We normally associate conceptual explanation with some form of abstract generalization. Tannaitic reasoning, however, concerns itself almost exclusively with uncovering the principles operative in particular cases. As we have seen, this involves a close comparison of two distinct but closely related halakhot. This tendency explains one of the most characteristic and widespread phenomena in tannaitic literature – the *halakhic couplet*. A mishnah of this sort contains, not one, but two distinct halakhot, parallel in form and clearly linked together by some literary device. The case descriptions of these two halakhot are very similar in form and content, and usually differ with respect to one element only. The rulings, on the other hand, are usually diametrically opposed, often reflecting alternative sides of the halakhic dichotomies described above (cf. example from BK 2:2 above). These parallel halakhot invite comparison, and their differences demand explanation.

By expressing its notions in the form of concrete distinctions, and not by means of finished and formal abstractions, the Mishnah invites the student to refine its unstated principles by means of further distinctions. These principles are implicitly conceptual, and so lead the student beyond their immediate context. Yet they are expressed in an external form which is both concrete and limited in scope. The resulting tension between these two aspects of tannaitic halakhah gives rise to an open-ended process of interpretation and analysis, reinterpretation, and renewed analysis. In this way, the cumulative body of tannaitic – and early amoraic – halakhic literature, which was the result of this process, provided fertile ground for the growth of the explicitly dialectical and conceptual discussions and analyses of later talmudic and post-talmudic literature.

The Sources of the Mishnah

When speaking of the sources of the Mishnah, we must distinguish between three senses in which the term is used. First, it is used to designate the multiplicity of fully formulated tannaitic halakhic and aggadic traditions which were accessible to Rabbi when he began to redact his Mishnah (see the following section below). The second sense in which we use the term is to designate earlier and more primitive forms of these halakhic and aggadic traditions, stemming perhaps from the first generations of tannaitic activity. The extant body of tannaitic literature often quotes and interprets such earlier traditions. An examination of the various forms in which these traditions have been preserved in the extant tannaitic works provides indirect evidence for their existence, and to a certain extent for their reconstruction. The third sense in which we speak of the ‘sources’ of the Mishnah is in regard to ancient pre-literary traditions, stemming from the Second Temple period,

which may have served as the background for the formulation of the earliest level of tannaitic literary activity.

With regard to this third sense, it has been claimed that the roots of tannaitic halakhah extend backward, “long before the destruction of the Second Temple” (Albeck, *Unter*. 3). In support of this position, scholars have pointed out numerous parallels between certain assumptions of tannaitic halakhah and similar positions reflected in the books of Judith and Jubilees, the Septuagint, as well as Philo, Josephus, and the Dead Sea writings (Safrai, 134–146). As further testimony to the antiquity of tannaitic halakhah, scholars have pointed to “internal evidence” within the Mishnah itself (Hoffmann, *Die Erste Mishna*; Epstein, *Tannaim*, 18ff.). This testimony, however, usually involves little more than descriptions of events or practices which supposedly took place in Second Temple times (*Tann.* 36, 57), without any concrete proof that the tannaitic formulations themselves actually derive from an earlier period. As impressive as these arguments are, they concern at best the cultural prehistory of tannaitic halakhah, but not the concrete history of the development of tannaitic literature itself. So long as this distinction remains clear, these investigations into the “roots” of tannaitic halakhah against the background of earlier periods can only contribute to our understanding of the Mishnah and its content.

We also speak (in the second sense mentioned above) of the sources of the Mishnah with regard to the earliest historical levels of tannaitic literature. Even the most conservative talmudic scholars admit that tannaitic *literature* (as opposed to tradition) is the product of a change which occurred, at the very earliest, around the end of the Second Temple period. “Our Mishnah collection is the result of the intellectual work of several generations, extending over hundreds of years, which served to preserve, transmit, and to develop the oral tradition which was transmitted along with the written teaching – the Torah. The halakhot, which up to that time remained undecided and to a certain extent fluid, received in our Mishnah a fixed form, and so were preserved and not forgotten” (Albeck, *Unter*. 3). Even the earliest strata of tannaitic sources possess a literary “form.” These literary forms were capable of being repeated and memorized, and so “preserved and not forgotten.” In this way “tradition” became “mishnah.”

If this were the whole story, the historical study of the Mishnah would be quite simple. However, “the simple fact is that the Mishnah found its final redaction only by the end of the second century C.E., and that much development had taken place in the Tannaitic period which preceded” (Safrai 133). At some point in the history of the tannaitic period, these early mishnaic sources became the object of intense study and analysis, and, as we saw in the previous section above, tannaitic analysis can result in radical reinterpretation of these earlier mishnaic sources.

Albeck described in detail (*Unter*. 5–13) many of the ways in which later tannaim interpreted and expanded earlier, relatively primitive halakhic sources. Sometimes, taking a relatively short and simple tradition as their starting point,

they would posit a series of additional layers of interpretation and elaboration. Sometimes later scholars would analyze the words of an earlier Rabbi, concluding that his halakhah reflected a more general principle. They would then take his words from their original context and copy them over, virtually verbatim, in another context, in which, according to their understanding, they should equally apply. Sometimes they would “interpolate” the original halakhah, i.e., insert interpretive comments of various lengths into the language of the original source. Albeck showed that these interpretive additions were sometimes drawn from other mishnaic sources found nearby in the same tractate. Sometimes an identical source was preserved in different schools or in different tractates within the Mishnah itself. In this case, the same original source might be expanded and interpolated in different ways, resulting in divergent, and even in contradictory versions of the same original tradition.

Other scholars went further than Albeck, asserting that tannaitic interpolation could also involve the *elimination* of words or passages from an original source, or even the *reformulation* of the original language itself, in line with some interpretation accepted by a later Rabbi. Epstein, for example, held that even the most ancient traditions “were *reworked* by later tannaim, and passed through the channels of intermediate redactors, who added to them and *subtracted* from them” (*Tann.* 57). Albeck explicitly rejected both of these notions (*Unter*. 12), and the reasons for his position will be examined below in the following section. It is nevertheless quite clear that the extant tannaitic sources cannot be relied upon to preserve traditions in the original form in which they were studied by earlier generations of tannaim.

This reservation should be kept in mind, not only with regard to the earliest literary layers of the Mishnah, but also with regard to traditions ascribed to the intermediate and later generations of tannaim. The tannaim who were active from the destruction of the Temple and up to the time of Rabbi are usually divided into four generations. The earliest tannaitic traditions – ascribed to Bet Hillel and Bet Shammai – are often the subject of debate, not only regarding the correct interpretation of their words, but even with regard to the words themselves. Similar disputes, however, are also found concerning Rabbi Joshua, Rabbi Eliezer, as well as Rabbi Akiva and his disciples, Meir, Simeon, Judah, etc. The attempt, therefore, to analyze the text of Rabbi’s Mishnah into four distinct literary levels, and then to assign each level to a particular historical period or personality – as attempted by A. Goldberg in his commentaries on the Mishnah – is suggestive, but remains somewhat problematic for the reasons outlined above.

The most promising method for recovering earlier forms of tannaitic tradition remains the exhaustive analysis of *particular cases*, based on the detailed reconstruction of the process of interpretation and interpolation which resulted in the various parallel versions of a given source which we possess today. Albeck, and most notably Epstein, provide solid models and many excellent examples of this kind of analysis.

In the short span of these four generations, the tannaim produced a considerable body of halakhic and aggadic traditions – traditions which served as the immediate literary sources (in the first sense mentioned above) for Rabbi's Mishnah. Much of the evidence for these literary sources is found in the other extant tannaitic works, the Tosefta and the tannaitic midrashim, which were edited in the Land of Israel in the generations immediately following Rabbi, and in part by his own disciples. These works preserve many parallel traditions to those included in the Mishnah, in forms which often seem to be more original than those found in Rabbi's Mishnah itself. The comparison of these parallel traditions, together with the results of the critical analysis of the Mishnah text itself, provides the basis for an examination of the redaction of the Mishnah.

The Redaction of the Mishnah

The question of the form and purpose of the final redaction of the Mishnah has long been a topic of scholarly debate. In the twentieth century this debate focused on the question whether the Mishnah should be seen as a code of relatively self-consistent and authoritative religious practice (Epstein), or as an anthology of frequently contradictory sources (Albeck). As so formulated, this dispute seems somewhat artificial. On the one hand, there is no reason to assume that the final redaction of the Mishnah was governed by one single overriding principle. On the other hand, the redaction of the Mishnah could reflect a preliminary, but as yet incomplete, effort to bring order and consistency to the body of tannaitic halakhah. Beneath the surface of this discussion, however, lies a far more fundamental and significant disagreement concerning the way in which Rabbi adapted and modified his source material in the redaction of the Mishnah.

Albeck's views on this issue are laid out in his German work, *Untersuchungen ueber die Redaktion der Mischna* (1923). This work, which is based almost exclusively on a critical examination of the Mishnah itself, describes a range of significant literary phenomena. From these phenomena Albeck drew a number of important conclusions, some of which are highly persuasive, others less so. Among the phenomena which Albeck described: (1) literary units including more than one topic, brought intact in more than one tractate, even though only part of the unit is relevant in each place; (2) parallel material found in more than one tractate, to which additions have been made in one tractate only, even though these additions seem equally relevant in the other tractate as well; (3) halakhot found in a given tractate, which do not belong to the subject matter of that tractate, and which are not found at all in the relevant tractate; (4) halakhot found in more than one tractate, which in one place contain conditions and alternative positions not found in the other tractate; (5) alternative versions of the same halakhah in different places in the Mishnah which present the same content in different language; (6) lists of phenomena with a common characteristic, which fail to include similar elements listed elsewhere in the Mishnah which

seem to share the same characteristic. On the basis of these and many other similar phenomena, Albeck concluded that the final redaction of our Mishnah did not reflect a comprehensive and sustained effort to revise, adapt, and reorganize its source material into a consistent and unitary whole (*Unter.* 39). On the contrary, the evidence seems to show that the final redactor (Rabbi) preserved much material in the form and in the context in which he received it, even when this material did not wholly correspond, or was even contradictory, to material included elsewhere in the Mishnah.

This conclusion – as far as it goes – seems highly persuasive. However, on the basis of this evidence Albeck went on to conclude “that the Tannaitic schools, including the final redaction of the Mishnah, arranged the individual mishnayot in the context and in the form in which they were originally learned; that they did not allow themselves to interfere in any way with their internal composition, neither did they dare to separate elements which originally belonged together; but rather that they conscientiously and faithfully transmitted these mishnayot, and systematized them” (*Unter.* 12). Albeck here seems to move beyond his evidence in two respects. First, on the basis of extensive, but still limited, evidence, he posits a universal, rather than a limited rule. Second, on the basis of this general rule, which has at most the status of an empirical observation, he posits a *necessary* rule – telling us not only what the Rabbis did or did not do, but rather what they *would not allow* themselves, or *would not dare* to do.

While Albeck's view of the Mishnah as an anthology has been accepted by recent scholars (cf. A. Goldberg, *Literature*, 214), it would seem that the more fundamental position which underlies his view has remained largely unexamined. For example, it is unclear how Albeck would reconcile his description of Rabbi's ultra-conservative approach to the final redaction of the Mishnah, with his own description (see above) of the creative interpretive process which gave rise to the multiplicity of sources which were available to Rabbi. Did the earlier tannaim “dare” to modify traditional sources in a way which the later tannaim viewed as illegitimate? Alternatively, is there some fundamental difference between modifying the interpretation of an earlier tradition by means of addition, interpolation, and transfer from one context to another, on the one hand, and subtraction and restatement on the other? Epstein's rather brief discussion of the issue (*Tann.* 225–226) hardly does justice to the complexity of Albeck's work. Moreover, the recent surveys of Albeck's work seem to have neglected the extensive evidence brought in his early research written in German, and to have based their assessment of his work solely on his late, popular summaries, published in Hebrew (*Modern Study*, 209–224). The fundamental validity of the substance of Albeck's claims is not in question, but rather only the apodictic and universal form in which he expressed them. It is this aspect which must first be reexamined, in order to make room for alternative insights into other aspects of Rabbi's redactional activity. For this purpose, one clear counter-example will suffice.

Tosefta Hullin 8:6 transmits a tannaitic dispute about a case in which a drop of milk fell into a pot containing pieces of meat. Rabbi Judah adopted a strict position, while the sages adopted a more lenient position. The Tosefta then states: “Rabbi said: The position of Rabbi Judah seems reasonable in a case where he didn’t stir or cover the pot, and the position of the sages in a case where he stirred and covered the pot.” Rabbi’s position in the Tosefta represents a compromise between the extreme positions of Judah and the sages. The parallel anonymous halakhah found in Mishnah Hullin 8:3 matches precisely the compromise position ascribed to Rabbi in the Tosefta. This case of Mishnah and Tosefta Hullin provides a somewhat unusual opportunity to observe all three stages in Rabbi’s redaction of a tannaitic tradition: (1) “raw” source material received from the previous generation of tannaim (R. Judah and the sages); (2) Rabbi’s own editorial comments upon this source (Tosef. Hul. 8:6, end); (3) the final result of the editorial process (Mishnah Hullin 8:3). It would stretch the limits of credulity to maintain that Rabbi did not “interfere in any way with the internal composition” of his sources in the redaction of Mishnah Hullin 8:3. On the contrary, it is quite clear that he adopted part of R. Judah’s ruling, part of the sages’ ruling, and applied them to new and modified case descriptions, introducing the distinction between a situation where he “stirred and covered the pot” and one where he “didn’t stir or cover the pot” – a distinction which neither R. Judah or the sages ever entertained.

This example shows that Rabbi indeed “dared” and “allowed himself” to add, to subtract, and to reformulate his source material in the process of redacting the Mishnah. Epstein, in his various works, adduced many examples of this kind of creative redactional activity. Recently, S. Friedman has revisited this issue in an extended redactional study of the parallel traditions found in Mishnah and Tosefta Pesahim (*Tosefta Atiqta*). Nevertheless, the question still remains open as to the relative weight we should ascribe to these two competing redactional tendencies – the creative (Epstein, Friedman) and the conservative (Albeck) – within Rabbi’s literary activity as a whole.

The Later Development of the Text of the Mishnah

In the generations following its redaction, Rabbi’s Mishnah achieved an unparalleled prominence and authority in the religious life of the Jewish communities both in Erez Israel and in Babylonia. To a large extent this story belongs to the history of later tannaitic and amoraic literature. In one regard, however, it is relevant to the history of the Mishnah itself. During – and as a result of – this gradual process of dissemination and acceptance, the Mishnah changed. Instead of a single uniquely authoritative Mishnah as redacted by Rabbi, the amoraic period is characterized by a multiplicity of *different versions* of Rabbi’s Mishnah. The Mishnah as studied and transmitted in the Babylonian rabbinic tradition differed significantly from the Mishnah as studied and transmitted in the Palestinian rabbinic tradition. Moreover, there are clear indications of considerable differences between different ver-

sions of the Mishnah as studied and transmitted in the various rabbinic academies within the Babylonian and the Palestinian communities themselves.

These different versions of the Mishnah are reflected in the divergent citations of individual Mishnah passages in the Talmud Yerushalmi and the Talmud Bavli, as well as in the variant readings of medieval manuscripts and early editions of the Mishnah. This multiplicity of versions of the Mishnah text presents difficulties, not only for the student of the Mishnah, but also for the scholar who wishes to understand the origin and significance of these variant texts. The classic analysis of these phenomena is found in Epstein’s *Introduction to the Text of the Mishnah* (1948). For a preliminary survey of its contents, see Bokser, *The Modern Study of the Mishnah*, 13–36. For an evaluation of its continued importance and its impact on modern scholarship outside of Israel, see Neusner, *The Study of Ancient Judaism 1*, 9–12.

While the opening pages of Epstein’s book have been the object of intense analysis and debate, it is primarily the second (pp. 166–352) and third (pp. 353–404) sections of his work which concern us here. The question Epstein deals with in these sections is the attitude of the early generations of amoraim to the text of Rabbi’s Mishnah, and the impact of their studies on the development of the Mishnah text itself. After an exhaustive analysis of the activity of the first several generations of amoraim, Epstein concluded that the most significant variants in the textual tradition of Rabbi’s Mishnah were not the result of errors in transmission, but rather reflected the cumulative impact of an ongoing process of conscious emendation of the text of the Mishnah. He summarized these findings in the following words: “From here we learn to recognize the fundamental nature of the ‘emendations’ of the Amoraim (at least the early ones), that they – like the ‘emendations’ of the Tannaim – are never strictly speaking emendations as such, but rather *textual variants* – if one may speak in such a fashion – reflecting *editorial revision*, whose cause and source is a dissenting opinion” (p. 218).

For Epstein the term ‘emendation’ signified the attempt of a later scholar to restore a corrupt text to its earlier original form. “Editorial revision,” on the other hand, signified the conscious modification of an historically correct original text, in order to bring it in line with some external standard of authority or truth. The “dissenting opinion” which could provide, according to Epstein, the justification for an “editorial emendation,” was regularly to be found in a tannaitic *baraita* – an alternative authoritative halakhic tradition. One should not, however, exclude the possibility that the individual halakhic judgments of some of the leading scholars among the first generations of the amoraim could also provide sufficient grounds for “editorial emendations” of the text of the Mishnah. In general, the very notion of “editorial emendations,” as developed by Epstein, seems to presuppose that Rabbi’s Mishnah was accepted as a fundamental study text in the amoraic academies some time before it was finally accepted as a uniquely authoritative corpus of normative halakhah.

As the amoraic period went on, the text of Rabbi's Mishnah became more and more sanctified in the eyes of the talmudic scholars. As a result, emendations of the Mishnah text became rarer and rarer. When confronted with an apparent contradiction between the text of the Mishnah and an alternative halakhic position, found in a baraita or in the words of an early amora, the later talmudic tradition had recourse to various kinds of forced interpretation of the Mishnah. In this way it 'resolved' contradictions between these competing sources of halakhic authority. These forced interpretations of the Mishnah often bear a striking resemblance to the 'editorial emendations' of the earlier generations of amoraim. Epstein went to great lengths to distinguish between these phenomena, as well as to describe and to categorize the various forms in which they appear.

By providing a comprehensive analysis and categorization of both the real and the apparent textual variants of the Mishnah attested in talmudic sources and in medieval manuscripts, Epstein's work was supposed to provide the foundation for a critical edition of the Mishnah. After more than 50 years since the publication of his work, this critical edition is still "in preparation." Various other attempts have been made to produce modern scientific editions of different parts of the Mishnah, and in the meantime scholars are still involved in the analysis and assimilation of the ramifications of Epstein's groundbreaking research for the future study of the Mishnah.

Finally, we should note that Epstein's notion of 'editorial emendation' has far-reaching ramifications for the entire field of talmudic research: for the relation between Mishnah and Tosefta; for the relation between talmudic baraitot and parallel traditions in tannaitic works; for the relation between the various redactional levels of talmudic texts; for the understanding of the textual variants found in the manuscript traditions of the Babylonian Talmud. At the same time, it must be emphasized that this notion was unequivocally rejected by Albeck and by a number of his followers. The reasons for Albeck's position (and some reservations regarding it) were outlined in the previous section.

The Traditional Interpretation of the Mishnah

Evidence for the interpretation of Rabbi's Mishnah can be found in the statements of the earliest amoraim – their *memrot* – many of which take the form of comments and additions to the text of the Mishnah. Also, the talmudic *sugya* (discussion) as a literary whole often takes as its starting point the text of the Mishnah and its interpretation, and even when a *sugya* begins elsewhere, the text of the Mishnah and its interpretation usually come up at some point in discussion, playing a significant role in the development of the argument. The *sugya* may begin by asking for the scriptural source of the halakhah of the Mishnah, and then proceed to quote the relevant parallel text from the *midrash halakhah*. The *sugya* may ask about the identity of the tanna who taught an anonymous halakhah brought in the Mishnah. In answer, the *sugya* will often quote a parallel *baraita* which ascribes the halakhah of the Mishnah

to a particular tanna by name, and then goes on to inform us of alternative halakhic positions held by this tanna's contemporaries, and passed over by Rabbi's Mishnah.

While these talmudic *sugyot*, together with the parallel traditions in the Tosefta and the tannaitic halakhic midrashim, provide the starting point for any informed commentary on the Mishnah, they can also frequently be misleading. The parallel tannaitic traditions may reflect positions similar to, but not identical with, those recorded in Rabbi's Mishnah. The talmudic *sugya* may take the text of the Mishnah and its interpretation as its starting point, but along the way it also entertains other positions, both tannaitic and amoraic. The synthetic bottom line of the *sugya*, therefore, will not necessarily correspond – in any simple sense – to any of these individual traditions taken in isolation.

While the post-talmudic period saw the composition of a number of important Mishnah commentaries, the lion's share of talmudic scholarship during this period (up to about the 15th century) focused on the exposition of the Babylonian Talmud as a whole – with the Mishnah playing a distinctly secondary role within that whole. From the earliest period we possess a commentary of the *geonim* to Seder Toharot (ed. J.N. Epstein), which consists primarily of the explanation of difficult words. From the 11th century we possess a commentary by R. Nathan Av ha-Yeshivah on the entire Mishnah, also providing explanations of difficult words, along with brief comments. From the 12th–14th centuries, the period of the **rishonim* (early commentators), we possess a number of more extensive – and more substantial – commentaries, focusing on those parts of the Mishnah which have no Babylonian Talmud, such as Zera'im (with the exception of Berakhot) and Toharot (with the exception of Niddah). Extended works of this sort were composed by R. Isaac ben Melchizedek, R. Asher ben Jehiel, R. Samson ben Abraham, and shorter ones on individual tractates, like R. Abraham ben David on Eduyot.

By far the most important Mishnah commentary from this early period (12th century) is that of *Maimonides. It is the only extensive commentary on the entire Mishnah which has come down to us from the time of the *rishonim*. Maimonides states in his introduction that his commentary is based on the full range of Talmudic sources – Tosefta, midrashei halakhah, the Jerusalem Talmud and the Babylonian Talmud. His avowed aim in writing his commentary was not to explain the simple sense of the Mishnah text as it stands. On the contrary, he wished to clarify those points that 'could never be derived by analysis' of a given Mishnah (Kafih, Zera'im-Mo'ed, 25), by providing the student with supplementary information found only in other talmudic works. Maimonides' goal was pedagogical – to use the Mishnah as a starting point from which the novice could begin to master talmudic halakhah as a whole.

To this end, Maimonides included in his commentary a number of important introductory essays – treating both halakhic and aggadic issues – to the Mishnah as a whole, and to individual sedarim, such as Kodashim, and especially

Ṭoharot. Similarly, he composed introductions to individual tractates and chapters, and even to individual halakhot, outlining the general principles and specific premises necessary for the proper comprehension of the halakhot under discussion. On the other hand, Maimonides often seems uninterested in how these principles actually apply to the specific cases mentioned in the Mishnah. He sometimes indicates that the student should focus on the general rules, the analysis of the details being relegated to a secondary role.

Maimonides' commentary was originally composed in Arabic and was revised constantly during his own lifetime. A new edition and translation by Rabbi J. Kafih has made both the final version and the various stages of revision available in an accurate modern Hebrew translation. Recent scholars have continued to expand and improve our knowledge and understanding of his commentary (Blau and Scheiber, Hopkins).

Special note should be made of two other commentaries from the period of the *rishonim*. The first is the commentary of R. *Jonathan ha-Kohen of Lunel. Although included in his commentary on the halakhot of Isaac *Alfasi, R. Jonathan's interpretations of the Mishnah are treated with a degree of attention and independence unusual for Mishnah commentaries from this period (cf. Friedman, *R. Jonathan Ha-Kohen of Lunel*, 7–9). The second commentary is that of the Meiri. While also part of his commentary to the Talmud, he included within it the entire text of Maimonides' commentary to the Mishnah and provided an extensive super-commentary of his own. The Meiri incorporates many of the issues raised by the Talmud into his commentary on the Mishnah, as opposed to other *rishonim*, who, following Rashi, tend to incorporate their commentary on the Mishnah into their discussion of the Talmud.

From the 15th century onward, talmudic scholarship underwent a series of important changes which had an impact on the study of the Mishnah. The exposition of normative halakhah gradually became divorced from the interpretation of the Talmud and began to center on the interpretation of the *Arba'ah Turim* and the *Shulḥan Arukh*, forming a new and specialized halakhic literature. As a result, the study of the classical talmudic works became more autonomous and more academic. No longer subordinated to the exposition of normative halakhah, commentaries were composed on the Mishnah, on the Tosefta, on the Midrashei Halakhah, and on the Jerusalem Talmud. While these commentaries remained, at first, rooted in traditional Talmud interpretation, they nevertheless began to investigate texts and traditions which had no direct bearing on any practical halakhic issues.

The earliest of these commentaries was that of R. Obadiah *Bertinoro. This relatively brief commentary is largely derivative in character, drawing mainly on Rashi's interpretations of the Mishnah imbedded in his commentary to the Talmud. Bertinoro also drew upon the commentaries of R. Samson ben Abraham, Maimonides, and others. Next in time is the commentary of R. Yom Tov Lipman *Heller, *Tosefot Yom Tov*. This work takes Bertinoro's as its starting

point but is far more ambitious, examining both the talmudic literature and the literature of the *rishonim*, with the goal of determining the range of Mishnah interpretations imbedded within them. R. Solomon *Adeni's *Melekheth Shelomo* was composed at about the same time but was not published until the early 20th century. This extensive and scholarly commentary includes numerous critical textual notes based on manuscript evidence, as well as references to citations of the Mishnah in the Babylonian and Jerusalem Talmud, and in the halakhic codes and commentaries. Another important commentary was composed somewhat later (19th century) by R. Israel Lipschuetz. His *Tiferet Yisrael* provides a brief exposition of the simple sense of the text, alongside more elaborate analyses of various obscure points of interpretation.

Deserving of special note are the commentaries of the "Gaon" R. Elijah of Vilna (18th century) to various parts of the Mishnah, of the Tosefta, and of the Jerusalem Talmud. They deserve mention not only for their brilliance and originality, but also because they often interpret these sources without attempting to harmonize them with the normative halakhic tradition, rooted in the Babilonian Talmud. In this way, R. Elijah's work laid much of the groundwork for the modern critical interpretation of the Mishnah.

The Modern Interpretation of the Mishnah

The terms "traditional" and "modern" interpretation do not designate different periods of time, but rather different approaches to the interpretation of the Mishnah. Traditional commentaries – as described above – continued to be written throughout the 20th century and up to the present day. By far the most successful example is that of Pinḥas Kahati, which provides the contemporary student with succinct and accurate summaries of the classical Mishnah commentaries. We should also include in this category commentaries which, while written by modern academic scholars, are nevertheless oriented toward a traditional audience and agenda, like those of H. Albeck, D. Hoffman, and others.

By "modern interpretation" we mean primarily *historical interpretation* of the Mishnah. The program of historical Mishnah interpretation as set out by J.N. Epstein (see above) involves: (1) the identification (or reconstruction) of the literary sources of each mishnaic passage; (2) an analysis of the tendencies and results of Rabbi's redaction of each particular mishnah passage against the background of these sources; (3) a description of the reciprocal influences of the text of this mishnah on the later history of talmudic tradition, and of later tradition on the text and interpretation of the mishnah itself. The raw materials for this kind of commentary includes (in part): the direct witnesses to the textual tradition of the Mishnah (medieval manuscripts and geniza fragments), as well as the indirect witnesses (citations in ancient talmudic sources); the parallel tannaitic sources and talmudic sugyot which document the history of the halakhic and aggadic traditions; lexicographical and archaeological research.

While Epstein's own works contain analyses of hundreds of individual mishnah passages, he himself composed no extended or continuous commentary to the Mishnah. Commentaries and editions of individual tractates have addressed various aspects of this critical agenda, but the attempts made so far at producing a critical edition of the Mishnah fall far short of this ideal (Stemberger, 139–144). To date, the works which come closest to realizing this critical ideal are the Mishnah commentaries of A. Goldberg (Ohalot, Shabbat, Eruvin, Bava Kamma) and S. Friedman's comparative study of Mishnah and Tosefta Pesahim, *Tosefta Atiqta*.

Starting in the 1970s, a new approach to the study of the Mishnah began to emerge, centered around the person of Jacob Neusner, and reflecting the creation of autonomous Judaic study programs within the modern secular university. In keeping with the interests and agenda of the modern academic world, the Mishnah came to be viewed historically, not only in the context of the talmudic tradition, but also in the broader context of ancient Judaism as a whole, and as part of the general intellectual and spiritual trends of late antiquity. New questions were raised regarding the formal structure of tannaitic halakhah; the literary relations between Mishnah, Tosefta and tannaitic midrash; the historical reliability of attributions and biographical traditions; the changing agenda of the different tannaitic schools over time, and so on. The mere quantity of scholarly studies produced over a short period of time – both by Neusner himself, and by colleagues and students – make it difficult to assimilate all the innovations, regarding content as well as methodology, which this new approach has generated. For example, Neusner's monumental work on Seder Toharot, *A History of the Mishnaic Law of Purities* (22 vol., 1974–1977), has never been properly reviewed or evaluated, and Neusner found it necessary briefly to restate some of his more important conclusions (*From Mishnah to Scripture* (1984); *The Mishnah Before 70* (1987)) in order to make them available to the general scholarly community. For a brief outline of Neusner's contribution to the study of the Mishnah, see *The Study of Ancient Judaism 1*, pp. 14–23, which must of course be supplemented by reference to his subsequent work, especially his four volumes on *The Philosophical Mishnah* (1988–89).

Editions, Translations, and Aids to Mishnah Study

The edition of the Mishnah printed in Naples in 1492 is usually regarded as the first edition of the Mishnah. It includes the complete text of the Mishnah and Maimonides' commentary in Hebrew translation. The edition published by Tom Tov Lipman Heller, printed in Prague 1614–17 along with his commentary *Tosefot Yom Tov*, has exerted significant influence on subsequent editions of the Mishnah (see: Goldberg, *Literature*, 247–248). The 13-volume Romm edition (Vilna, 1908ff.) included for the first time the *Melechet Shlomo* commentary, in addition to Bartenura, *Tosefot Yom Tov*, and *Tiferet Yisrael*. It also included references to citations of Mishnah passages in Talmudic and rabbinic literature, alternative readings, and

more than “70 commentaries.” Most of these consist of little more than collections of isolated comments on sporadic Mishnah passages, but some are quite significant, including the important commentaries of R. Efraim Yitzhak (*Mishnah Rishonah* and *Mishnah Aharonah*) and the commentaries of the Gaon R. Elijah of Vilna. The text of the Mishnah found in most editions currently available today varies little from that of the Romm Mishnah, a notable exception being the new edition of Maimonides' Commentary to the Mishnah, translated and published by J. Kafih (1963ff.), which includes Maimonides' own (12th century) text of the entire Mishnah. For a list of the many manuscripts of the Mishnah with Maimonides' Arabic commentary, see Krupp, 260–262.

Other works include important information relating to the text of the Mishnah. For example, a critical edition of Mishnah Zera'im, based on all known manuscripts and genizah fragments, including comprehensive references to all Mishnah citations in talmudic and rabbinic literature, was published in 1972–1975 by the Yad ha-Rav Herzog Institute for the Complete Israeli Talmud. They have also included similar material in their critical edition of the Babylonian Talmud of Seder Nashim (Yev., Ket., Ned., Sot., and part of Gittin). Critical editions of various individual tractates have also appeared (Stemberger, 143–144). For the manuscripts of the Mishnah, see Krupp, 252–257; Stemberger, 139–142, and it should be noted that digital images of many of the most important Mishnah manuscripts have been posted on the website of the Jewish National and University Library in Jerusalem, either directly (Kaufman A50, Parma de Rossi 138, Parma de Rossi 497, the original manuscript of Maimonides' Mishnah text and commentary) or through links to other libraries (Munich 95). Similarly, the Talmud Text Data Bank published by the Saul Lieberman Institute of Talmudic Research of the Jewish Theological Seminary of America (available on CD-ROM) includes all the Mishnah texts and all partial Mishnah citations found in the manuscripts of the Babylonian Talmud. For translations, see Goldberg, in *Literature*, 248–249 and Stemberger, 144–145, the most common English translations being those of Danby (1933), Blackman (1951–56), and Neusner (1988).

The language of the Mishnah – both its grammar and its vocabulary – represent a distinct phase in the history of the Hebrew language, and as such it has been the object of intense critical study over the past fifty years. E.Y. Kutscher, Z. Ben-Haim, H. Yalon, S. Morag and many others have examined many important aspects of Mishnaic Hebrew. Much of this work, however, has remained in the form of scholarly articles aimed at professional linguists, and the fruits of this labor have yet to be made available in a form which can be of help to the ordinary student of Mishnah. We still await a new synthetic grammar book comparable in size and scope to M.H. Segal's now outdated *Grammar of Mishnaic Hebrew* (1927). Similarly, the modern student of mishnaic Hebrew must still make use of the old talmudic dictionaries of J. Levy, A. Kohut, M. Jastrow; a notable exception to this rule is M. Moreshet's

extremely useful *Lexicon of the New Verbs in Tannaitic Hebrew* (1980). The archaeology and realia of the Mishnah have also been treated by many scholars (most notably D. Sperber), but again no comprehensive handbooks like S. Krauss' *Talmudische Archäologie* have been produced in almost a century. J. Feliks' small book, *The Plants and Animals of the Mishnah* (1983), provides simple and useful information on these topics. A regular survey of recent books and articles dealing with different facets of Mishnah study is provided by A. Walfish in the Hebrew language journal *Netuim*.

[Stephen G. Wald (2nd ed.)]

MISHNAT HA-MIDDOT (Heb. מִשְׁנַת הַמִּדּוֹת; “treatise of measures”), considered the earliest Hebrew geometry. *Mishnat ha-Middot* comprises various methods for determining the dimensions of various plane and solid geometric figures. Its five chapters include, among other matters, a discussion of triangles, quadrilaterals, and frusta. The Heronic formula for the area of a triangle in terms of the lengths of the sides is given. For π the value of $3\frac{1}{7}$ is used and this divergence from

the biblical $\frac{22}{7}$ is homiletically justified. One of the extant manuscripts has a sixth chapter dealing with the Tabernacle which is similar to sections of the *Baraita de-Meleket ha-Mishkan. In spite of the similar names, there seems to be no connection between this work and the *Baraita de-49 Middot* which is frequently cited by medieval commentators. This treatise is written in a distinctive Hebrew that combines mishnaic style with a technical terminology that has affinities with Arabic, although it stands apart from the Hebrew mathematical terminology of the Hispano-Arabic period. In content, the *Mishnat ha-Middot* belongs to the stream of Oriental mathematics represented, e.g., by Heron, Greek mathematician (c. 100 C.E.) in the Hellenistic period, and al-Khwarizmi (c. 825 C.E.) in the Arabic period, to both of whose works it offers striking parallels. Some attribute it to R. *Nehemiah (c. 150 C.E.), and see it as a link between the Hellenistic and Arabic texts, while others assign it to an unknown author of the Arabic period.

[Benjamin Weiss]

MISHOL, AGI (1947–), Hebrew poetess. Mishol was born in Hungary to Holocaust survivors who came to Israel in 1950. She earned her B.A. and M.A. in Hebrew Literature from the Hebrew University and published her first collection of poems *Nanny ve-Sheneinu* (“Nanny and Both of Us”) in 1972. Nine further collections followed, including *Gallop* (1980) and *Re'eh Sham* (“Look, There,” 1999). In 2003 appeared *Mivhar ve-Hadashim* (“Selection and New Poems”) with an essay by Dan Miron entitled “*Ha-Sibilah ha-Komit: Al Shiratah shel Agi Mishol*” (293–443). Mishol belongs to the great dynasty of Hebrew women poets, maintains Miron. He underlines her stylistic individualism and her humorous outlook on life and on the self as a necessary condition for personal and communal mental health. Mishol was awarded the Yehuda Amichai Prize (2002) and the Tel Aviv Foundation Award. She teaches poetry in the M.A. Program in Creative Writing at Ben-Gurion University, works as a translator and literary critic for radio and written media, and grows peach and persimmon trees in her village, Kefar Mordechai. A bilingual edition, *The Swimmers*, appeared in English (1998). For further information concerning translations see the ITHL website at www.ithl.org.il.

DEFINITION AND TERMINOLOGY

The term *mishpat Ivri* (משפט עברי) is now generally accepted as embracing only those matters of the *halakhah* (Jewish law) whose equivalent is customarily dealt with in other present-day legal systems, that is, matters pertaining to relations between man and man and not the precepts governing the relationship between man and his Maker. This definition diverges from the original meaning of the Hebrew term *mishpat* or *mishpatim*. Used in the sense of a system of laws – like the English term “law,” or the German term “*Recht*” – the

term refers not only to matters between man and man (in the sense of *jus, ius humanum*) but also to the precepts between man and his Maker (in the sense of *fas, ius divinum*). Thus for instance in Exodus 21:1 the words *ve-elleh ha-mishpatim* are stated by way of introduction to chapters 21, 22, and 23, which deal not only with matters of civil and criminal law but also with the laws of the sabbatical year, the Sabbath, first fruits, and so on.

Another Hebrew term for law is the word *dinim* (sing. *din*), used to designate matters included in the fourth mishnaic order, *Nezikin* (see Deut. 17:8; Hag. 1:8; Nahmanides, Gen. 34:13). The term comprises two main classes of laws, namely *dinei mamonot* and *dinei nefashot*. The concept of *dinei mamonot* corresponds to but is not identical with “civil law,” since it is wider than the latter in some respects (see Sanh. 2:2 and see below) and narrower in others, excluding, for instance, that part of family law dealing with what is ritually permitted and prohibited, the laws of usury, and so on. (Subject to this qualification, the term civil law will be used below and in the other articles on Jewish law as the equivalent of *dinei mamonot*.) The concept *dinei nefashot* takes in that part of the criminal law dealing with matters that call for capital and certain other forms of corporal punishment. (The term *dinei kenasot* relates to matters which are part of *dinei mamonot*; see *Obligations, Law of.) However, even the term *dinim* does not exclude matters concerning the precepts between man and God, as is evident from the concept of *dinei issur ve-hetter* – ritual prohibitions and permissions.

The reason for the absence in Hebrew sources of an accepted term describing legal norms pertaining exclusively to relations between man and man – for instance in the sense of “English law” or “Swiss law” – lies in the basic fact that both the laws applicable between man and man and the precepts concerning man and God have a single and common source, namely the *Written and the *Oral Law. This fact further asserts itself in the phenomenon that all parts of the entire halakhic system share and are subject to common modes of creation, thought, and expression, as well as principles and rules (see below). This, however, constitutes no hindrance to the acceptance of the term *mishpat Ivri* in the sense here described. The term first came to be used in this sense around the beginning of the 20th century, when the Jewish national awakening – which to some extent stimulated also the desire for a return to Jewish law – prompted a search for a Hebrew term to designate that part of the *halakhah* whose subject matter paralleled that which normally comprises other legal systems. What was sought was a suitable term that would circumscribe the bounds of the legal research and preparatory work to be undertaken. Thus there was accepted the term *mishpat “Ivri,”* in the same way as *safah “Ivrit”* and later also *medinah “Ivrit.”* Today the term *mishpat Ivri*, as defined above, is generally accepted in all fields of practical legal life and research in the sense here described. In the Knesset legislation use is made of the term *din Torah* (authorized English translation, “Jewish religious law”: see, e.g., sec. 2, “Rabbinical Courts Ju-

risdiction (Marriage and Divorce) Law,” 1953); this Hebrew term is inaccurate as far as the distinction between *de-oraita* and *de-rabbanan* (see *Mishpat Ivri: De-Oraita and De-Rabbanan*) is concerned.

“RELIGIOUS” HALAKHAH AND “LEGAL” HALAKHAH

Common Features

The “religious” and the “legal” norms of the *halakhah* share certain common features, a fact that finds expression in a number of ways (and accounts for our use of inverted commas since the *halakhah* does not recognize the concept of special “religious” law, which is used here in its modern sense). In the talmudic discussions the same theoretical argumentation, terminology, and modes of interpretation that are applied to a matter of civil law are applied also to matters concerning, for instance, the Sabbath, the sacrificial cult, and ritual purity and impurity. Many legal principles are common to both parts of the *halakhah*. Thus for instance the laws of *agency apply in the same way to matters of **hekdes*h, **terumah*, and the slaughter of the paschal sacrifice, as they do to matters of marriage, divorce, recovery of debt, and so on. Moreover, the essential legal principle underlying the principal-agent relationship – that “a person’s agent is as himself” – was derived by the scholars from the scriptural passages dealing with matters of the paschal sacrifice and *terumah* (Kid. 41b, etc.), and it is in relation to the laws of prayer that the solitary mishnaic reference to the above principle is made (Ber. 5:5). “Religious” directives are often found to be based on “legal” directives. This is illustrated in the discussions on the question of whether a person who has acquired the right to no more than the fruits of his neighbor’s field, may, when bringing the first fruit, read the *Bikkurim* portion which includes the passage, “And now, behold, I have brought the first fruit of the land, which Thou, O Lord, hast given me” (Deut. 26:10), since this involves a declaration that the land is his. The answer is made dependent on the elucidation of a question of legal principle, whether acquisition of the fruits (*kinyan perot*) is as acquisition of the body (*kinyan ha-guf*; Git. 47b) – an elucidation which has important consequences in all fields of Jewish law.

To their common origin must also be attributed a mutual interaction between the two parts of the *halakhah*, with directions pertaining to the “religious” field supplementing lacunae in the “legal” field. This is illustrated in the law concerning the father’s duty to maintain his children. In the *takkanah* of Usha, as finally accepted, it was laid down that the duty extended to children until the age of six years. In practice it sometimes happened that a father failed to maintain his minor children above the age of six and in such an event the court compelled the father to do so by applying two rules pertaining to the laws of charity: first, that a person who has sufficient for his own needs may be compelled to give charity if there is a poor man in need; secondly, that as regards the giving of charity, “the poor of a person’s own household take precedence over the poor of his town, and the poor of his town over those of another town,” and of all the poor the father’s children are the

nearest to him (Ket. 49b; Sh. Ar., YD 251:3; EH 71:1). Another illustration is found in the post-talmudic development regarding the establishment of an obligation by way of the promisor's vow or oath or undertaking on pain of ban to give or do according to his promise – whose fulfillment is imposed on him as a religious duty. This method was employed especially in the case of obligations which were incapable of being established in terms of the “legal” rules of the *halakhah*, such as an obligation relating to something not yet in existence (*Rema*, ḤM 209:4), or one tainted with the defect of **asmakhta* (Sh. Ar., ḤM 207:19) and so on (see **Obligation, Law of*).

Distinguishing between “Religious” and “Legal”

Halakhah – Ritual and Civil Law

A study of the halakhic sources reveals that the *halakhah*, notwithstanding its overall unity, distinguishes materially between the two main fields of its subject matter, between “matters of *mamon*” or “*mamona*” and “matters not of *mamon*” or “*issura*” (lit. “prohibitions,” i.e., ritual law). Although the concepts of *issura* and *mamona* are not coextensive with the modern concepts of “religious” and “legal” law (see above), the material distinction made between them exerted a decisive influence on the evolutionary path taken by that large part of the *halakhah* embraced in the term *mishpat Ivri*. The first manifestations of the distinction date back to the time of Bet Shammai and Bet Hillel (Yev. 15a–b; Eduy. 1:12 – “If you have permitted in a matter relating to the stringent prohibition of incest, shall you not permit in civil matters (*mamon*) which are less stringent?”) and in the course of time it became entrenched in many fields of the *halakhah*, as illustrated in the following examples: As regards the freedom of stipulation, the principle was laid down that “when a person contracts out of the law contained in the Torah, a stipulation which relates to a matter of *mamon* is valid but one that relates to a matter not of *mamon* is invalid” (Tosef., Kid. 3:7–8). The explanation is that the legal order prescribed by the Torah in civil matters was not enjoined in the form of a binding obligation (i.e., *jus cogens*), but as conditional on the will of the parties (i.e., *jus dispositivum*; Nahmanides, Nov. BB 126b) except in cases of a stipulation inimical to personal freedom or the public weal (for details see **Contract*). In case of an illegal contract the rule is that a contract whose fulfillment involves the transgression of law shall not be enforced, but transgression of a “religious” prohibition does not deprive the contract of legal validity and it will be enforced by the court; hence, “if a person sells or gives on the Sabbath, and certainly on festivals, even though he should be flogged, his act is effective” and an obligation undertaken on the Sabbath is similarly valid, “and a *kinyan* performed on the Sabbath (i.e., *kinyan sudar*; see **Acquisition*) is valid, and the writing and handing over take place after the Sabbath” (Yad, Mekhirah 30:7).

The distinction between *issura* and *mamona* also has an important bearing on the question of legislative authority in Jewish law. While such authority was to some extent limited in matters of *issura*, it remained fully effective in matters of

mamona (see **Takkanot*). So far as the legislative authority conferred on the public and its leaders was concerned, this never extended beyond matters pertaining to the civil law and criminal-police offenses (see **Takkanot ha-Kahal*). The distinction is also an important factor in the binding force of custom, particularly as regards the basic principle that “custom overrides the law,” which is applicable in matters of the civil law exclusively (see **Minhag*). Similarly, different rules and principles of decision were laid down for civil and for ritual matters. A basic principle is that matters of ritual law are not to be learned from matters of civil law and vice versa, for the reason that on the one hand ritual matters are by their very nature of greater stringency than matters of the civil law, while on the other hand the rule that “the burden of proof rests on the person seeking to recover from his fellow” applies to civil but not to ritual law. Flowing therefrom are a number of rules applicable to matters of the ritual law only (for instance, that in certain circumstances “the majority is not followed in civil law matters”; BK 46b). It was likewise accepted by all scholars that the rule of **dina de-malkhuta dina* has no application to matters of ritual law (*Tashbez*, 1:158, and see below), since all the reasons given for the adoption of the doctrine are relevant only to matters of the civil law. Thus the *halakhah* represents a unitary system of law with both its “religious” precepts and “legal” directions sharing a common origin and theoretical propagation as well as mutual principles and rules, the one part supplementing the other. At the same time the *halakhah*, as crystallized during its different periods, evolved a clear distinction between matters of *issura* and those of *mamona*, the latter being the counterpart of a substantial part of the subject matter of modern legal systems. This material distinction lent the legal part of the *halakhah*, which was the more sensitive and subject to the influence of changing social and economic realities, a wide flexibility and capacity for development.

LAW AND MORALS

Jewish law, like other legal systems, distinguishes between legal norms enforced by sanction of the courts and moral and ethical norms lacking such sanction. However, Jewish law also recognizes the existence of a special reciprocal tie between law and morality, a tie that stems from the common origin of both concepts in Judaic sources. The Pentateuchal commands, “Thou shalt not kill” and “Thou shalt not steal” (Ex. 20:13), are enjoined with the same finality as “Thou shalt love thy neighbor as thyself: I am the Lord” (Lev. 19:18), and the common origin of the concepts of law and morality remained a guideline for Judaism in all periods and generations (see, e.g., *Bertinoro*, Avot 1:1). The stated tie finds expression in the fact that from time to time Jewish law, functioning as a legal system, itself impels recourse to a moral imperative for which there is no court sanction, and in so doing sometimes prepares the way to conversion of the moral imperative into a fully sanctioned norm. An illustration is to be found in the law of tort, where there are cases in which the tortfeasor is legally exempt from the payment of compensation – whether for lack of necessary

causality between his act and the resultant damage, or because he acted with license, or for other reasons – yet with reference to many of these cases the rule was laid down that the person occasioning damage to another “is exempt according to the laws of man but liable according to the law of Heaven” (BK 6:4; BK 55b; and codes), or “he is exempt according to the law of man but his judgment is entrusted to Heaven” (Tosef., BK 6:6–17). Liability according to the law of Heaven means, according to some scholars, that although the court should not compel compliance by regular sanction it “should bring pressure to bear on him, verbally, without compulsion” (*Yam shel Shelomo*, BK 6:6); others held that the court should exercise no constraint – not even verbal – but should inform the individual: “We do not compel you, but you shall have to fulfill your duty to Heaven” (*ibid.*). Hence even the adjuration that the duty to Heaven must be fulfilled is addressed to the individual concerned by the court.

An instance of the conversion of a moral imperative into a legally sanctioned norm is to be found in the direction to act *li-fenim mi-shurat ha-din* (i.e., leniently, beyond the requirements of the law). In the Talmud this direction does not generally carry the import of a norm fortified by some form of sanction, and means only that it is fitting for the person who has a concern for his manner of conduct not to base his deeds on the strict letter of the law but to act leniently beyond the requirements of the law (as in the matter of restoring lost property or that of paying compensation for damage resulting from an erroneous opinion: BM 24b and 30b; BK 99b). As regards the talmudic matter concerning the exemption of workers from liability for damage caused by them – even though they are unable to prove the absence of negligence on their part – the *posekim* were divided on whether or not this involved an enforceable duty to act beyond the requirements of the law (*Mordekhai* and others; see *Bah*, ḤM 12:4). In the post-talmudic era the direction to act *li-fenim mi-shurat ha-din* became, according to the majority of scholars, a full fledged legal norm enforced in certain instances by the court (for instance in the case of a wealthy litigant; *Bah*, loc. cit. and *Rema*, ḤM 12:2). See also *Law and Morality.

DE-ORAITA AND DE-RABBANAN

Jewish law, in fact the entire *halakhah*, distinguishes between two categories of law, expressed in the two Aramaic terms *de-oraita* (“of the Torah”) and *de-rabbanan* (“of the scholars”). The second category is sometimes also termed *mi-divrei soferim* (a term which has an additional meaning, see Sanh. 88b, but is normally used as the equivalent of *de-rabbanan*) or *takkanat ḥakhamim*.

Distinguishing between the Two Categories

Classification of the halakhic rules into these two categories is beset with many difficulties and has been the subject of much scholarly discussion and research (see Z.H. Ḥayyim (Chajes), *Torat ha-Nevi'im*, s.v. “*Torah she be-al peh*”; H. Albeck, *Mavo ha-Mishnah* (1959), 49–53). Certainly the rules

expressly stated in the Pentateuch are *de-oraita*, while those clearly originating from the enactments or decrees of the scholars are *de-rabbanan*. More difficult is classification of the rules deriving from one of the different modes of Pentateuchal Midrash (exegesis, see *Interpretation). Maimonides held that any such rule was not to be considered *de-oraita* unless the interpretation accorded with a tradition from Moses at Sinai and the Talmud specifically lays down that the rule is *de-oraita* (*Sefer ha-Mitzvot*, rule no. 2). Naḥmanides held that such rules were *de-oraita* except when the Talmud specifically determines that the midrashic derivation of a particular rule amounts to no more than *asmakhta*, in which event the rule is *de-rabbanan* (*Hassagot ha-Ramban le-Sefer ha-Mitzvot*, ad loc.). Naḥmanides’ opinion was accepted by a majority of the scholars (many of whom interpret Maimonides’ view in a manner which tends to reconcile it with that of Naḥmanides). This, however, still does not constitute an adequate distinction, since there are *halakhot* which are regarded as *de-oraita* even though they are linked to particular scriptural passages by way of *asmakhta* alone, and there are also many *halakhot* which are regarded as *de-oraita* even though they do not originate from the legal source of Midrash (but from some other legal source, such as **sevarah*). Nor does classification of the *halakhah* into *de-oraita* and *de-rabbanan* necessarily have a bearing on the antiquity of a particular law, since it is possible that a law classified as *de-rabbanan* had its origin in a particularly ancient *takkanah*, whereas a later law may be classified as *de-oraita* because of its derivation from the interpretation of Pentateuchal passages. There are many institutions whose classification into one or other of the two stated categories occasioned doubt to the scholars of different periods, for instance, in the following matters: **ketubbah* (Ket. 10a; 110b); the husband’s right to inherit his wife’s property (Ket. 83a; Bek. 52b; and see **Succession*); the husband’s duty to maintain his wife (Ket. 47b; and see **Maintenance*); *kinyan meshikhah* (BM 47b); and modes of acquisition deriving from trade custom (*Kesef ha-Kedoshim*, Sh. Ar., ḤM, 201:1) and other matters. There is accordingly no absolute and exhaustive classification of the *halakhah* into *de-oraita* and *de-rabbanan* and the only method of determining the class to which a particular law belongs is an examination of the Talmudic and post-talmudic literature to determine the manner in which such law was classified by the sages of the Talmud and scholars who decided and codified the *halakhah*.

Legal Consequences of the Classification

A basic divergence between the two categories of law occurs when there is doubt or dispute as to the applicability or scope of a particular rule in certain circumstances: in a *de-oraita* matter a stringent approach is required, whereas a lenient approach is indicated in a *de-rabbanan* matter (Beḥah 3b; Av. Zar. 7a). In some cases the scholars laid down alleviations of the law as regards a *de-rabbanan* legal obligation, even in the absence of any doubt as to the existence of such an obligation (for instance as regards recovery of the *ketubbah* money; Tosef.,

Ket. 13 (12):3 and Ket. 110b; see also *Conflict of Laws) when special circumstances justified such leniency (Ket. 86a; *Rashbam*, BB 132b). In general, however, the scholars “imparted to their enactments the force of rules of the Torah” (see Git. 64b–65a; Ket. 84a). When the scholars saw the need for introducing a basic legal institution into daily life, they sometimes even enforced a rule of the rabbinical law more restrictively than a rule of the Torah. For this reason it was laid down that the parties may not stipulate for the payment of a lesser **ketubbah* amount than that determined by the scholars, notwithstanding the rule of freedom of stipulation in civil matters, even those pertaining to the *de-oraita* law (Ket. 56a). The rule that a legal obligation classified as part of the rabbinical law has the same legal efficacy as a *de-oraita* obligation is of special importance in view of the fact that so many of the rules in all the different branches of Jewish law belong to the *de-rabbanan* category (particularly those concerning the modes of acquisition, and the laws of obligation and tort). Any diminished regard for the standing and validity of a rule of the rabbinical law would have entailed the possibility of a far-reaching effect on the manner of execution and enforcement of such rules (see detailed discussion in Radbaz, 1,503).

THE BASIC NORM AND THE SOURCES OF JEWISH LAW

Three Meanings of the Expression “Source of Law”

Every legal system gives occasion for inquiry into the sources of its law (*fontes juris*, *Die Quellen des Rechts*). The expression “source of law” has three principal meanings, which may be distinguished as literary, historical, and legal sources of law.

The literary sources of law (in German, *Die Erkenntnisquellen des Rechts*) are those sources which serve as the recognized and authentic literary repository of the various rules and directions of a particular legal system for purpose of ascertaining their content.

The historical sources are those sources which constitute the historical-factual origin of particular legal norms. Legal research is largely concerned with an investigation of the historical sources of the directions comprising a particular legal system, of the various influences of one legal system on another, and other similar questions. The historical sources of law, in the wide sense of the expression, may also include any economic, social, moral, or other factor that led to the creation of a particular legal norm and there are many instances of laws which were enacted in answer to particular economic or social needs.

The legal sources (in German *Die Entstehungsquellen des Rechts*) are the sources of law and means of creating law recognized by a legal system itself as conferring binding force on the norms of that system (see J.W. Salmond, *Jurisprudence* (1966), 109 ff.).

The distinction between a legal and a historical source of law is of a material nature. The quest for the legal source of a particular norm is aimed at ascertaining the source from which the latter derives the force of law, that is, the principle

within the relevant legal system which serves to confer binding validity on such a norm. Thus it is possible to ascertain that a norm has its legal source in statute or precedent and so on, without any need to be concerned with the factual background or historical origin of such a norm. Salmond states: “This is an important distinction which calls for careful consideration. In respect of its origin a rule of law is often of long descent. The immediate source of a rule of English law may be the decision of an English court of justice. But that court may have drawn the matter of its decision from the writings of some lawyer, let us say the celebrated Frenchman, Pothier; and Pothier in his turn may have taken it from the compilations of the emperor Justinian, who may have obtained it from the praetorian edict. In such a case all these things – the decision, the works of Pothier, the *Corpus Juris Civilis*, and the *Edictum Perpetuum* – are the successive material sources of the rule of English law. But there is a difference between them for the precedent is the legal source of the rule, and the others are merely its historical sources. The precedent is its source, not merely in fact, but in law also. The others are its sources in fact, but obtain no legal recognition as such” (op. cit., p. 109).

The historical sources of law play only an indirect role in the evolution of a legal system, as factors which either offer a possible course to follow by way of imitation (as in the absorption of a principle from a different legal system) or create a need for the further development of such a legal system (as in the case of particular economic or social conditions). On the other hand, the legal sources play a direct role in the evolution of a legal system, serving as the sole means to add to, subtract from, or vary in any other way the existing norms of that system. This division of the sources of law into three classes is valid also for the Jewish legal system.

The Literary Sources of Jewish Law

VARIOUS CLASSES OF INFORMATIVE SOURCES OF LAW. The literary sources of a legal system constitute, as already mentioned, authentic sources for the ascertainment of its legal norms. Thus, for instance, the laws of a country may be ascertained from its official Statute Books. Similarly, knowledge of the law may also be gathered from what is called “the literature of the law.” This includes the literature in which the law is discussed or interpreted, although that literature itself is not recognized as an authoritative and authentic source from which binding legal norms may be ascertained (e.g., legal textbooks and articles: see Salmond, op. cit. 112, n. c). From a certain standpoint even general literature may contribute greatly toward a better knowledge of a legal system. Thus, if an author gives a historical-economic description of a particular period and mentions bankruptcies and the imprisonment of debtors, it may be possible to learn from this that it was customary at that time to imprison a debtor for the nonpayment of his debt; this may be deduced from the contents of a book even though the author dealt only incidentally with the legal aspects of that subject. In this regard, both the literature of the law and general literature must be approached with caution

and the degree of the author's accuracy and objectivity carefully examined in each case. These informative sources avail also in Jewish law. While its authoritative literary sources are the most important informative class, both literature of the law and general literature serve the important function of filling in the social and economic background to many legal norms. They are of added importance – subject to the above cautionary remarks – in relation to those periods when there were few authoritative literary sources, as was the position in Jewish law until the literary redactions undertaken in the tannaitic period. The different literary sources of the *halakhah* are briefly reviewed below in a general manner. (These are separately discussed elsewhere in greater detail; see, e.g., *Mishnah; *Talmud.)

FROM THE WRITTEN LAW UNTIL THE PERIOD OF THE TANNAIM. The Bible is not only the source of authority of the whole of the Jewish legal system (see below), it is also its first and foremost authoritative literary source. It contains legal directions which date from patriarchal times onward and are dispersed in specific books and chapters of the Pentateuch (Gen. 23:3–20; 31:41–43; Ex. 20–23; Lev. 5; 18–21; 24–25; 27; Num. 27:35–36; Deut. 1; 4–5; 15–17; 19–25). The next authoritative literary source is represented by the Books of the Prophets and the Hagiographa. From these information may be gained on the laws concerning the modes of acquisition (Ruth 4; Jer. 32 and see TJ, Kid. 1:5; 60c), the monarchy (I Sam. 8; I Kings 21), suretyship (Prov. 6:1–5; 11–15, et al.), the laws confining criminal responsibility to the transgressor (II Kings 14:6), and so on. It may be noted that the Prophets and Hagiographa contain scant material of a legal nature. The attention of the prophets and chroniclers was mainly directed to the numerous internal and external wars of their times, to moral, social, and religious problems. Therefore the silence of these sources on different matters of the law cannot be interpreted as pointing to the absence of a legal order on such matters.

Much of the accumulated knowledge of Jewish law in the above period and for some time after can be found in the informative sources termed literature of the law and general literature. These include the *papyri (such as the Elephantine papyri of the fifth century B.C.E.), the *Septuagint (end of the third century B.C.E.), the writings of *Philo (first half of the first century), the writings of Josephus (the period of the Temple destruction), the *Apocrypha (from the fourth century B.C.E. until the year 200), and other works. This literature contains some *halakhot* which are identical to those quoted in talmudic literature and others which are sometimes contrary to it. This may indicate a possible development in certain norms of Jewish law or it may also be that this literature preserved *halakhot* that appeared in talmudic sources which are no longer extant. Great care is needed in deducing conclusions from this literature: sometimes it represents the viewpoint of small sects or even a single individual; sometimes it may show the influence of a surrounding legal system (as in the case of the Elephantine papyri); sometimes the particular

author gathered a rule of Jewish law from a translation and not in its original form (as did Philo in making use of Greek translations); and sometimes the description of certain matters reveals a blatant tendentiousness (see, for instance, Jos., Ant., 4:279 (ed. Schalit) note 174; ed. Shor, note 3).

FROM THE TANNAITIC PERIOD UNTIL THE REDACTION OF THE TALMUD. This period, spanning the lives of the *tannaim* and *amoraim*, gave rise to literary creations which constitute the classical sources of Jewish law and the starting point, until this day, for the study or discussion of any matter in it. Extant from tannaitic times are the following: compilations of halakhic Midrashim (see **Midreshei Halakhah* and **Interpretation*); the Mishnah – compiled by Judah ha-Nasi and constituting the post-Mosaic “Corpus Juris” of Jewish law – and the **Tosefta* (see **Codification of Law*); other authoritative tannaitic literary sources are the **Beraitot* included in the two Talmuds, and **Megillat Ta’anit* which includes, besides descriptions of political and military events, halakhic and legal material. Authoritative amoraic literary sources are the Jerusalem Talmud and the Babylonian Talmud, which include commentaries and expositions on the Mishnah, *memrot* (new *halakhot* of the *amoraim*), *ma’asim* (i.e., cases, see **Ma’aseh*), questions and answers, *takkanot*, and *gezerot* as well as rules of decision (see **Codification of Law*).

THE POST-TALMUDIC PERIOD. The following are the three main branches of the post-talmudic literary sources of Jewish law commencing from the geonic period:

(1) The *Perushim* and *Hiddushim* – commentaries and novellae – to the Mishnah and Talmud (as well as the other talmudic literary sources). The commentary literature represents the efforts of the scholars to elucidate the earlier literary sources with a view to facilitating the study and understanding of them; the classic commentary is that of *Rashi on the Babylonian Talmud (11th century). The novellae literature is a product of the study and comparison by the scholars of different sources and their reconciliation of contradictory statements within the talmudic literature, in the course of which new interpretations and *halakhot* were derived; the classic novellae are those of the **tosafists* to the Babylonian Talmud (12th and 13th centuries). Of these two literary branches the commentaries represent the earlier development, which reached its peak in the 11th century (i.e., as regards commentaries on the TB; the commentaries on the TJ date from the 16th century onward), only then to be followed by the novellae, which have continued to be written until the present day.

(2) *She’elot u-Teshuvot* – the *responsa prudentium* of Jewish law. The *responsa* literature represents the decisions and conclusions written down by halakhic scholars in answer to written questions submitted to them. For the major part of the post-talmudic period these questions came either from *daiyanim* who sat in judgment over the litigants in their own community and found it necessary to turn to the outstanding halakhic scholars in the area for the solution to difficult

problems, or they arose from disputes between the individual and the community, or between different communities, which came directly before the competent scholars of the particular area. The responsa represent legal decisions on concrete questions arising in daily life and served as the main vehicle for the creativity and evolution of Jewish law in post-talmudic times. This body of literature is the case law of the Jewish legal system, estimated to include a total of approximately 300,000 judgments and decisions (see also **Ma'aseh*; **Responsa*).

(3) The Codes (see in detail under **Codification of Law*).

Besides these three main sources two other classes of literary sources belonging to this period may be mentioned: first, the collections of bonds and deeds (see **Shetarot*), i.e., forms of written documents in use at various times during this period and serving to order the legal relations between parties in different fields of the law – such as deeds of sale, indebtedness, lease, marriage, and *ketubbah*; secondly, the collections of *takkanot*, particularly the *takkanot* enacted by the community and its leadership, namely *takkanot ha-kahal*. In addition, there is the auxiliary literature of Jewish law consisting of various works of aid and reference, which may conveniently be classified into five categories: (1) works of introduction to the Talmud or to the *halakhah* in general (such as the *Iggeret R. *Sherira Ga'on*; the *Sefer ha-Keritot* of **Samson b. Isaac of Chinon*; et al.); (2) encyclopedias of the *halakhah* (such as *Paḥad Yizhak* by Isaac **Lampronti* and, more recently, the *Enziklopedyah Talmudit*, etc.); (3) biographies of the halakhic scholars (such as the *Sefer ha-Kabbalah* of Abraham ibn Daud; first part of *Shem ha-Gedolim* of Ḥ.J.D. Azulai); (4) bibliographies of halakhic works (such as the *Ozar ha-Sefarim* by Benjacob, the second part of *Shem ha-Gedolim* by Ḥ.J.D. Azulai); and (5) lexicons and dictionaries (such as *He-Arukh* by Nathan b. Jehiel of Rome; the *Arukh Completum* by A. Kohut; Levi's *Wörterbuch*; and Jastrow's *Aramaic Dictionary of the Talmud*). The main literary source in the post-talmudic period, however, remained the Talmud while around it and in continuation thereof there grew up a vast and profound literature in the form of all the aforementioned branches, sources, and auxiliary works.

The Historical Sources of Jewish Law

It is possible to point to the historical background of many norms of Jewish law – to the economic, social, and moral conditions leading to their creation (particularly in the case of the norms originating from *takkanot*), or to the influence of a different legal system (see below) and similar historical influences. General research on such historical sources is to be found in various works dealing with the history of the *halakhah* and some special research has been done on this subject (latterly, for instance, Y. Baer, *Yisrael ba-Ammim*; idem, in: *Zion*, 17 (1951/52), 1–55; 27 (1961/62), 117–55). Ascertaining the precise historical sources of a particular legal norm is often a formidable task which offers no assurance that the correct answer will be found. Some proffered answers lie in the realm

of mere conjecture and are unacceptable without adequate further investigation and proof (see for instance the strictures of G. Alon in his *Mehkarim*, 2 (1958), 181–247).

The Legal Sources of Jewish Law

There are six legal sources of Jewish law (as regards the Written Law see below): (1) *kabbalah* (“tradition”), based on “tradition transmitted from person to person” back to Moses from God (Avot 1:1; ARN *ibid.*; Yad, Mamrim 1:2; Maim., Introd. to Comm. Mishnah); it is materially different from the other legal sources of Jewish law, since it is not subject to change or development but is, by its very nature, static and immutable, whereas the other legal sources are dynamic by nature and mainly serve as the means toward the continued creativity and evolution of Jewish law; (2) Midrash (“exegesis” and “interpretation”), embracing the norms derived from interpretation of the Written Law and of the *halakhah* in all periods, and to a certain extent also taking in other principles relating to interpretation of deeds, communal enactments, and so on; (3) *takkanah* and *gezerah*, representing the legislative activities of the competent halakhic authorities and public bodies in every generation; (4) *minhag*, representing the legal norms derived from custom in all its different forms; (5) *ma'aseh*, representing the legal norms derived from judicial decision or the conduct of a halakhic scholar in a particular concrete case; (6) *sevarah*, representing the legal norms originating directly from the legal-human logic of the halakhic scholars.

The last five of these are recognized in Jewish law as being capable of both solving new legal and social problems and changing existing legal norms, when this need arises from the prevailing economic, social, and moral realities. In making use of these legal sources the halakhic scholars continued to shape and develop the Jewish legal system, which gave direction to the daily realities of life while being itself directed by them. This task the halakhic scholars carried out with a constant concern for the continued creativity and evolution of the *halakhah*, tempered at the same time by the heavy responsibility of preserving its spirit, objective, and continuity. This twofold assignment is entrusted in Jewish law to the halakhic scholars in every generation: “the judge that shall be in those days” (Deut. 17:9 and Sif. Deut. 153), in accordance with the fundamental principle that “the court of Jephthah is as that of Samuel ... for the contemporary judge is in his generation as the judge who was in earlier generations” (Eccles. R. 1:4, no. 4; Tosef., RH 2 (1):3; RH 25b). No supra-human power – such as a heavenly voice or the prophet acting as bearer of the divine vision – has ever had any authority or influence in the determination and decision of the *halakhah* (Sifra, Be-Ḥukkotai 13:7–8; BM 59b; TJ, MK 3:1, 81d; for further particulars see **Authority, Rabbinical*).

The Basic Norm of Jewish Law

As already mentioned, by the legal sources of a legal system is meant those sources which that legal system itself recognizes as valid sources from which its legal norms derive their binding force. Whence do these legal sources themselves de-

rive their authority and validity? How and by whom have they been recognized as having the efficacy to determine and introduce legal norms into the legal system concerned? Salmond (loc. cit.) states (111–2): “There must be found in every legal system certain ultimate principles, from which all others are derived, but which are themselves self-existent. Before there can be any talk of legal sources, there must be already in existence some law which establishes them and gives them their authority... These ultimate principles are the *Grundnorm* or basic rules of recognition of the legal system.” Thus the direct legal source of a municipal bylaw is the authority of the municipality to make bylaws; the bylaw has legal validity because parliament has delegated power to the municipality to make bylaws, while there exists a further rule – the *Grundnorm* – which determines that an act of parliament has binding authority in the English legal system.

So in any legal system there is to be found a chain of delegation of power extending from the ultimate legal value – the *Grundnorm* – to lower ones. The source of authority of the ultimate legal principle must be sought beyond the concepts of law and within the confines of history, religious faith, and beliefs, and the like: “But whence comes the rule that acts of parliament have the force of law? This is legally ultimate; its source is historical only, not legal. The historians of the constitution know its origin, but lawyers must accept it as self-existent. It is the law because it is the law, and for no other reason than that it is possible for the law itself to take notice of” (Salmond, op. cit., p. 111).

In the above-mentioned sense the basic norm of the Jewish legal system is the rule that everything stated in the Written Law is of binding authority for the Jewish legal system. The basic norm of Jewish law therefore not only expresses the concept of the delegation of power, but it is actually woven into the substantive content of the Written Law, the latter constituting the eternal and immutable constitution of Jewish law. This norm is the fountain of authority and starting point for the entire halakhic system with all its changes and evolution throughout the generations, and it is this norm that delegates authority to the legal sources of Jewish law rendering them valid means toward the continuing creativity and evolution of the latter. The source of authority of this basic norm itself is the basic tenet of Judaism that the source of authority of the Torah is divine command. In considering the matter from the aspect of Judaism as a whole it has to be said that there cannot be seen in it a system of legal norms isolated from and independent of other constellations of norms. All these constellations of norms have a single and uniform ultimate value, namely divine command as expressed in the Torah given to Moses at Sinai. Hence even the pre-Mosaic laws mentioned in the Written Torah – for instance concerning circumcision and the prohibition on flesh torn from a living animal, robbery, incest and so on – have binding force “because the Holy One commanded us through Moses” (Maim., Comm. *Hul.* 7:6) and because at the time the Torah was given “Israel entered into a covenant to observe them” (*Rashbam*, Gen. 26:5).

The exclusive authority to interpret the Written Law and ensure its continuing evolution was found by the halakhic scholars to be delegated, in the Written Torah itself, to the halakhic scholars of every succeeding generation. Such authority they derived from a number of Pentateuchal passages, particularly Deuteronomy 17:8–11, in which the resolution of problems and disputes arising from time to time is entrusted to the teachers and judges in every generation (see also *Authority, Rabbinical). In this and in other passages the halakhic scholars found not only their general authority to resolve problems but also the appointed means, that is the legal sources, wherewith to reach this goal (see *Yad*, *Mamrim* 1:2; *Maim.*, *Introd. to Comm. Mishnah*). Further particulars of Pentateuchal passages as a basis for the various legal sources of Jewish law are given elsewhere under the heading of each legal source.

THE DIFFERENT PERIODS OF JEWISH LAW

Jewish law has a history extending over a period of more than 3,000 years. For reasons of convenience and, to a certain extent, for historical and substantive reasons, this may be divided into two general periods, each with its own further sub-divisions; the first covering the time from the Written Law until the closing of the Talmud, the second from the post-talmudic period until the present day. This division between talmudic and post-talmudic *halakhah* has no bearing on the matter of the continuing creativity and evolution of Jewish law. Such creativity not only continued uninterrupted after the closing of the Talmud but, as regards volume and literary output, even gathered momentum in certain fields of the law. The significance of the closing of the Talmud as a historic turning point in Jewish law finds expression in the degree of authenticity attributed to the talmudic *halakhah*, which was accepted in Judaism as the authoritative expression and rendering of the Oral Law: “All matters stated in the *Gemara* ... must be followed ... and have been agreed to by all Israel” (Maim., *Introd. to Mishneh Torah*). Until the redaction of the tannaitic literary sources – and to some extent even of the amoraic – the Written Law was the direct source according to which the law was applied by the *dayyan*. After the redaction of the talmudic literary sources the Written Law still remained the constitution of Jewish law, but the Mishnah, the halakhic Midrashim (*midreshei halakhah*), the two Talmuds, and the remaining talmudic literature became the direct sources according to which all matters of Jewish law were decided. The talmudic literature became the starting point for any study or discussion of Jewish law, and retained this status even after Jewish law was enriched – in the course of some 1,500 years – by many additional literary creations which, in comprehensiveness, orderly arrangement, and convenience of use, overtake the talmudic literature. The first great period of Jewish law is further distinguished by the fact that in this period Jewish law acquired its characteristic lines and forms of legal thought and expression, and the fact that in this period there were evolved and consolidated the legal sources which served as the vehicle for

the creativity and development of Jewish law in this and in the post-talmudic period.

The first general period can be subdivided in six eras: (1) the biblical age (up to the time of Ezra and Nehemiah, about the middle of the fifth century B.C.E.); (2) the period from Ezra and Nehemiah until the age of the *zugot* (up to 160 B.C.E. approximately), the greater part of which is customarily described as the age of the *soferim* (“the scribes”; see N. Krochmal, *Moreh Nevukhei ha-Zeman*, ed. Rawidowicz, 56, 194), but latterly the use of the term as descriptive of the scholars of this period only has been criticized (see Kaufmann, Y., *Toledot*, 4 pt. 1 (1960), 481–5); (3) the age of the *zugot* (“the pairs”; from 160 B.C.E. up to the beginning of the Common Era), which takes its name from the five pairs of leading scholars who headed the *battei din* during this period (the names of the *zugot*, of whom the last pair were Hillel and Shammai, are given in *Ḥag.* 2 and *Avot* 1); (4) the age of the *tannaim* (up to 220 C.E.) which spans the activities of six generations of *tannaim*, from *Gamaliel the Elder (grandson of Hillel) and his contemporaries to *Judah ha-Nasi (redactor of the Mishnah). The generation succeeding R. Judah (that of R. *Ḥiyya Rabbah and his contemporaries) saw the transition from the tannaitic age to that of the *amoraim*. Besides the Mishnah, there are extant from the end of this period also collections of halakhic Midrashim, the *Tosefta*, and other tannaitic literary sources; (5) the age of the *amoraim* embracing the activities of five generations of *amoraim* in Erez Israel (until the end of the fourth century C.E.) and eight generations of *amoraim* in Babylon (up to the end of the fifth century). Extant from this period are the Jerusalem and Babylonian Talmuds; (6) the age of the *savoraim* (up to the end of the sixth century or, according to some scholars, the middle of the seventh century). This age must be regarded as the closing part of the talmudic period since the *savoraim* were mainly occupied with completing the redaction of the Babylonian Talmud and determining rules of decision (see *Codification of Law).

In the second period there are two main subdivisions, the age of the *geonim* and the rabbinic age, but the latter may be subdivided into six further categories. (1) The age of the *geonim* (from the end of the age of the *savoraim* until approximately the middle of the 11th century). The name is derived from the official title by which the heads of the academies of *Sura and *Pumbedita were known during this period. For most of this period the Babylonian academies remained the spiritual center of Jewry as a whole and most Jewish communities assigned absolute legal validity to the decisions and responsa of the *geonim*. For internal Jewish and external political reasons, the ties of the Babylonian *geonim* with the centers of learning that had arisen in North Africa and Spain became loosened towards the end of this period and, commencing from the middle of the 11th century, the phenomenon of a single spiritual center for the various centers of Jewish life came to an end and each of the latter began to rely on its leaders and teachers. This new reality was to exercise a great deal of influence on the subsequent modes of development

of Jewish law, evidenced, for instance, in the proliferation of local custom and legislation (see **Takkanot*; **Takkanot ha-Kahal*; **Conflict of Laws*). The *geonim* were instrumental in converting the Babylonian Talmud into the source according to which the *halakhah* was decided for all Jewry. In addition, this period saw the first flowering of the division of the post-talmudic literary sources of Jewish law into its three branches which exist until the present day – namely the commentaries and novellae, the responsa, and the codes (see above). Among the better-known *geonim* are R. Yehudai, R. Amram, R. Saadia, R. Samuel b. Hophni, R. Sherira, and Sherira's son, R. Hai. Of the well-known figures of this period who did not officially hold the title of *gaon*, mention may be made of R. Aḥa (Aḥai) of Shabḥa, author of the *Sefer ha-She'iltot*, and R. Simeon Kayyara, author of the *Halakhot Gedolot* (see **Codification of Law*). (2) The rabbinic age, which followed, was itself divided into three periods: (a) The period of the *rishonim* (the “early” scholars), from the middle of the 11th century (the time of Isaac Alfasi) until the 16th century (the time of Joseph Caro and Moses Isserles). This was the golden period of the rabbinic age in which were compiled the classic creations in all three branches of the post-talmudic literary sources of Jewish law: Rashi's commentary on the Talmud and the novellae of the tosafists; the codes of Isaac Alfasi, Maimonides, Jacob b. Asher, Joseph Caro, Moses Isserles, and others; the responsa collections of Solomon b. Abraham Adret (Rashba), Meir (Maharam) of Rothenburg, Asher b. Jehiel (Rosh), Isaac b. Sheshet Perfet (Ribash), Simeon b. Zemah Duran (Tashbez), Joseph b. Solomon Colon (Maharik), and others. This was also the period in which the main part of the communal enactments was produced. It embraces the rise and decline of Spanish Jewry, and its close saw the initial flowering of several other Jewish centers – particularly in Erez Israel and Poland-Lithuania – whose outstanding scholars were to make a great contribution to Jewish law, especially to its codification and to its responsa literature.

(b) The period of the *aḥaronim* (the “later” scholars), from the time of Joseph Caro and Moses Isserles until the coming of emancipation around the end of the 18th century. The legal creativity reflected in the three above-mentioned literary sources of Jewish law was continued in this period, particularly in the field of the responsa, which reached a peak of activity. From this period there have also come down numerous collections of communal enactments (such as the *Pinkas Va'ad Arba Arazot*, *Pinkas Medinat Lita*, *Takkanot Mehrin*, and others).

(c) The period of the abrogation of Jewish judicial autonomy. The era of emancipation, which brought in its train the abrogation of Jewish judicial autonomy, represents a turning point in the evolution of Jewish law. This period may be further subdivided: from the end of the 18th century until the beginning of the 20th century, i.e., until the period of Jewish national awakening; from the beginning of the 20th century until the establishment of the State of Israel in 1948; from the establishment of the State of Israel onward.

JEWISH LAW – A LAW OF LIFE AND PRACTICE

Introduction

For the greater part of its history of over 3,000 years, Jewish law has served the Jewish people while they not only lacked political independence but were for a considerable part of this period deprived of their own homeland – Erez Israel – and dispersed throughout the various countries of the Diaspora. The legal systems of other ancient peoples went into decline as soon as they lost their political sovereignty, eventually ceasing to exist except in scattered archaeological remains. Even Roman law, which has left an imprint upon – and still nourishes – many other legal systems, ceased to exist as a creative law of life and practice after having reached its peak of development in Justinian's *Corpus Juris*, in the middle of the sixth century. In the case of Jewish law, the position is otherwise. Despite loss of political independence and lack of physical tie with the homeland, the Jewish people retained judicial autonomy and Jewish law not only did not decline, but it experienced most of its creativity and structural evolution – the Babylonian Talmud and all the other post-talmudic creativity – after the exile. Two factors explain this unique phenomenon: an internal one resting on the substance and nature of Jewish law and its place in the cultural life of the Jewish people, and an external one resting on the general juridical-political outlook that was common in the political history of the nations among whom the Jews lived up to the 18th century.

The Religious and National Character of Jewish Law

Of the two above factors, the internal one is the more important, based as it is on the character of Jewish law which is both religious and national. It is a basic tenet of the Jewish faith that the source of Jewish law – like that of the entire edifice of the *halakhah* – is divine revelation; in the same way as the Jew is commanded in the Written Law to uphold the “religious” precepts – those pertaining to man's relations with the Almighty, such as the laws of the Sabbath and the festivals, the laws of *kashrut* and the like – so he is commanded in the Torah itself to uphold the “legal” precepts – those pertaining to man's relations with his fellows, for instance in matters concerning the laws of labor, tort, property, and different matters of the criminal law. The Ten Commandments enjoin observance of the Sabbath and “Thou shalt not steal,” or “Thou shalt not murder,” equally – as it were in the same breath. Hence, just as the vitality of the “religious” life remained unaffected by the people's exile, so the “legal” life continued to have unabated validity, and questions arising in both fields were brought before the same court or halakhic scholar for decision.

In addition to its religious character Jewish law has also been the national law of the Jewish people and its entire development has been the creative invention of this people. In this regard Jewish law differs from other legal systems, such as the Canon law or Muslim law, which were created and developed by followers of the faith – Catholic or Muslim – among many different nations. Notwithstanding its dispersion, the Jewish people continued to exist as a nation – not only as a religious

sect – and constantly sought recourse to Jewish law, which it regarded as a part of its national assets through which to give expression to its essential being and character in all fields of its internal social and economic life.

The Jewish Judicial System – the Scope of Its Jurisdiction

A precondition for the practical application of a legal system is the existence of an effective judicial machinery to administer and carry out the law. The Pentateuchal law provides express and detailed instructions for the maintenance of a judicial system (Ex. 18:21–27; Deut. 16:18; see also **Bet Din*) and a Jewish judicial system has always existed, even in the absence of Jewish political sovereignty and in all countries of the Diaspora. The Jewish court (*bet din*), alongside the various institutions of Jewish autonomy (the exilarch, the community, inter-communal organizations), provided the mainstay of Jewish internal autonomy from the destruction of the Temple until the period of emancipation. The scope of Jewish judicial autonomy underwent change from time to time depending mainly on the attitude of the ruling power under whose protection the Jews lived.

After the destruction of the Temple, Jewish judicial autonomy was restricted for a short period in Erez Israel (according to talmudic tradition jurisdiction over capital punishment (*dinei nefashot*) was abolished 40 years before the destruction (Shab. 15a; TJ, Sanh. 1:1, 18a; 7:2, 24b), but in practice the Jewish courts apparently did deal with such cases at least until the destruction). Soon, however, autonomy was fully restored and the time of R. Gamaliel, R. Akiva, and their contemporaries was one of the most creative periods in the history of Jewish law. Later, with the decrees of Hadrian and the revolt of Bar Kokhba, Jewish judicial autonomy was faced with another crisis (TJ, Sanh. 7:2, 24b), but by the end of the second century C.E., autonomy had already been fully restored (see Alon, *Toledot*, 1 (1958³), 129f.). The Babylonian Jewish center enjoyed wide judicial autonomy from an early period, and one of its main institutions was the Jewish court. After the decline of the Babylonian center the Jewish courts in all other centers continued to exercise the judicial function in matters between Jews. The halakhic scholars and communal leaders sought to impose a strict internal discipline in order to insure that all disputes between Jews would be aired before the Jewish judicial institutions. At the same time, they made every effort to obtain charters of privileges from the various rulers under whom they lived in order to insure the independence of Jewish law and the grant of powers of compulsion to the Jewish courts and internal authorities (see below).

The jurisdiction of the Jewish courts extended first and foremost to most civil law matters such as property, obligations, tort, family and succession law, and also to matters concerning the administration of local Jewish government at the hands of the representative communal and intercommunal institutions – such as election to the latter bodies, tax imposition and collection, relations between the individual and the community, and the like (see below). This measure

of judicial autonomy was generally extended (up to the 18th century), even in times and places of restriction of the rights of Jews. In many centers such autonomy extended even to criminal matters, varying from place to place in its scope and modes of execution. In certain places it also extended to capital offenses, particularly with reference to *informers (e.g., in Spain, see Resp. Rashba, 1:181; 5:290; Resp. Rosh, 17:1, 8; *Zikhron Yehudah*, 58 and 79; Resp. Ritba, 131; Resp. Ribash, 251; in Poland – see Resp. Maharam of Lublin, 138, etc.; see also *Capital Punishment); in other places it extended merely to religious offenses, offenses against property, and police administrative offenses.

The wide range of matters over which the Jews enjoyed autonomous jurisdiction may be gathered from a study of the responsa literature containing decisions given by the leading halakhic scholars of different periods on concrete questions arising from the daily realities. Thus, out of some 1,050 responsa of *Asher b. Jehiel – one of the leading scholars of German and Spanish Jewry in the second half of the 13th century and the beginning of the 14th – one-fifth (about 200) deal with precepts concerning man and God (such as the laws of prayer, festivals, forbidden food, and the like) and the remaining four-fifths with Jewish law (i.e., matters for the greater part included in Sh. Ar., EH and HM). Of the latter group, some 170 questions deal with matters of Jewish family law (marriage and divorce, parent and child, and the like) and the rest, more than 600, are concerned with all other “legal” branches of Jewish law (civil, criminal, and public-administrative; see Elon, *Maftē’ah*, introd. (Heb. and Eng.)). A similar ratio of subject matter is found to be more or less constant in all the responsa literature up to the 16th century, and slightly different in that of the 17th and 18th centuries, where the percentage of matters concerning religious law is somewhat higher. A material change can be detected in the responsa literature from the 18th century onward – following the era of emancipation, which saw the abrogation of Jewish judicial autonomy – and by far the greater part of these responsa deal with matters of religious precepts and family law, with a modest and minor place reserved for the remaining branches of Jewish law.

The Available Sanctions of the Jewish Judicial System

Within the framework of judicial autonomy described above the Jewish courts and competent authorities of the self-ruling bodies had the power to impose sanctions. These too varied from place to place and from period to period. The ordinary means of compulsion were attachment of property, monetary fines, and corporal punishment. In certain centers there were even Jewish prisons under the control of Jewish institutions and supervised by Jewish wardens (see *Imprisonment). At times the autonomous Jewish authorities had to seek the assistance of the central authorities in carrying out the sanctions imposed by the Jewish courts, especially so in case of the death sentence. A common and most effective sanction was the **herem*, the quality and severity of which varied from place to place and also according to the nature of the offense and

the degree of compulsion required. The use of this sanction was essential in circumstances where the Jewish authorities lacked the normal attributes of sovereignty, and it served as a most effective deterrent and means of compulsion in view of the self-centered living and residential conditions of the Jewish collectivity as an autonomous group. A person on whom the ban was pronounced was to a greater or lesser extent removed from the religious and social life of the community, and the stringent consequences of this sanction induced many halakhic scholars to refrain from its imposition except in the most difficult and serious cases.

The Prohibition on Litigation in the Gentile Courts

A striking expression of the religious and national character of Jewish law is to be found in the prohibition on litigation in the gentile courts (*arka'ot shel goyim*), to which the halakhic scholars and communal leaders attached the utmost importance. The first mention of this prohibition was made soon after the destruction of the Temple, when Jewish judicial autonomy was for a short period restricted by the authority of Rome (see above). It was laid down that there was to be no resort to the gentile courts not only when the material law applied in the latter courts differed from Jewish law but even when their law on a particular matter was the same as that applied in the Jewish courts (Git. 88b). Resort to the gentile courts was regarded as prejudicial to the existence of Jewish judicial autonomy and the prohibition served as a protective shield insuring the uninterrupted existence of such autonomy throughout the period of Exile; any person transgressing the prohibition was “deemed to have reviled and blasphemed and rebelled against the Torah of Moses our teacher” (Yad, Sanhedrin 26:17, based on Tanḥ. *Mishpatim*, 3). Contrary to the general principle that every rule of the civil law (*mamonot*) is *jus dispositivum*, so that in respect of it a man may contract out of the law of the Torah, it was laid down by a majority of halakhic scholars that the parties to a transaction may not mutually agree to submit their dispute to the jurisdiction of a gentile court, and also that resort to the gentile courts is not justifiable on the principle of *dina de-malkhuta dina* (“the law of the land is law”; Naḥmanides on Ex. 21:1; Resp. Rashba, vol. 6, no. 254; Tur and Sh. Ar., HM 26:1, 3).

In the political and social realities of the different centers of the dispersion it was not always fully possible to enforce this prohibition. As early as the middle of the ninth century Paltai Gaon laid down that it was permissible to institute proceedings in a gentile court against a party aggressively and obstinately refusing to appear in a Jewish court (B.M. Levin (ed.), *Ozar ha-Ge'onim*, BK, Resp. no. 227). It was decided that in such a case the plaintiff, after first obtaining leave of the Jewish court, might prosecute his claim in the gentile court, “in order not to strengthen the hands of the powerful and violent who do not obey the law” (Yad, Sanhedrin 26:7 and *Radbaz* thereto; Tur and Sh. Ar., HM 16:2, 4). At times resort to the gentile courts was permitted in certain matters in which the central authorities had a special interest, such as disputes over

land (Resp. *Rema*, no. 109), governmental taxes, and currency (Finkelstein, bibl., pp. 361f.). Some of the halakhic scholars permitted recourse to the gentile courts when this was agreed on by both parties (Resp. Maharam of Rothenburg, ed. Cremona, no. 78; Finkelstein, op. cit., pp. 153, 156 and n. 1; *Sma*, ח"מ 26 n. 11 and *Taz* thereto; see also *Siftei Kohen*, ח"מ 22, n. 15). In different periods there were communities and places where Jews scorned the prohibition, but in general the halakhic scholars and communal leaders firmly stood guard over the authority of the Jewish courts by enacting special *takkanot* and adopting sharp countervailing measures against those who thus undermined the autonomy of Jewish jurisdiction (see Assaf, *Battei ha-Din* ..., 11, 17–18, 24, 109–13; Elon, in: ILR 2 (1967), 524–7; as regards recourse to the gentile courts from the period of the emancipation onwards see below).

Arbitration and the Jurisdiction of Lay Jewish Tribunals

The aim of preventing recourse to the gentile courts as a means of preserving Jewish judicial autonomy induced the halakhic scholars to maintain judicial institutions composed of Jewish judges, even if the judgments of the latter were not based on Jewish law, or were based on this law in slight measure only. Institutions of this kind were arbitral bodies and lay tribunals in their various forms.

The arbitral body had its origin in the second half of the second century (R. Meir and other *tannaim*: Sanh. 3:1–3), when Jewish judicial autonomy was restricted, as we have already noted, by the decrees of Roman imperial rule following the Bar Kokhba revolt. The courts were destroyed and those which remained were deprived of the power of compulsion. In these circumstances the scholars directed the people to the institution of *arbitration, in which *ro'ei bakar* ("herdsmen," simple folk untutored in the law) could also sit and adjudicate in accordance with their own good sense and understanding. In order to give such adjudication a Jewish form, the scholars laid down that the arbitral body should be composed of three arbitrators (Sanh. 3:1), like the Jewish court which was always composed of at least three *dayyanim* (*ibid.* 1:1; and see **Bet Din*) and unlike the position in Roman law where there was generally a single arbitrator. Even after the restoration of judicial autonomy, arbitration continued to fulfill an important function alongside the regular judicial institutions, and its rules and procedures were prescribed by the halakhic scholars (see also **Compromise*).

Of interest is the evolution of the institution of adjudication by lay judges (*hedyotot*, i.e., persons untutored in Jewish law; the term also has the meaning of judges tutored in the *halakhah* but lacking **semikhah* ("ordination"; see, e.g., Git. 88b), a distinction that must be borne in mind). The precise origin of this institution is disputed by scholars; one opinion is that it dates from before the destruction of the Temple, while others hold that it too developed after the Bar Kokhba revolt and the withdrawal of autonomous jurisdiction from the Jewish courts (see Elon, op. cit., p. 529). Lay jurisdiction was likewise designed to ensure that the people would bring their dis-

putes before Jewish judges – even if the latter were not versed in the law – rather than resort to the gentile courts. These tribunals were composed of three members, one of whom had to be *gamir* – i.e., to have acquired some knowledge of the *halakhah* – while the other two had to be persons fit at least to understand any matter explained to them (Sanh. 3a, Rashi and Nov. Ran ad loc.). The scholars bestowed on the lay tribunal authority to deal with all matters of civil law, to the exclusion of criminal matters (Sanh. 3a and *Piskei Rosh* thereto, 1) along with power to compel the appearance of the parties (*Piskei Rosh* thereto, 2; Tos. to Sanh. 5a; Tur, מ 3:3; Sh. Ar., ח"מ 3:1). In order to prevent resort to the gentile courts at all costs in post-talmudic times the scholars laid down that in any community where not even one *gamir* was to be found, three laymen could make up the tribunal even if none of them possessed this minimal qualification, provided that they were "fit and God-fearing persons, spurning corruption and equipped with sense and understanding"; such tribunals could deal also with criminal matters, in cases of great need and after much prior forethought and consultation (Resp. Rashba, vol. 2, no. 290). The existence of tribunals composed entirely of lay judges is confirmed in other historical sources (see, e.g., the Valladolid *takkanot* of 1432, in Finkelstein, bibl., pp. 356–7), and the validity of such courts was halakhically recognized (*Rema*, ח"מ 8:1).

In general, the major part of the legal hearings, in disputes between individual Jews and between the individual and the communal authorities, took place before a court composed of three *dayyanim* expert in Jewish law and deciding in accordance therewith (a court of this kind called simply, *bet din*; Resp. Rashba, vol. 1, no. 1010); however, in most Jewish centers there were also lay tribunals functioning alongside these courts as a permanent judicial institution (a court of this nature being referred to as *bet din shel hedyotot*; Rashba loc. cit.). Many factors – social, economic, standards of knowledge and education – determined the measure of resort to lay tribunals. Their judges (known by different names: *tovei ha-ir*, *berurei tevi'ot*, *berurei averot*, *piskei ba'alei battim*, *parnasim*, *zekenim*, etc.) generally based their decisions on communal enactments (see **Takkanot ha-Kahal*), trade usages (see **Minhag*), appraisal, justice, and equity (see, e.g., Resp. Rashba, vol. 2, no. 290; vol. 3, no. 393 et al.; Resp. Maharshal, no. 93; Resp. Rema, no. 33) and at times even upon a particular branch of a foreign legal system (*Beit ha-Behirah*, Sanh. 23a concerning "courts in Syria"; see also *takkanot* of the Leghorn community: S. Toaff, in: *Sefunot*, 9 (1964/65), 190f.). Sometimes lay tribunals turned to halakhic scholars for their opinion and advice (*Zikhron Yehudah*, no. 58). In some places the limits of their jurisdiction were clearly defined. Mention is made of a tribunal composed of *tovei ha-ir* which dealt with tax matters (Resp. Rosh, no. 7:11). At times there was a predetermined division of matters over which the different courts were to have jurisdiction; thus a *takkanah* of the Lithuanian community prescribed that the courts of the communal leaders were to deal with matters of monopolies as well as certain tax and penal matters, and the *dayyanim* of the community with matters of

civil law (*Pinkas ha-Medinah* [Lita], no. 364); in a *takkanah* of the Leghorn community it was laid down that all matters of trade, insurance, and the like were to be dealt with by the communal leaders (*adonei ha-ma'amad*) judging in accordance with the general law as regards trade customs, but that matters of marriage and divorce, inheritance, mortgage, interest, and the like were to be dealt with according to Jewish law (Toaff, in: *Sefunot* loc. cit.).

The lay tribunals were originally and primarily instituted for the purpose of preventing resort to the gentile courts and also so as to enable certain matters of trade and the like, which were dependent on local custom, to come before a tribunal of merchants and professional experts. These tribunals tended, however, to gain in influence and to assume jurisdiction in additional matters, notwithstanding the existence of courts composed of *dayyanim* learned in the law. The halakhic scholars regarded this development as posing a threat to the ordered evolution of Jewish jurisdiction and application of Jewish law (see, e.g., Resp. Maharyu, no. 146). The fact that these tribunals tried matters according to appraisal and a subjective feel for justice, rather than according to any fixed legal rules, led the scholars to apprehend the danger of possible partiality and perversion of justice, especially since the tribunals were generally composed of the leaders and wealthy members of the community with the poorer and less influential members of society almost completely unrepresented. Strong criticism to this effect was often expressed by the scholars (see, e.g., *Keneh Hōkhmah*, *Derush ha-Dayyanim*, pp. 25f.; *Derushei ha-Zelah*, 3:12–4). However, such criticism never challenged the basic existence and positive merits of an institution which served as a vital additional means of preventing recourse to the gentile courts. For this reason adjudication by lay tribunals was also held to “accord with the Torah,” even if it had not always the same merit as adjudication by the courts of *dayyanim*, and only “the practice in a few places to turn without hesitation to the gentile courts is actually contrary to the Torah and amounts to a public profanation of the Divine Name for which those who act in this way will have to account” (*Sefer ha-Zikhronot*, 10:3). To do so was to undermine Jewish judicial autonomy. (In Sh. Ar., ḤM the matter of lay tribunals (ch. 8) is clearly distinguished from the stringent prohibition on recourse to the gentile courts (ch. 26); see also M. Elon, in: ILR, 2 (1967), 529–37.)

The Judicial-Political Position and Social-Fiscal Relations

The national-religious character of Jewish law, and the profound awareness that a zealous watch over this inalienable asset would ensure the continued existence and unity of the Jewish people, thus constituted the primary element in the application of Jewish law in the daily life of the Jewish people even when dispersed in exile. Yet it may be asked how it proved possible for the Jews to maintain judicial autonomy under the political sovereignty of the governments under whose rule they lived, and what motivated the state authorities to respond to the demand of the Jewish collectivity for its own autonomy. The answer lies in the second of the two factors mentioned above, that

is the judicial-political concepts of government and jurisdiction as these were common up to the 18th century, and the fiscal and social relations between the central authorities and the different strata, including foreigners, who dwelt under their rule. The judicial system was based on the individual's adherence to one of a number of distinctive groups with different legal systems which were recognized by the state. Unlike modern centralistic states, the medieval state was corporative in nature and comprised of a series of autonomous strata and bodies, such as the nobility, the burghers, the guilds, etc. The latter frequently competed with one another and some of them with the central authority, and the Jewish community was often the object of rivalry among these different strata, bodies, and the central authority. This political-legal reality rendered possible the existence of an autonomous Jewish group with its own judicial autonomy. The central authority, as well as the different strata and bodies amidst whom the Jews lived, regarded it as their “duty” and right to impose on the Jews heavy taxes in return for the privileges of settlement and residence. The collection of such taxation from each individual involved many difficulties, especially as the Jews were counted as members of a separate and foreign national group. The authorities accordingly found it convenient to impose an aggregate tax on the Jewish collectivity as a whole and for this purpose to enable the latter to be a unitary autonomous body, functioning in such manner that its leaders would bear the responsibility of producing the total amount of the tax apportioned and collected by each community from among its individual members. The existence of an autonomous public Jewish body also made it possible to give directions and conduct negotiations on other state rights and obligations through the recognized leaders of this body. Considerations of faith and religious opinions held by the Christian rulers may also have contributed to the grant of autonomous Jewish jurisdiction (see H.H. Ben-Sasson, *Perakim be-Toledot ha-Yehudim bi-Ymei ha-Beinayim* (196), 90–91).

In this manner a zealously pursued desire of the Jewish people coincided with the existence of external historical conditions and factors to enable this people to preserve its religious and national law as a law of life and practice, faithfully served and interpreted by Jewish courts throughout the dispersion. The preservation by the Jews of their national law has been the main factor in the preservation of Jewish national existence. In the words of Y. Kaufmann (*Golah ve-Nekhar*), “It was judicial autonomy which truly made of the Jewish nation in exile ‘a state within a state’” (1 (1929), 518) and “This autonomy derived from the striving of the nation to embody in its life the ideal of the Torah to the utmost limits. It derived especially from the striving to uphold the Jewish legal system, the Law of the Torah, and to base thereon the order of internal life. For this reason the ancient autonomy was fundamentally a judicial autonomy” (*ibid.*, 2 (1930), 312).

THE EVOLUTION OF JEWISH LAW

A material feature of Jewish law is the fact of its ever-continuing evolution. This is the logical and necessary outcome of the

fact of Jewish law's being a living and practical law, since constant evolution is a characteristic feature of every living thing whether it is discernible during the passage from one state to another or only clearly distinguishable in the perspective of history. It will be clear to anyone taking up the *halakhah* that he has before him one large unit in which the earlier and later, the basis and the construction, are all interwoven and arranged according to subject matter with no particular regard shown for historical-epochal distinctions. The halakhic scholars rightly considered that Jewish law was of a nature which required them to unite and integrate the various periods of the *halakhah* into a single, all-embracing epoch of unitary *halakhah*, and not to divide and differentiate between different stages and periods. This is a legitimate and accepted conception in any system of legal thought, especially in a legal system which, by its very nature, deems the existing body of laws to be the starting point for its own renewal and further development. This is also largely true, as regards, for instance, the development of most of English law. However, this conception does not in any way bar the scholar from examining each and every one of the institutions of Jewish law in historical perspective, with a view to determining the different stages of development they may have undergone. Moreover, an examination of such different stages of development and of the legal sources through which these stages were integrated into the fabric of Jewish law will reveal that the halakhic scholars themselves frequently emphasized the changes and development through which one or other institution of Jewish law had passed. This is evidenced in their resort not only to *takkanah* – a means of expressly adding to or changing the existing law – but also to Midrash and the other legal sources of Jewish law (see M. Elon, *Herut ha-Perat* . . . , 12 (introd.), 261–4).

Submission to Jewish law and the Jewish courts brought in its wake an unending creative development of the Jewish legal system. Social realities and economic exigencies change from period to period, and among the special conditions of the Jewish people must be included the social and economic variations that marked the different centers of the dispersion. Even when the Jewish people had possessed a single political center – and later on a spiritual center – there had existed a various and widely scattered Diaspora; however, geographical dispersion really began to impress its mark more critically at the end of the tenth and the beginning of the 11th century when the one center, the Babylonian, which had until then held sway over the entire Diaspora, declined and a number of centers made their appearance side by side and successively in North Africa, in Spain and Germany, in France and Italy, in Turkey, Egypt, and the Balkan countries, in Poland-Lithuania, and elsewhere. It is certainly true that despite the geographical scattering, Jewish scholars everywhere dealt with the same talmudic and rabbinic sources and that very often contact, personal and by correspondence, was also maintained among the different centers. But the variations in the social, commercial, and economic life of the Jews in each center, their communal organization and representative institutions in each locality,

their relationship with the gentile environment and the state authorities – all these from time to time gave rise to problems for some of which the existing Jewish law provided no express solution and for some of which it was necessary to find solutions which differed from those provided by the existing law. At times the influence of local conditions led to the absorption of undesirable legal principles which were contrary to the spirit of Jewish law and did not serve to advance the system of law as a whole. To the extent that such foreign principles deviated from the fundamental doctrines of Jewish law they generally came to be rejected in the course of time (see, e.g., *Imprisonment, *Imprisonment for Debt).

Thus Jewish law continued to evolve as a law of life and practice, giving direction to the daily realities while being itself directed thereby. The phenomenon of a legal system which demands that the determination of its law and its solutions to legal problems be founded on the past while answering the manifold needs of every succeeding generation is found to be true of Jewish law in all periods of its history, both in the time of Jewish political sovereignty and during the long period when this was absent but the Jewish people enjoyed judicial autonomy in Erez Israel, in Babylonia, and in all the other countries of the dispersion. This demand was satisfied through the ever-continuing evolutionary development of the institutions of Jewish law and through preservation of the central concept of each institution which constituted the common factor of all the different stages and changes through which it passed. (For illustrations of such development, see Authority, *Rabbinical; *Capital Punishment; *Contract; **Ha'anakah*; **Hassagat Gevul*; *Imprisonment for Debt; *Lien; *Limitation of Actions; *Obligation, Law of; *Surety; *Taxation. See also *Interpretation; **Ma'aseh*; **Minhag*; **Sevarah*; **Takkanot*; **Takkanot ha-Kahal*; and see M. Elon, *Herut ha-Perat* . . . , 12 (introd.), and 255ff.)

Since the development of Jewish law was the outcome of the practical application of the latter in daily life, it follows that in places where there was diminished submission to Jewish law and its courts system there was a corresponding falling off in the creative development of this legal system, as is evidenced, for instance, in the case of Italian Jewry in certain periods (Resp. Rambam (ed. Leipzig), pt. 1, no. 140, p. 26; *Sefer ha-Zikhronot*, 10:3). This was, however, an uncommon phenomenon until the 18th century and the era of emancipation. Thereafter, with the abrogation of Jewish judicial autonomy, Jewish law was to a far lesser extent a law of practice and this was to lead to a far-reaching diminution in the creativity of Jewish law (see below).

THE EVOLUTION OF JEWISH LAW REFLECTED IN ITS LITERARY SOURCES

Sefer ha-Zikhronot (loc. cit.) emphasizes that recourse to the Jewish courts is of importance not only for the continuance of the creative development of Jewish law itself but also for the enlargement of its literature. A study of the various matters with which halakhic literature has dealt at different times

shows that the part of the *halakhah* which was of practical application came to occupy an increasingly and incomparably larger place than the part that was not of such application.

The Mishnah as compiled by Judah ha-Nasi contains six orders, each of which treats one basic branch of the *halakhah*, and together they embrace the whole halakhic system. In the two Talmuds, the literary creations following immediately upon the Mishnah, the following phenomenon is apparent: the Babylonian Talmud, unlike the Jerusalem Talmud, contains no Talmud on the order of *Zera'im* (apart from the tractate *Berakhot* dealing with prayers and benedictions). There is no doubt that the Babylonian *amoraim*, like those of Erez Israel, studied all the six orders of the Mishnah and their deliberations on *Zera'im* are largely scattered throughout the tractates of the other orders. That no Babylonian Talmud was edited for this order is due to the fact that the rules therein stated – “precepts which are dependent on the land” (these being applicable only in Erez Israel), such as the laws of *shev'it* (the Sabbatical Year) and *pe'ah* (the corner of the field) – were not of practical concern in Babylonia, whereas in Erez Israel itself, where these rules were actually applied, a Talmud on this order was compiled and edited. In the post-talmudic period the overwhelming part of the halakhic literary creativity was also concentrated on the “precepts contemporaneously in use,” that is on the branches of the *halakhah* which were of everyday use and not on the laws connected with the “precepts dependent on the land,” with the Temple, ritual purity, and the like. It is found that sometimes even theoretical study itself was centered around the practical orders – *Mo'ed*, *Nashim*, and *Nezikin* – and those tractates of the other orders containing precepts in contemporaneous use – such as *Berakhot*, *Hullin* (concerning the laws of ritual slaughter and *kashrut*), and *Niddah* (concerning ritual purity of women) – were arranged together with these three orders (see *Beit ha-Be'irah* (ed. Jerusalem, 1965²), Introd. to Ber., p. 32). In geonic times many monographs were written on various halakhic subjects, most of them on strictly legal topics and part on matters of ritual law, the majority of both kinds dealing exclusively with the laws of everyday use. These monographs were primarily compiled for practical use in the *battei din*.

This phenomenon recurs in two branches of the post-talmudic literature – in the responsa and in the codifications – and to a certain extent also in the third branch, the commentaries and novellae. Thus Alfasi included in his code only those laws then operative and not, for instance, the laws of the order of *Kodashim* (except the tractate *Hullin* in which the topics discussed remained of contemporaneous significance). The only one to deviate from this path was Maimonides in his code, *Mishneh Torah*. He sought to restore the *halakhah* to its original dimensions by including in his code even matters of faith and belief, which he formulated in legal style. However, this undertaking was unique and in all subsequent codifications, such as *Piskei Rosh*, *Arba'ah Turim*, and Shulhan Arukh, the example set by Alfasi was followed and only the rules in current application were included. The responsa literature also

deals overwhelmingly with practical questions of the law and not with matters of ritual purity and defilement or sacrifices. This is obviously due to the fact that problems arose, and were referred to the leading halakhic scholars for solution, only in the area of the practical day-to-day application of the law. In the commentaries and novellae alone is there found any more extensive discussion of the “theoretical” branches of the *halakhah*, but even here the greater part is devoted to practical halakhic matters. This is one explanation for the fact that commentaries and novellae to the Jerusalem Talmud were written only from the 16th century onward, following the renewal of the Jewish settlement in Erez Israel in this period. (It is noteworthy that in latter times – before and since the establishment of the State of Israel – there has been greatly increased creativity in the field of the laws pertaining to the order of *Zera'im*, in all three literary branches of the *halakhah*, clearly because these laws have once more come to be of practical significance.) While it is true that at all periods Jewish law was frequently studied in purely theoretical manner, as Torah for its own sake, and an appreciable literature was created to this end, yet such study and literary creativity represent no more than embellishments of the main core, aids to the knowledge of Jewish law for everyday use in practical life.

THE DIFFERENT BRANCHES OF JEWISH LAW

Illustrations of Development and Change in the Different Branches of Jewish Law

In the different periods of its history Jewish law has comprised all the branches of law customary in other legal systems although from time to time changes of a structural nature took place. The institutions of Jewish law in all its different branches underwent, as already mentioned, an ever-continuing process of creative development. In some fields – for instance property, family and inheritance, procedure and evidence – this process was of no material consequence as regards the framework or content of a particular branch of the law, notwithstanding any changes in its principles. In other fields the process had a more material effect as regards the content and classification of an entire branch of the law.

LAWS OF OBLIGATION. A change of this nature took place, for instance, in the field of the laws of obligation. The original Jewish law fundamentally and unequivocally rejected any form of enslavement of the debtor's person as a means towards realizing the creditor's rights (see *Execution, Civic). Consequently there arose the need to find a strong alternative means of ensuring the fulfillment of an obligation in the form of an encumbrance on the debtor's property, which found expression in a right of lien over the debtor's property automatically conferred on the creditor upon creation of the obligation. For this reason an obligation in Jewish law had essentially a real character because the creditor was afforded a right of a real nature in the debtor's property, and in consequence of this many rules belonging to the field of property law came to be applied also to the laws of obligation (see *Lien; *Obligation,

Law of). In the course of time, the nature of the contractual obligation in Jewish law underwent a substantive change, one that found expression in a series of basic innovations introduced and given recognition in successive stages; these included the possibility, contrary to the laws of property, of establishing an obligation with regard to something not yet in existence; the possibility of establishing an obligation whether or not the property in the debtor's possession at such a time was capable of satisfying the debt, and a long series of further developments (see *Contract). Such a substantive change in the subject matter of a legal institution is an important factor in its classification or reclassification as belonging, for instance, to the field of the laws of obligation rather than the laws of property.

ADMINISTRATIVE LAW. A different phenomenon is evidenced in the field of administrative law, for the central subjects of this branch changed almost completely in consequence of the material changes in the nature of public Jewish leadership and administration in different periods. Whereas in ancient times the institutions of public law determined relations between the individual leader – the king (see *King and Kingdom), the *nasi, the exilarch – and the people, new social realities spurred the development of a pervasive system of administrative law based on collective leadership, elected or appointed. The representative and elective institutions of local Jewish government and intercommunal organization were built up on the principles of Jewish law, and the halakhic scholars as well as the communal leaders were called upon to resolve (the latter by way of communal enactments) the numerous problems arising in the field of administrative law. These related, among others, to the determination of relations between the individual and the public authority, between the latter and its servants; to the composition of the communal institutions and the methods of election and appointment to the latter and to other public positions (see *Public Authority); to the modes of legislation of the community and to the legal administration of its institutions (see *Hekdesh; *Takkanot ha-Kahal); to the imposition and collection of taxes (see *Taxation), and to many additional problems concerning economic and fiscal relations in the community. This wide range of problems was dealt with in a very large number of responsa and communal enactments, in the course of which the halakhic scholars and public leaders developed a new and complete system of public law within the framework of the *halakhah*.

CONFLICT OF LAWS. In the field of the conflict of laws development came mainly in consequence of periodic migratory movements and social changes in the life of the Jewish people. The conflict of laws is not usually regarded as a distinct branch of Jewish law, because of the substantive nature of Jewish law as a personal law purporting to apply to each and every Jew wherever he may be – even beyond the territorial limits of Jewish sovereignty or autonomy. From this it naturally follows that in Jewish law no importance attaches to the fact, as such, that a contract between two Jews is scheduled to mature in a

different country than that in which it was concluded – a fact that is normally the staple source of problems arising in the area of the conflict of laws. Nevertheless, the fact that for the greater part of their history, the Jews enjoyed their judicial autonomy under the political sovereignty of the foreign ruler with his own legal system, and especially the fact of the geographical dispersion of the various Jewish centers, inevitably caused the Jewish legal system to be confronted with many fundamental problems relating to the conflict of laws. There developed in Jewish law the phenomenon of a multiplicity of *takkanot* and customs relating to the same legal subject but varying in content from place to place. To some extent this phenomenon was also present in talmudic times, but it assumed significant proportions only from the tenth century onward when there ceased to be a single Jewish center exercising hegemony over the other centers of the Diaspora. The result of the rise of many centers was the proliferation of local *takkanot*, customs, and legal decisions, which brought in train the problem of the choice between different laws – not between Jewish law and any other law, but between the rules deriving from differing customs and *takkanot* within the Jewish legal system itself. Similarly, as a result of the close contact between Jewish law and the various legal systems of the nations amidst whom the Jewish collectivity lived, there evolved the principle of *dina de-malkhuta dina* and, flowing from this, various rules pertaining to the field of the conflict of laws.

CRIMINAL LAW. A different and completely opposite trend is evidenced in the field of criminal law. During those periods when the Jewish people enjoyed full judicial authority, it is possible to point to the existence of important principles and great creativity extending also to the criminal law (see *Penal Law; *Punishment). However, the scope of application of this branch of the law was already substantially narrowed around the time of the Temple destruction, and in consequence it reflects a diminished creative continuity and a smaller framework. It is true, as already mentioned, that in some places Jewish judicial jurisdiction extended even to capital offenses but in most centers the criminal jurisdiction of the Jewish courts was confined to offenses against property, administrative offenses, and the like. On the whole the lack of sovereignty deprived the Jewish people of the media required for the proper implementation of criminal jurisdiction and of suitable conditions for its organic development. All these factors therefore stunted the growth of the functional framework and content of this branch of Jewish law.

Classification of the Different Branches of Jewish Law

Like other legal systems, Jewish law has its own distinctive basic principles pertaining to each of the different branches of the system. Sometimes these principles are unique to Jewish law and characterize its approach to matters such as personal freedom and the rights of the individual, the substance and nature of legal and moral obligations, the concept of ownership of property, the essential nature of judicial jurisdiction, modes of proof, and other fundamental questions. In other

cases the principles of Jewish law correspond to parallel principles in other legal systems. Such differences and similarities are dealt with elsewhere under the heading of the subject to which they pertain.

A full enumeration of the articles on Jewish law appearing in this Encyclopaedia is given below, some articles being repeated since they pertain to more than one branch of law:

THE SOURCES OF LAW. Authority; *Rabbinical; *Codification of Law; *Interpretation; *Ma'aseh; *Minhag; *Mishpat Ivri; *Sevarah; *Takkanot; *Takkanot ha-Kahal.

GENERAL. *Agency, Law of; *Asmakhta; *Conditions; *Hazarah (in part); *Law and Morals; *Legal Person; *Majority Rule; *Legal Maxims; *Mistake; *Noachide Laws; *Ones; *Shetar; *Slavery.

THE LAWS OF PROPERTY. *Acquisition; *Gifts; *Hazakah; *Hefker; *Hekdesh; *Lost Property, Finder of; *Mazranut; *Ona'ah; *Ownership; *Property; *Sale; *Servitude; *Slavery; *Ye'ush.

THE LAWS OF OBLIGATION. *Antichresis; *Assignment; *Contract; *Gifts; *Ha'anakah; *Hassagat Gevul; *Labor Law; *Lease and Hire; *Lien; *Loans; *Maritime Law; *Me'ilah; *Obligation, Law of; *Partnership; *Pledge; *Sale; *Shalish; *Shi'buda de-Rabbi Nathan; *Shomerim; *Surety; *Unjust *Enrichment; *Usury.

THE LAWS OF TORT. *Avot Nezikin; *Damages; *Gerama; *Nuisance; *Theft and Robbery (civil aspects); *Torts.

FAMILY LAW AND INHERITANCE. *Adoption; *Agunah; *Apostate (Family Law); *Apotropos; *Betrothal; *Bigamy; *Child *Marriage; *Civil Marriage; *Concubine; *Divorce; *Dowry; *Embryo; *Firstborn; *Husband and Wife; *Ketubah; *Levirate Marriage and Halizah; *Maintenance; *Mamzer; *Marriage; *Marriage, Prohibited; *Mixed Marriage (Legal Aspects); *Orphan; *Parent and Child (legal aspects); *Rape; *Succession; *Widow; *Wills; *Yuhasin.

CRIMINAL LAW. *Abduction; *Abortion; *Adultery; *Assault; *Blood-Avenger; *Bribery; *Capital Punishment; *City of Refuge; *Compounding Offenses; *Confiscation; *Crucifixion; *Expropriation and Forfeiture; *Contempt of Court; *Divine Punishment; *Extraordinary Remedies; *Fines; *Flogging; *Forgery; *Fraud; *Gambling; *Hafka'at She'arim; *Herem; *Homicide; *Imprisonment; *Incest; *Informer (legal aspects); *Oppression; *Ordeal; *Penal Law; *Perjury; *Police *Offenses; *Punishment; *Rape; *Rebellious *Son; *Sexual Offenses; *Slander; *Sorcery; *Suicide; *Talion; *Theft and Robbery (criminal aspects); *Usury; *Weights and Measures (criminal aspects).

THE LAWS OF PROCEDURE AND EVIDENCE. *Admission; *Arbitration; *Attorney; *Bet Din; *Compromise; *Confession; *Evidence; *Execution (Civil); *Extraordinary Remedies; *Herem; *Imprisonment for Debt; *Limitation of Actions; *Oath; *Pleas; *Practice and Procedure (Civil and Penal Law); *Shetar; *Witness.

MERCANTILE LAW. *Acquisition; *Agency, Law of; *Contract; *Hafka'at She'arim; *Hassagat Gevul; *Imprisonment for Debt; *Labor Law; *Lease and Hire; *Legal Person; *Loans; *Maritime Law; *Minhag; *Obligations, Law of; *Ona'ah; *Partnership; *Sale; *Shalish; *Shetar; *Shomerim; *Takkanot; *Takkanot ha-Kahal; *Taxation; *Usury. (The articles enumerated above are all mentioned under other branches of the law, but are grouped together here because of the commercial elements they contain.)

PUBLIC AND ADMINISTRATIVE LAW. *Confiscation, Expropriation, and Forfeiture; *Dina de-Malkhuta Dina; *Hekdesh; *Public *Authority; *Takkanot ha-Kahal; *Taxation.

CONFLICT OF LAWS. *Conflict of Laws; *Dina de-Malkhuta Dina; *Domicile.

It may be added that classification of the subjects comprising a legal system is a task beset with difficulties, particularly so in the case of the Jewish law, and calls for the exercise of much care. Thus, for instance, certain institutions of Jewish law are classified both under the laws of property and the laws of obligation because of the close connection between these two branches of the law. This is true also as regards the classification of criminal matters, which in Jewish law do not always conform to those customarily classified in other legal systems as part of criminal law. It is questionable whether the classification of subject matter in one legal system is appropriate for another and any automatic application to Jewish law of the classification adopted in another legal system is especially liable to be misleading. To a certain extent the special legal terminology of Jewish law also influences the manner of classification of its subject matter (see for instance the definitions above of the terms *mishpat Ivri*, *issura*, *mamona*, and others). The difficulties entailed in the classification of Jewish law into defined legal branches derive in part from the fact that during the periods when the foundations of the various rules of Jewish law were laid, the system knew only a classification of a most general nature. This is reflected in the Mishnah and in the remaining halakhic literature of the tannaitic period and also in the two Talmuds. A more definitive and detailed classification of Jewish law came only with the compilation of Maimonides' code, the *Mishneh Torah*, and some of the subsequent codes. A classification of the subject matter of Jewish law in keeping with the character and spirit of this legal system is possible only after deep and careful study of its different institutions. For these reasons the above classification is not to be regarded as final and absolute.

PUBLIC JEWISH LEADERSHIP IN THE DEVELOPMENT OF JEWISH LAW

Introduction

The halakhic scholars and the *battei din* filled the central role in the development of the Jewish legal system. In addition, an important creative role was filled by the public leadership and representation of the Jewish people in all the different institutional forms it assumed throughout the history of the Jews:

from the kings, the *nesi'im*, and exilarchs down to the elected or appointed representatives of the community.

The King's Law

The fundamentals of the laws concerning the king and his kingdom are enjoined in the Pentateuch (Deut. 17:14–20, dealing mainly with the duties of the king and his modes of conduct), in the first Book of Samuel (ch. 8, in which the prerogatives of the king and the duties owed him by the people are defined), and in other biblical passages (see for instance 1 Kings 21, concerning the matter of Naboth's vineyard). The scholars also learned about the powers of the king from certain biblical statements concerning leaders of the people other than the kings (see for instance Josh. 1:18 concerning rebellion against the kingdom; cf. Sanh. 49a). The king was vested with wide powers in the legislative (see **Takkanot*), judicial, and executive fields, with authority to deviate in various matters from the rules as laid down in the *halakhah*. His authority was not confined solely to fiscal and economic matters relating directly to the rule of the kingdom, such as taxation and the mobilization of manpower or property, but extended also to the field of criminal law. In the latter field he had authority, for instance, to impose the death sentence on a murderer, despite the existence of formal defects in the evidence against him, when this was required “for the sake of good order in accordance with the needs of the hour” (Yad, Melakhim 3:10; 5:1–3 *ibid.*, Roze'ah 2:4; and Sanhedrin 14:2, 18:6).

The king's law represents the earliest determination in Jewish law of a creative factor not directly attributable to halakhic scholars, and the *halakhah* conferred similar creative authority on the various other post-monarchic institutions of central Jewish government. Thus for instance it was said of the exilarchs who headed the internal Jewish government in the Babylonian exile that “they take the place of the king” (Yad, Sanhedrin 4:13, based on Sanh. 5a and *Rashi* ad loc.) and that the king's law applies “in every generation... in favor of the leaders of each generation” (*Beit ha-Behirah*, Sanh. 52b; see also *Mishpat Kohen*, no. 144). The question of the relationship between the regular law and the king's law is often the subject of discussion in halakhic literature, particularly of the post-talmudic period. R. Nissim b. Reuben **Gerondi* explains the parallel existence of the two systems on the basis that justice administered according to law, while correct and ideal, does not always answer the social and other needs of the hour, and that this function is filled by administration of the king's law; for this reason Scripture enjoins the king to have the Torah with him always, “that his heart be not lifted up above his brethren” (Deut. 17:14–20), because inasmuch as he is not always subject to the law he must at all times, when making use of his powers, take particular care to ensure that he does not deviate from the general object of the Torah and its principles of justice and equity (*Derashot Ran*, Derush no. 11). All subsequent creative authority permitted in Jewish law to deviate, in certain cases, from the rules of the *halakhah* was subject to this above basic requirement (see *Minhag: Tak-*

kanot ha-Kahal). In later periods different scholars found a legal basis for the authority of the king's law in the idea of an agreement between the king and the people in terms of which the latter allows the king his prerogatives in all matters falling within the king's law in return for his undertaking to guard and protect the people (see Z.H. Chajes, *Torat ha-Nevi'im*, ch. 7 “*Melekh Yisrael*”). This idea was apparently the influence of the commonly accepted medieval theory which based the validity of the king's law on a consensus of the people, a theory which different halakhic scholars also adopted as a basis for the doctrine of *dina de-malkhuta dina*.

Local Jewish Government

Creativity in the legislative field of Jewish law is also evidenced at the local governmental level. The halakhic sources relating to the early part of the Second Temple period already mention certain legislative powers entrusted to the townspeople (*Benei ha-Ir*, see Tosef., BM 11:23; BB 8b). From this modest beginning there developed, at a much later stage, a wide legislative creativity at the hands of the autonomous governmental institutions of the Jewish community and intercommunal organizations. This was expressed in the *takkanot ha-kahal*, enacted, particularly from the tenth century onward, in all fields of the civil, criminal, and administrative law. As in the case of the king's law, it was possible for these enactments to be contrary to a particular rule of the *halakhah*, and the scholars determined ways to ensure that such enactments remained an integral part of the overall Jewish legal system. One of their principal means was to check that the enactments did not conflict with the Jewish law principles of justice and equity. Another contribution to Jewish law, not directly attributable to the halakhic scholars, was that which resulted from participation of the public in some of the institutions of Jewish jurisdiction, such as arbitration and the lay tribunals (see above). Although at times these jurisdictional institutions were prejudicial to the orderly evolution of Jewish law, it may nevertheless be accepted that the generally harmonious cooperation that existed between these institutions and the halakhic scholars enabled the public leaders to make a significant contribution toward the forging of a stronger link between Jewish law and the realities and problems of everyday life. This in turn was a spur to the further development of Jewish law.

THE RELATIONSHIP BETWEEN JEWISH LAW AND FOREIGN LAW

Introduction

The question of the relationship between Jewish law and foreign law has two aspects. First, the extent – if any – of reciprocal relations and influence of the one on the other in a manner leading to the integration into the one legal system of legal directives deriving from the other; secondly, the extent of the recognition – if any – given to a directive of a foreign legal system, without such recognition involving any integration of the directive into the host system. These are two separate but related aspects, for recognition by the host system of the

validity of a foreign legal principle entails, in certain cases, some measure of recognition – witting or unwitting – of the correctness of the foreign principle and of the possibility that the contents of the host legal system may be influenced in a manner leading to the integration of a foreign legal principle into its own framework.

Reciprocal Influences

From the 17th century onward a great deal of research in Jewish law has been devoted to the subject of mutual influence between Jewish law and other legal systems (latterly see B. Cohen, bibl., Introd. and ch. 1). More than any other, this field of research has been particularly conducive to the adoption of an apologetic approach – in the form of both an over-emphasis on the influence of foreign law on the Jewish legal system and exaggeration of the influence of Jewish law on other legal systems. Moreover, the influence of one legal system on another is no easy matter to prove because of the possibility that similar circumstances may have led to the evolution of like institutions in different legal systems, uninfluenced by each other. However, in general it may be said that there were reciprocal relations and influences between Jewish law and the surrounding legal systems or that of the nation under whose political sovereignty Jewish law functioned in any particular period of its history. The fact that the Jewish collectivity lived its social and economic life in accordance with its own law, yet all the while was under the patronage of many different nations with their own legal systems, inevitably left the mark of Jewish law on the other legal systems. The reverse process applied equally: the halakhic scholars were familiar with the law applied in the general courts of the land and sometimes even recommended the adoption of a foreign legal practice which commended itself to them (see, e.g., Elon, *Mafte'ah* 425; *Pesakim u-Khetavim*, no. 83; Resp. Israel of Bruna, no. 132). In certain cases the halakhic scholars recognized the particular social efficacy of certain aspects of the foreign law (see **Derashot Ran*, Derush no. 11) and sometimes they were not even deterred from lauding the gentile administration of justice when they found this superior to that of the Jews (*Sefer ha-Hasidim*, no. 1301). To some extent directives of the foreign law were absorbed by Jewish law by means of the legal source of custom (see **Minhag*). When absorption of a foreign principle did take place, such a principle underwent a process of internal “digestion” designed to accommodate it to the general principles and objectives of Jewish law. If in particular social circumstances a foreign principle was occasionally absorbed which conflicted with the fundamental doctrines of Jewish law, such a principle was usually rejected in the end by the Jewish legal system (see, e.g., M. Elon, *Herut ha-Perat...*, pp. 238–54, 259 f.).

Recognition of Foreign Legal Rules

The much-discussed subject of the validity in Jewish law of the provisions of a foreign legal system centers on the doctrine of *dina de-malkhuta dina*, which holds that the law of the land is law and must be followed. The earliest formulation of the doc-

trine was made in the Babylonian Exile by the *amora* Samuel as appears from some of the legal explanations given for its entrenchment. An unqualified recognition of the provisions of the foreign law pertaining to civil matters – *dinei mamonot* (in matters of ritual law the doctrine of *dina de-malkhuta dina* never applied; *Tashbez*, 1:158 and see above) – would have constituted a serious danger to the orderly evolution of the Jewish legal system and may well have rendered it of theoretical interest only. As the main means of averting this danger many halakhic scholars restricted the scope of the above doctrine – contrary to the plain meaning of some talmudic *halakhot* – by holding it applicable solely to certain matters falling within the sphere of relations between the central authorities and the public, such as taxation, expropriation of property for governmental purposes, and the like. Such restriction was expressly justified on the ground that extension of the doctrine to all matters of civil law would lead to “nullification of all the laws of Israel” (*Beit ha-Be'irah*, BK 113b). Even the scholars who in principle extended the doctrine beyond matters concerning relations between the authorities and the public (see Resp. Rashba, vol. 1, no. 895; Nov. Naḥmanides, BB 55a; Nov. Ran and *Nimmukei Yosef ibid.*; *Sefer ha-Terumot* 46:8, 5), did not always carry this out in practice (see Resp. Rashba, vol. 6, no. 254) and some scholars restricted the scope of the doctrine in other ways (see *Teshuvot Hakhmei Provinzayah* (ed. A. Sofer), pp. 426 f.; *Siftei Kohen*, HM 73, n. 39). The *halakhah* was decided according to the view that restricted the application of the doctrine solely to certain matters concerning relations between the authorities and the public (*Rema*, HM 369:11).

The prolific and ever-continuing creativity evidenced in talmudic and post-talmudic Jewish law offers eloquent proof of the fact that the doctrine of *dina de-malkhuta dina* remained only a marginal aspect of the Jewish legal system. Indeed, by their judicious use of the doctrine, the scholars rendered it a contributory factor toward the preservation of Jewish judicial jurisdiction, since qualified recognition of certain matters of foreign law enabled the Jewish collectivity to adapt itself, in the required and necessary manner, to the conditions of the gentile environment. The attitude of Jewish law toward a different legal system is determined, first and foremost, by its basic objective of safeguarding its own continued existence and, flowing therefrom, autonomous Jewish jurisdiction with all that it entails. As long as the realization of this objective is not endangered, no obstacle presents itself in Jewish law to resorting in certain cases, as the need arises, to a rule deriving from foreign law. Even then, however, such recognition is given only to the extent that the rule of the foreign law is not in conflict with any of the fundamental Jewish law principles of justice and equity. For this reason Jewish law attributes no validity to the law of the land with regard to a directive which does not apply equally to all but discriminates between different citizens, since any directive of this nature “is robbery” (Yad, Gezeleh 5:14). Similarly, Jewish law holds the imposition of a monetary fine on the whole public, on account of the transgression of a few individuals, to be “absolute robbery”

because such conduct contravenes the principle which prohibits the imposition of a collective fine and vicarious criminal responsibility (Resp. Ribash Ha-Ḥadashot, no. 9; in support the following references are cited: Gen. 18:25; Num. 15:22; Pes. 113b; see also Deut. 24:15 and II Kings 14:6).

THE ERA OF EMANCIPATION

Inner Spiritual and External Political Changes

On the eve of emancipation and the end of Jewish autonomy, substantial changes began to manifest themselves in Jewish law which were crucial to its development. As already indicated, two basic factors account for the survival of Jewish law as an operative law, even when it was deprived of its single territorial center and political sovereignty: the first the internal discipline of traditional Jewish society which regarded itself enjoined from a national-religious point of view to preserve Jewish law as a living force, and the second the political circumstances of the corporative medieval state. Both these elements now underwent a decisive change. At the same time as the rise of pressures for equality of rights for all, including Jews, the governments of Europe in turn deprived the Jewish community of the mandatory jurisdictional rights of the Jewish courts, even in matters of civil law; the use of the *herem* as well as other means of execution were forbidden. But the main factor for the progressive ending of the living practice of Jewish law was the social-spiritual change that began to assert itself among the Jewish people. The Jewish community, which had hitherto regarded the *halakhah* as the supreme value of its existence, split into a society part of which remained traditional while part no longer regarded itself as bound to the observance of the Torah and its precepts, and this decisively weakened the internal factor of a religious imperative to order daily practical life in accordance with Jewish law. This substantive change in the spiritual outlook of the Jewish world carried with it also a disregard for the national element in Jewish law and not only did the leaders of the community not oppose the abolition of Jewish judicial autonomy but a good number of them welcomed the ending of the “separation” between the Jewish and the general public, regarding it as promising achievement of the hoped-for freedoms and equality of rights as well as organic integration into the vibrant Europe of the emancipation era.

The Abrogation of Jewish Judicial Autonomy

With the beginning of this transformation relating to the continued existence of Jewish judicial autonomy, a number of the leading halakhic scholars gave voice to their concern and warned about the religious and national dangers inherent in yielding up this autonomy. Thus R. Ezekiel Landau railed against the frequent recourse to the gentile courts, a practice so prevalent that “all three pillars of the world are shaken: the Law, Truth, and Peace” (*Derushei ha-Zelah*, 8:14; 22:24). R. Raphael Cohn, spiritual leader of various communities in Poland-Lithuania and Germany in the 18th century, devoted much effort in the latter years of his life toward the

preservation of an autonomous Jewish legal system and all it entailed. Acknowledging the new reality of a laxity in Torah observance by a section of the Jewish public, he emphasized that the neglect of recourse to Jewish judicial jurisdiction was the most serious defect in non-observance of the laws of the Torah, and he particularly criticized those members of the Jewish public who saw the abrogation of such Jewish jurisdiction as a step toward equality of rights and duties (see *Zekher Zaddik*, pp. 7, 8, 20).

These political and spiritual changes, which were increasingly manifest in the course of the 19th century, left their impress upon that part of Jewry that continued to preserve the religious tradition. As regards Western and Central European Jewry, recourse to the general courts rapidly became widespread and common to all Jewish circles. Traditional Jewry of Eastern Europe still preserved for some considerable time its connection with Jewish law and brought its disputes to the rabbi and his *bet din* for *din Torah*. However, the decisions of the rabbinical courts became more and more arbitral awards and compromise settlements, lacking the semblance of judgments under a living and organic law, and in the course of time, here also, resort to the general courts grew increasingly frequent. Even the halakhic scholars reconciled themselves with the new situation of the lack of judicial autonomy and justified it on the principle of *dina de-malkhuta dina* – quite contrary to the attitude taken by the scholars in earlier periods (see, e.g., *Kelei Hemdah*, Mishpatim, no. 1, and see above). The main and greater part of Jewish law in civil and criminal, administrative and public matters, came to be treated as if it were rules “not contemporaneously applied” and now studied merely theoretically. The only sphere of Jewish law that continued to be practiced was a part of family law, the arrangement of marriage and divorce in accordance therewith. In this field, involving the laws of prohibitions and permissions, a powerful internal discipline continued to govern traditional Jewry and to some extent also those who did not observe religious precepts. However, recognition by the central authorities of such marriage and divorce varied from country to country in the Diaspora.

Continuance of Judicial Autonomy in the Eastern Jewish Centers

An interesting phenomenon is the fact that to some extent Jewish law continued to develop as a living law among Oriental Jewish communities in Turkey, North Africa, and elsewhere. This phenomenon is partly explained by the different political circumstances of the Ottoman Empire in the 19th and 20th centuries, but was also an outcome of the determined struggle waged by Oriental Jewish communities, as in Algeria for instance, to retain their judicial independence in the face of efforts by the central authorities to impose on them the general law of the land. A demonstrative expression of this reality is the fact that even in the 19th century the responsa literature of this Jewry continued to occupy itself to a very large extent with matters of the *Hoshen Mishpat* arising from

actual events in everyday life, while the responsa literature of European Jewry of this period is very poor in this respect and even then is more of a theoretical study than a consideration of practical problems.

Consequences of the Abrogation of Judicial Autonomy

The abrogation of Jewish judicial autonomy carried with it two far-reaching consequences with regard to the world of Jewish law. In the first place, Jewish law's dynamism as a living law of practice was greatly inhibited and its organic development suffered a marked curtailment. It was unfortunate for Jewish law that this development occurred in the course of the 19th century, a period which saw a revolution in social, economic, and industrial life that left a decisive imprint on different legal fields. The other consequence was the loss, by the greater part of the 19th-century Diaspora communities, of the former deep national and religious awareness that daily practical life, ordered in accordance with Jewish law, in all fields, became as an integral part of the way of life of the Jewish people. This consequence, as was later to become apparent, carried even more fateful implications for Jewish law than those stemming from the first-mentioned consequence.

THE PERIOD OF JEWISH NATIONAL AWAKENING

Ha-Mishpat ha-Ivri Society and Mishpat ha-Shalom ha-Ivri

The Jewish national awakening and the rise of Zionism also evoked a change in the mental attitude of the Jewish people toward Jewish law. Soon after the *Balfour Declaration the Ha-Mishpat ha-Ivri Society was founded in Moscow. Its members – drawn from all sections of the Jewish public – regarded the return of Jewish society to Jewish law as an aspect of national renaissance parallel to the building of the Jewish homeland and revival of the Hebrew language. Among the goals set by the society was the preparation of suitable literature on Jewish law and the establishment in Jerusalem of an institute – within the framework of a university – for research into that law preparatory to its adoption in the future Jewish state. In the editorial introduction to the first volume of the journal *Ha-Mishpat ha-Ivri* (Moscow, 1918) it is noted that “the ‘legal’ *halakhah* has been integrally bound up with the ‘religious’ *halakhah*... [yet]... over the last decades a process has begun of separating out our law from its religion and ethics, and we intend to continue this process in order to prepare our law for a secular existence.” The pursuit of this object was and still is a controversial one and its desirability as well as manner of achievement remain central problems relating to the integration of Jewish law into the legal system of the State of Israel (see below).

In 1909–10, on the initiative of the head of the Palestine office of the Zionist Organization, Mishpat ha-Shalom ha-Ivri was established in Jaffa as a judicial institution for the adjudication of disputes between Jews in Erez Israel. In the course of time district tribunals were established in a number of places and over them a supreme tribunal. Between the years 1918 and 1936 rules and regulations were issued containing directives as to judicial organs, procedure, evidence, and so on. The

first head of Mishpat ha-Shalom ha-Ivri was Arthur *Ruppin and the writer S.Y. *Agnon served as its first secretary. Mishpat ha-Shalom ha-Ivri functioned as an arbitral body and its work was facilitated by the enactment of the Arbitration Ordinance in 1926, which recognized the submission of disputes not only to individual arbitrators but also to an existing “arbitration tribunal” (see *Arbitration). It worked alongside the official bodies, first of the Ottoman Imperial government and later of the Mandatory power, and alongside the rabbinical courts. Mishpat ha-Shalom ha-Ivri did not, however, achieve its goal. Its main activities were confined to the years 1920–30 and after this date the number of cases brought before it began to wane. All in all it cannot be said to have produced any real harvest of Jewish law in consequence of its deliberations and decisions. Some of the reasons for this were objective, such as the tribunal's lack of powers of compulsion and the fact that it provoked sharp criticism from the rabbinical courts, the leaders of national religious Jewry, and respected scholars such as S. *Assaf who were opposed to the existence of fixed judicial bodies outside the framework of the rabbinical courts and in opposition to them. Mainly, however, its lack of success was due to the fact that not only did it not assume to decide according to the existing *halakhah* as set out in the Shulḥan Arukh *Hoshen Mishpat* and the subsequent halakhic literature, but it possessed no system of norms, either of Jewish law or generally, upon which to act. In fact, proceedings before this tribunal were much like inquiries by laymen based on generally conceived principles of justice and equity, ethics and public good, since the judges were for the larger part persons of general education only, without any legal training or specific knowledge of law (see P. Daikan, *Toledot Mishpat ha-Shalom ha-Ivri*, and bibl. there cited; J. Yonovitz, Introd. to S. Assaf, *Ha-Onshin ...* (1922), 5–6).

Jewish Law in the Rabbinical Courts

At the beginning of the 20th century the rabbinical courts in Erez Israel displayed a total lack of central organization. With the establishment of the Chief Rabbinate in 1921, most of the rabbinical courts came to organize themselves within the framework of this institution. In matters of personal status, the rabbinical courts were assigned exclusive jurisdiction as regards marriage, divorce, and “probate” of wills, and concurrent jurisdiction as regards maintenance, succession, etc. (all other areas of the law remained within the jurisdiction of the general Mandatory courts). The task of this supreme halakhic institution was pictured by its first head, Rabbi *Kook. After outlining the important creative role played by the *battei din* in all periods, through the enactment of *takkanot*, he went on to add that “in our renewed national life in Erez Israel there will certainly sometimes be great need to make important *takkanot* which, as long as they are consented to by the majority of the competent scholars and are then accepted by the community, will carry the force of a law of the Torah” (*Ha-Tor*, 1 (1921), nos. 18, 21–22). To some extent the rabbinical courts were equal to this important task in matters of procedure and

personal status, but in all other areas of Jewish law almost nothing was achieved.

MATTERS OF PROCEDURE AND PERSONAL STATUS. An important *takkanah* enacted immediately in 1921 established the Rabbinical Supreme Court of Appeal, thus introducing a regular appellate tribunal which had not previously existed in Jewish law (see *Practice and Procedure). That this *takkanah* rendered the appellate court an integral part of the Jewish legal system was made clear in a judgment of the Rabbinical High Court of Appeal of Jerusalem which rejected the contention that no right of appeal existed in Jewish law, holding that “the right of appeal has been enacted by a rabbinical *takkanah*, the force of which is as that of a rule of our Holy Torah” (OPD, p. 71).

At first the rules of procedure in the rabbinical court left much to be desired, but improvement followed upon the publication in 1943 of procedural regulations by the Chief Rabbinate Council. These included detailed provisions on the initiation of proceedings, on procedure during the hearing, rules of evidence, modes of appeal, and on other matters. A series of forms were also appended, among them statements of claim, summonses of parties and witnesses, applications for appeal and so on. In part these regulations were based on Jewish law and in part they showed the influence of existing practice in the general legal system. An innovation in Jewish law was the detailed rules laid down concerning the payment of various court fees and the adoption of children. The most radical innovation introduced by the above regulations involved an engagement by the rabbinical courts to distribute the estate of a deceased person in accordance with the provisions of the Succession Ordinance of 1923, which prescribed an order of distribution treating husband and wife and son and daughter in terms of equality. In 1944 a number of *takkanot* were enacted introducing further important changes: the customary minimum sum of the *ketubbah* was increased; the levir refusing to grant the widow of his brother *ḥalīzah* was rendered obliged to maintain her until releasing her (see *Levirate Marriage and *Ḥalīzah*); an important *takkanah* imposed on the father the legal duty to maintain his sons and daughters up to the age of 15 years and not merely until the age of six years in accordance with talmudic law (see *Parent and Child; M. Elon, *Ḥakikah Datit...*, 157ff.).

After 1944, however, creativity by way of *takkanot* ceased almost entirely, except for three additional *takkanot* enacted by the Chief Rabbinate in 1950 (the principal one involving a prohibition on the marriage of children under the age of 16 years; see *Child Marriage). This may be regarded as a matter for great regret since a number of urgent problems in the area of personal status still await solution by way of *takkanah* (such as certain cases of hardship for the **agunah*, problems relating to the joint property of the spouses, and other matters). On the other hand, there has since the 1940s been halakhic creativity in the area of personal status by means of interpretation as applied in actual cases. In this manner, for instance,

there was innovated the substantive principle giving a woman, upon divorce, the right to receive over and above her *ketubbah* a certain additional sum, called “compensation.” The amount thereof varies with the circumstances, one of the important considerations in its determination being the need to award the woman part of the property acquired in the course of the marriage through the joint efforts of the spouses (see M. Elon, *Ḥakikah Datit...*, loc. cit.).

OTHER FIELDS OF THE LAW. In fields of the law other than personal status the rabbinical courts were assigned no jurisdiction under the general law of the land, and the bearers of the *halakhah* initiated no real effort toward adaptation of the Jewish legal system to the contemporary social and economic needs of Erez Israel Jewry. The call to the people to submit their disputes in civil matters to the rabbinical courts by way of arbitration brought a very restricted response, even from the religious section of the community. Hence, except in a few exceptional cases, no evidence is to be found in the judgments of the rabbinical courts of any creative activity in the overwhelming part of the civil law. One notable exception is represented by a leading judgment given in 1946, in a matter concerning the laws of evidence, when a marriage was entered into before two witnesses in the absence of a rabbi. As violators of the Sabbath both witnesses were incompetent (Sh. Ar., ḤM 34:2, 24) and since they were the only witnesses the marriage stood to be regarded invalid according to Jewish law. On the man’s death, this was the contention raised by the remaining heirs of the deceased in opposition to the woman’s claim to the widow’s share in the estate of the deceased. The court, however, recognized the validity of the marriage, holding the witnesses to have been competent: “For reasons of religious transgression... and bearing in mind the fact... that libertarianism has increasingly spread for general and universal reasons, transgressions of this kind are not likely to affect the credibility of witnesses... who act almost unwittingly. The disqualification of transgressors as witnesses arises from the fear that their evidence will be false... and therefore in such cases the credibility of a witness is largely determined by reasons of time and place. If it is clear to the court that the person is not one who is likely to lie for the sake of deriving a benefit, he is to be admitted as a competent witness” (OPD, p. 137). This decision of principle was essential to the proper administration of justice under present day social realities in which a substantial part of the public is not religiously observant, and it is carried out in practice by the rabbinical courts.

Jewish Law and the Hebrew Language

It is appropriate that the quest for the restoration of Jewish law as a law of practice be compared with the struggle for the revival of Hebrew as a spoken language. From one aspect the latter represented the more difficult task. Ever since the beginning of the Diaspora, Hebrew had served almost exclusively as a literary language, not spoken in the common pursuits of everyday life, and as a result of emancipation it came to be fur-

ther and further removed from life – even the spiritual and cultural – of the Jewish people. Many of the faithful followers of the Zionist movement in its early stages entertained doubt about the possibility of using Hebrew in modern conditions: “Who among us knows sufficient Hebrew to ask for a train ticket in this language?” asked Herzl, who contemplated a Jewish state without Hebrew as its commonly spoken language (*The Jewish State*, ch. 5). Yet an inner awareness that the use of Hebrew in the social, economic, and cultural life of the people was a prime requisite without which there could be no complete national revival led eventually to Hebrew becoming not merely a holy tongue, but the national language, written and spoken, of the Jewish people returning to its homeland. As a result of the untiring efforts of individuals and public bodies expressions and terms were coined and style and forms created, largely drawn from the ancient treasure houses of the language, and in this manner there flowered a modern living language based on and preserving continuity with the ancient holy tongue.

In other respects the possibility of restoring Jewish law was more limited than the revival of Hebrew, which is not so dependent on political sovereignty or assistance from the ruling authorities and is more closely connected with individual inclination and the wishes of interested bodies; legal norms encroach more on the realm of philosophy and ideological outlook than do the byways of a language and the task of restoring Jewish law demanded more comprehensive study and preparation than did the revival of Hebrew. Yet it is conceivable that these obstacles to the restoration of Jewish law could have been overcome by a determined effort. To a large extent the political autonomy of the Jews in Erez Israel in the pre-state period was similar to that enjoyed by the Jewish people in the Diaspora until emancipation, an autonomy which also allowed for judicial independence. Moreover, by far the greater part of the subject matter with which Jewish law deals – such as obligations, property, public administration, and so on – is free of fundamental religious or ideological dispute. However, emancipation had produced a weakened religious and national consciousness of the need for daily life to be ordered in accordance with Jewish law, and all sections of the population displayed an irresolute apathy toward the preparation of Jewish law for its historic task. It is true that research was undertaken and books were written by scholars such as A. *Gulak, S. *Assaf, and A. *Freimann, which were of importance for the scientific research of Jewish law. But the required auxiliary literature of the law, written in convenient form with the law phrased and classified in accordance with modern legal concepts and terminology, was not prepared, nor were possible solutions to modern legal problems for which Jewish law has no ready or adequate existing answer, although it allows for one to be found by way of *takkanah* or any other of its recognized creative legal sources.

The Legal System in Erez Israel Preceding the Establishment of the State of Israel

The unique legal system in force in Erez Israel under the British Mandatory regime was a factor which might have served

as a strong stimulus toward the integration of Jewish law into the legal system of the state about to be established. The principles which governed the Mandatory legal system were set out in Article 46 of the Palestine Order in Council of 1922. In accordance with this, on the eve of the establishment of the State of Israel there was crystallized a legal system nourished by a number of legal systems: the *Mejelle*, based on Muslim religious law; various Ottoman laws embracing principles of French law and other legal systems; Mandatory ordinances based on English law; law based on the English common law and doctrines of equity introduced into the Mandatory legal system, in cases where the existing system provided no solutions to concrete problems. In addition, matters of personal status were to a considerable extent dealt with under the religious law of the different communities recognized by the general law. This was a legal system composed of a number of disparate elements and created a situation inviting its own replacement by a homogeneous legal system.

JEWISH LAW IN THE STATE OF ISRAEL

The Official Position Assigned to Jewish Law

On the establishment of the State of Israel, Jewish law continued to occupy the same official position in the legal structure of the state as it had done in the pre-state period. The Law and Administration Ordinance of 1948 prescribed that the law in existence on the eve of establishment of the state should remain in force (sec. 11), with the practical result that officially Jewish law was incorporated in the area of personal status only. At the same time the Hebrew language celebrated its final victory, even in a formal sense, and section 15b of the above ordinance repealed any provision in any law requiring the use of English, thus making Hebrew the language of the state, of its law, and of its everyday life.

MATTERS OF PERSONAL STATUS. The jurisdiction of the rabbinical courts was defined in a Knesset law of 1953 which, save for one or two changes, entailed no substantial departure from the existing situation. It gave the rabbinical courts exclusive jurisdiction in matters of *marriage, *divorce, and *ḥalīzah*; as regards the wife's claim for maintenance, jurisdiction is given to the court to which the wife applies – the rabbinical or the district court. In this and in other laws there were also prescribed the circumstances in which the rabbinical courts have concurrent jurisdiction in other matters of personal status (see *Adoption; *Apotropos; *Maintenance; *Succession).

THE RABBINICAL COURTS. Matters entrusted to the jurisdiction of the rabbinical courts are naturally dealt with in accordance with Jewish law. In the course of their activities these courts have given decisions introducing a number of important innovations in Jewish law, such as a married woman's right to the income deriving from the pursuit of her own profession, and recognition of the existence of mutual pecuniary rights between spouses married abroad in a civil ceremony only, and so on (see M. Elon, *Ḥakikah Datit...*,

166–72). In certain matters the law prescribes that the rabbinical courts too must decide in accordance with the general law. In the Succession Ordinance of 1923 provision was made for the treatment of son and daughter, husband and wife, on terms of equality as regards the division of certain kinds of property on succession, and the Women's Equal Rights Law, 1951, extended the directive to all other property. Some of the other main provisions of this law are the following: men and women are equated as regards all legal acts; the father and mother are given natural guardianship of their children; a married woman is given full capacity of acquisition during marriage and retention of her rights to property acquired by her prior to the marriage. In addition this law allows the litigants, if they are above the age of 18 years, to consent to having their case tried according to the laws of their community. It also states that its provisions shall not affect any halakhic prohibition or permission relating to marriage or divorce. In the main its provisions accord with the position under Jewish law as it has evolved (for instance as regards equal rights on succession), a notable exception relating to the husband's right to the fruits of his wife's *melog* property (see *Husband and Wife). A law of 1955 prescribes the status and manner of appointment of rabbinical court *dayyanim* and, except for two variations, its provisions correspond closely to those laid down in the Judges Law, 1953. (As regards two variations see M. Elon, *Hakikah Datit...*, 47–49.)

THE GENERAL COURTS. In matters of personal status concerning Jewish parties the general courts are also required to decide according to Jewish law, except when a law of the state makes express provision on the matter. As already mentioned, the general courts have jurisdiction in all matters not entrusted to the exclusive jurisdiction of the rabbinical courts. Matters of marriage and divorce may also be pronounced on by the general courts, either when the problem arises incidentally to the matter before the court (for instance in a claim by the wife for maintenance there may arise incidentally thereto the question of the validity of her marriage), or in a matter brought before the Supreme Court sitting as a High Court of Justice. Possibly a rabbinical court and a general court, even though both apply Jewish law, may arrive at entirely different conclusions. Thus, for instance, the general courts first resort to the principles of private international law before applying Jewish law and therefore may recognize a marriage entered into abroad as valid in accordance with the law of the country concerned, even when it is invalid according to Jewish law. In addition the general courts apply only substantive Jewish law and not its laws of evidence and procedure, thus for instance admitting the testimony of the parties themselves and that of their relatives.

LEGISLATIVE PROVISIONS CONTRARY TO JEWISH LAW. Legislation in the area of personal status contrary to Jewish law is reflected in a number of provisions, scattered in various Knesset laws, which confer on the commonly reputed spouse

(“wife” as well as “husband”) numerous rights. These provisions relate to rights of a social-economic nature (pensions, tenants' protection, and so on), rights under the Succession Law, and include also the right conferred on a woman to give her child born of the man reputed to be her husband the latter's family name, even without his consent. These rights were held by the Supreme Court to extend to the commonly reputed spouse even though the latter (or even both parties) be validly married to another (except with regard to the right of succession, which is only available if, upon the death of one of the parties who have lived together as husband and wife in a common household, neither is then married to another). The explanation that the above enactments were made in order to alleviate the hardship which is sometimes suffered by a couple who are unable to marry on account of Jewish law prohibition (for instance in certain cases of the *agunah*) is indeed weighty and hope may be expressed that the Chief Rabbinate will speedily find solutions to these problems. Nevertheless, it does not seem to justify the institution of the reputed spouse with its threat to the orderly existence of the family unit. This institution is the subject of controversy in Israel society and there are recent indications of a tendency by the Supreme Court to limit its scope (see M. Elon, *Hakikah Datit...*, 119–54).

“WHO IS A JEW?” – ANSWERED ACCORDING TO JEWISH LAW. In March 1970 an amendment to the Law of Return of 1950 incorporated into this law a most material principle of Jewish law. This law, which ensures for every Jew the right to come to Israel as an *oleh* and automatic citizenship from the moment of his arrival, was amended to define the term “Jew” as a person born of a Jewish mother or converted to Judaism, who is not a member of a different religious faith. This definition, including the latter part, is entirely in accord with Jewish law. A Jew converted to a different faith remains a Jew as regards his personal status and all this entails – such as the need for him to grant a divorce to his Jewish wife – but he is deprived of various religio-social rights and is not numbered as a member of the Jewish community (i.e., he cannot be counted toward **minyan* and so on); for this reason he is also deprived of the rights of a Jew under the Law of Return. The stated definition applies also for purposes of registering an individual's Jewish nationality (*le'om*) in the population register and related documents, including the identity card (see also *Jew).

LEGISLATION CONFORMING WITH RITUAL LAW. In addition to the already mentioned cases, Israel law is also based on the *halakhah* – in the wide sense of the term – in a number of different matters. Thus in 1948 the Provisional Council of State enacted that the supply of *kasher* food be ensured to all Jewish soldiers of the Israel Defense Forces; a law of 1962 prohibits the raising, keeping, or slaughtering of pigs in Israel except in specified areas (populated mainly by non-Jews) and for certain other limited purposes; the provisions of the Law and Administration Ordinance of 1948 (as amended) lay down

that the Sabbath and the Jewish festivals shall be prescribed days of rest in the state (but do not prohibit labor on such days, such matters being ordered in certain respects in the Hours of Work and Rest Law of 1951) and allows non-Jews the right to observe their own Sabbath and festivals as days of rest.

The “Unofficial” Application of Jewish Law in the State

INDEPENDENCE OF THE ISRAEL LEGAL SYSTEM. As already mentioned, Jewish law is reserved no official place in the Israeli legal system, except in matters of personal status. The proposal (made by P. Daikan on the eve of the state’s establishment and subsequently raised again by others) that Israel law be freed from its dependence on the English common law and principles of equity and that Jewish law be resorted to in any case of lacuna in the law of the state (see above, Art. 46 of the Palestine Order in Council) was not accepted. Until the present time there is to be found in two Laws only, the Succession Law of 1965 and the Land Law of 1969, a provision (entitled “Autarky of this Law”) which excludes the operation of the aforementioned article 46 in all matters with which the relevant law is concerned. None of the other laws so far passed by the Knesset proclaims its own independent operation. To some extent such independence has been established in the case law in consequence of decisions by the Supreme Court to the effect that the post-1948 English case law does not have binding force in Israel law as does that of the pre-1948 period, and even reliance on the pre-1948 English case law is also gradually diminishing.

LEGISLATION BASED ON JEWISH LAW PRINCIPLES. In some measure law in the State of Israel follows the principles of Jewish law even in areas where the latter system has not officially been rendered applicable. In the introduction to a draft bill for one of the early comprehensive laws there were set out the general legislative guidelines adopted for the entire area of the civil law. The legislative policy thus enunciated assigned to Jewish law the status of “the main but not the only or binding source” and enumerated the existing legal and factual position in Israel as well as the laws of other countries as additional sources (Draft Bill for a Succession Law, published by the Ministry of Justice in 1952). To some extent this policy has been adhered to in practice and some of the matters enacted in accordance with the principles of Jewish law are the following: the possibility of separate ownership of dwellings in a cooperative house (see *Ownership); the prohibition of delay in the payment of wages (see *Labor Law); the right of the dismissed employee to severance pay (see **Ha’anakah*); the legal arrangement concerning imprisonment for debt; the laws of bailment (see **Shomerim*), and so on. Particular reliance on Jewish law is to be found in the provisions of various Knesset laws in the area of family law, relating among others to the following matters: the duty of a person to maintain, besides his wife and children, also his other relatives (on the Jewish law principle of obliging a person to uphold the *mitzvah* of *zedakah*; see *Maintenance); in matters of guardianship that the minor’s own good is the primary consideration and

that “the court is the father of all orphans” and a complete departure – expressed in various provisions – from the Roman law concept of *patria potestas* (see *Apotropos); in matters of succession Jewish law is followed in the conferment of equal rights on all children of the deceased whether born in or out of wedlock, in the solution provided to the problem which arises in the case of commorientes (see *Succession), in acceptance of the Jewish law institution of a *shekhiv mera* will (see *Wills), and in the provision made for maintenance out of the estate of the deceased (see *Widow).

LEGISLATION CONTRARY TO JEWISH LAW. In contrast, there are Knesset laws containing provisions which are – without any real justification – contrary to the position taken by Jewish law. Some of the matters so enacted are the following: the right of the creditor to turn directly to the surety even without initial agreement to this effect (see *Surety); the right of a party to plead prescription of a claim along with an admission as to the existence of the debt (see *Limitation of Actions); the automatic administration of an oath to all witnesses whereas Jewish law leaves the matter to the discretion of the court (Resp. Ribash, no. 170; *Tashbez*, 3:15; *Rema*, חמ 28:2; for further illustrations see Elon, in: ILR, 4 (1969), 80–140).

JEWISH LAW IN THE CASE LAW OF THE GENERAL COURTS. The decisions of the courts, particularly of the Supreme Court, represent a further channel through which the influence of Jewish law is brought to bear on the Israel legal system. In numerous decisions of the Supreme Court diverse legal matters have been dealt with by way of a comparison between the position under the general law and Jewish law respectively, the two systems sometimes leading the judges to the same conclusion and sometimes otherwise. In some cases Jewish law has been quoted for the purpose of construing legal terms and definitions and on occasion Jewish law has constituted the primary legal source relied on by the Supreme Court, even in areas in which Jewish law is not expressly rendered applicable. This integration of Jewish law through the case law of the general courts is of great practical significance from the aspect of the confrontation between Jewish law and the legal problems that arose before the courts in the 1950s and 1960s.

JEWISH LAW IN THE CASE LAW OF THE RABBINICAL COURTS. A noteworthy phenomenon is the existence of a proliferous case law of the rabbinical courts, in diverse areas of the civil law, in matters coming before these courts as arbitral bodies. Some 30% of the judgments of these courts published since the middle of the 1960s deal with matters unrelated to personal status and concern, for instance, labor law, contracts, copyright, partnership, pledge, administrative law, and so on. These offer an instructive insight into the manner in which concrete questions of everyday life are dealt with in accordance with Jewish law and represent an important contribution to the solution of modern social and economic problems (see, e.g., *Contract; **Ha’anakah*; *Labor Law; *Public Authority).

Attitudes toward Jewish Law in the Law of the State

Integration of Jewish law into the legal system of Israel is sometimes opposed because it entails a “secularization” of the *halakhah* since the acceptance by the state of a Jewish law principle does not stem from recognition of the binding validity of such a principle from the religious point of view, but is dictated by purely human and national interests. The argument views that by such integration the Knesset’s own binding authority substitutes itself as the source of authority of any Jewish law principle it has adopted, and that neither the Knesset nor the general courts possess the necessary qualifications postulated by the halakhic system for deciding any of its rules. This view is decried by a decisive majority of religious Jewry and its spiritual leaders, who consider that the *halakhah* does not become secularized for the mere reason that the theory of the general law may hold a change to have taken place as regards the basic norm of a particular halakhic rule. It is argued that neither the Knesset nor the courts purport – nor indeed is it possible for them to do so – to decide the *halakhah* within the religious meaning of such activity; that not only is the *halakhah* not prejudiced by its integration into the legal system of the state, but the halakhic system itself commends that the legal order in the Jewish state shall, even if not based on religious faith, correspond with the substance of Jewish law and its principles of justice and equity rather than be founded on other legal systems. For some generations now this middle path has been followed by a decisive majority of religious Jewry, also with regard to other fundamental Jewish values, as with the revived use of the holy tongue in everyday secular life and with the settlement of the holy land even without observance of the religious precepts. The declared attitude of non-observant Jewry also favors the assignment of first priority to the reception of Jewish law principles when these are in keeping with present-day social and economic needs (see, e.g., the statement made in the session of Nov. 29, 1965, by Knesset members belonging to almost all political parties with reference to the Gift Law and Pledge Law Bills (*Divrei ha-Knesset*, v. 44, pp. 24–36)). It should be borne in mind that except in the area of family law the subject matter of Jewish law is generally free of fundamental public dispute of a religious or ideological nature.

The integration of Jewish law into the legal system of Israel is of importance to the former since it has a vital need to contend with the problems of practical everyday life as the only means toward the restoration of its former, almost unbroken, creative and evolutionary function, and this in its natural environment – the Jewish state and its legal system. Such an integration of Jewish law is no less important for the legal system of the state. Israel legislation is of an eclectic nature, the legislator choosing as he sees fit from many different legal systems. There is well-founded apprehension that this must necessarily result in a lack of homogeneity and lead to contradictions in Israel law due to the absence of a common axis around which the entire legal structure may revolve. A legal system so constructed moreover lacks roots and a past. If, as the revival

of Hebrew proved, a people’s language has to lean on history and foundations, then a priori a people’s legal system requires roots and a past on which to draw for sustenance and growth. The absence of these requisites in Israeli law accounts for the large number of Supreme Court decisions evidencing resort to numerous legal systems in a search for solutions to legal problems. The appointed way for the emerging legal system of the Jewish state to take root, to find the common denominator for its laws as well as the homogeneity it requires, is for it to become linked and integrated in the proper way with historical Jewish legal thinking and creativity.

Modes of Integration

Achievement of the desired integration of Jewish law with the Israel legal system demands strict observance of the rule that in all legislative activity preference be given to every principle of Jewish law which is in keeping with the existing social and economic exigencies. It is also necessary to ensure that all principles of Jewish law adopted in the laws of the state shall be construed within the spirit of the Jewish sources of law from which they were derived. Finally, it is necessary to lay down a “Jewish version” of the controversial Article 46, to the effect that the Jewish sources of law shall be resorted to in the event of any lacuna in the existing law. The decisions of the Supreme Court and of the rabbinical courts in matters involving Jewish law – not only in the area of personal status but in all its different fields – and a long series of varied research studies undertaken in recent years, point to the fact that it is within the power of Jewish law to contend successfully with the overall range of new problems that arise. In addition, Jewish law occupies a substantial part of the law faculty study curriculum at different universities in Israel and to the new generation of Israel lawyers and jurists Jewish law is no longer a remote and unfamiliar subject. Accelerated research activity in the different fields of Jewish law and the preparation of an auxiliary literature to facilitate study of and resort to the latter will be invaluable aids to the process of integrating the legal system of the State of Israel and Jewish law.

Legal Creativity

During various periods of its history Jewish law has experienced the reality of jurisdiction and legislation existing alongside the jurisdictional and legislative system of the halakhic authority itself – as illustrated by the king’s law, jurisdiction of the public leadership, lay jurisdiction, and communal enactments. In numerous matters such jurisdiction and legislation of the Jewish leadership diverged from the rules of Jewish law, but the halakhic system evolved a series of rules and principles which ensured that such jurisdiction and legislation of the public leadership became an integral part of the overall system (see above *Takkanot ha-Kahal*). It is true that during all the above-mentioned periods the entire Jewish people looked upon Jewish law as the ultimate and binding value, whereas the same cannot be said of the present-day Jewish public, which, in the existing socio-cultural realities, finds itself divided on matters of religious faith and ideologi-

cal outlook. Yet in this society there have developed certain cultural and social values – such as the restored language and homeland – which exist as the undisputed assets of all. Consequently the hope may be expressed that the acceptance of Jewish law principles into the legal system of Israel in a proper and consistent manner, along with the latter's formation of a tie with Jewish law for purposes of its own supplementation, will ensure that at some time in the future unity and integrity – and thereby continuity as well – will also be restored to this precious cultural and spiritual asset of the Jewish nation, that is, Jewish law.

[Menachem Elon]

Development in the Status of Jewish Law in the Israeli Legal System

Two significant and illuminating developments have occurred over the years in the status of Jewish law in the legal system of the State of Israel, whose common denominator is the entrenchment of the status of Jewish law in the legal system and the obligation to have recourse to and to rely upon it. The first development occurred in 1980, with the enactment of the Foundations of Law Act, 5740 – 1980, and the second with the enactment of the Basic Laws in 5752 – 1992.

THE FOUNDATIONS OF LAW ACT, 5740 – 1980. The Foundations of Law Act, 5740 – 1980, repealed Article 46 of the Palestine Order in Council, 1922–1947, thereby revoking the binding link between Israeli law and English law, and rendering complete the autonomy of the Israeli legal system. Instead of having recourse to English law, the Foundations of Law Act sets forth a different arrangement in cases involving a lacuna in the law, where the court is unable to find an answer to a legal question in the conventional sources of law: “Where the court, faced with a legal question requiring decision, finds no answer to it in statute law or case law or by analogy, it shall decide the issue in the light of the principles of freedom, justice, equity and peace of the Jewish heritage” (sec. 1). This was the first fundamental change wrought in the status of Jewish law in the State of Israel, as for the first time the legislator required the judge, in confronting questions to which no answer was available in the regular sources of law, to have recourse to Jewish law, and left no discretion to the judge in this regard.

Opinions are divided on two main issues regarding this section. First, in what cases must the court, pursuant to the provisions of the law, rule in accordance with “the principles of freedom, justice, equity and peace of the Jewish heritage”? Second, what is the nature and essence of these principles of “the Jewish heritage”?

Thus, in the case of *Hendeles* (CFH 13/80, *Hendeles et al. v. Kupat Am Bank Ltd.*, PD 35(2), 785), the Court discussed the meaning of the phrase “another person's domain” in the Lost Property Law, 5733 – 1973 (see at length *Lost Property). Justice Cohn stated that, when a statute incorporates a given term or phrase borrowed from Jewish law, it is clear that the court must resolve questions that arise in connection with that

term by turning to Jewish law. However, while such a term or phrase is to be construed according to its meaning in Jewish law, this does not dictate the concurrent application of the substantive provisions of Jewish law as they relate to that term. This was true, Justice Cohn argued, before the enactment of the Foundations of Law Act, and remains true after its passage. The law establishes that the need to refer to the sources of the Jewish heritage does not arise at all so long as an answer can be found to any question requiring decision “in statute law or case law or by analogy.” It is permitted to have recourse to Jewish law in such cases, for purposes of comparison or enrichment; however, such recourse remains optional, by way of *obiter dicta*, and not obligatory.

Regarding the interpretation of the phrase “the principles of freedom, justice, equity and peace of the Jewish heritage,” Justice Cohn (see bibliography, H. Cohn, “Residuary Law,” 295 ff.) opined that the legislator specifically chose the specific principles enumerated in the section (i.e., freedom, justice, and equity), which have become a part of the Jewish heritage, while rejecting other principles, which the legislator did not include. Moreover, the term “Jewish heritage” implies all those cultural assets created by the Jewish nation, including not only Jewish law, but also extra-legal sources. Any heritage that may be called Jewish, whether on account of the identity of its author or the nature of the bequest, comes within the rubric of the Jewish heritage, even if it is not part of the Jewish religious heritage.

Justice Menachem Elon thought that, “In the event of a lacuna, the aforesaid principles of Jewish law assume the status of a supplementary legal source of the Israeli legal system, to which the court is duty bound to rely upon as a binding legal source” (p. 793). Where doubt exists as to the *construction* of an existing provision of law, one may turn to other legal systems as a source of inspiration and influence, but not as a binding source. But even in those cases the recourse to Jewish law is primary in importance, and the Foundations of Law Act, which confers a binding status on the principles of the Jewish heritage in the event of a lacuna, strengthens the priority of turning to Jewish law even in cases where a doubt exists as to the *construction* of an existing provision.

As to the definition of a lacuna, Justice Elon held that: “Legal terms and concepts, which originate in ethical systems and cultural values – such as justice, good faith, public policy and the like – and are found in the Israeli legal system, must be construed according to the basic outlook of Jewish law – an outlook rooted in that law's moral and cultural values... It appears to me that the fleshing out of these value-laden terms, which, apart from their nomenclature, do not refer to any specific, substantive content, involves the filling of a lacuna... Therefore, the aforesaid method of interpretation, adopted by these judges, now constitutes the filling of a lacuna and is not only a matter for construction, with everything that implies” (p. 793).

Justice Aharon Barak disagreed with Justice Elon over the question of how to define a lacuna: “Where Israeli leg-

islation has recourse to such fundamental terms as ‘justice,’ ‘good faith,’ ‘public policy’ and other such value-laden concepts, the task of the court is to infuse them with concrete content according to the statutory purpose and with regard to the actual and ideal conditions of life in Israel. Here, the judge is not at all confronted with a ‘lacuna,’ since the legislature has stipulated the applicable norm. I therefore can see no possibility in such a case of applying the provisions of the Foundations of Law Act, which contemplates only the filling of a lacuna” (p. 797). Regarding the use of Jewish law as a source for interpretative inspiration in cases of doubt as to a term’s interpretation, Justice Barak held one cannot say that such inspiration must come primarily from the principles of Jewish law. Rather, he held, a piece of legislation must be interpreted from within the legislation itself, and where it is influenced by a foreign system, we must turn to that system for interpretative inspiration.

Justice Moshe Landau held that, where a lacuna exists, the court must have recourse to the principles of the Jewish heritage contained in the Foundations of Law Act. However, the legislator avoided referring to Jewish law by name and instead selected the concept, thus far undefined in point of law, of “Israel’s heritage.” According to Justice Landau, similar to the opinion of Prof. Barak, the very idea that the interpreter must refer specifically to any particular source for answers in the event of a doubt as to the proper construction of a particular term conflicts with the rules of interpretation. Therefore, in his view, the recourse to Jewish law should be to enrich our legal thinking; however, there can be no obligation to turn primarily to Jewish legal sources in order to interpret a legal term the meaning of which is in doubt.

Justice Menachem Elon criticized Justice Barak’s highly restrictive approach to the function of the Foundations of Law Act, to the extent of almost divesting it of all legal content:

We take it for granted that one of the basic rules of interpretation is that the legislature does not waste words and that some content must be given to the words it chooses to use. This rule has particular force when an entirely novel law is involved, and utmost force when the statute is a basic statute that occupies an important place in the legal system of the State... Even before this law became part of the Israeli legal system, the court was at liberty to engage in the worthy task of turning to Jewish Law for the purpose of “expanding the judge’s horizons and field of vision, so as to produce additional depth of interpretive creativity.” What change has then been generated with the adoption of the statute entitled the Foundations of Law Act? If the response is that Jewish Law will have its day in the event of a lacuna, and if we define lacuna as my distinguished colleague [i.e., Justice Barak] did in the Hendeles case... and if a lacuna does not include what he said it does not include, I would very much like to know when and how it will ever be possible to find a lacuna totally unaddressed in “legislation or judicial precedent or by means of analogy.” Is it indeed possible to construe a statute so that the legislator’s words are devoid of all legal meaning...? How many debates did the Knesset and lawyers generally have, and how many versions did they draft, before the enactment of this basic statute? Was this solely for the purpose of address-

ing the problem of a lacuna which has never yet nor will ever likely occur and which, if and when it does occur, will more than likely encounter the refusal of the majority of the court to acknowledge its existence? I wonder. (FH 40/80 *Koenig v. Cohen*, PD 36(3) 701, 742–743)

In accordance with his interpretation of the Foundations of Law Act, Justice Menachem Elon in many cases turned to Jewish law for the resolution of a variety of legal issues. Thus, for example, Justice Elon had recourse to Jewish law, pursuant to the Foundations of Law Act, for construing provisions of the Succession Law in cases where defects occurred in the writing of a will according to the provisions of that law (FH 40/80 *Koenig v. Cohen*, PD 36(3) 701, 742–743 – see *Will); to address the question of whether a political agreement between factions in the Knesset which was entered into in the aftermath of the composition of a new government had legal validity (HC 1635/90 *Schereschewsky v. Prime Minister*, PD 45(1) 749); in determining that the publication of a person’s identity in connection with the claim that said person is collaborating with the authorities of the State of Israel is not to be regarded as defamation, even though the society in which that person lives disapproves of such collaboration (CA 466/83 *Ajiman v. Dardarian*, PD 39(4) 734; see *Slander); to emphasize the importance of pluralism of views in the world of *halakhah* on an appeal, which was accepted, concerning the decision to reject applications by two party lists from taking part in elections to the Knesset (E1A 2/84 *Neiman v. Chairman of Central Elections Committee*, PD 39(2) 225); and in many other cases. In general, the courts have tended to use the method of analogy whenever a claim can be made that a lacuna exists in a statute – at times relying upon the Foundations of Law Act, which directs the search for a solution by way of an analogy. It should be noted however that this method was not adopted by Israeli law with the passage of the Foundations of Law Act, and was used even before its enactment.

BASIC LAWS: HUMAN DIGNITY AND FREEDOM; FREEDOM OF OCCUPATION. In 1992, a highly significant development took place in the status of Jewish law in the State of Israel, with the enactment of two Basic Laws – “Basic Law: Human Dignity and Freedom” and “Basic Law: Freedom of Occupation.” These laws have constitutional status, and protect a series of fundamental rights. Section 1A of the law states that: “The purpose of this Basic Law: Human Dignity and Freedom is to protect human dignity and freedom, in order to anchor in a Basic Law the values of the State of Israel as a Jewish and democratic state”; similar wording appears in section 2 of the Basic Law: Freedom of Occupation. These sections establish *the obligation* to turn to Jewish law in the framework of “the values of the State of Israel as a Jewish and democratic state” in order to interpret the values protected in the Basic Laws (see *Human Dignity and Freedom; *Rights, Human). This has been the most significant development in recent times in the status of Jewish law in the State of Israel, as until 1992 the obligation to have recourse to Jewish law applied, apart

from matters of a personal status, only in cases of a lacuna, according to the Foundations of Law Act. With the enactment of the Basic Laws, Jewish law acquired constitutional status, with ramifications for the validity and construction of all the laws in the State of Israel. Jewish legal principles have accordingly been implemented on many occasions by the courts in the course of turning to the values of the State of Israel as a Jewish and democratic state. Thus, for example, the courts have ruled, on the basis of Israel's Jewish and democratic status, that there was no room for active euthanasia in the State of Israel (see Justice Menachem Elon's ruling in 506/88 *Shefer v. State of Israel*, PD 48 (1) 87; see entries: *Medicine and Law: Euthanasia; *Values of a Jewish and Democratic State). The court similarly ruled that the Execution Law, 5727 – 1967 must be construed so as to permit a debtor's imprisonment only in cases in which it is clear that the debtor is concealing his assets and refuses to pay (HC 5304/92 *Perach v. Justice Minister*, 47(4) 715, Justice Elon; see *Imprisonment for Debt). It similarly ruled that the severity of an offense of which an accused has been charged is not in itself sufficient to justify his imprisonment until the termination of legal proceedings against him (Cr.A. 2169/92 *Suissa v. State of Israel* PD 46(3) 388, Justice Menachem Elon; see *Detention).

The key phrase – “Jewish and democratic state” has merited a variety of interpretations. According to Justice Elon, the court is required to examine the principles of Jewish law and the principles of democracy, in order to create a synthesis between the two when interpreting the Basic Laws. Where a number of different approaches exist in respect of the “democracy” component, the approach which befits the “Jewish” component should be adopted (see, for example, the case of active euthanasia, which some democracies permit and others outlaw; in such a case, that approach which is compatible with the “Jewish” approach prevails and active euthanasia becomes outlawed (see the *Shefer* case, on pp. 167–168, and *Medicine and Law: Euthanasia)). According to Justice Barak: “The values of the State of Israel as a Jewish state are the same universal values that are common to democratic societies, which emerged from the Jewish tradition and history. These values are accompanied by the same values of the State of Israel and which spring from the democratic nature of the state. The combination and synthesis between the two are what has shaped the values of the State of Israel” (see Bibliography, A. Barak, *Ha-Mahapeikhah ha-Hukatit* . . . , p. 31). It should be noted that Justice Barak has recently attributed more weight to Jewish law in the framework of the relevant sources for interpreting the Basic Laws, and for the construction of legislation in general (see Bibliography, A. Barak, *Shofet be-Hevrah Demokratit*). For a detailed discussion of these Basic Laws, see entries: *Values of a Jewish and Democratic State; *Human Dignity and Freedom; *Rights, Human).

LEGISLATION CONSISTENT WITH JEWISH LAW. Many of the laws enacted in the State of Israel were inspired by the principles of Jewish law. Thus, for example, the Unjust Enrichment

Law, 5739 – 1979, integrated its concepts and principles from Jewish law. The preamble to the law states: “The proposed law adopts the approach of Jewish Law in a number of respects: it entitles a person who improves another person's property to restitution, it adopts the principle that ‘One derives a *benefit* and the *other* sustains no loss as a factor in exempting the beneficiary from restitution’ and it entitles a person who protects another person's property to indemnification for his expenses, with the aim of encouraging acts of rescue” (Draft Bill, 5739, p. 266 – see *Unjust Enrichment).

Another such statute is the Criminal Registry and Rehabilitation of Offenders Act, 5741 – 1981, whose name and provisions are based on the principle of Jewish law that an offender must be assisted to return to the proper and correct path, and not reminded of his previous offenses (see *Punishment).

Yet another law whose name and inspiration emanates from Jewish law is the Good Samaritan Law 5758 – 1998⁵ (whose Hebrew title is taken from the biblical verse Lev 19:16, “You shalt not stand idly by the blood of thy neighbor”), which imposes a duty on any person to assist another person “in whose presence he finds himself, who is, as a result of a sudden incident, in severe and immediate danger to his life, bodily integrity or health, when he has the ability to extend assistance, without endangering himself or the other person” (section 1).

On the issue of the non-extension of the life of a terminally ill patient, the Terminally Ill Persons Act, 5766 – 2005, was enacted, in light of the Supreme Court judgment in the *Shefer* case, which was in turn based upon principles of Jewish law. Section 1(b) of the law expressly determines, similar to the above stated Basic Laws, that: “This Law is based on the values of the State of Israel as a Jewish and democratic state and on fundamental principles in the field of morality, ethics, and religion.” (See *Medicine and Law: Euthanasia.)

The Rules of Evidence Amendment (Cautioning of Witnesses and Annulment of Oath) Law, 5740 – 1980, annulled the previously existing practices, whereby the court used to administer an oath to every witness that appeared before it, adopting instead the approach of Jewish law on this issue. The preamble to the draft bill states:

According to Jewish Law, no person shall take an oath before giving testimony and no witness shall be sworn save in exceptional cases... It is true that we caution the witness to tell the truth... Maimonides, *Yad, Shevuot* 11:16, emphasizes the severity of the oath: “How do we intimidate him who takes the oath? [The judges] tell him: You must be aware that the entire world trembled when the Holy One blessed be He stated at Sinai: ‘You shall not take the name of the Lord your God in vain’ (Exod. 20:7). Moreover, for all [other] transgressions in the Torah retribution is exacted only from the violator, while here [in the case of a false oath, it is exacted] from him and from his family... Moreover, retribution is even exacted from the enemies of the Israel [i.e. a euphemism for the Jewish People as a whole], for all Jews are responsible for one another” (Draft Bill, 5740, p. 328).

According to Section 1 of the law: “Notwithstanding anything provided in any other law, a witness about to testify in

any judicial or quasi judicial proceeding, shall not be sworn.” In place of an oath, the law prescribes the administering of a warning, under which the witness is cautioned to tell the truth only, and is told that if he fails to do so he will be penalized in the manner prescribed by law. According to the law, the court is authorized to administer an oath to a witness if it has reasonable grounds to assume that an oath will assist in discovering the truth; notwithstanding, the witness is entitled to affirm by giving his word of honor in place of an oath – on the grounds of religion and conscience – unless the court is convinced that the witness’s refusal to swear is not in good faith (see, at length, *Oath).

For numerous additional laws which are based on Jewish Law, see bibliography, M. Elon, *Ha-Mishpat ha-Ivri*, p. 1361ff.; idem, *Jewish Law* (1994), p. 1624ff.

JEWISH LAW IN THE CASE LAW OF GENERAL COURTS. The application of the principles of Jewish law to judicial decisions continues in our own time. Jewish law continues to leave its imprint in all areas of case law, as indicated in the above discussion of the Foundations of Law Act and the Basic Laws. For a detailed discussion of the principles of Jewish law in the judicial system in the State of Israel, cf. *Imprisonment. As stated, the integration of Jewish law into the Israeli legal system is of great and undisputed importance both for the benefit of Israeli law and for the benefit of the development of Jewish law itself. The best and most accessible means available to judges, attorneys, and law students is by way of judicial decisions of the various courts. It should be noted that judgments which incorporate Jewish law are now translated into the English language, and this project will contribute to the increasing accessibility of Jewish law in a great many countries. Indeed, in the course of the updates that have been made to this edition of the *Encyclopaedia Judaica*, most of the entries have been enriched by the addition of examples from case law, integrating principles of Jewish law, and these have been incorporated into the new entries. See, for example, *Majority Rule, *Legal Person, *Extradition, *Evidence, *Medicine and Law, *Slander.

Additional changes in the status of Jewish law in the State of Israel, beyond those which appear in the previous edition, shall be detailed below.

INFLUENCE OF ISRAELI LAW ON JEWISH LAW. In the relationship between Jewish law and Israeli law, there is also influence in the opposite direction, i.e., the influence of Israeli law on Jewish law. The Supreme Court first dealt with this matter in the *Wilozni* case (HC 323/81 *Wilozni v. Rabbinical Court of Appeals*, PD 36(2) 733). The petitioner requested the Court to annul the decision of the Rabbinical Court of Appeals, which ruled that the petitioner must leave the apartment in which he continued to reside alone after his wife had left it owing to the husband’s violent behavior, following a judgment for divorce. According to the petitioner, the Rabbinical Court should have ruled that the apartment was regarded as property occupied by the husband, pursuant to the Tenants Protection Law (Con-

solidated Version), 5732 – 1972, and should therefore be sold as occupied property, and not as vacant property, as ruled by the Rabbinical Court of Appeals. The Rabbinical Court had determined that its ruling was consistent with the provisions of the above-mentioned tenant protection legislation, “which is given halakhic validity like any *sitomta* (i.e., customary practice) or *masi’in al kizatan* (i.e., communal enactment).” The Supreme Court (Justice Menachem Elon) relates to this point made by the Rabbinical Court and expands on the subject of the case law of the rabbinical courts and its tendency to adopt principles of law from the general legal system in many cases, and the various methods used for adopting such principles. The first method is based on the principle that “the law of the state is the law” (see: *Dina de-Malkhuta Dina), according to which the rabbinical courts have given effect to different kinds of legal transactions even where these would not be valid under Jewish law. When the principle of “*dina de-malkhuta dina*” is applied, a rule of the general legal system is given *binding force*, although the latter does not become part of Jewish law. Rules of other legal systems are incorporated into the Jewish legal system “by means of the legal source of custom; when the public acts in accordance with some legal norm, that norm is in certain circumstances recognized as part of the Jewish legal system, and it may be valid even if it is contrary to a particular regulation of Jewish civil law” (p. 741; see *Minhag). The second means for the absorption of the general law into Jewish law is by way of *takkanot ha-kahal* (communal enactments), according to which the community legislates, via its representatives, various enactments which become a part of Jewish law. The Talmud refers to this as “*masi’in al kizatan*” (i.e. communal enactment, lit: “the townspeople may impose penalties for breach of their enactments”; see: *Takkanot ha-Kahal). Justice Elon stresses that “there is a special, fundamental character to the relationship between the Jewish legal system and the general legal system of Israel, in accordance with the principle of *masi’in al kizatan*. Under this principle, various laws in the area of civil, criminal, and public law of the general legal system may actually become part and parcel of the Jewish legal system – in the broad sense of this concept – and not merely recognized by it, as was the case under the principle of *dina de-malkhuta dina*, nor simply absorbed by it, as was the case with custom” (p. 742). Justice Elon notes the uniqueness of this judgment, which ruled that the provisions of civil legislation (i.e., the Tenants Protection Law) are recognized *as part of the case law of the rabbinical courts*, not only by virtue of custom, but also under the rule of *masi’in al kizatan*. The implication, in this context, is that the Members of Knesset, elected by the public, who enact Knesset legislation, are capable of promulgating regulations for the benefit of the public, and that these regulations become part of Jewish law, and were even created as part of the Jewish legal system, “in the broad sense of this concept.”

In addition to the aforementioned example from section 33 of the Tenants Protection Law, other laws as well have had an impact on Jewish law. Thus, for example, the arrange-

ment in respect of cooperative houses appearing in the Land Law, 5729 – 1969, was recognized by the rabbinical courts. This, notwithstanding that this arrangement regulates the interrelationships between all the apartment owners, a subject already governed by detailed regulations in Jewish law which differ from those prescribed by the relevant sections in the Tenants Protection Law, which came to resolve a public problem of poor housing and does not contradict specific arrangements prescribed in this regard in Jewish law.

A further example is the recognition of the validity of the arrangement for the transfer of rights in land. According to section 7 of the Land Law, 5729 – 1969, *in rem* rights in immovable property are only transferred via registration in the Land Registry. By contrast, according to Jewish law such rights pass at the time of payment, and in a locale where it is conventional for property transactions to be executed solely via a written document, the rights pass under the terms of the deed. Notwithstanding this difference between Jewish law and Israeli law, many authorities have ruled, on the basis of the principle of “*dina de-malkhuta dina*” and “*minhag ha-medinah*” (custom of the state), that proprietary rights – *in rem* rights in land – pass, in general, upon their registration in the Land Registry, as prescribed by Israeli law. (On the differences between the halakhic authorities in this regard, see further the article of D. Frimer, bibliography, ad. loc.)

THE RABBINICAL COURTS. As stated earlier, the rabbinical courts must rule in accordance with Jewish law, and pursuant to the general provisions of the general law which expressly apply to them. According to Justice Aharon Barak in the *Bavli* case (HC 1000/92 *Bavli v. Rabbinical Court of Appeals*, PD 48(2) 221; see also HC 3914/92 *Lev v. Tel Aviv/Jaffa Regional Rabbinical Court*, PD 48(2) 491, Justice Aharon Barak), the rabbinical courts are also obligated to rule in accordance with the general law, as interpreted in the rulings of the Supreme Court, on all matters which are not related to personal status, in the narrow sense of this term. Pursuant to this principle, Justice Barak determined that the rabbinical courts are obligated to apply the “presumption of joint property,” as developed by rulings of the Supreme Court, in respect of matrimonial property (see *Matrimonial Property). This approach was criticized by Justice Menachem Elon and by additional scholars, who held that no change should be made from the original law, which was that the rabbinical courts are obligated to rule in accordance with the Jewish law and in accordance with the principles of the general law that are expressly applied to them by the legislator. Elon held that the rabbinical courts must rule according to Jewish law, just as rabbinical courts have ruled in accordance with Jewish law throughout the generations. Intervention in the principle of adjudication in accordance with Jewish law is a power reserved for the legislator, after having obtained the consent of the representatives of the Jewish people, as occurred, for example, with the Women’s Equal Rights Law and the Rabbinical Courts (Jurisdiction) Law. Generally, the rabbinical court is not called upon to rule according to the

general law, nor is it able to do so, because its judges lack the requisite expertise. Justice Elon held that the Supreme Court’s intervention in the rulings of the rabbinical courts stymies the development of Jewish law, as developed by the rabbinical courts throughout the generations, because according to this precedent the need to turn to the rabbinical courts is limited only to matters of personal status, and does not enable Jewish law to develop in other branches of law. In addition, Justice Elon held that this ruling creates needless tension between the civil courts and the rabbinical courts, who will find it difficult, and rightfully so, to accept such a broad encroachment upon their authority and freedom of action.

Regarding the presumption of joint property, Justice Elon opined that the rabbinical courts were under a duty to adopt this presumption as part of Jewish law, whether by way of regulation (see **Takkanot*) or whether by other means conventionally used in Jewish law, but not in accordance with the binding precedent of the Supreme Court (see Bibliography, M. Elon, “These Are Obiter Dicta...”). Opinions are divided among the judges of the rabbinical court as to the possibility of adopting the presumption of joint property as part of Jewish law (see **Dina de-Malkhuta Dina*). With regard to a husband’s right to enjoy the proceeds of his wife’s usufruct property, the law has now been amended, entitling the court to take account of the wife’s income from usufruct property, when determining the amount of maintenance which the husband owes to her (see **Husband and Wife*).

MI-SINAI NIGGUNIM (Heb.-Yid. נְגוּנֵי מִסִּינַי, “Melodies from Mt. Sinai”), Hebrew term for a traditional group of cantorial melodies sung in the Ashkenazi synagogues of both East and West European rite and regarded as obligatory, and for which no other melody may be substituted. Located at those points in the service where the liturgical and emotional elements join in equal force, the *Mi-Sinai* tunes may be called the heart of Ashkenazi synagogue song.

Mi-Sinai is an abbreviated form of *Halakhah le-Moshe mi-Sinai, referring to an ordinance going back to Moses, who received it on Mt. Sinai. The term was connected with biblical chant in the 12th century (*Sefer Hasidim*, ed. Wistinezki-Freimann §³); its present application is due to A.Z. *Idelsohn. In cantorial circles, the *Mi-Sinai* melodies are called “*Tunes of our Rabbi Maharil*” (erroneously, also Maharal), or, in Eastern Europe, *skarbowe niggunim* (Polish: “official” tunes).

The family of *Mi-Sinai* tunes includes about ten solemn compositions that are associated mainly with prayers of the Penitential Days (see ex. 1–7). The exact scope cannot be determined precisely, since the tradition is not unanimous and was never codified authoritatively. The distinctive features of

the melodies are as follows: they must belong to the common patrimony of the Eastern and Western Ashkenazi rites; must invariably be found in their proper liturgical place; and must exhibit a special musical structure (see below). Accordingly, ancient psalmodes such as **Akdmut Millin*, or the many melodies designated as “ancient” by the 19th century compilers, and well-known hymn melodies (e.g., *Eli Ziyyon) do not belong to this category. A close examination reveals that they do not entirely comply with the conditions, and no *hazzan* would count them among the *Mi-Sinai* tunes. However, there still remain some border cases which are classified differently by different writers.

The usual concept of “melody” as an indivisible unit is not applicable to the *Mi-Sinai niggunim*. They are real compositions built of several sections (“movements”) of individual character. These are often fitted to the divisions of the text (e.g., the *Kaddish), but may also be constructed on an independent plan (e.g., the *Kol Nidrei tune). In general, the first section is individual and characteristic of the specific tune; the following ones may include motives or entire themes of other *niggunim*, thereby creating a “family likeness” among the members of this group. Every section contains one or more “themes,” which are composed of short motives (see music examples of **Aleinu*; **Avodah*). The order of these themes is usually constant, distinguishing this music clearly from the *nusaḥ style. An important feature is the plasticity of themes and motives, which allows for their easy adaptation to a wide range of texts. Still more characteristic is the liberty granted to the performer to shape the music by himself; tradition prescribes only the approximate layout and motivic profile – an “idea” which the singer must realize in sounds. This challenge to creative improvisation recalls principles governing Oriental music and exceeds by far the freedom of embellishment in older European art. Therefore one should not expect to discover the archetype of any *Mi-Sinai* tune, for there exist only numerous “realizations” of a certain mental image (cf. *Maqām). Other Oriental features are the free rhythm, which cannot be fitted to regular bars without distortion, and the rich and fluent coloratura adorning it. Tonality is modal (today with a bias to major and minor); *Shtayger scales occur,

Mi-Sinai tunes: inventory of initial motives. No. 2, cf. *Amidah; earliest notation, 1783 (Aaron Beer). No. 3, for full version see *Music, example 30; earliest evidence, c. 1800 (Jacob Goldstein). No. 4, cf. *Aleinu le-Shabbat; earliest evidence, 1765 (A. Beer). No. 5, earliest notation, 1765 (A. Beer). No. 6, cf. *Avodah; earliest notation, 1791 (A. Beer). No. 7, earliest notation, 1744 (Judah Elias of Hanover). No. 8, earliest evidence, 1782 (A. Beer). Nos. 1 and 9, conventional form notated by H. Avenary.

but are not maintained rigorously (ex. 1, no. 3; see full version in *Music, ex. 30).

In East Ashkenazi tradition, the bond between music and text has been loosened: entire sections may be sung without words. Certain themes, still found in the earlier Western notated documents, have become lost, and others changed their places in the established order. As a result those themes or sections which were preserved came to be repeated in order to provide for the full text. This regressive evolution in the East was apparently caused by the early displacement of these communities from the birthplace and centers of *Mi-Sinai* song. The Western *hazzanim*, on the other hand, developed extensive and elaborate compositions from the original tunes. Such "Fantasias" were in fashion from about 1750 to 1850.

That the musical ideas and outlines of the *Mi-Sinai niggunim* originated in the Middle Ages can be concluded from musical evidence, a few references in literature, and, above all, the fact that they are found in two Ashkenazi rites, which separated early in their history. It may be supposed that the sufferings during Crusader times made Ashkenazi Jewry ripe for expressing in music the deep feelings that emanate from these melodies. Their character and profound musicality also attracted gentile composers, such as Max Bruch (*Kol Nidrei*, op. 47) and Maurice Ravel (*Kaddish*, 1914); their confrontation with the idioms of contemporary music is demonstrated in A. *Schoenberg's *Kol Nidrei* (1938).

MISKOLC, town in N.E. Hungary. Jews attended the Miskolc fairs at the beginning of the 18th century, and the first Jewish settlers earned their livelihood from the sale of alcoholic beverages. In 1717 the municipal council sought to expel them but reconsidered its attitude in 1728 and granted them the right to sell at the market. The number of Jews gradually increased, supplanting the Greek merchants from Macedonia. In 1765 several Jews owned houses. They enjoyed judicial independence and were authorized to impose fines and corporal punishment. Early in the 19th century there were two rabbis in the community. Many Jews acquired houses and land, but the majority engaged in commerce and crafts. When the local guild excluded Jews from membership in the unions, the Jews organized their own guild. The cemetery, dating from 1759, was still in use in 1970. The first synagogue was erected in 1765. The Great Synagogue was built in 1861; it was here that a choir, which aroused violent reactions on the part of the Orthodox, appeared for the first time. In 1870 the community joined the Neologians (see *Neology), but in 1875 a single Orthodox community was formed.

The educational institutions were among the most developed and ramified throughout the country. There were three yeshivot, an elementary school, two sub-secondary schools, and the only seminary for female teachers in Hungary. The Hasidim established a separate elementary school. In the

course of time the percentage of Jews of the general population became the highest in Hungary (around 20%), numbering 1,096 in 1840, 3,412 in 1857; 4,117 in 1880, 10,029 in 1910, and 11,300 in 1920.

Holocaust Period and After

In 1941, when there were 10,428 Jews in the town, 500 were deported to the German-occupied part of Poland for alleged irregularities in their nationality, and were murdered in *Kamenets-Podolski. Large numbers of youths, as well as elderly people, were conscripted into labor battalions and taken to the Ukrainian front, where most of them were exterminated. After the German occupation of Hungary (March 19, 1944) the Jews of the town, about 10,000 in number, were deported to *Auschwitz; only 400 of them survived.

After the liberation Miskolc became an important transit center for those who returned from the concentration camps. The elementary school was reopened and existed until the nationalization of elementary schools (1948). The reconstituted community had 2,353 members in 1946 but dropped to around 300 in the 1970s as most left for Israel.

MISREPHOTH-MAIM (Heb. מִשְׁרֵפּוֹת מַיִם), one of the farthest limits of the flight of the Canaanites after defeat by the waters of Merom (Josh. 11:8) and a boundary of the Sidonians (Josh. 13:6). Some scholars suggest reading Misrefot mi-Yam ("at the sea," i.e., on the west). It may be mentioned in the Egyptian Execration texts, dating to approximately 1800 B.C.E., as *'isrṗ'i*, which appears beside Achsaph. Abel and others identified it with Khirbat al-Mushayrifa, near Rosh ha-Nikrah. This site was partly excavated in 1951 by Miriam Tadmor and M. Prausnitz, and remains dating to the early Bronze Age, including a wall of early Bronze II–III, and to middle Bronze Age I, were uncovered. However, the site did not yield remains of the late Bronze Age, which corresponds to the time of the biblical descriptions. Recently, Aharoni suggested that it is not the name of a city, but a definition of the border of Sidon, which may be identified with the outlet of the Litani River.

[Michael Avi-Yonah]

MISSISSIPPI, southern state of the U.S. The 2001 Jewish population of Mississippi was 1,500 out of a total of 2,849,000, and has been in decline for several decades. Jews settled along the Gulf of Mexico from earliest times; they came via Mobile, Alabama, and New Orleans, Louisiana. There are extant records of their early presence in what is now Biloxi, on the Gulf Coast, and Natchez, on the Mississippi River. By the 1830s these com-

Jewish communities in Mississippi and dates of establishment. Population figures for 2001.

munities had Jewish cemeteries. High cotton prices, cheap land, and steamboat traffic stimulated population expansion, bringing a considerable number of Jews from Germany and Alsace who made a living as peddlers and small storekeepers. The first congregations formed in the state were in Natchez and Vicksburg in the early 1840s, both trading towns on the Mississippi River. Although their total number at the beginning of the Civil War (1861) is unknown, between 200 and 300 served in the Confederate armies. The later Eastern European Jewish migration increased the settlement in the state, particularly in the cotton-growing region of the Delta, where Jewish merchants settled in small towns throughout the region. In 1937, Jews lived in 46 different communities in the Mississippi Delta alone. In many of these towns, Jewish-owned stores dominated main street. The state's reforestation program and aggressive industrialization have brought in branch operations from the North, particularly in clothing and wood products. Many have absentee Jewish ownership. Since the mid-1950s there has been a steady decline in the Jewish population. The turmoil over civil rights slowed the pace of newcomers, while much of the state's Jewish youth left for higher education and did not return. The high-tech Sunbelt boom that has attracted many Jews to the South has largely passed over Mississippi. Chain store expansion into the state has led to the disappearance of family-owned enterprises and a consequent loss in Jewish numbers. The exception is Jackson, the capital city, which has become a regional center for education, law, and medicine providing employment for Jewish professionals.

Mississippi Jewish communities are synagogue oriented. Most of the Jews in isolated communities maintain membership in the nearest congregation. In 1936 the state's synagogues reported a total membership of 2,897, with six resident rabbis.

In 1970 there were eight rabbis and 20 synagogue structures, several of the latter used infrequently or not at all. In 2005, there were 13 congregations, though most were small and in decline; only two, Jackson's Beth Israel and Hattiesburg's B'nai Israel, had a full-time rabbi. Despite this, the majority continued to hold regular Shabbat services with lay leaders, rabbinic students, or visiting retired rabbis. Reform congregations in the state include: Adath Israel in Cleveland; B'nai Israel, Natchez; Beth Israel, Jackson; Hebrew Union Congregation, Greenville; Beth Israel, Meridian; Anshe Chesed, Vicksburg; B'nai Israel, Columbus; B'nai Israel, Hattiesburg; and Beth El, Lexington. Unaffiliated congregations include B'nai Israel in Tupelo and Beth Shalom in Oxford. Congregation Beth Israel in Biloxi is Conservative while Ahavath Rayim in Greenwood is nominally Orthodox. The Mississippi Assembly of Jewish Congregations, founded in 1955 by the Jackson rabbi, dissolved about ten years later. Fewer than five Jews have been members of the state legislature in the 20th century, and no Jew has achieved statewide prominence in politics. Jews have had a greater impact on local politics, with 21 Jews serving as mayor of 16 different towns, including "Mayor for Life" William Sklar, who served as mayor of Louise for 25 years, and Sam Rosenthal, mayor of Rolling Fork for 40 years. Jews have held presidential offices in statewide business, professional, and welfare organizations. During the Civil Rights era, two of the state's rabbis, Charles Mantinband and Perry E. Nussbaum, achieved various degrees of prominence for their efforts on behalf of racial equality. They pioneered in the development of local and statewide organizations that sought a peaceful resolution to the civil rights struggle. Mantinband occupied Hattiesburg's B'nai Israel pulpit from 1952 to 1963, when he moved to Longview, Texas. Nussbaum served in Jackson from 1954 to 1973. He took on the unofficial role of "prison chaplain" to the "Freedom Riders" of all creeds and races by traveling to Parchman State Penitentiary each week and writing numerous letters to Northern Jewish parents letting them know that their children were okay. Nussbaum was also among the founders of the state's Committee of Concern, which raised funds to rebuild burned black churches. His newly dedicated fourth synagogue edifice was dynamited by members of the Ku Klux Klan in September 1967. Two months later his home was severely damaged by a similar device. The same group dynamited Meridian's new synagogue in May of 1968. Jews in Jackson and Meridian raised money to pay an FBI informant, who revealed a plot to bomb the home of Meyer Davidson, a prominent Jewish community leader in Meridian. After a police stakeout of Davidson's home, one of the assailants was killed while the other was captured. These bombings produced expressions of outrage from state officials and an outpouring of support for the Jewish communities of Jackson and Meridian. These attacks were a turning point of sorts as many whites came to realize that the violent tactics of "massive resistance" had gone too far. It was time for Mississippi to change, and Jews have been in the forefront in building a new integrated society.

Although they have always been a tiny minority of the state's population, Mississippi Jews have worked hard to preserve and pass on their traditions. In 1970, after years of effort, Jewish leaders of the region opened the Henry S. Jacobs Camp for Living Judaism in Utica. In 1986, camp director Macy B. Hart created the Museum of the Southern Jewish Experience, which now has branches in Utica and Natchez. In 2000, the museum became the Goldring/Woldenberg Institute of Southern Jewish Life, based in Jackson, which works to preserve and document the practice, culture, and legacy of Judaism in the South.

In August 2005 Hurricane Katrina badly damaged the Congregation Beth Israel Synagogue, two blocks from the Mississippi Gulf Coast in Biloxi. Other synagogues in Mississippi were also damaged.

[Perry E. Nussbaum / Stuart Rockoff (2nd ed.)]

MISSOURI, state located in the central part of the United States. The Jewish population of Missouri in 2001 was 62,500, out of a general population of 5,603,000 with almost all Jews living in the *St. Louis (54,000) and *Kansas City (7,100 on the Missouri side) metropolitan areas. About 1,600 Jews live in at least 27 smaller towns, in eight of which there are congregations. There are communities in Columbia (400), Joplin (100), St. Joseph (265), and Springfield (300), and 12 synagogues in parts of the state other than the two major centers.

Jews were legally admitted into the area of Missouri with the Louisiana Purchase in 1803. The first known Jewish Missourian was Ezekiel Block, a slave owner who was part of a traditionally oriented family which gradually left Schwihau, Bohemia, between 1796 and 1850. At least 23 family members settled in Troy, Perryville, and mainly Cape Girardeau, Louisiana, and St. Louis. They engaged primarily in merchandising, but one also became a lawyer and another became a mill owner and an insurance company resident. Most eventually married Christians. However, one married into the Philipson family of St. Louis, the first Jewish family in that town.

By 1837 St. Louis had a *minyan* and, although the city had less than 100 Jews, a cemetery was founded in 1840 and a congregation in 1841. By mid-century the Jewish population in St. Louis increased to between 600 and 700 due to the German immigration of 1848–53, which also led to a Jewish influx into St. Joseph and Kansas City where congregations were established in 1860 and 1870 respectively. Congregations were established in the mid-1880s in the state capital, Jefferson City, and by 1905 in both Springfield (south-central) and Joplin (southwest). By 1950 regular services were being held at University of Missouri Hillel in Columbia, Fort Leonard

Jewish communities in Missouri and dates of establishment. Population figures for 2001.

Wood, and in Cape Girardeau (southeast). In 1948 Eddie Jacobson, a once failed Missouri Jewish merchant, played a role – whose importance is a matter of dispute – when he approached his former partner Harry S Truman and pressed for the recognition of the State of Israel. By the early 1960s the Jews of Sedalia (west-central) had organized their own congregation. Two of the most popular organizations in outstate Missouri are B'nai B'rith and Anti-Defamation League. Washington University had a fine Judaic studies program. Steven Schwarczchild taught there for a generation and Hillel Kieval was the Gloria M. Goldstein Professor of Jewish Thought. The University of Missouri had an active Hillel program. The *St. Louis Jewish Light* was the Jewish publication for the St. Louis area. Kansas City, Missouri, was covered by the *Kansas City Jewish Chronicle*, which was based in Kansas.

[Donald J. Makovsky]

MISTAKE. A legal transaction requires that the “making up of the mind” (or the conclusive intention of the parties to close the bargain – *gemirat ha-da'at*) be demonstrated (see *Acquisition, Modes of). When it is apparent that one of the parties lacked such conclusive intention, the transaction may be voided, but only at the instance of that party. One of the factors showing that the required conclusive intention was

missing is mistake, whether caused by the mistaken party himself or by the other party, whether willfully or unintentionally or whether relating to the subject matter of the transaction, its price, or any other aspect of the transaction. In all these cases the mistaken party is allowed to withdraw from the transaction, provided that the mistake is outwardly and objectively revealed, and not of a subjective nature only, even if it can be proved.

The contracts of *sale and *marriage exemplify the rules of mistake in Jewish law. An error as to price is generally termed *ona'ah* (overreaching), but when relating to the subject matter or any other aspect of the transaction it is termed *mikkah ta'ut* (mistake). If the mistake is common to both parties the contract is voidable at the instance of either of them, otherwise it is voidable only at the instance of the mistaken party (Maim., Yad, Mekhirah 17:1–2). If however the latter consented to the transaction as actually carried out, such consent being demonstrated by him either explicitly or by his subsequent use of the subject matter of the transaction with knowledge of the mistake (*ibid.* 15:3), he may not withdraw from the transaction, even though it does not accord with his original intention. Since the test for mistake is an objective one, the transaction will be voidable only if the majority of those of a particular place and time would consider it material, so that one would generally be expected to refuse to accept the property sold if the true position were made known (*ibid.* 15:5). Thus, if bad wheat is sold as good, i.e., a mistake as to quality, the purchaser may withdraw. Similarly the seller may withdraw if he purported to sell bad wheat, which is in fact found to be good. If the mistake concerns the nature of the object sold, e.g., when a person sells dark-colored wheat which is found to be white, or olive wood that turns out to be sycamore, both parties may withdraw since this is not what was agreed upon (*ibid.* 17:1–2). Similarly the discovery of a defect in the property sold entitles the purchaser to void the transaction, provided that he has not waived such right by his interim use of the property (*ibid.* 15:3). The purchaser retains the right even if the seller mentioned the defect at the time the transaction was negotiated, but did so in a manner that would not normally be taken as revealing the true existence of the defect. An example of this kind of mistake would be if the seller declares, “this cow is blind, lame, given to biting, and to lying down under a load,” and it is found to have one or other of these latter two defects but is neither blind nor lame, since the purchaser naturally assumed that the latter defects were as nonexistent as the two former ones (*ibid.* 15:7–8).

[Shalom Albeck]

Unexpressed Intentions

The Talmud determines that for non-conformity with the parties' intentions to be regarded as a mistake, there must be an expression and disclosure of the intention; it is not sufficient for the error to arise as a result of unspoken intentions. The rule formulated by the *amoraim* was that: “*devarim she-ba-lev einam devarim*” (lit: “words of the heart” [unexpressed words],

are not words” (Kid. 49b). The rationale for this rule is that when the mistake is the consequence of the person's misleading himself, by keeping his thoughts to himself and not sharing them with the other party, the misunderstanding is not considered a mistake (*Tosafot Rif ha-Zaken*, ad loc.). However, there is a category of facts that need not be expressed, where one can presume that the parties understood each other (*umdana mukhahat* = presumption of common sense; see: *Evidence; *Hazakah). In reliance on this principle, the court can determine which facts can be presumed [even when unexpressed], because they constitute “information known and understood by everyone” (Ran on Rif, Kid. 20b [Comm. on Rif]; Tos., Kid. 49b).

Mistake in Motivation for Performing Transaction

The Babylonian Talmud (Ket. 97a) records a discussion between *amoraim* concerning a person with a specific motive for a particular sale, and who after its completion found out that the grounds for his motivation did not exist. Can this person, under these circumstances, annul the sale? The Talmud concludes that he can: “If a man sold [a plot of land] and [on concluding the sale] was no longer in need of money the sale may be withdrawn.” Nonetheless, according to halakhic rulings, this case of mistake, based on an unproven motive, is governed by the same rule that governs all other cases of mistake: namely that the transaction can only be voided if the seller formally stipulated that the transaction was conditional. Absent such an express stipulation, the seller's intention would be considered unexpressed, as explained above (Rif, Ket. 56a; Yad, Mekhirah 11:8).

Deceit

An error by one party caused by or under the influence of another constitutes deceit. If this deceit is intentional, it constitutes a fraud or *ona'ah* (see *Ona'ah; *Fraud; *Theft and Robbery). Such a deceit is considered a transgression of the biblical prohibition: “When you make a sale to your fellow or make a purchase from the hand of your fellow, you shall not wrong one another” (Lev. 25:14). This prohibition does not only refer to fraud regarding the value of a sale, but also to any form of swindle as proscribed by the Torah (R. Moses di Trani, *Kiryat Sefer*, Mekhirah, 18). There is yet another explicit prohibition regarding deceiving a purchaser in weights and measures: “You shall do no unrighteousness in judgment, in measure of length, weight, or volume. You shall have just scales, just weights, just dry measures, and just liquid measures” (Lev. 19:35–36); and: “You shall not have in your house diverse weights and measures, a great and a small... For an abomination to the Lord your God are all who do such things, all who act corruptly” (Deut. 25:13–16). Talmudic literature extends this ruling of the prohibition of willfully defrauding others with weights and measures, to include the merchant's duty to ensure that his weights and measures are accurate. Thus, the Mishnah states (BB 88a) that weights and measure must be regularly cleaned from the residue that tends to settle and congeal therein, and the Talmud states that weights

must not be made of materials which corrode and wear away (*ibid.* 89b).

The validity of a fraudulent sale is the same as that of a mistaken sale, and as in the case of an intentional deceit, the sale may be rescinded, as explained above.

The laws of marriage provide an example of deceit which can result in the annulment of the transaction. The Rashba rules that where a person betrothed a woman using a cup (see *Marriage), but told her: “You are betrothed to me with this ring,” and she accepted the cup, without noticing the object being handed to her – she is not betrothed, because he misled her, and even if the cup was worth more than the ring (Resp. Rashba, vol. 3, no. 1186).

A person causing deceit, including deceit by failure to disclose, e.g., the seller’s silence when he knows that the buyer is making a mistake in a particular transaction (because the sale involves a defective item which was unnoticed by the buyer), is obligated to compensate the buyer. The Babylonian Talmud (BB 93b) records a dispute concerning a person who sold garden seeds that did not grow. In such a case, is the seller required to reimburse the buyer for the seeds alone, or also for the buyer’s expenses incurred during the unsuccessful planting, such as plowing expenses, hiring laborers to sow the field, etc. (Rashbam, ad loc.)? The particular talmudic passage deals with a case where the seller was not aware that the seeds were defective. Yet, if the seller had been aware that they were defective and unable to sprout, the Talmud rules that he is also required to pay the buyer’s expenses. Thus, the Tur (ḤM 232:20) cites the Rema’s ruling that: “One who purchases an item which is defective... if the seller knew of the defect he is even obligated to pay the expenses the buyer incurred, because of the law of *garmi*” (see *Gerama and Garme); and the Shulḥan Arukh rules accordingly (ḤM 232:21).

Remedies Not Involving Rescission of Transaction

When the defect (mistake) can be repaired or compensated for, the deceived party can only recover the cost of the repair or addition but not cancel the agreement. In the Babylonian Talmud, the *amora*, Rava, rules that: “anything sold by measure, weight, or number... is returnable” (Kid. 42b). Maimonides rules as follows: “If a person sells a specific measure, weight, or number, and made an error, the aggrieved party may always void the sale ... For example, if someone sold nuts at the rate of 100 nuts per dinar, and there were only 99 nuts, the sale is binding and even many years later the amount overcharged must be returned, ... because the transaction was made in error...” (Yad, Mekhirah 15:1–2). Commenting on these words, the *Maggid Mishneh* cites Ri Migash’s ruling – that such a sale is valid and not void, and the seller must merely compensate the buyer for the exact sum he paid. This ruling applies even when the margin of error is more than a sixth of the real value, the sale is still binding and the seller need only make good on the discrepancy. The law of *ona’ah* does not apply in this case because *ona’ah* only applies when the deceit relates to the essence of the intrinsic

value and not to the quantities – their weight, size, or number (ad loc.).

Mistake in Knowledge of the Law

Where a person performs a legal act relying on a legal presumption stemming from his misunderstanding of the law, as in any case of a mistake, his act is revocable. This emerges from the opinion of the Sages cited in a *baraita* (Arakhin 5a), that states that a person who vows to give the fixed value of an infant less than a month old – for whom the Torah does not assign any value at all – “has said nothing” (i.e., the vow is meaningless). The Talmud clarifies that since his vow stems from an ignorance of the law there are no practical ramifications to the undertaking he assumed as a consequence of his mistake. This is in contrast with an act of waiver (see *Mehilah) where a person’s act is based on his misunderstanding of the law. Regarding a mistaken waiver the halakhic authorities are divided. Many contend that a mistaken waiver should be considered valid. This was the ruling when a minor gave land as a gift – an act which has no legal effect, i.e., since the one giving the gift is a minor, the gift is revoked and the land returned to the minor. The purchaser need not pay for usufruct he has enjoyed from the property, because by giving it, the minor waived his right thereto, in his belief that he had given the land. Notwithstanding that this waiver originates in a mistake in the knowledge of the law – it is nonetheless regarded a valid waiver (Resp. attributed to Naḥmanides, no. 2; Rashi, BM 66b; Resp. Rivash, 375). In contrast, other halakhic authorities rule that such a waiver, just like any other legal act which is invalid if performed as a result of a mistake of law, is not regarded as a waiver and has the status of any other legal act which is invalid if performed as a result of a mistake of law (*Maḥaneh Efrayim*, Zekhiyah, 35; *Shevut Ya’akov*, vol. 3, no. 173).

Errors in Formulation and Drafting of Documents and Regulations

The resolution of contradictions between an earlier part and a later part of the same deed is governed by two legal rules. The first – “one is always to be guided by the lower entry” (Mish., BB 10:2; Yad, Malveh ve-Loveh 27:14; Sh. Ar., ḤM 42:5) – determines that whatever appears at the end of the document is decisive and in cases of contradiction represents a retraction of what was previously stated in the document. Concurrently, when the application of this rule is not feasible, because it is obvious that what is stated at the end of the document is a mistake, and not a retraction, the guiding rule is that “holder of the deed is always at a disadvantage (i.e., weaker)” (Ket. 83b; Yad, Malveh ve-Loveh 27:16). Similarly, if the “mistake” indicates that the undertaking party misunderstood the law, here, too, as detailed above, the rule that “holder of a deed is always at a disadvantage” applies (Resp. Maharik, no. 94).

Similarly, when a mistake is found in the wording of a communal regulation (see *Takkanot ha-Kahal), manifesting itself in contradictory provisions concerning the manner in

which public money is to be administered, the Rashba ruled that the latter sum is binding; this presumes that the latter sum constituted a retraction of the former sum (Resp. Rashba, vol. 3, no. 386). In another case of mistaken phraseology in a regulation affecting debts between two people, the Rashba ruled that “the claimant has the lower hand.” This ruling relied both on the rule which states that “the burden of proof rests on the claimant” as well as on the fact that the regulation goes beyond the requirements of the law, and therefore in the case of doubt, the existing law is followed, and not the regulation (Resp. Rashba, vol. 3, no. 397). In yet another case the Rashba addressed the issue of an alleged error in the drafting of a regulation. The question was one of interpretation of a communal enactment concerning taxes, the objective of which was to enable a more extensive collection of taxes from the population. However, the wording of the enactment created a situation in which a particular citizen paid *less* than what he would have paid prior to the enactment. The community argued that the enactment should be interpreted in terms of its objective, i.e., its intent, even if this absolutely contradicts its explicit wording. The Rashba rejected their claim, ruling that the community’s claims were unexpressed intentions and as such had no legal weight (lit. “words in the heart are not words”); thus, the clear language of the enactment was binding (Resp. Rashba, vol. 5, no. 282).

For a detailed discussion on this topic, see *Interpretation.

Customs Based on a Mistaken Premise

(See **Minhag*, for the essence of a custom, the manner of its acceptance, and its validity.) As early as mishnaic times, cases are recorded where it became apparent that a particular custom was based on a mistaken premise, and the custom was then annulled. The Mishnah describes a particular custom involving a matter concerning the Sabbath laws practiced in a synagogue in Tiberias, “until Rabban Gamaliel came with the Elders and forbade them to do so” (Er. 10:10). According to the explanation of *Tosafot* (Er. 101b), the reason for annulling the custom was that it was based on a mistaken premise. Elsewhere in the Talmud (Hul. 6b–7a), R. Judah ha-Nasi annulled the custom of separating tithes on fruits and vegetables grown in Beth She’an, after it became apparent to him – on the basis of testimony concerning R. Meir’s practice to eat even untithed fruits grown in that area – that Beth She’an had not been conquered by the Jews who returned from the Babylonian exile and was not sanctified by Ezra, such that the origin of the custom was based on a mistaken premise.

In the third generation of *amoraim* of the Land of Israel, R. Avin set out a clear general ruling regarding the possibility of canceling a custom which is the result of a mistake of fact. According to this ruling, if a stringent custom – a prohibition – had been enacted despite the clear knowledge that by “the letter of the law” the matter is permitted, the custom is valid, and may not be annulled. However, if the origin of the custom is based on a mistaken premise, then once the mistake

is discovered, the custom should be annulled and the prohibition undone (TJ, Pes. 4:1; 30:4).

In the post-talmudic period, the authorities discussed at length the annulment of a custom which originated in a mistake of fact. In certain cases, in addition to the sharp attacks against customs that are referred to as “foolish customs,” if investigation into a custom’s roots indicates its mistaken premise, even if the custom was extremely widespread it was annulled, and if “this is not a custom which ought to be relied upon in matters involving financial outlay... the custom is a mistake and needs to be cancelled” (Resp. Rosh 55:10).

The Law in the State of Israel

The Contracts (General Part) Law, 5733 – 1973, contains provisions concerning mistake and deceit. Section 14 provides that a party may rescind a contract which was entered into in consequence of a mistake, whether of fact or of law, when it may be assumed that – but for the mistake – he would not have entered into the contract, and the other party knew or should have known this. When the other party did not know or need not have known this, the court may exercise its discretion. As in Jewish law, if the contract can be maintained by rectifying the mistake, provided the other party is prepared to rectify the mistake, then this course should be followed.

Section 15 establishes that in a case of deceit, the contract may be rescinded, even if the deceit includes the non-disclosure of facts which the other party – by law, custom, or circumstances – should have disclosed.

The law emphasizes that a mistake as to the worthwhileness of a transaction does not constitute grounds for rescission of the contract.

MITCHELL, YVONNE (1925–1979), British actress and writer. Born in London, Yvonne Mitchell made her adult debut in 1944 in *Cradle Song*, and subsequently acted in Shakespeare, Ibsen, Shaw, Turgenev, and Pirandello. Her own play, *The Same Sky*, won the Festival of Britain Prize in 1950. She made her New York debut in *The Wall* in 1960. Mitchell appeared in 11 films between 1949 and 1976, winning the BAFTA Best Actress award in 1955 for her role in *The Divided Heart*. Her best-known film was probably *Woman in a Dressing-Gown* (1963). Her novels include *A Year in Time* (1964) and *The Family* (1967).

MITHREDATH (Heb. מִתְרִדָּת; LXX, **Mithradates**), a popular Persian name meaning “Given by Mithra,” and borne by kings of Parthia and Pontus and a king of Armenia. The name Mithredath occurs in the Elephantine papyri (Cowley, *Aramaic*, 26:2, 7; E.G. Kraeling, *The Brooklyn Museum Aramaic Papyri* (1953), 3:23b) and designates two individuals in the Bible. One is the treasurer whom Cyrus ordered to deliver the Temple vessels to Sheshbazzar, for return to Jerusalem (Ezra 1:8). The other is an official who apparently wrote a letter to Artaxerxes I against Jerusalem (Ezra 4:7).

[Bezalel Porten]

MITHRIDATES, FLAVIUS, sobriquet of a 15th-century humanist and Orientalist (apparently Samuel b. Nissim Bulfarag) of Caltabellotta, Sicily. He became converted to Christianity around 1466, taking the name Guglielmo Raimondo de Moncada, probably conferred by Guglielmo Raimondo Moncada Esfanoller, count of Adernò, who may have acted as godfather at his baptism. He is also referred to as Guglielmus Siculus (“the Sicilian”). After his conversion, he studied at the University of Catania where he learned Latin. He later stayed for a time in Messina. In 1470 he left Sicily to study at the University of Naples. He had the financial support of several Sicilian cities and several private persons who financed his studies, which shows that he must have enjoyed the patronage of influential figures in Sicily. Between 1476 and 1478, he acquired ecclesiastical benefices in several Sicilian cities. In 1477 he was accused of heresy but he was able to refute the accusations. Notarial acts preserved in Sicily in the archives of Sciacca and Caltabellotta show that he maintained his connections with the Jews of Caltabellotta but Mithridates’ attitudes toward his former coreligionists were for the most part antagonistic. While at the court of King John II of Aragon, around 1474, he took part in religious disputations with Jews and was praised for converting some of them to Christianity. Later in his life he disputed with Jewish scholars in Florence. In 1474 he appealed to Pope Sixtus IV to be granted the legacy left by the Jew Salomone Anello of Agrigento for the foundation and maintenance of a Jewish school confiscated and used to further the Christian faith rather than Judaism. The heirs of Anello contested the decision to close the school, and the litigation continued for several years, until a kind of compromise was reached and the Jews of Agrigento were ordered to provide Moncada/Mithridates with a house in Palermo instead of the school building in their city. Around 1478 he moved to Rome and came under the patronage of Giovanni Battista Cibo, bishop of Molfetta, later Pope Innocent VIII, and became a lecturer in theology at the Sapienza in Rome. In 1481, on Good Friday, he preached a sermon before Pope Sixtus IV and the College of Cardinals on the sufferings of Jesus (*Sermo de Passione Domini*, ed. by H. Wirszubski, 1963), offering Christological interpretations of Jewish texts. Wirszubski

demonstrated that in his sermon he relied extensively on the *Pugio Fidei* (“Dagger of Faith”), the polemical work of the Dominican Raymundus Martini, without, however, giving credit to his source. Toward the end of his discourse, Mithridates quoted so-called secret Jewish doctrines, some of them outright forgeries, fabricated from rephrasings of rabbinical sayings. In 1483 Mithridates was accused of committing a serious offense (unspecified) and as a consequence was deprived of all benefices and forced to flee Rome. The offense could have been of a sexual nature, as in his writings Mithridates is very explicit about his homosexuality, including his relationship with a young boy, Lancilotto de Faenza.

Mithridates taught Arabic, Hebrew, and Aramaic in Italy, France, and Germany and was one of the teachers of the humanist, Giovanni *Pico della Mirandola. He translated works from Arabic, Hebrew, and Greek into Latin, including parts of the Koran for Federigo da Montefeltro, duke of Urbino, intending also to translate it into Hebrew and Syriac. For Pico he translated Menahem *Recanati’s commentary on the Torah, *Levi b. Gershom’s commentary on the Song of Songs, a treatise on resurrection by Maimonides, and a number of kabbalistic works, among them *Sitrei Torah* and *Sefer Ge’ulah* (translated into Latin as *Liber Redemptionis*) both by Abraham Abulafia, *Nefesh ha-Hakamah* by Moses de Leon and *Ha-Yeri’ah ha-Gedolah*, a 14th-century kabbalistic text by an unknown author. According to Giulio Busi in *The Great Parchment*, Mithridates proved to be a skilled translator, able to grasp the subtlest nuances of mystical speculations. The translations also serve as a valuable historical source as Mithridates often added his personal remarks that allude to contemporary events and figures, mostly regarding Pico himself and Mithridates’ former patron, Giovanni Battista Cibo (by then Pope Innocent VIII), and the late Pope Sixtus IV. The translations also provide some biographical notes on the personality of their author such as his Hebrew name (Samuel), his homosexuality, and his personal relationship with Pico.

Mithridates’ influence and his contribution to Renaissance culture went well beyond that of a skilled translator. Pico used some of his translations for writing his *900 Theses*, which had a wide impact on Renaissance thought. He also had a crucial role in the spread of Christian Kabbalah.

[Menachem E. Artom / Nadia Zeldes (2nd ed.)]

MITIN, MARK BORISOVICH (1901–1987), Russian ideologist. Born in Zhitomir, he joined the Communist Party in 1919. Educated in Moscow, he held executive positions at the Krupskaya Communist Academy of Pedagogical Sciences, a training school for party theoreticians. At the same time he worked in the Institute of Philosophy of the U.S.S.R. Academy of Sciences. In 1939, he became director of the Marx-Engels-Lenin-Stalin Institute, and five years later he assumed the position of chief of the philosophy department of the Central Committee's higher party school. For his services to the party, Mitin was awarded two Orders of Lenin, two Orders of the Red Banner of Labor, and the Stalin Prize in 1949. Between 1939 and 1961, he served as a member of the Party Central Committee, one of the few Jews permitted to occupy such a high party post. Never deviating from Stalinism, and taking an active part in the anti-Jewish campaign during the "Doctor's Plot," etc., Mitin's philosophical and historical books included *Dialekticheskiy i istoricheskiy materializm* (1934); *Istoricheskaya rol G. V. Plekhanova v russkom i mezhdunarodnom rabochem dvizhenii* (1957); *Filosofiya i sovremennost* (1960). He was co-editor of the massive five-volume *Istoriya filosofii* (1957–61), and was editor of the journal *Voprosy filosofii*.

[William Korey]

MITNAGGEDIM (Heb. מִתְנַגְּדִים; sing. *Mitnagged*; lit. "opponents"), a designation for the opponents of the Ḥasidim. The name originally arose from the bitter opposition evinced to the rise, way of life, and leadership of the ḥasidic movement founded by Ḥisroel b. Eliezer Ba'al Shem Tov, but in the course of time lost its connotation of actual strife, and became a positive description, representative of a way of life. Since it was the personality and genius of Ḥisroel b. Solomon Zalman the Gaon of Vilna (1720–1797) which gave the powerful impetus to the rise of the *Mitnaggedim*, this way of life became especially characteristic of Lithuanian Jewry (except for the Lithuanian Ḥasidim, particularly the ḤKarlin dynasty and the Ḥabad trend). His iron will and intellectual perseverance shaped, through an elect circle of pupils, both adamant opposition to Ḥasidism, as well as the patterning of institutions, tendencies of thought and expression, and a way of life which formed a specific culture. One of its characteristics, which derived from the opposition to the charismatic, miracleworking leadership of the ḥasidic rabbis, was a pronounced skepticism and a severe criticism of credulity and authoritarianism. After the death of Eliezer the Gaon of Vilna the struggle between the Ḥasidim and the *Mitnaggedim* assumed even more bitter pro-

portions than during his lifetime, with mutual recrimination, but by the second half of the 19th century the hostility began to subside. One of the causes of the cessation of hostilities was the common front which both formed against the Haskalah. The main differences between them today are in matters of rite, the Ḥasidim having adopted the prayer book of Isaac Luria (largely the Sephardi *minhag*), while the *Mitnaggedim* retained the Polish form of the Ashkenazi *minhag*, and in the greater stress laid by the *Mitnaggedim* on study of the Talmud, while the Ḥasidim emphasize the emotional side of Judaism. There are large groups of *Mitnaggedim*, most of Lithuanian origin, in the State of Israel, the United States, England, and South Africa. The term *Mitnagged*, however, is not confined to Jews of Lithuanian origin.

MITTWOCH, EUGEN (1876–1942), German Orientalist. Born in Schrimm, Prussian province of Posen (now Poland), Mittwoch originally intended to be a rabbi and studied at the Rabbinical Seminary in Berlin. He made his first journey to the East with Moritz Sobernheim and thus became familiar with Palestine and the culture of the Near East. He returned to the Orient with Paul ḤNathan in 1907 and helped him set up the ḤHilfsverein's school system in Palestine. Mittwoch himself was one of the first German Jews to speak modern Hebrew. He taught at the University of Berlin (1915–16) and at the University of Greifswald (1917) and returned to Berlin in 1919 to serve as a professor at the Seminary for Oriental Languages, of which he became director in 1920. During World War I he was head of the Nachrichtenstelle fuer den Orient, which propagated pro-German feelings in the countries of the Near East. In 1933, having been dismissed from his position by the Nazis, Mittwoch first directed the office of the Joint Distribution Committee in Berlin and in 1939 moved to England, where he assisted the Ministry of Information on Arabian and Persian problems. Between 1910 and 1930 Mittwoch was active in educating young Falashas (Beta ḤIsrael), and was a prominent member of the Hilfsverein der deutschen Juden. He also cooperated in the Jewish World Relief Conference and was a representative at HICEM (a relief organization) from its inception. He was the last president of the council of the Gesellschaft zur Foerderung der Wissenschaft des Judentums and transferred the scholarly material from its office to England in 1938. He served on the executive of the Zentralverein deutscher Staatsbuerger juedischen Glaubens, immigrated to London and died there in 1942.

Mittwoch's special scholarly interest was in the study of classical and modern Arabic as well as Ethiopian dialects and literature, such as *Die traditionelle Aussprache des Aethiopischen* (1926). In his *Zur Entstehungsgeschichte des islamischen Gebets und Kultus* (1913) he illustrated the influence of Jewish prayer and liturgy on Islam. He also contributed to Hebrew epigraphy as well as to that of South Arabian, Himyaritic,

and Sabeian inscriptions. Among his other works is *Die arabischen Lehrbuecher der Augenheilkunde* (with J. Hirschberg and J. Lippert, 1905). Mittwoch also wrote about Islamic art and modern Islamic politics. He was a coeditor of the jubilee edition of the works of Moses Mendelssohn (seven vols., 1929–38). In 1937 the Gesellschaft presented him with a *Festschrift* (see bibliography).

[Bjoern Siegel (2nd ed.)]

MITZVAH (Heb. מצוה), a commandment, precept, or religious duty. The term is derived from the Hebrew root צוה which means “to command” or “to ordain.” In common usage, *mitzvah* has taken on the meaning of a good deed. Already in the Talmud, this word was used for a meritorious act as distinct from a positive commandment. The rabbis for instance declared it “a *mitzvah* to hearken to the words of the sages” (Ḥul. 106a; cf. Git. 15a). Although many different terms such as *hukkah* (“statute,” Ex. 27:21), *mishpat* (“ordinance,” Deut. 4:5), *edut* (“testimony,” Deut. 4:45), *mishmeret* (“observance,” Lev. 8:35), and *torah* (“teaching,” Ex. 16:28) are mentioned in the Pentateuch to indicate laws, only the word *mitzvah* is generally used to include all its commandments. There are traditionally 613 biblical *Commandments which are divided into 248 positive mandates and 365 prohibitions. With the increased ritual obligations imposed by the rabbis, the *mitzvot* were also separated into two main categories: *mitzvot de-oraita*, the biblical commandments, and *mitzvot de-rabbanan*, the rabbinic commandments (Pes. 10a; Suk. 44a). There are also instances when the *mitzvot* were classified as *mitzvot kallah*, less important *mitzvot*, and *mitzvot hamurot*, more important *mitzvot* (e.g., Ḥul. 12:5; Yev. 47b; Av. Zar. 3a). Nevertheless, the rabbis exhorted the people to be mindful of all the *mitzvot*, both light and grave, since the reward for the fulfillment of each precept is not known to man (Avot 2:1). The *mitzvot* were further divided into *sikhliyyot* (rational) and *shimiyot* (revealed) by medieval Jewish philosophers (see *Commandments, Reasons for). Other distinctions have also been made, such as commandments performed with the external limbs of the body and those by the heart; commandments regulating conduct between man and his Maker and between man and his fellows; and commandments applicable only to Erez Israel and those not dependent upon Erez Israel. Responsibility for the *mitzvot* is formally assumed by boys at the age of 13 plus one day, and by girls at 12 plus one day (see *Bar Mitzvah, Bat Mitzvah, and *Puberty). Women are exempt from all affirmative precepts contingent upon a particular time or season, although the Talmud also makes those of the Sabbath, Ḥanukkah, Purim, and Passover obligatory on them. All negative precepts, whether limited to a certain time or not, are binding upon both men and women (Kid. 1:7). The performance of most *mitzvot* is preceded by a *benediction which is usually worded: “Who has sanctified us by His command-

ments and commanded us to...” The omission of the benediction, however, does not invalidate the performance of the *mitzvah*. The opposite of *mitzvah* is **averah*, a transgression. A “precept fulfilled through a transgression” is considered as an *averah*, e.g., one does not discharge his obligation through a stolen *lulav* (Suk. 30a; see *Four Species). Although *mitzvot* were not meant to provide material enjoyment (RH 28a), and the final reward for their performance is in the hereafter (Kid. 39b), true joy and sanctity can be attained only through their observance (Shab. 30b; Sifra 9:2). Man should not anticipate any material recompense for performing the *mitzvot*, but one *mitzvah* brings another in its train (Avot 1:3; 4:2). “God desired to make Israel worthy, therefore He enlarged the Law and multiplied its *mitzvot*” (Mak. 3:16).

MIVḤAR HA-PENINIM (Heb. “A Choice of Pearls”), an ethical work consisting of a collection of epigrams, usually attributed to Solomon b. Judah ibn *Gabirol. It was believed that Gabirol made the collection in preparation for composing his small ethical work, *Tikkun Middot ha-Nefesh*. *Mivḥar ha-Peninim* (Soncino, 1484) is undoubtedly a translation from the Arabic; the material included in it was taken from Islamic ethical literature, much of it from Persian and Indian sources.

The book is divided into chapters (“Gates,” *she'arim*). Some of them contain a long chain of instructions, epigrams, and parables relating to the subject of the chapter, as for example *Sha'ar ha-Ḥokhmah* (“The Gate of Wisdom”), *Sha'ar ha-Anavah* (“The Gate of Humility”), and *Sha'ar ha-Emunah* (“The Gate of Belief”). However, most of the chapters give no serious treatment of their ostensible subject and have a title for nothing but a single epigram or ethical paragraph. They deal with all aspects of religious and social life, from the unity of God (*Sha'ar ha-Yiḥud*) to the proper way to treat one's friends. One of the chapters is an ethical will – “*Sha'ar Zavva'at Av li-Veno*” (“Gate of the Will of a Father to his Son”).

Mivḥar ha-Peninim was translated into Hebrew by Judah ibn *Tibbon, who translated most of the early Jewish works on philosophy from Arabic. It is not, however, a typical product of the genre, despite the clear influences of philosophical-ethical thinking found in it. Rather it is a popular collection of ethical epigrams and parables, collected from Arabic ethical literature. Its authorship has not been established, and there is no clear evidence that it was written by Gabirol. Some traditional editions attribute it to *Jedaiah b. Abraham Bedersi (ha-Penini), although there is no basis for this view either. The book has been very popular throughout the ages; it was used by the Ḥasidei Ashkenaz as well as by philosophers. It

has been often printed and many commentaries have been written on it, even in modern times.

MIX, RONALD JACK (Ron; “The Intellectual Assassin”; 1938–), U.S. football player, member of the Pro Football Hall of Fame and the American Football League Hall of Fame. Born and raised in Los Angeles, Mix attended the University of Southern California on a football scholarship. He entered the school as a 180-pound end but by the time he graduated was up to 250 pounds due to an intensive weight-training program. Mix was a starter for three years (1957–59), and co-captained the 1959 team that had a record of 8–2–0 and tied for first in the Pacific Coast Conference. Mix was named consensus All-America first team, AP All-Pacific Coast first team, All-Big Five first team, MVP USC Lineman Award, and won the Trojaner Diamond Award as the senior athlete who did the most to further the reputation of USC. In 1960, Mix was drafted in the first round by the Baltimore Colts of the NFL and the Boston Patriots of the newly formed American Football League. The Patriots traded Mix to the Los Angeles/San Diego Chargers, for whom he played tackle from 1960 to 1969, and then with the Oakland Raiders for the 1971 season. Mix played in five of the first six AFL title games, winning the 1963 championship 51–10 over the New England Patriots. He was an All-AFL selection eight times as a tackle and once as a guard, and played in eight AFL All-Star games (1961–68). Mix was known for his excellent speed and strength, and for his quick charge and accomplished blocking on both passing and running plays. Mix, one of only 20 men who played the entire ten years of the AFL, played in 142 career games, with only two holding penalties assessed in his career. He was unanimously chosen for the AFL’s all-time team in 1969. His coach with the San Diego Chargers, Sid Gillman, said, “Ron Mix was one of the greats of all time ... I think he’s the greatest tackle who ever lived.” He was inducted into the Pro Football Hall of Fame in 1979.

MIXED MARRIAGE, INTERMARRIAGE. The terms intermarriage and mixed marriage are used interchangeably. Intermarriage in the present context is defined as a marriage where one partner professes a religion different from that of his spouse. Marriages in which a partner has converted to the faith of the other are not considered intermarriages. Therefore, marriages between converts to Judaism and born Jews are not treated here.

Problems of Measurement

FORMATION DATA VERSUS STATUS DATA. Statistical data on the frequency of religious intermarriage are obtained from marriage licenses on which groom and bride state their religions, and from questionnaires connected with censuses or community surveys. Questionnaires reveal the religious com-

position of married couples and the status of heterogamy within a population. It is of the utmost importance to distinguish between intermarriage formation and heterogamy status data.

INDIVIDUAL RATES VERSUS COUPLE RATES. A number of methodological problems complicate the computation of intermarriage rates. Some researchers base their rates upon the number of individuals who marry out. However, since the couple is the basic unit in the marriage relationship and since the couple is expected to be homogamous, intermarriage rates are most meaningfully computed by determining the ratio of intermarried couples to the total number of couples in which one or both partners are Jewish.

SURVEYS OF THE ORGANIZED JEWISH COMMUNITY VERSUS COMPREHENSIVE SURVEYS. Surveys which produce intermarriage data should indicate whether the survey was limited to the organized Jewish community or encompassed the total population of a locality. As might be expected, the former type yields a significantly lower rate of intermarriage than the latter. Surveys of the former type sponsored by local Jewish organizations in the United States between 1930 and 1970 yielded an intermarriage status rate of about 6%. By contrast the Greater Washington survey which sampled the total population yielded a rate of 13.2%, more than double that of the organized Jewish community.

The Extent of Jewish Intermarriage

MAGNITUDE. In contrast to the period between World Wars I and II there are no data for Eastern and Southeastern Europe on intermarriage rates. Considerable variations exist from country to country and even within one country, namely the United States. In 1970 status rates ranged from a high of 26% for Switzerland and the Netherlands to a low of 7.2% for the United States; formation rates from a high of 80.6% in West Germany to a low of 16.8% in Canada. (See Table: World Jewish Population Distribution, by Frequency of Current Out-Marriages around 1930 and 2000.)

THE MEANING OF INTERMARRIAGE RATES: THE PROBLEM OF JEWISH SURVIVAL. There is a widespread belief that a high rate of Jewish intermarriage in a given locality leads to the disappearance of the Jewish community there. “How high is high?” The answer will be found in a comparison of what the intermarriage rate might be if random selection of partners would occur (expected random rate) with the actual (observed) intermarriage rate. A 1957 sample survey in the United States revealed that, compared to Catholics and Protestants, Jews are least likely to intermarry.

Social Factors Related to Intermarriage

ROMANTIC LOVE VERSUS GROUP COHESION. In the Western world the selection of marital partners is governed by two considerations. One is the romantic love ideal, which tends to override considerations of race, creed, cultural origin, or social class. The other consideration is group survival, the pressure to marry a member of one’s own race, religion, or cultural group.

World Jewish Population Distribution, by Frequency of Current Out-Marriages around 1930 and 2000

a Not Jewish at time of marriage. Out-marriage figures are countrywide or regional estimates. This table ignores variation in out-marriage frequencies within countries.

b Data quality rated as follows: 1 Recent and reliable data; 2 Partial or less recent data of sufficient quality; 3 Rather outdated or incomplete data; 4 Conjectural.

The effectiveness of this pressure is directly related to the value that adults place upon the survival of their group. Elopements can be considered an extreme case of romantic love, producing a maximum rate of intermarriage, while arranged marriages can be viewed as a most conscious effort to foster group survival generating a minimum of such marriages.

Size of the Jewish Community

DENSITY AND CONCENTRATION. It has been repeatedly observed that the rate of intermarriage is the result of density, the proportion that a subgroup constitutes of the total population in a given locality. However, density becomes relevant only when the will for group survival has been weakened or abandoned. Once group cohesion is weakened, however, the factor of density operates in the expected manner: the smaller

the proportion that Jews constitute of the total population in a given locality, the larger the intermarriage rate becomes. This relationship has been observed in Canada, the United States, and Australia. For example, in the United States the intermarriage formation rate in the state of Indiana between 1960 and 1963 was 38.6% for the five large Jewish settlements and 63.5% for those counties where there was only a scattering of Jewish families. Jews are well aware of the fact that dispersal of Jewish families over a rural or urban area increases the likelihood of intermarriage. Therefore, in urban areas they have been eager to concentrate their residence in specific neighborhoods and to locate their institutions within them.

AGE OF JEWISH SETTLEMENT AND DEMOCRATIC SOCIAL PROCESSES. Jews more than any other religio-ethnic group

have been involved in migrations from one country to another. As immigrants they have encountered economic, cultural, and social barriers. However, in democratic societies where equalizing processes between immigrants and older settlers and between different racial, ethnic, and religious groups are at least not discouraged and at best consciously fostered, these barriers will be lowered with increasing length of settlement. In time, then, Jews will become “acculturated,” i.e., less distinguishable from older settlers and other immigrant groups.

The most significant break in cultural continuity, social distance, and personal identity occurs with the birth of each new generation. Therefore, intermarriage is likely to increase with increased length of Jewish settlement, as measured by generations, and in the absence of continued Jewish immigration. The Greater Washington survey found that intermarried families increased from 1.4% among the foreign born, the first generation, to 10.2% among the native born of foreign parentage, the second generation, to 17.9% among the native born of native parentage, the third generation. The readiness of Jewish individuals to intermarry is met by a corresponding frame of mind on the part of non-Jews, who, as members of the upper classes, are no longer conscious of previous status differentials or who, as members of other immigrant groups, have also been “acculturated.” The fact that a new wave of immigrants can effectively lower earlier upward trends of intermarriage can best be demonstrated by Australia and to a lesser extent by Canada. In Australia, mainly because of the immigration of refugees from Nazi Europe, the Jewish population nearly doubled between 1933 and 1954. At the same time the percentage of intermarried families dropped drastically from a high of 29% for Jewish husbands and 16% for Jewish wives in 1921 to a low of 12% for Jewish husbands and 6% for Jewish wives in 1961.

OCCUPATION AND EMPLOYMENT STATUS. Occupation and employment status (independent owner versus employee) are factors significantly related to intermarriage. As long as occupational choice was limited by discriminatory practices, occupational homogeneity discouraged intermarriage. With virtually unlimited freedom of occupational choice in the United States, individuals who break away from traditional occupations are likely to have a higher intermarriage rate. The growth of corporate capitalism is also likely to generate a higher rate of intermarriage. Since large corporations demand from their executives considerable geographic and social mobility, local ties to the organized Jewish communities become attenuated. Surveys in the mid-50s revealed that roughly 80% of the heads of Jewish households in the United States were engaged in white-collar occupations while only 20% did blue-collar work. Within the white-collar group, managers, proprietors, and officials constituted the largest concentration, with 36% of all heads of Jewish households. It comes as no surprise, then, that the intermarriage formation rate for the latter group amounted to only 10% (for first marriages) in the state of Iowa. For the total white-collar group the rate was 27.2% and for blue-col-

lar workers 46.8%. Thus the expectation that Jews who adhere to the traditional occupational pattern are less likely to intermarry was borne out.

SECULAR EDUCATION. Secular education in the Western world has two major functions. One is to ensure the continuity of cultural tradition and values, the acquisition of basic skills, and of occupational training. The other is to provide for cultural change, the production of new ideas, and technical innovation. Students who are oriented to or exposed to the first type of schooling should be less inclined to intermarry than students enrolled in the second type. The Greater Washington survey supports the expectation for the native-born of native parentage. The intermarriage rate of those who had enrolled in the first type was nearly one-third lower than of those who had attended the second type.

RELIGIOUS EDUCATION. There is a widespread belief that Jewish education, including a bar mitzvah ceremony, helps to keep young men from marrying outside the Jewish faith. The Greater Washington survey showed that this belief is well founded as far as the native-born of native parentage (the third and subsequent generation) is concerned. Religious education cut the intermarriage status rate in half. It was 16.4% for those husbands who had been exposed to religious school as compared to 30.2% who had not had such instruction. Since the ethnic bond – expressed in secular activities and in a common language – has been virtually dissolved in the third generation, exposure to religious instruction, which usually includes some learning of Jewish history and some identification with Israel, serves as a check to intermarriage.

SEX DISTRIBUTION AND INTERMARRIAGE. In the beginning of the last quarter of the 20th century Jewish men were more likely to intermarry than Jewish women. One reason for this differential was that men take the initiative in proposing marriage. This was especially significant in localities where Jewish families are sparsely settled. Jewish parents allowed their sons more freedom in dating across religious lines. However, the following years witnessed an increase in the proportion of Jewish women who intermarry, and it is likely that the sex differential will diminish in the future. The proportion of Jewish men who intermarry varied from country to country and within a country from place to place. In Canada only 10.2% of all bridegrooms intermarried between 1955 and 1960, as compared with 26.7% in Iowa between 1953 and 1959. In the Netherlands, the percentage of such bridegrooms rose from 36.4% in 1946 to 44% in 1958. In Indiana, only about half as many Jewish bridegrooms intermarried in the five relatively large Jewish communities of the state (30% versus 55.8%). Jewish brides exhibit similar variations in their propensity to intermarry.

PREVIOUS MARITAL STATUS. Data available for the United States and the Netherlands demonstrate that the previous marital status of a person affects his decision to intermarry. Previously widowed persons, upon remarriage, have a lower

intermarriage rate than persons never before married. By contrast, persons who were previously divorced have a considerably higher intermarriage rate than the never married. For example, in Indiana one group of previously divorced couples had an intermarriage formation rate of 64.9% as compared with 33.2% for the never married before and 20% for the previously widowed.

The Prevention of Intermarriage

In societies where democracy and individualism are dominant values, intermarriage is bound to occur. Empirical observations have revealed that Jewish communities are trying to keep the frequency low with the help of a “survival” formula consisting of voluntary segregation, residence in a high-status area, a modicum of Jewish education, and Jewish group consciousness in the form of Zionism which is defined as supporting the State of Israel.

[Erich Rosenthal]

Legal Aspects

THE CONCEPT. A mixed marriage is a marriage of a non-Jew to a Jew, i.e., one born of Jewish parents, or whose mother alone was Jewish, or who has become a proselyte in accordance with Jewish law (see *Jew; **Yuhasin*). Conversion from the Jewish religion, both in the case of a Jew by birth and of a proselyte who reverts to his “evil” ways, has no halakhic significance in respect of the law on mixed marriages. For “an Israelite, even if he has sinned, is still an Israelite” (Sanh. 44a; Rashi thereto; see *Apostasy).

MIXED MARRIAGES ARE PROHIBITED AND INVALID. From the biblical passage (Deut. 7:3) “neither shalt thou make marriages with them: thy daughter thou shalt not give unto his son, nor his daughter shalt thou take unto thy son,” the sages inferred that marriage with a non-Jew is forbidden as a negative precept by the Torah (Av. Zar. 36b; Yad, Issurei Bi’ah 12:1–2; Sh. Ar., EH 16:1). As the passage cited refers to the “seven nations” (“The Hittite, and the Girgashite, and the Amorite, and the Canaanite, and the Perizzite, and the Hivite, and the Jebusite,” Deut. 7:1), according to one opinion, the prohibition applies only to intermarriage with those seven nations. Others maintain, however, that the prohibition applies to all gentiles because after the prohibition “neither shalt thou make marriages” the biblical passage continues: “For he will turn away thy son from following after Me” (Deut. 7:4), which serves “to include all who would turn [their children] away” (Av. Zar. 36b; Yev. 77a; and codes). The prohibition against marrying a gentile is also explicitly stated in the period of the return to Zion: “And that we would not give our daughters unto the peoples of the land, nor take their daughters for our sons” (Neh. 10:31; see Maim., *ibid.*). It was also inferred from the passage in Deuteronomy that in a mixed marriage there is “no institution of marriage,” i.e., mixed marriages are not legally valid and cause no change in personal status (Kid. 68b; Yev. 45a; and codes). Hence if the Jewish partner of such a marriage subsequently wishes to marry a Jew there is no need, according to the *halakhah*, for divorce from the previous “marriage.”

However, where one or even both of the parties to a marriage are apostate Jews who have married in a halakhically binding manner, neither can marry a Jew as long as the first marriage is not terminated by death or divorce, since a purported change of religion does not affect personal status (Yev. 47b; Bek. 30b; Sh. Ar., EH 44:9). Similarly if both parties (or only one of them) apostatize after a halakhically valid marriage and are then divorced by way of a civil divorce, neither party can marry a Jew until the previous marriage is terminated as above (Yad, Ishut 4:15; Rema, EH 154:23).

MIXED MARRIAGES HAVE NO LEGAL CONSEQUENCES. Since mixed marriages are not binding, such marriages entail no legal consequences (Yad, loc. cit.). Hence, the prohibitions of marriage (in respect of certain relations of the other spouse), which apply to a valid marriage, do not apply to the parties – even after the non-Jewish partner has become a proselyte (see *Marriage, Prohibited). Similarly the wife has no halakhic right to be maintained by her “husband,” since this right arises only if a valid marriage exists between them. For the same reason, in a mixed marriage none of the inheritance rights that flow from a valid marriage, such as the husband’s right to inherit his wife’s estate (see *Succession), come into effect.

The State of Israel

It is impossible to contract a mixed marriage in the State of Israel, since according to section 2 of the Rabbinical Courts Jurisdiction (Marriage and Divorce) Law, 5713 – 1953, no marriages of Jews in Israel are valid unless contracted in accordance with the law of the Torah. However, the criminal code does not provide criminal punishment for contracting a mixed marriage in Israel. Where a mixed marriage is contracted in the Diaspora, proceedings regarding it cannot be brought directly before the Israel rabbinical courts inasmuch as such courts have jurisdiction only in the event of both parties being Jews. In 1969, however, a law was passed whereby such marriages can be dissolved at the discretion of the president of the Supreme Court. If a problem arises before the civil courts, such as a wife’s claim for maintenance, the civil courts will act according to the general principles of private international law, and where such a marriage cannot be denied validity according to those principles, it will be sustained. The Succession Law, 5725 – 1965 provides that differences of religion do not affect rights of inheritance.

[Ben-Zion (Benno) Schereschewsky]

Reform and Conservative Practice

Through to the 1970s most Conservative and Reform rabbis requested conversion from the non-Jewish spouse before undertaking any action as regards marriage, although a small, though growing minority of Reform rabbis were prepared to officiate at mixed marriages (N. Mirsky, in: *Midstream*, 16 (Jan. 1970), 40–46). The practice of almost all Conservative rabbis was not to perform a marriage between a Jew and a non-Jew. Indeed those rabbis who do perform such marriages do so only in emergency cases. Another question which was de-

bated by the Conservative Rabbinical Assembly was the status of an intermarried Jew as regards membership in a Conservative congregation. The practice until 1963 had been to exclude such an intermarried Jew from synagogue membership. In 1963 the law committee of the Rabbinical Assembly adopted a modified view of the former position and, while affirming their opposition to mixed marriages, allowed the Jewish partner of a non-Jewish marriage to become a member of their congregation, provided that there was a definite agreement to raise the children of the marriage as Jews. The privileges of membership did not extend to the non-Jewish spouse, and the Jewish partner was restricted from holding office in the synagogue. All restrictions were to be lifted when the non-Jewish partner accepted Judaism.

Reform practice on the other hand was to accept both members of the marriage as members of the congregation, and to urge that any children of the marriage be brought to the Jewish religious school so that they could have Jewish training. They felt that by this policy they would be able to influence the non-Jewish spouse to affiliate with Judaism.

IN THE UNITED STATES, 1970–1990

Introduction

Intermarriage has always been a danger to the Jewish People. Any group that lives as a minority has the potential of being absorbed by its host society. Some contact among the groups within a society is inevitable, but that contact can take many forms as relations among groups are played out – not always in consistent patterns – along several dimensions: cultural, institutional, residential, social, and familial. Because these dimensions can be independent of one another, acculturation, for example, need not lead to residential integration, nor does residential integration necessarily bring about socializing across group lines. Almost all kinds of acculturation and integration are compatible with continued group identity, at least theoretically. Integration at the familial level, on the other hand, is a sufficient condition for total assimilation by a subgroup into the larger society and its eventual disappearance as an identifiable group. Although most social identities are transmitted through families, Jewishness, going much further, explicitly defines itself in familial terms. Intermarriage thus is seen as the very antithesis of Jewish continuity. From the time that Abraham sent his servant to choose a wife for Isaac from among his own people through Ezra's expulsion of the non-Jewish wives of the Jews who returned to establish the Second Commonwealth to the recent practice of severing all ties with and sitting *shivah* for intermarried children, exogamy was one of the most energetically discouraged and forcefully condemned acts that a Jew could perform.

Most of the research on intermarriage has been done on American Jewry, which serves as the focus of this section, but much of the analysis can *mutatis mutandis* be extended to other Diaspora communities. Since the early 1960s intermarriage has changed dramatically in the United States – not only in quantity, but also in its meaning and in the reactions it engenders.

Although a number of books and articles on intermarriage written before the 1960s viewed it with alarm as “an epidemic,” intermarriage was not then generally seen as a serious communal threat, and the data on which those works rested pale in the perspective of the 1990s. Widespread communal concern with intermarriage followed the publication of Erich Rosenthal's “Studies of Jewish Intermarriage in the United States” in the 1963 *American Jewish Year Book* and a cover story on the “Vanishing American Jew” in *Look* magazine. These two articles left the Jews of the time shaken and less assured about the future of the American Jewish community. They had come to believe that, while the Jewishness of their children would not be the same as that of earlier generations, the changes that they had made in order to “modernize” Judaism would guarantee that future generations would maintain their Jewishness even as they acquired full economic, political, civic, and cultural equality as American citizens. They knew that some would intermarry and be lost, but not enough, they were convinced, to seriously weaken American Jewish life. Most Jews entering the 1960s felt themselves part of what had become the world's premier Jewish community, at least in the Diaspora, and, for all its problems, they felt secure in its future.

In the late 1960s and early 1970s many committees, commissions, and task forces were established by Jewish organizations to propose ways of reducing what was viewed as a dangerously high intermarriage rate. Despite those efforts, in the intervening years the rate increased.

The national study, undertaken by the Council of Jewish Federations in 1990, reported that 52% of the Jews who married between 1985 and 1990 married non-Jews (and another 5% married converts to Judaism). The exogamy rate climbed dramatically from decade to decade from the comparatively low and stable level characteristic of the periods before the 1960s. Another recent study, by the Center for Modern Jewish Studies at Brandeis University, also reported recent intermarriage rates for successive decades, in eight communities in various parts of the country. Although the figures are somewhat lower than in the CJF study, the increase over time is equally steep. (The overall lower rates may be due to a combination of factors: the communities chosen, the decade break points, and the way Jews become eligible for the sample.) Whatever the precise figures may be, it is clear that at this point exogamy is as common as endogamy among American Jews.

Characteristics of Those Most Likely to Intermarry

Which Jews are most likely to intermarry? Until the 1980s, men were twice as likely as women to marry non-Jews. In later years, however, the gap has narrowed considerably. It also used to be the case that intermarriage was most frequent among Jews with the highest educational and income levels, but recent studies call this pattern into question. Now, when such variables as age are controlled, Jews at the top of the socioeconomic scale turn out to be less likely to intermarry than those toward the middle, but the differences are small. It is also found that the older Jews are at the time of their first mar-

riage, the more likely they are to be exogamous. This is probably due to the fact that older people are more independent, have a wider network of professional and business contacts including non-Jews, and face a shrinking pool of potential partners. Second marriages after divorce are also much more likely than first marriages to involve a non-Jewish partner. The higher tendency to exogamy among the divorced may be strengthened by their desire for a second spouse “different” from the first and by their greater independence from ties to family and community. Geographic variations are important. Generally, areas of high Jewish concentration have less intermarriage, but some cities with large Jewish populations have very high intermarriage rates (San Francisco, Denver, and Washington, DC, are examples). The less traditional the religious “movement” with which a Jew identifies, the more likely that Jew is to intermarry, with the highest rates of intermarriage among those who identify with no religious movement at all and claim to be “just Jewish.”

During most of the 1980s it was generally believed that in about one-third of the marriages between Jews and partners born non-Jews, the originally non-Jewish partner converted to Judaism according to the norms and practices of one or another of American Judaism’s religious movements, either before or after the marriage. (The phenomena led to the adoption of a more elaborate terminology in which “intermarriage” is often used to refer to any marriage between a Jew and someone born not Jewish, “conversionary marriage” refers to a marriage between a Jew and a non-Jew who converts to Judaism, and “mixed marriage” is the term reserved for marriages in which one partner is Jewish and the other is not.) The most recent studies show that a much smaller proportion of intermarriages is conversionary than had previously been thought to be the case.

Another terminological development is use of the phrase “Jews-by-choice” instead of “convert.” Many feel that the former term is more positive. It is also seen as a way at least partly to get around some of the problems that arise from the different definitions of conversion held by various segments of the Jewish community. The latest statistical projection estimates that there are now approximately 185,000 “Jews-by-choice” in North America.

Trying to assess the demographic impact of intermarriage, optimistic analysts used to point out that if half of the children of intermarried couples are Jewish there should be no net loss in the size of the Jewish community. Recent studies show, however, that far fewer than half of the children of intermarriage identify as Jews, even by the most liberal criteria. Moreover, those who do consider themselves Jews have weaker Jewish identity on the whole than do born Jews, and they are themselves far more likely to intermarry in turn. The 1990 CJF study projects that there are about 415,000 adults in North America who are descended from Jews but were raised from birth in another religion and another 700,000 children under 18 years of age who are not identified as Jews but have a Jewish parent or grandparent.

The organized Jewish community in North America is now expressing renewed alarm over intermarriage. Not only has the rate risen dramatically over the last couple of decades, but the demographic impact is seen as more threatening than had been hoped. Many federations and other Jewish organizations have begun to address what they articulate as the problem in “Jewish continuity.” Several inquiries have been undertaken into what can be done to bolster Jewish identity, Jewish organizations and agencies have been encouraged in a number of communities to strengthen those aspects of their programs that are seen as contributing to Jewish identity, and some funds are being allocated for activities designed to enhance Jewish continuity.

Meaning of Intermarriage in the Contemporary Jewish Community

In order to understand intermarriage in the contemporary Jewish community, it is essential to recognize that its very meaning has changed. In earlier periods intermarriage was often a rebellion against Jewishness or a quiet renunciation of Jewish identity – if not for oneself, then for one’s children. There were several variations on that theme. Intermarriage could be a way of breaking free from what were felt as the constraints of Jewish life and the discrimination to which to which Jews were subjected. It could be an extreme means to declare independence from, perhaps even to punish, parents. For the upwardly mobile, it could provide entry into desired social circles. Whatever the motives, however, intermarriage was understood as sufficiently incompatible with Jewish identity to constitute a decisive break with Jewishness. It was in that context that Jewish parents and, reflecting their sentiments, Jewish organizations reacted so forcefully when the intermarriage statistics of the 1960s were published.

Jewish identity had been re-shaped in America in the 20th century, but most Jews were not assimilationists. The dominant belief in American Jewry in the first two-thirds of the 20th century was that while Jewishness should undergo some acculturation in order to fit comfortably into modern Western culture, it should survive as a separate identity. Indeed, most Jews believed that acculturation was precisely what would guarantee Jewish continuity. If Jewishness were not adjusted according to the norms of the larger society, they were convinced it would be too culturally deviant for coming generations, which would consequently reject it altogether. Most American Jews understood, however, that intermarriage was the ultimate vehicle of assimilation. They could accept, if with some regret, whatever other changes their children made in Jewish self-expression. Exogamy, by contrast, was the decisive indicator of a failure to perpetuate Jewishness. Ironically, the changes in Jewish identity that were made in order to preserve Jewishness can now be seen as having engendered the kind of Jewish identity which is not inconsistent with intermarriage. It is for that reason that many young Jews came to view intermarriage as compatible with continued Jewish identity and as an essentially unremarkable act.

The Jewish identity of 20th century American Jewry can best be understood as an outgrowth of “Emancipation.” The fundamental change in the Jews’ status that is denoted by the term “Emancipation” occurred in central and western Europe at the turn of the 19th century. The French Revolution was, of course, the threshold event which offered Jews citizenship as individuals. For the preceding two millennia Jews had had corporate status as part of the Jewish community. The shift to individual political status, generally and for the Jews, made its way across Europe, unevenly, during the 19th and 20th centuries.

To appreciate the cultural dynamics of Jews in contemporary America, however, it is necessary to remember that about nine-tenths of American Jewry is descended from the major wave of Jewish immigration to the United States from Eastern Europe between 1881 and 1924. In other words, most American Jews are only two or three generations removed from the kind of intensive and enclosed Jewish life that prevailed in the Pale of Settlement and other Jewish areas of eastern Europe. For the Jew who came to America in the 40 years around the turn of the 20th century, the trip was not a journey for political freedom and economic opportunity alone. It was, rather, a fundamental transition to a “new world” in every sense. For them, their voyage was the “Emancipation.”

The marginal generation, those who carved out a new American identity (specifically, the children of older immigrants and the younger immigrants themselves), made two basic changes in Jewish identity. One concerned its scope; the other, its content. The marginal generation, welcoming America’s offer of equal status, sought to specify the part of behavior that should appropriately be molded by Jewishness, leaving the rest to other elements in each person’s overall identity. The most frequent position was that Jewishness was religion, defined narrowly as including some theological assertions, ethical injunctions, and ritual observances, none of which was thought (by most American Jews) to interfere with the larger society’s normative expectations regarding occupational, political, recreational, social, or even familial patterns of behavior. For other Jews, Jewishness was manifested in a special enjoyment of Hebrew and/or Yiddish literature. Still others expressed Jewishness through philanthropic activity, giving their largest financial contributions to Jewish causes and devoting significant portions of their volunteer time to service in those causes. In another alternative, the focus of Jewish activity was participation in efforts to enhance intergroup amity and to diminish prejudice and discrimination. Finally, there were Jews whose Jewishness found expression in their choice of other Jews as friends, but whose activities with those friends had no particular Jewish content.

These five general approaches to the limitation of the scope of Jewishness were reflected in the organizations of American Jewry. Most Jewish organizations in the earlier part of the 20th century had closely defined purposes, and activity outside of an organization’s prescribed scope was usually discouraged. Moreover, while Jews could, and did, belong to

organizations in more than one category of Jewish self-expression, most Jews tended to express themselves primarily in one or another mode.

Distinctiveness of Jewish Identity

The second fundamental change which the marginal generation made in Jewish identity concerned the extent to which Jewishness is distinctive. During virtually all of Jewish history, Jews were different from their non-Jewish neighbors in ideologically important and personally profound ways. American Jews in the early 20th century tried to convey the idea that being Jewish did not make them different from non-Jews in any significant way. There were several reasons for their effort. They wanted to reassure other Americans that the offer of equal status for the Jews was appropriate. More generally, the underlying ideology of intergroup relations activities during that period was that emphasis on the commonness of all humanity would encourage tolerance. It was believed that if people could accept that all human beings are fundamentally the same, then mutual respect and amity would grow. The basis of the approach was the combination of individualism and universalism that reached its apex at that time and which also found expression in a downplaying of other dimensions of identity such as race, ethnicity, and even family. (Now the emphasis is on cultural differences and the need to recognize and respect them, but that approach began to gain strength only in the 1960s.)

In the context of the early 20th century, then, it is not surprising that American Jews tended to articulate a Jewishness whose differentiating impact was restricted to detail. Most Jews preferred to emphasize what they had in common with non-Jews and to insist that what they had in common mattered much more than what set them apart. It is hard to assess the extent to which they believed their own claim, but the fact that they made it had its impact.

The children of the marginal generation were effectively the first “post-Emancipation” generation, and their Jewish identity differed in a number of far-reaching ways from that of previous generations of Jews. First, while all identities have both individual, and collective aspects, the relationship between those two aspects varies. Before Emancipation, a person’s Jewishness was derived from his/her being part of the Jewish people. “Jewish” was understood primarily as the designation of a group, and a “Jew” was someone who belonged to that group. For American Jews of the mid-20th century, “Jewish” described an individual first. Its application to organizations and communities was derived from the Jewishness of their members. In America’s political ideology Jewishness was the private business of individuals and of no official public relevance. Jewish organizations were understood as nothing more than voluntary associations of Jews who made them and could use them for whatever ends they wished. During this time, the phrase “Jewish people” was almost always used as the plural of Jewish person rather than to denote an entity with its own inherent meaning.

Jewishness in mid-20th century America was most often conceptualized as one role among the many roles that every person plays. A typical man would see himself in many roles – husband, father, son, brother, neighbor, friend, lawyer, golfer, Democrat, Jew, Chicogoan, tenant, investor, contributor, and so forth. Each role had its own institutionalized set of relationships, its own mandated behaviors, and, consequently, its own well-delineated sphere of relevance. Pre-Emancipation Jews also had multiple roles, of course, even though they were less likely to say it that way. The difference is that Jewishness cannot properly be viewed as one of their roles. It would be more correct to see it as the substance with which all role behaviors were specified and evaluated. Another way of saying the same thing is that, for most Jews, Jewishness was transformed from a diffuse characteristic into a very specific one.

Something can be of specific relevance, yet still be very important. However, most post-emancipation American Jews not only restricted the scope of Jewishness; they also greatly diminished its power. For the typical pre-Emancipation Jew, the fact that s/he was Jewish took priority over virtually every competing claim to time, energy, or normative prescription. By contrast, most American Jews in the mid-20th century made Jewish self-expression fit into the time, energy, and options left by almost the entire range of other claims – occupational, educational, recreational, civic, social.

The Jews growing up as a post-Emancipation generation heard from their parents that Jewishness did not make a Jew different in any major way. Young Jews learned that Judaism was one of the world's great monotheistic religions, and if there was pride to be found in the fact that it was the first, that, after all, was a matter of history and of little consequence. In Will Herberg's well-known formulation, a person could be a good American in any one of three ways, by being a Protestant, a Catholic, or a Jew. All were seen as acceptable variations on a common theme, and what mattered was the basic set of values and styles that constituted the American way of life, not the specific literature and symbolism with which the three religions were supposed to convey that way of life. In earlier periods, of course, Jewishness had made Jews different in many far-reaching and fundamental ways, as was fully recognized by Jews and non-Jews.

Because Jewishness was so narrowly restricted and made subordinate to external contexts of interpretation, most post-Emancipation Jews lost the kind of familiarity with Jewish behavior that people have with their own culture. It is probably a fair rule of thumb that the more internationalized an item of culture is, the fewer directions a person needs when performing it. Thus, the inability of post-Emancipation Jews to carry out Jewish acts without guidance says much about their level of estrangement from the content of Jewishness.

This description does not apply to all Jews in the mid-1900s. Some purposely assimilated altogether; others maintained Jewish identities that were far more comprehensive, primary, distinguishing, internalized, and rooted in Jewish peoplehood past and present. The vast middle group, how-

ever, molded a Jewish identity which, though generally positive, was not compelling. Although the Holocaust and the establishment of the State of Israel certainly affected Jewish identity, they did not alter its basic structure of place in the lives of most American Jews.

The key point is that the kind of Jewish identity described here is not a barrier to intermarriage, nor is intermarriage incompatible with that kind of Jewish identity. America is an open society, and the American ethos places overwhelming importance on individual choice in most things. While some group-based hurdles to individual choice remain, marriage across religious and ethnic lines is not discouraged. Rather, even in a period which has for the last two or three decades seen increasing emphasis placed on religion and on ethnic identity, interreligious and interethnic marriages are likely to be viewed as helping to demonstrate the compatibility of disparate traditions and the possibility of amity, even of love, across lines. Other factors encouraging intermarriage are improvement in the socioeconomic standing of Jews and increased acceptance of Jews as friends and potential marriage partners. As a result, most Jews have circles of colleagues, classmates, and friends that include non-Jewish peers. Inevitably, these relationships often lead to romance.

When subjective feelings of romance begin to grow between two people, they make judgments about whether their differences are numerous enough, large enough, or profound enough to be a barrier to marriage. If not, then the differences become the issues over which the compromises that are part of any marriage are worked out. Otherwise, one party or the other will end the relationship.

If Jewishness is seen to consist of some vague ideas about God's existence and providence, a number of almost universally endorsed ethical principles, two or three holiday dinners a year, a Hanukkah lamp in the house in December, brief attendance at synagogue services once or twice a year, the obligation to give some emphasis to Jewish causes among one's charitable donations, a somewhat higher and more consistent level of political support for Israel than other pro-Israel Americans offer, a political stance generally in the "liberal" camp, and pride in the Jewish achievements of the past, then Jewishness is compatible with intermarriage. No loving non-Jewish spouse is likely to find these behaviors and attitudes objectionable, and none of them requires the kind of joint participation by a spouse that a non-Jew cannot easily and readily provide. If we add some Jewish art and artifacts to the decorations of the home, a few hours of Jewish education for one's children for a few years, and some ceremonial recognition that those children are (at least "partly") Jewish, which is how ritual circumcision and Bar and Bat Mitzvah are sometimes conceptualized, exogamy still need not be an impediment to continued Jewishness. It is possible for a Jew to be proud of his/her Jewishness, enjoy it, consider it "important" and yet give it a form which is not pervasive enough and a content which is not distinguishing enough to interfere with a satisfying intermarriage. By contrast, when Jewishness or-

ders one's priorities, locates a person in history and society, provides basic goals and norms, furnishes the cultural material for the expression of "self," and marks out life's rhythm, then marriage to a non-Jewish spouse is inconceivable without either a total transformation of self or a severe narrowing of the normal marital relationship.

The intermarriage rate has risen as it has, not because Jews want to escape their Jewishness, but because they see intermarriage as quite compatible with their Jewishness. As Marshall Sklare explained, young Jews who marry non-Jews are likely to see themselves not as intermarrying, but merely as marrying.

Responses to Intermarriage

In another sense, however, intermarriage is not that simple. Resistance is likely to arise from several quarters. Parents and other relatives, synagogues and rabbis, and Jewish communal institutions can all be expected to express some level of opposition to intermarriage. The desire to include Jewish elements in the wedding ceremony or to raise children as Jews can elicit concern from the non-Jewish partner and/or his/her family. The many compromises that need to be made can be harder to work out than was anticipated. Normally suppressed stereotypes and resentments can emerge. Perhaps most indicative of the current mood regarding exogamy is the appearance in the last decade of several books of advice on how to carry out a successful intermarriage. These books usually deal with reactions of parents and other relatives, planning the wedding ceremony, the raising of the children, and ways of handling Jewish and Christian institutions. While some set forth the advantage of religious homogeneity and clarity in the home, others offer guidance on how to maintain active links to both traditions.

The responses of the organized Jewish community to intermarriage fall into two broad categories – opposition and outreach. As the 1990 CJF study shows, many Jews do not oppose intermarriage at all. Only 22% of the respondents who were born Jews and list Judaism as their religion said that they would oppose the marriage of their child to a non-Jew. The corresponding statistic for secular Jews is 4%. Among those Jews who do oppose intermarriage, either in general or in specific cases when they arise, there are several positions about what form opposition should take. Some Jews, though decreasing in number, still break all relationships with relatives and friends who marry non-Jews. Others reduce their relationships with people in mixed marriages, but do not sever them altogether. Yet others express opposition to intermarriage and try, with varying degrees of determination, to urge the Jewish partner to withdraw from the planned marriage or to bring about the conversion of the non-Jewish partner, but accept the marriage once it is a *fait accompli*.

Most Jewish institutions take the position that intermarriage should be discouraged but the intermarried should not be rejected. While that position has a tone that seems resonant with both Jewish principle and the ideology of individual

choice and universal human concern, it is hard to specify what coherent attitudes or concrete behaviors it implies.

Just as opposition takes many forms, so does outreach, and the two modes of response are usually in interplay with each other. Sometimes the effort to bring the non-Jewish partner to convert is explicit. Sometimes it is offered as one option. A frequently expressed view is that, where conversion does not seem immediately likely, it is important to maintain linkage to and positive feelings about the Jewish community in the hope that conversion may eventually ensue and that, even if it does not, there will be more readiness to transmit some Jewish identity to the children and a positive feeling toward the Jewish community by the children. In general, the more liberal the religious movement, the greater its emphasis on outreach relative to opposition as the proper response to intermarriage.

The religious movements deal with intermarriage and its consequences at four specific points. First, rabbis are often asked to officiate or co-officiate as intermarriages. The Orthodox and Conservative rabbinates refuse to participate in intermarriages. The Reform movement officially leaves the decision about participating in intermarriages to its individual rabbis, who are divided on this issue. Many liberal rabbis who will not take part in intermarriages themselves will, nevertheless, counsel interreligious couples or refer them to colleagues willing to be available.

The second issue that arises concerns the status of the children of intermarriage and of converts. Orthodoxy, following *halakhah*, defines Jewishness as acquired by being born to a Jewish mother or through conversion that meets the standards of traditional Jewish law. Since the Reform movement does not adhere to traditional Jewish law in conversion and Conservative rabbis are not uniformly careful in applying Jewish law, Orthodoxy generally does not accept conversions under non-Orthodox auspices. Those Conservative rabbis who do adhere to traditional law have similar problems with Reform conversions, but the Conservative movement's emphasis on pluralism makes it harder for them to be publicly explicit on this matter. The Reform movement's formal adoption of the principle of patrilineal descent, which it had practiced quietly for decades before declaring it officially, complicated the issue. By defining Jews differently from traditional Jewish law, it created a category of people who are Jewish by the standards of some Jews and not Jewish by the standards of others. Although there have long been such people, their number is growing and the resolution on patrilineality made the controversy over their status and the potential difficulty of their situation more severe. The reform rabbinat decided that its action was justified, nonetheless, as a way to compensate for demographic decline by broadening the definition of Jewry and by extending a welcome and a sense of legitimacy to people who, it felt, would otherwise most likely be lost to the Jewish community. The traditional view is that, since those people are not Jews, they are lost in any case.

The third specific issue with which synagogues must deal is the participation of non-Jewish spouses in synagogue ac-

tivities. Membership in synagogues is normally a family matter, and members can, of course, hold positions of leadership and play a number of roles in the ritual. Many intermarried Jews wish to join synagogues, and many synagogues, for outreach and other reasons, are willing, even eager, to welcome interreligious families. The consequence is that synagogues, especially but not only the more liberal ones, must make decisions about which roles can be played in leadership [and in ritual] by intermarried members and by their non-Jewish spouses.

Admission of children of intermarried couples to religious school, especially when those children are not Jewish also poses difficulties. Their parents may want to enroll them in order to make Jewishness an option or simply to give them some information about part of their family background. However, the curricular challenges of simultaneously teaching children from Jewish homes and from mixed homes are formidable.

Other organizations in the Jewish community must also delineate which roles, as participants and as leaders, can appropriately be played by intermarried Jews and, what is more difficult, by their non-Jewish spouses. Jewish organizations which cut across “movement” lines also have the problem that their members do not agree on which other members are Jewish.

Beyond the concerns about the status and roles of individual members, there is the problem of program. It cannot be entirely comfortable for a Jewish organization to deliberate about and then adopt a program whose goal is to discourage intermarriage when a not insubstantial proportion of its members and leaders are themselves intermarried or have accepted intermarriage among their children.

There is controversy over the proper balance between opposition and outreach as responses to intermarriage. Advocates of opposition argue that efforts must be made to strengthen a more comprehensive, distinctive, and rewarding Jewish identity in Jews and that, in the meantime, Jewish institutions and organizations should unambiguously convey Judaism’s position that only that kind of identity, in individuals and embodied in family life, is authentic and viable. Their acceptance of outreach is limited to attempts to bring non-Jewish spouses and prospective spouses to conversion. Advocates of outreach, by contrast, usually despair of changing the overall character of Jewish identity in America and predict that the intermarriage rate will not decline significantly as a result of any Jewish policy or program. Their approach to assuring Jewish continuity, therefore, rests on encouraging intermarried families to maintain positive links to the Jewish community and on increasing the number of people who are considered Jewish by expanding the lines of Jewish descent and broadening the criteria and methods by which people can be treated as Jews-by-choice. What balance between these two modes of response will ultimately be struck, and with what consequences, remains to be seen.

[Mervin F. Verbit]

JEWISH OUT-MARRIAGE: A GLOBAL PERSPECTIVE

The frequency, determinants, and consequences of marriages between Jews and non-Jews have long been a central topic of social-scientific research and community debate. Many observers consider the recent trends in Jewish family formation with great concern and a leading factor in the quantitative and identificational erosion of Jewish population. Others view the same trends as an opportunity for community growth and expansion. Both approaches may be using sophisticated theories, concepts, and analyses, and interestingly, the same data. The main debate revolves around the paradigms of Jewish assimilation and erosion versus resilience and revival. The main trends call for examination in broad comparative context, outlining the specifics of local situations.

HISTORY. In long-term historical perspective, Jewish marriage patterns underwent different stages. During the early formative periods, the ancient Hebrew tribes were small and geographically mobile, and may have frequently incorporated individuals from the proximate surrounding. With the codification of Jewish identification in late antiquity, Jewish society entered a long period of prevalent segregation – initially self-imposed, and much later forcefully imposed by others. Contemporary studies of population genetics point to the overall similar origins of Jews from disparate continents and countries, thus testifying to very limited marital interaction between Jews and others throughout the Middle Ages and early modern period.

From the 19th century but especially since the second half of the 20th, Jewish society underwent transformations which completely revolutionized cultural identities and socioeconomic structures. International migration, extensive urbanization, occupational mobility, and secularization were some of the main agents of change, generally evolving from traditionalism to modernity, and from segregation to openness, though counter-streams of search for more traditional cultural and social behaviors also appeared occasionally.

The transition, among many, of Jewish identity from mainly religious to ethnic-national was one of the main consequences of social change in the context of political emancipation of the Jews and general modernization. In the Europe of the 19th century, the quest for integration into general society led at least 200,000 Jews to opt out of Judaism into the prevalent Christian denominations. More recently, the *rites de passage* inherent in changing one’s own religious allegiance ceased to be a prerequisite for acceptance by the public at large, and moving out of Jewishness tended to become an expression of the freedom of choice in growingly individualistic societies.

Since 1948, the composition of world Jewry was crucially altered with the establishment of the state of Israel and the rapid growth of its large and densely interacting Jewish population which constituted a majority of total society. In contrast, Diaspora communities typically comprised smaller Jewish minorities, well integrated in a non-Jewish societal context, and eventually shrinking. Historically and in con-

temporary times, the Israel and Diaspora contexts generated entirely different opportunities for Jewish community life and identity. The low frequency of out-marriage in Israel had a counterbalancing effect on the leading global trend to greater integration and assimilation among Jews and non-Jews. More recently, increasing globalization of society created growing opportunities for interaction among different social and cultural groups, including Jews in Israel.

CONCEPTS. *Determinants.* Marriage and out-marriage in particular, reflect three basic factors, each widely varying over time and across individuals and sub-groups within the same Jewish community: (a) *Desirability*: the normative centrality of the act of marrying, and the choice of a partner from within or outside the group of origin. (b) *Feasibility*: the economic means and resources available to form a new family, and more specifically an in-marriage or an out-marriage. (c) *Availability* of appropriate marital partners, where age, sex, and marital status composition determine the choice of relevant partners to choose from within and outside the group.

Terminology. *Intermarriage* is a broadly used term but a number of distinctions should be kept in mind. *Out-marriage* refers to marrying someone who was born in a different group; *conversionary out-marriage* and *conversionary in-marriage* apply if conversion happens out of or into the group studied. In case each partner keeps to his/her original group identity, *mixed-marriage* applies. In more technical language we speak of *homogamy* (sameness) versus *heterogamy* (otherness). *Endogamy* and *exogamy*, respectively, indicate the same concepts but in a normative, ideal rather than descriptive sense.

Sources. Retrospective information often stems from general sources such as population censuses and general surveys that were not designed specifically for the purpose of investigating out-marriage. *Vital statistics* provide information on current marriages. *Specialized surveys* may provide a richer array of variables on existing households. Each of these sources has advantages and disadvantages regarding representation, coverage, and depth of questioning. Sources tend to be different in each country, when they exist at all.

Measurement. One should distinguish between *individual* versus *couple* measurement. If there are three Jews, two married among themselves, and one married a non Jew, we have one individual Jewish among three that out-married (33%), and one Jewish couple out of two that is a mixed-marriage (50%). These are both valid statistics but they are often mistakenly mixed up. Another problem is that measurement may refer to *all existing couples* in a certain population, regardless of age, or only to the younger *couples married in recent years*. In the 20th century since the trend to out-marry has been on the increase, later rates of out-marriage are significantly higher than the former. Finally, measurement may focus on the current or past marital status of people who were *born Jewish*, or on those who are *Jewish now*, and the results may vary accordingly. This distinction was at the core of an intense discussion

about the results and interpretation of the 1990 U.S. National Jewish Population Survey (NJPS).

MAIN TRENDS. At the beginning of the 20th century, rates of Jewish out-marriage were generally low or very low. In many countries with large Jewish communities out-marriage still was nearly nonexistent, portraying nearly complete socio-cultural segregation between Jews and the majority of society. Few exceptions appeared in highly acculturated and veteran communities such as Italy, Germany, or the Netherlands, or even more so in distant and relatively isolated outposts with small Jewish populations such as Australia and New Zealand.

Over time, growing differentiation in the propensity to out-marry emerged across Jewish communities. The table presented here reports a classification of Jewish populations, according to the frequency of individual out-marriage in each country around 1930 and around 2000. Countries tend to concentrate at certain levels based on the respective histories and general levels of modernization, and different types of legal regimes in the respective countries allowing or not the opportunity for marriage across religious lines. A steady trend appears outlining a move from lower to higher rates of out-marriage.

