The letter "N," a part of the illuminated word *In* (*diebus Assueri*) at the beginning of the Book of Esther in a 12th-century Latin Bible. On the right of King Ahasuerus, Haman is being hanged. The "I" frames the figure of Esther. Rheims. Bibliothèque Municipale, Ms. 159, fol. 5v.

NAT-NY

NATANSON, LUDWIK (1822–1896), physician and communal worker. A member of the Jewish intellectual and assimilationist circle of Warsaw, Natanson was the son of the banker and industrialist Wolf Zelig Natanson (1795–1879). In 1847 he founded the periodical *Tygodnik Lekarski*, one of the first modern medical publications in Polish, which he edited and financed until 1872. Natanson was also one of the public health pioneers in Poland, and was active in the campaign against the cholera epidemic in Warsaw (1848–52). In 1863 he was elected to the presidency of the Polish medical society. In 1871 he became chairman of the executive of the Jewish community of Warsaw, a position he held until his death. As chairman, Natanson successfully reorganized and considerably extended the public and administrative services of the community, managing also to balance its budget. He encouraged productivity among the Jewish poverty-stricken classes and was the initiator and founder of vocational schools and a community workshop center. He supported (1878–88) the secondary school which had 1,400 Jewish pupils. On his initiative, a new school building was erected, and community organizations and the cemeteries were renovated. He was the initiator of a project to erect a modern Jewish hospital in the Czyste district, and it was also during his term of office that the magnificent synagogue of Tłomacka Street was built. In 1874 Natanson obtained authorization to establish a Jewish semi-

nary for teachers. He was supported in his public activities by bourgeois circles and the assimilationist Jewish intelligentsia. The energy which he showed during the pogrom in Warsaw in December 1881 was of great assistance in maintaining the morale of the Jewish community.

[Arthur Cygielman]

NATANSON, MARK (1849–1919), Russian revolutionary. Born in Svenziany, the son of a wealthy Jewish businessman, Natanson graduated from a Kovno secondary school. He was the leading figure of the "Chaikovski circle," which played a great part in molding the opposition spirit against the Czarist regime among the Russian university youth in the 1870s, and was prominent in the Populist movement ("narodniki"). A brilliant organizer, and possessed of considerable business abilities, he was responsible for many daring revolutionary undertakings. Together with his first wife, Olga – a highly intelligent person and a passionate believer in radical ideas – he masterminded Prince Peter Kropotkin's escape from prison. He was a close friend of Georgi Plekhanov, who later became

“the father of Russian Marxism.” He managed to continue his revolutionary activities even during the many years he spent as a convict in Siberia. In 1917, he joined the left wing of the Russian Social Revolutionary Party and helped Lenin to disband the Constituent Assembly. He later became disillusioned with the Communist regime, left the Soviet Union, and died a lonely man in Switzerland. From the time that he joined the Russian revolutionary movement, he completely identified himself with Russian life, taking no interest in Jewish affairs.

[Schneier Zalman Levenberg]

NATHAN (Heb. נָתָן), prophet in the days of David and Solomon). Nathan, together with Zadok the priest, anointed Solomon as king after encouraging and activating the people of the royal court to proclaim him king. Two of his prophecies are known: one about the postponement of the building of the Temple from David's time to the time of his son (11 Sam. 7; 1 Chron. 17) and the election of David's dynasty; the second is the prophecy of rebuke to David about Bath-Sheba and the killing of Uriah (11 Sam. 12: 1–15). From his involvement in the life of the court and the clear connection of his prophecy to the king and the monarchy, Nathan, like the prophet Gad, may be designated as a court prophet. From the contents of his prophecies, however – not only his sharp rebuke in connection with Bath-Sheba but also his advice regarding the Temple, which was not in any way subject to the king's approval or control – there is justification for placing Nathan in the category of prophets who rebuke and advise, such as Elijah and Elisha (see *Prophets and Prophecy).

In his prophecy about the postponement of the building of the Temple to the time of Solomon, Nathan promises the House of David unconditionally that his dynasty will endure forever, and that the relationship between the Lord and each of David's successors will be like that between father and son. The reason for the postponement of the building of the Temple is not clarified. (The explanation of bloodshed in 1 Chron. 22:7–10 seems to have been inserted later.) On the basis of the wanderings in the wilderness, where God was present in the Tent and the Tabernacle, it would appear, however, that the monarchy was not yet firmly established and that the time had not yet come for removing the symbols of tribal tradition – the Tent and the Tabernacle and replacing them with a permanent house (temple) of the Lord, similar to the house (palace) of the king. The view of the monarchy in Nathan's prophecy – in which it is seen as granted to David by an act of divine grace (no reference is made to the monarchy of Saul) and as a complete and unbroken continuation of the Lord's providence and governance from the time of the Exodus from Egypt to the time of the judges – differs essentially from that of 1 Samuel 8–12, according to which Samuel opposed monarchy as such. The antiquity of the prophecy attributed to Nathan is attested by the description of the monarchy as a calm and secure period of respite, without any intimation of the division of the kingdom. The punishment of a king's son who transgresses will be a rebuke only “with the

rod of men, and with the stripes of human beings” (11 Sam. 7:14). In the rebuke over the affair of Bath-Sheba, Nathan, by means of the parable of the poor man's lamb, traps David (even with his privilege as king) into passing judgment upon himself. This prophecy contains a harsh vision of the future of the house of David: “the sword shall never depart from your house” (11 Sam. 12:10). This prediction, which is not recalled in this way in any other passage in the Bible, and which probably does not allude to any actual event such as the division of the kingdom, stamps the rebuke with the seal of authenticity. Nathan appears not only as warning against evil and demanding expiation for murder but also as commanding the king to establish law and justice, which is his duty as judge and is embodied in the monarchy itself, as explicitly stated in the chronicles of David's reign (11 Sam. 8:15; see *David, *Solomon). The “book of Nathan the prophet,” which relates the histories of David and Solomon, is mentioned in Chronicles (1 Chron. 29:9; 11 Chron. 9:29), in keeping with the theory of the author of Chronicles who also represents other prophets as chroniclers of the events of their days.

[Samuel Abramsky]

NATHAN, English family, distinguished in public service. The first member of the family to settle in England was MEYER (Michael) NATHAN who came from Dessau about 1790. His grandson, Jonah, married twice. SIR NATHANIEL (1843–1916), the son of Jonah's first marriage, a barrister practicing in Birmingham from 1873 to 1888, became attorney general, judge of the Supreme Court, and from 1901 to 1903 acting chief justice of Trinidad. His half brother, SIR FREDERIC LEWIS (1861–1933), explosives expert and soldier, joined the Royal Artillery in 1879 and organized explosives manufacture before and during World War I. Later, he specialized in fuel problems and was president of the Institution of Chemical Engineers from 1925 to 1927. From 1905 to 1926 he was commandant of the Jewish Lads' Brigade. Frederic's brother SIR MATTHEW (1862–1939) joined the Royal Engineers in 1880 and served in Sudan and India. The first Jew to be a colonial governor, he was governor of the Gold Coast (1900–03), Hong Kong (1904–07), and Natal (1907–09). Secretary to the General Post Office and the Board of Inland Revenue, he was appointed undersecretary to the Lord Lieutenant of Ireland in 1914 and was in sole charge of Dublin Castle when the Easter Rising occurred in 1916. An inquiry criticized his failure to warn the British government of the danger. After serving as secretary of the Ministry of Pensions he became governor of Queensland (1920–26) and retired to Somerset where he took part in local government and wrote a monumental local history. In Jewish life, he represented the New West End Synagogue on the United Synagogue Council. The fourth brother, SIR ROBERT (1866–1921), served in the Indian civil service from 1888 to 1915 and was appointed chief sec-

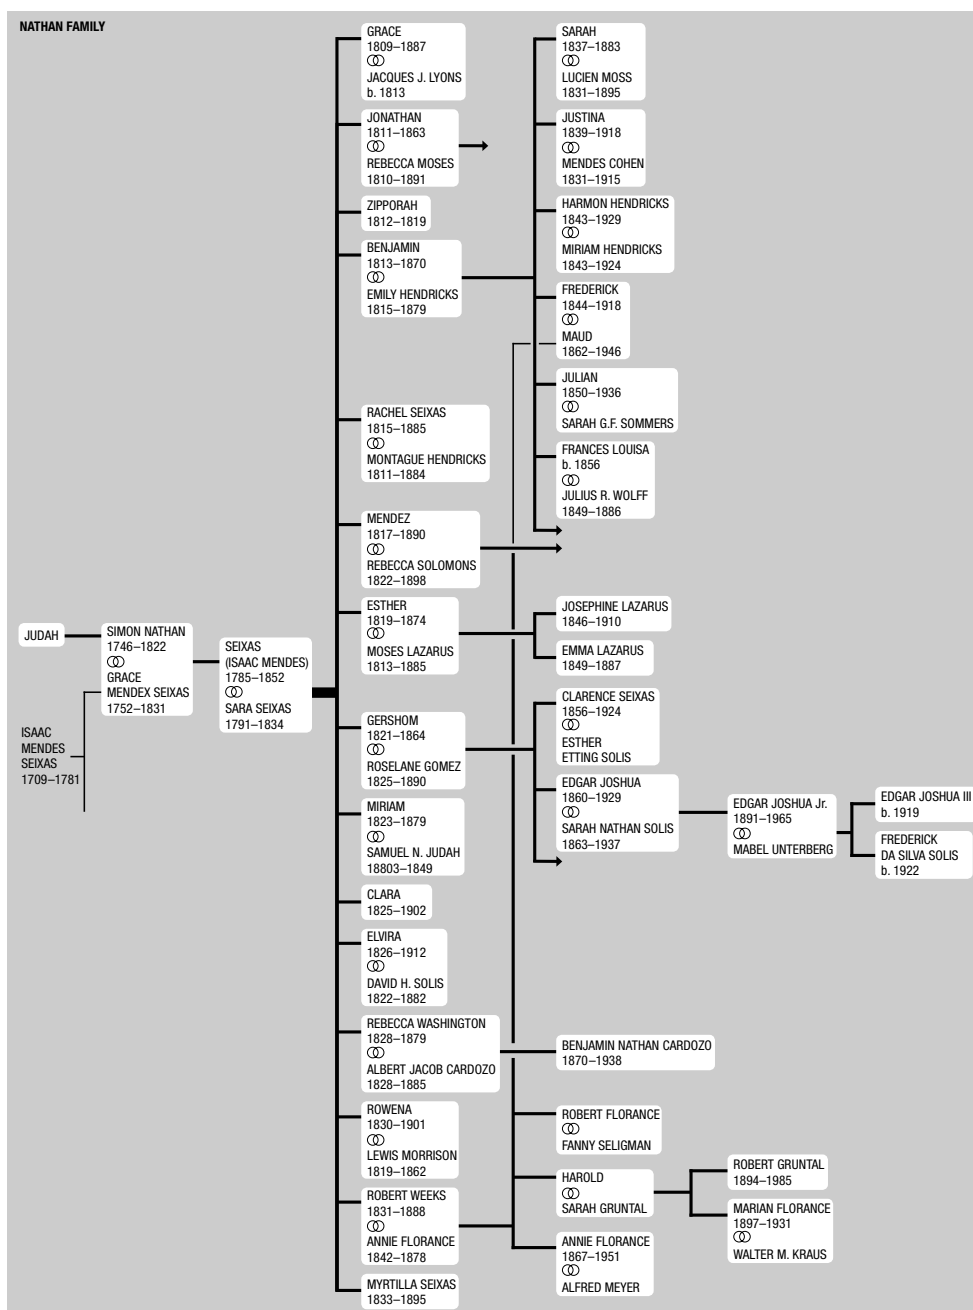

retary to the governor of Eastern Bengal and Assam in 1910. In World War I he did important work in counterespionage.

[Vivian David Lipman]

NATHAN, U.S. family. **SIMON NATHAN** (1746–1822), who was born in England, went to the colonies in 1773 by way of Havana. During the Revolution, he supported the revolutionary cause and helped ship supplies to the colonists from Jamaica

where he then resided. After leaving the island, he proceeded to New Orleans and from there went to Williamsburg, Virginia, in 1779. He loaned large sums of money to the Virginia state government for which he received the thanks of the then governor, Thomas Jefferson. When these loans were not repaid he suffered great financial loss, and was involved in protracted litigation with Virginia for many years. Possibly as a consequence of this litigation, he went to Philadelphia and enlisted in the militia. There, in 1780, he met and married Grace Mendes Seixas (1752–1831), the daughter of Isaac Mendes *Seixas. Nathan became a Mason the following year, a trustee of the Congregation Mikveh Israel in 1782, and president of

the congregation in the years 1782 and 1783. Soon afterward, he moved to New York, where he served as president of the Congregation Shearith Israel in 1785, 1786, 1794, and 1796. He opened a successful dry goods business with Aaron Pimental, enabling him to contribute sums of money to the synagogue.

Their son SEIXAS (Isaac Mendes) NATHAN (1785–1852) married his cousin Sara Seixas (1791–1834), daughter of Benjamin Mendes Seixas (1746–1817). They had 15 children. They and their children married into the Lazarus, Lyons, Cardozo, Gomez, and Hendricks families among others. Some of Simon Nathan's descendants include: the noted poetess EMMA *LAZARUS; her sister JOSEPHINE (1846–1910), a noted essayist; the novelist ROBERT *NATHAN; ANNIE NATHAN *MEYER, founder of Barnard College; MAUD NATHAN (1862–1946), suffragette and president of the Consumers' League for 20 years; and BENJAMIN N. *CARDOZO, member of the United States Supreme Court.

BIBLIOGRAPHY: D. de S. Pool, *Portraits Etched in Stone* (1952).

[Leo Hershkowitz]

NATHAN, ABRAHAM (d. 1745), founder of the London Ashkenazi community, also known as Reb Aberle, Aberle London, and Abraham [of] Hamburg. The son of R. Moses Nathan (Norden) of Hamburg, he was a wealthy diamond merchant and a rabbinical scholar of considerable attainment. It was through him that Zevi *Ashkenazi was induced to go to London in 1705 to arbitrate in the dispute then dividing the Sephardi community regarding the orthodoxy of the opinions of the haham David *Nieto. In 1704 Nathan was prevented by the Court of Aldermen from erecting a separate synagogue with a yeshivah attached. Later, however, he took the lead in vindictive fashion in the divorce dispute which resulted in the setting up of the Hambro' Synagogue by his rival Marcus Moses. He ultimately returned to Hamburg in reduced circumstances.

BIBLIOGRAPHY: C. Roth, *History of the Great Synagogue* (1950), 35–45.

[Cecil Roth]

NATHAN, DAVID (1816–1886), pioneer New Zealand businessman and communal leader. Nathan arrived in Kororaraka from London in 1840, trading as storekeeper. In 1841 he married Rosetta Aarons in New Zealand's first Jewish marriage. He opened a store in Auckland when it became the capital and bought 2,500 acres of land in the adjoining Manurewa. Nathan served on the Auckland City Council and on many local bodies. He went into auctioneering and established New Zealand's oldest and most diversified wholesale business. Sabbath and holiday services were held at his warehouse for over a decade. He served four terms as president of the Auckland Hebrew Congregation. Through his leadership and example he unified and conciliated all groups in the congregation. A strong force in the town's financial affairs, Nathan showed particular interest in working class welfare. His two sons L.D. and N.A. Nathan successively led the congregation after his death for almost half a century.

BIBLIOGRAPHY: L.M. Goldman, *History of the Jews in New Zealand* (1958), index. **ADD. BIBLIOGRAPHY:** J.C. Mogford, "David Nathan," in: *The Dictionary of New Zealand Biography*; L.D. Nathan, *As Old as Auckland: A History of L.D. Nathan & Co., Ltd., and of the David Nathan Family* (1984), index.

[Maurice S. Pitt]

NATHAN, ERNESTO (1845–1921), Italian statesman and the first Jewish mayor of Rome. Born in England, he came into contact with the Italian patriot Giuseppe Mazzini who was exiled to London for his radical views. Nathan was taken to Italy by his mother in 1859 and settled in Rome in 1871 soon after Rome became part of the Kingdom of Italy. He became manager of Mazzini's newspaper *Roma del Popolo* and was a passionate republican and an advocate of the secular state. Nathan became an Italian citizen in 1889 and was twice grand master of the Italian Masons. He was elected mayor of Rome in 1907 and held office until 1913. Following the Italian entry into World War I in 1915, Nathan enlisted in the army and although over 70 served at the front as a lieutenant.

ADD. BIBLIOGRAPHY: M.I. Macioti, *Ernesto Nathan: un sindaco che non ha fatto scuola* (1983); P.D. Mandelli, "Ernesto Nathan cittadino pesarese," in: *La presenza ebraica nelle Marche: Secoli XIII–XX* (1993), 355–62; A.M. Isastia, *Ernesto Nathan: un "mazziniano inglese" tra i democratici pesaresi* (1994); R. Ugolini, *Ernesto Nathan tra idealità e pragmatismo* (2003).

NATHAN, GEORGE JEAN (1882–1958), U.S. drama critic and editor. Born in Fort Wayne, Indiana, Nathan became the foremost American critic of his time, and took the lead in freeing the American theater of the stogy and melodramatic trappings of the *Belasco period. He was in journalism for more than 50 years, mostly linked with the world of Broadway as critic for *The Bohemian Magazine* (1906–08), *Harper's Weekly* (1908–10), *The Smart Set* (1908–23), and *The American Mercury*, which he founded with H.L. Mencken in 1924. He was also a founder – with Theodore Dreiser, Eugene O'Neill, and others – of *The American Spectator* (1932–39).

A detached, sophisticated, and cynical figure, Nathan was something of a boulevardier, not only in his personal habits but also in his writings. Nevertheless, he was a man of learning, critical insight, and courage, who paved the way for Eugene O'Neill and his type of dramatic writing. Nathan labored consistently to educate American taste to accept writers such as Sean O'Casey, Jean Giraudoux, and Ludwig Thoma. He wrote several books with Mencken, including the satirical play *Heliogabalus* (1920).

His own books, over 30 in number, include: *Mr. George Jean Nathan Presents* (1917); *The Theater, the Drama, the Girls* (1921); *Materia Critica* (1924); *Testament of a Critic* (1931); *The Theater of the Moment* (1936); *Morning After the First Night* (1938); an *Encyclopaedia of the Theater* (1940); and *The Theater of the Fifties* (1953).

[Charles Angoff]

NATHAN, HARRY LOUIS, BARON (1889–1963), English lawyer and politician. Born in London, the son of a fine arts publisher, Nathan was educated at St. Paul's school before becoming a solicitor. He fought in Gallipoli, Egypt, and France during World War I. In the 1920s he became legal advisor to the British Zionist Organization and to many Jewish bodies in Palestine. From 1929 to 1934 he was a Liberal member of Parliament and then switched and was a Labour member of Parliament from 1934 to 1935 and from 1937 to 1940. Following the outbreak of World War II Nathan became chairman of the National Defense Public Interest Committee. He was elevated to the House of Lords in 1940 as Baron Nathan and from 1946 to 1948 was minister of civil aviation in the postwar Labour government. Later he was departmental chairman of the governmental committee on the law of customs and excise and chairman of the governmental committee to investigate the law and practice of charitable trusts, which led to a new act. Lord Nathan was an active figure in Jewish communal affairs as a member of the Board of Deputies of British Jews, and president of the European Committee of the third, fourth, fifth, and sixth *Maccabiah. He was also prominent in national civic affairs as chairman of the Royal Geographical Society and of the Royal Society of Arts. Lord Nathan wrote *Medical Negligence* (1957) and *The Charities Act, 1960* (1962). His wife, ELEANOR (Stettauer; 1892–1972), was the second female chairperson of the London County Council in 1947–48.

BIBLIOGRAPHY: H.M. Hyde, *Strong for Service: The Life of Lord Nathan of Churt* (1968). **ADD. BIBLIOGRAPHY:** ODNB online.

NATHAN, HENRY (1842–1914), Canadian politician. Nathan was born and educated in London, England, and as a young man of 20 moved to Victoria, British Columbia. In Victoria he established himself as an importer and wholesale merchant, also taking an active interest in public affairs. In 1865 he was elected master of the local Masonic lodge. With the support of prominent politicians, in 1870 Nathan ran successfully for a seat in British Columbia's last legislative assembly before the colony entered the Confederation of Canada. He was strongly in favor of the union of British Columbia with Canada and urged such measures as increased representation, responsible government, and greater nonsectarian education. In November of 1871, shortly after B.C. became part of Canada, Nathan was elected one of the new province's first six members of Parliament, becoming the first Jew to sit in the Canadian House of Commons. As an MP, he was a staunch supporter of Prime Minister John A. MacDonald's government, using his position as the representative of Victoria's business interests to urge that the terminus of the Trans-Canada Railway be built as close as possible to the provincial capital. Nathan was re-elected in 1872 and served until 1874, when he retired from politics. Although the national railway was never extended to Victoria, Nathan is widely credited as being a prime mover in bringing British Columbia into the Dominion of Canada.

[Barbara Schober (2nd ed.)]

NATHAN, ISAAC (1790?–1864), composer, singer, and writer. Nathan was born in Canterbury, England, and his father was probably the local *hazzan*. He studied with Solomon Lyon at Cambridge to enter the rabbinate, but in about 1810 he went to London and began a career as singer, composer, and music teacher. From Domenico Corri he learned the classical tradition of Italian vocal culture, stemming from Corri's master, Porpora; Nathan's *Musurgia Vocalis* (1836²) is one of the few remaining written documentations of this method. In London he became friendly with Lord *Byron, whose *Hebrew Melodies* were written at Nathan's request and set by him to music. In the first editions of this work (from 1815 onward), which achieved great popularity, the name of John *Braham was featured on the title page as composer, in addition to that of Nathan, but Braham contributed nothing to the work except his prestige. After a financial setback, caused mainly by debts incurred while on a secret mission on behalf of King William IV, Nathan immigrated to Australia in 1841 and settled in Sydney as Australia's first resident professional composer. There he organized musical performances, published a magazine entitled *The Southern Euphrosyne*, and composed the first opera written and produced in Australia, *Don Juan of Austria* (1847). Nathan died in Sydney from injuries received while stepping off (or being run over by) a tram. His great-granddaughter Catherine Mackerras wrote his most informed biography, and her son was the conductor Charles Mackerras. His great-nephew was the pianist Harold Samuel.

Nathan's works include various operas and songs. Several traditional Jewish melodies are found in his *Musurgia Vocalis*. For some of the *Hebrew Melodies* he also used some traditional tunes, but, except for *Maoz Zur (set to Byron's "On Jordan's Banks"), they are quite transformed by his superficial compositional initiative. In certain of the songs published in Australia, he reworked aboriginal melodies. His grandson, Harry Alfred Nathan, has been proposed as the composer of the popular Australian song "Waltzing Matilda," but the claim is a matter of dispute.

[Bathja Bayer]

NATHAN, JOSEPH EDWARD (1835–1912), New Zealand businessman and communal leader. Born in London, Nathan prospected unsuccessfully in the Australian goldfields before arriving in Wellington in 1857. There he went into partnership with Jacob Joseph and built up the flourishing wholesale import-export business which later became Joseph Nathan and Company. He held office on the Wellington Harbor Board, the Chamber of Commerce, the Gas Company, and other enterprises, and was chief promoter and chairman of the Wellington-Manawatu railway. Glaxo Laboratories, which later became important in the manufacture of pharmaceutical

products in England, developed from his cooperative farming ventures. (The pharmaceutical giant Glaxo Wellcome, developed in part from his firm, became one of the largest drug manufacturers in the world. Nathan's son Alexander registered the name "Glaxo" for his dried milk powder in London in 1906.) In 1887 Nathan retired to London after having been one of the leaders of the Wellington Jewish community for over 40 years and president of its first synagogue (1870). His family remained prominent in New Zealand life.

[Maurice S. Pitt]

NATHAN, MANFRED (1875–1945), South African lawyer, author, and communal leader. Born in Hanover (South Africa), the son of a German pioneer in the Cape, Nathan practiced at the Johannesburg Bar. He served for a time on the Natal Bench and became president of the South African Special Income Tax court in 1931. An assiduous writer on legal and constitutional subjects, Nathan was the author of a four-volume work, *The Common Law of South Africa* (1904–09) and the studies *The South African Commonwealth* (1919) and *Empire Government* (1928). Among his many other writings were a life of President Paul Kruger, an autobiography, *Not Heaven Itself* (1944), and several works on South African history. Nathan was active in Jewish communal life. He was a founding member of the Transvaal Jewish Board of Deputies (1903) and was president in 1905 and 1907. He was on the first executive of the South African Board of Deputies (1912) and vice president of the South African Zionist Federation (1904–1907).

Nathan was also active in politics and was elected to municipal and provincial legislative bodies in the Transvaal, and served on the boards of educational institutions and hospitals.

[Louis Hotz]

NATHAN, MAUD (1862–1946), U.S. activist, suffragist, and president of the Consumer's League. The second of four children born to Annie Florance and Robert Weeks Nathan, Nathan descended from a line of Sephardi Jews in America that included Gershom *Seixas, the first *hazzan* in the New York Jewish community, poet Emma *Lazurus, and Benjamin *Cardozo, a United States Supreme Court Justice. Her sister, Annie Nathan *Meyer, founded Barnard College. Maud Nathan married wealthy financier Fredrick Nathan, a first cousin 19 years her senior, in 1879; their only child, Annette, died in 1895 at the age of nine. The loss of her daughter and a desire to become more involved in society led Nathan to join the board of directors of New York's Mount Sinai Hospital. She also volunteered as a teacher of English to immigrants at the Hebrew Free School Association and served as her synagogue's first sisterhood president. Expansion of her involvement out-

side the Jewish community soon followed as the Board of Exchange for Women's Work offered an opportunity to engage in politics. Nathan successfully lobbied the sponsors of a bill placing a high tariff on imported beads, arguing that it would increase the economic pressures already placed upon women doing needlework in their homes. Nathan was then contacted by Josephine Shaw Lowell, founder of the Consumer's League, who asked for her assistance in investigating the conditions under which women worked in retail stores, including bad sanitation and meager earnings. As president of the Consumer's League from 1897 to 1927, Nathan investigated the bad conditions experienced by women working in retail and encouraged consumers to patronize shops which provided decent environments and salaries for their workers. Nathan then became active in the women's suffrage movement, serving as president of the Fifteenth Assembly District of New York's Women's Suffrage Party (wsp). While her husband strongly supported her involvement, other family members, including her three siblings, disagreed with the suffrage platform. Undeterred, Nathan specifically targeted Jewish women, including recent East European immigrants, for involvement in wsp activities. Her efforts within Jewish and non-Jewish circles on behalf of women's rights won her the admiration of individuals such as Carrie Chapman Catt, founder of the League of Women Voters, who wrote the foreword to Maud's autobiography, *Once Upon a Time and Today* (1933). Nathan was also the author of *Story of an Epoch-Making Movement* (1926), about the Consumers League.

[Shira Kohn (2nd ed.)]

NATHAN, MORDECAI (15th cent.), French physician of Avignon, the teacher of Joseph b. Solomon *Colon. Nathan was mentioned among three "Jews and doctors of medicine" together with three "Christian doctors of medicine in Avignon" in a manuscript entitled "Thoroughly Tested Prescription for Pestilential Disease" (Bibliothèque Nationale, Ms. Français 630, fol. 54). It appears that he was also identified with M. Nadi, the mathematician (Wolf, *Bibliotheca*, 4 (1733), 904).

He is known by his work *Me'ir Nativ*, also called *Ya'ir Nativ* (Venice, 1523), the first Hebrew concordance of the Bible, compiled between 1437 and 1448. Nathan was familiar with Christian scholarly circles, and more than once engaged in theological polemics with them. He became convinced from these polemics of the need to prepare a Hebrew concordance of the Bible to make it easier for Hebrew-speaking Jews to reply to Christians. He arranged the books of the Bible in the order of the Vulgate (Latin translation). He explained the roots of the words in the most concise language. Verbs and nouns, however, appear in disorder, and he omitted prepositions and formative letters. He also omitted proper nouns and the Aramaic words in the Bible. Christian scholars engaged in the

study of Hebrew attached great importance to the work. Mario de Calascio published the concordance a second time (Rome, 1621) together with a Latin translation, in which the defects of the Hebrew edition were remedied. Differences of opinion have arisen about the identity of the author of *Me'ir Nativ*. The inner title page gives Mordecai Nathan as the name of the author, whereas the introduction is signed by Isaac Nathan. Johannes Buxtorf concluded, therefore, that Mordecai Nathan was also known as Isaac Nathan. I.S. *Reggio concluded that the author was Isaac Nathan and that the name Mordecai on the title page was an error. A. Tauber thought that the author was Mordecai Nathan, while the Isaac, who wrote the introduction, was apparently his relative.

[Isidore Simon and Abraham David]

NATHAN, MULLA IBRAHIM (1816–1868), British intelligence agent born in *Meshed, Persia. In about 1837 he and his brother Musa left their homeland and entered British service. They traveled throughout Afghanistan, Turkestan, and Bukhara and were connected with all the major British expeditions in Central Asia. During the first Anglo-Afghan War (1839–42), they supplied funds for British officers on remote missions, gathered intelligence and information for the military authorities, and rescued and assisted British prisoners in *Afghanistan after the disaster to the British army at Kabul. They left Afghanistan in 1842, and settled in Bombay in 1844. In recognition of their services, the British government in India granted them compensation for their losses as well as a life pension. Mulla Ibrahim was offered diplomatic employment in Meshed, but refused to return to the city in which the Jews had recently been forced to adopt Islam. In Bombay Mulla Ibrahim took an active part in the Baghdadi-Jewish community. Jacob *Saphir states that he was appointed as a customs official, but was exempted from duty on the Sabbath and Jewish holidays.

[Walter Joseph Fischel]

NATHAN, PAUL (1857–1927), German politician, Jewish leader, and philanthropist. A protégé of Ludwig *Bamberger and Theodor Barth, he was associated with the Berlin liberal publication *Die Nation*, serving as its editor until 1907. Because of his influence in political circles and as founder in 1901 of the *Hilfsverein der deutschen Juden, Nathan was often regarded as the spokesman of German Jewry apart from the Zionists. He was active in almost all international Jewish conferences on emigration and relief for Jewish victims of pogroms and wars, helping to shape international political and relief campaigns to aid them. Nathan was convinced that the Jewish problem in

Russia was part of the general Russian problem, to be solved only by change of regime – if necessary by revolution. He advocated economic pressure on Russia by the West, primarily through refusals to grant loans. Under Nathan's influence the Hilfsverein der deutschen Juden aided liberal and even revolutionary movements in Russia, and he was also instrumental in influencing Lucien *Wolf in England and Jacob H. *Schiff in the United States to accept its policies toward Russia. The Hilfsverein published the *Russische Korrespondenz*, which informed the press, political leaders, and other personalities of the true situation in Russia, and similar bulletins in England and Paris.

During the *Beilis trial of 1913 Nathan, with the help of Lucien Wolf in London, organized the defense of Beilis outside Russia. In Germany Nathan obtained a large number of signatures of non-Jewish personalities in favor of Beilis and expert opinions by scientists. At the same time Nathan published the book *Der Fall Justschinski*, an account of the German pro-Beilis campaign. He was among the founders of the Komitee zur Abwehr Anti-semitischer Angriffe in Berlin. In 1896 he published *Die Kriminalitaet der Juden* and *Die Juden als Soldaten und Uber das juedische rituelle Schaechtverfahren*.

Nathan was basically a sincere assimilationist who saw only in complete assimilation with the non-Jewish population the possibility of full emancipation in every country. Thus he strongly opposed the Zionist movement. During World War I, while German Zionists demanded autonomous rights for Jews in countries occupied by the German armed forces, Nathan gave constant help to the assimilationists of Poland. When the war broke out he helped to gain the sympathy of Jews in neutral countries for the cause of the Central Powers, his main argument being that a war against Russia, the country of barbaric pogroms, should be supported by Jews. At the beginning of the Weimar Republic Nathan officially joined the Socialist Party (SPD). The German government asked him to accept the post of its ambassador to Vienna, but Nathan declined the offer because of his close association with the major Jewish organizations at a time when antisemitism was strong in Austria. Through his many friends abroad he tried to gain sympathy for Germany, constantly warning that the harsh conditions of the Versailles Treaty would help bring back a totalitarian and reactionary regime in Germany from which both that nation and others would suffer. Nathan's enthusiasm for Jewish colonization in Soviet Russia led to his publishing a pamphlet in 1926 in which he favored the concentration of Soviet Jews in the far-eastern part of that country.

NATHAN, ROBERT ROY (1908–2001), U.S. economist. Born in Dayton, Ohio, Nathan joined the Department of Commerce in 1933 and became prominent in President Roosevelt's reconstruction programs. During World War II he was deputy director of the War Production Board and the Office of

War Mobilization and Reconversion. After the war, in 1946, he opened his own consulting firm, Robert R. Nathan Associates, which was active in counseling postwar rehabilitation work and economic development in many countries, such as France, Burma, Indonesia, Korea, Afghanistan, Ghana, Colombia, and El Salvador. During the late 1940s and the early 1950s he devoted much of his time and effort to guiding various Israeli government authorities in their first official contacts with the United States government. His main professional interest was developmental economics; his vision was of a free-enterprise democratic system that benefited all of society. To that end, his economic consulting firm advised business, industry, labor unions; and state, local, national, and foreign governments, applying tested economic principles. The firm became a leader in developing master plans for economic growth, sometimes spending decades in a country. A natural humanitarian, Nathan championed social causes, including civil rights, welfare legislation, and minimum wage, and he was the director of a foundation that contributed to low-income housing and equal opportunity programs. By the time Nathan turned the presidency of his company over to John Beyer in 1978, the firm had provided economic consulting services in most sectors of the U.S. economy.

Nathan Associates Inc. established the Robert R. Nathan Memorial Foundation, which endows a fellowship in applied economics at Nathan's alma mater, the Wharton School of the University of Pennsylvania.

Nathan's major publications include *Mobilizing for Abundance* (1944) and *Palestine – Problem and Promise* (with O. Gass and D. Craemer, 1946).

[Joachim O. Ronall / Ruth Beloff (2nd ed.)]

NATHAN, VENGUESSONE, major landowner and money-lender in 15th-century Provence. In a survey of 1424 Nathan is listed as the largest Jewish landowner in Arles, with property including a house, vineyard, and shop where she sold drapery and crockery. She also owned books in Hebrew and Latin. At her death, she was owed money from debts, claims, and pledges. In her will, notarized in 1436, Venguessone's largest bequests went to her grandsons. (Her son, Isaac, had a great deal of money of his own.) Her unmarried granddaughters received money for their dowries (probably in addition to what their father would contribute) and her married granddaughters received 25 florins for clothing for their first birthing. Venguessone left several charitable legacies, including money for the cemetery, a light for the synagogue, ten florins for the crown of the Torah scroll, and money for dowries for poor brides.

Venguessone's mother, Esther de Caylar, granddaughter of Bonjues Nathan, the patriarch of a prominent Arles family, is known to have represented the Nathan family as a delegate, with one other woman, Regina, at an assembly for the reorganization of a free school for the Arles Jewish community, held from November 8–December 23, 1407.

[Cheryl Tallan (2nd ed.)]

NATHAN BEN ABRAHAM I (d. c. 1053), *av bet din* of the academy of Erez Israel in Jerusalem. Nathan was a scion of one of the families whose members held respected positions in the academy. Around 1011 he traveled to Kairouan to settle the estate of his father, who had died there. He remained there for a number of years, studying under R. *Hushi'el. After the death of his maternal uncle, Rav ben Yohai, *av bet din* of the academy of Erez Israel, Nathan claimed the position – although according to accepted custom it belonged to Tobiah, who ranked third in the academy – at the same time attempting to oust R. Solomon b. *Judah as *gaon* of the academy. In the struggle, Nathan was sponsored by Diaspora scholars, while Solomon b. Judah was supported by the local community and also favored by the Fatimid governor of *Ramleh. Nathan lived in Ramleh, attempting to assume the functions of *gaon* there, while Solomon still held his position in Jerusalem and issued a ban against Nathan. In 1042 both parties agreed that Nathan should succeed Solomon as *gaon* of the academy after the latter's death. However, when this occurred (before 1051) the office of *gaon* passed to Daniel b. *Azariah. Nothing is known of Nathan's teachings. In one of his letters of 1042 he mentions his son Abraham, whose son Nathan *II was later *av bet din* of the academy.

[Abraham David]

NATHAN BEN ABRAHAM II (d. before 1102), *av bet din* of the academy of Erez Israel. Nathan was a grandson of Nathan b. Abraham *I. Few biographical details are known of him. He was appointed *av bet din* of the academy of Erez Israel during the gaonate of *Abiathar in 1095, in succession to Zadok b. Josiah. Nathan compiled a short Arabic commentary to the six Orders of the Mishnah, in which he incorporated explanations of many specific words. A Yemenite scholar who lived in the 12th century copied his commentary, and added some commentaries of other scholars to it. In the opinion of some scholars, however, Nathan is himself responsible for some of the additions from the commentaries of his predecessors. It is not clear which literary sources were already used by Nathan himself and which were added by the Yemenite scholar. The scholars quoted in the commentary, except for two contemporaries, Nathan b. Jehiel of Rome and Isaac Alfasi, lived before him. Nathan, or the Yemenite scholar, frequently quotes the later *geonim*, particularly Saadiah Gaon, Samuel b. Hophni

Gaon, Sherira Gaon, and Hai Gaon. There are few quotations from the earlier *geonim*. In general the commentary gives the meaning of words and concepts, a more extensive commentary being found only for a few tractates: *Berakhot*, *Shevu'ot*, and *Avot*. A few tractates are preceded by a short introduction explaining general concepts and essential matters necessary for an understanding of the whole tractate. R. Nathan, or the Yemenite scholar, gives a short survey of the development of the oral law down to his time in his introduction to the work. He discusses the relationship of the Tosefta to the Mishnah, taking the view that the Tosefta explains obscurities of the Mishnah. He also discusses the principles laid down by talmudic scholars for deciding *halakhah* where there are opposing opinions. The chapter divisions of the tractates in the commentary differ from the accepted form. The commentary seems to have been widely known and it was already used by Baruch Samuel of *Aleppo.

A number of extracts were published in the original with a Hebrew translation by S. Assaf and by M.L. Sachs. The whole commentary in the Hebrew translation of J. *Kafah was published by El ha-Mekorot (Jerusalem, 1955–58) together with the Mishnah text and other commentaries.

BIBLIOGRAPHY: Mann, Egypt, 1 (1920), 151, 193f.; 2 (1922), 229–32; S. Assaf, in: KS, 10 (1933/34), 381–8, 525–45 (= Assaf, *Ge'onim*, 294–332); M.L. Sachs, in: *Sinai*, 17 (1945), 167–75; S. Abramson, *Rav Nissim Ga'on* (1965), index.

[Abraham David]

NATHAN BEN ISAAC HA-KOHEN HA-BAVLI (i.e., the Babylonian; tenth century), chronicler who probably lived in *Baghdad. The fragments of his work that have been preserved appear to be part of his book on the Jews of Baghdad, *Akhbār Baghdād*. These fragments are an important source for the study of the history of Babylonian Jewry in the tenth century. In the first fragment Nathan gives a description of the office of the exilarch, the method by which he was appointed, his duties, and his functions. The fragment also contains details of two great controversies that raged in Babylonian Jewry in the tenth century. In one, the adversaries were the exilarch *Ukba and the *Gaon* of Pumbedita, Kohen *Zedek; it lasted from 909 to 916. In the other controversy, the adversaries were the exilarch David b. *Zakkai and Saadia b. *Gaon, in about 930. From the contents of the fragment it appears that Nathan was in Babylonia at the time that the latter controversy took place. His vivid account of the ceremonial observed at the installation of an exilarch is of exceptional interest (see *Exilarch). This fragment was published (in Hebrew) in Samuel Shulam's edition of Abraham *Zacuto's *Sefer Yuḥasin* (Constantinople, 1566), and again in A. Neubauer's *Medieval Jewish Chronicles* 2 (1895), 77–88. A second fragment describes the rise of *Natira and his sons at the court of the Abbasid caliph at the end of the ninth and the beginning of the tenth century. It was published, in Arabic and in a Hebrew translation, by A.E. Harkavy (see bibliography). A third fragment, also dealing with the Ukba-Kohen Zedek quarrel, was published, in the original and in English translation,

by I. Friedlander (see bibliography). The fragments lead to the assumption that Nathan ha-Bavli was closely associated with the circles surrounding the exilarchs and the academy heads, and that he may have been a student at one of the academies, apparently Sura. His writings contain inaccuracies and glaring omissions, e.g., he errs in the names of the *geonim* and in the chronological data. Nevertheless, he made an honest and unbiased effort to report events as he saw them happen or as they were reported to him. Some of the information contained in the fragments has been confirmed by other sources.

[Abraham David]

NATHAN BEN JEHIEL OF ROME (1035–c. 1110), Italian lexicographer, also called **Ba'al he-Arukh** ("the author of the *Arukh*") after the title of his lexicon. Few biographical details are known of him. Some state that he belonged to the De *Pomis or Delli Mansi family, but the view is widespread that he actually belonged to the famous *Anau (Anav) family. He was taught in his youth by his father, a *paytan* and the head of the yeshivah of Rome, and may as a young man have studied in Sicily under Mazli'ah b. Elijah ibn *al-Bazak, a pupil of Hai Gaon. However, there is reason to believe that the scanty references to Mazli'ah's name in Nathan's work are the addenda of an earlier copyist named Mevorakh, some of whose marginal notes, in which he also mentions that he was al-Bazak's pupil, were later incorporated in the text of the *Arukh*. Nathan also studied under Moses ha-Darshan of Narbonne, as well as, in the view of some scholars, under Moses Kalfo of Bari and Moses of Pavia. When his father died immediately after Nathan's return to Rome about 1070, he and his two brothers Daniel and Abraham succeeded him as the heads of the yeshivah of Rome. With them he wrote responsa to halakhic questions addressed to him by various scholars, among whom was a Solomon Yiz'haki, identified by some as Rashi. Noted for his charitable acts, Nathan built a magnificent synagogue and a ritual bathhouse for his community. It was while serving as head of the Rome yeshivah that he wrote his classic work (which he completed in 1101), the *Arukh*, a lexicon of the Talmud and the Midrashim, containing all the talmudic terms in need of explanation; in the course of time various additions were made to it (see below). At the end of the *Arukh* there is a poem written in particularly difficult language and therefore of somewhat obscure meaning; in it the poet, lamenting his bitter lot, tells of the death of four out of his five sons during his lifetime.

