices, in 1968, 1971, and 1978.

At first Meyerowitz focused on incidents like that in "Fallen Man, Paris, 1967," in which a young man lies supine on the street as passers-by stare or step around him. By the early 1970s Meyerowitz was shifting his view of the street to one in which people, buildings, and the flow of energy among them became the subject. "Woman in Red Coat, NYC" from 1975 depicts a flow of passers-by before a bland architectural façade. A woman in a bright red coat and long black gloves looms at the left of the picture. His first book, *Cape Light*, in 1978, is considered a classic, with more than 100,000 copies sold over a 25-year period. Photographs in the book, of Provincetown and Cape Cod, Mass., convey the look and delight of the areas. In 1980, with the support of public and private fellowships and grants, he published *St. Louis & the Arch*, a collection of more than 100 color plates with several foldouts and a minimum of text, focusing on the play of light and color on Eero Saarinen's Gateway Arch. He is the author of a dozen other books, including *Bystander: The History of Street Photography*.

In 1988 Meyerowitz produced and directed his first film, *Pop*, an intimate diary of a three-week road trip he made with his son, Sasha, and his father, Hy, who was suffering from Alzheimer's disease. The odyssey has as its central character an unpredictable, street-wise, and witty 87-year-old man with a failing memory. It is both an open-eyed look at aging and a meditation on the significance of memory, Meyerowitz said.

Within a few days of the attacks on the World Trade Center on September 11, 2001, Meyerowitz began to create an archive of the destruction and recovery at Ground Zero and the immediate neighborhood. "I walked and photographed nearly every inch of it," he said, "as it was transformed from an awesome pile to a vast and empty pit. Like an accordion, the 16-acre site was capable of appearing compressed and en-

circled one moment and then vast and beyond measure a second later. It breathed, as cities and nature do, when they draw us toward wonder and contemplation.” The archive numbers more than 8,000 images and is available for research, exhibition, and publication at museums in New York and Washington. The State Department asked Meyerowitz and the Museum of the City of New York to create a special exhibition of images from the archive to send around the world. The only photographer granted unimpeded access to Ground Zero, Meyerowitz takes a meditative stance toward the work and the workers there. His color photos, presented in a 30 inch × 40 inch format, convey the magnitude of the destruction and loss and the heroic nature of the response.

His book *Tuscany – Inside the Light* was conceived as an antidote to the events of 9/11. During 2002, he and his wife, Maggie Barrett, collaborating author, returned to Tuscany, where they had taught photography and writing workshops. The tranquility of life, the enduring values, the deep familial bonds, the land itself and its 2,000 years of cultivation, Meyerowitz said, stand “inside this bowl of light” as nowhere else.

[Stewart Kampel (2nd ed.)]

MEYERS, NANCY JANE (1949–), U.S. director, producer, and writer. A Philadelphia native, Meyers earned a B.A. in journalism from American University in 1971. She moved to Los Angeles in 1972, where she started off supporting herself as a screenwriter by selling homemade cheesecakes. Meyers met her husband, screenwriter Charles Richard Shyer (1941–), on a date with his best friend, Harvey Miller. Meyers and Shyer were a couple by 1976. Shyer was already established in Hollywood, having written for the TV series *The Odd Couple* and *All in the Family* as well as the films *Smokey and the Bandit* (1977) and *Goin’ South* (1978), starring Jack Nicholson. In 1976, Meyers and Shyer began collaborating on projects, joining Miller to pen a hit for fellow American University alumna Goldie *Hawn, in *Private Benjamin* (1980). The script earned an Academy Award nomination. Next, the two co-wrote *Irreconcilable Differences*, with Meyers as executive producer and Shyer as director. Their 1987 movie *Baby Boom* spawned an NBC TV series (1988–89) that the two produced. In 1991, the Meyers-Shyer remake of the 1950 film *Father of the Bride* was a success. The couple finally married in 1995 and also formed the Meyers/Shyer Company that year. The pair signed a development deal with Walt Disney Pictures in 1996 and remade the 1961 movie *Parent Trap* in 1998. It marked Meyers’ directorial debut. The film’s twin girls were named after Meyers and Shyer’s daughters, Annie and Hallie. By that year, Meyers and Shyer’s relationship had begun to dissolve and the two separated, personally and professionally. Meyers went on to direct *What Women Want* (2000) and *Something’s Gotta Give* (2003), which she also wrote. Shyer directed *The Affair of the Necklace* (2001) and the 2004 remake of *Alfie*.

[Susannah Howland (2nd ed.)]

MEYERSON, EMILE (1859–1933), French chemist, historian, and philosopher of science; son of Malvina Meyerson, Polish novelist. Born in Lublin, Poland, Meyerson studied in Germany, mainly in Heidelberg with the noted chemist R.W. Bunsen. He later immigrated to Paris where he worked as an industrial chemist, editor, and administrator of the Jewish colonization association (ICA). Although never appointed to a university post, Meyerson came to be recognized as an unusually erudite scholar of the interrelationships among the natural sciences, the history of philosophy, and cultural developments, particularly since the rise of modern science in the 16th century. His knowledge embraced the most recent work on Einstein’s theory of relativity and the early quantum theory of Max Planck and Niels Bohr. Meyerson wished to understand the nature of explanation both in the natural sciences and elsewhere. He believed that the philosopher of science has to have a thorough knowledge of the history of science, and of how scientists themselves conceived of their own work. His own philosophy, though abstract, was based on vast scholarly research which led him to conclude that rational understanding consisted of the discovery of those factors of permanence underlying processes of change, and the search for those identities found within the evident flux of experience or the incompletely rationalized world of most scientific work. Reality nevertheless seemed to Meyerson to be only partially open to rational understanding. Its sensual factors, for instance, which are so important for epistemological theory, remain unexplained. A complete understanding of nature thus seems to elude the grasp of a reasoned science. Meyerson’s works include *Identité et Réalité* (1908; *Identity and Reality*, 1930), *De l’explication dans les Sciences* (2 vols., 1921), and various essays.

BIBLIOGRAPHY: T.R. Kely, *Explanation and Reality in the Philosophy of Emile Meyerson* (1937), incl. bibl.; G. Boas, *A Critical Analysis of the Philosophy of Emile Meyerson* (1930); L. de Broglie et al., in: *Bulletin de la Société française de Philosophie*, 55:2 (1961), 55–105, issue devoted to Meyerson and Milhaud.

[Robert S. Cohen]

MEYERSTEIN, EDWARD HARRY WILLIAM (1889–1952), English poet and novelist. The son of a well-known philanthropist, Meyerstein was educated at Harrow and Oxford. He worked for some years in the manuscripts department of the British Museum. Though a noted scholar, especially in Greek and Roman literature, Meyerstein was mainly drawn to poetry. He published a number of volumes of verse elaborate in diction and reminiscent of the fashions of the 1890s. They included *The Door* (1911); *New Odes* (1936); *Briancourt* (1937); *Sonnets* (1939); *The Visionary* (1941); *In Time of War* (1942); *Three Sonatas* (1948); and *The Delphic Character* (1951). *The Unseen Beloved* was published posthumously in 1953. Meyerstein also wrote several novels, outstanding among which was the trilogy *Terence Duke* (1935), a study in viciousness. Few of his works retained their popularity, but his careful and detailed life of Thomas Chatterton (1930) is one of the best ex-

tant studies of that romantic poet. A melancholy and eccentric bachelor who kept an “extraordinary collection of whips” in a box under his bed, Meyerstein is unsympathetically portrayed in the character of Brunstein in Arnold Lunn’s novel, *The Harrovians* (1913). His own account of his youth appears in *Of My Early Life* (1958). *Some Letters of E.H. Meyerstein* (ed. Rowland Watson, 1959) is valuable in disclosing his strange life and views.

[Philip D. Hobsbaum]

MEYERSTEIN, EDWARD WILLIAM (1863–1942), British philanthropist. Meyerstein was a highly successful member of the London Stock Exchange, who was renowned as “the great benefactor of hospitals.” He had a very special interest in the Middlesex Hospital in London, which received his gift of £350,000 to make possible its expansion. Other institutions which were beneficiaries of his generosity were the Queen Victoria College Hospital, Tonbridge, the Kent County Ophthalmic Hospital at Maidstone, and the Westminster, St. Mary’s, and Princess Elizabeth of York hospitals in London. From 1937 to 1938 and from 1941 to 1942 he served as the high sheriff of Kent. He was knighted in 1938 for his benefactions to health services. His son, Edward Harry William *Meyerstein, was a writer of prose and poetry.

MEYUḤAS, ABRAHAM BEN SAMUEL (d. 1767), rabbi and kabbalist in *Jerusalem, his birthplace. Abraham studied under Israel Meir Mizraḥi in the Yeshivah Bet Ya’akov founded by Jacob Israel Pereira, and married the daughter of Tobias *Cohn. His life was one of suffering and affliction. He was orphaned as a child and lost his sight at the age of 30. Abraham was the author of *Sedeh ha-Arez*; homilies on the Torah, in three parts (pts. 1 and 2, Salonika, 1784, 1798; pt. 3, Leghorn, 1788); *Diglo Ahavah*, a commentary on the *Derekh Eẓ ha-Ḥayyim* of Isaac *Luria: it was arranged by Meir *Poppers and included the latter’s own work, *Or Zarua’; Ha-Ma’or ha-Katan*, on the *Eẓ Ḥayyim* by Ḥayyim *Vital; and *Si’ah ha-Sadeh*, on the *Kavvanot* (“Meditations”) of Isaac Luria, together with homilies and notes. Raphael *Meyuḥas was his brother. One of Abraham’s sons, Benjamin Moses (d. 1804), was responsible for publishing part 1 of *Sedeh ha-Arez*, and another, Joseph Jacob, an emissary of the *Hebron community, published the other two parts while engaged on his missions.

[Abraham David]

MEYUḤAS, MOSES JOSEPH MORDECAI BEN RAPHAEL MEYUḤAS (1738–1805), chief rabbi of *Jerusalem. Moses studied in the *bet midrash* Bet Ya’akov. When only 15 years of age he answered questions on *halakhah*. After 1778

he was one of the members of the *bet midrash* Keneset Israel founded by Ḥayyim ibn *Attar. After the death of his father-in-law Yom Tov *Algazi, Moses succeeded him as Sephardi chief rabbi (*rishon le-Zion*) in 1802. He was on friendly terms with H.J.D. *Azulai. The titles of all his works include the word *mayim* from the initials of his name (he even signed his responsa “Mayim Meyuḥas”). They are *Sha’ar ha-Mayim* (Salonika, 1768), novellae on the laws of *terefot* in *Yoreh De’ah*, on tractate *Hullin* and responsa; *Berekhot Mayim* (*ibid.*, 1789), novellae to the Shulḥan Arukh; *Mayim Sha’al* (*ibid.*, 1799), responsa, including the work *Mayim Rishonim*, novellae written in his youth, to the *Mishneh Torah* of *Maimonides. Many of his novellae and responsa, among them *Penei ha-Mayim* and *Ein ha-Mayim*, remain unpublished.

[Abraham David]

MEYUḤAS, RAPHAEL MEYUḤAS BEN SAMUEL (1695?–1771), chief rabbi (*rishon le-Zion*) of *Jerusalem. Meyuḥas was born in Jerusalem and studied in the yeshivah Bet Ya’akov, which he subsequently headed. In 1723 when the troubles of the Jewish community of Jerusalem were aggravated because of the harsh rule of its governor, Yussuf Pasha, Raphael was sent by Abraham *Yizḥaki, the *rishon le-Zion*, to Constantinople to plead for the governor’s removal. Meyuḥas served as *av bet din* in Jerusalem, his colleagues including Isaac Zerariah *Azulai and, much later, his son H.J.D. *Azulai. In 1756 on the death of Israel Jacob *Algazi, he was appointed *rishon le-Zion*. In one of his rulings Raphael endeavored to bring about a rapprochement between the *Karaites and the Rabbanites, permitting the Karaites to send their children to the *talmud torah*. Tradition has it, however, that Raphael later recanted his ruling. He was the author of *Minḥat Bikkurim* (Salonika, 1752) on the Talmud; *Peri ha-Adamah* in 4 parts (*ibid.*, 1752–57 (64?)), novellae on *Maimonides’ *Mishneh Torah* with responsa – appended to the fourth part are homilies called *Penei ha-Adamah*; *Mizbah Adamah* (*ibid.*, 1777) on the Shulḥan Arukh. Raphael was the brother of Abraham b. Samuel *Meyuḥas and the father of Moses Joseph Mordecai *Meyuḥas.

[Abraham David]

MEYUḤAS, YOSEF BARAN (ben Rahamim Nathan; 1868–1942), leader of the Sephardi community in Erez Israel, writer, and educator. Born in *Jerusalem, from 1884 Meyuḥas taught in various schools, including the Evelina de Rothschild School, and was headmaster of the Ezra Teachers Seminary and the municipal school for boys. In 1888 he was one of the founders of the lodge of “Jerusalem” *B’nai B’rith – the first in Erez Israel – and a founder of the Sha’arei Zedek quarter of

Jerusalem. Meyuḥas was also a leader of the Hibbat ha-Arez Society, which founded *Moza, near Jerusalem. One of the first Erez Israel Sephardim to take an Ashkenazi wife, he married Margalit, the daughter of Y.M. *Pines. His was among the first families to follow Eliezer *Ben-Yehuda's example of speaking Hebrew. Meyuḥas was among the founders of the Ginzei Yosef u-Midrash Abrabanel Library, which formed the nucleus of the *Jewish National and University Library. From 1920 to 1931 he was president of the city council of Jews in Jerusalem. From his youth, he contributed to the Hebrew and Ladino press on matters of culture, education, and literature and became a specialist on Sephardi folklore, Oriental communities, the Arabs of Palestine, and the history of the Jews of the Orient and of the *yishuv*. He published a number of works and some have remained in manuscript.

[Abraham Aharoni]

MEZAḤ (Segal), JOSHUA HA-LEVI (1834–1917), Hebrew and Yiddish author. Born in Lithuania in the Kovno region, near Zagare, Mezaḥ (whose pen name derives from the initials of "Mi-Zager Ḥadash") lived in many different Jewish settlements in Russia and Romania, and for the last 25 years of his life in Vilna. From 1861 he wrote for most of the Hebrew and Yiddish newspapers existing at the time. His first book was *Ha-Emunah ve-ha-Haskalah* ("Faith and the Enlightenment," 1874). A collection of articles containing descriptions of the social shortcomings of various Jewish communities was published as *Mikhtavim mi-Sar shel Ya-M* ("Letters from Yehoshu'a Mezaḥ," 5 vols., 1884–88). *Tefaḥ Megulleh* (1886), for the greater part written by Judah Leib *Gordon, was an attack upon Alexander *Zederbaum, the editor of *Ha-Meliz*. In *Bamat Yizḥak* (1890), Mezaḥ wrote about the Yiddish theater, and *Ha-Eshel* (2 pts., 1893–94) contains selections from his tales, poems, and essays. He also wrote two plays, *Tummat Ivriyyah* (1904) and *Alilat Shav* (1908). He edited *Gan ha-Perahim* (1891), and, together with Reuben Asher *Braudes, the short-lived biweekly *Ha-Yahadut* (1885). After the 1890s Mezaḥ wrote almost nothing in Hebrew; but he published many popular short stories and popular booklets in Yiddish which were circulated in hundreds of thousands of copies, sometimes anonymously and often without receiving remuneration. Mezaḥ spent the end of his life in poverty. A bibliography of his works in Yiddish was compiled by A.J. Goldschmidt, in Z. Shabad (ed.), *Vilner Zamlbukh*, 1 (1917), 192–201.

[Yehuda Arye Klausner]

MEZEI, MÓR (1836–1925), Hungarian lawyer and politician. Graduating from law school in 1864, Mezei was admitted to the bar by special royal permission, since Jews were excluded from the legal profession until 1867. While still a student he joined the movement for Jewish emancipation. From 1861 he was secretary of the Izraelita Magyar Egylet ("Union of Hungarian Israelites"), and later editor of the union's official journal, *Magyar Izraelita*. In 1868–69 he was secretary of the

General Congress of Hungarian Jews. It was largely through his efforts that the Jewish religion was officially recognized in Hungary (1895). From 1905 through 1925 he was president of the National Bureau of Hungarian Israelites, and was also active in general public affairs. He was a member of parliament (1893–1901) as a representative of the Liberal Party. His brother ERNŐ (1851–1932), a journalist and politician, also studied law at Budapest University. From 1874 to 1910 he was the political leader-writer of *Egyetértés* ("Concord"), the mouthpiece of the opposition Independence Party. In 1881 Mezei was elected member of parliament for Miskolc, but his parliamentary career was cut short when he submitted embarrassing questions in parliament in connection with the *Tiszaeszlár blood libel. Previously, Mezei had written several pamphlets against the policy of the Liberal Party leader Kálmán Tisza, who pursued a conciliatory policy toward the Hapsburg regime, *Tisza Kálmán a miniszterelnök* ("K. Tisza the Premier," 1875), *Tisza Kálmán 1877-ben* ("Tisza in 1877," 1877). His other works include a book describing his travels in Italy, *Bolyongások az olasz ég alatt* ("Roaming under Italian Skies"). At the beginning of the 20th century, Mezei, who was opposed to Zionism, corresponded with Theodor *Herzl. In a letter that later became famous, Herzl warned him of the fate in store for the assimilationist Jewry of Hungary.

MEZEY, FERENC (1860–1927), Hungarian lawyer and communal worker. Mezey studied law at the university of Budapest and took an interest in Jewish affairs from his student days. In the *Tiszaeszlár blood-libel case, he assisted the counsel for the defense, K. Eötvös. During the 1890s Mezey was one of the founders of the movement seeking institutional equality for the Jewish religion (granted in 1895). From 1902 he was the secretary of the national bureau of the Hungarian Jews, and its president in the last year of his life. Between 1889 and 1916 he was also secretary of the *hevra kaddisha* of Pest (see *Budapest), and was instrumental in establishing social welfare institutions. Mezey was also president of the administrative council of the rabbinical seminary. He founded the Jewish Museum of Budapest (1916), and was editor of the periodical **Magyar Zsidó Szemle*. An extreme assimilationist and anti-Zionist, Mezey sought to foster religious life organized within the religious institutions in order to repair the breach between the two factions of Hungarian Jewry, and helped to promote the influence of *Neologism.

MEZHIRECH (Pol. *Miedzyrzec Korecki*; Ukrainian *Mezhirichi*), a town in Rovno district, Ukraine. In Jewish sources Mezhirech is called *Mezrits Gadol* to distinguish it from

Miedzyrzec Podlaski in the province of Lublin and Miedzyrzec in the province of Poznan. An organized Jewish community existed there from the 1570s. In 1700 the economic situation of the Jews was satisfactory, and they were obliged to pay a poll tax (together with Kilikiev) of 1,550 zloty, which was a considerable sum on the Volhynian tax list. The community struggled to free itself from the dependency on Ostrog. During the liquidation of the *Council of Four Lands, Mezhirech is mentioned as an independent community. In 1707 there were no Jews due to the total destruction of the city by Ataman Mazepa. In 1784 there were 295 Jews. Among the celebrated Jewish personalities who lived there were the kabbalist R. *Jacob Koppel b. Moses Lipschuetz and R. *Dov Baer of Mezhirech; as a result of the latter's presence the town became a center of the ḥasidic movement. In 1847 the Jewish community numbered 1,808 persons. At the close of the 19th century the Jews of Mezhirech established and developed a factory producing brushes, which became known throughout Russia. During 1910–12 the annual turnover of this firm amounted to over 50,000 rubles. There were 2,107 Jews (67% of the total population) living in the town in 1897 and 1,743 (73%) in 1921. A Tarbut school and nursery operated in the town, and from 1930 a religious school. In 1937 Beitar established a farm to train agricultural workers for Erez Israel, and served also as a base for the *Irgun Zeva'i Le'ummi. The town was occupied by the Soviet army in September 1939, and, on July 6, 1941, by the Germans, who murdered, robbed, and conscripted the Jews into forced labor, with the assistance of the local Ukrainians. Of the 160 young Jews sent to work in Kiev, almost all were murdered there, with only two who had joined Soviet partisans surviving. On the first day of Shavuot (May 22, 1942) most of the town's Jews were murdered at prepared pits outside the settlement. The remaining 950 were confined in a ghetto. On September 26, 1942, about 900 of them were executed, and others fled, but only part of them managed to survive by joining Soviet partisan units. On January 14, 1944, the town was liberated, and 30 Jews came out of the forests and from hiding, and another 50 from the interior of the U.S.S.R. They soon left for Israel and the West.

MEZŐFI, VILMOS (1870–1947), Hungarian politician and journalist, leader of the socialist agrarian movement. Born in Debrecen, Mezőfi was a watchmaker's apprentice who became a journalist and columnist in liberal newspapers. He joined the Social Democratic Party and edited their daily newspaper, *Népszava*. He also edited the workers' literary magazine, *Népolvasótár*.

Mezőfi played a leading role in the Social Democrats' attempt to organize agricultural workers. He was elected to the Hungarian parliament in 1905 where he advocated universal suffrage and pressed for immediate land reform. He left the party in 1910 when he found that it was not applying itself to this question. After World War I Mezőfi joined the newly formed small landowners' party and edited its journal *Szabad Szó* ("Free Word"). He continued to be active in Hungarian politics after the counterrevolution of 1920. In 1938 legislation was introduced to deprive Jews of their civic rights. Mezőfi vigorously fought the proposals and helped to organize the defense of the Jewish community. He was elected president of the 14th synagogue district of Pest in 1941.

Among Mezőfi's many writings are *A szociáldemokrácia evangéliuma* ("Gospel of Social Democracy") and *A munkabérek Magyarországon az 1896–1898 években* ("Wages in Hungary During the Years 1896–1898," 1899). In 1937 he published a pamphlet, *Írás a zsidókról* ("Script on the Jews"), directed to the agricultural population to combat the antisemitic Nazi propaganda which was being distributed among them.

[Baruch Yaron]

MEZUZAH (Heb. מְזוּזָה), parchment scroll affixed to the doorpost of rooms in the Jewish home. The original meaning of the word *mezuzah* is "doorpost" (cf. Ex. 12:7). Its etymology is obscure; it has been suggested that it is derived from the Assyrian *manzazu*, but this is by no means certain. The Bible twice enjoins (Deut. 6:9 and 11:20) "and ye shall write them (the words of God) upon the *mezuzot* of thy house and in thy gates"; by transference, the word was made to apply not to the doorpost, but to the passages which were affixed to the doorpost in accordance with this injunction. The *mezuzah* consists of a piece of parchment, made from the skin of a clean animal, upon which the two passages in which the above-mentioned verses occur (Deut. 6:4–9 and 11:13–21) are written in square (Assyrian) characters, traditionally in 22 lines. The parchment is rolled up and inserted in a case with a small aperture. On the back of the parchment the word שְׁדֵי ("Almighty," but also the initial letters of שומר דלתות ישראל "Guardian of the doors of Israel" (Kol Bo 90, 101:4)) is written, and the parchment is so inserted that the word is visible through the aperture. It is affixed to the right hand doorpost of the room, or house, or gate, where it is obligatory (see below), in the top third of the doorpost and slanting inward. A blessing "Who hast commanded us to fix the *mezuzah*" is recited when affixing it. The earliest evidence for the fulfillment of the commandments of the *mezuzah* dates from the Second Temple period. A *mezuzah* parchment (6.5 cm. × 16 cm.) has been found at Qumran (Cave 8) in which are written some sentences from Deuteronomy (10:12–11:21) but not from the *Shema* (*Discoveries in the Judean Desert of Jordan* (1962), 158–61). The Samaritans make their *mezuzot* out of large stones and attach them to the lintel of the main door of their houses or place them

near the doorway. They carve on them the Ten Commandments or the “ten categories by which the world was created.” Sometimes they use abbreviations and initial letters of the ten or single verses in praise of God. *Mezuzah* stones of this sort are found in Israel dating from the early Arab and perhaps even Byzantine era. The Karaites do not make the *mezuzah* obligatory. Nevertheless, the *mezuzot* that they do attach are made of a tablet of blank plate in the form of the two tablets of the law but without writing on them and they fix them to the doorways of their public buildings and sometimes to their dwelling places.

In the Middle Ages the custom obtained of making kabbalistic additions, usually the names of angels, as well as symbols (such as the **magen david*) to the text. The custom was vigorously opposed by Maimonides. He declared that those who did so “will have no share in the world to come.” With their “foolish hearts” “they turn a commandment” whose purpose is to emphasize the love of God “into an amulet” (Yad, Tefillin 5:4). Despite this, there is one clear reference in the Talmud to the efficacy of the *mezuzah* as an amulet, though from the context it need not be regarded as doctrine. In return for a material gift sent by *Ardavan to *Rav, the latter sent him a *mezuzah*, and in answer to his surprised query replied that it would “guard him” (TJ, Pe’ah 1:1, 15d; Gen. R. 35:3). To a similar context belongs the story of the explanation of the *mezuzah* given by *Onkelos the proselyte to the Roman soldiers who came to arrest him: “In the case of the Holy One, blessed be He, His servants dwell within, while He keeps guard on them from without” (Av. Zar. 11a).

Maimonides’ decision prevailed, and the *mezuzah* today contains only the two biblical passages. However, at the bottom of the obverse side there is written the formula כולו במוכסל כולו, a cryptogram formed by substituting the next letter of the alphabet for the original, it thus being the equivalent of יהוה אלהינו יהוה (“the Lord, God, the Lord”). This is already mentioned by *Asher b. Jehiel in the 13th century in his commentary to the *Hilkhot Mezuzah* of Alfasi (Romm-Vilna ed. p. 6b).

The *mezuzah* must be affixed to the entrance of every home and to the door of every living room of a house, thus excluding storerooms, stables, lavatories, and bathrooms, and must be inspected periodically (twice in seven years) to ensure that the writing is still readable. The custom has become widespread and almost universal at the present day to affix the *mezuzah* to the entrance to public buildings (including all government offices in Israel) and synagogues. There is no authority for this, unless the building or room is also used for residential purposes (Levi ibn Ḥabib, Resp. no. 101), and the Midrash (Deut. R. 7:2) actually asks the rhetorical question, “Is then a *mezuzah* affixed to synagogues?” As the scriptural verse states, it is also to be affixed to “thy gates.” It is thus obligatory for the entrances to apartment houses. On the gates of the suburb Yemin Moshe in Jerusalem, which stand since their erection in 1860, the *mezuzot* are still to be seen. After the Six-Day War *mezuzot* were affixed to the gates of the Old

City of Jerusalem. In the responsa *Sha’ali Ziyyon* of D. Eliezerov (1962, pt. 2, nos. 9–10), who served as rabbi to the Jewish political prisoners at Latrun during the British Mandate, there are two responsa from him and Rabbi Ouziel, Sephardi chief rabbi of Israel, as to whether *mezuzot* were obligatory for the rooms and cells of the camp.

In the Diaspora the *mezuzot* must be affixed after the householder has resided in the home for 30 days; in Israel, immediately on occupation. If the house is sold or let to a Jew the previous occupier must leave the *mezuzah*. It is customary, among the pious, on entering or leaving to kiss the *mezuzah* or touch it and kiss the fingers (Maharil, based on the passage from Av. Zar. 11a quoted above).

The Talmud enumerates the *mezuzah* as one of the seven precepts with which God surrounded Israel because of His love for them. Of the same seven (the *zizit* being regarded as four) R. *Eliezer b. Jacob stated, “Whosoever has the **tefillin* on his head, the *tefillin* on his arm, the *zizit* on his garment, and the *mezuzah* on his doorpost is fortified against sinning” (Men. 43b). The *mezuzah* is one of the most widely observed ceremonial commandments of Judaism. In modern times the practice developed of wearing a *mezuzah* around the neck as a charm. Some of the cases in which the *mezuzah* is enclosed are choice examples of Jewish art, and the artistic *mezuzah* case has been developed to a considerable extent in modern Israel.

[Louis Isaac Rabinowitz]

MEZZROW, MILTON (Mesirow, Mezz; 1899–1972), jazz clarinetist. Born in Chicago, Mezzrow became one of the outstanding representatives of the Chicago style. In the mid-1920s he played occasionally with the Austin High School Gang in Chicago and recorded with the Chicago Rhythm Kings, the Louisiana Rhythm Kings, and Eddie Condon. During the 1930s and 1940s he was among the first white jazz musicians to perform with African American musicians, such as Tommy Ladnier and Sidney Bechet, with whom he appeared in New York and Paris. In 1937 he founded one of the earliest interracial jazz bands, led a band at Kelly’s Stable (1943), and worked with Art Hodes (1943–44). In 1945 he became a co-founder and the president of the King jazz label. During the early 1950s Mezzrow moved to France, where he worked as an entrepreneur, organizing all-star touring bands, and appeared in the films *Vedettes en pantoufles* (1953) and *Premier festival Européen de jazz* (1954). His recordings include *Really the Blues* (1938); *Royal Garden Blues* (1938); *Comin’ On with the Come On* (1938); *Revolutionary Blues* (1938); *Gone Away Blues* (1945); *Out of the Gallion* (1945); *Really the Blues* (1947); and *Mezz Mezzrow à la Schola Cantorum* (1955).

[Israëla Stein (2nd ed.)]

MIAMI-DADE COUNTY, located on the southeast coast of Florida. Miami-Dade County is comprised of 32 cities with Miami as the county seat and largest and oldest city. Miami, founded in 1896, was difficult to reach until the railroad was extended southward. The stereotyped image as the destination of Jews settling in Florida has been “Miami.” In reality, Miami was among the state’s latest communities to develop a Jewish population at all, with the Jews coming from other places in the United States (either New York or Key West); they were mostly immigrants from Russia and Romania. Romanian Jews had come to Key West in the 1880s and 1890s and left either as a result of a peddler’s tax in 1891, the decline of the cigar industry, or the general decline of that city as the railroad arrived in Miami. Russian Jews who had come to New York began to come south with the railroad, first to Ft. Pierce, West Palm Beach, then Miami. This was true of the earliest Jews to settle in Miami. The first Jew to arrive in Miami in 1895 was either Sam Singer or Jake Schneidman. The earliest permanent Jewish settler was Isidor Cohen, who was a signatory of the city’s charter in 1896 and helped found many Jewish and civic organizations. About 25 of these pioneer Jews had religious services beginning in 1896. There was no synagogue at the time but a rabbi was brought from West Palm Beach to conduct High Holy Day services. After the great fire that destroyed most of the businesses and took the life of Jewish merchant Julius Frank on December 26, 1896, and a yellow fever epidemic in 1899, the Jewish population declined by 1900 to three people: Isidor Cohen and Jake and Ida Schneidman; then Jake soon died. Cohen said that Jews owned 12 of Miami’s first 16 retail stores. Miami remained a hostile environment for would-be settlers. Nonetheless, aided by the railroad and a fledgling tourist industry, Miami didn’t give up. In 1905 Cohen married widow Ida Schneidman and the first *brit* was celebrated in 1907 for their son, Eddie, the first Jewish birth in the city. A girl, Nell Lehrman, was born in 1914. The death of a Jewish tourist in 1913 forced the small Jewish community to gather to discuss creating an organization and a cemetery. Meeting at the home of Mendel Rippha, the group of 35 Jews established the first congregation in Miami. They called it B’nai Zion, in tribute to its first president, Morris Zion. Later, the name was changed to Beth David. By 1915, there were 55 Jews in Miami. In the 1920s there was a Zionist Society; the United Jewish Aid Association (that eventually became Jewish Family Service); a B’nai B’rith lodge; chapters of the National Council of Jewish Women and Hadassah; Workmen’s Circle *The New Jewish Unity* newspaper (1926–35); and then the *Jewish Floridian* (1928–90). Tremendous advertising combined with abundant land, new roads, and the availability of the automobile and commercial aviation, created a tourist and real estate boom. A population of 30,000 (that included 100 Jewish families) exploded to more than 130,000 with 3,500 Jews by 1925. Jews founded Temple Israel, the first Reform congregation, in 1922, and were among those who chartered the University of Miami in 1925. The hurricane that swept Miami just as *Kol Nidre* services on Yom Kippur ended on September 18, 1926,

brought the real estate boom to an abrupt halt. From 1926 to 1931, the city suffered a boom and bust, two hurricanes, the failure of five banks, and finally the stock market crash. Headlines screamed, “Miami is Wiped Out.”

But the headlines were wrong. By the mid-1930s, Miami began a gradual recovery. New residents arrived by air, train, and the Mallory Steamship Line. Streetcars were introduced in the city. Tourists were lured to boating, fishing, and tropical gardens attractions. Miami began to gain a reputation as the “gateway to Latin America” – a reputation that would increase dramatically as the century wore on. During the 1930s, approximately 4,500 Jews lived among a Miami population of more than 110,000. Satellite communities emerged. The hotel, building, and banking industries escalated with greater participation by Jews. Jews helped start and continue to support Miami-Dade College, the University of Miami, which has a Center for Contemporary Jewish Studies and Hillel, and Florida International University with a Judaic Studies Program. The perilous situation of European Jews evoked a response in Miami’s small but active Jewish community, which founded the Greater Miami Jewish Federation in 1938. The first president was Stanley C. Myers. Ida Cohen founded the Jewish Home for the Aged with a \$10,000 donation from a non-Jew in 1940; today it is a leader in the field of all levels of care for the Jewish frail and elderly.

When the Japanese bombed Pearl Harbor, local leaders, seeking to expand business and visibility, convinced the government that Miami was the ideal location for training military personnel. As a result, funding and soldiers poured into the area, particularly Miami Beach. Many of these soldiers were Jews, who returned after the war, when South Florida’s image as a year-round resort reemerged. The tourist industry was revitalized with the widespread use of air conditioning, mosquito control, the development of Miami International Airport, and Israeli businessman Ted Arison’s expansion of the cruise ship business. The post-war economic boom brought additional tourists and settlers to Miami. Many were Jews, attracted by the new jobs created from tourism. In 1950, Dade County had a population of 495,000 people of which 55,000 were Jewish. For the next five years, approximately 650 Jews arrived each month. A new house was built every seven minutes during this period – and many of the builders were Jews. In 1952 Abe Aronovitz became the first (and to date, the *only*) Jewish mayor of Miami. Many Jews, horrified by news of the Holocaust, began to challenge antisemitism at home. The Miami branch of the Anti-Defamation League had been founded in 1940. During the McCarthy era, bombings and desecration of area synagogues were prevalent. Following the communist takeover of Cuba in 1959, 10–12,000 Cuban Jews immediately fled the country, finding refuge in Miami and its environs. In Miami, the presence of middle-class Cubans with business acumen helped revitalize the city.

In the post-war period until the mid-1960s, most jobs were related to the tourist and building industries or real estate. Most Jews were involved in the services and retail trades,

but by the 1960s, many were moving into medical and legal professions. In 1963 the first two Jews from South Florida were elected to the state legislature – Murray Dubbin and Louis Wolfson II. William Lehman was Florida's second Jew to serve in the U.S. Congress (after David Levy Yulee in the 19th century) when he began his 20 years of service in the House of Representatives in 1973. Lehman was a powerful force on transportation legislation, responsible for bringing mass transit to South Florida. In this period, Jews began to move north to North Miami and North Miami Beach. Cuban Jews started their own congregations.

From a shipping family, Israeli Ted *Arison, in 1972, acquired his own ship, the *Mardi Gras*, which was the start of Carnival Cruise Lines, today the largest cruise company in the world. Arison headed the campaign to bring professional basketball to South Florida (Miami Heat) and was the chief benefactor of the New World Symphony, founded by Michael Tilson *Thomas. The 1973 Arab oil embargo plunged Miami into the worst recession since the 1930s. Yet Jewish Miami continued to grow. By 1980 the Greater Miami Jewish population reached its all time peak of 230,000, with a full array of Jewish organizations, including Jewish Federation TV and the *Miami Jewish Tribune* (1986–93). The *Miami Herald* published an insert, the *Jewish Star Times* (2000–02).

In the 1980s, Miami became the new Ellis Island for people fleeing troubled countries like Haiti and the Dominican Republic. The influx of Caribbean immigrants, as well as the growing Spanish-speaking Cuban population, alienated some people and many Jews moved north to Broward and Palm Beach counties. By 1985 the Jewish population had declined to 209,000. As well, many of the old Jews, who had lived on Miami Beach, had died. But the greater Miami Jewish community was reinvigorated by the arrival of Jews from Latin America, Russia, and Israel. In 2005 the Jewish population of the county has decreased but stabilized at about 121,000 with a high percentage of retired and elderly persons (but less than in Broward and Palm Beach counties). There are more than 60 congregations, 34 Jewish educational institutions, and three Jewish community centers. The highest percentage and increase in Jewish population is in North Dade, especially in Aventura. Miami-Dade County hosts Florida's third largest Jewish population and the nation's tenth largest.

Miami Beach and Antisemitism

From the early 20th century, people visited the southern tip of Florida to picnic on its sandy beaches or bathe in the warm waters of the Atlantic Ocean. In 1913 the Collins Bridge opened, joining the beach to the mainland. That same year, New York Jews Joe and Jenny Weiss, and their son Jesse, relocated to Miami Beach. Joe and Jennie operated a snack bar at a popular bathing spot at the tip of the beach, the only place Jews could settle. Several years later, the Weiss family opened Joe's Stone Crab Restaurant in a small, wooden frame house, which they continued to expand and today remains the site of this world famous restaurant. It is still run by descendants of

the Weiss family. Developers placed restrictive covenants in their land deeds that prohibited the sale of Miami Beach lots to Jews: "No lot shall be sold, conveyed, leased to anyone not a member of the Caucasian race, nor to anyone having more than one quarter Hebrew or Syrian blood." A letter, written in 1920, stated, "We don't want Miami Beach to ever become a Jewish outfit – it would not only ruin the Hotel but ruin the property." However, the Lummus Brothers who owned properties at the southern end of Miami Beach, did not bar Jews from ownership. Several modest Jewish-owned hotels and apartments arose on property sold to Jews south of Fifth Street. These early Beach Jews owned and lived in apartments and rented units to others. This was their chief source of income. Sam Magid and Joseph and Harry Goodkowsky moved to Miami Beach and in 1921 built the Nemo Hotel on Collins Avenue and First Street, the first hotel to cater to kosher Jewish winter tourists. Shortly thereafter, the Seabreeze Hotel, also kosher, opened nearby at Collins and Second Street. Rose and Jeremiah Weiss and their children moved to Miami Beach in 1919 because of Rose's health problems. They bought the Royal Apartments, which had dwellings for 15 families. Rose Weiss, known as "the Mother of Miami Beach," attended every city commission meeting for nearly 40 years and created the city's flag. In the mid-1920s, the Jacobs family opened the first of three hotels. The Blackstone opened in 1929 on Washington Avenue and Eighth Street. Built by Nathan Stone, the grandfather of future U.S. Senator Richard Stone, this hostelry became one of South Beach's most imposing buildings, as well as a haven for Jewish visitors. George Gershwin reportedly wrote portions of *Porgy and Bess* while reposing in the hotel's rooftop solarium.

Despite this activity, the Jewish population of Miami Beach grew slowly in the first half of the 1920s. It was confined to an area from Fifth Street south to the tip of the peninsula. Malvina Weiss Gutschmidt, the daughter of Rose Weiss, noted that there were no Jewish residences north of Fifth Street until 1925. From 1925 until the end of the decade a rapidly growing Jewish neighborhood moved north all the way to Lincoln Road at 16th Street. A fantastic real estate boom, which overtook all of South Florida and much of the rest of the state in the mid-1920s, prompted this growth. The boom led to the creation of hundreds of new subdivisions and communities in Greater Miami and to a sharp increase in the area's population. This speculative era lured many "bigger than life" Jews: bankers Leonard Abess and Baron de Hirsch *Meyer and attorney, businessman, Zionist, and community builder Max Orovitz. Henri Levy, a French-born Jew, migrated with his family to Miami Beach, an area he characterized as "a lush tropical paradise." In 1922 Levy developed the smart boom-era communities of Normandy Isle and Normandy Beach North, which later became Surfside. The boom collapsed in 1926, when a hurricane smashed into South Beach and other parts of the county. But many "boomers," whose ranks included a considerable number of Jews, remained in the area. In the 1930s, Miami Beach's Jewish population grew significantly, reaching

at least several thousand (out of an overall population for Miami Beach of 28,012) by decade's end, as Miami-Dade County, formerly called Greater Miami, replaced Jacksonville as the center of Florida Jewry.

Many of the new arrivals to Miami Beach came initially as tourists. Most came from the northeast United States. Most hotels and apartments continued to exhibit "Gentile Only" signs. Jewish builders erected many of the finest hotels on South Beach during the 1930s. Many bore the Streamline or Nautical Modern style of architecture designed by Henry Hohauser, who moved to Miami Beach in 1936. His initial project was to design a new sanctuary for Miami Beach's first congregation – the building that now houses the Jewish Museum of Florida. For the next ten years, this brilliant architect was responsible for the design of more than 100 hotels, apartments, and buildings on Miami Beach. The Art Deco buildings of the 1930s and 1940s on Miami Beach are architectural treasures known throughout the world. The square-mile district is bounded by Fifth Street to 23rd Street, Lenox Avenue to Ocean Drive. In the 1980s, Barbara Baer Capitman, a Jew, launched the campaign that established the Art Deco District, the largest collection of 1930s Art Deco and Art Moderne buildings in the nation. Jews operated many of the hotels. The 1930s also marked the dismantling of restrictive barriers to Jewish ownership of real estate throughout the Beach, as large numbers of Jews purchased commercial properties from debt-ridden owners only too happy to sell them. Jews also began buying residential lots whose restrictive covenants proved impossible to enforce after the property had changed owners a couple of times. While discrimination had by no means vanished, conditions were improving. But it was not until 1949 that a law was passed by Florida's legislature that ended discrimination in real estate and hotels. The Jewish retail, institutional, and residential presence was most strongly felt at the southern portion of the island, especially along Washington Avenue and Collins Avenue and Ocean Drive, stretching from the tip more than one mile north to, and even beyond, Lincoln Road. Small Jewish businesses dotted Miami Beach streets and Jewish tenants filled apartments. In 1925, Jews began meeting for services in apartments. Several very observant Canadian Jewish visitors lobbied for a synagogue. As a result of their efforts, Orthodox Beth Jacob Congregation was organized in 1927. In the 1930s, as the Jewish population moved into areas north of Fifth Street, many members of Beth Jacob broke away and organized a Conservative congregation. Jacob Joseph of Miami Beach subsequently became the Miami Beach Community Center in the 1940s, and, finally, in 1954, Temple Emanuel. Rabbi Irving *Lehrman served as the powerful spiritual leader for 50 years. As the Jewish population continued to move north, and many Jewish soldiers poured into the area for wartime training, Jews founded the Beth Sholom Center in a storefront on 41st Street in 1942 (it was renamed Temple Beth Sholom in 1945), where Rabbi Leon *Kronish served for nearly 50 years. Today there are more than 20 congregations on the Beach. Jewish education is abundant: the Hebrew Acad-

emy since 1947, Lehrman Day School since 1960, and Talmudic Academy since 1974. There has been a *mikveh* since 1945 and an *eruv* since 1982. Commensurate with their increase in numbers, Jews began to play increasingly more important civic roles. Baron de Hirsch *Meyer, who came to the area during the boom after earning a law degree from Harvard, served as president of numerous Jewish organizations and was the first Jew to sit on the Miami Beach City Council (1934). Mitchell Wolfson, who migrated to Miami with his family around 1915 from Key West, became Miami Beach's second Jewish councilman. Like de Hirsch Meyer, Wolfson was a stellar businessman, civic leader, and visionary. In 1943 he was elected mayor, the first of 15 Jews who have served as mayor of Miami Beach (as of 2005). Mitchell Wolfson was very important to business in Miami. With his brother-in-law Sidney Meyer, Wolfson formed WOMETCO (Wolfson Meyer Theater Company) in 1949. WOMETCO became the first television station in Florida, WTVJ. Wolfson also built the Seaquarium and left an endowment to create the Wolfson campus of Miami-Dade College. By the mid-1940s, the Greater Miami Jewish Federation placed the number of Jews in Dade County at 29,325 in a county nearing 400,000 in population. Nearly one-half of these Jews lived on Miami Beach.

Less civic-minded Jews also embraced Miami Beach. Most prominent of these was Meyer *Lansky, the reputed boss of South Florida crime in the middle decades of the 20th century. Less "prominent" than Lansky nationally but quite active on the Beach was the S&G Syndicate, founded and operated by five Jews. From its office on Washington Avenue, the S&G controlled bookmaking in a couple of hundred hotels on Miami Beach and elsewhere in the area in the 1940s, grossing millions of dollars annually. A U.S. Senate crime investigating committee, chaired by Estes Kefauver, put the syndicate out of business in the early 1950s.

The tragedy of the Holocaust caused many Jews to turn to Zionism. In 1944, more than 8,000 persons gathered in Miami's Bayfront Park to hear Dr. Stephen S. Wise, a renowned scholar and leader, present the case for the Jewish people and for a homeland in Palestine. Some South Florida Jews, led by Shepard Broad (Broad Causeway honors him), helped outfit boats and planes to transport Jews from Displaced Persons (DPS) camps in Europe to Palestine. Inspired by first-hand experience in financing boatloads of Holocaust survivors and DPS to arrive in Palestine, Max Orovitz formed "the Miami Group" with fellow Jewish businessmen and created the Dan Hotel chain in Israel following statehood. Following World War II, Jewish doctors could not get staff privileges at any area hospitals. In response, Jewish leaders in the community formed Mount Sinai Hospital on Miami Beach; Max Orovitz was the founding chairman for 30 years. Today, the 55-acre hospital, the largest employer in that city, is renowned for its leadership in medicine, especially cardiac care.

As the social and cultural fabric of Miami Beach changed following the end of World War II, so did the Beach's physical appearance. Hotels were built rapidly to satiate the desire of

tourists for fancy new hotels. The hotel industry was greatly bolstered by Jews, including Ben Novack who, with Harry Mufson, built the Fontainebleau Hotel (1954). Designed by Morris *Lapidus, the elegant hotel quickly became a trademark property. A year later, Mufson commissioned Lapidus to design the equally grandiose Eden Roc Hotel next door.

Larry *King began his live talk show on Miami Beach in 1956. Sophie *Tucker belted her songs in Yiddish during the 1950s and 1960s in Miami Beach hotels. In 1967 Judy Drucker organized the first concert at Temple Beth Shalom and began bringing world famous performers to Miami Beach. Fifteen years later Drucker formed the Concert Association of Florida. From Yiddish theater in the 1930s to Pavarotti on the beach in the 1990s, from the Miss Universe Beauty Pageant at the Fontainebleau Hotel in 1960 to the opening of the Jewish Museum of Florida in 1995, Jews have played an active role in developing the arts and entertainment scene of Miami Beach to what it is today, and they continue to nurture it. Jews started the other museums, Bass Museum of Art and Wolfsonian, as well as the Miami City Ballet. In 1990 Kenneth Treister designed the Holocaust Memorial, a 50-foot outstretched arm with 135 life-sized bronze sculptures.

In the 1970s, about 80% of the population was Jewish. In 2004 it was 20% (about 20,000). There is a resurgence of Orthodoxy (17% of the Beach population), especially among younger families. The elderly Jews have passed away and Latin American and Israeli Jews have arrived. The increasing popularity of Miami Beach, rising real estate values, and a declining Jewish population have forced more synagogues to close their doors and become nightclubs and retail stores. The skyline of Miami Beach has changed from the day the first “skyscraper” went up in 1940. It continues to change, as some buildings come down and new higher ones go up. Jews have been involved in every aspect of these developments, as architects, developers, and contractors. Through their contributions to the physical appearance of Miami Beach, their roles in building the Beach are apparent and perpetual.

(Current demographics (2004) were provided by Ira M. Sheskin, Ph.D., for the Greater Miami Jewish Federation.)

[Marcia Jo Zerivitz (2nd ed.)]

Cuban Jewish Community

The Jews of Cuba form a special group among the Jews of Greater Miami. Despite their small number, 2,500 households (2001), they stand out as a link between the large Cuban exile population and the large Jewish population. Unlike other Jews from Latin America, who tend to use Miami as a temporary stopover, the Cubans made Miami their permanent home.

Following the Castro revolution, Cuban Jews started to migrate to South Florida, most of them to Miami Beach. Like other middle-class Cubans, their exodus was motivated by the complete change in the social and economic system under Castro, and particularly by the nationalization of private businesses. Between 1960 and 1963, more than 9,000 Jews, out of the 12,000 that had resided in Cuba prior to the revolu-

tion, left the island. Assisted by HIAS, which tried to relocate them in other parts of the United States, they favored Miami, which became their substitute for Havana. They found there a similar landscape and climate and a large Spanish-speaking population.

Though arriving with practically no property, the Cuban Jews were equipped with the experience and education to facilitate their economic integration and eventually their remarkable success. Like other Cuban exiles of the early 1960s they became owners and general managers of large business firms, senior bank executives, and professionals.

The Cuban Jews felt rejected by the resident Jewish population, which was indifferent to their presence and problems. The only congregation that was hospitable to the Cubans was Temple Menorah, which with time became an important social and religious center of Cuban Jews. In 1961 they founded the *Círculo Cubano Hebreo*, which became the Cuban Hebrew Congregation at the Ashkenazi Beth Shmuel synagogue. In 1969 the Sephardim founded the Cuban Sephardi Hebrew Congregation, and in 1980 they inaugurated their synagogue, Temple Moses (today Torat Moshe).

The two Cuban congregations were founded in Miami Beach, the center of the early immigrants, many of whom were born in Europe, migrated to Cuba, and finally settled in Miami. The younger generation, of Cuban-born Jews, tended to leave the Beaches and concentrate in South Dade. A study by I.M. Sheskin (see Bibliography) showed in 1982 that out of 3,213 Cuban-born Jews, 40% lived in the Beaches, 50% in South Dade, and 10% in North Dade. With time, however, the population of the Beaches decreased considerably, though most Cuban Jews still live within the boundaries of Dade County.

The Cuban-born Jews preserved the social and cultural patterns that they brought over from Cuba: they were very active in Zionist circles, they sent their children to Jewish day schools, and were less influenced by assimilation. With time, however, the Cuban identity tends to diminish. The third generation, born in the United States, is less affected by the Cuban heritage of their parents' community. They are integrated in an English-speaking environment and gradually lose their Cuban characteristics.

[Margalit Bejarano (2nd ed.)]

Heisler-Samuels, “Forced to Leave Homes, Cuban Jews Thrive in Miami,” in: the *Miami Herald* Internet Edition (Jan. 17, 2001).

MICA (Heb. מִיכָא; “who is like [El]”), son of *Mephi-Bosheth, son of Jonathan, son of Saul (II Sam. 9:12). In the genealogical list of the tribe of Benjamin (I Chron. 8:34, 35; 9:40, 41) he is called Micah (Heb. מִיכָה). Thanks to *Jonathan, his grandfather, and Mephi-Bosheth, his father, Mica no doubt benefited from David's generosity (II Sam. 9:12; cf. 19:24–29).

For his descendants, see *Benjamin.

MICAH (Heb. מִיכָה), the sixth book in the collection known as the Twelve Minor Prophets within the subdivision “Later Prophets” of the second division of the Hebrew Bible (the Prophets). In the Septuagint translation, where the order varies, Micah usually comes immediately after Hosea and Amos. It is possible that the prophet’s name is a hypocoristic of a name formulated as a rhetorical question. Mi-ka-yahu, “who is like YHW(ח)” or Mi-ka-El, “Who is like God / El.” An ostrakon from Jerusalem from the late eighth or early seventh century attests the name *Mk[ly]hw* (Ahituv, 23).

The Content of the Book

The title (1:1) specifies the name, country, and date (in the days of Jotham, Ahaz, and Hezekiah, kings of Judah in the eighth century) of Micah’s prophecy “concerning Jerusalem and Samaria.” This is followed by a diatribe against Israel and Samaria (1:2–7). Critics have suggested that verse 1:5b, dealing with the “cult places” (*bamot*) of Judah – which are hardly a concern of Micah – is a gloss inspired by 3:12. Others emend *bamot* to *hattot*, “sins.” In the succeeding lamentation (1:8–16), over the birthplace of the prophet and the neighboring towns, misfortune strikes at the gates of Jerusalem (12) but does not pass beyond them. The prophetic “I” makes its first appearance in verse 15. In verse 16, as the form of the Hebrew verb shows, a female person is addressed; no doubt Daughter-Zion of verse 13, or, following the reading of some manuscripts of the Septuagint, “Fair Israel.” In fact the “kings of Israel” did suffer a reverse at Achzib, as verse 14 indicates.

In 2:1 the threat is no longer directed against cities but against those who, having dispossessed others and defrauded them of their holdings, shall themselves be dispossessed. This section of chapter 2 may be dealing with social injustices (8–12) or, like Hosea 5:9–11, with a territorial dispute between tribes. Note that it is a clan (*mishpahah*, 2:3), which has angered the Lord and it is a stranger who reaps the benefit of the vengeful spoliation, without right of repurchase. The key phrase is in verse 7: the Lord does not abandon Israel. The sense of the passage becomes clearer if the prophet is assumed to be warning the ministers of Judah, who wish to expand at the expense of Israel. From this the conclusion can be drawn that the Lord, the sole King, steps into the breach and gathers His people together despite Judah’s policy. In a new soliloquy (3:1) the prophet personally attacks the “leaders” and “magistrates” of Israel (without any mention of kings) who ignore the law and devour each other in quarrels, which the prophet depicts figuratively as cannibalism, through which the people suffer. The prophets for their part mislead the people. In punishment, the Lord no longer provides them visions. Chapter 3 culminates in a prediction of the destruction of Jerusalem, corresponding to that of Samaria in 1:6. According to Jeremiah 26:18, this text had great repercussions, reaching the ear of Hezekiah and perhaps precipitating his reforms.

The allusion to Jerusalem and Zion is followed by the insertion of the famous passage, “from Zion shall come forth Torah/ teaching/ law and the word of the Lord from Jeru-

salem,” which appears also in Isaiah (2:2–4). The passage predicts the universal reign of peace, with the Lord issuing instructions on Mount Zion and settling disputes so that war will be unnecessary. (On the relation between the Micah and Isaiah oracles, Andersen and Freedman (413–25) cite no fewer than seven options.) After the profession of faith in 4:5 (“We walk in the name of the Lord, our God”), a new oracle announces the reign of the Lord, who assembles the crippled. Daughter-Zion regains her former sovereignty (vs. 8). Her present pangs are pangs of birth that augur well for the future when YHWH will redeem her. The section (5:1–5:5) on Beth-Lehem-Ephrathah appears to be a unity. Though the area is too small to be a fighting unit, from there the leader (*moshel*, the term “king” is avoided) of Israel will arise (cf. the Christian reading of this passage in Matt. 2:5–6). The allusion to a Davidide is clear, inasmuch as his wellsprings, or origins, can be traced from ancient times (5:1). The schism between Israel and Judah is compared to the abandonment of the Israelites by this Davidide until the day when she, presumably Daughter-Zion (4:10), who is destined to give birth does so. The leader presides over the ingathering, but here this is presented as a return of Judah to Israel (cf. Deut. 33:7). This shepherd is capable of organizing a coalition against Assyria of seven shepherds and eight *nesikhim* (“princes”) and of assuring peace. This passage is therefore linked with the preceding one, as B. Renaud pointed out. It likewise is connected with the following verses: 6–8, where the remnant of Israel is seen as present in the midst of the nations as a sign of the Lord’s blessing or curse.

In contrast, chapter 5:9–14 returns to the theme of the extermination of idols (as in 1:7 against Samaria; cf. Isa. 2:6–22) with an allusion to the cities of the country (as in 1:10–15). This passage is linked associatively with chapter 6 by the repetition of the verb *shama*, “hear” (cf. 5:14) in 6:1. Here the presentation is in the form of a complaint (*riv*). The Lord recalls his acts of salvation, citing the exodus from Egypt led by Moses, Aaron, and Miriam (the only non-genealogical reference to Miriam outside the Pentateuch), and the plot of Balak and Balaam, which YHWH foiled. No response of the people has survived. The verses that follow are arguably among the most famous in the Bible. In vss. 6–7 we have a question modeled on the liturgy of entrance: “With what shall I come before YHWH, bow down to the god on high? Shall I come before him with burnt offerings, with calves sons of a year? Will YHWH be pleased with thousands of rams, with myriads of streams of oil? Shall I give my first born for my transgression, the fruit of my belly for my own sin?” Verse 8 replies that it has already been revealed to humans what is required of them: justice, mercy, and humility before the Lord. Chapter 6:9–16 is a new soliloquy to an unnamed town, and probably to a tribe. The resemblance to Amos 8:4–5 and the allusion in verse 16 to Omri and the house of Ahab make it probable that the passage alluded (at least originally) to Samaria. The tribe may be Ephraim, since in the oracles of Hosea and Isaiah the kingdom of the North dismembered by *Tiglath-Pileser III is called Ephraim (Isa. 9:7 (8)).

The prophetic “I” again appears in 7:1 in a lamentation on civil discord (cf. 3:3; Isa. 10:17ff.). This “I” reappears from verse 7 onward where the prophet speaks in the name of Israel, which reproaches its “enemy” for having rejoiced at its downfall. It is probable that (as in 2:8) the enemy is in this case Judah, since the question raised by the “enemy”: “Where is your God?” is the reproach of the Judahites against the Israelites who did not recognize the choice of the sanctuary at Zion. Verse 10b is reminiscent of 3:12 on the ruin of Jerusalem. Chapter 7:14–20 is a prayer imploring the Lord to become the shepherd of His people once again (the geographical terms are of the North, Carmel, Bashan, and Gilead, alienated in 733 B.C.E.) as He promised to Jacob and Abraham. This rare reference probably aimed at encompassing both Judah and Israel in the same gathering.

Composition

The book is composed of independent but more or less connected sections. Ordinarily, these sections are re-divided into three: chapters 1–3 speak of condemnation, 4–5 of consolation, and 6–7 of a mixture of condemnation and consolation. The visions of consolation are generally attributed to the years following the Exile and are assumed to have been added to the original oracles of Micah at the time when the book was put together (Renaud). There are two objections to this view:

(1) It disregards the importance of the kingdom of the North and its downfall in 722 in the religious thought of Israel. This strain in Micah was given great emphasis by F.C. Burkitt, O. Eissfeldt, and J.T. Willis;

(2) It neglects the influence of the cultural traditions in the sanctuaries (including Jerusalem) on the prophetic oracles. E. Hammershaimb and B. Reicke have stressed this fact. In the ancient Orient, as at the beginning of the monarchy, prophecy announced good tidings rather than misfortune.

But as Willis’ survey of the numerous theories about Micah demonstrates, the history of the book’s composition is far from settled. The unity, coherence, and attribution to the prophet are all debated. Where some scholars see artful redactional unity, others (e.g., Hillers) find no meaningful structure. Willis himself enumerates areas that need to be addressed. Among these are the text, which swarms with philological difficulties, and the criteria for the dating of passages. It is impossible to speak meaningfully about the theology of the book, if indeed it has one or several, apart from the questions of composition, arrangement, and redaction. There is general agreement though that the present book has a historical core in the eighth century, and that at least some of the prophecies are those of the prophet Micah referred to in Jeremiah 26:16–19, and confused with Michaiah son of Imlah in 1 Kings. 22–28.

The Prophet and His Time

R. Weil emphasized the importance of historical events known from 11 Kings 20–22 for an understanding of Micah. His birthplace, Moresheth-Gath, near Lachish, is known as far back as the El-Amarna period (tablet 335:7). This region had suffered

since the days of the Syro-Ephraimite war against Judah, which commenced under *Jotham (11 Kings 15:37; cf. Micah 1:1 and probably 1:13) and continued up to the time of the Assyrian campaign against Gath and Ashdod in 733, 720 (the five *nesikim* of Micah 5:4 are reminiscent of the five Aramean “sheikhs” (Akkadian: *nāsikāti*) mentioned by the Assyrian king Sargon II (Fuchs, 147)), and 712 (cf. Isa. 20). Meanwhile Samaria had fallen. Hezekiah, who had probably been associated in the kingship from 729/7, became in any case the sole king after 716/5. He shared the views of Micah (Jer. 26:18), who attacked the leaders of Jerusalem (but never the king), and his political activities disturbed Sargon. Perhaps it was at this time that the mission of Merodach-Baladan took place and the oracles on the deliverance of daughter-Zion were delivered, but this mission probably dates from 703, the time of the general revolt against Sennacherib which was to end in 701 with a new occupation of Lachish and the region. The rabbis held that Micah’s prophecies were redacted and canonized by the Men of the Great Assembly (BB 15a; see *Great Synagogue).

The Theological Problem

Micah 5 regards it as the will of YHWH that all Israel unite around the dynasty that issued from Beth-Lehem, where David was born. There are similarities in the theological teachings found in Micah and Isaiah: the fidelity of the Lord endures despite his “wrath” (Micah 7:9; Isa. 9:11, 16); He remains the light of the faithful (Micah 7:8; Isa. 10:17); He is King of Israel (Micah 4:7; Isa. 6:1); and He has chosen the Davidic dynasty for the salvation of the people (Micah 5:1; Isa. 7:1–9; 9:6). Finally, the theology of the book of Micah shares points in common with that of Hosea and *Deuteronomy when speaking of *hesed* (“mercy”; 7:18, 20), “the love of *hesed*” (6:8), and when it places mercy and humble submission to God above sacrifices (6:8; cf. Hos. 6:6). This prophet who, unlike the others, reveals himself as “full of strength, the spirit of YHWH, and justice and valor” takes on his shoulders the burden that the descendants of David should have assumed (Isa. 11:2–3).

There are numerous word plays in the book: *be-gat al taggidu ... be-bet le-aprah apar ...* (1:10); *akziv le-akzav* (1:14); *ha-yoresh ... moreshah; ad adullam* (1:15); *titgodedi bat-gedud* (4:14). The text of the book has not been well-preserved, with some passages unintelligible (e.g., 1:10–16; 2:6–11; 7:11–12).

[Henri Cazelles / S. David Sperling (2nd ed.)]

In the Aggadah

According to one opinion, Micah was a contemporary of Isaiah (SOR 20; and Pes. 87b); according to another, he was one of the post-Exilic prophets (PDRK 16, 128b). The verse: “He hath shewed thee, O man, what is good; and what doth the Lord require of thee, but to do justly, and to love mercy, and to walk humbly with thy God?” (Micah 6:8) is a quintessence of the 613 commandments of the Bible (Mak. 24a).

MICAIAH (**Micah**; Heb. מִיכָה, מִיכָה), an Ephraimite in whose house was a shrine. Micaiah lived in the hill country of Ephraim though the exact location of his dwelling is not known. According to the Talmud (Sanh. 103b), his house was in Gareb, 3 mi. (5 km.) from Shiloh, which is perhaps Khirbet Arabah, about 2½ mi. (4 km.) west of Shiloh. The Bible relates that Micaiah took 1,100 pieces of silver from his mother but returned them because of her curse (Judg. 17–18). The mother consecrated the money to God: she gave 200 pieces of silver to a silversmith to make a graven image and a molten image and the rest she apparently consecrated to the shrine of God in her house. In the shrine were placed the graven and molten images, and an ephod and teraphim. It is difficult to ascertain their significance: the images were apparently cultic symbols while the ephod and teraphim were used for asking counsel of God (Judg. 17:3–5; 18:3–7, 14–15, 18–21). At first one of Micaiah's sons served as a priest but later a young levite who had come to the hill country of Ephraim from Beth-Lehem in Judah was hired as a "father and priest." The men of the tribe of Dan, passing through Ephraim on their way to capture Laish, forced the young levite to accompany them and take the graven image. Henceforth the image stood in the sanctuary of the city of Dan and the young levite, whose name was Jonathan the son of Gershom, son of Moses (or son of Manasseh), served there as a priest; and his sons continued to serve "until the day of the captivity of the land" (18:30). This ancient story, which is connected with the description of the capture of Laish in the north, may possibly reflect cultic customs during the period of the Judges when affluent men set up their own houses of God and used the cultic objects to inquire of God. Along with local attendants (or in their place) they installed levites who worked for wages and whose merit as inquirers of God was greatly valued as "father and priest." The purpose of the story of Micaiah is to explain how the sanctuary was established in Dan and how a body of priests – perhaps descendants of Moses – came to be based there after having had their beginning in a private house of God in the hill country of Ephraim. The Bible stresses the greater importance of priestly service "unto a tribe and a family in Israel" as against serving "the house of one man" (18:19) and draws a

parallel between the end of the sanctuary at Dan and that at Shiloh, perhaps as a result of some unknown historical event. From Judges 18:30–31 it can be concluded that the worship of Micaiah's graven image at Dan did not continue after the destruction of Shiloh.

[Samuel Abramsky]

MICAIAH (Heb. מִיכָה; in II Chron. 18:14, **Micah**, Heb. מִיכָה), son of Imlah, prophet who foretold the death of *Ahab (I Kings 22:7–28). Before embarking on the campaign of Ramoth-Gilead, Ahab and his ally *Jehosaphat king of Judah consulted prophets who unanimously prophesied: "Go up; for the Lord will give it into the hand of the king" (22:6; cf. 22:12). When Micaiah was called, he at first expressed the view of the other prophets, but only in an ironic mockery, and when the king adjured him to speak "nothing but the truth in the name of the Lord," he described two visions he had had: one, of the Israelites scattered over the hills like sheep without a shepherd, which the Lord explained to mean, "these have no master, let every one of them return to his house in peace"; and one, of a meeting of the heavenly council at which it was decided that Ahab should be lured to his death in battle at Ramoth-Gilead by a spirit of falsehood in the mouths of his prophets. Micaiah, who firmly repeated the prediction that the king would not return home alive, was then imprisoned for the duration of the campaign.

It appears that Micaiah was known as a prophet even before this, and the king of Israel says of him "I detest him, for he does not prophesy good concerning me, but evil" (22:8). It thus appears that Micaiah was not one of the court prophets, who as a rule acquiesced and encouraged the king. However, he did not bear animosity toward the king and tried, in his prophecy, to prevent his death and the defeat of Israel. His personality was distinguished by prophetic independence and a firm, uncompromising stand not only against the king and his ministers but against all the 400 prophets gathered in the king's court, who in his opinion were not merely false prophets, but became messengers of falsehood through a divine temptation. He was not a rebuking prophet and was not eager to prophesy as were the messenger-prophets. Nor is there any proof that he was one of the prophets who advised the people, like Elisha. His prophecy was similar to that of the classical prophets in his obdurate and unusual stand and his readiness to suffer and be tortured for the sake of truth.

From a political point of view, too, Micaiah differed from the other prophets who in their extreme nationalism were violently anti-Aramean and urged the king to fight against Aram without compromise (I Kings 20:22).

[Samuel Abramsky]

In the Aggadah

In the Aggadah, Micaiah is identified with the anonymous prophet who “came near unto Ahab” and foretold the destruction of the Aramean army (1 Kings 20:13; SOR 20, p. 52). Later, when he predicted the death of Ahab in battle, the false prophet Zedekiah b. Chenaanah challenged his prophecy, claiming that Elijah had previously prophesied that the dogs would lick Ahab’s blood in the field of Naboth, and he would not therefore be slain on a battlefield three days’ journey from there. However, both prophecies were fulfilled. Ahab fell in Ramoth-Gilead, but his blood was licked by the dogs in Samaria, when they washed the slain king’s chariot there (1 Kings 22:28; Jos., Ant. 8:15, 4).

°MICHAEL II, Byzantine emperor (820–29) to whom strong Judaizing leanings were ascribed, partly because of his iconoclasm. A tenth-century chronicler states that Michael relieved Jews of financial burdens and that he “loved Jews above all mortals” since he was himself half Jewish and had been brought up by Jews. It is possible that Michael may have come under Jewish influence as a native of Amorium in Phrygia, a province noted for Judeo-Christian syncretism, including sects which kept the whole of Jewish law except circumcision and had close contact with Jews. However, the main impetus for imputing pro-Jewish sentiments to Michael came from the desire of the succeeding dynasty, the Macedonian, to discredit the founder of the Amorian dynasty.

°MICHAEL VIII PALAEOLOGUS, Byzantine emperor (1259–82). In 1261 Michael recaptured Constantinople from the Latins, who had held it from 1204, and restored an independent if greatly reduced empire. Unlike his predecessors in Nicaea, he had no reason to suspect his Jewish subjects of having contact with Jews in hostile territory and was anxious to gain their support. Therefore as recorded by Jacob ben Elijah, the only contemporary Hebrew source, he called together the leaders of the Jewish communities and promised them religious tolerance as well as thus ending a series of nearly 40 years of persecutions (see *Epirus). Michael also persuaded his son and co-emperor Andronicus II Palaeologus (1282–1328) to continue and expand this policy, so that the Jews of Constantinople – as distinct from Jewish merchants of hostile Venice living in Constantinople – were allowed to live and build synagogues wherever they wished – to the displeasure of Patriarch Athanasius I.

[Andrew Sharf]

MICHAEL, HEIMANN JOSEPH HAYYIM (1792–1846), German merchant and bibliophile. Michael was born in Hamburg and lived there all his life. He assembled one of the finest collections of Hebrew manuscripts and books, a library containing 5,471 printed books and 862 manuscripts, of which 60 were autographs and 110 were written between 1240 and 1450. He maintained a lively correspondence, partly in German in Hebrew letters and partly in an attractive Hebrew, with L. *Zunz (in the years 1832–46), S.J. *Rapoport, and S.D. *Luzzatto. This correspondence is a treasury of bibliographical information.

A detailed catalog of Michael’s collection, *Ozerot Hayyim*, with notes by Moritz Steinschneider and an introduction by L. Zunz, appeared in 1848. After Michael’s death his friend M. Isler appealed to all friends of Jewish scholarship, wealthy German Jewry in particular, to preserve the priceless collection in Jewish hands and to save it from being sold abroad. The appeal was in vain, and Michael’s library was dispersed, the books going to the British Museum in London and the manuscripts, over 860 pieces, to the Bodleian at Oxford (see *Libraries) for a little over £1,000.

Michael’s encyclopedic work, *Or ha-Ḥayyim* (1891; repr. Jerusalem, 1965, with additional notes by N. Ben-Menahem), based on his very rich collection, contains the biographies and bibliographies of medieval Jewish scholars.

[Naphtali Ben-Menahem]

MICHAEL, JAKOB (1894–1979), U.S. financier and philanthropist. Born in Frankfurt, he began his business career in 1910 with his father-in-law’s metal-trading firm, Beer Sondheimer. Demobilized from the German army in 1917, he became active in trade and industry, but in 1933 left Germany for Holland, and in 1939 moved to the United States where he continued his activities in various industrial enterprises. He was prominent in many Jewish philanthropic, educational, and scientific institutions. He financed a high school and a children’s home in Pardes Hannah, Israel; an institute of biomedical research at the Einstein College of Medicine, New York; the institute of nuclear science at the Weizmann Institute in Israel; and a college of Hebraic studies at Yeshiva University, New York. Much of his attention was devoted to religious institutions, and his special interests included the collecting of Jewish ceremonial objects and Jewish music. He donated a collection of 25,000 items of Jewish music to the Hebrew University and many valuable books and ceremonial objects to the Israel Museum (including a complete synagogue taken from Vittorio Veneto in Italy).

[Joachim O. Ronall]

MICHAEL (Michaels, Michall), MOSES (Moshe bar Jehiel; 1675–1740), ship owner and international trader, born in Harzfeld, Germany. Michael immigrated to New York, and from 1717 shipped large quantities of foodstuffs, sometimes lumber and candles, to Curaçao, and supplied its garrison with flour and other foodstuffs. Michael usually traveled with his cargo on board his schooner *Abigail*. From 1721 to 1722 he was in partnership with Michael Asser of Boston; from 1731 to 1732, with his son Michael Michaels (d. 1736). In 1729 he paid for the privilege of placing the first cornerstone of New York's Mill Street Synagogue. He died in Curaçao.

[Isaac Samuel Emmanuel]

MICHAEL, SAMI (1926–), Israeli writer. Born in Baghdad, Iraq, to a middle-class family, Michael attended Jewish primary and secondary schools. After the pogroms in 1941 (the Farhoud), he joined the Communist underground. Years later, he explained that it was both as a Jew and as an Iraqi patriot that he chose to struggle for seven years in the underground, in the belief that only Communism had the potential to bring about a liberal society in Iraq which would, among other things, support the advancement of its Jewish citizens (“Unbounded Ideas,” 2000). With the outbreak of the War of Independence in Israel, the situation of the Jews in Iraq worsened. Michael, targeted both as a Jew and as a Communist, fled to Iran, from where, with the help of the Jewish Agency in Teheran, he arrived in Israel in April 1949. “I belong to Israel out of love, not out of ideology,” is how Michael describes his identity as an Israeli, eschewing a Zionist as well as an anti-Zionist definition. Michael sees himself first and foremost as a Jew, heir to the 2,500-year-old cultural tradition of the Babylonian Jews, which was unbroken until persecution and wanderings finally caught up with them after 1948. In other words, Michael does not consider Israel to be the ultimate, ideal home for all Jews. He believes that the Diaspora is another appropriate dynamic form of Jewish life. His own personal decision in favor of Israel was the result of his emotional bond, and he therefore defines himself as an “Israeli patriot” only in the sense of his attachment to the milieu and scenery of the place.

This nonconsensual view is a guiding force in Michael's life, expressing itself in both his civic and his creative activities. He arrived in Israel in a crucial period, during which the newly established state had to absorb hundreds of thousands of new immigrants from east and west. Michael did not accept the monolithic, culturally coercive attitude of the so-called “melting-pot” policy, and he sought instead to assert himself by remaining, as it were, on the seam. He served in the Israel Defense Forces (1950–52), lived through the trials and tribulations of his parents in a transit camp (1951–56), and made his living as a journalist for the Arabic newspaper *Al-Ittihad* in Haifa. Michael served it as an itinerant correspondent, covering the lives of the new immigrants in the transit camps as well

as those of Arabs living in villages under the military regime that Israel imposed on them in the early years of the state. At the same time, he began writing prose in Arabic.

Throughout this period he was active in the Israeli Communist Party, but in 1955, with knowledge of the shocking details of Stalin's reign of terror, he left the party for good. He worked for 27 years (1955–82) as a hydrologist at the Department of Agriculture, studying hydrology in his free time at the British Institutes as well as psychology and Arabic literature at the University of Haifa.

For 15 years (1955–70), Michael swore himself to literary silence. Only at the beginning of the 1970s, did he turn back to writing – this time only in the Hebrew tongue. Michael's writing is distinguished by its humane and social sensitivity. He is among the prime movers of the literary sea-change that has been occurring in Israel since the mid-1970s. This trend shifted social representation from the central current to the margins, broadening the boundaries of the consensual culture toward a multiculturalism inclusive of ethnic communities and minorities, and stirring voices within a public discourse driven by sectorality and social divisions. Sami Michael deals primarily with “the Other,” “the stranger,” “the outsider,” granting these figures a presence of their own: the immigrant facing the arrogance of the veteran citizen (in *Shavim ve-Shavim Yoter*, “All Men Are Equal, but Some Are More So,” 1974); the Israeli Arab coping with the animosity of the Jewish-Israeli regime (in *Hasut*, 1977; *Refuge*, 1988; *Hasozrah ba-Vadi*, *A Trumpet in the Wadi*, 2003); the woman silenced by patriarchy, in both family and communal frameworks (in *Viktoria*, 1993; *Victoria*, 1995; and “The Third Wing,” 2000). Of all these figures, the dominant one is that of the immigrant from an Arabic-speaking country, struggling with diverse versions of Israeliness. As might be expected, Michael's depiction draws upon biographical materials and his own experience of *aliyah*, tossed as he was between a loved, familiar past and a new, alien present, in which he struggled to forge his own Israeli identity. Thus, David in “All Men Are Equal, but Some Are More So,” for all his efforts to shake off the past and hold fast to the Israeli present, is constantly made to feel like a second-class citizen; beginning as a penniless child of the transit camps, he emerges as a “hero” of the Six-Day-War, yet his erudition, professional skills, and his prowess as a fighter will never make him an equal among equals.

In contrast to David's angry protest, Mordokh, in *Refuge*, has spent years languishing in an Iraqi jail for his activity in the Communist underground and is grateful to the State of Israel for giving him asylum. Nevertheless, he finds it hard to reconcile himself to Israel's social reality, in which the class gap is continually widening, resulting in injustice and discrimination against both Jewish and Arab communities. Unable to withstand the tension, Mordokh flees to the past. In *Mayim Noshkim le-Mayim* (“Water Kissing Water,” 2001), a sense of reconciliation with life in Israel begins to make itself felt. Joseph, who, like the other figures, came to Israel in the mass immigration during the 1950s, arrives only many years later at

an alternative Israeli identity of his own, one that even now incorporates a wrenching internal oscillation between past and present and is repulsed by the communal rifts between Jews and Arabs, religious and secular Jews, and Jews of Ashkenazi (European) and Mizrahi (Middle Eastern or North African) origin. Now, however, these dilemmas are played out in a context of pride, self-esteem, and a sense of belonging.

Along with his concern with the Israeli present, Michael devotes a large part of his *oeuvre* to the past – that is, to Jewish life in Baghdad in the 1930s and 1940s. Here too, he sets out to subvert the stereotypical image of the “*galut Jew*” by depicting episodes of a colorful, tempestuous past, unfolding a heterogeneous community of traditionalists, secularists, and intellectuals. These themes underlie *Hofen shel Arafel* (“A Handful of Fog,” 1979) and *Victoria*, as well as two of Michael’s novels for young people, *Ahavah bein ha-Dekalim* (“Love among the Palms,” 1990) and *Sufah bein ha-Dekalim* (“Storm over the Palms,” 1975).

The poetic fabric of Michael’s writing is engaging for its plots and characters, but also for the play of his texts with multiple languages and cultures. The overt level is that of the Hebrew language, with the variety of styles which it embraces; implicitly, however, Michael continues to “flirt” lovingly and longingly with the Arabic (and Judeo-Arabic) language and culture, which emerges in a wealth of sayings and customs.

Michael’s other works include novels for young people: “Tin Shacks and Dreams” (1979), “Brown Devils” (1993); plays: “Demons in the Basement” (1983), “Twins” (1988); and collected interviews: *Eleh Shivtei Yisrael* (“These Are the Tribes of Israel: Twelve Interviews about Social Integration in Israel,” 1984), “The Israeli Experience” (2001). Michael also translated Naguib Mahfouz’s *Cairo Trilogy* into Hebrew. His books have received many awards and have been translated into many languages, including Arabic. Information concerning translations is available at the ITHL website at www.ithl.org.il.

[Yaffah Berlovitz (2nd ed.)]

MICHAEL AND GABRIEL, two *angels named in Daniel 10:13, 21; 12:1 and Daniel 8:16; 9:21 respectively.

The Attributions of Proper Names to Angels

Michael and Gabriel are usually cited as the earliest instance of the practice of attributing proper names to angels; and it is just the contrast between the anonymity of the seraphim in Isaiah 6:2, 6 on the one hand and the explicit naming of Ga-

briel in Daniel 9:21 and of Michael in Daniel 10:21 on the other that is cited by R. Simeon b. Lakish as proof that the names of the angels were something that the returning exiles brought with them from Babylonia (TJ, RH 1:2, 56d). But these are not strictly the oldest examples. According to the critical view, the Book of *Daniel is of later authorship than those of *Zechariah and *Job; yet “the Satan [Accuser],” Zechariah 3:1–2; Job 1:6–12; 2:2–7 is a virtual proper name, and it is retained as the name of the angel in question throughout Jewish literature; but these passages too are post-Exilic. A special early instance is Beth-El (Jer. 48:13), a real proper name shortened from (Ha) El-Beth-El, Genesis 31:13; 35:7, “The Numen of Beth-El,” who was the special tutelary genius of Jacob and of the nation Israel (see the Book of *Hosea B-b; H.L. Ginsberg, in: JBL, 80 (1961), 339–47). Already the E document of the Pentateuch has made an angel of this being (Gen. 31:11), and Deutero-Hosea, who in Hosea 12:3–5, 13 palpably draws on the E story of Jacob embedded in Genesis 25 and 27–35 (and modifies it for his own purposes), refers to the being alternately as *e’lohim*, “a divine being” (Hos. 12:4) and *mal’akh*, “an angel” (Hos. 12:5).

Michael

Michael (*Mikha’el*, מִיכָאֵל “Who is like God?” – in ten passages the name of as many men: Num. 13:13; I Chron. 5:13, 14; 6:25; 7:3; 8:16; 12:21; 27:18; II Chron. 21:2; Ezra 8:8). Daniel 10:2–11 states that Daniel practiced asceticism for three full weeks in his endeavor to move Heaven to reveal to him what he wanted to know. At the end of that period a frightening figure appeared to him. He fell on his face in terror, but the being helped him to his feet and told him that he had been sent to deliver a message to him. In 10:12–21 he then explains that Daniel’s petition had been received favorably on the very first day, but the speaker was unable to leave his post for 21 days because he was holding in check “the prince [*sar*, שָׂר] of the kingdom of Persia”; at the end of that period, however, he was relieved in this task by “Michael, one of the chief princes [*sarim*],” whom he left there “with the kings of Persia.” He himself will only stay with Daniel long enough to inform him “what will befall your people at the end of the days” (verse 14), for he will have to “return to fight with the prince of Persia and when he retires – there comes the prince of Greece ... and there is none who shares my efforts against all these but your (pl., i.e., the Jews’) prince, Michael.” At the climax of history, it is “Michael, the great prince who stands guard over your fellow countrymen,” who will arise and save them (12:1). It will be seen that *sar* – properly “dignitary,” “official,” or “minister,” but here better “prince” in view of the designation of God in 8:25 as “the *sar* of *sarim*” – means “angel,” that every nation is conceived of as having an angelic representative, and that the author conceives of these representatives as engaging in clashes with each other which prefigure clashes between the respective nations. Obviously, the germ of this idea is Deuteronomy 32:8, which reads, according to the text of the Septuagint and a fragment from Qumran: “When the Most High gave nations their countries,/ When he set the divisions of

man, // He established peoples' homelands/to the number of the divine beings." // For "the divine beings" (*bene'el*, lit. "children of God"), the Masoretic Text reads "the Israelites" (*bene Yisra'el*, lit. "the children of Israel"). The latter, however, is a conflation of the Septuagint-Qumran reading *בני אל* and a variant *אל בני ישראל* which is presupposed by the above Daniel passages (H.L. Ginsberg, in: *Eretz-Israel*, 9 (1969), 45, n. 4). On the other hand the writer in Daniel diverges from his source in one important respect. The next verse in Deuteronomy 32, namely verse 9, specifically makes an exception of Israel: the latter is not apportioned to any *benel* or *sar'el* ("But *יחיה*'s people is his own portion, / Jacob is his own allotment.") All the passages cited above from Daniel 10–12 are from the pen of Apoc III (see *Daniel, Book of, B).

Gabriel

Gabriel (*Gavri'el*, *גַּבְרִיֵּאל*). This angel is the creation of Apoc IV, the author of Daniel 9 and of sundry interpolations in chapters 7, 8, 11, and 12 (see *Daniel B). In chapter 9 itself, Gabriel appears to the apocalypticist (9:21) in the first year of Darius the Mede (9:1, see *Daniel B) in answer to his prayer for enlightenment on the subject of the 70 years of Jeremiah (Jer. 25:11–12; 29:10). Gabriel explains that those 70 years are in reality 70 weeks of years (*septennia*), and proceeds to sketch the course that history will take during those 70 hebdomads. This is closely analogous to the role that is played in Apoc III (chs. 10–12) by an angel who is not named but merely described, who appears to Daniel in the third year of Cyrus in response to three weeks of mourning, and tells him in astonishing detail what is destined to take place from that date until the horrors of Antiochus IV. Apoc IV wished to imply that his Gabriel was identical with this informant of Apoc III, and this he did in a subtle way. Apoc III's informant explains to him in 10:12–13 that Daniel's petition for enlightenment was favorably received at the very beginning of his quasi-fast, and the delay was only due to the informant's being tied down with keeping the prince of Persia at bay (see above). Then in 10:20–21 he goes on to say that he has barely enough time at his disposal to impart to Daniel "that which is written in the book of truth [or, that which is written in the book, truly]" because he must presently go back to the combat with the prince of Persia, and after that with the prince of Greece, "and there is none who shares my efforts against these but your [i.e., the Jews'] prince Michael," after which Apoc IV interpolates (11:1) "and ever since the first year of Darius the Mede [the date of 9:1, on which Gabriel appeared to the seer] I have been standing by him to strengthen and support him." The implication is clearly this: "The same cause that prevented me from coming to you during the past three weeks also explains why I have not appeared to you for such a long time since my last visit." In other words, the unnamed linen-clad one of chapters 10–12 is identical with the Gabriel of chapter 9. Apoc IV has also taken steps to identify with the latter the originally unnamed being of Apoc II (ch. 8). Daniel 8:15 reads. "And when I, Daniel, beheld the vision [*hazon*] I asked [prayed] for an explanation, and lo, there

was standing before me one having the appearance of a man [*gaver*]." Inspired by this last word, Apoc IV interpolated here, "(16) And I heard somebody's voice between [the banks of?] Ulai. He called out, 'Gabriel [*Gavri'el*]! Explain the statement [*mar'eh*] to him.'" *Mar'eh* must mean "statement," and the reference must be to the statement about the evenings and mornings in verse 14, in view of verse 26; and verses 13–14 and 26a – also, by the way, verse 27b – are, just like verse 16, interpolations of Apoc IV in the text of Apoc II (the original text of ch. 8), so that they may be described as II-d. In 9:21b, then, when Apoc IV tells how he was visited by "the man [here the Hebrew has *ha-ish*, but the Aramaic original doubtless had *gavra* here as well as *gevar* in 8:15] Gabriel who had appeared to me before in the vision," he is referring back to chapter 8 as interpolated by himself.

[Harold Louis Ginsberg]

In the Aggadah

Michael and Gabriel, along with Uriel and Raphael, are the four angels who surround the throne of the Almighty (Num. R. 2:10; cf. Enoch 9:1). Michael, as the constant defender of the Jewish people (PR, 46), is considered greater than Gabriel (Ber. 4b). The *aggadah* consistently identifies Michael and Gabriel with the anonymous divine messengers or angels mentioned in the Bible. Thus, they were two of the three angels who visited Abraham after his circumcision (Gen. R. 48:9), Michael's task being to announce the future birth of Isaac while Gabriel's was to destroy Sodom (Gen. R. 50:2). It is Michael who called to Abraham at the **Akedah*, telling him not to offer up Isaac (*Midrash Va-Yosha* in A. Jellinek, *Beit ha-Midrash*, 1:38). It was either Michael or Gabriel who wrestled with Jacob (Gen. R. 78:1) and appeared to Moses at Horeb (Ex. R. 2:5). It was Michael who rescued Abraham from the fiery furnace (Gen. R. 44:13) and also informed him of the capture of Lot (PdRE, 27). He also accompanied the servant of Abraham in his mission to find a wife for Isaac (Gen. R. 59:10). Michael and Gabriel were called upon to record that the birthright was sold to Jacob by Esau (Gen. R. 63:14). They were both among the angels who accompanied God when He came down on Mount Sinai (Deut. R. 2:34). Although they were considered the kings of the angels, they were afraid of Moses (Eccles. R. 9:11, 2), and they refused to take his soul, so that God himself had to do so. Michael and Gabriel then stood at either side of Moses' bier (Deut. R. 11:10). On the day that Solomon married the daughter of Pharaoh-Neco, Michael came down from heaven and stuck a reed in the sea, round which matter settled, and upon this Rome, the future destroyer of Israel, was built (Song R. 1:6, 4). Michael smote Sennacherib and his army, and Gabriel delivered Hananiah, Mishael, and Azariah (Ex. R. 18:5) from the fiery furnace. Michael acted as the defender of the Jews against every charge which Haman brought against them (Esth. R. 7:12). It was Michael who pushed Haman against Esther to make it appear as if Haman intended to violate her (Esth. R. 10:9). Both Michael and Gabriel will be among those who will accompany the Messiah, and they will then contend with the wicked (*Otiyyot de-Rabbi Akiva Shin*).

Michael is made up entirely of snow and Gabriel of fire, and though they stand near one another they do not injure one another, thus indicating the power of God to “make peace in His high places” (Job 25:2; Deut. R. 5:12). Michael also occupies an important place in the interpretation of biblical stories in later Midrashim, e.g., *Exodus Rabbah*, *Midrash Avkir*, and *Midrash Konen*.

[Aaron Rothkoff]

In the Kabbalah

The motifs of Michael and Gabriel as found in the *aggadah* are in general repeated in the Kabbalah, but Michael is given an added importance.

In the *Heikhalot* and Merkabah literature of the late talmudic period and the period of the *geonim*, Michael plays a central role in the realm of the Chariot. He is the guardian of the south side, the figure of the lion in the Chariot, and so on (the descriptions vary in the different versions of this literature). In any case he is one of the four archangels, despite the interchange of names in the list. G. Scholem has deduced, from a statement in *Perek Re'iyot Yehezkel* (Wertheimer, *Battei Midrashot*, 2 (1955), 132–3) and from other sources, that at first Michael and *Metatron were identical – the guardian of the interior and the highest figure in the domain of the angels in the Merkabah literature and in the Kabbalah which succeeded it – and that some of the descriptions of Michael in talmudic and midrashic literature were later transferred to the figure of Metatron. He is outstanding as guardian and protector of Israel in Merkabah literature and in the European mystical literature of the Ḥasidei Ashkenaz and early kabbalistic circles. A central role in bringing about the redemption was attributed to him in midrashic and Merkabah literature. Such descriptions of the role of Michael relied mainly on sayings in the Book of Zerubbabel and other apocalyptic works dating from the end of the ancient era and the beginning of the Middle Ages, in which Michael was assigned the role of revealer and bringer of tidings. (As there is in the various versions an interchange between Michael and Metatron, it does indeed seem that the two figures are basically identical.)

In kabbalistic literature Michael is allotted the role of grace in the Merkabah, angel of the right, representing the *Sefirah Ḥesed* (“grace”). In several places in the *Zohar Michael symbolizes the *Sefirah Ḥesed* itself (Zohar 1:98b–99a, *Sitrei Torah*; 2:147, et al.). All the symbols of grace (the right side, silver, water, etc.) are to be found in the descriptions of the angel Michael. He is frequently described as a high priest, and the Zohar and later kabbalists (e.g., Moses Cordovero) portray him as bringing the souls of the righteous before the Almighty, an act which led to their inclusion in the world of emanation (*azilut*).

MICHAELIS, SIR ARCHIE (1889–1975), Australian politician. Born in Melbourne, Archie Michaelis worked in his successful family firm of leather goods merchants before entering state politics in Victoria, Australia. Michaelis became one of the best-known politicians in Melbourne and the state of Victoria. Always a member of the right-of-center party (which changed its name several times during his career), Michaelis sat in the Victorian Legislative Assembly as member for St. Kilda from 1932 to 1952. He served as minister without portfolio in 1945 and was speaker of the Victorian Legislative Assembly from 1950 to 1952. He was president of the St. Kilda Hebrew Congregation, a leading Orthodox synagogue in Melbourne. Originally typical of Jews of his background in opposing “political Zionism,” by the end of his life he had become a strong supporter of Israel.

°MICHAELIS, JOHANN DAVID (1717–1791), German Bible scholar. Born in Halle, Michaelis was the son of the theologian and Orientalist Ch. B. Michaelis. In 1746 he was appointed professor of Oriental languages in Goettingen. While he was at first a pietist of the Halle school, after a stay in England (1741–42) he advocated, somewhat inconsistently, a moderately rationalistic orthodoxy. His *Einleitung in die goettlichen Schriften des Neuen Bundes* (1750; 1787–884) was the first textbook on the historical-critical approach to the New Testament. His early works included a Hebrew grammar textbook (Halle, 1745) and a compendium of Jewish marriage laws *Ehegesetze Moses* (Goettingen, 1755). In his *Gruendliche Erklarung des mosaischen Rechts* (Frankfurt, 6 vols., 1770–75) he interpreted the laws of the Pentateuch as the work of the statesmanlike wisdom of Moses, whose aim was the separation of Israel from the heathens. He popularized the conclusions of biblical scholarship in a translation of the Bible with notes (13 vols., 1769–83). He also wrote an introduction to the Old Testament, *Einleitung in die Schriften des Alten Bundes* (1787). In 1761 he suggested to the king of Denmark that a scientific expedition be sent to Arabia. Through his extremely diverse academic and literary activities he enjoyed a worldwide reputation; however, in his later years, as a result of weaknesses of character and of scholarship, he became progressively isolated.

[Rudolf Smend]

MICHAELIS, LEONOR (1875–1949), German biochemist. Born in Berlin, he worked with Paul *Ehrlich at the City Hospital where he directed the bacteriology department from 1906 to 1922. In 1908 he was appointed professor of medicine at the University of Berlin, and from 1920, professor of physi-

cal chemistry. From 1922 to 1926 he was professor of biochemistry in Nagoya, Japan. In 1926 he went to the Johns Hopkins University in the U.S. and then to the Rockefeller Institute for Medical Research in New York. He contributed many scientific papers on topics concerned with casein, blood pH in biological systems, the behavior of dyestuffs in biological media, and respiration. His books included *Hydrogen Ion Concentration* (1926), *Praktikum der physikalischen Chemie insbesondere der Kolloidchemie fuer Mediziner und Biologen* (1930⁴); *Practical, Physical and Colloid Chemistry for Students of Medicine and Biology*, (1925), and *Oxydations-Reduktion Potential* (1929; *Oxidation Reduction Potentials*, 1930).

[Samuel Aaron Miller]

MICHAELIS, SIR MAX (1860–1932), South African mining magnate and philanthropist. Born in Eisfeld, Germany, Michaelis worked in a Frankfurt banking house before immigrating to South Africa in 1876. He settled in Kimberley where he formed a diamond-buying company which was later taken over by De Beers. Michaelis is best known for his interest in and benefactions to art and education. He established scholarships in South Africa and England, including the Jewish War Memorial Scholarship at Oxford. He donated funds to the University of Cape Town for a school of fine arts which was named after him. In 1912 he bought the Hugh Lane collection of Dutch masters, which he presented to the South African nation as the nucleus of the Michaelis Art Gallery in Cape Town. Michaelis contributed to the Johannesburg Art Gallery, City Library, and to hospitals. He was knighted in 1924.

MICHAELS, ALAN RICHARD (“AI”; 1944–), U.S. sports broadcaster. The Brooklyn, New York-born TV sports broadcaster was raised near Ebbets Field, fabled home of the Brooklyn Dodgers, which inspired his future award-winning career. Michaels graduated from Arizona State University in 1966, and almost immediately went into sports broadcasting, starting with a Hawaii team in the baseball minor leagues. He broadcast a World Series on radio in 1972, meeting his childhood goal of doing such a broadcast before he turned 30. He broadcast many prominent sports events of the late 20th century, including the U.S. upset of the U.S.S.R. hockey team at the 1980 Winter Olympics. As the game ended, he shouted, “Do you believe in miracles,” one of the most famous calls in sports history, and has twice since then played himself in film and TV recreations of that event. Michaels was the lead broadcaster for Monday Night Football from 1986, and won an Emmy award for his broadcast of the third game of the 1989 World Series, which was interrupted by an earthquake. In 2004, Michaels broadcast his first National Basketball Association finals, making him the only sportscaster to have announced a World Series, a Super Bowl, a Stanley Cup final, and the NBA championship. Michaels received a star on the Hollywood Walk of

Fame in 2004, and is a member of the National Sportscasters and Sportswriters Association Hall of Fame. He appeared as himself in the 1996 film, *Jerry Maguire*. Unlike Howard *Cossell and Larry *Merchant, Michaels is more of a reporter than a commentator. In a 2004 interview, he said: “I look at sports as drama.... Let the drama play out.”

[Alan D. Abbey (2nd ed.)]

MICHAELS, ANNE (1958–) Canadian poet, novelist. The youngest of four children, Michaels was born in Toronto, where she continued to live. In 1980, she earned a B.A. in English from the University of Toronto, and taught creative writing courses there as well. Musically accomplished, she composed music for the theater. *The Weight of Oranges* (1986), her first collection of poetry, won the Commonwealth Prize for the Americas. A second poetry collection, *Miner's Pond* (1991), won the Canadian Authors' Association Award for Poetry and was short-listed for both the Governor General's Literary Award (Canada's most prestigious literary prize) and the Trillium Award. A single volume containing both books was published in 1997. A third poetry collection, *Skin Divers*, was published in 1999.

Michaels's first novel, *Fugitive Pieces*, quickly established her national and international reputation. The work is a Jewish Canadian artist parable, a bipartite intergenerational book which juxtaposes two first-person autobiographical memoirs. The longer first section presents the journals (subdivided into seven titled sections) composed retrospectively by Jakob Beer, a Jewish poet, translator, and orphaned child survivor of the Holocaust, who is rescued from the mud of a Polish town and raised on a Greek island by Athos Roussos, an archaeologist, scientist, and righteous gentile. The second section records the narrative of Ben, the child of Holocaust survivors, who grows up in Weston, Ontario (then a separate municipality, and, in the present of his life, a suburb of Toronto), and who eventually finds on the Greek island of Idhra the two journal volumes which form the first part of the novel. Although their individual histories differ, the lives of Jakob and Ben have been profoundly shaped and distorted by the Shoah. In language which is luminous, evocative, and poignant, the novel explores the nature of identity and the relation between personal, historical, genealogical, and geological memory. It highlights the acts of reading and writing and the power of language and love to heal, to redeem, and to provide meaning in a post-Holocaust world.

Fugitive Pieces was a Canadian literary phenomenon. It remained at, or near, the top of the Canadian bestseller list for over two years, and the rights to the novel were sold to 21 publishers around the world. The work has been awarded many prizes, both in Canada and abroad. These include the Trillium Prize and the Chapters / *Books in Canada* First Novel Award Canada; the Orange Prize for Fiction by female writers, and the *Guardian* Fiction Prize in Great Britain; the Lannan Literary Award in the United States and the Giuseppe Acerbi Literary Award in 2001.

[Alexander Hart (2nd ed.)]

MICHAELS, LORNE (1944–), Canadian writer-producer. Born Lorne David Lipowitz to successful furrier Abraham and Florence (née Becker) Lipowitz in the affluent Forest Hill area of Toronto, Ontario, Michaels got involved with a theater group and began working on sketch comedy and satires while studying in the English program at the University of Toronto. After graduating college, Michaels left for England, where he worked briefly as a car salesman. Upon his return to Canada in 1966, Michaels and Hart Pomerantz began performing as a popular comedy duo on the CBC. In November 1967, he married comedy writer Rosie Schuster. Michaels and Pomerantz went to Hollywood to write for *The Beautiful Phyllis Diller Show* (1968), but the show only lasted six weeks. The duo picked up work with *Rowan and Martin's Laugh-In*, writing the opening monologues for the hosts from 1968 to 1969; however, their material was often rewritten by senior writers or dismissed altogether. Disillusioned with the experience of writing for *Laugh-In*, Michaels and Pomerantz returned to Canada to create their own television programs. In 1970, the pair inked a deal with the CBC to create such specials as *The Hart and Lorne Terrific Hour* and *Today Makes Me Nervous*. Over the next four years Michaels continued to pitch ideas for TV shows in Hollywood, and in 1975 NBC agreed to launch a live sketch comedy program called *Saturday Night*. (The show was retitled *Saturday Night Live* in 1977 after *Saturday Night Live With Howard Cosell* was cancelled in 1976.) The show launched the careers of such SNL players as Chevy Chase, John Belushi, Dan Aykroyd, Gilda *Radner, Laraine Newman, Eddie Murphy, Billy *Crystal, Mike Myers, Adam *Sandler, and Will Ferrell in its more than 30-year history and has won 18 Emmy Awards and nabbed 60 nominations. Over the years Michaels also produced a film version of Gilda Radner's Broadway show *Gilda Live* (1980), *Simon and Garfunkel: The Concert in Central Park* (1982), *Nothing Lasts Forever* (1984), and the TV series *Kids in the Hall* (1988–94). By the early 1990s, a reinvigorated *Saturday Night Live* served as the springboard for a variety of successful comedy features, including *Wayne's World* (1992), *Coneheads* (1993), and *Tommy Boy* (1994). Michaels became executive producer of NBC's *Late Night with Conan O'Brien* in 1993 and *The Colin Quinn Show* in 2002. He was inducted into the Order of Canada and the Television Academy's Hall of Fame, and received a star on the Canadian Walk of Fame. In 2004, Michaels produced the hit comedy *Mean Girls* and received an honorary award from the Producers Guild of America.

[Adam Wills (2nd ed.)]

MICHAELSON, EZEKIEL ZEVI BEN ABRAHAM HAYYIM (1863–1942), Polish rabbi, biographer, and bibliographer. He was a child prodigy, and in one of his works he cites responsa which he claims to have written at the age of 12. Orphaned in his early youth, he was forced to move from one place to another. In 1884 he was invited to become rabbi of the important community of Zamosc, but he refused. In the same year, he was elected rabbi of Karsinbrod. There he was

harassed by enemies and was even arraigned in court as a result of a false accusation. In 1893 he became rabbi of Plonsk and from then on was known as “the rabbi of Plonsk.” At the outbreak of World War I he was on a visit to Carlsbad and was unable to return home. In 1922 he was elected a member of the rabbinical council of Warsaw, and engaged in many communal activities. When the German forces entered Warsaw he was working in the community archives and in 1942 he was taken to *Treblinka where he died.

An exceptionally prolific writer whose knowledge of family lineages was unequaled, Michaelson published many books in such diverse fields as *halakhah*, *aggadah*, history, biography, and bibliography.

His best-known works are *Degan Shamayim* on tractates *Berakhot* and *Rosh ha-Shanah* (appended to Israel Jonah Landau, *Ein ha-Bedolah*, 1901); responsa *Beit Yehezkel*, (1924); *Pinnot ha-Bayit*, novellae (1925); *Siddur Beit ha-Ozar* (1931 (1929)); responsa *Tirosh ve-Yizhar* (1936). His most famous biographies are those of R. Israel Jonah of Kempen, R. Meshullam Zalman Ashkenazi, R. Joseph *Te'omim, R. Shabbetai *Bass, R. *Phinehas of Korets, the Margoloth family, R. Solomon *Ganzfried, R. Zevi Hirsh Zemah, and R. Jacob Aryeh of Radzymin, all appended to his editions of their works. During the Holocaust, three large chests containing his manuscripts were lost. They included *Imrei Yehezkel* on the Pentateuch and *Me'at Zevi* on the other books of the Bible.

BIBLIOGRAPHY: N. Shemen, *Di Biografie fun a Varshever Rov ha-Rov Zevi Yehezkel Michaelson* (1948); *Elleh Ezkerah*, 2 (1957), 195–202.

[Itzhak Alfassi]

MICHAELSON, ISAAC CHESAR (1903–1982), Israeli ophthalmologist. Born in Scotland, he taught at Glasgow University and served with the Royal Army Medical Corps in World War II. During Israel's War of Independence in 1948, he was specialist adviser to the Israel government and from 1953 served as professor of ophthalmology at the Hebrew University-Hadassah Medical School in Jerusalem. He set up eye clinics in Liberia, Malawi, Tanzania, and Rwanda and trained local doctors and medical assistants to run them. The Ophthalmology Research Laboratories administered by Michaelson and his colleagues from Hadassah Hospital in Jerusalem served an estimated patient-population of 20 million in Africa.

A specialist on the diseases of the inner eye, Michaelson is the author of *Circulation of the Inner Eye in Man and Animals* (1952) and, with Ballantyne, of *Textbook of Diseases of the Eye* (1970²). Michaelson was awarded the 1960 Israel Prize for medicine.

[Lucien Harris]

MICHAL (Heb. מִיכָל), the youngest daughter of King *Saul (Sam. 14:49), who loved *David and was given to him in marriage after he had killed 200 Philistines (in the Septuagint – 100). Michal's father had insisted on this as the condition for the marriage contract – “a hundred Philistines' foreskins,” instead of a dowry (18:27–29), hoping of course that David

would lose his life in the attempt to collect them. Michal, who loved David, was given to him instead of *Merab the elder, who had been promised to him but had been given to *Adriel the Meholathite (17:15; 18:17–20).

Michal demonstrated her loyalty to David in deceiving her father's messengers, who had been sent to murder David in his own home (19:17ff.). By the time Saul's messengers discovered the deceit, David had had time to escape. Later Saul gave Michal to *Paltiel son of Laish from Gallim (25:44). When David reigned in Hebron, he asked Ish-Bosheth, the son of Saul, to bring Michal back apparently under pressure from Abner, who was about to defect to David. He did in fact take her from her husband and restore her to David (11 Sam. 3:12–16). No doubt the demand was politically motivated, at least in part. David was trying to induce Israel (the northern tribes) to follow the example of Judah and accept him as its king (11 Sam. 2:5–7), and his marriage to a daughter of Saul who might become the mother of his successor would be an added inducement to the men of Israel to act upon his suggestion. When David leaped and danced in front of the Ark as it was brought to Jerusalem, Michal jeered that he had exposed himself "as one of the vain fellows shamelessly uncovers himself." David answered her in anger, referring to his being chosen as king, "above thy father, and above all his house" (6:16, 20–23). Michal remained childless (6:23). The masoretic text of 11 Samuel 21:8 mentions five children of Michal by *Adriel of Meholah, but the latter was in fact the husband of Merab (see above). Some versions (LXX, the Syriac; cf. Sanh. 19b) have Merab here instead of Michal.

[Samuel Abramsky]

In the Aggadah

Michal's love for David is compared to that of Jonathan; whereas the latter saved David from Saul outside the palace, Michal did so inside the palace (Mid. Ps. 59:1). She is identical with Eglah (mentioned in 11 Sam. 3:5 as David's wife), and was so called because like a heifer (*eglah*) she refused to accept the yoke of her father (Mid. Ps. 59:4). This love was returned. Although David married Merab after Michal's death he continued to refer to "My wife, Michal" (11 Sam. 3:14; Sanh. 19b). Michal's marriage to Palti (1 Sam. 25:44) was illegal, since she was already betrothed to David (Sanh. *ibid.*), and she had no marital relations with him (*ibid.*). She is stated to have worn *tefillin* (Er. 96a).

When rebuking David (11 Sam. 6:20), Michal made a forceful comparison between the modesty which Saul displayed when covering his feet (1 Sam. 24:4), and David's behavior (Num. R. 4:20); it was on account of this criticism that she was punished with childlessness (Sanh. 21a).