In 1930, most Jews in the world lived in countries where the rate of out-marriage was below 5% of individuals. These included most of the large communities in Eastern Europe, most communities in the Middle East and North Africa, including Palestine, but also large and modern communities in the United States, the U.K., Latin America, and South Africa. Jewish communities with an out-marriage rate between 5% and 15% included France, and the other large communities in Eastern Europe such as the Soviet Union. No community stood above an out-marriage rate of 35%.

In 2000, a majority of world Jewry lived in countries where the out-marriage rate was higher than the 35% threshold. Jews in Israel were virtually alone still below a 5% out-marriage rate. Jews living in the Judea, Samaria and Gaza territories were probably the only group with less than 1% out-marriage. The out-marriage rate of the main part of Israel within the pre-1967 "green line," approaching 5%, reflected the presence and social absorption of new immigrants mostly from the FSU lacking a formal Jewish status. Many of these actually performed their marriage ceremonies abroad. Mexico was the largest Diaspora Jewish community with an out-marriage rate estimated at less than 15%. Communities in Australia, Canada, and Turkey had an out-marriage rate of 25% to 35%. A rather large share of world Jewry, including France, the U.K., and the main Latin American countries experienced out-marriage rates between 35% and 45%. The Jewish community in the U.S., still the largest in the world, had moved to above 50%. Out-marriage rates for Jews in the European parts of the FSU were above 65%.

As a consequence of these trends, the worldwide average level out-marriage rate passed from 5% around 1930 to 31%

around 2000. The same average computed for Jews in the Diaspora only, without Palestine/Israel, passed from 5% in 1930 to 48% in 2000. While this quite dramatic increase underscores the nearly irreversible trend toward social integration and acceptance of Jews among general society, it should be stressed that the rising share of Israel and the parallel shrinking of the Diaspora in the world Jewish population tends to reduce significantly the world out-marriage average.

CORRELATES, DETERMINANTS, AND CONSEQUENCES. *Societal models.* At least in the past, ethnocentric and pluralistic societies coped quite differently with the issue of cultural and religious diversity, which in turn affected the amount of pressure to conform exerted on Jewish minorities. Out-marriage trends, in general and within Jewish society, was significantly associated with these different types of societal configurations.

Jewish community models. Some of these are more central and more comprehensive, while some others are quite dispersed. The amount of participation of Jews in Jewish community life is usually different across countries. This may reflect certain general assumptions in society but also reflects the specificities of the history of particular Jewish communities.

Sameness and otherness. Out-marriage in terms of religion or ethnic identity is also associated with other elements of otherness among the partners. Heterogeneous couples in terms of Jewish identification tend also to be more different in terms of other aspects of their socio-demographic profile, such as education or age.

Gender. Women in the past had lower rates of out-marriage, due probably to the more limited set of opportunities they had – less education, less participation in the labor force, more limited and confined leisure life. However, through the emancipation of women and their achieving education and jobs, the differentials narrowed very significantly. By the 1980s-1990s the gender gap was disappearing and the previously lower out-marriage rates of Jewish women converged to the higher rates of men.

Age. The structure of the marriage market – that is, how many available mates there may be – may sometimes be unbalanced, to the point that people may be left with the alternative not to marry at all, or to out-marry. Out-marriage tends to occur at a later age than in the case of in-marriage.

Socioeconomic differentials. In the past, out-marriage was strongly related to upward social mobility, and was more frequent among the better educated, wealthier, and more socially mobile. More recent data suggest that, on the contrary, out-marriage seems to be related to lower education, and lower social class – which indeed is quite infrequent among Jews. It is likely that the high cost of Jewish life causes some people to be marginalized vis-à-vis the opportunities of Jewish education, leisure, and culture. Those will consequently live mostly in a non-Jewish context.

Residence. Size and density of a Jewish community can be importantly correlated to marriage opportunities. The relation of out-marriage to place of residence reflects both the cause and the consequence. Internet and distance connections may have an impact on these relations in the future.

Jewish identification. This is the most important predictor of in- versus out-marriage. We have good evidence that Jewishness of the parental home is probably the most powerful factor, followed by formal Jewish education received. Patterns of socialization that begin very early in life appear to have a crucial effect on subsequent patterns of affiliation, social networks, and the subsequent opportunities for marital choice.

Marital stability. Out-marriages are more unstable than in-marriages. The reasons may be complex. The couple's assortment in re-marriages tends to be often of the opposite sign than in first marriages.

Acceptance. A circular relation emerges between frequencies of out-marriage and its social acceptance. Something that is more frequent is more acceptable, and something that is more acceptable becomes more frequent. Attitudes tend to be more open to intermarriage than actual behaviors.

Transmitted identity. Theoretically, if one half of the children of out-marriages are affiliated with one side and one half is affiliated with the other, there is no gain and no loss to either side. In reality, according to nearly all research evidence available, the Jewish side has received less than half of all the children of out-marriages. During the 1990s, less than 20% of the children of out-marriages were affiliated with the Jewish side both in the U.S. and in the Russian Republic. In the U.S., Canada, and other English-speaking countries, the mother is the dominant parent in transmitting a group identity to the children. If the mother is Jewish, the child tends to be Jewish, and if the mother is not Jewish the child tends to be non-Jewish. This conforms to the Jewish *halakhah*. In other societies, such as Latin American or Southern and Eastern European countries, where the father is the dominant parent in the allocation of the child's public identity, children mostly follow the father's identity.

IMPLICATIONS. *Second and Third Generation.* While the evidence is not massive, it points to a spectacular increase in the rate of out-marriage among the children of out-marriage, even if they have grown up as Jews. Possibly because of the model gauged from their parents, children may consider out-marriage a normal option. The children's social networks, too, tend to be more open to people of different backgrounds. Out-marriage in effect becomes very high in the 2nd generation.

Collective consequences. Broader implications affect the Jewish collective beyond individual experiences. What out-marriage does to the Jewish people needs to be considered in terms of the major actors and processes such as Israel-Diaspora relations, consensus on core values, polarization among the Jewish polity, and even Jewish theology. Inasmuch as it is perceived

as contradicting prevailing norms, besides its likely erosive effects on population size and composition, out-marriage is a factor of internal tension and stress. This is a fundamental question for Jewish policy making, and one of the major challenges world Jewry faces at the beginning of the 21st century.

MIXED SPECIES (Heb. כִּלְיִים; *kilayim*), prohibition mentioned twice in the Bible. Leviticus 19:19 states: “Ye shall keep my statutes. Thou shalt not let thy cattle gender with a diverse kind; thou shalt not sow thy field with two kinds of seed; neither shall there come upon thee a garment of two kinds of stuff mingled together.” Deuteronomy 22:9–11 states: “Thou shalt not sow thy vineyard with two kinds of seed; lest the fulness of the seed which thou hast sown be forfeited together with the increase of the vineyard. Thou shalt not plow with an ox and an ass together. Thou shalt not wear a mingled stuff, wool and linen together.” From these two passages the sages deduced six types of mixing of species which are forbidden: the mixing of seeds; the grafting of different species of trees and vegetables; the mixing of seed in a vineyard; the hybridization of domestic and wild animals; plowing or driving with domestic or non-domestic animals of different species; and the mixing of wool and linen (*sha’atnez).

The prohibitions against mixing species are defined in Mishnah *Kilayim* 8:1 “It is forbidden to sow diverse kinds in a vineyard or to suffer them to grow, and it is forbidden to have any benefit from them. It is forbidden to sow diverse kinds of seed or to suffer them to grow, but they may be eaten and certainly benefit may be derived from them. Mixed materials are permitted for all purposes, only the weaving of them being forbidden. Hybrid cattle may be reared and maintained; it is forbidden only to breed them.” The many *halakhot* connected with the laws of mixed species are taught in the Mishnah, Tosefta, and Jerusalem Talmud of the tractate *Kilayim. The chief problems relating to those laws are detailed below.

The Mixing of Seeds

The prohibition applies to the sowing together of two kinds of grains if they are regarded as belonging to different species (see below), or of grain and legume, as well as of other edible plants. A lenient ruling was given regarding vegetables, which were customarily sown in small beds, and it was permitted to sow five species at specified distances from one another in a bed one cubit square and with variations even 13 species (Kil. 3:1). According to most authorities, it is obligatory to separate fields sown with different species by the space of a *rova* (104 square cubits) or of three furrows (two cubits). In the opinion of some commentators, including Solomon Sirillio and Elijah Gaon of Vilna, the measures mentioned in the Mishnah (Kil. 2:6–10) refer to the size of the plot near which a different kind may be sown (and not to the space by which they must be separated), since plots of this size and larger have the appearance of separate fields, and there is no fear that they may be thought to have been planted indiscriminately, nor is there any risk that the different species will derive sustenance from one another. The prohibition of mixed seeds applies only in Erez Israel, while the prohibitions of the other mixed species are of universal application (Kid. 39a).

The Mixing of Trees

This is not mentioned explicitly in the Bible but is inferred from the juxtaposition of verses (Lev. 19:19), “Thou shalt not let thy cattle gender with a diverse kind; thou shalt not sow thy field with two kinds of seed,” which were interpreted to mean, “Just as the prohibition of cattle refers to mating, so does that of the field to grafting” (Kid. 39a), i.e., it is forbidden to graft two plant species in the same way as it is forbidden to mate two animal species. Some inferred the prohibition of grafting plants of different species from the beginning of the verse (Lev. 19:19): “Ye shall keep my statutes”; *Sifra*, *Kedoshim* (Perek 4:17) and the Jerusalem Talmud (Kil. 1:7, 27b) explain that the word *hukkah* (“statute”), is connected with the root *hakok* (“to carve”), i.e., that it is forbidden to change by grafting the original form “carved out” by the Creator at Creation. The prohibition applies to grafting a tree onto a tree, a vegetable onto a tree, and a tree onto a vegetable (Kil. 1:7). However, it is permitted to plant different trees side by side and to sow vegetables or grain among trees.

Mixing in the Vineyard

The laws of mixed species in the vineyard are stringent and complex, and almost half of the tractate *Kilayim* is devoted to them. The Bible (Deut. 22:9) rules that the resulting vines and seed become forfeit, and it is forbidden either to eat them or to benefit from them. The prohibition applies to grain but not to any trees among the vines. Concerning vegetables and other plants there are differences of opinion in the Mishnah and Talmud as to which are forbidden by biblical law and which permitted. A distance of four cubits must be allowed between a vineyard and any species forbidden to be sown there. In the case of a single vine, however, it suffices to leave a distance of three or six handbreadths (Kil. 6:1).

Mixing of Cattle

According to the Mishnah (Kil. 8:1) “they may be reared and maintained, and it is only forbidden to breed them.” “To rear and maintain” means that different species of cattle may be reared together without the fear that they will crossbreed. Some explain it to mean that the product of crossbreeding (e.g., a mule) may be reared. This prohibition applies to domestic and wild animals and to birds (BK 5:7).

Plowing and Driving with Two Species

The Bible forbids only plowing with an ox and an ass. The rabbis, however, explained that “Scripture spoke what was customary,” i.e., people were accustomed to plow with an ox or an ass, but the prohibition applies equally to plowing with any two other species and to riding, leading, and driving with them (Kil. 8:2).

Problems of Definition

In the discussion of the laws of mixed species the problem of defining like and unlike species arises. Although criteria for determining whether a plant or animal belongs to one species or another are laid down, an examination of the pairs enumerated in the Mishnah that do or do not constitute mixed species shows that there is no identity between the term “species” used in the law of mixed species and the term as applied by the modern system of botanical and zoological classification. Mixed species were determined by a tradition crystallized in the course of many generations (cf. Tosef., Kil. 1:3–4). Indeed two plants which are now classified as belonging to different species or even to different genera are reckoned as the same species for the law of mixed species (e.g., wheat and tares; Kil. 1:1). In contrast, however, different strains of the same species are regarded as different species (Kil. 1:6). With regard to mixed seeds an *amora* in the Jerusalem Talmud (Kil. 1:5, 27a) summarizes: “in some cases [the form of] the fruit is the determinant, and in others the leaf,” while another *amora* notes: “in some cases the taste of the fruit is the determinant.”

One of the assumptions in the prohibitions of mixed trees is the possibility of crossbreeding by grafting the scion of one species onto the stock of a second. Thus it is pointed out in the Jerusalem Talmud that grafting the almond onto the terbinth produces the *pistachio, a fruit similar to that of both

these species but systematically very far removed from the almond. It is almost certain that a graft of such a nature will not take, and it is certain that a species which has the median characteristics of the scion and the stock cannot be obtained by grafting. The early scholars saw an analogy between the grafting of plants and the crossbreeding of animals, but this latter could be compared to the cross-pollination of plants, a technique unknown to the ancients.

These views on grafting stem from the once-accepted assumption that environmental factors were liable to change the hereditary characteristics of the creature (see *Biology). The opinion that new species could be created by grafting belongs to agricultural folklore, and also to Greco-Roman "science," and from there entered into rabbinic literature. Because of the prohibition of mixed species, Jews were unable to test the truth of this notion. Many *halakhot* on the subject commence with the formula: "If a gentile grafted" species A with species B, then species C is produced. It should be stressed, however, that *halakhot* of this nature, common in the Tosefta and the Jerusalem Talmud, were not incorporated in the Mishnah (see *Kilayim).

Reasons for the Precept of Mixed Species

Some of the reasons given for the prohibition stemmed from the above-mentioned belief that the effects of environmental factors are hereditary. To the same category belongs the reason for forbidding change in the order of Creation. Naḥmanides gives this reason in his biblical commentary (to Lev. 19: 19), adding that if the crossbreeding of a horse and an ass produces a mule, which is a miserable creature that cannot beget, so too when mixed species of trees are grafted, "their fruit does not grow thereafter." Maimonides (*Guide* 3, 49) explains that the man who couples creatures of different species defies the laws of nature and of ethics, and similarly in the grafting and mixing of plants. It was part of the false beliefs of idolators that this served as a specific for fertility (*ibid.* 3, 37). That crossbreeding was unnatural was an early belief: Josephus (*Ant.*, 4:229) explained that "nature delighteth not in the conjunction of things dissimilar." Rabbenu Nathan, *av ha-yeshivah* (Erez Israel in the 11th century), gives an agricultural reason, that one species prevents the development of the adjacent one (commentary to Mishnah Kil. ch. 1). A similar reason for the prohibition of mixed seeds in the vineyard was given earlier by Philo: "since as a result of it too great a burden is put upon the earth" (*Spec.* 4:211). Some Greek and Roman agricultural writers laid down that summer plants which impoverish the soil should not be sown in the vineyard (Pliny, *Naturalis* 18, 101) and that it is forbidden to sow intermediate plantings in a vineyard (*Geoponica* 5, 11).

As against those who sought to rationalize the prohibition, Rashi concluded: "These statutes are a royal decree, for which there is no reason." In point of fact it is impossible to determine the reasons for the prohibition. Post factum, however, it seems that, as a result of the care taken by Jews in this matter, the fields were kept free of weeds and the purity of plant spe-

cies was preserved. It is also possible that it was a contributory factor to the success of Jewish agriculture in Erez Israel.

In the present, prohibitions of mixed species have raised a number of problems for farmers who adhere to these laws. Thus they are prevented from sowing vetch with grain as fodder in order to prevent the vetch from trailing on the ground. The problem was solved by the introduction of strains of vetch which do not trail. In connection with the prohibition against grafting trees of different species, experiments have taken place on stocks belonging to the same species as the scion, but so far no satisfactory solution to the matter has been found.

[Jehuda Feliks]

MIZMOR LE-DAVID (Heb. מִזְמוֹר לְדָוִד; "A Psalm to David"), a frequently occurring superscription to a number of psalms whose authorship is ascribed to King *David. Many of them form part of the traditional liturgy. Among them are (1) Psalm 29 ("Ascribe unto the Lord, O ye sons of might"), the last of the six psalms chanted at the Sabbath eve service at which the Sabbath is welcomed; and on Sabbath mornings, after the conclusion of the *Torah reading, when the Torah scroll is carried back in solemn procession to the *Ark. (2) Psalm 23 ("The Lord is my shepherd, I shall not want"), which in the Sephardi ritual is sung prior to the *Kiddush on Sabbath morning, and in the Ashkenazi ritual, on Sabbath afternoon at the third meal (*Seudah Shelishit). According to one talmudic opinion (*Pes.* 118a), it was also sung as a festive hymn at the Passover *seder.

BIBLIOGRAPHY: JE, 8 (1904), 624–5; Elbogen, *Gottesdienst*, index s.v. Psalm 29.

MIZMOR SHIR LE-YOM HA-SHABBAT (Heb. מִזְמוֹר שִׁיר לְיוֹם הַשַּׁבָּת; "A Psalm, a Song for the Sabbath Day"), the superscription of Psalm 92 which, according to the Talmud (*Tam.* 7:4, RH 31a, Sof. 18:1) was the Sabbath hymn chanted by the levites in the Temple. The Psalm forms part of the Sabbath eve service in which the Sabbath (*Kabbalat Shabbat) is welcomed. It is also part of the *Pesukei de-Zimra and the daily hymn at the conclusion of the Sabbath morning service, as well as in the Sabbath *Minḥah* service in the Sephardi and some Ashkenazi rites. Some aggadic sources ascribe its authorship to Adam who pronounced it in his great joy for the gift of repentance. In the course of time, it was forgotten until Moses reintroduced it with ten other psalms (*Gen. R.* 22, end; *Mid.* Ps. 90:30).

MIZPAH (Heb. מִצְפָּה; "lookout point"), moshavah in northern Israel, W. of Tiberias, founded in 1908 by Second *Aliyah pioneers from Russia, on *Jewish Colonization Association (ICA) land. For many years the small village, based on mixed farming, preserved its original layout of closely grouped farm-

steads interconnected by a surrounding basalt wall. It only began to expand after it was connected to a water line in 1979, its population increasing from 39 in 1968 to 167 in 2002.

[Efram Orni / Shaked Gilboa (2nd ed.)]

MIZPEH or **MIZPAH** (Heb. מִצְפָּה, מִצְפָּה, מִצְפָּה; “lookout point”), the name of several places mentioned in the Bible.

(1) A city belonging to the tribe of Benjamin (Josh. 18:26), the best-known place with the name of Mizpeh. The Israelites gathered there to punish the tribe of Benjamin after the outrage committed by the men of Gibeah (Judg. 20–21). Samuel assembled the people to fight against the Philistines and judged them in Mizpah (1 Sam. 7:5 ff.; 10:17). Asa of Judah fortified the place (1 Kings 15:22; 11 Chron. 16:6). Gedaliah, the son of Ahikam, established the capital of Judah in Mizpah after the fall of Jerusalem and was later assassinated there (11 Kings 25:22 ff.; Jer. 40–41). It was a district capital in the time of Nehemiah (Neh. 3:7, 15, 19). The place of origin of Simeon of Mizpeh (Pe’ah 2:6) is uncertain.

The ancient site is identified with Tell al-Naşbeh about 8 mi. (13 km.) north of Jerusalem, following A. Raboisson (*Les Maspéh*, 1897). It was excavated from 1926 to 1936 by W.F. Badè on behalf of the Pacific Institute of Religion in Berkeley. The first settlement there dates to the Early Bronze Age. Its main period of occupation, however, belongs to the Iron Age. The excavations uncovered the main part of the city, which contained many four-room houses typical of the period, some unusually large and built with pillars. Outstanding is a ninth-century wall and gate, evidently built by Rehoboam, which had been preceded by a tenth-century casemate wall. The mound was occupied until the Hellenistic period. A number of tombs uncovered there date from the Canaanite to the Hellenistic periods and were very rich in finds.

Hebrew seals and seal impressions were particularly abundant on the site. A seal with the inscription “Jaazaniah servant of the king” is ascribed by some to the Jezaniah who met with Gedaliah at Mizpah (Jer. 40:8; 42:1). A special seal from the Persian period reading *mšh* (Mozah?) is interpreted by various scholars as an abbreviation of Mizpeh (*mš[p]h*).

(2) The land of Mizpah (Josh. 11:3) or the valley of Mizpeh (Josh. 11:8) in the north of the country below the Hermon, an area settled by the Hivites. It was probably located in the region of Marj al-‘Ayyūn (‘Iyyon), north of Metullah.

(3) A place in Gilead which marked the boundary between the territories of Laban and Jacob (Gen. 31:49). It is perhaps identical with Ramoth-Gilead, a border stronghold between Aram and Israel in northern Gilead (1 Kings 22:3).

(4) The hometown of *Jephthah, also in Gilead, but farther south than (3) above. The Israelites gathered there before setting out for battle against the Ammonites (Judg. 10–11). It is identical with Ramath-Mizpeh in the vicinity of Mahanaim of Joshua 13:26. It has been tentatively identified with Khirbat Jal’ad south of the Jabbok.

(5) A city in the territory of the tribe of Judah in the vicinity of Lachish (Josh. 15:38). Eusebius (Onom. 130:2 –

Masseba) describes it as a village near Eleutheropolis (Bet Guvrin).

(6) A Mizpeh of Moab (Rujm al-Mushayrifa?) is mentioned in 1 Samuel 22:3.

(7) A Mizpeh (Massepha) at which Judah Maccabee assembled his army against Gorgias (1 Macc. 3:46) is probably identical with Nabi Samu’il northwest of Jerusalem.

[Michael Avi-Yonah]

MIZPEH RAMON (Heb. מִצְפָּה רָמוֹן), development town in S. Israel, in the Negev Hills, 54 mi. (87 km.) S. of Beer-sheba toward Eilat. Founded in 1954, initially as a labor camp of the workers employed in the construction of the highway, it became an “urban cooperative,” and when this dispersed seven months later, it was turned into a development town. At the beginning conditions were extremely hard; water had to be brought in trucks from the north, and communications were frequently cut off when the highway to the north was blocked by floods. In spite of these difficulties the town absorbed new immigrants from North Africa and Europe and in 1968 had a population of 1,470. In 1964 Mizpeh Ramon received municipal council status and in 2002 its population was 4,820, occupying an area of 33 sq. mi. (86 sq. km.).

Although servicing the central Negev, the opening of the Sedom-Eilat road increased its isolation and contributed to the town’s high unemployment rate and low personal income, though efforts have been made to develop tourism. In recent years, artists from all over the country have established their residence there, and Israel’s largest observatory, belonging to Tel Aviv University, is located in the town. The name means “Ramon Lookout” and refers to the town’s site on the rim of the Ramon Crater, which affords a remarkable view of Negev desert landscape.

MIZRA (Heb. מִזְרָה; “sown field”), kibbutz in northern Israel, north of Afulah, affiliated with Kibbutz Arzi Ha-Shomer ha-Za’ir. It was founded in 1923 by pioneers from Central Europe, who were later joined by others. Farming was highly intensive, including fruit orchards, citrus groves, field crops, and dairy cattle, and the kibbutz also ran a meat factory and a plant producing hydraulic presses. More recently, Mizra began to develop a tourist industry, including a hotel, restaurant, and small museum documenting the history of the kibbutz. In 1969 Mizra had 610 inhabitants; in 2002, 722.

[Efram Orni / Shaked Gilboa (2nd ed.)]

MIZRACHI (term coined from some of the letters of the Hebrew words *merkaz ruhani*, spiritual center), religious Zionist movement whose aim was expressed in its motto: "The Land of Israel for the people of Israel according to the Torah of Israel" (coined by Rabbi Meir Berlin – Bar-Ilan). Mizrachi was founded in 1902 as a religious faction in the World Zionist Organization. The name was first used by Samuel *Mohilewer, an early leader of *Hibbat Zion, to express the idea that the Torah should be the spiritual center for Zionism.

The Beginning of Mizrachi

Many religious Jews, including famous rabbis, joined the movement of political Zionism, which worked toward the establishment of a Jewish state in the Land of Israel. Among the first to join was Rabbi Isaac *Reines, who responded to Theodor *Herzl's call and devoted his energies to spreading the idea of a national renaissance among Orthodox Jews. Reines believed that the Zionist movement must be dedicated exclusively to a political goal, and he led the fight against the inclusion of cultural activities in the Zionist program. After the Fifth Zionist Congress, however, when the strength of the "cultural" camp grew and official permission was granted to establish factions (federations) within the framework of the Zionist Organization. Reines decided to found a federation of religious Zionists. Toward this end, he convened the founding convention in Vilna on March 4–5, 1902, and it established the national-religious organization within the Zionist Organization. At the suggestion of Rabbi Abraham *Slutsky, the organization was called Mizrachi.

An outstanding participant at the founding convention was Rabbi Ze'ev *Jawitz, who was charged with composing the organization's first manifesto. Two groups clashed at the founding convention: the "political" faction, which called for the preservation of the purely political character of the Zionist movement and opposed the decision of the Fifth Zionist Congress (1901) obligating the Zionist Organization to include cultural activities in its program; and the "cultural" faction, which demanded that Mizrachi, as a "spiritual center," influence the Zionist movement and its work in the Land of Israel in its traditional-religious spirit. The Mizrachi program, which was accepted by the majority of the participants at the founding convention, stated that the Zionist Organization should not engage in activities that do not have a direct relationship to Zionism, and it was stated in the manifesto that Mizrachi should try "to gather around it all those Zionists who wish to purge practical Zionism of any alien element that is not directly related to political and practical Zionism." These decisions seem to reveal the victory of the "political" faction. Jawitz, however, who formulated the manifesto, succeeded in reflecting in it both viewpoints and thus satisfied both trends. An opening was thus created for cultural activities, albeit only in the framework of branches, "in line with local conditions and in the spirit of Orthodoxy."

A year after its establishment, Mizrachi's second conference was convened in Lida on March 22–24, 1903. During its

first year, Mizrachi succeeded in building up 210 branches in Russia alone (which then included Poland, Lithuania, Courland, etc.). Mizrachi societies were also established in Galicia, Romania, Austria, Hungary, Germany, England, and Switzerland. First attempts were made to organize Mizrachi in Erez Israel, and two-and-a-half years after it was founded, its branches also became active in Western Europe and in the United States. The first world conference of Mizrachi took place, with the participation of about 100 delegates, in Pressburg, Hungary (now Bratislava, Slovakia), on Aug. 21–23, 1904. The conference laid the foundation for the Mizrachi World Organization. Reines was the conference's chairman and delivered the opening address in Hebrew. Other speakers included Nehemiah *Nobel, among the great rabbis of Western Europe; Jawitz; Rabbi Nahum Grinhaus from Troki; and Rabbi Judah Leib Fishman (*Maimon). The movement's program was summed up at the conference as follows:

(1) Mizrachi is an organization of Zionists who follow the *Basle Program and desire to work for the perpetuation of Jewish national life. Mizrachi sees the perpetuation of the Jewish people in the observance of the Torah, Jewish tradition, and the *mitzvot* and the return to the land of its forefathers.

(2) Mizrachi will remain within the framework of the Zionist Organization, in which it will struggle for its opinions and views. However, it will create a special organization of its own for its religious and cultural activities.

(3) The purpose of Mizrachi is to realize its goals by employing all the legal means at its disposal to explain its ideas to all Orthodox circles, by creating and distributing national-religious literature, and by educating youth in the spirit of its ideals and programs.

From Crisis to Expansion

At the Tenth Zionist Congress, which took place in Basle in 1911, the question of cultural work was again raised, and a bitter battle ensued between its advocates and opponents. In order to establish its stand on the question, Mizrachi called a meeting before the congress and decided to light against the inclusion of cultural work in the Zionist program, but not by threatening secession. The majority at the congress, however, decided to include cultural work in the framework of the Zionist Organization's activities. Consequently, all the Mizrachi delegates walked out of the hall to demonstrate their opposition to the decision. The fifth world conference of Mizrachi was held in Berlin, immediately after the Zionist Congress, to formulate a stand on the decision of the Zionist Congress about cultural activities. The delegates from Russia and Poland were in favor of a struggle within the Zionist Organization using all possible means short of creating a split, for any schism would be a tragedy for the entire Jewish people and the national renaissance. On the other hand, representatives from the center in Frankfurt and some of the Swiss and Hungarian delegates were in favor of withdrawing from the Zionist Organization. The Berlin conference finally decided against leaving the Zionist Organization while conducting the

struggle within its ranks. This decision brought about a rift in the ranks of Mizrachi, and a number of its leaders, including members of the head office in Frankfurt, left the organization. As a result the center of Mizrachi was moved to Altona, near Hamburg. Louis Frank was elected chairman and was later the second president of World Mizrachi.

During the term of the Hamburg executive, the central office of Mizrachi was established in the Land of Israel under the direction of Rabbi Fishman. Also during the Hamburg period, Rabbi Meir Berlin (Bar-Ilan) began working as the general secretary organizer of the Mizrachi World Organization. He left Lithuania for Berlin and there published the weekly *Ha-Ivri*. When Rabbi Berlin entered office, Mizrachi received a great impetus in its work and became a strong and influential factor both in the Zionist movement and among religious Jewry. Under his leadership, the first conference of Mizrachi to take place in the United States was convened in 1914, in Cincinnati, Ohio, and he succeeded in making the movement into an important factor in the lives of American Jewry and in the American Zionist movement. Rabbi Berlin was joined there by Rabbi Fishman, who had been expelled from Erez Israel during World War I by the Turkish authorities and who added projects of his own and the atmosphere of Erez Israel to the American movement. The first world conference of Mizrachi that took place after World War I (Amsterdam, Jan. 14–15, 1920) decided to transfer the seat of the world center to Jerusalem. Mizrachi was thus the first Zionist party to establish its center in Erez Israel (and specifically in Jerusalem). In 1923 Rabbi Berlin, who was the leader of the movement and expanded its activities, settled in Erez Israel. Some time later he was also elected president of the world organization and remained in this position until his death.

Mizrachi in Erez Israel

After fundamental organizational preparation within circles of the old *yishuv* and organizational work that began in March 1918, including the foundation of branches in various areas of settlement in the country and the establishment of a “temporary center” in Jaffa, the foundations for Mizrachi were laid in Erez Israel. Its first conference was held on Sept. 2, 1918, and since then Mizrachi has become a political and cultural force in the country. Among the founders of Mizrachi in Erez Israel were Rabbi Ben-Zion *Ouziel, then the rabbi of Jaffa and afterward the Sephardi chief rabbi (*rishon le-Zion*), and Moshe *Ostrovsky (ha-Meiri), then the rabbi of the settlement of Ekron and afterward a member of the Va’ad Le’ummi. Rabbi Fishman participated at the second national conference (September 1919) after returning to the country from his absence during the war. Mizrachi reached the height of its development with the transfer of its world center to the country and especially after Rabbi Berlin settled there in 1923. During certain periods, Rabbi Berlin also served as the chairman of Mizrachi in the country.

As early as its first conference in Erez Israel, Mizrachi raised the matter of establishing the offices of the rabbinate

as one of the major points on the agenda. It subsequently devoted much effort to ensure the success of the conference to establish the chief rabbinate of Erez Israel, which took place through the initiative of Rabbi Abraham Isaac *Kook in Jerusalem in February 1921. After great efforts, in December 1919 Mizrachi succeeded in acquiring the recognition of the Zionist institutions for its trend of religious education as a part of the educational system of the Zionist Organization.

With the end of World War I and the publication of the *Balfour Declaration, the Third Aliyah began to arrive in Palestine and brought with it members of Zēirei Mizrachi, who strove to build up the land on the basis of pioneering labor and religious renewal. As young pioneers they called for “personal fulfillment,” i.e., for religious Zionists to settle in Erez Israel and build it in the spirit of the Torah. Their vision was expressed in the short motto “*Torah va-Avodah*,” which became the basis for the religious labor movement and the establishment of *Ha-Po’el ha-Mizrachi in Erez Israel. The idea struck roots in the Diaspora as well and became the slogan of the mass movement, called *Torah va-Avodah*, throughout the world. It was an active participant in the Jewish Agency prior to 1948 and was an active partner in Israel’s government coalitions since the birth of the State (from 1956 as the National Religious Party; see below). Through the early 1980s it consistently polled about 10% of the total vote in Israel, but then dropped sharply to under 5% as less moderate parties to the right attracted many of its voters. (See *Israel, State of: Political Life and Parties.) The party was also active in the municipal level and was the main supporter of the chief rabbinate.

Educational Work

After the crisis that overcame Russian Jewry with the outbreak of the Russo-Japanese War, the revolution, and the pogroms that followed (1905), it was practically impossible to maintain the world center of Mizrachi in Russia. It was therefore decided to transfer the seat of its executive to Frankfurt, Germany. During the “Frankfurt period,” Mizrachi activities became more systematic. Their most important aspect was the beginning of the educational work of Mizrachi in Erez Israel. The world center decided to send Rabbi Fishman to study the situation of education in Erez Israel and find ways to develop educational and cultural activities there. He laid the foundation for the establishment of the Tahkemoni School in Jaffa, the first educational institution of Mizrachi in the country, which inaugurated Mizrachi’s educational system based on a synthesis of “the people of Israel, the Torah, and Zion.”

In 1920 an agreement was reached in the World Zionist Organization that ensured Mizrachi autonomy in the field of religious education in Erez Israel. An educational program began to be designed, followed by the establishment of a network of Mizrachi schools, which included kindergartens, elementary schools, high schools, yeshivot, vocational schools, and teachers’ seminaries. The educational network of Mizrachi continued to exist as a separate trend in Israel until the establishment of the State religious school system in the 1953/54

school year (see *Israel, State of: Education). The large majority of Mizrachi schools, which then encompassed more than 60,000 students and about 3,000 teachers, were integrated into the new framework of governmental religious education. The yeshivot have been the most outstanding achievement of Mizrachi education. In 16 high school-level yeshivot of *Bnei Akiva, students receive both a yeshivah and general education; in 12 girls' schools the educational program is parallel to that of the yeshivot. The network includes Midrashiat No'am in Pardes Hāannah, "Torah and Melakhah" yeshivot, the agricultural yeshivah at Kefar ha-Ro'eh, and the yeshivah for higher studies at Kerem Yavneh. At *Bar-Ilan University in Ramat Gan, which was established by Mizrachi in the United States, there were more than 7,000 students in 1970, with extensions in Safed, Ashkelon, and the Jordan Valley. In 2005 it had over 30,000 students. After the 20th world conference of Mizrachi (1962), the educational work of the movement was administered by the Center for Religious Education in Israel, affiliated with the world center of Mizrachi-Ha-Po'el ha-Mizrachi and the movement in Israel. In 2005 the Center provided supplementary religious education in 255 secondary schools in Israel. The Emunah women's organization operated 120 day care centers throughout the country.

Structure of the World Movement

From 1955 the world movement of Mizrachi and Ha-Po'el ha-Mizrachi constituted one united organization. Before the merger of the two movements, however, they existed as separate world organizations – Mizrachi as the Mizrachi World Organization and Ha-Po'el ha-Mizrachi as Berit ha-Olamit shel Torah va-Avodah. The activities among women and youth had also been separate. The world center of Mizrachi and Ha-Po'el ha-Mizrachi is the highest body of the religious Zionist framework and constitutes a common executive of the two movements. It is elected by the world conference of the movement, which meets every few years. Rabbi Meir Berlin served as president of the world movement for many years. After his death (1949), Rabbi A.L. *Gellman was elected chairman of the world center. At the 21st world conference (1968), Ḥayyim Moshe *Shapira was elected president of the world center and the world movement and Rabbi Zemaḥ Zambrowski was elected chairman of the world center. The world movement's financial instrument is the Keren Erez Israel shel Mizrachi.

When Mizrachi and Ha-Po'el ha-Mizrachi united throughout the world, a common conference of the two organizations in Israel was held in the summer of 1956 and decided to found a united party by the name of the *National Religious Party (Miflagah Datit Le'ummit, abbreviated to Mafdal). At the second conference of the NRP and the 13th conference of Ha-Po'el ha-Mizrachi in Israel (1963), the responsibilities and tasks of the NRP and Ha-Po'el ha-Mizrachi were divided as follows: the party will deal with matters of policy, municipal affairs, organization of the middle class, religion and rabbis, public relations and publication of the daily newspaper *Ha-Zofeh*; Ha-Po'el ha-Mizrachi with organization, fees, immi-

gration and absorption, labor and vocational affairs, housing, settlement, culture, pension funds and economic affairs, matters concerning free professionals, and departments for elderly members and development towns.

Projects and Achievements

Mizrachi fought for the observance of the Sabbath in Israel and the preservation of the character of the Sabbath and Jewish holidays in the public life of the Jewish community. It initiated the establishment of the Ministry of Religions in the government of Israel and of covering the religious needs of the population from government funds and local authorities. Its efforts also led to the passage of the laws governing *kashrut* and Sabbath observance in the Israel Defense Forces, marriage and divorce, rabbinical judges, etc. Through the initiative of Rabbi Berlin, the Mifal ha-Torah Lema'an ha-Yeshivot be-Erez Israel (Torah Fund for Yeshivot in the Land of Israel) was established whose publication of the Talmud and the *Encyclopedia Talmudica* is in progress. In the field of literature and journalism, the daily *Ha-Zofeh* and Mosad ha-Rav Kook, established by Rabbi Fishman and constituting the largest publishing house in the world for literature on the Torah and studies of Judaism, are worthy of mention. Since its foundation, more than 1,000 books have been published by the Mosad or with its aid.

Women's and youth organizations also hold an important place in the framework of the world movement. The women in the Mizrachi movement have taken part in the activities of Histadrut Nashim Mizrachi (Omen; Women's Mizrachi Federation in Erez Israel) and Mo'ezet ha-Po'alot shel Ha-Po'el ha-Mizrachi, which integrated into one movement called the National Religious Women's Movement in Erez Israel, encompassing more than 50,000 members. This movement is active in the sphere of establishing kindergartens and day nurseries, the cultural absorption of new immigrants, the organization of agricultural and vocational training for its members, etc. Among the youth organizations centered around Mizrachi is *Bnei Akiva. Until the union of Mizrachi and Ha-Po'el ha-Mizrachi and the establishment of the NRP, the youth organization No'am (short for No'ar Mizrachi), which was founded on Ḥanukkah 1940 and established Midrashiat No'am in Pardes Hāannah, existed separately. Other youth organizations are Ha-No'ar ha-Dati ha-Oved for working youth and Ha-Mishmeret ha-Ze'irah (The Young Guard), which encompassed thousands of students and army veterans. The world center of Mizrachi and Ha-Po'el ha-Mizrachi also established a special department for the young generation that centralized the activities of Ha-Mishmeret ha-Ze'irah around the world. Finally, there is the religious sports organization, Elizur.

The Mizrachi movement also established a series of financial and economic institutions including Bank ha-Mizrachi and Bank Ha-Po'el ha-Mizrachi, which united and established the United Mizrachi Bank, the fourth largest bank in the country; Mishhav, a company for construction and the establishment of religious quarters and suburbs; a center for

the economic institutions and programs of the movement; the cooperative of Ha-Po'el ha-Mizrachi; pension funds; etc.

[Itzhak Goldshlag]

In the United States

Mizrachi of America was founded in 1911 with groups in New York and St. Louis. Rabbi D.B. Abramowitz was the first president. The organization did not become effective until 1913, when Rabbi Meir Berlin settled in New York and became the leader of the movement. Following a tour of the country by Rabbi Berlin, Mizrachi held its first annual convention in Cincinnati in 1914. The Mizrachi Palestine Fund was established in 1928, and in 1936 became part of the United Palestine Appeal. Its youth movement, Benei Akiva, was established in 1934. In 1951 Mizrachi merged with Ha-Po'el ha-Mizrachi, which had been established early in the 1920s. AMIT, the Mizrachi Women of America (AMIT), is involved in educational work, funding an educational network in Israel that includes 22 primary and secondary schools, four youth and family residential facilities, five youth technology centers, and seven technical training colleges.

MIZRACHI, SHIMON (1940–), chairman of the Maccabi Tel Aviv basketball team. Mizrachi was born in Tel Aviv. In 1969 he joined the management of Maccabi Tel Aviv, when the team faced economic crisis. He initiated an economic plan to save the team, and began for the first time to sell tickets to the team's games. Mizrachi was also the first to understand that without foreign players the team would not succeed. His vision was fulfilled when Maccabi Tel Aviv won its first European championship in 1977 with a team that included former Illinois All-American Tal *Brody and a 6'10" black center named Aulcie Perry. Maccabi went on to win European championships another four times, in 1981, 2001, 2004, and 2005, becoming a European powerhouse. Under Mizrachi's leadership, Maccabi Tel Aviv was seen to represent the country as a whole in international sports, though it was in fact only a local sports club with its own rivals on the Israeli sports scene. For Mizrachi, the team was his life, with his own family events being fitted in around the team's schedule. Perhaps his greatest triumph was to convince European Basketball Association officials not to pull the Final Four out of Tel Aviv in 2004 de-

spite the security situation. In 2004 he was chosen as one of the torch bearers on Independence Day.

[Shaked Gilboa (2nd ed.)]

MIZRAH (Heb. מִזְרָח; "east"), designation of the direction to be faced during prayer, of the wall of the synagogue where seats were reserved for the rabbi and other dignitaries, and of an ornamental wall plaque used to indicate the location of east. The custom of facing the Temple during prayer has biblical origins beginning with Solomon's prayer (1 Kings 8:34, 44, 48; 11 Chron. 6:34). The Bible also relates that Daniel prayed three times daily in his chamber, the windows of which were opened toward Jerusalem (Dan. 6:11). The rule laid down in the Mishnah (Ber. 4:5) and amplified in the Talmud, is that if one prays in the Diaspora, he shall direct himself toward Erez Israel; in Erez Israel, toward Jerusalem; in Jerusalem, toward the Temple; and in the Temple, toward the Holy of Holies. If a man is east of the Temple, he should turn westward; if in the west, eastward; in the south, northward; and if in the north, southward. Thus all Jews direct their prayers toward one place (Ber. 30a; T.J. Ber. 4:5 8b–c; Tosef., Ber. 3:16). The term *mizrah*, therefore, applies properly to the cities and countries situated west of Jerusalem. Excavations of ancient synagogues generally bear this out, as those houses of worship found in Miletus, Priene, and Aegina, all west of Erez Israel, show an eastern orientation, as has been recorded of Egyptian synagogues (Jos., Apion, 2:10). Those synagogues north of Jerusalem and west of the Jordan River, as *Bet Alfa, *Capernaum, *Hammath, and *Chorazin all face southward, whereas ancient sanctuaries east of the Jordan, such as Val-Dokki Umm al-Qanātir, Jarash, and *Dura-Europos all face west. In the south, the synagogue excavated at *Masada faces northwest to Jerusalem. The directions frequently varied slightly due to the terrain. Exceptions have been found in the synagogues at Khirbat Summāqa, a village on Mt. Carmel, and at 'Usifiyyā, where the orientations are not toward Jerusalem. There is no satisfactory explanation for this divergence from the norm. In the early Christian church it was also customary to pray facing toward the Holy Land. For Islam the original direction of prayer (*qibla*) was toward Jerusalem, but this was subsequently changed by Muhammad in favor of Mecca.

Excavations of ancient synagogues show that the earliest houses of worship had their entrances facing Jerusalem, and portals, therefore, indicated the sacred direction. The remains of the Dura-Europos synagogue on the Euphrates reveal that by the third century C.E. the doors were on the eastern side, and the opposite wall, in which a special niche had been made to place the scrolls during worship, faced Jerusalem. This niche was too small to have been the permanent location of the ark, which was obviously still portable at that time. In Erez Israel the wall facing the Temple site was changed from the side of entrance to the side of the ark in the fifth or sixth century. This change is already found in synagogues at Naaran near Jericho and Bet Alfa. Worshipers came through the portals and

immediately faced both the scrolls and Jerusalem. However, in those sanctuaries found in Hammath, Yafa in Galilee, and Eshtemoa in Judea, the sacred direction is properly south in the first two cases and north in the third, while the entrance is from the eastern side. This may be in imitation of the Tent of Meeting, which had its gates on the eastern side (Num. 2:2–3; 3:38), or of Solomon's Temple, the portals of which were to the east (Ezek. 43:1–4), although the precise reason is not known. Maimonides, quoting the second passage in Numbers, states that the doors of the synagogue should face east, while the Ark should be placed “in the direction in which people pray in that city,” i.e., toward Jerusalem (Yad, Tefillah, 11:2). The Shulḥan Arukh records the same rule, but to avoid the semblance of worshiping the sun by facing east, it recommends that one turn toward the southeast (Isserles OH 94:2; also Suk. 5:4). If a person is unable to ascertain the points of the compass, he should direct his heart toward Jerusalem. This was also the opinion of R. Tarfon and R. Sheshet, who held that, since the Divine Presence is everywhere, the essential requirement is to direct one's heart to God (BB 25a). It is customary in traditional homes to mark the eastern wall to enable a person to recite his prayers in the proper direction. Artistic wall plaques inscribed with the word *mizrah* and scriptural passages like “From the rising (*mi-mizrah*) of the sun unto the going down thereof, the Lord's name is to be praised” (Ps. 113:3), kabbalistic inscriptions, or pictures of holy places are used for this purpose.

MIZRAHI, ASHER (1890–1967), cantor, composer, and poet. Mizrahi was born in the old city of Jerusalem. He later moved to Yemin Moshe, the first quarter outside the walls. At this period of his life, he composed and performed religious and secular songs connected with the traditional Judeo-Spanish repertory, as well as in the style of Turkish and Arabic classical music, which mark an early mingling of Sephardi and Oriental styles. He thus achieved a kind of qualitative compromise between the religious and secular in his musical works.

In 1917, Mizrahi quit Jerusalem, clandestinely seeking to escape his recruitment by the Turkish army, and settled in Tunis. Except for short stays in Jerusalem in 1919 and 1929, he sojourned there until 1967. He then returned to Jerusalem, where he died the same year.

During the many years he stayed in Tunis, he became a central figure in the musical life of the Tunisian Jewish community, not only by promoting the cantorial tradition and considerably enriching its musical life, but also thanks to his great artistry in the realm of the new Egyptian art style that was at that time the subject of great favor among both Jewish and non-Jewish Tunisians. It is noteworthy that Mizrahi, who

was a great admirer of the Egyptian singer and composer Muhammad 'Abd al-Wahhab, set many of his own Hebrew poems to his melodies. Thus, in addition to his essential role in developing the religious musical life of the community and the appropriate musical education he provided to the community's children and youth by means of the children's choir, he created *awlad al-Biyyut* (“the children of the *piyyut*”). He distinguished himself as an interpreter of Arab music and 'ud playing. In this latter activity he gained the favor of the Tunisian president, Habib Bourguiba.

In Tunisia, Mizrahi published an anthology of Hebrew poems for singing, the title of which is *Māadanei Melekh* (“The King's Delicacies,” Sousse: Makhluḥ Najjar, 1945; republished in Israel in 1968).

In Tunis he established choirs that performed his songs.

Among his outstanding pupils were Rabbi Getz, the late rabbi of the Western Wall, and David Riyahi, who established a synagogue choir in Netanyah that accompanied the services and performed many of his *piyyutim*.

[Amnon Shiloah (2nd ed.)]

MIZRAHI, DAVID BEN SHALOM (c. 1696–1771), one of the most prominent *halakhah* scholars in *Yemen. Mizrahi propagated Torah studies and headed the synagogue of the *nagid* Sar Shalom Irāqi (al-Usta). When the need was felt for a commentary on the Shulḥan Arukh adapted to the requirements of Yemenite Jewry and its customs, David Mizrahi undertook this task in his work *Shetilei Zeitim* (1886–91), on *Orah Ḥayyim* (1886–91; 1895). He explains the Shulḥan Arukh with brevity and clarity, quoting the customs of Yemenite Jewry which are not mentioned by R. Moses *Isserles and the commentaries of the Shulḥan Arukh. He retained all the notes of R. Moses Isserles that are in agreement with the Shulḥan Arukh and omitted everything that was in contradiction to it, including customs. Mizrahi adopted the same style in his work *Rashei Besamim* (1895) on the *Yoreh De'ah*. His third work is *Revid ha-Zahav* (1955), responsa and novellas on the Shulḥan Arukh and R. Moses Isserles (some of which were written by his son Yiḥya). This work is the first of its kind in the responsa literature of Yemenite Jewry.

[Yehuda Ratzaby]

MIZRAHI, ELIJAH (c. 1450–1526), rabbinical authority, the greatest of the rabbis of the *Ottoman Empire of his time. Mizrahi was of Romaniot origin (the original Turkish Jews as distinct from the Spanish exiles) and was born and educated in Constantinople. Among his teachers he mentions Elijah ha-Levi in rabbinic studies and Mordecai Comitiano (see *Comitino) in general studies. Until the death of Moses *Capsali, Mizrahi devoted himself to study and public instruction. As early as 1475 he is mentioned as heading a *keneset* (probably a school in addition to a synagogue) and as having students. During this period of his life he was involved in controversies with *Moses Eshim ve-Arba and Perez Colon, and despite his stormy and aggressive temperament he submitted to the in-

tervention of Capsali in these disputes, an intervention which reveals a certain tension between them. Perhaps for this reason he took no part in the famous controversy between Capsali and Joseph Colon. After the death of Capsali in 1498, Mizrahi became the foremost rabbinical authority in Constantinople and in fact throughout the whole Ottoman Empire. From far and near, problems of *halakhah* and procedure were addressed to him. There is reason to believe that he filled the position of head of the rabbis of Constantinople (though he did not have the title of *hakham bashi*, appointed by the sultan, since that office did not exist in that period). Nevertheless, it would seem that his authority derived not from any official position, but from the recognition of his personality and strength. He was considered both by his contemporaries and later generations as the greatest *posek* of his time in *Turkey. He was firm and unbending in his decisions, and even the great rabbis among the Spanish exiles accepted his authority.

In his responsa (56) he gives a description of his daily routine, which reveals the strain under which he worked. Fulfilling a number of functions simultaneously, he conducted the affairs of the community, gave decisions on all matters, headed a yeshivah, and taught not only Talmud but secular subjects. At the same time he wrote commentaries on both religious and scientific works, had an inner circle of select students whom he taught the codes, and wrote responsa in answer to queries addressed to him from afar. Like Moses Capsali, he was active in the problem of the absorption of the exiles from Spain and Portugal, collecting funds on their behalf, and forcing the wealthy members of the community to pay the amounts imposed on them (Resp. 66). Mizrahi's attitude to these exiles was one of respect and high regard. He appreciated that their standards of culture and knowledge were higher than those of the native Turkish Jews, but nevertheless he came out firmly against attempts by some of them to impose their will on the old community. He resisted attempts on their part to impose customs and procedures to which they were accustomed, but which were contrary to those ruling in Turkey. Of special importance was his attitude toward the *Karaites. On the one hand he exerted himself to attract them to the Rabbanites, and, in opposition to Moses Capsali, to give them instruction in both secular subjects and even in the Oral Law, and in this context firmly resisted every attempt to isolate them. On the other hand he completely rejected on halakhic grounds the permissibility of intermarriage between Karaites and Rabbanites. Mizrahi's halakhic method is distinctive and clear. He lays down fundamental principles and raises possible objections to his own statements, so that every topic is exhaustively examined and clarified. His responsa were accepted as authoritative by his and succeeding generations, despite the fact that some of the leading contemporary scholars opposed his views.

His best-known pupils and colleagues were Elijah ha-Levi, *Tam ibn Yahya, and Abraham ibn Yaish. Mizrahi suffered greatly from ill health, financial strain, and family misfortunes. Three of his sons are known, Gershon, Israel, and

Reuben, and a daughter. There are legends about his son-in-law's connections with the court of the sultan. Reuben died during his father's lifetime. Gershon was the victim of a libel that during a severe illness he had sought to be converted to *Islam. He had to abandon his family and, after paying heavy bribes, escaped to Naxos, but even there he suffered persecution and strife. These two incidents, as well as the death of his wife, affected Mizrahi greatly. His third son, Israel, published his father's Rashi commentary and *Sefer ha-Mispar*. Mizrahi died in Constantinople and Joseph *Taitazak eulogized his works.

Mizrahi's personality and multi-faceted character emerge clearly from his works. His main activity was in the writing and teaching of both *halakhah* and general knowledge, but his main fame rests upon his crowning achievement, his supercommentary to Rashi (1st ed. Venice, 1527), a fact which he himself states. In this work he exhaustively discusses almost every word in Rashi, but does not refrain from disagreeing with him on numerous occasions. On the other hand he defends Rashi against the criticism of Nahmanides. This work has given rise to a veritable literature. Later commentators answered his criticism and justified Rashi. The two works, Rashi's commentary and Mizrahi's supercommentary, became a main subject of study of rabbinical commentators of the Bible from the 16th century onward. The work has an added importance as a result of the quotations it gives from the Romaniot scholars of the 14th and 15th centuries for which his work is the sole source, side by side with those of Ibn Ezra and the French and German scholars. Mizrahi's responsa, published in two collections, number 140, but of them only 110 are his, although they undoubtedly represent only a fraction of his many responsa. More than 40 are still in various manuscripts. A comparison between the two reveals the many errors in the printed responsa, particularly in the Constantinople edition. An extant fragment (Resp. Const. 96) reveals the method of teaching in his yeshivah, consisting of notes made at the time by one of his pupils.

The only other rabbinic work of Mizrahi published is his novellae on the *Sefer Mitzvot Gadol* of *Moses of Coucy (Constantinople, 1521), the only work of his published in his lifetime. His work on the *Halakhot* of Isaac Alfasi is not extant. In the field of secular knowledge his *Sefer ha-Mispar* (Constantinople, 1533) on mathematics is famous. It was highly thought of in its time and has been translated into Latin. He also wrote a commentary on Ptolemy's *Almagest* and on Euclid's *Elements*. R. Moses Almosnino possessed a commentary by Mizrahi on the "Intentions of the Philosophers" of al-*Ghazali. Mizrahi took a negative attitude toward Kabbalah, particularly against relying on it for halakhic decisions, and the introduction of kabbalistic ideas into the prayer book.

MIZRAHI, HANINAH (1886–1974), teacher. Born in Teheran in 1886, he immigrated to the Land of Israel in 1895 and died in Jerusalem. His father, Haim Elazar, was a *paytan*. Mizrahi began his studies at the Alliance school in Jerusalem, where he learned French. He also learned German by himself and could read the Judeo-Persian works by Wilhelm Bacher of Budapest. In 1907, he received his teaching certificate from the Ezra school in Jerusalem, where he also improved his German language. In 1911 he married Sarah, the daughter of R. Shalom Yehezqel. For 15 years, beginning in 1921, he taught at the *talmud torah* of the Sephardim in Old Jerusalem. After Israel's War of Independence, the school fell into the hands of Jordan, so Mizrahi continued to teach at Harel school in West Jerusalem until his retirement in 1951. He is regarded as one of the founders of the Bet ha-Kerem quarter in Jerusalem. Mizrahi published the following books on the Jews of Iran: *Yehudei Paras* (1959); *Toldot Yehudei Paras* (1966); *Bi-Yshishim Hokhmah* (1967). He was mainly a folklorist in his education and writings.

BIBLIOGRAPHY: A rather full account of Mizrahi's life and works can be found in A. Netzer, "Yādi az yek shakhsiyat-e farhangī," in: *Pādyāvand: Judeo-Iranian and Jewish Studies Series*, vol. 3 (1999), 361–70.

MIZRAYIM (Heb. מִצְרַיִם), Hebrew place-name. In the Septuagint it is rendered as Egypt. The Hebrew proper noun, however, has a broader range of meaning. As Aiguptos, the name of the country was derived from a name for the city of Memphis, *Ḥet-kau-ptah* ("Castle of the *ka*-souls of Ptah"), so the name of Mizrayim may have been derived from the name of a city of Lower Egypt, if not of Lower Egypt itself. This is based on the occurrences in the Bible of Mizrayim in combination with Pathros (*pa to resy*; "the southern country," i.e., Upper Egypt), in which cases Mizrayim seems to mean Lower Egypt (*To Meh*). Secondly, it came to mean both all of Egypt and Egyptians, and was – and still is – the common Hebrew word for Egypt.

[Alan Richard Schulman]

MLADA BOLES LAV (Czech *Mladá Boleslav*; Ger. *Jungbunzlau*), town in N. Bohemia, Czech Republic. One of the important communities in Bohemia, it is first mentioned in 1471 and is noted in a Hebrew document of 1556. Eleven families lived there in 1570, and a synagogue was recorded in 1579. The cemetery (well known mainly because of the tombstone of Jacob *Bassevi von Treuenberg) was consecrated in 1584 and still existed in 1970. The number of adult Jews in the town in 1615 was 120. In 1643 the community came under the protection of the Swedish king for a time. The community elders were forced to sign an agreement in 1661 which greatly

limited their freedom of commerce. At the end of the century, Jews had a near monopoly of transportation. In 1710 a shopkeeper, David Brandeis, was accused of poisoning a Christian with plum jam; the day of his release was celebrated on the tenth of Adar as *Povidl* ("plum jam") *Purim*. After a fire in the late 17th century had destroyed part of the Jewish quarter and the synagogue, the community built a new synagogue on the model of the Meisl synagogue in Prague. It had to be demolished in 1960 because of decay. The Jewish population numbered 794 in 1834; 865 (9.1% of the total population) in 1880; 402 (2.8% of the total) in 1910; 419 in 1921; and 264 (1.3%) in 1930. In 1922 a local Jewish museum was founded; its treasures were later transferred to the Central Jewish Museum in Prague. In 1942 the Jews from Mlada Boleslav and the surrounding district were concentrated in the old castle. Of the 1,041 persons deported to *Theresienstadt in January 1943, only 40 were still alive in November 1944. After World War II a small congregation was reestablished, administered by the Prague community.

Among the outstanding rabbis of Mlada Boleslav were Moses Isaac Spira (until 1702), Ezekiel Glogau-Schlesinger (until 1821), and Isaac Spitz (1824–42). The house in which Sigfried *Kapper (1821–79) lived was marked by a memorial tablet. Jewish life in Mlada Boleslav at the beginning of the 19th century is described in Leopold *Kompert's *Die Kinder des Randars* ("The Randar Children"). Mlada Boleslav was considered a kind of a Bohemian *Chelm and many tales were told of "*Bumslers Shtiklekh*" ("pranks"). The Prague scholar Meir *Fischels (Bumsla) came from Mlada Boleslav. A **selihah*, printed in 1854 to commemorate a conflagration, was the last literary production of this kind published in Bohemia. Benjamin Isaac (d. 1750), "Jew merchant of extensive charity" in London, came from Mlada Boleslav, and he set up a foundation in his name in his native community.

[Jan Herman]

MLAWA (Pol. *Mława*; Rus. *Mlava*), town in the province of Warsaw, N.E. central Poland. The earliest documented information on the Jewish community is dated 1543. It is included in a report of a case of *blood libel, which mentions the name of the *parnas* of the community – Berechiah (Pol. Boguslaw). In 1569 there were 23 Jewish families living in the town and in 1578 they had increased to 34. Their main sources of livelihood were the livestock trade and crafts. A charge of desecrating the *Host in 1670, and the fires which devastated Mława in 1659 and 1692, caused the number of Jews gradually to decrease. On the other hand, the Jewish population of the suburb of Zabrody, which was beyond the area of municipal jurisdiction, and the surrounding villages, increased.

Until 1753, the community of Mława was under the jurisdiction of that of *Ciechanów. The growth of economic activity in the region during the last third of the 18th century brought an increase in the Jewish population. The 1765 census showed 70 Jewish families numbering 487 poll tax payers in Mława and the neighboring villages. Fifteen houses in the town were owned by Jews. Sources of 1781 mention a Jewish population of 718. After the Prussian conquest (1793), the town was granted a *de non tolerandis Judaeis* privilege, and the Jews then moved to the suburb of Zabrodzie.

The Jews returned to Mława with the establishment of the grand duchy of Warsaw (1807). In 1808 they numbered 137, forming 15% of the population. Following restrictions on Jewish settlement, a special quarter was established in 1824, and only there (with some rare exceptions) were Jews permitted to live. In addition, the entry of Jews from other regions was almost completely prohibited, because of the location of the town in the border area. In 1827, there were 792 Jews (36% of the population) living in the town. The ghetto and the other restrictions on residence and ownership of real estate were abolished in 1862. Once the railway lines from Mława to Warsaw (1877) and Gdansk (1883) were opened, the trade in grain, livestock, wood, and army supplies, from which many Jews earned their livelihood, increased considerably. Between 1857 and 1897, the Jewish population of Mława grew from 1,650 to 4,845 (41% of the population).

The influence of Ḥasidism manifested itself among the Jews of Mława from the beginning of the 19th century. With the consolidation of their economic situation at the close of that century, the influence of *Mitnaggedim* circles gained in strength (in 1870, Wolf Lipszcie was appointed rabbi of the town). The last rabbi of Mława, R. Jehiel Moses Segalowicz (appointed 1901), was known as one of the *Mitnaggedim*. In the late 1890s, a *Ḥovevei Zion circle was organized in the town. During the revolution and pogroms of 1905–06, the *Bund and the *Po'alei Zion wielded considerable influence among the Jewish workers, youth, and intelligentsia of Mława. The Jewish author Joseph *Opatoshu, the Hebrew author Jakir *Warshavsky, and the publicist and leader of the Bund in Poland, Victor *Alter, were born in Mława, where they also began their careers. Between 1921 and 1927 the Jewish population of Mława increased from 5,923 to 6,301. A newspaper, *Dos Młauer Lebn*, was published; its editors included Bunim Warshavsky, Moses Lichtensztain, and Moses Laska.

Holocaust Period

At the outbreak of World War II there were about 6,500 Jews in Mława. At the beginning of November 1939 the Germans destroyed all the synagogues in Mława and vicinity. The first deportation took place on Dec. 6, 1940, when 300 Jews were deported to Miedzyrzec *Podlaski, *Lubartow, and *Lublin; they shared the fate of the Jews there. The ghetto was established on Dec. 7–8, 1940, and liquidated two years later on Nov. 24, 1942. The last deportations took place from Nov. 10, 1942, to Dec. 10, 1942; almost all the Jews were deported to *Treblinka death

camp. The Jewish community of Mława was not reconstituted after the war. Organizations of former residents of Mława are active in Israel, the United States, and Mexico.

[Arthur Cygielman]

MLOTEK, CHANA (1922–), U.S. musicologist, folklorist, researcher, archivist, and scholar of Yiddish song and culture. Born Eleanor Gordon in Brooklyn, New York, the daughter of Leo and Bessie Gordon, Mlotek grew up as a native Yiddish speaker in the Bronx. She attended the Yiddish elementary school associated with the Workman's Circle, the Sholem Aleichem Yiddish High School, and Hunter College, receiving a B.A. in French and music in 1946.

Chana became a secretary to Lucy *Davidowicz at YIVO in New York in 1944 and then worked for Max *Weinreich. She went to California as Weinreich's secretary and later served as his assistant. In 1948, she studied folklore and linguistics at UCLA on a YIVO scholarship. Her interest in collecting Yiddish songs began around that time, and between 1948 and 1961 she worked intensively in this area. Chana married Joseph Mlotek, a teacher and writer of Yiddish musical plays in 1949, and the couple had two sons. Between 1963 and 1966, Chana served as music director of Camp Boiberik, where she created and taught Yiddish musical material for children. In 1968, she and Malke Gottlieb, through the Workman's Circle, published *Finf un Tsvantsik Geto Lider* ("Twenty-Five Ghetto Songs"), in commemoration of the 25th anniversary of the Warsaw Ghetto Uprising. Later, she published *Mir Zaynen Do: Lider fun di getos un lagern* ("We are Here: Songs of the Holocaust," 1983).

In 1970, she and her husband started a column in the Yiddish *Forward* newspaper, "*Perl fun der Yidisher poezye*" (Pearls of Yiddish Poetry), about Yiddish songs and poetry. People sent them material and between 1970 and 2000 they published over 2,000 Yiddish songs in their column. In 1972, Chana published an anthology of these songs, *Mir Trogn A Gesang* ("The New Book of Yiddish Songs"), in which she constructed an organizational scheme based on the songs' function and genre. In 1974, she published *Perl fun der Yidisher poezye* ("Pearls of Yiddish Poetry") in Tel Aviv. After Joseph's death in 2000, she continued to edit the column. Other published anthologies include *Yontefdi'ke teg* ("Song Book for the Jewish Holidays," 1972), *Perl fun Yidishn lid* ("Pearls of Yiddish Song," 1988), and *Lider fun dor tsu dor: naye perl fun Yidishn Lid* ("Songs of Generations: New Pearls of Yiddish Songs," 1990).

Chana Mlotek wrote over 20 articles on folk songs, folk poetry, and Yiddish literature in various journals. She contributed to the first two volumes of Uriel Weinreich's com-

pendium, *The Field of Yiddish: Studies in Language, Folklore and Literature*, and served as co-editor of the magazine *Yidisher Folklor*. Beginning in 1978, she worked at YIVO as an archivist.

[Judith S. Pinnolis (2nd ed.)]

°**MNASEAS OF PATARA** (in Lycia; probably second century B.C.E.), a disciple of *Eratosthenes. He wrote a *Periegesis*, a geographical work covering Europe, Asia, and Libya. According to Josephus (Apion, 2:112–4), Apion attributes to Mnaseas a story of how an Idumean named Zabidus duped the Jews into believing that he intended to deliver his god Apollo and thus gained entrance into the Temple, from which he stole the golden head of the ass allegedly worshiped by the Jews (cf. *Damocritus) – the first occurrence in literature of the canard that the Jews worshiped an ass. Since Mnaseas' words are known only at third hand, little weight attaches to the story, but it does illustrate the credulity (cf. *Hecataeus, *Horace, etc.) widely ascribed to the Jews in antiquity.

MNEMONICS OR MEMORA TECHNICA (Heb. סימן, *siman*; “a sign”), devices based on the principle that the mind is able to recall relatively unfamiliar ideas by connecting, as some artificial whole, parts of them which are mutually suggestive. Mnemonics are widely used in the Talmud – as in post-talmudic literature – but their use in the former was rendered imperative by the fact that the Talmud was originally transmitted orally, and even after it was committed to writing, both the scarcity of the texts, and the custom of teaching the text orally which prevailed in the geonic academies (Weiss, Dor, 3 (1904⁴), 215 ff.; Halevy, Dorot, 3 (1928), 227) made it necessary for mnemonic devices to be employed. The rabbis laid great store on the efficacy of mnemonics as an aid to study. R. Hisda in Babylon deduced that the Torah can be acquired only by the use of mnemonics, adducing as evidence the verse “Put it in their mouth” (Deut. 31:19) reading *simona* – mnemonic for *simā* (“put”); R. Taḥlifa in Palestine explained that in Palestine they deduced the same lesson from the verse “Set thee up waymarks” (Jer. 31:21), proving that the “waymarks” refer to mnemonics (Er. 54b). The fact that the scholars of Judah retained their learning while those of Galilee forgot it was ascribed to the fact that the former employed mnemonics while the latter did not (Er. 53a). The verse in Ecclesiastes 12:9, “and besides that Koheleth... taught the people knowledge” was explained that he taught them by mnemonics (Er. 21b). It has been suggested that the widespread use of the alphabetical *acrostic in the Bible (e.g., Lam. 1–4; Ps. 119 and 145) had a mnemonic purpose since it reminded the person who recited it of the letter with which the succeeding verse commenced, but this form of mnemonic, though widely used in medieval poetry and even in prayers (e.g., *El Barukh* in the morning service, *Tikkanta Shabbat* in the Sabbath *Musaf*) is not at all resorted to in the Talmud.

The mnemonic devices of the Talmud can be divided into two main categories, those in which the mnemonic is an

integral part of the text, forming part of its body, and those in which a passage is preceded by the mnemonic as an aid to the memory of what is to follow. The former are usually designated as *simankha*, i.e., “your mnemonic,” while for the latter the simple word *siman* is given. Since the essence of the mnemonic is to call to mind the unfamiliar by use of the familiar, it naturally follows that it consists of the use of a well-known phrase. These phrases can be divided into biblical verses, since knowledge of the text of the Bible was regarded as axiomatic, well-known talmudic phrases, popular proverbs, or readily remembered catchphrases.

Biblical Mnemonics

Examples of biblical verses used for this purpose are numerous. For the six orders into which the Mishnah is divided, Isaiah 33:6 was cited: “There shall be faith in thy times, strength, salvation, wisdom, and knowledge,” each of the nouns indicating a specific order (Shab. 31a). That basilicas attached to royal buildings are forbidden because of idolatry, but those of baths and storehouses permitted, was to be remembered by the mnemonic “to bind [forbid] their kings with chains” (Ps. 149:8; Av. Zar. 16b). The law that if the lungs of animals are liver-colored they are permitted, but if flesh-colored forbidden, had the mnemonic “and if flesh in the field, it is *terefah*” (Ex. 22:30; Ḥul. 47b). The mnemonic to remember that one should not curse one's parents in the presence of one's children is the verse (Gen. 48:5), “Ephraim and Manasseh [the grandchildren] shall be mine even as Reuben and Simeon [the children]” (Ket. 72b).

Talmudic Phrases

The bird called the moor-cock is forbidden as food, but the moor-hen permitted; the mnemonic is the rabbinic interpretation of the prohibition of an Ammonite to enter the congregation (Deut. 23:4): “An Ammonite,” but not an Ammonite woman. A bird called the wine-drinker is also forbidden, and the mnemonic is “a drunkard is forbidden to officiate” (cf. Sanh. 22b). These are two examples given from a list in *Ḥullin* 62b.

Catchphrases

By their nature these are pithy statements in which the element of apparent paradox is often used. Thus the fact that a fish called the “sea ass” is permitted while one termed “the sea bull” is forbidden produces the mnemonic “the unclean is clean, the clean unclean,” since the ass is forbidden and the ox permitted for consumption. To remember that meditating on sin can be worse than its actual commission, the mnemonic was devised “the odor of meat” (i.e., the odor of the meat excites the appetite more than the meat itself).

Mnemonics are used as an easy way to remember different statements in the name of one authority. Thus three statements on charity by R. Eleazar (BB 9a) provide the mnemonic “great is the sanctuary of Moses.” Three statements of R. Manasseh found in different parts of the tractate *Ḥullin* (4a, 31a, 51a) are mnemonically connected by the sentence,

“Inserting a blade into rams” (Ḥul. 4a). It is one of the characteristics of the methodology of the Talmud that a statement in the name of a sage which is relevant to the discussion is followed by a number of statements in the name of the same sage which have no connection with the subject under discussion. The need for mnemonics in these cases was obvious, and as far as possible they are made into a sentence. Thus three statements of Samuel b. Naḥamani in the name of R. Johanan (the first has Naḥamani in the texts) were to be remembered by the sentence “In truth money shall he see.” An interesting example is provided in the same passage. Six anonymous popular epigrams are quoted, for all of which Samuel finds a biblical proof-verse. They are combined in a mnemonic which (probably) means “Hear, Vashti, Seven Songs, (and) another” (Sanh. 7a). It is obvious, however, that any device which aided the memory was pressed into service. There was a difference of opinion between the scholars of Pumbedita and Sura as to the number of nails permitted in a shoe for walking on the Sabbath. R. Ḥiyya reported that the former said 24, the latter 22. The mnemonic was “Ḥiyya lost two nails in walking from Pumbedita to Sura” (Shab. 60b).

Popular Proverbs

The wealthy Simeon b. Judah ha-Nasi was of the opinion that a certain defect in an animal did not render the animal invalid and he ate its meat, while the poor R. Ḥiyya discarded it as invalid; they had a similar disagreement about the oil for the Temple. In both cases the mnemonic was the popular proverb, “the wealthy are parsimonious” (Ḥul. 46a; Men. 86a). Among the most frequent devisors of mnemonics are Rava, R. Papa, R. Safra, and especially R. Naḥman b. Isaac.

The second category of mnemonics (indicated by the word *siman* without the suffix) is usually merely a combination of words, each indicating a topic. Sometimes it is possible to make a sentence out of them (e.g., a mnemonic in *Hullin* 46b, “Date, Red, Dry Scabs” may be read as “A date, red and dry with scabs”), but sometimes this is quite impossible. These *simanim* appear to be post-talmudic and were often omitted from the text. In *Bava Batra* 113a the mnemonic has been omitted from the printed texts, but the word *siman* has been retained, giving rise to the erroneous view that it was the name of an *amora*. There was in fact a tendency to ignore the *simanim* even if they were printed, a practice of which Isaiah *Horowitz strongly disapproved, insisting that they had a mystic connotation (*Torah she-be-Al Peh, ayin, Shenei Luhot ha-Berit* (Amsterdam, 1698), 407b).

Another type of mnemonic consisted merely of the initial letters of words. The best known example is the mnemonic *DeZa-KH ADA-SH Be-AḤa-B* for the ten plagues. The Midrash states that it was engraved on the staff of Moses and calls it a *notarikon (Ex. R. 5:6), but in the Passover Haggadah it is referred to as *simanim*. Another example is the word *Ma-NZe-Pa-Kh* for the letters of the alphabet which have a final form. The Talmud makes a kind of mnemonic of this mnemonic, seeing in it a reference to the fact that “the

prophets [seers] introduced them” (*zofim amarum*), i.e., *Mi-N Zo-Fayi-KH* (“from thy prophets”; Meg. 2b). The medieval grammarians similarly made the mnemonic *Ba-Ga-D Ke-Fa-T* for the six letters which take a *dagesh kal*. The six things in which Shemini Azeret is regarded as a festival independent of Sukkot are indicated by the words *Pa-Ze-R Ke-SHe-V*, each letter indicating one of the things. The six laws in which the opinion of Abbaye prevails over that of Rava are indicated by the mnemonic *Ya-AL Ka-Ga-M* (BM 22b). The difference of opinion as to the order of the festival blessings for wine (*yayin*), *Kiddush*, the festival (*zeman*), the candle (*ner*), and *Havdalah* is indicated by whether it should be *Ya-KZa-Na-H* or *Ya-KNe-Ha-Z* (Pes. 102b, 103a). For the order of biblical readings for the intermediate days of Passover a full sentence was used, “He dragged an ox, and sanctified it with money” (Meg. 31a).

The use of mnemonics did not end with the Talmud, and they are found in late rabbinic literature. The laws of *terefah* begin, “there are eight categories of *terefah* and their *siman* is *Da-N Ha-Na-K Ne-Fe-SH*” (YD 29:1). A remarkable calendrical mnemonic is provided by *atbash* (the cryptogram whereby the first letter of the alphabet, *alef*, is equated with the last, *tav*; the second, *bet*, with the penultimate *shin*, etc.) so as to determine the days of the week on which the festivals of a certain year fall. *Alef, bet*, etc. represent the eight days of Passover, and the rule is that *alef* = *tav* (Tishah be-Av); *bet* = *shin* (Shavuot); *gimmel* = *resh* (Rosh Ha-Shanah); *dalet* = *kaf* (*Keri'at ha-Torah*, i.e., Simḥat Torah in the Diaspora); *he* = *Zadi* (*Zom*, i.e., the Day of Atonement); *vav* = *peh* (Purim, but of the previous year). The list ends with *vav*. *Zayin*, however, corresponds to *ayin*, and the seventh day of Passover always falls on the same day of the week as Israel Independence Day. Another calendrical mnemonic is “*Lo ADU Rosh ve-lo Ba-DU Pesah*,” i.e., (the first day of) Rosh Ha-Shanah cannot fall on the first, fourth, or sixth day of the week (*alef, dalet, vav*), nor Passover on the second, fourth, or sixth (*bet, dalet, vav*).

Distinct from mnemonics, although they serve the same purpose, are such mnemonic aids as are frequent in the Mishnah, whereby *mishnayot* on completely unrelated topics are grouped together because of their identical opening formula, e.g., “the only difference between A and B is” (Meg. 1), and “that which is invalid in A is valid in B” (Ḥul. 1:4–6).

MNOUCHKINE, ALEXANDRE (1908–1993), French film producer. Mnouchkine was born in Petrograd, Russia. One of the most influential producers in France, his endeavors left their mark on French cinema from the 1930s through the 1980s. He produced films with most of the great artists of his time, and a number of his films are among the greatest box office successes of France. He founded Majestic Films which

operated from 1935 to 1940, and from 1945 he was chairman of Ariane Films.

Among the films he produced were *Les parents terribles* (1948), *Fanfan la Tulipe* (1951), *Babette s'en va-t-en guerre* (1959), *Cartouche* (1961), *L'Homme de Rio* (1965), *Le Train* (1964), *Stavisky* (1974), *Garde a vue* (1981), and *La Balance* (1983).

His daughter ARIANE (1939–) is the founder and main director of the world-famous theater, Theatre du Soleil (established 1964). Mnouchkine and the actors in her company – most of whom come from academic backgrounds – live together in a kind of commune. Their creative activities take place in a former ammunition warehouse in a Paris suburb which was put at their disposal in 1972. They renovated the building and turned it into a theater setting, La Cartouche de Vincennes.

In 1960 Mnouchkine established the ATEP, the Paris University Theater. She studied the forms of Oriental theater in Cambodia and Japan in 1962. The Theatre du Soleil had its initial success with its presentation of *The Kitchen* by Arnold Wesker which was given in a Circus Medrano tent. The world-wide reputation of the theater was gained by its performance of *1789* in Milan in 1970 and of *1793* in Paris in 1972. The Mnouchkine formula for total theater includes physical expression and body language, the use of elements taken from the circus world, and audience participation. The performances also demonstrated a politically left-wing outlook on life.

A movie made by the Theatre du Soleil on the life of Molière was also a great success. In 1984 Mnouchkine participated very successfully in the Los Angeles international theater festival where the troupe presented three plays by Shakespeare, *Richard II*, *Henry IV*, and *Twelfth Night* in a Japanese-Oriental adaptation. In 1992 she presented her production of *Les Atrides* in England.

[Gideon Kouts]

MOAB (Heb. מואב), a land E. of the Jordan and the Dead Sea, one of Israel's neighbors in biblical times. The highland of Moab extends southward to the Zered River (Wādī al-Ḥasā'), eastward to the desert, and westward to the Dead Sea. Its northern boundary was much disputed; sometimes it was limited by the river Arnon and sometimes it extended north of the Dead Sea (cf. the "plains of Moab" in Num. 26:3). The area of Moab is mountainous in the south, with ridges up to 4,000 ft. (1,250 m.), leveling off to a plateau in the north (the biblical *mishor*, "tableland"). The decline to the desert is gradual; that to the Dead Sea steep. The area was traversed by the "King's Highway." Its economy was mainly pastoral (cf. II Kings 3:4).

The People and the Country

Archaeological surveys have established that after a period of pre-Moabite settlement in the last centuries of the third millennium, Moabite tribes settled the country in about the mid-

14th century B.C.E., not long before the Exodus. They were of Semitic stock, closely akin to the Israelites.

[Michael Avi-Yonah]

According to the tradition in Genesis 19:30–38, Moab (LXX: Μωαβ) was born to Lot by his elder daughter in the vicinity of the town of Zoar, at the southeastern tip of the Dead Sea. The meaning of the name, according to Targum Jonathan and the Septuagint, is "from my father" (cf. Gen. 19:37). Other than this tradition, there is no further information on the origin of the Moabites and the process of their formation into a national kingdom in Transjordan. The story of the birth of Moab and Ammon to Lot, son of Haran, the brother of Abraham, was intended to explain, in a popular midrashic manner, the names Moab and Ammon. However, the tradition of ethnic kinship between the children of Lot and Israel, echoes of which occur elsewhere in the Bible, is not based merely on the geographical proximity of these peoples to Israel. Biblical tradition and especially the Moabite language and the conjectured time of their settlement in Transjordan suggest that the Moabites were among the tribes of the sons of Eber, who spread out from the Syrian-Arabian desert in the second millennium B.C.E., and established national kingdoms throughout the Fertile Crescent. The Moabites, like the *Ammonites and *Edomites, were not among the pre-Israelite inhabitants of the land of Canaan (Gen. 10:15–20; 15:18–21; et al.). According to Deuteronomy (2:10–11), the Emim formerly occupied the land of Moab – "a people great, and many, and tall, like the Anakim" (see *Rephaim) – but it does not indicate when and in what circumstances they were driven out by the Moabites. Egyptian lists of the Middle and New Kingdoms (until the end of the 14th century) do not mention Moab as a people, state or territorial region. The archaeological survey of N. Glueck has revealed an interruption in the continuity of settlement in the Transjordanian plateau from the 19th until the 14th centuries B.C.E. During this period central and southern Transjordan were occupied by nomadic tribes. The mention of the sons of Seth in Transjordan (Num. 24:17) almost certainly refers to the nomadic Shutu tribes mentioned in Egyptian and Akkadian sources of the second millennium B.C.E. Only a few well-fortified settlements, such as Ader, Balū'a, Aroer, and Khirbat al-Madayyina, near Wādī al-Thamad, southeast of *Dibon, had the strength to withstand the raids from the east, while the other settlements were destroyed. It may be assumed, following Glueck, that the renewal of permanent settlement in Transjordan at the close of the 14th century, and the appearance of a new agricultural society, is connected with the penetration of West Semitic tribes, including the Moabites, from the east. After the Moabites were in possession of Transjordan, they founded a state that embraced regions on both sides of the Arnon (Wādī al-Mawjib). North of the Arnon, Moab extended to "the tableland" (Deut. 4:43; Josh. 13:9; Jer. 48:21), to the valley of Heshbon (Wādī Ḥisbān) and to "the plains of Moab" opposite Jericho (Num. 22:1). The "tableland" is a plateau rising to approximately 2,400 ft. (800 m.) above sea level.

It is rich in pasturage and fertile farmland (cf. Num. 32:1–4). South of the Arnon, the land of Moab extended over a mountainous plateau, which is suitable for cattle raising; it rises to approximately 3,750 ft. (1,250 m.) above sea level. The Zered River (Wādī al-Ḥasā) marked the border between Moab and *Edom. Moab was bounded on the west by the Dead Sea and the southernmost part of the Jordan up to the Nimrin Valley. “The mountains of Abarim” and “the slopes of Pisgah” (Num. 27:12; Deut. 3:17) refer to the steep slopes of the Moabite plateau which descend to the Dead Sea. The Moabite plateau terminates on the east in shelving slopes which descend to the desert that marked the eastern border of Moab.

Throughout the entire area of Moab, there have been discovered the remains of numerous settlements which existed from the 13th to the sixth centuries B.C.E. The capital of Moab was Kir-Hareseth or Kir of Moab (11 Kings 3:25; Isa. 15:1, 16:11; Jer. 48:31, 36), modern Karak, in the heart of Moabite territory south of the Arnon. However, most of the large settlements were situated in the fertile tableland (Num. 32; Josh. 13:16–27). Prominent in their importance were: Aroer (Khīrbat ‘Arā’ir), overlooking the fords of the Arnon, Dibon (Dhibān), Ataroth (Khīrbat ‘Aṭṭārūs), Medeba (Mādabā), and Nebo (Muḥayyit). The topographical conformation of Moab does not favor easy communications. The many wadis flowing into the Dead Sea have sawed deep ravines that make passage difficult. Only in the northern plateau region, in the territory of Medeba, was there a wide, convenient road, which connected the regions on both sides of the Jordan. Great importance was attached to the “King’s Highway,” the international route which connected Arabia and Egypt with Syria and Mesopotamia, and of which a section passed through the Moabite plateau.

The geographical and economic conditions of Moab made it easy for the Moabites to achieve a suitable blend of their desert heritage with the values of an urban and rural society; this is to be attributed to Moab’s position on the border of the desert and to its economy, which was based, on the one hand, upon agriculture, and on the other, upon cattle raising and trade conducted along the desert routes. Living in a border country, the Moabites, like the Edomites and Ammonites, were in need of effective defense against sudden attacks by raiders from the desert, as well as against invasion by the regular armies of neighboring countries. For this reason, the Moabites organized themselves into a national kingdom administered from a single center at the beginning of their settlement in Moab; only a permanent and strong leadership was capable of establishing a system of border fortresses, of setting up a permanent force able to match itself against external dangers, and of organizing guards for protection of the section of the “King’s Highway” which passed through Moab. The archaeological survey of Moab and the excavations at Aroer and Dibon, as well as the epigraphic material, have revealed the technical skill of the Moabites in the building of strongholds, watchtowers, walled cities, and installations for collecting water. They built fortresses along the borders. On the eastern border, along the edge of the desert, strong and impressive

forts have been discovered; the most prominent are Khīrbat al-Madayyina, overlooking the Zered River, Maḥāy, Mudaybī, al-Madyyina, overlooking one of the southern tributaries of the Arnon, Qaṣr Abu al Kharaq, and Qaṣr al-‘Āl, overlooking the fords of the Arnon on the south. These are only some of the fortresses which guarded entry into Moab from the east. In the service of the king of Moab were garrisons stationed in fortresses and troops trained for field combat and siege. He was assisted by a staff of officers who held various positions, such as that of scribe; one of the Moabite seals carries the name of “Chemos’am [son of] Chemosh’el ha-sofer.”

Most of the Moabite population obtained its livelihood from agriculture and cattle raising. *Mesha, king of Moab, was called a sheep-master (11 Kings 3:4). In areas unsuitable for agriculture, chiefly in the easternmost part of the country, the settlers lived in temporary dwellings (huts or tents), and continued to lead a seminomadic way of life, either as shepherds or as escorts of the merchant caravans that made their way along the nearby desert routes. Moabite culture, to the extent that it is revealed by the finds, most of which are from the Middle Iron Age, was influenced by various other cultures, chiefly by Aram in the north and Arabia in the south. Despite the eclectic character of Moabite culture, the Moabites developed a style of their own, which is particularly conspicuous in the pottery. Pottery sherds defined as Moabite have been discovered in large quantities in many settlements in the land of Moab proper and in localities north of the Arnon.

Moabite religion was essentially idolatrous and was national in character. *Chemosh was the national god of Moab (1 Kings 11:7, et al.), and was worshiped on high places and in temples. The god’s name was used as a theophoric component in Moabite personal names. Proscription (*herem*, Mesha stele, line 17), burnt offerings – either of an animal or, in special circumstances, of a human being (Num. 23:1, 14, 29; 11 Kings 3:27) – and circumcision (Jer. 9:24–25) were features of Moabite cultic practices. The polytheism of Moabite religion is attested by the names “‘Ashtar-Chemosh” (Mesha stele, line 17), “Beth-Baal-Peor” (cf. Num. 25), “Bamoth-Baal”, and apparently also by the noun *ari’el* (“altar hearths”; 11 Sam. 23:20; in Mesha stele, line 12, it is the name of an Israelite person or object), as well as by the many clay figurines found at various Moabite settlements, especially at Khīrbat al-Madayyina near Wādī al-Thamad.

The language and script of the Moabites is known first and foremost from the *Mesha Stele, found in Mesha’s native Dibon in 1868, as well as from two stele fragments (one found at Dibon and the other at Karak), from seals and from Moabite personal names. The language belongs to the northwest Semitic family and is close to the northern dialect of Hebrew. The Moabite script does not differ essentially from the Canaanite-Hebrew alphabetic script and, by the middle of the ninth century B.C.E., it had already attained a fine form. The length of the Mesha inscription and its content, style and form testify to a developed tradition of writing.

The History of Moab and its Relation with Israel

The first period of Moabite history bears the marks of Egyptian influence, as expressed in the stele found at Khirbat Balū'a in Moab. Its estimated date is approximately 1200 B.C.E. The relief on the monument depicts a figure, perhaps of the local ruler, in the presence of a god and goddess. Above the relief can be seen traces of several lines of writing in a script as yet undeciphered. Both the relief and the inscription contain clearly Egyptian characteristics. (According to some scholars, the Balū'a stele may be regarded as one of the earliest monuments of a Moabite tradition of writing.)

The land of Moab (*m²-b*) is mentioned in the geographical list of Ramses II (13th century B.C.E.). Ramses II undertook an expedition to Transjordan and captured cities in Moab, including Dibon. In the days of the first king of Moab, in the 13th century B.C.E., the Moabites were driven from the region north of the river Arnon by the Amorite king *Sihon, who ruled in Heshbon (Num. 21:27–35; cf. Isa. 15–16; Jer. 48). A short time later, Sihon's entire kingdom, from Wadi Jabbok to the Arnon, fell into the hands of the Israelites (Num. 21:13, 15, 24; 22:36; 33:44, et al.), who had reached the tableland by way of the desert east of Moab, because the king of Moab refused to allow them passage through his country. Fearing that they would now attack his land from the north, *Balak son of Zippor, the king of Moab, hired *Balaam to curse them but, on YHWH's order so goes the tradition, Balaam blessed them instead. Their inhospitality and their spite made the reasons for a prohibition against admitting Moabites and Ammonites "into the assembly of the Lord forever" (Deut. 23:4–8; Neh. 13:1). However, the enmity between Israel and Moab, echoes of which are also found in prophecies about the nations, was not the result of a single incident but grew out of a bitter and protracted struggle over disputed areas in Transjordan. With the conquest of the land of Sihon, the tribes of Reuben and Gad were settled in the tableland (Num. 32; Josh. 13), and the Arnon marked the border between Israel and Moab (Deut. 2:36, 3:8; Judg. 11:20, et al.). However, it is clear that a Moabite population remained north of the Arnon even after the conquest of the tableland from Sihon by the Israelites. An echo of the relations between the Moabites and Israelites in the tableland is the story of the affair of Baal-Peor in Shittim in the plains of Moab (Num. 25). The course of events following the Israelite conquest clearly shows that the Moabites did not surrender the tableland, and the region became a focus of strife between Israel and Moab as the border moved northward to the plains of Moab or southward to the Arnon, in accordance with the balance of power between Israel and Moab. The first attempt by Moab to reconquer the areas it had lost is the aforementioned incident of Balak and Balaam (Num. 22; cf. Micah 6:5). Numbers 22:6 and Joshua 24:9 suggest that Balak, with the support of the Midianites, waged war against the Israelites in an attempt to drive them from the tableland (but cf. Judg. 11:25–26). In the time of *Eglon, king of Moab (Judg. 3), the Moabites succeeded in thrusting northward across the Arnon. They imposed their rule on the tribes of Reuben and Gad,

Moab in the time of Mesha (9th century B.C.E.). Based on Y. Aharoni, Carta's Atlas of the Bible, Jerusalem, 1964.

and perhaps also upon the Ammonites, and even penetrated by way of the plains of Moab and Jericho to the center of the country on the western side of the Jordan, within the bounds of the territory of Ephraim and Benjamin. The Israelites were obliged to pay tribute and to bring a gift to the king of Moab. *Ehud son of Gera of the tribe of Benjamin saved Israel from the Moabites. In the time of *Jephthah the tableland was in the possession of Israel (Judg. 11:26). The datum in Genesis 36:35 according to which Hadad son of Bedad king of Edom smote Midian in the field of Moab (c. 1100 B.C.E.), is explained by some commentators as evidence of Edomite or, more plausibly, Midianite rule over Moab. The narrative in the Book of Ruth concerning the immigration of a Judean family to Moab when a severe drought struck Judah indicates that the history of relations between Israel and Moab included periods of tranquility and peace (cf. also 1 Chron. 4:22, 8:8).

The attacks by Moab on Israel at the end of the period of the Judges and in the time of Saul (Ps. 83:7, 9; 1 Sam. 14:47), and perhaps in the time of his son Eshbaal as well, served as a justification for David to wage war against Moab and to subdue it (11 Sam. 8:2; 23:20; cf. Num. 24:17), despite the friendly ties

that had developed between David, a descendant of Ruth the Moabite, and the king of Moab (1 Sam. 22:3–5). The actions taken by David against Moab after he had subjugated them (11 Sam. 8:2, 1 Chron. 18:2), although not sufficiently clarified, are indicative of the intense enmity that prevailed between Israel and Moab. David did not abolish the monarchy in Moab but contented himself with its subjection (11 Sam. 8:2; 1 Chron. 18:2). After the division of Solomon's kingdom, Moab came under the domination of the Northern Kingdom of Israel. As indicated by the stele of Mesha, king of Moab, it is probable that a long time before the death of Ahab, the Moabites threw off the rule of Israel and seized control over areas north of the Arnon (cf. 11 Kings 1:1, 3:5). The rise to power of Aram-Damascus immediately after the death of Solomon and its pressure on Israel (1 Kings 15:16–20), the expedition of *Shishak against the kingdoms of Israel and Judah, and the intense struggle between the house of Jeroboam son of Nebat and the house of David, especially in the time of Baasha and Asa, presented an opportunity to throw off the domination of Israel. The Moabites seized control of the tableland up to Medeba. Since Mesha called himself “king of Moab, the Dibonite,” it is possible that his father, whose name, as far as can be seen, was Chemoshyatti (?), had already established Dibon as the royal capital. The period of Moab's independence came to an end when the political and military situation of Israel improved under the rule of Omri. Omri “took possession” of the land of Medeba, but out of political and military considerations did not conquer the region of Dibon from Moab. Instead, he imposed his authority on the king of Moab, who resided in Dibon. The subjection continued throughout the days of Omri “and part of the days of his son,” apparently Ahab. When the pressure of the Arameans on Israel in the time of Ahab increased, Mesha withheld tribute from Ahab. The king of Moab took steps to strengthen his kingdom against the expected attack by the king of Israel. Mesha first secured communications between the region of Moab south of the Arnon and the region of Dibon by fortifying Aroer and building roads along the Arnon. He strengthened his city of residence, built an acropolis in it and prepared the city to withstand a protracted siege. Ahab did not turn his attention to Moab but satisfied himself with fortifying Jericho (1 Kings 16:34), which commanded the fords of the Jordan. Mesha, who had rebelled against Israel, chose not to participate in the joint campaign of Aram and Israel against Shalmaneser III in the year 853 B.C.E. (battle of *Karkar). Only after the death of Ahab did Mesha find the time ripe to begin the conquest of the entire tableland. He conquered Ataroth and the land of Ataroth, inhabited by the tribe of *Gad, Beth-Diblathaim, and the strong fortress of Jahaz on the border of the desert. He then continued northward, conquering Medeba and the land of Medeba, together with the large fortress of Bezer. The capture of Medeba opened the road to the plains of Moab for the Moabites; Mesha continued in a northwesterly direction to the plains of Moab by way of Wādī al-Harī, and seized control of the largest Israelite city of *Nebo, which he consecrated to 'Ashtar-Chemosh. Toward

the end of the inscription, Mesha mentions an expedition to Horonaim in southern Moab, close to Zoar (cf. Isa. 15:5; Jer. 48:5, 34). Thus Mesha succeeded in restoring the borders of the Moabite kingdom from the tip of the Dead Sea in the south to the vicinity of the plains of Moab in the north. He rebuilt cities in the tableland and settled Moabites in them. Some scholars hold that the expedition of Mesha to Horonaim is connected with the narrative in 11 Kings 3 of the joint campaign of *Jehoram, king of Israel, *Jehoshaphat, king of Judah, and the king of *Edom. The campaign of the three kings was carried out by way of Edom in order to attack Moab from the south, since the way to Moab from the plains of Moab was held by Mesha and was well defended by Moabite garrisons. In the battle that took place on the southern border of Moab, Jehoram and his allies defeated the Moabite army (11 Kings 3:20–24). Subsequently the allied armies penetrated into the heart of Moab and besieged the capital Kir-Hareseth (3:24–26). From the biblical description, it appears that the armies of Israel and Judah withdrew from Moab without succeeding in conquering the capital. According to 11 Kings 3:27, the king of Moab, in an act of despair, sacrificed his firstborn son upon the wall as a burnt offering, an act that brought “great wrath upon Israel.” Despite this, the great destruction caused to the cities of Moab in the campaign of the three kings weakened Moab and undermined Moabite rule in the tableland. Although Moabite bands were still able to make raids into Israel west of the Jordan (11 Kings 13:20), almost all of the tableland returned to Israelite possession, as is suggested by 11 Kings 10:32–33, which is concerned with Hazael's seizure of Transjordan down to the Arnon. Still later, in the time of Jeroboam, son of Jehoash king of Israel, Israelite rule in the tableland was consolidated (11 Kings 14:25; Amos 6:14), and Moab may have recognized the rule of Israel. Moab apparently never again attained full independence. Before it could benefit from the decline and fall of the kingdom of Israel, it was forced to recognize the sovereignty of the Assyrian empire.

The Moabites under Assyrian and Babylonian Rule and the End of their Kingdom

The expedition of *Tiglath-Pileser III to Israel in 734–733 B.C.E. brought the states of Transjordan under the rule of the Assyrian Empire. In one of his inscriptions, Tiglath-Pileser III mentions Salaman the Moabite (*Sa-la-ma-nu KUR Ma²-ba-ai*) among the kings of Syria and Israel who brought him tribute, apparently in 732 B.C.E. The paying of tribute was an expression of recognition of Assyrian rule. Acceptance of Assyrian sovereignty was generally bound up with the payment of tribute at fixed times, the offering of a gift on appointed occasions, bond service, and military aid to the Assyrian king for his expeditions. The Assyrians usually appointed an inspector (*qēpu*) to work alongside the local ruler and placed Assyrian garrison troops in fortresses and citadels, both in the provinces and in the domain of the vassal king. Aianūr of the land of Tabeel, who reported the raid of the men of Gidir into Moab to the Assyrian king, was apparently responsible to the

latter for the state of affairs in Moab. An Assyrian letter from Nimrud of the last third of the eighth century B.C.E. mentions a delegation from Moab which came to the city of Calah (Nimrud) to present a gift of horses to the Assyrian king. The king of Moab did not heed the words of incitement of Iamani, king of Ashdod, to rebel against Sargon II in 713 B.C.E. When Sennacherib conducted a military campaign against Hezekiah in 701 B.C.E., Chemosh-nadab the Moabite (*Kam-mu-suna-ad-bi KUR Ma-²-ba-ai*) came to meet him, bearing many gifts. In approximately 677 B.C.E., Esarhaddon, king of Assyria, ordered “the 22 kings of Hatti, the sea coast and within the sea” to drag cedar and pine beams from the mountains of Lebanon and Sirion to the capital Nineveh in order to build his palace. Included among these kings is Mušuri, the king of Moab (*Mu-šur-i šar KUR Ma-²-a-ab*). Ashurbanipal also relates that “22 kings of the seacoast, of the islands of the sea and of the mainland, servants subject to me” brought him numerous gifts and accompanied him with their troops on his first expedition to Egypt in 667 B.C.E. It is highly probable that Mušuri the Moabite was among these kings. An Assyrian list of tribute from the time of Esarhaddon or Ashurbanipal states that the Moabites tendered “one gold mina” as tribute to Assyria. The kings of Transjordan bore Assyrian sovereignty without attempting to throw it off because they were aware that the Assyrian government, in the prevailing circumstances, was of greater benefit than harm. The Assyrian government usually defended loyal vassal kings from neighboring enemies. Danger to the peace of the countries of Transjordan came chiefly from the inhabitants of the desert, whose pressure on the border countries increased, beginning in the eighth century B.C.E. From the description of the wars of Ashurbanipal against the Arabs, it is clear that the Assyrians stationed garrisons along the border of the desert in order to prevent attempts by the nomadic tribes to penetrate into the cultivated areas. The Assyrians were interested in strengthening the border countries against the desert raiders and consequently the former were included in the defense system of the empire. The defeat of Amuladi, king of Kedar, by Chemosh-halta, king of Moab (*Kama-as-ḥal-ta-a šar KUR Ma-²-a-ab*), is merely one episode in a chain of similar events that are no different from that which occurred 500 years previously, when Hadad son of Bedad the Edomite defeated the tribes of Midian in the field of Moab (Gen. 36:35). Furthermore, under the Assyrian rule, the peoples of Transjordan extended the borders of their kingdoms into areas with an Israelite population, and they enjoyed economic prosperity. The Assyrians managed the defense of the desert caravan routes that connected Egypt and Arabia with Syria and Mesopotamia. Echoes of Moab’s economic prosperity and of the extent of its territory appear in the prophecies about Moab (Isa. 25:10–12; Jer. 48, chiefly verses 7 and 29; Ezek. 25:9; Zeph. 2:8).

The passage from Assyrian to Babylonian rule did not involve a great change in the status of the kingdom of Moab. The king of Moab was apparently numbered with “all the kings of the land of Heth [Hatti]” who brought tribute to Ne-

buchadnezzar when the Chaldean king campaigned against Ashkelon (c. 604/3 B.C.E.). Moabite and Ammonite troops were in the service of the king of Babylon when the revolt of Jehoiakim was crushed (II Kings 24:1–2; cf. Ezek. 25:6–8). However, a few years later a change in the policy of Moab toward Babylon is noticeable. In the fourth year of Zedekiah of Judah (594 B.C.E.), the king of Moab participated in a scheme to form a conspiracy against Babylon (Jer. 27:3). While there is no explicit information about the fate of the conspiracy, Moab apparently did not come to the aid of Zedekiah but stood aside when the Chaldean army drew near. A Babylonian punitive expedition against the countries of Transjordan was undertaken in the fifth year of the destruction of Jerusalem, i.e., the 23rd year of Nebuchadnezzar’s reign. Josephus states that in that year, the Chaldean king proceeded against the army of Syria and defeated it, and that he also fought against the Ammonites and Moabites (Jos., Ant., 10:181; cf. Jer. 40:11; 48:7). Although there is no certain information that it was the Babylonian empire which brought about the end of the kingdom of Moab and turned it into a Babylonian province, the lack of information about Moab as an independent or semi-independent kingdom after the period of Babylonian rule, as well as a reference to the province of Moab (Ezra 2:6) during the first period of Persian rule in Israel, indicate that Moab was made a Babylonian province in the time of Nebuchadnezzar or a short time after his death. Glueck’s archaeological survey testifies to a decline of settlement in Transjordan which ended with complete destruction in the sixth century B.C.E. The destruction was apparently a result of the collapse of the defense system on the desert front, which desert nomads broke through in order to raid Transjordan (e.g., the sons of Kedar and Nebaioth), damaging cultivated lands and destroying permanent settlements. Many Moabites were driven from the region south of the Arnon. Some of them concentrated in the region of the plateau, a region that was later known as Moabitis, and some dispersed to near and distant countries. The Moabite population remaining in Moab was assimilated among the Arabian tribes who took possession of the land. The punishment of the kingdoms of Transjordan cited by Ezekiel (25:4–10, 35:15) faithfully reflects the disaster that befell the settlements in Transjordan, and points to the settling in of nomads and shepherds from the east. The lament on the destruction of Moab in Numbers 21:27–35, which is echoed in Isaiah 15–16 and Jeremiah 48, is an old fragment of Moabite poetry. Moab achieved an additional period of prosperity in the Hellenistic-Roman period, but by then it had already been taken over by the Nabatean tribes, and was included in the Nabatean kingdom. In Hasmonean times, Alexander Yannai conquered the area, which was returned to the Nabateans by Hyrcanus II. It was later incorporated into Provincia Arabia.

MOATI, SERGE (1946–), French television director. Moati was born in Tunis. From 1982 to 1986 he was the head of the state-owned channel 3 of French television (FR3), where he had been director of programming in 1981–1982. In addition to his work in television, he directed a number of feature films and was a film critic. He was awarded several prizes for his television programs, among them a prize for a documentary film (Prague, 1970), a prize for the best French-language film (1970), television critics award (1973), and the International Critics Award at the Monte Carlo festival in 1980.

[Gideon Kouts (2nd ed.)]

MOCATTA, English family of Marrano origin. MOSES MOCATTA (d. 1693), who came from Amsterdam, appears in a Bevis Marks (London) synagogue list in 1671. He was a diamond broker and merchant. His granddaughter REBECCA married as her second husband Moses Lumbrozo de Mattos. Their son ABRAHAM (d. 1751), (who added the name Mocatta and later dropped Lumbrozo de Mattos) joined with Asher Goldsmid to found Mocatta and *Goldsmid, later bullion brokers to the Bank of England, engaging in enormous transactions. Abraham Mocatta had 11 children (including Rachel, mother of Sir Moses *Montefiore). His son MOSES (1768–1857) retired early from business to devote himself to scholarship. He published *Faith Strengthened* (1851), a translation of Isaac b. Abraham *Troki's *Hizzuk Emunah*, and *The Inquisition and Judaism* (1845), a translation of a Portuguese inquisitorial sermon and the reply to it. In communal life, he was especially concerned with education and the reorganization of the Sephardi schools, "Sha'arei Tikvah."

Moses' children included DAVID (1806–1882), an architect, a pupil of Sir John Soane, and best-known for his railway stations on the London to Brighton line. As architect for his cousin Sir Moses Montefiore at Ramsgate, he was the first Jew to design an English synagogue. Another son, ISAAC LINDO (1818–1879), wrote tracts on Jewish moral teachings and social questions. Nine of the 24 founders of the Reform Congregation were Mocattas, including Moses and his nephew Abraham, father of FREDERICK DAVID MOCATTA (1828–1905). Philanthropist, scholar, and communal leader, Frederick was the representative ideal of late Victorian Anglo-Jewry. Active in both the Charity Organization Society and the Jewish Board of Guardians, he campaigned for the reform of voting charities. Widely traveled, he lectured on contemporary Jewish communities and wrote on Jewish history, publishing *The Jews and the Inquisition* in 1887. A munificent patron of scholarship, he was a correspondent and supporter of *Zunz. Sympathetic to most Jewish causes (although disapproving of nascent Zionism), he was an observant Jew and member

of two Orthodox synagogues as well as his family's Reform congregation. He left his library (now known as the Mocatta Library) to University College, London, and the Jewish Historical Society of England. EDGAR MOCATTA (1879–1957) continued to head the family business, Mocatta and Goldsmid, and was known as the "silver king" for his specialist knowledge of dealings in silver as a currency. The family firm was sold to Hambros Bank in 1957.

One branch of the Mocatta family remained within the Orthodox community: a descendant of this was SIR ALAN ABRAHAM MOCATTA (1907–1990), a judge of the High Court from 1961, also active in Anglo-Jewish communal and historical affairs (president of the Board of Elders of the Spanish and Portuguese Synagogue, and chairman of the Council of Jews' College, 1945–62). He was the joint editor of *Scrutton on Charter Parties* (14th–17th editions).

[Vivian David Lipman / William D. Rubinstein (2nd ed.)]

MOCH, JULES (1829–1881), French colonel, one of the first Jews to reach this rank in the French army. Moch fought with distinction in the Crimean War in 1854–55, and in the conquest of Rome in 1859, as well as in the Franco-Prussian War of 1870–71. He was the first Jew to be an instructor and examiner at the Military Academy of Saint-Cyr. Moch, proud of his Jewishness, was one of the founders of the Club Militaire which after his death became the moving spirit behind the incitement against Captain *Dreyfus.

MOCH, JULES SALVADOR (1893–1985), French socialist leader. Born in Paris, Moch worked as an engineer and industrial manager from 1920 to 1927. From 1928 to 1940 he sat as a socialist deputy in the National Assembly and in 1936 was made secretary-general of the prime minister's office under Leon *Blum, who held him in high esteem for his wide scientific and managerial experience. He was later under-secretary of state (1937) and minister of public works (1938).

During World War II, Moch served in the French navy; in 1940, after the fall of France, he was imprisoned for voting in the National Assembly against the granting of constitutional powers to Marshal Pétain. He escaped and joined the Free French Navy in 1943. In the following year he became a member of the Consultative Assembly and, on the termination of the war, a member of the National Assembly. From

1945 to 1947 Moch was minister of public works and between 1946 and 1951 he held important posts in 11 successive cabinets, serving as minister of the interior, vice premier, and minister of defense. In 1949 he was nominated premier but failed to secure a majority. Between 1953 and 1960 he served as French representative at the Geneva disarmament conference. He returned to the Ministry of the Interior in 1958 for a short period but resigned when General De Gaulle came to power.

Moch was one of the most respected figures in the French socialist movement. As a member of the French government he gave considerable assistance to Jewish refugees, as he took a keen interest in Zionism. He was an enthusiastic supporter of Israel, paying several visits, and closely following the development of the Israel labor movement. Among Moch's many publications were *Restitutions et réparations* (1921) and *La Russie des Soviets* (1925). He also wrote a number of books on financial questions including *Le Parti Socialiste et la politique financière* (1928), which were issued as handbooks by the French Socialist Party to demonstrate their ability to handle economic affairs.

[Moshe Rosetti]

MOCHA (Ar. *al-Mukhā*), a port city on the Red Sea coast of *Yemen. It is famous for being the major marketplace for coffee from the 15th to the 17th centuries, when the Dutch managed to obtain some seeds from the coffee tree – seeds which the Arab traders had guarded zealously – and soon enough were cultivating coffee in their colony of Indonesia. According to a sketch plan compiled by Brouwer (p. 143), the population of Mocha may have reached 20,000 permanent residents including a Jewish community (p. 228). It was the principal port for Yemen's capital, *San'a, until it was eclipsed in the 19th century by *Aden and Ḥudayadah as Yemen's main port. That, along with the fact that the Arabs no longer had an exclusive hold on the coffee trade, eventually pushed the city of Mocha into obscurity.

The earliest information about a Jewish community in Yemen can be derived from al-Zāhiri's *Sefer ha-Musar* from the 16th century. Since then we have a flow of information about Jews entering Yemen through Mocha, such as the emissary and book-printer from *Tiberias, Abraham b. Isaac Ashkenazi (1578). As can be judged from the main source of this information – responsa collections of Jewish rabbis outside of Yemen, mostly from *Egypt – the Jewish community in Mocha consisted not of Yemenite Jews but of non-Yemenite Jewish merchants who settled there for their business and others who came for a limited time only. In about 1770 there were some 400 Jewish families in the town, including some wealthy merchants, craftsmen, goldsmiths, weavers, and builders of smelting furnaces. R. Aaron Iraqi ha-Kohen, the president of the Jewish community in *San'a, lived there for some years as a ruler and judge (early 18th century), and his son Shalom, who also acted as president, built a magnificent synagogue there. After the British occupation of Aden in 1839

and its economic development, most Jews moved there from Mocha. In 1859 Jacob *Saphir found in Mocha only eight Jewish families living in a derelict quarter outside the city walls in wooden and reed constructions, as was the case in many other Yemenite towns. There were not enough members to form a *minyān* for Rosh Ha-Shanah services. One of the plagues common in this region caused the Jews to abandon the town and they dispersed in the mountain villages. The number of Jews gradually dwindled and by the 20th century no Jews remained in Mocha.

[Haim Z'ew Hirschberg / Yosef Tobi (2nd ed.)]

MODAI, ḤAYYIM (d. 1794), Safed scholar. In 1749 Modai journeyed to Europe as an emissary of the Safed community. Passing through Egypt, he came across a manuscript of geonic responsa which he published 43 years later under the title *Sha'arei Zedek* (Salonika, 1792). In 1755 he was appointed a member of the *bet din* in Constantinople as well as one of the *pekidim* ("commissioners") of Safed in the town. Following the earthquake in Safed in 1760, he was again sent to Europe in 1762 as an emissary for the town by the Constantinople commissioners, who published four letters on the subject of his mission in order to give it full publicity. After visiting various Italian towns (Mantua, Turin, and Venice in 1763), he went to Holland and England (Amsterdam and London) in 1765, and Germany. In 1766 he was in Prague where he had halakhic discussions with Ezekiel *Landau, who refers to him in respectful terms (responsa *Ḥayyim le-Olam*, YD no. 2; *Noda bi-Yhudah, Mahadura Kamma*, YD no. 87–88). Four years later he returned to Constantinople where he stayed until the death of Ḥayyim b. David Abulafia, when he was invited to succeed him as the rabbi of Smyrna. There he remained until 1793. At the end of his commendation to *Sha'arei Zedek*, Modai expresses his longing to return to Safed. His wish was fulfilled and he returned to Safed in 1793. His works include *Tiv Gittin* (1875), containing the bills of divorce arranged by him between 1737 and 1775 with the glosses of Yom Tov Israel; and *Ḥayyim le-Olam* (1878–79), responsa in two parts, including many written while on his travels; it also contains the responsa of his grandson, Nissim Ḥayyim Modai, entitled *Meimar Ḥayyim*. His glosses on the Shulḥan Arukh, *Orah Ḥayyim* and *Yoreh De'ah*, and the *Peri Hadash* appear in the *Berakh Moshe* (Leghorn, 1809) of Moses b. Mordecai Galante (pp. 151–69); a responsum by him in the *Ma'amar ha-Melekh* (Salonika, 1806), of Raphael Abraham Mazli'ah; and an alphabetical poem on the smoking of tobacco (*toton*) at the beginning of the *Avodah Tammah* (1903) of Joshua Raphael Benveniste. From 1767 Modai was on friendly terms with Ḥ.J.D. Azulai; on one ruling – in connection with reading from an invalid

Sefer Torah – they expressed opposing views; the correspondence between them continued until 1787.

[Josef Horovitz]

MODAI (Madzovitch), YITZHAK (1926–1998), Israeli politician and businessman, member of the Eighth to Twelfth Knessets. Modai was born in Tel Aviv. He studied at the Ge'ulah High School in Tel Aviv, and as a high-school student joined the Haganah in 1941. He joined the British mandatory police in 1943. He served in the IDF in 1948–50 as a field officer and as a staff officer, reaching the rank of lieutenant colonel. In 1951–53 he served as military attaché in London, and in 1953 headed the Israeli-Syrian and Israeli-Lebanese Mixed Armistice Commissions. Modai completed his studies in the Technion in Haifa as a chemical engineer in 1957 and received a law degree from the Tel Aviv branch of the Hebrew University in 1959. After that he entered the business world, and in 1961–77 was director general of the Revlon cosmetics company in Israel.

Modai joined the *Israel Liberal Party in 1961 and was appointed chairman of its Young Guard in 1962. He was a staunch supporter of the establishment of *Gaḥal, and as member of the Liberal Party executive consistently advocated full unity with the *Ḥerut Movement. In the course of the Six-Day War he was appointed military governor of Gaza. In 1969–73 he served as member of the Herzliyyah city council. Modai was elected to the Eighth Knesset in 1973, on the Likud list. Even though he objected to Israeli withdrawal from the territories, he expressed support for concessions on the Egyptian front, as long as Western Erez Israel would not be redivided. In the government formed by Menahem *Begin in June 1977 he was appointed minister of energy and infrastructures, serving also as minister of communications from January 1979 to December 1980. In May 1980 Modai was elected chairman of the Liberal Party presidium. In the second government formed by Begin in August 1981, he was appointed minister without portfolio, and in October 1982 returned to the Ministry of Energy and Infrastructures. In the National Unity government formed in September 1984, Modai was appointed minister of finance. At first he worked in harmony with Prime Minister Shimon *Peres, and together they passed the Economic Stabilization Plan of 1985 that was designed to deal with a three-digit inflation rate and balance of payments difficulties. However, due to growing tensions in the government, Peres decided to switch him with Minister of Justice Moshe Nissim. As minister of justice Modai dealt with the GSS Affair, following the scandal over the killing of a terrorist that had been taken prisoner. In July 1986 Modai was forced to resign from the government after insulting the prime minister. Following the rotation in the premiership in October, Modai returned to the government as minister without portfolio. In 1984 he was elected

chairman of the Liberal Party presidium, in which capacity he served until the Liberal Party and the *Ḥerut Movement finally merged into a single party in 1988. After the elections to the Twelfth Knesset in 1988 he was appointed minister of economics and planning. After the government approved the Shamir-Rabin initiative in May 1989 for holding elections in the West Bank and Gaza Strip, Modai joined Ariel *Sharon, and David *Levy in opposition to the initiative. On the day of the vote on a motion of no-confidence in the government on March 15, 1990, Modai and four additional members of the Likud parliamentary group broke away from the group and established a parliamentary group by the name of the Party for Advancing the Zionist Idea. In the narrow government formed by Yitzhak *Shamir in June, he was once again appointed minister of finance, after demanding a vast financial guarantee to back up the agreement he signed to join the coalition. Modai objected to the American conditioning of the grant of financial guarantees to Israel in return for stopping the Jewish settlement activities in the West Bank and Gaza Strip. He ran in the elections to the Thirteenth Knesset at the head of a new party called the New Liberal Party, but it failed to pass the qualifying threshold, and Modai returned to private business. He wrote *Mehikat Afassim* (1988).

[Susan Hattis Rolef (2nd ed.)]

MODEH ANI (Heb. מוֹדֵה אֲנִי; “I give thanks”), initial words of a prayer said immediately upon waking in the morning. The short prayer (“I give thanks unto Thee, O living and eternal King, who hast restored my soul unto me in mercy; great is Thy faithfulness”) does not mention any of the Divine Names and may therefore be said while still in bed and before performing the prescribed morning ablutions; hence it was preferred to the traditional *Elohai Neshamah* prayer (which was transferred to the morning benedictions).

Modeh Ani, possibly a shortened version of the *Elohai Neshamah* prayer (Ber. 60b), is of late origin and seems to have been composed about the 17th century; it was printed for the first time in the addenda to the prayer book *Seder ha-Yom* (1695). Because of its shortness and simplicity it became a favorite morning prayer for very small children before they are capable of reciting the ordinary daily morning service.

BIBLIOGRAPHY: Hertz, *Prayer*, 1116 ff.

MODEL, MARX (d. 1709), *Court Jew of *Ansbach. The Model family originated in *Oettingen in the 16th century and subsequently spread throughout *Bavaria. It included a number of rabbis and Court Jews, foremost of whom was Marx Model, who in 1676 inherited his father's position as military and court purveyor at the court of the Margrave of Ansbach. One of the earliest Court Jews to engage in economic ventures, Marx acquired a number of estates and farms, a paper mill, and a workshop making roof tiles. In 1691 he was freed from custom duties and was granted the right to be sole publisher of the Talmud in Ansbach. His eldest daughter married Wolf, son of Samuel *Oppenheimer, the influential Austrian Court

Jew; Modell served the latter as agent and supplier of silver for the mint and aided him in revoking an expulsion order against the Jews of Rothenburg. Modell maintained his own synagogue and cantor in Ansbach. His unsuccessful attempt to unite the rival Jewish communities of *Fuerth was utilized by his rival Elkan *Fraenkel, who undermined his position at court and subjected the Jews to a harsher rule. However, Fraenkel's triumph was short-lived; Modell's sons inherited their father's position and intrigued to bring about the eventual fall of the Fraenkels.

MODELL, ARTHUR B. (Art; 1925–), U.S. football team owner who was instrumental in transforming the NFL into the most popular TV sport in American history. Born and raised in Brooklyn, New York, Modell grew up destitute during the Depression and dropped out of high school at 15 to support his mother and two sisters after his father died. During World War II, he served stateside in the Air Force and then enrolled in television school under the GI Bill. He produced *Market Melodies*, one of the first regular television shows in the nation, and worked in advertising, public relations and television production in New York in the 1940s and 1950s. Modell was 35, living with and caring for his mother, when he purchased the Cleveland Browns on March 22, 1961 for \$4 million – a sixfold increase from the previous franchise sale. He invested \$250,000 of his own money, borrowed \$2.7 million and found partners for the rest. Modell owned the Browns for 34 seasons but his near bankruptcy forced him to move the team to Baltimore in 1996, provoking the lasting wrath of Browns fans. Soon after moving the team to Baltimore, he sold a minority interest and eventually the controlling interest in the team, and left the game in 2004 after 44 seasons in the NFL. During his time as owner, the Browns won the NFL championship in 1964, reached NFL and AFC league title games in 1964, '65, '68, '69, '86, '87, '89. His Baltimore Ravens won the Super Bowl in 2000.

Modell, an influential visionary, helped popularize the NFL through the league's increasingly lucrative television contracts, which he negotiated as chairman of the league's TV committee for 31 years. Along with Pete Rozelle and Rooney Arledge, Modell also created Monday Night Football on ABC; was instrumental in pushing the owners in the 1960s to share revenues equally; in bringing about the merger of the NFL and the AFL by agreeing to move the Browns to the less-established AFL for the good of the league; played an essential role in the creation of NFL Films, which became a financial success and one of America's premier production companies, and was instrumental in helping the league raise its profile; and, as chairman of the owners' labor committee, completed the first col-

lective bargaining agreement in NFL history in 1968. Modell was also a leader on diversity by promoting minorities to key positions in his front office, including naming the first black general manager in NFL history. He wrote his autobiography *Owning Up: the Art Modell Story*, in 2005.

[Elli Wohlgelernter (2nd ed.)]

MODENA, city in N. central Italy. The first document relating to Jews in Modena may date back to 1025, but the existence of a stable Jewish community, formed by loan-bankers who originated from *Perugia, *Rimini, and Fermo, was not recorded until 1393. For many years the Jews of Modena enjoyed the protection of the house of Este, which ruled Modena as well as Ferrara. After the expulsion from Bologna (1569) and the devolution of Ferrara (1598) when Modena became the capital city of the Duchy of Estense a number of Jews moved there; also in the 17th and 18th centuries the duchy of Modena attracted a large Jewish settlement. Generally, the dukes considered favoring Jewish settlement and development as beneficial to the state, mainly for economical reasons, but this did not prevent the establishment of the ghetto (1638–1859), Inquisitional controls, and the activity of the Opera Pia dei Catecumeni, founded in 1700. When the ghetto was established in 1638 the Jews in Modena numbered 750; in 1767 they were 1,262; in 1847, 1,538 lived in the entire province of Modena.

Modena was long a principal center of scholarship for Italian Jewry and was distinguished as a seat of kabbalistic study. Among its scholars were the kabbalist *Aaron Berechiah of Modena, author of *Ma'avar Yabbok* (Mantua, 1626); the scholars Leone Poggetti, Natanel Trabotti, and Yedidià Carmi; the remarkable bibliophile Abraham Joseph Solomon *Graziani; Abraham *Rovigo; and Ishmael *Cohen (Laudadio Sacerdote). During the first half of the 16th century the Hevrot Ghemilut Chassdim and the Talmud Torà were founded; in 1614 Aharon Berechiah of Modena founded the Hevrat Machshivim for kabbalistic studies. The cultural and economic activities of Modenese Jewry were central to the Duchy of Este. Although they were confined to the ghetto in 1638, the Jews of Modena were allowed to carry on their business activities. The Jews of the Este Dukedom in fact were involved in a variety of entrepreneurial, commercial, and cultural activities – among other things, the manufacture and trading of precious silks, silver, and diamonds. These activities were handled by large-scale entrepreneurs, and there were also a number of ordinary workers. Jews played important cultural roles – as ducal librarians, court silversmiths, printers, etc. – in the city, and often it was Jews who imported new cultural ideas from abroad. From 1638 to 1721, the Jews of Modena opened nine synagogues with women's galleries and two schools. The *hevrot* in Modena at the end of 18th century numbered 15. In 1735 the Hevra Soked Holim for women was established. There was also a renowned yeshivah in the city. In 1796 Modena was occupied by the French and became part of the Cisalpine Republic. Moisé Formiggini was the first Italian Jew to be elected to office in the government of the Repubblica Cisalpina (1797).

He took part in the Lyon consultation in 1802 and in the Great Sanhedrin of Paris in 1806. In 1796 he moved to Milan, where he expanded his entrepreneurial activities and became a public figure, uniting the Jewish communities of Northern Italy. At the same time, with his brother Salomone, the merchant Angelo Sanguinetti and the rabbis Buonaventura Modena and Ishmael Cohen he continued to lead the Modena community. During the Restoration, the ghetto restrictions were renewed, but the Jews of Modena contributed effectively to the Italian Risorgimento, collaborating with the Carbonari, the secret revolutionary movement. Angelo and Emilio Usiglio in particular were among the supporters of Giuseppe Mazzini. With the arrival of the Piedmontese troupes of the Savoy in 1859 the Jews of Modena were granted full equality with the other citizens. Yet the community, which up to the middle of the 19th century still consisted of about 1,000 Jews, then began to diminish numerically because of immigration, mostly to Milan. Devotion to Erez Israel was particularly strong in Modena in the ghetto period, and later on Zionism obtained an early foothold there: the monthly *L'Idea Sionnista* was published in Modena from 1900 to 1910, founded by Professor Carlo Conegliano, of the Faculty of Economics. Moreover in the 1930s, thanks the educational activity of Angelo da Fano, the Jewish community contributed greatly to the Italian Zionism movement.

In 1931 the community of Modena had a membership of 474 Jews. During the Holocaust 70 Jews were deported to the death camps from the province of Modena, and over 15 Modenese Jews died. Many Jews of Modena participated in antifascist activities and the Resistenza movement. Angelo Donati organized the escape of thousands of Jews from Nice to Palestine; the president of the community, Gino Freidman, was one of the organizers of the rescue of young refugees at Villa Emma. After the war 185 Jews remained in the community; by 1959 their number had decreased to 150 and by 2005 to 100, though the main synagogue remained open and there were regular Sabbath services. In the last quarter of the 20th century the community president Massimiliano Eckert (1908–2004) and Rabbi Adolfo *Lattes (1910–1995) did encourage the immigration to Israel of young people and the maintenance of religious life. In spite of its small number the Jewish community of Modena is very active in promoting cultural activities on Jewish and Israeli themes and Jewish education at the primary and secondary levels.

MODENA, ANGELO (1867–1938), Italian general. Born in Reggio Emilia on January 28, 1867, he was appointed second lieutenant of the Alpine troops in 1887. He took part in the Italian-Turkish war of 1911–12; promoted to major (he was a captain from 1907), he was decorated with the bronze medal for military valor. In 1915, he was appointed colonel; during World War I, he was also decorated with the silver medal for military valor. In 1927, he was appointed general.

MODENA, AVTALYON (da; 1529–1611), Italian scholar, and son of Mordecai (Angelo da) Modena, the eminent physician. After studying in Padua, Avtalyon settled in Ferrara, where he became noted as a talmudist and scholar; Azariah dei *Rossi mentions him with deference in his *Me'or Einayim*. He took part in the famous controversy on the ritual propriety of the *mikveh* constructed at *Rovigo. When the papal attack on Jewish literature was renewed in 1581, he went to Rome as delegate of the Italian Jewish communities and is said to have made a two-hour oration in Latin before the assembled Curia, as the result of which the edict was modified. He was known also as a writer of verse. Letters addressed to him are preserved among the correspondence of his nephew, Leone *Modena.

[Cecil Roth]

MODENA, FIORETTA (Bat Sheva; 16th century), wife of Solomon Modena (1522 or 1524–1580) and very learned in Torah, Mishnah, Talmud, Midrash, Jewish law, especially Maimonides, and kabbalistic literature, including the Zohar. Fioretta's sister, Diana Rieti of Mantua, was equally well versed. Fioretta spared no expense or effort to find the best teachers for her grandson, *Aaron Berechiah (d. 1639), later a rabbi and kabbalist in Modena. Nor was she unique in this respect; Italian Jewish women regularly supervised the educations of their sons and grandsons, especially when fathers and grandfathers were preoccupied. At the age of 75, after the death of her husband, Fioretta set out to Palestine to live in Safed, the Jewish equivalent of monastic retirement. According to her Venetian nephew Leon *Modena (1571–1648), who met Fioretta and witnessed her signal learning when she passed through Venice, she died just before reaching her destination.

[Howard Tzvi Adelman (2nd ed.)]

MODENA, LEON (Judah Areyeh mi-Modena; 1571–1648), Venetian rabbi, cantor, preacher, teacher, author, and polemicist. His father, Isaac, came from an old French Jewish family

which settled in Modena and, after they moved to Bologna and later Ferrara, retained the surname Modena. His mother, named Rachel, but renamed Diana by his father, came from an Ashkenazi family that had resettled in Italy. Leon Modena was born in Venice but spent his youth in Ferrara, Bologna, and Montagnana. He studied Bible, rabbinics, Hebrew language, poetry, letter writing, voice, music, dancing, Italian, and Latin. At the age of 13, he composed *Kinah Shemor*, a macaronic poem, sounding and meaning the same in Hebrew and Italian; translated sections of Ludovico Ariosto's *Orlando furioso*; and wrote a pastoral dialogue on gambling (1595/6).

In 1590, at the age of 19 after the death of his fiancée, his cousin Esther Simḥah, Modena married her sister Rachel and received the title of *haver*. He wished to embark on a rabbinic career, so in 1592 he returned to Venice, but the Jewish lay leaders raised the age of ordination to 35 and then 40. Modena, therefore, had to create his own opportunities for income and recognition until he was ordained in 1609.

Modena used his skills to serve as a legal clerk for the leading rabbis of Venice; a teacher of Hebrew and rabbinics for students of all ages; a popular preacher; a proofreader, expediter, and author of dedicatory poems in the Venetian Hebrew publishing industry; author of many Hebrew tombstone epitaphs, including his own; and a letter writer for his students. He also turned to gambling, a popular form of entertainment in Venice. Indeed, due to both emotional and financial distress, he gambled intermittently, despite his own better judgment, with both Christians and Jews, for the rest of his life.

Unable to earn a living in Venice, Modena moved to Ferrara from 1604 to 1607 where he functioned as a rabbi and taught for a wealthy family. During these years Modena made a successful presentation concerning Jewish moneylending before the papal legate, sided with most of the rabbis of northern Italy against the rabbis of Venice in a continuing controversy over a ritual bath in Rovigo, and supported a major musical performance in Ferrara that took place in the synagogue on Friday evening, Tu be-Av. He spent another year abroad in Florence (1609–10).

Modena met with and taught Hebrew to many English and French Christians. One offered him a chair in Oriental languages in Paris which he refused, probably because he would have had to convert. Another commissioned him to write for James I a description of Judaism, the *Riti Ebraica*, the first vernacular description of Judaism written by a Jew for a non-Jewish audience, first published in Paris in 1637 and subsequently republished and translated many times.

In his published books, Modena demonstrated his skills as an author, teacher, and popularizer of rabbinic teachings. In *Sod Yesharim* (1594/5), he prefaced magic tricks, folk remedies, and Jewish riddles to a curriculum of biblical and rabbinic studies to make it attractive to young students. In *Zemah Zaddik* (1600), he embellished a Hebrew translation of the most popular Italian book of the period, *Fior di Virtù*, removing Christian references and adding citations from tra-

ditional Jewish sources. In *Midbar Yehudah* (1602), he translated some of his Italian sermons into Hebrew. In *Zeli Esh* he made the first Italian translation of the Passover *Haggadah* (1609). In *Galut Yehudah* (1612), he tried to overcome Church laws against translating the Bible by providing a translation of difficult words, to which he later added a rabbinic glossary as well (1640). In *Lev Aryeh* (1612), he presented a Hebrew system of memory improvement, based on those popular in Venice, as a preface to a work on the 613 commandments of Judaism. In his play, *L'Ester* (1619) he combined the current dramatic standards with traditional rabbinic sources. To the anthology *Ein Yaakov*, the major source for rabbinic materials in Italy where the Talmud was banned, Modena contributed an index, *Beit Lehem Yehudah* (1625); a supplementary collection, *Beit Yehudah* (1635); and a commentary (*Ha-Boneh*, 1635). Modena's devotion to rabbinic learning and his educational program found expression in these books.

During his early years as a rabbi in Venice, Modena wrote some interesting responsa on contemporary Jewish cultural and legal issues, such as going about bareheaded and playing tennis or traveling by boat on the Sabbath. From his ordination until his death, Modena served as the chief Hebrew translator for the government and secretary for several organizations, including the Italian synagogue, where he also was elected cantor. In 1622 he prepared for press the first book of Hebrew music, *Ha-Shirim asher li-Shelomo*, by Salamone Rossi. He ordained candidates for the degrees of *haver* and rabbi, including medical students in Padua, approved the decisions of other rabbis, and authorized books for publication, with the result that by 1618 he was referred to as a *gaon*, and an excellent, well-known, honored and brilliant preacher. By 1627 Modena signed his name first in order among the Venetian rabbis. In 1628 he was maestro di cappella for a Jewish academy of music, Accademia degli Impediti, which was popular both inside and outside the ghetto.

In 1630, when the leaders of the Jewish community tried to ban gambling, he published a Hebrew pamphlet in the form of a rabbinic responsum in which he questioned whether gambling was a sin according to Jewish belief and challenged the lay leaders' authority to issue such a ban without rabbinic approval. But even the rabbis of Venice, on whose behalf he argued, opposed his views.

Modena's most important writings remained unpublished during his lifetime. These included his defenses of rabbinic Judaism against Jewish critics, Christianity, and Jewish mysticism. He wrote *Sha'agat Aryeh* (1622) against *Kol Sakhal*, an anti-rabbinic work; *Magen ve-Zinnah* (c. 1618), a response against attacks on rabbinic Judaism; and *Diffesa* (1626), a defense of the Talmud against the apostate Sixtus of Sienna, whose appeal was based in part on his use of Kabbalah.

His critique of recent trends in Jewish mysticism, especially the spread of the new school of Lurianic Kabbalah and the impact of Christian utilization of Kabbalah on Jewish apostasy, included a trilogy of works: a tract against reincar-

nation, *Ben David* (1636); a text challenging the authenticity of the Kabbalah, *Ari Noḥem* (1639); an attack on Christian Kabbalah, *Magen va-Herev* (1645, incomplete).

In *Ḥayyei Yehudah*, the first full-length Hebrew autobiography, Modena recorded many of the details of his unhappy but productive life. His difficult family life included, in addition to the death of two infants, the loss of his three adult sons: Mordecai, who died by inhaling fumes during alchemy experiments; Zebulun, who was murdered by a Jewish gang over a Jewish woman; and Isaac, whom he banished to the Levant and who traveled as far as South America. His main source of solace remained his two daughters: Diana, who would become the executrix of his estate, and Esther or Sterella, married to Jacob of La Motta. Modena's intellectual and spiritual heirs were Diana's first husband, Jacob Halevi, and Jacob's son, Isaac min Haleviim. After his beloved son-in-law died in the plague of 1629, Diana soon remarried Moses Saltaro Fano, with whom Modena did not get along, and who moved away, leaving her father to raise her son. Modena and his wife, Rachel, quarreled a great deal, especially after all the family moved out and their health deteriorated. According to the Venetian Ministry of Health she died on March 7, 1648, and he two weeks later. After his death the Italian congregation made extensive plans for his burial, and he was eulogized by the Jewish community and by Christian writers abroad.

As Modena's manuscripts were discovered during the 19th century, they were viewed as attacks on traditional Judaism. The early proponents of Reform Judaism looked to Modena as a precursor and, in the same tendentious spirit, those who wished to undermine the Reform appropriation presented him as a gambler, a heretic, a hypocrite, or someone racked by contradictions. Trying to make sense of these complexities, some have sought to identify him as the personification of the Renaissance Jew or the "first modern rabbi." The fact is, however, that in Italy the Renaissance was over by the time he lived and to see him as modern is to miss the fact that he spent much of his life defending traditional medieval rabbinic authority against attempts by the Jewish laity to limit their coercive power. Indeed, it may be more apt to view Modena as one of the last medieval rabbis and to see the period in which he lived as the earliest beginnings of the modern period for the Jews.

Leon Modena's life, however, is not only an important example of the struggles of early-modern rabbinic authority but also of social history. His candid and extensive writings provide details about the social and economic conditions of the family, women, and children and about daily life, community, and religion, including the occult, magic amulets, and especially, Jewish-Christian relations.

MODERN, JUDAH (1819–1893), Hungarian rabbi. Modern was born in Pressburg where he became one of the outstanding pupils of Moses Sofer, Meir Asch, and Moses Teitelbaum. In 1837 he married the daughter of Samuel Zanvil ha-Kohen of Sziget and remained in Sziget for the rest of his life, refusing to accept offers of rabbinic office. On the title page of his *Zikhron Shemu'el* it states: "Neither rabbi nor *av bet din*, despising honor and praise, engaged in Torah by day and by night." In Sziget he became attracted to *Ḥasidism and, to the displeasure of his teacher, Moses Sofer, paid visits to the ḥasidic rabbis. He was one of the leaders of the community which in 1886 broke with the Orthodox community of Sziget and established the separatist community which was called Ha-Kehillah ha-Sefaradit.

Modern was the author of *Zikhron Shemu'el* (1867), a detailed commentary on tractate *Gittin*, and *Peri ha-Ez* (1885–87), on the Pentateuch. He published Judah Kahana's *Terumat ha-Keri* (1858), on the Tur and Shulḥan Arukh, *Ḥoshen Mishpat*, with his own glosses and novellae. Individual responsa by him have appeared in various works.

MODIANO, PATRICK (1945–), French writer. Modiano's first book, *La Place de l'Etoile* (1968), gained him immediate fame and recognition. It is the story of a young French Jew caught in the turmoil of the war years in occupied Paris. Though Modiano was born after World War II, that period appears to fascinate him, and he goes back to it time and again in search of inspiration. Antisemitism and collaboration, black market and Resistance, spies and doubtful heroes: these are his most regular themes. His other works include *La ronde de nuit* ("Night Round," 1969), *Les boulevards de ceinture* ("Circle Line Boulevards," 1972). In *Lacombe Lucien* (1974), made into a successful film by Louis Malle, Modiano caused a furor by delving into the murky relationship between a young French Nazi and a Jewish girl. Memory becomes increasingly obsessive in his work, as shown in *Villa triste* ("Sad Villa," 1975), *Livret de famille* ("Family Record Book," 1977), and *Rue des boutiques obscures* ("Dark Shops Street"), in which an amnesiac detective is inextricably tied to the period of German Occupation. For the latter, Modiano was the winner of the 1978 Goncourt Prize. Also of note are *Remise de peine* ("Reduction," 1988), *Voyage de nocce* ("Honeymoon Trip," 1990), and *Dora Bruder* (1997), in which Modiano tells of the last months of a young Jewish girl in Paris before being arrested and deported. His later works include *Ephéméride* ("Block Calendar," 2002), *Accident nocturne* ("Night Accident," 2003), and *Un pedigree*

("A Pedigree," 2005), in which Modiano evokes his conflict-laden relationship with his father.

Modiano also wrote children's books. They include *Catherine Certitude* (1988) and *28 Paradis* (2005), illustrated by his wife, Dominique Zehrfuss.

[Gideon Kouts / Anny Dayan Rosenman (2nd ed.)]

MODIGLIANI, AMEDEO (1884–1920), painter. Modigliani was born in Leghorn, the son of a small businessman. One of his brothers, Vittorio Emanuele *Modigliani, was an active Socialist leader. Amedeo studied art in Florence and Venice. In 1905 he went to Paris. While there, though leading a life of dissipation, he learned a great deal from Cézanne, Gauguin, Toulouse-Lautrec and from African sculpture. He greatly admired the last and his own sculpture was in a similar simplified abstract style. Despite his many love affairs, his excesses of drunkenness and frequent lapses into illness aggravated by poverty, he managed to produce a substantial body of work within his relatively short career. More than 20 of his sculptures, some 500 paintings, and thousands of watercolors and drawings have survived. Modigliani usually painted single figures with backgrounds only vaguely defined. There are portraits of his fellow artists and of the two women who played leading roles in his life, the English poet, Beatrice Hastings, with whom he lived from 1914 to 1916, and later his wife, Jeanne Hébuterne. His sitters included the streetwalkers of the Left Bank whom Modigliani never made pretty but who always evoke pity. His portraits look as if he had caught the sitter in a moment of utter fatigue, lonely and devoid of glamor or gaiety. Their energy has been drained and their hands dangle limply on their laps. Their heads are inclined and their eyes look listlessly and unseeing, as though staring from another world. His women seem to be constructed of almond shapes connected by cylindrical necks to larger ovoids formed by the rounded shoulders of the upper body.

Modigliani was a superb draftsman and his color sense was fascinating. His sensuous nudes are painted in broad planes of vivid ochre, orange, and earthy hues, surrounded by strong lines. His iridescent tones are achieved by covering thin layers of color with many coats of varnish. In 1917 his only one-man show was a complete fiasco. The police ordered the five canvases of nudes to be removed and this led to a scandal. It was soon after his death that the greatness of his work was discovered and his paintings and sculpture were acquired by leading museums and collectors all over the world.

Krystof, *Modigliani* (Taschen, 2000); A. Kruszinski, *Amadeo Modigliani: Portraits and Nudes* (2005); J. Meyers, *Modigliani: A Life* (2006).

[Alfred Werner]

MODIGLIANI, FRANCO (1918–2003), economist and Nobel Prize laureate. Modigliani was born in Rome. After earning a law degree at the University of Rome, he escaped the Fascist regime in Italy and moved to the United States in 1939. In New

York he studied at the New School for Social Research, obtaining his Ph.D. in social sciences in 1944. Modigliani taught at the New School from 1944 to 1949 and was a research consultant to the Cowles Commission at the University of Chicago from 1949 to 1952. He was a professor at Carnegie Institute of Technology from 1952 to 1960 and at Northwestern University from 1960 to 1962. He was on the faculty of the Massachusetts Institute of Technology from 1962, becoming professor emeritus in 1988. He served as president of the American Economic Association in 1976.

Modigliani's research work focused on the analysis of household savings, wherein he determined that people save towards retirement rather than amass money to be left as inheritance for the next generation, and on the different types of national pension programs and their effects. He also was highly influential in the area of corporate finance by directing attention to the fact that future earnings of a company serve to determine stock market values. The Nobel Prize in economic science for 1985 was awarded to him for "his pioneering analyses of saving and financial markets," for work that he published in the second half of the 1950s.

Modigliani's autobiography is entitled *Adventures of an Economist* (2001). His other publications include *The Debate over Stabilization Policy* (1986); *Capital Markets* (with F. Fabozzi, 1992); *Foundations of Financial Markets and Institutions* (with F. Fabozzi and M. Ferri, 1994); and *Rethinking Pension Reform* (with A. Muralidhar, 2004).

[Ruth Beloff (2nd ed.)]

MODIGLIANI, VITTORIO EMANUELE (1872–1947), Italian lawyer and politician; brother of the artist Amedeo *Modigliani. Born in Leghorn, Modigliani joined the Socialist party as a student. From 1913 to 1924 he sat as a Socialist in the Italian parliament. He opposed Italian participation in World War I and supported the formula of a peace without victor or vanquished. In 1924 Modigliani joined the rest of his party in abstaining from all parliamentary activity, in protest against the new Fascist law making parliamentary opposition ineffective. He appeared for the prosecution in the Giacomo Matteotti trial in 1923–24 in which leading Fascists were accused of complicity in Matteotti's assassination. Soon afterward he left Italy in protest against the Fascist regime and lived in Austria and France, where he was a virulent opponent of Fascism. Modigliani participated in the formation of a socialist pro-Palestine committee formed in Brussels. He returned to Italy in 1945 and was elected a deputy to the constituent assembly and chairman of the Italian Socialist Party.

[Giorgio Romano]

MODI'IN (Heb. מוֹדִיעִים, מוֹדִיעִים, or Modi'im), town or village in the toparchy of Lydda, the family home of Mattathias the Maccabean and of his Hasmonean descendants; here the Maccabean revolt broke out (1 Macc. 2:1, 15, 23; cf. Jos., Ant. 12–13). Nothing much is said in the sources about the place,

its size and situation. Although the rebels were soon forced to evacuate the village, they were able to bury their dead there (1 Macc. 2:70, 9:18–21, 13:25–30). Simeon the Hasmonean eventually built a splendid mausoleum at Modi'in, which was adorned with seven pyramids and high columns with sculptures of ships that were said to be visible from the sea (1 Macc. 13:25–30; Jos., Ant. 13:210–11). In the time of Jonathan, Modi'in passed into Jewish possession with the rest of the toparchy of Lydda. An important battle was undertaken against the Seleucid Kendeabois from a camp situated close to Modi'in. Judas Maccabaeus is mentioned as having marched out of Modi'in in order to fight Seleucid forces sent against him by Antiochus v (11 Macc. 13:14 ff.), suggesting that the town was unfortified (but some historians, notably Longstaff, have cast doubt on the veracity of this story). John and Judah, the sons of Simeon, camped close to Modi'in before the battle of Kidron (1 Macc. 16:4). In the Mishnah, it is described as a town on the border of Judah (Pes. 9:2; Hag. 3:5). It was the home town of R. Eleazar of Modi'in, a close relative of Bar Kokhba and perhaps identical with Eleazar the high priest, who appears on coins of the Second Jewish War. R. *Eleazar was put to death in 135 C.E. on grounds of treason. Another teacher associated with Modi'in is Rabbi Yossi, but details regarding this person and his teachings are sparse. In the *Onomasticon* (132:16) of *Eusebius Pamphili (c. 260–339 C.E.) and on the Madaba mosaic map (mid-sixth century), it is located east of Lydda. The whereabouts of Modi'in the village/town and burial-place of the Maccabean family is a subject that has intrigued pilgrims and travelers since the 12th century when the Crusaders identified it at the site of Belmont, next to present-day kibbutz Zova, west of Jerusalem, a mistake that was maintained until the 19th century by visitors to the region. E. Robinson (1852), however, suggested that Modi'in should be identified at Latrun on the grounds of its position and elevation. In the mid-19th century, considerable efforts were made by scholars (notably E. Forner, Ch. Sandreckzi, V. Guérin, C.R. Conder and Ch. Clermont-Ganneau) to identify Modi'in at Khirbet el-Midya and Sheikh al-Gharbāwī, about 7½ mi. (12 km.) east of Lydda in the northern Shephelah, but the famous “Tombs of the Maccabees” seen there today are mostly of Byzantine date. During an archaeological project conducted by S. Gibson and E. Lass in the area of the modern city of Modi'in from 1995 to 1999, a proposal was put forward to identify ancient Modi'in at Horvat Titora (Khirbet el-Burj) as a result of the finds made there from the Iron Age, Hellenistic and Early Roman periods, including large numbers of subterranean hideaways from the Bar Kokhba period. More recently, Khirbet Umm el-'Umdan, which is the site of an Early-Roman period village with a public building (perhaps a synagogue), excavated by S. Weksler-Bdolach and A. Onn, has also been proposed as the site of Modi'in. To sum up: unless an inscription were to be found at one of these sites, the exact location of Modi'in will apparently always remain a mystery.

[Michael Avi-Yonah / Shimon Gibson (2nd ed.)]

Modi'im and Modi'im Region

In the Israel *War of Independence, the area west of the Nahal Modi'im gorge was occupied by Israel forces in July 1948, while the village al-Midya remained beyond the 1949 armistice line in Jordanian territory. In the 1950s and 1960s, the Herzl Forest of *Ben Shemen was gradually enlarged eastward to become the Modi'im Forest, and an observation tower and amphitheater were built there. In 1964, the Modi'im region development project was started, providing for further afforestation and land reclamation; the area's northern section was set aside as an ultimate reserve for the expansion of the Tel Aviv conurbation, with plans laid out for the construction of a future city to be named Makkabit. In 1965, a *Nahal outpost settlement, Mevo Modi'im (מְבוֹא מוֹדִי'ים), was established less than a mile (1 km.) from the armistice line by a group affiliated with *Po'alei Agudat Israel. After the *Six-Day War, these settlers moved southeastward to set up a new village in the Aijalon Valley, at the foot of the *Beth-Horon ascent, while the site of Mevo Modi'im, which has poor and rocky soil, was earmarked for a village to be based on industry and a Po'alei Agudat Israel seminary. Forest planting continued after 1967 on both sides of the former armistice line, carried out in the west by Jewish laborers and in the east by Arabs.

[Efraim Orni]

The City of Modi'in

The modern city of Modi'in was officially established in 1993 in a ceremony attended by late Prime Minister Yitzhak Rabin. Plans for the city were drawn up in the mid-1980s by the architect Moshe *Safdie and approved in the beginning of the 1990s by Ariel *Sharon, then minister of housing. In 1996 the first residents moved in and its rapid expansion earned it city status in 2001. It is located in a former army firing zone between the Judean Plain and the Jerusalem Hills, midway between Jerusalem and Tel Aviv. The city's convenient location has served to attract residents from both the Jerusalem and Tel Aviv areas. Its jurisdiction extends over 18 sq. mi. (46 sq. km.), 50% of which are green areas.

In 2003 the municipality was united with *Makkabim-Re'ut. The population of Modi'in at the time was 34,700 while Makkabim-Re'ut had 10,700 residents. The population was well educated, with 60% holding academic degrees, and the majority were young families with an average of two children. Most residents commuted to work but an industrial park was planned for the outskirts of the city.

MODON (now **Methone**), port city in S.W. Peloponnesus, Greece. Benjamin of Tudela found a Jewish community in Mo-

don, and it became of importance during the Venetian rule. Four travelers in the late 15th century recorded details about this Jewish community ruled by the Venetians (1206–1500). In 1481 Meshullam of Volterra found 300 Jewish families in Modon in a ghetto “on the outskirts of the city” engaged in trade and handicrafts. Jews were engaged in the silk and tanning industries, as well as the maritime trade. Jews were excluded from citizenship and obliged to provide an executioner, as in other Venetian colonies. Jewish men and women had to perform forced labor. Modon fell to the Turks in 1501, whereupon many exiles from Spain settled there. Venice demanded an exorbitant sum from its Jewish population. In the assault on the town in 1531 by the Knights of Malta, Jewish captives were presumed to have been among those non-Christians carried off by the invaders. The Jewish community ceased to exist after the Venetian-Turkish war of 1646.

[Simon Marcus]

MODZHITZ, ḥasidic dynasty in Poland (family name: Taub). Its founder was Israel of Modzhitz (d. 1921), son of Samuel Elijah of Zwole. He emphasized the value of music in Ḥasidism and is regarded as the creator of the ḥasidic melody as an art form. Israel composed hundreds of melodies, of which the best known are those to *Ezkerah Elohim ve-Ehemayah*, consisting of over 30 stanzas composed at a time of physical suffering, and to *Le-Mizmor Todah* (also called *Niggun li-Mehusserei Bayit* (“A Tune for the Homeless”), expressing the distress of Jewish refugees during World War I. Much of his teachings are devoted to the praise of music. His son, SAUL JEDIDIAH ELEAZAR (d. 1947), was *av bet din* in Rakov and Karzow. In 1929 he moved to Otwock near Warsaw and after his father’s death headed the Modzhitz Ḥasidim. He combined Torah with music, and popularized the Modzhitz melodies throughout the Jewish world, composing hundreds of tunes. He edited and published his father’s sermons with his own in *Divrei Yisrael* (Lublin, 1901–04; Warsaw, 1912; Warsaw, 1930; New York, 1931) and in the Passover *Haggadah*, *Ishei Yisrael* (Warsaw, 1938); he also edited and published the booklets *Tiferet Yisrael – Kunteres Maamarim* (Warsaw, 1936–38; Brooklyn, 1941–47). He died in Tel Aviv.

[Avraham Rubinstein]

MO'ED (Heb. מועד), the second of the six orders of the Mishnah according to the accepted order established by *Simeon b. Lakish. He interpreted the verse (Isa. 33:6), “and the stability of thy times shall be a hoard of salvation, wisdom, and knowledge ...” such that “stability” refers to the order *Zera'im*, “thy times” to the order *Mo'ed* ... (Shab. 31a, et al.). In the order given by R. Tanḥum, however, it is the fourth (Num. R. 13:15). *Mo'ed* treats comprehensively of the Sabbath and the festivals of the Jewish calendar, but it includes tractates **Eruvin*, which

is a kind of appendix to *Shabbat*, **Shekalim*, because of the fixed appointed time for the collection of the half-*shekel* (see Shek. 1:1–3), and **Ta'anit*, dealing with congregational fasts, since to some extent its subject matter is similar to that of the festivals. *Mo'ed* comprises 12 tractates arranged, as are all the orders, in descending order according to the number of chapters. They are (1) **Shabbat*, with 24 chapters; (2) *Eruvin*, 10; (3) **Pesaḥim*, 10; (4) *Shekalim*, 8; (5) **Yoma*, 8; (6) **Sukkah*, 5; (7) **Bezah* or *Yom Tov*, 5; (8) **Rosh Ha-Shanah*, 4; (9) *Ta'anit*, 4; (10) **Megillah*, 4; (11) **Mo'ed Katan* or *Mashkin*, 3; (12) **Hagigah*, 3; in all, 88 chapters.

In the Tosefta of *Mo'ed*, *Shabbat* has 17 (or 18) chapters; *Eruvin* 8 (or 11), *Pesaḥim* 10, *Shekalim* 3, *Kippurim* 4 (or 5), *Sukkah* 4, *Yom Tov* 4, *Rosh Ha-Shanah* 2 (or 4), *Ta'aniyyot* 3 (or 4), *Megillah* 3 (or 4), *Mo'ed Katan* 2, and *Hagigah* 3. There is no *Gemara* to *Shekalim* in the Babylonian Talmud but there is in the Jerusalem Talmud. In contrast to all the other orders which have plural names, the name of *Mo'ed* is in the singular. The reason is apparently that the concept *Mo'ed* has two meanings, one in the sense of a festival and the other in that of a fixed time, as for example, “the season [*mo'ed*] that thou camest forth out of Egypt” (Deut. 16:6), or, “therefore will I take back My corn in the time thereof, and My wine in the season thereof [*be-mo'ado*]” (Hos. 2:11). In this sense the Bible uses the term *Mo'ed* in the singular, and this is apparently the implication of the use of the singular for the name of the order, since it treats not only of the festivals, but also of other topics that nevertheless have a fixed time, such as *Shekalim*, *Ta'anit* and the readings of the Law. It seems that the tractate *Shabbat* alone was once called *Mo'ed*.

[Abraham Arzi]

MO'ED KATAN (Heb. מועד קטן; “small festival”), 11th tractate in the Mishnah order of *Mo'ed*, concerned mainly with **ḥol ha-mo'ed* (“the intermediate days of the festivals of **Passover* and **Sukkot*”). The original name of this tractate seems to have been *Mo'ed* (TJ, MK, 2:5, 81b), and in fact, throughout this tractate, the intermediate days are referred to as *Mo'ed* and not as *ḥol ha-mo'ed*. To distinguish the tractate **Mo'ed* from the mishnaic order of that name, the former was sometimes referred to as *Mashkin* (Lev. R. 34:4), its opening word. The present designation, *Mo'ed Katan*, prevailed to distinguish the tractate from its order.

While the Scripture does not explicitly forbid work on *ḥol ha-mo'ed*, Leviticus 23:37, speaking of the daily festival sacrifices, includes the intermediate days of the festival in the term “holy convocation” and on account of this *ḥol ha-mo'ed* is considered as semi-festival, days on which certain kinds of work (and as a rule all unnecessary work) are forbidden. Chapter 1 of the tractate discusses a great variety of activities (e.g., agriculture, burial, marriage, sowing, repairs) which in certain circumstances may be allowed on *ḥol ha-mo'ed*.

Chapter 2 speaks of further kinds of work (e.g., pressing olives, or finishing the manufacture of wine, and gathering fruits, etc.) which are allowed if they are urgent; the general rule is that no work which should have been done before the festival or could be postponed until after the festival may be done on *ḥol ha-mo'ed*. Chapter 3 speaks of the conditions under which shaving, washing clothes, drawing up of documents and other scribal activity are allowed; it then discusses the manner in which mourning customs are observed on Sabbath and festivals, including New Moon, Ḥanukkah, and Purim. The tractate ends on a note of comfort by quoting Isaiah 25:8: "He will swallow up death for ever, and the Lord will wipe away tears from all faces." The *Gemara* in Chapter 3 explains the connection between the laws of the intermediate days and those of mourning. In that context, the Babylonian *Gemara* discusses details of burial and mourning customs and records several interesting funeral orations and dirges, and deals with the laws of excommunication. There is also a *Gemara* in the Jerusalem Talmud. In the Tosefta the material of the tractate is divided into two chapters, and like the Mishnah contains many details which reflect life and conditions during the tannaitic period. An English translation and introduction by H.M. Lazarus is to be found in the Soncino Talmud translation (1938).

[Arnost Zvi Ehrman]

MOELLIN, JACOB BEN MOSES (1360?–1427), usually referred to as Maharil (Morenu ha-Rav Jacob ha-Levi) and also as Mahari Segal and Mahari Molin), the foremost talmudist of his generation and head of the Jewish communities of Germany, Austria, and Bohemia. Born in Mainz, Jacob was taught by his father, one of its leading rabbis, and then proceeded to Austria, where he studied under Meir ha-Levi and Shalom b. Isaac, who ordained him rabbi with the title *morenu*. Summoned to Mainz while still young to succeed his father who had died in 1387, Jacob founded a yeshivah there to which many students streamed. The students lived in his house and were supported by "the means provided for him by the leaders of the country" (*Sefer Maharil*). From this yeshivah came the greatest rabbis of Germany and Austria of the next generation, among them Jacob *Weil.

Moellin became famous throughout Europe. While he was still young, halakhic problems were addressed to him "since from your mouth Torah goes forth to all Israel" (Maharil, resp. no. 148). He was also regarded as the leader of the people in that troubled period. During the Hussite wars and the strengthening of Catholic reaction various communities turned to him for help. On this occasion he decreed a three-day fast upon the whole community, "even upon sucklings," and also took the matter up with the government, with successful results. His rulings, together with those of Israel *Isserlein, serve as the foundation of all the traditions which were

kept in German Jewry. In his decisions Moellin took prevailing conditions into consideration, and when a matter which affected the economic position of the community came before him, he assembled the scholars and "investigated the matter until he found a favorable solution." When he felt he had been too strict, he excused himself saying, "I have been very strict with you because you are without a rabbi" (resp. no. 26). He attacked rabbis who "bought" rabbinical positions which they were unqualified to fill (Jacob Weil, *Dinim ve-Halakhot*, no. 68, Kapust ed. (1834), 59b), and protested against the neglect of Torah study and against the widespread practice of giving decisions based on abridged halakhic works. In his sermons he placed particular emphasis upon the *mitzvah* of charity, and he was keenly solicitous of the honor of the poor.

Moellin also occupied himself with astronomy and applied himself to the solution of astronomical problems with the aid of instruments, and the study of the astronomical work *Shesh Kenafayim* of Immanuel b. Jacob *Bonfils. Jacob was well-versed in the different German dialects and composed Hebrew rhymed verse (in Ms.) and *piyyutim* (Joseph b. Moses, *Leket Yosher*, ed. by J. Freimann, 1 (1903), 50). Though, like all the rabbis of Germany, he shunned philosophy, he acted with a degree of tolerance toward those who, attracted by it, had strayed in matters of belief. He declared valid the *shehitah* of one who "accepted resurrection only as a traditional belief, but denied that there was a biblical basis for it," even declaring that "though his sin is too great to be tolerated, he is not under suspicion of deliberately transgressing the Torah" (resp. no. 194, p. 64a–b).

Moellin was renowned as a *ḥazzan* and his activities left a lasting influence on the Ashkenazi tradition. His opinion that traditional tunes should not be changed was a constantly stabilizing factor. The so-called "*Niggunei Maharil*," attributed to him (or at least thought to have been sanctioned by him) were in use in the Mainz community until modern times (see Idelsohn, *Music*, 170, 177, 206, 456, and see *Mishnah melodies).

His known works are (1) *Minhagei Maharil* (*Sefer Maharil*, first published in Sabionetta, 1556), compiled by his pupil Zalman of St. Goar who for many years noted down his halakhic statements, customs and, in particular, the explanations he heard from him. Through the efforts of various copyists, the work enjoyed wide circulation. Most of the customs noted in it were included by Moses Isserles in his glosses to the Shulḥan Arukh; (2) *Responsa*, some copied and arranged by Eleazar b. Jacob and published for the first time in Venice in 1549. A far more complete collection has been preserved in manuscript (Margoliouth, *Cat. No.* 575). The printed editions of the *Maharil* are full of errors, apparently having been published from a corrupt copy. Moellin died in Worms.

[Ephraim Kupfer]

MO'EZET HA-PO'ALOT, the General Council of Women Workers of Israel, founded in 1922 as a part of the *Histadrut (the General Federation of Labor). Its roots go back to the pioneering movement of the Second *Aliyah, when girls, as well as young men, went to build Erez Israel “by the sweat of their brow.” Masculine prejudices continued to exist even in an idealistic society. For women to work, especially in the open field, was considered not only unfair competition but a fall from grace. The handful of *halutzot* (pioneer women) banded together, proclaiming the slogan: “Women demand the right to be partners in the revival of our People and to fulfill themselves ... as women and as human beings.” In 1968 the membership of Mo'ezet ha-Po'alot totaled 486,000, composed of three categories: wage-earners – 177,000; women members of cooperative villages (kibbutzim or moshavim) – 33,000; and wives of Histadrut members, known as Immahot Ovedot (working mothers) – 276,000.

Since women are now accepted as full-fledged members of the trade unions, Mo'ezet ha-Po'alot is preoccupied mainly with social services and the special problems of working women, such as retirement age, maternity benefits, vocational training, and career advancement. Branches of Immahot Ovedot exist in every town and village, providing social services and education for housewives. Assisted by *Pioneer Women organizations in 12 countries, it maintains some 500 social and educational institutions, such as day-nurseries, children's residential homes, kindergartens, youth clubs, and summer camps, catering in 1968 to some 20,000 children. In 2005 Mo'ezet ha-Po'alot operated 75 day care centers, kindergartens, nurseries, and boarding schools. Special attention is given to children of immigrants and culturally deprived families, who are generally referred to these institutions by social workers. It also supports four residential agricultural high schools (two in cooperation with WIZO, which in 2005 included 1,250 pupils), four workshops for immigrants, several community centers (the largest of which is Bet Elisheva in Jerusalem), girls' vocational high schools (including a school for baby nurses), women's hostels, and special training courses, that in 1968 trained 7,500 women and girls and in 2005 2,850. In scores of women's clubs, immigrants are taught Hebrew, home economics, and social responsibility. In 2005 Mo'ezet ha-Po'alot offered professional training to 2,400 immigrant women. It operated 35 social and cultural centers for Arab women and 36 community centers. In developing towns, Mo'ezet ha-Po'alot ran the Education for Family Living project, counseling teenage girls in 50 centers and mothers of large families in 65 training groups. Residential seminars, study days, field trips, and lectures are organized. An advisory bureau on legal and psychological problems assists widows and orphans.

The executive of Mo'ezet ha-Po'alot is elected by general ballot every four years (simultaneously with the Histadrut elections). Mo'ezet ha-Po'alot is affiliated with many women's international movements and, through the Histadrut, with the International Labor Office (ILO), participating particularly in committees pertaining to women workers. Among the best-known members of Mo'ezet ha-Po'alot were Golda *Meir, Raḥel Yanait *Ben-Zvi, and Raḥel Shazar (*Katznelson).

[Shoshana Hareli / Shaked Gilboa (2nd ed.)]

MOFAZ, SHAUL (1948–), 16th chief of staff of the IDF (1998–2002). Mofaz was born in Iran and immigrated to Israel in 1957. In 1966 he joined the paratroops and in the Six-Day War fought under the command of Rafael *Eitan. During the Yom Kippur War he was the commander of the paratroop commando unit, and subsequently deputy commander of the special General Staff commando unit. In this post he participated in the Entebbe operation. Afterwards he took a break to study business administration at Bar-Ilan University for two years. In the Lebanon War he commanded a brigade and after the war went to study at the Command and Staff College of the U.S. Marine Corps in the U.S. On his return he was named head of the Officers' School and, in 1986, commander of the paratroop brigade. Afterwards he received a tank division and in 1993 was promoted to brigadier general and given command of Israeli forces in Judea and Samaria. A year later, in 1994, he became GOC Southern Command and in 1996 he was made chief of the IDF planning branch. In 1997 he became deputy chief of staff and in 1998 he was chosen as chief of staff, a position he held until 2002. Under his command, the IDF withdrew from Lebanon and the second Intifada commenced. After his retirement he was chosen by Prime Minister Sharon as defense minister, a position he continued to hold after the 2003 elections. At the end of 2005 he left the Likud for Sharon's new Kadimah Party, and after the 2006 elections he became minister of transport in Ehud *Olmert's government.

[Shaked Gilboa (2nd ed.)]

MOGADOR, now known as **Essaouira**, an Atlantic seaport in western *Morocco, midway between the towns of *Safi and *Agadir. The word Mogador is a corruption of the Berber term for “self-anchorage.” The city was occupied by the Phoenicians and Carthaginians in the 5th century B.C.E. From the Middle Ages to the 17th century there were sugar-cane refineries in the vicinity of Mogador whose operation was brought to a halt in the latter half of the 18th century. The town became a bustling seaport in 1764 under the Alawite Sultan Sidi Muhammad ibn Abdullah, who sought to transform it into a rival port to Agadir and have it serve as his main port for international commerce. The most important Moroccan Jewish merchant families from *Tangier, Agadir, *Marrakesh, and parts of northern Morocco

were recruited by the sultan to take charge of developing trade activity and relations in Mogador *vis-à-vis* Europe.

The sultan chose 10 or 12 of them, especially from the Corcos, Afriat, Coriat, Knafo, Pinto, and Elmaleh families, for the task and granted them the status of *tujjār al-sultān* (the “king’s merchants”). In sharp contrast to ordinary Jews who dwelt in the cramped Jewish *ghetto (**mellah*), the sultanate offered them the most luxurious dwellings of Mogador within the more prestigious *casbah* quarter. They not only became the leading merchants of the sultan’s court – parallel to a tiny elite of Muslim *tujjār* – but were entrusted with the role of mediation and diplomacy with European consuls and entrepreneurs. Not only were they influential in Moroccan economic affairs, but their functions extended to include the leadership of the local Jewish community. From their ranks the Jews chose the *tujjār* as presidents, vice presidents, and treasurers. The extraordinary and privileged Jewish *tujjār* elite controlled all of the major imports of Mogador and other Moroccan trade centers where their influence was gradually extended. These included sugar, tea, metals, gunpowder, and tobacco. The *tujjār* also managed such vital exports as wheat, hides, cereals, and wool, items which became government monopolies at the time, resulting from the *makhzan*’s fears of the political and social consequences of European penetration. Some *tujjār* were in fact dispatched by the Palace to European trade centers as economic attachés and were given interest-free loans to undertake major trade transactions and augment the sultan’s profits. Unlike the rest of the Jews, they were not required to pay the traditional poll-tax (*jizya*) commonly imposed on non-Muslim minorities throughout the Muslim world, and they received full protection – legal and political – from the *makhzan* (Moroccan government) from those in Muslim society who sought to harass or undermine them. The *tujjār* declined in influence after the 1890s with the aggressive penetration of the European powers into the Sharifian Empire of Morocco. By the early part of the 20th century, and certainly following the formation of the French protectorate (1912), they disappeared from the scene. A new elite of Jewish entrepreneurs, recruited by the French, Spaniards, Italians, and British commercial houses replaced them, as did foreign merchants who settled in Mogador and other parts of the country, controlling commerce until Moroccan independence in 1956.

Spiritually and religiously, the Mogador community was led over the years by the old established rabbis and **dayyanim* such as Abraham Coriat, Abraham b. Attar, Mas’ud Knafo, and Haim Pinto. Mogador Jewry was relatively well educated. Their musicians were renowned throughout Morocco. The town had exceptionally beautiful synagogues, with the community being dotted by numerous *battei midrash* and yeshivot. As British influence in Mogador became particularly dominant from the 18th century, English schools flourished there, including those of the London-based Anglo-Jewish Association and the Board of Deputies for British Jewry. The schools helped spread the English language and culture among the Jews. The French-based *Alliance Israélite Universelle also

opened schools for boys and girls in Mogador. As British influence declined in the town after 1912, the Alliance schools and those of the Protectorate, which propagated French influences, emerged supreme and oriented local Jews toward new cultural currents. By the mid-1950s, on the eve of large-scale Jewish immigration to Israel and the West, most young men and women spoke French in addition to the Moroccan Judeo-Arabic dialect.

During the 19th century the Jewish population grew from 4,000 in the 1830s and 1840s to approximately 12,000 in 1912, only to decline to 6,150 in 1936 and to once again rise slightly to 6,500 in 1951. This is attributed to the decline of commerce and other economic activity during the French Protectorate era in Mogador (and other inland or coastal cities which in the past enjoyed prosperity) in favor of Casablanca and Agadir. The immigration trends of the 1950s and 1960s caused the Mogador community to dwindle. Once Morocco’s most important commercial seaport, a phenomenon largely attributed to Jewish initiatives, Mogador became a sleepy and relatively unimportant town. In the early 1970s most of its Jewish community members resided in the Americas, Europe, and Israel. By 2005, the community had all but disappeared.

[Michael M. Laskier (2nd ed.)]

MOGILEV, capital of Mogilev district, Belarus; from the middle of the 14th century until 1772 Mogilev was part of Poland-Lithuania. One of the largest and most important in Belarus, the Mogilev community was founded during the 16th century by Jews who leased the collection of customs duties; the first of these was Michael *Jozefowicz (1522). During the 1580s one of the most prominent Jewish merchants of Lithuania, Ephraim b. Jeraḥmeel (Afrash Rakhmaelovich) lived in Mogilev and leased the customs duties. In 1585 the Christian population requested King Stephen Báthory to prohibit the settlement of Jews in Mogilev. Although the king agreed, the order was not carried out and Jews continued to live in the town. A synagogue existed from the beginning of the 17th century. The struggle between the townspeople and the Jews of Mogilev continued throughout the 17th and 18th centuries. In 1626 King Sigismund III Vasa granted letters patent to the town (confirmed by King Ladislaus IV in 1633) in which it was stipulated that all the Jews must move into the street where the synagogue stood, beyond the city walls. On Rosh Ha-Shanah 5406 (1645) the townspeople, led by the mayor, attacked the Jews. In 1646 the municipality decided to forbid the Jews to live in lodgings rented from the townspeople or to acquire these

lodgings. This too was confirmed by King Ladislaus IV. When Mogilev was occupied by the invading Russian armies in 1654, on the request of the townspeople Czar Alexis Mikhailovich ordered the expulsion of the Jews. Their houses were to be shared equally between the municipality and the Russians. The order was not immediately carried out, but as the Polish army approached Mogilev in 1655, the Russian commander drove the Jews out of the town and ordered their massacre. Those Jews who remained became apostates. After the end of the war the community was renewed and most of the apostates returned to Judaism. In 1656 John II Casimir granted letters patent to the town, according to which the Jews were forbidden to live within the walls of the city and to build houses or maintain shops there. There was a *blood libel in Mogilev in 1692. In 1736 King Augustus III confirmed the earlier letters patent of John II Casimir, adding further anti-Jewish restrictions. Restrictive orders on settlement and occupations were later reissued, but were not applied in practice.

In spite of opposition, the community continued to develop. By 1692 there were two synagogues. In 1748 the municipality reprimanded the townspeople because they themselves had helped the Jews to settle in the center of the town and to engage in commerce. In 1766, 642 poll tax paying Jews were registered within the community of Mogilev and the surrounding villages. In the *Councils of the Lands Mogilev was subordinated to *Brest-Litovsk, and a few gatherings of the Council were held in Mogilev. The community developed to a considerable extent after Mogilev was annexed by Russia. The Jews of the annexed region were granted judicial autonomy, and the community of Mogilev was designated as the central community of the whole province, its *bet din* being given authority to hear appeals against the legal decisions of the province's communities. The Jews played a principal role in Mogilev's extensive trade with Riga, Memel, Königsberg, and Danzig (*Gdansk), and later with southern Russia. In 1847 there were 7,897 Jews registered in Mogilev. The Jews were greatly influenced by *Chabad Hasidism, but by the end of the 18th century there were several *maskilim* among the wealthy merchants. In 1783 one of them, Jacob Hirsch, addressed a memorandum to the Russian government in which he suggested that the *hadarim* and *talmud torah* schools in both the district of Mogilev and the town itself be converted into schools where secular studies would also be taught. During the 1860s and early 1870s Pavel (Pesah) *Axelrod, who had studied at the local secondary school and later spread the ideas of the Haskalah among Jewish youth, lived in Mogilev. In 1870 the *Malbim (Meir Leib b. Jehiel Michael) was invited to become rabbi of Mogilev, but was soon compelled to leave the town after the *maskilim* denounced him to the authorities as disloyal to Russia. In 1897 there were 21,539 Jews in Mogilev (about 50% of the total population). In October 1904 pogroms were initiated by soldiers mobilized for the war against Japan. Mogilev was one of the important centers of the *Bund and of the Zionist Movement. Jews owned 219 small factories, where 667 workers were engaged, and also the 93 distilleries (except

for one). There were 400 small merchants and wholesalers, and most of the Jewish artisans, 244, were tailors. Following World War I and the establishment of the Communist regime, the number of Jews decreased and by 1926 only 17,105 (34.1% of the population) remained, increasing to 19,715 (20% of the total population) in 1939. During the 1920s a violent struggle occurred between the religious circles and the Zionists on the one hand, and the *Yevseksiya on the other, which terminated with the liquidation of Jewish communal life in the town. In 1924, 432 Jews were artisans, and many city Jews worked the 2,000 acres allocated by the government. Two seven-grade schools and one with four grades existed in Mogilev. In 1927 Jewish sections were opened in the local law courts. Mogilev was the birthplace of Mordecai b. Hillel *Hakohen, Nachman *Syrkin, and Jacob *Mazeh, the writers David Pinski and Eliezer Zwiefel, and the actor Aharon Meskin.

The Germans occupied the town on July 26, 1941. In August 80 Jews were shot, a Judenrat and a ghetto were established, and the Jews from the surroundings were concentrated there. In September another 337 were killed and the ghetto was moved to another place; 113 Jews who refused to move were murdered. On October 2–3, 2,208 children, women, and older persons were executed. On October 19, 3,600 were killed, and in November another 3,726 Jews were murdered. The 315 skilled laborers who were put into a labor camp were killed in December 1941. Most of those who were in hiding were discovered and murdered or later sent to Shiroka camp in Minsk. It was estimated that there were about 7,000 to 10,000 Jews in Mogilev in 1959. The last synagogue was closed down by the authorities in 1959 and turned into a sports gymnasium. There was a Jewish cemetery.

The Province of Mogilev

Together with the province of Vitebsk, it was the first region with a large Jewish population to be annexed by Russia, later comprising the core of the *Pale of Settlement as one of the "western" provinces in which most of Russian Jewry was concentrated. The province of Mogilev was one of the two provinces where the prohibition concerning the settlement of Jews in the villages, included in the "Jewish Constitution" of 1804, was fully applied (in 1823). In 1847, 87,739 Jews were registered in the communities of the province. By 1897 the number had risen to 203,947 (12.1% of the total population), 37.9% living in the towns, 38.9% in the townlets, and 23.06% in the villages. The large communities of the province included (in addition to Mogilev): *Gomel (20,385 Jews), *Orsha (7,383 Jews), *Shklov (5,422 Jews), *Mstislavl (5,076 Jews), and *Rogachev (5,047 Jews). In 1897, 38.95% of the province's Jews earned their livelihood from commerce and 36.90% in crafts; 9,517 Jews (4.7% of the total Jewish population) depended on agriculture. There were about 70 small Jewish agricultural settlements in the province. Under the Soviet regime, most of the territory of the province was incorporated into the oblasts of Mogilev, Vitebsk, and Gomel. In 1926 there were 48,900 Jews in the oblast of Mogilev.

[Yehuda Slutsky]

MOGILEV-PODOLSKI, city in Vinnitsa district, Ukraine; in Poland until 1795; under czarist rule it was a district town of Podolia. Mogilev-Podolski was an important station on the commercial route between Moldavia and Ukraine. Jews are first mentioned in the town in 1713. In 1765 there were 957 Jews in Mogilev and the vicinity. The number had grown to 5,411 in 1847, and by 1897 there were 12,344 (55.3% of the total population) Jews in the town itself. In 1808 H.Z. Stein and his father, David, transferred their Hebrew press from Slopkovicz to Mogilev and operated there until 1819, producing 24 books. Jews traded in farm products and lumber, exporting them through the Dniester river to the Odessa port. In October 1905 and in December 1919 the community suffered in the wave of pogroms. With the establishment of the Soviet regime, the Jewish communal organization and its institutions were liquidated. In 1926 the Jewish population had fallen to 9,622 (41.8% of the total) and to 8,703 (40% of the total population) by 1939. There were two Yiddish primary schools, and Jewish sections in the local law courts. Two Jewish kolkhozes operated near the city. The Germans occupied Mogilev-Podolski on July 19, 1941. They murdered about 1,000 Jews until the city was included in Romanian Transnistria, The Romanians created a ghetto, a Judenrat, and a Jewish police. In December the ghetto numbered 3,700 locals and 15,000 expelled from Bessarabia and Bucovina. By June 1942 some 1,200 had died of typhoid; to control the epidemic, the Romanians expelled thousands to other towns, but most perished. In 1946 there were 3,000 Jews in the town. According to the 1959 census, there were about 4,700 Jews in Mogilev (22.5% of the population). The last synagogue was closed down by the authorities in the mid-1960s.

[Yehuda Slutsky / Shmuel Spector (2nd ed.)]

MOGULESKO, SIGMUND (Zelig; 1858–1914), Yiddish actor. As a boy he sang in a synagogue choir in Bessarabia. Discovered by Abraham Goldfaden, he became a successful comedian. In 1880 he led a company in Odessa and in 1881 published a collection of verse, *Kupleten Komishe un Humoristische*. Arriving in New York in 1886, he sang in Offenbach's *Bluebeard*, acted in Thomashefsky's productions, and was in Jacob P. Adler's presentation of *Siberia* (1892). He wrote the music for M.H. Hurwitz' *The Sacrifice* and for Jacob Gordin's only operetta, *The Fair Miriam*.

MOHÁCSI, JENŐ (1886–1944), Hungarian author and translator. Born in Mohács, Mohácsi studied law and began his

writing career as a literary journalist. A man of great versatility who wrote poetry and Hungarian and German prose, he was outstanding as a translator and was instrumental in gaining a world public for Hungarian literature. His best work was a literary biography of Imre Madách (1823–64), author of the dramatic poem *Az ember tragédiája* (“The Tragedy of Man”), of which Mohácsi also made a complete German translation (1904⁴). He translated such classics of Hungarian drama as *Bánk Bán*, a historical play by József Katona (1791–1830), and *Csongor és Tünde*, a fairy tale by Mihály Vörösmarty (1800–1855). His original works include *Hegedű és koldusbot* (“A Violin and a Beggar's Staff,” 1942); *Madách* (1935), a playlet; and *Gemma, Dante Hitvese* (“Gemma, Dante's Wife,” 1944). Mohácsi was secretary of the Judah Halevi Society for the dissemination of Hebrew literature and wrote a book about the poet (1941). Together with many other Jewish journalists he was arrested by the Nazis in 1944 and scheduled for deportation. His exemption certificate, signed by the regent of Hungary, Admiral Horthy, never reached him, and he died during transport.

[Baruch Yaron]

MOHILEWER, SAMUEL (1824–1898), rabbi, early member of *Hovevei Zion* (**Hibbat Zion*) in Russia, and a founder of religious Zionism. Born in Glebokie (now Glubokoye), Vilna district, the son of a rabbinical family, Mohilewer was ordained a rabbi by the Volozhin yeshivah (1842) and took up the post of rabbi in his native city from 1848, in Szaki from 1854, in Suwalki from 1860, and in Radom from 1868. In each place he was active in community affairs, especially during the Polish rebellion (1863), toward which he asked the Jews to maintain a neutral attitude. In his articles, which were published in *Ha-Levanon*, he stressed the need for cooperation with the *maskilim* for the welfare of the people and demanded that the rabbis “combine the Torah and wisdom as the time is appropriate.” In 1873 he participated in the St. Petersburg gathering of rabbis, and the leading moderate *maskilim* and tried to bring the two sides closer together. He was attracted to the idea of settling Erez Israel even before the 1881 pogroms, but immediately after they took place he went to Brody and Lvov in order to encourage the masses of refugees who fled Russia and to influence the philanthropists and workers who came to their aid to divert the stream of migration to Erez Israel. Afterward, together with two other rabbis, he appealed to the Russian rabbis to found an organization for *aliyah* to Erez Israel and to settle there. Even after many rabbis withdrew their support of *Hibbat Zion* because the movement was headed by *maskilim* and “students,” Mohilewer remained faithful to the concept and supported the efforts of L. *Pinsker and M.L. *Lilienblum to organize the various *Hovevei Zion* into one organization.

Mohilewer was among those who influenced Edmond de *Rothschild to extend aid to the first settlements in Erez Israel and induced him to establish a settlement for Jewish farmers

coming from Russia (*Ekron). He then influenced Jews in Bialystok and its surroundings to settle in *Petah Tikvah. In 1883 he was chosen as rabbi of Bialystok under an agreement with the members of the community that he be allowed to devote himself to his public activities several months a year. Mohilewer was the honorary president of the *Kattowitz Conference of Ḥovevei Zion (1884). His speech at the closing session of the conference on the “Dry Bones” (Ezek. 37) served as a foundation for the sermons of the preachers of Ḥibbat Zion and of Zionism for the following years. In 1888 he joined I.E. *Spektor, M. *Eliasberg, and others who allowed the farmers to work the fields during the *shemittah* year in the Jewish settlements in Erez Israel. He chaired the Ḥovevei Zion conferences in Druskininkai (1887) and in Vilna (1889) and struggled for the influence of the Orthodox circles in the movement. Through his influence a board of rabbis was chosen to ensure that the settlement work in Erez Israel was carried out in a traditional Jewish spirit.

In 1890 Mohilewer was among the first speakers at the Odessa founding assembly of The Society in Support of Jewish Farmers and Artisans in Syria and Palestine (the official name of the Odessa Committee of Ḥovevei Zion). After the meeting he headed a Ḥovevei Zion group on a tour of Erez Israel and, upon his return, published his open letter titled “The Purpose of My Trip to the Holy Land,” in which he called upon Ḥovevei Zion “to work physically and financially for the sake of Erez Israel.” At a gathering of Ḥovevei Zion in Druskininkai (1893), it was decided, at Mohilewer’s initiative, to establish a Spiritual Center (Merkaz Ruḥani – *Mizrachi) for the movement to direct public relations activities and explain ideas connected with the settlement of Erez Israel. It was also decided to plant a citron orchard on land adjoining Ḥaderah and to name it Gan Shemu’el, in honor of Mohilewer’s 70th birthday. Mohilewer and his close associates continued in their propaganda work, especially among the Orthodox Jews, and the Mizrachi became the foundation for the development of the religious Zionist movement, which four years after Mohilewer’s death became a faction in the Zionist Organization (assuming officially the name Mizrachi).

Mohilewer joined the World Zionist Organization when it was founded by *Herzl, but because of his physical weakness he was not able to participate in the First Congress in 1897. His letter was read to the delegates, however, and created a great impression upon them. He was chosen as one of the four leaders who were charged with directing the work of the Zionist Movement in Russia and as the head of its “spiritual center” which disseminated directives to the members in their work. In his last letter before his death, Mohilewer called upon the Jews of Russia to support the *Jewish Colonial Trust. The basic goals in his public relations work were the attainment of a deep attachment to the commandment to settle Erez Israel, “which is the foundation of the existence of our people”; and tolerance toward the *maskilim* as a prerequisite to the unity of the Jewish people, which was necessary for the rebuilding of the Jewish homeland.

Mohilewer wrote many short works, including responsa, talmudic and rabbinical novellae, homilies, and scholarly works. Most of these writings were lost in the Bialystok pogrom (1906). Some of those that survived were published under the name *Ḥikrei Halakhah u-She’elot u-Teshuvot* (1944).

[Yehuda Slutsky]

His grandson, JOSEF MOHILEWER (1872–1943), was a Zionist leader and educator in Russia and Erez Israel. Born in Radom, Poland, he received a traditional Jewish education from his grandfather. He was active in various Zionist groups, and from 1902 was a government-appointed rabbi in Bialystok. Mohilewer was active in the fields of Jewish education and community affairs in Odessa. In 1920 he moved to Palestine, where he became deputy headmaster of the Jerusalem Teachers’ Seminary and, from 1923, headmaster of the Hebrew High School in Jerusalem. He published articles in the Russian, German, and Hebrew press.

MOHOLY-NAGY, LÁSZLÓ (1895–1946), painter, sculptor, graphic designer, photographer, filmmaker, educator. Born in Bács-Borsod, Hungary, Moholy-Nagy studied law at the University of Budapest, a field in which he received his degree after his military service in World War I. Afterwards, he became active in Budapest artistic circles, starting an artists’ group and founding a literary magazine. He fled the city’s political unrest in 1919 for Vienna. After traveling to Berlin the following year, Moholy-Nagy made the acquaintance of such Dada practitioners as Kurt Schwitters, Hannah Hoehch, and Raoul Hausmann. As early as 1919, he was influenced by the ideas of the Russian artists Kasimir Malevich and El *Lissitsky and brought their work to the attention of the European, and especially German, art worlds. While in Berlin in 1921, both Moholy-Nagy and Man *Ray produced Dada-influenced Rayographs and photograms by placing objects, including gears and machine components, on light sensitive paper, thereby creating complex compositions in which the objects’ silhouettes created bright spots on a dark surface. Moholy-Nagy elicited a variety of different gradations of light-suffused abstract shapes by arraying transparent or translucent objects, like glass, veils, and nets, on the photographic paper. Moholy-Nagy believed, as did many other artists of the opening decades of the 20th century, that an art of universal geometric shapes and forms possessed the capability to order and revolutionize society.

In the 1920s, Moholy-Nagy wrote for several influential art periodicals and edited with Ludwig Kassák a book of poetry and essays on art. The artist met El Lissitzky in 1921 and emerged as an important figure in the promulgation of Constructivism, a non-objective art movement based on geometrical forms associated with the work of Lissitzky, Naum Gabo, Antoine Pevsner, and Aleksandr Rodchenko, among others. Moholy-Nagy had his first show in 1922 at Der Sturm gallery, Berlin, and took part in the Congress of Constructivists and Dadaists. In 1923, he joined the famous Bauhaus school and for five years conducted the preliminary course together with Joseph Albers. During this period, Moholy-Nagy involved himself in book and stage design. He later became Walter Gropius' assistant. While teaching at the Bauhaus, Moholy-Nagy made the acquaintance of a number of seminal figures in the German art community, including Herbert Bayer, Marcel Breuer, Lyonel Feininger, Wassily Kandinsky, and Paul Klee. In 1924–25, Gropius and Moholy-Nagy edited and designed a 14-volume set of books. The eighth volume, Moholy-Nagy's *Malerei, Fotografie, Film (Painting, Photography, and Film)* of 1925 posited that the camera functioned as an instrument whose powers enhanced that of the human eye. The book included photographs and photograms by Moholy-Nagy and others, scientific imagery, and novel photographic techniques, including multiple exposures and photomontages. In 1928, Moholy-Nagy resigned from his position at the Bauhaus and settled in Berlin, where he remained active in numerous artistic fields, notably film, theater, and photography. In 1929, he published *Von Material zu Architektur* (translated as *The New Vision: From Material to Architecture*), which further codified his conception of the idea and practice of art-making within the context of Constructivist principles. In 1934 he went to Amsterdam, but with the rise of the Nazi threat he traveled the following year to England. Between 1935 and 1937, Moholy-Nagy worked in London as a designer and filmmaker. He finally settled in Chicago in 1937, where he founded the New Bauhaus. However, the Chicago school shut its doors within one year because of financial problems and amidst objections to Moholy-Nagy's utopian and collectivist ideals. In 1939, Moholy-Nagy and other former faculty re-organized the institution as the Chicago School of Design, renamed the Institute of Design in 1944. The artist's work continued to blossom in technique with his interest in the properties of Plexiglass, a durable resin available starting in 1937, which he molded, painted, and incised. In 1941, Moholy-Nagy became a member of the American Abstract Artists group. He attained American citizenship in 1944. Despite his international reputation in Europe, his first solo show was organized in the United States by the Modern Art Society of Cincinnati only in 1946, a year after his death from leukemia.

Moholy-Nagy's work is owned by private collectors and by numerous museums, including the Bauhaus-Archiv Museum of Design, Berlin; the Guggenheim Museum; the J. Paul Getty Museum; the Kunstmuseum, Basel; the Museum of Modern Art; the National Gallery of Art, Washington, D.C.; and the Tate Gallery.

[Nancy Buchwald (2nd ed.)]

MOHR, ABRAHAM MENAHEM MENDEL (1815–1868), Hebrew scholar. Born in Lemberg, he was a *maskil* who wrote in Hebrew and Yiddish. His fecund literary work commenced in 1834 when he published *Magen ha-Ḥokhmah*, in which he defended science and philosophy. Together with N.I. Fischmann, Jacob Bodek, and Jacob Mentsch, he issued the two-volume *Ha-Ro'eh u-Mevakker Sifrei Mehaberei Zemannenu* (1837, 1839), in which famous scholars were harshly criticized. The book aroused the anger of his contemporaries. His publication *Yerushalayim*, which appeared for three issues (1844–45), was more moderate. In 1848–49 he published a Yiddish newspaper, *Tsaytung*, which at the time was the only Yiddish newspaper in the world. Mohr wrote about the Rothschilds (*Tiferet Yisrael*, 1843), Columbus (1846), and Napoleon III (*Ḥut ha-Meshullash*, 1853). His works also included *Mevasseret Ziyyon*, (1847), a geography of Palestine and its Jewish inhabitants, and his Purim parodies *Kol Bo le-Purim* (1855) and *Shulhan Arukh Even ha-Shetiyyah* (1861). He published editions of *Mikveh Yisrael* by Manasseh Ben Israel (1847) and *La-Yesharim Tehillah* by M.Ḥ. Luzzatto (1859).

[Getzel Kressel]

MOHR (Mohar), MEIR (1888–1967), Hebrew writer. Born in Rozwadow, Galicia, Mohr left for the U.S. in 1908, where he worked as a tailor and a part-time teacher. After returning to Galicia he taught in Jaslo. Recruited for the Austrian army during World War I, in which he served until 1918, Mohr afterward taught in Tarnow and in various German cities, including Berlin (from 1923). From 1939, when he left Berlin for Palestine, he taught Hebrew to children and to adults.

Mohr's publication, under the pen name R. Simla'i, of light, humorous verse in G. Rosenzweig's *Ha-Devorah* (1912) was followed by poems, articles, and essays in the majority of Hebrew newspapers and literary periodicals of this period. In his later years, he regularly published articles and poems in *Ha-Po'el ha-Za'ir*. His books are *Ayin be-Ayin* (1950), a selection of his poetry, and *Ḥeret Enosh* (1959), a selection of his essays on poetry and prose. Mohr translated exclusively into Hebrew.

His son, JEHIEL MAR (MOHAR; 1921–1969), also a Hebrew poet, was born in Tarnow, and went to Erez Israel in 1937. He was a founding member of kibbutz Dovrat. Mar published five volumes of poetry, of which the first, *Mi-Lev va-Nof*, appeared in 1951. His verse aimed at a simple conversational idiom often achieved by irony. One of Israel's most skillful writers of lyrics for popular songs, he published these lyrics under the name Mohar.

[Getzel Kressel]

MOINEȘTI (Rom. **Moinești**), town in Moldavia, E. central Romania. Tombstones from 1740 and 1748 prove the existence of a Jewish settlement predating the foundation of the town (1781) and dating back to the discovery of oil in the vicinity. There were 42 Jewish taxpayers in 1820, 500 families in 1885, and 2,398 individuals in 1899 (50.6% of the total population). The community was organized in 1885 and had five prayer houses, a ritual bath, and a primary school for boys (founded in 1893) as well as one for girls (1900). The locality played a prominent role in the history of the colonization of Erez Israel. Jews from Moinești were the founders of Rosh *Pinnah. In 1881 a group of 50 families was organized which sent David *Schub as a delegate to Erez Israel. He purchased the plots of land where 22 families settled in the summer of 1882, together with several families from other Moldavian cities. The Moinești Jews addressed a call to all the Romanian Jews; the pre-Zionist movement Yishuv Erez Israel was subsequently established. Between the two world wars the number of the Jews decreased to 1,761 (26.6% of the total). After emancipation (1919), there were Jewish members on the municipal council and in 1930 Moinești even elected a Jew as deputy mayor. Tristan *Tzara (Sami Rosenstein), a founder of the Dadaist movement, was born in Moinești.

In World War II the Jews of Moinești were expelled to Botoșani. About 80 families returned after the war. The Jewish population numbered 480 in 1947, 400 in 1950, and about 15 families in 1969.

[Theodor Lavi]

MOÏSE, ABRAHAM (c. 1736–1809), progenitor of the Moïse family of South Carolina. Born in Strasbourg in Alsace, France, Moïse immigrated to the West Indies and was living at Cape François, Santo Domingo, when a black slave insurrection broke out in 1791. He and his family were forced to flee and made their way to Charleston, South Carolina, reputedly leaving their wealth behind. Aged 56, he started anew as a small shopkeeper and later became a vendue master (auctioneer). His descendants achieved distinction in various fields.

BIBLIOGRAPHY: H. Moïse, *The Moïse Family of South Carolina*, (1961).

[Thomas J. Tobias]

MOÏSE, PENINA (1797–1880), U.S. poet, hymnist, and teacher; daughter of Abraham *Moïse. Penina Moïse left school at the age of 12 – when her father died – to help support her large family, which had been left without means, by doing needlework. On her own, she continued to study and

read avidly, showing a literary talent at an early age and becoming a prolific writer of verse. She frequently contributed poems to the Charleston *Courier* which were on a variety of subjects, many on current events. She also wrote for the leading papers and periodicals of her day. In 1833 she published a small volume of her poems, *Fancy's Sketch Book*. She was admired by Charleston's antebellum writers. A devout Jew, she was superintendent of Beth Elohim Congregation's Sunday school and was the author of the first American Jewish hymnal. When the congregation installed the first American synagogue organ in 1841, she composed hymns for the organ service. A book of her hymns was published by Beth Elohim; later editions were used by other Reform temples. Many are still found in the *Union Hymnal* of the Union of American Hebrew Congregations. They are notable for a spirit of submission to the will of God. In her sixties Penina Moïse gradually became blind, but, with rare courage, she continued to write, using her niece as an amanuensis. She was widely known as Charleston's "blind poetess." Reduced to poverty after the Civil War, she, her sister, and niece eked out a modest living with a small private girls' school, in which she gave oral instruction by drawing on her remarkable memory. Her warmth and sympathy made her a favorite confidante of youth. Her hymns and poetry were published, as *Secular and Religious Works* (1911). She never married.

[Thomas J. Tobias]

MOÏSE, THEODORE SYDNEY (1808–1883), U.S. painter; grandson of Abraham *Moïse. Born in Charleston, South Carolina, he received instruction in painting from his aunt, Penina *Moïse, a part-time artist. Nothing is known about his further education. In 1835, Moïse opened a studio in Charleston, advertising his services as a portrait painter, animal painter, picture restorer, and ornamental draftsman. Moïse moved to New Orleans in 1842–43, where he gained a reputation as an accomplished portrait painter and maintained a studio from 1850 until his death. Members of his studio included Benjamin Franklin Reinhart, Paul Poincy, and the portrait and genre painter Trevor Thomas Fowler. During and after 1842, Moïse traveled with Fowler in the pre-Civil War and then Reconstruction South. Fowler sometimes collaborated with Moïse in the execution of portraits of members of wealthy Southerners. So closely did Moïse and Fowler work that art historians find it impossible in some instances to differentiate Moïse's work from that of Fowler's. Moïse's subjects often included wealthy landowners, their families, servants, horses, and dogs. The latter images might have been commissioned on the strength of Moïse's reputation as a portrait painter and as a master of making expressive likenesses of horses. Moïse's portraits demonstrate a Neoclassical style which shares characteristics of the work of the French 18th century artists Jean-Auguste-Dominique Ingres and Jacques-Louis David, as well

as the American 19th century painter Rembrandt Peale. John Freeland commissioned the artist to paint a portrait of the senator and orator Henry Clay the year of Moïse's arrival in New Orleans. Moïse's painting of General Jackson on horseback (1815, City Hall, New Orleans) took a \$1,000 prize for its accurate likeness of the general. When the portrait was cleaned in 1844, the signature "Amans and Moïse" was revealed; historians speculate that Moïse painted the horse, while Amans depicted General Jackson. Other portraits by Moïse include Mordecai Cohen and Governor Herbert (State Library, New Orleans). The Court House of New Orleans contains many portraits of judges by Moïse, as well as *Life on the Metairie*, which he completed in collaboration with Victor Pierson. Depicting portraits of 44 distinguished citizens of New Orleans at the last meeting of the old Metairie Race Track, this painting won Grand State-Fair First Prize in 1868 for best historical painting. The New Orleans Court House also houses a massive painting by Moïse which depicts portraits of 64 members of the Volunteer Fire Brigade marching in the city's Canal Street. Moïse attained the rank of major in the Confederate Army. He participated in the defense of the lower Mississippi during the Civil War by helping to deploy floating fire rafts to repel the Federal fleet. Works by Moïse are owned by private collectors, as well as by the Filson Historical Society in Louisville, Kentucky, the Louisiana State Museum, the Metropolitan Museum of Art, the Ogden Museum of Southern Art, and the S.J. Schwartz Historical Collection in Maison Blanche, Louisiana, among other museums and public buildings.

MOISEWITSCH, BENNO (1890–1963), pianist. Born in Odessa, Moiseiwitsch won the Anton Rubinstein Prize at the Odessa Academy at the age of nine, and later studied with Theodor Leschetizky in Vienna. He was regarded by many as the finest Chopin interpreter of his time. His London debut took place in 1909. He settled in England during World War I and thereafter played frequently in Britain and on concert tours abroad. His repertoire was extremely wide, but in his later years he tended to confine his programs to the standard favorites. His daughter, TANYA MOISEWITSCH (1914–2003), became a theatrical designer. She designed 50 productions in Dublin, and from 1940 worked in London, Stratford, and Edinburgh. She also designed productions at Stratford, Ontario, at the New York Metropolitan Opera, the Habimah, Tel Aviv, etc.

MOISSAN, HENRI (1852–1907), French inorganic chemist and Nobel Prize winner. Moissan was born in Paris of a

non-Jewish father and a Jewish mother. He joined the Ecole Supérieure de Pharmacie, where in 1886 he became professor of toxicology and in 1899 professor of inorganic chemistry. From 1900 he was professor of inorganic chemistry at the Sorbonne. Moissan's main work was on metal oxides and inorganic and organic fluorine compounds. He developed a laboratory electric furnace which he used to make artificial (black) diamonds. He was awarded the Nobel Prize for chemistry in 1906 for his investigation and isolation of the element fluorine, and for the adoption in the service of science of the electric furnace called after him.

Moissan published his work in scientific journals and in his books, *Le Four Electrique* (1897) and *Le Fluor et ses composés* (1900); he also wrote an inorganic chemistry textbook in five volumes, *Traité de chimie minérale* (1904–06).

MOISSIS, ASHER (1899–1975), Greek author, translator, and Jewish communal leader. Born in Trikkala, Moissis became a lawyer but soon began to take an active part in Jewish communal and Zionist affairs. In 1917 he founded the Zionist monthly *Israel* which he edited for the two years of its existence. In the early 1930s he began to publish books on Jewish subjects, particularly concerned with Greco-Jewish relations through the ages. Before World War II he wrote *Dheka pende imere ana tin Evraikiyin Palestinin* ("Fifteen Days Across Jewish Palestine," 1933), *Isaghoyi is to Oikoyeniakon Dhikyeyon ton en Ellidi Israiliton* ("Introductory Study of the Civil Laws of the Jewish Family in Greece," 1934), and a translation of the *Autoemancipation of J.L. Pinsker* (1933). He was president of the Jewish National Fund (1930–38), of the Salonika Jewish community (1934–36), and of the Greek Zionist Federation (1936–38). Following the liberation of Greece, Moissis resumed his communal and literary activities. He was president of the Central Council of Jewish Communities in Greece (1944–49) and, from 1948, honorary consul of Israel in Athens. He translated parts of the diaries of Theodor Herzl (1952) and the *History of Modern Hebrew Literature* by Joseph Klausner (1968). His postwar books include *I Filia Ellinon kye Evreon ana tous Eonas* ("The Friendship of Jews and Greeks Through the Centuries," 1953), *Ellenoiodhaikye Melete* ("Helleno-Judaic Studies," 1958), and *Pion "Ellinismon" Katepolemisan i Makkavei* ("The Hellenism that the Maccabees Fought," 1962). After the Six-Day War of 1967, he wrote *Istoria kye Thrili yiro apo to Tikhos ton Dhakrion* ("History and Legend Concerning the Wailing Wall," 1968), which was translated into Italian and English, the latter by Rae Dalven. Moissis also translated into Greek verse the *Haggadah* (1970). Moissis was probably the most committed and prolific Jewish writer in modern Greece.

[Rachel Dalven]

°**MOJECKI, PRZECLAW** (second half of 16th and early 17th century), Polish Catholic priest and antisemitic author. His principle work, *O zydowskich okrucieństwach, mordach y za-bobonach* ("The Cruelty, Murders, and Superstitions of the Jews"), was the first outright attack on the Jews and Judaism in Polish political writings. The pamphlet, which first appeared in Cracow in 1589 and was later printed in 1598 (Cracow) and in 1636 (Lvov), was dedicated to Prince Janusz Ostrogski – a newly converted Catholic – in the hope of convincing him to support the expulsion of the Jews from Poland. The author gives 25 stories of *blood libels from various countries and nine from Poland. Mojecki complains that Jewish trade finally results in the depletion of the country's resources in waste and corruption because of the encouragement of luxury, and that the Jews are not under the jurisdiction of the authorities of the towns in which they live. Moreover, Mojecki is of the opinion that the Jews are traitors to Poland and spy for the Turks, the Tatars, and the rulers of Moscow. The author attempts to convince his readers that God rewards those who persecute and expel the Jews and commends the measures adopted by the kingdoms of France, Spain, and Germany toward the Jews. This work, which was influenced by German and Italian antisemitic literature, was influential in the propagation of antisemitic ideas in Polish literature of the 17th century.

[Arthur Cygielman]

MOKADY, MOSHE (1902–1975), Israeli painter. Born Moshe Brandshtat in Tarnow, Galizca, Mokady was sent to study at a high school in Zurich during World War I. Among other things he studied music and painting there. In 1920 the family decided to immigrate to Erez Israel in spite of their comfortable life. The family built a home in Haifa. Subsequently Mokady lived in many places in Israel and also abroad for short periods. In the 1950s he was one of the founders of the Ein Hod artists' village and later he moved there. In those years he was chosen to represent Israel in the Venice Biennale (1952) and the Sao Paulo Biennale (1955).

Mokady's artistic style was characterized by his individualistic approach and variety. The connection between his private life and his art was clear and can be identified through the style of the paintings. In the beginning his style was a mixture of Cubism and Naive art. His penchant for painting portraits began then (*Sitting Boy – Portrait of Daniel Sharshavsky*, 1925, Israel Museum, Jerusalem). When Mokady dealt with the local landscape, he would describe figures in it.

His style changed after his Paris period. His meeting with the Jewish artists who lived there like *Chagall and *Soutine directed him toward the Expressionist style and his colors became darker and melancholic. The monochromatic painting that was one of his typical styles began to appear during this period.

At the end of the 1940s Mokady reached the abstract style. His interest in the music world and his awareness of

the New York Abstract lay in the background of his return to this art style. Mokady's abstract paintings show a clear influence of Israel's landscapes. The paintings were assembled from stains of color placed near the middle of the canvas. Many abstracts were done monochromatically and some were colorful and full of light.

After the death of his elder son, Raphi, in the Six-Day War, Mokady's paintings became darker and the black and white contrast returned again and again.

A significant part of Mokady's artistic corpus belongs to his stage design. He worked for most of the theaters operating in Israel, and was in great demand.

MOLADAH (Heb. מוֹלָדָה), city in the Negev of Judah, described in Joshua 19:2 and 1 Chronicles 4:28 as a town of the tribe of Simeon, and in Joshua 15:26 as a town of the tribe of Judah in the Negev, near Beer-Sheba. It is among the cities listed in Nehemiah 11:26, apparently settlements which endured through the Babylonian Exile. The commonly proposed identification with the Malatha of Josephus (*Ant.*, 18:147) and the Malaatha of Eusebius (*Onom.* 14:3; 88:4; 108:3) is baseless. Khirbat al-Waṭan, approximately 8 mi. (13 km.) east of Beer-sheba, has been suggested as a possible identification. Pottery found on the site dates from the Iron Age. The Arabic name may be a translation of the Hebrew (both Ar. *waṭen* and Heb. *moladah*; "birthplace").

MOLCHO, DAVID EFFENDI ISAAC PASHA (1839–1909), vice admiral of the Ottoman navy. Born in *Salonika, he was descended from an established family of Salonika rabbis. Molcho entered the College of Military Medicine and, upon graduation, joined the Turkish armed forces as a surgeon. He was promoted to lieutenant colonel in 1877 and was later appointed inspector general of the health services. He was appointed a vice admiral in 1902. He served also as the chief translator of the *Divan-i Humayun* and as the head of the communal council of the Jewish community of *Istanbul in the years 1892 and 1905. Previously, in 1883, 1885, and 1890, he had been a member in this institution.

MOLCHO, SOLOMON (c. 1500–1532), kabbalist and pseudo-messiah. Born in Lisbon of Marrano parents, he was originally called Diogo Pires. Though details on his early life are scarce, it is clear that he received a secular education and, at the age of 21, was appointed secretary to the king's council and recorder at the court of appeals. It is probable that Molcho secretly

studied the Kabbalah. On meeting David *Reuveni after the latter's arrival in Portugal in 1525, he asked to be circumcised. Reuveni dissuaded him but, undeterred, Molcho circumcised himself and took a Hebrew name. While the symbolic meaning of the name is obscure, some scholarly opinion takes it as referring to Molcho's spiritual kinship with Reuveni (the name Molcho deriving from the Hebrew *melekh* = "king"). Reuveni suggested to Molcho that he flee, while he himself was forced to leave Portugal because of the suspicion that he had had a part in Molcho's conversion. The details of Molcho's flight are uncertain. Reuveni later claimed that he had sent him on a mysterious diplomatic mission to *Turkey; Molcho himself stated that a divine command had directed his departure. His destination is also somewhat obscure. There are those who claim that he spent some time in Italy, *Jerusalem, *Safed, *Damascus, and even Constantinople. All authorities agree, however, that he settled for a period in *Salonika where he studied Kabbalah in the *bet ha-midrash* of Joseph *Taitazak. There he probably met R. Joseph b. Ephraim *Caro, whose writings reflect his admiration for Molcho. In Salonika Molcho gathered disciples and students who prevailed upon him to publish a collection of his sermons which are filled with expectation of coming redemption, *Derashot* (Salonika, 1529). In later editions the work is entitled *Sefer ha-Mefo'ar*. In the sack of Rome in 1527 he saw the signs of the coming redemption, and returned to Italy in 1529 and began to preach about it in Ancona. His sermons attracted many people, including Christians. The accusations of an informer that he was a Marrano who had reverted to Judaism caused him to flee to Pesaro and eventually to Rome. By then Molcho had become convinced that he was indeed the Messiah. In fulfillment of the talmudic legend (Sanh. 98a) that recounted the suffering of the Messiah, Molcho, dressed as a beggar, sat for 30 days, tasting no meat or wine, among the sick and the infirm on a bridge over the Tiber by the pope's palace.

Molcho succeeded in gaining the confidence of Pope *Clement VII, who granted him protection (1530). His standing was further strengthened when his prophecies of a flood in Rome (1530) and an earthquake in Portugal (January 1531) came true. He preached widely and was successful in preventing the spread of the Inquisition to Portugal. He left Rome for Venice at the end of 1530 for an unsuccessful meeting with Reuveni. Attempting to mediate in a dispute between Jacob *Mantino, the pope's physician, and Elijah Halfon, kabbalist and physician, Molcho succeeded only in arousing the enmity of Mantino. Molcho fled to Rome and a friendlier atmosphere, but Mantino, seeing danger in Molcho's activities, followed him and intrigued against him. Molcho was accused by an inquisitional court of judaizing and was condemned to be burned at the stake. He was saved by the personal intervention of the pope, and another man was burned in his place. In 1532 Molcho left for northern Italy, where he again met with Reuveni. Together they went on a mission to Emperor Charles V who was then at Regensburg. Although the nature

of their mission to Charles is somewhat speculative, R. *Joseph (Joselmann) of Rosheim records in his memoirs that Molcho came in order to rouse the emperor to call upon the Jews to fight against the Turks. However, Charles brought Molcho to Mantua, where he was tried and burned at the stake in late 1532 after refusing to recant and convert to Christianity. Many Jews and Marranos in Italy, however, did not accept that Molcho had died, but believed that he had been saved once more.

The influence of Molcho was considerable both during his lifetime and after his death. R. Joseph of Orly took note of Molcho in his messianic prophecies. Already in 1531 an important messianic movement had spread under his influence and had reached Poland. Some of his belongings were saved by the Jews of Prague and displayed long after his death; his influence on Shabbateanism (see *Shabbetai Zevi) was not insignificant. In addition to his *Sefer ha-Mefo'ar*, Molcho left a number of letters incorporated by R. Joseph ha-Kohen in his historical writings and in *Hayyat Kaneh* edited by Abraham Rothenberg in 1648, and some poetry. His life and that of Reuveni were the subject of much fictional writing, such as M. Brod's *Reuveni Fuerst der Juden* (1925); E. Fleg's *Le Juif du pape* (1925), and A.A. Kabak's *Shelomoh Molkho* (1928–29).

[Joseph Shochetman]

MOLDOVA (formerly Moldavia), independent democratic republic belonging to the CIS, which proclaimed its independence in May 1990. In 1979 it had 80,100 Jews and in 1989–65,800 (of whom 35,700 lived in Kishinev). Emigration in 1989 was 4,304 (3,702 from Kishinev). Immigration to Israel in 1990 amounted to 12,080 (7,578 from Kishinev); the corresponding figures the following year were 17,305 and 9,487. The estimated Jewish population at the end of 1991 was 28,500.

The first Jewish organizations in Moldova included the Moldova-Israel Friendship Association (established in November 1991), the Moldova-Israel Foreign Trade Association, and the Jewish Museum. The monthly Jewish newspaper *Nash golos* began appearing in March 1990. In June of that year the paper printed an interview with Prime Minister Mircea Druk, who stated that he had never concealed his revulsion for anti-semitism and stressed the need to normalize relations between Moldovans and Jews. The prime minister also came out in favor of education in Hebrew for Jews in the republic.

Moldovan Jews appeared to be concerned about their future. Not a single Jew was elected to the Supreme Soviet in

1990. A law was passed making knowledge of the Moldovan language mandatory: this created difficulties for the basically Russian-speaking Moldovan Jews. Intensive Jewish emigration was renewed in mid-1992 in the wake of fighting in Transnistria. Both the Joint Distribution Committee and the Jewish Agency began operating in Kishinev. Direct flights from Moldova to Israel started in January 1992.

At the end of 1993 there were an estimated 15,000 Jews in the Republic of Moldova, and by 2000 their number had dropped to 5,200. In an effort to revive Jewish life, a Chabad-run synagogue opened its doors to the community.

In March 1994 the old Jewish cemetery was desecrated in Kishinev. There were several instances of anti-Jewish violence.

[Michael Beizer/ Dan Rom (2nd ed.)]

MOLE, rodent. The only mole found in Israel is the mole rat (*Spalax ehrenbergi*), a small mammal belonging to the order Rodentia. It is blind, its rudimentary eyes being covered with a membrane. Inhabiting subterranean burrows which it digs, it throws up the ground in a continuous series of mounds. Sometimes it builds a nest in a small mound. Into these burrows, Isaiah prophesied (2:20) a man would cast away “his idols of silver, and his idols of gold... to the moles and to the bats,” the biblical word here for “moles,” *ḥafor perot*, denoting a burrower in Aramaic (*pina*, i.e., “burrower”). According to another opinion *ḥafor perot* refers to an animal which digs up fruits in the ground. In talmudic literature the mole rat is called *eishut* which, because of the damage it causes to crops, may be hunted also on the intermediate days of a festival (מק 1:4). The word *eshet*, which occurs in Psalms (58:9) in a reference to those “that have not seen the sun,” has been identified by some with *eishut*, i.e., mole rats “which do not see the sun but burrow in the ground and live there” (Mid. Ps. to 58:9). In modern Hebrew the mole rat is called *ḥoled*, mentioned among the unclean creeping things (Lev. 11:29). The biblical *ḥoled*, however, is the *rat.

The identification of *ḥafor perot* with the mole rat is most plausible. However, some scholars believe that it is a kind of bat (cf. Tur-Sinai, in: *Leshonenu*, no. 26, 77ff.), and S. Lieberman holds that it is the “flying fox” (which is not found in Israel) or the fruit bat (cf. *Leshonenu*, no. 29, 132f.).

[Jehuda Feliks]

MOLEDET (Heb. מוֹלֶדֶת בְּנֵי בְרִית B'nai B'rith; “Homeland”), moshav shittufi in northern Israel in S.E. Lower Galilee, affiliated with Tenu'at ha-Moshavim. Moledet was founded in 1937 by pioneers from Germany as a tower and stockade settlement,

its construction being aided by the *B'nai B'rith. In its initial years Moledet had to defend itself against frequent attacks by Arabs, and in 1939 was for the most part destroyed in a conflagration. Subsequently the moshav shittufi recovered, basing its economy on field crops, orchards, cattle, and a metal factory. Its population was 340 in 1968, growing to 520 in the mid-1990s and 622 in 2002. In recent years, like many other rural settlements, the moshav underwent major changes, including the distribution of collective property among members and the absorption of newcomers

[Efram Orni / Shaked Gilboa (2nd ed.)]

MOLHO, ISAAC RAPHAEL (1894–1976), Greek journalist and Zionist. Molho was born in Salonika, a descendant of Rabbi Joseph Molho, author of *Shulḥan Gaviyyah*, and Rabbi Abraham di *Boton, author of *Leḥem Rav*. He studied at the *talmud torah*, the Alliance Israélite Universelle, and the Beit Yosef Rabbinical Seminary in Salonika. In Salonika he was active in commerce and journalism becoming a partner in the Recanati firm and founding the newspapers *Pro-Israel* (French) and *La Renaissance* (Judeo-Spanish). *Pro-Israel* was the organ of the Zionist league, B'nai Moshe, which Molho started with Yitzhak David Cohen and Yitzhak Samuel Amarilio. He also served as librarian and secretary of the *Kadima* society, which disseminated the Hebrew language and culture. While a student at Beit Yosef, he worked as a reporter for the French daily newspaper *La Liberté*.

Molho worked to win the support of the French and the Italian governments as well as the Greek Parliament and government for the Balfour Declaration. In 1918 he met with the king of Greece, Alexandros, at the time Allenby conquered Jerusalem, and afterward in Salonika he organized a Jewish Legion to fight in Erez Israel. In 1919 he emigrated to Jerusalem.

In Jerusalem he worked as an agent and representative of several film companies. He was manager of the Rainois film company and the Gaumont and Metro Goldwyn Mayer movie theaters for the entire region from Jerusalem to Teheran. Molho brought cinema to Baghdad and was elected chairman of the Film Distributors Union in Erez Israel. He also helped organize the mass immigration of more than 15,000 Salonikan Jews to Erez Israel, many of whom worked in fishing or as port workers. In 1924 he met with King Hussein Abu-Ali in Amman.

In Jerusalem, he was one of the founders of the Rehavia neighborhood, and also served as its chairman and “mukhtar.” Also as a member of the Bayit ve-Gan neighborhood committee, he helped found its commercial center.

In Sephardi affairs, he was chairman of the Union of Sephardi Communities in Israel, and in 1938 he was elected by the World Zionist Organization executive and Jerusalem Sephardi Council as the Jerusalem delegate to the Amsterdam gathering of the World Union of Sephardi Communities and was later elected to the Union's Central Committee in Paris.

He was an active in the Jerusalem Municipality, was responsible for supervising apartment rental, and served as chairman of the property assessment committee. He was also was a member of the Council for General Education of the Va'ad ha-Le'ummi.

By befriending the Italian consul in Jerusalem he was able to get immigration certificates for some Rhodian Jews facing expulsion or help them reach Palestine clandestinely. In 1939, at the outset of World War II, the British imprisoned him for 20 days because of his amicable relations with the Italian consul. During World War II, he was an active member of the rescue committee for European Jewry, Al-Dami (Don't Keep Silent!).

He was an active member with Judah Leib *Magnes and Martin *Buber in *Berit Shalom. He also assisted in the founding of the *Ihūd movement and Kedmah Mizraḥah in the interest of making peace with the Arabs of Erez Israel.

Molho edited the journal *Ozār Yehudei Sepharad* and was also one of the founders of *Ha-Hed* ("The Echo"). He wrote in the Hebrew dailies *Davar*, *Ha-Zofeh*, and *Do'ar ha-Yom* in Erez Israel, the French Sephardi press of Egypt and France, and the Judeo-Spanish press in Salonika until the Holocaust.

He compiled several volumes of the *Enzikopedyah Le-Ziyyonut* under the editorship of Moshe Kleinman. His books include *Be-Ha'ir ha-Mizrah*; *Los Diversas Tintativas de Reconstruir la Nacionalidad Judiya*; *Rav Moshe Almosnino*, *Ḥayav ve-Sefarav*; *Yosef Marko Barukh*; and *Tur Ha-Zahav be-Toledot Saloniki be-Dorot ha-Aḥaronim*.

[Yitzchak Kerem (2nd ed.)]

°**MOLITOR, FRANZ JOSEPH** (1779-1860), Christian philosopher and kabbalist. Born into a Catholic family at Oberursel, near Frankfurt, Molitor at first studied law. Later he concentrated on research into the philosophy of history and was deeply influenced by *Schelling. His first book, *Ideen zu einer kuenftigen Dynamik der Geschichte* (Frankfurt, 1805), was an evaluation of the various books of idealistic philosophy. He pursued this inquiry in his next two books, in which he established Schelling's central position, although he criticized the latter's *Philosophy and Religion*. Molitor moved in liberal intellectual circles and consequently came into contact with Jews. He advocated the establishment of the Jewish school at Frankfurt, later known as the Philanthropin, and was one of its first teachers. Full of enthusiasm, he joined the *Freemasons and in 1808 he became a member of their "Jewish" lodge, Zur aufgehenden Morgenroethe, which he fought to have recognized. He headed this lodge in 1812, but finally succumbed to the opposition of the Masonic leaders and closed it in 1816.

From the start of his activity in Jewish and Masonic circles he befriended Ephraim Joseph *Hirschfeld and was influenced by his campaign for Jewish-Christian brotherhood. Unlike Molitor's other Jewish acquaintances, who favored the *Has-kalah, Hirschfeld was the first to direct Molitor's attention to *Kabbalah as a way of attaining this brotherhood. Schelling's espousal of theosophy in 1809 also influenced Molitor to explore Jewish theosophy, although he never compromised his faith in liberal Catholicism and Masonry.

Molitor's ascetic life weakened his body, and he was almost completely paralyzed for over 40 years. From 1816 he concentrated on the study of Judaism and the Kabbalah, but his Jewish guides, other than Hirschfeld, are unknown. He considered the Kabbalah to be that part of Jewish tradition which had preserved, in relative purity, those ultimate truths of primeval religion which tend to become more and more revealed with the progress of history. Learning Hebrew and Aramaic, he explored in depth both talmudic and kabbalistic literature. With the aim of describing kabbalistic teaching in all its depth and breadth, he devoted 40 years to this task. The four volumes of his great anonymous work, *Philosophie der Geschichte oder ueber die Tradition*, were actually intended as an introduction to the main bulk of the work, which remained uncompleted. After the appearance of the first volume (1827) he became acquainted with the philosophy of Franz von Baader, whose influence is marked in the succeeding volumes and in the second, much enlarged, edition of the first volume (part 2, 1834; part 3, 1839; part 4, 1853; part 1, in a second edition, 1857). The first volumes of his work are devoted to the principles of Judaism in the light of Kabbalah, with special emphasis, in the third volume, on purity and impurity. The fourth volume emphasizes the importance of Kabbalah for Christianity.

Despite his Christian theosophic leanings, Molitor's work remains unsurpassed by any previous attempt, both in speculative depth and familiarity with Jewish sources. His influence can be discerned in the work of all Christian theologians who were inspired by Baader. Molitor died in Frankfurt on March 23, 1860. His admiration for the Kabbalah was ignored by Jewish researchers in the 19th century, but it may well be that the weaknesses in the historical chapters of his book led the researchers to dismiss him completely.

[Gershon Scholem]

MOLLER, HANS (1896-1962) and his cousin **ERICH** (1895-), textile industrialists in Erez Israel. Born in Vienna and Ostrava, respectively, Hans and Erich were the fourth generation of textile industrialists. The Moller family owned the cotton-spinning mill, founded in 1865 by their great-grand-

father, Simon Katzau in Babi (Bohemia). They both went to Palestine in 1933 and in 1934 founded Ata Textile Company at Kefar Ata. They finally settled in Palestine in 1938. This was the first integrated cotton, spinning, weaving, dyeing, and finishing plant in the country, manufacturing and retailing ready-to-wear clothing and supplying the Allied forces in the Middle East during World War II. Originally a family business, Ata became a public company. In 1967 it had 1,861 employees. In 1948 a subsidiary company, Kurdaneh Textile Works Ltd., was founded. Erich left Ata in 1949 to build Moller Textile Ltd., a spinning, twisting, and dyeing plant in Nahariyyah. Both plants made major contributions to Israel export.

[Kurt Gruenberger]

MOLNÁR, ÁKOS (1895–1945), Hungarian author. An outstanding storyteller, Molnár wrote many books including *A császár dajkája* (“The Emperor’s Nurse,” 1935) and *Az égő csipkebokor* (“The Burning Bush,” 1940). He also wrote *A hitelhagyott* (“The Apostate,” 1937), the biography of Imre *Szerencses (Fortunatus), a baptized court Jew. Molnár was murdered by the Nazis.

MOLNÁR, FERENC (originally **Neumann**, 1878–1952), Hungarian playwright and novelist. Born in Budapest, Molnár’s first novel, *Az éhes város* (“The Hungry City,” 1900) was a historical picture of Budapest, and particularly of its Jewish quarter. The children’s story, *A Pál utcai fiúk* (1907; *The Paul Street Boys*, 1927), was Molnár’s outstanding work. Another of his social novels, *Andor* (1918²), symbolized the young Jewish intellectual destroyed by the defects of his own character. During World War I Molnár was a war correspondent, and some of his experiences appeared in his *Egy haditudósító emlékei* (“Memoirs of a War Correspondent,” 1916). In Molnár’s books, which brilliantly expose contemporary Hungarian social problems, the central figure is always a weak-willed Jew who makes himself ridiculous by trying to imitate his surroundings.

It was as a dramatist that Molnár was most distinguished. His witty dialogue owes much to Oscar Wilde. His ideas are sometimes fantastic, but never ridiculous. His first play was *A doktor úr* (“The Lawyer,” 1902). He achieved world fame with *Az ördög* (1907; *The Devil*, 1908); the tragicomedy *Liliom* (1909; Eng. vers., 1921), *A testőr* (1910; *The Guardsman*, 1924); and *A farkas* (1912; *The Tale of the Wolf*, 1914). All these characters deal with the problems of a changing society, and the characters are, almost without exception, Jews fighting to improve their image, sometimes turning into caricatures in the process. *The Guardsman* inspired Oscar *Strauss’ musical comedy *The Chocolate Soldier*; *Liliom* became the musical *Carousel* (1945), by Richard *Rodgers and Oscar *Hammerstein. Molnár also wrote lyrical, symbolic dramas. Most of his plays have been translated into English. There are two anthologies of his stage works, *Plays* (1927) and *The Plays of Ferenc Molnár* (1929, 1937²); and a prose anthology, *Husbands and Lovers* (1924). During the end of the 1930s, antisemitism drove Molnár from Hungary, and he lived in France and Switzerland,

but immigrated to the U.S. in 1940. His last major work was the autobiographical *Útitárs a száműzetésben* (1958; appeared in English as *Companion in Exile*, 1950).

BIBLIOGRAPHY: B. Halmi, *Molnár Ferenc...* (Hung., 1929); *Magyar Irodalmi Lexicon*, 2 (1965), 263–6; S.J. Kunitz and H. Haycroft (eds.), *Twentieth Century Authors* (1942), 970f.

[Baruch Yaron]

MOLOCH, CULT OF. Evidence concerning Moloch worship in ancient Israel is found in the legal, as well as in the historical and prophetic literature of the Bible. In the Pentateuch, the laws of the *Holiness Code speak about giving or passing children (lit. “seed”) to Moloch (Lev. 18:21, 20:2–4) and the law in *Deuteronomy speaks of “passing [one’s] son or daughter through fire” (18:10). Although Moloch is not named in the Deuteronomy passage, it is likely that his cult was the object of the prohibition. The author of the Book of Kings speaks about “passing [one’s] son and daughter through fire” (11 Kings 16:3 [son], 17:17, 21:6 [son]). 11 Kings 23:10 speaks about “passing [one’s] son or daughter through fire to Moloch.” Some scholars interpret the phrase *lā-hā’avir ba-esh*, as a reference to a divination or protective rite in which children were passed through a fire but not physically harmed. However, the same phrase *lā-hā’avir ba-esh* is found in an unmistakable context of burning in Numbers 31:23. Other biblical texts refer to the sacrifice of children. Psalms 106:37–38 speaks of child sacrifice to the unnamed idols of Canaan. In prophetic sources, Jeremiah 7:31 and Ezekiel 20:25–6 speak disapprovingly of sacrificing children to Yahweh (for the “bad statutes” referred to by Ezekiel, see Ex. 22:28–29; but see Friebe); Jeremiah 19:5 speaks of sacrificing children to Baal; Ezekiel 16:21, 20:31, 23:37, 39 of sacrificing children to unnamed divinities; as does Isaiah 57:5. In none of these is there a mention of Moloch. Only in Jeremiah 32:35 is Moloch mentioned by name and there he is associated with Baal (see below). Distinction should be made between human sacrifice as a sporadic deed at a time of crisis and distress, such as the holocaust of the son of Mesha king of Moab (11 Kings 3:27), or as an act which serves to express an unusual degree of religious devotion as the binding of Isaac (cf. Micah 6:7), on the one hand, and the Moloch cult which was an established institution with a fixed location (the Topheth), on the other. As the classical sources have it, the sacrifices of children at Carthage, a colony founded by Phoenicians on the coast of Northeast Tunisia, usually came after a defeat and a great disaster – a religious practice based upon an ancient mythological tradition. Thus Phoenician tradition ascribed to Sanchuniaton relates that the god Elos (= El) sacrificed his son following a war which brought disaster upon the state. If the classical reports are accurate, it could be maintained that there is no real connection therefore between the Phoenician-Punic child sacrifices which are sporadic and conditioned by crisis and the Moloch worship which was an institution or cult. In contrast though to the classical reports, the archaeological discoveries at Carthage, which attest some 20,000 burials of infant bones along with animal bones in what are evidently

not instances of natural death appear to conflict with the classical reports. There is as yet no evidence of child sacrifice in the Carthaginian homeland, the cities of Phoenicia (Lebanon) proper, where far less excavation has been done.

The Name

The accepted view since A. *Geiger is that Moloch is a tendentious mis-vocalization of the word *melekh*, “king,” the original vowels being changed and patterned after the vocalization of *boshet*, “shame,” which was often used as an intentional substitute for Baal (see *Euphemism and Dysphemism). It is true that the names Moloch (1 Kings 11:7) and Milcom occur in the Bible in reference to an Ammonite god, and that deities by the name Malik/Muluk are attested to from the 18th century B.C.E. onward. However, the laws and warnings against the worship of the Moloch could hardly refer to these particular deities. It is unlikely that one particular god who is not especially famous would be singled out for mention, while other prominent gods, e.g., Baal, are not mentioned by name in the Torah even once. That the original vocalization was *melekh* may be learned from Isaiah 30:33, which undoubtedly alludes to the fiery ceremony of the Moloch rites. The fact that the Septuagint of the Pentateuch (which was the first to be translated by the Greek translators) translates *molekh* as “king” (*archon*) seems also to indicate that at the time of the translation of the Torah, the reading *molekh* instead of *melekh* was as yet unknown.

A new dimension was added to the problem of the name Moloch with the discovery of some Latin dedicatory inscriptions in North Africa. In these inscriptions the term *molchomor* – which has been equated with מלכ אמר in the Punic inscriptions, the meaning of which was also unclear – occurs in the context of a lamb offering. The context has provided a clue to the meaning of both *molchomor* and מלכ אמר. *Molchomor* has been interpreted as *molech immer*, i.e., *molech*, “sacrifice” (see below) and *ommor*, “a lamb.” This interpretation, however, is beset by difficulties. First, it is hard to explain how *immer* (Aram. and Akk. “lamb”) became *ommor*; no less difficult is the interpretation of *molech* as sacrifice. O. Eissfeldt argued (on the basis of Syriac) that *molech* means “vow,” but this can hardly be reconciled with the biblical text. It would be futile to translate *li-znot aḥare ha-molekh* (לִּזְנוֹת אַחֲרֵי הַמֹּלֶךְ) in Leviticus 20:5: “to go astray after the vow.” Besides, it is methodologically unsound to explain a Hebrew word in the Bible on the sole basis of a late Aramaic word. Another expression occurring in the Punic inscriptions מלכאדם, turned out to be even more crucial for the understanding of the Hebrew *molekh*. Here again some scholars understood the term as human sacrifice. However, as in the case of מלכ אמר, no objective evidence has been found for this interpretation of מלכאדם. The most plausible explanation is, as has already been suggested, that the term means “king of humankind,” and is the epithet of the god to whom the inscription is dedicated. The word “king” was indeed a common attribute of the deities in the Phoenician-Punic sphere, e.g., Melkart (“king of

the city,” i.e., Tyre), מלכבעל, etc. El, the head of the Canaanite pantheon, later identified with Kronos, was named Malkandros (Plutarch, *De Iside et Osiride*, 16) which means “king of man” (Greek *aner* [gen. *andros*], “man”), in other words מלכאדם. This is corroborated by evidence from the Assyrian-Aramean sphere where the epithet “King” is applied to the god Adad/Hadad, who is identified with the Canaanite-Phoenician Baal – was also called “King,” cf. מלכבעל – “Baal is king.” The identification of Hadad-Baal with Moloch provides the background to Jeremiah 32:35, which fulminates against the *bamot*-altars of Baal in the valley of Ben-Hinnom where male and female children were burnt to Moloch, i.e., Baal-Hadad. Furthermore, a series of Assyrian-Aramean documents analyzed by K. Deller showed that Adadmilki or Adadšarru (“Adad the king”) was actually the god to whom children, sometimes firstborn, were burned (see below). The Assyrian material sheds new light on 11 Kings 17 where Adadmelech (to be read instead of Adrammelech) is the god to whom the Sepharvites burn/dedicate their children (verse 31). Adadmelech in this verse stands next to Anammelech who has been correctly related by scholars to Anath who bears the title “Queen of Heaven,” the standard term for Ishtar in Akkadian (*šarrat šamê*; cf. Sum. *nin.anna.ak* = Inanna). The pair Adad and Ishtar, or the “king” and the “queen,” are the ones to whom children are dedicated in the Assyrian-Aramean documents quoted above. Adad and Ashtart were actually the dominant gods in Syro-Palestine until the beginning of the common era, as may be deduced from the passage preserved by Philo of Byblos (ascribed to Sanchuniaton): “Ashtart the great and Zeus Demarus who is Hadad, the king of the gods, were enthroned on the earth” (Eusebius, *Praeparatio Evangelica* 1:10, 31; cf. O. Eissfeldt, *Kleine Schriften*, 3 (1966), 335–9). Another instructive example is the second century B.C.E. Greek inscription, found in Acre, that is dedicated to Hadad and Atargatis (= combination of Ishtar and Anath) who listen to prayer (M. Avi-Yonah, in: *IEJ*, 9 (1959), 1–2). As will be shown below, the introduction of the Moloch coincided with the introduction of the worship of the “queen of the heaven,” although the latter persisted after the reform of Josiah whereas the Moloch cult seems to have perished following the reform. The worship of the Moloch along with the worship of the “queen of the heaven” are therefore to be seen against the background of the widespread worship in the Assyro-Aramean culture of Adad/Hadad, the king, and Ishtar Ashtarth/Anath, the queen, that began in the ninth-eighth century B.C.E. This sheds new light on the controversial passage Amos 5:26: “... You carried the canopy [Heb. *sikkut* is a deliberate misvocalization of *sukkat* or *sukkot* to make it resemble שִׁקּוּץ; *shikkuz*, “abhorrence,” cf. LXX and 6QD 14–17] of your king and the *kaiwanu* [changed deliberately into *kiyyun*, as *skikkuz*] of your image[s] the star of your god[s] which you made for yourselves.” The *kamānu/kawānu*, found in Jeremiah 7:18, and 44:19, is a cultic cake in the form of a star which is the image of Ishtar, who is called in Akkadian *kakkab šamê*, “the star of the Heaven.” The image of Ishtar צלמיכם כוכב אלהיכם, is depicted here as having been car-

ried under a canopy in a procession, a procedure attested in the Assyrian documents (cf. L. Waterman, *Royal Correspondence of the Assyrian Empire*, 1 (1930), no. 1212, rev. 1–10 = SAA XIII: 192; for corrected reading see A.L. Oppenheim, in: *BASOR*, 107 (1947), 8, n. 4), but unrecognized until now. “Your king” in this verse is none other than her consort, Adad the king, sometimes identical with the sun-god Shamash.

The Nature of the Worship

As already indicated above, the legal and historical sources speak about passing children to Moloch in fire. According to the rabbinic interpretation, this prohibition is against passing children through fire and then delivering them to the pagan priests. In other words, according to this interpretation, this refers to an initiation rite. This kind of initiation or consecration is actually attested to in various cultures (see T.H. Gaster, in *bibl.*) and the Septuagint interprets Deuteronomy 18:10 in a similar manner. This is a Midrash of the rabbis likewise attested by the Septuagint. A similar non-sacrificial tradition, perhaps more ancient, is found in the Book of Jubilees. The Book of Jubilees 30:7ff. connects intermarriage or rather the marrying off of one’s children to pagans with the sin of Moloch. This tradition seems to be echoed in the dissenting opinion of R. Ishmael (cf. *Meg.* 4:9) in *Sifrei Deuteronomy* 18, who explains the prohibition of Moloch as the impregnation of a pagan woman, an interpretation lying behind the Syriac translation in Leviticus 18 and 20. The common denominator of all these traditions is the understanding of Moloch worship as the transfer of Jewish children to paganism either by delivering them directly to pagan priests or by procreation through intercourse with a pagan woman. This tradition is in keeping with the general rabbinic tendency to make biblical texts relevant to their audiences, who were more likely to be attracted to Greco-Roman cults and to intercourse with pagan women than to the sacrifice of humans to a long-forgotten god.

In the framework of the penalty clauses of some neo-Assyrian contracts, there is the threat that if one of the parties violates the contract, he will burn his son to Adad the king and give his daughter to Ishtar, or Belet-šēri. Some of these documents showed that Adadmilki or Adadšarru (“Adad the king”) was actually the god to whom children, sometimes firstborn, were burned. Ch.W. Johns, who first published these documents, contended that burning is used here in the figurative sense, meaning dedication (*Assyrian Deeds and Documents*, 3 (1923), 345–6). This figurative interpretation was accepted by Deller and Weinfeld, but context indicates that they are to be taken literally (see *CAD* š/II, 53; *SAA* VI: 102). From the fact that Ahaz, who opened the door to Assyria and Assyrian culture and religion (see e.g., *II Kings* 16:6ff.), was the first king to indulge in the worship of Moloch, it may be deduced that this was introduced through Assyrian influence, along with other practices such as the burning of incense on the roofs (*II Kings* 23:12), the sun chariots (23:11), and the tents for the Asherah (23:7). There is no reason to suppose that the Moloch

was introduced as a result of Phoenician influence, as is commonly supposed. Were this true, one would expect to find the Moloch worship in Northern Israel, which was overwhelmed by Phoenician influence, especially at the period of the Omri dynasty. No allusion, however, to this practice in the Northern Kingdom has been found. The worship of Moloch, which was practiced at a special site (outside the walls of Jerusalem in the valley of Ben-Hinnom) called Topheth, became firmly established in the time of King Manasseh, his son Amon, and at the beginning of Josiah’s reign. If it was completely eradicated by Josiah within the framework of his reform activities (*II Kings* 23:10), then Jeremiah’s references to this worship (7:31, 19:1ff., 32:35) might apply to the days of Manasseh and also to the time of Josiah before the reform (see Y. Kaufmann, *Toledot*, 3 (1960), 382–90).

[Moshe Weinfeld / S. David Sperling (2nd ed.)]

MOLODECHNO, town in Molodechno district, W. Belarus; during the interwar period it was within Poland. The Jewish community in Molodechno started in the early 18th century and numbered 251 in 1847, increasing to 1,105 (46 percent of the total population) in 1897. After improvement in the economic situation resulting from the construction of a railroad in 1905, the Great Synagogue was erected in 1906. Later a prayer house was built by the Ḥasidim. A government school for Jewish boys, with a special vocational department and boarding facilities, was erected but was destroyed at the time of the Polish annexation. In 1925 the Jews numbered 950. Under Polish rule Jewish children received their education in the Hebrew *Tarbut elementary school. The Jews were mainly engaged in trade and crafts. During World War II Molodechno was annexed from September 1939 to July 1941, liquidating Jewish economy and public life. The Germans entered Molodechno in July and immediately killed 50 Jews. In October they murdered another 400 to 800, and the remaining 350–600 were herded in a barn and burned alive in December 1941.

[Zeev Elyashiv / Shmuel Spector (2nd ed.)]

MOLODOWSKY, KADIA (1894–1975). Yiddish poet and novelist. Born in Bereze (Bereza Kartuska) in Belorussia, Molodowsky was educated by her father, grandmother, and tutors. After passing the gymnasium exams, she departed for

Warsaw and Odessa to prepare for a teaching career. Following the 1917 Revolution, she participated in the publications of the Kiev Yiddish Group before returning to Warsaw to teach in the *CYSHO* Yiddish secular schools; she also taught Hebrew to workers in a Jewish community night school. For her pupils she wrote playful verses, ballads, and poetic tales, some of which were set to music and sung in Yiddish schools throughout the world. In 1935 she settled in New York and founded and edited the journal, *Svive* (1943–4 and 1960–74). Her many volumes of poetry reflect her experiences in Europe, the U.S., and Israel, displaying her concerns for women, the oppressed poor, the tragedy of war, and the Holocaust. After the establishment of the State of Israel in 1948, a new joyous tone appeared in her lyrics, many of which were publicly sung and broadcast in Israel. A book of her children's poems translated into Hebrew, *Pithu et ha-Sha'ar* ("Open the Gate," 1945), was taught in Israeli schools. Her drama *Nokhn Got fun Midber* ("Toward the God of the Desert," 1949) was staged by Israel's Ohel Theater in 1956, and her novel *Baym Toyer* ("At the Gate," 1967) described the fate of new immigrants, life in the kibbutz, and the forging of a nation. Other works of fiction include a novel, *Fun Lublin biz Nyu York* ("From Lublin to New York," 1942), and a short story collection, *A Shtub mit Zibn Fenster* ("A House with Seven Windows," 1957). Among her volumes of poetry are *Kheshvendike Nekht* ("Nights of Khashvan," 1927); *Dzshike Gas* ("Dzshike Street," 1933), *Freydke* (1935), *In Land fun Mayn Gebeyn* ("In the Country of My Bones," 1937), *Der Melekh Dovid Aleyh iz Geblibn* ("Only King David Remained," 1946) and *Likht fun Dornboym* ("Light of the Thorn Bush," 1965).

[Sol Liptzin / Kathryn Hellerstein (2nd ed.)]

MOMBERT, ALFRED (1872–1942), German poet. Descended from a family of Jewish merchants that had settled in Karlsruhe, Mombert studied law in Heidelberg, where he later went into practice as a lawyer. In 1894, he published his first volume of poetry, *Tag und Nacht*. Despite the clear stylistic influence of naturalist and impressionist poetics, it nonetheless maintained a unique tone. From the start, it is an ostentatious "cosmological" focus that gives Mombert's early poem cycles – *Der Gluehende* (1896), *Die Schoepfung* (1897), *Die Bluete des Chaos*, and *Der Sonne-Geist* (both 1905) – their characteristic setting, necessitating a new language on which Mombert continued to work throughout his career. Only marginally integrated into contemporary artistic and intellectual circles (Martin Buber, Hans Carossa, and Richard Dehmel were his only partners in spiritual exchange), Mombert adopted a 19th-century aesthetic of monism and neo-romanticism. Impressed by the totalizing view of his poetry and its mythic and religious allusions, contemporaries likened Mombert to William Blake; the German poet Richard Dehmel detected in him the

fervor of the ancient Hebrew prophets. Abandoning the practice of law, Mombert turned toward cosmic verse-drama of epic scope. The trilogy *Aeon* (1907–11) established an imagery and dramatic figures to which Mombert would cling in all his further works, such as in *Der Held der Erde* (1919) and in *Atair* (1925).

In 1933, Mombert, with other Jewish members, was expelled from the German Academy of Arts. His last publication during his lifetime, *Sfaira der Alte*, was printed – at Buber's insistence – by the Schocken Verlag in 1936. Four years later, Mombert, already seriously ill, was arrested by the Gestapo in Heidelberg and deported to the Gurs concentration camp. With the intercession of non-Jewish friends and admirers (among them Hans Carossa and Mombert's biographer, Richard Benz), he was allowed to leave for Switzerland in 1941, where he died in Winterthur only a few months later.

MOMENT, DER, Yiddish daily newspaper in Poland. The paper was founded in Warsaw in November 1910 by Zevi Hirsch *Prylucki. Working with him were his son, Noah *Prylucki, and Hillel *Zeitlin. *Der Moment* became one of the most influential of the Jewish dailies of Poland, with a circulation of about 30,000, although that figure was far exceeded in times of tension: during the *Beilis blood libel proceedings, 1911–13, it reached a circulation of 150,000, and shortly before World War II it printed 60,000 copies daily.

In 1914 *Der Moment* published its first dispatches from Erez Israel; its contributor was Izhak *Ben-Zvi. The Russians suspended the paper in July 1915, but 18 days later the invading Germans allowed it to continue under censorship. During the Warsaw municipal elections of 1916, the paper backed the *Folkspartei. Prominent among the paper's contributors after the war were Hirsh David *Nomberg, Julius Schwalbe, Ignacy *Schiper, and from 1925 Isaac *Schwarzbart. In 1936 the paper became a cooperative and two years later was taken over by a syndicate which adopted a Revisionist policy. It printed Vladimir Jabotinsky's article "The Eleventh Hour" in 1938 and also his series "*Fun Mayn Tagebukh*." The publication of *Der Moment* was discontinued in September 1939 with the Nazi invasion of Poland.

[Artur Fiszer]

MOMIGLIANO, ARNALDO DANTE (1908–1987), historian of antiquity; born in Caraglio (Cuneo), Italy. After the Italian antisemitic legislation of 1938 he settled in England,

where from 1951 to 1975 he was professor of ancient history at University College, London. Momigliano wrote, in Italian, books on Thucydides, Claudius, Philip of Macedon, as well as works on classical historiography. His best-known English books are *Conflict Between Paganism and Christianity in the Fourth Century* (1963), and *Studies in Historiography* (1966). One of his earlier works, *Prime Linee di Storia della Tradizione Maccabaica* (1930, 3d ed. 1968), was an impressive contribution to Jewish history of the Hellenistic and Roman periods. Also notable were his *Ricerche sull' organizzazione della Giudea sotto il dominio romano* (1934, 1967) and his chapters on the Second Temple period in the *Cambridge Ancient History*. A comprehensive bibliography of Momigliano's works is included in his *Quarto contributo alla storia degli studi classici e del mondo antico* (pp. 669–719). He was renowned for his deep learning and erudition.

[Bernard Semmel]

MOMIGLIANO, ATTILIO (1883–1952), Italian literary critic, and historian. Momigliano was born in Asti to observant Jewish parents; he studied literature at the University of Torino, under the direction of the critic and writer Arturo Graf, and was professor of Italian literature at the universities of Catania, Pisa and Florence. After 1938 he was forced out of academic life by Mussolini's racist legislation and settled in Florence, where he continued to write under the pen name of Giorgio Flores. In 1943–44, during the German occupation of Italy, he took shelter in a hospital in Borgo San Sepolcro, where he was accepted as a patient by a cooperative doctor; he made use of this period to write a commentary to Torquato Tasso's *Gerusalemme Liberata*. He returned to his teaching post, but only as substitute, following the liberation. Momigliano has been called "an attentive and subtle impressionist of criticism." He was remarkably alive to the most delicate vibrations of poetry, reconstructing character motivation and presenting the results of his diligent reading in a calm and lucid prose. He was particularly skillful in bringing out detail in texts ranging from Dante's *Divina Commedia* to Tasso's *Gerusalemme Liberata*. The critic Luigi Russo found in Momigliano's Jewish origin an explanation for his isolation and historical detachment. A prolific writer, Momigliano published short literary essays and textual commentaries in the Italian press, all of unusual interest. His works include: *Impressioni di un lettore contemporaneo* (1925), *Introduzione ai poeti* (1946), *Studi di poesia* (1938; 1948²), and *Elzeviri* (1945). He also wrote valuable monographs such as *L'indole e il riso di L. Pulci* (1907), *Carlo Porta* (1910), and *Dante, Manzoni e Verga* (1944), but his best books were perhaps those based on his knowledge and analysis of Manzoni's works: *L'Innominato* (1913) and *La vita e le opere del Manzoni* (1933³). His *Storia della letteratura italiana* (1932), was reprinted several times after the author's death, and was studied by generations of high-school and university students.

[Louisa Cuomo / Alessandro Guetta (2nd ed.)]

MOMIGLIANO, FELICE (1866–1924), Italian philosopher and historian. Born in the ghetto of the small town of Mondovì, in Piedmont, Italy, Momigliano gave up a possible rabbinical career and embraced instead the life of teacher and journalist. A socialist militant and at the same time an admirer of Mazzini, Momigliano saw himself as the son of both the Italian and the Jewish cultures, which he tried to reconcile: in his thought patriotism, socialism, and prophetic faith were three sides of the same question. Among his works are *G. Mazzini e le idealità moderne* (1895), *Gli Ebrei e la civiltà moderna* (1912), *Il giudaismo di ieri e di domani* (1916), and *Ebraismo e Cristianesimo* (1922).

[Alessandro Guetta (2nd ed.)]

MOMMSEN, THEODOR (1817–1903), German classical scholar and historian; a vigorous opponent of antisemitism. A staunch liberal member of the Prussian and German parliaments and a luminary of Berlin University, Mommsen was active on behalf of Russian Jewry and consistently opposed all antisemitic manifestations, from the appearance of Adolf *Stoecker, the court preacher (1878), to the electoral success of Hermann *Ahlwardt (1902). He was also a prominent member of the *Verein zur Abwehr des Anti-semitismus and signed the public declaration of German notables against antisemitism (1880). Mommsen was the most renowned Christian to attack his colleague, Heinrich *Treitschke, the nationalist historian and antisemite. Paradoxically, a passage in his *History of Rome*, in which he described the Jews as one of the elements leading to the breakdown of the Roman state and the growth of cosmopolitanism, was repeatedly utilized by antisemites. Whereas Mommsen took a positive attitude to the Jewish role in furthering universalism, antisemites viewed the passage in a contemporary, ultra-nationalist setting. Despite his liberalism, Mommsen had no sympathy with the Jews' wish to preserve their cultural inheritance and religious independence. He called upon them to abandon their separateness and assimilate in a more thorough fashion; thus he shared the theoretical assumptions and principles of some conservative German leaders.

[Michael J. Graetz]

MONASH, SIR JOHN (1865–1931), Australian engineer and soldier who commanded the Australian forces in the Allied armies during World War I. Monash was born in Melbourne into an immigrant family who had been printers of Hebrew books in Krotoszyn. He was related to Heinrich *Graetz. At the university, he displayed exceptional versatility. Besides a doctorate in engineering, he graduated in arts and law, and also studied medicine. After 1900 he specialized in reinforced concrete construction, introducing this engineering technique into Victoria, Tasmania, and South Australia. Between 1913 and 1915 he was president of the Victorian Institute of Engineers. Perhaps uniquely for a senior commander in World War I, Monash was never a professional soldier; his background in civil engineering might well have assisted him in avoiding much of the pointless slaughter, the result of poorly conceived attacks, notorious among the British and French armies in the 1914–18 War. He volunteered for the Victoria militia in 1884 and was commissioned three years later. In 1900 he won a gold medal for military articles in the *Commonwealth Journal*, and on the outbreak of World War I, he had already risen to the rank of colonel in the militia. In April 1915 Monash commanded the Fourth Infantry Brigade at Gallipoli. Although the campaign was unsuccessful, the Australian and New Zealand troops under his command distinguished themselves, and “Monash Valley” there was so named in commemoration of his service. He was sent to France in the following year and in April 1917 participated with the Canadian forces in the capture of Vimy Ridge. In May 1918, as lieutenant general, he was appointed to lead the entire Australian and New Zealand Army Corps (ANZACS) on the western front, and his troops played a decisive part in breaking the German lines on the Amiens front in the summer of 1918. The Allied offensive brought about the end of World War I and gained Monash a reputation as the most resourceful leader in the British army. The British prime minister, Lloyd George, described him as the only soldier of World War I with the necessary qualities of leadership. Besides numerous military decorations, he received honorary degrees from the universities of Oxford, Cambridge, and London. After the Armistice, he led his ANZACS through the streets of London and received a tumultuous welcome. He returned to Australia and resumed his engineering practice. He replanned the electricity supply in Victoria, basing it on the exploitation of huge brown coal deposits at the open cast mine fields of Yallourn, in Victoria. He was made vice chancellor of Melbourne University. In 1930, shortly before his death, he was made a full general, the first Jew to attain that rank in any army. He wrote of his campaigns in *Australian Victories in France in 1918* (1920). Monash remained a practicing Jew all his life. He took an active part in Jewish affairs in Australia and was president of the Zionist Federation in 1928. A village in Israel, Kefar Monash, bears his name. In the 1950s the second university established in the State of Victoria was named Monash University in his honor.

Sir John Monash held an arguably unique position among Diaspora Jews of his time, being regarded as an au-

thentic and universally popular national hero. When he died, one-third of Melbourne’s population lined the route of the funeral procession, the sense of loss being, as one observer put it, “as if the king had died.” *John Monash: A Biography* by Geoffrey Serle (1982) is the authoritative account of his life.

MONASTIR (Serbo-Croat, **Bitolj**; Macedonian, **Bitola**), town in Yugoslav Macedonia 1918–1992, now in the F.Y.R. of Macedonia, near the Greek border. Monastir was situated on one of the ancient and main trade routes of the Balkans (the Roman “Via Egnatia”) which went from the Albanian port of Durazzo to Salonika and Constantinople. It is therefore not surprising that Jews lived there already in Roman times. Direct evidence of Jewish settlement in this region was discovered in 1930 by a Yugoslav archeologist, Joso Petrović, who found at nearby Stobi a column from a third-century C.E. synagogue donated by one Claudius Tiberius Polycharmos, *pater synagogae* (“father of the Synagogue”) – the chief *parnas* Marmorstein presumes that the ancestors of Polycharmos were freemen of the Emperor Claudius who had left Rome for Macedonia around the middle of the first century.

Nothing is known about Jewish settlement in Monastir in the Byzantine period. In the 12th century there were Greek-speaking (*Romaniote) Jewish artisans and traders in the town. More Jews arrived after the expulsion from Hungary in the 14th century. At the end of the 15th century refugees from Asia Minor, and during the first half of the 16th century many Spanish exiles who came by the sea or through Salonika, settled in Monastir. Throughout the Ottoman period (1382–1913) Monastir was a lively commercial center. Trade was mainly in Jewish hands (export of liquor, olive oil, salt and salted fish, and import of wool, silk and woven cloth, copper, etc.); many Jews were tanners, silversmiths, cheesemakers, etc. In the 16th century R. Joseph b. Lev was head of the yeshiva. In the 18th century Abraham b. Judah di Buton was a rabbi of Monastir. A fire which swept through the town in 1863 destroyed over 1,000 Jewish homes and shops. A blood libel accusation was leveled against the Jews in 1900.

In 1884 there were 4,000 Jews in Monastir and in 1910, 7,000. After World War I the economic situation deteriorated considerably and many Jews left the town, mainly for the United States and Chile, while others settled in Jerusalem. The remaining Jews were impoverished, and there were many unemployed and poor people who were workers, porters, and peddlers. Between the two world wars community activity was varied and intense, with growing Zionist consciousness

and endeavor; the leader was Leon Kamhi. In the 1930s, the central Jewish bodies became aware of the acute social problems in this community and introduced vocational training courses, encouraged *halutz* youth movements and other activities, but the time was too short. This old community with its several synagogues, diverse social and cultural institutions, as well as a rich and original Judeo-Spanish folklore with some Turkish admixtures, was wiped out during the Holocaust. The approximately 3,500 Jews were deported by the Bulgarian occupation authorities, for the most part to Treblinka on April 5, 1943. In 1952 there were only one or two Jews in the town, and none at the outset of the 21st century. The Jewish cemetery was renovated by volunteers from Israel.

[Zvi Loker]

MONASTYRISKA (Pol. **Monasterzyska**), city in Tarnopol district, Ukraine. Until 1772 the city was part of the Red Russia province in the kingdom of Poland, and from 1772 until 1918 in eastern Galicia under Austrian rule. First Jews are recorded in 1625. The Jewish community numbered 2,450 (56 percent of the total population) in 1890 and 2,041 (49 percent) in 1910. They comprised the majority of artisans, and some of them worked in a home-based toy industry organized by relief organizations from Vienna in 1902. Until World War I the community had four synagogues and an elementary school administered by the *Baron de Hirsch Fund. Owing to pogroms by Russian soldiers, Ukrainians, and Petlyura gangs during WWI, the number of Jews decreased to 1,168 (39 percent of the total) in 1921, and 1,488 in 1931). A Jew served as town mayor.

Holocaust Period

By 1939 the number of Jews had grown again and was close to 3,000. During the period of Soviet rule (1939–41), the activities of the Jewish community were stopped. The Jewish social services were also liquidated. The Jews tried to adjust to the new conditions and some of the youth moved to the large cities. With the outbreak of war between Germany and the U.S.S.R. (June 22, 1941), the Ukrainian nationalists began to attack the Jews. These attacks intensified after the Soviets withdrew from the city on July 4. On July 13 hundreds of Jews deported from Hungary were brought to the city. In March 1942 the Jews of Kopycynce and Koropiec were brought to the city. At the beginning of October 1942 an *Aktion* was carried out and 800 were sent to the *Belzec death camp. At the end of October, the Jews of Monastyriska were transported to Buczacz, where they perished together with the Jews of this city. Jewish life in the town was not revived after the war.

[Aharon Weiss]

MONATSSCHRIFT FUER GESCHICHTE UND WISSENSCHAFT DES JUDENTUMS, learned monthly publication which appeared in Germany for 83 years between 1851 and 1939. The *Monatsschrift* was founded by Z. *Frankel, while he was still rabbi at Dresden, to serve as the organ of what was called the “positive-historical school” in Jewish life and scholarship, which took up a middle position between Reform and Orthodoxy as interpreted by A. *Geiger, and Orthodoxy as interpreted by S.R. *Hirsch and A. *Hildesheimer. This type of Judaism, conservative in its approach to Jewish observance and ritual but undogmatic in matters of scholarship and research, was taught at the Jewish Theological Seminary at Breslau, founded in 1854 with Frankel as head; the *Monatsschrift* was intimately though not formally connected with this Seminary and drew its editors and contributors mainly from the ranks of its lecturers and alumni. Frankel remained the editor of the *Monatsschrift* until 1868. In the post-revolutionary years after 1848, Frankel had hoped to stem the growing indifference of the younger generation to Jewish values by spreading the scientific knowledge of the Jewish past, thus reviving Jewish consciousness and self-respect. Frankel hoped, in particular, to influence the younger generation of rabbis who had turned their back on traditional learning. In time, the *Monatsschrift* became the Jewish world’s leading journal. Frankel himself wrote about a quarter of the material published under his editorship, dealing with such subjects as the Septuagint, Jewish Hellenism, history of *halakhah*, and religious disputations in antiquity; he also wrote many painstaking book reviews. In 1869 H. *Graetz took over the editorship, assisted from 1882 to 1886 by P.F. Frankl of the Berlin *Hochschule. Graetz himself wrote mainly on Jewish history, Bible, and the language of the Mishnah. In 1887, when Graetz was 70, publication ceased for five years until M. *Brann revived it in 1892, sharing the editorship with D. *Kaufmann until his death in 1899, upon which Brann continued as sole editor. In 1903 the *Monatsschrift* found a new financial backer in the *Gesellschaft zur Foerderung der Wissenschaft des Judentums. At Brann’s death in 1920, I. *Heinemann took over until his immigration to Palestine in 1938. The last volume was prepared by L. *Baeck. From Frankel to the last, the *Monatsschrift* steered, more or less, an even course. Articles ranged over the entire gamut of Jewish scholarship. The editors generally tended to avoid systematic theology and purely religious problems. Most of the nearly 500 contributors were rabbis and seminary or university lecturers from Germany, Austria, and Hungary; but there were some from other European countries, the U.S., and Erez Israel. The last volume (83, 1939) of the *Monatsschrift*, a tragic and heroic monument to German-Jewish scholarship in its death throes, was confiscated and destroyed by the Nazis and only a few copies were saved; it was reprinted in 1963. Previously A. Posner had published a general index for volumes 1–75 (1938, repr. 1966, including an update of the last 8 volumes).

[Nahum N. Glatzer]

MONCALVO, small town in Piedmont, northern Italy. The first Jewish settlers in Moncalvo arrived presumably after the expulsions from France, as it was one of the only three communities following the *Apam (= Asti, *Fossano, Moncalvo) liturgy, which was of French origin (see *Liturgy). The first documents attesting to the presence of Jews in Moncalvo date only from the 1570s. When Moncalvo passed to the dukes of Savoy, the situation of the Jews deteriorated. They were confined to a ghetto in 1723 and forbidden to own real estate. At that time 176 Jews lived in Moncalvo. By 1836 there were 233 and in 1860 a new synagogue was dedicated, but toward the end of the 19th century the community declined. On the eve of World War II the community ceased to exist.

[Daniel Carpi]

MONCORVO (Torre de Moncorvo), town in N. Portugal, district of Bragança. Early a center of Jewish life, Moncorvo was one of the seven provincial centers with an official rabbinical seat. Its rabbi was authorized by the crown to adjudicate all civil, criminal, and religious questions concerning the Jews of the Bragança district. Once a year the *arraby moor (“chief rabbi”) visited Moncorvo to hear appeals. During the Peninsular War of 1803–13, a large number of Conversos – who were referred to simply as Jews by the Old Christians – entered Moncorvo as refugees from the neighboring town of Vila Nova de Fozcoa, where they were persecuted for alleged sympathy with the French. Mutual recriminations between the two towns eventually developed into armed battles. The descendants of these *New Christians were still in Moncorvo in 1917, when the Polish engineer Samuel *Schwarz made contact with the remnants of Portuguese Jewry. In 1927, when A.C. de *Barros Basto proselytized among the Conversos of the Bragança district, a special community was established in Moncorvo.

MOND (Melchett), British family of chemists and industrialists, of German origin. Ludwig Mond (1839–1909) was born in Cassel, Germany. In 1859, while working at a small soda works,

he patented a method for the recovery of the sulfur otherwise wasted in the process. Mond went to England where he tried to sell his patent. His process was not economical under British conditions, however, and he left for Holland. In 1867 Mond returned to England where he met Ernest Solvay (1838–1922), a Belgian chemist who had devised a process for making soda based on the use of ammonia. Mond put this process into operation when he joined Sir John Brunner (1842–1919) in founding the firm of Brunner, Mond and Company in 1873. In 1884 he developed a new process for the recovery of nickel and formed the Mond Nickel Company, which is still in operation. He was a noted art collector and most of his paintings were donated to the National Gallery in London. Of his two sons, the elder, Sir Robert Ludwig Mond (1867–1938), a scientist in his own right, was also a notable archaeologist, associated with the discovery of the *Elephantine papyri, and treasurer of the Palestine Exploration Fund. He was vice president of the Friends of the *Hebrew University and leader of the British Empire's anti-Nazi boycott.

The younger son, Alfred Moritz Mond (1868–1930), later the first Baron Melchett, entered his father's firm. During his lifetime Brunner, Mond and Co. greatly expanded and, after merging with other companies, became Imperial Chemical Industries (ICI) in 1926. Mond entered Parliament as a Liberal in 1906. He was made commissioner of works in the cabinet of Lloyd George (1916–21) and later became minister of health (1921–22). In 1924 Mond opened a debate in Parliament on the respective merits of the capitalist system and socialism, and his address was considered an outstanding defense of private enterprise. In 1926, in disagreement over land policy, he transferred his allegiance to the Conservative Party. He initiated a conference between leaders of commerce and industry on the one hand, and the workers organized in the Trades Union Congress headed by Sir Ben Turner on the other (1928). Out of this conference emerged the Mond-Turner agreement for industrial relations. In the same year he was raised to the peerage, as Baron Melchett.

Alfred Mond was not brought up as a Jew. His sole connection with Judaism in the earlier stage of his public life was that he helped to support the synagogue of Swansea, his parliamentary constituency, in order to present a more favorable picture there of the Jews and Judaism. Nevertheless, he was the butt of antisemitic attacks, and in consequence was won over to Zionism after the Balfour Declaration. He then became a dedicated Zionist and contributor to Zionist causes. Mond was one of the founders of the enlarged Jewish *Agency in 1929 and the chairman of its council. He acquired an estate in Erez Israel in Migdal overlooking the Sea of Galilee, and a township in central Israel, Tel Mond, bears his name. Alfred Mond was married to a non-Jew and his two children, Eva Violet (1895–1973), who married the second Marquis of *Reading, and Henry (1898–1949), second Baron Melchett, were brought up in the Christian faith but converted to Judaism after the rise of Hitler. Lady Reading was an active Zionist and president of the British section of the *World Jewish Con-

gress. Henry, also an ardent Zionist, succeeded his father as chairman of the council of the Jewish Agency and was president of the *World Union of Maccabi. Henry's son, Julian Edward Alfred (1925–1973), third Baron Melchett, was appointed chairman of the nationalized steel industry in 1967.

[Moshe Rosetti]

MOND, BERNHARD STANISLAW (1887–1944), Polish general. Born in Stanislav, Galicia, he fought in the Austro-Hungarian army during World War I. In 1916 he was taken prisoner by the Russians and released in February 1918 following the peace of Brest-Litovsk. At the end of World War I Mond joined the army of newly independent Poland and fought in the defense of Lvov against the invading Ukrainian forces. In 1920 he commanded an infantry regiment against the Bolsheviks in Russia. Subsequently, Mond became commander of Vilna. At the outbreak of World War II, he commanded an army corps with the rank of major-general. After the fall of Poland Mond was taken prisoner by the Germans and died in a prisoner-of-war camp.

MONDA (Moscovici), **VIRGILIU** (1898–1991), Romanian novelist. Beginning as a poet in 1923, Monda soon changed to prose and published novels reflecting his interests as a practicing physician. In his works he displayed great ingenuity and a sense of atmosphere. Monda's novels include *Urechea lui Dionys* ("The Ear of Dionysius," 1934), *Hora paiatelor* ("Dance of the Clowns," 1935), *Trubendal* (1946), and *Statuia* ("The Statue," 1969).

MONDAY AND THURSDAY (in Heb. *Sheni va-Ḥamishi*, "the second and fifth [day of the week]"), those days on which the liturgy of the morning service includes additional penitential and supplicatory prayers (among them the long *Taḥanun). On these days, in ancient times, villagers came to town for marketing and attending law courts. Pious Jews also fast on Monday, Thursday, and again on the Monday following the first Sabbath of the new month after *Passover and *Sukkot. These three days are known as "*Behab*" (see *Fast Days, and *Shovavim Tat). Some ultra-pietists make voluntary fasts every week on these days. The morning service on Mondays and Thursdays also includes a reading from the Pentateuch. Three persons are called up to the reading, but only the first part of the weekly portion of the following Sabbath is covered in the reading (see *Torah, Reading of).

MONDOLFO, RODOLFO (1877–1976), Italian historian of philosophy. Born in Senigalia, Mondolfo began teaching at

Padua (1904). He was appointed professor at Turin in 1910, and at Bologna in 1913. Because of the racial laws he lost his post in 1938 (reinstated 1944), and moved to Argentina where he was professor at Córdoba (1940) and Tucumán (1948). Mondolfo's first studies were on psychology in the 17th and 18th centuries. Next he turned to studies of Hobbes, Helvétius, and Rousseau. After his work on Lassalle (*La filosofia della storia di Ferdinand Lassalle*, 1909), Engels (*Il materialismo storico di Federico Engels*, 1912), Feuerbach and Marx (*Feuerbach e Marx*, 1919), he devoted himself to the study of Marxism, emphasizing the activist, humanistic side as opposed to the materialistic one, as in *Sulle orme di Marx* (1919, 1948⁴) and *Intorno a Gramsci e alla filosofia della prassi* (1955). After the rise of Mussolini and the suppression of his *Biblioteca di studi sociali* in 1925, he turned to Greek philosophy and made many original contributions, especially in *L'Infinito nel pensiero dei Greci* (1934), his edition of Zeller (*La filosofia dei Greci*, 2 vols, 1932–38), and *Problemi del pensiero antico* (1936, 1961³). In Argentina he wrote other works on Greek thought, one on Bruno, Galileo, and Campanella, and *Problemas y métodos de la investigación en historia de la filosofía* (1949).

[Richard H. Popkin]

MONDZAIN, SIMON (1890–1979), French painter. Born in Lublin, Poland, Mondzain came to Paris in 1909. He painted figures of men and women with musical instruments, as well as portraits, interiors and still lifes, but became known largely through his sensitive studies of villages in France, Algiers, and Morocco. His style was post-impressionist, with elements of expressionism.

MONEY CHANGERS. Money changing was very common in the Roman Near East, where there was a proliferation of currency systems and standards. In Palestine, as in Egypt, each district had its *basilikai trapezai* ("royal bank") retained from Hellenistic times (Jos., *Life* 38), and probably each village had its own money changer (cf. *Sif. Deut.*, 306).

In the period of the Second Temple vast numbers of Jews streamed to Palestine and Jerusalem "out of every nation under heaven" (Acts 2:5), taking with them considerable sums of money in foreign currencies. This is referred to in the famous instance of Jesus' driving the money changers out of the Temple (Matt. 21:12). Not only did these foreign coins have to be changed but also ordinary deposits were often handed over to the Temple authorities for safe deposit in the Temple treasury (Jos., *Wars* 6:281–2). Thus Jerusalem became a sort of central bourse and exchange mart, and the Temple vaults served as "safe deposits" in which every type of coin was represented (TJ, *Ma'as. Sh.* 1:2, 52d, and parallels). The business of money exchange was carried out by the *shulḥani* ("exchange banker"), who would change foreign coins into local currency and vice versa (Tosef., *Shek.* 2:13; Matt. 21:12). People coming

from distant countries would bring their money in large denominations rather than in cumbersome small coins. The provision of small change was a further function of the *shulḥani* (cf. Sif. Deut., 306; Māas Sh., 2:9). For both of these kinds of transactions the *shulḥani* charged a small fee (agio), called in rabbinic literature a *kolbon* (a word of doubtful etymology but perhaps from the Greek κόλλυβος “small coin”; TJ, Shek. 1:6, 46b). This premium seems to have varied from 4 percent to 8 percent (Shek. 1:6, et al.). The *shulḥani* served also as a banker, and would receive money on deposit for investment and pay out an interest at a fixed rate (Matt. 25:27), although this was contrary to Jewish law (see below; *Moneylending).

Thus the *shulḥani* fulfilled three major functions: (a) foreign exchange, (b) the changing of large denominations into small ones, and vice versa, and (c) banking. Three terms for “money-changer” are found in the New Testament: (a) *kermatistēs* (John 2:14), (b) *kollybistēs* (Matt. 21:12), and (c) *trapezitēs* (literally, *shulḥani*; Matt. 25:27, et al.) It seems probable that these three terms correspond to the three functions of the *shulḥani* outlined above. Thus *kermatistēs*, from *kermatizō*. “to cut small,” is one who gives small change; *kollybistēs*, from *kollybos*, changed foreign currency; while the *trapezitēs* was a banker (from *trapeza*, “table”).

The *shulḥanim* in Jerusalem used to set up their “tables” in the outer court of the Temple for the convenience of the numerous worshipers, especially those from foreign countries (Matt. 21:12–13). Excavations around the Temple walls have uncovered stores or kiosks, some of which, it has been surmised, were occupied by money changers. The Mishnah states that on the 15th of Adar, every year, “tables” were set up in the provinces (or in Jerusalem) for the collection of the statutory annual half-shekel, and on the 25th of Adar they were set up in the Temple itself (Shek. 1:3). The activity of the Jewish banker, *shulḥani*, was of a closely defined nature, as his transactions had to be in accordance with the biblical prohibition against taking interest (*ribbit*). The Talmud records much information relating to his activities. An additional and interesting feature of his business was the payment on request of sums deposited with him for that purpose (BM 9:12).

MONEYLENDING.

The Religious Context

BIBLICAL PERIOD. Deuteronomy 23:20–21 states: “You shall not lend on interest to your brother, interest of food or money or anything on which interest can be charged. You may charge interest to a foreigner, but not to your brother that the Lord, your God, may bless you in all you put your hand to in the land into which you are going, to possess it.” This text has

become the subject of much discussion and controversy for nearly two millennia. Within the framework of the so-called Book of the Covenant, another law on moneylending is to be found, in Exodus 23:24: “If you lend money to my people, to the poor with you, you shall not act toward him like a creditor. You must not lay interest [*neshekh*] upon him.” In this verse, *nosheh* (“creditor”) is philologically and semantically equivalent to the Assyrian *rašu* (“creditor”), the professional moneylender. A third pentateuchal law on interest-bearing loans occurs in Leviticus 25:35–38, in a context usually referred to as the Holiness Code: “If your brother has become poor and cannot support himself with you, you shall assist him [as] a resident alien [*ger ve-toshav*], and he shall live with you. You shall not give him your money on interest [*be-neshekh*], nor give him your food for increase [*be-marbit*]. I am the Lord, your God, who brought you forth out of the land of Egypt, to give you the land of Canaan, to be your God.” Usually the difference between *neshekh* and *tarbit* or *marbit* is explained as a difference between interest on capital and interest on food. The passage in Deuteronomy, however, also refers to interest on food (*neshekh okhel*) and it is possible that the two codes employ a slightly different terminology.

Many attempts have been made to answer questions on the literary form and the dates of these pentateuchal laws, but during the last decades detailed study of the various Ancient Near Eastern codes from the 19th to the 12th centuries B.C.E. has enabled scholars to substantiate their opinions on the *Sitz im Leben* of the Hebrew law collections more accurately than hitherto possible. The Book of the Covenant is generally considered the oldest of the pentateuchal codes, because of the social and economic structure it presupposes. No urban life or king is referred to, and there is no organized state or priesthood. There is, moreover, ethnological evidence of many similarly primitive units, among whom all loans of money and food were given free of interest, usually up to the time of the next harvest when they could be paid back by the debtor. Such legislation could not, of course, apply to the alien (*nokhri*), who was not a permanent resident.

In comparison, there are some similarities but also major differences between the pentateuchal law codes and their Ancient Near Eastern antecedents. The latter mirror a society much more fully developed than that of the still half-sedentary Hebrews. Thus, the *tamkarum* appears as a professional moneylender in various sections of the Code of Hammurapi, where rates of interest are specified for food as well as for money loans. Even in relatively late strata of the Bible, it is the Canaanite rather than the Israelite or the Hebrew, who is represented as the merchant or the trader. Had the nucleus of the Hebrew Codes been compiled at the time of the monarchy, they would have reflected quite different socio-economic conditions. Their literary form is of equal importance. In his *Urspruenge des israelitischen Rechts* (1934), 69 ff., A. Alt distinguishes between casuistic law, characteristic of the Ancient Near Eastern codes, and apodictic law, more frequently, although by no means exclusively, found in comparable Isra-

elitic source material. Exodus 22:24 is a mixture of both. The casuistic beginning, “If you lend money to my people...,” which would logically be followed by a reference to the rate of interest or to the punishment to be meted out to a defaulting debtor, concludes apodictically with: “You shall not act as a creditor.”

The Holiness and the Deuteronomic Codes are normally assigned to a much later date than that of the Book of the Covenant. The problem of their editing and ultimate incorporation into the Pentateuch is a difficult one, but as far as the laws on interest are concerned, all of them have elements in common, which stress, directly or indirectly, a special covenant between God and Israel and the consequent obligations of brotherhood between the members of the community. Just as biblical history with its predominantly theological tendencies has been described as *Heilsgeschichte*, much of biblical law may be classified as *Heilsgesetz*, addressing itself to the pre-state sacred institution of the 12 tribes. Moreover, Ancient Near Eastern codes do not claim divine inspiration, while all Hebrew laws are presented as having been revealed by God to Moses, even if, as in the case of the prohibitions against taking interest from a brother, no guidance is given as to judicial procedures against ruthless exploitation of the poor. The few other passages in the Bible which refer to money-lending confirm the impression that the relevant pentateuchal ordinances were interpreted by the prophets, psalmists, wisdom-writers, and chroniclers more as moral exhortations than as laws (cf. Hab. 2:6; Ezek. 18; Ps. 15:5; Prov. 28:8; II Kings 4:1–2; and Neh. 5:1–11; for apocryphal and pseudepigraphical literature, see Ecclus. 20:15;29 and IV Macc. 2:8). Neither indignation nor pious hopes could replace the jurisdiction of established courts.

Documentary evidence of the nonobservance of these pentateuchal admonitions comes only from the Diaspora, but affords an even clearer picture of prevailing conditions. Thus, the Aramaic Papyri show that the Jews of the military colony in Elephantine lent each other money on interest at the rate of 60 percent per annum in the fifth century (cf. Cowley, Aramaic nos. 10 and 11). In the Tebtunis Papyri, numbers 815, 817, and 818, loans at interest between Jews are also referred to. These documents belong to the third and second centuries respectively, and reflect typical Hellenistic usage in their formulation (cf. Tcherikover, *Corpus*, 1 (1957)). In the talmudic period such documents would be invalid. Aristotle had expressed contempt for the taking of interest in a well-known utterance in his *Ethics* (4:3), basing his opinion on the nature of money which is in itself not subject to physical growth. In addition, on several occasions during the last few pre-Christian centuries, popular resentment against impoverishment through usury forced Greek and Roman legislators to forbid the taking of interest altogether, although enactments of this sort did not remain in force for long. Among Jewish Hellenistic writers, Philo appears to have been the first to add his own comment to Deuteronomy 23:20, by extending the prohibition about taking interest from the brother to anyone of the same citizenship (*astos*), or nation (*homofulos*) in *De Vir-*

tutibus, 82. He is, however, not quite consistent and keeps himself closer to the biblical text in *De Specialibus Legibus* (II, 73 ff. and 122).

THE TALMUDIC PERIOD. After the destruction of the Temple, halakhists and aggadists determined the development of Jewish religious law proper, at least until the 17th century. The tannaitic Midrash *Sifrei Deuteronomy* 23:20 f. understands *la-nokhri tashikh* as a positive commandment; i.e., you shall lend at interest to a foreigner. Although this is possible on philological grounds, heavy oppression under Roman rule in the first part of the second century may have led to such an interpretation, particularly since R. Akiva was closely connected with the revolt of Bar Kokhba and with the editing of the *Sifrei*. The contemporary *Mekhilta of R. Ishmael* offers a different explanation on the related passage in Exodus 22:24. Interest-free money should be lent to Jews and gentiles alike, although a Jew should be given preference. In addition, one commentator states that it is only toward the poor that one should not act as a professional moneylender, but one may do so toward the rich. From the third century onward, the prohibition against taking interest had been accepted as applicable to every Jew, rich or poor. The *Mekhilta* on Exodus 22:24, ends with a homiletic statement by R. Meir: “He who lends on interest... has no share in Him who decreed against taking interest.” Similar denunciations occur frequently in halakhic and aggadic Midrashim, in Mishnah, Tosefta, *baraita*, and the Babylonian and Jerusalem Talmuds. Transgressors against the ever growing injunctions are called robbers and murderers. They are likened to those who rear pigs, described as denying the fundamental tenets of the Jewish faith and declared to be unfit as witnesses. The frequency of such utterances implies the frequency of the offenses. It is to be stressed, however, against apologetic tendencies that still prevail in the relevant literature, that views of this kind refer to inter-Jewish transactions only, unless the gentile is explicitly included in the prohibition. The expression “even interest from a non-Jew” (*afillu ribbit de-goi*) implies that the difference between them is still clearly felt.

As to inter-Jewish transactions, discussions continue as to whether paid interest, fixed or unfixed, can be taken back for the debtor by the judges. Also proposed are the relinquishment of the principal and the rescinding of written contracts or *shetarot* on which interest was specified. The Mishnah (BM 5:6) says quite plainly that one may lend to and borrow from gentiles at interest. In the course of the debate in the *Gemara* (ad loc.) R. Naḥman transmits Rav Huna’s objection to taking interest from anybody, but it is, apparently again for apologetic reasons, generally overlooked that his view is challenged by Rava on the basis of the Deuteronomic law and the Mishnah which precedes the *Gemara*. R. Ḥiyya replies that money may only be lent on interest to the non-Jew, as far as it is necessary for the sustenance of the Jew (*bi-khedei ḥayyav*). Ravina maintains that the reason for this restriction is based on religious self-protection. The lender should reduce his contact

with the alien to a minimum, lest he learn from the debtor's deeds (*shema yilmad mi-ma'asav*; see also Rashi on Mak. 24a, s.v. *afillu le-akkum*). The Jewish scholar, on the other hand, is allowed to take interest from non-Jews, even where there is no economic necessity, because he would not be influenced by the practices of the latter.

There is one further aspect regarding money-lending at interest in talmudic literature which calls for attention – the regulations against the employment of a non-Jewish intermediary, a device sometimes resorted to in order to make illegal inter-Jewish loan transactions possible. A number of tannaïtic traditions have a bearing on the subject (cf. ב"מ 71bf. and ט"י, ב"מ 10c; Tos., ב"מ 5:15). This convention has a prehistory in Roman law. Livy mentions that at the beginning of the second century B.C.E., Roman creditors had found a device (*fraus*) for collecting interest by transferring the ownership of accounts to citizens of allied states, who thus became the real or fictitious lenders without being subject to internal Roman legislation (ed. by E.T. Sage (1935), 10:18). That such evasive tactics were current among Jews of the talmudic period is evident not only from the various *halakhot*, but also from the following homiletic statement in *Bava Mezia* 61b: "Why did the All-Merciful mention the Exodus from Egypt in connection with the law on interest?... The Holy One, blessed be He, answered: 'I, who distinguished between the firstborn and those who were not firstborn in Egypt, shall in future punish him who hangs his money on a gentile and lends it on interest to a Jew.'"

THE GEONIC PERIOD. This period lasted from about the seventh to the 11th centuries. During that time, the main autonomous center of Jewish life was in Babylonia, although the decisions of the *geonim* were considered binding in the remotest communities of Europe and Africa. The Jews were active as artisans, builders, merchants, and as experts in agriculture and horticulture in many parts of the new Islamic world. Yet the Koran (4:160) is the first source to accuse them of usury. Contemporary halakhic compendia offer little original material on the subject. Only one responsum of the ninth century, by Amram Gaon (*Shaarei Zedek*, 1792, p. 40a), forbids any money-lending on interest, permitting only such as would come about in a credit transaction involving the exchange of money and fruit. He adds that Muslims, too, allow this according to their law. The strong anti-usury legislation of Islam as well as the almost unrestricted professional facilities then open to Jews prompted him to be stricter than the traditional rulings on Jewish-gentile money transactions. In an anonymous responsum of the tenth century, biblical and talmudic ordinances are stressed again, and it is left to the discretion of the pious to refrain from money-lending altogether.

THE EARLY RABBINIC PERIOD. The center of Jewish life shifted toward Europe. The academies of Babylonia were gradually replaced by famous schools in France, Germany, and Spain. Monographs on the various European countries contain detailed accounts of the general and specific in their history. Two factors, however, stand out: growing anti-Jewish

legislation and the development of the feudal system with its demand for a Christian oath on the acquisition of land. As a result, Jews were increasingly cut off from landownership. Yet even in countries like Spain and Italy, where Jewish urbanization took place less rapidly than in England and Germany, the Jews themselves no longer desired close contact with the soil, although they complained more and more about the shrinking opportunities to support themselves. An often quoted responsum by the French 11th-century scholar, Joseph b. Samuel Tov Elem *Bonfils, illustrates the change. Leah, the questioner, expresses dissatisfaction with the fact that taxes for which the community was responsible to the government were evenly distributed among the Jewish owners of fields and among merchants and traders. She is assessed for the ground she holds and for the crops it yields. In addition, the rulers of the land take their share from it. In contrast, money lent on interest is profitable, because the pledge remains in the hand of the creditor, and the principal increases without effort or expense. Joseph Tov Elem agrees with Leah's arguments against those who wish to assess her (cf. Responsa of Meir of Rothenburg, 1895, no. 941). Generally it must be said that early medieval rabbinic legislation cleared the path for a great variety of gentile-Jewish and inter-Jewish money transactions. Especially the authority of Jacob b. Meir Tam, Rashi's grandson, carried great weight with his contemporaries and successors. He summarizes the reasons for a number of his decisions in the following way: "Today people usually lend money on interest to gentiles... because we have to pay taxes to the king and princes and everything serves to sustain ourselves [*kedei hayyenu*]. We live among the nations and it is impossible for us to earn a living unless we deal with them. It is, therefore, no more forbidden to lend at interest because 'one might learn from their deeds' than it is to engage in any other business" (cf., e.g., Tos., ב"מ 70b, 71b and Av. Zar. 2a).

Menahem b. Solomon Meiri, an eminent 13th-century scholar, gives an account of the position in Provence: "In our days nobody cares about refraining from business dealings with and loans to gentiles, even on their festivals – not a *Gaon*, not a rabbi, not a scholar, not a pupil, not a *hasid* ["pious man"], and not one who pretends to be a *hasid*. All these laws refer only to idolators and their images, but all transactions with Christians are perfectly legal." Meiri coined a special phrase for this group: "nations who are restrained by the paths of their religion" (cf. J. Katz, in: *Zion*, 18 (1953), 18ff.). He thus differs implicitly or explicitly, with most of his predecessors, including Maimonides. Only the *Hasidei Ashkenaz*, German-Jewish pietists and some Spanish kabbalists of the beginning of the 13th century, viewed the new development with anxiety and disfavor. According to them, interest should not be charged to gentiles if a living could be made from the fields, although they no longer ventured to state this in terms of a legal prohibition. Contemporary Jewish commentators on the Bible follow the same distinctions as halakhic literature. In addition, they reflect full awareness of Christian polemics against the ever increasing number of Jewish moneylenders.

David *Kimḥi of Narbonne says the following about Psalms 15:5: "...the Hebrew must not overreach or rob the alien or steal from him, but interest which he takes by full agreement [with a non-Jewish lender] is permitted... If the gentile is kind to the Jew, the Jew must certainly be kind and good to him..." He adds explicitly that his views should serve as an answer to those Christians who maintain that David did not distinguish between the Israelite and the gentile.

Meir b. Simeon's only partly edited manuscript (Parma 2749) *Milḥemet Mitzvah* ("Obligatory War") contains by far the richest source material on Jewish-gentile moneylending transactions. His attempts to defend old and established practices show greater knowledge of former privileges granted by popes, emperors, and feudal lords than that of any of his predecessors, and he makes the widest possible and often ingenious use of practically all biblical and talmudic data on the subject. One or two generations older than David Kimḥi and also from Narbonne, he had frequent discussions with the lower and higher clergy, including two archbishops, the second of whom was probably Guido Fulcodi, who later became Pope Clement IV.

It was on this occasion that Meir was confronted with the same accusations about gentile disadvantages in Jewish law as those which had been made in the famous Paris disputation in 1240 at the palace of Louis IX. No Latin record of his disputation appears to be extant, and it is doubtful whether he could have said all he wrote down in the diary of his public activities. The whole historical background of his time is unfolded in his work – anti-Jewish legislation, persecutions, expulsions, and his able and often successful efforts to counter them. His sharp criticism of the release of interest and sometimes even of the principal, owed to Jews by the Crusaders, is of special significance. Fearless defense and daring attack are often juxtaposed. Thus, Joseph b. Nathan ha-Mekanne *Official, a contemporary and fellow-citizen of Meir b. Simeon, refutes the attacks against Jewish money-lending with the by now usual arguments, and subsequently adds: "You lend money at high rates... of 100%... and take reward for delayed payment" (Z. Kahn, in: *Birkhat Avraham... Berliner* (1903), 89).