In the *Arukh* Nathan gives not only the meaning but also the etymology of the words of the Talmud, including some of Aramaic, Latin, Greek, Arabic, and Persian origin. Nathan

quotes many geonic interpretations and an earlier lexicon by a Zemaḥ of uncertain identity, as well as the comments of earlier and contemporary rabbis – among them works otherwise unknown – and halakhic decisions, although apparently irrelevant to the object of the work. He describes Jewish customs, such as that of the Babylonian Jews, who in celebrating Purim burned Haman's effigy, singing around and leaping over a bonfire (s.v. *shavvar*). The *Arukh* is important for the study of the **Midrash Yelammedenu*. Of the other Midrashim he cites, particular note should be taken of the *Midrash Hashkem* of which only quotations have survived, and many of his citations from the Midrashim are not to be found in the extant editions. He also quotes the Palestine Targum to the Pentateuch. Words were still treated by Nathan as though they belonged to uniliteral or biliteral consonantal roots, even though the work of Judah ibn Ḥayyuj, showing that the Hebrew verb has a trilateral root, had already appeared.

The main importance of the *Arukh* lies in the extensive collection of explanations of words and subjects in the Talmud and in the profusion of the author's excellent readings, all drawn from the three chief Torah centers of that time: the teaching of the Babylonian *geonim*; the commentaries of Hananel b. *Hushi'el of Kairouan, which he uses extensively but in the main without acknowledgment; and the "Mainz commentaries" mentioned by him under different names ("scholars of Mainz," "pious ones of Mainz," "Mainz commentary," etc.). These explanations occur in the extant commentaries of Rabbenu Gershom without mentioning Nathan's name. Apart from these three sources he also had before him not a few of the early commentaries of Provence. Nathan frequently explains words and subjects according to the reading of Hananel b. Hushi'el without indicating that his explanation is based thereon. At times he goes beyond the explanation of the word and explains the whole theme. It has now been established that these explanations are also from Hananel, given by him in other contexts. In the printed editions of the Talmud, Rashi mentions him once (Shab. 13b). The whole passage, however, is missing in some manuscripts, and it is clear that Rashi made no use of the *Arukh*. The many anonymous parallels that exist between the two works have their source in the common use made by the two scholars of "the teaching of Mainz" and of the other common exegetical traditions.

The *Arukh* achieved exceptionally wide circulation. It was apparently first published in Rome in 1469–72?, an edition that is a better version than that found in later ones printed from a different manuscript. Because of the great importance attached to the work, many supplements to and emendations of it were written. Among them is the *Agur* of Samuel b. Jacob ibn *Jama (12th century), consisting of addenda to the *Arukh* derived from the language found in geonic writings, which was published by S. Buber in *Jubelschrift.... H. Graetz* (1887). Menahem de *Lonzano wrote addenda, emendations, and explanations to the *Arukh* under the title of *Ha-Ma'arikh*, published in his work *Shetei Yadot* (Venice, 1618). The physician and philologist Benjamin *Mussafia, in his *Musafhe-Arukh*, which was printed in

the *Arukh* (Amsterdam, 1655), corrected the Greek and Latin words. Isaiah *Berlin (18th century) wrote *Hafla'ah she-ba-Arakhin*, addenda and notes to the *Arukh* up to the letter *kaf* in the Lemberg 1857 edition of the *Arukh*. A scholarly edition, based on seven manuscripts, was published by Alexander Kohut under the title of *Arukh ha-Shalem* or *Aruch Completum* (1878–92), to which a supplement and addenda were issued by S. Krauss in his *Tosefot he-Arukh ha-Shalem* (1937). A condensed version, entitled *He-Arukh ha-Kazar*, by an anonymous epitomist, was first published in Constantinople.

[Abraham David]

NATHAN DE-ZUZITA RESH GALUTA, Babylonian exilarch. According to a statement in the Talmud (Shab. 56b), he is identical with Ukban b. Nehemiah (320–340), but in the *Seder Olam Zuta* two different exilarchs are mentioned called both Ukban and Zuzita: one, called Nathan Ukban (Nathan de-Zuzita), lived in the third century, and the other, Mar Ukban de Zuzita, a near contemporary of R. Joseph, in the fourth. Nathan seems originally to have lived a sinful life, but he later repented. The *amora* Joseph expressed the view that he must be regarded as one of the most celebrated of penitents of all time, and that he was much beloved in heaven. According to an old *aggadah* cited by Rashi (Sanh. 31b), Nathan (Masukba) was consumed by passion for a married woman and unfulfilled desire made him ill. On one occasion, in need of money, she paid him a visit of her own free will. Although he could now have had his desire, he restrained himself, and she departed untouched. From that moment his passion subsided, and a ray of light was seen to shine over his head. It is to this that the name Zuzita (ray of light) refers. According to the *geonim* Zemaḥ and Sa'adiah, however, the name derives from the fact that in his youth Nathan used to dress and curl the fringes (*ziziot*) of his hair (B.M. Lewin, *Ozar ha-Ge'onim* (Shab.; 1930), pt. 2 24). Rashi identified him in that passage with Mar *Ukba the *av bet din*, a contemporary of Samuel (cf. also R. Aḥai Gaon. *She'iltot*, Va-Era 42; ed. by S.K. Mirsky, 3 (1963), 43). In the manuscripts of the *She'iltot*, however, the passage, "and his name is Nathan b. Zuzita" does not occur. See also *Hibbur Yafeh min ha-Yeshu'ah* of Nissim Gaon (ed. by H.Z. Hirschberg (1954), 73–76), from which it appears that he lived in the tannaitic period.

BIBLIOGRAPHY: Hyman, *Toledot*, 956f.; J.N. Epstein, in: *MGWJ*, 63 (1919), 259–68; S. Abramson, *Rav Nissim Ga'on* (1965), 422f.

[David Joseph Bornstein]

NATHAN HA-BAVLI ("the Babylonian"; middle of the second century C.E.), *tanna*. It is said of Rabbi *Judah ha-Nasi and Rabbi Nathan that they constituted "the conclusion of the Mishnah" (BM 86a), i.e., that they were the outstanding scholars of the close of the tannaitic period. Like other prominent figures of the last generations of *tannaim*, Nathan's statements are rarely quoted in the Mishnah – only twice, and even those two passages are additions which do not appear in the manuscripts. In one passage he interpreted Psalms 119:126 to mean: "They have made void the law because it was a time to work for the Lord" (Ber. 9:5). The other passage lays it down that "The surplus of money collected for burial ... is used to build a monument over the grave" (Shek. 2:5). On the other hand, he is quoted by name over 60 times in the Tosefta, and over 100 times in tannaitic midrashim, mostly in midrashim of the school of R. Ishmael. It was reported that he had a Mishnah collection of his own (Tem. 16a). Nathan's appellation "ha-Bavli" ("the Babylonian") is only mentioned in one tannaitic source, and even then only in the Vienna manuscript of the Tosefta (Tosef. Shab. 15:8) in the talmudic parallels of this tradition (Shab. 134a, Ḥul. 47b; cf. TJ Ket. 4:11, 29a). According to a geonic tradition (see *Arukh* s.v. *kamra*), he was the *exilarch. He transmitted traditions in the names of *Ishmael (Tosef. Shab. 1:13), *Eliezer b. Hyrcanus (Tosef. Pes. 3:8), *Tarfon (Tosef. Zev. 10:13), and *Yose ha-Gelili (Men. 38b). When the Hadrianic persecutions broke out he fled to his native Babylon. He is reported to have traveled overseas to a number of countries, including Cappadocia (Ḥul. 47b). When *Haniah the nephew of Joshua b. Hananiah fixed the calendar in Babylon, Nathan was one of the two scholars who were sent to remonstrate with him and succeeded in persuading him to desist (TJ, Ned. 6:13 40a; Sanh. 1:2, 19a). He is cited as the one who transmitted the important halakhic rule that if A owes B money and B owes C, then C may claim from A (Ket. 19a; see **Shi'buda de-Rabbi Nathan*). In later tradition he was considered to be the author of **Avot de-Rabbi Nathan* and of the 49 *hermeneutical rules of Rabbi Nathan. He was regarded as an authority on civil law because of his experience as a *dayyan* (BK 39a; BM 117b). According to the *aggadah* (Git. 70a), the prophet Elijah appeared to him and taught him. Among the aggadic sayings ascribed to him are: "One may modify a statement in the interest of peace" (Yev. 65b); "Do not taunt your neighbor with your own blemish" (BM 59b); and "There is no greater love than love of the Torah; there is no wisdom like the wisdom of Erez Israel, and there is no beauty like the beauty of Jerusalem" (ARN, 28, 85).

According to an *aggadah* in the Babylonian Talmud Nathan was *av bet din* under the *nasi* *Simeon b. Gamaliel, at the time R. Meir was the *hakham* (Hor. 13b). According to this tradition Simeon b. Gamaliel took steps to strengthen the status and honor of his office at the expense of these other two sages, which Meir and Nathan took as a personal affront. Nathan and Meir engaged in a conspiracy to discredit Simeon b. Gamaliel and to remove him from office. Their plan was foiled and Simeon in turn attempted, unsuccessfully, to have them

removed from the *bet ha-midrash*. Nevertheless, as a punishment for their opposition to the *nasi*, it was decreed that all subsequent statements made by Meir and Nathan should be introduced anonymously, the former being quoted merely as "others say" and the latter as "some say" (Hor. 13b–14a). While some scholars have held that this story accurately reflects the forms of communal leadership practiced during the late tannaitic period, and have also accepted it as evidence for a power struggle between these well-known historical figures, Goodblatt has shown quite convincingly that this story is in fact a late Babylonian elaboration and embellishment of certain earlier Palestinian traditions (cf. TJ MK 3:1, 81c), and has little or no historical value.

[David Joseph Bornstein / Stephen G. Wald (2nd ed.)]

NATHAN OF GAZA (1643/4–1680), one of the central figures of the *Shabbatean movement. His full name was Abraham Nathan b. Elisha Ḥayyim Ashkenazi, but he became famous as Nathan the Prophet of Gaza, and after 1665 his admirers generally called him "the holy lamp" (*buzina kaddisha*), the honorific given to R. Simeon b. *Yoḥai in the Zohar. His father, Elisha Ḥayyim b. Jacob *Ashkenazi, who had come from Poland or Germany, settled in Jerusalem and for many years served as an emissary of its community, visiting Poland, Germany, Italy, and (frequently) Morocco. He was a respected rabbinical scholar with kabbalistic leanings. Nathan was born in *Jerusalem, probably about 1643/44. His main teacher was the famous talmudist Jacob *Ḥagiz and he seems to have been a brilliant student, quick to understand and of considerable intellectual power. Before he left Jerusalem in 1663, having married the daughter of a wealthy merchant of Gaza, Samuel Lissabonna, and settled in the latter's home town, he must have seen Shabbetai *Zevi, then twice his age, in the Jewish quarter of Jerusalem, where Shabbetai lived for almost the whole of 1663. It is also clear that he must have heard a great deal of talk about this strange personality and his tribulations. Strongly attracted by an ascetic way of life, Nathan took up the study of Kabbalah in 1664. The combination of great intellectual and imaginative power which was his main characteristic resulted in his having visions of angels and deceased souls after a short time. He delved deeply into Lurianic Kabbalah, following the ascetic rules laid down by Isaac *Luria. Shortly before or after Purim 1665 he had a significant ecstatic experience accompanied by a prolonged vision (he speaks of 24 hours) of the divine world revealing how its different stages were connected, a vision that differed in many significant details from the Lurianic scheme. Through this revelation he became convinced

of the messianic mission of Shabbetai Zevi, whose figure he saw engraved on the divine throne. (For his further intensive activities during the following year, see the article on Shabbetai *Zevi). When the latter returned from his mission to Egypt and came to see him in Gaza, Nathan finally convinced him of his messianic destiny by producing a pseudepigraphic vision, attributed to a medieval saint, Abraham Hasid, who as it were foretold the birth and early history of Shabbetai Zevi and confirmed his superior rank.

In his ecstasy Nathan had heard a voice announcing in the name of God that Shabbetai Zevi was the Messiah; he therefore became the prophet of the “son of David,” the mission that the biblical prophet Nathan had fulfilled for King David. As he had been vouchsafed charismatic gifts since his ecstatic awakening, many people made pilgrimages to him from Palestine, Syria, and Egypt. He showed “the roots of their souls,” revealed their secret sins, and prescribed ways to penance. Since his prophetic powers were widely acknowledged as genuine, his endorsement of Shabbetai Zevi’s messianic claim gave the decisive impetus to the mass movement which swept the Jewish people everywhere. Remaining in Gaza after Shabbetai Zevi left for Jerusalem and Smyrna (Izmir), he wrote letters to the Diaspora confirming that redemption was at hand and laying down elaborate kabbalistic rules of penance (*tikkunim*) to be followed by those who wished to usher in the new age. These were widely copied, and the exoteric portions of the ritual were printed in many editions during 1666. It is not known why the rabbis of Jerusalem, the majority of whom (including Jacob Hāgiz) took a stand against the messianic claims of Shabbetai Zevi, did nothing to interfere with Nathan’s activities. The fact that the small community of Gaza, including their rabbi, Jacob *Najara, were among his followers, is insufficient explanation. In the summer of 1666, during Shabbetai’s confinement in Gallipoli, Nathan composed several kabbalistic tracts of which the *Derush ha-Tanninim* has survived (published in G. Scholem, *Be-Ikkevot Mashiāh*, 1944), glorifying Shabbetai’s mystical state since the beginning of creation. His correspondence with Shabbetai Zevi during this time, however, is lost.

After receiving the news of Shabbetai’s apostasy, he left Gaza early in November 1666, accompanied by a large group of supporters, including his father-in-law and his family. On Nov. 20, 1666, he wrote to Shabbetai Zevi from Damascus announcing that he was on his way to see him, apparently on the latter’s invitation. By this time he had already begun to sign himself Nathan Benjamin, the new name Shabbetai had given him in Gaza when he appointed 12 scholars to represent the 12 tribes of Israel. Nathan’s faith in his messiah never wavered, and from the beginning he hinted at mystical reasons which justified the apostasy. Originally he planned to travel by sea via Alexandretta (Iskenderun) but he changed his route and went with his entourage by land, avoiding the larger Jewish communities which had been warned against him by the rabbis of Constantinople. By the end of January 1667 he arrived at Bursa (Brusa), where he was threatened with a ban

unless he stayed out of the town and “kept quiet.” Dispersing his group he continued with only six associates, including Samuel Gandoor, a scholar from Egypt, who became his constant companion until his death. Before leaving Bursa, he wrote a letter to Shabbetai’s brothers in Smyrna, opening a long series of letters, tracts, and other pronouncements defending the apostasy and Shabbetai’s continued messianic mission on kabbalistic grounds. Many of these have been preserved. On March 3, 1667, he arrived at a small village near Smyrna, then stayed until April 30 in Smyrna itself; there he met with some of the believers but kept largely to himself. He became very reserved toward all outsiders and even repelled the delegation of three northern Italian communities who were on their way to Shabbetai Zevi and had been waiting to hear Nathan’s explanations. The Dutch clergyman Th. Coenen has left a description of his meeting with Nathan on April 25. Nathan tried to reach Adrianople, where he would see his messiah, but he was held up in the nearby small community of Ipsala and met by a delegation from Adrianople and Constantinople. After being interrogated he was forced to sign a document (dated May 31, 1667) promising not to approach Adrianople, not to correspond with “that man” in Adrianople, and not to convene public meetings, but to keep to himself; finally he admitted that all his words would be given the lie unless the messiah appeared before September 14, a date he had fixed earlier on the strength of an additional vision. Later Nathan repudiated all these obligations, claiming that he had acted under duress. He went to see Shabbetai Zevi secretly, then wandered with Gandoor through Thrace and Greece where sympathy with the movement was still very strong.

Early in 1668 he traveled from Janina to Corfu, where he held secret conclaves with his adherents. On the initiative of Shabbetai Zevi himself he then undertook a journey to Italy, with the intention of carrying out a mystic ritual at the seat of the pope in Rome. His arrival in Venice around March 20 caused considerable excitement and apprehension. Under pressure from someone in the government, he was allowed to enter the ghetto where he spent approximately two weeks, being closely questioned by the rabbis but also beleaguered by a host of admirers and followers. The events of Ipsala were repeated; the rabbis published the results of their examination in a broadsheet, including a declaration in which Nathan admitted his errors; later Nathan repudiated this in statements to the believers. From Venice he and Gandoor traveled to Bologna, Florence, and Leghorn, where he stayed for some weeks strengthening the hopes of the remaining believers. He and a wealthy Italian believer, Moses Cafsuto, then proceeded to Rome, perhaps disguised as gentiles. He stayed a few days only (end of May or beginning of June) performing some secret rituals patterned on those outlined at an earlier time by Solomon *Molcho. He returned to Leghorn or, according to another source, went straight to Ancona, where he was recognized and met the rabbi, Mahalalel *Halleluyah (Al-luluyah), a fervent believer, who has left a detailed account of

their meeting. By that time Nathan had written an account of his mission to Rome, couched in elusive Aramaic filled with kabbalistic and apocalyptic metaphors. This was widely distributed to the groups of believers. On his return to Turkey via Ragusa and Durazzo, Nathan went to stay for some time with Shabbetai Zevi in Adrianople. After this he spent six months in Salonika, where a considerable group of scholars flocked to him to receive his new version of the Kabbalah according to Shabbatean principles. For the next ten years he remained in Macedonia and Bulgaria – apart from secret pilgrimages to Shabbetai Zevi after the latter's banishment to Dulcigno in Albania (1673 – staying mainly in Sofia, Adrianople, and Kastoria, and paying occasional visits to Salonika. He maintained close contacts with many other leaders of the movement, who continued to consider him as a charismatic figure of the highest rank. Although Shabbetai Zevi never asked him to follow him into Islam, he staunchly defended not only the necessity of the messiah's apostasy but also those "elect ones" who emulated him on his command. Many of the rabbis of the Macedonian communities stood by him, paying no heed to the excommunications and warnings emanating from Constantinople and Adrianople.

Nathan's letters reveal him as a strong personality, although the few that have been preserved from his intense correspondence with Shabbetai Zevi are couched in adoring and submissive terms. They contrast curiously with his obvious moral and intellectual superiority over his master. In spite of all this, there were periods of tension between the two. After Shabbetai's death Nathan withdrew even more from public contact, although he continued to preach in the synagogues of Sofia on some occasions. Refusing to admit defeat, he upheld the theory that Shabbetai Zevi had only "disappeared" or gone into hiding in some higher sphere, whence he would return in God's own time. Israel Hazzan of Kastoria, who served as his secretary for about three years, took down many of his teachings and sayings after Shabbetai's death. Nathan continued to lead an ascetic life and, feeling that his end was near, left Sofia and went to Skoplje (Škopsko), where he died on Jan. 11, 1680. His grave was revered as that of a saint, and over the generations many Shabbateans made pilgrimages there. His tombstone, whose inscription has been preserved, was destroyed during World War II. The many legends spread about Nathan during his lifetime increased after his death. He had two sons, of whose fate nothing is known. A sketch of Nathan drawn by a ship's mate who saw him in Gaza in the summer of 1665, which was reproduced in several contemporary broadsheets, may be authentic.

Between 1665 and 1679 Nathan embarked on a manifold literary activity. Some of his many letters are in fact theological treatises. At first, he composed kabbalistic rules and meditations for a fast of six consecutive days, *Seder Hafsakah Gedolah shel Shishah Yamim ve-Shishah Leilot*, partly printed anonymously under the title *Sefer le-Hafsakah Gedolah* (Smyrna, 1732). These were accompanied by *Tikkunei Teshuvah*, both treatises being preserved in several manuscripts. The printed

edition omits all mention of Shabbetai Zevi's name. At about the same time he began the explanation of his new vision of the process of creation, sending several tracts on this to Raphael Joseph in Cairo. Of these only the *Derush ha-Tanninim* has been preserved. After Shabbetai's apostasy he developed his ideas in a more radical way. The most elaborate presentation of his kabbalistic system, containing constant references to the function of the Messiah and his paradoxical actions, is found in the *Sefer ha-Beriah*, written in 1670, in two parts. It was also known under the title *Raza de-Uvda de-Bereshit*, and in some manuscripts was accompanied by a lengthy preface which may have been conceived as a separate literary entity. The work is extant, complete or in parts, in approximately 30 manuscripts and must have enjoyed a wide distribution in Shabbatean circles up to the middle of the 18th century. A short synopsis of its ideas, from Ms. Oxford, Neubauer Cat. (Bod.) no. 2394, is included in Scholem's *Be-Ikkevot Mashi'ah*. During the same period Nathan composed the book *Zemir Ari'izim* which, as well as other kabbalistic matters, contains long disquisitions on the state of the Torah in the messianic era and a justification of Shabbetai Zevi's antinomian actions (complete in British Museum Or. 4536, Margoliouth, Cat. no. 856 and elsewhere). In some manuscripts it was called *Derush ha-Menorah* and was partly included in the collection *Be-Ikkevot Mashi'ah*. These books were widely quoted by secret Shabbateans, sometimes even in printed works. Of his many pastoral letters, special mention must be made of the long apology for Shabbetai Zevi, published in *Kovez al Yad*, 6 (1966), 419–56, apparently written about 1673–74. Fragments of other writings are dispersed through several manuscripts and Shabbatean notebooks. Collections dealing with his special customs and behavior were made by his pupils in Salonika (who saw him as a reincarnation of Luria) and were distributed in Turkey and Italy. These are extant in several versions. An abridgment of Nathan's system was incorporated as the first part of the *Sha'arei Gan Eden* by Jacob Koppel b. Moses of *Mezhirech and was published as an authoritative kabbalistic text (Korets, 1803) without its heretical character being recognized.

[Gershom Scholem]

NATHANS, DANIEL (1928–1999), U.S. Nobel laureate in medicine (1978). Nathans was born in Wilmington, Delaware, of Orthodox Jewish immigrants from Latvia and graduated in chemistry from the University of Delaware (1950) and in medicine from Washington University, St Louis, in 1954. His career

in medical research began at the Rockefeller Institute in 1959 with work on protein synthesis before he switched to animal viruses, specifically the DNA virus SV40. During a 1969 sabbatical at the Weizmann Institute with Leo *Sachs and Ernest Winocour, Nathans realized the relevance of the newly discovered restriction enzymes to viral research. These enzymes cut DNA at specific sites, providing DNA fragments whose genetic function can be precisely mapped. Daniel's mapping of the SV40 gene pioneered the application of restriction enzyme techniques to genetics and was an essential step in the development of molecular cloning and recombinant technology. He was awarded the Nobel Prize for this work, jointly with Werner Arber and Hamilton Smith. His later interest in the genetic regulation of cell growth led him to study the response of cellular genes to growth factors. He moved to Johns Hopkins University in 1962, where he served as chairman of the Department of Microbiology and university president and was revered for his teaching and organizational skills. His honors included election to the U.S. National Academy of Sciences and the National Medal of Science.

[Michael Denman (2nd ed.)]

NATHANSEN, HENRI (1868–1944), Danish playwright and novelist. Born in Hjørring, Jutland, Nathansen practiced law before becoming a writer. He published some 20 works, nearly half of them plays, and in 1909 became stage director of Copenhagen's Royal Theater. Many of his plays dealt with contemporary Jewish problems. The drama *Daniel Hertz* (1908) was followed in 1912 by *Indenfor murene* ("Within the Walls") considered to be one of the finest plays in the Danish language. Nathansen here analyzes the position of the Jew in a non-Jewish environment and, in portraying the conflicts engendered by a Copenhagen Jewess' wish to marry a gentile, succeeds in airing the whole question of Jewish-Christian relations in a free society. Jewish themes also dominate Nathansen's comedy *Affaeren* (1913), the semi-autobiographical novel *Af Hugo Davids liv* (4 vols., 1917), and the last work published in his lifetime, the novel *Mendel Philipsen og Søn* (1932). His other outstanding publications include a biography of Georg *Brandes (1929) and *Portraetstudier* (1930), studies of eminent Scandinavian writers. In 1919 Nathansen issued a protest against the persecution of Polish Jewry, and in 1930 called for solidarity in the Copenhagen Jewish community to counteract the dangers of Nazi antisemitism. Together with the majority of Danish Jews, he fled to Sweden in October 1943. There, in a fit of depression, he took his own life.

[Torben Meyer]

NATHANSON, BERNHARD (Dov Baer; 1832–1916), Hebrew writer, biographer, and lexicographer. Born in Satanov, Podolia, Nathanson was a contributor to *Ha-Maggid* and *Ha-Meliz*. After the death of I.B. *Levinsohn in 1860 he was commissioned to prepare Levinsohn's manuscripts for publi-

cation, a task to which he devoted most of his literary career. He wrote a popular biography of Levinsohn, *Sefer ha-Zikhronot* (1876). Nathanson also compiled *Ma'arekhet Sifrei Kodesh* (1870), a Jewish historical lexicon, and *Sefer ha-Millim* (1880), a dictionary of foreign words.

[Yehuda Slutsky]

NATHANSON, JOSEPH SAUL (1810–1875), *posek. Nathanson was born in Berezhany, the son of Aryeh Leibush Nathanson of Brody, a wealthy businessman who was also a profound talmudist. In 1825 he married Sarah Idel, the daughter of Isaac Aaron Ettinger, who was also a great scholar and a wealthy man. Nathanson, as was customary in those days, was maintained in his father-in-law's home. When his father-in-law died shortly after his marriage, his mother-in-law administered the business and took care that he would be able to live and study without financial cares, and when she died in 1841, his wife took over the responsibility. In his father-in-law's house Nathanson found a colleague in his brother-in-law, Mordecai Ze'ev *Ettinger. They studied together for several years and compiled a series of halakhic works, but they separated as a result of a difference of opinion which came to a head on the question of the permissibility of machine-baked *matzah*. The two brothers-in-law were rival candidates for the rabbinate of Lemberg to which Nathanson was appointed in 1857. The same year his wife died, but in 1858 he married a wealthy woman and did not accept a salary.

Nathanson was the outstanding *posek* and writer of responsa of his generation. Problems reached him from all parts of the world and he corresponded with all the great contemporary scholars. In his works he is revealed principally as an instructor in practical *halakhah*. He regarded himself as responsible for the condition of *halakhah* in his time, in succession to such scholars as Akiva *Eger and Moses *Sofer. He was opposed to the method of *pilpul for its own sake, regarding it as suitable only for youths (*Divrei Sha'ul, Aggadot*, 29b) but not for those destined to be religious teachers. He did not necessarily base his decisions "upon the statements of *aharonim*" (*Sho'el u-Meshiv*, 2 pt. 3, no. 108), but based his rulings mainly upon the Talmud and the *rishonim*.

He tended to leniency in his rulings, and took contemporary circumstances into consideration. He was one of those who permitted machine-baked *matzah* in opposition to the view of Solomon *Kluger. Although Kluger decided that *etrogim from Corfu were invalid because of the fear that they were hybrids, Nathanson permitted them (*Yosef Da'at, Kilei Begadim*, no. 302). He also regarded the birds called "kibbitzer" hens as permitted according to the dietary laws although other authorities forbade them (*Sho'el u-Meshiv*, 3 pt. 2, no. 121). Although known for his permissive approach, he sometimes declared things forbidden simply as a precaution (*Yosef Da'at, Terefot*, 64–65). It was this which prompted

Dov Berush *Meisels, rabbi of Warsaw, to say of him: "I know him of old as one who adopts a stringent and not a lenient line" (end of the pamphlet *Moda'ah le-Veit Yisrael*). Despite his leniency in halakhic ruling, he fought with all his power against the progressives in his community who wanted to introduce reforms into education. When the government sought to compel the Jews of Galicia to send their children to government schools and to bar them from the *heder* until they had passed four classes of the secular schools, as well as to make the teachers pass an examination in German and pedagogy, Nathanson took the initiative in uniting the great talmudic scholars to obtain the repeal of the edict (see S. Kluger's letter of 1867 in *Toledot Shelomo* (1956), 113ff.).

On the other hand he was resolutely opposed to schism, and when Zalman Spitzer, the son-in-law of Moses Sofer, published a proclamation calling on 400 rabbis to sign a ban against the payment of taxes to communities whose leaders were progressives, he declined to sign because it would lead to discord. He also maintained harmonious relations with the preachers of the "temple" (i.e., Reform synagogue), Dr. Simeon Schwabacher and Bernhard Loewenstein.

Nathanson was completely opposed to the ḥasidic movement and its new customs. As such he upheld the Ashkenazi *minhag* opposing the custom of reciting *Hallel in the synagogues on Passover eve (*Sho'el u-Meshiv*, 2 pt. 4, no. 135) and the custom of not donning *tefillin* during the intermediate days of the festivals (*ibid.*, 2 pt. 3, no. 87). Despite his opposition to Ḥasidism, however, he respected their leaders if they were great scholars and quoted them in his works. While still a youth in the house of his grandfather in Berezhany, he made the acquaintance of the ḥasidic rabbi Abraham David of Buczacz and wrote a commendation for his *Da'at Kedoshim* (1880). In his own works he quotes Levi Isaac of Berdichev (*Divrei Sha'ul* on the Pentateuch, passim), and among the other ḥasidic leaders he had great respect for Isaac Meir Alter, author of the *Hiddushei ha-Rim*, and was on friendly terms with Ḥayyim Halberstamm, the author of the *Divrei Hayyim*.

Although mainly occupied with *halakhah*, Nathanson devoted part of his time to biblical study, and wrote *Divrei Sha'ul*, on the Pentateuch and the Five *Scrolls. He applied himself to the study of Kabbalah, but like the other great *posekim* of his generation refrained from quoting it in support of the *halakhah* (*Sho'el u-Meshiv*, 2 pt. 3, no. 87). He was also versed in the scientific works of the Middle Ages and applied modern methods in practical halakhic rulings, such as ordering a chemical analysis to determine the presence of an admixture of forbidden matter in food (*ibid.*, 3 pt. 1, no. 377). He lectured to his students twice daily (*ibid.*, 2 pt. 3, no. 101). He did not prepare his lesson in advance, but involved his pupils in the discussions, and his lesson became a workshop for his novellae. Among his distinguished pupils were Ze'ev Wolf Salat, the publisher of his responsa, and Zevi Hirsch Ornstein. He supported talmudic scholars and authors, and Solomon Buber testified of him that "without exaggeration there are extant 300 commendations by him,"

so that he was designated *Sar ha-Maskim* ("chief approver," a pun on Gen. 40:9).

Besides the works he compiled with his brother-in-law Moses Ze'ev Ettinger, Nathanson wrote a series of works in *halakhah* and *aggadah*. His classic work in *halakhah* is his responsa *Sho'el u-Meshiv* (1865–90), in six volumes comprising 15 parts. He was also the author of *Divrei Sha'ul veka-Sefer Yosef Da'at* (1878–79) on the Shulḥan Arukh, *Yoreh De'ah*, in two parts; *Yad Yosef ve-Yad Sha'ul* (1851); *Hilkhot Nedarim*; Shulḥan Arukh (YD 203–35), *Beit Sha'ul*, on the Mishnah (in the Romm Vilna edition); *Divrei Sha'ul* (1877), on the *aggadot* of the Talmud; *Divrei Sha'ul* (1875), on the Pentateuch and the five scrolls, in two parts; *Divrei Sha'ul ve-hu Sefer Helek le-Shivah* (1879), on the *Naḥalat Shivah* of Samuel b. David ha-Levi; *Torat Moshe*, on the *Torat Hattat* of Moses Isserles (in: *Ḥamishah Sefarim Niftahim* (1859)); novellae glosses on the four parts of the Shulḥan Arukh; *Melekh be-Yofyo* (1866), a sermon calling to contribute to the Austrian war effort; *Avodat ha-Leviyyim* on the *Torat ha-Adam*; *Divrei Sha'ul ve-hu Sefer Edut bi-Yhosef* on the topics of Maimonides' *Mishneh Torah* and part of the Shulḥan Arukh; and *Ziyyon vi-Yrushalayim*, on the Jerusalem Talmud (in the Zhitomir edition). Many works and articles have remained unpublished.

[Shillem Warhaftig]

NATHANSON, MENDEL LEVIN (1780–1868), Danish merchant and editor. Born in Altona, Nathanson went to Copenhagen at the age of 12 to join relatives. In 1798 he settled down as a wholesale draper and until 1831 was a prosperous businessman. Later on he wrote works on economics and in 1838 became editor of the *Berlingske Tidende*, making it the leading newspaper in Denmark. Nathanson was a tireless exponent of the emancipation of Danish Jews. Through his initiative the Jewish Free School for boys was founded in Copenhagen in 1805 and five years later a similar school for girls. He organized the administration of the Jewish community, favoring the religious Reform movement, and had a large share in the Danish government's edict of March 29, 1814 which gave the Jews equal rights. His writings on economics are still studied, especially his historical and statistical presentation of Denmark's administration of public revenues up to 1836. Of special Jewish interest is his history of the Jews in Denmark, *Historisk Fremstilling af Jødernes Forhold og Stilling i Danmark* (1860). Nathanson's children all converted to Christianity.

NATIONAL CONFERENCE ON SOVIET JEWRY. At the initiative of Rabbi Abraham Joshua *Heschel, a leading Jewish religious figure active in the American civil rights movement, and of Jewish political leaders, the Jewish community had begun to explore strategies to address the plight of Soviet Jews as early as 1963. In April 1964, with Rabbi Heschel's encouragement, and the guidance of Senators Jacob *Javits and Abraham *Ribicoff, as well as Associate Justice Arthur J. *Goldberg, Jewish organizational leaders gathered at the historic Willard Hotel in the nation's capital. Their mission was to articulate the Jewish community's concerns for Soviet Jews, and to engage fellow Americans in their defense.

The convening of an American Jewish Conference on Soviet Jewry (AJCSJ) concluded with a decision to create a continuing but ad hoc arrangement to mobilize the organized Jewish community. Many voices were opposed to the creation of a free-standing advocacy effort, including the leadership of the Conference of Presidents of Major American Jewish Organizations and the National Jewish Community Relations Advisory Council, who were reluctant to see a new, independent organization that might diminish their own central roles in the Jewish community. Some personalities, such as Nahum *Goldmann, feared that aggressive activities would be seen as anti-Soviet and lead to the worsening of the situation for Soviet Jews.

The Israelis, acting under the aegis of the office known as the *Lishkat ha-Kesher* (Contact Office), responsible to the prime minister, were virtually the architects of the new coalition. The rescue of Soviet Jewry was an important task that the Israeli government thought that the people of Israel could not undertake directly and certainly not on their own.

At about the same time other organizations emerged that argued against the seemingly more orderly "establishment" approach of the AJCSJ, or even its more activist successor, the National Conference on Soviet Jewry. This included the Union of Councils for Soviet Jewry, a loose coalition of local activist groups from across the country, and the Student Struggle for Soviet Jewry, launched several weeks after the initial AJCSJ meeting.

Joining such personalities in trying to energize the Jewish world was the eminent author Elie *Wiesel whose visit to the Soviet Union led to his forceful book *The Jews of Silence*. Then only emerging as a voice of conscience, Wiesel linked this effort of rescue with the failure to rescue one generation earlier. He also appealed for the silent Jews in the free West, who had a free choice, to become engaged on behalf of their coreligionists.

In the face of mounting harassment against Soviet Jews, and with the prodding of Israeli officials, the Council of Jewish Federations, the National Jewish Community Relations Advisory Council, and other leading Jewish organizations agreed to fashion the National Conference on Soviet Jewry out of the older AJCSJ.

The newly minted NCSJ began to function in June 1971 and eventually encompassed a massive network of over 50 na-

tional Jewish organizations and several hundred local Jewish federations and community relations councils. This extensive coalition would spearhead the advocacy campaign for Soviet Jews for the next 20 years, until the collapse of the Soviet Union and the easing of anti-Jewish restrictions.

The NCSJ created an ever-expanding network of support groups to engage a broad range of citizens, including non-Jews. This included doctors, Congressional Wives (later Congressional Spouses) for Soviet Jews, and a special legal team for Soviet Jewish Prisoners of Conscience.

Concluding that public attention must be focused, NCSJ became more aggressive in its efforts with the national media, the power brokers in Washington, Congress and the administration, and stimulated "grass roots" activism through its member groups. It accelerated local community and synagogue activities as part of a year-round program. To help safeguard individuals in the Soviet Union, and focus attention on the specifics of their cases, the NCSJ created links to Jewish activists in the Soviet Union through visits, telephone calls, and letter writing. Such activities also helped personalize the movement for people thousands of miles away.

Using the expanding concept of politicizing the campaign, the NCSJ fostered meetings with and programs of letter writing to government officials in Moscow and Washington, and organized conferences, public meetings and demonstrations targeting the Soviet Union so that it would loosen anti-Jewish restrictions. It also maintained constant contact with U.S. officials to reinforce their involvement with Soviet officials.

As a result the NCSJ came to be recognized by the White House as acting on behalf of the organized Jewish community in regard to the Soviet treatment of its Jewish citizens. With its broad reach the NCSJ could organize nationwide appeals and petitions, such as the delivery of over one million names to the White House prior to President Richard Nixon's visit to Moscow to meet Soviet leader Leonid Brezhnev.

A major crisis developed following the May 1972 summit meeting between Nixon and Brezhnev, when the Soviet government announced a special tax on would-be emigrants, labeled a "ransom tax." The exorbitant fees embarrassed an administration seeking détente with Moscow, and led to strong reactions. In the United States members of Congress, under the leadership of Senator Henry "Scoop" Jackson and Congressman Charles Vanik, joined with the NCSJ to create legislation linking trade benefits to emigration practices, an effort supported by the UCSJ and the SSSJ.

Despite powerful opposition from the Nixon Administration, a successful two-year campaign served as an effective means of popularizing the issues as well as inflicting additional pressure on Moscow. It also demonstrated how far the Jewish community had come in honing its political skills and resisting high-level political pressure by standing firm on principles.

The Jewish world was again threatened by a divisive issue that erupted over the destination point for Jews finally al-

lowed to leave the Soviet Union. The NCSJ took no formal position. Rather, it attempted to focus on the issues of the right to leave, an end to antisemitism, and the right to recreate Jewish life. But it did support the decision of Jewish refuseniks in the Soviet Union and of Israeli authorities to support direct flights to Israel. This position was based on invitations from Israel, which helped secure the permits to emigrate, and the Zionist orientation of the refuseniks. The UCSJ and others rejected the Israeli plan and pressed for a so-called “freedom of choice” solution. That decision antagonized many of the Zionist organizations in the NCSJ as well as the government of Israel and the Jewish Agency, the instrument for easing emigration to Israel.

Putting aside the controversy over destination, the campaign reached its zenith in the 1980s with a defining moment. On December 6, 1987, on the eve of President Ronald Reagan’s first summit meeting in the United States with General Secretary of the Communist Party Mikhail S. Gorbachev, 250,000 people marched in the nation’s capital. Christian dignitaries and members of Congress joined Jews from every state as well as leaders of different ethnic groups, students and labor leaders. It was the largest national event ever held in Washington for any Jewish cause.

Organized under the aegis of a special task force created by the NCSJ, the Student Struggle for Soviet Jewry and the Union of Councils for Soviet Jews had been invited to cooperate and help create a wall-to-wall effort. While they could not bring a mass of people needed to give form to the broad scope of the movement, a demonstration of unity was critical.

The march and the broad media coverage did in fact signal to Gorbachev that the Soviet Union would not be considered part of the family of modern, industrial nations until its persecution of Jews and other minorities halted. Within a few years over one million Jews had been allowed to leave for Israel and elsewhere, while Jewish cultural and religious life was allowed to reorganize.

The struggle for Soviet Jews had encouraged the Jewish community in the United States to develop a strategy that encompassed strong national as well as localized efforts, with a strong political overlay. Jews had entered the political mainstream in an aggressive manner. As a result of the experience the community was better prepared in the future to utilize the political process to protect Jews wherever they were threatened. It was a powerful lesson not to be lost.

The Soviet Jewry movement brought together survivors of the Holocaust, their children and their grandchildren. It energized Zionists and non-Zionists as well as secular and religious Jews. Rabbis spoke from the pulpits of synagogues and came down from them; they were joined by Christian clergy of many denominations.

It mobilized activists from the American civil rights movement, who transferred their zeal and their experiences to this new campaign. It enlisted human rights advocates.

Within two decades after the Holocaust, the Jewish community had developed a sense of confidence lacking in earlier

years. With this increasing self-confidence it learned how to identify the levers of power, and how to use them. The campaign was an exemplary use of “soft weapons” to achieve Jewish and human rights objectives, rather than call for or rely upon hard or military weapons.

[Jerry Goodman (2nd ed.)]

NATIONAL COUNCIL OF JEWISH WOMEN (NCJW), U.S. national organization, was founded by Hannah Greenbaum *Solomon in 1893, when she and other Jewish women from across the country gathered to participate in the World Parliament of Religions at the Chicago World Exposition. The National Council of Jewish Women undertook a wide range of religious, philanthropic, and educational activities, from organizing vocational training for Jewish women and girls, to managing settlement houses and offering free baths to poor urban dwellers. Starting with the belief that those in need required skills instead of alms, “friendly visitors” acted as pioneer social workers and family aides. Council sections sponsored free libraries, employment bureaus, kindergartens, day nurseries, and projects providing summer outings for children. They also established Sabbath schools in communities without synagogues.

When Jewish immigrants began to arrive in the United States in great numbers at the turn of the century, the council met and cared for incoming women and girls, creating a permanent immigration-aid station at Ellis Island in 1904. Representatives in 250 American cities and in European ports assisted the girls with immigration problems and protected them from white slavery. NCJW also promoted English classes and job-skills training, and guided girls to employment and lodging. The National Council of Jewish Women combined social action with local service, assisting with programs to help poor children with free milk, penny lunches, and health programs in school. In 1909 the council participated in President Taft’s White House Conference on Child Welfare, and in 1911 it set forth its first complete program for social legislation, including regulation of child labor, low-income housing, civil rights, public-health programs, and food and drug regulations. After World War I, the council helped thousands of refugees stranded in internment camps as the U.S. tightened its immigration laws. Out of the rescue work came the International Council of Jewish Women, which is today a network of Jewish women in 47 countries. During the 1920s the council sponsored classes for unemployed workers and brought health care to Jewish people in isolated rural communities.

When Nazism brought a new wave of refugees, the council participated in the formation of the National Coordinating Committee for Aid to Refugees and Emigrants Coming from Germany, which became the National Refugee Service. In the post-World War II period, it established homes for unattached girls in Paris and Athens to help victims of the European Holocaust. To help rebuild Jewish welfare and educational institutions, it brought educators and welfare workers from Israel and Jewish communities abroad to the U.S.

for advanced training, with the stipulation that they return home to use their new skills. Toys and educational supplies were sent to children's institutions in Europe, and to Israel, Morocco, and Tunisia. In Israel the council began to assist the Hebrew University's teacher education program, helping to establish its John Dewey School of Education and building a campus for the Hebrew University High School in 1959. In 1968, it established the Research Institute for Innovation in Education, to educate Israeli children who are socially at risk, at the Hebrew University in Jerusalem. In the 1960s the National Council of Jewish Women had more than 100,000 members in communities throughout the U.S. Council women were pioneers of the Head Start pre-school program and the Golden Age Clubs (the first nationwide network providing recreation for seniors). The council has participated in interfaith efforts to assist low-income women, and adopted a major national program to promote day-care facilities in communities across the country.