[Getzel Kressel]

MICHALOVCE (Hung. **Nagymihály**; Ger. **Grossmichel**), town in N.E. Slovakia. The first Jews settled there during the Ottoman occupation of Greater Hungary (1526–1699) and remained after the Turks left. A 1724 census attests to a Jewish presence. The aim of the census was to prevent Jews from owning real estate. The number of Jews at that time was small. Jews lived in the neighboring villages, such as Stranany and Pozdisovce, where they attended services. The first synagogue was constructed on the property of the Gueck family. In 1732, the number of Jews rose to 400. They also owned a *mikveh*. Most of the Jews lived on Silk Street ("Hodvabna ulica"). When it could no longer accommodate all the potential inhabitants, New Street ("Nova ulica") was added. The cemetery was in Stranany. In 1792 the *hevra kaddisha* was established. In 1865, a convention of Orthodox rabbis of greater Hungary was held in Michalovce, which affirmed the Conservative spirit of Hungarian Jewry. Fearing Jewish assimilation, the conveners codified several regulations to preserve accepted norms. It established the rule of use of only Hebrew and Yiddish in religious activity. After the Congress of Hungarian Jewry in 1868, the Michalovce congregation confirmed the Orthodox path it had followed in the past. The community was formally founded in 1867; in 1888 they built a large synagogue. A group of *hasidim* following *nusah sefarad* split from the congregation. The synagogue was replaced with another edifice in 1905. In 1970 it was torn down.

In 1840 there were 170 Jews in Michalovce (excluding Pozdisovce and Stranany); in 1844 there were 311; in 1857 they increased to 445. In 1880 the community had 1,079 (27.6% of all inhabitants), and in 1910 there were 2,200 Jews. Immigration from Galicia caused rapid expansion of the community. The Jews in neighboring villages moved to the city, and the railway created even further expansion of the Jewish population. The second Czechoslovak census of 1930 recorded 3,386 Jews in Michalovce. On the eve of the deportations in 1940, there were 4,197.

During the last 20 years of the 19th century a *bet midrash*, a *mikveh*, and a *talmud torah* were constructed. In the 1930s a Beth Jacob school for girls and another Jewish school were established. In 1926 the ḥasidim consecrated a synagogue of their own. There was a main yeshivah and there was a ḥasidic yeshivah.

Zionist activity began in Michalovce before World War I, and all shades of political views were represented. The Jewish party was strong and was regularly elected to the municipal council. While the Jews were doing well economically, there was a poor segment among the population. The Po'alei Zion party had some support among them.

On October 6, 1918, autonomy was proclaimed in Slovakia, and on March 15, 1939, Slovakia proclaimed independence, under the aegis of the Third Reich. In Michalovce this latter act was accompanied by antisemitic disturbances. In 1919 Jewish children were expelled from schools, and the Jewish school founded shortly before the crisis took on the responsibility of educating them.

Antisemitism peaked in 1942 with the deportation of Slovakian Jews to Poland. Many tried to escape to Hungary. On May 4, 1942, the first transport of Michalovce Jews was sent to Poland. Four transports followed to the Lublin region, to ghettos in Lukow, Medzirieczie, and Podleske. Survivors in the community tried to help the deportees by smuggling money and medicine to them. Ultimately, they were all sent to the extermination camps at Sobibor and Treblinka.

In the spring of 1944, all eastern Slovakian survivors were ordered to move westward for fear of the advancing front. Indeed, in November 1944 Soviet troops entered Michalovce. In 1945 the surviving Jews organized a congregation and repaired the synagogue, the *mikveh*, and the cemetery. In 1947 there were 614 Jews in Michalovce. In 1948–49 most of the Jews emigrated, particularly to Israel. The community continued to function. In 1967 there were 200 to 250 Jews in Michalovce. In 1989, at the time of the Velvet Revolution, only a handful remained and religious life no longer existed. In 1995 there were a few dozen Jews.

[Meir Lamed / Yeshayahu Jelinek (2nd ed.)]

MICHEL, JUD (d. 1549), also known as “the rich Michel,” financier and soldier of fortune. According to legend Michel was an illegitimate son of one of the dukes of Regenstein, who were his benefactors at the beginning of his career but later became his bitter enemies. His loans to rulers of *Hesse, the Palatinate, and lesser principalities are first recorded in the early 1530s. Michel, who had no official title (see *Court Jew), stood in the relationship of vassal to Philip the Magnanimous of Hesse, for whom he had to muster five horsemen, as well as

to the elector of the Palatinate and the margrave of Ansbach. When the duke of Regenstein repudiated a promissory note, Michel first warned and challenged him and then instigated acts of arson against his property. Called before the imperial court, he fled to Silesia where he organized effective support from nobility and *Ferdinand I, to whom he had once loaned 2,000 gold gulden. Michel subsequently entered the service of Joachim II, elector of *Brandenburg, with whom he conducted intricate economic transactions against the dukes of Regenstein, vassals of the elector. He owned two houses in *Berlin and one in *Frankfurt on the Oder, although the latter town objected to his presence there. In 1544 his wife, Merle, was accused of attempting to poison the wells and in 1546 he was accused of illegal slaughtering; in both cases Joachim intervened on his protégé's behalf. He was kidnapped while on a mission in 1549; his abductors were arrested and brought to Saxony and Michel was released on Joachim's command. Shortly after Michel died in dubious circumstances as the result of a fall down stairs. Michel made a singular impression on his contemporaries, including Martin *Luther, who reported having heard of a rich Jew who traveled throughout Germany, drawn by 12 horses. In dress and manners he conducted himself like a rich nobleman, surrounded by Jewish servants, and thus attended the Diets of the empire.

MICHEL-LÉVY, AUGUSTE (1844–1911), French petrologist and mining engineer. Michel-Lévy, who was born in Paris, was appointed director of the French geological survey and national inspector of mines in 1874. He was also a professor at the Collège de France. The most distinguished petrologist of his time, he was the first scientist to use the polarizing microscope to examine magmatic rocks and minerals. He extended this work by laboratory experiments in melting and crystallization, and with his collaborator F. Fouqué, was the pioneer of experimental petrology. He formulated fundamental queries which continue to pose major problems in the discussion of magmatic process as, for example, the role of volatiles (1875) and the mode of emplacement of granitic magmas through the assimilation of country rocks and bed-by-bed injection. The Fouqué-Lévy system became the standard one in the French teaching of petrography. Together with Fouqué, Michel-Lévy wrote *Minéralogie micrographique* (1879), *Synthèse des minéraux et des roches* (1882), and *Structure et classification des roches éruptives* (1889). He was a member of the French Academy.

This distinction was also conferred on his son, ALBERT-VICTOR (1877–1955), also a petrographer. He was born in Autun. Albert-Victor's main research was on the composition of the Vosges mountain range. He succeeded in producing artificial metamorphism in rocks by using pressure at high temperatures.

MICHELSON, ALBERT ABRAHAM (1852–1931), U.S. physicist; the first American to be awarded a Nobel Prize for science.

He was born in Strelno, Prussia, and was taken by his family to the United States at the age of two. Michelson graduated from the naval academy at Annapolis in 1873. However, after spending two years at sea he resigned to become an instructor in physics at the naval academy (1875–79). He spent a year in Washington and then two years studying in Germany. He returned to the U.S. in 1883 to become professor at the Case School of Applied Science in Cleveland until 1889. From 1889 to 1892 he was at Clark University and finally he was professor at the University of Chicago (1892–1929). He was awarded the Nobel Prize in physics in 1907. Michelson was a remarkable experimentalist able to secure astonishing accuracies with the simplest apparatus. His lifelong interest was the velocity of light, and this was the subject of his first experiment even in his mid-20s when he was an instructor at the U.S. naval academy at Annapolis. At that time physicists believed in the existence of an ether that filled all space, was at absolute rest, and through which light traveled in waves. There was then no way of measuring the motion of any body relative to the ether and leading scientists doubted whether this could be done. If it could be measured, two beams of light should show interference fringes denoting the difference. By measuring the width of the fringes it should be possible to show the earth's exact velocity when compared with the ether. Not only would the earth's absolute motion be determined, but also that of all bodies in the planetary system whose motions relative to the earth were known. For his experiment Michelson developed the interferometer, an instrument now used to measure wavelengths of light and other wavelengths of the radiation spectrum. He carried out his first experiments in Berlin in 1881 in Helmholtz' laboratory. In 1887, together with Edward Williams Morley, he performed one of the most important experiments in the history of science, which provided a new starting point for the great theoretical developments in 20th-century physics. The conclusion of the experiment indicated that light travels with the same velocity in any direction under any circumstances, and the implication was that the ether did not exist. This became one of the basic concepts which led *Einstein in 1905 to his special theory of relativity. The proving of this revolutionary theory of the absolute speed of light under any conditions has become the underlying principle of modern physics, astronomy, and cosmology and is considered to be, perhaps, the one absolute natural law in the universe. As a great experimentalist, Michelson established in 1892/93 the meter in terms of the wavelength of cadmium. He also determined the diameter of Jupiter's satellites and was the first person to measure the dimension of a star, Alpha Orion. Michelson wrote *Velocity of Light* (1902), *Light Waves and Their Uses* (1903), and *Studies in Optics* (1927).

[Maurice Goldsmith]

MICHELSON, CHARLES (1869–1948), U.S. editor, journalist, and political publicist. Michelson, who was born in Virginia City, Nevada, ran away from home at the age of 13. He

worked as a sheepherder, miner, and teamster, before going to work for the Virginia City *Chronicle* as a reporter. He subsequently worked for San Francisco newspapers, before going to Cuba as a correspondent for Hearst's New York *Journal* in 1896. Soon after his arrival Michelson was imprisoned briefly in Morro Castle, but was released in time to cover the Spanish-American War. After the war, Michelson worked for several other newspapers. From 1917 to 1929 he was chief of the Washington bureau of the New York *World*. In 1929 the Democratic National Committee hired Michelson as the first full-time publicity director, the first ever employed by a political party. Within two years of his appointment, Michelson was the ghostwriter of hundreds of press releases attacking the Hoover administration. After Roosevelt's election, Michelson also did publicity work for the Treasury Department and the Civilian Conservation Corps and was public relations director of the National Recovery Administration (NRA). His weekly column, "Dispelling the Fog," was distributed free to newspapers throughout the country. The Republican Party considered Michelson a key factor in the electoral successes of the Democratic Party. Michelson retired in 1942, returning briefly as associate director of publicity in 1944. He wrote his memoirs, *The Ghost Talks* (1944).

MICHELSTAEDTER, CARLO (1887–1910), Italian philosopher and poet. Michelstaedter was born at Gorizia, then part of the Austro-Hungarian Empire, into a well-known family. His mother was a descendant of Abraham *Reggio, chief rabbi of Gorizia in 1830, and Isacco Samuel *Reggio, who held the same office some years later, and who, together with Samuel David Luzzatto, co-founded the Rabbinical Institute of Padua. His father, Alberto, who came from a family of German origin, was an important part of the intellectual and social life of the city.

The young Michelstaedter strongly opposed his father's 19th-century positivist views, but politically, he did not disagree with him on the Irredentist cause. Michelstaedter undertook classical studies at the University of Florence. There he was greatly influenced by the writings of Schopenhauer, Nietzsche, and Ibsen and based his philosophy on the assumption that all human endeavor, spiritual or physical, is merely an illusion. Moreover Michelstaedter's Jewish origins gave his thought an original twist. Jewish Diaspora themes of the loss of self, exclusion from the fullness of life, the inability to enter deeply into existence, reflect a strong drive toward completeness. His ideas, as well as his Jewish identity, were reflected in his interest in the Kabbalah. On the other hand, Michelstaedter dissociated himself from the Zionist movement.

Michelstaedter's fundamental pessimism is expressed in his *Dialogo della Salute* (1912) and, in a more poetic fashion, in his *Poesie* (1912). He spent the last years of his short life in his native Gorizia preparing a thesis on "The Concept of Persuasion and Rhetoric in the Writings of Plato and Aristotle." After completing the second volume of this work (*La persuas-*

sione e la retorica, 1913) Michelstaedter committed suicide. In this last book he anticipated the main doctrines of European existentialism. Michelstaedter's philosophical outlook led him to the extreme step of taking his own life out of inner conviction. His works, all posthumously published, were widely circulated and greatly influenced Italian philosophy and literature after World War II. A critical edition of Michelstaedter's complete works, including the first collection of his letters, was published in 1959.

His mother and sister, Emma and Elda Michelstaedter, perished in the Shoah.

[Giorgio Romano]

MICHIGAN, one of the N. central states of the U.S. In 2001 there were an estimated 110,000 Jews among the 9,952,000 citizens of Michigan.

Michigan has been home to Jews since 1761, when the first Jewish settler, Ezekiel Solomon, came as a fur trader and supplier to the British troops in the strategic wilderness outpost at Fort Michilimackinac.

Chapman Abraham, one of Solomon's partners, is the first known Jewish resident in Fort Detroit, held by the British. By 1762 he was bringing furs and needed goods in flotillas of voyageur canoes back and forth on the hazardous water route from Montreal. While residing most of the year in Michigan, both Solomon and Abraham remained members of the Montreal congregation, Shearith Israel. During Chief Pontiac's 1763 native uprising against the British, they each were captured and imprisoned, but eventually released. These two pioneer Jewish fur traders are recognized by Michigan Historical Markers placed by the Jewish Historical Society of Michigan.

Years before the American Revolution, Ezekiel Solomon, Chapman Abraham, and their other Jewish trading partners, Gershon Levi, Benjamin Lyon, and Levi Solomons, are credited with helping to “push back the wilderness of the Great Lakes country,” and open up the continent for settlement. The British did not leave Michigan until 1796.

The completion of the Erie Canal in 1825, the laying of the railroads by 1848, and boat traffic on the Great Lakes opened up the route to Michigan. Moreover, the early promise of freedom of religion in the Northwest Ordinance of 1787 and free public education attracted Jewish immigrants. As the fur trade had brought Jews to Michigan in the 18th century, Michigan's prosperous lumber and mining industries offered economic opportunities during the late 19th and early

Jewish communities in Michigan and dates of establishment. Population figures for 2001.

20th centuries. Jewish immigrant entrepreneurs fanned out to peddle needed supplies to the lumber and mining camps and farms in the wilderness of both the upper and lower peninsulas. These peddlers provided a needed alternative to the lumber barons' “company store.” They became active citizens of their new communities and established Jewish cemeteries and synagogues in order to maintain their Jewish heritage. Their beginnings as peddlers often developed into prosperous mercantile businesses.

Michigan was declared a state in 1837. Ann Arbor was the first Michigan community where a colony of Jews settled in the 1840s, during the German-Jewish immigration. The five Weil brothers and their parents arrived in 1845; they conducted Sabbath and holiday services in their home. Michigan's first Jewish cemetery was established in 1848/9. The site is on the east lawn of University of Michigan's Rackham Building, noted with a historical plaque.

Starting out as farmers and peddlers, the Weil brothers later operated a prosperous tannery with over 100 employees. Jacob Weil, educated in European universities and a rabbi, was elected alderman in Ann Arbor and invited to the faculty of the University of Michigan, which he declined in order to continue as president of the family tannery firm. By 1873 the Weils had moved to Chicago to expand their business, J. Weil and Bros.

Jewish immigrant families followed the route of the railroad across southern Michigan to Chicago, establishing themselves in the mid-19th century not only in Ann Arbor, but also in Ypsilanti, Jackson, and Kalamazoo. Maurice Heuman was elected mayor of Jackson, Samuel Folz in Kalamazoo.

A Historical Marker in Kalamazoo honors arctic pioneer Edward Israel, a University of Michigan graduate, who served in 1881 as scientist on the nation's first polar expedition led by Lt. A.W. Greely. Along with 18 of the 25 expedition members, Israel perished of starvation after severe storms in the third winter of the expedition.

By 1845 the families of German immigrants Samuel Leopold and Julian Austrian, sailing their one-masted sloop to Mackinac, established a pioneer fishing business – which soon shipped as much as 1,000 barrels of salted fish to cities around the Great Lakes, including Cleveland. They became owners of a large fleet of sailing vessels, and after the discovery of copper in the Upper Peninsula, opened shops in five towns across the peninsula.

Jake Steinberg, Gustave Rosenthal, and Moses Winkelman operated successful stores in different “U.P.” towns, supplying the many lumberjacks and miners and their families. “Winkleman’s” grew to a large chain of shops for women’s apparel.

An observant Jew who closed his store on the High Holidays, William Saulson operated the prosperous “People’s Store” in St. Ignace. In 1888, he was elected Mayor of St. Ignace. In an ad published in 1884, Saulson proposed the building of the Mackinac Bridge, which opened 75 years later, in 1958. The five-mile-long suspension bridge linking the two peninsulas was designed by engineering genius David Steinman; Lawrence Rubin was the executive secretary of the Mackinac Bridge Authority.

Bavarian-born Dr. Frederick L. Hirschman, an 1873 graduate of one of the first classes of the Detroit College of Medicine, went to the Upper Peninsula to combat the smallpox epidemic there, and remained a doctor to the Republic Mines until his early death at the age of 38.

By 1903, at the far western end of the Upper Peninsula, Russian Polish immigrants Harry and Sam Cohodas first opened fruit markets in Houghton, Hancock, and Calumet. These developed into the nation’s third largest wholesale produce business. The Cohodas family became nationally known for its philanthropy and support of civic and Jewish causes. Temple Jacob opened in Hancock in 1912, named for merchant Jacob Gartner, and still serves the Jewish students and faculty of Michigan Technological University.

Supplying five million board feet annually for the building of the nation’s homes and factories, “white pine was king” in Michigan until about 1910, when the valuable forests had been stripped. In the late 18th and early 19th centuries, Jews followed the centers of lumbering, from Bay City and Saginaw on the state’s eastern side to Grand Rapids, Traverse City, and Muskegon on the western shore, and, as mentioned, crossing over to the Upper Peninsula. A successful work shirt manu-

facturer, immigrant Julius Houseman first was elected mayor of Grand Rapids, then to the Michigan State Legislature, and in 1883 to the U.S. House of Representatives. He was the only Michigan Jew to serve as United States Congressman until a century later, with the elections of Howard Wolpe and Sander Levin.

Peddler Julius Steinberg from Souvalk, Poland, settled in Traverse City, where he soon built a prosperous clothing and dry goods store, and in 1894 opened an elegant two-story Grand Opera House on top of his store – known as “the finest opera house north of Chicago.”

“The oldest synagogue building in continuous use,” according to the Michigan Historical Commission, opened in Traverse City in 1885. A second synagogue was founded in 1896 in nearby Petoskey. Both continue in active use, serving local Jews as well as summer and winter vacationers.

A port on Lake Michigan, Muskegon survived the decline of lumbering by building foundries and factories to supply the emerging auto industry of the early 20th century. The Muskegon Scrap Metal Co. was run by Henry, Harry, and Isadore Rubinsky. In nearby Holland, Padnos Iron and Steel grew into an essential supplier to industry; the Padnos are prominent philanthropists in the state. Later, in 1933, World War I veterans Harold and Leo Rosen opened the American Grease Stick Company, a major supplier of solid lubricants to the auto industry. The Muskegon Jewish House of Worship was dedicated in 1948.

In the 1890s, Russian Polish Jewish immigrants established a “Palestine Colony” at Bad Axe in Michigan’s “Thumb” area, which unfortunately did not survive the economic “Panic” of that decade. Later, the Sunrise Cooperative Farm Community, of close to 100 families, supplied mint to Parke Davis pharmaceutical, but only lasted from 1933 to 1938. In the fruit belt of southwestern Michigan, a number of Jews established farms; the Ben Rosenberg family remained as successful farmers and community leaders for three generations. Nearby South Haven, on the shores of Lake Michigan, became known as the “Catskills of the Midwest.” For three decades before World War II, Jewish immigrant families ran more than 60 resorts there, attracting thousands from Chicago and the Midwest.

By 1850 in Detroit, 12 Orthodox men formed Detroit’s first Jewish congregation, the Beth El Society. In a characteristic pattern, they hired a rabbi, Rabbi Samuel Marcus, who for \$200 a year also served as the *mohel*, the *shohet*, the cantor, the teacher of the children, and the judge to settle community disputes. They rented a room in which to meet, set up a school, bought land for a cemetery, arranged for traditional burials, and formed societies to care for the sick, the poor, and the widows and orphans. Rabbi Marcus died in the cholera epidemic of 1854.

When the Beth El Society adopted the Reform ritual advocated by Cincinnati’s Rabbi Isaac Mayer Wise, in 1861 17 traditionalists withdrew to form the Shaarey Zedek Society. Today these two congregations are among the country’s larg-

est and most active, and both are recognized with Michigan Historical Markers.

In the time before the Civil War, Beth El's Rabbi Leibman Adler was preaching vigorous abolitionist sermons. Ernestine Rose, a Jewish woman who belonged to the national coalition of social reformers, had visited Detroit in 1846 to speak out against slavery as well as child labor, and for women's rights. Temple members Emil Heineman and Mark Sloman were active participants in the Underground Railroad. From the 151 Jewish families in Michigan, 181 men and boys served in the Union Armies; 38 lost their lives in the conflict.

To meet the needs of the growing wave of immigrants, in 1899 Detroit established the United Jewish Charities, under the leadership of Rabbi Leo M. Franklin. This included the Hebrew Free Loan Association, which since 1895 had been helping peddlers with loans of \$5 to get them started.

By the early 1900s, an emerging automobile industry was providing additional economic opportunities. Engineer Max Grabowsky and his brother Morris, along with Bernard Ginsburg, formed the Grabowsky Power Wagon Company to manufacture the world's first gasoline-powered truck. Their successful four-story business in Detroit was bought by Will Durant to make up the new General Motors Company. Durant also hired bookkeeper Meyer Prentis who became treasurer of General Motors in 1919. Robert Janeway headed an engineering group for Chrysler for 30 years; A.E. Barit served as president of the Hudson Motor Car Company from 1936 to 1954. Participating in the wave of American inventiveness, in 1903 Rabbi Judah L. Levin received United States patents, and later British and Japanese patents, for his adding and subtracting machine which now is in the collection of the Smithsonian Institute.

However, since Jews were substantially excluded from the executive ranks of the automotive corporations, many Jewish entrepreneurs became suppliers to the industry. Jewish shops, which eventually grew into thriving businesses, supplied manufactured parts, glass, paint, chemicals, textiles, slag, and coveralls and operated laundries for factory uniforms. Max Fisher's Marathon Oil Company recycled and refined used oil. The Industrial Removal Office in New York City sent Jews to Detroit for industrial jobs and for work at the Ford Motor Company for "\$5 a day."

Providing a needed voice for the rights of workers, Jews were prominent in the labor movement. Samuel Goldwater was elected president of Detroit's Cigarmakers Union in the 1890s. Later Myra Wolfgang organized the waitresses' union. Many Jewish leaders worked with Walter Reuther in the UAW, including Sam Fishman, Bernard Firestone, and Irving Bluestone, who later served as professor of labor studies in the Economics Department chaired by Professor Samuel Levin at Wayne University. Prominent labor lawyer Maurice Sugar's papers are collected at the Reuther Library at Wayne University.

In 1912, Henry Ford, who was actively antisemitic a decade later, hired architect Albert Kahn to design the first fac-

tory to house a continuously moving assembly line to manufacture the Model T. Kahn continued to design Ford factories. Henry Butzel served as chief justice of the Michigan Supreme Court, while his attorney brother Fred became known as "Detroit's Most Valuable Citizen." Charles Simons was appointed justice to the United States Sixth Circuit Court of Appeals; while his brother David was elected to Detroit's first nine-man city council in 1914.

In the 1990s, with a total Michigan population of 9,478,000, there were 107,000 Jews statewide, with a Jewish population of 96,000 in metropolitan Detroit, the greater majority in the nearby Oakland County suburbs. It is anticipated that more current studies will show a greater degree of spread to additional nearby communities as well as a decline in the Metro Detroit Jewish population.

An estimated 200,000 Muslims live in Metro Detroit, many concentrated in Dearborn. The local American Jewish Committee, the Anti-Defamation League, and the Jewish Community Council are each involved in outreach activities between local Muslims and Jews.

Carl *Levin served as United States Senator, elected four times from 1978.

His brother, Sander, was re-elected to the House of Representatives from 1982. A leader of the statewide Democratic ticket, Kathleen Straus was elected to the Michigan Board of Education and served as president. Community activist David Hermelin was appointed by President Bill Clinton as ambassador to Norway, where he served until his untimely death. Florine Mark, founder of Weight Watchers in Michigan and a philanthropic leader, is in the Michigan Women's Hall of Fame. William *Davidson, a third generation Detroiter, is the owner of the Detroit Pistons, the Detroit Shock, and the Tampa Bay Lightning; chairman of glass manufacturer Guardian Industries, Inc; he is a major philanthropist taking a special interest in Jewish education. The patriarch of the Jewish community, Max *Fisher, who passed away in 2004, was recognized as the "dean of American Jewry" and was acknowledged by United States presidents as a "world citizen."

[Judith L. Cantor (2nd ed.)]

MICHMASH or **MICHMAS** (Heb. מִיכְמָשׁ, מִיכְמָס, מִיכְמָשׁ), city of the tribe of Judah, originally belonging to the tribe of Benjamin, situated between Jerusalem and Beth-El in a strong strategic position north of the deep Wadi al-Suwaynit. Saul gathered part of his army there (1 Sam. 13:2) and the main part

of the Philistine forces later encamped in the city prior to the battle of Michmash, fleeing by way of Aijalon after their defeat (1 Sam. 13–14). It is mentioned in Isaiah's description of the advance of the Assyrian army, where it is placed between Aiath and Geba (Isa. 10:28), and in the lists of those returning from the Babylonian Exile (Ezra 2:27; Neh. 7:31). Jonathan the Hasmonean resided there (until 152 B.C.E.) before assuming the high priesthood (1 Macc. 9:73; cf. Jos., Ant., 13:34). In the Mishnah, the wheat of the place is highly praised (Men. 8:1). Eusebius calls it a very big village, 9 mi. (c. 14 km.) from Jerusalem and in its territory (Onom. 132:3–4). Michmash is identified with Mukhmās, close to Rama, approximately 6 mi. (c. 10 km.) northeast of Jerusalem. A first-century C.E. ossuary is known from a local tomb bearing the names "Shimon" and "Levi." A Byzantine church with an inscription was found in the village. The Byzantine monastic laura of Firminus is situated in the vicinity of Mukhmās.

[Michael Avi-Yonah / Shimon Gibson (2nd ed.)]

MICKIEWICZ, ADAM (1798–1855), Polish poet. Born in Lithuania, Mickiewicz became involved in student nationalist politics at Vilna University and in 1826 was expelled from the country and ordered to live in Russia. In 1829 he was given permission to go abroad, and started the journeying from one European city to another that was to last for the rest of his life. It was during the period 1823–32 that he wrote his great drama *Dziady* (3 vols. (Paris, 1832); partial trans. *Forefathers' Eve*, 1928), in which he drew a picture of the future savior of Poland which has been interpreted as referring to himself. According to the vision of one of the characters, this savior would be "a son of an alien mother; his blood, the blood of ancient heroes; and his name – forty-and-four." Mickiewicz's mother, descended from a converted Frankist family, was an "alien"; and his own name, Adam (אָדאַם), omitting the unvoiced "A" (א), has the numerical value of 44. Such kabbalistic notions were gleaned from the writings of the French mystic, Louis-Claude de Saint-Martin. Although Mickiewicz at first occasionally referred slightly to the Jews, even in his biblically-influenced *Księgi narodu polskiego i pielgrzymstwa polskiego* ("Books of the Polish Nation and the Polish Pilgrimage," Paris, 1832), he soon revised his attitude. In this he was influenced by the mystical philosopher Andrzej Towiański, who considered the Jews, together with the French and Poles, to be a "chosen nation" and whose Messianic nationalism drew inspiration from Mesmer, Swedenborg, and the Kabbalah. Thus the idealized Jew, Jankiel, in Mickiewicz's masterpiece, the great epic *Pan Tadeusz* (1834), is an ardent Polish patriot. In the lectures he gave

as professor of Slavonic languages and literatures at the Collège de France in Paris (1840–44), Mickiewicz was at pains to praise the Jews and defend them against their detractors. In a sermon delivered in a Paris synagogue on the Fast of the Ninth of Av, 1845, he expressed his sympathy for Jewish suffering and yearning for Erez Israel. Although he dreamed for years of the conversion of the Jews to Christianity, he was greatly disappointed at the assimilationist tendencies of French Jews. In one of the statutes of the Polish legion which he organized in Italy in 1848 to fight against Russia Mickiewicz wrote: "To Israel, our elder brother: honor, fraternity, and help in striving towards his eternal and temporal goal. Equal rights in all things." When the Crimean War broke out in 1853, Mickiewicz went to Constantinople to help raise a Polish regiment to fight against the Russians. He hoped to include Jewish units, and was prepared to assure them the right to observe the Sabbath and all other religious obligations. His chief assistant, a French medical officer named Armand Lévy, was a Jewish nationalist, and it is possible that the two men believed that the creation of Jewish units would be a first step towards the revival of the Jewish nation in its own land. Mickiewicz died suddenly before his mission in Constantinople was completed.

[Yehuda Arye Klausner]

MICROCOSM (from Gr. *mikros kosmos*; "small world"), term in the Western philosophical tradition referring to man as an epitome of the universe (the macrocos) in his parts and structure. The Arabic (*‘ālam ṣaḡhīr*), Hebrew (*olam katan*), and Latin (*mundis minor*) terms are literal equivalents of the Greek. The term is said to be first attested in Aristotle (*Physics*, 8:2, 252b, 26–27), though the motif is older; indeed, the notion that some aspect of reality (the city, sanctuary, man) reflects the cosmos is both ancient and widespread. Though the broad diffusion of the microcosm motif in late antiquity (in Gnostic, Hermetic, neoplatonic, neopythagorean, Orphic, and stoic writings) complicates the study of original sources, its occurrence in medieval Arabic and Hebrew texts is mainly the result of neoplatonic influence. The analogy was frequently invoked to argue for the existence of a world soul or mind which directs and orders the physical universe as the soul does the body. The idea that man exemplifies all being was also used to buttress the theme of man's superiority, dignity, or freedom: as *nodus et vinculum mundi*, he epitomizes the entire scale of being (spiritual and material) and determines his own place, unlike angels and beasts whose nature is fixed. The elaboration of the neoplatonic hypostases was, in effect, a projection of human psychology to the supersensible world.

Furthermore, the neoplatonic notion that the human mind is potentially a κόσμος νοητός (“intelligible world”) implies that by knowing the intelligibles man becomes identical with all being. Microcosmic speculation tended to combine with astrology (correspondence between heavenly bodies and parts of the human body), medicine (universal and human nature, parallel between the four elements and the four humors), and magical practice (universal sympathy). Philo frequently compares man as microcosm βραχὺς κόσμος to the universe (Conger, in bibl., 16–18; H.A. Wolfson, *Philo*, 1 (1948), 424, n.), stressing the parallel between the human and cosmic minds (*logoi*; e.g., Op. 69–71). He is said to have drawn his theory of the microcosm from Greek and rabbinic sources (A. Altmann in bibl., 20). Among the latter is found a long list of gross analogies between parts of the world and parts of man in *Avot de-Rabbi Nathan* (ARN² 31, 92). (For other rabbinic sources, see Altmann, 21, n.) In medieval Jewish philosophy the motif is frequently cited, being part of the common stock of popular philosophy found in such works as the Epistles of the *Brethren of Sincerity. It is mentioned, for example, by *Saadia Gaon in his commentary on the *Sefer Yezirah* (ed. by M. Lambert (1891), 67ff., 91), where he compares God to life and intelligence and sets forth a series of analogues between the universe, the sanctuary, and man (followed by Abraham Ibn Ezra in his commentary on Ex. 25:40; see Altmann, in bibl., 25–26); by *Baḥya ibn Paquda (*Hovot ha-Levavot*, 2:4); and by *Judah Halevi in his *Kuzari* (4:3), where he quotes “the philosophers” who compared the world to a *macranthropos* (“large man”) and man to a microcosm, implying that God is the spirit, soul, mind, and life of the world. (For other citations of the microcosm motif by medieval Jewish philosophers, see Conger, in bibl., 37ff., and Altmann, in bibl., 27–28.)

The microcosm theme was productive in *Israeli, Ibn *Gabirol, and Joseph ibn *Zaddik. Israeli links it to his definition of philosophy as self-knowledge: “This being so, it is clear that man, if he knows himself in both his spirituality and corporeality, comprises knowledge of all, and knows both the spiritual and the corporeal substance, and also knows the first substance which is created from the power of the Creator without mediator ...” (A. Altmann and S.M. Stern (eds.), *Isaac Israeli* (1959), 27; see comments, *ibid.*, 28–30, 203–8, and Altmann, in bibl., 22–23). The same combination of philosophy as self-knowledge and the consequent knowledge of all is found in Ibn Zaddik’s *Sefer ha-Olam ha-Katan* (Introd.). Ibn Zaddik adds that this knowledge leads to knowledge of the Creator. (See also *Sefer ha-Olam ha-Katan*, pt. 2, Introd., where Job 19:26 is cited as a proof verse – “And from my flesh I shall behold God”; cf. Altmann-Stern, 208; Altmann, in bibl., 23, 25; and Vajda, in bibl., 97 and n. 3, who cites the similar combination of the microcosm and γνῶθι σεαυτόν (“know yourself”) themes by Abraham ibn Ezra.) In a more primitive vein, reminiscent of *Avot de-Rabbi Nathan* and the microcosm passage in the Iranian *Greater Bundahishn* (trans. by B.T. Anklesaria (1956), 245), Ibn Zaddik (pt. 2, ch. 1), referring to “the ancients,” compares the members of the human organ-

ism to the heavenly bodies (head to the outer sphere, nostrils to Venus, mouth to Mars, tongue to Mercury, vertebrae to the signs of the zodiac, eyes to the sun and moon, ears to Saturn and Jupiter), while the arteries are compared to the seas and rivers, the bones to the mountains, the hair to the plants, and the four humors to the four elements (see Altmann, in bibl., 24; and Vajda, in bibl., 113, who brands this a “néoplatonisme vulgarisé”). Nothing so gross appears in Ibn Gabirol’s *Mekor Ḥayyim*. Though the term for microcosm (*‘ālam ṣaghir* = *mundis minor*) appears but once (3:2, 10; see S. Pines, in *Tarbiz*, 27 (1958), 220), Ibn Gabirol makes ample use of the motif. Following the general principle that the inferior is an exemplar of the superior, man as microcosm is said to exemplify the macrocosm. The correspondence is utilized to demonstrate, for example, that the most simple substance is not in contact with the substance that bears the nine categories (3:2, 10, see also 3:58). The action of the particular will is invoked in order to explain that of the universal will (5:37).

Maimonides had little use for the popular philosophy of the Brethren of Sincerity and says he never read Ibn Zaddik’s *Sefer ha-Olam ha-Katan* (in his letter to Ibn Tibbon; A. Marx (ed.), in: *JQR*, 25 (1934–35), 378–9), but in a central chapter of the *Guide* (1:72) he sets forth an elaborate analogy (with qualifications) between the whole of being and man, the parallel par excellence, being that between God vis-à-vis the universe and the rational intellect vis-à-vis man. It is on the basis of this parallel that man is called a microcosm. In his structure man exemplifies the unity within diversity and the hierarchical ordering of the universe (an idea which appears frequently in the writings of al-Fārābī). With this analogy in the *Guide* microcosmic speculation in Jewish philosophy reaches its peak, from which it ebbs with the decline of Jewish neoplatonism occasioned by the rise of Jewish Aristotelianism in the post-Maimonidean era. A notable exception is Judah *Abrabanel (Leone Ebreo), the Renaissance neoplatonist, who set forth analogies between the heavens and parts of the body (astrological microcosm; cf. Ibn Zaddik) in the second dialogue of his *Dialoghi d’amore* (ed. Carmella (1929), 84f.; trans. by F. Friedberg-Seeley and J.H. Barnes (1937), 93ff.).

[Joel Kraemer]

°MICZYŃSKI, SEBASTIAN (late 16th–early 17th century), anti-Jewish agitator and professor of philosophy at Cracow University. In 1618 Miczyński published a venomous anti-semitic lampoon entitled *Zwierciadło korony polskiej* (“The Mirror of the Polish Crown”). It is a catalog of demagogic

denunciations accusing the Jews of all the misfortunes that had befallen the kingdom of Poland and its people. Through reports of *blood libels and accusations that they had desecrated icons and profaned Catholic festivals, the Jews are presented as the implacable enemies of Christians. Miczyński also presents the Jews as traitors and spies in the pay of Turkey, and lays special emphasis on the wealth of the Jewish merchants and craftsmen who compete with their Christian neighbors, driving the guilds and towns to ruin. The pamphlet seriously disturbed the Jews of *Cracow. When riots broke out in the town, the *parnasim* of the community appealed to King Sigismund III Vasa. The king promptly prohibited the circulation of the pamphlet, but in spite of his order it was reprinted in a second and enlarged edition during the same year; it was published for a third time in 1648. Miczyński's work is an important link in the chain of Polish antisemitic literature.

[Arthur Cygielman]

MIDDLESEX COUNTY, county on the eastern coast of New Jersey, southwest of New York City, U.S.; estimated total Jewish population of 55,000 in 2005. The majority of Jewish settlers in Middlesex County were traders and peddlers. Most of the information about Jewish immigrants comes from court and land records. Aaron and Jacob Lozada owned a grocery and hardware store in Bound Brook, on the border between Middlesex County and Somerset County, as early as 1718, and helped form a synagogue ten years later. The next mention of a synagogue, Congregation Anshe Emeth of New Brunswick, is found in an 1861 land record. A court record from 1722 lists Daniel Nunez as town clerk and tax collector of Piscataway Township and justice of the peace for Middlesex County. Perth Amboy was an important Jewish center for Jewish merchants from the time that it was named capital of East Jersey in 1685. The first Jewish religious service was held here in 1890 in the home of a local Jewish resident. A *mikveh* was constructed shortly thereafter and Rosh ha-Shanah and Day of Atonement services were held at the Perth Amboy Savings Bank. When the size of the Jewish community increased, a building was purchased in about 1900 under the name of the Hebrew Mutual Aid Society. This subsequently became Congregation Shaarey Tefilah which was dedicated on October 29, 1903. In 1904 a burial ground was purchased and a free Hebrew school was organized. The founders of the second congregation came from Perth Amboy, Metuchen, and South Amboy. It was incorporated on August 2, 1895. The first meeting places were in homes. In 1897 a synagogue was built and called Temple Beth Mordecai after a deceased son of Henry Wolff, one of the founders. In April 1927 the temple was dedicated. The Perth Amboy YMHA was formed in 1908 and was the first YMHA built in the state to have its own building rather than a rented one.

Middlesex County's prominent political figures included David T. Wilentz of Perth Amboy, the first Jewish New Jersey attorney general (1934–44), prosecutor in the Lindbergh kidnapping trial, and New Jersey national Democratic committeeman (1964–70); his son Robert Wilentz, also of Perth Amboy, state assemblyman from 1966 to 1970; Arthur J. Sills of Metuchen, state attorney general from 1962 to 1970; Donald Wernik, mayor of Metuchen in 1970; and Norman Tanzman of Woodbridge, who was elected state senator in 1962. By the 1970s the Jews of Middlesex County were mainly engaged in the professions and as business executives. Meryl Harris was the mayor of Highland Park and Brian Levine the mayor of Franklin Township. Linda Greenstein and Amy Handlin were members of the State Assembly and Barbara Buono was the State Senator.

The Federation of Middlesex County sponsors the Jewish Community Relations Committee, a Professional Networking Group, a Joint Chaplaincy Program, as well as a Missions program. It also supports a Jewish Home for the Aged, Jewish Family and Vocational Services, two Jewish community centers, a Solomon Schechter School in East Brunswick, the Rabbi Jacob Joseph School in Edison, as well as the Rabbi Pesach Raymond Yeshiva also in Edison. There is also an I.L. Peretz Community Jewish School, one of the few remaining secular humanist schools of its kind. Synagogues have been established in East Brunswick, New Brunswick, Perth Amboy, Highland Park, Edison, Monroe Township, South River, Carteret, Woodbridge, Metuchen, Old Bridge, Somerset. The Orthodox community established an *eruv* in Highland Park and in East Brunswick. The Hillel House at Rutgers University is quite active, along with the Allen and Joan Bildner Center. There is also a Chabad House on campus.

[Barry Dov Schwartz / Jeff Schekner (2nd ed.)]

MIDDOT (Heb. מִדּוֹת; “measures”), tenth tractate of the order *Kodashim* (in some codices and early editions it is ninth; in current Talmud editions the 11th and last). It is found in the Mishnah only. This tractate gives, in five chapters, exact details and measurements of the building of the Temple and of its component parts, intended perhaps to serve as a guide for the rebuilding of the Temple. The description is of the Temple of Herod. It is not based on a plan drawn up in Temple times, but depends on the memory of sages who saw the Temple and who after its destruction gave an oral description of it to their disciples. The main reporter seems to have been *Eliezer b. Jacob I, who figures prominently in this tractate. He is thought to have seen the Temple while it was still standing, but he may also have learned much about its inner arrangements from his uncle who actually served in it (1:2). That the descriptions are based on memory is evident from the controversies on factual points (1:9; 2:6; 3:4, 6; et al.); moreover, Eliezer b. Jacob is repeatedly reported to have “forgotten” certain details (2:5; 5:4). In fact this tractate was considered the original *mishnah* (“teaching”) of Eliezer b. Jacob; the final redaction of Judah ha-Nasi contains, of course, the variant traditions of the other authorities as well (see Yoma 16a–17a; TJ, Yoma 2:3, 39d).

[Arnost Zvi Ehrman]

MIDIAN, MIDIANITES (Heb. מִדְיָן, מִדְיָנִים Gen. 37:28, מִדְיָנִים), name of a people or a group of (semi-) nomadic peoples in the Bible (LXX, Madian, or Madiam; 1QIS^a 60:6, מִדְיָן). The Midianites are among the sons of Abraham and Keturah who were sent to “the land of the East” (Gen. 25:1–6). “Midianite traders” are mentioned in the episode about the sale of Joseph (Gen. 37:28). *Jethro, Moses’ father-in-law, was a Midianite priest living in the land of Midian (Ex. 2:15–3:1); he met Moses in the wilderness of Sinai (Ex. 18: 1–5), and the members of his family accompanied the Israelites in their wanderings in the desert (Num. 10:29–32). The elders of Midian displayed hostility toward the Israelites on the plains of Moab (22:7) and the Israelites fought the Midianites, killing many of them (31:1–20).

This episode was connected with the attempt to entice the Israelites to worship Baal-Peor, in which the daughters of Midian participated (25:6–18). In the period of the Judges, the Midianites exerted harsh pressure on Israel (Judg. 6:1–7), and Gideon defeated them far from the borders of Erez Israel, in Karkor (8:10), which was probably in Wadi Sirhān in Transjordan, on the border of the desert. After this war, the Midianites ceased to be a political or military factor.

The range of the Midianites’ wanderings was very broad: from the neighborhood of Moab (Gen. 36:35; Num. 22:4, 7; 25:1, 5, 15) and the kingdom of Sihon the Amorite (Josh. 13:21) in the border region of Transjordan, along the border of the Arabian desert (cf. Judg. 8:21, 24) west of Edom (1 Kings 11:18), to the Sinai Desert and the trade route between Erez Israel and Egypt (Gen. 37:28). In Greek-Roman and Arabic sources Midian is mentioned in Arabia, as well as on the shore of the Red Sea, and, according to Josephus (Ant., 2:257), this is the biblical Midian (cf. Eusebius, Onom. 124:6). This Midian is identified, according to the tradition of the Arabic geographers, with modern Maghāyir Shu‘ayb (= the caves near Akaba). It appears that the Midianites’ settlement in Arabia occurred in a later time, when their living area was reduced, but it is possible that the settlement in North Arabia during the Hellenistic-Roman period was a continuation of the biblical settlement. Among the sons of Keturah are mentioned tribes which inhabited North Arabia – Ephah and Dedan (Gen. 25:3–4) – and it is also possible that from there the Midianites spread to the north, the east, and the west. In the Bible the Midianites are also designated by the inclusive typological title “Ishmaelites” (Judg. 8:24). Some scholars discern a connection between the Midianites and the Kshu tribes mentioned in the Egyptian Execration Texts from the 18th century B.C.E., who wandered in the southern deserts of Erez Israel (cf. Cushan, Hab. 3:7). This may be hinted at in the story of the “Cushite woman” whom Moses married (Num. 12:1).

The name Midian is attributed to groups of tribes or peoples (cf. Gen. 25:4), as is attested by the nature of the monarchy in Midian. The Bible mentions “the five kings of Midian”

during the war in the wilderness (Num. 31:8) and Zebah and Zalmunna in the war of Gideon (Judg. 8:1ff.). The Midianite kings are called “chieftains” (*nesi'im*) and “princes” (*nesikhim*; Josh. 13:21; Ps. 83:12), very fitting titles for a tribal organization united in groups; Zur, a prince of Midian, is explicitly called “the tribal head of an ancestral house in Midian” (Num. 25:15). Their typically (semi- and eventually complete) nomadic character made them close to other similar tribes – Amalekites and Kedemites. The Midianites in Transjordan followed the cult of the Moabite Baal-Peor, while those who inhabited the Negev and the Sinai became close to the Kenites or even identified with them (cf. Num. 10:29; Judg. 1:16; 4:11) and the Hebrews. The Midianites were known as shepherds (Ex. 2:17) and traders (Gen. 37:28, 36). From time to time, they, together with neighboring tribes, broke into the permanent settlements around them. The Bible describes them as robbers (Judg. 6:5). During the Monarchy the Midianites lived within the confines of their place of origin, North Arabia, and they were known as middlemen in the frankincense (*levonah*) and gold export from Sheba in South Arabia (cf. Isa. 60:6). During the Hellenistic period the Nabateans mined much gold in the land of Midian and exported it via the port of Macna (Strabo, *Geographica*, 17:784). There has been no systematic scientific research of Midian in North Arabia.

[Samuel Abramsky]

In the Aggadah

Midian and Moab had always been enemies but, fearing that Israel would subdue them, they composed their differences and entered into an alliance (Sanh. 105a). They succeeded in inducing the Israelites to commit fornication with the daughters of Midian only by first making them drunk. For this reason, Phinehas forbade the drinking of gentile wine (PdRE 47). The hatred of the Midianites for Israel was solely on account of the observance of the Torah by Israel (Num. R. 22:2). The Midianites are sometimes identified with the Moabites, who lost their claim to special consideration as descendants of Lot (Deut. 2:9), the nephew of Abraham, because they tried to induce Israel to sin (*Yelammedenu* in Yal. 1, 875). The command to Moses to make war upon the Midianites before his death was because, having no reason for their hatred against Israel, they nevertheless joined the Moabites and outdid them in their enmity. Moses did not lead the war in person because he had found refuge in Midian when he was a fugitive from Egypt. He delegated the command to Phinehas as he had been the first to take action against them by slaying the Midianite princess, Cozbi (Num. R. 22:4).

MIDLER, BETTE (1945–), U.S. singer, entertainer, and actress. Born in Honolulu, Midler entered show business as a member of the *Fiddler on the Roof* cast on Broadway in 1964. She gained notoriety as a popular performer in the Continental Baths cabaret, a meeting place for homosexuals, and then scored a hit single with the frequently recorded “Do You Wanna Dance?” (1974). She followed this success with her top-selling album *The Divine Miss M.* and a popular film of her live act called *Divine Madness* (1979). Midler turned actress in a movie loosely based on the life of Janis Joplin, *The Rose* (1981), which earned her an Academy Award nomination for Best Actress. Midler, who was named after legendary film icon Bette Davis, starred in subsequent films such as *Down and Out in Beverly Hills* (1986), *Ruthless People* (1986), *For the Boys* (Oscar nomination for Best Actress, 1991), *The First Wives Club* (1996), *Drowning Mona* (2000), *Isn't She Great* (2000), and *The Stepford Wives* (2004).

Over the years, among other TV guest spots, Midler appeared on Johnny Carson's *Tonight Show* 24 times, starting in 1970 and including the final program in May 1992. She also appeared in the TV movie *Gypsy* (1993) and produced and starred in the sitcom *Bette* (2000–1).

On the Broadway stage, Midler appeared in *Fiddler on the Roof* (1964–72), *Bette Midler Special Concert* (1973), *Bette Midler's Clams on the Half Shell Revue* (1975), *Bette! Divine Madness* (1979), and *Short Talks on the Universe* (2002).

For her multiple talents as an actress, writer, singer, and performer, Midler won a host of awards. In 1974 she received a special Tony Award “for adding luster to the Broadway season.” She won four Grammy awards, including the 1973 Best New Artist and the prestigious Record of the Year in 1989 for her rendition of her #1 hit “Wind Beneath My Wings” from the movie *Beaches*. She won three Emmy awards and was nominated for another four. In 1987 she received the American Comedy Awards' Lifetime Achievement Award in Comedy, as well as the American Comedy Award in 1988, 1989, 1993, 1996, and 1998. Her writings include *A View from a Broad* (1980) and the fable *The Saga of Baby Divine* (1983).

[Jonathan Licht / Ruth Beloff (2nd ed.)]

MIDRASH (Heb. מִדְּרָשׁ), the designation of a particular genre of rabbinic literature containing anthologies and compilations of homilies, including both biblical exegesis (see *Hermeneutics) and sermons delivered in public (see *Homiletics) as well as *aggadot* (see *Aggadah) and sometimes even *halakhot* (cf.

**Midreshei Halakhah*), usually forming a running commentary on specific books of the Bible.

The term Midrash itself derives from the root *drsh* (דָּרַשׁ) which in the Bible means mainly “to search,” “to seek,” “to examine,” and “to investigate” (cf. Lev. 10:16; Deut. 13:15; Isa. 55:6; et al.). This meaning is also found in rabbinic Hebrew (cf. BM 2:7: “until thou examine [*tidrosh*] thy brother if he be a cheat or not”). The noun “*Midrash*” occurs only twice in the Bible (11 Chron. 13:22 and 24:27); it is translated in the Septuagint by βίβλος, γράφη i.e., “book” or “writing,” and it seems probable that it means “an account,” “the result of inquiry (examination, study, or search) of the events of the times,” i.e., what is today called “history” (the word history is also derived from the Greek root ἱστορέω which has a similar meaning). In Jewish literature of the Second Temple period the word Midrash was first employed in the sense of education and learning generally (Ecclus. 51:23), “Turn unto me, ye unlearned, and lodge in my house of Midrash,” which the author's grandson translated into Greek, “house of instruction or of study”; compare the similar development of the Latin *studium* which originated in the verb *studeo* which means “to become enthusiastic,” “to make an effort,” “to be diligent,” etc. and only in a secondary sense, in the post-Augustan era, in the sense of learning (with diligence and the noun *studium* passed through the same stages of meaning; cf. Ger. *studium*; Fr. *étude*, etc.).

Darosh both in its nominal and verbal forms is sometimes found in the literature of the *Dead Sea sect as the designation for a certain method, a special technique of learning things – in *halakhah* and in *aggadah* – through rigorous study and painstaking, searching inquiry into the verses of the Bible. This method of Midrash was both ideologically and halakhically one of the fundamentals of the life of the sect: “and that his deeds appear in accordance with the Midrash of the Torah as followed by the holy upright men” (Damascus Covenant 8:29–30; cf. the Manual of Discipline 8:25–26: “If his way is perfect in company, in Midrash, and in counsel”; cf. also *ibid.* 6:24 and 6:6). The nature of this Midrash is testified to by the explicit words: “When these become a community in Israel with such characteristics they separate themselves from the company of the wicked men to go thither to the wilderness to make clear there the way of the Lord, as is written [Isa. 40:3], ‘and in the wilderness clear ye the way... make plain in the desert a highway for our God,’ that being the Midrash of the Torah [which] he commanded through Moses, to do in accordance with all that is revealed in every era and as the prophets revealed through his holy spirit” (Manual of Discipline 8:12–16); i.e., the Midrash of the Torah is the lesson derived from the verse (4:21–5 5:11). A different method of interpretation is the **pesher*, although the Midrash could also contain *pesharim* (see 4Q 174 Florilegium, 1–2, 1 14–19, in: J.M. Allegro, *Discoveries in the Judean Desert*, v: Qumran Cave 4, 1 (1968), p. 53f.). This technique of biblical exegesis which is largely similar to that customary among the Greek grammarians, the students of the classical texts of Homer, and among the Roman rhetoricians, the exponents of Roman law, is found among the Jews

for the first time in the Dead Sea sect (see particularly Book of *Jubilees). Nevertheless these earlier forms of exegesis must be distinguished from rabbinic midrash as a fully developed literary form (cf. **Midreshei Halakhah: Literary Nature and Relation to Early Midrash*). Suggestions to the effect that the *Liber Antiquitatum Biblicarum* (pseudo-Philo) is a Midrash are without foundation.

Midrashic Literature

It is very possible that the earliest Midrash to come down is the Passover **Haggadah*, the earliest and chief element of which is a Midrash to Deuteronomy 26:5–8 (cf. Sif. Deut. 301). A great part of the midrashic *aggadah* of the tannaitic period is included side by side with the midrashic *halakhah* in the halakhic Midrashim (cf. **Midreshei Halakhah: The Aggadic Material*). On the other hand there are no independent works devoted only to midrash *aggadah* from the tannaitic era (see however **Seder Olam Rabbah* and the **Baraita de-Meleket ha-Mishkan*). All the extant literary works devoted primarily to midrash *aggadah* were apparently compiled originally in Erez Israel during the amoraic and post-amoraic periods. While the Babylonian Talmud contains a vast amount of aggadic midrash (cf. the Midrash on the Book of Esther in Meg. 10b–17a, and on Lamentations in Sanh. 104a–b), its literary structure follows the earlier tannaitic model, including both *midrash halakhah* and *aggadah* (as in the *midreshei halakhah*), and integrating both of them into an appropriate context following the order of the tractates of the Mishnah, as was done in both the Mishnah and the Tosefta (see **Mishnah: Aggadah* in the Mishnah).

From the point of view of the period of their arrangement and collection the aggadic Midrashim can be divided into three groups: early, middle, and late. The determination of the time of the editing and arranging of the various Midrashim is by no means a simple matter. It is nearly impossible to determine with even approximate certainty the period when a Midrash or aggadic work was compiled (see **Pirkei de-R. Eliezer*). However, it is possible to arrive at a relative date, that is, to determine the relation of a particular Midrash to others (see Table: *Midreshei Aggadah*). To do this one cannot rely on the historical allusions alone or merely on the names of the sages mentioned in the Midrash, nor can one rely on the first mentions of the Midrash and its first citations, since all the Midrashim contain much material from different and extended eras. The lack of historical allusions after a definite period do not suffice to testify to its compilation immediately after that period, just as the lack of mention of a Midrash and of its citation until a certain period does not prove that it was edited at the date nearest to the beginning of that period. In neither case can one rely on the *argumentum a silentio*. A more reliable method for determining priority and lateness among Midrashim is the relationship between the various Midrashim – the use one makes of another – as well as their relationship to other sources. This procedure, however, involves a number of very complex issues, and no consensus has yet been reached on how it should be applied in practice (see **Genesis Rabbah:*

The Redaction of the Midrash). Moreover, even after one arrives by use of this method at a provisional determination regarding precedence, other additional factors must be taken into account (literary forms, language, style, etc.).

The Early Midrashim (the Classical Amoraic Midrashim)

This period, from which it seems only seven Midrashim have come down, is the golden age of the aggadic Midrashim. The most developed and perfect literary forms and constructions are already found in the oldest aggadic Midrash, *Genesis Rabbah*, proving that many generations of development preceded the literary crystallization. Since in general such perfect and developed literary constructions and forms are found neither in the halakhic Midrashim nor in their aggadic section (although here and there mere beginnings can be found), it is probable that the main development of the literary forms came in the amoraic era. Toward the close of this period the assembling, collecting, and editing was begun.

Among its most perfect forms, one should mention the classical proem at the beginning of a complete Midrash or of a chapter, which served fundamentally as the introduction to a homily delivered in public. The classical proem is a prelude to a homily on a certain verse by citing a verse from another source (in most cases from another book, or even from a different section of the Bible, usually the Hagiographa) and connecting it with the chief verse of the homily, the proem concluding with the verse with which the homily itself begins. Thus, for example, the proem to Lamentations 1:1 begins with a verse from the Pentateuch, while the proems to the Pentateuch Midrashim open with a verse usually from the Hagiographa. The proem, scarcely found in the tannaitic literature, was greatly developed and perfected in the time of the *amoraim*, in order to attract, stimulate, and rouse the curiosity of the audience and to emphasize the unity of the biblical books. When gathering and assembling the material the compilers and editors of the Midrashim followed the method of the actual preachers of the homilies and placed the proems at the beginning of the Midrashim and of the various sections. They did not always have proems readily available and in consequence created artificial proems themselves (combining different sayings and a number of homilies together). Sometimes they greatly enlarged the proems so that a simple proem became compound, i.e., it included a number of homilies independent in themselves. Classical proems in their pure form are almost wholly confined to the early Midrashim: *Genesis Rabbah*; *Leviticus Rabbah*; *Lamentations Rabbah*; *Esther Rabbah I*; **Pesikta de-Rav Kahana*; *Song of Songs Rabbah*; and *Ruth Rabbah*. These Midrashim all consist of a collection of homilies, sayings, and *aggadot* of the *amoraim* (and also of the *tannaim*) in Galilean Aramaic and rabbinical Hebrew, but they also include many Greek words.

It seems that all these Midrashim were edited in Erez Israel in the fifth and sixth centuries C.E. Two types can be distinguished: exegetical and homiletical. The exegetical Midrash (*Genesis Rabbah*, *Lamentations Rabbah*, et al.) is a Midrash to one of the books of the Bible, containing comments on the

whole book – on each chapter, on every verse, and at times even on every word in the verse. The homiletical Midrash is either a Midrash to a book of the Pentateuch in which only the first verse (or verses) of the weekly portion is expounded (in accordance with the early *Triennial cycle that was current in Erez Israel, e.g., **Leviticus Rabbah*), or a Midrash that is based only on the biblical and prophetic reading of special

Sabbaths and festivals, in which, also, only the first verses are expounded (eg., *Pesikta de-Rav Kahana*). In both cases, in contrast to the exegetical Midrashim, the homiletical Midrashim contain almost no short homilies or dicta on variegated topics, but each chapter (or section) constitutes a collection of homilies and sayings on one topic that seem to combine into one long homily on the specific topic.

Midreshei Aggadah According to Types and Periods

| Aggadic Works | Midrashim | Date C.E. | The Era | | | | |
|---|--|-----------|--|-----------|------------------------------|-----------|--|

1. Tanḥuma Midrash (Yelammedenu). 2. All based on the work of Moshe ha-Darshan. 3. These are anthologies
Note: Names in Italics are homiletical Midrashim; the rest are exegetical.

The Difference Between the Early Midrashim and Later Midrashim

In the Midrashim of the middle period a decline is already discernible in the developed literary constructions and forms, especially in the proem, which is not the classical proem but merely an inferior and artificial imitation. After the Muslim conquest there is a gradual strengthening in the influence of the pseudepigraphic and the apocalyptic literature of the Second Temple era (see *Apocrypha and Pseudepigrapha), which had been disregarded by the talmudic rabbis (particularly because of the controversy with Christianity; see *Church Fathers). This influence is apparent both in content and form. In content, there is an increase not only in homilies which refer to angels and demons, the garden of Eden and hell, but even complete topics from apocalyptic literature. In form, there is an increase in the type of aggadic work which does not belong to the genre of Midrash at all. This type is not a compilation but a unified work impressed with the seal of the author, who is a narrator but chooses to attribute his words to the ancients and to ascribe to them statements which they never made (see **Tanna de-Vei Eliyahu*). The increase of pseudepigraphic matter can also be seen in authentic Midrashim. In contrast to the early Midrashim there was also an increase of Midrashim and aggadic works in which the *aggadah* is connected with *halakhah* in a variety of forms, some of which are merely transferred from Second Temple literature (e.g., *Pirkei de-R. Eliezer*) and some are the result of internal development by the sages (e.g., *Tanḥuma Yelammedenu*). In addition there is also a difference in language. The Galilean Aramaic of the early Midrashim progressively disappears, as does rabbinical Hebrew. Instead there is progressive use of artificial Hebrew, apparently pure and polished and becoming freer from the influences of Aramaic or the admixture of Greek words.

The Middle Period

To the period from the Muslim conquest (c. 640 C.E.) to the end of the tenth century belong many variegated midrashic and aggadic works. In addition to the exegetical and homiletical types of Midrash, the above-mentioned composition by a single person belongs to this period. The most important group of Midrashim of this period – all of which are homiletical – are those of the *Tanḥuma Midrash* (**Tanḥuma Yelammedenu*) group in which the old and the new are used indiscriminately. Of the exegetical Midrashim, particular mention may be made of *Ecclesiastes Rabbah*, *Midrash Samuel*, *Midrash Proverbs* (greatly influenced by the apocalyptic and *Heikhalot* literatures), *Midrash Tehillim I*, *Exodus Rabbah I*, and the series of smaller *Midrashim (*Midreshei Zuta*) to four of the five *scrolls. In all these too, marks of the old and the new, both in content and in form, appear together. Among the aggadic works the most important are: *Seder Eliyahu Rabbah* and *Seder Eliyahu Zuta*; *Pirkei de-R. Eliezer* (compiled apparently close to 750); *Midrash Agur*, also called *Mishnat R. Eliezer*; and a further series of smaller compositions. In most of them external influences from the Muslim (*Pirkei de-R.*

Eliezer) or Byzantine (*The Throne and Hippodrome of Solomon*, etc.) eras can be seen.

The Late Period

To the period of the 11th and 12th centuries belong the very latest Midrashim. Of these special mention should be made of *Midrash Abba Guryon*, *Esther Rabbah II*, *Midrash Tehillim II*, and the series from the school of *Moses ha-Darshan that already border on the anthologies with regard to their period of composition as well as to content. In these Midrashim there is hardly a trace of even an imitation of the classical proem, the Hebrew is completely medieval, and the pseudepigraphic influence both in content and form is still more pronounced. Among the aggadic works of this period particular mention must be made of the *Sefer ha-Yashar* (see *Midrashim, Smaller in supplementary entries, vol. 16) where the Muslim influence is most recognizable.

The Yalkutim (Anthologies)

From the beginning of the 12th century, scholars in various countries assembled anthologies from various Midrashim and aggadic works. To these belong such works as the **Midrash Lekah Tov* (or the *Pesikta Zutarta*) to the Pentateuch and the five *scrolls (of Tobiah b. Eliezer); the **Yalkut Shimoni* to the whole of the Bible (assembled in Germany at the beginning of the 13th century); **Midrash ha-Gadol* to the Pentateuch and scrolls; and the **Yalkut Makhiri* to various biblical books. Anthologies of the *aggadot* in the Babylonian and Jerusalem Talmuds were also collected, especially close to the beginning of the age of printing. Most of the anthologies quote their sources with the original wording and indicate them (an exception being the *Midrash ha-Gadol*).

[Moshe David Herr]

MIDRASH ASERET HA-DIBBEROT (Heb. מִדְרָשׁ עֶשְׂרֵת הַדִּבְרֹת; “Midrash of the Ten Commandments”), a collection of stories, occasionally connected by short homiletic passages, from the geonic period. Various scholars have ascribed different dates to it, ranging from the seventh century to the 11th. The collection cannot be dated later than the 11th century because in that century both Rabbi *Nissim of Kairouan and later the anonymous collector of the legends published by M. Gaster as *Sefer ha-Ma’asiyyot, The Ancient Collections of Agadoth. The Sefer ha-Ma’asiyyot and Two Facsimiles* (1894) made use of stories included in it. The work was apparently composed at the beginning of the geonic period, but later stories were added

and have created confusion regarding both the number of stories included and the structure of the book as it appears in the several printed versions and the 20 extant manuscripts.

The collection was called a “Midrash” although its contents do not justify the name. It is basically a narrative work, one of the first medieval Hebrew works in the field of fiction. Its treatment of the midrashic material can be described as revolutionary: whereas traditional Midrashim place primary importance on homiletic material with only occasional use of stories, this work is primarily composed of stories, with the homiletic passages relegated to secondary importance. This stress on the fictional element is one of the characteristics of the new attitude toward the story introduced in medieval times (see *Fiction).

The work, which is based on the Ten Commandments, is correspondingly divided into ten parts. However, there is not always a close connection between the midrashic story and the commandment on which it is supposed to be based. This explains the material occasionally introduced into a story to create the impression of such a connection. In some versions the work is called *Midrash shel Shavu'ot* or *Haggadah le-Shavu'ot*, leading one to believe that it was used on Shavuot, the festival on which the receiving of the Ten Commandments is celebrated. However, there is no proof that any Jewish community ever used this work during Shavuot. Noy (see bibl.) concludes plausibly that the arbitrary connection between the *Midrash Aseret ha-Dibberot* and the commandments and Shavuot is merely an attempt to give a religious veneer to a collection of essentially secular stories which had no other purpose than to entertain.

Some of the stories in the collection are originally found in the Talmud and represent a medieval retelling of the talmudic *aggadah*. Others are derived from more ancient sources, like the Apocrypha and Pseudepigrapha: the story of Judith is told in a different version (without mentioning her name), and the story of the woman and her seven sons from the Book of Maccabees is also retold. However, most of the stories are folktales, either Jewish in origin or Jewish versions of international folktales found in a variety of versions in many languages (Noy lists among them the international types Aarne-Thompson 976, 670, 899, 2040, and others). Some of these stories are still current today among oral storytellers.

The number of stories composing the collection differs from version to version, some containing no more than 17 and others nearly 30. One manuscript (Parma 473) has 44 stories. As there are some which appear in only one version, the total number of stories connected with this work is over 50. A large number of stories (12) are concerned with the commandment “Thou shalt not commit adultery”; an erotic element is also found in stories related to other commandments. Women, frequently courageous and devout, are the heroines of many of the stories. From the religious point of view, the stories seem to imply an extreme devotion to the observance of the commandments, far beyond that required by the *halakhah*. The

collection can also be described, therefore, as one of the earliest ethical works written in the Middle Ages.

[Joseph Dan]

MIDRASH HA-GADOL (Heb. מִדְרָשׁ הַגָּדוֹל), a 13th-century rabbinic work on the Pentateuch, emanating from Yemen and consisting mainly of excerpts of older rabbinic texts of the talmudic period. The Midrash is anonymous, but it is now certain that it was written by a native of Aden, David b. Amram *Adani. Adani writes in clear, limpid Hebrew prose, introducing each weekly portion with a proem in rhymed verse. His work is of importance not only because of the author's original contributions to the literature of *halakhah* and *aggadah*, but also because of the multitude of extracts which he incorporates from ancient tannaitic Midrashim either unknown, or only partially known, from other sources. Thus, for instance, the *Midrash ha-Gadol* has enabled scholars to reconstruct large portions of the lost **Mekhilta of R. Simeon b. Yoḥai*, the **Sifrei Zuta*, and the *Mekhilta of R. Ishmael* on Deuteronomy. In addition, the *Midrash ha-Gadol* is valuable for the accuracy of its quotations from known sources, such as the Talmud and the Midrashim. Its readings have made it possible to correct the texts of older works which have survived in garbled form. The *Midrash ha-Gadol* is also notable for its contribution to the study of the code of *Maimonides, as it preserves many sources available to Maimonides but otherwise unknown. Not only does Adani frequently quote the code on which the Yemenites largely, if not exclusively, base their religious rulings, but his work enables students to reconstruct the older authorities on whom Maimonides had based his rulings. As a result, many difficulties which had puzzled students of Maimonides over the generations have been solved. The *Midrash ha-Gadol* first came to the notice of European scholars in the 19th century. The text was brought to Europe in manuscript in 1878 and sold to the Royal Library in Berlin by M.W. Shapira, whose name is associated with the alleged forgery known as the *Shapira fragments. Since then, other manuscripts have been acquired by the major libraries in the western world. Solomon Schechter in his edition of the *Avot de-Rabbi Nathan* (1887) was the first to make extensive use of this Midrash and he edited the first part (on Genesis) in 1902. Different parts of the Midrash have been edited by other scholars: Exodus by D.W. Hoffmann (1913–21), Leviticus by Nahum E. Rabinowitz (1932), and Numbers by Solomon Fisch (partial edition, 1940; reissued in complete form with Hebrew commentary and introduction, 2 vols., 1957–63). Genesis and Exodus were re-edited by M. Margulies (*Margalioth; 1947, 1956), and Numbers by Z.M. Rabinowitz (1967). There exist two Yemenite commentaries on the Midrash, one titled *Segullat Yisrael* (“The Treasure of Israel”), dated 5440 (i.e., 1680) by R. Israel b. Solomon ha-Kohen, containing only a few interpretations and these of

only slight value, and the other (anon.), the *Sefer ha-Margalit* (“Book of the Pearl”), containing explanations in Hebrew and Arabic of difficult words. The *Midrash ha-Gadol* is still a standard work of rabbinic homily for the Yemenite community and circulates widely in manuscript.

[Solomon Fisch]

MIDRASHIM, SMALLER. This entry covers those aggadic and midrashic works which are not treated in separate articles.

(1) MIDRASH AGUR, also known as *Mishnat R. Eliezer*, or *Midrash Sheloshim u-Shetayim Middot*. Belonging to some extent to the category of aggadic works, this Midrash is an exposition on Proverbs 30:1–3 (“The words of Agur the son of Jakeh ...”), and begins by quoting R. *Eliezer b. Yose haGelili’s Baraita of 32 Rules. It used the Babylonian Talmud. Though written in a pure Hebrew, it contains Arabic words and refers to the “kingdom of Ishmael.” Therefore it was probably composed in Erez Israel, more or less contemporaneously with **Pirkei de-R. Eliezer* about the middle of the eighth century C.E. It was apparently used by *Saadia Gaon, and was first printed by Menahem de Lonzano at Safed in 1626, but not a single copy of this edition has been preserved. An excerpt from the Midrash was published from a manuscript by L. Ginzberg in *Tarbiz*, 4 (1933), 297–342 (and see J.N. Epstein, *ibid.*, 343–53; S. Lieberman, in: *Ginzei Kedem*, 5 (1934), 186–90). A scholarly edition, with an introduction in English, was published by H.G. Enelow (1933).

(2) AGGADAT SHIR HA-SHIRIM (“Aggadah of Song of Songs”) or *Shir ha-Shirim Zuta* (“Minor Song of Songs”), a collection of extracts from various Midrashim. The redactor made extensive use of a Midrash, no longer extant, which was also much used by the *Yelammedenu-Tanḥuma* Midrashim, especially **Pesikta Rabbati*. It has no proems. This Midrash in its present form was undoubtedly used by R. *Judah b. Kalonymus, the 12th-century author of *Yihusei Tanna'im ve-Amora'im*. The date of its redaction is apparently not earlier than the tenth century. Alongside later material it also contains much of an earlier date, unknown from other sources. It was published in scholarly editions (from Parma Ms. 541) by S. Buber (1894) and S. Schechter (1896).

(3) MIDRASH SHIR HA-SHIRIM (“Midrash Song of Songs”), also a collection of extracts from various Midrashim. The redactor used tannaitic literature, the Jerusalem and Babylonian Talmuds, and **Genesis Rabbah*, as well as sources used by the *Yelammedenu-Tanḥuma* Midrashim. This Midrash,

which likewise has no proems and contains many *aggadot* of a later type, is also quoted by Judah b. Kalonymus. It was apparently redacted in the 11th century. A scholarly edition was published from a Cairo *Genizah* manuscript, dated 1197, by L. Gruenhut (1897).

(4) RUTH ZUTA (“Minor Ruth”), or *Midrash Megillat Ruth be-Fanim Aḥerim* (“Other Aspects of the Midrash on the Scroll of Ruth”), a late Midrash compiled from **Ruth Rabbah*, the Babylonian Talmud, and other sources. It begins with a proem which is not of the classical type. As the author of **Midrash Lekah Tov* at the end of the 11th century used this Midrash it was apparently compiled in the tenth century. It was published (from Parma Ms. 541) by S. Buber (1894).

(5) KOHELET ZUTA (“Minor Ecclesiastes”), an abbreviated version of **Ecclesiastes Rabbah*, and much more popular than it. Since it was quoted by *Nathan b. Jehiel of Rome, the author of the *Arukh*, it was apparently redacted in the tenth century. This Midrash too was published by S. Buber (1894, from Parma Ms. 541).

(6) EIKHAH ZUTA (“Minor Lamentations”), an exposition of the first three verses of Lamentations, consisting mainly of *aggadot* on the destruction of the Temple. One version (A), which contains addenda from the Babylonian Talmud and **Pesikta de-Rav Kahana*, was used as a source by the compiler of the **Yalkut Shimoni*, and was published from Parma Ms. 541 by S. Buber (1894). A second, much shorter, version (B), which is defective at the beginning, contains addenda from **Lamentations Rabbah* and *Pesikta de-Rav Kahana* but not those in version A. It was published from Parma Ms. 261 by S. Buber (1894). Probably comprising excerpts from a complete Midrash on the Book of Lamentations in a manuscript as yet unexamined or no longer extant, the two versions were redacted not earlier than the tenth century.

(7) MIDRASH PANIM AḤERIM LE-ESTHER, NOSAḤ ALEF (“Other Aspects of the Midrash to the Scroll of Esther”: Version A), a short collection of *aggadot* and homilies on the Book of Esther compiled from various sources, including *Esther Rabbah II*, *Midrash Abba Guryon*, the Babylonian Midrash on Esther (see Babylonian *Talmud; and **Megillah*), *Pirkei de-R. Eliezer*, and others. It was redacted not earlier than the 12th century. S. Buber published the Midrash from a manuscript in the *Sifrei... Esther* (as above).

(8) MIDRASH YONAH, a late aggadic work on the Book of Jonah. Its author, drawing mainly on *Pirkei de-R. Eliezer* and the Babylonian Talmud, worked his sources into a fluent account told in his own words (a pure but artificial Hebrew). It was written not earlier than the end of the eighth century. First published in Prague (1595), it was subsequently republished, notably by H.M. Horowitz in an edition from a manuscript in *Aguddat Aggadot* (1881), 11 ff.

(9) MIDRASH HALLEL, a late midrashic work on the **Hallel* chapters in the Book of Psalms. The author used mainly **Midrash Tehillim* as well as the *Heikhalot* literature. Redacted not earlier than the tenth century, the work was published from a manuscript by A. Jellinek, *Beit ha-Midrash*, 5 (1938), 87–110.

(10) MIDRASH ESFAH, named from its introductory words: “Gather [*esfah*] unto Me seventy men of the elders of Israel” (Num. 11:16). This is a midrashic work on the Book of Numbers, most of which is no longer extant. Excerpts from it are quoted in *Yalkut Shimoni* and some have been published from manuscripts (*Abraham b. Elijah of Vilna, *Rav Pe’alim*, ed. by S.M. Chones (1894), 147–53; S.A. Wertheimer, *Battei Midrashot*, 1 (1950), 211–4). Unpublished fragments are also in existence. Known to the Babylonian *geonim* in the ninth century, apparently the work was edited not earlier than the end of the seventh century.

(11) MIDRASH ESER GALUYOT (“Midrash on the Ten Expulsions”), found in different versions in several manuscripts, some of which have been published (Basle, 1578 [on which is based L. Gruenhut’s *Sefer ha-Likkutim*, 3 (1889)], 1–22 (second pagination); Carmoly, Brussels (1842); A. Jellinek, *Beit ha-Midrash*, 4 (1938), 133–6; 5 (1938), 113–6; M. Ish-Shalom in *Sinai*, 43 (1958), 195–211). The date of the work, for which the author used Midrashim of tannaitic and amoraic times, is not earlier than the ninth century.

(12) MIDRASH SHELOSHAH VE-ARBA’AH (“Midrash Three and Four”; also called *Pirkei Rabbenu ha-Kadosh*, *Ma’aseh Torah*, and *Huppah Eliyahu*), also extant in different versions in many manuscripts, only some of which have been published (S.A. Wertheimer, *Battei Midrashot*, 2 (1953), 45–73; S. Schoenblum, in the collection *Sheloshah Sefarim Niftahim* (1877); L. Gruenhut, *Sefer ha-Likkutim*, 3 (1899), 33–90 (second pagination); *Kol Bo*, para. 118; A. Jellinek, *Beit ha-Midrash*, 2 (1938), 92–101; H.M. Horowitz, in the collection *Kevod Huppah* (1888), 45–56). However, most of the manuscripts remain unpublished. Enumerating various themes grouped in numbers from three onward, the work used various ancient sources and was redacted not earlier than the ninth century.

(13) OTIYYOT DE-R. AKIVA (“Letters of Rabbi Akiva”), or *Alef Bet de-R. Akiva* (“Alphabet of Rabbi Akiva”), an aggadic work likewise extant in different versions and in many manuscripts, only some of which have been published (Constantinople (1516), version A; Cracow (1579), version B; Wertheimer, *Battei Midrashot*, 2 (1953), 333–465, four versions), but most of them (including Mss. of the 13th and 14th centuries) have not yet appeared in print. This late Midrash on the alphabet contains many mystic and eschatological discussions. As it was quoted in the tenth century, the work was apparently compiled in the ninth century.

(14) MIDRASH ḤASEROT VI-YTEROT, a homiletic exposition on the reasons for the defective and plene writing in the Bible. It is also extant in many versions in numerous manuscripts, only some of which have been published (a critical edition including variant readings of the different versions was issued by Wertheimer, *Battei Midrashot*, 2 (1953), 203–332). The work shows the influence of the masoretic period. Since different versions are already cited in the responsa of *Hai Gaon, the date of its redaction has therefore to be fixed in the ninth century.

(15) MIDRASH AVKIR, so called after the initial letters of

the formula אָמֵן בְּיַמֵּינוּ כֵּן יְהִי רָצוֹן (Amen be-Yameinu Ken Yehi Razon) which concludes each homily. The Midrash is no longer extant but many excerpts from it have been preserved in *Yalkut Shimoni*; hence it was probably a Midrash on Genesis and Exodus, written in an artificial Hebrew. Both the style and contents of the excerpts are reminiscent of late aggadic and midrashic works, such as *Tanna de-Vei Eliyahu, *Pesikta de-R. Eliezer*, and the additional *Midrash Va-Yehi of Genesis Rabbah*. It was first definitely quoted by German Jewish authors of the beginning of the 13th century. Since it is doubtful whether the author of *Lekah Tov* used the work, its redaction should be dated to the beginning of the 11th century. Extracts from quotations of it were published by S. Buber (in *Ha-Shaḥar*, 11 (1883), 338–45, 409–18, 453–61), and from manuscripts by A. Neubauer (in *REJ*, 14 (1887), 109f.) and by A. Epstein (in *Ha-Eshkol*, 6 (1909), 204–7). It is doubtful if the extracts published by A. Marmorstein (in *Devir*, 1 (1923), 113–44) are from *Midrash Avkir*.

(16) MIDRASH TADSHE or *Baraita de-R. Pinḥas b. Ya’ir* derives its names from its introductory sentence: “It is written [Gen. 1:11]: ‘And God said: Let the earth put forth [*tad-she*] grass...’ R. *Phinehas b. Jair asked...” In both content and method, this pseudographical Midrash resembles works of the Second Temple period, on which it drew (such as the Book of Jubilees, *Philo, etc.). Despite all the internal indications pointing to its late composition, its date is to be assigned to not later than 1000 C.E., since *Moses ha-Darshan used the work. It was first published from a manuscript by A. Jellinek (*Beit ha-Midrash*, 3 (1928), 164–93).

(17) KISSE VE-IPPODROMIN SHEL SHELOMO HA-MELEKH, an aggadic tale dating from the Byzantine period. The first half, an adaptation of a description found in **Targum Sheni*, was written apparently in the 11th century (see E. Villepatlagean, in *REJ*, 121 (1962), 9–33). In it Solomon figures as a Byzantine emperor who holds horse races in the hippodrome, the colors of the different factions in the circus (blue, white, red, and green) being those of the courtiers’ clothes. The work was published from a manuscript by A. Jellinek (*Beit ha-Midrash*, 5 (1938), 34–39).

(18) SEFER HA-YASHAR (“Book of Jashar”), a late aggadic work corresponding to the narrative parts of the Pentateuch (in particular Gen. and Ex. 1:1–2:21, comprising more than three-quarters of the work), Joshua, and Judges 1:1–2:10. The style is fluent and the language a pure but artificial, pseudo-biblical Hebrew. The author used *Genesis Rabbah*, the Babylonian Talmud, *Pirkei de-R. Eliezer*, **Midrash va-Yissa’u*, **Josippon*, *Midrash Avkir* (no. 15) as well as ancient sources from the literature of the Second Temple period (its structure is reminiscent of *Liber Antiquitatum Biblicarum*). Connecting the biblical events with later ones in Jewish history, the author at times used his imagination freely and was greatly influenced by Muslim legends. The work contains many Arabic names and a Latin one, as well as the medieval philosophical definition that man is a living soul endowed with speech. It is first quoted by *Yalkut Shimoni*. Hence the work was written

apparently at the end of the 11th century, perhaps in southern Spain. First published in Venice in 1625, it has since been republished many times.

(19) MIDRASH KONEN, or *Adonai be-Ḥokhmah Yasad Arez*, dealing with the Creation, the heavens, paradise, and hell. This Midrash was influenced by apocalyptic sources of the Second Temple period, and by the mystic literature of the beginning of the Middle Ages. Composed not earlier than about the 11th century, it was first published in Venice in 1601. Another version was published from manuscript by A. Jellinek (*Beit haMidrash*, 5 (1938), 63–69) and excerpts from similar Midrashim, *Seder Rabbah di-Vereshit*, were published by S.A. Wertheimer (*Battei Midrashot*, 1 (1950), 1–48). Yet another version, *Zeh Ma'aseh Bereshit*, appeared in *Sefer Razi'el ha-Malakh*, and still another version was published from a manuscript by L. Ginzberg (*Ginzei Schechter*, 1 (1928), 182–7).

(20) MIDRASH VA-YEKHULLU (RABBATI), called after its opening sentence (Gen. 2:1): “And the heaven and the earth were finished [*va-yekhullu*]...” This Midrash, which is no longer extant, was quoted from the middle of the 12th century onward. The various quotations that have been preserved (they have been collected by L. Gruenhut, *Sefer ha-Likkutim*, 2 (1898), 16b–20a) show that the redactor used the Jerusalem Talmud and *Yelammedenu-Tanḥuma*. It is difficult to fix the date of its redaction but it was apparently not before the end of the tenth century.

(21) MIDRASH VA-YOSHA, a late aggadic work on the song at the Red Sea, which used, among others, *Pirkei de-R. Eliezer* and *Pesikta Rabbati*. The name is derived from the opening sentence (Ex. 14:30): “Thus the Lord saved [*vayosha*]...” The Midrash mentions *Armilus as a well-known figure. Apparently redacted at the end of the 11th century, it was first published at Constantinople in 1519 and again in the collection *Divrei Ḥakhamim* (1849).

(22) MIDRASH AGGADAH, an exegetical Midrash on the Pentateuch consisting mainly of excerpts from the work of Moses ha-Darshan. This is evident from the many parallel passages between, on the one hand, *Midrash Aggadah* and, on the other, **Genesis Rabbati*, *Numbers Rabbah 1*, and the quotations from Moses ha-Darshan's work cited in Rashi's commentary on the Pentateuch. It is further evident from the extensive use both of *Midrash Tadshe* (no. 16) and of apocryphal and pseudepigraphical works of the Second Temple period (in particular, the Book of Jubilees). *Midrash Aggadah*, compiled apparently in the 12th century, was published from the Aleppo manuscript by S. Buber (1894).

(23) MIDRESHEI ḤANUKKAH. Some of these Midrashim were published by A. Jellinek (*Beit ha-Midrash*, 1 (1938), 132–6; 6 (1938), 1–3), the rest being extant in manuscript. They are all late aggadic works, the oldest of them having been written apparently not earlier than the tenth century, and comprise various *aggadot* on the *Hasmonean revolt into which have been woven the story of *Judith and Holofernes as well as the theme of *ius primae noctis*.

(24) PESIKTA ḤADTA, or *Midrash Mah Rabbu* (“How manifold [*mah rabbu*] are Thy works, O Lord!”; Ps. 104:24), a compilation of homilies, of various dates and from different sources, on the festivals. It used, among others, late works (*Pesikta Rabbati*, *Sefer *Yezirah*, *Pirkei de-R. Eliezer*, *Midrash Konen* (no. 19), *Midreshei Ḥanukkah* (no. 23)). The date of its redaction is to be assigned to not earlier than the 12th century. It was first published from a manuscript by A. Jellinek (*Beit ha-Midrash*, 1 (1938), 137–41; 6 (1932), 36–70).

(25) MIDRASH TEMURAH, a pseudepigraphical aggadic work (ascribed to R. *Ishmael and R. *Akiva) dealing with the changes (*temurot*) in the world and in the life of man. The author was apparently acquainted with the commentary of Abraham *Ibn Ezra. The work was first mentioned by Me-nahem ha-*Meiri. According to all indications its redaction is not earlier than the end of the 12th century. It was first published at the end of H.J.D. Azulai's *Shem ha-Gedolim* (1786), then from another manuscript at the end of *Aggadot Bereshit* (Vilna, 1802), and frequently afterward. It was also issued in a critical edition, based on several manuscripts and on all the earlier published versions, by S.A. Wertheimer (*Battei Midrashot*, 2 (1953), 187–201).

(26) BERESHIT ZUTA (“Minor Genesis”). Extracted from many different sources this Midrash was compiled by R. Samuel b. Nissim *Masnut of Aleppo, who lived at the beginning of the 13th century, and published from manuscript by M. Hakohen (1962).

Many other small Midrashim, to which no individual articles have been assigned and which are not mentioned in this one, were published in various compilations containing collections of Midrashim. Such compilations, together with an introduction, notes, and a commentary, were published especially from the second half of the 19th century onward. Among these the most important are A. Jellinek, *Beit ha-Midrash* (with introductions in German), 6 vols. (1853–77, 1938²); H.M. Horowitz, *Aguddat Aggadot* (1881; repr. 1967); idem, *Beit Eked ha-Aggadot*, 2 pts. (1881–82; repr. 1967); idem, *Tosefta Attikta* (1890); S.A. Wertheimer, *Battei Midrashot*, 4 vols. (1893–97; 1950–53², in 2 vols.); idem, *Leket Midrashim* (1903); idem, *Ozar Midrashim*, 2 vols. (1913–14); idem, *Midrashim Kitvei Yad* (1923); L. Gruenhut, *Sefer ha-Likkutim*, 6 vols. (1898–1903); J.D. Eisenstein, *Ozar Midrashim*, 2 vols. (1915); L. Ginzberg, *Ginzei Schechter*, 1 (1928); J. Mann, *The Bible as Read and Preached in the Old Synagogue*, 1 (1940); 2 (1966), by J. Mann and I. Sonne.

For *Midrash Esther ha-Bavli* and *Midrash Eikhah ha-Bavli* see *Midrash; Babylonian *Talmud; and *Megillah. For *Aggadot Esther* see *Midrash ha-Gadol. For *Tefillat Mordekhai ve-Esther* see *Esther and *Mordecai. For *Midrash Petirat Aharon* see *Aaron. For *Midrash Petirat Moshe* and for *Midrash Divrei ha-Yamim shel Moshe* see *Moses, Chronicles of. For *Midreshei Yehudit* see *Judith. For *Midrash Birkat Ya'akov* see *Jacob. For *Midreshei Elleh Ezkerah va-Aseret Harugei Malkhut* see *Heikhalot; *Merkabah; and *Ten Martyrs. For *Midrash Hashkem* see *Ve-Hizhir. For *Midrash David ha-Nagid* see *David ha-

Nagid. For *Midreshei Teiman* see *Yemen. For *Haggadot ha-Talmud* and *Ein Ya'akov* see Babylonian *Talmud.

[Moshe David Herr]

MIDRASH LEKAḤ TOV (Heb. מִדְרָשׁ לְקַח טוֹב), a late 11th-century Midrash on the Pentateuch and Five Scrolls by Tobias b. Eliezer. The author called it *Lekah Tov* ("good doctrine") on the basis of its opening verse (Prov. 4:2): "For I give you good doctrine" which he chose with allusion to his name (for the same reason he begins his interpretations of the weekly portions of Scripture and of the Scrolls with a verse containing the word *tov*, "good"). The book was called *Pesikta* by later scholars, and also, in error, *Pesikta Zutarta*. Tobias lived in the Balkans (Buber), and his Midrash contains allusions to contemporary historical events and specific reference to the martyrs of the First Crusade of 1096 (in the portion *Emor* and in his commentary on the verse "Therefore do the maidens love thee," Song 1:3). Zunz defined the Midrash as a composition which is "half exegesis and half *aggadah*," but even in the "half *aggadah*" the exegetical commentary aspect is conspicuous. Tobias took the ideas he needed from the Babylonian Talmud, the halakhic Midrashim, and the early aggadic Midrashim (including some no longer extant), as well as from the early mystical literature and used them as the basis of his Midrash. He did not however quote them literally nor as a rule did he mention their authors. He translated Aramaic passages as well as Greek and Latin terms into Hebrew; abridged the language of the early authors; and even combined their sayings and refashioned them. He tended to quote scriptural verses from memory, which explains the many variations from the standard text.

The work also contains hundreds of explanations by Tobias himself, some in the style of the midrashic literature and some giving the literal meaning. He expounds the *keri* and the *ketiv*, the **masorah*, **gematriot*, and **notarikon* and also gives many mnemotechnical devices in the manner of the rabbis. His literal explanations are based on the rules of grammar, vocalization, accentuation, etc. It is noteworthy that he explains anthropomorphic verses and statements as parables and frequently repeats: "The Torah speaks in the language of men." This tendency is without doubt an aspect of his violent struggle with the Karaites which finds expression in the Midrash in many places. His practical aim is also conspicuous when he deals with certain *halakhot* whose performance was apparently neglected in his time. Tobias' Midrash was frequently quoted soon after it was written, but until the end of the last century only the *Lekah Tov* to Leviticus, Numbers, and Deuteronomy had been published (first edition, Venice, 1746). It was published in full, Genesis and Exodus by S. Buber (1884); Leviticus, Numbers, and Deuteronomy by Meir Katzenellenbogen of Padua (1884) from the Venice edition with corrections; the Song of Songs was published by A.W. Greenup (1909); Ruth by I. Bamberger (1887); Lamentations by J. Nacht (1895), and again by Greenup (1908); Ecclesiastes by G.

Finberg (1904); Esther by Buber in the *Sifrei de-Aggadata la Megillat Esther* (1886).

[Jacob Elbaum]

MIDRASH PROVERBS or **AGGADAT PROVERBS** (Heb. מִדְרָשׁ מְשֻׁלִּי; cf. Arukh, s.v. *nakad* 3), Midrash on the Book of Proverbs, also frequently but wrongly referred to as *Midrash Shohet Tov*. The Midrash is distinguished by an exegetical style demonstrated both in the choice of its contents and the manner in which they are quoted. The compiler selected passages which largely explained the texts of Proverbs according to the literal meaning, and very frequently reworded them. As a result several of the characteristics of the early Midrash disappear and the exegetical method prevails. There are few proems, introductory words are rare, the few statements depend upon abstruse allusions, and the discussions in general are brief. A departure from the method of the early Midrashim is further conspicuous in two respects: in the formulation of disputes, and in the ascription of dicta to early scholars. The sources of the Midrash are the Mishnah, Tosefta, *Mekhilta*, and *Sifrei*. A phenomenon worthy of mention is the compiler's use of *Heikhalot* literature (to which Zunz drew attention; see **Merkabah Mysticism*). The editor also made use of amoraic Midrashim, *Genesis Rabbah*, *Leviticus Rabbah*, *Pesikta de-Rav Kahana*, *Songs Rabbah*, and *Ecclesiastes Rabbah*, and he also knew the two versions of *Avot de-Rabbi Nathan*. He had no acquaintance with the Jerusalem Talmud, although there are numerous quotations from the Babylonian Talmud. From this, Buber concluded that it was compiled in Babylon, and not in Italy as claimed by Zunz, and conjectured from this and the quotations from it in geonic works of the eighth century, that it was edited after the final editing of the Babylonian Talmud. Although the quotations in the geonic writings are doubtful (Albeck) it is nevertheless certain that it cannot be as late as the end of the geonic period, despite the contrary view of Zunz.

The Midrash in its present state is incomplete. Parts of sections and whole sections are missing. The last third is particularly fragmentary, though the discussion of the last chapter (31) is given in detail. More Midrashim to this chapter are extant, namely *Midrash Eshet Hayil* (in S.A. Wertheimer, *Battei Midrashot*, 2 (1953²), 146–50); *Midrash Eshet Hayil* in the *Midrash ha-Gadol* to Genesis (ed. by M. Margulies (1947), 368–74); and L. Ginsberg published a fragment from a new edition of *Midrash Proverbs* (*Ginzei Schechter*, 1 (1928), 163–8). These apparently reflect different editions of the Midrash. Another version of the *Midrash Eshet Hayil*, which was collated in 1512 by Moses b. Joseph Albiladah of Yemen, is based upon ancient sources, and shows affinities in some details with the Ginsberg version (published in J.L. Nahum, *Mi-Zefunot Yehudei Teiman* (1962), 209–22). The most important printed editions of the Midrash are Constantinople, 1517, Venice, 1547, and

Prague, 1613. Subsequently the printers relied chiefly upon the Prague edition, which relied upon the Venice edition (whose reading is doubtful, as Buber has shown), and added to it the glosses, *Ot Emet*, of Meir b. Samuel Benveniste. In 1893 S. Buber published a new edition of great value based upon three manuscripts, as well as the Constantinople edition. Additional manuscripts of the Midrash are now available.

[Jacob Elbaum]

MIDRASH SAMUEL (Heb. מִדְרָשׁ שְׁמוּאֵל, *Midrash Shemu'el*), the only Midrash to a book of the early prophets. It contains 32 chapters – 24 on I Samuel and eight on II Samuel – which appear to be the contents original to the time of composition. The Midrash, a compilation chiefly from early works, contains tannaitic material from the Mishnah, Tosefta, *Mekhilta*, and *Sifrei*, as well as amoraic material from the early aggadic Midrashim: *Genesis Rabbah*, *Leviticus Rabbah*, *Lamentations Rabbah*, and the *Pesikta de-Rav Kahana*. The author also included material from later Midrashim: *Song of Songs Rabbah*, *Ecclesiastes Rabbah*, *Ruth Rabbah*, *Esther Rabbah*, *Pesikta Rabbati*, and the *Tanḥuma* Midrashim (the question of whether he made use of the *Midrash Tehillim* is still unresolved). The Midrash also contains original material, however, both early, dating from the *tannaim* and the first *amoraim*, and late. The state of the Midrash seems to indicate that it is based upon an earlier Midrash on Samuel, with additions by the editor, mostly from existing material but also some of his original interpretation. Among indications of the editing are the interlacing of exegetical and homiletical matter, which is uncommon in early Midrashim. The Midrash however is, in the main, homiletical. Other evidence of later editing is to be seen in the artificial character of most of its 14 proems, as well as the incorporation of homilies which are irrelevant to the scriptural verse or the subject matter under discussion – apparently resulting from routine copying of the sources (Albeck).

Nothing is known of the author. Zunz's assumption that the work is to be dated no earlier than the 11th century appears probable. There is overwhelming evidence, however, that it was edited in Palestine. Its sources, as has been stated, are Palestinian, as are all the *amoraim* mentioned in it. It contains no passages from the Babylonian Talmud. The language contains elements from the Palestinian Midrashim and it contains many Greek words such as are found in the Palestinian Midrashim. Both the conditions reflected by the Midrash and the problems dealt with point clearly to a Palestinian background. Rashi was the first to mention and quote the Midrash, and it is frequently mentioned by later authorities (Buber, introd., p. 28). It is referred to by many names: *Midrash Samuel*, *Aggadot Samuel*, *Midrash Et La'asot* (from its opening words, Ps. 119:126). It is also sometimes erroneously referred to as *Shoher Tov*, the name of *Midrash Tehillim*, together with which it was published (Venice, 1546). The book was first published in Constantinople in 1517, the Venice edition being the second.

It was published a third time in Prague in 1613 with the commentary of Isaac b. Samson Katz, son-in-law of *Judah Loew b. Bezalel of Prague, and has been frequently reprinted since. The best edition is that of S. Buber (Cracow, 1893) based on the printed editions of the Parma manuscript. For a commentary to *Avot* of the same name see Samuel ben Isaac *Uceda.

MIDRASH TEHILLIM (Heb. מִדְרָשׁ תְּהִלִּים; **Midrash Psalms**), an aggadic Midrash on the Psalms, called also *Aggadot Tehillim*, and *Shoher Tov* because of its opening verse, Proverbs 11:27. The Midrash embraces most of the Psalms. Despite the fact that most manuscripts and printed editions, as well as the copy that was before the author of the *Yalkut Shimoni*, lack homilies for Psalms 96, 97, and 98, they are included in the glosses of Abraham Provençal and in some manuscripts (see Jellinek and Buber). In several manuscripts and printed editions there is no Midrash to Psalm 15 but the Midrash to it is added to that of Psalm 14. The only psalms to which there is definitely no Midrash are 123 and 131. Zunz rightly conjectured that the Midrash on Psalms 119–50 differs from that to the preceding Psalms. From the differences of language and subject matter, the definite omission of the names of the authors, and the expository character of this section, he came to the conclusion that it was of later date than the earlier portion.

Zunz's claim was verified through the research of Buber. In six manuscripts and in the edition printed in Constantinople (1512), the Midrash concludes with Psalm 118. Only two manuscripts and those before Provençal contain a short fragment of a homily on Psalm 119. Buber also showed that the homilies of Psalms 122–137 were copied from the *Yalkut*, and since the latter contains no homilies to Psalms 123 and 131, these are also wanting in the Midrash. Zunz concluded from an examination of the sources, the methods employed, linguistic usages, and details of its contents (see especially *Mid. Ps.* 63:2; 6:2) that the first part is also late and that it was edited in Italy in the last centuries of the geonic period. From his examination of the manuscripts, Buber claimed that the original work had been added to by later copyists, and that its "youthfulness" is the result of these interpolations. According to him, Zunz erred in his identification of historical allusions in the work and was misled by errors in the names of persons and places (see his notes to *Mid. Ps.* 9:8). In his opinion the language of the original portions of the Midrash, its style, the manner of its homilies, and the *amoraim* mentioned in it, as well as the sources upon which it draws, are evidence of its antiquity and its Palestinian origin.

Buber, however, was mistaken, as has been shown by H. Albeck, who proved that the author of this Midrash also drew upon late Erez Israel Midrashim. Albeck also bases his argument for late dating on an examination of the form of the proems and points to the signs of deterioration in them: the connection with the verses being interpreted is faulty, the ter-

minology is inconsistent, the proems are mainly anonymous, and their formulation is at times defective. Albeck claims, furthermore, on the basis of the many differences between the manuscripts, the many additions in several of them, the errors in their arrangement, and the significant differences in the repetition of the same homily, that the present *Midrash Tehillim* consists of groups of Midrashim to the Psalms. This too is the reason, in his view, for the lack of uniformity in the methods of interpreting the Psalms: some are interpreted at length, every single verse being discussed, while in others homilies are found for only a few verses. It may be concluded, therefore, that the period of composition of the Midrash extended over some centuries. Obviously it is not identical with the *Midrash Tehillim* which Simeon b. Judah ha-Nasi taught Ḥiyya (Kid. 33a; and see also Av. Zar. 19a), even though it apparently contains material from as early as this period (third century). Its concluding section is definitely from the 13th century, and not as Mann suggested, that parts of it derive from an early "short" Midrash to Psalms.

Despite the lack of uniformity in this Midrash, its fragmentary nature on the one hand and the many additions to it on the other, it has retained many fine qualities and is one of the most beautiful in aggadic literature: it has exalted language and colorful themes, cites many stories and parables, and makes extensive and tasteful use of the hermeneutics of aggadic interpretation. L. Rabinowitz, adapting the main theory of Mann in his "The Bible as Read and Preached in the Old Synagogue," claims that one could assume a triennial reading of the Psalms paralleling that of the Torah, and from this it is possible to understand the contents of its homilies. This claim, however, is still far from being proved.

The Midrash has been frequently published: Constantinople, 1512, Venice, 1546, Prague, 1613, etc. Of great value are the Warsaw editions of 1873 and 1875, with the commentary of Aaron Moses Padua; the 1891 Vilna edition of Buber, for which he utilized eight manuscripts and the glosses of Abraham Provençal; and the English edition of Braude (1959). Important fragments of the *Midrash Tehillim* were published by A. Jellinek, *Beit ha-Midrash*, 5 (1873), 70–86 (glosses by A. Provençal); J. Mann, in: *HUCA*, 14 (1939), 303–32; and M. Arzt, in: *Alexander Marx Jubilee Volume* (1950), Hebrew section, 49–73.

[Jacob Elbaum]

MIDRASH VA-YISSA'U (Heb. מִדְרָשׁ וַיִּסְסָא'וּ), a medieval Midrash in Hebrew about the legendary wars of Jacob and his sons. The name derives from the first word of Genesis 35:5, with which the Midrash opens. The original name of the work is probably "The Book of Wars of the Sons of Jacob," a name which is preserved in Nahmanides' commentary on the Book of Genesis (to Gen. 34:13), the earliest reference to the existence of the legend. The small book contains three chapters. The

first describes a war of Jacob and his sons against the army of Ninevites, who came to Palestine to subdue the whole world. Characteristic of this chapter are exaggerations which are lacking in the two other chapters, a style possibly influenced by the Book of Josippon. This chapter does not appear in some manuscripts, although two of them consist of it only, which indicates that it was possibly a later addition to the Midrash. The second chapter describes the wars of the sons of Jacob against the Amorite kings seven years after Jacob and his family withdrew from Shechem (Gen. 35:5) because of the defilement of Dinah and the events which followed. The story of the victory over the Amorite kings is opposed to that of the biblical narrative, where Jacob fears that he will be outnumbered and destroyed. However, the story of the victory is hinted at in Genesis 48:22, a verse which is quoted to this effect in the Midrash. The third chapter describes the war between Jacob and his sons and Esau and his sons, in which Esau is killed by Jacob and Esau's descendants become tributary to Jacob's family.

The medieval Hebrew book (with the exception of the first chapter) is a free translation from Greek (or Latin) of an old Jewish (Hebrew or Aramaic) text from the time of the Second Temple, a text which was also used by the authors of the Book of Jubilees and the Testaments of the Patriarchs: the wars against the Amorites are narrated in the Testament of Judah, chapters 3–7, and in an abbreviated form in Jubilees 34:1–9; and a parallel narrative to the war against Esau and his sons is preserved in Jubilees 37 and 38:1–14, and in an abbreviated form, in the Testament of Judah, chapter 9. The medieval *Midrash Va-Yissa'u* is of great importance for a reconstruction of the original ancient Jewish text. The ancient text, which was used by the Book of Jubilees and the extant Testament of Judah, and is the basis of chapters 2–3 of *Midrash Va-Yissa'u*, could have been a separate work. It seems more probable, however, that the common source of all three works, in their description of the war of Jacob and his sons against the Amorite kings and against Esau, was an older and more expanded form of the Testament of Judah than its extant form in the Testament of the Patriarchs, a situation similar to that of the Testament of *Levi and the Testament of *Naphtali. Some scholars see in the description of the wars against the Amorites and Esau a tendentious projection into the biblical past of the wars of John Hyrcanus against the Samaritans and Edomites, the descendants of Esau, and a historical justification of these wars. *Midrash Va-Yissa'u* was used, expanded, and rewritten in the medieval *Sefer ha-Yashar* ("Book of Jashar"). A critical edition was published with an introduction by J.Z. Lauterbach in *Abhandlungen zur Erinnerung an H.P. Chajes* (1933, Heb. pt. 205–22).

[David Flusser]

MIDRESHEI HALAKHAH (Heb. מִדְרָשֵׁי הַלְכָה; “Halakhic Midrashim”), the appellation given to a group of tannaitic expositions on four books of the Pentateuch. This body of tannaitic literature will be discussed below under the following headings: (1) Characteristics of Halakhic Midrash: (a) The Collections; (b) The Term Halakhic Midrash; (c) Literary Nature and Relation to Early Midrash; (d) Authority of the Bible; (e) Development of Exegetical Methods. (2) The Schools of R. Ishmael and of R. Akiva: (a) Distinct Exegetical Methods; (b) The Division into Schools; (c) Redaction of the Material from the Schools. (3) The Aggadic Material. (4) Traces of Early *Halakhah*. (5) Relation to Other Works: (a) Aramaic Targumim on the Torah; (b) Mishnah; (c) Tosefta; (d) Talmuds. (6) Time and Place of Redaction. (7) History of Research and Future Challenges.

1. Characteristics of Halakhic Midrash

(A) THE COLLECTIONS. Halakhic Midrashim (ḤM) contain both halakhic and aggadic (i.e., nonlegal) material from the tannaitic period, arranged according to the order of verses in the Torah, in contrast with other major compositions of this period – Mishnah and Tosefta – in which the material is arranged by subject. (See: *Mishnah: The Mishnah as a Literary Work; *Halakhah* in the Mishnah; *Aggadah* in the Mishnah.) ḤM were composed on four of the five books of the Torah: Exodus, Leviticus, Numbers, and Deuteronomy. There is only a single whole extant ḤM on each of these four books: **Mekhilta de-Rabbi Ishmael* on Exodus (MY), **Sifra* on Leviticus, **Sifrei* on Numbers (SN), and **Sifrei* on Deuteronomy (SD). Three other midrashim have been partially reconstructed from *Genizah* fragments, and from citations by *rishonim* (medieval authorities): **Mekhilta de-Rabbi Simeon ben Yohai* on Exodus (MS), **Sifrei Zuta* on Numbers (SZN), and **Mekhilta* on Deuteronomy (MD). Passages from an additional tannaitic midrash on the book of Deuteronomy, known as **Sifrei Zuta* on Deuteronomy (SZD), were recently discovered.