Jewish moneylenders in England acted, as far as one can judge from their documents, in exactly the same way as those on the continent – i.e., in accordance with the ordinances of the sages (*ke-tikkun ḥakhamin*), even if there are certain peculiarities which seem to be influenced by non-Jewish legal practice. Thus, *ribbit* ("interest"), unless used in connection with *ribbit al yedei goi* ("inter-Jewish interest charges, made possible through a gentile proxy"), occurs only four out of about 30 times in M.D. Davis' *Hebrew Deeds* (1888). Instead of *ribbit*, *shevah* ("profit") is used. In some inter-gentile promissory notes, too, the expression *lucrum* ("gain") is found for *fenus* ("usury"). There is also the sudden emergence of the formula "if the stipulated time for repayment of the loan is over" (*im ya'avov zeman*) in Hebrew *shetarot* ("promissory notes" see **Shetar*) of English provenance. According to talmudic law, there is no justification for this, but contemporary

regulations of civil and canon law had adopted the Roman concepts of *lucrum cessans* and *damnum emergens*. They may well have found their way into inter-Jewish transactions, although still under the proviso that creditor A allow creditor B to borrow from a gentile, to indemnify the lender against damage or loss of gain.

In Spain, too, similar practices, perhaps even without the gentile intermediary, seem to have become customary during the 13th century, as is known from a responsum by Solomon b. Abraham Adret (ed. Hanau, 1600, 172b). He declares such convention to be forbidden, but adds that, strictly speaking, we have in this case to deal with a penalty (*kenas*) and not with interest. Officially, at least, Max Weber's distinction between *Binnen* and *Aussen-Moral* retained its validity in talmudic and rabbinic law. Similar Christian differentiations between the "brother" and the "other" can be traced back to the Church Father Ambrose of the fourth century. According to him, the Jew must be loaded with such a burden of usury that by the very punishment of the charges imposed upon him, he is compelled to move more quickly toward righteousness (*De Tobia*, 1, Migne, P.L. 14 (1845), 799; and T.P. Mc-Laughlin, *Medieval Studies*, 1 (1939), 92, 137).

THE LATE RABBINIC PERIOD. The Jewish analogue of this position was expressed by the 14th-century French philosopher and exegete, *Levi b. Gershom, who also holds that it is a positive commandment to lend money to an alien on interest, "if he needs it... because one should not benefit an idolator... and cause him as much damage as possible without deviating from righteousness," i.e., without demanding from him exorbitant rates of interest (see his commentary on Deut. 23:21). Such sentiments are extreme, though not isolated (cf. R. Tam on BM 70b and Maimonides' uncensored comment on Av. Zar. chs. 3 and 4). Sometimes the passion of the spirit gave way to the demands of economic necessity, and periods of quasi-normal business relationships between believers and non-believers interrupted the cold or actual war between them. More often the force of faith, never quite unconnected with the relatively high proportion of Jewish moneylenders, broke through and led to their persecution and expulsion. An ultimate judgment on the priority of powers which determine political and ideological reality remains difficult, if not impossible. The situation differed from country to country, from province to province, and even from town to town. Yet an analysis of the uneven and widely dispersed Jewish and Christian source material, ranging from the 14th to the 17th centuries, reveals an astounding development from unyielding medieval thought patterns to their integration with new economic theories, and leads almost to a breakdown of denominational barriers.

In his *Ikkarim*, the Spanish philosopher Joseph *Albo declares that the "brother" in the Deuteronomic law refers to everyone who is not an idolator. Interest is, therefore, only to be taken from one who belongs to the "seven nations of old" – for instance, from an Amorite or Amalekite: "If it is permitted to take his life, surely one may take his property" (*Im gufo mut-*

tar mamono kol she-ken; ed. Husik, 3 (1946), 237). Albo's words are an almost literal translation of Ambrose's "*ubi enim jus est belli, ibi est usurae*" (cf. also Plato's *Laws*, 10:909). In a position of defense vis-à-vis the archbishop of Narbonne, Meir b. Simeon had advanced a similar argument. Albo's statement is not part of the public disputation in Tortosa (1413) in which he was one of the Jewish spokesmen, but a record of another encounter with a Christian opponent. It is clear, however, that he did not refer to current halakhic practices, although some talmudic proof texts can be found in their support. Other Jewish writings, not concerned with interdenominational alterations, do not question the legality of charging interest from gentiles. Thus, Joseph Colon, who came from France and held a distinguished position in the Italian rabbinate during the second part of the 15th century, states casually that the Jews of both countries hardly engaged in any other business (Resp. Maharik 118, 132). Abraham b. Mordecai Farissol (1451–1526) confirms Colon's assessment of circumstances prevailing in Italy. Conditions of this kind were bound to bring about irregularities, but they were not restricted to Jews. Early propaganda of the Franciscans was, in fact, not specifically directed against the Jews. *Hebraei et Christiani usurarii* were the target of Bernardino da Feltre.

The establishment of Jewish loan banks was subject to a license of the papal administration or of the local rulers or of both. The stipulations of these *condotte* varied from time to time and from place to place. They were often changed unexpectedly, and as a result the insecurity of the Jewish moneylender increased, however much he might have profited from an occasional boom. Matters came to a climax through the propaganda for the establishment of Christian loan-banks, the *montes pietatis*, which were originally meant to work on a non-profit basis. Particularly during the Lenten period "the friars [*ha-doreshim*] are a strap of castigation for Israel and preach every day to destroy us... Their hand is heavy upon us... and the situation reaches a point when both body and property are endangered" (Colon, ed. princeps, no. 192).

Isaac Abrabanel's view on interest-bearing loans to gentiles is laid down in his commentary on Deuteronomy 23:21, and forms part of his elaborate exegesis of the whole book, which was completed in Monopoli in 1496 and published in uncensored form in Sabbioneta in 1551. He expounded his theories "before Christian scholars and the masters of the land." The first three of his arguments offer nothing new; only the fourth is straightforward and assailable on philological and historical grounds. At the same time, it foreshadows the general development toward capitalism, so characteristic of the 16th century: "There is nothing unworthy about interest... because it is proper that people should make profit out of their money, wine, and corn, and if someone wants money from someone else... why should a farmer... who received wheat to sow his field not give the lender 10% if he is successful, as he usually should be? This is an ordinary business transaction and correct... Interest-free loans should only be given to the coreligionist, to whom we owe special kindness." Abrabanel

sums up with an assurance to his readers that what he had said in the first three paragraphs was only meant "to promote peace. What a Jew should really believe is laid down in the tradition of the sages."

Shortly before the completion of Abrabanel's commentary on Deuteronomy, Abraham b. Mordecai Farissol had a disputation in Ferrara at the famous Palace of Ercole d'Este I, again attended by many prominent people (cf. *Magen Avraham*, ch. 73, ed. by D.S. Loewinger in: *HHY*, 12 (1928), 290ff.). Some of Farissol's answers also represent a definite opposition to medieval economic concepts. His formulations might well be borrowed from the views of contemporary civil lawyers. In contrast to the opinion of the canonists and of Levi b. Gershom who, like Aristotle, considered money as barren metal, a distinction is now drawn between primitive and advanced society: "After society had expanded and people began to be distinguished from one another by their views... there followed a new Nature and another Order. The custom of giving another person something for nothing ceased unless the person was poor. Thus, the law has developed to pay rent for houses... and to make loans... All comes for a price... Sometimes credit is even more important than lending an animal or a house. Hence... it is appropriate to give some compensation for a loan. A proof for this argument is that even the *ba'alei hadatot* [canonists] have agreed that one may pay up to 5% for the lending of money." Farissol seems to refer especially to the *montes pietatis*, which were forced to charge a small amount for the maintenance of their administration. As to the rates of interest charged, "one need not ponder over them, because they are agreed upon by the communities who require money from the Jews. They fluctuate according... to the availability or scarcity of silver and gold and the demand for it."

In 1588 the physician David de Pomis published his *De Medico Hebraeo Enarratio Apologetica*, in which he set himself the task of putting on record the devoted services of distinguished Jewish doctors in the past. The book, written in Latin, also contains his views on money-lending to gentiles. His effusive flattery about the relationship between Christianity and Judaism makes it unnecessary to refer to the first part of his arguments. Only in the last paragraph of the relevant section does he return to the practical aspects of the problem: "If the Jews do sometimes take interest from Christians, it can either be maintained that they abuse the law or..." and here his statements are almost identical with those of Farissol, "... their transactions represent an official agreement between the parties concerned... A Jew could effect the same transaction with another Jew according to recent rabbinic authorities." One form is technically called *tarsha* and the other *hetter iska* (cf. Sh. Ar., *YD* 167, 177). Both concessions represent developments dictated by the general change of economic conditions. In practice, de Pomis' labored defense came late. It was Calvin who challenged the Deuteronomic differentiation between the "brother" and the "alien" on principle. According to him, interest is forbidden only insofar as it is contrary to equity and charity. Otherwise, "*nous sommes frères sans aucune distinc-*

tion.” The enunciation of his program became the decisive formula for the new spirit of capitalism.

FROM OTHERHOOD TO BROTHERHOOD? From the 17th century onward, the collapse of the traditional Christian exegesis of Deuteronomy 23 is apparent in Europe and in the U.S. On the Jewish side, too, responsa on the subject become less frequent; even the records of the Council of the Four Lands have relatively little to say on the matter. The *hetter iska* (see *Usury) had opened the path to a mercantilistic interpretation of talmudic law. Nevertheless, on the readmission of the Jews to England, Manasseh Ben Israel, in his *Humble Address to His Highness the Lord Protector of the Commonwealth of England*, did not deem it necessary to revoke the ancient distinction: “For to lay out the money without any profit was commanded only toward their brethren of the same nation of the Jews, but not to any other nation” (cf. B.N. Nelson, *Idea of Usury* (1949), 73–109). In spite of occasional regressions, a gradual improvement of the position of the Jews in Western Europe became noticeable. Money-lending still remained one of their main occupations, but they also traded, sometimes simultaneously, in all kinds of merchandise, or they earned their living as craftsmen and artisans. Above all, there was the ascendancy of the Court Jew who, in spite of his fluctuating fortunes, played an important part in the economic administration of the estate of many a duke and king in peace and war (cf. H. Schnee, *Die Hoffinanz und der moderne Staat*, 6 vols., 1953–67). The Age of Reason further contributed to the disappearance of barriers between the various denominations. Although Leopold I expelled the Jews from Vienna and Lower Austria in 1670, Joseph II issued his *Toleranzpatent* only about 100 years later.

In 1807, the ecclesiastical and lay representatives of French, Italian, and German Jewry assembled in Paris to attend a meeting that had been convened by Napoleon. Bearing the proud title, “Grand Sanhedrin,” it concluded a development of 2,000 years and to many of those who had come seemed to open a new era. Two of the 12 questions they were asked concerned the problem of inter-Jewish and Jewish-gentile loan transactions. Although eminent rabbinic scholars of personal integrity were present, the answers, *Décisions Doctrinales* or, in their Hebrew version, *takkanot*, reveal neither any depth of historical understanding nor sincerity on the part of those who were responsible for their formulation. *Neshekh*, for example, is defined as a rate of interest to be determined by the *Code Civil* (*Code Napoleon*) of France. Such interest may be charged by one Jew from another, provided that the lender share the risk of loss and the chance of gain, and that the debtor give indemnification to the creditor in the case of *damnum emergens*. Only the poor Jew must be charged no interest at all. Gentiles, particularly those living in France or Italy, are to be considered as brothers of the Jews, and there must not be any difference between them if charity is required. Those who disregard this ordinance will be called sinners and transgressors of the law of the holy Torah. All this may, to a degree, be defensible from the standpoint of the *halakhah*, but

a complete renunciation of Jewish autonomy is implied. Jews have become Frenchmen of the Israelite persuasion. The law of the State (*hok ha-medinah*) sets the tone and the “Grand Sanhedrin” decides accordingly (*Takkanot ha-Sanhedrin shel Paris* (1958), 56–67). Ishmael b. Abraham Isaac ha-Kohen of Modena, who also received an invitation to the Paris Sanhedrin, was too old to make the journey, but gave his answers to each question in writing. Although gentle and dignified in his reply, he disassociates himself from the views expressed in the *Décisions Doctrinales*: “To deny permission to lend money on interest to gentiles is against all exegetes, against the *Gemara*, and against the literal understanding of the Bible” (cf. J. Rosenthal, in: *Talpioth*, 4 (1950), 583).

Events of the last 150 years belied the identification of the “brother” and the “other,” and in all probability the reaction of the old rabbi of Modena and those who thought like him, even at the beginning of the 19th century has not disappeared from Jewish life. The full awareness of covenantal relationship between God and Israel and Jew and Jew is still strongly felt. Until this day many Jewish banks both in and outside Israel display a notice to the effect that it is understood that business and loan transactions between Jews will be conducted according to *hetter iska* regulations.

[Siegfried Stein]

The Historical Context

The biblical injunctions against usury relate neither exclusively nor mainly to money-lending on interest. Their spirit reflects a nomadic and village society where the borrowing of goods is the norm, and moneylending the exception. Yet the so-called archives of the *Murashu house discovered at Nippur show Jews in Babylonian regions engaged in extensive financial operations. The Talmud largely treats the problem of usury and interest from the point of view of product loans, though financial operations are also dealt with in this connection. There is evidence that as Jews moved in the city life of the Roman Empire, some of them gave loans on interest.

With the development of an urban economy in the caliphate of the ninth century, the financing of the ever-growing needs of trade, of crafts, and of the state, became a pressing need. Jews financed the business of their coreligionists through participating in various ways as partners, both in financing and in profits. While some of these means of participation were actual, others were formal only, devised to evade the prohibitions on usury. In the tenth century, large-scale Jewish financiers appear, like the *Netira family, who loaned large sums to the state on interest, against the collateral of state incomes. These loans were evidently the accumulated savings of middle- and small-scale Jewish merchants, deposited with Jewish state bankers for greater income and security. When (up to the 15th century) the majority of the Jewish people lived in Islamic lands and in Christian Spain, money-lending was one of the occupations of Jews, as of other city dwellers. While in Northwestern Europe Jews first came mainly as international traders, when some of them later turned to local trade (1000 c.E.), they engaged in credit operations. The impact of

the First Crusade (1096–99) on the status and livelihood of the Jews in France, Germany, and England drove them out of trade through the lack of security arising from the inimical attitude of society in general; at the same time, Jewish merchants and craftsmen were denied any share in the Christian towns and *guilds which were rapidly evolving as the only social framework for trade and crafts in those countries. This crystallized at a time when European trade, agriculture, and building were expanding and in need of financing. Ready cash – which then meant precious metals – was scarce. Available means in Christian hands were channeled into credit for merchant ventures and other relatively creative loans, in which it was also easier to formulate partnerships that evaded the stigma of usury. Under such circumstances the Church found it easy to act in accordance with the agricultural ethos of its upper strata, and to insist on the prohibition of usury. There remained the field of loans for consumption – the need for which arose in cases of illness, litigation, and unforeseen expenses – for which Christian capital was not readily available and where usury was least avoidable. Deprived of its former uses, Jewish capital entered this field, as well as granting any other possible loan. Hence among the Jews of the region between the Pyrenees and Scotland, between the Atlantic and the Elbe, usury became the main source of livelihood from about the 12th to the 15th centuries. They were not the only people to lend money on interest in that region: there were also the Cahorsins of southern France, the Catalans, and the Lombards. But religious enmity, the social separateness of the Jews, and their hateful image, combined to identify Jew with usurer in the western Christian imagination. In those countries Jews sometimes lent on a debt deed only, without surety. Medieval Hebrew sources from those regions described this kind of loan as *be-emunah* (“on trust”), a practice usually reserved for established and proved clients. Most loans were given on the double surety of a written deed and a collateral (Heb. *maskon*). Since repayment of a loan for consumption was often difficult, the needy debtor came to hate the infidel Jewish creditor who, out of his own need, had helped him. Many anti-Jewish persecutions hence acquired an economic as well as a religious character, the instigators being no less anxious to destroy incriminating bonds than to eliminate accursed infidels.

In England the extent as well as the problems of Jewish money-lending were seen at their clearest. The most common interest rate was two pence in the pound a week (43 1/3 annually), though half and twice as much were also common. There were many partnerships, often between members of the same family; this form was utilized by the extremely wealthy *Aaron of Lincoln. To supervise Jewish lending, to insure maximum tax exactions from the Jewish lenders, and to make certain that debt deeds would not be lost even in times of massacres, the *Archa system was introduced. In the 13th century Jewish money-lending was conducted through tenants of the commons and of the middle class, whose bonds were bought up, on default, by the nobility and ecclesiastical institutions. This too, aroused the enmity of the commoners toward the Jews. In

1275 Edward III passed severe anti-usury laws, at the same time exacting extremely high tallages and calling in Italian money-lenders to replace the Jews. Some of the latter turned to coin-clipping, which led in part to the total expulsion in 1290.

Though in the heterogeneous Holy Roman Empire money-lending practices varied greatly according to time and place, the history of Jewish money-lending in *Regensburg may be typical of Rhenish and south German cities. Until about 1250 the municipality was the chief beneficiary of Jewish loans; until about 1400 the nobility and clergy were the main recipients; while after 1400 knights, burghers, and artisans pawned objects for short terms, and borrowed small sums at high rates of interest. This latter situation eventually became the focus of lower-class enmity toward the Jews and contributed to their expulsion in 1519.

Interest rates in Germany fluctuated greatly in practice and even in their legal norms. Frederick II of Austria fixed the Jews' maximum interest rate at 173 1/3% in 1244; in the more developed cities of the Rhineland and south Germany 43 1/3% was more common, though this rate did not apply in the case of foreigners or peasants; 86 2/3% was also common and acceptable. An investigation in 1676, motivated by anti-Jewish feeling, in the electoral Palatinate in western Germany, showed that an interest rate of 14.5% was honored there by the Jewish moneylenders. The Christian rulers who exploited Jews as their agents for usury – and then extorted from them a large part of their usurious gains, especially when the Jews became impoverished – used to proclaim moratoriums on the individual, partial, or total debts to Jews. The respective treasuries all profited by such measures, the best known being those of Emperor Wenceslaus in 1385 and 1390, which utterly impoverished the Jews while barely alleviating the burdens of the treasury. Likewise, total and bare-faced confiscation was often resorted to, as was expulsion, which left the field open to the Jews' remaining competitors. Because of the collateral in their hands Jewish moneylenders frequently engaged in related occupations, such as the repair and upkeep of clothes, armor, and precious objects, and in their sale when pledges were not redeemed, a frequent occurrence. Hence the rudiments of certain crafts, as well as the sale of *secondhand goods, were an integral part of this occupation. Articles regulating money-lending constituted the core of all charters issued to Jews in medieval Germany from the 12th century. They determined not only the rates of interest, but also ensured the rights of the creditor to the collateral, even if it had been stolen. The moneylender had to take an oath that he had received it in good faith and in daylight whereupon the legal owner of the collateral had to repay him the amount loaned on the pledge. This right clashed with Germanic legal conceptions, which demanded the return of the object to the rightful owner without any payment; hence the misconception that the charters allowed the Jews to act as fences.

When it became apparent in Italy that the citizens had need of cash loans, the activities of Jewish moneylenders were regulated by means of the *condotta*, conditions set out

in charter treaties between municipalities or rulers and Jewish moneylenders, first signed in the late 13th century in Umbria. The interest rate varied between 15% and 25% and was never to exceed the value of the pledge. The profit of the loanbanks in 15th-century Florence was approximately 4% (see also **Monti di Pietà*).

The first privilege granted to Jews in Poland in 1264 regarded them mainly as moneylenders. However, under favorable conditions, Jews soon took part in other economic activities, so that within a century money-lending became only one of their many-sided economic functions in the Polish cities and countryside. The **arenda* system, for example, stems from a change from lending to leasing. By the end of the 16th century, Jewish trade demanded more capital than the Jews themselves possessed, so that many Jewish traders became indebted to Christians. Lending on interest between Jews was explicitly initiated and legalized there, in the institution *hetter iska*, a legal device which created a formal partnership between creditor and debtor. Interest rates inside the Jewish business community in the latter half of the 17th century were between 25% and 33½%, whereas the Christians loaned at 6%–10%, and interest rates between Jews and Christians ranged between these two figures. Jews also developed their own system of credit bonds – the *mamran* (*membranum*) – used mainly at the great fairs of Poland-Lithuania. With the rise of modern *banking, Jewish money-lending of the conventional type gradually decreased in importance, though in Western Germany and in *Alsace-Lorraine it was sufficiently widespread to be detrimental to *emancipation of the Jews during the French Revolution, and later on to influence the attitude of Napoleon *Bonaparte to Jewish emancipation. It likewise was one of the causes of the anti-Jewish *Hep! Hep! disturbances of 1819, as well as 1830 and 1848.

When Jews moved to western countries in the late 19th-early 20th centuries, moneylending was a frequent occupation, especially in the first and second generation, and the Jewish moneylender became a familiar stereotype.

MONGOLIA, region of E. central Asia, which gained fame originally due to the *Mongols under Genghis Khan, who established an enormous empire in the early 13th century that eventually encompassed most of Asia. By the 17th century, Mongolia was firmly under Chinese control. Outer Mongolia became the Mongolian People's Republic in 1924 and Inner Mongolia remained under Chinese rule. At the end of the 19th century Jewish families from Siberia traded with Mongolia and a few settled there as a result of their businesses. Between 1918 and 1920 Russian Jews, fleeing from the civil war atrocities, crossed Lake Baikal to settle in Outer Mongolia. Most of them were wiped out in 1921 by the White Russian units under Baron Ungern-Sternberg which were retreating before the advancing Soviet forces. In 1925–26, a Russian-Jewish journalist discovered 50 newly settled Jewish families in a deserted area of Outer Mongolia, some 200 miles from the Manchurian border. Ulaan Bataar (or Ulan Bator, formerly Urga), the capital of the Mongolian People's Republic, had a community of 600 Russian Jews in 1926, including watchmakers, jewelers, barbers, furriers, and construction workers. The increasing Soviet influence in the area induced most of them to leave Outer Mongolia for *Manchuria and elsewhere. Those who remained were employees of state enterprises. Jews visited Outer Mongolia from the Manchurian town of Hailar during the 1920s only seasonally in order to buy furs and other domestic products, but they did not take up permanent residence. Over the years of Communist rule, Jewish civilian and military specialists from the Soviet Union spent time in Mongolia. The contact of Jews with Mongols led to some mixed marriages, a phenomenon strengthened by the many Mongols who traveled to the Soviet Union for study and other activities. With the end of Communism in both the Soviet Union and Mongolia around 1991, several of the children resulting from these marriages immigrated to Israel.

MONGOLS, a group of tribes from the eastern Eurasian steppe, north of China, which were welded by Genghis

(Chinggis) Khan in the late 12th and early 13th centuries into a state that created the largest land-based empire in history. Mongol successor states ruled much of Eurasia well into the 14th century, and smaller states of Mongol provenance ruled more restricted areas even longer. In contemporary sources, the Mongols are often referred to as Tatars/Tartars, and modern day Tatars, although speaking Turkic languages, are of at least partial Mongol descent. The Mongols touched upon and influenced the history of the Jews in Central and Eastern Europe as well as the Islamic world.

At the beginning of 1260 Mongol forces invaded *Syria, and their raiders reached as far as *Jerusalem, *Hebron, and *Gaza. A report of the arrival of the Mongols in Jerusalem and their depredations in the area is found in the famous letter of *Nahmanides to his son from 1267. Mongol advanced forces, however, were defeated by the *Mamluks at the battle of 'Ayn Jalut in northern *Palestine in August 1260, and the Euphrates River became the frontier between the two hostile states. Mongol raiders again reached Palestine, including Jerusalem, in 1300 after their defeat of the Mamluks near Homs at the end of 1299. In Western Asia, including the Middle East, Central Asia, and Eastern Europe the Mongols eventually underwent a double process of Islamization and Turkification, i.e., conversion to Islam and the replacement of Mongolian by Turkish, the language of many of their soldiers and officers.

The Mongols played an important role in world history, not the least in facilitating cultural contact between east and west Asia, as well as creating the conditions by which western Europe learned about China and East Asia, thereby contributing to European seaborne expansion. Latin Christian writers, such as Matthew of Paris, saw them as descendants of the Ten Tribes. Some Jews themselves in Central and Eastern Europe appear to have harbored messianic expectations of the Mongol advance, which combined with a desire for revenge against the Christians. Again, Matthew of Paris saw the Jews as encouraging and abetting the Mongols. This perceived "cooperation," together with a more concrete understanding of a contemporary messianic upsurge among the Jews, may have contributed to increased antisemitic feelings among Christians.

The situation of the Jews in the Islamic countries conquered and ruled by the Mongols appears to have dramatically improved. Jews, as well as Christians, enjoyed relative religious freedom and the restrictive laws derived from the so-called Covenant of *Omar were abolished for several decades. The activity of the free-thinking Jewish philosopher and scholar of comparative religion *Ibn Kammūna (d. 1285) in *Baghdad can be attributed to some degree to the relatively tolerant atmosphere in the realm of religion introduced by the Mongols. One prominent Jewish personality was Sa'd al-Dawla, who rose to become the wazir of the Ilkhan Arghun in 1289. His efficiency in raising funds is noted in the sources, as are the many enemies that he made. His being a Jew certainly exacerbated the dissatisfaction with him. He was removed and executed in 1291 when his patron was on his deathbed. Another important individual of Jewish origin, albeit one

who converted to Islam, was *Rashīd al-Dīn (al-Dawla) al-Hamadānī, who served as the co-wazir to three Ilkhans until his final dismissal and execution in 1318. Besides his success as a senior bureaucrat, Rashīd al-Dīn has gained fame as the author of the great historical work, *Jāmi' al-Tawārikh* ("Collection of Chronicles") written in Persian, although some parts have come down to us in Arabic. Not only is this the most important extant source on Mongol history, it is perhaps the earliest attempt at writing a comprehensive history of humankind. This may reflect the open atmosphere prevalent under the Mongols, the communication between all of Asia, and the fact that Rashīd al-Dīn himself was living on a frontier of two cultures. In any event, his Jewish origins were not forgotten. After his death, his head was paraded around, and common people shouted: "This is the head of the Jew who abused the name of God; may God's curse be upon him." In spite of these outbursts, there was much to commend Mongol rule to the Jews who came under their control, compared to many contemporary rulers in both the Muslim and Christian countries.

MONIS, JUDAH (1683–1764), Colonial American Hebraist. Monis, who was born in Algiers or Italy, was educated in Leghorn and Amsterdam. Very little is known about his career before he went to America. On Feb. 28, 1715/16, he was admitted as a freeman of New York, his occupation being that of merchant, although at a later period he was described as having been a rabbi in Jamaica and in New York. Much of his erudition may have been secondhand. He appears in the Boston area in 1720, and on March 27, 1722 was publicly baptized in the College Hall at Cambridge, at which time the Reverend Benjamin Colman delivered *A Discourse... Before the Baptism of R. Judah Monis, to which were added Three Discourses, Written by Mr. Monis himself, The Truth, The Whole Truth, Nothing but the Truth. One of which was deliver'd by him at his Baptism* (Boston, 1722). Monis' essays are an apology and defense of his new faith, and in support of the doctrine of the Trinity drawn from "the Old Testament, and with the Authority of the Cabalistical Rabbies, Ancient and Modern." Shortly after his conversion, on April 30, 1722, he was appointed instructor of Hebrew at Harvard College, a position he

held until his resignation in 1760. Monis received the degree of Master of Arts from Harvard in 1723. His instructorship, marriage, and academic degree came after his conversion to Protestant Christianity.

The study of Hebrew was a required subject at Harvard College, and Monis' Hebrew grammar, *Dickdook Leshon Gnebreet: A Grammar of the Hebrew Tongue* was published in Cambridge in 1735, sponsored by the Harvard Corporation. It was published in English: "to Facilitate the Instruction of all those that are desirous of acquiring a clear Idea of this Primitive Tongue by their own Studies; In order to their more distinct Acquaintance with the Sacred Oracles of the Old Testament, according to the Original, And Published more especially for the Use of the Students of Harvard College."

Monis insisted on the use of the Hebrew vowel points in this grammar as being essential for the correct pronunciation of the Hebrew. Monis also owned a manuscript volume of Kabbalistic tracts and excerpts (372 pages), some transcribed by him, and some in the handwriting of others. His brother-in-law, the Rev. John Martyn, presented his books and manuscripts to Harvard College Library in 1767. Monis also left a small fund for the needy widows of Christian ministers.

MONITOR (Heb. מוֹנִיטוֹר; lit. "strength"; AV "chameleon"; JPS: "land crocodile"), reptile included in the Pentateuch among the creeping things which are prohibited as food and whose dead bodies defile by contact (Lev. 11:30–39). The reference is to the *Varanus griseus*. It is the largest reptile found in Israel, with a length, including its long tail, of up to 4 ft. (1.20 m.). Feeding on reptiles and rodents, it is frequently found in the southern coastal belt, in the Negev, and in the Arabah. Alone of the reptiles in the country, it hibernates for six months in a burrow in the ground, and it is then that the Bedouin catch it, using it for medicinal purposes and eating its flesh, which the Greeks, who called it a land crocodile, believed granted immunization from poisoned arrows. It is usually hunted while in a torpid state, for when awake it is aggressive, defending itself by biting and lashing out with its powerful tail. The Septuagint and Vulgate identified the biblical *ko'ah* with the *chameleon.

MONMOUTH COUNTY, county in central New Jersey, lying along the Atlantic Ocean about 40 miles southwest of New York City. About 500 square miles in area, it is divided into 52 municipalities of various sizes. Monmouth's approxi-

mately 72,500 Jewish residents in 2005 (11.5% of the county's total population) make it one of the fastest growing Jewish communities in the Metropolitan region.

The county's Jewish history is long and varied. Evidence shows Sephardi peddlers from New York traveling through the county in the early 1700s. The first resident, Isaac Emanuel, a Freehold merchant, appears in a series of court cases in the early 1720s. By the 1750s Jonas Solomon and Levy Hart, both married to local Protestant sisters, were well known as Jewish merchants and tavern keepers. Solomon lived in Freehold and Hart in a small settlement further east that was to be labeled "Jewstown" by his colonial neighbors and by the British during the ensuing Revolutionary War. The original Freehold home and tavern owned by Jonas and Hannah Solomon was burned by the British during the Battle of Monmouth in 1778. The barn, circa 1800, owned by their son, Levi Solomon, who farmed nearby, is still in existence and was designated as the site for the newly established Monmouth County Jewish History Museum in 2005.

No permanent Jewish communities in the county developed, however, until the arrival of sizable numbers of German Jews just prior to and after the Civil War. Monmouth's 33-mile coastline became the destination of wealthy vacationers escaping the summer heat of New York City. By 1861 Aaron Cristaler had build and was operating the kosher Atlantic Hotel in Long Branch, which accommodated 500 persons. Denied acceptance at Christian resorts in New York and Rhode Island, more and more wealthy German Jews came to what was called the "Jewish Newport" at the Jersey Shore. Families with illustrious names such as Seligman, Guggenheim, Schiff, Loeb, Warburg, Sachs, Baruch, Mandel, Rothschild, Lewisohn, Lehman, Wimpfheimer, and Oppenheim built magnificent summer mansions from Rumson to Long Branch. By the late 1880s the need for a permanent synagogue resulted in the establishment of Temple Beth Miriam in Long Branch. Many of the supporters of this synagogue of Reform Judaism were also instrumental in 1887 in establishing the nearby hospital that is now known as Monmouth Medical Center.

In addition to their more wealthy compatriots, Monmouth attracted many German Jews who sought commercial opportunity in small trades and services. Such a close-knit community of Jews was already present in the northern Monmouth Bayshore town of Keyport in the 1860s. In 1880 they organized themselves as the United Hebrew Congregation and within a decade established a synagogue. By the last decades of the 19th century, Red Bank was also emerging as a commercial center, its growth synonymous with the career of Sigmund Eisner. Starting off with the family sewing machine Eisner developed a prosperous business producing military uniforms for the Spanish-American War. By World War I he had factories in Red Bank, Freehold, and Keansburg. One of Eisner's neighbors was summer resident Judge Abram I. Elkus, who served as U.S. ambassador to Turkey in 1916. His daughter Katherine Elkus White became mayor of Red Bank in 1950 and U.S. ambassador to Denmark in 1964.

Several other German Jewish entrepreneurs stand out: John Steinbach, proprietor of large department stores in Long Branch and Asbury Park; Frank Marx of Shrewsbury, cattle dealer and meat supplier; Joseph Goldstein, dry goods department store owner; Clarence Steiner and his sleepware factories in Long Branch and Freehold, Manasquan and Keyport; Walter Rosenberg founder of the Walter Reade Theater chain; Berthold Sussman and Siegfried Hirschfield and their hotels. Political acceptance followed; William Levy served as mayor of Deal in 1916, Clarence Housman was elected mayor of Long Branch in 1920, and Aaron J. Bach, mayor of Deal in 1922.

A wave of Eastern European immigration also hit Monmouth at the turn of the 19th century. Most of these poor Yiddish-speaking newcomers settled in the more established communities along the shore and to the south, working in factories and the retail trades. Finding that the existing summer German Jewish Temple Beth Miriam did not meet their year-round needs, the Orthodox residents of Long Branch formed their own synagogue, Congregation Brothers of Israel, in 1898. A larger building was completed in 1920. A YMHA and YHWA was organized, followed by the Ladies Independent Hebrew Sick Benefit Association, the Gemilath Chesed, the Hebrew Ladies Hospital Auxiliary, and the Workmen's Circle. Kosher hotels and boarding houses catering to wealthy and moderate income East European Jews proliferated.

In 1904 the Orthodox Jewish community in Asbury Park incorporated as the Sons of Israel and were in their own building the following year replete with Hebrew school and *mikveh*. The new Conservative Temple Beth El was dedicated in 1927. Soon Asbury Park could boast its own community center providing a meeting place for the YMHA, Jewish War Veterans, and other organizations. Similar activity occurred around the same period in Red Bank, Keyport, Bradley Beach, Belmar, and Manasquan. Belmar became a summer gathering place of the New York intelligentsia attracting such luminaries as the world renowned Yiddish writer Sholem Aleichem and Morris Hillquit, the Social-Labor Party leader and author. Ira Gershwin, the famed lyricist, courted and married one of the daughters of the Strunsky family, owners of the local hotel.

A smaller number of East European immigrants moved westward into the more rural areas surrounding Freehold, Englishtown, Perrineville, and Farmingdale.

The Jewish Agricultural Society, which provided loans, training and assistance to Jewish farmers, most often in Yiddish, described them as growers of vegetables, potatoes, and general farm crops with a cow or two and some chickens. A few, like Jacob Zlotkin, were horse and cattle dealers. In 1910 Jacob Grudin led a group of Millstone Township Jewish farm families in setting up a congregation named the First Hebrew Farmers Association of Perrineville. In 1913 the Perrineville Co-operative Credit Union was organized, one of the first farm credit unions in New Jersey. Local Jewish farmers were also largely responsible for the formation of the Central Jersey Farmers Cooperative Association in 1930. Maurice Wolf of Perrineville played an important role in the national Jewish

farmers movement, serving on the board of the Federation of Jewish Farmers of America.

The largest concentration of Jewish farm life in the county, however, was to develop in the Farmingdale-Howell area. Starting out in 1919 Benjamin Peskin found he had to take in summer boarders to supplement his meager potato and dairy farming earnings. By 1928 he and 12 other families joined to build a Jewish Community Center and in a few years a Yiddish school affiliated with the Sholem Aleichem Folk Institute was in operation. Other organizations took root; a Ladies Auxiliary, a Jewish reading circle, a Jewish farmers' chorus, two farmers' cooperative associations, a unit of the International Workers Organization, the Zionist Pioneer Women, and a chapter of the Rural Youth of America. At the advice of the Jewish Agricultural Society the farmers started raising poultry. By the late 1920s the fields around Farmingdale and Freehold were dotted with chicken coops as New Jersey was on its way to becoming the egg basket of the East. Jewish farmers soon accounted for about 75% of the state's egg production and by 1935 Monmouth County contained more Jewish farmers than any other county in the state.

It was at this time that, under the direction of the idealistic social planner and organizer Benjamin Brown, one of America's unique experiments in cooperative farming and industry was instituted in Jersey Homesteads (renamed Roosevelt after the president's death) in rural Millstone Township. Brown secured a \$500,000 federal government subsistence loan for the creation of a colony of 200 Jewish needle workers from New York who were to become self-sufficient through seasonal farming combined with seasonal employment in a cooperative garment factory. Individual homestead plots were to be supplemented by a community truck garden, a dairy and poultry plant, and cooperative store. The factory was opened in 1936 and from the start was a failure. Conflict between Brown and the International Ladies Garment Workers Union and other political and economic factors led to a federal government takeover of the cooperative in 1940. After World War II the houses were sold to individuals. Although Jersey Homesteads failed as a cooperative enterprise in many ways it succeeded as a community. Surrounded by a hostile rural Christian township the Jewish residents formed their own elementary school which became the cultural and social center of the town. Attracted by the intellectual and cultural atmosphere of the town, the famous artist Ben Shahn and many other painters and sculptors moved in and soon Roosevelt was hailed as an artists' colony as well.

By the late 1950s though, Monmouth's Jewish farm communities were in decline owing to a combination of economic, political, and social reasons. Another wave of immigration was to change the county's landscape as large numbers of families from New York City and northern New Jersey moved to the suburbs.

With America's entry into World War II, the U.S. Signal Corps located at Fort Monmouth in Eatontown underwent a tremendous growth of both military and civilian personnel. A

majority of the scientists, engineers, physicians, and dentists were Jewish men, and many of these stayed on at Ft. Monmouth blending into the great postwar movement from New York City to the Monmouth suburbs that was about to begin. The completion of the Garden State Parkway in 1955 facilitated the construction of massive industrial parks and residential subdivisions. Research organizations such as Bell Telephone Laboratories in Holmdel brought in thousands of new employees as did other corporations that were part of Monmouth's burgeoning electronic industry. Older citizens also found attractive homes in Monmouth, in high rises and garden apartments along the shore and in massive adult communities such as Covered Bridge in the western part of the county.

In addition, the postwar exodus to Monmouth's suburbs included a large contingent of Sephardi families with their own distinct religious and cultural practices. Many originally emigrated from Syria, settled in New York, and summered in Monmouth's shore communities before moving year round into the Deal and Ocean Township area. The number of Sephardi Jews increased so dramatically that three new Sephardi synagogues opened within a short period in the late 1970s.

From a prewar figure of 7,000 Monmouth's total Jewish population grew to 50,000 by 1977. Most of this growth was in the western part of the county. Mayor Arthur Goldwizweig estimated that in 1977 30% of Marlboro's residents were Jewish; Mayor Stanley Kruschick put the figure in neighboring Manalapan as 50%.

This growth has continued into the 21st century. The median age for Monmouth's 72,500 Jewish residents (divided into 26,000 households) is 41.1 years. They are well educated (55% of the adults have a college degree) and well off (median income is almost double that of all U.S. Jewish households); 54% live in western Monmouth, 32% in eastern Monmouth and about 14% in northern Monmouth. Summer vacationers number about 5,000. Of employed Jews, 52% work in Monmouth County, the rest commute to New York City or North Jersey. Of households surveyed by the Jewish Federation of Greater Monmouth 37% consider themselves Conservative, 26% Reform, 9% Orthodox, and 28% "just Jewish." There are 9 Conservative synagogues in the county, 6 Reform, 18 Orthodox, and 2 Traditional.

Four separate Jewish day schools exist in the county: The Hillel Yeshiva in Oakhurst, the Solomon Schechter Academy in Howell, the Shore Hebrew High School in Oakhurst, and the Solomon Schechter Day School in Marlboro.

An intense organizational life accompanied each stage of Monmouth's population growth. Local units of national Jewish organizations with a wide range of aims and purposes developed alongside synagogue religious and social clubs. The Monmouth Jewish Community Council (MJCC) was formed in 1969 to coordinate county-wide rallies for Jews overseas and in Israel. In 1971 several organizations in the shore area affiliated with the Jewish Federation movement and by 1976 most communities within the western and northern areas of the county joined them to create the Jewish Federation of Greater

Monmouth County, which eventually incorporated the MJCC as well. Federation also fostered the formation of the Jewish Family and Children's Service. A similar history of consolidation among YMHAS and YWHAS led to the completion in 1971 of the Ruth Hyman Jewish Community Center in Deal, which also houses the 500-seat Axelrod Auditorium. Western Monmouth has set up its own Jewish Community Center office and a building drive is underway.

Due to the efforts of Professors Albert Zager and Jack Needle the Center for Holocaust Studies at Brookdale Community College in Lincroft was established in 1979. The center, which is the first of its kind in the state, provides educational materials and programs about the Holocaust, genocide, racism, and antisemitism.

[Jean Klerman (2nd ed.)]

MONOBAZ I AND II, two kings of *Adiabene in the first century, C.E. Monobaz I was both brother and husband of Queen *Helena. His attitude to Judaism is unknown, but in view of the fact that his sister-wife and their son Izates both became converts to Judaism, it is highly probable that he was sympathetic to it. Monobaz I and Helena had a son, Monobaz, who was older than his brother Izates, but when Monobaz I died, Helena, in accordance with the king's testament, placed Izates upon the throne. Monobaz II was loyal to his younger brother and like him embraced Judaism. He succeeded Izates to the throne. Little is known of Monobaz II. Josephus, who is the main source, relates that he sent the remains of his mother and brother to Jerusalem for burial, and that he erected a palace in Jerusalem, which was called by his name (Wars 5:252). Many of his kinsmen took part with distinction in the war against the Romans (Wars 2:520). Though Josephus features Izates as the chief figure among the converts to Judaism of the Adiabene royal dynasty, the account of Monobaz II in the talmudic literature makes a deeper impression, highlighting his generosity to the people of Jerusalem and the Temple, his righteousness, and his wisdom. His circumcision and that of his brother are also mentioned.

[Uriel Rappaport]

MONOGAMY, the custom and social or religious institution, often sanctioned by law, according to which a person can be married to only one single mate at a time. The discussion in this article is restricted to polygamy and monogamy in Jewish practice, since polyandry was absolutely forbidden by biblical law.

The Bible does not limit the right of a man to have more than one wife. Indeed, many instances are cited where a man has several wives (and *concubines) – a prevalent custom in the Ancient Near East. It seems, however, that due to economic conditions, most of the people did not practice polygamy or even bigamy. Indeed, practice was more monoga-

mous than theory. The ethos underlying the creation story (Gen. 2), and the last chapter of Proverbs, is essentially monogamous. The situation changed during the Second Temple period. In addition to the economic factors which gave justifiable grounds to monogamy – factors applicable even more than in the First Temple period – the concept of mutual fidelity between husband and wife took root. Some men refrained from taking more than one wife because of an explicit agreement they had made with their first wife. Such agreements, preserved in Babylonian and Assyrian documents, are also to be found in the *Elephantine (Yeb) documents (Cowley, Aramaic, 44ff., no. 15, line 31ff. Bigamy and polygamy, while on the decrease, were mainly practiced among Hellenistic Jews (Joseph the *Tobiad, Herod, the administrator of Agrippa (Suk. 27a)), but they are also mentioned in the *halakhah* (Yev. 1:1–4; Ket. 10:1–6; Git. 2:7; Kid. 2:6–7; cf. Justin Martyr, *Dialogue with Tryphon*, 134:1; 141:4), and occurred even in the families of sages (Yev. 15a). Bigamy took place sometimes because of a *levirate marriage or the sterility of the first wife. Yet despite the rare occurrence of polygamy, its explicit prohibition in the *halakhah* of the Dead Sea Sect that saw polygamy as a Pentateuchal prohibition (Damascus Document 4:20–5:5) was a complete innovation. Christianity adopted a similar attitude, which was in conformity with Jesus' approach to marriage and to divorce (Tit. 1:6; 1 Tim. 3:2, 12).

But even the Mishnah and the *baraitot* clearly reflect a situation which was almost completely monogamist (Yev. 2:10; etc.). Some sages preferred **ḥalīzah* ("levirate divorce") to *yibbum* ("levirate marriage"; Bek. 1:7); others violently condemned marriage to two wives even for the purpose of procreation (Ket. 62b). According to R. Ammi a Palestinian *amora*, "Whoever takes a second wife in addition to his first one shall divorce the first and pay her *ketubbah*" (Yev. 65a). Such statements possibly reflect the influence of Roman custom which prohibited polygamy, especially since all the Jews of the empire became Roman citizens after 212 C.E. The Roman emperor *Theodosius issued a prohibition against the practice of bigamy and polygamy among Jews, but it did not disappear completely.

The Jews of Babylonia also practiced bigamy and polygamy, despite the Persian monogamistic background, and Rava said: "A man may marry several women in addition to his wife, on condition that he can provide for them" (Yev. 65a; cf. Ket. 80b; Pes. 113a). The sages however advised that one should not take more than four wives (and this would appear to be the source of the Muslim law which permits only four wives). Under the influence of the Muslim custom during the Babylonian geonic period, polygamous marriage became even more common (see Lewin, Oẓar, Yevamot (1936), 148–54). With the *Karaites, polygamy was a controversial issue. Bigamy was practiced among North African and Spanish Jews. There were women, however, who demanded that it be explicitly written in the document of marriage or in the *ketubbah* that the husband would not take a second wife.

In Germany and northern France polygamy was rare, mainly due to the economic conditions and to the influence

of the Christian environment. It seems that at the beginning of the 12th century, the Jewish communities issued a regulation which forbade polygamy. Later, this regulation became a *herem* (ban), attributed to R. *Gershom b. Judah. In the case of a levirate marriage, or the sterility of the first wife, the regulation was disregarded, while in cases where the wife had become insane (and could not therefore be divorced, see *Divorce) a regulation was introduced whereby the *herem* could be lifted by 100 rabbis from three countries (or three communities). By the 13th century, however, it had already been decided that levirate marriage was to be abolished and *ḥalīzah* performed instead. The ban on bigamous marriage however did not include a clause annulling the offender's second marriage (see Yev. 110a; BB 48b): For example, although the man had disregarded the *herem*, broken the law, and married a second woman, his second marriage remained valid; but he could be compelled to divorce his second wife. The prohibition on bigamy became widespread in most countries of the Ashkenazi Diaspora, but not in Provence, Spain, North Africa, and among the Oriental communities, and it was accepted only by Ashkenazi halakhic authorities. Bigamy was however not common even in those localities where it had not been prohibited, including the Islamic countries.

In the Palestinian *yishuv*, bigamy was extremely rare, and in the State of Israel it is prohibited by law (the 1951 law on equal rights to women), although immigrants coming with more than one wife are allowed to maintain that status. In 1950 the Chief Rabbinate of Israel unanimously decided that *ḥalīzah* was preferred to *yibbum* (Herzog, *Heikhal Yizḥak, Even ha-Ezer*, 1 (1960), 51n). See *Bigamy; *Marriage.

[Moshe David Herr]

MONOTHEISM, in its literal meaning, oneness of the godhead (i.e., one God). The concept of monotheism is embedded in the domain of religious discourse, and its full and relevant significance must be derived from the connotation which it carries within this domain. Monotheism is usually attributed to biblical faith as its unique and distinct contribution to the history of religious thought. The significance of the word monotheism in its biblical context is taken to lie in the "mono," in the godhead's being one. As such, it is contrasted with paganism, the fundamental religious alternative to biblical faith, whose distinctive religious concept is taken to be polytheism, i.e., the plurality of the godhead (many gods). The difference between the biblical and pagan orientation is thus constituted here as a mere arithmetical difference, a difference between one and many gods. On this basis, biblical monotheism is seen by modern biblical scholars as emerging gradually and in a continuous line from the polytheistic thought of paganism. The mediating stage in such a development is found in monolatry, where the godhead is reduced to one only as far as worship is concerned, while ontologically there is a plurality of

gods. It is a mediating stage inasmuch as the arithmetical reduction to oneness is partial. The full reduction of the godhead in all its aspects to oneness emerges from monolatry only later in biblical classical prophecy, when God is claimed not only as the one God of Israel but as the one God of universal history. Here, by drawing the arithmetical reduction to oneness in all the aspects of the godhead, biblical faith achieves ultimately its distinctive, unique character. It is observed, however, that an ontological arithmetical unity of the godhead is achieved also in paganism, even with a remarkable degree of purity (e.g., Plotinus). It must be concluded, therefore, that paganism too has a monotheistic formulation. Yet it is generally felt that a fundamental difference between biblical faith and paganism does exist, and that this difference is expressed in the respective concepts of monotheism. This difference, however, cannot be accounted for on the basis of monotheism understood as the arithmetical oneness of the godhead.

Theistic Monotheism

Consequently, it has been suggested that the difference between biblical and pagan monotheism lies in the fact that the former is theistic while the latter is pantheistic. While it is true that biblical monotheism is exclusively theistic and that pagan monotheism has a definite tendency toward pantheism, to formulate the difference between biblical and pagan monotheism on this basis is to formulate the difference with regard to a totally different aspect of the godhead from that to which the concept of monotheism refers. Monotheism refers to the being of the godhead as such, while theism and pantheism refer to the relation subsisting between the godhead and the world. Thus, while this attempt locates a difference which may follow from the fundamental difference within the concept of monotheism, it does not locate that fundamental difference itself.

Ethical Monotheism

The same point can be made regarding yet another attempt to locate the difference between biblical and pagan monotheism, according to which biblical monotheism is ethical while pagan monotheism is purely philosophical-ontological. Correlated to this is the suggestion that, while paganism arrives at the oneness of its godhead through philosophical reasoning and because of ontological-metaphysical considerations, biblical faith arrives at the oneness of its godhead because of ethical considerations and through a direct insight into the absolute character of the moral law. Thus, biblical monotheism can be distinguished from pagan monotheism in that it alone is ethical monotheism. Here again, however, the distinction is located in an aspect to which the concept of monotheism as such does not refer; the concept of monotheism as such conveys no ethical connotation. It may be that this distinction follows from the proper understanding of the difference between the meaning of monotheism in the biblical context and its use in the context of paganism, but this distinction as such does not capture this difference. In attempting to define the difference, it is interesting first to note that the two formu-

lations above have already shifted the aspect where the difference is to be located from the “mono” to the “theos” part of the concept of monotheism; the theistic-pantheistic distinction refers to the relation of the “theos” to the world, while the ethical-metaphysical distinction refers to what kind of a “theos” is involved. This means that the difference between biblical faith and paganism is no longer seen as a quantitative difference, i.e., how many gods are involved, but as a qualitative difference, i.e., what kind of a god is involved. This shift is essential to a proper understanding of the difference and must form the basis of the attempted formulation.

Ultimate Being

On this basis it can be asserted that the minimal necessary connotation of the term “theos” in the concept of monotheism is that of ultimate being. As such, the arithmetical comparison between biblical monotheism and pagan polytheism is clearly seen to be illegitimate. The “theos” in pagan polytheism is not ultimate. It is superhuman, or “man writ large,” but still it remains finite and non-absolute. In polytheism a plurality of ultimate beings is untenable and self-contradictory. Consequently, the “theos” in biblical monotheism and the “theos” in pagan polytheism connote two different kinds of being, for the difference between ultimate and non-ultimate being is not merely quantitative but qualitative. It is not legitimate, however, to compare quantitatively entities which belong to different orders of being. In order to locate the difference meaningfully it must be determined with reference to the same kind of entity, i.e., to the ultimate being which is connoted by the concept of monotheism. As such, however, it is not correct to speak of the development of the concept of monotheism in paganism. Paganism always had a conception of ultimate being transcending its gods and, as indicated above, ultimate being necessitates oneness. There can be no development from many to one with regard to ultimate being. Thus, if the “theos” in monotheism signifies ultimate being, paganism always had a conception of monotheism. The only development that can be pointed to is a development in its articulation, i.e., a development from the cultic-mythological to the speculative-philosophical expression. If the “theos” in monotheism, however, signifies only ultimate being, then it would not be possible to locate any difference between biblical and pagan monotheism, for then the “mono” conveys no additional information which is not already conveyed by the “theos” in itself. In order for the concept of monotheism to have a distinct meaning, the “theos” has to stand for something more than ultimate being. It is here that the real, fundamental difference between pagan and biblical monotheism becomes evident.

Personal Monotheism

In biblical monotheism the “theos” stands for a god who is personal. The “mono” connotes essentially not arithmetical oneness but oneness in the sense of uniqueness. Ultimate being is uniquely one in that it excludes the existence of any other qualitatively similar being. Thus, the authentic mean-

ing of biblical monotheism is the assertion that the “mono,” i.e., the unique, the ultimate, is “theos,” i.e., a personal being, and this is the distinctive and unique feature of biblical faith and its monotheistic formulation. Paganism, while it too always had a conception of ultimate being and thus a conception of a unitary being, never asserted that ultimate being as personal. It follows from this analysis that the development of biblical monotheism from paganism cannot be envisioned as a linear, continuous development, but must be seen as a “jump” from one orbit to another, for the change that biblical monotheism introduced is qualitative and not quantitative. There is no continuous line of development either from non-personal to personal being or from relative being to ultimate being. This development involves a shift in perspective. While the above articulates the distinctive and essential content of the monotheistic conception of Judaism, it does not preclude or invalidate the fact that the monotheistic conception in Judaism may convey also the arithmetical oneness and the ontological uniqueness of God. Indeed, in post-biblical Judaism (and even in some biblical instances) it is these notions that come to the fore and become the main expressions of the Jewish monotheistic conception. It would seem, however, that the notion of the arithmetical unity of God arises mainly as a reaction against pluralistic formulations found in other religions, such as the *dualism of the Zoroastrian, Manichean, or Gnostic formulation and the trinitarianism of Christianity. The notion of the ontological uniqueness of the godhead arises mainly when Judaism conceives and expresses itself in the philosophical-metaphysical domain, i.e., when its God becomes the god of the philosophers.

Monotheism in Jewish Sources

Thus, Deutero-Isaiah, in response to Persian dualism, stresses the oneness of God in the sense that He alone is God, the one and only creator and ultimate cause of all phenomena: “I form light and create darkness; I make peace and create evil” (Isa. 45:7). This assertion is repeated frequently in rabbinic literature: “He who brought all things into being and who is their first cause is one” (Maimonides, *Sefer ha-Mitzvot*, positive commandment 2); “I have created all things in pairs. Heaven and earth, man and woman, . . . but my glory is one and unique” (Deut. R. 2:31). Likewise, the specific use of this assertion polemically against dualism and trinitarianism is extensive: “‘I am the first’ for I have no father, ‘and I am the last’ for I have no son, ‘and beside me there is no God’ for I have no brother” (Ex. R. 29:5); “The Lord, both in His role as our God [who loves us and extends His providence to us, i.e., the second person of the trinity] and the Lord [as He is in Himself, i.e., the first person of the trinity] is one from every aspect” (Leon de Modena, *Magen va-Herev*, 2:7, 31–32). Furthermore, a number of the basic tenets of Judaism follow logically from this assertion of the arithmetical oneness of God, and rabbinic literature derives them from it. Thus, all forms of idolatry are rejected: God’s absolute sovereignty and glory is proclaimed; both love and judgment, mercy and justice are attributed to one and the

same God; God’s infinity in time as the one God in the past, present, and future is declared. Although the concept of arithmetical oneness is involved also in the assertion of God’s unity, the latter is distinct in that God is here distinguished qualitatively rather than merely quantitatively. This assertion finds its expression mainly in philosophical speculation, where the uniqueness of God is understood as essentially conveying the non-composite, non-divisible nature of His being (see *Attributes of *God*). This is expressed by Maimonides when he says that God is “not one of a genus nor of a species and not as one human being who is a compound divisible into many unities; not a unity like the ordinary material body which is one in number but takes on endless divisions and parts” (*Guide of the Perplexed*, 1:51ff.). This means that “God is one in perfect simplicity” (Ḥasdai *Crescas, *Or Adonai*, 1:1, 1), that He is wholly other (Saadiah Gaon, *Book of Beliefs and Opinions*, 2:1), and unique (Bahya ibn Paquda, *Ḥovot ha-Levavot*, “*Sha’ar ha-Yihud*”). Even in rabbinic Judaism, although the emphasis is clearly placed on the two aspects of the monotheistic idea, i.e., the arithmetical oneness and the ontological uniqueness of God, the fundamental underlying assertion is that God is first and foremost a personal being. Thus, though shifting the emphasis, rabbinic Judaism remains fully bound to that aspect of the monotheistic idea where Judaism makes its fundamental and distinctive contribution to the history of religions.

[Manfred H. Vogel]

MONROE, MARILYN (1926–1962), U.S. actress. Monroe was born Norma Jean Mortensen in Los Angeles, California, to mechanic Edward Mortensen and RKO film technician Gladys Monroe. Her father abandoned the family before her birth, her mother was frequently institutionalized because of paranoid schizophrenia, and Monroe was raised in a series of foster homes. After a failed youthful marriage to James Dougherty and a few modeling jobs she changed her name to Marilyn Monroe. Contracts with Columbia and Fox resulted in small parts in John Huston’s *Asphalt Jungle* (1950), *All About Eve* (1950), *Let’s Make It Legal* (1951), *Niagara* (1952), and *Monkey Business* (1952). In 1953, she appeared nude in the first issue of *Playboy*, certifying her role as the All-American sex symbol. In 1954, she married baseball player Joe DiMaggio; however, the stormy marriage was brief and the couple divorced the same year. After making Billy Wilder’s *Seven Year Itch* (1954) she broke her contract with Fox and moved to New York City to study with Lee and Paula *Strasberg at the Actors Studio. Introduced to playwright Arthur *Miller by Elia *Kazan, she converted to Judaism in a ceremony officiated by Rabbi Robert Goldberg two days after they married. She went on to appear in a string of successful films, including *Bus Stop* (1956), *Some Like It Hot* (1959), and *Let’s Make Love* (1960). In 1961, she starred in *The Misfits*, which featured a script written

by Arthur Miller. The Huston film was a difficult shoot, and was followed by the death of star Clark Gable 12 days after it was completed. Monroe divorced Miller in 1961, and entered a New York psychiatric clinic later that year. She returned to Fox in 1962 to finish her part in the film *Something's Got to Give*, but was found dead in her Brentwood, California, home on Aug. 5; an autopsy found a lethal dose of barbiturates.

[Adam Wills (2nd ed.)]

MONSKY, HENRY (Zevi; 1890–1947), U.S. communal leader, organization executive, and lawyer. Monsky was born in Russia and taken as an infant to Omaha, Nebraska. Of Orthodox background, as a matter of principle he belonged to Reform, Conservative, and Orthodox synagogues. In 1921 he founded the Omaha Community Chest and Welfare Federation, serving as its first vice president and later as president (1929); he was a trustee of Boys' Town, a member of the National Board of Community Chests and Council, Inc., president of the Nebraska Council of Social Work, and chairman of the Executive Committee of the National Conference of Prevention and Control of Juvenile Delinquency. Monsky was elected president of the Omaha lodge of B'nai B'rith in 1912 and eventually served as national president of the organization (1938–47). In 1941 he was invited by President Franklin D. Roosevelt to plan for the Office of Civilian Defense.

A lifelong Zionist, Monsky succeeded in enlisting the support of non-Zionists in protests against the British White Paper, Cyprus internment, and restrictions of immigration to Palestine. On Dec. 8, 1942, he led a delegation of representatives of Jewish organizations to the White House to call Roosevelt's attention to the plight of the Jews of Europe and to request firm action against the Nazis. Monsky collaborated with Zionists as the principal organizer of the all-inclusive *American Jewish Conference of 1943 in Pittsburgh, Pennsylvania, at which the U.S. Jewish community endorsed the Zionist program of a Jewish commonwealth. In April 1945, as consultant to the U.S. delegation to the United Nations Organizing Conference in San Francisco, he effectively helped influence the UN leaders to guarantee the rights of any states or peoples living under international bodies such as the Palestine British Mandate. He testified before the 1946 Anglo-American Commission of Inquiry in favor of this demand and also served as a member of U.S. Attorney General Tom Clark's Juvenile Delinquency Board. Monsky's Jewish communal interests included leadership positions in the Council of Jewish Federation and Welfare Funds, the Joint Distribution Committee, the National Conference of Christians and Jews, the Jewish Welfare Board, the American Friends of the Hebrew University, and the United Palestine Appeal. A moshav in Israel, Ramat Zevi, is named in his memory.

[Benjamin Kahn]

MONTAGU, English banking family, prominent in politics and public life. SIR SAMUEL MONTAGU, FIRST BARON SWAYTHLING (1832–1911), banker, communal worker, and philan-

thropist, was born in Liverpool as Montagu Samuel, but in his boyhood the names were reversed. In 1853 he founded the merchant bankers, Samuel Montagu and Company. By securing a larger proportion of the exchange business, he helped make London the chief clearing house of the international money market. He was Liberal member of Parliament for Whitechapel from 1885 to 1900, and a benefactor to its poor, Jewish and non-Jewish. An advocate of, and writer on, decimalization of the currency and adoption of the metric system, he was consulted by successive chancellors of the exchequer on financial matters and in 1894 persuaded the government to exempt from death duties works of art and gifts to universities, museums, and art galleries. In 1894 he was made a baronet and in 1907 a baron. A strictly observant Jew, he assumed leadership of the Orthodox Russo-Jewish immigrants, founding in 1887 the Federation of Synagogues to unite the small congregations. More theologically "right-wing" than the mainstream United Synagogue, it continues to be a force in the Anglo-Jewish religious spectrum. He, however, worshiped at the fashionable New West End Synagogue and was a life member of the United Synagogue Council, though because of disagreements with its president, the first Lord Rothschild, he was inactive there. A masterful personality, he traveled to Palestine, Russia, and the United States on behalf of Jewry, but vigorously opposed Zionism.

His eldest son, LOUIS SAMUEL (1869–1927), SECOND BARON SWAYTHLING, was president of the Federation of Synagogues. Also an anti-Zionist, he declared, "Judaism is to me only a religion." He married Gladys, daughter of Colonel A.E.W. *Goldsmid. Their second son, EWEN EDWARD (1901–1985) was president of the United Synagogue (1954–62). As part of his wartime role in naval intelligence he originated and oversaw the famous scheme (known as "Operation Mince-meat") to fool the Germans into thinking that an Allied landing at Sardinia, rather than Sicily, was imminent in 1943. He did this by planting cleverly forged papers and documents on the corpse of a dead British vagrant, which was placed in such a way that it was certain to be found by the Germans. It was one of the greatest examples of successful wartime deception; Montagu's best-selling account, *The Man Who Never Was* (1953), was later made into a well-known film. After the War, he became judge advocate of the fleet and chairman of Middlesex Quarter Sessions (a leading London judicial post). Samuel Montagu's second son, EDWIN SAMUEL (1879–1924), a Liberal politician, was elected to parliament in 1906, becoming private secretary to Herbert Asquith (later prime minister). As parliamentary undersecretary of state for India from 1910 to 1914, he championed Indian aspirations to independence. In 1914 he became financial secretary to the Treasury, in 1915, chancellor of the duchy of Lancaster, and in 1916, minister of munitions. Secretary of state for India in Lloyd George's administration (1917–22), he was responsible for the Government of India Act (1919), devolving wide powers of self-government. He resigned in 1922, because of his opposition to government policy which was offensive to Indian Muslims,

and lost his parliamentary seat the same year. In Jewish affairs, he was best known as an uncompromising opponent of Zionism and of the Balfour Declaration, being largely responsible for the modification of the original text. In 1915 he married (Beatrice) Venetia Stanley (1887–1948), the daughter of the fourth Lord Sheffield, who had been the (probably non-sexual) confidante of Prime Minister Herbert Asquith. As a result of her marriage she converted to Judaism, but without enthusiasm. Samuel Montagu's daughter, Lillian (Lilly) Helen *Montagu (1873–1963), a social worker and magistrate, was a pioneer of Liberal Judaism in Britain, and thus father and daughter have the possibly unique distinction of founding significant religious movements on opposite ends of the Jewish religious spectrum.

[Vivian David Lipman / William D. Rubinstein (2nd ed.)]

MONTAGU, LILY (1873–1963), social worker, magistrate in the London juvenile courts, suffragist, writer, religious organizer, and spiritual leader. Born Lillian Helen Montagu in London, the sixth of ten children of Ellen Cohen Montagu and Samuel Montagu (né Montagu Samuel, later First Baron Swaythling), Lily Montagu founded and long remained the driving force behind the Liberal Jewish movement in England.

In 1893, Montagu established the West Central Jewish Girls' Club with her sister, Marion, and their cousin, Beatrice Franklin, to give working-class Jewish girls social, intellectual and spiritual opportunities. Montagu led brief Sabbath services in English, and addressed contemporary issues and concerns through sermons and selected traditional prayers. From 1890 until 1909, Montagu led similar services for children at the New West End Synagogue. Their success among women led her to envision ways of religiously revivifying the Anglo-Jewish community as a whole.

In 1899, in "The Spiritual Possibilities of Judaism Today," she asked all religiously committed Jews, traditional and liberal, to help her form an association aimed at strengthening the religious life of Anglo-Jewry through Liberal Jewish teachings. Influenced by Claude *Montefiore, scholar and proponent of Liberal Judaism, and inspired by the growth of Reform Judaism in Germany, Montagu established the Jewish Religious Union

(JRU) in February 1902. The Union instituted Sabbath afternoon worship services conducted along Liberal Jewish lines and held "propaganda meetings," led by Montagu, to clarify and spread its teachings. Montefiore agreed to serve as the group's official leader, thus strengthening its credibility, but Montagu assumed responsibility for daily affairs and major activities.

During the next few decades, Montagu helped form Liberal Jewish congregations throughout Great Britain, frequently serving as their chairman or president. She became lay minister of the West Central Liberal Jewish Congregation in 1928, a position to which she was formally inducted in November 1944, and which she held until her death in 1963. Following Montefiore's death in 1938, she became president of the JRU, a position she held for 23 years. Montagu also helped found and eventually became president of the World Union for Progressive Judaism, administering the organization's daily affairs from 1926 through 1959. At the first WUPJ conference in Berlin, in 1928, Montagu delivered a sermon in German, on "Personal Religion," at a worship service held in Berlin's Reform Temple; she was the first Jewish woman to occupy a German pulpit. Through her efforts, the number of World Union constituencies steadily increased and new Liberal Jewish congregations were created in Europe, South America, Israel, South Africa and Australia. In 1959, when the World Union's headquarters were transferred to the U.S., she was named honorary life president and elected to chair the Union's newly-established European Board. Many of her writings appear in *Lily Montagu: Sermons, Addresses, Letters, and Prayers* (ed. E.M. Umansky, 1985).

While most British Jews continued to maintain at least a formal attachment to Orthodoxy, Montagu succeeded in establishing Liberal Judaism as an important religious force in Anglo-Jewish life. A Lily Montagu Centre of Living Judaism, housing the West Central Liberal Jewish Congregation, the European Board of the World Union, and the offices of the Union of Liberal and Progressive Synagogues (formerly the JRU), was named in Montagu's honor following her death in 1963.

MONTAGU, MONTAGUE FRANCIS ASHLEY (1905–1999), physical and cultural anthropologist. Born in London, Montagu served as research associate in the British Museum of Natural History (1926–27) and as curator of physical anthropology at the Wellcome Historical Museum, London (1929–30). He emigrated to the U.S. and taught anatomy at New York University (1931–38) and Hahnemann Medical College and Hospital (1938–49), and was chairman of the anthro-

pology department at Rutgers University (1945–55). An expert in physical anthropology and evolutionary theory, he served as rapporteur of the UNESCO committee of experts which formulated the 1950 UNESCO *Statement on Race* (1951, 1952²), and was a member of the second UNESCO committee of experts of geneticists and physical anthropologists. Convinced that the idea of race was not only fallacious but antihuman and socially destructive, he dedicated his rhetorical and literary gifts to the production of a number of popular books on this question and on anthropological themes of large humanistic interest. Among his best-known works are *Coming into Being among the Australian Aborigines* (1937, 1938²), *Man's Most Dangerous Myth: The Fallacy of Race* (1942, 1998⁶), *The Natural Superiority of Women* (1953, 1991⁴), *Human Heredity* (1959, 1964²), *Man in Process* (1961), and *The Direction of Human Evolution* (1955, 1959³), *Touching: The Human Significance of the Skin* (1971, 1985³), and *The Elephant Man* (1971, 1996³).

[Ephraim Fischhoff]

MONTAIGNE, MICHEL DE (1533–1592), French writer and philosopher. His mother, Antoinette de Louppes de Villanueva, came from a Spanish Jewish family. One of her ancestors, Mayer Pacagon of Catalayud was forcibly converted to Catholicism and took the name of Lopez de Villanueva. His descendants, however, remained secretly faithful to Judaism, and several of them were persecuted by the Inquisition. One of them, Juan de Villanueva, from whom Montaigne's mother was descended, fled to Toulouse, France, where he settled. She later married the Catholic Eyquem de Montaigne, her uncle's business partner. Montaigne studied at the College de Guyenne run by Portuguese New Christians and, later, at Toulouse University, a center of New Christian ferment and heterodoxy. From 1557 to 1570 Montaigne held a post at the Bordeaux Parliament and at the Court of France. He began his literary career in the late 1560s by translating the *Natural Theology* of Raimond Sebon, a Spanish theologian, and editing the works of his deceased friend, La Bœtie, a gifted young writer and thinker. In 1571 Montaigne retired from public life and wrote his *Essais* but, after a journey through Italy (1580–81), he was elected mayor of Bordeaux. In spite of his return to public office, Montaigne devoted much of his time to the continuation of the *Essais*. His humanistic skeptical philosophy, which had an enormous impact on later writers, undermined thinkers' acceptance of received theories. Philosophers such as Bacon, Descartes, Gassendi, and Pascal tried to overcome Montaigne's skepticism by finding new or different bases for knowledge. Montaigne also had a deep influence on English literature. Shakespeare cited him in a number of plays, notably in *The Tempest*, and he also inspired Dryden. The essay, as a literary form, is Montaigne's creation, and admirably suits the freedom of thought and open-mindedness he wished to attain.

It is difficult to know what Montaigne actually thought of the Jews, for this was a dangerous subject in those days of

religious intolerance. Almost all his references to the Jews, however, show a sympathetic attitude. In the *Essais* he mentions disapprovingly the persecutions in Portugal, as well as the Jews' stubborn loyalty to their religion (Book I, chap. 14). But it is in the Travel Diary (*Journal de Voyage*), not intended for publication (it saw the light for the first time in 1774), that numerous references are found to Jewish life and customs, as Montaigne saw them at first hand during his Italian journey. There is no doubt that he went out of his way to visit synagogues, attend Jewish ceremonies, and converse with Jews. Montaigne gives a detailed, accurate and sympathetic account of Sabbath services and a circumcision ceremony. He comments on the communal participation in prayer, study, and discussion, and on the widespread knowledge of Hebrew, even among children. On February 6, 1581, he witnessed a pre-Lent "entertainment": burlesque races on the Corso, in which half-naked Jews had to take part. He also attended a conversion sermon, given by a famous preacher, himself a converted Jew, who used his talmudic knowledge to convince his brethren to convert. In all these instances his tone is objective, detached, and completely free from the accepted prejudices of the time. But two facts remain puzzling: Montaigne's obvious interest in Jewish life and his refraining from any mention of his mother in the *Essais*, a largely autobiographical work. Some critics interpret this as proof that Montaigne was deeply preoccupied with his Jewish identity and, for reasons of caution, deliberately avoided any reference to it. This may be so, but one basic fact is unknown, whether Montaigne even knew of his mother's Jewish ancestry. It seems doubtful, as her ancestors had been Christian for several generations, and no one, in those intolerant days, would have gone out of his way to unearth his Jewish ancestry. Montaigne may have had other reasons for emphasizing his father's influence and ignoring his mother's. His education, which partially determined his philosophical direction, was shaped by his father. Furthermore his mother, like his siblings who are absent from the *Essais*, converted to Protestantism and this, for a public figure such as Montaigne, was not an asset in the midst of the religious wars. As to his display of interest in Jewish life in Italy, it could well be that of a liberal humanistic non-Jew, keen as he was on heterodox, free, original ways of living and thinking, as manifested in various groups of outsiders, and unaffected by the current oppressive Church restrictions. Unless other manuscripts come to light, which is unlikely, the question remains open.

[Denise R. Goitein]

MONTANA, one of the Rocky Mountain states of the United States. In 1969 it had a Jewish population of 615 out of a total

Jewish communities in Montana and dates of establishment. Population figures for 2001.

of 710,000. By 2001 Montana has a Jewish population of some 800 among 903,000.

According to one observer, Montana's Jews tend to fall into three categories: remnants of the pioneer community still in Helena or Butte; out-of-state professionals who mass in university towns such as Bozeman or Missoula; the lone Jew who lives in Townsend or Ennis or Miles City. The community is united by the Montana Association of Jewish Communities (MAJCO).

Member communities include Aitz Chaim (Great Falls Jewish Community), Bet Harim (Flathead Valley Jewish Community), Beth Aaron (Billings Jewish Community), Beth Shalom (Bozeman Jewish Community), Har Shalom (Missoula Jewish Community), and B'nai Israel (Butte Jewish Community). MAJCO regularly holds a shabbaton in the spring of each year. Chabad has sent summer rabbis to work with the community and is planning a full-time rabbinic presence in Bozeman, perhaps the liveliest of the Jewish communities.

The first Jews, who arrived in 1862 during the gold rush at Bannock and Virginia City, were miners, wagon drivers, merchants, freighters, hotel and saloon keepers, lawyers, and journalists, many of whom became solid citizens in the raucous mining camps. Ben Ezekiel was chief clerk of the first territorial legislature and Jacob Feldberg was a member of Virginia City's first town council. Jews were also among the leaders of the vigilantes who suppressed outlawry. The oldest Jewish settlement dates from 1864, with the arrival of Jewish merchants in Helena. One of the pioneers was Gumpertz Goldberg, for whose wife Helena is said to have been named. The First Hebrew Benevolent Society, organized in 1865, became the nucleus for Temple Emanu-El, founded in 1887; their synagogue, the state's first synagogue, was built in 1891. When the Jewish community declined in the 1920s, the synagogue was deeded to the state, and it now houses the State Department of Public Welfare. When

Butte became the biggest city in the state following the silver and gold booms around Anaconda in the 1870s, most of the early Jewish settlers and the later arrivals settled there. There was a Jewish congregation, Beth Israel, in Butte in 1877. It split over ritual in 1897 and a second one came into being, but today there is only one congregation with a synagogue dating from 1904. Long before Montana became a state in 1889, its Jewish residents were counted among its leading citizens. Henry Jacobs was Butte's first mayor in 1879, and Henry Lupin held that office from 1885 to 1889. Charles S. Cohan, editor of *The Butte Miner*, wrote the words for the state song. One of the early cattlemen was Louis Kaufman, who employed the cowboy artist Charlie Russell. Between 1873 and 1906 four Jews were grand masters of the State Masonic Grand Lodge: Sol Star, Moses Morris, H. Sol Hepner, and Henry I. Frank, a former mayor of Butte. Livingston, Great Falls, and Havre also had Jewish mayors before 1900. Among the colorful figures in the early days of the state were Daniel Bandman, a Shakespearean actor who brought theater to the mining camps (Bandman's Bridge outside Missoula is named for him); Moses Solomon, a Buffalo hunter and Indian fighter; and Philip Deidesheimer, a mining superintendent, who invented the square set system of mining timbers and for whom Philipsburg is named. The Bob Marshall Wilderness Area of 950,000 acres in the Flathead National Forest is named for the son of Louis *Marshall, who was chief of the division of recreation in the U.S. Forest Service.

The story of Billings, Montana, tells much about the paradox of Jewish life in Montana. In 1993 Billings had a population of 48 Jewish families among 81,000 residents. Hate literature appeared in mailboxes; the synagogue was painted with a swastika along with a picture of a Jew being shot by *Einsatzgruppen*, tombstones were overturned, Holocaust denial literature was circulated, and the homes of two Jewish families including the symphony conductor, which had been adorned with menorahs, had their windows broken. A cinder block was thrown through a Jewish child's window. The local Church Council and the senior minister of the First Congregational Church passed out menorahs to his congregation. He put a menorah in his own window. The newspaper printed a full page cutout of a menorah. The chief of police characterized the response: "It became physically impossible for the hate group to harass and intimidate thousands and thousand of Billings' citizens ... We have spoken one very loud voice." In this case, the response to hatred was a united chorus of solidarity. The specific motif of the Holocaust, which was the threat of the hate groups, was embraced by the community to say, "We will behave differently." Hatred will not triumph. The Jews will not be isolated but embraced. It was a hopeful moment for all concerned.

MONTCLUS (Heb. מונטקלוס, מונטקלוש, הר סגור), former town and fortress at the foot of the Pyrenees, in Aragon, western Spain. Jews apparently lived in the fortress of Montclus and the adjacent area from the beginning of the 11th century. The annual tax paid by the community in the 13th century was reduced by the king from 800 to 500 solidos in 1271, increased to 707 solidos and 3½ denarii in Jaca coin in 1304, and again reduced to 450 solidos in 1315. In 1298 James II ordered an investigation on the rate of interest charged by Jews on loans.

The Montclus community helped to rehabilitate Jews expelled from France in 1306. In 1307 the king authorized the community to absorb four families, including those of the physician Maestre Boninfante and Vitalis de Boulogne. However, between the end of June and the beginning of July 1320, the community was annihilated in the *Pastoureaux (Shepherds) massacres. On July 22, James II ordered that assistance should be given to the survivors, but that Jewish children who had been forcibly baptized were to remain in Christian households. In 1321 the king freed the remnant of the community from paying taxes and ordered that the walls of the fortress should be rebuilt, but by 1323 the Jews of Montclus had to pay taxes like the other Jews of the kingdom to finance the royal expedition to Sardinia. His successor, Alfonso IV, in 1335 freed the community from paying taxes, as did Pedro IV in 1341–42. Nevertheless, when disorders broke out in 1333, the commander of the fortress, Garcia Bardaxi, did nothing to prevent the rioters from massacring the Jews and was pardoned.

With the expulsion of the Jews from Spain in 1492, Montclus began to decline. In the 17th century it was completely abandoned.

[Haim Beinart]

MONTEFIORE, CLAUDE JOSEPH GOLDSMID (1858–1938), theologian and leader of Liberal Judaism in England. Montefiore was a great-nephew of Sir Moses *Montefiore and a grandson of Isaac Lyon *Goldsmid. He studied at Balliol College, Oxford, where he came under the influence of the master of Balliol, Benjamin Jowett, the famous liberal Christian thinker. Later he studied Judaism at the *Hochschule (Lehranstalt) fuer die Wissenschaft des Judentums in Berlin, and under Solomon *Schechter, whom he had taken to England as his private tutor. A man of means, Montefiore did not serve as a professional scholar or man of religion but nevertheless frequently preached eloquent sermons.

In 1888 he founded the *Jewish Quarterly Review*, which he financed and edited, with Israel *Abrahams, as coeditor, until 1908. He was the founder in England of a radical Reform movement (Jewish Religious Union, 1902), which led in 1911 to the establishment of the Liberal Jewish Synagogue; he served as its president. In 1926 Montefiore was elected president of the

World Union for Progressive Judaism, an office which he held until his death. Together with the Catholic theologian Baron von Hugel, he founded the London Society for the Study of Religion, a select group of Jewish and Christian thinkers which met regularly to read and discuss papers on the philosophy of religion. A generous philanthropist, he assisted many Jewish and general good causes. He was a determined opponent of Zionism, and as president of the *Anglo-Jewish Association (1895–1921) tried to prevent the signing of the Balfour Declaration. He was president of the Jewish Religious Union and of the Jewish Historical Society of England (1899–1900). He also played a major part in the educational life of the Jewish community and beyond, and University College, Southampton, presented him with a volume of essays on his 70th birthday (*Speculum Religionis*, 1929).

Works

Montefiore was a prolific writer. In addition to numerous articles in periodicals, he wrote: *Aspects of Judaism* (1895²), sermons, together with Israel Abrahams; *Bible for Home Reading* (2 vols., 1897–1899²); *The Synoptic Gospels* (2 vols.; 1909; 1927²; repr. 1968), a commentary on the Gospels primarily for the Jewish reader; *Liberal Judaism* (1903); *Some Elements of the Religious Teaching of Jesus* (1910); *Outlines of Liberal Judaism* (1912, 1923²); *Judaism and St. Paul* (1914); *Liberal Judaism and Hellenism* (1918); *The Old Testament and After* (1923); *Rabbinic Literature and Gospel Teaching* (1930); and *A Short Devotional Introduction to the Hebrew Bible for the Use of Jews and Jewesses* (1936). Together with Herbert *Loewe, Montefiore published: *A Rabbinic Anthology* (1938; repr. 1960, 1963), a collection of rabbinic teachings with remarkable notes by the two editors, one Liberal and the other Orthodox. Montefiore delivered the Hibbert Lectures (1892) on *Origin and Growth of Religion as Illustrated by the Religion of the Ancient Hebrews*.

Thought

At the center of Montefiore's thought was his complete conviction of the truth of Jewish theism. He acknowledged that the Jewish conception of God and His relation to man and that of the relation of religion to morality are akin to but not identical with Christian conceptions dealing with these themes. The distinctiveness of Jewish theism lies in its insistence on both the transcendence and immanence of God. Montefiore holds that modern Biblical scholarship has demonstrated conclusively that the Pentateuchal Code is not Mosaic, homogeneous, and perfect. Yet this does not mean that the conception of law in religion should be abandoned. Man discovers the Law within him but it is also revealed to him.

Montefiore was very suspicious of Jewish nationalism because of its "narrowness" and its betrayal, in his view, of Jewish universalism. He was so much at home in England that his affinities were much closer to his native land than to the community of Israel throughout the world.

The greatest cause of offense to traditionalists was Montefiore's leaning toward Christianity. He viewed Christianity entirely sympathetically, and seemed to look forward to the

religion of the future as embracing all that is good in both Judaism and Christianity as well as in other religions.

Montefiore's main contention is that in some respects but not in others the Christian ethic is more admirable than the Jewish, and that there is a mystical, appealing note sounded in the Gospels not sounded in quite the same way in the Bible. Jesus, for Montefiore, was a great teacher but not divine as Christians have it. He was opposed to any attempt at placing the New Testament on a par with the Hebrew Scriptures or at having readings from the New Testament in any act of Jewish worship. He, nevertheless, felt that the time had come for Jews to read and understand the New Testament and even allow it to occupy an honored place in present-day Judaism. Soon after the publication of *The Synoptic Gospels*, Aḥad Ha-Am launched a vigorous attack against it (*Al Parashat Derakhim*, 4 (1921), 38–58). Aḥad Ha-Am argued that Jewish ethic, based on justice, is incompatible with the Christian ethic based on love, so that it is impossible for the same man to embrace both of them at the same time. In his very last years, when the Nazi regime was systematically persecuting German Jewry, Montefiore may have been moving away from his adamant stance on the issues of Jewish nationalism and Zionism, but died before the full impact of the Holocaust and, later, the creation of Israel, might have necessitated a full-scale revision of his views.

[Louis Jacobs]

MONTEFIORE, JOSEPH BARROW (1803–1893), Australian pioneer. A cousin of Sir Moses *Montefiore, Joseph Barrow Montefiore was born in London. At the age of 23, he bought a seat on the London Stock Exchange and became one of the 12 "Jew brokers" in the city. He immigrated to Australia in 1829 with considerable means at his disposal and was granted 5,000 acres of land. In Melbourne, Sydney, and later in South Australia, he acquired extensive parcels of land. In 1838 he was invited to give evidence to the House of Lords on the state of the islands of New Zealand. He and his elder brother Jacob, who was one of the 11 commissioners appointed by King William IV to organize the administration of South Australia, helped to establish the Bank of Australasia. Montefiore, who had ultimately made his home in Adelaide, became one of its most prominent commercial and industrial figures. When in Sydney, he was South Australia's agent in New South Wales, and one of the original trustees of the State Savings Bank of

South Australia. In 1832 Montefiore helped to organize Australia's first congregation, the Sydney Synagogue, the predecessor of the Great Synagogue, and was its first president. He was a trustee of the Jewish cemetery, for which he had secured a land grant from the government. The township of Montefiore in New South Wales and Montefiore Hill in Adelaide are tributes to the pioneering work of Montefiore and his family. He spent the last years of his life in England.

[Israel Porush]

MONTEFIORE, JOSHUA (1762–1843), British-born lawyer and author. Montefiore, an uncle of Sir Moses *Montefiore, was born in London. Most unusually, he attended Oxford University and was admitted to practice as a solicitor in 1784. In 1787 he was in Jamaica, where discriminatory precedent prevented his admission as an attorney and notary. He participated in an unsuccessful expedition in 1791 to establish a British colony without slave labor off the west coast of Africa, near Sierra Leone, an adventure he described in *An Authentic Account of the Late Expedition to Bulam* (1794). Montefiore allegedly declined a knighthood and was the first Jew to hold the rank of captain in the British army. Around 1810 he went to the United States, pursued the practice of law, and for a time edited a New York weekly political journal, *Men and Measures*, said to have been subsidized by the British government. Montefiore compiled a number of useful lay guides to commercial law which sold briskly in England and the U.S., including *Law of Copyright* (1802), *Commercial Dictionary* (1803; first U.S., ed., 1811), *Traders and Manufacturers Compendium* (1804), *American Traders Compendium* (1811), and *Commercial and Notarial Precedents* (1804). Montefiore's second wife was a Catholic, but his eight children were raised as Protestants. At his request, he was buried on the farm on the outskirts of St. Albans, Vermont, where he had settled in 1835.

[Isidore S. Meyer]

MONTEFIORE, JUDITH (1784–1862), daughter of Levi Barent *Cohen and wife of Sir Moses *Montefiore, whom she married in 1812. Her influence on her husband was profound. She left a diary of their first visit to Palestine in 1827 and described their second visit in 1838 in her *Notes from a Private Journal* (1844). She was the author, or coauthor, of the first Anglo-Jewish cookbook, the *Jewish Manual* by "A Lady" (1846). She was commemorated by her husband in the foundation of the Judith Lady Montefiore College. Originally lax in observance, she later returned to strict Orthodox practice.

[Sonia L. Lipman]

MONTEFIORE, SIR MOSES (1784–1885), most famous Anglo-Jew of the 19th century. Montefiore was born in Leghorn while his parents were on a visit from London, where he was brought up, being taught elementary Hebrew by his maternal uncle Moses *Mocatta. First apprenticed to a firm of wholesale grocers and tea merchants, he left to become one of the 12 “Jew brokers” in the City of London. After initial setbacks, he went into partnership with his brother Abraham, and the firm acquired a high reputation. His marriage in 1812 to Judith Cohen (see Judith *Montefiore) made him brother-in-law of Nathan Mayer *Rothschild, for whom his firm acted as stockbrokers. After his retirement from regular business in 1824, though he retained various commercial directorships, he had the time and the fortune to undertake communal and civic responsibilities.

Contrary to accepted opinion, he was apparently somewhat lax in religious observance in earlier life; but from 1827, after his first visit to Erez Israel, until the end of his life, he was a strictly observant Jew. Montefiore maintained his own synagogue on his estate at Ramsgate from 1833 and in later years traveled with his own *shohet*. His determined opposition checked the growth of the Reform movement in England. Though a patron of scholars, he had no pretensions to scholarship himself. He paid seven visits to Erez Israel, the last in 1874. In 1838 his scheme for acquiring land to enable Jews in Erez Israel to become self-supporting through agriculture was frustrated when Mehmet Ali, viceroy of Egypt, who had shown sympathy for the idea, was forced by the great powers to give up his conquests from the Turks. He later attempted to bring industry to the country, introducing a printing press and a textile factory, and inspired the founding of several agricultural colonies. The Yemin Moshe quarter outside the Old City of Jerusalem was due to his endeavors and named after him. In 1855, by the will of Judah *Touro, the U.S. philanthropist, he was appointed to administer a bequest of \$50,000 for Jews of the Holy Land.

Montefiore was sheriff of London in 1837–38 and was knighted by Queen Victoria on her first visit to the City. He received a baronetcy in 1846 in recognition of his humanitarian efforts on behalf of his fellow Jews. Although president of the *Board of Deputies of British Jews from 1835 to 1874 (with only one brief interruption), he did not, after the early years, play a prominent part in the emancipation struggle but devoted himself to helping oppressed Jewries overseas. He has been described as the last of the *shtadlanim who by their personal standing with their governments were able to further the cause of Jews elsewhere. He was active as such from the time of the *Damascus Affair in 1840. In 1846, he visited Russia to persuade the authorities to alleviate persecution of the Jewish population, and went to *Morocco in 1863 and *Romania in 1867 for the same purpose. His intervention in the *Mortara Case in 1855, however, proved a failure. Some of his achievements appear in retrospect as transitory. Although in 1872, after representing the Board of Deputies at the bicentenary celebrations of Peter the Great, he reported

that a new age had dawned for the Jews of Russia, persecution was renewed in 1881. Lover of Erez Israel though he was and believer in the messianic restoration of a Jewish state, he did not conceive of large-scale, planned development of the country as a solution to the Jewish problem. This was largely because Montefiore (and his contemporaries) trusted absolutely in the inevitability of progress and with it worldwide emancipation for the Jews.

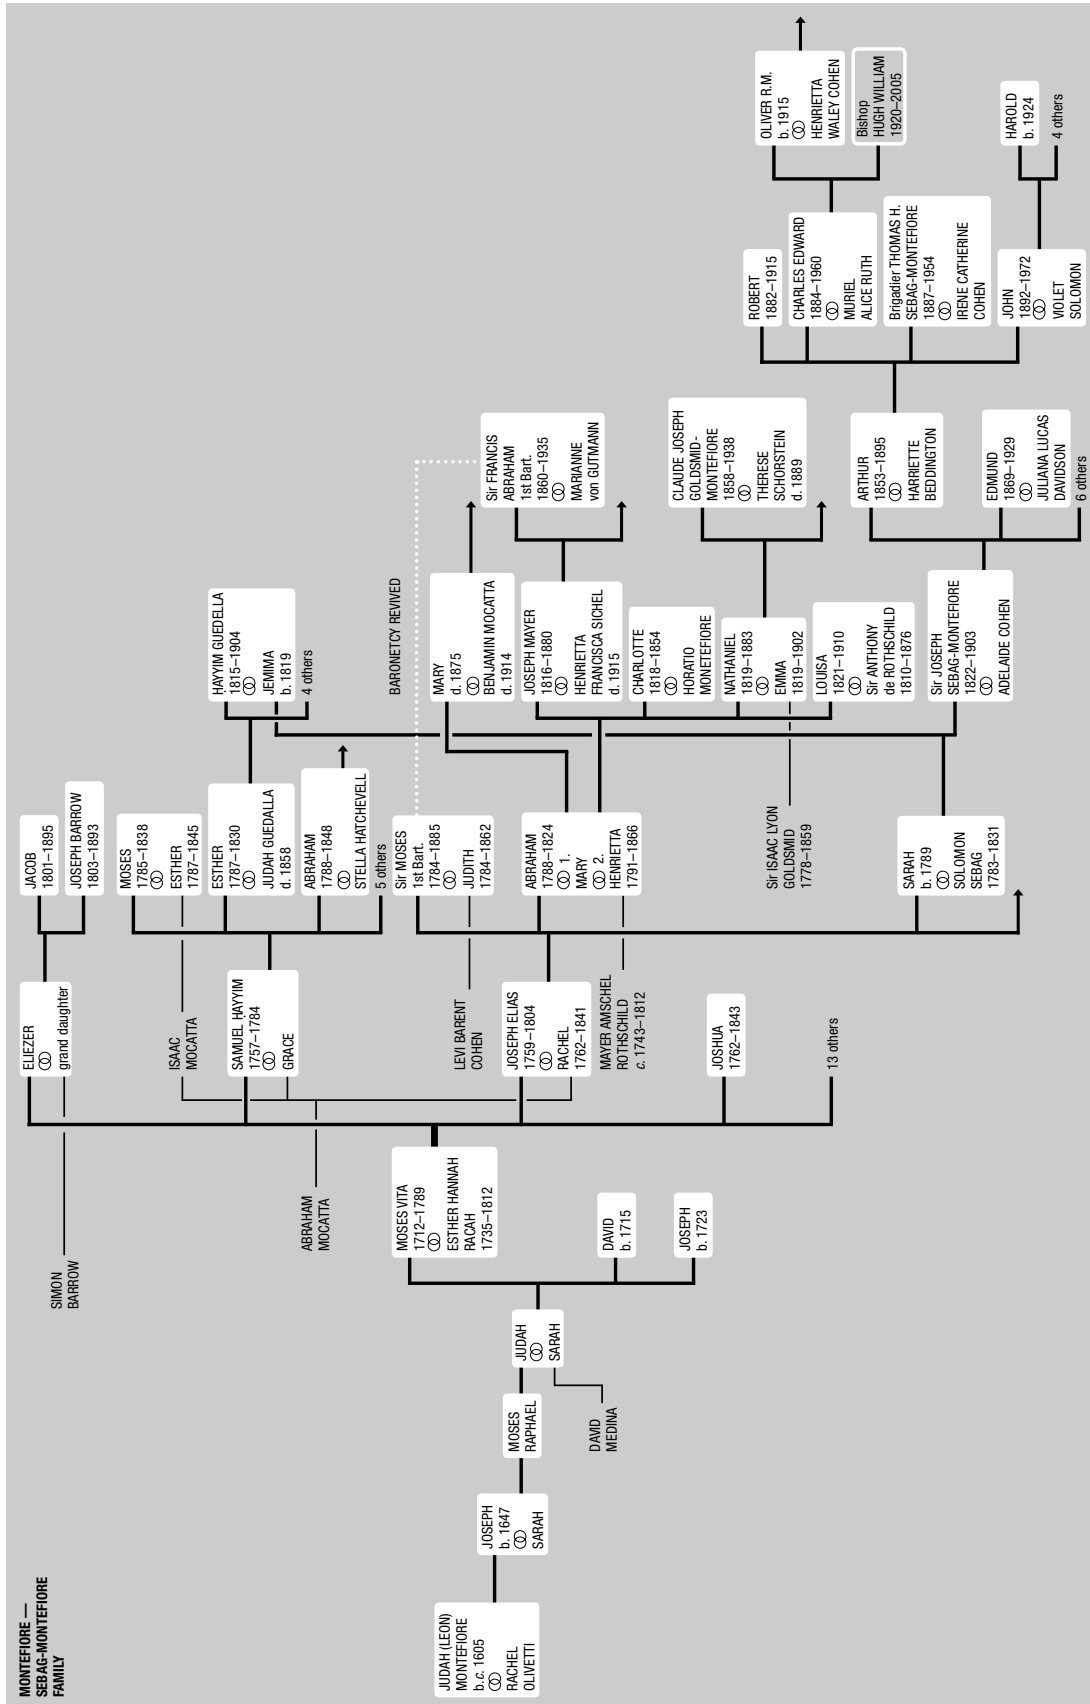

Nevertheless, both in his own lifetime and since, he enjoyed enormous prestige. Montefiore’s physical presence (he was 6 ft. 3 in. tall), his commanding personality, his philanthropy, and his complete disinterestedness, made him highly respected and admired both in England and abroad. The support of the British government for his activities – consonant with British policies overseas – and the personal regard shown him by Queen Victoria added to his reputation. His 100th birthday was celebrated as a public holiday by Jewish communities the world over.

One of the most famous Jews of the 19th century, Moses Montefiore was important for many different reasons, for instance as an early, influential Zionist. His most significant role, however, might have been as arguably the template of a wealthy, influential, well-connected Jew in a Western democracy, who used his influence to ameliorate the condition of persecuted Jews in countries where antisemitism was rife. This model of Jewish leadership has persisted, perhaps as the norm, into our own times.

[Vivian David Lipman]

MONTEFIORE, SEBAG-MONTEFIORE, English family originating from Leghorn, Italy. (See Chart: Montefiore Family 1, 2, and 3). The first to come to England were the brothers MOSES VITA (1712–1789), who set up successfully as an importer of Italian straw hats, and JOSEPH (b. 1723). The former had 17 children who intermarried with the Anglo-Jewish families. His grandsons Joseph Barrow *Montefiore (1803–1893) and JACOB MONTEFIORE (1801–1895) were prominent in early Australian history; two other sons were Joshua *Montefiore and JOSEPH ELIAS (1759–1804) who married Rachel Mocatta and was the father of Sir Moses *Montefiore. Sir Moses’ brother and business partner, ABRAHAM (1788–1824), married as his second wife Henrietta Rothschild. Their two sons were JOSEPH MAYER (1816–1880) and NATHANIEL (1819–1883), the father of Claude Goldsmid *Montefiore. Joseph Mayer succeeded Sir Moses as president of the Board of Deputies in 1874, after having been the first vice president since 1857. Under his presidency the Board and the Anglo-Jewish Asso-

ciation cooperated to form the Conjoint Foreign Committee. Joseph Mayer's eldest son, Sir Francis Abraham Montefiore, succeeded to Sir Moses' baronetcy in 1886, when the title, which had become extinct, was revived in his favor. With his death, the title became extinct.

Sir Moses' sister SARAH (b. 1789) married Solomon Sebag (1783–1831). Their son JOSEPH (1822–1903), a stockbroker who amassed a fortune, was the closest associate of Sir Moses in his last years and heir to his Ramsgate estate. In 1885 he added the name of Montefiore to his own by royal license, the family name henceforward being Sebag-Montefiore. He was a justice of the peace, high sheriff of Kent in 1889, and was knighted in 1896. Joseph, who had accompanied Sir Moses to Erez Israel in 1866, remained concerned with the welfare of the Jews there, administering on behalf of the Spanish and Portuguese synagogue the Holy Land Trust bequeathed by Sir Moses. In the 1890s he was a vice president of the Hovevei Zion (*Hibbat Zion). He was president of the Board of Deputies from 1895 until his death. His grandson ROBERT (1882–1915), a leading member of the London County Council and the Anglo-Jewish community, was killed in World War I. The London County Council named an East London school in his memory.

In the mid-20th century, some members of the family remained active both in public life and in the Sephardi community: BRIGADIER T.H. SEBAG-MONTEFIORE; OLIVER SEBAG-MONTEFIORE, a president of the London Jewish Welfare Board; and HAROLD SEBAG-MONTEFIORE (b. 1924), a Conservative member of the Greater London Council and president of the Anglo-Jewish Association. However, as with many of the older and wealthier Anglo-Jewish families, there has been considerable assimilation into English society, many of the members marrying non-Jews. An example was Sir Joseph's great-grandson, HUGH WILLIAM MONTEFIORE (1920–2005), converted to Christianity while still at Rugby school and entered the Anglican Church in 1949. He taught theology at Cambridge (1951–63), was appointed bishop suffragan of Kingston upon Thames, Surrey, and, in 1978–87, was Bishop of Birmingham, where he became nationally known. Montefiore was well aware of his Jewish origins. He is the author of *On Being a Christian Jew* (1999) and of an autobiography, *Oh God, What Next?* (1995), as well as dozens of other theological works.

[Vivian David Lipman]

MONTÉLIMAR, town in the department of Drôme, S.E. France. The first explicit mention of the presence of Jews in Montélimar dates from 1222. The community attained considerable importance during the 14th and first half of the 15th centuries. The synagogue, remains of which still existed at

the end of the 19th century, was situated in the Rue de Juiverie or the Rue Puits-Neuf; the school (or possibly another synagogue) was near the Porte Saint-Martin and the cemetery to the northwest of the present cemeteries. The community also maintained a special butcher's shop. As late as 1452, the dauphin granted the Jews of Montélimar, with Jews in several other localities of Dauphiné, some advantageous privileges; the municipal authorities, however, endeavored to render the lives of the Jews intolerable, for instance by compelling them to attend missionary sermons from 1453 onward. The same situation occurred at the end of the century: in 1476, King Louis XI had granted letters of protection to the Jews of Montélimar; however, in 1486, when only seven Jewish families remained there, the townsmen accused them of debauchery and shady practices and demanded their expulsion. From 1489, there no longer appear to have been Jews in Montélimar and the Jewish cemetery was closed. At the beginning of World War II, 150 Jewish families found refuge in Montélimar. There was no organized Jewish community in Montélimar in the 1960s.

[Bernhard Blumenkranz]

MONTEREAU (Montereau-Faut-Yonne), town in the department of Seine-et-Marne, France. A Jewish community existed in Montereau by 1228 consisting of at least 12 families. In 1251, the Jews of Montereau are mentioned in the poll tax roster of the Jews of Champagne. A new community was constituted after the return of the Jews to France in 1359. The houses of two of its members, Benion of Salins and Sannset of Baumes, were looted during the riots of 1381. The memory of the medieval community was preserved until the 18th century in the name of a quay known as the Port-aux-Juifs.

[Bernhard Blumenkranz]

°MONTESQUIEU, CHARLES LOUIS DE SECONDAT, BARON DE LA BREDE ET DE (1689–1755), French writer and political philosopher. Montesquieu inherited the humanistic French tradition of Jean *Bodin, with his vision of a society tolerant toward all religions, including Judaism. His earliest statement on the Jews was in the *Lettres Persanes* (1721), 50, where he described Judaism as “a mother who has given birth to two daughters [Christianity and Islam] who have struck her a thousand blows.” In *L'Esprit des lois* (25:13), published in 1748, he reacted to the burning of a ten-year-old Jewish girl by the *Inquisition with an eloquent denunciation cast in the form of an argument written by a Jew: “You complain [he said to the inquisitors] that the emperor of Japan is having all the Christians in his domain burnt on a slow fire; but he could answer you: ‘We treat you, who do not believe as we do, as you

treat those who do not believe as you do'... If you do not want to be Christian, at least be human." Nevertheless, he was not entirely uncritical of the Jews. Also in the *Lettres persanes*, his traveler writes: "Know that wherever there is money there are Jews." In a passage from *Mélanges inédits*, which was published posthumously (1892), the rabbinic texts are considered to have fashioned the low taste and character of the Jews, for there was not "one among [the rabbis] of even a minor order of genius." But this private opinion of Montesquieu at his most Christian was unknown in the 18th century. His relativistic view, which ran counter to *Voltaire's absolute deism in favor of an appreciation of the Jew and Judaism as one of the many valid forms of culture and religion, was one that influenced history.

[Arthur Hertzberg]

MONTEUX, PIERRE (1875–1964), conductor. Born in Paris, Monteux studied at the Paris Conservatoire where he won the first prize for violin in 1896. He played the viola in various orchestras and founded an orchestra of his own, the Concerts Berlioz. From 1911 to 1914 he conducted the Ballets Russes of Diaghilev, giving the first performances of Ravel's *Daphnis et Chloë*, Debussy's *Jeux*, and Stravinsky's *Petrouchka*, *Le Sacre du Printemps*, and *Le Rossignol*. He was conductor of the Metropolitan Opera in New York from 1917 to 1919 and then of the Boston Symphony Orchestra until 1924. From 1924 to 1934 he appeared as second conductor of the Concertgebouw in Amsterdam. He founded the Orchestre Symphonique de Paris (1929–38), and from 1936 to 1952 he was director of the San Francisco Symphony Orchestra. Monteux's conducting was faithful to the intentions of the composer and combined brilliant technique with profound musical culture. From 1961 until his death, Monteux was chief conductor of the London Symphony Orchestra.

MONTEVIDEO, capital of Uruguay with a population of 1,200,000, and a Jewish population of 23,500 in 2005 (90.78% of the Jewish population of the country). Some 13,000 former Uruguayan Jews live in Israel. The community was established before World War I by immigrants from Eastern Europe and the Middle East. The main representative body is the Comité Central Israelita (Jewish Central Committee), constituted of four *kehillot*: Jewish community of Montevideo (Ashkenazi), the Sephardi community, the New Jewish Congregation (German-speaking) and the Hungarian Jewish society. All of them together embrace the majority of the Jews except those of Communist ideology and affiliations. Another main body is the Zionist Organization of Uruguay (OSU), the roof organi-

zation and central authority of the local Zionist movement, its political factions, women organizations, and youth movements as well as both national funds – Keren Kayemet and Keren Hayesod–Hamagbit. For more details see *Uruguay.

[Nahum Schutz (2nd ed.)]

MONTEZINOS, ANTONIO DE (Aaron Levi; d. c. 1650), Marrano traveler. On a trip to South America during 1641–42, Montezinos discovered a group of natives in Ecuador who could recite the *Shema* and were acquainted with other Jewish rituals. He brought this news to Amsterdam in 1644, and the congregational authorities – *Manasseh Ben Israel among them – had him repeat his account under oath. The assumption was that these natives were a remnant of the *ten lost tribes, of the tribes of Reuben and Levi according to Montezinos. He then left for Brazil where he died, reasserting on his deathbed the truth of his report. Manasseh Ben Israel dwells on Montezinos' discovery in a booklet entitled *Esperança de Israel* ("The Hope of Israel," Amsterdam, 1650), which he dedicated to the British parliament, appending it to his petition for the readmittance of Jews to England. His thesis was that Montezinos' account points to an imminent fulfillment of the messianic prophecy of the lost tribes of Israel being reunited with Judah. The Montezinos report aroused literary interest even outside Jewish circles. In 1650 Thomas Thorowgood (1595–1669) published his *Iewes in America, or Probabilities that the Americans Are of that Race*. In reply Sir Hamon L'Estrange (1583–1654) wrote *Americans no Iewes, or Improbabilities that the Americans Are of that Race* (London, 1652). Thorowgood then retorted with *Jews in America, or Probabilities that those Indians are Judaical, Made More Probable by Some Additional to the Former Conjectures* (London, 1660).

MONTEZINOS, DAVID (1828–1916), librarian and bibliophile in Amsterdam. His father, Raphael Montezinos, served as rabbi of the Portuguese community there from 1852 to 1866. David studied at the Ez Ḥayyim seminary where he obtained the title *Maggid*. An enthusiastic bibliophile, he acquired one of the largest private libraries of the time. In 1866 he was appointed librarian of the Ez Ḥayyim library. In 1889, after the death of his wife, he donated his private collection to the library of the seminary, including 20,000 books, pamphlets, manuscripts, and illustrations. It contained extensive material relating to the Jews in Holland, and in particular to the Spanish-Portuguese community. The library was named after Montezinos and was directed by him until his death. Montezinos wrote a number of bibliographic studies, published in *Letterbode*, as well as a monograph on David *Franco-Mendes, published in 1867 in *Joodsch-letterkundige bijdragen*.

BIBLIOGRAPHY: J.S. de Silva Rosa, *David Montezinos, de stichter der "Livreria D. Montezinos"* (1914); idem, *David Montezinos* (Dutch, 1917); idem, *Geschiedenis der Portugeesche Joden te Amsterdam* (1925), 153ff.

MONTI DI PIETÀ (*Montes pietatis*), savings and loan agencies originally formed in Italian cities in the mid-15th century; considered as the predecessors of the modern credit union. Historically, the word *mons* was used during the Middle Ages to designate funds collected for a specific purpose, *pietatis* being added to identify them as nonspeculative. The initial object of the *monti* was to provide loans at a relatively low rate of interest (4–15%) to small artisans and dealers and to the poor in general, on the pledge of various goods. The interest was used to defray administrative expenses and salaries of employees. The formation of the *monti* was the result of a combination of factors, both economic and theological. It arose from the decline of handicrafts and the ensuing impoverishment of the masses, and a scarcity of money; and from the desire to oust the Jews from the business of *moneylending, which they had successfully practiced as their principal profession. The growing prosperity of Jewish bankers aroused the wrath of the *Franciscans who, as some historians have pointed out, themselves often came from the ranks of the “new aristocracy,” the merchant class.

Previously the progressive monopolization of moneylending by Jewish bankers had been justified both morally and theologically; on the one hand, it helped the poor, and on the other hand, it saved Christians from committing the sin of usury; but the founders of the *monti* advanced the argument that it was necessary to protect Christians from the voracity of Jewish usurers. The establishment of the first *monti* in *Perugia in 1462, after an earlier experiment eight years before at Ancona, came at the climax of a campaign against Jewish moneylenders waged by the Observant friars, the radical wing of the Franciscans. Its primary sponsor was Fra Michele da Milano, who protested vigorously against the arrangements then existing between the Jewish loan bankers and the city of Perugia. In subsequent years the Franciscans sought support for the expansion of the institution, preaching on its behalf throughout Italy, in opposition to the *Dominicans and the Augustinians, who condemned what they called the “*montes impietatis*” is a breach of the prohibition on usury proclaimed by Jesus (Luke 6:33). Foremost among those in favor of the institution was Bernardino of *Feltre, who bent all his charismatic talent for rabble-rousing to denouncing the Jewish moneylender. His sermons led to the establishment of the *monti* in many cities and were instrumental in the widespread persecution of Jews during the blood libel in *Trent in 1475 as well as in many other parts of the country. Pope Paul II approved (1467) the establishment of a *monte* in Perugia, despite theological opposition, and successive popes sanctioned *monti* in other Italian cities. By 1494 there were 30 *monti* in central and northern Italy. The controversy was finally settled by the papal bull, *Inter multiplicis* (May 1515), issued by Leo *x at the Fourth Lateran *Council, which declared the *monti* neither sinful nor illicit but, on the contrary, meritorious.

The institution of the *monti* did not, in itself, arouse the fears of the Jews. In some cases Jewish loan bankers, recognizing the charitable nature of the *monti*, actually gave them

support. One such loan banker, Manuele da Camerino, bequeathed a considerable sum to the *monte* of Florence which had been set up by Girolamo Savonarola. At times Jewish loan bankers utilized the *monti* for their own purposes, depositing in it a pledge left with them, thereby raising capital for further operations. The *monti* were not in a position to meet the growing need for capital, and, as a result, there were times when Jewish loan bankers were allowed to reopen their *condotte* in the Italian cities, as occurred in Florence after the return of the Medici in 1512. Eventually, both *monti* and Jewish loan bankers found it possible to coexist and the first decades of the 16th century proved to be among the most prosperous for the Italian Jewish banker. By the mid-16th century, it was common practice for many *monti* to make loans to businessmen (at an interest rate of from 8 to 10%) as well as to the poor. The *Monti di Piet* remained an essentially urban feature, an outgrowth of conditions specific to Italy. The decision of the Lateran Council of 1515 to allow *urbi et orbi* the establishment of *monti* was the signal for setting up official lending institutions sponsored by governments in the Catholic countries of Europe.

[Emmanuel Beerli]

MONTIEL, town in Castile, central Spain, in the frontier district of La Mancha. The small community there had close relations with the Order of Santiago, on whose lands it was situated. In 1273 the head of the Order, Pelayo Pérez, gave Don Samuel, Don Bono, and Don Jacob, all of them Jews under the jurisdiction of the Order, the right to settle their debts out of tax farming. They not only farmed the general taxes in Montiel but also in other lands belonging to the Order. At that time, tax farming produced considerable revenues. In 1290 the taxes paid to the king by the community of Montiel amounted to about 1,522 maravedis. The community probably suffered during the persecutions of 1391 when most of the La Mancha communities were destroyed. Nevertheless, a community may have existed in Montiel in the second half of the 15th century; Don Isaac Abudarham, a resident of Toledo, farmed the *alca-bala* (“indirect taxes”) there in 1462.

MONTOR, HENRY (1905–1982), U.S. organization executive and Zionist. Montor, born in Canada, was taken to the U.S. as a boy. He was active in Zionist affairs from his youth and assistant editor of *New Palestine* (1926–30). During his service

with the United Palestine Appeal (1930–39) and as executive vice president of the United Jewish Appeal (1939–50), Montor directed the raising of previously unparalleled amounts from overseas Jewry for Israel. In 1939, as chief fundraiser for the United Palestine Appeal, he approached the prolific Zionist organizer Meyer *Weisgal about Jewish participation in the New York World's Fair. The Jewish Palestine Pavilion, which Weisgal claimed was "the first Palestine exhibit at an international exposition in the United States," attracted record-breaking crowds. The presence of Albert Einstein at the opening helped produce the largest single day's attendance in the history of the fair. In all, a total of more than two million people were estimated to have visited the pavilion.

Although Montor was an ardent Zionist, the prevailing Zionist aim at the time was for "selective" immigration to build a Jewish state, not the rescue of Jewish refugees. Therefore in 1940 Montor, as executive vice president of the United Jewish Appeal, refused to intervene for a shipload of Jewish refugees stranded on the Danube. He wrote a letter to a rabbi in Maryland stating that "Palestine cannot be flooded with ... old people or with undesirables." He circulated thousands of copies of the letter, which asked Jews not to support illegal immigration to Palestine.

Yet for the UJA, Montor is credited with being the first man to have the conviction to set \$100 million as a campaign goal – and attain it. As vice president and chief executive of the American Financial and Development Corporation for Israel (1951–55), Montor established the Israel Bonds campaigns and supervised the sale of approximately \$190 million worth of bonds for Israel. He resigned his position as head of the State of Israel Bonds organization in 1955 to found his own brokerage firm.

[Ruth Beloff (2nd ed.)]

MÓNTORO, ANTÓN DE (1404–1480?), Spanish Converso poet who denounced the persecution of his fellow converts. He was born in Andalusia, probably in Montoro, and because he dealt in clothes he came to be known as the "tailor of Cordoba." He flourished during the reigns of Henry IV and Ferdinand and Isabella. Montoro was a noted writer of humorous and satirical verse which won him the esteem of the court poets but, despite his success, he never denied his humble origin or relinquished his trade. In a humorous poem addressed to his horse, he admitted that he had children, grandchildren, parents, and a sister who had not converted. Montoro was one of the few authentic and sincere voices of the age. He protested vigorously against the treatment of the Conversos and satirized the weak efforts of Alfonso de Aguilar, the governor of Cordoba, to stop the outrages. After the sack of Carmona in 1474, Montoro implored Ferdinand and Isabella to protect his people, whose sufferings he portrayed most movingly. He concluded his poem with a ferocious joke, saying that the killing should at least be postponed until Christmas, when the fire would be more welcome. Critics have therefore accused Montoro of cynicism, not realizing that the remark

represents the black humor of despair. Despite his work on behalf of the Conversos, Montoro himself was apparently sincere in his Catholic beliefs and in a poem addressed to Queen Isabella toward the end of his life lamented that in 70 years he had been unable to lose the name of "old Jewish dog," despite the fact that he went to church and ate bacon. Montoro engaged in a poetic feud with another convert, *Juan (Poeta) de Valladolid. The two men exchanged mutual insults, much to the amusement of their contemporaries. Montoro also rebuked Rodrigo de *Cota de Maguaque for his thoughtless attacks on fellow Conversos; such criticism, he claimed, might eventually rebound on its author.

[Kenneth R. Scholberg]

MONTPELLIER, capital of the Hérault department, southern France. The first direct evidence of the presence of Jews in the city is found in the will of Guilhem v, Lord of Montpellier, who forbade the investiture of a Jew as a bailiff. The Jewish traveler *Benjamin of Tudela, visited Montpellier in about 1165. Though he does not mention any figure for the Jewish population of the city, its importance can be deduced from the fact that he mentions the existence of several yeshivot. Until at least the end of the 12th century, the Jews of Montpellier appear to have been particularly active in commerce; they are explicitly mentioned in the trade agreement between Montpellier and *Agde; and they appear in the tariff of taxes due from the merchants of Montpellier in *Narbonne. Until the end of the 12th century, they do not appear to have practiced moneylending. In times of war, particularly when the town was besieged, the Jews helped in its defense by supplying weapons. (An agreement written at the beginning of the 13th century, for example, speaks of Jews providing 20,000 arrows.) From the middle of the 13th century, moneylending was regulated by the ordinances of James I, king of *Majorca, who also ruled over the duchy of Montpellier together with the bishop of Maguelonne. Before any contract could be drawn up, the Jewish lender was called upon to swear that it involved neither fraud nor usury. In addition, the consuls of the town prohibited loans to people under the age of 25 without the consent of their parents. James I's legislation concerning the Jews promulgated in 1267 was fairly favorable. Especially noteworthy was the clause prohibiting their prosecution on the basis of an anonymous denunciation. Those who accused or denounced Jews were to provide two guarantors and were threatened with being condemned themselves if they could not prove their accusation. Bail was to be granted to the accused Jew if he could provide a satisfactory guarantee.

During the 13th century, a Jewish quarter existed on the present site of the Rue Barralerie (until the 15th century it was named Sabatarie Neuve); in the first house on this street there are still some remains of the synagogue, and of the *mikveh* in the cellar. Although James I gave the old Jewish cemetery to the Cistercians of Valemagne in 1263, the latter were required to refund the cost of the exhumation and the transfer of the remains to the new cemetery. When the Jews were expelled from France in 1306, the king of Majorca opposed the measure. After considerable delay, the expulsion finally took place. It was little comfort to the Jews that the king of France was required to give to the king of Majorca two-thirds of the booty seized from “his Jews” and one-third of that taken from the other Jews of Montpellier.

In 1315, when the Jews were allowed to return to France, the Jews of Montpellier, like those elsewhere, were again placed under the authority of their former lords. In 1319 Sancho I, king of Majorca, permitted them to acquire a cemetery. It is not known in which quarter the Jews lived during this short stay, which lasted until 1322 (or 1323). In 1349 James III of Majorca sold his seignury over Montpellier to Phillip VI of France. As a result, when the Jews resettled in the city in 1359 they found themselves under the direct sovereignty of the king of France, Charles V. Originally assigned to the Castelmoton quarter, they were forced to move to the Rue de la Villed Intendance quarter after complaints from the Christian inhabitants. In their new settlement, they owned a synagogue and a school (after 1365). The Jews of Montpellier had to provide large financial contributions to the defense of the town, particularly in 1362 and 1363. In 1374 they were also obliged to participate in guarding the gates. The construction of a beautiful new synagogue in 1387 gave rise to a lawsuit with the bishop of Maguelonne, to whom the Jews paid the then enormous sum of 400 livres. In Montpellier the final expulsion of the Jews from France in 1394 was preceded by violent accusations against them in the municipal council.

Scholars

Even though the town had numerous Jewish physicians – who were subjected to a probative examination from 1272 – there is no valid evidence that the Jews had a part in founding and organizing the school of medicine there. Excluding those scholars who only lived temporarily in Montpellier, such as *Abraham b. David of Posquières, the foremost scholar in the town was *Solomon b. Abraham b. Samuel, who denounced the work of Moses Maimonides to the Inquisition. One of his leading followers was *Jonah b. Abraham Gerondi, who died in Toledo, Spain. The liturgical poet *Aryeh Judah Harari lived in Montpellier during the second half of the 13th century, as did *Aaron b. Joseph ha-Levi, the opponent of Solomon b. Abraham *Adret; and Isaac b. Jacob ha-Kohen *Alfasi. From 1303 to 1306 Montpellier was again the scene of a renewed polemic between the supporters and opponents of the study of philosophy. The latter were led by Jacob b. Machir ibn *Tibbon. In the later medieval community of Montpellier, the

physician and philosopher Abraham *Avigdor was particularly distinguished.

Later Centuries

In the middle of the 16th century, the presence in Montpellier of *Conversos, who chiefly lived among the Protestant population, is vouched for by a Swiss traveler, a student named Platter. From the beginning of the 16th century, Jews from *Comtat Venaissin traded in the town. In 1653 the attorney general of the parliament of Toulouse directed the town magistrates to expel them. Similar orders were issued in 1679 and 1680. A special register was opened at the town record office for the Jews who entered Montpellier as a result of a general authorization granted from the end of the 17th century enabling them to trade for one month during each season. From 1714 nine Jews were allowed to settle in the town; others followed with the tacit consent of the magistrates in spite of complaints by the Christian merchants. In 1805, the Jewish community consisted of 105 persons and was headed by R. Moïse Milhau, who represented the department of Vaucluse at the great *Sanhedrin. Thirteen local Jews served in the armies of the revolution and of the empire, five as volunteers. The historian and physician Joseph *Salvador was born in Montpellier of an old Spanish-Jewish family that had fled the Inquisition. At the beginning of the 20th century there were about 35 Jewish families in Montpellier.

Holocaust and Contemporary Periods

After the 1940 armistice, Montpellier, which was in the “free” zone, became a center for Jewish refugees from the occupied part of France. After the North was occupied by the Germans in November 1942, Montpellier became an important transit stop for Jewish partisans. After the liberation, the community was reorganized and by 1960 had 600 members. The arrival of Jews from North Africa increased the number to 2,000 in 1969, and led to the construction of a communal center and a Sephardi synagogue with 300 seats. There were two kosher butchers and a *Talmud Torah*.

[Bernhard Blumenkranz and David Weinberg (2nd ed.)]

MONTREAL, Canada’s second largest city and home to the country’s oldest and second largest Jewish community, one that is well known for the overall quality of its Jewish life. Until the 1970s the community was the largest and most dynamic in Canada, but it has declined in importance relative to Toronto’s since then. The multicultural city is the metropolis of the overwhelmingly French-speaking province of Quebec. Most of the Jews are Ashkenazim, descended from immigrants who arrived during the first 60 years of the 20th century and

assimilated into the English-language community, in part due to the more favorable educational and economic opportunities available in that sector. The Sephardim, largely French-speaking, have become increasingly important during the past 20 years. They are mainly the products of the post-1956 immigration from North Africa.

As Quebec nationalism, especially as manifested in demands to secede from Canada, became more assertive after the founding of the Parti Québécois (PQ) in 1968, minority ethnic groups, including Jews, felt less secure. PQ election victories and independence referenda between 1976 and 1995 sparked an exodus of thousands of Jews, mainly young adults, and left the remaining Jewish community on edge and apprehensive about its future. In the face of continuing threats of secession, the vast majority of Montreal Jews remains staunchly federalist and vigorously opposes the idea of an independent Quebec.

History

The community was founded by Sephardim from New York in 1768 but remained minuscule until the emigration from Eastern Europe began late in the 19th century. By 1901 there were about 7,000 Jews. During the 20th century there were rapid growth spurts connected with immigration spurred by anti-semitism, the destruction of the two world wars, and later by upheavals in the Arab world after the creation of Israel. The community reached its peak population of nearly 120,000 during the 1970s but has been in decline since then due to out-migration, mainly to other cities in Canada. During much of the 20th century Montreal was the leading force in the country-wide community, with most of the major organizations, notably the *Canadian Jewish Congress, headquartered there.

The flow of immigrants, almost all European until the Sephardi immigration that began in 1956, gave the community a European character in many respects: religious, cultural, social, and linguistic. Montreal was home to numerous Yiddish writers and a lively cultural life. The Jewish Public Library and the Montreal Yiddish Theatre are two examples of institutions with deep roots in the community. The geographical concentration of Jews in particular neighborhoods also produced a sense of genuine community that had a positive effect on organizational life. One concrete manifestation was the Jewish Federation, now known as Federation CJA, formed in 1965. It is well known for effective fundraising and coordination of a range of services to meet community needs. Through its power to allocate the funds raised in the annual campaign to the various agencies, the Federation is able to dominate Jewish organizational life in the city. However, there are numerous organizations that operate outside the orbit of the Federation, including religious institutions, B'nai B'rith, and bodies with direct links to Israel.

Montreal's Jews have always been consigned to minority status politically, even those who speak French. The same was largely true in the business world as well. Opportunities have been severely limited in both fields. In politics, there have been a few Jews elected, usually to represent predominantly

Jewish constituencies. Among the prominent examples since 1970 are the federal minister of justice and former president of the Canadian Jewish Congress Irwin *Cotler, the Quebec minister of revenue Lawrence Bergman, Victor Goldbloom, Gerry Weiner, Sheila *Finestone, Herbert Marx, and Robert Libman. Others, such as Norman *Spector and Stanley Hartt, have been top advisers to prime ministers. Morris Fish is the second Jew appointed to the Supreme Court of Canada.

In business, the largest success stories have been small businesses that eventually grew into large enterprises. Examples are the Seagram liquor empire under Samuel *Bronfman and Steinberg's supermarkets under Sam *Steinberg. In fact, traditionally Montreal Jews were more likely to be employed in Jewish rather than non-Jewish businesses.

By the early part of the 21st century the community faced a number of serious problems. The largest was demographic: a declining Jewish population with an age distribution skewed toward the elderly. Other key problems were the ongoing threat of Quebec independence, inadequate immigration levels, the difficulty of maintaining sufficient levels of community fundraising to support the demands generated by the aging population, and the challenge of supporting an elaborate day school system that educates over half of the Jewish children with only partial government subsidies.

Demography

Since the decennial Canadian Census asks questions about both religion and ethnicity, it is possible to generate accurate data about the Jewish population in the Montreal Census Metropolitan Area. According to Federation CJA demographer Charles Shahar, the population (using the "Jewish standard definition") stood at 92,970 in 2001, down from 101,405 in 1991, 103,765 in 1981, and 112,020 in 1971. Jews constituted 2.8 percent of the population of the metropolitan area in 2001, compared to 4.1 percent in 1971. Montreal's Jews were 25.1 percent of the countrywide Jewish population and had a higher median age (41.8 years) than Jews nationwide (40.2). In 1971, over 39 percent of Canada's Jews lived in Montreal. Jews constitute the seventh largest ethnic group in Montreal.

A comparison of Montreal's Jews with the non-Jewish population shows that there is a bulge in the over-65 category (21.6 versus 11.9 percent) and a shortfall in the 25–44 group (21.6 versus 32.0 percent). There are similar differences when compared to other Canadian Jews, though not as marked. In addition, the 15–24 cohort shrank dramatically between 1971 and 2001 (from 18.2 to 12.7 percent). The age distribution suggests that the growing social and health care demands of the elderly will be increasingly difficult for the community to meet because of the small size of the key productive age cohorts. As a result, the community actively seeks immigrants but has found that the supply is insufficient to maintain the population size.

The largest concentrations of Jews in the metropolitan area are found in the suburban areas of Côte St. Luc (19,785) and the West Island (13,030). Other areas with more

than 7,000 Jews are St. Laurent, Côte des Neiges, and Snowdon. Hampstead and Côte St. Luc have Jewish populations in the 70–75 percent range. There are ḥasidic enclaves in Outremont (mainly *Belz, Skver, and *Satmar), Côte des Neiges (Lubavitch), and Boisbriand (Tosh), as well as an ultra-Orthodox community in Outremont and the Park Avenue area. There are 6,795 Holocaust survivors, constituting nearly one quarter of Jews over 55. About 18 percent of Montreal's Jews live below the poverty line.

Approximately one third of the Jewish population was born outside Canada. The largest numbers of immigrants came from North Africa and the Middle East (10 percent) and Eastern Europe and the former Soviet Union (11 percent). Smaller proportions came from Western Europe, Israel, and the United States. About two thirds of the Jews speak both English and French, with English the predominant mother tongue and language of home use. Another 26 percent speak English only and four percent speak French only. About 10 percent have Yiddish as their mother tongue, with about 56 percent English, 18 percent French, and three percent each for Russian and Hebrew. Some 70 percent now use English at home.

Religious Life

Jewish religious life in Montreal is extensive and quite varied. There are dozens of synagogues, the overwhelming majority Orthodox. There is one major Reform temple, several Conservative synagogues, and a Reconstructionist congregation. Even among the Orthodox there is a wide range, running from the various ḥasidic sects to yeshivah-oriented ultra-Orthodox to Modern Orthodox to Sephardi, each with its own type of synagogue. Finally, there are also quite a number of informal *minyanim* around the city, meeting in such venues as schools, homes, synagogue buildings, and even shopping centers. Some of these *minyanim* have been formally organized as congregations in order to enjoy certain legal advantages.

During the early years of the 21st century, *Chabad has energetically tried to extend its impact in the community beyond traditional Lubavitcher ḥasidim by establishing a major presence in both Hampstead and Côte St. Luc. Among the leading synagogues, the Shaar Hashomayim in suburban Westmount, while originally Orthodox, was affiliated with the Conservative movement through most of the 20th century. It is currently unaffiliated and has hired only Orthodox rabbis since the retirement of long-time Rabbi Wilfrid Shuchat. The Conservatives' decision to ordain women was the key precipitating factor.

In addition to regional bodies representing the various religious movements, there are community organizations whose purpose is to facilitate religious life. The Montreal Board of Rabbis and the Synagogue Council are inclusive. The Va'ad Ha'ir, styled as the Jewish Community Council of Montreal, is Orthodox and has traditionally been the sole body to offer *kashrut* supervision in the city. The long-time monopoly, while objectionable to some, did serve a unifying purpose be-

cause the Va'ad's authority was accepted by virtually the entire community. During the past decade that authority has come into question for two reasons. First of all, the Communauté Sépharade du Québec (CSQ) organized its own *kashrut* supervision operation, which amounted to a competing *hekhsher*. Some kosher eating establishments opted for CSQ supervision, thereby undermining those who wanted to preserve a single standard of *kashrut* in the community. Secondly, under the influence of ultra-Orthodox rabbis, the Va'ad became more stringent in its interpretation of *kashrut* requirements. Its various edicts elicited some complaints from within the Modern Orthodox group.

Personal status issues such as conversion and divorce have generally been handled discreetly through the Va'ad or associated institutions. Issues involving marriage are more open, with traditional norms generally prevailing except among the most liberal groups. Questions about gays and lesbians have not had a high profile, though again the Reform and Reconstructionist congregations have been the most open to those minorities.

In general, studies have shown a pattern of greater religious observance, particularly in terms of Sabbath, holidays, and *kashrut*, than in other communities on the continent. In addition, there is a considerable amount of tolerance. For example, although most congregations are Orthodox, many of those who attend such synagogues are not. Yet that fact does not seem to have caused significant problems.

Education

Education has been a major issue for the community for over a century. Originally the public school system was confessional, with parallel Catholic and Protestant schools. Ashkenazi immigrants found greater acceptance in the Protestant sector, which is a major reason for the fact that they became part of the English-speaking community. The Catholic schools, most of which operated in French, were not open to the Jews. By the 1960s and 1970s Jewish involvement in Protestant schools was protected as a right; they were no longer there on sufferance.

Due to the confessional character of the public schools, many Jews had opted for private Jewish day schools, of which there is a great variety in Montreal. In 1968, the provincial government agreed to provide partial funding for the general studies portion of the curriculum, a policy that is still in effect. During the 1970s increasing numbers of strings were attached to those grants, notably a requirement that the major proportion of the teaching hours be in French. The schools were also made subject to the eligibility requirements of the language law that limited admissions to schools classified as English (which included most of the main Jewish schools) to students who were officially certified as Anglophones. This condition limited choices for immigrants, including English-speakers. Meanwhile, the Sephardim developed their own day schools, which were classified as French, meaning that any student was eligible for admission.

The result of the government subsidy of tuition kept tuition charges relatively low in the North American context. That, plus the tradition of Jews attending their own schools, has resulted in over half the Jewish school age children enrolled in day schools at the elementary or high school level. Only about half of those who complete Jewish elementary schools remain in the Jewish system for high school. The schools offer a wide range of ideological options, including Religious Zionist-Modern Orthodox, Yiddishist, Conservative, community, and ultra-Orthodox (including ḥasidic). Most of the schools maintain a strong commitment to Hebrew language studies, and the community is known for its innovations in Hebrew language instruction.

There was an agreement with the Quebec government in 2004 to increase the public support to 100 percent of the amount allocated to the public schools (now non-confessional) for secular studies. However, the announcement triggered a political storm that included thinly disguised antisemitism. Within a month the government backtracked, leaving the schools at 60 percent funding. The result was most embarrassing for both the community and the government, especially because of the way that opponents succeeded in ridiculing the government for proposing to channel additional public funds to the affluent Jews.

Organizational and Institutional Structure

Ever since the early part of the 20th century, Montreal's Jews have created a host of organizations, largely to deliver services to the community. Many of these were in the health care, social welfare, recreation, cultural, or education areas. Eventually, in 1965, a federation structure, similar to those in existence in the United States, was established in order to bring more coherence to fundraising, allocations, community planning, and coordination of community affairs. What was originally known as Allied Jewish Community Services was renamed Federation CJA during the 1990s. It is one of the 16 large Jewish federations on the continent. The Federation has proven to be exceptionally successful in the annual Combined Jewish Appeal, giving the Montreal community the reputation of being one of the most generous in North America on a per capita basis. In 2005 the expenditures on programs were about \$45 million. Of that, about 38 percent supported Israel and related activities, about 6 percent went to countrywide organizations and programs, and 56 percent was retained for local services. The local allocation is primarily for social services, education, and culture (including tuition assistance at the day schools), and various community initiatives.

The Canadian Jewish Congress, which had been the dominant representative body of Canadian Jewry for nearly a century, never established a solid fundraising base. Eventually it had to turn to the federations, including Federation CJA, for support. Its Quebec regional operation is now somewhat limited and is supported by the Federation. B'nai B'rith Canada is outside the federation structure. It has a national organization that raises money to fund its local activities, in-

cluding a Quebec Region office in Montreal, with the main focus on community relations and antisemitism. Other national bodies, such as the *Canadian Jewish News*, National Jewish Campus Life, the Canada-Israel Committee, the Canadian Council of Israel and Jewish Advocacy, Canadian Jewish Congress, and JIAS (*Jewish Immigrant Aid Services) Canada, are funded by all the federations in the country through UIA Federations Canada.

The Quebec Issue

Ever since the Parti Québécois (PQ) became one of the two main provincial parties in 1970, the issue of secession has bedeviled the political scene. The *raison d'être* of the PQ is making Quebec an independent sovereign state, a goal that few in the Jewish community share. Montreal Jews clearly prefer that Quebec remain within Canada. In the 1980 and 1995 referendums on independence Jews overwhelmingly opposed the PQ's goal. Indeed some were quite outspoken. After 1995 Jews became particularly prominent in leadership roles within the Anglophone community.

After the PQ achieved power for the first time in 1976, many Jews began to contemplate leaving Quebec, despite their strong roots in Montreal. Among the factors that they considered were the deleterious effect of separatism on the economic climate, the accentuation of the minority status of anyone other than the French Québécois, the political uncertainty associated with the secession option, and a general fear of nationalism. It is difficult to be precise about how many Jews left from 1976 onwards, but an estimate of 20,000 is certainly reasonable. The departure of such a sizable portion of the community, especially younger people, is a major cause of the imbalance in the age structure of Montreal's Jews.

Future developments regarding separatism are likely to have a profound effect on the community's future. Although the issue became quiescent with the election of the provincial Liberals in 2003, the PQ remains the main opposition party. Should it regain power and hold a successful referendum, there would likely be a further exodus from the productive age cohorts. Consequently the future of the community is in some ways dependent on the vagaries of Quebec politics and nationalist sentiment.

Montreal's Jews have built a strong, cohesive, and thriving community that in many ways exemplifies the best that Jews can achieve in the North American context. Although it retains considerable energy and has been revitalized by the arrival of the Sephardim, its future is clouded by the political uncertainty. There is no doubt that it will persist, but its ability to maintain an elaborate structure remains to be determined.

[Harold M. Waller (2nd ed.)]

MONZÓN (Monson, Montisson), city in Aragon, N.E. Spain. The history of three communities, Monzón, Barbastro, and Lérida, was closely interconnected. Information on Jewish settlement in Monzón, which had many connections with

the local Knights Templar, dates back to the second half of the 12th century. In 1232 the Monzón community joined the communities which pronounced a counter-ban against the scholars who banned the study of *Maimonides' writings. For taxation purposes, the community formed part of a *collecta* (tax administrative unit) with the neighboring communities of Albalate de Cinca, Alcoletge, Pomar, Estadilla, and Granadella. In 1271 the annual tax paid to the crown by the community of Monzón amounted to 4,000 sólidos. A ruling of Solomon b. Abraham ibn *Adret (Responsa, pt. 3, no. 242; cf. Responsa of Isaac b. Sheshet, no. 19) indicates how the tax was paid in Monzón. Anti-Jewish riots occurred in Monzón in 1260. During the persecutions at the time of the *Black Death (1348), the Jews of Monzón entrenched themselves inside their walled quarter and were thus saved. They suffered no harm during the 1391 persecutions, although a number of them subsequently became *Conversos. The community sent Don Joseph ha-Levi and R. Yom Tov Caracosa as its representatives to the disputation of *Tortosa in 1413–14, which had serious consequences for the Monzón community. In 1414 the antipope *Benedict XIII wrote to the bishop of Lérida authorizing him to turn the synagogue of Monzón into a church, since the majority of the community's members had become converted. He also ordered that property belonging to the burial society and the *Talmud Torah* should be given as *beneficium* to the chapel to be erected in the new church. However it seems that later the community revived. Forty-four names of Jewish householders are mentioned in the notarial records of 1465–78. No details are recorded regarding the departure of the Jews from Monzón on the expulsion of the Jews from Spain in 1492.

[Haim Beinart]

MONZON, ABRAHAM, the name of two scholars.

(1) (d. after 1603), halakhic authority and preacher, and apparently of North African origin. During his youth he lived in Egypt, where he studied under R. Bezalel *Ashkenazi. His pupils in Egypt included R. Abraham *Iskandari. He later went to Constantinople, where he died. He wrote halakhic decisions, and homiletical interpretations; some of his responsa are scattered in various manuscripts and in the works of contemporary scholars, such as Joseph di *Trani, Samuel de *Medina, Bezalel Ashkenazi, and Solomon b. Abraham ha-Kohen. *Azulai saw in manuscript a composition of his on the work *Imrei Emet*, by Menahem de *Lonzano, criticizing the kabbalistic system of R. Ḥayyim *Vital. Azulai also saw a collection of his sermons.

(2) (18th century), rabbi and author. He was born in Tetuan, Morocco, where he engaged unsuccessfully in commerce. He therefore wandered to Algiers and Oran and in about 1732 arrived in Egypt, where he was considered one of the most prominent rabbis. His works are extant in manuscript.

[Abraham David]

MOON (Heb. usually **יָרֵחַ**, *yare'ah*; poetical form **לְבָנָה**, *levannah*; Isa. 24:23, 30:26; Song 6:10). A deity for ancient Israel's neighbors, the moon is for Israel "the lesser light" created on the fourth day of creation "to rule the night" (Gen. 1:16). The calendar used in ancient Israel was probably lunisolar. At any rate, the month was based on the periodical recurrence of the moon's phases. (For full details, see *Calendar.) The New Moon, Rosh Ḥodesh, the beginning of a new period, was proclaimed by the Sanhedrin and marked by the blowing of trumpets and special offerings (Num. 10:10, et al.), and was a minor holiday of which liturgical traces have remained (see *New Moon). Two main festivals, Passover and Sukkot, begin at the full moon.

Cult

As a male deity, the moon (Nanna) was worshiped by the Sumerians and by the Semites in general. Known as Sin among the eastern Semites, the moon god was called Erah in the "west." Sin was the patron god of Ur and Haran, which were connected with the origins of the Patriarchs. The popularity of the moon cult is attested by the frequency of theophoric names with the divine element Sin or Erah. The Israelites were warned against worshiping the moon, and convicted transgressors were punished by stoning (Deut. 4:19, 17:3–5). The moon cult was, nevertheless, introduced into Judah by King Manasseh (II Kings 21:3) but was subsequently abolished by King Josiah (II Kings 23:5).

For fuller details see *Host of Heaven.

In the Aggadah

Rabbinic literature uses *levannah*, and not *yare'ah* for the moon. The moon and the sun were created on the 28th of Elul (PDR 8), and were originally equal in size (both being referred to as "the two great lights" – Gen. 1:16), but jealousy between them caused dissensions, so that God decided to make one of them smaller. The moon was chosen to be degraded because it had unlawfully intruded into the sphere of the sun, and hence the difference between the sun, "the greater light" and the moon, "the lesser light," (*ibid.*). The unlawful intrusion is based on the phenomenon that the moon is sometimes visible during the day (PDR 6; Gen. R. 6:3). The remarkable statement is made that the he-goat offered on the New Moon is a sin-offering brought by God; according to the Midrash this was for hav-

ing permitted the moon to encroach upon the domain of the sun (Gen. R. 6:3), but the Talmud says it was for diminishing its size (Ḥul. 60b). God also appeased the moon by surrounding it with stars like a viceroy encircled by his assistants (Gen. R. 6:4). God's original intention was that the sun alone should furnish light to the earth, but foreseeing the future idolatrous worship of the heavenly objects, He decided that it would be better to have two large celestial bodies, thus minimizing the danger of one becoming a central deity (Gen. R. 6:1). For this reason the sun and moon stand in judgment daily before the Almighty, ashamed to go forth, and pleading, "People worship us and anger the Holy One, blessed be He!" (Mid. Ps. 19:11).

The moon was designated as Jacob's luminary, while the sun symbolized Esau. The Jewish nation bases its calendar on the lunar year, since they have a portion in this world and the world to come, like the moon which can be seen both by day and by night (Gen. R. 6:3). An eclipse of the moon is therefore considered an evil omen for Israel, and is attributed to four different sins: forgery, false testimony breeding small cattle in Erez Israel (since they damage the crops of the field), and cutting down fruit trees (Suk. 29a). The rabbis declared that the countenance of Moses was like that of the sun, while that of Joshua was like that of the moon (BB 75a). Esther, who brought light to Israel after the evil decree of Ahasuerus, is likewise compared to the moon, which enables people to rejoice and walk about when it illuminates the darkness of the night (Ex. R. 15:6). In the future, seven companies of righteous men whose faces will shine like the sun and the moon will welcome the presence of God (Lev. R. 30:2). Moses did not comprehend exactly when the New Moon was to be sanctified until God showed him the form of the moon when it was beginning its monthly cycle and said to him. "When you see it like this, sanctify it" (Mekh. Pisha 1).

BIBLIOGRAPHY: Ginzberg, Legends, index s.v. *Moon*.

MOON, BLESSING OF THE, prayer of thanksgiving recited at the periodical reappearance of the moon's crescent. In Hebrew, the prayer is known by several names: *Birkat ha-Levanah* ("the blessing of the moon") or *Kiddush Levanah* ("sanctification of the moon"). It can be recited front the third evening after the appearance of the new moon until the 15th of the lunar month; after that day, the moon begins to diminish. The prayer is recited only if the moon is clearly visible (not when it is hidden by clouds), and it should preferably be said in the open air. According to the Talmud (Sanh. 42a), "Whoever pronounces the benediction over the new moon in its due time welcomes, as it were, the presence of the *Shekhinah*" ("Divine Presence") and hence it is recommended (Sof. 20:1) to pronounce the benediction, if possible, on the evening after the departure of the Sabbath when one is still in a festive mood and clad in one's best clothes. The blessing of the new moon in some rites is delayed in the month of Av until after the Ninth of *Av, in Tishri, until after the *Day of Atonement, and in Tevet until after the fast of the tenth of *Tevet. A mourner does not bless the moon until after *shivah ("the

first week of mourning"); in the rainy season, however, when the moon is often hidden by clouds, he recites it whenever possible. The blessing of the moon is not recited on Sabbath and holiday eves, mainly because of the prohibition to carry prayer books outside the house or synagogue building when there is no *eruv. The basic text of the blessing is given in *Sanhedrin* 42a and in *Soferim* 2:1, but many additions were subsequently made. In the present Ashkenazi ritual, the blessing is introduced by the recital of Psalms 148:1–6 (in the Sephardi rite also Ps. 8:4–5), after which a benediction praising God as the creator and master of nature is pronounced. In the mishnaic period, the proclamation of the new month by the rabbinical court was celebrated with dancing and rejoicing. It is still customary to rise on the tips of the toes in the direction of the moon while reciting three times "As I dance toward thee, but cannot touch thee, so shall none of my evil-inclined enemies be able to touch me." This is followed by "Long live David, King of Israel" (also pronounced three times) and by the greeting *Shalom aleikhem* ("Peace be to you") which is extended to those standing around who respond *Aleikhem shalom* ("to you be peace"). This part of the ceremony is reminiscent of the days of *Judah ha-Nasi when the Romans abrogated the authority of the rabbinical court to consecrate the new moon which therefore had to be carried out clandestinely. "Long live David, King of Israel" served as a password between Judah ha-Nasi and his emissary R. *Hiyya (RH 25a). It also voiced Israel's continuous hope for redemption by the Messiah, a descendant of David whose kingdom would be "established forever as the moon" (Ps. 89:38). The ceremony concludes with the recital of several scriptural verses, a quotation from the Talmud (Sanh. 42a) "In the school of R. Ishmael it was taught: Had Israel merited no other privilege than to greet the presence of their Heavenly Father once a month, it were sufficient," the plea that God readjust the deficiency of the light of the moon caused by the moon's complaint against the sun (Ḥul. 60b), and a prayer for the fulfillment of the promise of the restoration of the Kingdom of Israel when the Jews will "seek the Lord their God, and David their King" (Hos. 3:5). The blessing of the new moon and the festive character of Rosh Ḥodesh (New Month) originated in the time of the *Second Temple. Due to the significance of the moon in the Jewish *calendar (see Ex. 12:2), it may be of much older origin; in the course of time it has, however, undergone substantial changes. The rite takes the moon as a symbol of the renewal in nature, as well as of Israel's renewal and redemption. Various other elements, some of them of a superstitious nature, have become attached to the rite.

[Meir Ydit]

MOONMAN, ERIC (1929–), British politician and communal leader. Moonman was born in Liverpool and left school at 13, when he was apprenticed to a printer. He worked for the

Daily Mirror in Manchester and was involved in local politics in Stepney, London, before becoming the Labour member of Parliament for Billericay (1966–70) and Basildon (1974–79). More recently he was an executive in the radio industry and, despite leaving school at 13, a professor of management at the City University Business School. Moonman was one of the most visible and consistent pro-Israeli politicians in the British Labour Party, serving as chairman (1975–80) and president (2001–) of the Zionist Federation of Britain. He was vice president (1994–2000) of the Board of Deputies of British Jews and served on many other bodies fighting antisemitism.

[William D. Rubinstein (2nd ed.)]

MOONVES, LES (1949–), U.S. entertainment executive. Born in New York, Moonves is a distant relative of David Ben-Gurion through a marriage on his father's side. Although he once planned on becoming a doctor, after graduating Bucknell University in 1971 he decided to become an actor. Moonves lived in Greenwich Village for five years, studying acting at the Neighborhood Playhouse and working as a bartender at the renowned restaurant Tavern on the Green. In 1976, Moonves moved to Hollywood, where he bartended between minor roles on television shows like *The Six Million Dollar Man* and *Cannon*. He abandoned acting for an executive role at Columbia in 1979, and in 1981 he was hired by Twentieth Century Fox to produce made-for-television films. Joining Lorimar Television in 1984, he produced *The Two Mrs. Grenvilles* and *I Know My First Name Is Steven*. He was promoted to head of series production in 1986, overseeing shows like *Dallas*, *Knots Landing*, and *Falcon Crest*; head of public affairs in 1988; in 1989 he was made president of Lorimar, which was acquired by Warner in 1991, becoming Warner Bros. Television. Moonves oversaw a variety of hit television shows, and in 1995 he went to third-place CBS to take over as president of its entertainment division. Success came in the form of sitcom *Everybody Loves Raymond* (1996–2005), the reality-television show *Survivor* (2000–) and the drama *CSI: Crime Scene Investigation* (2000–). In 2002, CBS's parent company Viacom named Moonves to head its floundering network UPN, making him the first executive to run two networks simultaneously. That same year CBS ranked first in total viewership. In 2004, Moonves and MTV chairman Tom Freston were named co-presidents and co-chief operating officers of Viacom, Inc., taking over for Viacom chief executive officer Sumner Redstone. In 2004, Moonves married *The Early Show* anchor Julie Chen after divorcing actress Nancy Wiesenfeld, his wife of 26 years.

[Adam Wills (2nd ed.)]

MOORE, GEORGE FOOT (1851–1931), U.S. teacher of religion. Moore graduated from Yale in 1872 and from Union Theological Seminary in 1877, was ordained to the Presbyterian ministry in 1878, and became professor of Hebrew at Andover Theological Seminary in 1883. In 1902 he went to Harvard and was made professor of the history of religion in 1904.

Moore's work was of importance in four fields – the shaping of U.S. scholarship, the reshaping of U.S. concepts of religion, the study of the Hebrew Bible, and the study of tannaitic Judaism. For scholarship, he helped introduce the “scientific” standards and concepts developed in Germany into the U.S. His influence was exercised through his own example, teaching, committee work, editorship of the *Andover Review* (1884–93), the *Harvard Theological Review* (1908–14, 1921–31), and *Harvard Theological Studies* (1916–31), innumerable book reviews, articles, and lectures, and participation in learned societies. He was president of the American Academy of Arts and Sciences, the Massachusetts Historical Society, and the Society of Biblical Literature. Thus he also did much to shape the concept of religion as a universal human activity of which the various religions are particular instances, and the study, one of the “humanities.” This conception was important for the ecumenical movement, cooperation between Christians and Jews, reorientation of missions from conversion to social work, and introduction of courses on the history of religion into college curricula. The professor of history of religion appeared as a new social type, distinct from the chaplain and the professor of theology, and Moore's works – *Metempsychosis* (1914), *The Birth and Growth of Religion* (1923), *History of Religions* (2 vols., 1913–19, 1927–28) – were used in many courses.

In the study of the Hebrew Bible Moore not only introduced German methods, standards, and conclusions, but added his own common sense and enormous learning. Beside his many articles in the *Andover Review* and Cheyne's *Encyclopaedia Biblica*, his *Critical and Exegetical Commentary on Judges* (1895) remains most valuable. Finally, his *Judaism in the First Centuries of the Christian Era: The Age of the Tannaim* (3 vols., 1927–30, 1966²) is an outstanding study of rabbinic Judaism. Although it too much neglects the mystical, magical, and apocalyptic sides of Judaism, its apology for tannaitic teaching as a reasonable, humane, and pious working out of biblical tradition is conclusive and has been of great importance not only for Christians, but also for Jewish understanding of Judaism.

[Morton Smith]

MOPP (Max Oppenheimer; 1885–1954), painter and print-maker. Born in Vienna, he studied there from 1900 to 1903 at the Akademie der Bildenden Künste and at the Academy of Fine Arts in Prague from 1903 to 1906. He returned to Vienna in 1908. With the artists Oskar Kokoschka and Egon Schiele, Oppenheimer originated Austrian Expressionism, a style characterized by distorted form, exaggerated or unnatural color, and intensely expressive lines intended to signify turbulent emotion. Oppenheimer signed his name as Mopp beginning in 1910. Both Mopp's and Kokoschka's portraits, which share very similar visual characteristics, helped to establish Expressionism as the major Viennese visual style by 1909. Mopp was a masterly portraitist, with deep psychological insight. Among

his many sitters were the writer Thomas Mann (1913), writer Arthur Schnitzler, composer Arnold Schönberg, and composer Anton Webern (1909). After travel and study in Holland, France, and Italy, Mopp moved to Berlin in 1911, where he contributed drawings to the Expressionist periodical *Die Aktion*. During the same year, the artist had his first solo exhibition at the Galerie Thannhauser in Munich. The poster for the exhibition created a scandal because of its adaptation of Mopp's painting *The Bleeding Man*, an image of the artist as a wounded, semi-nude Christ. Mopp often composed paintings with religious, specifically Christian themes. In addition to *The Bleeding Man*, among other works, the artist produced several etchings for the German edition of Gustave Flaubert's *Legend of St. Julian the Hospitable*. Mopp fled from the rising National Socialist movement in Germany to Berne in 1915 and then to Zurich a year later. During this period, Mopp composed still lifes in a Cubist and Futurist style and experimented with Dada. With artist Marcel *Janco, Mopp created decorations and the Dada dancers' masks for the Cabaret Voltaire, and exhibited pictures there for the Cabaret's 1916 opening night. In addition, Mopp, with Guillaume Apollinaire, Jean Arp, Wassily Kandinsky, Janco, and Pablo Picasso, contributed to Hugo Ball's 1916 pamphlet titled *Cabaret Voltaire*. A music-lover and an accomplished violinist, Mopp painted many group portraits of celebrated string quartets. For example, Mopp's painting *The Klinger Quartet* (1916) is a tondo or circular composition in which the repeated depiction of the musician's expressive hands seeks to visually communicate the quality and rhythm of the sound emanating from the instruments. Mopp's massive painting *The Symphony* (1920–40), a work upon which Thomas Mann commented in an essay, was intended as an homage to the late Gustav Mahler. In 1924, 200 of the artist's now well-known orchestra works were shown in an exhibition organized by the Viennese Hagenbund artists' association. Later, Mopp's work revealed the influence of the *Neue Sachlichkeit*. The artist relocated frequently in the years before and during World War II. Between 1917 and 1923, Mopp lived in Geneva and Vienna; he resided in Berlin in 1924 and 1925, but returned once again to Vienna in 1932. In the latter city, Mopp exhibited at the Wiener Künstlerhaus. After he was labeled by the National Socialists as a "degenerate artist," nine pieces of Mopp's work were removed from German museums in 1937. The following year, the artist fled to New York. At the end of his life, his work displayed an Impressionist style. In addition to Flaubert's book, Mopp illustrated several more publications, including stories by Heinrich *Heine and two works by the chess master, Emanuel *Lasker. Mopp's work is represented in numerous museums, including the Fine Arts Museum of San Francisco; the Los Angeles County Museum of Art; the Museum of Modern Art, New York; the National Gallery of Canada; the Jewish Museum, Prague; and the Leopold Museum, Vienna.

MOPSIK, CHARLES (1956–2003), French scholar of Jewish mysticism. Mopsik was employed in the Centre national de la recherche scientifique (CRNS) and was instrumental in disseminating the serious study of Jewish mysticism in France in both academic and popular circles. He is best known for his translations of Zohar-related literature and central works of Castilian Kabbalah from the same period. He edited the series "Dix Paroles" (editions Verdier), establishing a library of annotated translations into French of classical Jewish texts. He also edited various Hebrew and Aramaic texts in their original, including works by Moses de León and Joseph Hama-dan. Mopsik's scholarly career began with his dissertation on sexual symbolism and sexuality in Jewish sources, comprising a study and edition of the celebrated "Treatise on Holiness" (*Iggeret ha-Kodesh*). He further published numerous articles on sex and gender, including the posthumously issued collection of studies in English, *Sex of the Soul*. One of his unique contributions was to assert that in some kabbalistic works the category of sex applies to the soul even prior to its embodiment in the material world. Mopsik's field of inquiry ranged from ancient Jewish mysticism, including a volume on the so-called "III Enoch" of the Heikhalot Literature, to kabbalistic texts in the early modern period, Lurianic and ḥasidic texts, and some reflections on the Holocaust. His magnum opus is his lengthy study on theurgy in Judaism, showing how the various forms of Jewish practice are seen to effect changes within the divine.

His works include (1) *Lettre sur la sainteté. Étude préliminaire, traduction et commentaire, suivi d'une étude de Moshé Idel*. 1986/1994; (2) *Le Zohar: Traduction de l'araméen, introduction et notes*. Genèse: vols. 1 (1981), 2 (1984), 3 (1991), 4 (1996); *Le Livre de Ruth* (1987); *Cantique des Cantiques* (1999); *Lamentations* (2000); (3) *R. Joseph Gikatila, Le secret du mariage de David et Bethsabée*, édition critique, traduction, introduction et notes, 1994/2003; (4) *Les grands textes de la cabale: les rites qui font Dieu*, 1993; and (5) *Sex of the Soul: The Vicissitudes of Sexual Difference in Kabbalah*, 2005.

[Daniel Abrams (2nd ed.)]

MORAG (Mirkin), SHLOMO (1926–1999), Hebrew philologist. Morag was born in Petaḥ Tikvah. He graduated in Jewish and Oriental Studies at The Hebrew University, receiving his doctorate in 1955, and also studied at the School of Oriental Languages of the Sorbonne, Paris. From 1950 he taught at The Hebrew University, and in 1975 he was appointed professor of Hebrew and Semitic languages as well as professor of Hebrew philology at the Tel Aviv University. Morag was a member of the Hebrew Language Academy. He was awarded the Israel Prize for Jewish studies in 1966. He initiated and founded a research project in the language traditions of the Jewish communities, becoming later *The Jewish Oral Traditions Research*

Center, which is part of the Institute of Jewish Studies of The Hebrew University. He served as director of the project, which collected and studied the language traditions of the Jewish communities. Among his works are *The Vocalization Systems of Arabic, Hebrew, and Aramaic* (1962), *The Hebrew Language Traditions of the Yemenite Jews* (1963), and *The Book of Daniel*, – a Yemenite Babylonian MS (1973). A full list of his works and scientific studies was published in *Mehkarim ba-Lashon ha-Ivrit u-vi-Leshonot ha-Yehudim Muggashim li-Shelomo Morag* (ed. M. Bar-Asher, 1996), 21–38; an autobiographical sketch, *ibid.*, 7–20; and an assessment by the editor, *ibid.* 1–6. To this list should be added *Edah ve-Lashon*, vols. 21–25.

Morag's father, Moshe Aryeh Mirkin, published a long commentary on the *Midrash Rabbah*.

MORAIS, SABATO (1823–1897), U.S. minister-*hazzan* as his position was defined and founder of the *Jewish Theological Seminary. Morais, who was born in Leghorn, Italy, received his early Hebrew education from teachers in his community. At the age of 22, he applied for the position of assistant *hazzan* at the Spanish and Portuguese (Bevis Marks) congregation in London and in 1846 he became director of that congregation's orphan school. During his five years in England he learned much about Jewish life in an Anglo-Saxon environment, and established a friendship with Moses *Montefiore and the Italian patriot Mazzini. In 1851 he arrived in the U.S. to become *hazzan* of Mikveh Israel congregation, the oldest congregation in Philadelphia (and one that exists until this day), succeeding Isaac Leiser. He was a pioneer in introducing adult education classes and supplemental religious schooling. He had a discretionary fund for the distribution of money to the poor. He served in this position until his death, 47 years later. He opposed slavery during the pre-Civil War period, much to the consternation of some of this congregants. He strove to unite the Sephardi and the Ashkenazi elements in the congregation, and later to help the Russian Jewish immigrants. Morais influenced many young men who became leaders of American Jewry, including Cyrus *Adler, Mayer *Sulzberger, and Solomon *Solis-Cohen. He was, in the words of Pamela Nadel, “a founder or a supporter, of nearly every Philadelphia philanthropy and institution,” at a time when Philadelphia was a source of enormous Jewish creativity.

He had a deep love for Jewish music and a great interest in Jewish scholarship, especially in Sephardi studies. He translated a work of S.D. Luzzatto and rendered the writings of other Italian Jewish scholars into English. He was involved in the revival of Hebrew and wrote prose and poetry and encouraged others to write in Hebrew. He published a commentary on the Book of Esther and translated Jeremiah that was the initial draft used in the 1917 Jewish Publication Society edition of the Bible. In 1887 he received an honorary LL.D. from the University of Pennsylvania, the first Jew to receive this distinction. He was a professor at Maimonides College, one of the early attempts to create a rabbinical seminary, from

1867–1873; many of its graduates later supported the Jewish Theological Seminary.

Morais was neither an original thinker nor an incisive expositor but his earnestness and breadth of outlook enabled him to rally the forces of tradition that defined itself as “other than Reform” at a time when the drift was predominantly in the direction of Reform. At one stage he showed a readiness to cooperate with I.M. *Wise in the work of Hebrew Union College, but the radical nature of the Pittsburgh Platform (1885) convinced him that a separate institution to train rabbis on Conservative lines was needed. He was the prime mover in the establishment of the Jewish Theological Seminary (1887) and was president of its faculty until his death, commuting from Philadelphia to New York. He helped shape the institution along the lines of the Breslau Seminary, meaning that candidates for the rabbinate would have both a secular and a religious education.

[Jack Reimer / Michael Berenbaum (2nd ed.)]

MORAVIA (Czech *Morava*, Ger. *Maehren*, Heb. מוֹרָבִיָּה, מוֹרָבִיָּין), historic region of the Czech Republic (formerly in *Czechoslovakia). A political unit from around 769, it formed the nucleus of the Great Moravian Empire (first half of the ninth century until 906). From 1029 it was under Bohemian rule; in 1182 it became a margravate and as such a direct fief of the empire. Together with *Bohemia it became part of the *Hapsburg Empire (1526–1918), and then part of Czechoslovakia, united with former Austrian Silesia after 1927. Between 1939 and 1945 it was part of the Nazi-occupied Protectorate of Bohemia-Moravia, after parts had been ceded to Germany as a result of the Munich Agreement of September 1938. It was replaced, in 1960, by the establishment of two provinces, southern and northern Moravia. Partly because of the region's location on the crossroads of Europe, throughout the centuries there was a considerable amount of reciprocal influence between Moravian Jewry and the Jewries of the surrounding countries. It had a thriving cultural life, promoted by the high degree of autonomy and communal organization it developed. Moravian Jews played a large part in the development of the communities in Vienna and northwestern Hungary.

From the Early Settlement to the 17th Century

Documentation of the first stages of Moravian Jewry is very scanty. In all probability Jews first came to Moravia as traders in the wake of the Roman legions. According to tradition, some communities (e.g., *Ivanice, *Jemnice, *Pohorelice, and *Trebic) were founded in the first millennium C.E., but such reports cannot be substantiated. Moravia is mentioned rarely in early medieval Jewish sources. However, it may well be that some authorities confused part of Bohemia with Moravia. As other authorities referred to all Slav countries as “Canaan,” it is

difficult to make any positive identification of a Jewish settlement in Moravia. It is likely that Jews lived in Moravia before the date of conclusive documentary evidence for their presence. In the biography of Bishop Clement of Bulgaria (d. 916) it is reported that, after the death of the Byzantine missionary Methodius (885), when the Frankish Church prevailed in the Byzantine Empire, about 200 Slav priests were sold to Jewish slave traders. The Raffelstaetten toll regulations (903–906), which fixed relations between the Great Moravian and the Carolingian empires, mention Jews as slave traders, but do not say whether they resided in Moravia. According to the Bohemian chronicler Cosmas of Prague (1039?–1125), a baptized Jew built the Podivin castle in southern Moravia in 1067; Cosmas also mentions a community in *Brno (Bruenn) in 1091. Isaac *Dorbelo, a student of R. Jacob b. Meir *Tam, speaks of observing the rite of the *Olomouc (Olmuetz) community around 1146 (*Maḥzor Vitry*, Hurwitz ed. (1923), 247, 388). The first extant document explicitly mentioning Jews in Moravia is the *Jihlava (Iglau) city law of 1249. In 1254 *Premysl Ottokar II issued his charter, an adaptation of one originally issued in 1244 by Duke Frederick II of Austria (1230–46). Among other provisions it forbade forced conversion and condemned the *blood libel. A gravestone excavated in *Znojmo (Znaim), dated 1256, is the oldest known Jewish tombstone from Moravia. In 1268 Premysl Ottokar II renewed his charter; at the time the Jews of Brno were expected to contribute a quarter of the cost of strengthening the city wall. In an undated document (probably from c. 1273–78), he exempted the Brno Jews from all their dues for one year since they had become impoverished. Writing to the pope in 1273, Bishop Bruno of Olomouc complained that the Jews of his diocese employed Christian wet nurses and accepted sacred objects as pledges, and that the interest they took during one year exceeded the initial loan. The first time a Jew, Nathan, is mentioned by name is in 1278, in connection with a lawsuit about church property. Solomon b. Abraham *Adret (d. 1310), responding to a question addressed to him from Moravia, mentions the *Austerlitz (Slavkov) and *Trest (Triesch) communities. Wenceslaus II confirmed Premysl Ottokar's charter (1283 and 1305) "at the request of the Jews of Moravia."

When Moravia passed under the rule of the Luxembourg dynasty in 1311, the Jewish community of Brno, carrying their Torah Scrolls, participated in the celebrations welcoming King John of Luxembourg to the city. In 1322 John permitted the bishop of Olomouc to settle one Jew in four of his towns (*Kromeriz (Kremsier), Mohelnice, Vyskov, and Svitavy (Zwitau)), and to benefit from their tax payments. At that time Jews earned their livelihood mainly as moneylenders, but gentile moneylenders could also be found. Several Moravian communities, such as Jemnice (Jamnitz), Trebic, and Znojmo, were affected by the wave of massacres evoked by the *Pulkau *Host desecration in 1338. A toll privilege granted in 1341 to the monastery of Vilimov, which was on the main road between Moravia and Bohemia, puts Jewish merchants on a par with their gentile counterparts and mentions a great va-

riety of merchandise in which they dealt. *Charles IV granted the cities of Brno and Jihlava the right to admit Jews in 1345, making the Jihlava community independent of that in Brno. There was an influx of Jews fleeing from Germany into Moravia during the *Black Death massacres (1348–49). In 1349 the bishop of Olomouc complained to the city authorities that Jews did not wear special Jewish hats, as they were supposed to do. Between 1362 and 1415 Jews were free to accept real estate as security on loans.

Some of the Jews expelled from Austria in 1421 (the **Wiener Gesera*) settled in Moravia. Accused of supporting the *Hussites, the Jihlava community was expelled by Albert V, duke of Austria and margrave of Moravia, in 1426. As a result of John of *Capistrano's activities, the Jews were expelled from five of the six royal cities in 1454 (Jihlava, Brno, Olomouc, Znojmo, and Neustadt; the sixth royal city, Uherske Hradiste, expelled the Jews in 1514). The royal cities remained forbidden to them until after the 1848 revolution. The Jews who were expelled settled in the villages. During the 16th century, when there was no central power in Moravia ("in every castle a king"), the Jews were settled in small towns and villages under the protection of the local lords. The latter treated them well, not only because of the part they played in the economic development of their domains, which they shared initially with the Anabaptist communes, but also because some of the lords belonged to the Bohemian Brethren (see *Hussites) or were humanists; many therefore believed in religious tolerance. The importance of the Jews in the Moravian economic life (as military purveyors and *Court Jews) increased because of the constant threat of the Turkish wars. Since several Christian sects lived side by side, it became somewhat easier for the Jew to pursue his own interests without interference. When the Anabaptists were expelled (1622), and the country became depopulated during the Thirty Years' War (1618–48), the Jews took over new economic areas and were also permitted to acquire houses formerly occupied by "heretics." However, at the same time some communities suffered severely during the war (e.g., Kromeriz and *Hodonin (Goeding)). Moravia also absorbed refugees from Poland after the *Chmielnicki massacres (1648), among them scholars such as Gershon *Ashkenazi, author of *Avodat ha-Gershuni*, and Shabbetai Kohen, author of *Sifteï Kohen*, the renowned commentary on the Shulḥan Arukh, who became rabbi of Holesov. Many Jews also arrived after the expulsion from Vienna (1670).

At this time an increasing number of Moravian Jews were engaged in crafts, a process that had already begun in the 16th century, and the cloth and wool merchants and tailors, who made goods to be sold at fairs, were laying the foundations of the textile and clothing industry for which Moravia was later known. In 1629 *Ferdinand II permitted the Jews to attend markets and fairs in the royal cities, on payment of a special body tax (*Leibmaut*; see *Leibzoll); in spite of protests from the guilds and merchants, the charter was renewed in 1657, 1658, and 1723. Jews also attended fairs outside Moravia, especially those in *Krems, *Linz, *Breslau (Wroclaw), and *Leipzig. In

Jewish Communities in Moravia before World War I. After Th. Haas, Die Juden in Maehren, 1908.

1650 the Moravian Diet decided that Jews could reside only where they had been living before 1618, but the decision was not enforced. Later this was modified by the Diet of 1681 to permit Jews to dwell where they lived before 1657.

The Modern Era

On July 31, 1725, during the reign of Charles VI, an imperial order fixed the number of registered Jewish families at 5,106 and threatened any locality which accepted Jews where they had not been previously settled with a fine of 1,000 ducats. On September 20 of that year the same penalty was imposed on anyone who allowed Jews to come into possession of real estate, particularly customhouses, mills, wool-shearing sheds, and breweries. The first enactment was reinforced a year later by allowing only one son in a family to marry (see *Familiants Law); the second was never carried out, as it would have deprived noblemen of lucrative revenue and most Jews of their livelihood. Under Charles VI the geographical separation of the Jews was implemented in most Moravian towns.

*Maria Theresa threatened Moravian Jewry with expulsion (Jan. 2, 1745) but rescinded her order, permitting them to remain for another ten years. In 1748, however, she raised their toleration tax (*Schutzgeld*) from a total of 8,000 florins (since 1723) to 87,700 for the next five years and 76,700 in the following five; in 1752 the tax was fixed at 90,000 florins. Two years later the empress' definitive "General Police Law and Commercial Regulations for the Jewry of the Margravate of Moravia" appeared; as its name indicates it regulated all legal, religious, and commercial aspects of Jewish life in Moravia. The authority of the **Landesrabbiner* was defined and his election regulated, as were those of the other offices of the **Landesjudenschaft*. In essence the law was based on a translation by Aloys von *Sonnenfels of the resolutions and ordinances of the old Council of Moravian Jewry. Although the earliest recorded session of the council had taken place in 1651, it was at least a century older, for a Bendit Axelrod Levi was mentioned in 1519 as being "head of all Moravian communities." The names of most Moravian rabbis were recorded from the mid-16th century.

A clearer picture of the council emerges after the Thirty Years' War (1618–48): Moravia (*medinah*) was divided into three provinces (*galil*), in each of which two heads (*rashei galil*) officiated; at the same time, each one was a member of the governing body of Moravian Jewry (*rashei ha-medinah*). The chief authority was the *Landesrabbiner* (*rav medinah*), who had jurisdiction over both secular and religious matters. His seat was in *Mikulov (Nikolsburg). His presence at council sessions was obligatory and he was the authoritative interpreter of their decisions. There were two types of council: the governing "small" council of six heads of provinces, and the "large" legislative one, which was attended by representatives of the communities and met every three years at a different community. The franchise was very limited and the council oligarchic in spirit and practice. The last "large" council, that of 1748, was attended by 61 representatives elected by

367 house owners. Its main function was the election of small bodies of electors and legislators. The authority of the council was undermined by the absolutist state, which in 1728 defined its ordinances as "temporary"; from 1754 Maria Theresa limited the independence of the communities and their central council. The main function of the council and the *Landesrabbiner* was to divide the tax load justly among the communities. When *Landesrabbiner* Menahem *Krochmal was called upon to settle a dispute between the poor and the rich over the control of the communities, he claimed that the decisive voice belonged to those who contributed more to the community. Krochmal's tenure (1648–61) was vital in the formulation of the 311 ordinances (*shai takkanot*) of the Moravian council. Among his noted predecessors were R. *Judah Loew b. Bezalel (Maharal) and R. Yom Tov Lipmann *Heller. Among the more distinguished holders of the office were David *Oppenheim (from 1690 to 1704); Gabriel b. Judah Loew *Eskeles, nominated in 1690; and his son Issachar Berush (Bernard) *Eskeles, (d. 1753), who also became chief rabbi of Hungary and successfully averted the 1745 expulsion threat. His successor, R. Moses b. Aaron *Lemberger, ordained that henceforth at least 25 students should attend the Mikulov (Nikolsburg) yeshivah, and that each Moravian sub-province should support two yeshivot with ten students each. R. Gershon Pullitz and R. Gershon *Chajes (*Landesrabbiner* 1780–89) fought against the insidious influence of Shabbateanism and Frankism in Moravia: in 1773 Jacob *Frank resided in Brno, where the *Dobruschka family were among his adherents; members of the *Prostejov (Prossnitz) community were commonly called *Schebse* since so many of them were followers of Shabbetai Zevi.

In spite of the hostile attitude of Charles VI and Maria Theresa and the continuous curtailment of the authority of the council and the *Landesrabbiner*, there was a thriving communal life in Moravia. In the first half of the 19th century the *Landesrabbiner* Mordecai *Benet (d. 1829), Nehemiah (Menahem) Nahum *Trebitch (d. 1842), and Samson Raphael *Hirsch (served from 1846 to 1851) wielded great influence. Besides the spiritual metropolis of Nikolsburg, there were important centers of learning in Boskowitz (*Boskovice), Ungarisch-Brod (*Uhersky Brod), Kremsier, Leipnik (*Lipnik nad Bécvou), and Prossnitz.

The situation of Moravian Jews improved after Joseph II's **Toleranzpatent*, which abolished the body tax (see **Leibzoll*) and other special taxes and permitted some freedom of movement. But the limitation of the number of Jewish families remained, the number of licensed (*systematisiert*) Jewish families being kept at 5,106, later raised to 5,400. An edict of Francis II in 1798 limited their rights of settlement to an area of 52 Jewish communities (*Judengemeinden*), mostly in places where communities had existed from early times. The six royal cities remained closed to the Jews. Like most of the local Christian communities, the Jewish communities were subject to the authority of the feudal lord. At that time the largest communities were Mikulov with 620 families, Prostejov with 328, Boskovice with 326, and Holesov with 265. The

total number of registered Jews increased from 20,327 in 1754 to 28,396 in 1803 (the actual numbers might have been from 10 to 20% higher). The revolutionary year of 1848 brought the abolition of most legal and economic restrictions, the right of free movement and settlement, and freedom of worship, but also gave rise to anti-Jewish disturbances: in Prostějov a Jewish national guard, 200 men strong, was organized. These measures of freedom were enacted by the Austrian parliament which convened in Kromeriz. *Landesrabbiner* S.R. Hirsch sent two messages to parliament. The process of legal emancipation was completed in the Austrian constitution of 1867. In conformity with the new municipal laws (passed temporarily in 1849 and definitively in 1867) 27 of the 52 Jewish communities were constituted as Jewish municipalities (*politische Gemeinden) with full municipal independence, and existed as such until the end of the Hapsburg monarchy, in striking contrast to the abolition of Jewish municipal autonomy in Prague in 1850 and in Galicia in 1866. The legalization of the Jewish religious autonomy, a longer process, was not completed until 1890, when 50 Jewish religious communities (*Kultusgemeinden*) were recognized, 39 in places where old communities existed and 11 in newly established Jewish centers.

The restrictions imposed on the Jews by Charles VI and Maria Theresa, most of which remained in force until the second half of the 19th century, led many Moravian Jews to leave the country, mainly for Hungary (Slovakia) and later for Austria. After equal rights and freedom of movement were granted, new communities were established in the big cities of Brno, Olomouc, Ostrava (Maehrisch Ostrau), and Jihlava, while others were set up in small places that previously Jews had only visited on market days. At the same time many Moravian Jews left for other parts of the Hapsburg Empire, particularly Vienna, and some emigrated. As a result, the Jewish population of Moravia remained relatively static at a time when the world Jewish population was rising, and even declined slightly from 1890. (See Table: Jewish Population in Moravia).

Jewish Population in Moravia

In 1787 Joseph II ordered that half of the main tax on Moravian Jewry (then 88,280 florins) be allowed to accumulate in a fund (known as *Landesmassafond*) for the payment of the

Landesrabbiner and other officials. In 1831, when the fund was sealed, the capital was allocated for low-interest loans for needy communities. An assembly of 45 Moravian communities convened in 1862 in order to try to obtain control of the fund, which was managed by state officials. After protracted negotiations, *Francis Joseph I awarded the guardianship of the fund (almost 1,000,000 kronen) to an elected curatorium whose first chairman was Julius von Gomperz of Brno. This curatorium served in lieu of a central Jewish organization until the collapse of the Austrian regime and enabled Moravian Jewry to alleviate the lot of the declining small communities. Jews were mainly engaged in trade, but increasing numbers entered some industries and the free professions or became white-collar workers (mainly in undertakings owned by Jews). They were prominent in the wool industry of Brno, the silk industry of northern Moravia, the clothing industry in Prostějov, Boskovice, and some other towns, the leather industry, the sugar industry in central and southern Moravia, and the malt industry in Olomouc. The brothers Wilhelm and David von *Gutmann (originally from Lipník) developed jointly with the Rothschilds the coal mines of Ostrava and established the great iron and steel works there. The Rothschilds also built the Kaiser Ferdinand Nordbahn, a railway linking Vienna and Galicia via Moravia and Silesia. Consequently there was a substantial number of Jewish railway engineers, employees, engine drivers, licensees of railway restaurants, etc. In the late 19th and 20th centuries Jews were also prominent in the timber industry and trade, the glass industry, hat-making, hosiery, and even in the development of water power.

The close ties between Moravian Jews and Vienna persisted until the end of the Austrian monarchy, and even increased after emancipation, since Moravia had no university under Austrian rule. Consequently, the great majority of Moravian Jews spoke German. In 1900, 77% of all Moravian Jews declared German as their mother tongue, 16% Czech, and 7% other languages (mainly foreigners), but this did not indicate any strong political assimilationist trend toward Germany or hostility toward Czech nationalism. Jews enthusiastically supported the candidacy of T.G. *Masaryk for the Austrian parliament in 1907 and 1911. Students from Moravian communities studying in Vienna were among the first followers of Theodor Herzl and many Zionist associations sprang up in Moravia, from the early days of Zionism.

After the Czechoslovak Republic had been established in 1918, Moravian Jews frequently constituted the bridge between the Jews in Bohemia on the one hand and those in Slovakia and Subcarpathian Ruthenia on the other, between traditionalists and modernists, Zionist and non-Zionists. Slovakian Jewry felt close to Moravian Jewry by ties of blood and tradition. The yeshivah of Mikulov was and remained the alma mater of many West Slovakian Orthodox Jews. Moravian Jews could perhaps not match West Slovakian Jews in religious feeling but surpassed their Bohemian brethren. Orthodoxy was not foreign to Moravian Jewry, and it was strengthened by the steady influx of Jews coming from Poland, often through the

Jewish Population in Moravia, 1830–1921

| Year | Number of Jews |
|------|----------------|
| 1830 | 29,462 |
| 1840 | 37,316 |
| 1848 | 37,548 |
| 1857 | 42,611 |
| 1869 | 42,644 |
| 1880 | 44,175 |
| 1890 | 45,324 |
| 1900 | 44,255 |
| 1910 | 41,255 |
| 1921 | 37,989 |

Duchy of Tesin. Even ḥasidic *shtiblekh* were not an oddity. Jews from Carpatho-Russia, who migrated westward between the wars and who left their country after World War II in fear of Soviet domination, strengthened the religiosity of Moravian Jewry still further. However, after World War II there were only two communities in Moravia where religious observance was the rule – Brno and Ostrava. Between the wars, 60% of Moravian Jews declared themselves as being of Jewish nationality, far above the figure for Bohemia.

The first provincial union of Jewish communities was established in November 1918 under the leadership of Alois Hilf from Ostrava; this union became instrumental in the emergence and consolidation of the Jewish National Council, as well as in the setting up of the Supreme Council of the Jewish Religious Communities in Bohemia, Moravia, and Silesia. The Central Committee of the Zionist Organization in Czechoslovakia had its seat in Ostrava from 1921 to 1938, under the chairmanship of Joseph *Rufeisen; the center of *He-Halutz was also located in Ostrava and the main office of Keren Hayesod was in Brno for a long time. Brno had the only Jewish high school in the western part of Czechoslovakia and Ostrava had a fully equipped vocational school. Moravian Jews were represented by a Zionist in the provincial Diet. However, the number of Jews continued to decline, from 45,306 in Moravia and Silesia in 1921 to 41,250 in 1930, almost half of whom were concentrated in the three cities Brno, Ostrava, and Olomouc. The venerable communities dwindled or even disintegrated.

When the Germans occupied Austria in March 1938, several thousand Jews escaped to Moravia, mainly to Brno. They were followed in September and October of that year by a few thousand more from the areas detached from Czechoslovakia and incorporated in Germany by the Munich Agreement. The majority of Jews in the Teschen (Tessin; Cieszyn) district, ceded to Poland, did not flee. On March 15, 1939, the remaining parts of Moravia were occupied by Nazi Germany and became part of the Protectorate of Bohemia-Moravia. Immediately after the conquest, the lot of the Jews in northeast Moravia was especially disastrous. They constituted a high percentage of those expelled to the Nisko reservate in the Lublin area. Many perished there in the first winter of the war; others returned, only to join their fellows in *Theresienstadt and various extermination camps. After the war, very few survivors returned to Moravia, and the majority of them later emigrated to Israel and other countries. In 1970 barely 2,000 Jews remained in former Moravia, the largest community being in Brno. In Brno there also existed a center of Carpatho-Rus Jewry which was involved in communal problems such as indemnities from Czech authorities, Carpatho-Rus authorities, and German authorities. Brno was the seat of the chief rabbi of Moravia, Richard *Feder. The rabbi was the only leading Jewish figure who dared criticize the Communist regime for its treatment of the Jews. He also publicly expressed longing for Erez Israel and interest in the State Israel. When he died in 1970, at the age of 95, the rabbinate remained vacant. In Brno and in Ostrava a prayer room, cemetery, and religious services were

maintained. Purim and Hanukkah were celebrated, with the participation of the children of congregation members. The Jewish museum of Mikulov, established shortly before World War II, was restored as part of the state museum. The ancient synagogue was refurbished, as was the cemetery. The cemetery was also used as a repository for the tombstones of cemeteries liquidated elsewhere. Another Jewish museum was established by the state in *Holesov. For further details on the contemporary period, see *Czechoslovakia as well as *Czech Republic and Slovakia. For fuller details on the Holocaust period, see *Czechoslovakia under Protectorate of Bohemia-Moravia.

[Meir Lamed / Yeshayahu Jelinek (2nd ed.)]

MORAVIA (Pincherle), ALBERTO (1907–1990), Italian novelist and critic. Born in Rome, Moravia took his pen name from his immigrant ancestors' country of origin. He made his reputation with works published after World War II, and in English-speaking lands was widely regarded as the outstanding Italian writer of his time. Moravia's first novel, *Gli Indifferenti* (1929; *The Indifferent Ones*, 1932; reissued as *The Time of Indifference*, 1953), was covertly critical of middle class society and its passive and cynical acceptance of the Fascist dictatorship. His violent hostility toward the bourgeoisie, into which

he had himself been born, and the relentless psychological analysis of the characters in his works came to the fore in *Le ambizioni sbagliate* (1935; *Wheel of Fortune*, 1938) and dominated many later novels. Moravia's early writings made it clear that he had set out to combine the 19th-century narrative tradition of Dostoevski and Flaubert with the aesthetic principles of the realistic or naturalistic novel. Totally estranged from Judaism, Moravia served during World War II as a foreign correspondent in Germany and the Far East. His post-war works dealt largely with themes such as adolescence and relations between the sexes, and remained outside of any established literary current.

Moravia's artistry and skillful characterization are especially evident in the novels which he published after World War II: *Agostino* (1945, Eng. trans. 1947); *La Romana* (1947; *The Woman of Rome*, 1949); *La disubbidienza* (1948; *Disobedience*, 1950); *Il Conformista* (1951; *The Conformist*, 1952); and *Il disprezzo* (1954; *A Ghost at Noon*, 1955). However, some critics were sensitive to the writer's preoccupation with sex and to his disinclination to pass judgment on the amorality of his heroes. There is a warmer, more sympathetic tone to his stories about the lower strata of society in *Racconti romani* (1954; *Roman Tales*, 1956) and in *Il Paradiso* (1970). Moravia distinguished himself as a novelist most of all, perhaps, in *La Ciociara* (1957; *Two Women*, 1958), an acute study of two characters, contrasting intellect and sensuality, which was made into a successful motion picture. His later works include *La noia* (1960; *The Empty Canvas*, 1961); *L'attenzione* (1965; Fr. trans. *L'Attention*, 1966); and a volume of short stories, *Una cosa è una cosa* (1967). Moravia also published *Luomo come fine* (1964; *Man as an End: A Defense of Humanism*, 1966), a collection of major essays published between the years 1941 and 1962, and a book of plays, *Teatro* (1958). The variety of his interests may be gauged from three other books – *Un mese in U.R.S.S.* (1958; Fr. trans. *Un Mois en U.R.S.S.*, 1954), *Un'idea dell'India* (1962), and *La rivoluzione culturale in Cina* (1967; *The Red Book and the Great Wall*, 1968).

[Giorgio Romano]

MORAVSKE BUDEJOVICE (Czech *Moravské Budějovice*; Ger. *Maehrisch-Budwitz*), small town in S. Moravia, Czech Republic. Its Jewish community is mentioned among those

suffering from the wave of massacres following the Host desecration of *Pulkau in 1338. One Jew, Jacob, is mentioned in 1363 and in 1386 as a member of a consortium buying and selling a village. From 1528 transactions between Jews and gentiles, involving loans and the sale of houses, horses, and grain, are mentioned frequently in the town records. In 1562 the community numbered 47, and its members were not permitted to sell alcoholic beverages or to brew beer. The community was expelled in 1564. There were no Jews in the town until 1774, when a tobacco agent settled there, and in 1808 a Jew leased a distillery. Between 1794 and 1842, 120 Jewish merchants attended the local fairs. There were 19 Jews in Moravske Budejovice in 1848, 58 in 1869, 127 in 1890, and 97 in 1900. A congregation was founded in 1867 and recognized as a community in 1890. A cemetery was consecrated in 1908 and a synagogue in 1910. From 1926 the community was administered by the Safov (Schaffa) community. Its members numbered 77 in 1930 (1.8% of the total population). In 1942 those Jews remaining after the German occupation were deported to extermination camps, and the synagogue equipment was sent to the Central Jewish Museum in Prague. No community was reestablished after World War II.

[Meir Lamed]

MORAVSKY KRUMLOV (Czech. *Moravský Krumlov*; Ger. *Maehrisch-Kromau*; Heb. קְרוּמְלוֹב), town in Moravia, Czech Republic. The community was in existence before 1437, the presence of Jews being mentioned in 1402. A synagogue was built in 1547. The number of families allotted by the *Familiants Laws was 49. In 1800, 43 houses were owned by Jews, a situation which was quite unusual in Moravia. With the 1848 revolution and the freedom of settlement, the Jewish population decreased steadily, from 356 persons in 1830, to 226 in 1869, 140 in 1880, and 116 in 1900. In 1930 it numbered only 34 persons (0.9% of the total population). The community had become a *politische Gemeinde after 1848 but gave up this privilege in 1869. From 1915 the community was under the guidance of Heinrich *Flesch, rabbi of nearby Dolni-Kounice. The community was liquidated under the Nazi occupation. Rabbi Samuel Baeck, father of Leo *Baeck (1873–1956), was born in the town.

[Meir Lamed]

MORAWETZ, OSKAR (1917–), Canadian composer. Morawetz was born in Svetla nad Sazavou, Czech Republic. Having studied piano and music theory in Prague and Vienna, he applied to enter Canada after the Nazis entered the Sudetenland (1938). Finally admitted in 1940, he continued music studies

at the University of Toronto (D.Mus., 1953), where he taught theory and composition (1946–82).

A conservative throughout his career, Morawetz early gained attention for such expatriate works of Czech nationalism as *Carnival Overture* (1945) and *Overture to a Fairy Tale* (1957). Known especially as a symphonic composer, Morawetz had works performed on every continent by more than a hundred orchestras. Also representative of his output are *Fantasy on a Hebrew Theme* for piano (1951), his choral setting of *Who Has Allowed Us to Suffer?* with words by Anne Frank (1970), and his arrangement for voice of Psalm 22 (1979) whose words, “My God, why have you forsaken me?” Morawetz employed to comment on the Holocaust. Notable too are the orchestral *Passacaglia on a Bach Chorale* for John F. Kennedy (1964) and *Memorial to Martin Luther King, Jr.* for cello and orchestra (1968, commissioned by Mstislav Rostropovich).

The Canadian Performing Rights Commission honored Morawetz for two student works: *String Quartet no. 1* (1945) and *Sonata Tragica* (1946). The Segal Fund of Montreal provided a special award for the orchestral work *From the Diary of Anne Frank* – which focuses on Anne’s fear for the survival of her former friend Lies – citing it as “the most important contribution to Jewish music” (1971). Morawetz’s *Concerto for Harp and Orchestra* won a Juno award as best Canadian classical composition (1989). The Canada Council awarded Senior Fellowships (1960, 1967, 1974) for his contributions to Canadian music. Morawetz was the first composer to receive the Order of Ontario (1987) and became a Member of the Order of Canada in 1988.

[Jay Rahn (2nd ed.)]

MORAWITZ, KARL RITTER VON (1846–1914), Austrian banker. Born in Iglau (now Jihlava), Moravia, he was educated in Prague and began working as a bank clerk in small banking houses in Prague and Dresden. In 1860 he joined the Banque de Paris et des Pays-Bas in Paris, an establishment of Ludwig *Bamberger with whom Morawitz became closely associated. Subsequently he entered the Paris office of the Ottoman Bank, but, as a foreigner, had to leave that post in 1870 after the outbreak of the Franco-Prussian War. He then worked for Baron Maurice de *Hirsch and his railway enterprises. In 1906 he became president of the Anglo-Austrian Bank, a post he held until his death. Morawitz was an expert in international finance, and his experience and connections made him an influential adviser. Shortly before his death he was knighted by Emperor Franz Joseph. Morawitz frequently wrote and lectured, and his book, *Les Finances de la Turquie* (1902), is a standard work on the financial history of the Ottoman Empire. Other publications include: *Aus der Werkstatt eines Bankmannes*, *Aus Arbeitstagen und Mussestunden* (1907), and a history of the Anglo-Austrian Bank, *50 Jahre Geschichte einer Wiener Bank* (1913).

[Joachim O. Ronall]

MORDECAI (Heb. מֹרְדֵכַי, מְרִדְכַי hypocoristic masculine proper name containing the theophoric element Marduk), name of two Biblical figures:

1) One of the 12 leaders who returned from Babylonia to Jerusalem at the time of Zerubbabel (Ezra 2:2; Neh. 7:7).

2) A Jew who lived in Shushan (Susa), the residence of the Persian King, Ahasuerus (Xerxes I), who reigned from 486 to 465 B.C.E. Mordecai was the great-grandson of a Benjamite of Jerusalem by the name of Kish who was a member of the group that was taken into exile by King Nebuchadnezzar of Babylon together with King Jehoiachin of Judah in 597 B.C.E. Since this group consisted mainly of the upper classes (11 Kings 24:14), and since the name Kish is otherwise known only as that of the father of the Benjamite king Saul, the implication is doubtless that Mordecai’s great-grandfather and, hence, he himself were descended from King Saul. Mordecai was foster father to his cousin *Esther (Esth. 2:5ff.).

When Esther was chosen for the harem of King Ahasuerus as a replacement for the deposed Queen Vashti, Mordecai charged her not to reveal her ancestry or nationality. Since he “sat in the king’s gate” (Esth. 2:21), i.e., was one of the king’s consultants (cf. Dan. 2:49), Mordecai was able to inquire daily about her welfare (Esth. 2:10–11); and when he discovered a plot by Bigthan and Teresh to assassinate the king, he informed her and she passed the information on to the king in Mordecai’s name. The plotters were impaled; and the incident, with the part played in it by Mordecai, was recorded in the royal annals (Esth. 2:21ff.). For the time being, however, he was not rewarded, while Haman, a descendant of the Amalekite Agag, who was spared by Mordecai’s ancestor Saul (1 Sam. 15), was elevated by the king above all his other officials. Mordecai was the only one of these officials who refused to obey the king’s command to bow down to Haman (Esth. 3:1ff.). This refusal has often been explained on religious grounds, but not only does Judaism not forbid, it actually enjoins, the showing of respect to highly placed persons, Jewish or otherwise. When Mordecai’s colleagues asked him for the reason for his behavior he merely told them that he was a Jew, and the narrator evidently takes it for granted that everybody knew that there was a sacred, perpetual feud between Jews and Amalekites (Ex. 17:14ff.; Deut. 25:17ff.).

Haman for his part resolved to avenge himself not only on Mordecai but on the entire Jewish people, and persuaded the king to decree their extermination by a pogrom on a given day (Esth. 3:6ff.). Then Mordecai urged Esther to intercede on behalf of her people with Ahasuerus. Providence, he saw, had put her there for such an act. Failure to act would result in her own destruction but the Jews would still be delivered (Esth. 4). In an unexpected turn of events, Mordecai was rewarded for having saved the king’s life by being dressed in royal garb and promenaded around the city on a royal steed by Haman (*ibid.* 6). As a result of Esther’s intervention, Haman was hanged on the same gallows (7:10) he had prepared for Mordecai (5:13f.), who was further rewarded by receiving

Haman's property (8:1f.) and being appointed vizier (10:3). His fame spread abroad and all Persian officials aided the Jews in destroying their enemies. Mordecai recorded all these events and he and Esther wrote to all the Jews to commemorate the days of deliverance annually (14th and 15th day of Adar; Esth. 9). In Hasmonean times, the 14th of Adar was known as the "Day of Mordecai" (II Macc. 15:36).

A cuneiform tablet from the end of the reign of Darius I or the beginning of that of Xerxes (Ahasuerus) mentions an official named Marduka, whom some scholars have identified with the biblical Mordecai. It has further been suggested that the prominence of Jews in the Murashu tablets from the time of Xerxes' successors, Artaxerxes I and Darius II, and their absence from documents of earlier reigns, accords with the statement that Mordecai "sought [and achieved] the welfare of his people" (Esth. 10:3).

[Bezalel Porten]

In the Aggadah

The fact that Mordecai is referred to as both a Benjamite (Yemini) and a Judean (Yehudi) (Esth. 2:5) is explained in various ways: as a tribute to David, who belonged to the tribe of Judah, for saving the life of Shimei the Benjamite who is regarded as Mordecai's ancestor, or because his mother was of this tribe. His name is interpreted to mean "pure myrrh" (*mor-myrrh, decai-pure*) for he was as refined and noble as pure myrrh (Meg. 12a). Mordecai was a prophet and is sometimes identified with Malachi (*ibid.*). He prophesied in the second year of Darius (Meg. 15a). Mordecai fasted from the eve of Passover till its seventh day, supplicating God to mete out punishment to Ahasuerus for his desecration of the Temple vessels (Targ. Jon., Esth. 1:10).

Mordecai was appointed to the royal court at the request of Esther (Yal., Esth. 10:53). Thus it was while attending on the king that he discovered the plot of Bigthan and Teresh. They were Tarseans and spoke their native language in plotting to poison Ahasuerus, unaware that Mordecai knew 70 languages (Meg. 13b). It was on account of his ability as a linguist that he was called Bilshan (Men. 65a). When the court officials asked Mordecai why he refused to pay homage to Haman while his ancestor Jacob prostrated himself before Haman's ancestor Esau, Mordecai answered, "I am a descendant of Benjamin, who was not yet born when that took place" (Targ. Sheni, Esth. 3:4). The true reason for Haman's hatred of Mordecai and the Jews was that he had once sold himself as a slave to Mordecai and whenever they met his erstwhile master used to remind him of this fact (Meg. 15b).

After the fatal decree had been signed, Mordecai asked three school children to repeat to him the biblical verses they had just learned. The children recited three different biblical verses, each containing a prophecy that Israel should not fear the evil designs against them. Mordecai had been informed of the king's decree by Elijah. The prayer he and Esther prayed then unto God was the *Hallel*. The days Mordecai decided that Jews should fast were the first three days of Passover (Meg. 15a). When Mordecai saw Haman coming to

him with the royal insignia, he thought his last moment had come. He therefore told his pupils to flee and leave him alone to his fate, but they refused. Mordecai spent what he thought were his last moments in prayer and Haman had to wait until he had finished. Since Mordecai had been fasting and mourning for several days he refused to don the king's apparel until he had bathed and trimmed his hair. But upon a decree of Esther, the baths and all the barber shops were closed on this day, so that Haman had to act as valet to Mordecai. Haman had also to offer him his back to enable Mordecai to mount the horse (Meg. 16a).

While Haman conducted Mordecai through the streets, 27,000 youths from the court marched before him, bearing golden cups and beakers (Targ. Sheni, Esth. 6:11). As he rode, Mordecai and his pupils gave praise to God (Lev. R. 28:6). As soon as the procession was over, Mordecai put off the royal attire and again covering himself with sackcloth, resumed his prayers and fasting (Meg. 16a). He did not stop praying until Ahasuerus charged him with the execution of Haman. In spite of Haman's pleas, Mordecai insisted upon hanging him like the commonest criminal (Targ. Sheni, Esth. 7:10). Mordecai became king of the Jews (Esth. R. 10:12). As such he had coins struck which bore sackcloth and ashes on one side and a golden crown on the other (Gen. R. 39:11). However in the measure in which Mordecai gained worldly power and consideration, he lost spiritually, because his high political function left him no time for study of the Torah. From first among the scholars of Israel, he had dropped to seventh place among them (Meg. 16b).

MORDECAI, ALFRED (1804–1887), U.S. soldier, engineer, and ordnance expert. Born in Warrenton, North Carolina, son of Jacob *Mordecai, Alfred was educated at the West Point Military Academy, passing out first in his class. He was commissioned in the Engineers, but transferred in 1832 to the Ordnance Department, where he remained until his retirement, with the rank of major, in 1861, on the eve of the Civil War. Mordecai served from 1839 to 1860 on the U.S. Ordnance Board, where he helped to develop and systematize weapons, ammunition, and equipment. His greatest contribution to American military technology was the introduction of scientific research and development to the military art. He was twice sent to Europe to study arms systems and production methods and commanded the arsenals at Frankford, Pennsylvania, Washington, D.C., and Watervliet, New York. He wrote several military works, notably *Second Report of Experiments in Gunpowder* (1849), and *Ordnance Manual for the Use of the Officers of the United States Army* (1841, 1850). His son ALFRED (1840–1920) was also an ordnance officer and rose to the rank of brigadier general.

[Stanley L. Falk]

MORDECAI, JACOB (1762–1838), U.S. merchant and educator. Born in Philadelphia, Pennsylvania, his early formal education was slight, but he studied at home and in the synagogue and later earned a reputation as a scholar and biblical authority. He moved to Richmond, Virginia, in 1782 and became an independent businessman. In 1784 he was in New York, where he formed a brief partnership with Haym *Salomon, but after the death of the latter in 1785, Mordecai's business failed. He returned to Virginia, attempting various commercial ventures, and finally in 1792 moved to Warrenton, North Carolina, where he became a successful merchant. In 1807 Mordecai lost heavily in tobacco speculations and was forced to give up his business. In 1809, encouraged and backed by a group of townspeople, he opened the Warrenton Female Academy, which became famous throughout the South as a school for girls. Mordecai and his family ran the Academy successfully until 1819, when he sold it and moved to a farm near Richmond. He served as president of Beth Shalome, the first synagogue in the city, which he had helped found. He lived in Richmond from 1832.

[Stanley L. Falk]

MORDECAI (Mokhi'ah) BEN ḤAYYIM OF EISENSTADT (1650–1729), wandering Shabbatean preacher – hence his cognomen *Mokhi'ah* (“reprover”). He propagated faith in *Shabbetai Zevi as the Messiah after the latter's conversion to Islam. An extreme ascetic, he wandered through Hungary, Moravia, Italy, and Poland spreading the doctrine, previously enunciated by *Nathan of Gaza, that for mystical reasons Shabbetai Zevi had to undergo conversion and that his death was merely an illusion. In three years, he insisted, the “Messiah” would reappear. Invited to Italy in 1682 by R. Issachar Behr *Perlhefter and R. Abraham *Rovigo of Modena – both secret Shabbatean adherents – he put forth the claim that, while Shabbetai Zevi had been the Messiah b. Ephraim, he, Mordecai, was the Messiah b. David. Apocalyptic writings stemming from Rovigo's circle and probably written by Perlhefter (1678–80) portray him as the forerunner of the Messiah. In the above-mentioned document reference is made to his plan to go to Rome in order to make certain “messianic” preparations. Upon meeting him in Modena, his host, R. Perlhefter, recognizing signs of madness in him, turned against him, apparently causing Mordecai's abrupt departure from Italy some time before 1682. He thereupon traveled through Bohemia and Poland, where, thanks to his prepossessing personality and fiery preaching, he won numerous adherents. Heinrich *Graetz dubbed him a “Jewish Vicente *Ferret.”

[Theodore Friedman]

MORDECAI BEN HILLEL HA-KOHEN (1240?–1298), author and rabbinic authority in Germany. The only biographical details known of him are that he was a descendant of *Eliezer b. Joel ha-Levi, a relative of *Asher b. Jehiel, and a brother-in-law of Meir ha-Kohen, author of the *Haggahot Maimoniyot*, that he was an outstanding pupil of *Meir b. Baruch of Rothenburg, *Isaac b. Moses (author of *Or Zaru'a*), and *Perez b. Elijah of Corbeil. He appears to have spent some time in Goslar (Resp. Maharam of Rothenburg, ed. Lemberg, 476), from there moving to Nuremberg, where he died a martyr's death in the *Rindfleisch massacres, together with his wife and five children.

Mordecai's fame rests on the *Sefer Mordekhai*, always referred to as “the *Mordekhai*.” This gigantic compendium consists of elaborations on talmudic problems in the style of the *tosafot. However, it follows the arrangement of laws used by Isaac *Alfasi, its aim having been to spread the learning of the French and German scholars and of their predecessors by attaching them to the work of Alfasi, which had a wide circulation; but the *Mordekhai* does not refer at all to the content of Alfasi's book. Over 300 books and authors are cited in the *Mordekhai*, including whole pages from *Or Zaru'a* and dozens of responsa of Meir of Rothenburg in full. The absence of any of the writings which Meir of Rothenburg sent to his pupils while he was in prison proves that the book was completed before 1286, the year of Meir's incarceration. On the other hand, it is clear from the many references to “my master, Rabbi Mordecai” that the book was not edited by Mordecai himself but by his sons and pupils. If the *Sefer ha-Dinim* of Judah ha-Kohen and *Sefer ha-Hokhmah* of Baruch b. Samuel are still known today, it is almost entirely thanks to the *Mordekhai*. The history of the spread of the *Mordekhai* and the transmigrations of its many versions in manuscript and in print is one of the most complicated in all of rabbinic literature. Because of the book's tremendous scope, two main compilations of extracts, the “Austrian” and the “Rhenish,” were made from it within a few decades, mainly reflecting regional laws and customs, and differing greatly from one another. The Rhenish version – which is the one extant – includes the views of many French and English scholars, and the customs of the German communities. These customs had spread eastward as far as Poland, but were not accepted west of Germany. The Austrian version reflects the *minhag* of southeastern Europe including the customs of Austria, Hungary, Bohemia, Saxony, and Moravia, and mentions many Austrian scholars. This version was in the possession of Israel *Isserlein.

In 1376 Samuel *Schlettstadt edited an abridgment of the *Mordekhai* (*Mordekhai ha-Katan*), adding glosses of his own (*Haggahot Mordekhai*). In print, these appeared independently at the end of the book, but sometimes they were confused with the text. This abridgment was based on the Rhen-

ish version, and when Schlettstadt later obtained a copy of the Austrian version, he added some passages from it. The *Halakhot Ketannot* in the *Mordekhai* are also Schlettstadt's work. Many other abridgments have been made, both by copyists and by printers, this activity having begun, in fact, shortly after Mordecai's death. Apart from Schlettstadt's abridgment, there are extant two printed versions of the book (see below) and a larger number of versions in manuscript. Many manuscripts are extant in libraries in many parts of the world, but no two of them are identical, and all of them are different from *Mordekhai ha-Gadol* (the unabridged *Mordekhai*), also extant in manuscript, which was too long to be copied in full. In view of this situation, Judah Loew of Prague ruled that the *Mordekhai* should not be used as the basis for legal decisions. The *Mordekhai* was first printed together with the first edition of the Talmud (tractates *Berakhot* and *Bezah*, by Soncino, 1483–84). While the amplifications on *Berakhot* are shorter than those in the regular printed editions, those on *Bezah* are much longer. It was also published together with Alfasi's abridgment of the Talmud in Constantinople, 1508–09. The *Mordekhai* was published separately, and on the whole Talmud, in Riva di Trento, 1559–60, in an edition containing matter not found in the standard edition, which was published later from other manuscripts. Before printing a new edition, printers would generally compare the various editions already previously published, for the purpose of reconciling them, a practice which helped confuse matters even more. Following the ruling of Judah Loew, all passages that were lenient or permissive on points not stated in the Talmud were expunged from the printed editions (but not from the Mss.), causing the accuracy of the text to deteriorate still further.

The *Mordekhai* exerted a powerful influence in Germany on the manner of arriving at halakhic rulings until the time of Moses *Isserles, mainly through Israel Isserlein, who relied on it considerably in his *Terumat ha-Desheh*, and Joseph *Colon. The book was also most influential in the world of Sephardi *halakhah* – which it reached in its abridged form – and Mordecai b. Hillel ha-Kohen is one of the few Ashkenazi authorities cited by Joseph *Caro in his *Beit Yosef*. Many scholars wrote interpretations, amplifications, glosses, or corrections to the *Mordekhai*, including: Israel *Bruna, Israel Isserlein, *Joshua Boaz b. Simeon, Moses Isserles (who inserted the page references to the tractates of the Talmud), Menahem of Tiktin (who wrote *Hiddushei Anshei Shem* on it), Isaiah b. Abraham *Horowitz, and Mordecai *Benet. *Kizzur Piskei ha-Mordekhai*, by Joseph *Ottolengo, which is generally published together with the *Mordekhai*, also deserves mention. Up to and including the time of Moses Isserles, small groups of Jews would get together for the regular and systematic study of the work. In addition to this book, Mordecai also composed a rhymed composition on the dietary laws (Venice, c. 1550), and a poem on the rules of vocalization. He also wrote a work on the laws pertaining to the Holy Land and the laws of *ḥallah* (“the priest's share of the dough”) published in Z. Bindowitz, *Hut ha-Meshullash* (1940). Five of his *piyyutim* are extant including

the *selihah Mah Rav Tuvekh*, a lament for Abraham the proselyte who died a martyr's death in 1264 at Augsburg.

[Israel Moses Ta-Shma]

Further Information

A study of the many manuscripts of *Sefer Mordekhai* reveals that there are “families” of manuscripts. Manuscripts belonging to a certain family are based on the same version and use the same linguistic expressions with the same additions as in the printed text of *Sefer Mordekhai* printed in different editions of the Talmud. The manuscripts of the *Mordekhai* make it possible to attempt to establish a text of the *Mordekhai* for the Talmud tractates that will include as many sections of the *Mordekhai* as possible, namely the text of the book as it is printed and, in addition, different parts not yet published and originating from the different manuscripts.

A. Halperin published a study called *The Complete Sefer Mordekhai for Tractate Bava Kamma* (1978): Part I, Introduction; Part II, a critical edition of the *Mordekhai* for *Bava Kamma* by Rabbi Samuel Schlettstadt. In addition, the complete *Mordekhai* for Tractate *Beizah* (edited by Yehoshua Horowitz and Yizhak Kleinman) appeared in the *Torat Hakhamei Ashkenaz* series of the Jerusalem Institute (1983). This edition is based on 18 manuscripts and early printed editions and includes notes, sources and variant readings.

MORDECAI BEN JUDAH HA-LEVI (d. 1684), *posek* and rabbinical authority in *Egypt. Mordecai was the son-in-law of R. Abraham Tarikah. He served for over 40 years as rabbi, all or part of the time as *dayyan* of *Cairo and of *Rosetta, and moved to *Jerusalem in 1684, dying there in the same year. In 1678 a sharp dispute broke out between R. Gabriel Esperanza, one of the leading scholars of *Safed, and Mordecai ha-Levi over a *halakhic* ruling. The dispute was brought before R. Moses *Galante, the leading rabbi of Jerusalem, but he refused to become involved. His only published work was a collection of responsa, *Darkhei No'am* (Venice, 1697). It is a storehouse of information on the history of 17th-century Egyptian Jewry, which contains the responsa of many scholars of Mordecai's generation. The historian R. David *Conforte was among his friends. Other works written by him which were never published include: *Avodat ha-Kodesh*, a commentary on the Torah; *Mikraei Kodesh*, hermeneutics; *Toledot Adam*, concerning the education of chil-

dren; and *Sof Adam*, collected eulogies. His son R. *Abraham b. Mordecai ha-Levi was the author of *Ginnat Veradim*.

[Abraham David]

MORDECAI BEN NAPHTALI HIRSCH OF KREMSIER

(d. c. 1670), talmudic commentator and scribe. Mordecai came from Kreamsier (Kromeriz), but lived in Cracow and died there. He was the pupil and friend of Shabbetai Sheftel *Horowitz, with whom he established friendship in Posen in 1648. He was famous as a preacher and was referred to as “the chief preacher.” Among his works were *Ketoret ha-Mizbe'ah* (Amsterdam, 1660), expositions of the *aggadot* in the tractate *Berakhot*, and a study of the destruction of the Temple and the length of the exile; *Ketoret ha-Sammim* (*ibid.*, 1671), a commentary on the *Targum Jonathan and the Palestine Targum to the Pentateuch, to which was appended a kabbalistic commentary on *Berakhot*; and the elegy *Shema Eli Kol Bekhi ve-Kinah* (Lublin?, c. 1650, according to Steinschneider; see bibliography) on the 120,000 martyrs slain in the *Chmielnicki massacres, together with his own commentary to it.

[Josef Horowitz]

MORDECAI BEN NISAN (17th–18th centuries), Karaite

scholar living in Kukizov, near Lvov (Lemberg), Poland. In answer to an inquiry by Jacob Trigland, professor at Leiden, Mordecai composed in 1699 an exposition of Karaism entitled *Dod Mordekhai* (Hamburg, 1714, with Latin translation; Hebrew text alone, Vienna, 1830, repr. 1966), in which he defends the antiquity of Karaism (reaching back into the Second Temple period) and its independence from Sadduceism, and traces in brief the history of Karaite literature. His other works include *Ma'amar Mordekhai*, a supercommentary on the *Mivhar* of *Aaron b. Joseph (unpublished); and *Levush Malkhut*, on the differences between the Karaites and the Rabbanites (published by Neubauer; see bibliography). Some hymns by him are included in the official Karaite prayer book.

BIBLIOGRAPHY: Fuerst, *Karaertum*, 3 (1869), 87ff.; A. Neubauer, *Aus der Petersburger Bibliothek* (1866), 76ff.; S. Poznański, *The Karaite Literary Opponents of Saadiah Gaon* (1908), 87; Mann, *Texts*, 2 (1935), index.

[Leon Nemoy]

MORDECAI OF NESKHIZ (Rus. *Nesukhoyshe*; 1752–1800),

ḥasidic *zaddik*, founder of the Neskhiz dynasty and one of the most famous “miracle-workers” of his generation. He was a disciple of *Jehiel Michael of Zloczow and became friendly with *Aryeh Leib of Shpola whom he met in Jehiel Michael's house. His name appears in the list of prominent *zaddikim* of 1798–1820 which mitnaggedic writers included in their works against Ḥasidism. After serving as rabbi in Leshnev

(Leszniow), in the province of Brody, where a ḥasidic group flourished as early as 1772, he settled in Nesvizh, near Kovel in Volhynia, around 1790. There he became renowned as a “miracle-working” *zaddik* and “his miracles in heaven and earth were revealed to the world; raising the dead, healing the sick, and enabling deserted wives to remarry... and he became a great wonder” (*Zikkaron Tov* (1892), 99). According to another tradition “Mordecai of Neskhiz was familiar with the mysteries of creation... and wrought many miracles but he regretted his actions” (Uri of Strelisk, *Imrei Kodesh* (1871), 9). A wealthy man, Mordecai commissioned the scribe Moses of Przeworsk to copy a Torah scroll for him. The work took three years and he paid him 400 zlotys. He wrote a small pamphlet, later published under the title of *Rishpei Esh* (1869).

BIBLIOGRAPHY: Dubnow, *Ḥasidut*, index; M. Buber, *Tales of the Ḥasidim*, 1 (1968⁴), 164–6; L.I. Newman, *The Ḥasidic Anthology* (1963), index s.v. *Neschizer*.

MORDELL, LOUIS JOEL (1888–1972), British mathematician.

Mordell was professor of mathematics at Manchester from 1923 to 1945 and professor at Cambridge from 1945. He was elected a Fellow of the Royal Society in 1924, and president of the London Mathematical Society from 1943 until 1945. Mordell wrote many articles on the theory of numbers and allied topics. In addition he published *Three Lectures on Fermat's Last Theorem* (1921); *A Chapter on the Theory of Numbers* (1947); *Reflections of a Mathematician* (1958); and *Diophantine Equations* (1969).

[Barry Spain]

MORDELL, PHINEHAS (1861–1934), Hebrew grammarian and scholar.

Mordell was born in Shat (Kovno province) and studied in Yelizavetgrad. In 1881, he went to the U.S. and settled in Philadelphia. During his first years there Mordell worked at various trades and was a beadle in a synagogue, at the same time industriously pursuing the study of Hebrew language and grammar. He was associated with the Wissenschaft scholars in the U.S., as well as with Hebrew writers. Finally, after achieving a wide reputation, he worked until 1903 partly as a teacher and partly as a night watchman in order to devote the day to his studies. He was among the pioneer proponents of Zionism and the Hebrew language movement in the U.S. Mordell spent much of his time on the study of Hebrew language and grammar and especially on the *Sefer *Yezirah* which he edited and to which he wrote a comprehensive commentary in English (1914). In 1895 he published, without commentary, the corrected text of *Sefer Yezirah*. He was greatly encouraged in his linguistic studies by Aḥad Ha-Am (Asher Ginsberg), who published some of Mordell's articles in *Ha-Shilo'ah* (vols. 3 (1898), 478–9; 5 (1899), 233–46; 10 (1902), 431–42; see *Iggerot Aḥad Ha-Am*, 2 (1957), 410–1). He continued publishing linguistic studies in *Ha-Toren*, 4 (1917/18), 8f.; *Ha-Ivri*, 9 (1919), no. 1, 3, 4, 5, 6, 9, 12, 17, 19, 21, 22, 24 (a series of articles on the reading of Hebrew which was also published separately); *Ha-Olam ha-Yehudi* (1924);

and *Leshonenu*, 3 (1930). His articles were also published in English (8 articles in *JQR*, 1912–34) and one was published in Yiddish. Mordell left an extensive Hebrew commentary to the *Sefer Yezirah* and chapters on grammar (unpublished). His son was Louis Joel *Mordell, the mathematician.

[Getzel Kressel]

°**MORDOVTSEV, DANIIL LUKICH** (1830–1905), Russian and Ukrainian writer who preached the return of the Jews to Erez Israel. Mordovtsev was a Ukrainian and one of the leaders of the Ukrainian nationalist movement throughout his life. Until 1866 he worked in various government offices, and afterward engaged in his historical and literary work. In his time he was one of the few liberals in Russia who openly sympathized with the Jews. In 1873 he began to publish articles refuting prevalent accusations by Russians, including liberals, against the Jews, and in particular attacked anti-Jewish instigators. In the summer of 1881 he visited Erez Israel and in Jerusalem met a number of Jewish refugees who had fled from the pogrom in Odessa. In his series of stories and travel impressions he repeatedly expressed the demand that the nations of the world restore Erez Israel to the Jews. His literary activity in this area increased especially after the pogroms of the early 1880s in Russia. In his historical stories, he censured the Ukrainian pogroms against the Jews. His stories on Jewish topics include *Za chto zhe?* (“Why?” 1884); *Mezhdu molotom i zakovalney* (“Between Hammer and Anvil,” 1891), and *Irod* (“Herod”). These stories were translated into Hebrew and Yiddish (some by Z. *Shazar). His support for the Jewish national movement continued until his death and became especially strong from the time of the appearance of political Zionism.

BIBLIOGRAPHY: I. Maor, in: *Shivat Ziyyon*, 2–3 (1951/52) 69–82; M. Ben Hillel ha-Kohen, *In Mame Loshn* (1935), 237–55.

[Getzel Kressel]

°**MORDVINOV, NICOLAI SEMIONOVICH** (1754–1845), Russian statesman and admiral; president of the Department of Civil and Ecclesiastical Affairs of the Council of State. In 1802, as a member of the Council of State, he supported the proposal not to limit the commercial rights of the Jews in the *Pale of Settlement, but in the 1820s he insisted on the mass expulsion of the Jews from the villages and rural settlements. In the blood libel case at *Velizh, Mordvinov took a stand in favor of the Jewish community. Owner of an estate near Velizh and knowing many local Jews, he followed the case closely; when it reached its final stage and came to the attention of his department, he helped to establish the innocence of the Jews, settling the matter by a ukase issued in 1835.

BIBLIOGRAPHY: Gessen, in: *Voskhod*, 4 (1903), 3–34; 5 (1903), 3–28; idem, *Velizhskaya drama* (1905); Rivkin, in: *Perezhitoye*, 3 (1911), 60–102.

MOREEL, BEN (1892–1978), U.S. admiral. Born in Salt Lake City, Utah, Moreel worked as an engineer and in 1917 joined

the U.S. Navy engineer corps. In the 1930s he served as public works officer at Pearl Harbor, and in 1937 he was made chief of the Bureau of Yards and Docks. When World War II broke out, Moreel created the elite naval construction battalions known as the Seabees, starting with 3,000 men. His Seabees developed airfields, roads, and housing on undeveloped islands in the Pacific. After the Japanese attack on Pearl Harbor in 1941, Moreel recruited carpenters, machinists, electricians, and masons whose average age was 37. He valued work experience over youth. Eventually, more than 325,000 men signed on with the Seabees. On some 300 islands in the South Pacific, they went ashore shortly after the Marines had landed and began building hospitals, housing, and warehouses, in addition to the roads and airstrips. Proud of their reputation as fighters, the Seabees also became goodwill ambassadors who constructed orphanages, public utilities, and highways all over the world. In 1944 President Franklin D. Roosevelt made Moreel a vice admiral. Moreel retired as a full admiral in 1958, the first engineering officer and the first Jew to reach this rank. When he received his fourth star as admiral, he became the highest-ranking Jewish officer in Navy history.

In his honor, the U.S. Navy League created the Admiral Ben Moreel Award for logistics excellence.

Moreel's book *The Admiral's Log Vol. 1 and 2* was published in 1958.

[Ruth Beloff (2nd ed.)]

MOREH, MORDECAI (1937–), Israeli printmaker and draftsman. Moreh was born in Baghdad, and immigrated to Israel in 1951. He studied at the Bezalel School of Arts and Crafts, Jerusalem, from 1955 to 1959, and from 1960 to 1962 studied on an Italian government scholarship at the Accademia di Belle Arti, Florence. In 1962 he was awarded a scholarship by the American-Israel Cultural Foundation to attend the Ecole Nationale Supérieure des Beaux-Arts, Paris.

Moreh mainly used the drypoint method in the technique of prints which revealed him to be a master draftsman. His subjects were traditional and, like Goya, Jean-Paul Sartre, and Pablo Picasso, he expresses a pessimistic and skeptical outlook. His philosophy about the human condition was revealed through his etchings, in which he employed symbols to convey his ideas – the illusions, the darkness of the unconscious, the violence and vanity of life. He differed from Goya and Picasso in his more moderate ironic attitude, and in his sense of humor and humanity. One of his favorite subjects was the woman through whom he portrays general human characteristics. In one of several drypoints titled “Monkey” (1970) he drew the profile of a woman whose backside is an untamed monkey in an open cage. Animals are another important subject in his work, forming part of his personal world of imagination.

Moreh used classical metaphors to indicate his philosophical research about the nature of reality. One of his famous metaphors is the mask – the mask of reality. For his masks he

used directly the portraits of his earlier works. A Renaissance spirit is evident in his etchings. Moreh held a large number of one-man shows and his work was exhibited at the Israel prints exhibition held in 1961 at the Boston Public Library and at the fourth Biennale of Paris-Israel Prints in 1968. His work is displayed in many museums and private collections in Israel and abroad.

BIBLIOGRAPHY: M. Moreh, *Radierungen 1960–1972*, Heidelberg Kurpfälzisches Museum (March–Apr., 1972).

[Judith Spitzer]

MOREH, SHMUEL (1933–), scholar of Arabic language and literature. Born in Baghdad, he immigrated to Israel April 1951. He received his B.A. and M.A. from The Hebrew University in Arabic literature and Islamic Studies and his Ph.D. in modern Arabic poetry (SOAS, London University) in 1965. He was a visiting professor at various universities in the U.S., U.K., Germany, Finland, and the Netherlands. Moreh became professor emeritus of Arabic language and literature at The Hebrew University of Jerusalem. He participated in conferences on Arabic and Islamic studies and on the Jews of Arab countries, especially of Iraq. He was awarded the Israel Prize in Oriental studies (1999) and the insignia of the Commander of the Order of the Lion of Finland (1986). He is the founder and chairman of the Association of Jewish Academics from Iraq in Israel (1980–) and chairman of the Academic Committee of the Babylonian Jewry Heritage Center, Or-Yehuda, Israel. He wrote *Modern Arabic Poetry 1800–1970* (1975), *Studies in Modern Arabic Prose and Poetry* (1988), *The Jewish Contribution to Nineteenth-Century Arabic Theatre* (with P.C. Sadgrove, 1996), *Live Theater and Dramatic Literature in the Medieval Arab World* (1992), *The Tree and the Branch, Studies in Modern Arabic Literature and Contributions of Iraqi-Jewish Writers* (Hebrew, 1977), and *Those Were the Days of Youth and Love, An Anthology of Poems in Arabic and English* (1998). He was also the translator and editor of al-Jabarti's *Chronicle of the First Seven Months of the French Occupation of Egypt* (1975) and of several collections of Arabic short stories as well as the compiler of bibliographies on Arabic literature.

MORENO, JACOB L. (1892–1974), U.S. social scientist. Born in Bucharest, he immigrated to the U.S. in 1927. He taught at New York University from 1952 to 1960 and was the founder of the Sociometric Institute and the Theater for Psychodrama. He edited the *International Journal of Sociometry*, *Group Psychiatry*, and *Group Psychotherapy and Sociodrama*. Moreno initiated the sociometric method in the social sciences. Sociometry assumes that societies have, besides a formal structure, an informal and emotionally based depth-structure of human relations, connecting the individual with other individuals. These relations can be made evident by appropriate methods. Among the techniques Moreno introduced for this purpose were the sociometric test, the sociogram, the interaction diagram, the locogram, and the sociomatrix. These techniques lead to group-therapeutic approaches, especially in “psycho-

drama” and “sociodrama.” In these, the conventional doctor-patient relationship is replaced by acting in which the participants purge themselves through reliving and acting out their experience. These methods have been applied in a variety of situations, especially in schools, industries, and armies.

Major publications of Moreno, apart from a great many papers and monographs, are *Das Stegreiftheater* (1924; *The Theater of Spontaneity*, tr. by the author, 1947); *Who Shall Survive?* (1934, rev. ed. 1953); *Sociometry, Experimental Method and the Science of Society* (1951); *The First Psychodramatic Family* (1964); and *Discovery of Spontaneous Man* (1965).

[Werner J. Cahnman]

MORESHET, research and education center for Holocaust Studies.

The Founding of Moreshet

Moreshet was originally established by the Kibbutz Arzi Ha-Shomer ha-Za'ir in the early 1960s as a center for collecting testimonies of concentration camp survivors and resistance fighters from the ghettos. The moving spirits of the project were a group of former partisans and members of Jewish undergrounds which included: Abba *Kovner, Israel *Gutman, Chaïke Grossman and a then young historian, Yehuda *Bauer. Their plan was adopted at a convention of the Kibbutz Arzi Federation in 1961. Kovner explained to the delegates the significance of the name, which they had chosen:

The project will be called *Moreshet*. Why? Because we are of the people. We intend to say that we have no political arrogance, but only an historical truth: that we are heirs to a great heritage of our people.

The primary incentive in all their activities was to make certain that future generations learn about the horrors of the Holocaust and to insure that it doesn't happen again.

As the years went by, Moreshet, expanded its field of work. In the early 21st century Moreshet had developed into a leading research and education center for Holocaust Studies. It carries out activities in various fields with a publishing house; *Yalkut Moreshet*, a journal; an educational Campus at Givat Havivah; Holocaust Studies and Research Center: Moreshet Archives; an exhibition annex; journeys to Poland; and the Holocaust Remembrance Day Ceremony at Yad Mordechai.

Publications

MORESHET PUBLISHING HOUSE. The dozens of titles which have appeared over the years encompass central issues, such as personal testimonies, biographies, historical works, annals of communities and literature for children and youth. The books, covering important subjects of the Holocaust, are an important resource for pupils and researchers.

YALKUT MORESHET. The journal *Yalkut Moreshet* is a prestigious research periodical appearing twice annually. First issued in December 1963, it is the oldest and most significant of its kind in Israel and is dedicated to documentation, deliberation, and research of the Holocaust. The material that appears

in *Yalkut Moreshet* has proven to be an invaluable source for courses in Holocaust Studies both in Israel and abroad.

As of 2003, an English edition of *Yalkut Moreshet* has begun appearing on an annual basis, containing articles from the current Hebrew edition, as well as articles from previous editions that have become classics in Holocaust research.

The Educational Campus at Givat Hivivah

The characteristic and unique guidelines of Moreshet's educational work are characterized by the participation of the pupils in the educational process, through various interdisciplinary activity workshops. Less emphasis is placed on lectures and more on discussions, stories and opportunity for self-expression. Major use is made of different means of illustration: films, pictures etc. Pupils are also given the opportunity to connect with the computerized archives for personal projects.

A significant portion of time is devoted to an encounter with Holocaust survivors. Since they were then the same age the pupils are now, it is easy for the youngsters to listen to them, ask questions and to identify.

Historical stress is placed on the role of youth, and especially graduates of the youth movements, in the resistance against Nazism. Historiography points out the place of youth as a leading element and stimulus to resistance, and at its head – graduates of the youth movements – owing to the education and values which they absorbed in their movements.

A central theoretical guideline is the exposure of the sources of racism and the roots of antisemitism and education towards universal humanistic values as a way of preventing it from happening again. Moreshet encourages participants to confront the complex dilemmas of one's own experience, to take a stand. and to make a moral choice.

Educational Programs

Among the educational programs carried out by Moreshet are (a) programs for the Israel Defense Forces, which enrich knowledge of moral struggles and values. Moreshet offers seminars dealing with the effects of military service in reinforcing Jewish and Israeli identity. Programs touch on obedience to authority, the role of civilians in war, heroism, human dignity. (b) Study days for pupils of all grades: the study units and means of illustration in the programs offered are designed with maximum consideration of the cognitive and emotional ability of the various age groups. During the course various activities take place, including creative activity to "work through" the experiences of the day. (c) A program on women Holocaust Resistance fighters, which deals with the role of women in fighting in the ghettos and forests and as liaisons with the Aryan side. The seminar deals with conflicts stemming from the three components of women's identity – woman, Jew, and Holocaust fighter. Emphasis is placed on the education these women received in their youth, on the ways they overcame difficulties and obstacles, the dilemmas they faced, and the means they used to fulfill their missions. (d) A weekend seminar in Russian for new immigrants from the CIS, Antisemi-

tism, Racism and the Holocaust as a Significant Element in Shaping the Collective Israeli Consciousness, has as its goal A weekend the clarification of the concepts connected with the Israeli collective identity; their significance to new immigrants and how they deal with these questions; antisemitism and the Holocaust as a significant element in shaping Israeli and Jewish collective consciousness. (e) Programs for visitors from abroad in the form of seminars on the Holocaust and its ramifications on Israeli society range from one to three days and include accommodations at Givat Hivivah, and are offered in English, Spanish, German, and other languages upon request. The schedule includes workshops, lectures and tours.

The Mordechai Anielevich Holocaust Studies and Research Center

MORSHET ARCHIVES. Founded in 1961, the task of the archives contain a collection of documents and testimonies from the period of the Holocaust, including important documents and files such as the Hannah Szenes, Abba Kovner, and Menachem Bader papers.

Moreshet has established a Reading and Research Center, including books of communities, of chronicles and documentation of the Holocaust period; personal memoirs and individual and group testimonies. Rooms for researchers are equipped with computers attached to the Moreshet computer network and research and information programs.

Exhibition Annex

Moreshet is in the process of developing an exhibition annex on the Givat Hivivah campus. The new annex will provide the basis for learning about the resistance to the Nazis in the ghettos, in the concentration camps, and among the partisans. From there the visitors will go into the classrooms and the auditorium. The annex will also contain an area for temporary exhibitions, providing visual expressions of various events.

Journeys to Poland

The Kibbutz Arzi high schools and the Ha-Shomer ha-Za'ir youth movement were among the first to organize delegations to the sites of the Holocaust and have thus gained significant experience in organizing the journeys and preparing groups for the experience programs offered by Moreshet towards the journeys to Poland by high school students include detailed preparation for the journey; acquaintance with the Jewish world that perished; study of World War II in Europe; clarification on the forming of Jewish and Zionist identity as an aftermath of the Holocaust. Moreshet also provides experienced guides to accompany the groups as well as workshops for the participants upon their return home, to "work through" the experience.

There is a training program for guides and teachers accompanying the journey to Poland, which includes educational ways of dealing with the experience of the journey. The preparation course for accompanying teachers is a program aimed at expansion of knowledge on subjects related to the Holocaust, and the psychological and educational preparation

for the role of accompanying teacher. It also trains teachers to deal with questions arising among young persons upon their return from Poland and develops the teachers' capabilities to cope with problems, difficulties and reactions by individuals and groups.

[Ariel Hurwitz (2nd ed.)]

MORESHETH-GATH (Heb. מוֹרֶשֶׁת גַּת), town of the tribe of Judah in the Shephelah, between Lachish and Achzib. It is mentioned by the prophet Micah, who was born there (Micah 1:1, 14; Jer. 26:18). Later sources (Eusebius, *Onom.* 134:10; Sozomenus, *Historia Ecclesiastica* 9:17; Jerome, *In Micam* 1:10) identify it with a village, which is also called Birat Satia or Kiryat Satia, in the territory of Eleutheropolis (Bet Guvrin). The *Madaba Map indicates a village called Morasthi to the north of Eleutheropolis, near a church of St. Micah. Some scholars have identified Birat Satia with Khirbat Sa'ad or Khirbat al-Başal and Moresbeth-Gath with nearby Tell al-Judayda; others have looked for it at Tell Khirbat al-Bayḏā' approximately 4 mi. (6 km.) northeast of Bet Guvrin. The Gath fortified by Rehoboam (11 Chron. 11:8) has also been tentatively identified with Moresbeth-Gath.

[Michael Avi-Yonah]

MOREWSKI, ABRAHAM (Menaker; 1886–1964), Yiddish actor and producer. Born in Vilna, Morewski acted and studied in Russia, doing translations and research on Shakespeare which resulted in his study *Shylock and Shakespeare* (1917). He joined the *Vilna Troupe in 1920, played Mirapoler Tsadik in *An-Ski's *The Dybbuk* and the title role in Gutzkow's *Uriel Acosta*. He directed a four-act version of *The Dybbuk* reduced to three acts in 1920. He toured in Europe and the U.S. and during World War II in southern Russia. In Warsaw, from 1956, he wrote his memoirs, *Ahin un Aher*, four volumes published in 1963.

MORGENSTERN, JULIAN (1881–1977), U.S. Reform rabbi, Bible scholar, and president of the *Hebrew Union College. Born in St. Francisville, Illinois, Morgenstern graduated from the University of Cincinnati in 1901 and was ordained at the Hebrew Union College in 1902. He received his doctorate at Heidelberg in 1904; his dissertation was published as *Doctrine of Sin in the Babylonian Religion* (1905). After three years as rabbi in Lafayette, Indiana, he turned to academic life, teaching biblical and Semitic languages, concentrating on biblical studies, at Hebrew Union College.

In 1921 Morgenstern became acting president of the college and in 1922 was elected president; he was the first alumnus to hold this office. During his presidency the number of students and faculty and the scope of college activity grew markedly. Departments of education, social studies, and Jewish music were established; new buildings were erected; an endowment fund was created; the college, previously a depart-

ment of the Union of American Hebrew Congregations, was independently chartered, and the Hebrew Union School of Religious Education was established in New York City. *Hebrew Union College Annual*, founded in 1924, at once became one of the world's outstanding publications in Jewish scholarship. During the Hitler period, a dozen European scholars found a haven at the college, chiefly as the result of Morgenstern's efforts. At first anti-Zionist, Morgenstern later modified his position on the creation of a Jewish state. After retiring as college president in 1947, Morgenstern continued to teach Bible. He served as president of the American Oriental Society and the Society of Biblical Literature; he was for many years recording secretary, and then honorary president, of the Central Conference of American Rabbis and one of the founders of the World Union for Progressive Judaism.

Biblical Studies

As a young professor Morgenstern immersed himself in biblical studies and published relatively little. As his views matured, the number and extent of his publications increased. Three works originally published in the *Annual* were later issued in book form: *Amos Studies* (1941); *Ark, the Aphod, and the "Tent of Meeting"* (1945); and *Message of Deutero-Isaiah* (1961). Among many other important essays in the *Annual* are "Oldest Document of the Hexateuch" (1927), which provided the first solid support for the so-called Kenite hypothesis (see *Kenites; *Pentateuch), and a series of studies on the calendars of ancient Israel (1924, 1926, 1935, 1947–48). Starting as a follower of the *Wellhausen school, Morgenstern became increasingly independent in his approach to Bible problems. In his analysis of documentary sources he relied chiefly on differences in economic, social, and political background rather than on differences of vocabulary and style. In his reconstruction of biblical history, he gave much weight to economic and social factors without minimizing the role of inspired thinkers and teachers. In his studies of the calendar, he showed that changes in the nomenclature of the months and the dating of the festivals reflected significant changes in the life of the people of Israel. He also found evidence that in the early post-Exilic period there was a strong universalist trend expressed in proselytizing activity, which came to a catastrophic end when a coalition of neighboring states destroyed Jerusalem and burned the Second Temple. (The Temple of Ezra-Nehemiah, later rebuilt by Herod, was thus actually the Third Temple; see "Jerusalem – 485 B.C.," in *HUCA*, 1956, 1957, 1960; see *Temple.) Morgenstern's continuing vigor in scholarly activity is evident in his *Fire on the Altar* (1963), *Some Significant Antecedents of Christianity* (1966), and *Rites of Birth, Marriage, Death, and Kindred Occasions among the Semites* (1966). More popular in character are *Jewish Interpretation of Genesis* (1919), *Book of Genesis: A Jewish Interpretation* (1965²), and a collection of lectures and papers, *As a Mighty Stream* (1949).

Views on Reform

His historical research convinced him that what had been called "universalism" and "particularism" are not mutually

antagonistic, but that both are necessary and each complements the other. Despite his official role within the Reform movement, Morgenstern was dissatisfied with the term “Reform Judaism,” which he regarded as reflective of conditions in 19th-century Germany rather than in 20th-century America, and as carrying with it certain overtones of sectarian separatism. He preferred to speak (so far as the United States is concerned) of an emerging American Judaism, more pragmatic and less dogmatic than early Reform; and he envisioned an ultimate synthesis of the Reform and Conservative movements, in a pattern not yet evident.

MORGENSTERN (née Bauer), LINA (1830–1909), German educational theorist, philanthropist, and author. Born in Breslau, she founded a society for supporting poor schoolchildren when she was only 18. In 1854, she married Theodor Morgenstern, a manufacturer, and they settled in Berlin.

From 1859 on, she devoted her life to education and philanthropy. She helped organize the first Froebel kindergartens, and in 1860 published *Das Paradies der Kindheit* (1904), a textbook based on Froebel’s method. She established the first free kitchens for the needy in 1866, and in 1873 founded the *Berliner Hausfrauenverein*, a society which served to educate women and safeguard their welfare. The society conducted a cooking school, for which she wrote all the textbooks. In 1887, together with two nurses, she opened a school for nursing. In 1896, she convened the first International Women’s Congress, in Berlin, where 1,800 delegates from all parts of the world heard her lectures on women’s rights. She was active in peace movements and served as vice president of the Alliance des Femmes pour la Paix. She edited and wrote many books, including storybooks for children, novels, biographies, cookbooks, periodicals for women, and books on women’s problems, such as *Die Frauen des 19. Jahrhunderts* or *Frauenarbeit in Deutschland*.

[Shnayer Z. Leiman]

MORGENSTERN, OSKAR (1902–1977), U.S. economist. Born in Goerlitz, Germany, Morgenstern taught at the University of Vienna (1928–38) and served as a director of the Austrian Institute of Business Cycle Research (1931–38). From 1936 to 1938 he served concomitantly as an adviser to the Austrian Ministry of Commerce and from 1936 to 1946 as a member of the committee of statistical experts of the League of Nations. In 1938 he settled in the United States and taught at Princeton University, where he became a full professor in 1944, and in 1948 director of its econometric research program. From 1955 to 1957 he was a consultant to the U.S. Atomic Energy Commission, and from 1959 to 1960 the White House con-

sultant on atomic energy matters. In addition to general economic theory, his principal interests were econometrics and business cycles. One of Morgenstern’s major contributions to the field was the formal conception of “game theory” as part of economic theory, which he and John von Neumann first organized in the classic book *Theory of Games and Economic Behavior* (1944). Game theory was later expanded upon and refined by John Nash and others. Morgenstern retired from Princeton in 1970.

Morgenstern’s other publications include *The Limits of Economics* (1937), *Economic Activity Analysis* (1954), *The Question of National Defense* (1959), *International Financial Transactions and Business Cycles* (1959), *On the Accuracy of Economic Observations* (1950, 1963²), *Predictability of Stock Market Prices* (with C.W.J. Granger, 1970), *Long-Term Projections of Power* (1973), and *Mathematical Theory of Expanding and Contracting Economies* (with G.L. Thompson, 1976).

[Joachim O. Ronall / Ruth Beloff (2nd ed.)]

MORGENSTERN, SOMA (1890–1976), novelist, journalist. Soma Morgenstern was born as Salomo in Budzanow, Galicia, and although reared in a ḥasidic environment and familiar with the languages of the multiethnic culture of the Habsburg monarchy, his father provided him with a tutor in German. He attended a gymnasium in Tarnopol and studied law and political science at the University of Vienna from 1912. Like his friend Joseph Roth, he served in the Austro-Hungarian Army during World War I and was commissioned. In 1921 he received his doctorate; however, did not work as a lawyer, deciding instead to become a writer. Attracted to the theater, he worked as an assistant to Max *Reinhardt and freelanced as a critic of drama, music and literature in Vienna and Berlin. In 1927 he joined the staff of the *Frankfurter Zeitung*, and from 1928 to 1933 was its cultural correspondent in Vienna. He later wrote for *Die Weltbuehne*. In 1932 he began work on his first novel, inspired not only by the music of Modest Mussorgski, as his friend Alban Berg noted, but also by the world congress of Agudat Israel in 1929 in Vienna, which he attended as a journalist for the *Frankfurter Zeitung*. He conceived an entire trilogy, *Funken im Abgrund*, the first part of which was printed in 1935 in Berlin under the title *Der Sohn des verlorenen Sohnes* and tells the story of the return of an assimilated Viennese Jew to East European Judaism. Morgenstern fled to Paris in 1938, escaped from a concentration camp in occupied France in 1940, and made his way via Morocco and Portugal to the United States in the summer of 1941. The English version of *The Son of the Lost Son*, translated by Joseph Leftwich and Peter Gross, and its sequels, *In My Father’s Pastures* (1947), translated by Ludwig *Lewisohn and *The Testament of the Lost Son* (1950), completed the trilogy. *Funken im Abgrund* is a unique paean to the vanished Jewish life in rural Eastern Europe, revealing remarkable narrative power and with lengthy detailed description. It tells the story of the son of an apostate

Jew who returns to his father's native village, where he rediscovers the values of authentic Jewish life. In his later work *The Third Pillar*, translated by Lewisohn in 1955 (the German original, written between 1946 and 1953, was published under the title *Die Blutsaeule* in 1964, and a Hebrew translation appeared in 1976 under the title *Ammud ha-Damim*), he attempts to come to terms with the Holocaust; combining realistic and fantastic elements, it is set in the same locale as the trilogy, and told in biblical language. Abraham *Heschel called it "the only Midrash about the Holocaust." A passage from it has been incorporated in the liturgy of the Yom Kippur martyrology in the *Mahzor for Rosh Ha-Shanah and Yom Kippur*, published by the Rabbinical Assembly of the Conservative Movement (1972). Morgenstern died in New York.

[Wolfe Kelman / Andreas Kilcher (2nd ed.)]

MORGENTALER, HENRY (1923–), Canadian physician and abortion advocate. Henry Morgentaler was born in Lodz, Poland, the son of well-known members of the Jewish Socialist Labor Bund. His parents and sister were murdered by the Nazis, but Morgentaler and his brother survived incarceration in Auschwitz and Dachau. Following the war, Morgentaler accepted a UN scholarship offered to Jewish survivors and enrolled in medical school in Germany. He completed his first year at Marburg-Lahn University, and his second and third years at the Université de Bruxelles. In 1950 Morgentaler emigrated to Canada, where, despite quotas for Jewish medical students, he resumed his studies at the Université de Montréal and received his medical degree in 1953.

Convinced that women had a right to a safe medical abortion, Morgentaler appeared before the Canadian House of Commons Health and Welfare Committee as president of the Montreal Humanist Fellowship in 1967 and urged the federal government to repeal the Canadian law against abortion. Recognized as a leading advocate of abortion rights in Canada, he was inundated with requests for help from across the country and began performing abortions in his Montreal office. To deliberately challenge the law, he announced in 1973 that he had, in violation of the law, successfully carried out more than 5,000 abortions. Three times he was arrested, charged, tried by jury, and found not guilty of violating the Criminal Code. An unprecedented decision of the Quebec Court of Appeal overturned his first jury acquittal and sent Morgentaler to prison, prompting Parliament to pass a Criminal Code amendment – now known as the Morgentaler Amendment – denying appellate judges the power to strike down acquittals and order imprisonment.

In 1983 Morgentaler opened a clinic in Toronto. He was again charged and acquitted, and in early 1988 the Supreme

Court of Canada finally struck down Canada's abortion law. Morgentaler, who had eight clinics across Canada, continued his campaign to provide abortion services and test federal and provincial law.

[Andrea Knight (2nd ed.)]

MORGENTHAU, U.S. family of public officials. **HENRY MORGENTHAU SR.** (1856–1946), financier and diplomat, was born in Mannheim, Germany. His family immigrated to the United States in 1865, settling in New York City. He studied at the College of the City of New York and graduated from Columbia Law School in 1877. He specialized in real estate law and soon concentrated on several highly successful New York City real estate ventures. He relinquished his law practice in 1899 and served as president of the Central Realty Bond and Trust Company and, from 1905 to 1913, as president of Henry Morgenthau Company.

Retiring from active business affairs, Morgenthau entered national politics. He was chairman of the Democratic National Committee's finance committee during Woodrow Wilson's 1912 and 1916 presidential campaigns. In 1913 President Wilson appointed him U.S. ambassador to Turkey and told him: "Remember that anything you can do to improve the lot of your coreligionists is an act that will reflect credit upon America." Morgenthau faithfully followed this advice. He was not a Zionist and Zionism as a theory scarcely interested him, but he was deeply impressed by what he saw on a visit to Erez Israel in April 1914: the pioneers appeared to him to be the personification of a new type of Jew.

Morgenthau's good will did much for Zionists during the war. In August 1914, he alerted the Jewish relief organizations in the United States and on October 6 Maurice Wertheim, his son-in-law, arrived in Jaffa on the American warship *North Carolina* to hand over 250,000 francs in gold (\$25,000) for emergency purposes. As the war went on and conditions worsened, more warships and additional funds were sent. Once an entire ship, the s.s. *Vulcan*, arrived loaded with provisions; it was thanks to his help that the Jewish population in the country remained alive. *Persona grata* with the Ottoman government, Morgenthau used his influence to prevent the destruction of the *yishuv* by Jamal Pasha.

In 1916, Morgenthau returned to the United States and assisted Woodrow Wilson in his presidential election campaign. In June 1917, the president dispatched him on a secret mission to explore the possibilities of detaching Turkey from the Central Powers. The British government, for its part, learning about American objectives, dispatched Chaim Weizmann to counter the move. The latter met Morgenthau in Gibraltar (July 4–5) and managed to dissuade him from carrying out his mission. Outwitted, Morgenthau never forgave Weizmann for this maneuver and his attitude towards Zionism consequently soured.

He made his views known in a letter to the *New York Times* (December 12, 1917) in which he paid tribute to the set-

tlement work in Palestine but branded Zionism a dangerous ideology which could undermine the hard-won civil rights of Jews in countries of their adoption; it provided no solution to the Jewish problem. This was the classic doctrine of the Reform movement, of which he was an adherent.

In 1919 Morgenthau was named by Wilson to head a U.S. commission investigating the treatment of Jews in Poland (see *Morgenthau Commission). A strong advocate of the League of Nations, Morgenthau was appointed chairman of its Refugee Settlement Commission in 1923 and implemented the complicated transfer of over a million Greeks from Turkish territory to Greece and of several hundred thousand Turks from Greece to Turkey. Morgenthau was one of the organizers of the International Red Cross and Near East Relief, Inc. He was a leader of the American Red Cross and a liberal patron of musical organizations. He was also active in Jewish religious and philanthropic work; he founded Bronx House in 1911 and served on the executive committee of B'nai B'rith. He was president of the Free Synagogue of New York, but resigned in 1919 because of his opposition to Stephen S. *Wise's Zionism.

Morgenthau was the author of *Ambassador Morgenthau's Story* (1918), an autobiography; *All in a Lifetime* (1922); *My Trip Around the World* (1928); and *I Was Sent to Athens* (1930).

His son HENRY MORGENTHAU JR. (1891–1967) was an agricultural expert and U.S. cabinet member. Henry Morgenthau Jr., who was born in New York City, studied agriculture at Cornell University. He purchased a large farm in Dutchess County, New York, modernized it, and operated it successfully. During World War I he worked to increase food production and also served as an officer in the navy. In 1922 Morgenthau purchased the *American Agriculturist* and used this journal to propagate his views on the state of American agriculture. Governor Franklin D. Roosevelt, a friend and Dutchess County neighbor, in 1928 appointed Morgenthau chairman of the Agricultural Advisory Commission and in 1930 appointed him state conservation commissioner. In response to the Depression, Morgenthau developed state work projects which were later used as models for national programs during Roosevelt's presidency.

Joining Roosevelt in Washington, Morgenthau served as head of the Federal Farm Board and the Farm Credit Administration, and in early 1934 was named secretary of the treasury. A skillful and dynamic administrator, he thoroughly reorganized the Treasury Department. U.S. national and international monetary policies instituted in the 1930s for the stabilization of the economy owed much to his initiative. In addition, he supported tax reforms emphasizing greater obligations of the wealthy. His humanitarian interests were consistently evident in his concern for relief activities. Morgenthau was one of the early champions of preparation for U.S. involvement in World War II and of support for the Allied nations early in the war; he promoted foreign purchases, industrial mobilization, and the huge wartime bond drives. In 1943 Morgenthau successfully intervened with Secretary of State Cordell Hull to

obtain State Department approval of a plan of the World Jewish Congress to transfer private U.S. funds to Europe to rescue French and Romanian Jews. It was at Morgenthau's suggestion that Roosevelt established the *War Refugee Board as a presidential executive agency in January 1944.

As the end of the war approached, Morgenthau proposed a peace plan involving the partition of Germany and its conversion into an essentially agrarian area. The Morgenthau Plan, presented in his *Germany Is Our Problem* (1945), stirred much debate and Morgenthau resigned after Roosevelt's death.

While still at the Treasury, Morgenthau worked with such Jewish organizations as Mt. Sinai Hospital, B'nai B'rith, and the Jewish Welfare Board. In 1947–50 he served as general chairman and in 1950–53 as honorary chairman of the United Jewish Appeal; the unprecedented sums raised by the appeal during these crucial years significantly aided the new State of Israel. Morgenthau also served as chairman of the board of governors of the Hebrew University (1950–51) and of the American Financial and Development Corporation for Israel, and the Israel Bond drive (1951–54).

Henry Morgenthau Jr.'s son ROBERT MORRIS MORGENTHAU (1919–) was born in New York. He served in the Navy during World War II and engaged in private legal practice in New York (1948–61). In 1961 he was appointed U.S. attorney for the southern district of New York and served with distinction until 1970, winning a reputation for integrity and efficient prosecution. He was an unsuccessful candidate for governor of New York in 1962. In 1974 he was elected district attorney of New York County (i.e., Manhattan), serving for 30 years and being reelected unopposed in 2005. Among his Jewish communal affiliations were the Anti-Defamation League, the New York Federation of Jewish Philanthropies, and Brandeis University.

[Morton Rosenstock / Isaiah Friedman (2nd ed.)]

MORGENTHAU, HANS JOACHIM (1904–1980), political scientist. Born in Coburg, Germany, Morgenthau qualified as a lawyer and practiced in Munich from 1927 to 1930, when he became an assistant at the University of Frankfurt. He was acting president of the Frankfurt Labor Court from 1931 to 1933 and was professor of international law at the Madrid Institute of International and Economic Studies from 1935 to 1937, when he emigrated to the United States. From 1943 he taught international politics at the University of Chicago; in 1968 he was also appointed professor of political science at the City College of New York. He also served as consultant to the U.S. departments of State and Defense.

Morgenthau was the predominant figure in the post-World War II effort to refocus the study of international relations on the observed regularities of human conduct, rather than on the idealistic pursuit of abstract norms. This political realism gained wide influence with the publication of his *Scientific Man vs. Power Politics* (1947), and especially *Politics among Nations* (1949), which became the leading text in the field. Morgenthau was also active as a commentator on U.S. current affairs. His writings were published as *Politics in the Twentieth Century* (3 vols., 1962) and in 1970 as *Truth and Power*.

Morgenthau was a founder of the National Committee on American Foreign Policy and served as its first chairman in 1974. In his honor, in 1981 the committee established the Hans J. Morgenthau Award, which is presented to an individual whose efforts have contributed to the advancement of the national interests of the United States and to the achievement of U.S. foreign policy objectives within the framework of political realism.

As a founding proponent of political realism, Morgenthau was regarded as the central figure in international relations scholarship of the 20th century. Some of his other publications include *In Defense of the National Interest* (1951), *Dilemmas of Politics* (1958), *The Impasse of American Foreign Policy* (1962), *The Restoration of American Politics* (1962), *Crossroad Papers* (1965), *A New Foreign Policy for the United States* (1969), and *Science: Servant or Master?* (1972). Many of his writings were translated into foreign languages, and he served as editor of numerous philosophical, legal, and scientific journals.

Bucklin, *Realism and American Foreign Policy* (2001); M. Griffiths, *Realism, Idealism, and International Politics* (1995); G. Russell, *Hans J. Morgenthau and the Ethics of American Statecraft* (1990).

[Alan Dowty / Ruth Beloff (2nd ed.)]

MORGENTHAU COMMISSION (July–September 1919), U.S. commission, headed by Henry *Morgenthau Sr., to investigate the situation of the Polish Jews after the pogroms which took place in Poland at the end of World War I. The news of the pogroms set off stormy demonstrations in the important Jewish centers of the West. The representatives of the Polish National Committee in Paris were troubled by the extent of this reaction, and sought to improve their image with the public and among leading statesmen in order to strengthen their position at the forthcoming peace treaty negotiations. It was against this background that the Polish premier, Ignace Paderewski, suggested to President Wilson that an American commission be sent to Poland in order to carry out an objective investigation of the facts on the spot, and to prove that the rumors which had been circulated were maliciously exaggerated.

The mission, besides its chairman, included lieutenant general E. Jadwin, the lawyer H.G. Johnson, and the jurist Ar-

thur L. *Goodhart as adviser. The commission considered that its task was not only to note facts but to uncover their causes and offer proposals for improving the situation. The activities of the commission in Poland lasted two months. The public and parliamentary debates on the ratification of the Treaty of Versailles and the Minority Treaty (see *Minority Rights) connected with it aroused exaggerated sensitivity among the Poles, some of whom were inclined to regard the commission as an expression of mistrust on the part of the Anglo-French Entente. The Morgenthau Commission met with the representatives of the various groups in Polish Jewry, paying special attention to the views of the parliament representatives and leaders of the political parties. Morgenthau did not conceal his sympathy for the assimilationists and was impressed by the *zaddik* of Gur (*Gora Kalwaria) as the spokesman of the *hasidic* masses. The commission visited the large urban centers and spent some time in disputed areas such as *Lvov and *Vilna, as well as in such towns as *Pinsk and *Kielce which had been the scene of pogroms. Morgenthau spoke to a considerable number of Polish leaders of various political parties. Morgenthau treated the unconventional figure of Marshal *Pilsudski with respect, the latter making no effort to hide his dissatisfaction with the whole idea of the commission, as a slur on the honor of Poland. Because of his delicate position as a Jew, Morgenthau made a point of appearing objective and was inclined to justify the Poles as much as possible.

The report of the commission was published in the *New York Times* on Oct. 3, 1919. It tended to minimize the outbreak of violence to a number of incidents occurring against a background of tension and hostile acts, perpetrated by the occupation armies and retreating forces. As for the future, the equality of all citizens, without any distinctions in their rights or obligations, was to be ensured. Endeavors were to be made to introduce changes in the lives of the Jews by diversifying the branches of economy in which they were engaged and by increased vocational training.

[Moshe Landau]

MORGULIS, MANASSEH (Mikhail; 1837–1912), Russian writer and lawyer. Born in Berdichev, Ukraine, Morgulis was among the first to be educated in the government schools for Jews. In 1861 he completed his studies at the government rabbinical seminary in Zhitomir, and in 1864 he entered the University of Kiev, where he helped to create a Jewish students' circle working for the education of the masses and the propagation of information on Judaism in the Russian language. At the same time he contributed to the Hebrew and Russian Jewish press, as well as to the general press. In 1869 he gradu-

ated in law and settled in Odessa. He joined the group which published the *Den*, and in his "Impressions from Abroad," he presented a comparison between the situation of the Jews in Western Europe and in Russia. Attacking antisemitism in numerous essays, he sought to reform Jewish life from within. One of his longest essays dealt with the history of the education of the Jews (in *Yevreyskaya Biblioteka*, vols. 1–3).

Morgulis considered that Russian Jewry should accept Russian culture while remaining loyal to the religious-national values of Judaism. He therefore supported Yiddish literature, contributed to the Jewish press, and cooperated with the moderate *Hibbat Zion inasmuch as they minimized their projects for "the settlement of Palestine." Although initially he was a member of the committee of the Society for the Support of Agricultural Workers and Craftsmen of Syria and Erez Israel, his violent opposition to political Zionism led him to abandon such activities; he also combated attempts to strengthen the Hebrew elements in the modern Jewish schools. A committee member of the Odessa branch of the *Society for the Promotion of Culture Among the Jews of Russia, he was also actively involved in the community's educational institutions, especially the vocational school, Trud, and the *talmud torah*, which were models for all the Russian communities. Morgulis' principal essays and studies were published in his *Voprosy yevreyskoy zhizni* ("Problems of Jewish Life," 1889), and his memoirs (in *Voskhod*, 1895–97 and in *Yevreyskiy Mir*, 1911) are of historical value.

[Yehuda Slutsky]

MORHANGE, town in the department of Moselle, N.E. France. Jews are first mentioned there in 1686. As a result of complaints by the townsmen about the increase in the number of Jewish families, Duke Leopold ordered the Jews not to attract new coreligionists to Morhange. In 1734 the townsmen demanded that Jewish residence be confined to a single street, and that the number of authorized Jewish families again be reduced. The Jews were compelled to conform to this order, despite their attempts to circumvent it with the connivance of some of the Christian inhabitants. Only five Jewish families remained in Morhange by 1739, the rest having moved away, mainly to Metz. Their numbers increased slightly after the French Revolution. The synagogue was destroyed by the Germans during World War II. Morhange has supplied the patronymic of several families of Lorraine.

[Bernhard Blumenkranz]

MORHANGE, PIERRE (1901–1972), French poet. Born in Paris, Morhange gained his literary apprenticeship in the intellectual battles of the 1920s. He maintained that a special sensi-

tivity identified the Jewish writer and that French culture had been enriched by the Jewish contribution. In *Blessé* (1951) he described Jewish suffering with violence and anguish. A prophetic tone dominates collections such as *La vie est unique* (1933), *Autocritique* (1951), and *La robe* (1954).

MORIAH (Heb. מוֹרְיָה), an unidentified locality mentioned in the Bible. Abraham was ordered to offer Isaac as a burnt offering in the "land of Moriah," which was three days' distance from Beersheba and visible "[from] afar" (Gen. 22:2–4). Early tradition identifies "mount" Moriah with the place where Solomon built the Temple. Josephus also locates the sacrifice on the mountain where David [sic] later built the Temple (Ant., 1:226). Talmudic scholars explain the name Moriah as derived from the "the mountain of myrrh" (in Song 4:6; Mekh., Be-Shallah 3; Gen. R. 50:7). The Septuagint, in translating "Amoria" (Amorite) for Moriah, offers another explanation. The assumption that Abraham intended to sacrifice Isaac on the threshing floor of Jebus (Jerusalem), in full view of the Canaanite city, is farfetched; nor is the Temple Mount visible from afar, as it is hidden by the higher mountains around it. It seems more probable that the biblical story left the location of Moriah deliberately vague; the importance of the sacrifice of Isaac in the series of covenants between God and Israel made it natural that at an early time this supreme act of faith was located on the site destined to become the most holy sanctuary of Israel, the Temple of Solomon, just as the Samaritans transferred the act to their holy mountain, Mt. Gerizim.

MORIAH, Hebrew publishing house. In 1901 H.N. *Bialik, together with Y.H. *Rawnitzki, S. Ben-Zion, and others, founded the Moriah publishing house in Odessa, their primary intention being the printing of educational material for modern Hebrew schools. Up to 1914 they issued a large amount of such literature, including Bialik-Rawnitzki's famous anthology *Sefer ha-Aggadah*. Moriah's activities were expanded (under E.L. Lewinsky) to include the best in modern Hebrew literature, such as works by Mendele Mokher Seforim, Shalom Aleichem, I.L. Peretz, S. Asch, and D. Frischmann; poetry by Bialik, Tchernichowsky, and Z. Shneur; and scholarly works by M.L. Lilienblum, D. Neumark, and S. Krauss. Moriah became the leading house for modern Hebrew publishing, but World War I and the Russian Revolution caused the end of this remarkably successful enterprise. It was succeeded by the *Dvir publishing house, set up in Berlin after the war by some of the founders of Moriah.

MORIN, EDGAR (1921–), sociologist and one of France's leading contemporary thinkers. He was born in Paris to a family of Salonikan origin. His parents were Vidal and Luna Nahum. He adopted the name "Morin" during the period of his

clandestine activities in the French Resistance during World War II. Formerly an active member of the Communist Party, he published his *Autocritique* in 1959. An emeritus researcher at the French National Center for Scientific Research (CNRS), Morin introduced the notion of inter-disciplinarity in his work, from his first book, *L'an zéro de l'Allemagne* (1946) until his last, *La violence du monde*, published with Jean Baudrillard (2003). His interests covered an extensive range of themes, from cinema to modern biology, regardless of the current disciplinary boundaries. He became internationally famous – especially in Latin America – by attaching his name to the age of complexity. He was president of the European Agency for Culture (UNESCO), president of the Association for Complex Thought (APC), and a member of the council of the International Center for Transdisciplinary Research and Studies (CETSAP). His major work, on which he worked for over 20 years (1977–91), is the monumental six-volume series in which he aimed at reforming our way of thinking: *La méthode* – (1) *la nature de la nature*, 1981; (2) *La vie de la vie*, 1985; (3) *La connaissance de la connaissance*, 1986; (4) *Les idées, leur habitat, leur vie, leurs moeurs, leur organisation*, 1991; (5) *L'humanité de l'humanité: L'Identité humaine*, 2001; (6) *Éthique*, 2004. He also published his intellectual biography, *Mes démons* (1998). Several of his books were translated into English: *The Stars* (1960), *The Red and the White: Report from a French Village* (1970), *Method: Towards a Study of Mankind – The Nature of Nature* (1992), *Homeland Earth* (1998), *Seven Complex Lessons in Education for the Future* (1999), *Concept of Europe* (2006).

Acknowledging his Jewishness, he published his family's biography, *Vidal et les siens* (1989), and contributed a preface to Henry Méchoulan's *Les Juifs d'Espagne: histoire d'une diaspora: 1492–1992* (1992). Most of the following have been translated into Chinese, English, German, Greek, Italian, Japanese, Korean, Polish, Portuguese, Russian, Spanish, Swedish, and Turkish: *Rumour in Orleans* (1971); *Human Race, Preceded by an Homage to Robert Antelme* (1992); *Homeland Earth: A Manifesto for the New Millennium (Advances in Systems Theory, Complexity and the Human Sciences)* (1998).

[Sylvie-Anne Goldberg (2nd ed.)]

MORNING BENEDICTIONS (Heb. בְּרִכּוֹת הַשָּׁחַר), designation of a series of benedictions (the number and sequence varying in the different rituals), which constitute the first part of the morning prayer (*Shaḥarit). After a number of preliminary hymns, the following blessings are recited: (1) for ablution; (2) for the wondrous harmony of the bodily functions; (3) the three Torah blessings (*Birkat ha-Torah), which in some versions appear in a different place; and (4) *Elohai*

Neshamah (based upon Ber. 60b) closing with the formula: “Blessed art Thou, O Lord, Who restores the souls unto the dead.” This is followed by a series of 15 benedictions (but this number varies in different versions) praising God who: (1) “endows the cock with the ability to distinguish between day and night”; (2) “has not made me a heathen” (the Conservative Sim Shalom siddur has “who has made me a Jew “); (3) “has not made me a slave” (Sim Shalom: “who has made me free”); (4) “has not made me a woman”; women say: “who has made me according to Thy will” (these last three blessings are near the end in the Sephardi rite and some ḥasidic rites; *Sin Shalom*: “who has made me in His image); (5) “enlightens the blind”; (6) “clothes the naked”; (7) “looses the bound”; (8) “raises them that are bowed down”; (9) “stretches out the earth upon the waters”; (10) “has provided me with all my necessities”; (11) “has ordained the steps of man”; (12) “girds Israel with might”; (13) “crowns Israel with glory”; (14) “gives strength to the weary” (this does not appear in all versions); and (15) “causes sleep to pass from my eyes.” These blessings, most of which are mentioned in the Talmud (Ber. 60b), were recited originally at home during the various stages of a person's awakening: opening his eyes, standing up, getting dressed, etc. Maimonides opposed their recital at public worship (Yad, Tefillah, 7:9), but in the course of time they were incorporated into the morning service in the synagogue, probably because people did not remember by heart their wording or their order.

Several personal prayers of tannaitic and amoraic origin (quoted in Ber. 16b, 60b) are then recited. These are followed by the scriptural account of the *Akedah, by the confession of R. Johanan (Yoma 87b), by the *Shema, the order of sacrifices (*parashat ha-korbanot*), and in most rites, especially the Sephardi, *Pittum ha-Ketoret*, and by talmudic sections: *Zevahim* (Mishnah, chapter 5) and the *baraita* of R. Ishmael (Introd. to Sifra, Leviticus). The morning service proper then begins.

The Conservatives have introduced alternate passages after the Shema, omitting the *korbanot* and *Pittum ha-Ketoret* passages. These are: Avot de-Rabbi Natan 11a; Sukkah 49b; Sifrei Deut Ekev; and Sotah 14a. After the textual study paragraphs they have kaddish de-rabbanan, followed by Shir shel Yom, Psalm 27 for the month of Elul, Psalm 49 for a shiva house, then Anim Zemiro, Psalm 30, and the mourner's kaddish.

MORNING FREIHEIT (*Morgn-Frayhayt* – “Morning Freedom”), U.S. leftist Yiddish newspaper. In 1921, the U.S. group, the Jewish Socialist Federation (JSF), split from the Socialist Party. During the ferment of the Jewish labor movement at that time, the “independent” JSF was expelled from the

building of the *Jewish Daily Forward*, located in the heart of Manhattan's Lower East Side; many of the federation's intellectual leaders worked as staff of the widely read Yiddish daily. The JSF, renamed the Jewish Federation, together with the just-formed Workers Party, founded the *Frayhayt* in April 1922 as a leftist daily afternoon newspaper. The *Frayhayt*, named for Germany's Independent Socialist Party's newspaper, initially tried to steer a "third course" between mainstream social democracy and proletarian communism. The *Frayhayt* managed for several years under the editorship of Moshe *Olgin to maintain high journalistic and linguistic standards and had a staff that included such first-rate writers as H. *Leivick, Moyshe-Leyb *Halpern, David *Ignatoff, Moses *Katz, and Moyshe *Nadir. In June 1927, the paper began appearing in the morning, from then on known as the *Morgn-Frayhayt*. As was the case with many Yiddish and radical newspapers of the day, the *Frayhayt* made available to a range of authors' works under the Farlag-Frayhayt imprint.

By the late 1920s, with the consolidation of different groups into what became known as the Communist Party, the *Morgn-Frayhayt* had become an unswerving Party organ, as was demonstrated by the reversal of its initial support of the *yishuv* (the Jewish community in Mandatory Palestine) to total support for the Arabs during the 1929 anti-Jewish riots. The paper's position alienated many of its readers and caused its circulation to slip sharply from its peak of 14,000. The *Morgn-Frayhayt* remained loyal to the Communist Party line through the Hitler-Stalin pact and the Cold War, undergoing a process of self-examination and eventual political and organizational independence beginning in late February 1956, with Nikita Khrushchev's de-Stalinization of the U.S.S.R. In 1967, the *Morgn-Frayhayt* supported Israel's right to defend itself during the Six-Day War, in direct opposition to the position of the Communist Party of the U.S. Two years later, the CPUSA attacked the *Morgn-Frayhayt* and its English-language sister publication, *Jewish Currents*, for their increasingly independent position regarding Soviet intervention in Poland and Czechoslovakia, although the *Morgn-Frayhayt* had not yet openly broken with the Communist Party. The *Morgn-Frayhayt*'s politics independently evolved to something akin to the "Eurocommunism" of the 1970s and 1980s. By 1970, the paper was appearing five times a week, with an estimated 8,000 circulation. Seven years later, it became a weekly, with an English-language supplement. The *Morgn-Frayhayt* folded in September 1988.

[Arieh Lebowitz (2nd ed.)]

MOROCCO, westernmost country in North Africa. The first arrival of Jews in Morocco goes back to antiquity. There are numerous legends which claim that they settled in the country before the destruction of the First Temple. From the fifth to the third centuries B.C.E., the Carthaginian gold market was situated in Morocco. On this historical basis, an ancient legend relates that some five centuries before the Carthaginian expansion, in the days of Solomon and the Phoenicians, the Hebrews came to Sala (Chella) in the vicinity of Salé (Rabat) in order to purchase gold in large quantities. In another legend, it is related that Joab was sent to Morocco to fight the Philistines, who had been driven out of Canaan; an inscription describing this expedition is said to have existed near the present-day town of Zagora. Wadi Oued Draa and the region of Oufra (Ifran of the Anti-Atlas) are said to have been the sites of important Jewish settlements before the destruction of the Second Temple. The earliest epigraphic evidence on the presence of Jews in Morocco, however, comes from the second century C.E. It consists essentially of inscriptions on tombstones found in the ruins of the Roman town of Volubilis, between *Fez and *Meknès, and another inscription discovered in Salé. The latter is in Greek, while one of the inscriptions of Volubilis is in Hebrew.

Morocco, like the remainder of the Maghreb, was one of the favorite territories for Jewish missionary activities. The Jews, together with those whom they succeeded in converting, appear to have originally been numerous and particularly powerful. The great Arabic historian of the 14th century, Ibn Khaldūn, names a number of large Moroccan *Berber tribes who were converted to Judaism prior to the Arab conquest. These were the Fandalāwqa, Madyūna, Bahlūla, Ghiyāta, and Bazāz tribes. The capital of the last was also named Bazāz or Qul'at-Mlahdī. It was completely inhabited by Jews and did not disappear until the 12th century. It was situated near the present-day town of Sefrou. Other tribes, such as the Barghwāta, were also heavily Judaized. Between 581 and 693 many Jews were compelled to leave *Spain as a result of the persecutions of the Visigoth kings who, while forcing them to accept baptism, also adopted draconian measures against them. According to later traditions, thousands of Spanish Jews had settled in Africa by 693. It is told that these Jews, together with their Moroccan coreligionists, plotted to conquer or deliver Spain into the hands of the more tolerant Muslims (694). Some historians maintain that there were Jews among the Berber-Muslim invaders of Spain in 711.

The Arab conquest of Morocco and its conversion to Islam did not bring about the elimination of the Jews or the Judaized Berbers. However, when Idris I seized power in 788, it was his intention to compel all the inhabitants of the country to embrace *Islam. After the death of Idris I, there remained some Jewish or Judaized tribes in the area of *Fez. When Idris II (791–828) decided to establish his capital in Fez, he authorized Jews of all origins to settle there. Their dispersion in all the regions was one of the principal reasons for their economic strength at the time. The story goes that the inhabit-

Jewish communities of Morocco. Names in boldface type indicate communities existing in 1971.

ants of Fez revolted against the ruler Yahya (860), who had violated the chastity of a Jewish girl. The pogrom in Fez in 1033 is to be seen as an isolated event due to the Jewish support for the Maghrawas, the rivals of the Ifrenids. At a later date, the **Almoravides* prohibited the Jews to live in their capital **Marrakesh*. The most brilliant period of the Jews of Morocco from the spiritual and intellectual point of view belongs to the reigns of the **Idrisids* and their successors. The numerous departures for Spain drained neither the strength of Moroccan Jewry nor its intellectual activity. Even after the departure of R. Isaac **Alfasi* from Fez for Cordoba (1088), Judaism in Morocco retained its vigor. Under the Almoravides there was even a trend in the opposite direction. Two of the physicians of the Almoravide sovereigns, Meir ibn **Kamniel* and Solomon Abūab Mu'allim in Marrakesh, were of Spanish origin, one from Seville and the other from Saragossa. Both were distinguished Torah scholars. There were also scholars

in **Ceuta*, the native town of Joseph ibn Aknin, the disciple of Maimonides. There was also an important center of learning in **Sijilmassa* (ancient capital of Tafilalet oasis). Scholars were to be found in the Atlas region, in Aghmât; of these, there is information on the talmudist Zechariah b. Judah Aghmati. In Fez studies were carried on continuously; it was for this reason that **Maimonides* and his family settled there after leaving Spain during the persecution of the Almohads.

The doctrine of the mahdi Ibn Tūmart, which inaugurated the **Almohad* movement, did not tolerate the existence of non-Muslims. At the beginning, the latter were among the victims of the Almohad soldiers, who were highlanders in search of plunder. Indeed, many of the Jews were wealthy. By the time that 'Abd al-Mu'min (1128–63) had finally imposed Almohad domination in 1154, many Jews had already converted under the threat of the sword. After that, there was a short period of improvement in the situation of the Jews in

Fez. Those who had been spared from the massacres and the conversions were then able to resume a relatively normal life. This situation changed with the advent of Abu Ya'qub Yusuf (1165–84). The recrudescence of fanaticism once more resulted in the forced conversion of Jews. The *dayyan* of Fez, R. Judah ha-Kohen ibn Shushan, who refused to submit to this, was burnt alive, and at that time Maimonides left Morocco. The situation deteriorated even further under al-Mansur (1184–99) who imposed on the Jews, including those already converted, the wearing of a distinctive sign, the *Shikla*, because he did not believe in the sincerity of their conversion. The presence of Jews was authorized once more by al-M'amun (1227–32), but their appearance drew the anger of the Muslims who massacred all of them in Marrakesh (1232). The Jews did not return in considerable numbers until the time of the dynasty of the *Merinids, who replaced the Almohads in 1269. During Almohad rule, many Moroccan Jews had left the country for the East, above all for Christian Spain. Large numbers of them settled in the territories of the kings of Aragon, in Catalonia and Majorca, where they were favorably received.

The Merinids proved themselves particularly friendly toward the Jews. When the still-fanatic mobs attacked them in 1275, the Merinid sultan intervened personally to save them. The sovereigns of this dynasty benevolently received the Jewish ambassadors of the Christian kings of Spain and admitted Jews among their closest courtiers. Of these Jews, Khalifa b. Waqqasa (Ruqqasa) became steward of the household of the sultan Abu Ya'qub and his intimate counselor. A victim of palace intrigues, he was put to death in 1302. His nephew, who was also named Khalifa, held the same office and suffered the same fate (1310). However, there were no repercussions against the Moroccan Jews as a result of the execution of their powerful coreligionists. They were the principal factors in the prosperity of the country. The Sahara gold trade, which was of primary importance, and the exchange with the Christian countries were completely under their control. Their relatives and associates in the kingdom of Aragon financed, when necessary, the navies which defended the Moroccan ports. In addition to the **jizya* (poll tax), they paid enormous sums to the treasury in customs duties for their imports and exports. In the outlying areas, particularly in the Atlas region where there were large concentrations of Jews of early origin, the Jews wielded great influence in both the political and spiritual domains. Jewish physicians enjoyed well-deserved renown. The study of Kabbalah, as well as philosophy, was then in vogue. The last Moroccan philosopher of the Middle Ages was Judah b. Nissim ibn *Malkah, who was still alive in 1365.

From 1375 the Muslim world of the West clearly entered into its period of decline. The Jews of Morocco were all the more affected by this development because, unlike in *Algeria, there was no revival due to the arrival of important Jewish personalities fleeing from the Spanish persecutions of 1391. The Jews who came to Morocco during this period were mainly of average erudition; moreover, just like their native brothers, they encountered the fanaticism which had been

introduced among the Muslim masses by the mystics who had then founded the Marabout movement. This movement eroded the authority of the last Merinid sovereigns, and a serious deterioration in the condition of the Jews ensued. In 1438 the Jews of Fez were enclosed within a special quarter, the first Moroccan *mellah.

The political and economic situation in Morocco during the 15th century was bad. The sultan 'Abd al-Haqq turned to the Jews in order to straighten out his finances. He chose the Jew Aaron ben Battas as his prime minister, but a short while later the Merinid dynasty was ended (1465) with the assassination of its last representative and his Jewish minister. A large number of Jews lost their lives in this revolution, and many others were forcibly converted. They were authorized, however, to return to Judaism when Muhammad al-Shaykh al-Waqqasi came to power in 1471. According to local traditions, groups of Jews had in the meantime taken refuge in Spain. Among these were the family of the scholar and poet Saadiah *Ibn Danan, who settled in Granada, as well as Hayyim *Gagin, who became the leader of the native Jews upon his return to Morocco in 1492. The Jewish chroniclers are unanimous in their description of the welcome accorded by the sultan Muhammad al-Shaykh al-Waqqasi to the Spanish and Portuguese refugees (*megorashim*) in 1492 and 1496. Bands of plunderers, however, attacked the numerous Jews on the roads to Fez, the town to which they had been attracted. Once they arrived there, they found a lack of accommodation and camped in the surrounding fields. About 20,000 of them died as a result of disasters, famine and diseases. Many of them returned to Spain. Under the influence of powerful religious personalities, a majority, both distinguished families and common people, permanently settled in the country. Among this new population there were such eminent men as Jacob Qénizal, Abraham *Saba, Abraham of Torrutiel, Joshua *Corcos, Nahman Sunbal, and others. There was, however, also a trend for emigration to *Italy, *Turkey, and *Palestine. Among those who left Morocco at that time were Abraham *Zacuto, Jacob (t) *Berab, *David ibn Abi Zimra, and Judah Hayyat.

The newcomers were generally ill received by their native coreligionists (*toshavim*). In spite of the fact that the *megorashim* rapidly assumed the leadership in southern communities; such a possibility was for a long time withheld from them in the north. The *toshavim* feared their commercial rivalry and their technical superiority. Controversies broke out between the two elements. The former went so far as to question the faith of the *megorashim*. The latter, however, succeeded in strengthening their position and in due course dominated all the communities where they were represented. Fez became their spiritual center. Their rabbis issued a large number of *takkanot*, which were known by the name of "*takkanot* of the exiles of Castile." These dealt essentially with the laws of marriage, divorce and inheritance and were based on Spanish tradition. For 450 years they separated themselves in this manner from the *toshavim*. The descendants of the *megorashim* jealously adhered to their ways and customs. They

worshiped in their own synagogues and sometimes had their own lots in the cemeteries. In such northern communities as *Tetuán and *Tangier, the native Jews were completely assimilated among the descendants of the *megorashim*. Oblivious to their own origin, they disdainfully referred to their brothers of the interior as *Forasteros* ("aliens," i.e., to the Castilian community). Until recently, most of these communities spoke Hakétia, a mixture of Spanish, Hebrew and an Arabic dialect. The ancient Castilian language, which differs from the Ladino spoken in the Orient, was, until the 19th century, in current usage among a large number of families of Spanish origin in both the north and south of the country.

At the beginning of the 16th century, Portugal occupied some of the Moroccan coast on the shores of the Atlantic. Communities of *megorashim* had settled in such ports as Azemmour and Safi. From the beginning, cordial relations were established between them and the Portuguese, who employed their members as official interpreters and negotiators. The political role of these men was of prime importance to the kings of *Portugal. Indeed, the latter granted the Jews of their Moroccan bases rights which may be considered as extraordinary for that period; they loaded such families as *Benzamero, Adibe and Dardeiro with favors. On the other hand, these Jews, as loyal subjects, did not hesitate in sacrificing their property or even their lives when this was required by Portuguese interests. The coreligionists who lived under the sharifs of Marrakesh or the *Wattasids of Fez were the principal factors in arranging the peace, always unstable, between the Portuguese and the Muslims. Jacob *Rosales and Jacob *Roti, talented ministers of the Wattasids, endeavored to create a lasting reconciliation between the Christians and the Muslims. Counselors of Muslim princes such as Menahem Sananes or Abraham Cordovi pursued similar objectives. These exiles from Spain and Portugal often traveled to the Portuguese kings as Moroccan ambassadors. During their stay in the Iberian Peninsula, they also induced the *Marranos to establish themselves in Morocco. During the 16th century, Morocco became a haven for Marranos who arrived from the Iberian Peninsula, the Madeira Islands, the Azores, the Canary Islands and even the Americas. In Tetuán, Fez, Meknès and Marrakesh, there were centers for reconversion to Judaism. Some Jews succeeded in transferring their fortunes there, while others, such as skillful craftsmen and especially the gunsmiths, found immediate employment. It was early Marranos who introduced a new process for the extracting of sugar from sugarcane. Due to their methods, Morocco became the leading producer of the world's best sugar during the 16th–17th centuries.

Until recent times, the Jews of Morocco engaged in a variety of professions. In some regions there were farmers and cattle breeders among them; in general, however, they were mostly craftsmen, small tradesmen, peddlers, and at times moneylenders. Some industries, such as that of beeswax, and the trading of rubber and ostrich feathers were exclusively concentrated in the hands of the Jews. For religious reasons,

the Muslims ceded to them the craftsmanship and trade of precious metals as well as the making of wine and its sale. Until 1912, the overwhelming majority of the maritime trade was controlled by a closed society of Jewish merchants. Wealthy and influential from father to son, some of them were court bankers or high officials. They held the title of "merchants of the sultan," obtained for themselves or their protégés monopolies over a large number of products or foodstuffs, and held a monopoly over certain ports or took them in lease; the European countries entrusted them with their interests and they represented them before the sultan, officially or semi-officially. But the majority of the Jewish population, however, suffered in helpless poverty. The droughts which preceded famine and the exorbitant and arbitrary taxes which were temporarily levied on the communities from the 16th to the middle of the 18th century were the cause of their poverty. Nevertheless, the misfortunes which struck one community did not affect the others. It was thus, for example, a common occurrence that while Jews died of hunger in Fez or were persecuted in Meknès, prosperity reigned in the mellah of Marrakesh and Jews ruled the town of *Debdou.

When there was a weakening of the central authority of the sultan, Morocco was divided up into subordinated territory (*Bled al-Makhzen*) and unsubordinated territory (*Bled al-Sibā*), the latter of which was always that of the Berbers under whom the Jews generally suffered less in their capacity of tolerated "protected subjects" (**dhimmi*). Many of them were the serfs of the Muslim lord; however, until the 19th century there were also many Jews in the High Atlas Mountains, the Sūs (Sous), and the Rif, essentially Berber regions, who carried weapons, rode horses, and did not pay the *jizya*. Like the Berbers, the Jewish masses of Morocco were marked by their religiosity. But a sincere, profound, and intellectual piety also prevailed within Moroccan Judaism; its development was inspired by the writings of Maimonides. Over the last centuries this Judaism produced genuine scholars and a large number of authors, such as members of the families of Ibn Danān, Ibn Ḥayyim, *Abensur, *Almosnino, Assaban, Ben-Attar, *Berdugo, de *Avila, de Loya (*Delouga), *Elbaz, *Uzziel, *Serfaty, *Serero, *Toledano, and others. On given dates, thousands of Jews left on regular pilgrimages (*Ziyāra*) through the country to the tombs of saints whose origin was at times unknown and who were venerated by both Jews and Muslims.

In many educated circles, there was an inclination toward mysticism: its members devoted themselves almost exclusively to the study of Kabbalah. The Zohar, much esteemed in Morocco, was often the principal work in their curriculum. In several communities, particularly in Salé, Safi, and Marrakesh, teachers and disciples were grouped in closed circles from which emerged such personalities as: Joseph Gikatilla, author of *Ginnat Egoz*; Abraham ha-Levi Berukhim, author of *Tikkun Shabbat*; Joseph ibn Teboul, author of *Perush al Idra Rabba*; Abraham b. Mūsā; Ḥayyim b. Moses *Attar, author of *Or ha-Ḥayyim*; Raphael Moses Elbaz, author of *Kisse Melakhim*; Joseph Corcos, author of *Yosef Hen*; Solomon

Amar; and Abraham Azulai. Initiates of the Kabbalah have remained numerous in Morocco until the present day. Many others followed *Shabbetai Zevi. During the middle of the 17th century, the movement of this pseudo-Messiah achieved considerable success in Morocco. In the West, an important role in checking it was played by the Moroccan rabbis Jacob *Sasportas, Daniel Toledano and Aaron ha-*Siboni.

According to a tradition, a Jewish scholar of Wadi Draa forecast to the Sa'dian sharifs that they would accede to the throne of Morocco. Encouraged by this prediction, they set out to conquer the country and took Marrakesh in 1525 and Fez in 1549. In fact, the Jewish counselors of the sharifs were not strangers to their progress. Their coreligionists – administrators, merchants and bankers – supplied their financial requirements; other Jews, former Marranos who maintained close relations with Europe, supplied them with weapons in their capacity as armorers. When the Portuguese army was defeated by 'Abd al-Malik at the Battle of al-Qaṣr al-Kabir (or Battle of the Three Kings, 1578), the Jews commemorated the event by a joyful Purim (*Purim de los Cristianos*). On the other hand, the tens of thousands of Christian prisoners taken in this battle were fortunate enough to be ransomed by the descendants of the *megorashim*, who treated them with indulgence. The liberation of these prisoners against ransom by their families and the conquest of *Sudan in 1591 brought a considerable quantity of gold to Morocco. Many Jewish families, especially those in the retinue of Ahmad al-Mansūr, were among the beneficiaries of this exceptional prosperity. Of an enterprising nature, the Jews of Morocco traveled as far as India in the conduct of their trade; they also had gained a hold in the financial world, particularly in Tuscany, in one direction, and in northwestern Europe, in the other. This activity was in concert with the politics of the young Netherlands, which sought to strangle the economic power of Spain. In 1608 Samuel *Pallache arrived in the Netherlands and in 1610 he signed the first pact of alliance between Morocco and a Christian country. The Pallache family played an active role in the political and economic interests of Morocco in Europe over a long period. The sultan Zidah (1603–1628) and his successors (1628–1659) took many other Jews into their service. As in former times, every Muslim leader had his Jewish counselor. The latter were the natural protectors of the Jewish masses. As a result, these masses generally lived in superior conditions to those of the Muslim population, which resigned itself to its fate.

“Frankish” Jewish families from Leghorn and Holland settled in Morocco. Some were attracted by the pirate traffic which operated from Salé and Tetuán. In Tangier, which was under British domination, a small community of “Frankish” Jews existed from 1661; relations with the Muslims, however, were maintained through the mediation of the Jews of Tetuán: until the evacuation of the town in 1684, the Parienté and the Falcon families played an important political role in the relations between the English and the Muslims. Moroccan Jews had also inaugurated a migratory movement a long while before.

There was a fair amount of emigration in the direction of the Holy Land, *Turkey, *Egypt, Italy (especially Leghorn and Venice), Amsterdam, Hamburg, England, and the countries of the two Americas. Occasionally, in their old age and once they had made their fortune, emigrants returned to their communities of origin. In Tetuán and later in *Mogador, this was a frequent occurrence.