NATIONAL FEDERATION OF TEMPLE SISTERHOODS

(**Women of Reform Judaism**), national organization of synagogue women's organizations dedicated to promoting Reform Judaism, founded in 1913. This organization, renamed the Women of Reform Judaism in 1993, counted 75,000 members in 500 local affiliates in the United States, Canada, and 12 other countries in 2005. Founding President Carrie Obendorfer Simon did not want NFTS to duplicate the work of existing Jewish women's organizations, especially that of the *National Council of Jewish Women, which in 1913 focused especially on immigrant aid. Instead, Simon saw NFTS carrying the banner of religious spirit forward in Jewish congregational life. Although she initially invited women from synagogue sisterhoods of all denominations to join NFTS, within a decade sisterhood women in both Conservative and Orthodox synagogues would create their own national associations.

At its inception NFTS declared that it would use the forum of a broad, public organization to further Jewish women's responsibilities to Reform Judaism, its synagogues, religious schools, seminary, and the wider Jewish community. NFTS encouraged its members to attend services weekly, to beautify their synagogues, and to be involved with their synagogue religious schools and the education their children received there. Reform Jewish women extended their mandate for youth work to rabbis-in-training, funding scholarships and building a dormitory at Hebrew Union College in 1925. After World War II, its leaders helped create the North American Federation of Temple Youth (NFTY) for Reform Jewish high school students.

For decades, the guiding light behind NFTS was executive director Jane Evans. Joining NFTS in 1933 at the height of the Great Depression, Evans pushed Reform Jewish women

to look beyond the confines of the synagogue and to engage the great issues of the day. Subsequently, its members took stances on access to birth control, civil rights, fair employment practices, and a host of other issues important to American women. In 1963, NFTS voted overwhelmingly in favor of their movement's considering women's ordination. A decade later they endorsed the Equal Rights Amendment.

Through NFTS, sisterhood women exercised a collective voice. Although they shared the public spaces of their synagogues and Reform Judaism's national institutions with their husbands and sons, NFTS nationally and through its local chapters allowed women a venue for the creation of a female Reform Jewish culture. Through its programs and shifting interests, the NFTS helped change the expectations of American Jewish women's proper behavior within the portals of their Reform synagogues and ultimately prepared them to enlarge their roles there and in the world.

NATIONAL FOUNDATION FOR JEWISH CULTURE

(NFJC), U.S. organization that supports Jewish artistic creativity, academic scholarship, and cultural preservation in America. The NFJC was established in 1960 by the Council of Jewish Federations and Welfare Funds (now the United Jewish Communities), following a ground-breaking study on National Jewish Cultural Services in America, chaired by Sidney Vincent of Cleveland, Ohio. The study recommended creating a central organization to respond to the cultural needs of the American Jewish community in the post-war era, particularly in the areas of Jewish Studies, scholarly publication, archives, and libraries. The NFJC's mission expanded in the 1980s to include new creativity in the arts as well as the dissemination of contemporary Jewish culture through national programming and publications.

NFJC provides grants and awards to writers, filmmakers, visual artists, composers, choreographers, playwrights, and scholars. Its national and international conferences, networks of cultural institutions, publications, and partnerships with local communities are intended to help define, interpret, and advance the contours of American Jewish culture for both the Jewish community and the broader American public.

Since its inception, the National Foundation for Jewish Culture has awarded over \$2.5 million in Doctoral Dissertations Fellowships to more than 400 graduate students pursuing careers in Jewish Studies. This program, along with the Foundation's early support for the Association of Jewish Studies, and its special grants for publication and research projects, helped fuel the development of the field of Jewish Studies in America in the later decades of the 20th century.

Over a 30-year period, the NFJC allocated almost \$10 million to major archival, scholarly, and Yiddish culture organizations through the Joint Cultural Appeal, comprised of allocations from the Jewish Federations of North America. Since 2000, the NFJC has awarded more than \$1.2 million on a competitive grants basis through the Fund for Jewish Cultural Preservation to libraries and archives for the preservation of historically important books, archives, manuscripts, periodicals, ritual objects, art and artifacts, photographs, recordings, and films.

In addition, the NFJC was instrumental in establishing and administering both the Council of American Jewish Museums (CAJM) and the Council of Archives and Research Libraries in Jewish Studies (CARLJS) as professional associations to support the cultural infrastructure of American Jewish life.

In the area of the arts, the National Foundation for Jewish Culture encourages and supports new creative expression in a wide variety of disciplines – film, theater, literature, music, dance, and visual arts.

The Fund for Jewish Documentary Filmmaking was created in 1996 with a challenge grant from Steven Spielberg's Righteous Persons Foundation and a matching grant from the Charles H. Revson Foundation. It has awarded 49 grants totaling more than \$1.25 million toward the production of documentary films which explore the variety of the Jewish experience. The NFJC has also initiated the Conference of American Jewish Film Festivals which provides a forum for film festival directors, staffs, and volunteers to network and address field-wide concerns.

The New Play Commissions in Jewish Theater has supported the initial development of 69 new plays presented by both mainstream and Jewish theaters. An anthology of *Nine Contemporary Jewish Plays*, selected from these commissions, was published by the University of Texas Press in November 2005. The NFJC also maintains an on-line database of *Plays of Jewish Interest*.

Other grants in the arts include the Goldberg Prize, which recognizes the work of young, emerging Jewish writers, and the Heyman Prize, which recognizes the work of emerging visual artists.

The NFJC also presents the premier annual Jewish recognition awards in the arts and humanities, which include the Jewish Cultural Achievement Awards in Scholarship and Arts, the Jewish Image Awards in Film and Television, the Patron of the Arts Award, and the Alan King Award in American Jewish Humor.

Over the years, the National Foundation for Jewish Culture, with support from the U.S. government's National Endowments for the Arts and Humanities, Jewish foundations, and local Federations, has sponsored a number of seminal conferences and special programmatic initiatives across the country. These have included North American and international conferences in Jewish theater, ethnic music, dance, and literature; artist retreats in the performing arts, visual arts,

and music; community-based and institution-based artist-in-residence programs; and public lecture series, film programs, and exhibitions.

The NFJC was instrumental in creating "Celebrate 350," the organizing committee for the celebration of the 350th anniversary of Jewish life in America. Its own 350th programs included the commissioning of "Klezmerbluegrass," a new work by the Paul Taylor Dance Company; the production of "Passover Dreams," a radio special distributed by PRI to over 150 stations nationwide; and a series of national conversations – both live in local communities and virtually over the Internet – on "American Jewish Icons."

The NFJC publishes the semi-annual *Jewish Culture News*, reaching over 20,000 households, which provides context and perspective to the contemporary Jewish experience, and the annual *Jewish Literary Supplement*, with a distribution of over 250,000, as a resource for readers, book groups, and schools. It also has an Internet presence through www.jewishculture.org, with on-line resources, information on Jewish culture, interactive discussions, and links to other Jewish and general culture sites.

[Richard Siegel (2nd ed.)]

NATIONAL HAVURAH COMMITTEE (NHC). The National Havurah Committee was founded in 1980 to facilitate the activities of fellowships known as havurot and to spread havurah values and enthusiasm to the larger Jewish community, thereby serving as a model for revitalizing Jewish living and learning in North America. The NHC was organized following a successful conference at Rutgers University in July 1979 that brought together different groups that shared the name "havurah." These included independent havurot that were formed as part of the counterculture of the 1960s, synagogue havurot that were created within Reform and Conservative synagogues, and Reconstructionist congregations that considered themselves havurot. Though differently organized, havurot, now as then, share the mission of creating small communities in which all members participate in creating authentic and meaningful Jewish experiences. Independent havurot also tend to be non-denominational, egalitarian, and inclusive. Havurah leadership is generally shared by the members; havurot typically do not have professional rabbinic or spiritual leaders.

The first NHC Summer Institute (at the University of Hartford in July 1980) was organized to help provide and empower havurah members with the knowledge to grow Jewishly and the skills to enable them to create and sustain such communities. (The first institute was organized and co-chaired by Joseph G. Rosenstein and Michael Strassfeld who, with Elaine S. Cohen, coordinated the 1979 conference; they were the first three chairs of the NHC.) Annual week-long summer institutes have been conducted by the NHC each year since 1980 and have attracted an average of 250 adults (plus many children) of varying Jewish backgrounds and observance. Courses at the institute address the variety

of Jewish texts, arts, culture, spirituality, issues, and practice from many different perspectives. Institute teachers are expected to attend as well as to offer courses. The NHC has inclusively recruited teachers from many backgrounds and women instructors when that was considered radical, and served as a prominent forum for discussing feminist perspectives of Judaism in the 1980s. The NHC model of summer programs for lay adults has been adapted by other organizations. Both the longevity of the institute and the replication of the model attest to its success.

Since 1996, an important feature of the summer institute is the participation of the Everett Fellows, a cohort of future leaders of the Jewish community who participate, often for the first time, in a heterogeneous community that manifests both excitement and commitment about Judaism and that embraces diverse ways of living Jewishly. (This program is funded by the Everett Foundation, established by Edith and the late Henry Everett.) Another unique annual feature (since 1995) is the celebratory completion (or *siyyum*) of a volume of the *Encyclopaedia Judaica* by study groups who have read a page a day (*daf yomi*) since the last institute.

The NHC also sponsors regional weekend retreats, including an annual New England retreat (since 1986) and an annual Canadian-American retreat (since 1993), publishes newsletters, and maintains on its website (www.havurah.org) a list of havurot. In the 1990s it published in a number of newspapers a weekly D'var Torah column that were written by a diverse group of writers representing all branches of Judaism, and that served as a prototype for subsequent D'var Torah columns; it also published three issues of a journal with the appropriately oxymoronic title of "New Traditions."

Although havurot and individuals participate in the NHC, it has not functioned as a membership organization; its programs have been organized by a volunteer board with modest staff assistance. The NHC has created and sustained programs and promoted values – such as inclusiveness, lay leadership and teaching, involvement, egalitarianism, fellowship – that have had an impact on the wider Jewish community.

[Joseph G. Rosenstein (2nd ed.)]

NATIONAL JEWISH CENTER FOR IMMUNOLOGY AND RESPIRATORY MEDICINE, non-sectarian hospital and research facility in Denver, Colorado, for respiratory, immune and allergic disorders. As early as the 1860s, hundreds and later thousands of men and women flocked to Colorado to "chase the cure" and seek a remedy for tuberculosis, the most dreaded disease of the era and the leading cause of death in 19th-century America. There was no single accepted treatment standard for tuberculosis or consumption as it was commonly called in the early years, but by 1880 medical opinion emphasized fresh air and high altitude for respiratory ailments, and Colorado, with its dry and sunny climate, drew tuberculosis victims like a magnet. By 1896 Colorado was being flatteringly referred to as "the World's Sanatorium." Yet, consumptives who flocked to Denver in the hope of finding a cure were often

unable to secure simple lodging, let alone medical care. Since no publicly supported institutions for tuberculosis existed at the time, the challenge of adequate care was left to private institutions. In Denver, the Jewish community was the first to come to their aid with the founding of National Jewish Hospital for Consumptives.

Frances Wisebart *Jacobs, nicknamed Denver's "Mother of Charities," was the impetus behind the founding of National Jewish Hospital. Launching a relentless campaign on behalf of the sick and indigent, she enlisted the assistance of the new rabbi at Temple Emanuel, Rabbi William Friedman, and they worked together with other community members for many years to make her dream a reality. The Jewish community, which numbered about 500 at the time, was composed primarily of acculturated German Reform Jews from Central Europe, and National Jewish Hospital was finally opened in 1899, with the financial assistance of the International Order of B'nai B'rith, the first sanatorium in Denver for tuberculosis patients. The hospital was formally non-sectarian and treated all patients free of charge; however, the vast majority of patients in the early years were East European Jews, and in addition to medical treatment the hospital taught classes in English, civics, and skills for new trades in an effort to Americanize the new immigrants and help make them financially self-sufficient. Like most early TB sanatoria, treatment emphasized enforced rest, fresh air and sunlight, and a diet rich in milk, eggs, and meat.

With the advent of antibiotic treatment, over the years the threat of tuberculosis was brought under control, and National Jewish Hospital evolved with the times. In 1978, National Jewish merged with the National Asthma Center, which grew out of the original Jewish Sheltering Home for Jewish Children (later the famed Children's Asthma Research Institute and Hospital (CARIH)), founded to assist the children of parents who were tuberculosis victims, and in 1986 the two institutions became known as the National Jewish Center for Immunology and Respiratory Medicine. The passing of time brought yet another change, and today the institution is called the National Jewish Medical and Research Center and continues to treat patients from throughout the country with cutting-edge medicine and research. It is known worldwide for treatment of patients with respiratory, immune and allergic disorders, the only facility in the world dedicated exclusively to these illnesses. Since 1998 National Jewish has been ranked by *U.S. News & World Report's* "America's Best Hospitals" as number one in the nation for excellence in treating respiratory diseases. In 1999 National Jewish marked its centennial and a legacy of one hundred years of healing. Today, it continues as a non-sectarian, independent, not-for-profit clinical and medical research center whose mission is to develop and provide innovative programs for treating patients of all ages and to discover knowledge to educate health care professionals and provide them with the tools for treatment and prevention.

[Jeanne Abrams (2nd ed.)]

NATIONAL JEWISH DEMOCRATIC COUNCIL (NJDC). Jews may be the Democratic Party's second most reliable constituency (after African Americans), but by the mid-1980s Jewish Democrats were beginning to feel insecure as Republican outreach to their community intensified and as the Democrats drifted further away from support for Israel. There was a palpable fear that such a potent combination could portend a Jewish exodus from the Democratic Party. To quell Jewish alienation from the Democratic Party, a group of concerned activists led by Morton Mandel of Cleveland decided to organize a Jewish voice *within* the party, and the NJDC was founded in 1990. Mandel became founding chairman; other initial organizers include Sheldon Cohen of Washington, D.C., Monte Friedkin of Florida, and David Steiner of New Jersey.

Ronald Reagan's early presidency brought a new wave of Jews into the Republican Party; dubbed neo-conservatives, many had been followers of Democratic senators Henry "Scoop" Jackson of Washington and Daniel Patrick Moynihan of New York. Neo-conservatives were ardently pro-Israel and hawkish on Cold War issues but were also domestic liberals, who nonetheless saw their party moving too far to the left and increasingly critical of Israel's hardline Likud-led government.

The Democrats' problem was compounded by the growing influence of the two-time Democratic presidential nominee Rev. Jesse Jackson, an African American civil rights activist. Jackson's hostility toward Jews – he privately referred to them as "hymies" and New York as "hymietown" – his open sympathies for Yasser Arafat and the Palestinian cause, and his avid courtship of Arab-American support were sources of great concern for the Jewish community.

The Republican Party exploited rifts within the Democratic party, as well as new pro-Israel voices within it to draw Jewish defectors. What became known as the Republican Jewish Coalition (RJC) was founded in 1985 to build support for the Republican party and its candidates in the Jewish community. However, Republican outreach to the Jewish community had little impact on Jewish voting habits, despite growing Republican support for Israel during the Reagan years and again under President George W. Bush, whose hostility toward Palestinian leader Yasser Arafat and sympathy for Prime Minister Ariel Sharon won praise from some hardline pro-Israel groups.

In the closing years of the 20th century and the early 21st both Democratic and Republican administrations were pro-Israel, and the majority of Jews (est. 70 percent) voted Democratic because of the conservative domestic agenda of the GOP, and particularly the enormous influence of the party's right-wing evangelical Christian base, widely seen as the Jewish community's most powerful adversaries on church-state issues. Both partisan groups seek to build Jewish support for their party. The RJC focuses overwhelmingly on Israel-related issues, including the war on terror, while the NJDC stresses a much broader agenda, particularly emphasizing the deep dif-

ferences between the parties on domestic issues, such as civil liberties, reproductive freedom, the environment, gun control, and privacy rights.

The NJDC has always been very open about its ties to the Democratic party, while its rival group was apparently reluctant to advertise its partisan identity. In an apparent appeal for Jewish support and to appear neutral to Democratic voters, the RJC initially simply called itself the National Jewish Coalition.

NJDC is aligned with the Democratic Party and its agenda, but it is not formally linked to the party itself. Legally, it (like RJC) is independent. NJDC, with Democrats' larger and less fragile Jewish voter base, is more likely than its counterpart group to criticize members of its own party who are seen as acting hostile to Israel or the Jewish community's interests. NJDC coaches candidates and politicians on how to deal substantively as well as politically with the Jewish community, and it trains grass roots advocates to work and organize at the local level. A special emphasis has been on developing a new generation of Jewish Democratic leaders around the country. NJDC also stages "get out the vote" efforts for each election and organizes debates among competing candidates or Jewish spokesmen for the two parties. NJDC also works with the Congress and the Jewish and national media in support of its agenda. It sponsors trips to Israel for leading political figures to better educate them on the views and concerns of Jewish voters back home.

[Douglas M. Bloomfield (2nd ed.)]

NATIONAL MUSEUM OF AMERICAN JEWISH HISTORY. The National Museum of American Jewish History opened its doors on July 4, 1976 on Independence Mall in Philadelphia.

At the beginning of the 21st century, the National Museum of American Jewish History announced plans for a new museum in Philadelphia's historic district, at the corner of 5th and Market streets, adjacent to the Liberty Bell, one of the most heavily traversed intersections in the city.

The NMAJH plans to build a landmark museum on Independence Mall dedicated to the history and contributions of Jews in America with dramatic interactive galleries and exhibition halls, a state-of-the-art resource center and a theater for films, lectures and performances. The lead architect is James Polshek, design principal of the Polshek Partnership in New York. The award-winning firm has designed many top museums, including the American Museum of Natural History's Rose Center for Earth and Space, the Smithsonian Institution's National Museum of the American Indian, and the Clinton Presidential Center.

The new location is a half block from the museum's current site, but the new location will put it across the street from the Liberty Bell and a block away from Independence Hall. As Museum board member George Ross said, "Right now we are on the fifty yard line on Independence Mall. With our new location, we will be in the owner's box."

The new location has many advantages over the current one, such as the site's larger footprint offers a more effective layout of exhibition space and the opportunity to build and operate a more efficient museum; visitation will be enhanced by being across the street from Independence Hall and the Liberty Bell Center: the latter attracts more than 2 million tourists annually; the new site's corner is also the location of a subway station, making it easily accessible for public transit riders.

In recent years, both the Liberty Bell Center and the National Constitution Center opened in Independence National Historical Park on Independence Mall as part of the largest urban revitalization project in the nation. Spurred by the new construction, park visitation surged by 35 percent and now has four million visitors annually.

Mary A. Bomar, director of the Northeast Region for the National Park Service, noted that

The Museum's presence on the mall is fitting because the story of the Jewish community in America is a story of freedom and what can be achieved when a group finds freedom. Visitors from around the world will now have another way to experience this vital American value during visits to Independence National Historical Park.

The museum will connect Jews more closely to their heritage and will inspire in people of all backgrounds a greater appreciation for the diversity of the American experience and the freedoms to which Americans aspire. The museum will collect historical materials and present experiences and educational programs that preserve, explore and celebrate the history of Jews in America. Situated next to Independence Hall and the Liberty Bell, the new museum will cooperate with all parts of the American Jewish community and will provide a symbolic location in the United States that is representative of all American Jews.

Congregation Mikveh Israel, which shares its location with the museum, will remain at the current site.

Among the significant exhibitions the Museum has presented since its opening are "A Worthy Use of Summer: Jewish Summer Camping in America" and "Bridges and Boundaries: Two Peoples Face to Face," a collaborative exhibitions project with the Afro-American Historical and Cultural Museum (now the African American Museum in Philadelphia.) Both museums were awarded the Ione Dugger Multicultural Award from Temple University and the Philadelphia Commission on Human Relations' Human Rights Award in recognition of the project.

The museum's most recent core exhibition (as of 2005), "Creating American Jews," won an Award of Merit for Institutional Achievement from the Pennsylvania Federation of Museums and Historical Organizations.

The museum has also been in the forefront of the Jewish crafts movement. Its first "Contemporary Artifacts" exhibition, in 1981, provided a showcase for Jewish ritual art and help spur the expression of traditional Jewish heritage in an American context.

The museum also innovated an annual family program held each December 25, "Being Jewish at Christmas." The program attracts approximately 1,000 people and provides an opportunity for families to explore their Jewish heritage through performances and other entertainment, crafts projects, and special children's activities.

[Josh Perelman (2nd ed.)]

NATIONAL PARKS IN ISRAEL. The National Parks Authority was established by law in 1963 to take over the functions carried out from 1956 (with the same staff) by the Department for Landscaping and the Preservation of Historic Sites in the prime minister's office. These functions are: the preparation, laying out, and maintenance of park areas for the general public; the restoration, landscaping, and preservation of historical and archaeological sites; the construction of access roads and amenities for recreation and leisure; and, in the case of ancient sites, the provision of explanatory notice boards and pamphlets. The Authority has also established museums at several historic sites.

Israel is rich in biblical sites and the remains of post-biblical Jewish, Roman, Byzantine, Muslim, and Crusader settlements, often in surroundings of beauty, and most of the national parks have been linked with these sites. Many had suffered from centuries of neglect, since they were of little interest to the successive occupying authorities. The Authority had to clear overgrowth and thick layers of debris, undertake restoration programs where possible, and provide amenities and access for visitors, both local and from overseas. Some parks were laid out without any connection with a historic site, in order to preserve rural areas from the encroachment of urban development. Occasionally, archaeological sites were taken over for preservation and maintenance by the Authority, where the excavations had been particularly dramatic, as at *Masada; or where scholars had made spectacular finds of wide public interest, as at *Hazor, the *Bet She'arim necropolis, the ancient synagogues at *Bet Alfa, *Baram, and *Hammath (Tiberias), the Roman theater at *Caesarea, and the excavations at *Bet Yerah and *Ramat Raḥel. At some sites the National Parks Authority was responsible for the excavations, undertaken by specially commissioned archaeologists, as well as for their restoration and current maintenance. Examples are: the Crusader city of Caesarea, complete with moat, walls, gates, and towers; the crypt, tunnels, and some of the walls of Crusader *Acre; the castles of *Yehi'am and *Belvoir; the Roman theater at *Beth-Shean; the Nabatean-Byzantine city of *Avedat, with its citadel, acropolis, and two churches; and the Nabatean cities of *Shivta and *Kurnub. At Masada, much of the restoration work was carried out at the same time as the excavations.

The Authority is also responsible for sites designated as national parks. Those already open to the public, in addition to the ones already mentioned, are: Ḥurshat Tal in Upper Galilee, with its streams, pond, lawns, and woods; the spring, bathing pool, and woodland slopes of Ma'ayan Ḥarod in the

Valley of Jezreel; the three natural pools and landscaped banks of Gan ha-Sheloshah, also in Jezreel; the seashore park and antiquities of *Ashkelon; the natural pools of Ein Avedat in the northern Negev; the 25,000-acre parkland and forest of Carmel; and the Crusader remains at Aqua Bella (Ein Hemed) near Jerusalem. The Authority has also renovated some of the medieval synagogues of Safed, and improved the amenities at the tomb of Maimonides in Tiberias. It has carried out site-improvement work at Mount Zion in Jerusalem and at the tomb of R. *Simeon b. Yoḥai at *Meron. The Authority was one of the initiators in setting up the park at *Yad Mordekhai, which contains a reconstruction of the Egyptian attack on the kibbutz in 1948 and a small museum devoted to the defense of the southern kibbutzim during the War of Independence. Among the new parks for which plans have already been completed by the Authority is the Jerusalem national park – a green belt circling the Old City walls and covering 500 acres. The number of visitors to the national parks in 1968 exceeded 2,000,000.

In 1998 the National Parks Authority was united with the Nature Reserves Authority as the Israel Nature and Park Authority. The new Authority's goal is to preserve Israel's green areas in the face of rapid urban development, increasing transportation needs, and the steep growth of Israel's population. The Authority's tasks are to locate sites for the establishment of nature reserves and national parks; to establish, maintain, and manage existing reserves and parks; to oversee natural resources; to initiate educational activities; and to conduct research on nature preservation. The Authority is responsible for 380 nature reserves spread over 2,350 sq. mi. (6,130 sq. km.) and 115 national parks spread over 140 sq. mi. (370 sq. km.). Fifty-eight nature reserves and national parks are open to the public, with over 10 million visitors in 2003.

NATIONALRAT (Ger. "[Jewish] National Council"), committee of Zionist roof organization in Austria. It was formed at the time of the collapse of Austria-Hungary in November 1918, in Vienna, to advance the claims of the Jewish people as a national entity in still unsettled postwar Austria and was active until the end of 1920. Initially it consisted of 50 members, representing a number of Jewish organizations. The Zionist Robert *Stricker was its most active chairman and its outstanding leader. The other chairmen were Adolf Boehm, Isidor Margulies, Bruno Pollack Parnau, and Saul Sokal. Its secretary was Robert Weltsch. Due to the segmentation of the Jewish population of old Austria, the sphere of influence of the Nationalrat was limited to the Jews of German-speaking Austria, who were too weak to demand extended minority rights. The Nationalrat was not based on elections and represented only part of the Jewish population. Its claims were opposed by the non-Zionist Jews who were satisfied with the existing legal autonomy of the Jewish religious community, and by the Social-Democratic Party, and were not accepted. Similar organizations were later established in other postwar

Central European countries. The Nationalrat organized a legal department, a social welfare department for former soldiers, and an employment exchange. Its department for social welfare was directed by Anitta Mueller-Cohen. The Nationalrat was instrumental in promoting modern Hebrew education by initiating the Hebrew Teachers' College (Hebraisches Paedagogium), founded in 1917, and by establishing the Jewish Realgymnasium in 1919, a secondary school with the language of instruction partially in Hebrew, directed by Viktor Kellner. The program of the Nationalrat was later taken over by the *Juedische Volkspartei ("Jewish People's Party").

NATIONAL RELIGIOUS PARTY (NRP), Israeli party known in Hebrew as **Hamafdal** (acronym for Ha-Miflagah ha-Datit ha-Le'ummit). The NRP was founded in June 1956 through the merger of two national religious Zionist parties, *Mizrachi and *Ha-Po'el ha-Mizrachi, and additional religious circles. In the elections to the Third to Twelfth Knessets it ran in elections under the name Ha-Hazit ha-Datit ha-Le'ummit (the National Religious Front). It constitutes a part of the World Federation of Hamizrachi-Hapo'el Hamizrachi. Unlike the *haredi* religious party, the NRP always considered itself an integral part of the State of Israel, and despite its adherence to *halakhah*, has accepted the supremacy of the secular laws of Israel on most issues. Its basic position was that the secular laws and halakhic laws can exist side by side with each other. Though rabbis have played an important spiritual role in the NRP, and their influence has grown in recent years, the party is run on democratic lines, and it is the members, not the rabbis, who decide the party's line. Like the other Orthodox religious groups in Israel, it opposes recognition of Conservative and Reform Judaism.

Until the Six-Day War the NRP followed a moderate political line, and concentrated its activities on preserving the Jewish character of the state in various spheres, including the provision of religious services, the preservation of the religious *status quo* on such issues as *kashrut*, respect for the Sabbath, nurturing of the national religious education system, the religious kibbutz movement, and social welfare. It advocated full military service for men, together with religious studies within the framework of *yeshivot hesder*, and nonmilitary national service for women.

Until 1976 it maintained a political alliance with *Mapai, and then the *Israel Labor Party, commonly known as "the historical coalition," and was a member of all the Mapai- and Labor-led governments, except for a brief period in 1974, soon after Yitzhak *Rabin formed his first government. However, after the Six-Day War, and even more so after the

Yom Kippur War, a shift to the right began in its political positions, especially with regard to the future of those parts of Erez Israel occupied in the course of the Six-Day War, and in religious terms it shifted to a more messianic brand of Judaism.

In 1968 the NRP convention adopted the following policy decisions: "The National Religious Party views the political and security accomplishments that have been achieved by this generation in Erez Israel, as the beginning of realization of the will of Divine Providence and of the processes directed toward complete salvation of the Jewish people in the land of its forefathers; the State of Israel must pursue all means at her disposal to lay the foundation for peace between itself and the neighboring states, and to negotiate peace treaties; in the negotiations for peace treaties, the State of Israel must be guided by three basic principles: the aspiration toward enduring peace; the historic religious rights over the Promised Land; and assuring secure borders for the state."

The NRP was at first an active actor within the *Gush Emunim settlement movement that was founded in 1974, though quite rapidly Gush Emunim started to develop independently of it. This shift in positions was both the result of the new political circumstances, and the growing influence of the younger generation in the party, headed by Zevulun *Hammer. The formal breach between the NRP and the Labor Party occurred in 1976, after its ministers abstained in a vote in the *Knesset on a motion of no confidence in the government, over the issue of the alleged official breach of the Sabbath as a result of a ceremony held in an air force base on a Friday afternoon.

The NRP joined the government that Menaḥem *Begin formed in 1977 and joined all subsequent governments, except for that formed by Yitzhak Rabin in 1992. In November 2004 it left the government of Ariel *Sharon over his Gaza disengagement plan.

In 1981 the Moroccan-born MK Aharon Abuhazeira left the NRP, claiming that the party had not stood by him during a corruption trial, due to his ethnic origin, and established his own party called Tami, which entered the Tenth Knesset. In 1988 a group of moderate members, who objected to the NRP's religious and nationalist radicalization, left the party and established a moderate religious party called Meimad. However, Meimad remained weak, and entered representatives into the Fifteenth and Sixteenth Knessets only because it ran in a single list with the Labor Party.

The NRP was adamantly opposed to the Oslo process initiated by the Rabin government, and voted against all the various interim agreements signed with the Palestinians, starting with the DoP in September 1993. The assassination of Rabin in November 1995 by a young man, Yigal Amir, who had studied in the religious Bar-Ilan University, resulted in serious soul-searching within the NRP, but this did not stop a further shift to the right thereafter. Prior to the elections to the Sixteenth Knesset, Effie Eitam, a former brigadier general, who was born on a secular kibbutz but gradually adopted

radical religious right-wing views, was elected as the leader of the NRP. The NRP was the only religious party that joined the government formed by Ariel Sharon after the elections to the Sixteenth Knesset but soon found itself in opposition to Sharon's disengagement plan. Nevertheless, the majority of the party continued to support a pragmatic line, while Eitam favored taking the NRP into the right-wing National Union Party. This resulted in his being removed from the leadership of the party, and his leaving the party together with MK Yitzhak Levy in June 2004, to form their own parliamentary group called Religious Zionism. The NRP remained in the government for another five months, but finally left the government in November 2004.

The NRP's political leaders since its establishment have been Hayyim Moshe *Shapira (1956–70), Dr. Yosef *Burg (1970–86); Zevulun Hammer (1986–98); Yitzhak Levy (1998–2003), Effie Eitam (2003–04), and Zevulun Orlev (2005–).

From the Third to Ninth Knessets the NRP had 10–12 Knesset seats; in the Tenth Knesset it went down to 6, losing seats to the Teḥiya and Tami, and until the Sixteenth Knesset received only 4–6 seats, except for a brief revival in the Fourteenth Knesset when it went up again to 9, as it did in the Seventeenth (2006).

Until 1977 the NRP usually held the ministries of Postal Services, Welfare, Religious Affairs, and the Interior. After 1977 the Ministry of Education and Culture was held by the NRP in numerous governments, and as of the 1990s also Transportation, Construction, and Housing and National Infrastructures.

The party publishes a daily called *Hazofeh*. From 1957 to 1969 it published an ideological journal called *Gevilin*, which started to appear again in 1990.

[Susan Hattis Rolef (2nd ed.)]

NATIONAL SOCIALISM (for short, **Nazism**), a movement in Germany patterned after fascism, which grew under Adolf *Hitler's leadership and ruled Germany from 1933 to 1945. The Deutsche Arbeiterpartei, founded on Jan. 5, 1919, changed its name in the summer of 1920 to Nationalsozialistische Deutsche Arbeiterpartei (NSDAP) and Hitler, who had been the seventh member of the original party, soon became its undisputed leader (*Fuehrer*). From then on, the history of National Socialism became virtually identical with Hitler's career.

As an ideology, National Socialism was a mixture of extreme nationalist, racist ideas and a trend of populist radicalism which never formed a coherent unity. Among its major tenets were biological racialism, social Darwinism – the survival of the fittest – unrestrained antisemitism, anti-Bol-

shevism, and the quest for *Lebensraum* – German conquest of living space to the East. It preached a folkish antisemitism, pan-Germanism and the *Dolchstoßlegende* – stab in the back myth – that Germany would have won World War I if it had not been attacked at home by Jews and others. It built itself on the myth of blood and soil and on the notion of Germans as the master race and Germany dominating Europe.

Prior to 1923 the Nazi Party was active mainly in Bavaria, where in November it attempted to overthrow the Weimar Republic in what became known as the Munich Beer Hall Putsch, or Hitler's Putsch. The coup was crushed and Hitler was imprisoned for a surprisingly short period of time; and it was there in Landsberg that he wrote *Mein Kampf*. The book became the bible of the movement, the platform of the party. Prior to 1928 it was a marginal party of virtually no significance, receiving less than 3% of the vote in 1928. Yet in the interim it organized, attracting more moderate elements along with folkish groups and a core of militant followers that it knew how and when to deploy effectively. The worldwide economic depression of 1929 and 1930 which hit Germany hard added to the dissatisfaction with the Weimar Republic and to the attraction of extremist parties. In September 1930 the Nazi seat total rose to 107 in the 608-seat Reichstag, winning some 6.4 million (18%) of the vote. They improved their performance in the elections of July 31, 1932, when they received 37.3 percent of the vote, which translated into 230 of 608 seats. Yet in the elections of November 6, 1932, the last free elections before Hitler's rise to power, the Nazis received only 33.1 percent of the vote and won 96 seats. Hitler came to power as the head of a coalition government, with conservative elements believing that once in power he would moderate his views due to the responsibilities of office and that he and his followers could be controlled.

Once in power, Hitler moved swiftly against external opposition, establishing concentration camps to house political opponents of the regime, using the pretext of the Reichstag Fire of February 27, 1933, to establish rule by decree, and suspending existing guarantees, and then eliminating the remaining non-Nazi parties. By July 1933 the Nazi Party was the only party in Germany.

In 1934 Hitler decided to act against his opponents within the party, eliminating SA chief Ernst Rohm and other rivals – perceived or real. On August 2, President Von Hindenburg died and Hitler was named head of state as well. After the pressures of 1933–34, the Nazis consolidated power and achieved successes at home and abroad. Unemployment was lowered and Germany was no longer isolated. Hitler's achievements in the realm of foreign policy were indeed impressive to the German people. He had reversed the shame of Versailles, returning Germany to the world stage and rearming its military. From the Nazi perspective the annexation of Austria and the entrance into the Sudetenland were triumphant.

From 1938 onward Nazism became increasingly unrestrained. **Kristallnacht* was the eruption of violence against Jews, the letting loose of controlled mob violence. Wartime

was the best time to solve certain problems that could not be addressed at other times. Thus, the “*Euthanasia Program,” an extreme expression of Social Darwinism and of applied biology, was approved in an order backdated to September 1, 1939, to give it the appearance of a wartime measure. The conquest of territories, the incorporation of lands, and the appeal to ethnic Germans living in other countries, were all expressions of Nazi ideology. Above all, so was the “Final Solution to the Jewish Question,” which wanted to eliminate all Jewish blood from the face of the earth and therefore remake the human species.

NATIONAL YIDDISH BOOK CENTER, cultural institution dedicated to collecting and distributing endangered Yiddish books and, through programs and education, opening up their contents to new readers. Located in Amherst, Massachusetts, the Center safeguards a collection of 1.5 million Yiddish books rescued from individuals and institutions worldwide. The collection contains original Yiddish novels, plays, poetry, nonfiction, periodicals, and sheet music, most in duplicate copies. The majority were published between the late 19th- and mid-20th century, mainly in Eastern Europe, the United States, and South America. The books fell into disuse as spoken Yiddish was gradually replaced by English and other languages after World War II. All the Center's volumes are available for sale at nominal cost to individuals, libraries, schools, and colleges and universities.

Because of the physical deterioration of many volumes, the Center created the Steven Spielberg Digital Yiddish Library in 1998, making reprints of every title available for purchase as brand-new, hardcover, acid-free editions. The Spielberg Digital Yiddish Library is believed to be the only project ever to digitize an entire modern literature, preserving it permanently for future generations of readers, students, and scholars.

History

The Yiddish Book Center is a nonprofit institution, and its programs are funded by contributions from over 30,000 (as of 2005) members, and gifts and grants. Founded in 1980 by Aaron Lansky, the Center was one of the first organizations in America dedicated to the preservation of Yiddish literature and culture. As a young graduate student, Lansky saw the need to save endangered books that were being discarded by the children and grandchildren of elderly Jewish immigrants. His call to save Yiddish books from destruction led to a massive, ongoing rescue operation by a worldwide network of *zamlers* (volunteers). Lansky won the John D. and Catherine T. MacArthur Foundation's so-called “genius” award in recognition of his extraordinary work.

In the early years of collection, most books, the personal property of Eastern European Jewish immigrants, came from locations within the United States. The mid-1990s saw a shift in origin, with volumes shipped from South Africa, Argentina, Mexico, and Brazil – sites of once-large Yiddish-speaking immigrant communities. All books coming into the Center are sorted by hand and new titles are catalogued according to library standards. As of 2005, 25 years after its founding, the Center still receives an average of 500 Yiddish books each week.

Programs

In 1997 the Yiddish Book Center moved into permanent headquarters in Amherst. The building, designed by architect Allen Moore, recalls the dramatic lines of the lost wooden synagogues of Eastern Europe. It is open to the public six days per week and houses library-style stacks of Yiddish books as well as exhibits, a theater, bookstore, and offices. Approximately 10,000 visitors come to the Center each year to view exhibits on modern Yiddish literature and culture and to attend programs ranging from week-long conferences to concerts, performances, readings, lectures, films, and family-oriented events.

The Book Center publishes an English-language magazine, *Pakn Treger*, which features essays, fiction, new translations, cultural reporting, photographs, and art connecting contemporary Jewish life to its roots in Yiddish culture. The Center's "Jewish Short Stories from Eastern Europe and Beyond," a 13-part audio series produced for National Public Radio in 1995, introduced hundreds of thousands of listeners to the riches of Yiddish and other modern Jewish literature, in English.

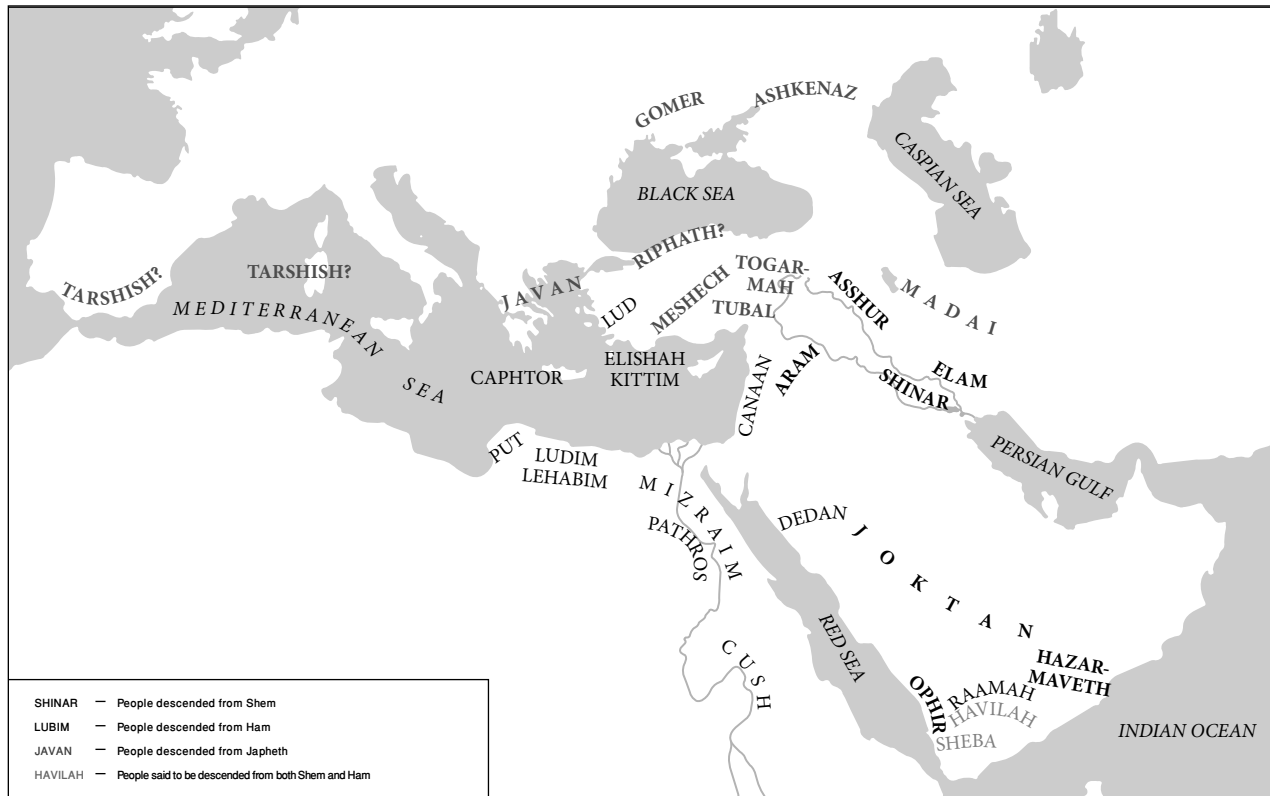

In 1989 the Center invited college students to take part in an internship program that provided Yiddish language instruction in combination with hands-on work sorting and shelves incoming Yiddish volumes. The popular program grew into the Steiner Summer Internship Program and now offers dozens of students an opportunity to study Yiddish language and literature in intensive accredited courses and to take part in the ongoing work of the Center for eight weeks each year. Many alumni of the program have gone on to enter the field of Jewish and Yiddish studies as educators, writers, and community leaders.

In 2002 the Center joined with the Fund for the Translation of Modern Jewish Literature and Yale University Press to create the New Yiddish Library, an initiative producing new translations of modern Yiddish literature. New Yiddish Library titles include works by Shalom Aleichem, Itzik Manger, and Lamed Shapiro. The Center also produced the Rohr Library of Recorded Yiddish, which preserved as CD compilations more than two dozen full-length works of modern Yiddish literature read by native Yiddish speakers, in partnership with the Jewish Library of Montreal.