In his fundamental study of ḤM, Hoffmann drew a clear and persuasive distinction between the midrashic schools of R. Akiva and R. Ishmael, that differ from one other in their homiletical methods, midrashic terminology, the names of the major sages mentioned in them, and in the body of the exegeses. Hoffmann similarly demonstrated that the midrashim

Division of Midreshei Halakhah According to Types

| | Type A ("de-vei R. Ishmael") | Type B ("de-vei R. Akiva") |
|-------------|--------------------------------------|--|
| Exodus | † <i>Mekhilta</i> (of R. Ishmael) | <i>Mekhilta</i> of R. Simeon ben Yohai |
| Leviticus | (fragments?) | † <i>Sifra</i> |
| Numbers | † <i>Sifrei</i> on Numbers | <i>Sifrei Zuta</i> |
| Deuteronomy | Deuteronomy = <i>Midrash Tannaim</i> | † <i>Sifrei Deuteronomy</i> |

The Midrashim that were known in the middle of the 19th century are marked with a †.

on each of the Pentateuchal books that have come down to us represent, in fact, these two schools, with one midrash from the school of R. Akiva and a second, from the school of R. Ishmael, extant for each of the books of the Torah (except for Genesis). MS, the major portion of *Sifra*, SZN, and SD belong to the school of R. Akiva, while the school of R. Ishmael is represented by MY, several additions that were appended to *Sifra*, SN, and MD. Other scholars, the most prominent of whom was J.N. Epstein, developed and expanded upon the distinctions between these two schools, while at the same time defining the unique character of each of the specific tannaitic ḤM.

A reexamination of the ḤM, taking into consideration additional passages from the three lost ḤM that were discovered in the *Genizah* and the new passages from SZD, teaches that, alongside the common elements of the midrashim belonging to each school, the differences between the midrashim are to be afforded greater prominence. The four midrashim from the school of R. Ishmael are marked by a relatively high degree of uniformity. Those from the school of R. Akiva, in contrast, are not homogeneous, and are to be divided into two subcategories that differ from each other in many realms: (a) MS, *Sifra*, and SD represent the classic midrashic school of R. Akiva, and bear a marked proximity to the Mishnah; (b) SZN and SZD exhibit a number of unique characteristics, both linguistically and with regard to their content, and have only very tenuous ties to the Mishnah of R. Judah ha-Nasi. This division, by itself, raises the possibility that the two groups of ḤM from the school of R. Akiva are merely representatives of the literary product of two academies, that originally included two parallel midrashic redactions for each of the Pentateuchal books from Exodus to Deuteronomy. Aside from the unlikelihood that the redactors of a school for the exegesis of the Torah would begin their activity with the Book of Numbers, or would be satisfied with midrashim on the Books of Exodus, Leviticus, and Deuteronomy, support for the existence of additional ḤM that have not been preserved may be brought from exegeses that were transferred verbatim from one midrash to another. Thus, for example, SZN and SZD contain exegeses that have their source in midrashim from the school of *Sifrei Zuta* on the books of Exodus and Leviticus. Remnants from other homiletical redactions of the tannaitic ḤM can also be discerned in many ḤM *baraitot* that are preserved in other compositions, most importantly, the Tosefta and the two Talmuds.

The above evidence teaches that the literature of the tannaitic Midrashim was originally much more extensive and richer than the extant written works. Such a perception requires us to beware of the drawing of unequivocal conclusions on the basis of the partial data that we possess, that are merely the tip of the iceberg. However, an awareness of our limitations does not exempt us from attempting to evaluate in considered fashion the body of data known to us regarding the details and rules of the ḤM.

(B) THE TERM HALAKHIC MIDRASH. The accepted name in scholarly literature for the tannaitic midrashim on the Torah,

“*midrashei ha-halakhah*,” is somewhat misleading, since these midrashim also contain aggadic material, a fact that is especially striking in MY and in SD, half of whose exegeses are of an aggadic nature. Nonetheless, the name “*midrashei ha-halakhah*” is defensible, since almost all the legal material mentioned in the Torah is included in ḤM, while only scant non-halakhic material, such as narratives, genealogical lists, ethical exhortations, and the like, are the subject of orderly midrashic exegesis in ḤM. Criteria have not been formulated that would explain why certain aggadic passages were included in ḤM, while others are not subject to such exegetical treatment. The clear linkage of the tannaitic midrashim to the halakhic material, specifically, can be learned from the fact that three out of the eight extant ḤM (MY, SN, and SZN) start with the first halakhic topic appearing in the appropriate biblical book, and not with the beginning of the book itself. This also explains the absence of any tannaitic midrash on the Book of Genesis, that is mostly concerned with nonlegal topics. It is worth noting in this context that a majority of the aggadic material incorporated in the ḤM seems to reflect an independent common source, and may not originally have derived from the two schools of halakhic exegesis. This strongly suggests that the midrashic material that was redacted by the sages from each of the two schools primarily contained passages that were fundamentally halakhic (see 3. The Aggadic Material below).

(C) LITERARY NATURE AND RELATION TO EARLY MIDRASH. ḤM literature draws a sharp distinction between the biblical text, on the one hand, and its interpretation by the rabbis, on the other. Every passage opens with a lemma consisting of the quotation of one or more words from the biblical verse, followed by a presentation of the exegetic interpretation of the words quoted. The quote and its interpretation comprise an independent literary unit known as a *midrash*. Generally, the order of the interpreted biblical passages precisely follows the order of the verses in the Bible, and only on rare occasions do the midrashim diverge from the biblical order.

The midrashim are written in Mishnahic Hebrew, and are formulated concisely, in a reserved and focused style. These works occasionally contain fairly simple and straightforward interpretations of the language of the Bible, that are formulated in accordance with the vocabulary and terminology of rabbinic language and paraphrases of the language of Scripture. Generally speaking, however, the midrashim go far beyond the simple interpretation of the biblical passage to derive laws and ideas from Scripture, or find support in it for them, employing exegetical methodology. Additionally, at times the midrashim tend to append to the narrow interpretation of the verse expanded and extensive discussion of halakhic matters and aggadic topics that only indirectly bear on the verse.

Most of the midrashic interpretations are unattributed, but the name of the rabbinic author of the midrash is often mentioned at its beginning or end. Frequently, a number of anonymous midrashic interpretations are offered for a single

biblical expression, or are presented with an explicit tannaitic disagreement regarding the meaning of a verse. In many instances, reasons and proofs are appended to the exegetical interpretation to reinforce the rabbis' understanding of the passage. Some of the reasoning is formulated as a dialectic dialogue, during the course of which several alternative interpretations are suggested, and explanations are presented as to why a certain interpretation is to be accepted, and not others. Other verses are frequently cited as proof texts in the course of the midrashic interpretation of the specific verse under discussion. At times, these proofs are themselves based on the midrashic understanding of the proof text as it was interpreted elsewhere, and not on its simple meaning. Other verses are brought to resolve contradictions between different verses or to clarify some new teaching that is understood to be implied by the repetition of verses and expressions that are mentioned in the Bible more than once. The midrashic interpretations are usually founded on fine distinctions drawn with regard to the general content of the biblical text, its individual words, and, at times, even its letters. All this is rooted in certain fundamental assumptions regarding the absolute authority of the Bible and its sacred text as a divine source, and in a profound belief in the exclusive legitimacy of the interpretation of Scripture that accords with rabbinic *halakhah*.

The above literary qualities are unique to the tannaitic midrashim. The earlier exegetical literature contains glimmerings and beginnings of this sort of midrashic method, but such a consistent and developed body of work appears for the first time in ḤM. Signs of the attempt to resolve the seeming conflict between the authority of the Torah, on the one hand, and its actualization and harmonization, on the other, can already be found in the Bible itself, especially in Chronicles, where these attempts were made by a paraphrastic reformulation of the verses of the biblical verses themselves. The same is true of the *Temple Scroll*, in which the passages that discuss the same topic in a number of places in the Torah are concentrated, along with their interpretation and completion in the spirit of the laws and views prevalent among the Judean Desert sect. All this, however, was done in a rewriting of the Torah's words, as the direct, first-person, command of God, in sharp contrast with the differentiation in the tannaitic literature between the quoted verses and their interpretation. The Qumran *Pesher* literature provides an example of quoted verses in lemmas alongside their interpretation, but this is only for subjects pertaining to philosophic, ethical, or political actualization of the books of the prophets, and not of *halakhic* topics that appear in the *Torah*, as it is in the ḤM. A rare trace of an early rabbinic midrash, that apparently consists solely of quoted verses and their adjoining interpretation, by means of other verses, can be found in the homiletical expansion of “My father was a fugitive Aramean” (Deut. 26:5) in the Passover *Haggadah*. A few instances of the quotation of a verse and the presentation of its halakhic interpretation-exposition, along with the mention of alternative interpretations and their rejection, exist in the New Testament, but, obviously, these

could hardly be compared with the systematic exegeses of the Torah in HM literature.

In comparison with the literature of the Judean Desert sect, HM literature exhibits a distinctly independent nature, that fundamentally differs from biblical literature: (1) unlike the Judean Desert scrolls, it does not present its interpretation as the absolute and unequivocal word of God, but rather as reasoned human interpretation of the verses of the Torah, that exposes the philological and theological difficulties that emerge from Scripture; (2) in contrast with those scrolls, that offer a consistent and uniform conception, the HM openly presents differing views and disagreements by rabbis from various generations, that are concentrated in a collective redaction; (3) the HM are written in pithy rabbinic language, while the Judean Desert scrolls employ language that more closely resembles that of the Bible, both in its grammar and in its lofty and dramatic style; (4) the great halakhic detailing of the HM , in comparison with the Bible, is vastly more developed than that in the scrolls; (5) in many instances the content of the *halakhot* set forth in the tannaitic literature is more removed from the simple meaning of the biblical *halakhah* than that of the Judean Desert scrolls. It is noteworthy, in this context, that in the second branch of the tannaitic literature, the Mishnah and the Tosefta, the *halakhah* is ordered in a completely new structure, that does not follow the sequence of the corresponding passages in the Torah.

The literary independence of the writings by the tannaim, in comparison with those of the Judean Desert sect, may be explained both by the relative lateness of the former, and by the overall worldview of the Sages regarding their own authority and power. We have not as yet uncovered written halakhic documents of proto-rabbinic orientation from the earlier period in which the Judean Desert scrolls were composed, thereby impeding our search for the main reason for these differences. Whatever the cause, it seems that the literary formulation of the HM in the tannaitic period was the result of several factors: (1) the canonization of the biblical literature and the conception that no books were to be added to the biblical canon bolstered the need to produce other compositions that clearly distinguished between the Bible *per se*, on the one hand, and its interpretation by the rabbis, on the other; (2) the consolidation of a more uniform version of the Bible and its sanctification, specifically, constituted a necessary condition for the composition of the exegetical interpretation of this text that would be based, *inter alia*, on a close reading of details in the accepted version; (3) the multiplicity of halakhic details that had no basis in the simple readings of Scripture, and the increasing gap between the early biblical law and the later rabbinic *halakhah*, furthered the need to create an updated compilation of *halakhot* and halakhic biblical exegesis; (4) the external polemics directed against the legitimacy of rabbinic *halakhah*, and the argument that it was only a human interpretation, led to an elaboration of the exegetical methods that had the potential for weakening these claims, while at the same time reinforcing the necessity of present-

ing the close link between the *halakhot* and the verses in independent compositions; (5) the internal debate between the different exegetical schools of the tannaim themselves also intensified the need for the redaction of midrashim by each of these schools. Another possibility is that external governmental prohibitions against Torah study, and the fear that this would result in the Torah being forgotten, spurred the process of a new summation of the *halakhot*, whether redacted by subject, as in the Mishnah, or in the order of the verses in the Torah, as in the HM . The general explanations cited above are applicable to a relatively long period; better knowledge of the time of the redaction of the HM might possibly enable us to gain a more correct understanding of the circumstances surrounding their redaction.

(D) AUTHORITY OF THE BIBLE. The Pentateuch, including all its verses, is perceived in HM as the authoritative and obligatory word of God. The belief in the divine source of the Pentateuch, and in the reliability of its transmitted and accepted version, constituted the necessary pre-conditions for the composition of HM , that in many instances are based on close readings of the minutest details of the words and even letters of the biblical text. The sages of HM openly do battle with the argument that Moses forged the Torah, or that he wrote certain verses of his own volition, while the *tannaim* concurrently reject the Samaritan version of the Torah on the grounds that it is a corruption of the original.

In no instance in HM or in other talmudic sources do we find the rabbis arguing among themselves as to the version of the Bible that is the subject of their exegesis, with one rabbi upholding a certain version, and another authority championing a different wording. Despite, however, the absence of overt disagreements between the rabbis concerning the versions of the Bible, HM contain indirect echoes of the awareness by the *tannaim* of more than a single version for some Scriptural passages, both in a number of explicit testimonies, and in several expositions that instruct: "Do not read x but y," when the second version does in fact exist in another textual tradition (and this is therefore not to be viewed as mere word-play); and possibly also in midrashim that incorporate two alternative versions.

The (apparently intentional) absence of open disagreements on this issue is all the more striking given the clear indications of rabbinic cognizance of the existence of biblical textual variants brought above. This should come as no surprise, because controversies regarding the text of the Bible were liable to have undercut the very basis of the tannaitic exegetes. It should be emphasized, as regards the biblical text underlying HM , that it is not absolutely identical with Masoretic Text, the details of which were finally formulated only in the medieval period. Here and there HM cite verses in a version that differs from Masoretic Text and that, at times, accords with other versions, such as LXX, the Samaritan Torah, or the Peshitta. We also find interpretations based on the non-Masoretic Text version, that prove that this was the commonly accepted text of

the Bible possessed by the *tannaim*-exegetes. An awareness of this phenomenon is of importance, both for an examination of the textual versions of the Bible, and for a proper understanding of the midrashic interpretations themselves.

(E) DEVELOPMENT OF EXEGETICAL METHODS. The first testimony in the tannaitic sources relating to the methods by which the Torah is expounded (*middot*) describes the principles employed by Hillel (*Sifra*, chap. 1, p. 9). These rules comprise, in practice, seven simple exegetical principles for the clarification of a given verse aided by an examination of other verses that contain (1) a law either more or less severe than that in the verse under discussion (“*kal va-ḥomer* [*a minori ad majus*]”); (2) a law equivalent to that in this verse (*gezerah shavah* [comparison of similar expressions]”); (3) a law that is specified in another place, but may be utilized elsewhere (“*binyan av* [prototype]”); (4) two verses that contradict one another (“*shenei ketuvim*”); (5) a verse that includes a general formulation along with one or more individual cases (“*kelal u-ferat* [general and particular]”); (6) a rare word or phenomenon that is explicated by other instances in other places (“*ka-yoze bo be-makom aḥer* [similarly, in another place]”); (7) a verse that is understood by its context (“*davar lamad me-inyano*”).

A later list of 13 exegetical methods by which the Torah is expounded appears in the beginning of *Sifra*, in the name of R. Ishmael. In addition to their greater number, the methods of R. Ishmael are characterized by their extended explanation, their detail, and their distance from the relatively simple and straightforward principles of Hillel. For example: Hillel’s “*shenei ketuvim*” is given an interpretation: “Two texts that refute one another, until a third text comes and decides between them”; *davar lamad me-inyano*, the method of “understanding from context,” was supplemented: “*ve-davar ha-lamed mi-sofo* [and something that is learned from a later reference in the same passage].” Additional methods were specified, such as Hillel’s “*binyan av*,” that R. Ishmael developed into “*binyan av mi-katuv eḥad, u-binyan av mi-shenei ketuvim* [a prototypical inference from a single verse, and a prototypical inference from two verses].” The method of “*kelal u-ferat*” was the subject of especially extensive development, as it was divided into subsections, with an accompanying explanation of their meanings: “*kelal u-ferat; perat u-khelal* [particular and general]; *kelal u-ferat u-khelal* [general, particular, and general] – [the law] is discussed only in accordance with the subject of the particular case; [...] everything that was in the general statement that is specified, that does so to teach [a law], is not specified only to teach of itself [i.e., the specific case], but rather to teach of all that is encompassed by the general statement,” and many more.

Furthermore, at times we witness a development of the meaning of exegetical methods that were formulated in the same fashion in the lists of Hillel and R. Ishmael. An outstanding example of this phenomenon is the method of “*gezerah shavah* [analogy],” whose primary meaning, as proposed by Lieberman, is a comparison between two identical matters. It was

already related of Hillel himself that he learned out a *gezerah shavah* before the elders of Bathyra, based on a single word that appeared in two similar matters, with this word bearing directly upon the law learned from it (T. Pesaḥim 4:13, p. 165 and parallels). Later on, in the tannaitic period, the *gezerah shavah* became an almost arbitrary comparison between *halakhot* taught on two different matters, based on the same or proximate word that appeared in both laws – for the most part, without any relation to the literal meaning of these words. By means of the new transformation of this method, it was now possible in effect to prove anything, therefore compelling the rabbis to employ various measures to limit its possible uses.

An additional *baraita* containing specific midrashic interpretations illustrating the use of each method was appended to the *baraita* in the beginning of *Sifra* of R. Ishmael’s 13 exegetical methods. Most of the traditional interpreters of the methods based their clarifications on this explanatory *baraita*. It would seem, however, that the explanations given in this *baraita* for several of the methods were elucidated in a manner at variance with their original meaning in the first *baraita* of R. Ishmael, one that reflects more fully developed methods, as they were formulated in the late tannaitic period. The method of “*kelal u-ferat*” is an outstanding example of this change. According to the initial meaning of this *baraita*, “*ke-ein ha-perat* [similar to the particular statement]” is to be employed for diverse instances of generalizations and specifications, without regard for their order of appearance in the verse: a generalization followed by a specification; and a specification followed by a generalization; and a generalization followed by a specification once again followed by a generalization. In contrast with this understanding, reflections of which can be found in a number of locations throughout the talmudic literature, the explanatory *baraita* in *Sifra* regards each of these three possibilities to be a different rule, as is more common in the talmudic literature: “*kelal u-ferat* – when there is a general and a particular statement, the general statement includes only what is specified in the particular statement”; “*perat u-khelal* – the general statement is made an addition to the particular statement”; “*kelal u-ferat u-khelal* – you discuss only similar to the particular statement.” This explanation facilitates an almost certain reconstruction of the original count of the 13 methods, that the explanatory *baraita* sets at fifteen or sixteen. The development of the exegetical methods was paralleled by the formation of a school headed by R. Akiva, who preferred to base midrashic interpretation on close readings of certain words and letters in the verse under examination itself, and not to rely upon general exegetical rules, thus resulting in a widening of the gap between the exegeses and the simple meaning of Scripture.

This gradual process of the formulation of complicated and developed hermeneutical methods that were ever more distant from the initial interpretive rules that were characteristic of the early exegetical methods, continued in the amoraic period. For example, in most of their exegeses, the *amoraim* applied the *kelal u-ferat* method to verses in which the “*kelal*”

no longer represents a biblical word of general content, and the “*perat*” does not denote a word that details the generalization. The main reason for this apparently can be traced to the ongoing attempt to find biblical proof texts for increasing numbers of laws, even though these *halakhot* had not initially been derived from Scripture, specifically. This tendency, of finding support in biblical verses for many diverse *halakhot* that had developed over the course of long periods of time, therefore gave rise to the need for a parallel development of the methods by which the Torah is expounded, and of the other exegetical methods.

(2) The Schools of R. Ishmael and of R. Akiva

(A) DISTINCT EXEGETICAL METHODS. One of the important achievements of ḤM research consists of the delineation of the methodological disagreement between R. Ishmael and R. Akiva concerning hermeneutical methods, and in its wake, the drawing of a distinction between the two chief types of ḤM: the midrashim that belong to the school of R. Ishmael, on the one hand, and those from the school of R. Akiva, on the other.

Some of the methodological differences between these two rabbis are already mentioned in tannaitic sources, and their consistent disagreement on a number of topics is also mentioned in amoraic sources. Only modern scholars, however, methodically collected the disagreements between these two rabbis concerning hermeneutical methods that are dispersed throughout the talmudic literature. The reconstruction of the differences between R. Ishmael and R. Akiva and their schools was made on the basis of four types of testimonies: (1) testimonies concerning dicta transmitted in the name of R. Ishmael or R. Akiva; (2) testimonies regarding views attributed by the talmudic sources to the schools of the two tannaim, such as “*tanna de-vei Ishmael*” or “*tanni R. Simeon bar Yoḥai*” of the school of R. Akiva; (3) disagreements implicit from an analysis of the differences between ḤM belonging to each school; (4) reconstructions of disagreements between R. Ishmael and R. Akiva proposed by the Talmuds. These different types of testimony generally complement one another. Based on a careful analysis and comparison of these various testimonies, scholars have reached well-founded conclusions. At times, however, the evidence concerning the disagreements between R. Ishmael and R. Akiva that emerge from the different types of testimony are inconsistent, and we should be cautious regarding generalizations and harmonizations, some of which were voiced by the talmudic sources themselves.

R. Ishmael’s exegetic method is generally more moderate than that of R. Akiva, and the expositions by the former are less distant from the simple meaning of the biblical text than the far-reaching exegeses of R. Akiva. R. Ishmael also relies upon more *middot*, interpretive rules, and comparisons between different verses, in contrast with R. Akiva, who tends to focus upon the individual verse and draw conclusions regarding its exegetical meanings from its specific words and letters. These two *tannaim* frequently employ different exegeti-

cal methods to reach identical halakhic conclusions, while in some instances they differ regarding both the hermeneutical method and its halakhic significance. The following few examples will aid us in clarifying the differing approaches of R. Ishmael and R. Akiva to the exposition of “superfluous” words and particles, and the duplication of verbs, nouns, verses, and even of entire passages.

In one instance (TB Sanhedrin 51b) R. Akiva learns out a *halakhah* from the exposition of a letter *vav* that he considers to be superfluous, a legal conclusion that is vigorously opposed by R. Ishmael. As regards another exposition based on a seemingly unnecessary *vav*, according to R. Eliezer (Sifra, *Negaim*, chap. 13:2, 68b): “R. Ishmael said to him, ‘My master, why, you tell Scripture to be silent until I expound(!).’ R. Eliezer replied: ‘Ishmael, you are a mountain palm,’” i.e., just as the palm that grows in the mountains bears no fruit, you, too, do not have the ability to expound. R. Akiva, in the footsteps of his teachers, also consistently expounded the particles “*akh*” (but) and “*rak*” (only) as exclusionary, on the one hand, and “*et*” and “*gam*” (also) as inclusory, on the other; R. Ishmael, as well, esteemed R. Akiva’s erudition in these expositions (See Gen. R. 1, ed. Theodor-Albeck, p. 12). At times R. Akiva was even more adept at this than his teachers (See TB Pesachim 22b and the parallels).

R. Ishmael and R. Akiva similarly dissented regarding the interpretation of the combination of a finite verb with its infinitive, a standard grammatical form that commonly occurs in the Bible. R. Akiva expounds this literally, as referring to a specific and distinct *halakhah*, while R. Ishmael, in contrast, argues that “the Torah spoke in the language of man” (See, e.g., SN, *piska* 112, p. 121). It should be stressed that the expression “the Torah spoke in the language of man” appears in the tannaitic and amoraic sources only in relation to the rejection of exegeses based on verb-infinitive repetition, and on the repetition of the biblical phrase “man man” at the beginning of a topic. A similar situation is created by the concluding verses that come at the end of biblical passages, which R. Ishmael regards as literary repetitions, that are not to be expounded (See his view in SN, *piska* 152, p. 197; *piska* 157, p. 212). He also adopted a similar approach, in contrast to R. Akiva, regarding the repetition of entire passages.

R. Akiva’s extreme methodology in his far-reaching expositions might possibly also explain the assertion by the Mishnah (mSot 9:15): “When R. Akiva died, the exegetes ceased.” Noteworthy in this context is the aggadic tradition in TB *Menahot* 29b that the Holy One, blessed be He, said to Moses: “At the end of a number of generations there will be a man, Akiva son of Joseph by name, who will derive from every tip [of the letters in the Torah] mounds and mounds of laws.” In practice, we do not know of any laws that R. Akiva derived from the tips of the letters, and this was most likely an extreme characterization of his hermeneutical method.

R. Ishmael, who opposed the overly precise exposition of biblical verses practiced by R. Akiva, based his own exegeses primarily on general hermeneutical rules and the com-

parison of different verses, as is demonstrated by his use of the 13 *middot* by which the Torah is explained, as described above. In addition to these rules, additional principles also were prevalent in the school of R. Ishmael, one of which relates to topics that are repeated in the Torah: “This is a rule for expounding the Torah: Every passage that was stated in one place but lacks one element, and was taught again in another place, was repeated only for the element that was omitted. R. Akiva says, Every place in which “*le-emor* [saying]” is stated must be expounded” (SN *piska* 2, p. 4). This apparently indicates that the school of R. Ishmael maintained that expositions are not to be founded on the duplication caused by the repetition of the other similar verses in the two passages. The problem with this is that on occasion the חמ of R. Ishmael, as well, employ such repetitions as the basis for exegeses, and it may reasonably be assumed that there was no unanimity within the school of R. Ishmael regarding this hermeneutical rule. At any rate, the incompleteness of our information regarding the opinions of both R. Ishmael and R. Akiva on this cardinal issue graphically illustrates the extent to which our knowledge regarding the conceptions of the *tannaim* are partial and imprecise.

Another hermeneutical rule of R. Ishmael relates to the tension between the simple meaning of the biblical text and what seemed logical and correct to the rabbis. R. Akiva resolves the contradiction by means of an extreme exegesis that removes the verses from their literal meaning and interprets them in accord with an opinion that seemed fitting to the *tannaim*. R. Ishmael, in contrast, candidly presents the inconsistency between the interpretation of the verse in accordance with his regular hermeneutical rules, on the one hand, and logic, on the other, and presents a compromise that allows both to coexist (See SN, *piska* 8, p. 14–15).

The tension between the simple meaning of Scripture and the *halakhah* is the subject of a similar disagreement between R. Ishmael and R. Akiva. The latter, as is his wont, explains the Torah in a manner that conforms with the *halakhah*. R. Ishmael, in contrast, pointedly indicates the instances in which there is a disparity between the two and says: “In three places the *halakhah* supersedes the biblical text” (*Midrash Tannaim* on Deut. 24:1, p. 154, and parallels). It nonetheless should be stressed that in many instances R. Ishmael, as well, uses his hermeneutical method to expound the Torah and harmonize it with the *halakhah*.

Another area in which we find a significant difference between R. Ishmael and R. Akiva relates to the bounds of the applicability of the *middot*, which R. Ishmael limits, while R. Akiva expands. A few examples: R. Ishmael permits the use of the *gezerah shavah* rule only if one of the two words on which it is based is free, i.e., it has not been used in other expositions. R. Akiva, in contrast, maintains that this hermeneutical method may also be used for two words that have already been put to other exegetical use. According to R. Ishmael, everything that is not specified in the Torah, but rather is learned by exegesis, cannot serve as the basis for an

additional exposition. R. Akiva, on the other hand, permits founding a new exposition on a previous one; R. Ishmael is of the opinion that “punishments are not derived from logic” (in other words, a person is not punished for violating a law that is learned by a *kal va-homer*), while other rabbis, including R. Akiva, according to one tradition, assert that punishments may be so derived.

R. Ishmael and R. Akiva also differ regarding the permissibility of expounding certain topics in public. R. Ba, in the name of Rav Yehuda (TJ *Hagigah* 2:1, 77a), attributes the law in *M. Hagigah* 2:1: “The forbidden sexual relationships may not be expounded before three persons” solely to R. Akiva, and as opposed to the opinion of R. Ishmael. Sifra (from the school of R. Akiva) accordingly did not include expositions regarding the forbidden sexual relationships in the portions of *Aharei Mot* (Lev. 18:7–23) and *Kedoshim* (Lev. 20:10–21), while the second midrash on Leviticus (from the school of R. Ishmael) does contain in these portions expositions of this subject, some of which were artificially included in several manuscripts of *Sifra*. Several explanations were offered for the reason behind this disagreement. I maintain that R. Akiva’s position is to be understood in light of his extreme exegesis and his fear that the publicizing of such expositions on the subject of forbidden sexual relationships, that human nature craves, was liable to result in licentious behavior “and may come to permit that which is prohibited,” in the words of TB (*Hagigah* 11b) on this mishnah. In contrast, R. Ishmael, who adopted a more moderate exegetical method, did not fear publicly expounding the passage of forbidden sexual relationships, presenting its prohibitions and concessions based on his hermeneutical rules. The *halakhah* in *M. Hagigah* loc. cit that “the Story of Creation is not expounded before two” is similarly attributed by R. Ba in the name of Rav Yehuda in TJ idem as following the view of R. Akiva exclusively, in opposition to the opinion of R. Ishmael. This dispute is reflected in the disagreement between the two *tannaim* concerning the legitimacy of the exposition in *Gen. R.*, p. 12, of the word “*et*” in Gen. 1:1. R. Akiva explains his position that the word is intended to prevent an erroneous Gnostic interpretation, that “we would say that the heaven and earth also are divinities,” and therefore nothing can be derived from it, while R. Ishmael has no qualms in expounding the word *et* in this problematic verse of the act of Creation. *Gen. R.* p. 206 and p. 574 also contains a similar disagreement between these *tannaim* concerning the exposition of the word “*et*” in two other verses that are likely to be understood as supporting the view of the heretics; here as well, the dispute between R. Akiva and R. Ishmael is based in the different nature of the hermeneutical method of each Tanna. R. Ishmael was not wary of expounding these verses, while R. Akiva was apprehensive that the public exegesis of such sensitive verses in accordance with his extreme expositional method would be liable to serve as justification for the extreme interpretations of the heretics, following their methodology, and he therefore refrained from expounding them in public. In light of the above, we cannot accept the opinion of

Heschel that R. Ishmael was a rationalist who vigorously opposed esoteric expositions of the Torah and matters that cannot be attained by the intellect. More generally, the drawing of unnecessary connections between simple and literal interpretation and religious rationalism should be avoided.

(B) THE DIVISION INTO SCHOOLS. The discovery of the differing exegetical methods of R. Ishmael and of R. Akiva led scholars to divide HM into two schools: that of R. Ishmael and that of R. Akiva. This classification was based on the differences between the midrashim in the following areas: (1) The use of the exegetical *middot* that are prevalent in the midrashim from the school of R. Ishmael: Both midrashic schools make frequent use of several of the straightforward hermeneutical methods, such as *kal va-ḥomer* and *gezerah shavah* (although the emphasis that the word of the *gezerah shavah* is “free,” as we could expect, appears only in the school of R. Ishmael). Other methods, such as *kelal u-ferat*, *perat u-kelal*, and *kelal u-ferat u-kelal*, appear only in midrashim from the school of R. Ishmael. (2) The terminology of the midrash: Some of the terms and introductory formulas that appear in HM are shared by all the midrashim, while additional midrashic terms are specific to each of the two schools. Some of these special terms are essentially related to the differing hermeneutical methods of the two schools, while others are merely alternative terms in which the redactors of each of the schools apparently were accustomed to use. (3) The names of the central rabbis: The midrashim from the school of R. Ishmael cite many dicta by R. Ishmael himself and by students from his school, headed by R. Joshua, R. Jonatan, R. Nathan, and R. Isaac, who receive scant mention in HM of R. Akiva and in the Mishnah, that also belongs to the sources of the school of R. Akiva. Conversely, HM of the school of R. Akiva make particular mention of R. Akiva himself and his students, headed by R. Judah and R. Simeon. In other instances, the midrashim are distinguished by the name each gives to the same rabbi (The most outstanding example of this practice is the use by HM of the school of R. Akiva of the name “R. Simeon,” while the midrashim from the school of R. Ishmael cite “R. Simeon ben Yohai.”) (4) Parallel expositions, appearing in a number of places in each school, whose content is virtually identical, or whose exposition employs a similar interpretive principle that is characteristic of each of the two schools. (5) Anonymous dicta whose attribution to the heads of the two schools is indicated by the parallels in the talmudic literature (Although this criterion was considerably amplified by Hoffmann, and after him, by Epstein, we should register a reservation, since HM also contain unattributed midrashim that the parallels ascribe to the rabbis of the opposing school. Scholars have not compiled orderly lists of this phenomenon, thus impeding an assessment of the relative weight of the unattributed dicta.). As was noted above, the fundamental division by early scholars, based on these criteria, between the schools of R. Akiva and R. Ishmael remains valid. A comprehensive and more precise examination, however, of

the material based on these criteria themselves indicates that the midrashim from the school of R. Akiva are to be further divided into two subgroups, that are distinct from each other as regards their terminology, the names of the central rabbis who are cited, and their internal parallels.

(C) REDACTION OF THE MATERIAL FROM THE SCHOOLS. The redactors of HM did not limit their works to the teachings by the rabbis clearly identified with their respective school, and they frequently cited the views of rabbis from the other school. The redactors generally first included the material belonging to their own school, to be followed, in dialectical fashion, by the opinions of rabbis from the other school, adding the name of the author of the exposition, or without attribution, as “another interpretation [*davar aher*]” thus, precedence was given, for the most part, to the material from the school of R. Ishmael in HM of this school, to be followed by the teachings from the school of R. Akiva, while HM from the school of R. Akiva first present the dicta from their own school, and only afterwards the dicta from the school of R. Ishmael. The opinions of rabbis from the other school are usually presented in the terminology of the school to which the redactors belonged, and only in very rare instances is the terminology of the other school employed. Furthermore, at times we discern the tendentious redaction of the material in HM , with the redactors of each midrash presenting the views of the rabbis from the other school in a partial and fragmentary manner, in order to tip the scales toward the position that they favor. In conclusion, the redactors of HM are not to be considered “objective” editors of the sources they possessed. These redactors most likely belonged to the schools themselves, as can be learned from the exegetical methodology employed in their works; from the midrashic terms that they use, some of which are intrinsically linked to their exegetical methodology; from their system of ordering the material, with precedence given to the rabbis belonging to their own school; and from their tendentious adaptations of exegeses from the other school.

(3) The Aggadic Material

The major differences described above between HM belonging to the school of R. Ishmael and those from the school of R. Akiva find marked expression in the halakhic material that forms the core of this literature. The differences, however, between the midrashim from the two schools are considerably narrower in their aggadic passages, and the latter apparently originate in shared early material. The two parallel midrashim frequently contain aggadic expositions of extremely similar order, content, and style. Notwithstanding this, the differences between the two midrashim clearly indicate that these are two different redactions of early material, and not a division resulting from copying by different scribes. The two midrashic schools often differ in their specific interpretations of expressions and words, they sometimes adopt differing approaches to a certain biblical passage, and more comprehensive differences of opinion between the two are not unknown.

Despite the high degree of similarity in the aggadic material in the midrashim of both schools, most scholars have sought to apply to this material as well the accepted division of midrashim into the schools of R. Ishmael and R. Akiva. Although various signs supporting such a division appear at times, clear-cut differences between the schools in hermeneutical methods, exegetical terms, and names of rabbis are usually to be found only in the halakhic portions of the midrashim, and are hardly discernible in the aggadic sections. Accordingly, the common aggadic material of HM was quite probably not produced in the schools of R. Ishmael or of R. Akiva, but it is highly plausible that during the course of the appending of this material to the various HM , the later redactors of the two schools occasionally left their mark on this material, as well.

As regards the relation between the midrashim, concerning their shared aggadic material, the aggadic material appended to MY and MD (from the school of R. Ishmael) is notably lengthier than the parallel material that was added to MS and SD (from the school of R. Akiva). Additionally, the aggadic material incorporated in the former two midrashim, from the school of R. Ishmael, is frequently superior in style and content to the parallel material in HM from the school of R. Akiva. On the other hand, the reader is struck by the considered thought invested in the aggadic material by the redactors of SD , and especially of MS , who sought to reformulate the deficient material that they apparently received. The two HM on the Book of Numbers contain similar aggadic material, but there are no extant direct textual witnesses from *Genizah* fragments of SZN , thus hindering the conducting of any reliable comparison between them. A preliminary examination of the fragmentary aggadic citations from SZN in *Yalkut Shimoni* and in *Midrash ha-Gadol* indicates a relatively major distinction between them and the aggadot of SN , and the characteristic features marking the relationship between them differ from the common features exhibited by the dual midrashim on Exodus and Deuteronomy. The aggadic material appended to SZN (from the school of R. Akiva) is often more detailed than its parallels in SN (from the school of R. Ishmael). These initial findings are therefore not surprising, because SZN represents an independent midrashic branch of the school of R. Akiva, and it is only natural that the aggadic material appended to it possesses unique features, that do not necessarily resemble the aggadic fragments added to MS and SD , that represent the other branch of this school.

Finally, it should be noted that our characterization of the aggadic material in HM relates solely to the large units of entire Torah portions that are of an aggadic nature, and not to aggadic expositions of a certain verse that are incorporated within the halakhic sections, that are an integral part of the classical midrashim from both schools.

(4) Traces of Early Halakhah

The decisive majority of the halakhic material cited in HM resembles parallel tannaitic material in the Mishnah, Tosefta, and *baraitot* in the Talmuds. Moreover, HM quote more dicta

from later *tannaim* than does the Mishnah. At the same time, HM also preserve opinions from, or allusions to, *halakhot* that differ from the prevalent rabbinic *halakhot*, as the latter were transmitted in most of the talmudic sources. Some of these opinions reflect the views of *tannaim* that, for whatever reason, have not come down to us in the other traditions, while another portion is representative of early or rejected *halakhot* that were observed in the Second Temple period.

The reasons for the preservation of these early *halakhot* in HM are to be found mainly in the following elements: (1) the highly developed dialectic deliberations in HM , including methodical discussions of several possible interpretations of the Bible, including a reasoned acceptance of one interpretation over another, with this alternative (rejected) interpretation occasionally representing the early *halakhah*; (2) the diverse sources used by the redactors of HM , some of which, such as the Mishnah that was used by the school of R. Ishmael or that used by the subschool of *Sifrei Zuta*, have not reached us in an orderly form through other transmission channels; (3) the incorporation of early interpretations and midrashim in HM , at times as part of the attempt by the later redactors to adapt them to the accepted *halakhah* of their time; (4) the inferior standing of HM in comparison with the Mishnah, a fact that paradoxically led to the more faithful preservation of their original versions and traditions. On the other hand, the halakhic authority of the Mishnah and its orderly interpretation by the *amoraim* and later authorities often resulted in the emendation and adaptation of its versions and traditions, under the influence of the reigning *halakhah* in a later period.

The traditional commentators of HM generally sought to obscure the remnants of non-normative *halakhah* in HM , in order to adapt it to the more common and well-known *halakhah* brought in the Mishnah and the Talmuds. A. Geiger was the first scholar to systematically reveal the early *halakhah* in HM . L. Finkelstein devoted discussions in a number of studies of this topic, in the attempt to prove that Sifra contains many remnants of an early, Second Temple period, midrash on Leviticus, and that many early *halakhot* following Beit Shammai are retained in SD , along with more ancient fragments from the Second Temple period, and possibly even from the time of the Prophets(!). While Geiger and Finkelstein have certainly made significant contributions to the scholarly research in this field, both by raising the proper questions and by providing many fertile insights into these difficult issues, a not inconsiderable portion of their brilliant and far-reaching conclusions are not sufficiently based on a literal interpretation of the language of the midrash, nor are they supported by the direct evidence of the Dead Sea Scrolls that was published only recently.

(5) Relation to Other Works

(A) ARAMAIC TARGUMIM ON THE TORAH. The Aramaic Targumim on the Torah, which were read in public, incorporated a considerable amount of midrashic material that corresponds to the teachings included in HM . At times the Targumim assist in the interpretation of the midrashim, both for

the literal interpretation of the midrashim, and for an understanding of content of passages in which the exegesis alludes to a subject that is explicated in the Targumim.

Each Targum must be examined separately in order to answer the question of which came first, HM or the Aramaic Targumim. Early material that influences the language of the exegeses in HM is sometimes embedded in the Targum in MS . Neofiti, the Fragmentary Targum, and Onkelos. On the other hand, the Neofiti and the Fragmentary Targum occasionally contain homiletical expansions that would clearly seem to originate in HM . Although Pseudo-Jonathan is closely and consistently linked to HM , it would appear that the author of this Targum did not possess early midrashic material (as maintained by Geiger and other scholars), but rather made use of several of the currently extant HM , in order to complete the foundation of the Neofiti and the Fragmentary Targum, that, as is known, were available to him. Proofs of this use of HM by Pseudo-Jonathan can be brought from a number of corruptions in Pseudo-Jonathan that most likely were due to the errors made by the redactor of the Targum during the course of the rendition of HM . We would be hard-pressed to find a strong connection to HM and the other ancient Bible translations, such as the Septuagint, the Peshitta, and the Vulgate, and their primary contribution to the study of the midrashim lies in the versions of the Bible that they present, that are equivalent here and there to the accepted Bible text of HM .

(B) MISHNAH. The order of the *halakhot* of HM follows that of the biblical citations, which serve to demonstrate the close connection between the tannaitic *halakhah* and the verses. In addition, HM also interpret many aggadic passages. The Mishnah, in contrast, orders the tannaitic *halakhah* by subject, with the connection of the latter to the Bible generally not presented; moreover, the aggadic material in the Mishnah is very limited, in comparison to that in HM . Notwithstanding these differences, there is a clearly mutual relationship between HM and Mishnahic literatures; along with exegesis, HM contain a not inconsiderable number of quotations from mishnahyot and *baraitot*, that are frequently cited in HM after set terms such as “מיכן אמרו” [From here they said], “מִיִּכְן אִתָּהּ אָמַרְתָּ [From here you say],” “אָמְרוּ [They said],” and other such introductory formulas. In other instances, however, this material is brought in HM without a prefatory expression. On the other hand, every so often midrashic reasoning for laws is incorporated in the Mishnah, as well as short midrashic units that are characteristic of the school of R. Akiva. In other instances, the abstract halakhic formulation of the Mishnah is adapted from early midrashic material.

An examination of the mishnahyot and *baraitot* in HM teaches of an important distinction between MS , Sifra, and SD (from the central school of R. Akiva), on the one hand, and the midrashim from the school of R. Ishmael, on the other. The former make frequent use of the extant Mishnah: they often seek to link the verses and their exegeses with the Mishnah, and they generally cite our Mishnah verbatim. In

MY and SN (from the school of R. Ishmael), on the other hand, the term “From here they said” is not so common, and when the Mishnah is cited, it is not brought in its actual language, but rather paraphrased and in abbreviated form; nor do these midrashim contain many instances of “from here they said” from *baraitot* and the Tosefta. This difference emerges quite strongly from a comparison of SN and SD , both of which are represented in the same important manuscript, Vatican 32. The abbreviation “וכולה מתניתין” [etc. from the Mishnah] is quite prevalent in SD , in which the Mishnah is quite frequently cited verbatim, but is totally absent from SN , in which the Mishnah is generally not cited in its original language. The disparity between the midrashim from the school of R. Ishmael and the Mishnah is also pronounced regarding the names of the rabbis who are clearly identified with this school, who are not mentioned in the Mishnah. To these indicators we should perhaps add the interesting finding that the term “*mishnah*” itself appears only in HM from the school of R. Akiva, and is totally absent from those of the school of R. Ishmael. It would therefore appear that the redactors of MS , Sifra, and SD (from the school of R. Akiva) related to the extant Mishnah, that also is founded in this school, as an authoritative source, while the editors of MY and SN (from the school of R. Ishmael), did not recognize the supreme authority of our Mishnah. An exception is the branch of SZ , that belongs to the school of R. Akiva, but is notably singular in a number of realms: the decisive majority of the *mishnahyot* that it cites are considerably different from our Mishnah, and it has already been suggested that this is to be viewed as reflective of opposition by its redactors to Rabbi’s court and teachings.

(C) TOSEFTA. The Tosefta, that was redacted following the Mishnah, also was based in great measure on halakhic sources from the school of R. Akiva. It contains a bit more midrashic material on halakhic and aggadic topics than the Mishnah, and a portion of it was even taken from midrashic sources from the school of R. Ishmael (Such as two large fragments in *T. Shevuot*). In contrast with the Mishnah, the Tosefta occasionally mentions rabbis who are prominent representatives of the school of R. Ishmael (R. Nathan, R. Josiah, R. Isaac and R. Jonathan). Additional study of each of the separate HM is required to determine whether all HM that we possess had knowledge of the extant Tosefta, or whether they made use of other collections that included similar *baraitot*.

(D) TALMUDS. The *amoraim* drew upon collections of tannaitic HM on the Torah, as we learn from thousands of quotations from the latter in TB and TJ (see their listing, by their order in the Pentateuch, in Melamed, *HM in the Babylonian/Palestinian Talmud*). Most of the citations in the Babylonian Talmud are from the school of R. Akiva, but there are also a large number of passages from the school of R. Ishmael, and additional sources. About forty percent of the quotations in the Talmud are of new material that does not appear in the extant HM , some of which was unquestionably taken from

other collections of the schools of R. Ishmael and R. Akiva and additional nonextant sources. The remaining 60 percent of the citations that are common to the Talmuds and HM apparently indicate that the *amoraim* possessed collections akin to the extant HM . The parallels for this material are not completely congruent, with the dissimilarity between the HM and TJ smaller than the difference between HM and TB . Exceptional in this respect are *Sifra*, which is frequently cited by TB in its original language, and *MS*, with a not inconsiderable number of its expositions cited by TB . Some of the differences between the otherwise similar parallels in HM and the Talmuds ensue from differing traditions and transmissions of the same basic or raw material, while in other instances various interpretive glosses and additions, along with numerous abridgements and adaptations, were attached to the *baraitot* in the Talmuds, notably in TB , but also in TJ . We nonetheless may conclude with certainty that the *baraitot* in HM generally reflect the teachings of the *tannaim* in a manner better and more faithful to the original than their parallels in the Talmuds.

The *amoraim* often appended their explanations and clarifications to the *baraitot* of HM ; needless to say, these ancient interpretations are of incalculable value for a full understanding of the tannaitic dicta. The midrashim were not, however, always given a literal interpretation by the *amoraim*, and several of the general perceptions in the Talmuds concerning the methods of the schools of R. Ishmael, R. Akiva, and other rabbis are inconsistent with the original views held by these *tannaim* themselves. In addition to the various concrete interpretive and halakhic considerations, that frequently influenced the nonliteral interpretation of the midrashic *baraitot* in the talmudic discussions, the *amoraim* also disagree with HM regarding several general principles concerning hermeneutical methods. This is especially true concerning the common tendency of redactors from both schools to base various *halakhot* on a single biblical expression, on the one hand, while, on the other, they find support for a single *halakhah* in a number of verses. One of the central assumptions prevalent in the Talmuds, in contrast, is that each biblical expression contains the foundation for a single halakhic derivation, and that the same *halakhah* is not to be derived from more than one biblical expression. The consistent application of this exegetical assumption in both Talmuds (which the Talmuds also ascribed to the *tannaim* themselves) led to the interpretation of many tannaitic midrashim in the Talmud in a manner which is not consistent with their literal or original sense. In addition to the growing belief in the unique halakhic significance of each and every biblical expression, the biblical exegesis of the *amoraim* themselves also represents a new direction in the development of midrashic methodology. Generally speaking, the latter took another step forward in developing the exegetical method of R. Akiva and his school, with increasing focus upon the details of the verse, and by basing ever-growing numbers of laws and their particulars on Scripture, while at the same time further distancing them from the simple meaning of the biblical text.

(6) Time and Place of Redaction

We probably should accept the predominant scholarly view that the final redaction of HM was conducted in the Land of Israel, in the first or second generation following the redaction of the Mishnah, that is, by the middle of the third century CE. An earlier dating cannot be proposed, because the latest rabbis mentioned in a majority of HM are from these generations. Nor, however, should a significantly later date be assigned to this editorial activity, placing it at the end of the amoraic period sometime in the fifth century, as has been suggested by several scholars, on the basis of quite weak evidence, and we certainly should reject the thesis of Wacholder that dates the redaction of several HM to the eighth century. The Mishnaic language of HM closely resembles that of the Mishnah, without influences of the Galilean Aramaic that was the predominant language of the *bet midrash* in the fifth century, at least in Galilee. The internal character of HM reinforces the theory that regards them as a transitional period between the Mishnah (that several quote verbatim) and the Talmuds. This transitional aspect is especially pronounced in the element of dialectic reasoning that is more fully developed in HM than in the Mishnah, but had still not reached the peak of its development that would come in the Talmud (even in the PT). Furthermore, the better preservation of tannaitic views in HM , in a form closer to the original, than in their emended and adapted parallels in the Talmuds, poses a very major obstacle for the conjecture that HM were redacted close to the redaction of the PT , after a lengthy period of “hibernation,” in which they underwent no change. This same conclusion is also indicated by the fact that the more developed hermeneutical method of the *amoraim* is not discernible in HM .

Nor is it to be assumed, and this should be stressed, that the various HM were redacted at the same time, rather, a separate discussion must be devoted to the time of each individual midrash's redaction. For example, we should probably assign a slightly earlier date to the redaction of *SN*, which makes no mention of sixth-generation *tannaim*, except for a single narrative that speaks of R. Hiyya. Such a hypothesis is somewhat strengthened by the brevity and relative scarcity of associative expositions, in comparison with the other HM . It would appear, though, that after its initial redaction an additional stratum, from the “school of Rabbi,” was incorporated in *SN*. On the other hand, while most scholars maintained that *MS* is the latest of HM , basing this estimate on its expansions, the use that it, in their opinion, made of other HM , and the developed nature that they found its *halakhot* and exegeses to possess, such a conclusion seems to lack a firm basis.

Most scholars properly think that all of the tannaitic HM were redacted in the Land of Israel, a conclusion that is supported by the similarity of the language of HM to that of the Mishnah and Tosefta, which were also redacted in the Land of Israel; and by the stronger affinity between the *baraitot* in HM and their parallels in the PT and the Palestinian *midrashei aggadah*, as compared to the frequent differences between them and the *baraitot* in the TB . Even more compelling evidence is

provided by internal indicators, such as the phenomenon of transferring literary units from one place to another, usually unaccompanied by any attempt to adapt them to their new position, corresponding to the common strategy of the literary redactors of the tannaitic and amoraic literature in the Land of Israel. The redactors of the *ṬB*, in contrast, frequently sought to have their displaced *sugyot* conform to their new position. The division of the Pentateuch into portions following Land of Israel practice is also noticeable in the redaction of *ḤM*.

All this also applies to the midrashim belonging to the school of R. Ishmael, that some scholars thought were redacted in Babylonia, an opinion resting on the assumption that most of the leading *tannaim* from this school, headed by R. Josiah, R. Jonathan, R. Natan, and R. Isaac were Babylonians. A re-examination of the subject revealed that several of these rabbis, such as R. Josiah, were not Babylonians at all, and that some of them seemingly immigrated to the Land of Israel. Especially impressive is the statement in *MD* by R. Jonathan – who was (unjustifiably) considered in the past to be a Babylonian *tanna* – that is incorporated in a passage that extols the importance of the obligation to reside in the Land of Israel, and vehemently opposes leaving the Land, even for the purpose of Torah study: “I vow [*noder*] never to leave the Land [of Israel]” (Ms Oxford Heb. c 18.5). All the above evidence therefore points in the direction of the Palestinian redaction of all *ḤM*.

At present we do not possess sufficient data for a more precise determination of the location within the Land of Israel of the *batei midrash* of R. Ishmael and R. Akiva, nor of settlements or regions in which the various *ḤM* were redacted. This question is obviously related to the difficulties involved in the identification of the last redactors of each of the midrashim, a subject to which most scholars have devoted lengthy inquiries, without reaching convincing or commonly accepted conclusions. It is to be hoped that new archaeological and future literary finds will aid in solving these knotty questions.

(7) History of Research and Future Challenges

The first steps in the systematic research of *ḤM* were taken in the late eighteenth and early the nineteenth centuries by scholars of the *Wissenschaft des Judentums*: A. Geiger, L. Zunz, Z. Frankel, J.H. Weiss, M. Friedmann, and others. They focused on three main areas: (1) a historical description of the development of the talmudic and midrashic literature as a whole; (2) the manner in which *halakhah* and midrash were learned in antiquity and developed; and (3) a reinterpretation of the various *ḤM*.

In the late 19th and early 20th centuries the study of *ḤM* intensified, with works by I. Lewy, D. Hoffmann, S. Schechter, H.S. Horowitz, and others, who focused on three other spheres: (1) the schools of R. Ishmael and R. Akiva and the classification of *ḤM* by this criterion; (2) the publication of critical editions of the major *ḤM* based on mss.; (3) the reconstruction of lost *ḤM*, based on **Yalkut Shimoni*, **Midrash ha-Gadol*, **Genizah* fragments, and other sources.

Modern *ḤM* scholars, the most prominent of whom were J.N. Epstein, Ch. Albeck, S. Lieberman, and L. Finkelstein, continued the publication of *ḤM* while conducting up-to-date studies in a diverse range of related subjects. Except for Finkelstein, however, these scholars devoted most of their energy in the study of tannaitic literature to the Mishnah and Tosefta, causing them to somewhat neglect the *ḤM*.

Continued progress in *ḤM* research depends, first and foremost, on vigorous effort to discover their lost portions in the libraries throughout the world, accompanied by the publication of new critical editions of all *ḤM*. Since the publication of the first editions, scholars have uncovered new manuscripts for most of the midrashim, *Yalkutim* and additional midrashim that quote passages from *ḤM*, and several previously unknown commentaries by *rishonim* and *aḥaronim*, whose versions and interpretations cast further light upon the subject of our scholarly inquiries. Eastern textual versions are of especial importance, primarily the many fragments from the Cairo *Genizah*, whose existence was not known to the editors of the early editions. The methodology of the critical editing of the talmudic sources has also advanced by great strides in determining the text and presenting textual variants.

Based on more authoritative editions of *ḤM*, a detailed commentary should be composed for each collection. New editions accompanied by critical interpretation will provide the foundation for a renewed discussion of all the basic issues pertaining to these midrashim. They will also facilitate an overall clarification of the formal and substantial character of *ḤM* and the meaning of the specific *halakhot* and ideas they contain, in comparison with the other strata of the talmudic literature, on the one hand, and other works, spanning a broad range of periods, both Jewish and non-Jewish.

Preparatory work in several of these realms has been undertaken in recent years, such as the production of a CD-ROM of tannaitic literature by the Historical Dictionary Project of the Academy of the Hebrew Language in Jerusalem; the systematic collection of extant *ḤM* fragments in libraries throughout the world, most importantly, substantial fragments from the *Genizah*; the publication of transcriptions of all the *Genizah* fragments (apart from the *Sifra*); preparations for the new scientific publication of several midrashim; the linguistic examination of good *ḤM* mss.; the development of a literary approach that will aid in the analysis of the halakhic and aggadic passages in *ḤM*; and an orderly and detailed commentary of several passages from *ḤM*. It is to be hoped that these will yield fruits that will continue to meet the scholarly challenges that we have listed.

[Menahem I. Kahana (2nd ed.)]

MIDSTREAM, U.S. Jewish monthly. *Midstream* was founded as a quarterly in 1955 by the Theodor Herzl Foundation with the object of creating a serious Zionist periodical that would have an intellectual impact upon American Jewish life. Under the editorship of Shlomo Katz, the magazine published articles and fiction of merit on various aspects of U.S. Jewry and Israel. In 1965 it became a monthly.

Billing itself as “the leading intellectual Zionist magazine in the world,” it then became an opinion magazine covering political, social, and religious topics that are relevant to Jewish communities around the world. In 2004, *Midstream* had a subscription list of 6,500 readers.

[Ruth Beloff (2nd ed.)]

MIEDZYRZEC PODLASK (Pol. **Międzyrzec Podlaski**; called **Mezhirech** or **Mezrich** by the Jews), town in Lublin province, E. Poland. An organized Jewish community existed in the town from the middle of the 17th century. Between 1689 and 1692, the *parnasim* of the community of Miedzyrzec Podlaski waged a stubborn struggle against the leaders of the community of *Tykocin (Tiktin) for the hegemony over the Jewish communities in the vicinity of *Mielec. A magnificent synagogue, which was still standing in 1970, was erected in Miedzyrzec Podlaski at the beginning of the 18th century. The owners of the town during the 18th century, the Czartoryski family (see Adam *Czartoryski), encouraged Jews to settle in order to develop the town. At the fair held twice a year in the town, local Jewish merchants, as well as those from other towns, played an important role. In 1714 the community of Miedzyrzec Podlaski and the Jews of the surrounding villages which were under its jurisdiction paid 1,000 zlotys as poll tax. In 1759 a compromise was reached between the communities of Miedzyrzec Podlaski and *Lukow: the Jews living in the surrounding villages and townlets would pray in Miedzyrzec on the High Holidays and would also bury their dead there; they would pay their taxes one year to one community and the next year to the other. In the 19th century, during the period of Russian rule, there were no residence restrictions in Miedzyrzec Podlaski. Around the middle of the 19th century, the influence of Hasidism spread among the Jews there. At the time of the political agitation in Poland (1861), a Hebrew manifesto on the contemporary problems was circulated among the Jews of the town. In 1863 a number of the local Jewish craftsmen assisted the Polish rebels supplying them with equipment and food. During the second half of the 19th century, a Jewish working class emerged which found employment in the sawmills, the tanneries, the production of ready-made clothing, and hauling. The organized Jewish proletariat and youth participated in the 1905 revolution. At the end of 1918, a Jewish self-defense group was active in the town. Between the two world wars, branches of all the Jewish parties were established, as well as Jewish educational institutions (*Tarbut, *СУНО*, Beth Jacob). During the 1920s a weekly, *Podlashier Lebn*, was published.

[Arthur Cygielman]

Holocaust Period

Before the outbreak of World War II, there were about 12,000 Jews in the town and they constituted 75% of the total population. During the first year of Nazi occupation, about 4,000 Jews from other places were forced to settle there. In December 1939, 2,300 Jews from Nasielsk, Pultusk, Rupiń, and Serock were deported to Miedzyrzec Podlaski. In April 1940

over 1,000 Jews from Slovakia were deported there, followed by 600 Jews from Cracow, Mlama, and Mielec. In June 1940 about 2,300 men were deported to six forced labor camps organized in the vicinity of the town. Almost all of them perished. On Aug. 25–26, 1942, the first deportation to the *Treblinka death camp took place. Other deportations followed on Oct. 6–9, 1942, and Oct. 27 of that year. Over 11,000 Jews perished in these deportations, but hundreds succeeded in fleeing into the surrounding forests. Some of them organized small guerrilla units that operated in the vicinity.

In October 1942 the Germans issued a decree about the establishment of a ghetto in Miedzyrzec Podlaski. Jews who fled into the forests were encouraged to return and promised that no more deportations would take place. The Germans managed to concentrate over 4,000 Jews in the ghetto. In December 1942 about 500 of them were deported to the Trawniki concentration camp, where all of them perished. On May 2, 1943, the ghetto was liquidated and all its inmates were deported to the Treblinka death camp and exterminated there. Only about 200 Jews were left in a forced labor camp, but they too were executed on July 18, 1943, when the town was declared *judenrein*. After the liberation of the town in July 1944, 129 Jewish survivors settled there, but after a short time they left because of the inimical attitude of the local Polish population. Organizations of former residents of Miedzyrzec Podlaski are active in Israel, the United States, and Argentina.

MIELEC, town in Rzeszow province, S.E. Poland. The Jewish community of Mielec was first organized in the middle of the 17th century. The *Council of Four Lands decided in 1757 that the Mielec community should pay an annual tax of 1,200 zlotys to the *Opatow *kahal*. In 1765 there were 585 Jewish poll tax payers in Mielec and 326 in the surrounding villages; among the former were 12 tailors, three hatters, three bakers, two goldsmiths, five butchers, three *shohatim*, four musicians (*klezmer*), and three jesters (*badhanim*). In the 19th century Mielec came under the influence of the *Hasidim* of *Chortkov and *Ropczyce and descendants of the *zaddik* of Ropczyce were rabbis there. The few wealthy Jews exported timber, dealt in grain, livestock, feathers, and building materials, and ran sawmills, but the majority engaged in petty trade, tailoring, shoemaking, smithery, and building. There were also some Jewish farmers in the nearby villages. An elementary school was established by the *Baron de Hirsch fund in 1900, as well as a Beth Jacob school for girls. In 1907 the Zionist association, Benei Yehudah, was founded. During the elections of 1907 and 1913 there were anti-Jewish riots in the town. In 1917 a "Borochov circle" was organized, as well as a Jewish li-

brary and sports clubs. The Jewish population of the town remained relatively static, increasing from 2,766 (56% of the total population) in 1880 to 2,819 (57%) in 1900 and 3,280 (53%) in 1910, then falling to 2,807 (50%) in 1920. Zionist parties, *He-Ḥalutz and *Agudat Israel, were active in Mielec between the two world wars.

[Arthur Cygielman]

Holocaust Period

By September 1939 the population had reached 4,000. On Sept. 13, 1939, the eve of Rosh Ha-Shanah, the Germans set a synagogue aflame and pushed 20 persons into the burning building. Those who tried to escape were shot. German soldiers sent some Jews into the slaughterhouse and set it aflame. Then the soldiers entered the *mikveh* and murdered the Jews present. On Sept. 15, 1939 (second day of Rosh Ha-Shanah), a second synagogue was set aflame. Jews suffered from administrative and economic restrictions, from the local Germans living at Czermin, and from forced labor at the camp near the Berdechow airport.

Early in January 1942 the General Government decided on the deportation of the Mielec Jews. Orders were given to deport 2,000 persons, and on March 7–9, 1942, the order was executed in greater dimensions. The sick and old were shot on the spot; others were transferred to the Berdechow airport, where a *Selektion* was made. A group of youths was sent to the labor camp at Pustkow; the remaining population was sent to Parczew, Wlodawa, Hrubieszow, Miedzyrzec, Susiec, and other towns in the Lublin district. The Jewish population there eased the suffering of the Mielec refugees by providing lodgings and public kitchens. Some months later, the Mielec refugees and these Jewish communities were exterminated.

Mielec was among the first cities that the General Government made *judenrein*. Near the workshops of the Heinkel airplane company, Mielec had a labor camp under the direct auspices of the SS. At first the camp employed 250 forced laborers, 80 of whom were from Mielec and others from Wielopole Skrzynskie. The population at the camp increased with the deportation of Mielec Jews in the winter of 1942. By the summer the population reached 1,000, including Jews from Tarnobrzeg and Huta Komarowska. The mortality rate at the camp reached more than 15 per day, excluding the sick who were shot. The camp was liquidated on Aug. 24, 1944. Some of the prisoners were transferred to Wieliczka and the rest to the camp at Flossenburg. Some 200 persons of the Mielec community survived.

MIELZINER, MOSES (1828–1903), rabbi, professor. Mielziner was born and educated in Germany, where he began his rabbinic career. He headed a Jewish school in Copenha-

gen, Denmark, while earning his Ph.D. from the University of Giessen (1859). Immigrating to the United States, Mielziner served as a congregational rabbi and educator in New York City until 1879, when Isaac Mayer *Wise appointed him professor of Talmud at Hebrew Union College in Cincinnati. Upon Wise's death, Mielziner was chosen interim president of the seminary, a position he held for three years, from 1900 until his death.

Mielziner was a charter member of the Central Conference of American Rabbis (CCAR), and his scholarly input on relevant subjects had an important influence on early discussions of CCAR policy. He published several treatises on Jewish law – including a volume on **halakhah* and divorce and marriage, as well as an overview of rabbinic civil and criminal law – but is best known for his classic work *Introduction to the Talmud*, published originally in 1894 and reissued three times since; the most recent edition, which appeared in 1968, contains an updated bibliography compiled by Alexander *Guttman. Mielziner's exposition of talmudic methodology – featuring a skillful dissection of the Talmud's distinctive system of technical terms and phrases adapted to its unique methods of investigation and demonstration – has been an indispensable handbook for the serious student of the Talmud for more than a century.

[Bezalel Gordon (2nd ed.)]

MIESES, FABIUS (1824–1898), Hebrew writer and scholar. Born in Brody (Galicia), Mieses moved to Cracow in 1840. Subsequently he lived in Brody (1846–54), Breslau (1854–67), and Leipzig (from 1867). Mieses wrote extensively in the Hebrew journals of his day, publishing poems as well as articles on Judaism, philosophy, and topical subjects. His major work, the first of its kind in Hebrew, is *Korot ha-Filosofyah ha-Hadashah* (“History of Modern Philosophy,” 1887), of which only the first volume appeared in print. He also wrote in German, contributing regularly to *Orient*.

[Getzel Kressel]

MIESES, JACQUES (Jacob; 1865–1954), German-British chess master and journalist. Mieses was born in Germany and went to England in 1938. He was famed for his collection of brilliancy prizes in the tournaments which he won, the best being in Vienna, 1907. Mieses was the doyen of German chess writers. He was known for his old-fashioned attacking style, which resulted in many brilliant games but few first prizes in major tournaments. From the 1920s, he was also the editor of many standard chess textbooks. In 1948, when the International Chess Federation began officially to award titles to leading players, Mieses was the first British player to be given the title of Grandmaster.

[William D. Rubinstein (2nd ed.)]

MIESES, MATTHIAS (1885–1945), Yiddish philologist. Born in Galicia, he was a prolific writer in Hebrew, Polish, and German. His main interest, however, was Yiddish, about which he wrote much, although little in the language itself. His Hebrew articles in defense of Yiddish against its detractors involved him in a controversy with Nahum *Sokolow. At the *Czernowitz Yiddish Conference of 1908, he created a sensation with his well-reasoned, scholarly espousal of Yiddish. I.L. *Peretz asked for the widest possible distribution of Mieses' speech. In his German study on the origin of Yiddish, *Die Entstehungsursache der juedischen Dialekte* (1915), a pioneer work in Yiddish philology, Mieses fought for the emancipation of the so-called Jewish “jargon” and its recognition as a language on a par with other European national languages. Another work on Yiddish was *Die jiddische Sprache* (1924). Mieses spent his last years in Cracow and was sent to Auschwitz with all remaining Jews as the Russian troops approached that city. He died on the way at the Glewitz station.

[Sol Liptzin]

MIESIS, JUDAH LEIB (1798–1831), leading member of the Galician Haskalah movement in the early 19th century. Born in Lvov, to a wealthy, prominent family, Miesis received a broad general education as well as a traditional Jewish one. His home was a meeting place for young *maskilim*, whom he encouraged and helped, and to whom he made available his large library. His first literary effort was the publication of a new edition of David *Caro's *Tekhnat ha-Rabbanim* (1822). Miesis' main work is *Kinat ha-Emet* (“The Zeal for Truth,” 1823; 2nd ed. Lemberg, 1879), written in the form of a dialogue between Maimonides and Solomon Helma (author of a commentary on Maimonides, *Mirkevet ha-Mishneh*). In the body of the work, as well as in an appendix containing quotations from Jewish scholars down through the ages, Miesis attacks the obscurantist beliefs in spirits, demons, mystical powers, and all the superstitious views fostered by the Orthodox rabbis. His highly rationalistic approach and his outspoken criticism of traditional beliefs were so extreme that even a number of *maskilim*, including his colleague and friend S.J. Rapoport, felt that he had gone too far and dissociated themselves from his views. Miesis also published a number of articles in the Hebrew journals (*Ha-Zefirah*, *Bikkurei ha-Ittim*, *Kerem Hemed*). He died of cholera in 1831.

[Getzel Kressel]

MIGDAL (Heb. מגדל; “Tower”), moshavah in the Ginnosar Valley, N.W. of Lake Kinneret, established in 1910 by Jews from Moscow who hired laborers to work their land. In 1921 it became a camp for Third *Aliyah pioneers working on the construction of the Tiberias–Rosh Pinnah road. These laborers founded *Gedud ha-Avodah, the “Labor Battalion,” at Migdal. From 1924 Jews from England and America acquired parcels of land at Migdal and some of them went to settle. Lord *Melchett’s farm was among those established at the time. After 1948 the moshavah was enlarged as new immigrants settled. In 1949 it received municipal council status. Banana, date palm, and other fruit orchards, out-of-season vegetable gardens, and dairy cattle constituted its principal farming branches. It also had resort facilities. The population numbered 535 in 1970 and 1,390 in 2002, occupying an area of 4.6 sq. mi. (12 sq. km.). The historical name of the site is *Magdala.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

MIGDAL HA-EMEK (Heb. מגדל העמק; “Tower of the Valley”), town with municipal council status in Lower Galilee, 4 mi. (7 km.) S.W. of Nazareth, founded in 1952 with the aim of absorbing inhabitants of transitory immigrant camps in the vicinity. Real progress started at the end of the 1950s, when industrial enterprises opened there. The population increased from 1,650 in 1955 to 8,200 in 1968 when 67% of the inhabitants were from Morocco and other North African countries, 19% from Romania, and 7.5% from Iraq, while 1% were veteran Israelis and the rest from different countries. Approximately half of the town’s gainfully employed worked in local factories, the largest of which were leather and cosmetic plants and produce mainly for export. In 1969 it was said to have the highest “export-dollar” income per capita in the country. Its educational network comprised 2,700 pupils in 1968, and maintained two comprehensive high schools. In 1988 Migdal ha-Emek received city status and in 2002 its population was 24,500 – a third new immigrants – with an area of 2.8 sq. mi. (7.3 sq. km.). The city expanded its industry to include a number of hi-tech firms but income remained well below the national average. The city overlooks a beautiful landscape, with a wide view over the Jezreel Valley in the south, and is surrounded by extensive woodlands, among them the *Balfour Forest.

MIGDOL (Heb. מגדל).

(1) Canaanite city, mentioned in the list of cities conquered by Thutmosis III (no. 71) with Socoh (Ra’s al-Shuwayka) and Yaham (Khirbat Yamma). It is identified with Khirbat Majdal southeast of *Haderah. Sherds of the Late Bronze Age were found on the site.

(2) Egyptian border fortress near Baal-Zephon (Ex. 14:2; Num. 33:7), inhabited by Jews in Jeremiah’s time (Jer. 44:1; Ezek. 29:10). It is the Greek Magdolos and the Migdol of

Baalsephon in the demotic Cairo papyrus (31.169). It is present-day Tell al-Khayri near Pelusium.

[Michael Avi-Yonah]

MIGRATIONS. Jewish migrations have a history of thousands of years: the wanderings of the Patriarchs; the Exodus from Egypt; the Babylonian Exile; the existence of Jewish groups outside Erez Israel in the Second Temple period; the dispersion of the Jewish people in the Roman and Near Eastern empires after the destruction of the Second Temple; the spread of the Jews to many countries of the Christian and Islamic world; the attraction of Jews to places with favorable conditions, and, on the other hand, departures from countries as a consequence of persecutions and expulsions – culminating in the scattering of the Jews of the Iberian Peninsula and the settlement of some Jews (and Marranos) in the New World since the early stages of the European colonization. In small numbers, Jews made their way to the Holy Land throughout the ages of the Diaspora. From the second third of the 19th century, a noticeable stream of Jewish migration flowed from Europe to the United States.

The modern period of intensive Jewish migration began in 1881. Since then, migrations have completely changed the world map of the geographical distribution of the Jews. In the demographic history of mankind, this period is generally characterized by the relative frequency of intercontinental migrations, especially from Europe; the Jews, however, exceeded by far other peoples of similar or superior size in the relative volume of long-distance migration. The world Jewish population at the beginning of the 1880s, which is estimated to have been more than 7½ million, is almost equaled by the number of Jews who have taken part in international migrations since then (c. 6 million in intercontinental migrations). Another feature characterizing Jewish migrations is the motivation behind them. Whereas individuals from other nations migrated over great distances primarily for economic motives, the great majority of Jews also tried to escape discrimination and were in fact refugees, especially since the 1930s; on the other hand, *aliyah* to Erez Israel was often based on idealistic motives. Consequently, whereas a considerable portion of the economically motivated migrants from other nations eventually returned to their countries of origin, remigration was much rarer among Jews.

When a substantial number of Jewish migrants had reached a country, further Jewish immigration was thereby facilitated (except for instances of worsening of the political or economic situation in the country or of the immigration regulations). The established Jews tended to assist – whether individually or through organizations – in the arrival and establishment of their fellow Jews. The changes in environmental influences produced by migration have strongly contributed to profound alterations in the economic, social, and demographic characteristics of the Jews in recent generations. Moreover, migrations have removed, before it became too late, large numbers of Jews from areas where they would otherwise

have been faced with the danger of physical destruction. The Nazi persecutions might have come much closer to their aim of a genocidal “final solution” had it not been for the preceding large-scale emigration from Europe. The period of intensive Jewish migration since 1881 can be divided into three main parts, with several subdivisions.

1881–1914

This period is characterized by a large flow of Jewish migration from Eastern Europe overseas and by the virtual absence of administrative restrictions on free entry into the main immigration recipient – the United States of America. The total volume of Jewish intercontinental migrations during 1840–80 has been estimated at little above 200,000, but for the years 1881–1914 at about 2,400,000. The overwhelming majority of these Jewish migrants came from Eastern Europe: the czarist empire, the eastern regions of Austria-Hungary (especially Galicia), and Romania. They were escaping the hardships inflicted by poverty, antisemitic discrimination, or political oppression. Since East European Jewry experienced a strong natural increase at the time, emigration also served as a regulator drawing away the Jewish population surplus for which there were not enough opportunities for a livelihood in those backward and inhospitable surroundings. About 85% of the Jewish intercontinental migrants turned to the U.S. Conspicuous among the other destinations were (in descending order of numbers) Canada, Argentina, Erez Israel, and South Africa.

The overseas movement of East European Jews started in 1881, after a series of pogroms in Russia. Its intensity increased in the first half of the 1890s, subsequently ebbed somewhat, but rose sharply after the great 1905 wave of pogroms in Russia, which came in the wake of the abortive revolution of that year. From mid-1905 to mid-1906, a peak figure of 154,000 Jews arrived in the U.S., and the total volume of Jewish international migrations in the same year has been estimated at 200–250,000. Similar figures were reached in the following year and again directly before the outbreak of World War I.

In most immigration countries, the statistics on Jewish arrivals were markedly higher during the second part of the period (1901–14) than during its first part (1881–1900). The outbreak of World War I put an abrupt stop to this vast movement while it was still gathering momentum. The absolute and relative size of intercontinental migration, by countries of destination, is seen in Table 1: Intercontinental Migrations, 1881–1914.

In the U.S. (see Table 2: Jewish Immigration to the U.S., 1899–1914), those registered as Hebrews accounted for nearly 11% of all migrants during 1899–1914 (the total share of the Jews may have even been somewhat greater as it is not certain that every Jew was actually registered under “Hebrews”). The number of Jews was second largest of all the immigrant national groups that came to the U.S. during that period; if, however, remigration is deducted and only net migration is considered, the difference between the Jews and the top group – the Italians – almost disappears. The Jews differed from other immigrant groups in the U.S. by their low proportion of remigration – seven remigrants per 100 immigrants during 1908–14, as compared to an overall average of 31 per hundred (among some national groups, remigration exceeded half the volume of immigration). Because of the permanent nature of their immigration, the Jews often brought their entire families with them and thus had higher proportions of women and children than other immigrant groups (see Table 3: Immigrant Characteristics, U.S.).

The Jewish immigrants to the U.S. were also distinguished by the high proportion registered as industrial workers: 66 per 100 wage earners. In the U.S. immigration statistics of 1899–1914, Jews thus accounted for 31% of all industrial workers, and in some branches, especially clothing manufacture, they were a clear majority. During 1899–1914, the distribution by previous country of residence of the close to 1,500,000 Jews who immigrated to the U.S. was as follows: Russia, 71.7%; Austria-Hungary, 16.2%; Romania, 4.2%; Great Britain, 4.0%; Canada, 1.2%; Germany, 0.7%; other countries,

2.0% (but among the Jews arriving in the U.S. from countries outside Eastern Europe, particularly Great Britain and Canada, many were actually of East European origin).

Immigration to Erez Israel during the same period fell immensely short of the mighty stream that turned to the U.S. In the history of modern Erez Israel it is usual to distinguish between the First Aliyah (1882–1903) and the Second Aliyah (1904–14). Altogether about 70,000 Jews migrated to the country, but a considerable number of them left again, mainly because of economic difficulties. Due to the overwhelming attraction of the U.S. and of other economically promising overseas countries, the arrivals in Erez Israel accounted for only 3% of Jewish intercontinental migrants.

During 1881–1914 there was also considerable international migration of Jews within Europe – generally from east to west and, particularly, from Russia and Romania to Central and Western European countries. This movement has been estimated to include 350,000 persons so that the total of Jewish international migrants over that period amounted to about 2,750,000. There were also large-scale streams of Jewish migration within the extended empires of Europe of

that time: from east (Galicia, Bukovina, Poznan) to west in the Austro-Hungarian and German empires; in a southern direction (Odessa) within Russia. In addition, Jews in many countries participated with relative intensity in the movement from smaller localities to large cities. Within cities, the socio-economic rise of many Jews enabled them to move to more well-to-do residential quarters.

1915–May 1948

In some ways, this is an intermediate period between the intensive migration movements preceding and following it that turned to the U.S. and to the new State of Israel, respectively. It was also the period in which the *Holocaust occurred, profoundly changing the entire demographic makeup of the Jewish people. This period can be broken down into several subdivisions; common to most of them was the existence of restrictions to the free movement of Jewish migrants. The main statistical data on the period are concentrated in Table 4: Jewish Intercontinental Migrations, 1915–May 1948, and Table 5: Jewish Immigration to the United States and Erez Israel, 1915–May 1948.

During and immediately after World War I, intercontinental migrations of Jews dwindled, but there were large movements of Jewish refugees in Europe to escape from the areas of the hostilities and from some of the subsequent political upheavals. Then the volume of overseas migrations swelled again, comprising more than 400,000 Jews during 1921–25; 280,000 went to the U.S. of whom nearly 120,000 arrived during the year ending in mid-1921. In the same year, Jews accounted for 15% of all immigrants to the U.S., and in the following year the figure rose to 17%. On the other hand, during 1921–24 the number of Jewish emigrants from the U.S. amounted to less than 1% of the number of Jewish immigrants. In Palestine, newly under British Mandatory rule, increased Jewish immigration came in response to the promise of a Jewish National Home. During 1919–26 (Third Aliyah and major part of the Fourth Aliyah), nearly 100,000 Jews immigrated to Erez Israel. Other streams of Jewish migrants found their way to South America.

In Europe, the tendency continued for Jews to move from countries in the east to Central and Western Europe. The post-World War I migration impetus, which continued, as it were, the prewar trend, was soon halted by a combination of factors, among which the following were outstanding:

RESTRICTIONS ON IMMIGRATION. In the U.S., the previously almost unfettered influx of overseas migrants was curbed by two laws, enacted in 1921 and 1924. The limitations imposed by the second law – annual quotas for each country of origin, amounting to no more than 2% of the respective immigrant population already in the country at the comparatively early date of 1890 – affected with particular intensity prospective migrants from Eastern Europe, i.e., from the main area of Jewish emigration. The number of Jewish immigrants to the U.S. was thus forced down drastically: it declined to little more than 10,000 per annum during 1925–30. The other main immigration countries for Jews also increasingly curbed immigration,

Table 4: Jewish Intercontinental Migrations¹, 1915–May 1948 (rough estimates)

through legislation and administrative practice, by reducing the overall number of immigrants permitted and/or by insisting on financial and other requirements for their admission. Restrictions were created both in overseas countries – e.g., Canada, Argentina, Brazil, South Africa, Australia, Palestine (quotas based on economic “absorptive capacity”) – and in Western Europe.

OBSTACLES TO EMIGRATION. After the first few years of the Communist regime, the Soviet Union began to frown on emigration and soon brought it virtually to a standstill.

POLITICAL AND ECONOMIC CONDITIONS. After the political and economic dislocations in Europe in the wake of World War I, which had also adversely affected many Jews, a stabilization occurred there. In Palestine, on the other hand, there were absorption difficulties and unemployment, leading to relatively considerable emigration in the later part of the 1920s. In the second half of the 1920s a majority of the then comparatively infrequent Jewish overseas migrants went to countries other than either the U.S. or Palestine – especially to Latin America.

In the 1930s, the objective motivation for Jewish emigration from Central and Eastern Europe increased tragically, but the would-be migrants encountered ever growing difficulties in gaining admission to other countries. The special motivation for departure arose from the accession of Hitler to power in Germany, the spread of authoritarian and more-or-less overtly antisemitic regimes in other states of Europe, and the great economic depression, which affected the livelihood of many Jews and provided further incentive to antisemitic agitation. However, with cruel irony, the very factors which made Jews wish to leave rendered prospective immigration countries unwilling to admit considerable numbers of Jews,

so as to avoid aggravating their own international and internal problems. The more desperate the need to escape became for large numbers of Jews, the more tightly most prospective immigration countries shut the gates of entrance.

Whereas prior to World War I Jewish long-distance migration was strongly determined by economic considerations, from the 1930s until quite recently it has been predominantly a movement of refugees trying to escape oppression and unable to return to their former land for political, racial, or religious reasons. As opportunity allowed, Jews escaped from Nazi horrors, from antisemitism and Communist regimes in Eastern Europe and, especially after 1948, from the outbursts of intolerance and fanaticism in Arab lands. International efforts in the Nazi period to mitigate the plight of the Jewish refugees and find them new homes – e.g., through appointment of a special high commissioner for refugees by the League of Nations as early as in the autumn of 1933 and through the *Evian Conference of 1938 – led to few tangible results.

In the history of Jewish migration, the 1930s are characterized by the following traits: the prominence of emigrants from Central Europe – Germany and, toward the end of the decade, Austria and Czechoslovakia (about 350,000 Jews are estimated to have left Germany, Austria, and Czechoslovakia before the outbreak of World War II); the continuation of departures from Eastern Europe (except for the U.S.S.R., where exit was barred); and the growth in importance of Palestine as a major destination for Jewish refugees (in addition to the continuing idealistic motives for *aliyah*). During the period 1932–39, nearly one half of all intercontinental Jewish migrants turned to Palestine (Fifth Aliyah). In the years 1934–36, Palestine attracted even a strong majority of the intercontinental Jewish migrants. Then the protracted Arab riots (1936–39) led to a deterioration of the British authorities' immigration

1 Official immigration statistics from Erez Israel are available as from 1919; in the United States, the category “Hebrew” was included in official migration statistics only between 1899–1943.

2 In the United States, fiscal year, i.e., the 12 months ending in June of year indicated.

3 Includes tourists settling.

policy toward the Jews. Under the shadow of the impending world war, the British promulgated the White Paper of May 1939, which severely curtailed Jewish immigration for the following five years and virtually provided for its cessation at the close of that period. A consequence of this policy were organized and partly successful attempts at “Illegal” immigration to Palestine.

During 1932–39 the U.S. and Canada together received only a fifth of the total intercontinental Jewish migrants. It was only when the above-mentioned restrictions on Jewish entry into Palestine were applied and World War II broke out (the U.S. did not join in the hostilities until the end of 1941) that Jewish immigration to the U.S. rose to more than 120,000 during 1938–42. In some of those years, Jewish immigration

to the U.S. constituted a majority of both total Jewish intercontinental migration and of general immigration to the U.S. The 1930s also witnessed a considerable amount of international migration of Jews within Europe, from the central and eastern parts of the area (outside U.S.S.R.) to countries of Western Europe.

As the German armies swept over most of continental Europe, there were tragically few opportunities for the Jews to leave Nazi dominated areas. The most notable exception was in the east, where many Soviet Jews, together with Jews from Poland and other neighboring countries, managed to retreat before the invaders. Many joined the armed struggle against the common enemy; a large proportion of the Jewish civilians who were thus saved spent the remaining war years in Soviet Siberia and Central Asia. Sweden gave refuge to the Jews of occupied Denmark. On the whole, however, millions of European Jews remained confined under Nazi sway, left to their fate by an indifferent world engrossed in war. No more than 45,000 Jews were allowed to reach Palestine during the five years 1940–44. Among the “illegal” immigrants who were turned back from the shores of Palestine by the British, hundreds of lives were lost in tragic events such as the explosion on board the *Patria* in 1940 and the sinking of the *Struma* in the Black Sea in 1942. On the other hand, among the seven to eight million Jews caught in Nazi-dominated areas of Europe, the intensity of movement from one place to another reached fantastic heights. Most of the Jews were driven from their homes to be deported and crammed into ghettos, concentration camps, labor camps, and extermination camps or transferred from one to another of those places of horror. Only a small minority could join the partisans, go into hiding, escape into Soviet or neutral territory, etc. Except for those executed forthwith in their locality of residence, nearly all Jews in Nazi-occupied Europe “migrated” before the eventual doom overcame most of them.

After the war there was a reverse movement – back to previous places of residence, on a much smaller numerical scale, due to the paucity of survivors. This return migration took place within the areas previously occupied by the Nazis and as a repatriation movement of Polish and other Eastern European Jews from the Soviet Union. Jews also participated in some of the new population transfers in Eastern Europe from territories newly incorporated into the Soviet Union (eastern Poland, Bessarabia, Carpatho-Ruthenia) to other territories, some of which had been vacated by former German inhabitants (Silesia). The Jewish repatriates to places in Eastern Europe, however, found themselves haunted not only by the memory of their families and fellow Jews who had been maltreated and killed there, but also by fresh outbursts of antisemitism and active hostility toward the repatriates (e.g., the pogrom in *Kielce, Poland, in 1946). Many therefore moved to *Displaced Persons camps in Germany, Austria, and Italy, which accommodated about a quarter of a million Jews at the end of 1946. Most of them fervently wished to go to Erez Israel and start a new life there. But the British authorities admitted

little more than 70,000 Jews from 1945 to May 1948, turning back many “illegal” immigrants (e.g., the passengers of the *Exodus* in 1947) or interning them in Cyprus; the DP camps were emptied only after the establishment of the State of Israel. A smaller stream of DPs went to the U.S., where emergency legislation granted admission above the usual quotas. The following international organizations and Jewish bodies played a prominent part in the care, transportation, and resettlement of the DPs: UNRRA (United Nations Relief and Rehabilitation Administration), IRO (International Refugee Organization), the American Jewish *Joint Distribution Committee, the *Jewish Agency for Palestine, HIAS (Hebrew Sheltering and Immigrant Aid Society), the *World Jewish Congress, etc.

There was a high proportion of young adults among the migrants to Palestine throughout the Mandatory period (1919–May 1948) in keeping with the pioneering character of many of the newcomers (*halutzim*), part of whom had received agricultural training prior to leaving their countries of origin. The proportion of young adults was particularly high among the “illegal” immigrants. Although the adjustment of Jewish overseas migrants to their new surroundings was universally necessary, a special situation existed in Palestine because of the emphasis of Zionist ideology on manual, and especially agricultural, work and the dynamic process of creating a new nation consisting of all economic and social strata. On the other hand, the age composition and occupational structure of the Jewish immigrants to the U.S. in the Nazi period reflected the “aging,” as well as the considerable proportion of liberal professions and commerce, characteristic of Central European Jews at that time.

Throughout the period 1915–48 there was also a large volume of Jewish migration within countries. The case of the vast Soviet Union is of particular importance in discussing interregional migrations. After the abolition of the *Pale of Settlement following the Revolution (1917), hundreds of thousands of Jews moved into the central and southern parts of the country. Subsequent transfers of Jews to Siberia – not only to *Birobidzhan with its ill-starred experiment of Jewish territorial autonomy focusing on agriculture, but especially to new industrial centers that were set up in Siberia – became increasingly important. In addition, in most countries of the world, the urbanization of the Jews was accentuated by residential changes from smaller to larger localities, and especially to the biggest population centers of each country. In most cases Jewish overseas migrants turned directly to the main urban centers of their new country. Compared with this predominant trend, the movement to Jewish agricultural settlement – in Palestine, Argentina, Crimea – was of minor numerical importance.

Demographic and Economic Dimensions of International Migration: World Jewry and Israel (1948–2005)

INTRODUCTION. The study of international migration concerning the State of Israel revolves around five main issues

that have attracted extremely unequal amounts of attention among researchers: (a) Jewish immigration (*aliyah*); (b) the Palestinian exodus of 1948–49; (c) Jewish emigration (*yeridah*); (d) labor immigration (legal or illegal), largely of a temporary character; and (e) family reunions (mostly of Palestinians into Israel). The terms *aliyah* (ascent) for immigration and *yeridah* (descent) for emigration indicate widespread value judgments toward these sociodemographic processes in Israeli society. Most of past research on Israel’s migrations has focused on *aliyah* and longer-term immigrant absorption. This exposition attempts to briefly review each of the main aspects though it is naturally influenced by the diverse amount and quality of available data.

THE DIASPORA AND WORLD JEWISH MIGRATION. Israel is the successor country of the Jewish state established together with the Arab state by the UN General Assembly in its November 29, 1947, Resolution 181 decreeing the end of British Mandate and the partition of Palestine. In its Declaration of Independence in May 1948, the State of Israel affirmed its aim to serve both as the focal point for Jews worldwide and a democratic society offering equal civil and cultural rights to all citizens, irrespective of religious and ethnic origin. The demographic, socioeconomic, and cultural development of Israel cannot be understood without considering the key role played by immigration. It is therefore necessary to examine immigration first, and to analyze migration to, and from, Israel in the framework of a broader world Jewish migration system.

The call for mass immigration through the “ingathering of the exiles” and the “fusion of the diasporas” constituted basic tenets of the new society, legally sanctioned through the Law of Return (*Hok ha-Shevut*). Adopted in 1950, this law was the founding instrument of immigration policy. It established a broad definitional framework granting virtually unlimited immigration rights and Israeli citizenship to Jews, their children, grandchildren, and the respective spouses, irrespective of their religious or national affiliation. This entailed the related concepts of *core* Jewish population, and *enlarged* Jewish population, including persons of Jewish origin but currently of another denomination and other non-Jewish household members (see Table 6: Jewish Intercontinental Migration, May 1948–1964).

During the late stages of the Ottoman Empire, and to a larger extent under the post-World War I British Mandate, migration to Palestine led to the growth of the Jewish community (*yishuv*) from 43,000 in 1890 to half a million in 1945. During the 19th century and the first half of the 20th century, when the entire territory of Palestine hosted a large majority of Arabs, Jewish immigration significantly contributed to create the modern socio-economic and logistical infrastructure in the country. Rapid economic development in areas of heavier Jewish settlement along the Mediterranean coast and in Upper and Lower Galilee also stimulated internal migration from other parts of Palestine.

During the 1948–49 War of Independence, a large part of the Arab population of the territories allocated to the Jewish

state by the UN fled the area, leading to what has since become the Palestinian refugee problem. According to Israeli sources, the number of Arabs who left the territory under Israeli control was estimated at between 625,000 and 650,000. Higher estimates exist and reflect conflicting views of the same history, namely competing evaluations of the size of the Arab population in the Jewish areas in 1948, and the permanent status as residents of some of those who fled, or who were cut off from their main sources of economic support there.

At the time of independence in 1948 the population of Israel comprised 630,000 Jews. An estimated 156,000 Arabs remained in Israel at the end of 1949. Between 1948 and the end of 2003, Israel's total net migration balance amounted to 2,385,800 individuals (excluding the exodus of Palestinian refugees). This resulted from 2,990,800 new immigrants and immigrant citizens and 605,000 emigrants, or a ratio of about five immigrants per single emigrant. Of the total international migration net balance in 1948–2003, 2,153,200 were Jewish, 158,000 were non-Jewish family members of the latter, 40,200 were Arabs (Muslims, Christians, and Druze), and another 34,400 otherwise unaccounted for probably reflected reclassification of group identifications and other data corrections.

In early 2005, Israel's population totaled 6,864,000, excluding the Palestinian population of West Bank and Gaza areas occupied and administered by Israel since the 1967 war, and partly transferred to the Palestinian Authority following the 1993 Oslo agreements. Of the total Israeli population, 5,234,800 were Jewish and 290,300 were non-Jewish members of Jewish households, making a total of 5,525,100. Of Israel's

ethnically Arab population of 1,338,900, the vast majority (82%) were Palestinian Muslims, the rest being nearly equally split between Christian Arabs of various denominations (primarily Greek Orthodox) and Druze. These figures include about 240,000 Arabs residents of the area of East Jerusalem annexed by Israel in 1967, about 15,000 Druze residents of the Golan Heights, as well as 237,000 Israeli residents of the West Bank and Gaza. In addition, the number of Jewish residents in East Jerusalem neighborhoods is estimated at 185,000.

The changing structure and feedback of modern Jewish international migration fit a systemic perspective. The number, direction, and characteristics of Jewish migrants at any time were significantly determined by the existing worldwide distribution of Jews (see Table 7: Jewish Population Estimates, by Major Religions, 1900–2005) – which was in turn largely the product of previous migration. Between 1880 and 2004, over nine million Jews migrated between countries (see Table 8: Jewish International Migration, 1969–2002). Of these, about 2.4 million moved between 1880 and 1918, 1.6 million between 1919 and 1948, 1.9 million between 1948 and 1968, and about 3 million between 1969 and 2004. These figures do not include another several hundred thousand Jews who migrated between neighboring countries within the same continent (in addition to Israel and the United States), nor do they provide a full account of return migration. What they do include is the significant migration of Jews from North Africa to Western Europe, particularly from Morocco, Algeria, and Tunisia to France, and from Libya and Egypt to Italy between the late 1940s and the late 1960s. The departure to Europe and in part to North and Latin America of these over 300,000 Jewish mi-

c All emigration from Israel included here.

grants, along with the larger contingents that moved to Israel, virtually put an end to the bi-millennarian Jewish presence in North Africa, and substantially strengthened the Jewish communities in Europe.

Of all Jewish international migrants, Palestine – and since 1948 Israel – was the country of destination of 3% in 1880–1918, 30% in 1919–48, 69% in 1948–68, 52% in 1969–88, and 61% in 1989–2004. Between 1948 and 2003, Israel attracted 73% of the total Jewish emigration from North Africa and the Middle East, and 65% of the total from Eastern Europe. Since 1969, the percent of Jewish migrants choosing Israel from each main region reached 81% and 60%, respectively (Table 8).

¹ Including tourists settling.

Jewish emigration propensities relative to local Jewish population size were consistently the highest from countries in North Africa and the Middle East, substantially high from Eastern Europe and the Balkans though reflecting highly variable opportunities to exit, comparatively low from Israel, and the lowest from the aggregate of Western countries. More recently (1969–2002), rates of emigration of Jews to any destination per 1,000 Jewish residents in each area were 97, 51, 4, and 1, respectively (Table 8).

The continuous wave-like pattern of Jewish international migration demonstrates recurrent crises involving discrimination and violence which negatively affected the position of Jewish communities in different parts of the world. The consequent need for prompt and large-scale relocation, and recurring limitations in the volume of migrants allowed to leave their countries of origin or to enter new countries of destination, greatly affected the total number of migrants. The Jewish Diaspora has been highly dependent on changing political,

socioeconomic, and cultural circumstances in the respective countries of residence. In this respect, the virtual disappearance of sizeable Jewish communities in Muslim countries, the marked decline in Eastern Europe, and the growing concentration in North America and Israel were particularly evident (Table 9).

EXTERNAL MIGRATION OF PALESTINIANS. Besides the already noted question of Palestinian refugees, since 1967 Israel has been in total or partial control of the West Bank and Gaza, particularly concerning points of access to and from the outside. The Israeli border authorities have regularly collected data on Palestinian population movements across the border. These data are not fully comparable with data collected on Israeli population movements, and should only be taken as roughly indicative. However, major changes that appear over time do reflect real migration trends – whether temporary or definitive.

Over the extended period September 1967–2003, the total external migration balance of the West Bank and Gaza was 356,000, of which 88,000 was since 1995. A surplus of 29,000 immigrants and return migrants was only recorded (see Table 10: External Migration of Palestinians, 1967–2003) in 1990–94, after the 1991 Gulf War, and especially after the Oslo agreements. The generally negative migration balance significantly spread to Jordan and across the Gulf States.

Table 10: External Migration of Palestinians, 1967–2003

| Year | Total |
|-----------|----------|
| Total | -356,000 |
| 1967–1969 | -74,900 |
| 1970–1974 | -27,100 |
| 1975–1979 | -81,800 |
| 1980–1984 | -68,700 |
| 1985–1989 | -45,300 |
| 1990–1994 | 29,400 |
| 1995–1999 | -52,900 |
| 2000–2003 | -34,700 |

Source: Israeli Border Authority and Israel Central Bureau of Statistics.

Migration between the West Bank and Gaza, and Israel was not systematically recorded. According to reports from Israel's Ministry of the Interior Population Register, about 130,000 Palestinians obtained a residence permit in Israel on the grounds of family reunion. However, population updates by Israel's Central Bureau of Statistics do not support this assumption. During prolonged periods since 1967, large numbers of Palestinians worked on a regular basis as commuters or temporary residents within Israel. Following the Palestinian Intifada (uprising) of the late 1980s and early 1990s the numbers declined significantly. After a short recovery, the second Intifada, which started in September 2000, virtually put an end to this form of economic migration.

IMMIGRATION INTO ISRAEL. *Current Flows, Including Return Migration.* Israel's Ministry of the Interior's file of Bor-

der Check Post provides basic information on the number and characteristics of new immigrants and of departing and returning residents. The data are processed by Israel's Central Bureau of Statistics. In addition, periodic census data provide information about population characteristics of immigrant stocks.

Immigration to Israel reflected the changing balance of circumstances in the Jewish Diaspora as well as in Israeli society. Between the various determinants, by far the most dominant were *push* (negative) and *hold* (positive) factors in the countries of origin of migrants. The intensity of *pull* (positive) and *repel* (negative) factors operating in Israel, while not negligible, played a complementary role. However, we cannot ignore the fact that the choice of Israel as a destination country reflected not only socio-economic processes that usually govern international migration, but also the powerful historical and cultural grounds for migration decisions. Indeed, Israel's economic ranking improved from being a poor country in 1948 to 24th worldwide in 1975 and to 22nd in 2002, but other countries in North America and Western Europe continued to offer a better standard of living.

Immigration occurred in waves, each dominated by a particular sub-set of countries of origin (see Figure 1 and

Table 11: Jewish Immigrants to Israel, 1948–2004). The initial wave of immigration brought in 688,000 people, thus doubling Israel's population within the first three years of its existence through annual immigration impacts above 25% of the absorbing population in the country of destination. Subsequent waves of immigration in Israel were progressively weaker until the major influx of 1990–91 that accompanied the collapse of the Soviet Union. While the annual numbers of immigrants were comparable, the relative impact fell on a much larger veteran population and could be absorbed with fewer traumas.

The first major wave of migration to Israel (1948–51) included survivors of the destroyed Jewish communities in Eastern, Central, and Balkan Europe, as well as the transfer of the substantial majority of Jewish populations of Muslim countries such as Iraq, Yemen, Turkey, Egypt, Iran, and Bulgaria. Subsequent waves included large contingents from Romania, Hungary, and the Maghreb (1953–64), the United States and Western Europe (1968–72), and then predominantly the Soviet Union (1967–77), Ethiopia (the 1980s), and since the end of 1989 the major wave from the Former Soviet Union (FSU).

a As from 1970 including non-Jewish family members of immigrants.

b As of 15 May.

c Including country not reported. Not including immigrant citizens.

The Foreign-Born Israeli Population. As a consequence of steady immigration, a high proportion of the Israeli population was foreign-born, but fairly high birthrates have progressively reduced the rate of foreign-born to native-born Israelis. Out of the total Jewish population, the share of foreign-born steadily declined from 65% in 1948 to 36% in 2004. Accounting for Israel's Arab population (excluding the territories), and assuming all of the latter was local-born, the share of foreign-born fell from 53% in 1948, to 29% in 2004.

Composition. The demographic, socio-economic, and socio-cultural characteristics of the Jewish population worldwide significantly affected the differential probability of deciding to emigrate, and the choice of destination country.

Demographic Characteristics. Because of its political-cultural – rather than merely economic – background, immigration to Israel tended to be more permanent, and less likely to be followed by return migration, than in other major countries of immigration. It was also less structurally selective than other migration streams. Entire families moved, including men and women across the age range rather than mostly young single males. This involved comparatively high dependency ratios and a high absorption burden. Wide socio-demographic gaps separated Jewish Diaspora communities that had undergone modernization to different degrees, particularly Jewish populations in Europe versus North Africa and the Middle East. Jewish migration to Israel included more children and elderly dependents than did Jewish migration from similar countries of origin to Western countries such as the United States or France.

Socio-Economic Characteristics. Jews abroad usually had a higher than average level of education and tended to concen-

trate in trade, selected branches of industry, and the liberal professions. The probability of emigrating was higher at the upper and lower extremes of the social spectrum in Jewish society. Israel absorbed a comparatively higher share of migrants previously employed in trade and blue-collar occupations. Structural differences were especially notable in the case of Jewish migration from North Africa to France and to Israel during the 1950s and 1960s. Immigration from Western countries and the more recent wave of immigration from the FSU contributed high proportions of university graduates and improved the quality of Israel's labor force. Different levels of modernization and socio-economic development attained by Jewish communities in the respective countries of origin generated internal social gaps within the new framework of Israeli society. Programs to ensure equal access to higher education have gradually reduced the gaps which, however, still persist in the second generation of immigrants.

Ethno-Religious Identification. The Law of Return was designed to promote Jewish immigration, but immigrants who arrived as families or as communities included a growing minority of non-Jews. The growing assimilation of Jews in the Diaspora in recent decades translated into a high percentage of mixed marriages. On the other hand, some communities had maintained intensive links to traditional Jewish religion and culture (including separate religious school systems). This entailed wide variations among types of immigrant and helped generate the diversified socio-cultural nature of Israeli society, and internal ideological tensions mostly stemming from the relation between the state and religion.

Economic, Legal, or Illegal Migrants, Refugees. The mechanisms of mass immigration to Israel also underlie the – often irreversible – nature of such migration. Emigration to Israel

often means loss of citizenship and civil rights in the country of origin, making it impossible to return there. Most Israeli immigration from North Africa, the Middle East, and Eastern Europe thus corresponds to *ex post facto* refugee movements.

Since the 1990s, with Israel's rapidly growing economy, and following the halt on Palestinian labor in connection with the first and second Intifadas, there has been a significant increase in the influx of foreign labor. Many of these (non-Jewish) workers from Asia, Africa, Latin America, and the Balkans tend to remain after their working permits have expired. The numbers of actual – i.e., legal and illegal – foreign workers are not accurately documented. Estimates for 2004 ranged around 190,000, but the government's policy of forced expulsion attempts to significantly reduce this number.

ISRAELI EMIGRATION. Definitions and Data. While immigration and the absorption of immigrants lie at the core of societal and research focus in Israel, emigration remains both a sensitive and comparatively little researched subject. The very definition of an emigrant is beset with difficulties. In the past, data were collected on the reasons for leaving the country, including emigration. However, the information proved highly unreliable and data collection was discontinued in the early 1960s. Given the lack of precise data on numbers of emigrants, indirect estimates can be obtained on the basis of different operational criteria. Long-term absentees, i.e., people leaving and not returning for a period of several years, provided the customary basis for emigration estimates. Another measure compares the known number of new immigrants and returning residents with the annual international migration balance which also reflects permanent residents who traveled abroad and did not return within a period of 12 months. The latter is a measure of actual absence rather than of permanent emigration.

Major Trends and Differentials. The absolute number of annual emigrants including return migration increased over time, but reflecting more rapid population growth emigration rates per 1,000 resident population consistently declined from the late Ottoman period, the British Mandate, and after Israel's independence. Over the period 1949–2004, based on any of the mentioned measures, the annual number of emigrants never fell below 5,000 or exceeded 28,000. The number of emigrants from Israel regularly fell short of the number of new immigrants, with the exception of 1953, 1981, 1985, 1986, and 1988 in which the Israeli economy was especially under stress.

Between 1948 and the end of 2003 over 700,000 Israeli residents left the country and did not return. This figure includes over 100,000 Israeli residents who had been abroad for less than a year in 2003 and, based on the experience of previous years, could be expected to return in the short term. The total number of Israeli residents settled or planning to settle abroad for a period of four years or more at the end of 2003 could thus be estimated at about 600,000, but the number of

those returning after a longer absence was not negligible. If one adds the estimated number of children born abroad to these persons, we arrive at a total pool of over 750,000 former Israeli residents and descendants living abroad or about 11% of the total Israeli population. These figures should be evaluated in the light of the marked increase in the numbers of Israelis who travel abroad. The annual number of departures grew from 30,000 in 1950 to 3,530,000 in 2000. The proportion of Arabs was generally smaller among emigrants than among residents in Israel.

Emigrants from Israel belong to one of three distinct groups: former immigrants returning to their country of origin; former immigrants emigrating to a third country; and emigrants born and raised in Israel. The propensities of emigrating differ according to specific socio-demographic characteristics; thus emigration was more frequent among young adults (aged 20–39), single people, and the better educated. Among former immigrants, there was a greater concentration of emigrants among persons entering Israel with a visa of “potential immigrant” (as compared to “immigrant”), who had lived in Israel for a relatively short period, or who had been born in Western Europe or North America.

The main countries of destination for Israeli emigrants were the United States, France, Canada, and Western countries in general. The largest pool of former Israelis is located in the United States, where it is estimated at over 200,000. The much higher figures sometimes circulated are not confirmed by research. In Europe, too, census figures of the respective countries reveal a much lower total than that commonly reported. Around 2004 the total officially reported number of Israeli citizens in Europe approached 40,000. Since 1991, a modest amount of re-emigration to the FSU has been recorded. The opportunity to enter a country, and the presence there of relatives, constituted a significant factor in the volume of emigration and in the choice of destination country.

Determinants and Consequences. Explanations of emigration from Israel have tended to focus on three factors. First, levels of immigration in the immediately preceding period, insofar as the early stages of immigrant absorption in the new country tend to be characterized by instability, but the probability of remaining (not re-emigrating) tend to increase the longer they remain. Major waves of immigration usually generate a minor wave of emigration with a few years' lag. Second, changing economic circumstances in Israel have an impact on emigration insofar as the latter tends to increase in years with diminishing levels of public investment, declining income, rising inflation, and unemployment. Third, albeit to a lesser extent, the security situation as expressed by major events such as wars or by the cumulative burden of military service (including reserve duty) impacts indirectly on the choice to emigrate or re-emigrate.

Therefore emigration is more strongly related to push factors in Israeli society than to pull factors abroad. Emigration from Israel resembles that for other countries with similar

levels of development. Rates of emigration per 1,000 population closely match the levels of immigration to Israel per 1,000 Jews in countries with a level of development similar to that of Israel. Emigration from Israel differs markedly from large-scale Jewish migrations driven by the objective of permanent resettlement in new countries. The tendency towards further return migration to Israel is quite high.