The Jews played a particularly important role in the rise to power of the *Alawid (Alouite) dynasty of Hasanid descent, which still governed Morocco in the beginning of the third millennium. This role has been distorted by a legend which relates that at the time an extremely rich Jew, Aaron Ben-Meshal, governed the region of Taza and, as a tribute, demanded a young Muslim girl from Fez every year. By deceit, Mulay al-Rashid (1660–72) succeeded in assassinating this Jew and seizing his riches; the *ṭolba* (“students”) assisted him in this exploit. He was thus able to become the first sultan of the 'Alawid dynasty. To this day, this legendary event is celebrated with much pomp by the *ṭolba* of Fez. In reality, Mulay al-Rashid, who lacked financial means, was backed by the Jews of the Taza, which was then an important commercial center and the first place which he had dominated; he employed a faithful and wise Jewish counselor and banker, Aaron Carsinet. In order to gain control of Fez, where he was enthroned, he entered the city through the mellah, where in secret he spent the night in the house of a notable named Judah Monsano. Mulay al-Rashid subsequently adopted a favorable attitude toward the Jews. His reign was a most prosperous one.

The Jews also successfully contributed to the rise to power of the brother of Mulay al-Rashid, Mulay Ismail (1672–1727), one of the most outstanding Moroccan monarchs. Mulay Ismail was *khalifa* (“viceroy”) in Meknès when, through one of his Jewish friends, Joseph *Maymeran, he learned of the death of his brother in Marrakesh. The speed with which he received this precious information and the large sum of money which Maymeran loaned him enabled Mulay Ismail to have himself proclaimed sultan immediately. It is also related that not wanting to be indebted to Joseph Maymeran, Mulay Ismail had him assassinated. In fact, he appointed him steward of the palace, a function of considerable importance which was later held by his son Abraham Maymeran, who had become the principal favorite of the sultan. The Toledanos, Ben-Attars, and Maymerans all enjoyed the favors of Mulay Ismail, who during various periods appointed one or the other as *shaykh al-Yahūd* with authority over all the Jews of the kingdom. Moses Ben Attar signed a treaty with England in his name; Joseph and Ḥayyim Toledano were his ambassadors to the Netherlands and London. Moreover, Jews who were close to Mulay Ismail wielded their influence over him. Thus, in spite of his cupidity, violence and cruelty, the Jews fared better under him than the Muslim masses. The greatest part of his long reign was marked by peace and security, and the Jewish communities were able to develop in every respect. However, during the last years of his reign, which were overshadowed by plagues and conflicts between his rival sons, the situation of the Jews began to deteriorate.

The 30 years of anarchy and plunder which followed upon the death of Mulay Ismail exhausted and impoverished the Jewish communities of the interior; they consequently transformed their social framework. The Middle Atlas region was literally drained of its Jews. The departure of the village Jews toward the urban centers changed the aspect of the mellahs of Fez and Meknès. These quarters, which had until then been well maintained, were converted into slums, with the exception of a few middle-class streets. Most of the ancient families were ruined and lost all power, only to be replaced by a few parvenus. Some Ben-Kikis and Mamans were sent on diplomatic missions to Europe; their rivalry with the former Jewish bourgeoisie caused controversies within the community; some members of the Levy-Yuly family became “confidants” of the sultans. Slowly, the towns of the interior were abandoned by their leading Jewish elements in favor of the ports, to which the new arrivals were already linked by ancient ties with the Jewish financial circles living there. Rabat, Safi and especially Marrakesh replaced Fez and Meknès as rabbinical centers.

Mulay Muhammad b. Abdallah (1757–1790) had formally been viceroy of southern Morocco from 1745. He had established security and, with the assistance of Jewish and Christian financial circles, an era of prosperity unknown in the north of the country reigned there. As under the Saʿdians, Marrakesh once more became the capital and royal residence. Its Jewish community flourished but then entered a period of decline as a result of the avariciousness of the sultan in his old age. The community of Safi took over the leading place in the foreign trade of Morocco, while that of Agadir acquired the monopoly over the trading with the Sahara. These roles later became the privilege of the community of Mogador (Essaouira), which was founded in 1764. The operations of the big Jewish merchants in Morocco began to expand. Sugar production and trade and maritime commerce were almost entirely concentrated in the hands of Jews. Commercial operations reached the ports of the eastern coast of the United States at the end of the 18th century. From the reign of Sidi Muhammad Ben-Abdallah (1757–90) down to the end of the 19th century, it was usually Jews who acted as agents for the European Powers in Morocco.

The wide-ranging activities of the Jews of this circle promoted the development of such communities as Sala, Asfi, Tetuan and Tangier and influenced the growth of new ones. These latter communities also gained economic supremacy over such older ones in the interior of the country as Fez and Meknès and the communities of the Marrakesh and Tapilalti regions. These Jews exploited their political and economic position to improve their legal and social status and improve the lot of the communities where they operated. In fact, beginning with the end of the 18th century, a circle of Jews arose in Morocco with rights protected by agreements under the aegis of the European Powers. Called “protégés,” their number reached a few thousand. An example of the prosperity of the new type of community is Mogador in the last third of

the 18th century. The beginnings of its accelerated development are linked to Sultan Sidi Muhammad Ben-Abdallah, who was interested in developing trade with Europe. He rebuilt the city and turned it into the chief port of Morocco. Ignoring the protests of the Muslim religious leaders, he levied taxes and customs duties on imports and exports and all the merchandise in the market place. He also brought to the city dozens of Jewish families, giving them special rights and exempting some of them from all the strictures (aside from the *jizya* tax) that applied to the Jews of Morocco. According to one source, there were around 6,000 Jews in Mogador in 1785. The city took on a Jewish character and the commercial center closed down on the Sabbath. The Jews of the city developed wide-ranging economic relations with Jewish communities outside Morocco, such as Amsterdam, London, Leghorn and *Algiers. The renewed desire of Morocco in the days of Mulai Abd Rahman (1822–59) to develop trade with Europe – a change caused partly by French pressure to open the gates of Morocco to European commerce – gave new impetus to the *tjjar esltan* (“King’s merchants”), who had gone into decline during the reign of Sultan Saliman (1792–1822).

Jewish merchants possessed various advantages: knowledge of Arabic and European languages, familiarity with local conditions, a good name and the confidence of the Sultan. The Sultan gave them greater freedom of movement in the country and custom discounts, and a number of them received the title of “King’s merchants.” Mogador served as a base for Jewish merchants operating in the south of Morocco and distributing European goods in Sous (the southern region of the country) and Sahara and exporting to Europe gold, ivory, ostrich feathers, almonds, olive oil, and goatskins. The familiarity of Jewish merchants with local business practices and their connections with the Sultan led European governments even to appoint local Jews as consuls (up to 1857). The condition of the Jews now improved throughout the country. Jews from abroad came to settle in Morocco. Among these were the Attals and Cardosos (Cordoza), who entered the service of the sovereign. Cardoso, however, drew the jealousy of the Attals upon himself and paid for this with his life. The leading favorite of the sultan was Samuel *Sunbal, a scholar, ambassador to Denmark, and the last “sheikh” of Moroccan Jewry. Certain Jewish personalities encouraged friendship with the United States, where their relatives had emigrated and with whom they had important commercial ties. Isaac Cordoza Nuñez, an interpreter of the sultan in Marrakesh, and Isaac Pinto, a Moroccan established in the United States, were largely responsible for the signing of a treaty between Morocco and the United States in 1787, whereby the U.S. Congress paid Morocco for the protection of U.S. shipping interests in the Mediterranean.

Mulay Muhammad entrusted the Jews with all his negotiations with the Christian countries. Those of the community of Tetuán, whose members included some wealthy merchants and who, as in Mogador, acted as consuls, refused the rebellious son of the sultan, Mulay al-Yazid, an important loan which he had requested from them. When he came to power,

Mulay al-Yazid (1790–92) wreaked cruel vengeance upon them and his hatred fell upon all the Jews of the kingdom. This was the greatest disaster which befell them after the period of the Almohads. In the first place, the community of Tetuán was handed over to the army, which plundered and perpetrated murder and rape. The communities of Larache, Arcila, al-Qaṣr al-Kabīr, Taza, Fez and Meknès then suffered the same fate. All the Jewish personalities who had been employed by the late sultan and upon whom Mulay al-Yazid could lay his hands were hanged by their feet at the gates of Meknès, where they remained for 15 days before they died. The treasurer Mordecai Chriqui, who refused to convert, was handed over to the executioner and Jacob Attal, who accepted such an offer, nevertheless died after being hanged by his heels. The notables and the Muslim masses then rose to intervene on behalf of the Jews. They hid many of them in their houses and saved a great many others. In Rabat, the governor Bargash saved the community from the worst. At the time Marrakesh had not been subordinated. Once it fell, the Jewish community was sacked, the men and children were massacred, and hundreds of women were taken into captivity. Mulay al-Yazid had the eyes of 300 Muslim notables of the town put out. Thousands of others were convened to the Great Mosque for prayers and massacred there. Shortly before he died as the result of a wound received in a battle near Marrakesh, Mulay al-Yazid ordered the drawing up of lengthy lists of Jewish and Muslim notables in Fez, Meknès and Mogador who were to be massacred. He died before the order was carried out, however.

The advent of Mulay Suleiman (1792–1822) came as a much needed respite. The new monarch was indeed opposed to violence but he proved to be a fanatic and the Jews felt the consequences. As he sought to seal off Morocco from foreign influence, he reduced trade with Europe to a considerable extent. He also decreed the establishment of ghettos in the wealthiest communities. In 1808 the Jews of Tetuán, Rabat, Salé and Mogador were for the first time enclosed within mellahs. The only exceptions were a few families in Mogador who continued to live in the residential quarter of the town. Since they were economically indispensable to the country, he restored to some of them their former prerogatives, notably to the Aflalos, the Corcos, the Guedallas, the Levy-Yulys, the Macnins, and the Sebags. He chose his diplomats, his bankers, and his counselors from these families. The terrible epidemics of 1799 and 1818 depopulated Morocco and wrought havoc with its social and economic conditions. As a result, some of these families emigrated to England, where they gained a prominent place within the Jewish society of London. One of the members of the Levy-Yuly family, Moses, emigrated to the United States, where his son David *Yulee became the first senator of Jewish origin.

The reigns of Mulay ‘Abd al-Raḥman (1822–59) and his successors Mulay Muhammad b. ‘Abd al-Raḥman (1859–73) and Mulay al-Ḥasan (1873–94) were marked by the pressure of the Christian powers on Morocco and an increased activity of the Jews in the economic and diplomatic fields. Meyer

*Macnin was appointed ambassador in London (1827); Judah *Benoliel, consul in Gibraltar, successfully negotiated several treaties; Abraham *Corcos and Moses Aflalo were entrusted with several delicate missions; many other Jews, such as the families of *Altaras, *Benchimol, and *Abensur, played important roles in Moroccan affairs. Until 1875 consular representation in the Moroccan towns was almost entirely assumed by Jewish merchants, and many of them held such functions into the 20th century. The European powers, concerned with their economic interests, granted protection to a large number of Jews. By often exploiting the defense of their protégés as a pretext, they interfered within the internal affairs of Morocco. A Jewish consular agent, Victor *Darmon, was summarily executed on a trumped-up charge (1844). This became one of the causes of the Spanish-Moroccan War of 1860, when Jews were compelled to take refuge in Gibraltar, while those of Tetuán were the victims of a pogrom. Tangier and Mogador were bombarded by the French fleet. In Mogador the Jews, assailed by the tribes who came to plunder the town, defended themselves by force of arms. In Tangier, which only suffered some material damage, the Jews celebrated with a Purim (*Purim de las bombas*). Emigration nevertheless rose and the sultan reintroduced the exit tax which was to be paid by every individual who left the country. However, those who desired to settle in the Holy Land were exempted from this tax (1858). A number of families, many of them wealthy, then established themselves in Palestine.

The Moroccan people, already fanaticized by the French conquest of *Algeria, accused the Jews of being the agents of European influence in Morocco. In some of the regions populated by the Berbers, the situation of the Jews became quite precarious. Measures which even went beyond the restrictions of Muslim law were imposed against the Jewish masses of the interior, which were more vulnerable than those living along the coasts: Jews were often sentenced to bastinado for trifling reasons. This situation prompted a visit by Sir Moses *Montefiore to the court of Mulay Muhammad in Marrakesh; the later promulgated a *dahir* (“royal decree”; February 1864) which was marked by extreme benevolence toward the Jews and granted them equality of rights with all Moroccans. Nevertheless, this decree was never respected by the *qā’ids* and pashas. An energetic protest was then made by the consul general of the United States and other powers intervened on behalf of the Jews. France reinforced the system of consular protection and the other nations followed in her wake.

During the reign of Mulay al-Ḥasan and at the beginning of that of Mulay Abd al-Aziz (1894–1908), the Jews lived in tranquility. Mulay al-Ḥasan held a positive attitude toward his Jewish subjects, receiving their deepest respect in return. Upon the death of the sultan, the chamberlain (*vizier*) Ba Ahmad treated the Jews with justice and fairness. During the 19th century Moroccan Jewry, whose number has been variously evaluated as being between 200,000 and 400,000, produced many renowned rabbis, poets, and talmudists, as well as a number of legal authorities whose works continued to serve

as the basis for the justice dispensed by Jewish tribunals under the French Protectorate. These scholars included: R. Abraham *Coriat and R. Mas'ūd Knafo of Mogador, R. Mas'ūd Ben-Moha and R. Mordecai Serfaty of Marrakesh, R. Joseph *Elmaleh of Rabat, R. Raphael Encaoua of Salé, R. Vidal Serfaty of Fez, R. Isaac Ben-Walid of Tetuán and R. Mordecai Bengio of Tangier. Many of these leaders realized the importance of secular studies for the masses and they assisted the *Alliance Israélite Universelle of Paris in founding its first schools in Tetuán in 1862, in Tangier in 1865, in Mogador in 1867, and in other Moroccan towns from 1874. In contrast, other rabbis violently opposed the establishment of these schools, which they foresaw would encourage an estrangement from Judaism.

Upon the death of Ba Ahmad (1900), an epidemic of plague ravaged Morocco. In the mellah of Fez alone, there were more than 3,000 victims; the country then entered a period of anarchy during which the Jewish population suffered greatly. During the entire second half of the 19th century, thousands of impoverished Jews swelled the Jewish populations of the large urban centers. The overcrowding of the Jewish quarters became indescribable. This exodus went on uninterruptedly into the 20th century. *Casablanca, which underwent a tremendous expansion, was its final halting place. The misery which prevailed in the Jewish quarters and which was partly due to the inability of the ex-villagers to adapt to urban life, became one of the social stains of Morocco. Jewish economic activity reminiscent of years past was considerably curtailed, also, because of the creation of the French Protectorate in 1912 which brought competition from French firms and large banks (and later from other West European and American ones). But at the same time a new bourgeoisie of middle-class merchants, professionals and white-collar workers began to flourish.

In 1912 Morocco was divided into two colonial zones and protectorates: French Morocco that encompassed central Morocco, the key inland cities and towns, the Atlas Mountains to the south, and the Atlantic coastal areas; and Spanish Morocco (in the north and the Rif Mountains). In December 1923, Tangier in the north became an international zone. The establishment of the French Protectorate in March 1912 was marked in Fez by a pogrom which claimed over 100 victims (April 18–19, 1912). However, there were no incidents in the zone assigned to Spain or in Tangier, which was declared an international town. Under the French and Spanish domination, the Jews enjoyed complete freedom in all matters pertaining to their traditions, religion, occupations and movement. France and Spain did not interfere with the status of the Jews of Morocco, who remained subject to the sultan's protection – this proved to be advantageous for them when the anti-Jewish laws were later issued by the *Vichy government. In a *dahir* of May 22, 1918, the French authorities contented themselves with granting official status to the existing organization of the Jewish communities, with a few modifications. These changes were more particularly emphasized by the *dahir* of 1931. During the 19th century, a council of notables appointed by the population was responsible for the administration of the community. A

gizbar ("treasurer"), who was elected by the leading personalities of the town, was co-opted to the council. The council and the *gizbar* were responsible for the nomination of the rabbis-judges (*dayyanim*). After 1912, the nation which assured the protectorate, i.e., France, claimed for itself, directly or indirectly, most of the prerogatives emanating from this organization and more particularly the tutelage of the community committees, which then became mere benevolent institutions. These committees, the number of whose members varied with the numerical importance of the community, as well as their presidents, were appointed by the grand vizier, who in practice was dependent on the protectorate authorities. Moreover, the committees were supervised by a Jewish official of the government, who was chosen because of his devotion to French interests. By the maintenance of such a strict control over the Jewish elements of the country, the protectorate authorities revealed their distrust. Few Jews, however, were politically hostile toward France. It was the task of the community committees to bring relief to the numerous Jews living in miserable conditions. Their budget continued to be raised from the income derived from the sale of *kasher* wine and meat, the revenues from charitable trusts (*hekdesh*) which they administered, and the often generous contributions of the upper classes and Jews from overseas. The authorities did not grant them any subsidies.

With the exception of Tangier, where there were special circumstances, and a few other rare cases, the old Jewish upper class kept its distance from these community committees. They were constituted of new elements which came from a middle class that until then had been practically nonexistent in Morocco. The members of these committees were generally all loyal to the French authorities. The children of the long-time upper class were usually sent to the French primary or secondary schools. Their religious instruction was entrusted to private teachers. Living within a traditional environment which had withstood many a trial, they were sheltered from religious estrangement and unreserved assimilation. The westernization of the new class, which was accomplished by the Alliance Israélite Universelle, did not alienate this stratum from Jewish traditions and values. Their potential complete integration among the colonizers, however, was thwarted by the antisemitism of the middle-class Frenchmen of North Africa. A large number of Jews of this new social class amassed considerable wealth as a result of the accelerated development of the country. This new middle class formed an important section of the larger, as well as the smaller, communities. Moroccan Jewry was consequently transformed. Some Jews took up higher studies in Morocco itself or in French universities. At the same time, however, the French refused requests by educated Jews to grant them French citizenship and thus release them completely from Moroccan judicial jurisdiction. Unlike Algeria where the Jews were granted French citizenship collectively in the spirit of the Crémieux Decree of October 24, 1870, or Tunisian Jewry who were offered the same status on a more selective basis in the context of the 1923 Morinaud Law, the

Moroccan counterparts were denied this privilege. The French protectorate authorities, like the Spanish zone administration, did not wish to alienate Moroccan Muslims over this sensitive issue; they were equally concerned about the reactions of the European settlers who regarded the bestowal of any significant privilege on the Jews as a threat to their own status.

From 1912 Morocco attracted a large number of Jews from Algeria and Tunisia. Others arrived from Middle Eastern countries and Europe. In 1939 the Jewish population of Morocco, including foreign Jews, was estimated at 225,000. Until then, political Zionism had won only a few adherents in Morocco. Zionism, however, was often discussed in youth movements and organizations and regular lectures on the subject were given in Jewish circles. The philanthropist Raphael Benozéof was most active in the Zionist movement in Morocco, spreading its ideas among both the masses and the elite of the Jewish community. A periodical, *L'Avenir Illustré*, which was published in Casablanca from 1926, regarded itself as the organ of Moroccan Jewry, as well as the standard-bearer of Zionism. It actually became the unofficial voice of the Moroccan Zionist Federation that was then subordinate to the Zionist Federation of France and aroused the opposition of those who stood for the evolution of Moroccan Jewry and its assimilation into French culture. The French authorities, too, were unhappy with the orientation of the periodical. From 1932 elements opposing the Zionists published *L'Union Marocaine*. In 1939 World War II interrupted the publication of these two Jewish organs. Although Zionism gained momentum in the mid-1940s through the action of emissaries from Erez Israel who came in contact with local Jews and helped them establish halutzic movements affiliated with Ha-Shomer ha-Za'ir, Bnei Akiva, Dror, Habonim, Gordonia and Betar, while Zionist parties became part of the Moroccan Zionist associations and the federation (Mapai, Po'alei Zion, Ha-Poel ha-Mizrachi, General Zionists and Herut) starting in the late 1940s, Zionist activity between the two world wars still carried some symbolic weight.

[David Corcos / Michael M. Laskier (2nd ed.)]

Modern antisemitic tendencies, though prevalent among the European settlers, were practically nonexistent among Moroccan Muslims before the 1930s. The situation changed after 1933, when German and Italian fascist propaganda became widespread. European antisemitic elements in Morocco seized upon the Palestinian Arab Revolt of 1936–39. They presented “international Jewry” negatively before Muslims whose solidarity with the Palestinian Arabs was unquestioned. Furthermore, Moroccan nationalists were then unhappy with local Jewry's lack of enthusiasm for their cause. Some nationalists were moderates, but others identified with aspects of European fascism. Muslim-Jewish tensions emerged in several inland French Moroccan cities as a result of this atmosphere. In the Spanish zone anti-Jewish nationalist declarations disturbed Jews. When the secretary of the grand mufti of Jerusalem, Haj Amin al-Husseini, visited the zone in July 1939 to raise money, nationalists held conferences where they yelled,

“Death to the Jews” and “Death to the British.” The Spaniards did nothing to contain the unrest. Yet the outbreak of the Spanish Civil War in 1936 prompted the Spaniards to restrain pro-fascist youth gangs which harassed Jews.

The outbreak of World War II in 1939, the German occupation of France in 1940, and the establishment of the Vichy government rendered the Jews of French Morocco powerless. On October 3, 1940, the Vichy government enacted its first anti-Jewish law in France. Article 9 concerning the status of the Jews was introduced in the French zone by the Sultanic Decree (*zahir*) of October 31, 1940. It applied to all Jews by “race,” which was defined as three Jewish grandparents, as well as all members of the Jewish faith. The law expressly authorized the exercise of rabbinic jurisdiction and allowed Jews to continue teaching at institutions intended solely for Jews. The Vichy Law of June 2, 1941, increased the hardships inflicted by the law of October 1940. It was implemented by the *zahir*s of August 5, 1941, which were issued separately for Moroccan Jews and the European Jews living in the zone. The decrees which followed were designed to deprive Jews from working in a wide array of professions, including real estate, moneylending, banking, non-Jewish journalism, and radio broadcasting. Jews were allowed to engage in crafts and wholesale trading. At the same time Vichy policy allowed only 2 percent of the total number of lawyers and physicians to be Jews. The Vichy Law of July 22, 1941 concerning the “Aryanization” of the economy was implemented in Algeria but was not introduced into French Morocco. In education, the policy of limiting the number of Jews in the protectorate's schools to 10 percent was enforced harshly though perhaps not completely. The French continued to subsidize the ATU schools because they did not wish to see Jewish children developing an aversion to French culture. Foreign Jews who sought sanctuary in Morocco were placed in labor or concentration camps, together with “undesirable” elements. Immediately after the U.S. landings, the Rabbi Eliahu Synagogue in Casablanca was desecrated and pogroms broke out all over the country. The landing of the allied forces in French Morocco on November 8, 1942, and its liberation did not result in the immediate obliteration of Vichy influence. This occurred only in the summer of 1943 when French Gen. Charles de Gaulle's supporters replaced the pro-Vichy elements.

While it is premature to assess the extent of the implementation of Vichy laws in French Morocco, not a single discriminatory law was issued against the Jews in the Spanish zone after Gen. Francisco Franco came to power in Spain. Spanish and local government officials foiled the efforts of German agents in the zone to foment anti-Jewish feelings. Jews in the International Zone of Tangier, however, faced certain problems related to immigration. During 1942–43 Tangier had 1,500 to 2,000 Jewish refugees, many of whom had arrived before the war. Approximately half were Sephardim originating from the Dodecanese Islands (then under fascist Italian occupation); some had left Rhodes for Italy and France even before Italy introduced anti-Jewish laws in 1938.

The Central Europeans had come mainly from Hungary and Poland via Italy. As long as Tangier remained an international zone, refugees were admitted without difficulty. After the fall of France and Spain's temporary occupation of Tangier, these people were deprived of various rights, including work. The indigenous Jewish elites of Tangier were far better off than their counterparts in French Morocco before and during the Spanish occupation. The small businessmen and lower middle class, however, were heavily taxed and they could not renew their import-export licenses. Politically, the Spanish occupiers dissolved the zone's legislative assembly, while the *zahir* of February 15, 1925, legalizing the Jewish community council, was abrogated. All community activity came under Spanish supervision. The Jewish community lost the subsidies that the government had hitherto allocated generously, as well as the right to elect a slate of community leaders from which the Spaniards would select appointees. All these restrictions were lifted with Spain's withdrawal in 1945 and the restoration of the international zone.

[Michael M. Laskier (2nd ed.)]

In 1948 about 238,000 Jews lived in French Morocco, 15,000 in Spanish Morocco, and 12,000 in the international zone of Tangier. The 1951 census in French Morocco indicated 199,156 Jews and, together with the Jewish population of Spanish Morocco, the total number of Moroccan Jews reached then about 222,000. The first census conducted in united Morocco in 1960 recorded 159,806 Jews, while in 1962 an estimated 130,000 Jews lived in the whole of Morocco, decreasing to 85,000 in 1964 and about 42,000 in 1968. The two censuses of 1951 and 1960 give valuable evidence of the demography of the Jewish population in Morocco. In 1951 over a third of the Jews lived in small towns and villages, but in 1961, as a result of the mass exodus to Israel, only about a quarter of them still lived there. The continued *aliyah* after 1960 reduced this number even further, so that the majority of Jews in the country in the late 1960s were concentrated in the major cities. Census data show that among the emigrants there were more young people than old; this is confirmed by the census conducted in Israel in 1961.

The dispersal of Moroccan Jews throughout scores of towns, townlets, and villages, which sometimes contained only a few dozen families, made it difficult to provide Jewish education for all who wanted it, and up to the time of the mass exodus there were places in which there were no Jewish educational institutions. This is one of the reasons for the high percentage of illiteracy among Moroccan Jewry, even in 1960. In a sample of 2% of the overall Jewish population aged five and over, taken in Morocco in 1960, 43.2% were illiterate (i.e., could not read Arabic or French, for those who knew only Hebrew letters were counted as illiterate). However, the 10–14 age group had an illiteracy rate of only 18.1%, whereas the age group 60 years and older had a rate of 76.3%. The 52 schools of the Alliance Israélite Universelle had 21,823 pupils in 1948, and in 1956 28,702 pupils attended its 82 institutions. The number of its pupils subsequently dropped to 9,000 in

1965, of whom about 1,000 were non-Jewish. In October 1960, the Moroccan government nationalized a fourth of the schools run by the Alliance Israélite Universelle, turning them into government schools, to which hundreds of non-Jewish pupils enrolled. Apart from the Alliance Israélite Universelle institutions, there were also schools run by *Ozar ha-Torah*, *Em ha-Banim*, and, from 1950, by the Lubavitcher *hasidic* movement. *Talmud Torah* schools and *hadarim* continued to exist, despite the fact that the opening of new *hadarim* was forbidden in 1953. The lack of a sufficient number of schools, along with the emigration of many educated Jews to France, resulted in a low number of university graduates in Morocco. In 1954 there were only 239 Jewish university students, of whom 151 had studied abroad. According to government statistics in 1964, of the 75,000 Jews who remained in the country there were only 60 physicians, 15 dentists, 50 pharmacists, and 44 lawyers. However, in proportion to the Muslim population, the Jews were better educated, for in that year the whole country contained only 232 lawyers.

Despite the fact that a few wealthy Jews lived in Morocco, most Moroccan Jews were considered to be poor. Many of them were peddlers or artisans or lived on social assistance. Since Jews lived in poverty and poor sanitary conditions in crowded homes of the *mellah*, where eight to ten people sometimes dwelt in one room, many Moroccan Jews suffered from diseases, especially trachoma. In fact, among the pupils attending Alliance Israélite Universelle institutions in Casablanca 30% suffered from trachoma, and the Alliance Israélite Universelle had to open a special school for them. This was also one of the reasons for the Israel government's adoption of a policy of health selectivity toward Moroccan immigrants. The Jewish Agency for Israel and *OSE worked in cooperation with many local doctors to treat Moroccan Jews before entry to Israel.

In the mid-20th century the legal status of Moroccan Jewry improved. With the exception of a few Casablanca Jews, they did not have the right to vote in local elections. Disputes between Jews and non-Jews had to be settled in Muslim courts, which judged according to Muslim religious and secular law. Jews were not allowed to elect their own representatives on the Jewish community councils, the members being appointed by the authorities. After the independence of Israel (1948), the Jews in Morocco, as in the East, suffered from severe attacks by the population. On June 7, 1948, 43 Jews were murdered and 155 injured at Jérada (Djérada) and Oujda, after nationalists incited the population. However, the government brought scores of guilty to trial, sentencing two of them to death and others to imprisonment. Beginning in August 1953, anti-colonial manifestations in French Morocco became widespread following the exile of the pro-nationalist Sultan Sidi Muhammad ben Yusuf to Madagascar. One year later and then again in 1955, pro-nationalist forces attacked Jews in Casablanca, Rabat, Mazagan and Petitjean. A number of Jews were murdered. Much Jewish property was looted in various places throughout the country; the Alliance Israélite

Universelle schools at Boujad, Mazagan and elsewhere were set on fire. Emigration subsequently increased. While between 1948 and 1953 about 30,000 Jews went to Israel, emigration figures in 1954–55 rose to 37,000 and in 1956, on the eve of Moroccan independence, to 36,301. Jews may have reached Israel in greater numbers at the time had the State of Israel and the Jewish Agency refrained from enforcing social and medical selection policies which deprived numerous elderly, sick, and economically disadvantaged elements from leaving Morocco. The Jews, however, feared that in an independent post-colonial Morocco their situation would worsen.

However, when Sultan Muhammad ben Yusuf (King Muhammad v since 1957) returned from exile in November 1955 and Morocco gained its independence in March 1956, the situation of the Jews improved temporarily. For the first time in their history, they were to enjoy greater equality with Muslims. A Jewish leader, Dr. Leon *Ben Zaqen, was appointed minister of posts in the first independent government. Other Jews began to gain important positions in the government administration as officials and in courts of law as judges. Jews were also appointed to the advisory council, the first being David Benazareff, shortly after his appointment to the presidency of the Casablanca community council. But on May 13, 1956, an order was issued forbidding Jews to leave for Israel. Then in June 1956 the offices of the Cadima organization – the name under which the Jewish Agency's Immigration Department functioned inside Morocco since 1949 – were closed. The Israeli *aliyah* emissaries, as well as envoys of other Jewish Agency departments dealing with Youth Aliyah, Zionist education and youth movements, were then compelled to leave the country. After long negotiations with the representative of the World Jewish Congress, the government permitted the emigration of the 6,325 Jews in the Mazagan camp who were ready to leave for Israel. At the same time, the Jewish Agency succeeded through channels and the bribing of senior Moroccan officials in smuggling several thousand additional Jews to Israel via Casablanca harbor and a "special route" through Tangier. However, vigilance on the Moroccan frontiers increased in 1957, after pressure from the opposition parties, and obstacles began to be placed in the way of those Jews requesting permission to travel legally for a short visit abroad, if it was suspected that their final destination was Israel. From that time on they had to show proof that they were able to support themselves abroad. Afterwards (1958–59), a number of Jews were tried and sentenced for smuggling their currency, or even for possessing an obsolete calendar issued by the Jewish National Fund. In 1958 when a new government was formed, Ben Zaqen was not included, and a number of Jewish officials were dismissed. In 1959 all Zionist activity was forbidden in Morocco and many Jewish organizations were forced to close their doors. That year, swastikas were daubed in Casablanca and Rabat. In September of that year Morocco severed postal ties with Israel, ties that were renewed only in 1994. All these measures were part and parcel of a Moroccan policy of avoiding conflicts with Egypt and Middle Eastern states in war with

Israel. The Egyptians were quick to accuse the Maghrebi states of permitting Zionist activity and *aliyah*, which according to their argument, only strengthened the Jewish State. Moreover, Morocco did not desire to lose Jewish nationals as this could have been detrimental to the Moroccan economy.

As a result of this situation and despite the illegal exit, about 25,000 Jews went from Morocco illegally to Israel between 1956 and 1961. The groundwork for the illegal activity was laid in 1955, when Israel, fearing that Moroccan independence was imminent, formed a Zionist underground. The Mossad, Israel's secret service agency, created the Misgeret (Framework), which organized self-defense training for all of the Maghreb. Misgeret's operational headquarters were in Paris; Casablanca became its center in Morocco. Misgeret's Israeli emissaries arrived in the Maghreb between August 1955 and early 1956. In Algeria and Tunisia they engaged mostly in self-defense training but in Morocco they had five units in the urban centers: Gonen (self-defense), Ballet (recruiters of activists), Oref Zibburi (the channel for communicating with leaders of the Jewish community councils), Mod'in (intelligence gathering for missions), and Makhelah (illegal *aliyah*). The need to organize illegal immigration and to create the Makhelah unit stemmed from the Moroccan decision to dissolve Cadima; the Mossad understood that the Jewish Agency had erred in not evacuating more Jews when the opportunity existed under colonial rule. Between the end of 1956 and mid-1961 Misgeret smuggled out many of the 25,000 Jews who left Morocco, using various land and sea routes. Many Misgeret operations were successful because of services rendered by Spanish and Moroccan smugglers, who assisted Misgeret in evacuating Jews without travel documents. The underground falsified passports, bribed Moroccan officials in seaports, and enlisted the help of the authorities in the Spanish enclaves of Ceuta and Melilla, the British in Gibraltar, and the French who still controlled Algeria. The Moroccan government failed to destroy the underground, although many activists were arrested.

In January 1961, on the occasion of Egyptian President Gamal Abdel *Nasser's visit to Casablanca, Jews were beaten up and jailed. Several days later the *Egoz*, one of the Misgeret's smuggling ships, foundered at sea, and 42 Jewish immigrants drowned. The repercussions of these events prompted local Jewish leaders, Israel, and international Jewish organizations to pressure Morocco to liberalize immigration. King Muhammad v promised to tolerate immigration and instructed his minister of the interior to grant passports to all Jews who wanted to leave. But the king died in February 1961 and was succeeded by King Hassan II; these events prevented the policy from being implemented immediately. The intercession of two influential Jews close to the palace enabled Israel to enter into discreet negotiations with the Moroccans through a series of meetings held in Europe; the result of the negotiations between the Misgeret's top envoy in Morocco and a representative of King Hassan II was a plan. HIAS (Hebrew Immigrant Aid Society) would open offices in Morocco and, under its auspices, Israel could organize more semi-legal departures;

Morocco would then receive “indemnities” for the loss of the Jews. Known as “Operation Yakhin,” between November 1961 and spring 1964 more than 90,000 Jews left for Israel by chartered planes and ships from Casablanca and Tangier via France and Italy. The secret negotiations leading to Yakhin also paved the way for Moroccan-Israeli negotiations over behind-the-scenes cooperation in intelligence and defense endeavors which yielded benefits in subsequent decades.

Until 1961, when the Moroccan authorities tightened restrictions on immigration, the remaining Jewish elite still held some privileges. In fact, the post-1956 elites were divided into three currents. The first, influenced by French and European schooling, emphasized the central importance of European culture. In general, the members of this group were not attracted to Zionism, and they eventually settled in France. The second group included those who, despite the education they had received at the Alliance Israélite Universelle schools, were still influenced by Zionism. The third group, which favored a Judeo-Muslim entente, emerged during the mid- and late 1950s and was by no means homogeneous. This group included about 400 activists with strong leftist tendencies and about 500 communists, as well as moderate leftists and conservatives. Several activists in the third group advocated Jewish-Muslim integration with Jews frequenting the same clubs as Muslims and attending the same schools, in order to bridge the political and intellectual gap between the two peoples. Others were more cautious, arguing that rapprochement should not compel Moroccan Jews to sever their ties with Israel or to embrace Arabic language and literature at the expense of French culture. To achieve national unity and engender reforms within the Jewish communities, the leftist integrationists affiliated with the Istiqlal party, and in 1956 the Union Marocaine de Travail, the Moroccan labor union, founded a pro-entente movement known as al-Wifaq (Agreement). During the late 1950s, leaders sharing their political orientation gained some prominence within the community councils, although eventually they either moderated their stance and remained in positions of authority or more moderate elements prevailed.

When Morocco gained its independence, a royal decree of January 1956 abolished rabbinical courts and turned them into state courts of law, with the exception of the Supreme Rabbinical Tribune in Rabat, which was abolished by government order in 1965. From 1945 the rabbinical court was headed by Chief Rabbi Saul D. ibn Danān, who went to Israel in 1966. From 1965, the other members of the rabbinical court were appointed judges in state courts. Jews who remained in Morocco were subject to military service.

Emigration continued to both Israel and other destinations. *Aliyah* reached a low point in the years 1965–67, but picked up its pace after the June 1967 war. Between 1967 and 1970 as many as 4,000 Jews left for Israel annually. Israel ceased to be attractive for most Moroccan Jewish immigrants afterwards. Those who left Morocco in the 1960s included wealthy and educated Jews, not only the lower socioeconomic

stratum. In 1970, some 35,000 Jews were living in Morocco. Of those who had emigrated a considerable number, mainly the wealthy and more highly educated, settled in France and Canada. Among the immigrants were lawyers, engineers, and doctors who were marginalized in their place of work in favor of Muslims. The mass exodus caused the closing of most Jewish institutions, yeshivot, schools and many synagogues. The community in the 1960s lacked rabbis, *dayyanim* and even readers of the Law in synagogue. The charitable organizations that functioned throughout Morocco were liquidated; Jewish newspapers were closed. One of these, *La Voix des Communautés*, was an official communal organ. During this period anti-Jewish propaganda increased, organized mainly by the Istiqlāl Party, led by ‘Allāl al-Fāsi, who at the time also served as minister of Islamic affairs. The party journal, *L’Opinion*, and the rest of the Moroccan press, with the exception of newspapers supported by the government party, published much incendiary material against Jews, and in 1965 the *al-Istiqlāl* newspaper published extracts from the *Protocols of the Elders of Zion*. During and after the June 1967 war, the Istiqlāl party encouraged Muslims to enforce an economic boycott of the Jews, but King Hassan adopted a firm policy so that Jews were not seriously harmed, and the economic boycott was implemented only partially.

In the 1970s, with a Jewish population of some 20,000 (1975), two-thirds of whom were concentrated in Casablanca and the remainder in Rabat, Marrakesh, Tangiers and Fez, Morocco had the largest organized Jewish community of any Arab country. But Moroccan Jewry was indeed moving slowly toward its self-liquidation. The school population was perhaps the best yardstick. Jewish day schools saw their enrollment drop by about 15 percent between October 1972 and October 1973, and they have noted subsequent drops of about 5 percent every year since. Yet the Arab-Israeli War of 1973 and later Middle East conflicts did not result in the end of Morocco’s Jewish communities. Those who remained weathered the crises and expressed confidence in the monarchy’s ability to safeguard their well-being. Despite the tolerant attitude of the authorities toward the Jews, difficulties were still placed in their way in respect to national organization or attempts to establish contact with Jewish organizations abroad, apart from philanthropic or religious organizations such as the American Jewish Joint Distribution Committee, the Alliance Israélite Universelle and the Lubavitch Hasidim.

Several communities of Jews delayed their complete departure in the 1970s through the 1990s, partly because they owned large pieces of communal property valued at many millions of dollars. These properties were registered with the Ministry of the Interior and could not be sold without the ministry’s permission, while the proceeds of the sales had to be kept in cash in a bank or reinvested in other property. In the mid- and late 1990s, 6,000 Jews remained in Morocco. Influential Jewish leaders – among them Robert Assaraf, a noted entrepreneur and one of the most affluent Jews in Morocco, and Serge Berdugo, who served as a minister of tourism in

the 1990s – have wielded influence, playing a cardinal role in politics. Their intimate ties to both the monarchy and opposition parties enabled them to promote diverse Moroccan-Israeli connections. While Berdugo was minister of tourism, Israeli-Moroccan tourist exchange gained considerable momentum. This came in the wake of the Israeli-Palestinian Oslo Accord of 1993 that led to the establishment of liaison offices in Rabat and Tel Aviv. The primary purpose of the liaison apparatus was to promote even greater tourist activity, particularly from Israel to Morocco. In October 1994 André Azoulay, a Jewish economist and one of King Hassan's confidants, was the driving force behind the first Middle East Economic Summit in Casablanca. The intermediary role played by the king in bringing Israel and the Arab states closer together, leading to the Egyptian-Israeli peace initiative back in 1977, also contributed to Muslim-Jewish coexistence at home.

After King Hassan's death on July 23, 1999, his son, Muhammad VI, ascended to the throne. In sharp contrast to his father's aspirations of involving Morocco in regional and international politics, Muhammad VI seemed – in the first years of his royal tenure, at least – to concentrate on domestic social reforms, greater equality for women, and democratizing the nation's political institutions. Thus far he has also demonstrated a belief in peaceful Muslim-Jewish coexistence. He retained Azoulay as the monarchy's chief adviser and facilitated the return from France of Abraham Sarfati, the exiled communist activist, whom the king appointed as his chief expert on sources of energy. The terrorist acts of the Moroccan al-Qa'ida-affiliated Salafiyya Jihadiyya Islamist radical group in Casablanca (May 16, 2003) claimed many lives and also caused damage to Jewish institutions. This and other acts by Islamists may well hasten the departure of younger Moroccan Jews who will be followed to the West by their parents. Nevertheless, the king vowed to punish the perpetrators while the Moroccan press unanimously condemned the act. The latter argued that Morocco had always been a haven for Muslims and Jews, and no extremist forces would be allowed to sabotage the good relations between the two religions. Simultaneously, the outbreak of the second Palestinian uprising in 2000 compelled Morocco to shut down its liaison office in Tel Aviv and ask Israel to recall its representative from Rabat – a move that is seen as a temporary break in ties.

In 2005, some 3,000 Jews live in Casablanca and there were smaller communities in Rabat, Marrakesh, Meknès, Tangier, Fez and Tetuan. The major Jewish organization is the Conseil des Communautés Israélites in Casablanca. The welfare organization in Casablanca is responsible for medical aid to the needy and hot meals for underprivileged Jewish students. Most of the community are of the upper middle class and enjoy a comfortable economic position. Most Jewish schools are closed and only those in Casablanca – under the auspices of the Alliance Israélite Universelle, Ort, Chabad and Oẓar ha-Torah – remain active. Interestingly, the number of kosher restaurants in tourism-oriented cities is on the rise. The community has initiated historical research toward

creating a Jewish museum documenting the Jewish presence in Morocco and has established a foundation for the Jewish Moroccan cultural heritage. In cooperation with UNESCO, the restoration of old synagogues has commenced.

Moroccan Jewish and Modern Education in the 20th Century: A Success Story

The history of the educational system represents the stabilization of a Jewish society under French rule that had preserved traditional values over a long period of time and now had to accommodate itself to new times and forms. Moreover, the importance of education grew because it served as a base for social mobility, particularly the growth of new elites: community leaders, merchants, officials and professionals achieved their positions through modern Western education. Some of them managed to combine education of this kind with values stemming from the Jewish heritage as it crystallized in Morocco.

Until the middle of the 19th century, public education was the responsibility of the Jewish community. In many places, no special buildings were set aside for the *Talmud Torah*, and elementary schools and often yeshivah studies as well were conducted in synagogues, this being the origin of the name *slla* ("synagogue" in Moroccan Arabic) as used for schools. The *sllas* were run by local teachers. The aim of elementary schooling in Jewish traditional education was to teach the child to read and write and prepare him to take part in the life of the synagogue. The yeshivot, which were post-elementary schools, were intended mainly for youngsters from rabbinical families. The status of the rabbi-teachers was shaky; they lived in dire economic straits, and were forced to take other jobs, as *ḥazzanim*, *shoḥatim*, etc., or abandon teaching when they found more remunerative occupations. Jewish girls generally remained ignorant, aside from what they learned from their mothers, which mainly concerned practical Jewish matters like *kashrut*, family purity, and the like.

From the beginning of reform in traditional education, Jewish institutions outside Morocco were involved – the Alliance Israélite Universelle and American institutions. The first school of the Alliance was founded in Tetuan in 1862. In conformity with its philanthropic-intellectual leanings, its institutions aimed at providing a secular education in French and in this way at achieving the Emancipation as understood by Western Jews, namely to abrogate the status of Jews as a tolerated minority and prepare them to take their place as useful citizens employed as craftsmen, merchants, and officials.

From the outset of Alliance activity, a major problem was the absence of teaching staff familiar with the new trends and a suitable pedagogic background. At first, out of political considerations, the Alliance, wishing to coexist with the communities and expand its activities, did employ teachers who had studied in traditional schools to teach Jewish subjects. But out of fear that the schools would become old-fashioned, the Alliance teachers, most of whom came from Alsace and different

parts of the *Ottoman Empire, tried to get these other teachers dismissed. Filled with the zeal of pioneers in pursuit of their aims, the Alliance director and teachers entrenched themselves in the communities, particularly from around 1900 on. Not only did they assert their authority in educational matters but often settled disputes within the community and served as go-betweens for the community and the European consuls with the aim of protecting the Jews from the Muslims. In addition, once they had consolidated their position, they came out against *slla* education and its outdated methods. In the period from the mid-19th century to the early 1920s there were rabbis, mainly representing communities in the interior of the country less exposed to European influences, who regarded the Alliance schools as “centers of heresy.” These rabbis clung to a policy of keeping their youngsters out of these schools so long as they had not completed their traditional educations. As a result many young people did not go to these schools.

The Alliance personnel at this time were not conciliatory. Nurtured on secular Western education in the rabbinical seminary of Paris, they lacked sensitivity to the values of Moroccan Jewry and their traditions. They sought to underscore the gap between the enlightened world and the tradition and experience of the parental generation and the *slla* schools, which they termed “centers of reaction.” In fact their depiction of the *Talmud Torah* schools as lacking any value was an oversimplification. One of the problems that cropped up in the 1924–45 period in Alliance educational activities derived from its negative attitude to Jewish nationalism in the Land of Israel and to Hebrew as a living language. Other organizations took advantage of its difficulties to step in and operate in Morocco. First the Em ha-Banim *Talmud Torah* network, which had started operating through the efforts of Rabbi Zar Halperin, an East European Zionist who was in Morocco from 1914 to 1922, flourished. By 1935, it had important schools in the interior of the country, mainly in Fez, Sefrou, Meknès, and Marrakesh.

The stepped-up activities of the World Zionist Organization in the 1920s also constituted a challenge to the Alliance. At first the WZO tried to found societies for the renewal of Hebrew culture and language and to collect money for the development of Erez Israel. Later it became a focus of local Zionist pressure exercised against the Alliance not only in the name of pedagogic advancement and the creation of new educational structures but also to adapt education to the needs of Zionism. The Alliance’s problems did not only stem from its universalist ideology; it also had practical causes. The organization had received considerable financial support from the French government, a fact which the French used to put pressure on it to give priority to French and general studies over Hebrew and Jewish education. This pressure had a positive effect, as many parents wanted their children to receive an education that would prepare them for jobs in the modern bureaucracy of the Protectorate or in banks and business firms. However, they were uneasy about the cutback in Jewish studies. The arrangement also made life difficult for the pupils.

They, as well as those who had studied first in a *slla* and then in an Alliance school, reached the fourth grade of elementary school at the age of 17.

The only way the Alliance could reconcile various circles by teaching Jewish subjects while instituting teaching reforms was by training a special staff of teachers. An attempt in this direction was made by supporting a local initiative on the part of the Torah and Hayyim Society of Tangier to set up a teachers’ seminar. Teachers from within the community taught Jewish subjects while general subjects were taught by teachers from the French schools in the city and the Alliance faculty. Another change was in the encouragement given by the Alliance chief representative in Morocco, Yom Tov Sémach, to the teaching of modern, spoken Hebrew. Though not an adherent of political Zionism, but rather the opposite, Sémach argued that the teaching of living Hebrew was an expression of Jewish solidarity, the first and foremost means of communication in the Jewish world and part of the renaissance of Jewish culture. The Alliance administration in Paris also did not heed the advice of the Tangier seminar’s director to bring over teachers from Erez Israel who had studied at the teacher training institute in Paris. Out of fear of the nationalistic reactions of Morocco’s Arabs and the possibility that such a step would be interpreted as pro-Zionist, Hebrew studies were not allowed at the institute. But the pressure exerted by rabbis and parents did not abate. The parents sought a balanced curriculum in Alliance schools, with more Jewish studies than in the past.

The period after World War II, from 1946 until the 1960s, represented a major turning point in Jewish education in Morocco. The Zionist Organization contributed to the process by accelerating the acclimatization to modern Jewish thought and education in Jewish institutes. Another factor, after 1948, was the growing importance of aspects of Hebrew as a language representing the link between Moroccan Jewry and the State of Israel. Moreover, with increasing financial assistance from the Jews of America and Europe, the Alliance began to develop Jewish programs of study that were not totally subordinate to the French colonial administration in Morocco despite continued French aid to expand secular education.

Another factor contributing to the change was the disappointment of the Alliance leaders, who underwent bitter experiences during the war and witnessed the tragic failure of the ideology of “emancipation through assimilation” (which rather than being met with enthusiasm by colonial society provoked antisemitic propaganda). And indeed, from 1946 on, though the Alliance did not cooperate with the emissaries of the Jewish Agency, it did cooperate with influential local Zionists. An excellent example of this is the establishment of the Hebrew teachers seminar in Casablanca in cooperation with the Zionist Magen David Society. In 1956 almost all the teachers who were products of traditional education were replaced by graduates of the seminar. This produced big changes in the Jewish studies in schools, not to mention the fact that such an institute as the Hebrew University agreed to award

graduates the “Jerusalem certificate,” which exempted them from the University’s entrance exam in the Hebrew language. The prestige of the seminar spread through the communities of Morocco and won for it rabbinical support. Graduates of the seminar began teaching in Alliance schools along the Mediterranean Basin and in Iran and, in the course of time, also in Israel, Latin America, Western Europe, and Canada. These graduates also played a part in the Arabization of the schools with the introduction of Arab studies after 1956. They also contributed to the creation of a social and economic elite among the Jews who remained, as the independent Moroccan government was not favorably inclined toward teachers educated in French (even if they were Moroccans). Moreover, while the number of admissions to French high schools before independence was relatively low because of the undeclared quota system, now after independence, admission became easier because of Moroccan policy. At the same time, the Alliance schools, which up to the mid-1950s had provided education up to junior high school only, now became full-fledged high schools. Thus the impetus of social and economic change that had its start in the 1940s and 1950s was not stopped with independence.

The 1946–60 period also represented a turning point in terms of the initiative shown by American Jewry on behalf of the Jews of Morocco in educational affairs. The outstanding American organization was Ozar Hatorah, a society of Sephardi Jews believing in a combination of Jewish and general education and supported financially mainly by the Joint Distribution Committee. Ozar Hatorah started operating in the large centers like Rabat and Mogador, and also in small villages in south Morocco. At first, relations between Ozar Hatorah and the Alliance were tense. The representative and teachers of Ozar Hatorah in Morocco (as opposed to the directorate in New York) regarded the Alliance teachers as confirmed secularists who had driven away the young Jews of Morocco from the Jewish heritage. But when they saw the Alliance’s powerful popular support and the Hebrew teachers seminar was set up in Casablanca, they toned down their criticism. After Morocco received its independence they cooperated in such projects as preparing and printing Hebrew and Jewish texts in the face of Morocco’s ban on the import of Hebrew books printed abroad. Not the least important of the Alliance’s activities was its campaign to update traditional education. Together with Ozar Hatorah, it succeeded in persuading a number of community leaders to institute reforms in curricula and methods in the old-fashioned *Talmud Torah* schools in the community. This influence continued to grow until in 1970 the number of students in reformed Jewish studies exceeded the number in Alliance schools: 7,800 compared with 7,100. This renaissance of Jewish education made it possible to provide spiritual leaders for the North African communities in Western Europe and Canada. The change was also felt among the rabbis identified with this trend who reached Israel in the 1960s and 1970s. In the last three generations important work has also been done in Morocco by the Chabad educational system. The results of

the work done by the Alliance and Ozar Hatorah were impressive. On the eve of Moroccan independence in 1956 there were 83 Alliance schools with 33,000 students, representing 80% of all Jewish children of school age. The Ozar Hatorah system had 6,564 students, or 16%, in 32 institutions. It is therefore correct to say that, in the 1940s and 1950s, the Jews of Morocco rapidly entered a new era in their history.

MOROGOWSKI, JACOB SAMUEL (“Zaydl Rovner”; 1856–1942), *hazzan*, composer, and conductor. Born in Radomyshl, Ukraine, Morogowski in his youth worked as a flour merchant, at the same time serving as the “musician” of the Makarov Rabbi Twersky. His fame as a *hazzan* began to spread after the rabbi ordered him to officiate in the High Holy Day

services of his *bet ha-midrash*. He then officiated as *hazzan* for five years in Kiev, where he studied music under the violinist Podhozer, and from 1881 to 1914 he officiated as *hazzan* in the communities of Zaslavl, Rovno (hence the name “Zaydl Rovner”), Kishinev (as the successor of Nisan *Belzer), Berdichev (as the successor of Yeruḥam ha-Katan *Blindman), London, and Lemberg, from where he returned to Rovno. In all these posts he was accompanied by a large choir, and for weekday services and festive occasions he also made use of an orchestra. His compositions enthralled his audiences and brought him worldwide fame. In 1914, Morogowski emigrated to the United States, where he remained until his death. He left a rich musical treasury of prayers for *hazzan*, choir and orchestra as well as marches. All his works were characterized by a true prayer style, fervent religious feeling, and ḥasidic melody. Hundreds of *hazzanim* considered themselves as his disciples. Some of his published compositions are *Halleluyah*, for choir and orchestra (1897); *Kinos* (Heb. text, 1922); *Uhawti*, for choir and orchestra (1899); and *Tisborach* (1874).

[Joshua Leib Ne'eman]

MOROSINI, GIULIO (Samuel ben David Nahmias; 1612–1683), apostate scholar, and polemicist. He was born in Salonika of a *Marrano family which had reverted to Judaism. His grandfather, Isaac, who had been a Christian in his youth, was referred to as “Paul Teshuvah” after his return to Judaism. When Morosini was a child, his family moved to Venice, where he studied under Leone *Modena. He at first engaged in commerce, traveling throughout the Ottoman Empire, and became converted to Christianity in Venice in 1649, when his family lost its fortune. In 1671 he became a clerk at the Collegium de Propaganda Fide. He completed the work, begun by the apostate Giovanni Battista Jonah, on textual variants in the Targums (Ms. Vat. Urb. 59; Ms. Oxford 2341). Morosini also engaged zealously in missionary activity among Jews, and wrote a work in three parts, *La Via della Fede* (Rome, 1683). In the first part, he attempts to show that it is the duty of the Jews to embrace Christianity. The second part contains important information on contemporary Jewish life and customs both in the home and in the synagogue. In the third part Morosini tries to demonstrate that the Jews do not observe the Ten Commandments, whereas the Christians do. A polemic against this work appears in Joshua *Segre's *Asham Talui*.

[Umberto (Moses David) Cassuto]

MORPURGO, North Italian family of Austrian origin. Its earliest known member was Israel b. Pethahiah *Isserlein (1390–1460), who settled in Marburg, Styria, and became known also as R. Israel Marburg. In 1624 members of the Marburger or Marpurger family were appointed Court *Jews by Emperor Ferdinand II. About the mid-17th century, they were to be found in various parts of Europe, North Africa and the East, but mainly in northern Italy, at Trieste, Ancona, Venice and Padua. Arriving there from Gradisca d'Isonzo (Austria), they eventually changed their name to Morpurgo, and distinguished themselves in various fields. Members include the noted talmudist Samson *Morpurgo and ELIJAH MORPURGO (1740–1830), a Hebraist. GIUSEPPE LAZZARO MORPURGO (1759–1833) was a poet and financier. He wrote verses in Hebrew and Italian, was a supporter of Napoleon and founded the well-known insurance company, Assicurazioni Generali of Trieste. He also presided over the Jewish community there. MOSÉ MORPURGO visited Erez Israel, where he met Ḥayyim Joseph David *Azulai (1764). Also of the family were Rachel *Morpurgo, poet, and EMILIO MORPURGO (1822–1882), who taught economics at Padua University and was undersecretary for agriculture in 1867. ABRAHAM VITA MORPURGO, a publicist from Gorizia, founded the *Corriere Israelitico* in 1867. He made a collection of prayers in Italian for the Jews of Trieste (1855), and translated the *Haggadah* into Italian (1864). Salomone *Morpurgo was a philologist and librarian. ELIO MORPURGO (1858–1943) was born at Udine, of which he was mayor in 1908. He served as undersecretary for posts in 1906 and 1908, and was made a senator for life in 1920. He was deported by the Germans in 1943. BENEDETTO MORPURGO (1861–1944), pathologist, member of the Lincei academy, held the chair of pathology at Turin University from 1900 to 1935. Following the Fascist discriminatory laws of 1938, he took refuge in Argentina, and died in Buenos Aires. GINO MORPURGO translated the Books of Ecclesiastes and Esther into Italian (1898–1904). GIULIO MORPURGO (1865–1931), of Gorizia, taught commercial technology at Trieste University and wrote numerous monographs on commercial subjects. EDGARDO MORPURGO (1866–1942), physician and Jewish historian, wrote *Psicologia e psicopatologia degli Ebrei* (1905); *Le origini del movimento Sionista* (1905); *La Famiglia Morpurgo di Gradisca sull'Isonzo, 1585–1885* (1909). Morpurgo donated to the library of Padua University the collection of Judaica belonging to his family, the *Raccolta Morpurgo di letteratura e storia dei popoli semitici*, whose catalog he published in 1924. LUCIANO MORPURGO (b. 1886), born in Spalato, publisher, wrote *Poesia della famiglia ebraica* (1948). Giuseppe *Morpurgo was an author and educator. VITTORIO MORPURGO (b. 1890), de Janeiro. MARCO MORPURGO (1920–1948) and EDGARDO an architect, designed buildings in Rome, Tirana, and Rio. Two grandsons of the historian Edgardo Morpurgo were Zionist pioneers. Both met their deaths during Israel's War of Independence, the first near Sedeh Eliyahu, and the second near Haifa.

[Emmanuel Beer]

MORPURGO, GIUSEPPE (1887–1967), Italian author and educator. A secondary school teacher, Morpurgo was for some time after 1938 headmaster of the Jewish school in Turin. His writings on school education retain considerable value. He also edited popular literary anthologies, his subjects including Virgil, Petrararch, and Leopardi. His fiction includes the novels *Yom ha-Kippurim* (1925) and *Beati misericordes* (1930). The first deals with the problems of Jews loyal to their religious tradition but fascinated by humanist culture and liberal Western European society, in which they may nevertheless face suffocation. Morpurgo seems to visualize two possible outcomes of this conflict-complete assimilation through mixed marriage arising from a faulty education or emigration to Erez Israel, the land of Jewish regeneration. The author's avowedly Zionist outlook is here quite explicit. In his second novel, Morpurgo examines a Catholic case of conscience, probing spiritual and theological questions with depth and learning.

[Louisa Cuomo]

MORPURGO, RACHEL LUZZATTO (1790–1871), Italian Hebraist and Hebrew poet. Morpurgo was born in Trieste and educated at home in Hebrew classics and secular subjects with her brother David and her younger cousin, Samuel David *Luzzatto (1800–1865), who became a prominent figure in modern Jewish thought and Hebrew literature, known as Shadal. Shadal credited Rachel with a major role in influencing his love for Jewish learning in general and Hebrew poetry in particular. In 1819, when she was 29 years old, Rachel married Jacob Morpurgo, a businessman from Gorizia, despite objections from her family. Devoted to serving her husband, who disapproved of her studies and literary efforts, and eventually the mother of three sons and a daughter, Morpurgo could only write late at night and on Rosh Hodesh. In 1847, 30 years after its inception, Shadal published their poetic exchange in *Kokhavei Yitzhak*, a journal devoted to modern Hebrew literature and enlightenment. Even her husband was proud of the recognition she now received for her talent. Some enlightened readers refused to accept that her Hebrew poems were actually written by a woman; others praised her for rising above women's ordinary activities and called her "Queen of the Hebrew Versifiers." Her letters and poems, in both Hebrew and Aramaic, invoke the matriarchs as well as the patriarchs, the hope for a return to Temple sacrifices in Jerusalem, a rare Hebrew description of a relationship between women, and the burdens of raising her own children. She also expresses her trepidation as a woman entering the literary realm of men. At the age of 65 she offered to work as a servant for Moses *Montefiore and his wife, Judith, passing through Italy on their way to Palestine. Morpurgo regularly signed herself as "The Worm,"

or "Rimah," the initials of Rachel Morpurgo Ha-Ketanah (in Hebrew, "Little Rachel Morpurgo"), expressions of modesty often employed by prominent rabbis. Rachel Morpurgo's poetry, which was translated into several European languages, was included in a few anthologies of modern Hebrew poetry and is remembered in some of the histories of modern Hebrew literature. Critical emphasis is often on her novelty and uniqueness as the first female modern Hebrew poet. Rachel Morpurgo's Hebrew writings were published in *Ugav Raḥel: Shirim ve-Iggerot*, ed. Vittorio (Isaac Ḥayyim) Castiglione (Cracow: Yosef Fisher, 1891; ed. Y. Zemora, Tel Aviv: Mahberot Lesifrut, 1943); and in English in Nina Salaman, *Rahel Morpurgo and the Contemporary Hebrew Poets in Italy* (London: George Allen & Unwin Ltd., 1924).

[Howard Tzvi Adelman (2nd ed.)]

MORPURGO, SALOMONE (1860–1942), Italian philologist and librarian. While still a student, Morpurgo was an active member of the Italian nationalist movement. He was arrested by the Austrian authorities in his native Trieste and received a prison sentence. He then moved to Rome, where he became coeditor of the *Archivio storico per Trieste, l'Istria e il Trentino* (1881–95), which campaigned in favor of the Irredentist claim to Italy's Austrian-controlled territories. Best known for his literary work, Morpurgo was a coeditor of the *Rivista critica della letteratura italiana* (1884–91), director of the Ricciardiana library in Rome (whose *Manoscritti italiani* he carefully described), and subsequently headed the Marciana library in Venice, which he transferred to the Palazzo della Zecca (*La Biblioteca Marciana nella sua nuova sede*, 1906). From 1905 to 1923 Morpurgo directed and reorganized the National Library in Florence. He investigated the medieval Italian version of the legend of the Wandering *Jew, publishing *Lebreo errante in Italia* (1891), and edited the Italian manuscript of the story written in Florence by Antonio di Francesco d'Andrea early in the 15th century, which predates the well-known German edition of the legend. A pupil of the eminent writer Giosuè Carducci (1835–1907), Morpurgo specialized in the study of old Italian dialects and literary sources, and prepared editions of various manuscripts, analyzing their linguistic features and their relation to the figurative arts. The outcome of this work was his *Supplemento alle opere volgari a stampa dei secoli XIII e XIV, indicate e descritte da F. Zambrini* (1929; reissued 1961). A leading authority on Dante and Petrararch, Morpurgo later taught Italian literature at the University of Bologna.

[Giorgio Romano]

MORPURGO, SAMSON BEN JOSHUA MOSES (1681–1740), Italian rabbi and physician. Samson was born in Gra-

disca d'Isonzo, Friuli. While still young he was taken by his parents to neighboring Gorizia, where he studied under Jacob Hai Gentili, the rabbi of the community, and his son, Manasseh. At the age of 12 or 13 he moved to Venice and there received a thorough education in the yeshivah of Samuel Aboab, as well as from his previous teacher Manasseh Gentili who had meanwhile moved to Venice. After some years he went to Padua to study medicine in the university there and in 1700 received the degree of doctor of philosophy and medicine. From then on he devoted himself to the study of Talmud, traveling between Padua and Venice, and between Gorizia and Mantua, where he studied under the outstanding scholar Briel, who in 1709 ordained him rabbi. In that year he was appointed a member of the *bet din* of the kabbalist Joseph Fiametta (Lehavah) whose daughter Rebecca he married. On the death of his wife in 1716, he married her sister, Judith. On the death of his father-in-law in 1721, Samson succeeded him as rabbi of the community, a post he held until his death. Morpurgo had connections with all the great scholars of his generation, who turned to him for counsel on complicated cases in the field of *halakhah*, among them Isaac Lampronti, who quotes Samson's rulings in his *Paḥad Yizḥak*, Moses Ḥagiz, and Benjamin ha-Kohen of Reggio. His skill as a doctor in Ancona, recognized by both Jews and Christians, and his profound compassion, particularly toward the suffering poor, won him the love and respect of all. In 1730 a devastating influenza plague swept Ancona, and, despite the Church ban against Jewish doctors' treating the Christian sick, Samson distinguished himself in the care he gave to all the town's inhabitants. In consequence, Cardinal Lambertini publicly presented him in 1731 with a document which expressed his gratitude and his esteem for Samson's devotion. Samson was involved in the polemics of the rabbis of the generation against Nehemiah Ḥiyya *Ḥayon, and was among those who took up a tolerant attitude toward him. There is extant correspondence between Morpurgo and Moses Ḥagiz on this subject from the end of 1711 to the beginning of 1715. The *Or Boker* (Venice, 1741) contains a prayer that was said at his grave on the anniversary of his death. The following of his works have been published: *Confutazioni alle Saette del Gionata del Benetelli* (Venice, 1703–04), a polemic against the Christian priest Luigi Maria Benetelli who wrote *Le Saette di Gionata scagliate a favor degli Ebrei* (1703), a book filled with hatred of the Jews and their religion; *Ez ha-Da'at* (*ibid.*, 1704), a philosophical commentary on the *Behinat Olam* of Jedaiah Bedersi; and *Shemesh Zedakah* (*ibid.*, 1743), a collection of responsa published posthumously by his son Moses Ḥayyim.

[Guiseppe Laras]

MORRIS, ERROL M. (1948–), U.S. director, producer, editor, and writer. Born in Hewlett, Long Island, Morris received

a history degree from the University of Wisconsin and attended Princeton University and then the University of California at Berkeley to earn his Ph.D. in philosophy. Morris' first film, *Gates of Heaven* (1978), was created after German film director Werner Herzog said he would eat his shoes if Morris made a documentary about pet cemeteries. Morris won the bet and Herzog kept his end of the bargain, which is documented in Les Blank's *Werner Herzog Eats His Shoes* (1980). Morris' next documentary, *Vernon, Florida* (1981), recorded the eccentric lives of the small town residents. Morris worked as a private detective for two years, a profession that helped him direct and write *The Thin Blue Line* (1988), a documentary about a man wrongly accused of murder. The man was eventually released. In *Fast, Cheap, and Out of Control* (1997), Morris used his own invention, the Interrotron. A play-off of teleprompters, the Interrotron lets Morris project his image onto a screen in front of the camera, allowing the interviewee to look straight into the lens, not off to the side. It creates what Morris calls "the true first person." Morris used it in his TV series *First Person* (2000–1) and for his Academy Award winning documentary, *The Fog of War: Eleven Lessons from the Life of Robert S. McNamara* (2003). Other Morris films are *The Dark Wind* (1991), *A Brief History of Time* (1991), and *Mr. Death: The Rise and Fall of Fred A. Leuchter, Jr.* (1999), about an execution device inventor who testified on behalf of Holocaust denier Ernst Zundel. Beyond films, Morris makes commercials and won an Emmy in 2001 for a PBS ad.

[Susannah Howland (2nd ed.)]

MORRIS, HENRY HARRIS (1878–1954), South African lawyer, for 20 years the leading defense counsel and King's Counsel at the South African criminal bar. Henry Morris was the son of Hyman Morris, president of the first synagogue in Johannesburg. Morris had a reputation for grasping the human essentials in a situation and for his acute understanding of motives. He was at his best in cross-examination, when he could be forceful and caustic, but also urbane. Morris left a book of memoirs, *The First Forty Years* (1948).

[Lewis Sowden]

MORRIS, NATHAN (1890–1970), English Jewish educator. Born in Novogradok, Russia, Morris went to England in 1909 and became a teacher in the Liverpool Hebrew Higher Grade School directed by J.S. *Fox, subsequently serving as headmaster of the institution (1912–20). Morris was founder and headmaster of the Glasgow Hebrew College, where he served from 1920 until 1929, when he was appointed education officer of the Jewish Religious Education Board of London, a post he held until 1940. When the ravages of war threatened Jewish schooling in Great Britain, he founded and directed the Joint Emergency Committee for Jewish Religious Education (1940–45), which set up classes for children in places far removed from the large population centers. At the end of the war, Morris was invited to take charge of the programs of the Central Council for Jewish Religious Education in the United

Kingdom and Eire and of the London Board for Jewish Religious Education (both 1945–48).

With Israel's independence, he helped to found the Jewish Agency's Department of Education and Culture and served as its director from 1949 until 1959, when he retired and returned to London. Morris wrote various Hebrew textbooks and educational manuals, but his most important work was the three-volume study on the history of Jewish education from the tannaitic period to the present, *Toledot ha-Hinnukh shel Am Yisrael* (1960–64). The study is a monumental work and the first of its kind in Jewish historiography.

[Judah Pilch]

MORRIS, NELSON (1839–1907), U.S. meat-packing executive. Morris, who was born in the Black Forest region of Germany, was taken to the U.S. at the age of 12. In 1854 he began working in the New York stockyards and two years later, he went into the meat-packing business for himself in Chicago. At the outbreak of the Civil War, Morris received a contract to supply meat to the Union armies. He subsequently supplied all the meat for the Army of the West later in the war, and filled meat-supply contracts for the governments of England, Germany, and France. His firm of Morris & Company was one of the largest in the U.S.

His son IRA NELSON MORRIS (1875–1942), who was born in Chicago, was a diplomat and author. Morris early severed his active connection with his father's firm. He served as commissioner-general to Italy (1913) and as U.S. minister to Sweden (1914–23). His books include: *With the Trade Winds* (1897); and *From an American Legation* (1926).

MORRIS, RICHARD BRANDON (1904–1989), U.S. historian. Born and educated in New York, Morris taught at City College, New York, from 1927 to 1949, and became professor of history at Columbia in 1949. Among his important books are *Studies in the History of American Law* (1930); *The Peacemakers* (1965); *Government and Labor in Early America* (1946); and *The American Revolution Reconsidered* (1967). He was co-editor of *The New American Nation* series (from 1953); *The Spirit of Seventy-Six* (1958); the *Encyclopedia of American History* (1953, 1963; 1970; 1982); and a *Documentary History of the United States* (from 1968). He also wrote *John Jay, The Nation and the Court* (1967); *The Emerging Nations and the American Revolution* (1970); *Seven Who Shaped Our Destiny* (1973); *Witnesses at the Creation* (1986); and *The Forging of the Union* (1987). He made noteworthy contributions in the field of archival preservation. He also served as chairman of the board of the editors of *Labor History*.

[Sidney I. Pomerantz / Ruth Beloff (2nd ed.)]

MORRIS, WILLIAM (1873–1932), U.S. talent agent. Born in Schwarzenau, Germany, Morris immigrated to America in 1898. He initially went to work for Marc Klaw and Abe Erlanger as a theatrical booking agent, and then as an inde-

pendent vaudeville agent at a time when Keith-Albee United Booking Office was monopolizing bookings for vaudeville theaters. In 1907, Klaw and Erlanger joined with the Shubert Brothers to form the National Vaudeville Artists Association to compete with Keith-Albee, but they were acquired three months later and Klaw and Erlanger were forced out. Morris led a prolonged fight against Keith-Albee's monopoly with the aid of entertainment newspaper *Variety* and President Theodore Roosevelt. On January 31, 1918, a victorious Morris established the William Morris Agency with his son William, Jr. (born 1899 in New York) and office boy Abe Lastfogel. The agency's logo of four Xs actually represent William Morris' initials – a “W” superimposed on an “M.” As silent film took hold, Morris pushed for clients like Al Jolson, Mae West, Charlie Chaplin, and the Marx Brothers to try out the new medium. By 1930, Morris had passed control of the agency to Lastfogel and his son, after 32 years in the business. Lastfogel managed the New York office, while William, Jr., took control of the Los Angeles office and later became president of the agency (1932–52). Morris died of a heart attack while playing cards at the Friar's Club in Manhattan.

[Adam Wills (2nd ed.)]

MORRIS AND SUSSEX COUNTIES, counties in New Jersey, U.S. The combined area of Morris and Sussex counties, located in western and northwestern New Jersey, is 1,000 sq. miles (2,700 sq. km.). In 2002, the Jewish population in Morris County was estimated at 33,000; Sussex County was estimated at 4,100. Morris-Sussex Federation merged with the Jewish Community Federation of Metropolitan New Jersey in 1983 to establish United Jewish Communities of MetroWest. A series of interstate highways, including Routes 280, 80, 78, 24, and 10, have made Morris County attractive to commuters. Hence, there is an active demographic shift of Jewish families from neighboring Essex County to portions of western New Jersey.

Sussex County Synagogues

There are three synagogues in Sussex County, located in the towns of Franklin, Newton, and Lake Hopatcong, and one “chavura,” or social group, Congregation B'nai Emet, located in Sparta. The membership of Newton's Jewish Center of Sussex County (100 member families), and Franklin's Temple Shalom of Sussex County (150 member families) is predominantly intermarried. Lake Hopatcong Jewish Center has a scant 45 member families and has offered to sell its building to the MetroWest federation. There is one Chabad Center located in Sparta.

Morris County Synagogues

There are 19 synagogue communities in Morris County. The oldest congregation is Pine Brook Jewish Center (1896); the oldest Orthodox congregation is Shaya Ahavat Torah (1974); the oldest reform congregation is Temple B'nai Or (1954). There are three Chabad Centers and the Rabbinical College of America, which is located in Morristown.

Early Settlers and Synagogues Before World War II

There are six congregations over 100 years old located in Morris and Sussex Counties. The four in Morris County are Pine Brook Jewish Center (1896), Morristown Jewish Center-Beit Yisrael (1899), Dover Jewish Center (1917), and Mount Freedom Jewish Center (1923). Dover Jewish Center merged with Temple Shalom of Boonton in 1988 to form Adath Shalom, now located in Morris Plains. The two in Sussex County are Temple Shalom of Sussex County, formerly Congregation Sons of Israel (1909), and Jewish Center of Sussex County (1924), formerly Congregation Reuben Shimon.

The history of the Jews of Morris County dates back to the Civil War when Morristown's Henry and Rosena Sire owned the local stable and racetrack and sold remounts to the Union Army. The history of Dover's Jews, who referred to themselves as a "group of Israelites," is found on the pages of original minute ledgers dated October 4, 1882. Morristown's and Dover's Jews established Jewish business districts on Speedwell Avenue and Blackwell Street, respectively. At this time, Dover was located on the Morris Canal.

Newton was also a market town. Jewish merchants set up shop on Spring Street and from their stores went around the corner to attend services at the synagogue located on Washington Street. Franklin's Jews, never more than 25 Jewish families at one time, opened storefronts on Main Street, where they provided goods and services to the miners who worked for the New Jersey Zinc Company from the 1920s to 1955, when the mine closed. Sam Mindlin was Franklin's first Jewish settler in 1902.

Pine Brook and Mount Freedom were farming communities. Jews in both towns opened boarding houses and resort hotels as early as 1896 and 1903, respectively. Well known were Josef and Lena Konner's Sunrise Hotel in Pine Brook and Saltz's Hotel in Mount Freedom. Word-of-mouth and newspaper advertisements promoted the healthy air and virtues of New Jersey's countryside. Guests were primarily from Newark, New York City, and Brooklyn. Mount Freedom was home to nine kosher hotels and 45 bungalow colonies from 1920 to 1974. In both instances, local farmers were not enthusiastic about the influx of Jews to the area.

Synagogues and Lake Communities after World War II

A significant influx of Jews from New York City settled in and around the Morris and Sussex lake towns of Lake Hopatcong, Rockaway's White Meadow Lake, and Parsippany Troy-Hills' Lake Hiawatha immediately after World War II. Initially these were summer communities. Developer Benjamin Kline advertised affordable summer homes to New York City residents and Jews flocked to the New Jersey countryside. Residents winterized their summer homes, commuted to New York City by bus and train, and stayed year-round. Synagogues followed. Lake Hopatcong Jewish Center was founded in 1946, Lake Hiawatha Jewish Center (now merged with Pine Brook Jewish Center in 1995) was founded in 1945, and White Meadow Temple was founded in 1952. Other synagogues established after the war

were Morristown's Temple B'nai Or in 1954 and Temple Shalom of Succasunna in 1965. Other synagogues located in Morris County include Congregation Beth Torah in Florham Park, Temple Hatikvah in Flanders, Congregation Ahavath Yisrael in Morristown, Temple Beth Am in Parsippany, and Congregation for Humanistic Judaism of Morris County.

Morris County's Alex Aidekman Jewish Community Campus

With the 1983 merger of Essex, Morris, and Sussex Counties into one umbrella federation, attention was paid to the demographic shift to western New Jersey. Hence, in 1990 the MetroWest community opened a second "Y" located in Whippany which moved Jewish services and agencies closer to Morris County. The Jewish Historical Society of MetroWest is located on this campus.

[Linda Forgosh (2nd ed.)]

MORSE, DAVID ABNER (1907–1990), U.S. labor executive and lawyer. Morse, who was born in New York, graduated from Rutgers University in 1929 and studied law at Harvard University; he was admitted to the New Jersey bar in 1933. Morse worked on the legal staff of the U.S. Department of the Interior (1933–34), as chief counsel for its Petroleum Labor Policy Board (1934–35), and as a regional attorney for the National Labor Relations Board in New York (1935–38), before entering private law practice. From 1940 to 1942 Morse was impartial chairman for the milk industry in the metropolitan New York area. On leaving the public service, he became a partner in the law firm of Coult, Satz, Tomlinson and Morse. He also lectured on labor relations, labor law, and administrative law at several educational institutions. From 1943 to 1944 he served in the U.S. army as head of the Labor Division of the Allied Military Government in Sicily and Italy, where he formulated and implemented labor policies and programs for the American and British liberators. From 1944 to 1945 he served as head of the Manpower Division of the United States Group Control Council for Germany, where he worked with representatives of Britain, France, the Soviet Union, and the United States to help coordinate the way they dealt with labor matters in occupied Germany. By the end of the war, he held the rank of lieutenant colonel and was awarded the Legion of Merit in 1946.

After serving with the military, Morse held the position of general counsel for the National Labor Relations Board (1945–47) until appointed assistant secretary of labor, in which capacity he created the department's Program of International Affairs. In 1948 he was elected director general of the International Labor Organization (ILO) based in Geneva, Switzerland, and remained in that position for an unprecedented 22 years. As ILO head, Morse directed its establishment of international labor standards and its training programs designed to assist underdeveloped countries, and particularly their workers, in raising their standards of living and bettering their job con-

ditions. When the organization was awarded the Nobel Peace Prize in 1969, Morse accepted the award on behalf of the ILO. In 1970 he resigned as ILO director general and became the impartial chairman of the New York coat and suit industry.

[Ruth Beloff (2nd ed.)]

MORSE, LEOPOLD (1831–1892), U.S. congressman. Morse, who was born in Wachenheim, Bavaria, went to the U.S. in 1849. In 1850 he moved to Boston, Massachusetts, where he worked in a clothing store. In 1864 Morse and Ferdinand Strauss formed the Leopold Morse Company which specialized in the manufacture of men's clothing and soon became the largest of its kind in New England. After twice running unsuccessfully for Congress on the Democratic ticket (1870, 1872), Morse subsequently served five terms in Congress as Democratic representative from Massachusetts (1877–85, 1887–89). Morse was rumored to be a leading choice for the post of secretary of war in Grover Cleveland's cabinet, but religious prejudices were supposed to have ruled out his appointment. Active in Jewish affairs, Morse founded the Boston Home for Infirm Hebrews and Orphanage, renamed the Leopold Morse Home for Infirm Hebrews and Orphanage after his death.

MORTARA, LODOVICO (1855–1937), Italian jurist and statesman. Born in Mantua where his father Marco *Mortara was chief rabbi, he lectured from 1886 at the universities of Pisa and Naples. He became professor of law at Naples in 1903 and at the same time a magistrate in Rome. He was promoted to membership of the Supreme Court in Rome where he held the offices of attorney general, public prosecutor and eventually first president of the Supreme Court of Cassation. In 1919 Mortara became minister of justice and in the following year was appointed to the Senate. He was an outspoken critic of Fascism and opposed the constitutional changes introduced by Mussolini. His writings ran into many editions and strongly influenced the development of Italian jurisprudence. They include: *Lo Stato Moderno et la Giustizia* (1885); *Principii di Procedura Civile* (1922⁷); *Manuale di Procedura Civile* (1921³). Mortara also edited the review *La Giurisprudenza Italiana* (1891–), Italy's leading judicial publication.

MORTARA, MARCO (1815–1894), Italian rabbi and scholar. He attended the rabbinical seminary in Padua under Samuel David *Luzzatto, was ordained in 1836, and from 1842 officiated as rabbi of Mantua. Mortara represented the liberal trend in Judaism in Italy and argued that a distinction be made between the Jewish religion and Jewish nationality. He proposed a conference of Italian rabbis in 1866 in order to secure certain reforms in Jewish practices, but his suggestion did not materialize. In the sphere of biblical study, Mortara opposed the documentary hypothesis and argued for the unity and Mosaic authorship of the Pentateuch (1843). He considered that the task of Juda-

ism was to spread monotheism and morality throughout the world and that this was facilitated by the Dispersion. Mortara published books on the principles of Judaism and a new edition of the prayer book whose translation into Italian was based on that by S.D. Luzzatto. His most important work was in the area of bibliography and includes a catalog of the manuscripts in the library of the Mantua community (1878), and *Mazkeret Hakhmei Italyah (Indice alfabetico dei rabbini e scrittori israeliti di cose giudaiche in Italia; 1886)*, a list of approximately 2,000 Jewish scholars living in Italy from the first to the 19th centuries. He was a notable bibliophile, his collection of manuscripts being purchased after his death by David *Kaufmann.

MORTARA CASE, case of the abduction of a Jewish child by Catholic conversionists. On the night of June 23–24, 1858, Edgardo Mortara, aged six years and ten months, son of a Jewish family in Bologna, Italy, was abducted by the papal police and conveyed to Rome where he was taken to the House of *Catechumens. The boy had been secretly baptized five years before in an irregular fashion by a Christian domestic servant, who thought, as she said later, that he was about to die. The parents vainly attempted to get their child back. This flagrant abduction of a minor had many precedents in Italy. The church, moreover, had always maintained that the extemporized baptism of a child who was in danger of death was valid even if it had been carried out against the parents' will. The case caused a universal outcry. Napoleon III was among those who protested against the infringement of religious freedom and parental rights. Sir Moses *Montefiore went to Rome in 1859, in the hope of obtaining the child's release. The founding of the *Alliance Israélite Universelle in 1860, in order to "defend the civil rights and religious freedom of the Jews," was due partly to this case. Pope *Pius IX, however, rejected all petitions submitted to him. In 1860, after the annexation of Bologna to the Italian kingdom, the boy's parents took new steps, again in vain, for the return of the child. With the ending of the pope's secular power in 1870, Edgardo Mortara who had taken the name Pius and in the meantime was a novice in an Augustinian order – was free to return to his family and religion. However, he refused to do so. Mortara, who preached eloquently in six languages, was such an ardent conversionist that he received the title of "apostolic missionary" from Leo XIII. He became canon in Rome and professor of theology. He died at the Abbey of Bouhay near Liège in Belgium in 1940.

[Giorgio Romano]

MORTEIRA, SAUL LEVI (c. 1596–1660), rabbi and scholar in Amsterdam. Morteira was born in Venice and studied there under Leone *Modena. In 1611 he accompanied the physician Elijah Montalto to Paris, and on the latter's death in 1616 brought his body for burial to Amsterdam, where he himself subsequently settled. A few years after his arrival he was elected *hakham* of the Beit Ya'akov community. When three Sephardi communities merged to form the Talmud Torah congregation in 1638, Morteira was appointed one of its rabbis, taught Talmud and *tosafot* to advanced students, and preached in the synagogue three times a month. He founded the Keter Torah Yeshivah in Amsterdam and Baruch *Spinoza was among his students. Morteira was a member of the *bet din* that excommunicated Spinoza.

Morteira's works include *Givat Sha'ul* (Amsterdam, 1645), a collection of sermons arranged in the order of the weekly portions of the reading of the Law, and a work (no longer extant) on the immortality of the soul, both written in Hebrew. Only fragments of his responsa, mentioned in the introduction to his sermons, have survived. In addition, he wrote a number of apologetics for Judaism in Spanish; among them, *La Eternidad de la Ley de Mosseh* ("The Eternal Nature of the Law of Moses"); *Preguntas que hizo un clérigo de Roan alas quales respondí* ("Questions of a Priest from Rouen and My Answers to Them"); *Obstáculos y oposiciones contra la religión cristiana* ("Criticisms and Arguments Against the Christian Religion"); and a treatise against the 16th-century Italian apostate, *Sixtus of Siena. Also preserved in many copies is his *Providencia de Dios con Ysrael* ("The Providence of God with Israel") which contains an account of the vicissitudes of the founders of the New Amsterdam (New York) community on their escape from Brazil. None of these works was printed. Morteira's *Discursos Académicos* is printed in Reuel *Jusurun's *Dialogo dos Montes* (completed 1624; published in Amsterdam, 1767). His apologetic works circulated widely in manuscript and had a profound influence on the Sephardi communities in Western Europe.

MORTON, LOUIS C. (1913–), U.S. historian. Born in New York City, Morton received his M.A. from New York University in 1936 and his doctorate from Duke University in 1938 in the field of American colonial history. He taught at City College of New York from 1939 to 1941. He served in the U.S. Army (1942–46), and was deputy chief historian in the Office of the Chief of Military History, Washington, D.C. (1946–59). During that time, he also served as chief of the Pacific Section, responsible for the preparation of the 11-volume subseries on "The War in the Pacific," and was historical adviser for the post-World War II program. He served

as consultant and lecturer at a number of military and civilian institutions, and from 1960 he was professor of history at Dartmouth College. In 1971–72 he served as provost. He was also president of the New England Historical Association (1968–69).

Morton's major scholarly interest was U.S. military history. Regarded as one of America's foremost experts on the history of World War II, he is best known for *The Fall of the Philippines* (1953); *The War in the Pacific: Strategy and Command* (1962); and *Writings on World War II* (1967). He was general editor of a 17-volume study, *Wars and Military Institutions of the United States* (1963).

[Ruth Beloff (2nd ed.)]

MORWITZ, EDWARD (1815–1893), U.S. physician and journalist. Morwitz, who was born in Danzig, studied Oriental languages in Halle and medicine at the University of Berlin. He participated in the revolutionary upheavals of 1848 and then fled to the U.S. Settling in Philadelphia, Morwitz first practiced medicine (1850) but swiftly moved to leadership in German-language journalism and publishing. He took an active role in the affairs of the Democratic Party but supported the Union cause during the Civil War. When the German Dispensary (now Lankenau Hospital) in Philadelphia was threatened with closure during the war, Morwitz himself took charge and served as its medical director. He organized the German Press Association of Pennsylvania in 1862, and through merger and expansion ultimately controlled a large number of German-language and English-language newspapers. Morwitz' primary interests and contributions were in the area of German immigrant cultural and political activities, but he did maintain ties with the Jewish community through his membership in Keneseth Israel Congregation and his ownership of the Philadelphia *Jewish Record* from 1875 to 1886.

MOSBACH, city in Baden, Germany. A Jewish community was in existence in Mosbach by the second half of the 13th century. In 1298 the *Rindfleisch massacres took 55 Jewish lives. Jews also suffered in 1343, when they were accused of desecrating the *Host, and during the *Black Death persecutions of 1349. By 1381 just one Jew lived in the city, and the number of the Jews there remained small throughout the following centuries. They traded in livestock, salt, and wine. The municipal authorities periodically sought to restrict Jewish commercial activity. In 1722 there were eight Jewish families in the city; the number had grown to 19 by 1773. A cemetery was consecrated in 1599 but no synagogue was built until 1860, and a Jewish school was established only in 1876. From 1827 the seat of the district rabbinate was in Mosbach. Leopold *Loewenstein (1843–1924), author of works on German Jewish history, served there as a rabbi from 1887 to 1924.

The 19th century saw a significant growth in the Jewish population. There were 100 persons in 1824, and 192 in 1884. By 1900 the numbers had declined to 161; 159 in 1925; 134 in 1933; and 18 in 1939. The Jews had been active in the commercial and industrial life of the city as merchants in grain and livestock, and owners of a cigar factory, liquor distillery, and numerous other businesses, which were all disrupted when the boycott of Jewish merchants began on April 1, 1933. On November 10, 1938, the synagogue was burned down and the cemetery desecrated. On October 22, 1940, 13 Jews were deported to *Gurs, only two of whom survived the war. The rabbi, Julius Greilsheimer, fled to Holland in 1939, only to be deported from there to Auschwitz, where he perished together with his family. In 1947 a grove of 100 trees was planted by the city in his memory and that of the Jewish community. In 1969 and, later, in 1985 a plaque was mounted to commemorate the desecrated synagogue.

MOSBACHER, EMIL JR. (1922–1997), U.S. yachtsman and businessman. Born in Mt. Vernon, N.Y., Mosbacher won intercollegiate sailing titles for Dartmouth College and during World War II served as an officer in the U.S. navy. He returned to sailing in 1949, and from 1950 to 1957 defeated the nation's best yachtsmen in International One-Design Class competition. Mosbacher skippered his first 12-meter class sloop, the 19-year-old *Vim*, in 1958. He was at the helm of *Weatherly* in 1962, when she successfully defended yachting's most prized trophy (the America's Cup) against the Australian challenger, *Gretel*. He defeated the Australians again in the 1967 America's Cup races. A successful businessman, Mosbacher was chosen by President Richard Nixon to serve as the State Department's chief of protocol in 1969. He was converted to the Episcopal faith.

MOSCATI, SABATINO (1922–), Italian semiticist and archaeologist. Moscati taught Hebrew, Semitic languages, and the history of religions at the universities of Florence, Naples, and Rome. He is a member of the Accademia dei Lincei and editor, the *Rivista di Studi Orientali*. His most important works deal with the origins of the Semites, the language and peoples of Palestine and Syria, and the history of the Arabs. Among them are *Le antiche civiltà semitiche* (1961; *Ancient Semitic Civilizations*, 1957); *L'epigrafia ebraica antica 1935–50* (1951); *I manoscritti ebraici del Deserto di Giuda* (1955); *I predecessori d'Israele* (1956); *Il profilo dell'Oriente mediterraneo* (1956); *The Face of the Ancient Orient*, 1960, repr. 1963; and

An Introduction to the Comparative Grammar of the Semitic Languages (1964).

Moscati took part in the excavations of Ramat Rahel in Israel in the years 1960, 1961, and 1962.

From the 1970s on Moscati dedicated his research to the Phoenicians and the Carthaginians and their impact on ancient Italy. He was the greatest expert on the Punic civilization in Italy. He published *I Cartaginesi in Italia* (1977), *Il mondo dei Fenici* (1979), *Il mondo punico* (1980), *I Cartaginesi* (1982), and *Italia punica* (1986).

MOSCATO, JUDAH BEN JOSEPH (c. 1530–c. 1593), one of the most important rabbis, authors, and preachers of the Italian Jewish Renaissance. He was forced to leave his native town Osimo when the Jews were expelled from the main places in the papal states by Pope Pius V in 1569. Moscato went to Mantua, at that time one of the great centers of Jewish culture and scholarship in Italy. It seems that, not long after his arrival in the city, he became the official preacher of the Mantua community and in 1587 was nominated to the post of chief rabbi.

Spheres of Interest

Moscato's range of learning and knowledge extended over all fields of cultural interest to Jews of the Renaissance, and he was better versed in them than most of his contemporaries. Besides being steeped in Jewish traditional culture, rabbinic literature, and *aggadah*, he was at home in Jewish medieval philosophy and was also familiar with classical philosophy; he was especially an advocate of Plato and of the medieval neoplatonists and Arab philosophies. Philosophic in his outlook, Moscato was, nevertheless, familiar with the Kabbalah which had become popular in the late 16th century and had begun to influence Italian Jewish intellectuals. His approach to a number of subjects, especially ethics and prayer, was distinctly mystical: he often quotes from the *Zohar, frequently using its ideas without mentioning the source. He also quotes Moses *Cordovero, mostly from his *Pardes Rimmonim*. Moscato's educational and cultural horizons extended to such secular sciences and disciplines as medicine, music, astronomy, and especially classical rhetoric. In all these fields, he quotes from the classical masters, as well as from medieval works. He was acquainted with a number of contemporary Italian non-Jewish writers, such as Pico della Mirandola, whom he quotes in his *Nefuzot Yehudah* (sermon 8, fol. 23c), even supporting a number of obviously christological passages. Moscato, explaining his reliance on non-Jewish sources and his frequent reference to them, states that all the great philosophers had been disciples of ancient Jewish kings and prophets; that philosophy, a Jewish science which was part of Israel's ancient culture, had been lost during the long period of exile and was preserved only in the writings of the non-Jewish students of Jewish teachers. This idea, in vogue from the 13th century, came to explain the existence of non-Jewish philosophy in religious

Jewish works. Moscato used it effectively; in his sermon on music, for instance (*Nefuzot Yehudah*, sermon 1), he argues in detail that the fundamental concepts of Renaissance music were based on the terms and formulas found in the Psalms, and concludes that King David was the inventor and teacher of the discipline of music, even though in Moscato's times the terms and forms were known in Latin and in Italian.

Moscato's Works

The spirit of the Jewish Renaissance is reflected in Moscato's two major works, *Kol Yehudah* and *Nefuzot Yehudah*. The former (Venice, 1594) is a commentary on *Judah Halevi's *Kuzari*, which became one of the major influences in 16th-century Jewish ideology in Italy and elsewhere. Moscato's exegesis was a motivating factor in the process and reflected the new interest taken in this author. In his commentary, Moscato also based himself on the writings of other Jewish philosophers who were little read or studied at the time, such as *Philo.

Moscato's second major work, *Nefuzot Yehudah* (Venice, 1589), is a collection of sermons preached in Mantua on the major holidays, on the special Sabbaths, at weddings, and at funerals. The sermons, 52 in number, correspond to the number of weeks in a year, signifying a full cycle, even though the sermons were not delivered weekly. Moscato's sermons may be described as a revolutionary innovation in Hebrew homiletic literature. None before him and very few, if any, after him achieved such a high degree of aestheticism in the genre. His sermons clearly reveal the influence of the Renaissance on the dialectic method of Hebrew homiletics. His main purpose was not to teach or educate, but to give aesthetic pleasure to his listeners – the actual congregation sitting before him. His sermons were, therefore, not written to be published as a book; it is rather their oral delivery which is reflected at every point. It is possible that Moscato preached both in Hebrew and in Italian, for it is known that many non-Jewish scholars came to listen to his sermons. However, the sermons collected in *Nefuzot Yehudah* were undoubtedly delivered in Hebrew on special occasions; this fact is sometimes referred to directly, sometimes is reflected in the contents. Moscato's great achievement in the field of rhetoric and homiletics lies in the fact that, even though his primary aim was to please his listeners, he also succeeded in being instructive, and in developing some ideas, original either in content or in formulation. He drew on his vast knowledge of philosophy and of the Kabbalah in order to develop ethical ideas and to interpret them in a new way so that they might be acceptable to Jewish culture in Renaissance Italy (see *Preaching). Many of the great preachers in Italy who came after him, including Azariah *Figo (Picho) and Leone *Modena, applied Moscato's ideas and methods of preaching, creating thus a new school in homiletics.

Besides these two major works, Moscato also wrote some poetry: a prayer for rain to be recited in time of drought, composed in 1590; a dirge on the death of R. Joseph *Caro; a dirge on the death of the Duchess of Savoy; and a few other poems.

Certain of his exegetical works, mentioned in his known works, have not survived.

[Joseph Dan]

MOSCHELES, IGNAZ (1794–1870), pianist and composer. Born in Prague, he studied in Vienna, but settled in London in 1826 as a concert pianist. In 1846 Felix *Mendelssohn (to whom he had given piano lessons in 1824) invited him to become piano teacher at the Leipzig Conservatory. He taught there to the end of his life. Moscheles' playing was noted for its precision and brilliance, but in comparison with Chopin and Liszt was rather classicist in attitude. He wrote many compositions in a Mendelssohnian style, the best being the "Etudes" (Op. 70). He also prepared the piano-vocal score of Beethoven's *Fidelio* under the composer's supervision (1814), and translated A. Schindler's biography of Beethoven into English, with additions (1841).

[Claude Abravanel]

MOSCOVITCH, MAURICE (1871–1940), actor-manager. Born in Odessa, Moscovitch won a reputation there on the Yiddish- and English-speaking stage. He acted in London with David *Kessler and reached New York with Jacob *Adler's company in 1890. Forming his own troupe, he toured the Americas and Europe in Jewish classics and Yiddish versions of Tolstoy, Turgenev, and Strindberg. He appeared in English in Manchester, England, in 1919, as Shylock, giving a controversial interpretation. Later he toured South Africa and Australia, and appeared in films, including Charles Chaplin's *The Great Dictator* (1940), just before his death.

MOSCOW (Rus. **Moskva**), capital of the Russian Federation, and, from the Middle Ages, the political, economic, and commercial center of *Russia. Up to the end of the 18th century, Jews were forbidden to reside in Moscow, although many Jewish merchants from Poland and Lithuania visited the city. In 1676 Jews who brought their wares to Moscow were expelled. Apostates and forced converts who maintained varying degrees of connection with Judaism and the Jews were to be found in Moscow during various periods. A few Jews among the prisoners brought to Moscow after the wars against Poland apostatized and settled there. A physician of Jewish origin, Daniel Gordon, was employed by the court in Moscow from 1657 to 1687; Peter Shafirov, one of the most important advisers of Czar Peter the Great, was also of Jewish origin.

With the Russian annexation of Belorussia (1772), the number of Jewish merchants living in Moscow for commercial reasons increased; they came in particular from *Shklov,

then an important commercial center in Belorussia. One of these was the contractor and merchant Nathan Note *Notkin. In 1790 Moscow merchants requested that the presence and commercial activities of the Jews in the city be prohibited. A royal decree forbidding Jewish merchants to settle in the inner districts of Russia was issued in 1791. However, they were authorized to stay for temporary periods in Moscow to carry on their trade. Most of the Jews who came to Moscow lodged at the Glebovskoye podvorye, an inn which was situated in the center of the market quarter. Jewish merchants continued to play an important role in the trade between Moscow and the southern and western regions of Russia, as well as in the export of Moscow's goods, and in 1828 the turnover of this trade was estimated at 27,000,000 rubles. As a result, Russian industrialists in Moscow supported the rights of the Jews. In 1828 Jewish merchants who were members of the first and second guilds were authorized to remain in Moscow on business for a period of one month only. They were forbidden to open shops or to engage in trade within the city boundaries. To facilitate the execution of these regulations, the Jews were compelled to lodge solely in the Glebovskoye podvorye. The inn was a charitable trust which had been handed over to the Moscow city council to use its income for the maintenance of a municipal eye clinic. Exorbitant prices were soon extorted from Jewish merchants who had to stay at the inn. After a few years, third-class merchants were also authorized to enter the town under the same conditions and the period of their stay was prolonged to six months. About 250 people made use of this right every year. As a result of these restrictions, Jewish trade decreased to about 12,000,000 rubles annually during subsequent years. When Alexander II came to the throne (1855), Jewish merchants were permitted to reside temporarily in all the sections of the town.

The first Jews to settle permanently in Moscow, and the founders of the community, were *Cantonists who had finished military service, some of whom had married Jewish women from the *Pale of Settlement. In 1858 there were 340 Jewish men and 104 Jewish women in the whole of the district of Moscow. After Jewish merchants of the first guild, university graduates, and craftsmen were allowed to settle in the interior of Russia, the number of Jews increased rapidly. Some were extremely wealthy, such as Eliezer *Polyakov, one of the most important bankers in Russia and head of the community, and K.Z. *Wissotzki. From 1865 to 1884 Hayyim Berlin officiated as rabbi of Moscow, and in 1869 the community invited S.Z. *Minor, one of the outstanding students of the Vilna rabbinical seminary, to serve as the **kazyonny ravvin* (government-appointed rabbi). There was an estimated Jewish population of 8,000 in the city in 1871, which had grown to around 12,000 in 1882 and 35,000 (over 3% of the total population) in 1890, just before the expulsion. The governor of Moscow, Prince Dolgorukov, was known for his liberal attitude toward the Jews, and (after receiving bribes and gifts) the local administration overlooked their illegal presence (as in the case of fictive craftsmen). A considerable number of industrial-

ists and merchants recognized the advantages deriving from Jewish presence in the city, and in a memorandum addressed to the minister of finance in 1882 they pointed out their great contribution to the city's prosperity. While anti-Jewish persecutions and decrees were gaining momentum throughout Russia after the accession of Alexander III, a period of relative ease, the legacy of the previous czar, continued in Moscow. This situation changed completely with the deposition of Prince Dolgorukov and the appointment of Grand Prince Sergei Alexandrovich as governor of the city. During the 14 years (1891–1905) of his term in office, his main aim was "to protect Moscow from Jewry."

The Expulsion

On March 28, 1891 (Passover Eve 5651), a law was issued abolishing the right of Jewish craftsmen to reside in Moscow and prohibiting their entry into the city in the future. The police immediately began to expel thousands of families, some of whom had lived in Moscow for several decades or were even born there. They were granted a period of from three months to a year to dispose of their property, and many were compelled to sell out to their neighbors at derisory prices. The poor and destitute were sent to the Pale of Settlement with criminal transports. On October 15 the right of descendants of the Cantonists to live in the town was abrogated, if they were not registered with the Moscow community. The expulsion reached its climax during the cold winter days of 1892. While the police made a concerted effort to search out the Jews and drive them out of the city, generous rewards were offered for the seizure of any still in hiding. The press was not permitted to report on the details of the expulsion. An appeal to the government made by merchants and industrialists in 1892 and their warning of the economic damage that would result from the expulsion were of no avail. Police sources estimated that about 30,000 persons were expelled. About 5,000 Jews remained – families of some Cantonists, wealthy merchants and their servants, and members of the liberal professions. The Moscow expulsion came as a deep shock to Russian Jewry. A considerable number of those expelled arrived in Warsaw and Lodz and transferred their economic activities there. Decrees regulating residence in Moscow became even more severe. In 1899 the authorities ordered that no more Jewish merchants were to be registered in the first guild unless authorized by the minister of finance. At the height of the expulsion period, the authorities closed down the new synagogue, as well as nine of the 14 prayer houses. Rabbi S.Z. Minor, who requested the reopening of the synagogue, was expelled from the city. The struggle for the use of the synagogue continued for many years and it was not until 1906 that permission was granted for its reopening. In 1897 there were 8,095 Jews and 216 Karaites in Moscow (0.8% of the total population). In 1902 there were 9,339 Jews there, and half of them declared Yiddish as their mother tongue; the overwhelming majority of the others declared it to be Russian. In 1893 J. *Mazeh was elected as rabbi of Moscow, remaining its spiritual leader un-

til his death in 1923. A considerable number of the members of the small community were wealthy merchants and intellectuals. Assimilated Jews (some of whom apostatized) held an important place in the cultural life of the city. In 1911 there were around 700 Jewish students in the higher institutions of learning in Moscow.

After the outbreak of World War I, from 1915, a stream of Jewish refugees began to arrive in Moscow from the German-occupied regions. They took part in the development of war industries in the town and some of them amassed large fortunes. In a short time, Moscow became a Jewish center. Hebrew printing presses were set up, and in the town of Bogorodsk (near Moscow) a large yeshivah was established on the pattern of the Lithuanian yeshivot. The foundations of the Hebrew theater *Habimah were then laid. Among the new rich were Zionists and nationally conscious Jews who were ready to support every cultural activity. Most outstanding of these were H. *Zlatopolsky, his son-in-law Y. Persitz, and A.J. *Stybel. Authorization was given for the publication of a Hebrew weekly, *Ha-Am*. Cultural activity increased in scope with the outbreak of the February 1917 Revolution. It was symbolical that O. *Minor, the son of S.Z. Minor, a leader of the Social Revolutionary Party, was elected as chairman of the Moscow municipal council. *Ha-Am* became a daily newspaper and two large publishing houses, Ommanut (founded by Zlatopolsky and Persitz) and that of A.J. Stybel, were set up. The founding conference of the organization for Hebrew education and culture, *Tarbut, was held in Moscow in the spring of 1917. This activity also continued during the first year of the Bolshevik Revolution (three volumes of *Ha-Tekufah* were published in 1918, as well as others) but the new regime, with the assistance of its Jewish supporters, rapidly liquidated the institutions of Hebrew culture in Moscow. The Habimah theater was more fortunate; it presented An-Ski's *Dibbuk* (*Dybbuk*) in Moscow for the first time in January 1922 and continued to exist under the protection of several prominent members of the Russian artistic and literary world who defended it as a first class artistic institution, until it left the Soviet Union in 1926.

When Moscow became the capital of the Soviet Union, its Jewish population rapidly increased. In 1920 there were 28,000 Jews in the city, which had become severely depopulated as a result of the civil war. By 1923 the number had increased to 86,000 and by 1926 to 131,000 (6.5% of the total population). In 1939 the Jews there numbered 250,181 (6.05% of the total population). The headquarters of the *Yevseksiya was situated in Moscow, and there its central newspaper. *Der Emes* (1920–38) was published, as well as many other Yiddish newspapers and books. The Jewish State Theater (known in Russian as GOSET from its initials), directed by S. *Mikhoels, was also situated in Moscow. For a number of years, small circles of organized Zionists continued to exist in the city, which was the central seat of the legal *He-Ḥalutz (which published its own newspaper from 1924 to 1926) and of the groups of the Left *Po'alei Zion. All these were liquidated by 1928. During World War II, the Jews shared the sufferings of the war

with the city's other inhabitants. From 1943 Moscow was the seat of the Jewish *Anti-Fascist Committee which gathered together personalities of Jewish origin who were outstanding in Soviet public affairs. Founded to assist the Soviet Union in its war effort against Nazi Germany and to mobilize world Jewish opinion and aid for this purpose, it published a newspaper, *Eynikeyt*.

[Yehuda Slutsky]

After World War II

The Anti-Fascist Committee attempted to continue with its activities even after the war, until it was brutally liquidated in 1948–49, as a first step in the total liquidation of organized Jewish life in the “black years” of Stalin's regime. Most of its leading members were arrested and executed in 1952. Because Moscow is the capital and a “window” of the Soviet Union, it has been possible for world Jewry to follow the destinies of Moscow's Jews more than those in other cities, and the latter were more able to meet with Jews from outside the Soviet Union. When Golda *Meir, the first diplomatic representative of the State of Israel, arrived in Moscow in September 1948, a spontaneous mass demonstration of Jews in her honor took place on the High Holidays near and around the Great Synagogue. The mere presence of an Israeli diplomatic mission with an Israeli flag in the center of Moscow was a constant stimulus to Jewish and pro-Israel sentiments among the Jews of Moscow and Jewish visitors from other parts of the Soviet Union. The Israeli delegation to the Youth Festival, held in Moscow in 1957, was the first occasion of personal contacts between Jewish youth from Israel and the U.S.S.R. It is considered to have been a turning point in the revival of Jewish national feelings and their daring demonstration in public on the part of Soviet Jewish youth. Already in 1958, on *Simḥat Torah eve, more than 10,000 young Jews gathered around the Great Synagogue to dance and sing Yiddish and Hebrew songs. They refused to be intimidated by the militia and to disperse. Thus these mass gatherings of young Jews, which also take place on their Jewish holidays, became a traditional feature of Jewish life in Moscow.

In 1955 some elderly Jews were tried and sentenced to several years of imprisonment in labor camps for possessing and distributing Israeli newspapers and Hebrew literature and gathering in groups to read them. For similar “offenses” several Jews of the Great Synagogue congregation were punished in 1963.

In 1970 three synagogues were functioning in the city of Moscow. Apart from the Great Synagogue on Arkhipova Street, there were two small synagogues – in the suburbs of Maryina Roshcha and Cherkizovo, which were wooden buildings, more of the type of a *shṭibl* than of a full-fledged synagogue. In addition to them, there was a synagogue in the nearby town of Malakhovka, practically also a suburb of Greater Moscow, which has had a sizable Jewish population from prerevolutionary times. The Great Synagogue and its rabbi (first S. *Schliefer and after his death J.L. *Levin) served the authorities often as unofficial representatives of Soviet Jewry to the outside world.

In the 1950s and 1960s the Great Synagogue was allowed to issue a Jewish calendar and to send it to other synagogues in the U.S.S.R. In 1956 Rabbi Schliefer was granted permission to print a prayer book, by photostat from old prayer books. He named it *Siddur ha-Shalom* ("peace prayer book") and deleted from it all references to wars and victories (as, e.g., in the *Hanukkah* benedictions). It was said to have been printed in 3,000 copies, but it was very rarely seen in other synagogues in the Soviet Union. (A second edition of it was printed, ostensibly in 10,000 copies, in 1968 by Rabbi Levin, but it also was not much in use in Soviet synagogues.) In 1957 Rabbi Schliefer received permission from the authorities to open a yeshivah on the premises of the Great Synagogue. He called it "Kol Ya'akov," and for several years a small number of young and middle-aged Jews (about 12 persons a year), mostly from Georgia, were trained there, almost all of them as **shohatim* (ritual slaughterers), whereas the number of ordained rabbis did not exceed one or two. In 1961 the yeshivah, though officially still in existence, almost ceased to function, mainly because of the refusal of the Soviet authorities to grant permission to yeshivah students, who went for the holiday to their homes outside Moscow, to come back and register again as temporary residents of the city for the purpose of study. By 1963, 37 students had passed through the yeshivah; 25 of them were trained as *shohatim*. In 1965 only one student was there, and in 1966 the number was six. The unrestricted baking of matzah in a rented bakery and its distribution in food stores was discontinued in Moscow, as in most areas of the Soviet Union, in 1962. However, it was partially permitted again in 1964 and definitely in 1965, but under a different system: it was done under the supervision of the synagogue board and was only for "believers" who brought their own flour and registered their names. The ritual slaughtering of poultry was allowed in the precincts of the Great Synagogue, whereas kosher beef was obtainable until 1964 twice a week at a special store on the outskirts of the city. From 1961 a barrier was erected in the Great Synagogue to separate foreign visitors, including Israeli diplomats, from the congregation, and the synagogue officers were responsible to the authorities for strictly enforcing the segregation.

In 1959, on Rosh Ha-Shanah eve, an anti-Jewish riot took place in Malakhovka, a suburb of Moscow. The synagogue was set afire, but quickly extinguished; the *shammash* of the Jewish cemetery was murdered by unknown persons and on the walls a typewritten antisemitic tract appeared, signed by "the B. Zh. S.R. Committee," the Russian initials of the pre-revolutionary antisemitic slogan "Hit the Yids and save Russia." At first Soviet spokesmen denied the facts, but several months later admitted them to foreign visitors, assuring them that the hooligans were apprehended and severely punished. The Soviet press did not mention the incident at all. In 1960 a stir was created among Moscow Jewry when interment at the Jewish cemetery was almost discontinued and Jews were forced to bury their dead in a separate section of a general cemetery. This section was filled up in 1963 and subsequent Jewish burials had to take place alongside non-Jewish ones.

Some Jews in various ways obtained the privilege of burying their dead in the remaining space of the old Jewish cemetery, others carried them to the Jewish cemetery of Malakhovka. In the same period several Jews in Moscow were accused, tried, and sentenced to the severest punishment, including execution, for "economic crimes," such as speculation, organizing illicit production and sale of consumer goods in collusion with high officials of the militia, directors of factories, etc. Their trials were accompanied by inflammatory feature articles (called "feuilletons") in the central Moscow press with pronounced antisemitic overtones. However, Moscow was also the center of other developments. In 1959 some Yiddish books, most of them selective works of the classics (**Shalom Aleichem*, I.L. **Peretz*, D. **Bergelson*, etc.), were published there after a prolonged period of the complete obliteration of any printed Yiddish word. Yiddish folklore concerts took place relatively frequently in the city and drew large crowds. Even a semiprofessional theater troupe, headed by the elderly actor Benjamin Schwartzner, was established and mainly performed Shalom Aleichem plays in provincial cities. In 1961 the Yiddish journal **Sovetish Heymland*, edited by an officially appointed editor, the poet Aaron **Vergelis*, began to appear as an "organ of the Soviet Writers' Union," first as a bimonthly, later as a monthly. It also served as a kind of Soviet-Jewish mouthpiece for foreign Jews, and visiting Jewish intellectuals were invited to its premises to meet members of its editorial staff. In 1963 and 1965 collections of Israeli Hebrew poetry and prose were published in Russian translation, as well as a Hebrew-Russian dictionary in 1965 (in 25,000 copies), which was sold out in a few weeks.

Contacts with Israel took manifold forms. The Israeli embassy invited to its receptions not only the rabbis and board members of the various synagogues, but also Jewish writers, artists, and other intellectuals. In various sport events, international scientific congresses, and international exhibitions Israel was almost always represented, and often not only Moscow Jews but also Jews from other parts of the Soviet Union, even from outlying regions, came especially to the capital "to see the Israelis." From time to time Israeli popular singers (e.g., Nechama Hendel, Geulah Gil, etc.) and other artists performed in Moscow and aroused great enthusiasm, particularly among young Jews.

The Six-Day War and the rupture of diplomatic relations between the Soviet Union and Israel (June 1967) put an end to these contacts. But, on the other hand, many Moscow Jews, especially the young, began more and more openly to demonstrate their pro-Israel feelings – by continuing increasingly their mass gatherings around the Great Synagogue, by signing collective protests against the refusal to grant them exit permits to Israel, by studying Hebrew in small groups, etc. Unlike other cities, like **Riga*, **Leningrad*, **Kishinev*, and some towns in **Georgia*, there were hardly any sanctions applied in Moscow in 1970 against pro-Israel Jews.

In the census of 1959, 239,246 Jews (4.7% of the total population) were registered in the municipal area of Moscow. Of

these, 132,223 were women and 107,023 were men. 20,331 of them (about 8.5%) declared Yiddish to be their mother tongue. These numbers are thought to be a gross underestimate because many tens of thousands of Jews declared at the census their "nationality" to be Russian (some opinions evaluate the number of Moscow's Jews as high as 500,000).

Developments from the 1970s

The Six-Day War had a major impact on the life of Moscow Jews, as it had on the life of all Soviet Jewry. It also resulted in a considerable increase in the anti-Israel policy of the Soviet regime in international affairs and an increase in antisemitism domestically. The process of national rebirth which had already begun among many thousands of completely assimilated Jews took various forms. Tens of thousands of young Jews began to congregate in and around Moscow's Choral Synagogue during Jewish holidays, especially Simḥat Torah. With the beginning of mass *aliyah*, the Jews of Moscow played a significant role in the struggle for the right to emigrate. Demonstrations took place in Moscow which attracted Jews from various cities of the Soviet Union. On February 27, 1971, for example, 26 Jewish activists declared a hunger strike in the entrance to the presidium of the Supreme Soviet of the U.S.S.R., demanding permission to leave for Israel. Similar demonstrations followed.

Despite resistance from the authorities, the period from the 1960s to the early 1980s saw a process of revival in the cultural and religious life of Moscow's Jews. Dozens of teachers taught Hebrew in their apartments, there were seminars and groups studying Judaism and Jewish history and culture, and a Jewish kindergarten and Sunday schools were organized. In the 1970s and early 1980s a number of Jewish *samizdat* publications appeared in Moscow. These included *Evrei v S.S.R.* ("Jews in the U.S.S.R.," 1972–79, nos. 1–20); *Tarbut*, 1975–79, 1–13; *Nash ivrit* ("Our Hebrew," 1978–80, 1–4). Many *aliyah* activists were arrested during this time. One of the most severe sentences was meted out to Anatoly *Sharansky in 1978, and in 1982 Yosef Begun was imprisoned for the third time.

In 1972 the synagogue in the Cherkizov district was closed. Thereafter, until the early 1990s, only two synagogues were functioning in the city: the Choral Synagogue and the hasidic prayer house in the district of Marina Roshcha. Jacob Fischman served as rabbi of Moscow from 1972 to 1982, when he was succeeded by Adolf Shayevich.

While basically conducting an overtly antisemitic policy, the Soviet authorities occasionally resorted to gestures intended to persuade world public opinion that Jewish culture was flourishing in the country. Thus, in 1978 the so-called Birobidzhan Jewish Musical Chamber Theater was established; from 1981 this theater, despite its name, was based in Moscow. In 1986 the Moscow Jewish Dramatic Ensemble became the Jewish Drama Studio Shalom.

From 1987, during the evolution of glasnost and perestroika, Jewish public life in the Soviet Union flourished. Centers of a number of informal Jewish national organizations

were established in Moscow including the Jewish Culture Association (ЕКА, headed by Mikhail Chlenov), the Zionist Federation of Soviet Jews (president Arye (Lev) Gorodetsky), and the Association for Friendship and Cultural Ties with Israel. A number of Moscow bodies began to function as well: the Moscow Jewish Cultural and Educational Association, the Jewish Information Center, and the cultural religious center Maḥanayim. As part of the effort to maintain some control of this burgeoning cultural revival, the authorities established the Association of Activists and Friends of Soviet Jewish Culture, which, starting in April 1989, published the newspaper *Vestnik sovetsko-evreiskoi kul'tury* ("Bulletin of Soviet Jewish Culture"). A number of Jewish libraries were founded. In late 1988, a yeshivah (headed by the Israeli scholar Rabbi Adin Steinsaltz) was established within the framework of the Academy of World Cultures. Also in 1988–89, branches of the international Jewish organizations Beta, WIZO, and B'nai B'rith were set up in Moscow.

After the failure of the August 19–21, 1991, coup in Moscow, the last barriers to free cultural and political activity in the country fell. Numerous Jewish bodies functioned in the city. Some of these had an All-Russian character, e.g., Va'ad Rosii (the Federation of Jewish Communities and Organizations of Russia (president: M. Chlenov), the Zionist Federation of Russia (chairman: A. Gorodetsky); Tkhiya, the International Center for Research and the Spreading of Jewish Culture (chairman: Leonid Roitman); the Orthodox All-Russian Jewish Religious Community (headed by the now chief rabbi of Russia, Adolf Shayevich). In 1991 a synagogue was opened on Malaya Bronnaya Street. Since that time three Orthodox synagogues have been operating (Rabbi Pinhas Goldschmidt now serves as chief rabbi of the city), as well as Reform and Conservative congregations.

Jewish cultural life exhibits new life. There are several Jewish high schools as well as evening and Sunday schools; a Jewish university, a Jewish Historical Society (chairman: Rashid Kaplanov), and a Jewish Scientific Center (chairman: Vladimir Shapiro). There has been a renewal of the publication of scientific works in Jewish studies: from 1992 *Vestnik evreiskogo universiteta v Moskve* ("Bulletin of the Jewish University of Moscow") has appeared regularly, and in 1994 the Moscow-based *Rossiiskaya evreiskaya entsiklopedia* ("The Encyclopedia of Russian Jewry," editor-in-chief: Herman Branover) began publication. *Mazhdunarodnaya evreiskaya gazeta* ("International Jewish Newspaper," editor-in-chief: Tancred Galinpol'sky) appears in Russia, while the Yiddish monthly *Idishe gas* ("Jewish Street," editor-in-chief: Aaron Vergelis, formerly the editor of the now defunct Yiddish journal *Sovetish Heymland*) began to appear in January 1993.

With the onset of political freedom, however, various, antisemitic groups also became active. In the late 1980s antisemitic slogans were heard with increasing frequency at public meetings of the "Pamyat" association. Antisemitic articles were printed in the journals *Nash sovremennik* ("Our Contemporary"), *Molodaya Gvardiya* ("Young Guard"), and

Moscow journals and 27 newspapers regularly publish antisemitic material. In April 1992 proto-fascist punks attacked the hasidic synagogue in Moscow with Molotov cocktails. In July 1993 the windows of the Choral Synagogue were broken and swastikas daubed on its walls. However, lacking broad support of the masses, the antisemites did not undertake more violent measures. Although the democratic-oriented public opposed antisemitic actions (articles against antisemitism appear regularly in a number of journals), and the Duma or parliament in November 1992 held hearings on antisemitism, where government and public figures condemned the phenomenon. Still, fear of antisemitism, along with the difficult economic situation and concern about the future of democracy in Russia, encouraged some Moscow Jews to emigrate. However, the rate of emigration for Moscow (and St. Petersburg) is much lower than that for the rest of the former U.S.S.R. The 1970 census recorded 251,000 Jews in the city. Estimates of the "core" (self-defined) Jewish population of Moscow based on subsequent census data give figures of 176,000 for 1989, 135,000 for 1994, and 88,000 for 2002, representing 35% of the Jews in the Russian Federation.

MOSENTHAL, South African family, who, in successive generations, played a major part in the 19th-century development of the country's commerce, banking, and, especially, agricultural export trade. The family came from Hesse-Cassel, Germany, and the first to immigrate was JOSEPH MOSENTHAL (1813–1871), who settled at the Cape in 1839. He was joined by his brothers ADOLPH (1812–1882) and JULIUS (1819–1880), and the three set up in business in Cape Town as Mosenthal Brothers. The firm continued to flourish under family control until well into the 20th century. From their main business centers in Cape Town, Port Elizabeth, and Graaff Reinet, the Mosenthals spread their activities throughout the Cape Colony, and later through the Transvaal. They established numerous trading posts in the interior and organized transport to and from the coast. Their first interest was the marketing of wool and hides, but they gradually expanded their activities to embrace gold and diamond mining, industrial enterprises, and banking. In the early years they issued their own banknotes, which were widely circulated but were withdrawn by the firm with the development of the colony's commercial banking system.

The Mosenthals made a special study of ostrich farming and opened up export markets for its products. They introduced merino sheep from France and Angora goats from Turkey; Adolph Mosenthal himself went to the Black Sea to

arrange for the importation of the goats after earlier attempts had failed. This was the beginning of South Africa's staple mohair industry. In 1857 Julius Mosenthal was the first professing Jew to be elected to the Legislative Council of the Eastern (Cape) Province, and Joseph Mosenthal was elected to the same body in 1861. A fourth brother, Salomon Hermann *Mosenthal, became well known as a Viennese dramatist. Other leading members of the family were HARRY (1850–1915) and WILLIAM (1861–1933), both sons of Adolph.

In the 19th century, the Mosenthals helped a number of German-Jewish immigrants to settle in South Africa. Joseph Mosenthal, like his brothers, was a conforming Jew and was one of the founders of the Cape Town Hebrew Congregation in 1841. In later years the Mosenthals, like many of the other early Jewish families in South Africa, married out of the faith, and their descendants were no longer identified as Jews.

[Lewis Sowden]

MOSENTHAL, SALOMON HERMANN (1821–1877), German playwright. Mosenthal, who was born in Cassel, was a member of the *Mosenthal family. While studying engineering in Karlsruhe, he published his first poems under the pseudonym "Friedrich Lehner," bringing him into contact with the Swabian Romantic circle. Though intellectual tendencies at that time were turning toward democracy and liberalism, Mosenthal neglected revolutionary impulses and turned toward conservatism. As a consequence, he moved to Vienna (where he worked as a private tutor) in 1842 – just as artistic life was fleeing the Austrian capital and its absolutistic, autocratic spirit. Soon he changed his aesthetic focus and embarked on a career as a playwright. Mosenthal's biggest success was the play *Deborah* (1850), which was adapted for the English stage as *Leah, the Forsaken*. After premiering in Hamburg, it was a success in New York and was performed more than 600 times in London. The play presents an 18th-century love story between Joseph, a minister's son, and Deborah, a passionate, gypsy-like Jewess, who ultimately renounces her love for the sake of Joseph's happiness. Though the highly emotionally charged scenes are soaked with social criticism, it nonetheless never targets contemporary political issues. On the contrary, it celebrates Joseph II as a founding figure of Jewish emancipation. Besides *Deborah* and a few other plays such as *Sonnenwendhof* (1857), Mosenthal wrote several opera libretti, some of them dealing explicitly with Jewish topics, including *Judith* (set to music by Albert Franz Doppler in 1870), *Moses*, and *Die Makkabäer* (set to music by Anton Rubinstein in 1892 and 1874, respectively). His most popular libretto in his lifetime was surely that for Otto Nikolai's *Die lustigen Weiber von Windsor* (*Merry Wives of Windsor*, 1849). In addition, Mosenthal published a volume of stories of characteristic Jewish life, *Bilder aus dem juedischen Familienleben* (1878). Obviously influenced by the genre of "Ghettoliteratur" and its most prom-

inent representative Leopold Kompert, it portrays the problematic and chronically-endangered coexistence of Christians and Jews in Mosenthal's childhood homeland of Hessen. As a civil servant, Mosenthal had an impressive career. In 1849 the University of Marburg – where he had attained his doctorate six years before – awarded him an honorary doctorate. From 1850 onward, he worked in the Austrian ministry of education and was promoted to the rank of privy councilor in 1873. In 1871, he was knighted Ritter von Mosenthal. His collected works were published in six volumes in 1877/78.

[Samuel L. Sumberg / Philipp Theisohn (2nd ed.)]

MOSER, SIR CLAUDE, BARON (1922–), British statistician and academic. Born in Berlin, Moser immigrated to Britain in 1936. He taught at the London School of Economics from 1946 to 1970, where he was professor of social statistics, as well as serving as senior statistician to the British government and, from 1967 to 1978, as head of the Government Statistical Survey. An eminent statistician, he was elected to the British Academy in 1969. A distinguished academic, Moser served as warden (president) of Wadham College, Oxford, in 1984–93, as president of the British Association for the Advancement of Science, and as a trustee of the British Museum (1988–2002) and chairman of the British Museum Development Trust. He was chancellor of Keele University from 1986 to 2002 and received no fewer than 16 honorary degrees, as well as serving as chancellor of the Open University of Israel from 1994. He received a knighthood in 1973 and a life peerage in 2001.

[William D. Rubinstein (2nd ed.)]

MOSER, JACOB (1839–1922), early British Zionist and a sponsor of the Herzlia High School in Tel Aviv. Born in Kappeln, Schleswig, Moser moved to England in the 1860s and settled in Bradford, where he was a successful woollens merchant. He and his wife engaged in philanthropic activities there, especially the establishment of hospitals and schools for the poor. He joined the Zionist movement with the appearance of Theodor Herzl and was a member of the Zionist General Council, the board of the Jewish Colonial Trust, the Anglo-Palestine Corporation, the Jewish National Fund, and the presidium of a number of Zionist Congresses. At the Eighth Zionist Congress (1907), David *Wolffsohn announced Moser's contribution of 80,000 francs toward the establishment of the first Hebrew high school (in Jaffa) on the condition that the school bear Herzl's name. This was the largest contribution made by an individual to the Zionist Organization up to World War I. Moser visited Erez Israel in 1908 and 1910 and followed the high school's early steps, adding large sums to his contribution, so that the building could be complete, supplies and equipment could be purchased, etc. He also supported other projects in Erez Israel (e.g., Ben-Yehuda's Hebrew dictionary,

the Bezalel School of Arts and Crafts, etc.). Moser continued his philanthropic activities until his last years. In 1909 he was chosen an honorary citizen of Bradford and served as its lord mayor in 1910–11.

MOSER, MOSES (1796–1838), banker and a founder of the *Verein fuer Kultur und Wissenschaft des Judentums. An employee (and eventual partner) in the firm of Moses Friedlaender (son of David *Friedlaender), he attended philosophical lectures at Berlin University although he had no formal secondary education. There he met Eduard *Gans, Leopold *Zunz, and other young Jewish intellectuals, with whom he eventually founded the Verein (Nov. 7, 1819). Moser, who exerted a stabilizing and moderating influence within the Verein, was its treasurer (1821–22) and secretary (Nov. 1819; 1822–23). He also gave five lectures and contributed three articles. After the dissolution of the Verein, Moser, the one member esteemed by all, maintained his ties with L. Zunz, E. Wohlwill, and others. However, his most valued and most famous friend was Heinrich *Heine, who in his letters expressed his affection and esteem for Moser. Despite some setbacks the friendship endured. In 1819 Moser and some colleagues joined the patrician society, Gesellschaft der Freunde (founded in 1792 by I. Euchel and J. Mendelssohn), in the vain hope of subverting it from within. Moser eventually became its president (1836–38).

MOSES (Heb. מֹשֶׁה; LXX, *Mōusēs*; Vulg. *Moyses*), leader, prophet, and lawgiver (set in modern chronology in the first half of the 13th century B.C.E.). Commissioned to take the Israelites out of Egypt, Moses led them from his 80th year to his death at 120 during their wanderings in the wilderness until their arrival at the Plains of Moab.

BIBLICAL VIEW

The individual accounts of Moses combine to make him the most important biblical figure after God. As a prophet he is incomparable (Num. 12:6–8; Deut. 34:10). In the Bible, he is not only a national leader; it is he who fashions the nation of Israel, transforming a horde of slaves into a people potentially capable of becoming “a treasured possession” and “a kingdom of priests” (Ex. 19:5–6). He is portrayed as Israel’s first religious teacher; he gave Israel the Torah – a law of justice, holiness, and loving-kindness. Nevertheless, Scripture portrays Moses as human (Ex. 33:21ff.) and mortal (Deut. 34:5). He had faults as well as virtues, and was punished by the very God whom he taught Israel to worship. Not till the advent of Hellenism was the lawgiver described as *theos aner* (“a divine man”). In the Bible he is only the “human rod” with which God performs wonders.

Biography

The primary sources for the story of Moses’ life and works are contained in Exodus, Leviticus, Numbers, and Deuteronomy. Additional references are to be found in Joshua, Judges, I Samuel, I and II Kings, Isaiah, Hosea, Micah, Malachi, Psalms, Daniel, Ezra, Nehemiah, and I and II Chronicles. The salient references will be given in the course of the article. Because the stories of Moses originate from different times and places we cannot really reconstruct a biography of Moses. We cannot even be sure that Moses was a historical character. Even if he was, later writers wrote stories about Moses in which the ancient worthy represented their viewpoints. For example, the story in Numbers 12, in which all prophesy other than

that of Moses is deemed unreliable, has the aim of elevating Scripture, the written Torah of Moses, at the expense of oral prophecy (Sperling).

EARLY LIFE. Moses’ father and mother – Amram and Jochebed – were both of the tribe of Levi; he had an older sister, Miriam, and an older brother, Aaron (Ex. 2:1; 6:16–20; 7:7; Num. 26:59; I Chron. 23:12–14). The future redeemer of Israel was born at the height of the Egyptian persecution of the Israelites. The Pharaoh that “knew not Joseph” (Ex. 1:8) had set taskmasters over the Children of Israel to oppress them with forced labor (Ex. 1:11). In order to reduce their numbers he had also instructed the Hebrew midwives, Shiphrah and Puah, to kill the Israelite boys at birth, but owing to the piety of these women the plan failed (Ex. 1:15ff.). Thereupon Pharaoh charged all his people to throw every newborn Hebrew boy into the Nile (Ex. 1:22). Jochebed succeeded in concealing the infant Moses for three months (Ex. 2:2). Thereafter she made a wicker basket for him, caulked with bitumen and pitch, and placed it among the reeds of the river, while his unnamed sister watched from a distance. Pharaoh’s daughter, spying the basket when she came down to bathe, ordered one of her maids to fetch it. The princess took pity on the crying babe and decided to adopt him. At the sister’s suggestion Moses’ own mother was given the task of nursing the child until he was old enough to be returned to Pharaoh’s daughter. In this way Moses the Hebrew was, ironically, brought up as a prince in Pharaoh’s own palace. The hand of providence is manifest in these events; Pharaoh’s very plan of destruction became part of the divine design of redemption. The wondrous story is also intended to indicate the historic destiny awaiting the child. Possibly even his name *Moshe* is a pointer in this direction. The popular etymology (undoubtedly *Moshe* is an Egyptian name, probably meaning “son”) “I drew him out of the water” (Ex. 2:10) should logically have required the form *mashui* (“one that has been drawn out”), not *moshe* (“one that draws out”). But the infant was one day to “draw out” his people from the Sea of Reeds and bondage. (See Isa. 63:11–12 and below.)

Although Moses was reared as an Egyptian, he remained conscious of his origin and sympathetic to his kindred. When he grew to manhood, he went out to his brethren and witnessed their tribulations. His early Egyptian upbringing seems to have been a necessary stage in the process of fitting him for his future role as Israel’s liberator. His outlook was molded by a sense of freedom that his kinsfolk could not enjoy. Though “learned in all the wisdom of the Egyptians” (Acts 7:22), he was outraged by his first contact with the realities of the bondage. He saw an Egyptian beating a Hebrew slave and, overcome by an irresistible feeling of righteous indignation, he slew the Egyptian and hid him in the sand, thinking his deed would not be discovered. His second experience was even sadder: he found two Hebrews fighting. His intervention drew from the aggressor the retort: “Who made you chief and ruler over us? Do you mean to kill me as you killed the Egyptian?” To escape Pharaoh’s wrath, Moses fled to Midian (Ex. 2:11–15).

FLIGHT TO MIDIAN AND THE MISSION. In Midian, Moses, always the foe of unrighteousness rose again in defense of the persecuted. He saved the daughters of the priest Reuel (also called Jethro, Jether, and Hobab), who had come to water their father's flocks, from the hands of the bullying local shepherds. As a result of the incident Moses stayed with the priest and married his daughter Zipporah, by whom he had two sons, Gershom and Eliezer (Ex. 2:15–22; 18:3–4; cf. Judg. 18:30; 1 Chron. 23:15–17). A turning point in his life came when he witnessed a theophany in the region of Horeb. He saw a bush aflame with a fire that did not consume it. On turning aside to investigate the marvelous sight, he heard the voice of a god, whose name he did not know, calling him. In the vision God bade Moses redeem Israel from Egypt, where a new king now reigned. Moses resisted the divine commission, with many new excuses. The dialogue veers in different directions. Four times Moses changes the course of his argument: he feels inadequate to the task; he inquires by what name God is to be announced to the Israelites; he doubts that the Children of Israel will listen to him; he protests that he is slow of speech. Patiently God answers each objection. He would be with Moses and the fact that the Israelites, when they left Egypt, would serve the Lord at this mountain would be a sign to him that God had sent him; he was to tell his people that "I am that I am" had spoken to him; and He who gives humans the power of speech would teach him what to say. Together with the elders he was to ask Pharaoh's permission for the Israelites to go on a three-day journey into the wilderness to sacrifice to the Lord, although the request would certainly be refused. To help him convince the Israelites, the Lord gave Moses three wondrous signs (the rod becomes a snake and is restored to its former state; his hand becomes afflicted with a skin disease (see *Leprosy) and is healed; the Nile water, poured out on the ground, turns to blood). But still, without further rational argument, Moses refuses. The Lord is angered, but promises to let Aaron be Moses' spokesman, and bids him take the rod with which to perform the signs (Ex. 3:1–4:17; 7:1).

The wonders wrought by Moses both in Egypt and in the wilderness have special quality. Moses' "signs and portents" served as evidence of God's will. Moses' "call" has no biblical parallel. Even Gideon (Judg. 6:11–24) and Jeremiah (1:4–10) in the end accepted the divine commission unconditionally.

THE RETURN TO EGYPT AND THE EXODUS. Moses' initial efforts were frustrating. At the very beginning of his homeward journey an obscure incident occurred that almost proved fatal to Moses; he was only saved by the timely action of Zipporah in circumcising their son (Ex. 4:24–26). Pharaoh responded to the request of Moses and Aaron by augmenting the people's burdens. Henceforth they were to provide their own straw for making the bricks. Understandably the Israelites lost confidence in their would-be redeemer, who was himself discouraged (Ex. 4:27–5:23).

Events now assume a new dynamic. In a second revelation God announced: "I am the Lord. I appeared to Abraham,

Isaac, and Jacob as El Shaddai ["Almighty"], but I did not make Myself known to them by My name $\Upsilon\text{H}\text{W}\text{H}$ " (Ex. 6:2–3). The divine announcement means that according to the Priestly source, the Tetragrammaton ($\Upsilon\text{H}\text{W}\text{H}$, the four-letter name of God) was first revealed to Moses. Names in the Bible are not merely labels but descriptive epithets. They are particularly significant when applied to God. $\Upsilon\text{H}\text{W}\text{H}$, elaborated in the enigmatic "I am that I am," expressed the abiding providence that would sustain the people. (cf. Ex. 3:12).

Pharaoh's hardness of heart (for the statement "And the Lord hardened the heart of Pharaoh" see *God) called for sterner measures. By means of a series of ten devastating plagues (blood, frogs, gnats, swarm of flies, pest, boils, hail, locusts, darkness, death of the firstborn – humans and beasts), arranged schematically (see U. Cassuto, *Exodus* (1967), 92ff.), Pharaoh's resistance and tergiversations were gradually overcome. Before the incidence of the final and climactic plague, the Israelites were enjoined to offer up a sacrifice on the 14th of the first month (Abib = later, Nisan), and to daub the lintel and the two doorposts with its blood: "For when the Lord goes through to smite the Egyptians, He will see the blood... and will pass over (or: "protect") the door and not let the destroyer enter or smite your home" (Ex. 12:23). The last plague brought immediate surrender. The departure of the Israelites was now speeded by the panic-stricken Egyptians with the utmost impatience, so that the people had to take their dough before it was leavened and baked unleavened cakes (Ex. 6:10–12:36).

The Israelites, accompanied by "a mixed multitude" Exodus, left Egypt on the 15th of what would later be called Nisan. Already in Egypt they had eaten the Passover/*Pesah* sacrifice ("because He passed over/protected the houses of the Israelites"), instituted the Feast of Unleavened Bread ("for there was no time for the dough of our fathers to become leavened"), and promulgated the law of the consecration of the firstborn ("at the time that I smote every firstborn in the land of Egypt, I consecrated every firstborn in Israel, human and beast, to Myself").

CROSSING THE SEA OF REEDS. Pharaoh, however, soon repented his liberating act. The urgency with which the Israelites were expelled from Egypt was matched by the haste with which Pharaoh sought to recapture his slaves. The final scene was enacted by the Sea of Reeds. Hemmed in between the sea and the Egyptian cohorts, with only the pillar of cloud (of fire, by night) between the fugitives and their pursuers, the Israelites cried to the Lord, the only power that could now save them. The end came with dramatic swiftness. Moses sundered the waters with his rod; Israel crossed the seabed dry-shod, but their would-be captors were drowned by the returning waters (Ex. 14). The ode of triumph that Moses and the Children of Israel sang after their deliverance from the Egyptians (Ex. 15) is one of the most beautiful psalms in the Bible. Characteristically it contains no mention of Moses, just as the credal recital in connection with the first fruits has no reference to

the liberator (Deut. 26:5–9). The glory and the thanksgiving are accorded solely to the Lord.

COVENANT AT SINAI AND THE DESERT PERIOD. The ultimate goal lay ahead at Mount Horeb (Sinai), where in the third month after the Exodus the people were to witness the revelation of God, hear the Decalogue issuing forth from Sinai, and declare their eternal loyalty to the Divine Law in the words, “All that the Lord has spoken we will do and obey” (Ex. 19:1ff.; 24:7). Israel entered into a covenant with the Lord (24:8), of which the Ten Words or *Decalogue, usually called the Ten Commandments, formed the preamble and the Torah precepts the conditions. The covenant with YHWH is depicted as the real purpose of the Exodus. Freedom was not just the negation of servitude. Even the plagues were intended not only to humble Pharaoh, but to establish divine sovereignty over Israel.

The Torah’s narratives describe a descent; from the sublime heights of God’s mountain Israel plunged into the abyss of the *Golden Calf. The narrative is not descriptive history but rather a polemic against the cult established by *Jeroboam I. According to the calf narrative, Moses had ascended the mountain of the Lord to receive the tablets of the Decalogue and spent 40 days and nights there. Disturbed by Moses’ delay in returning to the camp, the Israelites persuaded Aaron to make them a god that would go before them, since they did not know what had happened to their leader. The bovine image that Aaron produced was to serve as a surrogate for Moses, and in Aaron’s view probably only represented God’s visible throne. It nevertheless constituted unforgivable religious treason, for the people regarded the calf as an actual deity (“These are your gods, O Israel”), and the lawgiver, conscious of the spiritual catastrophe that had befallen Israel, shattered the tablets of the Decalogue. For the Judahite author of this anti-Northern polemic, the covenant had been broken; the calf and the Ten Words could not exist in juxtaposition.

Moses ground the idol to dust and made the Israelites drink its powdered remains. With the help of the loyal tribe of Levi he slew 3,000 of the idolators. Then, in a heartrending supplication, he interceded with the Lord for his people: “But now, if Thou will forgive their sin – and if not, blot me, I pray Thee, out of Thy book which Thou has written.” God forgave, in accordance with His attributes (cf. Ex. 34:7). Again Moses ascended the mountain and received a new copy of the Decalogue. He was also vouchsafed deeper insight into the divine glory and character (Ex. 34:6–7). Moses was also given credit for the establishment of – the *Mishkan* (“Dwelling Place”; usually called the Tabernacle). It was the sequel, as it were, of the theophany on Mount Sinai; it was the symbol of God’s continuing presence. Although Moses performed certain sacerdotal functions on special occasions (Ex. 24:6; Lev. 8:6ff.), and is even called a priest in Psalm 99:6, he is never actually portrayed as such in the Torah. The Tent of Meeting, referred to in Exodus 33:7–11, is not to be identified with the Tabernacle. It was Moses’ own tent, which served temporarily as a meeting place between him and God, until the time of “wrath was

pitched.” It was pitched outside the camp, which had been recently defiled by idolatry (see Rashi, Ibn Ezra, and Nahmanides to Ex. 33:7; Cassuto, *Exodus* (1967), 429ff.).

The desert wanderings were, according to the Torah, a period of constant tension and crisis. The people lacked food and were not content with the manna; at times they demanded meat (Ex. 16:12ff.; Num. 11:4–6; 21:5). Often they were in need of drinking water (Ex. 15:23ff.; 17:2–7; Num. 20:1–13). On one occasion, when Moses struck the rock to produce water, instead of speaking to it, he was himself condemned for lack of faith (Num. 20:7–13). Repeatedly the people murmured and even threatened to leader to redirect themselves and return to Egypt (Ex. 5:21; 14:11–12; 15:24; 16:28; 17:2–7; Num. 11:4–6; 14:1–4; 20:2–5; 21:4–5). Of the 12 spies sent to investigate the nature of the Promised Land, ten brought back an unfavorable report: the land was exceedingly fertile (as evidence they showed a huge cluster of grapes), but unconquerable; moreover it devoured its inhabitants. Caleb and Joshua, who gave an encouraging account, failed to convince the people, and in consequence the entire generation (except Joshua and Caleb) were condemned to die in the wilderness and not enter the Land (Num. 13–14). The weary people were prey to all kinds of dangers. The Levite *Korah (Moses’ cousin), aided by Dathan, Abiram, and On of the tribe of Reuben, accused Moses and Aaron of self-aggrandizement, and advanced a claim to the priesthood. The challenge and its implicit peril are reflected in the punishment meted out to the rebels: the earth swallowed them up and thousands of others died through plague (Num. 16–17). Even Miriam and Aaron criticized Moses on account of the Cushite woman (a black woman whose origin was Cush, modern day Sudan) whom he had married (Num. 12). Only after 40 years of wandering was Israel’s goal in sight. Skirting Edom (Esau’s territory), which would not permit them to pass through, and warned not to seize any Ammonite territory (Deut. 2:19), the wanderers were engaged in battle by Sihon the Amorite and Og, king of Bashan. The Israelites defeated both these kings and divided their lands among the tribes of Reuben, Gad, and the half-tribe of Manasseh (Num. 21:4–35; 32:1–42). While the period of the wilderness is depicted in the Pentateuch as a turbulent age, the prophets, in contrast, emphasize its positive aspects. In the desert the Children of Israel had evinced an unforgettable love of the Lord (Jer. 2:1–3).

Interestingly, though the Torah describes the priesthood as hereditary, Joshua, and not one of Moses’ sons, was appointed by the lawgiver to be his successor. In regard to the judiciary, Moses accepts Jethro’s advice in reorganizing the judicial system and selecting judges who can be taught the laws and expected to be honest (Ex. 18); in contrast to Numbers 11 in which judges are deemed to have prophetic vision. The numbering of the people (Num. 1:2ff.; 26:1ff.), the sending of emissaries to Edom (Num. 20:14) and to Sihon (21:21–22), and even the appointment of scouts to spy out the land (13:2ff.; 21:32; Deut. 1:22–23) are more secular than prophetic.

THE LAST DAYS. In the Plains of Moab Moses' life began to draw to its close. Miriam and Aaron had already died (Num. 20:1, 24–29); Moses, too, was denied entry by the Lord into the land that was the lodestar of his hopes. All his pleadings were in vain (Deut. 3:25). Instead Moses was bidden to appoint Joshua as his successor (Num. 27:16–23; Deut. 1:8; 31:3, 14, 23), and on the borders of the Promised Land the aged leader delivered three hortatory addresses (Deut. 1–4; 5–28; 29–30) in which he reviewed the history of the 40-years' wandering and gave a resume of the Torah Code. After admonishing and blessing his people and viewing the land from the top of Pisgah, he died at the age of 120 by the command of the Lord, and was buried by Him in an unknown grave (Deut. 34). The tomb of Moses was not to become a cultic site, a clear indication that such claims about the site were known to the writer (see below). The valedictory song (*Ha'azinu*) that Moses taught the Children of Israel (Deut. 32) and the testamentary benedictions (Deut. 33) form an epilogue to the biblical account of Moses. The tribute to Moses with which the Torah concludes (Deut. 34:10–12) underscores the uniqueness of Moses' character and achievements.

[Israel Abrahams]

Critical Assessment

(Note: Although there are certain overlaps between this section and that preceding, they have been retained so as not to impair the unity of either section (Ed.)).

No primary source of information on Moses exists outside the Bible. The Pentateuch is the main repository of the traditions regarding Moses' life and work. Some biblical allusions to Moses depend on the Pentateuch, while others are independent, e.g., Hosea 12:14, Micah 6:4 and Isaiah 63:11, and genealogical notices in Judges 1:16; 4:11; 18:30; 1 Chronicles 23:14–15. For critical treatment, the data are collected by topics in the following paragraphs: the pentateuchal data are followed by the extra-pentateuchal, and then assessed critically. The order of appearance in the narrative is followed in the main.

BIRTH STORY. Moses was born in Egypt to Levite parents – Amram son of Kohath son of Levi, and Jochebed daughter of Levi, Amram's aunt (Ex. 6:20; Num. 26:59; 1 Chron. 5:29; 23:13). He was their third child, after Aaron (older by three years, Ex. 7:7) and Miriam (older still, cf. 2:4). He was placed by his mother in the Nile to protect him from Pharaoh's decree against male infants of the Hebrews. Found by Pharaoh's daughter, he was returned to his mother for nursing, but later brought back to the princess who adopted him and named him *Moshe*, “explaining, ‘I drew him out [*meshitihu*] of the water’” (Ex. 2:1–10).

The story contains generic elements that are discounted by historians. The infant castaway who grows up to be a hero is considered a legendary motif; it appears, for example, in the birth stories of Sargon of Akkad (Pritchard, Texts, 119) and Cyrus (Herodotus 1: 107ff.); an Egyptian myth tells of the concealment of the infant god Horus by his mother among marsh reeds to protect him from Seth (Helck). Yet, the repre-

sentation of Israel's savior as being of Egyptian provenance and rearing (though, to be sure, of Hebrew stock) is singularly un-stereotypical, and is supported by the Egyptian names of other Levites – Phinehas, Merari, Hophni, and perhaps Aaron and Miriam as well (Albright). The name of Moses too is probably to be derived from the final, verbal element in such Egyptian names as Ptah-mose (“Ptah is born”), which occurs independently in names of the New Kingdom (Griffiths). Connection with Hebrew *mashah*, “draw out,” like other such name interpretations, is based on assonance rather than etymology (e.g., the connection of Noah with the unrelated verb *nhm*; Gen. 5:29); as a Hebrew name, *Moshe* is of very rare, if not unique, formation. (The derivation of the Greek form *Mōusēs* from Egyptian *mōu*, “water,” and *esēs*, “saved,” given by Josephus (Ant. 2:228; cf. Apion 1:286; Philo, 1 Mos. 17), has no bearing on the Hebrew (Černý in Griffiths, see bibl.)).

Moses' connection with the Levites figures in the *Golden Calf story (Ex. 32:26ff.) and in Judges 18:30, where one of his Levite descendants (see below) is said to have founded the priestly line of the Danite sanctuary (cf. also the later Levitical status of Moses' descendants. 1 Chron. 23:14). His relationship to Aaron shares the obscurity surrounding the origins of the Aaronide priesthood. Friction between Moses and the Levites on the one hand and Aaron on the other appears in the Golden Calf story and suggests a background of rival ecclesiastical lines. But Aaron's impunity speaks for a high rank independent of Moses – in which respect he is Moses' “brother” and peer. Moses, Aaron, and Miriam are linked in Numbers 12:1–2 and with the Exodus in Micah 6:4; such a family of spiritual persons is unknown in later Israel, but has numerous extra-biblical analogues.

EARLY MANHOOD AND SOJOURN IN MIDIAN. Forced to flee Egypt because of his fatal intervention on behalf of a Hebrew slave, Moses rescues the shepherdess daughters of a Midianite priest from other shepherds who had driven them off. Invited to join the priest's family, he marries his daughter, Zipporah – who bears him two sons, Gershom and Eliezer – and tends his flocks (Ex. 2:10–22; 18:3–4). The episodes of Moses' early manhood foreshadow his career as a savior of the oppressed; they are poetically apt but historically unverifiable. His flight to Midian recalls the story of the Egyptian official Si-nuhe who, having fallen out of favor at the court, fled to Syria, where he settled and married among Semitic tribes (Pritchard, Texts, 18ff.). The tradition of Moses' Midianite connection is unclear in details. His father-in-law is variously named Reuel (Ex. 2:18; cf. Num. 10:29), Hobab (Judg. 4:11; cf. Num. 10:29) and *Jethro-Jether (Ex. 3:1; 4:18; 18:1ff.). A wife of Moses is called a Cushite (Num. 12:1) – considered by some to be of the tribe Cushan, a synonym of Midian in Habakkuk 3:7 (cf. W.F. Albright, in: BASOR, 83 (1941) 34, n. 8), and thus identical with Zipporah, though the absence of cross reference is remarkable. Yet the later alliance with Israel of the nomad Kenites, descendants of Hobab (Judg. 1:16; 4:11; 1 Sam. 15:6ff.), coupled with the enmity between Midian and Israel that be-

gan in the pre-settlement age and continued for generations (Num. 22:4 ff.; 31:1 ff.; Judg. 6–7), supports the historicity of an early connection between Israel and a Midianite group – the Kenites, relatives of Moses.

THE COMMISSIONING AND THE EXODUS. Once while tending the flocks deep in the wilderness at the Mountain of God, Moses was surprised by a call out of a burning bush to become God’s agent in the deliverance of Israel from bondage. God’s name, YHWH, was revealed and interpreted to him, and identified with the God of the Patriarchs. Returning to Egypt with (Ex. 4:20) or without (18:2) his family, Moses was rebuffed by Pharaoh, re-commissioned by God, and armed with wonders to bring Pharaoh to his knees. A climactic series of plagues forced the king to release the Israelites. After executing the protective rite of the paschal sacrifice, which saved them from the final plague of the firstborn, the Israelites marched out of Egypt. Soon, however, the Egyptians set out to retake them. Overtaken at the Sea of Reeds, the Israelites escaped through the miraculously divided sea, while the pursuing Egyptians were drowned as the waters closed back on them. Thereupon the people “believed (i.e., attributed the quality of reliability to) in YHWH and in Moses, his servant” and sang a triumphal hymn to God (Ex. 3–15).

The present form of the burning bush story is a composite and elaborated account of the call of the first messenger of God to Israel. Its essence – the overpowering, unavoidable command to go on God’s mission – reappears in all accounts of prophetic calls; there is little reason to doubt that it was the experience of the founder of the line (cf. the succession listed in 1 Sam. 12:8, 11). An allusion to this story seems to be contained in the divine epithet “Bush-Dweller” found in the (tenth-century?) Blessing of Moses (Deut. 33:16). The antiquity of the worship of YHWH and of his association with the “Mountain of God” variously named Horeb and Sinai is problematic. Pre-Mosaic worship of YHWH as a deity whose seat was in the wilderness south of Palestine is hinted at by 14th-century Egyptian references to “a land of the bedouin of YHWH” adjacent to Edom (cf. provenance of YHWH in the old poems, Deut. 33:2; Judg. 5:4–5, and in Hab. 3:3), and the association of YHWH with Horeb-Sinai prior to Israel’s coming there is suggested by Exodus 19:4 (“and brought you to me”). To be sure, Moses is depicted as ignorant of the sanctity of the place (as Jacob was of the sanctity of Beth-El, “the gate of heaven” (Gen. 18:16)) and his experience and conception of YHWH have no known antecedents, but some link with prior religious data cannot be ruled out (though the speculative association of *Kenites-*Midianites with YHWH worship has little to stand on).

The new significance of YHWH with the advent of Moses is indicated by the appearance of the first names bearing an element of the tetragrammaton in connection with Moses: Jochebed and Joshua; no such element occurs in theophoric names of the patriarchal age (on which fact light is shed by Ex. 6:3; modern criticism follows the acute suggestion of the

Karaite Jeshua b. Judah (cited by Ibn Ezra, ad loc.) that occurrences of the tetragrammaton in divine communications with the Patriarchs is anachronistic, cf. *Pentateuch). The conception of the messenger or agent of YHWH, sent and equipped with wondrous signs to help Israel, has its first embodiment in Moses and is a distinctive and dominant feature of Israelite religion thereafter. That a new start was made with the God YHWH and his apostle Moses is the core of the burning bush story; the discontinuity that must be postulated at the beginning of Israel’s history makes it credible. Moses plays a central role in the story of the *Plagues of Egypt and the Exodus, dramatically woven out of various strands of tradition (see *Exodus, Book of). The line of song ascribed to Miriam in Exodus 15:21 appears as the opening of a triumphal hymn to God in 15:1, which can hardly be detached from it (though verses 12–18 may be a later element), and must be allowed the same antiquity. Reflexes of these traditions, assigning a primary role to Moses, appear in Hosea 12:14 and Micah 6:4 datable to the eighth century; of indeterminate pre-Exilic date are the references in Joshua 24:5 and Psalms 105:26 to the role of Moses and Aaron in the plagues, and in 1 Samuel 12:6, 8 and Psalms 77:21 (where an echo of Ex. 15:13 occurs) to the brothers’ part in the Exodus. Moses is linked with the parting of the sea in the post-Exilic Isaiah 63:11 (where, in the received Hebrew, a pun on Moses’ name may appear (*mosheh ‘ammo*, “who drew his people out [of the water]”)); but the Septuagint lacks these words, and various manuscripts and the Syriac version read *mosheh ‘avdo*, “his servant Moses”).

LEADER OF THE WANDERINGS THROUGH THE WILDERNESS. Moses conducted the people into the wilderness, aiming for “the Mountain of God” (cf. Ex. 3:12). On the way he had to organize them under the headship of his aide-de-camp, Joshua, into a fighting force to fend off marauding Amalekites (Ex. 17:8 ff.). At Sinai, the first threat to his new faith appeared in the Golden Calf apostasy; Moses met it with harsh resolution, executing the offenders with the help of his Levite kinsmen (Ex. 32). At Sinai, too, Moses established the administrative organs of the people: advised by Jethro, he appointed a hierarchy of deputies to govern and judge them (Ex. 18:13 ff.; Deut. 1:9 ff.), whose military titles (“officers of thousands, hundreds, fifties, tens”) accord with the disposition of the people, after their census, as an army (Num. 1–2). (For the revelation at Sinai, see below.) After celebrating the second Passover (Num. 9), Israel made ready to march on to the Promised Land. Moses requested his father-in-law’s service as guide along the way (Num. 10:29 ff.); then, with the Ark in the lead, Moses invoked YHWH’s victory over all his enemies, and set off (Num. 10:35–36). The post-Sinai part of the wilderness wanderings was filled with challenges to Moses’ authority (see next section). Numbers 11:11–12, 16 ff. tells of the appointment of 70 elders, inspired by God with some of Moses’ spirit to enable them to share the burden of leadership with Moses (but Ex. 24:9 ff. seems to suppose their presence already at Sinai). The worst crises came with the demoralizing report

of the spies sent from Kadesh to reconnoiter Canaan, and the failure of the subsequent rash attempt to invade directly, made in defiance of Moses' prohibition (Num. 13–14). Frustration induced by the prolonged, forced stay in the wilderness bred the revolt of *Korah and 250 chief men against the authority of Moses and Aaron (Num. 16), which ended with their miraculous destruction. Moses had to crush a second apostasy, incited by Moabite-Midianite women (on the advice of Balaam (Num. 22:16)), at Shittim, in Transjordan (Num. 25). Moses' martial achievements came at the close of his career. His request for peaceful passage through Amorite Transjordan having been denied, Moses led successful campaigns against the kings *Sihon and *Og and, after a preliminary reconnaissance, against the region of Jazer (Num. 21:21ff.; Deut. 2:24–3:11). He allocated the land to the tribes of Reuben, Gad, and half-Manasseh after their oath to participate in the conquest of Cisjordan (Num. 32; Deut. 3:12ff.; Josh. 13:15ff.), and reserved in it three cities of refuge (Deut. 4:41ff.; but cf. Josh. 20:8, which dates this act to the time of Joshua). His last campaign was a retributive war against Midian (Num. 31). In the last year of the wanderings, Moses appointed Eleazar to succeed his father, Aaron, in the priestly duties (Num. 20:23ff.), and his aide, Joshua, to succeed him in the leadership of the people (Num. 27:15ff.; Deut. 31).

The credibility of the wilderness narratives is impaired by their inconsistency (e.g., with respect to the 70 elders; and see the next section), chronological obscurities (e.g., the events in Num. 20–21 and their relation to Deut. 1–2), apparent doublets (e.g., Num. 21:1–3 and 14:45), and divergent itineraries (especially in Num. 33:17ff., which, e.g., has no trace of a southern movement from Kadesh, contrast 14:25, and in 14:41ff. which traces a route arriving at the Plains of Moab without circling the lands of Edom and Moab; contrast Num. 21:4; Deut. 2). Moreover, the presence of Moses is not consistent throughout this material (e.g., Num. 21:1–3), so that critics have assumed that data on tribal movements other than those led by Moses have been combined in these narratives (on the supposition that the migration of the Hebrews was not the single movement into which tradition has characteristically simplified it). Finally, the trek through the Sinai desert at the necessary time period is belied by the extensive archaeological studies of the Sinai following the 1967 Israeli victory.

INTERCESSOR. The stories of Israel's trials of God during their journey fall into two groups: the pre-Sinai trials, in which God's saving power is shown after Moses cries to God, or through a wonder announced by Moses (Ex. 14:15; 15:25; 16:1ff.; 17:4, 11), and the post-Sinai trials, in which the people, though answered, are punished for their faithlessness. Moses is still instrumental in supplying the people's needs, but he now must also intercede on their behalf to assuage God's anger. Moses' first intercession was his recrimination against God for allowing Israel's suffering to increase after his first audience with Pharaoh (Ex. 5:22–23). The longest is in the Golden Calf story – Moses' dramatic plea to God to rescind

His decree of annihilation, then to agree to accompany Israel in their journey to the Promised Land. Banking on his favor with God, Moses cajoles Him to reveal to him His "ways," i.e., His merciful attributes (in effect a broader definition of His name; note the similarity of Ex. 33:13, 19 to 3:13–14), upon hearing which he presses God to forgive Israel (Ex. 32–34). Only less dramatic is Moses' other great confrontation with God, wrathful over Israel's disbelief in his capacity to give them victory over the Canaanites. Once again God threatens to destroy Israel, and once again Moses intercedes mightily on Israel's behalf, invoking God's revealed attribute of mercy, and calling upon him to manifest His strength through forbearance (Num. 14:11ff.). Further intercessions occur at Taberah (Num. 11), at the time of Miriam's leprosy (Num. 12), at the rebellion of Korah ("Will one man sin and you rage at the whole community?" Num. 16:22), and at the plague of serpents – to cure which Moses made a *copper serpent (Num. 21:4ff.). Tradition coupled Moses and Samuel as the archetypal intercessors on Israel's behalf (Jer. 15:1). A striking figure, taken from Ezekiel 22:30, is applied to Moses in the post-Exilic Psalm 106:23: "He would have destroyed them, had not Moses, His chosen one, stood in the breach in front of Him, to keep His wrath from destroying them." Psalm 103:7 alludes to Moses' eliciting God's attributes, and cites a few of them. The formulas of intercession in the two major narratives of Exodus 32–34 and Numbers 14 are doubtless part of a liturgical tradition (cf. Joel 2:13) whose attribution to Moses cannot be verified. The intercessory role of later prophets is firmly established; the depiction of Moses as a master of this role accords with his status as founder of Israel's prophetic line (see below), and may well be authentic. Singular authentication is given to Moses' copper serpent: down to the eighth century a copper serpent ascribed to Moses was lodged in the Jerusalem Temple; King Hezekiah ordered it cut down because the people were making burnt offerings to it (II Kings 18:4).

MEDIATOR OF THE COVENANT AND LAWGIVER. At Sinai, Moses negotiated Israel's acceptance of God's offer of a covenant, prepared the people for the covenant theophany, led them to God for the theophany, and strengthened them to sustain the experience (Ex. 19–20). The people heard the *Decalogue directly from God; Deuteronomy 5:5, however, insinuates Moses between the parties "to tell you what God spoke." Shattered by the experience, the people asked Moses to be their intermediary with God henceforth (Ex. 20:18–21 [15–18]; Deut. 5:20–28). Moses then received detailed stipulations of the covenant ("the *Book of the Covenant," Ex. 24:7) which he related to the people, and upon securing their assent to be bound by them, wrote down and ratified them in a solemn ceremony (Ex. 24:3–11). Later he received the written form of the Decalogue on stone tablets, which he deposited in the Ark of the Covenant (Ex. 24:12; 32:15–16; 34:1, 28–29; Deut. 9:9ff.; 10:1ff.). According to Deuteronomy, Moses recited all these stipulations to the generation about to enter Canaan during his last days, in the Plains of Moab. He concluded the recita-

tion with warnings, blessings, and curses, then committed it to writing and deposited the document – “the Book of Torah” – in the Ark, alongside the tablets (Deut. 31:9, 24ff.). In between the two covenant-makings, at the beginning and at the end of the journey through the wilderness, Moses received a host of ritual, religious, and moral injunctions, in the Tent of Meeting at Sinai and in the Plains of Moab (Lev. 1:1ff.; 26:46; 27:34; Num. 36:13). In addition to these large and small collections of injunctions, issued at the initiative of God, Moses sought and received oracular decisions in difficult cases, as need arose. This role was reserved for him in the administrative organization of the camp suggested by Jethro (Ex. 18:19–20) and its performance is illustrated in the cases of the blasphemer (Lev. 24), the Sabbath breaker (Num. 15:32ff.), and the daughters of Zelophehad (Num. 27; cf. Num. 36). The figure of Moses as the mediator of God’s laws and admonitions to Israel appears in biblical literature influenced by Deuteronomy and in post-Exilic writings. Thus the deuteronomistically edited Book of Joshua is haunted by Moses, the lawgiver; indeed it reads as the record of fulfillment of Moses’ admonitions (e.g., 1:1ff.; 4:10ff.; 8:31ff.; 11:15ff.; 14:6, 9; 17:4; 20:2). Material in the same spirit and style is found in Kings: I Kings 2:3; 8:53, 56; II Kings 14:6; 18:6; 21:8; 23:25. In writings of the Persian period, Moses appears exclusively as the author of the Torah and the founder of Israel’s sacred institutions (Mal. 3:22; Ezra 3:2; Neh. 1:7ff.; 8:1, 14; 9:14; 10:30; I Chron. 6:34; 21:29; II Chron. 8:13; 24:6; 35:6, 12). For a critical assessment of this representation of Moses, see the end of the next section.

CULT FOUNDER AND PRIEST. Moses not only proclaimed the proper name of God, by which He was henceforth to be invoked in worship (“This shall be My name forever/This My appellation [*zikhri*, lit. ‘call-word’] for all time,” Ex. 3:15), he instructed Israel in YHWH’s sacred seasons—starting with Passover and *mazzot* (Ex. 12) and the Sabbath (Ex. 16) and proceeding to the whole cultic calendar and its related prescribed sacrifices (Ex. 23:14ff.; 34:18ff.; Lev. 23; Num. 28:29; Deut. 16). The non-festival sacrificial system, too, was ordained by him (Lev. 1–7). He received the blueprint of the Tabernacle and supervised its construction (Ex. 25–31; 35–40). He inaugurated it and consecrated its clergy (Lev. 8). Moses is described as exercising specific priestly functions (e.g., handling the blood of sacrifice) both in the ceremony of covenant ratification (Ex. 24:6, 8) and during the inauguration of the Tabernacle and priesthood (Lev. 8).

Only two allusions to Moses’ priestly aspect occur in extra-pentateuchal writing: Psalm 99:6 counts Moses with Aaron as a priest of YHWH (traditional exegetes refer this to his role in Lev. 8), and the priesthood of the Danite sanctuary traced their line to a descendant of Moses (Judg. 18:30 – crediting the talmudic notice that the suspended *nun* of “Manasseh” is a deliberate device to obscure the derivation of this ignoble priesthood from Moses; BB 109b). According to the post-Exilic record, and in line with the Aaronide monopoly of the priesthood prescribed by the Torah, the descendants of Moses

were counted as Levites, not priests (I Chron. 23:14). Criticism finds the ascription to Moses of the vast corpus of rules and admonitions in Exodus, Leviticus, Numbers, and Deuteronomy improbable. Its arguments – from inconsistency, variant repetitions, diversity in style and viewpoint, and divergent historical presuppositions – can be found in articles on the books in question and on the *Pentateuch as a whole. Yet the origin and motive of this ascription can be described, and its poetic justice defended. The constant, stable element in the history of Israel during the biblical period is the consciousness of being a religious community, bound together by a common link to YHWH. No political change or revolution broke the continuity of this element. Under tribal rule or united monarchy, in a divided kingdom or in exile, and no less under Persian rule, the idea of a primary allegiance to the will of YHWH, prior to all political forms, defined Israelite identity. From latest to earliest times this allegiance was expressed in zeal for YHWH’s exclusive claim upon Israel (i.e., hostility toward foreign cults), in iconoclasm (persecution of idolatry), in peculiar religious institutions (e.g., the Sabbath), and in moral earnestness resulting from the communal responsibility to God for violations of morality (Judg. 20; II Sam. 4:11). Its symbol was the Ark of the Covenant (as early as the time of the Judges, I Sam. 4), and its exponents were agents and messengers of YHWH who admonished error and saved from distress (e.g., Jerubbaal, Judg. 6ff.). These elements, constitutive of Israel’s identity and singularity from the very beginning of its occupation of Canaan no doubt originated in Canaan proper through circumstances not fully understood and projected backward in time. The question of their author – is solved in Israelite tradition by assigning to Moses his role of covenant mediator and cult founder. The above-mentioned features of Israelite religion are ascribed to Moses, as well as their integrating framework, the idea of the covenant with YHWH. However rudimentary the terms of the Mosaic covenant may have been (some suppose no more than the Decalogue, others include parts of the Book of the Covenant; criteria for positive ascription are wanting), they were enough to serve as the constitution of the religio-political community of Israel; subsequent development of these terms, their ramifications, their adjustments to changing times, was regarded as part and parcel of the original. In theory, all regulations constitutive of the religious community of Israel were covenant regulations; all were issued by God and communicated to Israel by the mediator Moses. Something of the process may be glimpsed at in Nehemiah 10:30ff. and II Chronicles 30:16; 35:12, where rites are ascribed to the Torah of Moses that are not in fact to be found there.

DEATH AND BURIAL. Although commissioned to bring Israel into the Promised Land (e.g., Ex. 33:1ff.), Moses died in the Plains of Moab, outside its borders. Numbers 20:2–13 accounts for this by the offense of Moses and Aaron at Kadesh, in connection with procuring water for the grumbling people – “the waters of contention” (*me merivah*). Wherein the brothers failed to “believe” God and “sanctify him in the sight of the Is-

raelites" (Num. 20:12) is obscure. The interpretation in Psalms 106:32–33 is ambiguous: this much seems clear, however: that Moses is blamed for speaking rashly. In Deuteronomy, in contrast, Moses is denied entry into the Promised Land on account of the people: their display of faithlessness during the incident of the spies made God turn upon Moses as well. It was then He decreed that Moses (as well as his whole generation) would not enter the land (Deut. 1:37; 3:26; 4:21). When his time had come, Moses was commanded to ascend Mount Nebo, from which he could view the length and breadth of the Promised Land. There he died and was buried in the valley, "in the land of Moab, opposite Beth-Peor; and no man knows his burial place, to this day" (Deut. 34; cf. Num. 27:12ff.). The various theological explanations of Moses' death in Transjordan vouch for the existence of a grave tradition. Inasmuch as grave traditions were attached to such worthies as the patriarchs and matriarchs, the surprising obliteration of his burial-place savors of a deliberate aversion toward his apotheosis, which might have grown out of veneration of his grave as a shrine. Such an apotheosis was likely in view of the singular status accorded Moses in Israelite tradition (see Houtman).

UNIQUE STATUS. The wonders performed by Moses on behalf of Israel exceed those of any subsequent prophet (Deut. 34:11–12). He not only outdid Egypt's magicians (whose virtuosity, as displayed, e.g., in the Westcar Papyrus (A. Erman, *The Ancient Egyptians*, 36ff.), illuminates the issue of the first part of the plague narratives), he also prevailed over the mightiest forces of nature – splitting both the sea (Ex. 14) and the earth (Num. 16). That in so doing he no more than activated the power of God, and in God's own cause, is unfailingly noted; no room is left for regarding Moses as a magician, aggrandizing himself through native powers or occult arts. One superhuman trait, however, does pertain to him: the ability to endure, on more than one occasion, a fast of forty days (Ex. 24:18; 34:28; Deut. 9:9, 18; cf. Elijah's similar feat, I Kings 19:8). Miraculous features, part of the traditional image of the "man of God," are ascribed to Moses in the highest degree as befits his heroic role. No later figure is portrayed so close to God as Moses. God spoke with him "face to face" (Ex. 33:11), and allowed him such a prolonged intimacy that as a result (after Moses' intercession in the wake of the Golden Calf apostasy) Moses' face was fearsomely radiant, so that he had to wear a mask in ordinary intercourse with people (Ex. 34:19ff.). The covenant made after this apostasy, on the basis of Moses' favor with God, specifically names Moses as an equal party with the people (Ex. 34:27; cf. 34:10, and the corresponding usage in the intercession in Ex. 33:16 ("I and your people," twice)). The equation corresponds to God's substitution of Moses for all the rest of the people in Exodus 32:10 (cf. Num. 14:12) and Moses' readiness to lay down his life on their behalf (Ex. 32:32). That Moses cannot simply be subsumed under the rubric "prophet" (*navi*) is the lesson taught to Aaron and Miriam in Numbers 12:6ff.: prophetic revelation is in the form of dream or vision; Moses, however, has the freedom of YHWH's house (i.e.,

may obtain audiences at will), he speaks with God "mouth to mouth," and is granted sight of YHWH (not a necessary contradiction of Ex. 33:20ff., where Moses is denied sight of God's face, but not of His back). In fact, Moses is never called a "prophet" in the Pentateuch (he is alluded to as such only in Hosea 12:14), but rather YHWH's "servant" (*eved*) – the usual epithet in extra-pentateuchal literature as well (Num. 12:7–8; Deut. 34:5; Josh. 1:1; once he is styled God's "chosen one" (*behir*, Ps. 106:23), a synonym of "servant" in Isa. 42:1, 45:4; Ps. 89:4). In Deuteronomy (33:1) and later literature (Josh. 14:6; Ps. 90:1; Ezra 3:2; I Chron. 23:14; II Chron. 30:16) Moses is occasionally called "the man of God," a prophetic epithet. His spirit inspires ecstasy (Num. 11:25), just as contact with the prophet Samuel does (I Sam. 19:20ff.). Moreover, he is compared to prophets in Numbers 12, Deuteronomy 18:18, and 34:10, and in the last passage he is represented as their unequaled archetype. But the catalog of gentile analogues to the Israelite prophet in Deuteronomy 18:10–11 suggests that the term *navi* was too restricted to oracular, divinatory, and magic-like functions to be applied to so comprehensive a figure as Moses (though, since he performed these functions, he might justly be considered a prophetic archetype). Just in those two narratives where Moses' relation to prophecy is manifest, a point is made of his meekness and forbearance. He does not share his servant's alarm at the apparently independent prophesying of *Eldad and Medad; on the contrary, he wishes the entire people were prophets (Num. 11:26ff.). Nor will he assert himself even against rival claims of his brother and sister, for he was "the meekest man on earth" (Num. 12:3). Perhaps here, too, a distinction between Moses' character and that of later prophets is intended (contrast II Kings 2:23–24).

FINAL CONSIDERATIONS. Moses is not consistently present in biblical literature. He dominates the Pentateuch and Joshua – the repository of traditions about the birth of the nation. He reappears in the revival and re-founding literature of late monarchic and post-Exilic times. But references to him in the prophetic and hymnal writings (e.g., Psalms) are negligible. Moses' slighting by prophets and psalmists is significant, but the implications of that omission are debated. All innovation in the later religion of Israel is attributable to individuals known by name: the monarchy to Samuel and David; the Temple to David and Solomon; reforms in the official religion to kings Asa, Jehu, Hezekiah, Josiah, the priests Jehoiada and Hilkiah, and the prophets Elisha, Elijah, and Huldah; new moral-historical and eschatological conceptions to Amos, Hosea, Isaiah, Jeremiah – and the list is not ended. Had no founder of the worship of YHWH and the covenant institutions that characterized Israel from its beginnings been recorded in tradition, analogy would have required postulating him; and that is probably what happened. The traditions of the Torah point unanimously to Moses as the founder of all the constitutional elements of the religious community of Israel (excepting the monarchy). No single figure in later Israel plays the many roles ascribed to Moses, itself an indication

that whatever historical basis there might have been for the activity of Moses is beyond recovery.

[Moshe Greenberg / S. David Sperling (2nd ed.)]

IN HELLENISTIC LITERATURE

Inventor and Civilizer, Lawgiver and Philosopher

The Jewish-Hellenistic tendency to adopt the sages of ancient culture entailed a whole series of farfetched identifications (e.g., Isis-Eve; Serapis-Joseph; Atlas-Enoch; Bel Kronos-Nimrod; Orpheus-David; Musaeos-Moses; Zoroaster-Ezekiel) and culminated in the attribution of the most important contributions of civilization to Jewish cultural hero-figures. Thus, Moses became for Eupolemus (whose chronology placed him more than 500 years before the Trojan War) the first wise man, and the first to invent writing for the Jews (from whom it was taken over by the Phoenicians, and from the Phoenicians, by the Greeks; Eusebius, *Praeparatio Evangelica*, 9:26). According to Artapanos, Moses (who is identified with Musaeos and also with Hermes-Thot) was the teacher of Orpheus, discovered the art of writing, was the first philosopher, and invented a variety of machines for peace and war. He was also responsible for the political organization of Egypt (having divided the land into 36 nomes), and was the originator of the animal cults of the Egyptians, which were seen as the only practical means available to overcome the unstable character of the Egyptian masses (Eusebius, op. cit. 9:27). The earliest philosophical exegete of the Pentateuch, Aristobulus, claimed that Homer and Hesiod drew much of their material from the Books of Moses, which, according to him, had been translated long before the Septuagint (Eusebius, op. cit. 13:12). Philo maintains that Heraclitus snatched his theory of opposites from Moses "like a thief" (*Quaestiones et Solutiones in Genesin* 4:152). Similarly, he says that the Greek legislators "copied" various laws from the laws of Moses (Spec. 4:61). Philo even states that Moses anticipated Plato's doctrine of creation from preexistent matter, by teaching in Genesis that there was water, darkness, and chaos before the world came into being (*De Providentia*, ed. J.B. Aucher (1822), 111; cf. Justin Martyr, *Apologia*, 1:59). According to Josephus, Moses was the most ancient of all legislators in the records of the world. Indeed, he maintains that the very word "law" was unknown in ancient Greece (Jos., Apion 2:154). Moreover, "in two points in particular, Plato followed the example of our legislator [Moses]. He prescribed as the primary duty of the citizens a study of their laws, which they must all learn word for word by heart, and he took precautions to prevent foreigners from mixing with them at random" (*ibid.* 257). "Our earliest imitators," concludes Josephus, "were the Greek philosophers, who, though ostensibly observing the laws of their own countries, yet in their conduct and philosophy were Moses' disciples" (*ibid.* 281). The only analogue in the pagan world to these ascriptions of priority to Moses is the famous statement of Numenius of Apamea (second century C.E.), who introduced allegorical interpretation of the Hebrew Bible to the pagan world (fragments 19 and 32, L),

that Plato was just a Moses who spoke Greek (fragment 10, L). Philo also asserts that Moses was "the best of all lawgivers in all countries," and that his laws are most excellent and truly come from God. This is proved by the fact that while other law codes have been upset for innumerable reasons, the laws of Moses have remained firm and immovable, and "we may hope that they will remain for all future ages... so long as the sun and moon and the whole heaven and universe exist" (11 Mos. 12). Furthermore, not only Jews but almost every other people have attained enough holiness to value and honor these laws. In fact, says Philo, "it is only natural that when people are not flourishing, their belongings to some degree are under a cloud, but if a fresh start should be made to brighter prospects... each nation would... throw overboard its ancestral customs and turn to honoring our laws alone" (*ibid.* 44). In spite of the declining political fortunes of the Jews during the period of the Roman Empire, an occasional note of admiration for Moses is still found in writers like Pseudo-Longinus, who speaks glowingly of the great legislator's lofty genius (*On the Sublime* 9:9), but Numenius, Tacitus, Galen, Celsus, Porphyry, and Julian, on the other hand, are highly critical of, and even hostile to, Moses.

Antisemitic Attacks on Moses

The earliest Greek references to Moses were quite favorable. Hecataeus of Abdera presented Moses as the founder of the Jewish state, ascribing to him the conquest of Palestine and the building of Jerusalem and the Temple. He explained, in the Platonic manner, that Moses divided his people into 12 tribes, because 12 is a perfect number, corresponding to the number of months in the year (cf. Plato, *Laws*, 745b-d; *Republic*, 546b). He also discovered a solicitude for military training in Moses' endeavor to train the youth in moral restraint and heroic endurance (Diodorus 40:3; in: Th. Reinach, *Textes d'auteurs Grecs et Romains relatifs au Judaïsme* (1895), 14ff.). More important, he emphasized that Moses instituted no images in the worship of God, so that God should not be conceived of anthropomorphically, since the all-encompassing heavens alone (i.e., the cosmos) are to be identified as God. Posidonius of Apamea similarly emphasized that Moses worshiped no idols, and identified God with nature (Strabo 16:35). Soon, however, a reaction set in, and Moses became the butt of a venomous antisemitic literature. Hecataeus had earlier observed that Moses had initiated a form of life encouraging seclusion from man and a hatred of aliens. According to the Egyptian priest Manetho (third century), Moses was a rebellious priest of Heliopolis, called Osarsiph (cf. Chaeremon and Jos., Apion 1:32), who commanded the Jews to slaughter the sacred animals of Egypt, and established, with the aid of the Hyksos, a 13-year reign of cruelty over the Egyptians, until he was finally expelled by Pharaoh Amenophis (Jos., Apion 1:228ff.; Reinach, *ibid.*, 11). Lysimachus wrote that he instructed the Jews to show goodwill to no man, to always offer the worst advice, and to overthrow any temples and altars of the gods which they found (Jos., Apion 1:309; Reinach, *ibid.*,

59). Apollonius Molon accused Moses of being a charlatan and impostor, who gave the Jews bad laws. Posidonius says that upon entering the Holy of Holies, Antiochus Epiphanes saw the statue of a bearded man riding on an ass (cf. Tacitus, *Histories*, 5:3) and holding a book. This was Moses, who gave the Jews laws of hatred toward all mankind (Diodorus 34:1, 3; Reinach, *ibid.* 57–58). Finally, Nicarchus (cf. Ptolemy Chennos of Alexandria, and Helladius) writes that Moses was called *Alpha* (an honorific title for members of the Museum at Alexandria, and possibly applied to Moses in Jewish-Hellenistic literature), because he had leprosy spots (*alphous*) all over his body (Reinach, *ibid.*, 122, 361–62).

THE BIOGRAPHY OF MOSES. The sparse biographical details of the biblical narrative concerning Moses are considerably elaborated and expanded in the characteristic style of Jewish-Hellenistic literature. Demetrius (end of third century), in his “On the Kings in Judea,” identified the Cushite woman whom Moses married (Num. 12:1) with Zipporah, by arguing that as far as one can infer from the names (the LXX lists among the sons of Dedan, Abraham’s grandson from the family of Keturah, also Raguel, who, according to Demetrius, was Jethro’s father), Zipporah was a sixth-generation descendant of Abraham’s family. According to the Bible, Abraham sent the sons of Keturah away “eastward, to the land of the East” (Gen. 25:6), which Demetrius identified as the land of Cush. “It was on this account,” concluded Demetrius, “that Aaron and Miriam declared that Moses took a Cushite woman” (Eusebius, op. cit. 9:29). The first elaborate account of Moses’ life is to be found in Artapanus’ “On the Jews.” According to Artapanus, Pharaoh’s daughter, Merris (Jos., Ant., 2:224 gives her name as Thermuthis), was barren, and therefore adopted a Jewish child whom she named Moshe. Merris’ husband, Chenephres, king of Memphis, grew jealous of Moses, and tried to dispose of him by sending him into battle against the Ethiopians with inadequate forces. After a ten-year campaign, the Ethiopians so admired Moses that, under his influence, they adopted the rite of circumcision. Artapanus knew nothing, however, of Moses’ romance with the Ethiopian king’s daughter and her betrayal of the capital city to him (Jos., Ant., 2:252), and it must be assumed that, like Demetrius and Ezekiel the Poet, he identified the Cushite woman whom Moses married with Zipporah. Artapanus’ version of the biblical story of Moses’ slaying of the Egyptian emphasizes the latter’s plotting against Moses’ life. Indeed, it was in a last resort to defend his life, that Moses slew the Egyptian Chanethotes. Moses’ efforts to free his people land him in jail, but the irons binding him miraculously fall off, and the jail doors open of themselves (cf. the experiences of the imprisoned god Dionysus in Euripides’ *The Bacchanals*, 600 ff.). Moses’ rod, according to Artapanus, was found in every Egyptian temple and was similar to the *seistron* or “rattle” used in the worship of Isis. It was by means of the *seistron* that Isis raised the waters of the Nile, and thus she was called in the Isis hymns *Seistrophóros*. Artapanus mentions two traditions concerning the Red Sea, that of Memphis and that of

Heliopolis. That of Heliopolis follows the Bible, while that of Memphis explains the event by saying that Moses knew the area well and waited for the ebb tide (cf. Jos., Ant. 2:341–49). Finally, the reason given for the Egyptians’ pursuit of the Israelites was their desire to retrieve the property borrowed from them (cf. Philo, 1 Mos. 1:141). A similar explanation is given by Trogus Pompeius, who says, however, that the Jews stole the holy utensils of the Egyptians (Justin 36:2, 13). Artapanus’ account closes with a description of Moses: “Moses, they say, was tall and ruddy, with long white hair, and dignified” (Eusebius, op. cit. 9:27). The 269 lines preserved from the tragedy of Ezekiel the Poet on Exodus include a long soliloquy by Moses recounting his career down to his flight to Midian; a dialogue which recounts a dream in which a royal personage enthrones Moses on a throne which reaches heavenward, whereupon Moses surveys the heavenly host who fall on their knees before him, and then pass by as he counts them; and a detailed description of a remarkable bird, apparently the phoenix, at Elim (cf. Herodotus 2:73; Pliny, *Natural History*, 10:3–5; Job. 29:18; Gen. R. 19:5; Sanh. 108b; 11 En. 6:6; 8:6; 11 Bar. 6–7; Eusebius, op. cit., 9:16–37). In his *De vita Mosis*, Philo depicts Moses in his fourfold role as king, legislator, priest, and prophet. Whereas the fame of Moses’ law, writes Philo, has traveled throughout the civilized world, the man himself, as he really was, was known to few. Greek men of letters, perhaps through envy, have refused to treat him as worthy of memory. Although there is no attempt in this treatise to refute the antisemitic literature on Moses, Philo does refer in his *Hypothetica* (355) to the charge that Moses was “an impostor and prating mountebank.” He also strangely explains the Exodus there as due partly to Jewish overpopulation in Egypt (cf. Tacitus, *Histories*, 5:4) and also to the revelations of God in dreams and visions bidding them to go forth. Moreover, he points out that the Israelites’ admiration for the man who gave them their laws was so great, that anything which seemed good to him also seemed good to them. Therefore, whether what he told them came from his own reasoning or from some supernatural source, they referred it all to God (*ibid.*, 357). In the *De vita Mosis*, Philo explains how the child Moses happened to be found by Pharaoh’s daughter. In a state of constant depression over not having a child who could succeed her father she finally broke down on one occasion, and, though she had hitherto always remained in her quarters, she set off with her maids to the river where Moses was exposed. Since he had been taken up from the waters, she called him Moses, *mou* being the Egyptian word for water. As he grew in beauty and nobility, she decided to claim him as her own son, having at an earlier time artificially enlarged the figure of her womb to make him pass as her real child. Teachers arrived from different parts of Egypt and even from Greece. In a short time, however, he advanced beyond their capacities. Moses thus acquired the best of both Greek and Egyptian education. In his desire to live for the soul alone and not for the body, he lived frugally, scorning all luxury. Moses’ career as a shepherd served as good training and a preliminary exercise

in kingship for one destined to command the herd of mankind. Since Moses abjured the accumulation of wealth, God rewarded him by placing the whole world in his hands. Therefore each element obeyed him as its master, and submitted to his command (cf. 11 Mos., 201; Wisd. 19:6). His partnership with God also entitled him to bear the same title: "For he was named god and the king of the whole nation, and entered into the darkness where God was, that is, into the unseen, invisible, incorporeal, and archetypal essence of existing things."

A few further details may be added from Josephus' account of Moses (Ant. 2: 201ff.). Pharaoh decreed that all male infants of the Hebrews be drowned on the advice of a sacred scribe who had divined the birth of one who, if allowed to live, would abase Egypt and exalt Israel. Moses' easy birth spared his mother violent pangs and discovery by the watchful Egyptian midwives. His size and beauty enchanted princess Thermuthis, who found him on the Nile. Because he refused to take the breast of any Egyptian wet nurse, his mother was engaged to suckle him. Moses' precocity was displayed in his very games. Moreover, when the princess laid the babe in her father's arms, and the latter, to please his daughter, placed his diadem upon the child's head, Moses tore it off, flung it to the ground, and trampled it underfoot. This was taken as an ill omen, and the sacred scribe who had foretold his birth rushed forward to kill him. Thermuthis, however, was too quick for him and snatched the child away. Carried away by his Hellenistic ambience, Josephus says that, after crossing the Red Sea, Moses composed a song to God in hexameter verse.

Some last points of interest may be gleaned from Pseudo-Philo's *Liber Antiquitatum Biblicarum* (first century C.E.). According to this work, Moses was born circumcised (cf. Sot. 12a, Ex. R. 1:20). Pharaoh's daughter comes down to bathe in the Nile at this particular time because she had had a dream. Before Moses smashes the tablets, he looks upon them and sees that there is no writing on them. The reason given for his not entering the Promised Land was that he should be spared the sight of the idols that were to mislead his people. Moses dies at the hands of God, who buries him personally (cf. Deut. R. 11:10), and on the day of his death the heavenly praise of God was omitted, something which never occurred before and was never to occur again.

MOSES IN THE APOCALYPTIC TRADITION. According to the *Assumption of Moses* (c. 7–30 C.E.), Moses was prepared from before the foundation of the world to be the mediator of God's covenant with his people (1:14; 3:12). No single place was worthy to mark the site of his burial, for his sepulcher was from the rising to the setting sun (11:8). Moses' relation to Israel did not cease with his death, for he was appointed by God to be their intercessor in the spiritual world. This work also includes the debate between Michael and Satan over the burial of Moses. Satan opposes Michael's commission to bury Moses, on the ground that he is the lord of matter. To this claim Michael rejoins: "The Lord rebuke thee, for it was God's spirit that created the world and all mankind." In other

words, Satan grants God Moses' soul, but claims his body as belonging to his exclusive domain. The author, speaking through Michael, rejects this gnostic dualism by insisting that God is Lord of both spirit and flesh, since he is the creator of all (R.H. Charles, *Apocrypha*, 2 (1897), 105–7). It may be well to allude here to the apocalyptic tradition connected with the name of Moses and also with Ezra, the "second Moses." In the *Assumption of Moses*, Moses gives Joshua secret books which are to be preserved and hidden "until the day of repentance in the visitation wherewith the Lord shall visit thee in the consummation of the end of days" (1:18). In Jubilees, too, the account is given of a secret tradition revealed to Moses on Sinai in which he is shown all the events of history both past and future (1:26). With this may be compared 11 Esdras 14, where Ezra, the "second Moses," receives by divine revelation the 24 books of canonical Scripture which he has to publish openly and the 70 books representing the apocalyptic tradition which he has to keep secret.

MOSES AS MAGICIAN. In pagan literature, Moses was, naturally enough, sometimes represented as a great magician. Numenius of Apamea, for example, presents him as a magician greater than his rivals Iannes and Iambres because his prayers were more powerful than theirs (fragments 18 and 19, L; cf. Pliny, *Natural History*, 30:1, 11; Reinach, op. cit. 282; Trogus Pompeius = Justin *Epitome* 36:2; Reinach, op. cit., 253). Moreover, in some of the magic papyri, Moses appears as the possessor of mysteries given to him by God (K. Preisendanz, *Papyri Graecae Magicae*, 2, 87f.). Finally, it may be noted that in some of the Qumran fragments, secret astrological teachings were ascribed to Moses (J.T. Milik, in: RB, 63 (1956), 61).

[David Winston]

RABBINIC VIEW

A marked ambivalence is to be observed in the Jewish tradition with regard to the personality of Moses. On the one hand, Moses is the greatest of all the Jewish teachers, a powerfully numinous figure, the man with whom God speaks "face to face," the intermediary between God and man, the master of the prophets, and the recipient of God's law for mankind. On the other hand, the utmost care is taken to avoid the ascription of divine or semi-divine powers to Moses. Moses is a man, with human faults and failings. Strenuous attempts are made to reject any "personality cult," even when the personality in question is as towering as Moses. Judaism is not "Mosaism" but the religion of the Jewish people. God, not Moses, gives His Torah to His people Israel. There are to be found Jewish thinkers, evidently in response to the claims made for Jesus by Christianity and for Muhammad by Islam, who elevate the role of Moses so that the religion is made to center around him. However, the opposite tendency is equally notable. Precisely because Christianity and Islam center on a person, Jewish thinkers declared that Judaism, on the contrary, singles out no one person, not even a Moses, as belonging to the heart of the faith. The stresses in this matter vary in proportion to

the particular strength of the challenge in the period during which the role of Moses is considered. The need is keenly felt to affirm the supremacy of Moses and yet, at the same time, to deny him any divine honors.

Rav and Samuel said that 50 gates of understanding were created in the world, and all but one were given to Moses, for it is said (Ps. 8:6): "For Thou hast made him [Moses] but a little lower than the angels" (Ned. 38a). All the prophets saw God as one looks into a dim glass, but Moses as one who looks through a clear glass (Yev. 49b). When Moses was born the whole house was filled with light (Sot. 12a). Moses was so kind, gentle, and considerate to his sheep when tending the flock of Jethro that God made him the shepherd of Israel (Ex. R. 2:2). For Moses such a great thing as the fear of God was very easy of attainment (Ber. 33b). R. Johanan said: "The Holy One, blessed be He, causes His Divine Presence to rest only upon him who is strong, wealthy, wise, and meek and Moses had all these qualifications" (Ned. 38a). According to one opinion, Moses did not really die but still stands and ministers to God as he did while on Mount Sinai (Sot. 13b). Moses was righteous from the beginning of his life to the end of it, as was Aaron (Meg. 11a). Here, and frequently in the rabbinic literature, the praise of Moses is coupled with that of Aaron. The humility of Moses and Aaron was greater than that of Abraham since Abraham spoke of himself as dust and ashes (Gen. 18:27) whereas Moses and Aaron declared that they were nothing at all (Ex. 16:8). The whole world exists only on account of the merit of Moses and Aaron (Ḥul. 89a). These and similar sayings are typical of the rabbinic determination to go to the utmost lengths in lauding Moses; yet sayings of a not too different nature are found lauding other biblical heroes, and in some of the passages Aaron is made to share Moses' glory.

For the rabbis generally Moses is *Moshe Rabbenu* ("Moses our master," i.e., teacher), the teacher of the Torah par excellence. Neumark (*Toledot ha-Ikkarim* (1919²), 85f.) has, however, conjectured that the absence of this title from the whole of the Mishnah is a conscious anti-Christian reaction in which the character of Moses is played down somewhat by avoiding the giving to him of a title given to Jesus (Acts. 2:36). It is also suggested in the Mishnah (RH 3:8) that the hands of Moses did not in themselves have any effect on the fortunes of Israel in the battle with Amalek. It was only when Israel lifted up their eyes to God in response to Moses' uplifted hands that God helped them. R. Eleazar, commenting on the verse "Go down" (Ex. 32:7), remarks: "The Holy One, blessed be He, said to Moses: 'Moses, descend from thy greatness. Have I given to thee greatness except for the sake of Israel? And now Israel have sinned; then why do I want thee?'" (Ber. 32a). R. Yose said that if Moses had not preceded him, Ezra would have been worthy of receiving the Torah for Israel (Sanh. 21b). Nor were the rabbis averse on occasion to criticizing Moses for his quick temper (Pes. 66b; Sot. 13b) and to stating that he erred, though ready to acknowledge his mistake (Zev. 101a).

In the rabbinic tradition Moses was not only given the Written Law but the Oral Law, including the "laws given to

Moses at Sinai" (**Halakhah le-Moshe mi-Sinai*), and whatever new interpretation of the law is ever brought before his teacher by a keen student of the Torah was already given to Moses at Sinai (TJ, Pe'ah 2:6, 17a). The idea that new teachings were truly new and yet were implied in the Torah given to Moses is conveyed in the story of Moses being transported through time to the academy of Akiva and feeling disturbed at his inability to comprehend Akiva's teachings until he heard Akiva declare that he had received them as a tradition from Moses at Sinai (Men. 29b). The idea that the foremost Jewish teachers who produced innovations – Hillel, Johanan b. Zakkai, and Akiva – are to be identified with Moses, whose work they continued, is expressed in the statement that they, like Moses, also lived for 120 years, divided into three periods of 40 years (Sif. Deut. 327). According to one interpretation, widely accepted in the Middle Ages, the name "Moses" was, in fact, sometimes given to scholars as a title of honor (Bezah 38b).

[Louis Jacobs]

In the Aggadah

Heaven and earth were only created for the sake of Moses (Lev. R. 36:4). The account of the creation of water on the second day does not close with the customary formula "and God saw that it was good" since Moses was destined to be punished through water (Gen. R. 4:6). Noah was only rescued from the Flood because Moses was destined to descend from him (Gen. R. 26:6). The ascending and descending angels seen by Jacob in his nocturnal vision (Gen. 28:12) were in reality Moses and Aaron (Gen. R. 68:12).

His parents' house was filled with light on the day of his birth. He was born circumcised (Sot. 12a) on Adar 7th (Meg. 13b). He spoke with his parents on the day of his birth, and prophesied at the age of three (Mid. Petirat Moshe, in: Jellinek, *Beit ha-Midrash*, 1:128). Pharaoh's daughter went down to bathe since she was afflicted with leprosy, but as soon as she touched the ark of Moses she was healed. She therefore took pity upon the child and saved him, despite the protests of her maidens. When she opened the ark she saw the *Shekhinah* next to Moses, and heard his cry, which sounded like that of a mature youngster (Ex. R. 1:23, 24). Pharaoh's astrologers had previously predicted that the savior of Israel would shortly be born and that he would be punished through water. After Moses was placed in the Nile, they told Pharaoh that the redeemer had already been cast into the water, whereupon Pharaoh rescinded his decree that the male children should be put to death (Ex. R. 1:24). Not only were all the future children saved, but even the 600,000 children cast into the Nile together with Moses were also rescued (Gen. R. 97:3). Moses refused to suck at the breast of Egyptian foster-mothers because the mouth which was destined to speak with the *Shekhinah* would not take unclean milk (Sot. 12b). His unique beauty captivated the royal household and he was adopted by Pharaoh's daughter, who constantly displayed her affection for him. Even Pharaoh played with the baby, who often took his crown and placed it upon his own head. The king's advis-

ers were frightened by this behavior and they counseled Pharaoh to put him to death. However, Jethro, who was among the royal counselors, insisted on first testing the youngster. A gold vessel and a live coal were brought before Moses, and he was about to reach for the gold when the angel Gabriel came and deflected his hand to the hot coal. The baby placed a live coal into his mouth, burning his tongue, and as a result he acquired the impediment in his speech (Ex. R. 1:26).

Moses not only sympathized with the sufferings of his brethren, but he also aided them in their tasks by himself preparing the clay for the bricks. He also assigned them responsibilities in accordance with their abilities so that the strong carried greater burdens while the weak discharged lesser tasks (Ex. R. 1:27). He slew the cruel Egyptian taskmaster only after the angels decreed his death since he had previously defiled the wife of one of the Hebrew slaves in his charge and subsequently sought to slay the husband. Moses killed the Egyptian either by means of the Divine Name or by his own physical strength. After Dathan and Abiram informed on Moses to Pharaoh, he was condemned to death, but the executioner's sword had no effect on him, since his neck became like a pillar of ivory (Ex. R. 1: 28–31). Moses saved the daughters of Jethro after the shepherds had cast them into the well, and he also protected them from their immoral designs. Moses drew out only one bucketful and with this watered all the flock there assembled, since the water was blessed at his hands (Ex. R. 1:32). According to one tradition, Moses could marry Zipporah only after he agreed to Jethro's condition that one of their children be raised in Jethro's faith while the rest could be trained in the Hebraic tradition. Because of this agreement, Gershom was not circumcised, and on the way to Egypt Moses almost met his death because of this neglect (Ex. 4:24–26; Mekh., Amalek), but in the opinion of other sages (Mekh. *ibid.*; TJ, Ned. 3:14, 38b) Moses could not circumcise his second son Eliezer, because he had been born just prior to his departure for Egypt, and his only fault was that he did not do so immediately on reaching the resting place.

Before God confers greatness on a man he is first tested through small matters and then promoted to importance. Moses displayed his trustworthiness by leading the sheep into the wilderness in order to keep them from despoiling the fields of others. He then showed his mercy by carrying a young kid on his shoulders after it had exhausted itself by running to a pool of water (Ex. R. 2:2–3). God appeared to him in a burning bush to illustrate that the Jews were as indestructible as the bush which was not consumed by the flames (Ex. R. 2:5). Many reasons are given for Moses' initial hesitancy in accepting the mission of redeeming his brethren: he recoiled from the honor and prestige which would accrue to him for successfully completing the task (Tanh. va-Yikra, 3); he feared to trespass upon the domain of his elder brother whom he felt should be the redeemer (Ex. R. 3: 16); he desired the redeemer to be God Himself rather than a mortal so that the redemption would be eternal (Ex. R. 3:4); he was angry because God had already deserted the children of Israel for 210 years and

permitted many pious individuals to be slain by their Egyptian taskmasters (Mekh. Sb-Y to 6:2).

The sages likewise were perplexed by Moses' seemingly disrespectful reply to God that since he had spoken to Pharaoh the lot of his people had not improved (Ex. 5:22–23). Various explanations are given for the tone of Moses' lament: the taunts of Dathan and Abiram regarding his lack of success provoked Moses' anger (Ex. R. 6:2); Moses mistakenly thought that the redemption would entirely come about through the attribute of mercy and would therefore be instantaneous (Ex. R. 6:3); he felt that his generation of Israelites did not deserve the severe punishment of bondage; and he did not doubt that God would ultimately redeem His people, but he was grieved for those children who were being daily immured in the new buildings and would not be redeemed. The attribute of justice sought to strike Moses, but God protected him since He knew that Moses only spoke out of his love for his brethren (Ex. R. 5:22). The elders started to accompany Moses and Aaron to Pharaoh's palace (Ex. 3:18) but gradually stole away furtively, singly or in pairs, so that by the time the palace was reached only Moses and Aaron were left (Ex. R. 5:14). Despite the harsh messages which Moses delivered to Pharaoh, he constantly accorded him the respect due to royalty (Ex. R. 5:15; Zev. 102a). Moses executed all the plagues except for those connected with water and dust, since he had been saved through water and the dust had concealed the body of the Egyptian he slew (Ex. 2:12; Ex. R. 9:10; 10:7). When Moses announced the final plague, he did not state the exact time of its incidence, saying only that "about midnight" (Ex. 11:4) because he feared that Pharaoh's astrologers might miscalculate and declare him a liar (Ber. 4a). During the Exodus, while the masses thought only of taking the gold and silver of the Egyptians, Moses went and retrieved the coffin of Joseph which subsequently accompanied the Israelites in the desert (Mekh. 2, Proem. Sot. 13a).

Moses went up to Mount Sinai, enveloped by a cloud which sanctified him for receiving the Torah (Yoma 4a). After he ascended on high, the ministering angels contested the right of "one born of woman to receive the treasures of the Torah." Encouraged by the Almighty, Moses demonstrated to the angels that only mortals were subject to the Torah's regulations and therefore it was rightfully theirs. The angels thereupon became friendly with Moses, and each one revealed its secret to him (Shab. 89a). In abstaining from food during the 40 days on Mt. Sinai Moses acted as do the angels (BM 86b). He received instruction from God by day and reviewed the teachings at night (Ex. R. 47:8). Not only were the Bible, Mishnah, Talmud, and *aggadah* taught to Moses, but all interpretations that were destined to be propounded by future students were also revealed to him (Ex. R. 47:1). Before Moses ascended the mountain, he promised to return by midday of the 41st day. On that day Satan confused the world so that to the Israelites it appeared to be afternoon when it was actually still morning. Satan told them that Moses had died and would never return, whereupon the people made the Golden Calf (Shab. 89a). Moses broke the tablets, and made it appear that

the Torah had not been given, to prevent the sinners from being punished (ARN² 2:5–6). God approved of this action (Shab. 87a) and when Moses realized that Israel's fate depended upon him and his prayers, he began to defend them (Ber. 32a). He argued that God had not enjoined the prohibition against idolatry upon the children of Israel since the singular and not the plural is used in the command (Ex. 20:3–5), and it applied only to him (Ex. R. 47:9; for the additional justifications set forth by Moses see *Golden Calf). Moses refused God's offer to make him the ancestor of a great nation since he feared that he would be accused of seeking only his glory and not that of the people (Ber. 32a).

God would not grant Moses' wish to behold all His glory since Moses had refused to look at him through the burning bush (Ber. 7a). He was hidden in the same cave which was later occupied by Elijah (1 Kings 19:9–14). If there had been an aperture even as minute as the point of a needle, Moses would have been consumed by the passing divine light (Meg. 19b). Moses received only the reflection of this light, and from its radiance his face subsequently shone (Ex. R. 47:6). During this revelation, Moses was granted profound insight into the problem of theodicy (Ber. 7a). Afterward he was known as the master of Torah, wisdom, and prophecy (Meg. 13a) since he possessed 49 of the 50 divisions of wisdom (RH 21b). He was the greatest prophet among the Israelites (Deut. 34:10) although, according to one view, Balaam was almost his equal so that the heathen nations could not attribute their wickedness to the lack of the prophetic spirit (Sif. Deut. 357; SER 26:141–2; but cf. TJ, Sot. 5:8, 20d; Lev. R. 1:12–14). Moses insisted on giving a complete account of the materials collected for the Tabernacle since he overheard scoffers claiming that he had embezzled a portion of the gold and silver (Ex. R. 51:6). During the seven days of the dedication of the sanctuary, Moses officiated as the high priest. He was also considered the king of Israel during the 40-year sojourn in the desert. When Moses requested these two offices for a permanent heritage, he was told that the priesthood was already assigned to Aaron, while royalty was designated for David (Ex. R. 2:6).

Moses insisted that his sin of striking the rock be recorded in the Torah (Num. 20:11) so that future generations would not mistakenly ascribe other transgressions or faults to him (Sif. Deut. 26; Num. R. 19:12). The impatience of the people and the jeers of the scoffers were the cause of his smiting the rock in anger (Num. R. 19:9). In reality, God had long before decreed that Moses should not enter the Promised Land and Moses' offense in Kadesh was only a pretext so that He might not appear unjust. God explained to Moses that if he were not buried in the desert with the generation that left Egypt, people would mistakenly declare that the generation of the wilderness had no share in the world to come (Num. R. 19:13). Moses immediately obeyed God's command to avenge the Israelite people on the Midianites (Num. 31:2), although he knew that after it was fulfilled he would die (Num. R. 22:22). Before his death, Moses pleaded for the appointment of a successor who would successfully cope with the dissimilar tem-

peraments of the people (Num. R. 21:2). Moses also requested that his successor lead his people into war, and not remain behind the troops as was the customary practice of gentile kings (Sif. Num. 139). Moses pleaded that the decree against his entering the Holy Land be rescinded so that he could share in the joy of his people after experiencing their sorrow (Deut. R. 11:10). However, God refused his repeated requests since the leader of the generation should remain with his followers, and the generation of Moses was buried in the wilderness (Num. R. 19:13); and because the time had come for Joshua to exercise his leadership (Deut. R., ed. S. Lieberman, pp. 48, 124).

Moses died at the kiss of God (Deut. R. 11:10; BB 17a) on the anniversary of his birth, Adar 7th (Tosef., Sof. 11:2). God himself buried Moses (Sot. 14a) in a grave which had been prepared for him since the eve of the Sabbath of creation (Pes. 54a). His tomb is opposite Beth-Peor to atone for the sin of the Israelites in worshiping the idol Peor (Num. 25:3). Nevertheless, his grave cannot be discovered, since to a person standing in the valley it looks as though it is on a mountain peak, whereas from the mountain peak it looks as though it is in the valley (Sot. 14a).

[Aaron Rothkoff]

IN MEDIEVAL JEWISH THOUGHT

All Jewish philosophers agree that the prophetic revelation of Moses was different from, and superior to, the prophecy (see *Prophets and Prophecy) of all other prophets. *Judah Hallevi writes that Moses' prophecy came directly from God: He did not receive his prophecy while asleep or in a state between sleeping and waking, nor did he arrive at it through union with the active intellect (*Kuzari*, 1:87). The term "prophet" when applied to Moses and other prophets is, according to *Maimonides, amphibolous. In his discussion of prophecy in the *Guide of the Perplexed*, Maimonides states that he will allude to the prophecy of Moses only in order to contrast it with prophecy in general (*Guide*, 2:35). He spells out four distinctions between the prophecy of Moses and that of other prophets (Yad, Yesodei ha-Torah, 7:6; Comm. on Sanh, 10, 7th principle). The revelations of all the prophets, except for Moses, took place in dreams and visions (Num. 12:6); through the medium of an angel, and hence they prophesied in riddles and symbolic language (Num. 12:18); in a trancelike state (Gen. 15:12); and at intervals of varying duration according to God's choice. Moses, by contrast, received his prophetic message while fully awake; in nonsymbolic language; directly from God, rather than through the medium of an angel; and at the time of his own choosing (Num. 12:6–8; Ex. 33:11). It seems that these differences between the prophecy of Moses and that of other prophets can be reduced to one basic difference, namely, that imaginative faculty played no role in Moses' prophetic experience, while it played a major role in the case of the other prophets, prophecy being, according to Maimonides, "an overflow from God, through the intermediation of the active intellect, toward the rational faculty in the first place, and thereafter the imaginative faculty" (*Guide*, 2:36, see

Abrabanel's commentary on this passage). He writes that while other prophets "can hear only in a dream of prophecy that God has spoken to him... Moses... heard Him from above the ark cover, from between the two cherubim, without action on the part of the imaginative faculty" (*Guide*, 2:45). Moses' prophetic experience, then, seems to have been dependent on the superior development of his rational faculty, and it is probable that according to Maimonides – although he does not say so explicitly – Moses attained union with the active intellect (see S. Pines (tr.), *Guide of the Perplexed* (1963), translator's introduction, lxxvii–xcii). J. Guttman has suggested that according to Maimonides, Moses' prophecy differed from that of the other prophets insofar as it transcended "the natural order and was wholly due to a supernatural action of God," while the prophecies of the other prophets resulted from the development of their rational and imaginative faculties. In this way, Guttman maintains, Maimonides "safeguards the uniqueness of biblical religion which Moses transmitted against the danger inherent in a naturalistic interpretation of prophecy" (Guttman, *Philosophies*, 172). S. Atlas, on the other hand, interprets Maimonides as asserting that while Moses' prophetic experience did not depend on his imaginative faculty, it did depend to a large extent on the superior development of his rational faculty, and was hence not totally dependent on the supernatural action of God. However, he too maintains that in Maimonides' view there was an important element in Moses' prophetic experience – an element not common to the experiences of the other prophets – which was the result of God's creative will, namely, the giving of laws (Atlas, in *HUCA*, 25 (1954), 369–400). Medieval philosophers considered Moses' qualities of courage, modesty, and justice to be prerequisites for prophetic experience (see for example *Guide*, 2:38–40).

[David Kadosh]

For Judah Loew b. Bazalel (the Maharal) of Prague (*Tiferet Yisrael* (1955), 64–67), Moses is a superhuman being occupying a midway position between the supernatural beings and humans. This is why he was able to be equally at home in heaven and on earth and this is hinted at in his name since the letter *mem* of *Moshe* is the middle letter of the alphabet. Samson Raphael Hirsch (Comm. to Ex. 24:1), on the other hand, denies any qualitative superiority to Moses. Very curious is the legend recorded by Israel Lipschuetz b. Gedaliah (*Tiferet Yisrael* to Kid. end, n. 77). A certain king, having heard of Moses' fame, sent a renowned painter to portray Moses' features. On the painter's return with the portrait the king showed it to his sages, who unanimously proclaimed that the features portrayed were those of a degenerate. The astonished king journeyed to the camp of Moses and observed for himself that the portrait did not lie. Moses admitted that the sages were right and that he had been given from birth many evil traits of character but that he had held them under control and succeeded in conquering them. This, the narrative concludes, was Moses' greatness, that, in spite of his tremendous handicaps, he managed to become the man of God.

Various attempts have, in fact, been made by some rabbis to ban the further publication of this legend as a denigration of Moses' character.

The biblical commentators discuss why God arranged for Moses to be brought up by the daughter of Pharaoh. Abraham ibn Ezra (Comm. to Ex. 2:3) suggests that this was first to teach Moses courage and leadership, faculties he would not have been able to achieve if he had grown up among a slave people, and, secondly, so that Moses might have the respect of his people which he would not have had if he had grown up with them from infancy. Isaac Arama (*Akedat Yizhak*, 43) understands the matter to belong to God's purpose that the tyrant king be defeated through a member of his own household. Nahmanides (Comm. to Ex. 2:11) argues that Moses was brought up in Pharaoh's palace to accustom him to being in the royal presence, since it was his destiny to stand before Pharaoh to demand the release of the Israelites.

In the Kabbalah, too, there is great elevation of the character of Moses. On the verse: "And Moses went up to God" (Ex. 19:3), the Zohar (II, 79b) remarks: "See the difference between Moses and all other human beings. When other human beings ascend it is to wealth or honor or power, but when Moses ascends what does Scripture say? 'And Moses went up to God.' Happy is his portion." The section of the Zohar known as *Ra'aya Meheimna*, "Faithful Shepherd," is in the form of mystical discourses conveyed to Simeon b. Yaḥai by Moses in heaven. Moses and Aaron on earth are, for the Zohar, the counterparts of the **sefirot Nezah* and *Hod* (I, 21b–22a). The high mystical state of Moses is described in the Zohar as Moses having "intercourse" with the **Shekhinah*, whose "husband" he was. Moses was a reincarnation of Abel (*Sha'ar ha-Pesukim*, Exodus, beg.). Hence, like Abel, the first shepherd, he was a shepherd (*Avodat Yisrael* by Israel of Koznice, Exodus beg.). Godly men chose the occupation of shepherd because it kept them far from the cities where men are prone to sin and because it afforded them the opportunities of communing with God (Baḥya ibn Asher, Comm. to Ex. 3:1).

MODERN INTERPRETATIONS

*Aḥad Ha-Am begins his essay on Moses (*Al Parashat Dera-khim*³ 210–21) by stating that he remains unmoved by the speculations of scholars as to whether Moses really existed since the true hero is not the historical figure but the man who is portrayed in the Jewish tradition as the embodiment of the Jewish spirit. This Moses is neither a great military strategist nor an astute politician. Nor is his role primarily that of law-giver in the accepted sense since the laws he gives are for the future ideal state still to be realized. Moses is rather the "master of the prophets," the highest example of the prophetic ideal as expressed in a human life. The prophet is ruthless in his pursuit of justice which is, for him, a categorical imperative brooking no opposition. Moses' vision is of the perfect society, of what ought to be rather than what is. Moses embarks on his prophetic career with a protest against injustice and oppression and devotes the rest of his life to his ideal. He hears the

voice of God speaking to him in his heart urging him to become the deliverer of his downtrodden people. This God who speaks to him and to the people is not a tribal god but the God of all men, every one of whom is created in His image. Because his vision is unqualified Moses must die without entering the Promised Land. The prophet is too uncompromising to be the leader of the people in the stark realities of the actual human situation. The leadership must pass to another more capable of coming to terms with life as it is, even though this involves a diminution of the dream. Thus Moses is the symbol of Israel's divine discontent with the present. Like Moses, Israel learned to live only in the past and the future, its life a pilgrimage from past to future. For Israel as for Moses the present, as it falls short of the ideal, has no real existence.

Sigmund *Freud's *Moses and Monotheism* (1939) is an interpretation of Moses' work and character which has been widely discussed, though the majority of scholars reject Freud's anthropology and his views on biblical scholarship. According to Freud, Moses was not an Israelite but an Egyptian. The monotheism he taught was derived from a period of pure monotheism established during the reign of Ikhnaton. Following a hint thrown out by Sellin based on an obscure passage in the Book of Hosea, Freud believed that the Israelites, unable to accept Moses' new ideas, eventually murdered him. But Moses' monotheistic teachings lived on in the racial unconscious of the Israelites to reappear hundreds of years later in the monotheism of the prophets. The slaying of Moses repeated what, for Freud, was the sin of primitive man, the slaying of the primal father by his jealous sons. Because of this, monotheistic religion is haunted by guilt feelings and the need for atonement. Freud admits the speculative nature of his theory but feels that it is in accord with his ideas on how religion began and on man's needs for a father figure.

Martin *Buber in his book *Moses* accepts the basic historicity of Moses but makes a distinction between saga and history. The saga is not history but neither is it fiction. It follows in the footsteps of the historical events and describes the impact they had. Creative memory is at work in the saga. But the saga is not simply a matter of group psychology. We can get behind it to the actual historical events which made such an impact on the people that they could only explain these events as of divine power at work in them. It is not a case of "historization of myth" but of "mythization of history." At the same time, in the Moses saga, the "mythical" element is not a myth of the gods. The human figure is not transfigured, so that the element of sober historical recording is still present. Describing the God of Moses, Buber writes: "He is the One who brings His own out, He is their leader and advance guard; prince of the people, legislator and the sender of a great message. He acts on the level of history on the peoples and between the peoples. What He aims at and cares for is a people. He makes His demand that the people shall be entirely 'His' people, a 'holy' people; that means, a people whose entire life is hallowed by justice and loyalty, a people for God and for the world... That Moses experiences Him in this fashion and

serves Him accordingly is what has set that man apart as a living and effective force at all times; and that is what places him thus apart in our own day, which possibly requires him more than any earlier day has ever done."

[Louis Jacobs]

IN CHRISTIAN TRADITION

Moses is mentioned more often than any other biblical figure in the New Testament, which emphasizes the parallel between the ministries of Moses and Jesus (Matt. 8:4; 17:1-8; Mark 7:10; 9:2-8; 10:2-9). As Israel's lawgiver and liberator, Moses – according to Christian tradition – prefigures the ministry of Jesus and prophesies the coming of the Savior and the mediator of the new covenant. Moses is an example of deep faith in God (Heb. 11:23-29), and like Jesus, he encounters the people's incomprehension and hostility (Acts 7:17-44). Jesus, however, surpasses Moses in all respects. Unlike the face of Moses, that of Jesus is unveiled and his superior glory is spiritual (11 Cor. 3:6-18). Moses appears as God's faithful servant, but Jesus is God's son (Heb. 3:5-6). Moses seals the covenant with the blood of animals, but the Messiah's covenant, which for Christians definitely supersedes the Mosaic Law, is sealed by his own sacrifice (Heb. 9:11-22). In addition, the events of the Exodus appear to the Church Fathers as typological events of Jesus' life; the passage through the Red Sea is the type of Salvation through baptism; and the water gushing out of the rock that Moses struck is a symbol of the Eucharist.

IN ISLAM

The personality and deeds of Mūsā (Moses) occupy an important place in the Koran. The events of his life, from the moment of his birth, are related at length. Indeed Nūḥ (*Noah), Ibrāhīm (*Abraham), and Moses were the first believers, and it was Moses who prophesied the coming of Muhammad, whose faith was that of Moses (Sura 7:140, 156; 42:11). At the same time of the decree of Fir'awn (Pharaoh) and his counselors, Hāmām and Qārūn (Korah), Moses' life was endangered when he was placed in the ark. However, Āsiya (see *Pharaoh), the wife (!) of Fir'awn, pitied Moses, saved him, and brought him up in her house (26:17; 28:6-10). Muhammad adapts the biblical tale of Jacob's labor for Laban inserting its years as those of Moses' employment by Shu'ayb (Jethro) in order to gain the hand of his daughter (28:27). He also adds details from the *aggadah*: Moses refused to suckle at the breasts of Egyptian women (28:11); one of the believers at the court of Pharaoh attempted to save Moses (40:29); Allah hung the mountain over the people of Israel like a pail in order that they would accept the Torah (2:60, 87; 7:170); on the sending of the spies (see *Joshua b. Nun = Yūshā'; on Korah (Qārūn) and his treasures; and many similar details. The Koran also contains themes and figures which are unknown in the ancient literature, such as the tale of al-Sāmīrī, who casts the Golden Calf, and the journey of Moses and his servant to the end of the world (18:59-81; see below). Some of the tales about Moses are also mentioned in the poetry of *Umayya ibn Abi al-Ṣalt, and

are embellished by Muslim legend, and interwoven with new legends. The biblical ʿImrān (Amram), husband of Yukhābid (Jochebed) and father of Moses and Aaron, is only mentioned in post-koranic literature. ʿImrān (Amram) of the Koran is the husband of Hannah (her name is not mentioned in the Koran, but in later works) and the father of Miriam (Maryam), the mother of Jesus (Sura 3, “The House of ʿImrān”). ʿImrān, the father of Moses, was one of Pharaoh’s bodyguards; after the decree against the male children was issued, he did not leave the palace and did not have marital relations with his wife. A great bird, however, brought his wife Yukhābid to him, to the bedroom of Pharaoh, without drawing the attention of the bodyguards; she became pregnant and gave birth to Moses (al-Kisāʾī, 201). The ark of Moses had marvelous healing powers from which Pharaoh’s daughter benefited. The infant Moses was saved from the fiery furnace just as Abraham had been; Pharaoh examined the child by placing a plate of coals and a plate full of gold in front of him. Moses wished to touch the gold, but an angel diverted his hand and put a burning coal in his mouth, which caused him later to stammer. The sheep of Jethro gave birth to spotted and speckled lambs. The staff of Moses came from a tree which had grown in the Garden of Eden, and which he inherited from the prophets, from Adam via Jacob. The death of Moses is described as an event unparalleled in world history, particularly in the tales of ʿUmāra (Ms., fol. 23v). The number of pages devoted to Moses in the “Legends of the Prophets” emphasizes the many legends which have been circulated.

Moses’ Journey

The tale of the journey of Moses and his servant (Sura 18:59–81) is a departure from the framework of the biblical tales and legends. Moses set out to find the confluence of the two seas. On the way the servant forgot the roasted fish which was to serve as their provisions. They encountered the prophet of Allah and Moses asked him for a sign which would teach him wisdom and lead him along the proper course. The prophet consented on the condition that he would not question the meaning of the events which would occur en route. They boarded a ship and the prophet drilled a hole in it. Moses wondered about this act, forgot his promise, and asked the prophet whether it was his intention to drown them. Continuing on their way, the prophet killed a youth; and when they reached a town whose inhabitants refused them hospitality, the prophet held up a fence which was about to collapse. The prophet then explained to Moses the meaning of his surprising actions. The ship, which was the property of poor men, was about to fall into the hands of a pirate king. The youth would have caused his upright parents to sin; in his place, an upright son was born. Under the fence there was a treasure, the property of orphans, which was discovered after a while.

Since this tale does not belong to the legends of Moses which were widespread in the Orient, some of the Muslim commentators attempted to explain that it did not refer to Moses son of ʿImrān, but to another Moses. Most of the com-

mentators, however, uphold the traditional explanation; they also explain that the servant was Yūshaʾ b. Nūn. The name of the prophet whom Moses asked for guidance is al-Khaḍir (al-Khiḍr, “the Green One”). However, other names are also mentioned. Thaʿlabī (p. 188) reports in the name of *Wahb b. Munabbih that it was Irmīyā b. Ḥilfiyā (!). The principal outlines of the tale of the journey can be found in the epic Gilgamesh (see *Flood) and in the romance of Alexander the Great, as related in the Syrian sources. It closely corresponds to the Jewish legend about R. Joshua b. Levi who set out on a journey with the prophet Elijah. The Jewish tale is found in two almost identical versions, though with a change in the order of events. One was published by A. Jellinek (*Bet ha-Midrash*, 5 (1877)) and the other in *Hibbur Yafeh min ha-Yeshuʾah* by R. Nissim b. Jacob. The introduction to the Jewish tale is identical to that of the Koran, except that Moses is replaced by R. Joshua b. Levi and the prophet (al-Khaḍir) by the prophet Elijah. The details of the story also differ: Elijah kills the cow of poor men who had received him and his companion with hospitality. They later stay with a wealthy man who neither pays attention to them nor gives them anything to eat. Elijah, however, prayed and rebuilt the wall of his house, which was about to collapse. Elijah and R. Joshua again came to a place of wealthy men who were indifferent toward them. Nevertheless, Elijah blessed them that they all might become leaders. When, however, they came to a place of the poor who were hospitable to them, the blessing was that they should have one leader. Elijah explained that all his actions and words had been favorable to the poor. With the exception of the story of the wall which was about to collapse, the Jewish tale differs from the Muslim account in its details.

[Haïm Z'ew Hirschberg]

IN THE ARTS

Of all the major biblical figures, not excepting David, Jacob, Joseph, and Solomon, Moses has inspired the largest amount of creative endeavor in literature, art, and music. Treatment of this figure also involves several associated themes, such as the Ten Plagues, the Exodus, and the Revelation on Sinai. By far the earliest literary work on the subject was *Exagoge* (“The Exodus from Egypt”), a drama by the second-century B.C.E. Alexandrian writer *Ezekiel (Ezekielos) the Poet, preserved as a fragment by the Church Father *Eusebius of Caesarea (modern editions by E.H. Gifford, 1903; and by J. Bloch, 1929). The first play known to have been written by a Jew, this was also the first recorded biblical drama. The characters who appear in it include Moses, Zipporah, Jethro, and an invented Chum. The *Exagoge*, an interesting example of late classical Greek theater, anticipates the miracle and mystery plays of the Middle Ages. In medieval drama, Moses figures in the *Ordo Prophetarum*, the French *Mistère du Viel Testament*, and in some of the English cycles: the *Ludus Coventriae* of Lincoln (*Moses and the Two Tablets*), the Towneley plays (*Pharaoh*), and the York series (*The Departure of the Israelites from Egypt*). Interest in the theme thereafter waned for a time. In the 16th century there

were only a few works of note, such as a play by Diego Sanchez (c. 1530), and the *Meistersinger* Hans Sach's *Die Kintheit Mosi* (1553). Although Moses was one of the Old Testament heroes that appealed to Protestant writers of the 17th century, most of the works about him were of Catholic inspiration: one of the English *Stonyhurst Pageants* (c. 1625); *Exodus*, a neo-Latin sacred tragedy by Balthasar Crusius (1605); *Moïse sauvé* (1653), a tedious epic by Marc-Antoine de Gérard Saint-Amant; and *Pascha, of tede verlossingte Israëls uit Egypten* (1612), a five-act play by Joost van den Vondel.

In the 18th century, treatment was at first light, but more serious attention was given by writers of the last decades, particularly with the rise of the oratorio and musical drama. *The Plagues of Egypt* (London, 1708), an anonymous English poem, was followed by Poisson's one-act comedy, *La Déroute de Pharaon* (1718), and by texts for many musical compositions; notably Joannes Theodorus' neo-Latin drama *Aaron a Moïse fratre sacerdos inauguratus* (1730); Charles Jennens' *Israel in Egypt* (c. 1738), which served as libretto for Handel's well-known oratorio; and Benjamin Stillingfleet's *Moses and Zipporah* (1765). Three works of greater significance, all written at about the same time, were Hannah More's *Moses in the Bulrushes*, one of her *Sacred Dramas* (1782); Friedrich *Schiller's youthful epic, *Die Sendung Mosis* (1783); and Naphtali (Hartwig) *Wessely's 18-canto Hebrew epic, *Shirei Tiferet* (1782–1829). Wessely's poem, an account of the Exodus culminating in the giving of the Law at Sinai, betrays the influence of F.G. Klopstock's *Der Messias* (1748–73) and, in the spirit of the *Haskalah, presents Moses as a devout philosopher battling against fanaticism and ignorance. *Shirei Tiferet* was later translated into German (*Die Moseide*, 1795) and part into French (1815).

A dramatic revival of literary interest in the theme took place from the first decade of the 19th century, possibly as a result of the political and social upheavals of the age. Among the earlier works were August Klingmann's five-act drama, *Moses* (1812); David Lyndsay's *The Plague of Darkness* and *The Last Plague* (in *Drama of the Ancient World*, 1822); and Antonio Maria Robiola's Italian verse epic, *Il Mosè* (1823). Moses was the hero of several poetic compositions by French writers, beginning with *Les bergères de Madian, ou La jeunesse de Moïse* (1779–80) by Stéphanie Félicité Ducrest de Saint-Aubin, countess de Genlis, which was translated into Hebrew (1834). In Alfred de Vigny's "Moïse" (*Poèmes antiques et modernes*, 1826), the Lawgiver is a tragic, weary figure, pleading with God on Nebo for release from his consuming task. He is also the central character in three other French works: François René de Chateaubriand's verse tragedy, *Moïse* (1836); a 24-canto poem of the same title (1850) by Ambroise Anatole de Montesquiou-Fézensac; and Victor Hugo's brief poem, "Le Temple" (in *La Légende des Siècles*, 1859¹), which is based on Exodus 31:1–6. Elsewhere, Imre Madách wrote the drama, *Mózes* (1860), where the Hebrew Exodus was reinterpreted in terms of the Hungarian struggle for liberation. During the 19th century, Jewish authors also found inspiration in the biblical and rabbinic accounts of the life of Moses. Solomon

Ludwig *Steinheim wrote the story *Sinai* (1823); Isaac Candia published the Hebrew play, *Toledot Moshe* (1829); and Moritz Rappaport was the author of a German epic poem, *Mose* (1842). The U.S. dramatist Samuel B.H. *Judah wrote *The Maid of Midian*, a biblical tragedy that was never staged because of the writer's sacrilegious treatment of the slaying of the Midianite captives (Num. 31:2–18). Contrasting sharply with this approach was the reverence expressed by *Heine in his late *Gestaendnisse* ("Confessions," 1854) – "How small Sinai appears when Moses stands upon it!" According to Heine the Lawgiver was an artist on a colossal scale, who built "human pyramids and human obelisks" and fashioned "a great, holy, and eternal people" out of a poor shepherd clan that would serve as a model for all other nations.

Literary Works by 20th-Century Non-Jewish Writers

Verse inspired by the life and career of Moses includes S.D. Plevaya's Russian biblical poem *Iskhod* (1913), Rainer Maria Rilke's *Der Tod Moses*, and *Moysey* (1922; Eng. 1938), a poem in Ukrainian by Ivan Franko. The yield has been richer in fiction, especially from the years following World War I when a number of novels were written on the theme. During World War II Zora Neale Hurston published *The Man of the Mountain* (1941; U.S. ed., *Moses*) and the U.S. novelist William George Hardy produced *All the Trumpets Sounded* (1942). Among novels that appeared during the postwar era were Dorothy Clarke Wildon's *Prince of Egypt* (1949); the Polish Catholic Dobraczyński's *Pustynia* (1957; German ed. *Die Wueste*, 1957); and the Hungarian writer János Kodolányi's *Az égő csipkebokor* ("The Burning Bush," 1957). Moses was also the hero of a Danish trilogy by Poul Hoffmann: *Den braendende tornebusk* (1961; *The Burning Bush*, 1961); *Den evige ild* (1961; *The Eternal Fire*, 1962); and *Kobberslangen* (1958; *The Brazen Serpent*, 1963). There are several treatments of Moses in modern drama. Earlier plays of the 20th century include Henry R.C. Dobbs' *Korah* (1903); five-act dramas, both entitled *Moses*, by Karl Hauptmann (1906) and Viktor Hahn (1907); and Oskar Kokoschka's *Der brennende Dornbusch* (1911); the Czech author Stanislav Lom wrote the drama *Vúdce* (1916; *The Leader*, 1917). The Nietzschean idea of the superman which had inspired Isaac *Rosenberg's remarkable short drama *Moses* (1916) inspired first a play by Lawrence Langner (1924), who treated the story as a myth on which to develop modern theories, and later Christopher Fry's *The Firstborn* (1946), in which Moses is again divested of his biblical qualities. Fry transforms his central character into an Egyptian military hero torn between idealism and reality, who finds himself providing the impetus for the Hebrews' liberation movement.

20th-Century Jewish Writers

Some of the most powerful and significant literary treatments of Moses in the 20th century have, understandably, been written by Jews. Max Donkheim published the five-act Russian drama, *Moysey* (1901), and Israel *Zangwill's "Moses and Jesus" (in *Blind Children*, 1903) records the imaginary encounter and bitter dialogue of the protagonists. Angiolo

*Orvieto's dramatic poem *Mosè* (1905) was later set to music by his fellow-Italian G. Orefice; and Naomi Nunes Carvalho wrote three dialogues involving Moses (in *Vox Humana*, 1912). Other literary treatments include the Czech play *Mojzís* (1919), by Eduard *Leda, and Markus Gottfried's Hebrew epic, *Moshe*, published in the same year. After World War I, the subject was treated by a number of eminent Jewish authors in various genres. Midrashic legends were reworked by Rudolf *Kayser (*Moses Tod*, 1921) and Edmond *Fleg (*Moïse raconté par les Sages*, 1925; Eng. *The Life of Moses*, 1928); and there were narrative works in Hebrew by David *Frischmann ("Sinai," in *Ba-Midbar*, 1923) and Ḥayyim *Hazaz – who showed a modern approach in *Ḥatan Damim* (1925; Eng. tr. by I.M. Lask, *Bridegroom of Blood*). Three other novels of the interwar years were Lina Eckenstein's *Tutankh-Aten; a Story of the Past* (1924), a fictionalized history; Louis *Untermeyer's *Moses* (1928); and *Fertzig Yohr in Midbor* (1934), a Yiddish work by Saul Saphire. The U.S. poet Robert Nathan's "Moses on Nebo" (in *A Winter Tide*, 1940) presented the sad vision of Israel's millennial wanderings; Károly *Pap's *Mózes* was staged by the Budapest Jewish Theater just before the author's deportation in 1944. Konrad Bercovici's *The Exodus* (1947) was probably the first postwar attempt to recreate the Bible story in U.S. fiction. It was followed by many new treatments, including *Moyshe* (1951; *Moses*, 1951), one of the best-known Yiddish novels of Sholem *Asch, and two Hebrew novels by Israel writers: Ben-Zion Firer's *Moshe* (1959) and Y. Shurun's *Ḥalom Leil Setav* ("Dream of an Autumn Night," 1960). Other works in the same genre have been written by Howard *Fast (*Moses, Prince of Egypt*, 1958) and the Dutch author Manuel van *Loggem (*Mozes, de wording van een volk*, 1947, 1960²).

In Art

Together with David, Jacob, and Samson, Moses is one of the most popular Old Testament figures in art. The medieval church considered him both a type of the Messiah and one of the prophets who foretold his coming. In early Christian art until the end of the Carolingian period, Moses was often represented as a beardless youth holding a rod. He was later conceived in the form in which he still lives in popular imagination: as a patriarchal figure with a flowing, double-pointed beard, clasping the Tablets of the Law. Two horns were shown protruding from his head, because the Latin (Vulgate) translation of the Bible used during the Middle Ages mistranslated the verb "sent forth beams" as "horns" (*karan*, קָרַן) in Exodus 34:35. There are medieval sculptures of Moses at Chartres and elsewhere, and a Renaissance figure by Donatello in the Campanile at Florence. The most striking examples are the horned figure by Claus Sluter (1406) for the Well of the Prophets (or Well of Moses) at Dijon, France, and the horned statue by Michelangelo at San Pietro in Vincoli, Rome. This work, the most famous portrayal of Moses in art, was originally intended for the mausoleum of Pope Julius II. Many art cycles relate the various episodes in the life of Moses. Among the earliest is a Jewish source, the third-century frescoes from the synagogue

at *Dura-Europos. Fuller cycles appear in Italy after the fifth century, such as the mosaics at Santa Maria Maggiore, Rome. There is a portrayal of the early life of Moses carved in ivory relief (Lipsanoteca, Brescia). A modern cycle of paintings, "Moses" (1924), was executed by the artist Uriel *Birnbaum.

Scenes from the life of Moses figure in many famous manuscripts, such as the sixth-century Vienna Genesis, the seventh-century Ashburnham Pentateuch, the ninth-century Bible of Charles the Bald, the 12th-century *Hortus Deliciarum* and Admont Bible, the 13th-century St. Louis Psalter, and the 14th-century Queen Mary Psalter. They are also found in medieval Hebrew manuscripts. Illustrations of the Exodus played a major part in the adornment of Passover **Haggadot*. There are also illuminations in German *maḥzorim* and other manuscripts. The *Haggadot* also include illustrations to a number of midrashic legends, such as the tale of the infant Moses who took Pharaoh's crown from his head and placed it on his own (Ex. R. 1:26). An episode from the same legend is treated in paintings by Giorgione (Uffizi Gallery, Florence) and Nicolas Poussin (Paris, Louvre). Other legends depicted include the petrification of Moses' neck when he was sentenced to be executed for killing the Egyptian (Ex. R. 1:28–31) and Pharaoh bathing in the blood of Israelite children as a cure for leprosy (Ex. R. 1:34). Scenes from the life of Moses also appear in mosaics at St. Mark's, Venice. Two scenes from the Exodus appear on the wings to the triptych of the Last Supper by Dirk Bouts (St. Pierre, Louvain): the paschal feast eaten by the Israelites before their departure from Egypt (a prefiguration of the Last Supper), and the gathering of the manna. The life of Moses inspired many frescoes of the Italian Renaissance. Benozzo Gozzoli dealt with the subject in frescoes at the Campo Santo, Pisa, and there are frescoes in the Sistine Chapel of the Vatican by Botticelli, Pinturicchio, and Signorelli. The Exodus was also treated in the Vatican frescoes of the school of Raphael. In the Brera Gallery, Milan, there is a series of paintings by Bernardino Luini that depict scenes from the Exodus, including the crossing of the Red Sea. In his murals for the School of San Rocco, Venice, Tintoretto painted "The Rain of Manna," "Moses Striking the Rock," and "The Raising of the Serpent in the Wilderness" with his usual boldness and employment of violent contrasts of light and darkness. More than any other painter, Nicolas Poussin was haunted by the figure of Moses. He painted a larger number of canvases, forming an almost complete cycle of the lawgiver's life. Among them are "Moses and the Burning Bush" (Copenhagen Museum), "The Rain of Manna," "Moses Striking the Rock" (a subject he treated seven times), "The Spies Carrying the Cluster of Grapes" (Louvre), and "The Dance Around the Golden Calf" (National Gallery, London). In the 20th century, the figure of Moses has interested *Chagall and Ben-Zion who have both painted scenes from his life.

Some individual episodes call for more detailed consideration. The finding of Moses, Moses and the burning bush, Moses striking the rock, and the giving of the Law are the subjects which have most interested artists. The finding of Moses

(Ex. 2:5–10) was painted with elegance by the Venetian artist Paolo Veronese (two versions in the Hermitage and Prado). There is also a painting of this subject by *Rembrandt (Johnson Collection, Philadelphia). Jochebed, the mother of Moses, and her infant son are the subject of a tender family group by the English artist Simeon *Solomon. Moses and the burning bush (Ex. 3:1–14) occasionally appeared in early Christian art, but this subject is particularly associated with the popularity of the Marial cult in the Middle Ages. The burning bush was held to symbolize virgin birth, in that the virgin was penetrated but not consumed by the flames of the Holy Spirit. In medieval art Mary is therefore represented as rising out of the bush which burns at her feet. An example of the Marial interpretation is a major work of the 15th-century Provençal school, “The Coronation of the Virgin” by Enguerrand Charonton (Hospice of Villeneuve-les-Avignon). There is a more traditional representation of the burning bush episode in an engraving by Hans Holbein the younger. The ten plagues of Egypt (Ex. 7–12) are sometimes represented by the last plague, the slaying of the firstborn. There is a treatment of this subject by the English landscape painter J.M.W. Turner in the National Gallery, London. In one of the many illustrations to the Bible executed by Paul Gustave Doré, Pharaoh, overwhelmed by the disaster, implores Moses to lead the Israelites out of Egypt. The crossing of the Red Sea (Ex. 12–15) often appears in Byzantine manuscripts. There is a painting of this subject by the German Renaissance artist Lucas Cranach (Pinakothek, Munich), who also depicted Miriam’s dance of triumph (Ex. 15:20–21; Augsburg Gallery). Moses striking the rock (Ex. 17:1–7; Num. 10:1–3) was one of the most popular subjects in early Christian art, where it is found in the murals of the catacombs, on Roman sarcophagi, and on gilded glass. Another Holbein engraving shows the Israelites gathering the manna; while Moses is seen with his hands supported by Aaron and Hur in a painting of the battle with Amalek (Ex. 17:8–16) by the English artist Sir John Millais. The giving of the Law (Ex. 20:1–18) appears on early Christian sarcophagi and in medieval art. Apart from the above-mentioned statue by Michelangelo, the most famous treatment of this episode is the painting by Rembrandt (Berlin Museum) of Moses breaking the tablets (Ex. 32:19). The raising of the serpent in the wilderness (Num. 21:6–9) was a popular subject in the Middle Ages and Renaissance, being understood as a prefiguration of the raising of the cross. The subject also lent itself to the dramatic, convoluted compositions of baroque artists. There is a painting by Rubens in the National Gallery, London, and one by his pupil, Anthony Van Dyck in the Prado. The death of Moses (Deut. 34) is depicted in a watercolor by William *Blake in accordance with a legend that, when Moses died, Satan tried to snatch his soul but was warded off by St. Michael’s lance.

The lawgiver’s brother Aaron is shown clad in the long robes of a high priest, a stone-studded breastplate on his chest and a turban or tiara on his head. He carries his flowering rod or censer, signifying priesthood. The revolt of Korah against Moses and Aaron (Num. 16) and the tragic fate that overtakes

the rebels form the subject of an illustration by Jean Fouquet to the *Jewish Antiquities* of Josephus (Bibliothèque Nationale, Paris). The medieval Church thought of the rebels as heretics; on the other hand, the papacy associated Aaron with itself and for this reason Botticelli was commissioned to include the episode in his frescoes for the Sistine Chapel in the Vatican.

In Music

The story of Moses, interwoven with that of the Israelites, has also inspired many musical compositions from the Renaissance era onward, as well as Jewish and other folk songs. The following survey lists selected settings of texts and episodes from the Pentateuch, including even the relatively few which do not mention Moses himself.

(1) Oratorios, Operas, Cantatas, and Choral Works: Jachet van Berchem, *Locutus est Dominus ad Moysen; Stetit Moyses coram Pharaone* (motets, printed 1538–59); Claudio Monteverdi, *Audi coelum* (motets, added to the *Vesperae* of 1610); Giovanni Paolo Colonna, *Mosé legato di Dio e liberatore del popolo ebreo* (oratorio, 1686); Giovanni Battista Bassani, *Mosé risorto dalle acque* (oratorio, 1694); Antonio Vivaldi, *Moyses Deus Pharaonis* (oratorio, 1714; libretto only preserved); Johann Adolf Hasse (1699–1783), *Serpentes in deserto* (oratorio; the authenticity of another oratorio, *Mosé*, is doubtful); Nicolo Porpora (1686–1768), *Israel ab Aegyptiis liberatus* (oratorio); Georg Friedrich Handel, *Israel in Egypt* (oratorio) – text compiled by Charles Jennens, first performed in London at the King’s Theatre, April, 4, 1739. This is one of Handel’s major compositions and ranks among the outstanding works in the genre. Built mainly on the expression of the chorus, symbolizing the people of Israel, it reaches its climax with its description of the crossing of the Red Sea and in the “Song of Triumph”; Carl Philipp Emanuel Bach, *Die Israeliten in der Wueste* (oratorio, text by Schiebeler, printed by the composer in Hamburg, 1775, and first performed in Breslau, 1798); François Giroust, *Le Mont-Sinai ou Le Décalogue* (oratorio, Latin text, 1785); Johann Christoph Friedrich Bach, *Mosis Mutter und ihre Tochter* (duodrama, 1788); Giovanni Paisello (1740–1816), *Mosé in Egitto* (cantata for three voices); Konradin Kreutzer, *Die Sendung Mosis* (oratorio, 1814); Gioacchino Rossini, *Mosé in Egitto* (opera, text by Léon Tottola, premiere in Italian at Naples, 1818) – The revised version in French, *Moïse*, first performed in Paris (1827), included the famous “Prayer of Moses” which was one of the favorite subjects for fantasias, variations, and arrangements throughout the 19th century. The plot is that of a typical grand opera, with an interwoven dramatic love story not found in the biblical text; Franz Schubert, *Miriam’s Siegesgesang* (for soprano solo, mixed choir, and piano, opus 136; text by Franz Grillparzer, 1828); Karl Loewe, *Die eherne Schlange* (cantata for men’s choir a capella, 1834); Adolf Bernhard *Marx, *Moses* (oratorio, 1841); Félicien David, *Moïse au Sinai* (“ode symphonique,” i.e., oratorio, 1846); Camille Saint-Saëns, *Moïse sauvé des eaux* (cantata, text by Victor Hugo, c. 1851); Anton *Berlijn, *Moses auf Nebo* (oratorio) Anton *Rubinstein, *Moses* (oratorio, 1892); Marcus *Hast, *The Death of Moses* (ora-

torio, 1897); Jules Massenet, *La terre promise* (oratorio, 1900); Bernard Rogers, *The Exodus* (cantata, 1932); Arnold *Schoenberg, *Moses und Aaron* (opera, text by the composer, two acts completed in 1932; composition resumed in 1951; unfinished) – *Moses und Aaron* was first performed, in concert form, as a radio broadcast from Hamburg (first two acts, 1954); and was first staged in Zurich (June 6, 1957). In this highly philosophical work, the composer expresses the conflict between the Lawgiver, who cannot communicate his vision to the people (Moses = Schoenberg himself?), the weak and wavering people, and the glib mediator (Aaron = the critics, conventional composers?). See K. Woerner, *Gotteswort und Magie: die Oper Moses und Aron* [sic] (1959); D. Newlin, *Yuval I* (1968), 204–20; Darius Milhaud, *Opus Americanum* 2, op. 219 (orchestral suite, originally composed as a ballet, *The Man of Midian*, for the Ballet Theater (1940, not produced) and first performed as an orchestral suite, 1940); Wadī'a Sabrā (1876–1952), Lebanese Maronite composer, *Le chant de Moïse* (oratorio); Roger Vuataz, *Moïse* (oratorio for five reciters, soprano, choir, and orchestra, 1947); Jacob *Weinberg, *The Life of Moses* (oratorio, 1955); Josef Tal, *Exodus* (first version, for piano and drums, as “choreographic poem” for the dancer Deborah Bertonoff; second version (“Exodus I”), for baritone and orchestra (1945/46); third version (“Exodus II”), electronic composition, including processed human voices (1958/59); the first electronic work produced in Israel).

(2) Jewish Folk Tradition. Among the musical notations made by *Obadiah the (Norman) Proselyte (11th–12th centuries) there is a setting of a *piyyut* in honor of Moses, *Mi al Har Horev ha-Amidi* (see *illus.* in col. 1307–8). Jewish folk-song tradition contains a large number of songs about Moses, such as *Yismah Moshe*, found in almost all communities; the religious Ladino songs, e.g., *Cantar vos quiero un mahase* (on the birth of Moses) and *A catorce era del mes* (on the Exodus); and the epic Aramaic songs of the Jews of *Kurdistan about Moses and Pharaoh's daughter, the battle between Israel and Amalek, and the death of Moses. Many of these songs are sung on Shavuot or Simhat Torah. Among modern Israel folk songs are Yedidyah *Admon's *U-Moshe Hikkah al Zur*, and two children's songs, *Benei Yisrael Po Kullanu* (Joel *Engel, after a Yemenite melody) and *Dumam Shatah Tevah Ketannah* (K.Y. Silman, after an East Ashkenazi melody). Yehuda *Sharett's setting of the **Haggadah* (“*Nusah Yagur*”) is both a functional “liturgy” for kibbutz use and an oratorio.

(3) Other Folk-Song Traditions. While a few songs about Moses and the Exodus exist in older Christian music, the most prominent examples can be found in the Afro-American spirituals – notably the powerful *Go Down Moses* (“When Israel was in Egypt land – let my people go!”), which has become an international favorite. The Palestinian Arab tradition of mass pilgrimage to the legendary tomb of Moses on the festival of Nebi Musa has given rise to its own repertory of mass chants. One of these, *Ya ḥalili ya ḥabibi, ya ḥawaja Musa*, has become an Israel *Hora*-song.

MOSES, ADOLPH (Eliezer Adolph; 1840–1902), rabbi. Moses was born in Kletchevo, Poland. His parents were Rabbi Israel Baruch Moses, a talmudic scholar, and Eva Graditz. An eldest child, Moses was born when his parents were living on stipend (*kest*) in the home of his mother's parents. In 1849, R. Israel Baruch took a rabbinic position in Santomishel, Posen. The young Adolph went back to Poland to study in yeshivot

for three years, then returned for secular studies at Schrimm and Militsch. He moved on to Breslau, where he attended both the University of Breslau and Zechariah *Frankel's Rabbinical Seminary. Idealistic and devoted to his studies, Moses was especially interested in history, philosophy, and philology and like many young Jews of the time was strongly influenced by Western civilization. In 1859, carrying only a walking stick, he hiked to Italy where he fought under Garibaldi, attaining the rank of corporal. Returning to Breslau, he felt rejected by old friends who did not sympathize with some of his views. In 1863, Moses joined the Polish insurrection. Captured by the Russians, he later wrote a novel, *Luser Segermacher*, about his prison experiences. After his release, Moses went to Frankfurt on Main to study under Abraham *Geiger, a leading Reform scholar, and later spent two years at the University of Vienna, where he was close to Professor Adolph *Jellinek. In 1868, Moses took a teaching position in Steegnitz, Bavaria. Two years later he accepted a call to a pulpit in Montgomery, Alabama, and soon moved on to another in Mobile, where he served 1871–1881. He devoted himself to learning to deliver sermons in good English, rather than the German language prevalent in the American synagogues at the time, and he developed a life-long fascination with Shakespeare, even giving lectures on the Bard.

Moses leaned toward radical Reform, deprecating what he would term “physiological Judaism,” by which he meant its ritual and nationalistic aspects. He preferred instead to see Judaism as a world monotheistic doctrine of truth and morality.

In 1885, he was the first to rise to advocate acceptance of the Platform at the famous meeting of Reform rabbis at Pittsburgh. He joined a group of rabbis in 1890 in rejecting the halakhic requirement of circumcision for male proselytes, although he criticized conversions for people who simply wanted to marry Jews. He opposed the budding Zionist movement, and like many Reform rabbis of that era moved his temple's main weekly service to Sundays, starting in 1892. He published many articles on Judaism, folklore, and anthropology and served as editor of *Zeitgeist*, a Jewish journal. A collection of his essays, along with a brief biography, was published in 1903 by Hyman G. Enelow.

He graduated from the medical school of the University of Louisville in 1893 and was particularly interested in working with the blind. From 1881, he served as rabbi of Temple Adath Israel in Louisville, Kentucky, where he remained until his death after a long illness.

[Matthew Schwartz (2nd ed.)]

MOSES, ASSUMPTION OF. Title of the incomplete text of an apocryphal writing, which consists, largely, of an address, in the form of a prophecy, by Moses to his successor, Joshua. The substance of the prophecy concerns the future fate of Israel and the End of Days. Only scant attention is paid to the epochs of the Judges and Kings, the onslaught of Nebuchadnezzar and the Babylonian Exile, and to the return of the ex-

iles. However, with discussion of the Hasmonean period the story becomes considerably more detailed.

The defiling of the altar in the temple is described in detail, i.e., blemished offerings which were presented by slaves, the offspring of slaves, rather than by priests (5:4). It is unclear whether this is a specific reference to John Hyrcanus (cf. Jos., Ant. 13:288–92). Unmistakable, however, is the allusion to the Hasmoneans in the mention of the reunion of the kingdom with the priesthood (6:1). The subsequent cruel rule of “an insolent king... who will not be of the race of the priests” (6:2) is depicted in detail, and its length (34 years) is specified (6:6). The prophecy continues: “And he shall beget children (who) succeeding him shall rule for shorter periods” (6:7); cohorts will assault and a powerful king of the west will conquer the country (6:8). It is at this point that the prophecy of political events ends, and 7:1 reads: “And when this is done the times shall be ended...” The succeeding sequence describes: the hypocrisy of the ruling class; the chaos of the persecutions (in chap. 8, which contains traces of the era of Domitian, although this may be a later interpolation); the appearance of a Levite, Taxo, who with his seven sons prefers death to active resistance (9); and a poetic representation of the intervention of God and of the victory of Israel over “the eagle” (an obvious reference to Rome). The text ends, abruptly, with the reply of Joshua (11), and with the final answer of Moses.

The work was discovered as a palimpsest in the Ambrosiana library in Milan by M. Ceriani, the Italian orientalist, and first published in 1861. The present Latin version of the text has remained untouched by Christian annotators. It is based upon a Greek original, although whether the first version was in Hebrew or in Aramaic is unknown. The contents of chapter one strongly suggest that the work originated in the first century, although some details in the following chapters may indicate another date (c. 130). It is probable that “the insolent king” referred to is Herod the Great, the length of whose reign may have corresponded to the 34 years mentioned in the text (6:6). It is difficult to agree with opinions which maintain that the passage refers to Alexander Yannai and Pompey and that the reign of 34 years was inserted later. If the Herodian interpretation is correct, then the work was composed after the campaign of *Quintilus Varus in 4 B.C.E. (perhaps referred to in 6:8), i.e., during the rule of Herod's sons. Allusions in the text which refer to events after that period are obscure. A study by J. Licht (see bibl.) proposes a Hasmonean date for the basic elements of the work, together with a reworking and adaptation by a post-Herodian editor. The present title of the manuscript is based on a tradition of the Church Fathers that a work of this name existed in ancient times. Clement of Alexandria, Didymus, and Origen, for example, claimed that the mention of the struggle between the archangel Michael and Satan for the body of Moses, in Jude 5:9, is based upon a work entitled the *Assumptio* or *Ascensio Moysis* (*Mosis*). However, although the lost sections of the work probably contained descriptions of the death of Moses and his ascent to heaven, this story is not mentioned in the portion of the text quoted by

Gelasius of Cyzicus in his "History of the Council of Nicaea" as being taken from the Ἀνάληψις Μωσέως ("The Ascension of Moses"). Neither is any reference made to the ascent of Moses in the Ceriani fragment. Indeed a more appropriate title for the extant palimpsest would appear to be *The Testament of Moses* (which is also mentioned as a distinct work in ancient Church documents); especially in light of the fact that reference is made in the present text (1:10) to Deuteronomy 31:7–8. The words "*Liber Profetiae Moysis*" in the text itself (1:5) could, however, indicate that this may have been its original title. Whatever the case, the present version of the text is probably the result of an amalgamation between an original work, *Testamentum Moses* (or *Liber Profetiae Moysis*), and a later composition, the *Assumptio Moysis*.

[Werner Michaelis]

MOSES, BLESSING OF. Deuteronomy 33 is presented as Moses' blessing of the tribes of Israel shortly before his death, and it is traditionally considered a prophecy of future conditions. The critical view, however, is not that the poem is actually Mosaic, for it describes Israel after the conquest, when the tribes had settled in Canaan. It is of uncertain date. It has been dated on orthographic grounds to the 11th century B.C.E., although it may have been written down in the tenth century (Cross and Freedman). This dating also fits the political and social conditions described: Judah was oppressed by the Philistines, and Reuben, suffering from Ammonite encroachment, had practically disappeared; Simeon had vanished as an ethnic entity, and Dan had already moved north. Others date the poem later. Driver places it either shortly after the reign of Jeroboam I or in the middle of the reign of Jeroboam II. The poem is probably of northern origin, for Judah is portrayed as weak and separated from his brothers, while Joseph, who has the longest and most lavish blessing, is called *nezir 'ehaw* – the "prince" or "distinguished one" of his brothers. The poem is divided into two parts: the framework and the body. The framework consists of: (a) the exordium (verses 2–5) telling how God appeared from Sinai, gave Israel a law through Moses, and established himself as king in their midst (possibly verse 5 tells of the foundation of human kingship in Israel), and (b) the hymnic conclusion (verses 26–29) lauding God's glory and might, and celebrating Israel's happiness, prosperity, and security under God's protection.

The body (verses 6–25) consists of 11 eulogistic sayings characterizing the tribes or praying for their well-being (Simeon is not mentioned). The sayings themselves may be older than the song. Each blessing after the first is introduced by the narrator, e.g., "And of Levi he said ..." (8). The ordering principle is a combination of the age of the eponyms and the importance of the tribes. In general the poem describes

Israel in its ideal condition: a tribal league with God alone as king, settled in their land and flourishing (except for Judah and Reuben) under the protection of God and the theocratic guidance of Levi. The atmosphere is one of peace and security. The language of the poem is extremely difficult because of its antiquity and epigrammatic style, and the text apparently contains many corruptions, so that much of the interpretation is necessarily problematic.

[Michael V. Fox]

MOSES, CHRONICLES OF (Heb. דְּבָרֵי הַיָּמִים לְמֹשֶׁה רַבְּנוֹ, *Divrei ha-Yamim le-Moshe Rabbenu*), a story on the life of Moses written in the early Middle Ages. The prophet's early life, before the Exodus from Egypt, forms the major part of the story, while his later life and death are described only very briefly. The author based himself on some of the midrashic interpretations of the life of Moses as told in the Book of Exodus, but the many adventures ascribed in the work to Moses are the product of the author's fertile imagination.

According to the story, *Balaam the Magician was adviser to the king of Egypt in Moses' time; *Jethro, also one of the king's advisers, was driven away from the royal court after he tried to help the Jews in Egypt. The author also describes a number of miracles (not mentioned in the Bible) that supposedly occurred in Moses' youth and which saved him from disaster. Completely new stories were also added to Moses' biography, e.g., a very detailed tale about his becoming king of Ethiopia, after he had driven away Balaam, who had seized the Ethiopian throne. In the story, Moses reigned for 40 years in the kingdom. A. Shinan published an edition of this book in 1977–78. There is a Spanish translation by L. Girón (1988). There is an East Slavic version of the "Life of Moses," preserved in manuscripts from the 15th century on, that agree in most details with the Hebrew text (Taube). "*Divrei ha-Yamim le-Moshe Rabbenu*" is similar to other early medieval tales in which a biblical story is adapted in the light of conventions, mores, and concepts of the Middle Ages. The narrative element is usually emphasized in these stories. Abraham and many other sages were also the subjects of such tales which were often erroneously considered to belong to midrashic literature. Later writers in adapting biblical stories also compiled and adapted these different versions, e.g., the author of *"*Sefer ha-Yashar*" (Venice, 1625; see *Fiction, Hebrew: The Hebrew Story in the Middle Ages). "*Midrash Petirat Moshe Rabbenu*" ("A Midrash on the Death of Moses") is another story about Moses written in the Middle Ages. The narrative aspect is not dominant, but rather the midrashic elements which are ethical in content and meant to convey a moral. Moses' death is described in a mythological setting involving a confrontation between God and Samael (Satan).

[Joseph Dan]

MOSES, ISAAC S. (1847–1926), U.S. Reform rabbi. Moses, who was born in Zaniemysl, Poznan, had not completed his education before he settled in the United States in the early 1870s. He was appointed to rabbinic positions in Quincy, Illinois (1876), Milwaukee (1879), and Chicago (1888). In 1901 he became rabbi of the Central Synagogue, New York, where he remained until his retirement in 1919.

In his early days in the United States, Moses was considered a radical Reformer, but later he took a more moderate position. In 1884 he introduced his own prayer book (*Tefillat Yisrael*). Moses was a founding member of the Central Conference of American Rabbis and a member of the Reform committee charged with compiling an official prayer book. The appearance of the *Union Prayer Book* in 1894 has been credited to his personal initiative in preparing and circulating a manuscript when the committee's work seemed to be leading nowhere. Moses also published a number of sermons and textbooks for children. His *Sabbath School Hymnal*, first issued in 1894, ran into 14 editions. While in Milwaukee, he edited the weekly *Der Zeitgeist* (1880–82).

MOSES, MARCUS (Mordecai Hamburger; d. 1735), Anglo-Indian pioneer. Son of Moses Libusch, a leader of Hamburg Jewry, he married a daughter of the famous *Glueckel von Hameln and settled in London. Here his criticism of a divorce issued by R. Aaron *Hart brought him into conflict with the established Ashkenazi community. He was excommunicated and, in consequence, in 1707 set up his own synagogue (later the Hambro synagogue). Becoming impoverished in 1712, he went to Fort St. George (*Madras) in India and was involved in the purchase for the governor of Madras, Thomas Pitt, of the famous Pitt diamond, later sold to the regent of France. In 1721 he returned to England a wealthy man and built his congregation a new synagogue. In 1731 he went back to India where he died. His eldest son, known as MOSES MARCUS (b. 1701), was converted to Christianity and published in 1724 an autobiographical tract (later translated into Dutch) justifying his action, as well as books on biblical study.

MOSES, MYER (1779–1833), U.S. merchant, soldier, and public official. Moses, who was born in Charleston, South Carolina, was active in the South Carolina Society for Promotion

of Domestic Arts and Manufactories and was director of the Planters and Mechanics Bank. In 1809 Moses became a captain of volunteers and he later served in the War of 1812. He represented Charleston in the 1810 state legislature and served on the Charleston public school commission in 1811 and 1823. In 1825 Moses moved to New York City.

[Neil Ovardia]

MOSES, RAPHAEL J. (1812–1893), U.S. lawyer and state legislator. Born in Charleston, South Carolina, into a family of colonial American origin, Moses attended grade school but left school at the age of 13. After an apprenticeship in business, he set himself up in Charleston as a merchant. After the 1838 fire destroyed his business, he moved to St. Joseph, Florida, then to Apalachicola, Florida, where he studied law and opened his own practice. He then moved to Columbus, Georgia, where his practice flourished and he became a leader of the bar. He also ventured into fruit growing. Before the Civil War he was the first to ship Georgia peaches to Savannah and thence by steamer to New York City. An ardent secessionist, Moses, although over military age, quickly volunteered his services at the outbreak of the Civil War. He rose to the rank of major and served as Confederate Commissary for the State of Georgia until the war's end. Moses retained his deep feeling for the "Lost Cause" to the end of his life.

Returning to Columbus, Moses resumed his law practice and was elected to the first postwar Georgia state legislature, where he was made chairman of the Judiciary Committee. In 1878, while campaigning for the U.S. Congress, Moses heard that his opponent, W.O. Tuggle, had taunted him with being a Jew. In "An Open Letter to the Hon. W.O. Tuggle," first published in the *Columbus Daily Times* (Aug. 29, 1878) and reprinted many times, he eloquently answered: "... I feel it an honor to be one of a race whom persecution cannot crush... whom prejudice has in vain endeavored to subdue... who... after nearly nineteen centuries of persecution still survive as a nation and assert their manhood and intelligence... Would you honor me? Call me Jew. Would you place in unenviable prominence your unchristian prejudices and narrow bigotry? Call me Jew." Moses lost the election nevertheless.

[Thomas J. Tobias]

MOSES, ROBERT (1888–1981), U.S. parks and highways developer. Moses was born in New Haven, Connecticut, to well-to-do Spanish-Jewish parents. He denied his Jewish affiliation. He received his B.A. and M.A. degrees from Oxford University in 1911 and 1913, respectively. In 1914 he received a Ph.D. in political science from Columbia University, writing his dissertation on British colonial administration. It was published as *Civil Service of Great Britain* (1914). He later wrote *Theory and Practice in Politics* (1939), *Working for the People* (1956), *La Guardia: A Salute and a Memoir* (1957), A

Tribute to Governor Smith (1962), and *Public Works: A Dangerous Trade* (1970).

In 1919 Moses joined the staff of Governor Alfred E. Smith and served as chief of staff of a New York State commission on administrative reorganization. He then began his long career on state parks and highways agencies as president of the New York State Council of Parks (1924–63) and chairman of the Long Island State Parks Commission (1924–63). He also served as secretary of state for New York (1927–28). In 1934 Moses was the unsuccessful Republican candidate for governor of New York.

In 1934 Moses became Mayor Fiorello La Guardia's parks commissioner, a post he held under four mayors (to 1960). As commissioner, he inaugurated massive public works of the New Deal type. He was responsible, for example, for construction of the Triborough Bridge structures (dedicated 1936); Grand Central Parkway; Belt Parkway; West Side Highway and Henry Hudson Parkway, in Manhattan and the Bronx; East River (later called the Franklin D. Roosevelt) and Harlem River Drive, in Manhattan; Fire Island State Park; the Niagara power plant; and the Coliseum convention hall in Manhattan. His department developed 15 outdoor swimming pools, 84 miles of parkways, and 17 miles of beaches, including Jones Beach. The park acreage in New York City was increased from 14,000 acres to 34,673 acres. On the social level, he provided full entry for the city's working-class communities into a recreational world previously reserved for the middle and upper classes.

Moses also served as city construction coordinator (1946–60); as chairman of the Jones Beach State Parkway Authority (1933–63); as member (1934) and then chairman (1936–46) of the Triborough Bridge Authority and of the Consolidated Triborough Bridge and City Tunnel Authority (1946–68); as sole member (1938) of the New York City Parkway Authority; as chairman of the state committee on post-war employment (1948); and as chief consultant on public works to the federal Hoover Commission on Reorganization of the Executive Branch (1948). Among the city buildings he constructed were Shea Stadium, Lincoln Center, and the New York Aquarium in Coney Island.

Impatient for results, Moses was known as "the man who got things done." Outspoken and single-minded, he was frequently embroiled in controversies in which he displayed his acerbic wit and combative style. By the late 1950s, however, there was growing public resentment about his aggressive urban reconstruction programs. In 1960, Mayor Robert F. Wagner moved him out of his city positions to run the New York World's Fair of 1964. Under the administration of Governor Nelson Rockefeller, Moses lost his positions in New York State and thus left state government in 1968. Finally, in 1972, Mayor John Lindsay refused to reappoint him to the Triborough Authority, which essentially ended Moses' career.

Considered the single most powerful individual in the city and state of New York in the 20th century, Moses was the most influential nonfederal public official in the U.S. of his

time without ever being elected to public office. Some of the landmarks named in his honor include the Robert Moses State Park in Long Island; Robert Moses State Park at Massena; the Robert Moses Causeway on Long Island; the Robert Moses Parkway at Niagara; and the dams at Niagara and Massena.

MOSES, SIEGFRIED (1887–1974), German Zionist leader and Israel public official. Born in Lautenburg, Germany, Moses practiced as a lawyer from 1912 to 1937. In 1917 he was appointed food controller of the city of Danzig and in 1919 he became deputy director of the Union of German Municipalities, a post he held until 1920. From 1923 to 1929 he was manager of the Schocken Department Store Co. in Zwickau. In his student days he was active in the union of Jewish student fraternities (see *Kartell Juedischer Verbindungen) and was the editor of *Der Juedische Student*. In 1920 he was appointed a member of the board of the Jewish Workers Aid Society in Berlin and was its executive chairman from 1921 to 1923. He was a delegate to several Zionist Congresses and was the president of the Zionist Organization of Germany during the period 1933–37. Moses was also active in Jewish communal affairs as vice chairman of the Reichsvertretung der Juden in Deutschland, 1933–37, and as a member of the Berlin Community Council. He settled in Palestine in 1937 and assumed the post of managing director of *Ha'avara (transfer of Jewish assets in Germany to Palestine). For a period of ten years (1939–49), he worked as a certified public accountant and income tax expert. He was a member of the *Jewish Agency Delegation to the United Nations in 1947 and in 1949 was appointed Israel's first State Comptroller, a post which he held until his retirement in 1961. In 1957 he was elected president of Irgun Olei Merkaz Europa ("Association of Settlers from Central Europe") and president of the Council of Jews from Germany and of the Leo Baeck Institute. He was the chairman of the Advisory Committee of the United Restitution Organization in Israel and a member of the board of Bank Leumi. Moses wrote *The Income Tax Ordinance of Palestine* (1942, 1946), *Jewish Post-War Claims* (1944), and articles on Jewish subjects and his professional work.

[Kurt Loewenstein]

MOSES BEN ABRAHAM OF PONTOISE (12th century), French tosafist. Moses was a pupil of Jacob *Tam. The *Sefer ha-Yashar* of R. Tam discusses a number of problems, concerned mainly with the clarification of the plain meaning of various talmudic passages, which Moses put before his teacher (Responsa nos. 51, 52, 69–70). The theoretical nature of most of the questions, and the answers and their importance for an

understanding of the relevant talmudic passages, led to their inclusion, in substance, in the standard *tosafot*, as well as in the works of such *rishonim* as *Mordecai b. Hillel, *Meir b. Baruch of Rothenburg, and others. The tosafists also mention Moses in connection with other subjects, and they cite his comments in the various collections of their biblical commentaries. A short verse of two lines by Moses, coming at the end of the list of positive precepts in the *Azharot of Elijah ha-Zaken, together with a commentary to it, has been preserved (*Kobez al Jad*, 1 (1936), 8).

MOSES BEN DANIEL OF ROHATYN (end of 17th century), Galician author. His name suggests that he was born in Rohatyn (Rogatin), but according to the preface of his works he lived in Zolkiew, where he published his *Sugyat ha-Talmud* (1693). The work, consisting of 40 paragraphs, is a methodology of the Talmud. It deals particularly with the commentaries of Rashi and *tosafot* and the manner in which they were studied at the time according to the two dialectical methods of Talmud study known as the “Nuremberger” and the “Regensburger” (see *Yeshivot). The work was translated into Latin by H.J. van Bashuysen and was published in the Latin translation of the *Halikhot Olam* of Joshua b. Joseph ha-Levi (Hanover, 1714 pp. 363ff.).

MOSES BEN ELIJAH HA-LEVI (d. 1667), Karaite scholar from Feodosia (the Crimea), *hazzan* of the community and a teacher of Torah in the 17th century. In 1654–55 he went on a pilgrimage to Erez Israel, which he described in his travel account (see Gurland; Ya'ari). Moses, with other members of the Karaite community, set out from Feodosia seaport. They traveled through Constantinople and Rhodes and spent Rosh Ha-Shanah and Yom Kippur on the ship. They visited Cairo and Alexandria, and he devoted part of his account to the depiction of Karaite communities of Egypt. From Egypt they moved to Gaza through the Sinai desert and then to Jerusalem. They also visited Hebron, Nablus, and Damascus. Moses copied Karaite books and was an author of the book *Darosh Darash Moshe* (JTS 3317, [JNUL, mic. 32002]), including 24 commentaries and sermons on different subjects. He composed several liturgical poems, which had been included in the Karaite *siddur*.

[Golda Akhiezer (2nd ed.)]

MOSES BEN ELIJAH PASHA, Karaite scholar from Chufut-Qaleh, *hazzan* of the community and a teacher of Torah in the 16th century. In addition, he was mentioned in one

manuscript as a corrector of prayer books. He corresponded with Karaite worthies of Constantinople, Moses Metsorodi and Elijah Maruli. He wrote a commentary on the liturgical poem by Aaron ben Joseph, *Hakdamat Azulah*, and composed several liturgical poems, some of which were included in the Karaite *siddur*.

BIBLIOGRAPHY: A.B. Gottlober, *Bikkoret le-Toledot ha-Kara'im* (1865), 204; Mann, *Texts*, 2 (1935), 446–47, 462ff., 1427.

[Golda Akhiezer (2nd ed.)]

MOSES (ben Isaac) BEN HA-NEŠ'AH (late 13th century), Hebrew grammarian and lexicographer; lived in England. His mother was apparently Jewish and was known as “Countess” or “Contesse,” in Hebrew *Ha-Nesi'ah*; hence his name: Ben ha-Nesi'ah. His only extant work, *Sefer ha-Shoham* (“The Onyx Book”), is the sole source for the scanty information available on him. In the introduction, he states that in his youth he wrote a grammar book, *Leshon Limmudim* (“Language of Learning”). This work is not extant and some scholars assume that extracts of it were included in *Sefer ha-Shoham*, written later. The author chose the name שׁוהַם (Shoham), because it is an anagram of his name מֹשֶׁה (Moses). From the work, it can be learned that the author's teacher was R. *Moses b. Yom Tov ha-Nakdan (“the Punctuator”) of London (c. 1268) and that he had a knowledge of Arabic. Moses b. ha-Nesi'ah was acquainted with many of the works of his predecessors.

Sefer ha-Shoham is divided into three parts. The first is a general introduction to the Hebrew language, a study of the origin of the letters, and on the formative letters and their role, etc. In the second part, the author reviews the verbs and divides them into seven groups. His system was possibly influenced by that of Judah b. David *Hayyuj. He then lists the nouns, classified into 162 metric groups, according to the method of David *Kimḥi. The third part deals with the particles, adverbs, numerals, vocalization, and accents. He added also a dictionary of the Aramaic words found in the Bible. Only the introduction to *Sefer ha-Shoham* and the section dealing with the verbs have been published (1947).

BIBLIOGRAPHY: Moses b. Isaac ha-Nesi'ah, *Sefer ha-Shoham*, ed. by B. Klar, 1 (1947), vii–viii (introd.), 5–16 (Eng. section) 16 n. 24 (additional bibliography).

[Nissan Netzer]

MOSES BEN HANOKH (d. c. 965), Spanish rabbi. The principal source for the biographic details of this famous scholar is the story of the *Four Captives told by Abraham *Ibn Daud in his *Sefer ha-Kabbalah* (*The Book of Tradition*, ed. by G.D. Cohen (1967), 63–69). This story tells how R. Moses' wife cast herself into the sea in order to escape from her captor, how he was sold as a slave at Cordoba and redeemed, and how his erudition resulted in his becoming recognized as rabbi of the community. But, according to sources which have since been discovered, this story seems to be unacceptable. It would indeed seem that R. Moses probably came from southern Italy. It is quite possible that he was indeed taken prisoner on a sea

journey at the time he traveled to Spain, because a maritime war was then being waged between the Umayyad caliphate of Spain and the Fātimid kingdom of North Africa. In any case, it seems that R. Moses arrived in Spain during the 950s and became rabbi of Cordoba. He enjoyed the protection of the minister *Hisdai ibn Shaprut, who by coordinating the policies of Abd-al-Rahmān III (912–961), the Umayyad caliph of Cordoba, sought to make the Jewish population of Spain independent of the Jewish center in Babylonia. R. Moses headed the yeshivah, which had many pupils, and also answered halakhic questions which were addressed to him from other towns. His responsa were regarded by his contemporaries as authoritative and no less valuable than the responsa of the Babylonian *geonim*. Many were included in the collections of geonic responsa, such as *Sha'arei Zedek* (Salonika, 1792), *Ge'onei Mizrah u-Ma'arav* (ed. by J. Miller, Berlin, 1888), and some were quoted by the *rishonim, particularly by the author of "*Ha-Ittur*," R. *Isaac b. Abba Mari of Marseilles. His responsa in a German translation were collected by J. Miller. A responsum attributed to Moses, the *Gaon* of Sura, is in fact by Moses b. Ḥanokh. From the time of Moses b. Ḥanokh the practical dependence of Spanish scholars upon Babylonian scholars ceased in everything connected with *halakhah* and custom. In addition to his outstanding erudition, his great humility and exceptional modesty left a deep impression on his contemporaries. He was succeeded by his son *Ḥanokh.

Nissim Ga'on* (Heb., 1965), 307; J. Miller, *Siebenter Bericht ueber die Lehranstalt fuer die Wissenschaft des Judenthums in Berlin* (1889), 3–4, 8–10.

[Eliyahu Ashtor]

MOSES BEN ISAAH KATZ (end of 17th and early 18th centuries), Polish rabbi and homilist. Katz was a pupil of Solomon *Luria and was rabbi successively of Medzibezh, Brody, and Przemysl. He is the author of *Penei Moshe* (Wilhermsdorf, 1716), a commentary on the aggadic passages of 18 treatises of the Babylonian and Jerusalem Talmuds. (This work should not be confused with *Penei Moshe*, the standard commentary on the Jerusalem Talmud by Moses *Margoliot.) He reveals a remarkable homiletic ingenuity in his work *Keren Or* (Zolkiew, 1721). As the title suggests, the work is a commentary on this phrase which occurs in Exodus 34:30, 35 ("the skin of his face shone"). He gives no less than 50 different explanations of the phrase. It has been suggested that Katz may be identical with Moses b. Isaiah Wengrow, the author of *Berit Matteh Moshe* (Berlin, 1701), a commentary on the Passover *Haggadah* with novellae on the tractate *Zevahim*.

MOSES BEN JACOB OF COUCY (13th century), French scholar and tosafist. His father Jacob is mentioned a number of times in the printed *tosafot* (Kid. 43b; et al.). Moses was

the maternal grandson of the tosafist *Ḥayyim ha-Kohen and brother-in-law of *Samson of Coucy. His principal teacher was *Judah ben Issac (Sir Leon).

Moses of Coucy is the first example among French Jews of an itinerant preacher, wandering from town to town and from country to country to rouse the masses to draw near to God by the active observance of His precepts. He began his preaching in Spain in 1236, being motivated to do so, according to his own words, by some mystical revelation which he experienced. The nature of this revelation is not clear, although it was possibly connected with the reckoning of the Redemption, a pursuit in which Judah Sir Leon, who designated 1236 for its beginning, also engaged. His sermons excited a massive response and, in his own words, brought about the repentance of "thousands and tens of thousands," especially in respect to observance of the precepts of *tefillin*, *mezuzah*, and *zizit*, which in that era (as other sources also testify) had grown very lax. He called also for the curbing of sexual relations with gentile women, widespread in Spain at that time, and taught in his sermons a method of repentance close in formula to the spirit of Ḥasidei Ashkenaz, though to a much less severe degree. He stressed the value of Torah study in a regular and orderly manner, and was one of the first to call for greater equity and propriety in economic dealings with the gentile community. Thus Moses checked, at least temporarily, the decline in the observance of the positive precepts of Judaism among the masses and the scholars in Spain, which had resulted from the tendency toward rationalization and to the extravagant allegorization of Scripture caused by the influence of Maimonides' philosophic writings. He later visited other countries (which, he does not specify) and in 1240 was in Paris, where he took part in the well-known disputation on the Talmud with Nicholas *Donin. These activities earned him the name of Moses ha-Darshan, in consequence of which he has sometimes been confused with *Moses ha-Darshan of Narbonne.

Moses of Coucy's reputation rests on his extensive and important work, the *Sefer Mitzvot Gadol* (*Se-Ma-G*; first published before 1480 (Rome?), and subsequently published three times by 1547, in Italy). The work is unique among the prolific rabbinic writing of the period. It includes, in effect, the essence of the Oral Law, arranged in the order of the precepts and divided into two parts: positive precepts and negative precepts. The work is based on Maimonides' *Mishneh Torah*, which is cited word by word on every page. He supplements Maimonides' words with an abundance of sources, from the Babylonian and Jerusalem Talmuds and the Midrashim, as well as from the works of French and German *rishonim*, which he possessed either in the original or in precis. Moses adapts the language of the Midrashim so closely to the style of Maimonides that one is often under the impression that he has before him an alternative reading of the halakhic Midrash. Although the book follows the arrangement of the precepts, their number and order differ from those of Maimonides, both because Moses did not know Maimonides' *Sefer ha-Mitzvot* but only

the list of precepts in the introduction to the *Mishneh Torah*, and because at the end of the book he included rabbinic precepts, in keeping with the practical aim he had set himself in compiling it: to instruct the people in the way of the Lord. In pursuit of this aim, he also varied the arrangement of the precepts, separating those applicable in our time from those which are not. The *Se-Ma-G* marks the penetration of the works of Maimonides (which Moses probably “discovered” during his stay in Spain) into the halakhic world of France. Though Maimonides was known to Moses’ teacher, Judah Sir Leon, as well as to *Samson of Sens, they merely quoted him a number of times, whereas Moses made him the basis of his whole project. He seems not to have been unaware of the great paradox in the possibility that it was precisely Maimonides who contributed to the undermining of practical *halakhah* in the countries under his influence, as a result of his use of allegory in general, and of his having posited reasons for the precepts in particular. Although the period of Moses’ activity began only a few years after the first controversy in Europe around the works of Maimonides, he makes no reference whatsoever to it in his work, perhaps feeling that his special relationship to Maimonides disqualified him as an impartial judge in the matter. Among works of French and German scholars frequently used and cited by Moses, sometimes by name and sometimes not, are the *tosafot* of Samson of Sens, the *Sefer ha-Terumah* of *Baruch b. Isaac of Worms, and the *Sefer Yere’im* of *Eliezer b. Samuel of Metz. His practice, in general, is to begin with a scriptural verse touching on the subject, to cite the interpretations of the verse found in the Talmuds and the halakhic Midrashim, to give the relevant talmudic discussions, the words of the commentators and *posekim*, and a summary of the *halakhah* – all this with the degree of editing and adaptation of style necessary to give greater fluency to the language, every effort being made to avoid casuistry and prolixity. Moses weaves into his words an abundance of aggadic material, quotations from the sources, or the homiletic creations of his own spirit, all marked by their wholesomeness and simplicity, with love of God and of his fellow man.

The *Se-Ma-G* won great popularity among scholars and *posekim*. Many tens of manuscripts of the work have been preserved to the present time, an unusual phenomenon with a book of such great length. It was also one of the first Hebrew books to be printed. It has served as a standard guide to halakhic practice for scholars in all generations, notable among them being *Mordecai b. Hillel, *Meir ha-Kohen, a pupil of *Meir b. Baruch of Rothenburg, in his *Haggahot Maimuniyyot*, as well as all the pupils of *Perez of Corbeil. Quotations from it occur in the printed *tosafot*. Great scholars of all generations have written commentaries to it, among them Isaac *Stein, Joseph *Colon, Elijah *Mizrachi, Solomon *Luria, and Ḥayyim *Benveniste. Joshua *Boaz included the *SeMaG* with the Shulḥan Arukh and Maimonides’ *Mishneh Torah* among the references given in his *Ein Mishpat*, an indication of the work’s indispensability. The tremendous influence of the book

is particularly evidenced by the fact that Isaac of Corbeil, who in his time bore the title “Head of the Yeshivot of France,” found it necessary to compile the *Sefer Mitzvot Katan*, which is completely dependent upon the *SeMaG*, and to make it compulsory daily learning for every Jew. Perez, and his pupils after him, who wrote glosses and notes to the book of Isaac of Corbeil, all associated themselves in their rulings with the *SeMaG*, which they continually quoted. This estimate of the *Se-Ma-G* persisted, among both Ashkenazim and Sephardim, until the time of Joseph *Caro’s Shulḥan Arukh; and Moses b. Jacob of Coucy is numbered among the great *posekim* of all generations.

The *tosafot* of Moses of Coucy to *Yoma*, first published with the title *Tosafot Yeshanim* in the Amsterdam (1714–17) edition of the Talmud, have come down to us. He also wrote a commentary on the Torah (known among *rishonim* as “*Peshatei ha-Ram mi-Coucy*”), which is much quoted in the *Minḥat Yehudah* (in *Da’at Zekenim*, Leghorn, 1783) of Judah b. Eliezer. In the *SeMaG* (positive precept no. 16) Moses tells of a special prayer he composed for the benefit of those wishing to repent. Two versions of such a prayer attributed to him have lately been published from manuscripts.

[Israel Moses Ta-Shema]

MOSES BEN JACOB OF KIEV (also called **Moses ha-Goleh** and **Moses of Kiev II**; 1449–c. 1520), talmudic scholar and author. Moses was born, according to various scholars, in Seduva (Shadov), Lithuania (see A. Epstein, *Kitvei... 1* (1950), 303–7). I. Zinberg, however, is of the opinion that he was born in Tarov, Kiev region (*Toledot Sifrut Yisrael*, 3 (1958), 161–6, 354). He died in Kaffa (Feodosiya), Crimea. At that time there were no important Torah institutions in Poland and Russia, and Moses traveled to Constantinople where he became friendly with both Rabbanites and Karaites. He also studied astronomy there under the Karaite Elijah ha-Shayazi, author of *Adderet Eliyahu*. He settled in Kiev and acquired a reputation in various branches of literature. He was a biblical exegete, talmudist, *paytan*, linguist, and kabbalist. From Kiev he wrote a polemical work against *Gan Eden*, the book of precepts of the Karaite scholar Abraham b. Elijah. In 1482 the Tatars attacked Kiev. Moses’ possessions, including his library, were plundered. He himself escaped, but his children were taken captive to the Crimea, and Moses journeyed to various communities to collect money for their ransom. When passing through Karaite communities he disputed with their scholars. After ransoming his children, Moses returned to Kiev. He then wrote his works *Sefer ha-Dikduk*, a Hebrew grammar, and *Yesod ha-Ibbur*, on the calendar. In 1495 the Jews of Lithuania and the Ukraine were expelled, and Moses again was forced to wander. During these wanderings he wrote *Shushan Sodot* on automatic and cryptic writing, as well as *Ozar ha-Shem* and *Sha’arei Zedek* on

the upper **Sefirot*, which are no longer extant. In 1506, while he was staying in the Lithuanian (i.e., Belorussian) town of Lida, it was attacked by the Tatars and Moses was taken captive. He was carried off to the Crimea where he was ransomed by the Jews of the city of Salkhat. From there he removed to Kaffa in the Crimea where he settled. Here Moses filled an important cultural role as rabbi and head of the community. He succeeded in uniting the members of the community who had come from different countries, and also compiled a prayer book for them which became known as *Minhag Kaffa* and was adopted by all the communities of the Crimea. Moses also compiled special regulations for the community. There he succeeded in completing his *Ozar Nehmad*, a supercommentary to the Pentateuch commentary of Abraham ibn Ezra.