[Nancy Sherman (2nd ed.)]

NATIONS, THE SEVENTY, a conception based on the list of the descendants of Noah given in Genesis 10, usually called "The Table of Nations." According to the table, all the nations of the earth may be classified as descended from one or another of Noah's three sons, Shem, Ham, and Japheth. The principle behind the classification is generally geographic proximity rather than ethnic or linguistic connections. Those nations descended from Japheth are *Gomer (Cimmerians), Madai (Medes), Javan (Ionians), *Ashkenaz (Scythians), *Elisha and *Kittim (Cypriots), and others (10:2–4). The lands occupied by the Japhethites bordered the Fertile Crescent in the north and penetrated the maritime regions in the west. The principal subdivisions of the descendants of Ham are Cush (the peoples of the southern shore of the Red Sea), Mizraim (Egypt), Put (location uncertain, probably Cyrene), and Canaan (10:6–20). The descendants of Cush are listed in 10:7 as Seba, *Havilah, Sabtah, Raamah, and Sabtechah. According to 10:8, Cush had another son, *Nimrod, whose rule extended over all Mesopotamia. That a Mesopotamian ruler is here linked to the peoples adjacent to the Red Sea stems from the confusion caused by the fact that there were two nations known by the name Cush, one in the Nile region ("Nubia, Ethiopia") and another in Mesopotamia (the Kassites; Akk. *Kaššû*). The Bible often telescopes the two. The inclusion of the Philistines and the Cretans (Caphtorim) in the list of the descendants of the Egyptians (Mizraim; verses 13–14) is another problem, as there is clearly no ethnic or linguistic connection between these peoples. The reason for including the Philistines in the list must, therefore, have been geographic; Crete was included because it was the original home of the Philistines. The inclusion of the Ludim, if this refers to the Lydians, in this list is also a problem. It is possible that this refers to the invasion of Egypt by the Sea Peoples. Another Lud is also mentioned as a descendant of Shem (verse 22). The classifying of Canaan in the Hamite branch of nations is again perplexing, there being no ethnic or linguistic connections between the Canaanites and the Egyptians (verse 6). The subdivision of the Canaanites is problematic too: the inclusion of Phoenicia (Sidon) among the subdivisions of the Canaanites is appropriate, since the Phoenicians referred to their country as Canaan, and the Phoenician language is close to Hebrew. However, it cannot be on ethnolinguistic grounds that the Jebusites, Hittites, Hivites, and others are listed as Canaanites (10:15–18). It seems that once again the principle behind the classification is geographic proximity. The territory of the Hamites extended from Phoenicia, through western Palestine, to northeastern Africa. The Shemites included all the "children of Eber," the eponym of the Hebrews (10:21), and hence were therefore given prominence. The Assyrians, Arameans, and numerous tribes of Arabians were classified as Shemites. It is not clear why the Elamites, whose center was southwest Persia, were considered Shemites (10:22). Perhaps they were listed with Ashur (Assyria) because they were the nearest neighbor to the east of Mesopotamia. Arpachshad, listed as the grandfather of Eber, is otherwise unknown; the name appears to be non-Semitic.

The Hebrew Table of the Nations (from Genesis 10 and related sources). After the Westminster Historical Atlas to the Bible, 1945.

That the table does not aim at completeness is suggested by verse 5a, “From these [sons of Japheth] the maritime nations branched out” – here unnamed. Moab and Ammon, the descendants of Nahor and Keturah, the Ishmaelite tribes and Edom, and Israel itself are intentionally omitted, for they find their place at later stages of the narrative. Unexplained is the omission of Babylon. The earliest dating of the table is determined by the presence of the Cimmerians and the Scythians, who appeared in Asia Minor only in the eighth century. In general, the horizon of the table agrees remarkably (with the exception of Babylon) with that of Jeremiah (e.g., 46:9; 51:27–28) and Ezekiel (27:1ff.; 38:2ff.; 39:1), and it is likely that the table in its present form was known to these prophets. Heterogeneous and inconsistent (cf. the discrepancy between verse 7 and verses 28–29 regarding Havilah and Sheba), the table is assumed to be a combination of various sources. The material is conventionally allocated between J (verses 8–19, 25–30) and P (all the rest). Together with the story of the Tower of Babel, the table marks the end of the primeval history of mankind and the transition to the patriarchal history, which is played out against a background of a world filled with nations. Like the genealogies of 11:10–30; 25:12–18; and 36:1ff., it enables the narrative to maintain its focus on the main line of Israel’s descent by summarily disposing of all collateral lines. At the same time, it shows the fulfillment of God’s blessing of Noah and his sons with fertility (9:1, 7), and locates the ancestors of Israel in relation to the rest of mankind. The Jew-

ish tradition that mankind is made up of 70 nations is based on the count in the table – although a sum is not stated in the text (cf. the itemization in *Pesikta Zutreta*, *No’ah*) and seems to underlie Deuteronomy 32:8, which speaks of God’s “dividing mankind... in accord with the number of the sons of Israel” (namely, 70; Gen. 46:27). On the other hand, the Septuagint and the 4Q Deuteronomy fragment that read “the sons of God” (i.e., angels) instead of “the sons of Israel” reflect the notion, dated as early as the Persian period (Dan. 10:20) and possibly earlier (Ps. 82:7) that every nation has a divine patron – again, 70, in accord with Jewish tradition (Charles, *Apocrypha*, 2 (1913), 363 (late Hebrew Test. Patr., Naph. 9), *Pesikta Zutreta*, *ibid.*).

The Table of Nations served as the basis of later Jewish ethnography; for representative attempts to embrace contemporary ethnogeography under its rubrics compare Jubilees, chapters 8–9; Josephus, *Antiquities*, 1:122–147; Targum Jonathan to Genesis 10; *Genesis Rabbah*, 37; and for the late Middle Ages, Abrabanel, at the end of his commentary to Genesis 10.

In the Midrash

In early Christian sources 72 nations and tongues were assumed (e.g., Hippolytus, 10:26; Clement of Alexandria, *Stromata* 1:26), perhaps following the Septuagint version of Genesis 10. This chapter was considered a scientific account of the division of mankind into three races – Semitic, Hamitic and

Japhethic – distributed in three separate zones (Jub. 7:10ff.). There are, however, varying opinions as to how many nations belonged to each “race.” The commonest system (Mid. Ps. to 9:7; et al.) ascribes to Japheth 14 nations, Ham 30, and Shem 26 (total 70), while the *Yalkut Shimoni*, Genesis 61 gives a reckoning of Japheth 15, Ham 32, and Shem 27. From this total of 74, however, subtract Shem, Arpachshad, Shelah, and Eber, who were righteous, and thus again there is a total of 70.

There is, moreover, another tradition of 60 nations, based on an exegesis of the Song of Songs 6:8 (Mid. Hag. to Gen. 10:1). *Numbers Rabbah* 14:10 speaks of 70 nations and 60 kingdoms, giving a total of 130 (cf. Num. 7:13). The tradition of 72, which is found in A. Zacuto’s *Yuhasin* (ed. Cracow (1580–81), 135) is also echoed in *Midrash Haggadah* to Genesis 10:32. It has been suggested that the 72 nations are the 70 “Noahite” nations plus Israel and Edom. However, Abrabanel (on Gen. 10:2) states that a straightforward reading of chapter 10 suggests 73 nations; thus 72 may have been reached by excluding the Philistines, who in Genesis 10:14 are designated as a mixed race. Just as there were 70 nations, so there were 70 languages (cf. Targ. Jon., Gen. 11:7 and Deut. 32:8). Thus the law engraved on the tablets on Mt. Ebal (Deut. 27:2ff.) was written in 70 languages (Sot. 7:5), so that all nations might read it. For the same reason, the divine voice that made itself heard at Sinai divided itself into 70 tongues (Shab. 88b et al.). However, according to *Aggadat Bereshit* 14 there are 71 languages. Perhaps the Philistines were included in that reckoning. The motif of the 70 nations is widely used in rabbinic literature (as is its derivative, the 70 tongues, e.g., *Sefer ha-Yashar*, Mi-Kez). Thus the 70 sacrifices offered on Tabernacles are said to atone for the 70 nations (Suk. 55b). The silver bowls, which the princes of the 12 tribes offered to the Tabernacle (Num. 7:13) weighed 70 shekels; so too did 70 nations spring from Noah (Num. R. 14:12). The 70 members of the Sanhedrin were likewise thought to correspond to the 70 nations of the world (Targ. Yer., Gen. 28:3).

[Daniel Sperber]

NATONEK, JOSEPH (1813–1892), rabbi, pioneer of Zionism in Hungary, and Hebrew grammarian. Born in Komlo, Hungary, Natonek, as a merchant, supplied the Hungarian revolutionary army in 1848 until its collapse. He became the principal of the Jewish school in Surany (south Slovakia), and subsequently (1861–67) rabbi in Jaszbereny and in Szekesfehervar (Stuhlweissenburg). In 1867, Natonek negotiated with the Turkish government in Constantinople to obtain a charter for the reclamation of Palestinian soil for Jewish set-

tlement. When his endeavors proved fruitless, he returned to Budapest, where he published the magazine *Das einige Israel* (“The United Israel,” 1872), in which he propagated the Zionist idea. He also produced a booklet in Hungarian, *Messias, avagy értekezés a zsidó emancipációról* (“The Messiah – or On the Emancipation of the Jews,” 1861), in which he opposed the idea of ameliorating the Jewish situation by cultural emancipation, advocating in its place national emancipation in the spirit of Moses *Hess and modern Zionism.

Natonek’s other works include the unpublished Hebrew manuscript, “On the Divine Revelation to Moses”; *Wissenschaft-Religion* (1876); and an edition of the Song of Songs (1871), published with German translation and commentary by L. Hollaender, with some additional comments of his own. He also began to prepare a dictionary of five languages, *Pentaglotte* (1861) in collaboration with Bishop Feuer of Szekesfehervar.

[Menahem Zevi Kaddari]

NATRA, SERGIU (Nadler, Serge; 1924–), Israeli composer. Born in Bucharest, Romania, he studied at the Musical Academy there under Leo Klepper, won the Georges Enesco Prize (1945) for his March and Chorale (which was performed by the Palestine PO in 1947, 14 years prior to his immigration to Israel) and the Romanian State Prize (1951). In 1961, he immigrated to Israel and settled in Tel Aviv and from 1975 to 1985 he taught at the Rubin Academy of Music, Tel Aviv. His Israeli honors include the Milo (1965), Engel (1970), and Prime Minister’s (1984) prizes for composers. Natra’s early works show the influence of Stravinsky, Prokofiev, and Hindemith. However, after he immigrated to Israel, his works were influenced by the new landscape, the Hebrew language, and biblical themes. In the 1970s he also composed in free atonality. Among his works are *Symphony for Strings* (1960); *Music for Violin and Harp* (1960); *Toccata for Orchestra* (1963); *Music for Harpsichord and Six Instruments* (1964); *Sonatina for Harp* (1965); *Song of Deborah*, for mezzo-soprano and chamber orchestra (1967); *Sonatinas for Trumpet, Oboe, and Trombone with Piano* (1969); *Interlude for Harp and Prayer for Harp* (1970); *Dedication for Mezzo-soprano and Orchestra* (1972); *Trio for Piano, Violin and Cello* (1971); *Divertimento for harp* (1976); *Ness-Amim Cantata* (1984); and *Sonata for harp and string quartet* (1997).

[Uri (Erich) Toeplitz / Yohanan Boehm / Israella Stein (2nd ed.)]

NATRONAI BAR HILAI (ninth cent.), *gaon* of Sura from 853 to 858. Natronai’s father Hilai, who died in 797, was also *gaon* of Sura. One of the most prolific writers of responsa among the *geonim* of the ninth century, Natronai always replied in the language in which he was addressed, whether Hebrew, Ara-

maic, or Arabic. He is said to have been the first to use Arabic for scholarly correspondence. He had strong ties with all parts of the Diaspora, especially Spain, and in particular Lucena, of whose Jews he was especially demanding, “since there is no non-Jew among you.” His responsa deal largely with matters pertaining to liturgy, and his responsum to a query from the Lucena community as to how to fulfill the rabbinic dictum to recite 100 benedictions daily, constitutes the nucleus of the Jewish prayer book. He gave a historical explanation of Rav’s statement (Shab. 24a) that it is necessary to recite the **haftarah* after the reading of the Pentateuch portion at the Sabbath afternoon service. According to him the Persians objected to this custom. This practice was abolished and never reinstated. He is the author of the earliest responsum regarding the geonic ordinance that debts may be collected from movable property. In another responsum, he stresses the importance of the study of the Babylonian Talmud for the unlearned since it includes both Bible and Mishnah.

Natronai did not insist that his questioners act in accordance with the customs prevailing in the two Babylonian academies. Only where he suspected Karaite influence, did his tone become authoritarian, and he declared that he who omitted the midrashic sections in the Passover *Haggadah* should be considered a heretic and liable to excommunication. Natronai once even denounced a Palestinian law which differed from the Babylonian, maintaining, “They err and have gone astray.” Natronai insisted on regular congregational recitation of the Aramaic Targum, a decision which was incorporated in R. Amram’s prayer book. He prohibited recitation from vocalized scrolls in the synagogue, a practice encouraged by the Karaites. Natronai also included in his responsa commentaries to various tractates of the Talmud. A collection of *halakhot* similar to the **Halakhot Kezivot* which has been ascribed to him is probably a condensation from his responsa, and some of the responsa attributed to Natronai bar Hilai are probably those of Natronai bar Nehemiah, *Gaon* of Pumbedita.

Natronai was also stated to practice mysticism, through the agency of which he caused himself to be transported to Spain, where he taught the people and, just as mysteriously, to have transported himself back to Babylon. Hai Gaon denied this, suggesting that some adventurer may have impersonated Natronai in Spain. Natronai became a legendary personality and many fictitious and fanciful decisions were attributed to him, particularly in Yemenite Midrashim.

[Meir Havazelet]

NATRONAI BAR NEHEMIAH (also known as **Rav Yenuka**), *gaon* of *Pumbedita, 719–730. Natronai married into

the family of the exilarch. According to *Sherira Gaon he was said to have dealt so severely with the students of the academy that some of them left and went to the academy at Sura, returning only after his death. Natronai was lenient to the repentant followers of the false messiah Severus (*Serenus), though they had rejected certain talmudic ordinances, permitting them to return to the communal fold. In one responsum however, he opposed the acceptance into the community of children of certain heretical Jews, who had renounced both biblical and talmudic Judaism. Virtually nothing is known of his halakhic decisions.

[Meir Havazelet]

NATRONAI BEN HAVIVAI (Zavinai) (second half of eighth century), exilarch in Babylonia and pupil of R. *Yehudai Gaon. R. *Sherira relates in his epistle (*Iggeret Rav Sherira Gaon*, ed. Lewin (1921), 104) that in the year 1082 of the Seleucid era (771) a conflict over the exilarchate broke out between Natronai and Zakkai b. Ahunai, who had already occupied this position for a number of years. R. Malkha b. R. Aha, the *Gaon* of Pumbedita, supported Natronai, but both yeshivot supported Zakkai b. Ahunai. When R. Malkha died, Natronai was compelled to leave Babylonia. He then traveled to the Maghreb (or Spain). According to Spanish tradition, Natronai prepared from memory a copy of the Babylonian Talmud for the Spanish Jews. It is possible that Natronai was the grandfather of Natronai, the exilarch in Babylonia after 857.

[Avraham David]

NATURE. Though the Bible is full of the awareness and appreciation of nature from the creation narrative up to the Psalmist’s declaration, “The heavens declare the glory of God...” (Ps. 19:2), it does not profess a comprehensive doctrine of nature in relation to man and God. Nature is a testimony to the work of the Creator (Isa. 40:26; Amos 5:8; Job 38–41), not a subject for speculation. As opposed to the pagan world-view which endowed natural objects with divinity, the Bible makes it quite clear that the natural world was produced by, and totally subject to, God – not in any way part of Him. This, in sum, is its doctrine of nature.

In Rabbinic Literature

A similar lack of speculative interest in nature is apparent in rabbinic literature, though to a lesser degree. Contemplation of the majesty of the heavens or the myriad creatures on earth served the rabbis as a reminder of the wondrous ways of the Creator rather than as the starting point of physical speculation. Thus when R. Akiva considered the manner in which land and sea animals were confined to, and dependent on,

their respective elements he would say, "How mighty are Thy works O Lord" (Ps. 104:24; Hul. 127a). On the other hand, the purely aesthetic appreciation of nature was played down in preference to the more centrally religious values. This is apparent in the (generally misunderstood) passage, "He who walks by the way studying, and interrupts his studying by saying 'How pleasant is this tree, how pleasant this plowed field'... it is as if he were deserving of death" (Avot 3:8).

The nearest to a conceptual discussion of nature comes in rabbinic consideration of cosmogony and of miracles. The ideas that God looked into the Torah and using it as a blueprint created the natural world (Gen. R. 1:1), and that miracles were built into the natural order at the creation (Avot 5:5; Gen. R. 5:5) would seem to reflect Stoic doctrine (see *Creation and Cosmogony; *Miracles).

The teleological argument, from design in nature to the existence of a Designer, is found in rabbinic literature, albeit in a philosophically naive form. Thus it is said of Abraham that he first came to know God by pondering on the comparison between the world and a palace. Just as a palace which is illuminated must have an owner so too must the world (Gen. R. 39: 1; cf. *Midrash Temurah* 5).

In Hellenistic and Medieval Jewish Philosophy

In their philosophy of nature, as in other branches of philosophy, Hellenistic and medieval Jewish thinkers were influenced greatly by the current general philosophical doctrines. Thus, for the most part, they adopted the view that the universe is governed by immutable laws; that all objects in the sublunar world are formed out of combinations of four basic elements – earth, air, fire, and water; that the celestial world consists of a fifth element; and that substances in the universe can be classified hierarchically as inanimate, vegetative, animate, and rational. However, the philosophical view of nature posed problems for the traditional Jewish view as expressed in the Bible and Talmud. For traditional Judaism the universe did not run according to set immutable laws. Rather God directly regulated the workings of the universe that He had created, ensuring that events would lead to the specific goal He had in mind. The medieval Jewish philosopher, unable to give up this view of nature completely, sought in his philosophies of nature to reconcile the biblical and talmudic concepts of *creation and *miracles with the theories of secular philosophy. For some of them, the design and order that they observed in nature constituted the evidence for the existence of a Creator – the teleological argument.

*Philo held that the world was governed by laws which were instituted by God at the time of creation. He maintained that all objects in the universe were composed of combinations of the four elements, interpreting the wings of the seraphim in Isaiah's vision (Isa. 6) as the four elements, one pair representing earth and water, and the second pair, fire and air. The third pair he interpreted as the forces of love and opposition which initiate movement in the other four elements (*De Deo*, 9–10).

*Saadia, too, held that all objects are composed of four basic elements (*Emunot ve-De'ot*, 10:17; 1:3; 2:2), and that the world is governed by set laws. As a follower of the *Kalam, which accepted creation and advanced proofs for it, Saadia had no difficulty with the doctrine of creation. Among the proofs which Saadia advanced for creation was one based on the order existing in nature, a proof that he adopted from the Kalam. Saadia argued that since all composite objects must be fashioned from their component parts by an intelligent being, so the world, which is itself a composite of many composites, must have been created (*ibid.*, treatise 1). *Bahya ibn Paquda employs a similar argument in his *Hovot ha-Levavot* (1:6).

NEOPLATONISM. Adopting the neoplatonic conception of the universe as a series of descending spheres, Jewish neoplatonists sought to combine the theory of emanation with the biblical concept of creation. In attempting to do so, Isaac *Israeli, somewhat arbitrarily, maintained that the intellect, which next to God is the highest being in the world, was created by God, and that all other objects emanate from the intellect (S. Fried (ed.), *Sefer ha-Yesodot* (1900), 69). Aristotelian influences are evident in Israeli's doctrine of the elements.

Joseph ibn *Zaddik, although generally a neoplatonist, adopted Aristotle's philosophy of nature. However, he deviated from it in his definition of matter and form, assigning to matter the position of the one real substance and to form a status similar to that of accidents (*Sefer Olam Katan*, 1:2).

*Judah Halevi, who was generally critical of Aristotelian philosophy, criticized the Aristotelian doctrine of the four elements on the ground that it has no basis in experience, for while we do perceive the qualities of heat, cold, wetness, and dryness, we do not perceive them in their pure form as primary elements (*Kuzari*, 5:14).

ARISTOTELIANISM. Abraham *Ibn Daud, the first of the Jewish Aristotelians, in his *Emunah Ramah*, adopted the Aristotelian concepts of form and matter, substance and accident, and the categories, finding allusions to the categories in the 139th Psalm. Unable to accept the Aristotelian doctrine of the eternity of matter insofar as it conflicted with the biblical concept of creation, Ibn Daud posited the existence of a formless prime matter which was the first stage in the process of creation.

*Maimonides, while he totally accepted Aristotelian physics, differed with the Aristotelian view that the world is eternal. Maintaining that neither eternity nor creation could be proved, he chose to accept creation as the theory advanced in the Bible. He held that miracles were predetermined at the time of creation, and that they were not abrogations of natural laws, but occurred through the exertion of one natural force upon another.

*Levi b. Gershom disagreed with the Aristotelian notion that time and motion are infinite (*Millhamot Adonai*, pt. 6, 1:10–12). Levi proved that the world was created from the teleological character of nature. Just as every particular object

in nature moves toward the realization of its own particular goal, so the universe, the sum total of all the things that exist within it, moves toward an ultimate end. He is unique among Jewish philosophers in that he rejects the idea of creation *ex nihilo*, maintaining that there existed an eternal absolutely formless matter out of which God at a particular point in time created the universe (*ibid.*, 1:17–28). He interprets the biblical story of creation to coincide with this theory.

*Crescas criticized Aristotelian physics, especially his doctrine of space, maintaining that, in opposition to Aristotle, a vacuum was possible (*Or Adonai*, bk. 1, pt. 2, ch. 3). Crescas believed that it was inconsequential whether or not the world was eternal; what is important is that God created the world *ex nihilo*, but not necessarily at a specific moment in time.

[Alfred L. Ivry]

Modern Period

Scientific philosophy entered a new phase with the doctrine of Kant that the natural world was phenomenal, being the manifestation, through the categories, of the noumenal world – the unknowable *ding an sich*. The development of this doctrine in Fichte, Hegel, and Schelling and the bifurcation of spirit and nature influenced Jewish philosophers of the school of idealism.

Solomon *Formstecher gave Schelling's doctrine of the nonconscious world soul a theistic interpretation. The world soul is the essence of the natural world though separate from and independent of it. Nature, in turn, is totally dependent on the world soul, being but one aspect of its manifestation. Formstecher makes a distinction between the religion of nature – in which the world soul is merely the highest principle of nature, and the religion of the spirit – in which the world soul is independent of nature and is the essence of ethics. The former is paganism, the latter Judaic religion.

In the philosophy of Samuel *Hirsch the central problem is more anthropocentric, namely, the relationship of man to nature, and the framework of his solution is Hegelian. Hirsch relates man and nature to God by regarding Him as the ideal to which man strives in asserting his freedom against nature. For in such ethical striving man is supporting spirit against nature, and spirit is the common element between man and God. Hirsch too distinguishes between the ethical religion of the spirit (Judaism), and nature religion.

Nachman *Krochmal does not, like Formstecher and Hirsch, start from the assumption of a split between spirit and nature. For him nature is merely an end point on the scale of spiritual development, which rises in degrees from primitive religion up to the Jewish world view. This leads him near to a pantheistic position in that he claims that all existence is immanent in the Absolute Spirit, God.

In the early system of Hermann *Cohen, which while accepting Kantianism rejects the unknowable *ding an sich*, the idea of God plays the role of a bridge between ethics and the natural world. It is the guarantee that ethical fulfillment is possible in nature. Since, however, God is ideal rather than

real, Judaism is in essence ethics as religion. His later philosophy, however, represents a complete volte-face. There it is God who has prime ontological status, and the natural world is the vehicle of God's manifestation with no independent being of its own.

A.I. *Kook, whose philosophy has been summarized by Hugo Bergman as "mystic pantheism," believed all reality to be a manifestation of God in a myriad of individual forms which in turn have no reality without Him. The plurality of the natural world is unified in God, the source and ground of its being. Adapting a kabbalistic notion, Kook believes that holy sparks are everywhere in nature, for it is shot through with a harmonious divine force. This "life force" of nature is not, like Bergson's *élan vital*, blind, but rather purposive. Evolution of nature is interpreted to mean that all creation, striving to be reunited with God, moves toward the Divinity. Judaism is thus, for Kook, the preeminent attempt to see nature in its total harmony and to sanctify, rather than reject, the material world.

A similarly positive approach to nature is apparent in the ideology of the early Labor Zionist Movement, especially in the work of A.D. *Gordon. Here however, there are clearer heterodox tendencies toward pantheism. Life's ideal, for Gordon, is a form of cosmic harmony of the human and material worlds. This harmony has been interrupted by the unnatural urban life of the Jew in the Diaspora, and in order to reestablish it he has to return to the soil to be as near to nature as possible. Gordon's ideal of unity with nature is not simply an ethical goal but is based on the metaphysical belief that man is organically united to the cosmos, and that it is the unbalanced emphasis on the intellect rather than on man's intuition which is at the root of human alienation.

In the dialogic writings of Martin *Buber, particularly in *I and Thou*, there is an echo of the belief in the existence of "sparks" in all things. It is possible, according to Buber, to enter into an I-Thou relationship even with inanimate objects, and this relationship need not be simply passive but may be one of full mutuality. In answer to criticisms of how one can enter into what seems an essentially personal relationship with non-personal nature, Buber remarks that in such a relationship the natural object reveals its being. There is a reciprocity of being between the person who addresses the object as "Thou" and the object so addressed, for the world is potentially a revelation of the divine (*I and Thou*, postscript, rev. ed. 1958).

NATURE RESERVES IN ISRAEL. Despite its limited area, Israel has an extraordinarily varied landscape and a rich array of flora and fauna. There are some 2,800 different species

of wild plants (150 of them indigenous) – an extremely high number in relation to the area – in its three geobotanical regions: Mediterranean, Saharo-Sindi, and Irano-Turani, as well as enclaves of tropical and European flora, the most northern and southern known. About 250 of the plants are endemic. The fauna is also varied, though it is only a remnant of the wild life of biblical times; at least 15 large mammalian species have become extinct. There are more than 20 varieties of freshwater fish, several species of amphibians and eight of reptiles, and 380 varieties of birds (150 of which nest in Israel, the remainder being migratory or winter visitors). Israel hosts over 150 million migratory birds each year during the spring and fall seasons. In addition, there are about 70 species of mammals, mostly small rodents and bats. Gazelle, wild boar, ibex, hyena, wolf, jackal, hyrax, caracal, and lynx are still to be found.

The dynamic development of modern Israel has inevitably affected plant and animal ecology. Some 500 new villages and a score of new towns, as well as the rapid expansion of existing ones, have encroached on areas of hitherto undisturbed wild life and natural vegetation. The quadrupling of the population, the rise in the standard of living, and the vast expansion of tourism, have brought large numbers of hikers and trippers to the countryside.

To protect the flora and fauna, a Nature Reserves Authority was established by the government in 1963. Some 380 areas have been selected as nature reserves in which landscape, flora, and fauna are protected in their natural condition. Some are large reserves, in which the flora and fauna maintain an equilibrium, for instance on Mt. Meron (about 70,000 dunams: 17,500 acres). There are also the smaller areas maintained for specific scientific reasons, e.g., winter pools to preserve lower crustacea and amphibians, a ridge of sandstone with its typical flora, islands on which common tern nest, and sites such as Horshat Tal and Circassia as reminders of the landscape that once existed. While most of the reserves are open to the public, some are closed to preserve their scientific value. Facilities for visitors have been provided at Tel Dan, the “Tannur” near Metullah, the cave of “Pa’ar,” the “Masrek” near Jerusalem, En-Gedi, etc., and the work is being extended to other places throughout the country. The Nature Reserves Authority has also undertaken to reintroduce species that have become extinct in Israel. At the *Hai-Bar* (wildlife) Biblical Game Reserve at Yotvata (34,500 dunams; 8,650 acres), attempts were begun in 1966 to breed some of these extinct species, with the approval of the World Wildlife Fund. Another *Hai-Bar* is located on Mt. Carmel (6,000 dunams; 1,500 acres) and includes species that used to live on the mountain. In 1998 the Nature Reserves Authority became part of the Israel Nature and Park Authority, a combined authority responsible for all the natural and archaeological reserves and parks in Israel.

NATZWEILER-STRUTHOF, Nazi concentration camp in Alsace, southwest of Strasbourg, that operated from May 1941 to Aug. 31, 1944. The site was mainly chosen because of its proximity to vast quarries where prison labor could be exploited. The camp became known as Natzweiler-Struthof because until the Natzweiler camp was completed, prisoners were housed in the nearby former Hotel Struthof. The camp was in the third or harshest category of concentration camps, and served as a concentration and redistribution center for political prisoners. Beginning in the summer of 1943, it was used to intern “Night and Fog” (*Nacht und Nebel*) prisoners from France and southwest Germany. In 1944, the camp was used to produce arms and to construct underground manufacturing facilities. The commandants were Hans Huetig, Egon Zill, Josef Kramer (the “Beast of Belsen,” who served at Bergen Belsen), and Fritz Hartjenstein, who was in charge from April 1944 until the camp inmates and staff were evacuated and sent to *Dachau with the approach of the Allies. Natzweiler-Struthof provided the Reich University at Strasbourg with inmates to be used for various pseudo-medical (including lethal) experiments. The scientists at Strasbourg experimented with combat gases and infectious diseases (hepatitis and others), with Roma (gypsies) being the primary victims. In August 1943, a gas chamber was constructed. Kramer gassed about 100 Jewish prisoners specially brought from *Auschwitz to supply August Hirt at the Reich University with specimens for his anthropological and racial skeleton collection in the anatomical institute. Among those especially brought for execution at Natzweiler were female agents of the French Resistance. Altogether, it is estimated that 25,000 prisoners died in the camp.

NAUHEIM (Bad Nauheim), town in Hesse, Germany. Jews may have lived in Nauheim as early as 1303; during the *Black Death persecutions (1348) they were expelled from the duchy of *Hanaau. In 1464 three Jewish households are noted in the city; in a document of the same year they appear as imperial *Kammerknechte* (“serfs of the chamber”; see *servi camerae *regis*) whose tax payments form part of a transaction between the margrave of Brandenburg and the count of Hanaau. Jews are again attested as taxpayers in Nauheim in the 16th century. They were expelled once more in 1539. From the middle of the 16th century onward some **Schutzjuden* lived in Nauheim, but their number was small. Nauheim Jews began worshiping in a rented prayer room in 1830. In 1861 there were 34 Jews in Nauheim. A Jewish cemetery was consecrated in 1866, and a new one in the first years of the 20th century. The first synagogue dates from 1867; a second larger one was built in 1928. At that time, the community had a religious school and a *hevra kaddisha*. In 1933 the Jewish population numbered 300. The

synagogue survived the Nazi period and was used once more by a reestablished congregation that totaled 124 persons in 1970. The Jewish community numbered 84 in 1989 and 341 in 2005. The increase is explained by the immigration of Jews from the former Soviet Union.

[Larissa Daemmig (2nd ed)]

NAUMBOURG, SAMUEL (1815–1880), *hazzan*, composer, and writer. Born in Dannelohe, near Ansbach (Bavaria), the descendant of almost ten generations of south German *hazzanim*, Naumbourg received his musical education at Munich and sang there in Maier *Kohn's synagogue choir. After an engagement as choirmaster in Strasbourg, he came to Paris in 1843. In 1845 he was appointed first *hazzan* at the synagogue in the Rue Notre-Dame-de-Nazareth, under the sponsorship of Jacques Fromental *Halévy and with the government authorization to carry out his plans for a thorough reform of liturgic music (which had lapsed into disorder after the death of Israel *Lovy in 1832). In 1847 he published the first two volumes of his *Zemirot Yisrael* (vol. 1 for the Sabbath, vol. 2 for the High Holidays), with vol. 3 *Hymnes et Psaumes* added when the work was reissued in 1864 (repr. 1874, 1954). In 1874 he brought out a collection of traditional synagogue melodies, *Aguddat Shirim*, which also included some western Sephardi material, and a long preface on the history of Jewish religious music. In 1877 Naumbourg published the first modern edition of Salamone de *Rossi's *Ha-Shirim Asher li-Shelomo* (30 out of 33 pieces) and a selection of his madrigals, with the collaboration of Vincent d'Indy, under the name of *Cantiques de Salomon Rossi*; the historical importance of the undertaking is in no way diminished by its many editorial failings and liberties. Naumbourg's *Zemirot Yisrael* achieved an influence comparable to the works of his senior Solomon *Sulzer and his junior Louis *Lewandowsky. The pieces are set for *hazzan* and 2- to 4-part choir, with some organ accompaniments and, apart from Naumbourg's own compositions and arrangements, include some melodies by Lovy and two works by Halévy and *Meyerbeer. About half of the pieces are based on traditional material, mainly south German. The others reflect the various styles then current in the Parisian grand opera, which "gave to Naumbourg's work some international features and helped it to become widely known, and much liked and used" (Idelsohn).

[Bathja Bayer]

NAUMBURG, U.S. family of bankers and philanthropists. The founder, ELKAN NAUMBURG (1834–1924), was born in Ger-

many, and went to the U.S. in 1850. He subsequently became a partner in the clothing firm of Naumburg, Kraus, Lauer & Company. After the firm was dissolved in 1893, Naumburg founded the banking house of E. Naumburg and Co., which specialized in advancing loans to business enterprises. A lover of music, he established and endowed the free summer concert programs at New York City's Central Park in 1905, and contributed the funds for the park's band shell. He also gave liberally to other philanthropies.

His eldest son WALTER WEHLE NAUMBURG (1867–1959), who was born in New York, entered his father's clothing business and then entered the newly established family banking business. He and his younger brother George Washington dissolved the firm in 1931 in order to devote themselves to charity. Besides continuing the Central Park concerts instituted by their father, Walter Naumburg founded the Walter W. Naumburg Musical Foundation (1926) which sponsored the debuts of talented musicians and the Musicians Foundation to care for needy musicians. He was a trustee of Mt. Sinai Hospital and a member of the Salvation Army's board.

His wife, ELSIE MARGARET BINGER NAUMBURG (1880–1953), was a well-known ornithologist who served on the staff of the American Museum of Natural History. Her monograph, *The Birds of Matto Grosso, Brazil* (1930), dealt with the ornithological finds of Theodore Roosevelt's expedition to Brazil. She established the Dr. Frank Chapman Memorial Fund to support ornithological research.

GEORGE WASHINGTON NAUMBURG (1876–1970). George Washington Naumburg was born in New York City, and entered the family banking business after graduating from Harvard in 1898. During World War I, he served as assistant chief of the cotton section of the War Industries Board. In 1933, two years after his bank's dissolution, he was appointed president of the New York Guaranteed Protection Corporation. A vigorous advocate of government economy, Naumburg was treasurer of the National Economy League in the 1930s and a director and vice president of the Citizens Budget Commission. As a philanthropist, Naumburg's principal interest lay in the area of child welfare. He was active in the National Child Welfare Association, and supported psychiatric treatment programs for children. Also active in Jewish affairs, Naumburg was a director of the Joint Distribution Committee, head of the Federation of Jewish Philanthropies finance committee, trustee of the Jewish Board of Guardians, and president of the Baron de Hirsch Fund (1932–70).

ROBERT ELKAN NAUMBURG (1892–1953). Robert Elkan Naumburg was born in New York, and graduated from the Massachusetts Institute of Technology. A mechanical engineer and inventor, Naumburg constructed the visigraph, a machine allowing the blind to "read" electrically-embossed characters on paper. After World War II, Naumburg donated the invention to the federal government for use by sightless veterans.

NAUMBURG, MARGARET (1890–1983), U.S. psychoanalyst, art therapist, and educator. Born in New York, Naumburg graduated from Barnard College, Columbia University. She then studied speech therapy with F. Matthias Alexander at the London School of Economics and child education with Maria Montessori in Rome. Influenced by Freud's theories, Naumburg maintained that the child was an individual with his own inner life and needs and that education should serve the child, and not the child education. In 1913, she founded and conducted the first Montessori class in New York City at the Henry Street Settlement. A year later she launched her own school, the Walden School, based on the importance of the personal relationship between pupils and teachers. She was a pioneer in art education and in the use of art for therapeutic purposes. From 1930 on, she concerned herself primarily with developing art therapy technique and moved away from progressive education. She devoted much of her life to the establishment of art therapy as a discipline. Naumburg taught at New York University into her eighties. She initiated art therapy instruction there at the undergraduate level. A graduate program for art therapy was instituted in 1969.

Naumburg's methods were disseminated by exhibitions at meetings of the American Psychiatric Association and at international psychiatric congresses. Naumburg's books include *The Child and the World* (1928); *Studies of the "Free" Art Expression of Behavior Problem Children and Adolescents as a Means of Diagnosis and Therapy* (1947); *Schizophrenic Art: Its Meaning in Psychotherapy* (1950); *Psychoneurotic Art: Its Function in Psychotherapy* (1953); and *Dynamically Oriented Art Therapy* (1966).

[Ernest Schwarcz / Ruth Beloff (2nd ed.)]

NAUPAKTOS (Lepanto, Inebahti), town in W. central Greece. Benjamin of Tudela, the 12th-century traveler, reported 100 Jews in the town. The Venetians ruled there from 1408 to 1499. Documentation from 1430 shows the existence of large-scale commercial dealings by Jewish bankers between the ports of Lepanto and Patras. There was a *Romaniot community in Naupaktos and after 1492 refugees opened two synagogues, one according to the Spanish rite and the other according to the Sicilian. Jewish merchants used to send to Budapest and Turkey *lulavim* and *etrogim* which they grew in the vicinity of Naupaktos. A special "Purim of Lepanto" was celebrated on the 11th of Tevet in memory of the community's miraculous preservation following the Turkish conquest of the city (1571). In the 16th century R. Joseph Pirmon attempted to unite the three communities but was opposed by the Romaniot minority who were supported by Samuel *Medina. At the beginning of the 17th century, the local Jews suffered greatly from efforts of the local governor to extort large sums of money from them. In the 1720s and 1730s, two local Jewish partners served Ottoman ministers. In 1746, a group of 16 Jews left the city to settle in Erez Israel but were captured

at sea and taken to the Island of Mykinos, being released after enduring much hardship. In 1806, the Jewish community numbered 30 families, or 150 people. In the wake of the Greek uprisings against the Turks in 1821-22, the Jewish community was destroyed.

[Simon Marcus / Yitzchak Kerem (2nd ed.)]

NAVARRO, Portuguese family, prominent in the 14th and 15th centuries.

MOSES NAVARRO of Santarem (d. c. 1370), personal physician to King Pedro I and his chief tax collector, served for nearly 30 years as chief rabbi (**arraby moor*) of Portugal. The king granted Moses and his wife, Salva, the right to adopt the family name Navarro and to bequeath it to his descendants. His son, JUDAH, inherited the posts of personal physician and chief tax collector under Pedro I and continued in the latter capacity under John I. He and Solomon Negro agreed to pay some 200,000 livres annually for five years for the privilege of farming taxes. He is also known to have given the king a rich estate in Alvito, Alemtejo. Moses' grandson (or son according to Amador de los Rios), also called MOSES (d. c. 1410), was likewise chief rabbi and personal physician to the king, in this case John I. All three Navarros used their offices to benefit their fellow-Jews. Particularly noteworthy are the efforts of the younger Moses Navarro at the time of the large-scale massacres of the Spanish Jews in 1391. In that year he presented the Portuguese king with the bull decreed on July 2, 1389, by Pope Boniface IX (based on a bull of Pope *Clement VI), forbidding Christians to harm the Jews, desecrate their cemeteries, or attempt to baptize them by force. On July 17, 1392, the king ordered the promulgation of this bull throughout Portugal, reinforcing it with legislation of his own. Moses was also instrumental in acquiring the king's protection for Jewish refugees from Spain.

[Martin A. Cohen]

NAVARRO, ABRAHAM (d. c. 1692), envoy in China and India. Navarro, a London Sephardi who may have earlier lived in Jamaica, was commissioned in 1682 by the East India Company to accompany the ship *Delight* to China as interpreter and linguist. In 1683 it reached Amoy, where Navarro began negotiations for opening trade relations. When these failed, Navarro returned to India, and engaged in trade. In 1689 Navarro was sent to the court of the powerful Moghul ruler Aurangzeb to negotiate a peace treaty. After a personal audience with the emperor, a firman for the British trade was obtained.

[Walter Joseph Fischel]

NAVEH (Heb. נָוֶה), city in Bashan, possibly mentioned in the lists of cities conquered by Thutmosis III (no. 75) and Ramses II (no. 13). *Zeno visited it during his travels in 259 B.C.E. In talmudic times, it was a well-known Jewish center with its own territory (Tosef., Shev. 4:8); the *nesi'im* had extensive possessions there. Naveh and the neighboring city of Halamish were at odds (Lam. R. 1:17, no. 52). Eusebius calls it a Jewish town (Onom. 136:3). The Jewish community persisted until the time of the Crusades, and the city was the home town of many scholars. In Byzantine times it was part of Provincia Arabia and had a bishop. It is the present-day Arab village of Nawā, in which the legendary tomb of *Shem and the tomb of Joseph b. Saadia (1062) are located. Jewish remains include many fragments of a synagogue built by Bar Yudan and Levi.

[Michael Avi-Yonah]

NAVON, BENJAMIN MORDECAI BEN EPHRAIM (1788–1851), kabbalist and halakhist, one of the outstanding Jerusalem sages of his time, son of Ephraim b. Jonah Navon. Navon was called Jilibin (Çelebi, a Turkish title of honor). He was head of the kabbalists of the “Midrash Ḥasidim Kehillah Kedoshah Bet El” and head of a *bet din*. He devoted himself to a great extent to communal affairs, and assisted Israel Bak in establishing his pioneer printing press in Jerusalem in 1841. Navon wrote many responsa, some of which were published under the title *Benei Binyamin* (1876) by Jacob Saul *Elyashar, his stepson and disciple, who also included many of his sermons in his *Ish Emunim* (1885).