At the same time, further attention should be paid to the longer-term picture of Israeli emigration. While Israeli immigration was long influenced by a commitment to building a new society by enhancing Jewish cultural, religious, and national values, emigration indicates a diminishing salience of these factors. Partial evidence indicates that the probability of emigrating is likely to be higher among those whose feelings of Jewishness and Israeli identity are weaker.

A little studied aspect of Israeli emigration concerns the economic impact of emigrants on the Israeli economy. It is not possible to provide a direct evaluation of the amounts of capital transferred by emigrants. However, total individual remittances (excluding personal payments from Germany) can be compiled from data on the balance of payments. Clearly, such transfers do not concern Israeli emigrants only, but rather the whole Jewish Diaspora which – while viewed by the Law of Return as a virtual target for future immigration – comprises a vastly large population. During the late 1990s and early 2000s the yearly amount transferred fluctuated around \$ 1 billion and represented roughly 1 percent of the total Gross National Product (see Table 12: Net Personal Remittances, and Percent of GNP, 1995–2004).

Table 12: Net Personal Remittances, and Percent of GNP, 1995–2004

| Year | Personal remittances (net) \$ millions ^a | GNP ^b \$ millions | Personal remittances (net) as % of GNP |
|------|---|------------------------------|--|
| 1995 | 1,039 | 95,790 | 1.08 |
| 1998 | 826 | 111,011 | 0.74 |
| 1999 | 960 | 109,263 | 0.88 |
| 2000 | 949 | 122,475 | 0.77 |

CONCLUDING REMARKS. There is a strong linkage between the country of residence and the probability of emigrating. Given the fact that most of the Jewish Diaspora currently resides in the more developed Western countries, further waves of large-scale immigration to Israel are unlikely in the near future, and only significant dislocations would reverse this situation. On the other hand, emigration from Israel is significantly determined by economic forecasts which in turn respond to broader geopolitical factors, namely security and the outcome

of the peace process. Developments in the latter dimensions, both locally and internationally, will indeed determine the future migration balance of the State of Israel.

MIHAILENI (Rom. **Mihăileni**), town in Moldavia, N.E. Romania. When the town was founded in 1792 only Jews from the other side of the border were permitted to settle in the locality. The prayer house of the Jews and their ritual bathhouse were exempted from taxes, and during the first year Jewish merchants did not have to pay taxes. In 1834 the town became the property of the prince of Moldavia, Michael Sturdza. Eager to develop the town, he granted Jewish craftsmen special privileges, exempting them from taxes for five years. He also encouraged merchants to settle there by granting loans. From a population of 516 in 1820 the number of Jews reached 2,472 (67.6% of the total population), in 1859. In 1903 there were 248 Jewish and 58 Christian merchants in the town. The majority of the Jews were engaged in commerce, especially the fur trade. Jewish carriers plied their trade throughout the whole area; they had their own prayer house. An organized community dates from 1897. A Jewish primary school was founded in 1899. After World War I, with the Romanian annexation of Bessarabia and Bukovina, Mihaileni lost its position as a frontier town. In 1930 only 1,490 Jews (32%) remained in the town. In the same year, the Jewish Party obtained the majority of votes in the local council elections. The peasants preferred it to the other parties, asserting that the Jews were more capable administrators. The election, however, was canceled by the authorities. On the eve of World War II there were nine prayer houses, a ritual bath, a primary school, and a cemetery in Mihaileni. The Hebrew author of the Haskalah period Mar-

cus *Strelisker lived and died in Mihaileni. The Yiddish poet Jacob *Groper (1890–1966) was born there.

In World War II the Jews of Mihaileni were deported to *Transnistria. Few returned to Mihaileni after the war; the majority emigrated. The Jewish population numbered 680 in 1947, 400 in 1950, and about ten families in 1969.

[Theodor Lavi]

MIHALY, EUGENE (1918–2002), rabbi, professor, and college administrator. Mihaly was born in Hungary and immigrated to the United States in 1930. He received his B.A. from *Yeshiva University in 1940 and dual ordination from Rabbi Isaac Elchanan Theological Seminary (Orthodox, 1941) and *Hebrew Union College (Reform, 1949), where he also earned a Ph.D. in 1952. Invited to join the HUC faculty, Mihaly became professor of rabbinic literature and homiletics and Deutsch Professor of Jewish Jurisprudence and Social Justice (emeritus in 1989). He added high-level administration to his lecturing duties when he was named executive dean for academic affairs of all four HUC-JIR schools in 1976, becoming academic vice president in 1985. After his retirement in 1990, he continued to contribute to the *Encyclopedia Britannica* and the *Encyclopedia Judaica*.

Mihaly, a radical reformer in the mold of classical Reform, wrote responsa sanctioning such controversial practices as rabbinic officiation at mixed marriages and holding weddings on the Sabbath. In response to the Reform movement's perceived drift toward Orthodox and Conservative stances on such issues as the importance of Zionism and Israel, the vital role of Hebrew and the embracing of ritual and tradition, Mihaly wrote the articles "Reform Judaism and Halacha" and "Halakhah Is Absolute and Passé," which articulated the need for Reform Judaism to return to its original rejection of Jewish law. In 1974, he was unanimously elected president of the newly formed (and ultimately short-lived) Association for a Progressive Reform Judaism, established by a group of approximately 100 Reform rabbis who shared concerns about what they claimed to be the subordination of the freedom of individual rabbis to positions adopted by the *Central Conference of American Rabbis, the alienation of the institutions of Reform Judaism from Reform laity, and undue emphasis on the ethnic and national aspects of Judaism at the expense of pure religion. In addition to numerous articles, responsa, and monographs, Mihaly wrote the books *Religious Experience in Judaism* (1957) and *A Song to Creation* (1975).

[Bezalel Gordon (2nd ed.)]

MI'ILYA, Christian-Arab village in northern Israel, in western Upper Galilee, west of *Ma'alot. Mi'ilya constitutes an important center in Israel for the Greek-Catholic faith, to

which almost all its inhabitants belong. Tobacco, deciduous fruit, vineyards, and olive groves, on land reclaimed from rocky slopes, formed the base of the village's economy. In 1957 Mi'ilya received municipal council status. In 1969 its population was 1,390, rising to 2,550 in 2002, on an area of 0.07 sq. mi. (1.8 sq. km.). According to archaeological evidence, Mi'ilya has been inhabited since the second millennium B.C.E. Although few remains from the earlier periods have been preserved, the crusader fortress built by German knights in the 13th century C.E. (Chateau du Roi or Castrum Regis) has remained almost intact and still forms the village's nucleus. Another crusader fortress, Montfort (Burg Starkenberg), lies nearby in the Chezib River gorge.

[Efraim Orni]

MIKARDO, IAN (1908–1993), British politician. One of the most important leaders of the British Labour Party's left wing from the 1940s through the 1980s, Mikardo was born in Portsmouth, Hampshire, the son of a tailor for the Royal Navy who had recently emigrated from a town near Warsaw. Mikardo spoke Yiddish at home and was educated at Aria College, a Jewish school in Portsmouth. In the 1930s he acted as a management consultant and was long associated with the Supervisory Staffs Association. Mikardo was elected to Parliament in the Labour landslide of 1945, becoming one of the driving forces of its left wing and working hard for further extensive nationalization and other left-wing goals. He was one of the closest associates of Labour's left-wing leader Aneurin Bevan and of other left-wing figures like Michael Foot. Mikardo lost his seat in 1959, but again became a Member of Parliament in 1964, serving until 1987. While out of Parliament he developed a business trading with the Soviet Union and became a fierce opponent of the Vietnam War. His left-wing views kept him out of any ministerial post, although he was always an influential figure in the Labour Party's internal machinery, serving as chairman of the Parliamentary Labour Party in 1974. Mikardo was also a supporter of the Israeli Labor Party. In his last years, ironically he was criticized by Labour's militants as too moderate. Mikardo wrote an autobiography, *Back-bencher* (1988).

[William D. Rubinstein (2nd ed.)]

MIKES, GEORGE (1912–1987), Hungarian-born humorist. After working for the BBC during World War II, he wrote many lighthearted books on politics, social customs, and national foibles. These works include *How to Be an Alien: England* (1946), *Ueber Alles: Germany* (1953), and *How to Scrape Skies: United States* (1948). Mikes also poked fun at Japan (*The Land of the Rising Yen*, 1970), the UN (*How to Unite Nations*, 1963), and Britain again (*How To Be Inimitable*, 1966; *How To Be a Brit*, 1984; *How To Be Decadent*, 1986). Though converted as a boy, Mikes retained a keen interest in Jewish affairs, writing two incisive books on Israel, *Milk and Honey* (1950) and *The Prophet Motive: Israel Today and Tomorrow* (1969).

MIKHAËL, EPHRAÏM (1866–1890), French author. Georges Michel (his real name) was born in Toulouse of an Alsatian father and a Provençal mother. There were strong links and intermarriage with families from Montpellier and Nîmes, for example with the Bernards from Nîmes, whose eldest son Lazare was and remained Georges Michel's dearest "brother" in every sense, personal and intellectual. When both became budding writers in Paris, they changed their neutral-sounding French names for Jewish-sounding pen names – a gesture of Jewish self-assertion. Around 1884 Georges Michel became Ephraïm Mikhaël and Lazare Bernard became Bernard *Lazare. E. Mikhaël's other Jewish "brother" was Camille Bloch, from an Alsatian rabbinical family, who became a leading historian.

E. Mikhaël moved to Paris as a schoolboy with his family. He began his literary career at age 17, while a pupil at the prestigious "lycée Fontanes," where, in a spirit of fraternal poetic exaltation, small literary groups sprang up, fed by intellectual pursuits and love of beauty.

E. Mikhaël's student years (1884–88) were spent at the Sorbonne and exclusive École des Chartes, specializing in Latin and medieval studies, graduating as archivist-paleographer, which won him an appointment at the Bibliothèque Nationale, a post he held until his untimely death.

Mikhaël was a fine scholar, ever broadening his knowledge in the realms of Greek and Oriental studies, philosophy, and comparative religion. His vast fund of knowledge served both his theoretical speculations and his poetic inspiration and the thematic background for his literary creation. He was a prolific and intensive writer in the six years of his student and professional careers and regarded as the most gifted of his generation by Victor Hugo and Mallarmé among others.

Although he is remembered primarily as a poet and quoted in the leading anthologies, he also excelled in poetic prose (tales, prose poems, parables), composed fine dramatic works (see *La Fiancée de Corinthe*, 1988), and important theoretical essays. Except for one small volume of poems, *L'Automne* (1886), he published primarily in literary journals, particularly *La Pléiade*, launched by his own little group and destined to become the famed and long-lived *Mercure de France*. The bulk of his writings appeared in a fine volume of verse and prose, published shortly after his death.

Though he remained famous for his melancholy poems ("Crépuscule pluvieux," "Tristesse de septembre," et al.), he had a dual personality: on the one hand he had a sad, pessimistic bent and on the other an innate love of life, whimsical and ironic, as in his satirical poems and some tales. He progressed from an idle reverie on the theme of the fatal burden of solitude and self-concern (exemplified in "La dame en deuil" and "La captive" among others) towards an active meditation, no longer severed from real life and commitment. In his last major critical text, he stakes a claim for a "new art," which rejects both the formal luxuriousness of the Parnasse school of poetry in favor of renewed freer expression and the flatly

naturalistic novel in favor of a type of literature that would stimulate philosophical reflection. This was to be the program of the "symbolists" for the next 15 years or so.

A similar evolution is noticeable in E. Mikhaël's overtly Jewish works. The author goes from allusive, ambiguous references to meaningful messages. Such poems as "La reine de Saba," "Le mage," "L'automne" remain ambiguous. For example "L'automne" makes a fairly clear allusion to the High Holy Days, but stresses the sadness of the season, the death of the old year, and an uncertain word of pardon rather than the opportunity for the soul's renewal. A comparison between two parables, playing on the similar subject of the messianic messenger, is instructive. In an early tale, "Miracles," a noble stranger arrives in a timeless city, filled with anonymous rabbis and sages, full of "ridiculous common sense" and blind to higher insights. They ignore the stranger (maybe a "divine messenger"). The poet Azahel, a sort of philosopher and seer, remains torn between faith and reason. He retreats in superstitious fear of the unknown. A much later tale, "L'imposteur," takes up the same theme, but in a precise setting in time (month of Elul, ten years after the fall of Jerusalem) and space (Galilee, Tiberias). The story presents a group of authentic pious priests and rabbis, all with Hebrew names, prepared to seek and greet the messianic figure announced in Scriptures. But the unfinished story and the ironic behavior of the supposed messiah warn against deceptive prophecy (cf. the title "L'imposteur"). This is in keeping with the author's evolution toward a rational philosophical outlook, a sane moralistic attitude, and love of life, as an antidote against superstition and esoteric doctrines. In his major tales ("Halyartès," "Le Solitaire," et al.) he presents a series of beautiful adolescent heroes, outstanding for their perfect purity of soul, thus condemned to solitude in a crude, vicious, and hypocritical world. The frequent theme of purity is balanced by a stinging satire of spurious mysticism in the midst of an evil society.

[Denise R. Goitein]

MĪKHĀ'IL, MURAD (1906–1986), Iraqi poet and educator. A *Baghdad lawyer, he was headmaster of the Shammash Jewish high school in Baghdad (1941–47). Some of his Arabic verse appeared in the Jewish press and a collection of love poems was published in 1931. Mikhā'il also wrote prose works in favor of women's rights and the peasants, and attacking superstition. After immigrating to Israel in 1949, he specialized in Arab education and wrote several textbooks.

[Shmuel Moreh]

MIKHALEVICH, BEINISH (pseudonym of **Joseph Izbitski**; 1876–1928), leader of the *Bund in Russia and Poland. Mikhaevich was born at Brest-Litovsk into a working-class family and at the age of 18 he joined a socialist circle. On the establishment of the Bund, he was active in Bialystok and Warsaw, set up its local organs there, and also wrote in its central newspaper *Arbeter Shtime*. After a period of arrest by the czarist police, he took part in the establishment of the Gar-

ber Bund and edited its organ *Der Kemfer*. In the following years – between repeated arrests, exile, and flight – he was an organizer, speaker, publicist, and propagandist of the Bund. In the internal struggles he belonged to the “soft” group that supported the Bund’s return to the Russian Social Democratic party (1906), and during the period of reaction, after the short-lived constitutional aftermath of the revolution, he belonged to the “anti-liquidators,” who demanded to continue illegal activities. Mikhalevich was the first to discuss the problem of the relationship between the Bund and the Jewish *kehillah* (the organized Jewish community) (1907). In 1912 he became a member of the central committee of the Bund and edited its weekly *Tsayt* in St. Petersburg. During World War I he was active in welfare and educational institutions in Vilna until his imprisonment by the German occupation forces for a leaflet he wrote against forced labor.

The leftward turn of the Bund in independent Poland decreased Mikhalevich’s political standing and he devoted himself mainly to writing and to social and cultural work. He wrote in the Bund organ *Folkstsaytung*, and gave a historical-biographical description of the Jewish workers’ movement in three volumes: *Zikhroynes fun a Yidishn Sotsialist* (1921–23). He took part in the founding of the Central Yiddish School Organization (CYSHO) and until his death served as its chairman, visiting the U.S. in 1923–24 as its emissary and promoting the establishment of the Society for Helping Children’s Institutions Overseas. He was also a member of the Jewish community council in Warsaw (1925–28). One of the outstanding polemicists against Zionism, Mikhalevich was popular even among his opponents because of his honesty and attachment to Jewish values.

[Moshe Mishkinsky]

MIKHMORET (Heb. מִכְמֹרֶת; “Fishing Net”), moshav village, and vocational school in central Israel, near *Kefar Vitkin, founded in 1945 by World War II veterans, some of whom had learned fishing in Holland. The moshav is affiliated with Tenu’at ha-Moshavim. Its economy is based on citrus groves, dairy cattle, and carp ponds. The village Mikhmoret Bet has developed the neighboring beach, one of the finest in the country, as a seaside resort. The fishery and seafaring school Mevo’ot Yam (“Approaches to the Sea”) constituted a central maritime training institute. In 1970 the three sections of Mikhmoret had a population of 720. In 2002 it was 1,050.

[Efraim Orni]

MIKHOELS, SOLOMON (stage and public name of **Solomon Vovsi**; 1890–1948), Yiddish actor; head of the Moscow State Jewish Theater; chairman of the Jewish *Anti-Fascist Committee. Born in Dvinsk (today Daugavpils, Latvia), Mik-

hoels studied law at St. Petersburg. In 1918 he joined Alexander *Granovsky’s Jewish drama studio, the next year following Granovsky to Moscow, where the group became the State Jewish Theater (GOSJET). He was Granovsky’s chief actor, and succeeded him to the directorship in 1928 when he did not return from abroad. In 1931 he opened a studio affiliated with the theater, which trained actors for all Jewish theaters in the U.S.S.R. Mikhoels, whose distinction lay in his command of both tragic and tragicomic roles, first attracted attention in 1921 in a performance of *Shalom Aleichem’s *Agents*. He was soon playing such famous Yiddish roles as Shimele Soroker in *Two Hundred Thousand*, Hotsmakh in Goldfaden’s *The Witch*, Benjamin in *The Travels of Benjamin the Third* by Mendele Mokher Seforim (S.Y. *Abramovitch), and Shalom Aleichem’s Tevye. One of his most notable performances was King Lear in the production by Sergei Radlov in 1935. From August 1941, Mikhoels, as chairman of the Jewish Anti-Fascist Committee, launched fervent appeals to “our Jewish brethren” in the West to help the Soviet war effort against Nazi Germany. In 1943 he and the poet Itzik *Fefer traveled on behalf of the Anti-Fascist Committee to the U.S., Canada, Mexico, and England, where they were enthusiastically received by the Jewish public. At the end of World War II, when survivors of the Holocaust and Jews returning from evacuation in Soviet Asia tried to resettle in their old homes, Mikhoels gradually became their spokesman and protector, interceding for them with the Soviet authorities. He apparently was also connected with the “Crimean project” which aimed at the settlement of homeless Jews in the Crimea. On Jan. 13, 1948, while on an official mission in Minsk on behalf of the State Committee for Theater Prizes, Mikhoels was brutally killed, ostensibly in an alleged car accident, but in reality executed by the Soviet secret police, on the order of Stalin. (Svetlana Alliluyeva, Stalin’s daughter, testified (in her book *Only One Year*) that her father was personally involved in covering up Mikhoels’ assassination and presenting it as an accident.) On January 16, Mikhoels was eulogized at his state funeral in Moscow in which many thousands of Jews participated. Mikhoels’ assassination was the first step in the process of the liquidation of all Jewish cultural institutions and of most outstanding Yiddish writers, artists, and actors which took place during the last years of Stalin’s rule. In 1952, four years after his death, Mikhoels was claimed as a Jewish nationalist, a “Joint agent,” and a contact man with the U.S. intelligence in the “Doctors’ Trials.” During the de-Stalinization in the mid-1950s Mikhoels was de facto rehabilitated. In Tel Aviv a square was named in his honor in 1962, on the tenth anniversary of the execution of Jewish writers in the U.S.S.R.

MIKULOV (Ger. *Nikolsburg*), town in S. Moravia, Czech Republic. The Mikulov community was the largest and most important in Moravia, and was the seat of the *Landesrabbiner* ("chief rabbi") from apparently as early as 1574 until 1851. A Jew from Mikulov, a moneylender, is mentioned in a document of 1369, but there is no mention of Jews in the oldest known city record of 1414. An inscription in the synagogue (burned down in 1719) was dated 1450. The community was probably founded by expellees from Austria (1420), reinforced in 1454 by those from *Brno (Bruenn) and *Znojmo (Znaim). The charter granted the Jews in 1591 guaranteed a self-elected communal administration (the revised charter of 1612 (renewed in 1708) removed the Jews from the jurisdiction of the town to that of the lord). In 1593 the Jews were permitted to trade in textiles. On the conquest of the town by the Swedes (1642), the Jews raised a quarter of the town's contribution. Refugees from the *Chmielnicki massacres came to Mikulov in 1648. In 1653 the **hevra kaddisha* was founded. In 1657 there were 145 families in the town. Their number was augmented in 1670 by expellees from Vienna, who at first kept apart from the local community, maintaining their own institutions and endeavoring to return to Vienna. A hospital for infectious diseases was built in 1680. Jews who were captured on the conquest of *Belgrade were ransomed in 1688 and settled in Mikulov. Almost the entire Jewish quarter, including the old synagogue and all records, was destroyed in a fire in 1719. The concomitant plunder led to a conflict between the central authorities and the local lord over military intervention. Under the leadership of Samson *Wertheimer, communities throughout Europe offered assistance to the Jews of Mikulov. The municipality bought up building sites to avoid the enlargement of the Jewish quarter, whose boundaries were fixed by an imperial commission in 1720.

The prosperity of the community depended on its connection with the cultivation of wines and the wine trade and on the town's position on the main road between Brno and Vienna. Many of the Jews were carters. The Jewish wine merchants leased vineyards, vats, and cellars or bought up the grape crops, paying in advance of the harvest. Jews also distilled spirits and produced the special Moravian plum jam (*povidl*). In the 17th century, the Jews undertook to supply the whole town with candles, and in the 18th century the purveyors of gold and silver to the imperial mint lived in Mikulov. The community *takkanot* from the 18th century are preserved in the National Library in Jerusalem. The Jewish tailors, shoemakers, and butchers were organized into guilds, with their own synagogues. However, most members of the community earned their livelihood in peddling, mainly in the villages of Austria.

Mikulov, the center of all activities of Moravian Jewry, was especially prominent when Samson Raphael *Hirsch held office as chief rabbi (1846–51). A German-language school, connected with a textile workshop, was opened in 1839. Joel Deutsch founded the Jewish institute for the deaf and dumb in 1844 (transferred to Vienna in 1852). Mikulov became a

political community (**Politische Gemeinde*) after 1848. After the economic importance of the community had declined when the Vienna-Brno railroad line bypassed Mikulov, many of its members left (after 1848), moving mainly to Brno and Vienna, where a "Verein der Nikolsburger" ("association of Nikolsburgers") grew up. The rapid decline in the community was reflected in the number of synagogues: 12 until 1868, five until the beginning of the 20th century, and then only two. The number of permitted families allotted under the *Familiants Laws was 620. From 3,020 persons in 1793, the community increased to 3,237 in 1830 and 3,680 in 1857, then fell sharply to 1,500 in 1869; 1,213 in 1880; 1,061 in 1890; 900 in 1900; 778 in 1913; 573 in 1921; and 437 in 1930 (5.6% of the total population).

The yeshivah of Mikulov was renowned, and many well-known rabbis held office in the town; nearly all of them were simultaneously chief rabbis of Moravia (see *Moravia). For a short period the town served as the seat of Hungarian chief rabbi and was a vital spiritual link between West Slovakian and Moravian Jewry. Until the mid-19th century Mikulov had the second largest Jewish community in the Czech-speaking lands. During World War I, Jewish refugees from Poland were concentrated in Mikulov, where they had their own school and prayer room. The scholar Abraham *Trebitch lived in Mikulov and Aloys and Joseph von Sonnenfels were natives of the town.

In 1936 a Moravian Jewish museum was founded in Mikulov; it was transferred to Brno at the time of the Sudeten crisis, and from there to the Central Jewish Museum in Prague. The community dispersed at this time; many of its members were deported to the Nazi extermination camps from Brno in 1941. The community was revived for a short period after World War II. In 1948 members of the Czechoslovak volunteer brigade (the so-called Sochor brigade) were concentrated in Mikulov before leaving for Israel – 120 soldiers and about 700 family members. The old synagogue (Altschul) was thoroughly restored in the years 1990–92. Other Jewish buildings were all pulled down during the Communist regime in 1950–75. The ancient cemetery is well preserved and also serves as a repository for tombstones from other liquidated cemeteries. It contains the graves of numerous famous rabbis of Moravia and Hungary. The mass grave of 21 prisoners from the local labor camp murdered by the Nazis in April 1945 is located in the cemetery. The Jewish surname Naach/Nash is derived from the Yiddish abbreviation of the town's name.

[Meir Lamed / Yeshayahu Jelinek (2nd ed.)]

MIKVA, ABNER J. (1926–), judge, legislator, special counsel to U.S. President Bill Clinton. Born in Milwaukee, Wisconsin, Mikva attended public schools there. He served in the U.S. Army Air Corps during World War II, and graduated from the University of Chicago Law School in 1951. Mikva was law clerk to Supreme Court Justice Sherman Minton from 1951 to 1952, then entered private practice in Chicago.

In 1956 Mikva was elected to the Illinois state legislature, running as a Democrat but against the Democratic machine. He served in the state legislature for ten years, writing reforms of the state criminal code and state mental health facilities; he gained a reputation as an opponent of corruption in the state welfare system and apparently earned the enmity of Chicago Mayor Richard Daley. In 1968 he was elected to the U.S. House of Representatives. He lost his bid for reelection in 1972 when Chicago's legislative districts were remapped, and he returned to Chicago, practicing law and teaching at Northwestern University School of Law.

In 1974 Mikva was reelected to Congress; he served there as a member of key committees until 1979, when President Jimmy Carter nominated him for the U.S. Court of Appeals in the District of Columbia. Mikva's nomination was opposed by the National Rifle Association, and conservative opponents unsuccessfully challenged his appointment with a lawsuit. He served in the Court of Appeals from 1979, becoming chief judge in 1991. During his judicial career, Mikva wrote over 300 opinions, many concerning free speech and consumer rights. In one noteworthy case, he ordered that a gay student be reinstated at the U.S. Naval Academy. He did not uphold the right of an air force captain to wear a yarmulke while on duty, though throughout the hearing whenever a skullcap was mentioned, he felt for the back of his head.

In 1994 he gave up his judicial appointment to become White House counsel to President Bill Clinton. With this new appointment within the executive branch, Mikva had served in all three branches of the federal government. In 1995 he returned to teaching, writing frequently on political and judicial issues. He continued to be known as an advocate of free speech, in 2001 speaking out against acts of racial profiling and wrongful imprisonment of Muslim immigrants in the United States.

[Dorothy Bauhoff (2nd ed.)]

MIKVA'OT (Heb. מִקְוֹאוֹת; "Ritual Baths"), the sixth tractate in the order of *Tohorot* in the Mishnah and the Tosefta. The

tractate consists of ten chapters and deals wholly with the details of the **mikveh*. Chapter 1 classifies *mikva'ot* according to the grade of their purity and purifying effect, from ponds or ditches containing less than 40 *se'ah* (c. 750 liters; see *Weights and Measures) and therefore invalid, to those of the highest grade, consisting of *mayim hayyim* ("pure spring water"). Chapter 2 discusses cases of "doubtful impurity" (e.g., if a person is not sure whether he has immersed properly or whether the *mikveh* was ritually fit), and then deals with the problem of *mayim she'uvim* ("drawn water"). Chapters 3 and 4 continue with various aspects of *mayim she'uvim*, e.g., how a *mikveh* invalidated by *mayim she'uvim* can be made ritually fit, or how to direct rainwater from a roof into a *mikveh* without letting the water pass through a "vessel" in order to prevent the water's becoming *mayim she'uvim*. Chapter 5 deals mainly with the fitness of springs, rivers, and seas as *mikva'ot*. Chapter 6 is concerned with the question of a body of water linked with a *mikveh*, or two *mikva'ot* connected so that the water of the one "touches" the water of the other (*hashakah*), which is of great significance in the construction of the modern *mikveh*. Chapter 7 discusses the minimal requirement of 40 *se'ah*, especially whether snow, ice, etc. may complete that measure. Chapter 8 first deals with the halakhic difference between *mikva'ot* of the Holy Land and those of other countries; it then discusses problems touching on seminal issue and menstruation. Chapter 9 discusses the problem of *hazizah* ("interposition"). Chapter 10 deals with vessels or any other artifact requiring purification in a *mikveh*.

The Vienna manuscript of Tosefta *Mikva'ot* contains seven chapters (and is missing one page, containing the end of the third chapter through the beginning of the sixth chapter), while the printed edition contains eight chapters. The Tosefta quotes traditions about queries raised by the inhabitants of "Assia" with the scholars of Jabneh during the three pilgrim festivals (4:6); about R. Gamaliel and Onkelos the Proselyte bathing in the sea at Ashkelon (6:3); and about discussions which took place among 32 scholars in Lydda (7 (8):11). Although there is no Babylonian or Jerusalem Talmud on *Mikva'ot*, several of its Mishnayot are explained in the Babylonian Talmud; for example, Mishnah 4:1 is explained in *Shabbat* 16b, Mishnah 7:2 in *Yevamot* 82b and *Zevahim* 22a, Mishnah 7:4 in *Shabbat* 144b, Mishnah 8:4 in *Hullin* 24b, Mishnah 9:1 in *Shabbat* 57a, and Mishnah 9:5 and 6 in *Shabbat* 114a. The Mishnah of this tractate was translated into English by H. Danby (1933) and the Soncino Press (1948), while J. Neusner has recently published a translation of both the Mishnah (1991) and the Tosefta (2002).

[Arnost Zvi Ehrman]

MIKVEH (Heb. מִקְוֵה; pl. *mikva'ot*; Hebrew for a “collection” or “gathering” [of water]), a pool or bath of clear water, immersion in which renders ritually clean a person who has become ritually unclean through contact with the dead (Num. 19) or any other defiling object, or through an unclean flux from the body (Lev. 15) and especially a menstruant or postpartum woman (see *Ablution; **Niddah*; *Purity and Impurity, *Ritual; **Taharat ha-Mishpahah*). It is similarly used for vessels (Num. 31:22–23). Today the chief use of the *mikveh* is for women, prior to marriage, following *niddut*, and following the birth of a child, since the laws of ritual impurity no longer apply after the destruction of the Temple. *Mikveh* immersion is also obligatory for proselytes, as part of the ceremony of conversion. In addition immersion in the *mikveh* is still practiced by various groups as an aid to spirituality, particularly on the eve of the Sabbath and festivals, especially the Day of Atonement (see *Ablution) and the custom still obtains, in accordance with Numbers 31: 22–23 to immerse new vessels and utensils purchased from non-Jews. At the beginning of the 21st century, *mikveh* immersion also frequently constituted a symbolic expression of a new spiritual beginning for both women and men, in all branches of Jewish practice. In addition to conversion to Judaism, rituals have developed incorporating *mikveh* immersion as part of bar mitzvah and bat mitzvah (coming of age); prior to marriage for men as well as women; in cases of miscarriage, infertility, and illness; and following divorce, sexual assault, or other life-altering events. An indication of the probable long-term impact of this trend is the increased construction of *mikva'ot* by non-Orthodox Jewish communities in North America.

It is emphasized that the purpose of immersion is not physical, but spiritual, cleanliness. Maimonides concludes his codification of the laws of the *mikveh* with the following statement: It is plain that the laws about immersion as a means of freeing oneself from uncleanness are decrees laid down by Scripture and not matters about which human understanding is capable of forming a judgment; for behold, they are included among the divine statutes. Now ‘uncleanness’ is not mud or filth which water can remove, but is a matter of scriptural decree and dependent on the intention of the heart. Therefore the Sages have said, ‘If a man immerses himself, but without special intention, it is as though he has not immersed himself at all.’

Nevertheless we may find some indication [for the moral basis] of this: Just as one who sets his heart on becoming clean becomes clean as soon as he has immersed himself, although nothing new has befallen his body, so, too, one who sets his heart on cleansing himself from the uncleannesses that beset men’s souls – namely, wrongful thoughts and false convictions – becomes clean as soon as he consents in his heart to shun those counsels and brings his soul into the waters of pure reason. Behold, Scriptures say, ‘And I will sprinkle clean water upon you and ye shall be clean; from all your uncleannesses and from all your idols will I cleanse you [Ezek. 36: 25]’ (Yad, *Mikva'ot* 11:12).

Although Maimonides in this passage states that lack of intention invalidates the act under all circumstances, a view which is found in the Tosefta (Ḥag. 3:2), the *halakhah*, as in fact codified by him (Yad, *ibid.* 1:8), is that the need for intention applies only for the purpose of eating holy things, such as **ma'aser and terumah*. For a menstruant, and before eating ordinary food, though intention is desirable in the first instance, its lack does not invalidate the immersion. The importance of intention in the laws of ritual impurity is further illustrated by the fact that the rabbis permitted fig cakes which had been hidden in water – an action that would normally make the food susceptible to uncleanness – because they had been put there in order to hide them and not in order to wet them (Makhsh. 1:6). This stress on intention passed from Judaism into Islam. “Purity is the half of faith” is a saying attributed to Muhammad himself and in general the laws of uncleanness in Islam bear a striking resemblance to those of Judaism (*Encyclopedia of Islam*, s.v. *Tahara*).

According to biblical law any collection of water, drawn or otherwise, is suitable for a *mikveh* as long as it contains enough for a person to immerse himself (Yad, *ibid.* 4:1). The rabbis, however, enacted that only water which has not been drawn, i.e., has not been in a vessel or receptacle, may be used; and they further established that the minimum quantity for immersion is that which is contained in a square cubit to the height of three cubits. A *mikveh* containing less than this amount (which they estimated to be a volume of 40 *se'ah*, being between 250–1,000 liters according to various calculations) becomes invalid should three *log* of drawn water fall into it or be added. However, if the *mikveh* contains more than this amount it can never become invalid no matter how much drawn water is added. These laws are the basis for the various ways of constructing the *mikveh* (see below). To them a whole talmudic tractate, **Mikva'ot*, is devoted, and Maimonides assigns them a whole treatise of the same name. The laws can be conveniently divided into two parts, the construction of the *mikveh* itself, and the water which renders it valid or invalid.

The *mikveh* is valid, however built, providing that it has not been prefabricated and brought and installed on the site, since in that case it constitutes a “vessel” which renders the water in it “drawn water” (“*mayim she'uvim*”; Mik. 4:1). It may be hewn out of the rock or built in or put on the ground, and any material is suitable. It must be watertight, since leakage invalidates it. It must contain a minimum of 40 *se'ah* of valid water, and, although it was originally laid down that its height must be 47 in. (120 cm.) to enable a person standing in it to be completely immersed (Sifra 6:3), even though he has to bend his knees (Sifra 6:3) it was later laid down that providing there is the necessary minimum quantity of water, immersion is valid while lying down.

The Water

All natural spring water, providing it is clean and has not been discolored by any admixtures is valid for a *mikveh*. With re-

gard to rainwater, which is ideal for a *mikveh*, and melted snow and ice (even if manufactured from “drawn” water) which are also valid, care must be taken to ensure that the water flows freely and is not rendered invalid by the flow into it being stopped, thus turning it into “drawn water.” In addition the water must not reach the *mikveh* through vessels made of metal or other materials which are susceptible to ritual uncleanness. This is avoided by attaching the pipes and other accessories to the ground, by virtue of which they cease to have the status of “vessels.” Similarly the *mikveh* is emptied from above by hand, by vacuum, or by electric or automatic pumps. The emptying through a hole in the bottom is forbidden since the plug may be regarded as a “vessel” as well as giving rise to the possibility of a leakage.

There is, however, one regulation with regard to the *mikveh* which considerably eases the problems of assuring a supply of valid water. Once it possesses the minimum quantity of 40 *se'ah* of valid water even though “someone draws water in a jug and throws it into the *mikveh* all day long, all the water is valid.” In addition “if there is an upper *mikveh* containing 40 *se'ah* of valid water, and someone puts drawn water in the upper *mikveh*, thus increasing its volume, and 40 *se'ah* of it flows into the lower pool, that lower pool is a valid *mikveh*” (Yad, Mikva'ot 4:6). It is thus possible to exploit limitless quantities of valid water.

Various Forms of Mikveh

The above regulations determine the various kinds of *mikveh* which are in use. In rare cases where there is a plentiful supply of valid water, spring or rain- (or sea-) water which can constantly replenish the *mikveh*, the only desiderata which have to be complied with are to ensure that the water does not become invalidated by the construction of the *mikveh*, rendering it a “vessel” or by going through metal pipes which are not sunk in the ground, as detailed above.

Since, however, *mikva'ot* are usually constructed in urban and other settlements where such supplies are not freely available, the technological and halakhic solution of the valid *mikveh* depends essentially upon constructing a *mikveh* with valid water and replenishing it with invalid water, taking advantage of the fact that the addition of this water to an originally valid one does not invalidate it.

The following are among the systems used:

1. The basic *mikveh* consists of the minimum valid amount of 40 *se'ah* of rainwater. To this rainwater, ordinary water may subsequently be added through a trough which is absorbent, dug in the ground, or one made of lean concrete at least three handbreadths (c. 30 cm.) long, and one wide. Through this device the added water is regarded as coming from the ground and not through a “vessel.” The resultant mixture of both types of water passes into the *mikveh* through a hole in the dividing wall. Since the added water is regarded as “seeding” the original valid water, it is called the *ozar zeri'ah* (“store for seeding”).

2. In a second system the added drawn water is not previously mixed with the rainwater, as in the previous case, but

flows directly onto the basic rainwater *mikveh* through an aperture in the wall of the *mikveh*, the diameter of which must be “the size of the spout of a water bottle” (c. 2 in.; 5–6 cm., Mik. 6:7). This method is called *ozar hasnakah* (“the store produced by contact”). Both the above methods, though they answer the halakhic needs, have their disadvantages in operation and in maintenance, particularly through the exhaustion of the rainwater and the stagnation of the standing water. The other systems are aimed at overcoming these drawbacks.

3. The “*dut*” is a cistern or tank built into the ground to store rainwater. When changing the water in the *mikveh*, it is filled each time with at least 21 *se'ah* of rainwater from the cistern and water is then added from the “store for seeding” by conduction. The water in the *mikveh* is brought into contact with the “contact store” by the method mentioned above. Though indeed this method overcomes the many shortcomings and halakhic problems, it nevertheless requires an extensive area for the cistern, and large areas of roof and pipes for filling with considerable amounts of rainwater in the winter.

4. Both a “store for seeding” and a “contact store” are built on each side of the *mikveh*. Each store has an aperture connecting its water with that of the *mikveh*.

5. A single “store” consisting of both “seeding” and “contacting.”

6. A “store” upon a “store.” A “contact store” is built on two stories joined by an aperture with the diameter of “the spout of a bottle.” The water of the *mikveh* is validated by means of the hole in the party wall between the *mikveh* and the upper “store.”

7. A “contact store” under the floor of the *mikveh*, connected by means of a hole the size of “the spout of a water bottle.”

The *mikva'ot* of Jerusalem as well as the oldest *mikva'ot* in other towns of Erez Israel are built in general by the method of the “contact store” as well as by the “store of seeding.” In the new settlements and elsewhere the *mikva'ot* are built in the main only by the method of the “store of seeding” (a system approved by Rabbi A.I. Karelitz, the “Hazon Ish”). Latterly *mikva'ot* have been built by the method of two “stores.”

In recent years vast improvements have been made in the hygienic and other aspects of the *mikveh*. An early enactment, attributed to Ezra, that a woman must wash her hair before immersing herself (BK 82a) may be provided for by the now universal custom of having baths as an adjunct to *mikva'ot*, the use of which is an essential preliminary to entering the *mikveh*, and especially in the United States they are provided with hairdressing salons and even beauty parlors.

The regulations for constructing the *mikveh* are complicated and its construction requires a considerable knowledge of technology combined with strict adherence to the *halakhah*, and it should be built only after consultation with, and under the supervision of, accepted rabbinic authorities. Nevertheless in order to increase the use of this essential requirement of traditional Judaism, a book has been published which con-

sists almost entirely of instructions for making a valid “Do it yourself” *mikveh* (see D. Miller in bibl.).

[David Kotlar / Judith Baskin (2nd ed.)]

History and Archaeology

During the Second Temple period (roughly from 100 B.C.E. to 70 C.E.), the Jewish population in Palestine had a very distinctive practice of purification within water installations known as *mikva'ot*. Large numbers of stepped-and-plastered *mikva'ot* have been found in excavations in Jerusalem, in outlying villages, as well as at various rural locations. Most of the installations in Jerusalem were in basements of private dwellings and therefore must have served the specific domestic needs of the city inhabitants. Numerous examples are known from the area of the “Upper City” of Second Temple period Jerusalem (the present-day Jewish Quarter and Mount Zion), with smaller numbers in the “City of David” and the “Bezetha Hill.” A few slightly larger *mikva'ot* are known in the immediate area of the Temple Mount, but these installations could not have met the needs of tens of thousands of Jewish pilgrims from outside the city attending the festivities at the Temple on an annual basis. It would appear that the Bethesda and Siloam Pools – to the north and south of the Temple Mount – were designed at the time of Herod the Great to accommodate almost all of the ritual purification needs of the large numbers of Jewish pilgrims who flocked to Jerusalem for the festivals. In addition to this, those precluded from admission to the Temple, owing to disabilities and bodily defects, would have sought miraculous healing at these pools and this is the background for the healing accounts in the Gospel of John (5: 1–13; 9: 7, 11).

Although water purification is referred to in the Old Testament, in regard to rituals and the Jewish Temple in Jerusalem, with washing, sprinkling, and dipping in water, we do not hear of specific places or installations that people would constantly frequent for the purpose of ritually cleansing their flesh. The term *mikveh* was used in a very general sense in the Old Testament to refer to a body of water of indeterminate extent (cf. Gen. 1:10; Ex. 7:19), or more specifically to waters gathered from a spring or within a cistern (Lev. 11: 36) or waters designated for a large reservoir situated in Jerusalem (Isa. 22: 11). None of these places are mentioned as having been used for ritual purification in any way. Hence, the concept of the *mikveh* as a hewn cave or constructed purification pool attached to one's dwelling or place of work is undoubtedly a later one. A distinction must be made therefore between the purification practices as they are represented in biblical sources, with Jewish water immersion rituals of the Second Temple period, as well as with later customs of *mikva'ot* prevailing from medieval times and to the present day (see below).

The basis for our information about what was or was not permitted in regard to *mikva'ot* appears in rabbinic sources: the tractate *Mikva'ot* in the Mishnah and Tosefta. One must take into consideration, however, that this information might very well be idealized, at least in part, and that the reality of purification practices in Second Temple times may have been much

more flexible than one would suppose from these sources. Josephus Flavius is silent in his writings about the purification installations of his time, and the few references in Dead Sea Scroll manuscripts are definitely not to be relied upon to generalize about the common Jewish purification practices current in Second Temple period Palestine. The Mishnah (Mik. 1:1–8, ed. Danby) indicates that there were at least six grades of *mikva'ot*, listed from the worst to the best: (1) ponds; (2) ponds during the rainy season; (3) immersion pools containing more than 40 *se'ah* of water; (4) wells with natural groundwater; (5) salty water from the sea and hot springs; and (6) natural flowing “living” waters from springs and in rivers. Clearly the ubiquitous stepped-and-plastered installation known to scholars from archaeological excavations since the 1960s and now commonly referred to as the *mikveh* (referred to under No. 3, above) was not the best or the worst of the six grades of *mikva'ot* as set forth in the Mishnah. It is referred to as follows: “More excellent is a pool of water containing forty *se'ah*; for in them men may immerse themselves and immerse other things [e.g., vessels]” (Mik. 1:7). The validity of *mikva'ot* was apparently one of the subjects occasionally debated in the “Chamber of Hewn Stone” in Jerusalem (Ed. 7:4).

Stringent religious regulations (*halakhot*) are referred to in regard to certain constructional details and how the installations were to be used. A *mikveh* had to be supplied with “pure” water derived from natural sources (rivers, springs or rain) throughout the year and even during the long dry season, and it had to contain a minimum of 40 *se'ah* of water (the equivalent of less than one cubic meter of water) so that a person might be properly immersed (if not standing, then lying down). Once the natural flow of water into a *mikveh* had been stopped, it became “drawn” water (*mayim she'uvim*). Water could not be added mechanically, but there was a possibility of increasing the volume by allowing drawn water to enter from an adjacent container, according to the sources, so long as the original amount of water did not decrease to below the minimum requirement of water. Hence, an additional body of water, known since medieval times as the *ozar* (the “treasury”), could be connected to the *mikveh*, and linked by pipe or channel. There was, of course, the problem of the water becoming dirty or stagnant (though not impure), but the *mikveh* was not used for daily ablutions for the purpose of keeping clean. Indeed, people appear to have washed themselves (or parts of their bodies, notably the feet and hands) before entering the ritual bath (Mik. 9:2). Basins for cleansing feet and legs have been found in front of the *mikva'ot* of Herodian dwellings in Jerusalem.

The *mikveh* was required, according to the rabbinical sources, to be sunk into the ground, either through construction or by the process of hewing into the rock, and into it natural water would flow derived from a spring or from surface rainwater in the winter seasons. There was, of course, the problem of silting (Mik. 2:6). The phenomenon of silts gathering within a *mikveh* was referred to quite clearly in rabbinic texts. For instance, in reference to the minimum quantity of water

required in a *mikveh* for it to be ritually permissible, we hear that: “if the mud was scraped up [from the pool and heaped] by the sides, and three *logs* [a measure] of water drained down therein, it remains valid [for cleansing purposes]; but if the mud was removed away [from the pool] and three *logs* rained down therefrom [into the pool] it becomes invalid” (Mik. 2:6). Elsewhere, we are told about certain damming operations made inside the *mikveh*: “if the water of an immersion pool was too shallow it may be dammed [to one side] even with bundles of sticks or reeds, that the level of water may be raised, and so he may go down and immerse himself” (Mik. 7:7).

The walls and floors of the *mikveh* chambers were plastered (frequently made of slaked quicklime mixed with numerous charcoal inclusions); ceilings were either natural rock or barrel-vaulted with masonry. These installations are distinguished by flights of steps leading down into them and extending across the entire breadth of the chamber; such ubiquitous steps, however, were not referred to in the sources. The riser of the lowest step tended to be deeper than the rest of the steps, presumably to facilitate the immersion procedures when the level of water had dropped to a minimum. Some of these steps had a low raised (and plastered) partition which is thought to have separated the descending impure person (on the right) from the pure person leaving the *mikveh* (on the left). Similarly there were *mikva'ot* with double entrances and these may indicate that the activities carried out inside them resembled those undertaken in installations with the partitioned steps. This arrangement of steps and/or double entrances is known mainly from Jerusalem, but also from sites in the vicinity, as well in the Hebron Hills and at Qumran. The installations from Jerusalem and the Hebron Hills with the single partitions fit well the double lane theory, that it was constructed to facilitate the separation of the impure from the pure, but at Qumran, installations were found with three or more of these partitions, which is odd. According to one suggestion (Regev) maintaining the utmost in purity *inside* the *mikveh*, reflected by the addition of features such as the partitions, would have been a concern mainly for priests, but little support for this hypothesis has been forthcoming from the archaeological evidence itself. Indeed, Galor rightly points out that the partitions are at best symbolic rather than functional, and that in some of the installations at Qumran they were not even practical, providing in one installation a stepped lane which was only 6 in. (15 cm.) wide!

The *mikveh* was also used for the purifying of contaminated vessels (e.g. Mik. 2:9–10, 5:6, 6:1, 10:1; cf. Mark 7:4). It is not surprising, therefore, that in the excavation of *mikva'ot* at Jericho and Jerusalem, some were found to contain quantities of ceramic vessels. Alternatively, it is quite possible that such *mikva'ot* were intended specifically for the purpose of cleaning vessels and were never used for the immersion of people. At Jericho, in one *mikveh*, located in the northern sector of the main Hasmonean palace, hundreds of intact ceramic vessels (mainly bowls) of the first century B.C.E. were found in a silt layer on the floor of one installation. It is quite possible

that these vessels were abandoned at one stage of the cleansing process because there was too much silt inside the installation, a phenomenon referred to in the Mishnah (see Mik. 2:10). A large concentration of pottery was also found trapped beneath a collapse of ashlar in the lower part of a *mikveh*, dating to the first century B.C.E., which was uncovered in the Jewish Quarter excavations in the Old City of Jerusalem. The concentration of pottery found there mainly consisted of an unspecified number of small bowls, mostly intact.

The date of the first appearance of stepped-and-plastered *mikva'ot* is a matter still debated by scholars, but the general consensus of opinion is that this occurred in the Late Hellenistic (Hasmonean) period, at some point during the end of the second century B.C.E. or very early in the first century B.C.E. One thing is certain: only a handful of *mikva'ot* are known from the time of the Hasmoneans, whereas by contrast large numbers of *mikva'ot* are known dating from the time of Herod the Great (late first century B.C.E.) and up to the destruction of Jerusalem (70 C.E.). This, therefore, led Berlin to conclude that the appearance of *mikva'ot* cannot predate the mid-first century B.C.E., but there is sufficient evidence at Jerusalem, Jericho, Gezer, and elsewhere to support an earlier date than that. What there can be no doubt about is that the *floruit* in the use of *mikva'ot* was in the first century C.E.

To sum up what we know about the use of the household *mikveh* in the first century based on the rabbinic texts and archaeological finds: the average size of the *mikveh* suggests that ritual bathing was ordinarily practiced individually (no more than one person would enter the installation at a time) and the location of *mikva'ot* within the basements of private dwellings suggests this purification was done regularly and whenever deemed necessary. The purpose of the immersion was to ritually cleanse the flesh of the contaminated person in pure water, but it may also have been undertaken within households before eating or as an aid to spirituality, before reading the Torah or praying. It was neither used for the cleansing of the soul nor for the redemption of sins (as with the purification procedures of John the Baptist), or any other rituals (except for the conversion of proselytes following their acceptance of the Torah and circumcision; Pes. 8:8). One assumes that disrobing took place before the immersion and that new garments were put on immediately afterwards. Ritual bathing could be conducted in the comfort of a person's dwelling, but there were also more public *mikva'ot* such as those used by peasants and other workers (such as quarrymen, potters, and lime burners) who would cleanse themselves at various locations in the landscape. A few *mikva'ot* are known in the immediate vicinity of tombs, but they are quite rare indicating that ritual purification following entrance into tombs was not common. The *mikveh* was not used for general cleaning and ablution purposes: this was done in alternative installations located within the house, or in public bathhouses instead.

The fact that so many *mikva'ot* are known from greater Jerusalem, from within the city itself as well as from the villages and farms in its hinterland, is a very clear reflection of

the preoccupation Jerusalemites had in the first century with the concept of separating and fixing the boundary between the pure and the impure. A general concern about purity was common to all Jews at that time and especially in the city that contained the House of God – the Jewish Temple. There are definitely no grounds for linking the phenomenon of *mikva'ot* in Jerusalem to any one specific group within Judaism, as some have done. In the eyes of the inhabitants of the city, a clear separation would have been made between the use of *natural* and *built* places for purification. While rabbinical sources may have extolled the higher sanctity of immersing in natural sources of water, the ease with which immersion could be made in a specifically designed installation situated in the basement of a house, made it far more convenient than having to set forth into the countryside in search of a natural source of water in which one might seek to purify oneself. Natural sources of water were either situated at a distance from the city (e.g., the Jordan River), or were difficult to access (e.g., a spring used for irrigation for agriculture), or were only available at the right season in the year (e.g., pools in rocky depressions that filled up after the winter rains). Above all, it would appear that convenience counted as the most important consideration when a *mikveh* came to be built in the first century. A stepped-and-plastered installation in the basement of a house satisfied all those who wished to immerse themselves on a regular basis for purification. To that end the installation had to have had a satisfactory incoming source of pure water, and in most instances rainwater sufficed. Everything else was done for reasons of fashion and personal preference, and one should include such things as footbaths outside the *mikveh*, double entrances, and lane partitions on the steps. The idea that the construction of *mikva'ot* was done in strict accordance and adherence to religious rules and stipulations (such as those debated in the “Chamber of Hewn Stone”; Ed. 7:4) is highly unlikely and finds no support in the archaeological evidence itself. Hence, the information about *mikva'ot* as it appears in the tractates of the Mishna and Tosefta should probably be regarded as representing a certain degree of rabbinical idealism rather than the complete reality of empirical practice of *mikveh* construction that was supposedly passed down through the generations following the destruction of Jerusalem in 70 C.E.

The important and obvious conclusion, however, is that the rise in the popularity of this installation during the first century C.E. no doubt reflects changing attitudes that were coming to the fore in regard to the perception of everyday purity and possible sources of ritual contamination. In a way, we may regard the later rabbinical writings on the subject of *mikva'ot* as the reflected culmination of a heightened process of Jewish awareness regarding purity that began to intensify particularly in the mid-first century C.E. An unprecedented number of *mikva'ot* ultimately came to be built, sometimes with more than one or two installations per household, and not just in the city of Jerusalem but in the outlying villages and farms as well. This development may also be paralleled

with the sudden upsurge seen in the manufacturing of stone vessels in the mid-first century C.E. (from c. 50 C.E. or perhaps 60) onwards. Such vessels were perceived of as being able to maintain purity and as such were extremely popular in the “household Judaism” assemblage of that time (see Berlin 2005), with small mugs and large (*kalal*) jars serving a particularly useful task during hand-washing purification procedures. Perhaps we should regard *mikva'ot* and stone vessels as two sides of the same coin representing the overall “explosion” of purity that took place within Judaism in the first century C.E. (“purity broke out among the Jews”; Tosef. Shab. 1:14), stemming from changing religious sensibilities on the one hand and perhaps serving on the other as a form of passive Jewish resistance against encroaching features of Roman culture in the critical decade or so preceding the Great Revolt.

[Shimon Gibson (2nd ed.)]

The Mikveh in Medieval and Modern Times

From Israel the *halakhot* of the *mikveh* and its construction spread to Europe, first and foremost to Italy. Eleazar b. Yosef taught a *halakhah* on the topic of cleanness in Rome and his colleagues agreed with it (Tosef., Nid. 7:1). The close connection between Italy and Germany through the medium of the scholars of Alsace and the communities of Spire, Worms, and Mainz brought the spread of the *halakhot* of Erez Israel and their *mikva'ot* were built according to the traditional format. In the Middle Ages the *mikveh* constituted civically an integral part of the Jewish center and synagogue, not merely in Byzantine Israel (Huldah, Maon-Nirim, etc.) but also in Italy, Germany, Bohemia, Lithuania, Poland, and other places. The most ancient remnants of *mikva'ot* in Germany have been uncovered in Cologne from 1170, Spire 1200, Friedberg 1260, Offburg 1351, and in Andernach, too, in the 14th century. The most typical is in Worms – a subterranean building with 19 steps descending to the entrance hall and then another 11 steps to the *mikveh* itself. A similar *mikveh* exists in Cairo and in the vault of the Tiferet Israel synagogue in Jerusalem. In Europe the architectural lines were influenced by the environment and by the builders who were generally not Jews (who had no entry to the trade guilds). The architectural and other details of their construction are remarkable by their precision – the outer and inner ornamentation, the capitals of the pillars, beautiful inscriptions, etc.; a mixture of Oriental and European elements created architectural solutions for the special problems of building the *mikveh*. In place of Roman modes, the Gothic and Baroque left their mark on the outer and inner style.

In many instances the *mikva'ot* of the Middle Ages served as bathhouses because of the order forbidding Jews to wash in the rivers together with Christians.

The views of the halakhic authorities in all generations differed with reference to many details of the *mikveh*. From this stemmed the great difference in the ways of building and in the systems of installation. Modern technology demands solutions of many problems, such as the permissibility of the use of reinforced concrete, porous concrete for the trough of

validation, floor tiles to prevent leaking of the water. In every generation the authorities of each generation have delved deeply into the sources of the *halakhah* and its reasons, and from them have come to clear decisions for the planner and builder, leaving extensive scope for his imagination and his ability to coordinate *halakhah* with technology.

MIKVEH ISRAEL (Heb. מִקְוֵה יִשְׂרָאֵל), Israel agricultural school, E. of Tel Aviv-Jaffa. Established in 1870, it is the oldest Jewish rural community in Erez Israel. The school was founded by the *Alliance Israélite Universelle on the initiative of Charles *Netter, who visited the country for the first time in 1868. He then visualized such a school as the beginning of a future network of Jewish villages. In 1870 Netter obtained a lease of 650 acres (2,600 dunams) of land from the Turkish government, personally receiving the firman from the sultan in Constantinople. In the summer of 1870 he opened the school, which he directed until 1873, gaining support from the *Anglo-Jewish Association and from individuals and interesting Baron Edmond de *Rothschild in the enterprise. In 1882 the first *Bilu pioneers found work and were trained at Mikveh Israel immediately upon their arrival in the country. During his visit to Erez Israel in 1898, Theodor *Herzl greeted Kaiser William II at the entrance of Mikveh Israel. Joseph *Niego directed the school from 1891 and Eliyahu *Krause from 1914 to 1955. Numerous species of fruit and forest trees were tried out there in the early years, and under Krause, Mikveh Israel became a pioneering ground for the introduction and improvement of new farm branches. Hebrew became the language of instruction soon after Krause had taken over. In the Israel *War of Independence (1948), the school was attacked several times. Since the 1930s Mikveh Israel has become an important education center for *Youth Aliyah. In 1968 it had 940 inhabitants (pupils, teachers, instructors, and other personnel). In the mid-1990s, the population was approximately 1,545, declining to 749 in 2002. Mikveh Israel has been instrumental in developing novel techniques in citrus and other farm branches, introducing avocado cultivation and the acclimatization of many livestock strains, and while it operated the Mikveh Israel wine cellars produced select wines and liqueurs. At the turn of the 20th century, the campus housed a state and state-religious agricultural high school and a school for agriculture technicians. It occupied 1.2 sq. mi. (3.2 sq. km.) and included a cultural center, a library named after Krause, experiment stations, and a botanical garden featuring over 1,000 species. Agriculture included field crops, fruit orchards, citrus groves, greenhouse crops, sheep, poultry, and bees. The name is taken from Jeremiah 14:8 and 17:13 and means “Israel's Hope.”

[Efraim Orni / Shaked Gilboa (2nd ed.)]

MILAN, city in Lombardy, N. Italy. The presence of Jews in Milan in the Late Roman period is attested by three Jewish inscriptions, two of which refer to the "father of the community." In 388, *Ambrose, bishop of Milan, expressed regret for failing to lead his congregation in burning down the synagogue which instead had been destroyed "by act of God." It was soon rebuilt, but about 507 was sacked by the Christian mob, whose action was condemned by the Ostrogothic ruler Theodoric. The community presumably continued in existence, though there is little evidence in succeeding centuries except for vague references to Jewish merchants and farmers in the tenth century. With the spread of Jewish communities through northern Italy in the 13th century that of Milan was also revived, but in 1320 the *podestà* issued a decree expelling the Jews. In 1387 Duke Gian Galeazzo Visconti granted privileges to the Jews in the whole of *Lombardy; these were confirmed by Francesco Sforza and his successors. An important court Jew was Elia di Sabato da Fermo, who in 1435 became the personal physician of the duke Filippo Maria Visconti. When in 1452 Pope Nicholas v approved the Jewish right of residence in the duchy, he specifically authorized the construction of a synagogue in Milan. Pope Pius II demanded a levy of one-fifth on the possessions of the Jews to subsidize a Crusade (1459), but was opposed by Duke Francesco Sforza. In 1489, under Ludovico il Moro, the Jews were expelled from the entire Duchy. They were soon readmitted, except to Milan itself where a Jew could only stay for three days. Similar conditions continued under the last Sforza dukes and after 1535, when the Duchy of Milan came under Spanish rule. In 1541 Emperor Charles v confirmed that Jews were allowed to live in various towns of the territory, but not in Milan. Thus, when the Jews were finally expelled in 1597, there were none in Milan itself.

Jews began to return to Milan at the beginning of the 19th century, when Milan was the capital of the Napoleonic Kingdom of Italy. An area for a Jewish cemetery was bought already before 1808. In 1820 around seven families lived in Milan; in 1840, there were already 200 Jews there. Jews came to Milan from the neighboring Kingdom of Sardinia to study at the university, as the learning centers were open to Jews. In 1848 some Jews were active in the rebellion against Austrian rule. In 1859 Milan became a part of the new Italian kingdom and the Jews received full rights. In 1870 there were more than 700 Jews in the city.

The first synagogue was built in 1840 in Via Stampa. In 1892 the synagogue of Via Guastalla was erected, designed by the architect Luca Beltrami.

Because of the great commercial and industrial development around Milan which now followed, the city became a center of attraction for new immigrants. In 1920, 4,500 Jews resided in Milano. In the same year the Jewish school was founded.

[Attilio Milano / Samuel Rocca (2nd ed.)]

Holocaust Period

Already after World War I, Jews from Central and Eastern Europe established themselves in Milan. However, only after

Hitler assumed power did many refugees arrive from Central Europe; this flow continued illegally during the first years of war. In 1938 no fewer than 12,000 Jews were living in Milan. Between 1939 and 1941 around 5,000 Jews escaped to Palestine or the United States. During the autumn of 1943, the Germans carried out an anti-Jewish raid in the course of which the community synagogue was completely destroyed, after it was damaged during a bombardment. Many Jews were captured and killed by the Germans in the towns and villages where they had taken refuge. In all, 896 Jews were deported between 1943 and 1945. The biggest massacre took place at Meina on the shores of the Lake Maggiore, where 16 Jews were murdered at the end of September 1943.

Contemporary Period

At the end of the war, 4,484 Jews were living in Milan and were joined temporarily by many refugees from camps in Lombardy. The soldiers of the Jewish Brigade with the help of such members of the community as Raffaele *Cantoni, operated a refugee center at Via Unione 5. Most of the refugees continued on illegally to Palestine under the British Mandate. A number of Jewish immigrants came to Italy after 1949 from Egypt and, to a lesser degree, from other Arab countries; 4% came from Israel. The Jewish population of Milan in 1965 numbered 8,488 persons out of a total of 1,670,000 inhabitants, with the Sephardi and Oriental element predominating. In the 1950s and 1960s assimilation was widespread, especially among the Italian element, with the proportion of mixed marriages fluctuating around 50%. Still Milan emerged in this period as one of the leading and most prosperous communities in Europe. The most dominant and important figure of this period was the philanthropist Sally *Mayer, who was the president of the community from 1946 to his death in 1953. His son, Astorre Mayer, who for years presided over the Italian Zionist Federation and was honorary consul general of Israel, succeeded his father as president of the community. After the *Six-Day War (1967), some 3,000 Jews, who fled persecution in Egypt, and above all in Libya, sought refuge in Italy. In 1967 there were 8,700 Jews in Milan. Jews from Iran and Lebanon arrived in Milan in the 1970s.

[Sergio DellaPergola / Samuel Rocca (2nd ed.)]

On January 27, 1993, the Contemporary Jewish Documentation Center (CDEC) inaugurated in Milan the largest Jewish videotheque in Europe with 700 titles including *Holocaust documentaries found through research in East European archives. The CDEC archives and research facilities will be totally renovated thanks to donations by Eliot Malki, an Egyptian Jewish businessman who came to Milan in the 1970s. It included a modern conference center. The synagogue on Via Guastalla was restored and celebrated its 100th anniversary. Jewish silver ceremonial objects stolen during World War II were returned to the synagogue by the Milan Fine Arts and History Department.

[Lisa Palmieri-Billig]

At the outset of the 21st century the community numbered around 6,500 Jews. The main school, sponsored by the community, is named after Sally Mayer. Besides the synagogue in Via Guastalla, which follows the Italian rite, there are seven other synagogues and houses of prayer of the Italian, Persian, Lebanese, and Ashkenazi communities, as well as a rest home for elderly people. The journal of the Jewish Community is *Il Bollettino della Comunità di Milano*.

MILANO, ATTILIO (1907–1969), historian of Italian Judaism. Milano was born in Rome, where he studied law and economics. He immigrated to Israel in 1939 with the inception of the racist laws in Italy, settling in Ramat ha-Sharon, where he worked as a manufacturer. Milano’s historical studies deal mostly with the economic and social conditions of various Italian Jewish groups, particularly stressing the study of the causes and consequences of usury and relations with the Roman Catholic Church. His *Bibliotheca Historica Italo-Judaica* (1954, 1964, and *RMI*, 1966) is an indispensable bibliographical tool for the study of Italian Jewry; it includes articles published in various periodicals by Milano himself. Among his important works are *Storia degli Ebrei Italiani nel Levante* (1949), *Storia degli Ebrei in Italia* (1963), and *Il Ghetto di Roma* (1964). He was editor of the department for Italian Jewish history of the *Encyclopaedia Judaica*.

His *Storia degli Ebrei in Italia*, originally published in 1963 (reprinted in Torino, 1992), has become a “classic” for the history of the Jews in Italy, and it is quoted very frequently. His fine collection of books, periodicals, articles and documents on the history and traditions of the Jews in Italy was donated to the Research Center for Italian Jewish Studies in Jerusalem.

MILBAUER, JOSEPH (1898–1968), poet. Born in Warsaw, Milbauer was raised in Brussels where, in 1914, he met Sha-

lom *Alechem, some of whose works he later translated. He went to Paris in 1921. Milbauer’s early verse collections were well received. During the 1930s he was for a time editor of the *Univers Israelite*, but his outspoken Zionist opinions brought him into conflict with the paper’s directors, and he resigned. Milbauer fought in both world wars and was a prisoner of war but after some harrowing experiences arrived in Erez Israel as an illegal immigrant in 1944. He headed the French desk at the *Keren Ha-Yesod, and was a co-founder of a French literary circle which developed into the Association des Amitiés Israëli-France. Milbauer published several more volumes of poetry, often inspired by the landscape of Israel. His other works include translations of S.Y. *Agnon, H.N. *Bialik, and S. *Tchernichowsky and the anthology *Poètes yiddisch d’aujourd’hui* (1936).

MILETUS, city in Asia Minor captured by Alexander the Great in 334 B.C.E. According to a document cited by Josephus (*Ant.* 14:244–6), the inhabitants of Miletus during the Roman period attacked the Jews, “forbidding them to observe their Sabbaths, perform their native rites or manage their produce [tithes] in accordance with their custom.” The Roman proconsul, Publius Servilius Galba, the author of the aforementioned document, was informed at Tralles of the inhabitants’ actions by Prytanis, the son of Hermas and a citizen of Miletus. The proconsul subsequently ruled in favor of restoring the rights of the Jewish population. An inscription from the Roman theater refers to “the place of the Jews who are also called God-fearing.” A ruined building dating from the late Roman-Byzantine period has been surmised by some to have been a synagogue.

[Isaiah Gafni]

MILEVSKY, AHARÓN (1904–1986), rabbi of the Jewish Ashkenazi community in Montevideo, Uruguay. He was born in Lithuania and studied at the yeshivot of Grodno and Slobodka, and in 1924–29 in the yeshivah in Hebron. In 1930–37 he was rabbi in Lithuania. In 1937 Rabbi Milevsky was invited to serve as community rabbi in Montevideo. He published two books with exegesis of Maimonides’ writings: *Minhat Aharon* (1941) and *Naḥalat Aharon* (1951). A third book, *Helkat Aharon*, was published posthumously (1991). In 1970 he settled in Jerusalem.

MILEYKOWSKY, NATHAN (**Netanyahu**; 1879–1935), Zionist preacher. Born near Kovno, Lithuania, Mileykowsky was educated in the Volozhin yeshivah and ordained in the rabbinate. While in Volozhin he displayed talent as a preacher and speaker and spent two years with the preacher J.L. Yevz-

erow. At the age of 20, he was sent by Y. *Tschlenow on a propaganda tour of Siberia, and from that time he became a preacher and speaker on behalf of Zionism. In 1908 he settled in Poland, taught in the Hebrew high school of M. Krinski in Warsaw, and participated in its management. He continued his propaganda tours in the cities and towns of Poland. During World War I he was a preacher in the Ohel Ya'akov synagogue in Lodz. In 1920 Mileykowsky settled in Palestine, where he served as the principal of a school in Safed. From 1924 to 1929 he was sent to England, Carpatho-Russia (then part of Czechoslovakia), and the United States on a mission for the Jewish National Fund and the Keren Hayesod. Toward the end of his life, he settled in Herzliyyah and was active in the Farmers' Association. During the *Arlosoroff murder trial (1933–34), he set up a committee for the defense of the accused. Some of his speeches are included in his anthologies *Ha-Nevi'im ve-ha-Am* ("The Prophets and the People," 1913) and *Folk un Land* (1928).

MILGRAM, STANLEY (1933–1984), U.S. social psychologist. Born in New York City, Milgram attended public schools in the Bronx, then earned a bachelor's degree in political science at Queens College in 1954. Convinced by an advisor to change his field of study to psychology, Milgram entered Harvard University, where he studied under Solomon Asch and Gordon Allport, receiving his doctoral degree in social psychology in 1960.

That year Milgram joined the faculty of Yale University as an assistant professor, and in 1961 he began his experiments on obedience to authority. He found, in studies conducted at Linsly-Chittenden Hall, that 65 percent of the subjects (ordinary citizens of New Haven) followed instructions to administer what they believed were harmful, even potentially fatal, electric shocks to an unwilling stranger – simply because they were directed to do so by an authority figure dressed in a lab coat. At the end of the experiment, the subjects were told that the victim did not actually receive shocks. Milgram's findings, released in 1963, were considered alarming; critics, including the American Psychiatric Association, initially questioned the ethics of the experiment. In time, however, Milgram's experiment was considered a milestone in the study of the social aspects of obedience and the primary documentation of what came to be called "situationism," whereby external situations override internal perceptions and moral standards. It is widely regarded as the most powerful experiment ever conducted in social psychology. Milgram, in his work *Obedience to Authority* (1974), used his findings to explain a range of shocking behavior, from guards in Nazi concentration camps to American soldiers at the My Lai massacre.

Milgram taught at Harvard from 1963 to 1967, where he conducted other noteworthy research, including the lost-letter technique and the "small world" problem, which both con-

cerned the degrees of separation between randomly selected people. The studies gave rise to the popular expression "six degrees of separation."

In 1967 Milgram was named the head of the social psychology doctoral program at the City University of New York. In 1980 he was appointed a distinguished professor at the City University Graduate Center, where he continued to teach until his death in 1984. His research in the 1970s and early 1980s is considered to have established the subfield of urban psychology. Milgram's work continues to be widely cited in psychology textbooks, and its influence on popular culture has extended to a television movie, *The Tenth Level* (1976), and a Broadway play, *Six Degrees of Separation*, which was adapted for film in 1993.

[Dorothy Bauhoff (2nd ed.)]

MILGROM, JACOB (1923–), U.S. Bible scholar. Born in New York City and educated at Brooklyn College (B.A. 1943) and the Jewish Theological Seminary (B.H.L. 1943, M.H.L. 1946, D.H.L. 1953, D.D. 1973), Milgram was a rabbi at Conservative synagogues in Orange, New Jersey (1948–51) and Richmond, Virginia (1951–65). He taught at Virginia Union University, Graduate School of Religion (1955–65); the University of California, Berkeley; Graduate Theological Union (1965–72), where he directed the Jewish Studies Program; and the UCB study center at the Hebrew University, and he was named emeritus professor of Hebrew and Bible studies. Milgram was a Guggenheim Fellow, a Fulbright Fellow, a fellow of the Institute for Advanced Studies and of the Albright Institute of Archaeological Research, both in Jerusalem, and a fellow of the American Academy for Jewish Research. In 1994 he and his wife, also an academic, moved to Jerusalem, where he began teaching at the Hebrew University and the Jewish Theological Seminary.

An outstanding Bible scholar, Milgram is recognized as one of the leading authorities on Leviticus, as a result of his commentary on that book, his best-known work. Milgram believes that "theology is what Leviticus is all about," and his massive commentary, according to critics, is distinguished by its comprehensiveness and thoroughness in its examination not only of the sources, authorship, meaning, and significance of the text, but of the ancient and modern commentary and scholarship on it. He has been praised, in particular, for his generosity in discussing theories and interpretations other than his own, even going so far as to cite his own students by name and arguing respectfully with them. Milgram's interpretations have not met with universal agreement, but his commentary has established itself as the modern standard.

Milgram's books include *Studies in Levitical Terminology* (1970), *Cult and Conscience: The Asham and the Priestly Doctrine of Repentance* (1976), *Studies in Cultic Theology and Terminology* (1983), *The JPS Torah Commentary: Numbers* (1990), and *Leviticus: A New Translation With Introduction and Commentary* (1–16, 1991; 17–22, 2000; 23–27, 2001). He also published over 200 scholarly articles.

[Drew Silver (2nd ed.)]

MILHAUD, DARIUS (1892–1974), French composer. Milhaud was born in Aix-en-Provence and was descended from an old Jewish family that claimed to have been among the first settlers in southern France after the fall of Jerusalem. He entered the Paris Conservatory at the age of 17, was soon attracted by the theater, and between 1910 and 1916 composed *La Brebis égarée*, *Agamemnon*, and *Le pauvre matelot*. He became acquainted with the composer Eric Satie and the writers Paul Claudel and Jean Cocteau and, when Claudel was appointed French minister to Brazil, he asked Milhaud to become his secretary. Milhaud spent almost two years (1917–18) in Rio de Janeiro, and his musical impressions of Brazil echo in many of his compositions. After his return to Paris, he joined a circle of progressive artists, the musicians of which formed an inner circle later known as “Les Six.” A versatile and prolific composer, Milhaud wrote music for concert, stage, and screen, and for voice and orchestra. South American rhythms, U.S. jazz, Jewish synagogal traditions (especially those of his native region, the *Comtat Venaissin), 12-tone music, and trends and styles of great divergence merge in his works. Yet the mixture is always unmistakably his own.

Milhaud’s most important contributions to 20th-century music are to be found in some of his operas: *Les Choëphores* (1915); *Esther de Carpentras* (1925, with text by Armand *Lunel); *Christophe Colomb* (1928); *Bolivar* (1943); and the biblical opera *David* which Milhaud composed with Lunel for the Jerusalem Festival of 1954. Milhaud wrote concertos for almost every orchestral instrument, ballets, short and full-scale symphonies, chamber music, songs, piano music, and cantatas. Among the best known of his compositions on Jewish themes are his *Service Sacré* (1947), and two song cycles with piano accompaniment: *Poèmes juifs* (1916) and *Chants populaires hébraïques* (1925). He also wrote musical settings of Psalms for solo voices and chorus; the ballet *La Création du Monde* (1923); a piano suite, *Le Candélabre à sept branches* (1951); and music for various festival prayers.

When France collapsed in 1940 Milhaud immigrated to the U.S. and became a professor at Mills College, Oakland, California. After 1947 he divided his time between the U.S. and Paris, where he became a professor of composition at the Conservatory. The story of his life and musical beliefs was told in *Notes sans musique* (1949; *Notes Without Music*, 1953), which also appeared in Hebrew, and in *Entretiens avec Claude Rostand* (1952). During his later years Milhaud suffered from rheumatoid arthritis which confined him to a wheelchair for long periods of time.

[Peter Emanuel Gradenwitz]

MILIAN, MAXIMIN (Mendel Gruenberg; 1885–1953), Romanian journalist and short-story writer. Born in Ploești, Milian wrote for various papers and was editorial secretary of

Lupta (“The Fight”) until the antisemitic regime of Octavian Goga in 1937. He devoted himself to Jewish problems and contributed to *Curierul Israelit* (“Jewish Courier”). His volumes of short stories included *Păcatul iubirii* (“Sin of Love,” 1910) and *Puternicul* (“The Strong,” 1910). In 1933 he gave warning of the dangers of Nazism in the book, *15 zile în imperiul lui Hitler* (“15 Days in Hitler’s Empire”).

MILIBAND, RALPH (1924–1994), British academic and socialist theorist. Born in Brussels, Miliband was a member of *Ha-Shomer ha-Za’ir before fleeing to England with his father in 1940 just before the German invasion of Belgium. He was educated at the London School of Economics and came under the influence of Harold *Laski. An independent socialist, in the 1950s, Miliband was associated with E.P. Thompson, John Saville, and other active intellectuals of the British “New Left.” Miliband taught at the London School of Economics before moving to Leeds University as professor of politics from 1972 to 1978. He was best known for his influential political works such as *Parliamentary Socialism* (1961), which argued that the British Labour Party, heavily weighed down by constitutional niceties, could never enact true socialism, and by works such as *The State in Capitalist Society* (1969) and *Capitalist Democracy in Britain* (1982), all written from an independent Marxist position. In his later *Socialism for a Skeptical Age* (1994), Miliband admitted the previous failures of socialism, but remained an independent, pro-democracy Marxist to the end. His son DAVID (1965–), who was educated at Oxford and MIT, was a leading figure on the moderate Labour left. He edited *Reinventing the Left* (1994) and became a Labour member of parliament in 2001. He was made minister for schools by Tony Blair in 2002 and entered the cabinet as cabinet secretary in 2004. Unlike his father, David Miliband was a moderate center-leftist, and headed Tony Blair’s Policy Unit after Blair became prime minister in 1997.

[William D. Rubinstein (2nd ed.)]

MILICH, ADOLPHE (1884–1964), French painter, born in Tysowce, Poland; a member of the school of Paris. He originally worked as a sign painter, finally settling in Paris in 1920. During the German occupation he lived in Switzerland. Milich worked in oils and watercolors, and painted landscapes, still lifes, large compositions of women bathing, and portraits. He particularly loved the Mediterranean landscape of Provence and of the area around Lugano. His painting owes much to his long study of the old masters. Among modern painters, the strongest influence is that of Cézanne. Milich cultivated his own idiom regardless of fashion. His work is well thought out and serene, and is characterized by its joyful color harmonies.

MILITARY LAW.

Morality and War in Judaism

The prophetic view of the end of days is expressed in the words: “and they shall beat their swords into plowshares, and their spears into pruning hooks; nation shall not lift up sword against nation, neither shall they learn war any more” (Isa. 2:4). But until those days arrive, there may be times when war is required. In such circumstances, *halakhah* views war as a necessity, and participation therein as an obligation under certain circumstances.

A soldier acting in accordance with *halakhah* may not indulge in the naked exercise of force, brutality, or vandalism, but rather must be guided by the recognition of an obligation imposed by an exigency brought about by reality. The Torah establishes the boundaries of what is permitted and forbidden in war for both individual and for society, with the view of achieving the military objective while striking a balance between recognition of the nature of soldiers in war – who must, at times, be permitted to behave in ways that would be forbidden in peacetime – and the need to imbue those soldiers with the qualities of compassion and holiness, even during times of war. It is instructive that the laws of prayer and of the sanctity of the synagogue are derived from the laws governing a military camp (Ber. 25a). Although under certain circumstances the Torah views war as an obligation incumbent upon every man in Israel, King David was not allowed to build the Temple because he had fought many wars (1 Chron. 22:7–10). This exemplifies the potentially problematic nature of war, and the need to strike an appropriate balance between single-minded combat against the enemy and preserving the moral standards of the combatants.

In this entry, we shall briefly consider the salient issues of military law in Jewish law. We shall examine the classic commandments related to war as they appear in the Bible, in Talmudic literature, and in halakhic decisions, and consider the contemporary ramifications of some of them and their expression in modern society.

The Sanctity of the Camp in Time of War

The Torah states (Deut. 23:10): “When you go forth against your enemies and are in camp, then you shall keep yourself from every evil thing.” In the tannaitic Midrash, the Sages interpreted this verse as implying a special warning in time of war to be careful regarding matters of defilement and purity, tithes, incest, idolatry, bloodshed, and slander (Sif. Deut. 254, ed. Finkelstein). In his commentary to Deuteronomy 23:10, Naḥmanides explains that human nature is such that moral restraints are loosened at time of war, and we shed the sense of shame felt in normal human society, with regard to such acts as licentiousness and theft. This is a by-product of the cruelty that envelops soldiers when they go to war. The Torah therefore saw need for reinforcement of these matters through a special proscription. In the ensuing verses, the Torah cautions about purity and physical cleanliness in the military camp. The section concludes with a general explanation that

these commandments are required so that the Divine presence not abandon the Israelite camp: “Because the Lord your God walks in the midst of your camp, to save you and to give up your enemies before you; therefore your camp must be holy, that He may not see anything indecent among you, and turn away from you” (Deut. 23:15).

Discretionary War and Obligatory War

The Mishnah (Sot. 8:7) distinguishes between two types of war: discretionary war and obligatory war. According to Maimonides, an obligatory war is like that fought by Joshua to liberate the land of Israel from the Seven Nations, the war to eradicate Amalek, or a war “to defend Israel against an enemy that attacks them.” A discretionary war is one undertaken to extend the borders of the state, such as the wars fought by King David (Yad, Melakhim 5:1; Sot. 44b; TJ, Sot. 8:10). Later rabbinical authorities differed on the interpretation of the term “to defend Israel against an enemy that attacks them.” Some explained that this refers to a situation in which Israel is attacked by her enemies, constituting a defensive war (obligatory). This is as opposed to a preventive war in which a preemptive strike is made against an enemy before it is able to realize its intention to attack, which constitutes a discretionary war (*Lehem Mishnah* ad loc.). Others extended the scope of the term “to defend Israel against an enemy” (and hence of an obligatory war) to include a preventive war, inasmuch as a defensive war – i.e., once Israel is actually under attack – is clearly obligatory, just as one is always obligated to rescue a victim from an assailant (*Sheyarei Korban* commentary to TJ, Sot. loc. cit.).

The decision to embark upon a discretionary war requires the approval of a court of 71 (Mish., Sanh. 1:5; Yad, Melakhim 5:2). However, the court cannot initiate the war. The initiative must come from the king, who must then seek the court’s approval (*Tosefot Yom Tov* on Mish. Sanh. loc. cit.). According to Naḥmanides (*Hassagot Ramban*, on *Sefer ha-Mitzvot*, gloss no. 17), the Urim and Thummim must also be consulted, as going to war must be done at the behest of the priest who wears them.

The Obligation to Serve, Fear, and Conscientious Objection

According to the Torah, the minimum age for military service is 20 (Num. 1:3, and Rashi and Naḥmanides ad loc.). The Torah does not expressly establish a maximum age. Some hold that the maximum age for military service is 60 (Sforno, Num. 1:45), while others suggest that it was 40 (according to certain versions of Sif. Deut., ed. Finkelstein, 197).

The book of Deuteronomy provides guidelines for exemption from military service. The Torah (Deut. 20) provides that, before venturing into battle, the priest – referred to in the Mishnah as the “Anointed for Battle” (Sot. 8:1) – must speak to the people and encourage them so that they not fear the enemy and to place their trust in God, as the Torah expressly forbids fear of the enemy in war (Maim., *Sefer ha-Mitzvot*, negative precept 58; *Sefer ha-Hinnukh*, 525). Following the

priest's speech, the officers address the people and exempt the following four categories of people: (a) one who has built a home and not dedicated it; (b) one who has planted a vineyard but not yet enjoyed its fruit (the fruit can only be used after the fourth year); (c) one who has betrothed a woman but not yet married her (see *Marriage*); (d) one who is afraid and fainthearted, "lest he cause his comrades to be afraid." Later sources explain the application of these exemptions in practice. Thus, prior to the battle with the Midianites, God commands Gideon to tell the fearful to return home; more than one third of the force leaves (Judges 7:3). The Book of Maccabees (1 Maccabees 3:55) relates that soldiers were exempted for the same reasons. There is some disagreement among the *tannaim* regarding the nature of the fear that exempts a person from going to war (Mish. Sot. 8:5; Sot. 44a). In Rabbi Akiva's view, this alludes to fear of war. According to the mishnaic citation of R. Akiva, his concern was fear of the dangers of war, whereas according to the Tosefta (Sot. 7:24), R. Akiva's concern was not the fear of war per se, but rather the fear that his sense of mercy would affect his ability to fight, and even a stony and mighty warrior was commanded to return home in the event of his feelings of mercy being likely to impair his ability to fight. According to R. Yose the Galilean, this exemption also refers to a person who is fearful because he knows himself to be a sinner, his feelings of guilt leading him to fear that he will be punished for his sins by death in battle. Although these four categories of people are exempted from battle, they are commanded to contribute to the war effort by providing food and water for the troops, and by repairing the roads (Mish., Sot. 8; Yad, Melakhim 7:9).

In addition to the above, a man is exempt from going to war during the first year of his marriage, in order to make his wife happy (Deut. 24:5). The Sages extended this one-year exemption to building a house and harvesting a vineyard, as well (TJ, Sot. 8:8; Yad, Melakhim 7:9). Unlike the other exemptions, a person exempt for these reasons is not required to contribute to the war effort, but simply stays home (Deut. 24:5; Sot. 44a).

All these exemptions apply exclusively to a discretionary war; in the case of an obligatory war, "all go forth, even the bridegroom out of his chamber and the bride from her bridal pavilion" (Mish., Sot. 8:8).

The Israel Supreme Court discussed these issues at length in its decision in the *Schein* case (HC 734/83 *Shein v. Minister of Defense*, 38 (III) PD 393, per M. Elon). The petitioner in that case was a reserve soldier who refused a call-up order to serve in southern Lebanon, on grounds of conscience. He argued that he opposed the Israeli army's presence in Lebanon, and believed that presence to be illegal. The petitioner had already been tried for a previous refusal, and the petition related to a new call-up order and to the sentence that he had served. In denying the petition, Justice Elon surveyed philosophical and legal positions accepted by various states in regard to conscientious objection, and addressed the distinction between general conscientious objection and selective conscientious

objection, that only relates to a specific type of military service. Justice Elon went on to examine the view of Jewish law. "In principle, the issue before us was addressed by Jewish law in its earliest days, as a matter related to the subject of exemption from the obligation of military service" (p. 403). After reviewing the above-mentioned sources and the opinions expressed by the *tannaim*, he concluded: "The foregoing quotations reflect the various opinions in Jewish law concerning an issue essentially comparable to the question of exemption from military service for reasons of conscience. The reasons for exemption are general and inclusive, and they concern the character of the person and his attitude to violence. They are not selective. They do not pertain to a particular time and place, and they are not based on ideological-social outlooks. Finally, even the general and inclusive reasons are applicable only to a "discretionary" war, but not to an obligatory war in a time of emergency (p. 405).

Participation of Women in War

From the Mishnah's statement that "all go forth, even the bridegroom out of his chamber and the bride from her bridal pavilion," one may conclude that both men and women are required to serve in an obligatory war. Certain later rabbinical authorities sought to limit this rule by saying that women are only required to help provision the troops (Rashash on Sot. 44b), while others opined that only the bridegroom goes to war, whereas the bride merely cancels her wedding (Radbaz on Maimonides, Melakhim 7:4).

The verse that forbids a woman from wearing a man's garments (Deut. 22:5) has been interpreted as prohibiting a woman from carrying arms, and thus prohibiting her going to war (Ibn Ezra). Others saw the verse as limited to matters of modesty, and therefore not to be taken as forbidding the participation of women in war (Rabbenu Perez, in *Shitat Kadmonim le-Nazir*, 1972). The subject assumed practical significance in the State of Israel with regard to the question of the conscription of women. Some authorities, relying upon some of the above-mentioned sources, argued that it is prohibited, while others expressed the view that it is not, so long as modesty is preserved. Under Section 39(c) of the Defense Service Law [Consolidated Version], 5746 – 1986, a woman may be exempted from service if she shows that it would be incompatible with "her family's religious way of life."

The Commandment to Sue for Peace

"When you draw near to a city to fight against it, offer terms of peace to it" (Deut. 20:10). Before launching war against a city or placing it under siege, the Torah requires an offer of peace. There is dispute as to whether this duty *also* applies to an obligatory war, as held by Maimonides (Melakhim 6:1), or only applies to a discretionary war, as is the view of Rashi (Deut. 20:10, based upon Sif. Deut., ed. Finkelstein, 199, and Rabad, on Maimonides ad loc.). Maimonides interprets the offer of peace as the granting of an opportunity to surrender and to accept subjugation to Israel and the obligation to pay tribute. Some commentators suggest that, practically

speaking, this approach sees the purpose of the offer of peace as a means for achieving the objectives of war in an easier, more efficient manner, while avoiding the loss of life. Under this approach, the call for peace applies to an obligatory war as well, inasmuch as it is clearly preferable to achieve the objectives of an obligatory war without resort to combat. Another approach sees the call for peace as an end in itself, which prevents war and teaches compassion (*Sefer ha-Hinnukh*, Mitzvah 527). Therefore, it is not required in an obligatory war.

This *mitzvah* led the Sages to the midrashic statement regarding the importance of peace in Judaism: “Great is peace, for Israel enjoys it even in war” (Sif. Deut., loc. cit.).

The Laws of Siege

THE DUTY TO LEAVE ONE DIRECTION OPEN FOR ESCAPE. The Midrash (Sif. Num., ed. Horowitz, 157) cites the opinion of the *tanna* Rabbi Nathan, that when Israel laid siege in its war with Midian (Num. 31), one side was left open so that the Midianites could flee. Nahmanides (*Hassagot al Sefer ha-Mitzvot la-Rambam*, 5), suggests two reasons for this. The first is educational, namely, to encourage compassion even for an enemy in time of war. The second reason is tactical: to avoid emboldening the enemy by putting it in a position from which there can be no escape, and in which it has nothing to lose. In his opinion, this rule only applies to a discretionary war. As opposed to this, Maimonides sees it as a duty in every war. Rabbi Meir Simḥah ha-Kohen of Dvinsk (*Meshekh Hōkhmah*, at Num. 31:6) explains that the source of the disagreement between Nahmanides and Maimonides is that Maimonides views this primarily as a matter of military tactics. Therefore it is not an obligation, but rather a recommendation applying even to an obligatory war. Nahmanides sees the underlying reason as that of compassion, which applies only to a discretionary war.

This dispute has practical ramifications to this day. Is there a halakhic obligation to allow the enemy an avenue of escape? Contemporary halakhic authorities disagreed as to whether the *halakhah* required the Israeli army to allow PLO terrorists to escape during the 1982 siege of Beirut. Rabbi S. Goren rejected the distinction of the *Meshekh Hōkhmah*, and ruled that according to Maimonides there was a duty to allow them to escape, even in an obligatory war. Rabbi S. Yisraeli accepted the distinction and ruled that according to Maimonides there was no such duty in an obligatory war, and the matter was subject to the discretion of the military commanders and the government (see Bibliography).

DESTRUCTION OF TREES DURING A SIEGE. A special provision of the rules of siege concerns the status of trees in and around the besieged city: “When you besiege a city for a long time, making war against it in order to take it, you shall not destroy its trees by wielding an axe against them; for you may eat of them, but you shall not cut them down. For is the tree of the field man that it should be besieged by you?” (Deut. 20:19). This rule applies only to a discretionary war (Sif. Deut., ed. Finkelstein, 203).

It should be noted that this verse constitutes the basis for the general prohibition upon destroying fruit trees, and of the destruction of property in general, independent of the rules of war (Maim., *Sefer ha-Mitzvot*, negative commandments, 57; Yad, Melakhim 6:8).

The prohibition only applies to unnecessary destruction. Felling trees for the purpose of constructing the siege, or to deprive the besieged enemy of wood for its own use, or to prevent the enemy from using the trees as cover, is permitted (*Hassagot ha-Ramban al Sefer ha-Mitzvot la-Rambam*, 6). Although the language of the Torah only prohibits the destruction of fruit trees, according to a *baraita* (BK 91b), the prohibition applies to all trees, and where there is need for wood, non-fruit bearing trees must be used first (BK 91b).

In his Torah commentary (Deut. 20:19–20), Nahmanides explains that the reason for this special prohibition is that once the city is captured its property will fall into the hands of Israel, and the soldiers must have faith in God that they will be victorious and that they will inherit the spoils. Thus, the prohibition derives from the rule that a person may not destroy his own property. According to Nahmanides, when the purpose of the war is not conquest but the destruction of the city, all the trees may be destroyed.

The closing expression, “Are the trees in the field man that it should be besieged by you?” has been variously interpreted by biblical commentators. Rashi understood it as a rhetorical question, expressing the idea that trees are not the enemy, and hence their destruction is not justified. Ibn Ezra explained: “For the tree is man’s life”; therefore, in harming the trees we harm ourselves.

During Israel’s war with Moab, the prophet Elisha expressly commanded that the army “fell every good tree, and stop up all springs of water, and ruin every good piece of land with stones” (11 Kings 3:19). The explanation given for this deviation from the language of the Torah is that it was an emergency measure (Radak).

Spoils and Looting

From the Torah, it would appear that the taking of spoils was common, and was viewed as an integral part of war (Genesis 11:24; 1 Samuel 30:24). This conclusion can also be reached on the basis of the prohibition against destroying trees, discussed above. In Deuteronomy, following the command to sue for peace, we are told that Israel shall enjoy the spoils of a city that refuses the offer of peace (Deut. 20:14). In the Midrash, the Sages emphasized that it was not only permissible to plunder, but that the spoils could be taken for the personal use of the soldiers (Sif. Deut., ed. Finkelstein, 200). According to Maimonides, the spoils were intended solely for the soldiers, and might be described as their payment (Maimonides, Melakhim 4:9). In accordance with David’s instruction that the spoils be divided equally between the front-line soldiers and those in the rear who stay “on the baggage” (1 Samuel 30:24), Maimonides ruled that the spoils must be equally apportioned.

Although permitted, it would seem to be considered inappropriate to take more than the costs of war. This is concluded from Abraham's decision to take from the king of Sodom "nothing but what the young men have eaten, and the share of the men who went with me" (Gen. 14:24; Radak and Sforino, loc. cit.). In the Scroll of Esther we find that the Jews were permitted to plunder the property of their enemies, yet the text emphasizes "but they laid no hands on the plunder" (Esther 8:11; 9:15).

Taking spoils can bring about the undesirable result of lowered moral standards in war, such as occurred at the time of King Saul (1 Samuel 14:31–32), when the people, in their excitement over the spoils, transgressed the prohibition of "eating with the blood." As earlier noted, the Torah considers maintaining the moral standards of the army to be an exalted goal and this is another argument against taking spoils. In view of this, some are of the opinion that taking spoils is permitted only for the army as a whole, in accordance with the instructions of the relevant authorities, but is not permitted to individual soldiers.

Harming Innocent Civilians

The language of the Torah leads to the conclusion that if, in a discretionary war, the enemy does not accept the terms of surrender offered by the Israelite army, then all the men are to be killed: "But if it makes no peace with you... you shall put all its males to the sword" (Deut. 20:12–13). This is the conclusion drawn by Maimonides (Melakhim 6:4), who emphasizes the corollary that women and children are not to be killed. Maimonides does not distinguish between combatants and non-combatants. This should perhaps be viewed in its historical and cultural context. In the ancient world, the enemy army comprised the entire male population, whether as direct participants in the fighting or as support. The correct translation of this rule to contemporary law might be that only combatants may be targeted, and that the innocent civilian population must not be harmed.

Over the last few generations, since the beginning of the Zionist enterprise, and particularly since the establishment of the State of Israel, contemporary halakhic authorities have addressed these issues. Rabbi S. Yisraeli (see Bibliography) was of the opinion that there is justification for harming a civilian population that supports the enemy forces and voluntarily assists them, even under the doctrine of the "pursuer" (*rodef*) (see *Penal Law). However, when the enemy forces compel that assistance from the civilian population, there is no justification for harming non-combatant civilians.

The biblical story of Simeon and Levi and the city of Shechem (Gen. 34) is germane to this discussion. After Shechem ben Hamor, son of the city's king, rapes Jacob's daughter Dinah, Simeon and Levi kill all of the males of the city. Some commentators (Nahmanides, at Gen. 34:13) take a dim view of what they see as their immoral conduct, and argue that this is why Simeon and Levi were reprimanded by their father Jacob (Gen. 49:5–7). Others justify the act, argu-

ing that it is of the nature of war that the acts of one *obligate* all (*Maharal, Gur Aryeh al ha-Torah*, Gen. 34:13), or that it was justifiable from a formal halakhic point of view (Yad, Melakhim 9:14). Some have responded that, even if it were halakhically permitted, it must nevertheless be morally condemned, as we should be strict in capital matters (Rabbi S. Goren, Bibliography, 1:28).

Rabbi S. Yisraeli addressed the question of the relationship between the international law of armed conflicts and Torah law (see Bibliography), expressing the view that the rule that the law of the country is binding (see entry **Dina de-Malkhuta Dina*) may apply not only to the spheres of civil and criminal law, but to international law, as well. According to this approach, international conventions on what is permitted and forbidden in war are halakhically valid (except, of course, in regard to what constitutes an "obligatory war").

MILITARY SERVICE. Jews served in the national armies of most countries in which they settled. However, in many states they were denied the right to bear arms before the 20th century since they were considered to be second-class citizens, not fit to fight for their country. A major consideration motivating the Jewish desire to fight in the armed forces of the countries of their adoption was that they hoped that the acceptance of this obligation would entitle them to civic rights. For this very reason, states which denied Jews civil rights frequently restricted their service in their armies. In the 20th century, however, Jews participated fully in modern warfare as the Table: Jewish Participation in World War I and Table: Jewish Participation in World War II show.

The figures in the table for the world wars were published by the United Nations and do not include Jewish partisans who fought against Nazi Germany. Jews served in all the services and a few became army commanders, for example the Italian general, Giorgio *Liuzzi. In the early years of Israeli statehood, the military achievements of the Israel Defense Forces during the *War of Independence (1948–49), the *Sinai Campaign of 1956, and the *Six-Day War (1967) focused attention on the quality of the Jewish soldier.

United States of America

Jews first did military service early in the colonial period in the form of militia duty. Asser *Levy insisted on his right to

be allowed to stand guard duty against attack by Indians, and other early members of the community of New Amsterdam demanded the right of helping to defend the settlement and, when necessary, sprang to arms in a common effort to repel hostile assaults, earning full admission as citizens of the colony (1657). Later, in the 1750s, Jews served in the conquest of Canada in which Aaron *Hart led a battalion against the French in Canada, and Judah Hays commanded a 16-ton privateer, the *Duke of Cumberland*. During the American War of Independence (1775–83), a considerable number of Jews volunteered for the colonialist armies and several acquired considerable distinction, among them: Isaac Franks, David Salisbury *Franks, Lewis Bush, and Solomon Bush. In this war some U.S. companies included a considerable number of Jewish soldiers, such as that commanded by Major Benjamin Nones (d. 1826), a French Jew who served under the command of Lafayette and George Washington. During the second war between the United States and Great Britain from 1812 to 1814, there were a small number of Jews in the U.S. army most of whom were volunteers or members of militia companies. Aaron Levy (d. 1829) became a lieutenant colonel. Two naval officers achieved fame in this war. Captain John Ordraonaux (1778–1841) seized nine British prize vessels and later captured a British frigate and Uriah Phillips *Levy volunteered for the U.S. Navy in 1812 and rose to become commodore nearly half a century later. Levy's ship was captured

by the British after sinking 21 merchant vessels and he spent the last 16 months of the war in a British prison. His subsequent career in the face of antisemitic opposition opened the way for future generations of U.S. Jewish sailors, among whom Claude C. *Bloch rose to become admiral of the U.S. fleet over a century later. In the following decades many Jews held senior posts in the U.S. forces; in the Nones family there were four naval officers who rose to the rank of captain. During the Mexican War (1846–48) the Jews of Baltimore formed a volunteer corps and Jonas Phillips Levy, brother of Uriah Phillips Levy, was promoted to naval captain. In the American Civil War (1861–65) Jews flocked to the colors of both Union and Confederacy armies. About 6,000 Jews fought on the Union side and a smaller number in the Confederate forces, though the exact figures are in dispute. The Confederate forces contained many prominent Jews, including Judah Phillip *Benjamin, the secretary of war, David de Leon (1813–1872), the first surgeon general, and 23 staff officers. The naval captain, Levi Myers Harby, distinguished himself in the defense of Galveston and commanded a fleet of gunboats on the Sabine River. On the Union side seven Jews were awarded the Congressional Medal of Honor: Leopold Karpeles, Benjamin Levy, Abraham Cohn, David Obranski, Henry Heller, Abraham Grunwald, and Isaac Gans. Several Jews rose to the rank of general during the war including: Frederick Knefler (1833–1901), a Hungarian by birth, who volunteered for the Union army on the outbreak of war as a private and was the first Jewish brevet major general; Edward S. Salomon (1836–1913), who was made governor of Washington Territory in recognition of his military feats at the battles of Fredericktown, Munfordville, and Gettysburg; and Leopold C. Newman (1815–1863), who was killed in action. Max Einstein and Phillip J. Joachimson (1817–1890), who organized the 59th New York volunteer regiment, were made brigadier generals in the Union army. Jews played no conspicuous part in the Spanish-American War of 1898. Nevertheless, it is noteworthy that hostilities broke out following the sinking of the U.S.S. *Maine*, commanded until shortly before then by the Jewish officer Adolph Marix, and over 100 of nearly 5,000 Jews who fought in the U.S. army were killed. A few Jews were active in various Latin American armies including Jacob Baiz who was a brigadier general in the army of Honduras and Sam Dreben known as the "fighting Jew" who fought in Nicaragua in 1910, and was subsequently a colonel in the armies of Honduras and Mexico. In World War I a quarter of a million Jews fought in the armies of the United States, representing 5% of the total Jewish population of the United States, whereas only 3% of the total U.S. population served in World War I. Over 15,000 Jews were killed or wounded in the 18-month campaign. Nearly half of the 77th Division, the National Army unit from New York, consisted of Jews and there were approximately 10,000 Jewish officers, including three generals, Milton J. Foreman (1863–1935), Charles Lauchheimer (1859–1920) and Abel Davis (1878–1937). Three Jews also rose to high rank in the navy during World War I: Rear Admiral Joseph Strauss (1861–1948) who commanded

the battleship *Nevada* and was later responsible for placing a barrage of mines across the English Channel, Commander Walter F. Jacobs, who commanded a flotilla of minesweepers, and Captain Joseph K. *Taussig who was responsible for the safe escort of convoys against submarine attacks. Six Jews won the Congressional Medal of Honor: William Sawelson, Benjamin Kaufman (1894–1981), Sydney G. Gumpertz (1879–1953), Charles W. Hoffman, Samuel Sampler, and Philip C. Katz. In addition over 200 Jews were awarded the Distinguished Service Cross. The Jewish contribution to the U.S. fighting force in World War II was no less impressive. Over half a million U.S. Jews fought in the Allied armies, many of whom crossed the Canadian border early in the war to volunteer for the Canadian army before the United States entered the fighting. More than 50,000 Jewish servicemen were killed or wounded and two Jewish soldiers were awarded the Congressional Medal of Honor, one of whom was Lieutenant Raymond Lussman who single-handedly killed 17 German soldiers and captured another 32. An outstanding army officer who fell in battle was Major General Maurice Rose (1899–1945) who commanded the U.S. third armored division in the final offensive against Germany in 1945 and who was killed at Paderborn only a few weeks before the end of the war. In addition Lewis *Strauss was promoted to rear admiral during World War II. In 1953 Hyman *Rickover, a naval captain in World War II, was promoted to rear admiral and retired in 1958 with the rank of vice admiral. Jews also played an important part in the United States armies in Korea and in Vietnam; 150,000 Jews saw service in the Korean War and nearly 30,000 Jews fought in Vietnam, where Ben Sternberg (1914–) served as major general.

Great Britain

Until the repeal of the 1673 Test Act in 1828, professing Jews were debarred by religious tests from serving as officers in the regular armed forces of the crown. English Jews were, however, like their counterparts, the Continental Court Jews, prominent as army contractors for pay and supplies in the 18th century: the most famous were Sir Solomon de *Medina, the associate of Marlborough, and Abraham Prado (the diary and letter-book of the latter's subordinate, David Mendes da Costa, have survived). Aaron *Hart was commissary officer at the taking of Montreal and settled in Canada. Professing Jews could serve in the ranks and a number served especially in the navy, among them Barnett Abraham Simmons (later minister in the Penzance synagogue) and Isaac Vallentine, founder of the *Jewish Chronicle*. When invasion threatened, volunteers were enlisted and many professing Jews served, particularly in the London Volunteers. Jews could hold nonregular commissions and Sir Moses *Montefiore served as an officer in the Kent Militia; Daniel *Mendoza, the boxer, was a sergeant in the Fifeshire, then Aberdeenshire, Fencibles. There were a number of officers of Jewish origin before 1828 – Wellington said 15 served under him at Waterloo in 1815 – but they were presumably converts or at least not professing Jews: the most famous were the descendants of Meyer Low Schomberg,

physician to the Great Synagogue; among his sons were Captain Sir Alexander Schomberg RN (Royal Navy), founder of a naval and military dynasty still flourishing, and Lieutenant Colonel Henry Schomberg, probably the first Anglo-Jewish army officer.

After the repeal of the Test and Corporation Acts, some professing Jews entered the army and became regular officers, particularly in the Indian army (e.g., Captain Lionel Gomez da Costa, who died of wounds at Lucknow in 1857, and Ensign Edmund Helbert Ellis, who died in 1851 at the age of 22), in which Indian native Jews had previously served. The most distinguished soldier in the community was Col. Albert E. W. *Goldsmid. An increasing number of professing Jews served in the ranks, including veterans of the Crimean War. Judaism was not, however, recognized in the British army as a separate denomination until 1886, partly owing to the efforts of Trooper Woolf Cohen of the 5th Lancers. In the South African War (1899–1902), between 3,000 and 4,000 Jews served, with 127 killed in action; many of those serving were South African “colonials” and “outlanders,” notably Colonel Sir David *Harris who commanded the Kimberley Town Guard during the siege. During World War I the number of Jews in the British army rose to 50,000. Several Anglo-Jewish families provided large numbers of Jewish soldiers. The *Rothschild family contributed five officers, the *Sassoon family 14 officers, and five sons of Arthur *Sebag-Montefiore held commissions, while 41 descendants of Sir Isidore *Spielmann were said to have served as officers. Five Jewish soldiers won the Victoria Cross: Captain Robert Gee, Lieutenant Frank Alexander De Pass, Sergeant Issy Smith (Shmulevitch), and Privates J. White and Leonard Keysor; 50 Jewish soldiers received the Distinguished Service Order. In addition the Jews formed their own unit, the Zion Mule Corps, which fought at Gallipoli and in the Dardanelles in 1915. Later, three Jewish units, the 38th, 39th, and 40th battalions of the Royal Fusiliers participated in the conquest of Palestine in 1918 under General Allenby (see *Jewish Legion). The regiments were disbanded after World War I. In World War II over 60,000 Jews fought in the British army. Jewish soldiers included volunteers from Central and Eastern Europe who were not British subjects and Palestinian volunteers who enlisted after the German advance across North Africa threatened the *yishuv* in Palestine. Two Jewish soldiers won the Victoria Cross in World War II: Captain David Hirsch, and naval lieutenant T. Gould. Several others rose to high military rank including Major General William Beddington (1893–?), Brigadier Sir Edward Beddington (1884–1966), who was deputy director of military intelligence at the War Office, Brigadier Barnard Goldstone (1896–?), Brigadier Fredrick Morris (1888–1941), Brigadier Bernard Schlesinger (1896–1945), and Brigadier Frederick *Kisch, who was killed in action. In addition, Irish-born Abraham Briscoe (1892–?) was the first Jew to reach the rank of air-commodore in the Royal Air Force. Jewish soldiers also fought in the British army in Korea and in Egypt where Brigadier Edmund Meyers (1906–?) was chief engineer to the British forces at the Suez

Canal. Major General James A. *D'Avigdor-Goldsmid became colonel of the 4/7th Dragoon Guards and director-general of the Territorial army.