[Shlomo Eidelberg]

MOSES BEN JOAB (d. after 1530), Hebrew poet who lived in Florence. His *diwan* (Montefiore Collection, Ms. 366) contains a colorful variety of poems, ranging from elegy to satire, from love song to religious hymn, and from epigram to epithalamium. The collection consists of three groups: (1) satiric verses, in which the poet presents a series of persons characteristic of his time, such as Isaac of Correggio and Solomon of Poggibonsi; (2) love songs stylistically modeled on the Spanish poets and Immanuel of Rome; (3) religious poetry – artistically the most important of his work. While it contains all the flavor of the early hymnology, some well-known secular motives have also been included, without in any way detracting from the poetic form. The greater part of his religious verse is consecrated to the festivals. One of his poems describes the tragic conditions in Florence during the siege of 1529–30.

[Yonah David]

MOSES BEN JOSEPH BEN MERWAN LEVI (12th century), one of the renowned scholars of Narbonne. Moses belonged to a distinguished family. His grandfather “was very pious, a man of substance and of good deeds, benefiting Israel with his wealth, and causing many evil decrees to be revoked.” His uncle, under whom he studied, was Isaac b. Merwan Levi, rabbi of Narbonne. His father was also a scholar, and his brother Meir one of the scholars of Narbonne. Moses himself was head of a yeshivah and a member of the *bet din* of Narbonne headed by *Abraham b. Isaac. Most of the scholars of Narbonne were pupils of Moses, among them *Abraham b. David and *Zerahiah b. Isaac ha-Levi. A commentary which he wrote on most of the Talmud is no longer extant. The few quotations from it in the works of the scholars of Provence and Catalonia show it to have been written in the style of the early German and French scholars, with the aim of establishing the *halakhah*. It was intended (though not in the manner of a polemic) to defend the old Provençal traditions against the influence of the Spanish school in Lunel in the 12th century, the prime expo-

nent of which was Abraham b. Isaac who follows in the steps of *Alfasi and *Judah b. Barzillai al-Bargeloni. In addition to his commentary, Moses' responsa and customs are also quoted in that literature. He exerted a great influence on the scholars of Provence and Catalonia, particularly on Zerahiah ha-Levi and *Nahmanides, who quote him extensively.

[Binyamin Zeev Benedikt]

MOSES BEN JOSEPH HA-LEVI (13th century), philosopher. Nothing is known about Moses' life; the suggestion that he was a member of the famous Abulafia family has not been proven. He was highly regarded by Joseph b. Abraham *Ibn Wakar, and is quoted by Crescas, Albo, and Isaac Abrabanel. His major work *Ma'amar Elohi* (“Metaphysical Treatise”), as well as fragments from two of his minor works (all written in Arabic), were discovered and incorporated in Ibn Wakar's *Treatise on the Harmony between Philosophy and the Revealed Law* (c. 1340). Two manuscripts of the Hebrew versions of the *Ma'amar* are extant (Bodleian and Leningrad), while a third, previously in the library of the cathedral of Pamplona, Spain, can no longer be traced. The *Ma'amar Elohi* seeks to establish the existence of the First Cause (God); to refute erroneous views concerning this subject and concerning the attributes of God; and to investigate the emanation of beings from the First Cause. Moses, disagreeing with Aristotle, Alexander of Aphrodisias, and Averroes, holds with Themistius, al-Fārābī, and Avicenna, that the “First Intellect,” which emanated directly from God without an intermediary, is the Prime Mover of the celestial spheres. His doctrine of Divine attributes seeks to avoid plurality in God and therefore denies all attributes superadded to His essence. He admits, however, not only negative attributes but also attributes of essence, such as knowledge, will, and power, as well as attributes denoting action as “Creator.” (Moses makes no reference whatever to Maimonides' thorough treatment of this theme.) Divine Providence, according to him, does not involve God's knowledge of individuals, but only the universal rule of God, employing the human intellect as an agent of the Active *Intellect. Of the two other fragments, one deals with the problem of Divine Providence and the other with al-Ghazālī's doctrine of the “Word” (*Kalima*). Approving of Ghazālī's doctrine, Moses establishes a metaphysical entity above the “First Intellect,” the Prime Mover, and immediately below God, the First Cause.

[Alexander Altmann]

Moses also wrote, assuming that Steinschneider's identification is correct, a work on musical harmonies, a short section of which is quoted by Shemtov Shaprut b. Isaac of Tudela in his Hebrew commentary on Avicenna's *Canon* (Munich, Ms. Hebr. 8, fol. 330b). Moses describes the mathematical relations of musical intervals as well as some arithmetical operations carried out with them. The rather elementary contents of this text comply with Arabic musical theory. Its musical terminol-

ogy is basically identical with that used in a Hebrew version of the musical chapter in Umayya ibn abī al-Ṣalt's encyclopedia (Paris, Cod. Hebr. 1037¹); thus Moses' treatise may originally have been in Hebrew.

[Hanoch Avenary]

MOSES BEN JOSHUA (Ben Mar David) OF NARBONNE (Narboni, Lat., **Maestre Vidal Bellsom** [Blasom?]; d. 1362), French philosopher and physician. Moses was born in Perpignan at the end of the 13th, or beginning of the 14th, century, to a family originally from Narbonne. As a youth he studied with his father and private tutors and was introduced to the study of Maimonides at the age of 13. In addition to the Bible, rabbinic literature, and Jewish philosophy, he studied general philosophy and medicine. Moses began his literary career in Perpignan, where he remained until 1344, and continued in Spain, writing most of his works there. Although he lived in various Spanish cities – he mentions Cervera, Barcelona, Soria, Toledo, and Burgos – he never completely severed his ties with Perpignan. He expressed nostalgia for the intellectual circles there and intended to return. He probably spoke Provençal and Catalan, and it is likely that he knew Arabic and some Latin. He shows no familiarity, however, with Christian thinkers, the major philosophical influence on him being Islamic thought, particularly Averroes, whose works he read in Hebrew translation. Moses, who is known primarily for his commentary on Maimonides' *Guide of the Perplexed* and for his espousal of Averroes' teachings, is the author of some 20 works, an impressive number for the troubled period in which he lived. An early work, *Ma'amar ba-Sekhel ha-Hiyyulani* or *Ma'amar be-Efsharut ha-Devekut*, was written in Perpignan under conditions of siege and warfare; in Spain, as a physician, he undoubtedly had to cope with the bubonic plague of 1348–50 and, as a Jew, with the antisemitism that followed it. In 1349 he fled Cervera with the rest of the Jewish community, leaving his possessions and books behind. Before his work on Maimonides, Moses had written a number of commentaries and supercommentaries, most of them on Islamic philosophical texts. He composed major commentaries on al-Ḡhāzālī's *Maqāṣid al-Falāsifa* ("Intentions of the Philosophers") and Ibn Ṭufayl's *Ḥayy ibn Yaqzān*, and a number of supercommentaries to Averroes' commentaries on Aristotle's works on logic, physics, metaphysics, astronomy, and psychology. Moses' commentary on the *Guide* (ed. by I. Euchel, and printed together with text of the *Guide*, 1791; ed. J. Goldenthal, 1852; the latter reprinted with text, 1946, and in *Sheloshah Kadmonei Mefarshhei ha-Moreh*, 1961), his last work, begun in Toledo in 1355 and finished in Soria in 1362, was based on his thorough knowledge of Islamic philosophy. He opposed Maimonides' neoplatonic interpretations of Aristotle's doctrines, which Maimonides had derived from al-Fārābī and Avicenna, with Averroes' more purely Aristotelian interpretations. He criticized, in particular, Maimonides' discussion of the proofs for the existence of God, his concept of God, and his doctrine of divine attributes. In the following, more conservative centu-

ries, critics such as Isaac Ḥarama, Isaac ḤAbrabanel, and Joseph ḤDelmedigo opposed his Averroistic critique of Maimonides' *Guide* and his clarification of points that Maimonides had left discreetly implicit. They also disparaged his difficult style of writing and highly eclectic, often confusing use of sources.

In *Iggeret al Shi'ur Komah* (ed. and tr. into English as *Epistle on Shiur Qomah* by A. Altmann in his *Jewish Medieval and Renaissance Studies* (1967), 225–88), one of his early works, Moses attempted a reconciliation between philosophy and Kabbalah, reflecting the influence of Joseph ḤIbn Waqar. He pursued a similar direction in his commentary on Ibn Ṭufayl's work (see G. Vajda, *Recherches sur la philosophie et la Kabbale* (1962), 396–403). Though more critical of kabbalistic concepts in his later years, Moses retained throughout his writings an affinity for the mystical phrase and symbol, a trait which has attracted recent scholarly attention (see Altmann's essay, *ibid.*). Averroes' doctrine of the conjunction of man's perfected intellect with the universal Agent Intellect that Moses accepted in his *Ma'amar bi-Shelemut ha-Nefesh* ("Treatise on the Perfection of the Soul," Paris, Bibliothèque Nationale, Ms. Heb., 988) resembles the mystic's experience of eternal being and loss of individuality in his relation to his creator. In his *Ma'amar bi-Shelemut ha-Nefesh*, Moses quoted almost the whole of Averroes' middle commentary on Aristotle's *De Anima*, as well as much of his "Treatise on the Possibility of Conjunction," to which he then added his own comments. Among Moses' other works are *Ha-Ma'amar bi-Vehirah* ("Treatise on Free Will," ed. by E. Ashkenazi in *Sefer Divrei Ḥakhamim* (1849), 37–41), a polemical work written in answer to ḤAbner of Burgos' *Minḥat Kena'ot*, which expounds a theory of determinism; a number of medical treatises, in particular *Orah Ḥayyim*, in which his reliance on classical and medieval sources is ostensibly tempered by an empirical approach; commentaries on Lamentations and Job; and four works which are no longer extant: a supercommentary on Abraham ibn Ezra's allegorical commentary on Genesis 2:2; *Pirkei Moshe*, a work containing philosophical aphorisms; a treatise on metaphysics; and a supercommentary on Averroes' commentary on Aristotle's *De Caelo et Mundo*.

[Alfred L. Ivry]

MOSES BEN JUDAH, NOGA (14th century), philosopher. Nothing is known about Moses' life, but it has been proved that he is not identified with ḤMoses Nathan, as some of the Hebrew bibliographical works claim. It has been suggested that "Nogah" is not a part of his name but rather an abbreviation for "*nuho gan Hashem*" ("may he rest in divine paradise"), and that he was a disciple of one of ḤNahmanides' students, probably of R. ḤYom Tov ben Abraham Ishbili (the *Ritba*). Moses ben Judah is the author of the Hebrew encyclopedia

Ahavah ba-Ta'anugim ("Love in Delights"), which was written during the years 1353–56, and which has never been printed, although extant in four manuscripts. The title of the work, *Ahavah ba-Ta'anugim*, is taken from the biblical Song of Songs 7:7: "How fair and how pleasant art thou, O love in delights!" The "love" referred to in the encyclopedia's title is directed towards the philosophical pursuits, which are the true human delight. The object of the book is to defend philosophy and to demonstrate that Torah and philosophy are not in contradiction but rather complement one another in order to arouse in the educated reader a passion for such learning. According to this aim the book contains a comprehensive summary of the sciences popular among philosophically inclined Jews of the period: The first section is devoted to physics which Moses (like Maimonides) identifies with *ma'aseh bereshit*, and contains eight divisions on the following topics: (1) On Prime Matter; (2) On the Substance; (3) On the Four Elements; (4) On Motion, the Movers, and the Prime Mover; On Time, Infinity, and the Finite; (5) On Space and Vacuum; (6) On Human Nature; (7) On Astronomical Signs; and (8) On the Soul, Sleep, and Waking; On Dreams and the Human Soul. The second section is devoted to metaphysics which Moses (again like Maimonides) identifies with *ma'aseh merkavah*, and contains eight divisions on the following topics: (1) On Substance and Accident, Chance and Necessity; On the Nine [other] Categories; (2) On Existence; (3) On the Whole, Parts, and the One; (4) On the Substance of the Sphere; (5) On the Separate Movers; (6) On God's Names; (7) On Knowledge; and (8) On the Way the World is Related to God. The third section is a theological section and contains four chapters on the following topics: (1) On Magic; (2) On Prophecy and the Prophet's Acts; (3) On the Creation of the World; On Providence, Reward, and Punishment; On the Meaning of the Commandments; (4) On the Eternal Soul and the Resurrection of the Dead.

The first two parts present clearly and systematically the central topics of physics and metaphysics, the points of dispute among the philosophers on various issues, and it also resolves these disputes by questioning the fundamental arguments underlying the refuted views. After those discussions it demonstrates how the philosophical opinions are to be found in the Torah. Moses almost always adopts the views of *Averroes, whom he regards as second to Aristotle. On the other hand he sees *Avicenna and Al-*Ghazali as thinkers on a lower level, who attempted to produce a mixture of religion and philosophy. Moses is also an admirer of Maimonides, and sees him not only as the master of all philosophers but also as the master of all prophets, and he even calls the *Guide of the Perplexed* "the sacred book." Another Jewish philosopher whom Moses admires is Abraham *Ibn Ezra, and he draws extensively on his commentary on the Pentateuch. Moses' acceptance of Averroes' philosophical views alongside his unconditional admiration for Maimonides leads him to a unique interpretive reconstruction of Maimonides, in order to present his opinions in accordance with those of Averroes, or at least to blur the difference between them. Moses also presents Maimonides' views as

identical with those of Ibn Ezra and as a consequence the gap between Ibn Ezra and Averroes is reconciled through Maimonides. Yet, for Moses, not only are the views of Maimonides, Ibn Ezra, and Averroes basically identical with each other, but also with the Kabbalah. Moses derives various terms and ideas from the Kabbalah. His interpretation of the Kabbalah, however, is distinctly philosophical, and eliminates much of its mythical and anti-philosophical language. In metaphysics Moses accepts Averroes' understanding of God as a form encompassing all the forms of the world and the prime mover of the sphere, and he rejects Avicenna's view identifying God with the necessary existent. He brings these views into unequivocal agreement with those of Maimonides in his *Guide* and interprets the kabbalistic theory of the 10 *sefirot according to the Aristotelian doctrine of the 10 separated intellects. Moses accepts Avicenna's doctrine of *emanation, although according to Averroes matter has its own separate existence. According to Moses the entire world derives from God, and that is the meaning of creation *ex nihilo*. Moses accepted Averroes' view on the soul as presented in his Middle Commentary on the *De Anima*. According to this view, the individual's hylic intellect is none other than one of the aspects of the Active Intellect, and it has no separate and independent existence. Thus, in the state of the conjunction as it is *post mortem*, that is, the state of immortality and eternal bliss, there is no place for the individual intellect. As in the case of metaphysics, so too here with regard to psychology, Moses reads Maimonides' statements on the soul through the eyes of Averroes. He also explains the mystical notion of *gilgul* (transmigration of the soul) according to this theory: The Active Intellect enters the bodies of various human beings, and *post mortem* returns to its source and is united a second time with the Active Intellect, and so on ad infinitum. Moses also identifies the Averroean theory of the conjunction with prophecy. On the question of providence, Moses combines the Maimonidean view, explaining providence naturalistically, with astral elements. Regarding the reasons for the divine commandments Moses integrates the Maimonidean doctrines, the astrological notions of Ibn Ezra, and the symbolic kabbalistic ideas.

Harvey (ed.), *The Medieval Hebrew Encyclopedias of Science and Philosophy* (2000), 415–29; R. Glasner, "The Question of Celestial Matter in the Hebrew Encyclopedias," in: *ibid.*, 313–34.

[E. Eisenmann (2nd ed.)]

MOSES BEN LEVI (12th century), communal leader and poet in *Egypt. From fragments of the Cairo **Genizah*, it has become clear that Moses was in charge of the affairs of the Jewish community of Qalyub, north of *Cairo. In 1195 the heads of the Jewish community there addressed themselves to *Sar Shalom b. Moses ha-Levi, the *Gaon* of the Fostat yeshivah, with a request that he confirm the appointment of Moses b. Levi as officer in charge of communal affairs after his position had been challenged. In his reply, the *gaon* praises Moses,

who also served in the offices of *ḥazzan*, *shoḥet*, and teacher of the community. An autobiographical **maqāma* by Moses is extant in the Kaufmann collection of the *Genizah*, which reveals details of his life before his arrival in Qalyub. At first he occupied himself with various matters, but after a time he immersed himself in Torah study alone. Two and a half years later he decided to leave his locality, the identity of which is unknown, after a quarrel with his parents. Reaching Qalyub, he was amazed at its beauty and wrote poems in its praise. He appears to be identical with Moses b. ha-Levi from whom there remains a blank verse poem (Ar. *muwashshah*).

[Abraham David]

MOSES BEN MENAHEM GRAF (also known as **Moses Praeger**; 1650–1700/1710), kabbalist born in Prague. After the conflagration in the Prague ghetto (1689), Moses moved to Nikolsburg (Mikulov), where he studied under the kabbalist Eliezer Mendel b. Mordecai. He was given lodging and support by David *Oppenheim, who, like Samson *Wertheimer of Vienna, encouraged the publication of his writings. Leaving Nikolsburg, Moses attempted to settle in various European cities, reaching Fuerth in 1696 and Dessau in 1698. It is not certain whether he died there or whether he returned to Prague in his later years. Moses' published works include: *Zera Kodesh*, a kabbalistic work with an appendix describing the exorcism of a *dibbuk* in Nikolsburg (Fuerth, 1696); a second edition, without the *dibbuk* story, was published by Simeon b. David Abiob of Hebron, together with his *Bat Melekh* (Venice, 1712; reprinted Munkacz, 1893); and *Va-Yakhel Moshe*, a kabbalistic discussion of various portions of the Zohar and of the *Adam de-Azilit*, with a special commentary on the latter concept entitled *Masveh Moshe*, introduced and annotated by Samuel b. Solomon Kohen, cantor in Brody (Dessau, 1699). In this last work Moses often criticizes the teachings of Moses *Cordovero and his followers.

[Joseph Elijah Heller]

MOSES BEN MEVORAKH (12th century), leader of Egyptian Jewry. He was the **nagid* of Egyptian Jewry from c. 1110 to before 1141, having been appointed to the position after the death of his father, the *nagid* *Mevorakh. He was assisted by his two sons, Mevorakh and Judah, who acted as “vice *nagidim*.” In his time the Jews of Egypt were oppressed, and he intervened in their favor. A *kinah* on his mother's death, which appears to have been written by him, has been preserved in the Cairo **Genizah*. On her death, which made an impression on Egyptian Jewry, another *kinah* is known to have been written by Zedakah b. Judah. From the *kinah* of Moses, it appears that he was influenced by the poets of the Spanish school, an influence evident in Zedakah's *kinah* as well. A poem written

in his honor by Abraham b. Shabbetai of Minyat Zifta, Egypt, which was found among the manuscripts of the *Genizah*, has also been published by J. Mann (see bibliography).

BIBLIOGRAPHY: Mann, Egypt, 1 (1920), 210, 213; 2 (1922), 255–59; J.H. Schirmann, *Shirim Ḥadashim min ha-Genizah* (1965), 97–102.

MOSES BEN SAMUEL OF DAMASCUS (14th century), Karaite poet. Moses, who was born in Safed, Erez Israel, was employed in Damascus as clerk in charge of the emir's private estates. In 1354 the emir received an order requiring him to remove non-Muslims from government service. Moses was seized, charged with blasphemy against Islam, and given the choice of forfeiting his life or becoming a Muslim. He chose the latter. Some time later the emir went on a pilgrimage to Mecca, and Moses was compelled to accompany him. What he observed of the pilgrimage ritual led him to resolve to return to Judaism. The emir at first refused to release him but he fell ill and soon died. Moses then appears to have escaped to Egypt and entered the service of the royal vizier, apparently returning to his ancestral faith. His works, all in Hebrew verse, include a description of his tribulations and of his Mecca pilgrimage. His liturgical pieces display depth of feeling and an occasional lyrical inspiration.

[Leon Nemoy]

MOSES BEN SHEM TOV DE LEON (c. 1240–1305), a leading kabbalist, author of the bulk of the **Zohar*. (For later views on the authorship of the Zohar, see the addendum to **Zohar*.) Moses was apparently born in Leon, near Castile – he also calls himself Moses “from the town of Leon,” in his *Shekel ha-Kodesh*. Nothing is known of his teachers and early studies. Apart from religious study, he was also attracted to philosophy; **Maimonides' Guide of the Perplexed* was copied for him in 1264 (Moscow, Ms. Guenzburg 771). Moses subsequently turned to **Kabbalah*, and when wandering among the communities of Castile, he became friendly with the kabbalists there. He immersed himself in the lore of the Geronese school of kabbalists and in the traditions of the Gnostic circle of Moses of *Burgos and Todros *Abulafia and in the 1270s and 80s drew particularly close to Joseph *Gikatilla. Moved by an unusual enthusiasm, combined with the urge to counteract the influence of certain rationalistic trends, Moses composed various writings toward the close of the 1270s. Presented in the guise of pseudepigraphica, they were designed to propagate the doctrine of kabbalism in the pattern in which it had crystallized in his own mind. Completed before 1286, they form the *Midrash ha-Ne'elam* or “Mystical Midrash,” and are the main substance of the Zohar. The later stratum in this composite work was written by another kabbalist. The major part of these writings is in Aramaic but Moses also composed Hebrew pseudepigraphica on ethics and the eschatology of the soul. The “Testament of R. Eliezer the Great,” also called *Orhot Hayyim*, is evidence of the author's hesitations in choosing be-

tween the *tannaim* Eliezer b. *Hyrchanus and Simeon b. *Yoḥai as the hero of his pseudepigraphical construction. He also intended to compose a new Book of Enoch, parts of which he embodies in his *Mishkan ha-Edut*.

For a number of years, during the composition of the Zohar, and at least until 1291, he resided in Guadalajara, circulating from his home the first parts of the Zohar, which included a partly different version of the *Midrash ha-Ne'elam* (G. Scholem, in *Sefer ha-Yovel... L. Ginzberg* (1946), 425–46, Heb. section). In Guadalajara he was associated with Isaac ibn *Sahulah, who is the first known to quote from the *Midrash ha-Ne'elam*. He dedicated some of his books to Joseph b. Todros Abulafia in Toledo. After 1292 Moses led a wandering life until, in later years, he settled in Ávila, and then probably devoted himself almost exclusively to the circulation of copies of the Zohar. Meeting Isaac b. Samuel of *Acre in Valladolid in 1305, he invited him to Ávila to see the ancient original manuscript of the Zohar in his home. However, on his return Moses fell ill and died in Arévalo (*Sefer Yuḥasin*, ed. H. Filipowski, 88). His widow denied the existence of such a manuscript. The Hebrew writings which bear his name are based on the same sources as those utilized in the Zohar and they frequently make veiled allusions to it without specifying it by name. These writings and the portions of the Zohar composed by Moses frequently serve to clarify one another; the former can be regarded as the authentic exegesis of the doctrine enshrined in the Zohar.

Numerous copies of several of these works were made in succeeding generations, and it seems that Moses himself circulated the texts in different versions. According to Abraham b. Solomon of Torrutiel (Neubauer, *Chronicles*, 1 (1887), 105), he was the author of 24 books. Those fully or partly extant are *Shoshan Edut* (1286), which Moses mentions as his first work (Cambridge, Add. Ms. 505, includes about half the work); *Sefer ha-Rimmon* (1287), an exposition of the kabbalistic reasons for the *mitzvot*, wholly constructed on Zohar homiletics (several Mss., e.g., Oxford, Bodleian, Ms. Opp. 344); *Or Zaru'a* (1288/89), on the act of *Creation (Oxford, Bodleian, Ms. Poc. 296, other parts in Ms. Vatican 428, 80–90): this was apparently extended by another kabbalist to cover the whole section *Bereshit*, Genesis 1–6 (Ms. Vatican 212); *Ha-Nefesh ha-Hakhamah*, written in 1290 for his pupil Jacob, whom Isaac of Acre met after Moses' death: a corrupt text was published in 1608 which contained numerous addenda from a work by a contemporary Spanish kabbalist; a lengthy titleless commentary on the ten *Sefirot* (see *Kabbalah) and penances (a large part in Munich Ms. 47); *Shekel ha-Kodesh* (1292, publ. 1912; an excellent text in Oxford, Bodleian Ms. Opp. 563); *Mishkan ha-Edut*, on the fate of the soul after death, with a commentary on the vision of Ezekiel appearing in numerous manuscripts (Berlin, Vatican, et al.) as an independent book: both here and in his introduction to *Or Zaru'a* Moses divulges the reasons for his literary activities; *Maskiyyot Kesef* (written after 1293), a commentary on the prayers, a sequel to the lost *Sefer Tappuhei Zahav* (Ms. Adler, 1577); responsa on points of Kabbalah (ed. by Tishby, in: *Kobez al Jad*, vol. 5, 1951); a treatise

on various mystical themes (Schocken Library, Ms. Kab. 14, 78–99; Ms. Vatican 428); another commentary on the ten *Sefirot*, *Sod Eser Sefirot Belimah...* (Madrid, Escorial, Ms. G III 14). Moses also wrote: *Sefer Pardes* ("Book of Paradise"); *Sha'arei Zedek*, on Ecclesiastes; *Mashal ha-Kadmoni* (after the title of his friend Isaac ibn Sahula's work); responsa on questions concerning Elijah; a commentary on Song of Songs; and a polemic directed against the Sadducees (or Karaites?), mentioned by Abner of *Burgos (REJ, 18 (1889), 62). The *Sefer ha-Shem* (publ. in *Heikhal ha-Shem*, Venice, 1605) on the designations of the *Sefirot*, ascribed to him from the 15th century onward, was written by another kabbalist named Moses in the middle of the 14th century.

[Gershom Scholem]

MOSES BEN SOLOMON BEN SIMEON OF BURGOS

(1230/1235–c. 1300), kabbalist in Spain; he was rabbi in Burgos from about 1260. Moses – also known as Moses Cinfa, evidently after his mother – came from a distinguished family. The pupil and spiritual heir of the kabbalists *Isaac and *Jacob b. Jacob ha-Kohen (who were brothers), and a leading kabbalist in Castile, he began to impart a knowledge of Kabbalah as soon as he assumed office in Burgos; his pupils included Isaac b. Solomon ibn *Sahula and Todros *Abulafia. Isaac *Albalag regarded him as the foremost kabbalist of his generation. Abraham *Abulafia met him and his pupil Shem Tov (b. Maor; "Major") between 1271 and 1274 and endeavored to attract him to his doctrine of prophetic kabbalism. Toward the end of his life Moses met *Isaac b. Samuel of Acre, who recounts the event in his *Me'irat Einayim*. Isaac heard Moses utter the harsh epigram expressing the relationship of philosophy to Kabbalah: "The position attained by their heads reaches only the position of our feet" – a motto of a gnostic-type statement indicating that the kabbalist has access to realms where the philosopher is unable to tread. Moses was a strict traditionalist and the value of his kabbalistic writings lies not so much in their original thought, as in the service they render as a treasury and repository of many traditions rarely mentioned by his contemporaries, but those which were generally not absorbed into the *Zohar.

Moses' works consist of the following:

(1) a commentary on Song of Songs *in extenso*, no longer extant but available to Isaac ibn Sahula;

(2) a commentary on the ten "left" *sefirot* (*Eser ha-Sefirot ha-Semaliyyot*; i.e., the impure *Sefirot*), also called *Ammud ha-Semali* ("The Left Pillar"; published by G. Scholem);

(3) commentaries on the three *haftarot* – *Merkevet Yeshayahu* (“Throne and Chariot Vision of Isaiah”), *Merkevet Yehezkel* (“Throne and Chariot Vision of Ezekiel”), and *Mareh ha-Menorah shel Zekharyah* (“Zechariah’s Vision of the Candelabrum”); fragments in Scholem);

(4) a commentary on the 42-lettered Divine Name, the bulk of which was published anonymously in the collection *Likkutim me-Rav Hai Gaon* (1798), the introduction and important concluding remarks are published by Scholem;

(5) an amplification of the treatise by his teacher Isaac ha-Kohen on “Emanation” (fragments published by Scholem);

(6) *Sod Shelosh Esreh Middot u-Ferushan* (“The Mystery of the 13 Divine Attributes and Their Interpretation”), which is, in fact, a kabbalistic explanation of the early tract **Shi’ur Komah* (“Measure of the Body”); published by Scholem);

(7) diverse mystical compositions on various subjects.

Moses had access to a variety of sources, including works affiliated to the circle centering on *Sefer ha-Iyyun*, as well as a number of pseudepigraphica. All the traditions upon which he relied in his *Ammud ha-Semali* are in this category. The crystallization of a definitely gnostic trend in kabbalism can be clearly traced in his writings. He also enlarges on kabbalistic traditions relating to the efficacy of pronouncing the Divine Names as incantations, but emphasizes that he never attempted to translate theory into practice.

[Gershom Scholem]

MOSES BEN YOM-TOV (d. 1268), London rabbi and grammarian, member of one of the most distinguished and wealthy families in England at that time. Moses himself was a businessman who did a great deal for the Jewish community of London. He was also known by the name of Magister Moss-eus. His father, Yom-Tov, was the author of *Sefer ha-Tena’im*. Moses wrote a commentary to the Talmud and to the *halakhot* of Isaac *Alfasi, after the manner of the tosafists. Part of his commentaries were published by Urbach (see bibliography). In his commentary he quotes a great deal from the tosafist *Isaac b. Abraham. He was the first English talmudist who made much use of the rulings of Maimonides. Many of his contemporary scholars frequently mention and cite him in their writings. A responsum he wrote to his friend *Moses of Evreux is known. Among his pupils was the grammarian *Moses (b. Isaac) Ha-Nesi’ah, the author of the *Sefer ha-Shoham* (Jerusalem, 1947), who was mistakenly identified by A. Geiger with Moses ben Yom-Tov. Moses was the author of the *Darkhei ha-Nikkud ve-ha-Neginot*, principles of biblical punctuation and accentuation, first published by Jacob b. Hayyim ibn Adonijah in the margin of the masorah section at the end of the Daniel Bomberg edition of the Bible (Venice, 1524–25). From 1822 on this work was published separately several times. A scientific edition was published by D.S. Loewinger (see bibliography). Moses was also the author of a book on forbidden foods that was not published. He was the father of two

sons, *Elijah Menahem b. Moses of London and *Benedict b. Moses of Lincoln.

[Abraham David]

MOSES ESRIM VE-ARBA (late 15th century), rabbi and emissary of Jerusalem. His unusual name (“Moses twenty-four”) derives from the fact that he was born in Vierundzwanzig Hoefe (“24 courts”) in the Aberndorf region of the province of Wuerttemberg in Germany. In the opinion of Alfred *Freimann (disputed by others), who identifies this Moses with the Moses Ashkenazi mentioned in various documents included in the journal of Michael *Balbo, Moses was sent in 1474 as an emissary of the Jewish community of *Jerusalem to the island of Crete. There he became friendly with Michael Balbo, who frequently discussed with him philosophical and kabbalistic problems, such as the belief in metempsychosis, which Moses rejected. In 1475 he arrived in Constantinople, with the intention of collecting money to rebuild a synagogue in Jerusalem destroyed by the Muslims. Elijah *Capsali wrote to Joseph *Taitazak that when Moses was there he was the cause of a bitter dispute between Moses *Capsali, chief rabbi of Constantinople, and Joseph *Colon, one of the important rabbis of Italy in the 15th century. Moses Capsali refused to assist Moses in collecting contributions for fear of the Turkish government, which had forbidden the transfer of money from *Turkey to Erez Israel, then under *Mamluk rule. Infuriated, Moses joined the opponents of Capsali who endeavored to undermine his reputation and spread allegations that he had given incorrect decisions in matrimonial matters, so causing many to enter unwittingly into prohibited relations. Moses took the accusations of Capsali’s opponents to Joseph Colon who, without verifying the facts, excommunicated Capsali. Moses proceeded to Italy in continuation of his mission. According to S.Z. *Shazar (Rubashow), it was Moses who compiled or copied the classical work, *Dos *Shmuel Bukh* (Augsburg, 1544), an epic in Yiddish based on the Book of Samuel. From his signature on the colophon of the manuscript, it appears that he also compiled glosses to Abraham ibn Ezra’s Pentateuch commentary.

[Abraham David]

MOSES HA-DARSHAN (11th century), scholar and aggadist of Narbonne. Moses was the teacher of *Nathan b. Jehiel of Rome, who quotes him in the *Arukh*, sometimes anony-

mously. Jacob *Tam in *Sefer ha-Yashar* (part of responsa ed. by F. Rosenthal (1898), 189f. no. 46:4) considers him, together with his brother Levi, and Joseph *Bonfils, among the early leaders of French Jewry. Moses is chiefly renowned for his contribution to midrashic literature. Rashi in his commentaries on Scripture, especially on the Pentateuch, frequently quotes from Moses ha-Darshan's *Yesod*, which was apparently a book of scriptural expositions, consisting chiefly of the exegesis of words and midrashic sayings. It is not known whether the work also embraced the rest of the Bible. For many years the *Genesis Rabbah* by Moses ha-Darshan, frequently quoted by Raymond *Martini in his polemic work *Pugio Fidei*, constituted a unique problem. No book of that name was known to scholars in previous centuries. Isaac *Abrabanel, for one, stated in his *Yeshu'ot Meshiho* that he did not know of such a book and suspected it to be a forgery. Only recently has it become evident that the early authorities did indeed know a midrashic anthology by Moses ha-Darshan, or at least one emanating from his school, and that this extensive anthology was the basis of the Midrash called *Genesis Rabbati, which was apparently adapted and abridged from the work of Moses. In this Midrash, Moses based himself entirely upon *Genesis Rabbah, but drew upon his vast store of knowledge and remarkable creative ability to develop and enlarge the central ideas of the source by comparing them with other verses and passages, and connecting them with homilies occurring elsewhere. Moses made abundant use of the Mishnah, the Talmud (chiefly the Babylonian), the *Midrashei Rabbah* and *Tanḥuma*, the *Pesikta*, *Pirkei de-Rabbi Eliezer*, and others.

There is ground for the suggestion that the portions *Bamidbar* and *Naso* in *Numbers Rabbah, as well as the midrashic anthology called *Midrash Aggadah* (ed. by S. Buber, 1894), largely emanate from the *bet-midrash* of Moses ha-Darshan. One unique characteristic of Moses' midrashic work is his use of the *aggadot* embedded in the *Apocrypha, such as Jubilees, Enoch, The Testament of the Twelve Patriarchs, and others, of which he possessed an improved Hebrew text. He also drew upon the collected Midrashim of his predecessors compiled from the Apocryphal literature, particularly from *Midrash Tadshe* (see Smaller *Midrashim) which, with its proem, was ascribed by Moses to the *tanna*, *Phinehas b. Jair. Some wish to ascribe to Moses several other extant minor Midrashim, on the basis of their similarity to his known work. In addition to citation in Rashi and Nathan b. Jehiel, the work was extensively quoted by Tobiah b. Eliezer in his midrashic collection, **Lekah Tov*; Menaḥem b. Solomon, in his anthology, *Sekhel Tov*; and, very much later by Abraham *Saba in his *Zeror ha-Mor*.

[Israel Moses Ta-Shma]

MOSES HA-KOHEN OF TORDESILLAS (second half of 14th century), rabbi born in Tordesillas, Spain. Moses experienced the terrible sufferings caused during the civil war in Castile, 1366–69. He moved to Avila and was evidently appointed rabbi of the congregation there. Moses represented the Jewish side in the religious *disputation ordered to be held in Avila in 1375. There were four sessions and Moses apparently emerged triumphant. After engaging successfully in an additional debate held with a pupil of *Abner of Burgos, he committed his arguments to writing in his still-unpublished work *Ezer ha-Emunah*.

BIBLIOGRAPHY: J. Loeb, in: *REJ*, 18 (1889), 226–30; Baer, Spain, 1 (1961), 374–5; J. Rosenthal, in: *Aresheth*, 2 (1960), 147 no. 61; D.S. Loewinger and B.D. Weinryb, *Catalogue of the Hebrew Manuscripts in the Library of the Juedisch-Theologisches Seminar in Breslau* (1965), 172.

MOSES ḤAYYIM EPHRAIM OF SUDYLKOW (c. 1740–1800?), ḥasidic preacher and *zaddik*, son of *Adel, the daughter of *Israel b. Eliezer Ba'al Shem Tov. He was the eldest brother of *Baruch b. Jehiel of Medzibezh. He is praised in the well-known letter of Israel Ba'al Shem Tov to his brother-in-law, *Abraham Gershon of Kutow. Although he knew that a *zaddik* was a highly influential figure, he did not gather many Ḥasidim round him, but lived in humility and poverty. He served as a preacher in Sudyolkow and popularized Ḥasidism through his work, *Degel Mahaneh Efrayim* (date and place of publication are unknown), a classic of Ḥasidism. The book is made up of sermons on the weekly portions from the Pentateuch. At the end of the book there is a collection of "dreams" (*ḥalomot*) from 1780 to 1785, describing mystical visions. The work, with the addition of stories and parables, is written in a pleasant and lucid manner. It contains important teachings and traditions of the Ba'al Shem Tov and his disciples, and shows also the influence of *Dov Baer of Mezhirech. It expresses social criticism of those scholars who boast of their Torah learning, in contrast with the Ḥasidim who are distinguished by their humility. He notes that in study for its own sake the letters of the Torah serve as a focus for meditation and concentration, and that the light of the **En Sof* (Infinite) shines through these letters to the student of the Torah. Because every generation interprets the Torah according to its needs, the *zaddik*, as the representative of the Torah, may be permitted to break a particular law when necessary. Moses Ḥayyim, however, warned Ḥasidim against superficial imitation of the *zaddikim*. The obligation, according to Lurianic Kabbalah, to "elevate the sparks" (*ḥa'ala'at ha-nizozot*), is expanded by Moses Ḥayyim to everything including slaves and animals. Thus, he also advocates the elevation of undesirable thoughts (*ḥa'ala'at maḥashavot zarot*). Moses Ḥayyim held that man would enter the palace of truth and redemption of the soul only by constantly thinking of God. He emphasizes his admiration for his grandfather and states that redemption and the end of the Exile would occur when the teachings of the Ba'al Shem Tov were accepted. However, he states that,

whereas in previous generations (i.e., during the time of Israel Ba'al Shem Tov) one might have hoped for the imminent advent of the messianic age, as a result of the spiritual decline in his time, this possibility had diminished.

[Moshe Hallamish]

MOSES ISAAC (Darshan; also known as the **Kelmer Maggid**; 1828–1899), the main preacher of the *Musar movement, Moses Isaac was born near Slonim. In his youth he already showed exceptional abilities as a preacher and delivered his first sermon in Slonim at the age of 15. Moses Isaac became a shopkeeper in a nearby town, but, failing to earn a livelihood, returned to Slonim to seek other means of subsistence. Reluctant to make a living from religious activity, he refused tempting offers to serve as a preacher, but at last accepted a position as preacher to a synagogue in Slonim, requesting the meager salary of half a ruble a week. Dissatisfied with his lack of influence, he accepted a similar position at Novaya Mysh, but there also he found no satisfaction. At the age of 21 he relinquished his position and proceeded to Kovno (Kaunas) in order to study under R. Israel *Lipkin, the founder of the Musar movement. He remained there until he had absorbed the teachings of that movement, and Lipkin, recognizing his outstanding abilities as a preacher and his potential influence, charged him with propagating its ideals. For over half a century Moses Isaac was the outstanding *Maggid* of the Musar movement. He accepted positions as preacher to various communities – Kelme (1850–53; whence his name, the Kelmer Maggid), Zagare (1853–58), Oshmyany (1858–60), and Minsk (1860–63) – but essentially he was an itinerant preacher, traveling from town to town.

In his sermons Moses Isaac departed entirely from the exegetical and expository method of preaching current in his time and applied himself solely to raising the moral and ethical standards of the communities. Wherever he went, he would first pay a visit to the local rabbi in order to acquaint himself with the social evils prevalent in the community and then fearlessly denounce them. The following extract from one of his published sermons (*Tokhaḥat Hayyim*, no. 7) is indicative of the content of his homilies: “If a man recites Psalms from morning to night but tells lies and is guilty of slander; if he prays with devotion and recites the Grace after Meals aloud, but has no compassion for his fellowman; if with the same enthusiasm as he fulfills every precept between man and God, he vindictively persecutes anyone who has done him a wrong... he can be called a wicked man.” He inveighed particularly against commercial malpractices, exploitation of the poor, and dishonest practices toward non-Jews. His influence was unbounded. Contemporary newspapers report how on the morrow of his sermons he would visit the local market, and shopkeepers would destroy their false weights and measures.

A dishonest shopkeeper is said to have lost his reason as a result of these denunciations, while another committed suicide. He did not hesitate to name flagrant transgressors, especially unworthy communal leaders, from the pulpit. As a result, on more than one occasion he was maligned, denounced to the government, and imprisoned, but, undeterred, he continued his reproofs.

Moses Isaac used to preach in a unique singsong, sometimes bursting into song, and although he was ridiculed for it, especially by the *maskilim* whom he vigorously attacked, the effect upon the masses was hypnotic. J.L. Gordon, the leader of the *maskilim*, complained (in *Allgemeine Zeitung des Judenthums*, 25 (1861), 168–70) of his “obscurantism” in establishing “Musar shtiebels” (conventicles for the study of Musar), and that he was so successful that he had established one in Mitau (Jelgava), Latvia, a center of the *maskilim*. Moses Isaac established scores of such “Musar shtiebels” throughout the country, synagogues for humble workers, arranging study courses for them, and philanthropic societies. In 1884 he visited London where the chief rabbi, Nathan Adler, and Samuel Montagu (the first Lord Swaythling), founder and head of the Federation of Synagogues, were greatly impressed by him and defrayed the expenses of his visit. In 1898 he moved to Lida, to settle with his son Ben Zion Darshan, and died in the following year. His only published work is the *Tokhaḥat Hayyim* (Vilna, 1897), ten of his sermons which he chose as examples of his teachings.

BIBLIOGRAPHY: D. Katz, *Tenu'at ha-Musar*, 2 (1954), 395–407.

[Louis Isaac Rabinowitz]

MOSES (Mesharshia) KAHANA BEN JACOB, *gaon* of Sura, 825–836. Moses, who succeeded Kimoi b. Rav Ashi, is identical with Mesharshia Kahana b. Mar Rav Jacob who is mentioned in the Spanish version of the “Letter of *Sherira Gaon” (ed. by B.M. Lewin (1921), 115). He is apparently not identical with Moses, *gaon* of Sura in the ninth century, who was a brother of Zadok Gaon, the father of *Nahshon Gaon. Many of his responsa have been preserved in the works of the *geonim* and the *rishonim*. Some touching on the liturgy are quoted in the *sefer* of *Amram Gaon. In many responsa he is referred to simply as Moses Gaon. In one of his responsa Hai Gaon writes that Mesharshia occupied himself with amulets and charms, stating that faith in them was characteristic of the students of Sura (*Ozar ha-Ge'onim*, B.M. Lewin, 4 (1931), *Ḥagigah*, 20).

[Abraham David]

MOSES LEIB OF SASOV (1745–1807), ḥasidic rabbi. He was a pupil of Samuel Shmelke *Horowitz of Nikolsburg, *Dov Baer the Maggid of Mezhibezh, and *Elimelech of Lyzhansk. He spent 13 years studying both Torah and Kabbalah under Samuel Shmelke who was then rabbi in Rychwal and Sieniawa.

Moses wrote novellae on several tractates of the Talmud, parts of which were published in the pamphlets *Likkutei ha-ReMaL* (1856), *Torat ha-ReMaL ha-Shalem* (1903), and *Hiddushei ha-ReMaL* (1921). For several years he lived in Opatov. When he moved to Sasov, he attracted many followers and the town became a great ḥasidic center. His disciples included Jacob Isaac of *Przysucha (Peshiskhah), Zevi Hirsch of *Zhidachov, Menahem Mendel of Kosov, and others. Moses was known for his abounding love for all Jews and for his charity, on account of which he was called “father of widows and orphans.” He composed many ḥasidic melodies and dances. His successor was his only son, JEKUTHIEL SHMELKE, who was seven years old when his father died. Jekuthiel grew up in the homes of Abraham Hayyim of Zloczow, Menahem Mendel of Kosov, and Israel of *Ruzhin in Sadagora (Sadgora), and returned to Sasov in 1849.

BIBLIOGRAPHY: Y. Raphael, *Sefer ha-Ḥasidut* (1956); idem, *Sasov* (1946); M. Buber, *Tales of the Ḥasidim, The Later Masters* (1966), 81–95.

[Yitzchak Raphael]

MOSES (ben Nethanel) NATHAN (14th century), communal worker and poet. Moses, who lived in Tarrega, Catalonia, left a collection of moral parables in rhymed meter, entitled *Toze'ot Hayyim*, which was published in the *Shetei Yadot* (Venice, 1618, 142–50) of Menahem b. Judah de *Lonzano. It contains 58 sections with aphorisms on counsel, quickness, industry, humility, and other virtues. A short acrostic poem prefaces the proverbs, each word ending with a letter of his name. While the work contains no original ideas, it is composed in a clear and beautiful style. A manuscript of the book is extant in Paris (Bibliothèque Nationale, no. 1284). It is possible that its author is identical with the communal worker Moses Nathan who lived in the 14th century, known from Hebrew sources and also from Christian documents, where he is referred to as Moses Naçan (Nazan). In the *takkanot* issued in 1354 by the representatives of the communities of Aragon when they met in Barcelona, Moses Nathan was the first of the signatories. He may also be identical with the Mosse Açan (Azan), who wrote a poem on chess that has survived in a Castilian translation.

BIBLIOGRAPHY: Schirmann, *Sefarad*, 2 (1956), 541–3, 697; Davidson, *Ozar*, 4 (1933), 449; Baer, *Urkunden*, 1 (1929), 306–7, 350–9.

[Abraham David]

MOSES OF EVREUX (Moses b. Schne'or), one of three brothers known as *Gedolei Evreux* (“the greatest [scholars] of Evreux”) in the first half of the 13th century. Moses was the brother of *Isaac of Evreux and apparently a pupil of *Samson of Sens. Moses’ individual teaching cannot always be identified since it is incorporated with that of his brothers, the whole being referred to by the *rishonim* as “the view of Evreux.” He is mentioned by name, however, in the *Shitah Mekubbezet* to *Bava Kamma* and in late collections of *tosafot* to *Zevahim*, *Menahot*, and *Bekhorot*. His comments on the Pentateuch are

known from the *Sefer ha-Gan* of Aaron b. Joseph ha-Kohen. The similarity of some of his ethical sayings quoted in the *Kol Bo* to Nahmanides’ “Ethical Letter” to his son led some scholars to ascribe the latter work to Moses, but there are no solid grounds for doing so. Moses’ son, Samuel, is referred to as the author of a prayer book. The work *Al ha-Kol* (published in *Ha-Goren*, 7 (1908)) containing rulings, *halakhot*, and customs, was compiled by one of his pupils.

[Israel Moses Ta-Shma]

MOSES OF KIEV (12th century), talmudist. No biographical details about him are known. He appears to have visited Western Europe and probably knew the tosafist Jacob *Tam personally. In Tam’s *Sefer ha-Yashar* (1811 Vienna edition, no. 522) a halakic saying occurs “that Moses of Kiev received from Rabbenu Tam.” It is possible that he stayed for some time in the latter’s yeshivah in Ramerupt. A. Epstein (in MGWJ), 39 (1895), 511 attempts to identify Moses of Kiev with Moses of Russia mentioned in the *Sefer ha-Shoham*. According to Epstein, Moses left Russia for France in 1124 following the expulsion of the Jews in that year from Kiev. Urbach (*Tosafot*, 193), however, disagrees, since in 1124 Rabbenu Tam was still very young. Moreover there is no information about an expulsion of the Jews from Kiev in 1124, though a great fire did break out there in that year. It appears that Moses arrived in France at a much later period.

Moses addressed queries to *Samuel b. Ali, head of the Babylonian academy: “Thus sent Samuel b. Ali head of the academy from Babylon to R. Moses of Kiev” (*Responsa Meir of Rothenburg*, ed. by R.N. Rabinowitz (1860), no. 443). The connection between Moses and Samuel b. Ali is also referred to in the *Sefer Yihusei Tanna'im ve-Amora'im* of Judah b. Kalonymus.

[Shlomo Eidelberg]

MOSES OF PALERMO (c. 1275), Sicilian translator. Moses of Palermo was one of a group of Jewish translators from southern Italy who were active in Naples and Salerno at the request of Charles of Anjou (1226–85). Their work continued the tradition of Jewish translation that flourished during the reign of Frederick II and his natural son Manfred. Charles apparently paid Moses a regular stipend as an official translator. On the occasion of his journey from Salerno to Naples in 1270, Moses received payment of “an ounce of gold” at Charles’ command. A document dated 1277 states that the king ordered Maestro Matteo Siciliaco to give Latin lessons to Moses of Palermo, thus enabling him to translate scientific texts from the Arabic. Moses’ name is primarily linked with the translation of a “Treatise on the Healing of Horses” ascribed to Hippocrates

(*Liber de curationibus infirmitatum equorum quem translativ de lingua arabica in latinam Magister Moyses de Palermo*). This was translated into Italian, together with another article on the same subject, and published in 1865 as *Trattati di mascalcia attribuiti ad Ippocrate, tradotti dall'arabo in latino da Maestro Moise da Palermo, volgarizzati nel sec. XIII* (ed. P. Delprato). One of the earliest scientific texts written in Italian, this translation played an important part in the development of scientific terminology in the Italian language. It was widely circulated both in Italy and in other countries throughout the Middle Ages. Another version of the treatise, also in Italian, was entitled *Libro della natura dei cavalli*, and this was often reprinted during the Renaissance era.

There is, however, a possibility that there was another Moses of Palermo who flourished either at the court of the Norman kings, in the 12th century, or at the court of *Frederick II Hohenstaufen. A work attributed to Moses of Palermo, *Liber mariscaltie equorum et cura eorum*, is cited in the *De Medicina equorum* of Giordano Ruffo (c. 1200), thus indicating that the writer of this text lived in an earlier period. A list of the manuscripts attributed to Moses of Palermo was published by Stefano Arieti, "Mosè da Palermo e le traduzioni dei trattati di mascalcia di Ippocrate Indiano," in: *Gli ebrei in Sicilia*, ed. N. Bucaria (1998).

[Joseph Baruch Sermoneta / Nadia Zeldes (2nd ed.)]

MOSES OF PAVIA, medieval talmudist (dates unknown). Moses of Pavia is reported as being mentioned in the talmudic lexicon *Arukh* of *Nathan b. Jehiel, although his name nowhere appears in the printed editions. There are no certain details concerning the time and place of his labors. In the *Mikdash Me'at* of Moses de Rieti (15th cent.), it is noted that Moses of Pavia died a martyr's death in Lombardy, but there is no discernible historical basis for this statement. In the Parma manuscript (De'Rossi, 1360) the event is pinpointed as having taken place in 1096, i.e., at the time of the First Crusade. It is possible that Moses was one of the German scholars who migrated to Germany and were murdered there in 1096. Kaufmann's conjecture (*Schriften*, 3 (1915), 26) is that Moses of Pavia is to be identified with a tutor of the

same name who, after having been banned, went to Capua and later to Pavia.

MOSES SHOHAM BEN DAN OF DOLINA (end of 18th century), ḥasidic author and preacher in Dolina in eastern Galicia. He was a disciple of *Israel b. Eliezer Ba'al Shem Tov and was related by marriage to *Jehiel Michael of Zloczow. He quotes traditions and teachings of both in his works: *Divrei Moshe* (Polonnoye, 1801), commentaries on the Torah; *Imrei Shoham* (1880), on the tractates *Ketubbot*, *Kiddushin* and *Bava Mezia*; *Seraf Peri Ez Ḥayyim* (1866), on the *Peri Ez Ḥayyim* of Ḥayyim *Vital.

BIBLIOGRAPHY: S.Y. Agnon, *Ha-Esh ve-ha-Ezim* (1962), 106–7; M. Kamelhar, *Ha-Ḥasidut ve-Ziyyon* (1963), 104–6.

MOSES ZE'EV (Wolf) BEN ELIEZER OF GRODNO (d. 1830), Lithuanian rabbi. Moses was born and grew up in Grodno. He was appointed *rosh yeshivah* there but left in 1813 to become the *av bet din* in Tiktin, where he stayed until 1824. He was then appointed *av bet din* in Bialystok, remaining there until his death. When Moses was first given this appointment, the people in Bialystok were concerned that he was so young, but he wittily replied that this was a fault which would improve with age. His best-known work, *Marot ha-Zove'ot* (Grodno, 1810) on the laws concerning *agunah*, is based upon the relevant chapter (17) of Shulḥan Arukh *Even ha-Ezer*. He also wrote *Ḥiddushei Moharmaz* (1858), on the commentary of R. Jonathan b. David Ha-Cohen of Lunel to Alfasi on tractate *Eruvin*, and three works all with the same title, *Aguddat Ezov*: (1) a collection of sermons (Bialystok, 1824) concluding with *Alon Bakhut*, nine funeral orations on great rabbis; (2) responsa (2 vols.; 1885–86); (3) novellae on the Shulḥan Arukh (1904). On the title page of the *Marot ha-Zove'ot* he gives his family tree in detail back to *Judah Loew b. Bezalel of Prague, stating where each of his forebears served as rabbi.

[Anthony Lincoln Lavine]

MOSHAV (Heb. מוֹשָׁב) or **MOSHAV OVEDIM** (Heb. מוֹשָׁב עוֹבְדֵי יָם, "workers settlement"), cooperative smallholders' village in Erez Israel combining some of the features of both cooperative and private farming. The idea was evolved during World War I in the quest for a form of settlement that would not only express national and social aspirations on the basis of collective principles like the kibbutz, but also provide scope for individual initiative and independent farm management. The idea was mooted in articles published in various periodicals and was given definite shape in a pamphlet *Yissud Moshevei Ovedim* ("The Establishment of Workers' Villages," 1919) by Eliezer *Joffe, who formulated the social and economic principles on which the moshav should be based:

nationally owned land, mutual aid, cooperative purchasing and marketing, and the family as the fundamental unit. These principles were further developed in the writings of Yizḥak Vilkanski (*Elazari-Volcani), the agronomist, who dealt with the economic structure desirable for the moshav and regarded it as the appropriate answer to the needs of mass settlement. This evaluation was fully vindicated after the establishment of the State of Israel, when tens of thousands of new immigrant families were settled on the land in hundreds of moshavim.

At first the moshav economy was based on mixed farming, which, it was expected, would supply most of the farmer's needs and give him greater stamina to withstand agricultural fluctuations and crises than the single-crop farm. It would also permit the work to be spread out evenly over the year, a point of particular importance since the settler and his family had to cultivate the farm by themselves without the aid of hired seasonal labor.

Milestones of Moshav Settlement

The first two moshavim were founded in 1921, *Nahalal in September in the northern Jezreel Valley and *Kefar Yeḥezkel in December in the eastern part. Most of the members had formerly lived in kibbutzim (Deganyah, Kinneret, Ḥuldah, and Merḥavyah). Within ten years another eight moshavim were founded, most of them in the Jezreel Valley. At the beginning of the 1930s, the movement was given a new impetus by widespread settlement in the Ḥefer Plain by the Hityashvut ha-Elef scheme, intended to settle 1,000 families on the land in the Sharon and Judea, and by the establishment of the first moshavim in the south. The landholdings were small compared with those of the first moshavim, as it was assumed that incomes would be supplemented and the farms consolidated by work outside the moshav in fruit groves and construction projects. During the Arab rebellion of 1936–39, more moshavim were established all over the country, especially in the valleys and in the south, as *Stockade and Watchtower settlements. At the end of World War II, a number of moshavim were established by demobilized soldiers from the *Jewish Brigade and other Jewish units in the British army. In 1948, when the State of Israel was established, there were 58 moshavim in the country.

Most of the new immigrants who arrived in large numbers immediately after the establishment of the state differed in many respects from the pioneers who had settled on the land after spending years in training and preparation. They consisted mainly of families with many children, elderly persons, even entire communities brought over en masse. The moshav ovedim, with its family structure, was felt to be the only medium of settling these immigrants on the land. Hundreds of veterans from the older moshavim came forward to recruit new immigrants for settlements, to set up moshavim, and particularly to instruct and guide the new settlers. In the period 1949–56, 250 new moshavim were established, with a population that approached 100,000 in 1970.

The Moshav Movement

The moshav movement (Tenu'at ha-Moshavim) was founded

in the mid-1930s to cope with the problems of the existing moshavim, to mold and preserve their social structure, and to help establish more moshavim. The movement developed a series of economic, financial, and service institutions to advance these purposes. These include: Keren ha-Moshavim, a mutual assistance fund; the Ein Ḥai Bank; Tagmulim la-Moshavim, a savings and pension fund for members; Bittu'ah Hadadi, a mutual insurance company; Matam (Mishkei Tenu'at ha-Moshavim – Moshav Movement Farms), which provides low-priced, high-quality products; Bank le-Mashkanta'ot (Mortgage Bank), which provides loans for private and public building in the moshavim; and regional purchasing organizations, with some 30 to 50 moshavim in each, to organize marketing and supplies. The latter have set up enterprises, in cooperation with local councils, to lower the cost of services and supplies, and improve production facilities. Examples of these enterprises are citrus-canning plants, fodder plants, slaughterhouses, fruit-packing plants, egg-sorting warehouses, and cold storage plants. The movement has departments for education, culture, social activities, internal arbitration, advice and training in farming and organization, and absorption of new settlers. It also has a youth section with 15,000 teenagers and it publishes periodicals.

In 1970 there were 212 moshavim, with a total population of 75,000, affiliated to Tenu'at ha-Moshavim. Other moshav movements were: the Union of Religious Cooperative Movements of *Ha-Po'el ha-Mizrachi, with 56 moshavim and a membership of 24,000; the Farmers' Union (Ha-Iḥud ha-Ḥakla'i), with 32 villages and 10,000 people; and the cooperative Agricultural Center of the *Ḥerut Movement and *Betar, with eight moshavim and 1,500 people. There were also 13 moshavim with 4,000 people affiliated to *Ha-Oved ha-Ziyyoni; nine, with 2,500, to *Po'alei Agudat Israel and *Agudat Israel; six, with 1,600, to the *Farmers' Federation (Hitaḥdut ha-Ikkarim); two with 370 to *Mapam; and eight unaffiliated moshavim, with 3,400 people; making a total of 346 moshavim with a combined population of about 122,000–95,600 living in 269 moshavim founded after the establishment of the State of Israel in May 1948 and 26,500 living in 77 veteran moshavim. Since that time the moshav population has grown more slowly than the urban population, reaching around 230,000 in 2004, with 206,500 affiliated to the moshavim of Tenu'at ha-Moshavim.

Organization of the Moshav

Each moshav is organized as a cooperative society for agricultural settlement and constitutes a unit of local government administered by the management of the society. The moshav operates in accordance with the Cooperative Societies Ordinance, 1933, under the authority of the Registrar of Cooperative Societies; its accounts are audited by the audit unions for agricultural cooperation. Its activities are governed by a general set of regulations which serve as a pattern for those of the individual moshavim. At an annual assembly of members, each moshav elects its management, which comprises

a managing committee, a control board, and committees for economic, social, educational, and cultural activities. Disputes between members or between a member and the management are submitted for arbitration and decision to the social committee or a judicial committee of the parent movement. The moshav helps its members to obtain credit, purchase seed, fertilizer, and fodder, and to market their produce. It maintains farming equipment and vehicles (sometimes together with neighboring moshavim), workshops, cooperative stores, etc. It provides members' children with primary and post-primary education in local or regional schools, and fosters cultural activities; members receive medical care in local clinics.

The society erects all the public buildings and installations including pumping installations, central irrigation network, supply stores, dairies, refrigeration and sorting plants, schools, clinics, and sports facilities. It finances its investments partly by direct taxation of members and partly by loans based on a general mutual guarantee by the members. The general assembly decides on the annual budget, composed of the local government budget (covered by direct taxes) and the administrative budget (covered partly by taxes and partly by levies on items of income and on various types of production outlays). In the 1960s the moshav set itself new goals: securing production rights in nationally planned branches of agriculture (dairy farming, poultry farming, orchards, etc.); the encouragement of new crops, notably for export purposes; and the protection of members' interests in taxation and social security. The expansion and social development of the moshavim at the time gave rise to the hope that they would continue to develop as an efficient and healthy unit of the national economy and society, and a measure of prosperity did indeed continue into the 1970s. However, with unmanageable debts piling up in the inflationary 1980s, many farms were liquidated, and with the younger generation leaving, some of the moshavim, especially those located near large population concentrations in central Israel, began to build new neighborhoods and absorb newcomers, mainly urbanites, in order to sustain the settlement. Moshavim also began renting land for commercial purposes and many farmers, especially in northern Israel, developed guest facilities and were occupied in tourism in addition to agriculture. Thus the moshav, like the kibbutz, found itself forced to adapt to changing realities and alter its economic and social base in the last decades of the 20th century.

The Moshav as an Example to Developing Countries

The moshav and its way of life attracted the interest of some leaders and many students from Asia, Africa, and Latin America. Thousands of them came Israel to study the methods of the moshav, which they regarded as a possible solution to the problems of organizing agriculture in their own countries. The moshav movement played host to students and organized study courses for them. It also provided Israel's technical assistance program (see State of Israel, Foreign *Policy) with many instructors to establish and advise settlements of the moshav

type in these countries. Scores of such settlements were established in Africa, Asia, and Latin America, with moshav members from Israel as instructors. The moshav movement, together with the Israel Ministry of Foreign Affairs, also established a volunteer movement for foreign service, and many young men from moshavim served as volunteers in developing countries, living and working with the local population.

[Uzi Finerman / Shaked Gilboa (2nd ed.)]

MOSHAV SHITTUFI (Heb. מושב שיתופי, collective moshav), a form of settlement combining features of the *kibbutz and the *moshav. The originators of the idea wanted to combine the advantages of both forms of settlement, while avoiding what they regarded as overemphasis on collectivism in the kibbutz and on individual farming in the moshav. They therefore separated production from consumption, adopting the productive system of the kibbutz and the preservation of the family unit in the moshav. The village's lands and installations – sometimes including industrial plants – are collectively owned and operated, as in the kibbutz, but each family has its own home and is responsible for its own cooking, domestic economy, and the care of children, as in the moshav. Mothers generally work outside the home for two or three hours a day five times a week. From the proceeds of the moshav shittufi's farming and other enterprises, each family is allotted a sum to meet its own needs, while the village as a whole provides education for the children, medical services, cultural activities, and the like.

The first two moshavim shittufiyyim – *Kar Hittim in Lower Galilee and *Moledet in the Gilboa district – were founded in 1936–37, and after World War II many of the demobilized soldiers who settled on the land chose this form of settlement. In 1970 there were 22 moshavim shittufiyyim with a total population of 4,200. Eight belonged to Tenu'at ha-Moshavim, five to Ha-Oved ha-Ziyyoni, four to Ha-Po'el ha-Mizrachi, three to the Herut movement, and one each to the Farmers' Union and Po'alei Agudat Israel. To coordinate their activities, the moshavim shittufiyyim maintained an inter-movement committee. In 2004 there were 27 moshavim shittufiyyim with a population of about 12,500.

For bibliography, see *Moshav.

[Uzi Finerman]

MOSHINSKY, ELIJAH (1946–), opera and theater producer-director. Moshinsky was educated at Melbourne University (B.A.) and St. Anthony's College, Oxford. He was appointed associate producer at the Royal Opera House in 1979 and became its principal producer. His most successful productions for Covent Garden included *Peter Grimes*, *Othello*, *Samson and Delilah*, and *Simon Boccanegra*. West End productions have included the prizewinning *Shadowlands* and *Cyrano de Bergerac*. He also produced five plays in the BBC Shakespeare cycle.

Moshinsky's preferences incline towards the classics, which include Chekhov and Ibsen, and he is considered a leading Verdi expert. However, the 20th century Ligeti's *Le Grand Macabre*, Berg's *Wozzeck*, and Sir Michael Tippett's *A Midsummer Marriage* are among his operatic productions.

Moshinsky described his favored method of working; he is first and foremost a respecter of the creative forces of composer and writer and is therefore not a believer in the current vogue of innovation for its own sake.

Moshinsky also staged operas for the New York Metropolitan, Australian Opera, Welsh National Opera, Chicago Lyric Opera, and the houses of Paris, Geneva, Amsterdam, and the Maggio Musicale in Florence. He also directed several films, including *The Midsummer Night's Dream* (1981) and *The Green Man* (1994), and has more recently been associated with the English National Opera in London. The Australian-born Moshinsky also headed several Adelaide Festivals and other cultural ventures in Australia.

[Sally Whyte / William D Rubinstein (2nd ed.)]

MOSKONI (Mashkoni), JUDAH LEON BEN MOSES (b. 1328), medieval philosopher and scholar from Ocrida in Bulgaria. As a result of disturbances caused by war Mosconi left his native town in 1360 and traveled extensively through many countries. While at Negropont he became a pupil of *Shemariah b. Elijah b. Jacob. During his travels he formed close ties with the great Jewish scholars of Egypt, Morocco, Italy, and southern France. Mosconi was well acquainted with the Hebrew and Arabic philosophic literature of his time and stressed the importance of studying grammar for an understanding of the Bible. His main work is a supercommentary to the commentaries of Abraham Ibn Ezra on the Pentateuch under the title *Even ha-Ezer*, which he wrote in 1362, but he also wrote other works in the fields of Hebrew grammar, biblical exegesis, and philosophy. The year of his death is not known. Some fragments of his commentary to Genesis (1:1–2) were published by N. Ben-Menahem; and to Exodus (some chapters) by A. Berliner and D. Hoffmann (see bibliography). Special importance is attached to Mosconi because of his edition of the Hebrew *Josippon. He had at his disposal a number of versions of the book but in the end selected the long adaptation of it, divided it into chapters, and added an interesting and detailed introduction. His edition has been preserved in two manuscripts and is the basis of the Constan-

tinople edition of *Josippon*, where his introduction appears in an abbreviated and adapted form. All the standard editions of *Josippon* are merely reprints of this version. His introduction to *Josippon* was published by A. Berliner and D. Hoffmann.

[David Flusser]

MOSKOVITZ, SHALOM (Shalom of Safed; 1887–1980), Israel primitive painter. Moskovitz worked in Safed as a watchmaker, stonemaker, and silversmith until at the age of 70, encouraged by the artist Yossl Bergner, he began painting, and gained international fame. Telling the story of the Bible in line and color, he laid out his visual narrations in strips, one above the other. These were characterized by a linear style and the use of repeated forms. In Moskovitz's work, kabbalistic and ḥasidic traditions blended anachronistically with features from his own surroundings.

MOSKOWITZ, HENRY (1879–1936), U.S. social worker and community leader. Moskovitz, who was born in Husse, Romania, went to the United States in his youth. He helped organize the Madison House Social Settlement. In 1907 he became active in the Ethical Culture Society and remained an associate leader of that group until 1913. From 1913 until 1917 Moskovitz served under the New York City reformist mayor, John P. Mitchell, as chairman of several city commissions. He was also an active leader of the Progressive Party under Theodore Roosevelt. In Jewish affairs Moskovitz served on the executive of the Joint Distribution Committee and as the executive chairman of American ORT and was elected in 1936 to the executive committee of its World Union. Moskovitz was closely associated with Governor Alfred E. Smith and, together with Norman Hapgood, wrote Smith's biography, *Up From City Streets* (1927). He also edited *Progressive Democracy: Speeches and State Papers of Alfred E. Smith* (1928) and wrote *Jewish Reconstruction in Russia, Poland, Romania; a report* (1925).

Moskovitz's wife BELLE LINDER ISRAELS MOSKOWITZ (1877–1933), who was born in New York City, worked on the professional staff of the Educational Alliance in New York City from 1900 to 1903 and married Henry Moskovitz in 1914. In 1908 she joined the staff of *The Survey*, remaining there for two years. She subsequently became increasingly involved in communal and political activity, and in public relations counseling. Belle Moskovitz later served on many of Governor Alfred E. Smith's state commissions and became his confidante and adviser. During the 1928 presidential campaign, when Smith was the Democratic nominee, Belle Moskovitz was the publicity chairman of the party. She also served as director of both the National Council of Jewish Women and the Women's City Club, and secretary to the Mayor's

Commission of Women on National Defense. She championed such causes as public health and housing. Following Smith's defeat in the 1928 presidential race, she became the president of Publicity Associates, where she remained until her death.

MOSLER, HENRY (1841–1920), U.S. painter and printmaker. Although in his lifetime Mosler claimed to have been born in America, he had immigrated from Germany at the age of eight with his parents, settling in New York. Two years later the family moved to Cincinnati. For years the Mosler family led a peripatetic life, living in several places, including Nashville, Tennessee, where Mosler received his first art instruction from a lithographer (1853) and again in Cincinnati (1859–1863), where he studied with a genre and portrait painter named James Henry Beard, whose subject matter and straightforward storytelling style on canvases comprised of small-scale figures influenced Mosler's early imagery. By 1860 Mosler had his own studio. During the Civil War, Mosler worked as an artist-correspondent for *Harper's Weekly*, which published 34 of his drawings. These images show battle as well as the daily life of soldiers. Later, three paintings explored war themes.

In 1863 Mosler began studying in Duesseldorf, Germany, a celebrated artistic center attractive to several American artists. Mosler's schooling in Germany strengthened his propensity for genre scenes and recording the intimate details of his subjects. Six months of study at the Ecole des Beaux Arts in Paris completed Mosler's extended training. The nomadic pattern of his youth brought Mosler back to Cincinnati from 1866 to 1874, where Reform Judaism began to gain prominence under the guidance of Isaac Mayer *Wise. Mosler painted *Plum Street Temple* (c. 1866, Skirball Museum, Hebrew Union College, Cincinnati), a canvas delineating the exterior of Wise's temple, Bene Yeshurun. A reproduction of the painting adorned the cover of the musical score "Progress March" a year later. Portraits commissioned by the Jewish community include a likeness of Wise's wife Therese Bloch Wise (c. 1867, Skirball Museum, Hebrew Union College, Cincinnati).

After eight years of living in cities in the United States, Mosler returned to Europe, continuing his studies at various times. He contributed entries to the French Salon from 1878 to 1897; his 1879 entry received honorable mention and was purchased for the Musée du Luxembourg, making the canvas the first by an American artist to be bought by the French government. Mosler began visiting Brittany in 1878, at which time he made paintings of Breton peasants, a subject that preoccupied his art until the 1890s. He meticulously recorded Breton dress, customs, and domestic interiors, and he painted wedding traditions on several occasions, including *The Wedding Feast* (c. 1892, collection unknown), shown at the 1892 Paris Salon. Returning permanently to the United States in 1894, Mosler lived in New York and painted scenes from American colonial history and genre works, employing a similar formula of attention to details and extensive research.

[Samantha Baskind (2nd ed.)]

MOSS, CELIA (1819–1873) and **MARION** (1821–1907), Anglo-Jewish writers and educators. The Moss sisters were born in Portsmouth, England, two of the 12 children of Amelia and Joseph Moss. Avid readers, they began writing poetry in early childhood. Their first joint publication was a book of poems, *Early Efforts* (1839). This was followed by two collections of short stories, *The Romance of Jewish History* (1840) and its sequel, *Tales of Jewish History* (1843). Both collections, which were highly successful, were intended to convey a positive view of Jewish history, religion, and customs to a somewhat hostile Victorian society. As the Moss sisters remarked in their dedication to the writer Edward Bulwer Lytton, they blended "fiction with historical fact, to direct the attention of the reader to a branch of history too long neglected." Celia and Marion hoped their romantic tales would "call the attention of the reader to the records of our people – to awaken curiosity – not to satisfy it." Along with their compatriot Grace *Aguilar (1816–1847), the Moss sisters were the first Jewish women to publish narratives of this kind. They hoped their work would support the struggle for Jewish emancipation, and, more specifically, they wished to encourage improvement of female education and religious reform within the English Jewish community.

In 1840 the sisters moved to London to teach; in 1845 they opened their own day and boarding school for Jewish children. That same year Marion married the French Jewish scholar Alphonse Hartog. Five of their seven children survived to adulthood; each went on to a distinguished career in scholarship, science, or the arts. In 1857 Celia married L. Levetus, the ritual slaughterer of the New Synagogue in St. Helen's; it is not known if the couple had any children. Both sisters continued to write short stories while teaching and both contributed to Isaac Leiser's Jewish American periodical, *The Occident*. In 1854–55, Marion Moss Hartog established the first Jewish women's periodical, the *Jewish Sabbath Journal: A Penny and Moral Magazine for the Young*, intended to provide mothers with material with which to further their children's Jewish education. Initially, a great success, prompting submissions of all kinds from female authors and positively endorsed by the chief rabbi of the British Empire, the journal foundered after Hartog offended the editor of the powerful *Jewish Chronicle*, who proceeded to write a harsh review. Funding declined and publication ceased after five issues. Hartog, who was crushed, wrote next to nothing more for the remaining 52 years of her life. After moving to Birmingham with her husband, Celia wrote a collection of stories on her own, *The King's Physician and Other Tales* (1865).

MOSS, JOHN (1771–1847), Philadelphia merchant, shipping magnate, and civic leader. Moss emigrated to the U.S. as a glass engraver from London in 1796. Opening a dry goods store in Philadelphia in 1807, he quickly became a major importer, ultimately owning a large number of ships. After he turned the active direction of his firm over to his brothers in 1823, Moss shifted his own concerns to banking and insurance, canal companies, and civic enterprises. In 1828 he was elected to the Common Council on the Jacksonian Democratic Party ticket, and in this role he participated in the establishment of the world-famous Wills Eye Hospital. Moss was one of the rich Philadelphia Jews who entered almost every phase of civic activity: he was a steward of the Society of Sons of St. George; a life subscriber to the Orphan Society; and a founding member of the Musical Fund Society. This status was not achieved at the sacrifice of Jewish identification; he was an active member of Mikveh Israel Congregation, a major contributor to its building fund of 1818, and, late in life, a supporter of Isaac Leeser's American Jewish Publication Society. As presiding officer at the Philadelphia *Damascus Affair protest meeting in 1840, Moss had become the representative of his community.

[Bertram Wallace Korn]

MOSSE, family originating from Graetz, a small town in the former Prussian province of Posen. Born in Friedland, Niederlausitz, **MARKUS MOSSE** (1808–1865), the family's founding father, moved to Graetz in 1835, where he became a committed physician, president of the local Jewish community in 1838, and deputy to the president of the town council. Unlike his coreligionists, he fought on the side of the Polish nationalists during the 1848 uprising and was wounded and taken prisoner. For the rest of his life, Mosse lived quietly in Graetz, engaged in the practice of his profession and the upbringing of his numerous descendants. Markus' wife, Ulrike (née Wolff; 1813–1888), was the aunt of Theodor *Wolff (1868–1943), one of the outstanding journalists of the early 20th century and from 1906 to 1933 chief editor of his cousin Rudolf Mosse's *Berliner Tageblatt*. Markus Mosse had eight sons and six daughters. His eldest son, Salomon (1837–1903), founded the Mosse linen house in Berlin and was joined by two other sons, Theodor (1842–1916) and Paul (1849–1920). Two other sons, **ALBERT** (see below) and **Maximus** (1857–1920), became lawyers, and **RUDOLF** (see below) was to be one of the three liberal press-czars of the Kaiserreich.

ALBERT MOSSE (1846–1925) specialized in administrative law, which he successfully taught to Japanese diplomats in Berlin. Thus, he became legal adviser to the Japanese government in Tokyo from 1886 to 1890. There he drafted the basic laws for the institutions of local self-government in provinces, districts, and communes. Moreover, he gave legal advice to

several ministries and even prepared the Japanese constitution. Returning to Germany, he went to Königsberg, Prussia, where he became a state supreme court judge in 1890, the highest position hitherto attained by an unbaptized Jew in the Prussian judicial administration. Until his retirement, he was engaged in academic pursuits in his profession, and received a honorary doctorate and – in 1904 – even a honorary professorship at the University of Königsberg. Albert Mosse was active in Jewish affairs all of his life; he was married to Caroline Meyer (1859–1934), daughter of the former president of the Berlin Jewish community. After Mosse's return to Berlin in 1907, he became vice president of the *Verband der Deutschen Juden* and chairman of the board of the *Hochschule fuer die Wissenschaft des Judentums*. In recognition of his intensive work with its municipal administration, the City of Berlin made him its honorary citizen in 1917.

RUDOLF MOSSE (1843–1920), another son of Markus, founded in Berlin the Mosse publishing house, which acquired a worldwide reputation during the Empire and the Weimar republic. Born in Graetz, he learned the profession of bookselling in Posen and worked for several printing firms in Berlin and Leipzig, where, in 1864, he produced the advertising section for the widely read family magazine *Die Gartenlaube*. In 1867 he opened his own advertising agency in Berlin and was joined first by his brother-in-law Emil Cohn (1832–1905) and later on by his brother Emil Mosse (1854–1911). The firm expanded rapidly, established dozens of branch offices in Germany, Austria, Switzerland, and other European states, and published the *Deutsches Reichs-Adreßbuch* every year from 1898. Only months after Germany had become an empire, Rudolf Mosse started to publish the *Berliner Tageblatt*, the mouthpiece of German left-wing liberalism. With the takeover of the *Allgemeine Zeitung des Judentums* (1890), the well-established *Berliner Volks-Zeitung* (1904), and the founding of the weekly *Berliner Morgen-Zeitung* (1889), the Mosse publishing house acquired nationwide prestige in the course of half a century. Even after World War I, the revolution, and the inflation, the House of Mosse remained a prominent, solidly financed, and highly regarded enterprise throughout Germany and Europe.

Beside his outstanding career as a businessman and a liberal-minded publisher, Rudolf Mosse was noted as a philanthropist. He established a hospital in Graetz and an educational institute in Wilhelmsdorf with an endowment of several million marks. He set up a fund for his employees and made large financial contributions to many literary, artistic, and, foremost, social institutions as well as academies, universities, and scientific pursuits. He was also active in the Jewish community in Berlin and was president of its Reform congregation from 1897 until 1910.

Rudolf's son-in-law Hans Lachmann-Mosse (1885–1944) was the last head of the Mosse publishing house. He worked in banking before entering the Mosse concern in 1910. Following the rise of Hitler, he resigned and the publishing house was seized by the Nazis. He moved to Paris in 1935 and in 1940 emigrated to the United States.

[Elisabeth Kraus (2nd ed.)]

MOSSE, GEORGE L. (1918–1999), U.S. historian; grandson of Rudolph *Mosse. Born in Berlin into one of Germany's wealthiest publishing families, Mosse and his family fled to Britain in 1933; in 1936 Mosse moved to the United States. He received a B.S. from Haverford College in 1941 and a Ph.D. from Harvard University in 1946. In 1944 he joined the Army Specialized Training Program at the University of Iowa, where he lectured for soldiers who were scheduled to take part in the postwar U.S. occupation of Europe. In 1945 he became a member of the history faculty and was assigned to a newly established course on the history of Western civilization. He helped to develop the curriculum for the program as well as to implement it at other universities.

In 1955 Mosse became associate professor of European history at the University of Wisconsin–Madison, where he was recruited to build up the European history program. He served on the faculty until his retirement in 1988. He also taught at The Hebrew University of Jerusalem from 1969 to 1985 and held the Koebner Chair from 1978 to 1985. In 1994 he was the first Shapiro Senior Scholar in Residence at the Holocaust Memorial Museum in Washington, D.C.

Mosse was president of the American Society for Reformation Research (1961–62) and was a founding editor with Walter Lacquer of the *Journal of Contemporary History*.

Mosse's principal interests were in 16th-century history, cultural history, and modern Germany, with special reference to the Nazis and antisemitism. His books *The Reformation* (1963) and *Europe in the Sixteenth Century* (with H.G. Koenigsberger, 1968) were important contributions to early modern history, while a series of later works – *The Crisis of German Ideology* (ed., 1964), *Nazi Culture* (1966), and *Germans and Jews* (1968) – explored modern Germany, particularly the fate of German Jewry. To this latter subject he brought his expert knowledge of more than four centuries of German history and a close familiarity with the development of European culture, a subject on which he also wrote in *The Culture of Western Europe* (1961).

After the unification of Germany in 1990, Mosse succeeded in reclaiming much of the family fortune that had been confiscated by the Nazis and the Communists. He bequeathed a large part of his estate to the University of Wisconsin–Madison and The Hebrew University to sponsor history scholarships.

Other books by Mosse include *Toward the Final Solution* (1978), *International Fascism* (1979), *Masses and Man* (1980), *German Jews beyond Judaism* (1985), *Nationalism and Sexuality* (1985), *Confronting the Nation* (1993), and *The Image of Man: The Creation of Modern Masculinity* (1996). His autobiography, *Confronting History*, was published in 2000.

MOSSERI, prominent family in *Egypt, said to have come there from Italy around 1750 (many of its members were Italian subjects). The family was active in the administration of the Jewish community in *Cairo as vice presidents and in its philanthropy towards the needy in the community.

NISSIM MOSSERI (1848–1897), his son and his brothers were at first moneylenders in Cairo, then founded the banking house of J.N. Mosseri et Fils Cie. (1876). JOSEPH (1869–1934), the eldest son of Nissim, was honored with the title of *bey* for his financial services to the Egyptian government. Joseph's three brothers, Eli, Jacques, and Maurice, founded a second bank in 1904, Banque Mosseri et Cie. ELI (1879–1940) headed many companies, one of which built the King David Hotel in *Jerusalem. JACQUES (1884–1934), Nissim's third son, studied languages at Cambridge and later secured permission for Solomon Schechter to investigate the Cairo **Genizah*. Jacques himself collected *genizah* fragments and wrote articles on the **genizah* and Cairo's synagogues. A delegate of Egyptian Jewry to the 11th Zionist Congress (1913), he founded the Zionist Organization in Egypt in 1917. VICTOR MOSSERI (1873–1930), brother-in-law and cousin of the Mosseri brothers, was an agricultural engineer. He did research for the improvement of several crops, publishing some 60 monographs, and developed an important new variety of cotton. ALBERT MOSSERI (1867–1933), also a cousin, was born in Cairo. He studied medicine in Paris, where he became acquainted with *Herzl and *Nordau. He began publishing a Zionist newspaper, *Kadimah*, there. Serving as a physician with the British army in World War I, he later left his profession and began in 1919 to publish the weekly *Israel* in Cairo, originally in Hebrew, then in Arabic, and French too. After his death, his wife, MAZAL MATHILDA (1894–1981), continued the publication until 1939. Their son MACCABEE (1914–1948) served as an officer in the Palmah and was killed when bringing supplies to besieged Jerusalem. The effort to control the supply route (May 1948) was called "Operation Maccabee" after him.

MOSSINSOHN, YIGAL (1917–1994), Israeli author and playwright. Born in Ein-Gannim, Mossinsohn was a member of kibbutz Na'an from 1938 to 1950 and served in the Palmah and the Israeli Defense Forces from 1943 to 1949. After six years in the United States (1959–65), he returned to Israel. Mossinsohn wrote stories, novels, plays, thrillers, and adventure books for children, and dealt with topical and historical themes. His first

book, a collection of stories, *Aforim ka-Sak* ("Gray as a Sack"), was published in 1946. In 1948 the Habimah Theater staged his first play *Be-Arvot ha-Negev* ("In the Negev Desert"), which was a popular success. The theme of the play was the heroic stand of Kibbutz Negbah against the invading Egyptian army during the Israeli War of Independence. Mossinsohn also wrote several other topical plays. A great success was his series of thrillers for children and teenagers, *Ḥasambah*, starting in 1950, which found a host of imitators.

Additional works include (1) Stories and novels: *Mi Amar she-Hu Shaḥor* (1948); *Ha Derekh li-Yriḥo* (1950); *Derekh Gever* (1953); *Yehudah Ish Keriyot* (1963, *Judas*, 1963); *Cherchez la femme* (stories, 1971); *Yeḥi ha-Hevdel ha-Katan* (1974); and *Taranella* (novel, 1979).

(2) Plays: *Tamar Eshet Er* (1947); *Im Yesh Zedek* (1951); *Cambyses* (Heb. 1955); *Casablan* (1958; later, the basis of a musical play); *Eldorado* (1963); *Shimshon* (1968); *Ha-Meragelim ba-Bordel shel Rahav ha-Zonah* (1980). For English translations, see Goell Bibl.

[Gitta (Aszkenazy) Avinor]

MOSSINSON, BENZION (1878–1942), Hebrew educator and Zionist leader. He was born in Andreyevka, in southern Russia. In 1904 he joined the opposition, headed by Menahem *Ussishkin, to Herzl's *Uganda Scheme and was sent as an emissary to Erez Israel to try to eradicate the leanings to the Uganda idea among certain circles in the *yishuv*. He taught at the Herzlia high school from 1907 and served as its principal from 1912 to 1941. A teacher of Bible, he introduced "Bible criticism" into Erez Israel high schools. Exiled by the Turkish authorities during World War I, Mossinson went to the United States. He was a delegate to Zionist Congresses, being elected to the General Zionist Council and its presidium, and went on missions to various countries on behalf of the Zionist Movement. Mossinson was a founder of the "A faction" of the *General Zionists (which later evolved into the Progressive Party). He edited the General Zionist weekly, *Ha-Ziyyoni ha-Kelali*. In 1941 he became director of the Education Department of the Va'ad Leumi. In addition to articles in Russian and Hebrew periodicals, Mossinson published *Ha-Ivrit be-Arzenu* (1917), and *Ha-Nevi'im* (1919, 1944²). The Youth Aliyah agricultural school at Magdi'el is named after him.

MOSSNER, WALTHER VON (1846–1932), German general. Born in Berlin, Mossner, a superb cavalryman, was commissioned into the King's Hussars in 1865, a personal favor by King William I to Mossner's banker father, despite the hostility of the other officers, who regarded the commissioning of a Jew in a cavalry regiment as an unwelcome precedent. Mossner was eventually baptized and was decorated for distinguished services in the Austro-Prussian War of 1866. In 1872 he was appointed to the German general staff and later was ennobled. He was made William II's aide-de-camp in 1892 and from 1896 to 1898 commanded the third cavalry brigade. Mossner became governor of Strasbourg in 1903 and in the following year was given command of a cavalry division with the rank of major general. He retired in 1910 and was awarded the High Order of the Black Eagle, the last Prussian general to be so honored.

MOST (Ger. **Bruex**), city in N.W. Bohemia, Czechoslovakia (town no longer exists). A Jewish moneylender is recorded in Most in 1393; there was a Jewish street situated near the monastery in the 14th century. When the Jews were expelled in 1453 most of them settled in *Litomerice. One Jew was allowed to settle in Most in 1839, and after 1848 some Jews from the surrounding villages moved to the city. There were 15 Jews in 1861, when a congregation was established; the synagogue was dedicated in 1872. Some of the rabbis of Most later became eminent: Alexander *Kisch (1874–77), Joseph Samuel *Bloch (1877–79), and Gotthard *Deutsch (1884–91). In 1930 there were 662 Jews in Most (2.4% of the total population). The community owed its importance and affluence to the development of lignite mining by the *Petschek and Weimann firms. During the Sudeten crisis the community dispersed, and the synagogue was destroyed on Nov. 10, 1938. The congregation was reestablished in 1945, mainly by Jews from *Subcarpathian Ruthenia, under the administration of the *Usti nad Labem community. In 1975 Most was evacuated to make way for open-cut mining and ceased to exist. The German-Jewish poet Yermiyahu Oskar Neumann (1894–1981), subsequently of Be'er Toviyyah, Israel, was born in Most.

MOSTEL, ZERO (Samuel Joel Mostel); 1915–1977), U.S. actor. Born in Brooklyn, N.Y., into an Orthodox Jewish family, Mostel graduated from City College in 1935, then taught painting and drawing and made extra money entertaining. Working as a comedian at a jazz club called Café Society, Mostel was nick-

named “Zero” by the club’s press agent, who said, “Here’s a guy who started from nothing.” A successful career as a comedian followed in Hollywood and on Broadway, mostly in portrayals of corpulent villains. His leftist views, however, led to his blacklisting, and it was not until 1958, when the political climate had changed, that he resumed full-scale activity. He appeared as Leopold Bloom in an off-Broadway production, *Ulysses in Nighttown* (1958), which was followed by stage successes in such plays as Ionesco’s *Rhinoceros* (1961), *A Funny Thing Happened on the Way to the Forum* (1962), *Fiddler on the Roof* (1964, and a revival in 1977). *Fiddler* won nine Tony Awards in 1965 and a special Tony in 1972 for the longest-running musical in Broadway history. Mostel won three Tony Awards: Best Actor in a Drama for *Rhinoceros* (1961) and Best Actor in a Musical for *A Funny Thing Happened on the Way to the Forum* (1963) and *Fiddler on the Roof* (1965). He was also nominated in 1974 as Best Actor in a Drama for a revival of *Ulysses in Nighttown*.

Mostel appeared in a number of movies, including *Panic in the Streets* (1950), *A Funny Thing Happened on the Way to the Forum* (1966), *The Producers* (1968), *The Angel Levine* (1970), *The Hot Rock* (1972), *Rhinoceros* (1974), *Journey into Fear* (1975), *Mastermind* (1976), and *The Front* (1976).

Mostel co-authored *Zero Mostel’s Book of Villains* (with Alex Gotfryd and Israel Shenker, 1976) and *170 Years of Show Business* (1978). His son Josh Mostel is an actor.

[Raphael Rothstein and Jonathan Licht / Ruth Beloff (2nd ed.)]

MOSTISKA (Pol. **Mościska**), city in Lvov district, Ukraine; from 1772 to 1918 in eastern Galicia, under Austrian rule. Jews first settled there in the middle of the 16th century, but the community was destroyed during the Chmielnicki massacres. It was renewed in the 18th century. The community was under the jurisdiction of the Council of Red Russia (Reissen) province (see *Councils of the Lands). In 1880 there were 2,123 Jews in Mostiska (51% of the total population) and in 1900 they numbered 2,548 (55%). Jews dominated the towns’ trade and artisanship. From 1919 to 1939 the city belonged to Poland. In 1921 the Jewish community numbered 2,328 (49%). The Jewish economy deteriorated because of competition and anti-Jewish boycotts. Before the outbreak of World War II there were about 2,500 Jews in Mostiska. The Germans occupied the town on June 27, 1941, and concentrated Jews from the environs there, numbering about 3,500 persons. During the first half of 1942 more than 500 were sent to labor camps. The Jewish community was liquidated on November 28 (or October 10) 1942, when 2,000 Jews were murdered or sent to Camp Janowska in Lvov. In December 1942 the remaining Jews were sent to the Jaworow ghetto and shared the fate of the local Jews.

[Shmuel Spector (2nd ed.)]

MOSUL, city in N. *Iraq, on the Tigris river. Jews settled in Mosul, or rather in ancient *Nineveh (a suburb of which probably stood on the site of the present Mosul), on the

left bank of the Tigris, when Shalmaneser, king of *Assyria (730–712 B.C.E.), conquered *Samaria.

In the middle of the seventh century C.E. there was a Jewish community in Mosul living in a special quarter called *Mahallat al-Yahūd* (“the Jewish Quarter”; according to Ibn al-Faqih, BGA v 129; Balādhuri, Futuḥ, 1907, 340). In the middle of the 10th century the Jewish philosopher Ibn Abi Sa’id ibn Uthmān Sa’id al-Mawṣilī lived in Mosul and through another Jew asked a contemporary Arab-Christian philosopher to settle several philosophical questions (S. Pines, in: PAAJR, 34 (1966), 103–36). During the first half of the 12th century the Jewish community of Mosul increased when a Muslim principality was established there. It was ruled by Atabeg Zangi (1127–46) and his sons who sought to unite all the small kingdoms in the vicinity of Mosul, to expand his domain up to *Syria, and later to make a joint attack on the Crusaders. Many Jews who had suffered from the Crusaders in Erez Israel came to the town and placed themselves under the protection of the Muslim rulers, who did not harm them. The traveler *Benjamin of Tudela, who visited Mosul before 1170, found “approximately 7,000 Jews headed by R. Zakkai (b. Azariah b. Solomon), the *nasi* who claimed to be from the Davidic line, and R. Joseph, who is called Burhan al-Falak [Ar. “Globe”] who is the [astrologer] to the king Zein al-Dīn” (Benjamin, Travels, p. 94). R. *Pethahiah of Regensburg, who visited Mosul about ten years later, found more than 6,000 Jews and two *nesi’im*: David and Samuel, two cousins who were of the Davidic line. The *nesi’im* had the authority to imprison transgressors. Every Jew paid a tax, one *dīnār* per year, half of which was for the authorities and half for the *nesi’im*. They had fields and vineyards.

In 1289 the head of the flourishing community was the exilarch *David b. Daniel. He, together with 11 members of the local rabbinical college, signed a letter threatening Solomon Petit of Acre, the opponent of *Maimonides, with excommunication (Graetz, Gesch, 7 (c. 1900), 166).

After a brief period of prosperity at the beginning of the Il-Khan rule, at the time of the vizier *Sa’d al-Dawla in the second half of the 13th century, there followed a swift decline and harsh setbacks which impoverished the community. Tamerlane, who captured the city at the end of the 14th century, caused great harm to its inhabitants. Nevertheless, there was a great yeshivah in the city at the beginning of the 16th century, which sent one of its students to the Adoni family to serve as rabbi of the *Baghdad community (A. Ben-Yaacob, *Kehillot Yehudei Kurdistan* (1961), 34–36).

In 1848 the traveler Benjamin II found 450 Jewish families there (Benjamin II, *Mas’ei Yisrael* (1859), 34). In the 20th century, there was no improvement in the situation of the Jews of Mosul. The figure of 3,000 Jews in the city remained more or less stable until the beginning of the 20th century. The decline of Mosul’s economic standing seems to have contributed to the departure of the Jews for Baghdad. According to the census of 1947 there were in the city 5,688 Jews. The Jewish community of Mosul remained enclosed in its neighborhood,

most of them poor and ignorant, a few of them merchants. Schools established by the *Alliance Israélite Universelle in 1906 (for boys) and in 1912 (for girls) were closed at the outbreak of World War I. In about 1930 schools for boys and girls were established by the philanthropist Eliezer *Kadoorie, but there was no Jewish high school. A few children attended government schools and a very small number attained a higher education.

Probably because of their lowly position, the Jews of Mosul did not arouse the envy of their neighbors and were not persecuted. Nevertheless, they lived in great fear throughout this entire period. The rabbis of the community were not highly regarded. During World War I the chief rabbi of the community was R. Elijah Barazani, and from the 1920s, his son R. Solomon Barazani (d. 1960), who remained in this position until he immigrated to Israel in 1951. In the years 1950–55 all the Jews of Mosul immigrated to Israel.

MOSZKOWSKI, MORITZ (1854–1925), pianist and composer. Born in Breslau, Moszkowski taught at the Kullak Academy in Berlin until 1897 when he established his residence in Paris. He was renowned as a concert pianist, touring Europe and the United States, and also as a composer of tuneful piano pieces. Of these, *Spanish Dances* have retained a certain popularity, especially in the four-hand version. He also wrote some orchestral works and an opera *Boabdil, der letzte Maurenkoenig* (first performed in Berlin, 1892). His brother ALEXANDER MOSZKOWSKI (1851–1934), a literary critic, published two booklets of musical humor under the pseudonym Anton Notenquetscher, of which excerpts still appear in anthologies.

MOTA, NEHEMIA (d. 1615?), poet whose influence in *Kochi (Cochin) remains very tangible to this day. The Malabari Jews honor the anniversary of his death on the first day of Hannukah with a special banquet followed by singing his *hashkavah* (Sephardi memorial prayer). But his religious significance extends to the Paradesis as well, and his tomb in Jew Town functions as the focal point of many vows, a spot for consolation in times of distress, and as an object of pilgrimage for Christians, Muslims, and Hindus as well as Jews.

The earliest reference in scholarship devoted to Nehemia Mota is found in the 1907 edition of the *Jewish Encyclopedia*, where it is stated rather misleadingly that in 1615 a false messiah appeared among the Jews of Cochin in the person of Nehemia Mota. Most authorities accept that Mota was from the Yemen; others say he was an Italian Jew who came to Kochi via Yemen, and still others hold that he was Polish. He mar-

ried a woman from the black Jewish community. The 1757 edition of the Shingli Maḥzor contains about 20 of Nehemia's songs which, for reasons unknown, were deleted from the 1769 edition. They have reappeared in recent Israeli editions of the Shingli rite.

Nehemia's tomb is located down an alley in a poor area just south of Jew Town. It resembles the "village deity" (*grammatadevata*) shrines of South India, except for the absence of any images or symbols of the saint. The presence of Nehemia inspires fear as well as blessings – such ambivalent feelings typify the cults of the village deities. Women, Jewish and Gentile, make vows and light candles at the tomb whenever they face a crisis of health, an employment opportunity, or a long journey.

The incorporation of a foreign saint into the Hindu pantheon is not uncommon, and this mechanism serves to acculturate the foreign community into Hindu society.

Nehemia's tomb bears the following Hebrew transcription:

Here rest the remains of
the famous kabbalist,
The influence of the light of whose learning
shines throughout the country,
The perfect sage, the hasid, and
God-fearing Nehemia, the son of
The dear rabbi and sage Abraham Mota.
Our Master departed this life on
Sunday, the 25th of Kislev, 5336.
May his soul rest in peace.

MOTAL, ABRAHAM BEN JACOB (1568–1658), rabbi and *dayyan* of Salonika. Motal was born in Salonika, where he studied under Samuel Ḥayyun and Solomon ha-Kohen, whose works he transcribed. He served first as head of the yeshivah of the Old Lisbon community of the city, and on the death of *Ḥayyim Shabbetai in 1647 succeeded him as Salonika's chief rabbi. Among his distinguished disciples were Aaron *Lapapa, Benjamin Melamad of Smyrna, Samuel Adarbi, Abraham ibn Naḥmias, Isaac Alkabez of Constantinople, Abraham *Galanti, and Levi Passariel of Salonika. Of his many works, only *Torat Nazir*, on the tractate of that name, has been published (Salonika, 1821). Appended to it is his *Kunteres Shemot ha-Gittin*. Many of his halakhic discussions appear in the works of contemporary scholars, but most of his responsa have remained in manuscript.

MOTH (Heb. מוֹץ, *ash* and סוֹס, *sas*; AV, JPS – "worm"), insect said to eat and destroy clothes (Isa. 51:8; cf. 50:9; Job 13:28). The word *ash* is also used as a synonym for disintegration and

destruction (Hos. 5:12; Ps. 39:12). These names refer to the clothes-moth *Tineola*, the larva of which feeds on wool. The metamorphosing larva (caterpillar) spins a cocoon, in which it develops into a chrysalis, to be transformed later into an imago. The tottering house of the wicked is compared to a cocoon (Job 27:18). Other species of moth that damage seeds, fruit, and trees are also to be found in Israel. The Talmud speaks of the *sasa* that infests trees (TJ, Hag. 2:3, 78a, according to the reading of Ha-Meiri; cf. Yoma 9b: the *sas-magor* which attacks cedars). The *noses* that destroys trees (Isa. 10:18) may be the *sas*, the reference here being to the moth which bores into trees, such as the larvae of the *Zeuzera pirina*, one of the worst arboreal pests in Israel.

MOTION PICTURES. Since the early years of motion pictures, Jews have played a major role in the development of the industry and have been prominent in all its branches. This is true not only of Hollywood, where the role played by Jews is generally known and acknowledged, but of the German film industry up to the Nazi era, Russian film production up to the time of the Stalinist purges of the 1930s, the British film industry up to the present, and contemporary underground motion pictures in the United States. The motion picture was created at a time when the Jews were seeking entry into the economic and cultural life of their host countries. Their involvement with motion pictures was due to a number of factors: the film business had not developed a tradition of its own and had no vested interests to defend; participation in it required no intimate knowledge of the vernacular; and films were not yet the realm of businessmen, entrepreneurs, or professional entertainers, but rather scientists, such as Edison and Lumière, who had no idea of the economic and industrial future of their inventions. In addition, the motion picture was initially regarded as a low-grade form of entertainment – suitable only for the immigrant or the uneducated masses – rather than a valid art form, and those connected with films were held in contempt. New immigrants, therefore, found it relatively easy to enter this field, and Jewish immigrants used the opportunity to transform the media from a marginal branch of entertainment into a multi-million dollar industry.

[Nahman Ingber]

In the United States

A century ago, motion pictures went from invention to entertainment to being an industry. First introduced in 1896, moving pictures were at first a novelty shown at the end of vaudeville shows or in penny arcades. Sigmund “Pop” Lubin (1851–1923), a Jewish immigrant from Germany built one of the first movie houses in 1899 (he charged ten cents, twice the customary rate). By 1907, more than 100 Nickelodeons – theaters seating fewer than 300 persons and charging a nickel per showing – had opened in New York, and more than a quar-

ter of those were located in the densely populated Lower East Side – home of the great majority of Jewish immigrants.

Max Aronson (1882–1971), who changed his name to Gilbert Maxwell Anderson, was the first movie-star cowboy. He had played a role in Edwin S. Porter’s *The Great Train Robbery* (1903), the first genuine American feature film. After working at Vitagraph as a production assistant Anderson moved to Chicago and then to California. In 1907, he cofounded the Essena Co., where he worked as a writer, producer, and actor. In 1908 he launched the “Bronco Billy” western series, which was a great success, producing 375 films in a seven-year period.

On Christmas Eve 1908 Mayor McClellan of New York closed all the nickelodeon theaters calling them immoral. Leading the successful fight to have them reopened were former garment worker turned exhibitor William *Fox (1879–1952) and former newsboy Marcus Loew (1870–1927). Competition was so fierce among exhibitors and producers that in 1909 Thomas Edison signed an agreement with most of the large film companies that led to the founding of the Motion Picture Patents Co. The theater owners were forced to rent projectors and films only from the Motion Picture Patents Co. – in effect Edison was creating a monopoly to keep new independent producers out. Fox and German Jewish immigrant Carl *Laemmle (1867–1939), an exhibitor turned producer and distributor objected to such control; they sued and won in 1912. Laemmle relocated to Southern California with his Universal Film Manufacturing Company (later Universal Studios) leading the exodus of film producers to the West.

By 1909 the nickelodeon boom was over; by 1915 the age of movie palaces began. By 1915, movie production had effectively moved to California. The age of the movie moguls had begun.

The first large Hollywood company was Paramount, which was founded and managed by Adolph Zukor (1873–1976). Together with Daniel *Frohman, a theatrical agent, Zukor decided to import a prestigious European film, *Queen Elizabeth* (1912), starring Sarah *Bernhardt. The film was shown in legitimate theater halls and was reviewed in the regular press, enabling Zukor to claim that film was a legitimate art form. Under the slogan “Famous Players in Famous Plays,” Zukor produced films based on literary and dramatic works, with casts of well-established, legitimate actors. He also initiated the practice of advertising the “star” actors in films; the first “star” he promoted was Mary Pickford.

Jesse *Lasky (1880–1958) owned a similar production company in Hollywood, and in 1917 he and Zukor founded a joint distribution company called Paramount; two years later their production companies also merged. Paramount produced, distributed, and exhibited films through its own worldwide theater chain. Lasky also brought two of his partners, Samuel *Goldwyn (Goldfish; 1882–1974) and Cecil B. De Mille, into the new company. As Paramount continued to grow, smaller producers were compelled either to disband or merge with one another in order to compete. Paramount’s commercial power was based upon the block-booking system

that forced local exhibitors to rent an outline group of Paramount's films, rather than choose only those they desired.

One producer who tried to fight Paramount was Carl Laemmle, who was developing Universal into one of the giants. William Fox, his former partner in the fight against the Patents Co., joined Twentieth Century and also made it into one of the large Hollywood companies.

Louis B. Mayer, who owned a chain of movie theaters (mainly in New England), purchased the Metro Co. in Hollywood (which had its own studios) and founded the Metro-Mayer Co. Samuel Goldwyn left Paramount in 1919 and, together with the Selwyn brothers, founded the Goldwyn Co. In 1924 it merged with Metro-Mayer to form Metro-Goldwyn-Mayer (MGM), which was headed by Mayer; Goldwyn himself did not join MGM and instead established one of Hollywood's outstanding independent production companies.

Columbia, owned and dominated by Harry Cohn from 1929 until his death in 1958, was built into a large company during the 1930s by producing a series of successful films by the clever use of stars and directors.

Warner Brothers was founded by Sam, Jack, Albert, and Harry Warner, who started out with a small exhibition hall and later became the managers of the First National Theater chain, and eventually formed their own company. In 1923 they bought out the Vitagraph Company, owners of the Vitaphone, which was a sort of record that played simultaneously with the silent film. Seeking to improve their difficult financial situation, in 1926 they developed and presented the first film with its own musical score.

A year later Warner Brothers produced *The Jazz Singer*, starring Al Jolson, containing both dialogue and singing parts. Written by Samson Raphaelson, based on his play, and starring Al Jolson as the son of a cantor torn between the observant and secular world, the film was a success and brought about the "sound revolution" in motion pictures and made Warner Brothers into one of the great Hollywood companies. Thus the majority of large Hollywood Studios were founded and controlled by Jews.

In addition, the first bank to finance the film industry was the Jewish-owned Kuhn, Loeb and Co., in 1919.

These founding fathers of the movie studio were part of a first generation who created "the dream factory," where Jewish immigrant movie moguls, eager to leave the Old World behind, became more American than the Americans (see N. Gabler, *An Empire of Their Own: How the Jews Created Hollywood*).

Other Jews who played a leading role in the large companies were Barney Balaban, who joined Paramount and became its president in 1936; Nicholas and Joseph M. Schenk, who became presidents of MGM (while Mayer was in charge of its Hollywood operations); and Irving Thalberg, who was production manager of MGM from the end of the 1920s until his death in 1936. Thalberg, who was responsible for production at the age of 23, was the wunderkind of the film industry and became the symbol of the successful Hollywood producer.

In the two years following Warner's *The Jazz Singer*, Hollywood frantically set about converting to sound. As the studios began importing New York talent, many Jews landed in Hollywood. Among the Jewish performers who made their way west were Jack Benny, Ben Blue, Fanny Brice, George Burns, Harry Green, Ted Lewis, the Marx Brothers, Sophie Tucker, and Ed Wynn. In addition, directors and writers shifted from theater to film, including men such as George Cukor, Sidney Buchman, Norman Krasna, Charles Lederer, Joseph Mankiewicz, S.J. Perelman, Robert Riskin, Morrie Ryskind, and Ben Hecht.

In the 1920s and 1930s another wave of Jewish émigrés came to Hollywood. They were mainly directors and actors.

Ernst Lubitsch, who came to the United States in 1923 after achieving fame in Germany, was best known for directing sophisticated comedies with a finesse that became known as the "Lubitsch touch." Among his films were *Ninotchka*, *To Be Or Not To Be*, and *Cluny Brown*. For several years Lubitsch served as president of production of Paramount, the first working director to also be head of a studio.

Erich von Stroheim, an Austrian-born actor and director, became known in the 1920s for his realistic direction, especially in the film *Greed*. His acting captivated audiences for a period of 30 years.

Josef von Sternberg directed several films in the United States in the 1920s; he directed *Blue Angel* in Germany in 1930 and became Marlene Dietrich's permanent director, famous for a grand style that made Dietrich into a screen goddess. William Wyler, who was born in Germany, began his career as a director in 1928; his films were based mainly on adaptations of literary works, and he was particularly successful in the direction of female stars. Billy Wilder also began his career in Germany, together with Fred Zinnemann and Robert Siodmak. Wilder's films were distinguished by their sharp humor and bitter irony.

Other Jewish actors and directors who arrived in Hollywood from Europe in the 1920s and 1930s leaving their past and sometimes their names behind, were Leslie Howard, Peter Lorre, and Michael Curtiz.

Curtiz, a Hungarian, would go on to direct *Casablanca* – perhaps the greatest American movie – as well as other American classics, including *Captain Blood*, *Yankee Doodle Dandy*, *Robin Hood*, and *White Christmas*.

White Christmas is a great example of the ways in which Jews assimilated American culture, making it their own. "White Christmas" was first born as a song written by Irving Berlin (né Izzy Baline in Siberia) for the 1942 film *Holiday Inn*. Wishing for an idealized world "I used to know" that is "merry and bright," the lyrics are, at the same time, wistful, hopeful, and all-inclusive. The song was so popular (it is one of the most popular songs of all time), it spawned a movie of its own.

The movie *White Christmas* as directed by Curtiz pairs Bing Crosby with the very versatile Danny Kaye (born David Kaminsky) in a romantic musical comedy, written by Norman

*Krasna, about two World War II veterans who achieve success in show business and then success in love. Its message is not religious, but universal.

Curtiz presents the world as it was and as it should be. Curtiz, like Berlin, was often critiqued for having no signature style. But for Curtiz and Berlin's generation of Jews, being able to work successfully in any number of styles was a virtue unto itself. Making a Christmas movie was not about assimilation, it was about versatility.

Curtiz had already assimilated back in Hungary when he first changed his name from Mano Kaminer to Mihaly Kertesz (a more Hungarian-sounding name). The jump from Kertesz to Curtiz was itself a testament to having an identity that was easily translated – that worked, literally and figuratively, in any culture. America was the land of freedom, and for Jewish directors and actors, it was a country where you could do anything, even make a Christmas movie.

In 1951, when Mayer was dismissed from his post at MGM, he was replaced by Dore *Schary, who had built a career as a writer. A similar position was held by William Goetz, who was head of 20th Century-Fox and, at a later stage, of Universal International Co.

Some of the most successful Jewish producers employed by the studios included Joe *Pasternak, Walter Wanger, Arthur *Freed, Jerry Wald, Pandro S. *Berman, among others. An even more important influence on the film industry – because of their greater control over the nature of the finished product – were the independent producers, such as Mike *Todd, producer of *Around the World in 80 Days*, who was connected with the Todd-AO method of cinematography; and David O. *Selznick, the son of Lewis J. Selznick, one of the industry's pioneers. Next to Samuel Goldwyn, David Selznick became the most famous and successful independent producer. He was responsible for the production of *Gone with the Wind* (1939), which was one of the most profitable films in Hollywood's history, having grossed \$72,000,000 through 1970. Among his other films were *David Copperfield*, *King Kong*, *Spellbound*, and *Rebecca*.

Hal Roach, one of the most prolific producers of comedies, was responsible for a part of the Harold Lloyd series and for the Laurel and Hardy films during the 1920s and 1930s. Sam *Spiegel, who maintained a high artistic standard, using outstanding directors and choosing serious subjects, produced such films as *The African Queen*, *On the Waterfront*, *The Bridge on the River Kwai*, and *Lawrence of Arabia*. The *Mirisch Brothers, originally theater owners, established their own company in 1957. After the decline of the big studios, it became one of the most successful Hollywood enterprises, producing *West Side Story* and *The Great Escape*.

After 1945, Stanley *Kramer, an independent producer who was connected with Columbia, produced such films as *Home of the Brave*, *Champion*, *High Noon*, and *Death of a Salesman*. Later on he also directed *On the Beach*, *Judgment at Nuremberg*, and *Ship of Fools*. Kramer believed that audiences wanted films that dealt with contemporary life.

Joseph E. *Levine, who began as a theater owner and became an importer of cheap or erotic Italian films, then turned to the financing of outstanding European films (8½), and later produced such films as *Where Love Has Gone*, *The Carpetbaggers*, and *Harlow*.

Among Jewish directors who earned success at the box office or received great critical acclaim one must include Jules *Dassin, Garson *Kanin, Robert *Aldrich, James *Brooks, Fred *Zinnemann, Joseph L. *Mankiewicz, Sidney *Lumet, John *Frankenheimer, Alan Pakula, Martin *Ritt, Roman *Polanski, Michael Curtiz, Mervyn Le Roy, Otto *Preminger, Richard *Brooks, George *Cukor (d. 1983), Daniel *Mann (d. 1991), Delbert *Mann, and Robert *Rossen.

The number of successful Jewish scriptwriters is so vast that only a few can be mentioned here. Among the most famous were Ben *Hecht, Samson *Raphaelson; George *Axelrod; Carl *Forman; Herman *Mankiewicz; Aaron *Sorkin; William *Goldman; Nora *Ephron; Eric Roth; Norman Krasna; and Abby *Mann.

Among the prominent composers of musical scores are Irving *Berlin, Alfred Newman, Franz Waxman, Dmitri Tiomkin (d. 1979), Elmer *Bernstein, and Burt *Bacharach.

The first great sex symbol was Theda *Bara (1885–1955), born Theodisia Goodman, whose portrayal of a seductive vampire inspired the appellation “Vamp.” Other Jewish actresses known as sex symbols included Mae *West, Mirna Loy, Sylvia Sydney, Hedy *Lamarr, Judy *Holliday, and more recently, Debra *Winger, Rachel Weisz, and Natalie Portman. There is also a long tradition of Jewish comediennes in which Mae West would also be included, but which begins with Fanny *Brice, and stretches to Barbra *Streisand and Bette *Midler.

A small sample of well-known Jewish actors and actresses includes the Marx Brothers, Danny *Kaye, Jerry *Lewis, Paul *Muni, Edward G. *Robinson, Eddie *Cantor, John *Garfield, Al Jolson, Peter Lorre, Zero *Mostel, Tony *Curtis, Alan *Arkin, Lee J. *Cobb, Kirk *Douglas, Melvyn *Douglas, Dustin *Hoffman, Elliot *Gould, Alla *Nazimova, Louise *Rainer, Paulette *Goddard, Shelley *Winters, Polly Bergen, Tovah *Feldshuh, and Lilli *Palmer. A number of film stars converted to Judaism including Sammy *Davis Junior, Marilyn *Monroe, and Elizabeth *Taylor.

By the mid-1930s ethnically distinct characters, especially Jews, were no longer considered desirable by studio heads. The degree to which Hollywood eliminated a Jewish presence can be assessed by comparing *The House of Rothschild* (1934) with *The Life of Emile Zola* (1937). In the former there is no question of Rothschild's identity. By contrast, *The Life of Emile Zola* treats the infamous *Dreyfus affair, yet oddly never reveals that Dreyfus was a Jew.

Despite Hitler's election as chancellor of the Third Reich in 1933, and the growing militarization, civilian restrictions, and legislated discrimination against Jews in Germany, Hollywood remained totally silent on the subject throughout the 1930s. The producers reflected the neutralist philosophy em-

anating from Washington. MGM's *Three Comrades* (1938) and the Warner Bros. film *Confessions of a Nazi Spy* (1939) merely intimidated at the true horror.

Charlie Chaplin, a non-Jew (whom antisemites often labeled "Jewish"), broke ranks by producing *The Great Dictator* (1940), a comedy which lampooned Hitler and depicted contemporary conditions in his mythical Tomania.

With the onset of World War II, Hollywood set about dealing with Fascism, although it was less explicit about Jewish persecution. But it was not until Pearl Harbor that Hollywood went to war in full force. Increasingly the victims were identified as Jews rather than the previous nomenclature non-Aryans (ironically a Nazi classification). Titles include *The Pied Piper* (1942), *None Shall Escape* (1944), and *Address Unknown* (1944).

The war also saw the rise of the combat film, which depicted a fighting unit of ethnically and geographically diverse soldiers. Most typically Jews functioned as comic relief. More serious depictions of the Jewish participation in World War II can be found in *The Purple Heart* (1944) and *Pride of the Marines* (1945), where characters evidence intelligence, bravery, and patriotism.

Following the war and the full knowledge of the Nazi atrocities, it was natural to ask, "How could this happen?" "Could it happen here?" The response to these questions was *Crossfire* (1947), a murder thriller, and *Gentleman's Agreement* (1947), a drama which presented a journalist, played by Gregory Peck, posing as a Jew to gain firsthand experience of discrimination. Both films received critical and popular acclaim and, despite initial concern on the part of Jewish agencies, both works proved through testing to be effective tools in combating prejudice.

However, it is important to note that when Hollywood needed a handsome actor to play a role where the character was Jewish, such as King David, they preferred a non-Jew such as Gregory Peck to play him, as he did in *David and Bathsheba* (1951), later reprised by Richard Gere in *King David* (1985).

The postwar period also produced an unexpected backlash against Jews, most particularly in Hollywood. Spurred on by anti-Communist fears, conservative individuals were able to effect their prejudices through the workings of the House Committee on Un-American Activities. Of the original "Hollywood Ten" who faced investigation and charges, seven were Jewish.

However, the films of the 1950s consistently promoted tolerance. In no decade are screen Jews so intelligent, patriotic, and unqualifiably likeable. At no other time is religious tolerance and good will so consistently foregrounded.

Beginning in 1951 with *The Magnificent Yankee*, which depicts Louis Brandeis, to the screen adaptation of *Dark of the Top of the Stairs* (1960), the films all preach the same message – antisemitism is no longer acceptable; antisemitism is un-American.

In between these two works, several important films came to the screen. In 1952 Dore Schary adapted *Ivanhoe*,

with Elizabeth Taylor in the role of Rebecca. In 1953 the first remake of *The Jazz Singer*, directed by Michael Curtiz, appeared with Danny Thomas in the lead role. The once Orthodox family have now become assimilated Reform Jews. And in 1959 Paul Muni played the kindly old doctor in the film version of *The Last Angry Man* (1959). Antisemitism in the U.S. army became the subject of two films – *The Naked and the Dead* (1958) and *The Young Lions* (1958).

Other films of importance include *Majorie Morningstar* (1958), the first major film since the 1920s to focus on Jewish domestic life and a precursor of the self-critical approach of the 1960s; *Me and the Colonel* (1958), a bittersweet comedy about World War II starring Danny Kaye; *The Diary of Anne Frank* (1959), the first Hollywood film to focus exclusively on the plight of Jews caught in the Holocaust; *The Juggler* (1953), starring Kirk Douglas, in the first U.S. production shot entirely in Israel; and *Exodus* (1960), the film which fixed Israel in the American imagination for years to come.

Exodus with the handsome Paul Newman, whose father was Jewish, and in which Newman appears bare-chested wearing a Jewish Star, paved the ground for a new sex symbol: the Jewish Man. The 1960s were a time when the anti-hero took center stage and such non-traditional leading men as Dustin Hoffman, Elliott Gould, and Richard Dreyfus became stars.

Not since the silent era had so many Jewish characters appeared, especially in major roles. Beginning in 1967 with Dustin Hoffman in *The Graduate*, a series of comedies set a new direction and established Jewish humor as a major mainstream trend for the next two decades. Films such as *The Producers* (1968), *Funny Girl* (1968), *Take the Money and Run* (1969), and *Goodbye, Columbus* (1969) launched a new Jewish sensibility in America.

Although comedy dominated the decade in terms of Jewish film, the Holocaust was approached in two works with forceful impact. First, Abby Mann's *Judgment at Nuremberg* (1961) soberly approached the range of Nazi injustices. Then in 1965 *The Pawnbroker*, starring Rod Steiger in the role of a German survivor, was the first American fictional work to treat the camp experience with such harrowing reality. Closely related, *The Fixer* (1968) depicted Jewish victimization under the Czarist regime, and by implication called attention to current Soviet discrimination.

The decades closed with one of the most celebrated films about Jewish life ever to reach the screen – *Fiddler on the Roof* (1971). Based on Sholem Aleichem, the film exposed millions around the world to Jewish family life, Jewish traditions, and the shtetl.

In the 1970s and 1980s, in such films as *Play It Again Sam* (1972), *Annie Hall* (1977), and *Manhattan* (1979), Woody Allen became the embodiment of an urban Jewish humor-filled sensibility, and of a seeming nebbish who won the girl (who was often non-Jewish).

The other major comedies of this era focus once again on domestic life, some with a nostalgic look towards the past; others with a derisive look at the present. Films include *My*

Favorite Year (1982), *Down and Out in Beverly Hills* (1986), *Brighton Beach Memoirs* (1987), and *Radio Days* (1987).

Meanwhile Jewish women began to have their say in films such as *The Way We Were* (1973), starring Barbra Streisand; *Hester Street* (written and directed by Joan Micklin Silver); and *Girlfriends* (1978, written and directed by Claudia Weill).

Jewish women came to the fore with great strength, in large measure due to women's participation in production. Beginning with *Private Benjamin* (1980), co-produced and starring Goldie Hawn as the Jewish American Princess who finally grows into an autonomous woman, Jewish women are admirably depicted in *Tell Me a Riddle* (1980), *Baby, It's You* (1983), *Hanna K* (1983), *Yentl* (1983), *St. Elmo's Fire* (1985), *Sweet Lorraine* (1987), and *Dirty Dancing* (1987). Among the Jewish women active in film as directors, screenwriters, and producers were: Barbra Streisand, Susan Seidelman, Claudia Weill, Lee Grant, Joan Micklin Silver, Gail Parent, and Sherry Lansing (who would go on to be chairman of Paramount).

The 1970s also introduced many new types: the Jewish gambler (*The Gambler*, 1974), the Jewish madam (*For Pete's Sake*, 1974), blacklisted artists (*The Front*, 1976), the Jewish gumshoe (*The Big Fix*, 1976), the Jewish lesbian (*A Different Story*, 1978), a Yiddish cowboy (*The Frisco Kid*, 1979), a Jewish union organizer (*Norma Rae*, 1979), a Jewish murderess (*The Last Embrace*, 1979), and an elderly Jew pushed to violence (*Boardwalk*, 1979). *The Frisco Kid* deserves special mention. Despite its high comedy, the film is one of the few Hollywood works to treat Jewish values as a serious topic. Briefly stated, the film shows the confrontation between talmudic piety and American pragmatism, as personified by characters played by Gene Wilder and Harrison Ford, as the two influenced each other as Jew met Gentile in the New Land.

For the rest of the 20th Century Jews assumed a wide variety of roles. From the romantic, such as Billy Crystal in *When Harry met Sally* to non-Jewish Ian McKellen as the evil Holocaust survivor Dr. Magneto in *X-Men* (2000), Jewish actors and Jews on screen took on a democratic smorgasbord of roles. Jewish leading men continue to be few and far between but a new crop of handsome young and versatile actors such as Ben Stiller, Jason Schwartzman, Adam Sandler, and David Duchovny continue to redefine Jewish actors on the screen.

In other areas, some things never change. Just as the non-Jewish Natalie Wood played Marjorie Morningstar, in the romantic comedy from Nancy Meyers, *Something's Got to Give* (2003), Diane Keaton is featured as playing a Jewish woman and Frances McDormand as her sister.

Regarding the Holocaust as a subject for Hollywood, prior to the 1980s, the Shoah was mainly used as a backdrop from which to create thrillers such as *The Odessa File* (1974), *Marathon Man* (1976), and *The Boys from Brazil* (1978). Only *The Man in the Glass Booth* (1975), based on a stage play, stands apart. However, after the successful 1978 TV broadcast of the mini-series *The Holocaust*, a proliferation of Holocaust-themed or related films were made, most notably *Schindler's List* (1993).

Finally, the beginning of the 21st century has been witness to a landmark event: the release of the first animated Chanukah feature-length movie, Adam Sandler's *Eight Crazy Nights*. Sandler's appeal is his endearing cretin-savant aesthetic: although his mind may be trapped in adolescence, his heart inevitably is in the right place.

In sum, 100 years after the start of the movie industry, the landscape is much changed. Born in America, the second, third, and fourth generation of Jews in Hollywood were raised during a time when institutional antisemitism had all but disappeared and where assimilation was not so much a goal as a norm. The melting pot has given way to the multicultural quilt – and religious choice is as varied as the combo plates on a Chinese menu. Jewish actors and directors continue to work in Hollywood making a diverse selection of studio and independent films. They no longer need to hide their religion or ethnicity but they are free to make movies on any subject, Christmas included.

Hollywood belongs to no religion – save a corporate one. The most marked change in the motion picture industry is one regarding ownership. The last several decades of the 20th century has seen tremendous change and consolidation in the motion picture industry. There are almost no truly independent studios, and the studios once owned by Jews are now part of international conglomerates and publicly traded companies. Warner Brothers was acquired by Time-Warner and in 2006 includes such former mini-major studios as New Line and Castle Rock; Disney is a public company that includes the Miramax independent film label and ABC television networks; Fox is owned by Rupert Murdoch's News Corp.; Columbia by the Japanese conglomerate Sony; Universal was sold to Matsushita, then to Edgar Bronfman's Seagram, then to the French utility Vivendi, and then to General Electric which has also acquired the NBC television network. Paramount is owned by Viacom and, as of January 1, 2006, is part of a company that also includes MTV networks.

Stephen Spielberg, Jeffrey Katzenberg and David Geffen launched their own studio in 1994, DREAMWORKS SKG. Although they produced such successful movies as *Shrek*, *Collateral*, *Seabiscuit*, and *Minority Report*, among others, they could not remain independent. They spun off Dreamworks Animation as a public company, and at the end of 2005 they concluded an agreement to sell Dreamworks' movie division to Paramount.

The first generation of Jewish movie moguls owned the studios. On the business side, adding to Hollywood's reputation as a Jewish industry was the fact that many of the talent agencies were founded and staffed by Jews – to mention a few: William Morris (founded by William Morris); MCA, led by Lew Wasserman and Jules Stein; International Creative Management (ICM), managed by Marvin Josephson, and in 2006 by Jeff Berg. One of the most powerful Hollywood agencies was founded by William Morris defectors Michael Ovitz, Ron Meyer, and Bill Haber. CAA is led in 2006 by Richard Lovett. One of the newer agencies is Endeavor, whose founders include Ari Emmanuel.

At the beginning of the 21st century, by contrast, the studios are owned by corporations and controlled in great part by non-Jews. A great many Jewish people have continued to work in Hollywood as executives, agents, and attorneys. They are involved at every level in the creative decisions affecting the movies made in America and seen the world over. But increasingly, they are making those decisions with their eyes on a mass audience and for corporate masters concerned with the bottom line, profits and stock performance. So although there are many Jewish executives, they are merely employees, serving at the whim of the marketplace and their masters.

In this light, it is legitimate to wonder: can the movie industry still be considered Jewish?

[Tom Teicholz (2nd ed.)]

Yiddish films were made in the U.S. from the 1920s. These films, for all their bathos, were a uniquely authentic expression. Although provincial and stylized, they reflected and preserved a Jewish way of life, stressing the unity of the Jewish people, traditional values, belief in human goodness, the triumph of justice, respect for education, and the ideal of the happy family nucleus. The success of Yiddish shorts in Jewish neighborhoods in the late 1930s led to the production of full-length features. The stars of the Yiddish theater, such as Maurice Schwartz, Boris Thomashevsky, and Celia Alder, participated in these films, which were heavily melodramatic and sentimental. The films have a “happy ending” often with a family reconciliation. Religious ceremonies were often portrayed as part of the action. Some of the films were adapted from Yiddish stage classics, such as Hirschbein’s *Green Fields* and Gordin’s *Mirele Efros*.

Serious Yiddish film-making ended in the U.S. at the same time as it was being brought to an end in Poland. The decline of the Yiddish theater in the 1930s in the U.S. was paralleled by a similar trend in the Yiddish cinema. After 1940, the only Yiddish films being produced were made up of vaudeville acts taken from the “Borscht Belt,” the chain of Jewish hotels in the Catskill Mountains hosting vaudeville acts. These, too, dried up within a few years. The end of the Yiddish cinema was inevitable with the disappearance of Yiddish as a spoken language in the younger generation. Moreover, even where the language was still spoken, the naiveté of the Yiddish films had no appeal to an acculturated and sophisticated public.

[Geoffrey Wigoder]

In Britain

Although the proportion of Jews involved in films was much smaller than in America, they made a significant contribution to the British film industry and were among its pioneers. For a long period, American competition made it impossible for the British motion picture to gain a foothold in the world market. It was a Hungarian Jew, Sir Alexander *Korda, who finally pulled the British industry out of the doldrums. Korda had been a pioneer of film making in Hungary and after World War I had worked in Austria, Germany, France, and Hollywood. In 1930 he moved to Britain and founded the London

Films Company, for which he directed and produced some of the best films credited to Britain in the 1930s and the 1940s. His success was due to his fine artistic sense, his ability to build artists from different fields into a working team, and his belief that by employing great British actors and choosing the proper subjects, the British film could be adapted to suit the American market. His greatest success as a director was *The Private Life of Henry VIII* (1933), in which he punctured the formal rigidity associated with royalty; he had other successes in *The Private Life of Don Juan* and in *Rembrandt*. His greatest achievements were as the producer of such films as *The Scarlet Pimpernel*, *Catherine the Great*, *Elephant Boy*, *Lady Hamilton*, and *The Third Man*, which established Britain’s reputation for fine films. His brother, Zoltan Korda, also worked for London Films as a successful director. Sir Michael *Balcon, who was initially in charge of Alfred Hitchcock’s British films, earned his reputation after World War II managing the operations of Ealing Studios. This company created the series of comedies (known as the “Ealing Comedies”) that depict the eccentric British character with subtle humor and irony (such films as *Kind Hearts and Coronets*, *Whisky Galore*, and *The Ladykillers*). Another outstanding producer was Harry Saltzman, a partner in the James Bond series; he later produced mainly war films and, from time to time, low-budget artistic films. Anatole de Grunwald also was a producer of note. A noted young director was John Schlesinger, who was responsible for such films as *Billy Liar*, *Darling*, and *Midnight Cowboy*. Among the outstanding British film actors were Leslie *Howard, Elizabeth *Bergner (who moved from Germany in the 1930s, as did Anton Walbrook), Claire *Bloom, Yvonne Mitchell, Laurence *Harvey, and Peter *Sellers.

[Nahman Ingber]

In France

What is a Jewish film? A film that is produced by a Jewish producer? A film that is made by a Jewish director? A film that has a Jewish theme? One may more specifically ask this question about France, for until the 1950s characters were not identified in French movies by religious or ethnic affiliation. However, after World War II it was impossible to ignore the Jewish presence in France, or the Holocaust.

In 1937, Jean Renoir directed *La grande illusion* (“The Great Illusion”), a pacifist film which depicts a group of French prisoners during World War I. One of them, Rosenthal, is a stereotyped *nouveau riche* Jew who, however, stands by his friends. At the end of the film, one of these friends, played by Jean Gabin, let’s the cat out of the bag. “I never could stand Jews!” he says. This cutting remark and Rosenthal’s ambivalent portrait brought accusations of antisemitism against Renoir. The controversy itself shows all the ambiguity of the Jews’ situation in French society, for Rosenthal is generous and human. In his next film, *La règle du jeu* (“The Rules of the Game,” 1938), the subtle and grand figure of the host goes under the name La Chesnay, but it is clearly said that he is of Jewish origin. It is significant that Marcel Dalio played both these parts. He was himself a Jew and had to leave France in

1940. The cliché about Jews who wish to believe they are accepted in French society is also the main theme of Julien Duvivier's *David Golder* (1931), from Irène Nemirovsky's book. After becoming wealthy, David Goldet is despised by his wife and daughter; he ends his days as a ruined and lonely old man. Unlike Renoir's films, *David Goldet* is undoubtedly antisemitic, echoing all the physical and psychological stereotypes spread by France's extreme right in the 1930s.

From the 1950s, documentaries – made from archives or from witness interviews – shed new light on the Jews' lot in French society during World War II. Thus in *Nuit et Brouillard* ("Night and Fog," 1955) by Alain Resnais, in *Le temps du ghetto* ("The Ghetto Time," 1968) by Frederic Rossif, *Le chagrin et la pitié* ("Distress and Compassion," 1971) by Marcel Ophuls, *Français si vous saviez* ("French Citizens, If Only You Knew," 1973) by André Harris and Alain de Sédouy, French eyes were opened to the realities of French society and the behavior of French politicians toward Jews under the German occupation. In other respects, at the same time Frederic Rossif and Claude Lanzmann made documentaries about Israel.

Some Jewish film makers were interested in making semi-autobiographical films on this period as well. These include Claude Berri (*Le vieil homme et l'enfant*, "The Old Man and the Boy," 1957), Henri Glaeser (*Une larme dans l'océan*, "A Tear in the Ocean," 1973), and Jacques Doillon (*Un sac de billes*, "A Bag of Marbles," 1976, from Joseph Joffo's book). Others produced stories in the context of collaboration: *Le dernier métro* ("The Last Subway," 1980) by François Truffaut tells the story of a Jewish director in Paris who hides in a cellar. Conversely, *Lacombe Lucien* (1974) by Louis Malle – from Patrick Modiano's book – absolves the hero from responsibility (he becomes a militiaman by chance) and depicts Jews as passive victims. Some years later, Malle made *Au revoir les enfants* ("Good Bye, Children"), which expressed feelings of guilt about the persecution of Jewish children. In 2005, *La maison de Nina* ("Nina's House") by Richard Dembo told the story of young survivors of the Nazi camps.

Several documentaries have been made with survivors: *La mémoire est-elle soluble dans l'eau?* ("Is Memory Soluble in Water?" 1995) by Charles Najman and *La petite maison dans la forêt de bouleaux* ("The Little House in the Birch-Tree Forest," 2003) by Marceline Loridan. One must mention too Emmanuel Finkiel's work, especially *Voyages* (1999), dealing with the memory of the Holocaust, moving on, and Jewish identity in the Diaspora and Israel.

There have also been comedies with popular actors like Louis de Funès and Roger Hanin. Their humor and optimism as they show reconciliation among people made them successful films. Such films are *Les aventures de Rabbi Jacob* ("Rabbi Jacob's Adventures," 1973) by Gérard Oury, *Le coup de sirocco* ("Gust of Sirocco," 1979), *Le Grand Pardon* ("Yom Kippur," 1982), and *Le grand carnaval* ("The Great Carnival," 1985), the last three by Alexandre Arcady. *La vérité si je mens* ("Damn It If I'm Lying," 1996) by Thomas Gilou gives Jewish humor a different perspective with a Sephardi contribution

dealing with North African Jews who settled in France from the 1960s. And Claude *Lelouch evokes men and women of all origins who are thrown into distress by History.

The most highly acclaimed of all these Jewish films was undoubtedly Claude *Lanzmann's masterpiece, *Shoah* (1985).

[Annie Goldmann (2nd ed.)]

In Germany

As in the United States, the impetus to produce films catering to popular taste in Germany came from Jewish owners of a chain of theaters. In 1913 Paul Davidson and Hermann Fellner, who had been exhibiting films since 1905, established their own production company and made films based on German folklore and legend, as well as comedies (it was for this company that Ernst Lubitsch made his early films). In 1919 Erich Pommer directed the Deutsches Eclair (Decla) film company, which some time later merged with UFA, a company that produced outstanding German films in the 1920s and the early 1930s. Pommer remained at the head of the company and determined the style and quality of the films in this period. He went in for daring artistic experiments and provided ample opportunity for talented film people to prove their mettle. As a result, the German film became the most advanced of its time; this was, in fact, the golden age of the German film industry. Lubitsch began his career with a series of comedies (some of them against a Jewish background) and then turned to the direction of light-hearted historical films. His overwhelming success resulted in his being invited to the United States. Another film produced by Pommer, *The Cabinet of Dr. Caligari*, which became a prestigious success for the German cinema, was written by Hans Janowitz and Carl Mayer. In general, Jews made a great contribution to the German cultural life in the 1920s and participated in the avant-garde artistic experimentation of this period. The painter Hans Richter produced experimental and abstract films and was a pioneer of this genre. The leading German-Jewish film director was Fritz *Lang, whose films are a marvelous portrayal of the social and cultural atmosphere prevailing in Germany at the time. They include *Der müde Tod* ("The Weary Death"), based on a medieval legend; two films based on the Nibelungen saga; two terror films; *Metropolis*, sharply critical of various aspects of industrial society; and *M*, the story of the Duesseldorf child murderer, which was Lang's last German film. When Hitler came to power, the Jews working for the German film industry were forced to flee the country. Most of them found their way to Hollywood, others to London, Paris, and Prague.

In Poland

Before the rise of the Jewish state, Poland was the only country that offered possibilities for the development of a Jewish film industry. Attempts to create a Jewish film tradition began before World War I, when film versions were made of the plays of Jacob *Gordin. Mark Tovbin, a pioneer in the field, filmed *Mirele Efros* with Esther Rachel *Kaminska in the title role and other members of her family in the cast. Nahum

Lipovski filmed Gordin's play *Hasa die Yesoeme* ("Hasa the Orphan") with Esther Lipovska as the orphan. It was not until the 1920s, however, that attempts at making films were resumed. In 1924 Leah Farber worked with Henrik Baum, as scenario writer, on producing films on Yiddish folk themes. Among them was *Tkies-Kaf* ("The Hand Contract"), based on a legend similar to that of *The Dybbuk*, directed by Zygmunt *Turkow, who also played the role of Elijah. Other roles were played by Esther Rachel Kaminska, her daughter Ida, and her granddaughter Ruth Turkow, then a child. In 1927 the same company filmed another legendary story, *Der Lamedvovnik* ("One of the Thirty-Six"), by H. Baum, starring Jonas *Turkow and directed by Henryk Shara (Shapira). In 1929 a company known as Forbert – after Leo Forbert, the first Jewish film producer after the war – filmed a version of Josef *Opatoshu's novel *In the Polish Woods*, with H. Baum as screenwriter, Jonas Turkow as director, and Dina Blumenfeld and Silver Rich in the leading roles.

The first Yiddish talking pictures were made in 1932, when Itzhak and Shaul Goskind formed a company known as Sektor and made documentaries of the Jewish communities in Warsaw, Lodz, Vilna, Lvov, Cracow, and Bialystok and then undertook popular productions with S. Dzigian and I. Szumacher. They produced *Al Khet*, with screenplay by the writer Israel Moshe Neiman, directed by A. Marten, with Rachel Holtzer and A. Morewski in the leading roles; *Un'a Heim* ("Without a Home," by A. Kacyzne), directed by Alexander Marten, with Ida Kaminska and the Dzigian-Szumacher partnership; and *Freylikhe Kabtsonim* ("The Merry Beggars"), a story by Moshe *Broderzon, with Zygmunt Turkow, Dzigian-Szumacher and Ruth Turkow in the cast. They also did a documentary called *Mir Kumen On* ("We're on the Way"), directed by Alexander Ford. Ford also did *Sabra* (1933).

Films of distinction were Josef Green's productions *Yidl mit'n Fidl*, lyrics by Itzik *Manger, starring Molly *Picon; *Mammele*, also starring Molly Picon; *Purim Shpiler*, with Z. Turkow, Anya Liton, L. Samberg, and Miriam Kressin (screenplays by Konrad Tam) and *A Brivele der Mammen*, written by M. Osherowitz (screenplay by A. Kacyzne) and directed by L. Tristan. This was the last Yiddish film made in Poland before the outbreak of World War II. Leo-Film did a talking version of *Tkies-Kaf* in 1937 with scenario by H. Baum, direction by Henrik Shara, and Z. Turkow as Elijah. *An-Sky's *Dybbuk* was also filmed in 1937, with a scenario by Katzisne, direction by Michal Vashiasky, and a cast including A. Morewski, Isaac Samberg, Moshe Lipman, Lili Liliana, and L. Leo Libgold. After World War II a cooperative, "Kinor," for Yiddish-speaking films was organized in Lodz by Shaul Goskind and Joseph Goldberg. From 1946 until 1950 two full-length films and about 12 shorts were produced including *Unzere Kinder*, which was made with Nusia Gold, Dzigian-Szumacher, and orphans from Alenuwek (Lodz). In 1951 "Kinor" was liquidated and the members left, mostly for Israel. The Polish State Film produced a work on the Warsaw Ghetto, *Ulica Graniczna*

("Border Street"), directed by A. Ford. Subsequently, several documentaries were made in Yiddish by American producers. Post-World War II film artists who did not specifically deal with Jewish themes were Alexander Ford (later in Israel) and Roman Polanski (who settled in the U.S. in the 1960s).

In the U.S.S.R.

Jews also took a large part in the motion picture industry in the U.S.S.R. Foremost among them was Sergei *Eisenstein, the great genius of the Soviet cinema, whose contribution to the progress made by motion pictures probably exceeds that of any other single film artist. His films, including *Battleship, Strike, Alexander, Old and New, October, Potemkin, Ivan the Terrible* (1 and 2), and *Alexander Nevski*, are still regarded as high achievements of the motion picture art and are studied by scholars and artists alike. His theories on the cinematic art, published in several volumes, remain an outstanding expression of motion picture aesthetics. The formalist experiments made by Eisenstein in the 1920s provoked the ire of the Soviet authorities and caused him great hardship throughout the 1930s and 1940s; the controversy over *Ivan the Terrible* shortly preceded his death. Other Jews who entered the Soviet motion picture industry in the 1920s were Friedrich Ermler, Abraham Room, Mikhail Romm, Juli Raizman, Leonid Trauberg, Esther Schub, and L.O. Arnshtam. They sought formal solutions to the artistic problems encountered, and when socialist realism became the prescribed doctrine, they were forced to compromise with the new conditions. A noted Jewish director was Dziga Vertov, a native of Poland, whose real name was Dennis Kaufman and whose brother, Boris Kaufman, was a well-known American cameraman. In 1924 Vertov propounded the theory of *Kino-Glas* ("Cinema-Eye"): *Kino-Glas* films were made outside the studio without actors, set, or a script. "They are written by the camera in the purest cine-language, and are completely visual." Vertov became the father of the documentary film, and his newsreels, "*kino pravda*," were the forerunners of *cinéma-verité*.

A number of Jewish directors were also active in the 1930s, including Yosif Heifitz and Alexander Zarkhy (who worked as a team for some time), Yosef Olshanski (also a scriptwriter), Samson Samsonov, and Yakov Segal. Yiddish motion pictures flourished in the Soviet Union in the 1930s, centering on the great Yiddish actor Shlomo *Mikhoels (who was later murdered during the Stalin purges), whose outstanding films were *King Lear* and *Menahem Mendel*.

Other European Countries

In other countries of Eastern Europe Jewish motion picture directors came to the fore after World War II, when film production first entered a serious phase of development. In Czechoslovakia Jan Kádar directed *Shop on Main Street*, and Milos Forman earned his reputation with such comedies as *Peter and Pavla, Firemen's Ball*, and *Loves of a Blonde*. A Swedish director named Mauritz Stiller became famous in the 1910s and 1920s for the style, humor, and aesthetic feeling of his films. His claim to fame now rests on his discovery of Greta

Garbo, whom he accompanied to the United States where he died soon after his arrival.

MOTKE ḤABAD (c. 1820–c. 1885), Lithuanian jester (*badḥan). Motke (familiar form of Mordecai) was the most famous jester of Lithuania, the counterpart to Hershele *Ostropoler of Galicia. He eked out a poor living by acting as *badḥan* at weddings and other festive occasions, and his barbed wit, directed against the rich and the powerful, as well as his practical jokes, constituted a form of social protest, reflecting the condition of Jews in Russia generally and of the poor within the Jewish community. His subjects include government bureaucracy, autocratic powers exercised both by lay and religious authorities, the shrewish woman, and particularly the affluent and miserly. Collections of anecdotes and sayings ascribed to Motke, however, include many of apocryphal nature. Various suggestions have been made as to the name Ḥabad, which is identical with that of the Lithuanian *ḥasidic sect. One is that it is a distortion of his family name Hobat, another that he married into a Ḥabad family, and a third that it was a satirical anti-ḥasidic designation coined by Haskalah intellectuals, whereby Badḥan was changed to Ḥabad.

Whereas in Jewish folklore Hershele Ostropoler is the hero of the prankish deed, Motke is more the master of the biting witticism; but both were directed against those who hold the reins of wealth and power.

[Gershon Winer]

MOTTELSON, BEN R. (1926–), U.S. and Danish physicist and Nobel laureate was born in Chicago and received his B.S. from Purdue University, Indiana (1947), and his Ph.D., supervised by Julian Schwinger, from Harvard University (1950). He worked at the Institute for Theoretical Physics (later the Niels Bohr Institute) in Copenhagen (1950–53), followed by a period working with the theoretical group of the European Organization for Nuclear Research (CERN). In 1957 he was appointed professor at the newly established Nordic Institute

for Theoretical Atomic Physics in the same city (1957). With Aage Bohr, Mottelson investigated the structure of nuclei by theoretical and experimental means and established that a rotational spectrum and particle pairing account for the energy levels in nuclei. These observations had an important influence on subsequent particle physics and the elucidation of superconductivity. Mottelson and Bohr were awarded the 1975 Nobel Prize in physics, shared with James Rainwater. Mottelson subsequently made important contributions to understanding nuclear pairing and rotation and shell structure in metallic atom clusters. He married Nancy Jane Reno (1948) and they and their three children became Danish citizens in 1971.

[Michael Denman (2nd ed.)]

MOTTL, FELIX JOSEF (1856–1911), German conductor and composer. Born near Vienna, Mottl studied with Anton Bruckner and Joseph Hellmesberger. When he was 24, Liszt conducted his first composition, the opera *Agnes Bernauer*, at Weimar. From 1881 to 1903 he was court conductor and then *Generalmusikdirektor* at Karlsruhe, acquiring a brilliant reputation. For the next four years he was conductor of the opera at Munich, making the city a center of operatic life. Mottl devoted himself to the interpretation of the works of Berlioz, Peter Cornelius, and Wagner. In 1887 he appeared at the Wagner festival at Bayreuth and in 1890 presented the first full production of Berlioz' *Les Troyens* at Karlsruhe. He also conducted in London and New York. Mottl's compositions include three operas, lieder, and chamber music, but he is best remembered for his orchestral arrangement of works by Lully, Rameau, Mozart, and Gluck, and for his piano reductions of Wagner's operas.

[Judith Cohen]

MOTZKIN, LEO (Aryeh Leib; 1867–1933), Zionist leader and protagonist of the struggle for Jewish rights in the Diaspora. Born in Brovary, near Kiev, Motzkin received a traditional Jewish education and witnessed in his youth the Kiev pogrom in 1881. He studied in Berlin where he was among the founders of the Russian-Jewish Scientific Society (1887), whose members were Jewish students from Russia and Galicia who supported the *Ḥibbat Zion movement. They conducted heated debates with the majority of the Russian Jewish students, who were attracted to socialism and cosmopolitanism. When he completed his studies, Motzkin abandoned his opportunities for a scientific career and devoted himself to activities for the Jewish national cause. He was one of the strongest critics of the methods of Ḥovevei Zion and, with the appearance of Theodor *Herzl, Motzkin immediately joined the newly formed Zionist Organization at the First Zionist Congress and headed a group of delegates that demanded a clear and decisive wording of the *Basle Program. Before the Second Congress, Herzl sent him to Erez Israel, and in his report to the Congress Motzkin criticized the settlement methods of Baron de *Rothschild and the Ḥovevei Zion and called for a

political agreement with the Ottoman government. Despite his ideological closeness to Herzl, he joined the *Democratic Fraction, which he represented at the Fifth Zionist Congress (1901) and at the Conference of Russian Zionists in Minsk (1902). He kept aloof from the controversy over the *Uganda Scheme because of his deep attachment to Erez Israel, on the one hand, and the urgent need to help the oppressed Jewish masses, on the other.

In 1905 Motzkin anonymously edited the revolutionary Russian *Russische Korrespondenz*, which was published in Berlin and provided West European newspapers with information on Russia in a radical spirit. He dedicated considerable space to the fate of the Jews and the anti-Jewish excesses. The Zionist Organization requested Motzkin to publish a book on the wave of pogroms in Russia; it was written for the most part by Motzkin himself (signed A. Linden) and was published in two parts in 1909–10 under the name *Die Judenpogrome in Russland*. The book contained thorough research into anti-Jewish violence in Russia from the beginning of the 19th century to its climax during the Russian Revolution of 1905–06, including descriptions of pogroms in various areas and towns and stressed the role of Jewish *self-defense. In 1912 Motzkin's pamphlet *The Legal Sufferings of the Jews in Russia* came out in an English translation by an anonymous author. It was also distributed in Russian among the Duma delegates in St. Petersburg. During the *Beilis trial (1911–13), Motzkin organized an information service in West European countries and Russia and spurred public figures to speak out against the blood libel. At the same time, he was a leading activist in the Hebrew language movement and among the first to speak Hebrew at conferences and meetings devoted to this subject. During World War I, he was head of the Copenhagen Office of the World Zionist Organization and the liaison between the various Zionist organizations in the warring countries. At the end of 1915 he left for the United States to mobilize support for the Jewish war victims on the East European front, and also for the struggle to ensure equal rights for the Jews of Russia. At the end of the war, Motzkin demanded that the Zionist Movement also concern itself with the civil rights of the Jews in the Diaspora. Thus, he took a leading part in the establishment of the *Comité des Délégations Juives at the Paris Peace Conference, to which various Jewish bodies were affiliated, including the World Zionist Organization, and which later became a standing institution at the League of Nations, serving as a world Jewish representative for all affairs other than those connected with Erez Israel. In the following years as well, Motzkin continued to direct the committee, which concerned itself particularly with the struggle against antisemitism (inter alia with the legal defense of Shalom *Schwartzbard for the assassination of Simon *Petlyura, who was held responsible for the pogroms in the Ukraine) and with the defense of Jewish rights. For this purpose he was active in the movement supporting the League of Nations and in the international Congresses of National Minorities. He did not abandon his Zionist work, however, and served as perma-

nent chairman of the Zionist General Council and of many Zionist Congresses.

When the Nazis came to power in Germany, Motzkin headed the anti-Nazi struggle of the Jewish people and brought the oppression of German Jewry before the League of Nations. When, under pressure from the German ethnic minorities in other countries, the Congress of National Minorities refused to deliberate on the situation of German Jews under the Nazis, Motzkin withdrew from the organization. He died in the midst of feverish activity to ensure political and financial aid to German Jewry. In 1939 *Sefer Motzkin*, including a selection of his writings and speeches, was published together with a monograph on him by the editor, A. Bein.

His son THEODORE SAMUEL (1908–1970) was a mathematician and educator. Born in Berlin, from 1936 to 1948 he taught at The Hebrew University, Jerusalem. He settled in the United States in 1948 and was a research fellow of Harvard University from 1948 to 1950, after which he was a professor and research mathematician at the University of California. He contributed to the subjects of inequalities, approximation, polynomials, and geometry. He wrote *Contributions to the Theory of Linear Inequalities*.

[Yehuda Slutsky]

MOUNTAIN JEWS, a Jewish ethnic and linguistic group living mainly in *Azerbaijan and Daghestan. The name "Mountain Jews" emerged in the first half of the 19th century when the Russian Empire annexed those territories. It is supposed that the name derives from "mountain of the Jews" (*Chufut* or *Dzuhud Dag* in the Tat language), an ancient name of Daghestan, indicating its large Jewish population.

The Mountain Jews call themselves *Juhur*. According to estimates based on the Soviet censuses of 1959 and 1970, they numbered between 50,000 and 70,000 in 1970. Of these, 17,109 registered as Tats in the 1970 census, so as to escape being registered as Jews and discriminated against by the authorities. About 22,000 did so in the 1979 census.

They speak several dialects (similar to each other) of the Tat language (see *Judeo-Tat), which belongs to the western branch of the Iranian languages group.

Their main centers of settlement are: in Azerbaijan, *Baku, capital of the republic, and the town of Kuba where the majority of Mountain Jews live in the suburb of Krasnaya Sloboda which has an all-Jewish population; in Daghestan, *Derbent, Makhachkalah, capital of the republic (which was called Petrovsk Port until 1922), and Buynaksk (Temir-Khan Shurah prior to 1922). Outside Azerbaijan and Daghestan, considerable numbers of Mountain Jews live in Nalchik, in the suburb of Yevreyskaya Kolonka, and also in the town of Grozny.

Linguistic and indirect historical evidence indicates that the community of Mountain Jews was formed as a result of

constant emigration of Jews from northern Persia – and perhaps also from nearby regions of the Byzantine Empire – to the Transcaucasian Azerbaijan, where they settled in its eastern and north-eastern regions among a population speaking the Tat language which they also adopted in time. The Talmud mentions a Jewish community in the city of Derbent as early as the third century C.E., and the *amora* R. Simeon Safra taught there (TJ, Meg. 4, 5, 75b).

The immigration of the Jews evidently began when the Muslims invaded those regions in 639–643, and it continued for the whole period from the Arab to the 13th-century Mongol invasion. Apparently the main waves of migration ceased in the early 11th century under the impact of the mass invasion of a Turkic nomadic tribe. This intrusion might also have forced many of the Tat-speaking Jewish inhabitants of Transcaucasian Azerbaijan to move further north to Daghestan.

There they contacted remnants of the *Khazars who had adopted Judaism in the 8th century. Already in 1254 the monk Wilhelm Rubruquis, a Flemish traveler, noted the existence of “a great number of Jews” throughout eastern Caucasus, in both Daghestan and Azerbaijan.

The Mountain Jews had contacts with the Jewish communities of the Mediterranean region. Tagriberdi (1409–1470), the Muslim historiographer from Egypt, wrote of Jewish merchants from “Circassia” (i.e., from Caucasus) visiting Cairo. Through such contacts printed books reached the Mountain Jews. In the town of Kuba books were preserved until the beginning of the 20th century that had been printed in Venice in the late 16th and early 17th centuries.

From the 14th to the 16th centuries European travelers did not reach those regions, but rumors spread in Europe in the 16th and 17th centuries about “nine and a half Jewish tribes” driven by “Alexander the Great” behind the Caspian Mountains, i.e., into Daghestan. Those rumors might have originated with Jewish merchants from the eastern Caucasus appearing at the time in Italy. N. Vitsen, a Dutch traveler, who visited Daghestan in 1690 found many Jews there, especially in the village of Buynak, not far from the present Buynaksk, as well as in the Khanate of Qaraqaitagh where, according to him 15,000 Jews lived. The 17th and early 18th centuries can perhaps be considered for the Jews a period of relative peace and prosperity. A solid area of Jewish settlement existed in the north of present-day Azerbaijan and in southern Daghestan, in the region between the towns of Kuba and Derbent. A valley near Derbent, called by the Muslim Juhud-Kata (Jewish Valley), was inhabited evidently mainly by Jews. Its largest settlement, named Aba-Sava, served as the spiritual center of the community. Several *piyyutim* (liturgical poems) written in Hebrew by Elisha ben Samuel, who lived in the region, have been preserved. Also in Aba-Sava there lived a scholar called Gershon Lalah ben Moses Naqdi who wrote a commentary on Maimonides’ *Mishneh Torah*. Mattathias ben Samuel ha-Kohen from Shemakha to the south of Kuba wrote between 1806 and 1828 a kabbalistic work, *Kol Mevasser*, which is the last evidence of religious creativity in Hebrew in the community.

From the second half of the 18th century, the situation of the Mountain Jews severely deteriorated as the result of the struggle to conquer their region involving Russia, Persia, Turkey, and a number of local rulers. The Persian commander Nadir, who later became the Shah of Persia (1736–47), managed in the early 1730s to drive the Turks out of Azerbaijan and successfully to withstand Russian efforts to possess Daghestan. Several settlements of Mountain Jews were almost entirely destroyed by his troops; a number of others were partially demolished and plundered. The Jews saved from destruction settled in the town of Kuba under the protection of its ruler Khan Hussein. In 1797 or 1799 Surkhan-Khan (the Muslim ruler of *qazimuqs* or *laks*) attacked Aba-Sava and, after a bitter battle in which 157 defenders of the settlements perished, killed all the male prisoners, took the women and children prisoners, and destroyed the settlement. Thus the settlements of the Jewish valley came to an end. Those Jews who were so fortunate as to remain alive found refuge in Derbent under the protection of the local ruler, Fatkh-Ali-Khan, whose lands stretched to the town of Kuba.

In 1806 Russia annexed Derbent and the surrounding areas. In 1813 Transcaucasian Azerbaijan was annexed, the formal right to possession being finalized in 1828. Thus the majority of Mountain Jews who lived in these regions found themselves under Russian rule.

In 1830 a rebellion against Russia broke out in Daghestan, except for the coastal region including Derbent. The rebellion, headed by Shamil, continued with interruptions up to 1859. Its slogan was *Jihad* – holy war against non-believers, i.e., non-Muslims. Grave assaults on Mountain Jews occurred: the inhabitants of a number of *auls* (villages) were forced to convert to Islam, and in time they merged completely with the surrounding population. However, for several generations, the memory of their Jewish origin lingered. In 1840 the community heads of Mountain Jews in Derbent appealed to Czar Nicholas I in a petition (in Hebrew) beseeching the Russians to “gather the Jews dispersed in the mountains, the forests, and little villages, suffering under Tatars” (meaning the rebellious Muslims) “and settle them in towns and settlements” (meaning in areas controlled by the Russians).

The turning of the Mountain Jews to Russia for protection did not lead to immediate changes in their situation, occupations, or community structure.

Such changes emerged slowly only toward the end of the 19th century. In 1835, of 7,649 Mountain Jews under Russian rule 58.3% were involved in agriculture and 41.7% were urban dwellers. The town population, however, also engaged to a considerable extent in agriculture, mainly in viticulture and wine-making, especially in Kuba and Derbent; they also grew rubia, a plant from the roots of which red paint was extracted.

The rich families among the Mountain Jews were wine producers: the Hanukaevs, owners of a company for producing and selling wine, and the Dadashevs, who, besides wine production, founded the largest fishing company in Daghestan.

The raising of rubia was almost entirely dropped by the

early 20th century due to the development of aniline dye production; most Mountain Jews who had been involved in the business lost their property and became casual workers. This became their job mainly in Baku, where the number of Mountain Jews increased only toward the end of the 19th century, and to some extent also in Derbent, where the bankrupt Jews turned mostly to door to door trading or became seasonal fishing workers.

Almost all the Mountain Jews engaged in viticulture worked also in gardening. In some settlements of Azerbaijan they grew tobacco, and in Qaitagh and Tabasaran (Daghestan) they were engaged in land cultivation, an occupation which was also common in several villages of Azerbaijan.

In some of the villages their main employment was leather processing. This branch came to a standstill in the early 20th century when the Russian authorities forbade Mountain Jews to enter Central Asia where they used to buy the raw skins. A significant part of the leather processors became town laborers.

The number of Mountain Jews in petty trade, including peddling, was relatively small in the initial period of Russian power, but grew significantly from the late 19th century. The few affluent Jewish merchants lived mainly in Kuba and Derbent, and from the end of the 19th century they also began to settle in the towns of Baku and Temir-Khan-Shura, where they most notably dealt in textiles and carpet selling.

In his travel book *Sefer ha-Massa'ot be-Erez Kavkaz* (1886), Joseph Judah *Chorny, who traveled in the Caucasus for eight years (1867–75), gives detailed information on the life and settlements (about 30 at the time) of the Mountain Jews. Another valuable source is the book of the Russian writer Nemirovich-Danchenko (*Voinstvuyushchii Izrail*; "Fighting Israel," 1886), in which he records his vivid impressions of his stay among the tribe. The Mountain Jews were then simple people, mostly illiterate, but proud, courageous, and freedom-loving. Farmers and hunters, they always carried a dagger or similar weapon in their typical Caucasian dress. The Tat Jews were prepared at any time to defend by their sword their family or their honor. Their dwellings were low mud huts, whose inside walls were hung with polished weapons. The synagogue, its exterior resembling a mosque, served as a *heder* for the children. Sitting on the floor they learned the Torah by heart from the *hakham*. Of the Jewish festivals, Purim and Passover were especially celebrated. Their Passover **seder* had a special form differing from the traditional *seder*. During the night of *Hoshana Rabba the girls used to dance; according to Tat tradition, this is the night when a man's fate is decided. The marriage ceremony contained foreign influences, and the circumcision ceremony was generally held in the synagogue. Tat family names are mostly biblical names, to which the Russian suffix "ov" was added, e.g., Pinkhasov, Binyaminov, etc. The custom of the vendetta was practiced until recently.

The main social framework of the Mountain Jews up to the end of the 1920s was a large family unit encompassing three or four generations and reaching 70 or more people in

number. As a rule, the extended family lived around a large single "yard" where each nuclear family, consisting of a father and mother with their children, occupied a separate house. The Mountain Jews practiced polygamy, and two or three wives at a time were common up to the Soviet period.

If a nuclear family consisted of a husband and two or three wives, then each wife with her children occupied a separate house. The father was head of the family, and after his death was succeeded by his eldest son. The head of the family took care of the property shared by all members of the family. He also fixed the work schedule for all the men in the family and his authority was beyond question.

The mother of the family, or in the polygamous families the first wife of the father, conducted the household and watched over the housework: cooking the food for all the family, cleaning the yard and the house, and so on.

Several large families originating from the same ancestor formed the broader and loosely connected community, *tukhum* (literally "seed"). Family links were of special importance in vendettas; if the murderer appeared Jewish and the relatives did not manage to avenge the blood of the victim within three days after the murder, then the families of the murderer and the victim reconciled and considered themselves tied by the bonds of blood kinship.

The population of the Jewish village consisted as a rule of three to five large families. The head of the rural community originated from the most respected or most numerous family of the settlement.

In the towns the Jews lived in special suburbs as in Kuba, or in a separate Jewish quarter as in Derbent. From the 1860s Mountain Jews began to live in towns where they had never lived before (Baku, Temir-Khan-Shura), and in towns founded by the Russians: Petrovsk Port, Nalchik, and Grozny. Such moves often resulted in the disintegration of the structure of the large family, for only part of it – one or two nuclear families – moved to a new settlement. Even in the towns where Mountain Jews had lived for a long time, such as Kuba and Derbent (but not in the villages), the process of the disintegration of large families began toward the end of the 19th century.

Precise data on the administrative structure of urbanized Mountain Jews is available only for Derbent, where the community was headed by three elected members. One of these took the post of head and the two others served as his deputies. They were responsible both for the relations with the authorities and for the internal affairs of the community.

The rabbinical hierarchy had two levels: "rabbi" and "dayyan." The rabbi served as *hazzan* and preacher in the *namaz* (synagogue) of his village or his quarter of the town, and also as a teacher in *talmid-khuna* (*heder*) and as religious slaughterer (*sho'het*). The *dayyan* was the chief rabbi of the town: he was elected by the leaders of the community and was the highest religious authority not only for his town, but also for the neighboring settlements; he chaired the religious court (**bet din*). He was also the *hazzan* and preacher in the main synagogue of the town and headed the yeshivah.

The level of halakhic knowledge among the yeshivah graduates was about that of a ritual slaughterer elsewhere, but they were reverently called “rabbi.” From the middle of the 19th century a number of Mountain Jews studied in Ashkenazi yeshivot in Russia, mostly in Lithuania; there they were granted only the title of *shohet* but, on returning to the Caucasus, they served as rabbis. Very few of these Jews who studied in the yeshivot of Russia received the title of rabbi. From the mid-19th century, the Czarist authorities acknowledged the *dayyan* of Temir-Khan-Shura as the chief rabbi of northern Daghestan and northern Caucasus, and the *dayyan* of Derbent as chief rabbi of southern Daghestan and Azerbaijan. Besides their traditional duties, they acted as **kazyonny ravvin* (official rabbis in behalf of the authorities).

In the pre-Russian period, relations between the Mountain Jews and Muslims were determined by the so-called Covenant of *Omar, the special set of Islamic directives regarding **dhimmis* (non-Muslim protected citizens). However, the application of those laws in these regions was accompanied by special humiliation since the Mountain Jews depended to a great extent on the local ruler. According to the description of the German traveler I. Gerber, published in 1728, they had to pay a special ransom to the Muslim rulers for protection. Moreover, they had “to perform all kinds of difficult, dirty jobs which could not be enforced on a Muslim.” The Jews had to give the ruler some of their yields free of charge: tobacco, rubia, tanned skins, and so on; they worked on his fields in harvest time, built and repaired his house, did gardening jobs, and were engaged in his vineyard. They also gave the ruler their horses on special occasions. Muslim soldiers who were feasting in the house of a Jew could demand money from their host “for causing them toothache.”

Up to the end of the 1860s the Jews of certain mountain regions in Daghestan continued to pay ransom to the previous Muslim rulers of those regions, or to their descendants to whom the Czarist government has given rights equal to Russian noblemen, leaving the estates in their possession.

*Blood libels occurred in these regions only after they came under Russian rule. In 1814 disturbances occurred as the result of a blood libel in Baku; the Jews affected, mostly originating from Iran, fled to Kuba for protection. In 1878 on a similar allegation, dozens of Kuba Jews were arrested, and in 1911 the Jews of the settlement of Tarki suffered after being accused of kidnapping a Muslim girl.

The first contacts between the Mountain Jews and Ashkenazi Jews were established in the 1820s or 1830s. These links were reinforced and became more frequent only after regulations appeared which allowed those Russian Jews permitted to live outside the Pale of Settlement to move to areas where Mountain Jews were living.

In the 1870s the chief rabbi of Derbent, R. Jacob Itzhakovich-Yizhaki (1848–1917) contacted a number of Jewish scholars living in St. Petersburg. In 1884 R. Sharbat Nissim-Oghly, the chief rabbi of Temir-Khan-Shura, sent his son Elijah to the Higher Technical School in Moscow, and he became the first

Mountain Jew to receive higher secular education. In the early 20th century Russian-language schools, where both religious and secular subjects were taught, were opened for Mountain Jews in Baku, Derbent, and Kuba.

Already in the 1840s or 1850s the yearning for the Holy Land led some Mountain Jews to Erez Israel. In the 1870s and 1880s Jerusalem emissaries regularly visited Daghestan to collect **halukkah* money. In the second half of the 1880s a Kolel Daghestan (Daghestan congregation) already existed in Jerusalem. R. Sharbat Nissim-Oghly settled in Jerusalem at the end of the 1880s or in the early 1890s. In 1894 he issued there a brochure, *Kadmoniyot Yehudei he-Harim* (“The Ancient Traditions of the Mountain Jews”). In 1898 representatives of the Mountain Jews participated in the Second Zionist Congress in Basle. In 1907 R. Jacob Itzhakovich-Yizhaki moved to Erez Israel and headed a group of 56 founders – mostly Mountain Jews – of the settlement Be’er Ya’akov near Ramleh, which is named for him.

Another group tried without success to settle in Maḥanaim in Upper Galilee in 1909–1911. Ezekiel Nisanov, who went to the country in 1908, became a pioneer of the *Ha-Shomer organization and was killed by the Arabs in 1911. His brothers Judah and Zevi also joined Ha-Shomer. Before World War I, the number of Mountain Jews in *Erez Israel* reached several hundred, most of them living in the Beth Israel quarter of Jerusalem.

Asaf Pinhasov became an active advocate of Zionism among the Mountain Jews at the beginning of the 20th century. In Vilna he published in 1908 his Judeo-Tat translation from the Russian of Joseph Sapir’s book *Zionism*, the first book published in the language of the Mountain Jews.

The varied Zionist activities in Baku during World War I attracted Mountain Jews. After the 1917 February Revolution, these activities gained some momentum. Four representatives of the Mountain Jews, one of them a woman, participated in the Conference of Caucasian Zionists, in August 1917.

In November 1917, the Bolsheviks seized power in Baku, but in September 1918 the independent Azerbaijan Republic was proclaimed. These changes left Zionist activity undisturbed up to the second Sovietization of Azerbaijan in 1921. The national Jewish Council of Azerbaijan, headed by Zionists, established the Jewish People’s University in 1919 and Mountain Jews were among the students. In the same year the Regional Caucasian Zionist Committee started to issue in Baku a Judeo-Tat newspaper called *Tobushi sabahi* (“Twilight”). Among the Zionists, Gershon Muradov and Asaf Pinhasov were outstanding.

The Mountain Jews in Daghestan viewed the struggle between Soviets and the local separatists as the continuation of the traditional fight between Russians and Muslims, and they therefore mostly sympathized with the Russians, i.e., with the Soviet rule. Seventy percent of the Red Guards of Daghestan were of the Mountain Jews. The Daghestan separatists and their Turkish supporters, for their part, destroyed Jewish settlements and massacred their population. Consequently

the majority of Jews living in the mountains had to move to towns situated along the coast of the Caspian Sea, mainly to Derbent, Makhachkalah, and Buynaksk.

After Soviet power established itself in Daghestan, anti-semitism did not disappear. In 1926 and 1929 the Jews faced blood libels, that of 1926 being accompanied by pogroms.

In the early 1920s, about 300 families of Mountain Jews from Azerbaijan and Daghestan managed to leave for Palestine. The majority of them settled in Tel Aviv where they established a Caucasian quarter. (One of the outstanding leaders of this immigration was Yehuda Adamovich, father of Yekutiel Adam, deputy chief of staff of the Israeli Defense Forces who was killed in the 1982 Lebanon War.)

In 1921–22 organized Zionist activities among the Mountain Jews were disrupted; immigration to Erez Israel also subsided. In the period between the end of the Civil War in Russia and World War II, the main goal of the Soviet authorities for the Mountain Jews was their productivization and eradication of religious feeling. With the former objective, Jewish collective farms were established. Two Jewish collective farms were founded in the settlements of Bagdanovka and Ganshtakovka where about 320 families worked in 1929. The settlements were situated in the North-Caucasian Territory, presently Krasnodar Territory. In 1931 about 970 Mountain Jewish families were drawn into collective farms in Daghestan. In Azerbaijan collective farms were established in Jewish villages and in the Jewish suburb of the town of Kuba. In 1927 members of 250 Mountain Jewish families became collective farmers in the Republic.

However, toward the end of the 1930s the Mountain Jews began to abandon collective farming, although many Jewish collective farms were still in existence after World War II: in the beginning of the 1970s about 10 percent of the community members remained in collective farms.

As far as religion was concerned, the authorities preferred not to destroy it immediately, in accordance with their general policy in the eastern provinces of the U.S.S.R., but to undermine religious tradition gradually by secularizing the community. For this purpose a wide network of schools was established, and special attention given to indoctrinating youth and adults in the framework of clubs.

In 1922 the first Soviet newspaper in Judeo-Tat appeared in Baku called *Karsokh* (“Worker”). It was sponsored by the Caucasian Regional Committee of the Jewish Communist Party and its Youth Section. The Poalei Zion newspaper did not find support among the authorities and soon ceased to exist. In 1928 another Mountain Jewish newspaper appeared called *Zahmatkash* (“The Laborers”) and it was issued in Derbent. From 1929 to 1930 Judeo-Tat was given in the Latin script instead of Hebrew, and from 1938 the Russian (Cyrillic) alphabet has been used. In 1934 the Tat Literary Circle was established in Derbent, and in 1936 a Tat Section was created in the Union of Soviet Writers of Daghestan. In 1926, the only census that registered Tats, they numbered 25,866, and probably reached 35,000 persons by 1941. Works by Mountain

Jewish writers of the period evince strong Communist indoctrination, especially in drama which was considered by the authorities as the most effective propaganda weapon. As a result, amateur theatrical groups proliferated and later, in 1935, the professional Mountain Jewish theater opened in Derbent.

During World War II the Germans for a short time occupied the regions of the northern Caucasus populated by Mountain Jews. In those areas with mixed Ashkenazi and Mountain Jewish population – in Kislovodsk, Pyatigorsk, and so on – all the Jews were killed. The same fate struck the Mountain Jewish collective farms in Krasnodar Territory, and also the Crimean settlements of Mountain Jews founded in the 1920s. In the regions encompassing the towns of Nalchik and Grozny the Germans were awaiting instructions on how to deal with “the Jewish problem,” but these did not arrive before they had to retreat from these areas.

After World War II the anti-religious campaign gained momentum. In the period 1948–53 teaching in Judeo-Tat ended, and all the Mountain Jews’ schools were conducted in Russian. *Zakhmatash* no longer appeared and all literary activities in Judeo-Tat were ended.

In the latter part of the 1970s, the Mountain Jews became victims of assault in several towns, in particular Nalchik, because of their struggle to leave for Israel. Cultural and literary activities in Judeo-Tat, revived after Stalin’s death remained rudimentary in nature. From the end of 1953 up to 1986, two books a year were published on the average.

The main – and at times the sole – language of the youth was now Russian. Even the middle generation used the language of their community only at home in the family circle; to discuss more sophisticated topics they had to turn to Russian. This development was most noticeable among the small urban population of Mountain Jews, as for example, in Baku, and also among persons of higher education.

Religious tradition suffered, but was still partly retained, especially in comparison with the Ashkenazi community of the Soviet Union. The majority of the Mountain Jews continued to observe customs connected with the Jewish life cycle. The dietary laws are observed in many homes. However, Sabbath observance has been mostly abandoned, and the same is true of the Jewish festivals, except Rosh ha-Shanah and Yom Kippur, the Passover seder and the eating of matzah. The knowledge of reading prayers and prayer rituals has been also largely lost.

Despite all this, the level of Jewish consciousness among the Mountain Jews has remained high and their Jewish identity is being preserved, even by those who formally register themselves as Tats. The mass immigration to Israel was resumed rather later than among other groups of Soviet Jewry; they began to leave not in 1971 but at the end of 1973 and early 1974 after the Yom Kippur War. About 12,000 Mountain Jews had arrived in Israel by the mid-1980s, and from 1989 through 1992 about another 5,000 reached Israel. In 2002, 3,394 were living in the Russian Federation.

Literature

The most important literary heritage of the Mountain Jews is the national epic in Judeo-Tat, *Shiraha* (the name probably derives from the Hebrew *shirah*, “poem”), which abounds in biblical associations and figures. One of the most beautiful poems is the “Song of the Mountain Jews,” which expresses their yearning for the ancient homeland “so near, in front of your eyes, put out your hand and touch it.” It also mentions the “maids of Deborah,” the “brave horsemen of Samson,” and the “heirs of Bar Kokhba.” The epic was translated into Yiddish by the Soviet-Jewish writer M. Helmond. Mishi (Moshe) Bakhshyev, poet, novelist, and playwright, born in Derbent in 1910, laid the foundations for the modern Tat literature, which began to develop in the 1930s. His publications include “Earth,” a play dealing with life on a Jewish kolkhoz, a novel “Cluster of Grapes,” and a collection of poetry. Other poets are Amrami Isakov, whose collection of children’s songs has been translated into Russian, and Zion Izagayev, who has published three volumes of poems. A literary almanac, *Woton Sovetimag* (“Soviet Homeland”), the first of its kind in Judeo-Tat, edited by Hizigil (Ezekiel) Avshalomov and published in Makhachkala in 1963, assembled the works of 27 Tat writers, selecting mainly works which reflect the integration of the Mountain Jews in Soviet society. Visitors to the region reported a deep-felt longing for the State of Israel among the Mountain Jews, which became particularly strong after the 1967 Six-Day War, in spite of the official anti-Israel propaganda campaign (see also *Judeo-Tat).

MOUNT OF OLIVES (Olivet), mountain overlooking *Jerusalem from the east, beyond the *Kidron Brook. From the orographic point of view, the Mount of Olives is part of a spur projecting near Mount Scopus (Ra’s al-Mushārif), from the country-long water divide which continues southward. The Mount of Olives ridge has three peaks. Upon the highest, 2,684 ft. (826 meters) above sea level, the original buildings of the *Hebrew University were constructed and opened in 1925. This area is commonly, although mistakenly, known as Mount Scopus. On the second peak, 2,645 ft. (814 meters) above the sea, is the site of Augusta Victoria Hospital. On the third, 2,652 ft. (816 meters) high, lies the Arab village of al-Tūr (*hahar*, “the mountain”), an epithet whose source is in the Aramaic name of the Mount of Olives, Tura Zita. The Mount of Olives ends in this peak, though a spur of it continues to Ra’s al-‘Amūd (2,444 ft.; 752 meters), draining to the Kidron brook southward, to the village of *Shiloah (Silwān). Even at its highest, the Mount of Olives is lower than the highest point in the Rome-

mah district, which is the highest point of the water divide in Jerusalem (2,697 ft; 829 meters). However, since the Mount of Olives stands so very high (351 ft; 108 meters) in relation to the deep Kidron brook beneath it, it seems much higher than it actually is. From a geological point of view, the mountain is entirely within the Senonian region, while phytogeographically speaking, it is within the bounds of the Judean Desert.

In the Bible, the mountain is called the Ascent of the Olives (Heb. *Ma’aleh ha-Zeitim*; 11 Sam. 15:30), it being said of the top of the mountain (verse 32) “that this was where David was accustomed to worship God.” This sanctity is apparently what prompted Solomon to build a *high place “in the mount that is before Jerusalem” (1 Kings 11:7). However, according to 11 Kings 23:13, the high place which he built was “on the right hand [i.e., to the south] of the mount of corruption (i.e., the Mount of Olives),” that is, probably at Ra’s al-‘Amūd. Ezekiel 11:23 gives an important place to the Mount of Olives in his vision of the end of days: the glory of the Lord will arise and stand “upon the mountain which is on the east side of the city.” The name Mount of Olives in its present form first appears in Zechariah 14:4: “His feet shall stand in that day upon the Mount of Olives, which is before Jerusalem on the east.” Zechariah describes how in his vision the mountain is cleft in two. During the period of the Second Temple, the Mount of Olives was of great importance in Jerusalem: the *red heifer was burnt upon it; a bridge, or possibly two such bridges, connected its slopes with the Temple Mount. During the period of the Roman procurator Felix, thousands gathered upon it, there to be beguiled into believing the words of a false Egyptian prophet (Jos., Ant. 20:169; Wars 2:262). During the siege of Jerusalem, the Tenth Roman Legion encamped on it (Wars 5:70, where the location of the Mount of Olives is clearly established as being six *ris* (= 3,707 ft.; 1,110 meters) east of Jerusalem, across a deep valley called Kidron). During the period of the Second Temple, at the order of the Sanhedrin, beacons would be lit on the Mount of Olives (*har ha-meshiḥah*, “Mount of Anointing”), in order to announce the sanctification of the New Moon. These flares could be seen as far away as Sartaba (RH 2:4).

The Gospels frequently refer to the Mount of Olives (by its Greek name τὸ ὄρος Ἐλαιῶν). Jesus and his followers encamped on one of its peaks on their way to Jerusalem. From its slopes, he wept for Jerusalem when he foresaw its coming destruction. At its foot is Gethsemane (Heb. Gat(h)-Shemanim), where he and his disciples spent the night before his arrest, and from it Jesus rose to heaven after being crucified and resurrected. For these reasons, Christianity, upon attaining supremacy, erected several churches and monasteries on the mountain. On its summit, the Church of the Ascension was erected and further down the Church of Eleona was built by the emperor Constantine. In Gethsemane a church was constructed during the Byzantine period and was refurbished by the Crusaders. According to Muslim tradition, the caliph Omar encamped on the Mount of Olives while receiving the surrender of Jerusalem (638).

Once the Jews were authorized to return to Jerusalem by the Arab conquerors, the pilgrimages to Jerusalem were also resumed. These pilgrimages generally took place during the month of Tishri. In these, the Mount of Olives held an important place, especially from the end of the eighth century, when the Jews were no longer allowed to enter the Temple Mount. On the festival of *Hoshana Rabba, they circled the Mount of Olives seven times, in song and prayer. On Hoshana Rabba, the Palestinian *rosh yeshivah* announced the “Proclamation of the Mount of Olives” concerning the new moons, the festivals, and the intercalation of years, a practice which was based on the ancient kindling of beacons on new moons on the Mount of Olives. On this same day, the *rosh yeshivah* appointed members to the “Great Sanhedrin” and accorded titles of honor to those who had worked in favor of the Palestinian academy. Bans on the unobservant and on those who rebelled against authority, especially against the Karaites, were not lacking on such occasions. The clashes with the Karaites resulted in the intervention of the authorities, and they even prohibited the *rashei yeshivah* from issuing bans.

The choice of the Mount of Olives as the site of pilgrimages and gatherings was based on midrashic tradition: “The Divine Presence traveled ten journeys, from the cover of the Ark to the Cherub . . . and from the Town to the Mount of Olives” (RH 31a; Lam. R., Proem 25). In the letters of the *rashei yeshivah*, the Mount of Olives is referred to as “the site of the footstool of our God.” A tenth-century guidebook found in the Cairo *Genizah* points out “the site of the footstool of our God” on “a stone whose length is ten cubits, its breadth two cubits, and its height two cubits.” The armchair of the Palestinian *rosh yeshivah* was placed on this “stool” during the gatherings and the festive ceremonies which accompanied the pilgrimages. From this spot, the *rosh yeshivah* addressed the celebrants, and it was here that he received their contributions.

The site of the prayers and the gatherings was, according to the documents of the *Genizah*, above “Absalom’s Monument,” “opposite the Temple and the Gate of the Priest,” which was situated along the southern third of the eastern wall of the Temple Mount. This corresponds to the open space above the slope of the Mount of Olives, which is today covered with Jewish graves, to the south of the Mount’s summit. Here according to a medieval tradition, was the site “on which the priest who burnt the [Red] Heifer stood, sought out, and saw the Temple when he sprinkled the blood” (Mid. 2:6; Yoma 16a). The Arabs call this area “al-Qāda” (“The Sitting Place”). This name might be an echo of the seat of the Palestinian *rosh yeshivah* during the pilgrimages to Jerusalem during the Arab period.

[Joseph Braslavi (Braslavski) and Michael Avi-Yonah]

At the foot of the mountain, in the area of Silwan Village, rock-hewn tombs are known from the time of the First Temple (Tomb of Pharaoh’s Daughter) and Second Temple (so-called Tomb of Zechariah, Tomb of the Sons of Hezir, and Tomb of Absalom). Consequently, this spur of the Mount of Olives became, with the passage of time, especially from the Middle

Ages, a burial place for the Jews of Jerusalem. Because the *Ma’aseh Daniel* (A. Jellinek, *Bet ha-Midrash*, vol. 5, 128) states that at the end of days the Messiah will ascend the Mount and it will be there that Ezekiel shall blow his trumpet for the resurrection of the dead (Ginzberg, *Legends of the Jews*, 6 (1959), 438), through the years the graves spread over the slopes and up to the top. At the end of the 19th century, the Russians erected the Church of Gethsemane at the foot of the mount, and on the al-Tūr summit, a monastery and tower. Kaiser William II of Germany, after visiting Jerusalem in 1898, erected a hospice for pilgrims known as Augusta Victoria on the second peak. The Englishman, Sir John Grey Hill, built a house on the third peak (“Mount Scopus”), which was later acquired by the Hebrew University for one of its buildings. During Israel’s War of Independence, the university buildings remained in Israel hands even though they were surrounded by Arab held territory. This situation was frozen by the Armistice agreement, causing friction and many incidents. Israel was permitted to keep a number of policemen on the mount and these were changed every two weeks in a convoy which had to pass under UN auspices through Jordan-held territory. The Jewish cemeteries and monuments on the Mount of Olives, now outside Israeli territory, were vandalized by the Arabs. The entire Mount was captured by Israel troops in the Six-Day War (1967) and arrangements were subsequently made for the restoration of the Jewish cemeteries on its western flanks, and the Hebrew University returned to its earlier location on Mount Scopus.

MOURNING (Heb. לָאֵן), the expression of grief and sorrow over the death of a close relative, friend, national leader, or in response to a national calamity. The lamentation (Heb. קִינָה (*kinah*, *qinah*); נְהִי, *nehi*) is the specifically literary and musical expression of such grief. The rite of mourning most frequently attested in the narrative and poetic sections of the Bible is the rending of garments. Thus Reuben rends his garments on finding Joseph missing (Gen. 37:29). Jacob does so on seeing Joseph’s bloodstained cloak (Gen. 37:34). Joshua responds in this way to the defeat at Ai (Josh. 7:6), Hezekiah, to the words of the Rab-Shakeh (II Kings 19:1 = Isa. 37:1), and Mordecai, to news of the decree of genocide (Esth. 4:1). Job rends his garments on hearing of the death of his children (Job 1:20), and his friends tear their clothing to commiserate with him (2:12). The rending of garments may be simply an outlet for pent-up emotions, or it may have developed as a symbolic substitute for the mutilation of the flesh. Almost as frequent as the rending of garments is the wearing of sackcloth (e.g.,

II Sam. 3:31; Ps. 30:12; Lam. 2:10). Ezekiel prophesies that Tyre will mourn by the removal of embroidered garments and the donning of special mourning robes (Ezek. 26:16; cf. 7:27). The woman of Tekoa whom Joab sent to King David was likewise dressed in mourning garments (II Sam. 14:2), which may be identical with the garments of widowhood worn by Tamar, the widow of Er (Gen. 38:14, 19). Micah suggests that it was not unusual for a mourner to appear naked (Micah 1:8). Other mourning practices which survived in later Judaism are the placing of dust on the head (Josh. 7:6; II Sam. 13:19; Jer. 6:26; 25:34; Ezek. 27:30; Lam. 2:10 etc.; cf. Ta'an. 15b), refraining from wearing ornaments (Ex. 33:4; cf. Sh. Ar., YD 389:3), abstaining from anointing and washing (II Sam. 12:20; cf. Ta'an. 1:6), and fasting (II Sam. 3:35; Esth. 4:3; Ezra 10:6; Neh. 1:4; cf. Ta'an. 1:4ff.). Isaiah describes mourners beating their breasts (Heb. *safad*, Isa. 32:12). The Hebrew term for beating the breast (*safad*, *misped*; Akk. *sipittu*) becomes a general term for "mourning" (e.g., Gen. 23:2), which takes on the sense of "wailing" (I Kings 13:30; Micah 1:8). Other rites of mourning related to the hair and beard. At the death of Nadab and Abihu, apparently, the Israelites uncovered or disheveled their hair as a sign of mourning. Aaron, Eleazar, and Ithamar, who as priests were forbidden to mourn, were thus prohibited from following this practice (Lev. 10:6). While it became obligatory in later Judaism for mourners to let their hair grow (MK 14b), the prophets (Isa. 22:12; Jer. 16:6; Ezek. 7:18; Amos 8:10) describe tonsure as a standard rite of mourning. Similarly Job shaves his head on hearing of the death of his children (Job 1:20). Deuteronomy 21:12 even prescribes the shaving of the head as a rite of mourning to be observed by the gentile maiden taken captive in war. According to Ezekiel 24:17 it was customary to remove one's turban as an expression of grief (cf. Isa. 61:10). The covering of the head may also be attested as a rite of mourning in II Samuel 15:30; Jeremiah 14:3–4 and Esther 6:12; 7:8, if the Hebrew *ḥafui* is derived from the Hebrew verb *ḥafah*, "to cover." If it is derived from the Arabic *ḥāfi*, "barefoot," which is also the root of Hebrew *yaḥef*, "barefoot," the latter references may corroborate the testimony of Ezekiel and Deutero-Isaiah. Alongside tonsure and the shaving of the beard, the prophets take for granted the practice of cutting gashes in the flesh of the hands or elsewhere (Jer. 16:6; 41:5). They seem unaware of any prohibition against these rites. Leviticus 21:5 prohibits only the priests from making incisions in the flesh, shaving the beard, and tonsure, as from all other rites of mourning, except on the occasion of the death of the priest's father, mother, son, daughter, brother, or unmarried sister. Leviticus 19:27–28 prohibits all Israel from shaving, cutting the hair, *tattooing, and making incisions as a rite of mourning. Deuteronomy 14:1 prohibits all Israel from making incisions in the flesh and from employing tonsure as a rite of mourning. In Leviticus 19 the prohibitions are motivated by the desire to avoid ritual impurity, while in Deuteronomy 14 they are motivated by the striving for holiness. Micah (3:7) and Ezekiel (24:17) mention the covering of the upper lip as an expression of grief. The same practice along with the uncover-

ing (or disheveling) of the hair and the rending of garments is prescribed for lepers in Leviticus 13:45. In the Bible the typical posture for the mourner is sitting (Ezek. 26:16; Jonah 3:6; Job 2:13) or lying (II Sam. 13:31; Lam. 2:21) on the ground, as in later Judaism (Sh. Ar., YD 387:1). Placing the hands on the head (II Sam. 13:19; Jer. 2:37) and prostration (Jer. 4:28; 14:2; Ps. 35:14) are also attested. The Bible does not distinguish, as does later Judaism, between the mourning that precedes the funeral (Heb. **aninut*) and that which follows burial (cf. Ber. 17bff.). The practices which later Judaism associates with the former are therefore referred to simply as rites of mourning in the Bible. Thus Daniel (Dan. 10:23) mourned by abstaining from meat and wine. Although the Mishnah (Ket. 4:4) prescribes the playing of flutes at funerals, the Bible associates mourning with the cessation of both dancing and instrumental music (Isa. 24:8; Jer. 31:12; Ps. 30:12; Job 30:31; Lam. 5:15; Eccles. 3:4), as do later Jewish authorities (Sot. 48a). From the association of gift-giving with the cessation of mourning in Esther 9:22, one may surmise that the exchange of gifts was forbidden to mourners, as in later Judaism (Sh. Ar., YD 385:3). Later Judaism understood its various mourning rites both as an affirmation of the value of the deceased (Sem. 9) and as an appeal to God for mercy (Ta'an. 2:1). Each of these approaches has been advocated to the exclusion of the other by modern schools of anthropology. Most likely both lie behind many of the biblical practices. T.H. Gaster suggests that the mutilation of the body was originally intended to provide the ghost of the departed with blood to drink, while the cutting of the hair enabled the ghost to draw on the strength it embodied.

Lamentations

Lamentations are poetic compositions functionally equivalent to the modern eulogy. Composed by literary giants like David (II Sam. 1:17ff.; 3:33ff.) and Jeremiah (II Chron. 35:25), these tributes were, in accordance with the standard literary usage, chanted rather than declaimed. These eulogies were frequently composed in a special meter, which modern scholars have designated as the *qinah* meter (i.e., lamentation meter). It is characterized by the division of each verse into two unequal parts, in contrast to the usually parallel structure of biblical poetry. Jeremiah speaks of a professional class of women who composed and chanted lamentations (*mekonenot*, *meqonenot*, Jer. 9:16). Their art was regarded as a branch of wisdom, and thus they are called "skilled" (Heb. *ḥakhamot*). Men and women singers made lamentations and preserved them for future generations as part of the general education of the young (II Chron. 35:25). Another expression of grief was the exclamation *ho-ho* (Amos 5:16) or *hoi* (I Kings 13:30; Jer. 22:18; 34:5). A specified period of mourning is only prescribed by the Bible in connection with the captive gentile maiden (Deut. 21:13). She is required to mourn her parents for one month. The later Jewish custom of seven days of mourning is observed by Joseph on the death of Jacob (Gen. 50:10); the Egyptians mourned him for 70 (50:3)), the inhabitants of Jabesh-Gilead upon the burial of Saul and Jonathan (I Sam.

31:13 = 1 Chron. 10:12), and Job and his friends at the height of Job's suffering (Job 2:13). Daniel's observance of three weeks of mourning (Dan. 10:2) may reflect the author's awareness of the week as a standard period of mourning. Moses and Aaron were each mourned for 30 days (Num. 20:29; Deut. 34:8), while Jacob and Ephraim each mourned "many days" (Gen. 37:34; 1 Chron. 7:22) for their children. While Jeremiah (41:5) tells of contemporaries who expressed grief by bringing sacrifices to the Temple, Nehemiah (Neh. 8:9) suggests the incompatibility of religious festivities and mourning (cf. Ta'an. 2:8, 10). The comforting of mourners is accomplished by the tenderly spoken word (Isa. 40:1–2), by sitting with the mourner (Job. 2:13), by providing him with compensation for his loss (Gen. 24:67; Isa. 60:2–9), and by offering him bread and wine (11 Sam. 3:35; Jer. 16:7). The bread is called "bread of agony" (*leḥem onashim*, Ezek. 24:17; cf. *leḥem ʾonim* in Hos. 9:4), and the wine, "the cup of consolation" (Jer. 16:7). The serving of such a meal has been variously explained as an affirmation of the bonds between the survivors, a reaffirmation of life itself after a period of fasting from death to burial, and as an act of conviviality with the soul of the deceased.

[Mayer Irwin Gruber]

Talmudic and Medieval Periods

Although the laws and customs of mourning are largely based on the biblical references, many additional ones developed out of usage and custom and, as such, are of rabbinical rather than biblical authority. In general, there has been a consistency in mourning practices from the biblical era, but in particular between the talmudic period and modern times. With few exceptions, the rules of mourning described and laid down in the Talmud and the early sources are identical with those observed today. These laws were designed to provide both for the "dignity of the departed" and the "dignity of the living" (cf. Sanh. 46b–47a). The body, regarded as the creation of God and the dwelling place of the soul, was accorded every respect. Likewise, every attempt was made to ease the grief of the mourners and to share their sorrow. The pain of death was mitigated by viewing it as the moment of transition from the temporal world to the eternal world (Zohar No'ah, 66a). One of the rabbis interpreted the biblical verse "And, behold, it was very good" (Gen. 1:31) to refer to death (Gen. R. 9:5, 10; see *Life and Death).

It was customary "to pour out all drawn water" in the neighborhood of the house in which the person died (Sh. Ar., YD 339:5). Originally deriving from folk beliefs, this custom was subsequently explained as a method of announcing a death since Jews were always reluctant to be the bearers of evil tidings (*Sifteï Kohen*, YD 339:5, n. 9). Others interpreted that this act indicated that the deceased was an important person, therefore the supply of water was lessened just as "there was no water for the congregation" (Num. 20:2) after the death of Miriam (*Be'er ha-Golah*, YD 339:5, n. 8). The dead body was not left alone, and watchers remained with the corpse until the funeral, either to honor the dead or to guard the corpse against possible dam-

age. These watchers were exempted from the performance of other positive commandments while engaged in this meritorious deed (Bet. 3:1). Before the funeral the body was ritually purified (see **tohorah*). Professional women mourners, who clapped their hands in grief and sang dirges and lamentations, led the public display of grief at the funeral. Dirges were recited responsively while lamentations were sung in unison (MK 3:8, 9; see **Kinah*). The prevalent rabbinic opinion was that only the first day of the mourning period was of biblical authority (Asheri to MK 3:27; 34b; Maim. Yad, Avel, 1:1), while the seven-day mourning period was instituted by Moses (TJ, Ket. 1:1, 25a). The rabbis distinguished four stages in the mourning period: **aninut*, the period between death and burial; *avelut* or *shivah*, the seven days following burial; **sheloshim*, the time until the 30th day after burial; and the first year (TJ, MK 3:7, 83c).

ANINUT. During the *aninut* period, the mourner was called an *onen*. Although still obligated to abide by the negative precepts of the Torah, the *onen* was absolved from the performance of many positive religious duties such as the recital of the **Shema* and the donning of *tallit* and *tefillin* (MK 23b). He thus indicated his respect for the memory of the deceased since he was so distraught that he could not discharge his religious obligations (Sem. 10; Deut. R. 9:1). In addition, freedom from certain religious obligations enabled the *onen* to attend to the needs of the dead and his burial without distraction. The rule that "he who is engaged in a religious act is exempt from performing other religious duties" applied (Suk. 25a). It was also forbidden for the *onen* to eat meat or drink wine (Ber. 17b) or overindulge in eating (TJ, Ber. 3:1, 6a). If death occurred on the Sabbath, or if the Sabbath was part of the *aninut* period, the *onen* was obligated to discharge all his religious obligations (MK 23b), and he was even permitted to eat meat and drink wine on that day (Ber. 18a).

SHIVAH. Immediately after the funeral, the *shivah* ("seven") mourning period began. The bereaved family gathered in the house of the deceased and sat on overturned couches or beds and enrobed their heads. The mourners were obligated to rend their garments and to recite the *dayyan ha-emet* ("the true Judge") blessing (see **Keri'ah*). They were also not to leave the house (MK 23a), perform manual labor, conduct business transactions, bathe, anoint the body, cut the hair, cohabit, wear leather shoes, wash clothes, greet acquaintances, and study the Torah (MK 15a–b). They were, however, permitted to study sorrowful portions of the Bible and Talmud such as Job, Lamentations, parts of Jeremiah, and the laws of mourning. The mourner's first meal after the funeral was known as *Se'uddat Havra'ah* (Meal of Consolation). The meal was provided by friends and neighbors in accordance with the talmudic injunction that "a mourner is forbidden to eat of his own bread on the first day (of mourning)" (MK 27b). It was also forbidden for the mourner to don *tefillin* on the first day of the *shivah* period (Ket. 6b; Sh. Ar., YD 388:1). The rabbis considered the first three days as the most intense, declaring, "Three days for weeping and seven for lamenting" (MK 27b).

SHELOSHIM. Modified mourning continued through the *sheloshim* period when the mourner was told “not to cut the hair and wear pressed clothes” (MK 27b). During the *sheloshim* it was also forbidden for the mourner to marry, to attend places of entertainment or festive events (even when primarily of religious significance), to embark on a business journey, or to participate in social gatherings (MK 22b–23a; Yad, Avel 6:2). When mourning for parents, some of the above prohibitions remained applicable during the entire 12 months following the day of death. The mourner was not permitted to trim his hair until his companions rebuked him. He was also enjoined from entering “a house of rejoicing” during this period (MK 22b).

RELATIONSHIPS REQUIRING MOURNING. The observance of these formal rules of mourning was required for the nearest of kin corresponding to those for whom a priest was to defile himself, i.e., a wife (husband), father, mother, son, daughter, brother, and sister (Lev. 21:1–3; MK 20b), but not an infant less than 30 days old (Yad, Avel 1:6). The Talmud also relates instances when aspects of mourning were observed upon the death of teachers and scholars. Thus when R. Johanan died, R. Ammi observed the seven and the 30 days of mourning (MK 25b). In mourning for a *hakham* one bared the arm and shoulder on the right for the *av bet din* on the left, and for a *nasi* on both sides (MK 22b; Sem. 9:2).

TERMINATION OF MOURNING. Although the Sabbath was included in the seven days of mourning, no outward signs of mourning were permitted on that day. Private observances such as the prohibition against washing remained in force on the Sabbath (MK 23b; Maim, Yad, Avel 10:1). If burial took place before a festival and the mourner observed the mourning rite for even a short period prior to the festival, the entire *shivah* period was annulled by the holiday. If the *shivah* had been completed, then the incoming festival canceled the entire *sheloshim* period. If, however, the funeral took place on **Hol ha-Mo'ed*, the *shivah* and *sheloshim* were observed after the termination of the festival. In the Diaspora, the last day of the festival counted as one of the days of the *shivah* and *sheloshim* (MK 3:5–7; Sh. Ar., YD 399, 13; 400).

Relatives and friends visited the mourner during the week of *shivah*. Discreet individuals expressed their condolences in sympathetic silence (cf. Job. 2:13). In general, visitors were advised not to speak until the mourner began the conversation (MK 28b). Upon leaving, it became customary for the visitor to approach the mourner and say: “May the Almighty comfort you among the other mourners for Zion and Jerusalem.” Rabbinical literature explained the reasons for the choice of seven as the main period of mourning. Commenting on the verse “I will turn your feasts into mourning” (Amos 8:10), it was explained that, just as the days of the feasts (Passover and Sukkot) are seven, so the period of mourning is also for seven days (MK 20a). The Zohar gives a mystical reason: “For seven days the soul goes to and fro between the house and the grave, mourning for the body” (Zohar, *Va-Yehi*, 226a). The institution of *shivah* was considered even more ancient than

the flood. The rabbis interpreted “And it came to pass after the seven days, that the waters of the flood were upon the earth” (Gen. 7:10) to mean that God postponed retribution until after the seven days of mourning for the righteous Methuselah (Gen. 5:27; Sanh. 108b). The rabbis discouraged excessive mourning. Jeremiah’s charge, “Weep ye not for the dead, neither bemoan him” (Jer. 22:10) was interpreted to mean “weep not in excess, nor bemoan too much.” Accordingly, intensive mourning ceased after the *sheloshim*. Thereafter, God declares to the one who continues to mourn “Ye are not more compassionate toward the departed than I.” The rabbis stated that whoever indulged in excessive grief over his dead finally had to weep for another. It was related that a woman in the neighborhood of R. Huna ultimately lost all seven of her sons because she wept excessively for each one (MK 27b).

Modern Practice

Most of the observances described above are still practiced by traditional Jews all over the world. In most communities today there are burial societies or funeral chapels which arrange the details of the *tohorah* and the burial. The *onenim* still have the responsibility of contacting the burial society, as well as obtaining death and other certificates which may be required before the funeral can be held. They must also inform relatives and friends so that proper honor and respect can be paid to the deceased. In the house of *shivah* couches and beds are no longer overturned, the mourners sitting instead on low stools. With the exception that mourners no longer muffle their heads, all the other restrictions are observed. Slippers of cloth, felt, or rubber are worn instead of leather footwear. Women also abstain from using cosmetics during the *shivah* period. A candle burns continuously in the house of mourning for the entire seven days. It has also become customary to cover mirrors or turn them to the wall. Among the explanations offered for this practice is that prayer is forbidden in front of a mirror, since the reflection distracts the attention of the worshiper. Another interpretation is that mirrors, often associated with vanity, are out of place at such a time.

Prayers in the Home and Changes in the Liturgy

By the end of the Middle Ages, praying in the house of *shivah* was a well-established custom (cf. Shab. 152a–b). Nowadays a **minyán* gathers in the house of mourning for the daily *Shaharit* and *Minḥah-Ma'ariv* services. For the reading of the Law during these home services a Torah Scroll may be borrowed from the communal synagogue, provided that proper facilities for its care are available and that it will be read on three occasions. If it is not possible to obtain a *minyán* in the home, the mourner may attend the synagogue for services and the recitation of **Kaddish*. Generally the mourner attends the synagogue for Sabbath and festival service. In the house of mourning and in the mourner’s personal prayers, the following changes in the normal order of the services are made:

(1) The talmudical passage *pittum ha-ketoret* (Ker. 6a; Hertz, Prayer, 546), describing the compounding of the in-

censes for daily offering in the Temple, is omitted by the mourner since he is forbidden to study Torah.

(2) Likewise the mourner omits the recitation of *eizehu mekoman*, the chapter of the Mishnah which describes the appointed places for the various animal sacrifices (Zev. 5:1–8; Hertz, Prayer, 38–40).

(3) The *Priestly Blessing (Num. 6:24–26; Hertz, Prayer, 154), which concludes with the greeting of peace, is omitted in the house of mourning because the mourner may not extend greetings. In Jerusalem, however, it is recited.

(4) **Tahanun* (Hertz, Prayer, 168–86) is omitted because its theme, “I have sinned before thee,” is deemed inappropriate for a mourner.

(5) Psalm 20 (Hertz, Prayer, 200) is also omitted because it will intensify the mourner’s grief during his “day of trouble” (Ps. 20:2).

(6) The verse beginning, “And as for me, this is my covenant with them, saith the Lord” is omitted from the *u-Va le-Ziyyon* (Hertz, Prayer, 202) because the mourner does not desire a covenant which will perpetuate his unhappy situation.

(7) Psalm 49, which declares that the injustices and inequalities of human existence are corrected in the hereafter, is recited after the daily service in the house of mourning (Hertz, Prayer, 1088–90).

(8) The mourner omits the six Psalms (95–99; 29) recited before the *Ma’ariv* service on Friday night (Hertz, Prayer, 346–54). He remains in the anteroom until the conclusion of **lekhah dodi*. He then enters the synagogue and the congregation rises and greets him with the traditional greeting extended to mourners: “May the Almighty...” Hertz, Prayer, 358).

(9) **Hallel* (Hertz, Prayer, 756–72) is not recited in the house of *shivah* on *Rosh Hodesh because it contains such verses as “The dead praise not the Lord, neither any that go down into silence” (Ps. 115:17), and “This is the day which the Lord hath made, we will rejoice and be glad in it” (Ps. 118:24). In most rites, however, it is recited when the mourners leave the room. If Rosh Hodesh coincides with the Sabbath, *Hallel* should be recited even if the services are being held in the house of mourning since no public display of mourning is permissible on the Sabbath.

(10) The mourner is not called up to the reading of the Law during the week of *shivah* even if he is the only kohen or levite in the congregation.

There are indications that it was customary for mourners to wear black throughout the *sheloshim* (Yoma 39b; Shab. 114a; Sem. 2:8). Nowadays, however, Jews are not permitted to dress in black clothing or to wear black armbands as signs of mourning since these are considered non-Jewish customs (see **Hukkat ha-Goi*). Similarly, the bringing of gifts to the house of *shivah* is considered an emulation of non-Jewish practice. During the *sheloshim* period it is customary for the mourner to change his synagogue seat for weekday services. When mourning for parents, a different seat is occupied during the entire 12-month period. The **Kaddish*, however, is re-

cited by the person mourning a parent or child for 11 months. **Yahrzeit* is observed on the anniversary of the Jewish date of the person’s death. There is an opinion that when three or more days elapse between death and burial, the first *Yahrzeit* is observed on the date of burial. Nevertheless, during subsequent years, *Yahrzeit* is observed on the anniversary of the date of death (*Taz*, *Shakh* and *Be’er Hetev*, YD 402:12). Reform Judaism has greatly modified the above laws and customs. The week of mourning is often shortened, and, frequently, only a period of three days is observed. Practices such as the rending of garments, sitting on low stools, not wearing leather shoes, and not attending places of entertainment during the period of the 30 days or first year are not generally observed by Reform Jews. Some have the religious services in the home only for the first three days, while others have them only after returning home from the funeral.

MOUSE (Heb. עֶכְבֵּר, *akhbar*), small rodent enumerated in the Bible with the rat and five reptiles (“creeping things”). It is so classified because as a result of its short legs its belly touches the ground as it walks. Isaiah (66:17) vehemently assails those who “eat swine’s flesh, detestable things, and the mouse” at idolatrous ceremonies. The *akhbar* includes both the house mouse, *Mus musculus*, and the field mouse, *Microtus guentheri*, the latter wreaking havoc with crops. Their depredations can amount to a plague destroying substantial parts of the harvest. It was such a plague which visited the Philistines who captured the Ark of the Covenant of the Lord (1 Sam. 6:4–11). They not only “marred the land” but also caused a plague of “emerods.” It has been suggested that the latter reference is to a pestilence caused by the microbe, *Pasteurella pestis*, transmitted to man by rodent fleas. The symptoms are a swelling of the lymphatic glands especially in the groins, which was thought to be a form of hemorrhoids. Both house and field mice are frequently mentioned in the Mishnah and Talmud. The ancient view of the possibility of spontaneous generation finds expression in the statement that the mouse was formed from the earth (Hul. 9:6). A mean person was called “a mouse lying in his money” (Sanh. 29b). One who eats food which has been nibbled by mice was said to forget his learning (Hor. 13a).

°MOWINCKEL, SIGMUND OLAF PLYTT (1884–1965), Norwegian biblical scholar. Mowinckel was educated at the University of Oslo (then Kristiania) and taught there from 1917 until his retirement in 1954. He also studied Assyriology in Germany. His doctoral thesis (1916) was a study of the Book of Nehemiah, and one of his last books was also devoted to Nehemiah (*Studien zu dem Buche Ezra-Nehemia*, 3 vols., 1964–65). Mowinckel was very much influenced by the form-critical and tradition–history approach of Hermann *Gunkel and Hugo Gressmann. His first book on the Psalms, *The Royal Psalms in the Bible*, was also issued in 1916, and his chief work, *Psalmenstudien* (vols. 1–6) was published between 1921 and 1924. In this work, he placed the psalms in their cultic context and interpreted them in the light of this background. These *Psalmstudien* were republished in 1961, and in 1963 an English translation of his last work on the Psalms was issued (*The Psalms in Israel's Worship*, 2 vols, 1962; Norwegian version, *Offersang og Sangoffer*, 1951). In 1964 two works on the Pentateuch were published, *Erwägungen zur Pentateuchquellenfrage* (“Considerations of the Question of the Sources of the Pentateuch”) and *Tetrateuch, Pentateuch, Hexateuch; Palestina for Israel* (“Palestine before Israel,” 1965) and *Israels opphov eldste historie* (“Israel's Origin and Oldest History,” 1967) were published posthumously. Mowinckel's main ideas have been widely accepted by biblical scholars, and his influence in Europe, especially Scandinavia, has been considerable. H.L. *Ginsberg taught himself Norwegian so that he could speak it to Mowinckel.

MOWSHOWITZ, ISRAEL (1914–1991), U.S. rabbi, political intermediary. Mowshowitz was born in Poland and immigrated to the United States with his family in 1929. He attended Yeshiva University, where he earned a B.A., and was ordained at its Rabbi Yitzhak Elchanan Theological Seminary in 1937. He earned a Ph.D. in psychology from Duke University and Yeshiva University awarded him an honorary doctorate in 1966. Although trained as an Orthodox rabbi, the pulpits he held were at Conservative synagogues, first in Durham, N.C., and then at Omaha, Nebraska. In 1949, he was appointed rabbi of Hillcrest Jewish Center in Queens, N.Y., becoming rabbi emeritus in 1983.

Respected in both the Orthodox and Conservative movements, Mowshowitz rose to become arguably the most prominent Jewish communal leader in the city and state. He was a founder of the International Synagogue at Kennedy International Airport and served as its honorary president. He also served on the boards of numerous charitable, interfaith, and interracial organizations in New York.

In the 1960s Mowshowitz was the president of the New York Board of Rabbis, an organization of 1,000 rabbis representing all the major denominations; in that capacity, he became a nationally quoted spokesman, commenting on all political and social issues that impacted Jewish interests.

Mowshowitz forged close ties with New York Governor Mario M. Cuomo, a Roman Catholic who called Mowshowitz “my rabbi,” and who lived nearby. He held the title of special assistant for community affairs in the governor's office, where he negotiated issues between the state and religious groups. According to Conference of Presidents of Major American Jewish Organizations head Israel *Miller, “He was the one all of us would call when we needed something done of a political nature.”

Mowshowitz traveled throughout the world on behalf of Jewish causes. In 1956, he was a member of one of the first delegations of rabbis to visit the Soviet Union to investigate the conditions of Soviet Jewry. He also traveled to Poland, South Africa, Iran, Hungary, Poland, Romania, and other countries on similar missions, including a study trip to 13 countries with the National Conference of Christians and Jews.

The New York Board of Rabbis established the annual Rabbi Israel and Libby Mowshowitz Award, to honor both them and rabbis who excel in public service.

He wrote two books, *Fires to Warm Us* (1978) and *To Serve in Faithfulness* (1975), and co-authored with Debra Orenstein *From Generation to Generation* (1992).

[Bezalel Gordon (2nd ed.)]

MOYAL, ESTHER (1873–1948), Arabic journalist and feminist. Esther Moyal, a member of the Lazari (al-Azhari) family of *Beirut, began taking part in public affairs in 1893, while she was teaching for the Scottish Church mission. She took over the correspondence of the Lebanese Women's League and in the same year was sent to Chicago to represent *Lebanon at the International Women's Conference. She was active in various women's organizations such as Bākūrat Sūriya (“The Dawn of Syria”) and Nahḍat al-Nisā’ (“The Awakening Women”). In 1894 she married a medical student, Simon Moyal, in *Jaffa. After he qualified they settled in *Cairo, where in 1898 Esther founded the monthly *al-Ā'ila* (“The Family”), which became a weekly in 1904. She also became a frequent contributor to the leading Cairo daily, *al-Ahrām* and the Egyptian literary periodical *al-Hilāl*. The Moyals moved to Jaffa in 1908 and the following year she helped establish an organization of Jewish women in the city. In 1913 she became joint editor with her husband of the Jaffa periodical, *Ṣawt al-Āthmāniyya* (“The Voice of Ottomanism”). Widowed in 1915, she went to live in Marseilles, returning to Jaffa in the mid-1940s. Her writings include a life of Emile Zola and Arabic translations of French books.

[Hayyim J. Cohen]

MOZA or **(Ha)Mozaḥ** (Heb. מוֹצָה, הַמּוֹצָה), town in Benjamin mentioned in the city list of Benjamin with Mizpeh and

Chephirah (Josh. 18:26) and in the genealogy of Benjamin with Alemeth, Azmaveth, and Eleasah (1 Chron. 8:36). The name also occurs in the genealogy of Caleb (1 Chron. 2:46), but a connection between this Moza and the Benjamite Moza is doubtful, as another locality might be meant. According to one reading, the “*Mšh*” seal stamps found on jar handles at Jericho and Tell ab-Našba and belonging to the Persian period attest the existence of an administrative center at Moza at that time. It is identified with Khirbat Beit Mizza to the west of Jerusalem and situated near a spring in a valley rich in olive groves and vineyards. It is probably identical with the Roman colony *Emmaus, established by Vespasian after the siege of Jerusalem at a distance of 30 stadia (c. 3½ mi.) from Jerusalem; he settled 800 veterans there (Jos., Wars, 7:217). A village below Jerusalem called Moza, where willow branches were cut for the rites at the Sukkot, is mentioned in the Mishnah (Suk. 4:5), i.e., in reference to the times before the destruction of the Second Temple. According to the Jerusalem Talmud (Suk. 4:3, 54b), the name of Moza was changed to Colonia and a “source of Colonia” is mentioned by Cyrillus Scythopolitanus (*Vita Sabae*, 67). The latter locality was probably at the site of the Arab village Qālūnya (see below). Remains of a Roman road station, a bath, Jewish and Roman tombs, and a Byzantine monastery were found in the area.

[Michael Avi-Yonah]

Modern Times

The land of Moza (moshav), on the site of ancient Moza, was the first rural site in Erez Israel acquired by Jews for farming purposes (by inhabitants of the old city of Jerusalem headed by Yehoshua *Yellin in 1859). A few families worked the land and terraced the hillsides, but did not live permanently at Moza. In 1894 the Jerusalem chapter of the *B'nai B'rith founded a small village on the site. One of the first industrial enterprises in the country was a tile and roof tile factory which used the local Moza marl as raw material. It was built by the Moza settlers at the beginning of the 20th century. In the 1929 Arab riots the village was largely destroyed and seven of its inhabitants were murdered, but the village was soon restored and in 1933 Moza Illit (“Upper Moza”) was founded as an adjacent moshav. On the hilltop southwest of Moza, *Kuppat Ḥolim, the Histadrut Sick Fund, opened the Arza Convalescent Home in the 1930s, in the place where Theodor *Herzl on his 1898 visit to the country planted a cypress tree (at the time erroneously identified as the biblical cedar from which the name “Arza” was derived). The tree was felled in World War I by unknown persons. In the Israel *War of Independence (1948) Moza was in grave danger until the neighboring Arab village of Qālūnya fell to Jewish forces and was abandoned by its inhabitants. Although most of the inhabitants in Moza were employed in Jerusalem, some kept farms. From the late 1950s a garden suburb of Jerusalem developed there. In 2002 the population of Moza Illit was 796.

MOZES, family of Israeli press magnates. The Mozes family played a major role in the Israeli press in the second half of the 20th century. From its flagship daily newspaper, *Yedioth Aharonoth*, through its subsidiary enterprises including a chain of local newspapers, women’s and other special interest magazines, publishing and printing interests, and shares in Israel’s Channel 2, the Mozes family had by the 1990s become the country’s biggest media moguls.

In 1940, a small newspaper, *Yedioth Aharonoth*, founded the previous year as one of the country’s few independent evening newspapers, had been acquired by ALEXANDER MOZES, a printer, from the newspaper’s founder Nahum Komerov. While Alexander took charge of printing the paper, his father YEHUDAH MOZES (b. 1886), a textile entrepreneur and businessman, took charge of the newspaper’s editorial operations, together with his son, NOAH (1912–1986), an agronomist. It consisted of some two pages each day, and had a circulation of 30,000. The paper failed financially in its early years, and in 1949 was forced to sell half of its shares to *Mapai. Its biggest crisis occurred in February 1948 when its editor, Dr. Azriel *Carlebach, together with most of its editorial staff as well as some of the printing and administrative workers, left the newspaper overnight – ostensibly upset over Yehudah Mozes’ intervention in day-to-day editorial matters – and founded the rival *Maariv* newspaper. Rebuilding the paper, Yehudah Mozes appointed his cousin Dov *Yudkovsky as news editor and Dr. Herzl *Rosenblum as editor, whose responsibilities comprised the editorial column and the op-ed pages. Yudkovsky conceived the newspaper as “the people’s newspaper”: despite its popular tabloid appearance, it also carried editorial matter of interest to readers from the professional classes. With the death of Yehudah in 1955, Noah Mozes became the publisher. It took *Yedioth Aharonoth* until the late 1970s to overtake *Maariv* as Israel’s biggest-selling newspaper. By 2005 42% of Israelis read the newspaper daily, and 54% its Friday weekend edition, according to a Teleseker survey. In the 1980s the newspaper entered the local newspaper market, developing local weekly newspapers (sold as supplements to the Friday paper) in key Israeli towns, exploiting the local advertising market.

The newspaper’s corporate setup is characterized by a highly centralized structure in which company shares are divided between 100 basic shares and 1,400 regular shares. With only the family owning the basic shares, and an in-built clause that the company directors are determined only by the holders of the basic shares, it generated resentment among the regular shareholders, particular after Noah died in 1986 in a traffic accident and his son, ARNON (“Noni”; 1953–), an economics graduate from Tel Aviv University, replaced him as publisher.

Since the mid-1980s the newspaper’s senior management was characterized by family in-fighting and court hearings as “Noni” Mozes sought to centralize control. In 1989 Yudkovsky was dismissed, and moved to *Maariv*, where he was appointed editor. While Ze’ev Mozes, the paper’s co-director whose responsibilities included manpower, was initially

allied with “Noni” Mozes – based on a 1986 agreement that the two men would share the two-man directorship of the newspaper for a 20-year period – he was subsequently eased out and sold his shares in 1997 to Eliezer Fishman and Haim Bar-On (the owners of the *Globes* financial newspaper). Ze'ev, who was Noah's nephew and Yehudah's grandson, was also responsible for moving the newspaper's printing press from the newspaper's editorial offices in Tel Aviv to a bigger site in Rishon le-Zion. Oded Mozes, son of Alexander, had been eased out years earlier when Noah Mozes set up a separate printing press, named after his son Gilad, killed in a traffic accident, to print the newspaper.

When Paula Mozes, Noah's widow, died in 1997, she bequeathed all her shares to her son, Noni, asking her two daughters, Judy Shalom-Mozes, wife of the Likud MK and former foreign minister Silvan *Shalom, and Tami-Mozes-Borowitz, to give their brother power of attorney to administer the newspaper. In building a coalition, Noni initially gave Tami management of Yediot Tikshoret, the sister company comprising the chain of local newspapers and magazines, as well as *Yedioth Aharonoth's* share in the Channel 2 subsidiary, Reshet. But she sold her shares to Fishman and Bar-On in 1998. Noni Mozes received a setback in 1997 when the Israeli courts acceded to a petition to broaden the structure of the paper's directorship from two to five members.

After Yudkovsky's departure from the paper in 1989, Moshe *Vardi, a managing editor, and Rozenblum's son, was appointed in his place. Vardi possessed an uncanny ability for identifying news stories and for news writing. This helped the paper maintain the lead which Yudkovsky had managed to bring about in the circulation war with *Maariv*. In the mid-1990s the newspaper was embroiled in an affair involving mutual wiretapping among partners and editors of *Maariv* and *Yedioth Aharonoth*. *Yedioth Aharonoth's* assignments editor, Ruth Ben-Ari, was charged with wiretapping *Maariv* boss Ofer Nimrodi, and its editor Dov Yudkovsky. Though subsequently cleared, Vardi, suspended himself from the editorship during the two year trial. During this period Alon Shalev, a news executive on Channel 2, was appointed editor. Vardi was subsequently reinstated, holding the post until his retirement in 2004. Rafi Ginat, an Israel television reporter who edited and presented the investigative *Kolbotek* consumer program, replaced him.

In 2000 the newspaper created its website, Y-Net, with its own separate reporting staff. In 2005 it had 3.3 million users monthly.

The *Yedioth Aharonoth* groups was valued in 1997 at around \$450 million. In addition to the daily newspaper, the group's properties included 17 local newspapers, a woman's magazine and shares in another, a number of special interest magazines, a Russian-language daily newspaper, three publishing houses, shares in the Channel 2 subsidiary Reshet, two printing presses, and two modeling agencies. Noni Mozes' share alone was valued in 2004 at \$200 million. Concerned at the power of *Yedioth Aharonoth*, and of other newspaper

chains, with the perceived threat to freedom of the press, the Monopolies Commission allowed *Yedioth Aharonoth* to purchase no more than 24% of the shares of Reshet.

[Yoel Cohen (2nd ed.)]

MOZDAYIM (Heb. מִזְדַּיִם), literary organ of the Hebrew Writers Association in Israel. *Moznayim* was founded in 1929, under the editorship of Y.D. *Berkowitz and F. Lachower, when the association ceased to endorse its previous organ, *Ketuvim*, edited by A. Steinman and A. *Shlonsky. Published first as a weekly in Tel Aviv, *Moznayim* became a monthly in 1933. It appeared regularly until the spring of 1947, when it ceased publication until the autumn of that year. *Moznayim* reappeared as a fortnightly only until the State of Israel was about to be established. *Moznayim*, in a new series, was published as a monthly from 1955.

The first volumes bear the stamp of *Bialik, a frequent contributor, and his contemporaries. Eventually, younger writers also left their influence upon this publication. All literary genres were encouraged: poetry, the story, the essay, criticism, the review, the scholarly study in the form of a popular lecture, publication of literary documents (e.g., letters), and translations from world literature. Hebrew writers from different generations and different parts of the world have participated. Until the Holocaust, the majority of East European Hebrew writers contributed and, later, Hebrew writers in the United States and other countries were published.

In honor of the U.S. Hebrew writer, Reuben *Wallenrod, *Moznayim* annually presents an award for the most distinguished poem, story, or essay published in the periodical. An index to the first hundred issues was issued in 1944.

[Getzel Kressel]

MOZYR, city in Polesie district, Belarus. After the second partition of Poland (1793), Mzyr was annexed by Russia and became a county town in the province (gubernia) of Minsk until the Russian Revolution. Jews are mentioned there in the 16th century. Many were wounded, killed, and robbed by the soldiers of *Chmielnicki in 1648. In 1766 there were 896 Jewish taxpayers in the community of Mzyr and the surrounding villages; these increased to 2,256 in 1847 and 5,631 (70% of the total population) in 1897. The Jews played an important role in the wood industry which developed in the town and its vicinity, owning several sawmills and match factories. Mzyr was one of the towns where the *Bund was active. A Russian language school operated from 1899, as did a yeshivah. During the Russian Civil War (1917–21) the Jews suffered at the hands of the “volunteer army” of Bulak-Balakhovich, who fought the Soviet regime. Many were wounded and 44 murdered, women were raped, and property looted. With the consolidation of the Soviet regime Jewish public institutions were liquidated. In 1926 there were 5,901 persons in the town (61.3% of the population), and 6,307 (36.1% of the total population) in 1939. Until 1938 there were two Yiddish elementary schools. Mzyr was occupied by the Germans on August 22,

1941. Some Jews succeeded in leaving town. In the fall a ghetto was established housing 1,500 persons. In the week of January 7, 1942, they were murdered, and another 700 Jews were drowned in the Ripet River.

[Yehuda Slutsky / Shmuel Spector (2nd ed.)]

MSTISLAVL (referred to by the Jews as **Amtchislav**), city in Mogilev district, Belarus; until 1772 in Poland-Lithuania; under czarist rule, part of Mogilev province. Jews are first mentioned as inhabitants of Mstislavl in 1590, although they had leased the taxes of the area from the mid-16th century. In 1639 there was a synagogue in Mstislavl. During the Northern War between Peter the Great and Charles XII of Sweden, Peter's troops entered Mstislavl (1708) and many Jews were injured. In 1765 there were 552 Jews registered as paying poll tax in the town and surrounding villages. As a result of their critical economic situation, 271 Jews left the town and district in 1808 for agricultural settlements in southern Russia. At the end of December 1843 a quarrel broke out between some Jews and a group of soldiers who had come to confiscate some smuggled merchandise in a Jewish shop. Magnifying the incident, the local authorities described it to the government as a Jewish rebellion against the authorities. When informed of the affair, Nicholas I ordered that every tenth Jew in the town be impressed into the army. It was only after numerous intercessions in the capital that investigators from St. Petersburg were sent to Mstislavl. The accusations of rebellion were refuted and the collective punishment revoked. Subsequently, the day the decree was rescinded (Kislev 3) was celebrated as the *Purim D'Amtchislav*. In 1847 there were 3,815 Jews registered in Mstislavl and in 1897 they numbered 5,076 (59.7% of the population). Because of the Jewish merchants, the town turned into an important commercial center. There were 194 Jewish artisans out of a total of 291. Most of them were *Mitnaggedim*, but there was also a considerable minority of *Ḥabad Ḥasidim. After World War I the Jewish population decreased, until in 1926 only 3,371 (42% of the total population) remained, and it dropped further to 2,067 (20% of the total) in 1939. A Yiddish school operated there from 1927, and two kolkhozes, with 110 families, were in the town in the 1930s. The Germans captured Mstislavl on July 14, 1941, and in early October killed 30 elderly Jews. On October 15, 1941, together with the local police, they murdered 850 (or perhaps 1,300) Jews in the marketplace. S. *Dubnow was a native of Mstislavl, as was Dr. Moshe Rachmilevich, one of the founders of the Hebrew University Medical School.

[Yehuda Slutsky / Shmuel Spector (2nd ed.)]

MUBARAK, MUHAMMAD HUSNI SA'ID (1928–), third president of *Egypt, following Abdul *Nasser and Anwar *Sadat. A successful career officer in the Egyptian air force and its commander (since 1972), he was appointed vice president of Egypt (1975) and vice chairman of the National Democratic Party (1978). Eight days after Sadat's assassination (on October 6, 1981), Mubarak was elected as chairman of the National Democratic Party and president of Egypt – confirmed by a countrywide referendum. He was re-elected by referendum in 1987, 1993, and 1999 and then by popular vote on September 7, 2005, for a fifth term, defeating (with more than 75% of the votes) nine other candidates for the presidency. This was a sign of democratic processes being gradually introduced into Egypt. Meanwhile, until this unusual development, President Mubarak, using the authoritarian system of government inherited from his predecessors, promised to cure some of the worst ills facing the country, but with moderate success only. Corruption continued to affect the bureaucracy. The economy improved in the early 1990s with the help of massive U.S. aid (rewarding Egypt for supporting the U.S. with 40,000 troops in the 1991 Gulf War), but 16% of its 77 million population (in 2005) lived below the poverty line and unemployment was still very high (reaching 25% of the labor force, according to unofficial data). Mubarak also contended with the specter of Islamic fundamentalism and limited its political activities in Egypt; for example, the Muslim Brethren were not allowed to set up a political party, while Mubarak's spokesmen accused them and their fellow-travelers of supporting terrorism, thus delegitimizing them.

Mubarak and his regime have not displayed enmity to the tiny Jewish community (about 200 souls in 2005, residing in *Cairo and *Alexandria), but they have not prevented or condemned the publication of books and articles or the propagation of films accusing the Jews in Egypt and elsewhere of blood-libels, plots, and intrigues. Similar accusations against the State of Israel abound in the press and are supported by the elites, chiefly the unions of writers, lawyers, and others. As for Mubarak's government, it insisted on maintaining a "cold peace" with Israel, calling back its ambassador from Tel Aviv and openly siding with the Palestinians in the Israeli-Palestinian conflict. However, there were signs, also, of a mild rapprochement in 2004–5, probably conditioned by Israel's disengagement from the *Gaza Strip and Mubarak's wish to score points with the U.S.: a bilateral gas deal (lucrative for Egypt) was signed with Israel and, in September 2005, 750 Egyptian border guards started patrolling, at Israel's request, the Philadelphi Road between Sinai (which is part of Egypt) and the Gaza Strip. Still, some thorny issues remained to be solved.

[Jacob M. Landau (2nd ed.)]

MUBASHSHIR BEN NISSI HA-LEVI (tenth century), Babylonian scholar who lived in *Baghdad; also known as Ibn Ussaba or *Unnāba. Mubashshir comments on the works of *Saadiyah Gaon, contained in *Kitāb Istidrāk al-Sahw* (“Book of Correction of Errors”), fragments of which were found in the Cairo **Genizah* and printed. The purpose of his book is not quite clear; the introduction leads one to believe that he sought to point out Saadiyah’s errors rather than to correct them, and the contents of the book strengthen this impression to the extent that at times the author seems to agree with Saadiyah Gaon’s Karaite critics. The book had a large circulation, especially in Spain, and is mentioned by many Jewish scholars.

[Abraham David]

MUBASHSHIR BEN RAV KIMOI HA-KOHEN (d. 925), *Gaon* of the Pumbedita Academy from 917 to 925, a post to which he was appointed upon the death of R. Judah Gaon (the grandfather of R. *Sherira Gaon). Mubashshir belonged to the faction which opposed the appointment of *David b. Zakkai as exilarch, apparently because of his family relationship with Mar *Ukba, the deposed exilarch. In turn, when David b. Zakkai did become exilarch, he refused to recognize Mubashshir in his post and appointed R. *Kohen Zedek as head of the Pumbedita Academy; the members of the Academy were split into two factions, each supporting one of the two *geonim*. A prominent supporter of Mubashshir was *Ben Meir, the *gaon* of Erez Israel, who conducted an active campaign against both David b. Zakkai and R. Kohen Zedek. Saadiyah Gaon, on the other hand, when he came to Baghdad in 921, joined Mubashshir’s opponents. Mubashshir appointed R. Aaron b. Joseph *Sarjado as *rosh kallah* Pumbedita, in spite of his not being the scion of a scholarly family. In 922 David b. Zakkai made peace with Mubashshir and most of the members of the Academy accepted the latter’s leadership; R. Kohen Zedek, and the few members who remained loyal to him, left the Academy but continued to receive their share of its income. None of Mubashshir’s teachings and responsa has been preserved.

On Mubashshir’s death in 925 his rival R. Kohen Zedek succeeded him as *gaon*.

[Abraham David]

***MUCIANUS, CAIUS LICINIUS**, governor of Syria during the Roman War (66–70 C.E.) and a prominent supporter of Vespasian’s successful attempt to assume the leadership of the Roman Empire. As governor of Syria, Mucianus is known to have supported certain privileges of the Jewish community at Antioch. In 69, together with other generals in the east, Mucianus urged Vespasian to become emperor, and subsequently was dispatched with a substantial force to Italy, to secure Rome from the supporters of Vitellius. He entered the city during the last days of 69, and prepared the way for Vespasian’s triumphant arrival there in the summer of 70 C.E.

MUEHLHAUSEN, city in Germany. Though the exact date of the earliest Jewish settlement in Muehlhausen is unknown, there was certainly a Jewish settlement there c. 1300, and a synagogue is mentioned in 1311. The relationship between the town and the community (“*universitas Judaeorum*”) was regulated by the municipal council in 1311. Jurisdiction over the Jews of Muehlhausen and the income from them was contested between the municipality and the landgraves of *Thuringia, who during the Black Death persecutions advised the burghers to massacre the Jews; this occurred on March 21, 1349. Among the martyrs was a scholar, R. Eliezer. Many of the exiles settled permanently in Erfurt and Frankfurt. The property of the deceased Jews was the object of bitter contention between Charles IV and the city. In 1374 Jews were again present in Muehlhausen, and the townspeople were released from all debts owed by them in 1391. In 1433 the Jews had to pay 200 florins as a coronation tax; throughout the 15th century they were taxed heavily by all governmental authorities. Regulations of 1472 ordered the Jews to stay out of the homes of Christians and to wear the yellow *badge; the women had to wear two blue stripes on their head coverings. In 1543 all Jews were expelled. Jews originating from Muehlhausen were living in Cracow, Poznan, and Lissa in the 17th century. The first *Schutzjuden returned to Muehlhausen in 1643, and in 1692 there were four Jewish households, rising to 14 families around 1781; 144 persons in 1843; 180 in 1907; and 170 in 1932. On the eve of the Nazi rise to power, the community possessed a synagogue, religious school, and three philanthropic organizations. Repressive measures resulting in emigration brought the number of Jews down to 70 in 1939. In 1942, only 19 Jews remained. The community was annihilated during World War II. After 1945 a small Jewish community was reestablished. It numbered 19 in 1946. Many members emigrated or moved to other places, and by the 1980s the community no

longer existed. In 1985 a plaque was dedicated to the city's victims of the Holocaust. The synagogue, consecrated in 1841/42 and desecrated in 1938, was restored with public funding in 1998. It serves as a cultural and educational center and houses a small exhibition about the history of the Muehlhausen Jewish community.

[Larissa Daemmig (2nd ed.)]

MUEHSAM, ERICH (1878–1934), German poet, playwright, and anarchist. Born in Berlin and raised in Luebeck, where he was expelled from school for “socialist activities,” Muehsam, like his father, apprenticed as a pharmacist. Following his dream of becoming a writer, he left Luebeck for Berlin, establishing contact with Martin *Buber and Gustav *Landauer. The latter had an enormous influence on Muehsam’s intellectual development and persuaded him to join the *Neue Gesellschaft*, a group of libertarian writers. Muehsam quickly became involved with the socialist-anarchist movement in Berlin, serving briefly, in 1902, as editor of the anarchist journal, *Der arme Teufel*. He advocated homosexual rights in his first publication, *Die Homosexualitaet*. In 1904 he left Berlin, traveling through Switzerland, Northern Italy, France, and Vienna before settling in Munich in 1909. While his years as a traveler brought forth poetic publications, among them his poem collections *Die Wueste* (1904) and *Krater* (1909), as well as the comedy *Die Hochstapler* (1906), Muehsam’s time in Munich was characterized by increasing political activity. He founded the socialist circle *Die Tat* and the revolutionary journal *Kain: Zeitschrift fuer Menschlichkeit*. World War I put an end to the anti-militaristic journal. He tried to organize resistance to the war, seeking closer contact to the Spartacists and the independent social democrats around Kurt *Eisner. During the strike at the Krupp works in Munich in January, 1918, he called for revolution; one year later he was deeply involved in the founding of Eisner’s Bavarian Soviet Republic. After a putsch brought down the republic, he was arrested and sentenced to 15 years for high treason. In prison, Muehsam again pursued his literary ambitions. Besides several publications on revolutionary issues, articles for *Die Aktion* and *Die Weltbühne*, and another poem collection titled *Brennende Erde*

(1920), his drama *Judas*, staged in 1921 for 5,000 workers in Mannheim, should be singled out. In December 1924 he was reprieved. Back in Berlin, he immediately returned to supporting anarchist organizations within the Weimar Republic. From 1926 to 1931, he edited the anarchist monthly *Fanal*. His final publication was the manifesto *Die Befreiung der Gesellschaft vom Staat*, published only a few weeks before his arrest by the SA on February 28, 1933. After prolonged torture in various concentration camps, Muehsam was murdered by the Nazis in Oranienburg on July 9, 1934.

[Sol Liptzin /Philipp Theisoehn (2nd ed.)]

MUELHAUSEN, YOM TOV LIPMANN (14th–15th centuries), scholar, polemist, philosopher, kabbalist, and one of the great rabbis of Bohemia in his time. His name indicates that he, or his family, probably originally came from Mulhouse in Alsace; all that is known with certainty, however, is that he was active chiefly in Prague, where he lived before 1389, that he was among those affected by the “Edict of Prague” which took place in that year, and that in 1407 he was appointed *Judex Judaeorum* (“judge of the Jews”) there. Yom Tov was the pupil of the outstanding Austrian scholars, Meir b. Baruch *ha-Levi, Sar Shalom of Neustadt, Samson b. Eleazar, and particularly of the brothers, Menahem and Avigdor Kara, serving with the last two as *dayyan* in Prague. He journeyed a great deal in Bohemia, Austria and Poland with the aim of acquainting himself with shortcomings in the observance of *halakhah* and custom and rectifying them. There is information of his activities and his varied *takkanot in Cracow, Lindau (German Bavaria), and Erfurt, where he introduced permanent and amended rules for the writing of Scrolls of the Law, *tefillin*, and *mezuzot*, in the making of a *shofar* and the manner in which it should be sounded, the order of granting a bill of divorce, etc. These rules were adopted in many districts of Austria and Bohemia and named after him. He also had a ramified correspondence with great contemporary talmudists, including Jacob *Moellin and Jacob b. Judah *Weil. Between 1440 and 1450 he was one of the heads of the council of the Ashkenazi communities known as Va’ad Erfurt (“The Council at Erfurt”), but its exact date and activities are not known.

Yom Tov Lipmann’s activity as a polemist gave him lasting renown even among non-Jews, who over many years produced a complete and ramified literature in refutation of him known by the general name of Anti-Lipmanniana. He began these activities early in his life when he conducted polemics with the bishop of Linda, on the initiative of the bishop, and in a spirit of mutual tolerance and non-provocation. Some of the other priests of Linda disputed with him also, and part of this series of polemics was later included in his *Nizzahon* (see below). According to a Christian source, Muelhausen went

to listen to the sermons of their preachers, and it is possible that he actually initiated some of his polemics at those gatherings. His best-known disputation, which had the most serious consequences, was that with the apostate Pesaḥ (Peter). It was connected with the edict of apostasy issued against the Jews of Prague in 1389, as a result of which Peter came out with a series of public attacks upon the Jews who deny and despise Christianity. A proposal was made that the Jews hold a disputation with him to justify themselves, and Muelhausen was chosen for this purpose. No details are known either of the staging or the content of this disputation, but as a result of it 80 Jews were martyred, and the remainder, including Yom Tov Lipmann, were saved by a "miracle" of unknown nature.

Except for the *Sefer ha-Nizzahon*, Muelhausen's books were written after 1407, when he was *Judex Judaeorum* in Prague. He dealt chiefly with Kabbalah, *halakhah*, and philosophy, but all three topics were intertwined. His various works have become part of the contemporary Jewish heritage, as has the whole form of the *halakhah* laid down by him. They afford evidence of his great erudition in the sources of *halakhah* and *aggadah*, in the Bible and its exegesis, in Kabbalah, and particularly in philosophy – in which he attained the highest level reached until then among the Jews of that country. He is, in fact, the first known scholar of Bohemia who openly occupied himself with philosophy, having a sound knowledge of the subject. He based himself on Maimonides' *Guide of the Perplexed*, and it was he who first gave it wide publicity in Poland and the neighboring countries, just as he endeavored to establish his halakhic views in accordance with the opinion of Maimonides. Undoubtedly it was Muelhausen who influenced the great Polish rabbi, Moses *Isserles, to follow Maimonides in his study of philosophy and *halakhah*. Muelhausen was well acquainted with what was known of the teaching of Saadiah Gaon and also made frequent use of early works on Kabbalah, such as the *Sefer *Yezirah*, the *Heikhalot* literature (see Merkabah *mysticism), the *Sefer ha-Bahir*, *Sefer ha-Temurah*, *Ma'arekhet ha-Elohut*, etc. He also knew the works of Bahya ibn *Paquda, Solomon ibn *Gabirol and Abraham ibn *Ezra. One contemporary scholar whose works he frequently used was Shemiah b. Elijah *ha-Ikriti of Negropont. Muelhausen occupied himself intensively with Kabbalah, and, in addition to the above-mentioned works the influence of Naḥmanides – whose esoteric remarks, like those of Ibn Ezra, he sought to explain – is evident. In his view, there is no contradiction between Kabbalah and philosophy; he maintained that Maimonides, too, was a kabbalist but that he merely gave a philosophical garb to his words. His writings on Kabbalah are also generally written in the accepted style of medieval Jewish philosophy, with the result that many scholars were led to the erroneous conclusion that as a philosopher, he was opposed to Kabbalah. However, the new texts published during recent decades have removed all doubts on this matter. The central problems which he discusses, namely the reasons for the precepts, the fundamentals of faith, free will, and omniscience, the suffering of the righteous, corporeality, etc. – all

serve a threefold purpose: the refutation of heretics, the attainment of philosophical truth and the establishment of the foundations of kabbalistic mysticism. His chief kabbalistic work is the *Sefer ha-Eshkol* (ed. by J. Kaufman, 1927) written in 1413, which is wholly influenced by the Spanish kabbalists of the school of Azriel b. Menahem of *Gerona, and in his *Alfa Beta* the great influence upon him of the Ḥasidei Ashkenaz is recognizable.

Muelhausen's halakhic writings reveal his complete command of all rabbinic literature up to his own time. Some of his many polemics were assembled by him in the *Sefer ha-Nizzahon* which he intended to serve as a handbook for the ordinary Jew compelled at times to wrestle with complex theological problems beyond his ability. The work was written in 1390 and was much copied in manuscript. It was first published by the priest Theodore Hackspan (Altdorf, 1644). Hackspan strove to edit it with maximum faithfulness to the source, and with the aim of enabling Christian scholars to oppose it, but he did not succeed because neither he nor the workers in his press understood either the language of the sources or their subject matter. As a result this edition is full of errors; despite this, it has great value for correcting many mistakes in the subsequent editions. The first Jewish edition was published in Amsterdam in 1701. It was only rarely reprinted because of the papal decree against its publication and circulation, and there is a variety of bibliographical problems connected with the various editions of the book. Muelhausen's method was to expose the Christian lack of understanding of the Hebrew sources with their linguistic and contextual associations and to ridicule aspects of the Christian religion. His great superiority over other polemicists was based on his knowledge of Latin and lay in his intimate knowledge of Christian literature – the New Testament, the Vulgate, and the leading Church Fathers, as well as the works of the late Christian scholars. Frequently his polemics are based on sound philology. His familiarity with Christian sources was, however, less than that of Isaac *Troki, and his arguments are more popular in character and not so "logical." He undoubtedly made use of early Jewish polemic material included in various collections, among them an earlier *Sefer Nizzahon* (probably by Joseph *Official) as well as of oral traditions. He selected and summarized the best of the answers, according to his understanding and according to the taste of his contemporaries, connecting them with topical questions. Among Christian scholars who applied themselves to refuting his arguments may be mentioned chiefly Bodker, Sebastian *Muenster, and J. *Buxtorf, and especially J.C. *Wagenseil, who also included short fragments both from the *Nizzahon* and from the *Nizzahon Yashan* in his book *Tela Ignea Satanae*.

Muelhausen's *Sefer Alfa Beta*, on the shape of the letters and their inner meaning, was written for the benefit of scribes of Scrolls of the Law, *tefillin*, and *mezuzot* and of those who wished to devote themselves to esoteric study. It was published in the second part of the *Barukh she-Amar* (Shklov, 1804) of Samson b. Eliezer and its identity was recognized only about

a century ago (previously it had been regarded as part of the *Barukh she-Amar*). Muelhausen also wrote *haggahot to the *Barukh she-Amar* itself, but these were incorporated in the text so that they cannot be recognized. He also wrote *Tikkun Sefer Torah*, containing the order of open and closed sections of the Torah (see *Sefer *Torah*) as well as many essential scribal regulations. This work was issued by E. Kupfer and S. Loewinger (see bibl.). Other works are *Sefer ha-Eshkol* and *Sefer Kavvanot ha-Tefillah* (appended to *Sefer ha-Eshkol*, 1927), a commentary on the *Shir ha-Yihud* (see J. Kaufman, p. 80f.), and various prayers and *piyyutim* printed in different places. His *Sefer ha-Berit*, on the meaning of the 13 attributes, was published from a manuscript by E. Kupfer (see bibl.). Other works written by him have not been found. Muelhausen's works have important historical value, particularly regarding the status and the situation of the Jews at the time of the Hussite wars.

[Israel Moses Ta-Shma]

MUELLER, DAVID HEINRICH (1846–1912), Orientalist. He was born in Buczacz (Galicia), which was also the hometown of his relative S.Y. *Agnon. In his youth Mueller was influenced by *Rappaport, *Zunz, *Krochmal, and *Smolenskin. He studied at the *Jewish Theological Seminary in Breslau, but his lack of talent as a preacher forced him to leave the seminary and to specialize in Semitic languages. From 1876 he taught Oriental languages at Vienna University and also lectured at the Vienna Jewish Theological Seminary from its foundation in 1893. In 1889 he was elected a member of the Austro-Hungarian Academy of Sciences. Shortly before his death he was ennobled under the title of Baron Mueller von Deham.

Mueller undertook in 1877 a journey to the Orient which produced a crop of publications on South-Arabian inscriptions, on castles and palaces in that region (2 parts, 1879–81), and a detailed report on this expedition (1878). He also edited S. Langer's journal on his travels in Syria and Arabia and the inscriptions he had discovered (1883); Hamadani's Arabian geography (2 parts, 1884–91); and Ṭabarī's annals (1888–89). Mueller also wrote comparative studies of Semitic languages (1884); on the cuneiform writings discovered at Ashrut Dargha (1886/87); and on the particular division of sibilants in the South-Arabian dialect (1888). His articles in the Vienna *Zeitschrift fuer die Kunde des Morgenlandes*, of which he was an editor, also dealt with early Semitic epigraphy. A second expedition to South Arabia led by Mueller resulted in several volumes of reports of which Mueller wrote three, dealing mainly with the linguistic and literary discoveries.

When the Code of *Hammurapi was discovered, Mueller wrote on its relationship to the laws of the Pentateuch (1903,

translating the Code into biblical Hebrew), and to those of the Syrio-Roman Lawbook (1905). In biblical studies proper (*Biblische Studien*, 5 vols., 1895–98), Mueller advanced a novel theory on the structure and rhythm of biblical poetry. Mueller, in general, adopted a conservative attitude to the Bible text and was averse to emendations.

[Naphtali Herz Tur-Sinai (Torczyner)]

MUELLER, ERNST (1880–1954), mathematician and writer on Kabbalah and philosophy. Born at Misslitz, Moravia, Mueller taught at the Kiryat Sefer agricultural school, Jaffa (1907–09). From 1911 he worked at the Jewish community library in Vienna, and after its closure by the Nazis immigrated to England. His *Der Sohar und seine Lehre* went through three editions (1920, 1923, 1959), and he translated selections of the Zohar into German (*Sohar, das heilige Buch der Kabbalah*, 1932). Mueller wrote a *History of Jewish Mysticism* (1946). He translated a selection of Bialik's poems (*Gedichte*, 1911) as well as Abraham ibn Ezra's *Sefer ha-Eḥad* (*Buch der Einheit*, 1920), with notes and an excursus on the author as mathematician. On the occasion of the tercentenary of Spinoza's birth he published a (supplementary) bibliography of Spinoza literature (1932). He prepared a German stage version of Plato's Symposium (1932).

°MUELLER, HEINRICH (1900–?), last chief of the *Gestapo. Mueller joined the Bavarian police after serving as a much decorated NCO pilot during World War I. He had a specific expertise in Leftist movements, communist and Marxist, which became ever more valuable as the Nazis came to power and targeted these groups. When the Nazis came to power, *Heydrich was appointed Bavarian police chief and retained him as an expert on communism in the Bavarian political police even though Mueller in this period was not a Nazi but a member of the Bavarian Volkspartei. Mueller in 1933 joined the *SS and the SD (secret police), but became a Nazi Party member only in 1939. When Heydrich took charge of the Gestapo in 1936, Mueller, who had become one of his top aides, went with him to Berlin. He soon became chief of the executive of the office (Main Branch 11). When the Security Police (Sipo) was organized, he was appointed chief of its political police section and, in effect, head of the Gestapo. He earned his stripes with the "Night of the Long Knives," the attack on Ernst Rohm. He continued to impress his superiors with the suppression of all organized opposition to the Nazi regime, which was, among other factors, due to Mueller's efficiency and ruthlessness, which included the application of torture on his victims. Mueller was involved in the hoax whereby "Pol-

ish” attacks on Germany served as a pretext for the outbreak of World War II. On Sept. 27, 1939, Mueller was appointed chief of Office IV of the *RSHA (Reich Security Main Office). Besides being responsible for the murder of hundreds of thousands of Soviet prisoners of war and an untold number of political prisoners, Mueller was one of the key figures of the “Final Solution” (see *Holocaust, General Survey). *Eichmann’s IVB 4 Section was part of his office and Eichmann his subordinate. Mueller participated in the *Wannsee Conference, representing the Gestapo, where the “Final Solution” was coordinated. In June 1942 he ordered that the evidence of the Einsatzgruppen murders be destroyed. As the war drew to a close, he opposed all efforts to spare Jews. He punished brutally those involved in the 1944 plot against Hitler, including personal friends such as Arthur Nebe. He made every effort to remain in the background throughout his career. Ruthless and efficient, he preferred to work in the shadows. Last seen in Hitler’s bunker on April 29, 1945, he succeeded in quietly disappearing when the Third Reich collapsed. There were rumors that he was killed by the Russians or that he was in Brazil, rumors also that he was the enforcer among the Nazis who escaped. Clearly, he eluded capture.

[Yehuda Reshef]

MUELLER, JOEL (1827–1895), rabbinical scholar and authority on geonic texts. Born at Maehrisch Ostrau, Moravia, Mueller received his early talmudic education from his father, rabbi in Maehrisch Ostrau, whom he succeeded in 1853. After a period as rabbi in Leipa, Bohemia, and as a teacher of religion in Vienna, in 1884 he began teaching at the Berlin Hochschule fuer die Wissenschaft des Judentums.

Mueller published a series of rabbinic texts, chiefly responsa, of the geonic and immediate post-geonic period, which are models of scholarly editions. The most important are the post-talmudic tractate *Massekhet *Soferim* (1878), with an introduction and copious notes in German; a post-talmudic work on ritual differences between Erez Israel and Babylon, *Hilluf Minhagim* (in *Ha-Shaar* 7 (1876), and 8 (1877); published separately, 1878); *Teshuvot akhmei arefat ve-Loter* (“Responsa of French and Lorraine Scholars,” 1881, repr. 1959, 1967); *Teshuvot Ge’onei Mizrah u-Ma’arav* (“Responsa of Eastern and Western Geonim,” in *Bet Talmud*, 4 (1885); and 5 (1886); published separately 1888; repr. 1959, 1966); *Maft’e’a li-Teshuvot Ge’onim* (“Introduction to Geonic Responsa,” 1891; repr. 1959); and *Halakhot Pesukot* (“Short Geonic Responsa,” 1893). Muel-

ler also edited Saadiah’s “Book (on the law) of Inheritance,” *Traité des Successions...*, for J. Derenbourg’s edition of Saadiah’s writings (*Oeuvres Complètes*; vol. 9, 1897). For the annual reports of the Lehranstalt he published studies on responsa in the pre-geonic period (in: 4, 1886); on those of tenth-century Spanish teachers (in: 7, 1889); on Yehudai Gaon (in: 8, 1890), and on the responsa of Meshullam b. Kalonymus (in: 11, 1893); see also his *Responsa of Kalonymos of Lucca (Teshuvot Rab-benu Kalonymos mi-Lucca, 1891)*.

MUELLER-COHEN, ANITA (1890–1962), social worker. Born in Vienna, Anita Mueller-Cohen became a social worker while still in her youth. During World War I she did relief work in the war-stricken areas of Galicia and Bukovina. She devoted herself to establishing lying-in hospitals for mothers, day nurseries and medical services for children, and institutions for the care of the aged. After the war she led the effort to help returning soldiers to readjust themselves and established milk stations for undernourished children throughout Austria. She directed the placement of orphaned children in Jewish homes in a number of West European countries and in 1920 promoted the adoption in North and South America of child victims of persecution in Eastern Europe. In that year she became a member of the Vienna City Council. Anita Mueller-Cohen settled in Tel Aviv in 1936 and continued her child welfare and other social services.

MUENSTER, city in North Rhine Westphalia, Germany. Jews lived there from at least the middle of the 13th century, maintaining a synagogue, a cemetery (mentioned in 1301; a fragment of a tombstone dated 1324 has been preserved), and a *mikveh*. In the wake of the *Black Death persecutions (1349/50), the Jews were expelled or killed and their property confiscated or destroyed. Between 1350 and 1810, Jews were not allowed to reside in Muenster but were only allowed to pass through. They were, however, tolerated since the 16th century within the bishopric of Muenster. They received letters of protection from the bishop and founded several congregations. After 1650 these congregations were united in the *Landjudenschaft. The head of this corporation was the “*Judenvorgaenger*”; the first was (1657) Nini Levi, brother of Behrend *Levi. The seat of the rabbi of the *Landjudenschaft* (**Landrabbiner*) was in Warendorf (near Muenster), the largest Jewish community of the bishopric. The last *Landrabbiner* were the *Court Jew Michael Mayer Breslauer (1771–89) and his son David (1789–1815). When Muenster passed to the duchy of *Berg (1808–10) and to the French Empire (1810–13), the first

Jews settled in the city; their residence there was legalized by Prussia in 1819. They officially founded a new community in 1854. The first prayer house was situated in the Loerstrasse; the cemetery was established in 1811, and the synagogue was built in 1880.

From 1816 *Landrabbiner* Abraham *Sutro lived in Muenster, although he did not act as rabbi of the community, which in 1879 appointed Dr. J. Mansbach as preacher and cantor. He was succeeded by S. Kessler. The first rabbi, who took office in 1919, was Dr. Fritz Steinthal (who immigrated to South America in 1938). His successor, Dr. Julius Voos of Kamen, was deported to *Auschwitz in 1943. Among the most notable members of the community were Prof. Alexander Haindorf (1782–1862), co-founder of the Marks-Haindorf Foundation for the training of elementary school teachers and for the advancement of artisans and artists among the Jews, and the first Jewish professor at Muenster Academy (university); and the poet Eli Marcus (1854–1935), co-founder of the Zoological Evening Society, and author of poems and many plays in the Low German dialect of the Muensterland.

During the Nazi era, the community was reduced from 558 Jews (0.4% of the population) in 1933 to 308 (0.2%) in 1939. The synagogue was destroyed in November 1938 (see *Kristallnacht). The first deportation from Muenster city and district (to Riga) took place in December 1941 (403 persons); in 1942 the last large-scale transport went eastward, followed by individual deportations in 1943 and 1944. After World War II, a new congregation was founded which included, besides Muenster, the Jews of Ahaus, Beckum, Borchen, Burgsteinfurt, and Coesfeld. This new community of Muenster numbered 142 members in 1970. The synagogue was built in 1961. The community numbered 101 in 1989 and 766 in 2005. The increase is explained by the immigration of Jews from the former Soviet Union after 1990.

[Bernhard Brillling / Larissa Daemmig (2nd ed.)]

°MUNSTER, SEBASTIAN (*Monsterus*; 1488–1552), German *Hebraist and reformer. Born in Ingelheim, Muenster entered the Franciscan order in 1505. Turning to the study of Hebrew, he became a pupil of Conrad *Pellicanus from about 1510, first in Rouffach, and then in Pforzheim and Basle. He converted to Protestantism in the 1520s, and was a professor of Hebrew at the University of Heidelberg from 1524 to 1528. During this time he found his true master in the Jewish Hebraist Elijah *Levita, whose major grammatical works he translated and edited beginning in 1525. In 1528, Muenster was appointed professor of Hebrew at the University of Basle, a position he held until his death from the plague. Muenster was a prolific author and translator. He contributed significantly to almost every aspect of Hebrew and Jewish studies, and next to Johann *Reuchlin, he was the outstanding Christian Hebraist of the 16th century. Muenster reissued Reuchlin's *De rudimentis Hebraicis* and published about 40 works, including *Epitome Hebraicae grammaticae* (1520); *Institutiones Grammaticae in Hebraeam Linguam* (Basle, 1524); *Chaldaica Grammatica* (Basle, 1527), the first Aramaic grammar by a Christian, based on the *Arukh* of *Nathan b. Jehiel of Rome; a list of the 613 Commandments (Basle, 1533) culled from the *Sefer Mitzvot Katan* of *Isaac b. Joseph of Corbeil; translations of *Josippon, and of works by David *Kimḥi and E. Levita; and a grammar of rabbinic Hebrew (Basle, 1542). His outstanding *Hebraica Biblia* (2 vols, Basle, 1534–35), which is provided with an original Latin text independent of the Vulgate, represents the first Protestant translation of the Old Testament from Hebrew into Latin. Like Paulus *Fagius, Muenster translated into Hebrew the Apocryphal Book of Tobit (Basle, 1542), which later reappeared in the London Polyglot Bible (1654–57).

He also published several missionary works directed toward the Jews, most notably *Vikuach* (1539), a dispute between a Christian and a Jew, and a Hebrew version (with annotations) of the Gospel of St. Matthew (“*Torat ha-Mashi'ah*,” Basle, 1537). This work, dedicated to Henry VIII of England, was the first Hebrew translation of any portion of the New Testament. Muenster's use of Jewish polemical literature, as in the preparation of his Hebrew edition of Matthew, as well as his publications in the field of rabbinic thought, provoked many accusations of Judaization against him, by Martin *Luther, Guillaume *Postel, and others.

Muenster was also a mathematician, cosmographer, and cartographer. His *Cosmographia* (1544), the earliest German description of the world, appeared in many editions, and was translated into several European languages. He also annotated the Latin version of Abraham b. Ḥiyya's astronomical and geographical work, *Zurat ha-Areẓ* (Basle, 1546).

[Godfrey Edmond Silverman / Aya Elyada (2nd ed.)]

MUNSTERBERG, HUGO (1863–1916), psychologist. Born in Danzig, baptized at the time of his appointment to the University of Freiburg, Muensterberg developed the first psychological laboratory there. His fields of research included such varied problems as auditory space perception, estimation of size, kinesthesia, memory, the time sense, attention, and the influence of drugs on mental work. These were published in the series *Beitraege zur experimentellen Psychologie* (1889–92). Muensterberg enjoyed a reputation as one of the most brilliant young psychologists. As the result of a quarrel in the field of work, he was prevented, on antisemitic grounds – in spite of his baptism – from receiving a Berlin University appointment. Other appointments were turned down on the basis of unfavorable comments on his work by his colleagues. On the other hand, his work had attracted the attention of America's preeminent psychologist, Harvard's William James. Muensterberg was given a trial period at Harvard (1892–95), which was followed by a permanent appointment. Muensterberg's contribution is not widely appreciated today, mainly because he left no disciples.

Many modern trends in psychology are traceable to Muensterberg. On the theoretical side, Muensterberg was a forerunner of the functionalist school of psychology. His principles were described in *Grundzuege der Psychologie* (1900), with a second edition published posthumously by Max *Dessoir in 1918. His English text, *Psychology, General and Applied* (1914), although not well received, shows the scope and originality of his thinking. In 1898 he served as president of the American Psychological Association and as president of the American Philosophical Association in 1908. He was undoubtedly responsible for the growth of applied psychology. He was a leading figure and pioneer in industrial psychology and became interested in film, publishing in 1916 his book *The Photoplay*, one of the first major books on film theory. His work inspired William *Stern, Otto Klemm, and Otto *Lipmann. He devised tests for the selection of motormen and developed other testing procedures. He had a hand in the invention of the so-called lie detector and he instituted some of the first attempts at psychotherapy. In his day he was the great popularizer of psychology. He also took an interest in psychic phenomena, exposing the medium Madame Eusapia Paladino and writing, in a negative vein, on thought transference.

Muensterberg's last years were marked by increasing political activity. Although originally a marginal German, he remained a superpatriotic German who never gave up his German citizenship. At the outbreak of World War I he tried by all possible means to prevent the entry of the U.S. into the war and to work for a negotiated peace. His correspondence with the German chancellor, von Bethmann-Hollweg, presenting his plans to have President Wilson act as mediator, was inter-

cepted and aroused violent feelings. In the midst of this controversy, he died as he was lecturing to his class.

[Helmut E. Adler]

MUENZ, ELEAZAR (Lazar) BEN ARYEH LEIB (1837–1921), rabbi and preacher in Poland and Germany. Muenz was a grandson of Eleazar *Loew, the author of *Shemen Roke'ah*. He was appointed to the rabbinate of Oswiecim (Auschwitz) near Cracow before 1867. In 1875 he was appointed to the rabbinate of Kempen (Kepna) district of Posen, where he remained until after 1905. From there he moved to Wuerzburg and subsequently to Nuremberg. At the end of World War I he was living in Ansbach, where he died. He was the author of *Get Mesuddar* (1932), on the law of names in bills of divorce. Among his other works, written in German, are *Die modernen Anklagen gegen das Judentum als falsch nachgewiesen* (1882); *Religioese Zeitfragen* (1887, 1909²), a collection of his homilies; *Torat Nashim* (Ger., 1905), on the laws of family purity, frequently reprinted; and *Rabbi Eleasar, genannt Schemen Rokeach* (1895), a detailed biography of his grandfather.

BIBLIOGRAPHY: E. Muenz, *Get Mesuddar* (1932), introd.

MUENZ (Minz), MOSES BEN ISAAC HA-LEVI (c. 1750–1831), Hungarian rabbi. Muenz was born in Podolia or in Galicia. After serving as rabbi in Vishravitz and in Brody, he was appointed in 1789 rabbi of Alt-Ofen (Óbuda) where he remained for the rest of his life. As a result of his activity there and his great reputation, the community became renowned. He represented the community at all royal ceremonies, including the coronation of Francis I. The addresses he delivered on those occasions were published in Hebrew and German. In 1793 he was appointed by the government chief rabbi of the whole Pest region. By virtue of this appointment he was granted the right to serve as Jewish judge in all the judicial affairs of the communities in the area, and not only in religious matters. This right was limited in 1796, but it did not affect the prestige in which he was held. On his initiative, and as a result of his endeavor, a beautiful synagogue was built by the community in 1822. It is still standing and has been proclaimed by the Hungarian government as a protected historical site. The sermon he preached at its consecration, *Devir ha-Bayit*, was published that same year in Vienna. To the second edition (1931) a biography of the author was added by D.S. Loewinger.

During the period of Muenz's rabbinate, tendencies toward religious reform began to be manifested in Hungary. At the beginning Muenz was relatively tolerant toward these reforms and even maintained friendly ties with the leader of

the reformers, Aaron *Chorin, but later he took a strong stand against their aspirations in general and against Chorin in particular. In 1803 Chorin's book *Emek ha-Shaveh* appeared with the commendation of Muenz, but by 1805 Muenz was presiding over the *bet din that summoned Chorin before it and rebuked him sharply, compelling him to rescind his progressive attitudes. Although the civil government revoked the ruling of rabbis headed by Muenz it was supported by the Orthodox community. His responsa were published by his son Joseph Isaac, under the title *Sefer Maharam Min* (Prague, 1827). He also published, with his annotations, *Peri Ya'akov* (Ofen, 1830) of Jacob ben Moses. Orthodox Jews of Budapest used to visit his grave in the cemetery of Alt-Ofen during the days of Elul and of *seliḥot*. In 1949 this cemetery was cleared by order of the government and Muenz's remains and the tombstones were transferred to another cemetery in Budapest and reinterred near the graves of those killed by the Nazis, where the custom of visiting his grave continues.

[Yehouda Marton]

MUGUR (Legrel), FLORIN (1934–1991), Romanian poet. He was deputy editor of *Argeş* and between 1953 and 1968 published seven verse collections, including *Visele de dimineață* ("Morning Dreams", 1962) and *Mituri* ("Myths", 1967). *Destinele intermediare* (1968) dealt with existentialist questions.

°**MUHAMMAD** (**Muhammad ibn 'Abdallāh ibn 'Abd al-Muṭṭalib ibn Hāshim ibn 'Abd Manāf ibn Quṣayy**; c. 570–632), founder and prophet of *Islam. Muhammad was born in Mecca around 570 C.E. In his twenties he married Khadija, in whose service he was trading; she was a few years older and bore him several children. According to the traditional account, he received his first revelation at the age of 40, following which he preached his religion with little success in his hometown Mecca for about a decade. The turning point was Muhammad's conclusion of an agreement with Arabs from *Medina who adopted the new religion and provided him with a new basis for continuing his mission. The *hijra* that followed the agreement marks the beginning of Muhammad's Medinan period, namely the decade that made Islam a world power. It is mainly with regard to the Medinan period that a student of Muhammad's biography finds himself on relatively firm ground.

The scholarly struggle with central issues of Muhammad's biography has not yet gone far beyond the starting point, because the accounts about specific events in Muhammad's life, their chronology, and their sequence are often incoherent or contradictory. In addition, they reveal legal and exegetical biases beside political and tribal ones. The famous biography of Muhammad by Ibn Hishām and several other early mainstream compilations were the mainstay of Western scholarship regarding the life of Muhammad. But in recent decades an increasingly critical attitude to these sources has been adopted

by several scholars, which for the time being rules out the writing of a narrative biography along the lines of the medieval ones. The creators of the accounts that make up the medieval biographies were not unsophisticated and often had agendas of their own, beside their wish to tell the story of the Arabian Prophet. Students of these accounts cannot afford to be gullible or unsophisticated. Moreover, one has to bear in mind that many of the medieval scholars, on whom we sometimes pass judgment as if they were fellow historians, did not consider themselves as such, or in any case they were not historians in the modern sense of the term. The liberty with which these compilers treated the received texts, for example in creating "combined reports" by putting together fragments from the texts of their predecessors, is most revealing with regard to their concept of history. Besides, their compilations were products of their own time. Their foundations had been laid well before they came into being, and in the cultural context of early Islam that was marked by extreme conservatism, the compilers had little room for self-expression and creativity.

The sheer amount of evidence found in Muhammad's biography is misleading; for example, one looks in vain for the name of a fortress in which a certain tribe was besieged. To some extent the lack of concrete evidence in the biography can be remedied by resorting to other sources, since accounts about Muhammad's life are found everywhere in the vast Islamic literature. Even relatively late sources sometimes contain valuable evidence, because compilers who lived several centuries ago still included in their compilations extracts from much older works which have meanwhile been lost. In sum, one has to throw one's net beyond Muhammad's medieval biographies and employ relatively late sources, too.

Paradoxically, as more and more texts on the Prophet's life are being made available electronically or through the publication of texts hitherto unknown to science, Western scholars seem to be less and less interested in finding concrete evidence in this huge repository of source material. Such evidence does exist, mainly in the form of background information regarding the society of Arabia at the time of Muhammad. The thousands of persons mentioned in the sources, their families and property, in addition to the geographical and topographical data, provide a firm starting point for the study of events in Muhammad's life, their chronology, and their sequence. Between the naiveté of certain past scholars who were unaware of the complexity of Islamic accounts, and the total rejection of these accounts as historical sources, there are several interim positions. A rigorous scrutiny of the sources does point out problematic areas in the evidence, but enough playing cards remain in our hands to facilitate step-by-step progress in the study of Muhammad's life.

Many Jews are mentioned in the chapters of Muhammad's Medinan period. The amount of evidence about their relations with Muhammad is enormous and some of it goes back to Jewish converts or their descendants. It makes up a sizeable "Jewish chapter" in every medieval biography of Muhammad. Only a small number of Jews are treated positively

in the biography and elsewhere in the Islamic literature. They include several Jews who adopted Islam and several others who helped Muhammad in one way or another. Other Jews who appear in the sources were hostile to him: this has major implications to this very day, far beyond the spheres of literature and culture.

Muhammad in Mecca

Arabia in general and Mecca in particular were not isolated from the rest of the world, mainly because of the rivalry between Byzantium and the Sassanian Empire. Being a significant Arabian cultic and trade center, Mecca and its vicinity must have attracted international traders of all religions. But because of lack of interest on the part of Muslim informants, and perhaps due to self-censorship and an apologetic attitude, concrete details about indigenous Meccans who abandoned idol worship and adhered to other religions, or about foreigners living in Mecca, is scarce; after all, Muhammad was accused by his Meccan adversaries of having had a human teacher rather than a heavenly one. There is evidence about a Jewish trader in Mecca who announced Muhammad's birth, lamenting the fact that prophecy had forsaken the Children of Israel. This may well have been a legendary person created in the context of the literary genre known as "the proofs of Muhammad's prophecy." But he represents the Jewish trader in Mecca and elsewhere in Arabia that must have been a well-known figure. A relatively more convincing account concerns a Jew from Najrān by the name of Udhayna who was a protégé of Muhammad's grandfather 'Abd al-Muṭṭalib and was trading on the latter's behalf in the markets of Tihāma or the Arabian coast. When the Jew was murdered, 'Abd al-Muṭṭalib saw to it that blood money be given to the Jew's cousin. Off the beaten track one also finds relatively reliable data of Jewish women who before Islam married prominent members of Muhammad's tribe, Quraysh. For example, two elder brothers of Muhammad's grandfather are said to have had a Jewish mother.

Since Muhammad himself was a trader, there can be no doubt that he had had some contacts with Jews before becoming a prophet. Also his family's links with Medina, which had a large and dominant Jewish population, point in the same direction. His great-grandfather Hāshim married a Medinan woman, Salmā, of the Arab tribe of Khazraj. Muhammad's grandfather 'Abd al-Muṭṭalib was born in Medina and stayed there with his mother for several years. Other Qurashīs, too, had close links with Medina in which both trade interests and politics were involved. For example, when Abū Sufyān had married Hind, who in due course gave birth to the future caliph Mu'āwiya, the bride's father, 'Utba ibn Rabī'a, borrowed the jewelry of the Banū Abīl-Ḥuqayq, a leading family of the Jewish tribe *Naḍīr.

Muhammad at Medina

Negotiations between Muhammad and men from Medina of the Khazraj and Aws tribes (mainly of the former, which was stronger than the latter), referred to in Islam as *al-Anṣār*

or "the helpers," preceded by several months the *hijra* that brought Muhammad from Mecca to Medina. The crucial agreement was concluded during the annual pilgrimage to Mecca at nearby al-'Aqaba. Reportedly, the Jews of Medina told their Arab neighbors about the imminent appearance of a prophet. This sounds like yet another example of "the proofs of Muhammad's prophecy," but it may reflect historical fact. At the 'Aqaba meeting, twelve of the Medinan Arabs were designated as *nuqabā'* or tribal representatives, nine of the Khazraj and three of the Aws. Seven out of the twelve *nuqabā'* shared a common denominator: they were literate. Now since in pre-Islamic Medina literacy was acquired at the Jewish *bayt al-midrās*, this means that the literate *nuqabā'*, while they possibly did not convert to Judaism, were educated by the Jews, and hence were prepared to accept Muhammad as the messiah expected by the Jews. This conclusion, arrived at by comparing the list of *nuqabā'* with that of literate people, has a stronger claim to historicity than a direct statement found in a literary source.

Some have argued that the fate of the Jews of Medina was raised at the 'Aqaba meeting and that Muhammad had a predetermined plan to wipe them out. But this assumption is based on a corrupt text: the word *yahūd* or "Jews" in the story of the meeting on which this argument was based is wrong and should be replaced by *'uhūd* or "treaties" found in better versions of the same text. It is doubtful that Muhammad had such plans; in any case it is somewhat naive to expect to find Muhammad accused of insincerity in an Islamic source otherwise devoted to the protection of his image.

The Jewish Tribes

Several Jewish tribes in Medina are the subjects of separate chapters in Muhammad's biography because they were involved in bloody conflicts with him. In the traditional order of events these are the *Qaynuqā', the Naḍīr, and the *Qurayza. A fourth tribe, the Tha'laba ibn al-Fiṭyawn, may have been on a similar level of significance, but it was expelled by Muhammad in 3/625 "without a fight," and hence only scanty details were preserved about it. The major Jewish tribes of Medina were the owners of weapons and fortresses *par excellence*. However, concerning the status of the Jews, modern students of Muhammad's life have been misled by a corrupt passage in Wāqidi's "Book of Battles" (*Kitāb al-maghāzī*) regarding the divisions in the population of Medina when Muhammad arrived there. The passage is from the introduction of the account about the assassination of Naḍīr's leader *Ka'b ibn al-Ashraf. In its correct form, the passage reads as follows: "Ibn al-Ashraf was a poet. He would satirize the Prophet and his Companions and instigate against them in his poetry the infidels of Quraysh. When the Messenger of God came to Medina, its population was a mixture; among them there were the Muslims who were united by the call of Islam; the 'associators' who worshipped idols; and the Jews who were the owners of weapons and fortresses and allies of the two clans, the Aws and the Khazraj."

It can be shown that the Jewish tribes, Naḍir and Qurayza, in addition to several Arab clans of the Aws, owned castles or special fortifications. Unlike the common tower-houses called in Arabic *uṭum*, pl. *āṭām* that were found everywhere in the Medina area, these castles were military buildings only used at times of war. In addition, the main Jewish tribes had huge arsenals of weapons of different kinds that are listed in the reports on the spoils taken from them. The above report also refers to alliances between the Jews and the Arab tribes of Medina. The Jewish tribes were part of the general system of alliances that was supposed to preserve a balance of power in Medina. In this system the Qaynuqā' and Naḍir were allied with the Khazraj, while the Qurayza were allied with the Aws. In the Battle of Bu'āth several years before the *hijra*, the system was temporarily disturbed, when the Naḍir fought against their former allies, the Khazraj, alongside the Qurayza and the Aws. But after the battle there was a reconciliation between the Naḍir and the Khazraj following attempts by the Khazraj leader 'Abdallāh ibn Ubayy, who had not been involved in the Battle of Bu'āth. He was the most prominent leader among the Khazraj, and probably in Medina at large, and was supported by the Jewish allies of the Khazraj, namely the Qaynuqā' and the Naḍir.

The small group of *muhājirūn* including Qurashīs and clients who arrived at Medina, followed by Muhammad himself, did not cause an immediate upheaval in Medinan politics. Reconciliation between the Khazraj and the Aws was under way, although several wounds and blood with claims were still open. The tribal system was generally stable, with the exception of the occasional clan which had a dispute with its brother clans. Muhammad did not pose as a political reformer intent on destroying the existing equilibrium. It is true that his monotheistic message had immediate political implications, because the Arab tribal leadership of Medina was closely associated with idol worship. But as far as the Jewish tribes were concerned, there was nothing alarming about that: they could only rejoice at the sight of idols being destroyed.

The initial good intentions of Muhammad and the Jewish tribes vis-à-vis each other were expressed, not long after the *hijra*, by separate non-belligerency agreements with the three main tribes, Qaynuqā', Naḍir, and Qurayza. Besides having a time limit, these agreements basically included an assurance that the parties would not attack each other. Simply, the relationship between the newcomers and the native Jewish population had to be regulated by agreements so that trade and agriculture could continue without interruption.

Muhammad directed his attention to his community of disciples that included an increasing number of members from the Khazraj and Aws tribes. One of his first political actions, dating back to the very first period after the *hijra*, was the conclusion of the agreement known in Orientalist jargon by the misnomer, "The Constitution of Medina." The three main Jewish tribes were not a party to the agreement, which was far more binding than the basic non-belligerency agreements which they had concluded with Muhammad. The so-

called "Constitution" was closely linked to Muhammad's creation of a territorial basis in the town of Zuhra in Lower Medina (the Sāfila): the only Jewish tribe that is listed in the agreement, the Tha'laba ibn al-Fiṭyawn, lived in Zuhra and hence was Muhammad's neighbor; as has been mentioned, the Tha'laba were expelled in 3/625. This precious document created a community defined by religion, while preserving the existing tribal system. Despite its religious framework, it had far-reaching political implications, since it separated the members of Muhammad's new community from their fellow tribesmen with regard to several key legal aspects. Thus it laid the foundations for Muhammad's victory over the Jews that was achieved despite his initial military inferiority. Muhammad introduced into the political system of Medina a new source of authority which destroyed it from within, namely Allah and His Messenger.

The first period after the *hijra* was marked by a stable relationship between Muhammad and the Jews that was possibly not free of polemics and friction. Muhammad sincerely expected the Jews to embrace Islam, but they were only prepared to recognize him as Allah's messenger to the Arabs. The small number of Jewish converts was for Muhammad a constant source of frustration; even declaring *Jerusalem as the Muslim *qibla* or direction of prayer did not help to attract the Jews to Muhammad's call. As long as Muhammad's relations with the main Jewish tribes were good, there was nothing menacing about the "Constitution" from their viewpoint. Problems began when conflicts of loyalties occurred among the Arab allies of the Jews. With the prominent exception of 'Abdallāh ibn Ubayy, Islamic literature usually preserved the stories of former Arab allies who proved by their actions that they were no longer attached to the Jews. Hostilities broke out after Muhammad's major victory at Badr (2/624) at about the same time Jerusalem was replaced by Mecca as the Muslim direction of prayer. The first Jewish tribe to enter into a conflict with Muhammad was the Qaynuqā'. Muhammad's biography offers a variety of causes for this conflict, a phenomenon we meet time and again with regard to other Jewish tribes and to the assassination of the Naḍir leader Ka'b ibn al-Ashraf. Regarding the Qaynuqā', the pride of place in the sources – and sometimes in scholarly writings as well – is given to the alleged events that followed the humiliation of an Arab woman by a Jewish goldsmith at the market of the Qaynuqā'. But this story is a suspicious *casus belli*, since a similar one exists regarding one of the pre-Islamic "Battles of the Arabs" (*ayyām al-ʿarab*). In fact, we have here a wandering literary motive unworthy of serious consideration.

Self-imposed censorship is not uncommon in Islamic literature, and Muhammad's biography is no exception. Therefore, straightforward answers to simple questions are in short supply. Even when this would have been appropriate, we are unlikely to come across a statement that "Muhammad attacked such-and-such an enemy, taking advantage of a propitious moment"; unrealistically, the Prophet is not supposed to have been driven by political or military considerations.

But Muhammad's brilliant achievement during the last decade of his life is proof enough that he knew how to choose a propitious moment in the interest of his new religion. To understand why the Qaynuqā' were the first Jewish tribe to find itself in conflict with Muhammad one has to consider two realities that can easily go unnoticed in the general tumult of the evidence. The Qaynuqā' lived in Lower Medina, not far from Muhammad's territorial basis – admittedly, this is also true of the Naḍir, who lived in the nearby town of Zuhra; both Jewish tribes were allied with the Khazraj. More significantly, the Qaynuqā' lost most of their Arab allies. The Qaynuqā' were allied with the Khazraj, who were generally far more supportive of Muhammad than the Aws. However, their alliance was not with the Khazraj as a whole, but with a specific group within the Khazraj, namely the 'Awf ibn al-Khazraj. The 'Awf were divided into two subsections, the Ḥublā led by 'Abdallāh ibn Ubayy and the Qawāqila led by 'Ubāda ibn al-Ṣāmit. The two leaders held equal shares of the alliance. Against the background of the conflict between Muhammad and the Qaynuqā' 'Ubāda repudiated his alliance with the Qaynuqā'. In practice this meant the collapse of their alliance with the 'Awf ibn al-Khazraj, because it was inconceivable that one section of the 'Awf, the Ḥublā, would fight against another section, the Qawāqila, in order to protect the Qaynuqā'.

This crucial account on the alliance – a rarity in Muhammad's biography that is otherwise poor in factual evidence – provides a matter-of-fact behind-the-scenes insight into the conflict with the Qaynuqā'. We owe it to 'Ubāda ibn al-Ṣāmit's offspring. They were naturally proud of 'Ubāda's repudiation of his alliance with the Qaynuqā', which is emphasized against 'Abdallāh ibn Ubayy's refusal "to move with the times." According to Arab values, the abandonment of one's allies was not a praiseworthy act; but there was a temporary abandonment of these values in the context of Muhammad's conflict with the Jews. The reversal of values is reflected by the expression "the hearts have changed" which is used as an excuse at least twice in connection with the alliances between the Jewish and Arab tribes of Medina. It is doubtful whether the dialogues which include this expression really took place; but obviously Islamic literature chose to refer in this manner to the changing circumstances when the former Arab allies of the Jews had to choose between their Jewish allies and Muhammad. By declaring their loyalty to Muhammad, they expunged the blemish of their former alliances.

The repudiation of former alliances with the Jews repeats itself in connection with the other main Jewish tribes. The assassination of the Naḍir leader Ka'b ibn al-Ashraf, the son of an Arab tribesman and an aristocratic woman of the Naḍir, which was probably an introduction to the tribe's siege and expulsion, was carried out by his foster-brother, among others. The vivid account of how Ka'b was lured out of his fortress and the precise details of his assassination belong to the "change of heart" theme.

As usual, one finds several alternative causes for the conflict with the Naḍir where one good cause would have suf-

ficed. Again a significant reality could easily have been overlooked. Some reports about the conflict with the Naḍir have it that Muhammad ordered his men to attack the Naḍir who were lamenting the death of their chief, Ka'b ibn al-Ashraf, in their town of Zuhra. This suggests that the attack on the Naḍir was a surprise one. As has already been mentioned, in addition to the common tower-houses which were also used for residence, the Naḍir had a castle only used at times of war. But when Muhammad attacked them, they were in their town, not in their castle. Indeed accounts of their war with Muhammad speak of house-to-house fighting. The compilers of Muhammad's biography felt an understandable aversion to describing the attack on the Naḍir as a surprise attack; the attachment of a proper *casus belli* to every act of war was for them a matter of high priority. The expelled Naḍir probably went to places with which they had had former trading links: Edrei, Jericho, al-Hira, and Khaybar. Two leading families of the Naḍir, the Banū Abil-Ḥuqayq and the family of Ḥuyayy ibn Akhṭab, went to Khaybar.

Like the other main Jewish tribes, the Qurayza concluded a non-belligerency agreement with Muhammad not long after his arrival at Medina. Agreements of this kind had a time limit. In any case, some sources mention a later agreement that neutralized the Qurayza and gave Muhammad a free hand to deal with the Naḍir. It is reported that Muhammad laid siege to the Naḍir, announcing that they would only be safe if they conclude an agreement (i.e. of non-belligerency) with him. They refused and he fought them for one day. In the following day he laid siege to the Qurayza, demanding that they conclude with him an agreement along the same lines. They consented and he returned to the Naḍir and fought them until they surrendered and went into exile. This valuable fragment seems to have been marginalized in Islamic literature. Again, we realize that scholarly biographies of Muhammad which are solely based on his mainstream biographies lack crucial evidence.

The war against the Qurayza took place after the Battle of the Ditch (Khandaq) during which Medina was besieged by a coalition including Muhammad's own tribe, Quraysh, and several nomadic tribes. Unlike the war against the Naḍir, in this case one may speak of a real siege: the Qurayza were probably in their castle in a state of alert ever since the Battle of the Ditch had started. The siege of the Qurayza was rather eventless, perhaps due to negotiations which were taking place between Muhammad and the leaders of the besieged tribe. The besiegers had only two casualties: a man who died of natural causes and another who was killed by a millstone thrown from the castle by a woman who was later executed.

The Qurayza are said to have violated their non-belligerency agreement with Muhammad, although evidence about hostile military actions on their part is meager. Reportedly, it was the angel Gabriel who told Muhammad after the Battle of the Ditch that the war was not over yet and that he had to march on the Qurayza. Obviously, the informant who brought Gabriel into the story did not give much thought to the question of *casus belli*. Typically, when the Qurayza surrendered

without conditions, Muhammad yielded the power to decide their fate to a former ally of theirs from the Aws, who ordered that their fighting men (i.e. all those who had reached puberty) be killed and their wives and children be sold into slavery. Several accounts make it clear that while this person, Sa'd ibn Mu'adh, had undergone a full "change of heart," other members of the Aws were embittered by the fact that the Qaynuqā', who had been allied with the Khazraj, had been allowed to leave Medina unharmed through the intercession of 'Abdallāh ibn Ubayy, while their own allies were going to be slain. In itself, the execution of a whole tribe was not a new idea: after all, Muhammad had intended to execute the Qaynuqā'. The Qurayza could not rely on meaningful support from their allies, the Aws, for the simple reason that at the time of their execution most of the Aws were not yet Muslims. 'Abdallāh ibn Ubayy, even after having lost some of his power among the Khazraj following Muhammad's arrival at Medina, commanded enough authority among the Khazraj to exert real pressure on Muhammad and spare the lives of the Qaynuqā'. It can be said that the execution of the Qurayza is yet another attestation of the collapse of the system of alliances that had safeguarded the security of the Jewish tribes.

The last major episode in Muhammad's conflict with the Jews of Arabia was the conquest of Khaybar. Here too we come across a little known chapter in Muhammad's diplomatic history, one that is completely absent from his biographies, probably due to self-imposed censorship. The expedition of Khaybar (7/628) was immediately preceded by that of Ḥudaybiyya (6/628) in which Muhammad led an enormous army to the fringes of the sacred area of Mecca. There he negotiated the terms of a non-belligerency treaty with his tribe, Quraysh. Muhammad's medieval biographies include lengthy accounts about the negotiations at Ḥudaybiyya, making no secret of the fact that Muhammad consented to far-reaching concessions to the Qurashī pagans. But there is no convincing explanation of why he was prepared to yield to such an extent. It is an 11th century doctor of law who has the answer. It is found in a discussion of whether it is legitimate for Muslims to accept humiliating demands if these are dictated by necessity. The case in question concerns the demands made by the inhabitants of a town which a Muslim troop needs to cross:

Indeed the Messenger of God undertook in the non-belligerency agreement on the day of Ḥudaybiyya, commitments which were graver than this, since the people of Mecca imposed on him to undertake to return to them any of those who would come to him as a Muslim. He had fulfilled this undertaking until it was abrogated, because there was in it a benefit for the Muslims, owing to the conspiracy between the people of Mecca and the people of Khaybar. It prescribed that if the Messenger of God marched on one of the two parties, the other party would attack Medina. He concluded a non-belligerency agreement with the people of Mecca to secure his flank when he would march on Khaybar.