[Abraham David]

NAVON, DAVID (1943–), Israeli psychologist. Born in Tel Aviv, he studied at the Hebrew University of Jerusalem and received his doctorate in psychology from San Diego University in California. He taught at Haifa University where he became a professor in 1984 and was dean of the Faculty of Psychology. He was a leading researcher in cognitive psychology. Among his areas of interest were attention and perception. He is known mainly for a widely used experimental model and for a number of influential theoretical papers. In all, his papers have been cited around 2,400 times. In 1992 he became a member of the Israel Academy of Sciences and Humanities and received the Israel Prize for social sciences.

[Shaked Gilboa (2nd ed.)]

NAVON, EPHRAIM BEN AARON (1677–1735), rabbi and halakhist. Navon was born in Constantinople, and emigrated to Jerusalem about 1700, together with his father-in-law, Judah Ergas. He returned to Turkey in 1721 as an emissary of Jerusalem. On the termination of his mission there in 1723, he was appointed a *dayyan* in the *bet din* of Judah *Rosanes in Constantinople, and later received the appointment of rabbi. While in Constantinople, he continued to concern himself with the amelioration of the material conditions of the Jewish community of Jerusalem. In 1738 his *Maḥaneh Efrayim* appeared in Constantinople, containing responsa and novellae on the Talmud and the works of early halakhic authorities. ARYEH JUDAH NAVON (1707–1761), his son, was the teacher of Yom Tov *Algazi.

[Avraham David]

NAVON, ISAAC ELIAHU (1859–1952), Israeli composer and poet. Born in Adrianople (Edirne), Turkey, he taught in a Hebrew school established by his father in Constantinople and wrote for Jewish newspapers. He also helped to reorganize the Maftirim fraternity of Adrianople (most of whose members had immigrated to Constantinople), and to publish their songbook *Shirei Yisrael be-Erez ha-Kedem* (1921), which contained a number of his own poems and a foreword by *Bialik. In 1929 Navon settled in Jerusalem, later in Tel Aviv, and devoted himself to spreading the Sephardi musical tradition. Some of the songs he collected or composed entered into the Israeli folksong tradition, notably “*Nizzanei Shalom*,” “*Haddesh ke-Kedem Yameinu*,” and “*Gizratekh Tavnit Nogah*.” He published further poems of his own in 1932.

[Bathja Bayer]

NAVON, JONAH BEN HANUN (1713?–1760), rabbi and author. Navon was born in Jerusalem where his father was a rabbi. He studied in the *bet ha-midrash* Bet Ya'akov Pereira under Israel Meir Mizrahi. In 1746 he headed the *bet ha-midrash* Keneset Yisrael, founded by Ḥayyim ibn *Attar, and when the yeshivah Gedulat Mordekhai was established Navon was appointed to head it, and was at the same time one of the heads of the Yefa'er Anavim yeshivah. Among his pupils was Ḥ.J.D. *Azulai, who was the son of his brother-in-law. He traveled as an emissary of Jerusalem to North Africa in 1737, and again to Turkey and Greece during 1746–48. He was the author of responsa *Nehpah ba-Kesef* (2 parts, Constantinople, 1748; Jerusalem, 1843), to which was added his supercommentary on Elijah *Mizrahi's commentary to the *Sefer Mitzvot Gadol* (*Semag*) of Moses of *Coucy; *Get Mekushar* (Leghorn, 1785), novellae

and comments on the *Get Pashut* of Moses ibn *Ḥabib. His other works have remained in manuscript. His sons were Ephraim, Benjamin, and Mordecai.

[Abraham David]

NAVON, JONAH MOSES BEN BENJAMIN (d. 1841), rabbi and Jerusalem emissary. Navon, together with his cousin, Joseph Saadiah Navon, was sent to Gibraltar and to various Moroccan communities by the rabbis of Jerusalem in 1802–03 in order to mobilize financial aid for the Jerusalem community. He went on a second mission in 1804, and on his return was appointed a member of the *bet din* of Solomon Moses Suzin, whom he succeeded at the end of 1836 as *Rishon le-Zion*, a position he held until his death. Navon used his great authority to assist the Ashkenazi community of Jerusalem in acquiring the “Ḥurvah Synagogue” of Judah he-Ḥasid from the Arabs and in erecting a synagogue on the site. Navon added novellae and glosses to the *Nehpah ba-Kesef* vol. 2 (Jerusalem, 1843) of his grandfather, Jonah b. Hanun *Navon, and some of his own responsa appear in the *Hukkei Ḥayyim* (*ibid.*, 1843) of Ḥayyim *Gagin.

[Abraham David]

NAVON, JOSEPH (1858–1934), pioneer of Erez Israel development. Navon was born into a prominent Sephardi family in *Jerusalem. His father, Eliahu Navon, was the Jewish representative in the Jerusalem regional council. Joseph was educated in France, and on his return became a merchant and banker. He and his uncle Ḥayyim *Amzalak helped the settlers in Petaḥ Tikvah and Rishon le-Zion enter their lands in the land registry. With his banking partner Frontiger he pioneered in popular housing schemes in Jerusalem (including the Beit Yosef and Battei Navon quarters). He had ambitious schemes for the development of Erez Israel, including railway development, the building of a port in *Jaffa, and providing irrigation facilities for the citrus groves of the coastal plain. After lengthy negotiations in Constantinople, he received a concession in 1888 to construct a railway from Jaffa to Jerusalem, which he, in turn, transferred to the Société Ottomane de Chemin de Fer de Jaffa à Jerusalem et Prolongements founded by him in France in consideration of one million francs. After the opening of the line, he received the title *bey* from the Ottoman government in recognition of his services in developing Erez Israel. After he lost his capital, he moved to Paris in 1894. Here he met *Herzl and tried to interest him in his plans for developing Erez Israel. He died in Paris.

[Yehuda Slutsky]

NAVON, YITZHAK (1921–), Israeli politician, writer, and the fifth president of the state of Israel; member of the Sixth to Twelfth Knessets. Navon was born in Jerusalem to an old Sephardi family of well-known rabbis that had settled in Erez Israel in the 17th century. He received religious schooling until the end of primary school, and then attended the Beit ha-Kerem high school. After graduating from the Hebrew University, where he studied Literature, Arabic, Islamic Culture and Education, he became a teacher. In 1946–48 he headed the Haganah Arab Department in Jerusalem. After serving in the Israeli embassy in Argentina and Uruguay in 1949–50, he was appointed political secretary to Minister for Foreign Affairs Moshe *Sharett in 1951, and director of the prime minister's office, serving under both David *Ben-Gurion and Sharett in 1952–63. In 1963–65 he was director of the cultural section in the Ministry of Education and Culture. Navon joined the *Rafi party in 1965 and that year was elected to the Sixth Knesset in which he served as one of its deputy speakers. Within the framework of Rafi he joined the *Israel Labor Party when it was formed in 1968. In 1972 he was elected chairman of the Zionist General Council, in which capacity he served until 1977. In the Eighth Knesset Navon served as chairman of the Knesset Foreign Affairs and Security Committee. In 1977 Navon headed the public committee established to determine the method for determining tuition in universities. In 1978, even though the Likud was in power, Navon was elected by the Knesset as Israel's fifth president. In October 1980 he paid the first-ever official state visit to Egypt by an Israeli president. Navon decided not to run for a second term as president, resigning in 1983 in order to run for the leadership of the Labor Party, being encouraged to do so by Uzi *Baram. He finally decided not to run opposite Shimon *Peres but ran in the elections to the Eleventh Knesset. In the National Unity governments that served from 1984 to 1988 Navon was appointed deputy prime minister and minister of education and culture, continuing to serve as minister of education and culture until March 1990, when Labor left Yitzhak *Shamir's government. As minister of education he paid special attention to education for democracy, the battle against racism, and the inculcation of Jewish and universal values. After leaving the government Navon served as chairman of the public council that prepared the events in commemoration of the 500th anniversary of the expulsion of the Jews from Spain that was to take place in 1994. Navon did not run in the elections to the Thirteenth Knesset, and declined a proposal to run in the 1993 elections for mayor of Jerusalem. Had he run he might well have defeated the Likud candidate Ehud *Olmert. In 1996 he served as chairman of the public committee appointed to investigate the scandal of the destruction of blood donated by Ethiopian immigrants. He served as president of the National Authority for *Ladino which acts for the preservation of the Ladino language and culture.

Navon wrote the text for two popular musical plays based on Sephardi folklore, *Sephardic Romancero* (1968) and *Bustan Sephardi* (“Spanish Garden,” 1970). Among his writings are

Sheshet ha-Yamim ve-Shivat ha-She'arim ("The Six Days and The Seven Gates," 1976).

[Susan Hattis Rolef (2nd ed.)]

NAWI, rabbinical and philanthropic family in Iraq. REUBEN BEN DAVID (end of 18th century–1821) was a prominent disciple of outstanding *hakhamim* in *Baghdad. His main teacher, the *hakham* Moses b. Hayyim, nominated him during his lifetime (1810) as his successor as *av bet din* in Baghdad, but he died prior to his master. Nawi's teachings are extant in the works of his disciples, the *dayyanim* R. Abdullah Somekh, Jacob b. Joseph b. Jawb ha-Rofe, and others. Many legends concerning his life are current among Baghdad Jews. At the end of the 19th and in the first quarter of the 20th centuries SOLOMON REUBEN and MANASSEH SOLOMON took an active part in the affairs of the Baghdad community, and improving the health conditions of Baghdad Jewry.

[Eliyahu Hirschberg]

NAZARETH (Heb. נָצְרֶת), town in Galilee, mentioned several times in the New Testament as the home to which Mary and Joseph, her husband, returned with the child from Egypt and where *Jesus was brought up (Matt. 2:23; Luke 2:39, 51). Archaeological evidence has shown that the area was settled as early as the Middle Bronze Age, and tombs have been found dating from the Iron Age to Hasmonean times. According to the New Testament, Joseph and Mary lived in Nazareth before Jesus' birth, which was announced there to Mary by the angel Gabriel (Luke 1:26; 2:4). When Jesus tried to preach to the people of the town, he was attacked, his assailants attempting to throw him headlong from a cliff, identified by tradition as the Jebel Qafza, a hill 350 m. above sea level. Although he left Nazareth, possibly as a result of the incident (Luke 4:16–30; Matt. 4:13), the name Jesus of Nazareth nevertheless remained in common use both in his lifetime and among his followers, especially the apostle Peter. Members of Jesus' family continued to live in Nazareth at least into the second century. The term "Nazarene" was a derogatory name utilized by one's enemies during the first century (Matt. 21:11), and the Hebrew and Arabic terms for Christians (*Nozeri*, *Nasrani*) are derived from the town's name. Nazareth is not mentioned in non-Christian sources until the third or fourth century, when it was recorded in an inscription found at Caesarea listing the priestly courses and their seats in Galilee. According to this list (which is reproduced in the seventh-century liturgical poems of Kallir and others), the family of Hapizzez (1 Chron. 24:15) settled in Nazareth, a name derived in this source from the root *nšr* (to guard). It is described by Jerome as a very small village in Galilee (Onom. 141:3). Constantine may have included it in the territory of Helenopolis, a city which he founded, but the town remained purely Jewish in the fourth century.

Excavations conducted by B. Bagatti from 1955 to 1968 on the site of the Church of the Annunciation revealed the remains of a church with a mosaic pavement dating to about 450. Below the church and nearby were the remains of a Jewish town from the Roman period in which were pear-shaped silos, vaulted cellars, cisterns, ritual immersion pools (*mikva'ot*), and olive presses. Among the remains were about 80 partly-stuccoed and inscribed stones, as well as column bases. The excavators view these finds as the remnants of a Judeo-Christian synagogue or a Constantinian church built for Jews. The first mention of a church in Nazareth was made in 570 by Antoninus Placentinus, who describes it as a converted synagogue.

In 614 the Jews in the mountains of Nazareth joined the Persians in their war against the Byzantines. Shortly before the Crusader conquest, the town was destroyed by Muslim Arabs. Tancred captured Nazareth, and the Crusaders built a church, whose finely sculptured capitals (now in the Franciscan Museum) exhibit French workmanship of the 12th century. The archbishopric of Beth-Shean was transferred to Nazareth during the Crusades. After winning the decisive battle against the crusader forces on July 4, 1187, Saladin captured the town; its crusader forces and European clergy were forced to retreat to the coast. At that time, according to an eyewitness account, the townspeople were either massacred or imprisoned while the Basilica was profaned. The city was again in Christian hands in 1240 and 1250, and in 1252 St. Louis of France visited there. In 1263 Baybars ordered a pogrom against the Christians and destruction of churches of the land which included the Basilica at Nazareth, which remained in ruins for 400 years. The Franciscans returned to the town in 1620 by permission of the emir Fakhr al-Dīn. A new church was built under Zāhir al-'Amir in 1730. In 1955 the present Basilica was commissioned by Franciscans, and the building was consecrated in 1969 based upon a three-level design incorporating the remains from a Roman Period public building and the Byzantine and Crusader Basilicas in the lower church.

Modern Nazareth and Naẓarat Illit

In April 1799 *Napoleon's troops occupied Nazareth, but with his retreat it was recaptured by Aḥmad Jazzār Pasha. In 1890 the German scholar G. Schumacher estimated Nazareth's population at 7,500. Shortly before the outbreak of World War I, the German military command established its Palestinian headquarters there. The town was taken by the British in 1918; at that time there were 8,000 inhabitants, two-thirds of whom were Christian, and the rest Muslim. In the 1920s Nazareth's economy was still based largely on agriculture, as its inhabitants owned lands in the Jezreel Valley. The town remained surrounded with olive groves, which supplied it with raw materials for the manufacture of oil and soap. The Muslim element in Nazareth was strengthened when villagers from the vicinity were absorbed there. Nazareth became a market center for a wide agricultural region and a pilgrimage and tourist center,

developing handicrafts, while inhabitants also found work in the Haifa industrial zone.

In July 1948, during the War of Independence, the Israel army took Nazareth from Kaukji's forces in "Operation Dekel." Its population remained and was augmented by Arabs who had abandoned other locations in Israel. It thus increased from 9,000 inhabitants in 1947 to 25,100 in 1961 and 32,900 in 1969, Muslims attaining a slight majority over Christians. In 2002 the population of Nazareth was 61,700, with a municipal area of 6.4 sq. mi. (16.5 sq. km.). It included 67% Muslims and 33% Christians. Unemployment reached 14%, including 80% among women, and income was about half the national average. Tensions between Muslims and Christians, increasing as the Muslims gained hegemony, reached a peak when Muslim residents sought to build a mosque near the Church of the Annunciation.

Nazareth became the largest Arab center in the State of Israel (in its pre-1967 borders) and, with a number of private and public secondary schools, an important center of Arab education and culture. It has a hinterland of Arab villages both in Galilee to the north and in the southern Jezreel Valley and the Iron Hills to the south, constituting a highway junction connected with Haifa, Tiberias, Afulah, and Shefar'am. In 1970 Nazareth had 24 churches and convents of different Christian denominations, the newest being the Catholic Basilica of the Annunciation – the largest church in the Middle East – constructed between 1955 and 1968 over the Grotto of the Annunciation and the foundations of the original Byzantine church. Tourism and pilgrimages have been important sources of Nazareth's economy. Other branches of its economy comprise small industries and workshops and administrative services. An increasing number of laborers have been employed in Nazerat Illit.

In 2000, Nazareth was declared a high-priority tourist site, and the Nazareth 2000 Project initiated large-scale roadwork and rehabilitation of the Old City, together with the construction of new hotels and museums.

In 1957 the ground was laid for the neighboring Jewish development town of Nazerat Illit. Israel-born settlers formed the nucleus of its population, which was augmented by immigrants mainly from Europe. It received city status in 1974. Its population increased from 1,000 in 1957 to 13,200 in 1969, and reached 35,200 by the mid-1990s and 44,290 in 2002, including 91% Jews, 2% Muslims, and the rest Christians. In these latter years the city absorbed 25,000 new immigrants, which led to construction of new neighborhoods. The municipal area extends over 11.5 sq. mi. (29.7 sq. km.). The city has broad avenues tracing the hill contours, with large apartment buildings occupying the western and central sections and industrial structures on the eastern one. The economy of Nazerat Illit was based on relatively large enterprises. In the early 2000s, its industrial areas included approximately 100 factories in various industries, such as food, textiles, electronics, steel, etc.

NAZI-DEUTSCH, specific use of the German language by the National Socialists. The use of language as a tool of psychological warfare against the "enemies" of the regime occupies a special place among the instruments of persecution and extermination. Nazi-Deutsch concealed the real intentions of the governing authorities from the potential victims and lulled them into submissiveness. Unprecedented crimes were masked by the use of "innocent words." It was, in the words of Raul Hilberg, a tool of concealment, not only from the victims but also – at least psychologically – from the perpetrators as well. Aware that words of long-standing usage acquire frightening meanings, the National Socialists dubbed the deportation to the death camps from Central Europe "evacuation to the East" (*Evakuierung*), from the Netherlands "recruitment for labor in the East" (*Arbeitseinsatz*), from Eastern Europe "resettlement" (*Umsiedlung*). The word "shower" was used to lead the unsuspecting victims to the gas chambers. New secret words were coined with *prima facie* innocent appearance to smooth over ominous meanings. The mass destruction of the Jewish people in Europe was called the "Final Solution" (*Endlösung*), a neologism. The word "final" was altogether apt; the proposed murder of all Jews was conceived to solve the Jewish problem forever. The actual process of physical destruction was mostly referred to as "Special Treatment" (*Sonderbehandlung*). The underground gas chambers were special cellars, the surface chambers were bath houses for special actions. In the daily reports at *Auschwitz, the statistics showing the number gassed refer to numbers of "sb" (*Sonderbehandelte*, "specially treated"). The expression sb was taboo even in interoffice correspondence on the highest level. While no objection was raised by Himmler against the use of the word "Final Solution" by the inspector of statistics, Richard Korherr (author of a November 1943 top secret statistical report on the "progress of the Final Solution"), Himmler ordered the word "special treatment" to be replaced by "transporting." The Ministry of Information gave daily instructions to the press and strictly enforced the proper "use of language" (*Sprachregelung*). Dictionaries of this language exist.

[Jacob Robinson / Michael Berenbaum (2nd ed.)]

NAZI MEDICAL EXPERIMENTS. During the Nazi regime a series of medical experiments were carried out, some even before the war, to advance German medicine without the consent of the patients upon whom the experiments were conducted and with total disregard for their suffering or even their survival.

Some experiments had legitimate scientific purposes, though the methods that were used violated the canons of medical ethics. Others were racial in nature, designed to advance Nazi racial theories. Most were simply bad science.

The experiments fall into three categories.

1. Racial experiments
2. War-injury related experiments
3. Pharmaceutical testing of drugs and experimental treatment.

The Law for the Prevention of Offspring with Hereditary Diseases was promulgated on July 14, 1933. It led to the sterilization of more than 200,000 Germans and to a great interest on the part of German physicians in sterilization. If successful, sterilization could rid the master race of those within it who were less than masterful and, if perfected, it could have enabled Germany to utilize the populations in the territories it occupied without fearing their reproduction with its consequences for the master race.

Two modes of sterilization were the subject of experimentation: X-rays and injections.

Air force physician Dr. Horst Schumann ran experiments at Auschwitz. Two to three times a week, groups of 30 prisoners – male and female – were brought in to have their testicles or ovaries irradiated with X-rays. Schumann varied the dosage. As a rule, prisoners subjected to these experiments were sent back to work, even though they suffered from serious burns and swelling. The results of sterilization experiments by means of X-ray irradiation proved disappointing. Surgical castration was more dependable and time-efficient. Nevertheless Schumann continued his experiments.

The most infamous experiments at Auschwitz were conducted by Dr. Josef *Mengele, who became the chief physician of Birkenau in 1943. Mengele wanted to “prove” the superiority of the Nordic race. His first experiments were performed on gypsy children supplied to him from the so-called kindergarten. Before long he broadened his interest to twins, dwarfs, and people with abnormalities. The tests he carried out were painful, exhausting, and traumatic for the frightened and hungry children who made up the bulk his subjects. The twins and the crippled people designated as subjects of experiments were photographed, their jaws and teeth were cast in plaster molds, and prints were taken from hands and feet. On Mengele’s instructions, an inmate painter made comparative drawings of the shapes of heads, auricles, noses, mouths, hands, and feet of the twins. When the research was completed some subjects were killed by phenol injection and their organs were autopsied and analyzed so that more information could be obtained. Scientifically interesting anatomical specimens were

preserved and shipped out to the institute in Berlin-Dahlem for further research.

On the day Mengele left Auschwitz, January 17, 1945, he took with him the documentation of his experiments. He still imagined that they would bring him scientific honor. According to his son, he took them with him to South America even when he was fleeing for his life.

There were several forms of war injury-related experiments. At Dachau, a series of experiments were conducted to ascertain how German military personnel might survive conditions of combat. Civilian physicians Siegfried Rugg and Hans Romberg of the German experimental Institute of Aviation joined Air Force physician Sigmund Rasher in high-altitude experiments carried out to see how long people could withstand the loss of air pressure. Prisoners were put into pressure chambers to replicate what might happen at high altitudes. Some died; many suffered. Presumably, this was meant to ascertain at what altitude Air Force personnel could bail out of an airplane.

Freezing experiments were conducted to find a treatment for hypothermia. Victims were put into tanks of ice water for an hour or more and various methods of warming up their bodies were tried. No painkillers were used. Others were placed in the snow for hours. Physicians also experimented with prisoners who were forced to drink sea water.

At other concentration camps such as Sachsenhausen, Dachau, Natzweiler, Buchenwald, and Neuengamme, pharmaceutical compounds were tested to fight contagious diseases such as malaria, typhus, tuberculosis, typhoid fever, yellow fever, and infectious hepatitis. Sulfa drugs, only recently discovered, were tested at the Ravensbrueck camp. Elsewhere, prisoners were subjected to gas poisoning to test antidotes. In Ravensbrueck new methods were explored to deal with fractures and war wounds. Prisoners’ legs were broken or amputated; transplants were attempted.

The physicians enjoyed complete freedom to act without regard to basic medical ethics, without any consideration for the health of the patient.

There were some 70 such “medical-research” programs at Nazi concentration camps involving some 7,000 prisoners and some 200 physicians, who worked directly in the concentration camps, but they were not alone. They maintained close professional and research contacts with leading medical institutions and universities and an ongoing relationship with research laboratories. Indeed, the German medical establishment was involved in this work.

Medical experimentation on human subjects has long been practiced. This experimentation was different. It was left to the Physicians Trials, begun on October 25, 1946, at Nuremberg, which were the forerunner of the subsequent trials, to determine precisely how different.

Twenty-three men stood in the docket. Seven were sentenced to death; nine to long prison terms and seven were acquitted. Two physicians, Mengele and Schumann, had disappeared, and Clauberg was tried in the Soviet Union.

More important than the judgment were the principles articulated by the Court. They form the foundation for contemporary medical practice and define what was wrong with the Nazi practice.

The judges found that certain basic principles must be observed in order to satisfy moral, ethical, and legal concepts:

1. The voluntary consent of the human subject is absolutely essential.

The duty and responsibility for ascertaining the quality of the consent rests upon each individual who initiates, directs, or engages in the experiment. It is a personal duty and responsibility which may not be delegated to another with impunity.

2. The experiment should be such as to yield fruitful results for the good of society, unprocurable by other methods or means of study, and not random and unnecessary in nature.

3. The experiment should be so designed and based on the results of animal experimentation and knowledge of the natural history of the disease or other problem under study that the anticipated results will justify the performance of the experiment.

4. The experiment should be so conducted to avoid all unnecessary physical and mental suffering and injury.

5. No experiment should be conducted where there is an *a priori* reason to believe that death or disabling injury will occur, except, perhaps, in those experiments where the experimental physicians also serve as subjects.

6. The degree of risk to be taken should never exceed that determined by the humanitarian importance of the problem to be solved by the experiment.

7. Proper preparations should be made and adequate facilities provided to protect the experimental subject against even remote possibilities of injury, disability, or death.

8. The experiment should be conducted only by scientifically qualified persons. The highest degree of skill and care should be required through all stages of the experiment of those who conduct or engage in the experiment.

9. During the course of the experiment the human subject should be at liberty to bring the experiment to an end, if he has reached the physical or mental state where continuation of the experiment seems to him to be impossible.

10. During the course of the experiment the scientist in charge must be prepared to terminate the experiment at any stage, if he has probable cause to believe, in the exercise of the good faith, superior skill, and careful judgment required of him, that a continuation of the experiment is likely to result in injury, disability, or death to the experimental subject.

[Michael Berenbaum (2nd ed.)]

NAZIMOVA, ALLA (1879–1945), Russian-U.S. actress. Born in Yalta, Nazimova went to New York with a Russian company in 1905, making her debut in the play *The Chosen People*. She stayed in the United States, became a success on the U.S. stage, and had her first screen role in *War Brides* (1916). One of the earliest film stars, she played in *Heart of a Child* (1920), *Madonna of the Streets* (1924), *Since You Went Away* (1944), and *In our Time* (1944). She also appeared in the anti-Nazi film *Escape* (1940).

NAZIR (Heb. נָזִיר; “Nazirite”), fourth tractate in the order *Nashim*, in the Mishnah, Tosefta, and the Babylonian and Jerusalem Talmuds. It deals, as its name indicates, with the laws of the *Nazirite (Num. 6:1–21), and its position after the tractate *Nedarim (“Vows”) is determined by the fact that the assumption of Naziriteship was by vow. In the Babylonian Talmud it comes before *Sotah* (“The Unfaithful Wife”) – although in the Bible it follows it – because “whosoever sees the degradation of an unfaithful wife will forbid himself the use of wine as leading to such behavior” (2a).

The tractate consists of nine chapters. Chapter 1 deals with the various verbal formulas used in undertaking the vow and their implications, and the duration of the three forms – the ordinary, the Samson, and the lifelong Naziriteship. Chapter 2 continues the same theme and discusses whether it is possible to limit Naziriteship to only part of its obligations. Chapter 3 deals with multiple Naziriteships, the procedure of polling the head at the end of the Naziriteship, and the intervening of ritual uncleanness terminating the Naziriteship. In Mishnah 6 of this chapter, there is the story of Queen *Helena of Adiabene who fulfilled a vow that if her son returned safely from war, she would take a Nazirite vow for seven years; this incident confirms the statement of Josephus (Wars, 2:313) that it was the custom for someone in trouble or danger to undertake a Nazirite vow. Chapter 4 deals with Naziriteship made dependent upon that of another, a stranger, husband, or wife; the consequences of annulling a Naziriteship; the father’s power to impose Naziriteship upon his son; and the son’s right to utilize his deceased father’s Nazirite money. Chapter 5 discusses vows made in error and the situation which arose when the destruction of the Temple made the adoption of the complete Nazirite vow impossible. Chapter 6 discusses the duties of a Nazirite in greater detail, as well as the sacrifices to be brought either when the Naziriteship is interrupted by uncleanness or when it is completed in cleanness. Chapter 7 discusses on which occasions the Nazirite may defile himself for the dead, and which sources of uncleanness interrupt the Naziriteship. Chapter 8 deals with uncertain breaches of the vow. Chapter 9 discusses the fact that gentiles cannot, but women and slaves can, become Nazirites and whether the prophet Samuel was a Nazirite.

It can be demonstrated that several *mishnayot* of *Nazir* belong to the Second Temple period. Among them are 1:1, which predates the schools of Shammai and Hillel (Tosef., Naz. 1:1 and 2:1), and *mishnayot* 7:2–3, the laws of which were

disputed by the *zekenim ha-rishonim* ("the first elders," who lived during the Second Temple period; Tosef., 5:1 and Naz. 53a). The remainder of the Mishnah of *Nazir* derives from the *Mishnayot* of Akiva's disciples, Meir, Yose, and, especially, Judah and Eleazar (Epstein, Tannaim, 386). The six chapters in the Tosefta to *Nazir* follow a different order from that of the Mishnah. Many *mishnayot* have no corresponding Tosefta and vice versa. The Tosefta includes some aggadic material. Noteworthy is the story of the high priest Simeon the Just who, though in principle opposed to people taking Nazirite vows, made an exception for a handsome youth from the south. When Simeon asked him why he had decided to cut off his flowing hair, he replied that on beholding his reflection in a pool he had become vain of his beauty and had taken a vow to "shear these locks to the glory of Heaven" (4:7).

The Babylonian Talmud to *Nazir* differs from the rest of the Talmud in language and is similar to that of the Jerusalem Talmud (cf. Pseudo-Rashi on Nazir 32a, s.v. *amar mar*). Epstein claims that it was compiled in Maḥoza and Pumbedita, where a special Aramaic dialect was used (Amoraim, 72–83), and that the anonymous discussions in the Jerusalem Talmud were taken from Rava's discussion in the Babylonian Talmud. A. Weiss, however, maintains that there is an essential difference in style, content, and the names of the rabbis quoted, and attributes the differences to the fact that the study of *Nazir* was neglected, and therefore lacks the post-amoraic embellishments given to the other tractates. The Babylonian Talmud has an important passage (23a) dealing with the importance of motive in action. It also contains the dictum (23b): "A man should always occupy himself with the Torah and its precepts even though it be for some ulterior motive, for the result will be that he will eventually do it without ulterior motive."

The rabbinic attitude to *asceticism can be seen in the dictum of Eleazar ha-Kappari (19a); that the Nazirite is called "a sinner by reason of the soul" (Num. 6:11) because he denied himself wine: "If then one who denies himself wine only is termed a sinner, how much so then one who is an ascetic in all things!" Support for this point of view is also found in the Jerusalem Talmud (Kid. 4:12, 66d): Man is destined to be called to account for everything (permitted) he saw (and desired) but did not partake of. After the destruction of the Temple, since it was impossible to complete Naziriteship by offering the sacrifices on its conclusion, the practice fell into disuse. Tractate *Nazir* was not studied in the academies of the *geonim*, nor were there any *halakhot* on it in the *Halakhot Pesukot*, *Hilkhot Re'u*, or *Halakhot Gedolot* (B.M. Lewin, *Ozar ha-Ge'onim*, 11 (1942), 8, and Epstein, Tannaim, p. 72). The commentary to *Nazir* attributed to Rashi was apparently written by his son-in-law Meir b. Samuel, who recorded the commentaries of Isaac b. Eleazar ha-Levi, Rashi's teacher. According to Epstein the *tosafot* to *Nazir* were written by the disciples of Perez of Corbeil. The talmudic tractate in the Soncino edition was translated into English by B.D. Klien (1936).

NAZIR, MOSES HA-LEVI (second half of 17th century), rabbinic author and Hebron emissary. Moses was the son-in-law of Abraham b. Hananiah, a Jerusalem scholar. He was called Nazir because of his acceptance of the ascetic practices enjoined on the *Nazirite. At the beginning of each year he would undertake the observance of such practices for that year, and the text of one of these resolutions has survived. In 1668–71 he traveled in Syria and Turkey as an emissary of Hebron and a copy of the account book of this mission is extant. It contains the names of the communities he visited, the amount received in each of them, his traveling expenses, how much was stolen during the journey, etc. While on his mission he wrote several responsa to Ḥasdai b. Samuel ha-Kohen Perahyah, *av bet din* of Salonika, and these too reveal Moses' fine character. He also wrote halakhic novellae on the laws of the festivals, which were published by his son Joseph, and the *Yedei Moshe* on *Hoshen Mishpat*, which is still in manuscript.

Moses' son JOSEPH (d. 1713) was born in Jerusalem, studied under Hezekiah b. David da Silva, then settled in Hebron with his father, and was apparently a Hebron emissary to Europe in 1689. From Hebron, Joseph went to Egypt and served as *av bet din* in Cairo. His responsa and novellae were published after his death by his son-in-law Joshua Zein, according to the order of the *Arba'ah Turim*, under the title *Matteh Yosef* (2 pts., Constantinople, 1717–26); the numerical value of *matteh* is 54, which is the number of responsa. In them he discussed halakhic problems with contemporary scholars, especially with Abraham Blom, rabbi of Egypt.

[Avraham Yaari]

NAZIRITE, person who vows for a specific period to abstain from partaking of grapes or any of its products whether intoxicating or not, cutting his hair, and touching a corpse (6:3–9). Such a person is called a Nazirite (Heb. *nazir*, נָזִיר) from the root *nzr* (נָזַר), meaning to separate or dedicate oneself (e.g., *nifal*, Lev. 22:2; *hifil*, Lev. 15:31; Num. 6:2, 5, 12). The subject is dealt with in the Priestly Code (Num. 6:1–21) and the purpose of the law is to prescribe the proper ritual if the Nazirite period is aborted by corpse contamination (Num. 6:9–12) or if it is successfully completed (6:13–21).

In the person of the Nazirite, the layman is given a status resembling that of the priest, as he now is "holy to the Lord" (Lev. 21:6; Num. 6:8; cf. Philo, 1 LA, 249). Actually, in his taboos, he approximates more the higher sanctity of the high priest in that (1) He may not contaminate himself with the dead of his immediate family (Lev. 21:11; Num. 6:7; cf. the ordinary priest, Lev. 21:1–4); (2) For him, as for the high priest, the head is the focus of sanctity (Ex. 29:7; Num. 6:11b. Note

the same motive clauses, Lev. 21:12b; Num. 6:7b and compare the dedication of the ordinary priest, Ex. 29:21; (3) He abstains from intoxicants during his term (Num. 6:4) – a more stringent requirement than that of the high priest, whose abstinence, like that of his fellow priests, is limited to the time he is in the Sanctuary (Lev. 10:9).

A more instructive parallel to the Nazirite is the case of the dedication of land to the Sanctuary (Lev. 27:16ff.). Both result from a votive dedication (Lev. 27:16; Num. 6:2), and both dedications are for limited periods, the land reverting to its owner on the Jubilee if not redeemed earlier (implied by Lev. 27:21; Num. 6:13). In both cases the period of dedication can be terminated earlier – the Nazirite's by contamination (Num. 6:9–12), the land's by redemption (Lev. 27:16–19). In the case of premature desanctification, a penalty is exacted: the Nazirite pays a reparation offering (*asham*) to the Sanctuary, and the owner of the land pays an additional one-fifth of the redemption price to the Sanctuary. If the dedication period is completed, no desanctification penalty is incurred. True, the Nazirite offers up an array of sacrifices together with his hair (Num. 6:13–20), but the sacrifices are mainly for thanksgiving, and the hair, which may not be desanctified, is consumed on the altar. Similarly, dedicated land (so the text of Lev. 27:22–24 implies) reverts to its original owner on the Jubilee without cost. In the case when the Nazirite period is interrupted by contamination, the following ritual is observed: the Nazirite must undergo sprinkling with purificatory waters on the third and seventh day (inferred from Num. 19:14ff.); he shaves his hair on the seventh day; and on the following day three rituals are prescribed: he is purified of his contamination by a purification offering, his hair is reconsecrated and his Nazirite period begins anew, and a reparation offering is brought to expiate his desecration.

The uncut hair of the Nazirite is his distinction. (In this respect the priest differs; though forbidden to shave his hair, he is compelled to trim it; cf. Ezek. 44:20.) Its importance is indicated by the root of the term Nazirite, נָזִיר, which refers at times to the hair (Num. 6:6, 7, 12, 18; Jer. 7:29. Note the parallelism in Gen. 49:26; Deut 33:16). Since hair continues to grow throughout life (and apparently for a time after death), it was considered by the ancients to be the seat of man's vitality and life-force, and in ritual it often served as his substitute. A ninth-century B.C.E. bowl found in a Cypriot temple contains an inscription on its outside surface indicating that it contained the hair of the donor. It was placed there, if the reconstructed text is correct, as "a memorial" to Astarte (cf. Ex. 28:12, 29; 30:16; Num. 10:10; Zech. 6:14), i.e., as a permanent reminder to the goddess of the donor's devotion. The offering of hair is also attested in later times in Babylonia (Pritchard, Texts, 339–40), Syria (Lucian, *De dea Syria*, 55, 60), Greece (K. Meuli), and Arabia (W.R. Smith).

The narrative and prophetic literature corroborate the existence of Nazirites in Israel. Samson and Samuel were lifelong Nazirites (Judg. 13:7; 1 Sam. 1:21 (4Q Sam^c), 28). Indeed, they resembled the prophets in that their dedication began not

at birth but at conception (Isa. 49:1, 5; Jer. 1:5; cf. Amos 2:11). The taboos prescribed in the Torah are verified in their lives. Neither polled his hair (Judg. 13:5; 16:17; 1 Sam. 1:11) nor drank any wine (to judge by the prohibition to Samson's mother during her pregnancy; Judg. 13:4, 7, 14). However, the law forbidding corpse contamination was not observed (Judg. 14:9, 19; 15:8, 15; 1 Sam. 15:33). This divergence from the Priestly Code is implicitly reinforced by the rule set down by the angel to Samson's mother (Judg. 13:14), i.e., that she must eschew forbidden food; nothing, however, is said about contracting impurity from the dead which, according to the Priestly Code, would have automatically defiled her embryo.

[Jacob Milgrom]

In Talmud

The Mishnah and the Talmud distinguish between a lifelong Nazirite and a "Samson Nazirite" since Samson, unlike the lifelong Nazirite, was never allowed to thin his hair even when it became burdensome (Naz. 1:2). On the other hand, Samson was permitted to defile himself through contact with the dead, since the angel did not enjoin him from such defilement when delineating the laws of his abstinence (Naz. 4b).

When the period of the vow was not specified, it was understood to be 30 days (Naz. 1:3). In addition to being subsumed under the general regulations governing vows, many specific formulas were developed for Nazirite commitments. "If a man says 'Let my hand be a Nazirite' or 'Let my foot be a Nazirite,' his words are of no effect. However, if he says, 'Let my head be a Nazirite' or 'Let my liver be a Nazirite' [or some other vital organ], he becomes a Nazirite" (Naz. 21b). It was customary for the wealthy to aid poor Nazirites in the purchase of their offerings (Naz. 2:5, 6), since it was felt that the most meritorious aspect of abstinence was the chance to bring a sin-offering at its conclusion (Ned. 10a). It is related that at the time of *Simeon b. Shetah, 300 Nazirites came to Jerusalem. He absolved half of them of their vow, and not revealing the fact to the king Alexander Yannai, persuaded him to give what purported to be half the sacrifices needed, he "offering" to provide the other half (TJ, Ber. 7:2, 11b). The Nazirite laws applied only to Erez Israel. It is related that *Helena of Adiabene took Nazirite vows for seven years. After this period she went to Erez Israel, where Bet Hillel ruled that she must continue for a further seven years (Naz. 3:6).

There were different reasons for taking the Nazirite vow. Some did it for the fulfillment of a wish, such as for the birth of a child (Naz. 2:7–10). One who saw the conduct of an unfaithful wife was advised to abstain completely from wine by becoming a Nazirite (Ber. 63a). Thus the passages on the wife suspected of adultery and the laws of the Nazirite are juxtaposed in the Bible (Num. 5:11–31, 6:1–21). The pious simply made a freewill vow of abstinence to afford them an opportunity to bring a sin-offering at its conclusion (Ned. 10a). The Nazirite vow was severely discouraged by the rabbis, since *asceticism was against the spirit of Judaism (Ned. 77b; Naz. 19a; Ta'an. 11a). Their discouragement of the practice was al-

most certainly in protest against the excessive mourning after the destruction of the Second Temple, when large numbers of Jews became ascetics, vowing not to eat meat or to drink wine (BB 60b). The rabbis even designated the Nazirites as sinners in accordance with the verse: "And [the priest] shall make atonement for him, for that he sinned against a soul" (Num. 6:11; Ned. 10a). The high priest Simeon the Just only once in his life ate of the trespass-offering brought by a defiled Nazirite. This was when a young, handsome shepherd possessing beautiful, thick locks of hair undertook to become a Nazirite and thus had to cut his hair in order to avoid sinful thoughts (Ned. 9b; cf. the Narcissus legend in Greek mythology). The observance of the Nazirite vow may have continued for many centuries. However, it ultimately disappeared, and there is no reference to Nazirites in the Middle Ages. In modern times Nazirite practices have been observed in Jerusalem by David Cohen, a disciple of Chief Rabbi A.I. Kook.

NEANDER, AUGUST (originally **David Mendel**; 1789–1850), Church historian and convert. His Orthodox father abandoned the family, complaining that his liberally educated wife was corrupting the children (four of five were eventually baptized). Though poor and sickly, David was an immediate success at the Johanneum Gymnasium in Hamburg. His honorary public address presented in Latin on the conclusion of his studies in 1805, demanding equality for the Jews in all respects but advocating the abrogation of some rites, aroused wide interest. The speech was inspired by his rationalist benefactor, who was also principal of the school. David soon fell under the varied influences of Plato, *Schleiermacher, and romanticism, and embraced Christianity at the age of 17. Neander (Gr. "new man") rapidly attained prominence in the field of Church history and became a professor at the age of 24. During the *Damascus affair (1840) he publicized his opinion that the whole ritual murder charge was a falsehood. In 1847 he opposed the admission of Jews to Berlin University, identifying them with the anti-Christian movement of the left-wing Hegelians.

NEBAIOTH (Heb. נְבִיּוֹת, נְבִיִּית), a tribe or a group of tribes of nomads in the border deserts of Israel, identified with the Nabaiāte mentioned in the Assyrian documents from the time

of Ashurbanipal. The Nebaioth are not to be connected with the *Nabateans, as some classical authors mistakenly did (cf. Jos., Ant. 1:221; 12:335, et al.; Jerome in his commentary to Gen. 25:13–18). According to Genesis 25:13 and 1 Chronicles 1:29, Nebaioth was the firstborn of Ishmael and according to Genesis 36:3 he was also the brother of Esau's wife Basemath, daughter of Ishmael. In Isaiah 60:6–7 Nebaioth is mentioned with Kedar, another son of Ishmael (Gen. 25:13), among the nomadic tribes on the border of Israel.

NEBENZAHL, ITZHAK ERNST (1907–1992), Israeli state comptroller. Nebenzahl was born in Frankfurt on the Main, Germany, and studied at the universities of Frankfurt, Berlin, and Freiburg. He was appointed lecturer in civil law at Frankfurt in 1932. A strictly observant Jew, Nebenzahl was president of the Ezra religious youth movement in Germany in 1929–30. Following Hitler's rise to power in 1933 he immigrated to Erez Israel. A partner in the world-wide Hollander concern, and chairman of the Board of Directors from 1947 to 1961, he has served on most of the important economic bodies of Israel, including the Jerusalem Economic Corporation, the Israel Post Office Bank, and the Bank of Israel, where he was chairman of the advisory committee and council (1957–62). In 1961 Nebenzahl was elected state comptroller of Israel for a five-year period, and was re-elected in 1966, 1971, and 1976, retiring at the end of 1981. In 1976 he also became ex-officio commissioner for complaints from the public (Ombudsman) of the State of Israel.

NEBO (Heb. נְבוֹ).