British Commonwealth

No discrimination existed against Jews serving in the armed forces of Canada, Australia, and South Africa and a number of Jewish officers rose to high rank. In World War I Lieutenant General Sir John *Monash commanded the Australian army corps in France from June 1918 and was responsible for the breach of the German lines on August 8 which led to the collapse of German resistance. He was considered the outstanding army commander of World War I and in 1930 was promoted to full general. Major General Sir Charles Rosenthal also achieved prominence in the Australian army during World War I, commanding the ANZAC artillery and later the second Australian army division under Monash's supreme command. Another Australian, Private Leonard Keysor, was awarded the Victoria Cross during the Gallipoli campaign of 1915. In World War II 16,000 Jews fought in the Canadian army in Europe and North Africa, and one of them, Colonel Phinias Rothschild (1914–), was later promoted to major general and quartermaster-general of the Canadian army. 10,000 Jews fought in the South African army in which Major General Alexander Ohrenstein was director-general of the medical services.

[Vivian David Lipman]

Czarist Russia

Before 1827 Jews were exempted from military service on payment of a money tax. In that year, however, on the accession of Nicholas I, Jews were conscripted into the Russian army for periods of up to 25 years. Ten Jews for every thousand males were conscripted, recruitment being of boys aged between 12 and 25 while those under 18 were placed in special schools (see *Cantonists). Jewish soldiers were subjected to persistent pressure to convert, young Jewish children were seized and pressed into military service for 25-year periods, and Jews were excluded from the ranks of officers. Not unnaturally Jews sought every opportunity to evade military service in Russia under these conditions. These conscription laws did not apply to Jews in Polish territories annexed by Russia at the end of the Napoleonic wars. Thousands of Jews fought in the czarist army in the Crimean War (1854–56) and about 500 were killed. In 1864 a monument was erected to the Jewish soldiers who fell in the siege of Sebastopol and one Jewish soldier, Chaim Zaitchikoff, was congratulated by Prince Gortchakoff for his valor. Following the accession of Alexander II the condition of the Jews improved slightly and they were given the right to be promoted to sergeant while demobilized Jewish soldiers were allowed to live outside the *Pale of Settlement. The seizure of Jewish children for military service was abolished and the maximum period of service was reduced to 15 years. In 1874 a law was enacted introducing universal military service obliging all Russian citizens to report for military service at the age of 21. The effect of the new law was to grant Jews equality

with the rest of the population but half a century of enforced service in the Russian army had already conditioned them to avoid enlistment wherever possible. Nevertheless, many thousands of Jews fought in the Russo-Turkish War of 1877. They were not allowed to become officers though as an exception to the rule Captain Zvi Hertz *Zam was permitted to enter the officers' school in 1874 after eight years of service; however, he was promoted to captain only after more than 40 years of service in the Russian army. Another exception was Joseph *Trumpeldor, who refused to be discharged from service after he lost his right arm in action. The acute shortage of doctors in the Czarist army also led to Jews being admitted as surgeon officers. On the outbreak of World War I nearly 400,000 Jews were drafted into the Russian army and the number increased to nearly half a million by 1917. Several thousands won awards for bravery on the battlefield.

Austro-Hungary

The Austro-Hungarian Empire generally adopted an enlightened policy toward its Jews. In 1782 Joseph II granted civic rights to the Jews and six years later Jews were declared fit for military service, though the right was at first restricted to serving in the supply corps in the province of Galicia where most Jews lived. Later Jews were allowed to serve in all branches of the Hapsburg army. During the Revolutionary and Napoleonic wars (1792–1813) many Jews served in the Austro-Hungarian army. Some were allowed to become officers. In 1818 Jews were officially accepted as officers even in the conservative cavalry regiments. Nevertheless, several professing Jews rose to the rank of general in the Hapsburg army, among them Field Marshal-Lieutenant Joseph *Singer who was chief of staff of the Third Army, and Major General Alexander von *Eis and Field Marshal-Lieutenant Eduard von *Schweitzer, both of whom commanded major Austrian army units. The comparatively generous treatment of Jews in the Austro-Hungarian army led many Jews to take up a military career, especially as certain other professions were closed to them. In 1855 there were 157 Jewish officers in the Hapsburg army and by 1893 this number had risen to 2,179 or 8% of all the officers in the Hapsburg army. A number of Jews also became prominent in the navy, including Tobias von Oesterreicher, who was the first Austrian Jew to be promoted to rear admiral, and two battleship commanders (sea captains), Friedrich Pick (1839–1908) and Moritz von Funk (1831–1905). Nearly 300,000 Jews fought in the Austro-Hungarian army during World War I. Among 2,500 officers were three field marshal-lieutenants, Eduard von Schweitzer, Adolph Kornhaber (1856–1925), and Hazai *Samu, and five major generals, Simon *Vogel, Johann Mestitz, Leopold Austerlitz, Emil von *Sommer, and Márton Zöld. Nearly 30,000 Jewish soldiers were killed during the four years of war, including 600 Austrian Jewish officers. After the collapse of the Hapsburg Empire Jews played an increasingly smaller part in the armed forces of both Austria and Hungary, and following the advent of Fascist and pro-Nazi regimes in the 1930s they ceased to serve in the armed forces altogether. One out-

standing figure of the post-World War I period was General Vilmos Böhm (1880–1947) who was commander in chief of the Hungarian army during the four-month Soviet dictatorship of Béla *Kun in 1919.

U.S.S.R.

Following the Revolution of February 1917, Jews were granted equal rights and for the first time were allowed to become army officers. Many were transferred to officers' schools and on graduating received the rank of sub-officer (*praporshchik*). When the Bolsheviks seized power in November 1917, many Jewish soldiers fought in the Red Army organized by Leon *Trotsky, aided by Skliansky and Jacob Sverdlov. Four divisional commanders were Jews and a few units consisted solely of Jews such as the brigade commanded by Joseph Furman. After the civil war J.B. Goldberg became commander of a reserve army. Among Jews who obtained senior army commands were Grigori Stern, Jan Gamarnik, and Feldman. Most of them were executed during Stalin's purges, a notable exception being Stern, who was sent to the Far East (1935), where he routed the Japanese army which had invaded Soviet territory. He later commanded the Soviet Far Eastern Forces with the rank of full general and drove the Japanese from Mongolian territory. Stern's army was assisted by air force units under Yaacov *Shmushkevich, appointed commander in chief of the Soviet air force in 1940.

WORLD WAR II. Following the outbreak of World War II, the Soviet Union annexed the Baltic state and territories in eastern Poland and Belorussia thus incorporating a large number of Jews within its borders. After the German invasion of Russia, Polish and Belorussian soldiers in the Soviet army were considered of suspect loyalty and were transferred to labor battalions. In December 1941, however, the order was revoked and Jews from the Baltic states were permitted to serve in all units of the Soviet army. Subsequently four Lithuanian Jews were made Heroes of the Soviet Union. The Soviet Jewish historian Jacob Kantor estimated that almost half a million Jews fought in the Soviet army in World War II of whom at least 140 were awarded the title Hero of the Soviet Union (the official Soviet

Number of Jewish Generals in the Soviet Army during World War II, by Corps

| No. of Jewish Generals | Corps |
|------------------------|----------------------------|
| 13 | Engineering and Mechanical |
| 13 | Artillery |
| 10 | Tank |
| 10 | Medical |
| 6 | Infantry |
| 5 | Air Force Engineering |
| 4 | Air Force |
| 4 | Quartermaster Service |
| 2 | Veterinary |
| 2 | Navy |
| 2 | Cavalry |
| 1 | Communications |

figure is 107). Jews constituted a disproportionately large number of senior officers, largely because the percentage of Jews having a university education was higher than that of other nationalities. More than 100 Jews held the rank of general (see the partial Table: Jewish Generals in the Soviet Army).

Jewish generals were particularly prominent as field commanders, notably General Jacob *Kreiser. Other Jewish commanders at the battle of Stalingrad included Lt. Gen. I.S. Beskin and Major Gen. (later Lt. Gen.) Matvey Weinrub. Jewish generals also held key commands during the final assault on Berlin. Lieutenant General Hirsh Plaskov was artillery commander of the Second Guards Army, Lieutenant General Semion Krivoshein commanded one of the first corps to break into Berlin in the spring of 1945, and Lieutenant General Weinrub was artillery commander of the Eighth Guards Army. Special mention should also be made of the Jewish Cossack commander, Major General Lev Dovator, who was killed during the first Soviet offensive in December 1941, Lieutenant General David Dragunski, who was twice made a Hero of the Soviet Union, and Major Caesar Konikov, whose courageous defense of the fishing village of Stanichka for seven months led to the village being renamed Kunikovo after his death. In addition Colonel General Leonti Kotlyar was commander of the engineering corps and six Jews held the rank of major general in the medical services (where there were a large number of Jewish doctors and nurses): Vovsy, Levitt, David Entin, Reingold, Gurvich, and Slavin. A number of Jews were given the award Hero of the Soviet Union in the Soviet air force, among them Michael Plotkin, who flew in the first Soviet bombing raid on Berlin in August 1941, Henryk Hofman, and four women: Polina Gelman, Zina Hofman, Lila Litvak, and Rachel Zlotina, who belonged to a women's air regiment. Two Jewish Soviet submarine commanders became Heroes of the Soviet Union – Israel Fisanovich and Isaac Kabar – as did Abraham Sverdlov who commanded a flotilla of torpedo boats. Jews were also prominent among the partisans, constituting more than 20,000 men in separate units in the Polish-Russian border areas. The official Soviet history of the war mentions the names of several Jewish partisan heroes, among them N.S. Kagan, one of seven Moscow Komsomol members hanged by the Germans while on a mission behind enemy lines, L.E. Bernstein, commander of the Pozharski unit which joined the Slovak rising against the Germans, and Vladimir Epstein, who escaped from Auschwitz to form a partisan unit in Poland. (See also *Partisans.)

AFTER WORLD WAR II. Although famous Jewish generals such as Dragunski and Kreiser retained their popularity after World War II, Soviet policy toward the Jewish soldier changed for the worse, in accordance with general Soviet policy toward the Jews. It is believed that nearly all the Jewish generals of World War II were retired by 1953 as were nearly 300 Jewish colonels and lieutenant colonels. By 1970 the number of Jewish senior officers on active service in the Soviet army had declined drastically.

Italy

Before the beginning of the 19th century Jews were forbidden to bear arms in any of the Italian states or to be a member of any military organization. The French Revolution, however, led to the demand for equal rights in Italy as elsewhere and the Jews were among the beneficiaries of progressive legislation. Following the conquest of north Italy by Napoleon, Italian Jews even established their own units and fought with the emperor all over Europe. However, during the reactionary period in north Italy following the final defeat of Napoleon in 1815, Jews were debarred from military service. After the decree of March 1848 granting Jews full equality in Piedmont, 235 Jews volunteered for the Piedmontese army in the war against Austria. Enrico *Guastalla was among the Italian soldiers who captured Rome in 1849, and among the Piedmontese troops fighting on the allied side in the Crimean War (1854–56) was Colonel Cesare Rovighi who later became aide-de-camp to King Victor Emanuel I. In the war against Austria, 1859–60, 260 Jews volunteered for the Piedmontese armies and several were awarded medals. There were 11 Jews among the 1,000 led by Garibaldi who captured southern Italy and Sicily from the Bourbons and Enrico Guastalla later became one of Garibaldi's chief lieutenants. In 1870, 236 Jews were among the victorious Italian army which conquered Rome. Jewish soldiers were subject to no restrictions in the army of united Italy and the percentage of Jewish officers was disproportionately large. Many Jews held the rank of general in the Italian army. They included Lieutenant General Achille Coen (1851–1925), Lieutenant General Emanuele *Pugliese, Lieutenant General Roberto *Segre, Lieutenant General Angelo *Arbib (Arbid), Lieutenant General Angelo Modena, and others. Other Jewish soldiers rose to high military rank, among them Lieutenant General Giuseppe *Ottolenghi who was minister of war from 1902 to 1904. In all, several thousand Jewish officers and men fought in the Italian army in World War I.

Other Jewish officers included four major generals: Carlo Archivolti (1873–1944), Armando *Bachi, Adolfo Olivetti (1878–1944), and Giacomo Almagia (1876–1947), and 12 brigadier generals. Five Jews became admirals in the Italian navy. Augusto Capon, Franco Nunes (1868–1943), and Guido Segre (1871–1942) were full admirals, and Vice Admiral Paolo Marani (1884–1950) and Rear Admiral Aldo Ascoli (1882–1956) commanded ships in the invasion of Abyssinia in 1935. In November 1938 a new law was promulgated prohibiting Jews from serving in the armed forces and all the Jewish generals and admirals were forced to retire. During World War II no Jews fought in the army of Benito Mussolini, and some joined the partisan underground movement. Nevertheless two Jews were specially recalled to service because of particular skills: these were Rear Admiral Pontremoli and Major General Umberto Pugliese (1880–1961). The latter was given the task of raising Italian naval vessels sunk by the British at Taranto. After World War II Giorgio *Liuzzi who was one of the senior officers retired in 1938 was recalled to active service and was chief of staff of the Italian army from 1956 to 1958 with the rank of lieutenant general.

Germany

In the early Middle Ages, Jews were accorded the right to bear arms. Later on, however, with the deterioration in their social and political standing after the upheavals of the *Crusades, this right was gradually withdrawn until by the middle of the 13th century Jews, numbered with women, children, and clerics, as being forbidden to bear arms. Exceptions to this rule were rare during the following centuries (see Jud *Michel), though Jews were very prominent as military *contractors (purveyors of livestock, fodder, food, uniforms, etc.) in the 17th and 18th centuries.

The first German Jews conscripted in modern times were from the left bank of the Rhine occupied by revolutionary and Napoleonic France. German states under French influence followed suit (*Westphalia). In 1812 Prussia decreed that Jews were liable to military service and when the War of Liberation broke out a year later many hundreds volunteered, 82 of them receiving decorations. Nevertheless, Frederick William II repudiated his promise that war veterans could receive positions, irrespective of religion, and even wounded veterans suffered discrimination. The sole Jewish officer in the army during his reign was Major Meno Burg (1787–1853), who owed his position to the influence of the king's brother, the commander of the artillery. It was commonly accepted that Jews were inferior soldiers and that their service was mainly of educational and assimilatory value.

In 1845 the first Jewish officers were commissioned into the Prussian reserve forces, the *Landwehr*. Until about 1885, Jewish officers, primarily university graduates, were commissioned by co-option; but after this date virtually none became officers, despite their exemplary service in the Austro-Prussian (1866) and Franco-Prussian (1870–71) wars, because of growing antisemitism. An exception was Walther von *Mossner, the sole senior Jewish officer in the Prussian army, and he owed his position to personal connections with the king and converted to Christianity during his career. Most German states followed Prussia's discriminatory policy (particularly Hanover) while others were more liberal, Bavaria permitting Jewish officers to rise to the upper ranks in the standing army. During the 1848 Revolution Jews enlisted in the National Guard, where they were reluctantly accepted. That year the first Jewish doctor was commissioned in Prussia, and subsequently, due to the lack of physicians, the medical corps harbored Jewish officers in large numbers without permitting them to become senior officers.

Many thousands of Jews fought in the German army in World War I. About 2,000 Jewish officers were commissioned and 12,000 Jews were killed in battle. Nevertheless, during and after the war there was an ugly upsurge of accusations that Jews had either not enlisted or shirked front-line service. To combat this propaganda the Reichsbund juedischer Frontsoldaten, an association of Jewish war veterans, was founded. In 1917 the War Ministry ordered a thorough survey conducted to find the number and proportion of Jews serving in front-line units. The results and the dubious manner in which they

had been obtained became the subject of a bitter public controversy. In fact, the percentage of Jews was almost equal to that of Christians; that it was not higher is explained by the diminishing birthrate among German Jewry (between 1880 and 1930) which resulted in a lower proportion of those of military age relative to the non-Jewish population. After World War I the small professional army of the Weimar Republic contained few Jews, who were all removed in 1933.

[Henry Wasserman]

France

During the Middle Ages Jews were generally excluded from military service except in times of emergency. Their position remained unchanged until 1789 when, following the outbreak of the French Revolution, all Frenchmen, including Jews, were made liable for military service. Many Jews served in Napoleon's armies, among them Brigadier General Marc-Jean-Jerome Wolffe (1776–1848) who commanded the first cavalry brigade of the Grande Armée and Captain Alexandre Marcquefoy who was awarded the Legion of Honor by Napoleon himself; 800 Jews were estimated to be serving under Napoleon in 1808, among them a number of Italians and Poles. Berek (Berko) *Joselewicz, the Polish patriot, commanded a regiment in Napoleon's Polish Legion. The outstanding Jewish soldier in Napoleon's army was Henri *Rottenbourg who was made major general in 1814. Nevertheless, conditions of the Jewish soldiers were made difficult by the refusal of many commanding officers to allow Jews into their ranks and the restrictions on the rights of promotion.

During the early part of the 19th century an increasing number of Jews fought in the French army and a few achieved considerable prominence, among them Colonel Martin Cerfbeer, Captain Abraham Lévy, Captain M. Vormess, and Captain Benoît Lévy who were all awarded the Legion of Honor. No exact details are available as to the number of Jews who fought in the Crimean War (1854–56) but several won awards for gallantry, among them Leopold *See and Colonel Abraham Lévy. In the Italian war of 1859 See and Lévy were again decorated as was Major Adolph Abraham, and in the Franco-Prussian War (1870–71), Colonel Jules Moch and Captain Halphen broke through the Prussian lines after the French army had been surrounded at Metz. In that war Major Franchetti was posthumously decorated having fallen during the siege of Paris. During the Third Republic (1870–1940), Jews entered the French army in unprecedented numbers and 23 rose to the rank of general. Although subject to no official restrictions, Jews were frequently the target of antisemitic attacks, the most notable occasion being the *Dreyfus case. The outstanding Jewish officers of the period before World War I were: Major Generals Leopold See, Aimé *Lambert, Abraham Lévy, and Naquet-Laroque (1843–1921), and Brigadier Generals Edgar Wolffe (c. 1840–1901), Gabriel Gustave Brisac (1817–c. 1890), Adolphe Hinstin (c. 1820–c. 1890), Bernard Abraham (1824–c. 1900), and Adolphe Aron (c. 1840–c. 1910). On the outbreak of World War I, several hundred Jews vol-

unteered for the French army, among them captains Charles Lehmann and René Frank, both of whom had fought in the Franco-Prussian War 44 years earlier. About 50,000 French Jews, over 20% of the total Jewish population, fought in the French army between 1914 and 1918, and an additional 4,000 Jewish refugees from Eastern Europe volunteered. Twelve French Jews held the rank of general, among them Lieutenant General Valabrègue, Major Generals Naquet-Laroque and Justin Dennerly (1847–1928), who were recalled from retirement, Major Generals Camille Baruch Levi (1860–1933) and Jules Heymann (1850–1928) and Brigadier Generals René Alexandre (1864–1931), Lucien Lévi (1859–1932), Paul Emile Grumbach (1861–1931), Gédéon Geismar (1863–1931), and André Weiller (1865–c. 1940). Of 39 French Jewish airmen who fought in World War I, all but four were killed in battle and the total number of French Jews killed in action exceeded 8,000. Several Jews rose to the rank of general after World War I, among them Major General Pierre Boris, Major General Raymond Laroque and Brigadier General Albert Baumann (1869–1945).

Before the French collapse in June 1940 General Boris was made general inspector of the French artillery. Major General Charles Huntzinger and Major General Pierre Brisac were all permitted by the Vichy régime to retain their rank despite the racial laws against Jews. Similarly the Vichy régime gave Samuel Meyer the award of the Legion of Honor for bravery while André Gutman received the award of the Croix de Guerre for bravery in action. The French army included one regiment almost entirely made up of Polish Jews. Following the French defeat in June 1940 many French and East European Jews joined the Free French under Charles de Gaulle in London, among them Ingénieur-Général Louis *Kahn who was director of naval construction. Jews were also prominent in the French resistance, among them Roger Carcassonne who led the resistance movement in North Africa. In 1944, following the liberation of France, General Boris was one of several Jewish officers reinstated in the French army, and in 1945 General *Dassault commanded the French artillery. After World War II a small number of Jews served in the French army in Indo-China.

Poland

Jewish settlement had begun in Poland by the 12th century and Jews were conscripted principally to reinforce the local militia and help build fortifications. They were not expected to take any important part in the Polish army until the Tatar attacks on eastern Poland at the end of the 16th century. Jews were recruited into defense units and some were taken prisoner, a fact recorded in the orders of the Russian czar Michael (1613–1645). A Jewish unit was formed under the command of one Mozko and in some cities the general mobilization of Jews was ordered. Jews were also prominent in the wars against Sweden (1655–60). During the 18th century, Catholic pressure was brought to bear against Jews fighting in the Polish army and the number of Jews serving fell from over 2,000 to a few

hundred. During the uprising in the year following the second partition of Poland of 1793, numbers of Jews joined the revolutionary army along with other Poles and many Jews fought in the Polish force which drove the Russians out of Warsaw. Later in 1794, a Jewish cavalry legion was formed under the command of Berek Joselewicz, initially numbering 500 men and later nearly 2,000. The Jewish legion distinguished itself in the defense of Warsaw but was completely wiped out in the Russian massacre in the suburb of Praga after the collapse of the rebellion. At the turn of the 19th century a number of Jews joined Napoleon's army and fought for France in Italy and Eastern Europe. Joselewicz himself commanded a regiment of Polish cavalry, and another Polish Jew, Caspar Junghof, was awarded the Legion of Honor. Similarly Jews volunteered for the army of the Grand Duchy of Warsaw established by Napoleon in 1807. Among them was Josef *Berkowicz, the son of Joselewicz, who fought with other Poles in the French army which invaded Russia in 1812.

After the defeat of Napoleon in 1814, Jews in the area of Poland under czarist rule played an active part in the Polish uprisings of 1830, 1848, and 1863. During World War I, Polish Jews fought in units of both the armies of the Allies and the central powers. A number of Polish Jews in the Russian Austro-Hungarian and French armies were decorated. After the war thousands of Jews fought in the Polish army against Russia, among them Colonel Goldman, Colonel Karaffa-Kreutenkraft, and Colonel Floyar-Reichman. Nevertheless, Polish antisemitism permeated the army and all the other organs of state, and although there were never less than 20,000 Jews in the Polish army between the wars, very few Jewish soldiers held high military rank. An outstanding exception was Bernhard *Mond who was promoted to colonel in 1924 and on the outbreak of World War II commanded the Fifth Infantry Division with the rank of major general. The condition of the Jewish soldier improved during the nine-year rule of Joseph Pilsudski (1926–35) but deteriorated after his death. Nevertheless, 400,000 Jews were recruited into the Polish army on the outbreak of World War II and many thousands were killed in battle during the four weeks of fighting. A large number of Jewish soldiers were taken prisoner by the Russians and interned in the Soviet Union. In 1942 an agreement between the U.S.S.R. and the Polish government in exile resulted in the formation of a Polish army in Russia under General Anders. Although Jews were generally excluded from this army, usually on the pretext that they were unsuitable for military service, 4,000 fought in General Anders' army in Western Europe while over 5,000 Jews fought in a second Polish army in Russia, a large number of them holding officer's rank. In addition many more Jews fought in Polish units serving in the armies of other Allied states.

Despite the fact that the Jewish population of Poland was decimated by the Holocaust, a large number of Jews joined the Polish army and after World War II many held senior ranks. Following the Six-Day *War in 1967, however, nearly all of them were removed from their posts.

Romania

Romania became an independent kingdom in 1881. Restrictions were subsequently placed upon the right of Jews to serve in the armed forces despite the fact that nearly 1,000 Romanian Jews had fought against the Turks in the Balkan War of 1877. An outstanding Jewish soldier in the Romanian army was Colonel Maurice Brociner (1855–1942) who was decorated for gallantry in 1877 and in 1882 was made secretary to Charles I, king of Romania. In 1896 a law was enacted prohibiting Jews from volunteering for the Romanian army but in 1913, following the involvement of Romania in the Balkan Wars, the law was rescinded. During World War I, 20,000 Jews fought in the Romanian army, including several hundred officers. Thirty-seven Jewish officers and 845 men were known to have died. After World War I a large number of Jews served in the Romanian army, and some rose to the rank of officer. During World War II, however, Nazi pressure led the Romanian government to remove all the Jews from the Romanian army. Few Jews served in the army of Communist Romania after 1945.

Bulgaria

Following Bulgarian independence in 1878 Jews were given equal rights with the rest of the population. Bulgarian Jews fought in the Turkish army when Bulgaria was under Turkish rule, and after independence they joined the Bulgarian army in the thousands. Many Jewish soldiers distinguished themselves during the Serbo-Bulgarian war of 1885 and were described by Prince Alexander of Bulgaria as "true descendants of the ancient Maccabeans." Despite growing antisemitism, no restrictions were placed on Jews entering the army or even the officers' training schools. Five thousand Jews fought in the Bulgarian army in the Balkan Wars (1912–13) and several hundreds of them were killed. In World War I a number of Jews reached senior army ranks, among them three Jewish colonels Graziani, Tajar, and Mushanov. Over 700 Jews were killed in the war, among them 28 officers. Between the wars, Jewish soldiers continued to enjoy equal rights in the Bulgarian army until 1940 when Bulgaria allied herself with Nazi Germany. All Jews were removed from the Bulgarian army and organized into labor units to perform manual work. Many of them were later sent to concentration camps but some succeeded in joining the partisans headed by the Fatherland Front. After the war most of Bulgaria's surviving Jews emigrated to Israel and hardly any joined the army of Communist Bulgaria.

Greece

Greek Jews were subject to continual persecution for many years after Greek independence in 1821. Very few Jews joined the army until the outbreak of the Greco-Turkish War of 1897 in which 200 Jews fought in the Greek army. Abraham Matalon rose to the rank of colonel during World War I and was one of several Jewish soldiers to have been decorated. The total number of Greek Jews fighting in World War I was estimated at 500. Many Jews fought in the Greek army against Italy in 1940 and by 1942, when the Germans invaded Greece, over 13,000 Jews had been recruited, many of them from Sa-

lonika and Macedonia where there were large concentrations of Jews. Five hundred and thirteen Jews were known to have been killed in action, among them Colonel Mordechai Parisi, who was killed after holding off an entire Italian brigade for nine days. A monument was erected in his memory in his native town of Chalcis and 25 Greek towns have streets named after him. Following the German conquest of Greece, many Jews were deported to concentration camps. Among the Greek Jews deported to Auschwitz was Colonel Baruch who set fire to part of the gas chambers and was later killed by the Nazis. A few Greek Jews joined the partisan movement in the mountains of northern Greece and some fought in the Allied armies in North Africa.

Switzerland

Before 1850 Jews were exempted from military service upon payment of a tax. In 1866 Jews were granted equal rights including the obligation of military service but even before the law of 1866 certain cantons permitted Jews to bear arms, the first of them being Aargau where the civil authorities acceded to a request of Marcus Dreyfus, head of the Jewish community. In 1855 Moritz Meyer from Aargau was made an officer and several other Jews became officers during the latter part of the 19th century. Several hundred Jews were recruited into the Swiss army for border defense during the two world wars and two Jewish soldiers rose to the rank of colonel: A. Nordman and his son, Jean Nordman.

Holland

Jews were allowed to bear arms in Holland from the 17th century when the country became an independent state under the House of Orange. In 1808, during Napoleonic rule, Jews were granted equal rights and were therefore obliged to do military service along with the rest of the population. The number of Jews serving in the Dutch army grew steadily during the 19th century and a few Jewish soldiers were singled out for merit, one of them, Michael Kohen (b. 1877), being decorated for outstanding bravery in the fighting in Surinam. Thousands of Jews fought against the Nazi invasion of Holland in May 1940 and a small number of them succeeded in escaping to Britain to continue fighting from there. After World War II, hardly any Jews served in the Dutch armed forces.

Other Countries

A small number of Jewish soldiers rose to fame in India, the Middle East, and North Africa, some of them serving as soldiers of fortune. Some of the Jewish soldiers of fortune achieved fame in the Turkish army in which several thousand Jews fought during the Balkan wars of the 19th century. Fischel-Freind (1885–1928), a Polish Jew, became a colonel in the Turkish army and was later governor of Syria with the title Magyar Mahmud Pasha. An English Jew, Stephen Lake-man (1812–1897), was briefly a Turkish general with the title, Mazar Pasha. In addition David Effendi Molcho, a Jew from Salonika, was made head of the Turkish navy's medical services with the rank of vice admiral. Another Jewish soldier of

fortune was Rubino *Ventura who held military commands both in Persia and in India during the 19th century. A small number of Indian Jews reached high military rank in the British army, among them Subadar Major Haskelji Israel Kollatkar who was killed during the Burmese campaign of 1887 and Subadar Major Shalom Moses Penkar of the 15th Bombay Infantry unit. Indian Jews fought in the two world wars and after Indian independence, some became senior officers, and one of them, Colonel Joseph Ephraim Jhirad, was killed in the 1965 war against Pakistan. North African Jews were prominent in World War II both in the French and British regular armies and in the French underground. Thus Maurice Guedj (1913–1945), a Tunisian lawyer, joined the Free French air force and won numerous decorations. He was killed in action in January 1945. Leaders of the underground included José *Abulker, Pierre Smadja, and Raoul and Edgar Bensoussan. Jews were not prominent in the Algerian war against the French after 1955 or in the armies of the Arab North African states after independence.

Women in Military Service

There is no record of Jewish women serving in the army of any modern state until 1813 when Louise Grafemus (Esther Manuel; 1785–1852), in search of her husband in the Russian army, joined the Prussian infantry disguised as a man. She was twice wounded and rose to become a sergeant major before her sex was discovered. Louise Grafemus was awarded the Iron Cross and returned to her home in Hanau with great honor. During the 19th century women played an increasing part in the conduct of wars in auxiliary capacities such as nurses. Thus nurse Woolf was decorated by King George V for her services in the British army in World War I and several Jewish women became nursing officers in the Allied forces in World War II. During World War II women went into active service for the first time as auxiliary troops; in Russia they served with men in the front lines during the initial invasion by Germany and afterward. A number of Soviet Jewish women became famous through their bravery in action, among them Lyudmila Kravetz who was made a Hero of the Soviet Union when as a medical sergeant she took command of her unit when all the officers were killed and advanced against the enemy. Riva Steinberg (d. 1944), who was killed trying to rescue a Russian soldier from a burning aircraft, was posthumously decorated. Mary Ykhnovich, a senior battalion commander, Sarah Meisel, Klara Gross, and Lea Kantorovich, a nurse, were all cited for bravery under fire. Another Russian Jewess, Gitta Schenker, a telephone operator, took command of an infantry battalion during the battle of Stalingrad. However, the most famous Jewish heroine of World War II was Hannah *Szenes who was parachuted into Yugoslavia to organize Jewish resistance and was captured and killed.

See also *Israel, State of: Defense Forces.

Conclusion

In most states Jews were not called upon to do military service until well into the 19th century since the obligation to

take up arms was considered a privilege to which Jews were not entitled. Even where they did fight they were usually restricted in their right to hold officer's rank (as in Prussia and Russia) or were excluded from certain branches of the army such as the general staff in Austria-Hungary. In the 20th century most restrictions on Jews as soldiers were removed but only in France, Italy, and Austria-Hungary was the number of Jewish senior officers relatively high. Vilmos Böhm and Giorgio Liuzzi were the only Jews to become commanders in chief of an army, the former when he held this post in the short-lived regime of Bela Kun in Hungary, the latter in Italy. Three other Jews reached the rank of full general: John *Monash, Grigori Stern, and Jacob *Kreyzer; and three Jews the rank of full admiral: Ben Moreel (1892–?), Augusto *Capon, and Roberto Segre (1872–1942). One Jew, Yaacov *Shmushkevich, was commander of an air force.

Jewish Chaplaincy

In most countries of Europe where Jews have volunteered or been enlisted into the armed forces, provision has been made for the appointment of chaplains to look after the religious needs of servicemen and women in times of war and peace. One can generally say that from the middle of the 19th century, following the political emancipation of the Jews, Judaism became a recognized denomination having more or less the same privileges and obligations as those of other denominations. Commissioned chaplains were given relative military rank, senior chaplains having the relative rank of colonel, lieutenant colonel, or major. This was the case in Austria, France, Prussia, Britain, Belgium, Italy, Holland, and Poland. In Britain in 1889 Judaism was recognized as a denomination for the purpose of chaplaincy in the forces. The first Jewish chaplain was Rabbi Francis L. Cohen who was appointed in 1892. In European countries, such as Italy and Belgium, chaplains were first commissioned during World War I when the number of Jews serving in the various national armies increased considerably. In World War I Jewish chaplains, with the approval, and sometimes at the request of the superior commanding officer, rendered service to the Jews in occupied territories. Thus German Jewish chaplains acted as intermediaries between the German army authorities and Jewish civilians in Poland and in northern France. They also provided religious appurtenances and Passover requirements (such as *mazzot* and *haggadot*). British chaplains performed similar services for Jewish civilians in northern France and Belgium. They were supported by chaplains attached to the forces of Australia, New Zealand, Canada, and South Africa, and chaplains also served with the Jewish units serving in Palestine and Egypt. A number of chaplains in both the Allied and central armies were decorated for bravery. An outstanding example of bravery was that of Rabbi A. Bloch of the French army who was killed by a shell in 1914 after seeking a crucifix for a severely wounded Frenchman when there was no priest available. During World War II there was a further increase in the number of chaplains in the Allied forces. On the other hand

the Dutch government in exile, for the first time, appointed a Jewish chaplain, Chief Rabbi S. Rodrigues Pereira, to look after the religious requirements of Dutch Jews serving with the Allies. In the Polish army Rabbi J. Mieses was senior chaplain to be succeeded by Rabbi B. Steinberg who was killed during the Katyn massacre in 1943. Jewish chaplains served with the Polish army in Russia, the Middle East, and Europe. The last senior chaplain in the Polish army was Rabbi David Kahana who served from 1945 to 1952. Jewish chaplains were also attached to the Jewish infantry group made up of Palestinians and Jews from other British army units who served in the western desert, in Italy, and with the army of the Rhine. As in World War I, a number of Jewish chaplains were decorated for gallantry in the Allied armies, among them Grand Rabbi Jacob Kaplan of the French army who was awarded the Croix de Guerre. The duties of chaplains during the two world wars were extensive and involved a considerable amount of travel. They were required to organize religious services whenever possible, particularly during the festivals and High Holy Days, to distribute service prayer books and religious literature, visit the sick and wounded in hospitals and casualty clearing stations, and bury the dead. They were also required to assist observant soldiers in following the religious requirements of their faith without detriment to their army duties and to deal with the many welfare and social problems affecting the domestic life of the soldier. At the end of World War II chaplains were additionally required to help bury Jews who had died in concentration camps and to help those who survived as far as possible. As in the case of chaplains of other denominations, Jewish chaplains were requested to use their influence in maintaining the morale and fighting spirit of the troops. They were encouraged to participate in educational and recreational programs designed to improve the mind and outlook of the serviceman. In the Royal Air Force a scheme of moral leadership courses was devised to guide and train officers and men who had shown a talent for leadership to apply their potential in the groups to which they were attached.

[Sir Israel Brodie]

IN THE UNITED STATES. The Jewish military chaplaincy in the United States began in 1862 during the U.S. Civil War. Before then army chaplains had to be ordained Christian clergymen, selected by the officers of the regiments to which they were assigned. By an Act of Congress of 1862, a regularly ordained minister of any religious denomination could be commissioned as a chaplain. Three rabbis were commissioned as chaplains in the Union forces: Rabbi Jacob Frankel of Philadelphia, who served the six Philadelphia military hospitals; Rabbi Bernhard Gotthelf, of Louisville, Kentucky, who served 18 army hospitals in Kentucky and Indiana; and Rabbi Ferdinand L. Sarner of Brith Kodesh Congregation, Rochester, New York, who was elected chaplain of the 54th New York Volunteer Regiment and was wounded at Gettysburg.

No Jewish chaplains served in the Spanish-American War (1898), although Rabbi Emil G. *Hirsch and Rabbi J.

Leonard Levy of Philadelphia were commissioned. Rabbi Joseph *Krauskopf of Philadelphia spent the summer of 1898 at military camps in the United States and in Cuba as a field commissioner for the National Relief Commission, and conducted religious services for Jewish personnel. A number of other rabbis also conducted services at camps adjacent to the communities in which their congregations were located.

In 1917 the *National Jewish Welfare Board (JWB) was organized to serve the religious and morale needs of Jewish soldiers and sailors in the U.S. armed forces during World War I. One of the duties assigned to the JWB by the government was the recruiting and endorsing of Jewish military chaplains. In October 1917 Congress authorized the appointment of chaplains-at-large of "faiths not now represented in the body of Chaplains of the Army." As a result, 149 of the 400 English-speaking rabbis in the United States volunteered, and 34 received the ecclesiastical endorsement of the JWB's Chaplains Committee. Of these, 26 received commissions. The first Jewish chaplain commissioned was Rabbi Elkan C. Voorsanger of St. Louis, who earned two decorations for gallantry under fire, and became senior chaplain of the 77th Division.

After World War I, some chaplains maintained reserve commissions, and a number of younger rabbis enlisted in the reserves between 1918 and 1940. As World War II approached, the chaplaincy underwent a major reorganization. Cyrus *Adler was succeeded by Rabbi David de Sola *Pool as chairman of the JWB Chaplaincy Committee, and the committee was renamed Committee on Army and Navy Religious Activities (CANRA) of the JWB. Rabbi Phillip S. *Bernstein was named executive director. By the time the United States entered World War II, 24 Jewish chaplains were on active duty. By the end of the war 311 rabbis had been commissioned and served in the armed forces; seven died in service, among them Alexander Goode who was one of four chaplains who lost their lives on the military transport, s.s. *Dorchester*. CANRA provided the chaplains with vast supplies of religious literature, equipment, and kosher foods in a supply line that reached around the world. Two tasks of special importance performed by Jewish chaplains were their work as leaders in the first penetration of areas cut off from Jewish contacts during the Nazi occupation, and their aid to concentration camp survivors. After World War II the chaplaincy became a career for some, and a way for the promotion of senior Jewish chaplains to key administrative chaplaincy posts. Many of those who did not choose a career in the chaplaincy retained their reserve commission. Only 18 Jewish chaplains remained on active duty at the outbreak of war in Korea in 1950. Twelve Jewish chaplains were decorated in that war.

After World War II CANRA was renamed to emphasize its function within the JWB organization, which finances it, first as the Division of Religious Activities and, after the outbreak of the Korean War, as the Commission on Jewish Chaplaincy of the JWB Reform, Conservative, and Orthodox rabbis rotated as commission chairmen for three-year terms. The commission instituted a draft to supply 100 Jewish chaplains;

it drew from all rabbis and newly-ordained students eligible for military service who had not already served in the forces, and required a two-year tour of duty. From 1950 to 1968 the draft brought 485 rabbis into the chaplaincy, about a third of all the rabbis ordained by the major Jewish seminaries of the United States during the period. The commission also used civilian rabbis who had their own congregations to provide chaplaincy services at military bases, academies, and hospitals and nonmilitary federal installations where no full-time Jewish chaplain was assigned. About 800 rabbis were involved in this program up to 1970. In 1969, reacting to anti-Vietnam sentiment among rabbinical students, the commission substituted a voluntary system for the drafting of newly-ordained rabbis. When the Vietnam War led to a new military buildup, four Jewish chaplains were assigned to duty in that country. From 1966 to 1970, 11 chaplains were decorated. In 1970 Jewish chaplains were serving 611 domestic installations and hospitals, as well as in more than 40 foreign countries. Jewish chaplains were active in the later military actions in Iraq. By 2005, in the renamed Jewish Chaplains Council, approximately 40 full-time military and Veterans Administration chaplains, 55 chaplain reservists, more than 88 military lay leaders, and thousands of Jews were serving at more than 500 military installations and VA medical centers.

PUBLICATIONS AND CHILD EDUCATION. In the 1950s and 1960s, religious-lay cooperation and interdenominational harmony were strikingly evident in the work of the Jewish Chaplaincy Commission's responsa and publication committees. The former formulated mutually acceptable answers to questions of religious practices under military conditions. The latter published prayer books, *Haggadot*, hymnals, and a library of pamphlets on the Sabbath, holy days, festivals, Jewish ethics, and Jewish history, all widely distributed and serving as excellent expositions of Judaism to non-Jews in the military. In 1954 the commission published the first standardized religious school curriculum for the children of servicemen, rewritten in 1965 as "Unified Jewish Religious Education Curriculum." It is particularly important because of the growing number of service children who live far from civilian synagogues and Jewish schools. Religious education for service children has become a prime task of the Jewish chaplains, who prepare many youngsters for bar and bat mitzvah as part of an organized program of elementary Jewish training.

MILK. The milk most commonly mentioned in the Bible is that of sheep and goats (Prov. 27:27; Deut. 32:14), but cows' milk was also known and was consumed at least in the form of curds (Isa. 7:21–22). Milk is considered among the finest of foods (Deut. 32:14; Isa. 55:1) and is used as a term of abundance (Joel 4:18; Isa. 60:16), as the standard of whiteness (Lam. 4:7) and, with honey, of sweetness (Song 4:11). A “land flowing with milk and honey” refers to the abundant fertility of Canaan (e.g., Ex. 3:8, 17; Num. 13:27; Deut. 6:3; Jer. 11:5) and of Egypt (Num. 16:13). The prohibition against boiling a kid in its mother's milk (Ex. 23:19; 34:26; Deut. 14:21) most probably refers to a Canaanite sacrificial custom. Some scholars believe that this practice is referred to in Ugaritic text 52, line 14, but the textual restoration is uncertain. Boiling in milk – called “its mother's milk” – is a common way of preparing a kid or a lamb among modern Arabs, but it has no ritual significance for them.

[Tikva S. Frymer]

In Halakhah

The milk of clean animals such as cows, sheep, and goats, etc., although it comes “from the living” (*min ha-hai*, Bek. 6b), is permitted for consumption, but not the milk of unclean animals or of those suffering from visible disease which causes the animal to be ritually unfit for consumption (*terefah*), or that or an animal which after ritual slaughtering is found to have suffered from such a disease. In the latter case, all milk which the animal produced during the three days before it was slaughtered is forbidden to be used (Sh. Ar., YD 81:2). Milk bought from a non-Jew is forbidden for consumption out of fear that he may have mixed it, either through carelessness or in order to improve it, with milk of unclean animals. If a Jew was present at the milking, the milk may be used (*ibid.*, 115:1). There are, however, opinions that nowadays, even if the Jews did not supervise the milking, the milk is permitted since the law of the land forbids adulterating the milk. By many authorities butter made by gentiles is permitted for consumption on the grounds that butter cannot be produced from the milk of unclean animals (Av. Zar. 35b, Maim. Yad, Ma'akhalot Asurot, 3:12, 15, 16).

MILKEN, MICHAEL R. (1946–), U.S. investor, philanthropist. Nicknamed “the junk bond king,” Milken, by using a little-noticed financial tool, transformed corporate takeovers and financing in the 1970s and 1980s, amassing great personal wealth – \$200 million to \$550 million a year – through what some considered questionable financial dealings. In 1989 a federal grand jury indicted Milken for violations of federal securities and racketeering laws. He pleaded guilty to securities fraud and related charges in 1990, and the government dropped the more serious charges of insider trading and racketeering. Milken was fined and sentenced to 10 years in prison but in 1991 his sentence was reduced to two years plus three years probation. Barred from the securities business for life, Milken worked as a strategic business consultant after his release from prison. The Securities and Exchange Commission charged that this work was a violation of his probation, and in 1998 Milken settled with the SEC and paid the government \$42 million in fees that he had earned plus interest.

Michael Robert Milken grew up in Encino, Calif. His paternal grandparents were Jewish immigrants from Poland. He attended the University of California at Berkeley during the height of protest movements in the mid-1960s and graduated as a business major with highest honors. He began his financial career at the university, when he invested money for his fraternity brothers in return for 50 percent of the profits. With no returns to his clients on losses, Milken had virtual assurance of profitability. At that time he developed a theory about low-grade “junk” bonds. Milken believed that under a revised rating system, one that also factored the potentials for return on investment, cash flow, business plans, personnel and corporate vision, junk bonds might pose a worthwhile risk. In 1970, after earning a master's degree from the Wharton School at the University of Pennsylvania, Milken went to work for the Drexel Corporation as assistant to the chairman and later became head of bond research. When Drexel merged with Burnham & Co. in 1973, Milken headed the noninvestment-grade bond-trading department, an operation that earned 100 percent return on investment. In 1977 Milken returned to California and moved his High-Yield Bond Department to Los Angeles. Milken's younger brother Lowell joined him. In the early 1980s Drexel-Burnham began using the “highly confident” letter, a correspondence designed to convince commercial banks to finance corporate takeovers. The letters stated that Drexel was “highly confident” the funds could be raised to finance the deal. In the company's first attempt at this scheme, Milken raised \$1.5 billion in 48 hours. In 1982, Drexel-Burnham took on a new client, the financier Ivan *Boesky. Milken's dealings with him violated the securities law. In June 1989 Milken resigned from Drexel to form his own company, International Capital Access Group. The new venture was unsuccessful largely because Milken was fighting the SEC charges in a 98-count indictment. Eventually, he issued an apology and admitted that he cheated clients and plotted with Boesky to accomplish a corporate raid.

Milken completed his prison term in 1993. He co-founded a company called Education Entertainment Network, which produces business videos. In 1996 he and Larry *Ellison founded Knowledge Universe, a company dealing in a diverse variety of goods and services, including day care, executive education, corporate training, and toys. The SEC came after him again. He admitted no wrongdoing but paid a fine of \$47 million in response to accusations that he served as a broker.

Milken used his personal fortune and high-level contacts to become an influential voice in economics, education, and medical research. In 1982 he co-founded the Milken Family Foundation to support medical education and research. In 1991 he founded the Milken Institute, a kind of think tank that sponsors prestigious international conferences. In 1993, after he was diagnosed with prostate cancer, he founded the Prostate Cancer Foundation, the world's largest philanthropic source of funds for prostate cancer research. The Milken Family Foundation, through the Milken National Educator Awards, founded in 1985, awarded \$52 million to honor more than 2,000 teachers and principals, with each educator receiving an unrestricted \$25,000 prize.

Milken's philanthropy – some critics questioned his motives – was widespread. In 1995 he donated \$5 million to a large Jewish secondary school in Los Angeles. In gratitude the school was to be renamed Milken Community High School of Stephen Wise Temple until parents and students objected. However, a number of Milken grants to Jewish causes endure. The Skirball Cultural Center, one of the most prominent cultural venues in the United States, has a Milken Gallery, for which the Milken Family Foundation was the lead benefactor. It contains exhibits that explore the connections between the 4,000 years of Jewish heritage and the vitality of American democratic ideals. The Milken Archive of American Jewish Music is an international undertaking to record, preserve, and distribute a vast cross-section of American Jewish music covering 350 years. The archive comprises 50 CD's and 600 works on the Naxos American Classical label, the largest collection of American Jewish music ever assembled. The archive has also videotaped more than 100 oral histories of composers, conductors and performers and commissioned a comprehensive history of American Jewish music. The Milken Family Foundation is also a major supporter of American Friends of the Hebrew University, and the foundation for many years has supported the College of Judea and Samaria, the largest public college in Israel. It has a Milken Family Campus, embodying its teaching and research laboratories as well as its library, main administration building and computer center.

[Stewart Kampel (2nd ed.)]

MILKWEED, plant of the Euphorbiaceae family. Many genera comprising scores of species are found in Israel. Attempts have been made to identify them with plants mentioned in the Bible, but such attempts are without foundation. One plant mentioned in the Mishnah belongs to the Asclepiada-

ceae family: the *Calotropis procera*, the mishnaic *Petilat ha-Midbar* (“desert wick,” Shab. 2:1). It is a shrub growing in the salt Jordan valley and the Arabah. It has large leaves and its fruit is like a big lemon, but instead of juice it contains many seeds enveloped in shining silky fibers. These are used for making cushions, and wicks too can be prepared from them, but since the oil does not rise well in the fiber its use for the Sabbath lamp is forbidden (Shab. *ibid.*). The popular name of the fruit is “Sodom apple,” which has no connection with “the vine of Sodom” (Deut. 32:32). Milkweed is mentioned by Josephus (Wars, 4:484) who points out that this fruit of Sodom appears edible but on being opened turns to dust. The reference is to the seeds, which have hairy adhesions by which they are broadcast.

MILL, JOSEPH SOLOMON (John; 1870–1952), pioneer of the *Bund. Born in Panevezys, Lithuania, Mill was left on his own when his family immigrated to the United States. From an early age he established close relations with Polish families, acquainting himself with the complex nationality problems of the region. He joined revolutionary circles under the influence of Z. *Kopelson. From 1890 he was a most active member of the Jewish Social Democratic organization in Vilna, except for intervals of imprisonment (1892), military service, and studies at the University of Zurich. He established ties with the leaders of the Polish Social Democrats, Rosa *Luxemburg, and L. *Jogiches, who led the Social Democratic “circles” in Vilna at the end of the 1880s. In 1895 Mill went to Warsaw as the head of a group interested in laying a foundation for a Jewish workers' society that later became a branch of the Bund there. He fought the Polish Socialist Party and its group of Jewish members and succeeded in uniting Lithuanian and local workers into one Jewish association. After the arrest of Bund members in 1898, Mill fled the country, and together with Kopelson initiated the establishment of the Bund “committee abroad.” He was the editor of its organ *Der Yidisher Arbeter* (nos. 6–11) and initiated the setting up of the Bund archives. At the third congress of the Bund (1899) Mill was the first to demand that the claim to national autonomy be included in its program. For many years he headed the organizational affairs of the Bund and its “committee abroad” until he immigrated to Chicago in 1915. In the United States he worked at his profession of dental technician, and was active in the *Jewish Socialist Verband and the Socialist Party, holding the position of Jewish secretary and translator. He wrote for Jewish socialist periodicals and published important memoirs entitled *Pionern un Boyer* (2 vols., 1943–46).

BIBLIOGRAPHY: LNYL, 5 (1963), 624–6, incl. bibl.; J.S. Hertz et al. (eds.), *Geshikhte fun Bund*, 3 vols. (1960–66), indexes; M. Mishkinsky, in: *Asufot*, 14 (1970), 81–131.

[Moshe Mishkinsky]

°**MILLÁS VALLICROSA, JOSÉ MARIÁ** (1897–1970), Spanish scholar and historian. Millás Vallicrosa was born in Santa Coloma de Farnés, Spain. From 1925 onward he was professor of Hebrew studies at the University of Barcelona, having also taught at the University of Madrid. Millás Vallicrosa did research into the history of Spanish Jewry, medieval Hebrew poetry, the Bible, and the history of the sciences. He also translated medieval works from Hebrew and Arabic into Spanish. One of his important studies on Spanish Jewry is *Documents hebraïcs de jueus catalans* (1927), in which he compiled and explained Hebrew documents of the Catalanian Jews in the 11th–12th centuries. Another work of his is *Assaig d'història de les idees físiques i matemàtiques a la Catalunya medieval* (1931), on the history of the development of science in Catalonia. In the field of the history of science, Millás Vallicrosa's studies on Abraham ibn Ezra and *Abraham bar Hiyya are notable, while in the research into Hebrew poetry and literature a special place is occupied by his work, *La poesia sagrada hebraico-espanyola* (1940). He suggested that antecedents of poetic forms in medieval Hebrew poetry in Spain can be traced to biblical poetry (in *Sefarad*, 1 (1941), 45–87). In this field he also published the studies, *Yehuda ha-Leví, como poeta y apologista* (1947), and *Šelomō ibn Gabirol, como poeta y filósofo* (1945). Millás Vallicrosa published scores of articles in scholarly journals, including *Al-Andalus*, *Sefarad*, *Revue Internationale de l'Histoire des Sciences*, and *Osiris: Archeion*. Many of his pupils earned scholarly reputations, among them his own sons. His wife, FRANCISCA VENDRELL, also a scholar, studied the history of medieval Spanish Jewry. A two-volume *Homenaje...* containing scholarly articles by Jewish and non-Jewish scholars was published in honor of Millás Vallicrosa in 1954–56. A list of his works was published under the title *Títulos y Trabajos de Profesor D. José M. Millás Vallicrosa* (1950).

[Haim Beinart]

MILLER, ARTHUR (1915–2005), U.S. playwright. In his work, Miller wrestled with the primal issues of modern society. Because he came of age in New York City during the Great Depression, he embraced the themes of personal integrity and social responsibility, themes writ large in his immediate surroundings and his own family. Relationships, typically between one and one's family and society, were at the heart of nearly all his work. Theater director Robert Whitehead has been quoted as saying Miller had a "rabbinical righteousness," that his plays "sought to be a light unto the world." For Miller, theater was not mere entertainment, but an opportunity for consciousness raising, to change or broaden the minds of the audience. Writing and producing plays was a politically engaging experience for him. However, while he acknowledged that a given work might reflect a creator's political and social ideology, he rejected the notion that a play could encapsulate one's entire philosophy. He felt that real life was far too complex to be fully explained in a work of art or in a political methodology. He repeatedly tried to illustrate this ultimately

unknowable complexity in his work. Very often the motivations of his characters are vague and mysterious. He offered no succinct answers to the problems he presented; indeed he may have believed there were none.

He acquired an international reputation after World War II, following the publication of two plays and of *Focus* (1945), a novel about antisemitism. In it, a pair of glasses allows a man to see better as it encourages others to see him differently. A meek gentile, who, as part of his job, identifies Jewish job applicants, is mistaken to be Jewish when he begins wearing a pair of glasses. He loses his job and can only find employment in the office of Jewish businessmen. He passively participates in the antisemitism in his initial job, in his neighborhood, where hatred of Jews reaches a virulent level, and at home. Ultimately he redeems himself by trying to stop vandals from destroying the store of a Jewish shopkeeper.

The play *All My Sons* (1947) revealed his ability to portray characters involved in emotional conflicts. It is a realistic play, intended for the general public. The dialogue is of common speech. The plot involves an overwhelming crisis growing out of smaller crises. The play has symbolic overtones despite the realistic characters and plot, which combine to help Miller focus on his themes of mutual responsibility and survivor guilt.

His reputation was really established with *Death of a Salesman* (1949), which won the Pulitzer Prize for drama. The play, later made into a motion picture, owed its success to the delineation of Willy Loman, the unsuccessful traveling salesman, and was regarded as an indictment of the false sense of values of American life. Miller has stated his initial idea for the play came from one notion: that the main character would kill himself. Loman's is a realistic portrayal of decline, of never quite giving up on the American dream, despite all evidence to the contrary. His sacrifice is a hopeless attempt to preserve some personal dignity and to help his family. The audience is never told if the insurance from his death properly provides for his family, but there are hints in the play that his death is in vain, that his plan does not work. Because of his drastic and self-destructive behavior for what may be an ideological misconception, Willy Loman is one of the great tragic characters of American drama.

In 1951, engaged by the problem of freedom of speech, Miller wrote an adaptation of Henrik Ibsen's *An Enemy of the People*, and in 1953, in his own play *The Crucible*, he turned to the Salem witch trials of 1692, and spoke for freedom of conscience during the period of Senator McCarthy's anti-communist campaign. Miller hoped the play "would be seen as an affirmation of the struggle for liberty, for keeping one's own conscience." John Proctor is a strong protagonist, flawed, but with no misplaced idealism. With Proctor at the center, Miller plays with the theme of retaining one's sense of morality in the face of public pressure. The witch-hunt mentality (reminiscent of the antisemitic hysteria in *Focus*) has both rational and irrational origins: some, like those causing the fuss, are conscious of the social and economic power it brings, while others are

merely swept up in the supernatural paranoia. Miller adeptly portrays the act of ruination by accusation. When one character is accused of witchcraft, he has two choices: to confess and lose his land, or deny and lose his land. When he remains silent, even to his death, his land at least stays with his family. During the political climate of the McCarthy Red Scare, this proved to be a profoundly important lesson in social and individual responsibility. In an odd case of life imitating art, Miller played Proctor for real. Summoned before McCarthy's House Un-American Activities Committee, Miller was asked about Communist meetings he had attended. He did not refuse to answer, telling the committee everything they wanted to know about him, while denying he was a Communist. But he stopped short of implicating others. As Proctor refused to speak about people already known to his questioners, so did Miller. He was found guilty of contempt of court, but that charge was later reversed. This play was screened as the *Witches of Salem* (1957).

A View from the Bridge (1955) again won a Pulitzer Prize. It showed Miller still striving for significant realistic drama and imaginative dramatic form. In the play he continued his practice of trying to mythologize the ordinary and everyday. Falling short of being entirely uplifting, the play has a positive message: that life goes on despite any tragedy.

The film script *The Misfits* (1961), written after his marriage to the screen star Marilyn Monroe, and acted in by her and Clark Gable, was an unusually sensitive, though commercially unsuccessful, study of loneliness and divorce.

Miller returned to the theater with an autobiographical drama, *After the Fall* (1964), based largely on his life with Marilyn Monroe, whom he had divorced in 1962, and relating his own conflicts in love and friendship to the state of the world. This expressionistic drama concerns the various crises of Quentin, one of which is his sense of guilt at not experiencing the Nazi death camps. His proximity to Holga, a woman who has escaped Auschwitz, exacerbates this feeling in him. He laments his inability to atone for what he feels are sins, because they are sins of omission, that is, he is guilty, not for things he has done, but for things he has not done.

Incident at Vichy (1965) deals with the arrest of a number of Frenchmen, including some Jews, during the Nazi occupation. Each prisoner separates himself from the others while trying to understand why the Nazis want to destroy them. The gypsy, the Communist, the Catholic, and the Jew are unable to come together even as fellow prisoners, even in their hatred of the Nazis. There is no sense of union, that each is responsible for the others. One Nazi officer is shown having feelings of guilt, but he ultimately does nothing about it. Miller stresses that guilt is not enough, that action is necessary. To deny one's connection to humanity is to deny one's own humanity.

The Price (1968), depicting a dramatic conflict between two brothers, had as a central character an old Jew who acted as a wise commentator.

Miller stated his intention as a dramatist as being to "bring to the stage the thickness, awareness, and complex-

ity of the novel." He endeavored to give postwar American drama depth of purpose and content, and a sense of tragic conflict in terms of contemporary American life. Widely regarded in the 1950s as America's leading dramatist, his reputation faded somewhat in the 1960s as realistic drama itself passed out of critical fashion. The 1980s, however, saw a return to appreciation of Miller's contribution to 20th-century theater. Other plays include *The American Clock* (1983), *The Archbishop's Ceiling* (1984), *Danger: Memory* (1986), *Two-Way Mirror* (1989), *The Ride Down Mount Morgan* (1991), *The Last Yankee* (1991), and *Broken Glass* (1994). For the collected edition of his plays published in 1958, he wrote a 50-page introduction, which clarified his purpose and explained his methods of work. Translated into many languages, the plays were internationally popular. Miller was elected president of the International PEN Club in 1965, in which position he strove vigorously to organize protests against literary censorship and repression all over the world.

MILLER, BEN-ZION (1947–), *hazzan*. Miller was born in Germany where his father, Rabbi Aharon Miller, was serving as *hazzan* to the Klausenburger rebbe in a German refugee camp. He studied at the Bobov yeshivah in Israel, becoming a *hazzan* and *shoḥet*. He also came under the tutelage of the well-known cantor Samuel Baruch *Taube. Thereafter he served as *hazzan* in New Jersey, New York, and Canada, before becoming, in 1981, *hazzan* of the Beth-El synagogue of Boro Park in Brooklyn, New York. He has also appeared in concert in Europe, the United States, Australia, and Israel. He is one of the few Orthodox cantors dedicated to perpetuating the great virtuoso cantorial styles and tradition of the 19th and early 20th centuries. A tremendous recording and performing artist, Miller has many varied recordings to his credit, including the Milken Archive releases issued by Naxos.

[Akiva Zimmerman / Raymond Goldstein (2nd ed.)]

MILLER, EMANUEL (1893–1970), English psychiatrist. Born in London, Miller studied medicine at Cambridge University and the London Hospital and lectured in psychology at Cambridge for a brief period after 1924. He became a psychiatric specialist in 1940 and in 1946 was made a Fellow of the Royal College of Physicians. One of the foremost psychiatrists in Britain, Miller was founder and honorary director of the East

London Child Guidance Clinic and chairman and honorary president of the Association of Child Psychiatry. He showed a keen interest in the development of medicine in Israel and in 1953 was elected president of the British Friends of Magen David Adom. His publications include *Modern Psychotherapy* (1930) and *Neurosis in War* (1940). His wife, BETTY MILLER (née Spiro; 1910–1965), born in Cork, Ireland, was the author of various novels including *Farewell Leicester Square* (1940), *A Room in Regent's Park* (1942), *On the Side of the Angels* (1945), and *The Death of the Nightingale* (1949). She also wrote a biographical study, *Robert Browning: A Portrait* (1952), and was elected a Fellow of the Royal Society of Literature. Their son JONATHAN MILLER (1934–) was educated at St. Paul's school and Cambridge and qualified as a doctor but established his reputation as an actor in the revue *Beyond the Fringe*, a satire on various aspects of British life from Shakespeare to the Royal Family, which played in London and New York. Later he directed many successful theatrical and television productions, frequently winning acclaim for his originality. His television series on the history of medicine, *The Body in Question*, became internationally known.

ADD. BIBLIOGRAPHY: ODNB online.

MILLER, IRVING (1903–1980), U.S. rabbi and Zionist leader. Rabbi Miller, who was born in Kovno, Lithuania, was taken to the U.S. in 1912. Ordained a rabbi at Yeshivath Rabbi Isaac Elhanan in 1926, he served congregations in Youngstown, Ohio (1926–28), Chelsea, Mass. (1928–30), and Far Rockaway, N.Y. (1930–46), before becoming rabbi of Congregation Sons of Israel, Woodmere, N.Y. (1946–63). Extremely active in Jewish affairs, Miller's posts included secretary-general of the World Jewish Congress (1942–45); president of the American Jewish Congress (1949–52); president of the Zionist Organization of America (1952–54); president of the American Zionist Council (1954–63); chairman of the Conference of Presidents of Major American Jewish Organizations (1961–63); and member of both the national cabinet of the United Jewish Appeal and the Actions Committee of the World Zionist Organization.

MILLER, ISRAEL (1918–2002), U.S. Orthodox rabbi, communal leader, and university administrator. Miller was born in Baltimore and educated in New York, where he earned his B.A. from *Yeshiva College in 1938 and his ordination from the Rabbi Isaac Elchanan Theological Seminary of Yeshiva University in 1941. He received an M.A. from Columbia University in 1949 and a D.D. from Yeshiva University in 1967. Immediately after ordination, Miller became rabbi of the Kingsbridge Heights Jewish Center in the Bronx, New York, becoming emeritus in 1968, with a brief interruption to serve as a United States Air Force chaplain (1945–46). In 1968 Miller began a second career at Yeshiva University, as a professor, vice president, senior vice president, and senior vice president emeritus, until his *aliyah* to Israel in 2000.

Miller was president or chairman of nearly every major Orthodox or American national Jewish organization; in fact,

he was one of the founders of several of them, including the American Jewish Conference on Soviet Jewry, serving as its first chairman (1965–67); the American Zionist Federation (successor to the *American Zionist Council, of which he was chairman from 1967–70, and precursor to the *American Zionist Movement), serving as its first president and then honorary president (beginning 1970 and 1974, respectively); and the New York Jewish Community Relations Council, serving as its first vice president (1976). Miller was elected president of the *Rabbinical Council of America in 1964, and led the RCA's first mission to the Soviet Union and the Moscow Great Synagogue under KGB scrutiny in 1965.

From 1969 to 1976, Miller was vice chairman and chairman of the *Conference of Presidents of Major American Jewish Organizations. He was an advisor to presidents of both Democratic and Republican administrations: President Johnson appointed him to the National Citizens Committee for Community Relations to help implement civil rights legislation; he received a citation from President Ford; and President Reagan consulted him prior to his Geneva summit with Mikhail Gorbachev and dispatched him on a fact-finding mission to South Africa.

For the last 20 years of his life, Miller was president of the *Conference on Jewish Material Claims against Germany (and the Claims Conference against Austria), overseeing the disbursement of \$2 billion to 400,000 Holocaust survivors and \$500 million in institutional allocations. In this capacity, he negotiated with world leaders, including German Chancellor Helmut Kohl, and visited thousands of survivors personally to ensure that they were living their final years with dignity. In addition to serving as president of the Association of Jewish Chaplains of the Armed Forces, honorary chairman of the Jewish National Fund, and vice president of the Religious Zionists of America, Miller sat on the executive committees or boards of directors of many organizations, including the World Zionist Organization, National Jewish Welfare Board, and American Israel Public Affairs Committee.

Miller received numerous awards, not only from the organizations he led, but also, for instance, from Yeshiva University and the Boy Scouts of America. The greatest honor, however, came from the accolades and votes of confidence of his colleagues, who elected him repeatedly to the highest leadership positions on account of his gentility, grace, integrity, and wisdom, rather than as a result of vigorous campaigning for office.

[Bezalel Gordon (2nd ed.)]

MILLER, LOUIS (1917–1988), Israeli psychiatrist. Born in Somerset West, South Africa, he went to Israel in 1948 and established psychiatric and psychological services in the Israeli army and air force. In 1949 Miller became director of psychiatry in Israel's Ministry of Health, where he planned and initiated its regional hospital and community services. In 1954 he entered the field of public health and developed a family health and community organization program for the Jeru-

salem region. In 1959 he returned to his post of director of Mental Health Services, and in 1970 became chief national psychiatrist. In 1966–67, as visiting professor at Northwestern University, he planned and initiated a community mental health program in Chicago for the State of Illinois. His contributions to mental health theory, research, and practice were concerned particularly with the effects of socio-cultural and community influences on mental health and ill health and its treatment. He integrated this approach with the biological and psychological interpretations of personality. His publications include studies concerning the incidence of psychiatric conditions in various cultures in Israel, immigration and mental health, child rearing on the kibbutz and among Tripolitanian Jews, aging, urbanization, and social change. He was chairman of the National Committee for the Study of Drug Abuse and the *Encyclopaedia Judaica* (first edition) departmental editor for Jews in psychiatry.

MILLER, LOUIS E. (pseudonym of **Louis E. Bandes**; 1866–1927), Yiddish editor and labor leader. Miller was born in Vilna and became involved in socialist and revolutionary activities in his boyhood. He fled from Russia at 14 and participated in émigré revolutionary circles in Berlin, Switzerland, Paris, and, after 1886, in New York. In the U.S. Miller worked in a shirt factory, and helped found the first shirtmakers union among Jewish workers. Miller was also deeply involved in the political life of socialist and other labor organizations. In his early years he remained close to organizations which used Russian as their language, but in 1889 he represented the Yiddish-language-oriented United Hebrew Trades at the Second International in Paris.

Miller was most influential as editor and writer in Yiddish. In 1890, with Philip *Krantz, Morris *Hillquit, and Abraham *Cahan, he founded the Yiddish-socialist *Die Arbeiter Zeitung* (1890). In 1897 he joined Cahan in launching the daily *Forward* (1897). In 1905 he broke with Cahan, the editor in chief of this daily, and founded his own paper *Die Wahrheit* (1905) which stressed Jewish national aspirations no less than socialism. When World War I broke out, he espoused the cause of the Allies, while most of his daily's 100,000 readers favored Germany as against czarist Russia. The paper continued to lose circulation, and he preferred to resign rather than to keep silent. He attempted several journalistic ventures after 1917, but never regained his earlier influence with the Yiddish reading masses.

[Alexander Tobias]

MILLER, MARTIN RUDOLF (1899–1969), Czech actor, who from 1939 worked in England. Miller (né Rudolf Muller) was born in Kremšier, Czechoslovakia, started his career in Vienna, and made his last appearance in Berlin at the Jewish Culture Theater in 1939. In London he appeared in *Awake and Sing* (1942) and in 1,000 performances of *The Mousetrap*

(1952). In New York he was in *The Mad Woman of Chaillot* (1949) and *The Magnolia Street Story* (1951). Miller was noted for his portrayal of elderly Jews.

MILLER, MARVIN JULIAN (1917–), one of the most influential figures in American sports history, baseball's first labor leader who served as executive director of the Major League Baseball Players' Association (MLBPA) from 1966 to 1982. Miller was born in the Bronx and raised in Brooklyn, New York, by his father Alexander, a salesman of women's coats on the Lower East Side and a member of the wholesale clothing workers union, and by his mother Gertrude (Wald), an elementary-school teacher in New York's public schools who became one of the early members of the city's teachers' union. Miller studied first at the University of Miami and then at New York University, where he graduated in 1938. He worked at the National War Labor Relations Board, the Machinist Union, the United Auto Workers, and the United Steelworkers union, where he was assistant to the president and its leading economist and negotiator. On March 5, 1966, the baseball player representatives elected him executive director of the MLB Players' Association. Through his innovative thinking and keen negotiating skills, Miller united a loosely organized association and transformed it into one of the strongest unions in the United States, thereby revolutionizing baseball. As a pioneer in the unionization of professional athletes, Miller was instrumental in its development into a powerful labor union that transformed the economics and labor relations of baseball, which led ultimately to profound changes in the nature of U.S. professional sports and their place in society. He led the baseball union to two strikes, the first on April 1, 1972, which lasted 13 days and was the first successful strike in the history of professional sports, and again in 1981, which lasted 50 days.

Among Miller's accomplishments were the recognition of the players' union; the right to bargain collectively; the use of agents to negotiate individual contracts; an end to the reserve clause, with free movement from team to team through free agency; arbitration in labor disputes; the right for veteran players to veto trades; and a vastly improved pension plan funded largely through percentages of television revenue. During Miller's tenure, major league players saw their minimum salary jump from \$6,000 to \$33,500, while the average salary rose from \$19,000 to over \$240,000. Miller also instituted changes to make the game safer, successfully bargaining for improved scheduling and padded outfield walls, better-defined warning tracks, and safer locker rooms. Journalist Red Barber called Miller "one of the three most important men in baseball history," along with Babe Ruth and Jackie Robinson, and author Studs Terkel said Miller was "the most effective union organizer since John L. Lewis." In 2000, *The Sporting News* ranked Miller fifth on its list of the "100 Most Powerful People in Sports for the 20th Century." Miller was the author of *A Whole Different Ball Game: The Sport and Business of Baseball* (1991).

[Elli Wohlgelernter (2nd ed.)]

MILLER, MITCH (*Mitchell William*; 1911–), U.S. oboist, record producer, arranger, and conductor. Miller studied piano and oboe and later attended Rochester's Eastman School of Music (B. Mus., 1932). Miller played oboe with the Rochester Philharmonic (1930–33) and the CBS symphony orchestra (1935–47). In the 1950s he became a major force in the recording industry. Miller was appointed director of artists and repertoire for the classical division of Mercury Records (1947–50) and produced a series of major hits, including Frankie Laine's "That Lucky Old Sun." When he was in charge of the popular division of Columbia Records (1950–61), he recorded Guy Mitchell and Tony Bennett, and signed artists like Mahalia Jackson and Rosemary Clooney. He got Laine to record "High Noon," the title song from the Gary Cooper western, and played an important role in fostering the 1950s folk revival. Miller's own recording career, mostly credited to "Mitch Miller and His Gang," began with his adaptation of the Israeli folk song "Tzena, Tzena," "The Civil War Marching Song," "The Yellow Rose of Texas," and the "Colonel Bogey March" from *The Bridge on the River Kwai*. His series of "Sing Along With Mitch" albums, in which he led an all-male chorus in spirited versions of mostly older tunes, led to his own television program *Sing Along with Mitch* (1960–65), which became extremely popular. By 1965 Miller's influence had waned. He appeared as guest conductor of pop concerts and light classical recordings with orchestras in and outside the U.S. Miller and Freedman edited his *Mitch Miller Community Song Book: A Collection for Group Singing for All Occasions* (1999).

[Naama Ramot (2nd ed.)]

MILLER, SHAYE (1895–1958), Yiddish novelist, editor, and translator. Born in Filpovitch, Ukraine, he immigrated to the U.S. at age 17 and lived in New York and Cleveland before settling in Los Angeles ten years later. He began to publish Yiddish short stories at the age of 22, translated Maeterlinck, Tagore, and Wedekind, and published ten volumes of impressionistic stories. Miller published in the leading Yiddish periodicals of his day, including the *Forverts*, *Der Yidisher Kemfer*, *Tsukunft*, and *Der Tog*. His novel *Dor Hafloge* ("The Lost Generation," 1948) deals with the decay, in the new American environment, of an Eastern European Jewish family which symbolizes the pre-World War I generation of transition. The stories of *Nekhtn* ("Yesterday," 1956) deal largely with Los Angeles Jews: Miller gives a panoramic view of the charlatans, the noble characters, and the ordinary men and women who were caught up in California's boom-psychosis of the 1920s and ended their lives tragically during the Great Depression of the early 1930s. He stresses the nostalgia for old-fashioned Jewishness that assailed the Jews who had wrested themselves loose from their Jewish roots and who found their materially successful life empty of meaning in later years. Miller is a master of dialogue, accurately reproducing the speech, intonations,

and gestures of his marginal, semi-assimilated Jews. His posthumously published essays *Skeptische Makhshoves* ("Sceptical Thoughts," 1959) deal with basic questions of American-Jewish cultural survival and cast light upon his own personality and approach to literary craftsmanship.

[Sol Liptzin]

MILLET, the *Panicum miliaceum*, a summer plant of the Gramineae family, whose small seeds are utilized as fodder or are sometimes ground to produce a poor quality flour. It is regarded by some as identical with *doḥan*, one of the ingredients of the flour mixture that Ezekiel was commanded to eat for 390 days (Ezek. 4:9). The probability is, however, that *doḥan* is *sorghum. *Doḥan* is mentioned a number of times in rabbinic literature together with *orez* ("rice"), *peragim*, and *shumshe-min* ("sesame"; Shev. 2:7), as summer plants from which occasionally bread is made (Hal. 1:4). *Peragim* cannot therefore be poppy as is stated in the *Arukh* of Nathan b. Jehiel (and as the word is used in modern Hebrew), since the poppy is a winter plant and is used only as a spice. From Syrian Aramaic it would seem that *peragim* is to be identified with millet, an identification compatible with the talmudic sources.

[Jehuda Feliks]

MILLET, name for the religious communal organization of non-Muslims in the Ottoman Empire. The Koran uses *milla* for religion or rite, e.g., religion of the Jews and Christians (2:114), and the religion of Abraham (2:124; 3:89). It is assumed that a Jewish communal organization was already in existence for some time in the areas occupied by the Ottoman Turks in the 14th and early 15th centuries. Even before the capture of Constantinople in 1453 the Ottoman conquerors of the Balkans had granted the Christian population religious, juridical, and administrative autonomy. Mehmed II the Conqueror (1451–81) organized all non-Muslim communities and recognized their religious leaders as heads of the respective millets. Each head had jurisdiction over and responsibility for the members of his millet, and even in matters of taxation, the apportionment of the whole amount was left to him. R. Moses *Capsali was the first to be appointed (1461?) head of the Jews in Constantinople (see also **hakham bashi*). The powers of the second head, R. Elijah b. Abraham Mizraḥi (1485?–1526), were in fact restricted to religious matters of the Jews in Constantinople. Mizraḥi clearly had nothing to do with the collection of taxes and the representation of the Jews with the various authorities. That the collection of taxes was not the concern of the official representatives of the millet is confirmed by many

sources. In fact, the opposite is true: the various tax collectors, toll farmers, cashiers, and bankers of the pashas, in so far as they were non-Muslims, were the natural spokesmen of their communities by virtue of their functions and influence at court. In his time *Kakhya Shealtiel was the official spokesman who represented the Jews of the city – especially in the matter of tax collection – before the authorities. Mizrahi's judgment in the case of Kakhya Shealtiel repeatedly mentions the representatives of the congregations in Constantinople. The representative's title of *memunneh* (lit. "appointee") is one of the titles designating the persons elected by the congregation to manage its affairs; other titles are *parnas*, *barur*, *kazin*, and the ancient collective designation, *tovei ha-ir*. The powers, number, manner of election, and period of tenure of these functionaries varied greatly. Their main task was the collection of communal taxes (especially the *gaballa*), which were used to maintain the children of the needy at school and to finance charitable purposes. The mode of imposition and amount of the taxes were also different; as a rule, the consent of the whole congregation or at least of the taxpayers was required. The congregations of expellees and immigrants from Europe usually retained the practices they had followed in their countries of origin. The veteran residents likewise maintained their ancestral tradition according to which public affairs were looked after by the elders, who were the heads of prominent and influential families.

In connection with the reforms in the Ottoman Empire in the 19th century, the structure of the millet organization underwent many changes. The regulations of the Greek community (*Rum milleti*) were finally drafted and approved in 1862 and those of the Armenian community (*Ermeni milleti*) in 1863. The submission of proposals for the reorganization of the Jewish community (*Yahudi milleti*), as required by the *Khaffi humayun* (imperial decree) of 1856, was delayed due to internal dissension. The "Organizational Regulations of the Rabbinate" (*hakham Khane nizamnamesi*) was approved finally in 1865 (see *community and **hakham bashi*). The tenor of the regulations reveals a desire to limit the powers of the *hakham bashi*, and they remained in force so long as the Ottoman Empire existed; only under the republic did they lapse de facto – without being officially replaced.

[Haïm Zew Hirschberg]

MILLET, SIR PETER, BARON (1932–), British barrister and judge. Born in London and educated at Harrow and Cambridge, Millett was called to the bar at the Middle Temple and became a QC in 1973, having served (1967–73) as standing ju-

nior counsel to the Department of Trade and Industry. From 1986 to 1994 he served as a judge of the High Court (Chancery Division), and then became a judge of the Court of Appeal (1994–98), and a lord of appeal in Ordinary from 1998 to 2004. Lord Millett was one of the most prominent senior Freemasons in the British judiciary and wrote widely on aspects of the law. He was knighted in 1986 and made a life peer in 1998.

[William D. Rubinstein (2nd ed.)]

MILLGRAM, ABRAHAM EZRA (1901–1998), U.S. rabbi, Jewish educator. Millgram was born in Russia and immigrated with his family to the United States where he was educated at the City College of New York (B.S., 1924) and at Columbia University (M.A. in 1927), the year he was ordained by the Jewish Theological Seminary where he also received his D.H.L. in 1959. While serving as the rabbi of Temple Beth Israel in Philadelphia (1930–40), Millgram attended Dropsie College for Cognate Learning where he received his Ph.D. in 1942. He went to work for the then new organization for Jewish college youth, Hillel, at the University of Minnesota from 1940 to 1945. (In the first generation of rabbis who served Hillel were many men who would have preferred an academic career but Judaic studies had not yet developed as a field so they joined Hillel to be close to the university environment.) He then came back to New York as the educational director of the United Synagogue of America, where he was responsible for their widespread educational activities at a time when it was most influential and respected. He retired to Jerusalem where he continued to write. Among his publications were *Sabbath: Day of Delight* (1944); *Handbook for the Congregational School Board Member*, United Synagogue Commission on Jewish Education (1953); *Concepts That Distinguish Judaism* (1985); *Jerusalem Curiosities* (1990); and *A Short History of Jerusalem*, published in the year of his death. He was also the editor of *An Anthology of Medieval Hebrew Literature* (1961), *Great Jewish Ideas* (1964), and *Jewish Worship* (Jewish Publication Society, 1971).

[Michael Berenbaum (2nd ed.)]

MILLIN, PHILIP (1888–1952), South African Supreme Court judge. Millin began his career as a journalist in Johannesburg and Cape Town, studying law at the same time. On graduation in 1913 he began to practice in Johannesburg. He became a King's Counsel in 1927, and was chairman of the Bar Council for several years. He was appointed to the Supreme Court in 1937. As chairman of the Company Law Amendment Inquiry Commission he drafted the "Millin Report," which led to important changes in company law. He was also the coauthor of *Mercantile Law of South Africa* (1917 and several other editions), a standard work. For some years Millin was vice president of the South African Friends of the Hebrew University. His wife was the novelist, Sarah Gertrude *Millin.

BIBLIOGRAPHY: S.G. Millin, *The Measure of My Days* (1955).

[Lewis Sowden]

MILLIN, SARAH GERTRUDE (born **Liebson**; 1889–1968), South African novelist. Born in Lithuania, she grew up near Kimberley and married Philip *Millin. After publishing several novels, she made her name with *God's Step-Children* (1924), a story of the colored people of Cape Province. None of her subsequent novels had the same popular impact, though at least one of them, *Mary Glenn* (1925), a rural tragedy, showed great power of projecting atmosphere and passion. Turning to biography, she published a life of Cecil Rhodes (1933) and *General Smuts* (2 vols., 1936). A prolific writer on South African and world affairs, Sarah Gertrude Millin produced among other works short stories of South Africa, and during World War II she wrote her war diaries in six volumes (published 1944–48), in which she devoted much attention to Palestine. Returning to fiction, she broadened her scope in *King of the Bastards* (1949) and *The Burning Man* (1952). She wrote two volumes of autobiography, *The Night is Long* (1941) and *The Measure of My Days* (1955).

Sarah Gertrude Millin's style was terse and her objectivity in fiction carried to the point where it often seemed that she disliked the people she wrote about. In her later years she often expressed conservative and controversial views on South Africa's race relations and color policies (apartheid). In 1966 she edited and contributed to a volume of essays, *White Africans are Also People*, in defense of Rhodesia and South Africa. Sarah Gertrude Millin, although interested in Jewish affairs, took no part in Jewish life. She occasionally introduced Jews in her stories, as in *The Coming of the Lord* (1928).

[Lewis Sowden]

MILLMAN, JACOB (1911–), U.S. electrical engineer. Millman was born in Russia and taken to the U.S. in 1913. He was a faculty member of City College, New York from 1936 to 1951, and from 1952 professor of electrical engineering at Columbia University. He wrote *Electronics* (1941), *Pulse and Digital Circuits* (1956), and *Vacuum-Tube and Semiconductor Electronics* (1958).

MILLO (Pasovsky), JOSEF (1916–1996), Israeli theatrical producer and actor. Born in Prague, Millo was taken to Israel in 1921 but received his theatrical training in Prague and Vienna. On returning to Israel he worked with a marionette troupe (1937–41), acted for two years with the satirical theater "Ha-Matate," and in 1942 founded the Cameri Theater, which he directed until 1959. In 1961 he founded and became director of the Haifa Municipal Theater. Millo inaugurated a naturalistic school of Israel drama and strongly influenced the younger generation of actors and writers. He directed about 100 plays, including works by Bertolt Brecht and Shakespeare, himself playing many leading roles. He was considered to have shown new trends in modern Hebrew drama with N. Shoham's *They Will Return Tomorrow* and M. Shamir's *He Walked Through the Fields*. He was also responsible for the film version of the

latter (1967). Millo translated into Hebrew Goldoni's *The Servant of Two Masters* and Čapek's *The World We Live In*. He directed plays at drama festivals in Paris (1956), Venice (1965), and other European cities. In 1968 he was awarded the Israel Prize for theater.

MILLSTONE (Heb. מִלֵּן), an instrument used for grinding grain. The word has a dual ending, indicating an instrument composed of two parts: an upper millstone (Heb. *rekhev*, Deut. 24:6) and a lower millstone (talmudic Heb. *shekhev*), which, however, was called *reḥayim* as well (*ibid.*). Other terms for both millstones are *pelah* (Judg. 9:53, in combination with *rekhev* for upper millstone; Job 41:16, in combination with *taḥtit*, lower millstone), and *taḥanah* (Eccles. 12:34). The mill was worked by slaves (Ex. 11:5; Judg. 16:21 – Samson; Isa. 47:2; Lam. 5:13). The manna too was ground by millstones (Num. 11:8). Abimelech was killed with an upper millstone by the woman of Thebez (Judg. 9:53). Grain would be spread out between the upper and lower millstones, and the friction and pressure of one stone upon the other would break the kernels and grind them into flour. The desired friction was achieved by passing the upper stone back and forth over the lower one, as is illustrated in early Egyptian pictures. Millstones of this type have been found in abundance in excavations in Erez Israel, for example at Gezer, Megiddo, and Hazor. This type of millstone was in use until the end of the Israelite period. Only at the end of the Persian period did another type of millstone come into use, in which the desired friction was achieved by means of the circular motion of the upper stone – which turned on an axle – upon the stationary lower stone. Millstones were essential household items, and it was forbidden to remove them from their owner's possession, for example, as a pledge for a loan (Deut. 24:6). In talmudic times a distinction was made between "hand mills" or "human mills," usually worked by the housewife and standing in a special room or place, and a mill operated by a donkey, which was both larger and of a more complicated construction. Water mills are mentioned but were rare.

[Z'ëv Yeivin]

MILNER, MOSES MICHAEL (Mikhail Arnoldovich); 1886–1953), composer, born in Rokitno, Ukraine. As a child he sang in the choirs of several famous *hazzanim*, including J.S. *Morogovski (Zeidel Rovner), and then studied at the Kiev and St. Petersburg conservatories. From 1912 to 1919 he was conductor of the choir of the Great Synagogue in St. Petersburg, and then worked as singing teacher and choral conductor in various posts. From 1924 to 1931 he was musical director and conductor of the Yiddish Theater in Moscow and Kharkov,

musical director of the Jewish Voice Ensemble in Leningrad (1931–41), and coach of the choir of the Leningrad Bolshoi Theater from 1941 until his death.

Milner's renown began with the publication of his songs in 1914 by the *Society for Jewish Folk Music which he had helped to found. His works indicated new possibilities for the harmonization of traditional melodic material in the dramatic style of Moussorgsky. Until the mid-1930s he wrote many works on Jewish themes, mainly for the stage. The opera, *Die Himlen Brennen*, based on S. *An-Ski's *Dibbuk* and adapted by M. Rivesman, performed in 1923, was later denounced as reactionary and its performance was forbidden. Among his other works are *Der Najer Veg* (1933); *Josephus Flavius* (1935), based on L. *Feuchtwanger's novel; stage music for the Habimah performances of H. Leivik's *Golem* and R. *Beer-Hoffmann's *Jaakobs Traum*; and a ballet, *Ashmedai*. In addition, he also wrote settings of Jewish folk songs and liturgical texts. After the repression of Jewish art, Milner turned to more general subjects and wrote a symphony (1937); a symphonic poem, *The Partisans* (1944); and a piano concerto.

Bernandt, *Slovar Oper* (1962).

[Haim Bar-Dayan]

MILO (Milkovsky), RONI (1949–), politician, lawyer, and businessman; member of the Ninth to Thirteenth and Fifteenth Knessets. Milo was born in Tel Aviv. As a pupil in the leftist-oriented Tikhon Ḥadash high school, Milo sought to introduce the mention of Zē'ev *Jabotinsky in the curriculum, and argued in favor of the cancelation of the matriculation exams. In 1966 he was elected mayor of Ir ha-No'ar (Youth City), and got Menahem *Begin to help him write his inauguration speech. He studied law at Tel Aviv University and served as assistant to constitutional law professor Amnon *Rubinstein, who served at the time as dean of the Law Faculty, and like Milo was elected to the Ninth Knesset. From his student days Milo was an active member of the Herut Movement. He served as chairman of the Israeli Students' Association and was one of the organizers of a students' general strike over differential tuition. He also initiated the establishment of a bureau for free legal advice for the needy and received a budget from Minister of Education Yigal *Allon to finance private lessons for needy students. After the Yom Kippur War he supported the "Temurah – Yisra'el Shel-anu" Movement, which called for the resignation of the government of Golda Meir. Because of health reasons he was not mobilized for regular military service but after completing his law studies served in the army in the military attorney's office as a justice officer and military prosecutor. Following his army service he worked as an independent lawyer.

Milo was elected to the Ninth Knesset on the Likud list. In his early years in politics he was considered a firebrand and

an extremist. After returning from a visit to the United States in 1978, he claimed that the *Peace Now Movement was being funded by the CIA, even though its leaders might not have been aware of the fact. He nevertheless supported the peace agreement with Egypt.

In the Tenth Knesset Milo served as chairman of the Likud parliamentary group as well as chairman of the Herut Movement section. He fell out with Begin after supporting the appointment of David *Levy as deputy prime minister in the government formed by him in 1981. When Begin decided to resign the premiership in October 1983, Milo supported Yitzhak *Shamir as his successor. In the National Unity governments of 1984–88, he served as deputy to Shamir, first in the Ministry for Foreign Affairs and then in the Prime Minister's Office. In the National Unity government formed in 1988 he served as minister for the environment, after the new ministry was tailor-made for him. Between the fall of the government in March 1990 and the establishment of the new narrow government by Shamir in June 1990 he served as minister of labor and welfare, and in the new government was appointed minister of police, and served in the narrow cabinet. In this period he started to advocate a unilateral Israeli withdrawal from the Gaza Strip, but the idea was rejected by Shamir. He also supported the idea of granting the Palestinians in the West Bank and Gaza autonomy, but not a state. On the eve of the German reunification, Milo demanded that Israel express its opposition to this development. When Milo was minister of police an investigation was opened against MK Aryeh *Deri, and tension developed between the two. Before the elections to the Thirteenth Knesset, his name was raised as a candidate for the post of treasurer of the Jewish Agency and World Zionist Organization, but he decided not to run. Soon after the Likud's defeat he was elected chairman of the World Likud. In September 1993 Milo was one of several Likud MKs who abstained in the vote on the Declaration of Principles with the Palestinians. Soon after that vote he resigned from the Knesset to be mayor of Tel Aviv-Jaffa, and served in that post until 1999. In September 1996 Milo met with Abu-Ma'azen, and in November with the chairman of the Palestinian Authority, Yasser *Arafat. He backed Prime Minister Binyamin *Netanyahu in the Likud Central Committee after he had met Arafat and was booed by its members. In January 1997, after the fiasco around the appointment of Ronnie Bar-On as attorney general (Bar-On resigned after one day), Netanyahu offered Milo the Justice portfolio in his government, but Milo declined. He became progressively more critical of Netanyahu's leadership, and at the end of 1997, when it was generally believed that Netanyahu would fall, registered a "shelf party" (a passive party, which could be activated at short notice). In this period he started talking to Labor politician Haim *Ramon about the possibility of establishing a new center party. In 1998 he considered running for the premiership at the head of an independent party and started to discuss the establishment of such a party with Dan *Meridor and former Chief of Staff Amnon *Lipkin-Shahak. By the end

of 1998 he started to talk about the eventual establishment of a Palestinian State.

In the elections to the Fifteenth Knesset Milo was elected to the Knesset on the list of the Central Party, of which he was one of the founders. Until he joined the government formed by Ehud *Barak as minister of health in August 2000, he served on the Finance Committee, the House Committee, and the Economics Committee, and chaired the lobby for Tel Aviv-Jaffa in the Knesset. Milo joined the government formed by Ariel *Sharon in August 2001 on behalf of the Center Party as minister for regional cooperation, returning to the Likud in November 2002, after establishing a parliamentary group by the name of Ha-Lev. Milo was not elected to the Sixteenth Knesset. From November 2003 he served as chairman of the board of Azorim Investment Co. Ltd., in the IDB group.

[Susan Hattis Rolef (2nd ed.)]

MILOSZ, OSCAR (originally **Oscar Venceslas De Lubicz-Milosz**, 1877–1939), French poet, mystical writer, and diplomat. Milosz, who was born in Chereya, Belorussia to a Lithuanian nobleman and the baptized daughter of a Warsaw Hebrew teacher, was raised as a Catholic. He nevertheless retained a warm regard for his Jewish heritage and developed a keen interest in the Kabbalah. At the age of 12 he was taken to Paris, where he later studied Hebrew and Assyrian at the Ecole des Langues Orientales. He was Lithuania's minister resident in Paris (1919–26) but, despite his eventual assumption of French citizenship, remained attached to his ancestral land, which inspired his *Contes et fabliaux de la vieille Lithuanie* (1930) and *Contes lithuaniennes de ma Mère L'Oye* (1933). In his poetry Milosz progressed from erotic mysticism to spiritual and metaphysical speculation. Among his early works were *L'Amoureuse initiation* (1910), a novel in the form of a poetic monologue, and two plays, *Miguel Mañara* (1912; Eng. tr. in *Poet Lore*, 1919) and *Méphiboseth* (1914), the second of which dealt with David and Bathsheba. His mystical experiences inspired two metaphysical works, *Ars magna* (1924) and *Le Poème des Arcanes* (1927). These mingle Catholic theology with mystical and kabbalistic doctrine, stressing the belief that man possesses the ability to perceive reality as it is seen by God and that this faculty, at present hidden, will one day be recovered. In his *Arcanes*, Milosz glorified the Jewish people as the servant of humanity who "preserved the sacred treasure of the original Revelation in all its purity through a thousand vicissitudes for the sole purpose of the world's future regeneration." *Les origines ibériques du peuple juif* (1932), a product of Milosz' last, kabbalistic, and eschatological period, attempted to prove, by comparing Andalusian and biblical place-names and Basque and Hebrew etymology, that the Hebrews emigrated to Canaan from southern Spain.

MILSTEIN, U.S. family with vast interests in real estate, banking, and philanthropy. **SEYMOUR MILSTEIN** (1920–2001) was born in New York City and graduated from New York University. His father, Morris, had founded Circle Floor Company, which installed the floors at Rockefeller Center, the World Trade Center, and other buildings. Shortly after World War II, Milstein joined a second company founded by his father, Mastic Tile Company. Both companies flourished in the postwar housing boom in the United States and in 1955 Seymour Milstein became Mastic's president. Four years later, the company was sold to Ruberoid, a building products company, for \$24 million. Seymour became a Ruberoid director and vice president, but when it was bought by GAF in 1967, he was not offered a top job. Milstein and his brother tried and failed to take control of GAF. In 1970 the family took control of United Brands, a large food company, and Starrett Housing Corporation. They later sold the companies. In 1986 they took over the failing Emigrant Savings Bank and pumped \$90 million into it.

In the early 1960s **PAUL MILSTEIN** (1923–), who was born in New York City and graduated from NYU's School of Architecture, built the family's first apartment house, the Dorchester Tower near Lincoln Center. It was the first luxury building in that area since World War II. He also developed two other Manhattan landmarks, 1 Lincoln Plaza in 1972 and 30 Lincoln Plaza in 1978. Two of the buildings overlook a plaza that is one of Lincoln Center's most popular thoroughfares, and it was renamed in Milstein's honor in 1992. In the 1980s the Milsteins built tens of thousands of apartment, office, and hotel units in New York. The Milsteins were also responsible for buying and refurbishing the Milford Plaza Hotel in the Broadway area.

During their partnership, Seymour Milstein handled the financial details and was in charge of dealing with banks. Paul was more boisterous, and they were classic risk takers. Then they became more famous for litigation than for development. In 1981 they promised city officials that they would protect the famous and fabled gilded clock and Palm Court lounge of the Biltmore Hotel, and then demolished both. For nearly five decades the brothers presided over a multibillion-dollar real estate and banking empire with three million square feet of office space, 8,000 apartments, and one of New York's oldest financial institutions, Emigrant Savings Bank, which in 2003 had 36 branches in the New York area. The brothers lunched together daily and took family vacations together, but in later years, as succession issues loomed, the rivalry between their sons escalated into a legal battle of operatic intensity. By the end, the brothers were no longer speaking. In 2003, the family ended a decade-long feud and withdrew several lawsuits against one another.

The Milsteins gave widely to medical, educational, and Jewish causes. Among Seymour Milstein's beneficiaries was New York Presbyterian Hospital, where he was chairman from 1989 to 1996. His family's \$25 million gift, in 1989, made possible the construction of the Milstein Hospital Building,

a ten-story addition above the Hudson River in Washington Heights. The donation was in the name of Seymour and Paul Milstein and their sister, Gloria Milstein Flanzer. Eight children of the three donors were born at Presbyterian. Seymour also supported research on interferon, the hepatitis and cancer drug. From 1964 to 1973, Seymour was chairman of Bronx Lebanon Hospital Center. He was also a founder of the United States Holocaust Memorial Museum and a contributor to many Jewish philanthropies.

In 1994 the family of Paul Milstein gave \$10 million to Cornell University for its Architecture, Art, and Planning College. The New York Public Library was also a beneficiary of the Milsteins, establishing the Irma and Paul Milstein Division of United States History, Local History, and Genealogy, in 2000 with a \$5 million gift. The division brought together microfilm and other research materials long scattered in other parts of the library and a specialized staff to handle public inquiries, particularly on genealogical research.

[Stewart Kampel (2nd ed.)]

MILSTEIN, CESAR (1927–2002), immunologist and Nobel Prize laureate in medicine. Milstein was born in Bahia Blanca, Argentina. He studied at the University of Buenos Aires and received his doctorate from Cambridge University in 1960. From 1961 to 1963, when he emigrated from Argentina to England, he was affiliated with the National Institute of Microbiology in Buenos Aires. From 1963 he was with Cambridge University and in 1981–93 the joint head of the division of protein and nucleic acid chemistry. In 1980 he became head of the molecular immunobiology subdivision. He was the recipient of many awards, including the Wolf Prize in medicine. In 1984 he was a co-recipient of the Nobel Prize in medicine with George Koehler and Niels Jerne for their research into the body's immunological system and their development of a revolutionary method for producing antibodies, a technique which gave rise to new fields of endeavor for theoretical and applied biomedical research. From 1995 until his retirement in 2002 he was deputy director of the MRC Laboratory of Molecular Biology.

MILSTEIN, NATHAN (1904–1992), U.S. violinist. Born in Odessa, Russia, he was a child prodigy and studied with L. Auer and E. Ysaye, making his debut in 1914. He toured Russia after the revolution with Vladimir Horowitz and Gregor Piatigorsky but left for Paris in 1925 where he soon became famous as a soloist. He went to the United States in 1929 and first appeared there with the Philadelphia Symphony Orchestra under Stokowski. He made his home in the United States but toured widely and gained a reputation as one of the great virtuosos of his time. He wrote arrangements and cadenzas for the violin.

[Uri (Erich) Toepflitz]

MILTON, ERNEST (1890–1974), British actor. Born in San Francisco of partly Jewish origin, Milton acted in New York before making his London debut in *Potash and Perlmutter* in 1914. Of his many roles of Jewish interest, Ferdinand de Levis in Galsworthy's *Loyalties* (1922) gave him his first London success. Others were *Daniel Deronda* (1927), Hanan in *The Dybbuk*, Disraeli in Laurence Housman's *Victoria Regina* (1927), and *The King of Schnorrers* (1950). With the London Old Vic Company he acted in Shakespeare, Shaw, Ibsen, Pinero, and Pirandello. His own plays included *Christopher Marlowe* (1924), *Paganini* (1935), and *Mary of Magdala* (1945). He also appeared in a number of films, including *Alice in Wonderland* (1950). Milton was a Roman Catholic.

MILTON, JOHN (1608–1674), English Puritan poet, whose works contain an unusual concentration of biblical and Judaic sentiments. Milton may have learned Hebrew while he was at Cambridge from the Semitic scholar, Joseph Mede (1586–1638). His knowledge of Hebrew and Aramaic was sufficient to enable him in later years to read the Hebrew Bible and probably also the classical Hebrew commentators. On the other hand, it seems certain that he had no first hand knowledge of Talmud or Kabbalah, although he read the works of Maimonides and other post-biblical texts in the Latin translations of Johannes Buxtorf. The result of these studies is apparent in two tracts, *Doctrine and Discipline of Divorce* (1643) and *Tetrachordon* (1645), obviously prompted by his own unhappy marriage. In pleading for more liberal divorce laws, Milton tends to view the Hebrew legislation on the subject in Deuteronomy as the normative code for Christians. He was attacked as a flagrant heretic by many fellow Presbyterians, including William Prynne (1600–1669), who was later to oppose the re-entry of the Jews into England. In 1659 he became Cromwell's Latin secretary, and continued to maintain his covenant faith in the God who had chosen England as the messiah-nation and himself as the prophet-poet of Reformation. The end of the Commonwealth in 1660 found him a blind, abandoned, and aging revolutionary.

Milton's great epic poem, *Paradise Lost* (1667), which seeks to "justify the ways of God to men," frames the biblical account of the Creation and the fall of Man in the Christian tradition, relating the battles in the fall of the angels; however, its fundamental emphasis is on human freedom and responsibility. This indicates Milton's relative proximity to Hebraic norms and his remoteness from the deterministic views of the more orthodox Puritans. *Paradise Lost* also reflects in part Milton's early acquaintance with Sylvester's English translation (1605) of *Du Bartas' epic *On the Creation*. In *Samson Agonistes* (1671), he clearly identifies himself with his hero, the Hebrew judge, "Eyeless in Gaza at the mill with slaves," whom God had nevertheless chosen for special tasks and revelations. Biblical and Judaic elements are also prominent in the sonnets *On His Blindness* (1651?–5) and *On the Late Massacre in Piedmont* (1655), and in the pamphlet *Areopagitica* (1644).

Milton's most heretical work, the *De Doctrina Christiana* (written c. 1658–60, but published in 1825), which rejects the orthodox view of the Trinity, indicates his virulent Puritan objection to the Jewish priesthood and ritual code. His theological and philosophical position was marked by considerable internal conflict as he sought to resolve the tensions set up between the Hellenic, Hebraic, and Christian elements of his cultural inheritance. Milton's biblical verse had a considerable influence on the romantic poets Blake, Wordsworth, and Coleridge.

[Harold Harel Fisch]

MILWAUKEE, Wisconsin's largest city, located on the southeast tip of the shores of Lake Michigan. A few Jews are known to have lived in the area in the latter part of the 18th and early 19th centuries. Ezekial Solomon, perceived to be Jewish, was one of 14 fur traders permitted by the British to come to the area in 1770. An 1820 newspaper account refers to a "Jew peddler who was a victim of murder by three Indians who committed the deed to obtain the goods he carried on his back, going on foot from place to place" – an incident in Kaukauna. Gabriel Shoyer arrived in 1836, followed shortly by his brothers, Charles, Gabriel, Emanuel, Meyer, Samuel, and William. Several of the brothers opened a clothing store, Emanuel Shoyer a tailor shop, and in 1851 Charles began to practice medicine.

Early settlers, in 1842, were the families of Solomon Adler, Isaac Neustadt, and Moses Weil. Other immigrants arrived shortly afterwards from Germany, Bohemia, Hungary, Austria. From 70 families in 1850, the population grew to 200 in 1856 and to an estimated 2,074 in 1875. Intensive czarist persecutions in 1882 generated a flow of immigrants from Russia. By 1895, Russian Jews represented 39 percent of the Jewish population, then 7,000 people. The population grew to an estimated 22,000 by 1925. Several thousand Jewish refugees fleeing Nazi Germany and World War II came from 1938 on. The Jewish population was estimated at 23,900 in 1968 and 21,000 in 2001.

The earliest settlers from Western Europe settled on the near east side. Those settlers were soon vastly outnumbered by immigrants from Eastern Europe who settled on the near north side. There were two centers of Jewish population by the mid-1940s, the largest on the northwest side; the older east side settlers increased in number and moved northward into suburbs along Lake Michigan. By 1990, the majority of

northwest side Jews had also moved to those suburbs; now a diminished northwest side community consists essentially of families desiring proximity to an Orthodox synagogue because of connections to its ḥasidic rabbi Michel Twerski.

The earliest Jewish settlers from Western Europe were involved in clothing manufacturing, grain, meatpacking, and had a substantial presence in the Great Lakes transportation business. Those who followed from Eastern Europe had less financial resources, working for their livelihoods as country peddlers, grocers, and clothiers. From 1895 into the 1920s Jews owned many clothing factories and retail shops. Wholesale dry goods, knitting goods, and yarn mills were developed with Jewish initiative. Jews had a substantial presence in flour milling, soap, and tobacco manufacturing and department store enterprises. Immigrants from Eastern Europe advanced from their roles as small tradesmen into larger retail and wholesale fields. In the 1920s, Jews became clerical workers and began to enter the arts and professions. By the early 1960s, the number of small storekeepers had substantially diminished; the peddler and small junk dealer virtually vanished; many of their sons were prominent in professions and in the business world.

A number of manufacturing, industrial, and commercial companies of national note were created and operated by Milwaukee Jews. The Master Lock Company, the world's largest padlock manufacturer, was founded by Harry E. Soref, an inventor, Samuel Stahl, and P.E. Yolles in 1921. The most extensive food store chain in Wisconsin was begun by Max Kohl in 1927. Kohl and his sons also founded the Kohl's Department Store chain, which by 2000 had grown to be one of the largest chains in the United States. Elmer L. Winter and Aaron Scheinfeld established Manpower in 1948; the company became the largest of its kind in the world with branches on all continents. In 1956, Max H. Karl founded the world's largest private mortgage insurer, Mortgage Guarantee Insurance Company. Clothing manufacturers of national note included Jack Winter & Company, Junior House, founded by William Feldstein and Sol Rosenberg, later becoming J.H. Collectibles.

Responding to the social, financial, welfare, and health needs of Jewish people, a number of communal agencies were created, the first of which was the Hebrew Relief Society (1867), now the Jewish Family Service. The Settlement, predecessor of the Abraham Lincoln House, now the Jewish Community Center, was begun in 1900. A Jewish-sponsored hospital, Mount Sinai, was organized in 1902. By the 1990s, it had become a non-sectarian institution in sponsorship as well as in service – the Aurora-Sinai Medical Center. The Jewish Vocational Service (1938) was created to help Jews find employment during the Great Depression, a time when substantial numbers fleeing from Nazism were coming as refugees. The Jewish Vocational Service became the largest organization of its kind in the United States outside of New York, financing coming from the state and federal governments and a variety of Jewish and non-Jewish sources with primary support from

the Milwaukee Jewish Federation. In the early 1990s, it became non-sectarian in sponsorship as well as in service.