The Mecca-Khaybar "conspiracy" was adapted to the realities on the ground, since Medina is located between Khay-

bar in the north and Mecca in the south. Muhammad's rivals, the Jews of Khaybar and the Quraysh of Mecca, agreed that rather than coming to each other's rescue upon being attacked by Muhammad, the party that was not targeted would attack Muhammad's base in Medina. The sweet fruit of the Ḥudaybiyya non-belligerency agreement was the abolishment of the Mecca-Khaybar axis. The pagan Meccans gave Muhammad a free hand in Khaybar, the last major Jewish stronghold in northern Arabia. Khaybar was conquered shortly afterwards. The Jews of Khaybar and those of Fadak, Taymā' and Wādīl-Qurā were allowed to continue cultivating their lands in return for a certain share of the annual harvest.

Muhammad's phenomenal success in his war against the Jewish tribes of Medina gave him control over it. The accounts of the tragic events of this first encounter between Islam and Judaism remain with us. Regardless of their historicity, they became basic building blocks of Islamic culture and a source of edification, inspiration and entertainment for millions of Muslims.

°**MUHAMMAD ALI** (1769–1849), ruler of *Egypt from 1805 to 1849. First coming to Egypt in 1799 with the Ottoman sultan's armies, Muhammad Ali quickly rose to power there and conquered the Sudan, *Palestine, and *Syria. He successfully subdued the *Mamluks, massacring them in 1811. By exploiting the weakness of the Ottomans and the disunity of the Great Powers, he consolidated his position by military campaigns outside Egypt and important reforms within the country. He also appointed French officers who had retired from their duties at the close of the Napoleonic Wars. Nevertheless he was unable to maintain his hold over Palestine and Syria, owing to the opposition of Britain and other European countries – with the exception of France – and finally came into conflict with the sultan in 1840. His only important achievement in his foreign policy was the commitment of the sultan to leave the governorship of Egypt in the hands of his family. His internal reforms were also largely motivated by personal interests, but they partially helped in developing and

rebuilding Egypt. Despite his severity and his cruel punishments, the lot of his subjects improved. The public administration and the collection of taxes became more efficient, but the reforms essentially took place in the fields of irrigation, agriculture, industry, commerce, justice, health, and education. The relative security within Egypt encouraged commerce; the members of the religious minorities, such as Christians and Jews, also played an active role. Nevertheless, as a result of his personal retention of various monopolies during most of his rule, Muhammad Ali increased his income, but slowed down the development of commerce. His experiments in reforming the system of justice ran foul of a lengthy tradition of corruption among many qadis (religious judges); in order to circumvent them, he established two new courts of justice, in *Cairo and *Alexandria, to which he appointed Muslim and Christian merchants as judges (in Alexandria, there was also a Jewish judge); they were to deal with affairs of business and commerce, especially between members of different religions. Muhammad Ali's generation did not complete the modernization of Egypt and some of his reforms were neglected after his death; the seeds for the Arabization of the country had however been sown. In any event, the Jews of Egypt exchanged the arbitrariness of the many rulers of the land – namely the Mamluks – for the arbitrariness of a single ruler. Though they were still oppressed, the authority of the law protected their persons and their property. When taxes were levied, they were treated in the same way as the other non-Muslims in Egypt, i.e., without discrimination. Personal and material security resulted in an increase in the Jewish population in Egypt (Jews immigrated there from *Italy and *Greece), and by the close of Muhammad Ali's rule there were over 7,000 Jews, including about 1,200 Karaites. Most of the Jews lived in towns and were essentially occupied in commerce, crafts, and public services. Under the influence of Sir Moses *Montefiore, Muhammad Ali did not allow the *Damascus blood libel (1840) to spread to other places. The years of Muhammad Ali's rule of Palestine (1832–40) were a time of relief for the Jewish inhabitants of Erez Israel and especially *Jerusalem, which had been troubled by the Fellaheen revolts.

MUHLSTOCK, LOUIS (1904–2001), Canadian artist. Louis Muhlstock was born in Narajow, Galicia. In 1911 he resettled with his family in Montreal, Canada, where his father had immigrated a few years before. After early studies at the Conseil des arts et manufactures, he took evening classes at the Art Association of Montreal and the École des beaux-arts de

Montréal while working during the day as an accountant for a fruit and vegetable merchant.

In 1928 Muhlstock made his way to Paris, where he studied at the Grande Chaumière and took part in several exhibitions. When his mother became ill in 1931 he returned to Canada and the difficult Depression era life of an artist. During this period, Muhlstock painted street scenes, abandoned slums, and some remarkable portraits of people marginalized by society – the poor, the sick, and the unemployed. With these works, he became one of the leading proponents of a new form of Canadian art that moved away from a nationalistic identification with the northern landscape to focus on the human condition and contemporary life. A founding member in 1939 of the Contemporary Arts Society, he was part of a dynamic group of artists from Montreal's Jewish community – which also included Jack Beder (1910–1987), Alexander Bercovitch (1891–1951), Sam Borenstein (1908–1969), and Ernst Neumann (1907–1956) – who gave a more decisively humanist, urban dimension to the art of their day. During World War II, Muhlstock made a number of pictures of war industry workers.

Over the following decades Muhlstock's work diversified, thematically and stylistically, but remained marked by an expressive sensibility evident in both the graphic quality of his drawings and the handling of his paintings. A regular exhibitor, he was a member of several associations, including the Canadian Society of Graphic Arts, the Canadian Group of Painters and the Federation of Canadian Artists. His works are represented in numerous public and private collections.

MUHR, ABRAHAM (1781–1847), leader of Silesian Jewry. Muhr moved from his native city of Berlin to Plesse (Pszczyna; now in Poland), Prussian Silesia. In 1813 he published a pamphlet, *Jerubaal*, in opposition to David *Friedlaender's *Ein Wort zu seiner Zeit*, which demanded extreme reforms in the liturgy and education in response to the Prussian emancipatory edict of 1812. Although Muhr opposed the repudiation of tradition in favor of questionable changes, nevertheless he proposed that sermons in German and choir singing be allowed, and was prepared to sacrifice various customs in order to make the services more respected and meaningful. Subsequently he became an advocate of Reform and an admirer of Abraham *Geiger. He was instrumental in the building of a synagogue in Plesse (1835), where he carried out his 1813 proposals. In 1836 Muhr succeeded in having a cabinet order repealed which introduced the form of address "Jew" in official transactions. He also played a role in the partial repeal of the prohibition on the use of non-Jewish names. In 1840 he was one of the leaders in the organization of a regional body of Upper Silesian Jewry, the first modern union of Jewish communities in Germany. In 1844 he proposed establishing a Jewish agricultural colony, but in 1847 he died in Breslau (now in Poland). His brother Joseph (1772–1848) was leader of the Berlin community.

[Henry Wasserman]

MUKACHEVO (Czech. **Mukačevo**; Hung. **Munkács**), city in Transcarpathian district, Ukraine. Until 1919 Mukachevo belonged to Hungary, then until 1938 to Czechoslovakia, and from 1938 to 1945 again to Hungary. From the end of World War II it formed part of the Soviet Union. The modest beginnings of the community are reflected in documents early in the 18th century. In Jewish sources, such as the place-formulas in divorce bills, the town is referred to as “Minkatchov, a town situated on the banks of the Latartza River and of springs.” The Jewish population rapidly increased and it became one of the largest communities in Hungary, renowned on the one hand for its extreme conservatism and pronounced inclination toward ḥasidism, and on the other for its many undertakings in the fields of Hebrew education and Zionist activities. Many documents on the beginnings of the Jewish settlement in this town have been preserved and published. According to these, Jews settled there early in the second half of the 17th century. There is also evidence of isolated Jews living in the surrounding area prior to this period. In 1711 ownership of the town was transferred to the Schoenborn family of the nobility, who authorized the growth of the Jewish population on payment of taxes and levies. Local Jews were already engaged in commerce at that time and acted as brokers in trade between Galicia and Hungary. There were also Jewish farmers and craftsmen. The population was continuously augmented by arrivals from Galicia. In 1741 a Jewish community of 80 families was organized and a synagogue established; their numbers had doubled by 1815 (165), reached 202 in 1830, and 301 by 1842. In the 1848–49 Hungarian revolt against the Austrians, 247 Jews joined the local guard. From 1851, when there was already a large yeshivah in Mukachevo, the community maintained regular records of births, deaths, and marriages. A Hebrew press was founded in 1871 and many Hebrew books were published in Mukachevo (see *Kirjath Sepher, Index to Studies, Notes and Reviews* (1967), entries, 86, 192, 193, 473).

The most prominent rabbis of the community were Solomon Shapira (grandson of R. Zevi who had also occupied this rabbinical seat for a few years); Zevi Shapira, who succeeded his father in 1893; and Ḥayyim Eleazar Shapira, who led the community from 1913 and became known as the leading opponent of Zionism in the ḥasidic world. After his death in 1937 he was succeeded by his son-in-law, Baruch Rabinowitz, subsequently rabbi in Ḥolon, Israel (for ḥasidic dynasty, see *Shapira family). In 1891 the community numbered 5,049 (47.9% of the total population) and two additional synagogues were erected in 1895 and 1903. The Jewish population continued to grow and numbered 7,675 in 1910 (44%); 10,012 in 1921 (48%); and 11,241 (43%) in 1930, of whom 88% registered their nationality as Jewish.

Between the two world wars Jews participated actively in the administration of Mukachevo and its general political life. Despite opposition by the masses, the Zionist party of Czechoslovakia found many supporters in the town. Four Yiddish periodicals were published. Pupils of the town and its surroundings streamed to the first Hebrew elementary school, which was founded in 1920 by the Organization of Hebrew Schools in Subcarpathian Ruthenia. A Hebrew secondary school was established in 1925. This was headed from 1929 by Ḥayyim *Kugel, who became a member of the Czechoslovak parliament in 1935, and later by Eliahu Rubin. At the time of the Holocaust there were about 30 synagogues in Mukachevo. Many of these were ḥasidic *bettei-midrash* and *kloyzen*.

When Mukachevo reverted to Hungarian rule in 1938, the Jews immediately suffered heavily.

Holocaust Period and After

In 1940–1941 many young Jews were drafted into work battalions and sent to the Russian front, where most of them died. In July and early August 1941 many Jewish families without Hungarian citizenship were expelled to Stanislavov (Galicia) and Kamenets-Podolski, and there most of them perished. After the German occupation of Hungary in March 1944, the Jews were herded together in a ghetto with about 15,000 others from the Berehovo district. The ghetto consisted of a few streets with extremely poor sanitary conditions and almost no food. The able-bodied were pressed into forced labor. In the second half of May 1944 transports started to leave for Auschwitz and by May 30 the city was pronounced **judenrein*. After the war some 2,500 returned to the city, but after it was annexed to the Soviet Union, many left for Czechoslovakia and Israel. Under Soviet rule the synagogues were confiscated; the last one was converted into a warehouse in 1959. Some Jews were imprisoned for practicing *sheḥitah*. Between 1,000 and 2,000 Jews were living in Mukachevo in the late 1960s. Most remaining Jews emigrated in the 1990s, leaving for Israel and the West.

[Yehouda Marton]

MUKAMMIŞ (also **al-Mukammaş**, the spelling of the name is uncertain), **IBN MARWÂN AL-RÂQI** (from the city of Raqa, Iraq) **AL-SHIRAZI AL-** (also known as **David ha-Bavli**; c. 900), one of the first Jewish philosophers of the Islamic period. Al-*Kirkisani, the Karaite scholar, relates that he was a Jew who began to convert to Christianity when he was a student of Nonnus, a Christian philosopher and physician who lived at Nisibis. However, when he became better acquainted with the dogmas and teachings of Christianity, he composed two polemical works against this religion; nevertheless, from this fact it cannot be deduced with certainty that he returned to Judaism. Be that as it may, Jews and Muslims considered

him a Jewish scholar. It is also not clear whether he was a Rabbanite or Karaite.

Al-Mukammiş translated Christian commentaries on Genesis and Ecclesiastes and wrote on different religions and sects. A manuscript which contains most of his theological-philosophical work entitled *‘Ishrūn Maqālāt* (“Twenty Treatises”) is extant in the St. Petersburg library. Only a small portion of the Arabic original of the work has been published; this corresponds to one of the sections of a partial Hebrew translation of the work which forms part of Judah b. Barzillai al-Bargeloni’s commentary on *Sefer Yeẓirah*. Al-Mukammiş’ work deals with such topics as knowledge and truth, substance and accident, the existence of God, His unity and attributes, prophecy, and the Divine commandments. The portions of the work which are extant disclose that, like *Saadia Gaon (*Emunot ve-De’ot*, 1:1), al-Mukammiş followed, generally speaking, the teachings of the Muslim Mu’tazilites (see *Kalām), though he also accepted some of the views of the Greek philosophers. Like the Mu’tazilites he argued that the attributes of God are not superadded to His essence, so that they would introduce multiplicity into God. God and His attributes are one, and only the shortcomings of human language require that men use a multiplicity of terms in describing His attributes. Attributes describing God must be understood negatively, that is to say, they must be interpreted as stating what God is not, rather than what He is (cf. *God, Attributes of). Al-Mukammiş holds further that a “negative theology” similar to his is already found in Aristotle. He rejects the Christian doctrine of the Trinity as false, since it is based on the notion that God possesses a multiplicity of attributes. He calls God the “uncaused cause.” The soul, he holds, lives through itself, not through a force in something else. The reward of the righteous and the punishment of the wicked takes place throughout eternity in the World to Come. Describing the history of Christianity, he affirms that this religion has its root in two Jewish sects: the Sadducees and the Jewish pre-Christian sect of the Alkaraya. He points to the contradictions among the various Gospels and shows that these writings contain no laws. Laws were given to Christians only by the apostles Peter and Paul, though Christians see the source of these laws in a secret tradition stemming from Jesus. Since these apostolic laws were few and insufficient, Christians added new laws at the Council of Nicea, and still more laws were added later.

Al-Mukammiş wrote extensively about Jewish sects, and his discussion of this topic served, undoubtedly, as an important source for Jewish and Islamic authors.

MUKDONI, A. (pseudonym of **Alexander Kappel**; 1877–1958), Yiddish essayist, and theater critic. Born in Lyakhov-

ichi, Belorussia, he began his literary career in Warsaw in 1906, specializing in theater criticism and publishing widely in Yiddish journals in Poland, Russia, and the U.S. Before earning a doctorate in labor law from the University of Bern, Switzerland, he studied in yeshivah and a Russian high school. After World War I, he edited the Kovno daily *Nayes*, before immigrating to the U.S. in 1922. There he joined the daily *Morgn-Zhurnal* as literary and theater critic. He published *Ertseylungen un Skitsn* (“Stories and Sketches,” 1911), and *Y.L. Perets un dos Yidische Teater* (“I.L. Peretz and the Yiddish Theater,” 1949) in addition to four volumes of memoirs: *Mayne Bagegishn* (“My Encounters,” 1949–55). He published his best critical essays in the volume *Teater* (“Theater,” 1927), which includes keen observations on the Yiddish theater and Yiddish actors.

MUKZEH (Heb. מִקְזֶה; “set aside,” “excluded”), rabbinical term for objects which it is forbidden to handle on the Sabbath or festivals. According to one authority in the Talmud, the law of *mukzeh* is a biblical injunction derived from Exodus 16:15 (Beah 2b; Pes. 47b). Maimonides explains that the law is intended to emphasize the distinction between the Sabbath and festivals, and weekdays (Yad, Shabbat, 24:12).

The Talmud (Shab. 124a) enumerates several categories of *mukzeh*, including: (1) objects, such as money and tools, whose nature renders them unfit for use on the Sabbath or festivals because of their connection with forbidden work (Sh. Ar., Oḥ 308:1). Such objects may only be handled if they are needed for an act permitted on these days, such as a hammer for cracking nuts (308:3); (2) objects not normally used at all (e.g., broken property, pebbles), unless a specific use had been determined for them on the eve of the Sabbath or the festival (308:7); (3) objects which were not in existence (termed *nolad*), or were inaccessible at the commencement of the Sabbath or festival. This category includes newly laid eggs (322:1), fruit fallen from a tree on the same day (322:3), and milk obtained from an animal by a non-Jew (305:20); (4) objects which at the commencement of the holy day served as a base for others which are forbidden to be handled on that day, such as candlesticks or a candle tray (309:4).

An object which is *mukzeh* can only be moved if its place is needed (311:8, 15a), and if it is moved in an unusual way, if it is kicked for instance, and not moved by hand (*Be’ur Hala-khah* to 266:13). In all cases, objects which were *mukzeh* at twilight on the eve of the holy day, remain *mukzeh* throughout the holy day.

See general laws of *Sabbath.

MULBERRY (Heb. תות, *tut*). Two species of mulberry grow in Israel: the black, *Morus nigra*, and the white, *Morus alba*. The latter is a comparative newcomer to the region, the ancient sources referring only to the former. The mulberry seems to have originated in Persia, from where it was transferred to the Middle East. There is evidence that it was growing in Greece in the sixth century B.C.E. In Aramaic literature it is first mentioned in the Book of *Ahikar, which was discovered among *Elephantine papyri, where it says: "My son, be not in a hurry, like the almond tree whose blossom is the first to appear, but whose fruit is the last to be eaten; but be equal and sensible, like the mulberry tree whose blossom is the last to appear, but whose fruit is the first to be eaten" (Ahikar, Syriac Version A, 2:7). According to the Talmud the fruit of the mulberry ripens 52 days after the flowering (Bek. 8a). In 1 Maccabees 6:34 it is related that the elephants brought by the Syrians were incited to battle with the juice of grapes and mulberries. The staining of the hands by the juice is referred to by the rabbis in their parable of the dialogue between God and Cain, who pleaded "Am I my brother's keeper?" (Gen. 4:9): "This may be compared to one who stole mulberries and, on being caught by the owner, pleaded his innocence. The owner replied: 'But your hands are stained.' Thus said the Holy One, blessed be He, to Cain: 'Thy brother's blood crieth unto Me'" (Gen. R. 22: 9). The mulberry initially is white, then reddens and finally becomes black (see Ma'as. 1:2). It is a large, long-living tree. Until a generation ago, an old mulberry tree used to be shown in Jerusalem near the Pool of Siloam about which there was a legend (mentioned in a travel book of 1575) that Isaiah hid in the hollow of its trunk when pursued by Manasseh. Apparently the town Bertotha (Or. 1:4; et al.) takes its name from the mulberry. The white mulberry, the leaves of which are used for feeding silkworms, originated in China and was brought to Erez Israel at a late date. Joseph *Nasi planted extensive orchards of them in Tiberias in 1565 with the intention of developing a silk industry. This venture, however, failed. Another effort was made in Petah Tikvah by the Hovevei Zion, who in 1891 planted 576 dunams (144 acres) with mulberry trees, but this venture also failed. Nowadays the tree is grown in gardens for its beauty and for the shade it gives. There is no basis for the Authorized Version's rendering of *bekha'im* in 11 Samuel 5:23 and 1 Chronicles 14:14, as mulberry trees (see *Mastic).

MULDER, SAMUEL ISRAEL (1792–1862), educator and Hebrew author, born in Amsterdam. He was a pupil of David *Friedrichsfeld and under his influence became one of the pillars of the Dutch Haskalah. As a youth he signed himself "Salomon" or "Schrijver," receiving the surname Mulder only in 1811. In 1818 he became an official court translator, and in 1826 was appointed principal of the Nederlands Israëlietisch

Seminarium, the seminary for rabbis and teachers in Amsterdam. From 1835 he served as the superintendent of all Jewish religious schools in Holland, and from 1849 was secretary of the Amsterdam community.

Mulder's scholarly and literary work qualifies him as the Dutch equivalent of a late 18th-century Berlin *maskil*, his oeuvre showing many parallels with that of Joel *Loewe (Joel Brikl). Mulder made his name as a linguist, compiling, inter alia, an abridgement of Loewe's 1794 *Ammudei ha-Lashon* and a Hebrew-Dutch dictionary (1831; with M. *Lemans), and as a translator of the core texts of the Jewish liturgy. He translated large parts of the Bible (1827–38), the Passover *Haggadah* (1837), *Keter Malkhut* (1850), and *Sefer ha-Ḥayyim* (1851). He also published a Dutch Bible for Jewish youth in 17 parts (1850–55). In 1815 he had founded, together with Mozes Loonstein, the Hebrew literary society *Tongeleth*. Simultaneously, Mulder's work appears mildly influenced by the early German *Wissenschaft des Judentums*. He was the author of several historical overviews, ranging from ancient history to Dutch literature. As early as 1826 he published a (liberal) abridged translation of Zunz's groundbreaking study of Rashi (1822). Part of Mulder's Dutch compositions were collected in *Ver spreide Lettervruchten* (1844).

[Yehuda Arye Klausner / Irene E. Zwiep (2nd ed.)]

MULE (Heb. מִלֵּךְ), the offspring of a he-ass and a mare. Although a Jew is prohibited from producing such hybrids, their use is permitted (Tosef., Kil. 5:6 cites an individual view prohibiting it). Since there were different strains of horses and asses in Erez Israel, the mules were also of different strains. The mule is a powerful, submissive animal, particularly suitable for riding and transporting goods in the mountainous regions of Erez Israel, and hence was commonly used. Nor was riding on it regarded as inferior to riding on a horse; Solomon, on the occasion of his proclamation as king, was made to ride "upon King David's mule" (1 Kings 1:38), while Absalom met his death while riding on a mule (11 Sam. 18:9). Ezekiel (27:14) speaks in praise of the mules of Togarmah (Turkey?). The Talmud mentions white mules as being dangerous and some sages were indignant with Judah ha-Nasi for harboring them (ul. 7b). That the mule is sometimes dangerous, is sterile, and the female barren was regarded as proof that man is prohibited from interfering with the work of creation. Rabban Simeon b. Gamaliel maintained that the first to cross a horse with an ass in order to produce a mule, thereby committing an unworthy act, was "Anah who discovered the *yemim*" (Gen. 36: 24), which he explained as meaning mules. On the other hand, R. Yose held that on the termination of the first Sabbath after the Creation one of the two things which Adam did was "to cross two animals, and from them came forth the mule."

He contended that thereby Adam performed an action “of a kind similar to that of Heaven,” that is, he created something new, to become, as it were, a partner with the Creator in the work of creation (Pes. 54a; cf. TJ, Ber. 8:6, 12b). Some also crossbred a stallion and a she-ass, and the Talmud gives the characteristics of the two types of mule: if its ears are short, it is the offspring of a mare and a he-ass, if large, of a she-ass and a stallion (TJ, Kil. 7:3, 31c).

MULHOUSE (Muelhausen), city in *Alsace, in the Haut-Rhin department, France. The earliest documentation of the presence of Jews in Mulhouse dates from 1290, when one Salman was victim of a persecution. The existence of a synagogue is confirmed from 1311. The Jews of Mulhouse suffered during the *Armlerder riots in January 1338, and again during the outbreaks accompanying the Black *Death (1349). By 1385, however, there were once more Jews living in Mulhouse. At the beginning of the 15th century, several Jews who had arrived from other places in Alsace were granted the freedom of the city. The nine families who were there in 1418 owned houses, engaged in moneylending and traded in livestock. Although there was no expulsion, no Jews lived in the city between 1512 and 1655. At the beginning of the 18th century, when they were still insignificant in number, their trade flourished to the extent of arousing the jealousy of the Christian merchants, who demanded that their rights be restricted. In 1784 there were 23 Jewish families (94 persons) in the city. As it was free from the anti-Jewish riots which broke out throughout Alsace in 1789, Mulhouse became a refuge for many Jews from the surrounding district. The synagogue, built in 1822, soon proved to be too small and was replaced by a larger one in 1849. A cemetery was purchased in 1831, and the community established several other institutions, including a vocational school in 1842, and an almshouse-hospital in 1863. Two periodicals catering for all the Jews of Alsace and even beyond were published during the second half of the 19th century. From about 5,000 in 1900 the community declined to around 3,000 in 1921, remaining stable until just before World War II. Jacob *Kaplan, later chief rabbi of France, held office in Mulhouse in 1922.

[Bernhard Blumenkranz]

Holocaust and Contemporary Periods

Under German occupation in World War II, the Jews who had not managed to escape were expelled on July 16, 1940, along with the Jews in the rest of Alsace and Moselle. The synagogue, which had been partially damaged, was saved from total destruction when the edifice was requisitioned by the municipal theater. In 1970 Mulhouse had 1,800 Jewish inhabitants and a well-organized and active Jewish community.

MULISCH, HARRY (1927–), Dutch author. Born in Haarlem, Mulisch was of mixed descent, his father being a non-Jewish Czech banker and his mother a Jewess born in Antwerp. Widely recognized as one of Holland's most original modern writers, Mulisch published novels, short stories, and other prose works notable for their imaginative use of mythological, occult, and philosophical material to explore the existential problems of contemporary society. His earlier works include the novels *Archibald Strohalp* (1952), *De diamant* (“The Diamond,” 1954), and *Het zwarte licht* (“The Black Light,” 1956); also a play about the 12th-century heretic *Tanchelijn* (1960). Mulisch visited Israel in 1961 to cover the *Eichmann trial, which inspired *De zaak 40/61* (“Case 40/61,” 1961). Two other works on Jewish themes are the novel *Het stenen bruidsbed* (“The Stone Bridal Bed,” 1959) and the autobiographical *Voer voor psychologen* (“Food for Psychologists,” 1961). In 1975 Mulisch published a novel on lesbian love, *Twee vrouwen* (“Two Women”). Another novel, *De aanslag* (“The Assault,” 1982), deals with the problem-filled life of a man orphaned in the war due to a cruel coincidence. In *De ontdekking van de hemel* (“The Discovery of Heaven,” 1992), World War II and its impact on private and public life take center stage once more. This vast novel, with its multi-layered narrative, counts as his masterpiece. The main story line has God renounce His trust in humanity and reclaim Moses' Stone Tablets with the Ten Commandments. The novel comes to an apocalyptic end in Jerusalem. Mulisch's work has been translated into many languages.

[Gerda Alster-Thau / Maritha Mathijssen (2nd ed.)]

MULLER, BENJAMIN (1947–), *ḥazzan*. Muller was born in Geneva, Switzerland, where his grandfather, Samuel Sternberg, who was also his first teacher, was a *ḥasidic ḥazzan*. Muller attended Mir yeshivah in Jerusalem and studied voice development in Milan. He served as *ḥazzan* in Montreal and in Johannesburg, where he also studied *ḥazzanut* under both Shelomoh Mandel and Abraham Himmelstein. In 1975 he became the chief *ḥazzan* of the Shomre Hadass congregation in Antwerp. He recorded *ḥazzanut* and *ḥasidic* melodies and his rendering of *seliḥot* was broadcast annually on television from Belgium to all Western Europe. The wide range

of his powerful tenor voice can be compared to the greatest opera singers. He is also a well-known exponent of the works of Yossele *Rosenblatt. Besides singing, Muller is also a composer and orchestrator of cantorial recitatives and other Jewish concert works.

[Akiva Zimmerman / Raymond Goldstein (2nd ed.)]

MULLER, HERMAN JOSEPH (1890–1967), U.S. geneticist and Nobel Prize winner. He was born in New York City, and after teaching at Columbia and the University of Texas went to Berlin (1932–33) on a Guggenheim Foundation fellowship. Having communist leanings, he moved to the Soviet Union (1933–37) where he served as senior geneticist at the U.S.S.R. Academy of Sciences. After breaking with communist philosophy, he spent three years at Edinburgh University and then returned to the United States in 1940 to teach at Amherst College. In 1945 he moved to Indiana University, becoming Distinguished Service Professor in 1953. The central theme of his work was the nature and significance of changes in the relatively stable gene material of the chromosome.

Muller is best known for his demonstration in 1926 that X-rays induce mutations, an achievement for which he received a Nobel Prize in physiology and medicine in 1946. His earlier contributions were concerned with the design of techniques for quantitatively determining the frequencies of gene mutations, and he was among the first to recognize that these mutations constitute the basis for evolutionary change in populations. His collaborative efforts with others in Thomas Hunt Morgan's laboratory at Columbia established the association between chromosome duplication and genetic defect. He speculated on the course of human evolution based upon the genetic principles which he helped to establish, with his classical work on the fruit fly, and long championed the establishment of a human sperm bank. He also called attention to the extreme danger to genetic material inherent in atomic activity.

Muller was the recipient of many honors. He published many works and was coauthor of *The Mechanism of Mendelian Heredity* (1915) and *Genetics, Medicine and Man* (1947). He also wrote *Out of the Night, a Biologist's View of the Future* (1935) and *Studies in Genetics* (1962).

BIBLIOGRAPHY: Carlson, in: *Canadian Journal of Genetics and Cytology*, 9 (1967), 437–48, includes bibliography; T.N. Levitan, *Laureates: Jewish Winners of the Nobel Prize* (1960), 156–60; L.G. Grenfell, *Nobel Prize Winners in Medicine and Physiology, 1901–1950* (1953), 238–43.

[George H. Fried]

MULLER, ROBERT (1925–1998), German-born novelist. Muller came to Britain in 1938. The Nazi era plays a prominent role in *The Shores of Night* (1961) and *The Lost Diaries of Albert Smith* (1965), a study of the psychology of a fascist and a fantasy of fascism in modern Britain. Another of his novels, *The World That Summer* (1959), portrays the Germany of 1936, as seen by a Jewish adolescent. Muller also wrote prolifically

for British television, particularly science fiction and dramas of the supernatural, and, after the 1960s, wrote works in German for German television.

MULT ÉS JÖVŐ (Hung. “Past and Future”), a literary and artistic monthly journal in the Hungarian language which appeared from 1911 to 1944. Its founder was the writer József *Patai, who edited it until 1939 and made it one of the foremost Jewish illustrated periodicals. It maintained a high standard in both its literary and pictorial content and attracted contributions by Jewish scholars from many parts of the world. It stimulated the Jewish revivalist movement in Hungary and established links between Hungarian and other Jewries. The journal was banned in 1944 at the time of the German invasion.

[Baruch Yaron]

MULŪK AL-ṬAWĀ'IF (Ar. “kings of parties,” petty kings; Sp. **reyes de taifas**), term referring to the petty kingdoms that arose on the ruins of the *Umayyad caliphate in al-Andalus, Islamic *Spain, in the early 11th century, some of them surviving until the end of that century. The dynasties were of varying origins – *Berber, Arab, so-called “Slav” (generally European slaves) – and states little more than cities with their surroundings, larger in thinly populated areas and dependent on agriculture, smaller in the port cities of the eastern coast. The *taifa* states sought to replicate the political might and cultural wealth of the Umayyads; their large number and their small size encouraged greater reliance on Jews as servants of the ruler. Jews might be more loyal than others, having little potential or temptation for political plotting. In consequence Jewish viziers are found in several of these states. The most famous are *Samuel ha-Nagid (d. 1056) and his son Jehoseph (murdered in a pogrom in 1066) in *Granada, but Jews with the title of vizier are found in Seville, Saragossa, Almeria, and elsewhere. Samuel ha-Nagid stands out as not only a political figure but also a military commander, almost unique in Jewish history between the second century C.E. and the modern period.

The period of the *mulūk al-ṭawā'if* was one of great cultural flowering for Iberian Muslims. It offered the Jews greatly increased opportunity, too. Political participation gave Jewish viziers means and reason to offer patronage to Jewish poets and others, who not only sang the praises of their successful co-religionists but also became immensely productive across the whole range of cultural activity. We find many works by Jews in al-Andalus from this period not only in poetry, religious and secular, but also in Hebrew grammar, philosophy, theology, and the sciences.

The period encouraged social and cultural closeness between Jews and their neighbors. Jews wrote not only in Hebrew but also in Judeo-Arabic (the problems of the *kharja*, a peculiarly Iberian addition to Arabic poetic genres, were resolved by S.M. Stern thanks in part to material written by Jews), and in Arabic, and took part in cultural and educational activities alongside Muslims. Nonetheless, this central period of what is known as the Golden Age of Jewish life in Spain

went unnoticed by Muslims. The invasions of the *Almoravids at the end of the 11th century destroyed the *taifa* system, and Iberian Jewish life began to enter into a decline.

[David J. Wasserstein (2nd ed.)]

MUNI, PAUL (Muni Weisenfreund; 1895–1967), U.S. actor. He started acting at the age of 12 in Chicago. Maurice *Schwartz recognized his talent and persuaded him to join his new Yiddish-speaking Jewish Art Theater in 1918. Muni got his first real opportunity in an English role on Broadway in *We Americans* in 1926 and his success was immediate. He had a rich voice, good command of mime and facial expression, and a capacity for varied characterization. He played his first gangster in *Four Walls*, went to Hollywood and was acknowledged a star for his work in *The Valiants* (1929). *Scarface* established his reputation and *I am a Fugitive from a Chain Gang* seemed to confirm him as a player of “tough” roles. However, he resisted typecasting and starred in *The Story of Louis Pasteur* (1935), which won him a Motion Picture Academy award, *The Good Earth* (1936), *The Life of Emile Zola* (1937), and *Juarez* (1939). These roles expressed his true stature as an interpreter of heroism in spirit rather than in violence. Muni continued to appear in Broadway plays, including Elmer Rice’s *Counselor-at-Law* (1931–33), Maxwell Anderson’s *Key Largo* (1939), and in *Inherit the Wind* (1955). He also acted in the London run of *Death of a Salesman* and played his last film role in *The Last Angry Man*.

MUNICH (Heb. עיר הכנרים), capital of *Bavaria, central Germany. In 1229 a Jew called Abraham, from Munich, appeared as a witness at a Regensburg trial. In the second half of the 13th century Munich appears to have had a sizable Jewish community; the Jews lived in their own quarter and possessed a synagogue, a ritual bath, and a hospital. On Oct. 12, 1285, in the wake of a *blood libel, 180 Jews who had sought refuge in the synagogue were burnt to death; the names of 68 of the victims are listed in the Nuremberg **Memorbuch*, which dates from 1296. The Jews obtained permission to rebuild the synagogue in 1287, but for several centuries they remained few in number and suffered from various restrictions, which from time to time were further exacerbated (e.g., in 1315 and 1347). During the *Black Death (1348/49) the community was again annihilated. However, by 1369 there were Jews in the city once more, and in 1375 Duke Frederick of Bavaria granted them (and the other Jews resident in Upper Bavaria) the privilege of paying customs duties at the same rate as non-Jews. Some

years later the Jews planned the construction of a synagogue and a **hekdesch*, but their plans do not seem to have been realized. The remission of debts owed to Jews ordained by Emperor Wenceslaus (1378–1400) resulted in Munich Jews losing all their assets. They also suffered severely in 1413, when they were accused of desecration of the *Host. In 1416 the small community was granted some privileges, including permission to acquire a lot for a cemetery; in 1432, when Duke Albert III sought to impose a special tax on Munich Jews, the results were disappointing. The clergy succeeded in having all the Jews of Upper Bavaria expelled in 1442, and eight years later they were also driven out of Lower Bavaria, where they had taken temporary refuge. Duke Albert gave the Munich synagogue (in the modern Gruftgasse) to Johann Hartlieb, a physician, and it was subsequently converted into a church. For almost three centuries Jews were excluded from Munich and Bavaria (although there may have been some periods when their residence was permitted, as may be deduced from a renewal of the ban announced in a 1553 police ordinance).

During the Austrian occupation, Jews were readmitted to Bavaria and some of them presumably found their way to Munich. At any rate, a new decree issued on March 22, 1715, again ordered them to leave the country. Some ten years later, a few Jews who had business dealings with the Bavarian count began to settle in Munich, and by 1728 several Jews resided in the city. In 1729 (or 1734) the Court Jew, Wolf *Wertheimer, took up residence there and was joined by his family in 1742; in 1750 all Court Jews and Jews in possession of passes granting them freedom of movement were excepted from the general ban on Jewish entry into the city. A community was formed by Jews who maintained connections with the court. Of the 20 of them in 1750, there was only one woman and a single child, which attests to the temporary and migratory nature of the settlement. Except for these **Schutzjuden*, the only Jews permitted to reside in the city were those who had been commissioned as purveyors or who had made loans to the state; all others were permitted to stay in the city for a short while only and had to pay a substantial body tax (**Leibzoll*). This situation continued for most of the 18th century, and it was not until 1794 and 1798 that the number of women and children in the city was commensurate with the number of heads of families. In 1794 there were 153 Jews, including 27 heads of families, 28 women, and 70 children; in 1798 the respective figures were 35, 33, and 98. Up to the end of the 18th century, Jewish women had to go to Kriegshaber to give birth to their children, and it was not until 1816 that Jews were permitted to bury their dead in Munich rather than transport them to Kriegshaber for burial. At this time Munich Jews earned their livelihood as *contractors for the army and the royal mint (see *mintmasters), merchants dealing in luxury wares and *livestock, moneylenders, and *peddlers. Since there was no legal basis for their residence in Munich, they did not have the right to practice their religion, and every year they had to pay a special tax to enable them to observe Sukkot. In 1805 a “Regulation for Munich Jewry” was issued (it formed the basis for the

Bavarian *Judenmatrikel* of 1813); among other privileges, the Jews were permitted to inherit the right of domicile, to conduct services, and to reside in all parts of the city.

During the Napoleonic Wars, the number of Jews was augmented by immigrants, and by 1814 there were 451 Jews in the city. Two years later, the Jewish community was formally organized. In the same year the community was given permission to establish a cemetery, and in 1824 a permit was issued for the construction of a synagogue (dedicated in 1827). The first Jewish religious school was founded in 1815 and a private one in 1817. The community played a leading part in Bavarian Jewry's struggle for civil rights, which lasted up to the founding of the German Reich (1871); delegates of the Bavarian communities frequently met in Munich (1819, 1821) to make common representations to the government. In the second half of the century the community grew further (from 842 in 1848 to 4,144 in 1880, and 8,739 in 1900) as a result of increased immigration from the smaller communities (especially in the last few decades of the 19th century). By 1910, some 20% of Bavarian Jews lived in the capital (11,000). There was also a steady immigration of Jews from Eastern Europe, mainly from Galicia, which lasted up to World War I.

Jews were prominent in the cultural life of Munich, a center of German arts, in the late 19th and 20th centuries, as well as being more equally represented in Bavarian political affairs than in other German states. After World War I a revolutionary government on the Soviet model was formed, in which Kurt *Eisner, Eugene *Levine, and Gustav *Landauer were prominent. It was routed by counterrevolutionary forces, and a "White Terror" against Communists, Socialists, and Jews was instigated. In the postwar years of economic and political upheaval, Munich was a hotbed of antisemitic activity and the cradle of the Nazi *party; many Jews from Eastern Europe were forced to leave Munich. Sporadic antisemitic outbursts characterized the years until the Nazi seizure of power in 1933, when Reinhold *Heydrich and Heinrich *Himmler took control of the police; the first concentration camp, *Dachau, was erected near Munich. At the time, the community numbered 10,000 persons, including an independent Orthodox community and many cultural, social, and charitable organizations. Munich Jewry was subjected to particularly vicious and continuous acts of desecration, discrimination, terror, and *boycotts but responded with a Jewish cultural and religious revival. Between 1933 and May 15, 1938, some 3,574 Jews left Munich. On July 8, 1938, the main synagogue was torn down on Hitler's express orders. During the *Kristallnacht*, two synagogues were burnt down, 1,000 male Jews were arrested and interned in Dachau, and one was murdered. The communal center was completely ransacked. During the war a total of 4,500 Jews were deported from Munich (3,000 of them to *Theresienstadt); only about 300 returned; 160 managed to outlive the war in Munich. A new community was founded in 1945 by former concentration camp inmates, refugees, displaced persons, and local Jews. In the following five years, about 120,000 Jews, refugees, and displaced persons

passed through Munich on their way to Israel. In 1946 there were 2,800. The community increased from 1,800 persons in 1952 to 3,522 in January 1970 (70% of Bavarian Jewry). In 1966 a Jewish elementary school was opened, the second in Germany, but the postwar community was repeatedly troubled by acts of desecration and vandalism (against synagogue and cemetery). In March 1970 the Jewish home for the aged was burned down and seven people lost their lives. The Munich library contains a particularly valuable collection of Hebrew manuscripts.

During the Olympic games, which took place in Munich in 1972, Palestinian terrorists took eleven Israeli sportsmen as hostages. All of them died. In 1982 the first Jewish bookshop in Germany was opened in Munich. It has branches in Berlin and Vienna. In 1995 Hagalil was established in Munich, which is the largest Internet site on Jewish life in Europe.

The Jewish community numbered 4,050 in 1989, 5,000 in 1995, and 9,097 in 2004, making it the second largest Jewish community in Germany. The increase is explained by the immigration of Jews from the former Soviet Union. In 2003 the cornerstone was laid for the new Jewish center. The complex was to have a new community center (with kindergarten, elementary school, youth center, library, offices, etc.), a main synagogue, and a Jewish museum. Partially financed by the Jewish community, the city of Munich, the Federal State of Bavaria, and private donors, the center was slated to open in 2006.

In 1995 the liberal Jewish community Beth Shalom was founded. It is a member of the Union of Progressive Jews in Germany and of the World Union of Progressive Judaism. Since 2003 the community has had its own community center. It had about 275 members in 2005. Munich is the seat of the Association of Jewish Communities in Bavaria.

[Larissa Daemmig (2nd ed.)]

MUÑIZ-HUBERMAN, ANGELINA (1936–), Mexican poet, novelist, and essayist. Muñiz-Huberman was born in Hyères, France, to parents who were refugees of the Spanish Civil War. In addition to her career as a writer, she is also a professor of comparative literature at the Universidad Nacional Autónoma de México. When she was still a young girl her mother revealed to her that she had Sephardi roots. Following the discovery of her ancestral origins, she undertook the study of Judaism and eventually underwent a formal conversion. In her brief autobiographical text, *El juego de escribir* (1991), she narrates this experience along with other significant moments that have shaped her life and her literature. Her work has been recognized with numerous honors and some of the most prestigious literary awards from Mexico and Spain.

Her first novel, *Morada interior* (1972), draws on the life of Santa Teresa de Jesús. It explores the converso Jewish identity of the Spanish mystic poet by presenting a spiritual crisis, but the main character is a thinly veiled representation of the author herself struggling with issues of identity, exile, nationality, and religion. In her second novel, *Tierra adentro* (1977), Muñiz-Huberman again recalls the Sephardi heritage of Spain by telling the story of a young Jew during the time of the Expulsion. The monumental novel *El mercader de Tudela* (1998) is closely modeled after the real-life travels of Benjamin of Tudela and is based on Tudela's own 12th-century travelogue. Muñiz-Huberman also demonstrates her interest in Sephardi culture in her two books *La lengua florida: antología sefardí* (1989) and *Las raíces y las ramas: fuentes y derivaciones de la Cábala hispanohebrea* (1993). The first is an anthology of traditional Sephardi texts accompanied by her own essays on the subject. The second is an in-depth study of the kabbalistic tradition in Jewish Iberia. In addition to her prolific narrative, Muñiz-Huberman is an accomplished poet. Her poetry, as one would expect, expresses issues of identity, exile, gender, and death, which serve as a starting point for exploring human nature and the experience of life.

[Darrell Lockhart (2nd ed.)]

MUNK, family of rabbis. Ezra (1867–1940), an Orthodox rabbi in Germany, was the son of Elias Munk, *dayyan* at Altona. He studied at the Berlin Rabbinical Seminary under his uncle Azriel (Israel) *Hildesheimer and at the Universities of Berlin and Koenigsberg. In 1897, when he was rabbi at Koenigsberg (an office he held from 1893 to 1900), his congregation seceded from the general community. In 1900 he succeeded Hildesheimer as

rabbi of the Adass Yisroel congregation in Berlin. Munk acted as Orthodox adviser to the Prussian Ministry of Education and Religious Affairs, where he enjoyed great confidence. He expanded the office for **shehitah* affairs, founded by Hirsch *Hildesheimer in 1907, making it the international center for the defense of *shehitah*. Cofounder of the BJA (Bund Juedischer Akademiker), the association of Orthodox students in German universities, and of the Union of Orthodox Congregations (the so-called Halberstaedter Verband), he was also chairman of the "Association of Traditional Torah-True Rabbis" and a member of the rabbinical council of the German *Agudat Israel. Among his publications are *Gefaeltschte Talmudzitate* (1924) and *Entwicklung der Verhaeltnisse der preussischen Synagogengemeinden...* (1931). Some of his responsa (*Kahana Messayyeà Kahana*) were published by S.Z. Klein (1938). In 1938 Munk left Germany for Jerusalem, where he died. Among his sons were ELI (1899–1978), rabbi of the Golders Green Beth Hamidrash, London, and MICHAEL (1905–1984), educator in the U.S., author of *Ezra ha-Sofer* (1933) and coauthor (with I. Lewin and J. Berman) of *Religious Freedom: the Right to Practice Shehitah* (1946). He also published with I. Lewin *Shechita: A Religious, Historical and Scientific Background* (1976).

LEO (1851–1917), Ezra's brother, was district rabbi at Marburg (Hesse) from 1876. He took an active part in the work of the *Deutsch-Israelitischer Gemeindebund, the *Hilfsverein der deutschen Juden, and the rabbinical associations, both general and Orthodox. Among his publications was a scholarly edition of *Targum Sheni* on Esther (1876). ELIE (b. 1900–1981), Ezra's nephew, a rabbi and writer, was district rabbi of Ansbach (Bavaria) from 1926, and from 1937 was rabbi of the Communauté Israélite de la Stricte Observance in Paris. His published works include *Die Welt der Gebete* (2 vols. (1938); Eng., *The World of Prayer*, 2 vols., 1954–63), a commentary on the *siddur*; *Das Licht der Ewigkeit* (1935); *La justice sociale en Israel* (1947); *Rachel* (on the duties of Jewish women; 1951⁵); and a translation into French of Rashi's Pentateuch commentary (1957).

MUNK, HERMANN (1839–1912), German physiologist; a pioneer in the field of cerebral physiology. Munk was a director of the physiological laboratory of the Veterinary School in Berlin and a member of the German Academy of Science. He studied the localization centers in the brain and his name is associated with the so-called visual sphere of the cerebrum. He also did research on the function of the thyroid gland and studied the mechanism of motion. His younger brother IMMANUEL MUNK (1852–1900), was also a physiologist. He was his brother's assistant and then taught at the Physiological Institute of Berlin University (professor from 1899).

Munk and Nathan Zuntz did research in the field of metabolism and nutrition, with particular emphasis on the

function of the kidneys. He wrote *Physiologie des Menschen und der Säugetiere* (1881) and co-edited *Zentralblatt fuer die Medizinischen Wissenschaften*.

[Suessmann Muntner]

°**MUNK, KAJ** (pseudonym of **Harald Leininger**; 1898–1944), Danish pastor and playwright. He showed an unusual interest in Jewish themes and his anti-Nazi writings and sermons had an incalculable effect on the Danish resistance movement during World War II. Perhaps the most influential, and certainly the most controversial, Danish playwright of his time, Munk lived – and died – for his ideals. At first he showed some sympathy for ultranationalism, betraying a certain preoccupation with the “strong men” of history. *En idealist* (“An Idealist,” 1928) was a study of Herod the Great; *De udvalgte* (“The Chosen One,” 1933) dealt with King David; and *Sejren* (“The Victory,” 1936) was based on Mussolini’s invasion of Ethiopia. Munk was, however, outraged by what he saw during a visit to Berlin in 1938, and his drama *Han sidder ved smedtediglen* (*He sits at the Melting Pot*, 1938) attacked Hitler’s persecution of the Jews. Two other works by Munk which appeared in the 1930s were *Vedersø Jerusalem retur* (1934), an account of the author’s journey to the Holy Land among other places; and *Os boerer den himmelske gloede* (“Heavenly Joy Bears Us,” 1934), a collection of verse containing impressions of Palestine. After Denmark was overrun by the Germans, Kaj Munk came to be regarded, by Danes and Germans alike, as one of the leading spokesmen of the Danish resistance. His play *Niels Ebbesen* (1942), which deals with the Nazi occupation, was suppressed but nevertheless enjoyed a clandestine circulation. He was murdered by the Nazis.

MUNK, SOLOMON (1803–1867), French Orientalist. Born in Glogau, Silesia, Munk studied at the universities of Bonn and Berlin. Realizing that as a Jew he had no academic future in Germany, he left for Paris in 1828. Here he first worked as a tutor in the Rothschild family, but was soon engaged by the *Bibliothèque Nationale* and put in charge of Semitic manuscripts. His assiduous work with them led to his becoming totally blind by 1850, but it did not prevent 17 more years of fruitful scholarly activity. Before then (1840) he joined the Montefiore-Crémieux delegation to *Egypt – as the latter’s secretary and interpreter – which was to intervene in the *Damascus affair. When the Egyptian khedive *Muhammad Ali at last agreed to issue an order to *Damascus to set the falsely accused free, Munk – though some say it was L. Loewe, Montefiore’s secretary – detected in the Arabic draft the word “mercy” to be granted, which at the insistence of Crémieux was changed into “freedom and peace.” Crémieux and Munk used the opportunity of their visit to persuade Egyptian Jewry to modernize

their school system and to bring about a rapprochement between Rabbanites and Karaites. Munk also acquired valuable manuscripts, particularly Karaitica, for the *Bibliothèque Nationale*. Back in Paris, Munk joined the *Consistoire Central* and was elected a member of the *Académie des Inscriptions et des Belles Lettres*. In 1864 he succeeded E. *Renan as professor of Hebrew and Syriac literature at the *Collège de France*.

Munk devoted himself to the study of the Hebrew and Arabic literature of the Golden Age of *Spain. It was Munk who discovered that the author of the philosophical work *Fons Vitae*, which had been preserved only in a Latin translation from the Arabic original, and whose author, called Avicbron, was believed to have been either a Muslim or an Arab Christian, was none other than the 11th-century Hebrew poet Solomon ibn *Gabirol. He discovered a manuscript of Shem Tov ibn *Falaquera’s Hebrew translation of excerpts from Gabirol’s original and identified this with passages in the Latin version (in his *Mélanges de philosophie juive et arabe* (1857–59; text, translation with an extensive essay on Gabirol, his writings, and philosophy). The crowning work of Munk’s life was his three-volume edition of the original Arabic text (in Hebrew characters) of Maimonides’ *Guide of the Perplexed* from Paris, Oxford, and Leyden manuscripts with a French translation (*Guide des Égarés*) and extensive notes (1856–66; Arabic text re-edited by B.J. Joel, 1960). All subsequent translations are based on this classic edition.

Federbush (ed.), *Hokhmat Yisrael be-Eiropah* (1965), 239–41; M. Brann, in: *JJGL*, 2 (1899), 148–203 (44 letters of Munk).

MUNKÁCSI, BERNÁT (Bernhard) (1860–1937), Hungarian philologist and ethnographer. Born in Nagyvárad (now Oradea, Romania) into a family of rabbis, as a student in Budapest he came under the influence of several distinguished specialists in Hungarian studies (including Arminius *Vámbery) and decided to dedicate himself to Hungarian linguistics and ethnography. He and a fellow student undertook a journey, collecting linguistic and other data on the Sereth (Siret) and Moldavo areas. Additional scientific trips were made from 1885 to study the language of the Votyak and Chuvash in the Kama and Middle Volga regions. With grants from the Hungarian Academy of Sciences and the Russian government, he made ethnographic tours of the northern parts of the Urals. After 1893 he served as editor of *Ethnographia*, and in 1900 he was cofounder of a philological journal *Keleti Szemle, Revue orientale des études oural-altaïques* (1900–32), to which he contributed numerous studies on Magyar culture, linguistics, and history. During World War I he carried out linguistic research in Ossetic by interrogating Russian prisoners of war who spoke this Iranian language of the Caucasus.

From 1890 to 1930 he served as an inspector of religious instruction in the Jewish schools of Budapest. As a professional teacher, he helped raise the level of existing schools,

specifically the Jewish ones in Pest which he had helped to found. He prepared a program of studies for teachers, evolved a series of tests, and edited textbooks published by the Jewish community. Munkácsi's *Volksbraeuche und Volksdichtungen der Wotjaken* was edited by D.R. Fuchs and posthumously published in 1952.

[Ellen Friedman]

MUNKÁCSI, ERNŐ (1896–1950), Hungarian jurist and art writer. Born in Páncélcseh, then Hungary, the son of Bernát *Munkácsi, he entered public service in Budapest in 1921 and was the secretary of the Neolog community. In 1923 he became legal adviser and served as chief secretary from 1942 until he went underground. During the period of the Holocaust, he proposed the idea of contacting the Hungarian anti-Nazi underground movement, and he was one of the editors of the underground manifesto which revealed to the non-Jewish community the horrors of deportation. After the war he published documents and lists from the period of the Holocaust *Hogyan történt?* (“How Did It Happen?” 1947). As a jurist, Munkácsi devoted himself to the interpretation of the laws relating to the legal standing of the Jews. He strove for complete autonomy of the Jews in Hungary, within the framework of the laws of emancipation (1867) and repatriation (1895). He wished within this framework to educate toward a historical Jewish consciousness, and to eradicate the widespread ignorance of Jewish matters. He published many articles in Jewish journals, in particular the periodical *Mult és Jövő* (“Past and Future”), and *Libanon*, where he served as one of its editors. He later collected these articles in a volume entitled *Könyvek és kövek* (“Books and Stones,” 1944). In his short book *Római napló* (“Diary from Rome,” 1931), he described the relics of the Jewish past in Rome. In his comprehensive *Miniatürművészet Itália könyvtáraitban; héber kódexek* (“The Art of the Miniature in the Libraries of Italy. Hebrew Codices,” 1937), he traced most of the miniature material found in the leading libraries of Italy. His German book *Der Jude von Neapel* (1939) dealt with the remnants of Jewish art in southern Italy, and his English article “Ancient and Medieval Synagogues in Representations of the Fine Arts” (*Jubilee Volume Bernhard Heller*, 1941, 241–51 ed. by Munkácsi) was devoted to the representations of art in synagogues.

[Baruch Yaron]

MUNTNER, ALEXANDER SUESSMAN (1897–1973), medical historian. Muntner was born in Kolomyia, Poland, and received his medical education in Berlin, at the same time pursuing Jewish studies. He graduated in 1928 and in 1933 immigrated to Erez Israel where, apart from his military ser-

vice during the War of Liberation and as medical officer in the South of France in charge of North African immigrants to Israel, he engaged in private practice. In 1959, he was appointed visiting professor in the history of medicine at The Hebrew University. Muntner devoted his life to the history of Jewish medicine in the Middle Ages, and particularly to *Asaph ha-Rofe, Shabbetai *Donnolo, and *Maimonides. He undertook the publication of the medieval Hebrew translation of Maimonides' medical treatises, both from manuscripts and previous versions.

In 1949, he published a fully annotated book on Donnolo, which included his extant works, and in 1957 he published his *Mavo le-Sefer Asaph Ha-Rofe*, and later an edition of the full Hebrew text. He was the *Encyclopaedia Judaica* first-edition departmental editor for medicine.

A bibliographical list of his works appears in *Korot* (see Bibliography).

BIBLIOGRAPHY: *Korot*, 6, nos. 3–4 (February 1973). This volume is dedicated to the memory of Muntner.

MUQADDIM (Ar. مُقَدِّم, “leader,” also *muqaddam*, literally “the one in front”), Arabic word, one meaning of which designates a chief heading an army, a ship, or a community. In North African countries, this term was employed to designate a *parnas* of the Jewish community, while in the Hebrew documents of Castile, Aragon, and Navarre it was employed as a synonym for **adelantados*.

MURABBA'AT SCROLLS, manuscripts found in 1951 and 1952 in caves in Wadi Murabba'at, which runs down to the Dead Sea from the west about 18 km. (11 mi.) south of Wadi Qumran and some 25 km. (15 mi.) southeast of *Jerusalem. The presence of inscribed material in this area was first suspected in October 1951 when Ta'āmra Bedouin offered some fragments of skin with Hebrew and Greek writing to the Palestine Archeological Museum, Jerusalem. The site was visited early in 1952 by a team led by G.L. Harding and Père R. de Vaux, and they explored four caves, which yielded a considerable quantity of manuscript material. In March 1955 another cave was entered by local shepherds, who found a scroll of the *Twelve Minor Prophets*, containing substantial portions of the Hebrew text of nine of the 12 books.

General

The Murabba'at caves contained traces of human occupation at six distinct periods in antiquity – the Chalcolithic Age (4th millennium B.C.E.), the Middle Bronze Age (c. 2000–1500 B.C.E.), the Iron Age (more specifically the 8th and 7th centuries B.C.E.), the Hellenistic period, the Roman period, and the Arab period. From the third, fourth, fifth, and sixth of these periods written documents were discovered. From the third period, the era of the later kings of Judah, came a papyrus palimpsest inscribed in Phoenician (paleo-Hebrew) characters. The ear-

lier writing seems to have been a letter; part of it runs: "... yahu says to you, 'I send greetings to your family. And now, do not believe every word that... tells you...'" The original writing was washed out and replaced by four lines of script, each containing a personal name followed by numbers (perhaps listing quantities of produce to be delivered by peasants to the royal exchequer). From the Hellenistic period come two inscribed potsherds (2nd century B.C.E.). From the Arab period come some paper documents in Arabic and one or two Greek papyri. But the most numerous and by far the most interesting manuscripts come from the Roman period. These last are especially interesting because their presence at Murabba'at is due to the use made of the caves as outposts of guerrilla fighters during the Bar Kokhba Revolt (132–5 C.E.). There are fragments of Genesis, Exodus, Deuteronomy, and Isaiah on skin, a few *tefillin* fragments, and a piece of a *mezuzah*. The biblical texts are uniformly of protomasoretic type. The *tefillin* are of the type which became standard from the beginning of the second century C.E. onward, unlike those found at Qumrān, which belong to an earlier type and include the Ten Commandments. There is a fragment of a liturgical document in Hebrew and fragments of some literary works in Greek. There are quite a number of contracts and deeds of sale in Hebrew, Aramaic, and Greek; of those which are intelligibly dated, the majority belong to the period preceding and during the Bar Kokhba Revolt. There are several lists of deliveries of grain and vegetables, one or two in Aramaic and/or Hebrew but mostly in Greek. Some papyrus fragments and one potsherd contain Latin writing.

The Ben Kosebah Letters

Chief interest attaches to some correspondence between Joshua b. Galgula, apparently leader of the Murabba'at guerrillas, and other insurgents. One letter comes to him from the administrators of Bet Mashiko (a village in southern Judea, it appears) informing him that a certain cow has changed ownership. Another letter comes from the defenders of En-Gedi, yet another from someone at Meẓad Ḥasidin, "the fortress of the saints," perhaps meaning Khirbat Qumrān – which is shown by archaeological excavation to have been occupied by insurgents during the Bar Kokhba Revolt. Two letters come to Joshua from the leader of the revolt in person, whose name is shown to have been Simeon b. Kosebah. (It was formerly known that the name Bar Kokhba, "son of the star," had been given him by R. Akiva and other supporters on the basis of Numbers 24:17, and the name Bar Koziba, "son of falsehood," given him by his opponents. His official designation "Simeon prince of Israel" is also found on coins of the Second Revolt.) One of the letters runs: "From Simeon b. Kosebah to Joshua b. Galgula and the people of Ha-Baruk (?), greeting! I call heaven to witness against me that if any of the Galileans who are with you is ill-treated, I will put fetters on your feet as I did to Beni Aflul. Simeon b. Kosebah in [his own person]." It is not known who the luckless Beni Aflul was, or what he had done; neither is there any information that would throw

light on the Galileans mentioned (there is no reason to suppose that they were Christians). The second letter (which, like the other, is in Hebrew) runs: "From Simeon to Joshua b. Galgula, greeting! Take cognizance of the fact that you must arrange for five *kors* of wheat to be sent by the [members of] my household. So prepare for each of them his lodging place. Let them stay with you over the Sabbath. See to it that the heart of each is satisfied. Be brave and keep up the courage of the people of the place. Peace! I have ordered whosoever delivers his wheat to you to bring it the day after the Sabbath." Plainly Simeon b. Kosebah was a man of peremptory temperament, a quality no doubt desirable in the leader of a revolt. With this requisition of wheat it is possible to correlate the lists of grain and vegetables discovered in the same caves. The Murabba'at caves seem to have been the last redoubt of Joshua and his men and their families. The Romans pursued them there and wiped them out, as they did to their comrades in Naḥal Ḥever. Some of the manuscripts bear signs of having been violently torn up by the invaders.

Linguistic Importance

The Murabba'at scrolls provide evidence that the inhabitants of Judea were trilingual at the time of the Second Revolt as they had been in the Herodian period: Hebrew, Aramaic, and Greek were used by Jews with equal facility. One Aramaic manuscript of earlier date than most (55–56 C.E.) contains the name of the Emperor Nero spelt in such a way as to yield the total 666 (NRWN QSR) – a pointer to the "number of the beast" in Revelation 13:18.

[Frederick Fyvie Bruce]

MURASHU'S SONS, prominent banking and commercial family in the Babylonian city of Nippur, active during the reigns of Artaxerxes I and Darius II. In 1893 an expedition from the University of Pennsylvania uncovered 730 clay tablets from the family archive dating from 455 to 403 B.C.E. The texts deal with diverse undertakings such as payment of taxes on behalf of others, land management, and the granting of loans to be repaid at a high rate of interest. Some 50 of the 730 tablets contain names which were thought to be Jewish, and this led some to deduce that the Murashu family itself was Jewish. However, the conclusion is unfounded. Apart from the purely indigenous name of the firm (*muraššū* – means "wildcat" in Akkadian), caution must be exercised in deciding which of the names of the clients or witnesses are characteristically Jewish and which are merely of West Semitic origin. The fact that names like Ḥanana (חנן, Hanan), Minahḥimmu (מנחם, Menahem), Miniyamin (מנימין, Minyamin), or names compounded with *ilī* (אל, El) are attested elsewhere in Jewish contexts does not necessarily mean that their bearers at Nippur were Jews. They may have been Arameans or members of some other West Semitic group living in Babylonia. Undisputed evidence for the presence of Jews is furnished by such

names as Ahiyama (אהיה, Ahijah, Aiyah), Yaḥulakim (יהולקם, Yeholakhem), Yaḥulunu (יהולינו, Yeholunu), and Yaḥunatanu (יהונתן, Jonathan, Yehonatan), which are compounded with the Tetragrammaton or some combining form of it and by such names as Shabbetai son of Haggai. The picture of the Jewish exiles in Mesopotamia which emerges after an examination of these names is one of a people engaged in a wide range of activities: they act as witnesses in documents dealing with taxes, as tenants cultivating the land of others, and as landowners on whose behalf taxes are paid. Some seem to be highly placed royal officials.

[David B. Weisberg]

MURCIA, capital of the former kingdom of Murcia, S.E. Spain. The kingdom was first taken from the Muslims (1243) during the reign of Ferdinand III of Castile. After the revolt of the Muslims, it was reconquered by James I, king of Aragon, who handed it over to Castile in 1265. Among those who assisted the king in his conquest of the region were Judah de la *Cavallería, who lent money for outfitting the navy in the war against the Muslims, and Astruc (or Astrug) Bonsenyor (d. 1280), father of Judah *Bonsenyor, who conducted the negotiations with the Muslims for their capitulation, and who was also translator of Arabic documents in the kingdom. Jewish officials of the kingdom of Aragon met with Jewish officials of the kingdom of Castile in the town, and in 1292, Moses ibn Turiel of Castile held important administrative positions there. *Alfonso X of Castile (1252–84), son-in-law of James I, allocated a special quarter for the Jewish community, explicitly ordering that Jews were not to live among the Christians. However, at the time of their settlement various Jews received properties in the Jewish quarter and beyond it, in the town itself. A site was also allocated for the Jewish cemetery. Once the regulations of the settlement had been stipulated, an annual tax of 30 dinars was imposed on every Jew. Jews were also compelled to hand over tithes and the first fruits of all their possessions and herds to the cathedral, as was customary in Seville. In 1307 jurisdiction over the Muslims of the kingdom of Murcia was entrusted to Don Isaac ibn Yaish, the last Jew to hold such a function.

Toward the close of the 14th century, several Jewish tax farmers were active in the kingdom and in the town, among them Solomon ibn Lop, who settled in Majorca after 1378 and who was granted the special protection of the king of Aragon. During this period, the Jews of Murcia were noted for their generosity in the redemption of prisoners and for their participation in maritime trade; this was in addition to their usual occupations in commerce, crafts and agriculture. Although there are no details available on how the Jews of the town fared during the persecutions of 1391, the community continued to exist after that time. Some 2,000 Jews earned their livelihood in a great variety of activities. Close mutual relations were maintained with the Christian population, and

two of the community elders attended the meetings of the municipal council. Throughout the 15th century, Jews of Murcia were often tax farmers, both in the kingdom of Murcia and in other towns near and distant. In 1488 Samuel Abulafia was taken under the protection of the Catholic monarchs for two years in appreciation of his services to the crown during the war against Granada. Solomon b. Maimon Zalmati printed Hebrew books in Murcia in 1490.

Details on the departure of the Jews from Murcia at the time of the expulsion are unknown but it may be assumed that they left from the port of Cartagena. After the expulsion, debts owed by Christians to the Jews were transferred to Fernando Nuñez Coronel (formerly Abraham *Seneor) and Luis de Alcaláfor collection. Murcia also had Conversos, some of whom remained faithful to Judaism. Conversos even used to come there in order to return to Judaism; one such case is mentioned in the La Guardia trial (1490). At an early date, an Inquisition tribunal was established at Murcia.

[Haim Beinart]

MURMELSTEIN, BENJAMIN (1905–1989), rabbi, scholar, and public figure of the Holocaust period. Born in Galicia, Marmorstein studied at the Juedisch-Theologische Lehranstalt, Vienna, where he became a lecturer in 1930. From 1923 he served as rabbi of the Vienna Jewish community. He was associated with S. Krauss in preparing the supplementary volume, published in 1936, to *A. Kohut's famous talmudic dictionary, *Arukh ha-Shalem*, and Marmorstein published a popular *Geschichte der Juden* and annotated selections from Josephus (both in 1938). When the Nazis occupied Austria in 1938, Marmorstein became a member of the *Judenrat appointed by them. In this capacity he wielded power, which he was accused of having used arbitrarily. Later he was deported to *Theresienstadt concentration camp; he was made deputy *Judenaeltester* (head of the Jewish council) in January 1943 and succeeded P. Epstein as chief *Judenaeltester* in December 1943, after Epstein was murdered by the Nazis. As *Judenaeltester* – an officer whose exact and tragic powers and responsibilities are difficult to assess – Marmorstein was both hated and feared; he was described as a complex character, gifted, ambitious, cynical, and calculating. When the camp was liberated in May 1945, Marmorstein remained and held himself at the disposal of the Czech authorities. He was arrested in June and remained in custody until December 1946, when the public prosecutor withdrew the indictment because “he had been able to disprove all accusations.” Marmorstein settled in Rome, where he worked first at the Papal Biblical Institute and

later as a commercial agent, taking no part in Jewish communal life. He published an account of events in *Terezin-Ghetto Modello di Eichmann* (1961) and in several newspaper articles (in *Neue Zuercher Zeitung* (Dec. 17, 1963), 3; *Hamburg Die Welt* (Jan. 14, 1964)).

MURRAY, ARTHUR (Moses Teichman, 1895–1991), America's most famous ballroom dance instructor; businessman. He was born in New York and trained with Irene and Vernon Cast. After winning a waltz contest at the age of 17, he started selling dance lessons via mail, by sending out footprint diagrams designed to teach students the steps of the popular social dances. Shortly after 1923 Murray opened a highly structured dance studio in New York occupying six floors and employing dozens of teachers, which was followed by the establishment of an extensive network of other studios which provided dance instruction in the U.S. and Europe.

In the 1950s, Murray and his wife, Kathryn Kohnfelder, who became his dance and business partner, presented a long-running television series, which helped to popularize ballroom dancing. Murray is credited with creating many of the standard steps still used today in the foxtrot and the rumba.

In 1964, Murray resigned as president of the Arthur Murray Dance Studios but remained as a consultant.

[Amnon Shiloah (2nd ed.)]

MURVIEDRO (in Catalan, **Morvedre**; now **Sagunto**), city in Valencia, E. Spain, near the Mediterranean coast, built on the ruins of the Roman city Saguntum. According to a legend, a tombstone was found there bearing the inscription in Hebrew “Adoniram, treasurer of King Solomon, who came to collect the tax tribute and died.” Another spurious inscription mentioned King Amaziah's military commander as having also met his death in Murviedro. Jews lived in Murviedro during Muslim rule. On capture of the city by King James I of Aragon, the Vives family was given a bakery in the city, as a reward for services rendered during the siege. Several Jews served as royal bailiffs there including Solomon Baye, Solomon b. Lavi de la *Cavallería (1273), and Joseph ibn Shaprut (1279–80). At the time the community numbered 50 taxpayers. The Jewish quarter was on the west side of the Roman theater, the present Calle Segovia and Calle Ramos being the main streets. In 1321 James II authorized the Jews to fortify their quarter. A large portion of the community's revenue was derived from taxes on the sale of meat and wine. Silversmiths and cobblers are specifically mentioned among the artisans obliged to pay taxes; artisans who earned less than six *denarii* a day were exempt from taxes. R. *Isaac b. Sheshet permitted indigent artisans in Murviedro to work during the intermediate days of the Jewish festivals. In 1328 the community acquired grounds for a new cemetery, tombstones from which are still preserved.

During the 1391 persecutions, the Jews of Murviedro found refuge in the fortress which was near the Jewish quarter. Hence after the massacres, Murviedro, the only surviving community in the Kingdom of Valencia, became one of the most important communities of the Crown of Aragon. In the 15th century, the Jewish quarter had 120 houses and probably more than 600 residents. In 1394 the king ordered that the Jews of Murviedro should not be investigated in respect of their activities to counteract conversion or for bringing back Conversos to Judaism and assisting them to leave the country. In 1402 Queen Doña María authorized the Murviedro community to establish several societies for catering to communal needs: the *Bikkur Ḥolim society, to care for the sick; a burial society; and a *Talmud Torah* society. Various problems arose with the increased number of conversions. In 1416 Alfonso V dealt with the division of property of deceased Jews between the heirs who had remained Jews and those who had been converted. The Jewish silversmiths of Murviedro were celebrated for their craft; especially notable was Vidal Astori, who in 1467–69 worked for the future King Ferdinand the Catholic. In 1474 the *muqaddimūn* (**adelantados*) complained to the bailiff-general about some nobles who had forbidden their vassals to trade with the Jews of Murviedro. The bailiff decided in favor of the community and proclaimed freedom of trade in the area.

The Jews of Murviedro did much to encourage their Converso brethren to return to Judaism. After the decree of expulsion was issued in March 1492, Gericá, one of the local Jews, reached an agreement with Valencia merchants to transfer 300 Jews from Murviedro to Oran, in North Africa. Other agreements dating from the end of July relate to the conveyance of Jews from Murviedro to Naples. A total of 500 Jews left the city, and the synagogue in the present Calle de la Sangre Vieja was turned into a church named Sangre de Cristo (“Blood of Jesus”).

The Jewish quarter of Murviedro is one of the best preserved in Spain, probably because it did not suffer any attack in 1391. The Jewish quarter is in the upper part of the city. Entrance to the quarter is through an arch which was called *Portal de la juheria*. It is situated near the Roman theater and includes within its boundaries the streets Antigones, Segovia, Pelayo, Ramos and Sang Vella. The Portal is at the beginning of Sang Vella Street when one enters from Castillo Street. The synagogue was probably at the corner of Sang Vella and Segovia streets.

[Haim Beinart / Yom Tov Assis (2nd ed.)]

MUSAF (Heb. מוסף), the additional sacrifice or prayer instituted on the Sabbath and the festivals. In addition to the daily morning and afternoon sacrifices offered in the Temple, the Bible prescribed additional offerings to be brought on Sabbaths, the three *Pilgrim festivals, Rosh Ha-Shanah, the Day of Atonement, and the New Moon (Num. 28–29; see *Sacrifice). These were offered after the regular morning sacrifices (Yoma 33a). An additional prayer was already recited on these days by some worshipers even when the sacrificial cult still existed (Tosef., Ber. 3:3; Suk. 53a). After the abolition of sacrifice with the destruction of the Temple, the additional prayer was formalized and took the place of these sacrifices (Ber. 26b; see *Prayer, *Liturgy). There were some *tannaim* who regarded the *Musaf* prayer service as exclusively communal, and they held that it could only be recited when one worshiped with a quorum (*minyan; Ber. 4:7 and Ber. 30a–b). The rabbis, however, made the additional service obligatory upon every individual, both when praying alone or with a quorum, and they endowed it with the same importance as the regular morning service (Ber. 30b; Sh. Ar., OH 286:2).

It is customary to recite the *Musaf* service immediately after the reading of the weekly Torah and *haftarah* portions which follow the morning prayers on Sabbaths and festivals. It is, however, permissible to recite it at any time during the day. Nevertheless, one who negligently postpones its recitation until after the seventh hour of the day is considered a “transgressor” (Ber. 4:1 and Ber. 26b, 28a).

The *Musaf* is introduced by the reader’s recitation of the Half *Kaddish. This is followed by the *Musaf* **Amidah* which, except on Rosh Ha-Shanah, consists of seven benedictions. The first three benedictions of praise and the last three benedictions of thanks are identical with those of the daily *Amidah*. The benediction *Kedushat ha-Yom* (“Sanctity of the Day”) is inserted between these blessings. It consists of an introductory paragraph, followed by a prayer for the restoration of the Temple service, and concludes with the appropriate selection from the Torah detailing the additional sacrifice for the day. In the *Musaf* for Rosh Ha-Shanah three blessings are added in the middle: the **malkhuyyot* (*malkhiyyot*), **zikhronot*, and **shofarot*. In communal prayer, the *Musaf* *Amidah* is generally repeated in full by the *hazzan* (*Rema* to Sh. Ar., OH 286:2). In some congregations, however, particularly among the Sephardi Jews, the *hazzan* chants the first three blessings aloud with the congregation. This, however, is not done on the High Holy Days, when the entire *Amidah* is always repeated by the *hazzan*.

The Sabbath *Musaf* *Amidah*, after the initial three regular blessings, consists of a composition in which the initial letters of the first 22 words follow the inverted order of the Hebrew alphabet. This prayer concludes with the description of the

Sabbath *Musaf* offering from Numbers 28:9–10. A short prayer for those who observe the Sabbath follows, and the “Sanctity of the Day” concludes with the prayer beginning with the invocation “Our God and God of our fathers,” common to all the *Amidot* of the Sabbath (Hertz, Prayer, 530–4).

On New Moons, the *Musaf* consists of a prayer expressing sorrow over the abolition of the sacrificial ritual and hope for its restoration. Numbers 28:11, describing the New Moon sacrifice, is quoted, and it concludes with a prayer for a blessed and happy month (*ibid.*, 778–82). When the New Moon falls on a Sabbath, the first prayer is greatly altered and is very similar to the corresponding formula for the festivals. It concludes with the quotations from Numbers for both Sabbaths and New Moon offerings (*ibid.*, 542–4).

The *Musaf* *Amidah* for the three festivals begins with the prayer “But on account of our sins we were exiled from our land.” God is asked to gather the scattered remnant of Israel to the Holy Land and to build the Temple. The appropriate passage detailing the *Musaf* offering is then inserted, and the regular prayer for the blessings of the festival concludes this section (*ibid.*, 820–8).

The *Musaf* service for the New Year is the longest in the liturgy. It opens with the same format as the other *Amidot* of that day, followed by the prayer “But on account of our sins,” and concludes with the selection from Numbers 29:1–2 describing the *Musaf* sacrifice. After this, *Aleinu* is recited, followed by the above mentioned three additional benedictions.

The *Musaf* *Amidah* for the Day of Atonement begins in the same way as that of the New Year. After the biblical selection in which the additional sacrifices for the day are detailed (Num. 29:7–8), a prayer for the forgiveness of sins is recited. The *Confession (see **Al Het*; **Ashamnu*) forms an integral portion of this *Musaf* service, just as it does in the other *Amidot* of the Day of Atonement.

It was customary to interlace the *hazzan*’s repetition of the *Musaf* *Amidah* on festivals and special Sabbaths with various *piyyutim*. Except for Rosh Ha-Shanah and the Day of Atonement, this is hardly done nowadays. Even on those two holidays most modern congregations recite only selections from the huge volume of *piyyutim* composed throughout the generations.

The *Musaf* services of the first day of Passover and of Shemini Azeret are known by special names: the former as *Tal* (“dew”), because prayers for abundant dew are recited during the repetition of the first two blessings by the cantor; the latter as *Geshem* (“rain”), because prayers for rain are recited by the cantor at the same juncture. (In Israel, the custom is to recite these two prayers before *Musaf*.)

In Reform congregations in the 19th century the *Musaf* service was either entirely abolished or modified, since Reform Judaism no longer anticipated the restoration of the sacrificial cult. In the course of time, the tendency was to omit it entirely. Some Conservative congregations have rephrased references to the sacrifices so that they indicate solely past events without implying any hope for a future restoration of sacrifice.

[Aaron Rothkoff]

MUSAR HASKEL (Heb. מוסר השכל; also known as **Shirei Musar Haskel** or **Sha'arei Musar Haskel**), the name of a frequently printed ethical poem of the 11th century, usually attributed to *Hai ben Sherira Gaon (939–1038). The poem as printed consists of 180 verses, but there is a possibility that it was not printed in full and that in some manuscripts there is more material belonging to it. It was first printed in Fano, probably in 1505, and has appeared many times since then, mostly together with the *Ka'arat Kesef* of Jehoseph b. Hanan b. Nathan *Ezobi and occasionally also with S.J. Rapoport's essay on Hai Gaon. Although there is not sufficient proof to support the traditional attribution of the work to Hai Gaon, neither is there any evidence that the attribution is impossible. The poem is written in the literary style of the Book of Proverbs and of the Wisdom of Ben Sira. It deals with many aspects of human life, religious and social; it shows in short, rhymed epigrams the ethical way of life. Among other subjects it deals with prayer, the love of God, the love of knowledge, fear of the divine judgment, the treatment of women, and the correct way to conduct business. Every couplet of the poem usually stands alone as an epigram, and only rarely is a topic dealt with in more than two lines. The work was translated into Latin by Jacob Ebert (Frankfurt, 1597).

[Joseph Dan]

MUSAR MOVEMENT, movement for the education of the individual toward strict ethical behavior in the spirit of *halakhah*; it arose in the 19th century, continuing into the 20th, in the Jewish culture of the *mitnaggedim* in Lithuania, in particular becoming a trend in its yeshivot. Originally inspired by the teachings and example of the life of Joseph Sundel b. Benjamin Benish *Salanter, it began as a movement for influencing members within the community. Circumstances, however, caused a radical change in its character at an early stage and turned it from the ideal of creating a pattern for leading and exemplary members of the community to forming the personality of the young students in the yeshivot.

Israel *Lipkin (Salanter) had primarily intended to establish the movement for members of the community through their activities. About the middle of the 19th century, the mitnaggedic Jewish culture was facing a severe crisis as a result of its vulnerability to the corroding influence of Haskalah ideology. The growing poverty and congestion in the *shtetl* in the *Pale of Settlement were causing severe tension and bitterness within Jewish society. The world of the leading circles of Lithuanian Jewry was breaking up. The pupil and co-worker

of Israel Lipkin, Isaac *Blaser, complained in the second half of the 19th century about the moral degeneration: “The fear of God has terribly deteriorated ... sins are proliferating whereas formerly Torah and the fear of God went together among Jews ... now, because of our many sins, this unity has broken up; the bonds have gone and the connection joining them has been severed. In the end, without the fear of God, the knowledge of Torah will disappear too, God forbid” (his introduction to Lipkin's *Or Yisrael* (1900)). This expressed a typical complaint of the *Mitnaggedim* of the period. Blaser was alarmed by the new phenomenon presented by the graduates of the yeshivah, who, though learned, were no longer devoted to the rigorous pattern of *halakhah*. Confronted by ḥasidism on the one hand, and on the other by the trends in German Jewry of *Haskalah, *Reform, and *Neo-Orthodoxy, mitnaggedic Jewry was faced with the problem of how to sustain a rigorous traditional Jewish life, based mainly on learning and intellectuality. Israel Salanter at first intended to tackle the problem directly in the communities. In his first letter to the Vilna community in 1849, proposing the creation of a *musar shtibl* (“a room for moral deliberation”) he wrote: “The busy man does evil wherever he turns. His business doing badly, his mind and strength become confounded and subject to the fetters of care and confusion. Therefore appoint a time on the Holy Sabbath to gather together at a fixed hour ... the notables of the city, whom many will follow, for the study of morals. Speak quietly and deliberately without joking or irony, estimate the good traits of man and his faults, how he should be castigated to turn away from the latter and strengthen the former. Do not decide matters at a single glance, divide the good work among you – not taking up much time, not putting on too heavy a burden. Little by little, much will be gathered ... In the quiet of reflection, in reasonable deliberation, each will strengthen his fellow and cure the foolishness of his heart and eliminate his lazy habits.” His program, meant to meet the needs of busy traders, proposed their meeting for moral reflection and self-improvement on the day of rest. In his third letter to the Vilna community he proposed that women join in this concern with the study of morals. In his *Iggeret ha-Musar*, Salanter particularly stressed the sin of financial fraud.

However, the movement failed to attract the settled members of the community; their “laziness of habit” was too deeply ingrained. Blaser, and not Salanter, had estimated correctly: the trouble lay not so much in the area of individual morality as in the dichotomy between Torah learning and the fear of God. It may be surmised that Israel Salanter's personality – which was both admired and criticized by Orthodox and Haskalah circles – was also one of the reasons for the failure of the movement among the upper circles of mitnaggedic society.

In the later years of Israel Salanter, through the energetic drive of his devoted pupils Isaac Blaser and Simah Zissel *Broida, the supporters of the Musar movement turned to the education of the young, and in particular to influencing the students of the yeshivot to form early in life the alertness of moral habit which had proved so difficult to instill at a later

age. Blaser founded a *kolel* at Lubcz (Lyutcha). In 1872 Simah Zissel founded a *musar shtibl* at Kelme. He also founded a school for youngsters at Grobina, Courland, obtaining some financial support from Orthodox circles in Germany. As the Musar movement began to penetrate the yeshivot, both through the indirect influence of its own institutions and through the direct introduction of *musar* study and methods (see below) into the yeshivot, sharp opposition arose from the traditional yeshivah leadership. Rabbis and leaders, such as Aryeh Leib *Shapiro and Isaac Elhanan *Spektor of Kovno, openly opposed the new educational system, but without success. Subsequently some of its opponents explicitly renounced their objection, while others ceased to speak openly against it. By the beginning of the 20th century, *musar* had become the prevailing trend in the Lithuanian yeshivot.

Methods and Goals

After its adoption by the yeshivot, and the earlier establishment of *musar shtibl* and educational institutions, the Musar movement developed an individual institutional and educational pattern. The reading of ethical works, of isolated sayings from the Midrash and Talmud, and of verses from the Bible served as vehicles for creating a certain mood and for implanting certain feelings. The principal activity was to recite passages from these works, or a saying or verse, to a melody – taken from the repertoire of the **maggidim* – suitable for evoking a pensive atmosphere of isolation and mood of emotional receptivity toward God and His commandments, preferably in twilight or subdued lighting (from a certain aspect this resembles the “spiritual exercises” recommended by Ignatius of Loyola for the Jesuits). The reading of the intellectual matter in the text served to stimulate an emotional response, which was intended to help the student both in forming moral personality and in devotion to Talmud study.

Formally, the Musar movement was based on the study of *ethical literature, although its conception of this was highly eclectic, and its libraries included works by authors as diverse as *Jonah b. Abraham Gerondi, Moses b. Jacob *Cordovero, Moses Ḥayyim *Luzzatto (who had been excommunicated in his time), and Naphtali Herz *Wessely (one of the leaders of Enlightenment). However, several generations of study of this variegated literature by many brilliant young men did not produce for the movement, as far as is known, a single systematic commentary, either on the literature as a whole or on an individual work.

In the “minimalistic” *musar* yeshivot, students devoted at least half an hour daily to studying one of these texts in unison, intoning them in the same plaintive melody. Unity was demanded only in the melody used, each student being allowed to read the book of his own choice. In these yeshivot, the **mashgi'ah* (“supervisor”) became a second spiritual mentor of the students, equal to the *rosh yeshivah*; in the case of some personalities, such as Jeroham Lebovitch at the *Mir yeshivah, he was even superior. The *mashgi'ah* held a *shmu'es* (“talk”) with all the yeshivah students at least weekly, on either

a general moral topic – a kind of a special yeshivah sermon – or some specific incident that had occurred in yeshivah life. Devout *musar* students often combined into a *va'ad*, several youngsters gathering together for a period to chant some *musar* saying and achieve the proper *musar* mood. Larger groups would create a *musar berzhe*, in which they would act collectively and enter collectively through a more protracted way into the same mood. In these yeshivot, commonly called “Slobodka-style” yeshivot (see also *Kovno), the student's mind was molded through this activity, through his comradeship in emotivity with fellow students, and through the influence of the *mashgi'ah*. In this highly charged emotional life intellectual Talmud study became encapsulated by the atmosphere created by *musar*.

The crisis in the yeshivot brought about by secularizing influences, such as the *Bund, general socialist revolutionary trends, Zionism, and Haskalah, was counteracted to a large extent by the influence of the Musar movement. Israel Salanter's original aim was also largely achieved, though indirectly, as the “*muserniks*” who entered the life of the upper circles of the *shtetl* were now imbued with the new proud and rigoristic spirit engendered by *musar* and the collective sense of identity.

There also developed a second, “maximalist,” trend of *musar* yeshivot, in the so-called “Nowardok style.” Its proponent, Joseph Josel, the “old man of Nowardok” (Novogrudok), applied a deeper psychological approach. This not only included many hours devoted to the study of the *musar* texts, employing if possible a more plaintive melody, with less light, but the student would also be taught to discipline himself by a series of *peules af* ... (“actions to ...”). Such actions were calculated to subdue his natural instincts of vanity, economic calculation, or love of material goods. A student, for example, might be ordered to go to a drug store and ask for something inappropriate, such as nails, to mingle with well-dressed people in rags, or to enter a train without a coin in his purse. By the Nowardok method, a man not only trained himself to subdue his animal and social nature, but also to check if he did so in complete emotional depth. Ḥayyim *Grade described it:

“When you ask the *Nawardoker*, ‘How do you do?’ the meaning is ‘How is Jewishness with you? Have you advanced in spirituality?’ ... He who has studied *musar* will never enjoy his life further, Ḥayyim, you will remain a cripple your whole life. You write heresy... but is there any one of you really so strong that he does not desire public approval for himself? Which one of you is prepared to publish his book anonymously? ... Our spiritual calm you have exchanged for passions which you will never attain, for doubts which, even after much self-torture, you will not be able to explain away. Your writing will not improve a single person, and it will make you worse” (from his “My Quarrel with Hersh Rasseynar,” in: I. Howe and E. Greenberg (eds.), *Treasury of Yiddish Stories* (1954), 579–606).

Even after many years the *musarnik* remembered this naked prolonged cry, “O voices of ecstasy, O hoary voices, I

follow you – I follow the echo of my Elul nights seven years ago” (idem, *Mussernikes* (1969), 9).

The Musar movement is thus a civic trend which, deflected from its original aim, gradually developed an entire educational system, based on, and aiming toward, integration and subjection of the youthful emotions to a deeply instilled emotional defense system of a rigoristic Jewish life according to *halakhah*. It promoted unity through pride in this fraternity of feelings and intentions and thus served as a social bond among those who emerged from the *musar* hothouse in the yeshivot. The Slobodka and Nawardok approaches differed in their degree of extremism and the emphasis on spiritual exercise, but were based on the same principle. By 1970 the main yeshivot of the Lithuanian type were *musar* oriented, the majority of Slobodka style, and a small minority Nawardok style. Despite the system, or to some extent because of it, many left the *musar* yeshivot for more secular trends of education.

MUSÉE D'ART ET D'HISTOIRE DU JUDAÏSME (MAHJ).

Open to the public since December 1998, the MAHJ is located in the area of le Marais, the historical heart of Paris and, since the 19th century, one of the main Jewish residential areas in the city. The MAHJ is located in a renovated 17th-century mansion, property of the city of Paris and assigned to the housing of a museum of Jewish civilization by Jacques Chirac, then mayor of Paris, already in 1986. All the costs for the construction and functioning of the museum were and are covered in equal terms by the municipality of Paris and the Ministry of Culture. The very rich collections of the MAHJ originated in the collections of the Musée d'Art Juif, a former Jewish museum created in 1948 which discontinued its activities, and in the Jewish collection of the National Museum for the Middle Ages. Among several donors and depositors, one can mention the Paris Consistory, which entrusted to the MAHJ its important collection of ritual objects. Apart from the permanent exhibition, the MAHJ organizes temporary exhibitions, hosts cultural events in its auditorium, receives the public in its library and documentation center, and puts very special emphasis on workshops for youth. The founder-president of MAHJ was Claude-Gérard Marcus, who was succeeded by Théo *Klein. In 2006 the director was Laurence Sigal.

MUSELMANN (German for Muslim), death camp slang word for prisoners on the edge of death who have surrendered to their fate, i.e., showing the symptoms of the last stages of hunger, disease, mental indifference and physical exhaustion. This term was mostly used at Auschwitz. It seems to have originated from the typical deportment of the sufferers, e.g.,

to squat with their legs tucked in an “Oriental” fashion, their faces masklike in stiffness. Often the *muselmann* was the target of anger from fellow prisoners, who avoided them lest they too be overcome by despair at the conditions they faced.

Primo *Levi has argued that had the *lagers* lasted a little longer they would have developed a language of their own. His chilling description of the *muselmann* indicates the depth of their despair: “The *musselmaner*, the drowned, form the backbone of the camp, an anonymous mass, continually renewed and always identical, of non-men who march to labor in silence, the divine spark dead within them, already too empty to suffer. One hesitates to call them living; one hesitates to call their death death, in the face of which they have no fear, they are too tired to understand.... If I could enclose all the evil of our time in one image, I would choose this image, which is familiar to me: an emaciated man with head dropped and shoulders curved, on which face and in whose eyes not a trace of thought is to be seen.”

MUSEUM OF JEWISH HERITAGE: A LIVING MEMORIAL TO THE HOLOCAUST (MJH: ALMTTH).

The opening of MJH: ALMTTH, in September 1997, marked the culmination of a long and difficult process to create a Holocaust Memorial in New York City. Beginning with the dedication of the site for a Holocaust Memorial, in Manhattan's Riverside Park, on October 19, 1947, and until the Museum opened its doors to the public 50 years later, the aspirations and plans to establish an appropriate commemoration of the Holocaust were loaded with frustrations and repeated dismissal.

Over the years, numerous plans for a N.Y. Holocaust Memorial were submitted but were either rejected by the City's planning authorities or failed to raise the necessary funding. The artists chosen by the various planners to submit designs for the planned monument included some of the most renowned architects and sculptors. These included Eric Mendelsohn (1951), two designs by Nathan Rapoport (1962 and 1964), and Louis Kahn (1968). Rapport's 1964 rejected submission was ultimately installed in the Jerusalem Hills and titled *Scrolls of Fire*.

A heightened awareness of the significance of the Holocaust for contemporary society from the late 1970s onwards, resulted in increased endeavors to commemorate the Holocaust and address both Jews and non-Jews alike. This included major TV productions, educational curriculums, and ultimately the establishment of Holocaust memorial centers and museums. Especially significant was the 1979 decision to create the *United States Holocaust Memorial Museum in Washington, D.C.

In July 1981, New York's Mayor, Edward *Koch established a Holocaust Memorial Task Force, which evolved in September 1982 to the New York City Holocaust Commission,

co-chaired by philanthropist and real estate developer George Klein and Manhattan district attorney, Robert M. Morgenthau. The stated goal was the creation of “a living memorial,” meaning a museum rather than only a monument. Koch’s declared rationale was clear: “New York City is regarded by all as the cultural and spiritual nucleus of American Jewry and is home to the largest number of Holocaust survivors... It is tragic that the city... still does not have a fitting memorial to the six million martyrs lost in the Second World War.”

In February 1986, Governor Mario Cuomo was added to Mayor Koch as founding chairman of the now State Commission. This new development allowed for greater leverage in obtaining State-controlled properties on the tip of Manhattan in Battery Park. Other than allocation of land by the State, the project was to be funded by private financing. Yet, despite support by the local authorities, the project was unable to raise the required funds, resulting in repeated delays and causing it to be nearly forsaken.

Finally in October 1994, ground-breaking ceremonies unveiled Kevin Roche’s design for a substantially reduced 30,000 sq. ft. building in Battery Park, symbolically situated opposite two major icons of American Jewish life, the Statue of Liberty and Ellis Island.

Having weathered the ups and downs of creating the new memorial since 1986, Museum director David Altshuler enthusiastically moved ahead in 1995 to create the team that would develop the Core Exhibit. Patrick Gallagher was hired as exhibit designer, Yitzchak Mais, the former director of Yad Vashem’s Historical Museum, was appointed chief curator and together with filmmaker Max Lewkowicz combined to create a novel approach to Holocaust commemoration.

The three floors of the Museum portray Jewish life in the 20th century, before, during and after the Holocaust, thus providing an essential but all too often overlooked context for this tragic period in Jewish history. The exhibit’s integration of artifacts, photos, text and videos, depict the human drama and highlight the personal narrative of individuals who actually experienced the historical events. This allows the visitors to develop an intimacy with the historical “participants,” and results in a powerful emotional experience that will be remembered long after many of the facts, figures, and maps have faded.

The exhibit’s narrative, while emphasizing the particular Jewish tragedy, permits its diverse audiences the opportunity to also focus on themselves – their own backgrounds, traditions and history – as they encounter the values, customs, and heritage of the Jewish people. The more universal a story is in its appeal, the more it can bridge cultural differences. Any group’s life experiences are unique, but there are characteristics that are common to all people – hope, desire, frustration, fear, courage, and the instinct for survival. The museum’s innovative approach of highlighting Human history, with a capital “H,” tells the particular Jewish story with universal relevance for all audiences.

This approach is especially evident in the museum’s second floor, “The War Against the Jews.” In contrast to most

other Holocaust exhibitions in North America which depict the Jews under Nazi domination as mere objects in a reign of ongoing terror, MJH:ALMTTH highlights how the Jews perceived and responded to the evolving persecution. Hence, based on the changing Nazi policies and the Jews’ understanding of its implications, the Jews are not perceived by the visitors as passive victims, but rather as active agents who exhibited resourcefulness and vitality within the limitations imposed by the tragedy and calamity the Jews experienced during the Holocaust.

The review of the Core Exhibition in *The Wall Street Journal*, highlighted this innovative approach:

Although the Museum of Jewish Heritage documents with unflinching detail Hitler’s war against the Jews, it never permits its visitors to view Jews as faceless extras in the drama of Nazi butchery.

Appointed Museum director in 2000, David Marwell guided MJH:ALMTTH, to its role as a major educational and cultural institution. The realization of the original plans, which were scaled down for lack of budget, were finally accomplished with the dedication of the Robert M. Morgenthau wing in 2003 which provided auditoria, classrooms, a conference center as well as temporary exhibition space.

[Yitzchak Mais (2nd ed.)]

MUSEUMS. In her entry on museums for the 1948 *Universal Jewish Encyclopedia* the eminent historian of Jewish art Rachel Bernstein Wischnitzer (1885–1989), founding curator of the Jewish Museum in Berlin, cited the origin of collecting and exhibiting of objects of Jewish art and archaeology as dating to 1863 when Félicien de Saulcy brought sarcophagi discovered in Jerusalem to the Louvre. In this way, she wrote, “Since the excavations in Palestine and other sites of [Jewish] archaeological interest were conducted by expeditions from many countries, Jewish excavation finds found their way into various museums all over the world ...” Many finds were not related to the Jewish cultural heritage, but the significance of excavating in the Land of Israel was the study of the Bible. Similarly, interest in the Bible and other texts of the “people of the Book” led to the acquisition of important manuscripts and printed texts as some ceremonial objects for libraries and museums throughout Europe. The earliest group of Jewish ritual artifacts was acquired by the Victoria and Albert Museum, then called the South Kensington Museum, in London in 1855, just four years after the museum was established.

It is only in the modern age that there has been a concerted effort to develop museums of the Jewish cultural heritage with far-ranging collections to reflect the 4,000 year history of the Jewish people and Jewish life as it evolved in many lands among many different peoples. Beginning in the 1890s,

the formation of Jewish museums in Europe, the United States, and in Erez Israel reflected the phenomenon in Europe of the creation of public museums that began a century earlier and specifically the establishment of ethnographic collections in the mid-19th century. Prior to that time, collecting was the provenance of the nobility and the wealthy. While private wealth did enable some individuals to form collections of Jewish art, in the period before World War I, with increasing secularization, demographic changes, and the rise of nationalism, there was a growing trend to mobilize community preservation efforts and to raise public awareness of the importance of sustaining cultural heritage. Jewish art activities in Europe continued to thrive in Europe even after the Russian Revolution and World War I and heroically persisted even as the Nazis came to power.

In the decades following the Holocaust, there was some limited activity in Europe, but the major mantle of scholarship in the field of Jewish art became the responsibility of Jewish communities in the United States and in Israel. After the Six-Day War in 1967, there was a tremendous upsurge in interest in Jewish life and culture. In America, this occurrence paralleled a focus on ethnicity which significantly impacted American life. Since the late 1970s the most profound aspect of the emphasis on history as memory has been the building of hundreds of Holocaust museums and memorials worldwide. The effort to preserve local Jewish history has been a major impetus to establish Jewish museums in communities across the globe by restoring historic synagogues, in many cases where few Jews remain. Perhaps most astonishing is the revival of Jewish museums in Europe even where the Jewish community was largely destroyed during the Holocaust. By the 1950s Jewish museums had been established or reopened in the Netherlands, Germany, Austria, Greece, Italy, Spain, England, Ireland, Scandinavia, France, and Belgium.

With the collapse of communism in the late 1980s, Jewish museums, many in restored synagogues and other former Jewish communal buildings, have been created in the former East Germany, Hungary, Poland, the Czech Republic, Slovakia, Belarus, Bosnia-Herzegovina, Bulgaria, Croatia, Latvia, Lithuania, Romania, Serbia, and Ukraine. Several collections thought to have been plundered during World War II have been brought to light. An ironic consequence of the loss of cultural artifacts during the Holocaust, is the development of contemporary *genizah* projects, the search for once discarded and hidden Judaica in Europe. The efforts of the Hidden Legacy Foundation in London and the Jewish Museum in Prague for example, have led to the discovery in *genizot* buried artifacts of a number of communities in Germany and Czechoslovakia. While these documents, sacred texts, and ritual objects were buried because they were outworn or no longer usable, their conservation has now become necessary because of the dire fate of the locations in which they were placed for safekeeping and the destruction of the communities that cared for them.

Over 20 countries with representation of several dozen museums are members of the Association of European Jew-

ish Museums (AEFM), an important forum for new plans and developments. The association was established to promote the study of European Jewish history and seeks to protect and preserve Jewish sites and the Jewish cultural heritage in Europe. The Association of European Jewish Museums, the Council of American Jewish Museums (CAJM), which represents over 80 institutional and associate members, along with representatives of the vast network of museums in Israel, and colleagues worldwide – from Australia to South Africa, from Chile to China – seek more and more ways to work in partnership to preserve and interpret the Jewish cultural heritage.

Western Europe and the Mediterranean Rim

Isaac Strauss (1806–1888), conductor of the orchestra at the Paris Opera and for Napoleon III, was an avid art collector and purchased Judaica during his extensive travels. The first public display of Jewish ceremonial art was an exhibition of his collection at the Exposition Universelle at the Palais de Trocadéro in Paris in 1878. The Strauss Collection was purchased in 1890 by Baronne Charlotte, wife of Nathaniel de Rothschild, given to the State, and housed at the Musée de Cluny. The Strauss collection was fortuitously spared during World War II. The Strauss Collection was given a new home in 1999 when the *Musée d'art et d'histoire du Judaïsme opened in Paris in the magnificent restored 17th-century Hôtel de Saint-Aignan in the Marais quarter. The new museum is a successor to the Musée d'Art Juif which was founded in 1948 and acquired its collections. The grandchildren of Captain Alfred *Dreyfus (1859–1935) gifted the museum with the archives, numbering over 3,000 items, that chronicle the “Dreyfus Affair” – the accusation of treason, his court-martial, conviction, imprisonment, and finally exoneration in 1904 – which revealed the persistence of antisemitism in France and became an international issue. The museum also has a long-term loan of ceremonial objects from the Consistory of Paris, never before seen by the general public.

Paris was also the home of the oldest Jewish national historical society, the Société des Études Juives, founded in 1880. On the eve of the French Revolution, Alsace was home to more than half of French Jewry. When the decree of emancipation in 1791 gave Jews full citizenship and the right to practice any trade, many Jews left the rural communities. In 1905, the Société d'Histoire des Israélites d'Alsace et de Lorraine was established to preserve traditional folkways. Headed by Rabbi Moïse Ginsburger and Charlés Levy, the society collected objects and recorded oral traditions. These were deposited in the Musée Alsacien in Strasbourg specifically created to preserve the distinctive regional folk culture. In recent years, there has been an upsurge in documentation of Jewish life in Alsace. Over 200 sites are on record, a number of which have already been restored and now are home to Jewish museums including in Bischheim, Bouxwiller, Colmar, and Marmoutier. Two 18th-century synagogues in Carpentras and Cavaillon in Comtat Venaissan, formerly an area where Jews were given protection by the popes of Avignon, have also been preserved.

The first attempt to create a Jewish museum in Belgium dates to 1932, but it was not successful. The 1981 exhibition, “150 years of Belgium Jewish Life,” held at the Brussels town hall was the impetus for establishing the Pro Museo Judaico. The Jewish Museum in Brussels opened in 1990 and in 2004 moved to a building donated by the Belgian government.

The Anglo-Jewish Historical Exhibition presented at the Royal Albert Hall in London in 1887 was the first major exposition organized to further interest in the historic preservation of Judaica art and artifacts. Plans for the exhibition grew out of the attempt to establish an Anglo-Jewish historical society and motivated by the threatened demolition of the Bevis Marks Synagogue, a landmark since its dedication in 1701. The exhibition was spearheaded by Lucien Wolf (1857–1930), a historian and publicist, and Alfred A. Newman (1851–1887), a collector of Anglo-Jewish books, pamphlets, and portraits, and guided by Sir Isidore Spielmann (1854–1925), an organizer of art exhibitions. Some 2,500 items were displayed, including ceremonial objects, antiquities, paintings, prints, documents and books on loan from some 345 lenders, both individuals and institutions and included the Strauss collection from Paris. Another important collection was that of Reuben D. Sassoon (1835–1905), largely purchased from Philip Salomons (1796–1867), the brother of Sir David *Salomons, the first Jew to serve as lord mayor of London.

A diverse, ecumenical general committee participated in the planning of the exhibition and related public programs. This inclusion reflects a political agenda that factored in the rescue and preservation of the cultural artifacts of the Jewish people. In England, as elsewhere in Europe and in the United States, an underlying aim was to dispel age-old prejudices and stereotypes and to increase awareness of the contributions made by Jews and the Jewish community to society at large. The Anglo-Jewish Historical Society was formed in 1893. The London Jewish Museum was established in 1932, an effort spearheaded by historian Cecil *Roth (1899–1970) and Wilfred *Samuel (1886–1958). The Jewish Museum is considered the National Collection of Judaica. Important early collections include objects from the Arthur Howitt collection purchased in 1932, the Kahn Collection of 18th-century textiles, and the Franklin Collection of ceremonial silver. For many years, the collection was housed in the Library of the Jews’ college at Woburn House in Tavistock Square, along with the main institutions of the Jewish community. Since 1995, the museum has been located in the Raymond Burton House in Camden, a restored 1844 building. Today, the London Jewish Museum also encompasses the London Museum of Jewish Life founded in 1983 to focus on the more recent history of Jewish life in Britain from the late 19th century to the present. The Ben-Uri Society was established in 1915. The founders, many of whom were Yiddish-speaking immigrants, aspired to develop a collection of fine arts that would demonstrate the significant contribution of Jewish artists. Today its collections represent the work of some 350 artists and is one of the most important of its type in Europe. In Manchester the Jewish Museum

opened in 1984 in the former Spanish and Portuguese Synagogue built in 1874.

The Irish Jewish Museum, dedicated in 1985, is housed in the now restored Walworth Road Synagogue, in the heart of what was once a Jewish neighborhood of Dublin. The collections represent Jewish communities in Belfast, Cork, Derry, Dublin, Limerick, and Waterford.

The Jewish community in Italy was the very first in Western Europe, and only in Italy has there been continuous settlement since Jews first arrived during the era of the Roman Empire. Today few, if any, Jewish residents remain in many of the once thriving communities. A number of synagogues have been restored and often ceremonial objects, along with a history of the particular locale, are displayed.

Rome is home to the largest Jewish community in Italy. The Jewish Museum in Rome is located in the Tempio Israelitico, built in 1904 in the area of the old demolished ghetto. The Jewish Museum in Florence is located in the historic 1882 Moorish revival style synagogue. Also in Tuscany, there is a Jewish museum in Livorno, and the Sienna synagogue has been restored. In Venice, all of the five synagogues in the area that was the ghetto have been preserved. Each represents one aspect of the community’s diverse background, the richly appointed interiors epitomizing the greatness of Italian Jewish art. In nearby Padua, the museum is at the site of the last surviving synagogue, which dates back to 1548 and which was actually closed from 1893 until after World War II. The Jewish Museum in Bologna, located in the area of the former ghetto, and along with the synagogue of Modena and the Jewish museums of Soragna and Ferrara promote an awareness of the long, rich history of Jewish culture in the Emilia-Romagna region. In Piedmont, Jewish museums are found in the restored synagogues in Asti, Casale Monferrato, and Turin. There is also a Jewish Museum in Trieste.

Jewish settlement in Spain also dates to the first centuries of the Roman Empire. The expulsion of the Jews from Spain in 1492 was a major turning point in the history of the Jewish people, and it was not until the second half of the 19th century that Jews returned. The Museo Sefardi in Toledo, Spain established in 1964 which is now located in the restored El Tránsito Synagogue, built between 1336 and 1357 by Samuel ha-Levi, who held several important posts in the court of King Pedro I of Castilla. Fortunately, in 1877, the building, which had been used as a hospital and later a church, was declared a National Monument. Preservation was begun by the government and completed under the auspices of the Museo Sefardi. A museum has also been formed in Girona in conjunction with the Nahmanides Institute for Jewish Studies. Following the expulsion from Spain some 150,000 Jews fled to Portugal. But it was not to be a safe haven and in 1497 Jews were forced to leave. The oldest existing synagogue in Portugal was built in 1438 in Tomar. Classified as a national monument in 1921, it was donated to the state in 1939 for use as a museum. Today it houses the Abraham Zacuto Luso Jewish Museum.

The Joodsch Historisch Museum (Jewish Historical Museum) in Amsterdam, founded in 1931 was re-opened in its original home in the medieval Waagebouw (Weigh-House) in 1955. Eighty percent of its collection was lost during the war; the rest was recovered in Germany. In 1974, the Amsterdam City Council, which then held title to the buildings, voted that the abandoned Ashkenazi Synagogue complex should become the new home of the Jewish Historical Museum. Four historic synagogues, two of which were built in the 17th century and two in the 18th, were restored and physically linked to form the museum. The buildings had been badly damaged in the war, and the replacement elements are all of contemporary design, symbolically serving as a reminder of what has been lost.

The effort to establish a Jewish museum in Denmark was launched in 1985. The museum opened in 2003, in what was the Royal Boat House, built by King Christian IV at the turn of the 17th century. The choice of this site is significant because it was at the invitation of King Christian that Jews were first invited to settle in Scandinavia. Noted architect Daniel Libeskind transformed the historic space for use as the Jewish museum using the concept of *mitzvah* for the overall matrix of his plan.

The Jewish Museum in Basle exhibits objects and documents related to the history of the Jewish community in Switzerland. Basle was the site of the First Zionist Congress in 1897 and documents and mementos from the Congress are on display. A group of tombstones from the 13th century are installed in the courtyard.

The Jewish Museum in Stockholm, was founded in 1987. In 1999, it was accorded the status of a national museum by the Swedish government. In Norway, the Jewish Museum in Trondheim opened in 1997 in the main building of the former railway station, built in 1864, which was converted for use as a synagogue in 1925 and rededicated after World War II.

The Jewish Museum of Greece in Athens was founded in 1977 by Nikos Stavroulakis, who was also the founding director of the Jewish Museum in Thessaloniki in 2000. In addition to collecting archives and artifacts of the two-millennia-old Jewish heritage in Greece, both museums have undertaken the recording and photographing of Jewish monuments, synagogues, and cemeteries endangered because nearly 90 percent of the Jewish population perished during the Holocaust. The Jewish Museum of Rhodes was founded in 1997 and is located adjacent to the Kahal Shalom Synagogue built in 1577. The Jewish community in Turkey also traces its roots to antiquity. The Jewish Museum in Istanbul, housed in the historic Zülfaris Synagogue, was founded in 2001 by the Quincentennial Foundation, which commemorates the 500th anniversary of the 1492 expulsion of the Jews from Spain and the welcome to the Ottoman Empire. The Jewish Museum is the first to be established in a predominantly Muslim country. The vast majority of Moroccan Jews left for Israel, France, and the United States after 1948. The Jewish Museum in Casablanca, Morocco, preserves and records the long history of Jewish life in Morocco and has been involved in the restoration of synagogues.

Central and Eastern Europe

Beginning with a study group in Vienna established in 1895, there was a proliferation of societies in Europe dedicated to the furtherance of Jewish art, which was a consequence of the growing awareness of issues of Jewish identity in the face of modern life. The Gesellschaft fuer Sammlung und Konservierung von Kunst und historischen Denkmälern des Judentums (Society for the Collection and Conservation of Jewish Art and Historic Monuments) also established the first Jewish museum. About 20,000 objects and 30,000 books were recovered in 1945 and returned to the Jewish community. In the 1960s there was a short-lived effort at re-opening the museum. In 1990, the city of Vienna founded a new Jewish Museum, which opened in 1993. The Museum Judenplatz Vienna was inaugurated in 2000 along with a Holocaust memorial designed by Rachel Whiteread. The museum, entered through a 500-year-old Jewish community building still active today, preserves the remains of a newly discovered 13th-century synagogue.

The home of Samson Wertheimer (1658–1724), court Jew to Emperor Leopold I, in Eisenstadt today houses the Austrian Jewish Museum that opened in 1982. An earlier Jewish museum that was founded by Sándor Wolf (1871–1946) in the 1930s was plundered during World War II. Samson Wertheimer, who was also a rabbi, had a private synagogue in his home. His *schul*, one of the few Jewish places of worship not destroyed during the Holocaust, was rededicated in 1979. A Jewish museum in Hohenems is located in the historic Heimmann-Rosenthal villa which dates to 1864 and focuses on Salomon Sulzer (1804–1890), renowned composer of Jewish music.

Alexander David (1687–1765), a Court Jew from Braunschweig, formed the earliest known collection of Judaica originating with the ceremonial objects used in his private synagogue. In 1747, the private synagogue became a community house of prayer and was maintained as such until 1875. Today, David's collection forms the core of the Judaica department of the Braunschweig Landesmuseum in Germany.

In Frankfurt-am-Main, a Catholic art historian and director of the Duesseldorf Kunstgewerbemuseum (Museum of Applied Art), Heinrich Frauberger (1845–1920), formed the Gesellschaft zur Erforschung Juedischer Kunstdenkmaeler (Society for the Research of Jewish Art Objects) in 1901. The Frankfurt Jewish Museum, established in 1922, was destroyed on **Kristallnacht*, the Night of the Broken Glass, Nov. 9, 1938, and was reopened in 1988 in the former Rothschild Palais on the 50th anniversary of the infamous pogrom that began the massive destruction by the Nazis of Jewish homes, businesses, and cultural and religious institutions. Frauberger also formed a collection of Jewish art. In 1908, he curated the first exhibition in Germany of Jewish ceremonial objects at the Duesseldorf Kunstgewerbemuseum. Frauberger later sold his collection to Salli Kirschstein (1869–1935), a successful Berlin businessman. In addition to the influence of Frauberger and the Frankfurt group, Salli Kirschstein's collection also reflects the work of Max Grunwald (1871–1953), who had issued a

call in Hamburg in 1896 to establish a Museum fuer juedische Volkskunde, which aimed to study Jewish folklore studies as a means for Jews to represent what they shared in common with other peoples. A Jewish museum was subsequently established in Hamburg prior to World War I. Today, the Hamburg Historical Museum maintains Judaica department.

Salli *Kirschstein established a private museum in his Berlin home to educate Jews and non-Jews alike through the material evidence of Jewish culture. In particular this was his response to the absence of any representation of Jewish life in the Arts and Crafts and Ethnology Museum in Berlin. Kirschstein's encyclopedic approach to collecting including ceremonial objects, fine arts, manuscripts and rare books as well as historic documents would later serve as a paradigm for other Jewish museums.

There were other initiatives to bring Jewish art to Berlin. The first exhibition of the work of Jewish artists sponsored by the Verein zur Foederung juedischer Kunst (Society for the Furthering of Jewish Art) was held in Berlin in 1908. Another effort at establishing a Jewish Museum in Berlin was based on the art collection of Albert Wolf (1841–1907). In 1917, the collection was displayed in the community administration building adjacent to the historic Neue Synagog on Oranienburgerstrasse. Lack of funding, and a theft in 1923, left the community collection in compromised straits. A new society to support a Jewish Museum in Berlin was established in 1924, with Salli Kirschstein as a participant. However, his collection never became the nucleus of the expanded effort. In 1926, Kirschstein sold his collection numbering over 6,000 items to the Hebrew Union College in Cincinnati, Ohio, in the United States. A second group of objects he collected was sold at auction in 1932. Fifteen of them became part of the collection of the Jewish Museum in Berlin which was, at long last, dedicated on January 24, 1933, just six days before the Nazis came to power. The Nazis closed the museum in 1938 and Allied bombing heavily damaged the Oranienburgerstrasse Synagogue. When the city became divided, the synagogue was in the eastern sector. A change in government policy precipitated by the declining fortunes of communism led to the decision in 1988 to create the Stiftung Centrum Judaicum-Neue Synagoge, which established a memorial and cultural center in the synagogue. In West Berlin, a Jewish Department of the Berlin City Museum, which was located in the Kollegienhaus, a former Baroque Prussian courthouse, was established in the early 1970s. In 1989, Daniel Libeskind's design won a competition for what was officially the "Expansion of the Berlin Museum with a Jewish-Museum Section." The striking post-modern building became a destination in its own right and was visited by a quarter of a million people during a year and a half period after the building was completed in 1999 before closing to install the exhibitions. The Jewish Museum Berlin opened officially on September 8, 2001. Among its creators were two men exiled from Berlin by the Nazis: Michael Blumenthal and Jeshajahu Weinberg,

In the interwar period, Jewish museums were also established in Kassel, Munich, and Mainz. Theodor Harbinger

conducted a survey for the Center for Collecting Jewish Art in Bavaria in Munich under the auspices of the Verband Bayerischer Israelitischer Gemeinden. Plans are in the works for a new Jewish museum to be built in Munich in a complex that will also include a synagogue and community center. In Mainz the museum was formed by the Verein zur Pflege Juedischer Altertuemer in Mainz where in 1931 there was a landmark convention of Jewish art historians, collectors, and curators who met to discuss collaborating on developing a unified methodology of cataloging, photographing and exhibiting collections of Jewish art.

From the mid-1980s and especially since the reunification of Germany, numerous Jewish museums have been established and nearly 100 synagogues have been restored, many of them with exhibitions. The Jewish Museum of Franconia has three sites: in Fuerth, in the former home of the Court Jew family Fromm, built in 1702; in Schnaittach, in a synagogue built in 1570; and in Schwabach, where a painted *sukkah* was found in a house on Synagogengasse. The Jewish Museum in Augsburg is in a restored synagogue – originally dedicated in 1917, it was badly damaged in 1938 and restored in 1985. In 1982, the former wedding hall of the Jewish quarter of Worms located next to the destroyed Romanesque synagogue became the home of Rashi House, a Jewish museum and archive named in honor of the leading commentator of the Bible Rabbi Solomon ben Isaac (*Rashi; 1040–1105). Others are to be found in Baisingen, Essen, Groebzig, Halberstadt, Ichenhausen, Rendsburg, and Veitshoechheim. The site of Jewish Museum Creglingen was a Jewish property from 1618 which was restored to Jewish ownership in 1998 by a descendant of the original owner.

In Prague, Salomon Hugo *Lieben (1881–1942), a historian, galvanized efforts to collect Judaica when urban renewal threatened the demolition of several historic synagogues. He founded the Verein zur Gruendung und Erhaltung eines juedisches Museums in Prag (Organization for the founding and Maintenance of a Jewish Museum in Prague). Lieben's efforts to preserve the Jewish cultural heritage of Bohemia and Moravia extended to rural villages as well. In 1926, the growing collection was moved into the former Ceremonial Hall of the Prague Hēvra Kaddisha, the burial society, which is still used as an exhibit space for the museum. Lieben headed the museum until 1938. During World War II the Prague synagogues and the museum were used as storehouses for confiscated Jewish property from Bohemia and Moravia. Ironically, a plan for preservation of the property in order to care for and promote the unique heritage of Jewish culture suggested by Dr. Karel Stein (1906–1961) led to the establishment of a Central Jewish Museum in Prague. The plan was accepted by the Nazis for a very different reason – they wanted to create a perfect storehouse – a resource for the study of the Jewish people from which future exhibitions could be developed. They presumed that the Jewish "race," as they termed it, would be extinct.

At the end of the war, the collection which numbered 1,000 objects in 1939, had over 100,000 catalog cards record-

ing information about the over 200,000 objects, books, and archives handled by the museum staff. The museum, under the aegis of the Prague Jewish Community Council, renewed its work focusing on efforts to return property to individuals and to any re-established Jewish communities. However, by 1949, the council determined it could no longer maintain the historic buildings in Prague's Jewish Quarter or the museum collections. In April 1950 the Prague Jewish Museum was taken over by the state and placed under the control of the Ministry of Education. Finally, in October 1994, five years after the fall of the Communist government, the museum was returned to the Federation of Jewish communities of the Czech Republic. In addition to the former ceremonial hall of the Prague burial society, the exhibits are housed in five historic synagogues. Across Bohemia and Moravia, with the leadership of the Jewish Museum in Prague, sites are being researched, reclaimed, and preserved. A number of restored synagogues, some of which serve other functions such as concert halls, also have museums including in Boskovice, Decín, Holešov, Kolin, Mikulov-Nikolsburg, Plzeň, Polná, Rakovník, Rychnov, Slavkov-Austerlitz, and Trěbíč.

In the Slovak Republic the Museum of Jewish Culture in Slovakia was established in 1991 Bratislava as part of the Slovak National Museum. The Jewish Museum Prešov housed in the restored 1898 synagogue is seen as the successor to the museum organized in 1928 by Rabbi Theodore Austerlitz and Eugen Bárkány. That collection was among those sent to Prague during the war and when returned became part of the Bratislava collection.

The Jewish museum in Budapest was founded in 1910 and officially opened in 1916. In 1932, under the direction of Erno Naményi (d. 1958), the museum, which had fallen on hard times, reopened in a building attached to the famed Dohány Synagogue. During the war, the most important of the museum's objects were crated and hidden in the basement of the Hungarian National Museum, fortunately these were returned in good order. After the war, Naményi and others worked to restore the museum. The museum was reopened in 1947, but the next years would be difficult. Ilona Benoschofsky, director for two decades from 1963, with the expertise of renowned manuscript scholar Alexander Scheiber catalogued the collection. The museum underwent a major renovation in the 1990s.

The Jewish Historical Museum in Belgrade, Serbia, was established in 1948 and since 1969 has been housed in the Federation of Jewish Communities building. The collection includes many objects saved during World War II and later returned to Jewish hands and the archives document many destroyed Jewish communities. Marking the 400th anniversary of Sephardi settlement in Bosnia-Herzegovina, a museum of the history of the Jews was opened in Sarajevo in 1965 in the synagogue built in 1580. Closed during the Bosnian War, the museum has not reopened. The famed Sarajevo *Haggadah* was put on display in the National Museum in 2002. The Jewish Museum in Sofia, Bulgaria is located adjacent to the Sofia

Central Synagogue. In Dubrovnik, Croatia a museum was established in the 17th-century Kahal Adat Yisrael Synagogue which was restored and rededicated in 1997. In Bucharest, the Museum of the Jewish Community in Romania opened in the former Great Synagogue in 1992.

The demographics of the Jewish world rapidly shifted with the onset of a wave of pogroms in Eastern Europe beginning in 1881 following the assassination of Czar Alexander II. No longer willing to endure the poverty and degradation, over two million Jews left Eastern Europe and moved westward, with the United States, and the promise of economic opportunity and religious and political freedom, the chosen destination of the majority of them. Even as many were leaving there were already profound changes taking place within Jewish society, as many Jews had begun to abandon traditional Judaism as they sought a more modern way of life. Simon Dubnow (1860–1941) issued what was the earliest appeal to recognize the importance of the historical documents and other cultural artifacts of the Jews of Eastern Europe. The rapid changes in Jewish life also motivated the well-known author S. *An-Ski (Solomon Zainwil Rapoport, 1863–1920) to organize an expedition to collect documents, ceremonial objects, and ethnographic artifacts and to gather folktales and songs. An-Ski's motivation was the idealistic belief that the materials collected would provide a source for a Jewish cultural renaissance. The collecting efforts went on from 1912 to 1914 throughout the Ukraine, Podolia, and Volhynia. Even during the war, An-Ski, dressed as a Russian officer and working with the Red Cross, continued to salvage what he could from destroyed Jewish villages on the Galician front. The An-Ski collection was deposited in the State Ethnographic Museum in St. Petersburg. There is now also a Jewish Museum in St. Petersburg which sees its work as being in the tradition of An-Ski and of the first Jewish museum which closed in 1929.

An-Ski escaped from Russia in 1918 and made his way to Vilna. Though in poor health, he re-established the museum founded by the Society of Lovers of Jewish Antiquity in 1913, its collection having been destroyed during the war. *YIVO, the Yidisher Visenshaftlikher Institute (Institute for Jewish Research) founded in Berlin in 1925, with Vilna selected to be the central site of the new organization, became the most important center for research on Eastern European Jewish art and ethnography. In 1939 Max *Weinreich (1894–1969), co-founder and guiding light of YIVO, was on a lecture tour in Finland when the Germans invaded Poland. He made his way to New York and immediately began to work to keep YIVO active. Fortunately, a large portion of the collection of books, manuscripts, and archival items looted by the Germans was recovered after the war and transferred to YIVO's new home in New York.

During the war, Herman Kruk (1897–1944) led a heroic effort of cultural resistance by maintaining a library in the ghetto and collecting ceremonial objects, artwork, and other cultural artifacts belonging to deported Jews and in abandoned Jewish institutions. Aware that the Nazis were on to

their plan Kruk and a few assistants known as the “Paper Brigade” attempted to hide rare books and documents. Two survivors of the Paper brigade, Abraham Sutzkever and Smerke Kaczerginski, returned to Vilna in July 1944 with the Soviet army liberating the city. Little remained, but they determined to reopen the Jewish museum. Beset with difficulties from the authorities, the museum staff shipped out what they could from Soviet Vilnius. The museum was shut down in 1948. After the breakup of the former Soviet Union, YIVO documents were discovered in Vilnius in a church used by the Lithuanian national library for storage. Though not returned to YIVO, a compromise was reached and the documents were sent to New York to be microfilmed then sent back to Vilnius. In 1989, a new Jewish museum was established in Vilnius as the Vilna Gaon State Jewish Museum. On October 3, 2000, the Lithuanian Parliament voted to return 300 scrolls from the holdings of the National Library to the Jewish people. In January 2002, a delegation from Israel led by then Ashkenazi chief rabbi Israel Meir *Lau, himself a survivor, traveled to Vilnius to bring the scrolls to Israel. YIVO now a partner in the Center for Jewish History which opened in New York in the spring of 2000 expanded its scope of work after the move to New York, with the scholarly mission adding a focus on the influence of East European Jewish culture as it has developed in the Americas.

Another group of objects rediscovered in the aftermath of the collapse of the Soviet Union were artifacts from the private collection of Maksymilian Goldstein (1880–1942) and which, along with the contents of the Lvov (Lviv) Jewish Community Museum, were feared to have been destroyed or lost during World War II. Today the collection is housed in the Ukrainian Museum of Ethnography and Artistic Crafts. Goldstein had placed his collection with the museum after the German occupation 1942. Though the movement to form a collection in Lvov had been spearheaded by Goldstein, there was interest in the general community to form such a collection. The nationalist impulse was a major factor, and indeed, Jewish objects had already been displayed at the Municipal Museum as early as 1894 as part of a regional exhibition.

A Jewish museum established by the Jewish Cultural League in Kiev in 1920 existed for about a decade and another in Odessa, also closed in the 1930s. Plundered by the Nazis, the Odessa collection was removed to Germany and was discovered in Bavaria by British forces after the war. The Museum of the History of Odessa’s Jews opened in 2002 during an international conference. Other Jewish Museums in the Ukraine are located in Nikolaev, Simferopol, and Sevastopol.

In Belarus, the Marc Chagall Museum, opened in the artist’s boyhood home in Vitebsk in 1992. In Riga, the Museum of the Jews in Latvia is housed in the Jewish Community Center and highlights many important Jewish personalities from Latvia, including R. Abraham *Kook, the first Ashkenazi chief rabbi of Palestine during the period of the British Mandate. With the political change in Russia, there even are now plans to develop a major Jewish museum in Moscow to be located in a former bus depot donated by the government.

In Poland, Matthias Bersohn (1823–1908) spearheaded the effort to establish a Jewish museum in Warsaw. Bersohn also contributed to ethnographic and folklore studies with his photographic survey of wooden synagogues in Poland. The museum in Warsaw which opened in 1910 was founded with his bequest. The museum was destroyed during the bombardment of Warsaw in 1939. The Museum of the Jewish Historical Institute in Warsaw began its activities in 1948, the first museum to collect artifacts of the Jewish cultural heritage in the postwar period. In the early 21st century building plans were underway for a new museum.

Bersohn’s survey was expanded through the efforts of Majer Balaban (1877–1942), a Lvov native and historian of Polish Jewry who photographed Jewish landmarks, life, and artifacts. In Krakow in 1935, Balaban encouraged the creation of a Jewish museum to preserve the many treasures of the large synagogues, the Stara Synagoga, the Rema Synagogue, and the Hoyche Schul. During the war the collection was plundered and the Stara Synagoga was used as a warehouse by the Nazis. Restored after the war, since 1958 the synagogue has housed a Museum of Jewish History and Culture as a branch of the Krakow History Museum. A Jewish museum was established in Breslau (now Wroclaw) in 1929, also by a Society of friends, the Verein Juedisches Museum Breslau.

In Danzig (Gdansk, Poland, since 1945) a museum was founded in the Great Synagogue in 1904 when Lesser Gieldzinski (1830–1910) presented his private collection of Judaica to the synagogue to commemorate his 75th birthday. In 1939, the Gieldzinski Collection, along with the ceremonial objects of the Great Synagogue of Danzig, was sent to the Jewish Museum in New York. An agreement stipulated that if after 15 years there were no safe and free Jews in Danzig the objects were to remain in America for the education and inspiration of the rest of the world.

Erez Israel

The history of Jewish museums in Erez Israel began with the efforts of Boris *Schatz, who founded the *Bezalel School for Arts and Crafts in Jerusalem. The Lithuanian-born Schatz (1866–1932) trained in Paris and in 1895 became court sculptor to Prince Ferdinand of Bulgaria. In a meeting with Theodor Herzl in 1903 Schatz proposed his vision for an art school that meshed with Zionist ideology. He chose the name of the biblical artist Bezalel as a symbol of the continuity of art in Jewish life. Schatz expressed that his mission was for a Jewish art to come into being which would weave together the cultural threads that had been pulled apart and damaged during the 2,000 years of the Diaspora experience. His idealism was tempered with reality for he planned for the students to learn crafts, which could be sold to help support the school. In the wake of Herzl’s untimely death at age 44 in 1904, Schatz sought the backing of various Zionist institutions. His proposal was officially accepted at the 1905 Zionist Congress and the school was launched a year later. The Bezalel Museum was founded

soon thereafter. By 1910, Bezalel had 32 different departments, over 500 students and a ready market for its works in Jewish communities in Europe and the United States. The school was closed during World War I and again after Schatz passed away in 1932. The museum was incorporated into the *Israel Museum when it opened in 1964 as the national museum (see below). The Bezalel Academy of Art and Design remains as a premier art school today.

From its beginnings in the mid-19th century archaeologists have actively explored the land of Israel seeking evidence of the rich heritage of cultures and civilizations of the peoples who have played a part in shaping its history. Some 15,000 archaeological sites are currently known and new ones are discovered all the time. Though of course many date well before the period of the Israelites and span in time to much later settlers, the sense of being enveloped by history is all-encompassing. Numerous excavation sites have become archaeological parks.

It is perhaps emblematic of how deeply museums are entwined with history that David Ben-Gurion announced the establishment of the State of Israel in the Tel Aviv Museum of Art. Independence Hall is located in what was originally the home of Meir *Dizengoff, first mayor of Tel Aviv. Dizengoff gave it to the city for the creation of an art museum. With its rich collections of modern paintings, sculpture, and graphic art, and its many visiting exhibits, the museum was housed in a new building in 1971. Founded in 1932, it expanded with the addition of the Helena Rubinstein Pavilion in 1958.

The complex Ha-Arez ("Homeland") Museum started with nine separate pavilions: museums for glass, ceramics, numismatics, ethnography and folklore, science and technology (including a planetarium), antiquities of Jaffa and Tel Aviv, the history of Tel Aviv, the alphabet, and Tel Qasile excavations. There are also ten other museums in Tel Aviv, including a Museum of Man and his Work, the Haganah, and the Jabotinsky Museum.

The Israel Museum, situated in the heart of modern Jerusalem, houses a collection of Jewish and world art, the archaeology of the Holy Land, and the Dead Sea Scrolls. The museum was founded to collect, preserve, study, and display the cultural and artistic treasures of the Jewish people throughout its long history as well as the art, ethnology, and archeology of the Land of Israel and its neighboring countries. It also aims at encouraging original Israeli art. The exhibition area totaled 17,000 sq. m. (about 20,500 sq. yd.) with an additional 19,000 sq. m. (about 23,000 sq. yd.) for storage, laboratories, workshops, a library, and offices, including those of the Israel government Department of Antiquities. The museum includes the Billy Rose Art Garden and the Shrine of the Book.

The Haifa municipality administers museums of ancient and modern art, a maritime museum, and the "Dagon," a grain museum showing the cultivation and storage of grain through the ages.

No section of the country is without its regional and local museums, most of them created and maintained to satisfy

the intense interest of the people in their past. In the north, *Beth-Shean, the ancient fortress city guarding the road from the east, displays a collection of archaeological finds and mosaics from the town and its environs; at the nearby kibbutz *Nir David is a museum of Mediterranean archaeology. The Mishkan le-Ommanut, the art museum at kibbutz *En-Harod, the first rural museum in the country, started in 1933. The object of this museum is to collect Jewish art, and it has already a rich collection of Jewish painting, sculpture, and Jewish folk art from all over the world. Beit Sturman at En-Harod exhibits the history and archaeology of the region. Wilfred Israel House, at kibbutz *Ha-Zore'a, exhibits artistic objects from the Far East and archaeological finds from the village fields; Bet Ussishkin, in kibbutz *Dan, is both a natural history museum for the Huleh region and the site museum for the excavations at nearby Tel Dan. There are museums at *Hanitah and *Sasa in Upper Galilee, Tiberias and Nazareth in Lower Galilee, *Ayyelet ha-Shaḥar by ancient *Hazor, *Bet She'arim, close to the Jewish necropolis of the talmudic period, and *Megiddo with its imposing mound.

The coastal region is represented by municipal museums in *Acre, site museums in *Sedot Yam showing the antiquities of *Caesarea, and *Ma'agan Mikha'el showing objects found in the sea; the regional museum at Midreshet Ruppin in Hefer Plain exemplifies the local flora and fauna, as well as the history of the area's modern villages and their ancient sites. In the Negev, Beersheba has an archaeological museum; the kibbutzim Gevulot, Kissufim, Mishmar ha-Negev, and Nirim have their own collections; the site museums of Masadah, En-Gedi, Arad, and Avedat exhibit representative collections of the finds; *Eilat has a museum of modern art, as well as a maritime museum.

Since 1948, museums have flourished throughout Israel and today number over 150. Among them are numerous museums devoted to topics of Jewish and Israeli history, Jewish art, ceremonial art, ethnography and folklore. Important collections have been developed reflecting the ingathering to Israel of refugees from Europe and Arab Lands. An important development in recent years has been the focus on the vibrant legacies of communities like Afghanistan, Kurdistan, Iraq, Morocco, Yemen and of Jews who lived under Ottoman rule.

The Americas

UNITED STATES. The oldest collection of Judaica in the United States was established in 1887 as part of a department of comparative religion at the Smithsonian Institution. The collection was acquired under the direction of Cyrus *Adler (1863–1940), a young curator who had just completed his Ph.D. at Johns Hopkins University, the first to be awarded in the field of Semitics in the United States. Like his compatriots in England who organized the Anglo-Jewish Historical Exhibition, Adler intended that the collection of Jewish ceremonial objects be used in educational exhibitions in order to counteract ignorance of Judaism and prejudice against Jews.

Adler was also a central figure in the founding of the *American Jewish Historical Society in 1892. The AJHS, which has the distinction of being the first ethnic historical organization in the United States, pioneered the collection of archives, books, and artifacts of American Jewry.

In 1904, Judge Mayer *Sulzberger (1843–1923) presented the Jewish Theological Seminary Library in New York with a gift of 26 ceremonial objects to serve as the nucleus for a Jewish museum. Judge Sulzberger was a cousin of Cyrus Adler's, who by this time had become president of JTS in addition to his responsibilities at the Smithsonian. In 1925, Adler was responsible for the acquisition of the collection of Hadji Ephraim Benguiat (d. 1918), an antique dealer who amassed the earliest collection of Sephardic Jewish objects, which he brought to the United States in 1888 and which was displayed at the 1893 World's Fair and subsequently at the Smithsonian Institution. The ominous storm clouds gathering in Europe in the late 1930s brought two additional collections to the museum. The first, through the American Jewish *Joint Distribution Committee, was the Danzig Collection. The second was the collection of Benjamin and Rose Mintz which they brought to the United States from Poland in 1939. The Mintz Collection was purchased by the museum in 1947.

In 1947, the *Jewish Museum moved to its own quarters in the former Warburg Mansion on Fifth Avenue. Stephen Kayser (1900–1988) and Guido Schoenberger (1891–1974), both distinguished art historians and émigrés from Nazi Germany, set a standard of leadership in exhibitions and collections development for nearly two decades. The collection would grow even more with the gift of 10,000 objects from museum supporter Harry G. Friedman (d. 1965), who began acquiring Judaica during the war years. The Jewish Cultural Reconstruction (JCR) was based at the Jewish Museum through 1952. In the aftermath of World War II, the JCR was the organization given the authority by the U.S. State Department to identify and redistribute Nazi looted Jewish ceremonial objects, archives, and books for which no heirs could be found that were located in the American Occupied Sector of Germany. Salo W. *Baron (1895–1989), pre-eminent Jewish historian, spearheaded the campaign to form the JCR, which included representatives of all the major Jewish national and international organizations and served as its president. Hannah *Arendt (1906–1979), political philosopher and author, was the executive secretary for day-to-day operations.

A pioneering initiative was the establishment in 1956 of the Tobe Pascher Workshop for contemporary ceremonial art, whose founding director was Ludwig Wolpert (1900–1981), a German-trained silversmith who came from his home in Jerusalem to direct the workshop. Another was the annual commission by collectors of contemporary art, Albert and Vera List, to commission prominent American artists to make an original graphic for the museum for the Jewish New Year.

From 1970, when Joy Ungerleider-Mayerson (1920–1994), archaeologist and philanthropist, became director, and during the tenure of her successor Joan Rosenbaum beginning in

1980, the museum has continued to actively develop its collections and to present a wide-ranging series of exhibitions and programs. In recent years, The Jewish Museum has focused on presenting a series of major art exhibitions. The JTS Library has maintained a large and important collection of illustrated manuscripts, illuminated ceremonial texts, and prints.

A second Jewish Museum was founded at the Hebrew Union College Library in Cincinnati in 1913 through the impetus of the National Federation of Temple Sisterhoods, whose members recognized the merit of saving family heirlooms. The HUC Librarian Adolph Oko (1883–1944) undertook to develop the museum by acquiring important collections in Europe. His crowning achievement was the purchase of the Salli Kirschstein collection in 1926. Unfortunately, the collections remained in storage for many years until the museum was officially reestablished in 1948 by then president Dr. Nelson *Glueck (1900–1971), a pioneering biblical archaeologist who contributed to the museum's growth by depositing artifacts from his excavation in Israel. Franz Landsberger (1883–1964), former director of the Berlin Jewish Museum, rescued through the displaced European Jewish Scholars program, became director of the museum and he was succeeded by Joseph *Gutmann (1923–2004), who became one of the preeminent scholars in the field of Jewish art. In 1947, Jacob Rader *Marcus (1896–1995) established the American Jewish Archives at HUC, which now bears his name. The Union Museum was renamed the Skirball Museum when the collection was moved to Los Angeles in 1972. During a 30-year tenure as director, Nancy Berman fostered the growth of the collection with a focus on contemporary Judaica. In 1996, the museum opened in greatly expanded quarters in the new *Skirball Cultural Center. Exhibitions and related programs reflect the mission of the cultural center to explore the connections between 4,000 years of Jewish history and American democratic values. A branch of the Skirball Museum is in Cincinnati and the HUC Klau Library in Cincinnati maintains an important collection of visual arts. Established in 1983, Hebrew Union College-Jewish Institute of Religion Museum in New York presents exhibitions illuminating Jewish history, culture, and contemporary creativity. The Skirball Museum of Biblical Archaeology in Jerusalem exhibits archaeological artifacts discovered during the HUC-JIR excavations from 1963 to the present.

Fortuitously some major synagogues saved historic commemorative artifacts as well as important ceremonial objects that later formed the basis of museum collections in those congregations. Congregation Emanu-El of the City of New York established a collection in 1928 with the gift of the private collection of Henry Toch, a trustee, and dedicated the Herbert and Eileen Bernard Museum decades later in 1997. In the post-World War II era, new Jewish museums slowly began to be founded in the United States. While it took another generation before the American Jewish community focused efforts on creating Holocaust memorials and museums, in the aftermath of the destruction of the European Jewish community, there was a new sense of the importance for Jews in the United States

and in the new state of Israel to preserve Jewish culture. The first formally established synagogue museum, at Temple-Tifereth Israel in Cleveland, was dedicated in 1950 by the eminent Rabbi Abba Hillel Silver (1893–1963) in 1950 on the occasion of the centennial anniversary of the congregation.

The Leo Baeck Institute, dedicated to the history of German-speaking Jewry, was founded in New York in 1955. The B'nai B'rith Klutznick National Museum in Washington, DC, was founded in 1957. The core of its collection was the gift of Joseph B. and Olyn Horwitz of Cleveland. The Judah L. Magnes Museum is in Berkeley, California in 1962. The prime mover behind the founding of the museum and its director for more than 30 years was Seymour Fromer, who built the collection as a community-based endeavor, without the resources of a parent institution. The Spertus Museum of Judaica was created in Chicago in 1968 in large measure with the private collection of Maurice Spertus. Two additional Jewish museums were founded in the 1970s. The Yeshiva University Museum in New York was officially opened in 1973, but the university did maintain some collections of Jewish art in its library prior to that time. Sylvia Herskowitz was the director of the museum from its opening. The National Museum of American Jewish History in Philadelphia opened in 1976 in honor of the Bicentennial of the United States. The museum is located across Independence Mall from the Liberty Bell and Independence Hall. It shares its site with Congregation Mikveh Israel, one of the oldest synagogues in America.

In 1977, at a meeting of the Association of Jewish Studies, Dov Noy, professor of Jewish folklore of the Hebrew University, proposed that the U.S. Jewish museums form an organization to further the efforts of the museums to “collect, preserve, and interpret Jewish art and artifacts.” The Council of American Jewish Museums (CAJM), affiliated since 1980 with the National Foundation for Jewish Culture, has now grown to represent over 80 institutional and associate members.

In the late 1970s planning began for the United States Holocaust Memorial Museum in Washington, D.C. which opened in 1993. The USHMM serves as America's national institution for the documentation, study, and interpretation of Holocaust history, and as the memorial of the United States to the millions of victims. Through its multifaceted programs, the museum's mission is “to advance and disseminate knowledge about this unprecedented tragedy; to preserve the memory of those who suffered; and to encourage its visitors to reflect upon the moral and spiritual questions raised by the events of the Holocaust as well as their own responsibilities as citizens of a democracy.” The USHMM is a Federal institution. There are Holocaust memorials in communities throughout the United States and many Holocaust museums. The Simon Wiesenthal Center, Museum of Tolerance in Los Angeles, which opened in 1993 is named in honor of the survivor and well-known Nazi hunter Simon Wiesenthal and is dedicated to the cause of human rights. The Museum of Jewish Heritage: A Living Memorial to the Holocaust in New York opened in 1997. It is sited in view of the Statue of Liberty and Ellis Island and just

five blocks form the former site of the World Trade Center. The museum was “created as a living memorial to the Holocaust” to honor the lives and legacy of the victims of the Holocaust even as it recounts the tragedy of their deaths.

The tremendous growth in interest in preserving Jewish cultural heritage has reached communities large and small throughout the United States. An important aspect of the work of many of these museums is the focus on local and regional history. The Gomez Hill House, built in Marlboro, New York in 1714 by Luis Moses Gomez, a Sephardi immigrant, is the oldest surviving homestead in the country and a foundation to preserve it was established in 1979. Museums have been formed in a number of historically important synagogues. The Touro Synagogue in Newport, Rhode Island, built in 1763, was the first prominent synagogue to be built in America, and is the only one to survive from the colonial era. The beginnings of Kahal Kadosh Beth Elohim in Charleston, South Carolina can be traced to 1775. The temple and a museum are housed in an 1841 Greek Revival building that is the second oldest synagogue in the United States and the oldest in continuous use. The Jewish Historical Society of Greater Washington is housed in the Adas Israel Synagogue dedicated in 1876. The Beth Ahabah Museum and Archives in Richmond, Virginia, maintains materials dating back to the 18th century. The Jewish Museum of Maryland in Baltimore is unique in that it saved and restored two historic structures – the Lloyd Street Synagogue of the Baltimore Hebrew Congregation built in 1845 and the original house of worship of the Chizuk Amuno Congregation which dates to 1876 – and incorporated them into a museum complex. The Eldridge Street Synagogue, completed in 1887, was the first designed and built in America by immigrants from Eastern Europe. The Vilna Shul, built in 1919, is now the Boston Center for Jewish Heritage.

The Museum of the Southern Jewish Experience, now incorporated as part of the Goldring/Woldenberg Institute of the Southern Jewish Experience, was founded in 1986, through the initiative of Macy Hart to represent Jewish culture in the states of Mississippi, Louisiana, Alabama, Arkansas, and Tennessee and is now endeavoring to cover all 12 states of the South. With changing demographics especially in rural communities and small towns, the Jewish population in them has dwindled or no longer exists. The collection in many ways serves as a rescue mission. In addition to collecting artifacts and archives, the museum provides planning assistance for congregations, works to save historic properties, and to care for untended cemeteries. The museum is also a genealogical center. The Jewish Museum of Florida in Miami Beach restored Congregation Beth Jacob, an art deco building dating from 1936. The museum originated as MOSAIC, a project organized by Marcia Kerstein Zerivitz, as a statewide grassroots preservation effort on the history of Jewish life in Florida. The Oregon Jewish Museum was founded in 1986 and in 1996 merged with the Jewish Historical Society of Oregon, acquiring its archives of 150 years of Jewish experience in Oregon and the Pacific Northwest.

Numerous other Jewish museums have been established in synagogues and in Jewish community centers including: the Sylvia Plotkin Museum at Temple Beth Israel in Scottsdale, Arizona; the Elizabeth S. and Alvin I. Fine Museum of Congregation Emanu-El in San Francisco; the San Francisco Jewish Museum originated in 1982 at the Jewish Federation and is developing a major new site designed by Daniel Libeskind; the Gotthelf Gallery at the San Diego Center for Jewish Culture; the Mizel Center for Arts and Culture in Denver; the Chase/Freedman Gallery of the Greater Hartford Jewish Community Center; the Harold and Vivian Beck Museum of Judaica at the Beth David Congregation in Miami, Florida; the William Breman Jewish Heritage Museum in Atlanta, Georgia; the Rabbi Frank F. Rosenthal Memorial Museum at Temple Anshe Sholom in Olympia Fields, Illinois; the Kansas City Jewish Museum; the Goldsmith Museum at Chizuk Amuno Congregation in Baltimore, Maryland; the Janice Charach Epstein Gallery at the Jewish Community Center of Metropolitan Detroit, Michigan; the Temple Israel Judaica Archival Museum in West Bloomfield, Michigan; the Benjamin and Dr. Edgar R. Cofeld Judaica Museum of Temple Beth Zion; the Judaica Museum of the Hebrew Home for the Aged in Riverdale; the Judaica Museum of Temple Beth Sholom in Roslyn, New York; Judaica Museum of Central Synagogue in New York City; Kehila Kedosha Janina Synagogue and Museum in New York City; the Rosenzweig Museum and the Jewish Heritage Foundation of North Carolina in Durham; the Sherwin Miller Museum at the Tulsa Jewish Community Center in Oklahoma; the American Jewish Museum of the Jewish Community Center of Greater Pittsburgh; Philadelphia Museum of Jewish Art of Congregation Rodeph Shalom in Philadelphia; Temple Judea Museum of Reform Congregation Keneseth Israel in Elkins Park, Pennsylvania; Mollie and Louis Kaplan Judaica Museum at Congregation Beth Yeshurun in Houston, Texas; Rabbi Joseph Baron Museum in Milwaukee, Wisconsin.

A unique initiative was the creation of the *National Yiddish Book Center founded in 1980 to rescue Yiddish books. The center's headquarters in Amherst, Massachusetts, is described as a lively "cultural shtetl." The newest and most ambitious Jewish cultural entity to be established in the United States is the Center for Jewish History located in New York City which opened in 2000. The center houses the combined holdings of the American Jewish Historical Society, the American Sephardi Federation, the Leo Baeck Institute, the Yeshiva University Museum, and the YIVO Institute for Jewish Research. The Center for Jewish History is the largest repository of Jewish artifacts, archives, and historical materials in the United States. Undoubtedly the brightest note in the Jewish museum world in the United States is the focus on special installations for children and the creation of independent Jewish children's museums including the Zimmer Children's Museum in Los Angeles, the Jewish Children's Museum in Brooklyn and the Jewish Children's Learning Lab in New York City.

CANADA. In Canada, the Beth Tzedec Reuben & Helene Dennis Museum in Toronto was established in 1965 with the purchase of Cecil Roth's collection. Roth, a pre-eminent scholar of Jewish history and founder of the London Jewish Museum, formed his collection over a 50-year period. Also in Toronto is the Silverman Heritage Museum, located at the Baycrest Centre for Geriatric Care. The Royal Ontario Museum maintains a gallery of Jewish ceremonial objects. Jewish historical societies document life in several cities across Canada in Alberta; Vancouver, British Columbia; Winnipeg, Manitoba; St. John, New Brunswick; and in Montreal, Quebec.

LATIN AMERICA. Several Jewish Museums are active in Latin America. In Argentina, the Museo Judío de Buenos Aires established in 1967 and re-opened in 2000 is located in the Congregación Israelite. It is dedicated to the Jewish historical contribution to the Argentine Republic. A museum dedicated to Jewish immigration is located in Moiséville. A museum is being planned in Cochabamba, Bolivia. The Jewish Museum in Rio de Janeiro was established in 1977. In Chile, there is the Sephardic Historical Museum in Santiago and in Valparaíso there is a Jewish museum and the Israelite Society of Education "Max Nordau." The Museo Histórico Judío "Tuvie Maizel" is located in the Ashkenazi community headquarters in Mexico City. The Jewish Museum of Paraguay, established in 1990, is located in Asunción. In Venezuela, the Separdi Museum of Caracas "Morris E. Curiel" was founded in 1998.

THE CARIBBEAN. Mikvé Israel Emanuel Synagogue in Curaçao, Netherlands Antilles, was founded in 1651 and its current building, which dates to 1732 is the oldest continuously functioning congregation in the western hemisphere. The museum opened in 1970. The Hebrew Congregation of St. Thomas was established in 1796. The present building dates to 1833. The community celebrated its bicentennial in 1995 and the Weibel Museum was created to commemorate the history of the Jews in the community. Plans are underway to develop a Jewish museum in Kingston, Jamaica.

Australia

In Melbourne, Australia Rabbi Ronald Lubofsky, London born and raised, initiated plans for a Jewish museum which was established in 1982. An important focus of the museum has been the acquisition of archives, art, and artifacts reflecting the 200 years of Jewish experience in Australia which "helps strengthen and define our identity as Jewish Australians." Originally housed at the Melbourne Hebrew Congregation, the museum moved to new quarters opposite the stately 1927 St. Kilda Synagogue in 1995. The Sydney Jewish Museum established in 1992 is dedicated to the documenting and teaching about the Holocaust.

South Africa

In Capetown, South Africa a new cultural and heritage center opened in 2000 and located on a site which over a century ago had served a growing immigrant population from Europe. Vivienne Anstey, who directed the effort to develop the new museum, wrote of the South African Jewish community that it

has “grappled with the responsibility of upholding moral and religious values aimed to serve the needs of its own community and the needs of South Africans in general. It has walked the tightrope in its integration in the South African context, at the same time dedicating itself to Jewish continuity.” Adjacent to the new South Africa Jewish Museum is the Cape Town Holocaust Centre. There are also Jewish museums in Calvinia, in Malmesbury in the former synagogue, the C.P. Nel Museum in Oudtshoorn, the Jewish Pioneers’ Museum in Port Elizabeth, and in Pretoria there is the Sammy Marks Museum, a historic house of this South African Jewish pioneer who immigrated from Lithuania in the mid-nineteenth century.

India

The Paradesi Synagogue in Cochin, India was built in 1568 by descendants of Spanish, Dutch, and other European Jews. Though the synagogue is still functioning, the Cochin Jewish community intends to deed the synagogue to the Indian government as a historic monument when the last Jews have left Cochin. Restoration work on the synagogue was made possible by the Yad Hanadiv Foundation under the leadership of Jacob Lord Rothschild. There are several historic synagogues in Mumbai (Bombay) that are preserved including the Gate of Mercy Synagogue (Shaar Harachmim) built in 1796, Keneseth Eliyahoo Synagogue, and the Tifereth Israel Synagogue.

China

The Ohel Rachel Synagogue in Shanghai, China, built in 1920 by Sir Victor Sassoon is currently being renovated, although it is not yet in use again for worship services. Once a center of Jewish life for the 30,000 Jews who found refuge in Shanghai, first when fleeing the 1905 pogroms of Russia, and then from Nazi persecution, the synagogue was last used for services in 1952. The building was then confiscated by the Communist government. Attention was given to the preservation efforts when the synagogue was visited by then First Lady Hilary Rodham Clinton in 1998. Ohel Rachel was added to the World Monuments Fund Watch List of 100 Most Endangered Sites in 2002. The Ohel Moishe Synagogue, the Jewish Refugee Memorial Hall of Shanghai, was the center of religious life for Jewish refugees during World War II. The museum was established in 2002.

Ongoing Endeavors

The search for art and artifacts of the 4,000-year long Jewish experience continues and new finds are regularly being discovered. The most ambitious effort to document the visual culture of the Jewish people is the Index of Jewish Art of the Centre for Jewish Art established in 1980 at the Hebrew University. Founded by Bezalel *Narkiss, the centre has ongoing research projects in Europe and in Israel, presents symposia on a wide-range of projects, maintains an active publications program, including the annual journal *Jewish Art* and organizes tours to Jewish sites. A center for the study of Jewish art has been created at Bar-Ilan University and has published its first journal. The International Survey of Jewish Monuments, spearheaded by Samuel Gruber in the United States, has been

actively involved not only in identifying and studying historic Jewish sites in over 35 countries that are in need of preservation, but in spearheading efforts to undertake the needed work. The Ronald S. Lauder Foundation supports vital educational programs and community projects in Central and Eastern Europe with a special focus on developing schools and camps. The commitment on the part of the Lauder Foundation to “pick up the pieces of a history shattered by Nazism and stifled by Communism” includes preservation efforts as well. Ronald Lauder has also long chaired the Jewish Heritage Program of the World Monuments Fund. Centropa is a project of the Central Europe Center for Research and Documentation, with headquarters in Vienna. The vision of its director, photographer and filmmaker Edward Serotta, an international team works to explore both the history of the Jewish communities and what is currently happening to Jews in Central and Eastern Europe the former Soviet Union, and Turkey & the Balkans, to convey that information to the public through a variety of technologies.

Holocaust Memorials and Museums

The importance of memory is central to all of the efforts in developing Jewish museums, but it is even more so in the dedication of Holocaust memorials and museums. It is a remarkable phenomenon that so many Holocaust memorials and museums have been established in recent years. In 1969, the American Jewish Congress published *In Everlasting Remembrance: A Guide to Memorials and Monuments Honoring the Six Million*. The slim booklet, only 48 pages in length, was compiled so that American Jews visiting Europe could visit the sites “where European Jewry suffered its catastrophe,” the rationale being so that the American Jew could “remember as a witness, to recall the particulars of the Holocaust by [his] presence at the actual sites.” At the time, there were but 20 listings. Of the 17 in Europe, most were at sites of ghettos and concentration camps, the Anne Frank House was listed for Amsterdam. Memorials in Brussels and London were only in the planning stages. In Israel, a documentation center and museum had opened in 1951 at kibbutz *Loḥamei ha-Getta’ot, at Ghetto Fighters House. *Yad Vashem, the Martyrs and Heroes Remembrance Authority, was created by an Act of the Israeli Knesset (Parliament) in 1953. In the United States, plans had just been developed for a memorial in New York City, designed by architect Louis Kahn, and sponsored by a coalition of more than 30 national and local Jewish organizations. The original Kahn design was never realized.

Three decades later, the publication of the Association of Holocaust Organizations includes hundreds of listings. The mission of the Association is “to serve as a network of organizations and individuals for the advancement of Holocaust programming, awareness, education, and research.” Today, around the world, millions of people visit Holocaust memorials and museums annually. The places of memory differ widely. As James Young wrote in his 1994 book *The Art of Memory*, “the reasons for Holocaust memorials and the kind of memory they generate vary as widely as the sites themselves.

Some are built in response to traditional Jewish injunctions to remember, others according to a government's need to explain a nation's past to itself." In 1993, the United States Holocaust Memorial Museum opened in Washington, D.C., adjacent to the national mall and within view of monuments to U.S. Presidents Washington, Lincoln and Jefferson. During the 1990s with the collapse of the Soviet Union and the reunification of Germany many more Holocaust memorials and museums have been created or are in the planning stages. Perhaps most symbolic among them, a Holocaust Memorial in Berlin is situated close by the restored Reichstag (parliament) under a law passed on the Tenth Anniversary of the Treaty of German Unity, the so-called "Foundation for Remembrance, Responsibility and Future." (See also *Holocaust: Museums.)

MUSHER, SIDNEY (1905–1990), U.S. food and pharmaceutical chemist, born in New Jersey. His career was in industrial chemical development and he was vice president of Cooper Tinsley Laboratories Inc. from 1963. He took an active interest in the economic development of the State of Israel, being treasurer of the Pan-American-Israel Economic Corporation, president of the American Committee for Palestine Inc., and a board member of Palestine Endowment Funds Inc., as well as being member of the Jewish Reconstruction Foundation and the American Jewish Historical Society, etc.

MUSHROOMS, fungus. Israel is rich in various species of mushroom which grow chiefly in the winter. A large number of them are poisonous. The poisonous ones are mainly of the genus *Amanita*. Easily recognizable among edible mushrooms are those of the genus *Boletus*, called in modern Hebrew *or-niyyot* because they grow on the roots of the pine (mod. Heb. *oren*), of which most of the forests planted in Israel consist. The mushroom is not mentioned in the Bible, though some exegetes (Rashi, D. Kimi) identify it with the poisonous *pakku'ot* of II Kings 4:39–40. The *pakku'ot*, however, are the colocynt. In rabbinic literature the combination *kemehim u-fitriyyot* ("truffles and mushrooms") is usually found. They have in common that, although they "grow in the soil," one does not recite over them the blessing for vegetables but the blessing "by whose word everything was created." The Talmud gives as the reason that, unlike ordinary plants, "they do not draw their nourishment from the ground but from the air" (Ber. 40b). In this way they explained the fact that they possess no true roots, being fed by other plants, and absorbing moisture from the air. Mushrooms and truffles are also exempt from tithes (see: *Ma'aser),

"because they do not grow by being sown, or, because the earth extrudes them" (TJ, Ma'as. 1:1, 48d). The latter reason refers to their quick growth, which makes it seem as if the earth is expelling them. The extensive sprouting of mushrooms after rain is reflected in the *aggadah* about *Honi ha-Ma'agel who prayed for rain after drought. After rain had fallen in abundance and the heavens were free from clouds "the people went into the fields and brought home mushrooms and truffles" (Ta'an. 23a). Truffles are found chiefly in the light soils of the Judean wilderness and in the sands of the Negev. In contrast to mushrooms, they grow under the surface. In addition to *kemehim*, truffles are called *shemarka'im* (Uk. 3:2) in the Mishnah.

The most workable definition of Jewish music would seem to be the functional one proposed by Curt *Sachs: "Jewish music is that music which is made by Jews, for Jews, as Jews" (in his opening lecture, to the First International Congress of Jewish Music, in Paris 1957). This defines the scope of inquiry without prejudicing its results, leaving it free to undertake the tasks of description, analysis and whatever conclusions may be drawn.

As in all other national and ethnic cultures, the musical dimension of Jewish culture is both determined by its origins and modified by its history in proportions peculiarly its own. Through their dispersion, the Jews came into contact with a multiplicity of regional musical styles, practices, and ideas, some of which were more closely related to their own patrimony (as in the Near East and around the Mediterranean) and others intrinsically different (as in Europe north of the Alps and the Pyrénées).

These factors shaped the character of the mainstream of Jewish music. They have also determined the nature and location of the sources, which the musicologist must explore in order to obtain his facts. The problem can be most easily understood by a comparison with the source situation of European historical musicology. There the sources of information can be ranked as follows: compositions by individuals, created and preserved by musical notation; theoretical treatises; historical documents; instrumental relics; evidence from the visual arts (iconography); and complementary evidence from the fields of religion, the verbal arts, philosophy, political history; and other complementary evidence exploited at the discretion of each scholar. Among the latter, the most important source is the folk music of the area, which survives both in tone and word by a purely oral tradition, except for a few accidental notations made in the past by curious savants, and is in itself the subject of a parallel discipline – ethnomusicology.

The source situation of Jewish music is completely different. All the factors listed above are present, but in entirely different proportions – both absolutely and for each Diaspora area and period. A particularly complicated case is that of musical notation. On the one hand, no tone script, in the European sense of the term (one sound = one symbol) was evolved in Jewish musical culture. Even European Jewry adopted the tone script of the surrounding culture only in a few communities during certain periods and only for certain sections of its total musical activity. On the other hand, the masoretic accents serve as universal indicators of certain melodic motives for the cantillation of some of the biblical books (according to principles basically common to all Jewish communities), and their syntactical and grammatical function is supported by a written tradition of doctrine and discussion. Nevertheless the melodic content of this cantillation differs in each Diaspora area and is transmitted by a purely oral tradition (cf. *Masoretic Accents, Musical Rendition).

Although this oral tradition cannot convey information of its own past, some motives (of both the Ashkenazi and the Sephardi tradition) have been preserved in notation from the beginning of the 16th century onward. Thus even for this single category of Jewish music, the "art" and "folk" components, the historical and ahistorical, musical and extra-musical, and the local and universal are woven together so tightly that no single strand can serve as the base for any generalization.

As in all other parts of the mainstream tradition of music in Jewish culture, the notated document is not the point of departure, but a fortunate find which may occur on the way but

more often is absent. The same holds for autonomous treatises on the “art of music,” whether technical or philosophical. Literary sources of all kinds are the main storehouse of historical fact, and very often the only source, since it is here that Jewish life has always documented itself most fully, including its musical actions and thoughts. Yet another important source are the relics of actual musical instruments (especially for the biblical period) and the depictions of instruments and music making ranging from the dawn of history through *illuminated manuscripts to the photographs of *klezmer* ensembles in Eastern Europe before the Holocaust. The living oral traditions preserved and studied through sound recording, followed by sophisticated techniques of acoustical analysis and musical transcription, are equal in importance to the written, notated, and visual relic, and the application of the historical evidence can very often give them a great measure of historical dimension. Finally, there are the external sources. Judicious comparisons with the musical heritage of those cultures, with which the Jewish people came into contact, taking and – especially in the case of the formation of Christianity – also giving, can yield valuable insights. In addition, through still wider comparisons, even with historically unrelated cultures, Jewish music can be put into the overall perspective of the music of mankind.

The following survey of the sources is intended to give a general picture of the situation.

WRITTEN SOURCES OF DIRECT AND CIRCUMSTANTIAL EVIDENCE

Most of these do not appear as independent literary units but as parts of larger works. Potentially, the field includes the entire written heritage of Jewish culture. Some source categories have proved to be particularly fruitful in information, such as rabbinic Responsa, community registers and regulations, the literature of philosophy and the sciences, the early Midrash, travelers’ accounts and various kinds of traditional exegesis. In many cases, textual criticism must be applied before the source can be utilized. Manuscripts of medieval and later poetry very often contain indications that the poem is to be sung “to the tune of ...” (*be-laḥan, be-no’am, be-niggun*); even if the tunes themselves cannot be recovered, the existence of the repertoire itself is thus documented. When the tunes are taken from a gentile environment, which uses notation – as in the German-speaking areas – even the tunes themselves can often be recovered from contemporary manuscripts or printed music. A further stage is reached by the libretti of the cantata-like works, which were written mainly in Italy from the 16th century onward. The music for some of these has also survived or still waits to be recovered from the archives; but even if only the texts remain, they often contain indications such as *aria, solo, and duetto*. Finally, there are also a certain number of theoretical and practical treatises on music, as independent works or more often as chapters in larger treatises. Except for the “cantors’ books” (such as Solomon Lipschitz’ *Te’udat Shelomo*, Offenbach, 1718), the material naturally reflects the theories and practices of the surrounding

culture, in the Islamic regions of Spain and the Near East or in Italy and France. Direct biographical and social evidence can be gleaned from inscriptions (including tombstones), community registers, the **Memorbuch* sources, and other archival material. A special contribution is made by extra-Jewish sources. Both non-Jewish writers and apostates from Judaism often give very detailed descriptions of musical practices in Jewish society, in works written for enlightenment or polemic, and echoes of the musical life of a Jewish community are also bound to appear in official documents of the local and state authorities. They range from a tax collector’s list from Ptolemaic Egypt, mentioning “Jacob the son of Jacob, an aulos-player,” to the petitions of gentile musicians to the municipality of Prague against their Jewish competitors in the 17th century.

THE MATERIAL RELICS AND ICONOGRAPHY

For the biblical and Second Temple periods, the written sources are complemented by literally hundreds of archaeological finds from Palestine itself. The soil conditions of Palestine are generally not favorable to the survival of instruments made of organic material, such as drums or string instruments. The archaeological finds, including metal cymbals, bells, pottery rattles, bone and ivory clappers, however, are effectively supplemented by figurines, frescoes, mosaics, pottery decorations, graffiti, images on coins, etc. External sources, such as the Phoenician ivories and bowls which reached the neighboring countries by way of commerce or booty, the decorations of synagogues in the early Diaspora (particularly important for the history of the form of the *shofar*), or the trumpets depicted in relief on the Arch of *Titus, further add to the evidence. It is, therefore, no longer necessary to “illustrate” the story of music in ancient Israel by archaeological finds from the Egyptian or Mesopotamian cultures. Such material may still be used for purposes of comparison, but only if corroborated by a local find.

The correlation of these material relics with the textual ones, above all the Bible, is a task as difficult as it is important. In later periods, the wide choice of instruments in other cultures is limited, for Jewish society, to the *shofar* and simple noisemakers, such as decorative bells on the *rimmonim* of the synagogal scrolls or the various forms of rattling and banging devices for *Purim. The iconographical evidence, however, is to be found in many sources: illuminated manuscripts and marriage contracts, printed books (especially those written by gentiles on “Jewish customs”), synagogue decorations, embellished ritual objects, and, in later periods, even portraits.

NOTATED SOURCES

As indicated above, one cannot expect the notated sources of Jewish music to be plentiful. For the entire period before the 19th century, these notations come only from the settlements of the Ashkenazi, Italian and European Sephardi communities (except for the earliest specimen so far discovered, the 12th-century notations of *Obadiah the Norman Proselyte,

which was found in the Cairo **Genizah*). These documents are most conveniently divided into two categories: notations reflecting oral tradition, liturgical, religious, and secular; and manuscript or printed compositions in the style of contemporary art music.

Several German humanists of the 16th century included specimens of masoretic cantillation in their works on the Hebrew language, *masorah*, etc. The best known of these is the notation in Johannes **Reuchlin's De accentibus et orthographia linguae hebraicae* (Hagenau, 1518). Some 15 other gentile writers up to the end of the 18th century feature such notations of masoretic cantillation in works on Judaist subjects and later on also in chapters on the "Music of the Hebrews" in histories of music. As a rule, they copied and recopied the specimens from their predecessors, so that the total stock of notated documentation rises very slowly. The most prominent additions are those by Athanasius Kircher (*Musurgia Universalis*, Rome, 1650), who features the German-Italian cantillation which he heard in a Roman synagogue; by Daniel Jablonski, in his edition of the Hebrew Bible (Berlin, 1699), where a specimen of notated cantillation of the Pentateuch according to the tradition of the Amsterdam Sephardi community was supplied by David de Pinna (cf. **Masoretic Accents, Musical Rendition*); and the 12 specimens of Ashkenazi and Sephardi cantillation, psalm intonation, and hymn tunes collected by the composer Benedetto Marcello in Venice in order to base his collection of Psalm compositions, *Estro poetico-armonico* (1724–27, and subsequent editions), on "authentic Jewish tunes." They are featured in his own notation at the head of the respective settings. The musical scholar Giovanni Battista Martini gathered all the notations of his predecessors in the first volume of his *Storia della Musica* (Bologna, 1757–81, repr. facsim. 1967), whence they were taken over (with one omission) by Johann Nikolaus Forkel in his *Allgemeine Geschichte der Musik* (Leipzig, 1788–1801, repr. facsim., 1967).

A few notations of other kinds of traditional music are found from the beginning of the 17th century onward, such as the "learning tune" of the Talmud, some of the songs of the Passover **seder*, the **Priestly Blessing*, and the 13 religious folk song tunes printed by Elhanan Kirchan (Kirchhain) in his *Simhat ha-Nefesh*, part 2 (Fuerth, 1726/27). The earliest cantorial manual found to date is that of Judah Elias of Hanover, dated 1740, and it is followed by many others, especially toward the end of the 18th century (cf. Aaron **Beer*; Isaac **Offenbach*). Whether the "Jew parodies" found in the works of several Renaissance and baroque composers actually reproduce what was heard in a synagogue or played by a Jewish musician still remains to be ascertained in each case.

Art music composed in the Western European style is documented by a certain number of scores and parts of scores from Italy, southern France and the "Portuguese" community of Amsterdam. The earliest work of this kind is Salomon de **Rossi's Ha-Shirim Asher li-Shelomo* (Venice, 1622/23); for a more extended description of these sources see **Cantatas*, Hebrew.

ORAL TRADITION

The chief treasure house of Jewish music is the living oral tradition – the many thousands of melodies and variants still current in the synagogues, schools, and homes in all Jewish communities, which adhere, or at least have kept in some measure, to the ways of the past. Their systematic collection, now being made by sound recording, is an awesome and theoretically endless task. A fairly representative selection of several regional traditions was collected by A.Z. **Idelsohn* in Jerusalem at the beginning of the 20th century and published in his *Thesaurus of Hebrew-Oriental Melodies* (10 vols. 1914–32): Yemen, Iraq, Persia (with some material from Bukhara and Dagestan), the "Jerusalem Sephardic" tradition, Morocco and Eastern Europe. Earlier and contemporary collections of synagogal music (see bibliography), mainly of the Ashkenazi and European Sephardi areas, also contain varying amounts of truly traditional melodies, even if these are sometimes distorted by inadequate notation or attempts at "modernization." Much essential material still remains to be recorded.

[Bathja Bayer]

ARCHIVES AND IMPORTANT COLLECTIONS OF JEWISH MUSIC COLLECTIONS

Since most of the traditional Jewish music was transmitted orally from generation to generation, there was a need to create a sound archive to document the music and promote its study. This need was fulfilled by the establishment of the National Sound Archives in Jerusalem (NSA) in 1965 as a section of the Music Department of the Jewish National and University Library (JNUL). The musicologist Israel **Adler* founded the archive incorporating the field recordings of Jewish music (and recordings of other people living in the area) that were made since the 1920s. The NSA also holds a large collection of commercial recordings of Jewish and Israeli music as well as music and other sound documents produced by Kol Israel (Israel Broadcast Authority).

The first great scholars who recorded Jewish music were Abraham Zvi **Idelsohn* and Robert **Lachmann*. *Idelsohn's* recordings are at the Austrian Phonogramm Archive in Vienna; those of *Lachmann* are mainly at the Berlin Phonogramm-Archiv but some copies as well as unique records are at the NSA.

Important collections at the NSA are known by the names of their creators such as: The Robert *Lachmann* collection (300 wax cylinders, which are copies of the originals of Berlin), 960 unique ethnographic records, most of which are made of tin, and 167 early commercial records of Oriental music. Robert *Lachmann* (1892–1939) recorded in North Africa and in Palestine. His interest was Oriental music. His recordings were made during the 1930s. His lectures and the musical demonstrations survived and are preserved at the NSA and at the Music Department (Mus. 26). Other collections are that of Johanna **Spector*, who recorded in the late 1940s and early 1950s, including about 60 hours of music performed by Jewish immigrants just arriving in the new State of Israel from Yemen, Tunisia, Morocco, Pakistan, and Iraq as well as the

Samaritans of Israel; the collection of Leo *Levi made during the late 1950s and the 1960s, including about 70 hours of Jewish musical traditions of the Italian Jews, Greek Jews, and Jews from Holland, Ethiopia (in Israel), Georgia, Czechoslovakia, and other locations; and the collection of Edith *Gerson-Kiwi, who was a student of Lachmann, including 700 records and 240 reel-to-reel tapes of new immigrant Oriental traditions made between the 1950s and 1970s.

A historical collection of commercial records and broadcasting material is included in the Jacob Michael Collection, collected in New York during the 1950s and 1960s. The Jacob Michael collection contains 3,000 records and 480 tapes, mostly of Yiddish radio material.

Since 1965 the NSA has continuously expanded its collections by promoting new recordings both through fieldwork and recordings at the NSA studio. Most of the Jewish liturgical recordings are made in the studio or other locations, but not during actual prayer services, since it is forbidden to use any electrical equipment on the Sabbath and holidays. The NSA also benefits from donations from scholars who deposit their recordings at the NSA; to mention just a few of them: Amnon *Shiloah, Shoshana Weich-Shahak, Mark Kligman, Yaakov Mazor, Simha *Arom.

Since 2000, the Depository Law for books and prints in Israel has been expanded to include all non-book material. Thus a copy of all CDs and videotapes produced in Israel must be deposited at the NSA. Also, recordings made by Kol Israel during the 1950s and the 1970s were deposited at the NSA. These include mainly Israeli songs, Israeli art music, and some traditional music. The NSA catalogue is available online on the JNUL website. It is open to the public (at the JNUL) and serves mainly scholars and educators. The NSA continues to collect, preserve and publish its collections.

Other collections in Israel are at The Institute for Religious Jewish Music – *Renanot*, which has its own archive as well as copies at the NSA. It contains recordings of experts in Jewish musical performance, especially *hazzanim* of different traditions and their liturgical repertoire. The Beit Hatefutsot Music Center has a good collection of commercial recordings, which are available on site. All the departments of music and musicology in Israel have collections of recorded sound; however, their focus is not on Jewish music.

In America, universities, libraries, museums and Jewish institutions also have collections of recorded sound. Some of the important collections of Jewish music are: The Robert and Molly Freedman Jewish Music Archive, which was donated to the University of Pennsylvania's Rare Book and Manuscript Library. The Freedman Jewish Music Archive comprises over 1,800 recordings, primarily in Yiddish and Hebrew. The Harvard University Judaic Library has a large collection of Israeli popular music. The YIVO Institute in New York holds a good collection of commercial and broadcasting material of Yiddish music. The Library of Congress Folklife Center and the Sound Archives also have Jewish recordings, both field recordings and commercial records.

Some institutions and private music lovers and collectors provide Jewish music databases and music online for research and teaching, for example Hazzanut Online and Virtual Cantor.

HISTORY

BIBLICAL PERIOD

The Bible is the foremost and richest source for knowledge of the musical life of ancient Israel until some time after the return from the Babylonian Exile. It is complemented by several external sources: archaeological relics of musical instruments and depictions of musical scenes; comparative material from the neighboring cultures; and post-biblical sources, such as the writings of *Philo and *Josephus, the *Apocrypha, and the *Mishnah. A truly chronological ordering of the biblical evidence on music is hardly possible, since it frequently happens that a relatively late source attributes certain occurrences to an early period, in which they could not have existed. A case in point is the chronicler's reports about the ordering of the Temple music by King David. Many details – above all the prominent status of the Levitical singers, which almost overshadows that of the priests – are probably a projection back from the chronicler's own time. Some of the reports may even be nothing more than an attempt to furnish the Levitical singers with a Davidic authorization in order to strengthen their position. It is therefore more prudent to draw a synthetic picture in which most of the facts can be assumed to have existed for at least a considerable part of the time.

The mythical dimension of music is represented in biblical tradition only by the story of Jubal, who was “the ancestor of all who play the *kinnor* and *uggav*” (Gen. 4:21; for names of instruments see below). Another relic of the same kind may well be found in the allusion, in God's speech to Job, to the day on which the creation was finished, whereupon, “the morning stars sang together and the Sons of the God[s?] Raised a shout of acclamation” (Job 38:7). Most of the evidence concerns the place of music in the cult. Music is conspicuously absent in the stories of the Tabernacle in the desert wanderings. The bells (perhaps only rattling platelets, see below) on the tunic of the high priest had no musical function but an apotropaic one. The trumpets served mainly to direct the movements of the camping multitude, and their function for arousing God's “remembrance” is common to their use in the sacrifice and in war (Num 10:1–10). In the transport of the Ark to Jerusalem by David, which is accompanied by the playing of lyres, drums, rattles, and cymbals (11 Sam. 6:5; 1 Chron. 13:8), the context is that of a popular fête, not an established cult ritual. Even the description of the inauguration of Solomon's Temple in the first chapters of 1 Kings lacks an explicit reference to music. Only the trumpets are mentioned in the reconstitution of the Temple services in the time of Joash (11 Kings 12:14).

In Chronicles, the musical element suddenly appears as the most prominent part of the service, with detailed and repeated “duty rosters” (and genealogies) of the levitic singers

and instrumentalists, as planned by David and established by Solomon. Since the lists of the returned exiles from Babylon, in Ezra and Nehemiah, include a certain number of families of Temple singers, it can be assumed that, at least toward the end of the First Temple, there was already some kind of organized cult music in Jerusalem. On the other hand, there are grounds to believe that the role of music in the First Temple was minimal. In the sanctuaries outside Jerusalem, it was probably much more prominent: witness the “prophets’ orchestra” at the high place of Gibeah (1 Sam. 10:5) and Amos’ fulminations against the external pomp in one of the cult centers of the northern tribes, perhaps in Shechem, “take away from me the roaring of thy songs and the playing of thy lyres will I not hear” (Amos 5:23).

After the return from Babylon, music as a sacred art and an artistic sacred act was gradually given its place in the organization of the Temple services. It seems that this did not pass without opposition. Some scholars have even tried to adduce a power struggle between the levites and the priests. Although the evidence does not mention music as a subject for quarrel, the striving of the levitic singers for prestige is implicit in the chronicler’s descriptions, and may even be the reason for the insertion of the poem, or set of poems “By the waters of Babylon,” in the collection of Psalms (Ps. 137). The weepers by the waters of Exile were not an abstract personification; they were the levitic singers, whom their captors would have join the other exotic court orchestras that the Assyrian and Babylonian kings kept for entertainment and took care to replenish by their expeditions of conquest. The court and temple orchestras of Mesopotamia in this period are the prototype for the Temple music established in Jerusalem after the return: a large body of stringed instruments of one or two types only (in Jerusalem *kinnor* and *nevel*); a small number, or a single pair, of cymbals; and a large choir. The trumpets of the priests constituted a separate body in every respect, with a ritual but not really musical function. In the earlier stages of religious organization, centered on inspirational ecstatic prophecy, the role of music was understandably important (cf. 1 Sam. 10:5 and the story of Elisha’s musically-induced prophetic seizure in 11 Kings 3:15). David’s playing and singing before Saul belongs to a related psychological aspect.

At coronations, the trumpets were blown as part of the formal proclamation (11 Kings 11:14), and the spontaneous and organized rejoicings after victory in war were accompanied by women who sang, drummed and danced; (a practice still current among the Bedouin), cf. The Song of the *Sea, and the women’s welcome of David and Saul in 1 Sam. 18:6–7. Music at popular feasts is described in Judges 21:19ff. Finally, the musical accompaniment at the feasts of the rich and, of course, at the king’s court is also described several times, often with a note of reproach (11 Sam. 19:36; Isa. 5:12; Amos 6:5; Eccles. 2:8). The musical expression of mourning is implicit in the verses of David’s lament for Saul and Jonathan and explicit in the mention of the male and female mourners who repeated specially composed dirges (11 Chron. 35:25). True folk music is

mentioned only rarely, such as the songs and rhythmic shouts of the workers in the vineyards (probably the grape treaders) alluded to by the prophets.

The number of identifiable terms for musical instruments in the Bible comes to about 19. Some other terms, notably those appearing in the headings of the Psalms, have also been taken to represent instruments but probably mean some kind of indication of the melody. For many of the terms, a precise archaeological equivalent can already be proposed. Others still await the yield of future excavations. In the following section, the instruments will be listed and described briefly.

(1) *Asor* (עָשׂוּר), see below, under *nevel*.

(2) *Halil* (חָלִיל), double-pipe wind instrument, with the mouthpieces probably of the single-reed (“clarinet”) type and probably made up of one melody pipe and one drone pipe. A folk and popular instrument, it was used for rejoicing and also in mourning ceremonies.

(3) *Hazozerah* (חֲצוּצָרָה), trumpet, made of precious metal, generally silvers. Blown by the priests, it was used in the sacrificial ceremony, in war, and in royal coronations.

(4) *Kaitros/Katros*, see below, under “Daniel instruments.”

(5) *Keren* (קֶרֶן), Aram. *karna* (קַרְנָא), see below, under *shofar*.

(6) *Kinnor* (כִּנּוֹר). A stringed instrument of the lyre family, constituted by a body, two arms, and a yoke. The Canaanite type of the instrument, which was certainly the same as used by the Israelites, is asymmetric, with one arm shorter than the other, and its body is box shaped. The instrument was probably of an average height of 20–23 in. (50–60 cm.) and sounded in the alto range, as evinced by surviving specimens from Egypt (which took over the form and even kept the name of the instrument from the neighboring Semites). The *kinnor* is the noble string instrument of Semitic civilization, and became the chief instrument of the orchestra of the Second Temple. It was played by David and was therefore held in particular honor by the Levites. According to Josephus, it had ten strings and was sounded with a plectrum (Ant., 7:306), and according to the Mishnah, its strings were made of the small intestines of sheep (Kin. 3:6).

(7) *Mashrokita* (מִשְׂרוֹקִיתָא), cf. below, under “Daniel instruments.”

(8) *Mena’ane’im* (מְנַעְנְעִים), mentioned only in 11 Samuel 6:5 among the instruments played during David’s transport of the Ark to Jerusalem. The parallel narrative in 1 Chronicles 13:8 substitutes *meziltayim* (cymbals). The numerous finds of pottery rattles make it highly probable, by etymological analogy (נַעֲנַע “shaking”), that the term can be applied to them. After about the seventh century B.C.E., these rattles disappeared and were replaced by the newly-invented metal bell (see below, under *pa’amon*).

(9) *Meziltayim*, *Zilzalim*, *Mezillot* (מְצִילֹת, מְצִלְתַּיִם, מְצִלְתִּים), the first two forms probably standing for cymbals. The cymbals found in excavations were made of bronze, in the form of plates with a central hollow boss and with a metal

thumb-loop. The average diameter of the finds is about 4.5 in. (12 cm.). They were played by the Levites in the Temple. The *mezillot* of the horses, mentioned in Zechariah 14:20, are probably the same metal ball-jingles as those depicted on Assyrian reliefs.

(10) *Minnim* (מִנִּים), an unclear term (Ps. 150:5 and perhaps also Ps. 45:9), presumably a stringed instrument, and perhaps the lute, which was never an integral part of the Canaanite and Israelite instrumentarium.

(11) *Nevel* (נֶבֶל), a type of lyre, perhaps originating in Asia Minor, constructed differently from the *kinnor*-lyre – larger, and therefore of deeper tone. The coins of Bar Kokhba show it in a schematized form. According to Josephus, it had 12 strings and was played by plucking with the fingers (Ant., 7:306). Extra-biblical sources, which describe it under the name of *nabla* mention its “breathy” or “rumbling” tone. It was the second main instrument in the Temple orchestra. According to the Mishnah (Kin. 3:6), its strings were made of the large intestines of sheep. The *nevel asor* (נֶבֶל עֲשׂוּר), or, in its brief form, *asor* (Ps. 33:2; 92:4; 144:9), was perhaps a slightly smaller *nevel* with ten strings only.

(12) *Pa'amon* (פְּאֵמוֹן), mentioned only in Exodus 28:33–34 and 39:25–26 (and later by Josephus), as attached to the tunic of the High Priest alternating with the ornament called *rimmon* (pomegranate) and made of gold. The usual meaning of the term is a bell. Bells came into use in the Near East only in the seventh century B.C.E., so that the noise-making attachments to the high priest's garment in the desert Tabernacle could not have been bells proper. If the description in Exodus is not a pure projection back from the period of the First or Second Temple, the original *pa'amonim* must have been metal platelets. Later on, real bells substituted these. Most bells found in Palestine are small, made of bronze and have an iron clapper.

(13–14) *Pesanterin* פְּסַנְתְּרִין and *sabbekha* (סַבְּכָא/שַׁבְּכָא), see below, under “Daniel instruments.”

(15) *Shalishim* (שְׁלִישִׁים), mentioned only in 1 Samuel 18:6–7, as played by women. By analogy with Ugaritic *tlt*-metal (and not *tlt* and *shlsh* as meaning “three”), these may be cymbals or struck metal bowls.

(16) *Shofar* (שׁוֹפָר), the horn of the ram or a wild ovine, and the only instrument to have survived in Jewish usage, probably identical with the *keren* (קֶרֶן) and *keren ha-yovel* (קֶרֶן הַיּוֹבֵל). In the Bible, its function is that of a signaling instrument especially in war; its famous appearance at the siege of Jericho must be understood in this sense and not as a magical noisemaker. The *shofar*-like sound at the receiving of the Ten Commandments is also a transfer from the same domain. Only after the *shofar* was taken into the service in the Second Temple did it regain its primitive magical connotation.

(17) *Sumponyah* (סוּמוֹפוֹנְיָה), cf. below, under “Daniel instruments.”

(18) *Tof* (תּוֹף), a shallow round frame drum, frequently played by women (cf. *Miriam), and associated with the dance.

(19) *Uggav* (עֻגָּב), still unclear, but very probably not the wind instrument which medieval exegesis would have it to be. Perhaps the harp, which, like the lute (*minnim*?) was never an integral part of the Canaanite and Israelite instrumentarium.

(20) “Daniel Instruments.” Daniel 3:5 describes, in Aramaic, an orchestra at the court of the Babylonian king, which includes the *karna*, *mashrokita*, *kaitros*, *sabbekha*, *pesanterin sumponyah*, “and all kinds of instruments.” *Karna* is the horn, and *kaitros*, *sabbekha*, and *pesanterin* are but Aramaized versions of the Greek *kithara*, *sambyke*, and *psalterion*. *Mashrokita* is a whistling or piping instrument; *sumponyah* parallels the Greek *symphoneia*, which, in itself, means only “the sounding together.” It is highly probable that the term does not stand for an instrument at all, but means the concerted sound of those mentioned before. The closing of the sentence, “and all kinds of instruments,” would thus be nothing but an explanatory gloss.

The forms of music can only be surmised from the forms of those parts of biblical poetry, which are clearly meant to be sung. The most important of these are the Psalms, or at least a great part of the 150 poems gathered into the canon of the Psalter. Many of these, open with an “invitation to music” (“Let us go and sing,” “Sing to the Lord a new song”). Before the body of the Psalm itself, a shorter or longer heading formula often appears, in which at least some of the elements have a presumably musical meaning. *Mizmor* and *shir*, also combined as *mizmor-shir* and *shir-mizmor*, are clearly of this kind, but their musical difference has so far remained obscure. The term *lamenazze'ah* has often been thought to mean “to the choirmaster.” Most tantalizing of all are the phrases prefixed by *al* (“upon”?) such as “*al-ayyelet ha-shahar*” (Ps. 22, literally “upon the hind [?] of the dawn”), or “*al ha-sheminit*” (Ps. 6, literally “upon the eighth”), and others which are untranslatable even literally. The most reasonable hypothesis is that these designate certain melodic types. Whether the term *selah* which appears at the end of certain verses in many psalms (and often creates a tripartite division of the psalm) has a musical meaning still remains to be proved.

The sounds themselves are lost. Although comparative studies of living Jewish and other Near Eastern traditions may be able to point to certain melodic and formal elements as “very old,” their attribution to the biblical or early post-biblical period can never be confirmed by objective proof.

SECOND TEMPLE PERIOD

Only the last part of this period is documented by contemporary literature (chiefly Philo, Josephus, and in the writings of the sectarians of Qumran). Much of the mishnaic narrative concerning music in the Temple service is based on eyewitness memories. The information is often very precise, such as the description of the daily morning sacrifice in Mishnah *Tamid* and the numbers of instruments in the Temple orchestra in Mishnah *Arakhin*. The figure of the Temple musician himself appears much more clearly. Thus there is Hognas ben

Levi, who was prefect of the singers and would not teach his own technique of virtuoso voice production to others (Shek. 5:1; Yoma 3:11). Of the instruments mentioned in the Bible, only the Temple instruments proper appear again: *kinnor*, *nevel*, *tziltzal* and *metziltayim*, *ḥazozerah*, and the newly accepted *shofar*. The *ḥalil* is also mentioned as a popular instrument, which was played in the Temple only on 12 days of the year (Ar. 2:3). The term *abbuv* (pipe) is used for the separate pipes of the *ḥalil*.

Other terms proposed as musical instruments by later commentators, from the *Gemara* onward, are very probably not instruments at all, such as *niktimon*, *batnun*, *markof*, *iros*. Neither is the *magrefah*, a rake, which was noisily thrown on the floor after the cleaning of the altar to signal to the singers in their chambers to proceed to their stations, which talmudic exegesis later turned into the equivalent of the Byzantine organ.

A separate body of musical practice and doctrine was evolved by the dissident sectarians of the period. The choral singing of the *Therapeutae in Egypt is described by Philo and Josephus and seems to be the musical base of some of the hymns found in the Dead Sea Scrolls. The sectarians seem to have eschewed the use of musical instruments, holding “the fruit of the mouth,” i.e., singing, as the more pure expression of devotion. Some passages in their writings and in Ben Sira may indicate the existence of ideas, which approach very closely to the sphere of musical, or rather musical-poetical theory. The catastrophe in 70 C.E. put an end to the Temple-centered music of the Jewish people and opened a new period, in which the *synagogue became the focal point of creativity in word and tone.

[Bathja Bayer]

THE EMERGENCE OF SYNAGOGUE SONG

Late Hellenistic civilization made music an all-penetrating cultural activity. The Eastern scene was dotted with theaters, arenas, and circuses where singers and virtuosos flocked together at musical contests (organized even by Herod; Jos., Ant., 15:269ff.; 16:137). Amateur philosophers at social gatherings of every kind discussed music. Jingling, banging, and rattling accompanied heathen cults, and the frenzied shawms of a dozen ecstatic rites intoxicated the masses. Amid this euphoric farewell feast of a dying civilization, the voices of non-conformists were emerging from places of Jewish and early Christian worship; *Philo of Alexandria had already emphasized the ethical qualities of music, spurning the “effeminate” art of his gentile surroundings. In the same spirit, early synagogue song intentionally foregoes artistic perfection, renounces the playing of instruments, and attaches itself entirely to “the word” – the text of the Bible.

The new style of Jewish music made its appearance at a specific and fateful moment. When the destruction of the Temple in 70 C.E. demanded a complete rearrangement in the religious, liturgical, and spiritual fields, music became involved in several ways. The abolition of Temple worship also

put an end to the refined instrumental art of the levites. The use of instruments in the synagogue service was prohibited (and remained so, with certain exceptions), leaving music a strictly vocal art. Needless to say, this limitation left its imprint on musical style and form. Moreover, the musical skill of the Levitic singers and their tradition, accumulated over generations, were not utilized in synagogue song, and their professional teaching and rules had not survived in writing. Synagogue song was thus a new beginning in every respect – especially with regard to its spiritual basis.

In the new era, prayer was to take the place of sacrifice in providing atonement and grace (RH 17b). Levitical music had been an integral part of the order of sacrifices (Er. 13:2; Ar. 11a; TJ, Pes. 4:1, 30c). Its nature probably was to be as pure and flawless as the offering itself, for it was directed at the heavens and not at a human audience. It must have striven for objective and transcendental beauty and have been “art music.” The task of synagogue song was a different one. The individual and the congregation both appeal to God by means of the spoken word. Prayer, regarded as “service of the heart” (*avodah she-ba-lev*), had to express a broad scale of human feelings: joy, thanksgiving, and praise, but also supplication, consciousness of guilt, and contrition. All these emotions urge subjective expression in song and human warmth, rather than abstract beauty. The strong human element in synagogue music made itself acutely felt as soon as the professional solo singer began to appear. Before this, however, any member of a congregation could be called up to lead in prayer as a “delegate of the community” (*sheli'ah zibbur*). The gift of a fine voice obliged a member of the community to accept the function of lay precentor (PR 25; PDRK 97a).

Among the different singing styles in which the early nonprofessional *shelihei zibbur* may have performed, are elementary ones that can be ascribed with certainty to the early synagogue. They are suited to a gathering of people assembled for singing prayer and praise and for the majority of whom artistically contrived song and complicated tunes were normally out of range. Such congregations had to be cemented together by a kind of music that was easily grasped and performed. The musical forms of psalmody, chanted Bible reading, and prayer tunes bases on a simple melodic pattern fulfill these conditions. These are the archetypes of synagogue song and have been preserved by the whole range of Jewish communities over the ages.

THE ROOTS OF SYNAGOGUE SONG IN THE NEAR EASTERN COMMUNITIES (C. 70–950 C.E.)

The Formation of the Basic Pattern (c. 70–500 C.E.)

A strong similarity of style can be detected in the recitation of the Psalms or chapters from other biblical books by different Jewish communities. Exactly the same recitation style is to be found in the most ancient traditions of the Catholic, Orthodox, and Syrian churches. Since there was a close contact between the faiths only at an early period, the musical structure or styles of singing must have been accepted by Christianity

together with the Holy Scriptures themselves. Many of its different forms, which are still employed by Jewish communities in many different parts of the world, were also described in ancient literature. The findings point to a common source of Bible song in the early synagogue.

PSALMODY. The singing of Psalms occupies an important place in Jewish and in Christian worship. Both creeds share a musical pattern, traditionally and also in musicological parlance known as psalmody (Greek-Christian *psalmodia*). Its outlines and internal organization follow closely those of the poetic form. Each psalm may consist of a smaller or greater number of verses, without being organized in symmetrical stanzas. Accordingly, the melody of one verse may become a musical unit, which is repeated, as many times as there are verses in the psalm. Most of the verses are subdivided into two equal parts (hemistichs) by a caesura; similarly, the psalmodic melody is given a bipartite structure. The biblical verse is formed and characterized solely by the number of its stressed syllables, disregarding completely how many weak syllables there are between the stresses. The verse of a psalm may consequently vary widely in length, since the overall number of syllables is not constant. The tune has to be adaptable to these floating conditions; a "recitation note," which may be repeated according to the particular situation, provides for the required elasticity.

In practice, the singer of a psalm verse reaches the "recitation note" through a short initial motion of the voice, dwells on the former for the main part of the text, and concludes the first hemistich with a medial cadence. The second hemistich is performed in the same manner, but concludes with a final cadence. Thus the basic psalmodic formula consists of:

Initial motion/recitation note/medial cadence//
initial motion/recitation note/final cadence (see Mus. ex. 1).

The simple melodic material of this basic formula can be grasped and reproduced by an average audience after listening to a verse or two. In this respect, psalmody is a truly collective genre of music. Its aesthetic and psychological effect is governed by the recurrent repetition of the same melodic phrase – an element of stability coupled and contrasting with the constantly changing text. The tune, after a few repetitions, loses all its interest: the attention automatically turns to the words, which continually offer something new. The accompanying vocal inflections merge and form an acoustical background which infiltrates the subconscious and creates a distinct mood, which eventually becomes associated with a certain feast or time of prayer or with grief and other emotions. The unchanging repetition of the formula throughout a psalm, which is the rule in Gregorian chant, is, in fact, seldom practiced in Jewish song. Apparently, even an unsophisticated congregation wanted to avoid dullness and to enliven the sound of the Davidic hymns (Song R. 4:4).

One line of development in psalmody led to the distribution of the performance between groups of singers. Responsorial psalmody was described as early as the Mishnah (Suk. 3:11; Sot. 5:4) and both Talmuds (Sot. 30b; Suk. 38b; TJ, Suk. 3:12, 53d). Precentor and congregation alternated in singing full verses or hemistichs; the precentor may intone the beginning and the choir takes over; or the choir may sing the concluding words. Moreover, a verse or part thereof may serve as refrain, "like an adult reading the *Hallel*, and they respond to him with the initial verse [as, e.g., in the Song of the Sea]: Moses said, 'I will sing unto the Lord,' and they say, 'I will sing unto the Lord'; Moses said, 'for he hath triumphed gloriously,' and they say, 'I will sing unto the Lord'..." This *baraita*, transmitted in the name of R. Akiva (d. 136 C.E.) and some of his contemporaries, treats the various forms of responsorial psalmody as

| | 1st Half-Clause | | | 2nd Half-Clause | | |

| | 6. We-hu kehatan yoze me-hu-pato, | | | ya-sis Kegibbor la-ruz o-rah. | | |

Example 1. The basic formula of psalmody. Verses of Psalm 19, as chanted in various communities. After Idelsohn, *Melodien*, vol. 4, no. 25 (Oriental Sephardi); *ibid.*, vol. 3, no. 51 (Persia); *ibid.*, vol. 3, no. 171 (Morocco); I. Lachmann, *Awaudas Yisroel*, vol. 1, 1897, no. 154 (Western Ashkenazi).

old and well established. It demonstrates the transformation of the first hemistich into an actual refrain. The exclamation "Hallelujah" may be given this role when it is inserted at discretion between verses. This practice was described by Rava (c. 300 C.E.; Suk. 38b), and is found in the Christian tradition as *Psalmus alleluatus*, and is still perpetuated by the Yemenite Jews (see mus. ex. 2a)

Additions alien to the biblical text are very rare in Jewish tradition (mus. ex. 2b) but have become the rule in the antiphonal psalmody of the churches. The Greek term *antiphonos* originally meant alternate singing in different pitches (e.g., by men and women or men and boys); Philo heard this performed by the sect of Therapeutae. However, worship in the synagogue, which was a congregation exclusively of men and lacked a separate clergy, was unfavorable to the formation of permanent choirs, and the embellishment of a psalm was contrary to the obligation of faithfulness to the holy text. There was no limitation, however, on the strictly musical development of psalmody, with the basic formula serving as a mere skeleton for more complex forms. The musical evolution is achieved mainly by means of variation – just as the poetic language of the Psalms draws largely upon variation within the framework of *Parallelismus membrorum*. Once again, musical composition enhances the poetry.

Jewish psalmody prefers to have hemistichs recited on different tone levels, which is very exceptional in Plain song.

Moreover, the recitation note need not remain rigid but may hover around its axis, raising stressed syllables here, marking a subdivision there, or simply adorning the tune. The initial phrases may be redoubled as well as omitted. Finally, several psalmodic formulas may be joined within the same psalm. The device of variation is capable of producing true artistic effects by a gradual escalation of its resources as, for instance, in Psalm 29 for Sabbath eve as sung in Iran (Idelsohn, *Melodien*, III (1922), no. 3): here the melody gradually gains momentum and increasingly dense texture in accord with the intensification of the poetic images. Psalmodic music may change its features to a certain extent according to its multiple uses as well as the contents of the text, nevertheless, it must be content to strengthen, but never outdo, the effect of the words. The ancient pattern of psalmody is still extensively used in Jewish communities all over the world. It is worth noting that the detailed accents later added to the psalm text by the Masoretes were disregarded: the traditional manner of intoning psalms was already too deeply rooted (see also *Psalms, Musical Rendition).

BIBLE READING BY CHANT. Chapters from the Pentateuch and the Prophets are regularly read in the synagogue service, the other books of the Bible being reserved for certain feasts. It is characteristic of the synagogue that the Bible is never read like speech or declamation; it is always chanted to mu-

Example 2. Responsorial psalmody. (a) Hallel Psalm 113, as chanted in Yemen, with a Hallelujah response by the congregation after each verse, similar to the Gregorian *Psalmus alleluatus*. After Idelsohn, *Melodien*, vol. 1 no. 32; (b) Hallel Psalm 136, as chanted in Iraq, with the unwritten response, *Hodu Lo ki tov* (Praise Him for [He] is good), by the congregation after each verse. After Idelsohn, *Melodien*, vol. 2, no. 23.

Example 2. Responsorial psalmody. (a) Hallel Psalm 113, as chanted in Yemen, with a Hallelujah response by the congregation after each verse, similar to the Gregorian *Psalmus alleluatus*. After Idelsohn, *Melodien*, vol. 1 no. 32; (b) Hallel Psalm 136, as chanted in Iraq, with the unwritten response, *Hodu Lo ki tov* (Praise Him for [He] is good), by the congregation after each verse. After Idelsohn, *Melodien*, vol. 2, no. 23.

sical pitches and punctuated by melodic cadences attached to clauses and periods. The reading of the Bible at home or at school is performed in the same way (see also *Masoretic Accents, Musical Rendition). This custom is strange to European habits. The ancient Greeks already knew well how to distinguish between the rising and falling of the voice in rhetorical speech or stage declamation on the one hand, and true musical intervals, on the other. When the Church took over biblical chanting from the synagogue, its Roman branch retained the chant in a simple form and did not develop it any further. Eastern Christianity, however, embarked on its own development and elaboration of scriptural chanting, which took a course parallel to the developments within Judaism.

There is ample evidence of Bible chant in Jewish sources as early as the second century C.E., by which time it was an old and well-established custom. In the third century, Rav interpreted the verse "And they read in the book, in the Law of God... and caused them to understand the reading" (Neh. 8:8) as a reference to the *piskei te'amim*, i.e., punctuation by means of melodic cadences (Meg. 3a). Still earlier, Rabbi Akiva expressed his demand for daily study – also executed in chant – by the words "Sing it every day, sing it every day" (Sanh. 99a). Finally, Johanan, head of the Tiberias Academy (d. 279), formulated the central idea of chant in this categorical manner: "Whoever reads [the Torah] without melody and the studies [Mishnah] without song, to him may be applied the verse (Ezek. 20:25): Wherefore I gave them also statutes that were not good, and ordinances whereby they should not live" (Meg. 32a). As an external witness, Jerome (c. 400 C.E., in Bethlehem) testifies that the Jews "chant off" the Torah (*de-cantant divina mandata*: PL 24. 561).

Talmudic sources state that the biblical verse was subdivided into clauses according to its meaning and the rhythm of speech. This division was called *pissuk te'amim* and was strictly an oral tradition, the transmission of which was incumbent upon the teachers of children. Their method of instruction was the ancient practice of chironomy – hand and finger signs that evoked the medial, final, and other cadences of Bible chant (Ned. 37b; attested by R. Akiva, Ber. 62a). Chironomy had already been used by the singers of ancient Egypt and was later also adopted by the Byzantines. Jews practiced

it in the time of the masorettes, of Rashi (comm. on Ber. 62a) and, until recently, in Italy and Yemen. On the other hand, their absence in the sources indicates that there were no written "accents" (*te'amim*) during the Talmudic period. These were gradually developed and introduced – together with vocalization – by the masorettes in the second half of the first millennium ("Although the cadential division of the verses and the reading tune were given at Mount Sinai, they were uttered according to oral tradition and not to accent marks in the book" *Mahzor Vitry*, par. 424; 11th century). The nature of this primitive, unwritten Bible chant can be inferred from the present custom of some communities, notably the Yemenites and Bukharans, which still disregard the written accents and read the Bible in a much simpler manner, using only the well-known cadences of psalmody plus an intermediate stop (see Mus. ex. 3).

The antiquity of this modest kind of chanting is proven by its existence in the Roman Church. Like psalmody, it appears to have been accepted there as a body foreign to Western musical concepts and remained, therefore, in its primitive state.

Psalmody and melodic reading are common traits of all the "peoples of the Bible." Repeated attempts to find an archetype of it in pagan antiquity have not succeeded. Melodic enunciation has been connected with Bible recitation from the very beginning and has accompanied the Holy Scriptures through their translation into every tongue. In contrast to sensualist tendencies in art, which take the Bible text as a mere opportunity for writing a beautiful piece of music, Bible chant is the genuine expression of a spiritual concept and, as such, is opposed to the general trend of the Hellenistic period. Its restriction to a small range of notes and limited ornamentation is intentional, not "primitive," with the purpose of ensuring that the melody will never interfere with the perception of the words and the apprehension of their meaning and spiritual message. As defined by Curt *Sachs, such music making is "logogenic" – proceeding from the word and serving the word (see *Masoretic Accents, Musical Rendition).

THE EARLY STYLE OF PRAYER CHANT. During the first period of synagogue song, the precentor was normally chosen from the ranks of the congregation, and his devotion did not

The image shows two staves of musical notation for biblical cantillation. The first staff contains the text: "Wayikaz Shlomoh we-hinbh ha-lom ; wayavo yerusha-la-yim waya'a-mod lifnei aron". Above the staff, labels indicate "INITIUM", "TONE OF RECITATION", and "MEDIAL CADENCE". The second staff contains the text: "brit Adoshem, wayaal olat waya'as shelamim, waya'as mishte lekhol avadav". Above this staff, labels indicate "COMMA CADENCE", "TONE OF RECITATION", "COMMA CADENCE", "TONE OF RECITATION II", and "PREPARATION OF FINAL CADENCE". The notation uses a simple melodic line with various note values and rests, characteristic of traditional Jewish chant.

Example 3. Simple form of biblical cantillation. I Kings 3:15, as chanted in Bukhara to a psalmodic pattern. After Idelsohn, *Melodien*, vol. 3, no. 138.

always have to be balanced by musical gifts and skills. Prayer tunes thus had to be simple and, simultaneously, of a plastic and variable nature in order to be fitted to longer or shorter phrases of the prose texts without difficulty. These demands are met by the “prayer modes” (*nusahim*) traditional and common in the Eastern and Western synagogues of today. Although it is impossible to ascribe individual tunes heard today to the early synagogue with any degree of certainty, it is legitimate to speak of the principle of chanting according to a *nusah*.

Jewish prayer chant is essentially an evolution of traditional melodic patterns classifiable as “*Tefillah*-mode,” “*Yotzer*-mode,” and so on. The melodic pattern of a certain *nusah* consists of several motives, which are not in any fixed rhythm or meter, but are rather a melodic formula, which is apt to be expanded or shortened according to the text. The motives may be repeated or omitted, they may change places and, above all, they may be subjected to variation by the singer. Melodic patterns of this kind are used in Sephardi, Ashkenazi, and Oriental communities alike. Their nature may best be recognized from their adaptation to metrical prayer texts (see mus. ex. 4a), as well as to free recitation (mus. ex. 4b).

The musical effect of an Ashkenazi prayer mode rests on its “varied unity”; it establishes a common stock of motives for a whole group of prayers without imposing a rigid, unchanging framework upon it. The melodic development is stimulated by improvised variation – which has always been an important element in Jewish music (see **Nusah*; **Shtayger*).

THE POPULAR BACKGROUND. Psalmody, melodic reading of Bible texts, and prayer chant were made to fulfill a function in collective Jewish worship; they grew organically from a popular treasure of forms, under the guidance of basic religious ideas. The latter excluded from worship the use of the multitude of instruments which were, in fact, in the hands of Jews in Palestine and Babylonia: the frame drum *tabla* (Ar. *duff*) accompanied non-synagogal song and dance and pleased the women especially (“The sexagenarian as much as the six-year-old runs after the drum”: MK 9b); the reed-pipe *abbuv* was blown; the long-necked lute *tanbura* (Ar. *ṭunbūr*) plucked. Workmen used to sing to lighten monotonous toil such as plowing, boat towing, or weaving (Sot. 48a). Song was heard in the tavern (Sanh. 101a), and every kind of musical entertainment at the fair (Tā’an. 22a; BK 86a see Rashi) and social gatherings (Sot. 48a).

Radical religious authorities of the Babylonian Jews opposed popular music making as unsuitable for a nation in distress (relying upon Sot. 9:11 and 14). Their negative attitude (“Song in the house – destruction at the threshold,” Sot. 48a) became even more entrenched when the feudal aristocracy of Sassanian Persia made music part of their hedonistic enjoyment of life, and even the exilarch Mar *Ukba I, who was, according to the chronicle of the scribe R. Nathan ha-Bavli (written in the 10th century), a poet-musician himself and

throughout the year composed and performed his own paeans of praise to the king, who allowed himself to be attended with music at his ceremonial levee (TJ, Meg. 3:2, 74a; Git. 7a). At this time Rav *Huna issued his famous prohibition of music, which, however, had undesirable side effects and was dropped by his successor *Hisa (Sot. 48a). Palestine was apparently spared this unrealizable prohibition. There was never any intention to interfere with the music making at wedding festivities (*hillula*); on the contrary, this was regarded as a religious duty (*mitzvah*).

Several legends tell of the rabbis’ eagerness “to gladden the groom and bride” (Ber. 6b; TJ, Pe’ah 1:1, 15d, etc.). On these occasions, genuine responsorial singing was performed (Ber. 31a): an honored guest had to improvise a verse suitable for the company to answer with one of the current refrains (such as Ket. 16b–17a). Responsorial psalmody may have been influenced by such common customs. Antiphony, in its original meaning of alternating choirs of different pitch, was also employed at the popular level (Sot. 48a). Instrumental playing at the wedding *hillula* was officially encouraged, and this favorable attitude of the Talmud teachers became a guideline for later legal decisions.

It is not known when and why playing the flute before the bridal pair (rooted in ancient life and fertility symbolism) was abandoned; it was once a familiar and absolutely legal custom (BM 6:1). The same question arises with regard to flute playing at funerals, where this instrument symbolized life and resurrection; it was customary at the time of Josephus (Wars 3:437) and the Gospels (Matt. 9:23), and its legal aspects were still given consideration by the tannaim (Shab. 23:4; Ket. 4:4), but it, too, disappeared without any trace. Lamentation of the dead by wailing women could assume the form of a dirge (**kinah*, *hesped*) in responsorial patterns (MK 3:8; Meg. 3b; 6a); but it often remained a short acclamation (MK 28b), probably repeated to current melodic phrases. A funeral song of the Diaspora Jews is attested in Canon 9 of the Council of Narbonne in 589 (Juster, Juifs, 1 (1914), 368, n. 3).

A relationship between synagogal and domestic singing patterns has already been noted. Since responsorial and antiphonal song is found as a frequent practice among many peoples, it may be surmised that the related forms of psalmody also derived from popular usages. As far as can be judged from the necessarily one-sided talmudic sources, Jewish folk music remained relatively immune to the omnipresent Hellenistic influences. Near Eastern Jewry belonged to the Aramaic-speaking peoples (as evinced, for example, by the nomenclature of their musical instruments) and may have kept away from Greek theaters and circuses at the behest of their teachers (Av. Zar. 1:7; TJ, *ibid.*, 1:7, 40a; Av. Zar. 18b, etc.). In the Diaspora, however, the Jews of Miletus, Antioch, and Carthage liked the stage and the arena (Juster, Juifs, 2 (1914), 239–41). Jewish (Purim?) plays were restricted by the Codex Theodosianus of 425 (*ibid.*, 1 (1914), 360 n. 2). At any rate, the lasting influence of Hellenistic musical activities in the Jewish sphere cannot be proven.

IDEAS ABOUT MUSIC. The influence of religious law (*halakhah*) on the structure of synagogue music, such as the discontinuation of instrument playing and the entire Levitical tradition, has been noted above. To this should be added the rejection of the female voice from the service and other public performances, exemplified by Rav's harsh statement: "The voice of a woman is indecency" (Ber. 24a, etc.). The rabbi's indifference or hostility to the sound of music changes, however, in the aggadic parts of the Talmud, where many instances of true musical feeling and appreciation of the charm of sounds are recorded. The rabbis dwelled on King David's allegoric lyre, which was sounded by the midnight wind like an Aeolian harp (Ber. 4a, etc.), they perceived the "song of the ears of grain" in the field (RH 8a), and let trees burst into song (TJ, Hag. 2:1, 77a). They fostered ideas that became universal sources of artistic inspiration: the parallel singing of celestial music of the angels and the righteous (Hag. 12b; 14a; Av. Zar. 3b; Er. 21a; Sanh. 91b; Meg. 10b, etc.; Tosef. Sot. 6:2); and the "trump of doom" (later Midrashim: *Otiyyot de-Rabbi Akiva*, letter T; Midrash Daniel, etc.). In other Midrashim (of more or less disputed date), the eternal link between mystical and musical conceptions, already extant in some of the above-quoted Talmud passages, reveals its full strength in certain peculiar hymns aimed at inducing a visionary trance. These hymns were assembled in the treatise *Heikhalot Rabbati* ("All these songs Rabbi Akiva heard when approaching the *Merkabah and understood and learned before the heavenly throne what its servants sang unto it"). They are composed in a language rich in "word-music" and vocal harmony; and one can imagine them being sung to the repetition of short melodic phrases characteristic of suggestion-inducing and spell-casting songs all over the world.

The same *Heikhalot* treatise reveals a guiding idea of sacred song in legendary form: "R. Ishmael said: Blessed is Israel – how much dearer are they to the Holy One than the servant-angels! Since as soon as the servant-angels wish to proceed with their song in the heights, rivers of fire and hills of flames encircle the throne of glory, and the Holy One says: Let every angel, cherub, and seraph that I created be silenced before Me, until I have heard and listened to the voice of song and praise of Israel, my children!" Human song of praise is given preference over the pure and flawless beauty heard from the heavenly hosts, and the standards of sacred song are set by the warmth of devotion resounding from earthly voices, imperfect and human as they may be.

This concept differs from the basic idea of ecclesiastical song as laid down by Dionysius the Areopagite and repeated throughout the Middle Ages. This notion propounds that the perfect beauty of angelic song descends to the lower ranks in heaven and reaches earth as a faint echo. Church music endeavored by imitation to approach the heavenly model; it had to strive increasingly for superhuman, transcendental beauty, thus creating a perfect but cold product of art. This fundamental difference between the Jewish and Christian view of sacred music indicates what to look for in the evaluation of

synagogue song. It must be judged by the perseverance of its original intention, which is to be an expression of human feelings, disregarding beauty for its own sake. Whenever, during its development, appreciation of the pleasant sound as such became prominent, this attitude was most often initiated by foreign influences. As a rule, however, the basic patterns set during its first period have survived as a permanent background of Jewish music.

Evolution of the Basic Pattern and Creation of New Forms (c. 500–950)

After the completion of the Talmud, c. 500 C.E., new developments began in the liturgical and musical fields. The Near Eastern communities maintained their leadership, and the innovations created there became an integral part of Jewish tradition in the entire Diaspora. During this time, as far as can be judged, Jewish music was spared serious conflict with foreign influences.

THE "LEARNED ART" OF BIBLE CHANT. According to the early, oral tradition of reading the Bible by chant, only a few main sections of a verse were distinguished by means of melodic cadences (see Mus. ex. 3 above). Although the text of the Hebrew Bible was fixed long since, every sequence of words could become meaningful only by the correct grouping of the words and a clear interrelation of clauses and sub-clauses. The division of a verse could become a matter of interpretation, or even ideology, and raise debates with dissenting sects or a foreign creed. It was no wonder that in epochs of insecurity a need was felt to mark the accepted infrastructure of biblical verses in an indisputable way – in writing. This was achieved by the masoretic accents which have accompanied the text ever since.

Written reading accents are a feature unknown in the Talmud (that is to say, until c. 500 C.E.). They appear to have developed from the sixth century onward. During the same period, the Syrian and Byzantine churches also introduced written reading signs. Even small groups like the Samaritans invented such signs, although the period of their origin is uncertain. No priority can be ascertained today, but the former hypothesis of a Hellenistic prototype has been finally abandoned, as has the idea of interdependence between the different accent systems. It was a general but variously realized tendency of this era to make a new attempt at a musical script – the first one since the ancient Greeks, and completely different from their method. Greek musicians had expressed single pitches by means of graphic signs, as is done in modern European notation. This method is based on analytical thought. Writing music with accents, however, rests upon the conception of complete melodic figures or motives, which are retained in the singer's memory. Their specific application in singing may be brought about by gestures of the hand (*chironomy*), as documented already in the talmudic era. The motive may be given a suggestive name (*etnahta* "sign of rest"; *zakef* "upright," etc.); the first letter of its name may be written above the text, as was done by the Babylonian masoretes.

Finally, freely invented signs could also be used, as was done by the masoretes of Tiberias.

The development of biblical accents (*ta'amei mikra*) was a prolonged process which was completed definitely only between 900 and 930 by Aaron b. Moses *Ben-Asher of Tiberias. This final and authoritative system was imposed upon the whole of Jewry. The earlier Palestinian and Babylonian accentuations fell into disuse and have only recently been recovered from rare manuscripts. The general trend of development was from simplicity to complexity. The masoretes "in good faith furnished the 24 biblical books with accents of correct judgment, with a clear manner of speech, with a sweetly enunciating palate, with beautiful oration... Whoever reads shall hear, whoever hears shall understand, and whoever sees shall grasp" (Moses Ben-Asher, autograph colophon of the Cairo Codex of the Prophets, dated 895 C.E.). They proceeded from the subdivision of a sentence by accent pairs (Babylonian system) to a total accentuation of one sign, and occasionally two, on every word. Having begun with the simple indication of the traditional places of the cadences, they ultimately arrived at a "learned art" of Bible chant, prescribing how the reader was to organize his recitation.

In evaluating the musical consequences of the Tiberian "total accentuation," one basic fact should be borne in mind: an accent can seldom be regarded as a detached, self-contained unit. Not only is a disjunctive accent ("king") most often accompanied by a conjunctive one ("servant"), but also several of these pairs are frequently combined to form typical groups. In music, motive groups or melodic phrases match these accent groups: a chanted Bible verse is made into a continuous chain of musical motives (see Mus. ex. 5) and is clearly distinguished from the old-fashioned, psalmody-like style (see Mus. ex. 3 above).

Since the single motives are often linked by a short bridge of linear recitation (see ex. 5), this kind of chant may also be likened to a string of beads. An entire chapter read in this manner resembles a mosaic in which the same pieces are assembled in constantly varying combinations.

The translation of the masoretes' intentions into music was not accomplished smoothly. First of all, the Tiberian system of accentuation is too detailed and complex to be followed perfectly by even the most scrupulous reader. Moreover, there were Jewish communities with closer ties to the Babylonian than to the Tiberian school; they accepted the Tiberian system as a matter of book learning, but interpreted in song only part of it (the king accents) or disregarded it altogether. Writers of the 14th and 16th centuries (Simeon b. Zemah *Duran, Elijah *Levita) explicitly attest that the Sephardim who used to obtain books and teachers from Babylonia neglected all the servant accents and some of the kings as well, and they still do so today. In Iran and Yemen there arose hybrid styles of melodic reading in which the three or four cadences of the old style are permuted arbitrarily in order to comply with the Tiberian rulings. Some remote communities, such as that of Bukhara, continue to recite simply in the old, psalmody-like style (Mus. ex. 3 above). In this way, Jewish reading practices of today form a living museum of chanting styles as they were at different stages of their development.

THE LITURGICAL HYMN (PIYYUT). Although the composition of religious poetry most certainly did not break off with the destruction of the Second Temple, the introduction of hymns as an integral part of synagogue liturgy is ascribed to the sixth century. An old tradition (first recorded by *Yehudai Gaon c. 760) connects the admission of hymns into the synagogue with an interdiction against studying the law and reciting the *Shema Yisrael*, generally linked with the hostile edict of Emperor Justinian I promulgated in 553 (Juster, Juifs, 1 (1914), 369–77). This, however, is not sufficient to explain the continuing production of hymns over the centuries, the immense creative power invested in them, the mystical touch present since the very beginning, nor the musical elaboration which they brought about. Hymn writing and singing must be regarded rather as an elementary religious force, effective in Jewry as in every other faith, and one of the main promoting forces of musical evolution.

Wayikaz Shlomoh wehineh halom; wayavo yerusha-la--yim waya--amod lifnei aron be-
rit Ado-shem, wayaal olot wa-yaas shelzmin, wayaas mishte lekhol a-va-dav.

Example 5. Ashkenazi biblical chant according to the masoretic accents. I Kings 3:15, following the rendition of Joshua 1:1 in Idelsohn, *Melodien*, vol. 2, 50 no. 11.

The early designation of the genre, **ma'amad*, was soon replaced by the borrowed Greek word *piyyut*. The choice of a foreign term probably indicates the introduction of innovations, such as consequent rhyming and the division of a poem into stanzas of identical structure. In time, the stanza form became highly important to musical form: it offered the opportunity of changing the unarticulated cumulation of verses into a divisive organization of the song. This possibility, however, is hardly exploited in tunes of the older style. In present-day synagogue song, *piyyut* melodies continue the traditional usage of repeating the first line throughout the entire song. The cause is certainly the poetic rhythm, which remained as it was in biblical poetry: an equal number of stresses in the verses, occurring at unequal intervals because of the changing number of unaccentuated syllables in between. Thus, a well-known hymn of Eleazar *Kallir (early seventh century?) reads:

Tal ya'asis zuf harim = 3 accents, 6 syllables
 ta'em bi-meodkha muvharim = 3 accents, 8 syllables
 hannunekha ha'lez mi-masgerim = 3 accents, 10 syllables

A tune appropriate to such poems in "free rhythm" must be capable of extension or contraction according to the length of the text. In addition to psalmody and the principle of prayer chant, another solution to this problem was found by singing according to modal patterns, still practiced today by the Sephardim and the Eastern communities. The basic musical idea or modal pattern consists of not more than one or two tetrachords (four-tone rows); this framework is filled, in actual singing, with melodic curves, step patterns, and ornaments of every kind. A particular musical realization of the scale model

will seldom be repeated, but every verse of the stanza offers a new variation of the preconceived pattern (Mus. ex. 6b).

This method of "endless variation" is characteristic of the Oriental style of Jewish song. Its Ashkenazi counterpart is more closely related to the *nusah* structure of prayer chant (see above), being a plastic sequence of variable and interchangeable motives (Mus. ex. 6a). The Ashkenazi style is distinguished by the clear-cut outline of its motives and the retention of the recitation tone technique related to psalmody.

It should be understood that there is no other means of evaluating the historical forms of *piyyut* singing than by inference from present-day traditions. Tunes, which show archaic features and conform neatly to the poetical form, may be regarded, as a working hypothesis, as representative of the original style. The texts of the *piyyutim* contain a considerable admixture of mystical elements recognizable, inter alia, by the exuberant accumulation of divine attributes (found as early as in the hymns of the Qumran sect and later explicitly condemned by the *tanna'im*, Ber. 33b; Meg. 18a). The exact musical consequences of these tendencies are not known, but they caused the later *geonim* (Yehudai, Nahshon) to urge the general removal of hymns from the liturgy. However, hymnal song had captivated the hearts of the people to such a degree that this proved impossible. The rabbis, therefore, looked with a certain suspicion upon the principal exponents of *piyyut* singing, the precentors who by then had already become professional ministers.

THE HAZZAN AND THE SYNAGOGAL SOLO STYLE. *Piyyut* as sung art-poetry demanded the expertness of a gifted soloist,

The musical score consists of five staves, labeled A through E. Each staff has a vocal line with Hebrew lyrics and a piano accompaniment line. Motifs A, B, and C are indicated above the first three staves.

Staff A: *Gash lehalot--kha— Kena'ar uelo kevar-ar/ degalaw. la---vo— bezeh ha-sha---'ar—*

Staff B: *Imukhim— bede-----shen sehakeda / te-----sher a-sheer bo nif-ka--da—*

Staff C: *Tashiv lindan— berak hashanun/ taha--zek magen— lego--nani_voni---gun.*

Staff D: *Keren bemoshkham— hayom_e de--khal' nahum— zekhor— shevuat— avadei-kha.*

Staff E: *Sho-me-a tefilla zekha kol basar yavo-'u.*

Example 6a. Hymn-tune constructed as a chain of varied motifs. Ashkenazi melody for the kerovah hymns for the High Holy Days: (a) for Ne'ilah of the Day of Atonement, Bavarian version c. 1800–40 (Loew Saenger, 1781–1843), after Idelsohn, *Melodien*, vol. 7 part 3, no. 211; (b) for Shaḥarit of the New Year, Frankfurt version c. 1883 after F. Ogutsch (1845–1922), *Der Frankfurter Kantor*, 1930, no. 179; (c) for Musaf of the New Year, Ukrainian version, c. 1860–80, after J. Bachmann, Schirath Jacob, 1884 no. 90; (d) for Musaf of the New Year, Jerusalem version of the Lithuanian tradition as noted in 1963, after J.L. Neeman, *Nusah la-Hazzan*, vol. 1, 1963, part 2, no. 17; (e) Psalm 65:3, chanted at Kol Nidrei to motives A and B of the kerovah melody, "Polish" version, 19th century, after A. Baer, *Baal T'fillah*, 1883³, no. 1307.

Example 6b. Hymn-tunes constructed of variations on a modal pattern. The penitential hymn, *Atanu lehalot*. Oriental Sephardi, after Idelsohn, *Melodien*, vol. 4, no. 95 and Iraq, *ibid.*, vol. 2, no. 45. For the same as sung in Persia to a pattern comprising one tetrachord only, cf. *ibid.*, vol. 3, no. 40.

especially when the singer himself was expected to compose both text and tune. A lay precentor could hardly continue to fulfill such a task. It is surmised that the early *paytanim* performed their creations themselves, having also composed or adapted the melody. It was at this period, in the last quarter of the first millennium, that the new function of the professional solo singer came into existence – presently the well-known figure of the **hazzan*. The title *hazzan* was not new. It had formerly designated an assistant of the **archisynagogus*. In addition to several secular tasks, this functionary had to ar-

range and supervise the ceremonies in public worship. It was an honored post: the Code of Theodosius exempted its holders from taxes in 438 and Pope Gregory the Great endorsed it c. 600. It was reasonable enough also to require musical ability of applicants for the post of this synagogue master of ceremonies. The term *hazzanut*, derived from the title *hazzan* designates, either the official post or, more often, the specific melodies and musical style of the solo singer.

For the chronological determination of the *hazzan's* specialization in music, a *terminus ante quem* is to be found in

*Nahshon's decision of about 875–880: "A *hazzan* who knows *piyyut* shall not be admitted to the synagogue" (B.M. Lewin, *Ozar ha-Ge'onim*, 1 (1928), 70). The assumption of the title *hazzan* by the singer probably took place during the ninth century. Since the function of *hazzanut* soon came to be passed on from father to son, this vocation became almost a closed social class, where it was the custom for a *hazzan* to marry the daughter of his master or of a colleague. The ties of certain families to a musical profession are important for the growth and early training of talents and, in the long run, for the preservation of a musical tradition. There is mention, for instance, of a family of *hazzanim* flourishing in Baghdad in the 10th and 11th centuries: Joseph *Albaradani, the "Great *Hazzan*" (d. 1006), left sons and grandsons who became successive incumbents of his position, and all of them also wrote *piyyutim*.

The close connection between *hazzanut* and *piyyut* is demonstrated by some letters preserved in the Cairo *Genizah (S.D. Goitein, *Sidrei Hinnukh* (1962), 97–102; idem, in: *Tarbitz*, 29 (1960), 357f.). The congregations in medieval Egypt were always eager to hear new hymns, and the *hazzanim* were compelled to exchange *piyyutim* among themselves, write them down secretly from the singing of a colleague, and engaged in correspondence as far afield as Marseilles.

It is difficult to imagine the musical character of early *hazzanut*. One can, however, attempt to demonstrate the common features of Oriental and European *hazzanim* of today with comparable gentile melodies taken as a control group. In addition, the tunes noted down by Obadiah the Norman Proselyte in the first half of the 12th century is available for comparison. With due precaution, it may be said that *hazzanut* implies the free evolution of a melodic line (without reference to any system of harmony). The tune therefore proceeds by seconds and other small steps, while leaping intervals are avoided. The melodic texture is dense: there are no empty intervals, no extended notes that are enlivened by dissolution into small steps (Mus. ex. 7).

The *hazzan* must command a good measure of musical creativeness. He does not simply reproduce a preconceived piece of music, but must give final shape to the general outlines of a theme by an improvisation of his own. In this way, the stanza of a *piyyut* may develop in a series of variations on the traditional theme (Mus. ex. 8a)

This feature is already found in the tunes notated by Obadiah the Norman Proselyte (Mus. ex. 8b) in the 12th century. The expressive element so characteristic of *hazzanut* can also

be discovered in Obadiah's notations. The music of a *piyyut* fragment exhibits the repetition of words, the expressive motives, and the lively "pulsation" around a single note that have remained the pride of the *hazzan* until today.

To sum up, musical tradition in *hazzanut* means a melodic pattern to be followed, the choice of a specific tetrachord or other scale, which is representative of a certain mood, or a stock of motives to be arranged and rearranged in changing melodic structures. The most ancient heritage of synagogue music cannot be confined to bar lines or enclosed in a framework of symmetric phrases. Its rhythm is as free as that of the Hebrew poetry of the time. It is worth noting that melodies in free rhythm have been preserved even in European communities, as a body separate from Western music.

MUSIC OF THE MEDIEVAL DIASPORA (C. 950–1500)

The close connection between musical development and changes in thought and national or social conditions is demonstrated perfectly by the changes which occurred in Jewish music as a result of the Islamic conquests, which introduced strong secular and cosmopolitan traits into the cultural life of the Near East, North Africa, and Spain. The Jewish mind does not favor revolutions in sacred music, but new and powerful elements were added to the ancient stock and gave rise to mutual reactions and interactions. In the field of secular music, however, there was a strong trend towards integration, often impeded by forced separation from the gentiles, but thrusting forward as soon as conditions allowed. This general picture is colored by the existence and interplay of different spiritual factors within Jewry itself, each of which contributed to the shaping of musical ideas and forms.

The beginning of a new period in Jewish music may be placed about the middle of the tenth century. By then, the accent systems of Bible chant had been completed; music was made a subject of philosophical reasoning; and sung poetry took on a new look by the introduction of meter and the aesthetic values connected with it. These developments in the spiritual and artistic fields went hand in hand with most important events and changes in the Near East. The conquest and unification of the Near Eastern countries by Islam brought the local Jewries into a larger world of relative liberty and open-mindedness. Art and science were no longer restricted to the service of certain religious dogmas, and Jews were free to integrate themselves into the material and spiritual realms of the general culture, but the price was paid by giving up the administrative autonomy of the Jewish population, and the

rapid decline of the academies and geonic authority. As a result, the hegemony of Eastern Jewry – which, until then, had supplied the Diaspora with legal decisions, books, *piyyutim*, *masorah*, rabbis, teachers, and *hazzanim* – came to an end. The dispersed Jewish communities were compelled to take matters into their own hands.

Integration in the Realm of Secular Music

THE SCIENCE OF MUSIC. The term *musica* did not exist in the Hebrew vocabulary until the tenth century, when it made its first appearance in the Arabized form, *mūsīqī*. It served to express the concept of the science of music (Ar. *‘ilm al-mūsīqī*), as *hokhmat ha-musikah*, later also *hokhmat ha-niggun*. This branch of science is reckoned as the fourth in the classical quadrivium, “the most excellent and last of the propaedeutic disciplines” (*Dunash ibn Tamim). Muslim scholars followed the ancient Greeks when analyzing acoustic and

musical phenomena in the spirit of an abstract science – an idea that attracted Jewish thinkers. In the early tenth century, Isaac *Israeli and his disciple Dunash ibn Tamim held that a full command of philosophical reasoning was indispensable for religious exegesis; they actually employed musical science for their commentary on the *Sefer *Yezirah* (ed. by M. Grossberg (1902), 16, 40, 48). Their great contemporary *Saadia Gaon, who took it upon himself to bridge the widening gap between philosophy and religious tradition, is the author of the oldest known text on music written by a Jew. This is a paragraph at the end of the 10th treatise of his *Kitāb al-amānāt wa’l I’tiaqādāt* (*Book of Beliefs and Opinions*) written in 933. Its subject is the eight rhythmic modes known at the time and their influence on the human soul. Its approach largely expresses the prevailing doctrine of the ethos, which emphasizes the importance of harmony in its broad sense as an equilibrating force. Saadia’s 10th treatise as a whole is entitled “Concerning

How It Is Most Proper for Man to Conduct Himself in This World.” It should be noted that the then prevailing ancient doctrine of the ethical influence of music formulated by the Greek philosophers, had been expressed earlier in the biblical stories of David playing before the melancholy King Saul and of prophetic ecstasy aroused by hearing musical instruments (1 Sam. 10:6, 16:16, 23; 11 Kings 3:15).

It is quite likely that Saadiah’s major source was the Arabic “Treatise Imparting Concise Information on Music” of the great Arab philosopher al-Kindī (d. after 870). However, a close comparison of the respective passages shows that Saadiah’s contains significant differences and deviations from al-Kindī’s.

The historical significance of Saadiah’s short chapter far exceeds that of its musical content. It demonstrates the integration of musical theory into Jewish learning. It had now become a challenge for erudite Jews in the Islamic countries to comprehend this art intellectually. Fragments of several books on music discovered in the Cairo *Genizah* were written during the 11th to 13th centuries in the Arabic language, but in Hebrew letters. Among them are extracts from the famous treatise on music of the secret 10th century Arab confraternity Ikhwān al-Ṣafā’, and a fragment on the elements of lute playing. Contemporary book lists also provide an indication of what could be found on music in private libraries and on bookstalls, and one can imagine how much must have been lost in Cairo and in cities like Baghdad, Damascus, Kairouan, or Cordova.

The scientific approach also makes itself felt in the fields of grammar and *masorah*, thus transferring the treatment of biblical accentuation to a higher level. The system of accents itself had been completed and summed up in somewhat naïve rhymes designed to aid memorization (*Dikdukei ha-Te’amim*, ascribed to Aaron Ben-Asher himself). This old-fashioned method of teaching continued only by the Ashkenazim (versified teachings of Rabbenu Jacob *Tam in the 12th century and of *Joseph b. Kalonymus in the 13th century). A completely different spirit governs the dry but scientific classification given to the accents by Judah *Hayyuj (late tenth century), *Ibn Bala’am or *Ibn Janah (11th century). It is difficult to gauge the extent to which these works influenced musical performance proper, but they are witnesses to a new trend in the theoretical foundations of synagogue chant.

The classes of literature mentioned so far were addressed to a small stratum of society and never exerted as broad an influence as the books of biblical exegesis, whose study was everyone’s moral duty. Thus the exegetes and their works achieved great power in the spiritual life of the nation and inevitably played a part in forming a body of common ideas about music. It was Saadiah Gaon who won the title “head of the speakers and first of the exegetes” in the post-midrashic era. His Arabic translation of and commentary on the Book of Psalms adheres scrupulously to the principle that all instrumental music be prohibited until the Temple is rebuilt, and he even claims that instrumental music was restricted to the Temple in ancient times. Saadiah was very particular about ex-

plaining obscure musical passages in the Bible out of the biblical text alone, but, on the other hand, he rather unconcernedly translated the Hebrew words *nevel* and *kinnor* by the Arabic names of contemporary string instruments. His practice was continued by Abraham *Ibn Ezra and innumerable others.

An example of an exegesis drawing on current philosophical opinions is *Baḥya b. Asher’s comments on Ex. 32:19 and 15:20 (*Be’ur*, written 1291 in Spain). Relying upon the view of “the masters of musical science” that the nine musical instruments of Psalm 150 allude to the nine heavenly spheres and that seven of them derive their power from the seven planets, he explains why the *maḥol* (= Mars = evil) was the instrument played before the golden calf, while the *tof* (= Jupiter (*zedek*) = Justice) was beaten by Miriam, sister of the just priest Aaron. The *maḥol*, he points out, was the symbol of a sinful woman. In the course of time the opinion took shape that *maḥol* and other terms from the headings of the psalms, such as *ayyelet ha-shaḥar* and *alamot*, were musical instruments or names of musical “modes.” This view recurs in literature until quite recent times. In general, the exegetical books spread an understanding and a high esteem of music; they endowed it with an image of strong spiritual power – not very different from that developed by philosophy – rather than of a self-sufficient art or a despised entertainment.

THE CHALLENGE OF NEW FORMS OF ARTS. The philosophy and theory of music were conceived by scholars and, as an abstract science, were detached from musical composition and performance. This did not prevent leaders like Saadiah Gaon from writing hymns in the free rhythms of Kallir’s school. The following generation (about 940–950), with Saadiah’s disciple *Dunash b. Labrat as its leader, introduced contemporary Arab metrics into Hebrew poetry. This was a revolutionary act of immense influence on poetry and music. Arabic poets had accepted the ancient Greek metrics based upon measured syllable durations as early as the eighth century: “Since the ancient Arabs by nature measured [their language], its very nature accorded with tonal proportions and musical composition” (*Ibn Danan, *Perek be-Herez*, 15th century). The differentiation of long and short syllables is foreign to the Hebrew language; it was, rather, the intensity of enunciation that provided the poetic “weight” (*mishkal*). It may be seen, for instance, from *Yose b. Yose’s *Darkekha Eloheinu le-Ha’arikh Appekha* that the singer had to utter one, two, or three syllables, as the case may be, between the accents; this precluded a regular beat and meter, and the tune had to be either psalmodic or in free rhythm. It can be said that this poetry did not include the dimension of time as an object of artistic configuration.

This old Semitic heritage was challenged by the Greco-Arab meters, which give a precise order and division to the continuum of time. The heavy pace of the old *piyyutim* was regarded as “bothersome to the public,” which now preferred smoothly flowing rhythms flattering to the ear. The formal element had become autonomous, so to speak; its former depen-

dence upon an idea (expressed in a natural flow of speech) had weakened. This process was justified by the slogan “that the beauty of Japheth should dwell in the tents of Shem.” Aesthetic appreciation was clearly a new aspect in Hebrew poetry and song. Of course, it had to overcome stiff opposition, but its victory was almost complete and lasted more than half a millennium. “A pleasant musical sound” was henceforth demanded when offering a prayer (Joseph *Albo, *Ikkarim*, 4:23, 8).

In the musical field, too, a new type of melody made its appearance. Its novelty in Jewish musical tradition is signalled by the fact that there was no term to designate it, and the Arabic word *lahn* had to be adopted for the purpose. This type of melody demanded metrical texts, and an early Muslim theoretician, Ibn Rashik, held that meter was also the foundation of melody. This idea was repeated and developed by several Jewish writers down to the 17th century (e.g., Samuel *Archevolti). Both Moses and Abraham ibn Ezra (*Zahut* (Venice, 1546), 142a, written in 1145) advocated that a poem intended to be sung should be written in equal metrical units throughout. It is understandable that mixed meters would have led to alternating double and triple time within the melodic phrase and this seems to have been regarded as unbalanced.

Since neither Islamic nor Jewish culture record their music in writing, it is only by inference that the *lahan* can be regarded as a “melody” according to European notions, i.e., a musical structure built of equal or corresponding sections and shaped according to a rhythmic scheme (meter). This design differs from the traditional tunes of free rhythm, as metrical poetry differs from biblical verse, and has the same advantages and drawbacks, as *Judah Halevi demonstrated (*Kuzari* 2:69).

In modern Jewish singing practice, a *lahan* may be very closely to the cyclic structure of the stanzas and can be notated with bars according to the meter of the text (Mus. Ex. 9).

It is evident from the example that a “metrical” tune need not be syllabic; a series of short notes may appear on a long syllable. To judge from present practice, however, the absolute identity of poetic and musical rhythm is relatively rare. More often the tune is given its own rhythm, but even then it will be symmetrical or cyclic.

With the emergence of metrical poetry, the formal idea of the stanza became predominant; it constituted a major cycle, which comprised the minor elements of metrical units and rhythms of light character. Its introduction into serious songs was apt to broaden their public appeal. In the Jewish sphere, this implied the explicit invasion of musical tradition by environmental elements. This development was heralded by the extensive use of the Arabic strophic forms established in Spain: the *shir ezor* (“girdle song,” *muwaššah* in Arabic and the more popular genre the *zajal*, which were probably the ancestors of both the Spanish *villancico* and the French *virelai*). This form is characterized by a certain order of rhymes and by an unchanging refrain (*pizmon*) to be performed in chorus by the audience (*Tanhum ha-Yerushalmi*, s.v. *pazzem*; see Y. Ratzhaby in: *Tazlil*, 8 (1968), 16). The melody of a *shir ezor* could be either original or taken from an earlier composition (“With the Greeks, the song was composed together with its tune; with the Arabs, every song has a tune, but not every tune has a song [exclusively associated with it],” Moses ibn Ezra, c. 1100 (Heb. transl. B.Z. Halper, *Shirat Yisrael*, 1924, 110)). The transfer of melodies from one song to another is also a common feature of Hebrew hymns from the 11th century onward (“The scribes of Spain... would write the tune of a well-known *piyyut* above the column of the *piyyut*,” Abraham ibn Ezra, commentary on Ps. 7:1). In a sample of about 80 hymns from the Cairo *Genizah*, published by J.H. *Schirmann in 1966 (*Piyyutim Hadashim min ha-Genizah*), the superscriptions of 32 refer the reader to the tunes of other Hebrew poems. Seventeen others, however, were written to Arabic melodies assumingly well known in their day. This shows clearly that the acceptance of a foreign form was often accompanied by the adoption of foreign music – either by the transfer of actual melodies or as an imitation of style. Simeon Duran writes (c. 1400) of “the tunes for songs and elegies... some were composed in the lands of Spain and taken by the poets from the songs of Ishmael [i.e., of the Arabs] which are very attractive: others were taken from the popular songs of the French countries and are driven to extreme melodic height and extension” (*Magen Avot*, ed. Leghorn 1785, 55b). Sometimes approved, but more often attacked, the custom of using foreign tunes remained a permanent feature in Jewish music. Later it even became an issue of mystical ideology and, in music itself, a source of hybrid forms.

ORIENTAL SEPHARDI : *Yede rashim*

ASHKENAZI : *She'eh nesar*

Example 9. Melodies shaped according to the meter of the poetry. (a) Oriental Sephardi, after Idelsohn, *Melodien*, vol. 4, no. 218; (b) basic Western Ashkenazi melody; cf. A. Baer, *Baal T'fillah*, 1883³, no. 225.

The new development in poetry and music may be reduced to one common formula: both arts are given a periodic ordering, an artificial structuring of the dimension of time acquired from Greco-Arabic precedents. The mere sound of speech and song thereby becomes an experience of its own. The listener may give himself up to rhythms and sounds more harmonious and relaxed than those found in harsh reality; the words may pass before him without posing a special challenge or demand. This phenomenon was alien to the older forms of Hebrew poetry in which the “weight” of accents, like pounding hammers, drove the words into the consciousness. It is difficult to imagine that one could listen to the “beautiful flow of speech” of Isaiah or Job without being moved by its message. The impact of a sensual and aesthetic appreciation of art was a new element in Jewish music, and the first tangible sign of its progressive integration with the cultural environment.

MUSIC AT THE SOCIAL AND POPULAR LEVELS. As a result of the relative freedom in daily life that the Jews were granted, musical elements that had no connection whatsoever with either religion or secular learning came to the fore. At the popular level, song and play had certainly never ceased to enliven festival and ordinary activities, exactly as is related of the Talmudic era (see above). An uninterrupted stream of reports and notices from the Middle Ages tell about Jewish minstrels and jugglers roaming the countries and performing before Jews and gentiles. The wandering artist had a very low status in medieval society; he was almost an outcast in Christian civilization and was regarded with the same suspicion, as sometimes were the Jews. Nevertheless, minstrelsy was a very old vocation, which had spread over the continent in the path of the Roman legions. When the Jews were expelled from their country, many joined the universally open class of *ludarii* (M. Jastrow, *REJ*, 17, 308–10), *ministrerii*, and *ioculatores*. The movement of Jews into this way of life continued during the Middle Ages and later on. Most of the Jewish communities could not offer a livelihood to all who possessed an artistic gift and felt an urge to practice it. These artists used to master not only singing and instrumental play but also the recitation of long epics and the composition of various kinds of poetry, as well as dancing, rope walking, knife throwing, etc.

This kind of “art” was acceptable not only in the villages or market places; men of high standing were also fond of hearing and seeing the minstrel and juggler, and those they liked best they would attach to their retinue. Since the roaming artist was an outsider in any case, his Jewish extraction was of no consequence in making him the court musician of a caliph or emir or of a Christian king, bishop, or knight. Some examples of the Jewish minstrels’ appearance before high-class audiences may shed some light on this continuously recurring phenomenon. From Jewish tribes who settled in seventh-century Hijaz and went to war with shawm and drum came the famous singer *al-Gharid al-Yahudi of Medina, said

to have pleased Muhammad himself by his song. In Andalusia, *al-Mansur al-Yahudi was appointed court musician by al-Hakam I, the caliph of Cordoba, early in the ninth century and sent to Kairouan to escort the famous musician Ziriyab to Cordoba; others are known to have served the nobles of the Ibn Shaprut family, such as a certain Isaac b. Simeon (c. 1100). The Christian kings of Spain also held Jewish musicians in high esteem. Their court accounts of the 14th–16th centuries repeatedly mention Jewish *juglares* (mostly vihuela players) who received considerable remuneration and were granted pompous titles (*ministrerii de stroments de corda de casa de la señora reyna*). Wandering singer-poets of Jewish descent were welcome with kings and aristocrats since they added a popular flavor to the sophisticated, but sometimes dull, court atmosphere. “El Ropero,” the son of a Jewish tailor, was maliciously called *malvado cohen, judio, zafio, logrero* by his rivals, but nevertheless allowed to address Isabella the Catholic with a protest song against the persecution of the Marranos in 1473. One of his contemporaries Juan (Poeta) of Valladolid, pleased the Spanish court of Naples.

The activities of Jewish singers immediately before the expulsion of the Jews from Spain, testifies again that they were regarded as outsiders in every respect. They also appear in the company of Provençal troubadours, French trouvères, or, like *Suesskind of Trimberg (c. 1220), at the seat of the bishop of Wuerzburg. The poetries of these Jewish singers, even the songs on biblical subjects and those obviously written for a Jewish audience, were in the vernacular. They mastered the international repertoire to no less a degree than their gentile colleagues and added to it subjects from Bible and Midrash. One of the unexpected discoveries in the Cairo *Genizah* was the notebook of a Jewish minstrel of 1382, writing German in Hebrew letters. It contains a lengthy German epic, as well as songs on Moses, Abraham, Joseph, and a parable from the Midrash. The authors, “Eizik and Abraham the Scribes,” rarely use Hebrew words (but “church” is pejoratively called *tifleh*).

The wandering singers were a class between the nations and, in general, rather estranged to their origin. They spread the works and motifs of literature over the countries and continents (e.g., Samson Pine, who interpreted the French epic of Parzival to German scribes in 1335). The tales of King Arthur were introduced to the Jewish public as well when they were transferred to the Jewish idiom or imitated, as in the **Shmuel Bukh* (15th century), the *Akedat Yizhak* poem, and similar compositions. Reliable sources show that such Jewish epics were sung to a fixed melodic phrase throughout the whole work like the *Chanson de Geste* and similar poems the world over. Regrettably, such tunes as the *Niggun Shmuel Bukh* were never recorded in music, but their counterparts have been preserved in the biblical ballads of the Sephardim, which show that the recurrent standard phrase was varied with every repetition (Mus. ex. 10).

Minstrelsy in general holds an important share in the formation of common European melody types. Its Jewish repre-

El Dios del cie-lo de A-bra-ham,
el Dios del cielo d'Is- hac horra-- do /
pa--ra-- cumplirle -- los dies
fuertes cosa le-- -ha mandan--do./

Example 10. Standard phrase of epic song. In this example, the phrase is varied by alternating open and closed cadences. Ladino ballad on the sacrifice of Isaac, Morocco, after A. Larrea Palacin, *Cancionero Judio del Norte de Marrucos*, vol. 1, Romances de Tetuan, 1952, 123.

representatives served as intermediaries between the ghettos and their environment. They were also the bearers of an instrumental tradition, especially in the field of dance music. When conducting the elaborate musical rites of wedding ceremonies and other occasions, they transferred part of the international repertoire to the Jewish quarter (Mus. ex. 11).

It is no wonder that common European formulas of dance melodies invaded the more popular part of religious and even synagogue song (Mus. ex. 12). Although these processes belong to the popular level, their importance can hardly be overrated. It was the broad masses of the people who sang certain hymns and regulated the musical taste by giving or denying their emotional approval to the precentor. Periods when an educated musical understanding decided the forms of liturgical song remained rather isolated phenomena. One can hardly discover any influence of that art music which was so highly esteemed during the Golden Age of Andalusian Jewry, when *Moses ibn Ezra gained relief from melancholy by listening to a lute player ("The sinew of my heart becomes one of his strings... skillful hands that feel their way and jump on a fret in just time, spread joy over the breathing souls... the dark doors closed, and the seat of the Most-High lies open to the

initiated eyes...," *Shirei Hol*, ed. Brody, no. 72), or *Al-Harizi who gave his thankful greetings to a certain Isaiah, master on the Arabic lute (he "stirs up the lute strings to sing... like a child in mother's lap who smiles and emits exultant shouts, not weeping... His playing over a dead body would awaken it, and the spirit of life would dwell upon it again...," *Tahkemoni*, ed. Kahana, 463). Those beautiful and poetic words bear witness of the deep emotions felt on listening to elaborate art music. However, the conditions of the Jewish exile did not allow for a continued delight in the refined art; time and again the Jews were thrown back to the level of poor people and to the kind of music enjoyed by the same.

THE FORMATION OF CONCEPTS OF JEWISH MUSIC (12TH–14TH CENTURIES)

Since the dawn of the second millennium the impact of the musical idioms of the host cultures was felt more and more in Jewish life, religious and secular. In the face of powerful external influences, the traditional attitude to music was also revised and, eventually, rearranged. By the 13th century, three main concepts had developed that circumscribed the role of music in Jewish life in such a fundamental way as to retain their power through the ages down to the present.

The Rabbinic Attitude to Music

Wherever the Torah is applied to life in its entirety, the ethical potential of music is esteemed above its aesthetic values. Beauty of sound and formal perfection fade and are ranked as a mere means of reaching a higher goal, beyond the realm of art. Rabbis did not appreciate any kind of music that was merely pleasing to hear but had no edifying objective. It goes without saying that they condemned music that was likely to stir up excessive human passion. From the time of *Hai Gaon (c. 1000) the most important Talmud commentaries and legal decisions constantly uttered warnings against listening to Arab love songs (*shir al-ghazal*, *Alfasi) or the popular "girdle songs" (*muwaššah*, *Maimonides). The latter called the occupation with songbooks (*sifrei niggun*) a "waste of time in vanity" (Comm. to Sanh. 10:1). On the condition that the singer refrains from losing himself in sensual pleasure and evoking primitive instincts, however, most rabbis held music in high esteem. Song is regarded as a very desirable accompaniment to prayer. Musical performance at

Example 11. International dance tunes in the Jewish klezmer repertoire. (a) Italian dance tune, "Lamento di Tristano," late 14th century, after A. T. Davison and W. Apel (eds.), *Historical Anthology of Music*, vol. 1, 1950, no. 59; (b) klezmer tune, after Elhanan Kirchhan, *Simhat ha-Nefesh*, part II, Fuerth, 1727, fol. 4r.

public worship was naturally subject to certain prohibitions, e.g., the prohibition on playing instruments and listening to them during the Sabbath, imitating rites of foreign worship, or listening to female singing voices. Regulations of this kind impeded the introduction of the organ or the formation of mixed choirs in synagogues, for example. Another rabbinical doctrine demands that everyone in full, including the participants in responsorial chant, should enunciate the psalms. This gave rise to the strange “concatenated” alternation of hemistichs still practiced in several Eastern communities:

Solo: The heavens declare the glory of God,
Choir: and the firmament sheweth his handiwork. Day unto day uttereth speech,
Solo: and the firmament sheweth his handiwork. Day unto day uttereth speech,
Choir: and night unto night sheweth knowledge. There is neither speech nor language,
Solo: and night unto night sheweth knowledge. There is neither speech nor language (Psalm 19).

Rabbi Isaiah *Horowitz, who settled in Jerusalem in the early 17th century, recommended this custom also to the West (*Kizzur Shelah* (ed. 1715), fol. 66a).

The competence of the *hazzan* was judged by his personal respectability and good repute rather than by musical standards. This frequently expressed view was codified later in the *Shulḥan Arukh* (OH 53:4). Time and again, rabbis were inclined to reject *hazzanim* of a prominently artistic or virtuosos disposition, since they were suspect of aiming at public applause alone. Nevertheless, rabbis very often had to compromise or even resign themselves to the demands of the public (Solomon Luria, *Yam shel Shelomo*; Hul. 1:49). The guardians of law however, did not cease calling singers to order by their warnings not to disturb the balance of word and tone or sever the bond between related words by extended coloraturas: indeed, a style of singing came into existence in which vocalized coloraturas occurred only as a sort of interlude between integral word groups, instead of being sung to the syllable or a word. In the later centuries, *hazzanim* were often blamed by their rabbis for a “theatrical” or “operatic” mode of performance or (in unconscious conformity with Plato) for their “imitation of nature,” such as when they pictured vocally the “sound of great waters” in Ps. 93:4 (Judah Leib Zeligower, *Shirei Yehudah*, 1696, fol. 27b).

The innermost meaning of music was defined by Maimonides with reference to the perfect music of the Levites in the Temple as cognate to the faculty of discerning the pure idea (*Guide of the Perplexed*, 3, 46), with pleasantness of sound a precondition of its effect on the soul (*ibid.*, 3, 45). About three centuries later an exile from Spain, Isaac ben Ḥayyim Cohen wrote in his *Ez Ḥayyim* that the singing of the Levites is intended to prepare their minds for contemplation, as befits those fulfilling sacred tasks. These statements demonstrate how a well-established tradition may be corroborated by philosophical argumentation.

Philosophy and Secular Education

Music was included in the ardent debates about this problem, since it formed part of the curriculum of sciences. It remained for Maimonides’ followers to establish its rightful place within Jewish education and learning. Joseph ibn *Aknin was the first to undertake this task in his book *Cure of the Souls* (*Tibb al-Nufus*, ch. 27). In Ibn Aknin’s opinion the Bible itself obliges the Jewish people to learn the art of music, not only because of its association with the holy sacrifices and its high esteem in the ancient times, but because the spiritual power of music had been a source of prophecy, “guiding the mind to clear sight, to keen distinction, to the faculty of meditation.” Music now penetrated education as a medium of shaping the character and developing emotional abilities. “Understanding music” (as a goal apart from practical execution) was accepted as an educational factor by the Jews of Moorish Andalusia and of Christian southern Europe, from about 1230–40. Transfer of the language of musical literature from Arabic to Hebrew marked the turning point. Already a century earlier *Abraham b. Ḥiyya wrote in Hebrew a comprehensive encyclopedia of the sciences of which the section on music, “On *Ḥokhmat ha-Niggun* called *musika* in Greek” is in manuscript in the Vatican library. Shemtov *Falaquera gave music its appropriate place in his educational work of 1236 *Ha-Mevakkesh* (“The Searcher” – after wisdom and happiness) and in his *Reshit Ḥokhmah* (“Beginnings of Wisdom,” also translated into Latin); he also advocated Hebrew as the preferred language of studies. The latter idea guided the Jews of Provence when they appointed Andalusian authors to translate science books into Hebrew. Judah ibn *Tibbon had already supplied a version of Saadiah’s philosophical work together with its musical appendix (see above). Judah Al-Ḥarizi translated the Ḥunayn ibn Ishāq’s *Sayings of the Philosophers* (ch. 18–20 about music). Anonymous translators contributed the extensive music treatise from the encyclopedia of *Ibn Abi al-Ṣalt. Fragments of a musical treatise by *Moses b. Joseph ha-Levi have been preserved as a quotation.

The activities of these promoters of music education coincided – certainly not by chance – with the endeavors made in Christian Castile, Provence, and Sicily to create a European spiritual culture independent of ecclesiastical dogma but following classical antiquity. A cosmopolitan and humanistic spirit governed the circles that fostered this movement, and the above-mentioned Abraham b. Ḥiyya served them as a translator, as did many Jews and Moors. This breath of fresh air awoke hopes for a normalization of exile conditions by transferring ingredients of secular culture into Hebrew. During these heydays of medieval civilization, Jews ornamented their books with excellent miniatures, sang the love songs of the troubadours (“a very bad custom, taken over from the surrounding peoples,” Jacob *Anatoli, c. 1230) or romances (*Sefer Ḥasidim* 142; cf. 3; 238, c. 1200) and listened to popular tales and epics. Hebrew poets of Provence appreciated the art of famous troubadours (Abraham *Bedersi, late 13th century) but wrote exclusively in their own tongue, albeit for a limited au-

Salmen, MGG, vol. 7, 1957, col. 227; (c) Bulgarian dance melody, *ibid.*, (d) Bergamasca, a north Italian melody widely known since the 16th century; here in a version by Salamon de' Rossi, after P. Nettl, *Altjuedische Spielleute und Musiker*, 1923, 21; (e) Ashkenaz Passover hymn, after G. Ephros, *Cantorial Anthology*, vol. 3, 1948, 85; (f) klezmer tune, 1727, after E. Kirchhan, *Simḥat ha-Nefesh*, part 11, fol. 2v.; (g) klezmer tune *ibid.*, fol. 5v; (h) European dance-music formula, descending the major scale, after W. Wiora in Report, Sixth Congress of the International Musicological Society, Bamberg, 1953, 1954, 170.

dience (“My lyre, awaking melodies in this generation, what is it more than a forlorn song?” Abraham Bedersi).

Such tendencies received fresh impulse from the movement of the Proto-Renaissance and from new trends in French and Italian music early in the 14th century. The poet and thinker *Immanuel of Rome (“O science of music, who will understand any more the art of thy flutes and drums?” *Mahbarot*, 21) complained: “It is a well-known fact that the science of music – a wonderful and esoteric science and art – was once thoroughly understood by our nation... but nowadays, none of us knows anything of it, and it is entirely in Christian hands” (Comm. Prov. 23:13). Such ideas, of whom Immanuel was only one exponent, now gave rise to a new wave of Hebrew musical literature drawn from Latin and Italian sources. The connection of its compilers with the Proto-Renaissance movement is obvious. *Kalonymus b. Kalonymus, who served King Robert II of Anjou as a science translator, also wrote a Hebrew version of Al-*Farabi’s *Classification of the Sciences* (3:5 on music), in 1314. *Levi b. Gershom, collaborating with Johannes de Muris in mathematics and astronomy, was commissioned by Philippe de Vitry to write a treatise *De numeris harmonicis* in 1343 and was thus in close touch with two outstanding figures of the *Ars Nova* in France, as was probably also that unknown music student whose Hebrew notebook refers to teachings of Jean Vaillant (c. 1400). Italian Trecento music is reflected by the notebook of another anonymous Jew who translated into Hebrew a brief compilation of musical theory attributed to the famous Marchettus of Padua from Italian. A more comprehensive treatise of musical theory was translated from Latin by a certain *Judah b. Isaac. In his preface, the translator brings forward the favorite idea of that epoch: that Jewish occupation with musical science actually means the recovery of one’s own property, lost in the turmoil

of exile. 14th-century Spain contributed some discussions on the role of music in medicine; they are only marginal phenomena, when compared to the strong tendency of Provençal and Italian Jewry to make the science of music a building stone of a secular culture of their own.

The endeavors of medieval Jewry to attach themselves to contemporary musical conceptions were buried under an avalanche of severe catastrophes that threatened the very existence of the Jews. These prompted the question whether the devotion to art and worldly goods was at all appropriate to a people in exile. Solomon *Ibn Verga (late 15th century) expressed such opinions in a fictional discussion between King Alfonso VIII and three Jewish leaders (*Shevet Yehudah*, par. 8): “Why should you teach your children music” asks the king, “whereas you are obliged to tears and mourning all your life since the God of Heavens called you a wretched people and dispersed you for it, which he did to no other nation.” The Jewish respondents cannot proffer a real answer and demonstrate a disheartened retreat from their former aims and hopes. Pushed back by the turn taken by medieval civilization, Jews had to abandon their tentative contacts with art music and musical learning. This problem was to repeat itself several times later on.

According to a pattern that became standard, rejection led to a return to traditional standards and ideas. In music, this meant a move back to the use of musical language for predominantly religious expression. By the 15th century, however, the latter had already lost its original sober purity by the adoption of metric tunes for hymnal song and by the practice of florid melodies fostered by a strong mystical movement.

Mystical Ideas and Forms

Tradition on the lines of pure *halakhah* hardly considered the innate dynamics of musical expression, but judged it by exter-

nal (albeit exalted) standards. Direct and constant relations between religious experience and music are rather found in the mystical approach to faith, which needed music for communicating ideas that cannot be expressed by words and as a means of imparting visions and secret revelations. Such tendencies are already evident in the Midrashim of earlier Jewish mysticism. During the 13th century, the mystical trend gained in impetus and exerted an unprecedented power over both the contemplative and the active modes of life.

When the Kabbalah attempts to reveal the secrets of creation or of the heavens, it often has recourse to musical symbols, metaphors, and allegories. The reciprocal relation between the lower and the upper world, for example, is made comprehensible by analogy with musical resonance; divine love and grace are pictured by various allegories of song and dance. The Zohar gathers almost every musical allusion to mystical ideas found in the Talmud and Midrash, without adding anything really new; but it renovates and strengthens the impact of such visions as the angelical choirs (*Va-Yetze*, ed. Mantua, fol. 158b–159b) and their counterpart, Israel's song of praise ("so that the Holy One may be exalted from above and from below in harmony," *Shemot*, 164b; cf. *Va-Yehi*, 231a–b). Images of this kind had earlier been drawn in the *Heikhalot* literature (see above). Especially significant is the demand for cheerfulness in prayer, concretely expressed in song and melody: "... we know that the **Shekhinah* does not dwell in sad surroundings, but only amid cheerfulness. For this reason Elisha said (II Kings 3:15): 'But now bring me a minstrel; and it came to pass, when the minstrel played, that the hand of God came upon him'" (*Va-Yeshev*, 180b; cf. *Va-Yehi*, 216b; 249b). Contemporary and later kabbalists connect their allegories with a rather precise, almost scientific, description of musical phenomena (e.g., Abraham *Abulafia; Isaac *Arama). Mystical meditation, however, by its very nature, had to remain a privilege of the selected few. Its massive influence on music was made effective by books or commentaries in the prayer book and, more directly, by the personal example of individual mystics acting as cantors and rabbis.

Among the **Ḥasidei Ashkenaz*, mystical ideas penetrated the particular mode of devout life taught by Judah he-*Ḥasid* and his followers. Their aim was to demonstrate the love of God and the joy in his commandments every day, and this strongly emotional element shaped a musical idiom of its own. Prayer and praise are the center of life, but they can be conducted in true perfection only by inseparable union with a tune. Singing is the natural expression of joy, and a frequent change of melodies prevents daily prayer from becoming mere routine. Absorption in song releases the abandonment of the self and the innermost concentration on the words uttered. Moreover, mystical prayer also has an active end in sight: **kavvanah*, the "intention" or concentration on the mystical union of world and creator, is to be brought about by contemplating the hidden sense behind the plain meaning of the words. These unspoken matters must be deliberated during the utterance of certain key words of the prayers. In this context, the tune

has several tasks: to eliminate the diversion of mind by the surroundings, to make room for a chain of thoughts around a word, and to remind the congregation of a specific "intention." The technical term for this application of melody was *le-ha'arikh be-niggun*, *li-meshokh niggunim* (extending the tune), *be-orekh u-vemeshekh niggun*, or *niggunim arukhim* (long tunes). All these terms point to the long melismas, mostly wordless coloraturas, before or within the prayer that became a distinguishing mark of mystical prayer song.

A rather simple example of melodically expressed *kavvanah* may be found in the recitation of the Book of Esther, which does not contain any explicit mention of God. When reaching chapter 6, verse 1, "On that night the king could not sleep," the same long melisma which ornaments the word "the King" during High Holiday morning prayers is intoned, symbolizing that it actually was the King of the World who intervened at this point. Other examples are the legendary association of the **Aleinu* prayer with Joshua and the walls of Jericho, which is evoked by inserted trumpet-like flourishes, or the extended tune of *Barekhu* on Sabbath night which was believed to give the souls suffering in hell an additional moment of relief. Undoubtedly a certain poetical element dwells in the "long melodies" and, at the same time, provides a challenge for the performing cantor. The latter always took pride in giving musical shape to these sometimes phantasmagorical ideas.

Along with this outlet of dynamic music making, medieval mysticism also opened the door to the intrusion of definitely popular musical elements. Just as everyone was obliged to say daily prayers, no one would be dispensed from doing so in song:

You should never say: My voice is not agreeable... Speaking this way, you complain against him who did not make your voice beautiful. There is nothing that induces man to love his Creator and to enjoy his love more than the voice raised in an extended tune... If you are unable to add something [of your own to the prescribed text], pick out a tune that is beautiful and sweet to your ears. Offer up your prayer in such tunes, and it will be full of *kavvanah*, and your heart will be enchanted by the utterings of your mouth... (*Sefer Ḥasidim*, 11; 13th century).

This trend necessarily led away from every artistic or elaborate kind of music. Although the *Sefer Ḥasidim* clearly rejected "music from the tavern," the door was thrown open to a new invasion of foreign melodies, at least at the popular level of Jewish mysticism. A time was even to come when the "redemption" of a beautiful gentile tune, by its adaptation to a sacred text, was to be regarded as a great merit. The concepts of music developed by the *Ḥasidei Ashkenaz* deeply penetrated the communities and lasted for a long time in Central Europe. Made popular by the writings of *Eleazar b. Judah (Ha-Roke'ah) of Worms and numerous prayer books with commentaries of his inspiration, the musical expression of *kavvanot* became an essential task of *ḥazzanut*. It remained so as late as the 18th century, when it was replaced by the influence of East European *Ḥasidism*.

THE CONSOLIDATION OF REGIONAL STYLES

The spiritual developments which shaped the various concepts of sacred song were largely concluded by 1300. It fell to the 15th century to shape music itself according to the chosen ideal and to direct the accepted patterns into the channels of a continuous tradition. Differences of ideology and taste gave rise to separate musical traditions – not only of the larger groups (*Minhag Ashkenaz, Sefarad, Italyah, Romanyah*), but even on the community level. Important but limited groups, such as the Jews of Avignon (*Carpentras), Mainz, and Prague, developed a characteristic musical custom (*minhag*) of their own.

Musical Minhag

Scattered references related to the music of certain prayer or hymn texts can already be found in the earlier compendia of liturgical practice, such as *Abraham b. Nathan ha-Yarhi's *Ha-Manhig* (c. 1205). Moreover, their disciples passed down the practices of venerable rabbis and *hazzanim* through oral tradition. Some of the musical *minhagim* go back to the talmudic period, such as extending the melodies of "ehad" in *Shema Yisrael* (Ber. 13b; 61b), (Mus. ex. 13a), of the *Amen (Ber. 47a), and of the *Priestly Blessing (Kid. 71c), see Mus. ex. 13c. The halakic sayings that *shofar* and *megillah* are to be treated alike (Ber. 30a; Meg. 4b, etc.) are evoked by the use of an identical tune for the benedictions of both of them (Mus. ex. 13b).

The efforts to consolidate an Ashkenazi tradition of sacred song were concentrated in the school of Jacob b. Moses *Moellin, commonly called the Maharil. Although a rabbi by rank and authority, he liked to function as a *hazzan* (*Sefer Maharil*, ed. Lemberg, 1860, fol. 55a–b; 49b). The musical us-

age taught by him was, on the one hand, a continuation of existing traditions accepted from former *Hazzanim* (*ibid.*, 28a; 82b), but on the other, his personal choice and example became normative. As a rule, the Maharil used to acknowledge the right of local custom:

Maharil said: Local custom should not be altered at any price, even not by unfamiliar melodies. And he told us an event in his life. Once he was *hazzan* during the High Holidays at the Regensburg community and sang all the prayers according to the custom of the land of Austria, which is followed there. It was difficult for him, however, so that he said the *haftorah* in the tune customary in the settlements near the Rhine.

It is remarkable how elaborate and thoughtful the musical performance of the Maharil was. His disciple, Zalman of St. Goar, recorded many details with great care and transmitted to posterity a "score without music," so to speak, of the most important parts of the liturgy. In the service for the Ninth of Av, for instance (fol. 49b–50b), not only is the distribution of texts between congregation and cantor defined, but also what the latter had to sing in a loud, medium, and low voice, what in a mournful intonation, and where a cry of pain was to be sent up. The pauses at the end of the verses and chapters are not forgotten, nor are the extension of melodies and other discriminate implements of expression. The music of the Day of Atonement is treated in a similar way (fol. 63a; 65a).

The Maharil used to stress the importance of hymns (*Krovez*, 83b), but he wished to exclude those in the German vernacular (117a), which apparently existed then, as do such in *Ladino with the Sephardim to the present. Often the Ma-

Example 13. Old tradition of melodic extension. (a) Italian Sephardi, after F. Consolo, *op. cit.*, Ex. 4, no. 12; Western Ashkenazi, after I. Lachmann (see Mus. ex. 1) no 8; (b) Western Ashkenazi, notated by H. Avenary; (c) Italian, after Mordecai Tzahalon, Metzitz u-Melitz, Venice, 1715; Eastern Ashkenazi, after H. Wasserzug, Schirei Mikdosch, I, 1878, no. 65.

haril points to the identity between certain hymn tunes (28b; 74b). Unlike many other rabbis, he regarded melody as an essential element of liturgical tradition.

The “musical *minhag*” of the Maharil is also full of mystical “intentions” (*kavvanot* 40b; 55b; 56a; 66a). There are striking examples of their influence on melodic configuration: “He used to extend [the tune at] the word ‘Thou’ very much, obviously concentrating his mind on the faculty of ‘Thou’ known to all the adepts of mystics” (56a). Such musical suggestions of a hidden sense of the words were indicated by remarks in the prayer books. The *Mahzor Hadrat Kodesh* (Venice, 1512), for instance, advises the *hazzan* to sing a certain chapter “to a melody” or “in a long and beautiful tune” and assigns to the prayer *Nishmat Kol Hai* “a beautiful melody, since all the people of Israel are given *Neshama yetera* on the Sabbath.” Other books attest the use of veritable leitmotifs in the recitation of the Book of Esther when, for instance, the drinking vessels of Ahasuerus are mentioned to the tune of the Lamentations (for they supposedly formed part of the booty from the Temple of Jerusalem). It was also an old custom to prolong the tune of *Barukh she-Amar* in the Morning Prayer (mentioned in *Ha-Manhig*, c. 1205 and in 1689 by the convert Anton *Margarita); the author *Samson b. Eliezer (14th century) relates that he used to sing it as an orphan in Prague with such a sweet voice that he was given the name *Shimshon Barukh she-Amar* (*Sefer Barukh she-Amar*, preface). Although directions for musical execution are found in the works of many authors, the Maharil was made the legendary patron of Ashkenazi *hazzanut* and the invention of traditional melodies was ascribed to him. In particular, the so-called **Mi-Sinai* melodies – a common heritage of Ashkenazi synagogues in both Western and Eastern Europe – were believed to go back to the authority of the Maharil (sometimes confused, by uneducated cantors, with *Judah Loew b. Bezalel, Maharal of Prague). As a matter of fact, these melodies, ascribed to an oral tradition stemming “from Mount Sinai,” i.e., revealed to Moses, are common to Ashkenazi congregations all over the world. They kept their identity in Jewish settlements as distant from each other as eastern Russia and northern France, south of the Carpathians, and in Scandinavia or Britain. There is no doubt that they antedate the great migrations from Central to Eastern Europe in the 15th century or even earlier. The structural principle of the *Mi-Sinai* melodies is basically Oriental, inasmuch as a cycle of certain themes or motifs is used in manifold combinations and variants according to a traditional master plan. Of course, manifestations of local taste and of “acculturation” are most often present (see **Aleinu le-Shabbē’ah*; **Avodah*); however, the essential identity of all the variants is undeniable. They may well have been inherited by the Ashkenazim from a still unspecified epoch in the Middle Ages.

Modal Scales in Synagogue Song

The term “modal” in music is often used (although not with scientific precision) for those tone sequences which are different from the familiar major and minor scales, an example

being the Church modes. When applying the term “modal” to Jewish music, several precautions should be borne in mind. Firstly, a modal scale need not be an octave, but may be composed of more or less than eight notes. Furthermore, it must not necessarily repeat the same intervals over the whole gamut; on the contrary, an E natural, for instance, may appear in the lower octave and an E-flat in the upper one. Finally, the interval of the augmented second sometimes joins the tone and semitone as a note proper to the key. Of course, scales of vocal music will not necessarily be in the equal temperament of the piano, but may retain a certain flexibility (sharpened leading notes, neutral thirds). In Oriental Jewish song, micro-intervals in the style of the region are common.

The peculiarity of Jewish modes can be recognized and evaluated best in the Ashkenazi and European-Sephardi song, since their special character stands out against the background of the music of the gentile environment. The structural framework of West and North European song consists of chains of thirds bridged by whole tones, but repressing or avoiding semitones (as does Scotch and Irish folksong still today). Oriental song, on the other hand, is built on the **maqam* modal scale system, which is basically conceived as a combination of several small groups of notes, whether of the same intervallic structure or not, called “genera,” a skeleton of consecutive notes, including a semitone or even micro-intervals as may be seen from examples 4a and 6b.

As to the Jewish settlements in Europe, tunes determined by a tetrachordal skeleton are found among the Sephardim, including the communities of Carpentras (Avignon and Comtat Venaissin), Bayonne, Rome, and the rest of Italy (the Balkans belonging to the realm of Eastern music). In Ashkenazi song, however, tetrachordal patterns have almost entirely vanished. This has preserved, instead, some features of the earliest Western, semitoneless melodic (Mus. Ex 14)

In spite of this environmental influence on Ashkenazi song, a particular “Jewish” character does prevail there in certain scale structures, which are strange in the context of Western music. These are called **shstayger* (a Yiddish term equivalent to mode, manner). Actually there are more *shstaygers* than the “four synagogue modes” proposed by earlier research, but two of them outweigh the others by far: the *Ahavah Rabbah* and the *Adonai Malakh*. Their special features may be recognized from the melody-excerpts given in example 15 and accompanying analyses of their scales (Mus. ex. 15).

As the present Ashkenazi liturgy is an accumulation of hymns and prayers successively added in the course of time, its music also exhibits many characteristics of medieval monody. Among them are the Re- and Mi-modes (similar to the Dorian and Phrygian of plainsong), and several peculiar final clauses. A Jewish origin has often been claimed for them but can hardly be proved. An Oriental or Mediterranean character is evident, however, in most of the genuine *shstaygers*, especially the *Ahavah Rabbah* and kindred scales. Its nearest par-

allel is the second mode of the Greek Orthodox tradition; it may also be compared with the Persian-Arab *ḥijāz* scale, but it has no parallel in Western art or folk music.

The Sephardi communities that settled in Italy, France, Amsterdam, and London after their expulsion from Spain also preserve European elements in their melodies. The most remarkable of these is a strange chromaticism which imparts a certain soft and floating tonality to some of their tunes (Mus. ex. 16); it might possibly be defined as a superimposition of two different modes, or as a bi-modality, which is very remote from Western concepts of functional harmony. This kind of chromaticism is found most characteristically in examples of biblical chant notated in 1693 (Rome) and 1699 (Amsterdam), as well as during the 19th and 20th centuries. Similar "floating" phrases are found in prayers and hymns; they are a characteristic of the "sweet singing of Sepharad," whose Oriental roots may at present be postulated only speculatively but cannot as yet be proved by scientific deduction.

Performance and Practice of Synagogue Song

The collaboration of a soloist (*sheli'ah zibbur* or *ḥazzan*) and the choir formed by the whole congregation represents the

main feature of synagogue music. These two bodies alternate or answer each other according to a traditional division of the liturgical texts. Especially the Sephardi communities have preserved very old practices of responsorial performance. As indicated in the Talmud (Sot. 30b) and also adopted by the Roman Church, the cantor may intone the first words of a chapter, whereupon the choir takes over, or they may alternate and respond one to the other. Among the Sephardim the congregation is also accustomed to take up the keywords of the more important prayers from the mouth of the cantor. The division of tasks between solo and choir sometimes affects the melodic configuration. If a particular prayer is sung to a *nusah* (see above), its original free rhythm may change into measured time when taken over by the congregation, and the *ḥazzan* may execute the simple pattern in elaborate coloraturas (Mus. ex. 17).

Many non-Ashkenazi communities provide the cantor with two assistants (*mezammerim*, *somekhim*, *maftirim*) who flank him at the prayer desk and take over at certain points of the liturgy. This custom is rooted in certain ideas about the community's representation before the Most High; here the participation of three singers does not influence the shape and

manner of their music making. However, a special development in this field took place in the Ashkenazi synagogues. Their cantors also attached to themselves two assistant singers, but they did so with a view to the enrichment and beauty of their singing. According to a fixed rule, one of these assistants (*meshorerim*) had to be a boy-descant, called *singer*, and the other an adult, called *bass*. It is not known, when and why this custom was introduced; a picture in the so-called *Leipzig Mahzor* of the 14th century may be regarded as the earliest representation of such a trio. The heyday of *hazzanut* with accompanying *meshorerim* was the 17th and 18th centuries, and it is only from the sources of this late period that its nature can be inferred. According to it, the assistants improvised an accompaniment of hummed chords, drones, or short figures; the *singer* also intoned thirds and sixths parallel to the cantilena of the *hazzan*. In addition, both *singer* and *bass* had their solo parts – most often extended coloraturas to be performed while the cantor paused. Famous cantors traveled, with the *meshorerim* as a part of their household, from one large center to another as guest ministers, while the less famed undertook such wanderings in search for a hoped-for

permanent post. In the late baroque period, if not earlier, the traditional number of two assistants was supplemented by performers of distinctive tasks, such as the *fistel singer* (falsetto) and specialists in the imitation of musical instruments (*Sayt-bass*, *fagott-bass*, *fleyt-singer*, for strings, bassoon, and flute, respectively).

The use of musical instruments proper is attested in medieval Baghdad by the traveler *Pethahiah of Regensburg, between 1175 and 1190. However, this was a rare exception and restricted to the half-holidays, since the ban on instrumental music remained in force. It was only by the influence of later mystical movements that the play of instruments was employed in some 17th century Ashkenazi synagogues before the entry of the Sabbath as a token of the joy of the day of rest. Vocal performances nevertheless remained the basic characteristic of synagogue music. An incessant struggle took place in this field between older singing styles and the musical expression of spiritual tendencies that arose during the Middle Ages. This interplay of forces kept Jewish liturgical music from the petrification typical of many other traditions of religious chant.

MIGRATION AND BLENDING OF MUSIC STYLES (C. 1500–1750/1800)

The era of the Middle Ages is generally regarded as completed at about 1500. The Jews, however, were not yet relieved of the pressure that had built up during medieval times. For them the period between 1500 and about 1800 was a time of forced migrations, of many a spiritual crisis, of ethno-geographical regrouping, and the formation of new centers. The uprooting of large communities and their confrontation with new environments inevitably left its imprint on their music. The most conspicuous event was the migration of these exiled from Spain to the Ottoman Empire, Italy, and other countries, followed by a steadily trickling rearguard of *Marranos; the persecutions in Central Europe also directed a Jewish mass movement to the (then very spacious) Polish kingdom. The eastbound migrations of both Sephardi and Ashkenazi Jews share the fact that the emigrants preserved their original vernacular and their liturgical customs, as well as part of their music, and even imposed these on the local communities. In the long run, however, the musical atmosphere of the new lands permeated the intonation and scale structure of their song, while its melodic structure was affected to a lesser degree. The developments were not left to mere chance. New ideologies came into being and also became guiding stars for the forms and contents of musical expression.

[Hanoch Avenary]

The Mystical Movement of Safed

MUSIC AS CONCEPT AND PRACTICE. An ideological approach to music and its role in worship took root particularly within the mystical movement. In the mystic's world, prayer and the singing associated with it were perceived as elevating the soul to celestial realms where it could bask in the supreme glory. The mystic hears singing everywhere, in his imagination the entire universe incessantly sings the praise of the Lord, as is written in Psalm 150: "Let everything that have breath praise the Lord." Leaders of this movement claimed that music is shared by angels and the Children of Israel and is part of the music of the cosmos destined to sing the Glory of the Creator; as such it helps to establish harmony between the micro- and the macrocosmos. The role assigned to music as leading to knowledge and the constant repetition of music's revelation through mystical intention indicates, according to the Kabbalists, that music was God's creation. He created it on the third day, making angels out of his own breath to sing his glory day and night. This special attitude deriving from the cosmic meaning inherent in the kabbalist's approach to song also encouraged the use of song as an enhancement to ritual.

THE LURIANIC KABBALAH. Theories dealing with the meaning, power and function of song were, in particular, developed and given important practical application in the kabbalistic doctrine that flourished in Safed in the 16th century; this kabbalistic school had its wellsprings in the teachings of Isaac Luria, reverently called *ha-Ari ha-Kadosh* (the saintly Ari). These kabbalists, among whom were talented poets and musicians,

believed in fostering poetic and musical creativity, since they could raise the individual and help him overcome the drabness and mundane tribulations of life in this world. They believed that the heavenly gates opened to receive one who intoned a Psalm and conscientiously sang hymns and supplications. He thus became a part, so to speak, of the universal singing of the celestial angels, and of the wind that stirs the trees in paradise. The systematic thinker of this kabbalistic circle, Moses Jacob Cordovero (d. 1570) wrote: "The peoples on earth are birds of varied plumage, each with its own type of music and its own song, and no sooner does the boundless power of God descend to the lower spheres than the song of the birds is heard drawing Him through all the rooms to hear the sweet music. Their singing symbolizes the fulfillment of the Divine command, and therefore great skill is required for the birds to sing the song as it should be sung; since it is part of the sage's wisdom, this skill cannot be gained unless the sage himself teaches it to the birds" (*Shi'ur Komah*, Warsaw, 1883, par. 20–44).

MAJOR THEMES CHARACTERIZING THEIR APPROACH. It should be noted at the outset that concepts relating to the importance and virtues of music that developed in the mystical doctrine and contributed to the enrichment of the musical repertoire are so interwoven with the symbols and concepts comprising the word of the Kabbalah that it is often difficult to treat them separately.

Some of the major themes that expanded considerably and influenced the development and practice of song are the following:

(1) The sanctity of the Sabbath considered as a kind of small-scale paradise and personified as a heavenly queen imprisoned in the sky, which descends to earth once a week to dispense her holiness. This idea gave birth to a fundamental rite associated with the day, **Kabbalat Shabbat*, receiving the Sabbath with the singing of appropriate hymns, as well as the introduction of the concept, *oneg shabbat* (Sabbath enjoyment), which consists of honoring the Sabbath through engaging in pleasurable activities. This includes the three obligatory meals which are times of supreme joy and exaltation expressed by communal singing while eating, etc.

(2) The idea of rising at the midnight hour to sing became very popular. This led to the establishment of choral groups of early risers and Watchmen of the Morning to perform a sophisticated sequence of special hymns called **bakkashot* (supplications). The custom has been perpetuated up to our own days and continues to be held in great esteem.

(3) The analogy between man and the universe and the sought-after resonance and harmony between them are frequent themes in mystical speculation. It is said in this regard that everything done by the individual or the community in the mundane sphere is magically reflected in the upper region. The sublime nature of Israel's singing is related to the theme of the parallel singing of the angels, the power of this singing achieves its highest expression only when both choirs simultaneously intone the praise of God. This acquires particular

importance in the performance of the **Kedushah* – the Trisagion. This parallelism extends not only to the *Kedushah*, but implies full concordance between the singing of those on high and those below. Hence the singing of hymns on earth contributes to the establishment of perfect tuning and harmony between man and the macrocosm.

(4) Evil forces constantly obstruct the way leading to this perfect harmony meaning salvation; sacred music and prayer directed by mystical intention are the most formidable weapons in the combat for salvation.

(5) This combat is partly related to the magical power of the *shofar* and the symbolical roles it fulfills. Indeed many passages of the Zohar deal with its shape, the material it is made of, and the sounds it emits. Among the salient roles assigned to it are the dissipating of harsh divine judgment and to change its nature from punishment to clemency; important historical events in the life of the nation are associated with the sound of its blowing (the Exodus, the revelation of Sinai) as are events of the future – that is to say the redemption.

Some of the many symbols developed in Jewish mystical theories and practice, made their mark on and were bound up with daily activities of the past several hundreds years.

[Amnon Shiloah (2nd ed.)]

The democratic tendencies in the ideology of religious song gave rise to a new wave of popular and profane tunes that infiltrated Hebrew hymnody. The Sephardim had always been very fond of singing and did not lose this predilection during the bitter days of the expulsion. This is proven by the respectable production of Hebrew hymns for extra-synagogal use, written in the popular style and connected with tunes borrowed from songs in the vernacular. An early print of **bakkashot* (Constantinople, c. 1525) attests the popularity of 13 Spanish songs with the exiles from the peninsula; six of the hymns by Solomon b. Mazal Tov (printed in 1545) were to be sung to the tune of Spanish songs, 30 to Turkish, and 29 to older Jewish ones. Solomon Mevorakh's song book of 1555 refers to only ten Turkish melodies (since it was written in Greece), and 14 taken from Jewish songs, but it quotes no less than 30 Spanish tunes that obviously were familiar to his contemporaries. Among the latter are "evergreens" of the Iberian repertoire and many pieces that have since fallen into oblivion. The natural inclination of the people to sing, both in Hebrew and in vernacular tongues, received backing from a mystical idea which, suggested that every melody, even those drawn from popular or gentile sources, may become a vehicle of elated feelings.