(1) High mountain E. of the Jordan River, opposite Jericho. It forms part of the heights of Abarim bordering the Moab plateau, where the Israelites encamped on the last stage of their journey (Deut. 32:49). The mountain is identified with Jebel Shayhān that has two peaks: Ra's al-Nibā', 2,739 ft. (835 m.), and Ra's Siyāgha, 2,329 ft. (710 m.). In the Bible the peak of Mt. Nebo is called Pisgah; from there Moses beheld the Promised Land before dying. Although Ra's al-Nibā' has retained the biblical name, scholars regard the second peak as the more likely site of Pisgah, because of the magnificent view from there. Moses died on the mountain and was buried in a valley "and no one knows his burial place to this day" (Deut. 34:6). According to an apocryphal source, Jeremiah buried the Ark of the Covenant and various other objects from the Holy of Holies on the mountain (11 Macc. 2:5ff.). In Byzantine times the tomb of Moses was "rediscovered" by a shepherd (Petrus Iberus, 88) and a memorial church was erected together with a monastery on Ra's Siyāgha. The church consists of a basilica with a trefoil apse, a baptistery (dated 597), and a chapel, all paved with mosaics. Eusebius locates "Phasgo" (= Pisgah) on the way from Livias to Heshbon (Onom. 18:3).

(2) Reubenite town (Num. 32:3, 38) near Mt. Nebo, belonging to the family of Bela (1 Chron. 5:8). It remained an Israelite possession till the revolt of the Moabite king Mesha

against the house of Omri. On his stele (lines 14 ff.) Mesha describes his conquest of the town, the destruction of the sanctuary of the God of Israel before the Moabite god Chemosh and the sacrifice of 7,000 men, boys, women, girls, and maid-servants (see Mesha *Stele). The prophets Isaiah (15:2) and Jeremiah (48:1, 22) mention Nebo among the cities of Moab in their descriptions of the “burdens” on that land. Eusebius refers to it as a ruined town, 6 (or 8) mi. (c. 11 or 14 km.) west of Heshbon (Onom. 136:6–13).

Scholars identify Nebo either with Khirbat al-Muḥayyit southeast of Ra’s Siyāgha or with Khirbat ‘Uyūn Mūsā (“Springs of Moses”) northeast of the mountain, beside a spring of the same name. Iron Age fortresses have been discovered at both sites.

(3) Town in Judah whose inhabitants were among those who returned from Babylonian Exile (Ezra 2:29; 10:43; Neh. 7:33). The place may be identical with Nob.

[Michael Avi-Yonah]

NEBRASKA, state on the Great Plains located near the geographical center of continental United States. Its population in 2005 was 1,729,000 of whom approximately 7,200 are Jews, a decline of some 10% in three decades. Most live in Omaha, the home of four synagogues, a Jewish community center, and a *mikveh*; the majority of the other Jews in the state live in Lincoln, the home of the state university and two synagogues.

Nebraska was organized as a territory in 1854, and within a year the stream of Jewish settlement had begun. The first Jewish settlers are believed to have been two brothers, Lewis and Henry Wessel, who went to Nebraska City from St. Louis in 1855. The next few decades brought a steady trickle of Jews who were predominantly of Central European origin (Alsace-Lorraine, Germany, Bohemia). Many had settled briefly in cities on the eastern seaboard before moving to the west, where, especially after the Civil War, the Homestead Act and railroad construction attracted new settlement. The early Jews in Nebraska were mainly merchants, such as Aaron Cahn and Meyer Hellman, who established a clothing business in Omaha to supply pioneers striking out on the Oregon Trail, and Carl Ernest Louis Golding, who was an Indian trader in Plattsmouth.

One of the most colorful figures in early Jewish life in Nebraska was Julius Meyer, who settled in Omaha in 1866 and became a successful Indian trader. He mastered at least six tribal dialects, was adopted into the Pawnee tribe, and was given the name “curly-headed-white-chief-with-one-tongue.” He later became a government interpreter for the Indians and accompanied a party of them to the Paris Exposition. Another early Indian merchant, Harris L. Levi, was less fortunate. In 1869 he joined a surveying party, all of whom were massa-

Jewish communities in Nebraska and dates of establishment. Population figures for 2001.

cred by the Indians in retaliation for the slaying of two Indian youths by the surveyors.

The most important early Jewish settler was Edward *Rosewater, who went to Omaha in 1863 as manager of the Western Union, and then became active as a journalist, founding the *Omaha Evening Bee News* (1871). Rosewater was a leading and controversial figure in Republican Party affairs in the state, served as National Republican Committeeman from Nebraska, and was twice defeated for the U.S. Senate.

After 1881 Russian Jews began to arrive in large numbers, many of whom were systematically sent out west by the Industrial Removal Aid Society of New York. Some abortive attempts were made to settle the newcomers on the soil, and the Jewish Agricultural Society tried to found a colony in Cherry County in 1908, but by 1916 the experiment was abandoned.

With the exception of a handful of ranchers, the Jewish population of Nebraska, by 1970, was almost entirely concentrated in business and the professions. Scattered groups of Jews live in some of the smaller Nebraska towns (Grand Island, Norfolk, Scottsbluff, Beatrice), but only *Omaha and Lincoln sustain organized community life. Lincoln has two congregations, one Conservative and one Reform, and a Jewish Welfare Federation. The Esther K. Newman Camp, between the two cities, serves the Jewish youth of the state during the summer.

Jews have served in a wide variety of public offices in the state since its inception. Many have been mayors of their municipalities, and as early as 1863 Aaron Cahn served in the legislature. Henry *Monsky of Omaha gained national importance in the B'nai B'rith. Ben Greenberg of York was chairman of the Board of Regents of the University of Nebraska. Edward Zorinsky was a United States Senator (1976–87) after serving as mayor of Omaha and defeating long-time incumbent Roman Hruska.

[Sanford Ragins / Renee Corcoran (2nd ed.)]

NEBUCHADNEZZAR (*Nebuchadrezzar*; Heb. נְבוּכַדְנֶצַּר; Akk. *Nabû-kudurri-ušur*, “O Nabû, guard my border!”), son of Nabopolassar the Chaldean, ruler of Babylon (605–562 B.C.E.). Nebuchadnezzar succeeded to his father's throne at the time when the struggle between Babylon and Egypt for the territories that had been part of the Assyrian

empire was at its height. According to the *Babylonian Chronicle*, Nebuchadnezzar waged his first war against Egypt in the region of the Euphrates, in the last year of his father's reign (605). In that year he defeated the Egyptian armies in a battle fought at *Carchemish on the Euphrates (cf. Jer. 46:2), thereby frustrating Pharaoh-Neco's attempt to gain control of Syria and Palestine, and at the same time paving the way for the rise of Babylon as a world power. In his pursuit of the Egyptian forces, Nebuchadnezzar reached the region of Hamath in central Syria but was obliged to return to Babylon in consequence of his father's death. In the same year he returned to the land of Ḫatti, i.e., Greater Syria, and according to the *Babylonian Chronicle*, "He marched unopposed through the Ḫatti-land; in the month of Šabātu (Shevat) he took the heavy tribute of the Ḫatti-territory to Babylon." It would seem that Nebuchadnezzar reached Palestine and subjected Judah to his rule one or two years later. At the end of 604 he conducted a military campaign against Palestine, besieging and capturing the city of Ashkelon. In the words of the *Babylonian Chronicle*, "All the kings of the Ḫatti-land came before him and he received their heavy tribute." One of these kings was apparently *Jehoiakim of Judah.

After consolidating his rule in Palestine and Syria, Nebuchadnezzar attempted the conquest of Egypt (end of 601). The stubbornly fought encounter between the Babylonian and Egyptian armies was indecisive. Nebuchadnezzar's failure to obtain a clear-cut victory over the Egyptians may have encouraged various states in Syria and Palestine, including Judah, to revolt against Babylon. In Kislev (December) 598 Nebuchadnezzar entered Palestine, and, according to the *Babylonian Chronicle*, "he encamped against the city of Judah [i.e., Jerusalem] and on the second day of the month of Adar [i.e., March 16, 597] he seized the city and captured the king [i.e., Jehoiachin]. He appointed there a king of his own choice [i.e., Zedekiah], received its heavy tribute and sent it to Babylon" (see *Zedekiah). In the following years the Babylonian king was occupied with wars against the Elamites to the east of the Tigris, and was also obliged to suppress a revolt in the country of Akkad (695/94). His absence from Syria, and the events in Babylon and Elam, apparently encouraged the kings of Syria and Palestine to plot a further revolt against their overlord. The Egyptian rulers no doubt lent their support to uprisings against Babylon, and Zedekiah's open revolt enjoyed their active aid (Jer. 37:5ff.). In 588 the siege of Jerusalem began, and in the summer of 586 Nebuchadnezzar captured the city, laid the Temple waste, carried off a large part of the population of Judah into captivity, and put Zedekiah and other Judean nobles to death. The land of Judah was turned into a province (see *Gedaliah son of Ahikam).

Some information about the fate of the exiles in Babylon in Nebuchadnezzar's day is found in Babylonian administrative documents, in which King Jehoiachin and his sons are mentioned as receiving a regular allowance of oil from the royal treasury. On the other hand, it is hard to draw any conclusions from the Book of Daniel about this subject be-

cause of the legendary character of the stories related there. Some scholars are of the opinion that the name Nebuchadnezzar in these stories is an error for Nabonidus, since in an Aramaic text from Qumran there is a story about Nabonidus which resembles the story about Nebuchadnezzar in Daniel. Of similarly doubtful authenticity is the mention of Nebuchadnezzar in the Book of *Judith. In the years following the capture of Jerusalem, Nebuchadnezzar waged a war in Phoenicia against Tyre, most probably in 585, which, according to Josephus, lasted for 13 years (Ezek. 29:18; cf. Jos., Ant., 10:220–2; Jos., Apion, 1:154–60). Three years later (582/81) he conducted a campaign against Ammon and Moab (Jos., Ant., 10:181–2), in the course of which he also took captives from Judah (Jer. 52:30). Nebuchadnezzar must have been aware of Egypt's part in inciting the vassal states to revolt against Babylon and of its desire to establish its own power in Palestine and Syria. He therefore attacked Egypt too, but the source material dealing with this war is fragmentary and unreliable.

Despite his many foreign wars, Nebuchadnezzar did not neglect Babylon itself. From various inscriptions and archaeological finds he emerges as a dynamic and able monarch in the administrative and architectural no less than in the military field. He adorned and fortified his capital city, Babylon, with the booty and tribute that poured in from all over the Near East. He restored and renovated ancient temples in the cities of Babylonia in order to gain the support of the Babylonian priests. He also made provision for the regular irrigation of the lands of Babylonia by means of a whole network of canals connected with the Euphrates. In his reign the neo-Babylonian empire attained the pinnacle of its greatness.

[Bustanay Oded]

In the Aggadah

The description of Nebuchadnezzar in the *aggadah* seems largely to be a veiled reference to Titus. He is frequently referred to as "the wicked one" (Ber. 57b; Shab. 149b; et al.) as well as "a wicked slave," and "hater and adversary" of God (Lam. R., Proem 23); Titus is depicted in similar terms (Git. 56b). The "wicked slave" charge may be connected with the notoriously humble origin of the Flavian dynasty (Suetonius, *Vespasian*, 1:1; 3:1).

Despite the relatively favorable attitude to Nebuchadnezzar in Jeremiah, Ezekiel, and Daniel, the rabbis, for the most part, depict him as a cruel, merciless conqueror who, among other things, tore the flesh off a hare and ate it while it was still alive (Ned. 65a; Lam. R. 2: 10, no. 14), and forced his client kings to enter into homosexual relations with him (Shab. 149b). Several Roman emperors, including Titus (cf. Suetonius, *Divus Titus* 7:1), were said to have indulged in pederasty. Nebuchadnezzar was also reported to have cast Jehoiakim's body to the dogs (Lev. R. 19:6) and to have killed large numbers of Judean exiles in Babylonia (Sanh. 92b; *PaRE* 33). Likewise, he is frequently accused of having made himself into a god (Gen. R. 9:5; Ex. R. 8:2) – a transparent criticism of the Roman emperors who claimed divine honors.

Nebuchadnezzar's treatment of Zedekiah was at first favorable, and he even placed five kings under his rule; but when it seemed that they were prepared to plot against Nebuchadnezzar, Zedekiah reviled him in their presence, whereupon they betrayed Zedekiah to his suzerain (Lam. R. 2: 10, no. 14). Although ostensibly based on Jeremiah 27:3, the story is remarkably similar to Josephus' account of the congress of five kings held by Agrippa I at Tiberias and rudely dispersed by the Roman governor of Syria (Ant., 19:338–41). There, too, it seems that some anti-Roman plot was being hatched, with the result that henceforth the Roman authorities became hostile to Agrippa.

Nebuchadnezzar charged the Sanhedrin with absolving Zedekiah from his vow of loyalty, and he had them punished by having their hair tied to tails of horses and being made to run from Jerusalem to Lydda (Lam. R. 2: 10, no. 14). Since, according to 11 Kings 25: 18–21, 72 leading citizens of Jerusalem – a number almost equivalent to the traditional great Sanhedrin – were executed at Riblah in Syria, the punishment mentioned in the Midrash undoubtedly alludes to some incident in the Roman period, probably to the execution of Jewish rebels at Lydda by order of Ummidius Quadratus, governor of Syria; the dispatch from Lydda of a number of Jewish leaders to Rome where their fate was to be decided; and the subsequent beheading of a Roman tribune after being dragged round Jerusalem (Jos., Ant., 20: 130–6; Jos., Wars, 2:242–6).

According to the Midrash, Nebuchadnezzar hesitated to attack Jerusalem and destroy the Temple (Lam. R. Proems 23, 30) – which is precisely what Vespasian did in 68–69 C.E., though his motives were political, not religious. Interpreting Ezekiel 21: 26, the rabbis depict Nebuchadnezzar as practicing belomancy and studying various auguries before deciding whether to proceed against Jerusalem (*ibid.* 23). The same is reported in the Talmud concerning Nero (Git. 56a).

Since Nebuchadnezzar left the task of subduing Jerusalem and burning the Temple to Nebuzaradan, he is assailed mainly for trying to force image worship on the Jewish exiles. Interpreting Daniel 3: 16, the Midrash depicts Shadrach, Meshach, and Abed-Nego as saying to Nebuchadnezzar, "You are our king only as regards taxes, *annonae*, fines, and poll taxes; but in this matter of which you speak to us you are just Nebuchadnezzar ... You and a dog are alike to us. O Nebuchadnezzar, bark like a dog, swell like a pitcher, chirp like a cricket" – a curse which was duly fulfilled (Lev. R. 33:6). The Roman taxes enumerated indicate an allusion to the Roman period, probably to Caligula who insisted that his statue be placed in the Temple and who was a madman just like Nebuchadnezzar (Jos., Ant., 18:261 ff.; Jos., Wars, 21:184 ff.; Tacitus, *Historiae*, 5:9; Philo, *In Flaccum*, 31).

Occasionally, however, Nebuchadnezzar is viewed in a more favorable light, mainly in later rabbinic sources composed at a time when hostility to the Romans had subsided. Thus, he is said to have taken pity on the Jews after the exile of Jehoiachin, and, indeed, on Jehoiachin himself, whom he provided with a wife during his long imprisonment (Lev. R.

19:6; PR 26:129). Nebuchadnezzar was one of the five persons saved from the army of Sennacherib, and from that time he was inspired by the fear of God (Sanh. 95b). He was the scribe of Merodach Baladan and corrected him for writing the name of Hezekiah before that of God (Sanh. 96a). For this act he was rewarded by ruling over the whole world (Song R. 3:4, no. 2), including the world of animals, and by sitting on Solomon's throne (Est. R. 1:12).

A historically significant Midrash reports that when the "exiles of Zedekiah" were brought to Babylonia by Nebuchadnezzar, they were met by the earlier deportees (of 597 B.C.E.), wearing "black underneath but white outside" and hailing Nebuchadnezzar as "conqueror of the barbarians" (Lam. R., Proem 23). This story evidently alludes to the Jews of the Hellenistic and Roman Diaspora, as well as to individuals such as Josephus and Agrippa II, who had to conceal their mourning for Jerusalem and proclaim their loyalty to the Roman conquerors.

[Moses Aberbach]

In Islam

In the *Koran (Sura 17:4–7) it is related that the people of Israel sinned twice and were therefore punished twice. The description of these events in the Koran is very vague, and the traditional Muslim commentators therefore found it difficult to present a clear and crystallized explanation of these verses. According to them, the two sins were the murder of *Isaiah or the imprisonment of *Jeremiah or the murder of *Zechariah son of Iddo; and the murder of John the Baptist. However, some elements from the *aggadah* on the murder of Zechariah have also been introduced into this story (cf. Targum Lam. 2:20). In any case, the Koran clearly hints at two destructions of the Temple.

According to Muslim legend, the punishment was meted out either by *Goliath, Sennacherib, Nebuchadnezzar (Bukhtanašar), one of the Nabatean kings, or Persian invaders. Among the intermediaries whom Allah used to punish the people of Israel, the figure of Bukhtanašar stands out; folklorists make frequent references to him, even adding a beautiful story about his youth to his biography. According to them, one of the people of Israel dreamed that a poor, orphaned youth would destroy the Temple and exterminate the people. He set out in search of this youth, traveled as far as Babylonia, and almost gave up the hope of finding him. Some people finally pointed out a poor orphan who carried a bundle of twigs on his head. The Israelite gave him three dirhams with which to buy meat, bread, and wine. He repeated this act the next day and for several more days. When his time came to leave, the youth was saddened by the fact that he was unable to repay the generosity of his Israelite benefactor. The latter told the youth that his reward would be the youth's written promise that when he ascended the throne he would spare his life and the lives of all those with him. The youth answered that his benefactor and friend was mocking him. Upon the entreaties of his mother he finally granted the request of the Israelite and gave him the written promise; a sign was even convened upon

by which Bukhtanašar would recognize the Israelite among the great crowd. The story of Yahya ibn Zakariyyā (i.e., John the Baptist) has been added to some versions of this story. The continuation of the story relates that Nebuchadnezzar destroyed the Temple as a punishment for the murder of John the Baptist and that he ordered the bodies of those who had been killed to be thrown among the ruins. Everyone who obeyed his command was exempted from the payment of the *jizya* (poll tax) for that year. The Israelite, the benefactor of Nebuchadnezzar, was not in Jerusalem on that day and was therefore unable to make use of the written promise which he had received years ago; thus, no one was saved by it. As usual, there are several versions of this story. It does not appear to have any Jewish origin, except for a weak echo of the story of the encounter between Rabban Johanan b. Zakkai and Vespasian, when Rabban Johanan announced to Vespasian that he would become king and destroy Jerusalem (Git. 56a–b).

[Haïm Z'ew Hirschberg]

In the Arts

Although few of the literary, artistic, or musical works associated with Nebuchadnezzar are of the first rank, they are rather numerous; and the Babylonian king also figures in works dealing with the notable Jews who have contact with him in the Bible. Two of the earliest literary treatments were an old English play, *Nebuchadnezzar's Fierie Furnace* (re-edited by M. Roesler, 1936), and an Italian miracle play in verse, *La Representatione di Nabucdonosor Re di Babillonia* (c. 1530; Florence, 1558²). A second English play on the theme is known to have been staged in London in 1596. Nebuchadnezzar's treatment of Zedekiah and the royal house of Judah forms the subject of *Sédécie, ou les Juives* (1583), one of the most important works of the French dramatist Robert Garnier. Later, the German playwright Christian Weise added *Nebukadnezar* (1684) to his series of biblical dramas. In the 18th century, Christian Friedrich Hunold wrote a "Singspiel," *Der gestuerzte und wieder erhoehte Nebucadnezar, Koenig zu Babylon, unter dem grossen Propheten Daniel*, which was staged at Hamburg in 1728; and the Russian writer and publisher Nikolai Ivanovich Novikov published a *Komediya Navukhodonosor* (1791; in *Drevnyaya Rossiyskaya Biblioteka*, Moscow, 1788–91). Works on the subject that appeared in the 19th century include *Nabucco* (1819), a five-act verse tragedy by the Italian writer Giovanni Battista Niccolini; *Nabuco in Gerusalemme* (1829), an Italian *azione sacra* in verse; and *Nebuchodonosor* (1836), a four-act French drama by Auguste Anicet-Bourgeois written in collaboration with Francis Cornu and staged in Paris. The tragic end of the Judean monarchy also inspired Ludwig *Philippson's German dramas *Jojachin* (1858) and *Die Entthronen* (1868). On the whole, 20th-century writers have avoided the subject, an exception being the German author Heinz Welten, whose novel *Nebukadnezar: der Koenig der Koenige* appeared in 1924.

In art, the main subjects treated are the king's dreams and visions and their eventual realization. There are several works illustrating Nebuchadnezzar's dream of the metal statue

with feet of clay (Dan. 2:31–35). The stone hewn without hands which topples the statue was thought by the Church Fathers and later Christian symbolists to represent the Virgin Birth (i.e., Jesus conceived without human agency). The dream is depicted in medieval manuscripts and in carvings from the Gothic cathedrals of Amiens and Laon. Nebuchadnezzar's vision of the tree (Dan. 4) appears in medieval illuminated manuscripts and on the front of Laon Cathedral, as well as in stained glass and paintings of the Middle Ages. The pitiful figure of the king reduced to grazing with the beasts (Dan. 4:32) appealed particularly to the artistic imagination of the Romanesque period (11th–12th centuries) with its feeling for the awesome and the grotesque. This scene appeared in illuminated manuscripts of the commentary on the New Testament Book of Revelations by the eighth-century Spanish monk Beatus and on the capitals of French Romanesque churches. A more recent treatment of the episode is the English visionary poet and artist William *Blake's striking depiction of the shaggy, wild-eyed monarch walking on all fours (1795). The image also occurs in Blake's prophetic work *The Marriage of Heaven and Hell* (1790) with the caption "One Law for the Lion and the Ox is Oppression." Nebuchadnezzar occasionally figures in medieval manuscript illustrations of the Three Hebrews in the Fiery Furnace (Dan. 3). In the early 15th-century *Très Riches Heures* of the Duc de Berry (Musée Condé, Chantilly), he is shown complacently stoking the furnace which encloses Shadrach, Meshach, and Abed-Nego.

Musical compositions involving Nebuchadnezzar largely deal with episodes drawn from the Book of Daniel, notably that of the Three Hebrews. They include an opera by Caldara (1731), Darius *Milhaud's *Les Miracles de la Foi* (1951), and Benjamin Britten's *The Burning Fiery Furnace* (1966). To mark the coronation of the Austrian emperor Ferdinand I as king of Lombardy and Venice, a ballet entitled *Nabucodonosor* was performed at La Scala, Milan, on September 6, 1838. The Italian composer Giuseppe Verdi was in Milan at the time and subsequently found inspiring reading in T. Solera's libretto *Nabucodnosor*, which described the Babylonian king's enslavement of the Jews and the plight of the latter in their distant exile. *Va, pensiero...*, the chorus of the Hebrew captives in Solera's text, fired Verdi's dormant patriotism and the opera which he wrote, *Nabucco*, had its premiere at La Scala in 1842. Its performance created widespread enthusiasm in Italy, where the Hebrew captives' prayer for deliverance was seen as a comment on the country's state of subjugation to Austria, or as the lament of exiled Italian patriots. When *Nabucco* was staged at Her Majesty's Theater, London, in 1846, it was retitled *Nino* and the biblical characters renamed, since the stage performance of biblical subjects was then still taboo in England. *Nabucco*, translated into Hebrew by Aharon *Ashman, has often been performed by the Israel Opera since its foundation in 1958.

NEBUZARADAN (Heb. נְבוּזַרְאֲדַן; Akk. **Nabu-zēr-iddina**; “Nabu has given offspring”), commander of *Nebuchadnezzar’s guard who was in charge of the destruction of the Temple and the deportation of the people of Judah. Acting on orders, Nebuzaradan set fire to the city of Jerusalem and leveled its walls (11 Kings 25:9ff.). Certain of the ecclesiastical, military, and civil officers and leading citizens who were supporters of *Zedekiah were brought before Nebuchadnezzar at Riblah and executed (25:20), and *Gedaliah son of Ahikam was placed in charge of the remaining population. Five years later, Nebuzaradan deported another 745 people (Jer. 52:30).

The official title of Nebuzaradan is given as *sar ha-ṭabbāhim*, although such a designation of a court official is unknown in Mesopotamian literature. The Septuagint translates the term as “chief cook or butcher.” In an inscription from the time of Nebuchadnezzar II, the chief court officer is referred to as Nabû-zēr-iddina, whose official Babylonian title is *rab nuḥatimmê* (cf., talmudic Heb. *naḥtom*, “baker”). Scholars have thus identified this officer with Nebuzaradan, and assume that the biblical title is a translation of the Babylonian one. The Aramaic translations render the term as “chief butcher” or “slaughterer,” and it is probable that this official belonged to the king’s guards whose duty was the infliction of capital punishment.

In the Aggadah

Nebuzaradan’s loyalty to his king is praised. He attached Nebuchadnezzar’s portrait to his chariot, so that he might always feel that he stood in his presence. For the same reason he accepted the assignment to conquer Jerusalem, even though he had personally witnessed Sennacherib’s defeat there (Sanh. 95a–96b). His success was due to divine aid. According to one Midrash, after three and a half years he was about to abandon the task but was advised by God to measure the city walls. As soon as he did so they began to sink into the ground and ultimately disappeared (Lam. R., introd. 30). According to another account, he was on the point of returning home after all the axes but the one at his disposal had been broken in the attack on Jerusalem. At that moment a voice cried out: “The time has come for the Sanctuary to be destroyed and the Temple burnt,” and with his last remaining ax he destroyed one of the city gates (Sanh. 96b).

When he led the exiles into captivity he commanded his soldiers not to touch married women captives, lest they provoke God’s wrath (Lam. R. 5:11). He forbade the captives to pray, putting to death those who did so. When, however, they had crossed the Euphrates, he desisted since they were now beyond the territory under the dominion of Israel’s God (*ibid.* 5:5). Nebuzaradan is identified with Arioch (Dan. 2: 14),

since he roared like a lion (*ari*) at his captives. When he saw the blood of the murdered Zechariah boiling (of. 11 Chron. 24:22), he put to death in revenge the scholars, young priests, and 14,000 of the people, but still the blood did not rest. In despair he exclaimed: “I have destroyed the flower of them. Do you wish me to massacre them all?” The blood immediately subsided, but so stricken was Nebuzaradan with grief that he exclaimed: “If they who killed only one person have been so severely punished, what will be my fate?” He thereupon became a righteous proselyte (Sanh. 96b).

NECO (or **Necoh**; **Wehemibre Neko** II; c. 609–593 B.C.E.), Twenty-fifth Dynasty king of Egypt, who played a major role in the fall of Judah. Marching to aid the Assyrians after the fall of Nineveh in 612, Neco found his passage blocked at Megiddo by King *Josiah (11 Kings 23:29ff.; 11 Chron. 35:20–24). The defeat and death of Josiah there allowed Neco to consolidate and control Syria and Palestine as far as the Euphrates. He deposed *Jehoahaz, Josiah’s successor, after a three-month reign and exiled him to Egypt (11 Kings 23:31–35 and Jer. 22:10–12), replacing him with *Jehoiakim as an Egyptian puppet. The Babylonian conquerors of Assyria were quick to react. In 605 *Nebuchadnezzar, the son of Nabopolassar, “crossed the river to go against the Egyptian army ... He accomplished their defeat and beat them into non-existence” (*Babylonia Chronicle*, ed. Wiseman, 25, 67–68), and “the king of Egypt did not come again out of his land, for the king of Babylon had taken all that belonged to the king of Egypt from the brook of Egypt to the river Euphrates” (11 Kings 24:7). Judah and the other Egyptian vassals gained a brief respite, for the death of Nabopolassar compelled Nebuchadnezzar to abandon his victorious advance and hasten back to Babylon to secure the throne. The respite was short, and by the end of 604 the Babylonians were in Philistia. An Aramaic letter, found in Egypt, begging the Egyptian pharaoh for aid against the Babylonian invader, probably came from Ashkelon. Jehoiakim, willingly or not, defected to the Babylonians (11 Kings 24:1), but rebelled after Nebuchadnezzar was checked by Neco at the Egyptian frontier in 601. Two years later he died (was perhaps assassinated) and was replaced by his son, *Jehoiachin. Within three months Jerusalem fell, and the royal family was exiled to Babylon (11 Kings 24:10–17). In 593 Neco died, but his son Psammetichus II continued to incite Zedekiah, the new ruler of Judah, against Babylon. Egypt provided no assistance, however, when Jerusalem finally fell in 587.

[Alan Richard Schulman]

NEDARIM (Heb. נִדְרִים; “Vows”), third tractate of the order *Nashim*, though in some editions the order varies. It is based upon Numbers 30 and deals mainly with the binding quality

of the spoken vow by means of which a person may forbid the use of things to himself and his own property to others. The inclusion of this topic in the order dealing with family law arises, in part, from the right of the father to annul the vows of his daughter during her minority and the right of a husband to annul most or all of his wife's vows. The Mishnah consists of 11 chapters. Chapter 1 deals with the formulas which constitute binding vows and Chapter 2 with formulas that are not binding. Chapter 3 deals with vows not binding because of lack of serious intent, constraint, and the like, as well as the interpretation of certain vow formulas; there is an incidental digression on the importance of circumcision. Chapter 4 discusses the consequences of forbidding benefit to, or being forbidden benefit from, another person. Chapter 5 continues this subject in connection with the property of partners and of members of a community or people. Chapter 6 lays down guidelines for determining what is to be included in, and what excluded from, vows appertaining to produce. Chapter 7 continues this topic in connection with places and periods of time. Chapter 8 deals with the extension in time to be given to expressions connected with recurring events, and vows made in general language arising from some specific event. Chapter 9 deals with the absolution of vows, and the grounds on which such absolution may be granted.

It includes the following moving account (Mishnah 10): It once happened that a man vowed to have nothing to do with his niece (i.e., not to marry her because of her uncomely appearance). R. Ishmael took her into his household and had her treated cosmetically ("beautified her"). He then said to the uncle: "Was it against this woman that you took the vow?" He answered in the negative, and R. Ishmael released him from his vow. Whereupon R. Ishmael wept and said: "the daughters of Israel are comely, but poverty destroys their comeliness!" When R. Ishmael died the women of Israel lamented: "Ye women of Israel, weep for R. Ishmael."

Chapter 10 deals with revocation by both father and fiancé of the vows of an affianced maiden; women whose vows cannot be revoked; the impossibility of revoking vows in advance; and the period allowed for such revocation. Chapter 11 treats of the type of vow that a husband can revoke: those which affect their relations or involve self-denial; vows of women not requiring revocation; and of women whose vows are not subject to revocation. *Nedarim* is a rich source for linguistic and syntactical usages in mishnaic Hebrew and is so used by the *Gemara*. The oldest stratum of this tractate including 1:3; 2:4; 3:4; 5:5 dates from the Second Temple period. *Mishnayot* 1:1; 7:1; 9:5–6; 11:4 are apparently derived from the *mishnayot* of Akiva while the rest of Mishnah *Nedarim* originated in the *mishnayot* of his disciples, Meir, Judah, and Yose. Chapter 4 belongs to Meir; 1:1; 3:6–10; 6:1; 7:5; 8:5–7; 9:1–8 belong to R. Judah, and the passages 3:1–5, 11; chapters 5; 1:1–7 belong to Yose who actually states that Elijah the Prophet taught him the section on *Nedarim* (Songs Zuta, ed. Schachter, 44; Buber 39; Epstein, Tanna'im 140–1). *Mishnah* 11:8 to the end of the tractate consists of supplements and glosses on the

laws concerning vows. *Mishnah* 1:2 mentions several terms for vows about which the *amoraim* debate whether they were borrowed from foreign languages or were coined by the rabbis (10a). One of these terms, "konam," was found in the Punic inscription of Ashmanezzer, king of Sidon (4:20), meaning "curse" or "vow," but it is not certain whether this Phoenician word is connected with the mishnaic term (S. Lieberman, *Greek in Jewish Palestine* (1942), 129 n. 106). Many of the laws in *Nedarim* should be seen in light of the Hellenistic practices of that period (*ibid.*, 115–43).

The Tosefta consists of only seven chapters and many of the *mishnayot* of *Nedarim* have no corresponding comments in the Tosefta, nor does the order of the laws in this Tosefta always follow that of the Mishnah. On the other hand, the Tosefta gives several laws not included in the Mishnah.

There is a *Gemara* to *Nedarim* in both the Babylonian and the Jerusalem Talmuds. The Babylonian *Gemara*, as is the case with regard to the tractate *Nazir*, is written in a peculiar dialect and various theories have been propounded to explain it. Epstein is of the opinion that it originates in the academy of Maḥoza, and since very little of the Talmud of Maḥoza reached Sura or Pumbedita, the *geonim* overlooked this tractate. In fact, during the whole of the geonic period the study of *Nedarim* was neglected in the Babylonian academies (Yehudai Gaon; B.M. Lewin, *Ozar ha-Ge'onim*, 11 (1942), 23; cf. Adler Ms. no. 2639. See A. Marmorstein, in *MGWJ*, 67 (1923), 134ff.). A. Weiss maintains that the differences are due solely to its neglect in the academies in later ages, and that it therefore lacked the benefits of final polishing given to the other tractates in the post-amoraic period, though he adds that it contains a certain amount of post-amoraic material, and regards the first two discussions as entirely savoraic. The Babylonian Talmud is usually printed with the commentary of Nissim Gerondi (the Ran) in addition to one attributed to Rashi, and with *tosafot* and the commentary of Jacob b. Asher. The text is not in very good condition and the commentaries contain many variant readings.

Aggadic Material

Both Talmuds, especially the Babylonian, are rich in aggadic material as exemplified by the following sayings: "The ancestors of the arrogant never stood on Mount Sinai" (20a); "If the people of Israel had not sinned, they would have been given only the Pentateuch and the Book of Joshua" (22b); "Why have scholars very often no learned children? In order that knowledge may not be thought transmissible by inheritance and that scholars may not pride themselves on an aristocracy of mind" (81a). Biblical scholars find interest in the Talmud's remarks on the masoretic division of the Bible into verses and on the *keri* and *ketiv* which do not entirely coincide with the existing masoretic text (37b–38a). The Jerusalem Talmud tells of letters which Judah ha-Nasi addressed to Hananiah, the nephew of Joshua b. Hananiah, to dissuade him from decreeing leap years abroad. The discussion that followed ends with the saying that "a small group in Erez Israel

is more precious to me than a Great Sanhedrin in the Diaspora" (6:13, 40a).

The talmudic tractate was translated into English in the Soncino edition by H. Freedman (1936).

NE'EMAN, YEHOSHUA LEIB (1899–1979), Israeli **hazzan*, writer, and teacher. Born in Jerusalem, Ne'eman sang as a *me-shorer* with A.Z. Idelsohn and other *hazzanim* and studied liturgical music and singing with Solomon Rosowsky. His lyric tenor voice and emphasis on correct pronunciation and accentuation of the prayers made him a popular *hazzan* in many of Jerusalem's synagogues. He was often accompanied by his choir, Shir Ziyon. From 1948 Ne'eman was lecturer in biblical cantillation at the Academy of Music in Jerusalem, and from 1958 to 1965 was director of the school for *hazzanim* for the Israel Institute for Sacred Music. He wrote extensively on biblical cantillation including *Zelilei ha-Mikra* (1955), and also published *Nusah la-Hazzan* (1963, with demonstration records). Rosowsky based his *The Cantillation of Bible* (1957) on Ne'eman's renderings which he accepted as the pure representation of the Ashkenazi tradition.

NE'EMAN, YUVAL (1925–2006), Israeli physicist, defense expert, engineer, and political activist. Born in Tel Aviv, he graduated from high school at the age of 15 and studied at the Technion (1941–45), graduating in mechanical engineering and applying it at the family's pump factory. He had joined the Haganah in 1940 and fought in 1948 defending the Jerusalem road, then on the Egyptian Front (Givati Brigade operations officer), staying on in the IDF until 1960. On the General Staff, serving as director of planning (1952–55), he is credited with the elaboration of the IDF's fundamental strategic and organizational doctrine, followed until after the Six-Day War. From 1955 to 1957 he served as deputy director of the Defense Intelligence Division (with the rank of colonel), where he contributed to the introduction of advanced information technologies and was, in addition, responsible for the operational secret link with France at the time of the Sinai Campaign. In 1958 he was appointed defense attaché to the UK and the Scandinavian countries. At that time he embarked upon a new career, studying physics at London's Imperial College under Nobel laureate A. Salam. Since J.J. Thomson's discovery of the electron in 1897 and E. Rutherford's discovery of the proton (1911), nearly 100 particles had been discovered, forming a confusing jumble for which Ne'eman proposed in 1960–61 a classification scheme based on a mathematical symmetry (the "SU(3)-octet" model, popularly known as the "Eightfold Way") which was experimentally confirmed in 1964. The same

scheme was suggested simultaneously and independently by M. Gell-Mann and is often regarded as an analog of D. Mendeleev's Periodic Chart of the chemical elements or C.V. Linne's classification of the living and plant species. In 1962, Ne'eman also conceived the sub-structure that would create such an order, an idea further developed by M. Gell-Mann and independently by G. Zweig, now known as the "quark model." During 1961–63, Ne'eman served as scientific director of the Israel Atomic Energy Commission's Soreq Research Establishment.

Appointed professor of physics, he founded the Department of Physics and Astronomy of Tel Aviv University and chaired it from 1965 to 1972. In mathematical physics, from 1974 to 1979, he made important contributions to the new areas of Lie "superalgebras" and to "supergeometry" and "superconnections," including new physical predictions which will be experimentally tested at CERN in Geneva when the construction of a new accelerator will be completed in 2007. He also developed with A. Kantorovich a new approach to evolutionary epistemology.

Ne'eman introduced astronomy in Israel with the inauguration of the Wise Observatory (40" telescope) in the Negev in 1971. At Tel Aviv University he also created the School of Engineering and the Jaffe Institute for Strategic Studies and was elected to succeed George Wise as Tel Aviv University president in 1971. He resigned in 1975, joining the Ministry of Defense as senior advisor to the minister, having served in the same capacity on a part-time basis in 1972 and 1974. At Tel Aviv University he was also director of the Mortimer and Raymond Institute of Advanced Studies from 1979 to 1997. In the Defense Ministry, he resigned as senior advisor in protest over the surrender of the Sinai (Abu Rudeis) oilfields in the Interim Agreement with Egypt, having advocated since the Six-Day War the annexation of Judea, Samaria, the Golan Heights, and parts of Sinai in order to establish secure borders, calling for a massive Jewish settlement in the occupied areas and supporting the Gush Emunim settlement movement. He also served as president of the Israel Bureau of Standards (1972–76) and chief defense scientist (1975–76), chairman of the National Research Council (1982–84), and president of the Israel Association of Engineers, Architects and Academics in the Technological Disciplines (1997–2002).

In the political arena, in the beginning of 1979, around the time when MKs Ge'ula *Cohen and Moshe *Shamir left the Likud and established an independent parliamentary group against the background of the Egyptian-Israeli Peace Treaty, Ne'eman called for all the opponents of the agreement with Egypt to join forces. In October the Teḥiyyah party was formed, and he became its chairman. He was elected to the Tenth Knesset in 1981 on the Teḥiyyah list and served as minister of science and development from 1981 to 1984, simultaneously serving as deputy chairman of the joint Settlement Committee of the government and the World Zionist Organization. In 1983 he founded the Israel Space Agency, chairing it into the 21st century. He was reelected to the Eleventh and

Twelfth Knesset, but in January 1990 resigned from the Knesset to enable the next in line on the Teḥiyyah list – Eliakim Haetzni – to enter the Knesset in his place. In the government formed by Yitzhak *Shamir in June 1990, after the fall of the National Unity Government, Ne’eman was appointed minister of Energy and Infrastructure, without being a member of the Knesset. In this capacity he was the first Israeli minister to meet Soviet President Mikhail Gorbachev, not long before the collapse of the Soviet Union. He resigned from the government in February 1992, against the background of the Madrid Conference and the Washington talks. Following the failure of Teḥiyyah to enter the Thirteenth Knesset, and Cohen’s decision to rejoin the Likud, Ne’eman left active political life, and returned to Tel Aviv University. During these years he was also in the forefront of the struggle to get Jewish scientists out of the Soviet Union.

Altogether, he published some 400 research articles and some 20 books in the physics of particles and fields, cosmology, and the history and philosophy of science. Ne’eman received the Israel Prize in 1969 and the EMET Prize in 2003 as well as the Albert Einstein Medal in 1969 and other international awards.

NEGA’IM (Heb. נִגְעִים; “Plagues”), third tractate of the order *Tohorot* in the Mishnah and Tosefta. It deals with ritual uncleanness resulting from the plague referred to in Leviticus 13 and 14, which is usually translated as “leprosy.” *Nega’im* consists of 14 chapters. Chapter 1 defines the colors and shades of the various symptoms of human leprosy. Chapter 2 discusses the time these symptoms may be inspected, the posture of the sufferer when being examined, and the person qualified to make the examination. Chapter 3 details when the examination can be postponed, the procedure when the examination is made by a non-priest, and the symptoms of the plague in persons, houses, and garments. Chapter 4 contrasts the various symptoms indicating uncleanness, and the consequence of different leprous signs appearing simultaneously or in succession. Chapter 5 deals with doubtful signs of leprosy and symptoms that disappear and reappear in the same or in changed form. Chapter 6 discusses the minimum sizes of leprous signs and the parts of the body in which the appearance of the symptoms do not give rise to uncleanness. Chapter 7 deals with spots that are clean and natural or induced changes during or after the inspection. Chapter 8 discusses when the symptom covers the whole body and chapter 9 the symptoms of the plagues termed “boil” and “burning” and their relationship to one another. Chapter 10 deals with scales, chapter 11 with the leprosy of garments, and chapter 12 with the uncleanness of houses. Chapter 13 continues with the uncleanness of houses and how they and a leper pass on uncleanness. Chapter 14 deals with the procedure at the leper’s cleansing and at his offering of sacrifices.

The Tosefta to *Nega’im* has only nine chapters and contains details not found in the Mishnah, as well as several independent groups of laws. Two groups are found in this Tosefta,

the first characterized by the legal formula, “One does not” (1:11–13), and the second group by its opening word “*netek*” (i.e., a bald spot on the head or beard, 4:2–6). *Tosefta* 6:1 cites an anonymous opinion stating that the laws concerning a house defiled by leprosy have only theoretical validity because such houses never existed and never will; other rabbis, however, cite cases of such houses. *Tosefta* 6:7 claims that leprosy is a punishment for the sins of gossip and haughtiness. The laws of *Nega’im* and *Oholot* were regarded as extremely complicated and difficult, and consequently the rabbis referred to them as prototypes of deep halakhic learning. For example, the Talmud relates that Eleazar b. Azariah told Akiva: “Why do you deal with *aggadah*? Occupy yourself with *Nega’im* and *Oholot*” (Ḥag. 14a). The *aggadah* also claims that King David pleaded that his Psalms, the most spiritualized form of worship, be considered before God as *Nega’im* and *Oholot* (Mid. Ps. 1:8). English translations of the Mishnah were published by H. Danby (1939), in the Soncino Talmud by I.W. Slotki (1948), by P. Blackman (1955), and by J. Neusner (1991), who also translated the Tosefta (2002).