The Milwaukee Jewish Council, organized initially to combat antisemitism, and then xenophobia in all forms, was created in 1938. A Bureau of Jewish Education was organized by the Jewish Federation in 1944 to develop, strengthen, and coordinate Jewish education activity. The Milwaukee Jewish Home for Jewish elderly (1904) and the Jewish Convalescent Hospital (1950) merged in the late 1990s into one entity, which provides a variety of forms of assisted living, including intensive nursing home care.

All communal agencies came together in 1902 to create the Federated Jewish Charities in order to unify fundraising efforts and to help strengthen the work of all communal agencies. During the Depression, the organization foundered and discontinued operations. The pressing need to aid refugees in the 1930s resulted in the creation of a successor organization, the Milwaukee Jewish Welfare Fund, with a name change to Milwaukee Jewish Federation in 1972 to reflect its functions as a central communal organization for planning of services and centralized fundraising to meet needs deemed to be the responsibility of the total Jewish community. To coordinate work with refugees, the Federation created the Milwaukee Committee for Jewish Refugees in 1938 and in 1948 developed the Central Planning Committee for Jewish Services, its community-planning arm to avoid duplication and waste in efforts, etc. Orderliness in fundraising was served by the Committee on Unified and Coordinated Fund Raising beginning in 1957.

Major community buildings include the Max and Anita Karl Campus, which houses the Jewish Community Center, the B'nai B'rith Youth Organization, the Coalition for Jewish Learning (previously the Board of Jewish Education), the Milwaukee Jewish Day School, the Hillel Academy, and the Children's Lubavitch Living and Learning Center. The Helfaer Community Services building houses the Federation, the Milwaukee Jewish Council, and the *Wisconsin Jewish Chronicle*. The Milwaukee Jewish Home, which is adjacent to the Helfaer Building, and a new additional campus of the Jewish Home created in the suburb of Mequon in 2004 serve the elderly. The Jewish Community Center runs a summer overnight camp situated in Eagle River, 300 miles north of Milwaukee, and a summer day camp.

The first Jew elected to the state legislature was Bernard Schlesinger Weil in 1851. Henry M. Benjamin, one of eight Jewish aldermen before 1900, also was acting mayor of Milwaukee in 1875. Three Jews sat on the Common Council after 1920: Arthur Shutkin until 1928, Samuel Soref until 1940, and Fred P. Meyers after that. Charles L. Aarons served as a county judge from 1926 to 1950; Max Raskin, a city attorney from 1932 to 1936, later was a circuit court judge. Maurice M. Spracker served in a similar capacity for many years, beginning in 1968. Charles Schudson served as a circuit court judge until 2004. Myron L. Gordon, who had served as a justice on the Wisconsin State Supreme Court, became a federal judge for the Wisconsin Eastern District beginning in 1967.

Milwaukee Jews were in positions of note nationally and internationally. Marcus *Otterbourg was U.S. minister to Mexico in 1857. Newton *Minow, who was born in Milwaukee, but later lived in Chicago, was appointed by President John F. Kennedy to be Chairman of the Federal Communications Commission. His description of television programming as a "vast wasteland" resulted in legislation enabling oversight by the government of television and radio advertising.

Joseph A. *Padway, who served as a State senator and then as a civil court judge, became the first general counsel of the American Federation of Labor. In that capacity, he successfully defended the constitutionality of the National Labor Relations (Wagner) Act before the United States Supreme Court.

Among those who became prominent nationally was Wilbur J. *Cohen, who served as secretary of health, education, and welfare beginning in 1968. Earlier, he had helped write the Social Security Act in 1935. Victor L. *Berger, principle founder of the Social Democratic Party, was the first socialist elected to the House of Representatives of the United States (1911–13 and 1919–29). From 1992 onward both United States senators, democrats from Wisconsin, were Jewish: Herbert *Kohl, who served continuously from 1988 and Russ *Feingold of Madison, first elected in 1992.

William *Haber was advisor on Jewish affairs to General Lucius Clay, commander and chief of all Allied forces in Europe after World War II. Haber also served as an economic advisor for several U.S. presidents and as dean of the College of Literature, Science, and the Arts at the University of Michigan. Prominent in Jewish organizational life, he was chairman of several national and international Jewish organizations.

The best known of all Jewish Milwaukeeans was Golda *Meir (Myerson), who emigrated to Israel from Milwaukee and became Israel's prime minister in 1969, leading the country through the 1973 Yom Kippur War, which threatened the very existence of the state. Her life has been the subject of numerous books, biographies, and her own autobiography. Baseball fans may dispute Meir's primacy and think of Bud *Selig, the long-reigning first Jewish commissioner of baseball, who was also an owner of the Milwaukee Brewers team.

The community's oldest synagogue, Congregation Emanu-el B'ne Jeshurun, organized in 1856, grew out of a merger of Congregation Emanu-el (1850), Ahabath Emuno (1854), and Anshe Emeth (1855). Its membership was of German and West European extraction. Synagogues organized by immigrants of Eastern Europe followed, e.g., Beth Israel, initially Orthodox – now Conservative (1886); Anshe Sfard (1889); Agudas Achim (1904); Anshe Lubavitch (1906); and Beth Jehudah (1929). Additional reform congregations are Sholom (1951) and Sinai (1955). Conservative Temple Menorah was organized in 1957. Orthodox Anshe Sfard Kehillat Torah was organized in 1988; Agudas Achim merged with North Shore Chabad in 1993; Lake Park Synagogue in 1983; a Reconstructionist Congregation Shir Hadash was begun in 1990.

The primary public media instrument in Milwaukee is the *Wisconsin Jewish Chronicle*, established in 1921 by Nathan J. Gould and Irving R. Rhodes. Rhodes published the paper as sole proprietor after Gould's death in 1941. There had been several predecessor Jewish newspapers; the first, *The Zeitgeist*, was published in German by a Milwaukee rabbi for a few years, beginning in 1880. In 1914, a Yiddish newspaper, *The Wochenblatt*, was created, published until it folded in 1932. Another Yiddish language paper, *The Yidishe Shtimme*, lasted for just one year, beginning in September 1930. Rhodes saw the paper as an advocate for the concept of community and consensus building. He simultaneously served as a board member of a number of agencies and was the only Federation General Campaign Chair to serve for three successive years. When Rhodes found publication burdensome, the Milwaukee Jewish Federation purchased the *Chronicle* to assure continuity of the publication and the Federation continues to publish the newspaper.

[Melvin S. Zaret (2nd ed.)]

MIN (Heb. מִיָּן, pl. מִיָּיִם, *minim*; “heretic,” “sectarian”). The term *min* for which no truly convincing etymology has yet been found (see Talmudic Dictionaries; G.F. Moore, *Judaism*, 3 (1930), 68f.; S. Krauss, *Griechische und Lateinische Lehnwörter*, 1 (1898), introd. 15, n. 2, etc.), occurs frequently in rabbinic literature, though in the printed texts, due to the censors, the terms *zedoki* and *kuti* (“Samaritan”) have often been substituted. The term was widely applied to cover many different types of “heretics” or sectarians. From some halakhic definitions in the Talmud, it would appear the *min* was used to refer only to a Jewish sectarian (Hul. 13b; cf. Tosef., Shab. 13:5). Thus, for example, *Horayot* 11a states that a Jew who eats forbidden fat in a flaunting and defiant manner or (according to another opinion) worships idols is a *min*. The *minim* who ridiculed aggadic descriptions given by the rabbis (Git. 57a; BB 75a) were probably Jewish. However, there is also abundant evidence to show that the term was applied to non-Jews as well, as in *Pesahim* 87b where a Roman nationalist is called a *min* (see Hul. 13b; see also S. Lieberman, *Greek in Jewish Palestine* (1942), 141, n. 196; idem, *Hellenism in Jewish Palestine* (1950), 135, n. 69).

Any attempt to identify *minim* with one single sectarian group is thus doomed to failure. H. Hirschberg's discussion (in *JBL*, 67 (1948), 305–18) in which he defends his own earlier thesis that in talmudic literature the term denotes Pauline Christians is a case in point, since at various historical periods, the word *min* was applied to different kinds of “heretics.” Thus the *min* who according to (the printed editions of) *Leviticus Rabbah* 13:5 upbraided Alexander the Great for stand-

ing up before Simeon the Just was probably a Samaritan, or even a member of Alexander's own retinue (cf. Mss. readings in M. Margalioth ed., 2 (1954), 294). The *minim* mentioned in *Berakhot* 9:5 (variant Sadducee, JQR, 6 (1915–16), 314, n. 86) who taught that there was but one world and who apparently had considerable influence in the Temple were undoubtedly Sadducees, who among other things, as is well-known, denied the existence of an afterlife. According to Johanan, the people of Israel did not go into exile until they had become 24 different groups of *minim* (TJ, Sanh. 10:6, 29c), i.e., Jewish schismatics. Johanan was probably referring to the situation in his own time, when there appears to have been a proliferation of Jewish schismatic groups, and there were numerous *minim* in most Galilean towns, with reference to whom the verse (Ps. 14:1) could be cited, “The fool hath said in his heart there is no God” (Sif. Deut. 320).

Sometimes the term *min* may apply to more than one kind of sectarian even within one text. Thus, in *Hullin* 87a, two *minim* are mentioned: The first puts forward a proof (from a biblical verse) for the existence of two deities, and was therefore in all probability either a heathen Christian (believing in God the Father and God the Son) or a Gnostic; but the second *min* was invited by Rabbi (Judah ha-Nasi) to pronounce the blessing over food, and must therefore have been a Jew. *Minim* appear as wonder-workers (TJ, Sanh. 7:19, 25d), but again it is not clear whether they were Gnostics (Ebionites?) or (Judeo-) Christians, such as the well-known Jacob of Kefar Sekhanya (fl. c. 80–110), the wonder healer (*Av. Zar.* 17a, 27b; *Tosef.*, Hul. 2:22, 24; et al.). In some passages, however, it is fairly certain that Gnostics are being referred to. Thus, the *minim* who (according to Tanh. B., Num. 30, 41) believe that God does not revive the dead nor receive penitents, etc., were probably Marcionite Gnostics (A. Buechler, *Studies in Jewish History* (1956), 271). Similarly, those of *Megillah* 29b were, according to Lieberman, Gnostics believing in the demiurge (S. Lieberman, in *Biblical and Other Studies*, ed. by A. Altmann (1963), 140f.). However, it is very often difficult to know for certain whether heathen Christians or Gnostics are meant (e.g., Sanh. 4:5 and Gen. R. 8:8, where the plurality of gods may be either a Gnostic or a Christian notion; see Scholem, *Mysticism*, 359, n. 24). Now, though it is true that the term *min* had a wide and ambiguous range of application, and that consequently in individual passages it is generally difficult to pinpoint exactly the schismatic group to which a *min* belongs, nonetheless, it is possible to distinguish historically two semantic phases in the use of the term. Thus according to Buechler (op. cit., 247, 271 etc.), until the early second century C.E. “it denoted heretic Jews,” whereas “in Galilee in the second and third centuries *min* denoted in the first instance non-Jewish sectaries... Bible-reading heathens who oppose Judaism and its basic doctrines, antinomian Gnostics, or, in a few cases, heathen Christians who agree with them.”

According to *Berakhot* 28b, Samuel ha-Katan (fl. c. 80–110), at the invitation of Gamaliel II of Jabneh, composed the “benediction against the *minim*,” included in the *Amidah* as

the twelfth benediction (see E.J. Bickerman, in *HTR*, 55 (1962), 171, n. 35). This was directed primarily against Judeo-Christians (specifically mentioned in one old text – see Schechter, *JQR* 10 (1897/98)), either to keep them out of the synagogue or to proclaim a definite breach between the two religions. This undoubtedly “represented the formal recognition by official Judaism of the severance of all ties between the Christian and other schismatic bodies, and the national body of Judaism” (Baron, *Social²*, 2 (1952), 135, 381, n. 8, incl. bibl.). This severance of the *minim* from the national body of Judaism had obvious halakhic implications. Thus, meat slaughtered by a *min* was forbidden to a Jew (*Hul.* 13a). Likewise Torah scrolls, *tefillin*, and *mezuzot* written by him are barred from use (*Git.* 45b; cf. *Tosef.*, *Hul.* 2:20). For Maimonides’ five-fold classification of *minim* see *Mishneh Torah*, *Teshuvah*, 3:7. On the books of the *minim*, see *Sifrei ha-Minim.

MINC, HILARY (1905–1974), Polish Communist politician. Born in Kazimierz Dolny into an assimilated family, Minc joined the Communist youth movement in 1921. From 1925 to 1928, studying economics in France, he was a member of the French Communist Party. After his return to Poland, he worked in the chief statistical office in Warsaw and at the same time joined the illegal Communist Party, becoming secretary of its central editorial staff. During World War II Minc lived in the Soviet Union, and was one of the chief organizers of the Soviet-sponsored Union of Polish Patriots. He was also prominent in the formation of the Polish Army units organized in Russia. Following the liberation of Poland from the Germans (1945), Minc became minister for industry and commerce. He was made a vice premier in 1949 and in the same year was appointed chairman of the State Planning Commission. In this capacity he was the chief author of Poland’s economic policy; but in 1956, when Wladyslaw Gomulka came to power, he was removed from all his posts in the party and government, both as a Stalinist and as a Jew.

MINCO, MARGA (1920–), Dutch author, born in Ginneken (near Breda), who lived in Amsterdam. Her first book, the short novel *Het bittere kruid* (1957; *The Bitter Herb*, 1960), describes the deportation of her family and her own survival in hiding during World War II. It was translated into many languages. The book, like the ones that were to follow, was praised for its sparing yet impressive style. Marga Minco was one of the first Dutch writers to deal with “survivor’s guilt.” Most of her books are partly autobiographical; they often re-

late to the persecution of Jews during World War II and the lack of understanding of the non-Jewish world after the war. After *Het bittere kruid* Minco wrote the collection of stories *De andere kant* (“The Other Side,” 1959), the short novels *Een leeg huis* (“An Empty House,” 1966), *De val* (“The Fall,” 1983), *De glazen brug* (“The Glass Bridge,” 1986), *Nagelaten dagen* (“Posthumous Days,” 1997), the collection of short stories *Storing* (“Breakdown,” 2004), and several short stories, collected in *Verzamelde verhalen 1951–1981* (“Collected Stories, 1951–1981,” 1982). *Het bittere kruid* and *Een leeg huis* were adapted for the stage several times; *Het bittere kruid* was filmed, not very successfully, by Kees van Oostrum in 1985. Marga Minco also wrote children’s stories, notably *Kijk ‘ns in een la* (“Look into a Drawer,” 1963) and *De verdwenen bladzij en andere kinderverhalen* (“The Missing Page and Other Children’s Stories,” 1994).

[Hilde Pach]

MINDA, ALBERT GREENBERG (1895–1977), U.S. Reform rabbi. Minda was born in Holton, Kansas, and earned his B.A. from the University of Cincinnati in 1918 and his ordination from Hebrew Union College in 1919. He received a doctor of divinity degree (*honoris causa*) from HUC-JIR in 1947. Following pulpits at Temple Beth El of South Bend, Indiana, and in Lingonier, Indiana (1919–22), he became rabbi of Temple Israel in Minneapolis, Minnesota, where he remained for the rest of his career, becoming emeritus in 1963. During his tenure, the congregation grew from 275 members in 1922 to more than 1,400 in the 1960s. An innovator, Minda pioneered the establishing of a Jewish Art Gallery and Museum on the premises of an expanded temple.

In the greater community, Minda was one of the founders and first presidents of the Minneapolis Federation for Jewish Service, as well as a founder of the Minneapolis Urban League and the Minneapolis Round Table of Christians and Jews. He was also the first president of the Minnesota Rabbinical Association and a member of the executive board of the United Fund of Greater Minneapolis and of the faculty of Hamlin University in St. Paul, Minnesota.

Nationally and internationally, Minda served Reform Judaism as a member of the executive board of the Central Conference of American Rabbis in three different decades and chairman of the organization’s Church and State Committee (1939–46). Following a term as vice president, he was elected president of the Central Conference of American Rabbis (1961–63), concurrently with holding the position of vice president of the World Union for Progressive Judaism.

Minda was also a prolific author, whose writings include *Over the Years*, vols. 1 and 2 (1957–63); *The Sanctuary of the Home* (1945); *The Fire on the Altar* (1948); *Speak to the Heart* (1956); and *And Thou Shalt Write Them* (1967).

[Bezalel Gordon (2nd ed.)]

MINDEN, town in Germany. Jews are mentioned for the first time in 1270 as being under the bishop's protection. After 1336 the town agreed to recognize the bishop's prerogatives over the Jews provided that they paid municipal taxes as well as protection money to the bishop. Moneylending was the only authorized Jewish occupation at the time. The small community numbered no more than 12 families in 1318 and ten in 1340. They were expelled in 1350 following the *Black Death persecutions.

Jews did not settle in Minden again until the 16th century. In 1571 the council granted them residence permits of 12 years' duration and allowed them to engage in commerce and moneylending and to hold religious services. From that time Jewish settlement was continuous, even after the town had come under the rule of Brandenburg, whose authorities claimed all prerogatives over the Jews. After 1652 no Jew was permitted to settle in Minden without permission from the elector; the numbers of "tolerated" Jews were ten in 1682 and 12 in 1700. In Prussian Minden, the Jews engaged not only in moneylending but also in commerce and the slaughtering and sale of meat. Between 1806 and 1810 Minden belonged to the kingdom of *Westphalia, where the Jews received equal civil rights. After emancipation, when Minden reverted to Prussia, the small community grew steadily, from 65 in 1787 to 81 in 1810; 193 in 1840; and 267 in 1880. Their numbers later decreased to 192 in 1933 and 107 in 1939, when there were 228 Jews in the district of Minden. In October of 1939, there were 54 Jews in Minden. During World War II, 179 Jews were deported from the town and district. The *Memorbuch of the synagogue from the 17th and 18th centuries has been preserved. The synagogue built in 1867 was destroyed in 1938. After World War II a small community was reconstituted, which had 44 members in 1962. A new synagogue was consecrated on June 15, 1958. The ethnologist Franz *Boas and the astronomer Philip S. Wolfers were born in Minden. The Jewish community numbered 43 in 1989 and 113 in 2005. The increase is explained by the immigration of Jews from the former Soviet Union.

[Bernhard Brillung]

MINDLIN, HENRIQUE (1911–1971), Brazilian architect who contributed to the flowering of modern Brazilian architecture after World War II. Mindlin helped to introduce the modern style of American skyscraper design, with its glass curtain walling, into Brazil. In 1960, he built the synagogue and Cul-

tural Center of the Congregação Israelita de São Paulo (Jewish Community of São Paulo).

MINHAG (Heb. מִנְהַג; "custom," "usage") from the verb "to lead."

DEFINITION

The word is found in the Bible (11 Kings 9:2) meaning "the driving" (of a chariot) but it was taken by the rabbis to refer to "usage." As such, it is used in a wide variety of senses. It refers primarily:

(1) to customs which, having been accepted in practice, became binding and assume the force of **halakhah* in all areas of Jewish law and practice (see below);

(2) to local custom (*minhag ha-makom*) which obtains in one locality, whether a whole country or a single community, but not in another, and is binding upon the local community. The question of the extent to which the *minhag* is binding upon those who come from a place where it does not obtain is exhaustively debated in the Talmud and codes. The Mishnah already takes notice of this difference of local custom and its binding force (Pes. 4). These local *minhagim* have been collected in special **minhagim* books;

(3) The word *minhag* is also employed to designate the various liturgical rites which have developed, e.g., *minhag Romania*, *minhag Polin*, *minhag Ashkenaz* (see *Liturgy).

GENERAL

Custom is one of the most important foundations of the *halakhah*. It can be assumed that the Written Law (cf. *Oral Law) already takes for granted the continuation of some customs that were common practice before the giving of the law. This is probably the reason why the Torah makes no mention of laws which are fundamental in some domains, in spite of their importance and central position in life (such as the detailed laws of *betrothal and *marriage, modes of acquisition, *buying and selling). On the other hand, external customs entered the world of the precepts during later periods as a result of prevailing conditions, and were either temporarily integrated or remained permanently. An instructive example is that of the *New Moon, which the Torah only mentions with regard to the additional sacrifice and the blowing of the trumpets (and this too was probably only intended against those who believed it to be a festival to the god of the *Moon as was common in the ancient Middle East). During the days of the First Temple, however, as a result of Canaanite-Phoenician influence, the day became an accepted and important festival in Israel to such a degree that work and commerce were interrupted (with the difference that with the Jewish people the New Moon lost its pagan character and assumed a purified Jewish value of "a statute for Israel – a law of the God of Jacob" (Ps. 81:5)). Frequently, a particular matter of the *halakhah* is nothing but the consolidation of customs created among the people over the generations (e.g., see *Mourning, *Fasts). There are some customs which are as binding as legal

regulations (see Tosef., Nid. 9:17) while others are no more than a consensus (*ajmā'* with Muslims) which is accepted in cases where there is no fixed and decided *halakhah* ("Go out and see what the custom of the public is and act likewise" (TJ, Pe'ah 7:5, 20c); cf. "Go out and see how the people act" or "the people are accustomed" (TB, many times)). There are also individual customs in situations where there is no existing *halakhah*; these may be a local custom ("the custom of the country" (Suk. 3:11; Ket. 6:4; BM 7:1, 9:1; et al.); "in a place where the custom has been" (Pes. 4:1–5; Suk. 3:11; Av. Zar. 1:6; et al.); "the custom in Jerusalem" (BB 93b; Sof. 18:7)), or a custom of a section of the public ("the custom of those traveling with a caravan" (Tosef., BM 7:13); "the custom of the sailors" (*ibid.*), "the custom of women" (TJ, Pes. 4:1; 30c–d); "the custom of landlords" (Tosef., Pe'ah 2:21); "the custom of the priests" (*ibid.* 4:3)), and even from one of these "there must be no deviation" (Tosef., BK 11:18; et al.). There are, however, also customs which are in opposition to the *halakhah*, and of these the sages said: "The custom annuls the *halakhah*" (TJ, Yev. 12:1, 12c; and cf.: "R. Judah said, the *halakhah* is according to the opinion of Bet Shammai, but the majority acts according to the opinion of Bet Hillel"; Tosef., Ter. 3:12). It is obvious that "just as punishment is inflicted for transgression of the *halakhah*, so it is inflicted for transgression of a custom" (TJ, Pes. 4:3, 30d) and "permitted things [or actions] which the custom of others considers as prohibited, you are not authorized to permit them in their presence" (Pes. 50b–51a). It has also been prescribed many times that a man should deviate "neither from the custom of the place nor from that of his ancestors" (see TJ, Pes. 4:1, 30d; etc.), even though the reason for the custom has become obsolete. The following saying indicates the importance of the custom as a basis of the *halakhah*: "It has become accepted by the people that the *halakhah* cannot be fixed until a custom exists; and the saying, that a custom annuls the *halakhah*, applies to a custom of the earnest, while a custom for which there is no proof from the Torah is nothing but an error in reasoning" (Sof. 14:16).

Indeed, to prevent vain and foolish customs superseding the *halakhah*, the rabbis opposed following stupid customs which had their origin in error or even in periods of persecution. *Yehudai Gaon, who wrote to the population of Palestine in order to abolish the "custom of the persecution era" which they respected "against the *halakhah*" was unsuccessful. He received the reply that "A custom annuls the *halakhah*" (*Pirkoi b. Baboi*, L. Ginzberg, *Genizah Studies*, 2 (1929), 559–60). Maimonides violently attacked erroneous customs (see, e.g., Yad, Issurei Bi'ah 11:14–15, even in opposition to the opinion of the *geonim*; cf. responsa of Maimonides, ed. A.H. Freimann, §98–99), but even he stressed that there are certain cases which "depend on the custom" (see, e.g., Yad, Issurei Bi'ah 11:5–7). Customs arising from ignorance, however, and even those of which it was evident, not only from their origin but by their very nature, that they belonged to the "ways of the Amorites" and were to be suspected as idolatrous, often penetrated within the limits of the *halakhah* and secured a

permanent place. It is significant that such customs often became so popular with the public, in spite of the opposition of the rabbis, that more importance was attached to them than to some of the strictest precepts of the Torah. There were instances where strange and doubtful customs became sanctified with the masses only because of the superstitious beliefs attaching to them. Such customs penetrated not only the text of the prayers but also the field of the prohibited and the permitted (see **Issur ve-Hetter*). They were especially tenacious in critical periods of human life (birth, marriage, death) or in the calendar (Day of Atonement, New Year). Thus, for example, some consider that the essentials of repentance and expiation can be found in the customs of **Kapparot* (expiation ceremony) and **Tashlikh*, and throughout the whole year do not visit the synagogue except for the *Kol Nidrei* ceremony. One common denominator of all these customs is their foreign origin and nature. However, they became so popular with the masses that even some of the rabbis attempted to find grounds to permit them, even through some kind of compromise. This was naturally even more true of customs which did not stem from a foreign origin, such as the recitation of *piyyutim* in the morning benedictions of *Shema* and during the repetition of the *Amidah* prayer by the *hazzan*, which became the accepted practice in many countries in spite of the opposition of many authorities. The same also applies to the foreign custom of addressing prayers to angels or mentioning their names in the *mezuzah*. This situation, whereby nonsensical customs found a home in Jewish life, still remains and has possibly even been strengthened in modern times. It is sufficient to mention the demonological customs connected with birth and circumcision (the night of vigil before the circumcision) or with death and burial, such as the strange custom current among Ashkenazim that a person whose parents are alive leaves the synagogue when the souls of the dead are remembered, or the "prohibition" of the sons from entering the cemetery during their fathers' funeral, which is widespread among the Ashkenazim of Jerusalem. Thus it can be said that the custom has been the most important channel through which external influences, even odd and unwanted ones, penetrated and still penetrate into the domain of *halakhah*. The general importance of customs is also reflected in literature.

[Moshe David Herr]

IN JEWISH LAW

Minhag as a Source of Law

Three possible meanings may be attributed to the term "source of law": a historical source of the law, i.e., a source which factually and historically speaking constitutes the origin of a particular legal norm; a legal source of the law, i.e., the source which lends the particular normative direction legal recognition and validity as part of the entire body of legal rules comprising the relevant legal system; and a literary source of the law, i.e., the informative source constituting the authentic repository for purposes of ascertaining the content of a particular legal direction (see **Mishpat Ivri*). *Minhag*, as does custom in other

legal systems, sometimes serves as the historical source of a particular legal norm and sometimes as the legal source.

AS A HISTORICAL SOURCE. A study of the formative stages of any legal system will reveal that to some extent its directions originated from customs evolved in the practical life of the society concerned, and that only at a later stage was legal recognition conferred on such customs – by way of legislation or decision on the part of the legislator or judge. This phenomenon is also evidenced in Jewish law. Thus, for instance, certain legal usages which had been prevalent in pre-Mosaic Hebrew society later came to be affirmed in the Torah, as, for example, the law of the bailees' liability (see **Shomerim*), and sometimes also with material modifications, as with regard to the laws of *yibbum* (see *Levirate Marriage and *Halizah*). The historical source of such directions is the pre-Mosaic usage, but their legal source is the Written Law, which gave them recognition and validity. Custom has fulfilled this historical function in all stages of the development of Jewish law, by serving to prepare a particular normative direction for acceptance into this legal system.

AS A LEGAL SOURCE. In Jewish law *minhag*, like custom in any other legal system, has also fulfilled an important function as a legal source, and it is with custom in this capacity that this article is concerned. Custom constitutes a legal source when the legal system, in certain circumstances and upon fulfillment of certain requirements, recognizes a consistently followed course of conduct as a binding legal norm. When custom serves merely as a historical source, it is only capable of preparing the normative course of conduct toward acquisition of legal recognition by means of a law-creating source, such as **takkanah*; however, when custom is a legal source, the normative usage already has legal force by virtue of such usage alone, without the affirmation of any law-creating source. As a legal source, the primary purpose of custom is like that of legislation (see **Takkanot ha-Kahal*), namely to fill a void in the existing *halakhah* when the latter offers no solution to new problems that arise, or in order to rectify or vary existing legal rules if and when the need arises. There is, however, a formal difference – which, as will be seen below, is also of substantive importance – between these two legal sources: legislation functions demonstratively and directly, at the direction of the competent authority, such as the halakhic scholars or the leaders of the people and of the community; custom, on the other hand, functions without preconceived intent and anonymously – at the hands of all or part of the people at large – and in order to ascertain it, it is necessary to “go and see what is the practice of the people” (Ber. 45a; Pes. 54a; in the TJ the version is, “go and see what is the practice of the public, and follow it” (TJ, Pe’ah 7:6, 20c; Ma’as. Sh. 5:3, 56b; Yev. 7:2, 8a). It is true that even in the case of a normative direction originating from custom there is the indirect influence of the halakhic scholars, by virtue of a certain control which they exercise over it (see below; see also Yad, Mamrim 1:2–3); nevertheless it is the public as a whole that is the direct

creative source of the legal direction. The public is invested with such creative authority on the presumption that, since its conduct is founded on the Torah, its creative authority will be directed in the spirit of the Torah, in accordance with the statement of Hillel the Elder made in affirmation of the binding force of a public custom in determining the *halakhah*: “Leave it to Israel. If they are not prophets, they are still the children of prophets” (Pes. 66a).

SUBSTANTIATING THE VALIDITY OF MINHAG AS A LEGAL SOURCE. Some of the scholars apparently sought to explain the validity of a custom by saying that it had to be assumed that the earliest source of such a norm – now appearing in the form of custom – was ancient *halakhah* founded on transmitted tradition, *takkanah*, or other legal sources, but that the latter had become forgotten in the course of time, leaving the norm in the form of a custom only. This opinion finds expression in the Jerusalem Talmud: “Any Torah which has no source (*bet av*) is no Torah” (TJ, Shab. 19:1, 17a stated in relation to the *baraita* (Pes. 66a) in which Hillel recalls that the custom followed by the people concerning the paschal sacrifice on a Sabbath day he had heard mentioned by Shemaiah and Avtalyon (see below); the term *torah* is here used in the sense of custom). Elsewhere it is stated: “A custom which has no support in the Torah, is like the erroneous exercise of discretion” (Sof. 14:18; see also Mordekhai BM 366). According to this view custom has no independent creative force, but merely offers testimony to the existence of a rule created by one of the legal sources of the *halakhah*. In post-talmudic times some halakhic scholars expressly adopted this attitude toward custom (Resp. Rif no. 13; Nov. Ramban BB 144b, s.v. *Ha de-Amrinan*). Some scholars explained the decisive power of custom, even when this was called forth only to decide between disputing scholarly opinions (see below), on the basis that a custom proves the existence of an ancient, deliberate determination of the law which has become forgotten, being preserved in this form only (Resp. Rosh 55:10). The source of authority of custom remained a matter of dispute among the *aḥaronim* (for particulars, see Pitḥei Teshuvah ḤM, 163, n. 16).

Certainly there are customs which have their source in ancient *halakhah*, as is evidenced by the Jerusalem Talmud in the matter of the paschal sacrifice on a Sabbath day (see above) and in other instances (see, e.g., Tosef., MK 2:14–15; see also Pes. 51a and TJ, Pes. 4:1, 30d). However, it transpires that the distinguishing feature of custom as a legal source lies not in its probative efficacy but in the law-creating authority of the public, whether the custom serves to decide between disputing opinions or to add to the existing *halakhah*. This is undoubtedly so as regards the validity of custom in matters of the civil law (*dinei mamonot*), where it is within the power of custom to operate even contrary to the existing law, in terms of the general principle of Jewish law which permits the parties to a transaction – and all the more so the public as a whole – to contract out of the Law of the Torah (see below). This is accepted by the majority of halakhic scholars as

the explanation for the rule that custom overrides the law in matters of the civil law, which is certainly a classic illustration of the creative activity of custom.

Elucidation of Terms

At times, a particular halakhic direction which has its source in custom is also called *dat* (Bez. 25b and Rashi thereto) or *dat yehudit* (Ket 7:6 and Rashi to Ket. 72a; Tosef., Ket. 7:7). At other times the term *minhag* is used by the halakhic scholars to describe a normative direction having its source in *takkanah* (e.g., TJ, Ket. 1:5, 25c; Mid. Prov. to 22:28) and even the verb *הנהיג* is sometimes used to describe the enactment of a *takkanah* (cf. Tosef., RH 4:3 with RH 4:1 and Suk. 3:12). The use of a common term to describe both *takkanah* and custom (cf. further Yad, Mamrim 1:2–3; Resp. Rashba, vol. 2, no. 268) is attributable to their common function, namely legislative activity (each in its own different way, as already mentioned). Sometimes the term *minhag* is also used to describe *halakhah* which has its source in the Bible itself (see Sifra, Emor 17:8, the law concerning habitation of a *sukkah* etc., described as *minhag le-dorot*; in Suk. 43a/b, the phrase is *mitzvah le-dorot*). Contrariwise, a normative direction having its source in custom is sometimes called *halakhah* (BM 7:8; Kid. 38b; and see Samuel's interpretation, in TJ, Or. 3:8, 63b of the term *halakhah* appearing in Or. 3:9). Such use of common labels of *minhag*, *takkanah*, and *halakhah* for differing concepts not only calls for the exercise of great care in distinguishing the correct identity of each law appearing under such a name, but also offers proof of the legal efficacy of normative directions which have their source in custom and are integrated into the general halakhic system as a substantive part of it (even though there is a variance at times between the force of a direction originating from *takkanah* and one originating from custom; see below). Transgression against a direction decreed by custom is punishable by sanction: "Just as a fine is imposed in matters of *halakhah*, so a fine is imposed in matters of *minhag*" (TJ, Pes. 4:3, 30d) and R. Abbahu even sought to have punishment by flogging imposed on a person who transgressed a prohibition decreed by custom (TJ, Kid. 4:6, 66b; see also Kid. 77a).

At the same time, the scholars occasionally distinguished, primarily in the field of the ritual law, between a rule originating from custom and one originating from another legal source. Such distinctions, particularly from the amoraic period onward, are illustrated by the following examples: the majority of the *amoraim* held that the prohibition of **orlah* (eating the fruit of young trees) outside of Erez Israel had its source in custom, and therefore they sought various legal ways in which to permit the fruit of *orlah* outside of Erez Israel – something they would not have done had the prohibition belonged to the category of *halakhah le-Moshe mi-Sinai* (Kid. 38b–39a and see above). Similarly, there is recorded the talmudic dispute between R. Johanan and R. Joshua b. Levi as to whether the rite of taking the willow-branch on Sukkot (the branch that is raised and beaten on Hoshana Rabba) was an enactment of the prophets or a custom of the latter – i.e.,

a usage of the prophets but not enacted as a *takkanah* (Suk. 44a and Rashi ad loc.; see also *Sha'arei Teshuvah* no. 307); the answer to this question was relevant to the need (i.e., if it was an enactment) or otherwise (if it was a custom) for recital of a benediction at the time of beating the willow-branch (see Suk. 44a and see *takkanot* concerning benedictions in respect of matters instituted by the halakhic scholars). Even as regards deciding the *halakhah* in a matter under dispute, the *amoraim* distinguished between *halakhah* determined by way of open and deliberate decision, *halakhah* determined by custom introduced by the scholars, and *halakhah* determined by mere anonymous undirected custom (see TJ, Shek. 1:1, 46a; Meg. 1:6, 70d; Nid. 3:1, 50c; and Pes. 4:6, 31a; Av. Zar. 14b; Yev. 13b; Nid. 66a; et al.). Some of the Babylonian *amoraim* even laid down a further distinction, one relating to the nature of the custom. Thus three possibilities are distinguished: *nahagu ha-am* ("the practice followed by the people") was apparently interpreted by the Babylonian *amoraim* as referring to a usage not yet fully crystallized into an established custom, and therefore "we do not teach in this way initially, but should a person have done so, we allow the matter to stand"; *minhag*, to a crystallized custom which, although it has sufficient authority for the people to be taught to act from the start in accordance with it, nevertheless does not have the same force as a rule openly and expressly decided by the halakhic scholars – "we do not teach to act in this way in public, but we may teach (those who ask, to act according to the rule embodied in the custom)"; and that which is decided as *halakhah*, which must be published and made known to the public (Ta'an. 26b and see also Er. 62b and 72a). These distinctions relate primarily to the field of ritual law and not to the creative function of custom in civil law matters (see below, "Custom Overrides the Law").

Scriptural Support for the Validity of Minhag as a Legal Source

Halakhic scholars sought to rely on various scriptural passages as the source of the validity of custom. Simeon b. Yoḥai's statement, "Change not the custom set by your fathers!" is supported in the Midrash (Mid. Prov. 22:28, and see annotation there), by allusion to the scriptural injunction, "Remove not the ancient landmark, which thy fathers have set" (Prov. 22:28). R. Johanan found support for the validity of custom in another passage from the Book of Proverbs (1:8), "Hear, my son, the instruction of thy father, and forsake not the teaching of thy mother" (see Pes. 50b; Hul. 93b; cf. also *She'iltot*, Va-Yakhel, Sh. 67; *Halakhot Gedolot* end of Hil. Megillah). Sherira Gaon quotes the following tradition, which is not extant in the Talmuds: "Whence is it said that custom obliges? As it is said, 'Thou shalt not remove thy neighbor's landmark, which they of old time have set'" (Deut. 19:14; *Sha'arei Zedek*, 1:4, 20; Tur, ḤM 368). The discussion concerns an article stolen from its owner and sold to another; in law, if the owner has "despaired" (see *Ownership), the purchaser will not be required to return the article to him, but Sherira Gaon decided that there was in operation a custom to restore the article in

such circumstance, from which there could be no departure. The factor which is common to all legal sources is that a norm which has been followed for some considerable time (see below) acquires for itself a fixed place in the *halakhah* and may not be overlooked nor “trespassed” upon (cf. the comment of Philo on the above scriptural passage, Spec. 4:149).

Functions and Categories of *Minhag*

Just as *takkanah* – the directed legislation of the halakhic scholars – has functioned in all fields of the *halakhah*, so custom – anonymous legislation – has also functioned in all its fields, although in some of them the measure of authority of custom is limited as compared with that of *takkanah*. Custom fulfills a number of functions in *halakhah* and is also divisible into several further categories.

FUNCTIONS. Custom serves three possible functions:

(1) as the decisive factor in the case of disputing opinions as to a particular halakhic rule; in this event the custom operates even where the *halakhah*, but for such a custom, would be decided differently in accordance with the accepted rules of decision;

(2) as adding to the existing *halakhah*, whenever the practical realities give rise to new problems to which the former has no available answer;

(3) as establishing new norms which stand in contradiction to the existing *halakhah*, i.e., norms which serve to vary the latter, or derogate therefrom.

The latter two functions of custom parallel that of legislation (see *takkanot*), save that the last one (abrogation of an existing law) is of lesser efficacy than is the case with legislation (see below).

CATEGORIES OF MINHAG. *Custom (Minhag) and Usage (Nohag)*. At times minhag functions of its own inherent power, independently and directly, just as does a direction by express *takkanah*; at other times it functions by way of an inference that the parties to a particular matter acted as they did on the assumption that the decree of the *minhag* concerned would determine their relationship. This distinction is developed in other legal systems too, and in English law *minhag* of the first kind is termed “legal custom” or simply “custom,” and *minhag* of the second kind “conventional custom” or “usage.” In current Hebrew the latter is customarily termed *nohag*.

General Custom and Local Custom. A custom may be general in the sense of obliging the whole of the people or the public, or it may be local and obligatory only for the people of a particular place, in which case it is termed local custom, *mores civitatis* in Roman law. In the same way the operation of a custom may be confined to people of a particular class, occupation, etc., and further like subdivisions of custom may be made (see below).

Minhag as Deciding the *Halakhah*

In case of dispute between halakhic scholars as to the law, custom decides the issue – whether in circumstances where

there are no established rules of decision concerning the particular matter, or in circumstances where the custom stands in contradiction to the accepted rules of decision. The matter is illustrated by the following examples: It is recorded that R. Tarfon differed from the majority opinion of the scholars with regard to the blessing to be recited over water (Ber. 6:8) and the *amoraim*, when asked how to decide the *halakhah*, replied: “go and see what is the practice of the people” (Ber. 45a; Eruv. 14b); this was also stated with regard to a similar question concerning the eating of **terumah* (TJ, Pe’ah 7:6, 20c; Ma’as. Sh. 5:3, 56b; and Yev. 7:2, 8a). In another case R. Judah and R. Yose held the view that just as the priests generally did not lift their hands when reciting the priestly benediction at the *Minḥah* (afternoon) service – because of the proximity of the service to the meal and the apprehension that a priest might lift his hands while intoxicated – so this was forbidden at the *Minḥah* service on the Day of Atonement (even though the above apprehension would not exist) lest this lead the priests to the erroneous practice of lifting their hands during weekday *Minḥah* services; however, R. Meir differed, holding that such lifting of the hands was permissible at the *Minḥah* service on the Day of Atonement (Ta’an. 26b). Although the accepted rules of decision required that the *halakhah* on the matter be decided according to R. Yose (see Eruv. 46b) – who in this case represented the stringent view – it was nevertheless decided according to the view of R. Meir – representing in this case the lenient view – for the reason that “the people followed the view of R. Meir” (Ta’an. 26b; see also Resp. Maharik no. 171).

According to some of the Babylonian *amoraim*, the power of determining the *halakhah* contrary to the accepted rules of decision was to be withheld from custom in matters concerning the ritual law (*dinei hetter ve-issur*). Thus in response to R. Johanan’s statement, “In regard to carob trees, it has become the custom of the people to follow the rule of R. Nehemiah” (RH 15b) – i.e., contrary to the majority of the scholars – the question is asked: “In a matter of prohibition, shall it be permitted to follow a custom?” (*ibid.*). On the other hand, the *amoraim* of Erez Israel – along with some Babylonian *amoraim* – conferred on custom the power of deciding the law in any case of dispute, even in matters of ritual law and even when it was contrary to the accepted rules of decision, for instance when decreeing in favor of an individual opinion against the majority opinion (TJ, Shev. 5:1, the opinion of R. Johanan quoted in RH 15b; cf. the statement of Rava, “The custom accords with the view of R. Meir” Ta’an. 26b; see also Pes. 103a and Ber. 52b, contrary to the unqualified statement of the law in the Mishnah).

In the 13th century, *Meir b. Baruch of Rothenburg stated, “For in all matters on which the great halakhic scholars are in dispute, I hold that a stringent approach must be followed, save ... when the permissibility of a matter has spread in accordance with the custom of the scholars by whom we have been preceded” (Resp. Maharam of Rothenburg, ed. Berlin, no. 386). At this time too the dispute concerning the extent to which it was within the power of custom to determine the

halakhah was continued. Thus Jacob *Moellin justified the custom of lending the money of orphans at fixed interest (*ribbit kezuzah*, see *Usury), contrary to the opinion of the majority of scholars, who held this to be prohibited; Moellin based his view on a solitary opinion (Resp. Maharil no. 37), which in fact only permitted such interest in respect of loans given from charitable funds (*Or Zarua*, Hil. Zedakah, no. 30), but Moellin extended the opinion to embrace also money lent by orphans, “for all matters concerning orphans are deemed to be matters of *mitzvah*, and this is truly so because they are alone and meek” (Maharil, loc. cit.). Other scholars contested this view: “There are places where it is customary for an *apotropos [guardian] to lend orphans’ money at fixed interest, but this is an erroneous custom and should not be followed” (Rema to YD 160:18; see also *Sifte Kohen* thereto, n. 27).

Minhag as Adding to Existing Halakhah

In its previously described function, custom serves to decide between two existing disputing opinions rather than to create a new rule. The latter effect is achieved by custom in fulfillment of its second function, namely that of establishing a new rule in relation to a question to which the existing *halakhah* offers no solution. For instance, as regards the paschal sacrifice, it is enjoined that it shall be brought on the 14th day of the month of Nisan (Num. 9:3), even when this falls on a Sabbath day (Pes. 6:1); when Hillel the Elder was asked what the law was in the event that it had been forgotten to prepare the knife on the eve of the Sabbath – i.e., whether it was also permissible to have the knife fetched on the Sabbath – he replied: “Leave it to Israel! If they are not prophets, they are still the children of prophets” (i.e., to await the morrow and see how the people would act); on the morrow, “he whose sacrifice was a lamb, stuck it [the knife] in its wool, and he whose sacrifice was a goat, stuck it between its horns; he [Hillel] saw the act and recalled the *halakhah*, saying, ‘thus have I received the tradition from Shemaiah and Avtalyon’” (Pes. 66a). Hillel thus left the solution to the custom of the people, only later recalling that this custom had its source in ancient *halakhah*. A further illustration is to be found in the reply given in the Jerusalem Talmud to the question whether it was necessary or not to set aside tithes from the fruit of trees in their fourth year: “when there is no clearly established *halakhah* on any matter before the court and you do not know what its true nature is – go and ascertain the custom of the public and act accordingly, and we see that the public does not set aside tithes in this case” (TJ, Pe’ah 7:6, 20c and see Ma’as. Sh. 5:3, 56b). In this way custom served to decide the *halakhah* in a lenient manner (in TJ, Yev. 7:2, 8a – the above rule is quoted in connection with the function of custom as deciding between disputing opinions; see also Resp. Rosh 55:10).

“Custom Overrides the Law” – Minhag Mevattel Halakhah

Many halakhic scholars devoted a great deal of attention and research to the question whether it was within the power of

custom, “concealed legislation,” not only to add to existing *halakhah* but also to vary the latter and set aside any of its rules in certain circumstances – as it was within the power of *takkanah*, “open legislation,” to do. This function, which in talmudic sources is termed *minhag mevattel halakhah* (“custom overrides the law”), has been the subject of much dispute – as in other legal systems in which custom is a recognized legal source. In Roman law, for instance, disputing opinions are found on the question whether custom (*mores, consuetudo*) has the power to create also a rule that is contrary to existing law (*contra legem*, see J. Salmond, *Jurisprudence* (1966¹²), 189–212; C.K. Allen, *Law in the Making* (1964⁷), 82f.).

DISTINCTION BETWEEN CIVIL AND RITUAL LAW. Jewish law distinguishes between civil and ritual law for purposes of the instant function of custom, recognizing the power of the latter to set aside the law in civil law matters but not in matters of the ritual law, where it cannot operate contrary to existing law in permitting that which has been prohibited. The explanation for this distinction lies in one of the substantive differences between these two fields of the law – one that relates to the freedom of stipulation (see *Contract; *Mishpat Ivri). In matters of the civil law the rule is, “a person may contract out of the law of the Torah” – i.e., the law is *jus dispositivum*, since the premise is that halakhic rules of the civil law are laid down as a binding arrangement only as long as the parties do not disclose their preference for an alternative arrangement. On the other hand, the directions of the ritual law are *jus cogens*, obligatory and not variable at the will of the parties concerned. The logical conclusion is that just as the order in civil law matters is variable at the instance of the parties to a particular transaction, so it may be varied by the public as a whole, which, as it were, stipulates in advance that such and such an order, contrary to that laid down in the Torah, is convenient and desirable for each and every one of its members (see Resp. Rosh 64:4; Resp. Rashbash no. 562; Resp. Maharashdam חמ no. 380). Thus custom, in expressing the collective will of the public, functions with power to change the *halakhah* in the civil law field – where the will to change the law has recognized authority – but not in the field of ritual law, in which a prohibition is obligatory and unchangeable whether at the will of the instant parties or of the public as a whole. In this function there is accordingly an important distinction between open legislation by way of *takkanah* and concealed legislation by way of custom. The Torah, in all fields, was entrusted to the authority of the halakhic scholars (see *Authority, Rabbinical), authority being delegated to them in the Torah itself to make legislation, whether to add to or derogate from the existing *halakhah* (see *Takkanot). This is not the case as regards the authority of the public in relation to concealed legislation; the public may decide, by way of *minhag*, between disputing opinions of the halakhic scholars within the existing *halakhah*, may add to the *halakhah*, but may not set aside any rule of the existing *halakhah* – except when the abrogation of such a rule is rendered possible at the hands of

individual members of that public by way of express stipulation, i.e., in the field of civil law.

COINAGE OF THE PHRASE MINHAG MEVATTEL HALAKHAH. The essential principle that in the field of civil law custom overrides the law is mentioned in various parts of talmudic and post-talmudic halakhic literature (see below). However, the characteristic phrase for this principle, *minhag mevattel halakhah*, is quoted in the Jerusalem Talmud in connection with the following two matters: The first relates to the determination in the Mishnah (BM 7:1) of the laborer's working hours in two different ways: one whereby he goes to work early in the morning and returns home late, these being the hours of work according to law (BM 83a–b); the other, whereby the laborer goes to work at a later hour and returns home earlier. The Mishnah lays down that local custom determines the hours of work even if this is contrary to the hours laid down by law; the comment of R. Hoshaiiah is, "that is to say the custom overrides the *halakhah*" (TJ, BM 7:1, 11b), so that the employer may not withhold the wages of the worker by requiring that he abide by the legally prescribed working hours, but will himself have to abide by the working-hours decreed by custom – this without need for any proof that the parties had so intended (TJ, *ibid.*). The second matter in which the phrase is quoted relates to the laws of *ḥalīzah* (see *Levirate Marriage); the fact that this forms part of ritual law does not affect the premise that in the latter field of the law the doctrine of *minhag mevattel halakhah* does not operate. In the Mishnah (Yev. 12:1) it is stated that the *ḥalīzah* rite may be performed with a shoe or sandal (both of leather) but not with *anpilya* (sock or shoe made of cloth) since only the first two are included in the Pentateuchal term *na'āl* (Deut. 25:9). In the Jerusalem Talmud (Yev. 12:1, 12c) it is stated: "If Elijah should come and state that *ḥalīzah* may be performed with a shoe he would be obeyed; that *ḥalīzah* may not be performed with a sandal he would not be obeyed, for it has been the practice of the public to perform *ḥalīzah* with a sandal, and custom overrides the law." In this particular case custom supports the existing *halakhah*, since the Mishnah permits *ḥalīzah* with a sandal and this is not prohibited by any extant talmudic source; accordingly, if Elijah were to come and forbid performance of *ḥalīzah* with a sandal he would be determining a new rule, contradicting the existing *halakhah*, and in such an event custom – in supporting the existing *halakhah* – would serve to override the new *halakhah* being laid down by Elijah, a function of custom effective in the field of the ritual law. (It is also possible that the phrase *minhag mevattel halakhah* was originally stated in relation to the laborer's hours of work and its application extended to the case of *ḥalīzah* by the redactor of the talmudic discussion. It may be noted that the above version of the doctrine does not occur in Yev. 102a, where the rule, "if Elijah should come..." is also found, nor in BM 83a–b; see also Men. 31b–32a.)

The rule that it is not within the power of custom to render permissible an undisputed prohibition is stressed by

the use, on several occasions, of the phrase, "Does the matter then depend on custom?" (Hul. 63a; BM 69b–70a). On the other hand, custom does have the power, even in the field of the ritual law, to render prohibited something that has been permitted, since the law is not abrogated thereby but only rendered more stringent: "Custom cannot set aside a prohibition, it can only prohibit that which has been permitted" (Yad, Shevitah Asor 3:3; see also Resp. Rosh 55:10). According to some scholars, custom – even in civil law matters – only overrides *halakhah* when it has been accepted by way of a communal enactment (see **Takkanot ha-Kahal*; and see *Nimmukei Yosef* BB 144b; Nov. Ritba to Ket. 100a and *Shittah Mekubbezet* ad loc.; *Bedek ha-Bayit* HM 368:6, commentary on the statement of Sherira Gaon). This view seems to be in conflict with the plain meaning of a number of talmudic discussions, particularly as regards the rule of *sitomta* (affixing of a mark; see below), and was not accepted by the majority of the scholars. The matter was succinctly summarized by Solomon b. Simeon *Duran – after a detailed discussion of the two relevant talmudic references – as follows: "It will be seen that the doctrine of 'custom overrides *halakhah*' is true in matters of civil law, but erroneous when applied to a matter in which it has been the practice to permit something that is prohibited, for custom only has the power to prohibit something that has been permitted, and not to render permissible something that has been prohibited" (Resp. Rashbash no. 562).

MINHAG AS VARYING THE LAW IN VARIOUS FIELDS. The facility of custom to override the law in civil matters has lent Jewish law great flexibility in adapting to changing economic realities, and many rules – sometimes even entire branches of the law – have come to be based on the legal source of custom.

In the Talmudic Period. The following are some of the rules that were laid down: deeds that are not signed as required by law are valid if prepared in accordance with local custom (BB 10:1; BB 165a; Kid. 49a); debts which according to law may only be recovered from the debtor's immovable property (Ket. 51a, 69b) may also be recovered from his movable property when it is local custom to recover them in this way (TJ, Git. 5:3, 46d; in geonic times a special *takkanah* was enacted permitting the recovery of debts from the debtor's movable property since at that time most Jews had ceased to be landowners (see *Execution, Civil); this is an illustration of *halakhah* received first by way of custom and later by expressly enacted *takkanah*). Similarly, many illustrations of the rule that custom overrides the law are to be found in matters of the financial relationship between *husband and wife (see Ket. 6:3–4; Tosaf., Ket. 6:5–6; see also *Beit ha-Beḥirah*, Nov. Rashba, and *Shitah Mekubbezet* to Ket. 68b).

In the Post-Talmudic Period. In this period too custom actively fulfilled the far-reaching function of changing the law, this phenomenon sometimes leading to sharp dispute – even in the case of one specific matter only – and at other times ac-

cepted by all scholars in relation to an entire branch of the law. Thus, as regards the authentication of deeds (see **Shetar*) – which according to law must be done by three judges and is ineffective if done by a single judge (Ket. 22a) – it was stated in the 15th century: “For the scholars of the yeshivot it is the accepted custom for deeds to be authenticated by the signature of one [judge], and this is a possible application of the doctrine that custom overrides the law in matters of the civil law” (*Terumat ha-Deshen*, Resp. no. 332). This custom was accepted by Moses Isserles (*Rema* חמ 46:4), but others differed (see *Yam shel Shelomo*, BK 10:11; *Siftei Kohen* חמ 46, n. 8). On the other hand, it is generally accepted that the extensive field of tax law is largely founded on the legal source of custom. This is due to the fact that halakhic principles stated in the Talmud in this field (including also the rule of **dina de-malkhuta dina* and the laws of *partnership) were unable to offer adequate solutions to the multiple legal problem that had arisen – commencing from the tenth century onward – in this field of the law (see *Taxation). At first a certain hesitation was expressed concerning the extent to which it was within the power of custom to create an obligation even when it was contrary to “established and known *halakhah*” of the Talmud concerning tax law matters (see statement of Baruch of Mainz, 12th-century author of the *Sefer ha-Hokhmah*, quoted in *Mordekhai* BB no. 477); later, however, this hesitation gave way to full recognition of the validity of any legal rule or usage sanctioned by custom, even when it was contrary to the existing *halakhah*.

Nowhere are the tax laws founded on talmudic sanctity and everywhere there are to be found variations of such laws deriving from local usage and the consent of earlier scholars; and the town residents are entitled to establish fixed *takkanot* and uphold recognized customs as they please, even if these are not according to *halakhah*, this being a matter of civil law. Therefore if in this matter they have an established custom, it should be followed, since custom overrides the *halakhah* in matters of this kind (Resp. Rashba, vol. 4, nos. 177, 260 and see *Taxation for further particulars).

The preference for flexible custom above rule of *halakhah* as regards the legal order in all public matters was emphasized by Israel *Isserlein:

In all matters affecting the public, their custom shall be followed in accordance with the order they set for themselves as dictated by their needs and the matter under consideration, for if they be required to follow the strict law in every matter, there will always be strife among themselves; furthermore, at the outset they allow each other to waive the strict law and make up their minds to follow the decree of their own custom (*Terumat ha-Deshen*, Resp. no. 342).

At the same time, the halakhic scholars made every effort to integrate the legal norm originating from custom into the pattern and spirit of the rules within the Jewish legal system, and in this regard Isserlein adds (*ibid.*):

Even though it has been said that in tax matters custom overrides the law, it is at any rate desirable and proper to examine carefully whether we can reconcile all customs with

the strict law and even if not entirely so, it is yet preferable that we find support and authority in the statements of the scholars and substantiate them with the aid of reason and legal logic (*ibid.*).

In this and in other ways – for instance by means of the control exercised by the halakhic scholars to ensure that rules originating from custom should not depart from the Jewish law principles of justice and equity – the rules of tax law, largely derived from custom, became an integral part of the Jewish legal system.

In Jewish Law in the State of Israel. The stated power of custom continues even in present times actively to assert itself in Jewish law, a fact that finds expression particularly in the decisions of the rabbinical courts in Israel. A notable example concerns the matter of severance pay, payable to the employee on his dismissal. The rabbinical courts have sought various legal ways of conferring binding legal force on the employer's duty to pay this (see **Ha'anakah*), and one of the principal ways has been reliance on the legal source of custom. Thus it was held, “since in our times there has spread this custom of paying compensation to employees ... we have to enforce this as an obligation according to the law of the Torah, in terms of the rule stated in regard to the hire of workers: ‘all in accordance with local custom’” (PDR, 1:330); moreover, by virtue of custom the claim for severance pay “is not a matter of grace, but a claim founded on law,” for which the employer, even if a charitable institution, is liable (PDR, 3:286f.). Particular importance was held to attach to custom in this case, since “we have found support for it in the Torah and *halakhah* ... this custom being based on the Pentateuchal law of the grant payable by the master to his Hebrew bound servant” (*ha'anakat eved Ivri*, PDR, 4:129; *Yam ha-Gadol* no. 22), and as such represented “a proper and just custom” (PDR, 1:330f.; cf. *Terumat ha-Deshen*, Resp. no. 342 concerning reliance on the Pentateuchal law on tax matters).

MINHAG IN THE DEVELOPMENT OF THE MODES OF ACQUISITION AND OF ESTABLISHING OBLIGATION. In the above field – one that is particularly sensitive to changing trends in commercial life, the nature and scope of which is subject to constant fluctuation – custom was destined to exercise a decisive influence. A transaction executed in a verbal manner alone attains no legal validity in Jewish law, which provides for the transfer of ownership and establishment of an obligation in prescribed ways, generally requiring much formality, as by way of *kinyan meshikhah* or *hagbahah*, etc. (“acquisition by pulling or lifting,” etc.; see *Contract; *Acquisition). Such formality was not in keeping with the demands of developing commerce, which called for more convenient and flexible modes of acquisition. Custom, in the form of mercantile or trade usage, was instrumental in providing a large part of the forthcoming answer to the stated demands.

As early as talmudic times (BM 74a), it was laid down that where it was the custom of the merchants for a sale of wine to be concluded by the purchaser affixing a mark (*sitomta*, Rashi

ad loc. and Targ. Jon., Gen. 38:18) on the barrel of wine, this action would complete the sale even though the purchaser had not yet “pulled” the barrel and it remained in the seller’s possession. This is an illustration of law overridden by custom, since in law acquisition was not complete until the purchaser had “pulled” the barrel, and until then both the seller and the purchaser remained free to retract; thus, in law the barrel would still have remained in the ownership of the seller but custom decreed that ownership of the chattel would pass to the purchaser after it was marked in the customary manner and after this the parties might no longer retract. From this *halakhah* Solomon b. Abraham *Adret concluded: “From this we learn that custom overrides the law in all matters of the civil law, in which everything is acquired and transferred in accordance with custom; hence the merchants effect *kinyan* in any mode according with their own usage” (Nov. Rashba BM 73b; see also *Nimmukei Yosef* BM, loc. cit.; *Maggid Mishneh* Mekhirah 7:6; *Sma* ḤM 201, n. 2). In the course of time and on the basis of this principle, Jewish law came to recognize new modes of acquisition and of establishing obligation. Thus the fact that it was the trade custom to conclude a transaction by shaking hands, by making an advance on the purchase price (*Piskei ha-Rosh*, BM 5:72), or by delivering a key to the place where the goods were stored was held to be sufficient to confer full legal validity on a transaction concluded in any of these ways (Sh. Ar., ḤM 201:2).

The extent of the creative power of custom in relation to the modes of acquisition has been the subject of much discussion founded on halakhic and economic considerations. R. Joel *Sirkes held that custom served to create new modes of acquisition in respect of transactions of movables only, “as there is much trade in these and he [the purchaser] has not the time to pull all the goods into his possession” (*Baḥ* ḤM 201:2), but the majority of scholars took the view that custom also served to do so as regards various transactions of immovable property (*Yam shel Shelomo*, BK 5:36; *Sma* ḤM 201, n. 6; *Siftei Kohen* thereto, n. 1). Similarly, many scholars held that custom served to lend full legal validity to an acquisition of something not yet in existence (see *Acquisition, Modes of; *Contract; Resp. Rosh 13:20; other scholars differed – see *Keẓot ha-Hoshen* 201, n. 1; *Netivot ha-Mishpat*, *Mishpat ha-Urim*, 201, n. 1). At times custom operated with such far-reaching effect that not only were new modes of acquisition added to those halakhically recognized but even certain substantive elements of the existing acquisitory modes as determined by the halakhic scholars were changed (see, e.g., Resp. Ribash no. 345 on the custom concerning acquisition incidental to four cubits of land (*kinyan aggav arba ammot karka*), without specification of the land, contrary to the opinion of Maimonides, when locally the latter’s statement of the law was otherwise followed; similarly, in Resp. Rosh 79:4).

In the 13th century a question of principle arose whose answer was to be of great significance as regards the measure of the creative power attaching to custom in general. The fundamental idea underlying the need in Jewish law for acquisi-

tory formalities in the formation of legal transaction is that in a such manner the parties demonstrate their absolute *gemirut ha-da’at* (“making up of their minds”) to close the transaction (see *Contract). The modes of acquisition that came to be decreed by custom also served to demonstrate such *gemirut ha-da’at*, since these represented accepted trade customs; however, the question arose whether local custom to close a transaction in a verbal manner alone was capable, from the standpoint of Jewish law, of conferring full legal validity on such transaction. *Asher b. Jehiel took the view that no affirmative conclusion could be drawn from the rule of *sitomta* (see above), except with regard to the validity of a custom requiring the performance of some act such as those mentioned above (handshake, etc.), “but never by mere speech alone, and even when this is the practice it is a bad custom which is not to be followed” (Resp. Rosh 12:3). This view denied custom the power of contravening the basic requirement of Jewish law for the performance of some act indicating the absolute *gemirut ha-da’at*; a custom of this kind was therefore not proper except when it served only to change the substance of the act, but when it was aimed at eliminating the need for any act at all it was a “bad custom” from which the scholars would withhold validity (see below).

Another view was that whenever custom decreed mere speech alone as sufficient for the conclusion of a legal transaction it had to be assumed that absolute *gemirut ha-da’at* would come about in such a way too (opinion of Meir of Rothenburg and of R. Jehiel, quoted in *Mordekhai*, Shab. nos. 472–3), and this was the opinion accepted by the majority of the *posekim*. Thus it was decided that a person who had promised his neighbor to be the *ba’al berit* (“sandek”; see *Circumcision) at a circumcision ceremony was not free to retract from such an undertaking and assign it to another “since it has long been the practice among all Israelites for the privilege of performing such a *mitzvah* to be conferred in mere verbal manner and it is already established that custom is an important tenet in all matters of this kind” (Resp. Radbaz no. 278). This is also the position as regards the formation of partnership. According to talmudic law a partnership is formed by performance on the part of each partner of an act of acquisition in relation to the share of the other partners (Ket. 10:4; Yad, Sheluḥin 4:1; and see *Partnership). However, it was held that “where it is local custom to become a partner even by speech alone – there will be a partnership; such is the custom in this country too ... and so we decide in every case, for custom is an important matter in the field of the civil law” (Resp. Radbaz no. 380). This opinion came to be accepted as *halakhah* by the later *posekim*, “reason inclines to the view that whenever it is the custom to rely on speech alone, it is like the custom of *sitomta*” (*Kesef ha-Kedoshim* ḤM 201:1), in terms of which full recognition according to Jewish law was given to public sales (*Mishpat u-Zedakah be-Ya’akov*, no. 33), to sales on the exchanges (Resp. Maharsham, pt. 3, no. 18), and to like legal transactions customarily concluded in mere verbal manner (see *Ohel Moshe* pt. 2, no. 138).

In cases before the rabbinical courts in the State of Israel reliance on custom (see above) is particularly evident in the field of the modes of *kinyan*. In several cases acquisition by way of registration in the registry in accordance with the state law is recognized as a valid *kinyan* according to Jewish law, by the force of custom (see, e.g., PDR 4:81). In another leading decision it was laid down that “in our times a signed contract between purchaser and seller constitutes a *kinyan* by virtue of the rule of *sitomta*, whether relating to immovable or to movable property, since this is a trade custom” (PDR 6:216, and see also the distinction drawn with regard to the text of the contract).

THE RULE OF MINHAG MEVATTEL HALAKHAH – IN THE CASE OF LOCAL CUSTOM. Custom overrides the law even when it is not general but customary with part of the public only. Thus in talmudic law it is laid down that when a desert caravan is attacked by robbers who demand a price for the release of the travelers, each must pay according to the amount of the property he carries and not on a per capita basis; in the case where a guide is taken to avert danger to life, payment of the guide is made according to a calculation based both on the amount of property carried by each and per capita; however, “the custom of caravan travelers must not be departed from” (i.e., if the custom decrees that the participation always be according to property and not per capita, it must be followed, Tosef., BM 7:13–14; see also BK 116b; TJ, BM 6:4, 11a). Similarly, it is laid down that “a shippers’ custom [minhag *sappanin*] must not be departed from” in the case where cargo has to be jettisoned to lighten the load (Tosef., loc. cit.). Hence it follows that a local custom or trade usage overrides the *halakhah* for the people governed by such custom: “In matters of the civil law custom is followed, even the custom of ass drivers and shippers, for even if the strict law requires that participation must be according to money and the load carried, nevertheless the custom of ass drivers and of shippers overrides the law” (Resp. Maharik, no. 102).

Proof of the Existence of a Custom

Jewish law sets three requirements for the validity of a custom:

(1) It must be widespread over the whole country, or in the whole of a particular locality, or amidst the whole of a particular class of people, according to its purported field of operation: “In all such matters [of the financial relationship between spouses] custom is an important tenet and must be followed in deciding the law, provided, however, that the custom be widespread (*pashut*) over the whole country” (Yad, Ishut 23:12 and cf. with the matter of *takkanah*, *ibid.* 16:7–9). A custom which exists in most parts of a particular district must be presumed to exist in the whole of such a district (Resp. Rosh 79:4; *Beit Yosef* ḤM 42:21).

(2) A custom must be of frequent application: “It must be known that the custom is established and widespread, that the townspeople have followed it at least three times, for often the public adopt for themselves a practice to suit their

immediate needs [i.e., in regard to a particular matter only] without intending to establish a custom at all” (*Terumat ha-Deshen*, Resp. no. 342; Resp. Maharashdam, ḤM no. 436). The time required for the evolution of a custom depends on the nature of the matter in each case: “This matter [whether or not there was a custom to exempt the communal cantor from tax payment] is not like a custom relating to the hire of workers, which happens every day so that everyone can see what the custom is; but as regards the cantor’s tax immunity, since there is only one cantor in the town, how shall the fact that tax was not demanded from one or two cantors be called a custom unless it be public knowledge in the town that cantors had been exempted there on account of local custom to exempt them” (Resp. Ribash no. 475).

(3) The custom must be clear: “The custom must be clear to exempt” (Resp. Ribash, loc. cit.). In another matter Samuel b. Moses *Medina held that the rule of custom overrides *halakhah* was applicable to that case, provided only that the instant custom was sufficiently clear, “there are two approaches to this matter: one according to the law of our holy Torah, the other according to the trade custom; for there is no doubt that in such matters custom is decisive, provided that the import of the custom be clear, but if there be any doubt about this then we have to revert to what is decreed by the law of the Torah” (Resp. Maharashdam, ḤM no. 33).

Jewish law dispenses with the formality of the laws of evidence for purposes of proving the establishment of a custom – a fact that has provided custom with wide creative opportunity. Thus hearsay evidence suffices and the testimony of normally disqualified witnesses is admitted (*Terumat ha-Deshen*, Resp. no. 342). The wide latitude which Jewish law allows to the creative power of custom is evidenced in a decision given by the rabbinical court in the State of Israel concerning the matter of severance pay due to an employee upon his dismissal (see above). In 1945 R. Ouziel (in a responsum quoted in M. Findling, *Teḥukat ha-Avodah*, p. 133f.) refrained from basing the law of severance pay on the legal source of custom (relying instead on an ethical-halakhic principle: see **Ha’anakah*), for the reason that a custom had no validity unless it was widespread, of frequent application, and clear: “and as far as I am aware this custom [of severance pay] is not widespread in the whole country nor of common application, but only followed in certain specific cases, and therefore the court is not ordering severance pay to be paid in terms thereof” (*ibid.*). A mere ten years later the rabbinical court – seeking a full legal justification for the obligation of severance pay – held: “Now that this custom has spread and become accepted in the whole country, and is popular and of common, daily application, it must be followed and the statements mentioned above (i.e., of R. Ouziel), made in the year 1945, are no longer applicable or valid because the custom has become widespread and established.” Recognition of such an accelerated spread of a custom within the short period of ten years is indicative of the special readiness of Jewish law to enrich itself by means of the legal source of custom.

Custom (*Minhag*) and Usage (Nohag)

The customs so far discussed belong mainly to those in the category of a legal norm functioning of its own power and independently of the consent of the parties to a particular transaction. Thus, for instance, the validity of a mode of acquisition sanctioned by custom is not to be explained on the ground that the parties to a particular transaction intended, by implication, to confer legal validity thereon – since it is beyond the authority of the parties to pass on the validity of a *kinyan* even if they should expressly say so. In this case the new mode of acquisition draws its validity from the efficacy of custom to create new legal norms of self-standing force. On the other hand, many customs operate in the *halakhah* – as in other legal systems – not from their own independent force but by virtue of a presumption that the parties intended, by implication, to introduce a particular usage as part of the transaction between themselves. An agreement between two parties is generally composed of two kinds of terms, those expressly stipulated and those imported by implication as an integral part of the agreement. Such implied terms may be inferred in two ways: either because they are decreed by factors of logic and reasonableness, or because they are usual and customary, since it may be presumed that the parties intended to include in the terms of their agreement the dictates of all the former factors (see J. Salmond, *Jurisprudence* (1966¹²), 193–7). The matter may be illustrated as follows: The Mishnah (BM 9:1) lays down that a transaction of *arisut* or *hakhirah* (land tenancy and cultivation in return for a share of the crop, see *Lease and Hire) includes implied terms concerning cultivation of the land in accordance with local usage – *keminhag ha-medinah* – and that neither party to the transaction may contend, for instance, that he intended the crop to be reaped by scythe when it was local custom to reap by hand (BM 9:1). The Talmud adds that a party's plea that he had not intended to abide by local custom will not be accepted even if it is supported by circumstantial evidence, such as higher or lower rental than usual (see BM 103b), because in the absence of any express stipulation to the contrary it will be presumed that both parties intended to embrace local custom in their agreement (see also Yad, Sekhirut 8:6; Sh. Ar., ḤM 320:4–5). Talmudic *halakhah* offers abundant examples, in most branches of the civil law, of usages which are imported by implication as part of the terms agreed upon between the parties to a transaction, e.g., in the laws of joint ownership (BB 1:1 and 4a; TJ, BB 1:2, 12b) and partnership (BM 68b; 69b; Tosef., BM 5:6–7; TJ, BM 5:6, 10b; see also Yad, Sheluḥin 5:1 and 8:4; and see Partnership); in the laws of *pledge (e.g., BM 67b–68a; Yad, Malveh 7:2–3); in the laws of master and servant (BM 7:1; BM 83a concerning the hours of work; 86a concerning the worker's sustenance; 87a concerning the worker's wages; and see *Labor Law); in the laws concerning the pecuniary relationship between spouses (see above; see also *Husband and Wife), etc. Usages of the above kind also fulfill an important role as regards the interpretation of various deeds and documents, in which local usage in the particular mat-

ter is of decisive importance (BB 166b; Yad, Malveh 27:15; and see *Interpretation).

The Rule of Doreshin Lashon Hedyot. This rule (Tosef., Ket. 4:9ff.; TJ, Ket. 4:8, 28d; TJ, Yev. 15:3, 14d; BM 104a) is of application in the interpretation of documents (for details, see *Interpretation). Many halakhic scholars regarded this rule as serving to give recognition to the implicit importation into the terms of a document of a usage followed by the people, on the presumption that the parties intended their transaction to be subject to such usage: "For whatever is customarily written by the people is deemed to have been written by the parties, even if they have not done so ... and this is as if provided by an enactment" (*tenai bet din*; Resp. Rashba vol. 1, no. 662; vol. 3, nos. 17,433, et al.; this is also the view of Hai Gaon and Ramban, in Nov. Ramban, Tos., *Beit ha-Behirah* Nov. Ritba and *Shitah Mekubbezet* BM 104a; Resp. Ran no. 54; Resp. Ritba no. 53). Just as scholars saw the need in matters of marriage and *ketubbah* to enact essential conditions for the good of all, these being applicable, *setaman ke-ferushan*, i.e., binding even if not expressly stipulated between the parties – so there are matters "which the scholars did not enact and which have not been accepted by all, but are usages which have been followed by the people in certain places, simply of their own accord without [communal] enactment, and this too is a matter of *setaman ke-ferushan*, which the scholars refer to as *derishat hedyotot*" (Resp. Rashba, vol. 4, no. 186). In this sense the rule of *derishat leshon hedyot* served the halakhic scholars as a means of solving many legal problems relating to the laws of marriage, property, and obligations (see Resp. Rashba, Ritba, and Ran as cited above; for an interesting example in the field of obligations see Resp. Rashba, vol. 4, no. 125).

General and Local Custom

A general custom is created at the hands of the public as a whole and as such applies to the whole of that public, whereas a local custom is created at the hands of the people of a certain place, class, or some other group, and as such its application and validity is confined to the people of that place or group. Already mentioned above are the customs of various trade associations like those of shippers and caravan drivers, and the talmudic sources also mention customs relating to priests (Kid. 78b; TJ, Bik. 1:5, 64a; and TJ, Kid. 4:6, 66b), women (Pes. 48b; TJ, Pes. 4:1, 30c), *havurot* in Jerusalem (Tosef., Meg. 4:10, 25c), the fair-minded (*nekiyyei ha-da'at*) of Jerusalem (Sanh. 30a), etc. Often a custom is referred to as *minhag ha-medinah* (i.e., custom of a particular area or district: BM 7:1 and 9:1; BB 1:1 and 10:1; Suk. 3:11, et al.). Sometimes a custom is quoted as followed in Judea (Tosef. Ket. 1:4, 1:5 and 4:12; BB 100b, et al.), in Galilee (Tosef. and Mishnah, *ibid.*), or in particular settlements, e.g., Tiberias, Acre, Kabul (TJ, Pes. 4:1, 30d; TJ, Ta'an. 1:6, 64c), also Jabneh, Sepphoris, etc. Such local or group customs relate to diverse fields of the *halakhah*, both the civil and the ritual law.

Many local customs render the law more severe by prohibiting matters which are permitted (see, e.g., Pes. 4:1–4).

Thus although the law permitted the performance of all labor on the 14th day of Nisan – i.e., on the eve of Passover – it became the general custom to refrain from labor from noon onward, since from that time the paschal sacrifice could properly be brought, so that the rest of the day was treated as a festival day; the Mishnah records that there were places where it was customary to perform labor until noon, and other places where it was customary not to do so lest the need for burning the leaven and other requirements of the festival be forgotten, and the Mishnah prescribes that the local inhabitants should follow their own custom. The halakhic validity of a custom that prohibited what was legally permissible was justified by regarding this as a form of vow undertaken by the public, and the sanction against breaking such a custom as akin to that of the prohibition against breaking a vow: “Matters which are permitted [in law] but prohibited by others by virtue of their custom may not be rendered permissible to the latter, as it is said (Num. 30:3), ‘he shall not break his word’” (Ned. 15a; see also H. Albeck, *Shishah Sidrei Mishnah*, Nashim, p. 137f.). It seems however that the Babylonian *amoraim* restricted the operation of the prohibition deriving from the above rule, holding it as applicable only to a custom of the Cuthites (non-Jews), or of Jews amidst whom there were no scholars – out of apprehension that if the latter persons were permitted matters which their own custom prohibited, even though these were permissible in law, they would make light also of other prohibitions stemming from the law itself (Pes. 50b–51a).

These local customs were also discussed in relation to the biblical injunction, “you shall not cut yourselves” (Deut. 14:1), interpreted by the halakhic scholars as a stringent prohibition against the formation of separate “societies” in relation to the rules of *halakhah*, so that the Torah “should not become like several Torot.” In R. Johanan’s opinion this prohibition only applied in circumstances where in one place a decision is given according to one opinion – for instance according to Bet Hillel, and in another place according to another opinion – for instance according to Bet Shammai, for in this way the *halakhah* itself would be divided; however, if from the standpoint of the law all decide according to the same opinion but part of the public renders the law additionally stringent for itself, this does not amount to a division of the *halakhah*, and it is permissible in the same way as any individual may take a vow and render prohibited for himself that which is permissible in law (TJ, Pes. 4:1, 30d; Yev. 13b; see also L. Ginzberg, *Perushim ve-Ḥiddushim ba-Yerushalmi*, 1 (1941), 152–60). Despite this theoretical distinction, the halakhic scholars maintained that in practice the diversity of customs might lead to division and strife and therefore laid down that a person should follow no custom but that of the place where he finds himself at any given time, if to do otherwise might lead to dispute (Pes. 4:1 and 51a; Yad, Yom Tov 8:20; see also in detail *Peri Hadash*, OH 468 and 496).

Minhag and the Conflict of Laws (within Jewish Law)

The multiplicity of customs, particularly local customs, inevitably gave rise to the phenomenon of varying laws on the same

legal subject. At times it transpired that the law on the same subject differed in different places, and in this event – when the different stages of a legal obligation required performance in different places, in each of which there prevailed a different law concerning such an obligation – there arose the question of whether to apply the customary law at the time and place of establishment of the obligation, or the customary law at the time and place of its performance, or some other law. This and like questions, relating to the field of the conflict of laws, frequently arose in many fields of Jewish law against the background of differing customs on the same subject: e.g., as regards the laws of marriage, divorce, labor, partnership, and land tenancy. The result was the evolution of a proliferous body of case law on the subject of the *conflict of laws, constituting one of the important contributions made by custom to the development and creativity of Jewish law.

Control over Minhag by the Halakhic Scholars

Custom, because of its spontaneous and undirected nature, sometimes calls for a measure of supervision and control. At times a custom may be founded on error, or develop unreasonably or illogically in a certain direction, or may even be in conflict with substantive and fundamental principles of Jewish law in a manner leaving no room for its integration into this system. From time to time the halakhic scholars exercised such control in order to contain or discredit entirely a particular custom.

CUSTOM FOUNDED ON ERROR. The Mishnah (Er. 10:10) mentions the case of a certain usage observed in Tiberias until the scholars came and set it aside; according to one opinion the usage of the people of Tiberias involved a prohibition which the scholars later permitted; according to another opinion, it involved a permission which the scholars later forbade (*ibid.*). Some commentators held that the usage was set aside because it was based on error (Tos. to Eruv. 101b, s.v. “R. Yose Omer”; for a further illustration, see Hül. 6b concerning Rabbi’s permissiveness regarding the eating of untithed fruit from Beth-Shean). In the Jerusalem Talmud a rule is laid down by R. Abun that a custom founded on error may be set aside: if the custom prohibits when it is clearly known that the relevant matter is permitted in law, the custom is valid and the matter must not be rendered permissible; however, if the custom prohibits as an outcome of an erroneous belief that the relevant matter is prohibited in law, when the error is discovered, the matter may be rendered permissible and the custom discredited (TJ, Pes. 4:1, 30d).

In post-talmudic literature frequent reference is made to customs discredited by the halakhic scholars on the ground of error. Thus Rabbenu Tam censured those who counted a minor as helping to make up a *minyán* as long as he held a Pentateuch in his hand: “This is a nonsensical custom ... is a Pentateuch to be regarded as a man?” (Tos. to Ber. 48a). In another case Asher b. Jehiel examined the source of a custom concerning the testamentary disposition of property

by a woman, concluding that “this is certainly an erroneous custom” and even if widespread, “it is not a custom that may properly be relied upon for purposes of the disposition of property ... the custom is wrong and it must be invalidated” (Resp. Rosh 55:10). Similarly Mordecai *Jaffe opposed the custom of not reciting *birkat ha-mazon* (*Grace after Meals) in the home of a gentile, holding that the spread of “this nonsensical custom” originated from an erroneous understanding of a talmudic statement completely unconnected with such a custom (*Levush ha-Tekhelet*, 193:6). In another instance it became customary to take a stringent view and regard a woman as married in circumstances where – in the opinion of all scholars – there was no *kiddushin* at all in law; Simeon Duran strongly condemned this custom: “In circumstances where the whole world holds that there is no *kiddushin*, some people wish to impose on themselves such a stringent rendering of the law – this is a custom born in ignorance which the public must not be compelled to uphold” (*Tashbez*, 1:154).

UNREASONABLE OR ILLOGICAL CUSTOM. At times the scholars examined a custom from the aspect of its reasonableness. Thus it was determined that a custom of the women not to do any work during the whole of the evening following the Sabbath was unreasonable and of no validity except insofar as it was restricted to the time of prayer on that evening (TJ, Pes. 4:1, 30d; Ta’an. 1:6, 64c); similarly invalid was a custom of the women not to do any work on Mondays and Thursdays, but their custom to do no work on a public fast-day or on Rosh Hodesh was reasonable and proper (*ibid.*). Some customs were condemned as imposing hardship on the public and contrary to the purpose of the actual law concerned. Thus the custom of those who prepared grits in Sepphoris and of the crushers of wheat in Acre not to work on *hol ha-mo’ed* was held to be a good custom since it was not likely to detract from the joy of the festival; however, the custom of the fishermen of Tiberias not to work on *hol ha-mo’ed* was opposed by the scholars, since it was impossible to prepare in advance fresh fish for the whole festival, and the custom was therefore likely to detract from the joy of the festival (TJ, *ibid.*).

BAD CUSTOM. In post-talmudic times there was disputed the question of the extent to which a custom concerning a matter of civil law had to be accepted even when it appeared to be a “bad custom.” On the dispute over a custom concerning the erection of a partition between two joint holders so that one might not observe the other (see below), Rabbenu Tam held that a custom of erecting a partition which fell short of the talmudic requirements was a bad custom and was not to be followed: “it may be concluded that some customs are not to be relied upon, even though it has been said, ‘all in accordance with custom’” (Tos. to BB 2a). This opinion was followed by many scholars but others held that in civil law matters even a custom of this kind had to be followed when locally accepted (see *Piskei ha-Rosh* BB 1:1 and 5; Tur, H̄M 157:3–4, 16; Sh. Ar., H̄M 157:1 and commentaries; Haggahot Maimuniyyot, Shek-

henim 2:20; Mordekhai, BM no. 366). Even those who took the former view conceded that in certain matters even a bad custom had to be followed – for instance in tax matters – if it was necessary for the good order of the public (Terumat ha-Deshen, Resp. no. 342; Sh. Ar., H̄M 163:3, *Rema* and commentaries).

CUSTOM CONTRARY TO FUNDAMENTAL RULES AND THE PRINCIPLES OF EQUITY AND JUSTICE. The halakhic scholars were also at pains to ensure that custom did not controvert basic general rules as well as the principles of equity and justice in Jewish law. In so doing they rendered possible the integration of legal norms originating from custom into the general framework of the law, in the same way as their similar close control over communal enactments (see *Takkanot ha-Kahal*) rendered possible their integration. The matter is illustrated by the following examples:

(1) When Asher b. Jehiel decided that the custom of closing a transaction by verbal agreement alone controverted the basic rule requiring demonstration of the absolute *gemirut ha-da’at* of the parties to a transaction, he laid down that this amounted to a bad custom which was not to be followed (see above).

(2) In law, on division of a courtyard between joint owners, “a partition must be built by both of them in the middle, so that neither may observe his neighbor in the enjoyment of his portions, since the injury of being observed is a real injury” (Yad, Shekhenim 2:14, based on BB 3a); the width of the partition is determined by local custom “even when the custom is to build the partition of reeds and palm fronds” (BB 4a; Yad, Shekhenim 2:15). In this regard, Rashba decided that a custom not to erect any partition at all – leaving each neighbor free to observe the other – was of no legal validity, so that either partner could oblige the other to erect the partition: “If it has been the custom, as regards houses and courtyards, not to pay heed at all to the injury of observing one’s neighbor, the custom is a bad one and no custom at all; for waiver may only be made in matters of civil law in which event a person may give of his own or tolerate damage to his property, but he is not free to breach the fences of Israel and to act immodestly in a manner causing the Divine Presence [*Shekhinah*] to depart from this people, as it is said, ‘a person shall not make his windows to open onto his joint owner’s courtyard’ (BB 3:7) ... Scripture relates, ‘And Balaam lifted up his eyes, and he saw Israel abiding in his tents according to their tribes’ (Num. 24:2). What did he see? That the openings to their tents were not made to face each other, and he said, ‘These are worthy that the Divine Presence abide with them’” (BB 60a; Resp. Rashba, vol. 2, no. 268). Thus the custom in question stood in conflict with a material tract of the *halakhah* and could be given no legal recognition.

(3) A custom may not conflict with the Jewish law principles of justice and equity. Hence even in cases where a bad custom is given legal recognition, as in tax matters (see above), some way must be found for anchoring it within the general

spirit of the *halakhah*. Hence a tax custom which did not adequately distinguish between rich and poor was held to have no legal validity: “The contention of the rich has no justification, for certainly according to the law of the Torah taxes must be shared according to financial means and there can be no greater injustice than to make the rich and the poor bear the tax burden in virtually equal measure, and even if the custom has been in existence for some years it must not be upheld” (Moses Rothenburg, quoted in *Pitḥei Teshuvah*, ḤM 163, n. 16).

MINHAGIM BOOKS. Variations in usage between various sections of Palestine are already recorded in the period of the *tannaim* and *amoraim*. Thus, customs of Jerusalem (Ket. 4b, 12b; BB 93b; TJ, Suk. 4:14; Sem. 3:6), variations between Judah and Galilee (TJ, Pes. 4:5; Ket. 12b), and differences between Sura and Pumbedita (Ḥul. 110a) are mentioned. Also mentioned are usages established by individual sages in certain localities (Shab. 130a; Yev. 14a; Ḥul. 116a). A tolerant attitude was obtained toward these variations but it was insisted that once established, the observance of the usage is obligatory (Pes. 4:1; Ket. 6:4; BM 86b), sometimes even when it was contrary to a normative rule (TJ, Yev. 12:1; BM 7:1). De facto, the *minhag* assumed the force of law consisting of popular halakhic works, whose chief purpose was to record differences in religious custom as reflected in the daily life of their authors, in contrast to other *likkutim* (“anthologies”), which recorded similar – or at times the very same – differences culled from books or from the statements of rabbis but without personal acquaintance with them. By definition, a *minhag* is a prevalent religious practice or usage not enjoined by normative regulations, in contradistinction to *din*, which is a normative prescription. Often, however, such usages assumed the status of normative regulations (see **Minhag*).

The first book of this nature to survive is the *Sefer ha-Hillukim bein Mizraḥ ve-Erez Yisrael* (“Variations in Customs Between the People of the East and of Israel”; Jerusalem, 1938),

which was apparently compiled in Erez Israel in the eighth century. This early work summarizes some scores of major differences between the customs of Erez Israel and Babylon actually in force, and seems to refer to the customs of Babylonian Jews living in Erez Israel who preserved the customs of their country of origin. Many and varied suggestions have been made to explain the nature and purpose of this early work, but it is still not clear. Another work, *Ḥilluf Minhagim*, from the same period, of which not even a fragment has survived, gave the differences in custom between the academies of Sura and Pumbedita. It is certain, however, that such lists were in the possession of early scholars even though they may have been merely a collection from a variety of sources.

Minhagim books differ from one another in content, structure, purpose, and literary standard. Some describe the totality of customs peculiar to a certain area either on one topic only or covering a broader range – with the purpose of presenting “local custom” in its purity in order to preserve its existence and secure its uninterrupted continuation against penetration by external influences.

Middle Ages

Sefer ha-Minhagot of *Asher b. Saul of Lunel, which describes the customs of southern France over a very wide range of subjects and is apparently the earliest *minhagim* book to come down to us from Europe, belongs to this category. To this period also belongs *Ha-Manhig* of *Abraham b. Nathan ha-Yarḥi which is, however, of a different character. It limits itself mainly to the laws of prayer, Sabbath, and festival, but in it are described Spanish, Provençal, French, and German customs which the author himself saw while traveling in these countries. Consequently the aim of the two books also differs. While Asher of Lunel explicitly states that his purpose is to indicate the sources in rabbinical literature of the customs in order to prove their authenticity and prevent the disrespect for them which stems from lack of knowledge, the aim of *Ha-Manhig* was to show that all customs, even when contradicting one another, have a halakhic source, and that none of them should be rejected, but each locality should maintain its *minhag*. These two books were of great importance and played a prominent role in molding the *halakhah* in succeeding generations. A book, unique of its kind, though of the same type as the *Ha-Manhig*, discusses a collection of 25 variant customs between Catalonia and Provence. It was written by Menahem b. Solomon with the aim of proving that despite the great halakhic authority of *Naḥmanides, the ancient customs of Provence were not to be undermined because of him, and Menahem exerted himself to show their sources in the *halakhah* (see *Magen Avot*, London, 1909). In 12th-century Germany, halakhic compilations were known of the type of “*Minhagei Spira*,” “*Kunteres Magenza*,” and the like, which are mentioned for example in *Ha-Roke’ah* of *Eleazar b. Judah of Worms and the works of the school of Rashi. There are already allusions to it in *Sefer Rabban* of *Eliezer b. Nathan which was the first Hebrew book written in Germany. From the quotations it is

recognizable that although these were not actually complete “books,” like the Provençal and Spanish *minhag* books of the 13th century, they were nevertheless the first *minhag* books in this region, and some 300 years later they were to serve as the main source for the growth of a ramified and developed *minhagim* literature. These early Ashkenazi compilations committed to writing for the first time the great fragmentation in the sphere of custom that prevailed in Germany, each city, including even adjacent cities, having different customs.

Another type, much more rare, confines itself to the customs appertaining to one single theme, in most cases an actual professional sphere, like the book of Jacob *Hagozer which describes the comprehensive customs applying to the laws of circumcision, and was intended to serve as a handbook for those performing the ceremony. Despite the rarity of this type, it is of great importance, since through it the close connection which exists between *minhagim* literature and “professional” literature is well recognized, an affinity which became blurred in the course of time, but which is still apparent in one sphere of *halakhah*, **Issur ve-Hetter*. The various types of works of *Issur ve-Hetter* are in fact merely *minhagim* books intended to ease the burden of giving decisions from rabbis, and to a large extent they transmit different local customs in accordance with the different evidence they adduced, including visual evidence.

During the period of the *rishonim*, *minhagim* literature dealt mainly with the description of the customs of distinguished rabbis, with the avowed aim of establishing as the accepted norm their personal customs down to their last detail. The beginnings of this category are connected with the personality of *Meir b. Baruch of Rothenburg, who was the central figure in Germany in the 13th century and whose disciples created a complete *minhagim* literature, known as that “of the school of Maharam of Rothenburg,” basing themselves on his customs and rulings. The first apparently was Ḥayyim *Paltiel, whose *minhagim* served as the foundation for the *Sefer ha-Minhagim* of Abraham *Klausner, regarded as “the father of the *minhag* Ashkenaz.” In contrast to Ḥayyim Paltiel, who does not mention Meir of Rothenburg by name in his work, the *Ha-Parnes*, also compiled in conformity with the views and practices of Meir by his pupil Moses Parnes, in most cases refers to him by name. The personality of Meir is especially recognizable in the *Tashbez* of his pupil Samson b. Zadok, and in the anonymous *minhagim* book published by I. Eifenbein (New York, 1938). A century later this type of literature received powerful stimulus, chiefly in the Rhine region, and the description of the customs of outstanding rabbis became a widespread activity, in great demand by the public. It was engaged in by disciple-attendants who were in close personal contact with a certain scholar – at times living with him for decades – and these included in their descriptions the actual minute-by-minute practice of their master, including the very smallest details even of the most intimate and private kind. They saw in each such detail a model worthy of emulation by every pious Jew. The best-known writers in this field are *Jo-

seph b. Moses of Hochstadt who in his *Leket Yosher* described the customs of his distinguished teacher Israel *Isserlein, and Zalman of St. Goar who recorded the customs of his teacher Jacob *Moellin ha-Levi. In this connection it is worth mentioning the *minhagim* book of Isaac *Tyrnau – incidentally the first rabbinic work to be written in Hungary – who in point of fact recorded the customs of his teachers, Abraham Klausner and R. Sar Shalom of Vienna; but in contrast to the other two, who were not distinguished scholars, he was himself a renowned scholar who also devoted his energy to compiling a book of his teacher’s customs. Together, these books constitute the well-known “*minhag* of Austria,” and from them all important Ashkenazi customs developed – in particular the order of prayer and the festivals – down to the latest periods. Also deserving mention is the importance of the *Mordekhai* of *Mordecai b. Hillel which served as a primary work to which various Ashkenazi scholars, particularly in the 15th century, added their local customs, thus creating many different texts of the *Mordekhai*.

From the 15th century *minhagim* literature in Germany held an important place, without precedent in the world of *halakhah* and rabbinical literature. Moreover during this period the status of the *minhag* was raised to such a high level that great scholars and leading personalities of the period speak with great respect even about the customs of women and children and ascribe to custom a degree of authority exceeding that of the normative *halakhah* which is independent of custom. In opposition to the view of 19th-century Jewish historians, that the inordinate devotion to the writing of *minhagim* books in Germany in the 15th century testifies to the deterioration of intellectual creativity occasioned by the many persecutions with which this period was marked, it should be stressed that this tendency is evidence of a completely different process; namely, to a drawing near of the contemporary rabbis and leaders to the masses and their effort to transmit the practices of Judaism to the masses as a whole instead of to a mere handful of students. From the scholarly point of view, research into *minhagim* literature is very difficult, because these works have frequently been copied from one manuscript to another, and in the process sections of the halakhic discussions have been omitted, and glosses, supplements, **hassagot*, and corrections have been added by the various copyists, who tried to adjust the work to the local prevailing custom as it was known to them, or at least to interweave this custom into the earlier work. This feature is especially noticeable in the *minhag* book of Abraham Klausner, as it has been preserved in the printed edition (Riva di Trento, 1558) and in the manuscripts which are so completely surrounded by glosses and comments that it is no longer possible to distinguish the actual text from the additions.

[Israel Moses Ta-Shma]

Modern Period

In more recent times, the *minhagim* literature was enriched by works that sought to give reasons for each *minhag*. Among

the more popular were *Tàamei ha-Minhagim* (1896), by A.I. Sperling and *Ozar kol Minhagei Yeshurun* (1917), by A.E. Hirschovitz. The reasons given are often far fetched and jarring to the modern ear. More recent works describe the *minhagim* lucidly and give reasons based on research and scholarship. Two examples are *Ziv ha-Minhagim* by J.D. Singer (1965), and *Sefer ha-Toda'ah* by Eliyahu Kitov, 2 vols. (1958–60; *Book of our Heritage*, 3 vols., 1968). Both follow the traditional pattern of the calendar.

The establishment of the State of Israel and the ingathering of the exiles has added impetus to the study of the *minhagim* of the various communities of the Diaspora, particularly of the Oriental communities. The latter is pursued particularly by the Ben Zvi Institute in Jerusalem, which has already published a number of studies. Of the *minhagim* of other communities the following have been republished: *Sefer Erez Hayyim*, by Ḥayyim Sithon (1968), and *Sefer Erez Yisrael*, by Y.M. Tukazinsky (1966). Of special note is the exhaustive study of Jacob Gellis on *Minhagei Erez Israel* (1968).

[Isaac Klein]

Illustrations on Minhagim Books

A different kind of *minhagim* books were written for popular use, and, since they were designed also for women, many were written in Yiddish. They were usually arranged according to the order of the religious year and it was customary to add to their interest by the inclusion of illustrations. The antisemitic publications of the apostate J. *Pfefferkorn (*Judenbeichte*, 1508) contain illustrations of Jewish observances which may be based on an authentic prototype.

The Prague *Birkat ha-Mazon* ("Grace after Meals"), of which one copy has survived, is the first Hebrew work of the type known to contain such illustrations. The earliest published illustrated *minhagim* book is that of Venice of 1593. Its text was based on a similar work edited by one Simeon Ashkenazi in 1590. The 1593 edition, though printed in Italy, is in Yiddish. It was no doubt published partly for export and partly for the use of the Ashkenazi Jews then living in the north of Italy. It was accompanied by a series of woodcuts illustrating various observances and customs of Jewish religious life throughout the year, the participants dressed in the unmistakable German style. These illustrations became very popular. They were repeated but with growing indistinction in all manner of editions produced in Amsterdam and northern Europe from the second half of the 17th century onward. The same woodcut sometimes serves to illustrate two different subjects in different editions. Thus the Sabbath before Passover and the Day of Atonement is illustrated by a scene showing the delivery of the special sermon on that occasion. They are still reproduced to illustrate Dutch Jewish social life of the 17th–18th centuries, whereas they in fact belong to a much earlier period and in great part to another environment. In 1601 another *minhagim* book appeared in Venice with a series of remarkable woodcuts, far superior to the earlier edition and clearly illustrating the Italian Jewish environment.

A *minhagim* book produced in 1693 for the Sephardi community of Amsterdam but with illustrations in some cases showing typical Ashkenazi costume has some independent interest and attraction. Unfortunately this one was not imitated later. The imitative editions of Prague of 1665, of Frankfurt c. 1674, and of Hamburg 1729 deserve cursory mention. That of Dyhernfurth of 1692, edited by S. Bass, has certain independent elements but like the earlier ones is poorly executed. The Frankfurt edition of 1717 has half a dozen badly executed cuts (most of them repeated in the 1729 edition) reflecting tenth-century German Jewish customs and usages. The *minhagim* books as a whole, but particularly the hitherto neglected Venice edition of 1601, are of considerable importance for the study of Jewish social life. Of particular significance are the female costumes, the ritual details (e.g., the form of the Sabbath lamp and the **Havdalah* appurtenances), the interior of the synagogue and the separation of the sexes, the wedding ceremony, the Purim mummies, and even the barber's shop included to illustrate Lag ba-Omer.

MINḤAH (Heb. מִנְחָה), the afternoon prayer service, one of the three daily services of the Jewish liturgy. The name of this prayer is derived from Elijah's devotions "at the time of the offering of the evening (*minḥah*) offering" (1 Kings 18:36). One tradition ascribes the institution of this service to Isaac, who "went out to meditate in the field at eventide" (Gen. 24:63), while another attributes the formalization of the three daily prayer services to the men of the *Great Synagogue as substitutes for the daily sacrifices, with the *Minḥah* prayer taking the place of the lamb sacrificed in the Temple at dusk (Num. 28:8; Ber. 26b). The custom of three daily prayers is also implied by Daniel 6:11. The *Minḥah* prayer consists of **Ashrei* (Ps. 145, preceded by Ps. 84:5 and 144:15 and closed by Ps. 115:18), the **Amidah*, **Tahanun*, and concludes with the **Aleinu*. On Sabbaths and fast days, a portion of the Torah is read before the *Amidah* (see *Torah, Reading of). In some rites, portions dealing with the daily sacrifices are read before *Ashrei*. The time for the recitation of the *Minḥah* prayer begins at the conclusion of six and one-half hours of the day. In calculating this time, an "hour" is one-twelfth of the length of the day. *Minḥah* prayed at this time is known as *Minḥah Gedolah* ("major"). *Minḥah* recited after nine and one-half hours of the day is called *Minḥah Ketannah* ("minor"). R. Judah set the final time for the *Minḥah* prayer until midway (*pelag*) through the time designated for the *Minḥah Ketannah*, or until one and one-quarter hours before sunset. The law is, however, in accordance with the opinion that the *Minḥah* may be recited

until sunset, which is calculated to occur at the conclusion of the 12th hour of the day (Ber. 4:1; Ber. 26b–27a). As a precaution lest people forget to pray the afternoon prayer, the rabbis ruled that it is forbidden to commence a large business transaction or sit down to a banquet once the time has begun for the *Minḥah Gedolah*, without having previously recited the prayer. Likewise, it is forbidden to begin a minor transaction or partake of an ordinary meal after the time for the *Minḥah Ketannah* (Shab. 1:2; Shab. 9b). It seems that some made it a practice to pray both at *Minḥah Gedolah* and *Minḥah Ketannah*. However, *Asher b. Jehiel ruled that it is forbidden to do so (resp. 4:13). According to the Shulḥan Arukh (OH 234), it is permitted to recite the *Minḥah* prayer twice, provided one is recited as an obligatory prayer (*hovah*) and the other as a voluntary act (*reshut*). This, however, is only allowed for the extremely pious who are certain that both their prayers will be recited with true devotion. Otherwise, the additional prayer will be considered an unwelcome addition in accordance with the exhortation of Isaiah: “To what purpose is the multitude of your sacrifices unto Me?” (Isa. 1:11). The third meal on the Sabbath (see **Se’udah Shelishit*) is usually eaten between *Minḥah* and *Ma’ariv*. During daily worship, the *Minḥah* prayer in the synagogue is usually delayed until near sunset in order that the congregation may assemble to pray *Ma’ariv* shortly after the *Minḥah* service is completed (see *Magen Avraham* to Sh. Ar., OH 233:1).

[Aaron Rothkoff]

MINIS, family of original settlers of Savannah, Georgia. ABRAHAM MINIS (1694?–1757) arrived in Savannah with his wife ABIGAIL (1701–1794), two daughters, LEAH and ESTHER, and brother SIMON in 1733. Four sons and three daughters were born in Savannah. When fear of Florida’s Spaniards drove Sephardi Jews from Georgia by 1741, only the Minis and Sheftall families, Ashkenazi in origin, remained. After trying farming unsuccessfully, Abraham began trading and shipping, and soon became an official supplier for General Oglethorpe. Upon Abraham’s death, his widow Abigail, aided by her sons, continued his import business, and expanded their land holdings in Georgia to more than 2,500 acres. At the outbreak of the revolution, PHILIP MINIS (1734–1789), Abraham’s only surviving son, was made acting paymaster and commissary general for Georgia, subsequently advancing \$11,000 of his own funds to Virginia and North Carolina troops in Georgia. In 1779 he and Levi Sheftall guided Count d’Estaing and General Franklin in their unsuccessful attempt to recapture Savannah. The entire Minis family moved to Charleston, but Abigail secured agreement from the royal governor not to confiscate her property, and when the British left Savannah the family returned. Upon the reorganization of Savannah’s Congregation Mikveh Israel in 1786, Philip was elected president. The following year he became a warden of the city, holding both posts until his death.

[Malcolm H. Stern]

MINKIN, JACOB SAMUEL (1885–1962), U.S. Conservative rabbi and author. Minkin was born in Russian Poland and received his education in Prague. He immigrated to the United States in 1904, earned a B.A. from Columbia University in 1908, and was ordained at the *Jewish Theological Seminary in 1910, where he earned his D.H.L. in 1935. Minkin’s first pulpit was with Congregation Anshe Shalom in Hamilton, Ontario, Canada (1910–17), where he organized Jewish education classes and an evening school teaching English to Jewish immigrants. The program was so successful that the city’s Board of Education adopted the school and appointed Minkin superintendent of Hamilton night schools. In 1919, he was appointed rabbi of Temple Beth El in Rochester, New York, a newly established Reform congregation that Minkin led into the Conservative movement. In 1922, he began writing a syndicated column, *News of the Jewish World*, which appeared in more than 50 newspapers for eight years. In 1929, he became rabbi of Inwood Hebrew Congregation in New York City (1929–33), before leaving the congregational rabbinate to devote more time to scholarly research and writing. He took a part-time position as Jewish chaplain of Fordham Hospital in New York, where he remained for 25 years. Minkin wrote biographies of outstanding Jewish men of the ancient and medieval worlds, a study of the contribution of Jewish thought to modern philosophy, and one of the first books in English on the history and founders of the Ḥasidic movement. His works include *The Romance of Hassidism* (1935); *Herod: A Biography* (1936); *Abarbanel and the Expulsion of the Jews from Spain* (1938); *The World of Moses Maimonides* (1957); posthumously, *The Shaping of the Modern Mind: The Life and Thought of the Great Jewish Philosophers* (1963); and *Gabriel da Costa* (1969).

[Bezalel Gordon (2nd ed)]

MINKOFF, NAHUM BARUCH (1893–1958), Yiddish poet, critic, literary historian. Born in Warsaw, he immigrated to the U.S. in 1914 and graduated from New York University’s Law School in 1921. But instead of practicing law, he taught at Jewish schools, the Jewish Teachers’ Seminary, the New School for Social Research, and edited the Yiddish literary monthly *Tsukunft*. Together with the poets A. *Glantz-Leyeles and Jacob *Glatstein, he issued the first manifesto of the *In-Zikh group, emphasizing modernism, cosmopolitanism, and individualism. In his five collections of poetry published between 1924 and 1952, Minkoff tried to analyze emotions and moods intellectually. He succeeded in his poems on the Holocaust, *Baym Rand* (“At the Edge,” 1945). As a trained musician, he had an impeccable ear for tonal effects and for verse melodies. His critical essays and studies in literary history

strengthened his position in Yiddish literature. He wrote studies of Elijah *Levita (1950), *Glueckel of Hameln (1952), and a monumental work in three volumes, *Pionern fun Yidisher Poezye in Amerike* ("Pioneers of Yiddish Poetry in America," 1956). Regarding literary criticism as a scientific discipline, he attempted an intellectual, objective evaluation and classification of writers and their works – an approach which had found embodiment in his earlier works of criticism in the books *Yidische Klasiker Poetn* ("Yiddish Classic Poets," 1939), *Zeks Yidische Kritiker* ("Six Yiddish Critics," 1954), and *Literarische Vegn* ("Literary Ways," 1955).