Menahem di Lonzano preferred to compose hymns to Turkish melodies because of their ascending "to the tenth over the note *duga*" (the note D in the Persian-Arabic scale); he held that this "utmost range of the human voice," not reached by Greek, Romaniote, or Arabic tunes, was the real meaning of the Psalm verse "On the *Asor* and on the *Nevel*" (*Shetei Yadot*, fol. 141b–142a). Thus, a rabbi and mystic used his well-founded musical knowledge for imparting high flight to his hymnal

song. Religious hymns designed both for the prayer house and outside (*pizmonim*; *bakkashot*) propagated the pious mood of Safed in the Jewish world. Among the most prominent songs of this kind are: *Asadder bi-Shevaḥin* (ascribed to Isaac Luria himself), **Lekhah Dodi* by Solomon *Alkabez, *Yedid Nefesh* by Azikri, and *Yah Ribbon Olam* by Israel *Najara. The last was a very productive and inspired poet-musician gifted with a sense for musical nuances. Many of his hymns (printed between 1587 and 1600) were written to the tunes of well-known secular songs in the Spanish or Turkish vernacular, less often in Greek and Arabic.

Najara continued an older custom of providing for a phonetic correspondence of the foreign and the Hebrew text. In this manner, the singer of a gentile song was reminded of the preferred religious alternative. The manuscript of Solomon Mevorakh (Greece, 1555), for instance, shows the replacement of the Spanish song "*Alma me llaman a mi alma*" by the very similar sounding Hebrew "*Al mah ke-alman ammi, al mah.*" Najara substituted for the Arabic "*Ana al-samra wa-sammuni sumayra*" the words "*Anna El shomera nafshi mi-levayim.*" He strengthened the associative bridge still further by giving the plot of the gentile song a religious meaning. Thus the famous romance on the knight-errant Amadis becomes a tour de force of phonetic sound imitation and, at the same time, a fine allegory of Israel and God's errant glory:

(Spanish-Jewish romance)

Arboleda, arboleda,
Arboleda tan gentil,
La rais tiene d'oro
Y la rama de marfil.

(Najara)

Ḥil yoledah bi soledah
Ḥil yoledah bi soledah
Keshurah al lev bi-fetil
Al dod meni histir oro
U-me'oni me-az he'efil

(Mevorakh)

Ashorerah li-fe'erah
Azamerah na be-shir

Najara fostered music in the broadest meaning by acknowledging the union of word and tone – not as an artistic game (as did later imitators), but for the pious inspiration of the common people by ways of a musical language that was their own.

Humanism and the Renaissance

Contemporary with the era of Safed mysticism, another encounter of East and West in the field of Jewish music was initiated by the Renaissance and Humanist movements in Italy and other parts of Europe. This was an interlude in history acted out in the circles of learned scholars and before an erudite and refined audience of art music.

THE HUMANISTIC APPROACH TO LETTERS AND MUSIC. In the world of science, a direct dialogue with the authors of antiquity replaced the traditional definitions and views of the

Middle Ages. This trend extended to the Bible and later Hebrew works. Several Christian scholars studied Hebrew language and grammar, including the rules of *masorah* and its accentuation. After a short time, the students themselves wrote books on Hebrew grammar, which contained chapters on the *te'amim*, sometimes adding the music of biblical chants. Among these were Johannes Reuchlin (*De accentibus et orthographia linguae Hebraicae*; Hagenau, 1518), Sebastian *Muenster (*Institutiones grammaticae in Hebraeam linguam*; Basel, 1524), and Johann *Boeschenstein (Munich Cod. Hebr. 401). Many later writers, such as Johannes Vallensis (*Opus de prosodia Hebraeorum*; Paris, 1545) and Ercole Bottrigari (*Il Trimerone*, Ms. dated 1599) took over their notated examples. The Ashkenazi Pentateuch tunes, notated independently by several of the authors, are of very similar outlines and are based upon that same semitoneless scale which is still recognizable in the Bible chant of modern times. The renewed interest in grammar and *masorah* seized Jewish circles as well. Early in the 16th century, several Hebrew authors undertook the description of contemporary practices of biblical chant. The features of the Sephardi version were described by Calo Kalonymus (Appendix to Abraham de *Balmes, *Mikneh Avram*, 1523), and compared with Ashkenazi practice by Elijah Levita (*Tuv Ta'am*, 1538).

In the field of art proper, the open-mindedness of the Renaissance period favored the reconciliation of a progressive Jewish public with art music, especially in the small town-states of upper Italy and Tuscany. A very dry historical source – the book lists delivered to the papal censor by the Jewish families of Mantua in 1559 – speaks eloquently when stating that a certain Samuel Ariano had Zarlino's voluminous *Instituzioni harmoniche* in his library and that Isaac *Norzi possessed madrigal books of Cipriano de Rore, Donato, Stabile, and others. Two influential leaders of the Mantua community discussed the integration of art music in Jewish life. Judah *Moscato, rabbi of that town in 1587–94, preached a long sermon titled *Higgayon be-Khinmor* ("Meditations on the Lyre"), published in *Nefuzot Yehudah* (Venice, 1589). He examined the subject "man and music" under the aspects of Jewish tradition from the Talmud and Midrash down to the contemporary kabbalists, as well as with reference to the Greek and Arabic philosophers. The rabbi stressed the interrelation of the harmony found in music and the harmony imagined in the soul and character of man, striving to show the legitimacy of musical art in Judaism.

His contemporary, the physician and rabbi Abraham *Portaleone II of Mantua, wrote the book *Shiltei ha-Gibborim* ("Shields of the Heroes"; posthumously printed Venice, 1612) which may be viewed as an early attempt at biblical archaeology based on the interpretation of literary sources, in the spirit of Renaissance scholarship. The author dwells at length on Levitic song and the form and nature of its musical instruments. Outstanding Christian writers soon regarded these chapters as a "source" of Hebrew music, especially after Blasio Ugolino had translated them into Latin in 1767. Disregard-

ing its dubious informative value, this book is symptomatic of the mood governing Renaissance Jewry. Even before 1480, *Judah b. Jehiel Messer Leon of Mantua had become enthusiastic about the concordance between the Bible and ancient Greek rhetoric and other literary genres; Azariah de *Rossi took up these views, and Abraham Portaleone finally applied them to the field of music. At the time, R. Portaleone's book was likely to strengthen the consciousness of the Hebrew share in the culture of antiquity and the importance of its musical achievements.

ART MUSIC. With the partial release of external and internal pressure, a generation of gifted Jewish musicians and composers cropped up during the 16th century. They straightway were absorbed into the fervent development of Italian music, and several Jewish composers saw their works appear in the famous printing establishments of Venice between 1575 and 1628. Outstanding talents had already begun to run the social blockade early in the Cinquecento. The convert Giovan Maria, a lute player, won great fame even beyond the Alps. He successively served the courts of Urbino (1510), Mantua (tutor of the princes, 1513–15), and finally Pope Leo X (chamber musician, 1515–21) and Clement VII (1525–26). At the Gonzaga court of Mantua the harp players Abramo (Abraham Levi) dall' *Arpa and his family were appointed before 1550. They are mentioned as high-ranking musicians by the art theoretician G.P. Lomazzo (1584; 1587); Daniel Levi dall'Arpa was sent to the imperial court of Vienna between 1550 and 1560. The social situation of such Jewish musicians is understood from the fact that Abramo dall' Arpa also held a license for the ritual slaughterhouse and for moneylending in his native town; his son Daniel was granted a special passport to move freely about the country.

The first Jewish composer to see his works appear in print was David *Sacerdote (Cohen) of Rovere. His first book of six-part madrigals was dedicated to the Marchese del Vasto and printed in 1575 (until now only the *Quinto* part book has been rediscovered). For the first time the designation *Hebreo* was added to the composer's name; this became the rule with all those who came after him, most probably by decree of the censor.

The most conspicuous developments took place in the duchy or Mantua, whose court harbored composers of worldwide fame such as Monteverdi. Ensembles of Jewish actors and musicians contributed to the fervent musical life of that town, including several members of the de Rossi family ("Min-ha-Adumim"). A female singer of this family participated in the performance of one of the precursors of the opera (1608), and an Anselmo Rossi had a motet based on psalm texts printed in a collective work (1618). In 1651, Giuseppe de Rossi served the duke of Savoy at Turin. The most important musician of the family was composer Salamone de *Rossi, whose life is documented between 1586 and 1628 (see below). His works were much favored by his contemporaries, as attested by several reprints and their admission to collected editions published in

Copenhagen (1605) and Antwerp (1613; 1616). He also secured a firm place in the general history of music, especially by his progressive instrumental compositions and the early application of the thorough bass. Other Jewish composers whose works have been preserved in print were Davit *Civita (1616; 1622; 1625) and Allegro Porto (1619).

Outside Italy Jewish folk musicians were very active but were not given an opportunity to gain a footing in the ranks of art music. The relative freedom prevailing in Renaissance Italy came to a sudden end with one of the usual crises of Jewish existence. When the House of Gonzaga died out and troubles seized the duchy of Mantua, the Jewish musicians had to emigrate (most went to Venice). The prosperity of that city and its large Jewish population encouraged them to found a Jewish *accademia musicale* (concert society) called “*accademia degli Impediti*” and later on “*Compagnia dei musici*.” The music-loving R. Leone *Modena promoted their activities. Attempts were made to introduce instrumental play into the synagogue at the feast of *Simhat Torah*; but the initiators had to yield to rabbinical objections, since the organ used by them was too reminiscent of “the foreign cult.” Finally it was again a catastrophe – the plague of 1630 – that cut off the manifestations of Jewish integration in art music. Severe rabbis about the middle of the century quenched the last flickering of such intentions, but not before the first works of synagogal art music had come into existence.

EFFORTS TO ESTABLISH ART MUSIC IN THE SYNAGOGUE. From the eloquent recommendation of Judah Moscato and the delight in art music fostered in wide circles of Renaissance Judaism, it was not a far cry to welcome art music in the synagogue as well. The enthusiasm for the ancient Temple music (Abraham Portaleone, see above) suggested its reinstitution in the house of prayer. The power of conservatism and exile – conditioned humility and pessimism, however, proved hard to overcome. The power behind these progressive tendencies was Leone Modena, who, although ordained as a rabbi, was actually rather one of the errant literati and jack-of-all-trades like many a learned humanist or his younger contemporary Joseph *Delmedigo. While music was for Delmedigo a matter of science (*Sefer Elim*, Amsterdam, 1629), it was one of the 26 crafts in which Leone Modena claimed to have been engaged.

As a rabbi in his native Ferrara about 1605, he saw to the installation of a synagogue choir and to the systematical instruction of its six to eight singers in music. They performed hymns such as **Adon Olam*, **Yigdal*, **Ein ke-Eloheinu*, and *Aleinu le-Shabbèaḥ* on the occasion of feasts and special Sabbaths, “in honor of God according to the order and right proportion of the voices in the art [of music].” This innovation met with the stiff resistance of a local rabbi who held that music was prohibited in exile; but Leone Modena secured a decision of four other rabbis in favor of polyphonic synagogue singing. This document was to become the main weapon for many later attempts in this direction. It was reprinted by the progressive cantor Solomon Lipschitz in 1718, as well as

by Adolf *Jellinek of Vienna in 1861 (Ben Chananja 4, no. 27 suppl. as “topical for the still pending question of introducing choir singing in the sacred service of the Hungarian communities”). The most prominent place in which this decision was printed, and, at the same time, the recompense of Leone Modena’s efforts, was the edition in print of Salamone de Rossi’s collected synagogue compositions *Ha-Shirim Asher li-She-lomo* (Venice, 1622/23). The preface of the editor (de Modena) states that de Rossi, after his success in secular music, “dedicated his talents to God... and wrote down psalms, prayers and praises. As soon as one started singing [them], all the listeners were taken away by their ear-flattering beauty.” The wealthy Moses Sullam and other notabilities of Jewish Venice (including the editor himself) worked hard in persuading the composer to have these liturgical works published in print.

If the flowery language of this preface can be taken at face value, de Rossi’s choral works for the synagogue had already been performed from the manuscript at Mantua (possibly also at Ferrara where a Benjamin Saul Min-ha-Adumim was *ḥazzan* before 1612). The three- to eight-voiced compositions of the *Ha-Shirim Asher li-She-lomo* are not only a “first” and a solitary phenomenon in early synagogue music, they have also a particular standing within the musical work of Salamone de Rossi himself. Considering his way from the youthful freshness of the *Canzonette* (1589) down to the ripe and dramatized lyricism in his *Madrigaletti* (1628), the restraint and objectivity of his religious works becomes obvious. Rossi had no Jewish tradition of choral polyphony to start from; he could not use the idiom of church music, nor did he wish to employ his command of madrigalesque expressivity. Thus he turned to a sort of objective choral psalmody, on the one hand, and to the representative chordal columns of Gabrieli, on the other, interspersed with fine specimens of polyphonic voice weaving and a diversity of nonfunctional chords. The expressive values and musical declamation are austere, however, as compared with Rossi’s secular works. They comply with Pietro Cerone’s rules for psalm composition (*El Mellopeo*, 1613) rather than evoking the customary conceptions of synagogue style. It should be emphasized that Rossi’s compositions were intended only for particular occasions, such as “special Sabbaths and feasts,” and were not designed to replace the traditional synagogue chants.

At the Crossroads of the East and West

In the course of the 16th century, a rearrangement of the Jewish population in the lands of the Diaspora had taken place. The most important moves were the influx of exiles from Spain and Portugal into the Ottoman-ruled East and the immigration of Ashkenazim into Poland and the rest of Eastern Europe. These mainstreams of migration led to the formation of an Oriental-Sephardi and an East-Ashkenazi branch of Jewish music each developing a special character that had not previously existed.

CONSOLIDATION OF THE ORIENTAL STYLE OF JEWISH MUSIC. The obstinacy shown by the Sephardim in their cling-

Example 18. Hymn in Spanish villancico form. Poem by Israel Najara, from his *Zemiroth Yisrael*, Safed, 1587; melody as sung in Iraq, beginning of 20th century, after Idelsohn, *Melodien*, vol. 2, no. 120.

ing to the Castilian vernacular and folk song did not prevent them from yielding to the powerful influence of Oriental, especially Turkish, music. This is indicated, for instance, by the increasing use of Turkish melodies for Hebrew hymns. Musical assimilation became more spectacular when the system of **maqām* was adopted in Jewish song. Israel Najara, late in the 16th century, appears to have been the first to assign every poem to a certain *maqām*, even when he demands a Spanish folk tune for it. His *Kumi Yonah Yekushah*, for instance, is accompanied by the instruction “Tune: *Linda era y hermosa*” but, at the same time, is classified as belonging to the *maqām Ḥusaynī* (today it is sung to the *maqām Nawā*; see Mus. ex. 18) According to the Eastern custom, Najara arranged his hymns for publication in a *diwān* of 12 *maqāmāt*. The framework of *maqāmāt*, each of which also represents a certain mood or “ethos,” was imposed on synagogue song in general and extended even beyond hymnody proper. The majestic *Siḡa* became the mode for reading the Torah and all texts referring to it; the gay *Ajam-Nawruz* was used on *Shabbat Shirah*, *Simḥat Torah*, and for weddings; the mournful *Ḥijāz* expressed the mood of the Ninth of Av, funerals, and pericopes mentioning death. *Ṣabā* (“chaste love, filial affection”) was reserved for texts connected with circumcisions. The most systematic adherence to the mood conventions of the *maqāmāt* was by the Aleppo community.

Poetry books dating from the 17th century onward open the section of every *maqām* with an introductory verse or independent verses called (*petiḥah*) – an improvised vocal piece rhythmically free and highly ornamented underlining the characteristics of the *maqām* as well as the art skillfulness of the performer. The Jews of North Africa (Maghreb) adhere to the Andalusian modal system called *ṭubu* (“natures,” *maqāmāt*), which include sequences of rhythmical pieces introduced and interspersed with improvised free rhythmical short pieces similar to the *petiḥah*, which are called *Bitain* and *mawwāl* and constitute part of the prestigious compound form, the *Nuba* (see *North African Musical Tradition).

All musical characteristics quoted up to now demonstrate the progressive Orientalization of the Jews who came from the Iberian Peninsula and intermingled with the veteran settlers. However, while the melodic configuration itself came

to follow the ways of the East, some formal traits of European origin were retained such as the syllable-counting verse known from the Romance literature.

After Najara’s time, the Orientalization of Eastern Sephardi music went on both at the popular and the artistic levels. In major centers of the Muslim world Jewish musicians became powerful agents in the exchange of tunes and styles; they were also fully accepted by the gentiles and their rulers. Jewish ensembles and entertainers were active in the major cities of Morocco. The most famous of them was Samuel ben Radan’s group in Marakesh. Sultan ‘Abd al-Aziz, who ruled from 1894 to 1908, was particularly fond of Jewish musicians. In Iraq there were ensembles that excelled in the art of the prestigious *Iraki maqām* genre. In Tunisia, Iran, Central Asia, and elsewhere, Jewish musicians formed famous bands. The Turkish traveler Evliya Tchelebi describes the parade of the guilds before Sultan Murad IV in 1638: 300 Jewish musicians were led by their chief, Patakoglu, together with the famous Yaco and the *tunbur*-player Karakash; later on marched the Jewish dancers, jugglers, and buffoons. The reliability of the recorded numbers is proven by Ludwig August *Frankl, who found 500 Jewish musicians of Turkish nationality in Constantinople of 1856 forming 5.6% of all the craftsmen registered by the Jewish community.

The ranks of respected Turkish musician-composers were joined by Aaron Hamon (Yahudi Harun) late in the 17th century. Some of his *peshtref*-suites were preserved in the so-called Harpasun notation. After him, Moses Faro (“Musi,” d. 1776) and Isaac Fresco Romano (“Tanburi Issak”) won great fame in the late 18th century. Turkish art music left its unmistakable imprint on the *ḥazzanut* of that country (Mus. ex. 19), as it did also in the case of the *maḥtirim* choirs (see above) that sometimes claim dependence on the fine melodies of the dervish orders.

As to the Sephardim settling in Italy, Amsterdam, and other parts of Christian Europe, the situation was quite different. Certainly they preserved modes and tunes of an old standing, which they held in common with their Oriental brothers; there was also a steady immigration from the Eastern communities. On the other hand, Marranos escaping from the peninsula permanently reinforced the European Sephardi congregations; they were most often highly-educated people with a flair for contemporary music. The writer Daniel Levi de *Barrios (born in Spain, from 1674 in Amsterdam) mentions several newcomers to the “Portuguese community” who excelled in playing the harp and *vihuela* (guitar) or flute, as well as in singing. As these returning converts were setting the fashion in cultural life, it is not surprising that the preserved music exhibits the character of contemporary art. It was in this style that Purim plays and comedies with music were performed and cantatas were composed for *Simḥat Torah* and other festive occasions. One of the better-known composers of this style of music was Abraham *Caceres in Amsterdam early in the 18th century. De Barrios also refers to the cantors of the Amsterdam Portuguese community, some of whom re-

Example 19. Turkish style of ḥazzanut. Refrain of a pizmon by Israel Najara. The addition by the singer of words and interjections such as those shown in brackets is typical of this style of art music. Notated in Istanbul in 1936 and published by Th. Fuchs in *Ommanut*, Zagreb, 1, 1936–37, music supplement, 2.

ceived commissions from the London, Hamburg, and other Sephardi synagogues. A musical manuscript of the ḥazzan Joseph de Isaac Sarfati (mid-18th century) contains liturgical solo pieces composed in the taste of his time or directly taken over from contemporary secular works (Mus. ex. 20). It must be born in mind, however, that the ḥazzanim of that period used to write down only “composed” music of their own production or that of their contemporaries; there was no need to notate traditional melodies and recitations that every cantor knew by heart.

Traditional Amsterdam-Sephardi song as it is intoned or recorded today makes a deep but somewhat strange impression on the listener. One is tempted to say that this Oriental music is misunderstood both by singers and notators and nevertheless performed in naïve faithfulness. Further research may perhaps disclose that it was brought to the Netherlands by ḥazzanim recruited from Tunis or other Eastern areas in order to fill the vacuum of traditional song felt by the Marranos. The sound of Hebrew prayers was like a revelation to them and was faithfully preserved in spite of its displaced Oriental character. But the transplantation of Eastern music to the north inevitably ended in degeneration. That this was a slow process is indicated by a tune of a *kinah* (lament) for the Ninth of Av notated in 1775 (Mus. ex. 21): the modality, the articulation of the profuse coloraturas, and especially the attack of every new phrase after a caesura still bears the unmistakable mark of Eastern origin.

The biased character of Amsterdam Portuguese music is found in the other Sephardi communities of Europe in varying degrees. London proved more “progressive” in the direction of Westernization, while the Bayonne and other Carpentras communities preserved more of the Mediterranean character (see **Avi Avi*). Leghorn and Rome retained many a non-European feature in their synagogue songs, such as tetrachord scales, free rhythm, and the variative development of modal patterns. Side by side with this conservative attitude, the Italian congregations liked to celebrate certain holidays, weddings, circumcisions, and special events (like the dedica-

tion of a new prayerhouse) by Hebrew *cantatas written in the contemporary style. Their music was of a strictly utilitarian character and significant only for the very average taste of their respective times.

THE EASTERN BRANCH OF ASHKENAZI SONG. An uninterrupted flow of Ashkenazi emigrants poured forth to the East European countries beginning in the Middle Ages and accumulated to form the most powerful Jewish community until the 20th century. The Eastern Ashkenazim preserved their old German-Jewish idiom but developed a rich religious and secular culture of their own. The special flavor of their melodies and singing habits can be distinguished from that of the Western Ashkenazim even when the tunes are identical. The material roots of this musical evolution are uncertain. The proposed influence of the *Khazars or of Byzantine Jews is only hypothetical and cannot be proven. What remains credible is the effect of country and surroundings, just as these factors imparted a Slavic tint to the song of the German settlers in the Volga region. Such influence has been proven to alter intonation and rhythm and promote the favoring of certain modal shades, as well as supply a predominantly sentimental disposition of the singer. The Eastern Ashkenazi way of singing was first discerned at its appearance in Western Europe after the renewed migration in about 1650 caused by the *Chmielnicki persecutions. A small but steady flow of rabbis, teachers, and cantors continued infiltrating the West during the 17th and 18th centuries. Thus, in 1660, Ḥayyim Selig from Lemberg was appointed ḥazzan at *Fuerth; Judah Leib served in several synagogues of western Germany and published a critical essay entitled *Shirei Yehudah* (Amsterdam, 1696); Jehiel Michael from Lublin established, in about 1700, ḥazzanut with assistant singers in the Amsterdam Ashkenazi synagogue; a traveling ḥazzan of great fame during the years 1715–25 was Jokele of Rzeszow; and Leib b. Elyakum from Gorokhov-Volhynia was made the first cantor of the new Ashkenazi prayerhouse of Amsterdam (1730). Through the activities of cantors from Poland in the most prominent places, Western Jewry

Example 21. Oriental singing style in the Amsterdam synagogue, 18th century. Lamentation (*kinah*) for the Ninth of Av, after H. Krieg, Spanish Liturgical Melodies of the Portuguese Israelitisch Community, Amsterdam, vol. 2, 1954, 2.

was confronted with the Eastern Ashkenazi style of singing and came to like it.

Among the special features of the East Ashkenazi *hazzanut* was its emotional power, which was stressed in particular by the early writers. The chronicle of martyrdom *Yeven Metzulah* (by Nathan *Hannover) tells of the surrender of four communities to the Tatars in 1648. When the *hazzan* Hirsh of Zywtow chanted the memorial prayer *El Malei Raḥamim*, the whole congregation burst forth in tears, and even the compassion of the rough captors was stirred, until they released the Jews. A similar story was told much later of the *hazzan* Raz-

umny; his *El Malei Raḥamim*, said after the *Kishinev pogrom of 1913, has been taken over by many cantors (Mus. Ex. 22).

Common to the Russian and other East European peoples is the tendency to attribute to music a decisive power over human behavior and mode of action; the same is true of the Jews living among them. A highly significant characterization of East Ashkenazi *hazzanut* was given by Rabbi Selig Margolis in 1715 (*Hibburei Likkutim*, 4b–5a): a *hazzan* who delivers his prayers devotedly and with beautiful melodies, he holds, may stir up hearts more than any preacher. Margolis gives as an example the fact that the *hazzan* Baruch of Kalish

moved the congregation to tears by his expressive rendition of “Perhaps the feeble and miserable people may vanish” or even by the recitation of the “Thirteen Attributes of God.” In particular, during the penitential days, when he chanted the prayers that had always been the domain of individual cantorial creation (*Zokhrenu le-Hayyim; Mekhalkel Hayyim; Seder ha-Avodah*), “there was nobody in the synagogue whose heart was not struck and moved to repentance... all of them pouring out their hearts like water – the like of which does not occur in other countries that have neither melody (*niggun*) nor emotion (*hitorerut*); the *hazzanim* of our country, however, know well how to arouse penitence by their voices.” This self-assertion stresses the emotional attitude, which already distinguished Eastern Ashkenazi *hazzanut* in the pre-*hasidic* period. Since the late 18th century, the Jews of the West have called it “the Polish style.” This designation implied, *inter alia*, a certain profile of rhythm shaped by syncopes and dance-like configurations. Western cantors wrote down some early examples around 1800. It is possible that some of them reflect the practices of *hasidic* singing, such as the dance tune to the words “He redeemeth from death and releaseth from perdition” (Mus. ex. 23a); dancing is suggested here by the four-bar strains repeated with open and closed cadenzas and, especially, by the “bridge bars” between the phrases, which are also known from the *oberek* and other Slavic dances.

A minor tune of the same type (Mus. ex. 23b) embodies the full pattern of what is called “a Jewish dance.” Since it is very remote from the music written by Western cantors of the 18th century, this may also be regarded as an echo of the East Ashkenazi style.

The vigor of musical life in Eastern Europe is reflected by several historical sources. It is proved by the very restrictions that the Council of the Four Lands imposed on it. As early as 1623 this board of congregations limited the creative impulse of its cantors to three or four extended works on Sabbath day; the victims of the 1650 and 1655 pogroms were mourned by reducing the instrumental music of the wedding celebration to those ceremonies where it was regarded as essential (“covering” the bride and during the night after the wedding). The council also protected the *sheli’ah zibbur* and the beadle from arbitrary dismissal (1670). It controlled the livelihood of popular singers and entertainers (*marshalek*, **badhan*) by obliging them to apply for a special license (*ketav badhanut*).

Incipient Westernization of Ashkenazi Song

It was for good reasons that the music of the Jews from Eastern Europe was appreciated in the West as a genuine and heartwarming manifestation of the true Jewish spirit in song. Whether its special character resulted from the intense “Jewishness” of life in the Eastern countries or was the outcome of a happy merger with the melos and rhythms of Slavic music, Western European Jewry has welcomed it with a sort of nostalgic feeling down to the 20th century. Apparently it was felt to be a counterpoise to the Westernization that progressively displaced national music.

This process of Westernization started and developed first at the bordering strata of Jewish society, one of which was the substratum of folk musicians (*klezmerim*) who had ever been “wanderers between two worlds” and agents of musical exchange between peoples. Their instrumental performance

Example 22. El Malei Raḥimim, as sung by Shlomo Razummi, 1903. After A. Nadel, *EJ*, vol. 6, 1930, cols. 381–2.

Example 23. Dance-like melodies from cantorial manuals of the late 18th century. (a) After Idelsohn, *Melodien*, vol. 6, part 2, no. 20; (b) *ibid.*, vol. 10, no. 245; cf. sections C and D with sections A and B of the first melody.

was accorded a definite social function, since wedding music was regarded as a sort of religious obligation, and *klezmerim* were regularly employed at the feast of Simḥat Torah and Purim, the transfer of the Torah scrolls to a new synagogue, and numerous other occasions. Even the rabbinical authorities were willing to make special legal arrangements in order to secure instrumental performance wherever it was desired.

The folk musicians of Ashkenaz used to play the lute or form small ensembles of bowed strings, preferably two violins and a gamba. They were mostly true professionals and sometimes formed trade unions or guilds (Prague, 17th century). The more important communities put their musical capacity to full display at festival processions in honor of their sovereigns (Prague in 1678, 1716, 1741; Frankfurt in 1716). At the Prague festival of 1678 (described in a special Yiddish booklet) five of the usual string trios, cembalo with two fiddlers, a harpsichord with two fiddlers, a portable organ, two choirs with organ accompaniment, and a choir of *ḥazzanim* with their *meshorerim* (who “carried a sheet of music in their hands and pointed with the finger”) marched in procession. The many trumpeters and drummers were probably hired from the outside, but Jewish dilettante musicians played the organs and the keyboard instruments.

Splendid performances of this kind did not take place every day; as a matter of fact, professional musicians seldom found a base for a decent living in their community alone. The rule was that Jewish musicians also served their Christian neighbors, and the *klezmerim* met stiff opposition from their

Christian colleagues and their guilds. In 1651 the *arme Prager Juden Musicanten und Spielleute* had to appeal to the authorities to retain the privilege of 1640 granting them the right to play “when we are demanded by various people of rank and Christians to make music at Sundays and holidays” lest “we are bound to die miserably and to perish together with our folks” since “we poor people have to make a living of the art acquired by ourselves.” Serving a broad and diversified audience called for a repertoire that pleased wide circles. The Jews in their closed quarters thus obtained their share of popular songs and fashionable dance music, besides their traditional Jewish dances and tunes.

The musical features of *klezmer* music are largely unknown today, but there is some circumstantial evidence that the Jewish minstrels played in a kind of “hot style” of unusual scales and lively rhythms. This becomes obvious from Hans Newsidler’s parody of a “Jews’ dance” (Mus. ex. 24a) and from the scornful description by their gentile competitors (Prague, 1651) that “they keep neither time nor beat, and mockingly deprive noble and sweet music of its dignity.” It appears that people nevertheless liked the exotic spices of *klezmer* music, which may perhaps be compared with the fascination exerted by gypsy tunes.

Several old *klezmer* tunes were notated by Elhanan Kirchan of Fuerth in 1727 (*Simḥat ha-Nefesh* 2; facs. repr. New York, 1926). Mus. ex. 24b shows a Purim song obviously composed in a humorous mood. These specimens of 1727 indicate that the general trend was already directed toward

adoption of the European baroque style. A Purim *niggun* notated by cantor Judah Elias in 1744 (Mus. ex. 24c) exemplifies the inorganic linking of a traditional Jewish tune (I, G minor) through dance-like “bridge bars” (II), with a continuation in the contemporary taste (III, D minor; IV, B-flat major, modulation and *da capo*); some strains of the melody are echoed in the 1794 Purim tunes of Aaron Beer (Idelsohn, *Melodien*, 6, nos. 117–8) suggesting a common popular source. Songs in the vernacular followed the same direction as instrumental music. Although their foreign melodies were balanced by original invention, their constant use advanced the Westernization of music at the popular level.

Since the 17th century, the affluent classes had become accustomed to have their children, especially daughters, instructed in singing and instruments (cf. Jos. Kosman, *Noheg ka-zon Yosef*, 1718, 18a; Jos. Hahn, *Yosif Omez*, 1723, 89o). *Glueckel of Hameln relates that her stepsister knew how to play the harpsichord well (c. 1650). During the Prague festival of 1678, the granddaughter of the community chairman played the cembalo, and Isaac Mahler’s daughter the harpsichord. The tendency toward integration in music grew stronger among the upper classes during the late 18th century, when Rachel (Levin) *Varnhagen could report: “My musical instruction consisted of nothing but the music of Sebastian (Bach) and

the entire school [of the period].” Heinrich *Heine’s mother, Peierche van Geldern (b. 1771), had to conceal her flute (“my truly harmonious friend both in joy and grief”) from her strict father. Sara Levi, daughter of the Berlin financier Daniel *Itzig, was the last and most faithful disciple of Wilhelm Friedemann Bach (d. 1784) and preserved many of his autograph works for posterity. These developments in the upper class prepared the way for the emergence of composers like Giacomo *Meyerbeer and Felix *Mendelssohn.

The trend of integration in European music finally came to affect the broad masses of the people, and the *hazzan*, their speaker and representative, was too dependent upon the goodwill of the public not to gratify its taste. Whereas early in the 17th century only the use of foreign melodies had been protested (by Isaiah *Horowitz and Joseph *Hahn), about 1700 and thereafter the entire style of cantorial performance was challenged by practices adopted from secular music. Violent discussions about the unstable state and reputation of cantorial art are reflected in several pamphlets. The deeper reasons for this crisis were exposed by Judah Leib Zelichover (*Shirei Yehudah*, Amsterdam, 1696). The author still clings to the medieval idea that *hazzanut* should be the musical expression of mystical intentions (*kavvanot*) by means of extended vocalises; he begrudges the cantors applauded by his genera-

The image displays three musical examples, labeled (a), (b), and (c), in staff notation. Example (a) is a single staff with a treble clef, key signature of one sharp (F#), and a 2/4 time signature. It features a complex, dance-like melody with many sixteenth and thirty-second notes. Example (b) consists of two staves. The top staff has a treble clef, key signature of two flats (Bb), and a 3/4 time signature. It shows a more melodic line with some rests and a dashed line above it. The bottom staff continues the melody and includes the marking "[quasi recit.]" and "[in tempo]". Example (c) is a multi-staff piece with a treble clef, key signature of one sharp (F#), and a 3/4 time signature. It is divided into four sections: I, II (labeled "Bridge"), III, and IV. Section I has a repeat sign. Section II is a bridge section. Section III contains trills (tr) and a repeat sign. Section IV ends with a "Fine" marking.

Example 24. Characteristics of early klezmer music. (a) parody, “Der Juden Tantz,” lute piece by Hans Newsidler, 1554, after P. Nettl, *Alte juedische Spielleute und Musiker*, 64–65; (b) Purim song, after E. Kirchan, *Simhat ha-Nefesh*, part II, fol. 7r.; (c) “Purim Niggun” from the manual of Judah Elias of Hanover, 1744, no. 224, after A. Nadel, unidentified facsimile publication, Jerusalem, J.N.U.L., Jakob Michael Collection of Jewish Music, JMA 3997.

tion for neglecting the traditional mode of singing (“saying: It’s outdated and does not satisfy us”) and replacing it by their own inventions or borrowings from the opera, dance bands, of street singers.

Considering the isolation of Judaism in those days and its divorce from secular art, these declarations could hardly be called overstatement. A remedy was suggested about one generation later by the cantor Solomon *Lipschitz (*Te’udat Shelomo*, Offenbach 1718, no. 30). He also censures the ambitious individualism of his colleagues (“everybody builds a stage for himself”), which mostly turned out to be imitations of the simplest forms of music, since the cantors lacked any formal musical education. Lipschitz wishes to replace the old form of Jewish singing leaning on the lower strata of the music of the gentile environment, by more accomplished forms of art: “Making music without knowing the rules of *musica* is like a prayer without true intention [*kavvanah*]!”

The results of such ideas soon became manifest. Close to the middle of the 18th century, cantors began to use musical notation and thus began the “literary period” of Ashkenazi *hazzanut*. It was not the old and venerable traditions of synagogue song, however, which were put on paper, but rather the new compositions of the individual *hazzanim*. The earliest known document of this kind is a manuscript from 1744 written by the *Herr Musicus und Vor Saenger Juda Elias in Hannover*. After this work come the manuscripts of the most eminent cantor of his age, Aaron *Beer (1738–1821); famous as *der Bamberger Hazzan*; from December 1764 in Berlin). His collection contains both his own versions or new creations of synagogue melodies and those of a dozen contemporaries (published in Idelsohn, *Melodien*, 6). Other important manuscripts go back to *meshorerim* who also served their cantors as “musical secretaries” (Idelsohn, op. cit.).

The character of these cantorial works is defined, first of all, by its strict homophony, tailored to the needs of a virtuoso singer wishing to display his coloraturas (*lenaggen*), while the text is given a subordinate role. The structure of these compositions remains in the line of traditional *hazzanut* by developing a theme by means of variative improvisation. The resources of the basic melodies, however, are borrowed from the post-baroque music of about 1700 to 1760, often recalling the fashionable composers of that period (Monn, Wagenseil, Zach). There is little left of the strong pathos and dramatics of the true baroque, although the artistic evolution of the opening theme statement and the extensive use of sequences were imitated, as was the instrument-like treatment of the voice (Mus. ex. 25a); later in the century, some influence of the early classicists can be observed (Mus. Ex 25b).

The “new trend” of cantorial art catered to the musical taste of about 1720, but the merger of traditional and modern style was far from complete. The customary Jewish freedom of rhythm and the roving melodic line could not easily be harnessed; attempts to do so resulted in asymmetrical phrases, awkward modulation, and other flaws in conventional workmanship. Most of these cantorial compositions shared only

the platitudes and the most insipid musical idioms of the period. They were the product of a superficial connection between incompatible styles – the first sign of that dualism in the West Ashkenazi musical practice that was to become the hallmark of the 19th century.

MODERN TIMES

The Nineteenth Century

By the 18th century, conditions of life had become almost unbearable in the ghettos and crowded Jewish settlements of the continent. The protracted persecutions aimed at economic, moral, and physical ruins nearly accomplished their purpose and were balanced only by the firm belief in final redemption, unbroken self-confidence, and vital energy. The growing pressure put European Jewry on two different paths of self-deliverance, as divergent from each other as the leaders Moses *Mendelssohn and *Israel b. Eliezer Ba’al Shem Tov. Assimilation, aiming at civil emancipation, was the external way toward joining the society of an enlightened Europe; *Hasidism, on the other hand, was entirely directed toward intrinsic values and was coupled with a certain abrogation of bitter reality. Both tendencies penetrated all aspects of life and had strong repercussions on music. A specific kind of music could demonstrate a certain ideology (e.g., use of the organ in synagogue service) or be made an essential means of spiritual exaltation (the *hasidic niggun*); music became a vehicle of both social integration and spiritual escapism.

THE *ḤASIDIC NIGGUN*. East European Jewry, suffering from increasing pauperization and the incessant menace of extermination for centuries, underwent a critical disillusionment with the failure of *Shabbetai Zevi and its aftereffects. At this doleful juncture, between 1730 and 1750, arose the *hasidic* movement, with its message of delivery of the soul from its detention in the body and the troubled earthly life by its ascent to spiritual, true values, thus partaking of a higher existence. As a continuation of the mystical tenets of Safed (see above), “a joyful heart and a devoted soul learning for our Father in Heaven” were made the cornerstone of prayer, and singing became a focal point of religious experience. For the first time, music of Jewish mysticism itself becomes known and may still be heard today. *Hasidic* singing spans the entire gamut from grief and deep concern to extreme joy, from a meditative mood to ecstatic exaltation, from purposeful melodic construction to open forms or shallow banality (see *Hasidism: Musical Tradition).

THE ABSORPTION OF THE EUROPEAN ART STYLE. While the Jews of Eastern Europe decided to overcome their miseries by a spiritual divorce from the environment, those of the West witnessed Lessing declare the equivalence of religions and the French Revolution proclaim freedom and equality for all men. This atmosphere encouraged their striving for integration in a future society of enlightened Europeans and tendencies of assimilation that ranged from slight external changes to total surrender. Music was regarded as an essential part of future

Example 25. Cantorial compositions in 18th-century style. (a) *Hodu for Hanukkah* from the manual of Judah Elias of Hanover, 1744, after A. Nadel, *Der Orden Bne Briss* 9–10, 95; (b) from *Hodu for Hanukkah* by Moses Pan (before 1791), after Idelsohn, *Melodien*, vol. 6, no. 55. Both compositions use the traditional melody of *Ma'oz Zur* as a point of departure.

integration. Therefore, both tradition and acquired practices (which could barely be kept apart) were put to a test against the taste, rules, and forms of contemporary music. The prolonged prelude of this process has already been mentioned; by the 19th century, it gained sway and momentum of decisive power. As soon as the obstacles of personal advancement were removed, musicians of Jewish birth broke away from their faith, either formally or tacitly. The Jewish community suffered from a heavy drain of talent of higher and medium caliber. This incessant process principally affected synagogue music until, in the second half of the century; it became partly dependent upon immigration of cantors from Eastern Europe – not to speak of the lack of high-ranking composers.

The extent and nature of this exodus can be gauged by the numerous Jewish-born musicians who entered the fields of European art and were famous enough to merit entries in general encyclopedias. Among those born between 1790 and 1850, the most prominent categories were instrumentalists, es-

pecially virtuosos (28), and composers (21); next came singers and the scholars and pedagogues (11). Allegedly “typical Jewish” occupations are as yet clearly in the minority: conductors (6), publishers (2), impressarios (1), critics (0). A peak (60%) is formed by those born in the decade 1830 to 1839 who chose their profession about 1848, hopeful of being granted full civil rights. These forces were practically lost for the cultivation and development of the Jewish musical heritage. As to synagogue music, the impetus for immediate and drastic innovations came from a sudden turn at the political level. Napoleon wished to promote the social integration of his Jewish subjects by granting the superintendents of all communities with over 2,000 members an official status. Consequently, organized and binding changes in liturgy and its music could be enforced against the will of any opposition.

The Reform Movement. Napoleon also conferred his synagogue constitution upon some annexed countries, such as the

Kingdom of Westphalia; among them, the Koeniglich Wuerttembergische israelitische Oberkirchenbehoerde even survived his rule. These authorities gave the official and legal framework to the already existing tendencies of correcting and amending the synagogue service. The disregard of external form, dignity, and beauty was regarded by many as an abasing stigma of exile conditions. The mystical ideas and symbols that provided so much content to *hazzanut* and its coloraturas were no longer understood; the congregations had changed into an audience that expected music to evoke feelings they could not find within themselves. A small but energetic circle of extremists used the communal constitution given to Westphalian Jewry to materialize its vision of a liturgy modeled after European ideas and aesthetics. Perspicaciously, they started working with the young generation, on the initiative of Israel *Jacobsohn, court factor of Jerome Bonaparte and fervent champion of synagogue reform. The pupils of the Jewish mechanics school at Seesen were given formal instruction in music from 1804; they formed the choir and sang to the *organ installed in the prayer hall of their institution (1807). The music consisted of chorale-like melodies composed by their Christian music teacher to Hebrew and German texts. Soon afterward, Jacobsohn opened another Reform synagogue with organ and part-singing in the Westphalian capital of Kassel. Both his institutions were forced to close, however, with the end of the kingdom in 1814. The reformer and his musical assistant went to Berlin and opened a private synagogue with an organ and a boys' choir from the free school (1815). Two years later (1817), they moved to the private synagogue established in the house of Meyerbeer's father, the banker Jacob Herz Beer, where an organ with two manuals and pedal was put at their disposition. The bold innovations of liturgy and liturgical singing aroused disputes and quarrels with the conservatives, whereupon the government ordered the synagogue to be closed (1818).

Meanwhile, the Reform movement has spread to other communities. The Hungarian rabbi Aaron *Chorin published a book in defense of the synagogue organ (*Nogah ha-Zedek*, Dessau, 1818). Reform congregations had been founded at Frankfurt (Philanthropin orphanage, 1816), Hamburg (1817), and during the Leipzig Fair (a synagogue opened in 1820 with tunes composed by Meyerbeer). The Hamburg synagogue was joined by many of the local Sephardim and their cantors, was very active, and existed until 1938. Its members regarded the melodic recitation of prayers and Bible reading as opposed to the spirit of the age and replaced them by plain declamation. On the other hand, some Sephardi tunes (of the "civilized" kind favored by the Marranos) were adopted. Above all, Reform congregations created German-language hymnals on the pattern of the Protestant *Gesangbuch* (first: Jos. Joel's *Shirei Yeshurun*, Frankfurt (1816)). The Hamburg hymnal (1819, many editions) contained some melodies composed by well-known musicians like A.G. Methfessel and, later, the Jewish-born Ferdinand *Hiller.

Reform congregations, however, were generally unable to recruit composers with both stature and real involvement

with the task. The original tunes of their hymnals, mostly the products of music teachers, match the feebleness and absence of inspiration found in the texts. Furthermore, there existed an ideological impulse to integrate prayers with the Christian environment by adopting the tunes of well-known Protestant chorales. Banal new texts were connected with the melodies of Christological songs (*Sefer Zemiroth Yisrael*, Stuttgart, 1836). After all the effort, a few jewels also took root outside Reform synagogues (*Seele, was betruerst du dich*, music by J.H.G. Stoewing; *Hoert, die Posaune toent mit Macht*, poetry by Abraham *Geiger). More important are two achievements of a general nature. First, the instruction of the youth in part singing – no longer in the old, improvised manner, but of music written according to the rules of harmony – through the schools, orphanages, and seminaries spread the understanding of European music to the less-privileged classes as well. Another innovation of lasting effect was playing the organ during the service. An object of raging and never-settled debates, the use of the organ in synagogues was made a cornerstone and symbol of later liberalism against strict observance in religious matters.

The "Improved Service" and Its Music. Attempts at radical reformation of the liturgy and its music did not go beyond a certain sector of the larger communities; in the provinces, they failed almost completely. This does not imply indifference or sluggishness on the part of the majority. In fact, a more decided and massive move toward musical "acculturation" has seldom been observed. Even where the liturgical tradition was handled with caution or left untouched, the conditions prevailing in prayer performance caused much indignation. Western Jewry strove for an improvement – for a *geordneter Gottesdienst* – and this concept included the entire field of sacred song ("orderly music of the divine service"; Sulzer).

First came the renunciation of the brilliant coloratura in the cantorial solo, once regarded as an asset in its own right. By 1800 *hazzanut* was hopelessly pervaded with foreign elements (mostly baroque) and had developed as a sort of half-breed that, unfortunately, demonstrated the weak spots of both its ancestors. Independent attempts at modernization were initiated by provincial cantors (Mus. ex. 26) whose abilities and taste were not up to their exaggerated aspirations. Therefore, these experimental works were discarded by the more urbanized taste.

The changed attitude toward musical performance also wished to dispose of the usual trio consisting of the cantor and two assistant singers (*meshorerim*). The improvised accompaniment executed by the latter was to be replaced by harmonies of academic regular structure, and their solo coloraturas were to be clipped as eccentricities of an outmoded taste. Likewise, the boisterous chorus of the entire congregation lost its value as a moving acoustical experience with ancient roots and was to be silenced and substituted by well-rehearsed part singing. Such ideas and tendencies materialized during the period between the Congress of Vienna (1814–15;

disappointing the hope for emancipation) and the revolutions of 1848 that led to the admission to citizenship. In the meantime, synagogue music was remodeled according to the ideas of the “Jewish European.” Fortunately, a cadre of real talents remained after the great exodus of musicians to devote itself entirely to this task. All of them were proficient in synagogue song and were backed by family tradition in this vocation. Most of them were gifted with extraordinary voices, and some had already excelled as child prodigies; rich patronage had paved their way to studies of musical theory and instrumental playing. They were given the chance to realize their ideas on a large scale when they were between 19 and 30 years of age: the ardent idealism of youth contributed much to the breakthrough of the new trend.

Two forerunners had already set the first standards. Israel *Lovy, a cantor and concert singer with a phenomenal voice, established a four-part choir in the new Paris synagogue in 1822. The music he composed for this body indiscriminately combined the old *meshorerim* tradition and the choral style of the *opéra comique*. The other precursor of things to come, Maier (Meir) *Kohn of Munich, did not demonstrate Lovy’s creativeness when he was commissioned to establish a choir of boys and men in 1832. He had to resort to local non-Jewish musicians for choral compositions or, at least, the harmonization of melodies arranged or composed by himself and others. Kohn’s compilations, (*Vollstaendiger Jahrgang von Terzett- und Chorgesängen der Synagoge in Muenchen...*) known as the *Muenchner Terzettgesänge* (1839), became, for some decades, a vademecum for small to medium-sized communities. The compositions offered by the early proponents of the “improved service” extended to selected chapters of the liturgy and touched upon only a small part of the highly important role of the *hazzan*. Thoroughgoing changes of the whole extent of the musical liturgy were finally put into effect

by Solomon *Sulzer in Vienna (from 1826), Hirsch *Weintraub at Königsberg (1838), Louis *Lewandowski in Berlin (1840), and Samuel *Naumbourg in Paris (1845). The principles guiding the various renovators of synagogue music have much in common:

We might find out the original noble forms to which we should anchor ourselves, developing them in an artistic style... Jewish liturgy must satisfy the musical demands while remaining Jewish; and it should not be necessary to sacrifice the Jewish characteristics to artistic forms... The old tunes and singing modes, which became national should be improved, selected, and adjusted to the rules of art. But new musical creations should also not be avoided (Sulzer, *Denkschrift*, 1876).

The point of departure had to be a survey of the entire body of tunes and recitatives transmitted by oral tradition. For the first time in history, the complete cycle of obligatory or commonly accepted melodies was recorded in musical notation (until then, only the extraordinary, individual compositions and arrangements had been written down). In examining these invaluable documents, one should disregard the enclosure in bars of recitative and free-rhythmic tunes by which the notators paid tribute to contemporary usage; the obligation to fill the bars regularly resulted in shortening and lengthening of notes, and most of the ornamental passages do not disclose their deliberate *rubato* tempo.

The tendencies of “improvement, selection, and adjustment to artistic forms” (Sulzer) enter the picture at this point. They were justified for their time, however painful to the adherents of modern historicism and folklore conservation. However, personal liberty in the aural interpretation of traditional melody patterns or “ideas” had been the characteristic procedure of Jewish music at all times; it was also the duty of the 19th-century cantor, as it had been of his predecessors. Therefore it was not a fault but their right when can-

The image shows a musical score for a Minyan (prayer service) setting. It is titled "Menuetto" and is in 3/4 time. The score is written for a voice (Zinger) and piano accompaniment. The lyrics are in German and Hebrew. The vocal line is marked "Zinger mathil" and "Hazzan mathil". The piano accompaniment is marked "Z[inger]". The lyrics are: "Ba-ruk-ah ata A--do--shem e-lo-henu we-lo-he avo-ta--nu e-lo-hē lo-hē Avraham Yiz-hak ve-lo-hē Ya-a-kov ...".

Example 27. A traditional melody and its 19th-century adaptation. (a) A. Baer, *Baal T'fillah*, 1883³, no. 1158; (b) Ch. Vinaver, *Anthology of Jewish Music*, 1955, no. 23; (c) S. Naumbourg, *Zemiroth Yisrael*, vol. 2, 1847, no. 228; (d) L. Lewandowski, *Todah W'Simrah*, part 2, 1882, no. 179.

tors now followed the earlier trend toward classicism with a new trend oriented toward the early romantic style in music. Consequently, their arrangements of traditional material tend toward melodies of clean-cut outlines and logical, if possible symmetric, structures. The old modes were preferably transformed to major or minor; if the specific *shtayger* scales are preserved, they are sometimes disturbed by leading notes and other dressings of modern tonality (Mus. ex. 27). The recitatives were toned down to a rational declamation, in which melismatic figures are admitted only for scoring meaningful words or marking the clauses of the sentence.

The intended "improvement" of the cantor's part demanded a gentle touch guided by sensitivity for genuine and authentic values. A bolder approach was suited to the passages assigned to the choir. Precedents of choral performance were the *meshorerim* accompaniment of the cantor and the largely turbulent responses of the entire congregation. The traditional singing of *meshorerim* contained elements that could be rearranged to form a choral style of genuine flavor. Naumbourg, Sulzer, and Lewandowski made attempts at this. Naumbourg's arrangement of one of the *Mi-Sinai* tunes demonstrates the special features of this style (Mus. ex. 28).

The melody is given to one of the inner parts, the cantor's tenor, embedded in the chords of male voices and tender boy sopranos. The latter proceed very often in parallel thirds or sixths (both in relation to the cantor's tune and between themselves) and produce an effect similar to certain mixture stops of an organ. The basses refrain from a steady accompaniment, entering only with hummed chords at melodic vantage points or acting like a community that joins in with the cantor's prayer. There are also solo sections provided for the bass and the soprano, frequently exhibiting an instrumental character; a sweet soprano could become a favorite of the public, and many of them later became famous cantors. The resources of this original style were tapped but not developed to any importance in Western Ashkenaz, but they became preeminent in East Ashkenazi synagogue music, as shall be seen later.

The free composition of choral works in the contemporary style was challenged by still another factor—the need to give shape to the songs and responses of the congregation itself. Sulzer and Lewandowski were gifted with the inventiveness and skill for creating choir pieces of high quality. The religious element in Sulzer's music exhibits delicate feeling with a sentimental timbre, clad in simple but sweet harmonies, while Lewandowski expresses himself in a more forceful manner and avoids that common intelligibility which is apt to turn into triviality in a short while.

The first synagogue choirs were quite an experience to the congregations who had been annoyed by singing habits perpetuated by inertia alone or by barren experimentation. Sulzer's choir in the Vienna Seitenstettengassen Synagoge, was also praised by Christian visitors such as Liszt, the Abbé Mainzer, and others as both a human and musical experience. The impact of Sulzer's achievements was felt very soon by the brisk demand for his scores. Synagogue choirs were founded in Prague, Copenhagen (before 1838), Breslau, Berlin, Dresden (1840), and London (1841). Sulzer's disciples or choir singers transmitted the music of the "improved service" to the United States as well (G.M. Cohen, New York 1845; A. Kaiser, Baltimore 1866; M. Goldstein, Cincinnati 1881; E.J. Stark); their appearance antedated that of East Ashkenazi synagogue song in the Western hemisphere (New York, 1852). Cantors from the East European communities came to Vienna in order to perfect themselves with the "father of the new song in Israel" (Pinchas *Minkowski). The more important of Sulzer's Eastern disciples or followers were Osias *Abrass, Jacob *Bachmann, Nissan *Blumenthal, Wolf *Shestapol, Spitzburg ("the Russian Sulzer"), and others.

In these ways and by these men, the stage was set for musical life in the Western houses of prayer. During the second half of the century, after 1848, the liberal wing of conservative (non-Reform) synagogues added organ playing to the service order. A progressive cadre of communal leaders had decreed its admissibility during the second Assembly of Rabbis held

at Frankfurt in 1845. It was, however, a partial vote that did not oblige or convince any sworn opponent. For instance, five years before the Berlin New Synagogue was finally furnished with an organ (1866), seven rabbis were consulted; Rabbi Michael Sachs was among the opponents, Abraham *Geiger was with the advocates. In the end 74 German-Jewish communities came to have organs played at their service, according to a count made in 1933. In Russia, the first synagogue organ was installed not before 1901 (Union Temple, Odessa). Very few of the composers writing for this instrument understood its technique and spirit. Lewandowski, a pupil of E.A. Grell, was the first to produce real organ music for the synagogue.

The absorption of European standards in the musical service was paid for later in the 19th century with the weakened understanding and cultivation of the old tradition, especially of the cantor's role. The impending loss of acknowledged values was noticed in time and was averted by collecting and publishing what remained of oral tradition. Some of the related publications exhibit a remarkable sense of authenticity: outstanding is Abraham *Baer's voluminous, almost single-handed, collection, *Baal T'fillah* (1877); relatively reliable is F. *Consolo's *Libro dei canti d'Israele* (Leghorn-Sephardi tradition, 1892). Other authors who intended to create handbooks for the cantor's training imparted a little polish to the original tunes, but may still serve well for critical research (Moritz *Deutsch, *Vorbeterschule*, 1871; Meier Wodak, *Ha-Menazze'ah*, 1898; etc.). The Sephardi rite of Carpentras was noted by J.S. & M. Crémieu (1887), that of Paris by E. Jonas (1854), and a selection of London Portuguese melodies by the piano virtuoso E. *Aguilar and D.A. de *Sola (1857, unfortunately in a harmonized and metricized arrangement).

Parallel with the activities in collecting and editing, inquisitive minds strove to answer the question of the distinctive elements in Jewish music. The particular nature of the *sh'tayger* scales or modes, already noted by Weintraub (1854) and Naumbourg (1874), was demonstrated by the Viennese cantor and disciple of Sulzer, Josef *Singer in an attempt at systematization (1886). Outstanding in this first generation of researchers was Eduard *Birnbaum, Weintraub's successor at Koenigsberg from 1879. A sound Jewish education enabled him to place musical questions in the context of history and literature and achieve an unusually high level. His inconspicuous article (later a booklet) *Juedische Musiker am Hofe von Mantua* (1893) has become a classic in its field. An asset of lasting value is Birnbaum's collection of cantorial manuscripts and other source material (at present in the Hebrew Union College Library, Cincinnati); partly exploited by Idelsohn, it holds research tasks for generations to come.

The 19th century also witnessed the professional organization of West European cantors and the edition of periodicals in which the publication of source material and research had a place (*Der Juedische Cantor*, ed. A. Blaustein, 1879–98; *Oesterreichisch-Ungarische Cantorenzeitung*, founded by Jacob *Bauer, 1881–1902). In spite of all the activity and alertness in matters of synagogue song, the West European communities

were drained more and more of its musical talents, including cantorial candidates. The gap was filled by immigrants from Eastern Europe, especially after the Russian persecutions of 1882. The Western synagogues could maintain their musical standard by recruiting the often-brilliant singers originating, on a nearly equal scale, in Russia, the Baltic states, Poland, Hungary, and the neo-Prussian provinces. Finally, they outnumbered their local colleagues in the ratio of three to two. The newcomers, mostly ambitious and studious youths, learned the melodies of the Western rite with great zeal; as prescribed by Jacob Moellin (Maharil), there was no intermingling of regional traditions before 1900. Exceptions were Joseph Goldstein's enclave of Eastern virtuoso song in Vienna (1858–99), and Ḥayyim Wasserzug (Lomser), who went to London (1875) as a famous *ḥazzan*.

THE EVOLUTION OF EAST ASHKENAZI ḤAZZANUT. The breakdown of inherited musical forms in the West was the work of a few decades and generally affected synagogue and Jewish communal life, albeit to varying degrees. East European Jewry remained completely immune from the advance of the times and kept its ears shut before art music, which had now become available to the middle classes throughout Europe. The developments there, however, occurred by way of a gradual and organic evolution.

The reasons for this development in Eastern Europe must be sought both in social and intellectual conditions. The Jewish population of Eastern Europe was massed in its assigned *Pale of Settlement and bound by almost medieval restrictions. Even outstanding musical talents could find an outlet only in synagogue song or, alternatively, in popular music making and entertaining. They had to contribute their sometimes-considerable gifts compulsorily, to the musical life of their community, which was deeply concerned with all matters of music. Within that responsive musical microcosm, synagogue song represented the highest level of art; the interest and knowledgeability of the public was focused on the solo performance of the *ḥazzan* and subjected it to both relentless criticism and unconditional adulation. P. Minkowski, for example, commented:

The Odessa community was not an ordinary one, but was split in two factions, accusers and defenders... When I had sung ancient melodies known to every listener, a dispute arose on the spot... as to whether my song was in the style of Abrass [Pitche] or of Bachman, and people of venerable age also conjured Zalel [Shulsinger] up from his grave in Erez Israel in order to pitch my singing against Tzalel's... (Recollections).

Ashkenazi *ḥazzanut* represented an original and self-sufficient kind of music, comparable only with certain Oriental styles of song. Its most conspicuous attribute is its expressivity, the prayer of the community subsiding, as soon as the *ḥazzan's* voice is heard, and the mind completely identifies itself with the voice. Unlike the self-imposed restraint of the Western cantor, the aim is to produce an upsurge of religious feelings (*hitorerut*) and a strong and immediate response. The

impressive capacities of this particular kind of song are not easily described in precise technical terms. The cantorial melody develops as a strictly monodic line, with structural points of support quite different from those of European harmony. It proceeds by many small movements, creating melodic cells, which build up the body of the tune (Mus. ex. 29 and 30) Phrases composed of long-drawn single notes are

nonexistent: they appear to be dissolved into flickering. Rhythm is not confined to bars and stringent symmetry, but is as free as in the music of the Oriental ancestors and relations of this style. Melodies are often shaped to *shtayger* scales; modulations are rather frequent and a proof of mastery, like the Oriental singers' shifting from *maqām* to *maqām*. Another archaic element is still in full vigor: the principle of variation

Example 29. Eastern Ashkenazi ḥazzanut, c. 1800. Introductory prayer to the confession of sins on the Day of Atonement, by Solomon Weintraub (Kashtan), as notated from oral translation by D. Roitman, after G. Ephros (ed.), *Cantorial Anthology*, vol. 2, 1940, 135.

Example 30. Eastern Ashkenazi *hazzanut* with “singer” soli, c. 1990. *Retzeh*, by Aryeh Lev Schlossberg (1841–1925), after G. Ephros (ed.), *Cantorial Anthology*, vol. 4, 1953, 368–9.

governs both the melodic cells at every instance of recurrence and the whole structure of a piece. Often a cantorial composition contains a “double course” of the same section – first as an original statement and then as a variation of the same (Mus. ex. 29). At times, the work is composed of melodic cells arranged without any apparent order (Mus. ex. 30) exactly as the ancient *nusah* style demands (see above).

One of the rules of *hazzanut*, however, is that there is no rule of adhering to one plan or the other: expression is the element, which counts. The expressive intention is overwhelming: it dissolves the form of the underlying poetic text past recognition; single words may be repeated over and over (Mus. ex. 30), in spite of halakhic prohibition; emotional exclamations intermingle and long coloraturas expand certain syllables, in particular towering above the penultima at the end of compositions. These traits may appear exaggerated to a taste accustomed to classicist restraint, but they are capable of the most suggestive presentation of sentiments, mostly in the pitiful and lachrymose mood (the expression of joy being channeled mostly through imitations of foreign song). The *hazzan*’s voice plays on a variety of sound colors, complemented by a high falsetto (in the old contralto manner) and prefers techniques such as the gliding passage from tone

to tone, slowly entering trills, and other characteristics of an advanced vocal culture.

The development of East Ashkenazi *hazzanut* is known only since its early 19th-century protagonists, whose exploits and compositions had been preserved in the memory of their congregations and disciples. Besides, regional schools and stylistic subdivisions, such as the Jewish-Lithuanian, Ukrainian, etc., a parting line is recognized between an older, “classical” *hazzanut* and a younger style influenced by Western art music.

The “classical” stage is represented in the communities of the Ukraine and Volhynia by the impressive personalities of Bezalel *Shulsinger (“Tzalel Odesser”), Yeruham *Blindman (“Yeruham ha-Koton”), Yehezkel of Zhitomir, and Solomon *Weintraub (Kashtan). The old style was perpetuated by Israel Shkuder (1804–46) and Nissan *Spivak (“Nissi Belzer”). To judge from the small part of their music preserved, the early cantors did not indulge in the excessive coloraturas and superficial tricks preferred by the later synagogue singers. In Lithuania and Poland, the old style was upheld by Sender *Polachek of Minsk, who excelled in particular melodic formations (Sender’s *shtayger*), and his disciple Baruch *Karlner, a master of spontaneous improvisation “when the spirit dwelled upon him.” Galicia and Hungary had David’l

Strelisker (“Dovidl *Brod”), who assumed the airs of a noble dilettante and would not give in to the modernistic tendencies of the Budapest *chor shul* of 1830.

The first waves of Sulzer’s musical reform reached Eastern Europe promptly and impressed both singers and ambitious community leaders. Cantor Nissan *Blumenthal of Odessa was the first to adopt Western ways by cultivating a smooth bel canto style. Some went or were sent to Sulzer himself in Vienna (see above). Others acquired their formal education in Eastern Europe, such as Joel David Strashunsky (the “Vilner Balabess’l”) with Moniuszko in Poland, and Jacob *Bachmann with Anton Rubinstein in Russia. The “Westernizing” *hazzanim* limited the influence of art music to choral composition, while the solo parts of their own were left almost untouched. In general, choral composition kept to the *meshorerim* style, touched up with more regular harmonic sequences; but those who were tempted to introduce fugues or other musical devices of advanced academic training also inserted showpieces of artful elaboration indiscriminately. In addition, their works frequently reflect the fascination exerted by Rossini and other idols of the day. The so-called choral synagogues soon brought forth specialists in choral leadership and composition, such as A. Dunajewski, Eliezer *Gerovich, and David *Nowakowski. Their creations do not lack touching moments, but are “conductors’ music,” incompatible with the strong and style-conscious works of their older contemporary Nissan *Spivak (“Nissi Belzer”).

Research in traditional Jewish music was taken up by cantor Pinchas *Minkowski, one of the prominent *hazzanim* who left for the West. Immediately before the mass emigration of star cantors, the splendor of Ukrainian *hazzanut* flashed once again with Solomon *Razumny.

The Twentieth Century

At the beginning of the 20th century, the specific kind of music inherited by European Jewry had no good expectations. The spiritual and social landslides in the West had buried the characteristic features under the quicksand of fashionable tastes, leaving the original outlines barely recognizable. The traditional solo style, still fostered in the East, drifted toward brilliant but shallow display and mingled with the first attempts in formal artistry. The musical situation reflected

the general conditions of European Jewry during the period. A major part of the Jewish musicians seemed to have been integrated into the gentile environment as composers and performers; nevertheless, they were looked upon as outsiders by society.

Even the most liberal individuals referred disparagingly to these Jewish musicians. *Moscheles was referred to by Schuppanzigh in a letter to Beethoven in 1823 as “this Jewish boy”; H.A. Marschner in a letter to his wife referred to the “Jews’ music fabrication” while *Tausig is referred to as “the little Jew” (Esser to the publisher Schott, 1861). They vary from the single reference to descent (with certain overtones) to the blunt identification of Jewish musicianship with the negative elements in art (a point driven home in Richard Wagner’s pamphlet *Das Judentum in der Musik* (1850) and accepted by certain composers from Pfitzner’s standing downward). The keen observer Heinrich *Heine held (1842) that Jewish-born artists, *Mendelssohn among them, were characterized by “the complete lack of naiveté; but is there, in art, any ingenious originality without naiveté?” He obviously intended to ascribe a certain degree of mannerism to their works of art. The general validity of this sweeping statement is not easily proven; but the greatest Jewish talents did go to the extreme boundaries of stylistic means or sentiment, as if they were looking for an indefinable something that would bestow ultimate perfection upon their creations. Arnold *Schoenberg has demonstrated (*Style and Idea*, 82–84) how Gustav Mahler probed into the subconscious and unknown in his last major work of 1911 (Mus. ex. 31), “An extraordinary case, even among contemporary composers, is the melody from *Abschied*, the last movement of Mahler’s *Das Lied von der Erde*. All the units vary greatly in shape, size, and content, as if they were not motivic parts of a melodic unit, but words, each of which has a purpose of its own in the sentence.”

The free rhythm of this truly “talking” passage; its construction by means of addition, instead of subordination of elements; and even certain melodic idiomatics have a familiar ring to an ear trained in Jewish singing and belonging to a sphere of sound forms which includes Jewish music. A similar structural affinity is also found with the “principle of permanent variation” that governs the formation of Schoenberg’s serial compositions from the early 1920s onward. It was, how-

Example 31. Gustav Mahler, *Das Lied von der Erde*, opening melody of the last movement, “Abschied” (“Parting”), singled out by Arnold Schoenberg for its unique melodic character (see A. Schoenberg, *Style and Idea*, 1950, 85–86). Music, courtesy Universal Edition Vienna.

ever, a far cry from the visionary and subconscious achievements of the great masters in the open field of pure music and the practical solutions demanded for applied music, such as synagogue song, which had to cope with tradition and habitude. But its composers also felt the need to express Jewish identity much more strongly than in the past century. The first obstacle to be overcome was their estrangement from the genuine sources of inspiration; moreover, these sources lay buried under much debris.

THE COLLECTION AND EXAMINATIONS OF THE INHERITANCE. Gathering and transcribing the oral tradition of synagogue song had begun in the Western countries during the 19th century and was almost completed by the end of that era. This labor and the incipient research had been the work of cantors personally involved in maintaining the vocal traditions. It became the task of the present century to approach the material under broader aspects and, above all, to extend its scope to the Oriental Jewish communities. The decisive step was taken by Abraham Zvi *Idelsohn (1882–1938), a disciple of Eduard Birnbaum – who imbued him with the inquisitive and historical approach to tradition – educated at German conservatories and in the principles of the Leipzig school of musicology.

The impact of Idelsohn's publications made itself immediately felt in general musicology, especially in Plainchant research (Peter Wagner, *Einfuehrung in die Gregorianischen Melodien* 3, 1921; frequently borrowed and repeated in later research). The reaction of specialized Jewish research came with the confrontation of European and Oriental music in Israel. A wave of re-recording and extensive or intensive surveying swept over the fields of folklore, now widened beyond expectation by the "ingathering of the exiles" (from 1948). These activities form a base for present research, in addition to historical and liturgical studies by modern methods. The integration of Jewish music in the general history of music (especially its comparative branch, foreshadowed in Curt *Sachs' writings) is close to being accomplished.

Parallel to the research in Jewish Oriental song went the collection of musical folklore in the European communities. The collection and transcription of these treasures began about 1900. It was not necessarily in the wake of Herder's ideas on folk song and national character that the Warsaw watchmaker Judah Leib *Cahan began his famous collection of folk song texts and music in 1896 (published from 1912); rather he felt the waning of his Jewish world so lovingly described in I.L. *Peretz's and *Shalom Aleichem's novels. The menace came from secularization (*Haskalah) and the attraction of the Russian big cities but it was the progressive and assimilated circles themselves that approached Jewish folk music with the methods of ethnomusicology. In 1898, the writers Saul *Ginsburg and Pesah *Marek initiated a collecting campaign of folk song texts (published 1901), and the critic and composer Joel *Engel began noting down Jewish folk tunes. Their motivation sprang from the conscious acceptance of the national

trend in music, already realized by the Czechs, Spaniards, and the Russians themselves. Texts alone were still published by Noah Prilutzki (1911–13); but music was the foremost issue in the phonograph recordings of "expeditions" sent to the countryside by the *Petrograd Society for Jewish Folk Music and Baron *Guenzburg in 1912–14 (under the direction of S. *An-Ski). The output of Edison cylinders found its way into Soviet archives in Kiev, and the recordings were transcribed and published in part by M. *Beregovski.

After World War I, An-Ski's Jewish Historical-Ethnographical Society took over (1925–39) and published the first volume of its *Muzikalisher Pinkas* (1927, ed. A.M. *Bernstein). Only a fraction of its members as well as some of their collections reached the United States and set up the YIVO Society, New York, among others. Yiddish folk song found warm and intelligent attention there (such as the collecting activity of Ruth *Rubin). Several smaller anthologies, like those of Menahem *Kipnis (Warsaw, from 1930) and Fritz Mordecai Kaufmann (Berlin, 1920) were instrumental in deepening the appreciation of Ashkenazi folkways in song.

The development was quite different as regards the Judeo-Spanish folk song of the Sephardim. The first texts, published by A. Danon in 1896/97 (REJ, 32–33), aroused the interest of historians of Spanish literature (see Romancero Musical Tradition).

THE REVIVAL OF NATIONAL VALUES IN MUSIC. The idea of imprinting a "national style" on art music of nonreligious description came late to the Jewish composers. It sprang up in Russia, but not from those composers who were linked to traditional or folk music (M. Dulitzki, D. Kabunowski, A.M. *Bernstein) and had set to music the Hebrew lyrics of the Haskalah and *Hibbat Zion authors. It cropped up, rather, within the thin layer of gifted students paying their precious admittance to metropolitan conservatories by complete assimilation. They were either unaware of their people's special singing style or ashamed of it and did not follow the model of the national trend in Russian music, from Glinka to Musorgsky. The impulse had to come from the outside. In St. Petersburg in about 1902, Rimsky-Korsakov used to refer all his non-Russian students to their folk music. He also urged the Jews among them to cultivate their "wonderful music, which still awaits its Glinka" (according to *Saminsky). In a similar way, the young critic Yuli Dmitrevich (Joel) *Engel of Moscow was aroused to think of his cultural identity after having been asked point-blank by the mentor of the Russian national school, Vladimir Stassov: "Where is your national pride in being a Jew?" (according to Jacob *Weinberg). Many of these Jewish musicians, born between the 1870s and 1890s (the generation of Scriabin and Stravinsky), had little inner relation with living folk and traditional music (except for the few who had been disciples of cantors, such as E. Shkliar, M. *Gnesin, S. *Rosowsky). Saminsky, *Milner, *Zhitomirsky, *Achron, Lvov, and *Engel became enthusiasts of folk song collecting and arranging.

The rediscovered treasures were quickly brought before the public in unsophisticated arrangements for concert performance. Engel presented his folk song arrangements at concerts of the Moscow Ethnographical Society as early as 1901–02. The Petrograd Society for Jewish Folk Music (1908–18) had a statistically splendid record of concert performances. Its publishing house, Juwal, produced 58 works of 16 composers up to 1914, in addition to Engel's numerous songs and a collective songbook for schools. The results were sound craft-productions but not creative art. In consequence, the works of the National School did not gain ground beyond a certain sector of the Jewish audience. Talents like Joseph Achron struggled tragically for the fusion of Eastern-rooted Jewish and Western art music. The important problem of connecting self-sufficient melodic lines and modal (anti-harmonic) structures with harmonies was not solved; experiments went on in the tracks of Balakirev and Mussorgsky and later with the application of sound shading à la Debussy.

A short Russian spring after the October Revolution promised a new efflorescence of national aspirations in art. Hebrew and Yiddish theaters (after having been banned since 1883) were founded (*Habimah, 1917; Vilna Troupe), and gave a fresh stimulus to Jewish composers. In fact, the latter's performances were at their best with incidental music such as Engel's *Dybbuk Suite* (op. 35), or A. *Krein's music to I.L. Peretz' *Night in the Old Market Place*. But very soon Jewish national art was dispersed for political reasons and its exponents went westward. After a short rallying in Berlin (about 1920–22), they made their way to the United States or Palestine. Others rode the tide and became useful members of the Soviet musical establishment (M. Gnesin, A. Krein, A. *Veprik).

Those who remained in Central Europe continued the national trend. The Juwal publications of music were transferred to Vienna and carried over to the new Jibneh series (closed in 1938). This group of composers did much to foster the conscience of Jewish identity in the Western communities (J. *Stutschewsky, A. *Nadel, J.S. Roskin, and singers like cantor L. Gollanin); they also became closely associated with the Zionist movement.

The earlier delegates of the National School who went to Palestine left only a superficial and transitory imprint on local art development because of their inflexible views and frozen stylistic traits; but a few representatives of the old guard, such as J. Engel and J. Stutschewsky (from 1938) played important roles in musical life.

The massive immigration of Jewish composers and musicians to America was quickly absorbed in the well established communities of East Ashkenazi extraction with their own music theaters, choral societies, and virtuoso star cantors. Members of the National School such as Lazare Saminsky, Joseph *Yasser, and others became important organizers of both sacred and secular music. They remained indebted to East Ashkenazi folk song or the styles based upon it, as can be seen, for instance, from the proceedings of the Jewish Music Forum (New York, from 1939) and similar institutions. The

hope of deriving a universal Jewish style from that particular sector, with a directness bordering on imitation, is still nurtured by composers who have not experienced the pluralism of forms brought together in Israel – especially the Oriental components.

The production of Jewish music in America was well appreciated within its own small province of well-disposed listeners, but it did not conquer the general and international audience of the concert halls. This was accomplished by those few Jewish composers who were gifted enough to assimilate tradition and folkways to their own language and make them part of a profound expression of musicality. They are represented by Ernest *Bloch, Darius *Milhaud, Arnold Schoenberg, and Leonard *Bernstein – each in his own, highly individual way. A new leaf in national music was turned by the generation of composers who witnessed the reestablishment of the Jewish state in Israel (for the artistic problems to be overcome and the ideas and tracks followed by them, see *Israel, State of: Cultural Life).

NEW WAYS IN SACRED MUSIC. The trend in art-music of Jewish orientation was from the display of an upgraded Ashkenazi idiom to a more universally understood language. This language was the common musical vernacular; it also encroached upon liturgical music, but did not altogether supersede the traditional style. The contribution of the 20th century to synagogue song must therefore be evaluated in the light of the development of East Ashkenazi *hazzanut* in the West. It is true that the image of this original art has been marred by virtuosity for its own sake, the search for external effects, flattering the tastes of an indiscriminating public, and by the inroads of the record industry. The field is too wide and variegated for generalizations, however, and any judgment should orient itself to the outstanding accomplishments. The development of East Ashkenazi *hazzanut* in the United States was initiated and furthered by immigrants from about 1880 until the end of World War II. Earlier arrivals, such as *Minkowsky and Samuel *Morogowski (“Seidel Rovner”), were followed by Joseph *Rosenblatt, David *Roitman, Moses (Moshe) *Koussevitzky, and many others, who continued the traditional personal union of performer-composer. From the ranks of this generation, Zevulun (Zavel) *Kwartin (immigrated 1920) created and published works that can be taken as models of progressive *hazzanut* (Mus. ex. 32)

The most evident mark of this purely single-voice composition is the coloratura. Although it includes some recurrent patterns, these appear in no way as merely decorative adornment and avoid the brilliance for the sake of brilliance displayed by J. *Rosenblatt and others. The ornament often underlines the sense and expressive contents of the text, sometimes recalling the old cantors' musical *kavvanot* (mystical “intentions”). Coloraturas are affixed to points of internal or external tension, concentrating on the essential, while the intervening, preparatory words may be passed by with a certain indifference. Kwartin claimed that he absorbed “genuine

The image shows a musical score for a piece in Eastern Ashkenazi style. It consists of four staves of music. The first staff begins with a treble clef, a key signature of one flat (B-flat), and a 3/4 time signature. The melody is characterized by a series of eighth notes, often grouped in threes. The lyrics are written below the notes, with some words underlined. The second staff continues the melody, and the third staff shows a change in the key signature to two flats (B-flat and E-flat). The fourth staff concludes the piece with a double bar line. The lyrics are: "Ha-ben ya kir, ha-benyakir li e-fra yim im ye led sha'ashu im... wetiten lanu hayim, hayim aru-kim, ha yim shel shalom, hayim shel to-va, hayim shel bera kha..."

Example 32. Eastern Ashkenazi style *hazzanut* from the United States. Two compositions by Zavel Kwartin. After Z. Kwartin, *Zmiroth Zebulon*, vol. 1, 1928, nos. 35 and 18.

Oriental formulations” during his stay in Palestine (1926–27), and took them as a model for his compositions (*Zmiroth Zebulon* 1, preface, 1928). He succeeded in combining the two related musical styles and paved the way for a revival of the venerable, but outworn, art of *hazzanut*.

This sphere of music, well circumscribed by tradition, barely raised the problem of harmonic accompaniment or choral harmonies; the latter was left to the usual semi-improvisatory *meshorerim* style, with the spontaneous congregational responses. However, where the service followed the Western trend of part singing and eventually came to include the organ accompaniment of choir and cantor, the problem of harmony became acute. Out of dissatisfaction with the solutions propounded during the 19th century, three specific questions – old and new – came to the fore: how to harmonize melodies of an unharmonic conception, by what means to replace romanticism in synagogue composition, and how to write choral tunes inviting the participation of the congregants. Since there was no ready-made solution, the demands of the various communities had to be met by trial and error. From the 1920s, American synagogues did much to encourage the search for solutions of this problem, by sponsoring the composition of complete services or sections, often according a great measure of freedom to the composer.

The initiative in composing new synagogue music was taken by immigrant adherents of the National School, such as Lazare Saminsky (in the U.S. from 1921) and Joseph Achron (from 1925). Previously, these had dealt with the folkloristic manifestations of sacred song, or, occasionally, with single pieces of concert appeal; now they had to adopt a modern musical language appropriate to the Jewish service or, at least, had to modernize the traditional idiom (a venture quite legitimate in the flexible ideological framework of Jewish music). They understood that they should abandon the well-trodden ways of romanticism as well as the feeble “edifying” style and

obtrusive sentimentality (“to vitriol away the ‘cello sentimentality’ of Messrs. Bruch, etc.”; A. Schoenberg on his *Kol Nidrei* version, letter to Paul *Dessau, 1914). Saminsky, for instance, consciously renounced the plaintive *shtayger* scales in favour of what he called “the beautiful and majestic major and Aeolian minor of Hebrew melodies” (*Sabbath Evening Service*, preface, 1926). He drew much inspiration from the motive stock of Ashkenazi biblical chant and its basically pentatonic structure (*ibid.*, ch. 36). He has the Sabbath Psalm 93 sung to a tune derived from the motive-chains of Bible reading (Mus. ex. 33). The effect is an unusual relaxed expression of joy, Jewish in substance, but completely divorced from the perpetual tension of *hazzanut*. The composer evaded the problem of harmony by prescribing the unison of choir and organ.

Lazar *Weiner, too, relied upon pentatonics (Mus. ex. 34a), but in a more schematic way and took some of his inspiration from the earlier Israel song composers (Daniel *Sambursky, Marc *Lavry). Russian-born Isadore *Freed, educated in America and in France with Vincent d’Indy, approached the problem of harmony by employing the subtle, somewhat pallid, chords of late French romanticism (Mus. ex. 34b).

The harder line of the “expanded tonality” featured by Ernst *Toch or Hindemith, with its tonal flexibility and harsh harmonies, had a refreshing influence on modern synagogue composition: here was an antithesis to romanticism, and a certain affinity to the antiharmonic elements and heterophonic performing habits of the earlier synagogue. Heinrich *Schalit applied some of these topical principles to his *Sabbath Eve Liturgy* (Munich, 1933; revised ed. New York, 1951), using several original Oriental-Sephardi tunes (e.g., the radiant ecstasy of the *Kedushah* in Idelsohn’s *Melodien* 4, no. 41). A remarkable, but isolated, progress toward a synagogue choral style was made by American-born Frederick *Jacobi in one of his later works. The harmonies brought forth by the four-part choir have been severed from functionalism; the doubling of the

Example 33. Choir tune developed from motifs of biblical cantillation. From L. Saminsky, Sabbath Evening Service, op. 26, 1930.

voices serves rather for the acoustical strengthening and coloration as known, in principle, from *meshorerim* practice. The voices go in unison at one time and move apart at another, as in the natural heterophony of a praying congregation; there are also reminiscences of choral psalmody.

Perhaps the most prolific innovator was Hugo Chaim *Adler, cantor and disciple of Toch. When still in Germany, in Mannheim, he recoined the concept of Brecht-Hindemith's ethical cantata to the ideas of Buber's *Juedisches Lehrhaus*. After escaping to the United States in 1939, he gave a new shape to the musical service and community life of his Worcester, Massachusetts, congregation (synagogue compositions 1934–52; cantatas 1934–48). Drawing upon the same techniques as Schalit and Jacobi, Adler was more consistent in stressing the specific Jewish elements. Traditional features such as *shtayger* modality, and restraint to the musical essentials endow his works with character and stature.

The specimens quoted so far may demonstrate some important trends and achievements in adapting contemporary musical language to the synagogue. Among the considerable number of commissioned works are the liturgies of L. Saminsky (1926), J. Achron (1932), Darius *Milhaud (op. 279; 1947), and L. *Algazi (1952). In a different category are the para-synagogal cantatas and prayer arrangements with obligatory orchestra accompaniment that are suited to concerts or meetings of religious or national celebration; this class is represented by the important works of Ernest *Bloch (*Avodat ha-Kodesh*, 1930), which was commissioned for a Reform synagogue and which entered the concert repertoire, and Arnold Schoenberg (*Kol Nidrei*, 1938). Selected prayers were set to music, on the commission of prominent communities, by Leonard Bernstein (1946), Mario *Castelnuovo-Tedesco (op. 90; 1936), Lukas *Foss, Morton *Gould (op. 164; 1943). Alexander *Tansmann (1946), Kurt *Weill, and others. The composers' names suggest the wide range of schools and individual styles employed but do not guarantee a degree of personal involvement and familiarity with the actual demands of the service. At any rate, the publication of new synagogue compositions, both on the traditional and the decidedly contemporary line, is growing in number, the output of the 1960s exceeding by far that of the 1950s. The impact of modern tendencies on synagogue music as a whole is checked, however, by the differences of approach to liturgy and service which form part of more comprehensive principles and ideological controversies. A new factor has been added to the question of conservatism or progress in sacred music by the meeting and clash of widely differing ritual and singing cultures in Israel. The most ancient funda-

mentals of Jewish song form the only common ground left for any synthesis that may be in the offing.

[Hanoeh Avenary]

FOLK MUSIC

It is today acknowledged that differences between folk music and art music, and what is called "popular music," are not clearly defined. However, major features are usually noted as characteristic of folk music. It is transmitted orally from mouth to ear and learned through listening rather than through written notated documents. This suggests that the music can change when passed from one individual to another depending on the memory and creative power of the performer and the measure of acceptance in the performer's community. Gifted individuals who gave of the fruits of their poetical and musical talents frequently borrowed familiar pre-existing melodies and made new songs out of them. In many cases the names of the composers were forgotten and the compositions became anonymous. Folk song, primarily rural in origin, is functional, meaning that it is associated with other activities; yet it also exists in cultures in which there is a technically more sophisticated urban musical tradition and where this cultivated music is essentially the art of a small social elite.

As a whole, these and other characteristics are hardly applicable to the complex web of Jewish musical traditions, which have been rooted in many and diverse cultures through the long years of dispersion where alien traditions impinged on Jews wherever they resided. Viewed as a unit they represent a multiplicity of idioms, simple and more sophisticated musical styles in which the sacred and secular overlap. Considered separately, each tradition has numerous forms of expression, being partly folkloristic in character and partly drawing upon the sophisticated art of the surrounding environment. Thus, for instance, non-Jewish art music from the surrounding culture insinuates itself into the Oriental synagogues and other forms through the the art music spread through the areas under Islamic control, which in itself, despite its considerable sophistication, is based on oral transmission.

Another characteristic that sets Jewish musical traditions apart from other musical traditions is the use of Hebrew as a common language and the recourse to the same corpus of sacred classical texts for reading from biblical books and the liturgy. This has created a special blend of highly varied musical lore transmitted orally from generation to generation and written textual lore that operates as a unifying and stabilizing factor.

Although Hebrew is dominant and shared by all Jews in the religious hymns enhancing events marking the cycle of life and the Jewish year, extra-synagogal music displays a complex and diversified idiomatic picture in both language and music.

Celebrations of circumcision, the bar mitzvah, and weddings usually consist of two musical parts: the distinctly paratiturgical, which is almost indistinguishable from synagogue music, and what may include an almost unlimited use of secular music from the surrounding society, including instrumental accompaniment, despite the fact that musical instruments continue to be banned inside the synagogue. The accompaniment is often no more sophisticated than simple rhythm instruments but professional singing and playing is often included. One famous example out of many instrumental entertainers is that of the *klezmerim*. This represents a purely oral tradition, with its practitioners true professionals who, although of relatively low social status, are often given an important place in social life and public events.

The musical manifestations found in the various Jewish communities that have exclusively or predominantly folk elements are associated with the aforementioned events; at other times it focuses on the private life of the individual.

There are times when the singing has a defined function, but it may also be entirely dissociated from any specific happening. Individuals may express themselves in lyrical song even if there is no apparent relation between the song and whatever evoked the urge to sing. The themes and contents of the songs are as extensive as the range of occasions that inspire them. Generally speaking they encompass events associated with (1) the Jewish calendar such as Sabbath songs (*zemirot*), the Purim plays, the Passover Seder and the like; (2) general festive gatherings such as the songs of *hillulot* or pilgrimage to the tombs of saints. Among those whose holiness has been recognized by the entire nation the outstanding figure is certainly Simeon bar Yoḥai, whose grave at Meron attracts great masses from all Jewish groups. One can add to this category the celebrations of the **Maimuna* by the Moroccans and the *Seherane* by the Kurds; (3) The third category and undoubtedly the richest concerns the life cycle. A person's lifetime, from birth to death, is filled with a succession of outstanding occasions, many of which are celebrated in song and dance. A new element enters the scene here, one that is totally nonexistent in synagogue singing: women take part and even create texts that are performed in suitable circumstances and on occasions have unique reference to their world, some being

considered their exclusive province, such as cradle songs and dirges (see below).

WOMEN'S FOLK MUSIC

The phenomenon of women singing for other women on various occasions was undoubtedly a way of circumventing restrictions engendered by religious and social bias that limited their public musical activities and their participation in synagogue rituals. Women are also circumscribed by the talmudic injunction to the effect that "hearing a woman's voice is an abomination," which was interpreted as a prohibition against their singing in public. In his extensive response to the Jews of Aleppo concerning the lawfulness of music, Maimonides, the prominent religious authority, included among the major prohibitions "Listening to the singing and playing of a woman."

All this seems to have encouraged the emergence and crystallization of songs with unique values and characteristics, as women singing for other women became a way of getting around these prohibitions. In their songs women can express their world of experiences and the Jewish and human values they uphold. The songs seem to have been a form of release through which they could express – even if only to themselves – those experiences and aspects of their lives that were special. They also often included Jewish ethical instructions, reaction to public and political events, as well as various communal happenings.

The song's texts have a broad thematic scope: comments on important historical and current events; songs of religious character, which are in the form of translations or paraphrases of biblical stories; the life cycle from birth to death with special emphasis on the wedding and its colorful attendant ceremonies; lyrical songs that accompany a woman when she is alone, when doing housework, when remembering the bitter experiences in her life, her troubles, complaints, and dreams, whether in a lullaby or a song of love or jealousy. There are also humorous and satiric songs like the songs of curses ostensibly meant to entertain women by introducing a light atmosphere.

With few exceptions, women's songs are in the language and Jewish idiom spoken locally. Their singing falls within the realm of oral tradition and consequently their songs are usually not fixed in permanent form so that gifted women can exhibit their creative ability by adding verses of their own or by rearranging the material they include in their repertoires.

The songs are sung in public on occasions of a folk nature either by a group of women or by one individual with a good voice. There are also professional performances by female musicians who are specialists in specific genres; particularly notable is the performance of funeral laments and dirges, which are considered the province of women who excel as keeners. Professional performances, much like of those of men, are given by one or two specialists – the main singer and her "assistant." They are usually performed in responsorial form and the women accompany themselves on the most

characteristically feminine instrument, the frame drum. This phenomenon goes back to ancient times; one finds such instances in biblical stories like that of Miriam the prophetess in the Book of Exodus.

There are also female ensembles that enhanced women festivities such as the professional singers called *tañaderas* (drummers). This is a group of three women who sing and drum and are well versed not only in the musical repertoire but in all the customs. Another, larger all-female ensembles is the *daqqaqat* (drummers) in Baghdad, which at one time was a Jewish ensemble comprising four to five women beating various drums (frame drum, kettle drums, two-headed drum). The leader of the band was noted for her fine voice and, being a talented performer, she was the soloist.

From a musical standpoint, are the women's songs different from those of the men? Reflecting on the sexual aspect in the development of music, the prominent musicologist C. *Sachs wrote in *The Rise of Music in the Ancient World*: "If singing is indeed an activity of all our being, sex, the strongest difference between human-beings must have a decisive influence on musical style ... woman's influence was particularly strong in shaping the structure of melody" (1943). Another great figure, composer Bela Bartok, who studied the folk songs of Hungary, Romania, and elsewhere, noted in his "Essay on the Collecting of Folk Music" (1976) the uniqueness and archaic nature of women's singing. He was of the opinion that an ancient stratum of song was reproduced therein because in the traditional societies they had little contact with the external world.

In recent decades, great interest in the subject has arisen, particularly in the United States and Canada, with deepening focus on gender as an analytical category in music research. In the realm of Jewish music, one should note in this respect Ellen Koskoff's article: "The Sound of a Woman's Voice: Gender and Music in a New York Hasidic Community," which has been included in the collection essays of which she is the editor: *Women and Music in Cross-Cultural Perspective* (1989).

In this context, it would be interesting to briefly draw attention to the phenomenon of the emergence of a professional class of talented Jewish women musicians by the beginning of the 20th century. These artists gained prominence and recognition as outstanding vocalists and creative artists in Muslim societies in a broad cultural region extending from Central Asia to the major centers of North Africa.

[Amnon Shiloah (2nd ed)]

ART MUSIC IN MODERN ISRAEL

Musical life in the *Yishuv* and in Israel has always been dominated by dialectical contrasts. In the broader spheres of musical activity, each Jewish ethnic group conducted intensive daily musical activity within its traditional community life, ruled by the yearly and life cycle. Such activity was inherently compartmentalized and intended only for members of the specific group (as may still be observed in the older, Ortho-

dox neighborhoods of Jerusalem). By contrast, the national ideology – first carried forward by the Zionist movement and then as an official policy of the State of Israel – activated a drive for national unification around common values, most importantly the revival of the Hebrew language. In the case of music the national ideology was expressed in the endeavor to create a new and inherently national style of folk, popular, and art music, which acted as a powerful unifying social agent, including social gatherings in contexts of music making and concert activity. At the same time, the immigrants from Europe were reluctant to discard their rich cultural heritage. The immigrants from Europe were thus dominated by the dialectical conflict between the Vision of the East and the Heritage of the West.

Within the narrower sphere of art (concert) music and concert life, the maintenance and practice of European music – whether as active music making at home or in passive attendance of concerts – played a paramount role in softening the trauma of immigration and resettlement. By contrast, composers, strongly guided by the Vision of the East, endeavored to create a new, intrinsically national Israeli musical style. Reaching beyond a blurred vision to actual musical parameters proved a nearly insurmountable obstacle, which composers have been struggling with to the present day.

THE YISHUV PERIOD

Music was second only to the revived Hebrew language as a powerful agent in the creation of a unified, national culture in the *Yishuv* and in Israel. As the most sociable art, it had the power to bring people together, mostly for singing folk songs at work and in leisure time, but also for group performance and for passive listening.

Transplantation of Music Institutions

The Jewish immigrants from Europe took the momentous step of transplanting the European institutional model to the social setting of the *yishuv*. In 1895 a community orchestra was founded in the early settlement of Rishon le-Zion. It was a well-organized amateur wind band with a paid conductor, which took part in all festive and social functions of the settlement (including playing at the historical visit by Herzl in 1897). The model was soon adapted by all other settlements, such as Petaḥ Tikvah, as well as in the Jewish community of Jaffa. All of the orchestras were grouped under the rubric “Kinnor Zion” (the Violin of Zion).

The German-born singer Shulamit Ruppın founded in Jaffa in 1910 the first music school (named after her upon her untimely death in 1912). The Shulamit School maintained a pure German curriculum, with individual instrumental instruction of violin, piano, and voice, theory classes, and a student chorus and orchestra. The first director was the versatile violinist, conductor, and concert manager Moshe Hopenko, who also owned a music store and imported pianos to Palestine. The school stimulated lively interest with an unexpectedly large enrollment. Shulamit Ruppın founded a branch in

Jerusalem, which soon became an independent school. The Shulamit School served as model for additional music schools such as Bet Leviim (Levite House) in Tel Aviv and Conservatoire Dunya Weizmann in Haifa.

The horrendous hardships of World War I dealt a heavy blow to all musical activities of the *Yishuv*, yet recovery after the institution of the British Mandate in Palestine was strikingly quick, especially due to the renewal of Jewish immigration. In 1923, conductor Mark Golinkin made the daring step of founding the Palestine Opera, which lasted against all economic odds for four seasons. Golinkin presented mostly mainstream operas such as *La Traviata*, *Otello*, *Faust*, and *The Barber of Seville*. Yet he placed special emphasis on operas by Jewish composers, with Meyerbeer’s *Les Huguenots*, Halevy’s *La Juive*, and Anton Rubinstein’s *The Maccabees*. The performers were fine singers, mostly from Russia, and the productions enjoyed full houses. Yet the lack of funds, which did not allow a proper orchestra and chorus, and the bad physical conditions of performances in badly equipped movie houses plunged the opera into deep financial crisis and it collapsed in 1927. Between 1941 and 1947 composer and conductor Marc *Lavri established the Folk Opera, which presented operettas, occasionally accompanied by two pianos. Yet the Folk Opera also pioneered the first production of a local opera, Lavri’s *Dan ha-Shomer* (“Dan the Watchman”).

There were several short-lived attempts in the 1920s to form symphony orchestras, such as conductor Max Lampel’s extremely popular outdoor concert series in Tel Aviv. The performances of these groups attracted large audiences, which showed that they answered a deep need among the immigrants to maintain their connection to European art music. But these were ad hoc ensembles that recruited musicians at their miserable venues in cafes and silent movie houses, and no regular orchestra could emerge from such initiatives.

A European quality prevailed in the unique Chamber Music Association founded in Jerusalem by cellist Thelma *Bentwich-Yellin and her sister, violinist Marjorie, in 1921. They performed full seasons with their fine string quartet, including an all-Beethoven series, as well as concerts by piano trios, piano recitals, and baroque ensembles.

The most significant developments occurred in the 1930s with the Fifth Aliyah, which was called the German Aliyah. While most immigrants in the 1930s came from Poland, the Fifth Aliyah effected a major cultural change in general and in music in particular in the *Yishuv*, due to the high musical standards of the Jews who came from Central Europe (Germany, Austria, and countries strongly affected by German culture such as Hungary and Czechoslovakia). The so-called German immigration brought to Palestine not only well-trained composers, performers, and music teachers but also a discerning audience.

The Palestine Orchestra

The momentous act which violinist Bronislaw *Huberman undertook in founding the Palestine Orchestra (later the

Israel Philharmonic Orchestra) in 1936 was of paramount importance in placing musical activity in Palestine on a high international level. Huberman's original vision was to turn the Jewish community of Palestine into an international center replacing what he considered "the declining West." The rapid deterioration of conditions in Europe made him take the emergency step of establishing a first-class philharmonic orchestra. He obtained the consent of the British Mandate authorities to grant entry certificates to the musicians he auditioned in Europe from among the fine Jewish instrumentalists who had been fired from their orchestras by the Nazi and Fascist managements. In this way he saved scores of musicians and their families from the Holocaust. The Palestine Orchestra was inaugurated in December 1936 with a concert, which served as a national celebration, conducted by the legendary Arturo Toscanini, who turned it into a powerful, internationally publicized anti-Nazi demonstration. The best international conductors and soloists followed Toscanini and performed with the orchestra, most of them gratis, and in this way it maintained the strict professional standards, which Toscanini had demanded. The core of the repertoire was the mainstream Classic-Romantic symphonic repertoire, but the orchestra also performed almost every new orchestral composition composed in Palestine. The members of the orchestra also founded fine chamber music ensembles and provided high-level instrumental instruction to children.

The Palestine Conservatoire

In 1933 violinist Emil *Hauser founded the Palestine Conservatoire in Jerusalem, with a large faculty of over 30 teachers and a comprehensive curriculum for most instruments as well as classes in composition, history, and theory in addition to instruction in the Arabic *'ūd* given by Ezra *Aharon and courses in non-Western music given by Edith *Gerson-Kiwi. The conservatoire also initiated advanced professional studies. Hauser received 70 certificates from the Mandate authorities and in this way saved the most brilliant young Jewish music students from the Nazis. The conservatoire gave rise in the mid-1940s to the Academies of Music in Jerusalem and Tel Aviv, which have continued to be the leading professional music schools in the country.

The Palestine Broadcast Service

In March 1936, the British founded the Palestine Broadcast Service, which alternated broadcasts in Arabic, English, and Hebrew. The Music Department included a large chamber ensemble, which soon became the radio orchestra, later the Jerusalem Symphony. The Music Department also initiated an ensemble of Arabic instrumentalists and singers headed by Ezra Aharon.

Bridging East and West

Pioneer individuals made the first attempts. The great researcher Abraham Zvi *Idelsohn (1882–1938) settled in Jerusalem in 1907 with the original vision of rediscovering the original chant of the ancient Hebrew Temple through thorough

fieldwork which would reveal elements common to all Eastern ethnic groups, Arabic music, and Plainchant. Idelsohn's hypothesis was that the groups of Jews in the Middle East, such as in Yemen and Babylon (Iraq) were barely influenced by the neighboring Arabs, unlike the European Jews whose liturgical chant and music were strongly imbued with Western influences. Idelsohn selected Jerusalem as the center of his activity since it presented to him a unique concentration of all Jewish ethnic groups in one location. Idelsohn's ambitious project could not be realized, yet he did extensive and unprecedented fieldwork, using the newly-invented Edison phonograph. The first volume of his monumental and influential *Thesaurus of Jewish Melodies*, the one including the Yemenite chants, was published in 1914. The travails of World War I and the lack of public support made his life in Jerusalem unbearable and in 1921 he left Palestine and settled in the United States, where he continued his monumental *Thesaurus*.

In 1924 the researcher and collector Yoel *Engel moved the center of activities of the Society of Jewish Folk Music, founded in St. Petersburg (1908) and briefly domiciled in Berlin (1922), to Tel Aviv. His main project was the publication of hundreds of Jewish folk songs, which he and his colleagues had assembled, as cheap sheet music, easily available. His project was curtailed by his untimely death in 1927.

Proceeding from the East westwards, singer Bracha *Zefira (1910–1990) started a unique project. Born to a Yemenite family, she was orphaned in childhood and raised by foster families of different ethnic origins, registering in her superb memory scores of traditional songs. After studies in Jerusalem and Berlin, she initiated in 1931 public concerts of songs of diverse ethnic Jewish and Arabic groups with improvising pianist Nahum *Nardi, which revealed the wealth of Eastern traditions to Western-educated concertgoers. From 1939 she commissioned arrangements from most local composers, deliberately using piano and Western chamber ensembles, as well as performing with the Palestine Orchestra. The Yemenite composer, singer, and choreographer Sara *Levi-Tanay made a lasting contribution to Israeli folk song, with her *Kol Dodi* and *Ali Be'er*. In 1948 she founded the *Inbal Yemenite Dance Company. The Yemenite singer Shoshana *Damari was one of the most important performers of the newly-invented Israeli folk song, having frequently performed with composer Moshe *Wilensky at the piano.

The Yemenite artists effected a major change in the self-image of Yemenite women in Palestine and Israel and were pioneers in the liberation of the Yemenite woman from her traditional boundaries.

Composition, First Generation

About 30 composers immigrated from Europe between 1931 and 1938. Most of them were of German origin and had finished their studies also in Germany. A smaller group originated from Eastern Europe, most of whom did their advanced studies in Paris. Having never met before, they did not coalesce into any "school." The often mentioned concept of a so-

called “Mediterranean School” is misleading. Each composer responded to the powerful internal and external ideological pressure in an individual way. Moreover, most composers found ways to compose in different idioms and techniques at the same time, thus maintaining their Western heritage on the one hand and trying to find links with the East – whether ethnic or imaginary – at the same time. Such was Stefan *Wolpe (1902–1972), who remained dedicated to the powerful expressionism and dodecaphonic technique of *Schoenberg in his orchestral and piano works (1935–38) while composing at the same time simple settings of modern Hebrew poetry for voice and piano and arrangements of folk songs for kibbutz choirs. Wolpe’s avant-garde approach was not accepted in Jerusalem and in 1939 he emigrated to the U.S. All other major immigrant composers overcame the immigration trauma and initiated intensive activity in creation and instruction in Tel Aviv and Jerusalem.

The only person who produced a clearly defined ideology was Alexander U. *Boskovitch (1907–1964), who demanded that the Israeli composer acts as a *shali’ah zibbur* representing the collective and responding to the local “static and dynamic landscape,” i.e., both the visual and acoustical scenery of the country, especially the sound of biblical and modern Hebrew as well as Arabic. Boskovitch created the regional concept of “Mediterranean Music,” according to which Jewish music from Europe had nothing to do with the future Israeli national style. Boskovitch turned to the sonorities and the melos of Arabic music, but stressed the difference between “the Jewish and the Arabic shepherds.” Boskovitch systematically realized his ideology in his early works, the Oboe Concerto (1943), *Semitic Suite* (1946), and *Adonai Ro’i* (“The Lord is my Shepherd,” 1943).

The other composers never subscribed to his ideology, and the term itself was quoted only once, by Menahem *Avidom, in his *Mediterranean Sinfonietta*. Still, all composers responded to the ideological call of the Vision of the East. Most characteristic was the substitution of modes (in the romantic sense of scales with no leading tone) for the Western major-minor tonal system. Erich Walter *Sternberg (1891–1974) rejected all external ideological pressures and in his introduction to his large-scale *Twelve Tribes of Israel* (1938) he proclaimed his commitment to the inner call of a composer to respond to new surroundings in his own individual way. His language was deeply ingrained with late Romanticism, especially under the influence of Brahms, Bruckner, Reger, and *Mahler. Joseph *Tal (1910) repeatedly declared that the very fact of his being a composer creating in the social and cultural environment of Israel would shape his music in a new way. Tal insisted on staying abreast of new developments in Western music. A concise illustration of Tal’s attitude is found in the second movement of his Piano sonata (1952) in which an ostinato quote of simple, modal melody by his friend Yehudah *Sharett serves as the basis for a series of extremely chromatic and dissonant variations. The prolific Paul *Ben-Haim found his own manner of proceeding in simultaneous tracks. He produced over

30 arrangements for Bracha Zefira, whose melodies he later quoted and interpreted in his large scale works, such as the Clarinet Quintet and his two symphonies. In his early piano works he resorted to naïve, romantic depiction of imaginary Eastern pastorals, whereas his First Symphony (1940) is a powerful artistic response to the horrendous first months of World War II, with strong Mahlerian influences. Ben Haim also initiated the genre of the Hebrew Lied, setting great poetry by Bialik, Rachel, Sh. Shalom, and Leah Goldberg. In his *Sabbath Cantata* (1940) Mordechai *Seter made a strongly personal synthesis of melodic quotes of Baylonian Jews from Idelsohn’s Thesaurus, cast in a combination of contrapuntal Palestrina style and 20th century modal-dissonant harmony. Marc *Lavri (1903–1967) departed from the ideology of creating an easily accessible, tuneful, and popular style, which would obliterate the dividing line between folk and art music, as in his extremely popular Emek (Jezreel Valley) song which he developed into a folk-like symphonic poem. Lavri was the first to incorporate the Hora dance into chamber and symphonic music (the Palestinian Hora has nothing to do with the Romanian Hora Lunga; it is a dance cast in regular, brief phrases in common time, with constant syncopations, and it came out of ḥasidic dance).

During the last two decades of the British Mandate period the immigrant composers created a large repertoire of symphonic, chamber, and especially piano music, as well as songs, which was the basis of Israeli art music.

AFTER THE FOUNDATION OF THE STATE OF ISRAEL

Institutional Expansion

By the time the State of Israel was proclaimed in 1948 the institutional and ideological musical infrastructure had been established. The Palestine Orchestra was renamed the Israel Philharmonic Orchestra, which continued to be the leading representative ensemble of Israel, attracting large subscription audiences. Concert life evolved in the direction of expansion and diversification. Orchestras were formed in Haifa and Beersheba. In 1972 the small radio orchestra was expanded and became the Jerusalem Symphony.

Soprano Edis *de Philippe founded and directed the Israeli Opera from 1948, but financial difficulties and abrasive personal relations hindered its progress for more than 30 years. New municipal orchestras emerged such as in Haifa and Beersheba. The first wave of immigration from the Soviet Union in the early 1970s made possible a significant expansion of the radio orchestra, which as mentioned became the Jerusalem Symphony. Direct initiatives of the government, other than providing for limited financial subsidies through the Public Council for Culture and the Arts, were realized in a few large-scale ventures, most importantly the establishment of the annual Israel Festival in 1960, which from the start introduced some of the foremost international artists such as Pablo Casals and Igor Stravinsky to the Israeli audience. Once every few years the State of Israel has granted the prestigious Israel Prize to composers and performers.

Following the demise of the Israeli Opera following de Philippe's death, a new opera company was founded in 1985 with a new house erected in Tel Aviv. The New Israeli Opera (later named The Israeli Opera) soon reached high professional standards and brought about a significant change on the Israeli musical scene, collaborating with major opera houses in productions of operatic masterpieces. It started a project of commissioning new operas from Israeli composers, the first of which was Tal's *Joseph*.

The large wave of immigration from the former Soviet Union after 1990 effected an unprecedented expansion of the community of professional musicians, leading to the founding of several new orchestras, foremost among them the Rishon le-Zion Symphony (which is also the opera orchestra) and the Ra'anannah Orchestra.

Musicological Research

The immigration of the ethnomusicologists Robert *Lachmann and Edith (Gerson) Kiwi in 1935 initiated a highly productive period of field research, now preserved and digitalized at the Sound Archives of the Hebrew University. The Music Department of the National and University Library and the Center for Jewish Music Research, founded by Israel *Adler, initiated studies and publications and became the world repository of archives of Jewish and Israeli music. The first Department of Musicology was founded at the Hebrew University in 1965, with scholars doing high-standard historical and ethnomusicological research, including extensive field work and recording in the ethnically extremely diverse Jewish and Arab society in Israel, among them ethnomusicologists and historians Amnon *Shiloah, Ruth *Katz, Dalia Cohen, and Don *Harran. This was followed by musicology departments at Tel Aviv University (1966) whose faculty included Edith Gerson-Kiwi, Herzl *Shmueli, and Judith Cohen, and Bar-Ilan University (1969) with Bathia *Churgin, Uri Sharvit, and Judith Frygesi on the faculty.

Composition, Second and Third Generations

The founders of Israeli music persisted in their individual ways of coping with the expectations of critics, fellow musicians, and the composers themselves for a new Israeli style to emerge as a fusion of east and west. After the long period of isolation during wartime, the country was reopened to the west and composers renewed direct contacts with new music, such as when Haim *Alexander (1915) participated in the Darmstadt workshops, interpreting the serial techniques in his personal way (*Sound Patterns* for piano) while retaining folk-like modal tuneful writing such as in *Nature Songs*. Mordekhai *Seter developed an extremely individual synthesis of Eastern chant and primeval dissonant harmony, combined with direct quotes of traditional Yemenite tunes in his monumental *Midnight Vigil*. Paul *Ben Haim persisted in simultaneous tracks, ranging from the daring adoption of Arabic melos and sonorities in his *Sonata a tré* for mandolin, guitar, and harpsichord, to the dense contrapuntal texture of his *Metamorphoses* on a Bach Chorale, written a year apart (1967–68). Joseph Tal com-

posed dramatic, innovative symphonies, and founded the first studio of electronic music in Israel, his work there culminating in the opera *Metzada* for singers and magnetic tape, and the large-scale vocal work *Death Came to the Wooden Horse Michael* to a poem by Nathan Zach.

The second and third generations of composers included Ben-Zion *Orgad, Zvi *Avni, Yehezkel *Braun, Ami *Maayani, Noam *Sheriff, and others. They all received their initial training under the founders of Israeli music, but then went abroad for advanced studies. Their styles branched in new directions of increased pluralism. Yehezkel Braun always maintained flowing tuneful melodies, even in his dodecaphonic works, Orgad found his inspiration in the rhythms and sound qualities of the Hebrew language, whether biblical or modern. Avni established his own individual synthesis of Eastern declamation and rich Western atonal harmony, such as in his powerful *Meditations on a Drama*, and Maayani likewise turned to syntheses of Arabic maqams with Western counterpoint, such as in his tense and dramatic String Quartet.

New waves of immigrations, such as from the Soviet Union in the early 1970s, further diversified Israeli music. Mark *Kopytman (1929) found his own strongly personal heterophonic technique with strong influences of Eastern music, such as in *Memory*, which is a complex orchestral interpretation of a traditional Yemenite song which opens and closes the composition, and of traditional Jewish prayer chant of Eastern Europe such as in *Beyond*.

The younger generations of composers further diversified the extreme pluralism of Israeli music, in response to the increasing diversification of Western music since the 1970s. Haim Permont (1950) turned in his powerful opera *Dear Son of Mine* to a direct commentary and critique of painful issues in contemporary Israeli society. The endeavor to achieve a synthesis of Jewish traditions continued and reached its peak with Betti *Olivero (1954–), whose rich repertoire presents a strongly personal interpretation of Jewish Eastern, ḥasidic, and Sephardi traditions within advanced Western harmonic techniques.

Since the 1980s several composers have achieved new breakthroughs in Arab music, strongly influenced by the contemporary emergence of "World Music." Ensembles combining Arab and Western instruments such as Bustan Avraham with the *ūd* and violin virtuoso Taisir Elias were founded, and the Music Academy in Jerusalem opened a department for applied study of Arab music. Composer Tzipi *Fleischer (1946–) undertook full academic studies of Arab music and culture and composed vocal works to classical and modern Arabic poetry, culminating in her *Hexaptichon* – six versions of the same composition moving from a powerful Arab rendition to a purely Western version for two pianos. Michael Wolpe (1960) combined the *ūd* and Arab drum with a string trio and the voice of a Persian-born singer in his poignant *Songs of Memory*. Wolpe also turned to nostalgic evocation and commentary in the style of early instrumental and folk music, such as in his Piano Trio no. 3 "On Israeli Songs."

The musical scene was further expanded with the large-scale immigration from the former Soviet Union in the 1990s, especially with a group of composers coming from the Central Asian republics, such as Joseph *Bardanashvili and Benjamin Yosupov (see below).

Interest in the performance of contemporary music was stimulated through the regular performances of three fine ensembles: Musica Nova, The Ensemble of the Twenty-First-Century, and Caprizma.

(See also "Israel, State of: Culture Life – Music and Dance.)

[Jehoash Hirshberg (2nd ed.)]

Immigrant Artists

The wave of over one million immigrants from the former Soviet Union since 1989 brought to Israel a great number of musicians. To the 1,500 active professional musicians in Israel, another 5,500 arrived from the U.S.S.R. Some of them went back to their countries of origin; some moved on to other countries, and some even changed their professions. Those who continued their careers in Israel changed the musical life of the country. They were employed in existing orchestras, chamber ensembles, and ballet troops, founded new orchestras (the Israel Symphony Orchestra of Rishon Le-Zion, Camerata Jerusalem, the Hed Big Band of Tel Aviv and others). They have also filled pedagogical positions at academies and conservatories. New concert halls were built for some of these orchestras, like those in Rishon le-Zion and in Kefar Shmaryahu. Concert life has also been enriched by the performances of new soloists. The most noted among them are the singers Susanna Poretsky, Felix Lipshitz, and Yuri Shapovalov; pianists Raimonda Sheinfeld, Irena Berkovich, Dinna Yoffe, Gabriela Talrose, and Evgeny Shenderovich; jazz-pianists Viacheslav Ganelin and Leonid Ptashka; violinists Maxim Vengerov and Sergey Ostrovski; cellists Mikhail Homitzer and Oleg Stolpner; clarinetist Evgeny EHUDIN; bassoonist Alexander Fain; harpist Julia Sverdlova, and others. Many of the new artists appear as guests in concerts.

As many as 50 new composers from the former Soviet Union have joined the existing 150 members of the Israel Composers' League. The musicians imported a variety of styles, from followers of "socialist realism" to followers of Gubaidulina, Kancheli and other representatives of the Russian post-modernism. Among the post-modernists, the highest achievements were attained by Josef *Bardanashvili, who in a few years won the most prestigious Israeli awards and became one of the leading composers (especially in the fields of theater and film scores). His piano composition was selected as the compulsory piece at the 2005 International Rubinstein piano competition. Even though he spent only his last years in Israel (from 1994), Valentin Bibik (1942–2003) had significant achievements and produced important new works. The composers who came from the Asian republics of the former Soviet Union also had interesting achievements combining the elements of modernism and post-modernism along with a variety of local musical elements from their regions. In

Israel, Jewish elements were added (Yusupov, Pigovat, Davydov, Fel, Perez, Freidlin, Heifets). Most of the composers from this group display a growing interest in Jewish themes. Many new compositions have been written in the "Jewish style." In most cases it is only a simple rearrangement of popular Jewish melodies. However, some composers have created remarkable works (Bardanashvili, *The Children of God*; Yusupov, Sonata for Two Pianos).

Among the winners of the Klon Prize for the best young Israeli composer are also some newcomers: Benjamin Yusupov, Karel Volnianski, and Uri Brener.

In the field of electro-acoustic music, the most noted newcomer artists are Marcel Goldmann (from France) and Simon Lazar (from Bulgaria). Among the musicologists, Marina Ritzaeva and Yulia Kreinina achieved the best works.

[Dushan Mihalek (2nd ed.)]

MUSIC AND THE HOLOCAUST

Life during the Holocaust, the suffering of the Jews under the Nazi regime, has been reflected in music and musical life. Musical performance created venues to express humanity under inhuman conditions, it was a way to escape from reality, a way to find comfort and hopes and express freedom.

Shortly after the Nazi rise to power in 1933, the regime established a central office to control all musical activity in Germany. The composer Richard Strauss was appointed its president, and the conductor Wilhelm Furtwangler his deputy. All Jewish professional musicians in Germany were dismissed from their posts and works of Jewish composers were banned. Many of them immigrated to Palestine and the U.S. and resumed their careers there.

In July 1933, Jewish performers set up the Kulturbund Deutscher Juden (Cultural Society of German Jews) for promoting music and the arts among German Jews. In its eight years of existence the Kulturbund organized over 500 concerts of opera, operettas, symphonic and chamber music, Jewish cantorial music, and other genres. When the Kulturbund could no longer function, some of the musicians left Germany while others were sent to ghettos and concentration camps and continued to perform there, like those at the Theresienstadt (Terezin).

During the war, there were public musical activities in some ghettos as well as performances for private occasions where people sang, played, and even danced. Street performances were known in some ghettos, such as Lodz, Warsaw, and Cracow, where several singers performed songs, some of them composed ad hoc, on ghetto life while others were set to pre-composed melodies. One of the popular street performers in the Lodz ghetto was Yankele Hershkowitz (1910–1970).

Professional musical performance was censored and controlled by the authorities; however, the freedom to sing and compose music could not be controlled or censored totally. Thus music became a symbol of freedom. In Warsaw, Adam Furmanski (1883–1943) organized small orchestras in cafés and in soup kitchens. In the Warsaw ghetto a symphonic orchestra

played until April 1942, when the German authorities put an end to the orchestra, punishing it for having performed works by German composers. In Lodz, the Jewish Council chairman, Mordechai Chaim Rumkowski, centrally directed musical activities. The community center organized musical and theatrical performances, a symphony orchestra, the Zamir choral society, and a revue theater appeared on its stage. In the Cracow ghetto, chamber music recitals and concerts of liturgical music were performed. The Vilna ghetto had an extensive program of musical activities, with a symphony orchestra and several choirs. A revue theater presented many popular songs composed in the ghetto on ghetto life. A conservatory with 100 students was established in the Vilna ghetto.

Many songs were heard in the ghettos – some old, perhaps with new words, and some new. One of the first anthologies of songs was published in 1948, under the title *Di Lider fun Getos un Lagern* (“Songs of Ghettos and Camps”), which was collected and edited by the poet, teacher, and partisan from Vilna Shmerke Kacerginski (1908–1954). The anthology contains 236 songs (lyrics) and 100 melodies. However, many songs were lost forever.

Among the best-known songs composed and performed during the Holocaust are songs of the Vilna Ghetto “*Zog nit Keymol*” (“Never Say”), also known by its postwar title “Song of the Partisans,” written by Hirsh Glik (1922–1944) to a melody of Russian composer Dimitry Pokrass; “*Shtiler, Shtiler*” (“Quiet, Quiet”) with words by S. Kacerginski and music by the 11-year-old Alexander Volkoviski (*Tamir; 1931–); “*Friling*” (“Spring”), words by S. Kacerginski, music by Abraham Brudno (1910(?)–1943), and “*Yisrolik*,” words by Leyb Rozental and music by Mischa Veksler (1907–1943). Songs of the Vilna ghetto inspired the writer Yehoshua *Sobol in his play *Ghetto*, which made the songs popular in many languages around the world. Many of the Vilna ghetto theater songs became songs of remembrance and are still performed in commemoration ceremonies, mainly in translation, especially in Hebrew and English. The songwriter Mordecai *Gebirtig (1877–1942) from Cracow wrote another song “*Es Brent*” (“It Burns”) that became popular during the Holocaust and afterward. The song was written in 1938 under the impact of the pogrom in Przytyk and became a prophecy of the Holocaust. It became after the war a symbol for the fate of the Jews in Eastern Europe.

Those who became partisans composed songs in a variety of languages, which were performed mostly in group singing. Some of the partisan groups also used an instrument for accompaniment. The best-known partisans’ songs from Vilna gained fame thanks to the collection work of Kacerginski.

Many songs performed and composed in the camps were popular prewar songs in a variety of languages and were not transmitted from one ghetto to another. However, after the war, at the DP camps, songs were also transmitted and were shared by Holocaust survivors.

In the Theresienstadt ghetto, where professional composers as well as classical and jazz musicians were interned,

many compositions were created and many musical pieces were performed. Viktor Ullman (1898–1944) composed there three of his piano sonatas (No. 5, Op. 45, 1943; No. 6, Op. 49, 1943; No. 7, 1944), String Quartet (No. 3, Op. 46, 1943), three songs for baritone and piano, and arrangements of songs for choir. His last piece, the opera *The Emperor of Atlantis*, was never performed, and Ullman was sent to the gas chambers in Auschwitz in August 1944. In the same transport, his colleagues Pavel Haas (1899–1944), Hans Krasa (1899–1944), and Gideon Klein (1919–1945) were also sent to Auschwitz. Gideon Klein composed in Theresienstadt a Piano Sonata (1943), Fantasia and Fugue for string quartet (1942–43), Trio for violin and cello (1944), Two Madrigals (1942–43), and arrangements of folk songs. One of the more memorable performances was of the children’s opera *Brundibar* by Hans Krasa (1899–1944) (in Czech), which was composed in 1935 and performed in the ghetto with a children’s choir, soloists, and piano. Hans Krasa also composed a Theme and Variations, based on Brundibar’s song for string quartet (1942), Songs (1943) for baritone, clarinet, viola and cello, Dance (1943) for trio, Passacaglia and Fugue for trio, and more. Other composers interned in Theresienstadt who composed there were Zigmund Schul (1916–1944), Erwin Schulhoff (1894–1942), and Carlo S. Taube (1897–1944), who was also a singer and conductor.

In most of the big concentration and extermination camps, the Germans formed orchestras from among the prisoners and forced them to play when Jews arrived at the camps, on their way to the gas chambers, when they marched to work, and also for the pleasures of the SS men.

The Auschwitz camp had six orchestras at one point. The biggest one, in Auschwitz I (the main camp), consisted of 50 musicians. A women’s orchestra in Auschwitz-Birkenau consisted of 36 members and eight women who wrote musical notes under the musical direction of the singer Fania Fenelon. All four of the extermination camps – Treblinka, Majdanek, Belzec and Sobibor – had orchestras as well as Mauthausen and Buchenwald camps. Dachau had four orchestras and a string quartet.

The written documentation published after the Holocaust includes the earliest anthologies of ghetto and camp songs compiled by Yehuda Eisman (Bucharest 1945); that of Zami Feder (Bergen-Belsen, 1946), and that of Kacerginski (New York, 1948). Kacerginski also made recordings among survivors in Displaced Persons camps in 1946, some of which survived at Yad Vashem archives. Composers and poets who immigrated to Israel, the U.S., and other countries composed new songs about the Holocaust, such as Henek Kon in the anthology *Kdoishim-Martyrs* (New York, 1947). Later even popular musicians such as the Israeli Yehudah *Poliker composed songs to lyrics of Yaakov Gilad, like “*Efer ve-Avak*” (“Ashes and Dust,” 1988). Both of them are sons of Holocaust survivors.

Several organizations of people from the same home city or ghetto, the State of Israel, other countries around the world, etc. organized commemoration gatherings for Holocaust survivors. In these ceremonies the song “*Zog Nit Keynmol*” of the

partisans of Vilna became the Holocaust hymn. Other ghetto and camp songs were never performed again while new songs about the Holocaust or related themes such as survival, uprising, belief, and hope were added to the ceremonies.

New compositions have been composed since the Holocaust, including Arnold Schonberg's *Survivor from Warsaw* (1947), *Dies Irae* of the Polish composer Krzysztof Penderecki, the *Thirteenth Symphony Babi Yar* by the Russian composer Dimitry Shostakovich, *I Never Saw Another Butterfly* by Charles Davidson, and more.

With the growth of research on music of the Holocaust and the revival of Jewish Yiddish music since the 1980s more songs were recorded, especially by American musicians, and performed to mixed audiences around the world. °MUSIL, ALOIS (1868–1944), Czech Orientalist, born in Rychtarov in Bohemia. He studied at the theological faculty of Olomouc and was ordained a priest in 1891; in 1895 he went to Jerusalem to join the Dominican Ecole Biblique. His field exploration began with a trip to *Egypt in 1896 and to Petra in 1897, when he traveled from *Gaza to *Damascus by way of

the Negev and Transjordan. In 1898 the Vienna Academy sent him on a mission to Arabia Petrea, which he explored until 1902, discovering the desert palaces at Quşayr 'Amra, Tüba, al-Bäyir, and al-Muwaqqar. He was one of the first explorers of the ancient cities of the Negev. In addition to archaeology, he was greatly interested in mapping and in the manners and customs of the Bedouin. From 1902 to 1909 he taught at Olomouc and from 1909 to 1918 at Vienna. He explored the Syrian Desert in 1908–09, the northern *Hejaz in 1910, and the Palmyrene and northern *Arabia to the Hejaz in 1912–15; the last mission was semipolitical. In 1920 he began to teach at Prague University. Musil published *Kuşejr 'Amra und andere Schloesser...* (2 vols., 1902); *Arabia Petraea* (Ger., 4 vols., 1907–08), which contains the first good map of the Negev; and a four-volume series of topographical itineraries through northern Arabia, including maps of the region (1926–28). He was an exact observer, although his archaeological training was insufficient.

°MUSOLINO, BENEDETTO (1809–1885), Italian statesman who foretold the return of the Jews to Erez Israel. Born in Pizzo (Calabria), Musolino was an exile in his youth and later joined Garibaldi's army. From 1861 he served as member of the Italian parliament and later as a senator in united Italy. He published seven books on philosophy, law, and social justice. Musolino visited Erez Israel four times and wrote *Gerusalemme ed il Popolo Ebreo* (1851, first published in 1951). Based upon an analysis of the situation of the Jews in the Diaspora and their yearning to return to Erez Israel, the book suggests that Britain support the establishment of a Jewish principality in Erez Israel under the Turkish Crown. Musolino even formulated a complete constitution, which stipulates a prince at the head of the principality and a bicameral parliament. The official religion of the principality is Judaism and the language is Hebrew. The right to vote and to be elected would be granted only to those who read and write Hebrew. All the public offices, including jurisdiction, would be determined by the elections for one-year terms. Citizenship would automatically be granted to Jews settling there and to non-Jews who request it. Other laws include freedom of speech and assembly, the prohibition of polygamy, and compulsory education between the ages of four and sixteen. Immigration and absorption would be under the control of a domestic settlement company, and the principality would guarantee the right to work.

MUSSAFIA, ADOLFO (1834–1905), Italian philologist. Born in Split (Spalato), Croatia, Mussafia specialized in Romance studies and taught for almost 50 years at the University of Vienna, first (from 1855) as an Italian professor, then (from 1860 to 1903) as a professor of Romance philology, to which he added the role of curator of the manuscripts at the Imperial Library. In 1901 he was appointed a member of the Austrian House of Lords. Having tried in vain to have an Italian center for higher studies established in Trieste, he eventually moved to Florence, where he spent the last years of his life. Though the son of the rabbi of Split John Amadeus, Mussafia was estranged from Judaism and converted to Catholicism in 1860. A philologist of wide interests, he was one of the pioneers who took up the study of the Italian and Romance dialects, founding Romance philology in Vienna, and devoting his valuable and painstaking attention to early texts in Italian and the Italian dialects (*Monumenti antichi dei dialetti italiani*, 1864, and *Darstellung der romagnolischen Mundart*, 1871). Mussafia also did research in comparative literature, investigating the origins of many medieval legends about Christian saints (*Zur Katharinen-Legende*, 1874, and *Sulla leggenda del segno della Croce*, 1870), elucidating many texts, and writing critical reviews. His other major publications include *Italianische Sprachlere in Regeln und Beispielen* (1860; reprinted until recent years under the title *Der neues Mussafia*); *Sul testo della "Divina Commedia"* (1865); *Sul testo del "Tesoro" di Brunetto Latini* (1870); *La difesa d'un illustre* (G. Boccaccio, 1861); and the *I codici Vaticani Latini 3195 e 3196 delle "Rime" del Petrarca* (1899).

[Louisa Cuomo / Alessandro Guetta (2nd ed.)]

MUSSAFIA, BENJAMIN BEN IMMANUEL (1606–1675), rabbi, philologist, physician, and author. A descendant of Spanish Marranos, he was probably born in Spain; little is known of his early years. He received a broad philosophical education, and, apart from his great talmudic scholarship, had a sound knowledge of Latin, Greek, and Arabic. He lived in Hamburg where he distinguished himself as a physician and gained fame in the medical profession with the publication of his books on medicine. Consequently, he was invited to act as personal physician to King Christian IV of Denmark, to whom he dedicated the scientific work *Mei ha-Yam* (Amsterdam, 1642). When the king died in 1648, Mussafia moved to Amsterdam where he became a member of the well-known

bet ha-midrash "Keter Torah." In his old age, he acted as one of the scholars of Amsterdam, and his signature was first on the eulogy and letter of recognition of Shabbetai Zevi, the false messiah, which was signed by Portuguese and *bet ha-midrash* "Keter Torah" scholars. In consequence, Jacob Saprota, a zealous fighter against the Shabbateans, attacked him in his *Oholei Ya'akov*.

Mussafia's most important work is *Musaf he-Aruk* (Amsterdam, 1655), a supplement of linguistic entries to the *Aruk* of *Nathan b. Jehiel of Rome, in which he also gave new explanations to Latin and Greek words in that work. In his research he based himself largely on *Buxtorf's lexicon. The book gave him a world reputation as a scholar, and it was published in more than 20 editions. *Zekher Rav* (Hamburg, 1638) is his first published work (subsequently in about 16 editions and many translations); written in verse, it relates the marvels of the creation. His commentary on the Jerusalem Talmud has not been published. His scientific works, written under the Latin pseudonym, Dionysius, include *Mei Zahav* (Hamburg, 1638), on the healing properties of gold; and *Mei ha-Yam* (Amsterdam, 1642), on the tidal flow.

MUSSAFIA, HAYYIM ISAAC (1754–1831), rabbi. Mussafia was born in Jerusalem. In 1796, while serving as an emissary of Jerusalem to the Balkan states, he was appointed *av bet din* of Spalato in Dalmatia. His only published work is *Hayyim va-Hesed* (pt. 1, Leghorn, 1844), responsa, appended to which are the laws of blessings by Yom Tov b. Abraham *Ishbili and talmudic novellae by early Jerusalem rabbis. Isaac Badhab affirmed that part two was in his possession. Mussafia also wrote *Derekh ha-Hayyim ve-Tokhaḥat Musar*, and *Maskil le-Eitan*, a supercommentary on the Pentateuch commentary of Rashi and Elijah Mizraḥi (see introd. to the responsa). He was succeeded at Spalato by his son, ABRAHAM HAI, who was also born in Jerusalem and served as a rabbi there. Abraham founded a yeshivah in Jerusalem called Shevet Ahim (acronym of Avraham Hai Isaac Mussafia), which was in existence until shortly before World War I. He composed poems and was a contributor to *Ha-Maggid*.

[Simon Marcus]

MUSSERT, ANTON ADRIAAN (1894–1946), National Socialist leader in Holland. Originally an engineer in government service, he became active in politics in 1925. He founded the National-Socialist movement (1931), which at the peak of its popularity in the 1935 election received 8% of the votes. When Holland was occupied by Nazi Germany in May 1940, he tried to conduct a national policy and resisted annexation to Germany, but eventually he became a mere tool in the hands of the Germans. After the war he was condemned to death for

collaboration with the enemy. Initially Mussert did not follow an anti-Jewish policy, and even accepted Jews as members of his party. From 1935, however, Jews could not hold office in the party, and in 1940 it was decided under German pressure to expel them altogether. Mussert unsuccessfully warned against the introduction of the yellow badge. For this reason, and because he tried to save some of his Jewish comrades, the Germans regarded him as a “Jew-servant.”

[Jozeph Michman (Melkman)]

MUSSOLINI, BENITO (1883–1945), Italian dictator, founder of Fascism. Mussolini’s policy toward the Jews was opportunistic, while his personal view of them, although unsystematic, was not unbiased. As early as 1908, in his essay “*La filosofia della forza*,” Mussolini the socialist adopted *Nietzsche’s view that Christianity, as a “reevaluation of all values,” was the spiritual revenge by which the Jews in Erez Israel overcame their secular enemies, the Romans. In June 1919, reflecting the line of the extreme right-wing “fasci” he had created shortly before, Mussolini attacked world Jewry in his organ *Popolo d’Italia*, defining it as “the accomplices, the soul of both Bolshevism and of capitalism.” However, he reversed this stand in October 1924, saying that “Bolshevism is not, as is believed, a Jewish phenomenon,” and further claiming that “Italy does not know antisemitism and we believe that it will never know it.” At the same time he excluded Zionism, declaring that “the new Zion [*nuova Sionne*] of the Italian Jews is found here, in our beloved land, that many of them heroically defended with their blood.” By its very nature, Mussolini’s opportunistic maneuvering delayed a systematic anti-Jewish policy, to a greater extent than did the presence of Jews in the ranks of Fascism from its earliest phases. From 1922, when he acceded to power, to 1938, when he branded them as racially impure, Mussolini endeavored to use the Jews as an instrument of policy, especially on the international level, in conformity with his distorted view of Judaism as an “international, occult body.” At the same time, he permitted a parallel undercurrent of antisemitism (see *Preziosi, *Farinacci) which he repudiated or encouraged in turn, whenever he saw a chance of blackmailing the Western democracies. As a rule, antisemitism was deemed counterproductive as a propaganda tool, as well as on the official level. In November 1923, Mussolini declared to Angelo *Sacerdoti, chief rabbi of Rome, that “the Italian government and Italian Fascism have never intended to follow nor are following an antisemitic policy.” Concerning mixed marriage, however, Mussolini’s views were strictly Catholic. In 1929, the year of the Concordat with the Vatican, he forbade his daughter Edda’s projected marriage with a Jew as “a real and proper scandal.”

His attitude to Zionism was similarly ambivalent. To Chaim *Weizmann he said, shortly after his accession, “You

know, we could build your state *en toute pièce*.” In February 1928, he personally approved and encouraged the creation of the Italy-Palestine Committee, but rebuked the Italian Zionists in November of the same year (probably in deference to the Vatican, with whom he was about to sign the concordat) charging them with disloyalty to Italy: “We therefore ask the Italian Jews: are you a religion or a nation?” (*Popolo di Roma*, Nov. 29, 1928). Subsequently he resumed his pro-Zionist policy, purely from expansionist motives, and maintained it until after the conquest of Ethiopia. As long as Mussolini kept an open window on the Western world, he was eager to present an image of Italian Fascism as “Latin” and unprejudiced, in contrast with “savage and barbarous” National Socialism. Antisemitism remained a “German vice” and Hitler “a fanatical idiot.” Racialism was “the Aryan fallacy” (*Popolo d’Italia*, Aug. 4, 1934).

Mussolini soon reversed his position. From 1936, to all intents and purposes, he dissociated himself from the Western world and drew near to his derided disciple and future master. He blamed “international Jewry” for the sanctions which castigated Italy for its Ethiopian adventure and marked the end of his rapprochement with the Western democracies. As a result, the Italian Jews had become expendable and could finally be treated in conformity with Fascist latent intolerance toward “alien groups.” Undoubtedly, Mussolini also sought to please his new German ally, but the Italian Jews were not sacrificed merely for the sake of Hitler’s “brutal friendship.” In search of a formula which would bind his own irresolute hands, create an unbridgeable gap between non-Jews and Jews in Italy, and enable him to be rid of all the latter in one stroke, Mussolini resorted to racialism which he now saw as politically profitable. The *Dichiarazione della Razza* of July 1938, introducing racial measures in Italy, was largely compiled and edited by himself and due entirely to his initiative; there is no evidence whatsoever that he was subjected at any moment to pressure by Hitler. His acceptance of the racial vice, deliberate and cynical, was rejected by the Italian people in their great numbers. The extent to which he was personally willing to cooperate in the physical destruction of Jews is shown by events occurring during World War II. In August 1942 the Germans asked the Italians to hand over to the German-Croatian authorities the Jews who had gone into hiding in Dalmatia, in the Italian occupation zone, and a memorandum on the subject, indicating the terrible fate in store for the Jews, was submitted to Mussolini. He scrawled in the margin: “nulla osta” (“no objection”).

[Emmanuel Beeri]

MUSTA'RAB, MUSTA'RABS, name of the Arab-speaking, old, established Jewish communities and residents in the Middle East. The term is borrowed from the Arabic. According to Arab genealogists, the "Arab al-Musta'riba" were not of native Arab stock; they were naturalized, "Arabized," Arabs. In Muslim Spain the Christians who adopted Arabic and Arab customs were called "Mozarabs." The term Musta'rab (better: Musta'rib) for Arabized Jews seems a late one; it occurs from the 15th century onward and seems to have been first used by immigrants from Christian Europe for the old, established Jews in Egypt, Palestine, and Syria. The terms al-Mashāriqa ("Easterners") and Moriscos are sometimes used in the same sense.

[Haïm Zew Hirschberg]

MUSTARD (Heb. חָרְדָּל, *ḥardal*), the name applied to two species, the common mustard (*Sinapis alba*), known in rabbinical literature as "Egyptian mustard," and the kind called simply "mustard." The latter was extracted from the seeds of a different botanical genus, *Brassica nigra*, the mustard prepared

from it being darker and more pungent than the former. This species, like white mustard, grows wild in Erez Israel but was also cultivated. Given favorable conditions, the plant reaches a height of more than six feet. The *aggadah* relates that a man having sown "a single seed of mustard... would climb it as he would a fig tree" (TJ, Pe'ah 7:4, 206). The seed of this species is very small (1–1.6 mm.) and was used to indicate the smallest measure of size (Ber. 31a). The contrast between the size of the plant and the seed is used in a parable in the New Testament (Matt. 13:31). Although these two species of mustard belong to different botanical genera they are very similar in appearance (except that the white mustard plant is smaller and its seed larger). Hence the rule that mustard and Egyptian mustard do not constitute *mixed species (*kilayim*; Kil. 1:2). Both have conspicuous yellow flowers (cf. Kil. 2:8–9). In Israel there are many species belonging to the family of Cruciferae which have yellow flowers and seeds with a pungent flavor. Among these the species *Sinapis arvensis* is very widespread. This is called in the Mishnah *lafsan* ("charlock") and it was laid down that "mustard and charlock, although resembling one another, do constitute *kilayim*" (Kil. 1:5).

MUSZKAT, MARION (Marian, Maks; 1915–1995), jurist. Born in Suwalki, Muszkat served in the Polish army during World War II, rising to the rank of colonel. In 1944 he was appointed a military judge and in the following year headed the Polish military delegation at the Nuremberg war-crimes trials. In 1949 Muszkat became lecturer at the Polish Academy of Political Science and later professor of international law at the University of Warsaw. He emigrated to Israel in 1957 and lectured in international law at the Tel Aviv extension of The Hebrew University, being appointed professor when the institution became Tel Aviv University. Muszkat's works include *Interwencja – zbrodniczej-polityki Stanów Zjednoczonych* ("Intervention – Criminal Weapon of U.S. Policy," 1953), *Kavei-Yesod ha-Mishpat ha-Bein-Le'umi* (2 vols., 1959–61), and *Hitpatteḥuyot Ḥadishot be-Mishpat u-ve-Irgunim Bein-Le'ummiyyim* (1967); and he edited *Zarys prawa międzynarodowego publicznego* ("Outlines of Public International Law," 2 vols., 1955–56) and the quarterly *Be'ayot Bein-Le'ummiyyot*.

[Israel (Ignacy) Isserles]

MUTER, MELA (1873–1967), French painter. She was born in Warsaw and as a young woman left Poland to study in France. There she abbreviated her family name, Mutermilch, using

“Muter” as her professional name. In 1937 she received a gold medal at the Paris World’s Fair, and two years later she was represented in the World’s Fair of New York. When the Nazis invaded France, Mela Muter was in her late sixties. Her son was killed in the war, but she managed to elude the Germans in Avignon, in southern France. There she continued to live for many years, in great poverty, until in 1965 she was rediscovered by a gallery in Cologne. Two years later, a few months before her death, her work was exhibited in New York. Crippled and no longer able to paint, she enjoyed her new fame; she used most of her earnings to aid sick children. Her “psychological portraits” were much admired. In addition to portraits, she painted mother and child groups, landscapes and still lifes, either in vigorous oils or in tender aquarelles.

[Alfred Werner]

MUTNIK (Mutnikovich), ABRAHAM (pseud. **Gleb**; 1868–1930), cofounder of the *Bund. Mutnik was born in Vilkomir (Ukmerge), Russian Lithuania. In Kovno he belonged to a revolutionary circle of Narodnaya Volya (the People’s Will movement) which functioned among the pupils of his school, and he was subsequently expelled from the school. In the 1880s he studied in Berlin and became acquainted with the German workers’ movement. He was expelled from Germany and on returning to Russia lived in Ponevez, Lithuania, gave private lessons, and disseminated illegal revolutionary propaganda which led to his arrest. From 1894 he was a central figure among the *Jewish Social Democrats in Vilna. On its behalf he wrote a detailed report for the Congress of the Socialist International in London (1896). At the founding convention of the Bund he was elected, with V. *Kossovski and A. *Kremer, to its central committee. Mutnik drew up the first proclamation of the Bund (May 1, 1898) and represented it at the first conference of the Russian Social Democratic Workers’ Party (March 1898). He was arrested in Lodz, but in 1900 he escaped abroad. In the years 1902–06 he was secretary of the Bund “committee abroad” in London and Geneva and a member of the editorial board of its organ, *Der Yidisher Arbeter*. He published an important article on the history of the Bund and its activity (in *Zhizn*, no. 2, May 1902 signed G. Ya.); he returned to Russia in 1906 and took charge of the Bund press. He then withdrew from party activities and after World War I lived in Germany. His autobiographical memoirs were published in *Zukunft* (38 (1933), 509–13, 595–6, 664–6, 718–20).

BIBLIOGRAPHY: J.S. Hertz (ed.), *Doyres Bundistn*, 1 (1956), 122–30; J. Hertz et al. (eds.), *Geshikhte fun Bund*, 1–2 (1960–62), indexes.

[Moshe Mishkinsky]

MUYAL (Moyal), AVRAHAM (1847–1885), representative of Ḥovevei Zion in Erez Israel. Born in Rabat, Morocco, Moyal went to Erez Israel with his parents in 1860, becoming a wealthy merchant and banker. As a French national, he had close ties with the French consul in Jaffa. He also had consid-

erable influence in Turkish government circles and was treated with respect by the Arab population, with whose customs and way of life he was well acquainted. Moyal did much to help Jewish settlement and obtained a permit to build houses at Ekron. He was also entrusted with financial dealings by Baron Edmond de *Rothschild concerning the settlements of Ekron and Rishon le-Zion. In 1885 Moyal was appointed as the Ḥovevei Zion representative. He built houses and established farms in Petaḥ Tikvah and put the settlement on a sounder basis. In the *Bilu settlement Gederah, where it was forbidden to build houses, he secured shelter for the settlers by rapidly erecting a structure of wooden boards and covering it with a roof. Under Turkish law, destruction was thereupon illegal.

[Israel Klausner]

MYER, MORRIS (Mayer; 1876–1944), Romanian-born Yiddish editor and Zionist worker, settled in London in 1902 and became active in Yiddish journalism and the Labor movement. A member of the Po’alei Zion, he became prominent in the British Zionist Federation and was a delegate to Zionist Congresses. From 1919 he sat on the Board of Deputies of British Jews and its joint foreign committee. Through the popular Yiddish daily, *Die Tsayt*, which he founded in 1913 and which existed until 1950, he was a prime molder of opinion among Yiddish readers in England when Whitechapel was a hub of Jewish life. He founded the Federation of Jewish Relief Organizations and was a Yiddish theater enthusiast and perceptive drama critic, as seen in his lively *Yidish Teater in London 1902–1942* (“Yiddish Theater in London, 1902–1942,” 1943). His Yiddish writings include *Der Sveting System, Vi Vert Men fun ihr Poter* (“The Sweating System, How to Abolish It?” 1907), *A Yidische Utopye* (“A Jewish Utopia,” 1918), *Dzhordzh Elyot, di Englishe Nevie fun der Renesans fun Idishen Folk* (“George Eliot, English Prophetess of the Jewish People’s Renaissance,” 1920), and *Dos Organizirte Yidntum in England* (“Organized Jewry in England,” 1943).

[Joseph Leftwich / Leonard Prager (2nd ed.)]

MYER, SIDNEY (Simcha) BAEVSKI (1878–1934), Australian retailer and philanthropist. Myer was born in Poland and in 1897 he migrated to Australia. After working briefly at odd jobs in Melbourne, he opened a shop in Bendigo in partnership with his brother, Elkan B. Myer. This venture failed, but later Myer bought another shop in Bendigo, and this time his business expanded rapidly. In 1911 Myer purchased a store in Melbourne which he called the Myer Emporium and which became the largest business of its kind in Australia. He had

also obtained control of Marshall's of Adelaide, another large department store. In the early 1930s Myer had 5,300 employees working for him in his enterprises. He provided rest houses for his workers at the seaside and in the country. The Myer Emporium is still one of the largest and most successful retailers in Australia, and its flagship store in central Melbourne is probably the leading department store on the continent.

In 1920 Myer divorced his Jewish wife and married an 18-year-old girl, Marjorie Merlyn Baillieu, the daughter of a prominent gentile financier in Melbourne. The marriage caused a scandal, and Myer and his wife were forced to live in America for nine years. To placate his wife's family, Myer converted to Anglicanism and distanced himself from the Jewish community. Ironically, two of his sons were allegedly blackballed from membership in the exclusive Melbourne Club on antisemitic grounds.

Sidney Myer was one of Australia's richest men when he died. In addition to his many contributions to Jewish and general charities, Myer donated large sums for unemployment relief during the depression of the 1930s. He left sizable endowments for the promotion of free orchestral concerts and the Melbourne Symphony Orchestra and an additional large sum for the general purposes of the University of Melbourne.

ADD. BIBLIOGRAPHY: J. Browning and L. Critchley, *Dynasties* (2002), 131–67; A. Pratt, *Sidney Myer: A Biography* (1993); H.L. Rubinstein, *Jews in Australia*, II, 321–22, index.

MYERHOFF, BARBARA GAY SIEGEL (1935–1985), U.S. anthropologist. Myerhoff was born in Cleveland, Ohio, and was raised there and in Los Angeles by her mother Florence Siegel and her stepfather Norman Siegel. She received a B.A. in sociology (1958) and an M.A. in human development (1963) from the University of Chicago, and a Ph.D. in anthropology from UCLA in 1968. Myerhoff served on the Anthropology faculty at the University of Southern California for her entire academic career, developing a program in visual anthropology and chairing the department. She was part of a group of scholars in the 1970s who introduced the importance of understanding storytelling, who pioneered the study of one's own community, and who investigated the relationships among age, ethnic identity, and gender.

Myerhoff's initial scholarship was devoted to the developing field of ritual and symbolic studies. Her dissertation and subsequent book, *Peyote Hunt: the Sacred Journey of the Huichol Indians* (1974), was highly regarded for its treatment of pilgrimage and the religious life of a Mexican Indian group. She explored those same themes in *Number Our Days* (1979), her innovative ethnographic study of elderly Jews who met at a senior center in Los Angeles, demonstrating the ways in which rituals, both traditional and invented, gave the aged the visibility they had been denied by family and society. Performances of all types, including storytelling, rituals, and quarrels, provided a certainty of their place in social interaction that was both reassuring and tenuous. From these observations Myerhoff wrote about the ways in which culture offers

and withholds visibility. One of her most important contributions to the study of women and religion was the concept of "domestic Judaism" that she developed in *Number Our Days*. Myerhoff effectively challenged the notion that religion can best be understood from an elite, usually male perspective linked to formal practices. Rather, her work demonstrated that a well-articulated religious system for women ran parallel to men's sacred worlds.

Prior to the publication of *Number Our Days*, Myerhoff collaborated with Lyn Littman on a documentary film with the same title that was awarded an Oscar and two Emmys.

Prell, "The Double Frame of Life History in the Work of Barbara Myerhoff," in: Personal Narratives Group (ed.), *Interpreting Women's Lives* (1980).

[Riv-Ellen Prell (2nd ed.)]

MYERS, SIR ARTHUR MELZINER (1867–1926), New Zealand businessman and politician. Myers came from a family of German immigrants who opened a brewery in New Zealand. His father, who became a jewelry salesman, drowned in 1870 and Myers was raised by an uncle in Wellington, where he eventually became head of the family brewery. Myers became managing director of a large business concern in his native city, Auckland, and from 1905 to 1909 was mayor of Auckland. He entered the New Zealand parliament in 1910 and in 1912 became a member of the cabinet as minister of finance, defense, and railways. In the National Government from 1915 to 1919, he was minister of customs, munitions, and supplies, in which capacity he laid the foundations for compulsory military service. He retired from parliament in 1921. Myers was noted for his benefactions to the city of Auckland, including the Myers Park in which he built a kindergarten and a school for backward children. He lived in England from 1923 and was a member of the Royal Commission on Local Government. He was knighted in 1924.

ADD. BIBLIOGRAPHY: R.C.J. Stone, "Sir Arthur Myers," in: *The New Zealand Dictionary of Biography*; A. Gluckman (ed.), *Identity and Involvement: The Jewish Community in Auckland, 1840–1990* (1990).

MYERS, ASHER ISAAC (1848–1902), British journalist. Born in London, Myers started in the clothing trade and then became publisher of the *Jewish Record*. In 1869 he joined the *Jewish Chronicle*, later becoming general manager. After the death of the editor, Abraham *Benisch, in 1878, he achieved editorial control and part-ownership, and conducted the paper successfully until 1902, broadening its contents to include more cultural material. He also engaged widely in Jewish communal service. In 1874 he published *The Jewish Directory*, the first British compilation of its kind.

ADD. BIBLIOGRAPHY: D. Cesariani, *The Jewish Chronicle and Anglo-Jewry, 1841–1991* (1994).

MYERS, CHARLES SAMUEL (1873–1946), British psychologist. Born in London, Myers was educated at the City of London School and Cambridge. He became a physician and, on taking his degree, immediately left on an anthropological expedition to Torres Strait and Borneo with W.H.R. Rivers, the founder and first director of the Cambridge Psychological Laboratory. The successful expedition returned the following year with data on hearing, smell, taste, reaction time, rhythms, and music of the local population. In 1900 he spent some time in Egypt, studying hieroglyphics, excavating, and taking anthropometric measurements in Cairo and Khartoum. On returning to Cambridge he was appointed to the psychological laboratory where, after considerable opposition, he succeeded Rivers. He published his *Textbook of Experimental Psychology* in 1909 (1925³). It was the first text to have laboratory exercises and to treat statistics for psychology students. There was also a briefer *Introduction to Experimental Psychology*, which he published in 1911 (1925³). Myers held the posts of professor in experimental psychology at King's College, London (1906–09), and also held a variety of positions at Cambridge, where, in 1921–22, he was reader in experimental psychology.

During his stay in Cambridge, Myers conducted research on primitive music, synesthesia, auditory localization, and individual differences among listeners to music. He helped to found the *British Journal of Psychology* in 1904 and edited it from 1911 to 1924. The new psychological laboratory at Cambridge, established in 1912, was made possible by a grant which he made anonymously. He was elected secretary and, in 1920, president of the British Psychological Society.

Myers' interest in applied psychology was initiated in World War 1, when he was the first to recognize shell shock as an essentially psychological condition and to treat it by psychotherapy. He had secured a commission in the Royal Army Medical Corps. In 1922 he resigned his post at Cambridge and went to London to establish the National Institute of Industrial Psychology, where work was conducted on tests of mechanical ability, manual dexterity, performance measures of general intelligence, problems of attention, and industrial fatigue. Myers became the driving force in British applied psychology and helped to gain official recognition for psychological practitioners. He was widely honored for his work. Although his desire to occupy the first chair in psychology at Cambridge was not fulfilled, he exerted considerable influence on the next generation of British psychologists through his students and his textbooks. He also wrote: *Psychology* (1910), *Mind and Work* (1920, 1921²), *Industrial Psychology* (1926), *Ten Years of Industrial Psychology: An Account of the First Decade of the National Institute of Industrial Psychology* (1932).

[Helmut E. Adler]

MYERS, GUSTAVUS (1872–1942), U.S. political reformer and historian. Myers was born in Trenton, New Jersey. As a reporter for several newspapers, he belonged to the muckrak-

ing movement, attacking big business and political abuses. Myers' first exposé, *History of Public Franchises in New York City* (1900), was followed by *History of Tammany Hall* (1901, 1917²), and his best-known work, the *History of Great American Fortunes* (1910, 1936³). Among Myers' other works are: *Beyond the Borderline of Life* (1910), *History of the Supreme Court of the United States* (1912), *The History of American Idealism* (1925), *The Ending of Hereditary American Fortunes* (1939), and *History of Bigotry in the United States* (1943), in which he attacked all forms of prejudice, including antisemitism. Myers' reputation rests principally on his painstaking research. Highly critical of the conditions that had made abuses possible, he became convinced in later years that modern innovations were contributing toward the elimination of some economic inequalities.

[Hans L. Trefousse]

MYERS, LAWRENCE E. (Lon; 1858–1899), U.S. track athlete. Born in Richmond, Virginia, Myers began his career as a runner in 1878 and a year later became the first man to better 50 seconds for 440 yards. Between 1879 and 1884, Myers won 15 U.S., ten Canadian, and three British national titles at distances from 100 to 880 yards. He visited Great Britain in 1881, 1884, and 1885, and set the then world marks for 440 yards (48.6 seconds) and 880 yards (1:55.4). In 1881 he became the first foreign runner to win a British national title.

Myers faced his most formidable opponent, Britain's Walter George, for the first time in 1882. George won two of three races at the Polo Grounds in New York City. Racing three years later as a professional, Myers won all three races at New York's Madison Square Garden. After repeating his victory over George in Australia in 1887, Myers retired from track the following year.

[Jesse Harold Silver]

MYERS, SIR MICHAEL (1873–1950), lawyer; chief justice of New Zealand. Born in the small township of Motueka, Myers was educated in Wellington and joined the largest law firm there, acting in crown cases that were both criminal and civil. In 1922 he was appointed king's counsel and began his own practice. Six cases in which he was involved went to the Privy Council and in all of them he was successful. From 1929 to 1946, Myers was chief justice of New Zealand, and his wide practical experience and keen sense of justice earned him a high reputation. In 1936 he served as justice on the Privy Council and in 1946 he represented New Zealand on the United Nations committee of jurists. Myers took an active interest in all Jewish affairs and was president of the Wellington synagogue from 1912 to 1921, a post previously held by both his father and elder brother. Myers was intensely in-

terested in Jewish history and was patron of the Australian Jewish Historical Society. On several occasions he acted for the governor-general during the latter's absences from New Zealand.

ADD. BIBLIOGRAPHY: P. Spiller, "Sir Michael Myers," in: *The Dictionary of New Zealand Biography*.

[Maurice S. Pitt]

MYERS, MORDECAI (1776–1871), U.S. merchant, army officer, and politician. Myers was born in Newport, R.I. He lived in New York State most of his life, while intermittently maintaining residence in Charleston, S.C. A member of New York City's Shearith Israel Congregation after 1792, he served as a trustee from 1800 to 1805 and donated a generous sum toward the construction of a new synagogue in Greenwich Village. Subsequently he joined the army and was commissioned captain in the Third Regiment of the First Brigade Infantry (1811). He served with the Thirteenth Infantry in the War of 1812, was wounded in the battle of Chrysler's Field, and was later promoted to major. In 1814 Myers married a non-Jewish woman, and thereafter ceased to play a role in the Jewish community. He was a ranking Mason from 1823 to 1834 and was offered the office of grand master for New York State, which, however, he declined. In 1828 and from 1831 to 1834 Myers served as a Democratic assemblyman in the state legislature from New York County. Subsequently he moved to Schenectady, where he was elected mayor in 1851 and 1854. In 1860, at the age of 84, he ran unsuccessfully for a seat in the U.S. Congress.

[Leo Hershkovitz]

MYERS, MOSES (1752–1835), U.S. merchant and civic leader. Moses Myers, the son of Haym and Rachel Louzada Myers, was born in New York City. For a time he was a junior partner in Isaac Moses & Co., a New York import-export firm, but the bankruptcy of Isaac *Moses in 1786 led Moses Myers to seek a new enterprise. With his friend Samuel *Myers, also a junior partner in the bankrupted firm, he opened a store in Norfolk, Virginia, 1787. After Samuel moved to Petersburg, Virginia (1789), Moses expanded his operations into importing and exporting. By 1812 he was the leading merchant south of the Potomac. During his early years in Norfolk, he functioned also as agent for the Philadelphia financier Stephen Girard, as superintendent of the Norfolk branch of the Bank of Richmond, and as consular agent for France and the Batavian Republic. He was elected to the city's Common Council for 1795–97 and, because he polled the largest vote, served as council president. The Embargo Acts of 1807–15 and a second bankruptcy of Isaac Moses, with whom he had investments, led Moses Myers and his eldest son, John, into bankruptcy. Myers never totally recovered from this setback, despite the testimonials of 277 Norfolk and Portsmouth merchants. President John Quincy Adams later named him collector of customs, superintendent of lights, and agent for the Marine Hospital, declaring him "the first honest man in the post"; he served from 1827 to 1830.

In 1787, he married Eliza Judah of Montreal, widow of Detroit pioneer Chapman Abraham. Myers' handsome home, erected in 1792, remains a Norfolk landmark.

[Simon Vega]

MYERS, MYER (1723–1795), U.S. silversmith. Myers was born in New York, where his parents had emigrated from Holland. He learned his trade early and at 23 set up shop on Lower Wall Street, where he not only engaged successfully in his craft but also sold tea, coffee, spices, and tobacco. By 1755 he had expanded his trade to Philadelphia. Myers was active in the general community, in Freemasonry, and in the synagogue, serving as president of Congregation Shearith Israel in New York in 1759 and again in 1770. During the American Revolution he was a patriotic stalwart, and he and his family moved from the city during the British occupation, going first to Norwalk, Connecticut, and later to Philadelphia. There he used his skill to smelt down metal household goods and turn them into bullets. Myers returned to New York in 1783 and was a signatory of the address to Governor George Clinton from the "congregation of Israelites lately returned from exile." Myers was a highly skillful and versatile master craftsman, who created the first American examples of Jewish ceremonial objects and was also distinguished for his general ornamental and functional pieces. There are many examples of his work in places of worship, museums, and private collections. For the synagogues of New York, Newport, and Philadelphia he made silver Torah bells (*rimmonim*) which are still in use. His versatility is revealed in his alms basins and baptismal bowls. His mark "myers" was most frequently stamped on his work in script in a shaped cartouche though sometimes he merely used his initials, M.M. In 1786 he was elected chairman of the Gold and Silversmiths' Society of New York. He was buried in the cemetery that still exists off Chatham Square in Lower Manhattan.

The U.S. Post Office issued an 8-cent stamp on American Independence Day 1972 to commemorate Colonial American craftsmen. The first day cover reproduces the Torah Scroll ornaments which Myers created for Congregation Shearith Israel in New York City. The single largest collection of Myers' silver is on display in the Klutznik Exhibit Hall of the B'nai B'rith Building in Washington.

[Alfred Werner]

MYERS, SAMUEL (1755–1836), U.S. merchant. Samuel Myers was the second child of New York silversmith Myer *Myers and his first wife, Elkaleh Myers-Cohen. As a child he worked in his father's silver shop, but soon joined his friend Moses *Myers as a junior partner in Isaac *Moses' import-export firm. A year after the firm's bankruptcy in 1786, Samuel

and Moses opened a store in Norfolk, Virginia, but two years later they separated. Samuel moved to Petersburg, Virginia, the first known Jewish resident of the town. His half-brothers MOSES MEARS MYERS and SAMPSON MEARS MYERS joined him there, all three becoming tobacco dealers. By 1798, Samuel was active in Richmond, contributing to Congregation Beth Shalome. He settled there permanently by 1803 and played an active role in business and social life as a leading Jewish citizen. Samuel's first wife, Sarah, daughter of Samuel *Judah of New York, died a year after their marriage. In 1796 Samuel and his brother Moses married daughters of the Boston merchant Moses Michael Hays. His second son, GUSTAVUS ADOLPHUS MYERS (1801–1869), became Richmond's leading Jew, serving for nearly three decades on the City Council and for 12 years as its president.

[Saul Viener]

MYERSON, BESS (1924–), Miss America and philanthropist. Born to Louis and Bella Myerson in the Bronx, New York City, Myerson grew up in the Sholom Aleichem Cooperative. She attended the High School of Music and Art and graduated from Hunter College in 1945. In 1945, the 5-foot-10 Myerson won the Miss New York City pageant after her sister Sylvia entered her in the contest, and on a lark she entered the Miss America contest with the hope of winning a \$5,000 scholarship to continue with her music studies and buy a piano. A pageant official suggested she change her name to the less Jewish-sounding Beth Merrick, but she refused. After her win, Myerson encountered blatant antisemitism among sponsors and during her tour of the United States over the next year. Inspired by the bigotry she encountered, she spoke out on behalf of the Anti-Defamation League. Myerson went on to study music at Juilliard School and Columbia University, and appeared as a guest soloist for the New York Philharmonic in 1946. In October 1946, she married Allan Wayne. The couple had a daughter together, but divorced in 1957. Myerson became a hostess and game show panelist on a variety of television programs from 1947 to 1968. In 1962, she married Arnold Grant, who adopted her daughter. Mayor John Lindsay appointed Myerson as New York City's commissioner of consumer affairs in 1969. During her four-year term, she helped pass the city's Consumer Protection Act and hosted the consumer affairs television show, *What Every Woman Wants to Know*. She went on to publish two books, *The Complete Consumer Book* and the *I Love New York Diet*. Myerson enjoyed presidential appointments to a variety of commissions in the 1970s, but the decade also brought another divorce and a fight with ovarian cancer. In 1980, she lost a Democratic Senate bid and suffered a stroke. From 1983 to 1987 she served as New York's commissioner of cultural affairs, but her reputation was tarnished by bribery and conspiracy charges. Myerson was acquitted, but not before pleading guilty to separate shoplifting

charges in South Williamsport, Pa. In 1987, she released her autobiography, *Miss America, 1945: Bess Myerson's Own Story*. A founder of the Museum of Jewish Heritage in New York, she continued to champion social causes and Israel.

[Adam Wills (2nd ed.)]

MYNONA (Salomo Friedlaender; 1871–1946), German philosopher and author. Born in Gollantsch in Posen, Mynona studied medicine, philosophy, German literature, archaeology, and art history in Munich, Berlin, and Jena between 1894 and 1902. In Jena he wrote his dissertation on Schopenhauer and Kant (1902), seeing from then on in Kantian philosophy not only the solution of the central problems of 20th century in general, as did his contemporary teacher, the neo-Kantian Ernst Marcus, but also an expression of modern Judaism. Also in his later, main philosophical work *Die schoepferische Indifferenz* (1918), Mynona relied on Kant to overcome the classical dualism of subject and object in a purified, absolute self. In 1906, Mynona went to Berlin, starting to write under the literary name "Mynona," an anagram of "anonym" (i.e., anonymous), poetry, which he published in books like *Durch blaue Schleier* (1908) and expressionist publications like *Der Sturm* and *Die Aktion*, being intimate with the Berlin expressionist circle of Herwarth *Walden, Else *Lasker-Schueler, and Samuel *Lublinski. At the same time he wrote satirical and grotesque prose works (*Rosa, die schoene Schutzmannsfrau*, 1913; *Mein Papa und die Jungfrau von Orleans*, 1921; *Das Eisenbahnlueck oder der Anti-Freud*, 1925; *Mein hundertster Geburtstag und andere Grimassen*, 1928); in these philosophical satires Mynona exposed the other side of Kantian rationalism. In 1933, he fled to Paris, where he wrote his last published literary work, the grotesque *Der lachende Hiob* (1935), confronting the will to annihilation of the Nazis with his idea of the purified self by answering torture with laughter. Other works, like *Vernunftgewitter* and *Das Experiment Mensch*, remained unpublished. The autobiographical work *Ich* was published in 2003. Mynona died in Paris. In 1980, H. Geerken published two volumes of Mynona's prose.

[Andreas Kilcher (2nd ed.)]

MYRRH (Heb. מִרְרָה, *mor*), one of the most important perfumes of ancient times. It is referred to 11 times in the Bible, more than any other perfume. The Hebrew, *mor*, refers to its bitter taste (*mar*, "bitter"); the root is common to the various Semitic languages, from where it was transferred to Greek Μύρρα and Latin *myrrha*. It is first mentioned along with the ingredients from which the holy anointing oil in the Tabernacle was prepared (Ex. 30:23–25), where it is called *mor deror*, i.e., myrrh congealed to form granules (*deror* from *dar*, "pearl") and then dissolved in olive oil. The king's garments were perfumed with myrrh (Ps. 45:9), and the faithless wife perfumed her couch with it when she wanted to seduce men (Prov. 7:17). The maid-

ens were treated with it for six months before being presented to Ahasuerus (Esth. 2:12). In the Song of Songs myrrh is mentioned no less than seven times. It grew in the imaginary spice garden to which the charms of the beloved one are compared (Song 4:14; 5:1). It is upon “the mountain of myrrh” that the beloved dreams he will meet his heart’s desire (4:6). The queen arrives for a meeting with the king “from the wilderness... perfumed with myrrh and frankincense” (3:6). The beloved one watched for her lover with her fingers dripping “flowing myrrh” (5:5), i.e., oil of myrrh, and his lips too were “dripping with flowing myrrh” (5:13). The man lying in the arms of his beloved is likened to the crystallized myrrh which the women used to wear as “a bag of myrrh” (1:13).

Myrrh is extracted from certain trees or shrubs growing in Africa or in the Arabian peninsula: *Commiphora abyssinica* and *Commiphora schimperi*. These plants contain a fragrant sap under the bark like the sap of the *acacia, from which gum arabic is prepared (Gr. κόμυ; mishnaic Heb. קומוס, *kumos*). The sages warned against those who adulterated myrrh with this *kumos* (Sifra 1:12). Myrrh is variously interpreted homiletically by the rabbis as referring to Moses and Aaron or to Abraham: myrrh, the prince of spices, is Abraham who offered his son Isaac on Mt. Moriah (connecting “*mor*” with “Moriah”; Song R. 3:6, no. 2). They also connected it with Mordecai whose name was explained to mean *mor-dakhya*: “pure myrrh” (Hul. 139b). The *mor over*, “flowering myrrh,” of the Song of Songs alludes to Israel’s troubles which will pass: “Read not *mor over* but *mar over*: “passing bitterness” (cf. Shab. 30b). Saadiah Gaon, followed by Maimonides, identified “a bag of *mor*” with musk, the perfume extracted from the aromatic gland of the musk deer (see *Incense and Perfumes) but there is no basis for this.

[Jehuda Feliks]

MYRTLE (Heb. טרף; *Hadas*), *Myrtus communis*, a shrub, and occasionally a tree, possessing fragrant and glossy leaves. It grows wild on Mount Carmel and in Upper Galilee, and its use as a decorative shrub is widespread. The leaves usually grow in series of two and opposite each other. Some have leaves arranged in groups of three. Burning the shrubs produces a higher proportion of the latter form. The plant flowers during the summer months and later bears black berries. There are other varieties whose ripe fruit is white and whose small leaves are arranged in groups of four or more. The plant is called *asu* in Akkadian and *asa* in Aramaic. The *ez avot*, twice mentioned in Scripture, refers, according to rabbinical tradition, to the myrtle. It is one of the *Four Species (Lev. 23:40). The Book of Nehemiah, however, refers to both *hadas* and *ez avot*, in connection with the observance of the Feast of Tabernacles (Neh. 8:15). In consequence some scholars think that the name *ez avot* applies to any tree whose branches are closely braided together (*avotim*, “compact”). The rabbis explain that

hadas refers to the wild myrtle branches gathered for covering the *sukkah*, while *ez avot* refers to the twigs of three-leaved myrtles which were “with the *lulav*” (Suk. 12a). They explained that *ez avot* means a tree “whose branches cover its trunk... is shaped like a plait and resembles a chain” (Suk. 32b). The leaves of the *oleander are of similar form but were declared invalid on the grounds that it is poisonous (*ibid.*). To satisfy the regulation concerning Tabernacles “a myrtle producing groups of three leaves from a single node” is necessary; there was a dispute concerning the validity of those varieties of myrtle, like the Egyptian myrtle, which produce many leaves from a single node (Suk. 32b–33a).

The myrtle is an evergreen (Targ. Sheni, Esth. 2:7), and the rabbis thus compared it with the good qualities of Esther whose Hebrew name was Hadassah (“myrtle”). Its aromatic branches were used for preparing the bride-groom’s wreaths (Tosef., Sot. 15:8). They were used in festivities and betrothal celebrations, and some of the sages would juggle with myrtle branches, throwing them up and catching them (Ket. 17a). The leaves of the myrtle have the shape of the eye (Lev. R. 30: 14). Its fruits, called *benot Hadas* (“myrtle products”), were occasionally eaten, but are tasteless (TJ, Or. 1:1, 60c–d; Suk. 32b). Some recommended myrtle leaves as a remedy for blood pressure in the head (Git. 68b). The custom still obtains in some places of pronouncing the blessings for spices at the *Havdalah on the termination of the Sabbath over myrtle leaves. According to *Bet Hillel the benediction over the myrtle takes precedence over the benediction over aromatic oil (Ber. 43b).

MYSH, MICHAEL (1846–?), Russian lawyer and writer; born in Korets, Volhynia. Of a poor family, Mysh attended the government Jewish school of his town. He completed his studies at the law faculty of the University of Kiev and contributed to the Russian Jewish press, devoting himself to the study of anti-Jewish legislation in Russia. He wrote commentaries, surveys, and guides on the restrictive laws against the Jews. The most important of them was *Rukovodstvo po russkim zakonam o Yevreyakh* (“Guide to the Russian Laws Concerning the Jews,” 1892), which ran into four editions. He also wrote essays and books on general legal problems. His son, VLADIMIR (1873–1947), was a professor of medicine and a member of the Soviet Academy.

[Yehuda Slutsky]

MYTH, MYTHOLOGY (Gr. μῦθος; “word,” “word content,” “narrative”). A myth is a story about the universe that is considered sacred. Such a story deals with the great moments of man’s life: birth, initiation, and death, referring them to events that took place in “mythical time.” The myth is often recited

during a dramatic representation of the event it narrates (e.g., the *Enūma eliš* was recited at the Babylonian New Year festival). Through the ritual, man becomes contemporary with the mythical event and participates in the gods' creative actions. Thus man can create, maintain, or renew fecundity, life, etc. Myths can be classified according to their subjects, as: theogonic, cosmogonic, anthropogonic, soteriological, and eschatological, myths of paradise, myths of flood, hero myths, etc.

In the Bible

The word "myth" was first applied to biblical narratives in the 18th century, when the question of the historicity of the first chapters of Genesis arose. For J.G. Eichhorn, for instance, the biblical narratives contain philosophical truth (e.g., the Garden of Eden narrative) or are based on a kernel of historical truth (the narratives concerning the Patriarchs). In the mid-19th century the term myth acquired a more precise meaning in biblical research. Biblical scholars who held that myth and polytheism were inseparable (e.g., Y. Kaufmann and H. Frankfort) denied any possibility of finding myths in the Bible, though they do not deny the existence of residues of myths or "demythologized myths" in the Bible. A number of apparent myths and mythical subjects which found their way into the Bible, have been collected and compared with extra-biblical parallels. In the prophetic and poetic books, references are made to the Lord's struggle with the primeval dragon, variously named *Tannin* ("Dragon," Isa. 27:1, 51:9; Ps. 74:13; Job 7:12), *Yam* ("Sea," Isa. 51:10; Hab. 3:8; Ps. 74:13; Job 7:12), *Nahar* ("River," Hab. 3:8; Ps. 93?), Leviathan (Isa. 27:1; Ps. 74:14), and *Rahab* (Isa. 30:7; 51:9; Ps. 89:11; Job 9:13; 26:12–13). A special parallel to this theme is found in the Ugaritic myth of Baal and his struggle against *Yam*, in which mention is made of Leviathan (*ltn*; C.H. Gordon, *Ugaritic Textbook* (1965), 67, 1:1) and *Tannin* (*tnn*; *nt*, *ibid.*, 3:37) as well as of *Nahar* (*nhr*). In this myth the dragon is called, as in Isaiah 27:1, *bari'ah* ("fleeing serpent") and *'aqallaton* ("twisting serpent"; cf. Gordon, *ibid.*, 67, 1:2–3). The same theme is found in the Babylonian creation epic *Enūma eliš* (Marduk's fight with Tiamat, "Sea") and in the Hittite myth of the storm-god and the dragon Iluyankas (Pritchard, Texts, 125–6), and with variations in Sumerian, Egyptian, Phoenician, and other literatures.

The idea that man was made out of clay (Gen. 2:7; Job 33:6) is common to the Bible and other extra-biblical literatures, especially the myth of Atrahasis (W.G. Lambert and A.R. Millard, *Atra-Ḥasis* (1969), 56 ff.; cf. also *Enūma eliš*, 6:1–38 and the creation of Enkidu, *Gilgamesh* 1:30–40, in Pritchard, Texts, 68, 74). In Genesis 2:7, the Lord breathed into man's nostrils the breath of life; in Atrahasis, man is the product of the mixture of clay and the flesh and blood of a slaughtered god. In the latter source, man is created to do the work the inferior gods refused to do (cf. Gen. 2:15).

The biblical story which has the most striking Mesopotamian parallel is the flood story (Gen. 6–8; *Gilgamesh*, tablet 11 – in Pritchard, Texts, 93–97, cf. also Atrahasis). In both accounts a man and his household escape the deluge thanks to

divine providence; the flood hero is told to build a ship (ark); after the flood, the ship comes to rest upon a mountain (Ara-rat or Nišir); birds are sent out in exploration; a much appreciated sacrifice is offered by the survivor; God (or the gods) repents of His bringing about the flood. As in other myths, the main difference between the biblical and extra-biblical version of the flood story resides in the fact that the biblical one is monotheistic. Other differences can be pointed out. For example, the fact that Noah takes with him only his family, while Utnapishtim (the Babylonian flood hero) makes a point of taking craftsmen with him, may well point to different types of society.

Residues of hero myths can be found in Genesis 5:24; 6:1–4; 10:8–9; and 11 Samuel 23:8 ff., for example. The stories about Samson, Jephthah, Gideon, and so on have much in common with the hero myth genre.

In biblical poetry there are echoes of myths: the wind has wings (1 Sam. 22:11; Hos. 4:19); thunder is the Lord's voice (11 Sam. 22:14; et al.); the Lord rides the clouds (Ps. 68:5), etc. Although mythical patterns can be found in the Bible, the biblical authors are not especially interested in "extra-temporal events," but rather deal with God's intervention in history. The Bible is less interested in the cosmos than in man.

M'ZAB, region containing six towns, one of the major groups of oases of the Sahara in central *Algeria. It was founded in the 11th century by M'zabite *Berbers belonging to the Ibadiyya sect who formerly dominated *Tripoli (part of modern *Libya today). Although the French had occupied Algeria in 1830 and removed it from Ottoman domination, the M'zab was annexed to France only in 1882 and reverted to Algerian indigenous rule in summer 1962 upon its national independence. Ghardaia is the main town and capital of the M'zab, while el-Ateuf is the oldest settlement in the region. Beni Isguene is the most sacred Berber Islamic town. It prohibits all non-M'zabites from various sections of this town and all foreigners from spending the night within its walls. Melika is populated by black Africans and contains spacious cemeteries, while Guerrera and Berriane have been part of the M'zab since the 17th century. The total population of the M'zab in the early 21st century exceeded 70,000.

M'zab Jewry are apparently the descendants of Jews from Tahert, an ancient metropolis destroyed in 902 C.E., but also from Sedrata and Ouargla in the important region of Ifriqiyya – which in ancient and medieval times contained the territories of present-day Libya and *Tunisia. Ouargla was a cen-

ter of *Karaites. Until 1300 the Jewish community of the M'zab was reinforced demographically by Jews from the island of *Djerba (southern Tunisia) and Jebel Nafusa (the region of Tripolitania in modern Libya). Overwhelmingly residing in Ghardaia, the Jews were mainly employed as goldsmiths as well as being suppliers of ostrich feathers whose exports to Europe were monopolized by their coreligionists in parts of the Mediterranean.

The Jews of Ghardaia dwelled in their own special quarter, were forced to wear black clothes, and were not allowed to engage in farming or to purchase rural land. Unlike the Jews of the major urban centers of the regions of *Algiers, *Oran, and *Constantine, M'zab Jewry were not beneficiaries of the October 1870 Crémieux Decree which granted French citizenship to Algeria's Jews. This is attributed to the fact that the French could only grant this privilege to Jews in their sphere of influence. The M'zab was not under French control until over a decade later. It was only in the early 1960s that the Crémieux Decree was extended to include M'zabite Jews. By then, however, it was too late, for in 1962 the French granted Algerian Muslims independence. On the eve of Algerian independence, after numerous M'zabite Jews (out of 6,000) relocated to France (many resettled in Strasbourg), as many as 3,000 still remained behind.

In June 1962, as the Jewish Agency Israeli immigration emissaries were about to leave Algerian soil, a cable arrived at the Immigration Office in Algiers from Jerusalem. It instructed them to remain there for the time being because, based on reliable information, Algerian Muslim rebels in the south intended to harm the 3,000 remaining Jews of the Saharan community of Ghardaia. On June 12, 1962, the Jewish Agency requested Ben-Zion Cohen, one of the emissaries in Algiers, to fly to Ghardaia and warn that community about

the potential dangers. The State of Israel also contacted the French authorities in the south to inform them of Cohen's arrival. Upon his arrival Cohen met with Jacob Blocca, Ghardaia's community president. Blocca then convened an emergency meeting of the community council members in which Cohen prodded them to permit the Jewish Agency to evacuate the Jews before it was too late. The community leadership gave its approval.

Already in mid-June Cohen began to register the families at the local *talmud torah* building. Of the 3,000 Jews in Ghardaia, 2,700 agreed to leave immediately. Meanwhile, the Jewish Agency in Europe received from Cohen precise data on the size of the immigration and the number of planes needed for the operation. The Grande Arenas transit camp in Marseilles was prepared to accommodate the transients. However, the Algerian rebels found out about the operation and were determined to prevent the departures. Not wanting to risk lives, Cohen telephoned the French governor, who himself was about to leave Algeria. The latter sent a military vehicle with several armed paratroopers to guard Cohen and accompany him to the local military base for his own protection. Toward the end of June the French planes chartered by the Jewish Agency reached Ghardaia's military airport. The immigrants could now take the 12-kilometer ride to the airport on buses, guarded by military jeeps and a helicopter. Algeria was a sovereign nation when the evacuation process ended successfully in July 1962.

The letter "N," a part of the illuminated word *In* (*diebus Assueri*) at the beginning of the Book of Esther in a 12th-century Latin Bible. On the right of King Ahasuerus, Haman is being hanged. The "I" frames the figure of Esther. Rheims. Bibliothèque Municipale, Ms. 159, fol. 5v.

NAA-NAS

NAAMAH (Heb. נַעֲמָה; "pleasantness"), two biblical figures.

(1) Daughter of Lamech and Zillah and sister of Tubal-Cain (Gen. 4:22).

(2) Ammonite wife of Solomon, mother of Rehoboam (1 Kings 14:21; 11 Chron. 12:13).

BIBLIOGRAPHY: EM, 5 (1968), 891–2 (incl. bibl.).

NAAMAN (Heb. נַעֲמָן; "pleasant"; the name occurs in Ugaritic and is an epithet of heroes in Ugaritic epics), Syrian commander, healed of leprosy by the prophet *Elisha. According to 11 Kings 5, Naaman, a valorous man, held by his king in great esteem but afflicted with leprosy, had a female slave from the land of Israel. From her, his wife learned that "the prophet that is in Samaria" could cure Naaman of his leprosy. Naaman departed for the land of Israel taking with him a letter from the king of Aram to the king of Israel, as well as lavish presents. The king of Israel thought that the letter asking him to cure Naaman was nothing but a trick "to seek an occasion against him." Elisha, however, asked that Naaman be brought to him. When Naaman and his escort arrived at Elisha's house, he was told by a messenger to wash seven times in the Jordan River. Offended by the prophet's brusqueness and aloofness, Naaman decided to leave the land of Israel, but on the way his servants convinced him to do what the prophet prescribed. He washed in the Jordan and was cured. Naaman then went back to Eli-

sha convinced that "there was no God in all the earth but in Israel." In vain he entreated the prophet to accept his presents. He then asked for "two mules' burden of earth, for thy servant will henceforth offer neither burnt offering nor sacrifices unto other gods, but unto the Lord." The fact that Naaman felt it was necessary to take earth from the land of Israel to build an altar for the Lord hints at the belief that sacrifices to YHWH could only be offered on Israelite soil (cf. Josh. 22:10ff.; 11 Sam. 26:19). Naaman also asked forgiveness for the fact that because of his office at the court he would be obliged to perform acts that could be interpreted as idolatry. Soon after Naaman's departure, Gehazi, Elisha's servant, ran after Naaman and through deceit received from him two talents of silver and two changes of clothing. As a punishment he was cursed with Naaman's disease. That neither Naaman nor Gehazi was isolated from society (11 Kings 8:4; cf. Lev. 13–14) suggests that Naaman's disease was not what is now known as *leprosy.

In the Aggadah

Naaman was the archer who drew his bow at a venture and mortally wounded Ahab, King of Israel (1 Kings 22:34) and thus it was that through him "the Lord had given deliverance unto Syria" (11 Kings 5:1). It would therefore follow that his master, referred to in 5:18, was Ben Hadad (Mid. Ps. 90). Two reasons are given for his leprosy, one that it was a punishment

for his haughtiness (Num. R. 7:5; cf. Rashi to Lev. 14:4) and the other that it was for taking an Israelite girl as maidservant to his wife (Tanḥ. Tazri'a, end). According to the *Mekhilta* (Yitro, Amalek 1), Naaman was an example of the righteous proselyte, ranking even higher than Jethro; according to the Talmud, however (Git. 57a), he became merely a *ger toshav*, a "resident alien" who accepted only the seven Noachide laws but not all the commandments.

NA'AN (Heb. נַאֲן), kibbutz in central Israel, E. of Rehovot, affiliated with Ha-Kibbutz ha-Me'uḥad. It was founded in 1930 as the first village of *Ha-No'ar ha-Oved youth. The founders were later joined by immigrants from many countries. During the 1936–39 disturbances Na'an maintained friendly ties with Arab villages in the vicinity and was not attacked, but it came under siege by the British army on "Black Saturday," June 29, 1946, when 23 settlers were wounded. In 1969 Na'an had 870 inhabitants; in 2002, 1,140. Its economy was based on highly intensive farming (citrus groves, avocado plantations, field crops, and dairy cattle) and it ran a metal plant producing irrigation and other equipment. The settlement's name is adapted from the Arabic name of the site, Na'ana, which in turn may be the original town of Naamah of the tribe of Judah (Josh. 15:41).

[Efram Orni / Shaked Gilboa (2nd ed.)]

NAAR, DAVID (1800–1880), U.S. politician, journalist, and public servant. Naar, who was born in St. Thomas, Danish West Indies (now Virgin Islands), was sent to Manhattanville, New York, at the age of 15 to be educated. He spent about five years there. Because of Black insurrections in the Caribbean and the decline of trade, his family moved to New York City in 1834 and continued their tobacco importing and exporting business. In 1838 Naar purchased a farm near Elizabeth, New Jersey, became active in politics as a Democrat, and was rewarded politically with an appointment as lay judge of the Court of Common Pleas. He was appointed mayor of Elizabeth in 1849. In 1844 he was a delegate to the state constitutional convention where he vigorously and successfully advocated giving Roman Catholics the right to vote and hold office. President James K. Polk appointed him as commercial agent of the United States to St. Thomas (1845–48). Naar moved to Trenton in 1853 and bought the *Daily True American* which he edited until 1870. His nephew and son then edited the paper until 1905. The newspaper, which became a very influential factor in the Democratic Party, espoused the cause of the South, favored (at first) secession and states' rights, and was pro-slavery. Naar was attacked by his Republican opponents as "a West Indian Jew" and other epithets. Naar served as treasurer of New Jersey and a member of the Trenton Common Council. He favored free public school education, free public libraries, and was one of the founders of the Normal School for Teachers (now the College of New Jersey).

[S. Joshua Kohn]

NAARAH (Heb. נַעֲרָה), town in the Jordan Valley on the boundary between the territories of Ephraim and Benjamin (Josh. 16:7; 1 Chron. 7:28 – Naaran). It is called Neara by Josephus, who relates that Herod's son *Archelaus diverted the waters of the village to irrigate groves of palm trees (Ant., 17:340). Eusebius refers to it as Noorath and describes it as a Jewish village five miles from Jericho (Onom. 136:24). A Mi-drash mentions that hostile relations existed between Naarah and Jericho (Lam. R., 1:17, no. 52). The Jews living there are mentioned in late Christian sources (Simeon Metaphrastes, *Life of St. Chariton* (Gr.) 7:578; Palladius, *Historia Lausiaca*, 48). Naarah is now identified with 'Ayn al-Dük, 4½ mi. (7 km.) north of Jericho. In 1918 a mosaic pavement was accidentally uncovered there by Australian troops when a shell exploded, and some fragments were removed and transported to Sydney. The site was subsequently excavated by L.H. Vincent and B. Carrière in 1919 and 1921, and published by P. Benoit in 1961. The pavement was found to be part of a synagogue which consisted of a court with a pool, an L-shaped narthex, and a hall, 72 × 49 ft. (22 × 15 m.), paved with mosaics. On the pavement are depicted two gazelles at the entrance and geometric designs in the aisles. The nave is decorated with images of birds within interlocking rhombuses and circles; a zodiac with the sun in the center and the symbols of the seasons in the corners; Daniel flanked by two lions; two candelabra and ritual objects. Another candelabrum was depicted in front of the main entrance to the hall. Inscriptions in the pavement commemorate the donors: Phinehas the priest, his wife Rebekah, a certain Samuel, Benjamin the *parnas*, Marutah, Ḥalifu, etc. The images of living beings had suffered from iconoclasm at a later date. The synagogue dates to the sixth century. The pavement (and some additional details, previously unknown) was rediscovered in 1970.

[Michael Avi-Yonah / Shimon Gibson (2nd ed.)]

NABAL (Heb. נָבָל; connected with the Ar. *nabīl*, "noble"), man of the town of Maon who owned much livestock near the neighboring town of Carmel, southeast of Hebron on the edge of the desert of Judah; a Calebite (1 Sam. 25:3; *keri* and versions). David extended his protection to Nabal's flocks when he was camping with his men in the desert of Judah (25:14–16). Nabal refused to give him a "gift" out of his produce at the time of the sheep-shearing (25:10–11). *Abigail, Nabal's beautiful wife, appeased David and dissuaded him from taking revenge (25:18ff.). Her husband, she said, punning on his name, "as his name is, so is he; Nabal [נָבָל] is his name and outrage [נָבָלָה] is with him" (25:25). After Nabal's death by a stroke, she became

Plan of the synagogue at Naarah, sixth century c.e., with drawing of the mosaic floors in the nave and in the narthex. Based on Encyclopaedia of Archaeological Excavation in the Holy Land, Jerusalem, 1970.

David's wife (1 Sam. 25:42). This tale is one of the finest narratives in the Bible and is a faithful description of the life of the prosperous cattlemen on the border of the desert of Judah.

[Yohanan Aharoni]

In the Aggadah

In the Aggadah Nabal is referred to as a descendant of Caleb in order to compare his own illustrious ancestry to that of David who was descended from Ruth the Moabitess (TJ, Sanh. 2:3,

20b). He denied God, had idolatrous thoughts and was guilty of unchastity. Like *Laban, the letters of whose name are identical with those of Nabal, he was a scoundrel (Mid. Ps. 53:1). Ten days intervened between his illness and his death (1 Sam. 25:38) because he had given food to each of David's ten men (1 Sam. 25:5; RH 18a); or because these were the Ten Days of Penitence, when God hoped that Nabal would repent (TJ, Bik. 2:1, 64d). According to another opinion, however, Nabal was smitten more than a week after Samuel died, his death being delayed in order to avoid any confusion between the mourning for a righteous man and a wicked one (Mid. Ps. 26:7).

NABATEANS, ancient people in the Middle East. Originally a pastoral, nomadic people, the Nabateans became merchants in the trade of oils, aromatics and spices, frankincense and myrrh from southern Arabia. By the second century B.C.E., they controlled the Red Sea coastal cities and were considered unwelcome competition by Ptolemaic shipping interests (Diodorus 3, 43:5). Soon thereafter the expansionist Nabateans established settlements on the lucrative trade route, dominating the passage from the Hejaz through Petra to Damascus, and from Petra through the Negev to the Mediterranean port city of Gaza. Nabatean remains are found at over 1,000 sites in this area. At their height they controlled and colonized parts of modern-day Syria, Jordan, the Israeli Negev, Sinai, parts of eastern Egypt, and a northwestern section of Saudi Arabia. Nabatea's apogee is from the first century B.C.E. to the second century C.E. Nabatean material culture reaches its zenith in the second half of the first century B.C.E., before the Romans established control in 106 C.E.

The Nabateans (Gk. *Nabataioi*) are identified as people from the Arab kingdom of Nabatea. They refer to themselves as *Nabatu* on their Aramaic inscriptions. Their origins are controversial, but according to Graf the Nabateans arose within the Aramaic-speaking world of the so-called "Fertile Crescent" (Hieronymos of Cardia, *apud* Diodorus Siculus 19:95), and they may have been a sub-tribe from Qedar or the Persian Gulf. Philip C. Hammond places their origins in the Arabian Hejaz. However, the fact is that we do not know where they come from; thus, their origins are unknown. Whatever their origins, we do know that by 312 B.C.E. the Nabateans were already living in Petra, where they defended themselves successfully from an attack by Antigonos the "One-Eyed," a veteran commander from Alexander the Great's eastern campaigns.

The Nabatean Kingdom was strategically located. It was interlaced with east-west routes traversing the desert of the region now designated as the Israeli Negev (south of Beersheba) to the ports of Gaza, Ascalon, and Raphia (Rafa) in the Sinai, the latter a border town between Gaza and Egypt on the Mediterranean Coast. It also included the vast desert of the Sinai. From Petra, which served as the nexus for the redistribution of goods for the caravan traffic, the most important route to the west crossed the Negev to the Sinai. Here the Nabateans established settlements in the Negev that served as their in-

termediary links either to the Mediterranean or to Jerusalem and Phoenicia in the north. The best known of these towns include: Nessana (Auja al-Hafir in Arabic, Nitzana in Hebrew), and in the Negev, Sbeita or Sobata (Isbeita in Arabic, Shivta in Hebrew), Elusa (Khalasa in Arabic, Halutza in Hebrew), Oboda (Abda in Arabic, Avdat in Hebrew), Rehovot-in-the-Negev (Ruheibeh in Arabic), and Mampsis (Kurnub in Arabic, Mamshit in Hebrew). From Mediterranean ports ships sailed westward to the North African coast to Egypt and Alexandria, and northwards to Palestinian and Phoenician ports, primarily Caesarea and Tyre, and to Anatolian ports, such as Miletus. Goods were then transported further afield to Europe.

What little is known of Nabatean history is through Greek, Latin, Hebrew, and Nabatean sources which have been extensively researched by the Abbé J. Starcky (1966), P.C. Hammond (1973), R. Wenning (1987), and G.W. Bowersock (1983). Writing in the Augustan period, two writers are particularly important for our understanding of the Nabateans. One is the first century B.C.E. Sicilian-born Greek historian, Diodorus Siculus, whose *Bibliotheca historica* (19:94–100) is based on Hieronymos of Cardia. The second historian is Strabo, who wrote about the Nabateans in his *Geography*.

Petra – Capital of Nabatea

Located in a north-south deep canyon, approximately 50 miles (80 km.) south of the Dead Sea, via the Desert Highway some 160 miles (260 km.) south of Amman, Petra is enclosed by the towering majesty of the scarp which forms the Dead Sea Rift System. It can be said that the city of Petra (*Raqmu* in Nabatean) is symbolic of the religious, social, and political order of the Nabateans, and we have little physical evidence that is more central to their study. This complex, remarkable capital of the Nabatean kingdom is unique in its setting and architecture, including not only opulent temples and 800 tombs but also all the trappings of an active major urban center with a theater, baths, and administrative buildings.

The chronologies of Nabatean monarchs for these periods are provided by Abbé J. Starcky 1966, Z.T. Fiema and R.N. Jones 1990, and R. Wenning 1993 (see chart of Nabatean kings below). Although the early rulers are shrouded in mystery, the list begins with a reference to the Nabateans in the war with the Seleucid king Antigonos of Syria. The Nabatean King Aretas I (ca. 170–160 B.C.E.) is referred to as the "tyrant of the Arabs" and the "King of the Nabatu," or King of the Nabateans. It is also Aretas I who is cited in 11 Maccabees 5:8 as the protector of the High Priest Jason, who asks for asylum in Petra. He also rules when cordial hospitality is offered to the Maccabean leaders Judas and Jonathan. There is scholarly debate (see Bowersock 1983) as to whether Aretas I is or is not succeeded by a king known as Rabbal I.

Although the known rulers are male, there is clear evidence for the high status accorded queens, for the coinage demonstrates that both the king and the queen occupied prominent positions. And in some cases they probably serve as joint rulers.

Nabatean Language and Writing

The Nabateans were apparently multilingual. Their native language was Arabic, many of their personal names were in Arabic, and they spoke Arabic, but they adopted the *lingua franca*, Aramaic, which they wrote in their own script for formal inscriptions. After the Romans occupied and established a strong military presence in the area, Petra continued to retain its native language but used Greek for business. After 106 C.E. the Nabateans incorporated Roman institutions and employed Latin for government and business.

Nabatean Religion

The main deities of the Nabateans were Dushara, and Al-'Uzza (on the various deities see Sourdel, 1952). Dushara – Dusares in Greek, Dus-sara (pronounced Dushara, or “Lord of the Shara”) – was the tutelary deity of Petra, the supreme deity of the Nabateans and of Petra. He is associated with vegetation and fertility, and is also the everlasting, deathless god. At Petra Dushara has been recognized by a black obelisk and huge rectangular blocks of stone that carried his spirit (Glueck 1965). The tradition handed down by Arab folklore is that the djinn blocks and tower tombs are representations of Dushara and embody his spirit. The djinn are considered to be malevolent spirits that inhabit some 26 of these blocks of stone found at Petra. Dushara was also worshipped in carved quadrangular niches with *betyls* in them.

In the Hellenistic period, Dushara became equated with Dionysos, and was syncretized with the Egyptian gods Serapis and Osiris. Later he may be identified with the Hellenistic Zeus and Ares.

Al-'Uzza (sometimes associated with the Syrian Atargatis, meaning “the mighty One”) is the Nabatean mother goddess, the Arabian Aphrodite sometimes referred to as Al-'Uzza-Aphrodite. She symbolizes fertility and vegetation, and is also the paramount queen, the sky-mother, and the patroness of travelers. Most important of all, she is the creator and sustainer of life.

Nabatean Material Culture

Among the most remarkable of Nabatean technological achievements are the hydraulic engineering systems they developed for water conservation. Utilizing their ingenuity, they constructed dams, terraces, and aqueducts to divert and harness the rush of swollen winter waters. As brilliant engineers they diverted flash flood conduits to funnel the precious resource throughout Petra.

Nabatean architecture exhibits an eclecticism achieved by a combination of styles, with Hellenistic Greek, Seleucid, Ptolemaic, Egyptian, and to a lesser extent Parthian architectural concepts. These are combined with a Nabatean sense of Orientalism. A strong native style asserts itself in both architecture and sculpture. Most of their monuments were constructed within a 200-year period. The artisans were probably imported, perhaps from Alexandria. With time the stylistic development of sculptural decoration became simplified, so that by the Roman period, most of the recovered sculpture

is more bold and crude in character with less warmth, and a metamorphosis takes place resulting in a style that has all but lost its individuality.

Nabatean construction primarily employed sandstone ashlar blocks – either bonded together with mortar or dry-laid. Their walls are set with timber stringcourses that provide tensile reinforcement against earthquakes. The diagonally chiseled surfaces are designed to hold colorful stucco commonly used for decoration. Ornamented plaster, and sometimes marble imported for use as revetments, also decorated many of the buildings.

Nabatean Coinage

Minted for 170 years, the earliest Nabatean coins were struck during the period of 62–60 B.C.E. These coins are important sources of information about Nabatean political standing.

Nabatean Pottery

Nabatean pottery is unique. It is what archaeologists refer to as a “horizon-marker” or an “index fossil,” because it is different from any other wares produced at this time. Not only is it recovered in prodigious numbers at Petra and known Nabatean sites in Jordan, but large quantities also are found in Saudi Arabia, the Negev, and the Sinai. The origins of Nabatean pottery are obscure, but it makes its earliest appearance at Petra during the reign of Aretas II, or between 100 and 92 B.C.E.

In conclusion, Nabatean research proves the existence of a highly original culture that flourished from the second century B.C.E. to the second century C.E. Nabatea has not yet, however, yielded all the secrets concealed in its soil.

(The names of sites and monuments in Petra and Jordan are based on the official transliteration system used by the Royal Jordanian Geographic Center (RJGC).)

The Chronology of Nabatean Kings

(based on Z.T. Fiema and R.N. Jones (1990))

| | |
|---------------------------------|----------------------|
| Aretas I | ca. 170–160 B.C.E. |
| (?) Rabbel I | |
| Aretas II | ca. 100–96/92 B.C.E. |
| Obedas I | 93–85 B.C.E. |
| Aretas III Philhellenos | 85–62 B.C.E. |
| Obedas II | 62/61–59 B.C.E. |
| Malichus I | 59/58–30 B.C.E. |
| Obedas III | 30–9/8 B.C.E. |
| Aretas IV “Lover of his People” | 9 B.C.E.–40 C.E. |
| Malichus II | 40–70 C.E. |
| Rabbel II | 70–106 C.E. |

[Martha Sharp Joukowsky (2nd ed.)]

NABLUS, city in Erez Israel (in later times called *Shechem in Hebrew). Nablus was founded by Vespasian in 72/73 C.E. as Flavia Neapolis on the site of the Samaritan village Mabartha (“the passage”) situated between Mts. Ebal and Gerizim near biblical Shechem (Jos., Wars 4:449). Biblical Shechem is identified with Tel Balatah, which has remains from proto-historic times down to the late Persian period. Because of its favorable geographic position and abundance of water the Roman city prospered; it was endowed with an extensive territory including the former Judean toparchy of Acraba. Neapolis was hostile to Septimius Severus, who therefore temporarily deprived it of municipal status. In 244 Philip the Arab turned it into a Roman colony called Julia Neapolis; its coinage continued until the time of Trebonianus Gallus (251–3). Its temples included an Artemision and the city also had an agora, colonnaded streets, a stepped nymphaeum, a theater and hippodrome, etc. In recent years important remains of Roman Neapolis have been unearthed by Y. Magen. Christianity took root early in Neapolis; it was the birthplace of *Justin Martyr (c. 100) and had a bishop as early as the Council

of Ancyra in 314. In Byzantine times it was depicted on the Madaba Map as a walled town, Neapolis was also an important center for the *Samaritans who twice revolted and set up a “king.” The city was conquered in 636 by the Arabs, who retained its name in the form Nablus. It is mentioned several times in talmudic literature as Nipolis (TJ, Av. Zar. 5:4, 44d); the rabbis, as well as some early Christian authors, confused it with Shechem, and even with Samaria. Under Muslim rule Nablus contained a mixed population of Muslims, Persians, Samaritans, and Jews. The synagogue built in 362 by the high priest Akbon was turned into a mosque (al-Khadra’). From 1099 to 1187 the city was held by the crusaders, who called it Naples. It was the second capital of the royal domain and contained a palace and a citadel; the city itself was unwalled at that time. In 1522 a Jewish community is mentioned in Nablus; its fortunes varied throughout the 18th and 19th centuries until it completely abandoned the city shortly after 1900. Nablus remained a center of the Samaritans, some of whom still live there.

[Michael Avi-Yonah / Shimon Gibson (2nd ed.)]

Modern Period

After World War I Jews again tried to live there, but Nablus was a center of Muslim fanaticism, and the 1929 Arab riots ended these attempts. The town suffered severe damage in the 1927 earthquake and was largely destroyed. The Mandatory Government aided its reconstruction along modern lines but sought to preserve its Oriental character. The Samaritan quarter lies at the foot of Mt. Gerizim; wealthier inhabitants have built their homes, mostly in the last decades, on the slopes of Mt. Ebal and Mt. Gerizim. Under the Jordanian regime (1948–67), the economy of Nablus, then the center of the largest district of the West Bank, was based mainly on administrative services and farming. In addition to its traditional industry of soapmaking (its raw material coming from the extensive olive groves of the vicinity), the first modern manufacturing enterprises made their appearance, most of them in the Sokher Valley to the east. In the *Six-Day War, on June 7, 1967, Nablus was taken by an Israeli column coming from the east. In the census held by Israel in the fall of 1967, Nablus had 44,000 inhabitants (as against 23,300 in 1943), of whom all were Muslim, except for 370 Christians and about 250 Samaritans. When, however, the populations of villages and refugee camps next to the town were added, the total number amounted to about 70,000, making Nablus the largest urban center of Samaria.

By the early 21st century the population of the city had reached 100,000, while the Nablus district had a population of 200,000. Nablus was one of the West Bank towns from which Israeli troops withdrew in the wake of the 1995 Oslo II agreement signed at Taba. With the outbreak of the second intifada in 2000 it became part of the terrorist infrastructure and a jump-off point for terrorists making their way to Israel. In 2002 it was targeted by Israeli forces in Operation Defensive Shield and since then has been

subjected to roadblocks, searches, and security actions by Israel.

NABONIDUS (Nabû-na'id), last king of Babylon (556–539 B.C.E.), son of a governor, Nabû-balatsu-iqbi, and a votress of Sin. A native of *Haran, Nabonidus was a military commander in his sixties when he ascended the throne of Babylon.

The principal cuneiform sources concerning his reign are: the Nabonidus Chronicle (Pritchard, *Texts*, 305–7); a basalt stela, which relates his rise to power (*ibid.*, 308–11); a memorial inscription from Haran, which tells the story of his mother (*ibid.*, 311–2); the so-called “Verse Account of Nabonidus,” a libel which accuses Nabonidus of mendacity, madness, and of impiety (*ibid.*, 312–5); and foundation documents relating the rebuilding of sanctuaries.

The same period is recorded also by Herodotus, Xenophon, and Josephus. His religious activities were multiple. He restored the ziggurat of Ur and its various temples, e.g., Esagila – the great temple of Marduk in Babylon. One of his dreams was to reconstruct the temple of Sin in Haran. This important city commanding the highways from northern Mesopotamia to Syria and Asia Minor had been in the hands of the Medes since 610. To expel the Medes, Nabonidus sought the help of the young Persian king *Cyrus. In the battle that followed, Cyrus captured the Median king Astyages – his grandfather – and annexed the Median kingdom, thus initiating the building of a great empire which was to include Babylonia as well. In the third year of his reign, Nabonidus went to Syria to raise troops for his campaign in Arabia. He took Hamath, rebuilt the temple of Sin in Haran, stayed during a brief illness in the Anti-Lebanon, and started for Arabia. He took Adummu (al-Jauf) and destroyed *Tema, which he rebuilt and made his residence for several years. His son Bêl-šar-ušur (*Belshazzar, cf. Dan. 5) stayed in Babylon as regent during Nabonidus’ long absence. His stay in Tema still puzzles historians, and various explanations have been put forward, the most accepted being that his major aim was the resurrection of the ancient moon religion of Sin.

In the fall of 539 Cyrus, with the approval and perhaps even on the initiative of the priesthoods of Babylon and the other cities of southern Mesopotamia, invaded the Babylonian empire. By that time Nabonidus was back in the capital. During Cyrus’ siege of Opis on the Tigris, the inhabitants revolted against Nabonidus, who massacred them. On the 15th of Tashritu (September–October), Sippar surrendered

to Cyrus without battle. Nabonidus fled. The next day Babylon – whose priests, especially the priest of Marduk, opposed him – opened its gates to Cyrus and his allies (the Gutians). Nabonidus was later arrested upon his return to Babylon. On the third day of the following month Cyrus made his triumphal entrance into Babylon. “Great twigs were spread before him. The state of ‘peace’ was imposed on the city.” Nabonidus’ end is obscure; according to Josephus, however, he was treated humanely by the conqueror, who assigned Carmania (Central Iran) for his residence (Jos., *Apion* 1:153). Aramaic fragments from Qumran in which Nabonidus (*Nbny*) relates that while in Tema (so!) he was afflicted with an inflammation of the skin (*shehin*) for seven years until an unnamed Jewish soothsayer (*gazar*, a word which also appears in the Aramaic of *Daniel) advised him to pray to the God of Heaven instead of to the idols, show what sort of speculations the king’s prolonged residence in remote Tema gave rise to. This suggests that the story about the seven years’ lycanthropy of Nebuchadnezzar in Daniel 4 goes back ultimately to such malicious speculations about Nabonidus on the part of disaffected Babylonians.

[Laurentino Jose Afonso]

NABOTH (Heb. נָבוֹת), owner of a vineyard close to the palace of *Ahab king of Israel (1 Kings 21:2). Naboth came from the town of Jezreel. Ahab coveted Naboth’s vineyard, but Naboth refused to sell or exchange it, basing his refusal on the tradition that inherited family property cannot be taken out of the family’s hands: “The Lord forbid it me, that I should give the inheritance of my fathers unto thee” (21:3). In order to obtain the vineyard, Ahab’s wife *Jezebel fabricated an accusation against Naboth that he blasphemed God and the king (21:10). According to the custom in the Ancient East, the property of a rebel against the monarchy was confiscated and taken into the royal treasury. Evidence of this custom has also been preserved in one of the *Alalakh documents (No. 17). As a result of a staged trial Naboth’s property was confiscated and he himself was stoned. Another biblical tradition states that his children were also killed. Elijah the prophet raised his voice against Ahab because of Naboth’s execution, and Elijah’s scornful words branded Ahab a murderer and robber and foretold the doom of the royal house (1 Kings 21:17–24). The story of Naboth serves as an example and symbol of the Israelite’s close attachment to his inheritance and his family-tribe tradition. Furthermore, this story points to the limits of royal authority in Israel, which cannot deal arbitrarily with the lands belonging to the people. For this reason Jezebel had to represent Naboth as a rebel against the king and as blaspheming God.

[Hanoch Reviv]

In the Aggadah

Naboth was Ahab's cousin, with the result that the king, by killing Naboth's sons (11 Kings 9:26), could claim his vineyard by right of inheritance (Sanh. 48b). He used to make regular pilgrimages to Jerusalem, and as a great singer, many followed him. It was because he once failed to make his customary journey that his false conviction took place (PR 25, 127a). Naboth's opportunity for revenge, however, came when God asked: "Who shall entice Ahab that he may go up and fall at Ramoth-Gilead?" (1 Kings 22:20–21). It was the "spirit" of Naboth which volunteered for the task (Shab. 149b).

NACHÉZ, TIVADAR (Theodor Naschitz; 1859–1930), violinist and composer. Born in Pest, Hungary, Nachéz as a boy played with Liszt and studied under *Joachim in Berlin. In 1889, after settling in London, he embarked on his career as an internationally renowned violin virtuoso. His compositions include *Danses Tsiganes*, a violin concerto, and a string quartet. He also edited Vivaldi's violin concertos in A minor and G minor.

NACHMANN, WERNER (1925–1988), industrialist and German-Jewish communal leader. Born in Karlsruhe (Baden), he fled with his family to France in 1938 and returned as an officer in the French army to his native city in 1945. He was the chairman of the Karlsruhe Jewish community (1961–88), of the Association of Jewish Communities (Oberrat) in Baden, and of the Central Council of Jews in Germany between 1969 and his death in 1988. He received numerous awards, such as the Theodor Heuss Prize, for his efforts regarding the improvement of Jewish-Christian relations. He was, however, also criticized during his long tenure as top official of Germany's Jewish communities as being too lenient toward former Nazis. Thus, his defense of the minister president of Baden-Wuerttemberg, Hans Filbinger, who faced accusations over his role as a judge during World War II, caused considerable protest within and beyond the Jewish community. Immediately after Nachmann's death it was discovered that he had embezzled about DM 33 million of restitution money. Although his successor, Heinz Galinski, made this affair public and tried to discover where the money had gone, it was never resolved conclusively.

NACHMANOVICH (Pol. Nachmanowicz), wealthy family in *Lvov, Poland; its members were among the leaders of the community within the walled city of Lvov during the late 16th and early 17th centuries.

The first-known member of the family, ISAAC BEN NAḤMAN (d. 1595), is mentioned in 1565 as *dayyan* of the community, and for many years was among its leaders. As chief of the representatives of the communities of the "Land of

Russia" (*Senior generalis ziem ruskich*) he participated in meetings of the Council of the Four Lands. In 1589 he was *parnas* of the Council and in 1590 he and his son Mordecai paid the first installment of a tax in its behalf. Isaac attained his high position in the community through his diversified activities as a spice merchant and tax farmer. Among other undertakings he leased an important customs station in Sniatyń, in the Lvov region, and held the rights to the lease of the state revenues in the city of Lvov and the sub-district (*starostwo*). He was also engaged in large-scale moneylending against pledges of real estate and valuables. Through his wealth and prestige he was able to appear in the Polish law courts without having to take the Jewish *oath (*more judaico*). Isaac also had access to the Polish kings Sigismund II Augustus and Stephen Báthory. In 1581, he was authorized to acquire a plot of municipal land where he built a magnificent synagogue in Gothic style at his own expense after the plans of an Italian architect. It became known as the "Turei Zahav" synagogue.

Isaac's elder son, NAḤMAN ISAAKOVICH (Naḥman ben Isaac; d. 1616), took over his father's affairs, including his tax farming and moneylending undertakings, and acquired the lease of the market imposts and other revenues of Lvov. He served as head of the community a number of times, and was admitted to the citizenship of Lvov, being known among Christians by the honorific "Generosus." He was also a scholar. Naḥman, who was stringent in collecting the taxes, had frequent conflicts with the local inhabitants who accused him of overcharging the customs dues, but the city council, which was dependent on his loans, rejected their complaints. From 1603 Naḥman headed a struggle to preserve the synagogue erected by his father which the Jesuits in Lvov wished to convert into a church and seminary. In 1609 a compromise was reached which left the synagogue in the ownership of the Nachmanovich family, while the Jewish community undertook to procure a suitable site for the needs of the Jesuits in the suburbs of Lvov for a sum of 20,600 zlotys. Immediately afterward, Naḥman and his brother Mordecai completed the construction of the synagogue, adding a women's gallery and magnificent religious requisites. In honor of its opening R. Isaac ha-Levi composed a "Song of Redemption" which was sung by the Jews of Lvov for many generations. The deliverance of the synagogue was preserved in the memory of the local community and gave rise to a number of legends. It was connected in folklore with Naḥman's wife Rojse ("Di gildene Rojse," as she was called by the Jews) who was renowned for her beauty and wisdom. After the death of her husband, Rojse took charge of his business affairs until her death in 1637. Her tombstone, which was preserved until the Nazi occupation, was inscribed with a Renaissance-style epitaph extolling her deeds.

The younger son of Isaac, MORDECAI (MARCUS) BEN ISAAC (d. 1635?), ranked among the elders (*seniores*) of the Lvov community, and also engaged in tax farming. In 1627 the merchants of Lvov accused him of overcharging the customs duties. He became court purveyor in 1634 to King Ladislaus IV, furnishing supplies to the Polish army in the war with Russia.

The son of Nahman Isaakovich and Rojse, ISAAC NACHMANOVICH (Junior; b. 1595), after years of apprenticeship under the tutelage of his mother and uncle, resumed the business in his own right and on occasion acted as court banker. In 1626 he lent considerable sums of money to the royal treasury during the war with Sweden. In 1634 Isaac was given the status **servus camerae* by King Ladislaus IV, and exempted from paying all customs duties and imposts, whether levied by the crown or privately. He also expanded his commercial activities, especially the trade in textiles and supply of oxen to the army, and in partnership with others, leased the state revenues in the districts of Lvov and *Drogobych. However, by 1637 he was on the verge of bankruptcy, and in 1646 was arrested for debt. He succeeded in escaping from prison and disappeared.

[Arthur Cygielman]

NACHOD (Czech *Náchod*), town in N.E. Bohemia, Czech Republic. Its Jewish community was one of the four oldest in *Bohemia and is first mentioned in the city records of 1455. The Jewish street dates from the end of the 15th century. Jews were expelled from Nachod in 1542 and robbed on their way to Poland. They returned in 1544 and founded a school which is mentioned in 1547. The cemetery dates from 1550 and a *mikveh* from 1592. Eleven families were recorded in the town in 1570. In 1663, the Jews were accused of having caused a conflagration in which their quarter and a large part of the town was destroyed. One member of the community was executed; the whole community was attacked, and its members fled. Some founded a community in Ceska Skalice which was expelled in 1705. Soon reestablished, the Nachod community had 60 families in 1724. The synagogue was rebuilt in 1777. Jews were active in making Nachod a center of the textile industry; in 1848 Isaac Mautner founded the famous Mautner textile company. At the end of the century they were beset by antisemitic riots and plunder in connection with the *Hilsner case (1899). There were 150 Jewish families in Nachod in 1852; 630 persons in 1893; 463 in 1921; and 293 in 1930 (2.1% of the total population). In 1902 there were 100 Jews in 22 surrounding localities, among them formerly important communities such as Hronov, Cerveny Kostelec (Ger. Rothkosteletz), and Police nad Metuji, who were affiliated to the Nachod community. In 1934 the *Moller family transferred their textile factory to Palestine, founding the Ata company at *Kiryat Ata. Among the rabbis of Nachod were Heinrich (Hayyim) *Brody, who officiated from 1898 to 1905, and Gustav *Sicher. Under Nazi occupation in June 1939, the synagogue was desecrated, and in July the Gestapo raided Jewish homes. The cemetery – its oldest monument dating from 1648 – was also destroyed. In December 1942 the Jews were deported to Theresienstadt, and from there to the death camps of Poland. After World War II

a small congregation affiliated with the *Liberec community was established, primarily by veteran soldiers from *Subcarpathian Ruthenia. Nachod was one of the important transit stations for *Berihah (1945–46). A monument was erected there for the victims of the Holocaust in 1958. The synagogue building was demolished in the 1960s.

NACHOD, JACOB (1814–1882), merchant and second president of the *Deutsch-Israelitischer Gemeindebund. An orphan, he studied at the Wolfenbuettel Samsonschule and went to Leipzig in 1830. There he founded in 1844 the Gesellschaft der Freunde, the forerunner of the Leipzig communal organization established in 1868. He cooperated with M. Kohner in the founding of the Deutsch-Israelitischer Gemeindebund (1869) and succeeded him as its president on Kohner's death in 1877. Nachod's main contributions were in the field of education and welfare.

BIBLIOGRAPHY: *Gedenkblaetter an J. Nachod* (1882).

NACHOD, OSKAR (1859–1933), German historian and bibliographer. Born in Leipzig, Nachod began to write a definitive history of Japan. He abandoned the immense task after completing two volumes. These volumes, *Die Urzeit* (1906) and *Die Uebernahme der chinesischen Kultur* (1930), have remained classics. Nachod's magnum opus was the seven-volume *Bibliographie von Japan* (1928–44), the last parts of which were completed by other scholars. It is a catalog of books and periodical articles dealing with Japan published in European languages between 1906 and 1943.

NADAB (Heb. נָדָב; “[God] has been generous”), eldest son of *Aaron and Elisheba daughter of Amminadab (Ex. 6:23; Num. 3:2, et al.). For details see *Abihu. (The two are always mentioned together and what applies to Abihu is also true of Nadab.) Nadab too left no sons (Num. 3:4; 1 Chron. 24:2).

[Morris M. Schnitzer]

Nadab and Abihu in the Aggadah

Apart from the one sin which brought about their mysterious deaths, Nadab and Abihu were righteous men. As to the nature of the sin – the “strange fire” which they offered up – there are various interpretations. The most obvious explanation bases itself on the injunction against the priests' partaking of wine and strong drink before entering the sanctuary (Lev. 10:9), which immediately follows this episode. It is therefore suggested that Nadab and Abihu were in a state of intoxication when they offered up the “strange fire.” A number of interpretations suggest that they neglected the various ritual requirements connected with the offerings (Lev. R. 20:8–9).

It is also suggested that their overbearing haughtiness was responsible for their deaths. They did not marry because they considered no woman good enough for themselves,

saying, "Our father's brother [Moses] is a king, our mother's brother [Nahshon] is a prince, our father [Aaron] is a high priest, and we are both deputy high priests – what woman is worthy of us?" (Lev. R. 20:10). They even went so far as to wish for the death of Moses and Aaron so that they could assume the mantle of leadership (Sanh. 52a; Lev. R. 20:10). Even in the performance of the sacrifice they displayed their haughtiness by refraining from consulting with one another and by neglecting to ask Moses and Aaron whether they might offer such a sacrifice, depending instead upon their own judgment. The sages deduce from this episode that it is forbidden for a disciple to render a legal decision in the presence of his master (Lev. R. 20:7). It is, however, also suggested that their death was a vicarious punishment for their father's sin with regard to the golden calf. Moses relates: "Moreover the Lord was very angry with Aaron to have destroyed him" (Deut. 9:20), and "destruction" means extinction of offspring (Lev. R. 10:5). Moses attempted to comfort his brother by assuring him that his two remaining sons were greater than Nadab and Abihu. At Sinai, Moses was told that he would sanctify the Tabernacle through the death of a great man. He thought that the reference was to himself or Aaron, but now he realized that Nadab and Abihu were nearer to God (Lev. R. 12:2).

Their deaths were caused by "two streams of fire,... branched off into four, and two entered into each of the nostrils of Nadab and Abihu." Their souls were burnt, although no external injury was visible (Sanh. 52a). The whole House of Israel was bidden to bewail the death of Nadab and Abihu (Lev. R. 20:12) for "the death of a pious man is a greater misfortune to Israel than the destruction of the Temple" (Sif. Deut. 31).

NADAB (Heb. נָדָב), son of Jeroboam whom he succeeded on the throne of Israel (907–906 B.C.E.). Nadab is said to have ruled for two years (1 Kings 14:20; 15:25). Since it is also related that he came to the throne in the second year of Asa's reign in Judah and that he was assassinated and succeeded by *Baasha in the third year of Asa's reign (15:28), the actual period of his rule must have been less than two years. During his short reign he fought against the Philistines and laid siege to *Gibbethon. Baasha, who presumably was one of his officers, revolted against him. The usurper assassinated all the descendants of Jeroboam as predicted by Ahijah the Shilonite (15:29).

[Josef Segal]

NADAV, ZĒVI (1891–1959), Second Aliyah and Ha-Shomer activist, editor, and author. Born in Ein Zeitim near Safed, he was brought up in Bobruisk, Belorussia, and returned to Erez Israel in 1906. Nadav was one of the founders and outstanding members of *Ha-Shomer ("Watchmen's Organization") and among the first settlers at Umm Jūnī (*Deganyah) and *Merhavyah. In 1917, when the Nili intelligence network was uncovered, he was sentenced to forced labor in Turkey, but escaped to Russia and returned to Palestine in 1919. He was a member of *Gedud ha-Avodah ("The Labor Legion") and was active in the organization of Jewish defense in Jerusalem in 1920, in Jaffa in 1921, and in Haifa in 1929. He studied engineering and was the editor of the journal *Tekhnukah u-Madda* ("Mechanics and Science"). His memoirs, which appeared in *Kovez ha-Shomer* ("Ha-Shomer Anthology," 1937), and his books, *Mi-Ymei Shemirah ve-Haganah* ("The Days of Vigilance and Defense," 1954), and *Kakh Hithalnu* ("Thus We Began," 1958), are a source for the history of the period.

[Yehuda Slutsky]

NADDAF, ABRAHAM ḤAYYIM (1866–1940). Born in *San'a, Yemen, to a family of rabbis and communal leaders, he settled in Jerusalem in 1891 with R. Shalom *Alsheikh, his close friend and partner for many years in the leadership of the Yemenite community in Jerusalem. From his arrival he acted to disengage the Yemenite community from the Sephardi *kolel* (communal organization) in order to promote the economic and cultural life of his community, which was included in the Sephardi *kolel* and was discriminated against in the distribution of financial resources. With R. Alsheikh he took decisive steps to separate his community from the Sephardi *kolel*, against the policy of the older recognized leadership. As a young person he was the first in the communal leadership to understand and use modern political and communal standards. For that end he established independent community institutions such as schools, yeshivot, and a hostel for newcomers from Yemen, and what was crucial for their independent existence, namely, a network of fundraising to finance these institutions. He traveled several times as an emissary of both the Sephardi and the Yemenite communities to *Syria, *Lebanon, and Yemen. Following complaints by the Sephardi *kolel*, he and many other Yemenite separatist leaders were arrested in 1907 by the Ottoman government in Jerusalem, but he was successful in escaping from prison dressed as a woman and went to Constantinople, where he could obtain a *firman* from the Sublime Port for establishing an independent Yemenite *kolel*. In 1908 he carried out a comprehensive and detailed census of the Yemenite community in Jerusalem which constitutes a very helpful source for our knowledge of that community. To preserve the Yemenite tradition he worked for the publication of the essential liturgical religious books: *tāj* (Pentateuch, including the *tafsir*, Arabic

translation of *Sa'adia Gaon) and a *tiklāl* (*siddur*). In 1903, he represented the Yemenites of Jerusalem at the first assembly of Erez-Israeli Jews in Zikhron Ya'akov's *kolel*. He was the first Yemenite rabbi in Erez Israel to investigate Yemenite traditions and published several books and articles on the subject, such as the first bibliography of the works of Yemenite scholars, *Seridei Teiman* ("Remnants of Yemen," 1928), *Anaf Ḥayyim* (notes on *tiklāl Ez Ḥayyim* by R. Yiḥye Ṣaliḥ). In consequence of a disagreement with younger leaders in the community he retired and moved to Tel Aviv, devoting his last years to research. His rich literary legacy, preserved by his descendants, was used by Prof. Y. Ratzaby for his research on Yemenite Jews, including his memoir *Zekhor le-Avraham*.

[Yosef Tobi (2nd ed.)]

NADEL, ARNO (1878–1943), German poet and liturgical musicologist. Born in Vilna, Lithuania, Nadel studied liturgical music under Eduard *Birnbaum in Königsberg. In 1895, he entered the Jewish Teachers' Institute in Berlin and spent the rest of his life in Berlin. His first book, a volume of aphorisms and verse entitled *Aus vorletzten und letzten Gruenden* (1909), betrayed the influence of Nietzschean philosophy. His later works dealt mainly with biblical and Jewish themes. They include the play *Adam*, staged in Karlsruhe in 1917; *Das Jahr des Juden* (1920), a collection of 12 poems; *Rot und gluehend ist das Auge des Juden* (1920); *Der Suendenfall* (1920); and *Juedische Volkslieder* (1923). His most important verse collection, *Der Ton* (1921, enlarged 1926), constitutes his Jewish reply to the nihilism of his time. He also published a German translation of *An-Ski's drama, *Der Dybbuk* (1921). *Der weissagende Dionysos* (1934), a collection of his later poetry, was republished after World War II.

In 1916 Nadel was appointed conductor of the choir at the synagogue in the Pestalozzistrasse, and later became musical supervisor of the Berlin synagogues. He devoted much effort to the collection and study of synagogal music and East European Jewish folk song, searching for manuscripts and noting oral traditions. Many of these he published and discussed in the music supplements of the *Berlin Gemeindeblatt* and *Ost und West*, and in his articles on Jewish music in the *Juedisches Lexicon* and the German *Encyclopaedia Judaica*. Some of the Yiddish folk songs were also published separately, as in his *Jonteff Lieder* (1919) and *Juedische Liebeslieder* (1923). Drawing on his researches, Nadel restored old traditions and raised the standards of the synagogue choirs. His manuscript collection included several unique cantors' manuals, such as that of Judah Elias of Hanover (1744). All of this he planned to incorporate in a multivolume compendium of synagogal music entitled *Hallelujah*, which was to have been published under the auspices of the Berlin community. The preparation of the earlier volumes was apparently well under way before Nadel was transported to Auschwitz, where

he was murdered. His papers were reported to have been hidden in time, but most have not been recovered.

Nadel was himself a composer, and wrote the incidental music for Stefan *Zweig's *Jeremias* (1918). A man of many talents, he also excelled as a graphic artist and as a painter of landscapes and portraits.

BIBLIOGRAPHY: Stoessinger, in: *Israelitisches Wochenblatt fuer die Schweiz* (Aug. 9, 1946); A. Nadel, *Der weissagende Dionysos*, ed. by F. Kemp ([1934] 1959), contains a critical biography; Sendrey, *Music, indexes*; Baker, *Biog Dict*.

[Sol Liptzin and Bathja Bayer]

NADEL, SIEGFRED FERDINAND STEPHAN (Frederick; 1903–1956), British anthropologist. Born in Austria, Nadel studied with Moritz Schlick and Karl Buehler, and developed a command of contemporary philosophical and psychological theory. In 1932 he began the serious study of anthropology at the London School of Economics under B. Malinowski and C.G. Seligman. He studied the music of primitive peoples, and African linguistics with D. Westermann. He did field work in the Anglo-Egyptian Sudan and with the Nuba, from 1938 to 1940. During World War II he served with the British armed forces and later as a lieutenant colonel with the British Military Administration, 1945–46. He successfully applied his anthropological knowledge to the administration of peoples of various origins and traditions. When a department of anthropology was established at the University of Durham in 1948 he was appointed to the chair, and in 1950 took the new chair of anthropology and sociology at the Australian National University, and was dean of the Research School of Pacific Studies. His ethnographic work was shown in *A Black Byzantium* (1942). In his research he investigated the deeper bases of cultures and employed new psychological techniques of investigation such as intelligence tests. Nadel's primary accomplishment, however, is in theory, which he developed in two major works, *The Foundations of Social Anthropology* (1951) and the *Theory of Social Structure* (1957). His great concern was how to unify the conceptual systems of social anthropology and sociology with a psychological framework. His *Theory of Social Structure* has been described as "one of the great theoretical treatises of twentieth century anthropology... which will have a lasting place in the fundamental literature of our subject" (Meyer Fortes). Nadel died unexpectedly of a heart attack at the age of only 52.

Janowitz, in: *Current Anthropology*, 4:2 (1963), 139, 149–54; IESS, index. **ADD. BIBLIOGRAPHY:** ODNB online; J. Salat, *Reasoning as Enterprise: The Anthropology of S.F. Nadel* (1983).

[Ephraim Fischhoff]

NADELMAN, ELIE (1882–1946), U.S. sculptor. Nadelman, who was born in Warsaw, studied art there and in Cracow. He lived in extreme poverty in Paris for some years, but his first one-man show in 1909 was a triumph. His work at this

time was mainly influenced by classical Greek art, but certain drawings and pieces of sculpture hinted at a search for a new direction. Andre Gide wrote in his *Journal* (1909): “Nadelman draws with a compass and sculpts by assembling rhombs. He has discovered that each curve of the human body is accompanied by a reciprocal curve opposite it and corresponding to it.” Nadelman, who regarded himself as the father of cubism, resented his not being recognized as such. He made his way to the U.S. early in World War I, and had his first American one-man show in New York at the end of 1915. Over the years Nadelman became very successful with his fashionable, witty portrait busts. Nadelman and his wealthy wife assembled one of the finest collections of American folk art. The depression of the 1930s, however, brought a change in his fortunes and after 1932 he was virtually forgotten. He spent his last years doing voluntary occupational therapy at the Bronx Veterans’ Hospital and making sentimental little plaster figures for mass reproduction. Nadelman was rediscovered when in 1948, two years after his death, the New York Museum of Modern Art, in collaboration with the Boston Institute of Contemporary Art and the Baltimore Museum of Art, mounted a memorial exhibition of his work. This revealed him as an important sculptor, remarkable for the supple languor of his marble heads, his translations of folk art, and his comments on human foibles.

BIBLIOGRAPHY: L. Kirstein, *Sculpture of Elie Nadelman* (1948), includes bibliography; idem, *Elie Nadelman, Drawings* (1949).

[Alfred Werner]

NĀDER SHAH, Persian king of the Turkish-speaking tribe of Afshār, originating from the northeastern region of Iran, who according to reliable sources acted as the head of a band of highway robbers and later became the king of Iran (1736–47). Nāder was a Sunni and thus aimed at diminishing the influence of the Shiʿite religious authority which became predominant in Iran during the Safavid period (1501–1736). This trend of thought to some extent brought relative relief to the Jews, who suffered extreme persecution and conversions under the Safavids. He may have entertained the idea of uniting all the monotheistic religions, at least in Iran, but he never acted seriously to implement his idea except for ordering the heads of the Jews, Christians, and Muslims to translate their holy books into Persian. The translation of the Jewish Holy Scriptures was made by Rabbi Bābāi ben Nuriel of *Isfahan. The translation was made into *Judeo-Persian (Persian language in Hebrew letters). It was later transliterated into Persian script by a Muslim. The manuscripts of these Bible translations are preserved in the Vatican Library, the Bibliothèque Nationale in Paris, and the *Ben-Zvi Institute in Jerusalem.

In addition, Nāder entered Jewish history for being involved in two other events: (1) According to the Chronicle of *Bābāi ben Farhād (written around 1730), during his wars to expel the invading Afghans from Iran (1722–30), Nāder, who in the Chronicle is called by his pre-royal name, Tahmasb Nader-Quli, extracted a large amount of money from the Jews of *Kashan and Isfahan and treated them badly. (2) Nāder,

who made *Meshed the capital city of Iran, was responsible for the transfer of many Jews from *Kazvin and *Gilān provinces to the east and northeast of Iran which eventually resulted in the settlement of a group of Jews in Meshed around 1746. Nāder’s mistreatment of the Jews in the Eastern Caucasus is described by Altshuler.

[Amnon Netzer (2nd ed.)]

NADICH, JUDAH (1912–), Conservative rabbi and post-war special advisor for Jewish affairs to General Dwight David Eisenhower. Nadich received his Bachelor of Arts degree with Phi Beta Kappa honors from the City College of New York and his Master of Arts degree from Columbia University. He was ordained by the Jewish Theological Seminary of America, which also awarded him the degrees of Master of Hebrew Literature, Doctor of Hebrew Literature, and Doctor of Divinity (*honoris causa*).

Upon ordination he served as rabbi of Temple Beth David in Buffalo from 1936 to 1940 and of Anshe Emet Synagogue in Chicago from 1940 to 1942. He then enlisted and served as an army chaplain for four years, spending 3½ years in the European Theater of Operations as senior Jewish chaplain with the U.S. armed forces and deputy to the theater chaplain. After the first German concentration camps were liberated, General Eisenhower appointed him his advisor on Jewish affairs, in which capacity he was instrumental in creating livable conditions for Jews who had survived the Holocaust, working with Displaced Persons and with other Jewish chaplains to urgently alleviate their desperate conditions. He received several American decorations, the French Croix de Guerre, and the Order of the British Empire. He retired from active duty in 1946 with the rank of lieutenant-colonel. The government of Israel decorated him with the Ittur Loḥamei ha-Medinah for his service during wartime. The Jewish Welfare Board honored him with the Frank L. Weil Award for distinguished service in the Armed Forces. Following his retirement from the Army, Nadich spent a year and a half on an extended speaking tour, addressing Jewish communities in 40 states on behalf of the *United Jewish Appeal. On behalf of the *Joint Distribution Committee, he addressed Jewish communities throughout South Africa, Zimbabwe, and Zambia as the guest of the South African Jewish War Appeal.

He then went on to serve in the pulpits of two major Conservative congregations, very different in kind and in constituency. He was rabbi of Kehillath Israel (κ1) in Brookline, Massachusetts, from 1947 to 1957; and in 1957 he came to Park Avenue Synagogue in Manhattan after the death of Mil-

ton *Steinberg, where he remained for three decades as rabbi and, after 1987, as rabbi emeritus. KI was located in a middle class suburb of Boston and its congregants were arch traditionalists; a four-day a week Hebrew School was the norm, followed by high school supplemental education at Boston Hebrew College. The congregation produced dozens of rabbis and Judaic scholars from its student body. Park Avenue Synagogue is located on the prestigious upper East Side. Its congregants were leaders of business and industry, Wall Street and the worlds of banking and finance. Nadich served both communities well.

Active in national as well as local affairs, Nadich was president of the Rabbinical Assembly; the Association of Jewish Chaplains of the Armed Forces; and the Jewish Book Council of America; vice president of *Hadoar*, the American Hebrew weekly magazine and an honorary vice president of the Jewish Braille Institute and a member of its board of directors from 1957. He was chairman of the Commission on Jewish Chaplaincy of the Jewish Welfare Board. At the invitation of the Department of Defense and the Armed Forces Chaplains Board during November 1971, he conducted Torah Convocations in South Vietnam and Japan and visited Jewish chaplains and servicemen in those countries and in Thailand, with the brevet rank of major-general; similarly, in Germany in November 1974. In July 1990, he officiated at the first bat mitzvah in China. In 1992 the secretary of the Army appointed him to the committee of the Department of Defense commemorating the 50th anniversary of World War II.

He wrote *Rabbi Akiba and His Contemporaries, The Legends of the Rabbis* (2 vols.; 1994), *The Jewish Legends of the Second Commonwealth* (1983), and *Eisenhower and the Jews* (1953); he was the editor and translator of *The Flowering of Modern Hebrew Literature* (1959) by his late father-in-law, Menachem Ribalow; the editor of *Al Halakhah ve-Aggadah* (1960), a volume of Hebrew essays by Louis Ginzberg. His brochure on Yom Kippur, written for Jews in the armed forces of the United States, has a distribution in the hundreds of thousands.

[Michael Berenbaum (2nd ed.)]

NADĪR, BANŪ I-, one of the three major Jewish tribes in *Medina (pre-Islamic Yathrib) that became famous in Islamic historiography through their conflict with *Muhammad. Following their defeat, the Naḍir left their fortifications and orchards and went into exile. The Naḍir and their brother-clan, the *Qurayza, probably considered themselves descendants of Aaron ben Amram, and hence their nickname *al-kāhināni*, “the two priests,” or “the two priestly tribes.” Several years before Muhammad’s arrival at Medina (the *hijra*), the two tribes cooperated with the Arab tribe of Aws in the battle of Bu’āth, although the Naḍir had been beforehand, and were afterwards, allied with the Arab tribe of Khazraj; the Qurayza were constantly allied with the Aws. But with regard to tribal status the two tribes were unequal: the Naḍir were more prestigious than the Qurayza and were entitled to a higher rate of blood money.

Against this background there was tension between the tribes of which Muhammad presumably took advantage.

Roughly up to the middle of the sixth century Medina was controlled by a Sassanian military governor whose seat was in al-Zāra on the coast of the Persian Gulf; the Naḍir and Qurayza were then “kings” and exacted tribute from the Aws and Khazraj on behalf of the Sassanians. In the last quarter of the sixth century the king of al-Ḥīra made an Arab of the Khazraj the king of Medina, which indicates that the Jews were no longer “kings” and tribute collectors. However, they later regained their power, and in the above-mentioned battle of Bu’āth they, together with the Aws, defeated the stronger Khazraj. After Muhammad’s arrival the Jews were still the owners of fortresses and weapons par excellence. Muhammad concluded non-belligerency agreements with the Naḍir as he did with the other main Jewish tribes; these agreements were not related to the so-called “Constitution of Medina” in which the main Jewish tribes did not participate.

The town of Zuhra in the Medina area that was close to al-Quff, the town of the *Qaynuqā’, was “the town of the Naḍir,” although it was also inhabited by others. In Zuhra there were reportedly 300 goldsmiths, but it is not clear whether all or part of them belonged to the Naḍir. The town was located near the eastern Ḥarra (stony tract) of Medina that was named after it, Ḥarrat Zuhra.

Beside agriculture, the Naḍir were involved in commerce: one of them, Abu Rafi, is referred to as “the biggest merchant among the people of Hijaz.” They traded in textiles, wine, and weapons. In addition to the common tower-houses (*uṭum*, pl. *āṭām*) which were also used for residence, the Naḍir had a castle capable of sheltering the whole tribe in times of war. But the accounts of Muhammad’s war against them speak of house-to-house fighting, which may indicate that they were taken by surprise.

[Michael Lecker (2nd ed.)]

NADIR, MOYSHE (pseudonym of **Isaac Reis**; 1885–1943), Yiddish poet and humorist. Born in eastern Galicia, Nadir emigrated to New York at the age of 13 and at 16 began to write lyrics in which he emphasized the hardships of the immigrant generation. His later lyrics were more skeptical and often biting satirical. In addition to poetry, Nadir published feuilletons, essays, short stories, plays, and criticism in dozens of different Yiddish periodicals and anthologies, as well as dozens of his own books. He tried to mask his sentimentalism in biting irony, which increased as he found life increasingly meaningless, and sought escape from nihilistic moodiness in jesting. He said: “When God had nothing to do, He created a world. When I have nothing to do, I destroy it.” He co-edited the humorous biweekly *Der Yidisher Gazlen* and was a

frequent contributor to *Der Groyser Kundes*, the most widely read Yiddish humorous periodical of his time. He participated in the literary projects of Di *Yunge and aroused interest with his volume of erotic lyrics *Vilde Royzn* ("Wild Roses," 1915). His popular poem "Rivington Strit" ("Rivington Street," 1936), published with the illustrations of Yosl Cutler and William Gropper, was transformed into a performance piece. Delighting readers with his paradoxes and wit, his writings served, at the same time, as a means through which he vented his anger at the world. His plays, poems, and essays were intended to shock respectable society. The fantastic is a thread often running through his stories. His major contribution to Yiddish literature, however, was his imaginative use of the language, demonstrating through his puns and coinages the plasticity of Yiddish. Active in communist circles, he was hailed by adoring Jewish crowds during a 1926 visit to the Soviet Union, and in his articles in the communist Jewish daily, *Frayhayt* (1922–39), he attacked opponents of the Communist Party line. However, severe disillusionment came with the Stalin-Hitler pact of 1939, and his collection of poetry *Moyde Ani* ("I Confess"), written in 1941 and published posthumously in 1944, includes an autobiographical section in which he repudiated his former beliefs (English transl. in I. Howe and E. Greenberg, *A Treasury of Yiddish Stories*, 1953).

[Sol Liptzin / Edward Portnoy (2nd ed.)]

NADLER, JERROLD LEWIS (1947–), U.S. congressman, lawyer, and activist. Born in Brooklyn, N.Y., to Emanuel and Miriam, Nadler was raised as an Orthodox Jew. He attended the Crown Heights Yeshiva and then Stuyvesant High School. He holds an A.B. from Columbia College, where he was a Pulitzer scholar and co-founded a youth activist group called "West Side Kids" that sought better housing and education for Manhattan's West Side, supported liberal political candidates, and opposed the Vietnam War. He also holds a J.D. from Fordham University. Nadler's varied positions within Congress have included committees and subcommittees on transportation, the environment, and law. He is widely regarded as one of the most liberal members of Congress, representing one of the most liberal districts in the United States.

After serving in the New York State Assembly for 16 years, Nadler was elected to the House of Representatives in 1992, filling the seat of Ted Weiss who had died in office. He was elected to his seventh term in 2004. Nadler is best known as a defender of civil rights and civil liberties, efficient transportation options, affordable health care and housing, support for the arts, and defense of the Social Security system. Nadler has been an outspoken supporter of some of politics' most sensitive issues, including reproductive rights and sexual ori-

entation discrimination. An expert in transportation issues, Nadler has worked with New York City officials to relieve congestion of major arteries, enhance bus and ferry routes, and improve subway access.

Nadler's commitment is tied to his constituents, those residents of the 8th Congressional District of New York, which is considered one of the most diverse districts in the nation; the district is also known as having one of the largest Jewish communities in any congressional district. Nadler has been a constant supporter of the Jewish community, authoring the bill granting federal tax exemptions on settlements received by Holocaust survivors, working to improve African American–Jewish relations, and backing federal hate crimes legislation. He also represents the largest gay community in the United States and took forceful issue with President Bill Clinton's "don't ask, don't tell" policy, adding that it also meant "don't get caught." He argued that it sanctioned bigotry in the United States, only changing the means by which it will be enforced.

Nadler acted as a staunch and vocal advocate of efforts to clean up the contaminants left behind in the wake of the World Trade Center terrorist attacks and the subsequent buildings' collapse. Nadler's immediate reaction to the attacks in 2001 was to help coordinate aid and supplies to residents and to help secure funds for victims; following that he worked for funding for community development and small businesses. He then focused on air quality, and called attention to what he felt was negligence by the Environmental Protection Agency (EPA) in allowing residents to return to their homes near the collapse site, citing unsafe levels of environmental contaminants.

[Lisa DeShantz-Cook (2nd ed.)]

NADLER, MARCUS (1895–1965), U.S. economist. Born in Austria, he joined the Austrian army in 1912. During World War I he became a Russian prisoner of war and was sent to Siberia. From there he worked his way through Manchuria to the United States, where he enrolled as a night student at Columbia University and completed his studies at George Washington University. For several years he worked for the Federal Reserve Board, and in 1927 joined the faculty of New York University as professor of finance. He also served as a consulting economist for several New York banks and research director of the Devine Institute of Finance at New York University. His publications include *The Banking Situation in New York State* (1956), *The Money Market and its Institutions* (1955), and *International Money Markets* (1935) with J.T. Madden.

[Joachim O. Ronall]

NADSON, SEMYON YAKOVLEVICH (1862–1887), poet. He was grandson of an apostate Jew. After the death of his parents, his uncle, despite his opposition, sent him to army high school and to officers' school, from which he was discharged only because he became ill with tuberculosis. Owing to his illnesses during childhood, he suffered from antisemitic persecution from members of his mother's noble family. The sensitive and optimistic lyrics of his *Stikhotvoreniya* ("Poems," 1885)

reflect an orphan's childhood and tragically brief career. Often republished in the U.S.S.R., Nadson's verse appealed especially to younger readers. Despite his Christian upbringing, he dedicated one poem to the Jews – "Ya ros tebe chuzhim, otverzhenny narod" ("I Grew Up Strange to You, Parish People") – which appeared in *Pomoshch* (1901), an anthology published to raise funds to aid devastated Jewish communities.

NADVORNAYA (Pol. **Nadwórna**), city in Ivano-Frankovsk (Stanislavov) district, Ukraine. An organized Jewish community existed from the beginning of the 18th century. According to the 1765 census, 937 Jews paid the poll tax in Nadvornaya and the surrounding villages. During the second half of the 18th century the ḥasidic movement made its influence felt among the local Jews. Nadvornaya Jews engaged largely in agricultural trade and owned oil wells, refineries, and saw mills. In 1880 the community numbered 4,182 (64% of the total population); by 1900 the number had decreased to 3,644 (48%); and in 1921 only 2,042 Jews (34%) remained, because of the pogroms perpetrated by Cossacks, Ukrainians, and Petlyura soldiers during World War I. Between the two world wars many Jews earned their livelihood from the lumber industry.

Holocaust Period

In 1941 there were about 5,000 Jews in Nadvornaya. Under Soviet rule (1939–41), community institutions and all Jewish parties ceased to function. With the outbreak of war between Germany and the U.S.S.R. (June 22, 1941), the city was occupied by the Hungarians, who were allies of the Germans. Some 2,000 Jews were expelled to there from the Transcarpathian province. The Ukrainians attacked the Jews, murdering many of them and looting their property. In September the Germans entered the town. On Nov. 6, 1941, an *Aktion* took place in which about 2,500 Jews were killed, among them 1,000 expelled. In the winter of 1941–42 a number of Jews were taken to concentration camps. A ghetto was established on June 20, 1942, and in another *Aktion* in the summer of 1942, hundreds were sent to the *Belzec death camp. In September and October 1942 groups of Jews were transported to the ghetto at Stanislav and murdered there. Although at the end of 1942 the ghetto at Nadvornaya was destroyed, a few Jews succeeded in escaping and hiding in the surrounding forest; some crossed the border into Hungary. Jewish life was not reconstituted in Nadvornaya after the war.

[Aharon Weiss]

NAEH, BARUKH BEN MENAHEM (1880–1943), Turkish translator and legal writer. Active in Adrianople (Edirne) public affairs, he was a Turkish infantry officer during World War I and immigrated to Palestine in 1923. Naeḥ's translations include works by Yehuda Burla, A.S. Friedberg, and Sholem

Asch, as well as part of the Ottoman *Majalla* legal code. He also compiled a volume of guarantees and laws governing loans and debts (1937).

NAFTALI, PERETZ (Fritz; 1888–1961), Israeli economist and politician, member of the First to Third Knessets. Born in Berlin, he studied at a Realschule in Berlin and at the Higher School for Trade (ZIA). In 1909–12 he worked for an export company in Berlin and Brussels. Naftali joined the German Social Democratic Party in 1911. In 1911–12 he served in the German army and in 1917–18 fought in World War I. In 1921–26 he was the economic editor of the German daily *Frankfurter Allgemeine Zeitung*, and in 1926 became the director of the economic research institute of the Deutscher Gewerkschaftsbund (German Trade Union Federation). Naftali was viewed as a pioneer in the field of "economic democracy" and published a book under that title which earned him considerable fame in the international labor movement. Naftali joined the Zionist Organization in 1925, was chairman of the League for Labor Palestine, and a member of the Zionist Executive in Germany. In 1931 he took part in the Zionist Congress. In 1933, when the Nazis came to power in Germany, Naftali settled in Palestine. In 1933–36 he was a lecturer in economics at the Haifa Technion, and in 1936–37 at the Tel Aviv School of Economics and Law. In 1938–49 he served as the director general of Bank Hapoalim. He was a member of Asefat ha-Nivḥarim in 1941–48 on behalf of Mapai and a member of the Tel Aviv Municipal Council and the *Histadrut Executive. Naftali was elected to the first three Knessets on the Mapai list and served as minister without portfolio in 1951–52 and again in 1958–59, minister of agriculture in the years 1952–55, minister of commerce and industry in 1955, and minister of social welfare in 1959. In the First and Second Knessets, when he did not serve as a minister, Naftali was a member of the Knesset Finance Committee.

Among his writings are *Kalkalat Yisrael: Halakhah u-Ma'aseh* ("Israel's Economy: Theory and Practice," 1964); *Demokratya Kalkalit: Mivḥar Ketavim* ("Democratic Economics: A Selection of Writings," 1965).

NAGARI (Na'ari), MOSES BEN JUDAH (14th century), philosopher. Nagari probably lived in Rome around 1300. He is the author of *Ma'amar ba-Ma'arekhet*, an index to Maimonides' *Guide of the Perplexed*, which also contains explanations of philosophical terms. This work was printed together with questions on the *Guide* addressed to Isaac *Abrabanel by Saul Cohen (Venice, 1574; reprinted in *Abrabanel, Ketavim al-Maḥashevet Yisrael*, vol. 3, 1967). Steinschneider suggested that Nagari's name should be read Na'ari and that he was a member of the Ne'arim (Adolescentoli) family. He also corrected certain mistaken notions about Nagari (Cat Bod, 1834).

NAGASAKI, port in S. Japan. With the opening of Japan to international relations in the mid-19th century, Nagasaki gradually grew into a center of foreign trade. In the 1860s a small number of Jews, mainly from Eastern Europe, settled in the city. In the following years they organized religious and communal activities, built a synagogue, and maintained a burial ground. In the late 19th century (when the community numbered around 100) many of them earned a livelihood by catering to the needs of Russian sailors whose ships called regularly at the port. When this business ceased with the outbreak of the Russo-Japanese War in 1904, many of the Jews moved elsewhere, and the organized Jewish community came to an end.

[Hyman Kublin]

NAGEL, ERNEST (1901–1985), U.S. philosopher. Nagel, who was born in Nove Mesto (Moravia), emigrated to America at an early age. He received a B.S. from the City College of New York in 1923 and an M.A. (1925) and a Ph.D. (1930) from Columbia University. He was appointed to Columbia's faculty in 1930. He became John Dewey Professor of Philosophy in 1955 and university professor in 1967. Upon his retirement, he was professor emeritus at Columbia.

Though he was best known for his incisive and learned essays in the philosophy of science, Nagel's interests as a philosopher were broad. Many of his writings deal with social and political questions and with questions of religion. In these latter domains, influenced by his interest in the philosophy of science, his work emerges as a type of philosophical naturalism. According to Nagel, the types of explanation of the world that produce human knowledge are essentially those based on the model of explanation in the physical sciences. He argued, however, that such types of explanation must not be interpreted narrowly, as a kind of rigid scientism, but rather broadly; e.g., explanations of mental phenomena are not to be reduced to descriptions of the movement of material particles as in the physical sciences. He thus distinguished between naturalistic explanations and materialistic ones, where "materialism" is taken to mean that philosophical view which denies the existence of mind or mental qualities. In a similar vein, Nagel argued that "determinism" in physical theory is not such as to entail the denial of human freedom with regard to moral and political decisions. His analysis of morality and of human history accordingly allowed for the attribution of responsibility to human agents for their actions. Thus he maintained that naturalism, although committed to giving a correct account of scientific knowledge, includes within its scope a place for imagination, liberal values, and human wisdom. Nagel's main contribution to the philosophy of science is to be found in *The Structure of Science* (1961). He served as president of the Association of Symbolic Logic (1947–49), and as president of the Philosophy of Science Association (1960–62).

Among Nagel's other important writings are *An Introduction to Logic and Scientific Method*, with Morris Raphael Cohen (1934); *Principles of the Theory of Probability* (1939);

Sovereign Reason (1954); *Logic without Metaphysics* (1956); *Gödel's Proof*, with James R. Newman (1958); *Observation and Theory in Science* (1971); and *Teleology Revisited and Other Essays in the Philosophy and History of Science* (1979).

ADD. BIBLIOGRAPHY: S. Morgenbesser (ed.), *Philosophy, Science, and Method; Essays in Honor of Ernest Nagel* (1969); E. Madden, *Philosophical Problems of Psychology* (1962).

[Avrum Stroll / Ruth Beloff (2nd ed.)]

NAG HAMMADI CODICES, a collection of Coptic papyrus manuscripts discovered in 1945 in the Egyptian desert near the base of the Gebel et-Tarif in the vicinity of Nag Hammadi. The manuscripts, 13 in all, date from the fourth century and comprise a "library" of 52 tractates (not all of which are fully preserved). Presumably all of these writings are translations from Greek originals. Most, but not all, of the documents are gnostic in character, and therefore shed considerable light on the history and character of the gnostic religion of late antiquity, since before the discovery of this library of original texts, most of our knowledge of Gnosticism was dependent upon the writings of opponents, especially the Church Fathers.

These documents contain massive evidence concerning the Jewish elements in the development of Gnosticism, and refute once and for all the old opinion that Gnosticism originated as a Christian heresy. What follows is but a small sampling of this literature.

The Apocalypse of Adam (Codex v, tractate 5) is especially important, since it appears to be devoid of Christian influences, and it, or perhaps rather its *Grundschrift*, may even be a pre-Christian work. The *incipit* indicates at once the literary genre of the work: "The revelation which Adam taught his son Seth in the seven-hundredth year, saying ..." The document is in direct continuity with the pseudepigraphic Adam literature of the Second Temple period (e.g., the Book of the Life of *Adam and Eve) and with well-known legends concerning Adam and Seth (cf., Jos., Ant. 1:67–71). In form it is an example of the "testament" literature (cf. e.g., the Testaments of the Twelve *Patriarchs and Gen. 49), Adam in this document giving his dying speech to his son Seth. (The "seven-hundredth year" is reckoned from Seth's birth, and according to the chronology of Gen. 5:3, the Septuagint, Pseudo-Philo, *Liber Anti-quitatum Biblicarum* 1:2, and Jos., Ant. 1:68, is the year of Adam's death.) Adam's speech deals with the experience of himself and Eve after creation, alluding to the Genesis accounts and to well-known Jewish *aggadot* (e.g., the "glory" of Adam before his fall). But the thrust is typically gnostic. The Creator, called "Saclas" (Aramaic for "fool"), holds Adamic man in fear and bondage. A revelation from the higher realm is necessary to effect salvation for gnostic man, the "Sethians." Adam recounts to Seth and his seed a revelation he has received from three angelic figures (cf. Gen. 18:2) prophesying the coming destruction by flood, by fire (cf. Sodom and Gomorrah), and the end of the world. The coming of a savior-figure, the "Illuminator," is also prophesied, in terms reminiscent

of Iranian traditions, but also of Jewish messianic traditions. The Jewish elements in the *Apocalypse of Adam* are central, yet mutated in a heretical direction.

This is the case, too, with very many of the other Nag Hammadi documents. An “Ophite” version of the Paradise story is recounted in *On the Origin of the World* (II, 5), *The Hypostasis of the Archons* (II, 4), and, probably in its earliest form, in a Midrash imbedded in *The Testimony of Truth* (IX, 3), wherein the serpent and Eve are the revealers of knowledge, and the Creator is an envious villain. In addition to the Genesis story itself, aggadic traditions known from the Jewish Midrashim, including Aramaic word-plays (“serpent” חוּיָא / “Eve” חוּוָה / “instruct” חוּוָה, cf. Gen. R. 20:27) are utilized in the text, but are, of course, retold in a gnostic, heretical direction.

The Apocryphon of John (II, 1; III, 1; IV, 1) is a document which is attributed, in an obviously secondary redactional framework, to *Jesus as a revelation to his disciple John. However, the basic revelation consists of a cosmogonic myth, with a Midrash on the first six chapters of Genesis, in which the figure of Jesus is altogether extraneous. At least a part of this myth was known also to Irenaeus (*Adversus haereses* 1:29). The myth contains speculations concerning the Highest God and the divine world (*ma'aseh merkabah*) and on the creation of the cosmos (*ma'aseh bereshit*). Speculation in, and study of, both these subjects was severely limited if not actually condemned by the rabbis of the tannaitic period (cf. Hag. 2:1 and see *Merkabah Mysticism). In accordance with a trend in post-biblical Jewish theology (cf. Jos., Apion, 2.167: “uncreated ... immutable ... unknowable”), the Highest God is described in negative terms which stress his utter transcendence. From him emanate other divine beings, including four angelic “light-bearers” that serve as attendants (cf. the four *hayyot* of Ezek. 1:5). However, what marks this document as heretical is that the Transcendent God is not also the Creator. Creation results from the “fall” of Sophia (“Wisdom,” cf. the role of *hokhmah* in Prov. 8:22ff.; and *sophia* in Wisd. 7:22ff.), whose product is Ialdabaoth (also called “Saklas” and “Samael”). “Ialdabaoth” is the biblical Creator, and he, together with his fellow “archons,” creates the world and the corporeal part of man. In his “ignorance” he claims to be the only God (he quotes Ex. 20:5 and Isa. 45:5). This myth is found not only in the *Apocryphon of John*, but in numerous other gnostic writings as well.

The creation of man in the *Apocryphon of John* is not only a retelling of the Genesis story, but is based on Jewish traditions of interpretation of key biblical texts. For example, the account of the fashioning of man’s lower nature by Ialdabaoth and his fellow-archons is based on the Alexandrian-Jewish interpretation of Genesis 1:26f. and 2:7, that God relegated the creation of man’s mortal nature to the angels (cf. Fug. 68–70: Justin, *Dialogue with Trypho the Jew*, 62). The duality of man’s soul, i.e., a lower *psyche* and a higher *pneuma* (“spirit”), is based on the Hellenistic Jewish (probably Alexandrian) interpretation of the Septuagint of Genesis 2:7 (cf. Spec. 4.123; Det. 84). The detail that Adam was inert and lifeless until he received the heavenly “inbreathing” is developed from the

Palestinian interpretation of Genesis 2:7 that depicts Adam as a *golem (cf. Gen. R. 8:1; 14:8; Sanh. 38b).

An interesting example of continuity between the *Dead Sea Scrolls and the Nag Hammadi documents is the tractate *Melchizedek* (IX, 1), wherein the figure of *Melchizedek is presented as a redeemer-holy-war figure, just as in the fragmentary scroll discovered in cave 11 at Qumran (11 Q Melch.). Other features of Melchizedek’s role as presented in the Nag Hammadi tractate are reminiscent of Jewish traditions found in the Enoch literature, esp. 2 (Slavonic) Enoch.

Study of the Nag Hammadi documents provides a clearer picture of some of the gnostic groups described by the Church Fathers, especially the Valentinians and the so-called “Sethians.” The following Nag Hammadi tractates are related to the Sethian form of Gnosticism: *The Apocryphon of John* (II, 1; III, 1; IV, 1), *The Hypostasis of the Archons* (II, 4), *The Gospel of the Egyptians* (III, 2; IV, 2), *The Apocalypse of Adam* (v, 5), *The Three Steles of Seth* (VII, 5), *Zostrianos* (VIII, 1), *Melchizedek* (IX, 1), *The Thought of Norea* (IX, 2), *Marsanes* (x, 1), *Allogenes* (XI, 3), and *The Trimorphic Protennoia* (XIII, 1). While some of these documents (but not all) are Christian in their present form, it is now clear that Sethian Gnosticism, in its earliest stages, developed independently of, and possibly even prior to, Christianity. The Jewish components of Sethian Gnosticism are central and constitutive.

In short, a wide variety of Jewish traditions may be found in the Nag Hammadi documents, biblical and extra-biblical, “main-line” and “sectarian,” from Palestine and from the Diaspora, to the extent that the Jewish element in Gnosticism must be seen as primary and not secondary. Paradoxically, the hermeneutical thrust in the use of these materials is outspokenly heretical, even “anti-Jewish.” These documents, therefore, present an exceedingly interesting area of study for scholars working in the fields of religious history, sociology, and psychology.

NAGID (Heb. נָגִיד, pl. נְגִידִים; Ar. *ra'is al-yahūd*), the head of the Jewish community in Islamic countries (except under

*Abbasid rule where Jewry was led by the *exilarchs). In the Middle Ages, beginning with the tenth century, there were *negidim* in *Spain, *Kairouan, *Egypt, and *Yemen; in *Morocco, *Algeria, and *Tunisia there were *negidim* from the 16th to the 19th centuries.

History of the Institution of the Nagid

When the Abbasid caliphate was split up and independent kingdoms came into being, the new rulers found it necessary to appoint a leader for each non-Muslim community. ‘Abd al-Rahmān I (751–788), founder of the *Umayyad emirate in Spain, appointed a Visigoth prince to head the Christian community, and subsequent leaders of the Christians were appointed from among Christian courtiers or candidates proposed by the community. The duties of the head of the Christian community consisted of representing the community before the authorities, ensuring the payment of taxes, supervising community life, and administering the judiciary, which applied Visigoth law. In a similar manner, the heads of the Jewish community were appointed from among persons holding high rank at the court of the caliph or sultan, such as vizier, secretary, or treasurer; most, however, were physicians. Their task was to see to it that the Jewish community fulfilled the duties imposed on it (such as observing the Covenant of *Omar); they also appointed *dayyanim* and other community officials. Thus, the office of *nagid* came into being to serve the purposes of the Muslim state, but its existence was also in the interests of the Jews, for these **nesi'im* (the term *nagid* was first applied in the beginning of the 11th century) would intervene in their behalf to obtain better conditions or to bring about the cancellation of anti-Jewish decrees. The archetype of the institution of *nagid* was the Babylonian exilarch, with certain differences. The *negidim* did not claim Davidic descent, their appointment being based on their own achievements and their standing with the authorities, rather than their blood line, and they did not, as a rule, derive their income from taxes imposed on the community, as did the exilarchs. The similarity of the duties of the two institutions seems to account for the legend mentioned by *David b. Solomon ibn Abi Zimra (Responsa no. 944) and Joseph b. Isaac Sambari (Neubauer, *Chronicles*, 1 (1887), 115–6), according to which the office of *nagid* in Egypt was created by a member of the Babylonian exilarch's family who had been invited to Egypt by the Abbasid wife of the Egyptian ruler; D. Ayalon (Neustadt, see bibliography) has shown that there is no historical truth to this legend, for there is no record of any daughter of an Abbasid caliph marrying a Fatimid caliph, and, as stated, the *negidim* did not claim Davidic descent.

Spain

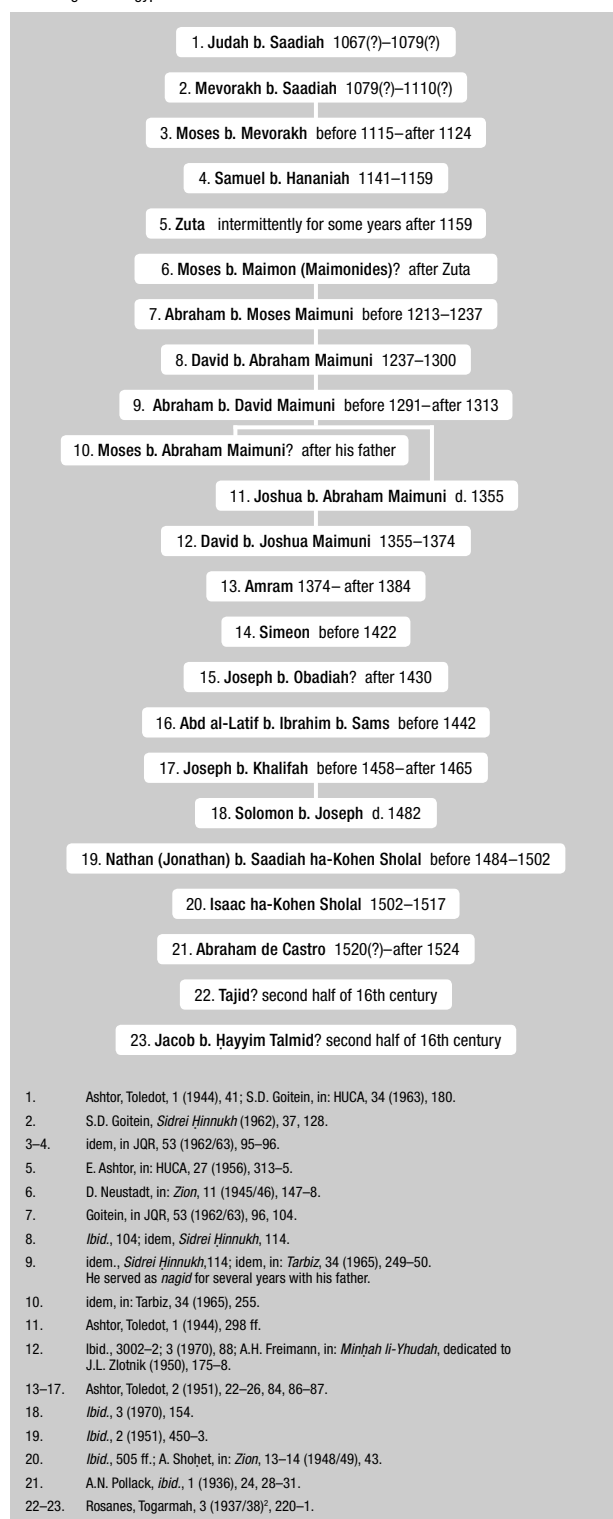

Among those known to have held the office of *nagid* in Spain are Hisdai ibn *Shaprut, physician and statesman at the courts of ‘Abd al-Rahmān III (ruled 912–61) and his son al-Ḥakam II (961–76). Ibn Shaprut did a great deal for the Jews in his own country, as well as for Jewish communities in other parts of the world; Dunash b. *Labrat refers to him as “judge.”

Jacob ibn *Jau, who succeeded Ibn Shaprut, was, according to Abraham ibn *Daud, appointed head of the Jewish community by Maṣur ibn Abi ‘Amir, the guardian of Hisham II (976–1013); the latter “issued him a document placing him in charge of all the Jewish communities from Sijilmasa to the river Duero... [The decree stated] that he was to adjudicate all their litigations, and that he was empowered to appoint over them whomsoever he wished and to exact from them any tax or payment to which they might be subject... he placed at his disposal... the carriage of a vicegerent. Then all the members of the community of Córdoba assembled and signed an agreement [certifying] his position as *nasi*, which stated: ‘Rule thou over us, both thou, and thy son, and thy son's son also’ (Abraham ibn Daud's *The Book of Tradition*, ed. by G.D. Cohen (1967), 69). Ibn Jau was in office for only one year, and was removed by the vizier al-Manṣur. The source quoted above illustrates the duties of the office, the manner in which the appointee was chosen by the authorities, and the appointee's acceptance by the community. Both Ibn Shaprut and Ibn Jau fulfilled the duties of *nagid*, but neither bore the title. Two Spanish *negidim* who did hold the title were Samuel ibn Nagrela (Samuel *ha-Nagid; 993–1056) and his son Jehoseph *ha-Nagid. Samuel was the treasurer and secretary of King Ḥabbus of Granada; S.D. Goitein (see bibliography) assumes that the title *nagid* was awarded to him by *Hai Gaon. His son, who also served as the king's secretary, was killed in 1066; according to Goitein, he was awarded his title by Daniel b. *Azariah, *nasi* and *Gaon* of Palestine from 1051 to 1062. Both *negidim* received their titles in recognition of the aid they extended to the *yeshivot*, both in Palestine and in Iraq (Babylonia).

Kairouan

During the same period, there was a separate Jewish leadership in Kairouan, Tunisia. The first official *nagid* who was appointed by the Zirid emir was ‘Abu Iṣḥaq Ibrahim ibn ‘Ata (Natan), who served as court physician to the emir Badis (966–1016) and his son al-Mu‘izz (1016–62), the rulers of the eastern Maghreb (Tunisia and Algeria). The appointment apparently was made during the period of the Fatimid al-Ḥakim bi-Amrillāh (1010–1221), at which time the opportunity was grasped to free themselves from Fatimid rule. It may be assumed that even before this there was local Jewish government in Kairouan, but without formal independent status. Ibrahim, like the Spanish *negidim*, extended aid to the Babylonian *yeshivot*, in addition to attending to the needs of his own community, and earned the praise of Hai Gaon, who in 1015 awarded him the honorary title of *negid ha-Golah* (“*nagid* of the Diaspora”). He died in about 1020 and was succeeded by Jacob b. Amram, who was referred to by such titles as *negid ha-Golah*, *sar ha-Segullah* (“the chosen prince”), and *pe'er ha-ēdah* (“pride of the community”). There is no record of his early activities and the last report about him dates from 1041. He helped the Kairouan community in times of need, sent contributions to the *yeshivot* in Palestine and Babylonia,

List of Negidim in Egypt

and earned the praise of the exilarch Hezekiah b. *David. He was also in contact with the Jewish community in Sicily. It is probable that there was one more *nagid* in Kairouan before the community ended in the 1160s.

Egypt

In Egypt the office of *nagid* remained in existence for over 500 years; there are extant documents which contain a wealth of details on the *negidim* and their authority and acts. Some scholars accept the view that the first *nagid* of Egyptian Jewry was *Paltiel, an Italian Jew who was brought to Egypt by al-Muʿizz, the Fatimid conqueror of Egypt (969), and was part of the ruler's officialdom. The sole source for this information is the *Ahimaaz Scroll; there is an assumption that the Shiʿite Fatimids, who decreed themselves Imams (caliphs), did not wish to depend in any way upon the Sunnite Abbasid caliphs, preferring to appoint a separate head for the Jews under their ruler rather than have them acknowledge the authority of the Babylonian exilarch, an official who was part of the Abbasid hierarchy. There are various theories concerning the true identity of Paltiel, the most recent being the one expressed by M. Gil (see bibliography), according to which he was Fadl ben Salih, a chief commander of the Fatimid army. Another theory is B. Lewis's (see bibliography), according to which he was Musa b. Eleazar, al-Muʿizz's physician. Mann (Egypt, 1920, see bibliography) was the first to suggest this theory of Paltiel's being the first *nagid* on the Fatimids initiative.

The *Genizah* documents contain no proof of the existence of the office of *nagid* in the first half of the 11th century. On this basis some scholars, such as Goitein (1971, see bibliography), Cohen (1980, see bibliography), and Gil (1992, see bibliography), wrote against Mann's theory. Today there are certain scholars, such as Sela (1995, 1998, see bibliography) and Bareket (1998, 1999, see bibliography) who are re-adapting the old Mann theory. The first *negidim* for whom details are found in the *Genizah* are Judah b. Saadiah, who was a court physician, held the post of *nagid* in the 1060s and the 1070s, and was referred to as "*nagid* of the People of God," and his brother *Mevorakh, who was *nagid* from about 1079 (with temporary interruptions) to 1110. Mevorakh was the physician and adviser of al-Malik al-Afdal, the acting ruler of Egypt, and was awarded no less than 14 honorary titles, some of which were typical of those used by the *yeshivot* in Babylonia and Palestine. For a while, Mevorakh was removed from office, a result of the machinations of David b. *Daniel, a member of the house of the Babylonian exilarch who had succeeded in gaining the governor's support for his claim to the leadership of Egyptian Jewry. Such competition for the office occurred on several occasions, up to the 13th century. As a rule the challenge came from members of the Babylonian exilarch's house or the Palestinian *yeshivah*.

THE INSTITUTION OF NAGID. The *nagid* was appointed by the authorities after receiving the agreement of prominent members of the community. The choice, however, was not made in a democratic manner. Rather than the official representatives, it was the influential members of the community who recommended the candidate. Sometimes the vizier was bribed to recommend a particular person; this happened, for example, in the middle of the 12th century, in the case of

*Zuta. The appointment of the *nagid* did not depend upon the consent of the exilarch or the heads of the *yeshivot*, and the mention of such consent in the existing documents must be regarded as a mere formality. At times it was the son of the deceased *nagid* who was appointed in his father's place, while on some occasions preference was given to a person who had achieved a prominent position at the ruler's court. Beginning with Abraham b. Moses b. *Maimon, the son of *Maimonides, the office became hereditary, and four of his descendants served as *negidim*, the last being David b. Joshua *Maimuni. From the end of the Ayyubid dynasty and throughout the Mamluk period, the office of *nagid*, or *ra'is al-yahūd*, had the character of a permanent institution, whose functions were defined by the authorities. Several letters of appointment from the Mamluk period are extant which contain the provision that the *ra'is* always be a Rabbanite and that he also be in charge of the *Karaites and *Samaritans. It was his duty to appoint a prominent Karaite as leader of that community, although the head of the Samaritans received his own letter of appointment from the government. According to Qalqashandi (d. 1418), the status of *nagid* was parallel in nature to that of the Christian patriarch, and like any person of official rank wore official dress, the *khal'a*. The Arab chronicler Ibn Faḍl Allah al-ʿOmārī, whose work was written in 1340, tells about a *nagid's* letter of appointment in which his authority and functions were described as follows: consolidation of the community; administration of justice to the members of the community on the basis of its religious law; responsibility for matters of personal status – betrothals, marriages, and divorces; the right of excommunication; supervision of the observance of the commandments, according to the Law of Moses and the decisions of the rabbis; the duty to ensure compliance with the Covenant of Omar, especially the prohibition of constructing new synagogues, and the order concerning the wearing of garb different from that of the Muslims; supervision of synagogues and prayer services; grading the status of the members of the community (this apparently applies to tax assessment, for there were three different rates for the poll tax, depending upon a person's economic situation); and general responsibility for the maintenance of law and order by the community. Jewish sources, primarily *Genizah* documents dating from the Fatimid period and after, give further information on the wide range of the *nagid's* duties and activities. He protected his community from oppression by government officials and interceded with the authorities for the cancellation of unjust and severe decrees. He served as arbitrator in cases of injustice, discrimination, and unfair economic competition; attended to the needs of the weak and the suffering; and tried to retrieve lost goods, rescue Jews from prison and captivity, and raise the ransoms required for such purposes. It was he who authorized the payment of tuition fees from the communal trust fund for the education of orphans and children of the poor (five such payment orders by a single *nagid*, Abraham b. Moses b. Maimon, were found in the *Genizah*). The *nagid* was not responsible for collecting the poll tax, but

it was he who ensured the payment of the tax on behalf of the poor, when the authorities did not exempt them. He had his own officials through whom he supervised *kashrut*, ritual slaughter, and marriages. Decisions made by the various communities required his confirmation, and in general he supervised the community operations by means of the *muqaddam*, his personal representative to the local community. Although he was the supreme legal authority for the community, he did not actually function as a judge, but appointed *dayyanim* who sat on his *bet din* and handled legal conflicts; the court was known as the Great *Bet Din* and it was headed by the *dayyan al-yahud*. Legal documents such as marriage writs, divorce writs, and wills were issued "by the authority" of the *nagid*. According to Meshullam of *Volterra, who visited Egypt in 1481, the *nagid's* penal powers included the right to impose capital punishment (*Massa Meshullam mi-Volterah*, ed. by A. Yaari, 1948, 57), but it is doubtful whether the authorities did in fact grant him such power. Obadiah *Bertinoro, writing in 1487–88, states that the *nagid* was empowered by the caliph "to punish, imprison, and flog" anyone who opposed his will; this seems to be a more realistic description of the *nagid's* authority. He could also use excommunication and imprisonment in those cases where the prestige of his office was not sufficient to achieve compliance with his decisions. In the Fatimid and Ayyubid periods the *negidim* did not impose taxes for the maintenance of their office; usually they were wealthy court physicians and property owners, and also received gifts from members of the community. In the Mamluk period a change seems to have taken place, and according to the testimony of David b. Solomon ibn Abi Zimra marriage and divorce proceedings became subject to a fee, out of which the *nagid* would pay the scribe, while the rest would go into his own treasury. The honors accorded to the Egyptian *nagid* were similar to those of the exilarch. Thus, the reading of the weekly portion of the Torah would be preceded by an introductory recital in honor of the *nagid*, in which he was mentioned by name. Special *Yizkor* (i.e., memorial) *piyyutim* were composed to commemorate departed *negidim*. The conquest of Palestine by Saladin (1187) created the need for the appointment of a separate leadership for Jewish communities of Palestine and Syria, and the office of *nagid* of "Erez Israel and Judah" was created. The names of two such *negidim* are known, both of whom served in the 13th century; Obadiah b. ʿUlah and Hillel b. Moses. Under Mamluk rule, Palestine had a deputy *nagid*, who was under the authority of the *nagid* of Egypt. As a rule the Egyptian *negidim* were chosen from local Jewish leaders. The last two *negidim* appointed under Mamluk rule, however, were from a family of Maghreb *hakhamim*: Nathan (or Jonathan) *Sholal, *nagid* from 1484 to 1502, who went from Algeria to Palestine but then moved to Egypt, and his nephew Isaac *Sholal, who was director of the Egyptian mint. Isaac founded a yeshiva in Jerusalem and attended to the needs of the city's scholars. In 1509 he and his *bet din* enacted an ordinance exempting religious scholars from all taxes, except for the poll tax. He was

deposed from his office in 1517, when Egypt was taken over by the Ottomans, and died in 1524. Under Ottoman rule, two more *negidim* were appointed in Egypt: Abraham *Castro, who was also the director of the Egyptian mint, and Jacob b. Ḥayyim *Talmid, who was sent from *Istanbul to Egypt in order to take up the post. According to a report by Joseph *Sambari (Neubauer, *Chronicles*, 1 (1887), 116–7), Jacob Talmid became involved in a controversy with Bezalel *Ashkenazi, whereupon the Egyptian governor decided to abolish the office of *nagid* in Egypt. Henceforth, it was the *hakham* (chief rabbi) who acted as the representative of Egyptian Jewry before the authorities.

Yemen

The existence of the office of *nagid* in Yemen may be deduced from fragmentary information contained in letters found in the *Genizah* and from inscriptions on Yemenite tombstones, both sources dating from the end of the 11th up to the beginning of the 14th centuries. The first *nagid* of whom there is knowledge was Japheth (Hasan) b. Bendar, apparently of Persian origin, who in a document dating from 1097 is referred to as a “prince of the communities.” He and his descendants were residents of *Aden, were clerks for merchants, and dealt in the trade with India; they exercised some measure of control over the trade routes and the price of the transit goods which passed through Yemen on their way to Egypt. Japheth’s son, Maḍmun, mentioned in letters from the period 1132–51, was granted the title of “*nagid* of the Land of Yemen” by the exilarch; he also maintained contact with the gaon Mazliah *ha-Kohen from Egypt and received an honorary title from him (in addition to six other titles of honor that he bore). In an official report of the *bet din* he is described as “appointed by the exilarchs and heads of the *yeshivot* over all of Israel and acknowledged by the respective rulers in the lands of the sea and of the desert”; the latter passage seems to imply that Maḍmun had agreements with the pirate chiefs who controlled the sea routes. His son Ḥalfon inherited the title of *nagid* and served from 1152 to 1172. During his lifetime there were two other *negidim*, R. Nethanel *al-Fayyumi (d. after 1164) and his son Jacob b. Nethanel *al-Fayyumi, who was in charge of the communities in central Yemen; the latter received Maimonides’ famous *Iggeret Teiman*. There are reports of another *nagid* by the name of Maḍmun (he may be identical with Shemariah b. David), who served from 1202 to 1218. Three *negidim* are known from the first half of the 13th century: Maḍmun (apparently a descendant of the first Maḍmun mentioned above) and his sons, Ḥalfon and Joshua. The title of *nagid* was also held by David b. Amram *Adani, author of *Ha-Midrash ha-Gadol*, who lived at the end of the 13th and the beginning of the 14th centuries, and may have been a descendant of the Maḍmun family.

North Africa

In the Jewish communities of the Maghreb from the 16th to the 19th centuries the office of *nagid* was held either by prominent Jewish merchants or Jews who had close contacts at the

ruler’s court and served as interpreters and diplomatic agents. In rabbinic literature of the time, they are referred to as *nagid me’ulleh* (“most excellent *nagid*”) or *nasi*. They differed from the medieval *negidim* in that they served only a single community, rather than a whole country, and were really *rashei kahal*. Some of them, however, extended their influence beyond the confines of their own community. They were elected by the prominent members of the community and in some cases also received an appointment from the Muslim ruler. They participated in the drafting of community statutes, and were authorized to impose corporal punishment and fines and report to the Muslim authorities any person violating community regulations. The *negidim* are frequently mentioned in the “Statutes of Fez” (*Kerem Hemed*, 2, 1871). In the 18th century their official title in Algeria was *muqaddam*, while in Tunisia and Tripolitania it was *qā’id*.

[Eliezer Bashan (Sternberg) / Elinoar Bareket (2nd ed.)]

NAGIN, HARRY S. (1890–), U.S. civil engineer. Born in Romny, Russia, Nagin went to the U.S. in 1906. From 1924 he was executive vice president of a large steel products company in Pennsylvania. He took out over a hundred patents on steel structures, bridge floors, gratings, concrete, and plastics.

NAGLER, ISADORE (1895–1959), U.S. labor leader. Born in Austria, Nagler went to the United States in 1909 and worked as a cutter, joining Local 10 of the Cutters' Union. In 1920 he was made an official of the International Ladies Garment Workers Union (ILGWU) and was a prominent anti-communist. He became vice president of the ILGWU in 1929 and worked closely with the union president, Benjamin *Schlesinger and his successor David *Dubinsky. Nagler was general manager of the Joint Board of the Cloakmakers Union from 1928 to 1939 and was one of the founders of the American Labor Party (ALP). In 1944 he left the Labor Party with Dubinsky in protest against its pro-communist line and helped found the Liberal Party in which he was a prominent figure. He was prominent in the New York Jewish Education Committee, the Federation of Jewish Philanthropic Societies, and *ORT.

NAGY, ENDRE (1877–1938), Hungarian author and stage manager. Some of Nagy's early stories had Jewish themes, but he later converted to Christianity. He was founder and manager of Hungary's first political cabaret, to which he contributed topical commentaries. Two of his more important works were *A kabaré regénye* ("The Story of the Cabaret," 1935) and *Várad-Pest-Párizs* (1958).

°**NAGYBACZONI-NAGY, VILMOS** (1884–1976), Hungarian general and minister of defense. In 1942 Nagybaczoni-Nagy was appointed minister of defense. At that time Jews were excluded from the Hungarian army and were drafted into the labor service. Their situation was at times intolerable, particularly at the Russian front. When Nagybaczoni-Nagy assumed office, he reviewed the labor battalions at the front and immediately ordered an improvement in their conditions. Claiming that labor service was the same as military service, he abolished the discriminations against Jewish draftees and their families, then in force through anti-Jewish legislation. He ordered officers and commanders "when dealing with Jews to refrain from showing their personal feelings, and not to increase work norms and discipline by unlawful means." Nagybaczoni-Nagy expressly forbade attacking or humiliating Jews in public. He was concerned with the release of the sick and invalids, with healthy and sufficient food, a daily eight-hour rest, and with the personal cleanliness of the members of the labor battalions. In addition, he gave his attention to the religious needs of the draftees, e.g., the keeping of the Jewish festivals, as well as allotting sufficient time for donning the phylacteries. Nagybaczoni-Nagy did not hesitate to put on trial officers and commanders who behaved with cruelty.

Following repeated pressure by the Arrow Cross opposition in the Hungarian parliament, Nagybaczoni-Nagy was forced to resign. After the German occupation of Hungary (March 19, 1944) Nagybaczoni-Nagy was arrested and de-

ported to Germany. His memoirs for the years 1939–44 were published in 1946 under the title *Végzetes esztendőök* ("Crucial Years"). In 1967 Nagybaczoni-Nagy was recognized by *Yad Vashem as one of the *Righteous of the Nations.

NAGYKANIZSA, city in S. Hungary. It is almost certain that Jews were living in Nagykanizsa in 1710, and by 1745 the community owned a synagogue. The first inscription in the register of the *hevra kaddisha* dates from 1782. The community was officially established in 1786 and the new *bet midrash* was erected in 1805. The community of Nagykanizsa was among the first to join the *Reform movement, although only after bitter disputes. In 1829 it adopted the ritual of the famous composer S. *Sulzer (which was identical with the traditional ritual) and introduced an ensemble of ten violinists to accompany the choir during all services except those of the New Year and the Day of Atonement. In 1845 an organ was also introduced, the first case of its kind in the service of a Hungarian Jewish community. Noteworthy Orthodox rabbis of the community were H. Torai (1776–92) and Meir Szántó (until 1831). The first rabbi belonging to the Reform movement was L. *Loew (1841–46). He was succeeded by H.B. Fassel (1851–83) and E. Neumann (1883–1918). The latter was the only Hungarian rabbi to incorporate some of the ritual reforms suggested by A. *Geiger. The last rabbi of the community, E. Winkler (1919–44), who reintroduced the traditional ritual, accompanied his community to Auschwitz. He died in Melk (1945).

In the first Jewish school (1786–1809), opened following the reforms of Joseph II, the language of instruction was German. In 1832 Jewish education was offered in the Hungarian language. A pre-secondary school was opened in 1867, which offered courses in natural sciences as well as religious matters. In 1891–92 it was converted into a secondary commercial school (the only Jewish school of its kind in Hungary) which functioned until 1933. In addition, a general pre-secondary school was opened in 1890. The Jews of Nagykanizsa played an important role in the industrial and commercial development of the town during the first years of the 20th century. The golden era of the community lasted from 1863 to 1902 under the community presidents of the Guttman family who received the title Baron. The leading charitable institutions were the *hevra kaddisha* (founded in 1782), whose beautiful *pinkas* has been preserved in the Jewish Museum of Budapest, the Jewish Hospital (founded in 1832), and the women's organization (1843). The population rose from 500 in 1782 to 1,000 in 1830, 2,875 in 1880, 3,378 in 1910, and 3,663 in 1920. After the German occupation (March 19, 1944), Jewish males between the ages of 16 and 60 became the first Jews of Hungary to be deported to Auschwitz, on April 29. The rest were sent to Auschwitz on June 3–4. Only 300 returned in 1945. In 1970, 100 Jews were living in Nagykanizsa.