[David Joseph Bornstein]

NEGBAH (Heb. נֶגְבָּה; “toward the Negev”), kibbutz in southern Israel, 6 mi. (10 km.) E. of Ashkelon, affiliated with Kibbutz Arzi Ha-Shomer ha-Za’ir. Negbah was founded by pioneers from Poland as a *stockade and watchtower settlement in the last month of the Arab riots (July 1939) and constituted the country’s southernmost Jewish village at the time. As the kibbutz’ name indicates, its establishment was the first of a systematic effort to gain footholds in the south and Negev. Isolated among strong Arab villages, Negbah had to repulse attacks in the first days of its existence. In the Israeli *War of Independence (1948) the Egyptian army made all-out efforts to take the kibbutz. The settlers held out for six months in their entrenchments under continuous shelling, air bombardment, and tank attacks, after Egyptian forces occupied the nearby dominating Iraq Suweidān police fortress. The kibbutz was completely destroyed aboveground. The Egyptians, in violation of the local cease-fire agreement, interfered with the passage of Israeli convoys from Negbah to the Negev settlements and this led to the “Ten Plagues” Operation of the Israeli army (Oct. 15, 1948); a strong Egyptian pocket continued to hold Negbah under fire until the police fortress fell on Nov. 9. The kibbutz preserved its ruined water tower in memory of the battles, and erected a monument to the defenders in its cemetery. After 1948 Negbah developed a flourishing farming economy based on intensive field crops, citrus and other fruit

orchards, and dairy cattle. It also established a sewing factory and a metal workshop. Its population in 1968 was 404. In the mid-1990s the population was approximately 665, dropping to 407 in 2002.

[Efraim Orni]

NEGEV (Heb. נֶגֶב; from the root נִגַּב, “dry,” “parched”), an area comprising those southern parts of the Land of Israel which are characterized by a totally arid desert climate, contrasting with the semiarid Mediterranean climate of the country’s center and north.

Geography

On the map describing an inverted triangle, with an apex directed to Eilat in the south, the Negev covers an area exceeding 4,600 sq. mi. (12,000 sq. km.), i.e., about 62% of Israel’s area. Compared with other regions (Sinai excepted), distances in the Negev are considerable, exceeding 150 mi. (250 km.) from north to south, and 80 mi. (125 km.) from west to east. Whereas the Negev’s northern border is a climatic one, roughly following the line of 12 in. (300 mm.) annual rainfall, the eastern border is a topographical one, sharply delineated by the Edom scarps emerging from the Arabah Valley, while in the west and southwest there is a gradual transition into Sinai. Structurally, the main partition of Cisjordan – into the Coastal Plain, the hills and the rift – continues into the Negev, with the following subregions recognizable:

- (1) the Negev Coastal Plain, linking up in the east with the Beersheba Basin;
- (2) the Negev Hills, composed of the northern and central hill regions, the Paran Plateau, and the Eilat Mountains;
- (3) the Arabah Valley.

Geologically, most of the Negev hills resemble the hills of central and northern Israel, where folding constitutes the principal tectonic element, and hard limestones and dolomites, or softer chalks with flint intercalations, are the predominant surface rock strata. Desert weathering, however, has imposed on these rocks dissimilar landscape features, which are mostly sharp and angular. The only exception is the Eilat Mountains, which, with their crystalline rocks and Nubian sandstones, form a continuation of the geological province of southern and southeastern Sinai. With the exception of the Beersheba Basin, arable soil is absent from practically all of the Negev, and wide expanses are covered with sharp flint or limestone gravel.

The Negev lies within the global subtropical desert belt of the northern hemisphere. Its climate is of the “continental” type and has two outstanding characteristics – sharp temperature differences between day and night, and summer and winter, and extremely limited amounts of precipitation, which diminish from an annual 10 in. (250 mm.) on the region’s northwestern fringe to 2–4 in. (50–100 mm.) in most of its parts, and 1–2 in. (25–50 mm.) or less in the Arabah Valley and the Eilat area. Solar radiation and evaporation are strong during all seasons, and relative humidity and cloudiness remain low. Whereas the tempering influence of the Mediter-

The Negev, ancient sites and modern settlements.

anean Sea reaches inland for a score of miles at best, the Red Sea and the Eilat Gulf do not exert any such influence on the adjoining land.

The Negev’s vegetation cover is universally sparse, and practically absent over large expanses. Most of the Beersheba Basin, together with the highest reaches of the central Negev Hills, falls within the Irano-Turanian semidesert zone, while the rest of the Negev belongs to the Arabian Zone, which has full desert characteristics. Similarly, the Negev has a desert fauna, including a number of indigenous species; its animal kingdom has somewhat increased in numbers due to nature-preservation measures in force since the 1950s. In the Beersheba Basin, which gradually rises eastward from 350 ft. (less than 100 m.) to 1,650 ft. (500 m.) above sea level, a thick cover of yellowish-brown loess, in sections of the west overlaid by coarse dune sands (the Ḥaluḏah, Shunrah, and Agur dunes), determines both landscape features and farming possibilities. In restricted areas, gullying by flashfloods resulted in a broken badland topography, which, however, has since the 1950s largely disappeared thanks to leveling in the framework of the soil reclamation program. Almost the entire Beersheba region belongs to the drainage basin of Naḥal Besor, which crosses it from southeast to northwest and receives three important

tributaries from the east and northeast – Naḥal Be'er Sheva, Naḥal Ḥevron, and Naḥal Gerar. The width of their beds bears no relation to the minute annual quantities of water running through them, which, at least during the last millennia, have been limited to occasional, short-lived winter floods.

In the central Negev Hills, whose folds attain heights of 3,000–3,400 ft. (900–1,035 m.) above sea level (Mt. Ramon, Mt. Sagi, Mt. Loz, Mt. Arif, and others), the most striking landscape feature is represented by the three huge erosional cirques (Makhtesh Ramon, Ha-Makhtesh ha-Gadol, Ha-Makhtesh ha-Katan). The wild Zin Canyon divides the hills into a northern and central section. The Paran Plateau, whose topography is more monotonous, is inclined from the southwest to the northeast, descending from 2,000 ft. (600 m.) to 330 ft. (100 m.). Naḥal Paran, the longest and most spectacular of Israel's desert wadis, runs through the plateau. Although the peaks of the Eilat Mountains attain heights of only 3,000 ft. (800–900 m.), the landscape of this area is truly mountainous and of infinite variety, with rock towers, indented and crenellated crests, between which narrow clefts cut in various directions. There is a wide range of igneous rocks (granites, diorites, quartz-porphry, diabase, gneiss, quartzite, etc.), as well as vividly colored (ocher, yellow, rose, red, white, black and so on) Nubian sandstones, but also strongly contorted limestones and other marine sediments.

The Arabah Valley, that section of the rift extending from the Dead Sea to the Gulf of Eilat for 105 mi. (over 170 km.), is hemmed in by the continuous rock wall of Edom in the east and by the Negev Hills, of lesser height and uniformity, in the west. Its bottom ascends from 1,150 ft. (350 m.) below sea level in the Sedom salt flats over a relatively prominent step to 690 ft. (210 m.) below sea level near Ḥaẓevah, and thence continues to rise more gently to 755 ft. (230 m.), above sea level near the Sheluḥat Noẓah ridge, which protrudes into the valley 48 mi. (75 km.) north of Eilat; from that point southward, it gradually descends to the Eilat shore. The Arabah bears a cover of alluvium (sand, gravel, etc.) which obscures its rock foundations. Alluvial fans, mostly spreading in front of the Edom Mountains, obstruct the drainage of the southern Arabah and are the cause of the formation of playas (saline marshes), e.g., those of Eilat, Avronah, Yotvatah, and Sa'idiyin. The central and northern Arabah are drained by Naḥal ha-Aravah, which is the lower section of Naḥal Paran. Springs in the Arabah are mostly weak and brackish on the western, but stronger and sweeter on the eastern, rim. Deep well drillings in the 1960s yielded water in previously unsuspected quantities.

History

In the Bible, Negev refers to southern and southeastern Judah, an area split up between various groups, each of which is connected with a Negev of its own: Negev of Judah, around Beer-Sheba; Negev of Caleb, north of it; Negev of the Chereithites (Philistines), to the northwest; Negev of the Kenites, to the east; Negev of the Jerahmeelites, to the southeast. Today the name is applied to the whole southern region of Israel,

extending from Beersheba to Eilat. In prehistoric times, the Negev was a well-watered and settled region, till the desiccation which accompanied the Mesolithic period. In the Chalcolithic period, a new culture developed along the dry river beds around Beer-Sheba, with pasture-bred animals, underground dwellings, and the beginning of exploitation of the Arabah copper mines for a metallurgic industry. A chain of short-lived settlements of a seminomadic, pastoral populace again appeared in various parts of the Negev in the intermediate period between the Early and Middle Bronze Ages (c. 2000 B.C.E.). The suggestion that these were situated along the main routes in the time of Abraham is refuted by most scholars. At the time of the Exodus, the Amalekites roamed in the southern part of the Negev, while the Canaanites of Arad held strongly to the north. Attempts by the Israelites to pass through the Negev on the direct route to Canaan ended in failure. The northern region is included within the boundaries of the land of Israel (Num. 34:4; Josh. 15:3). After Joshua's conquest, Simeon had a weak hold on the northern Negev centering on Beer-Sheba. Saul and David fended off the Amalekites, and Solomon and his successors set up fortresses to guard the routes to Elath and Egypt. Uzziah made the greatest effort to develop the Negev in the Israelite period, keeping up his communications with Elath through this region, and, apart from extending agriculture (11 Chron. 26:10), building large fortresses at Kadesh, Arad, Ḥorvat 'Uza, and other sites.

After the return from Babylonian exile, Jewish connections with the Negev in the post-biblical period are tenuous. The northern part was held by Alexander Yannai (Jannaeus). It came under the control of the *Nabateans, who used its highway (the so-called "spice and incense" route) primarily for conveying caravans of goods (such as frankincense and myrrh) from their capital Petra and from their port Aila (Elath) to Gaza and the shores of the Mediterranean. Sites discovered include way stations, forts and towers, and regional roads. It was once thought the *Nabateans were the first to develop terraced agriculture in the Negev, but although they were undoubtedly masters in sophisticated water-gathering systems, which were especially important for the caravans of camels and men passing through the region, there is no evidence that they practiced wide-scale cultivation in the area, except perhaps in a very limited fashion. Toward the end of Nabatean rule in the Negev, settlements flourished along the trade route, as is now known from remains uncovered at Avedat, Mampsis, and Elusa, with inscriptions, temples, caravan-serai, and other structures. After the annexation of Nabatea by Rome in 106 C.E., the importance of the region declined; it revived toward the middle of the third century C.E. and entered its most prosperous era in antiquity during the Byzantine and Umayyad periods. Impressive towns from these periods existed at Elusa (Heb. Halutza), Subeita/Sobata (Arab. Isbeita; Heb. Shivta), Nessana (Arab. Auja al-Hafir; Heb. Nit-zana), Oboda (Arab. Abda; Heb. Avedat), Rehovot-in-the-Negev (Arab. Ruheibe), and Mampsis (Arab. Kurnub; Heb. Mamshit). Impressive churches are known at many of these

sites. An important archive of manuscripts was uncovered at Nessana. It has been estimated that by the Late Byzantine/Umayyad periods 40,000 dunams (10,000 acres) of the Negev highlands were under cultivation; this was mainly achieved by the careful terrace and dam building and the efficient diversion and distribution of rainwater by channels. Numerous agricultural settlements have been investigated. The Negev settlements began declining in the Abbasid period.

[Michael Avi-Yonah / Shimon Gibson (2nd ed.)]

At the earliest stages of the modern Jewish return to the land, the Negev was visualized as a possible area of settlement by men like Z.D. *Levontin, who aimed at founding a settlement south of Gaza (1881–2). Like other Jews at the beginning of the 20th century, however, they had to abandon attempts at purchasing holdings, mainly because Bedouin vendors could not produce title deeds entered in the land registry for the tracts they offered. Attention was again directed to the Negev when Theodor *Herzl took up Davis *Trietsch's proposal of the *El-Arish Project (1903), and a daring plan for a Jewish-Bedouin alliance was also put forward. After World War I, veterans of the Jewish *Legion tried to settle on state land offered by the British authorities near the tell of Arad, but they despaired when no water was found. After the end of the 1930s, the Jewish National *Fund took over, securing and enlarging scattered holdings in the Negev which had been acquired beforehand by Jewish individuals. Thus the three "observation villages" – Gevulot, Beit Eshel, and Revivim – were set up in 1943, followed by 11 more villages established on the night of Oct. 6, 1946 and four more – preceding the outbreak of the War of Independence – in December 1947. All outposts were modestly supplied with water from two pipelines drawn from the Nir Am and Gevar'am wells in the southern Coastal Plain. In the 1949 Armistice Agreements with Egypt and Jordan, Israel's hold of the entire Negev was endorsed, with the single exception of the Gaza Strip. Whereas the Negev Bedouin population, of which about 15,000 remained in the Negev after 1948, increased to about 27,000 in 1969, Jewish settlement was the principal factor causing population density in the Beersheba subdistrict (whose borders are nearly identical with those of the Negev) to rise from 2.85 per sq. mi. (1.1 per sq. km.) in 1948 to 36.5 per sq. mi. (14.1 per sq. km.) in 1969; in the latter year, 180,400 inhabitants were counted, of whom 153,300 were Jews and 27,100 were Arabs. By 2003 the population had increased to 534,700 (107 per sq. mi.; 41.3 per sq. km.), including 366,900 Jews and 135,400 Arabs living in 167 settlements. The Negev's population comprises about 7% of the country's total.

Rural settlement quickly progressed as great efforts were invested in bringing mounting quantities of water to the Negev, first through the reconstituted pipelines from the Nir Am area in the 1950s, from the Yarkon springs ("Yarkon-Negev line"), and in the 1960s via the National Water Carrier. In the pattern of settlement comprising over 70 villages, three groups can be discerned:

(1) the bulk of villages, mostly moshavim, concentrated in the northwestern Negev and arranged in regional projects (Benei Shim'on, Merhavim, Eshkol regions);

(2) security settlements, preponderantly kibbutzim, along the border of the Gaza Strip;

(3) outpost settlements, of the kibbutz and moshav types (mostly in the Arabah Valley), which combine the task of border defense with pioneering new methods in desert and oasis farming. Agricultural initiative has brought citrus groves to the northwestern Negev and developed out-of-season vegetable and flower cultivation both in the western Negev (Eshkol region) and the Arabah Valley, while cotton, fodder crops, sugar beet (all irrigated), wheat, and other grain crops (the latter grown unirrigated or with auxiliary irrigation) are characteristic of the interior part of the northwestern Negev. However, present-day irrigation is no longer based only on the National Water Carrier; it also utilizes purified sewage water and wells. A number of kibbutzim have also developed industrial enterprises.

Among urban settlements, the city of Beersheba has surpassed all other centers in growth and contains nearly 34% of the Negev's total population; second is Dimona on the Negev Hills; and third is Eilat. Other urban settlements were established, in the northwest (Netivot, Ofakim) to serve as regional centers for agricultural areas and elsewhere to promote mining and industrial development (Arad, Yeroham, Mizpeh Ramon). During the 1990s the region absorbed many immigrants from the former Soviet Union, a process that augmented mainly the urban settlements of the Negev, which include 82% of the Negev's population. However, by the beginning of the 21st century the Negev had not yet realized its full potential for settlement and development.

The Dead Sea minerals, as well as phosphates, copper, clay minerals, glass sand, and methane gas constitute the principal foundation for the Negev's industrial-development projects, whose important centers are the towns of Beersheba, Dimona, and Arad, the Oron and Zefa-Efeh phosphate mines, the factories near the latter site. The Sodom Dead Sea industrial zone has no resident population. However, high-tech industries have also begun to find a home in the Negev, mainly in Beersheba's industrial zones. Another economic branch, which developed mainly since the peace agreements with Egypt and Jordan, is tourism. The Negev offers many natural wonders, walking routes, and tourist attractions, among them Ben-Gurion's cabin, which became a museum located at kibbutz *Sedeh Boker.

The communications network of the Negev is of great importance in the framework of Israel's economic infrastructure. Among highways, the Sodom-Eilat road is particularly busy. Second, comes the Beersheba-Dimona-Mizpeh Ramon-Eilat highway. The northern and western Negev has a well-developed road network. Railways link Beersheba with Kiryat Gat and Lydda in the north and with Dimona and the Oron and Zefa-Efeh mines in the south. Another important economic asset is the Eilat-Ashkelon oil pipeline. Finally, the

Eilat port and oilport are Israel's marine outlets to the south and east.

[Efraim Orni]

NEHALIM (Heb. נְהָלִים; “streams”), moshav in central Israel, near Lydda (Lod) airport, affiliated with Ha-Po'el ha-Mizrachi moshavim association. Originally founded by veteran farm laborers in 1943 in the Huleh Valley (where its name, referring to the Jordan River headstreams, was chosen), the moshav was largely destroyed in the Israeli War of Independence and the settlers were transferred to the present site on the land of the former German colony, Wilhelma (August 1948). There, the group was joined by settlers from moshav Neveh Ya'akov, north of Jerusalem, which had to be given up in May 1948. Later, new immigrants from Hungary and Poland joined the moshav. The village economy was based on intensive and fully irrigated farming. Nehalim had 710 inhabitants in 1969, part of them staff and pupils of a yeshivah which was opened in 1958. In the mid-1990s, its population was 1,520, growing further to 1,920 residents in 2002.

[Efraim Orni]

NEHAMA, JOSEPH (ca. 1880–1971), Greek educator and historian. Nehama was born in Salonika, the son of the reformist rabbi Judah Nehama, and studied at the Ecole Normale Orientale, the teacher training school of the Alliance Israélite Universelle in Paris. In his capacity as teacher and school principal of the local Alliance Israélite Universelle, Nehama devoted his life to educating several generations of Salonikan youth.

For a number of periods, Nehama was a member of the Committee of the Jewish Community of Salonika representing the non-Zionist general stream of the Jewish community. As a historian he made a major pioneering effort in tracing the Salonikan Jewish community's roots in his seven-volume work, *Histoire des Israélites de Salonique*. Another noteworthy work was *La Ville Convaincée* under the pen name P. Risal.

As a writer Nehama's literary ability was demonstrated in the dozens of essays he contributed to such French literary publications as *Mercure de France*. He wrote numerous studies and articles in Judeo-Spanish on Jewish history, health codes, and commerce which appeared in the press of Salonika and Paris. Nehama made a great contribution to the propagation

and research of the Judeo-Spanish language by writing a comprehensive Judeo-Spanish-French dictionary. The work, entitled *Dictionnaire du Judéo-Espagnol*, was published in 1977 several years after his death.

Nehama was a prominent banker in his capacity as president of the Banque Union. During the Holocaust, Nehama managed to escape the Germans in Salonika by fleeing to Athens. However he was caught by the Nazis and deported on March 25, 1944, to Bergen-Belsen. He was liberated by the American army in the last days of the war.

The Holocaust not only was a personal tragedy for Nehama, but a changing point in his attitude toward Zionism. Previously he had little belief in the potential of political Zionism and its ability to create a viable and prosperous homeland for the Jews. He had been one of the key community leaders in the 1930s who encouraged Jews to stay in Salonika and not immigrate to Palestine. After the Holocaust Nehama was greatly saddened that the prosperous Diaspora center of Salonika had come to an end and regretted his earlier stand against emigration. He was joint author (with Michael Molho) of *The Destruction of Greek Jewry 1941–1944* (Hebrew, 1965). In 1973, the Jewish community of Salonika put out a French version of the book.

[Yitzchak Kerem (2nd ed.)]

NEHARDEA, town in Babylon, situated on the Euphrates at its junction with the Malka River, which was an important Jewish center and seat of a famous academy. Nehardea was surrounded by walls and by the Euphrates River, preventing its penetration by enemies (Jos., Ant., 18:311). The Jewish settlement of Nehardea was an early one. The first settlers were, according to tradition, those exiled in the time of Jehoiachin, king of Judah in the sixth century B.C.E. These exiles erected there a synagogue which they built with stones and earth brought from the site of the Temple. The synagogue was called Shaf ve-Yativ, i.e., “[the Divine Presence has] removed [from the Temple] and settled [in this place]” (*Iggeret Rav Sherira Ga'on*, ed. by B.M. Lewin (1921), 72 and appendices). The existence of its Jewish settlement in the century before the destruction of the Temple is attested by the fact that the Jews of Babylon concentrated in it the half-shekel offering and their donations and offerings for the Temple and dispatched them from there to Jerusalem (Jos., *ibid.*). Josephus also relates the exploits of *Anilaus and Asinaus who were natives of Nehardea. At the beginning of the second century C.E., Akiva visited Nehardea and there intercalated the year, thus testifying to the importance of the local Jewish settlements (Yev. 15:7). Nehardea was also the seat of the exilarch and his *bet din*. The town attained the zenith of its influence in the first half of the third century in the days of *Samuel, who headed its academy, and its influence was widespread (Ket. 54a). Of the scholars active there at the beginning of the amoraic period, Karna, Shila, and Abba b. Abba (Samuel's father) were noteworthy. The academy of Nehardea was destroyed in 259 by Papa b. Nezer and its scholars moved to *Pumbedita. When

spiritual activity was renewed there, many important scholars were active in it, including Dimi and Amemar.

[Yitzhak Dov Gilat]

The Arab Period

There is no extant information on a Jewish settlement in Nehardea during the Arab period. Even after the town was rebuilt, the academy did not return there. Its memory was preserved in Pumbedita, however, by the fact that a group of sages who sat in one of the first three rows of the academy was referred to as “the row of Nehardea.” In his responsum to R. Moses b. Meshullam of Mainz, *Elijah b. Solomon ha-Kohen refers to the academy of Sura by the name of Nehardea. In connection with a question on the custom of saying the prayer of *Ve-Hassi'enu* on Rosh Ha-Shanah and the Day of Atonement, the *gaon* replied: “Heaven forbid that there be a difference over this matter, because it is our custom in the two *metivta* (academies) in Erez Israel and Nehardea, that *Ve-Hassi'enu* is said on Rosh Ha-Shanah and the Day of Atonement.” B.M. Lewin has pointed out that the reference was to Sura, where this custom prevailed, in contrast to Pumbedita, where it did not. On the other hand, for Sherira, Nehardea was synonymous with the academy of Pumbedita because it was the continuation of Nehardea. In connection with the customs of prayer he writes: “the custom is according to the established *battei midrash* of Nehardea and Sura” (B.M. Lewin (ed.), *Ginzei Kedem*, 1 (1922), 5–6). Benjamin of Tudela, who visited *Iraq during the 1170s, also identifies Pumbedita with Nehardea.

NEHAR PEKOD, according to earlier scholars a town in the district of Nehardea (Babylonia), and according to more recent research, between Sura and Nippur. Nehar Pekod gained note after the *tanna* R. Hananiah, the nephew of the *tanna* R. Joshua b. Hananiah, settled there following the suppression of the Bar Kokhba revolt in Erez Israel (Sanh. 32b). The town seems to have rapidly developed into a major center of Jewish life. R. Hananiah tried to establish a *bet midrash* and a Sanhedrin with the authority to continue the practice of intercalating years and fixing months, an authority which was a privilege of Erez Israel (see Ber. 63a–b; Sanh. 32b; TJ, Sanh. 1:1, 19a). The reactivated leadership in Erez Israel immediately intervened and quashed this separatist move. It is reported that R. Hananiah died and was buried in Nehar Pekod. Further testimony about the town and its Sages stems from the geonic period.

[Eliyahu Hirschberg]

NEHĀVAND (also pronounced **Nahāvand**), a city situated in west central Iran about 75 km south of *Hamadan. It was an important city during the Sasanian period. Its conquest by the invading Arabs (642 C.E.) is considered the beginning of the end of the Iranian empire. It is mentioned in the Babylonian Talmud as a *golah* (Diaspora) which may allude to the existence of a Jewish community in Nehāvand (Kid. 72a). *Benjamin of Tudela (1167) mentioned a city by the name “NHR-VNT” where 4,000 Jews lived. It is possible that he meant the city of Nehāvand.

During the medieval period an important *Karaite community lived there. Prominent in it was R. Binyamin ben Mosheh Nehāvandi (mid-9th century). We possess some fragments of his *Sefer ha-Mitzvot* and *Sefer ha-Dinim*. R. David d'Beth Hillel visited the city around the year 1827 and according to him 20 Jewish families lived there, all of whom were poor. He estimated the number of the Muslim population at 3,000 families. Ephraim Neumark (1884), who did not visit the city, heard that 30 Jewish families lived in it.

According to *Ālam-e Yahud* (1945), a Jewish Persian monthly published in *Teheran, 115 Jewish families lived in Nehāvand, of whom 15, among them some physicians and land owners, were considered rich, 50 ranked as middle class, and the rest were poor. There were two synagogues in the city and one elementary school administered by Alliance Israélite Universelle, where 137 pupils (98 boys and 39 girls) studied up to the sixth grade. The sanitary conditions were reported as unsatisfactory (1945). After the 1979 Islamic Revolution many left for Teheran, Israel, and the U.S., so that no Jewish family was reported as living in Nehāvand by the end of the 20th century.

[Amnon Netzer (2nd ed.)]

NEHEMIAH (Heb. נְחֵמְיָהּ; “YHWH has comforted”: fifth century B.C.E.), cupbearer of *Artaxerxes I and later governor of Judah. Nothing is known of the parentage of Nehemiah except that he was the son of Hacaliah. Two other persons of that name are mentioned in the Bible: one returned with Zerubbabel (Ezra 2:2; Neh. 7:7), and the other, a son of Azbuk, was the chief of half the district of Beth-Zur and helped in rebuilding the wall of Jerusalem (Neh. 3:16). Nehemiah the son of Hacaliah was a high official at the Persian court of Ar-

taxerxes I, perhaps a eunuch (cf. לִּיִּם, Neh. 1:11, *eunuchos* of οἰνοχοοῦς of LXXB). Origen considers Nehemiah, the king's cupbearer, and his eunuch as one person. E. Weidner (see bibl.) has pointed out the importance of the cupbearer at the Assyrian court which, according to Herodotus (3:34), continued at the Persian court.

Being a trusted Jew, though a layman, Nehemiah was, at his own request, placed in charge of a very important and delicate mission – that of the governorship of Judah, which involved rebuilding the walls of Jerusalem and reorganizing the Judean province. He was thus invested with great authority which he wielded with distinction and propriety. The first tasks to which he set himself with great zeal were providing protection for Judah by restoring the walls of the capital, and erecting houses for its population so that all aspects of the community could function more smoothly. Though he suffered almost continuous interference from the governor of Samaria, and perhaps from those of Ammon, Arabia, and Ashdod (6:1–9), he was sufficiently astute to avoid serious conflict, probably because he used his authority wisely and gained the confidence of his fellow Jews. Having achieved his primary objective, he next devoted himself to establishing order and justice in the community (7:1–3). Conscious of his position as a layman (and perhaps, eunuch), he submitted to the religious regulations of his time but was himself a profoundly religious man as is evident from his concern for the levites (13:10–14), his conception of the sanctity of the Temple as shown in the Tobiah affair (13:4–9), his appreciation of the Sabbath (10:32; 13:15–21), and his provision for offerings (10:33–40). It is of interest that he had drawn up his memoirs, which were doubtless placed in the Temple precincts as an inscription of his deeds and works.

Nehemiah is praised by Ben Sira (49:12b–13) and in II Maccabees 1:18, 20–36. Josephus (Ant. 11:159–74) embellished the story of Nehemiah, but the Talmud and the Church Fathers were not so complimentary. The date of Nehemiah's first period of service (5:14) extended from the 20th to the 32nd year of Artaxerxes I (i.e., c. 445–433 B.C.E.). The length of his second period (13:6–7) is not stated.

[Jacob M. Myers]

In the Aggadah

Nehemiah is identified with *Zerubbabel, the latter name being considered as indicative of his Babylonian birth (Heb. זְרֻבָּבֶל, “conceived in Babylon”; Sanh. 38a). He was called Tirshatha (Neh. 8:9) because the authorities absolved him (*hittir*) from the prohibition against gentile wine, permitting him, as cupbearer to the king, to drink (*shatah*) with him (TJ, Kid. 4:1, 65b). The strict rabbinic enactment prohibiting the handling of most vessels or utensils on the Sabbath was attributed to Nehemiah as a means of counteracting the laxity in Sabbath observance during his period (Shab. 123b; Neh. 13:15). The sages did not call the Book of Nehemiah by his name and referred to it as the second part of Ezra because Nehemiah uti-

lized a seemingly vain expression (Neh. 5:19) and also spoke disparagingly of his predecessors, who included Daniel (Neh. 5:15; Sanh. 93b). Nehemiah completed the Book of Chronicles which was started by Ezra (BB 15a).

NEHEMIAH (middle of second century C.E.), *tanna*. Nehemiah was considered one of Akiva's outstanding disciples and is mentioned in all the talmudic traditions that described the reestablishment of the center of learning in Galilee after the Bar Kokhba revolt. Thus it is reported that on the easing of the Hadrianic persecution he took part in the activity for the renewal of the teaching of the Torah (Gen. R. 61:3; Eccles. R. 11:6). Similarly, Nehemiah was listed as one of the five ordained by *Judah b. Bava at the cost of his life (Sanh. 14a), and also among the scholars who gathered at Usha to reconstruct the religious life of the people (Song R. 2:5, no. 3). He was also described as having been active at Bet Rimmon when the renewed calendar arrangements were made (TJ, Hag. 3:1), and as having taken part in the convention of Jabneh (Ber. 63b). Though these traditions have been viewed by some as representing distinct historical events, they should more properly be viewed as a family of related traditions with definite lines of literary dependence between them, as has been recently argued convincingly (Oppenheimer, 78–79).

The Talmud (Sanh. 86a) ascribes to R. Johanan the statement that נְהֵמְיָהוּ רַבִּי תוֹסֵפְתָא (*setam tosefta Rabbi Nehemyah*), apparently ascribing to Nehemiah the authorship of all anonymous statements in the Tosefta. Both the authenticity and the exact intent of this statement are unclear (see: *Tosefta), and in any case it is clear that R. Nehemiah is neither the author of our Tosefta (nor of any earlier version of the Tosefta which may have once existed), nor do his traditions take up any considerable percentage of this work. His name is mentioned 20 times in the Mishnah and about 60 times in the Tosefta, and given the fact that the Tosefta is between three to four times longer than the Mishnah, the two figures correspond almost exactly. Nehemiah is also mentioned about 60 times in the *midrashei halakhah* and is well represented in both tannaitic *halakhah* and *aggadah*.

The Talmud attributes to him the grammatical rule that the suffix ה to a noun is equivalent to the prefix ל (Yev. 13b). According to the printed edition of the Talmud, Nehemiah's name is associated with the study of Merkabah mysticism (Shab. 80b), but in the manuscript readings of this passage (Oxford, Vatican 108, Munich 95) Nehemiah is not mentioned. Similarly, the Talmud ascribes to him a statement on the creation, transmitted in the name of his father (Pes. 54a). A tannaitic source ascribes to him the following aggadic saying:

"Beloved is suffering. For just as sacrifices bring atonement so does suffering" (Sif. Deut. 32). In a much later aggadic saying he is reported to have said: "A single individual is as important as the whole of creation" (ARN¹ 31, p. 46). According to the Jerusalem Talmud (Ta'an. 4:2, 88a) he was descended from the biblical Nehemiah. He lived in great poverty and on one occasion shared his pottage of lentils with a poor man, who died from eating such scant fare (Ket. 67b). He worked as a potter (TJ, BM 6:8, 11a).

[Stephen G. Wald (2nd ed.)]

NEHEMIAH BAR KOHEN ZEDEK (tenth century), *gaon* of the Pumbedita academy from 960 to 968; son of R. Kohen *Zedek, who also held this post. His brother R. Hophni was the father of R. Samuel b. *Hophni. R. *Sherira Gaon tells of the controversy between R. Nehemiah and *Aaron b. Joseph ha-Kohen Sarjado which arose several years after R. Aaron Sarjado had been appointed *gaon* of Pumbedita (943); it appears that the original cause of the controversy was R. *Mubashshir b. R. Kimoi's appointment of R. Aaron as president of his *bet din*, an appointment which Kohen Zedek viewed with disfavor. The struggle between Nehemiah and Aaron Sarjado broke out after the death of R. Amram, president of R. Aaron's *bet din*; Aaron wished to appoint R. *Sherira in Amram's place, while Nehemiah contended that the position was properly his. Failing to achieve his aim, Nehemiah set himself up as *gaon* in rivalry with R. Aaron. In 960, when Aaron Sarjado died, Nehemiah officially succeeded him as *gaon* of Pumbedita, and his brother Hophni was the president of his *bet din*. Sherira Gaon refused to recognize Nehemiah's appointment as *gaon*, although he did not suggest himself as *gaon* in his stead. Apparently he did not want to undermine the foundations of the *gaonate*. After the death of R. Hophni in 962, however, the two men agreed that Sherira Gaon would serve as Nehemiah's *av bet din*, and after the latter's death in 968, Sherira Gaon succeeded him as the *gaon* of Pumbedita. Nothing remains of Nehemiah's teachings or responsa; only a number of letters survive.

[Abraham David]

NEHEMIAH HA-KOHEN (17th century), Polish kabbalist, apparently born in Lvov. His personality remains obscure, though certain details emerge from the sometimes contradictory sources. Late in the month of Av, 1666, he arrived at the fortress in Gallipoli, Turkey, where *Shabbetai Zevi was imprisoned, and visited him there early in the month of Elul. In his memoirs Loeb b. Ozer quotes information that he

heard from Nehemiah concerning his disputation with Shabbetai Zevi, indicating that Nehemiah rejected the latter's messianic pretensions. According to Christian sources, however, Nehemiah claimed that he himself was Messiah ben Joseph and remonstrated with Shabbetai Zevi for announcing himself as Messiah ben David before Messiah ben Joseph had started out on his journey of tribulations. Hence for the first time Shabbetai Zevi found himself on the defensive before a man who, unlike all his other visitors, was not overwhelmed by him. I. Sonne questions the truth of the story about the disputation, considering it improbable that in an atmosphere of messianic tension anyone should, in the presence of the Messiah, cast doubts on the very fact of his being Messiah. After three days Nehemiah despaired of Shabbetai Zevi, and notified the authorities of the fortress of his own intention of converting to Islam. From there he repaired to Adrianople, where he complained to the civil authorities that Shabbetai was an impostor. Shabbetai was then brought before the sultan, in whose presence he too was converted to Islam. Having passed on his information to the Turkish authorities, Nehemiah returned at once to Lvov and to the religion of his fathers. His activities caused an uproar throughout Poland: some vindicated them, since their sole intention was to bring an end to the specious doings of Shabbetai Zevi, while others disapproved, since Nehemiah's activities had terminated the great messianic awakening. Nehemiah, however, was obliged to wander from place to place, ultimately leaving Poland in about 1675, excommunicated and outcast. He even changed his name to Jacob in an attempt to obscure his identity. His persecution presumably stemmed from the bitterness of the Jews of Poland and Germany, and their disillusionment with the messianic movement.

[Abraham David]

NEHER, ANDRÉ (1914–1988), scholar and philosopher; born in Obernai (Alsace). After having taught German in a high school before and some years after World War II, Neher spent the war years together with his father Albert Neher, his elder brother, Judge Richard Neher, and the rest of his family, dedicating his time to intensive Jewish studies. After the liberation of France, Neher emerged as a highly original and captivating thinker, and quickly became one of the spiritual leaders of the young intellectuals of the French-speaking world, preaching ideals of reasoned belief and of respect for tradition. After being appointed to the chair of Jewish Studies at the University of Strasbourg, he contributed to the development among the local Jewish community of deep feelings of responsibility toward the Jewish people in the world and toward the State of Israel in particular. Algerian Jews who came to Strasbourg found a warm welcome there, as a result of Neher's interest in them. Respected in all quarters, Neher was able to convince the local Catholic and Protestant leaders of the legitimacy of Jewish

aspirations, including Zionism, and this had its repercussions at various national and international conventions.

Neher took part in various initiatives on behalf of Israel in the Diaspora. He established himself in Jerusalem, dividing his time between the University of Strasbourg and academic activity in Israel (mostly at Tel Aviv University). He was a consulting editor to the *Encyclopaedia Judaica*. The moving force of his philosophy is the “alliance” of God with Man, and in particular with the People of Israel. Neher found in the teachings of Judah Loew b. Bezalel (Maharal) a guide and inspiration.

His principal works include: *Transcendence et immmanence* (1946; with Richard Neher); *Amos, contribution à l'étude du prophétisme* (1950); *Notes sur Qohélet* (1951); *L'Essence du prophétisme* (1955); *Moïse et la vocation juive* (1956); *Jerémie* (1960); *Histoire biblique du peuple d'Israël* (2 vols., 1962; with Renée Neher-Bernheim); *L'Existence juive* (1962), a collection of articles; *Le Puits de l'exil – la théologie dialectique du Maharal de Prague* (1966); *De l'hébreu au français* (1969); *Etincelles, textes rabbiniques traduits et commentés* (1970; with Abraham Epstein and Emile Sebban); *L'Exil de la Parole, du silence biblique au silence d'Auschwitz* (1970, English trans., 1980); *Dans les Portes Jerusalem* (1972); *David Gans, disciple du Maharal de Prague, assistant de Tycho Brahe et de Jean Kepler* (1974); *Clefs pour le Judaïsme* (1977); *Oubekhol zot* (“Nevertheless,” in Hebrew, 1977); *Le dur bonheur d'être Juif* (1978); *Ils ont refait Leur Ame* (1979); *Jérusalem, vécu juif et message* (1984); *Jewish Thought and the Scientific Revolution of the Sixteenth Century* (1986); *Faust et le Maharal de Prague, le mythe et le réel* (1986); and *Korot Am Israel be-Or ha-Mikra* (an adaptation in Hebrew of his *Histoire Biblique du Peuple d'Israël*, in collaboration with his wife Renée Neher-Bernheim; 1986). In 1980 there appeared the second edition of his *Jeremiah* (1960). On the occasion of his 60th birthday Neher was presented with *Melanges André Neher*, containing a bibliography of his articles, listing 336 items. In addition, in 1983 appeared the third edition in French and the Italian and Japanese translations of his *L'Exile de la Parole*, the Japanese translation of his *Moïse et la vocation juive*, while in 1984 there appeared a selection of his writings in Russian, *The Philosophy of André Neher*. He received the 1977 Remembrance Award for Holocaust Literature established by the World Federation of the Bergen-Belsen Associations.

His wife, RENÉE NEHER-BERNHEIM (1922–), a historian, was born in Paris. In 1972 she was appointed lecturer in Jewish History at the School for Overseas Students of the Hebrew University, Jerusalem. She wrote *Le Judaïsme dans le monde romain* (1959), *La Déclaration Balfour* (1969), and in 1974 completed the publication of her *Histoire Juive – faits et documents – de la Renaissance à nos jours* (1963–65, 1974). In 1977 she published *Documents inédits sur l'entrée des Juifs dans la société française (1750–1850)*, 2 volumes and in 1983, *Feu Vert à Israël, l'époque décisive de la Déclaration Balfour*. She later wrote *Jérusalem, trois millénaires de histoire* (1997), *La vie juive en terre sainte sous les Turcs ottomans (1517–1918)* (2001), and *Histoire juive de la Révolution à l'Etat d'Israël* (2002).

NEHORAH (Heb. נְהוֹרָה; “light”), rural center in southern Israel established in 1956 in the framework of the *Lachish regional development project, to service a bloc of moshavim comprising Nogah, Zohar, Oẓem, Shaḥar, and Nir Ḥen. Nehorah had 131 inhabitants in 1970. By 2002 its population was 1,020.

[Efraim Orni]

NEHORAI (end of second century C.E.), *tanna*. Nehorai is referred to three times in the Mishnah, once in *Nazir* 9:5, mentioning that Samuel was a Nazirite; once in *Avot* 4:14, where he says, “Exile thyself to a place of Torah; and say not it will come after thee or that thy companions will assist thee to maintain it; and lean not upon thine own understanding”; and lastly in *Kiddushin* 4:14, where he states, “I would disregard all other crafts and teach my son only Torah. For man enjoys its reward in this world, while its principal remains to him for the world to come.” In *Nazir* he engages in discussion with R. Jose; the Mishnah at the end of *Kiddushin* is a late addition from Tosefta *Kiddushin* 8:16, where his words appear between those of Rabbi and of R. Simeon ben Eleazar. Similarly, in *Avot* 4:14 his statement is placed in the context of 4th and 5th generation *tannaim*. On the other hand he is quoted as transmitting traditions in the name of R. Joshua (*Seder Olam* 22, *Nazir* 5a). The reference to Nehorai in Tosef. RH 1:16 has been identified with the *tanna* Nehorai ben Shinai mentioned in Tosefta Ma’asrot 1:1 (see Lieberman, *Tosefet Rishonim*, 4, 194). If these two figures are one and the same, then the notion that Nehorai dealt almost exclusively with *aggadah* would have to be modified somewhat.

The Talmud asserts (*Shab.* 147b) that his name was not Nehorai at all, and that he is actually to be identified with the far better known *tanna* R. *Nehemiah, or perhaps even with the famous figure *Eleazar b. Arakh, and he was called Nehorai (“light”) because he enlightened the eyes of his colleagues in knowledge of *halakhah*. This assertion, however, should be understood in the light of the general tendency of the Talmud, both when retelling biblical stories and when elaborating the biographies of early talmudic sages, to identify obscure and little known figures with more famous and well known figures. The further statement (*Er.* 13b) that Meir is the same as Nehorai is little more than a play on words (both names being derived from words denoting “light”), and cannot be taken as reflecting a serious historical tradition, since Nehorai is found together with Meir in *Avot* 4:10 and in *Kiddushin* 4:14 they are both mentioned in the same Mishnah.

[David Joseph Bornstein / Stephen G. Wald (2nd ed.)]