[Shlomo Bickel]

MINKOWSKI, EUGÈNE (1885–1972), French existentialist psychiatrist. Eugène Minkowski, born in St. Petersburg, studied medicine and was appointed psychiatrist at the Henri Rousselle Hospital in Paris from 1925. He had already come under the influence of the Zurich school of psychiatry led by Eugen Bleuler, which included Ludwig Binswanger the existentialist psychiatrist whom he met in 1922. In 1921 he wrote an analysis of Bleuler's conception of schizophrenia, "*La schizophrénie et la notion de la maladie mentale*." This was a precursor of his book, *La Schizophrénie* (1927), in which Minkowski maintained that insanity was nothing more than an exaggeration of the individual's habitual character. The influence of Henri *Bergson is seen in his belief that the patient's impetus toward integration with reality was reduced and he existed in a world of his own. In the case of the schizophrenic, the dynamic functions of mental life were impaired and contact with reality lost. From Edmund *Husserl, he took his views on "phenomenology" as the study of immediate experiences in a living and concrete fashion of reality. Minkowski's existentialist views are in evidence generally in his writings. In *Les notions de distance vecue et d'ampleur de la vie* (*Journal de Psychologie*, 1930), he stated that the patient affirms his relation to a "becoming" around himself in which relationship he is able to grow and which contains all the vital dynamics of the human personality. In 1933 he published *Le Temps Vécu* and in 1936, *Vers une Cosmologie*. His many shorter works appeared regularly each year from 1921, except for the war years, in various medical journals. He served on the executive of the French *ORT and was honorary president of the world *OSE union. His wife FRANCOISE MINKOWSKI, a psychologist, carried out clinical work with the Rorschach test in the area of epilepsy, the typology of personality, and the rapport or detachment of the schizophrenic. In her book *Le Rorschach* (1956), she developed the Rorschach test as a clinical instrument analyzing specific dynamic factors rather than providing only a diagnosis. Her study of Van Gogh, *Van Gogh, sa vie, sa maladie et son oeuvre* (1963), confirmed her findings that the sensory type lives in the abstract and her work on child-

rens' drawings is set out in *De van Gogh et Seurat aux dessins d'enfants*. MIECZYSLAW MINKOWSKI (1884–1972), Swiss neurologist and brother of Eugène, was a research worker in the Pavlov Physiological Laboratory in St. Petersburg from 1907 to 1908 and worked in a neuropsychiatric clinic in Berlin from 1909 to 1911. In 1928 he became a professor of neurology at Zurich University and the president of the Swiss Neurological Society (1943–46). He wrote a number of neurological research papers beginning in 1925 with "Zum gegenwaertigen Stand der Lehre von den Reflexen." His work on the foetus included "Prenatal neuropathologic changes leading to neurological or mental disturbances" and his integrative views are expressed in "Neurobiologie, Moral und Religion" (1963). He was the president of the Swiss friends of the Hebrew University, Jerusalem from 1932 to 1947.

[Louis Miller]

MINKOWSKI, HERMANN (1864–1909), German mathematician. Minkowski, who was born in Alexoten, Lithuania, was taken to Koenigsberg, Germany, by his parents when he was eight years old. He held chairs of mathematics at Koenigsberg in 1895, Zurich in 1896, and in Goettingen (where a special chair was created for him) in 1902. In 1881 the Paris Academy of Science offered their prize for an investigation of the representation of integers as sums of squares. Although only a freshman, he produced a brilliant paper which went far beyond his terms of reference. The Academy overlooked his writing in German, a language not permitted by the prize regulations, and awarded him a prize. Minkowski's early work was on the theory of numbers. Apart from some work of *Eisenstein and others, Minkowski is entitled to nearly all the credit for creating the geometry of numbers. He was one of the earliest mathematicians to realize the significance of *Cantor's theory of sets at a time when this theory was not appreciated by most mathematicians. The later work of Minkowski was inspired by *Einstein's special theory of relativity which was first published in 1905. He produced the four-dimensional formulation of relativity which has given rise to the term "Minkowski space." He also made contributions to the theories of electrodynamics and hydrodynamics. The collected works of Minkowski were edited by D. Hilbert in two volumes and published in 1911 in Leipzig. The first volume contains a biographical article by Hilbert. In addition to his papers, he published the book *Diophantische Approximationen* (1907).

[Barry Spain]

MINKOWSKI, PINCHAS ("Pinie"; 1859–1924), Russian cantor and composer. He was born in Belaya Tserkov, Ukraine, where his father was the town cantor. Minkowski received his basic training from his father, and joined the choir of Nissan

*Spivak ("Belzer") in Kishinev. At the age of 18, he was appointed Spivak's successor and three years later became chief cantor of the Choral Synagogue ("Chor-Schul") in Kishinev. After further study in Vienna, he sang in Kherson, Lemberg, and Odessa, and spent three years at the Kahal Adas Yeshurun Synagogue in New York, but was recalled to Odessa in 1892 as chief cantor of the Brody Synagogue, an office he held for 30 years. Minkowski had a tenor voice of natural sweetness though lacking in power. He avoided extraneous effects such as word repetition, falsetto, and needless coloraturas. A prominent member of the intellectual group which flourished in Odessa, headed by *Bialik, he lectured at the Jewish Conservatory, was chairman of the Ha-Zamir ("The Nightingale") musical society, and published many articles on *hazzanut* and Jewish music, in Hebrew, Yiddish, and German. After the Russian Revolution he left for the United States, where he continued to sing and lecture.

Many of Minkowski's compositions remained in manuscript and are preserved, with his papers, in the Jewish National and University Library, Jerusalem. His setting of Bialik's poem *Shabbat ha-Malkah* ("Sabbath the Queen"), to a chorale-like melody, became a much-loved song for Friday evening in Israel and in many communities and synagogues abroad.

[Joshua Leib Ne'eman]

MINNEAPOLIS-ST. PAUL. The Twin Cities of Minneapolis and St. Paul in *Minnesota consist of a metropolitan area of 2.7 million inhabitants, well over half of the state's population. Although settled earlier, St. Paul was smaller, which is reflected in the fact that St. Paul's Jewish population in 2004 was estimated to be almost 11,000, while Minneapolis' was a bit over 29,000. The cities are arranged like beads on a necklace, with the Mississippi River running through both. Settled at different times, the towns have different personalities: St. Paul is sometimes compared to Boston, while Minneapolis is a brash prairie town. St. Paul developed as a river port and later as a wholesaling center, while Minneapolis gained ascendancy as a railroad center as well as for its role in lumber and grain milling. They even differ in ethnic makeup: St. Paul has a high proportion of Irish Catholics while Minneapolis' is Scandinavian. The cities' Jewish development also took different trajectories. Today the cities' industrial drivers are high technology, manufacture of scientific instruments and products, industrial machinery, printing, publishing, and food product processing.

St. Paul

Jews were among the earliest settlers in the city, which was incorporated in 1849. By 1856 there were enough Jews to establish Mount Zion Hebrew Congregation. Despite internal rancor, the congregation endured and hired their first rabbi in 1871. The congregation moved toward Reform during his

stay, evidenced by the fact that in 1871 the women's auxiliary suggested purchasing an organ. Members were both American-born and of German origin who became wholesale and retail merchants. Some took part in civic affairs as well: Jacob J. Noah, son of Mordecai Manuel Noah, was appointed clerk of the Dakota County District Court and elected as the first clerk of the state Supreme Court in 1857. Isaac Cardozo was appointed a deputy of the United States District Court in 1858. He was among the founders of Mount Zion and the first president of B'nai B'rith in Minnesota. St. Paul Jews from German-speaking lands also felt a kinship with the growing German population of the city, joining their singing societies and social clubs.

After the Civil War, Jewish migration from Eastern Europe began. The first group arrived with both funds and skills but with different modes of worship. They established Sons of Jacob, incorporated in 1875, but often lived in the same neighborhood as the German Jews. The year 1882 began with the arrival by train of some 200 desperate refugees fleeing from the Russian Empire, who overwhelmed the resources of the Mount Zion Congregation. The city of St. Paul helped feed, clothe, and shelter them, and even the Archbishop of St. Paul and Minneapolis donated funds for their welfare. The population grew chiefly through chain migration as those newly settled sent back funds for their relatives. It was augmented through select migration through Galveston and aided by efforts of B'nai Brith members to find jobs for them. They found jobs as peddlers, craftsmen, shopkeepers, and tailors.

Immigrants settled in two neighborhoods near downtown, the West Side and Capitol City areas. Each had numerous Orthodox synagogues, European-style *Talmud Torahs*, and Socialist clubhouses, and each had a settlement house. In both cases, the houses were either founded or supported by women who were members of Mount Zion. St. Paul German Jews, in general, practiced benevolence at arm's length. Beginning in the 1910s, movement to middle class neighborhoods occurred. Here within a four block radius could be found a Jewish Community Center, a modern *Talmud Torah*, and the Reform and Conservative synagogues (Temple of Aaron, the city's first Conservative synagogue, was founded in 1912). A nearby commercial street supported kosher butcher shops and other ethnic commerce.

Although antisemitism was certainly not unknown, particularly in the 1920s and 1930s, St. Paul's large Catholic community has generally accommodated Jewish participation in civic affairs. Housing restrictions and employment discrimination were not as severe as in Minneapolis.

The city's Jewish population did not truly unite until World War II. It settled about 400 Displaced Persons after the war. Movement toward the western section of the city began in the 1940s and toward suburbs south of the Mississippi River in the 1960s. Voluntarism was strong during this era: St. Paul Section of National Council of Jewish Women (NCJW) 1964 project at McKinley School served as a model for the Headstart program. Russian-speaking immigrants began arriving

in the 1970s and were well looked after by the community. During the 1960s, the Lubavitchers established a synagogue and later a day school. They also maintain Bais Chanah, established in 1971, which draws women from all over the world. The community founded a Jewish day school in 1982. Beth Jacob, a newer Conservative synagogue, was founded in 1985. Norman Coleman was the mayor of St. Paul before his election to the Senate.

Minneapolis

Minneapolis's Jews did not establish a synagogue until 1878 although the city was incorporated in 1866. Shaarei Tov (later Temple Israel) was founded by German Jews who lived south of the downtown area near a chain of lakes. They evinced Reform practices as early as the 1880s. Although south Minneapolis had a Romanian Jewish neighborhood until the early 1950s, Eastern European Jews tended to settle on the north side of downtown. The area housed Jews from the 1880s through the 1950s. Interestingly, the same area contained public housing near the downtown section, built in the 1930s and one quarter of which was reserved for Jews, as well as mansions near the opposite end bordering the city limits. Jews of every economic stratum mixed in the public schools, *Talmud Torah*, and in neighborhood businesses.

The city's civic structure was tightly controlled by a group who had arrived from New England and who developed the city's industries, particularly that of flour milling. They were not hospitable to sharing power with the enormous Scandinavian population and certainly not with Jews. A few women of intellect were spared this treatment: Nina Morais Cohen, daughter of Rabbi Sabato Morais and wife of attorney Emanuel Cohen, was a founding member of the Women's City Club. She also founded the Minneapolis chapter of NCJW in 1894 and educated a cadre of women, even those of Eastern European origin.

It may be a result of this exclusion, or the long-term effects of a community unifier such as Rabbi Samuel Deinard, Lithuanian-born rabbi of Temple Israel, who attended services at Orthodox synagogues on the second day of Jewish holidays and preached in Yiddish, but the German and Eastern European Jews of Minneapolis coalesced more rapidly and created a strong infrastructure with the full panoply of Jewish institutions

Chief among these was the community-sponsored Minneapolis Talmud Torah, founded in 1894 and renowned for its early embrace of teaching *Ivrit be-Ivrit* and the number of students who became rabbis. Beth El (Conservative) Synagogue, founded in 1921 is also an offshoot of the Talmud Torah. The community also supported an orphanage for the temporary placement of children in need, a community center, Zionist and Socialist meeting halls, numerous synagogues, loan societies, and a Hachnosses Orchim. An Orthodox day school was founded in 1944 and a non-denominational day school in the 1980s. A number of these institutions were beneficiaries of the Minneapolis Jewish Federation,

founded in 1930 and representing all persuasions within the community.

Synagogues were established as well. Keneseth Israel, founded in 1891 was the first Orthodox place of worship, and Adath Jeshurun became the first Conservative one in 1907. The city had at least seven other Orthodox synagogues.

It took a massive exposé in 1946 by journalist Cary McWilliams called, "Minneapolis: The Curious Twin" to call attention to the fact that while St. Paul Jews felt they were full civic participants, Minneapolis Jews endured many sorts of discrimination. Entire neighborhoods were "off limits" to Jewish home ownership; the city's major businesses did not hire Jews; organizations such as the Minneapolis Automobile and the Minneapolis Athletic Clubs, the Elks, Rotary, and Lions Clubs excluded Jews. Even the city's hospitals denied admitting privileges to Jewish physicians. One result was the building of Mount Sinai Hospital, which opened its doors in 1951. The election of Hubert Humphrey in 1945 and the formation of the Mayor's Council on Human Relations did effect a change when ordinances to ensure civil rights and discourage housing and job discrimination were passed.

The Jewish community settled about 800 Displaced Persons after World War II. It was always hospitable to Zionism, and a number of Minneapolitans settled on Kibbutz Kefar Blum. The city has the distinction of being home to two national presidents of the National Council of Jewish Women. Fanny Brin served from 1932 to 1938 and throughout her life devoted herself to world disarmament issues. Viola Hymes was president during the early 1960s and also served on the President's Commission on the Status of Women.

The movement to the suburbs began earlier than in St. Paul. During the 1950s young families began purchasing homes in nearby St. Louis Park. Synagogues and a Jewish Community Center soon followed. The torching of North Side businesses during the late 1960s hastened Jewish flight. Since that time, Jews have continued to move both north and west of the city. Two new Reform congregations have also been founded, while the Lubavitch sect also gained adherents. The community has resettled between 4,000 and 6,000 Jews from the Former Soviet Union (FSU), who in 2004 made up 17 per cent of the Jewish population.

While the Jewish community is still vibrant, the 2004 Jewish population study found some worrisome features centered on integration of members of the FSU and intermarried couples.

Although the rivalry between the cities has abated, they still have separate Federation structures and accompanying beneficiary agencies, a mystery to outsiders. They jointly support institutions such as a middle school, Hillel on the University of Minnesota campus, the Jewish Community Relations Council, and the Jewish Historical Society of the Upper Midwest. Rudy *Boschwitz was a U.S. senator and later an ambassador. He was defeated in the 1990 and 1996 Senate races by another Jew, Paul *Wellstone, who died in 2002 in a plane crash as he was running for reelection.

Plaut, *The Jews in Minnesota—the First Seventy-Five Years* (1959); A.I. Gordon, *Jews in Transition*, Twin Cities Jewish Population Study (2004).

[Linda M. Schloff (2nd ed.)]

MINNESOTA, U.S. state in the north central tier with about 4.9 million inhabitants of which the Jewish population is roughly 42,000. (The 2004 Twin Cities’ Jewish Population Study found 10,900 Jews in St. Paul and 29,100 in Minneapolis. It is estimated that about 1,000 Jews live in outstate towns, chiefly Duluth and Rochester). While they make up less than 1% of the state’s population, Jews comprise about 1.7% of the Twin Cities metropolitan area.

While isolated Jewish fur traders were not rare, the first Jewish community was established in St. Paul, the northernmost steamboat landing on the Mississippi. They found little prejudice in a frontier town and by 1856 formed Mount Zion Hebrew Congregation. Minneapolis just upriver did not grow until the advent of the railroad system. Its pioneer synagogue, Shaarei Tov (later Temple Israel), was not founded until 1878.

These Jewish pioneers arrived from the eastern and southern United States and from Germanic lands with some capital. They became clothing and dry goods merchants, fur traders and cigar makers. Some took part in civic affairs. Impoverished Eastern Europeans arrived beginning in 1882. The population grew chiefly through chain migration as those newly settled sent back funds for their relatives. It was augmented through select migration through Galveston. The newly arrived worked as craftsmen and on railroads, they peddled, collected scrap metal, and sewed in factories. Jews tended not to be employed in the giant state industries, such as lumber, flour milling, and iron mining.

Jews filtered into market towns, such as Austin, Albert Lea, and Mankato, serving as clothing and dry goods purveyors, hide and fur merchants, and scrap metal dealers. After iron ore was discovered nearby, Duluth’s Jewish population soared, reaching a peak of about 4,000. This discovery provided the impetus for Duluth’s Jews to move inland to newly created towns, such as Virginia, Hibbing, Chisholm, and Eveleth, where they became merchants. Each town once supported a synagogue between about 1905 and the 1950s. The most famous Iron Ranger is undoubtedly Bob Dylan (Robert Zimmerman), who was born and raised in Hibbing. Rochester, renowned for its Mayo Clinic, also has maintained a synagogue. Its population is more transient due to the high proportion of physicians in training at the Mayo Clinic. The state had a peak Jewish population of about 44,000 in 1937. While there has been migration to Sun Cities, it received a modest influx of displaced persons after World War II and a large number of Jews from the Former Soviet Union (FSU). In 2004, this group comprised 17% of the Twin Cities’ Jewish population.

By the 1930s, Minneapolis, St. Paul, and Duluth all had established Federations, which supported social service, edu-

Jewish communities in Minnesota and dates of establishment. Population figures for 2001.

cational, and defense institutions. Religious institutions and social clubs flourished as well, and Herzl Camp with its Zionist orientation attracted Jewish youth from all over the Upper Midwest. The weekly *American Jewish World*, established in 1912, is still published.

The gubernatorial election of 1938 between Harold Stassen and Elmer Benson used vicious antisemitic cartoons to vilify several of Benson’s Jewish supporters. The Minnesota Jewish Council (now called the Jewish Community Relations Council) was created soon after to counter organized antisemitism. The situation changed dramatically after Hubert Humphrey was elected mayor of Minneapolis in 1945 and instituted reforms that were repeated at the state level. Since then, Jews have actively engaged in running for political office. In 1961, Arthur Naftalin was elected mayor of Minneapolis. St. Paul elected Larry Cohen mayor in 1972, a position that hitherto was an Irish Catholic stronghold. Rudy *Boschwitz, elected in 1978, was the state’s first Jewish senator. Ironically, he was defeated by another Jew, Paul *Wellstone, in 1990 in a race in which the Jewish identity of Wellstone, who was married to a non-Jewish woman became an issue. The tactic (a nasty letter campaign) backfired against Boschwitz, and Wellstone went to the Senate. Wellstone triumphed over Boschwitz a second time in 1996. Norm Coleman won in 2002 over the successor to Wellstone, who had died during the campaign. So in a state where Jews make up less than 1% of the population, Jewish candidates for U.S. Senate faced each other three times in a dozen years.

Today, the Minnesota Jewish community can be characterized as generally prosperous with great population stability, and a high level of support for communal institutions. The University of Minnesota has a Center for Jewish Studies. The Jay Phillips Center for Jewish-Christian Learning at the University of St. Thomas and St. John’s College promote interfaith understanding. The Jewish Historical Society of the Upper Midwest interprets the region’s Jewish history for Jews and non-Jews alike.

Nevertheless, there are major challenges such as integrating the Jews from the FSU into the general Jewish community and devising ways of embracing the intermarried and their children. Only by inculcating both with a sense of allegiance to Jewish communal institutions will the Minnesota Jewish community remain healthy in the 21st century.

[Linda M. Schloff (2nd ed.)]

MINNITH (Heb. מִנִּית), one of the farthest limits of the area in which Jephthah smote the Ammonites (Judg. 11:33). The wheat of Minnith was traded in exchange for goods from Tyre (Ezek. 27:17). Eusebius (Onom. 132:2) locates the place at the fourth Roman mile on the road from Heshbon to Philadelphia (Rabbath-Ammon). It has accordingly been placed at Khirbat el-Ḥanūttiyya in the fertile Heshbon plain, 6 mi. (c. 9½ km.) north-northeast of Ḥisbān. The earlier identification with Umm al-Ḥanāfish has generally been abandoned.

[Michael Avi-Yonah]

MINOR, OSIP S. (Joseph; 1861–1932), Russian revolutionary and a leader of the Social Revolutionary Party. Born in Minsk, he was the son of Rabbi S.Z. *Minor. While still a student at the University of Moscow, he joined the “People’s Will” (Narodnaya Volya) Society. In 1883 he was arrested for the first time, and in 1887 he was exiled to Siberia. After participating in a rebellion of exiles in Yakutsk, he was sentenced to forced labor for life (1889). Freed in 1896, he was banned from living in European Russia. In 1900 he nevertheless returned to Russia and settled in Vilna. He resumed his revolutionary activities, traveled abroad, and was one of the organizers of the Social Revolutionary Party. In 1909 he was again arrested as a result of the intervention of the czarist agent Y.F. *Azeff and was sentenced to ten years’ forced labor. He was freed at the time of the Revolution of 1917 and was briefly mayor of Moscow. Minor left Russia in 1919 after the Bolshevik victory and settled in France, where he became chairman of the Society for Assistance to Exiles and Political Prisoners in Russia. He died in Paris. His book *Eto bylo davno* (“It Was Long Ago”) appeared posthumously in 1933.

[Yehuda Slutsky]

MINOR, SOLOMON ZALMAN (Zalkind; 1826–1900), writer and scholar, one of the pioneers of the Russian-Jewish intelligentsia. As a youth, he entered the newly opened gov-

ernment rabbinical seminary in Vilna and was one of its first two graduates – he was later a Talmud teacher in the seminary. Through the efforts of the *maskilim* he was elected **Kazyonny ravvin* (“government-appointed rabbi”) of the Minsk community in 1859. There he opened a Saturday school and a public library. One of the first to preach in Russian in the synagogue, he became well known for his sermons, which were published in book form and served as models for other rabbis (“The Voice of Happiness,” 1862, and “Speeches,” 1895). Minor was active in the promotion of the *Haskalah in Minsk, and in 1869 he was invited to serve as rabbi in Moscow. In the early 1890s, when the Jews of Moscow were persecuted, he interceded with the authorities on behalf of his community and was consequently expelled from Moscow on the order of the governor of the city, the Grand Duke Sergei. He then returned to Vilna and continued his literary activity there. Minor published many articles in the Russian-Jewish and the Hebrew press, for the most part under the name “Remez.” He conducted a debate with antisemites (including the priest *Lutostansky) and was a friend of Tolstoy and directed his studies in Hebrew and the Bible. He was one of the first Jewish scholars to work in the field of the history of Russian Jewry. His son LAZAR (ELIEZER) MINOR was a professor of nervous diseases and another son, Osip *Minor, was a leader of the Social Revolutionary Party.

MINORCA, Mediterranean island of the Balearic group. The earliest information about the Jews on the island dates from 418 C.E. when Severus, the bishop of Minorca, reports on the victory of Christianity in the island. The agitation he fomented led to the destruction of the synagogue. Many Jews, especially the women, died for their faith: a few succeeded in hiding in the forests and caves. According to Severus he gained 540 Jews for Christianity. While it existed, the community was organized as a national group under the leadership of a “defensor”: the last, Theodore, acted as *archisynagogos. There is no information available on the Jews during the Byzantine and Muslim rule. When Minorca was reconquered by the Christians during the reign of James I of Aragon, he received help from the Jews to equip the expedition. Most of the later history of the Jews of Minorca is closely connected with that of their coreligionists in *Majorca. In 1319 King Sancho I declared that they and the Jews of the nearby island of Ibiza were to be included in all the levies imposed upon them by the communal leaders of Majorca. The Jews shared the sufferings of the general population when Minorca was almost depleted of its inhabitants during the *Black Death (1348). After the disorders which swept Spain in 1391, there were apparently no Jews on the island. Nevertheless, a number of Judaizers in Minorca were sentenced by the Inquisition of Majorca which maintained a commission at Mahón. A small Jewish community existed

again in Minorca during the temporary English occupation in the 18th century (1720–56; 1762–81).

[Haim Beinart]

MINORITY BLOC (1922–30), political alliance of representatives of the national minorities in Poland created with the aim of obtaining representation in the Sejm corresponding to their numbers in the population – up to 40%. The Bloc was formed in 1922 in reaction to the election regulations issued under the pressure of the extreme nationalist bloc led by the clergymen Lutoslawski, which sought to present to the world an artificial image of a monolithic national state. In the mapping of the constituencies there was blatant discrimination between the Polish ethnographic region and the mixed regions, as well as the intentional addition of rural and urban units to the disadvantage of scattered minorities such as the Jews and the Germans. The common objective of assuring their national rights enabled the parties to overcome the wide differences which prevailed among the various ethnic sections and to establish a countrywide bloc. Its initiator was the German Hasbach, and its executor and organizer was the Zionist leader Yizhak *Gruenbaum. The Ukrainians of Galicia boycotted the elections because in theory they did not yet recognize the Polish government; the Zionists of Galicia therefore presented their own national list. On the other hand, in Congress Poland and in the Belorussian border regions (“Kresy”) the overwhelming majority of the Jewish public, with the exception of the *Folkspartei, the *Bund, and the *Po’alei Zion, supported the Bloc. The Poles regarded this union as a hostile act because they suspected its partners of irredentist tendencies and anti-national aims. The elections brought an impressive victory for the Minority Bloc, which won 66 seats, including 17 Jewish ones. The drastic defeat of the Polish lists was most evident in the mixed border regions. In eastern Galicia 15 Jewish representatives were elected as a result of the Ukrainians’ abstention and in western Galicia two, so that the “Jewish club” consisted of 34 seats in the Sejm and 12 in the Senate. During the parliamentary term of 1922–27 only loose links were maintained between the minority “clubs,” because the policy of all the Polish factions was to achieve the dissolution of the Bloc either by fomenting disunion within its ranks or by promising to fulfill specific demands. In 1923 Premier Sikorski, who headed the Leftist coalition, attempted to win over the Ukrainians and the Belorussians, while in 1925 the *Grab-

ski government endeavored to attract the Jews by means of an “agreement” which became known as the *Ugoda. In 1926 Marshal Pilsudski came to power in the wake of the May coup d’état. The new regime adopted the slogan of “moral improvement” (*sanacja*) and attempted to form a wide public front for constructive purposes. However, the hopes which had been aroused among the national minorities rapidly melted away when the weakening of parliamentary government became apparent and the promises to fulfill national aspirations in culture and education did not materialize. With the approach of the elections of March 1928 a second Minority Bloc was organized. On this occasion it was joined by the Ukrainians of Galicia, and their representative, Dmitri Levitsky, became the active colleague of Gruenbaum and Hasbach. In the meantime, however, conditions had changed. A split, arising out of social differences, had occurred within the minorities. This prevented the affiliation of the Radicals, and the Bloc thus became an association of political parties instead of whole national groupings. The representation of the Jews was also reduced as a result of the departure of all the Galician Zionists, who formed their own national list, and the pro-government bloc consisting of Agudat Israel, the Folkspartei, and a faction of the organization of merchants and craftsmen. In addition to this there were Orthodox and assimilationist Jewish circles that preferred to vote directly for the government list. These differences were responsible for a sharp decrease in the number of Jewish representatives: seven in the Minority Bloc; and six in the National List of Galicia. The other lists did not obtain a single seat.

After the third Sejm was unexpectedly dissolved by the president before the end of its term, new elections were held in 1930 in an atmosphere of growing political suppression. Internal frictions rendered the establishment of a countrywide Zionist list impossible. Among the Ukrainians radical nationalistic feelings were expressed in the thesis that since they constituted a majority in their regions, it was not in their interest to maintain a union with scattered minority groups. The Zionists of Congress Poland under the leadership of Gruenbaum joined forces in six regions with the German minority of central and western Poland – a substitute for the former comprehensive Minority Bloc. The economic businessmen list of Agudat Israel, the Folkspartei, and the merchants also increased their strength. The government employed harsh measures against the candidates of the reduced Minority Bloc, who did not secure more than two seats. The Zionists of Galicia only succeeded in obtaining four seats. Thus ended the attempt to unite the minorities in a common political campaign, and in the relations between the Jews and the other minority groups there were increasing differences, estrangement, and even hostility as a result of the economic and political suffocation of the masses.

[Moshe Landau]

MINORITY RIGHTS, rights enjoyed by Jews and other ethnic minorities between the two world wars in some countries, mainly eastern and southeastern Europe, according to the provisions of the minorities treaties at the Versailles Peace Conference, 1919. In all the other states the treatment of minority nationals was regarded as an internal matter, subject only to the state's own laws and not to international law. In those states which were bound, between the two world wars, by the minorities treaties, Jews and other minority nationals were guaranteed certain minimal rights, and the *League of Nations created a machinery for supervising their implementation. These were rights granted in addition to civil, political, and religious freedoms. Whereas the *French Revolution and *Napoleon brought *emancipation of the individual in parts of Europe as an equal citizen of the state, the minority rights expanded the concept of equality to include ethnic and cultural distinctions within the territory of the state. These national rights differed from medieval *autonomy in that the latter presupposed a society that is subdivided into corporations, each of which lives according to its own distinct law. The minority rights, on the other hand, posited an egalitarian society, where the individual enjoyed individual rights plus his rights as a person belonging to an ethnic or religious minority. The proponents of the idea gave it widely differing interpretations. Minority rights tended to embrace largely secular, as opposed to religious, elements; therefore the terms cultural, national, ethnic, or linguistic are interchangeable with the term minority.

Development of the Idea

The idea originated at the beginning of the 20th century in the multi-national states of Eastern Europe where it was impossible to carve out territorial units to accommodate particular ethnic groups. Karl Renner, an Austrian socialist, published in 1902 his *Der Kampf der oesterreichischen Nationen um den Staat* in which he developed the proposition that national affiliation was primarily a personal and not a territorial matter. He therefore advocated that the state represent a federation of nationalities, without separation of state and nationality, similar to the separation of Church and state. Since the Jews represented an extraterritorial minority *par excellence* the idea that they constitute a distinct nationality and are therefore entitled to a special national existence appealed very strongly to East European Jewish intellectuals. Chaim *Zhitlowsky and Simon *Dubnow in Russia, and Nathan *Birnbaum in Austria, attracted at first only a small group of intellectuals to their ideas of national autonomy. Zhitlowsky, an émigré socialist revolutionary, sought to synthesize socialism with nationalism as early as 1883. He demanded for Jews “national equal rights

with all peoples” and asserted that only through the Yiddish language could the social and national revival of the Jewish people be effected. He maintained that one could remain identified with the Jewish nationality even if abandoning the Jewish religion. He urged the Jewish masses to participate in the class struggle as a national unit. Alone among the cosmopolitan Jewish socialists he favored national socialism.

In 1897 he began publishing philosophical studies in Jewish history and a comprehensive program of action which later appeared in book form as *Pisma o starom i novom yevreystvie* (“Letters on Old and Modern Judaism,” 1907). His main thesis was that national consciousness consists mainly of spiritual-cultural determinants and that these national characteristics can be maintained by the Jews in the future in the lands of their dispersion, just as they have survived the lack of territory or unity of language since the end of the second commonwealth. After emancipation of the individual the Jews as a group should be granted national self-government within the framework of the state along with other national minorities. His secularization of the national idea as opposed to those who saw the essence of Judaism in religion, and his optimistic view of the future of Judaism in the Diaspora, were the main underpinnings of his insistence on national cultural autonomy.

Popular Movement

These meager beginnings in academic speculation turned into a powerful popular movement during the 1905 revolution in Russia (1904–07), petered out from 1907 to 1914, and then gained in volume in both east and west during World War I. A number of middle-class parties and socialists tended toward “*assimilation”; i.e. they sought only civil and political rights, and shied away from nationalist identification. Before long, however, *autonomism developed into a mighty stream; most Jewish parties adopted Diaspora nationalist plans in their platforms. The League for Equal Rights for Jews, consisting of middle-class liberals and Zionists, met illegally in 1905 and declared in favor of “civil, political, and national rights... the freedom of national-cultural self-determination... a comprehensive *kehillah* autonomy, freedom of language and of school education.” This was adopted despite the wishes of the top leadership which was anti-nationalistic. The Zionists, too, at their conference in *Helsingfors, Finland, in 1906, demanded “the recognition of the Jewish nationality with the right of self-government in all affairs of Jewish life.” This was achieved although large segments of political Zionists clung to the doctrine that creative Jewish living was possible in Palestine only. In 1918 the Zionist headquarters issued the “Copenhagen Manifesto,” which demanded a national home in Palestine, and in all other countries full equality of rights, including “national autonomy, cultural, social, and political, for the Jewish population of countries largely settled by Jews, as well as of all other countries whose Jewish population demands it”; and admission into the “League of Free Nations.”

The followers of Dubnow's Diaspora nationalism formed the *Folkspartei (People's Party) in 1906, only to remain a

mere handful. The *Bund in Russia, Poland, and Lithuania was organized in 1897. Though it initially had made the class struggle paramount in its program, it soon became a major protagonist of autonomism, with especial emphasis on Yiddish as the national language. The proletarian Zionist groups, the *Jewish Socialist Workers' Party (Sejmists), the *Jewish Social Democratic Party, *Po'alei Zion, and the *Zionist Socialist Workers' Party, more or less hesitantly, also came around to demand national self-determination. Similar agitation took place in Austrian Jewry and to a lesser extent in the Ottoman Empire and the United States. Thus in the space of less than two decades national autonomy grew from a mere theory into a mass movement. During World War I activity was transferred to the west. In the United States, after several years of numerous meetings, the *American Jewish Congress was organized in 1918 to present the Jewish case for Palestine and minority rights for the Jews of Europe at the Peace Conference. They adopted a "Jewish Bill of Rights" to be presented to the conference. In addition to guarantees of equal civil, political, religious, and national rights, it proposed autonomous management of communal institutions by minorities, respect for the languages of ethnic groups, and no discrimination against Sabbath observance. Whereas in the U.S. a modicum of accommodations was arrived at between the nationalists and the members of the non-nationalist *American Jewish Committee, no such rapprochement was achieved in England or France.

At the Peace Conference

At the Versailles Conference the Jews assumed leadership in the struggle for minority rights. Delegations and petitions from Jews in many countries began to arrive in Paris. Immediately an attempt was made to form a united front, and a Committee of Jewish Delegations (*Comité des Délégations Juives) was formed. Most of the erstwhile opponents bowed to the desires of the East European Jews who were directly concerned. The French and British delegations, who refused to join the Committee of Jewish Delegations, agreed not to oppose actively the efforts of the majority to attain national rights.

Minority Treaties

After prolonged and stubborn negotiations that lasted in some cases until 1923, minority treaties were signed by the newly created states of Poland, Czechoslovakia, Romania, Yugoslavia, and Greece; and by the defeated states of Austria, Hungary, Bulgaria, and Turkey; declarations of willingness to abide by minority stipulations were secured from Lithuania, Latvia, Estonia, Albania, and several other localities. Iraq made its Minorities Declaration when it became independent in 1932. The Polish Minority Treaty became the model for all the rest. It had 12 articles. Some of them dealt with the basic civil, political, and religious rights of minorities. The specific rights of minority nations were dealt with in detail. Polish nationals were to have the free use "of any language in private intercourse, in commerce, in religion, in the press, or in publications of any kind, or at public meetings." Minority nationals were guaran-

teed "the use of their own language, either orally or in writing, before the courts." They were also authorized "to establish and control, at their own expense, charitable, educational, religious and social institutions, with the right to use their own language and to exercise their religion freely therein." Minorities were guaranteed the right to establish schools in their own language, and to obtain an equitable share of public funds for their "educational, religious, and charitable purposes." Finally, in view of the special position of the Jews in Poland, who were not concentrated in any one area in compact masses but were diffused over the entire country, and in view of Polish anti-semitism, two special "Jewish articles" were inserted to safeguard their unique position. Article 10 read:

Educational Committees appointed locally by the Jewish communities of Poland will, subject to the general control of the State, provide for the distribution of the proportional share of public funds allocated to Jewish schools in accordance with article 9, and for the organization and management of these schools.

Article 11 provided that: "Jews shall not be compelled to perform any act which constitutes a violation of their Sabbath," with specific reference to attendance at courts of law, and elections or registration for electoral or other purposes. Other articles dealt with enforcement. The minority obligations must be recognized as fundamental law of the country. Infractions were to be supervised by the League of Nations, and member-states of the League Council were entitled to appeal to a world court. Some of the other countries resolutely resisted the minorities provisions, but were forced to sign them. The "Jewish articles" were omitted in some treaties. There was general satisfaction among Jews with the provisions of the Minorities Treaties. Some were jubilant over the new era that had dawned to enable them to live their own lives and to develop their own culture.

Implementation of Treaty Provisions

The minorities system represented a remarkable experiment in international control that lasted some 20 years. With all its faults, substantive and procedural, it could have developed into a major force for minority protection. However, it crumbled along with the League of Nations that sponsored it. The system helped prevent serious disturbances by providing minorities an outlet in the international provisions for resolving grievances and by serving as a brake on oppressive chauvinism. In most minority states there were provisions for national education, and protection against undesirable assimilation, and some of them experimented, on their own initiative, in autonomous minority institutions on a considerable scale. The main weakness lay in the refusal of minority states to act on their international pledges in good faith. Some of the substantive provisions of the Minority Treaties lacked precision. The procedure in hearing complaints was faulty. The League itself did not pursue recalcitrant states with proper vigor. Only the Permanent Court of International Justice at The Hague tried valiantly, in two cases brought before it, to preserve decency

and public order. All this was to no avail. In 1934 the world was stunned by the declaration of Col. Józef Beck (Polish minister of foreign affairs) renouncing minority obligations. The whole structure toppled along with the League of Nations. World War II put an abrupt end to the experiment.

Treatment of Jews by Countries

The Jews had been most instrumental in the promulgation of minority rights. They set out full of hope for a new deal. They were the ones to be most disappointed. Unlike other minorities they did not constitute a threat to the state by irredentist or restoration dreams. Except for three cases, they did not resort to petitioning Geneva on their grievances, as did other minorities; they feared antagonizing their governments. Only Estonia excelled in granting its minorities, including the Jews, complete autonomy. A chair of Jewish studies was established there at the University of Dorpat (*Tartu).

LATVIA. Although Latvia by a law of 1921 narrowed the grant of rights, including minority rights, to those who could prove residence over a period of 20 years, it provided liberal allowances for minority schools until 1934. The Education Law of 1919 provided for compulsory education in the language of the family. Central and local authorities were to establish such schools and to bear the necessary expense. Such a class was to be established if at least 30 pupils were enrolled. The minority section of the ministry of education had a Jewish division, its head nominated by the Jews, subject to the approval of the Council of Ministers. The Jewish educational system thrived. This autonomy, however, was limited to schools; Latvia never enacted laws regarding cultural, religious, and welfare organizations of minorities. In 1934, with the abolition of the democratic regime, school autonomy was virtually nullified by a new law which provided that paid officials of the state administer minorities school systems, that a child be instructed in his family's language provided he could express his thoughts in that language, and that state and local subventions to minority education not exceed their ratio in the population.

LITHUANIA. In Lithuania, too, there was at first a great surge of hope when the constitution in 1922 granted to minorities autonomy and the right to levy taxes. Autonomous Jewish communities, already recognized by law in 1920, were allowed to administer their own cultural, welfare, social, and educational affairs. These communities were united into a national council with a minister of state for Jewish affairs who could levy taxes for Jewish needs and exercised some authority in school affairs. The schools were under the ministry of education. The national and municipal authorities were charged with subventing the Jewish schools. They were entitled to employ Yiddish in government offices. All this exuberant activity in national self-determination came to a halt after only two years. In 1924 both the Jewish national council and the ministry of Jewish affairs were abolished. The following year the local communal organizations were disbanded. Only a modicum of school autonomy remained.

POLAND AND OTHER COUNTRIES. In Poland antisemitism was rampant, especially in the economic sphere. Almost all Polish parties obstinately opposed the granting of equal minority treatment for Jews. The government did not open public schools in Hebrew or Yiddish. The school system established by the Jews themselves was subsidized very grudgingly and in diminishing manner. Jewish religious communities were permitted to deal with cultural and social matters and to organize a council of all congregations. Such a council, however, never convened. Most odious was the limitation of the numbers of Jewish students at state universities by a **numerus clausus*. Despite all these restrictions and an endemic poverty, the Jews of Poland succeeded in maintaining a vibrant cultural life and a thriving network of schools in both Yiddish and Hebrew. In Romania the government disclaimed antisemitic tendencies, yet tolerated the most virulent attacks by Jew-baiting parties. The Romanian language was forced upon Jewish children in schools; the religious sensibilities of Jewish students were violated. In the higher schools of learning a tacit *numerus clausus* prevailed. Yugoslavia respected the rights of its Jewish minority. Apart from Nazi Germany, Hungary was the only state which introduced a *numerus clausus* for Jews not only in practice but by official legislation.

In Turkey the right not to appear in court or to transact legal business on their holidays was vouchsafed the Jews. The autonomy enjoyed by Jews for many centuries was gradually narrowed by the new nationalist regime. Turkish was made the language of instruction in schools. Schools could be directed only by Turkish nationals. In 1926 Turkey renounced its minority obligations. The office of the **hakham bashi*, the chief rabbi, was abolished and with it the unified organization of the Jewish communities. Iraq granted to religious congregations the right to form schools in the language of their members. Jewish and Armenian minorities were granted certain autonomous rights.

IN SOVIET RUSSIA. Due to unsettled conditions in Russia during the period of the Peace Conference no arrangements were made there for minorities protection. The country itself, however, experienced inordinate agitation for minority rights during the revolutions of 1917. Again the Jews were most active. Hundreds of meetings and conferences were held as if to celebrate the new-found freedom. On April 3, 1917, Alexander Kerensky, head of the Provisional Government, published a decree removing all restrictions based on "religion, sect, or nationality." All Jewish parties, middle-class or proletarian, gradually united on the question of autonomy. At the end of July 1917 a preliminary conference agreed upon a platform for a Russian Jewish congress to be convened soon. It proposed an elaboration of "the fundamentals of Jewish self-government in Russia; the determination of legal guarantees for the Jewish national minority," as well as the communal organization of Russian Jewry, and the civil and national rights of the Jews in Poland, Palestine, and Romania. The congress never took place due to the seizure of power by the Bolsheviks. On

Nov. 15, 1917, the new Soviet government issued the Declaration of the Rights of Peoples which proclaimed the principle of national self-determination, even to the point of secession. In the Ukraine the Jews were the leading spirits in a flurry of legislative plans designed to establish national-personal autonomy as a fundamental law. On Jan. 9, 1918, the Ukrainian parliament enacted into law a detailed set of articles prepared by the Jewish secretariat. It all came to naught, however, in the political turmoil that ensued with the occupation of the Ukraine by the Germans. It fell to Soviet Russia to launch an experiment in autonomy for minorities on a vast scale. The Soviet government departed from the personal principle of minority rights, namely, that they would apply to all members of a particular nationality throughout the country, and proclaimed, instead, the rights of territorial nationalities. A soviet or a region with a national majority could enjoy cultural autonomy. Since the Jews were scattered all over the country in the large cities, this privilege did not apply to them. Only in hamlets and villages or certain regions where they constituted a majority did they enjoy linguistic, judicial, and educational self-rule. Jews had 67 courts of their own where the official language was Yiddish. In the late 1930s they had five autonomous regions in the Ukraine and the Crimea and 224 local Jewish soviets. In 1931, 160,000 pupils attended Yiddish schools. The high point of this policy was reached in 1927 when *Birobidzhan, a territory in eastern Siberia, was proclaimed a Jewish autonomous region inviting Jewish settlers. None of these efforts, however, were directed at the perpetuation of Jewish identity. On the contrary, the stated purpose of the Soviet government and of the *yevsektsiya (the Jewish sections of the ruling Communist Party) was to eradicate Judaism in favor of atheism and Communism. The Yiddish courts aimed at weaning the Jews away from their accustomed rabbinic courts. The schools proscribed all religious and traditional Jewish content. They declined rapidly before World War II and were not reopened after the war. In the last years of the Stalin era all vestiges of Jewish national life were cruelly obliterated.

In the Western world the demand for minority rights was seldom heard. There the Jews were satisfied with civil rights and the freedom to foster their own religion and culture.

After World War II

In the *United Nations, which after World War II succeeded the League of Nations, no minority rights provisions survived. Instead, emphasis was put on human rights, concerning all men, including members of the majority nation. In 1966 an International Covenant on Civil and Political Rights was drawn up, which in its 27th paragraph stipulates that “in those States in which ethnic, religious, or linguistic minorities exist, persons belonging to such minorities shall not be denied the right, in community with the other members of their group, to enjoy their own culture, to profess and practice their own religion, or to use their own language.” This provision is binding on member-states of the UN which sign and ratify the Covenant.

[Isaac Levitats]

MINOR PROPHETS, a collection of the books of 12 prophets: *Hosea, *Joel, *Amos, *Obadiah, *Jonah, *Micah, *Nahum, *Habbakuk, *Zephaniah, *Haggai, *Zechariah, and *Malachi. This collection counts as a single book (the last) of the second division – the Prophets (Heb. *Nevi'im*) – of the Palestinian Canon. In the Alexandrian Canon (according to the Septuagint), Minor Prophets, again as a single book, occurs in the fourth and last division, that of prophecy, and is the first of the ten books enumerated there, but the order of the first six of the 12 is there Hosea, Amos, Micah, Joel, Obadiah, and Jonah. The designation “Minor Prophets” alternates with the title “The Twelve” as the designation of this collection, the latter being the native Jewish one (Heb. שְׁנַיִם עָשָׂר; Aram. תְּרֵי עָשָׂר, BB 14b) and that of the Septuagint (*Dodekapropheton*), while the former seems to be rooted in the Latin designation of the Vulgate (*Prophetæ Minores*). The adjective “minor” in the title “Minor Prophets” does not reflect upon the relative importance of the 12 prophets in comparison to Isaiah, Jeremiah, and Ezekiel, but rather upon their much smaller size. This is implied by the observation about Hosea in *Bava Batra* 14b. The order of the prophets within the anthology is based on a combination of Midrash, the chronological understanding current at the time of compilation, and certain word associations. For example, Hosea is first because his book opens (1:2): “When God first spoke to Hosea” (cf. BB 14b). Amos is placed third after the Book of Joel because of the occurrence of two very similar verses, one at the end of Joel (4:16) and the second at the beginning of Amos (1:2). Finally, the last three books, Haggai, Zechariah, and Malachi, were put at the very end of the anthology because they were thought to be the only prophets of the 12 who belonged chronologically to the Second Temple period. The Minor Prophets could not have been compiled as an anthology any earlier than the fourth century B.C.E., the probable date of the Book of Jonah, the latest of the 12 books. Its compilation can be no later than the time of Ben Sira (c. 180 B.C.E.), however, since the latter, in praising the Israelite heroes in chronological order, mentions all the other prophets by name, each one in his own age, while the Minor Prophets are grouped together namelessly as “the twelve prophets” (Eclus. 44–49).

[Chayim Cohen]

MINOR TRACTATES. In addition to the 63 regular tractates of the Mishnah and Talmud, there are appended at the end of the fourth order, **Nezikin*, 14 smaller or minor tractates which were first published together in their present format in the Romm-Vilna edition (1886). These tractates contain a wealth of legal and aggadic material. In manuscript and published form, these uncanonical treatises may also be found under different titles, arrangements, and order. Their appellation as minor or smaller tractates does not necessarily refer to their size, but rather to the fact that they were not canonized. **Avot de-Rabbi Nathan* for instance, consists of 41 chapters. **Soferim*, *Semaḥot* (*Evel Rabbati*), and *Kallah Rabbati* are also of considerable length. The other main tractates are **Kallah*, **Derekh Erez Rabbah*, and *Derekh Erez Zuta*. For additional details see the articles on the individual tractates. Also included in this section, however, are seven more brief treatises which were compiled to give in a methodological form the rules of topics which were not dealt with in specific tractates of the Talmud. These are *Gerim*, about proselytes; *Kutim*, about Samaritans; *Avadim*, about Hebrew slaves; *Sefer Torah*, on the writing of a Torah scroll; *Tefillin*, on the precept of **tefillin*; *Zizit*, on the fringes (**zizit*); and *Mezuzah*, on the **mezuzah*; and it is sometimes only to them that the term minor tractates applies (see *Shem ha-Gedolim*, II, 161 and cf. Eccles. R. 5:8, 2). The time when these works were compiled remains uncertain. Some scholars assign them to the end of the geonic period, but recent scholarship favors a much earlier date. M. Higger, in the introduction to his critical edition of these seven minor tractates, judges them to be the “first post-mishnaic compendia regulating specific Jewish practices and usages.” His opinion is that “most of the Minor Tractates are Palestinian in origin, but were later modified or elaborated in Babylonia.” Thus it may be that the original composition of these codes was already completed by 400 C.E. Since they were of Palestinian origin, they were not included in the final redaction of the Babylonian Talmud.

The first medieval scholar to clearly cite one of these brief codes is *Nahmanides. In his *Torat ha-Adam Inyan ha-Hoza'ah* (*Kitvei Rabbenu Moshe b. Nahman*, ed. by C.D. Chavel, 2 (1964), 100) and in his *Milhemet ha-Shem* to Alfasi (Alfasi; MK 16a), he cites the passage in *Zizit* which discusses whether the fringes in the *tallit* in which the deceased is buried should be untied. Menahem b. Solomon *Meiri likewise makes reference to this same passage in *Zizit* (*Beit ha-Behirah al Massekhet Berakhot*, ed. by S. Dikman (1965²), 61b). A similar passage, to be found in *Semaḥot* (ch. 12), is twice cited by *tosafot* (Pes. 40b and Av. Zar. 65b). Although a substantial portion of these tractates consists of material already in the Talmud, they occasionally contain items which are not found elsewhere, such as the above-cited text from *Zizit*. Another example of such

new material is the concept that the main shortcoming of the Samaritans was that they denied the centrality of Jerusalem. *Kutim* concludes with the statement that when the Samaritans renounce Mount Gerizim and acknowledge Jerusalem and the resurrection of the dead, they will be accepted as Jews.

Gerim

Gerim consists of four chapters:

- (1) the preliminary procedure for receiving proselytes is detailed;
- (2) regulations are set forth regarding the circumcision, ritual bath, and sacrifice, of converts;
- (3) the *ger toshav* is defined by Meir as one who has merely renounced idolatry, although according to Judah he is one who will only eat the meat of ritually slaughtered animals;
- (4) Jews are exhorted to maintain a friendly attitude toward proselytes.

Kutim

Kutim regulates the relationship between *Samaritans, Jews, and gentiles, in two chapters:

- (1) sales to and intermarriage with Samaritans are prohibited since they desecrate holy objects, but it is permitted to lend them money;
- (2) buying meat, wine, cheese, and bread from the Samaritans is discussed.

Avadim

Avadim contains three chapters:

- (1) the validity of the regulations concerning Hebrew slaves is limited to the period when the *Jubilee is observed, and the purchase and manumission of bondmen is detailed;
- (2) the relationship between the master and his slave, the slave's family's obligation to redeem him, and his status after redemption are discussed;
- (3) the details of the ceremony prescribed for a slave who does not wish to go free, and the acquiring of freedom by a slave when he is sold to a non-Jew or outside of Palestine are given.

Sefer Torah

Sefer Torah has five chapters:

- (1) details of the writing material that may be utilized are given;
- (2) the blank spaces that must be left between sections of the scroll are explained;
- (3) laws for the reading and respect of the Torah are given;
- (4) the names of God and the interdiction against erasing them are explained;
- (5) the method for writing God's names is laid down.

These five chapters are almost identical with the first five chapters of *Soferim*.

Tefillin

Tefillin contains only one chapter, and it gives the rules for writing the biblical passages on the parchment of the *tefillin*,

the manner and time of wearing them, and those persons who are obligated to wear them.

Zizit

Zizit consists of only one chapter which details the regulations of the fringes (Num. 15:38–40; Deut. 22:12). It discusses such topics as the persons who are obligated to obey this law, the garments which are exempt, the number of threads in each fringe, and the manner of dyeing the blue thread that is part of the fringes.

Mezuzah

Mezuzah has two chapters:

(1) details are given of the parchment to be used and the types of doorposts that require a *mezuzah*;

(2) the exact spot for the *mezuzah*, its case, and differences in regulations for houses within and outside of Palestine are discussed.

In the Romm edition of the Talmud, only *Gerim* has a detailed commentary, titled *Nahalat Yaakov*, by R. Jacob Neuberger of Offenbach. His commentary on the first five chapters of *Soferim* also serves as a commentary to *Sefer Torah*. More recent commentaries to these tractates were published by Samuel I. Hillman of London and R. Hayyim Kanievsky of Bene-Berak (1963–65). These seven tractates have been twice translated into English. Michael Higger published his edited text and translation in 1930. In 1965, the Soncino Press issued a new English translation.

[Aaron Rothkoff]

MINOW, NEWTON NORMAN (1926–), U.S. lawyer and public official. Born in Milwaukee, Wisconsin, Minow served in the U.S. Army in 1944–46. He graduated from Northwestern Law School and was admitted to the Wisconsin and the Illinois Bar in 1950. He served as law clerk to U.S. Supreme Chief Justice Fred M. Vinson (1951–52), and as administrative assistant to Governor Adlai Stevenson of Illinois (1952–53). He was a member of Stevenson's campaign staff during the latter's two attempts for the presidency (1952 and 1956), and was also a partner in two Stevenson law firms (1955–57 and 1957–61). In 1961 President John F. Kennedy appointed Minow chairman of the Federal Communications Commission. Minow caused a furor within the television industry soon after becoming chairman by describing most of its programming as a "vast wasteland." His conception that the FCC should oversee the networks and protect the public interest brought industry charges of government censorship and interference, but resulted in congressional legislation to assist educational television, the passage of the Communications Satellite Bill (1962), and an attempt to vary and enlarge the area of television programming by enabling new channels to operate on the ultra-high frequency band. Under his direction, the FCC also attempted to supervise television and radio advertising

closely. Although he served in that position for only two years, it was estimated that during that time, Minow and his ideas received more news coverage than any other federal official besides the president.

Minow resigned from the agency in 1963 to become executive vice president and general counsel to the *Encyclopaedia Britannica* (1963–65). He then became a partner in the communications law firm Sidley and Austin (1965–91), after which he took on the Of Counsel role. Minow took to teaching as well, serving from 1987 as professor of communications policy and law in the Annenberg Program of Northwestern University.

Active in Jewish affairs, Minow was a member of B'nai B'rith; a director of the Chicago chapter of the American Jewish Committee; and chair of the board of overseers of the Jewish Theological Seminary. He wrote *Equal Time: The Private Broadcasters and the Public Interest* (1964); *Presidential Television* (with J. Martin and L. Mitchell, 1973); *For Great Debates* (1987); *How Vast the Wasteland Now* (1995); and *Abandoned in the Wasteland* (with C. Lamay, 1995).

BIBLIOGRAPHY: L.J. Silver, *Profiles in Success* (1965), 303–13.

ADD. BIBLIOGRAPHY: M. Curtin, *Redeeming the Wasteland* (1995); M. Watson, *The Expanding Vista: American Television in the Kennedy Years* (1990); R. Macneil, *The People Machine: The Influence of Television on American Politics* (1968).

[Ruth Beloff (2nd ed.)]

MINSK, capital of Belarus; in *Poland-Lithuania from the beginning of the 14th century until 1793; under czarist rule, the most important commercial center of Belorussia from the 15th century. Jews first leased the customs duties of Minsk in 1489, and after the expulsion of Jews from Lithuania in 1495 they started to settle in Minsk. In 1579 King Stephen Báthory granted the Jews of Minsk a charter, but in 1606 King Sigismund III prohibited Jews from opening shops there or engaging in commerce. In 1623 the community of Minsk was under the jurisdiction of Brest-Litovsk, but in 1631 the Lithuanian Land Council granted it a special regional status, which included the Russian hinterland. In 1633 King Ladislaus IV confirmed these rights and permitted the Jews of Minsk to acquire real estate on the market square or anywhere else, and to buy land for a new cemetery. During the *Chmielnicki revolt and the Russian-Polish War which followed it, the Jews of Minsk were among those who suffered. In 1679 King John III Sobieski confirmed their right to the ownership of houses and shops, their synagogue and cemetery, and restated their freedom to engage in commerce and crafts and their exemption from all jurisdiction excepting that of the king. These rights were confirmed in their entirety by King Augustus II in 1722. Hence the community of Minsk prospered during the 17th and 18th centuries in spite of the opposition of the townspeople. In 1766, 1,322 Jewish poll tax payers were registered in Minsk. Jews were prominent in the town's commercial life and at the fairs of nearby *Mir and Kapulia (see *Market Days and Fairs). The spiritual life of the community was also enriched. In 1685 a yeshivah was

established by the local rabbi, Moses Mordecai. Among the rabbis and *rashei yeshivah* of Minsk during the 18th century were Jehiel b. Solomon *Heilprin, Aryeh Leib b. Asher *Gunzberg, and Raphael *Cohen.

During the 19th century, Minsk was one of the largest and most important communities in Russia. In 1847 the Jewish population numbered 12,976, rising to 47,562 (52.3% of the total population) in 1897, which made Minsk the fourth largest community in the *Pale of Settlement. Jewish life in the first half of the 19th century is reflected in the community records, which were published with a Russian translation by Jacob *Brafman. *Mitnaggedim* were influential in Minsk, and Hasidism was relatively weak. There were several yeshivot in the town, the largest of which was known as “Blumke’s Kloyz.” At the end of the 19th century Jeroham Judah Leib *Perelmann, who was known as “the *gadol* [the great scholar] of Minsk,” officiated there as rabbi. A circle of *maskilim* also existed in the town, and in the 1840s several Jewish schools which included secular subjects in their curricula were opened there. Minsk was one of the places where the Jewish labor movement originated and developed. In the mid-1870s circles of Jewish Socialists were organized, which were very active during the 1880s and 1890s. The years 1893–94 also saw the birth of the “national opposition” to them, led by A. *Liessin. In 1895 a convention of Jewish Socialists was held in Minsk, which discussed the projected establishment of a Jewish Socialist Federation. The Jewish Socialists of Minsk sent delegates to the founding convention of the *Bund in 1897, and Minsk became one of the centers of the Bund’s activities, being the first seat of the movement’s central committee until 1898, when it was dispersed by the police. From 1901 to 1903, Minsk likewise became the center of the activities of the *Independent Jewish Workers’ Party. Jews were predominant in the demonstrations and revolutionary meetings held in the town in 1905 and were also the principal victims of the riots directed against liberal elements in general which took place in October 1905. Groups of *Hovevei Zion* (see **Hibbat Zion*) were first organized in Minsk in the early 1880s. In 1882 the Kibbutz Niddehei Israel association was founded there, and in 1890 the Agudat ha-Elef. Later, Zionism became very influential. In 1902, with the authorization of the government, the Second Convention of Russian Zionists was held in Minsk. In the communal elections of 1918, the Zionists and *Po’alei Zion won 33 seats, the Orthodox 25 seats, the Bund 17 seats, the nonaffiliated six seats, and the *Folkspartei and the *United Jewish Socialists Workers’ Party two seats each.

After the establishment of the Soviet regime, Jewish communal and religious life was silenced at Minsk as elsewhere in the Soviet Union. The suppressed religious and national institutions were replaced by institutions of Jewish culture based on the Yiddish language and Communist ideology, and Minsk became an important center of Jewish-Communist cultural activity in the Soviet Union. Yiddish schools were established, and at the Institute of Belorussian Culture, founded in 1924, a Jewish section was organized. It published several scientific

works, including *Tsaytshrift* (5 vols., 1926–31) devoted to Jewish history, literature, and folklore. A Jewish department was also established (1921) within the faculty of education of the University of Minsk. These institutions, however, were closed down in the mid-1930s. Various newspapers, periodicals, and other publications in Yiddish were issued in the town. These included the daily newspaper *Der Shtern* (1918–21), *Der Veker* (1917–25; until 1921 the organ of the Bund), *Oktyabr* (1925–41), and the literary monthly *Shtern* (1925–41). In 1926 the Belorussian Jewish State Theater was opened, presenting performances until June 1941. In 1926 there were 53,686 Jews in Minsk (40.8% of the population), increasing to 70,998 by 1939 (29.7% of the total population).

Hebrew Printing

In 1808 Simḥah Zimel set up in Minsk a Hebrew printing press which he had brought from *Grodno. Up to 1823, he had printed at least 12 books, mostly liturgical. Another press was established in 1820 by Gerson Blaustein, who by 1837 had also printed 12 books, again mostly liturgical, though including one volume of Hebrew poetry by M. *Letteris (1832). In the 20th century a Hebrew press once more operated in Minsk, printing books and newspapers mainly for local use. After the Russian Revolution, the studies in the history of Russian Jewry and Yiddish literature which were published in Yiddish by the Jewish section of the Institute of Belorussian Culture were printed in Minsk.

The Minsk Province

In czarist Russia, the province of Minsk was one of the “western” provinces of the Pale of Settlement. In 1797 its *gubernator* presented Czar Paul I with the resolutions of the meetings of the province noblemen, who alleged that the Jews were responsible for the sorry plight of the peasants of the province and for the famine which then raged. This statement was the forerunner of the program to expel the Jews from the villages, which later took the form of the “Jewish Statute” of 1804 (see *Russia). In 1847 there were 37 Jewish *kahal* administrations, in which 87,633 Jews were registered. In 1897 the Jews of the province numbered 345,015 (16% of its population); 37.5% of them lived in the towns, the same number in the townlets, and 25% in the villages. The largest communities of the province (with the exception of Minsk itself) were then *Pinsk (21,065 Jews), *Bobruisk (20,759), *Slutsk (10,264), *Borisov (7,722), *Mozyr (5,631), *Rechitsa (5,334), *Novogrudok (5,015), *Nesvizh (4,687), and Shchedrin (4,002); 41.5% of the province’s Jews earned their livelihood in crafts and as hired labor, and 28.9% from commerce. About 21,000 Jews (6.1% of all those in the province) depended on agriculture, and over 6,000 of them lived in the mostly small Jewish agricultural settlements. In Minsk oblast there were 70,713 Jews (13.1% of the total population) in 1926; in the Minsk oblast as it had been organized in 1938 (with the exception of the town of Minsk itself), there were 9,054 Jews (0.61% of the population) in 1959.

[Yehuda Slutsky]

Holocaust Period

Some 100,000 inhabitants were left in the city when the German forces entered on June 28. The population rose to 150,000 as the front line moved farther east, and tens of thousands who had fled and had been overtaken by the speed of the German advance, turned back. About one-third of these were local Jews. Their number was increased by refugees from as far west as *Bialystok, as well as by survivors of mass executions carried out by the *Einsatzkommandos* (mobile killing squads) in the vicinity, so that another 30,000 Jews were added. Later, about 23,500 German, Austrian, and Czech Jews were deported to Minsk, and settled in a separate ghetto, so that despite the fact that a large number of Minsk Jews had been murdered before the establishment of the ghetto, at least 85,000 Jews were confined in it. Their choice of Minsk as a site for a large Jewish slave labor camp was dictated by military needs and the geographical position of the city in the rear of two German army groups advancing on Leningrad and Moscow.

Immediately following the occupation of Minsk, the German city commandant ordered all males between the ages of 15 and 45 to report for registration under the penalty of death. About 40,000 reported and, in a field at Drozdys outside Minsk, were segregated in three sections: Jews, Red Army men, and non-Jewish civilians. On the fifth day the non-Jewish civilians were released. All Jewish members of the intelligentsia were ordered to step forward; the several thousand who did so were marched off to the nearby woods and machine-gunned. The remaining Jews were moved to Minsk prison and released on Aug. 20, 1941. On the same day the city commandant issued an ordinance for the establishment of a ghetto in a suburb consisting mostly of wooden cottages, and ordered every Jew to wear the yellow badge. All Jews had to be inside the ghetto by July 25, but the Judenrat managed to delay the date until the middle of August by means of bribes. As there were no Jewish communal organizations to provide the Germans with officials to carry out their orders, a group of Jews was arrested. One of them, Ilya Mushkin, who knew a little German, was appointed head of a Judenrat and ordered to select the other officials.

Once inside the ghetto, the Jews were terrorized by nightly murders and kidnappings carried out by the Germans and their local henchmen. On the nights of August 14, 25, and 31, thousands were taken away and only a few appeared in the dreaded "labor" camp on Shirokaya Street, where in addition to Jews the Germans held non-Jewish Red Army men. On Nov. 7, 1941, 12,000 Jews were seized and taken to Tuchinka, where they were machine-gunned at the side of the newly dug pits. Some of the emptied streets were used to house 1,500 German Jews, most of them from *Hamburg. By means of barbed wire fences, the ghetto was henceforth divided into three sections: the main ghetto for "unskilled" Jews; a section for "skilled" workers and Judenrat employees, including the ghetto police; and a section housing the German, Austrian, and Czech Jews. On Nov. 20, 1941, 5,000 people were removed to Tuchinka, where they were murdered. Some of the emptied

streets were used to house 6,500 Jews brought from Germany, Austria, and Czechoslovakia.

At the end of February 1942, the *Gestapo asked the Judenrat to turn over 5,000 Jews not employed in Wehrmacht enterprises. The resistance leaders ordered Serebryanskiy, the chief of the ghetto police and a member of the resistance organization, to use his trustworthy policemen to warn the Jews of the impending massacre and tell them to hide. On March 1 the Germans ordered the Judenrat to dig a pit in Ratomskaya Street, an unpaved ravine in the center of the ghetto. On the following morning, after the columns of workers had left the ghetto, Nazi officials arrived and demanded the 5,000 victims. Informed that the Judenrat had been unable to collect them, the Germans began a hunt for their victims. Dr. Chernis, the woman in charge of the ghetto orphanage, and Fleysher, the supervisor, were ordered to bring their charges in front of the Judenrat building. Unaware of what awaited their children, they led them, dressed and washed, and carrying the youngest in their arms, toward the building, but when they arrived in Ratomskaya Street, they were all thrown into the pit and buried alive. When the columns of workers returned at night, several thousand were taken to *Koidanovo and murdered there. Others were forced to join the people rounded up inside the ghetto and butchered in the Ratomskaya Street ravine.

Shortly after the March 2 massacre, the Germans discovered the existence of the underground organization in the "Aryan" part of Minsk in which several Jews, such as R.M. Bromberg and M.P. Malkevich, had played a prominent role, and its connection with a similar organization inside the ghetto. On the night of March 31, 1942, the Gestapo raided the ghetto and arrested several resistance leaders, but failed to capture the head of the resistance, Hersh *Smolar. The raid was followed by nightly massacres directed against relatives and neighbors of runaways, in an attempt to discourage Jews from fleeing to the forests to join the partisans. On July 28, 1942, after the labor columns left the ghetto, the Germans and their local collaborators invaded the ghetto and for three days murdered and tortured the inhabitants. Some 10,000 were murdered, including 3,500 German, Austrian, and Czech Jews, most of whom were old people, women, and children. Nine thousand Jews still survived. On Feb. 1, 1943, 1,500 Jews were rounded up and shot over open pits at Maly Trostenets. The number of survivors was systematically reduced by the shooting of smaller groups of men and the gassing of women and children in vans during the summer. To speed up the total annihilation, a transport of some 2,000 people, including a group of Jewish Red Army men held in the Shirokaya Street camp, was sent to *Sobibor on Sept. 18, 1943. This transport included Lt. Alexander *Pecherski and Shelomo Lejtman, the latter a Jewish Communist from Poland, who together led the revolt in the death camp on Oct. 14, 1943. On September 22, Generalkommissar Kube was killed by a bomb placed by his Belorussian maid, E.G. Mazanik. The assassination was organized by David Keymakh, the political commissar of the detachment commanded by G.M. Linkov, who as "Uncle Batya"

became one of the most successful Soviet partisan leaders. This event speeded up the final liquidation of the ghetto, which took place on Oct. 21, 1943.

Resistance

The resistance record of the Jews imprisoned in Minsk ghetto is unique. One Sunday in 1941, within days of finding themselves inside the ghetto, a group of local Jews and Jewish Communists from Poland met and decided that it was the duty of the Minsk Jews to take an active part in the war against the German invaders. They rejected the possibility of armed resistance inside the ghetto and decided to devote all their efforts to effecting the escape of the largest possible number of Jews into the forests in order to become partisans. Four resistance groups arose in the "Aryan" part of the city in August and September 1941. However, it was only after the November 7 massacre that Hersh Smolar, the Polish-born leader of the Jewish resistance, met Isai Pavlovich Kozinets, known as Slavek, the leader of one of the four groups, who subsequently became the leader of the entire underground movement in Minsk. It was only in 1969 that it became known that Kozinets was a Jew born at Genichesk on the Azov Sea and that his first name was Joshua. A petroleum engineer by profession, Kozinets had been in charge of the installations in Bialystok at the outbreak of the war. The underground organization inside the ghetto then became an integral part of the city underground and was known as the "Ernst Thaelmann district," in recognition of the part played by the ghetto inhabitants in the struggle against the Nazis. The Judenrat itself, under Mushkin, took orders from the city-underground committee and played a unique part in diverting much of the production from the workshops and factories manned by Jews to the needs of the partisans. The Jewish organization provided the city underground with news of what was happening in the outside world by establishing a radio monitoring station. It also supplied a printing press and printers, while the ghetto hospital provided surgical and other treatment for wounded partisans. Moreover, Jews employed in the factories working for the Wehrmacht set an example to their Belorussian fellow workers in how to sabotage production. In 1942 the ghetto resistance was better organized and more efficient than the city organization, and the Jews, who ran incomparably greater risks than their Russian and Belorussian fellow citizens, contributed greatly in the common fight against the Germans. In return, the Jewish resistance leaders asked their "Aryan" comrades to help them save the maximum number of Jews from slaughter by making possible their escape into the forests to become partisans. As their assistance proved inadequate, the Jews also had to take the initiative in developing the partisan movement. They organized the nuclei of future partisan detachments inside the ghetto, while M. Gebelev and M. Pruslin, two of the Jewish resistance leaders, helped organize similar ten-man teams in the "Aryan" part of the city. Furthermore, when most of the "Aryan" resistance leaders fell into the hands of the Germans in the spring of 1942, Gebelev and other Jews played a deci-

sive role in rebuilding the city organization. Gebelev was actually captured when preparing the escape of a group of Russian prisoners of war to the forests. The first organized group of Jewish partisans left the ghetto in December 1941 to join Captain Sergeev-Bystrov's detachment, which in time grew into the Stalin Brigade. Many Jews escaped with the help of the railwaymen's resistance group headed by Kuznetsov; they formed a large proportion of the Narodny Mstitel ("People's Avenger") Brigade, which Kuznetsov later commanded. The Jews of Minsk created the 406, Kutuzov, Budyonny, Dzerzhinskiy, Sergei Lazo, and Parkhomenko Detachments, as well as the 106 Family Detachment commanded by Semion Zorin (who immigrated to Israel), which provided protection in the forests for over 600 Jewish women and children. Jews also formed a large percentage of the Frunze Detachment. The Kutuzov Detachment became the nucleus of the Second Minsk Brigade, while the Parkhomenko Detachment, formed mostly by Jews who had been helped to escape from the ghetto by boys and girls ranging in age from 11 to 15, served as the basis of the Chapayev Brigade. Hundreds of Minsk Jews were also active in other brigades. After the liberation about 5,000 Jews returned from the forests.

[Reuben Ainsztein]

Contemporary Jewry

A memorial to the Jewish victims of the Holocaust was erected in Minsk immediately after World War II – the only one in the U.S.S.R. – bearing a Yiddish inscription which explicitly mentions Jewish victims. On Jan. 13, 1948, Solomon *Mikhoels, the chairman of the Jewish *Anti-Fascist Committee and the director of the Jewish State Theater in Moscow, was murdered on Lodochnaya Street in Minsk while visiting the city on an official mission. Later the murder was acknowledged to have been the work of the secret police (on Stalin's orders). In the 1959 census 38,842 Jews were registered in Minsk, 5,716 of whom declared Yiddish to be their mother tongue. However, the population figure was estimated to be in fact between 50,000 and 60,000. The Great Synagogue of Minsk was closed down by the authorities in 1959, and in the same year private religious services were dispersed by the militia. A small synagogue was left, but in 1964 it was destroyed, as the site was earmarked for new apartment buildings. Eventually the Jewish congregation was allowed to open a small synagogue in a wooden house on the outskirts of the city. There is no Jewish cemetery in Minsk, but Jews are buried in a separate section in the general cemetery. Matzah baking was banned for several years, and on March 23, 1964, an article in the local newspaper, *Sovetskaya Belorussiya*, condemned the sending of packages of matzah to Minsk from Jewish communities abroad. Kosher poultry, however, was available. In 1968 several young Jews were arrested for Zionist activity. In the 1990s most Jews left for Israel and the West.

MINSK CONFERENCE, the second conference of Russian Zionists, held publicly and with the government's permission in Minsk from Sept. 4 to Sept. 10, 1902. The number of representatives was estimated at 526. The Minsk Conference was in essence the "first all-Russian Zionist Congress," an assembly of a national minority in a state that had suppressed national minorities and denied them the right of assembly. Two organized factions were represented at the conference: *Mizrachi with 160 representatives and the *Democratic Fraction with about 60 representatives. The majority of representatives did not align with either group but organized a neutral faction. The main point of contention between Mizrachi and the Democratic Fraction was the cultural question. Mizrachi opposed the Zionist Organization's conducting cultural activities, demanding instead, practical work in Erez Israel by means of the *Jewish National Fund (JNF) and the *Jewish Colonial Trust. Jehiel *Tschlenow was elected chairman. M. *Ussishkin proposed the establishment of a "Zionist Guard" composed of young men whose task would be to deliver public speeches on the Zionist idea, organize schools, write propaganda pamphlets, etc. This call for practical efforts enthused many delegates, especially among the youth. The focal point of the conference was the delivery of reports on cultural activities by N. *Sokolow and *Aḥad Ha-Am. The latter explained his outlook on the close relationship between the movement of national renaissance and cultural work; Sokolow proposed that Hebrew be the official language of the Zionist Organization. Isaac *Reines, the Mizrachi leader, expressed his objections to the Zionist Organization's conducting cultural activities. After a vehement debate, the conference's presidium summoned both Aḥad Ha-Am and Reines to a consultation, in which the latter accepted the proposal to choose two educational committees – a traditional one and a progressive one. This arrangement dissolved the crisis that threatened to split the Russian Zionist Movement. After the conference, there was a marked change for the worse in the government's attitude toward the Jews in general and the Zionist Organization in

particular. During Passover 1903 the *Kishinev pogrom took place, and in June of the same year all Zionist activities were totally prohibited in Russia.

MINSKI, NIKOLAI MAXIMOVICH (pseudonym of **N.M. Vilenkin**; 1855–1937), Russian poet and essayist. Born in Glubokoye, near Vilna, Minski studied law at St. Petersburg. For a time he was influenced by P. *Smolenskin and the rising Jewish nationalism among young, educated Russian Jews. In 1879–80 he wrote a series of essays, under the pseudonym "Nord-Vest," in which he argued that the Jewish problem in Russia could be solved by the creation of a Jewish farming class which would "cleanse Judaism of its impurities." He also claimed that all Jewish groups were opposed to socialism. Minski later became alienated from Jewish affairs, and before the turn of the century converted to Christianity. In the 1870s he lived in Italy and Paris, where he taught the children of Baron G. Ginzburg. Due to the antisemitism of the journal "Novoye Vremia," he published in *Voskhod* (nr. 1, 2, 1888) the drama in verses "The Siege of Tulchin," where he compared the *Chmielnicki murders with the pogroms of 1881. He published his first poems in 1876. His early poetry, such as *Belyye nochi* ("White Nights," 1879), deals with socialist and folk themes, but his later writing betrays his disillusionment with socialism and an attraction to mysticism and Nietzschean philosophy. During the 1905 Revolution, Minski helped to publish *Novaya zhizn* ("New Life"), the organ of the Bolshevik wing of the Social Democrats. He translated the *Internationale* into Russian, but with the failure of the Revolution he was imprisoned and thereafter he was freed and left Russia and lived in Berlin, London, and Paris. During the 1917 Revolution he wrote anti-Bolshevik articles for the French press. Some of Minski's poetry, which Soviet critics have stigmatized as decadent, appeared in a Hebrew translation by Leah Goldberg (*Yalkut Shirat he-Ammim*, 1 (1942), 5–6). He translated into Russian Homer's *Iliad* and some poems of Yehuda Halevi, Byron, Shelley, and Verlaine.

[Yitzhak Maor]

MINSK MAZOWIECKI (Pol. **Mińsk Mazowiecki**), town in E. central Poland. Minsk Mazowiecki received urban status in the first half of the 15th century, but Jewish settlement did not develop there until the close of the 18th century. From the beginning, and particularly during the second half, of the 19th century, the number of Jews increased until they were the majority in the town. In 1827 there were 260 Jews in a general

population of 770, while by 1864 they numbered 620 (46.3% of the total population). In 1897 there were 3,445 Jews (55.6%). During World War I the number of Jews decreased as a result of migration to Warsaw and other large centers. In 1921 the Jewish population numbered 4,130 (39.3%). During the period between the two world wars the Polish population increased considerably, while the Jewish population grew at a slower rate. On the eve of World War II, 5,845 Jews lived there.

The Jewish community was not at first independent; at the close of the 18th century the rabbi also served the Kaluszyn community. During the 19th century ḥasidic groups such as those of Gur (*Gora Kalwaria) and Parysow gained in strength, and the court of the *zaddik* of Minsk Mazowiecki was established by R. Jacob Perlov at the close of the 19th century. After World War I his successor, the *zaddik* Alter Israel Simeon, removed his seat to Warsaw. There were eight Jews among the 24 members of the municipal council elected in 1927. The Jewish population's political affiliations may be deduced from the 1931 elections to the community council, which included seven members of *Agudat Israel, four craftsmen, and one member of right *Po'alei Zion. The Jews of Minsk Mazowiecki earned their livelihood principally from small trade and crafts. During the 1930s they aroused the jealousy of the Polish tradesmen and craftsmen, who declared an economic war on them. As a result of this struggle, severe anti-Jewish riots broke out in May 1936, which were fomented by the antisemitic *Endecja party and destroyed the means of livelihood of the Jews. Antisemitic agitation was particularly violent in the town on the eve of World War II.

[Shimshon Leib Kirshenboim]

Holocaust Period

In 1940 about 2,000 Jews from Pabianice, Kalisz, and Lipno were forced to settle in Minsk Mazowiecki. In August 1940 a ghetto was established and on Aug. 21, 1942, the great *aktion* in Minsk Mazowiecki took place when about 1,000 were shot on the spot. Almost all of the rest of the Jewish population was transferred to the *Treblinka death camp and exterminated there. Only two groups of workers in the town were left: one, with about 150 men, was transferred to a camp in the Rudzki factory; and the second, with over 500 men, was placed in a camp in the Kopernik school building. Another several hundred succeeded in fleeing the town. Some of them organized small partisan units which became mixed Jewish-Russian units and operated for some time in the region. On Dec. 24, 1942, the Germans shot 218 workers from the Kopernik camp. On Jan. 10, 1943, this camp was liquidated. On the same day the Jewish prisoners offered armed resistance, during which a few Germans were killed or wounded. On June 5, 1943, the camp in the Rudzki factory was liquidated and all its inmates were shot. No Jewish community in Minsk Mazowiecki was reconstituted.

MINSKY, LOUIS (1909–1957), U.S. journalist. Born in England, Minsky went to the U.S. in his youth. He became a special writer on religious topics and in 1934 established the Religious News Service as an independent affiliate of the National Conference of Christians and Jews. It was dedicated to providing authoritative and bias-free news about religion and ethics to both the secular and religious press. Minsky remained head of this interfaith press agency, serving daily newspapers, religious periodicals, radio, and television.

Now the oldest secular news agency covering religion and ethics, RNS is owned by Newhouse News Service and its parent, Advance Publications, Inc. Its daily and weekly news wires are syndicated in hundreds of newspapers, reaching more than 20 million readers worldwide. In the past, it covered such stories as the civil rights movement, the persecution of the Jews during World War II, the rise of the evangelical movement, the Vietnam antiwar movement, and the founding of the State of Israel, as well as Pope John Paul II's visit to the Holy Land in 2000. Ever widening its scope, its coverage includes such topics as Islam, Asian religions, New Age, tribal beliefs, gay rights, and sexual harassment.

MINTCHINE, ABRAHAM (1908–1931), painter. Mintchine was born in Kiev, Russia, where he became apprenticed to a goldsmith. He went to Berlin in 1923 but in the following year went to France and began to exhibit in the Salon des Indépendents. By the time of his premature death, Mintchine had established himself as one of the most gifted of the East European artists who settled in Paris and who constituted the Paris School of Art. He painted still-life, compositions, and landscapes, but the most striking part of his output was a series of superb self-portraits. Early influences of Cubism were soon abandoned for a broader style, closer to German Expressionism, but devoid of *angst* or nervous anxiety. René Gimpel, the distinguished French art dealer, was one of Mintchine's main patrons. He is represented in leading public museums throughout the world, including his native Kiev; his masterpiece, a self-portrait as a harlequin, is in the Tate Gallery, London.

MINTMASTERS AND MONEYERS. In the Middle Ages rulers tended to lease the right of minting coins to mintmasters or to grant and sell the right to their territorial vassals, who themselves employed such mintmasters. Jews carried out this prestigious and profitable enterprise mainly either as suppliers of precious metals for minting purposes or as distributors of coins; very rarely were they the actual craftsmen. In general, in the later Middle Ages, the Jewish master of the mint or purveyor was superseded by a Christian.

The Jew *Priscus was probably master of the mint for King Clotaire of the Franks and issued the royal coins at Chalon-sur-Saône around 555 C.E. Some Czech numismatists consider that Omeriz, Mizleta, and Nacub, moneyers for Duke

Boleslav II in Prague toward the end of the tenth century, were Jews. This is also true of Zanta and Noc, who worked at the Vysehrad mint (near Prague). Ladislaus II of Bohemia (1158–73) had a Jewish mintmaster in his province of Lusatia. In the 13th century a cleric complained that the Jews were still lessees of the mint and customs. For much of the 12th and 13th centuries the coinage of some Polish rulers was issued by Jewish mintmasters and often had Hebrew inscriptions on the coins. Boleslav IV (1146–73) used Jews to mint and distribute his currency. Shortly after, Casimir II (1177–94) allowed a Hebrew inscription to appear on state coins. Mieszko III (1173–77, 1195–1202) gave a life grant to the Jews to lease the state mint, and Polish currency in the last two decades of the 12th century was stamped solely in Hebrew. Most of the inscriptions were various dedications to Mieszko. Boleslav of Kujawy and Mieszko the Younger imitated their father. Boleslav permitted his own name to be stamped in Hebrew, while Mieszko the Younger allowed the names of Jewish mintmasters, such as Ben Jacob and Joseph ha-Kohen, to be inscribed; sometimes the names covered the entire face of the coin, as in the case of R. Abraham b. Isaac Nagid. Przemyslav I later continued this practice some 40 years, as did his son Przemyslav II; Menahem, Jacob, and Abraham were mintmasters whose names were stamped on coins.

In later Polish history, Jews continued to be mintmasters, although no Hebrew appeared on their coins. In 1360 the Cracow mint was transferred to *Lewko, an important Jewish financier. Under Sigismund I, between 1509 and 1518, Abraham *Ezofowitz was minister of the exchequer and in charge of minting coins. In 1555 Sigismund II leased the mint in his Lithuanian province of Poland for three years to a Jew in Vilna. He again gave the Vilna concession to the Jews Felix and *Borodavka in 1560. Because of their prominence in the fields of money changing, moneylending, and finance, Jews participated in minting activities in Poland almost without interruption from the early stages of the kingdom until its partition. From the 17th century, the Councils of the Lands, both in Poland and Lithuania, showed much concern and great reservation about coin minting and the coin trade.

Jews leased mints in Christian Spain as early as the 11th century. Bonnom (Shem Tov) made gold coins under the authority of Count Ramón Berenguer I of Barcelona. In 1066 the count's son sold the right to mint coinage to a syndicate which included David b. Jacob ha-Ivri. *Benveniste de Porta (d. 1268) leased the mint of Barcelona from James I of Aragon. Sancho IV of Castile gave a similar concession to Abraham el Barchilon in 1287. A century later, in 1331, Alfonso XI of Castile repeated this with Samuel *Ibn Waqar (Aben Hucar); Pedro IV of Aragon gave control of the royal mint to a Jewish company at about the same time.

As early as 1063 Queen Anastasia of Hungary permitted a Jew to mint his own coins at the royal mint. Hebrew appears on a coin of Andrew II in the early 13th century. Andrew's Golden Bull of 1222 excluded Jews and Muslims from the office of mintmaster, but the prohibition was disregarded, for

the coins of his son Bela IV and his grandson Stephen V bear Hebrew letters, apparently standing for the initials or signs of Jewish mintmasters.

The first Jew recorded by name in Austria was *Shlom the mintmaster, massacred by crusaders in 1195. The nobility obtained a decree in 1222 specifically excluding Jews from the post, but Jews were again employed in this capacity some 40 years later. Jewish mintmasters were found in other German states and principalities, particularly in the 12th century, though their role was much less significant in the centuries that followed. In the Wetterau region, thin coins stamped on one side only, known as bracteates, were issued between 1170 and 1180, with the name David ha-Kohen imprinted in Hebrew. In this same period Otto the Rich, margrave of Meissen, employed Gershon, who also struck his name in Hebrew on bracteates. Nearby, at Lausitz and Pegau, Jews operated mints for the local nobility. Twelfth-century bracteates from Saxony, made under both Count von Mansfeld and Duke Bernhard I, show Hebrew letters. Similarly Jehiel, the name of a Jewish mintmaster at Wuerzburg in the early 13th century, is clearly marked in Hebrew on numerous bracteates. The question of whether a Jewish mintmaster might operate on the Sabbath appears twice in contemporary responsa; he might do so only if he had a Christian partner. The number of Jewish mintmasters was restricted, however, both by the appearance of Christian symbols and formulas on coins and by guild regulations.

The 16th and 17th centuries witnessed political and economic developments in central Europe which enabled Jews to play an unprecedented role in purveying. The growing independence of the many petty German states, the mercantilist theory of the supreme value of precious metals for state economy, as well as the readiness of the unprincipled rulers to issue debased coin, combined to create a need for expertise and initiative. The increased demand for currency was thwarted by the depletion of the silver mines; the metals had to be imported from the Americas or bought at the entrepôts of Amsterdam, London, and Hamburg, where Sephardi Jews were prominent in the bullion trade. In Poland, too, Jews were experts in all aspects of the coin trade. The princes and rulers of the petty and larger states of the Holy Roman Empire and elsewhere turned to them for purveying, minting, and distributing currency. This was done by means of contracts (see *contractors) between the ruler and his *Muenzjude* ("mint Jew"), who was to be found at virtually every court. The purveying of silver was conducted by a sophisticated network of contractors and subcontractors reaching down to the level of the peddler (see *peddling), entrusted with the task of buying up foreign coinage, silver and copper wares, and anything else suitable. The actual minting was supervised by Jews, contractors of the mint. The coin dies were often made by Jewish seal engravers, a profession which Jews tended to monopolize, by virtue of its being free of medieval guild restrictions. The distribution of the freshly minted, often inferior quality coinage was often entrusted to military contractors, frequently Jews.

While *Muenzjuden* were active throughout the 17th and 18th centuries, their activity increased even further during the unstable periods of intensive monetary activity, especially so from 1618 to 1623, the 1670s and 1680s, from 1756 to 1763, and at all times during war and turmoil. During these crucial phases the activity of the *Muenzjuden* brought them into a disrepute that aroused anti-Jewish feelings, reaching a peak during the Seven Years' War.

Among the more prominent Jewish mintmasters of the 16th century were Phibes of Hanover, a lessee of the mint at Wunstorf, Brunswick, in 1566, and Isaac Meir (Mayer) of Prague, who administered the mint from 1546 to 1549. The most famous was *Lippold, the mintmaster of Brandenburg, who ruled the electorate's Jewry with an iron hand. In the first decades of the 17th century, a number of Jewish mintmasters and contractors achieved fame, influence, and notoriety, such as Albertus *Denis (Alvaro Diniz), Jacob *Bassevi of Treuenberg, and Israel Wolf (Auerbacher) in Vienna. In Breslau Manasseh of Hotzenplotz gained a foothold to power through his services to the mint, and the number of Jewish silver purveyors in other minting centers in Austria and southern Germany was large. In 1627 they supplied 29% of the silver to the Breslau imperial mint and 50% in 1656. The dependence of the government on such purveyors increased in the 18th century to 78% in 1704, and to 94% in 1720. In the crisis of the 1670s and 1680s Jews were less prominent, although some *Court Jews were active in the precious metals and coin trades. Among such Court Jews was Jacob Mussaphia, of the duchy of Holstein-Gottorf. Jewish mintmasters reestablished communities in Saxony, from which Jews had been expelled. The nuclei of the Jewish communities of Leipzig and Dresden were formed by the *Muenzjuden*. Gerd Levi (1659–1739) received a license to buy and supply silver (1710) to the Leipzig mint; his son, Levi Gerd, continued in his father's footsteps.

The classical country of Jewish minting activity, however, was Prussia. Throughout most of the 17th and 18th centuries the *Muenzjuden* constituted the leadership of the Berlin community. Israel Aron, first head of the newly reconstituted (1671) community of Viennese exiles, was purveyor to the Berlin mint. His widow, Esther, married the court jeweler Jost *Liebmann and received (between 1700 and 1713) permission to mint large series of small coins as payment for the precious stones which she had supplied to the court. Levin Veit monopolized the purveying of silver in the years 1717 to 1721 and received permission to smelt and refine silver. In the 1750s two firms, that of Daniel *Itzig and members of the *Gomperz family, and that of V.H. *Ephraim and members of the *Fraenkel family, competed fiercely, one outbidding the other for the state minting contract. Frederick II's growing and urgent demands for funds during the war forced the competing firms into a partnership (in 1758), which leased all Prussian and Saxon mints. The Saxon mints of Leipzig and Dresden had been occupied by Frederick, who turned them over to his entrepreneurs, who then issued successive series of millions of more debased Saxon coins. These were known

as "Ephraimiten" and gave rise to the bitter popular refrain: "Pretty on the outside, worthless within; on the outside Frederick, Ephraim within." Frederick instituted similar proceedings with the currency of Mecklenburg-Schwerin, Anhalt-Zerbst, and Anhalt-Dessau, and he was also forced to debase Prussian currency. The last Ephraim-Frederick contract was signed on Dec. 17, 1762. After the war *Muenzjuden* were employed in buying up the corrupt coinage and in supplying silver for the reconstituted currency. Ephraim and his sons were gradually overshadowed by the Itzig family, who were sole purveyors of precious metals between 1771 and 1786. One of Itzig's many agents was David *Friedlaender of Königsberg and his sons (David was the most talented). The last important mint entrepreneur was Liepmann Meyer Wulff of Berlin, who supplied the mint between 1799 and the Prussian debacle of 1806, after which thorough governmental reforms were introduced which abolished the need for the services of private silver and gold purveyors.

The tradition of Jewish moneyers and mintmasters in the Muslim world goes back to the Middle Ages. A certain Sumayr was die cutter and mintmaster for Abdalmalik (685–705), the Umayyad caliph at Damascus. Since the earliest Muslim coins were struck at this time, Sumayr was one of the technical founders of Islamic coinage. Jewish moneyers were known in Cairo from earliest times, possibly being successors to those previously operating in Alexandria. Japheth b. Abraham, in partnership with two other Jews, was administrator of the Fostat mint (see *Cairo) in about 1086. A brief mention is made in a document from the Cairo *Genizah* of two Jewish partners working the caliphate mint in the second half of the 12th century. The most noted Cairo mintmasters were Isaac *Sholal and Abraham Castro, who was appointed to the position after the conquest of Egypt by Sultan Selim (c. 1520). When the Egyptian viceroy, Ahmed Pasha, plotted independence, it was Castro who informed Constantinople. He was reinstated after Ahmed's defeat in 1524. In the 1660s this same position was held by the court banker Raphael Joseph, known as Chelebi. Under Murad III (1574–95) the director of the Turkish mint was a Jew, Hodja Nessimi (or Nissim). In this same period, Moses *Benveniste – known to the Turks as Hodja Moussahibi – was involved in the currency "reform" which led to a revolt of the janissaries against "Jews' Money" in 1589. Samuel b. Abraham, head of the Crimean Karaites, was moneyer to the last Tatar khan in the mid-18th century. As the treasury minister, he held the official title of Aga. His son Benjamin succeeded him in both position and title. When the Crimea was conquered by Russia in 1783, Benjamin was permitted to retain his title. Yaḥyā b. Judah *Badiḥi (1810–1888) was minter for the imam of Yemen in the mid-19th century.

MINTZ, MOSES BEN ISAAC (15th century), German talmudist. Moses was born in Mainz sometime between 1420 and 1430. He studied under his father, Israel *Isserlein, and Jacob *Weil. During his extensive travels, he visited various towns, investigating their customs and communal regulations. His first rabbinate was at Wuerzburg where he served for a short time, until the expulsion of the Jews from the town in 1453. He proceeded to Mainz, where he stayed until the expulsion of 1462. From there he went to Landau and in 1464 to Ulm. In 1469 he was appointed rabbi of Bamberg. Four years later he went to Nuremberg and the following year to Posen. While there he decided to immigrate to Erez Israel; he had already made all final preparations when for some reason he had to abandon his plan, and it appears that he remained in Posen until the end of his life. The year of his death is unknown.

Mintz's influence spread in Germany and beyond. He was involved in communal affairs and individuals, including outstanding scholars, as well as communities turned to him with their problems and disputes. Concern for the community and its general welfare was of paramount importance to him. He directed a yeshivah and engaged in discussions with his pupils. In 1456–57 R. Seligman Bing Oppenheim and R. Menahem Bachrach convened a council in *Bingen for the purpose of enacting *takkanot* that would be binding on other communities also – a step which did not meet with the approval of the rabbis of Germany. Despite his esteem for Seligman Bing, Mintz strongly opposed them and the *takkanot* were not adopted. Similarly, when he felt that Bing had been guilty of faulty judgment, he did not hesitate to criticize him, though there was nothing personal in his criticism. In another dispute in Italy, when Liva Landa placed a ban upon the rabbis of Padua, including Mintz's cousin Isaac Mintz, Moses

agreed to place Landa under a ban although he was a venerable scholar and teacher, “unless he withdraw his ban and appease the rabbis of Padua,” and at the same time he appealed to the rabbis of Padua “to waive their rights and show respect for a sage.” Should Landa remain obdurate, however, “then the ban on him is to remain in force.” Moses concludes: “I do this neither for my own honor nor for the honor of my family, but for the sake of Heaven to prevent the increase of strife in Israel.” Moses was an accomplished *hazzan* and conducted the services on the high holidays. His best-known pupil is *Joseph b. Moses, author of the *Leket Yosher*.

Moses Mintz's fame rests on his responsa (Cracow, 1617); the 119 published, chiefly on civil and matrimonial law, abound in references to local customs and *takkanot*, ancient and new, including those ascribed to *Gershom b. Judah of Mainz and *takkanot shum* (Speyer, Worms, and Mainz). The index lists 120 responsa, but the last one has been omitted from all editions. This may be because of its subject, which the author describes as: “The stern words I wrote to the seven elders of the Regensburg community. It lays down that one who has a right of settlement in a community and leaves, subsequently to return, has not lost his previous right... And it explains that a scholar should not take advantage of his status to act haughtily.” The main source for Moses' biography is the responsa, where it is related that his wife Minlan was “crowned with the crown of the Torah and piety.” They also include many local *takkanot* introduced by Mintz, some of a social character, including rulings on the vestments a reader should don when conducting the service, how a man should conduct himself during prayer, etc.

Of special value are three responsa in manuscript entitled “The Three Branches,” which are an important source for the history of the yeshivot of Germany in the 15th century. They depict the woeful condition of pupil-teacher relations, which had broken down as a result of the arrogance of the teachers and their exaggerated concern for their dignity, as well as because of the pupils' desire for greater freedom of activity and the acquisition of social status. The laymen, too, did not accept the authority of the rabbis and disregarded their rulings. The responsa reflect other aspects of the life of the Jews in Germany: their economic, social, family, and religious life, study, the attitude of the Jews to gentiles, persecutions, and expulsions, etc.

[Shlomo Tal]

MINTZ, PAUL (1870–after 1940), Latvian lawyer. Born in Dvinsk (Daugavpils), Mintz was one of the most prominent lawyers in Riga. After Latvia became an independent republic (1918), he was appointed professor of criminal law at the University of Riga. He was a member of the Latvian National Council and the Constituent Assembly, and was the only

Jewish member of the Latvian government, serving as state controller. He published various legal works and was chairman of the commission preparing the Latvian code of criminal law. He was also active in Jewish affairs as founder of the *Hevrat Mefizeh Haskalah* (*Society for the Promotion of Culture Among the Jews of Russia), in Riga, chairman of the Jewish National-Democratic Party, chairman of the commission preparing a draft for the legal framework of Jewish national autonomy, a non-Zionist member of the *Jewish Agency for Palestine, and chairman of the Jewish Lawyers' Society in Latvia. In 1940, when Latvia was occupied by the Soviet forces, Mintz was arrested together with other Jewish and non-Jewish leaders and deported to Kansk, near Krasnoyarsk, and later to a Soviet labor camp, where he died.

MINTZ, SHLOMO (1957–), Israeli violinist, violist, and conductor. Mintz was born in Moscow. The family immigrated to Israel in 1959. He was a student of Ilona Feher and gave his first recital in 1966, making his *début* with the Israel PO in 1968. With the support of Isaac Stern and the American Israel Cultural Foundation Mintz made his Carnegie Hall debut in 1973 and completed his training with Dorothy DeLay in Juilliard. He made a major European tour in 1977 and appeared regularly with the most celebrated orchestras and conductors. He was also heard in recital and chamber music concerts as well as playing the viola. Mintz is esteemed for his silvery beauty of tone, his command of the standard repertoire, sensitive playing, and commanding technique. He gave recitals with the pianists Itamar Golan and Georges Pludermacher, and as a member of the Golan-Mintz-Haimovitz Trio. Among his recordings are works by Bach, Ravel, Sibelius, and Paganini. He was musical director of the Israel Chamber Orchestra in 1989–93 and also conducted the Israel PO and the Rotterdam PO. In 1994 he was appointed musical director of the Limburg SO in Maastricht. Mintz held master courses in many places, and was one of the founders and supporters of the Keshet Eilon International Violin Master Course for talented young musicians. He was a member of the jury of several important international competitions, such as the Tchaikovsky Competition in Moscow. He won many music prizes, including Sienna's Premio Accademia Musicale Chigiana and three times the Grand Prix du Disque.

[Naama Ramot (2nd ed.)]

MINYAN (Heb. מִיָּנְיָן; "number"), designation for the quorum of ten male adults, aged 13 years or over, necessary for public synagogue service and certain other religious ceremonies. The Talmud (Ber. 21b; Meg. 23b) derives this number from the term *edah* ("community"), which in the Scriptures is applied to the ten spies (Num. 14:27). Thus ten men constitute a congregation. The Talmud (Ket. 7b) also mentions Ruth 4:2

and Psalm 68:27. Some relate the rule to Abraham's plea to God to save Sodom if at least ten righteous men were found there (Gen. 18:32). On the basis of Psalm 82:1: "God standeth in the congregation of God," the Talmud explains that if ten men pray together, the Divine Presence is with them (Ber. 6a). This quorum of ten adult males is necessary for the following sections of the public synagogue service: The repetition of the *Amidah* with *Kedushah*, the pentateuchal and *haftarah* reading, priestly benedictions (Meg. 4:3), and the *Kaddish*. Some also require a *minyan* for the recital of the *Barekhu* invocation; others permit this to be said even if only six or seven males are present (Sof. 10:6). The accepted custom in emergency cases is nine adults and a boy holding a Bible (based on PDR, 8; see Tos. Ber. 48a and Sh. Ar., OH, 55:4). A quorum of ten is also necessary in the rites of comforting the mourners (*ma'amad u-moshav*; Meg. 4:3; Meg. 23b). The recital of the seven nuptial blessings at wedding ceremonies and the special invocation preceding grace there ("Let us bless our God of whose bounty we have eaten") also require a *minyan* (*ibid.*).

Ten male adults constitute a quorum in any place, and there is no need for a synagogue building or an officiating rabbi to hold divine services. In talmudic times, a community was regarded as "a city" if there were at least "ten idle men" (not occupied by work or other duties) who could come to each synagogue service to make up the *minyan* (Meg. 1:3). R. Johanan said, "when God comes to a synagogue and does not find a *minyan* there, He is angry, as it is written (Isa. 50:2). 'Wherefore, when I came, was there no man? When I called, was there none to answer?'" (Ber. 6b). In traditional congregations, especially in Eastern Europe, when it was difficult to hold daily services with a *minyan*, it was customary to pay a few old or idle men to be present twice a day at the services. These people were called "*minyan* men."

In Reform, Reconstructionist, and most Conservative practice at the beginning of the 21st century, women were counted in the minimum quorum of 10 persons required to constitute a public prayer service, since they had full religious equality with men.

Freehof, *Reform Jewish Practice*, 1 (1948), 49–52; D. Golinkin, *The Status of Women in Jewish Law: Responsa* (2001).

MINYAT ZIFTA, town in Lower *Egypt, on the eastern tributary of the Nile. In the *Fātimid period, there was an important Jewish community in this town. R. *Abraham b. Shabbetai, who wrote several works on *halakhah*, was rabbi (*haver*) of the community at the beginning of the 12th century, and after him, his son Shabbetai held the same position for many years. In a list of contributions to a collection among the communities of Lower Egypt at the middle of the same century, Minyat Zifta is mentioned as the second largest contributor. From the **Genizah* documents it appears that the social status of the Jews was variegated; among them were craftsmen,

merchants, and government officials. The Jewish population decreased over the generations and in the 19th century, Jacob *Saphir found only five families there: in 1897 there were 84 Jews, in 1907, 54, and in 1927 only 37. By 1924 the synagogue had already been sold, and in 1937 there was only one family living in the town.

[Eliyahu Ashtor]

MINZ, ABRAHAM BEN JUDAH HA-LEVI (d. 1525), Italian scholar and rabbi. Some time before 1509, acting on behalf of his father, Judah b. Eliezer ha-Levi *Minz of Padua, he insulted the famous rabbi, Jacob Margolis of Regensburg. Both father and son subsequently made public apology. In January 1509, after his father's death, Abraham was appointed to succeed him, but in July of the same year a decree of expulsion was issued against him by the Venetian authorities for having presented a gift in the name of the Padua community to the chief of the conquering imperial German army during the sack of Padua. The decree was apparently revoked some time thereafter, as Minz is known to have visited Padua about ten years later. After leaving Padua, Abraham spent 15 months in Ferrara, being supported there by the wealthy *parnas*, Norsa, whom he later sided with in the notorious *Finzi-Norsa controversy, at the height of which Jacob *Pollak, a partisan of Abraham Raphael Finzi, and Minz excommunicated each other. Abraham subsequently became rabbi in Mantua. His son-in-law, Meir *Katzenellenbogen, occupied the Padua rabbinate.

Abraham was the author of a number of responsa, which are printed together with those of his uncle by marriage, R. Liwa of Ferrara (Venice, 1511). He was the author, too, of *Seder Gittin va-Halizah*, printed together with the responsa of his father and his son-in-law (Venice, 1553). He died in Padua.

MINZ, BENJAMIN (1903–1961), leader of the *Po'alei Agudat Israel movement. Born in Lodz, Poland, Minz went to Palestine in 1925. A member of Agudat Israel from his youth, he persistently advocated cooperation with the Zionist Movement, despite the opposition of his leaders. At the Third Great Assembly of Agudat Israel (Marienbad, 1937), he was elected a member of the Central Council, and in 1938 was elected to the Po'alei Agudat Israel Executive. During World War II, he was active on the Va'ad ha-Hazzalah (rescue committee), and after the war he worked in DP camps in Germany (see *Displaced Persons). He initiated the founding of the World Union of Po'alei Agudat Israel at the Antwerp Conference (1946), and

as its head led the movement into close cooperation with the institutions of the *yishuv*, in opposition to the policy of *Agudat Israel. Minz was a member of the Provisional State Council of Israel (1948) and later of the Knesset. He was elected deputy speaker of the Second Knesset and held the post until the Fourth Knesset. He overruled a decision of the Council of Torah Sages of Agudat Israel and joined the coalition government as minister of posts in 1960, thus causing a rift between his party and Agudat Israel. Minz wrote several books, mainly on ḥasidic topics.

[Menachem Friedman]

MINZ, JUDAH BEN ELIEZER HA-LEVI (c. 1408–1506), Italian rabbi. Judah, a first cousin of Moses *Mintz, was a member of a family of scholars and bankers which derived its name from the town of Mainz, where he was probably born. It is presumed that Minz left Mainz in 1462 during the expulsion of the Jews (see Graetz, Hist. 4 (1894), 294). He settled in Padua where he became rabbi and rector of the yeshivah and where he remained until his death. In Padua he was taught by R. Asher (Israel) Enschechin, a German talmudist, who lived in the city during his latter years (Resp. Judah Minz, nos. 2, 3; *Leket Yosher*, 2 (1904), xlvii, no. 113). Minz corresponded on halakhic matters with many famous rabbis of his time, including Elijah *Mizrahi of Turkey (who supported Minz in a quarrel with Elijah Delmedigo, the cause of which is unknown), Israel Isserlein of Wiener-Neustadt, Israel *Bruna of Regensburg and Joseph *Colon of Mantua (see *Seder ha-Get* of Abraham Minz at the end of Judah's responsa and *Leket Yosher*, 2 (1904), xxxii, no. 54). His responsa are a valuable historical source and reveal his involvement in the problems of his time (see e.g., *Leket Yosher*, nos. 5, 6, 11). Ghirondi's assertion that Judah was a student of philosophy, and, subsequently, a professor of philosophy at the University of Padua (Ghirondi-Neppi 122 ff.), is now held to be unfounded. In his ritual decisions Judah leaned heavily on his German predecessors (see, e.g., Resp. Judah Minz, nos. 7, 13, 15), but, rather uniquely, permitted men to masquerade as women on Purim (*ibid.* no. 16). Minz's library and most of his manuscripts were destroyed in the year of his death during the sack of Padua (see introd. to *Leket Yosher*). 16 of his responsa were discovered by his grandson Joseph b. Abraham Minz and were published in Venice in 1553 by the husband of Judah's granddaughter, Meir *Katzenellenbogen, together with his own responsa and the *Seder Gittin va-Halizah* of Abraham b. Judah ha-Levi *Minz. Many later editions have been published, among them one with notes and a preface by Johanan Moses Preschel (1898).