[Jeno Zsoldos]

NAHAL (Heb. נַחַל, *Noar Hālutzi Loḥem*; Fighting Pioneer Youth), in its classic form a regular unit of the Israel Defense Forces whose soldiers were organized in *garinim* (“groups”) of pioneering youth movements in Israel and Zionist youth movements in the Diaspora that educated their members toward cooperative settlement in Israel. During their term of military service, these soldiers simultaneously participated in intensive training and social and ideological preparation toward their future as members of cooperative agricultural settlements. Naḥal had two aims: to produce first-class soldiers and to prepare *garinim* for establishing new settlements or joining existing ones. All members of such a potential group were mobilized together, form a single army unit, and together underwent training. Training consisted of initial military training (at a Naḥal army camp) which was combined with ideological and social activities. There was then a period of combined agricultural and military training in a kibbutz or at a Naḥal outpost. Advanced military training in paratroop, tank, artillery, engineering, or other units followed for the men, while the girls went to live in their destined settlement where they were later joined by the men. The group then served for a period of *shalat* (*sherut le-lo tashlum*, “unpaid service”).

The Naḥal outpost was a typical army camp with military ranks and discipline, but at the same time preparations were made for a civilian agricultural settlement. During the first 20 years of its existence, Naḥal founded 36 outposts, of which 22 became permanent settlements. Another 18 settlements were founded or refounded by soldiers who once served in Naḥal; in a further 70 settlements, Naḥal soldiers constituted half the membership, while in hundreds of other kibbutzim and moshavim there were smaller groups of ex-Naḥal soldiers. It has been found that four years after mobilization (i.e., a year after completing Naḥal), about a third of the soldiers remained on the land and, of these, about half (that is 15% of those who were originally members of the group), stayed in their settlements after 15 and 20 years.

Naḥal was sometimes employed on special projects. For example, in 1949 it built a road to En-Gedi along the west bank of the Dead Sea. In the early 1950s it organized large-scale vegetable production. In the 1960s it employed its soldiers to teach reading and writing to both young and adult illiterates in development towns. Other countries showed interest in Naḥal methods, and courses for Naḥal instructors were organized in Israel for countries in Asia, Africa, and South America. Many Israelis were employed as instructors in training similar groups in developing countries.

In the 1980s, Naḥal changed its character. The name Naḥal is now used for two different army units: the Naḥal Command working under the Education Corps and responsible for the

garin activity; and the Naḥal brigade, which is a regular infantry brigade and part of the Central Command. It includes the Naḥal *haredi* battalion for ultra-Orthodox soldiers. The Naḥal *garinim* focus on educational activity in civilian communities.

[Yehuda Schuster / Shaked Gilboa (2nd ed.)]

NAHALAL or NAHALOL (Heb. נַהֲלָל, נַהֲלֹל).

(1) Town in the territory of the tribe of Zebulun, along with Shimron and Beth-Lehem (Josh. 19:15, 21:35). The Israelites were apparently unable to dispossess the Canaanites from Nahalol (Judg. 1:30). Later, probably in the days of David, it became a levitical city belonging to the family of Merari (Josh. 21:35). In the Talmud (TJ, Meg. 1:1, 70a), it is identified with Mahalol, which corresponds to the present-day Arab village of Maʿlūl southwest of Nazareth; the remains that can be found there are of the Roman period only and include a mausoleum (Qaṣr al-Deir). The site of Nahalal proper is still in dispute.

[Michael Avi Yonah]

(2) The first moshav ovedim in Erez Israel. It was founded in 1921 in the western Jezreel Valley by veteran pioneers of the Second *Aliyah, some of whom had been members of the first *kevuṣah*, *Deganyah. The 80 settling families each received 25 acres (100 dunams) of land, and they drained the malarial swamps. (Malaria had prevented two previous attempts at settlement, one by Arabs and one by Germans.) In the 1920s, the first farm branches – field crops, cattle, and poultry – were developed and concrete stables built, while the settlers lived in wooden huts for 15 years. The village layout, devised by the architect Richard *Kauffmann, became the pattern for many of the moshavim established before 1948; it is based on concentric circles, with the public buildings (school, administrative, and cultural buildings, cooperative shops, and warehouses) at the center, the homesteads in the innermost circle, the farm buildings in the next, and beyond it ever wider circles of gardens and fields. In 1929 a Girls’ Agricultural Training Farm was established at Nahalal by *WIZO; it was headed by Hannah Maisel-Shoḥat, wife of Eliezer *Shoḥat. In the 1940s it became a coeducational farming school of *Youth Aliyah. Nahalal is one of the principal centers of the Tenuʿat ha-Moshavim. More water became available in the 1930s from the *Mekorot regional network and deep wells were drilled in the vicinity. Farming then became more intensive, fruit orchards were added, and existing branches expanded. In 1969 Nahalal, including the agricultural school, had 1,020 inhabitants. By the mid-1990s its population had grown to 1,240, but in 2002 it was down to 925, with 350 resident farmers, 165 permanent non-farming residents, 100 school employees, and the rest temporary residents. The main farming branches were dairy cattle, poultry, fruit orchards, flowers, and field crops.

NAḤALAT YEHUDAH (Heb. נַחְלַת יְהוּדָה), urban community with municipal council status, on the Coastal Plain of Israel near Rishon le-Zion, founded in 1914 as a moshavah by members of the Ḥibbat Zion movement of Russia. Naḥalat Yehudah was characterized by auxiliary farmsteads whose owners were employed in Rishon le-Zion or in Jaffa and Tel Aviv. After 1948 an immigrant camp (*ma'barah*) was established in Naḥalat Yehudah's municipal area, increasing its population to over 5,000. The new immigrants were later given permanent housing in other localities, so that the population decreased to 2,350 (1969). Although a number of industrial enterprises existed in Naḥalat Yehudah, many inhabitants were employed in other communities in the Tel Aviv conurbation. Subsequently Naḥalat Yehudah became part of Rishon le-Zion and its name was given to a *WIZO youth village accommodating approximately 300 students. The youth village had originally been founded in 1922 as a workers farm training women in various farm branches. After the establishment of the State of Israel it became an agriculture high school with a dormitory. The name Naḥalat Yehudah commemorates Judah Leib *Pinsker.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

NAḤAL OZ (Heb. נַחְלֵל עֹז), kibbutz in southern Israel, established in 1951 as a border settlement by a *Naḥal group near the Gaza Strip, affiliated with Iḥud ha-Kevuṣot ve-ha-Kibbutzim. Later, pioneers from South America and other countries joined the kibbutz. Before the *Sinai Campaign (1956), and in the days before the *Six-Day War (1967), Naḥal Oz was frequently a target for attacks and shelling from beyond the Gaza Strip border. After June 1967, a point near the kibbutz became an entrance gate to the Strip. The kibbutz economy was based on intensive farming (field crops, dairy cattle, and poultry) and a hi-tech enterprise in the field of video communications. In 1997–98 the kibbutz began going over to a private wage economy. This was accompanied by a great crisis causing many residents to leave the kibbutz and the population to drop from 495 in the mid-1990s to 288 in 2002. The name Naḥal Oz points both to the original Naḥal outpost, and to nearby Gaza (whose Hebrew name, Azzah, is derived from the same root as *oz*, meaning “strength”).

[Efraim Orni / Shaked Gilboa (2nd ed.)]

NAHARIN, OHAD (1952–), Israeli dancer and choreographer. He was born in Israel on kibbutz Mizra, and grew up in the town of Tivon, near Haifa; he is the son of artistic parents who were involved in music and theater.

Naharin started professional dance training after he finished his army service. After a year of training with the *Batsheva Dance Company, he performed in *The Dream* (1974) and was asked to stay on with the troupe for another year. He then studied for a year at Juilliard in its Professional Studies

Program. He danced for a year with Maurice Béjart's Ballet of the 20th Century and moved to New York. He married Mari Kajiwara, the Japanese-American dancer who danced in the Alvin Ailey Company. His dance creations are performed by the top dance companies of the world. Naharin's first work as choreographer was *Haru No Umi* (1980). In New York he founded the Ohad Naharin Dance Company, which toured worldwide. In 1990, he was appointed the artistic director of the Batsheva Dance Company. His choreography challenges visually and excites the senses. “If you could hold one of Ohad Naharin's dances in your hand, it would feel smooth. Think of a polished stone, it looks like a piece of secret sculpture, but hurl it and it becomes a weapon” (Deborah Jowitz, *Village Voice*, New York). His works include: *Black Milk* (1986), *Tabula Rasa* (1987), *Sinking of the Titanic* (1990), *Kyr* (1990), *King of Wara* (1990), *Anaphase* (1993), and *Mamootot* (2003). In his work *Playback* (2004), performed in Eilat, he appeared as dancer, singer, and instrumentalist. Naharin won the Israel Prize for dance of 2005.

[Ruth Eshel (2nd ed.)]

NAHARIYYAH (Heb. נַחַרְיָה), city in N. Israel, 6 mi. (10 km.) N. of Acre. Nahariyyah was founded in 1934 as a village (moshavah) by a group of middle-class immigrants from Germany. Their company, headed by the engineer Yosef Levi, bought the land, and thus gained the first Jewish foothold in the Acre Plain and Western Galilee. The settlers encountered difficulties in changing over to farming from their previous occupations in commerce and the professions. They also found themselves in an endangered and isolated position when the 1936–39 Arab riots broke out. By then beginnings were made to turn Nahariyyah into a seaside resort, in addition to developing agriculture. The population, with about 1,000 in 1941, increased to 1,400 in 1945 when manufacturing, particularly in the food branch, first began. In the years just prior to statehood, Nahariyyah served as a landing place for “illegal” immigrant ships. In the War of Independence (1948), Nahariyyah, together with ten other Jewish settlements in Western Galilee founded in the preceding decade, was completely cut off by Arab Acre, and only intermittently were communications with Haifa maintained by means of small motor boats going to Haifa. With the capture of Acre by Israel forces, Nahariyyah was able to resume contact with the rest of the country and was included in the State of Israel. Numerous immigrants from various countries, mainly from Romania, North Africa, and Iraq settled there. The population grew from 9,200 in 1953 to 20,700 in 1968, 37,100 in the mid-1990s, and 47,400 in 2002, occupying a municipal area of about 4 sq. mi. (10 sq. km.). The city's economy was based on tourism and recreation, industry, farming, trade, and services. In 1968 the city had over 30 hotels and pensions with a total capacity for 1,400 tourists. On the bathing beach a breakwater was built creating two bays, for swimming and for sailboats. There were also swimming pools. Farming was mostly for specialized export crops (strawberries, avocados, flowers). Local industry included textiles, asbestos cement, metal instruments,

electrical appliances, fine mechanics, paper products, agricultural machinery, etc. A new industrial zone for large enterprises was added in the north to supplement the older industrial zone near the railroad station. The commercial center was laid out along the central avenue on both sides of the Ga'aton Stream. The hotel zone stretched mainly along the beach and the city had 21 public parks and ornamental gardens. At the turn of the 20th century, residents earned their living in industry (45%), services (40%), tourism (11%), and agriculture (4%). The city's name is derived from *nahar* ("stream"), referring to the Ga'aton Stream which passes through part of the city.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

NAHASH (Heb. נָחָשׁ; "snake"), king of the Ammonites, who enjoyed a long reign from the beginning of Saul's reign over Israel (1 Sam. 11:1ff.) until some years after David was established at Jerusalem (11 Sam. 10:1). Nahash is first mentioned when he encamped against Jabesh-Gilead and sought to subjugate it on most humiliating terms. The Jabeshites appealed for help to their fellow Israelites, and the crisis called forth Saul's latent capacity for leadership. He issued a call to the tribes to rally behind him and march to the relief of Jabesh-Gilead; and the force that responded inflicted a stunning defeat on the Ammonites (1 Sam. 11:1ff.). Nothing more is related about Nahash until the notice of his death, where the Bible states that he had shown kindness to David (11 Sam. 10:2). It is likely that he was friendly toward David because David was also an opponent of Saul. David attacked Nahash's son and successor Hanun and reduced the Ammonites to dependency. Shobi, another son of Nahash, who was one of those who befriended David at Mahanaim during Absalom's rebellion, may later have been reigning over the Ammonites as David's vassal. Nahash, according to 11 Samuel 17:25, was the father of David's sister Abigail. Since David's father was Jesse, this would imply that David and his sister had only one parent in common – their mother, the tracing of their relationship through their mother being a characteristic of a beena marriage. The Nahash referred to in this verse might be Nahash king of the Ammonites, which would be an additional reason for the latter's friendliness toward David. It has been suggested, however, that there is a corruption in the text, and Nahash intruded into this verse from verse 27. According to this, "daughter of Nahash" is to be emended to read, with the Septuagint, "daughter of Jesse."

NAH'ĀWENDĪ (Nahāwandī), BENJAMIN BEN MOSES AL- (mid-ninth century), *Karaites scholar, surnamed after the city of *Nehāvand (Nahavand, Nihavand), in Persia. He probably lived in Persia or Iraq, since Karaite settlement in Palestine, particularly in Jerusalem, did not begin until after Nah'āwendī's death. In the official Karaite memorial prayer

he is ranked next to *Anan's son Saul, and in medieval Arabic accounts the Karaites as a group are sometimes referred to as "the followers of Anan and Benjamin." Al-*Kirkisānī, who lived a century later and whose information is usually highly reliable, states that Nah'āwendī was "learned in the lore of the Rabbanites and strong in Scripture, and served for many years as a judge." Karaite tradition regards Nah'āwendī as the person who established early Karaite teaching on a firm footing by purging it of Anan's supposedly excessive leaning toward Rabbanite doctrines. It is true that Nah'āwendī disagreed with Anan on many points of law, but at the same time he appears to have been rather tolerant; he not only had no objection to adopting Rabbanite legal ordinances, including some which have no direct support in Scripture, but is even said to have declared that every person may be guided in legal matters by his own judgment and is not obliged to submit to the decisions of commonly acknowledged authorities. On the other hand, later Karaites rejected some of Nah'āwendī's views, particularly his theory that the world was not created immediately by God, but that God created an angel who, in turn, created the world. Further, he was of the opinion that the Law was revealed by an angel, not by God, and the prophets received their prophecy from an angel. The purpose of this theory was to refer all the anthropomorphic passages in Scripture, or those which might be contrary to pure monotheism, to this angel-creator, and not to God Himself. This theory presumably represents an adaptation of a Gnostic idea, subsequently modified into the Philonic-Christian doctrine of the *logos (creative word). Nah'āwendī's borrowings from Rabbanite law seem to testify to his realization that the cry "Back to the Bible!" raised by Anan and earlier pre-Karaite schismatics, while tactically useful for their purpose of basing their laws solely on the Bible, was impractical, since biblical legislation alone could not efficiently govern the Karaites' social and economic life a thousand years later, in the vastly different conditions prevailing in the Muhammadan empire. Hence he was forced to provide guidance for his coreligionists (probably out of his own experience as a practicing judge) in such matters as identification of witnesses, loans, agency, conjugal property rights, revokable gifts, and inheritance and wills, for which Scripture supplies only vague guide rules or none at all. Unlike Anan, who wrote (so far as is known) only in Aramaic, and unlike his own successors who wrote in Arabic, Nah'āwendī wrote (again, so far as is known) in clear and fluent Hebrew, sharply distinct from the stilted Hebrew of later Karaite scholars and translators in the Byzantine Empire. His legal works comprise *Sefer Mitzvot* ("Book of Precepts") and *Sefer Dinim* ("Book of Rules"), both presumably parts of a comprehensive code of Karaite law. The *Sefer Dinim*, dealing with civil and criminal law, was published by A. Firkovich under the title *Masat Binyamin* (1835); extracts in English translation are found in L. Nemoy, *Karaite Anthology* (1952). Fragments, presumably of the *Sefer Mitzvot*, were published by A. Harkavy (*Studien und Mittheilungen*, 8 (1903), 175–84).

Nahāwendī also wrote commentaries on some of the books of the Bible (the Pentateuch, Isaiah, Song of Songs, Ecclesiastes, Daniel), which were highly regarded even by an authority like Abraham ibn Ezra. The colophon of the *Sefer Dinim* contains the earliest-known occurrence of the term “Karaites.”

[Leon Nemoy]

NAḤMAN BAR RAV HUNA (first half of the fifth century C.E.), Babylonian *amora*. According to the letter of Sherira Gaon (ed. by B.M. Lewin (1921), 94f.), during 452–55 Naḥman was head of the academy in Mata Meḥasya which had been revived by Ashi, succeeding Idi b. Avin, Ashi's successor. According to Halevy, the *amora* Naḥman mentioned in the Babylonian Talmud as a contemporary of Ravina and Ashi (Er. 27a; Ket. 7a; Kid. 6b; et al.) is the same person. Halevy suggests that he was the brother of the younger Ravina who was considered by some scholars to have completed the editing of the Babylonian Talmud, since, according to Sherira, the father of Ravina was also Huna, but this is refuted by S. and H. Albeck (see bibl.).

BIBLIOGRAPHY: Hyman, *Toledot*, 940f.; Halevy, *Dorot*, 3 (1923), 91–93; S. Albeck, in: *Sinai – Sefer Yovel* (1958), 70f.; H. Albeck, *Mavo la-Talmudim* (1969), 434.

[David Joseph Bornstein]

NAḤMAN BEN ISAAC (d. c. 356), Babylonian *amora*. His mother was the sister of Aḥa b. Joseph (Shab. 140a). Naḥman studied under his uncle Aḥa, who because of his age leaned upon Naḥman's shoulder and was led by him (Shab. 140a). He is referred to as having waited upon a Mar Samuel (Beḥaz 25b). According to R.N. Rabinovicz, however (*Dikdukei Soferim*, ad loc.), the reference is to Simeon b. Abba and the great *amora* Samuel of a previous generation. He was the head of the **kallah* in the academy of Rava where he was friendly with Adda b. Abba, with whom he attended Rava's discourses (BB 22a). He also taught in Drukeret (Shab. 94b), where he went at the invitation of Naḥman b. Ḥisda (Ta'an. 21b) and assisted him in his teaching (BB 8a), defending him several times against the criticism of Rava (Ket. 63b; Shevu. 12b; Hul. 88b). It is probable that he was active in Drukeret before his appointment with Rava. After Rava's death in 352 Naḥman joined the academy of Pumbedita which, since the death of Abbaye in 338, had been combined with Rava's school in Maḥoza, and held this post for the last four years of his life.

Naḥman b. Isaac is frequently quoted in the Babylonian Talmud (the occurrence of his name in the Jerusalem Talmud – BK 9:1; BB 3:3; et al. – is a mistake for Naḥman b. Jacob). Naḥman continually stressed the need for assembling and arranging the material taught, as in Pes. 105a–b, where he calls himself *sadrana*, an arranger of tradition (cf. Epstein, *Introduction*, 432; E.S. Rosenthal, *Pesaḥ Rishon*, 254). As a result he paid careful attention to the correct name of the transmit-

ters of teachings (Pes. 107a; Kid. 44a) and also made frequent use of mnemonic formulae (Shab. 60b; Ta'an. 10a; et al.). He devoted himself to biblical study and was well versed in the *masorah* (Shab. 28b, 55b; Yoma 75b; et al.), often using it to arrive at the correct text of the Mishnah (Shab. 77a; Beḥaz 35b; BK 60a).

The Talmud relates that his mother was told by astrologers when she was pregnant that her son would be a thief, so she watched over him from his childhood, taking care he should always go about with his head covered in order to make him conscious of the fear of Heaven. One day he was sitting and studying under a palm tree when temptation overcame him, and climbing up he bit off some of the dates. He then realized why his mother insisted on his keeping his head covered. This is one of the talmudic sources for keeping the head covered (*ibid.*; see **Head, Covering of the*). It is also told that since Naḥman's father was not a scholar, Naḥman showed greater honor to his friend Naḥman, son of the leading *amora* Ḥisda, than he would permit his namesake to show him (Ta'an. 21b). Among his colleagues were Mar son of Ravina (Shab. 61a, 108a), Papa, and Ḥuna son of Joshua (BB 22a). He died in Pumbedita.

[David Joseph Bornstein / Stephen G. Wald (2nd ed.)]

NAḤMAN BEN JACOB (usually referred to without patronymic; d. c. 320 C.E.), Babylonian *amora* and a leading personality of his time. Born in Nehardea, where his father was a scribe of Samuel's *bet din* (BM 16b), Naḥman sometimes quotes his father's teachings (Beḥaz 26a; Zev. 56a). Naḥman may have studied under Samuel, since he transmits teachings in his name (Ber. 27b; Shab. 57b) and refers to him as *rabbenu* (“our master”; Ber. 38b, Er. 16b); but if so he must have then been very young, since Samuel died in 254. Naḥman also transmits sayings in the names of Rav (Er. 72b; Pes. 13a), Adda b. Ahavah (BK 24a), Shila (Ber. 49b), and Isaac (Shab. 131b), with whom he was on close terms (Ta'an. 5a–6a). His main teacher, however, was Rabbah b. Avuha (Yev. 80b; Git. 72a) in whose name he frequently transmits statements (Ber. 36b; Shab. 17a). Rabbah b. Avuha wanted to give him his daughter in marriage (Yev. 80b), although it is not clear whether this occurred. It is known that Naḥman ultimately married into the family of the exilarch (Hul. 124a) and in consequence was held in high esteem (Kid. 70a), and that his wife, **Yalta*, had influence in the house of the exilarch (Rashi to Git. 67b). When Nehardea was destroyed in 259 by Odenathus, Naḥman went to Shekanzib, but returned to Nehardea when it was rebuilt, teaching and serving as *dayyan* there (Er. 34b; Kid. 70a–b; BB 153a). There are many statements by him on both *halakhah* and *aggadah* in the Talmud, and his name is one of those most frequently mentioned in the Babylonian Talmud and also appears quite frequently in the Jerusalem Talmud. Huna held him equal to

Samuel as a judge in civil law (BK 96b), and Naḥman regarded himself as of sufficient standing to judge cases on his own (Sanh. 5a). In later generations it was laid down that in any dispute between Naḥman and a colleague, the former's opinion was to prevail (Ket. 13a; Kid. 59b). He often visited Sura (Suk. 14b; Ket. 94a) and frequently transmitted teachings in the name of Huna, who taught there (Pes. 40a), and with whom Naḥman frequently disputed (Er. 42a), referring to him as "our colleague Huna" (Git. 52b). An important contemporary was *Judah b. Ezekiel, the founder of the academy of Pumbedita; Naḥman often differed with him (BK 27b) but held him in high esteem (BM 66a). On one occasion he summoned Judah to court. Judah was advised by Huna to overlook the discourtesy, and he appeared. It was only then that Naḥman realized who the respondent was. Judah, however, plainly showed his irritation, whereupon Yalta advised her husband to settle the case quickly lest Judah make him appear an ignoramus (Kid. 70a–b). Other of his colleagues were Ammi (Ber. 47b) and Assi (Er. 32b), as well as Ḥiyya b. Abba (*ibid.*) and R. Isaac of Palestine. Once, when parting from Naḥman, Isaac compared him to a rich shady fruit tree growing by the side of a stream, not lacking wealth, reputation, or honor, and said that he could only pray that each shoot taken from the parent tree should be the equal of the sire (Ta'an. 5b–6a). Among his pupils were Zera (RH 20b), Rabbah (Pes. 40a), Joseph (Yev. 66b) and Rava (Ber. 23b). Some of his aggadic sayings are: "When a woman is talking she is spinning" (a web to capture the male; Meg. 14b); "Haughtiness does not become a woman" (*ibid.*). There is definite mention of a number of his sons, Rabbah (Shab. 119a), Hon (Yev. 34b), Mar Zutra (BB 7a), and Ḥiyya (BB 46a). Naḥman is said to have had two daughters who were taken captive. R. Elesh, taken captive with them, wanted to take them with him when he was about to escape, but did not do so, on discovering that they practiced witchcraft (Git. 45a). On his deathbed Naḥman requested Rava, who was sitting by the bed, to pray to the angel of death to spare him a painful death. He later appeared to Rava in a dream and said that though his death was not painful, he would prefer not to face the fear of it again (MK 28a).

[David Joseph Bornstein]

NAḤMANIDES (**Moses b. Naḥman**, also known as **Naḥmani** and **RaMBaN** – an acronym of **Rabbi Moses Ben Naḥman**; 1194–1270), Spanish rabbi and scholar and one of the leading authors of talmudic literature in the Middle Ages; philosopher, kabbalist, biblical exegete, poet, and physician. Naḥmanides was born in Gerona, Catalonia, and it was after his native town that he was also referred to as Rabbenu Moses Gerondi or Yerondi. His Spanish name was Bonastrug da Porta. Naḥmanides was a descendant of Isaac b. Reuben, a contemporary of Isaac b. Jacob *Alfasi. His mother was the

sister of Abraham, father of Jonah b. Abraham Gerondi. His teachers included *Judah b. Yakar, a disciple of *Isaac b. Abraham of Dampierre, who established his yeshivah in Barcelona, and *Meir b. Isaac of Trinquetaille. From the first, he received the tradition of the tosafists of northern France, while from the second he learned the methods of study employed in the yeshivot of Provence. He maintained close contact with Meir b. Todros ha-Levi Abulafia of Toledo who replied to his queries, and even more so with his cousin, Jonah b. Abraham of Gerona. His colleagues also included Samuel b. Isaac *Sardi, to whom he sent the largest number of his responsa, as well as *Isaac b. Abraham of Narbonne. The responsa of Solomon b. Abraham *Adret (part 1, 120, 167) relate that Naḥmanides earned his livelihood as a physician. Even though there is no information available on Naḥmanides' yeshivah in Gerona, there is no doubt that it existed. His disciples included the leading halakhists of the following generation, such as Solomon b. Abraham Adret, *Aaron b. Joseph ha-Levi, David Bonafed, Jonah b. Joseph, Naḥmanides' cousin, and many others. There is reason to believe that after the death of Jonah b. Abraham Gerondi in 1264, Naḥmanides acted as chief rabbi of Catalonia until his emigration to Erez Israel. The Spanish rabbis of subsequent generations regarded him as their great teacher and referred to him as *ha-rav ha-ne'eman* ("the trustworthy rabbi"). In his *Nomologia*, Immanuel *Aboab states that throughout Spain it was the custom to refer to him simply as "the rabbi" or "the teacher."

When the *Maimonidean controversy broke out in *Montpellier in 1232, Naḥmanides attempted to find a compromise between the opposing camps, although he agreed with *Solomon b. Abraham of Montpellier and his followers in condemning the detrimental use which had been made of the works of Maimonides by the "philosophizers" to whom the study of secular sciences was a principal object. On the one hand, in the letters which he sent to the community leaders of Aragon, Navarre, and Castile, he sought to prevent them from taking measures against the extremists of Montpellier, while on the other hand, in his famous letter "Before I raise my voice, I err," he requested the rabbis of France that they annul the *herem* which they had proclaimed against the writings of Maimonides. He argued that these were not intended for French Jewry, which was faithful to Jewish tradition, but for the Jews of the south (Provence and Spain), among whom philosophic culture had struck roots, with the objective of bringing them back to the path of the faithful. In order to avert a schism between the opposed communities and camps, he proposed a detailed program which would suit the varying conditions prevailing in France and Spain and would regulate the study of the various sciences according to the age of the students and the locality. Naḥmanides' program failed because the extremists in both camps gained the upper hand and he was isolated.

He exercised extensive influence over Jewish public life in Catalonia; even King James I (1213–1276) consulted him and in 1232, on the strength of Naḥmanides' opinion, rejected the

claims of the *Alconstantini family to the position of *dayyan* over all the Jews of the kingdom. In 1263 King James coerced him into a public disputation in Barcelona with the apostate Pablo *Christiani. The disputation, which was held in July in the presence of the king and the leaders of the *Dominicans and the *Franciscans, was a victory for Naḥmanides, the king even presenting him with 300 dinars in appreciation of the manner in which he had stated his arguments. (For further details see *Barcelona, Disputation of.) At the request of the bishop of Gerona, Naḥmanides summarized his views in a book, apparently the *Sefer ha-Vikku'ah*, which is still extant. The Dominicans, who had initiated the disputation, did not remain inactive, and in April 1265 they called Naḥmanides to trial for his supposed abuses against Christianity. Before the tribunal Naḥmanides stated that his words had been spoken during the disputation after the king had promised him freedom of speech, and that he had written his work at the request of the bishop. The king thereupon succeeded in extricating Naḥmanides from the complications of the trial, which was postponed for an indefinite period. Dissatisfied, the Dominicans sought the aid of Pope *Clement IV, who sent a letter to the king of Aragon requesting him to penalize Naḥmanides for writing the above work. Naḥmanides barely succeeded in escaping from Spain and during the same year emigrated to Erez Israel.

A prayer in the spirit of the Psalms, which Naḥmanides composed at sea while on his way to Erez Israel, has been preserved. He arrived in *Acre during the summer of 1267 and on Elul 9 of that year he went to Jerusalem. In a letter to his son Naḥman, he described the ruined state of the city seven years after the invasion of the Tatar hordes. He found few Jews, "only two brothers, dyers who bought their dye from the governor and were joined by up to ten Jews in their home on Sabbaths for prayers." On his arrival in the town he organized the remnants of the Jewish community and erected a synagogue in a derelict house; it appears that he also founded a yeshivah. Reports of his activities circulated rapidly; many Jews streamed into Jerusalem. In 1268 Naḥmanides moved to Acre, where he became the spiritual leader of the Jewish community, in succession to *Jehiel b. Joseph of Paris. From this period a sermon which he delivered in the synagogue on Rosh Ha-Shanah in 1269 has been preserved. The site of his tomb has not been ascertained; some believe that he was buried at the foot of Mount Carmel; others that he was buried in Haifa, beside the tomb of Jehiel b. Joseph of Paris; while others say that he was interred in Acre. There is also a tradition that he was buried in Jerusalem, under the slope of the mountain near the village of Silwan, and another that his tomb is in Hebron.

Naḥmanides had three sons: Naḥman, to whom he sent the above-mentioned letter from Jerusalem; Solomon, who married the daughter of Jonah b. Abraham Gerondi; and Joseph, who was a favorite at the court of the king of Castile and owned an estate in *Valladolid. One of Naḥmanides' daughters married *Gershom b. Solomon, and their son was *Levi b. Gershom.

Works

About 50 of Naḥmanides' works have been preserved, in addition to many works which are doubtfully attributed to him. The majority of his works are novellae on the Talmud and *halakhah*. He also wrote books and letters connected with his public activities, including the *Sefer ha-Vikku'ah* already mentioned. He devoted a special work to the nature of the belief in Redemption, the *Sefer ha-Ge'ullah*, written in about 1263. He was also a gifted *paytan*, writing a number of poems and prayers, including a prayer which he composed on his entry into Jerusalem. Four of his sermons have been preserved: *Ha-Derashah la-Hatunnah*, dating from his youth; *Torat ha-Shem Temimah*, which he apparently delivered after the disputation of Barcelona; one on the Book of Ecclesiastes, which he delivered before his departure for Erez Israel; and the sermon mentioned above, delivered in Acre on Rosh Ha-Shanah. All his works bear the imprint of his original personality, a synthesis of the culture of Spain and the piety of Germany, a talmudic education together with the teachings of Kabbalah, as well as a broad knowledge of sciences and Christian theological works. An edition of his works has been published by Ch. D. Chavel (see bibliography).

[Joseph Kaplan]

As Biblical Commentator

Naḥmanides wrote his commentary on the Torah in his old age. He composed the main part in Spain, but added to it after his arrival in Erez Israel. In the introduction he states the purpose of his commentary: "To appease the minds of the students, weary through exile and trouble, when they read the portion on Sabbaths and festivals." It is an extensive commentary, both on the narrative and legislative part of the Bible. Unlike his most noted predecessors, *Rashi and Abraham *Ibn Ezra, who devoted themselves chiefly to the elucidation of individual words and verses, Naḥmanides, though he followed strict philological procedure when he deemed it necessary to establish the exact meaning of a word, concerns himself mainly with the sequence of the biblical passages and with the deeper meaning of the Bible's laws and narrative. He makes frequent use of the aggadic and halakhic interpretations of the talmudic and midrashic sages, but whereas Rashi quotes these without expressing his own opinions, Naḥmanides dwells on them at length, analyzes them critically, develops their ideas, and probes their compatibility with the biblical text.

The commentary of Naḥmanides is more than a mere commentary. It reflects his views on God, the Torah, Israel, and the world. The Torah is the word of God and is the source of all knowledge. The narratives of the Bible are not simple records of the past, but are portents of the future. The account of the six days of creation contains prophecies regarding the most important events of the succeeding 6,000 years, while the Sabbath foreshadows the seventh millennium which will be the Day of the Lord, and the accounts told about the patriarchs foreshadow the history of the Jewish people as a whole. Naḥmanides does not hesitate to criticize the patriarchs when their actions seem to him unjustifiable. According to him

(Gen. 12:11), Abraham “unintentionally committed a great sin,” when, on coming to Egypt, he said out of fear for his life that his wife Sarah was his sister, for in this way he exposed her to moral corruption; rather, he should have had faith that God would save both him and his wife. Naḥmanides demonstrates great psychological insight when describing the behavior of biblical personalities. In the story of Joseph the Bible relates that “he fell on his neck and wept on his neck for a while” (Gen. 46:29). The question arises: Who wept? Jacob or Joseph? It is obvious who is more likely to weep at such a time, Naḥmanides says, the old father who finds his son alive after he had mourned for him as lost, not the son who has risen to become a king. Naḥmanides explains the laws in the light of halakhic tradition. He maintains that there is a reason for every commandment. The commandments are all for the good of man, either to keep from him something that is hurtful, to remove from him evil beliefs and habits, to teach him mercy and goodness, or to make him remember the miracles of the Lord and to know him. He explains some of the dietary laws in terms of health regulations; others he interprets as seeking to keep us from eating foods that dull the mind and harden the heart.

Naḥmanides very often quotes Rashi and Abraham ibn Ezra. Despite his great reverence for Rashi, he polemicizes with him. At times he praises Ibn Ezra, but attacks him sharply for those of his views which run counter to tradition. He holds Maimonides in high esteem, but rejects some of the reasons given in the *Guide of the Perplexed* for the commandments. He regards (Gen. 18:1) Maimonides’ view that the visit of the angels to Abraham was a mere vision to contradict the Bible. Naḥmanides was the first commentator to introduce Kabbalah into his commentary.

The commentary, written in a lucid style, contains many a word of encouragement and solace to the Jewish people. At the end of the Song of *Haʾazinu* (Deut. 32), Naḥmanides writes: “And behold there is nothing conditional in this song. It is a charter testifying that we shall have to suffer heavily for our sins, but that, nevertheless, God will not destroy us, being reconciled to us (though we shall have no merits) and forgiving our sins for His name’s sake alone.... And so our rabbis said: ‘Great is the song, embracing as it does the present, the past (of Israel) and the future, this world and the world to come....’ And if this song were the composition of a mere astrologer we should be constrained to believe in it, considering that all its words were fulfilled. How much more have we to hope with all our hearts and to trust to the word of God, through the mouth of his prophet Moses, the faithful in all his house, like unto whom there was none, whether before him or after him.” Naḥmanides’ commentary became very popular and has been widely drawn upon by later commentators. Supercommentaries have been written upon it and kabbalistic treatises have been composed on its kabbalistic allusions (see below). Baḥya b. Asher and Jacob b. Asher incorporated large parts of it into their commentaries. The commentary was printed for the first time in Rome prior to 1480. A scholarly edition

based on manuscripts and early printings, prepared by Ch. D. Chavel, was published in Jerusalem in 1959–60.

The commentary on Job, too, was probably written by Naḥmanides in his old age. Naḥmanides regards Job as a historical figure. He intimates that the answer to the problem of the suffering of the righteous and the prosperity of the wicked – the central theme of the book – is to be found in the belief in the transmigration of souls. The righteous are punished and the wicked rewarded for their deeds in an earlier life. Comments on other books of the Bible are found dispersed throughout Naḥmanides’ writings. His *Book of Redemption* (*Sefer ha-Geʾullah*) contains comments on various passages of the Book of Daniel. He also wrote a commentary on Isaiah 52:13–53:12.

[Tovia Preschel]

As Halakhist

Naḥmanides’ halakhic works rank among the masterpieces of rabbinic literature, and some of them have become classics. They may be divided into four categories: novellae on the Talmud, halakhic monographs, **hassagot* (“criticisms”), and responsa.

Naḥmanides’ novellae, which originally covered the entire orders of *Moʾed*, *Nashim*, and *Nezikin* – from early times the parts of the Talmud customarily studied in Spain – and which are for the most part extant, mark the summit of the halakhic and religious literary creativity of Spanish Jewry. They also opened a new chapter in the cultural history of that cultural community. In his novellae Naḥmanides based himself on the best of the earlier Spanish tradition and constantly availed himself of the writings of *Samuel ha-Nagid, most of which are no longer extant, of *Hananel b. Hushiʾel, Isaac *Alfasi, Isaac *Ibn Ghayyat, *Judah al-Bargeloni, Joseph *Ibn Migash, and their contemporaries. Nevertheless, he mainly adopted the mode of learning characteristic of the French *tosafists, whose teachings were previously little known in Spain and whose method was not followed there. In this way Naḥmanides created a new synthesis in the method of study in Spain which was henceforward concerned with a comprehension of the talmudic argumentation for its own sake after the manner of the French scholars and not merely with elucidating *halakhah* for practical purposes, as had until then been customary among the Spanish scholars. Accordingly Naḥmanides emphasizes in his work the theoretical meaning and academic significance of the pronouncements and decisions of the leading earlier Spanish codifiers. Thus he inaugurated a new school in the method of studying the Oral Law which laid the stress on an apprehension, for its own sake, of the talmudic *sugyah* (“theme”) as a whole, in point both of its inner tenor and of its relation to other relevant *sugyot* dispersed throughout the Talmud, without, however, becoming entangled in lengthy, sterile discussion. Yet there was no complete dissociation from the practical halakhic aspect. While these two trends are to be found side by side also in the *tosafot*, Naḥmanides was undoubtedly the first fully to achieve this synthesis, which pervades his novellae.

A further local “Spanish” factor which he synthesized with the French system was his constant search for ancient, critically examined, and established texts of the Talmud so as not to become involved in needless discussions to solve questions arising from corrupt readings. The tosafists, too, were aware of this problem, but not having access to enough ancient texts, they were compelled to take such versions from secondary sources, such as Hananel’s glosses or the works of the *geonim*, available to them largely at second or third hand, or they made conjectural emendations of the talmudic text which led to a grave and protracted controversy among the tosafists. In this respect, Naḥmanides enjoyed an obvious advantage. Living in Spain, he had at his disposal the best talmudic texts that had been sent to that country direct from the academies of the Babylonian *geonim* 200–300 years earlier. Another factor, chiefly Spanish and conspicuous in Naḥmanides, is his extensive use of the geonic writings and the Jerusalem Talmud. This system of Naḥmanides completely superseded the earlier Spanish tradition. The greatest of his pupils, as also their pupils, having continued, developed, and improved this system, established it as the method for future generations among ever broadening circles of students of the Oral Law.

In addition to the teachings of the French scholars, of whom he speaks with profound esteem, Naḥmanides’ works also contain the teachings of Provence, which he incorporated into his system of study as an inseparable part of it. The teachings of *Abraham b. Isaac of Narbonne, *Abraham b. David of Posquières, *Isaac b. Abba Mari, and many others, form an integral part of his works, the last mentioned to a large extent anonymously. Although not very apparent from a superficial reading, his associations with the teachings of Provence are even closer than with those of Spain. Besides the earlier Provençal scholars, he mentions many others from Provence, contemporaries of his, whose statements he discusses. This threefold Spanish, French, and Provençal trend is undoubtedly connected with two of his principal teachers, *Judah b. Yakar and *Nathan b. Meir of Trinquetaille, both of whom were pupils of *Isaac b. Abraham of Dampierre, the well-known tosafist. Naḥmanides’ contemporary and relation, Jonah Gerondi, who likewise studied under the tosafists, also based his teachings on a similar method of study.

Naḥmanides’ novellae are notable for their wealth of sources and mode of presentation, their clear, lucid style and logical structure. In his desire to arrive at the authentic literal meaning, he did not hesitate to disagree even with the *geonim* and the most illustrious of the earlier authorities, such as *Hai Gaon, Isaac *Alfasi, and others. He was among the first of those who in their writings developed the theoretical method, at once logical and profound, that aimed at comprehending the pivotal argument on which the *sugyah* as a whole depends. Often his novellae range far beyond the limits of the *sugyah* under discussion to a fundamental investigation of various subjects central to the *halakhah*. He also devotes much space to methodological discussions, to be found dispersed in his glosses, on the principles of the Talmud. The novellae on the

Talmud were not published simultaneously, the first to appear having been those on *Bava Batra* (Venice, 1523) and the last those on *Bava Mezia* (Jerusalem, 1929) and, in a complete edition, on *Hullin* (New York, ed. by S.Z. Reichmann, 1955). Most of his novellae – those on *Berakhot*, on *Mo’ed*, *Nashim*, *Nezikin*, and on *Hullin* and *Niddah* – were published between 1740 and 1840. His novellae to *Ketubbot* go to this day under the name of Solomon b. Adret. Nearly all these were known throughout the intervening years from many manuscripts, and leading scholars, particularly among the Sephardim, quoted them in their works. His novellae were published in their entirety for the first time in 1928 in Jerusalem in two volumes. Some of his novellae on a few tractates are extant in the form of short extracts on several pages of a tractate only. He presumably composed them in this manner and was unable to complete the entire work.

Until the expulsion from Spain, Naḥmanides’ novellae occupied, alongside Rashi’s commentary, the place that the *tosafot* do among students of the Talmud. To such an extent were his words minutely examined and debated that methodological rules were laid down for them. In this respect, Isaac *Campanton was especially notable, declaring that Naḥmanides’ statements are to be so closely studied that not a single word should appear superfluous. He even established many minute rules for extracting Naḥmanides’ underlying meaning from every single passage. From the time his novellae first appeared in print their influence has become increasingly pronounced also among Ashkenazi students and yeshivot. To this day their study occupies in yeshivot of Polish-Lithuanian origin a principal place together with Rashi, the *tosafot*, and Maimonides.

The second class of Naḥmanides’ halakhic literary works comprises his halakhic monographs, of which there are seven:

(1) *Dinei de-Garme* deals with a clarification of the laws regarding inconvenience to a neighbor, injury to his property, and their relation to the law of torts. Since the subject is treated in the second chapter of *Bava Batra*, this short excellent monograph was appended to his novellae on that tractate from its first appearance in print. In it Naḥmanides summarizes the principal views of the earlier authorities on the various aspects of the laws of the *assailant and his victim in general, including damage to a neighbor. In presenting the various opinions Naḥmanides treats of each with great profundity. On this subject he was, he says, forestalled by monographs of French scholars, whose names, however, he does not mention. In recent years there was published (in *Hadorom*, 23 (1966), 31–53), from a manuscript *Gerama ve-Garme* by one of the tosafists, apparently *Ephraim b. Isaac of Regensburg, and Naḥmanides may be referring to this or to a similar work. This small work of Naḥmanides was highly praised by scholars, several of whom wrote commentaries on it. A comparison between his work and that of the scholar previously mentioned clearly reveals Naḥmanides’ superiority as a writer of glosses and systematizer.

(2) *Mishpetei ha-Ḥerem* deals with the ways in which a ban is imposed and release obtained from it. It also treats at length of **Kol Nidrei*, said on the eve of the Day of Atonement. Although casting some doubt on its value, he nevertheless states that those accustomed to say it should not be prevented from doing so, since they rely on a custom instituted by the earlier authorities.

(3–5) *Hilkhot Bekhorot* and *Hilkhot Ḥallah* written by Naḥmanides as a supplement to *Hilkhot ha-Rif* of Alfasi, from which these laws were omitted. Here Naḥmanides adopts, with great fidelity, the Aramaic used by Alfasi, as well as his particular style and mode of writing. Naḥmanides also wrote *Hilkhot Nedarim* to fill a gap in Alfasi (those printed on tractate *Nedarim* are not Alfasi's). In this work Naḥmanides included, to a much larger extent than is to be found in the writings of Alfasi, novellae and argumentations in the style characteristic of his glosses on the Talmud.

(6) *Torat ha-Adam* is a comprehensive and unique monograph on all the laws concerning death, starting with what is prohibited and permitted and what is a *mitzvah* as regards the sick and dying, and concluding with the laws of mourning. In point of fact this work is also in the nature of a "supplement" to *Hilkhot ha-Rif*, but in it Naḥmanides, expatiating on the subject, included many scores of talmudic and tannaitic sources as also of Sephardi and Ashkenazi views, which he compared and discussed at length in the light of the sources. Very great importance was attached to the work by the leading codifiers, *Jacob b. Asher incorporated it, in its actual order and form and with corresponding sections, in his *Tur*, as did Joseph *Caro later in his *Shulḥan Arukh*. Commentators on the Talmud set great store by it when dealing with the interpretation of the relevant *sugyot* in the Talmud. Of special interest on its own account is *Shā'ar ha-Gemul*, the 30th chapter of the work which, published separately some 30 years before the whole (Naples, 1490), deals with reward and punishment after death.

(7) *Hilkhot Niddah* was printed in *Todat Shelamim* (Venice, 1741) of Isaiah *Bassani.

The third category of Naḥmanides' halakhic writings, and the first to appear in print, comprises his works of criticism, of which there are three:

(a) *Hassagot* ("criticisms") of *Maimonides' *Sefer ha-Mitzvot* (Constantinople, 1510);

(b) *Milḥamot Adonai* (in *Rif*, Venice, 1552) attacking *Zerahiah ha-Levi of Lunel's criticisms of *Hilkhot ha-Rif* as well as criticizing Zerahiah's *Sefer ha-Zava*; and

(c) *Sefer ha-Zekhut*, (in *Shivah Einayim*, Leghorn, 1745) attacking Abraham b. David's criticisms of Alfasi.

These three share a common feature, namely Naḥmanides' desire to vindicate the earlier authorities against the criticism of later scholars, and hence their contents do not everywhere reflect Naḥmanides' own view; thus, Maimonides having written his *Sefer ha-Mitzvot* mainly against the enumeration of the 613 commandments by the author of the *Halakhot Gedolot*, Naḥmanides took upon himself the task of

defending the earlier authority against this criticism. The most important of them is *Milḥamot Adonai* which also has great intrinsic value for the comprehension of a *sugyah*, Naḥmanides devoting himself with his signal profundity and unique talents to an accurate reconstruction of the earlier views that appear to conflict with the *sugyah*. The style of the work is terse, vigorous, and not always easy to understand, calling for much concentration by the reader. In general Naḥmanides, in keeping with the basic purpose of the work, limited himself to the criticisms directed against Alfasi, but in its earlier parts the author went beyond these self-imposed limits to include in them arguments against Zerahiah ha-Levi even where the subject matter did not touch directly on Alfasi.

Naḥmanides' halakhic writings had a decisive influence on the entire history of subsequent rabbinic literature. Solomon b. Abraham Adret's glosses on the Talmud are founded on those of Naḥmanides, and Adret literally copied extracts from his work. Based principally on Naḥmanides' writings are *Sefer *Ha-Ḥinnukh* (which is also based on Maimonides) and Samuel b. Meshullam *Gerondi's *Ohel Mo'ed*. A complete series of works on *Hilkhot ha-Rif* by an anonymous author, mistakenly identified as Nissim *Gerondi, are by a "pupil of Naḥmanides" and based on his teachings. Menahem b. Solomon *ha-Me'iri devoted an entire work, *Magen Avot*, to a controversy with Naḥmanides' pupils who had brought with them to Provence their teacher's customs, which were diametrically opposed to those of Provence. The very great authority enjoyed by Naḥmanides is apparent from the fact that ha-Me'iri found himself compelled to defend the views of the leading earlier authorities of Provence against those of Naḥmanides. Of his responsa only a small number are extant; a large number of them being written in reply to the questions of Samuel b. Isaac ha-*Sardi, who incorporated them in their entirety in his *Sefer ha-Terumot*. A few other responsa by him appeared in *She'elot u-Teshuvot ha-Ramban*, the vast majority of which, despite the title of the work, are by Solomon b. Abraham Adret.

It is difficult to fix the chronological order of Naḥmanides' halakhic works. It is known that he composed *Hilkhot Nedarim* in his youth, and it is clear that he wrote *Milḥamot Adonai* before most of his novellae on the Talmud. Since he composed his novellae over many years, it is impossible to determine their order.

[Israel Moses Ta-Shma]

In Kabbalah

There is evidence that in an earlier version of his Commentary on the Pentateuch (Rome, 1480) Naḥmanides intended to discuss kabbalistic matters more explicitly, but he fell ill and was informed in a dream that he should desist. An extant fragment from an earlier version seems to indicate such a tendency. However, immediate doubts about the authenticity of the fragment were raised by Naḥmanides' students. Hints of kabbalistic references sprinkle his prolific writings, especially his commentary on the Pentateuch (Naples, 1490), commentary on the Book of Job, and the sermons. Kabbalistic concepts are woven into the eschatological discussion in the

last section of his halakhic work, *Torat ha-Adam*; this section has often been printed as a separate work titled *Sha'ar ha-Gemul*. Kabbalistic elements are readily recognizable in his liturgical poems, e.g., in *Shir ha-Neshamah*, and in the prayer on the death of R. Abraham Ḥazzan, one of the kabbalists of Gerona. Naḥmanides' single work dealing exclusively with the Kabbalah is his commentary on the first chapter of *Sefer Yezirah*.

Despite the paucity of his kabbalistic writings, he came to be known in his later years as an expert on the subject. Kabbalists in the late 13th and early 14th centuries made considerable literary attempts to try and solve the secrets of Naḥmanides' commentary on the Pentateuch. The most important commentaries in this vein are *Keter Shem Tov* by R. Shem Tov *Ibn Gaon and *Me'irat Einayim* by R. Isaac b. Samuel of Acre. Even as late as the beginning of the 14th century, Naḥmanides' kabbalistic writings were studied and relied upon to a far greater degree than the *Zohar itself; a definite preference for the Zohar became apparent only in about 1325.

In the course of time Naḥmanides came to be regarded as such an authority that other authors' works were wrongly attributed to him, e.g., *Ha-Emunah ve-ha-Bittahon* (Korets, 1485), which has been proven to be the work of R. Jacob b. Sheshet *Gerondi. G. Scholem has made intensive surveys of Naḥmanides' method in Kabbalah in his *Ursprung und Anfaenge der Kabbala* (1962) and in his series of lectures, *Ha-Kabbalah be-Geronah*, ed. by I. Ben Shlomo (1964).

[Efraim Gottlieb]

Naḥmanides' Mysticism in Light of Late 20th Century Research

Researchers throughout the 20th century attempted to decipher Naḥmanides' mystical teachings in the context of their general and Jewish cultural contexts, and there were several efforts to present his mysticism and theology systematically, both by academic and Orthodox authors. In the 1980s a collection was published in which various articles explored diverse aspects of Naḥmanides and his thought: his Andalusian background, his conservative transmission of kabbalistic traditions, and the blatant contrast between Naḥmanides and *Azriel of Gerona regarding Adam's sin and other physical and spiritual subjects. In the 1990s scholarly interest grew regarding Naḥmanides' exegetical writings and their social implications, and major advances were made in focusing on Naḥmanides' hermeneutics in their Jewish and general context.

MYSTICISM IN NAḤMANIDES' BIBLE COMMENTARIES. Bible commentaries formed the literary and spiritual context in which Naḥmanides functioned as a kabbalist. His kabbalistic creativity cannot be separated from its appearance in his Bible commentary, and this exegetical work forms the essential context for understanding his kabbalistic teaching. Naḥmanides functioned in a context in which the literary genre of Bible exegesis – especially exegesis of the *peshat* (plain meaning of the text) – had already been developed by its classical exponents: Abraham Ibn Ezra in Spain, and Rashi and his school

in France. In contrast with the *peshat* exegesis, which was thus already an established and structured literary genre, there was not yet any tradition of kabbalistic exegesis, especially in the specific sense of attempting to explicate the secrets of the Kabbalah in an exegesis following the *peshat*-exegetical paradigm. Accordingly, Naḥmanides had to shape a new strategy of writing, and made a highly significant choice to distinguish between two different paths in the text: the path of *peshat* and the path of truth. This choice created a problematical exacerbation of the gap between prior bodies of knowledge and the mysticism evolving in this period.

Whole sections of the Bible had, perhaps, not previously been dealt with from a mystical perspective, and certain parts of Scripture had no specific traditions of esoteric interpretation, just as other parts had rich traditions of interpretation. The question of attitude toward the Torah was especially sharp.

Naḥmanides sought to compose a consistent and continuous mystical commentary to the Torah, relying only on existing mystical material or on established tradition. He thereby encountered two complementary problems: (a) the Torah contains passages lacking any mystical exegetical tradition; (b) there are mystical doctrines which lack any clear and direct relation to the text of the Torah. This does not mean that Naḥmanides faced discontinuity in the mystical tradition; there is an essential and profound difference between what seem to the reader to be "interpretative gaps" and what is lost material. These two phenomena should not be confused. Even if the exegete's self-conception is related to lost knowledge, the processes leading to this phenomenon are frequently related to the gap resulting from a change in the focus of the exegesis. Another complementary problem exists, namely that the rules of preserving the mysteries, which were at the heart of ancient mysticism, and which were also involved in oral transmission, often led to their being lost.

CONSERVATISM AND INNOVATION. A lively controversy has surrounded the question of Naḥmanides' innovation or conservatism in the Kabbalah. We can state, however, that both factors are active in his Kabbalah, and we need to explicate the relations between them. On the one hand, Naḥmanides transmitted bodies of knowledge which were transmitted in whispers, carefully preserving their character; on the other hand, he transmits them in a reorganized and different manner, in the form of Bible exegesis. One facet of innovation was his attempt to interpret the Bible mystically, an attempt motivated by the notion, characteristic of his time, that "everything is learned from the Torah." Presenting the mystical meaning while following the linear continuity of the text was also related to his time, since prior mystical traditions were not shaped in direct relation to the text of the Torah. To what, and by means of what exegesis, and on the basis of which texts, could the mystical traditions be connected? This was the urgent and immediate question faced by the early kabbalists, a question closely connected to the process of histori-

cal and social uncovering of the Kabbalah and its becoming written down.

Rabbi Ezra and Rabbi Azriel, in contrast with Naḥmanides, chose to interpret the talmudic *aggadot*. Their choice was simpler: they could review and write Kabbalistic commentaries on *aggadot* which had a mystical background or tendency. In this respect they remained closely and obviously related to rabbinic materials arranged in a midrashic manner. At the same time, the connection between what they chose to interpret is related to specific points in the Talmud, just as Naḥmanides did in his commentary to the Torah, which reflects the fact that we are referring to a process of uncovering existing knowledge, and not merely an exegetical decision.

CONCEPTIONS OF HISTORY AND TIME: CHRISTIANITY AND ISLAM. Attitudes toward Christianity and Islam alike provide additional contexts for Naḥmanides' writings. His attitude toward the Christianity of 13th century Europe becomes blatant in his concept of history and his historiosophy. His attitude toward Islam also finds occasional expression, but less in historical references than in more substantive phenomenological parallels to contemporary mystical doctrines known from the Ismaili Islam.

Naḥmanides' method regarding "the actions of the ancestors are a sign for their children" and "pictures of things," implemented on the level of *peshat*, confirms the relationship between his conception and Christian conceptions of history, whereas his overall conception of time (of which the conception of history is a part), such as his theory of *shemitot* (sabbatical years of release) based on his theory of the **Sefirot*, is implemented on the mystical level, and is related to Ismaili concepts of cyclical cosmic time.

NAḤMANIDES' THEOLOGY: THE RELATION BETWEEN CONCEPT AND SYMBOL. Naḥmanides' thought, which can be called kabbalistic thought or a "religious system," connects basic symbols of the mystical tradition and fundamental concepts in Jewish religion. Naḥmanides was a creative theologian, whose new system of thought includes such theological and philosophical concepts as miracle, nature, providence, exile, redemption, time, will, commandment, Torah, faith, image and story. In turn, his thought influenced a broad spectrum of Jewish thinkers, kabbalists and non-kabbalists alike, including thinkers of an opposite point of view from his, such as Crescas, Judah Loew ben Bezalel (Maharal), Isaac Luria, Cordovero, Abraham Cardozo, Elijah ben Solomon Zalman (Vilna Gaon), Moses Sofer (Ḥatam Sofer), Krochmal, Rabbi Kook, the Satmar *rebbe*, and others. Basic ideas of his theology are also subtly connected to a body of symbolic knowledge and render Naḥmanides' Kabbalah uniquely profound, and resulted in its influencing a broader circle outside of Kabbalah alone.

THE STRUGGLE BETWEEN TWO MYSTICAL THEORIES: NAḤMANIDES AND THE ZOHAR. The conservative and normative aspect of Naḥmanides' mystical theory reflects his communal

and halakhic leadership as well as his being a kabbalist. However this conservatism was expressed more in the oral manner of his transmitting his theory than in its content. Recent research has increasingly explored the social aspect of two different conceptions of mysticism, related to two strategies of transmission and writing.

The controversy between Naḥmanides' school and the school of the Zohar surrounds a core issue: a differing view of God and man, which in turn is reflected in a differing view of reality and history. Naḥmanides' conception of God contains a dimension of transcendence, absolutely beyond human comprehension, expression, revelation or theurgy, and is experienced by God's remoteness from language. By the language of the *Sefirot*, Naḥmanides was able to express a hierarchy between two levels of divinity: the known and the unknown, reminiscent of Pseudo-Dionysius.

The school of the Zohar, by contrast, provides a different conception of God and man: the transcendent is open to revelation, theurgic contact and even ecstasy (what can be called theurgic ecstasy). The transcendent is experienced by its absolute proximity to language. The concept of God and man is thus "realized" in the concept of history as a gate open to infinite fields. The acosmic vector of this concept applies to history's beginning or pre-history, and not to its end. By giving up on the concept of cyclical *shemitot*, it cuts any link to an apocalyptic world-view, and thus the center of gravity shifts from the cosmos seeking its end, to a cosmos moved by its beginning, and the shift from a cosmic process to a historical process.

There is a close correlation between determining an unequivocal and sharp end to the cosmos and history, and the concept of a defined reservoir of souls, just as there is between the infinity of history, especially in the transition to messianic times, and the continual renewal of souls and the perpetual self-perfection of God.

In recent research there have been diverse claims regarding the pseudepigraphical authorship of the Zohar in relation to the school of Naḥmanides, which faithfully preserved his oral teachings in the generation after his death, and served as guardians of canonical kabbalistic writing. The texts of the school of the Zohar, on the other hand, did not exist as a formed corpus in the 13th century, and only at the end of the 13th and beginning of the 14th century did the idea of "the Book of the Zohar" take shape, in response to the canonization of Naḥmanides' commentary to the Torah and to the rise of a genre of mystical exegesis.

COMMENTATORS ON NAḤMANIDES. Some of the commentators on Naḥmanides are known by name; others are anonymous. The supercommentaries of R. Joshua *Ibn Shuaib and R. Shem Tov *Ibn Gaon are regarded as the most authoritative for the transmission of the teachings of Naḥmanides and his students Solomon ben *Adret and *Isaac Todros, and are important to understanding Naḥmanides. Although *Isaac of Acre's commentary *Me'irat Einayim* also follows the order

of the biblical text, it is a topical key to Naḥmanides' thought. Other commentaries of an interpretative and homiletical character are R. Joshua ibn Shuaib's *Derashot* on the Torah and Bahya ben Asher's Torah commentary. R. Menahem Recanati's commentary to the Torah also contains commentary on Naḥmanides and citations from the Zohar.

The works which present Naḥmanides' teachings in a systematic manner are anonymous, and differ in strategy from super-commentaries: they uncover a system, rather than follow step by step. These include *Ma'arekhet ha-Elohut*, and two works referred to in scholarly literature as the unknown commentary of Naḥmanides' mysteries, and an anonymous commentary from the circle of Solomon ben Adret, as well as a commentary to the *Sefer ha-Bahir*.

Following these anonymous works written in Spain, the literature of the circle of the *Sefer ha-Ṭemunah* in Byzantium also needs to be mentioned. These writings discuss the meaning of the shapes of the letters of the Hebrew alphabet together with the theory of Sabbatical cycles. A similar combination may also be found in the thought of Naḥmanides' grandson, R. David ben Judah he-Ḥasid, whose contacts with the circle of the Zohar were complex. He combined knowledge of the Zohar with knowledge of Naḥmanides' teachings, and was a primary conduit for the transmission of Naḥmanides' Kabbalah to the circle of *Sefer ha-Ṭemunah*.

In the first and second generations after Naḥmanides, there were thus students who received his teachings and transmitted them, sometimes by personal word of mouth. Some of them, however, combined his teachings with other kabbalistic systems. In terms of content, many of the anonymous works focus on the mysteries of time and the nature and character of its historical or cosmic cycles. In this regard, they resemble ancient apocalyptic literature. In terms of form, the anonymous works break out of the limits of oral transmission.

Later developments, which follow in the path of *Sefer ha-Ṭemunah* and, like it, rely on Naḥmanides' teachings, are *Sefer ha-Ḳaneh* and *Sefer ha-Peli'ah*, which reinforce its apocalyptic paradigm, in which the *shemitot* cycles are also used to explain the commandments, in terms of the cycle of human religious life. The mystical transmission is no longer only oral and within the family, but now includes revelation and written transmission, personal revelations and revelations of Elijah.

Such transmission by anonymous revelation is dialectically related to Naḥmanides' own conceptions. It is not necessarily opposed to his strict rules of oral transmission. Rather, the rich power and agitation already existing in the oral circles branched out in writing and revelation. Naḥmanides himself had been described, shortly after his life, as someone capable of restraining his horses while galloping at full speed.

NAḤMANIDES BETWEEN CATALONIA AND CASTILLE. The great difference between the behavior of Naḥmanides' students and that of kabbalists in the area of Castille leads to the conclusion that the earlier kabbalists of Naḥmanides' circle, who tended to preserve traditions and to obey strict rules of

transmission, were careful in the way they committed these teachings to writing, at the same time that the Zohar was being distributed and thereafter. This does not, however, provide evidence of influence of Castille on Catalonia. To the contrary: earlier material was uncovered later on, in diverse dialogical relations with the kabbalists of Castille. Parallels between the kabbalists of Catalonia and Castille do not necessarily mean that the Catalonians internalized teachings from Castille, but just the opposite: it is possible that the kabbalists in Castille broke earlier restrictions and were the first to commit to writing theories they learned from people close to the circle of Solomon ben Adret, without accepting their strict rules of secrecy, whereas Naḥmanides' students were reticent to take this step. We know about some of these people from the testimony of R. Shem Tov Ibn Gaon, and one of them was likely R. David ha-Kohen.

Such violation of the rules of transmission made possible a much broader explication of mystical teachings than had been previously known through oral transmission, whether direct or indirect. Naḥmanides' students, as well as those of Solomon ben Adret and Isaac Todros, had committed themselves to the strict restrictions of oral transmission. We have the testimony of R. Shem Tov ibn Gaon, one of Adret's students, that his teachers made the condition that he only transmit the kabbalistic teachings to a wise and humble student, over the age of 40. His testimony also indicates that these strict restrictions sometimes failed; the teachers occasionally misjudged a person who had already learned Naḥmanides' teachings.

The difference regarding innovation and knowledge is not what divided the circle of Naḥmanides from the kabbalists in Castille. It is merely an external symptom of a more extreme struggle over the content of completely differing conceptions of reality and God, and the dynamics of the controversy cannot be separated from the essential content.

MOSES DE LEON'S CONTROVERSY WITH NAḤMANIDES. *Moses de Leon's attitude toward Naḥmanides was quite complex. Their ideological and religious controversy was conducted on several levels: the concept of transcendence; the concept of God as binary (i.e., the dichotomy of good and evil, being vs. destruction) or unitary; later on "positive" destruction at the end of time (i.e., rest, identified with the good) or "negative" destruction in the beginning (i.e., motion, identified with evil); theurgy directed at part of the divine vs. a theurgic connection to all of divinity; dimensions of divinity closed to experiential knowledge vs. all levels of divinity being open to contact in ecstatic revelation; the destiny of the sinful soul after death: purification and immersion in water (according to Naḥmanides' circle) vs. purification by fire (according to Moses de Leon); cosmic cycles of time vs. cycles of the year, festivals and Sabbaths. A correct understanding of Naḥmanides' theories thus provides a criterion which may permit a break-through in understanding how Moses de Leon's circle accepted and rejected Naḥmanides.

The awareness of the *peshat* was critical for the development for Naḥmanides' awareness of *sod* (mystical meaning) as a defined exegetical layer of the text. Such refinement of the concept of *sod*, not only in the content but also in the literary expressions and forms of the text and its transmission led to mystical exegesis, but also to a reaction against Naḥmanides in the Zohar, which rejected the distinction between the two layers.

Naḥmanides conceived of the transcendent as entailing a level closed to human attainment. This accords with the concept of the infinite as a dimension lacking any representation in the stories of the Torah, the concept of the three highest *Sefirot* which the Torah's commandments can only hint at but not aim at them or affect them. In other words, theurgic contact with them is absolutely precluded. Similarly, these *sefirot* cannot be imagined in anthropomorphic terms of any human bodily organ. There is a fundamental connection between the concept of the divine image and the concept of the cycles of *shemitot*, in other words between the anthropomorphic conception of God in terms of only some of the *Sefirot* and the limitations of religious language, and the conception of the cosmos as limiting history. This conception of two dimensions of God – the revealed and the hidden – may be congruent to mystical doctrines known from Hasidei Ashkenaz and from ancient mysticism; but in Naḥmanides' teachings they find additional expression.

The Zohar, on the other hand, in most places, offers a different view: it mentions the *Ein Sof* (infinite), and it relates to all the *Sefirot*, even to the highest ones, in anthropomorphic terms, and provides a theurgic and ecstatic connection with all of them.

THE CONTROVERSY OVER ESCHATOLOGY AND THE THEORY OF SHEMITOT. The controversy described above, regarding conceptions of God and the world, also involves completely differing conceptions of exile, the present and the messianic era. At this critical stage in the history of the Kabbalah and its transition from esoteric to exoteric teaching, the apparently temporary collapse of the theory cosmic cycles, namely the ancient doctrine concerning the passage of time, is related to a completely different conception of the present, an immeasurably long exile, which the circle of the Zohar regarded as the building blocks of the immeasurably long messianic future, to be effected by the knowledge of God and influencing Him.

This early kabbalistic interest in eschatology is congruent in some respects to general culture. On the level of the fate of the individual soul there is prominent interest in locating and characterizing the stages of the trial of the soul after death. Such interest may already be found in Sa'adiah Gaon's *Book of Beliefs and Doctrines* and in Eleazar of Worms' book *Wisdom of the Soul*, and it is particularly prominent in Naḥmanides' *Sha'ar ha-Gemul* as well as in the thought of his bitter opponent, Moses de Leon. Naḥmanides' work describes a continuity from the time of illness to the time of dying and death, to the fate of the soul after death, and also describes

allusions to a collective eschatology. Similar questions occupied other kabbalistic trends of thought: where are paradise and hell located – on heaven or on earth, or in both? What is the essence of the judgment fortifying the soul for the life of the world to come – burning in fire (according to Moses de Leon) or immersion in water (according to Naḥmanides' circle)? Is there an intermediate state, a liminal area in which there is no right to be judged, or (in the Zohar's terms) a naked state? Can the *zaddik* effect an improvement of the sinful souls of the dead? The kabbalists disagreed over these questions and over their answers. In some cases they accommodated their views to ideas they heard in contemporary Christianity, but generally they related to a broad range of options found in rabbinic sources.

Questions of esoterics vs. exoterics, of closed vs. open knowledge, were only the tip of the iceberg in a much deeper struggle over a wide spectrum of religious issues (theology and praxis) grounded in differing world-views. Naḥmanides' conservative theory of *shemitot* preserved a more ancient worldview, which apparently no longer was relevant to the contemporary experience of reality of some 13th century kabbalists. A different conception of time bursts out of the writings of the kabbalists in Castille, who rejected the theory of *shemitot*. Instead, they regarded the present day as the time for creative messianic activity, a view related to general processes taking place in Christian European society, such as the rise of the city and mercantile economy, with their concepts of time. These new concepts of time were internalized in the religious life of these kabbalists, and not merely in the way they supported themselves financially. These differences split the world of 13th century Kabbalah, but we would not be witness to these changes of seasons in the conception of time were it not for the conservative component in Naḥmanides' teaching.

NAḤMAN OF BRATSLAV (1772–1810), ḥasidic *admor* (“master, rabbi, and teacher”) and fertile thinker in the fields of philosophy and literature. His personality and his work resonate to this day far beyond the boundaries of the ḥasidic stream he founded.

On his mother’s side, Naḥman was the great-grandchild of the Ba’al Shem Tov, Rabbi *Israel ben Eliezer, considered to be the founder of ḥasidic Judaism. His mother, Feiga, was the daughter of Adil, daughter of the Ba’al Shem Tov. On the side of his father, Rabbi Simḥah, Naḥman was the grandson of *Naḥman of Horodenka (Gorodenka), a disciple of the Ba’al Shem Tov and part of the first group of Ḥasidim headed by the Ba’al Shem Tov.

Naḥman was born in Medzhibezh, in the Ukraine, the town where the Ba’al Shem Tov worked and was buried, and where Naḥman’s uncle and the grandson of the Ba’al Shem Tov, Rabbi Baruch of Medzhibezh, continued to work. Naḥman

therefore grew up in the heart of the ḥasidic world, and from a young age already saw his destiny as being a ḥasidic rabbi. He was betrothed as soon as he reached bar mitzvah age, and married a year later, at the age of 14. At his wedding he met Rabbi Simeon, who became a student and loyal friend and accompanied him throughout his life. After his wedding, as was the custom at that time, he went to live in the home of his father-in-law, Rabbi Ephraim of Ossatin, in the Kiev district of Podolia. The rural nature of this place attracted Naḥman, and he often wandered among the fields and went off by himself to the caves and forests, to commune with God. He used to go out rowing by himself on the river, although he was not a very good oarsman. His life during this period had a considerable influence on the life he encouraged his disciples to live. Seclusion, walks in the countryside, and conversations with the Maker as if conversing with a friend, are the salient features of Bratslav Ḥasidism to this day.

After Rabbi Ephraim became widowed and remarried, Naḥman did not get on with his father-in-law’s new wife and moved to the town of Medvedevka, in the Kiev district. There he began to gather his first disciples around him, and embarked on the path of a ḥasidic leader.

In 1798 Naḥman set out on a journey to Erez Israel. He traveled anonymously, and only his friend Simeon accompanied him and knew his identity. On his way to Erez Israel he acted childishly, playing soldiers with youngsters and unnecessarily provoking other Ḥasidim traveling with him on the boat. These actions can be interpreted in various different ways. In Erez Israel he met the local ḥasidic leadership, who received him with great honor and respect, as befitting the great grandson of the Ba’al Shem Tov. He visited Acre, Safed, and Tiberias, as well as other places, but after a few months, when Napoleon’s army began to arrive in the country, he fled back home. His return journey was also accompanied by various adventures, since he mistakenly boarded a Turkish warship and was only released after payment of a large ransom.

After his journey to Erez Israel he returned to Medvedevka and to leadership of his ḥasidic community. During this period, the first disputes also began to take place with other ḥasidic leaders in the same area. At the same time, Naḥman began to develop his view of disputation as a source of growth and development and as something with positive aspects, arising in places where new paths are broken in the worship of God.

In Elul 5560 (1800) Naḥman moved to Zlatopol, in the Kiev district, not far from the town of Shpola, home of Reb *Aryeh Leib, known as the Shpola Zeide (“the Grand Old Man of Shpola”), who was the oldest of the ḥasidic *admorim* in the region and whose authority also extended to Zlatopol. Shortly after Naḥman arrived in the town, a serious disagreement broke out with the Shpola Zeide, who apparently saw Naḥman’s arrival in town – which had not been coordinated with him as was customary – as an encroachment and an affront. In due course Baruch of Medzhibezh and other *admorim* in the Ukraine joined the dispute against Naḥman.

From a series of meetings that he had with ḥasidic rabbis in the area on his return from Erez Israel, it appears that Naḥman did not conceal his criticism of the *admorim*, most of whom were many years older than he. Naḥman told them bluntly that the revelations of which they were so proud were false, and frequently attacked the “erroneously famous” rabbis who did not know how to lead themselves, but wanted to lead others.

Naḥman saw himself as the greatest **zaddik* of his generation, and as a true saintly man. He considered his rank to be incomparably higher than that of the other rabbis of his generation, and also of *zaddikim* of previous generations, including the Ba’al Shem Tov, the founder of Ḥasidism. Naḥman even hinted that he was higher in rank, at least in some respects, than all the outstanding Jewish figures throughout the generations, from the creation of the world and the first man and right up to the days of the Messiah. This is the message that comes across from the conversations, sermons, and stories of Naḥman, and more explicitly from the esoteric material discovered and published only at the beginning of the 21st century, in particular from those parts that were censored and omitted in the printed version of the book *Ḥayyei Moharan* (“The Life of our Teacher Rabbi Naḥman”), but preserved in the manuscript version.

These bold pretensions naturally aroused opposition, which came as no surprise to Naḥman; he even said: “How could there not be disputes around me, since I am taking a new path that no one has ever taken before, not even the Ba’al Shem Tov, nor any being since the Torah was received, even though it is a very ancient path and even though it is completely new” (*Ḥayyei Moharan*, Jerusalem 5760, p. 338). Naḥman even saw himself as a potential messiah, and as the trailblazer for the coming of the Messiah, who would lead the world with the help of the tools and the advice that Naḥman had prepared and renewed, and the whole world would become Bratslav Ḥasidim.

As a result of the dispute, Naḥman was forced to move to Bratslav (1802). At this stage he was joined by Rabbi Nathan Steinhart (1780–1845), who soon became Naḥman’s scribe and the disseminator of his doctrine. Naḥman stayed in Bratslav for some eight years, until the last year of his life, and there he established and expanded his work as a ḥasidic rabbi and teacher. Even then, the disputes did not abate, accompanying Naḥman until his final days. The most notable of the ḥasidic rabbis who supported Naḥman during these difficult times was Rabbi **Levi Isaac* of Berdichev, who stood by him until his own death, about a year before Naḥman’s.

In 1805 Naḥman’s son Solomon Ephraim was born. Naḥman had messianic hopes for the infant, which increased in fervor during 1806. In the summer of 1806 the “Holy Child” died, and with him the hopes of coming redemption. Shortly afterwards Naḥman first revealed the *Megillat Setarim*, an esoteric discourse describing the “order of the coming of the righteous redeemer.” This scroll, to which Naḥman returned in 1809, was encompassed by walls of stringent secrecy, and Bratslav tradition claims that only one person in each gen-

eration should know it. The scroll was set out in writing but only in brief hints and acronyms. In the book *Yemei Moharanat*, which is Reb Nosen’s autobiography, it was claimed by the publisher that the scroll was lost. However it emerged that contrary to what was declared, the scroll is still in existence and is preserved by the Bratslav Ḥasidim. Recently, the scroll has also been exposed to research.

Naḥman regularly traveled between the towns where his supporters lived. One important journey that left an impression on him was his journey to Lemberg (Lvov). At the time, there were important doctors staying in Lemberg and Naḥman went to see them because he was suffering from tuberculosis, the disease from which he would eventually die. However, apart from the medical aspect, the encounter with the doctors in Lemberg, which continued for some eight months, was significant for Naḥman in that, for the first time, he came into lengthy and intensive contact with educated Jews. Naḥman also made other journeys, some of them incognito, whose purpose and meaning he did not explain.

Some six months before his death, in the spring of 1810, when he was already well aware that his days were numbered, Naḥman moved to the town of Uman. There were a number of reasons for the move. Naḥman, who had prayed for a long time for the privilege of dying a martyr’s death, apparently wanted to be buried in the cemetery in **Uman*, where many Jews martyred in the 1788 Gonta massacre were buried, and in this context declared that he had come to engage in *tikkun neshamot*, the perfection of souls. Naḥman was also interested in meeting with the Uman intellectuals. To the amazement of his disciples, he preferred to live in a house previously occupied by one of the important intellectuals of the town, Naḥman Nathan Rapaport, and not in the home of one of his followers. Naḥman even used to meet with prominent members of the circle of Uman intellectuals, and had a special connection with Hirsch Be’er Horowitz, who some time later immigrated to England, changed his name to Herman Bernard, and became a professor of Oriental languages at Cambridge University. It is not clear what they talked about at these meetings, but we know that the meetings were social in nature and that they played chess together. Naḥman saw them as an important mission and found them very interesting, even though they prompted surprise among his disciples. Bratslav tradition tells that these intellectuals “almost” returned to their religious roots, and had Naḥman not died an untimely death they would certainly have fully returned to the fold.

Bratslav Ḥasidism was never a large sect, and after the move to Uman it became even smaller, with only a few hundred loyal Ḥasidim remaining and not put off by the disputes and persecution, or by the strange actions of the rabbi.

The tuberculosis from which Naḥman was suffering for a third year became worse, and any conversation or speech cost him great effort and severe pain. Nonetheless, to his last days Naḥman continued his homiletic and literary activities, and even expounded doctrine to his congregation of disciples,

and some of his most complex and interesting teachings were given during this difficult period. During *Hol ha-Mo'ed* Sukkot of 1810 Naḥman died and was buried in Uman.

Naḥman of Bratslav's Spiritual Work and Character

Naḥman of Bratslav is one of the most original creative minds of ḥasidic contemplation and oration and the most notable writer in the field of ḥasidic literature. His book *Likkutei Moharan* (1808) contains theoretical homilies which were, for the most part, written down by his disciple Reb Nosen, with a few written by Naḥman himself. In terms of genre, the book clearly belongs to ḥasidic homiletic literature, containing Naḥman's teachings presented in a manner that is full of imagination and vision. The innovation and imagination can be seen both in the content and the penetrating way in which the theological and existential problems are presented, and at the level of the literary qualities of the homilies, such as the surprising linking of characters and the unexpected way in which Naḥman quotes sources in order to build his sermon. Although on first reading the homilies appear to document Naḥman's disorganized flow of associations, at the end and on second reading it becomes clear that Naḥman has woven a colorful and changing tapestry into a tale whose end lies in its beginning, and which has both structure and a point to make.

The book *Sippurei Ma'asiyyot* (1815) presents 13 stories told by Naḥman during the last three years of his life, written down by his disciple Rabbi Nathan of Nemirov (Reb Nosen). The stories were published, on Naḥman's instructions, in a bilingual edition – Hebrew and Yiddish, with the Hebrew version above and the Yiddish version below. These stories represent an independent division in ḥasidic literature, and there is nothing else like them in the field. Unlike most ḥasidic stories, these were told by the rabbi and not by the disciples. However, a more important characteristic lies not in the identity of the author but in the character and content of the stories. Unlike other ḥasidic literature, which is entirely hagiographic, the tales of Naḥman are not paeans of praise dealing with an exemplary figure, and only one of the 13 deals with the ḥasidic world, while most of them make no mention at all of the Jewish world. The stories in *Sippurei Ma'asiyyot* are told about the daughter of a king captured by the Evil One, about a gang of pirates, about dust that makes anyone who steps on it mad, about the heart of the world and its pining, and about the love of birds, lovers' yearnings and their song. In addition to the tales collected in *Sippurei Ma'asiyyot*, there are dozens more short stories by Naḥman published in Bratslav literature down the generations. A group of stories was written down by Reb Nosen and disseminated in his various writings (mainly in *Ḥayyei Moharan*), while the other stories are scattered through later Bratslav literature. These stories are not all the same in character; they include parables and tales of praise, dreams and visions.

Other than the sermons and stories, Reb Nosen also collected conversations and short sayings of Naḥman which, although they are not as complex and well developed as his

homiletic and literary work, contain a clarity of thought and a directness that are not to be found in the work that is clad in literary and homiletic dress.

Naḥman attributed great importance to the rituals he established with the aim of amending man's sins and defects. He instituted a *Tikkun le-Mikra Laila* (nocturnal pollution), which mainly involved reciting ten psalms; the *Tikkun Kelali* (General Remedy), which does not deal with a specific sin but is intended to amend entire areas where man is defective, such as the subject of speech, money, and particularly eroticism; and a third *tikkun* which is visiting his grave after his death, and which also allows general amendment of all man's sins, and to which we will relate below.

The figure of the *zaddik* is very important in Naḥman's work, and he emphasized rank and virtue and the importance of believing in the *zaddik*. And yet, Naḥman's teachings and conversations were spoken and written in a personal and confessional tone, including the reader not only in the *zaddik's* moments of elation but also in his moments of crisis. Naḥman often refers in his conversations to his struggle with evil inclinations and his times of weakness, bordering on despair and depression. Even questions of belief and denial are presented in all their seriousness, and the feelings of helplessness that even a *zaddik* feels when faced with the skepticism which has no answer are brought up openly. Despite the noticeable presence of the threat of skepticism, weakness, and despair, it would not be correct to say that the Bratslav climate is pessimistic. Naḥman declared war against sadness and despair in a unique way. He called upon his disciples not to ignore and escape sorrow and anguish but to draw them too into a joyous dance and turn pain and suffering into a source for the awakening of life, elation, and happiness. In Naḥman's work there is a rare combination of a pessimistic sense of reality and a positive and optimistic response to the question of what a man can accomplish in life and whether it is given to a man to achieve joy in his life. These extremes are also expressed in Naḥman's theological world and in his sermons, which place side by side the strong feeling of distance and absence of God on the one hand, and at the same time the ability to sense the divine in everything. The role of the *zaddik*, according to Naḥman, is to know the *ḥasid* standing before him and to adapt his words accordingly. With a spiritually arrogant *ḥasid*, the feeling of distance and the question "Where is God's place?" should be emphasized, whereas with a *ḥasid* who is feeling distant from God, it is the divine presence that should be stressed, and the saying that "The earth is filled with the Lord."

Naḥman is one of the greatest of the mystics of the Jewish people who have left written records of their mystical experiences. He gave voice to his mystic world in his sermons, in stories, and in direct documentation of the revelations he experienced, both while awake and when dreaming. One of these intense experiences, which undoubtedly had considerable weight in shaping Naḥman's self-awareness, was documented in the secret tale called "*Ma'aseh me-ha-Lehem*." In this tale, Naḥman describes a mystic experience in which he

received a new Torah, with a re-statement of the ten commandments and the Torah as a whole. This story was kept secret for over 200 years, and only in recent years has it been published. In the published Bratslav literature there are also reports by Naḥman of various revelations he experienced and teachings he developed as a result. Naḥman's self-confidence in this respect was so great that he even dared to attack other *zaddikim*, even those who were many years older than he, who claimed to have seen revelations and angels, saying to them: "This is not how Metatron appears ... many have anticipated expounding on the Chariot, but have never actually seen it" (*Ḥayyei Moharan*, 113, p. 148).

When Naḥman's disciples raised doubts as to the ability of *zaddikim* to experience revelations such as Ezekiel's chariot, Naḥman replied: "Why are you so surprised? Ezekiel was only human" (*Ḥayyei Moharan*, 553, p. 437). In his sermons and conversations, Naḥman often related to devotion to God and to the states of awareness that are derived from this. He dedicated long sermons in clarification of the issue of devotion, the Holy Spirit, and prophetic visions. Belief and prophecy, for Naḥman, are part of a single spiritual scale whose basis is man's simple faith and whose highest point is the prophetic experience. Both belief and prophecy, each at its own level, require man to be willing to cast aside his intellect in order to reach a state of awareness without knowledge, in which the power of imagination, which is an active and vital part of belief and prophecy, is the central and dominant power at work in his consciousness. Naḥman considered mystic devotion to be a main aim, and all Bratslav work and customs are directed towards helping man to achieve it. Seclusion and conversing with the Creator, shouting and clapping hands, paying attention to the song of the wild grass and searching for hints – all of these modes lead to devotion to God.

Bratslav Ḥasidism after the Death of Naḥman

Naḥman's view of himself as the *Zaddik le-Dorot*, the likes of whom would not be seen again until the coming of the Messiah, left no room for the appointment of a successor after his death, and the Bratslav Ḥasidim remained a ḥasidic community without a living rabbi. This phenomenon, which had not been seen before in Ḥasidism, provoked astonishment and mockery, manifested in the nickname that adhered to the community: the *Toete Ḥasidim* – the Dead Ḥasidim. It was Rabbi Nathan of Nemirov (Reb Nosen), Naḥman's disciple and scribe, who took it upon himself to lead the community and ensure its continuity. At first the older Ḥasidim objected, but Reb Nosen's leadership gradually took shape. Although Reb Nosen did not try to take the place of Naḥman, he played a central role in shaping Bratslav literature and customs for the following generations. Apart from the fact that all the Bratslav literature about Naḥman was written by Reb Nosen, he also continued his own creative momentum, following in the spirit and footsteps of Naḥman, especially in his greatest work, *Likkutei Halakhot*. Reb Nosen set up an independent printing press and ensured that the writings of his rabbi would be pub-

lished and distributed, while completely neglecting his own affairs. Reb Nosen wandered among the disciples and encouraged them to continue adhering to the path of their rabbi even after his death, and even succeeded in attracting new disciples and infusing a new spirit into the community, which had been in deep crisis after Naḥman's death. Reb Nosen initiated the construction of a new *bet midrash* for the Bratslav Ḥasidim in Uman, and also established the Rosh Ha-Shanah gathering at Naḥman's grave. During this period the dispute over Bratslav Ḥasidism was rekindled, with Reb Nosen at the center of the disputes and persecution this time, the persecutor being Rabbi Moses Zevi of Savran. At the height of the dispute, many left the path of their master and did not return even after the dispute died down. After the death of Reb Nosen, the unofficial leadership passed to Rabbi Naḥman of Tulchin (1814–1884), who acquired this status as Reb Nosen's student and right-hand man. In the next generation, the outstanding figure accepted as having authority and continuing the Bratslav tradition was his son, Rabbi Abraham Ḥazan (1849–1917), who was a prolific writer. In addition to expositions on the work of Naḥman, he and his students wrote up many Bratslav traditions which until then had been preserved only orally. After his death, Rabbi Levi Isaac Bender (1897–1989) achieved prominence and was considered by many as the main channel for passing on the Bratslav tradition to the next generation, and as the most devoted student of Abraham Ḥazan. From the beginning of the 20th century and until World War I, there was an improvement in the standing of Bratslav Ḥasidism, and Bratslav centers also sprang up in Poland alongside those in the Ukraine. However, the instability in Eastern Europe, World War I, the Holocaust, and then Soviet rule all had a serious effect on this small ḥasidic community and the only center that survived was a small group of Ḥasidim in Israel.

Since the 1970s there has been a surprising renaissance in the strength and scale of Bratslav Ḥasidism and the status of Naḥman in Israeli culture. Thousands of new disciples joined the community, and wider circles of students and admirers of Naḥman also developed who are not counted as his disciples. Bratslav Ḥasidism split up into a number of factions, some of which have a very tense relationship with each other. During this period, from being a small and persecuted group Bratslav Ḥasidism became a large and influential community. Most of the outstanding figures of this generation were students of Rabbi Levi Isaac Bender.

The following are the different factions of Bratslav Ḥasidism at the turn of the 20th century:

The main faction, also known as Bratslav Me'ah She'arim, comprises veteran Bratslav families, a small minority of them the descendants of Naḥman and Reb Nosen and the majority the descendants of families which joined Bratslav Ḥasidism in later generations. This sect does not have a single leader, and has a number of influential rabbis, including Rabbi Ya'akov Meir Schechter, Rabbi Shemuel Moshe Kramer, Rabbi Nathan Libermunsh, and others. The head of the World Bratslav Ḥasidism Committee, which constitutes the official leadership

of this sect, is the elderly ḥasidic rabbi Mikhal Derfman, head of the Bratslav yeshivah Or ha-Ne'elam in the Me'ah She'arim neighborhood of Jerusalem.

Unlike this sect, the majority of members of the other Bratslav factions are new Ḥasidim with no previous family connection to Bratslav Ḥasidism. The vast majority are *ba'alei teshuvah* from secular families, and a minority are from an ultra-Orthodox or religious Zionist background. A large number of them are from Oriental communities.

The largest faction is led by Rabbi Eliezer Berland, the head of the Shuvu Banim Yeshivah, and his student Rabbi Shalom Arush, head of the Hut shel Heseḏ institutions. The center of this sect is in Jerusalem, on the outskirts of the Me'ah She'arim neighborhood, and its communities are scattered throughout Israel.

Another sect is led by Rabbi Eliezer Schik (Moharash), who travels between the two main centers of his followers in the town of Yavniel in Galilee and in New York City. Rabbi Schik's literary activity is extensive and includes free distribution of his booklets. It is worth noting his correspondence, which includes over 40 volumes of letters to his disciples. In his writings there are hints that indicate that he sees himself as a kind of incarnation of Naḥman and as continuing not only his path but also his personality.

A faction that is small in number but has a large public presence in Israel are the followers of Rabbi Yisroel Ber Odesser, known as the "*Na Naḥim*." Odesser (1888–1994) claimed to have found a note personally sent to him by Naḥman of Bratslav. Among other things, the note contained the expression "*Na Nah Naḥm Naḥman mi-Uman*," which became the mantra and charm of Reb Yisroel's disciples. These Ḥasidim believe that repeated chanting and dissemination of this phrase play a key role in speeding up redemption, which is why they spread it by means of stickers and graffiti and in any other way they can. White knitted yarmulkes with this phrase embroidered on them have become the dress code of this faction. After the death of Reb Yisroel "*Ba'al ha-Petek*," his followers split up and have no agreed leadership, and their main occupation is spreading word of the note and Bratslav literature.

One of the main characteristics of these factions, as opposed to the mainstream, is the considerable status accorded to their living *zaddik* leader. For the first time in Bratslav tradition since the death of Naḥman, the respect and honor given to the leader is not significantly different from that given by other ḥasidic communities to their living rabbi. However, it is still the case among these factions that the figure of Naḥman is the unequivocal center of the ḥasidic experience.

The great expansion of Bratslav Ḥasidism is part of broader processes that took place in the second half of the 20th century, one of which is the increasing resonance of the figure of Naḥman in Israeli culture outside Bratslav ḥasidic circles. Both in secular circles and in national religious and traditional circles there is increasing interest in the works of Naḥman, manifested among other things in study of his writ-

ings in the national religious yeshivah framework and in informal secular frameworks, and in the ever-increasing presence of his personality and writings in Israeli literature and culture. This phenomenon in itself is part of the wider phenomenon of the rise of mysticism in Israeli and Western cultures as part of the "New Age" phenomenon. Yet even against the background of the New Age, the Bratslav renaissance provokes astonishment in its scale and power, and it seems today (2006) that we are still in the midst of the process and that it is too early to summarize it and predict its future.

The main and most significant event in Bratslav Ḥasidism, bringing together all the different factions, is the Rosh Ha-Shanah pilgrimage to Naḥman's grave in Uman. Naḥman felt a special connection with this holiday and instructed all his disciples to gather together every Rosh Ha-Shanah, even if this involved great effort and devotion. Not directly connected to this matter, Naḥman also expressed his wish that his followers come to visit him even after his death, and in preparation for this he laid down a special ritual for the pilgrims visiting his grave, offering great benefits in return: Naḥman promised anyone who comes to his grave, no matter who he is and what his sins are, providing he undertakes not to repeat his sins, gives charity for the elevation of Naḥman's soul, and says 10 particular verses of Psalms, that he will intercede on his behalf and will drag him up from the depths of Hell by his sidelocks. After his death, his followers put these two dictates together and, under the leadership of Reb Nosen, made Rosh Ha-Shanah the holiday when all the Bratslav Ḥasidim gather in Uman at their rabbi's graveside. And indeed, throughout the generations the Bratslav Ḥasidim made great efforts to maintain this tradition. When they were not able to reach Naḥman's grave in Uman, the Ḥasidim gathered in Lublin, Jerusalem, or Meron.

In the 1990s, after the fall of the Soviet Union, the gathering in Uman was reestablished and the number of participants gradually increased. In 2004–05 over 20,000 people arrived in Uman for Rosh ha-Shanah. The vast majority came from Israel, by air, on the eve of the holiday, and a minority came from the United States, Canada, and France. A new synagogue was built. On the top floor and in the surrounding courtyard over 4,000 people pray in the traditional Bratslav manner, and on the ground floor some 2,000 people pray in Mizraḥi style. The other worshipers pray in smaller *minyanim* nearby. On Rosh Ha-Shanah it is not only Naḥman's Ḥasidim who come to Uman but also people who clearly belong to other streams of Judaism, both religious and secular, and yet take an interest in this gathering. Only men are allowed in Uman on Rosh ha-Shanah. Not all Bratslav ḥasidism are able to join the gathering on Rosh ha-Shanah and various Bratslav gatherings are held in parallel in Israel and other parts of the world. Due to the fast-changing dynamics of the movement, it is difficult to estimate the number of Bratslav Ḥasidim in the different factions. It is harder still to estimate the scope of the widening circles of people who see Naḥman as a figure of authority and inspiration with a significant influence on their lives but who do not belong to any particular Bratslav community. The processes of change

in Bratslav Ḥasidism are still in formation and it is too early to speculate on the future of this lively branch of Ḥasidism.

BIBLIOGRAPHY: In David Assaf's *Bratslav – Bibliografyah Mu'eret* (2000) there are more than 1,100 titles on the subject of Bratslav Ḥasidism, original and research literature, accompanied by keys and commentary helping the reader find what he is looking for and know what the item before him contains. We are therefore presenting here only a basic research bibliography. Y. Elstein, *Pa'amei Bat Melekh* (1984); D. [Zvi Mark (2nd ed.)]

NAḤMAN OF HORODENKA (Gorodenka; d. 1780), disciple of *Israel b. Eliezer Ba'al Shem Tov; his son married Feige, the granddaughter of the Ba'al Shem Tov, and their son was *Naḥman of Bratslav. Little information is available on the personality of Naḥman of Horodenka and his teachings. From the scattered quotations in the early ḥasidic literature attributed to him, it appears that he occupied himself essentially with practi-

cal questions on the method of divine worship. His encounter with the Ba'al Shem Tov became the turning point of his life, as he himself confirms: "When I was a great pietist I immersed myself every day in a *mikveh*, so cold that nobody else could bear. When I came to my house and found the place so warm that the walls were almost burning, I did not feel the warmth for almost an hour. Even so, I could not rid myself from impure thoughts until I was compelled to seek the wisdom of the Besht [Ba'al Shem Tov]" (*Shivḥei ha-Besht* (1961), 112). This change of attitude expresses the complete reversal of his world outlook from ascetic to non-ascetic Ḥasidism. In 1764 Naḥman emigrated to Erez Israel with *Menahem Mendel of Peremyshlany at the head of a group of Ḥasidim and settled in Tiberias.

His journey was described by Simḥah b. Joshua of Zalozhtsy in *Ahavat Ziyyon* (Gorodnya, 1790; published a second time under the title *Doresh Ziyyon*, Jerusalem, 1887). Some teachings are recorded in his name by his father-in-law *Moses Ḥayyim Ephraim of Sudyklow in *Degel Maḥaneh Efrayim*, as well as in the *Toledot Ya'akov Yosef* by *Jacob Joseph of Polonnoye.

[Esther (Zweig) Liebes]

NAḤMAN OF KOSOV (d. 1746), kabbalist and one of the early Ḥasidim. A wealthy land contractor and grain dealer, he lived for a time in Ludomir (Vladimir *Volynsky) where he built a *bet midrash* with adjoining bathhouse; Naḥman was associated with a group of Ḥasidim in Kutow (Kuty) which was active even before the appearance of *Israel b. Eliezer Ba'al Shem Tov and possibly remained independent of him even later. At first Naḥman was opposed to the Ba'al Shem Tov, refusing to accept him as a religious leader. Even after recognizing the latter's authority Naḥman preserved his spiritual independence, and his connections with the Ba'al Shem Tov were apparently weak. It is known that among the Kutow group "there was a condition that none of them should prophesy" (*Shivḥei ha-Besht*) but Naḥman did not always observe this condition. He was considered a "man of the spirit," possessing contemplative power and known for his ecstatic manner of praying; he was one of the first to introduce into public prayer the *Nosaḥ ha-Ari* (prayer rite of Isaac *Luria).

Naḥman was among the foremost teachers of devotion (**devekut*), emphasizing constant contemplation of God; *devekut*, according to him, does not contradict the requirements of social life and is not confined to moments of spiritual concentration or a propitious occasion. It is carried out by a visual technique, the letters of the Tetragrammaton and the other names of God appearing before the eyes of the person meditating (the visual method of seeing letters). Naḥman recognized the importance of the dialectical fabric of a society composed of "men of matter" (the masses) and "men of form" (i.e., of the spirit), holding that man's spiritual elevation from his lowliness will take place by his association with the great

and pious. Everyone should aim at progress toward perfection day by day and a gradual ascent through completeness and unity of will and intention (*kavvanah*). Naḥman admitted the struggle in man's soul between the powers which are his good and evil inclinations. Life is like a "running and returning" (Ezek. 1:14), with ascents and descents; sometimes what seems to be an ascent is actually a descent, but the descents are prerequisites of the ascents and are not absolutely evil, for "intellect proceeds from instinct and spiritual desire from physical desire" (*Zafnat Pa'ne'ah*, 38a).

Naḥman was suspected of Shabbateanism and since he supported Jonathan *Eybeschuetz, Jacob *Emden publicly censured him as "Naḥman Kosover, the ignoramus of the Shabbatean sect" (Emden, *Petaḥ Einayim*, 14b; *Sefer Hitabbe-kut* (1862), 20b). However there is no real proof that Naḥman was a Shabbatean. His teachings are cited in *Toledot Ya'akov Yosef* by Jacob Joseph of Polonnoye, in *Shivḥei ha-Besht* (Horodetzky ed. (1922), 56–57), etc.

[Esther (Zweig) Liebes]

NAḤMIAS, IBN (15th–16 centuries), family of Hebrew printers from Spain. DAVID IBN NAḤMIAS, his brother SAMUEL, and David's son SAMUEL left Spain in 1492 and made their way to *Constantinople. There they published *Jacob b. Asher's *Turim* in 1493 (5254). The correctness of this date, written out in words in the colophon, has been doubted by scholars such as M. *Steinschneider (*Juedische Typographie*, 1938, 17), who assume an error of ten years. More recently, the case for the 1493 date has been strongly defended by A.K. Offenber (see bibliography). After an interval of over ten years, the Ibn Naḥmias brothers printed a Pentateuch with Rashi, including *haftarot* with David Kimḥi's commentary and the Five Scrolls with that of Abraham ibn Ezra (1505–06). Several other books followed, among them Alfasi's *Halakhot* and Maimonides' *Code* (both 1509), and three works by Abrabanel, the only ones printed in the author's lifetime. Samuel Sr. died in 1509 or 1510, and David ibn Naḥmias about a year later. David's son Samuel carried on, alone or with a partner, to 1518, when the press was leased to others. The first two works printed (*Turim* and Pentateuch) have as *printer's mark a *Magen David* surrounded by leaves and flowers.

Yaari, *Ha-Defus ha-Ivri be-Kushta* (1967), 17–18, 59ff.; idem, *Diglei ha-Madpisim ha-Ivriyyim* (1944), 3, 123; A. Freimann, *Thesaurus typographiae hebraicae saeculi XV* (1924), C1, 4; Rosanes, *Togarmah*, 1 (1930²), 316–8.

NAḤMIAS, JOSEPH BEN JOSEPH (first half of 14th century), biblical commentator in Toledo. Naḥmias belonged to an ancient and distinguished Spanish family. Apart from the fact that he studied under *Asher b. Jehiel, little is known of his life. His reputation rests upon his biblical commentary which apparently originally encompassed most of the Bible.

The following parts have been published with introductions by M.A. Bamberger: Esther (1891), Proverbs (1912), and Jeremiah (1913). Bamberger also published Naḥmias' commentaries to *Avot* (1907) and to the *piyyut Attah Konanta* (in: *JJLG*, 6 (1909)), on the order of the Temple service for the Day of Atonement. His commentary to the tractate *Nedarim* has been preserved in manuscript. Naḥmias is also known to have translated many parts of Maimonides' *Guide of the Perplexed*.

BIBLIOGRAPHY: Bamberger's introd. to his edition of the commentary to Jeremiah, Proverbs, Esther (all in German); Neubauer, in: *JQR*, 5 (1892/93), 709–13; Poznański, in *ZHB*, 1 (1896/97), 118–21.

[Israel Moses Ta-Shma]

NAHMIJAS, DANILO (1926–), novelist. Born in Bosnia and raised in Sarajevo, Nahmijas joined the partisans at the age of 17 and after the war became a writer and journalist. He published short stories about his war experiences and three novels dealing with the Holocaust, the Nazi occupation, and Jewish resistance: *Nema mjesta pod suncem* ("No Place under the Sun," 1959), *Razvevano seme* ("Seeds Scattered by the Wind," 1960), and *Oganj* ("Conflagration," 1963).

NAHON, family of rabbis and community leaders of Portuguese origin, in various cities of *Morocco. R. ISAAC BEN JOSEPH NAHON (mid-16th century) was a rabbi of the community of Spanish exiles (Heb. *megorashim*) in *Fez and a signatory of its *takkanot* in 1545. Apparently either BENJAMIN (Joseph's father or brother) or JOSEPH was the author of *Sefer ha-Derashot* (Neubauer, *Cat Bod* 998). In the 17th and 18th centuries, the Nahons were international merchants in *Algiers; the family originating in *Tetuán. ISAAC (d. 1730) was rabbi in Tetuán. During the 18th and 19th centuries the family was prominent in *Marrakesh, *Mogador, and particularly *Tangier, where they built the Great Synagogue. They greeted Sir Moses *Montefiore on his trip to Morocco in 1864. JONAS BENASULI (b. 1888) was an architect in Tangier. MOSES (Moïse; b. 1870), a distinguished educator, Francophile, and the inspector of the Alliance Israélite Universelle schools throughout Morocco, was active in several philanthropic societies, as were the Nahon women. Other members lived in London, Gibraltar, and Leghorn, Italy.

BIBLIOGRAPHY: J.M. Toledano, *Ner ha-Ma'arav* (1911), 61ff., 101–2; I. Laredo, *Memorias de un viejo tangerino* (1935), 120–2, 267–72; Hirschberg, *Afrikah*, 2 (1965), 310.

NAHON, GERARD (1931–), Jewish scholar and historian. Nahon was born in Paris to a family that came from Algeria in the 1920s and took refuge in Pau during the war. He studied philosophy, history, and Hebrew at the Sorbonne, the Institut national des langues et civilisations orientales (INALCO), and the Ecole Pratique des Hautes Etudes (EPHE). After working as an educator for the Oeuvre de Secours aux Enfants, and as a high school history teacher, he was appointed in 1965 to the Centre National de la Recherche Scientifique, where

he developed a research unit devoted to French Jewish history, “Nouvelle Gallia Judaica,” which he directed until 1992. In 1977 he becomes directeur d'études at the Ecole Pratique des Hautes Etudes, section des Sciences religieuses, where he held the chair of medieval and modern Jewish history until 2000. He also taught Jewish history at the Séminaire israélite de France, at the INALCO, and at the University of Brussels. A former curator of the Archives of the Consistoire de Paris and president of the Société des études juives, he served from 1980 to 1996 as editor of the *Revue des études juives*. A student of Georges *Vajda and I.S. *Revah, and an indefatigable archive researcher, he devoted a large part of his studies to the scholarly edition of sources and documents and trained numerous students in this rigorous craft.

Chronologically, his research and publications cover extensive ground with a clear focus on two distinct areas, French medieval Jewry and early modern Sephardi history, and revolve around a few recurrent themes. He did research on the history of rabbinical literature, institutions, and personae. Through the study and publication of wills and epitaphs Nahon contributed to the historiographical emergence of the issue of death in Jewish studies. The bulk of his work focuses on the Sephardi Diaspora, particularly on the Portuguese nations of southwestern France, Bayonne, Bordeaux as well as the lesser communities. Through works on the relations between the Portuguese nations of Western Europe and their links to the Holy Land, he promoted the investigation of intercommunal links within the early modern Jewish world. Finally, he devoted several studies to the history of the Jews in Erez Israel and translated Joshua Praver's works.

As well as numerous articles in the aforementioned areas, his works and publications include: “Communautés judéo-portugaises du Sud-Ouest de la France (Bayonne et sa région) (1684–1791),” unpubl. diss., 1969; Menasseh ben Israël, *The Hope of Israel*, with Henry Mechoulan, (1987); *Les “Nations” juives portugaises du Sud-Ouest de la France (1684–1791) Documents* (1981); *Inscriptions hébraïques et juives de France médiévale* (1986); *Métropoles et périphéries sefarades d'Occident. Kairouan, Amsterdam, Bayonne, Bordeaux, Jérusalem* (1993); *La Terre sainte au temps des Kabbalistes 1492–1592*, (1997); *Juifs et judaïsme à Bordeaux* (2003).

[Evelyne Oliel-Grausz (2nd ed.)]

NAHOR (Heb. נַחֹר; cf. Assyrian personal names Naḥaru, Naḥiri, Ur III, Naḥarum).

(1) The son of Serug, the father of Terah, and the grandfather of Abraham. Of those enumerated in the genealogy of the descendants of Shem, he had the shortest life – 148 years (Gen. 11:22–25; 1 Chron. 1:26).

(2) The son of Terah, the brother of Abraham and Haran, and the grandson of Nahor (1). His wife was Milcah, the daughter of his brother Haran (Gen. 11:26–29).

This was a consanguineous marriage such as is common in the narratives of the Patriarchs (for example, that of Jacob with Rachel and Leah). According to E.A. Speiser, such

marriages are to be seen in the light of a custom known from Horite law, whereby a girl was adopted as a daughter with the intention that the adoptive father or his son would marry her. Apparently Bethuel, the son of Nahor and Milcah, died while still young, and his children came under the protection of their grandfather Nahor. Hence Laban is called “the son of Nahor” (Gen. 29:5). However, “the son of Nahor” may constitute a clan name, as is sometimes the case in the Bible.

Abraham and Nahor are described as the progenitors of two clans which intermarried. In the ceremony marking the covenant between Jacob and Laban, the latter declared (31:53): “May the God of Abraham and the god of Nahor – their ancestral deities – ‘judge between us’”; the patriarchal god of each family would judge in any dispute between them, this being customary also in treaties in the ancient Near East, in which each party cited his gods as witnesses to the pact.

The genealogy of Nahor states that his wife Milcah bore him eight sons and his concubine Reumah four. This represents a schematic genealogical outlook whereby 12 sons are ascribed to a progenitor, analogous to the 12 sons of Ishmael or of Jacob. B. Mazar holds that the genealogy of the sons of Nahor reflects an ancient historical reality which tallies with the expansion of the West Semitic tribes in the first half of the second millennium B.C.E. Support for this assumption is to be found in the reference to Aram as the grandson of Nahor, which indicates that the Aramean tribes were still a young and insignificant element. However, in the Table of the Nations, Aram is represented as descended from Shem himself, and Uz, the firstborn of Nahor, is represented as the firstborn of Aram (Gen. 10:22ff.). This genealogy points to a later period, when the Arameans had attained the pinnacle of their power in the Fertile Crescent. Thus the “Aramaization” of Bethuel and Laban (cf. Gen. 31:47) – and indirectly of Nahor himself, which contradicts the genealogical scheme of Nahor's sons – is to be apprehended as a later anachronism engendered after the rise and expansion of the Arameans in the region of Nahor and of Aram-Naharaim at the end of the 12th and in the 11th centuries B.C.E. The ascription of Nahor's sons to a wife and a concubine expresses a geographical and population distribution – the sons of the wife symbolizing tribes, clans, and geographical limits in the region of Aram-Naharaim and the middle Euphrates and on the borders of the Syrian desert, and the sons of the concubine, areas, tribes, and cities in the south of Syria and northern Transjordan.

(3) The city of Nahor (Assyrian Naḥur, Til Naḥiri). In Genesis 24:10 it is related that the servant of Abraham went to “Aram-Naharaim, to the city of Nahor.” Whether this was a place named Nahor or a city in which Nahor's family lived cannot be determined. Those holding the latter view identify the place, on the basis of Genesis 27:43 and 29:4, with *Haran. Nahor is also mentioned in Akkadian sources dating from the beginning of the second millennium to the middle of the seventh century B.C.E., as the name of a city in the Balikh valley. Nahor is first mentioned in Assyrian documents from Kanish of the 20th–19th centuries B.C.E. as an important station

in the Assyrian trade with Asia Minor. Much information on the city during this period is contained in the *Mari archives, from which it is clear that Nahor was a regional capital subject to Mari and a location of its agents. From Nahor supervision was exercised over the Balikh area and the upper stretch of the Habor river; in Nahor intelligence was collected from all parts of Aram-Naharaim. Nahor was also a center for nomadic tribes which, defying all authority, endangered the caravan trade. Accordingly, the rulers of Mari were from time to time constrained to employ military means to suppress their depredations.

In the Middle Assyrian period, Nahor belonged to the kingdom of Hanigalbat, whose rulers erected a palace there. In the 13th century it was captured by the Assyrian kings Adad-Nirari I and Shalmaneser I. During this period it was the seat of a governor, as attested by Assyrian documents, from which it appears that Nahor was included in a district whose capital was Haran, near which it was apparently situated. Although the sources, as well as the archaeological survey conducted in the region of Haran, do not help to fix the exact site of Nahor, it is to be located at an important junction on the caravan route.

NAHOUM, HAIM (1872–1960), chief rabbi of *Istanbul and *Cairo. Born in Manisa, Turkey, Nahoum moved to *Tiberias with his family and received his elementary education there. He then went to Smyrna, Turkey, where he was graduated from government high school, and then to Istanbul, where he studied law. Between 1893 and 1897 he studied at the rabbinical seminary in Paris, where he was ordained, and at the Higher Seminary for Semitic Languages of the Collège de France. When he returned to Istanbul, Nahoum was appointed secretary-general of the community committee and deputy director of the rabbinical seminary founded in 1898 by his father-in-law, R. Abraham *Danon. At the same time, he received a government appointment as history teacher in the Turkish Military Academy. At that time, he became acquainted with the “Young Turks” who were exiled in Paris, and when they

seized power in the *Ottoman Empire in 1908 they appointed him chief rabbi of the Empire. In this position, Nahoum successfully intervened in favor of Jews in various localities of the Empire, especially in assuring government protection for them during World War I (it seems that it was due to him that the project of expelling the Jews from Jerusalem was averted). After the defeat of the Ottoman Empire and the removal of the “Young Turks” from power, Nahoum left Istanbul for Paris in 1920. In 1925 he was elected chief rabbi of Cairo, a post he held until his death. In June 1931 the king of Egypt appointed Nahoum a member of the Egyptian senate, and in 1933 he was appointed a member of the Arabic Language Academy in Cairo. He was also awarded many honors by the governments of Turkey, Egypt, France, Austria-Hungary, and Ethiopia. Proficient in many languages, he engaged in research on the history of Egyptian Jewry. He also published – with a French translation, notes, and a glossary of Turkish terms – a collection of 1,064 firmans (decrees by the sultan) that had been sent to the rulers of Egypt between 1597 and 1904. This work is entitled *Recueil de firmans impériaux* (1934).

[Haim J. Cohen]

NAHRAI BEN NISSIM (11th century), community leader of the Iraqi Jews in Cairo. Nahrai, who was originally from *Kairouan, settled in Egypt where he became a wealthy merchant. He maintained commercial ties with several countries and specialized in the export of such precious goods as spices, pearls, and indigo to Tunisia and Sicily. However, he was also a scholar with halakhic experience and religious and legal questions were addressed to him. He was referred to as “The eminent Rabbi, the greatest of the yeshivah.” He is mentioned in documents dated between 1048–95. Nearly 200 letters addressed to him were found in the *genizah* of Fostat; these are certainly only a part of his original archives.

[Eliyahu Ashtor]

NAHRAWĀN, town in Iraq, E. of *Baghdad. Nahrawān was a flourishing town during the time of the *Abbasid caliphs (8th and 9th centuries) because the main highway to Persia passed through the town, crossing the Nahrawān canal at this point. At this time it had a large Jewish community, some of whose members were said to have come there from *Egypt. The Nahrawān community belonged to the “domain” of the exilarch. To judge by the large income that the exilarch de-

rived from the Nahrawān community (and from Jews living in its vicinity), according to Nathan ha-Bavli the community must have been of considerable size. In the first half of the tenth century a blind scholar from Nahrawān, R. *Nissi (Nissim) al-Nahrawāni was *resh kallah* at one of the academies. He brought about a reconciliation between the exilarch David b. Zakkai and the head of the Pumbedita academy. R. Nissi subsequently became one of the exilarch's advisers. In the late Middle Ages the caravans to Persia changed their route and as a result Nahrawān fell into decay.

[Eliyahu Ashtor]

NAHSHON (Heb. נֶחֱשׁוֹן; “little (?) serpent”), son of Amminadab (Ex. 6:23; Num. 2:3, et al.). Nahshon was chieftain of the tribe of Judah (Num. 2:3) which consisted of 74,600 men (Num. 2:3–4; 10:14). He assisted Moses in taking a census of the community (Num. 1:7). He was the first to present his offering at the dedication of the Tabernacle (Num. 7:12–17) and the first to proceed in the desert marches (Num. 10:14). Elisheba, his sister, married Aaron (Ex. 6:23). He was the descendant of *Perez, the son of Judah and Tamar, and his son Salmah (Ruth 4:20; Salmon, 4:21; Salma, 1 Chron. 2:11) was the father of Boaz. King David was thus one of his descendants.

In the Aggadah

According to a well-known *aggadah*, Nahshon was the only one among the Israelites on reaching the Red Sea to obey the command of Moses to descend into the waters and courageously enter the waves, trusting that the promised miracle would occur and the sea be parted. The members of the tribe of Judah followed their leader's example (Mekh., Be-Shallah 5; Sot. 37a). This version of the story is attributed to Tarfon (early second century).

According to an opposing version, all the tribes were eager to obey the command and competed among themselves, who was to be the first; eventually, the tribe of Benjamin jumped first into the water, but the tribe of Judah, infuriated by Benjamin's success, attacked them with stones (Mekh. loc. cit.; Sot. 36b). Benjamin's reward for being the first to descend into the sea was that the first king of Israel – Saul – was chosen from their tribe (Targum Ps. 68:28 and 1 Sam. 15:17), or else that the *Shekhinah* (Divine Presence) dwelt in their territory (the Temple was built in the territory of Benjamin; Mekh. and Sot., loc. cit.). According to the version which ascribes the outstanding feat of courage to Nahshon, the reward to the tribe of Judah was that kingship in Israel was accorded to them permanently. Tarfon's version was probably meant to encourage acts of rebellion – in the period of unrest preceding the Bar Kokhba Revolt – as the one and only means to regain kingship for Judah, that is to say, to regain political independence. Various attempts to explain this *aggadah* against the background of other events remain unconvincing.

[Joseph Heinemann]

NAHSHON BAR ZADOK, *gaon* of Sura from 871–79, succeeding *Amram Gaon (who mentions him several times in his *Seder*). Nahshon's father, Zadok, had previously been *gaon* of Sura for more than 50 years, and Nahshon's son, Hai, held the office from 889–96.

Nahshon is the author of numerous responsa, in reply to queries addressed to him from various countries. Various works have been attributed to him, among them *Sefer Re'umah* (in J. Onkeneira, *Zafanat Pa'ne'ah*, Constantinople, 1566), on ritual slaughter, and he is thought by some to have been the author of *Seder Tanna'im ve-Amora'im*. Nahshon made a special study of the Jewish calendar, and is best known for his discovery that the Jewish calendar repeats itself exactly every 247 years. His writing on this phenomenon, known as the *Iggul de-R. Nahshon*, was published under that name in the *She'erit Yosef* of *Joseph b. Shem Tov (Salonika, 1521). It is possible that it was this calendrical research which led him to take up the study of Karaite literature, since he had to familiarize himself with the works of the founder of the Karaite sect for this purpose (L. Ginzberg, *Gaonica*, 1, (1909), 158), and his interpretations of words in the Bible and Talmud may well be related to his polemics with the Karaites. Nahshon's conservative outlook led him to discourage the innovation of reciting *piyyutim* in prayer, and he disapproved of the recitation of *Kol Nidrei* on the eve of the Day of Atonement, as did his son Hai. Most of Nahshon's responsa are written in terse and difficult Aramaic, but those ascribed to him in D. Cassel's *Teshuvot Ge'onim Kadmoniyim* (1848; see German introduction, 45) are written in a simple and fluent Hebrew. Some of his decisions conflict with the Talmud and his talmudic-aggadic interpretations do not always agree with those of former aggadists.

[Meir Havazelet]

NAHUM (Heb. נְחֻם; a *qattul* hypocoristic of a name like נְחֻמָּיָה, “YHWH has comforted,” like שְׁלֹמֹה for שְׁלֹמֹהָה, שְׁמוּעָה for שְׁמוּעָהָה etc.), one of the Twelve Minor Prophets. Nothing is known of the man himself other than the statement in the book's title that he was an “Elkoshite.” A place called al-Qūsh, containing a grave said to be that of Nahum, is located in the neighborhood of Mosul near ancient *Nineveh, whose ruin Nahum depicts in chapters 2 and 3; this tradition connecting al-Qūsh with the prophet cannot, however, be traced beyond the 16th century. Jerome, in the prologue to his commentary on Nahum, records that the prophet was a native of a village in Galilee, which in Jerome's time was called Elcesi and is identified with el-Qauze, west of Tibnin. Some older modern scholars, such as A.W. Knobel and F. Hitzig, have sug-

gested locating Elkosh at Capernaum (“Village of Nahum”). More credible seems to be the tradition recorded by Pseudo-Epiphanius (*De Vitis Prophetarum*), which mentions a Judean Elkesi, “yonder,” i.e., south of Eleutheropolis or Bet Guvrin, but the name Elkesi may represent Lachish, since the town of this name was situated directly south of Bet Guvrin. No definite identification of the locality denoted by the designation “Elkoshite” can therefore be made.

Nahum’s literary activity took place after the capture of the Egyptian Thebes (biblical No-Amon) by Ashurbanipal in 663 B.C.E., an event which is alluded to in Nahum 3:8–10. It is not certain, however, whether he wrote before the fall of Nineveh in August 612, when the Assyrian capital was captured and razed by the Babylonians and Medes, or shortly after its fall, when the joyful news of the oppressor’s defeat was conveyed to Judah. The perfect tenses employed in chapters 2 and 3, where the event is depicted with poetic vividness and force, suggest that Nineveh had already fallen. But several passages (such as 3:11, 14–15) seem to indicate that the resistance was not yet completely crushed. It may therefore be inferred that the Book of Nahum was composed in the very year 612, shortly before Nineveh’s final downfall.

The Book of Nahum

The original title of the book as a whole is probably contained in the second part of the superscription: “The book of the vision of Nahum the Elkoshite.” The first part – “Oracle concerning Nineveh” – was perhaps the title of the oracle proper on Nineveh’s fall; in any case, it correctly describes the main contents of the book. Chapter 1 is generally thought to form an acrostic hymn of theophany. In the opinion of several scholars the entire alphabet was represented in the original poem. The text of Nahum 1 and 2:1, 3 has accordingly been rearranged and reconstructed, mainly by G. Bickell and H. Gunkel, to form a complete alphabetic psalm of an eschatological character which they regarded as a later addition to the book. The restoration of a complete acrostic, however, is impossible; in fact, the poem seems to follow the alphabet only down to the letter *samekh* (1:2a, 3b–8, 9c–10a, 9ab, 2b, 10bc), with verses 9ab and 2b having been transferred to their present position by the book’s last editor. One can only conjecture whether the acrostic was composed by Nahum; it is more probable that this text, like other similar ones in the Psalter, was a part of the Jerusalem liturgy. The theophany proper, employing the ancient themes of God’s rule over the primordial forces of nature, is contained in verses 3b–6. It serves here as an introductory motif to a national psalm of confidence (1:7–8, 9c–10a, 9ab, 2b, 10bc), followed by an oracle addressed to Judah (1:12–13; 2:1). This liturgy actually forms the exordium to the poem on the fall of Nineveh.

The oracle addressed to the Assyrian capital was perhaps headed by the words “Oracle concerning Nineveh” (1:1). It opens with the introduction 1:11, 14, and is followed by 2:2, 4ff. and 3. The descriptions in Nahum’s masterful poetry are singularly picturesque and vivid (especially 2:4–6, 11; 3:2–3, 17–19). The absence of distinctly religious motifs is remarkable, and yet

P. Humbert (followed to a certain extent by E. Sellin, A. Lods, H. Lamparter, and S.J. de Vries) tried to prove that the whole Book of Nahum was a liturgy for the enthronement festival of the Lord after the fall of Nineveh in 612. Although other scholars have rejected this view, A. Bentzen (*Introduction to the Old Testament*, 2 (1958⁴), 151) considered that the book might be an “imitated” liturgy, consisting of the introductory hymn (chapter 1), the invitation to a festival (2:1), and the curse against Nineveh (chapters 2–3). A. Haldar, on the other hand, has ascribed the Book of Nahum to a cultic prophet who, in c. 614 B.C.E., foretold the approaching destruction of Nineveh by the Lord and employed the images and expressions normally used in depicting the cultic-mythical struggle of God against his foes. As these motifs are paralleled in Sumero-Akkadian and Ugaritic texts, the Book of Nahum would accordingly derive from cultic circles (see below). S. Mowinckel early considered Nahum one of the nationalistic temple prophets of the kind attacked by Jeremiah (*Jesaja-disiplene, Profetien fra Jesaja til Jeremia* (1926), 56). Following A. Kuenen (*De Boeken des Ouden Verbonds*, 2 (1889²), 384), he suggested that the immediate occasion of the oracle may have been the Median attack upon Nineveh in 623 B.C.E. which, though it was aborted and cost King Phraortes his life, may have turned the prophet’s thoughts toward the city and its future destiny. Several other commentators (such as Th. H. Robinson, K. Elliger, and M. Delcor) also consider the book an actual prophecy of doom against Nineveh uttered before its fall in 612. Nahum, however, in his extant writings, was more a nationalist poet than a prophet predicting the future. He expressed his joy over the imminent downfall of Nineveh in the forceful and vivid language of poetry, depicting the assault upon the city, the entrance effected by her foes, the scene of carnage and tumult in the streets, the flight of her inhabitants, the treasures plundered by the captors (chapter 2), and in 3:2–3 he again visualized the chariots and horsemen of the victor forcing a path through the streets. Since the Lord is against Nineveh (3:5–6), she will be as unable to avert her doom as was Thebes in Upper Egypt (3:8–11). Nineveh’s fortresses have given way; her men have become as women (3:12–13); in vain she tries to endure the siege (3:14); and amid the rejoicings of all who have suffered at her hands, the proud empire of Nineveh passes away forever (3:18–19). The Book of Nahum thus indirectly depicts God’s moral government of the world; He is the Avenger of wrongdoers and the sole source of security to those who trust in Him. Though some of the text is very difficult (1:10, 12; 2:4, 11), the book makes use of vivid images in rapid succession (e.g. 1:3–6). Christensen posits musical influence on the book, which he traces to the prophet’s participation in the temple cult of Jerusalem. The book was known to the Qumran sectarians who composed a **peshet* to the book, an exegetical commentary based on the premise that ancient prophecies found their fulfillment in the life and times of the sect. The graphic imagery of the exposure of a harlot (3:4–5) finds its parallel in Jeremiah 13:26–27; Hosea 2:4–5; Ezekiel 16:37–38; and in the eighth century Aramaic treaty from Sefire (Avishur; see COS II, 214; 11, 35b–42).

[Edward Lipinski / S. David Sperling (2nd ed.)]

NAHUM, AARON SASSON BEN ELIJAH (c. 1872–1962), educator and communal worker in *Iraq. From 1920 he was chairman of the Zionist Organization in Iraq; his Zionist work was done underground because of Iraqi persecution of the Zionist movement. In 1920 he helped found a Hebrew Literary Society in *Baghdad. He was the founder and, from 1924 to 1935, director of Pardes Yeladim, a school which fostered the use of Hebrew. In 1935 he settled in Palestine, where he continued to work as an educator. In 1920 he founded a Hebrew-Arab weekly in Baghdad, *Yeshurun*, of which only five numbers appeared. Under the pseudonym of “Ha-Moreh,” he published a book of poems, *Sefer Shirei ha-Tehiyah*, containing translations and original works (2 parts, 1925; part 3 in 1931). His poems express his longing for Zion. In Palestine he also published a number of booklets, in which he appealed for religious observance.

[Abraham Ben-Yaacob]

NAHUM, ELIEZER BEN JACOB (c. 1653–c. 1746), rabbi in *Turkey and Erez Israel. He served as rabbi in Adrianople, where his pupils included Solomon Shalem, later rabbi of the Sephardi community in *Amsterdam. He later settled in Jerusalem and was elected *rishon le-Zion* (chief rabbi), a position he held for ten years. Among his colleagues in the *bet din* were Meyuhas b. Samuel, Isaac *Azulai (father of H.J.D. Azulai), and Judah *Diwan. He wrote a number of works, including a commentary on the mishnaic orders *Kodashim* and *Tohorot*, entitled *Hazon Nahum* (Constantinople, 1705). The commentary on the order *Zera'im* is still in manuscript form.

[Samuel Abba Horodezky]

NAHUM THE MEDE (fl. second half of the first century C.E.), *tanna*. Nahum lived in Jerusalem during the period of the destruction of the Temple (Naz. 5:4). According to the *tanna* *Nathan, he was one of the judges of civil law, known as *daiyyanei gezerot* (Ket. 105a; Tosef., BB 9:1). Three of Na-

hum's teachings have been preserved in the Mishnah (Shab. 2:1; Naz. 5:4; BB 5:2), and several more in *beraitot* (Av. Zar. 7b; Tosef., BB 9:1).

BIBLIOGRAPHY: Bacher, Tann, 1; Hyman, Toledot, s.v.

[David Joseph Bornstein]

NAHUM OF GIMZO (late first and early second century C.E.), *tanna*, mentioned once only in tannaitic sources (Tosef. Shav. 1:6) as the man from whom R. Akiva derived his famous hermeneutical method of expounding the particles “*akh*” (but) and “*rak*” (only) as exclusionary, on the one hand, and “*et*” and “*gam*” (also) as inclusory, on the other (see **Midrashei Hala-khah*, Distinct Exegetical Methods). Though in all our talmudic sources his name is written “*gam zo*” (two words), it has been suggested his name is derived from *Gimzo (II Chron. 28:18) in the center of Erez Israel. Despite the importance of his contribution to the history of rabbinic exegetical methodology, no additional information about him or his teachings has been preserved from the early tannaitic period. In three places, Gen. R. (1, 22, and 53) ascribes to R. Ishmael the statement that R. Akiva studied under Nahum for “22 years.” This, however, is almost certainly a late aggadic embellishment of the tradition in Tosefta *Shavuot*, based on the notion that Akiva was willing to expound not only particles like “*et*” and “*gam*,” but also individual Hebrew letters – hence 22 years, one for each letter of the Hebrew alphabet.

Like many tannaitic figures about whom we possess only the most meager information, the talmudic *aggadah* transmits a number of fascinating legends concerning Nahum. The designation Gimzo (גמזו) was regarded as meaning “this too” (זו גם, *gam zo*), in reference to his custom of asserting of every happening, however inauspicious it seemed, “this too is for the best” (*gam zo le-tovah*), a habit elsewhere attributed to Akiva (Ber. 60b). Thus when on one occasion he was carrying a casket full of jewels as a gift to the Roman emperor and they were stolen from him at an inn and replaced by earth, he declared “this too is for the best.” When he arrived at his destination and the emperor desired to put him to death for mocking him, the prophet Elijah appeared in the guise of a senator and suggested that this was possibly the legendary earth which, if thrown at the enemy in battle, is converted into deadly arrows. On being put to the test, it did indeed prove to be that earth (Ta'an. 21a). Nahum's piety is described in a story concerning a journey on which a poor man accosted him and asked for food. The *tanna* asked the man to wait until he had unloaded his ass, but meanwhile the hungry man died. Nahum reproached himself for not being quicker in providing help and prayed that, as a punishment, he should lose his hands, feet, and sight, and his whole body be covered with sores. Thereafter he lay in that condition in a dilapidated house on a bed with its legs immersed in water to keep away the ants, with his disciples tending him (*ibid.*, cf. TJ Peah 8:8, 21b, Shek. 5:4, 49b).

NAIDITSCH, ISAAC ASHER (1868–1949), philanthropist and Zionist. Born in Pinsk, Naiditsch joined the Ḥibbat Zion movement in his youth. Later, he settled in Moscow and became one of Russia's greatest alcohol industrialists. He was sent by the Russian government on commercial missions several times. He carried on his Zionist work, wrote about literary subjects in Hebrew periodicals, and generously supported Hebrew writers. At the beginning of World War I he was one of the founders and directors of the Central Committee for the Relief of Jewish War Sufferers (YEKOPO). After the Russian Revolution (1917), he donated large sums of money for the purpose of promoting Hebrew culture. When the Soviet regime became established, he emigrated to France. Together with Hillel *Zlatopolsky, he suggested the idea of the *Keren Hayesod and was one of its first directors. When the Nazis occupied France, he fled to the United States, but returned to Paris in 1946. He was a close friend and adviser of Chaim *Weizmann from their youth.

Naiditsch wrote articles on Zionism and current events. Some of them were in the book *Ba-Ḥalom u-va-Ma'aseh* ("In Dream and in Practice," 1956), which also contains a collection of appreciations of his personality. He also wrote a book entitled *Edmond de Rothschild* (1945), based upon his conversations with the baron.

NAIDUS, LEIB (Leo Najdus; 1890–1918), Yiddish poet. Born in Grodno, Belorussia, Naidus began writing poems in Yiddish, Hebrew, and Russian while attending gymnasium in Vilna. His first book of Yiddish poems, *Lirik* ("Lyrics," 1915) revealed virtuosity in versification and was a manifestation of modern literary aestheticism. From 1916 to 1918 Naidus composed large poetry cycles and epic poems, where he expressed vitalism as his poetic philosophy. After his premature death, his works were published in six volumes (1923–28), including two volumes of translations of Russian, German, French, and English romantic and symbolist poetry.

[Melech Ravitch / Mindaugas Kvietkauskas (2nd ed.)]

NAIN, village in the Jezreel Valley, 2 mi. south of Mount Tabor, where according to the New Testament Jesus revived a dead man (Luke 7:11). It was situated on the slopes of the hill of Moreh. In the Midrash, it is located in the territory of Issachar (Gen. R. 98:12). For many centuries, it was one of the villages of the district of Sepphoris. It was a large village, for it had a gate and presumably a wall (if one accepts the testimony of Luke). In the fourth century, Nain was made independent, remaining a separate district within Palaestina Secunda until

the Arab conquest. The area of the village included the valley of Iksalo (Exaloth). In 1101 Naym appeared in a list of villages in the possession of the abbey of Mount Tabor. The present-day village (Kafr Na'im) has retained the same name and is built on a slope, 5 mi. (8 km.) south-southwest of Nazareth. A spring in the village irrigates plantations of olives and figs. Rock-cut graves were found in the crags along the road leading from the village to the southwest. In the area of the village are remains of a church or chapel, later transformed into a mosque (maqam Sayidna), ruined buildings, and a mosaic pavement.

NAJAR (Nadjar), prominent rabbinical family of Spanish refugees in *Algeria and *Tunis. R. MAIMON NAJAR (14th and early 15th century) left Majorca for Algeria in 1395. He settled in *Constantine, serving as *dayyan*. Author of *Kunteres ha-Minhangot* on local practices, he corresponded with Simeon b. Zemah *Duran on religious matters. His brother MORDECAI went to Tunis in 1391 because of persecutions in *Spain; Mordecai later spent some time in Bougie, but returned to Majorca where, under duress, he had accepted Christianity. He finally settled in Algiers in 1435. NATHAN BEN MAIMON (15th century) was rabbi in Constantine and corresponded with Solomon b. Simeon Duran. JUDAH BEN JACOB (d. 1830), talmudist, author, and *dayyan* in Tunis, wrote the following works: *Limmudei ha-Shem* (Leghorn, 1787), on hermeneutics in the Talmud; *Alfei Yehudah* (Leghorn, 1794), a commentary on *Shevuot*; *Shevet Yehudah* (Leghorn, 1801), a commentary on the *Mekhilta*; *Simḥat Yehudah* (Pisa, 1816), on *Keritot*, *Soferim*, and *Semahot*; *Ḥayyei Yehudah* (Pisa, 1816), on *Gerim*, *Avadim*, and *Kuttim*; and *Oholei Yehudah* (Leghorn, 1823), on the *Sifrei*. DAVID (early 19th century) was a rabbi in Tunis and wrote *Zemah David*, which was published posthumously with Judah Cohen *Tanuji's *Admat Yehudah* (Leghorn, 1828) and contains novellae on tractates of the Talmud and on parts of Maimonides' *Yad ha-Hazakah*.

NAJARA, family of rabbis and kabbalists in Erez Israel and *Syria, originating from the town of Nájera in *Spain. Apparently, the head of the family, LEVI NAJARA, settled in Constantinople after the expulsion from Spain (1492). His son MOSES (1) (1508?–1581), rabbi and kabbalist, lived in *Damascus and in *Safed. Apparently before 1546, he served as a rabbi in Da-

mascus and corresponded with Moses di *Trani. He remained in Damascus until after 1555. He spent some time in Safed as a student of Isaac *Luria and wrote a commentary on the Torah, *Lekah Tov* (Constantinople, 1571). *Sha'ar ha-Kelalim*, published in the beginning of *Ez Hayyim* of Hayyim *Vital, is attributed to Najara in several manuscripts. Different discourses on Lurianic Kabbalah are found in his name in manuscripts and in published works of Hayyim Vital. According to Shabbatean tradition, Baruchia (Russo), the head of the *Shabbateans in *Salonika, is reputed to have been a reincarnation of Maharam Nayar, i.e., Moses Najara. In his last years he continued to serve as rabbi in Damascus, where he died. His son was the distinguished poet Israel *Najara. The son of Israel, MOSES (2), succeeded his father as the head of the Jewish community in *Gaza, according to David Conforte (*Kore ha-Dorot*, 49b), who passed through Gaza in 1645 and studied Torah with Najara. Kabbalistic sermons preserved in manuscript were attributed to him but it is possible that they were written by his grandfather, Moses Najara (1). JACOB, his son, who succeeded Moses (2), is known to have been a fervent believer in Shabbetai *Zevi. When Shabbetai Zevi reached Gaza in 1665, he stayed with Najara, whom he appointed "High Priest," although Najara was not of a priestly family (*Kohen*). In 1666 Jacob Najara sent propagandistic letters abroad supporting the messianism of Shabbetai Zevi and the prophecy of *Nathan of Gaza. Even after Shabbetai Zevi's apostasy, Najara believed in him and visited him in Adrianople in 1671 (*Sefunot*, 5 (1961), 254–61). MOSES (3), apparently a member of this family, may have been a rabbinic emissary. Between 1760 and 1790 he was one of the rabbis in Debdou, in eastern Morocco. JUDAH NAJARA, a rabbi in Constantinople, may also have been a member of this family.

[Abraham David]

NAJARA, ISRAEL BEN MOSES (1555?–1625?), Hebrew poet. Born apparently in *Damascus, Israel served as secretary of that community, in which his father, Moses *Najara, was rabbi. While acknowledging Israel's poetic ability, some of the rabbis of Damascus, e.g. Menahem *Lonzano and Hayyim *Vital, spoke disparagingly of his unconventional conduct and of his imitation of foreign poetic styles and melodies, acquired, it seems, in Arab taverns. His conduct may also account for his many wanderings. In 1587 Israel published his books *Zemirot Yisrael* and *Mesaheket ba-Tevel* in *Safed. One of his responses is preserved in manuscript (Oxford, Mich. Add. 66). Subsequently, he served as rabbi in *Gaza, where, upon his death, his son Moses succeeded him as rabbi. Though during his youth Israel also wrote secular and love poems, his chief compositions are sacred. These are distinguished by their deep religiosity, by their references to Jewish suffering, and by his

yearning for redemption. He learned much from the great Jewish poets of the Spanish-Arabic period, but nevertheless frequently employed original forms and contents. His poems, numbering hundreds – the greater part still in manuscript – are outstanding in both their wealth of language and in their polished style. His poems and *piyyutim* achieved wide circulation among the various Oriental communities and countries and are sung in those synagogues. The Ashkenazi communities also adopted his Sabbath song, written in Aramaic, **Yah Ribbon Olam ve-Alemayya* ("God of the World, Eternity's Sole Lord"). Well known, too, is his *Ketubbah le-Hag ha-Shavuot* ("Marriage Contract for Shavuot"), a poetic parody describing the wedding conditions made between Israel and God, read in many Oriental communities on Shavuot. The Shabbateans and Frankists highly respected him, mistakenly regarding him as a kabbalist. They were so fond of one of his poems that they made it a hymn.

Israel's works include *Zemirot Yisrael* (Safed, 1587), 109 poems; second edition (Salonika, 1594); third edition enlarged (Venice, 1599–1600), 346 poems (a scientific edition printed by A. Avrunin and edited by I. Pris-Horev, 1946); *Mesaheket ba-Tevel* (Safed, 1587), moral instruction in a rhetorical style similar to that of the *Behinat Olam* of *Jedaiah ha-Penini Bendersi; *Meimei Yisrael*, rhetorical letters with secular and love poems, composed during his youth and appended to the third edition of his *Zemirot Yisrael*; *Keli Mahazik Berakhah* (Venice, 1620), laws of grace after meals; *Shohatei ha-Yeladim* (Amsterdam, 1718), laws of slaughtering in an easy language comprehensible even to children; *Pizmonim* (1858), 120 poems; *She'erit Yisrael* (in ms.), a large collection of poems, many of which have been published by various scholars; *Pizei Ohev* (Constantinople? 1597?) a commentary on the Book of Job. Some other of his works are known but not extant: *Ma'arekhot Yisrael*, a commentary to the Torah; *Mikveh Yisrael*, homilies.

[Abraham David]

NAJDORF, MIGUEL (1910–1997), Polish-Argentinean chess grandmaster. Born in Warsaw, Poland, as Mieczysław Najdorf, at age 20 he was an International Chess Master. In 1939, at the outbreak of the World War II he was in Buenos Aires, where he participated in the 8th Chess Olympiad representing Poland. He decided to stay in Argentina and became separated from his family. There he adopted Argentine nationality and devel-

oped his chess prowess, although for many years he worked in insurance. Between 1943 and 1965 he won many international tournaments. In 1950 Najdorf became an International Grandmaster. He played well in Candidates' tournaments, in 1950 (finishing in fifth place) and 1953 (finishing sixth). He won important contests in Mar del Plata (1961) and Havana (1962 and 1964). In the Chess Olympiads in Helsinki he obtained second place. Najdorf was noted for some extraordinary feats of simultaneous play. At São Paulo in 1950 he played 250 boards, winning 226 and drawing 15. His blindfold exhibitions were also impressive. At one time he held the record of 40 such games played simultaneously.

[Gerald Abrahams / Efraim Zadoff (2nd ed.)]

NÁJERA (Najara, Nagara, Naiera), city in Castile, N. Spain. It had an old and important community which maintained relations with the Babylonian *geonim*. Letters from the community have been found in the Cairo **Genizah*. As early as the beginning of the 11th century, the community enjoyed a *fuero* ("municipal charter"), which later served as a model for similar grants of privileges to other localities. The blood price for a Jew as specified in the charter was equal to that paid for killing a knight or a member of the clergy. The charter was ratified in 1136 by Alfonso VII, and in the 13th century was included in the *fuero* of Castile. The Jewish quarter of Nájera was located near the city wall and the marketplace in the southern part of the city, and remains of the synagogue have been discovered there. The Jews of Nájera owned land and vineyards in the vicinity of the city. The importance of the community toward the end of the 13th century is shown by the tax levied upon it, which amounted in 1290 to 30,318 (according to another source 24,106) maravedis. In 1360, during the civil war between Peter the Cruel and Henry of Trastámara, Henry's supporters attacked the Jews in Nájera and many were killed. The community suffered once more at the time of Peter's victory over Henry in 1367 near Nájera. During the 15th century the position of the community in Nájera, as well as of the others in the kingdom, deteriorated, although at the beginning of the century some Jews still owned land and real estate in the old city. During the war against Granada a special levy of 18½ gold castellanos was imposed on the Jews of Nájera, San Millán de la Cogolla, and Cañas. No details are known about the fate of the community at the time of the expulsion of the Jews from Spain in 1492.

NAJĪB AL-DAWLA (d. c. 1315), court physician and administrator at the court of the Il-Khāns in Persia at the end of the

13th century and beginning of the 14th century. Najīb al-Dawla was closely associated with the Jewish vizier, *Sa'd al-Dawla, and with the court physician, vizier, and historian, Rashīd al-Dīn (of Jewish origin, according to some sources). He seems also to have been for some time governor of the city of Nubandagan, near Shiraz in Persia.

NAJMAN, JULIJA (1905–1989), author and translator. Born in Slavonia, Najman studied in Vienna and Lausanne. In some works, such as the short story collection *Pri ča o Ani* ("The Story of Anna," 1968) and the drama *Žuti kavez* ("Yellow Cage"), she chose Jewish themes. Her fiction dealt mainly with World War II or contemporary life, showing a keen insight into female psychology and employing a simple, compelling style. Her best-known work is *Lica, nameštanja, lica* ("Appearance, Simulacrum, Appearance"), which contains psychological insights into the behavior of Jewish refugees in troubled times. She also translated French works and published interviews with famous literary personalities.

NAJNUDEL, LEÓN DAVID (1941–1998), Argentinean basketball player and coach. Born in Villa Crespo, one of the traditional Jewish neighborhoods of Buenos Aires, Najnudel started his career as a basketball coach in 1963. After many years in the U.S. and Europe, where he learned more about basketball, he was one of the creators of the Liga Nacional de Básquet en Argentina (Argentinean National Basketball League) in 1982. Najnudel was the manager of the Sport Club and Ferrocarril Oeste teams, and led the latter in winning many championships. He was considered a teacher and pioneer of basketball in Argentina.

[Alejandro Dubesarsky (2nd ed.)]

NAJRĀN, chain of fertile oases and a town in north *Yemen; in 1936 the area became part of *Saudi Arabia, after the war between the two states. A Jewish community made up of both merchants and farmers existed in Najrān long before the influx in the fifth century of Christians, who were mostly Monophysites from al-*Hira. Najrān became the center of Christian propaganda in southern *Arabia. The persecution of the Christians of Najrān by the Jewish proselyte king of *Himyar, Yosef Dhū Nuwās, in about 523, is recorded in Greek, Syriac, and Ethiopic Christian literature. The Ethiopians, aided by Justinian to some extent, wrested control of the town from Dhū Nuwās and the Himyaris. Nonetheless, Jews continued to live in Najrān, maintaining their former status. Muhammad guaranteed the Christians rights in Najrān, as they quickly made an agreement with him which was confirmed by his successors *Abu Bakr and *Omar. Jewish communities continued to exist in Najrān until their emigration to Israel in 1949.

Contemporary Period

According to Yemenite Jewish tradition, the Jews of Najrān trace their origin to the Ten Tribes. They lived in the region of Najrān in Saudi Arabia and were the only group of Yemenite Jews who lived outside Yemen under the rule of another kingdom. On the strength of the laws of the desert and tribal protection, they were not subjected to persecution as were the Jews of Yemen. They enjoyed the same equality of rights as the Arabs of Saudi Arabia, were not taxed, and did not pay the **jizya* (the poll tax imposed on non-Muslims in the Muslim countries "in exchange for the protection" granted them by the government). The Bedouin of Saudi Arabia, who belonged to the Sunni Islam sect, practiced religious tolerance toward them and ate meat slaughtered under their laws of *sheḥitah*. The Jews of Najrān carried weapons in self-defense, as did the other inhabitants, and were renowned for their courage and strength. There was no other place in the Arabian Peninsula where Jews lived in such dignity and freedom as in Najrān. By profession they were craftsmen: they worked essentially in goldsmithing and repairing arms. They earned a good livelihood and their material conditions surpassed those of Yemenite Jews. Their settlements were scattered throughout Najrān in small units of two to forty families. They lived in clay houses or in huts. Their clothes, of both men and women, were slightly different from that of Saudi Arabians and Yemenite Jews. The strict barrier between men and women, which was customary in social life throughout Yemen, was nonexistent among them. At festivities and celebrations men and women sat together and women danced to the sound of the men's singing. After 1936, their relations with Yemenite Jews were not very close, because the two groups were under the rule of different kingdoms which occasionally were at war with each other. The life of the Jews of Najrān, dispersed as they were in small settlements, did not encourage the development of Torah studies among them or the fostering of an independent spiritual culture. In matters of religion and *halakhah* they were dependent on the community of nearby Sa'dah (one day away from them), and when necessary, on the *bet din* of *San'a. The Jews of Sa'dah served as their spiritual guardians in times of need: they provided them with religious books and guided them in their religious practices. Therefore, their prayers, customs, and system of study were very closely related. In Israel they are concentrated in Kiryat Ekron, which is inhabited by the Jews of Sa'dah. When the Jews of Najrān immigrated to Israel in 1949, they numbered about 250.

NAKAR, MEIR (1926–1947), Jew executed by the British in Palestine. Nakar was born in Jerusalem and joined Betar at the early age of 13. In 1943 he joined the British army and served for four years in Egypt, Cyprus, and Greece. On his release from the army in 1946, he joined IZL and five months later was

captured during the break into the Acre prison together with Avshalom Ḥaviv and Yaacov Weiss, was sentenced to death and hanged with them.

NAKDIMON BEN GURYON (first century C.E.), mentioned in one version of a tannaitic story (Sifre Deut. 305; cf. Mekh. Baḥodesh 1) concerning *Johanan b. Zakkai, as the aristocratic and wealthy father of a young woman reduced to abject poverty and humiliation in the aftermath of the destruction of Jerusalem. Like many figures mentioned in passing in the early tannaitic sources, the later talmudic and post-talmudic *aggadah* transmits many elaborate legends concerning his life and the dramatic events in which he reportedly took part. According to the Talmud (Git. 56a) he was one of three celebrated wealthy men of Jerusalem during the last years of the Second Temple. Like his affluent associates *Ben Zizit ha-Kassat and *Ben Kalba Savu'a, Nakdimon studied under the rabbis and was highly regarded by *Johanan b. Zakkai (cf. **PDRE** 2). Legendary accounts are given of his wealth and philanthropy. On his daily journey to the house of study (the texts of that period often confuse the house of study with the Temple), he had the whole way covered with woolen carpets which he left lying there for the poor to take (Ket. 66b). Other accounts speak of his daughter's excessive use of cosmetics (*ibid.*) and his daughter-in-law's expenditure on her kitchen (Ket. 65a). He was also regarded as a wonder-worker. During a water shortage he borrowed 12 cisterns filled with water from a wealthy Roman official on condition that by a certain day he would either return the cisterns full of water or pay 12 silver talents. On the evening of the last day of the appointed time, in answer to his prayers, rain fell and filled the cisterns. When the Roman objected that the sun had already set and the appointed time had passed, Nakdimon caused the sun to shine by means of his prayer (Ta'an. 19b). During the siege of Jerusalem, he and his two associates promised to supply the city for 21 years with all necessary provisions. The Zealots, however, burned all the provisions so that need would induce the people to fight against the Romans (Git. 56a). With the fall of Jerusalem, Nakdimon lost all his wealth, and Johanan b. Zakkai met his daughter (Miriam; Lam. R. 1:16, no. 48, cf. Sifre Deut. 305) picking out barley corns from cattle dung (Ket. 66b; Lam. R. *ibid.*). According to a talmudic tradition his proper name was not Nakdimon but Boni (Ta'an. 20a).

[David Joseph Bornstein / Stephen G. Wald (2nd ed.)]

NAME, CHANGE OF. The Bible records changing of names as symbolic of a new status or destiny, e.g., Abraham (Gen. 17:5), Sarah (*ibid.* 15), Jacob (*ibid.* 32:38), and Joshua (Num. 13:16). Basing itself upon this precedent, the Talmud declares

that among the “four things that cancel the doom of man” is change of name (RH 16b). From this there developed in the Middle Ages the custom of changing, or more accurately giving an additional name to, the name of a person who was dangerously ill, or suffered some other misfortune, in the belief that the Angel of Death would be confused as a result of the new name. This new name was sometimes chosen by opening a Bible at random and selecting a name which occurred there, except for such names of ill repute as Esau or Korah. The most widespread custom, however, which persists to the present day, was to choose auspicious names such as Ḥayyim or, among the Sephardim, Ḥai (Life), Raphael (may God heal), Hezekiah (may God give strength) for males, and Ḥayyah for females. (The name Alter (old) was frequently given to a boy if several children in the family had died during infancy, this name being regarded as a good omen that he should reach old age.) In the Ashkenazi rite the change of name is effected by pronouncing a special **Mi she-Berakh* prayer which contains the following passage: “Just as his [her] name has been changed, so may the evil decree passed on him [her] be changed from justice to mercy, from death to life, from illness to a complete cure.” The Sephardi rite has a different formula.

The new name given to a person is henceforth used in addition to his former name (e.g., Ḥayyim Abraham) for all religious purposes (e.g., to be called up to the Torah, in a bill of divorce, on the tombstone, etc.).

NAMÉNYI, ERNEST (Ernö; 1888–1957), Hungarian art historian, economist, and writer. Born in Nagykanizsa, Naményi was the son of Rabbi Ede Neumann. He studied in Budapest and in Brussels, and after he received his doctorate in law was appointed a research associate in the Institut de Sociologie Solvay from 1911 to 1914. He specialized in banking with his uncle, the noted banker P. *Philipson. With the outbreak of World War I he returned to Hungary, and from 1916 to 1949 served as the secretary and later the director of Országos Iparregyesület (“National Industrial Association”). He published economic and sociological articles in Hungarian and French. He also did research in Jewish art, which he felt was an educational means of striving for aesthetics and ethics in Judaism. This outlook led him to found the Jewish Liberal program movement known as “Ézsaiás Vallásos Társaság” (“Isaiah Religious Society”). He was among the leaders of the Jewish Museum, and from 1942 served as its director and from 1947 as chairman, succeeding in collecting for it the best works of Jewish artists in and out of Hungary. He also worked for the central Jewish library, which included the remnants of both public and private Jewish libraries, and these collections were housed in the Rabbinical Seminary in Budapest. When the journal *Libanon* was transferred to the Jewish Museum, Naményi participated in its editing until 1944. Together with P. Gruenwald, he wrote the history of the synagogues in Buda-

pest, *Budapesti zsinagógák* (“Synagogues of Budapest,” 1949). In 1949 he emigrated to Paris, where he devoted himself to literary work exclusively in the field of Jewish art. He also published two essays on Jewish art in: C. Roth, ed., *Jewish Art* (1961), 423–54, 575–638. His last book was *L'Esprit de l'Art Juif* (1957; *The Essence of Jewish Art*, 1960).

NAMES.

In the Bible

Biblical proper names, together with proper names in Old South Arabic, Canaanite (East- or Proto-Canaanite, Ugaritic, and Phoenician), Old Aramaic, Akkadian, and – with some reservations – Old Egyptian, comprise one division of the Semitic onomasticon. Within this division, the Hebrew names have particularly archaic traits. In this respect they are connected with Old South Arabic, East- or Proto-Canaanite, and Ugaritic proper names, and are distinguished from the Akkadian and Old Egyptian names, whose development led them away from the early Semitic type of naming (cf. Stamm, in *Fourth World Congress...*, 141–7).

The most important source for Hebrew proper names is the Bible. In addition to individual proper names found throughout the Bible, biblical genealogies from early and late times also offer numerous examples. Other sources of Hebrew names are Palestinian inscriptions (ostraca and seals), the Elephantine Papyri, and Babylonian clay tablets from the Persian period.

In Hebrew, as in old Semitic generally, two forms of proper names are to be distinguished: propositional names and epithetic names. Propositional names can be classified as either verbal or nominal sentences. A separate group is constituted by the very numerous short names, which cannot be taken into consideration here (see Noth, in *bibl.*, p. 36ff.).

In addition to these formal criteria, another distinction, relating more to content, is that between theophoric and secular proper names.

The predicate of the (theophoric) verbal propositional names is generally in the perfect or imperfect tense. In contrast to the Akkadian, the use of the imperative mood, directed either to the divinity or to the environment, is rare. Late names such as עֲשֵׂאֵל (Asiel, “Do it, O God!”) and הִזְיֵאֵל (Hazel, “Look, O God!”) may be considered as belonging to the former, and רְאֵבֶן (Reuben, “See, a son!”; cf. also Noth, in *bibl.*, p. 32, and Stamm, *op. cit.*, p. 142), as belonging to the latter.

In the perfect-tense names the “predicate-subject” type (e.g., נִתְנָאֵל, Nethanel) is, according to Hebrew syntax, on the whole more frequent than the inverse, i.e., “subject-predicate” (e.g., אֶלְנָתָן, Elnathan; cf. Noth, in *bibl.*, pp. 20–21). The meaning of these names is expressed by the use of the past tense: they signify thanksgiving for an act of charity bestowed by the divine (e.g., “God has given”).

In names formed with the imperfect tense, the “subject-predicate” type is hardly represented. This type appears only in the later monarchical and the post-Exilic periods (יהויאחין, Jehoiachin; cf. Noth, in *bibl.*, p. 28). On the other hand, the “predicate-subject” type is much more frequent (יְחוֹנָיָה, Jechoniah). Certain of the oldest proper names are of this type, some appearing as abridged forms not containing the word אֱל of the complete form. Examples of these are יִצְחָק (Isaac), יַעֲקֹב (Jacob), יִשְׂרָאֵל (Israel), יוֹסֵף (Joseph), and יְרַחֲמֵאל (Jerahmeel). This type occurs more often in the periods of Moses and the Judges. It becomes scarcer during the Davidic period, almost disappearing, but regaining favor shortly before the Exile and in post-Exilic times (cf. Noth, *loc. cit.*).

As the Hebrew imperfect tense is both preterit and jussive in character, its meaning in proper names is disputed. Noth, probably because he believed that the perfect expresses the past tense unequivocally, preferred the jussive interpretation for the imperfect, as expressing a wish. Several proper names, which certainly contain such wishes, e.g., יְחִיָּהּ (Jehiel, Jehiah, “may he live, O God/יְהוָה!”), יוֹסֵף (Joseph, “may he [God] add!”), and יְהִדִּיָּהּ (Jahdiel, Jehdeiah, “may he rejoice, O God/יְהוָה!”), can be quoted in support of this theory. In opposition to it, however, there are to be found names which are vocalized not as jussive forms but as statements, such as אֱלִיאִים (Eliakim, “God had made [the deceased] stand up again”), אֱלִישִׁיב (Eliashib, “God has brought back [the deceased]”), and יַעֲיִר (Jair, “He has protected”; for the translation of this name on the basis of the Ugaritic and Hebrew (Deut. 32:11a; Job 8:6b; root *yr/wr*), see Stamm, in: *Studies ... B. Landsberger...*, p. 421a). It should, therefore, be taken into account that the imperfect tense should be rendered in proper names, as in general usage, sometimes as a statement, sometimes as a wish. It is not always easy to decide which of these it is, and the subject warrants further investigation. It appears that the past tense is to be preferred for the oldest names, whereas in the case of the later names the jussive is also to be considered (cf. Stamm, *ibid.*, pp. 414–5; Stamm, in: *Fourth World Congress...*, p. 142).

The content of theophoric propositional names is that the divinity: (1) has given, created/made, or added the child named; (2) has granted, helped, saved, and had mercy, spared, restored justice, and cured, or that it may do so. Whereas in Akkadian the content of groups 1 and 2 both refer to the child named, insofar as it is not only the object of divine gift and creation but also of mercy and salvation (cf. J.J. Stamm, *Die akkadische Namesgebung* (1939), 23 ff.), this is not the case in Hebrew. Here, naturally, the content of group 1 also refers to the child; however, the content of group 2 refers to the parents. They are the ones whose prayer was granted or to whom justice was done. This is explained in the interpretation of names in the Bible (Gen. 29:31–30:24; Ex. 2:10, 22; 1 Sam. 1:27–28). This may well have been the case originally, while the situation in Akkadian (and in Egyptian) may represent a modernization which might have taken place under the influence of liturgical literature.

Such a modernization can also be seen in the fact that in Akkadian and Egyptian there exist propositional names with a suffix indicating the child named. Thus there are in Akkadian (for Egyptian, see J.J. Stamm, in: *Die Welt des Orients* (1955), 111–9), besides Išme-^dAdad (“Adad has hearkened”), the forms Ili-išmeanni (“My God has hearkened to me”) and Ištar-išmēšu (“Ishtar has hearkened to him”; cf. also Stamm, in: *Fourth World Congress...*, 145). Hebrew, on the other hand, has nothing but יְתַנְיָהּ (Nethanel, Nethaniah(u), “God/יְהוָה has given”) and יִשְׁמַעֵאל (Ishmael, Shemaiah(u), “God/יְהוָה has granted”). This concise, coined form dominates also in corresponding names in Old South Arabic, and with a few exceptions, also in Ugaritic-Canaanite (cf. Stamm, in: *Fourth World Congress...*, pp. 143–4).

In (theophoric) nominal propositional names, the first remarkable trait is that, unlike the Akkadian, those names containing a participle are scarce and of rather late origin. The only biblical examples are: מִשְׁעֵזֶבֶל (Meshezabel), מְהֵטָבֵאל (Mehetabel), מְהַלְלָאֵל (Mahalalel),

מְשֵׁלֵמְיָהּ (Meshelemiah(u)). Very common, on the contrary, are the so-called names of reliance, consisting of a theophoric element and an appellative, such as אֵלִיָּהּ (Elijah(u), “יְהוָה is my God”) and עֲזִיָּהּ (Uzziel, Uzziah(u), “God is my strength”). In these, the possessive “my” can refer both to the giver of the name and to its bearer. It expresses a personal utterance which the father or mother pronounces at first for the child, until the child is able to make it his own. Besides the forms containing the suffix of the first person singular there are also forms which are suffixless and, therefore, do not contain any reference to the speaker. Examples of the latter are יוֹאָב (Joab), יוֹאֵה (Joah), יוֹאֵל (Joel), יוֹעֶזֶר (Joezer) (“יְהוָה is father/brother/God/help”). Again, in contrast to Akkadian and Egyptian, there are no forms with a suffix of the third person singular (“יְהוָה is his/her father”). The suffix of the first person plural occurs only in the cry for salvation, which later became a name, עִמָּנוּאֵל (Immanuel), and in the messianic name, ה' צְדָקָנוּ (Jer. 23:6).

Theophoric epithetic names are not particularly common in Hebrew, a fact which is related to the absence of the following type, common in Akkadian and Egyptian: “son/daughter of divinity X.” The most popular names in this category are those constructed with עֶבֶד (*eved*, “slave”), e.g., עֶבְדֵי־אֵל (Abdiel, “God’s slave”) and עֶבְדֵי־יְהוָה (Obadiah(u), “[small] slave of יְהוָה”; cf. further Noth, in *bibl.*, pp. 135–9).

In the above-mentioned name groups, the most frequently occurring theophoric elements are אֵל (*el*) and the tetragrammaton, the latter always used in abridged form, namely, יְהוֹ (*yeho*) and יוֹ (*yo*) at the beginning, יְהוּ (*yahu*) and יָהּ (*yah*) at the end, of the word. The first personal name that was definitely constructed with the tetragrammaton is יְהוֹשֻׁעַ (Joshua). The name of Moses’ mother, יוֹכֶבֶד (Jochebed), is more ancient, but it is extremely questionable if it really contains the biblical divine name; as for יְהוּדָה (Judah), it is certain that it does not contain the divine name. From the period of the Judges, five personal names belonging to this group, יוֹאָשׁ

(Joash), יוֹתָם (Jotham), מִיכָיָהּ (Micaiah(u)), יְהוֹנָתָן (Jonathan), and יוֹאֵל (Joel) should be mentioned. During the monarchical period, names of this group became frequent and dominant and even retained their lasting predominance – together with those containing the theophoric אל (ʾel) – afterward. אֵל (ʾel) is common in personal names up to the beginning of the monarchical period, during which time it fell into almost complete disuse, reappearing again and becoming more frequent from the seventh century onward, and remaining common after the Exile (see Gray, in *bibl.*, pp. 166ff.; Noth, in *bibl.*, pp. 82ff.).

With other old Semitic personal names, especially South Arabic and Proto- or East-Canaanite, Hebrew names have in common the particularity that terms of kinship can take the place of the theophoric element. These are terms like אָב (ʾav, “father”), אָח (ʾah, “brother”), and עֹם (ʾam, “paternal uncle”), thus, for instance, אַבְרָם (Abiram), אַחִיטוב (Ahitub), and עֲמֶרָם (Amram; for other examples, see Noth, in *bibl.*, pp. 66ff.; Stamm, in: *Studies ... B. Landsberger...*, pp. 416ff.). These names have their origin in the early Semitic and nomadic conceptions of tribal and clan structure, according to which deceased relatives enjoyed the divine privilege of being worshiped. In Israel, after the Conquest, this belief became extinct. If corresponding names continued to be used, this was undoubtedly based on the supposition that terms denoting kinship could be assimilated to YHWH. However, not all of these originally had a theophoric meaning. There exist those in which אָב (ʾav), אָח (ʾah), and עֹם (ʾam) designate the (deceased) father, brother, or uncle of the one named. These are the so-called substitute names (see below). (On the problem of distinguishing these secular names from the theophoric, see Stamm, in: *Studies ... B. Landsberger...*, p. 418.)

Other words, some of which are very ancient, which can be used in a theophoric sense in names are צוּר (zur, “Rock”), שְׁדַי (shaddai, “the Almighty”), אָדוֹן (ʾadon, “Lord”), בַּעַל (baʾal, “Possessor/Lord”), and מֶלֶךְ (melekh, “king”; cf. Noth, in *bibl.*, pp. 114ff.).

Secular epithetic names have in Hebrew, as in related languages – particularly Akkadian and Egyptian, the most diverse and disparate contents. These retain the day of birth (חַגִּי, Haggai, “he who was born on the festival”), or the origin (יְהוּדִי, Jehudi, “the Judean”), or the position within the family (בְּכוֹרֶת, Becorath, “firstborn”). Other proper names give expression either to the relationship between the child and his parents, or to their joy, such as יְדִידָהּ (Jedidah, “the loved one”) and שָׁמְשׁוֹן (Samson, “little sun”). Also frequent are names given on the basis of particularly distinctive physical traits or flaws, e.g., לְבָן/לְבַנִּי (Laban/Libni, “white,” probably after the color of the skin, particularly of the face), גָּדוֹל (“tall”; a proper name from Elephantine), הַקָּטָן/צוּעֵר (Hakkatan/Zuar, “[the] small one”), בְּרוֹזֵלִי (Barzillai, “as hard as iron”), and קַרְחָה/קָרַח (Kareah/Korah, “the bald headed”; for other examples see Noth, in *bibl.*, pp. 221ff.). In addition, names of animals and plants are not infrequent as proper names.

Two other groups of names which should be mentioned specially are substitute names, names in which expression is

given, in some manner, to the view that the bearer of the name reincarnates a deceased relative, or that the latter has returned to life in, or through, the former, and women's names. This is an ancient idea which has its roots in the conception of tribal and clan structure and which does not presuppose the belief in the transmigration of souls. Parallel forms to this category of proper names can be found in many peoples; among the Semitic peoples they are particularly numerous with the Babylonians and the Egyptians.

Most groups which occur in other proper names can be found also among the substitute names. Only a few examples of each will be given here (for further illustration of the subject see Stamm, in: *Studies ... B. Landsberger...*, 213–24): verbal proposition (secular): שְׁבָעָם (Jashobeam, “the uncle has come back”), יָשׁוּב (Jashub, “he [the deceased] has returned”); verbal proposition (theophoric): אֱלִיאִים (Eliakim), אֱלִישִׁיב (Eliashib), and יַעִיר (Jair, see above); nominal proposition: אַבְרָם (Abiram), עֲמֶרָם (Amram; “the father/uncle is great”), and אַבִּיהוּד (Abihud), אַחִיהוּד (Ahihud), עַמִּיהוּד (Amihud; “my father/brother/uncle is splendor”). In these proper names the praise of the deceased simultaneously keeps his memory alive.

A form which cannot be found outside this category of substitute names is represented by those uttering, in the sense of a complaint, the quest after the deceased, thus אִיכָבוֹד (Ichabod) and אֶהוּד (Ehud; “where is the glory?”), also אֵיזְבֵּל (Jezebel; “where is nobility?”), and אֵיעֶזֶר (Iezer; “where is help?”). The interrogative particle *ai/e/i*, used in all these names, may also be discerned in אֵיֹב (Job; “where is the father?”).

In the epithetic names, the child either simply bears the epithet of the relative whom he replaces, thus אַחָאָב (Ahab; “father's brother”), or is named after the function which devolves to him as substitute, מֶשֻׁלָּם (Meshullam, “the replaced”), מְנַחֵם (Menahem, “one that consoles”), and מְנוּשָׁה (Manasseh, “he who makes forget”).

As for women's names, the theophoric ones are relatively scarce. Much more frequent are the secular ones, i.e., designations based on the time of birth, or the origin of the bearer (of the name), on a characteristic physical or spiritual quality, or the relationship with the parents. Names of jewels, plants, and animals are also used as women's names (for details, see Stamm, in: *VTS*, 16, where the question as to the reasons for the relative scarceness of theophoric women's names also is raised).

[Johann Jakob Stamm]

Hypocoristica, or shortened names, were common, and were formed in various ways (see Noth, *Personennamen*, 36–41). Very common, especially in later times, was the formation *qattūl*, as in זַכְכּוּר (Zakkur) for זְכַרְיָהּ (Zechariah), חֲשׁוּב (Hazzūl, for חֲשִׁבְיָהּ, נְחֻמָּהּ, etc. At Elephantine we even find הַצּוּל, Hazzūl, for הַצְלִיָּהּ and יַחְמוּל, Yahmūl, for יַחְמִלְיָהּ, so that the Elephantine name גְּדוּל, which was interpreted above as the adjective *gadol*, “large,” is more probably to be read Gaddūl as a hypocoristicon of גְּדַלְיָהּ, Gedaliah.

[Harold Louis Ginsberg]

In the Talmud

Insofar as names are concerned the talmudic literature covers a period of some 700 years, from the time of Simeon the Just (c. 200 B.C.E.) to 500 C.E. A distinction must be made between fact and homiletical propaganda. Thus, the often repeated statement giving one of the causes of the deliverance of the Children of Israel from bondage as “they did not change their names” (e.g., Lev. R. 32:5) is certainly to be viewed as a homily appealing for the retention or giving of Hebrew names, in view of the prevalent tendency of adopting foreign names. It is in this light that the interesting equivalents, Rofe (Rufus?) for Judah, Luliani (Julianus?) for Reuben, Lestim (Justus?) for Joseph, and Aleksandri for Benjamin, quoted there are to be regarded. Zunz, somewhat casuistically, suggests that these passages are to be understood as referring specifically to the change from a Hebrew name already given to a gentile name, a custom which was disapproved of as a sign of deliberate assimilation, but not to the initial granting of non-Jewish names. To be regarded in a similar light is the Targum to Amos 6:1 which renders *nekuvei reshit ha-goyim*, “they give their children the same names as do gentiles.” The Talmud states only that “the majority of Jews in the Diaspora have the same names as the gentiles” (Git. 11b; in Babylonia only names of idols were avoided – Git. 11a; the name Tammuza (Judah b. Tammuza; TJ, Meg. 4:5, 75b) is not evidence of the adoption of the name of the god Tammuz (= Adonis), since Tammuz had already become Hebraized as the name of the Hebrew month, cf. Dosa b. Tevet, Song R. 7:8). However, the evidence of the widespread use of non-Jewish names also in Erez Israel is too obvious to be overlooked.

All the characteristics and permutations of names which are found in later generations are found among the names of the rabbis. Examples of almost every type of nomenclature can be found in the short list of the **zugot* (including their fathers) as they appear in the first chapter of *Avot*. They include purely traditional biblical names, such as Simeon (see later), Joshua, and Judah; Hebrew names which are not those of biblical worthies, though they occur there, such as Hillel, Gamliel, Johanan, and Joezer; purely Greek names such as Antigonos (in the generation immediately after Alexander the Great; cogent evidence of the rapidity of the social assimilation in nomenclature) and Avtalyon; and Aramaized forms of Hebrew names, such as Yose (twice) for Joseph, Tabbai (probably for Tobiah), and what appears to be a purely Aramaic name, Nitai. Of special interest are purely Hebrew names which do not occur in the Bible, such as Peraḥyah and (probably) Shetaḥ.

With few exceptions, all other names fall into those categories. The only forms missing are Greek names which are an obvious Grecization of Hebrew names, such as Dositheus for Nethanel or Jonathan, and purely Roman names, such as Julianus (Lulianus). There are fathers with non-Hebrew names whose sons have Hebrew names, such as Eliezer b. Hyrcanus, as there is the reverse, such as Dostai (Dositheus) b. Judah. Of interest are the names of the five sons of R. Yose b. Ḥalafta, given as Ishmael, Eleazar, Ḥalafta, Abtilus, and Menahem

(Shab. 118b). Three (Ishmael, Eleazar, and Menahem; for Ishmael see below) have purely biblical names; Ḥalafta has an Aramaic name, like his grandfather (cf. Gen. R. 37:7, where R. Yose explicitly refers to the custom of giving a child the name of “our fathers,” and the eight other examples in the Talmud, of which the best known are the dynasty of Hillel, the son of Eliezer b. Hyrcanus (Men. 35a), and R. Ishmael; this custom is thought to have been derived from the Greeks – L. Loew, *Beitraege zur jued. Alterskunde*, 2, 9b); and the fifth Abtilus, has a Greek name (probably a corruption of Εὔπολιος). Another passage (TJ, Yev. 1:1) gives the names as Ishmael, Eleazar (Lazar), Menahem, Ḥalafta, and Avdimos (Eudymos) and asks about another son of Yose called Vardimon; the Talmud explains that Vardimon is identical with Menahem, but he was so called because “his face was like [*domeh*] a rose [*vered*].” This is a homiletical interpretation similar to that which makes of Tiberias *Tovah Re'yyatah* (“of goodly appearance”; Meg. 6a). These names raise the interesting question whether it was not the custom to have two names, one Semitic (Hebrew or Aramaic) and one Greek, as was the case with Hasmonean rulers such as John (Johanan) Hyrcanus and Salome Alexandra, and whether that is not the simple explanation of the names of the five sons of Mattathias: “Johanan called Gaddis, Simeon called Thassi, Judas called Maccabeus, Eleazar called Avarah, and Jonathan called Apphus” (1 Macc. 2:2).

It is equally natural that there were names which were avoided because of their unhappy associations, and this is explicitly stated. The Talmud interprets the verse “and the name of the wicked shall rot” (Prov. 10:7) to the effect that “none name their children after them” and points to the grim example of a child being given the name of *Doeg, whose mother would every day give the increase in his weight in gold to the Temple, yet “when the enemy prevailed she slaughtered and ate him” and, because of the unfortunate choice of the name of a wicked person, “see what happened to him” (Yoma 38b). Similarly the Midrash states, “Have you ever heard that a man should call his son Pharaoh, or Sisera or Sennacherib? But (one does give the name) Abraham, Isaac, Jacob, Reuben, Simeon, Levi or Judah” (Gen. R. 49:1), and in general it is stated that the name of a person determines his destiny (Ber. 7b).

In respect to this, the repeated name of Ishmael raises a difficulty. R. Yose (Gen. R. 71:3) divides names into four categories according to their beauty or ugliness as well as according to their bearers' deeds and gives Ishmael as an example of one whose “name was beautiful but his actions ugly.” How then is this name so frequently found? The *tosafot* (loc. cit.) explain that it was only because, according to rabbinic tradition, he repented; and because of the bad association of the names they alter the name of Absalom, the father of Hanan the Judge (Ket. 13:1), to Avishalom (because Absalom “has no portion in the world to come” (Sanh. 103b)) and Shebna to Shechna (Tos. Yoma 38b; Ket. 104b).

By the same token, there are homilies as to the efficacy and desirability of giving names after those of biblical wor-

thies. To the above quoted passage that fathers call their children Abraham, Isaac, Jacob, Reuben, Simeon, Levi, Judah, there is the positive injunction “One should ever examine names, to give his son a name worthy for him to become a righteous man, for sometimes the name is a contributory factor for good as for evil” (Tanḥ. Ha’azinu 7). Ephraim is praised that “the best of my sons shall be called after thee” (Lev. R. 3:2). On the contemporary plane there are quoted cases of a woman in gratitude calling her child after Nathan ha-Bavli because he had saved its life (Shab. 134a) and children called Eleazar after Eleazar b. Simeon because of a similar boon (BM 84b).

Despite that fact, however, there is one puzzling phenomenon, namely, the complete absence of names which one would expect. Not a single rabbi is known by the name of Moses (the name occurs only once in the whole talmudic literature as borne by the father-in-law of a certain scholar Huna – BB 174b, Ar. 23a), Abraham, Israel, David, or Solomon. Aaron is borne by only two *amoraim*. Of the sons of Jacob, a decided preference is given to Simeon and Judah, and among the *amoraim* to Levi and Joseph (there are no *tannaim* called Joseph and only two called Levi though, as stated, the Aramaized form Yose is common). Dan, Gad, and Asher do not occur at all, the others only rarely. (Steinschneider draws attention to a similar phenomenon among the Jews in Arabic-speaking countries.) A similar position exists with regard to the names of the prophets. Of the 15 prophets, Jeremiah, the name of one *tanna*, appears to have become popular in the amoraic period, and only one *amora* is known by the name of Ezekiel. Nahum and Jonah are of greater frequency, but the former seems to be in a class by itself, since the frequent occurrence of other names of the same root, Naḥman, Tanḥum, Tanḥuma, suggests that it was the root meaning “comfort” which decided its choice. Similarly Jonah, which occurs only among the *amoraim*, may have been influenced by the many amoraic *aggadot* (cf. Gen. R. 33:6) which identified the dove (Jonah) with Israel. Zechariah is the only name which occurs with any frequency (three *tannaim* and two *amoraim*) and Haggai (and Ḥagga). Isaiah, Hosea, Joel, Amos, Obadiah, Micah, Habakkuk, Zephaniah, and Malachi are not found at all.

It is specifically mentioned (ARN 12) that humans were not given the names of angels, and in fact such names as Raphael and Gabriel are not found.

Lastly, attention should be drawn to a passage in *Pesahim* 113b to the effect that Joseph of Huzal is identical, inter alia, with Issi, the son of Gur Aryeh, who is also named Issi b. Judah. The alternatives Judah and Gur Aryeh seem to be the only example known of the custom widely prevalent in later ages to give double or alternative names on the basis of Genesis 49 and Deuteronomy 33: “Judah Aryeh.” “Naphtali Zevi,” “Benjamin Ze’ev,” and “Joseph Bekhor Shor.”

On the other hand, there is clear evidence of the use of different names. In *Gittin* 34b there is a case mentioned of a woman in Babylonia known in one place as Miriam and in another as Sarah, and of a query sent from the Diaspora to Rabban Gamliel as to the procedure to be adopted with re-

gard to the name to be inserted on a bill of divorce in the case of a man who came from Palestine where he was known as Joseph but in Babylonia (probably) as Johanan. The fact that the vice versa is mentioned suggests that this case is also one of “anonymous names.”

[Louis Isaac Rabinowitz]

Medieval Period and Establishment of Surnames

Variations in onomastic styles – generally a useful index of cultural diversity and change – are especially prominent in Jewish history. As the Jews moved from area to area, through many linguistic milieus, they were affected, in varying degrees, by the patterns of nomenclature in the societies around them. The tendency toward adoption of names in vogue with the non-Jewish majority – discernible throughout the Middle Ages – accelerated during the late 18th and 19th centuries with intensification of the process of emancipation. As modern Jews reaped the benefits of this emancipation, they increasingly imitated the mores of their neighbors, appellations included. Governments in some instances furthered this tendency by rewarding or even legislating the adoption of European forenames and family names. The 20th century – witness to both a deepening of the thrust toward integration of the Jews into Western society as well as repudiation of such integration – has seen rapid changes in Jewish name styles. While the Jews of the Americas and Western Europe have continued to pursue onomastic assimilation, their brethren in Israel have revived the old Hebrew nomenclature and created a new one.

Middle Ages

During the Middle Ages, Jews retained a preference for Hebrew forenames. In most cases these names were readily adaptable to the language of the surrounding society. Thus, in the Arab world, Abraham became Ibrahim and David, Dāwud. In the Greek milieu, Joseph became Iosiph (Ἰωσήφ) and Shemiah, Samargia, while in the Latin West, Moses (Moshe) became Moyses and Ḥayyim, Hagin. Often Jews bore Hebrew names along with related, but not identical, non-Hebrew appellations, e.g., Eleazar-Manṣūr, Yefet-Hasan, Eliakim-Anastasios, Mattathia-Dieudonné, Jehiel-Vivant, Ḥayyim-Vital. Some designations popular in non-Jewish circles were taken over by Jews with no regard for Hebrew equivalence. In general, there was a greater likelihood of a non-Hebrew given name among the female members of the community. The range of non-Hebrew names adopted was broader and the percentage of women bearing such designations was higher than among the male Jewish population. Popular female forenames included Mas’ūda and Sulṭāna (Arabic); Anastassu, Cali, and Zoe (Greek); Angélique, Fleurette, and Précieuse (French); Esperanza and Gracia (Spanish). Conversion into and out of the Jewish community was almost always accompanied by a symbolic change of name. The most common names for those entering the Jewish faith were Abraham and Sarah. Jews leaving their heritage took new names as well. In the Christian world, for example, designations such as Paul, Christian, and Mary

were widespread, as was adoption of the names of prominent ecclesiastical or secular sponsors.

Designations appended to the given name, to identify more clearly the individual, developed already during antiquity. This tendency grew more marked throughout the Middle Ages. The most traditional of these surnames was the patronym, readily adapted from the Hebrew “ben” to the Arabic “ibn” and the French “fils.” A special Arabic usage was the identification of the father by his firstborn son, the “abū” designation. In most areas a favored style of byname was that which derived from locale, in some cases the bearer’s birthplace and others his adult residence. In the Arab world prominent examples are R. Isaac Alfasi and R. Saadiyah al-Fayyumi. The great 13th-century leader of French Jewry was known both by the Hebrew R. Jehiel of Paris and by the French Vivant of Meaux, the latter his birthplace and the former the locus of his adult activities. Surnames derived from locale became particularly widespread in the wake of the periodic expulsions suffered by medieval Jewry. Both for ease of identification and out of nostalgia, Jews chose names that recalled their earlier homes. Thus, for example, in Turkish Jewry subsequent to 1492 surnames such as De Leon, D’Alvo, Zamora, and Toledano abounded. Another source of bynames was occupation. Medicine, printing, masonry, tailoring, dyeing, minting – all left their mark on Jewish onomastics. Physical and spiritual characteristics, such as size, age, complexion, honesty, and piety, also gave rise to series of widely used surnames. With the passage of time, in Jewish society as in general, these surnames tended to crystallize into family names, passed on from generation to generation.

There are two special types of designation, popular during the Middle Ages and early modern period, which deserve special mention. The first is the acronym. The components drawn upon for the acronym might include a title (rabbi, morenu ha-rav, ha-gaon), the given name, or the surname. Well-known examples include RASHI (Rabbi Solomon Yizhaki), RAMBAM (Rabbi Moses b. Maimon), HA-GRA (Ha-Gaon Rabbi Elijah). The second style of designation stems from an author’s *magnum opus*. In many instances, e.g., the Roke’ah (R. Eleazar b. Judah) and the Tur (R. Jacob b. Asher), given names and surnames were almost totally obscured by such literary appellations.

Modern Times

With the onset of emancipation there was growing imitation of forenames current in general society. Study of Berlin Jewish forenames at the beginning of the 20th century has shown a marked tendency toward appropriation of popular German designations, although some names remained peculiarly Jewish. In the U.S., the transition from immigrant-generation to first-, second-, and third-generation status has been accompanied by constantly changing given name styles. Certain names extremely popular with an earlier generation have subsequently been totally rejected, usually out of a sense that such names were excessively identified with immigrant status and with Jewishness.

Concern over the process of emancipation occasionally led governments to restrict the range of choices for Jewish given names. Such was the force, e.g., of the Austrian edict of 1787, limiting the Jews to biblical first names. The total repudiation of emancipation espoused by the Nazis expressed itself clearly in the sphere of nomenclature. On Aug. 17, 1938, a governmental decree specified 185 forenames for men and 91 for women – many with derogatory connotations – which were henceforth to be used by German Jews. Jews already bearing names other than those specified were to assume, by Jan. 1, 1939, the additional name of Israel for a male and Sarah for a female. These new appellations were to be duly registered and faithfully used in all business and legal transactions.

Along with Zionism and the revival of the Hebrew language came a new interest in Hebrew forenames. This interest was expressed in the establishment of a Commission for Hebrew Nomenclature (Va’ad Shemon Ivri) and in the compilation of a multivolume *Shemon Ivri*, containing both rules for Hebraization of non-Hebrew names and a wealth of information on specific Hebrew designations. Within the Jewish community of Palestine and subsequently the State of Israel there have been numerous forename styles, reflecting differences of origin and of generation. Each of the various elements that have been woven together into Israeli society has retained its own traditional nomenclature. Successive generations of native-born Israelis have tended to reject older patterns and create their own – sometimes utilizing obscure biblical names, sometimes reviving prebiblical Canaanite designations, sometimes fashioning wholly new appellations. This dignified return to Hebrew forenames has been carried over, in limited measure, into the Western Jewish communities. While the predominant tendency remains Westernized, a steady growth in the utilization of Hebrew names popular in Israel can be discerned in the United States and Western Europe.

As the Jews passed increasingly into the mainstream of European life, the adoption of a fixed surname became ever more important. The modes of establishing these surnames, already noted, included patronyms (Abramson, Abramowitz, Jacobson, Jacobowitz, Mendelssohn), names based on localities (Berliner, Bresslau, Poznanski, Moscovitz), vocational designations (Drucker, Schneider, Wechsler), and appellations drawn from characteristics (Alt, Klein, Schwartz). The process of altering names to suit increasingly Western tastes has been inevitable. This tendency has been obvious in the U.S. Jewish community, where the family names brought from Eastern Europe generally branded their bearers as immigrants. Cumbersome Slavic endings were dropped to form short and American-sounding names. In the earlier stages of emancipation, government edicts often had to be enacted in order to institute among the Jews the regular use of surnames. Such a step was included in the Austrian legislation of 1787. Jewish surnames were to be registered by a government commission, and where the Jews refused to select a name, this same commission was empowered to make the choice. In France, Napoleon decreed the fixing of family names for the

Jews in 1808, and in Prussia in 1812 emancipation of the Jews was made contingent upon the adoption within six months of acceptable surnames. In the United States the practical necessity of registration of immigrants coupled with ignorance of English resulted in the creation of a host of new surnames for bewildered newcomers. The Zionist experience has often been associated with the Hebraization of family names. The major political figures of the first few decades of the State of Israel reflect this phenomenon: Ben-Zvi (formerly Shimshelevitz), Shazar (Rubashov), Ben-Gurion (Gruen), Sharett (Shertok), Eshkol (Shkolnik), Meir (Myerson). The most common methods of fashioning new Hebrew surnames have been the use of patronyms, the translation of the non-Hebrew name into a Hebrew equivalent, and the adoption of a Hebrew designation phonetically similar to the non-Hebrew.

The demographic upheavals and the ideological conflicts of the 19th and 20th centuries have thoroughly shattered the onomastic unity of many Jewish families. Brothers and cousins spread across the Diaspora and Israel often bear totally different family appellations – a curious testimony to the unparalleled disruptions of the past century of Jewish life.

NAMIAS, JEROME (1910–1997), U.S. meteorologist. Born in Bridgeport, Conn., Namias worked during the 1930s at the Blue Hill Observatory affiliated with Harvard University. In 1941 he set up the extended forecast division of the U.S. Weather Bureau in Washington, D.C., and during the years of World War II prepared the weather forecasts for the convoys crossing the Atlantic and for military maneuvers. After

the war Namias was appointed assistant director of the National Meteorological Center at Suitland, Maryland. Here he developed methods for the study of weather phenomena in three dimensions.

[Dov Ashbel]

NAMIER (Bernstein-Namierowski), SIR LEWIS (1888–1960), English historian and Zionist, pioneer of the trend in historical scholarship known as “Namierism.” Born in eastern Galicia, where his parents were landowners, Namier became aware of his Jewish origin at the age of nine, upon overhearing antisemitic sneers at his parents’ efforts to work their way into the Polish gentry. This traumatic experience turned him into a dedicated Zionist. After a spell at Vienna and Lausanne, he arrived in England in 1908. He graduated from Balliol College, Oxford, where he mixed with young men who were later to become famous, such as T.E. Lawrence and the historian Arnold J. Toynbee. Among his Jewish contemporaries were Leonard Stein and Leonard Montefiore. In 1914 Namier volunteered for the British army. He served for a time in the Foreign Office Intelligence Service and was taken to the Versailles Peace Conference to advise on problems concerning the old Hapsburg Empire, Poland, and Eastern Europe. After the war he did not turn at once to an academic career but tried his luck – unsuccessfully – in business. He needed the help of friends to complete the research for his first book and masterpiece, *The Structure of Politics at the Accession of George III* (1929). After publication of *England in the Age of the American Revolution* (1930) he was appointed professor of modern history at Manchester University (1931), holding the chair until 1953. Namier was one of the most influential British historians of the 20th century. His method, of deeply researched collective biography, widely known as “namierization,” influenced several generations of historians. He was also seen as an influential conservative thinker, whose respect for the virtues of the British constitution was heavily influenced by its contrast with the catastrophic experience of the continental nations.

After his war service Namier devoted himself to the Zionist cause, although he was viewed with distrust by leaders of the Zionist movement, especially from Eastern Europe, as an outsider. Namier’s Zionist creed, stemming from the outsider’s need for roots and the wanderer’s yearning for an anchor, found expression in 1930 in a powerful cry (in *England in the Age of the American Revolution*):

To every man the native land is his life-giving Mother and the State raised upon the land is his law-giving Father, and the days cannot be long of a nation which fails to honor either. Only one nation has survived for two thousand years, though an orphan – my own people, the Jews. But then in the God-given Law we have enshrined the authority of a state, in the God-promised Land the idea of a Mother-Country; through the centuries from Mount Sinai we have faced Eretz Israel, our Land. Take away either, and we cease to be a nation; let both live again, and we shall be ourselves once more.

From 1929 to 1931 Namier served as political secretary to the Zionist Executive, and it was as the chief draftsman of the

*Jewish Agency, with Blanche Dugdale, that Namier, with his pedantic insistence on the niceties of formulation and protocol, made his chief contribution to the Zionist cause. He played a considerable role as an intermediary in obtaining the Ramsay MacDonald Letter, which in fact canceled the Passfield *White Paper of 1930. Thanks to his friendship with Reginald Coupland, the author of the 1937 report of the Peel Commission (the first British document to bring up the idea of a Jewish state in a partitioned Palestine), Namier was able to exercise a direct impact on matters of great political importance. He served for a time as deputy to Chaim Weizmann on the Anglo-Jewish Committee for Refugees from Germany, taking up a determined stand against the “barons” of Anglo-Jewry. At the time of the St. James’ Conference on Palestine, which resulted in the anti-Zionist White Paper of May 1939, Namier insisted on a forceful Zionist policy toward the British government, occasionally criticizing the line taken by Weizmann. On the outbreak of World War II he was on loan full time from Manchester University to the Jewish Agency, for which he worked until 1945. Namier kept aloof from the ideological struggles among the Zionist factions. He disliked the religious parties and had close friends in the Labor leadership. His Zionism was a romantic nationalism in the tradition of Mazzini and Pilsudski – the vision of a historic breakthrough conceived in messianic terms – but it lacked any Jewish cultural sustenance.

Namier’s historical research may be classified under four headings: the social-political structure of England in the 18th century; the 1848 revolutions; the twilight of the Hapsburg monarchy; and the international crisis leading up to World War II. All four inquiries may be said to be variations on one theme: cohesion versus disintegration. His chief work, *The Structure of Politics...*, is a microscopic examination of the composition of the successive Houses of Commons under George III. His concern was with how politics are made by members of a governing elite, to the neglect of intellectual trends and social forces. Namier’s biographical method was applied to the great collective *History of Parliament* (initiated by Whitehall and Westminster), of which he was coeditor. In recognition of his achievement as an historian, Namier was elected a member of the British Academy in 1944, was knighted in 1952, and was invited to give the prestigious Romanes Lecture at Oxford. These honors went some way to assuage his feelings of disappointment at having been bypassed for the Regius Professorship of Modern History at Oxford University. The rather eccentric and intensely self-centered outsider with strong and forcefully expressed likes and dislikes scared off many contemporaries. There has long been speculation as to whether his academic disappointments, beginning with his failure to be elected to a fellowship at All Souls College, Oxford, in 1912, was chiefly due to his foreign Jewish background or to his unpleasant and gauche personality. While capable of deep emotions, he lacked flexibility and was very vulnerable. After an unhappy first marriage, Namier married in church the former Julia de Beausobre, a daughter of the

Russian gentry who was deeply committed to the Greek Orthodox Church and had suffered in Soviet prisons and concentration camps (described in her book *The Woman Who Could Not Die*, 1938). She played a great role in Namier’s life.

Namier paid many visits to Palestine. His only visit to the State of Israel took place in 1959 in connection with the scheme for the publication of the Weizmann papers, in which he took great interest. On that occasion he gave a memorable address to the modern history seminar at the Hebrew University. It contained a kind of confession and testament and was preceded by the Hebrew incantation “If I forget thee, O Jerusalem” tearfully.

Namier’s publications include *Skyscrapers* (1931); *Additions and Corrections to Sir John Fortescue’s Edition of the Correspondence of King George III* (1957); *In the Margin of History* (1939); *Conflicts* (1942); *1848: The Revolution of the Intellectuals* (1946); *Facing East* (1947); *Diplomatic Prelude* (1938–39, 1948); *Europe in Decay* (1936–40, 1950); *Avenues of History* (1952); *In the Nazi Era* (1952); *Personalities and Powers* (1958); and *Vanished Supremacies* (1958).

[Jacob L. Talmon]

NAMIR (Nemirovsky), MORDECHAI (1897–1975), Israeli labor leader and politician, mayor of Tel Aviv-Jaffa, member of the Second to Sixth Knessets. Born in Bratolinbovka in the Ukraine, Namir studied in a traditional *heder*, a reformed *heder*, and a secular high school. After the Bolshevik Revolution Namir studied economics and law at the University of Odessa but was arrested for underground activities within the framework of the *Zionist Socialist Party, and expelled from the university. He also studied music. Namir settled in Erez Israel in 1924, working at first as a laborer but soon joining the management of the Histadrut’s daily *Davar*. In 1926–30 he served as the secretary of Ahdut ha-Avodah in Tel Aviv. He was the director of the statistical section of the Histadrut in 1929–35. In 1935 he was elected to the Tel Aviv City Council and in 1936–43 he was secretary of the Tel Aviv Workers’ Council. Namir joined the Haganah Command in Tel Aviv in 1933. In 1940 he was arrested by the Mandatory authorities for organizing demonstrations against the White Paper policy. In World War II he served as head of the bureaus for Jewish enlistment to the British army. After the establishment of the state, Namir was sent on diplomatic missions to Bulgaria, Czechoslovakia, and Romania. In 1948–49 he served as first advisor in the Israeli consulate in Moscow, and in 1940–50 served as consul in Moscow. Namir was elected to the Second Knesset in 1951 on the Mapai list, simultaneously being elected to the position of secretary-general of the Histadrut, in which capacity he served until 1955. He served as minister of labor in 1956, holding the post until he was elected mayor of Tel Aviv-Jaffa in 1959. As mayor, Namir was responsible for extensive

modernization and development schemes. Namir remained mayor and a Knesset member until 1969.

Among his writings are a book about Aḥdut ha-Avodah, *Aḥdut ha-Avodah: Ma'asef Mifleget Po'alei Erez Yisrael* (1946) and one about his years as consul in Moscow, *Sheliḥut be-Moskva: Yeraḥ Devash u-Shenot Za'am* (1972).

[Susan Hattis Rolef (2nd ed.)]

NAMIR (née **Toib**), **ORA** (1930–), Israeli politician, member of the Eighth to Thirteenth Knessets. Namir was born in Haderah, and grew up in Moshav Hōglah. In the War of Independence she served as an officer in Upper Galilee. During the Second Knesset she served as the secretary of the Mapai parliamentary group, and secretary of the coalition administration. In Israel she studied at the Lewinsky Seminary and the Givat ha-Sheloshah Seminary. In 1954–57 she studied English literature at Hunter College in New York, and served as a secretary with the Israeli delegation to the United Nations, in the years when Abba *Eban was ambassador. When she returned to Israel she went back to her job in the Knesset, and for a while worked as the secretary of the architects' office that was designing the new Knesset building, under Tel Aviv architect Shimon Powsner. In 1959, she married Mordechai *Namir, who was elected as Mapai's first mayor of Tel Aviv in that year, and started to work in the field of social work. In 1967–79 she was secretary of Na'amat (the Histadrut women's section) in Tel Aviv, serving also on the secretariat of national Na'amat (1970–74).

Namir was first elected on the Labor Alignment list to the Knesset in 1973. In 1975, after her husband had passed away, she was appointed by Prime Minister Yitzhak *Rabin as chairperson of a committee of inquiry concerning the status of women in Israel. The committee completed its work after the 1977 political upheaval, and Namir presented its report to Prime Minister Menahem *Begin in 1978. After the publication of this report, which pointed to widespread discrimination against women in Israel, the official approach to the subject started to change.

In the Ninth and Tenth Knessets, Namir served as chairperson of the Knesset Education and Culture Committee, and in the Eleventh and Twelfth as chairperson of the Labor and Welfare Committee, earning for herself the reputation of a hard-working and highly demanding MK. Her hope to be appointed minister in the National Unity government formed in 1988 was not fulfilled. The following year she considered running for secretary-general of the Labor Party opposite Micha Harish, but withdrew her candidacy claiming that the competition was not fair. In the primaries to the Labor Party leadership in February 1992 she contended opposite Yitzhak *Rabin, Shimon *Peres, and Israel *Kessar, but received less than five percent of the vote. In the government formed by Rabin after the elections to the Thirteenth Knesset she was

at first appointed minister of the environment, and in December 1992, minister of labor and welfare. Namir ran in the Labor primaries for the elections to the Fourteenth Knesset, but even though she received a realistic place in the list, she was offended by the fact that among the women Dalia *Itzik came before her. She then resigned from the Thirteenth Knesset shortly before the elections, after being appointed ambassador to Beijing – a position she held from 1996 to 2000.

[Susan Hattis Rolef (2nd ed.)]

NANCY, capital of Meurthe-et-Moselle department, northeastern France; former capital of the Duchy of *Lorraine. In 1286 the Jews acquired a cemetery at nearby Laxou. In 1341, and later in 1455, several Jews settled in Nancy itself but were expelled from the Duchy in 1477. The Jews temporarily reappeared in Nancy in 1595. Maggino Gabrieli, known as the "consul-general of the Hebrew and Levantine nation," attempted to establish two banks and a pawnshop in 1637–1643. In 1707 and 1712 Duke Leopold authorized three Jewish bankers from *Metz to settle in Nancy, one of whom, Samuel *Lévy, became the duke's chief tax collector in 1715. After Lévy fell into disgrace, there was a hostile reaction toward the Jews. Nevertheless, in 1721 an edict authorized 70 Jewish families to remain in Lorraine, eight of them in Nancy and its surroundings. The 90 Jewish families in Nancy in 1789 (50 of whom were without authorization) included such wealthy merchants and manufacturers as the *Alcan, Goudchaux, and Berr families from whom the trustees of the Duchy's Jewish community were chosen. Herz *Cerfberr became squire of Tomblaine, and *Berr Isaac Berr became the leader of the Ashkenazi Jews in 1789. There was a house of prayer in 1745, but it was not until 1788 that a synagogue was officially built, eight years after the chief rabbi of Lorraine established himself in Nancy. (The synagogue was renovated in 1842 and again in 1935.) Notable among the chief rabbis of the consistory formed in 1808 were Marchand Ennery and Solomon *Ullmann. With the influx of refugees from Alsace and Moselle after 1870, the number of Jews in Nancy increased to some 4,000 by the end of the century. Nancy made important contributions to French Jewish cultural life. The prayer room of the Polish Jews was decorated by the artist *Mané-Katz. Nancy was the birthplace of the writer André *Spire and Nobel Prize winner F. *Jacob.

[Gilbert Cahen]

Holocaust Period

Many of Nancy's prewar Jewish population (about 3,800 in 1939) fled the city under the German occupation. Those who stayed were brutally persecuted. In three *Aktionen* in 1942–43, 130 Jews of foreign origin were arrested and deported, while over 400 others who had fled to the "free" zone in the south were arrested and deported after it was overrun by the Germans in 1942. Only 22 survivors returned. Among the old French Jewish families, 250 victims were deported, of whom only two survived. The majority were arrested on March 2, 1944, along with 72-year-old Chief Rabbi Haguenuer, who

despite his being forewarned, refused to desert the members of his community. A street in postwar Nancy bears his name. The synagogue, as well as other buildings belonging to the Jews, were plundered by the Nazis. The synagogue interior was destroyed, while the holy books were sold to a rag collector. Several of the art works and books in the local Musée Historique Lorrain and departmental archives were saved. After the war the community of Nancy rapidly recovered, and by 1969 it had about 3,000 members with a full range of Jewish communal institutions. A chair for Hebrew studies was set up at the university. In 1987, the community was said to number 4,000.

NANTES, city in Brittany, capital of the department of Loire-Atlantique, western France. The first mention of Jews there dates from 1234. In 1236 the Jews of Nantes, as well as those in the rest of *Brittany and other provinces of western France, were victims of a riot that broke out during the Sixth Crusade. The attack was followed by their expulsion in 1240. The importance of the community is shown by the cemetery for which evidence exists from 1231. The Rue des Juifs which the community occupied still retains its name.

From the second half of the 16th century many Portuguese of *Marrano origin settled in Nantes. The Vaz, Mendez, Rodriguez, and other families found here generally became loyal Christians, whose members frequently chose an ecclesiastical career. Some Marranos whose sympathies remained with Judaism occasionally passed through Nantes but did not settle there. Thus, toward the end of the 16th century, Abraham d’Espinoza, the grandfather of Baruch *Spinoza, stayed in Nantes with a few members of his family before establishing himself in Holland. In 1636, however, several Portuguese Jews of *Bayonne, expelled from this frontier town at the time of the Franco-Spanish War, settled in Nantes. At the end of the 18th century local merchants, led largely by the old clothes dealers, leveled legal charges against several Jewish merchants who were newly established in the town. Public opinion sympathized with the Jews, however, as evidenced in articles in the *Journal de la Correspondence de Nantes* of 1789 to 1791, and in the *Feuille Nantaise* of 1795. There were 25 Jewish families in Nantes in 1808–09. In 1834 they established an organized community with a membership of 18 families. A synagogue was built in 1870, and by 1898 there were about 50 families.

According to the census of 1942 carried out by the Vichy government, there were 531 Jews in Nantes. By the beginning of September 1943, the number had been reduced to 53 as a result of arrests and deportations. At first, some Jews were arrested and imprisoned in the Caserne Richemont of Nantes, but in January 1944 they were deported. After World War II,

few Jewish families settled in Nantes and in 1960 there were said to be only about 25. The growth of the city, and especially the arrival of Jews from North Africa, led to an increase in the Jewish population. By 1969 Nantes had over 500 Jewish inhabitants. There was a combined synagogue and community center, religious instruction classes, and youth activities.

NAOMI (Heb. נָאוֹמִי; probably from *nu'may* (Ugaritic, *n'my*), “pleasantness”), the wife of *Elimelech the Ephrathite from Beth-Lehem in Judah who, because of famine, immigrated to Moab with his wife and his sons Mahlon and *Chilion (Ruth 1:1–2). Her husband and her two sons, who had married Moabite women, died in Moab. When she heard that the famine in Judah had ended, Naomi returned there. Her daughters-in-law wanted to accompany her, but she tried to dissuade them from binding their destiny to hers. Chilion’s widow, *Orpah, was persuaded, but Mahlon’s widow, *Ruth, clung to her mother-in-law (4:10). Naomi, in return, looked after the interests of her faithful daughter-in-law so that Ruth was taken in marriage by *Boaz, a relative of the family. Naomi adopted and nursed the son born to Ruth and Boaz and so achieved a measure of consolation in her old age.

[Isaac Avishur]

In the Aggadah

Naomi was of outstanding beauty. She and Elimelech were cousins, their fathers being the sons of Nahshon son of Aminadab. From this the rabbis taught, “even the merit of one’s ancestor is of no avail when one emigrates from Erez Israel” (BB 91a). Naomi was so anxious to return to Erez Israel that she set out on her journey barefoot and in rags. She did not even stop to rest on the Sabbath (Ruth R. 2: 12). On the way she taught Ruth the laws concerning proselytes (*ibid.*). She arrived in Beth-Lehem on the day of the funeral of Boaz’s wife (BB 91a). In her youth Naomi had been a nurse to Boaz as she later became a nurse to Ruth’s son, Obed (*Lekah Tov* on Ruth 4:16). Proverbs 31:19 is interpreted to refer to Naomi who brought Ruth under the wings of the *Shekhinah* (Mid. Hag., Gen. 23:1). She is thus included in the 22 women of valor enumerated by the rabbis (*ibid.*).

NAPHTALI (Heb. נַפְתָּלִי), the sixth son of Jacob and second son of Bilhah, Rachel’s maid (Gen. 30:7). The name is said to derive from Rachel’s words, “A fateful contest (*naftule*) I waged (*niftalti*) with my sister; yes, and I have prevailed” (Gen. 30:8). Its exact origin is uncertain. Nothing is related about Naphtali in the biblical sources except that he had four sons. He gave his name to one of the tribes of Israel.

Territory of the tribe of Naphtali. After Y. Aharoni, *Lexicon Biblicum*, Dvir Co. Ltd, Tel Aviv, 1965.

The Tribe and its Territory

The affiliation of Naphtali to Bilhah testifies to an inferior status, at some period, among the tribes of Israel, as does its position in the listings of the sons of Jacob where it appears in the ninth (Deut. 33:23; Gen. 49:21), tenth (Gen. 35:23ff.; 1 Chron. 2:1), eleventh (Num. 1:15, 42), and occasionally even in last place (Gen. 46:24; Deut. 27:13). The four clans of the tribe of Naphtali are Jahzeel, Guni, Jezer, and Shillem (Gen. 46:24; Num. 26:48–50; and with some slight variants, 1 Chron. 7:13). These names do not seem to have any connection with settlements, a fact which testifies to their tribal, rather than territorial, origins. This would contradict the view of the German school about the formation of the Israelite tribes. (Guni may be an exception as a place name, possibly to be identified with Umm Jūnī on the east bank of the Jordan.) However, the matter is complicated because of a Gadite family with the same name (1 Chron. 5:15). Naphtali's territory was the sixth to be decided by lots at Shiloh in the tribal division of the land.

The description in Joshua comprises border points and a list of cities (Josh. 19:32–39). The description of the boundary begins with the south, and proceeds from west to east, from the Tabor to the Jordan, with five designated border points: Heleph (apparently Khirbat ‘Arbītā north of the Tabor), the Elon-Bezaananim (apparently a geographic designation; cf. Judg. 4:11), Adami-Nekeb (apparently Khirbat Dāmiya), Jabneel (either Tell An‘am or Khirbat Yamma), and Lakkum (apparently Khirbat el-Manšūra close to the Jordan). The western and eastern boundaries are only alluded to by reference to the boundary of Zebulun at the south and Asher on the west. In the south, the text designates only Hukok, the point of intersection of the three tribes Naphtali, Zebulun, and Asher (Hukok is apparently the ruins of Khirbat Jumayjima to the east of Cabul). The description of the northern boundary is missing, but by reference to the northern boundary of Asher which extended to Sidon (Josh. 19:28), and relying on the fact that the northern border of David's kingdom at the time of David's census was “to Dan and from Dan they went around to Sidon” (11 Sam. 24:6), it may be assumed that it followed the line Dan-Ijon-Sidon. The northern boundary of Naphtali's territory can thus be envisioned to have been to the east of this line. The list of cities is probably not complete since, according to its title, it includes only “fortified cities” (Josh. 19:35), which testifies to the character and origin of the list. Furthermore, an archaeological survey has shown that there were many populated areas in the territory of Naphtali during the period of settlement. The total number of 19 cities given at the end of the list (19:38) does not refer to the given list, and perhaps it includes also the settlements described in the list as border points.

The History of the Tribe

Information is sparse and is based only on inference. The importance of Naphtali's territory from an agricultural (Deut. 33:23) and military standpoint (Josh. 19:35, “fortified cities”) and the designation of the whole of Galilee as “the land of Naphtali” (11 Kings 15:29) testify to the prominent and central role of this tribe among the northern tribes during the historical period, in contrast to the nomadic. At the beginning of the period of the Judges, the members of the tribe of Naphtali appear to have constituted a minority living among the Canaanites and to have been subject to them (Judg. 1:33). Only after the decisive battle between the Canaanites and the Israelite tribes during the time of Deborah did they overcome those Canaanites living within their territory. In this war, the tribe played an outstanding role. The rebellion was led by Barak the son of Abinoam from Kedesh-Naphtali (Judg. 4:6) and the men of his tribe risked their lives on the heights of the field (5:18). High praise is given to Naphtali and its territory both in the blessings of Jacob and Moses which refer to the period of the Judges. In the united kingdom of David and Solomon, Naphtali became a royal administrative district which seems to have also included the territory of Dan. (Apparently, the families of Dan were absorbed by Naphtali; cf. 1 Kings 7:13–14

with 11 Sam. 24:6; 1 Kings 15:20; 11 Chron. 2:13; 16:4.) The importance of the tribe and the districts is perhaps expressed in the appointment of the king's son-in-law as his officer there (1 Kings 4:15). Apparently deriving from the same period is the list of three levitical cities in Naphtali – Kedesh, Hammoth-Dor, and Kartan (Josh. 21:32, with minor variants in 1 Chron. 6:61), which were religious and administrative centers set up by the central government. One of the important fortresses established in the days of Solomon was the city of Hazor in the territory of Naphtali (1 Kings 9:15). Information about the tribe and its territory after the division of the kingdom is exceedingly scanty. From the little available it is clear that the tribe suffered from the protracted conflict between the kingdoms of Israel and Aram. In the reign of Baasha, Ben-Hadad, the king of Aram, invaded “and conquered Ijon, Dan, Abel-Beth-Maacah and all Chinneroth, with all the land of Naphtali” (1 Kings 15:20), and he may possibly have annexed them to his kingdom. However, in the time of Omri and Ahab the tribe was certainly liberated. In 732 B.C.E., Tiglath-Pileser III conquered, among other places, “all the land of Naphtali and he carried the people captive to Assyria” (11 Kings 15:29). It is reasonable to assume that he exiled only a section of the population, and that the territory, along with those remaining, was annexed as an Assyrian province with its center at Megiddo. In the days of Josiah, an attempt was made to reunite the northern tribes with the kingdom of the house of David, and apparently Naphtali was among them (11 Chron. 34:6). However, it proved unsuccessful owing to the death of Josiah at Megiddo and the subsequent subjugation of the land.

[Isaac Avishur]

NAPHTALI, TESTAMENT OF. A Hebrew fragment of a Testament of Naphtali was identified among the *Dead Sea Scrolls. It seems that this work was one of the sources of the Jewish Greek Pseudepigrapha, the Testament of the Twelve *Patriarchs. The Hebrew fragment deals with the genealogy of Bilhah and is longer than the parallel passage in the Greek text. A Testament of Naphtali in medieval Hebrew is preserved in two versions, the second, published by Wertheimer, being a secondary elaboration of the first one. The medieval Hebrew Testament, which is not identical with the text discovered in Qumran – it does not contain a genealogy of Bilhah – nor with the Greek Testament of Naphtali in the Testament of the Patriarchs, is a translation from a non-Hebrew source, probably Greek. This source was composed in the same trend as the Testament of the Patriarchs and shows clear affinities with the extant Greek Testament of Naphtali.

The ethical teaching of the medieval Hebrew Testament is based on fear of God and the golden rule (in the nega-

tive form). The stress on the importance of Levi and Judah is common to this text, the Greek Testament of the Patriarchs, and the Book of Jubilees; behind this idea lies, apparently, the Qumran concept of the two Messiahs, Messiah b. David, the anointed of Judah, and Messiah, the anointed of Aaron. In the text a dream of Naphtali is narrated which is similar to that in the Greek text (Naphtali 5:1–3). In both versions of the dream, Levi is identified with the sun and Judah with the moon. This passage, as indeed the whole work, shows a polemical tendency against Joseph and his descendants, in sharp opposition to the very positive appreciation of Joseph in the Testament of the Patriarchs. The second dream also has a parallel in chapter 6 of the Greek Testament of Naphtali, and it also shows the same polemical attitude toward Joseph. It is an interesting fact that the text praises the Hebrew language, which is in accordance with the ideology of the whole major religious trend exemplified in the Testament of the Patriarchs and the Dead Sea Scrolls. The treatise ends with the blessing of the man “who does not defile the Holy Spirit of God which hath been put and breathed into him,” a theologoumenon which has its exact parallel in the *Damascus Document.

[David Flusser]

NAPLES, city and former kingdom in Campania, S. Italy. The first Jewish settlement there probably dates to the beginning of the first century C.E., if not before. Josephus (*Antiquities*, xvii, 23–25, and *Wars*, ii, 101–05) reports that during Augustus' rule there was already a Jewish community at Puteoli (Dicaearchia), near Napoli. Puteoli was the most important mercantile harbor of Roman Italy in that period. Some sepulchral inscriptions in Latin dated to a later period indeed attest a Jewish presence in the area. By the fourth century C.E. the community of Naples was of considerable size and economically important. A Jewish burial ground was excavated in 1908 in Corso Malta. The tombs date from the end of the fourth century to the middle of the fifth century C.E. Three of the inscriptions are in Latin, one in Greek. It is interesting that one of the inscriptions in Latin is followed by an inscription in Hebrew. All the inscriptions are decorated with the *menorah*. The *etrog* as well as the Holy Ark decorate two of the inscriptions. In 536, according to the Byzantine historian Procopius (*War* v, 8:41, 10:24–25), the Jewish population helped the Goths, although unsuccessfully, to defend the city when it was besieged by the Byzantines.

Eleventh- and twelfth-century documents show that the Naples community had a synagogue and a school. Jews enjoyed the right to own real estate and to dispose of it as they wished. *Benjamin of Tudela, who visited the town in c. 1159, found 500 Jews living there. From 1288, under Charles II, anti-

Jewish disorders incited by Dominican preachers occurred; they reached their height in 1290 when serious outrages were committed and a synagogue was converted into a church. However, in 1330, Robert of Anjou invited Jews from the Balearic Islands to settle in Naples and in the rest of his kingdom, promising them protection against annoyance and the same taxation rights as those enjoyed by Christians. From 1442, under the rule of Aragon, conditions for the Jews in Naples and its surroundings were favorable, and attracted Jews from various parts of Europe.

At the end of 1492 and the beginning of 1493, a large influx of refugees from Sicily, Sardinia, and Spain found temporary asylum in Naples. The Spanish refugees, undernourished and sick, probably introduced the pestilence in 1492 that struck down 20,000 persons in Naples alone. Among the Spanish refugees who landed in Naples in 1492 was Don Isaac *Abrabanel, who became fiscal adviser to King Ferdinand I and Alfonso II. In 1495 the Kingdom of Naples was conquered by the Spanish and in 1496 a decree for the expulsion of the Jews was issued, although it was not implemented. The expulsion of the Jews was definitively ordered in 1510 and finally carried out: exception was made for 200 wealthy Jewish families who undertook to pay an annual tax of 300 ducats to the crown. In 1515 the *New Christians were also expelled from the kingdom. The 200 wealthy families, who had been joined by others in 1520, had increased to 600 within the following decade. Although a new decree of expulsion was issued in 1533, permission was granted to the Jews in November 1535 to reside in Naples for a further ten years against the payment of 10,000 ducats. However, the agreement was not respected by Emperor Charles V, and in 1541 he ordered the total expulsion of the Jews; this coincided with the establishment of a Christian loan bank (*Monte di Piet ) in Naples.

It was not until 1735, when the kingdom passed to the Bourbons, that Jews were readmitted into Naples and the vicinity by an edict signed by Charles IV on Feb. 3, 1740. However, following pressure by Jesuits and the Church, the few Jews who had accepted the invitation were again expelled (Sept. 18, 1746). In 1822, under the suggestion of Metternich, the Austrian premier, Solomon de Rothschild had his brother, Karl Mayer von *Rothschild of Frankfurt on the Main, settled in Naples as court banker of the Bourbons. There Rothschild did much to help the ruling dynasty economically, and he pushed for a liberalization of the government. Rothschild resided in Villa Acton-Pignatelli in Via Chiaia. Rothschild's task came to an end in 1860, when Garibaldi conquered Naples. By then a small Jewish community had developed around Rothschild. Religious services began to be held in Naples in 1831, but a synagogue was not opened until June 1864. The synagogue located in the Palazzo Sessa was inaugurated in 1864 thanks to the influence of Baron Rothschild. In the entrance there are two marble statues; one in honor of the community president Dario Ascarelli who bought the premises for the synagogue in 1910 and the other which commemorates the

deportation of Neapolitan Jews during World War II. Restoration was carried out in 1992.

[Ariel Toaff / Samuele Rocca (2nd ed.)

In 1931 there were 998 Jews in the community of Naples, whose authority extended to all southern Italy. Persecutions during World War II had minor consequences as the Allied landing led to a speedy liberation of southern Italy. Nevertheless, 11 Jews were taken to extermination camps from Naples and others were killed elsewhere. From 1943 to 1945 Naples was the biggest harbor that served the Allies in the Mediterranean. Thus various Jewish units from Palestine served in the area as well as Jewish chaplains from the U.S. Army. Both assisted the local Jewish community. After the war, the U.S. Navy held regular services for American Jewish sailors in Naples. At the war's end 534 Jews remained in the community. In 1969 there were 450 Jews in Naples. In the early 21st century the community numbered a handful of families.

[Sergio DellaPergola / Samuele Rocca (2nd ed.)]

Hebrew Printing

A Hebrew press was established in Naples not later than 1485, and in the decade which followed nearly 20 books were published, making the city one of the most important cradles of Hebrew *incunabula. Naples was then a center of general book printing and the book trade, and wealthy members of the Jewish community including immigrants from Spain and Portugal, financed the publishing of Hebrew books. The first Jewish printer there was the German Joseph b. Jacob *Gunzenhausen, who was followed in 1490 by Joshua Solomon *Soncino. A third printer was Isaac b. Judah ibn Katorzo (of Calatayud in Spain). The first book published (in 1487) was Psalms with David Kimhi's commentary, followed by Proverbs with a commentary by Immanuel of Rome (n.d.), and the rest of the Hagiographa in 1488. A Pentateuch (with Rashi), the Five Scrolls, and the Antiochus *Scroll appeared in 1491. The first printed edition of Abraham ibn Ezra's Pentateuch commentary came out in 1488; Nahmanides' Pentateuch commentary was printed in 1490 by Katorzo; and that of Bahya b. Asher in 1492. The magnificent first edition of the entire Mishnah (with Maimonides' commentary) was published in 1492. Halakhic works included Jacob Landau's *Agur* (n.d.), the first Hebrew work with approbations (*Haskamot) and the second printed in the lifetime of the author (who was one of Gunzenhausen's typesetters); the first edition of the *Kol Bo* (n.d.); and Kimhi's *Sefer ha-Shorashim* was published by Gunzenhausen in 1490, and by Soncino (and Katorzo?) in 1491. Bahya b. Joseph ibn Paquda's "Duties of the Heart" (*Hovot ha-Levavot*) appeared in 1489, and Nahmanides' *Sha'ar ha-Gemul* in 1490. Of particular interest are Perez Trabot's *Makre Dardekei* (1488), a 14th-century Hebrew glossary with Italian, Arabic, and also French, Provençal, and German translations; Kalonymus b. Kalonymus' satirical *Even Bohan* (1489); a Hebrew grammar, *Petah Devarai* (1492); a five-volume Hebrew translation of Avicenna's medical canon *Ha-Kanon ha-Gadol* printed for the first and only time. The fourth edition of Dante's *Divina*

Commedia was published by an anonymous Jewish printer in Naples in 1477.

NAPLES AND COLLIER COUNTY, county in Florida, U.S. At the beginning of the 21st century, Naples and Collier County hosted perhaps the newest and fastest-growing Jewish community in Florida. This area on the southwest coast of Florida did not welcome Jews and there are none recorded there until the late 1950s. When Joseph and Helen Weinfeld drove into Naples, interested in purchasing real estate, they were told, “If you are Jewish, just keep going.” Through persistence, by 1956, Joe Weinfeld was selling lots in Naples. The earliest known families to settle were the Freschels, Gilmans, Dinaburgs, and Luffs. These families with young children ventured to Naples and established businesses. The Freschels and Gilmans opened the Anchor Bar; the Dinaburgs made cement blocks; and Gabriel Luff was the first Jewish real estate person in town. There were no streetlights and no doctors and mosquitoes were a major challenge. A few years later the developer of Golden Gate and Golden Gate Estates employed some Jewish salesmen who added to the tiny community and there were enough Jews to have High Holiday services. In 1962 the Jewish Community Center of Collier County was founded with Garson Dinaburg as the lay leader and Leo Spiegel as the volunteer cantor. Three years later a board of directors was established. Services were held in various venues around town and the family of builder Sam Chudnow donated a Torah in 1965 when he had to say *kaddish*. In 1966 the State of Florida issued a charter, signed by president Garson Dinaburg, secretary Gabriel Luff and vice president/treasurer William Freschel. By 1970 retirees helped increase their numbers along with younger professionals and retailers with families. Judy Dinaburg married Charles Wallowitz in the first Jewish wedding and their daughter, Jennifer Relkin, was the community’s first baby naming. Joseph Weinfeld started a religious school in 1972 with eight children. By 1973 there was a bar mitzvah and congregation president Joseph Weinfeld and lay leader Garson Dinaburg led efforts to secure from Collier Development Corporation about two acres

of land on Pine Ridge Road for \$15,000. Led by Rabbi Simon Friedman of Cape Coral, 57 member families participated in the dedication of the new synagogue on April 31, 1975. The first paid rabbi was Abraham Shusterman of Baltimore, who came in 1977. An educational and social wing was added in 1980 and the name of the reform congregation was changed to Temple Shalom that year. Rabbis Mark Golub, Alan Tuffs, and Seth Philips each served the congregation for three years. Recognizing the need for expanded space in 1988, young congregation members purchased another piece of property on Pine Ridge Road, close to State Road 951. A new synagogue was dedicated in 1991 with a membership of 375 families. In 2005 there were 713 member families of this pioneer congregation. Rabbi James Perman became spiritual leader in 1993 and Rabbi Daniel Sherman joined him as assistant in 1999.

As of 2005 the Jewish population of about 6,000 (not including snowbirds), mostly from the Midwest and lately also from the New England area, was distributed all over the county from Marco Island north through Naples and into Bonita Springs and Estero. With an annual growth rate of about 15%, there are many young families, a gap in the 50-somethings and then early retirees. A high percentage of the Jews are affiliated; about 50% belong to a congregation. There are three Reform congregations (Temple Shalom of Naples, Jewish Congregation of Marco Island, and Naples Jewish Center), a Conservative (Ma’ayan Congregation), and a Chabad with their various havurot, Sisterhoods, and Men’s Clubs. Jewish organizations are vibrant and diverse: Jewish Family Services, Naples Friends of ARMDI (Magen David Adom); Hadassah, National Council of Jewish Women; Brandeis; ORT, Israel Bonds, Jewish War Veterans, Southern Florida Holocaust Museum, and even a Yiddish Club. Monies have been raised for the United Jewish Appeal since about 1980. The Jewish Federation of Collier County raised \$660,000 in 2004. The Federation, which counts 30% of the households as contributors, publishes *Federation Star* monthly with community news.

[Marcia Jo Zerivitz (2nd ed.)]

°**NAPOLEON BONAPARTE** (1769–1821), emperor of the French. He proclaimed the *emancipation of the Jews in the Italian states which he had established, and the majority of the Jews in Italy hailed Napoleon as a liberator and political savior, calling him “Helek Tov” (lit. “Good Part”; cf. Bonaparte). Even by this time, however, problems had arisen from the contradictions posed by Jewish laws and communal autonomy on the one hand and the political and civic obligations of the Jews on the other. In May 1799, during Napoleon’s campaign in Palestine (see below), the government newspaper *Moniteur* published the information that Napoleon had issued a manifesto in Palestine which promised the Jews their return to their country. Many European newspapers reproduced this information, although today it is questioned whether Napoleon really issued such a declaration. The news concerning the manifesto and Napoleon’s Palestine campaign made little impression on the Jews in Europe. On the other hand, the cam-

campaign gave rise to millenarian hopes among certain nonconformist circles in England; for the first time, their expectation of the return of Israel to Palestine and hence to the Church was linked with realistic political projects.

The principal influence exercised by Napoleon as emperor on Jewish history was in the years 1806 to 1808 when he convened the Assembly of Jewish *Notables and the (French) *Sanhedrin, and established the *Consistories. The programmatic documents formulated during this period and the institutions which then came into being embody the first practical expression of the demands made by a centralized modern state on the Jews who had become its citizens – “the separation of the political from the religious elements in Judaism.” The news of the activities of the Jewish assemblies stirred both Jewish and gentile sectors of society in Central and Western Europe. The Austrian authorities were apprehensive that the Jews would regard Napoleon in the light of a messiah. In England, theological hopes and political projects for the “Return of Israel” intensified. On March 17, 1808, however, Napoleon issued an order restricting the economic activity and the freedom of movement of the Jews in the eastern provinces of the empire for a period of ten years, an order which became known among Jews as the “Infamous Decree.”

Napoleon’s victorious armies brought civic emancipation to the Jews in all the countries of Central and Western Europe where governments dependent on him were formed. The central Jewish Consistory established in the Kingdom of Westphalia was the first Jewish institution in Europe to introduce reforms into the Jewish religion. The Jews of Eastern Europe were only ephemerally influenced by Napoleon’s conquests. Discussions were held among Ḥasidim as to whether support should be given to Napoleon or the Russian Czar Alexander I in order to hasten the coming of the messiah.

[Baruch Mevorah]

The Palestine Campaign (Feb. 8–June 1, 1799)

After the conquest of Egypt in August 1798 by Napoleon’s army, the defeated survivors fled to Palestine, where the pasha of *Acre, Ahmad al-Jazzār, and the Turks attempted to organize resistance. At the beginning of February, Napoleon moved into Palestine at the head of a 13,000-man army. He took El Arish on Feb. 20 and reached Gaza on Feb. 24; the small Jewish community there fled to Hebron. On March 1 Napoleon reached Ramleh and on March 7 Jaffa surrendered after a four-day siege. The French army continued northward, crossed the southern Carmel on March 16 and 17, and reached al-Ḥāvithiyya (west of Sha’ar ha-Amakim). Haifa was captured on March 18. On March 19 the French army reached the walls of Acre; however, supported by British warships, the city withstood a protracted siege and several assaults by the French. A Jew, Ḥ.S. *Farḥi, Ahmad al-Jazzār’s chief aide, played an important role in its defense. By June 1799, Napoleon’s army, now plague-ridden and decimated, had moved back into Egypt.

From a political point of view, Napoleon’s campaign in Palestine marked the beginning of a renewed interest of the

Western Powers in Palestine as occupying an important international position. From a social-cultural point of view, the importance of the campaign was much more limited. However, this was the first substantial contact made between the inhabitants of Palestine and Westerners since the destruction of Crusader Acre.

[Abraham J. Brawer]

Impact on Jewish History

The forces unleashed by Napoleon brought in their wake contradictory effects on the course of modern Jewish history. The breakup of old European feudal patterns of societal organization was eventually to open up a range of new economic and political options for the Jew. The closed societies that restricted but sheltered him were never again to be the same. On the other hand, the immediate effect of these forces was to provoke an almost total reversal in the process of civic emancipation brought about in the course of Napoleonic conquests. Nonetheless, Jewish Emancipation was to come eventually, even if its triumph was to be delayed till later in the century. Well in advance of that time the Napoleonic uprooting of the established order forced the Jewish community to contend with the many challenges posed by that process to their traditions and their lives. Already before Napoleon there were individual Jews seeking an accommodation with the world outside the ghetto. The events that surrounded the Napoleonic adventure extended the concern of the few to the preoccupation of the people as a whole. Moreover, Napoleon’s insistence on a price to be paid by the Jew for his entrance into the modern world was to set the tone for much of the debate within the Jewish community during the Emancipation era. How to remain loyal to the traditions of his people and at home in the modern world was a problem with which the Jew wrestled throughout the period of his modern history; it is a problem first posed practically and seriously by the threat of Napoleonic successes.

NAQUET, ALFRED JOSEPH (1834–1916), French chemist and republican politician. Born at Carpentras, Vaucluse, Naquet became professor of chemistry at the Polytechnic Institute at Palermo in 1863 and later professor of medicine in Paris. He participated in the 1867 Peace Conference at Geneva, where he spoke out against the French Empire and was imprisoned for 15 months. Naquet was again imprisoned following the publication of *Réligion, Propriété, Famille* in 1869, in which he opposed religious marriage, and was also deprived of his civic rights. Following his release he went to Spain but returned to France in 1870, working for the republican government in Tours. In 1871 he was elected deputy for

Vaucluse, and from 1882 was a member of the senate. Naquet represented the left wing of the Assembly and the Senate and repeatedly pressed for legislation on divorce, the laws of 1884 being known as the "loi Naquet." His support for General Boulanger in 1888 did considerable harm to his career, and following allegations of complicity in the Panama scandal, he fled to England. Although subsequently vindicated, Naquet did not take any further part in French politics. His writings include *Principes de chimie fondés sur les théories modernes* (1865); *Le Divorce* (1877); *L'Humanité et la patrie* (1901); *La République radicale* (1873); and *Socialisme collectiviste et socialisme libéral* (1890).

[Samuel Aaron Miller]

NARA (also **ONR: Obóz Narodowo-Radykalny**: "National-Radical Camp"), a nationalistic, antisemitic organization in Poland, formed on April 14, 1934. The group was organized by youth who seceded from the *Endecja (ND) Party, which was also antisemitic. Whereas ND was anti-German, NARA, inspired and supported by the Nazis, wanted to serve as a bridge between the antisemitic ideologies of both Germany and Poland. The program of NARA envisaged a fascist regime modeled on the Nazi plan. It called for the assimilation of the Slavic minorities in Poland (Ukrainians, Belorussians), and the expulsion of Jews by means of economic boycott, by seizing their sources of living, confiscating their assets, and denying them all civil rights. With such forceful economic measures against Jews, NARA aimed to win the sympathy of the masses during a critical economic period and, at the same time, form a strong movement in opposition to *Pilsudski's regime. The membership of NARA embraced mainly city youth and university students. After widespread terrorist activities against Jews, particularly Jewish students, NARA was dissolved by the government (July 10, 1934) and its newspaper *Sztafeta*, prohibited. The group continued its illegal activities, supported and increased by various rightist groups, until it met with complete defeat in the municipal elections of December 1938.

NARBATA, Jewish district E. of Caesarea, which perhaps inherited the name of Arubboth in the third district of Solomon (1 Kings 4:10); it appears in the Book of Maccabees (1 Macc. 5:23) as Arbatta, a city from which Simeon evacuated Jews at the beginning of the Hasmonean revolt. In 66 C.E., the Jews of Caesarea moved to the toparchy of Narbata because of persecution (Jos., Wars. 2:291). It is mentioned (in a different form) in the Jerusalem Talmud as the site of an inn (Ber. 6:1, 10b). The district of Narbata was inhabited by a mixture of Jews, Samaritans, and pagans. It is identified with Khirbat Baydūs, where there are remains of a town of the Roman period.

NARBONI, family of French origin which established itself in Algeria toward the close of the 14th century. ALLAL BEN SIDUN BEN JOSHUA (15th century) was a wonder-working rabbi in Tlemcen. He composed a large number of *piyyutim*, some of which were included in the *maḥzor* of Tlemcen. Until recently, frequent pilgrimages were made to his grave. SHALOM (d. 1691), a financier in Algiers, was appointed **muqaddim* of the Jews of that town and played a political role in the relations with the Christian countries. MORDECAI (d. 1794) edited the work *Kol Yehudah* by Judah *Ayash of Algiers. Accused of having blasphemed Islam, he was given the alternative of conversion or death; he was beheaded in Algiers. ELIE and GEORGES, both heroes in World War I, were respectively president of the Jewish Consistory in Constantine and an army medical officer. ANDRÉ (1912–1979), lawyer and a leader of Algerian Jewry, participated in the defense of his coreligionists, particularly during the antisemitic Vichy government. A fervent Zionist, he was one of the founders of the Algerian Zionist movement. When Algeria achieved independence (1962), he settled in Israel, where he became a member of the executive of the Jewish Agency. From 1972, he headed the department for Sephardi communities.

[David Corcos]

NARBONNE, town in S. France, 5 mi. (8 km.) from the Mediterranean. The capital of medieval Septimania, Narbonne was ruled successively by the Visigoths (413?), the Saracens (719), and the Franks (759). About 900 it became the possession of the local viscount. In 1508 Louis XII of France annexed it to his domains. The earliest written evidence of a Jewish presence in France, from about 471, comes from Narbonne. Sidonius Apollinaris, bishop of *Clermont, entrusted a Jew by the name of Gozolas and a customer of Magnus Felix of Narbonne, with a letter for the latter. Jews are not mentioned again in Narbonne until a *Church council was held there in 589, which forbade Jews, under penalty of a heavy fine, to recite prayers aloud, even in Jewish funeral processions (canon 9, in Mansi, *Collectio*, IX, 1016). Soon after (597) Pope *Gregory I ordered an inquiry into a report that four captive Christian brothers had been bought by Jews of Narbonne who held them in their service. The earliest known inscription relating to the Jews of France also comes from Narbonne. It is an epitaph in Latin, including the phrase "Peace to Israel" in Hebrew, to three siblings who died either at the same time or within a short period of one another, probably victims of a plague recorded in Septimania at about the same period.

While there is no information about the Jews of Narbonne during the period of Muslim occupation, a legendary tradition of the 12th and 13th centuries tells of the election of "Jewish kings" there when the town was taken by Pépin the Short in 759. According to some sources (Philomena, *Gesta Caroli Magni ad Carcassonam*; *Milhemet Mitzvah* of *Meir

Simeon ha-Me'ili), Jews helped to drive out the Muslims and as a sure means of appreciation, were granted the right to be governed by a "Jewish king." Another source (the addition to the *Sefer ha-Kabbalah* of Abraham *Ibn Daud) states that Charlemagne invited a certain Machir to become the founder of the dynasty of "Jewish kings." Although this princely dynasty is confirmed authentically only from the 11th or 12th centuries, the Jews held freehold properties by 768. Pope Stephen 111 in a letter addressed to Aribert, archbishop of Narbonne, was critical of the fact that Jews, by virtue of the privileges granted by the kings of France, not only owned alodial properties in both the towns and their surroundings, but also employed Christians to work in their vineyards and fields. At the close of the ninth century King Charles 111 the Simple (898–923) tried to dispossess the Jews of Narbonne of their estates, at first those that had been recently acquired from Christians, and later all others. These measures did not remain in force for long, and a short while later Jews again owned property, including mills which they also worked.

The partition of jurisdiction over the town between the viscount and the archbishop resulted in the emergence of two distinct groups of Jews, from the point of view of their civic administration (among themselves the Jews formed a single community). In the 11th century Archbishop Pons d'Arce nominated two Jews as toll gatherers. Between 1134 and 1143 clashes which broke out as a result of differences between Ermengarde, viscountess of Narbonne, and Alphonse Jourdain, count of Toulouse, worsened the situation of Narbonne's Jews, and many of them then emigrated to *Anjou, *Poitou, and to the kingdom of France. According to the addition to the *Sefer ha-Kabbalah*, the Jews of Narbonne numbered 2,000 around 1143; in 1161 Benjamin of Tudela mentions 300 Jews there (but since this figure probably refers to heads of families there was probably a Jewish population of some 1,500). In 1163 Jews were the objects of attacks by the Spanish crusaders but were protected by both Viscount Bérenger and Archbishop Guiffrey.

The Jewish quarter of the viscounty (known as *Grande Juiverie*, *Jouzaigas Majours*, etc.), which was of considerable size, situated to the north of the present Place de l'Hotel de Ville and Cours de la République, did not constitute a "closed" quarter and non-Jews and Jews lived side by side. From 1217 the Jews benefited from a very advantageous charter granted by the viscount, in which they were represented by ten arbitrators. Although the Jewish quarter under the archbishop's jurisdiction, situated in the Belvèze quarter, did not obtain such an advantageous charter until 1284, the two Jewish sections shared all community resources. In the viscounty there were at least two synagogues, a hospital, baths, and workrooms, and in the archbishopric there was a cemetery, known as Mont judaïque (or Montjuzaic), some of whose epitaphs were found and preserved in the museum.

In 1236 a petty brawl between a Jew and a fisherman that ended in an accidental homicide set off an anti-Jewish riot which was rapidly suppressed by Viscount Aimeri IV, who ordered the restitution of all objects stolen during the pillage. The

Jewish community celebrated its good fortune by a local Purim. At the end of 1246 Viscount Amauri I demonstrated his sympathy toward the Jews by attending a protest meeting against the anti-Jewish policies of King *Louis IX. It was, therefore, not surprising that the Jewish quarter of the viscounty attracted Jews from the rest of the province as well as from the archbishop's part of the town. After disputes between the two overlords of the town over the judicial status of certain Jews, both joined forces to defend themselves against the claims of the monarchy, which sought to deprive them (from the close of the 13th century) of the jurisdiction over "their" Jews. When the expulsion order was issued, however, there was no evidence of protest by either the archbishop or the viscount, and it was only with the liquidation of Jewish property that both intervened to claim their share of the profits. (Only the viscount made a satisfactory settlement with the king.) In 1306, on the eve of the expulsion, the town register indicated 165 Jewish households, or about 825 persons (less than 5% of the total population). The exiled Jews moved mainly to *Roussillon or to the Catalonian regions. A few returned in 1315 and later, in 1359, more returned. Tradition has it that three events caused the decline of the town of Narbonne: the silting of the Aude River; the expulsion of the Jews in 1306; and the *Black Death plague of 1348.

The Jews of Narbonne were engaged in both agriculture and the production of wine. With the transfer of ownership of cultivable areas Jews, nevertheless, often retained part of the harvest for themselves. Jews were also involved with salt mines and water mills. Serving as public functionaries, Narbonne's Jews also collected fees for the archbishop and acted as brokers as well as traders. A Jewish notary served to draw up contracts between Jews. There were a number of Jewish physicians in Narbonne and also some goldsmiths. Many Jews practiced moneylending, particularly from the beginning of the 13th century. (Loans were generally given against pledges, personal property, or real estate.)

In his *Sefer ha-Kabbalah*, Abraham ibn Daud mentions only two French communities which were outstanding for their learning and one of them was Narbonne. Important scholars were R. *Moses b. Joseph b. Merwan ha-Levi, R. *Abraham b. Isaac of Narbonne, and R. Meir b. Joseph (toward the middle of the 13th century), who "caused the Torah to shine forth before their disciples by the study of the Pentateuch, the Bible, the Mishnah, the Babylonian Talmud, and the Jerusalem Talmud." Benjamin of Tudela praised the town "which already has an ancient reputation for erudition. And from there, the Torah has spread throughout all countries. Scholars and men of great authority live there." Among Narbonne's most famous scholars were *Moses ha-Darshan, exegete and head of the yeshivah (toward the middle of the 11th century); Abraham b. Isaac of Narbonne, referred to as *av bet din*, the father-in-law of *Abraham b. David of Posquières and author of ritual works and talmudic commentaries (second half of the 12th century); Joseph *Kimḥi (*Maistre Petit*) and his two sons Moses *Kimḥi and David *Kimḥi (second half of the 12th and early 13th centuries); *Isaac b. Meir of Narbonne,

liturgic poet (first half of the 13th century); Moses b. Joseph b. Merwan ha-Levi, teacher of (among others) Abraham b. David; Meir b. Simeon ha-Me'ili, author of *Millhemet Mitzvah* (middle of the 13th century); and Maestro David de Caslari, physician and poet famous for his commentary on *Maimonides' Guide; and *Moses b. Joshua b. Har David Narboni (late 13th century). There were others who stayed for a time in Narbonne or who were born there but whose activities were restricted to other places. Numerous personalities later bore the surname *Narboni. The 13th-century Jewish troubadour, Bofilh, also came from Narbonne.

From the beginning of the 18th century, Jewish merchants from Avignon were authorized to visit Narbonne four times a year in order to trade there for a period of one month each time. From the close of the 18th century Jews settled in the town as permanent residents. On the eve of World War II there were hardly any Jews in Narbonne, as was still the situation in subsequent decades.

NARDI (Narodietzky), NAHUM (1901–1977), composer. Born in Kiev, Nardi studied the piano and composition at the Kiev, Warsaw, and Vienna conservatories and went to Palestine in 1923. There he began to give piano recitals but soon turned to composing, inspired by Arab Bedouin and peasant songs and the Sephardi and Yemenite melos. Many of his songs for children and adults became folk songs for which he developed an original style of piano accompaniment. Many of them were first performed at his joint recitals with the Yemenite singer, Brachah *Zefira, his first wife. For these recitals he developed an original style of piano accompaniment. In later years Nardi also promoted the careers of several other singers of Yemenite origin. Among other associations which contributed to his production and style were those with Hayyim Nahman *Bialik, the poet and educator Levin *Kipnis, and the poet and composer Yizhak Navon.

Nardi's songs, which have achieved folk song status, include: *Shir ha-Avodah ve-ha-Melakhah, Bein Nehar Perat, Yesh Li Gan* (Bialik), *Mi Yivneh Bayit be-Tel Aviv, Shanah Halkhah, Ani Purim* (L. Kipnis, the latter also metamorphosed by an unknown kindergarten poet into the ubiquitous *Ha-Shafan ha-Katan*); *Kakhol Yam ha-Mayim* (N. Alterman); *Udi Hamudi* (M. Dafna); *Alei Givah* (Broides, the tune beginning DGFED as distinct from M. *Ravina's setting); *Pattish Masmer Nikkakh Maher* (E. Harussi); *Shetu ha-Adarim* (A. Penn); *Sisi Admat ha-Sharon* (Y. Fichmann); *Mi Yitteneni Of* (D. Shimoni), *Im Yesh Ei Sham* (Y. Karni) – both transformations of Oriental Jewish folk melodies.

[Bathja Bayer]

NARESH, town situated on the bank of the Euphrates, south of the old city of Babylon and of *Sura. A canal went from near Naresh to Nippur. The town was situated in a hilly district and extended over a very wide area (Er. 56a). As a result it was not surrounded by a wall and this constituted a danger to the safety of its inhabitants at night (Hul. 127a). This particularly affected the women of the city who were obliged to undergo their ritual bathing (Nid. 67b). Naresh became renowned in the talmudic era because of Rav Papa, a native of Naresh, who lived and was active there in the middle of the fourth century C.E. Rav Papa studied at *Maḥoza under Rava, and after Rava's death some of his pupils left for Naresh, where Papa served as head of the academy and Huna b. Joshua as head of the *Kallah. The Jews of Naresh engaged in agriculture (BM 68a), and among the products made by its inhabitants, thick blankets were famous (Yoma 69a). The inhabitants had a bad reputation and were known as extortioners and thieves; it was said: "If a native of Naresh kisses you, count your teeth" (Hul. 127a).

[Moshe Beer]

NARKISS, BEZALEL (1926–), Jewish art historian. Narkiss was born in Jerusalem, the son of Mordechai *Narkiss, director of the Bezalel Art Museum. He studied at the Hebrew University of Jerusalem and then taught history for five years at a secondary school in Haifa. It was only after his father's death, while examining and arranging his papers, that Narkiss found his vocation; to establish Jewish art as a specialized academic discipline. Consequently, he retrained, studying at the Courtauld Institute of Art and the Warburg Institute at the University of London. Specializing in the history of medieval art, where his interests were divided between iconographic and stylistic studies, he was particularly influenced in his approach to art by Hugo Buchthal and Francis Wormald, his supervisors in London, and Yitzhak *Baer, professor of medieval Jewish history in Jerusalem. After his return to Israel in 1963, Narkiss taught in the department of art history at the Hebrew University, serving as chairman from 1974 to 1976. His positions included serving as art editor of Masada Press (1963–73) and foreign editor of *Gesta* International Center of Medieval Art (1973–80). He was the editor-in-chief of the *Journal of Jewish Art* (1974–86) and director of the Catalogue of Hebrew Illustrated Manuscripts of the British Isles. He was illustrations consultant and art editor of the first edition of the *Encyclopaedia Judaica* (1970). He was also the art adviser to the Diaspora Museum (Beth Hatefutsoth), and sat on the boards of the Israel Museum and the Wolf Foundation.

Narkiss' unique contribution was as the founder of the Index of Jewish Art in 1974, thus undertaking the task of indexing all works of Jewish art worldwide. Through Narkiss' seminal work, the study of Jewish art has been transformed

into a specialized academic discipline. He stressed the relationship of the style to that of the general art of the region, while pointing to specific Jewish elements and iconography. The Center for Jewish Art at the Hebrew University, founded and initially led by him (1979–91), established the *Journal of Jewish Art* (now *Jewish Art*) and he served as its editor in 1974–86. He worked towards the computerization of the Index, while concomitantly encouraging the continuing documentation of Jewish art around the world. He also encouraged documentation and preservation activities in areas of Eastern Europe and the former Soviet Union that had been less accessible before 1989. As a result of his activity, a school of students and researchers has evolved since the mid-1980s and the study of Jewish art as a discipline has spread from Israel to Europe and the United States. For this significant work he was awarded the Israel Prize in 1999. From 1999 he was a visiting scholar at Princeton and the National Gallery of Art in Washington, DC. Narkiss published widely on the subject of illuminated Hebrew Manuscripts, and his major work on the subject, *Hebrew Illuminated Manuscripts*, has appeared in several editions.

[Susan Nashman Fraiman (2nd ed.)]

NARKISS, MORDECHAI (1898–1957), Israel curator and art historian. Narkiss was born in Skala, Poland. In 1920 he settled in Erez Israel, where he continued his studies at the *Bezalel School, Jerusalem, and became assistant to the director, Boris *Schatz. Narkiss began to devote himself to amassing a collection of Jewish art and antiquities, and in 1932 became director of the *Bezalel Museum. The museum had closed down with the school after Schatz’s death, but Narkiss founded the Society of Friends of the Bezalel National Museum and reopened it under the auspices of the executive of the Zionist Organization.

Narkiss wrote on many aspects of Jewish art. Among his publications were *Matbe’ot Erez Yisrael* (“Coins of Erez Israel,” two parts, 1936 and 1938), *The Channuka Lamp* (1939), *The Artcraft of the Yemenite Jews* (1941), and *Niello Work as a Jewish Craft* (1942). He also wrote many articles, translated books on art, and was art editor of the *Encyclopaedia Hebraica*. The sixth volume of *Eretz Israel* (1960), one of the publications of the Israel Exploration Society, was dedicated to his memory. It included a complete bibliography of his works.

NAROL, small town in the region of Lubaczow, southeastern Poland. Founded in 1585 as the settlement of Floryjanowa, the town later received the name of Narol. Jews who settled there were active as merchants and lessees. They developed an economically flourishing community which existed until 1648–49, when the entire settlement of some 12,000 was destroyed in the *Chmielnicki pogroms. About 40,000 refugees from neighboring settlements fled to Narol in 1648 in

fear of the Cossacks. When the town was captured (1649) all of them were slaughtered. Nathan Nata *Hannover, in his *Yeven Mezulah*, described the massacre in these words: “Many were drowned in the water, many hundreds shut themselves up in the synagogue, but they broke down the doors and first slew the Jews inside it and then burnt the synagogue with the slain. There was no such slaughter in the whole of Poland ...” Documents on the history of the Jews in the town were also destroyed during the massacre. Although much wealth was lost in the Cossack plunder, a large part of it hidden under the ruins of the houses was discovered in the 19th century. Moses Kohen, rabbi of Narol, who was saved from the slaughter and later appointed rabbi of Metz in France, composed a *seliḥah in which he lamented the destruction of Narol – the death of its scholars and the loss of the Torah centers in the town. The settlement never returned to its prior glory. When the *Council of Four Lands was disbanded, the town still owed sums of money on taxes and other payments to the Council. Narol was incorporated into the territory of Austria following the partition of Poland in 1772. After World War I, Narol became part of independent Poland, and in 1921 the number of Jews totaled 734 (out of 1,817). The majority of its Jews were Zionists who took an active part in the affairs of the Zionist Federation. In 1933 misfortune again overtook the town when a fire completely destroyed the houses of 23 families. In 1939 the Germans expelled the Jews to the Soviet sector.

[Shimshon Leib Kirshenboim]

NAROT, JOSEPH (1913–1980), U.S. Reform rabbi and communal leader. Narot, who was born in Vilna, immigrated with his family to Ohio where he grew up and was educated. He was ordained by Hebrew Union College in 1940. He served first as assistant rabbi (1940–41), then as rabbi (1941–50) of Temple Beth Israel in Atlantic City, New Jersey. In 1950 he became rabbi of Temple Israel, Miami, that city’s oldest Reform synagogue. In Atlantic City, Narot was active in UJA drives and was founder and president of the Atlantic City Forum, composed of 60 civic organizations. He continued to divide his time between Jewish and civic concerns in Miami where he was member and chairman of the Dade County Community Board (1964–68). He was also president of the Dade County Welfare Planning Council (1961–63) and a founder of the Interfaith Agency for Social Justice.

[Gladys Rosen]

NAROWE, MORTON (1932–), rabbi. Born in Philadelphia in the U.S., Narowe came to Sweden in 1965 as rabbi for the Stockholm Jewish congregation, becoming chief rabbi in 1975 and emeritus in 1998. He was a member of the Swedish Bible Commission from 1974 to 2000 and in 1975 cofounded the Joint Jewish-Christian Interfaith Council. In 1977 he published a book entitled *Handledning för sörjande* (“Guidelines for the Bereaved”) and in 1990 he received his doctorate at the Jewish Theological Seminary of America. His thesis, “Zionism in Sweden: From Its Beginning until the End of World War I,”

provides unique insight into early Zionist history in Sweden. Rabbi Narowe also wrote numerous newspaper and magazine articles about Jews and Judaism, and participated in many radio and TV programs.

NASATIR, ABRAHAM PHINEAS (1904–1991), U.S. historian. Born in Santa Ana, California, Nasatir taught at the University of Iowa and then moved to San Diego State College. He was a fellow of the Social Science Research Council and president of the Pacific Coast Branch of the American Historical Association.

Nasatir specialized in the history of the United States West and Southwest, and published *Before Lewis and Clark* (2 vols., 1952). He edited Etienne Derbec's *A French Journalist in the California Gold Rush* (1964). Later his interest in the southwest expanded beyond the U.S. frontier to include Hispanic America and led to a history of that area, together with Helen M. Baily, *Latin America* (1960, 1968²). He was active in Jewish affairs.

In 1965 he received the Outstanding Professor Award from the California State University Foundation. The Nasatir Professorship of Modern Jewish History was established in his honor at San Diego State University, where Nasatir taught history for 46 years and was active in the community as an advocate of Jewish education.

His writings include *French Activities in California* (1945); with G.E. Monell, *French Consuls in the United States* (1967); with N.M. Loomis, *Pedro Vial and the Roads to Santa Fe* (1967); *Spanish War Vessels on the Mississippi, 1792–1796* (1968); *Borderland in Retreat* (1976); and *The Imperial Osages* (with G. Din, 1983).

NASAUD (Rom. **Nășăud**; Hung. **Naszód**), town in Bistrita-Nășăud county (Transylvania), Romania. Until 1918 and between 1940 and 1945, Nasaud was part of Hungary. While still under Hungarian rule, it was a center of the Romanian nationalist movement. Jews settled in Nasaud after the law prohibiting their settlement was abrogated in 1848 while residence in the town itself was still barred. Jews lived in the nearby village of Jidovitza (Entredam), today named *Rebreanu. The community was Orthodox and strongly influenced by *Hasidism. In 1885 the government designated the community as the administrative center for the Jews of all the villages in the district. At the beginning of their residence in Nasaud the Jews belonged to two different communities: the "Hungarian" and the "Polish." This situation lasted until the 1880s, when they decided to unite the congregations. The community possessed a large synagogue, a *bet midrash*, and a *heder*. Jewish children attended elementary and secondary school in which the language of instruction was Romanian. The Jewish population in

Nasaud itself declined from 859 in 1866 to 425 (12% of the total) in 1930, and 415 (12.9%) in 1940. Between the two world wars there was an important Zionist movement in the town. There were 1,198 Jews living in the surrounding villages in 1930. Some 400 Jews were deported to Auschwitz in the summer of 1944. In 1941 the Hungarian Horthiite authorities deported the "foreign" Jews to Kamenets-Podolski, in the Ukraine, where they were soon murdered by the Nazis. In 1944 the remaining local Jews were sent to a ghetto in Bistrita, the district capital, and from there deported to Auschwitz. After World War II, about 110 Jews returned to Nasaud, including former residents who had survived the camps and some who had previously lived in the surrounding district. As a result of immigration to Israel and elsewhere, the Jewish population dwindled and by 1971 only two families were left in the town.

[Yehouda Marton / Paul Schweiger (2nd ed.)]

NASHIM (Heb. נָשִׁים; "Women"), third order of the Mishnah, according to the accepted order mentioned in the homily of *Simeon b. Lakish (Shab. 31a; according to the order given by Tanḥuma (Num. R. 13:15), it is the first). *Nashim* deals essentially with matrimonial law and with the laws governing the relations between husband and wife. It also includes the tractates **Nedarim* ("vows") and **Nazir* ("the Nazirite"), respectively, since according to the Bible (Num. 30:4 ff.), the vow of a wife or a girl during her minority can be annulled by the husband or father (cf. Sot. 2a). The tractates included in *Nashim* are **Yevamot*, 16 chapters; **Ketubbot*, 13; *Nedarim*, 11; *Nazir*, 9; **Sotah*, 9; **Gittin*, 9; and **Kiddushin*, 4. As is customary, the tractates are arranged in descending order according to the number of chapters (see **Mishnah*). The *mishnayot* of *Nashim* also contain incidental aggadic passages, but at the end of *Sotah* and *Kiddushin* there are more continuous aggadic passages. In the Tosefta, *Yevamot* has 14 chapters; *Ketubbot*, 12 (or 13); *Nedarim*, 7; *Nazir*, 6; *Sotah*, 15; *Gittin*, 7 (or 9); and *Kiddushin*, 5. The aggadic section is richer than that of the Mishnah, particularly in *Sotah*. Because of their practical importance for matrimonial law and sexual morality, the tractates of the order *Nashim* are stressed in rabbinic study, and the more practically relevant parts have received extensive treatment by both the medieval commentators and the later rabbinical authorities, including all the responsa literature.

[David Joseph Bornstein]

NASH PAPYRUS, a second-century (c. 150) B.C.E. papyrus fragment written in square Hebrew script, containing the *Decalogue and the *Shema. The Nash Papyrus was the oldest biblical text known before the discovery of the *Dead Sea Scrolls. A single sheet, not from a scroll, was purchased from an Egyptian dealer by W.L. Nash, secretary of the Society of Biblical Archaeology in England, and published by S.A. Cooke in 1903. The papyrus is of unknown provenance, although allegedly from Fayyum. The text of the Decalogue accords closely with the Septuagint of Exodus (20:2 ff.), and must resemble the Hebrew that underlay the Septuagint trans-

lation (see table of variants in article *Decalogue). The *Shema* follows (Deut. 6:4–5), including the Septuagint’s preliminary to verse 4: “And these are the statutes and the judgments that Moses (so Nash; LXX, “the Lord”) commanded [the Israelites] in the wilderness when they left the land of Egypt.” The papyrus breaks off after the second letter of verse 5. The combination of the Decalogue and the *Shema* indicates that the text of the papyrus represents the Torah readings included in the daily morning liturgy of Second Temple times (cf. Tam. 5:1: “they recited the Decalogue, the *Shema*, etc.”).

[Moshe Greenberg]

NASHVILLE, city in central Tennessee, U.S. Although there had been individual Jewish families in Nashville almost since it was founded in 1780, it was not until 1851 that the Hebrew Benevolent Burial Society purchased land for a cemetery. This piece of land is still a part of The Temple Cemetery, which was listed on the National Register of Historic Places in 2004. The first congregation, K.K. Mogen David, chartered in 1854, was made up of the mostly German members of the Hebrew Benevolent Burial Society. A second congregation, Ohava Emes, was chartered in 1860. In 1867 the two congregations reunited under the name of Ohava Sholom. A short-lived Reform congregation, B’nai Yeshurun, had begun in 1864. Ohava Sholom adopted the Reform ritual and took the name “Vine Street Temple” when it completed a new sanctuary in 1876. It later relocated and took the name The Temple, Congregation Ohabai Sholom. Also in 1876 the Conservative congregation Adas Israel was chartered. It later became the present West End Synagogue. The Hungarian Benevolent Society, chartered in 1871, evolved into the Orthodox congregation Sherith Israel. In 1992 a second Reform congregation, Congregation Micah was started. The Chabad Congregation Beit Tefilah began in 2001.

Nashville’s very active Jewish community belies its population of barely 8,000. The Gordon Jewish Community Center was established in 1902 as the YMHA. Because of Jewish involvement in the civil rights movement, the Jewish Community Center was dynamited in 1958. The Jewish Federation, founded in 1936 as the Jewish Community Council, helps Jews everywhere sustain communal life. The Nashville Section of the National Council of Jewish Women was founded in 1901. Jewish Family Service celebrated its first hundred and fifty years in 2003. It has assisted in the settlement in Nashville of Holocaust refugees and survivors and Jews from the former Soviet Union. B’nai B’rith and Hadassah are active in Nashville.

Nashville’s Vanderbilt University has an active Ben Schulman Center for Jewish Life and offers undergraduate and graduate degrees in Jewish studies.

BIBLIOGRAPHY: F.S. Frank, *Five Families and Eight Young Men* (1962); idem, *Beginnings on Market Street* (1976); J. Roseman, *From Y to J, the Hundred-Year History of Nashville’s Jewish Community Center* (2004).

[Annette Ratkin (2nd ed.)]

NASI. In biblical usage, *nasi* signifies an important person, ranging from a king to a tribal chief or the head of a large family. The *nesi'im* are the leaders of the people in the wilderness (Ex. 16:22, 34:31) and are counted by name (Num. 1:5–16); they are sent to spy out the land and are charged with its apportionment (Num. 13:1–15, 34:16 ff.); they bring special gifts and sacrifices to the tabernacle (Ex. 35:27; Num. 7: 10 ff.). The institution reflects the tribal covenant and declines with the conquest of Canaan; it is revived by Ezekiel, who denotes by it the future ruler of the people. This prophet so names the rulers of other small nations as well, but his avoidance of the term *melekh* (“king”) for the future ruler of Israel may signify disapproval of monarchical absolutism. Jewish rulers during the period of the Second Temple used the title *nasi*, thus asserting their authority while avoiding the assumption of kingship. 1 Maccabees 14:41 tells that Simeon the Hasmonean was declared ethnarch (“ruler of the people”) by the people in 141 B.C.E., the Hebrew original of that title probably being *nasi*. Coins minted by *Bar Kokhba during the abortive revolt against Rome bear the inscription *Shimon Nesi Yisrael*, demonstrating that the rebel leader considered himself *nasi* of the people; the title is similarly found in letters credited to Bar Kokhba.

While the rabbis understood certain biblical instances of the term to mean “king” (see Hor. 3:3), they applied the title in a more limited sense to the president of the Sanhedrin, and perhaps to the heads of other bodies and orders too. The secular head of the sect described in the *Dead Sea Scrolls also bore the title (War Scroll, ed. Yadin, p. 184; in the English edition, p. 279). Rabbinic sources call one of the “pairs” (*zugot*), going back to Yose b. Joezer (c. 165 B.C.E.), the *nasi* (Hag. 2:2), and continue to use the term for the head of the court through amoraic times. Historians have long been divided on the reliability of these early sources: some claim the title is used anachronistically, its actual usage commencing only with *Judah ha-Nasi (fl. 190 C.E.); others believe it first came into use after 70 C.E., or in 30 B.C.E. at the time of Hillel the Elder; yet others accept the mishnaic testimony (the head of a Phoenician *synodos* is called *nasi* in 96 B.C.E.) and even claim that the office is pre-Maccabean. The office was held by scions of the Hillelite family, though unusual circumstances may have allowed others to hold the office for relatively short periods, and it may have been unfilled when conditions were most disturbed (such as during the Hadrianic persecutions). The last Hillelite *nasi* was Rabban Gamaliel (VI), who died in 425.

With the destruction of the Temple in 70 C.E., the office of the *nasi* becomes more significant. Onkelos performed the mourning ritual for Rabban Gamaliel II as though he were a king (see Sem. 8), and there is a strong implication that Rome extended him its recognition (see Eduy. 7:7). The Hillelite *nasi*

was recognized as political head (“Patriarch”) of the people by the Roman government (Cod. Theod. xvi. 8), an arrangement that allowed for more effective control and administration of its Jewish subjects. From the Jewish point of view, the Patriarchate provided the people with a Roman official sympathetic to their needs, and it placed significant power in rabbinic hands. The rabbis, for their part, relaxed certain religious laws so as to allow the patriarch greater ease in Roman society. Internally, the *nasi* presided over the Sanhedrin, fixed the calendar together with the court by proclaiming the new month and intercalating the year, led public prayers for rain, and ordained scholars (the content and scope of this ordination being somewhat unclear). He kept in touch with the Jewish communities of the Diaspora, dispatching apostles to preach, teach, set up courts, and raise funds. His court possessed legislative powers, and so most *takkanot* (“enactments”) were attributed to the presiding *nasi*.

[Gerald Y. Blidstein]

Post-Geonic Period

The title *nasi* persisted for many centuries and in different lands throughout the Middle Ages, sometimes as the title of a defined head of a Jewish institution, sometimes as an honorific title only, given to important personages and to sons of illustrious families. The *nasi* as the leader of the community (see *Autonomy) is found in Jerusalem; in Fostat, Egypt; in Baghdad, Damascus, and Mosul, Syria; and in Spain under Muslim rule. Some had considerable power, similar to that of the exilarch, especially the *nesi'im* of Erez Israel, Syria, and Egypt. The earliest person known in the post-geonic period to bear this title is Zemaḥ in Egypt or Syria, with the latest Sar Shalom b. Phinehas, who is mentioned in 1341 in Egypt and Baghdad. Most of the other twenty-odd names are from the 11th century, among them *Daniel b. Azariah, *David b. *Daniel, and Jedidiah b. Zakkai. One, Shem Tov, a most respected *nasi* of Jerusalem, could not prove Davidic descent and was exiled. Some *nesi'im* in Muslim Spain were appointed by the court and represented the Jews at court, collected taxes, and acted as chief justices. The *Karaites also called their heads *nasi*, from their founder *Anan b. David through the 18th century. From early modern times the title *nasi* was also given to the heads of the **kolel* institutions of the **Ḥalukkah*. In later modern times the title “president,” especially of democratic political and social bodies, was translated into Hebrew as *nasi*; as such it has been carried over into the political nomenclature of the State of Israel, being used to designate the president of the State.

NASI, GRACIA (c. 1510–1569), Marrano stateswoman and patroness. A member of the first generation of Portuguese Marranos (probably of Spanish descent), her original name as a Christian in Portugal, where she was born, was Beatrice de Luna. In 1528 she married Francisco Mendes, also a Marrano, who with his brother Diogo *Mendes built up out of a business in precious stones an important banking establishment, with a branch in Antwerp (directed by Diogo) which soon outdid the main establishment in importance. In 1537, after her husband's death, the widow left Portugal with her family (including her nephew, João Micas (Miques, Miguez), later Joseph *Nasi) and went via England to the Low Countries, where she joined her brother-in-law. There she became known in aristocratic society, and assisted her brother-in-law in his efforts to aid the flight of the Marranos and to stop the activity of the Inquisition in Portugal. After Diogo's death in 1543 she fled from Flanders (1545), leaving much of her property behind, and settled in Venice. There she was denounced to the authorities as a Judaizer by her own sister Reyna, Diogo's widow. João Miques, however, secured Turkish diplomatic intervention on her behalf and she was released. She and her family then settled in Ferrara. About this time she threw off the disguise of Christianity and became known by her Jewish name of Gracia Nasi.

In Ferrara she continued her remarkable work for organizing the flight of fugitive Marranos from Portugal; this is described in Samuel *Usque's *Consolaçam as Tribulaçoens de Israel*, which (together with the Ferrara Spanish Bible of 1553) is dedicated to her in admiring terms. In 1553 Gracia Nasi settled in Constantinople, where she continued similar activity; she also patronized scholars and established academies and synagogues in Constantinople and Salonika, and perhaps elsewhere. In 1556–57, she attempted to organize a punitive boycott of the port of *Ancona in Italy, in retaliation for the burning there of 26 Marranos as renegades from the Christian faith; she secured the intervention of the sultan for some of the accused who were Turkish subjects, including her business agents. In 1554 she was joined in Constantinople by her nephew (henceforth Joseph Nasi), who married her only child Reyna and was now associated closely with all her enterprises, both political and commercial. In 1558 or 1559 she secured from the sultan, in return for an annual payment of 1,000 ducats, a grant of the ruined city of *Tiberias in Erez Israel, where she set up a yeshivah; this grant was subsequently renewed, with a political motivation by Joseph Nasi.

Doña Gracia was certainly the outstanding Jewess of her day, and perhaps of the entire period between the fall of the Jewish state and the present. She was known as *La Senora*, or *Ha-Geveret*, and the synagogue known by this name long continued to exist in Constantinople. She was, however, inactive, perhaps because of ill health, for some years before her death, possibly in Erez Israel, in 1569.

[Cecil Roth]

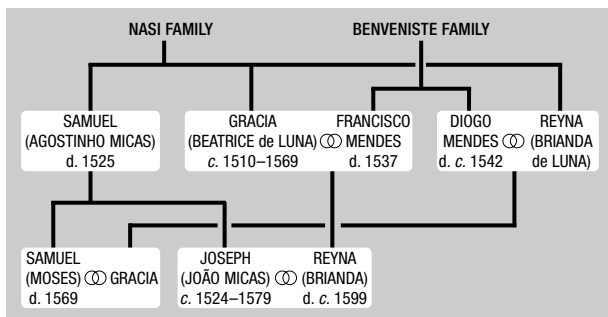

NASI, JOSEPH (c. 1524–1579), statesman. Nasi was born as a Marrano in Portugal, perhaps descended from the ancient Spanish Jewish family of Nasi. (See Chart: Nasi Family). He was the son of the Portuguese royal physician Agostinho (formerly Samuel) Micas (d. 1525), who taught medicine at the University of Lisbon. Joseph, known originally as a Christian by the name of João Micas (Miques, Míguez), accompanied his paternal aunt, Beatrice de Luna (Gracia *Nasi), when she went from Lisbon to Antwerp in 1537. After studying at the University of Louvain, he entered the banking establishment of *Mendes and was responsible for settling the family's affairs when Gracia left in 1545 for Italy. He was then in contact with Emperor *Charles v and the queen regent of the Netherlands, and is said to have been the jousting partner of their nephew, the future emperor Maximilian. Despite the dexterity of his negotiations, he was unable to save the family property from confiscation, and fled after them in about 1547. The following years he spent in France, where he became known to King Francis I, and later in Italy. He is alleged to have sought the Venetian government's concession of one of their islands as a refuge for fugitive *Marranos. Early in 1554 he joined his aunt, Gracia Nasi, in Constantinople, where he was circumcised and assumed the name of Joseph Nasi. In August he married her daughter Reyna. Henceforth, he was closely associated with his aunt in her commercial and political activities. In 1556 he joined her in organizing the blockade of the port of *Ancona to avenge the persecution of the Marranos there.

In the struggle for the succession to Sultan *Suleiman I between his sons Selim and Bajazet he supported the former, with the result that he received many favors from him, including the rank and emoluments of *muterferik* ("gentleman of the imperial retinue"). Due to his intimate knowledge of European affairs and statesmen, and his chain of agents throughout the Western world, he exercised great influence on the foreign policy of the Sublime Porte, helping Alexander Lapuseanu, the former voivode of Moldavia, to recover his throne and taking a prominent part in the peace negotiations between Poland and Turkey in 1562. In 1569 he encouraged the Netherlands' revolt against Spain and a letter of his, promising Turkish

support, was read out at a meeting of the Calvinist consistory of Amsterdam. By then his influence at Constantinople had grown, due to the accession to the throne (1566) of his friend Sultan *Selim II, who esteemed him as his favorite. Immediately after this, he was granted a monopoly on the import of wines through the Bosphorus, said to have brought him a net income of 15,000 ducats annually. In addition, he obtained important trading privileges in Poland. In order to satisfy certain claims against the king of France (who had sequestered the family property left in that country, on the pretext that Jews were not tolerated there), he obtained the sultan's firman (1568) ordering the confiscation of one-third of the merchandise on French ships docking at Alexandria. This firman was revoked in August 1569, the sultan stating that he had been misled. At this period, Nasi's influence at court seemed to wane and the French envoy, Grandchamp, launched an elaborate plot with Nasi's former physician, Daoud, in the hope of disgracing him. The plot failed and Daoud was excommunicated by the principal Jewish communities of the Turkish Empire.

Soon after Selim's accession, he appointed Nasi duke of the island of Naxos and the adjacent archipelago, whose Christian duke had recently been deposed, and eventually he also became count of Andros. He administered his duchy mainly from his palace at Belvedere near Constantinople, his local representative being Francisco Coronel or Coronello, a descendant of Abraham *Seneor, the last chief rabbi of Castile. During the War of Lepanto (1570–71) Nasi's dominions were reconquered by the Venetians for the former duke, but Nasi's authority was soon reinstated. In compensation for his loss, he is supposed to have been appointed voivode of Walachia in 1571, but the facts concerning this are obscure.

As early as 1558 or 1559, Doña Gracia obtained from the sultan various concessions in *Tiberias, then in ruins, probably with the intention of founding a yeshivah there. In 1561 Joseph obtained confirmation and extension of this grant, giving him plenary authority in Tiberias and seven nearby villages in consideration of an annual payment. In the winter of 1564–65 the rebuilding of the ruined walls of Tiberias was completed, ensuring a certain degree of physical security. This was the only practical attempt to establish some sort of Jewish political center in Palestine between the fourth and 19th centuries. It is not clear, however, whether Nasi thought of it primarily as a political, a charitable, or even an economic enterprise; it is certain in any case that he never visited his domain. He attempted to develop it commercially, fostering the wool and silk industries. He also sent a circular letter to the Jewish communities of Italy inviting them to settle there, and the community of Cori in the Campania made preparations (not perhaps fulfilled) to accept his invitation *en masse*. The intrigues of the native Arabs and Christians and the jealousy of Nasi's rivals in Constantinople led him to concentrate his interest elsewhere. Nevertheless, he remained titular lord of Tiberias until his death, the concession being afterward renewed for Solomon *Abenaes.

Nasi encouraged Jewish scholarship by his patronage of various scholars, such as Moses *Almosnino who composed his "Treatise on Dreams" at Nasi's request; the physician *Amatus Lusitanus, who dedicated his fifth *Centuria* to Nasi; Isaac *Akrish, whom he supported when he was impoverished by the Constantinople fire of 1569; and Isaac Onkeneira, his translator and director of the yeshivah and synagogue that he maintained at Belvedere. A fine library from which some manuscripts still survive adjoined these institutions. Joseph's only independent literary production, edited by the same Isaac Onkeneira, was his *Ben Porat Yosef* (Constantinople, 1577) – a polemic against astrology, which records a dispute he had with certain Christian dignitaries.

In 1569 Nasi threw his powerful influence on the side of the war party in Constantinople, and was considered to be mainly responsible for the Turkish war against Venice over Cyprus. It was reported that the sultan had promised to make him king of this island, though it would remain a Turkish fief. Some suggest that Nasi thus planned to provide a political solution to the Jewish problem of the day. Although the Turks conquered Cyprus in 1571 they suffered a naval disaster at Lepanto, in consequence of which the peace party led by Grand Vizier Mehemet Sokolli gained the ascendant. Nasi's influence henceforth waned, though he remained in possession of his dignities and privileges until his death. The balance of his achievement was disappointing, due to his inconstancy of purpose. It is difficult to decide what credence can be placed in the Spanish report that he repented of his action in abandoning Christianity and desired to return to Western Europe.

Joseph was survived by his widow, REYNA, duchess of Naxos (d. c. 1599), who maintained his library and allowed scholars access to it. In 1592 she set up a printing press in her palace at Belvedere. It was directed by Joseph b. Isaac Ashkeloni, and operated until 1594; it operated again from 1597 to 1599. Some 12 works, commemorating Reyna's generosity on the title page, were issued from the press.

NASIELSK (Rus. **Nasyelsk**), town in Warszawa province, E. central Poland. It received its first municipal privileges in 1386. The date of the first Jewish settlement is unknown, but a wooden synagogue was erected in 1650. The community listed 1,410 Jews in 1808, 4,741 in 1910 (76% of the total population), and 2,691 in 1921. Jews were not integrated into the economic life of the town and many of them emigrated after World War I. During the period of Polish independence, there

was a significant number of unemployed and poor among the Jews, a situation which deteriorated even further as a result of a boycott by Polish antisemites. Tension between Jews and Christians came to the fore in 1923, when the latter accused the Jews of a ritual murder. Dominant in the community was the *Agudat Israel, which in 1920, 1924, and 1931 won half of the seats of the community council. Among the educational institutions, there were the Beth Jacob schools of the Agudat Israel, the *Tarbut of the Zionists, and a Yiddish school, as well as such cultural institutions as a library and various drama circles. The wooden synagogue was rebuilt in 1880. Renowned *zaddikim*, such as R. Jacob Landa (d. 1886) and Ezekiel ha-Levi b. Meir Jehiel (d. during the Holocaust) settled in the town.

[Shimshon Leib Kirshenboim]

Holocaust Period

During the Nazi occupation, Nasielsk belonged to Bezirk Zichenau, established and incorporated into East Prussia by Hitler's decree of Oct. 26, 1939. Before World War II Nasielsk had about 3,000 Jews. During the bombardment of the town, a considerable number of Jews fled eastward. After the Germans entered, the Jewish community there existed for only three months. Existing data leave doubt whether the Jews were deported in one mass *Aktion* (deportation) on Dec. 3, 1939, or in two deportations, beginning in September or October. Some of the victims were shut up for a day or more in the local synagogue, beaten, and herded to the station. They were loaded onto trains and dispatched to Lukow, Mezhirech, and Biala Podlaska railroad stations. There they were driven out of the train and dispersed among various towns in the Lublin region of the General Government. Some of them reached the Warsaw Ghetto, where many Jews from Nasielsk, refugees from the first days of the war, already lived. After the deportation from Nasielsk, the local Germans and soldiers seized all Jewish property. Only about 80 Jews from Nasielsk survived the Holocaust.

NASNA (generally referred to in Hungarian Jewish historiography as **Náznánfalva**), village near Tîrgu-Mureş in Transylvania, Romania, within Hungary to 1918 and from 1940 to 1945. With the exception of *Alba-Iulia, Nasna had the oldest Jewish community within the borders of historic Transylvania. The first reliable information about the Jews there dates from 1601. Several were members of the Turkish Sephardi community and had family or communal connections with Jews in Alba-Iulia. The curious wooden synagogue of Nasna, of which only the eastern wall was constructed of brick, was apparently built in 1747 (or according to some opinions in 1757 or 1785). The exterior resembled a granary or warehouse and the walls, ceiling, pillars, and platform were painted and ornamented in the style of the contemporary church decoration of the local Unitarians. Quotations from the Psalms and prayers were inscribed on the walls and ceiling. The synagogue was

completely demolished in 1940. Some of the decorated boards which were salvaged were transferred to the Jewish Museum in Budapest. Members of the Nasna community were among the first Jews to settle in Tîrgu-Mureş from which Jews had been excluded until 1848. After the prohibition was abolished the Jewish population of Nasna dwindled. During the Holocaust the last two Jewish residents were deported to the ghetto in Tîrgu-Mures (and from there to their deaths). After World War II the Jewish community of Nasna was not revived.

[Yehouda Marton]

NASSAU, former duchy in Germany. In the Middle Ages Jews were to be found in Limburg on the Lahn, Diez, Montabaur, and other towns in the duchy. Limburg was the most important community before the *Black Death persecutions (1348), when all the Jews were annihilated. The settlement was reestablished, but there is evidence that they were again severely persecuted and expelled. After the Thirty-Years War (1618–48) *Wiesbaden emerged as the leading community. When the duchy of Nassau split up into minor principalities, Jews settled in the villages, where they engaged in peddling and livestock trading. In 1798 the French army abolished the *Leibzoll (“body tax”) in Nassau-Usingen, but it was reappplied in 1801 and only finally abolished in 1808 through the intervention of Wolf *Breidenbach, the *Court Jew of Brunswick. The authorities compensated themselves by raising the *Schutzgeld* (“protection money”; see **Schutzjuden*). Nassau-Usingen, which had 104 Jewish families, increased its territory and included about 530 Jewish families in 1805; after 1815–16, a single duchy was created. In 1836 there were 1,238 Jewish families (6,147 persons) distributed in 229 localities and conducting services in 95 *Judenschulen*. Only 11 communities in the various localities had more than 100 persons; the largest, Heddernheim, had 327, but almost all of the men were peddlers who were generally absent on their business. The capital, Wiesbaden, had 234 persons, and its rabbi, Abraham *Geiger, who served from 1832 to 1838, appealed unsuccessfully to the government to be appointed **Landrabbiner*. The Orthodox communities opposed his efforts, and Geiger left in frustration. In 1842 Reform services modeled on those of Wuerttemberg were introduced and four district rabbinate created. In 1848 full civic equality was temporarily granted, and in 1861 the Jewish *oath was abolished. In 1865, a year before it was annexed to *Prussia, as part of the province of Hesse-Nassau, there were in Nassau 7,000 Jews (1.5% of the population). Through emigration from the rural communities to the cities, in particular to Wiesbaden, their numbers subsequently decreased.

NASSAUER, RUDOLF (1924–1996), German-born poet and novelist. From a wealthy family of German Jews, Rudolf Nassauer was, by profession, a wine merchant as well as a writer. He wrote *Poems* (1947), and an ambitious novel, *The Hooligan* (1960), a powerful, imaginary picture of concentration-camp life. The victim's search for power over the aggressor is also the theme of *The Cuckoo* (1962). In 1947 he married the well-known British novelist Berenice *Rubens. They were divorced in 1967.

[William D. Rubinstein (2nd ed.)]

NASSER, GAMAL ABDUL (1918–1970), president of the United Arab Republic (Egypt) and spokesman of the Pan-Arab movement. As a leading member of the revolutionary group of “free officers,” in 1952 Nasser participated in overthrowing the Egyptian monarchy and establishing a republican regime. Quickly becoming the political leader of the “new” Egypt, he tried, with considerable success, not only to introduce economic and social reforms into his own country (including an agrarian reform and efforts at industrialization), but also to place Egypt and himself in the forefront of the nonaligned nations, the so-called Third World, together with Nehru's India and Tito's Yugoslavia. During this process, his extremely belligerent attitude toward Israel, as well as his interventions in the internal affairs of other Arab states, served as the main instruments of his policy. His anti-Israel policy included the organization of an economic boycott, armed infiltration and sabotage, closing of the Suez Canal to Israel shipping, and open belligerency.

Nasser participated as an officer in Egypt's invasion of the newly established State of Israel in 1948 and was a commander of the regiment besieged at the Faluja pocket. Upon his return to Egypt, he was decisively instrumental in the bloodless military coup, led by General Mohammad Naguib, which overthrew King Farouk. By 1954 he had succeeded in ousting Naguib, assuming full power, and overcoming the opposition of the Muslim Brotherhood and remnants of the previous ruling Wafd Party and the Communists. To reinforce his leadership, he created a political framework that became the only legal party in Egypt. At that time he wrote his book *The Philosophy of the Revolution* (1955). In the first years of his rule Nasser decisively changed the political course of events in Egypt and the Middle East by several drastic steps. His arms deal with the Soviet Union (ostensibly with Czechoslovakia) overturned the delicate balance of forces between Israel and her Arab neighbors, maintained by the Western powers, and inaugurated the Israel-Egyptian arms race, which from then on dominated the Middle Eastern scene and almost evolved into a confrontation of the super powers in the late 1960s and the beginning of the 1970s. By evicting the last remnant of British forces from the Suez Canal zone and nationalizing the Suez Canal Company (1956), thus removing a barrier between Egypt and Israel, and by his deliberate policy of actively supporting the murderous *fedayeen* raids deep into Israel territory, from the *Gaza Strip and from Sinai, Nasser exacerbated the situation until it ex-

ploded in the *Sinai Campaign. In spite of Egypt's total military defeat, Nasser, mainly with Soviet support, succeeded in converting it, at least in the eyes of his devoted followers, into a political victory that enhanced his prestige.

In 1956 and 1965 Nasser was the only candidate for presidential election. In the course of his reforms, Nasser nationalized the Egyptian press and removed his enemies and critics from influential positions. Over the years his anti-imperialist policy became more and more pro-Soviet, until Egypt became so dependent on the U.S.S.R. in military and economic spheres (heavy armament deliveries, military advisers, the construction of the Aswan Dam and of individual industrial plants, etc.) that in May 1967 Moscow was able to lead Nasser into the adventurous steps that provoked the *Six-Day War. After the defeat, Nasser resigned (on June 9) for a few hours, but reassumed power in response to mass demonstrations in the streets of Cairo demanding the continuation of his leadership. He tried to place the blame for the defeat on the senior military echelons, including his vice president, Marshal Abdel Hakīm 'Amer, who committed suicide. Other military leaders were convicted in show trials, and Nasser held a new election to the Arab Socialist Union.

After 1967 Nasser visited the U.S.S.R. several times. In his public pronouncements about Israel, he was careful to formulate the aim of Israel's destruction in non-explicit terms, though from time to time, particularly just before the Six-Day War, he left no doubt that this was the real aim of his policy. This again became clear at the Arab Summit Conference in Khartoum (Aug. 29–Sept. 2, 1967), when he initiated the policy of pledging the Arabs not to recognize Israel, not to negotiate with her, and not to conclude peace agreements with her. Nasser maintained that Egypt's acceptance of the Nov. 22, 1967 Security Council resolution was compatible with the "three noes" of Khartoum, but he interpreted the resolution as demanding an Israeli withdrawal from all occupied territories without negotiations and a peace treaty. When his policy failed to achieve any effective pressure on Israel, he renewed military attacks along the Suez Canal zone. When this failed to achieve its aim and ultimately turned into military setbacks for Egypt, in August 1970 Nasser accepted a U.S. initiative for a limited cease-fire period and indirect negotiations with Israel, under the Security Council resolution, in exchange for an Israeli acceptance of the principle of withdrawal from occupied territories. Nasser died suddenly in September 1970 before the new stage of his policy bore any fruit.

Nasser was adept at adjusting his personal image and tone to whomever he addressed, so that while in Arab eyes he was the incarnation of the fight against Israel and for Arab glory, many Western circles and media were impressed by his reasonableness and moderation. This diversity became particularly evident when, on the one hand, he gave an Indian newspaper editor a copy of the Protocols of the *Elders of Zion as an explanation of the Jewish "world conspiracy," while on the other, with Western people, he continuously stressed that he clearly distinguished between Jewry and Zionism. These

declarations notwithstanding, Egypt's Jews suffered persecution and humiliation during his rule, chiefly after Egypt's defeat in 1967.

NASSY, DAVID DE ISAAC COHEN (late 18th century), Caribbean physician, Jewish community leader, and publicist. Nassy, born in Surinam into its leading Sephardi family, was a descendant of David Nassy, who had founded the Jewish community there in 1664. The younger David first appears in 1785 as a signatory to a petition for a college of letters in Surinam. Shortly thereafter he became president of the *Regenten* (board) of the local Jewish community, and in this capacity was the first signatory of a communication to the German Christian advocate of Jewish rights, Christian Wilhelm von *Dohm. At the latter's request, Nassy played a leading role in compiling *Essai historique sur la Colonie de Surinam* (2 vols., Paramaribo, 1788), a record of the Jewish role in the history of the colony. Restrictions on Jewish freedom led him to St. Thomas for a time and subsequently to Philadelphia (1792), where he was the first Jewish physician to practice in that city. An outbreak of yellow fever the following year brought him into conflict with his foremost colleague, Dr. Benjamin Rush, over diagnosis and treatment. Nassy published his findings in *Observations on the Cause, Nature, and Treatment of the Epidemic Disorder Prevalent in Philadelphia* (1793), in which he pointed out his success in losing only 19 patients (11 of whom had already received Rush's treatment) out of 117 afflicted. Nassy's scientific work earned him election to the American Philosophical Society. In 1795 he returned to Surinam, where he went into business. Three years later he published *Lettre Politico-Theologico-Morale sur les Juifs* (1798?) with a Dutch translation, supporting the emancipation of Dutch Jewry.

NASZ PRZEGLĄD ("Our Review"), Jewish Polish-language newspaper. *Nasz Przegląd* was published in Warsaw from 1923 to 1939 and served as an informative political organ with a Zionist-nationalist orientation. It had been preceded by *Nasz Kurjer*, which first appeared in 1917 at the incentive of the journalist Jacob Appenzlak, aided financially by Joseph *Dawidsohn and Samuel Jacob *Jatzkan, editor of **Haynt*. In 1920 *Nasz Kurjer* was reorganized on a cooperative basis, and in 1923 appeared under its new name *Nasz Przegląd* as a non-party nationalist organ. Nathan Szwalbe, Saul Wagman, Jacob Appenzlak, and Samuel Wołkowicz all served as associate editors. Its permanent contributors included noted Jewish writers

and publicists, such as Samuel *Hirschhorn, Florian Sokolow, Fishel *Rotenstreich, Janusz *Korczak, the political writer Bernard Singer (who wrote under the pseudonym “Regnis”), and the historians Majer *Balaban and Emanuel *Ringelblum. Several prominent progressive Polish intellectuals worked within the framework of the newspaper, including the philologist Baudouin de Courtenay and the journalist W. Rzymowski. It had many Polish non-Jews among its readers.

Nasz Przegląd was not a campaigning newspaper and did not take a fixed ideological stand, developing a tendency to adapt to the changing political situation. The members of its staff differed in their outlooks, although the pro-Zionist trend was marked. While *Nasz Przegląd* supported the Polonization of Jewish culture, many of the Jewish intelligentsia

became influenced by it toward the Zionist cause. It published installments of important works of Yiddish and modern Hebrew literature in Polish translation, including those of Joseph *Opatoshu and Singer, and J. *Klausner’s *Jesus of Nazareth*. *Nasz Przegląd*’s daily circulation reached 40,000 and its staff comprised some 50 writers. The newspaper owned a modern printing-house which published a children’s supplement, *Mały Przegląd*, edited by Janusz Korczak, as well as a women’s weekly, *Eva*, edited by Paulina Appenzlak.