[Shlomo Eidelberg]

MIR, town in Grodno district, Belarus. From 1569 until 1813 the town and the surrounding estates were the property of the Radziwill princes. Jews first settled in Mir at the beginning of the 17th century. To begin with they were under the jurisdiction of the community of *Nesvizh, but within a few years their numbers had rapidly increased, and it can be assumed that they then had their own communal organizations. The Jews became an important factor in local trade and at the two annual fairs held in Mir. Many of them also earned their livelihood as carters. Jewish merchants from every part of Lithuania and Poland were attracted to the fairs of Mir, where they carried on an extensive trade in furs (exporting them especially to Leipzig), horses, oxen, spices, grain, textiles, tobacco (from 1672), and wine. In the records of the Lithuanian council (see *Councils of the Lands) Mir is mentioned for the first time in 1662. The Council convened there four times: 1687, 1697, 1702, 1751. From 1673, the taxes owed by the Jews of Lithuania to state institutions and debts to other creditors were occasionally collected at the Mir fairs. In 1685, after complaints by the Jewish representatives, Catherine Sapieha of the Radziwill family instructed the administrator of the town to respect the rights of the Jews and to refrain from dispensing justice or arbitrating in their internal affairs.

During the early decades of the 18th century, the Jewish population of Mir increased considerably. The local Jewish contribution to the poll tax rose from 45 zlotys in 1673 to 1,160 zlotys in 1700 and 1,350 zlotys in 1720. During this period the merchants of Mir maintained fruitful commercial relations with *Leipzig, *Koenigsberg, *Memel, and Libau (*Liepaja). From the second half of the 18th century, the economic situation of the community declined. In 1760 the Jews of Mir paid 480 zlotys in poll tax; the census of 1765 recorded 607 Jews in the town and the vicinity who paid this tax.

Prominent rabbis officiated in Mir during the 18th century. The first *av bet din* known by name (in the late 1720s) was R. Meir b. Isaac *Eisenstadt, followed by R. Zevi Hirsch ha-Kohen Rappoport; during the middle of that century, R. Solomon Zalman b. Judah Mirkish, author of *Shulhan Shelomo* (Frankfurt on the Oder, 1771), held rabbinical office for 15 years. He was succeeded by R. Zevi Hirsh Eisenstadt. During the rabbinate of R. Joseph David Ajzensztat (1776–1826), the famous yeshivah of Mir was founded, functioning there until the eve of WWII. At the beginning of the 19th century *Habad Ḥasidism acquired considerable influence in the community.

In 1806 the Mir community numbered 807, including 106 tailors, five goldsmiths, six cord-makers, and about 30 merchants. In the 65 nearby villages, there were 494 Jews in 1818. The numbers in Mir itself rose to 2,273 in 1847 and 3,319 (about 62% of the total population) in 1897. From the second half of the 19th century, with the exception of the wood, grain, horse, and textile merchants who formed the upper class, the majority of the local Jews were craftsmen such as scribes, carters, butchers, and tailors. The wooden synagogue, which had been erected in the middle of the 18th century, was burnt down

in 1901. With the threat of pogroms in 1904–05, Mir Jews organized a *self-defense organization. During this period, the *Bund and *Po'alei Zion movements won many adherents in the town. The Zionist movement was organized there in 1914. In 1921 there were 2,074 Jews (c. 55% of the population) living in the town. Their difficult economic situation deteriorated even further from the late 1920s. A Yiddish elementary school and kindergarten were founded in 1917; during the 1920s they were administered by CYSHO and during the 1930s by the Shul-Kult. During the same period, *Tarbut, Yavneh, and *Beth Jacob schools functioned in Mir. The Jewish library was founded in 1908.

The yeshivah of Mir, founded by Samuel b. Ḥayyim *Tiktinski in 1815 and directed by his son Abraham after his death, played a central role in the spiritual life of the community. From 1836 it was headed by Moses Abraham b. Joseph Ajzensztat and later by Ḥayyim Zalman Bresler, rabbi of the town, who resigned as the result of a dispute. From then on, the offices of town rabbi and *rosh yeshivah* were separated. From the 1880s, the rabbi was Yom Tov Lipman (R. Lipa). In 1903 he was succeeded by R. Elijah David *Rabinowitz-Teomim, who served until his *aliyah* to Erez Israel. The last rabbi of Mir was Abraham Zevi Kamai (from 1917 until the Holocaust). During World War I, the yeshivah of Mir was transferred to Poltava but returned to the town in 1921, and was then headed by R. Eliezer Judah Finkel. Mir was the birthplace of Zalman *Shazar (Rubashov).

[Arthur Cygielman]

Holocaust Period

Under Soviet rule (1939–41) private enterprise was gradually stifled and factories, businesses, and even large buildings were taken over by the state. The yeshivah students and rabbis, headed by R. Eliezer Judah Finkel, moved to Vilna in still independent Lithuania (Finkel managed to reach Palestine and founded the Mir Yeshivah in Jerusalem). The Germans captured Mir on June 27, 1941. They immediately executed scores of Jews on charges of Soviet collaboration. On Nov. 9, 1941, 1,300 Jews were murdered on the outskirts of the town. The surviving 850 Jews were segregated into a ghetto and transferred in May 1942 to the ancient fortress in the city. A young Jew, Shemuel (Oswald) Rufeisen, born in the Cracow district, played a key role in the Mir resistance movement. He posed as a *Volksdeutscher*, Joseph Oswald. After the removal of the Jews to the Mirski fortress, a resistance movement of 80 members was organized to offer armed resistance to the imminent *Aktion* ("action") against the Jewish population. Working in groups of five, they acquired weapons and trained themselves. Their central command was made up of Ha-Shomer ha-Za'ir, Deror, Bund, and Communists.

Early in August 1942 Rufeisen informed the underground that the Germans would begin their liquidation campaign on Aug. 13. On Aug. 9 about 300 young people left for the forests on the assumption that no effective resistance action against the Germans could be taken inside the ghetto. On August 13 the liquidation action began, and all those who had remained

in the ghetto were murdered in Yablonošchina and buried in mass graves. Those who had escaped to the forests were confronted with many difficulties. Russian partisan units often refused to accept Jews into their ranks, and many of the Mir Jews who came to the forests were killed by antisemitic Russian partisans. Despite all these difficulties, Mir Jews managed to join Soviet partisan units, mainly the Brothers Bielski brigade, and took part in sabotage activities. Following the arrival of the Soviet army, the Jewish partisans from Mir joined the Soviet forces to continue the fight against the Nazis up till the end of the war.

The student body of the yeshivah was saved during the war by escaping to *Shanghai. After the war (1947), the yeshivah was transferred to Brooklyn, New York (Mirror Yeshivah Central Institute). Some of its scholars later joined the Mir Yeshivah in Jerusalem.

°**MIRABEAU, HONORE GABRIEL RIQUETI, COMTE DE** (1749–91), statesman of the *French Revolution. Mirabeau became interested in the Jewish question during his visits to Holland in 1776, England in 1784, and Prussia in 1786. Influenced by the enlightened members of the Jewish communities in the capitals of these three countries, he was particularly attracted by the image of Moses *Mendelssohn. In the book resulting from this journey, *Sur Moses Mendelssohn, sur la réforme politique des Juifs* (London, 1787), he argued that the faults of the Jews were those of their circumstances. Although his main reason for admiring Mendelssohn was that “humanity and truth” seemed much clearer to him than “the dark phantoms of the Talmudists,” Mirabeau did not consider Judaism an immoral faith, and he defended it against attacks both old and new. In the course of his argument, he repeated *Dohm’s assertion that “the Jew is more of a man than he is a Jew.” Quoting from Turgot and *Rousseau in support of his pro-Jewish arguments, Mirabeau affirms that history proves that “the Jews, considered as men and as citizens, were greatly corrupted only because they were denied their rights.” Like Dohm he advocated preserving some measure of Jewish autonomy, a view he developed in his memorandum to *Frederick the Great of Prussia, *De la monarchie prussienne* (1788), p. 462, but he envisaged it as a transitory phenomenon; the organized Jewish community would wither away and die as the Jews entered fully into the economic and social life of the majority. Mirabeau continued to work for the emancipation of the Jews as he saw it. In the debate of Dec. 24, 1789,

he denied Rewbell’s assertion that “they [the Jews] do not regard themselves as citizens,” and followed *Clermont-Tonnerre in stating that the very fact that the Jews were requesting equality was proof of their desire to cease being Jewish in any separatist way.

[Emmanuel Beeri]

MIRACLE. Biblical Hebrew has no word corresponding to the English “miracle.” Occasionally, the Bible mentions “wonders” (*peleʿ, niflaʿot*) meaning “miracles” (Ex. 3:20; Josh. 3:5; Ps. 78:11; etc.), but the meaning of “wonder” is much broader than “miracle.” A particular class of miracles, however, can be considered as a definite biblical concept, since it is designated by terms of its own. These are the “signs” (*ʾotot, mofetim*), i.e., extraordinary and surprising events which God brought about in order to demonstrate His power and will in particular situations, when men had to be convinced. A sign can be given as proof of prophecy. Thus the altar of Beth-El collapsed as a sign that the prophecy of its future destruction was true (1 Kings 13:1–6). The more important signs occurred in Egypt: the staff turned into a serpent to show that Moses was indeed sent by God (Ex. 4:1–7), and the ten plagues coerced Pharaoh to accept the divine command and let the people go. Deuteronomy 13 raises the problem of a sign given by a false prophet: it can be genuine, brought about by God to test the people, who must not obey under any circumstances a prophet summoning them to idolatry. The problem shows that “signs” as proofs of prophecy were regarded – at least among theologians – as regular (or indeed necessary) events.

Some biblical miracles are more than signs, i.e., their purpose goes beyond the mere proof of divine power. Israel was saved and Egypt’s army destroyed by the parting of the Red Sea, the people were given water and food in the desert by means of miraculous acts, and so on. Both Samaria (11 Kings 6:8–7:20) and Jerusalem (11 Kings 19:35) miraculously escaped conquest by besieging armies. Such miracles can be viewed as direct divine intervention at critical moments of human history. Even in these incidents, the element of a “sign” is never wholly absent. Dathan and *Abiram and their followers were swallowed by the earth; it was a just punishment, whose suddenness was demanded by the situation. Moses’ words (Num. 16:28–30), however, designate the event clearly as a sign. It is also stated that when Israel saw the mighty deed of Egypt’s destruction in the sea, they believed in God and in Moses (Ex. 14:31). Evidently, the Bible makes no distinction between signs proper and miraculous divine intervention in human history. There is a third type of miracle in the Bible in which the sheer admiration of the wonder-worker seems more important than both elements discussed above. One cannot escape this impression when reading the stories about Elijah and, to an even greater degree, about Elisha. Such stories are a regular feature of popular religion of all times and in all places; in the Bible

they are almost entirely confined to the figures of these two “nonliterary” prophets.

The problem of whether miracles are “natural” or “supernatural,” which was of concern to scholars of later ages, does not bother Bible writers. In one case (Num. 16:30), a miracle is described as a “creation,” which indicates an awareness of what moderns might call the “suspension of natural laws” (see also Ex. 34:10). On the other hand, the miracle of the descent of the quail (Num. 9:18–23) is quite plainly and clearly described as a “natural” – though unexpected – occurrence and yet is treated as a full-scale miracle. Bible writers simply do not question God’s ability to do anything, by any means.

The intellectual’s dislike of miracles has furnished the mainstream of Bible criticism with a yardstick: some “sources” contain more accounts of miracles than others, and are therefore deemed less “valuable.” Scholars with apologetic tendencies tend to minimize the importance of Bible miracles, in their endeavor to make biblical religion less “crude” and more “pure.” This case can be based on the preponderance of the “sign” concept in the Bible discussed above, but is nevertheless wrong. The Bible does not, as a rule, tell miracle stories for their own sake, but it does regard the “signs and wonders” of God as extremely important. Man has to know that God can do anything, whenever and wherever He chooses; that this has been demonstrated in history many times; and the sacred history of Israel has been shaped often enough by direct and quite evident divine intervention. Faith that can do without this notion of miracles is possible, but unthinkable in biblical terms.

[Jacob Licht]

In the Talmud

The almost universal word for a miracle in the talmudical literature is the term **נִסִּים** (*nes*), used in the Bible for a “sign” or “standard.” The biblical miracles are unquestionably accepted by the sages of the Talmud. Insofar as their theological aspect is concerned, three main considerations exercised the minds of the sages: (1) the reversal of the order of creation with its corollary of an insufficiency in the act of creation; (2) the miracle as a testimony of the truth of religion; and (3) the “daily miracles” which do not involve a disturbance of the order of creation.

(1) According to the rabbis, the miracles were, so to speak, preordained and provided for in the act of creation. “R. Johanan said, God made a condition with the sea that it would part before the Children of Israel... R. Jeremiah b. Eleazar said, not with the sea alone, but with whatever God created on the six days of creation... God commanded heaven and earth that they should be silent before Moses; the sun and moon that they should stand still before Joshua; the ravens that they should feed Elijah; the fire that it should not harm Haniah, Mishael, and Azariah; the lions that they injure not Daniel; the heavens that they should open to the voice of Ezekiel; and the fish that it should cast up Jonah” (Gen. R. 5:45). Another passage emphasizes this idea even more strongly. When God commanded Moses to lift up his staff and part the Red Sea, Moses argued with God that it would involve a breach of

his own act of creation, God answered him, “Thou hast not read the beginning of the Torah... I made a condition at the time”; and only then did Moses heed the divine behest (Ex. R. 21:6). In the same vein, the Mishnah (Avot 5:6) enumerates ten things which “were created on the eve of the Sabbath [of creation] at twilight,” including the mouth of the earth which opened up to swallow Korah (Num. 16:32), the mouth of the ass of Balaam which spoke (Num. 22:28), the manna (Ex. 16:14), and the rod of Moses (Ex. 4:17). As Zangwill (quoted by J.H. Hertz, Comm. to Prayer Book) puts it, the Talmud sages “discovered the reign of universal law through exceptions, the miracles that had to be created specially and were still a part of the order of the world, bound to appear in due time.”

(2) That miracles are not evidence of religious truth is clearly and explicitly stated in the Bible (Deut. 13:2–4). The rabbis emphasize this in a striking incident wherein R. Eliezer b. Hyrcanus called for, and achieved, a series of miracles for the purpose of proving that his halakhic ruling was correct, but R. Joshua disdainfully rejected them, quoting “the Torah is not in heaven” and his contrary view was accepted (BM 59a).

(3) The rabbis, however, almost go out of their way to emphasize the daily miracle of life which does not express itself in violations of the laws of nature. “Come and consider how many miracles the Holy One, blessed be He, performs for man, and he is unaware of it. If a man were to swallow unmasticated bread, it would descend into his bowels and scratch him, but God created a well in the throat of man which enables it to descend safely” (Ex. R. 24:1). This thought is expressed in the formula of thanksgiving prayer (*Modim*) which forms part of the daily *Amidah*, “for Thy miracles which are daily with us, and for Thy wonders and Thy benefits, which are wrought at all times, evening, morning, and night.”

In this connection is it not without interest that the formula of thanksgiving “for the miracles... which Thou didst wage for our fathers” is confined to the two festivals of Hanukkah and Purim (Sof. 20:6; the formula is found in *Seder R. Amram*). It is true that the rabbis emphasize the miraculous aspect of the Hanukkah legend of the pure oil which was sufficient for one day only but lasted for eight until new oil could be brought (Shab. 21b), to which there is no reference in the Book of Maccabees, and that many of the regulations of the festival are enjoined “in order to publicize the miracle” (Shab. 23b), but this miracle cannot compare with the biblical miracles, and there is no *deus ex machina* miracle in the story of Purim. On the whole they belong to the class of “natural miracles.” The parting of the Red Sea is regarded as the greatest (“most difficult”) of the biblical miracles (Pes. 118a).

Although the Talmud is replete with stories and legends of miracles wrought for its worthies (cf. especially Ta’an. 21–25), it is generally accepted that the age of miracles (probably for the benefit of the people as a whole) has ceased, because “they were performed for those who were willing to sacrifice themselves for the sanctification of the Name, and we are not worthy of having miracles performed for us” (Ber. 20a; Ta’an. 18b; Sanh. 94b).

Nevertheless ten minor miracles happened in the time of the Temple (Avot 5:5). They include such mundane miracles as that no person was ever bitten by a snake or scorpion in Jerusalem, that there was always accommodation to be found there (during the pilgrim festivals), and that rain never extinguished the altar fire.

It is forbidden to rely upon miracles (Pes. 64b). "One should never stand in a place of danger and say 'a miracle will happen to me' since perhaps it will not happen, and if it does, it will be deducted from his merits" (Ta'an. 20b). But "the recipient of a miracle does not recognize the miracle" (Nid. 31a). When coming to a place where miracles were wrought for the Jewish people, one must recite a special blessing (Ber. 9:1 and 54a).

[Louis Isaac Rabinowitz]

In Medieval Jewish Philosophy

The subject of miracles was one of the most important and problematic in the writings of medieval Jewish philosophy. The medieval philosopher found it difficult to accept the biblical notion of miracles, not only because it was difficult to explain the particular miracles described in the Bible in terms of contemporary science, but also because the acceptance of miracles entailed the belief in creation and divine providence – notions rejected by Greek philosophy.

The first of the medieval Jewish philosophers, Saadiah *Gaon, who, following the Mu'tazilites (see *Kalam), proved the existence of God from the temporal origin of the world (*Beliefs and Opinions* 1:2), and deduced the concept of divine omnipotence from the concept of creation (2:4), does not question the possibility of miracles. Since he accepted the concepts of creation and divine providence, it was consistent for him to maintain that God may see fit to alter His creation in order to preserve the faithful or in order to confirm His revelations to the prophets. The purpose of miracles, according to Saadiah, was to confirm the prophet as God's emissary whose word is truth (3:4, 5).

Saadiah believed that a perfect correlation exists between the content of revelation and the conclusions of rational investigation. Thus the miracle, insofar as it confirms revelation, confirms at the same time the conclusions of rational investigation – the existence of God, His unity, and the creation of the world. It might seem, therefore, that the miracle is superfluous. However, Saadiah maintained that while the intellectual verification of revealed doctrines is indeed an obligation, it is lengthy and accessible to few, and therefore revelation and miracles are required for the masses. Revelation and miracles are helpful even for those capable of speculation, insofar as they serve as guides in the search for the truth.

To distinguish between the true religion and a false one which lays claim to miracles, both the miraculous occurrence itself, as well as the doctrine it confirms, must be subjected to scientific scrutiny. One must examine the supposed miracle to discover whether it may not have been illusory (ch. 3), and also the tradition which reports it (introd.). Because there is a correlation between that which is revealed and that which is

arrived at through rational speculation, nothing which clearly contradicts intellectual judgment may be accepted as prophecy (excluding, of course, phenomena which transcend intellectual understanding; 3:8).

Neoplatonism

Like Saadiah, the early Jewish Neoplatonists accepted the possibility of miracles without question. While they attributed the same function to miracles as Saadiah had, their conception of the phenomenon of the miracle itself was different. The Neoplatonists no longer viewed miracles as events which contradict the natural order thus serving as evidence of God's will, but rather as the interposition of a higher supranatural order amid the natural order below it. The Neoplatonists maintained that a miracle can take place only in the presence of a person who is worthy of the suprasensual order and attracts it in the form of a particular providence, that person being the prophet. The prophet plays an active role in the manifestation of the miracle. Miracles do not merely serve to confirm the content of the revelation; they are in themselves revelations in the sense that they represent the direct appearance of the divine order in the midst of the natural order (cf. Ibn Ezra, commentary on Ex. 3:15, and 6:3).

The Challenge of Aristotelianism

The problem of miracles grew more acute as the Aristotelian influence on Jewish philosophy became stronger. According to Aristotelianism, which conceives of the natural order as deriving necessarily from the rational Being of God, all that contradicts nature is, by definition, contradictory to reason. Thus a Jewish philosopher confronted by these Aristotelian teachings had two alternatives: if he rejected Aristotelian physics and metaphysics he was challenged by the intellectual demands that physics and metaphysics make, and if he accepted them, he had to account within their framework for the existence of revelation which is the basis of the Torah.

Judah *Halevi accepted the first alternative, Maimonides, the second. Judah Halevi set out from the premise that experience takes precedence over intellectual judgment. Although the intellect might deny the possibility of the occurrence of miracles, the fact of miracles is upheld by the immediate authenticity of the event and the authenticity of the tradition which recorded it (*Kuzari*, 1:5). Rejecting the idea that intellectual judgment must confirm the substance of revelation, and perceiving that the miracle *per se* is no evidence of the validity of the prophet's utterances, Judah Halevi does not, as did Saadiah, regard the miracle as an affirmation of the content of revelation, but views the miracle as itself a direct revelation of God. God's direct communication with a person or a nation is a miracle. The deviation from the natural order for the purpose of guiding a man or a nation to their religious destiny is a miracle. Both occurrences share the fact of God's immediate presence in the lives of men. The miracle, therefore, affirms nothing more than the possibility of its occurrence (1:13–25), and revelation can be verified only as an immediate experience. The authenticity of

the revelation at Sinai was established by the fact that all of Israel were granted prophecy together with Moses and could bear witness to revelation out of their own experience. This fact confirmed the revelation for all time, and any prophecy which conflicts with it must be invalid even if it is supposedly supported by miracles (1:80–90).

Maimonides

While Maimonides adopted Aristotelian physics and metaphysics, he deviated from the Aristotelian view that the world is eternal. He upheld the assumption of the temporal origin of the world, although he maintained that it can be neither proved or disproved conclusively, as the only one which allows for miracles (Guide 2:25). Miracles, according to Maimonides, are necessary in order to sustain the authority of revelation for the masses, as well as to support the biblical assumption that God guides men by giving them the Law.

In his attempt to reconcile the concept of miracles with the Aristotelianism that he accepted, Maimonides maintained that the creation of the world as well as miracles are voluntary acts of God, and that in its essence and constitution the world reflects divine reason. Thus there is no conflict between divine wisdom and divine will, both of which were impressed upon the original mold of creation (3:25). According to Maimonides, miracles are predetermined at the time of creation and thus do not indicate a change in God's will or wisdom. The difference between the act of nature and the miracle is a difference between the regular and the unique, although the unique is also governed by its own laws. Indeed, the miracle, like creation, is a unique occurrence which establishes a reality or an order. For example, the miracles of the patriarchs and Moses established the existence of a nation with a particular role to play in the order of the world. The Sinaitic revelation established an ideal legislation for human conduct. Maimonides was careful not to define the miracle as an abrogation of the laws of nature. He explained that in the miracle of the crossing of the Red Sea (Sea of Reeds), for example, the nature of the water was not changed but was affected by another natural force, the wind. A miracle, such as the revelation at Mt. Sinai, was the manifestation of a particular act of creation, and thus may be considered an addition to nature rather than an abrogation thereof.

In sum, Maimonides concurred with Aristotle's position that reality derives from divine reason and therefore not everything imaginable is necessarily possible. While he did maintain that there are things which nature disallows, he differed with Aristotle on the limitation of the possible. Aristotle maintained that only that which exists is possible, whereas Maimonides posited the possibility of singular, constitutive occurrences as equally a necessary effect of divine wisdom (3:15). In accordance with his definition of miracles as constitutive events of general significance, Maimonides elevated the miracles of Moses above all others, while he interpreted allegorically many other biblical episodes which when understood literally are miraculous (2:46, 47).

Nahmanides

Among Jewish philosophers after Maimonides there were those who repudiated the belief in the temporal origin of the world and in miracles, explaining biblical references to them as allegories. There were also renewed attempts to prove that miracles did take place, notably by Nahmanides, who disputed Maimonides' conception of miracles from a kabbalistic viewpoint. In opposition to Maimonides' view of nature as a necessary effect of divine wisdom, Nahmanides posited the miracle as preceding nature. The miracle is not a singular occurrence – it is an immutable supernatural reality. According to Nahmanides, "nature and worldly order do not affect the ends of the Torah," and therefore the destiny of Israel is not natural but miraculous. However, miracles do not necessarily conflict with, or deviate from, the natural order. Nahmanides postulated a distinction between self-evident miracles, i.e., those which deviate from the natural order thus serving to impart faith to unbelievers and the ignorant, and hidden miracles, which consist in the unusual coincidence of a number of natural events. The miraculous nature of the latter will be evident only to the believer (A. Jellinek (ed.), *Torat Adonai Temimah*, passim).

Hasdai Crescas

The most fully developed critique of Maimonides' position is found in Hasdai *Crescas' writings. Crescas held that the world was created *ex nihilo* but had no temporal beginning. The world is eternal and continually renewed by God, characterized by Crescas as infinite grace. As well as being infinitely good, God is omnipotent, and therefore miracles, which are instruments of good, are not merely within His power and in harmony with His wisdom but are a necessary effect of His being (Or Adonai, 2, proposition 3:1).

For Crescas, miracles were neither a deviation from nature nor in conflict with it, but an expression of a supernatural order. What distinguishes miracles from natural occurrences is not the fact of their deviation from the natural order, which is after all an external manifestation, but an intrinsic quality. Whereas the natural occurrence is brought about by God indirectly, expresses a limited force, occurs as part of a process, and has only a relative existence, the miracle is brought about directly by God, expresses unlimited power, is a singular event, is not part of a process, and has an absolute existence (*ibid.*, proposition 3:2). This conception of miracles fits in with Crescas' view that the world is continually recreated *ex nihilo* by the divine will: the world itself is actually a perpetual miracle which encompasses the natural order. Thus the miracle is not an aberration of nature, rather it precedes nature. The ultimate purpose of the miracle is to impart faith to unbelievers and to strengthen the faith of believers. However, he did not regard the miracle as an external verification of prophecy, but, along the lines of Judah Halevi, he believed that in every event in which the infinite power of God is revealed, God becomes present to man, and thus heresy and doubt are abolished (*ibid.*, 3, proposition

4:2). In Crescas' doctrine there is a strong universalistic orientation, although emphasis is placed on the particular supernatural providence of Israel: God's grace, being infinite, must reveal itself to everyone, and the miracle which will bring this about, the resurrection of the dead, will be superior even to the miracles performed by Moses (*ibid.*, 3, proposition 4:2).

An analysis of Crescas' doctrine illustrates the development of the concept of miracles through the confrontation with Platonism and Aristotelianism, in that it represents a critical synthesis of both. The miracle, which had been regarded as an external confirmation of revelation, came to be viewed not as a non-natural occurrence but as an immediate revelation of the truth of the Torah. In his critical synthetic doctrine, Crescas also anticipated ideas which were fully developed only by modern Jewish philosophers.

[Eliezer Schweid]

In Later Jewish Thought

S.D. *Luzzatto was against the rational approach to religion, which he dubbed "Hellenism," and claimed that Judaism based on love and mercy was superior. Attacking the Jewish philosophers of his day for trying to assimilate Judaism to the barren "Hellenism" of Western culture, he affirmed the historicity of the miracles in the Bible, including the miracle of prophecy, and he held that miracles were proof of divine providence.

Samuel *Hirsch, in his *Die Religionsphilosophie der Juden* (1842), also upheld the historicity of the miracles recorded in the Bible. However, for him it was not the miraculous incident itself that was important, but its educational value. In the biblical period, God revealed Himself to Israel by means of miracles in order to demonstrate that He was above nature and that nature was not omnipotent – an idea which the Israelites had acquired in Egypt. Once the idea of the omnipotence of nature had been uprooted, miracles were no longer necessary and, therefore, ceased to take place. According to Hirsch, however, there was one miracle that did not just take place in the past but has continued up to the present, namely, the existence of the Jewish people, which serves as an additional means of teaching the existence of God.

Moses *Mendelssohn maintained that the truth of any religion cannot be proved by appealing to miracles; it can be proved only on the basis of the rationality of its doctrine. Only after a religious faith has been upheld by reason is it possible to consider the miracles associated with that religion. While Mendelssohn did not reject the possibility of miracles, he stressed that Judaism did not appeal for belief to the authority of miracles but to that of direct revelation witnessed by the entire people.

Nachman *Krochmal felt that there were potent spiritual forces underlying the workings of nature. These forces can operate and cause events which defy the laws of nature and appear miraculous. However, not all miracles are of this type. There is another class of miracles in which God actually directly interferes in nature. However, Krochmal does not sat-

isfactorily explain this class of miracles in terms of his general metaphysical system.

Contemporary Views

There have been two trends in modern Jewish thought concerning miracles. The first, represented by such thinkers as F. *Rosenzweig, M. *Buber, and A.J. *Heschel, has returned to an almost biblical conception of miracles, based upon the idea that the miracle is a "sign" of God's presence. The second trend, represented by M. *Kaplan, may be said to follow the rationalistic approach of the medieval philosophers. However, it goes beyond the medievals in denying the significance of miracles qua miracles. The first trend explains away the problem of the miracle being contrary to natural law by proposing a new definition of the miracle, according to which the essence of the miracle does not lie in its being contradictory to nature, but in its having a particular significance in history. The second trend, in a sense, chooses science over miracles, denying any validity to the miracle, insofar as it supposedly goes against natural law.

Rosenzweig holds, as does Maimonides, that the miracles of the Bible were built into the scheme of things from creation, hence, they were part of the natural order. These events were miracles because they played a significant role in history. Rosenzweig attempts to connect science and miracles, or what he called objectivity (idealism) and subjectivity (personal meaning), revelation being the point at which they are joined. The man who receives and lives a revelation carries both in him. The miracle of personal revelation is genuine. It infuses meaning into a particular moment, while its impact carries over into the future (see F. Rosenzweig, *Kokhav ha-Ge'ullah* (1970), 131–48).

Buber also stressed that no miracle is contrary to nature, maintaining that the miracle and nature are two different aspects of the same phenomenon – revelation. For Buber, man's attitude is the essential element in the miracle: the miracle is "our receptivity to the eternal revelation." Buber approaches biblical miracles by asking, "what human relation to real events this could have been... (which) grew into the written account we have read" (*Moses* (1958), 61ff.). A man today can experience the same relation to real events, the same miracle, that biblical man experienced. The attitude that a man has to events, the world, or other people is the raw material out of which experiences that are miracles arise. For a person properly attuned, any event may be considered a miracle, in terms of its meaning for him.

Heschel stresses the same points using various terms such as "the legacy of wonder" (*God in Search of Man* (1959), 43), or "radical amazement," terms that he gives to the sense of mystery and awe that he attributed to biblical figures. He writes that, "What stirred their souls was neither the hidden nor the apparent, but the hidden in the apparent; not the order but the mystery of the order that prevails in the universe" (*ibid.*, 56). He also speaks of the "ineffable," and of a sudden extraordinary and meaningful moment which he calls an

“event” as distinguished from “process,” the usual scientific way of looking at things.

M. Kaplan conceives of the accounts of miracles in Jewish literature as reflecting the attempt “of the ancient authors to prove and illustrate God’s power and goodness” (*Judaism as a Civilization* (1934), 98). Kaplan maintained that these traditions concerning miracles were in conflict with modern thought, and that the belief in miracles that contravene natural law is a “psychological impossibility for most people” (*Questions Jews Ask* (1956), 155–6). The idea of God’s exercising control and direction over the workings of the world is passé after modern physics. However, while Kaplan rejects the literalness of the miracle, he sees in the concept that God performs miracles for the sake of the righteous an important idea that has value for modern man, namely, the idea of responsibility and loyalty to what is right.

MIRANDA, SALOMON RODRIGUES DE (1875–1942), Dutch social-democratic politician. Born in Amsterdam of poor parents, De Miranda became a diamond worker and one of the leading figures of the General Diamond Workers Trade Union (ANDB). The lack of support by the orthodox clergy for their social struggle caused a rupture with their faith and marked the beginning of a secular integration process. De Miranda was a prominent member of the Dutch Labour Party (SDAP) and represented the party as an Amsterdam municipal councilor after 1911. In 1919 he was made alderman for the distribution and price control of foodstuffs, public baths, housing, and public works. In this capacity he was both practitioner and theoretician of the main social-democratic policy at municipal level, which enabled the Labor Party to receive a mass base. He held his function for nearly 20 years and was responsible for the building of several workers’ quarters, which were remarkable for their architectural design (the “Amsterdam School”). After the German invasion of the Netherlands, he was arrested and taken to Amersfoort concentration camp where he was beaten to death.

[Henriette Boas / Bob Reinalda (2nd ed.)]

MIRANDA DE EBRO, city in Castile, N. Spain. It had one of the oldest Jewish communities in Castile. The *fuero* (“municipal charter”) granted to Miranda de Ebro in 1099 gave the Jews equal rights with the Christian and Moorish residents. In 1290 the community numbered 15 families who paid an annual tax of 3,312 maravedis and 744 maravedis in services. Jews from Miranda went to work in the fields of neighboring villages. In 1304 Ferdinand IV confirmed that the Jews, Moors, and Christians in Miranda had equal rights, in par-

ticular as regards financial liabilities. Ferdinand’s ruling was reconfirmed by Alfonso XI in 1347 and by Pedro I in 1351. In 1360, at the beginning of the civil war between Pedro the Cruel and Henry of Trastámara, Henry’s supporters in the city attacked the Jewish population and many were massacred. Pedro punished the ringleaders and the municipal authorities but, on finally gaining control of the city, Henry granted a moratorium on debts owed to Jews for a year. The privileges of Jews in Miranda, as enumerated to the authorities in Burgos in 1453, included the right to own synagogues, to participate in the tax apportionment, and to work on Sundays at home or in closed workshops, as well as exemption from paying dues to the cathedral. By the system of taxation introduced by Jacob ibn Nuñez in 1474, several neighboring communities were joined with Miranda and their joint tax was fixed at 2,000 maravedis. In 1485 they had to pay a levy of 107 castellanos for the war with Granada. On the expulsion of the Jews from Spain in 1492, the synagogue of Miranda was handed over to the municipal council. The remains of the synagogue in Miranda are preserved in a house in Calle de la Fuente (no. 18). The Jewish quarter was located in and around the present Calle de la Independencia (formerly de los Judíos).

[Haim Beinart]

MIRANSKY, PERETZ (1908–1993), Yiddish poet and fable-writer. Miransky was born in Vilnius (Vilna), Lithuania, where he attended *heder* and then public high school. He made his literary debut in 1934 with two fables in the *Vilner Tog*. He joined the *Yung Vilne (Young Vilna) group of poets and artists, and contributed to its literary publications such as *Yung Vilne*. He was one of the group’s last remaining members along with Abraham *Sutzkever. His fables appeared in Yiddish periodicals, including the Warsaw *Literarische Bleter* and the Kovno (Kaunas) *Emes*, and newspapers in Bialystok, Grodno, and Gluboke (Hlybokaye, Belarus). His fables were used in pedagogical materials for the Yiddish schools. He wrote pieces that were performed in the Vilna ARRT revue theater and in the *Maydim* Yiddish puppet theater.

Miransky fled the Nazi invasion to Samarkand, Uzbekistan, and worked in an artel. After the war he lived in the Tempelhof DP camp in Berlin, where he was culturally active among the refugees and coedited the journal *Undzer Lebn*. He immigrated to Canada in 1949 and settled in Montreal. He moved permanently to Toronto in 1955 and greatly enriched the Toronto Yiddish cultural scene. His Yiddish poetry and fables were published widely in the Yiddish press and in literary journals including the *Keneder Odler*, *Yidisher Zhurnal*, *Goldene Keyt*, *Svive*, *Tsukunft*, *Afn Shvel*, *Yidishe Kultur*, and the *Forverts*. He published several volumes of his writing in Canada and Israel: *A Likht far a Groshn* (1951), *Shures Shire: Lider un Mesholim* (1974), *Tsvishn Shmeykhl un Trer: Mesho-*

lim Bukh (1979), *Nit Derzagt* (1983), and *A Zemer fun Demer* (1991). His writing, with its eternal themes and emphasis on issues of social justice, has been widely published in translation, most recently in a bilingual English-Yiddish edition: *Selected Poems and Fables: An English/Yiddish Collection* (ed. Anna Miransky, 2000). His poetry has also been set to music, found in Marilyn Lerner and David Wall's *Still Soft Voiced Heart: New Yiddish Lieder* (2002) and the Flying Bulgar Klezmer Band's *Sweet Return* (2003).

[Rebecca Margolis (2nd ed.)]

MIRELMAN, family of Argentine industrialists and Jewish leaders. **SIMON** (1894–1978) was born in London, moved to Russia and Switzerland, and settled in Buenos Aires in 1914. Three of his brothers, **ROBERTO** (1898–1991), **JACOB** (1900–1990), and **JOSE** (1902–1996), were born in Russia, educated in Switzerland, and eventually joined Simon in Buenos Aires at different stages after World War I. **LEON** (1907–2003) was born in Switzerland and moved to Buenos Aires in 1927. There the brothers founded a highly successful textile factory. Simon was president of the Hospital Israelita, B'nai B'rith, the Committee Against Antisemitism (later ***DAIA**), the Argentine-Israel Cultural Institute, the United Jewish Appeal, and the Israel Bond Drive. He also had a prominent role in the establishment of an office of the American Jewish Committee in Buenos Aires, and was a member of the Board of Governors of the Hebrew University. Roberto was president of the Congregacion Israelita and later among the founders of Bet El synagogue. Jose became a strong Zionist advocate and a leader of the Revisionists in Argentina. In 1949 he moved to Israel. Already in the 1960s he became an activist for the immigration of Russian Jews to Israel, and printed over a million Russian-Hebrew dictionaries, *haggadot* in Russian, and other educational materials, to be forwarded to Jewish communities in Russia. In the 1970s he supported the exchange of Russian Jews for hard currency, which enabled the exit of over 100,000 Jews. Leon was president of the board of the Seminario Rabinico Latinoamericano from its inception in 1962 until 1969, and for many years the president of the United Jewish Appeal.

The Mirelman brothers were benefactors of many Jewish causes, especially those connected with Israel. In the 1930s they founded Editorial Israel, a pioneering effort to publish books of Jewish content in Spanish. Over 100 titles were published.

Jose's son, **DAVID** (1938–), born in Argentina, emigrated to Israel in 1949 and became a biochemist at the Weizmann Institute of Science, known for his investigation of infectious and parasitic diseases in less developed countries, and in particular as an expert in the molecular biology of host-pathogen interactions.

Leon's son, **VICTOR** (1943–), born in Argentina, moved to the U.S., where he became a Conservative rabbi and professor of Jewish history, publishing in particular scholarly works on the Jews of Argentina.

BIBLIOGRAPHY: V. Mirelman, *Jewish Buenos Aires (1890–1930)*. In *Search of an Identity* (1990).

[Victor A. Mirelman (2nd ed.)]

MIRIAM (Heb. מִרְיָם); the daughter of *Amram and Jochebed and sister of *Moses and *Aaron (Num. 26:59; 1 Chron. 5:29. The name may mean “gift” (see von Soden, UF 2 (1970), 269–72). According to tradition, Miriam is the sister, mentioned in Exodus 2:2–8, who advised Pharaoh's daughter to call a Hebrew nurse for him. The critical view is that the representation of Moses, Aaron, and Miriam as “siblings” is secondary. In the earliest form of the tradition, Miriam was one of the leaders of the Exodus (Micah 6:4). The title “prophetess” was given to Miriam when she appeared, timbrel in hand, at the head of the singing and dancing women after the crossing of the Red Sea (Ex. 15:20–21). It was an Israelite custom for women to welcome the men with timbrels and dancing when they returned from the battlefield and at other celebrations (cf. Judg. 11:34; 1 Sam. 18:6–7; Ps. 68:26).

Miriam is also mentioned in the context of her and Aaron's attempt to challenge Moses' exclusive right to speak in the name of the Lord (Num. 12). Miriam is mentioned first, and according to G.B. Gray, the verb appearing in the feminine, *va-tedabber be-* (“she spoke against”), suggests that Miriam led this revolt. In any event, she alone was punished. The text preserves two traditions: one that the cause of the rebellion was Moses' marriage to a Kushite (black Sudanese) woman (Num. 12:1), while the other cause was a challenge to the unique authority of Moses, i.e., Miriam and Aaron objected to Moses' exclusive right to prophesy in God's name (cf. Num. 11:25–30). Miriam was smitten with a dread skin disease (see ***Leprosy**), and was healed only after Moses interceded on her behalf, and after she had been quarantined for seven days. Her punishment is recalled again (Deut. 24:9), as a warning against disobeying the laws against “leprosy.” Miriam died in Kadesh and was buried there (Num. 20:1). It is likely that there were more traditions about Miriam that did not survive the canonization of the Bible.

[Ephraim Stern / S. David Sperling (2nd ed.)]

In the Aggadah:

Miriam was so called in reference to the bitterness of the bondage of Egypt (מַר, “bitter”; Ex. R. 26:1). Although she is referred to as a prophetess in the Bible (Ex. 15:20), none of her prophecies is mentioned there. The *aggadah*, however, fills the lacuna. It explains that her father *Amram, unwilling to have children who would be doomed to death, divorced his wife after Pharaoh's decree. Miriam urged him to remarry *Jochebed, rebuking him for being even more cruel than Pharaoh since the latter had decreed only against the male children, and prophesying that a child would be born from them who would be the liberator of Israel. Amram acceded and Miriam

sang and danced before her parents on the occasion of the remarriage (Sot. 12a–13a; BB 120a). Miriam is identified by some rabbis with Puah (from פּוּעַ, “to open the mouth”: Ex. R. 1:13; Rashi, Sot. 11b), one of the midwives (Ex. 1:15), who was so called because she comforted the mother and cooed to the child to make it open its mouth. As a reward she was destined to have illustrious descendants. She is also identified with Azubah, the wife of Caleb (1 Chron. 2:18); their son, Hur (Ex. R. 1:17) was the grandfather of Bezalel, who inherited the wisdom of his great-grandmother and was the architect of the Sanctuary. Some rabbis hold that even King David was descended from her (Sif. Num. 78; Ex. R. 48:3–4).

Miriam is portrayed as fearless in her rebukes. As a child, she reprimanded Pharaoh for his cruelty, and he refrained from putting her to death only as a result of her mother’s plea that she was but a child (Ex. R. 1:13). She also saw fit to rebuke Moses when he separated from Zipporah, because she felt that he should procreate (Sif. Num. 99). Although Miriam was punished with leprosy, God honored her by Himself officiating as the kohen to declare her definitely a leper and subsequently to declare her cleansed (Zev. 102a). Because she had waited for Moses by the river, the Israelites waited for her to recover (Sot. 11a). A miraculous well, created during the twilight on the eve of the first Sabbath (Avot 5:6), accompanied the Children of Israel in the desert due to her merits (Ta’an. 9a). Like Moses and Aaron, she too died by the kiss of God since the angel of death had no power over her (BB 17a).

[Aaron Rothkoff]

In Islam

In his early prophecies Muhammad speaks about Miriam (Mary, Ar. Maryam) and her son Jesus, who was born of the Holy Spirit (Sura 19:20; 23:52; 66:12). It is, however, also said in Sura 19:29 that she was the sister of Aaron, while in the third Sura (3:31), known as the sura of the family of ‘Imrān, she is described as the daughter of ‘Imrān. In connection with the decrees of Fir‘awn (*Pharaoh), Muhammad related that the mother of Mūsā (Moses) ordered his sister to watch over the ark in which Moses had been placed (20:41–42; 28:10–12) – without mentioning her name. On another occasion (66:11–12), he mentions the wife of Pharaoh and Miriam (the mother of Jesus) among the righteous women. According to Tabari and Tha‘labi, Miriam was married to Caleb, while in Kisā’i’s tale about Qārūn (*Korah), it is said that Miriam was his wife and that it was from her he had learned the science of alchemy, the reason for his attainment to wealth.

MIRIAM BAT BENAYAH, scribe who lived in *San‘a, *Yemen, during the late fifteenth and into the early sixteenth century and followed her family’s profession. Her education, which included, at a minimum, the skills of reading and writing in Hebrew, as well as the special prayers and procedures required of a Torah scribe, was highly unusual for a woman of her time and place. Miriam worked with her father, *Safra* (scribe) Benayah ben Sa’adiah ben Zekhariah, and her two brothers David and Joseph. Together, the family is credited with copying 400 books, including prayer books and collections of *haftarot* as well as copies of the Torah. Only a few examples of their work are still in existence, and most may have represented joint efforts, because not all are signed by a single family member. However, one Torah scroll, whose existence was first reported to the wider world in 1859 by a Jewish traveler to Yemen, is unmistakably the work of Miriam. Its colophon reads: “Do not condemn me for any errors that you may find, as I am a nursing woman,” an apparent indication that Miriam continued her scribal work after she married and had a family. No information about her husband or her offspring is known.

[Emily Taitz (2nd ed.)]

MIRISCH BROTHERS, HAROLD (1907–1968), **MARVIN** (1918–2002), and **WALTER** (1921–), U.S. film producers. Born in New York, the Mirisch brothers became a team in 1952, when they joined Allied Artists as executives. They wanted to produce high-quality films by giving a free hand to independent filmmakers, but Allied dropped the plan after two productions, so in 1957 the brothers set up their own company. They envisioned the Mirisch Company as a haven for independent filmmakers who did not want to deal with the business aspect of an independent production company. The brothers signed a 12-picture deal with United Artists in 1957, which was extended to 20 films two years later. The Mirisch Company moved to the Samuel Goldwyn Studios, where they became the largest tenant. Many actors, directors, and other producers enjoyed stability and creative autonomy under the canopy of the Mirisch Company. In 1969 Walter Mirisch was named president and executive head of production of the Mirisch Corporation.

The Mirisch brothers scored an immediate success with their first film, Billy Wilder’s *Some Like It Hot* (1959). The com-

pany' subsequent films included *The Apartment* (1960), *The Magnificent Seven* (1960), *By Love Possessed* (1961), *West Side Story* (1961), *The Children's Hour* (1962), *Two for the Seesaw* (1962), *The Great Escape* (1963), *Toys in the Attic* (1963), *The Pink Panther* (1964), *The Russians Are Coming* (1966), *Hawaii* (1966), *In the Heat of the Night* (Academy Award winner for Best Picture, 1967), *Fitzwilly* (1967), *They Call Me Mr. Tibbs* (1970), *The Organization* (1971), *Scorpio* (1973), *Mr. Majestyk* (1974), *Midway* (1976), *Gray Lady Down* (1977), *Same Time Next Year* (1978), *The Prisoner of Zenda* (1979), *Dracula* (1979), *Romantic Comedy* (1983), *Lily in Winter* (1994), and the TV series *The Magnificent Seven* (1998).

Walter Mirisch was president of the Academy of Motion Picture Arts and Sciences from 1973 through 1978. In 1978 the Academy awarded him the Irving Thalberg Memorial Award, and in 1983 he received the Academy's Jean Hersholt Humanitarian Award.

[Jonathan Licht / Ruth Beloff (2nd ed.)]

MIRON, DAN (1934–), scholar and critic of Hebrew and Yiddish Literature. Miron was born in Tel Aviv. He studied for his first two academic degrees at the Hebrew University of Jerusalem, and for his Ph.D. at Columbia University in New York. For more than 40 years he taught at the universities of Tel Aviv and Jerusalem and at Columbia University. Dan Miron's oeuvre constitutes one of the largest, most impressive, and significant achievements in the research and criticism of Jewish Literature in recent generations. His unique contribution to Jewish literary studies can be considered under the following parameters:

Quantity

Miron's scholarly output has been prodigious. He published his first article in 1951, when he was just 17, and from then not a year went by without a written or published work. His publications include some 30 original books, another 30 or so which he edited or translated, generally adding a substantial foreword or postscript, and hundreds of articles. In addition, he was responsible for two massive, long-term editorial projects: The complete definitive edition of the poems of H.N. Bialik, in three volumes (1983–2000) and the edition of the works of U.Z. Greenberg, not yet complete, comprising over a dozen volumes by 2005.

Scope

Miron's opus is multifaceted and spans historical periods, genres and languages. In historical terms, his research projects span from the beginning of the Haskalah during the first half of the 19th century to the most avant-garde literary frontline of the end of the 20th century and the beginning of the 21st. Within this wide range he has researched most of the major writers, of both prose and verse, and many of the more marginal, both Hebrew and Yiddish.

Methodology

Although Miron's intellectual heritage derived from the related trends of Anglo-American New Criticism, Russian Formal-

ism, and French Structuralism, he was never content to remain within the bounds of textual and semiotic analyses, or of an "internal" investigation of literary dynamics. At the same time he never abandoned them. His interpretations combine a subtle and sensitive recording of the finest nuances of a text, of its multiple levels of meaning, its poetics and its aesthetics with an awareness of the text's historical, biographical, social and cultural contexts. These contexts he describes in lively detail, mapping their reciprocal and cross-fertilizing links to a group of texts.

Form

Miron's critical work takes the form of brilliantly organized essays, possessing a high artistic quality of their own. Their organization is of a rigorously classical kind, which functions by way of discovering an ordering idea within a primordial mass of heterogeneous material, thus imposing a boldly contoured clarity upon diversity and confusion. The aesthetics of masterly ordering in the essays has an emotional effect, due to its narrative, even dramatic character. Miron's essays tell a story, and they employ intuitively the tactics and strategies of effective storytelling to arouse interest, to maintain suspense and to provide enough information to satisfy the reader's natural curiosity without quenching a desire to investigate further.

Miron's oeuvre, developing since the 1950s, is a profoundly searching multidimensional project, which delineates a richly detailed map of modern Jewish literature and culture. It uncovers hidden areas and throws new light upon well-known territory. It offers the student of contemporary Jewish literature a superb entry route to the many faces of the subject.

Among his works are *Shalom Aleikhem: Pirkei Masah* (1970); *Sholem Aleykhem: Person, Persona, Presence* (1972); *Arba Panim ba-Sifrut ha-Ivrit* (1975); *Bein Hazon le-Emet: Nizzanei ha-Roman ha-Ivri* (1979); *Kivvun Orot: Tahanut ba-Sipporet ha-Ivrit ha-Modernit* (1979); *Der imazsh fun Shtetl: Dray literarische Shtudyas* (1981); *Ha-Preidah min ha-Ani he-Ani* (1986); *Mul ha-Ah ha-Shotek: Iyyunim be-Shirat Milhemet ha-Azma'ut* (1992); *H.N. Bialik and the Prophetic Mode in Modern Hebrew Poetry* (2000); *Parpar min ha-Tolaat: Natan Alterman ha-Za'ir* (2001); *Akdamat le-Azag* (= U.Z. Greenberg) (2002); *Ha-Zad ha-Afel bi-Zehoko shel Shalom Aleikhem* (2004).

[Gidi Nevo]

MIRON (Michrovsky), ISSACHAR (1920–), Israeli composer. Born in Poland, Miron studied composition and conducting at the Warsaw Conservatory. He settled in Erez Israel in 1939. He served in the British Army's Jewish Brigade and during that period composed his most popular song "Tzena, Tzena" ("Come Out, Come Out"). This song was performed and recorded all over the world by singers such as Pete Seeger, Bing Crosby, Judy Garland, and Richard *Tucker. Following the establishment of the State of Israel, he served in the Israeli Army as the director of music and art programs. From 1957 to

1961 he edited *Zemirot*, the Jewish Agency folk music periodical. In 1959 he was awarded the Engel Prize for his compositions. In 1963 he went to the U.S. where he continued to compose music. Among his many compositions of instrumental and liturgical music are: *Kol Rinah be-Ohalei Yisrael: A Sabbath Service of Israel for Cantor, Chorus (SATB) and Organ* (1963), *Tripartite Epigram* for violoncello and piano (1975), *Sephardic nocturno* for violoncello and piano (1975), *Klezmer Reflections* for oboe and piano (1980), and many popular songs. His archive is at the Music Department at the Jewish National University Library, Jerusalem.

[Israela Stein and Gila Flam (2nd ed.)]

MIROSLAV (Ger. **Misslitz**), town in S. Moravia, Czech Republic. Jews apparently settled there after their expulsion from the Moravian royal cities (1454). There is a record of a community during the Turkish wars; subsequently it diminished to only three families, but later absorbed refugees from the *Chmielnicki massacres (1648). In 1666, 20 Jews were put in chains and expelled from the town. Subsequently Jews from *Vienna settled in the town, bringing the total Jewish population to 18 families. The oldest legible tombstone in the Jewish cemetery dates from 1692. The *Familiants laws allotted 119 families to Miroslav, where in 1753, 64 families lived in 18 houses. Their number had risen to 448 persons (18% of the total population) in 1801 and remained the same in 1820. In 1831 Rafael Koenig (b. 1808) became the first Jewish locksmith in the Hapsburg Empire. A synagogue in the Reform style was erected in 1845. In 1867 a political community (see **politische Gemeinden*) was established, which was incorporated in the municipality in 1924. The Jewish population reached its peak in 1857, when it numbered 1,032, subsequently declining to 424 in 1869 and then rising slightly to 528 in 1900. During World War I some 350 refugees fled to Miroslav, but few of them settled. In 1930 the community numbered 291 (6.6% of the total). The remainder of the community was deported to Nazi extermination camps in 1942, and the synagogue equipment was sent to the Central Jewish Museum in Prague. Although the community was not revived after the war, the Jewish quarter was preserved in its original plan.

[Meir Lamed]

MIROWSKI, MICHEL (1924–1990), doctor and co-inventor of the implantable defibrillator. Born in Poland, Mirowski survived the Nazi Holocaust as a teenager and was left without family. He immigrated to Lyon, France, to study medicine. He completed his postdoctoral studies in Israel at Tel Hashomer Hospital and fellowships with Professor Demetrio Sodi Palares in Mexico City and with Dr. Helen Taussig at Johns Hopkins in the U.S. In 1963, he returned to Israel and became the chief cardiologist at Asaf Harofe Hospital, where he focused his research on abnormal heart rhythms.

In the late 1960s, his former mentor at Tel Hashomer Hospital and chief of medicine, Dr. Harry Heller, died of recurrent tachyarrhythmias. This event marked a turning point in Mirowski's career. Realizing that patients like Heller cannot stay indefinitely in hospitals, and inspired by the recent development of the implantable pacemaker, Mirowski conceived of a small implantable device that would monitor the heart continuously and deliver an appropriate electrical shock to patients in response to life-threatening abnormal heart rhythms (ventricular tachyarrhythmias). Mirowski hoped that the hundreds of thousands of people who succumbed annually to abnormal heart rhythms could be saved by such a device. However, the technology of the time rendered the concept of miniaturizing a large table-top external defibrillator with no monitoring capabilities untenable.

Unable to find resources to pursue his idea in Israel, Mirowski returned to Baltimore in 1968 to direct the new Coronary Care Unit at Sinai Hospital. It was within a year that his team developed the first prototype, making him the pioneer cardiologist who invented the implantable defibrillator (ID). The first surgical implant of the defibrillator occurred in 1980 at the Johns Hopkins Hospital.

He led the way for the clinical use of the implantable defibrillator despite enormous obstacles from within the medical profession, and in defiance of many leading cardiologists in the field who said the implantable defibrillator had no clinical utility. It was his steadfast commitment to the concept of the implantable defibrillator and the goal of introducing it into clinical cardiology in his lifetime that allowed him to see some of the fruits of his vision and his labors before his premature death in 1990 from multiple myeloma.

Since the 1980s, many new generations of IDs have been developed, all based on Mirowski's original concept and work. Hundreds of thousands of lives have been saved by IDs worldwide, and they have revolutionized the therapy for malignant tachyarrhythmia and heart failure. Mirowski's life story demonstrates the importance of unfettered scientific inquiry in medical advance. His favorite quote was, "The bumps in the road are not bumps. They are the road."

[Ariella M. Rosengard and Dan Gilon (2nd ed.)]

MIRSKY, AARON (1914–2001), Hebrew writer. Born in Novogrodek, Poland, he was ordained as a rabbi and immigrated to Erez Israel in 1935. He was an editor at the Mosad Bialik publishing house (1950–60), and from 1952 taught Hebrew literature at The Hebrew University (professor, 1965). He published studies on ancient and medieval Hebrew poetry and on the Hebrew language. His books include *Yalkut ha-Piyyutim* (1958), an annotated anthology of medieval Hebrew religious poetry; *Shirei Yizhak Ibn Halfon* (1961), with an introduction and textual variants; *Reshit ha-Piyyut* (1965); and volumes of his own poetry, *Alei Si'ah* (1966), *Sefer ha-Gai ve-ha-Kaddish* (1986), and *Din ha-Shir* (1994). Among his other works are *Ha-Pisuk shel ha-Signon ha-Ivri* (1978), a study of the piyyut tradition in the Diaspora and in Erez Israel (1990) as well as

a book on Hebrew style (*Signon Ivri*, 1999). A bibliography of his works was published in 1986.

[Getzel Kressel]

MIRSKY, SAMUEL KALMAN (1899–1967), rabbinic scholar, religious Zionist, and Hebraist. Born in Russia, Mirsky emigrated as a child with his parents to Palestine, where he received a thorough talmudic education and *semikhah* at 16. After teaching for some time at various yeshivot, he graduated from the Palestine Government Law School in 1924 and settled in the United States in 1926. He began teaching at Rabbi Isaac Elchanan Theological Seminary in 1936; in 1954 he became professor of rabbinics and director of the Israel Institute at Yeshiva University. In 1942 Mirsky was appointed rabbi of the Borough Park, New York, Young Israel Congregation. He took a leading part in the work of *Mizrachi and of *Histadrut Ivrit of America, serving as president of the latter in 1958 and founding its Hebrew Academy and its journal *Perakim*, which he edited (3 vols., 1957–63). He also edited the Hebrew quarterly *Talpioth* (9 vols., 1944–65), the annual of the Sura Research Publishing Foundation, *Sura* (4 vols., 1953–64), which he founded, and the *Morashah* book series. Mirsky's main scholarly achievement lay in the publication of medieval critical texts, such as Aḥai Gaon's *She'iltot* (4 vols., 1959–66) and two commentaries on Alfasi, *Perush Rabbi Yehudah ben Binjamin Anav* (1955) and *Perush Rabbi Yonatan ha-Kohen mi-Lunel al-Megillah u-Mo'ed Katan* (1956). Only the first part of his new edition of the 13th-century halakhic compendium by Zedekiah b. Abraham Anau, *Shibbolei ha-Leket* (1966), with an extensive introduction, appeared. Mirsky also published collections of his own articles and edited two books of essays on the leading figures and institutions of modern Jewish scholarship, *Mosedot Torah be-Eiropah* (1957) and *Ishim u-Demuyyot be-Hokhmat Yisrael be-Eiropah* (1959). He contributed many articles to periodicals, some in English, and some in Hebrew. Two of his originally written autobiographical articles for *Genazim* appeared in *Hadoar* (Nov. 3 and 10, 1967).

[Eisig Silberschlag]

MIRVISH, family of Canadian entrepreneurs and theatrical producers. EDWIN ("Honest Ed"; 1914–) was born in Virginia in 1914 and lived his early years in Washington, D.C. Ed Mirvish moved to Toronto with his family when he was nine years old. His father opened a grocery store in a heavily Jewish immigrant downtown residential neighborhood. After running a series of different businesses, including a cleaner's and a dress shop, Ed, a high school dropout, moved into bargain merchandising and quickly found success with his no-credit, no-frills model of doing business. In 1948 he opened Honest Ed's, a discount store located at Bloor and Bathurst, a key intersection in Toronto's busy downtown. The store with its huge billboard remains a landmark in the city. Between 1959

to 1963 he purchased a two-block area of houses on Markham Street adjacent to his store and converted the area into "Mirvish Village," a trendy area of art galleries, studios, stores and restaurants.

In 1963 Mirvish purchased the Royal Alexandra, a historic theater that was slated for demolition, and refurbished it, revitalizing the Toronto theater scene. Convinced that theaters and restaurants worked well together, he also opened a series of restaurants which drew crowds into the area. With his son DAVID (1944–), in 1982 he bought and refurbished London's legendary Old Vic Theatre, which they owned and operated until 2000, and also built the Princess of Wales Theatre in Toronto in 1993. Ed and David operate Mirvish Productions, which has staged productions of many Broadway hits such as *The Lion King*, *Mama Mia!*, *The Producers*, and *Hairspray*. In addition to their theater business, David Mirvish has operated an independent bookstore from the 1970s, which specializes in books on art, architecture, design, and photography.

A tradition since Ed's 75th birthday has been the large annual party adjacent to the flagship store, which attracts over 50,000 people for seven hours of free food, entertainment, and children's rides. Ed has been awarded honorary degrees from five Canadian universities and from Tel Aviv University and has been inducted into the Canadian and American Business Hall of Fame and honored with the Order of Canada.

[Randal F. Schnoor (2nd ed.)]

MISES, LUDWIG EDLER VON (1881–1973), economist, best known for his work on monetary theory and his criticism of interventionism and central planning. Born in Lemberg, the son of an Austrian railway engineer, von Mises was educated in Vienna. As professor of economics at the University of Vienna from 1913 to 1938, he represented the Austrian economic school of thought. He served as a consultant to the Austrian Chamber of Commerce and formed the Austrian Institute for Business Cycle Research in 1926. From 1934 Von Mises taught in Geneva and from 1940 in New York. Together with Luigi Einaudi, Jacques Rueff, and Wilhelm Roepke, he founded the Mont Pèlerin Society, an influential international association of free-market economists and sociologists. His writings include: *The Theory of Money and Credit* (1912); *Kritik des Interventionismus* (1929); *Die Ursachen der Wirtschaftskrise* (1931); *The Ultimate Foundation of Economic Science* (1962); *Human Action: a Treatise on Economics* (1966³).

[Joachim O. Ronall]

MISGAV AM (Heb. מִשְׁגַּב עַם; "Stronghold of the People"), kibbutz on the Naphtali Ridge, on the Israel-Lebanese-border, affiliated with Ha-Kibbutz ha-Me'uhad. Its establishment in 1945 by a group of Ha-No'ar ha-Oved youth 2,770 ft. (840 m.) above sea level, and accessible only by steep footpaths, was

a daring undertaking. In the Israel War of Independence (1948), Misgav Am was for many months completely isolated but served eventually as a base for Israel forces in Operation Hiram. In 1980 five terrorists infiltrated the kibbutz, killing the kibbutz secretary and an infant and wounding four more children before being stopped by the army. In 1969 the kibbutz cultivated the hilly terrain in its vicinity and also had fields and orchards in the Huleh Valley below. Subsequently it manufactured surgical dressings. In the mid-1990s, the population was approximately 280, declining to 236 in 2002.

MISHCON, VICTOR, BARON (1915–), British solicitor and politician. Educated at the City of London school, in 1937 Mishcon founded a one-man firm of solicitors in Brixton, south London. From 1988, after growth and merger, it was known as Mishcon de Reya and had become one of the largest and most prestigious firms of solicitors in Britain. It represented Princess Diana in her divorce proceedings against Prince Charles and acted for American historian Deborah *Lipstadt in the libel suit brought against her in 2000 by David Irving. Victor Mishcon served as a Labour member on many public bodies and was chairman of the London County Council in 1954–55. In 1954–57 he served as a member of the controversial Departmental Committee of Inquiry into Homosexuality and Prostitution. Mishcon was made a life peer in 1978 and was Opposition spokesman in the House of Lords on Home Affairs in 1983–90. In 1990–92, most unusually for a solicitor, he served as shadow lord chancellor, a post normally reserved for a senior barrister, and in 1992 was the first practicing solicitor to be appointed an honorary Q.C. Mishcon was associated with many Jewish and Israeli causes. He was president of the Anglo-Jewish Association and served as vice president of the Board of Deputies of British Jews.

[William D. Rubinstein (2nd ed.)]

MI SHE-BERAKH (Heb. מִי שֶׁבֵרַךְ; “He Who Blessed”), initial words of a prayer formula said on various occasions and invoking God’s blessing on the community and on individuals.

During the Sabbath morning service after the Torah reading a blessing is invoked “May He who blessed our forefathers... bless this holy congregation...” The wording of this *Mi she-Berakh* varies in the various rites, but in its essence can be found in the oldest manuscripts. In different communities there are various additional *Mi she-Berakh* prayers, e.g., for one who does not interrupt his prayers from **Barukh she-Amar* through the **Amidah*, for one who always comes on time to the synagogue, etc. In Israel there is a *Mi she-Berakh* for the soldiers of the Israel Defense Forces. A personal *Mi she-Berakh* is generally recited for every person called to the reading of the law sometimes specifying the donation being made to the synagogue. If the person called to the Torah is

celebrating a special occasion, such as his bar mitzvah, forthcoming marriage, or the birth of a child, the prayer is worded so as to make reference to the event. For a female child the name is usually given in the prayer. The usual *Mi she-Berakh* starts with the words “May He who blessed our fathers Abraham, Isaac, and Jacob bless...” however, when the blessing is invoked for a sick female or one recovering from childbirth, the names of the matriarchs, Sarah, Rebekah, Rachel, and Leah are added to the invocation. It is also customary to recite relevant versions of the prayer at banquets celebrating events of religious importance.

BIBLIOGRAPHY: Eisenstein, Dinim, s.v.

MISHMAR HA-EMEK (Heb. מִשְׁמַר הָעֵמֶק; “Guard of the Valley”), kibbutz on the southwest rim of the *Jezreel Valley, Israel, affiliated with Kibbutz Arzi ha-Shomer ha-Za’ir. It was founded in 1926 by pioneers from Poland (joined later by immigrants from other countries) as the first Jewish settlement in the area. It soon became a center of the Ha-Shomer ha-Za’ir movement, particularly since the first regional school of the Kibbutz Arzi network was set up there. In the Israel *War of Independence (1948), Mishmar ha-Emek successfully resisted the first large-scale attack of the Arab “Liberation Army,” commanded by Fawzi al-Qāwuqjī, aimed at a breakthrough to Haifa. The attacking Arab forces were eventually thrown back toward *Megiddo and Jenin (April 1948). In 1969, the kibbutz had 700 inhabitants, increasing to 790 in the mid-1990s and 935 in 2002. Its economy was based on intensive and diverse farming, such as field crops, orchards, dairy cattle, and poultry. It also operated a plastics factory for electrical appliances and household goods in partnership with Kibbutz Galed. The Ha-Shomer ha-Za’ir Forest which was planted in the hills near the kibbutz at the end of the 1920s has become part of the Menasheh Forest, the largest in the country. The kibbutz has a local museum.

[Efraim Orni]

MISHMAR HA-NEGEV (Heb. מִשְׁמַר הַנֶּגֶב; “Guard of the Negev”), kibbutz in southern Israel, 12 mi. (20 km.) N.W. of Beersheba, affiliated with Ha-Kibbutz ha-Me’uḥad. It was one of the eleven Jewish settlements established in one night (Oct. 6, 1946) in the south and Negev as a continuation of the “tower and stockade” principle. In the Israel *War of Independence (1948), the kibbutz constituted an important link with the isolated Negev settlements and served as a base for the Israel forces which captured Beersheba. Its members, numbering 462 in 1969, originated from Latin American countries, France, North Africa, Bulgaria, and other countries. In 1969 its economy was based on agriculture irrigated by the National Water Carrier, and on a plastics factory. In 2002 the population was 592, and it also operated an events center, shooting range, and gas station. The local archaeological museum displays artifacts from the vicinity where ancient *Gerar is supposed to have been located.

[Efram Orni / Shaked Gilboa (2nd ed.)]

MISHMAR HA-SHARON (Heb. מִשְׁמַר הַשָּׂרׁוֹן; “Guard of the Sharon”), kibbutz in central Israel, in the Hefer Plain, affiliated with Iḥud ha-Kevuzot ve-ha-Kibbutzim, founded in 1933. Mishmar ha-Sharon developed intensive, irrigated farming, including citrus, and dairy cattle; it pioneered in raising flowers. The kibbutz also operated a bakery, one of the oldest and biggest in the country and the mainstay of its economy. After it burned down, many of the kibbutz members began to work outside the kibbutz, contributing their salaries to the common fund. In 1969 the population was 400; in 2002, 447.

MISHMAR HA-YARDEN (Heb. מִשְׁמַר הַיַּרְדֵּן; “Guard of the Jordan”), moshav in northern Israel, near the upper Jordan River course, affiliated with the *Ḥerut Movement. In 1884 a Jew living in the United States acquired the land, to establish a farm, Shoshannat ha-Yarden, but shortly after sold his holding to a Ḥovevei Zion group from Russia which founded the moshavah of Mishmar ha-Yarden (1890). Although it received aid from Baron Edmond de *Rothschild, the village, which was based mainly on extensive grain crops, did not make much headway. It suffered from isolation and the endemic malaria. In 1946 the village, reinforced with the settlement of Irgun Wedgwood, a group of World War II veterans, intensified its farming. In the Israel *War of Independence, the Syrian army crossed the Jordan River from the *Golan over the nearby *Benot Ya'akov Bridge, and established a bridgehead at Mishmar ha-Yarden, in an attempt to cut off the Ḥuleh Valley and penetrate into Galilee (May 1948). The attempt of Israel forces to encircle the Syrians from the east in “Operation Berosh” (July 1948) was unsuccessful, but the bridgehead was contained and its area reduced. When the Syrians evacuated the area as a result of the armistice terms (1949), hardly any traces remained of the moshavah. At the end of 1949, the moshav and a kibbutz, Gadot, were founded on the site. Until the Six-Day War (June 1967), Mishmar ha-Yarden was the frequent object of sniping and shelling from Syrian positions, just beyond the Jordan River. Most of the moshav's inhabitants originated from Morocco. Its farming was based on irrigated field and garden crops, deciduous fruit orchards, and dairy cattle. In 2002 its population was 364.

[Efraim Orni]

MISHMAROT (Heb. מִשְׁמָרוֹת; “Guard Posts”), kibbutz in central Israel, near *Pardes Ḥannah, affiliated with Iḥud ha-Kevuzot ve-ha-Kibbutzim, founded in 1933. Mishmarot developed citrus, and field crops, became a partner in a large plywood factory, and set up smaller plants for metal products and furniture parts. Its population in 1968 was 240; in 2002, 290. The kibbutz is known as the birthplace of such pop singers as Shalom *Hanoach, Hanan Yovel, and the late Meir Ariel.

MISHMAROT AND MA'AMADOT, priestly and levitical divisions.

Historical

According to 1 Chronicles 24–26 and rabbinic tradition, the priests and the Levites were organized into courses or divisions. According to post-biblical evidence, these divisions used to serve in rotation. The term which is rendered as “course” (Heb. *mishmar*, *mishmarot*) is the one used in post-biblical sources (*The Scroll of the War of the Sons of Light Against the Sons of Darkness*, p. 2, 2ff.; Suk. 5:6–7; Ta'an. 2:6–7, et al.), whereas the Bible generally employs the term “division” (Heb. *maḥlakah*, *maḥlakot*).

According to 1 Chronicles 23:1ff., it was King David who divided all the priests and Levites according to their families and clans and assigned them their tasks in the *Temple. This arrangement is attributed to David also in the description of the dedication of the Temple by Solomon in 11 Chronicles 8:14. The text of Nehemiah 12:45–46 ascribes the assignment of tasks to the Levites and priests to both David and Solomon. There is no information about the working arrangements in the Temple anywhere else in the Bible; neither is there any allusion to courses among the detailed instructions for the priests and Levites in the Bible. It would appear that even the listing of the divisions of priests and singers and porters, as given in 1 Chronicles 24–26, dates from the Second Temple era, and that they reflect a Second Temple reality, a conclusion based on the comparison of the list in 1 Chronicles 24 with the lists of the priestly families in the Book of Ezra and Nehemiah and post-biblical sources.

In the list of returnees in Ezra 2:36–39 (Neh. 7:39–41) – apparently a record of a general census after the rebuilding of the Temple – only four priestly clans are listed: the sons of Jedaiah (of the house of Jeshua), the sons of Immer, the sons of Pashhur, and the sons of Harim. They totaled 4,289, which was a tenth of the number of returnees. This is a complete record of all the priests as of that date, and they belonged to only four families or clans. Of these four clans, three – Jedaiah, Immer, and Harim – appear again in the list of the 24 divisions of the priesthood in 1 Chronicles 24:7ff. Again, a detailed list of priests (as representatives of clans) leads the list of 22 names of those who signed the covenant in Nehemiah 10:2–9. Eight of these – Immer (Amariah), Malchijah, Shebaniah (Shecaniah), Harim, Abijah, Mijamin, Maaziah, and Bilgai (Bilgah) – recur in the list in 1 Chronicles 24. With minor differences, these names are the same as those of the priestly clans listed in Nehemiah 12:12–20, which is attributed to the time of Joiakim, the high priest and the father of the high priest Eliashib of the period of Nehemiah. Fifteen names in the latter list are identical with the names of the signers of the covenant, including the eight clans which figure in the list of divisions in Chronicles; and it includes two names which recur in the Chronicles list, including Jehoiarib (Joiarib), the division to which the Hasmoneans belonged. These two lists – of Nehemiah 10 and of Nehemiah 12 – also predate the list of 24 priestly divisions in the book of Chronicles.

It would appear, then, that the author of Chronicles ascribed to David certain later arrangements of divine service, and that the priestly courses were actually not established until the Second Temple era. On the other hand, it may be argued that, although the list of courses in 1 Chronicles 24–26 reflects reality at the time of the author, the fact that priestly tasks were performed by established divisions serving in rotation indicates a historical tradition. Indeed, the theory that some sort of courses existed in the First Temple is supported by the parallel with the system of divisions in Egyptian temples, despite the generally dissimilar natures of the two priest-hoods. The four priestly families mentioned in the list of returnees in Ezra 2:36–39 may possibly have corresponded to the four priestly divisions of the First Temple, which also served in rotation. Comparison of the list of priests in the Book of Ezra and Nehemiah and the list of the 24 priestly courses in Chronicles illustrates the relationship between all these lists, on the one hand, and the priority of the lists in the Book of Ezra and Nehemiah, on the other. The earliest among them is the list of four priestly families, mentioned in Ezra 2, from the time of the Return, which is based on the divisions in the First Temple. According to this list, the number of priests was already very large (4,289 men), and even the number of priests in one family was so great that they could not serve in the Temple simultaneously. An arrangement whereby the groups of priests would serve in rotation was necessary. The families were divided into clans, and the clans into courses (cf. rabbinic tradition: “four divisions returned from Exile – Jedaiah, Harim, Pashhur, and Immer; and the prophets in Jerusalem organized them into four-and-twenty divisions”, Tosef., Ta’an. 2:1; TJ, Ta’an. 4:2, 67d, et al.). Perhaps to be included in the same framework is the account given by Josephus (Apion, 2: 108) concerning four priestly tribes that rotated service in the Temple at regular intervals. Indeed, there are those who would amend the text to read “twenty-four” in this place as well (cf. Jos., Life, 2; Jos., Ant., 7:366). A tradition concerning the gradual consolidation of the 24 priestly courses appear also in Tosefta, *Taanit* 4:2, and TJ, *Taanit* 4:2, 67d.

The establishment of 24 priestly courses and the order of their service as described in 1 Chronicles 24 was meant to be a permanent arrangement. When this order was established and at what time the list was made is not known. In any event, it was a late development, at least one or two generations after the time of High Priest Joiakim, to which the list of priestly clans in Nehemiah 12 is attributed. Various scholars date this list at the beginning of the Hasmonean era, since Jehoiarib, the representative of the Hasmonean clan, heads the list (1 Chron. 24), whereas in Nehemiah his name is 16th on the list. According to this theory, the family of Jehoiarib was primarily a provincial one, which did not achieve greatness until the Hasmonean period. However, according to I Maccabees 2:1, the house of Joiarib (Jehoiarib) was Jerusalemite; only Mattathias moved to Modin (Modi’in, presumably because of the perilous times.). Although he is mentioned 16th on the Nehemiah list, he appears before Jedaiah, whose fam-

ily was important from the early days of the Return of Exiles (Neh. 12:6, 19). The date of the list of 24 priestly courses may therefore be set close to the period of Nehemiah, still during the Persian occupation. Possibly Nehemiah, who testifies that it was he himself who assigned the priests and the levites their various duties (Neh. 13: 30), also established the arrangement of the 24 priestly courses, despite his failure to specify it in the account of his activities.

[Jacob Liver]

Talmudic Data

As the priests were numerous and scattered throughout Palestine, it was impossible for all of them to officiate at the same time. An arrangement was therefore made whereby they were divided (in the final stage) regionally into 24 *mishmarot* (lit. “guards”; Ta’an. 4:2), which served in a regular weekly rotation. The *mishmarot* were further broken up into a varying number of *battei avot* (“houses” or “families”). Each division and subdivision was presided over by a head, called *rosh mishmar* and *rosh bet av* respectively (Tosef., Hor. 2: 10); there is also mention made of a *bet av* (Tam. 1:1; Mid. 1:8; cf. Yoma 1:5). The levites were similarly divided into 24 *mishmarot*, which replaced each other every week (1 Chron. 25:8ff, et al.; Jos., Ant., 7:363ff.; Ta’an. 4:2). These were in turn subdivided into seven *battei avot*, and presided over by “heads.” Finally, there was an analogous division of the Israelites themselves into 24 *mishmarot*, each of which had to take its turn in coming to Jerusalem for a week. They served to represent the whole body of the people while the daily (communal) offerings were sacrificed, for “how can a man’s offering be offered while he does not stand by it?” (Ta’an. 4:2, et al.).

That part of the *mishmar* of priests, Levites, or Israelites actually engaged in the performance of its duty was called a *ma’amad* or *ammud* (“station”) and was headed by a *rosh ma’amad* (Tam. 5:6). When the time for the service of a *mishmar* came round, all the priests and Levites belonging to it would go to Jerusalem. Not all the Israelites of that *mishmar*, however, proceeded to Jerusalem. A portion of them certainly did (Ta’an. 4:2; cf. Tosef., Ta’an. 4:3) but those who could not do so assembled in their own towns and read the story of creation, etc. Only those in Jerusalem who actually “stood by” while the sacrifice was being offered could, strictly speaking, be called a *ma’amad*, or *ammud* (see Sof. 17:5; but see Lieberman, *Tosefta ki-Feshutah* 5, 1962, 1104, who shows that according to a different opinion the *ma’amadot* were of Israelites alone).

Activities

These 24 *mishmarot* conducted the daily Temple service, each in turn officiating for one week. Every Sabbath they changed, the retiring *mishmar* offering the morning and *musaf* additional sacrifices, whereas the new *mishmar* offered the evening one, and laid the fresh shewbread on the table (Tosef., Suk. 4:24–25). On the three pilgrim festivals, all the 24 *mishmarot* officiated together (Suk. 5:7–8). Each priestly *mishmar* had in the Temple its own ring at which its members slaugh-

tered their animals (Mid. 3:5) and its own niche in which their vestments were kept (Tam. 5:3). Bilga's niche was, however, permanently blocked up and its ring immovable (Suk. 5:8), a sign of disgrace, because one of its members had once acted shamefully (Suk. 56b). The weekly *mishmarot* of priests were broken up into between four and nine subdivisions (*battei avot*). If there were fewer than seven, some would officiate twice during the week. If, on the other hand, there were more than seven, then on some days two would have to serve together (Tosef., Ta'an. 2:2, et al.). Furthermore, as only a small part of a *bet av* was required to serve at any given time, lots were drawn to decide which individual priests should officiate each day (Yoma 2:2–4, et al.).

A number of restrictions were placed upon members of the *mishmar* and *bet av* during their week (or day) of office. Thus, members of the *mishmar* were permitted to drink wine by night but not by day, whereas those of the *bet av* could not drink wine either by day or night, as they might be called upon to assist in the Temple service at any conceivable hour. Members of the *mishmar* and of the (Israelite) *ma'amad* alike were forbidden to cut their hair or wash their clothes throughout the week – as this should have been done earlier – except on Thursday, so that due honor be accorded the Sabbath (Ta'an. 2:7). On certain communal fast days, members of the *mishmar* and the *bet av* were permitted to eat, or else to fast only partially, so as to have enough strength to carry out their Temple duties (Ta'an. 2:6). The men of the Israelite *ma'amad*, however, would fast from Monday to Thursday on their week of service, while from Sunday to Friday they read (in sections) the chapter of Creation (Gen. 1; Ta'an. 4:2–3). Members of the *mishmar* who were not engaged in actual service would pray that the sacrifices of their officiating brethren be acceptable; while those of the Israelite *ma'amad* who could not come to Jerusalem gathered in their local synagogues (or meeting places) and prayed for the welfare of sailors, wayfarers, children, pregnant women, etc. The *ma'amadot* were considered to be of such importance that it was said that without them heaven and earth could not have survived (Ta'an. 27b; cf. the reading in Sof. 17:15). The institution of the *ma'amadot*, which dates back to the beginning of the Second Temple (see sources cited below), seems to have formed the basis of what later became the synagogal system.

History

Concerning the origins of the *mishmar* system, there are three conflicting (tannaitic) traditions recorded in rabbinic literature:

(1) Moses established eight (priestly) *mishmarot*, to which David and Samuel added another eight. Finally, on the return from the Babylonian Exile, 24 were established (TJ, Ta'an. 4:2, 67);

(2) Moses established eight (priestly and levitical) *mishmarot*; David and Samuel increased them to 24, and on the return from the Exile 24 (Israelite) *ammudim* (*ma'amadot*) were established, parallel to the priestly and levitical *mishmarot* (Tosef., Ta'an. 4:2);

(3) Moses established 16 *mishmarot*, which were later increased to 24 (Ta'an. 27a). Relative unanimity of opinion is to be found only in the account of the restoration of the *mishmar* system after the Babylonian Exile. Four *mishmarot* are said to have returned from the Exile, Jedaiah, Harim, Pashchur, and Immer. "And the prophets among them [or "in Jerusalem", according to the Tosefta; i.e., Haggai, Zechariah, and Malachi] arose and made 24 lots, and put them into an urn." Then each of the four *mishmarot* drew five lots in addition to his own, making a total of six. Finally, the *rashei mishmarot* divided them into *battei avot* (TJ, Ta'an. 4:4, 68a, et al.). It would seem (from tradition (2) above) that only at this stage were the Israelite *ma'amadot* introduced.

Thus rabbinic sources trace the first origins of the *mishmarot* via David and Samuel back to Moses. However, these accounts do not appear to have the value of independent traditions but rather to be based upon inferences drawn from scriptural passages. Thus, "... whom David and Samuel the seer did ordain, in their set office ..." (1 Chron. 9:22) is said to refer to the priestly and levitical *mishmarot* (Tosef., *ibid.*; cf. TJ, *ibid.*, citing 1 Chron. 2:4). Nevertheless, the resultant picture presented by rabbinic sources probably has considerable historical validity. The system remained unchanged even till Josephus' time (Jos., Ant., 7:363 ff.; Life, 1:2).

Long after the destruction of the Temple, memories of the *mishmarot* lingered on. In Erez Israel their names were mentioned each Sabbath in the *piyyutim*. Tablets, fragments of which have survived, were fixed on synagogue walls, engraved with a list of *mishmarot* and their geographical provenance. Karaite liturgy preserved echoes of both the *mishmarot* and the *ma'amadot*. Even as late as 1034, it was still the custom in some communities to announce on each Sabbath: "Today is the holy Sabbath, holy to the Lord. Today is [the Sabbath of] which *mishmeret*? [That of] *mishmeret* ... May the Merciful One restore the *mishmeret* to its place, speedily and in our days. Amen."

MISHNAH (Heb. מִשְׁנָה). The term "mishnah" is used in a number of different ways (see below), but when used as a proper noun ("the Mishnah") it designates the collection of rabbinic traditions redacted by Rabbi *Judah ha-Nasi (usually called simply "Rabbi") at the beginning of the third century

CE. The Mishnah supplements, complements, clarifies and systematizes the commandments of the Torah. The Torah, for example, commands: “Remember the Sabbath day” (Ex. 20:8). The Mishnah provides this abstract commandment with a concrete form – the *kiddush* and *havdalah* rituals which mark the beginning and the ending of the Sabbath day. The Torah commands “Observe the Sabbath day” (Deut. 6:12). The Mishnah specifies 39 categories of forbidden labor which are prohibited by this commandment, subsuming dozens of other kinds of labor under these 39 headings. The Torah commands: “When you eat and are satisfied, give thanks to your God for the good land which He has given you” (Deut. 8:10). The Mishnah spells out specific blessings to be recited before and after each kind of food, and what to do if the wrong blessing is recited by mistake. It also extends the recitation of blessings to areas other than food, detailing blessings to be recited before and after the performance of commandments, blessings of praise and thanksgiving, even establishing a regular order of daily prayers. When the commandments seem chaotic or inconsistent, as in Lev. 13–14 (“leprosy”), the Mishnah organizes these rules into a consistent system. When they are already relatively detailed and systematic, as in Lev. 1–7 (sacrifices), the Mishnah deals with additional aspects of the halakhah, either ignored or mentioned only in passing in the Torah, such as the proper intentions which should accompany the sacrifices, and the consequences of improper intention.

The contents of the Mishnah are the product of an ongoing process of elaborating and explaining the foundations, the details and the significance of the Torah’s commandments. This process began long before the redaction of the Mishnah, and continued throughout the talmudic period (1st to 6th centuries CE) and beyond. Nevertheless, the Mishnah has a unique place within the rabbinic tradition. It was the central literary document of the entire talmudic period, providing the framework for the redaction of its companion volume, the *Tosefta, and serving as the foundation for both the Jerusalem Talmud and the Babylonian Talmud. Through these works the Mishnah has shaped most of the actual practice of the Jewish religion down to the present day. In the post-talmudic period commentaries were composed to the Mishnah, and together with them the Mishnah came to serve as the authoritative epitome of the talmudic tradition as a whole. In these two roles – as the foundation underlying the talmudic tradition and as the authoritative epitome of that tradition – the Mishnah has played a decisive role in the religious life of the Jewish people.

Below we will examine the formal structure of the Mishnah as a literary work, and provide an overview of certain aspects of the Mishnah’s content, focusing on its two primary components – halakhah and aggadah – including an analysis of the logical structure of mishnaic halakhah. We will then discuss the sources of the Mishnah, its redaction, and its dissemination and acceptance in the later talmudic academies. After a discussion of the contributions of traditional and academic scholarship to the understanding of the Mishnah, we

will provide a brief survey of editions, translations, and other aids to Mishnah study.

The Mishnah as a Literary Work

Originally the term “mishnah” designated the entire content of traditional Torah study, with the exclusion of the 24 books of the Hebrew Bible – “mikra” in Hebrew. Mishnah Ned. 4:3 opposes the term “mikra” to “midrash, halakhot, and aggadot,” which are themselves grouped together in Tosefta Ber. 2:12 under the general heading of “mishnah.” The terms midrash and halakhot (sing. halakhah) mentioned in these passages designate the two most fundamental forms in which rabbinic tradition was studied and transmitted. In midrash, rabbinic tradition is intimately interconnected with the explication of the biblical text, and the overall literary structure of midrashic compilations follows the order of the biblical text. Halakhot contain the same rabbinic material as is found in the midrash, but without any reference to the biblical text. In the halakhot, rabbinic tradition stands on its own, the structure and order of halakhic compilations being determined solely by the content of rabbinic tradition itself.

Only two halakhic compilations have come down to us from the earliest period of rabbinic literature: Rabbi’s Mishnah and the Tosefta, a supplementary halakhic work similar in arrangement to the Mishnah, and probably redacted by Rabbi’s disciples. Both of these works are divided into six *sedarim* (sing. *seder* = “order”): *Zera’im, concerning agricultural matters; Mo’ed, concerning holy times and related issues; *Nashim, concerning family law; *Nezikin, concerning civil and criminal law; *Kodashim, concerning sacrifices and the Temple; *Toharot, concerning ritual purity and impurity.

These six *sedarim* are further subdivided into tractates (*masekhtot*, sing. *masekhet*), and the tractates into chapters (*perakim*, sing. *perek*). The further subdivision of chapters into smaller groups of halakhot varies from edition to edition and does not seem to be original. With the exception of Zera’im, the order of the *masekhtot* follows the number of chapters which they contain. A tractate with a larger number of chapters comes first, followed by tractates with fewer chapters. If a *seder* contains more than one tractate with the same number of chapters, their order may vary between different manuscripts and editions. In the past, chapters of the Mishnah were referenced by the opening words of their first halakhah. Today references are made to tractates by name, and to chapter and individual halakhah by number, according to the accepted division of the most recent editions.

The redaction and dissemination of the Mishnah in the early third century marked a turning point in the history of rabbinic literature. Scholars who were active up to the time of Rabbi and his immediate disciples were called “teachers of mishnah” – **tannaim* (sing. *tanna*) in Aramaic. The later talmudic scholars – called **amoraim* – accepted the traditions of the *tannaim* as authoritative, and as time went on they were increasingly unwilling to disagree with them. As a result, talmudic literature is divided into two periods – the earlier, tan-

naïtic period and the later, amoraic period. The tannaitic literature consists primarily of the Mishnah, the Tosefta, and tannaitic midrashim – Sifra, Sifre, and Mekhilta, etc. Amoraic literature is included primarily in the Jerusalem Talmud, the Babylonian Talmud, and the classic midrashei aggadah – *Genesis R., *Lamentations R., *Leviticus R., *Pesikta de-Rav Kahana, etc.

Since Rabbi's Mishnah was the most important and authoritative work of halakhah to come down to us from antiquity, the term "mishnah" came to be equated with the term "halakhot," and was often used in opposition to the term "midrash." In a parallel development, the term "hilkhata" ("halakhot" in Aramaic), apparently referring to Rabbi's Mishnah, is listed in later talmudic sources (TB Shav. 41b) along with "sifra, sifre and tosefta" – apparently referring to compilations similar to the tannaitic works known by these names today.

Finally, the individual unit of tannaitic tradition was called "a mishnah" (pl. mishnayot), or *matnita* (pl. *matneyata*) in Aramaic. Here also, the unique status of Rabbi's Mishnah within tannaitic literature leads to the further distinction between *matnitin* ("our mishnah"), a tradition included in Rabbi's Mishnah, and *matnita baraita* ("an external mishnah"), or *baraita* (pl. *baraitot*) for short, a tannaitic tradition not included in Rabbi's Mishnah. The *baraitot* were preserved not only in the Tosefta, but were also included in and transmitted as part of the amoraic tradition in the two Talmudim.

Our discussions below of tannaitic halakhah and aggadah apply not only to Rabbi's Mishnah, but also to the Tosefta and to many of the talmudic *baraitot*. However, the discussions of the place of the Mishnah in the development of talmudic literature, in the history of Jewish tradition, its redaction, and so on, apply to Rabbi's Mishnah alone, but not to the Tosefta or to the talmudic *baraitot*.

Halakhah in the Mishnah

The Mishnah itself uses the term halakhah to designate ancient or authoritative traditions (Pe'ah 2:6, Or. 3:9, Yev. 8:3), as well as accepted religious practices (Naz. 7:4, BK 3:9, Edu. 1:5, Men. 4:3, Nid. 4:3). It is also used to refer to individual units of tradition, irrespective of their authoritative status (Avot 6:3), and even to incorrect traditions (Oha. 16:1). These traditions may involve no more than the simple restatement or brief elaboration of some custom or practice. But by far the most characteristic tendency of the individual tannaitic halakhah is the close examination of some dimension of ordinary human life or experience, and the careful categorization of certain aspects of that experience in line with a limited number of formal dichotomies.

The most obvious – and familiar – halakhic dichotomy is the one between "forbidden" (*asur*) and "permitted" (*mutar*). This dichotomy is most regularly applied to human behavior. For example, the Mishnah may categorize sexual relations between two individuals under certain circumstances as permitted, and under other circumstances as forbidden. While eating on the Day of Atonement is certainly forbidden, tannaitic

halakhah lists certain exceptions to this rule and even requires children under a certain age to eat. Similarly, the halakhah permits heating food on the Sabbath under certain circumstances and forbids it under other circumstances.

A related dichotomy – applying also to a large extent to behavior – is the one between "liable" for punishment or some other formal sanction (*hayyav*) and 'exempt' from such sanctions (*patur*). This dichotomy is generally applicable to actions which have already been categorized as forbidden. For example, tannaitic halakhah forbids the carrying of an object in the public domain on the Sabbath. In order for the transgressor to be considered "liable" for sanctions, however, the act of carrying must conform to a number of different conditions. If any one of these conditions is not met, the transgressor is considered "exempt" from sanctions. Similarly, the halakhah forbids baking bread on a holiday for use the following day. One who transgresses this rule is, however, not necessarily liable for punishment. It is forbidden to steal. Under certain circumstances the thief will be liable to pay double indemnity, while under other circumstances he will be exempt from this additional payment. Although a person can be liable for the indirect or inadvertent consequences of his or her actions (or inaction), it is not always possible to categorize these actions as forbidden.

The dichotomy between *hayyav* and *patur* may also be applied to human behavior in another way – with regard to positive commandments, such as the eating of matzah on Passover. Here *hayyav* should be translated as "obligated [to fulfill the commandment]" and *patur* as "exempt [from fulfilling it]." The halakhah categorizes eating matzah on the first night of Passover as an "obligation" (*hovah*), and on the remaining days of Passover as "optional" (*reshut*). The Mishnah states that properly prepared matzah "may be used in order to fulfill one's obligation" (*yosin bo*). When prepared improperly, the Mishnah states: "it may not be used in order to fulfill the obligation" (*ein yosin bo*). The Mishnah uses the dichotomy between "fit" (*kasher*) and "unfit" (*pasul*) in a similar fashion, in order to determine whether various ritual objects – a shofar or a lulav, for example – may be used to fulfill one's obligation in performing these commandments.

Halakhic categorizations are, however, by no means limited to the field of human behavior. The Torah itself designated certain days as "holy" (*kodesh*), during which various forms of activity are forbidden. It also designated certain places as holy, such as the Temple and walled cities, from which various kinds of impurity must be excluded. The Mishnah systematically applies the dichotomy between the "holy" (*kodesh*) and the "profane" (*hol*) in order to constitute an elaborate hierarchy of holy times and holy places. The holiest times were defined by the most rigorous and most comprehensive set of prohibitions, and lesser degrees of holiness by more lenient and less comprehensive sets of prohibitions. Similarly, the Mishnah defines ten ascending levels of holy space (Kel. 1:6–9), each defined by stricter and stricter rules of purity.

The most highly developed area of tannaitic halakhah is to be found in its system of ritual purity. Seder Toharot ap-

plies the dichotomy between ritually pure (*tahor*) and ritually impure (*tame*) to virtually every aspect of ordinary life. These terms can signify either that an object is susceptible to becoming impure, or that it is actually impure and capable of transmitting this impurity to something else. Certain tractates define the purity or impurity of tools, garments, vessels, and places of residence. Others define the purity or impurity of foods and drinks. Others categorize certain individuals as themselves being sources of ritual impurity, and other individuals as impure as a result of contact with other sources of ritual impurity. This area of halakhah seems to have played a decisive role in the life of the tannaitic sages, even among non-priestly families, and with no obvious connection to the Temple (see Alon).

Tosefta Demai (2:2ff.) describes the procedure by which a candidate is accepted into the elite association called the *havura*. It lists in detail the responsibilities which the candidate must freely accept upon himself or herself in order to be considered a *haver* – including the responsibility to observe all the rules of ritual purity (cf. Demai 2:3). From these descriptions it seems fairly clear that many or most of the purity rules involved no formal obligation (*hova*) whatsoever, but were rather purely voluntary practices (*reshut*). This example of Toharot should serve as a warning against viewing tannaitic halakhah as a legal system consisting entirely of formal obligations enforceable by earthly courts. While true in part, other aspects of tannaitic halakhah could be more accurately described as a moral or a spiritual discipline which the initiate freely accepts in order to draw closer to the ideal of divine service.

Aggadah in the Mishnah

The other primary component of the Mishnah is the aggadah. This term is notoriously difficult to define, and it has become the custom among scholars to define aggadah by means of negation – as the non-halakhic component of rabbinic tradition (Frankel, *Midrash and Aggadah*, 20). While fair enough, we must be careful in adopting this approach not to define halakhah itself too narrowly. As we have seen, the halakhah of the Mishnah can be described in part as a system of laws, but not infrequently it also has the character of a personal moral and spiritual discipline. It can be expressed in the form of concrete judgments about specific cases, but also in rules involving varying degrees of abstraction and generality. The Mishnah may even use stories to express a halakhah. This is obviously so when the story reports an explicit legal precedent. But it may also be true when a story merely describes the behavior of a notable sage, if it is understood that this behavior is worthy of imitation.

Despite these differences in form, the rules, judgments and precedents included in the Mishnah all have one thing in common. They all categorize specific forms of behavior and well defined areas of concrete experience in line with formal dichotomies of the sort described in the previous section. Aggadah, on the other hand, investigates and interprets the

meaning, the values, and the ideas which underlie the concrete forms of religious life – as opposed to the specific rules which actually govern that life. Continuing the tendency to define aggadah as ‘that which is not halakhah’, we could say that the relation between aggadah and halakhah is similar in many ways to the relations between theory and practice, between idea and application, and, in the area of ethics, between character and behavior.

Starting from the last distinction, it is clear that the Mishnah makes extraordinary demands upon the external behavior of the sages and their disciples. Along with these external demands, the Mishnah makes equally extraordinary “internal” demands on the character, the faith, and the understanding of the sages and their disciples. The Mishnah contains a tractate – Avot – devoted in its entirety to these principles of character, faith, divine providence, justice, etc. Moreover, the Mishnah introduces related aggadic elements into the context of specific halakhic discussions. For example, after defining the obligation to recite a blessing on hearing bad tidings, the Mishnah adds the aggadic statement that one’s love for God should never falter, “even if He takes your life” (Ber. 9:5). Similarly tractate Pe’ah, which deals with specific obligatory gifts to the poor, opens with an aggadic description of the unlimited nature of acts of loving kindness and charity, and of the rewards that await those who show love, respect and kindness to others. After defining the specific sums one is obligated to pay in restitution for assault, the Mishnah declares that “one is not absolved [of the sin] until one asks [the victim for forgiveness]” (BK 8:7). The Mishnah then goes on to state that the victim “should not be cruel” but rather should be merciful and forgiving.

It is in this sense that we should understand the programmatic statement concerning the nature and the purpose of the aggadah, found in the tannaitic midrash, Sifre Deut. 49: “If you desire to know the One who spoke and the world came to be, then you should study the aggadah, for in this way you will come to know the One who spoke and the world came to be, and *you will cleave to his ways*.” As is made clear there, God’s ways are the aspects of justice, mercy, etc., which both define the holy character of the righteous individual and underlie those forms of normative behavior which constitute much of the halakhah.

The aggadah of the Mishnah also deals with classic theological issues such as divine providence, theodicy and the afterlife. These issues, however, are regularly integrated into some appropriate halakhic context. For example, one of the most highly developed aggadic themes running throughout tannaitic literature is the doctrine of “measure for measure.” At its foundation lies an ancient saying – “The vessel which you use to measure out [for others], will itself be used to measure for you” – which is already quoted in the New Testament (Matt. 7:2) as a warning not to be judgmental of others, lest one suffer the same fate at their hands. The tannaitic literature develops it into a general theory of divine justice. More specifically, it is used to explain and to justify the details of

divine retribution as described in various biblical passages. One of these passages concerns the sotah, a wife suspected of unfaithfulness (Num. 5). Since the oracular method the Torah gives for determining the sotah's innocence or guilt seems extraordinarily harsh and cruel, the Mishnah (Sot. 1:6) quotes the ancient saying itself, and then goes on to argue that every aspect of the biblically ordained procedure is in fact just and appropriate. In the following two mishnayot, the Mishnah summarizes the entire tannaitic doctrine of measure for measure, not only with regard to divine retribution, but also with regard to divine reward.

Another prominent aggadic theme is that of the after-life – the “portion in the world to come.” The first three mishnayot of Sanhedrin 10 present an almost halakhic categorization of actions, beliefs, and historical figures, dividing them into those who do, and those who do not “have a portion in the world to come.” This discussion fits the general context in Sanhedrin – a description of the various forms of capital punishment – since the loss of one's portion in the world to come is a kind of otherworldly capital punishment. It also fits the immediate context, coming immediately after a dispute (9:6) whether a non-priest who served in the Temple is to be executed “by the hands of Heaven,” and before a discussion of the inhabitants of an idolatrous Israelite city (10:4), who lose their portion in the world to come.

By a recent count there are more than 50 such aggadic passages in the Mishnah, not including Avot and those found at the ends of tractates or sub-divisions of tractates which are generally viewed as later scribal additions, and not as integral parts of the text of the Mishnah (Frankel, *The Aggadah in the Mishnah*, 655–656). While preliminary conclusions may be drawn concerning this phenomenon as a whole, there is still much room for detailed analysis of each individual case in its own particular halakhic context.

Finally, we should mention that, despite its overall literary character, the Mishnah does contain a number of midrashic passages. With regard to their content, these passages are quite unexceptional, and reflect the same kind of halakhic and aggadic content found in the overwhelming majority of non-midrashic mishnah traditions. They differ only with regard to their external form. This phenomenon has been addressed with regard to the question of possible literary dependence between the extant tannaitic halakhic and midrashic works (Melamed; Friedman, *Tosefta Atiqta*, 76). Recently the midrashic material found in the Mishnah has been used as a starting point for a general examination of early rabbinic hermeneutics (Samely). The question of the specific role which these midrashim play within the context of mishnaic halakhah has recently been addressed (Raviv), but no firm conclusions have yet been reached.

The Structure of Tannaitic Halakhah

The style of the Mishnah is deceptively simple. Most individual halakhot consist of little more than a description of some situation and a brief statement of the ruling which applies to

that situation. To the undiscerning eye these halakhot seem to lack virtually all of the dialectical and conceptual elements which are so characteristic of the later forms of talmudic and rabbinic literature. If the analysis of tannaitic halakhah were to end here, we would be left with a rather difficult question: How could these tannaitic halakhot have served as the foundation for the highly dialectical and conceptually sophisticated discussions found in the later talmudic and post-talmudic halakhic literature? Yet they did, and so it would seem that the logical structure of tannaitic halakhah deserves further examination.

First it must be admitted that the Mishnah contains many halakhot of a descriptive and historical character which have little or no conceptual content. For example, tractate Middot describes in detail the physical structure of the Temple. The related tractate Tamid describes the daily Temple service in the form of a continuous narrative. The third chapter of Bikurim describes the process of bringing and offering of the first fruits. The first seven chapters of Yoma relate in chronological order the events leading up to and culminating in the Temple service of the Day of Atonement. Certain court and priestly procedures are also related in narrative form, as in Sanh. 3:6–7, Neg. 12:5–7, and 14:1–3. Some reports of second Temple practice and restatements of biblical law may include elements of constructive reinterpretation (as in Neg. 13:1), but by and large the conceptual element in these mishnayot, if present at all, is relatively small.

These are however exceptions to the rule. The overwhelming majority of tannaitic halakhot are normative in nature, not historical. The connection between the case description and the ruling in a normative tannaitic halakhah will rarely be merely contingent or accidental. On the contrary, it will almost always reflect the judgment that in this particular case, and under these specific circumstances, the ruling given in the halakhah *must* apply.

The presumption that the connection between the case description and the ruling in a tannaitic halakhah is essential, not accidental, gives rise to a number of interpretive principles. We may illustrate this by means of an example. Mishnah BK 1:4 posits a halakhic dichotomy between two categories – *tam* (lit. “innocent”) and *mu'ad*. In the Mishnah the term *mu'ad* – based on Ex. 21 29 – signifies strict liability for all damages caused by one's property. The distinction between *tam* and *mu'ad* in BK 1:4 builds upon the distinction already found in Ex. 21 35–36 between an ox which caused damage unexpectedly, as opposed to an ox that was known to have caused damage repeatedly in the past, and whose owner, despite having been warned, did nothing to prevent further damage. In the latter case, the owner is held strictly liable for all damages caused by his animal, while in the former his liability is limited to one half of the damages. The reasoning behind this distinction is quite transparent. Strict liability is associated with a situation where the owner was clearly negligent, and the Torah holds him strictly liable for full damages because of this negligence.

Continuing this line of thought, Mishnah BK 1:4 states that the owner of a domesticated animal is held strictly liable for full damages if “it ate something appropriate for it.” From this one can infer that if the animal “ate something not appropriate for it,” the owner would not be liable for full damages, but rather only for half-damages. This then gives rise to the following question: Why should this change in the object consumed – from “appropriate for it” to “inappropriate for it” – affect the degree of liability for the damages caused by one’s animal? An answer to this question requires a determination of the extent of the owner’s responsibility to anticipate possible damages. This in turn would involve a more precise definition of the exact boundary between “appropriate” and “inappropriate.”

In BK 2:2 the Mishnah provides such a definition. First it quotes BK 1:4 and then explains it by means of the following two halakhot: “If the animal ate fruits and vegetables – the owner is fully liable; [if the animal ate] clothes or vessels – the owner is liable only for half-damages.” The first halakhah defines the case where the animal ate “something appropriate for it.” The second halakhah defines the alternative case, where the animal ate “something not appropriate for it.” A naive reader of BK 1:4 would probably have understood the words “appropriate for it” – i.e., for the animal itself – to signify some kind of feed which the animal is accustomed to eating, and to exclude other foodstuffs, such as avocados, artichokes, etc., which are not appropriate “for it.” BK 2:2 draws a very different distinction, between “fruits and vegetables,” generally consumed only by humans, and “clothes or vessels,” which are totally inedible. While the tanna of BK 2:2 may not have given us a very precise interpretation of the original language of BK 1:4, he has, nevertheless, expressed a very clear and unequivocal judgment regarding his understanding of the notions of responsibility, negligence, and liability which underlie that halakhah.

The procedure outlined above is very characteristic of talmudic analysis. Starting from one halakhah, taught explicitly in the Mishnah, the student infers another halakhah – parallel to the original halakhah, but differing in two ways. First, the case description of the second halakhah differs from the original with respect to one detail – e.g. “inappropriate” instead of “appropriate.” Second, the ruling in the second halakhah is totally different from the original – “not liable for full damages” instead of “liable for full damages.” This analysis presupposes that the difference in the rulings of these two halakhot follows necessarily from the change in their case descriptions. If we then explain *why* a certain change in the ruling follows from the change in the case description, we will, in effect, have grasped the legal principle which underlies the original halakhah. In fact, the only way we can ever understand the essential connection between the case description and the ruling in a tannaitic halakhah is by explaining why, if the case changed, the ruling would necessarily be different.

From this perspective, it becomes clear how tannaitic halakhah – even an individual tannaitic halakhah – can be considered both dialectical and conceptual. It is dialectical

because the meaning of the individual tannaitic halakhah is determined only in its relation to another alternative halakhah. It is conceptual because the comparison of these two contrasting halakhot requires a conceptual distinction which can justify the difference between them.