NEHUNYA BEN HA-KANAH (dates uncertain), *tanna*. Mishnah Ber. 4:2 relates two prayers which he would recite when entering and leaving the study hall. An aggadic statement is transmitted in his name in Avot 3:5, and two *halakhot* are transmitted in his name in Tosefta Ket. 3:5. One of these *halakhot* is brought in Tosefta BK 7:18, apparently responding to the words of R. Meir. Similarly his statement in Avot follows the statements of R. Simeon and Haninah b. Hakinai, which would place him in the fourth generation of *tannaim*, in the middle to end of the second century. On the other hand, the Babylonian Talmud asserts that *Ishmael received from Nehunya his practice of interpreting the Torah with the hermeneutical rule of *kelal u-ferat* ("general propositions and particulars," see **Midrashei Halakah*, Distinct Exegetical Methods), which would place him in the second generation of *tannaim*. This tradition may, however, be a later expansion and elaboration of the relatively early tradition according to which Akiva learned the principle of *ribbui u-mi'ut* ("extension and limitation") from *Naḥum of Gimzo (Shevu. 26a). Similarly, the Talmud relates a discussion between Nehunya and Johanan b. Zakkai (see BB 10b), but this is a relatively late aggadic tradition whose historical authenticity cannot be confirmed. So also the *Tanḥuma* (Deut. 26:13) cites a halakhic discussion between him and Joshua b. Ḥananiah, referring to him as Nehunya b. ha-Kanah of Emmaus. He is named in the TB as disputing with R. Eliezer and R. Joshua (Hullin 129b), but in *Eduyot* 6:3 and 4 it is clear that the *tanna* originally mentioned in this tradition was Nehunya b. Elinathan of Kefar ha-Bavli.

He dictum in Avot was: "He who takes upon himself the yoke of Torah will have the yoke of worldly care removed from him; but he who casts off the yoke of Torah will have placed upon him the yoke of the kingdom and the yoke of worldly care" (Avot 3:5). The talmudic tradition transmits the text of the prayers which he spoke when entering and leaving the house of study as follows: "On entering what did he say? 'May it be Thy will, Oh Lord, that I become not impatient with my fellows and that they become not impatient with me, that we declare not the clean unclean nor the unclean clean... so that I be not put to shame both in this world and in the world to come.' On his departure what did he say? 'I give thanks to Thee, O Lord, that thou hast set my portion with those who sit in houses of study and in synagogues and not with those who sit in theaters and circuses. For I toil and they toil. I am industrious and they are industrious. I toil to possess the Garden of Eden and they toil for the pit of destruction'" (TJ, Ber. 4:2, 7d; cf. Ber. 28b for another tradition). The TB relates that when Nehunya's pupils asked him by what virtue he had attained old age, he replied: "Never in my life have I sought honor through the degradation of my fellow, nor has the curse of my fellow gone up with me upon my bed [i.e., he forgave all who had vexed him before retiring to sleep], and I have been generous with my money" (Meg. 28a). The medieval Kabbalists attributed to him the mystical work *Sefer ha-Bahir*. The prayer *Anna be-Kho'ah (based upon the Divine Name of 42 letters) is also ascribed to him.

[Yitzhak Dov Gilat / Stephen G. Wald (2nd ed.)]

NEHUSHTAN (Heb. נֶחֱשֶׁתָּן), the name of the *copper serpent which King Hezekiah broke into pieces (11 Kings 18:4). The name suggests both its serpentine shape (*naḥash*) as well as the material (*neḥoshet*) of which it was made. Since the smashing of the copper serpent parallels the shattering of the pillars and the cutting down of the Asherah (*ibid.*), it was probably located in the Temple court in Jerusalem. It was thus one of the cultic symbols of the people who assembled in the Temple courts. Like the local shrines (*bamot*), however, and like the two other objects named in the verse, it was illegitimate in the Deuteronomic view, in accordance with which Hezekiah abolished the former and destroyed the latter (*ibid.*). The Nehushtan probably stood in the Temple court, and the people believed that it had the power of curing sicknesses. Serpents are also associated with fertility. In this respect the copper serpent differed from the *cherubim, whose location was in the innermost sanctum of the Temple, hidden from human sight. Some scholars hold that the copper serpent in Jerusalem was set near "the stone of Zohaleth ("the crawler's [i.e., serpent's] stone"), which is beside En-Rogel" (1 Kings 1:9), that is, outside the Temple enclosure. However, there are no grounds for connecting the copper serpent with the stone of Zohaleth. At the latter, sheep and oxen were sacrificed (*ibid.*), whereas only meal-offerings were offered to the copper serpent.

The account in Numbers 21:6–9 states that its form was that of a *saraf*, traditionally, a "fiery serpent." It probably had wings, for so *serafim* are described in the Bible (cf. Isa. 14:29; 30:6). Herodotus (2:75; 3:109) also states that in his day people told of the existence of flying serpents in the Arabian desert.

Some scholars assume that the copper serpent entered the Israelite cult as a Canaanite heritage and only popular belief ascribed it to Moses, but this is to assume that we know more about "popular" vs. "official" religion in ancient Israel than we do. (For the problem of "official" vs. "popular," see Berlinerblau.) M. Noth contends that this tradition is somewhat later than the others associated with the Exodus from Egypt, since it can only have arisen after David had captured Jerusalem. H. Gressmann suggested that Moses adopted the copper serpent from the Midianites, but this has been rejected by other scholars. Ackerman believes that Asherah was connected with serpents so that the destruction of Asherah and the serpent would likewise be connected. Note that Nehushta, a name similar to that of the serpent, was borne by the mother of King Jehoiakin (11 Kings 24:8). For serpent iconography and the Bible, see Williams-Forte.

[Menahem Haran / S. David Sperling (2nd ed.)]

NEHUTEI (Aram. נְהוּטַי, נְהוּטַי, *Nahutei*, sing. נְהוּטַי *Nehuta*; “one who goes down”), rabbis who went from Erez Israel academies to those of Babylonia, or vice-versa. The name was first applied to *Ulla, a native of Erez Israel in the third century C.E. (TJ, Kil. 9:4, 32c). He was given this epithet because from time to time he “went down” from Erez Israel to Babylonia and had discussions in Babylonia with the heads of its academies and its scholars. Rav *Hisda referred to Ulla as “our teacher who came down from Erez Israel” (Ber. 38b: see *Dikdukei Soferim*). When he came to Babylonia, Ulla brought with him the halakhic and aggadic sayings of Johanan and Eleazar, the heads of the academy of Tiberias at that time. He also described the customs and ways of the Jews of Israel, and evoked historical memories and popular sayings current among them. He used to compare the customs current among the Jews of Babylonia with those current in Erez Israel. Generally he gave preference to the customs of Erez Israel, and more than once he uttered caustic comments about the Jews and scholars of Babylonia (Ta’an. 9b). In the first half of the fourth century the name *nehutei* was given to a few scholars, born apparently in Babylonia, who traveled to the academies of Erez Israel and brought back with them the teachings of its scholars. The best known of them were *Dimi, Samuel b. Judah, Rabin, and *Isaac b. Joseph. The purpose of their activity was to transmit the teachings of Erez Israel to Babylonia, and vice versa. Through their activity, the texts of the Mishnah and the *beraitot* and their exact meaning were established, and the halakhic and aggadic sayings of the first *amoraim* of Erez Israel, such as *Hanina, *Johanan, *Eleazar, and *Simeon b. Lakish in Tiberias and *Abbahu in Caesarea, and of the first *amoraim* of Babylonia, such as *Rav and *Samuel, *Huna and *Hisda, and others, were elucidated.

By their activities the *nehutei* contributed to the cross-fertilization of the academies of Erez Israel and Babylonia. Their words were tested in the academies and compared with parallel traditions, and in this way they attempted to arrive at the precise implication of the statements, their truth, and their reliability. In this manner the *nehutei* made their contribution to the formation and elucidation of many topics in the Babylonian Talmud. As a result of the connections established by the *nehutei* between the academies of Erez Israel and Babylonia the mutual knowledge of the two large Jewish communities was increased, and so the Oral Law was prevented from developing separately with the two communities becoming two nations, alien one to another. The scholars mentioned were especially active in two academies – in Tiberias in Erez Israel and in Pumbedita in Babylonia. References are found at times to the *nehutei* informing Babylonia of various *hala-*

khot by means of letters (Git. 9b). These scholars were active until the middle of the fourth century C.E. In the opinion of *Sherira Gaon (*Iggeret...*, ed. B. Lewin, p. 61) their mission ceased because of the increase of restrictive edicts in Erez Israel and the decrease of Torah there. The reference is apparently to the restrictive edicts of Constantius (377–361) in the 340s and 350s and the revolt by a section of the Jews of Erez Israel against Gallus in 351.

[Moshe Beer]

NE'ILAH (Heb. נְעִילָה), a worship service deriving from the ritual of the Second Temple, but subsequently recited only on the Day of Atonement as its concluding rite (see Ta’an. 4:1; Ta’an. 26b and TJ, Ta’an. 4:167c; TJ, Ber. 4:1, 7b–c; Yoma 87b and TJ, Yoma 8:8, 45c). It was originally recited on all public fast days, in addition to the Day of Atonement. It also concluded the daily **Ma’amadot*, where laymen from provincial communities prayed with their priestly delegates in Jerusalem. The full name of the service is *Ne’ilat She’arim* (“Closing of the Gates”), referring to the daily closing of the Temple gates. On the Day of Atonement this literal closing (*ne’ilat sha’arei heikhal*) was associated with the symbolic closing of the heavenly gates, which remained open to prayer until sunset (*ne’ilat sha’arei shamayim*). Throughout the year, according to the Talmud, *Ne’ilah* was recited one hour before sunset, when the Temple Gates were closed; on the Day of Atonement, because of its length, *Ne’ilah* did not begin until close to sunset. Once *Ne’ilah* was limited to the Day of Atonement, it began before twilight and ended at nightfall.

By the third century *Ne’ilah* consisted of an **Amidah* of seven benedictions, parallel to the other statutory services of the day. It likewise featured confession of sins. *Attah yode’a razei olam* (“Thou knowest the secrets of the world”), however, and *Al Het* were replaced by two prayers unique to the confession in the *Ne’ilah* service: *Attah noten yad le-foshe’im* (“Thou stretchest forth Thy hand [in forgiveness] to sinners”) and *Attah hivdalta enosh* (“Thou has distinguished man [from the beast]”). These recapitulate the biblical-talmudic doctrine that God eagerly forgives the truly penitent. In accordance with the rabbinic idea that the divine judgment, inscribed on *Rosh Ha-Shanah, is not sealed until the Day of Atonement ends, the word to “inscribe” (כָּתַב, *ktv*) (in the Book of Life) is amended to “seal” (חָתַם, *hṭm*). To set it off from the preceding *Minhah* service, *Ne’ilah* is prefaced by *Ashrei* (Ps. 145) and *U-Va le-Ziyyon Go’el*, which ordinarily introduce *Minhah*.

Ne’ilah was eventually embellished with sacred poetry, especially *Selihot*. Impressive melodies heightened the emotional impact of *Ne’ilah*. The central motif is exhortation to make a final effort to seek forgiveness before the heavenly gates close at sunset. Yet the overall tone is one of confidence, especially in the final litany. The service proper concludes with **Avinu Malkenu* and **Kaddish*. The entire ritual culminates in responsive proclamations of **Shema*, followed by *Barukh*

shem kevod malkhuto, and “The Lord, He is God” (1 Kings 18:39). A single *shofar* blast announces the end of the “Sabbath of Sabbaths.”

[Herman Kieval]

NEILSON, JULIA (1868–1957), English romantic actress. Born in London, Julia was the daughter of Alexander Ritchie Neilson, a silversmith and jeweler, and Emily Davis, and was a cousin of three other well-known actresses of the Davis family, Lily Hanbury, Hilda Jacobson, and Nora Kerin. She made her first appearance (1888) in W.S. Gilbert's *Pygmalion and Galatea*, toured with Beerbohm Tree in 1889, and acted with him at the Theatre Royal, Haymarket, for five years. In 1890 she married Fred Terry, brother of the celebrated Ellen Terry. Julia became famous for her acting in such plays as *A Woman of No Importance*, *The Prisoner of Zenda*, *Sweet Nell of Old Drury*, and *The Scarlet Pimpernel*. Her greatest success was as Rosalind in *As You Like It* (1896). She visited the U.S. in 1895 and again in 1910. In 1900, she and her husband went into management and for the next 30 years played and toured with their own company. Both their children, Dennis (1895–1932) and Phyllis (1892–1977), acted under the name of Neilson-Terry. Neilson's memoirs, *This for Remembrance*, were published in 1940.

NEIMAN, YEHUDAH (1931–), Israeli painter. Neiman was born in Warsaw. After immigrating to Erez Israel in 1940, he studied painting in Tel Aviv and created stage designs for theaters but settled in Paris in 1954. From 1955 to 1965 he painted lyrical abstract paintings, concerning himself mainly with colors, by means of which he constructed his compositions of line, space, and light. At that time he was known as the leading “Luminist painter” because of his lyrical synthesis of space and light. In 1966, he made his first mechanical works using photographs which were printed on sheets of canvas or painted aluminum. This “photomécanique,” in which he was a master-artist, enabled him to multiply one photograph form and thus create a symmetrical composition. His art portrayed an erotic spirit, using different parts of the human body as subject matter and creating erotic suggestions in the composition. He applied this “photomécanique” method to silkscreen and sculpture. Neiman held many exhibitions in Europe and Israel, and was represented at the “Erotic Art” exhibition in Sweden (1968), the “Mec-Art” exhibition in the Apollinaire Gallery, Milan (1969), and the Erotic Art exhibition in the Museum of Modern Art, Stockholm, in the same year.

[Judith Spitzer]

NEIPRIS, JOSEPH (1918–1991), Israeli social worker. Neipris was born in Malden, Massachusetts. He served as a psychiatric social worker, and in 1950 settled in Israel, where in 1952 he became administrative director of the Lasker Mental Hygiene and Child Guidance Clinic. In 1968, he was appointed deputy director of the School of Social Work at the Hebrew University of Jerusalem. Neipris was co-author of *The Individual and the Group* (1953) and the author of *Social Welfare and Social Services in Israel* (1981). He was the *Encyclopaedia Judaica* departmental editor for Jews in social welfare.

NEISSER, HANS PHILIPP (1895–1975), economist. Born into a distinguished professional family in Breslau, Germany, Neisser obtained a doctorate in jurisprudence from the University of Breslau. He served on various government economic commissions, was economic adviser to the Weimar government, and edited one of Germany's leading economic weekly magazines, *Wirtschaft* (1922 to 1927). In 1927 he began to teach at the University of Kiel and was at the same time director of the Institute for World Economy. Emigrating to the U.S. in 1933, he was professor of monetary theory at the University of Pennsylvania from 1933 to 1943, the first Jew to attain a position at that university. During the last two years of this period he headed the division of research at the U.S. Office of Price Administration in Washington. He was also research principal at the Institute of World Affairs (1943–51). From 1943 to 1965 he was professor of economics in the graduate faculty of the New School for Social Research in New York City, where he also served in a leadership capacity, including tenure as chairman of the department of economics, until his retirement. He then became professor emeritus (1965–75). Under his guidance, the New School became the first teaching institution in the metropolitan area to establish a training center for econometric study. Described as one of the most brilliant economic minds of his generation, Neisser focused mainly on general economic theory, international economics, and monetary and banking developments.

His publications include *Der Tauschwert des Geldes* (1928); *Some International Aspects of the Business Cycle* (1936); *National Incomes and International Trade* (with F. Modigliani, 1953); and *On the Sociology of Knowledge, an Essay* (1965).

[Joachim O. Ronall / Ruth Beloff (2nd ed.)]

NEIZVESTNY, ERNST (1926–), Russian sculptor and draughtsman. Neizvestny was one of the few living Russian artists whose work became known and admired in the West. This was largely the result of the admiration and advocacy of the English art critic John Berger, in whose opinion “Neizvestny is principally the first visual artist of genius to have emerged in the Soviet Union since the twenties.” He came into prominence during the regime of Nikita Khrushchev. On a famous occasion Neizvestny argued with the Russian leader at the opening of an exhibition of advanced art he had organized in Moscow. Neizvestny's art is best when dealing with the human figure. He cast his bronzes personally in a small furnace,

since access to a state foundry was denied him. Both his drawings and sculptures have a heroic quality, even willfully abstract. After Khrushchev's deposition, a close friendship developed between the two and the headstone over Khrushchev's tomb in the Novodevichi cemetery in Moscow was carved by Neizvestny, in accordance with a wish expressed by Khrushchev before his death.

Neizvestny later immigrated to the United States after leaving the Soviet Union for Switzerland in 1976. He held exhibitions in many countries including Scandinavia, Italy, and Switzerland. His essays on art, literature, and philosophy, collected in *Space, Time and Synthesis in Art*, appeared in English in 1990. After the breakup of the Soviet Union he was commissioned to erect three Gulag memorials.

[Charles Samuel Spencer]

NEKLYUDOV, NICOLAI ADRIANOVICH (1840–1896), Russian criminologist, counselor to the Ministry of Justice. From 1877 Neklyudov served as member of the committee for the advancement of the economic status of the Jews. In 1880 he, together with V.D. Karpov (an official of the Ministry of Interior), submitted a memorandum to the committee refuting the charge that the Jews were engaged in unproductive activities and exploited the non-Jewish population. Neklyudov stood for the emancipation of the Jews, advocating the dissolution of the *Pale of Settlement. Such a step, he averred, would be advantageous to the non-Jewish population through the development of trade and commerce in the interior of Russia. At the same time he argued that "Reason does not justify placing a population of several millions in the same category as criminals." No action was taken on his proposal, as the committee was soon dismissed.

NELSON, BENJAMIN (1911–1977), U.S. sociologist. Born in New York, Nelson graduated in medieval history from Columbia University. He taught at the universities of Chicago and Minnesota and the State University of New York before taking the position of professor of sociology and history in the graduate faculty of the New School for Social Research in 1966. Nelson's chief interest was in the sociological approaches to history and in the sociology of psychoanalysis and the arts. He opposed theoretical and practical "uniformitarianism" in favor of studying varied cultural histories. For Nelson, history comprised not only all the great civilizations described in the historical record but also their interconnections and evolutions since the beginning of civilization itself. His later work emphasized the study of civilizational complexes and encounters, particularly comparisons between China and the West.

Nelson helped found the Society for the Scientific Study of Religion and served as its vice president from 1976. He also was president of the International Society for the Comparative Study of Civilizations from 1971 until his death.

Among his numerous publications are "The Legend of the Divine Surety and the Jewish Money Lender" (1939); *The Idea of Usury: From Tribal Brotherhood to Universal Otherhood* (1949); and *On the Roads to Modernity* (1981). He also edited *Freud and the Twentieth Century* (1958).

[Werner J. Cahnman / Ruth Beloff (2nd ed.)]

NELSON, LEONHARD (1882–1927), German philosopher, a descendant of Moses Mendelssohn. Born in Berlin, he was baptized while a child. He became lecturer in philosophy in the faculty of natural sciences at Goettingen in 1909 and professor in 1919. He founded the "New Fries School," which, following J.F. Fries (1793–1873) and using psychological method, wanted to renew Kant's teaching, but on a basis entirely different from that of the Neo-Kantians. To provide a forum for this school, Nelson founded the "Discussion groups of the Fries School" (1904–08), and published many articles, the most famous of which is "*Die Unmoeglichkeit der Erkenntnistheorie*"; the English version of which appeared in the collection of his articles *Socratic Method and Critical Philosophy* (1949). His main interest was in ethics, and his own ethics are close to those of Kant but without sharing their severe pendantry. Nelson developed his ethics in *Vorlesungen ueber die Grundlagen der Ethik*, 3 vols. (1917–32). Volume 1 dealt with the bases of ethics, volume 2 with pedagogy, and volume 3 is devoted to the philosophy of law and politics. In politics Nelson was close to moderate Socialism, similar to that of Franz *Oppenheimer. The principles of society's existence cannot be surrendered to majority decisions, since this would abandon them to arbitrariness and chance, for one cannot be certain that the majority even knows what is best for it. His students issued some of his unpublished lectures, among them the great work *Fortschritte und Rueckschritte der Philosophie; von Hume und Kant bis Hegel und Fries* (1962), edited by Julius Kraft. A list of his works is to be found in *L. Nelson zum Gedaechtnis* (1953).

BIBLIOGRAPHY: H. Falkenfeld, *Kantstudien* (1928), 247–55; *Encyclopedia of Philosophy*, 5 (1967), 463–7; B. Selchow, *L. Nelson, ein Bild seines Lebens* (1938).

[Samuel Hugo Bergman]

NELSON, LOUIS (1895–1969), U.S. labor leader. Born in Kharkov, Russia, Nelson immigrated to the United States with his family as a young child. He left school at the age of 12 to work in the needle trade, joining the Raincoat Makers' Union and then the Amalgamated Clothing Workers as a tailor. A member of the Young People's Socialist League and affiliated with the left wing of the Socialist movement, he was active in opposition to the Amalgamated leadership. He was expelled from Amalgamated in the early 1920s, became a dressmaker in a dress shop and worked with the dual, Communist-controlled union, the Needle Trades Industrial Union. Later he reappraised his own position and came to believe that the

small shop, which he had supported, permitted employers to avoid enforcing union conditions and that the installation of machines had in fact preserved jobs in those shops where they were installed. Nelson rejoined the International Ladies' Garment Workers' Union in 1931 and took an active part in the successful dressmakers' strike of 1933. In the following year he became manager of Local 155, the Knit Goods Workers' Union, an industrial local with a membership of under 1,000. As manager of this union for 35 years, Nelson built it up to one of the strongest and most responsible of the ILGWU locals and by 1969 it had a membership of about 14,000. In 1952 he was elected a vice president of the ILGWU and served in that post until his death.

Long interested in Yiddish culture and education, Nelson supported the Folksbühne theater and the work of YIVO. By the 1960s the membership of Local 155 was no longer primarily Jewish but Nelson continued to arrange the appearance of Jewish artists and singers before the local's members. He was prime mover in the establishment of the Jewish Labor Committee. A non-Zionist, he supported the Bund position in regard to a Jewish state.

NEMEROV, HOWARD (1920–1991), U.S. poet and novelist. Nemerov was born in New York. His sister was Diane Arbus, the photographer. He was educated at Harvard and served as a pilot in World War II. He was awarded the Pulitzer Prize (1978) and was the Poet Laureate from 1988 to 1990. His poetry is marked by a brooding, illuminating intelligence as well as comic irony and wit: for example, in "A Memory of My Friend," a "Jewish atheist stubborn as Freud" says to a departing guest, "... instead of 'Good night,' 'Go with God.'" His Judaism was secular though he did focus on themes drawn from Hebrew Scripture and Jewish history, as, for example, in "To the Babylonians" and "False Solomon's Seal," and in the poetic dramas, "Endor" and "Cain." He also brought Hebrew Scripture into the narrative allusiveness of the poem, as in "Small Moment," with its epigraphic reference to Isaiah 54:7, and in "The First Day." He wrote three novels: *The Melodramatists* (1949); *Federigo; or, The Power of Love* (1954); and *The Homecoming Game: A Novel* (1992). His *Collected Poems* were published in 1977; *A Howard Nemerov Reader*, in 1991.

BIBLIOGRAPHY: R. Labrie, *Howard Nemerov* (1980); W. Mills, *The Stillness in Moving Things: The World of Howard Nemerov* (1975); D. Potts, *Howard Nemerov and Objective Idealism: The Influence of Owen Barfield* (1994).

[Lewis Fried (2nd ed.)]

NÉMETH, ANDOR (1891–1953), Hungarian and French author and critic. From 1938 Németh lived in France, where he published *Kafka ou le mystère juif* (1947). His other works include a study of the empress Maria Theresa (1938). From 1947 until his death as a paralytic, Németh edited the Hungarian literary periodical, *Csillag*, also translating many works from English and French.

NEMETZ, NATHAN THEODORE (1913–1997), Canadian lawyer, judge, and community leader. Born in Winnipeg, Manitoba, Nathan Nemetz moved to Vancouver, British Columbia in 1923. He completed a history degree at the University of British Columbia (UBC) in 1934 and was called to the bar in 1937. Moved by the problem of high unemployment, Nemetz entered the field of labor law, eventually representing both the provincial government and numerous workers' associations as one of BC's top mediators. His strong social conscience also led Nemetz to an active pursuit of anti-discrimination work and inter-ethnic relations. During the 1950s he was a founding member of the Vancouver section of the Canadian Civil Liberties Union and a board member of the Vancouver Civic Unity Association, which successfully lobbied the provincial government to pass legislation making it illegal to discriminate in public places based on racial grounds. Nemetz was also active in the Jewish community. In addition to serving as president of the local chapter of B'nai B'rith and guiding much of the community relations work of the Pacific Region of the Canadian Jewish Congress, Nemetz was for many years the co-chairman of the Canadian Council of Christians and Jews. He was appointed to the BC Supreme Court in 1963 and was named chief justice in 1973. Between 1978 and 1988 he served in the province's top judicial position as chief justice of the BC Court of Appeal, doing much work to modernize the appeal process. Nemetz maintained a long association with the University of British Columbia, serving a term as chancellor from 1972 to 1975. Nemetz was named to the Order of British Columbia and was made a Companion of the Order of Canada, the nation's highest civilian award. Following his 1997 death, the Nathan T. Nemetz Chair in Legal History at the UBC Faculty of Law was endowed in his honor.

[Barbara Schober (2nd ed.)]

NEMIROV (Pol. **Niemirów**), town in Vinnitsa district, Ukraine. It was annexed by Russia after the second partition of Poland (1793), and was incorporated in the district of Podolia until the Russian Revolution. Under Polish rule it was a fortified city of considerable importance. A Jewish settlement in Nemirov is first mentioned in 1603. In the 1630s, Yom Tov Lipmann Heller held rabbinical office there for a while. During the Chmielnicki persecutions of 1648 thousands of Jews from other localities sought refuge in Nemirov; however, the city fell to the Cossacks, who massacred 6,000 Jews. The slaughter at Nemirov, one of the worst of that period, created a profound impression, becoming a symbol of all the terrible massacres the Jews suffered at the hands of cruel rioters. Reports and legends spread about the heroic acts of the Jews of Nemirov who chose martyrdom (see **Kiddush ha-Shem*) and rabbis and *paytanim* composed special *kinot* and *seliḥot* on the destruction of the community. At a meeting of the Council of the Lands held in 1650, the anniversary of the massacre (20th of Sivan – 20 of June) was proclaimed a day of mourning and public fasting. Reports and legends spread about the heroic acts of the Jews of Nemirov who chose martyrdom (see **Kid-*

dush ha-Shem). Jews started to resettle there when the town was retaken by the Poles, and their situation was especially satisfactory under the Turkish rule over Podolia (1672–99). In the 18th and 19th centuries Jews owned a large distillery, dyeing factory, and hide-processing facilities. At the beginning of the 18th century the Great Synagogue was erected. Early in the 19th century, Nemirov became a center for the Ḥasidim of *Nahman of Bratslav. In 1765, 602 Jewish poll-tax payers were registered; the Jewish population increased from 4,386 in 1847 to 5,287 (59.3% of the total population) in 1897. In 1917 a democratic community headed by the Zionists was established, but with the consolidation of the Soviet régime it was liquidated. During the Russian Civil War, the Jews also suffered, but they created an armed self-defense unit with their Christian neighbors and succeeded in averting a pogrom on January 19, 1918. There were 4,176 Jews (57.2% of the population) living in Nemirov in 1926, dropping to 3,001 (36.7% of the total population) in 1939. Between the wars a Yiddish school and orphanage operated in the town. Most of the Jews worked in artisans' cooperatives and dozen of families in a Jewish kolkhoz. The Germans took Nemirov on July 21, 1941, and created a ghetto. In November 1941 2,000 Jews were murdered, and 1,500 were executed on June 26, 1942. About 1,000 Jews who had been expelled to Nemirov from Transnistria were also murdered. The last group of skilled laborers was executed in April–August 1943.

[Yehuda Slutsky]

NÉMIROVSKY, IRÈNE (1903–1942), French author. Born in Kiev to a well-to-do assimilated family, Némirovsky received an aristocratic education, speaking French at an early age. Her early years were marked by tragic experiences during the civil war in Russia (including a pogrom). Her father was a banker and the revolutionaries set a price on his head. The family hid in a Moscow apartment, until they could escape to Finland. They lived a year in Sweden and eventually settled in Paris, where the father gradually rebuilt his fortune. These experiences found their way, at least indirectly, into Némirovsky's novels. When she married and became a mother, she hoped to live in peace and happiness, but the Nazi occupation shattered all. She sought refuge with her family, in rural central France. She was denounced, arrested by the French police in 1942, and deported to Auschwitz, where she died, apparently of typhus.

Her first and best-known novel, *David Golder* (1930) won wide acclaim. The hero, a Russian Jewish banker, is a ruthless character, ready to sacrifice all in order to strengthen his financial empire. Having destroyed all human relationships, he faces ruin in utter loneliness. His one remaining shred of humanity, manifest in his devotion to an unworthy daughter,

gives the elder Golder the strength to rebuild his fortune for her sake and die a grandiose, moving, solitary death.

This was followed by *Le Bal* (1930), a short novel and literary gem. *Les mouches d'automne* (1931) and *L'Affaire Couri-lof* (1933) illustrate the author's Russian vein. *Le vin de solitude* (1935) her most overtly autobiographical novel, describes her tragic childhood experiences and painful relations with her mother, a strange woman who rejected her daughter in her obsession to preserve her beauty, youth and glowing womanhood. The mother's obsession also forms the subject of *Jezebel* (1936).

As Nazi threats loomed Némirovsky wrote a true "Jewish novel," *Les chiens et les loups* (1939), which opens with a pogrom viewed through the eyes of two ghetto children, Ada and her cousin Ben. The two reach the beautiful and peaceful quarters of their rich cousins, where young Harry lives like a prince, heir to the banking empire of his uncles. As the story unfolds in a French setting, Harry, the wealthy assimilated immigrant, and Ben, the struggling refugee, ever wandering in anguish, realize that they are, in spite of all, identical Jewish brothers with distant roots set in a "peculiar way of loving, of desiring" some unattainable truth set in every Jewish heart. Ada, a painter, expresses the same yearning in the lonely pursuit of artistic creation.

While in hiding Némirovsky wrote *Les Feux de l'automne*, *La Vie de Tchekhov*, and *Les Biens de ce monde* (posthumously published after the war). She used an original narrative technique: the story builds itself, in the absence of any narrator. The events unfold according to their own implacable logic, leaving no place for the creator's narrative design, ideas, or appeals to pity.

[Marthe Robert]

NEMON, OSCAR (1906–1985), British sculptor. Nemon was born in Croatia, the son of a pharmaceutical manufacturer. He spent his early years training in Vienna, where he knew and modeled a bust of Sigmund Freud, and then studied art in Brussels. Nemon emigrated to Britain in 1939 and was naturalized in 1948. He lived most of the rest of his life in London. He became one of the best known sculptors of important political figures and other notables, and was especially famed for his monumental effigy of Winston Churchill. He also produced busts of Eisenhower, Montgomery, the British Royal family, and Margaret *Thatcher, among others.

NEMOY, LEON (1901–1997), scholar and librarian. Born in Balta, Russia, Nemoy studied classical and Slavic languages at the University of Odessa. After moving to the U.S. in 1923, he studied Semitic languages at Yale University (1924–29), where he received his Ph.D. He served as a librarian at the Society for the Propagation of Knowledge, Odessa, Russia (1914–21), the Academic Library of Odessa (1919–21), and the University Library of Lvov, Poland (1922–23) before assuming his

duties at Yale in 1923. Rising to the post of curator of Hebrew and Arabic literature at Yale's Sterling Memorial Library, he became the university's first Judaica and Arabic curator. During his tenure, Yale received the Alexander Kohut Memorial Collection of Judaica (1915 and 1935) and the Sholem Asch Collection (1946). The acquisition of these significant collections was instrumental in making Yale a center for the study of Jewish literature, history, and culture. Under Nemoy's direction, important Arabic manuscripts were acquired as well. Upon his retirement, Nemoy became scholar-in-residence at Dropsie University, Philadelphia, where he was editor of the *Jewish Quarterly Review*.

Nemoy's scholarly activities were mainly devoted to research on the history of the *Karaites. His major work is his edition of the Arabic text of al-*Kirkisānī's *Kitāb al-Anwār wa-al Maraḡib* (5 vols., 1939–43). He also translated a valuable collection of Karaite texts into English from Arabic, Hebrew, and Aramaic (*Karaite Anthology*, 1952), with introduction and annotations. He also compiled *Arabic Manuscripts in the Yale University Library* (1956). Nemoy contributed numerous articles on Arabic philology, Karaite subjects, and the history of Jewish and Arabic medicine to various scholarly journals. He also published a catalog of the Hebrew and Yiddish books donated by Sholem *Asch to Yale (*Catalogue of Hebrew and Yiddish Manuscripts and Books from the Library of Sholem Asch*, 1945). Nemoy was one of the editors of the *Yale Judaica Series* and departmental editor for the *Encyclopaedia Judaica* on the Karaites.

[Menahem Schmelzer / Ruth Beloff (2nd ed.)]

NEMȚEANU, BARBU (originally **Benjamin Deutsch**; 1887–1919), Romanian poet. Born in Galatz, Nemțeanu was the son of a teacher at the local Jewish elementary school. From 1907 onward his own verse, as well as translations of foreign poetry, appeared in Bucharest literary journals such as *Viața Nouă* and *Flacăra*, and the Jewish periodicals *Mântuirea* and *Lumea evreei*. His collection of verses, *Stropi de soare* ("Drops of Sunshine", 1915) was warmly received by leading critics. Not a profound poet, he wrote lyrical verse about love and everyday life which was touched with light humor. He is better known for his translations from Victor Hugo, Baudelaire, Oscar Wilde, *Lessing, and, above all, *Heine, whose *Hebrew Melodies* appeared posthumously in his Romanian translation in 1919. He also translated Yiddish works by Eliezer *Steinberg and Jacob *Groper. Nemțeanu died of tuberculosis at the age of 32.

[Abraham Feller]

NEO-ARAMAIC, general name for the various branches of spoken Aramaic, both western and eastern. Three groups of

dialects are known. The first includes the dialects of Ma'lūla, a continuation of the western branch of Middle Aramaic, spoken by Christians and Muslims in three villages about 60 km. (38 mi.) north of Damascus. The second comprises the dialects spoken by Christians in the Ṭūr 'Abdīn area in the Mardin region of southern Turkey. These dialects occupy an intermediate position between the first group and the third, the Aramaic dialects that are the continuation of the eastern branch of Middle Aramaic and are used in Kurdistan in the area on the common border of Iraq, Persia, and Turkey. Christians and Jews speak these dialects. Most of the Jews have immigrated to Israel; the Christians have spread out through the United States, Europe, and elsewhere. The recently discovered spoken dialect of the Mandeans in Persia has a special position in the third group.

The Jewish dialects can be divided into three groups:

(1) The dialects spoken in northwest Iraq (Iraqi Kurdistan). Important settlements are Nerwa, 'Amadiya, Zāxō, and Dehōk, to which Jezira and Čalla (Çukurca) in Turkey should be added. The dialects of this group are particularly important for historical-linguistic study, since they clearly resemble Ancient Aramaic, in pronunciation, forms, and vocabulary.

(2) (Persian) Azerbaijan. Important settlements are Salmas (Shahpur), Urmia (Rizaiyah), Naḡada (Solduz), Ushnu-iyeh (Šinno), to which Bašqala in Turkey should be added.

(3) Persian Kurdistan. Important settlements are Sablaḡ (Mahabad), Saqqiz, Bokaḡ, Bana, and Senna, and the Iraqi towns of Rawanduz, Irbil, Sulaymaniya (before Iraq was established as an independent political entity after World War I, it was part of the Ottoman Empire). The southernmost Aramaic-speaking settlement is Kerend.

From the Middle Ages Jews are known to have spoken Aramaic in Kurdistan. Some scholars hold that Aramaic was not the original language of some of these Jews, but that they adopted it after their emigration (from Persia?) to the Aramaic-speaking areas. Perhaps not all the Jews from this area spoke Aramaic. The census takers did not distinguish between Jews who spoke Aramaic and those who spoke other languages. It appears that in the cities where Arabic (or Turkish) rule was strong the Jews adopted the language of their surroundings, after a period of bilingualism. Jews from places where, according to travelers, Aramaic was still spoken in the 19th century, did not bring this language with them to Israel. Immigrants from Irbil exemplify this process: both Arabic and Aramaic are the everyday language of the older generation.

When the State of Israel was established the total number of Aramaic-speaking Jews was estimated at 20,000; most of them are now in Israel, grouped largely according to their provenance. The Jews (especially from Persia and Turkey) have called their language the "language of the Targum." Other names are "the language of the Jews," "our language," and "Jabali." In Israel this language is commonly called Kurdi, even though this is the scientific name for the Iranian language of the Muslim Kurds. It seems that rabbinic scholars on rare occasions called this language Aramaic, as can be seen in two

manuscripts, one from the beginning of the 18th century, the other from the beginning of the 20th. The scientific name given this language is “Northeastern Neo-Aramaic” or “modern Syriac” (the latter suitable to the Christian dialects). The Christians who use this language consider Syriac the language from which their language evolved, but there is no linguistic proof for this contention.

From the historical-linguistic point of view it is assumed that the eastern dialects of Neo-Aramaic developed from a language similar to Babylonian talmudic Aramaic and Mandaic, but there are no documents extant in this language since it was not used as a literary vehicle. Similarly, the exact connection between eastern Neo-Aramaic and the Aramaic of the Babylonian Jews before they began speaking Arabic is unknown.

An idea may be obtained of some of the major features of these dialects by a description of the dialect as spoken in Zāxō, which is of particular importance for historical-linguistic study.

Phonology

The glottal stop, ʔ, parallels three consonants of Ancient Aramaic, 𐤀, 𐤁, 𐤂. ʔ from 𐤁 (or 𐤂) is always retained, while the ʔ from 𐤀 is liable to disappear in certain situations: ʔurxa (“road”), burxa (“on the road”) as against ʔisra (“ten”) and bʔisra (“by ten”). This is important in determining the etymological origin of a particular ʔ. 𐤀 is pronounced as x (= ܚ).

The phonemes of *b, g, d, k, p, t* which in Ancient Aramaic, as in Hebrew, had two variants each, have attained phonemic status in the modern dialects for each of their variants. The spirantized and *dageš* forms appear in all environments and are not conditioned by the accepted rules of Ancient Aramaic, for example, the 𐤌 of 𐤌𐤀𐤁𐤁𐤀, 𐤌𐤀𐤁𐤁𐤀 is always given the hard pronunciation, even though it was spirantized in Ancient Aramaic under certain conditions.

The following is the transposition of *b, g, d, k, t* in Neo-Aramaic: 𐤁 = *w*; 𐤂 (through 𐤁) = *ɣ*; 𐤃 = *x*; 𐤄 = *z*; 𐤅 = *s*. The different pronunciations of 𐤃 and 𐤄 in the various dialects serve as a criterion for differentiating them.

As in Eastern Syriac, the phoneme 𐤆 is always pronounced *p*. In all the Jewish dialects, however, *f* is found only in loanwords, while in most of the Christian dialects *f* is replaced by *p*.

Neo-Aramaic dialects

| Anc. Aram. | Zāxō | Dehōk | ʿAmadiya | Urmia | Irbil |
|---------------|------|-------|----------|-------|-------|
| 𐤁𐤀𐤁𐤁𐤀 “hand” | ʔiza | ʔida | ʔida | ida | ila |
| 𐤁𐤀𐤁𐤁𐤀 “house” | bēsa | bēṭa | bēṭa | bēla | bēla |

In loanwords the phonemes ʔ, 𐤆, 𐤇, 𐤈, 𐤉, 𐤊, are also found. The diphthongs in Ancient Aramaic have become monophthongized: *ay* > *ē* (𐤁𐤀𐤁𐤁𐤀 > *bēsa*), *aw* > *ō* (𐤁𐤀𐤁𐤁𐤀 > *yōma*). The same is true for diphthongs originating in Neo-Aramaic as a result of the 𐤁 > *w* shift: 𐤁𐤀𐤁𐤁𐤀 *xōla*. The doubling of consonants has largely been eliminated and replaced by the lengthening of the preceding vowel, as 𐤁𐤀𐤁𐤁𐤀 > *jāma*.

Morphology

The new status constructus is formed by adding the suffix *it* to the noun base: *baxta* (“a woman”); *baxtit axōna* (“the brother’s wife”). In the plural there is no differentiation of gender in adjectives, pronouns, or the verb, as: *gōra sqīla* (“A handsome man”), *baxta sqīla* (“a beautiful woman”); *gūrē sqīlē* (“handsome men”), *baxtāsa sqīlē* (“beautiful women”). There is only one set of possessive pronouns suffixed to the nouns (both the singular and the plural).

The verb differs radically from Ancient Aramaic both in form and in content. Whereas in Ancient Aramaic the tense system has two parts (past and future), in Neo-Aramaic it is tripartite: past, present, and future. The prefixed and suffixed forms which in Ancient Aramaic were perfect and imperfect have been replaced by other forms. The form *šāqil* (𐤍𐤑𐤍 in Ancient Aramaic = active participle) is a subjunctive. It is conjugated by adding the enclitic pronouns. *Šāqil* refers to the actor and the recipient of the act is indicated by *-l-* plus pronominal suffixes, e.g., *šāqillē* (“that he will take”). The present is formed by prefixing *g/k* to *šāqil* (*gzamir*, “he plays”); the future by prefixing *b/p* to this form (*bzāmīr*, “he will play”).

Šqil (= 𐤍𐤑𐤍, the passive participle) is the basis of the past and the recipient of the action. The actor is indicated by *-l-* plus personal suffixes: *šqilē* (“he took”), *šqilālē* (“he took her”), *šqililē* (“he took them”).

Neo-Aramaic has also introduced compound tenses which indicate different aspects (continuous action and perfect). The infinitive *šqāla* (*bi* usually precedes the infinitive of the first conjugation) plus the copula produce the continuous present: *bīšqāla lē* (“he is taking”). The form *šqila*, conjugated according to gender and number, with the copula, forms the present perfect: *šqilā lē* (“he has taken”), *šqiltā lā* (“she has taken”), *šqilē lū* (“they have taken”). By adding the suffix *wa* every tense can be cast one degree into the past: *gšāqilwa* (“he used to take”), *šqilwālē* (“he had taken”).

There are only three conjugations which parallel *qal, pael*, and *afel*. The reflexive conjugations that were used in Ancient Aramaic to express the passive are not found in Neo-Aramaic where the passive is formed with the passive participle plus an auxiliary verb.

Especially noteworthy is the syntax of the copula. In a sentence whose predicate is not a verb, the predicate is formed through the addition of the copula, as: *baxta sqīla* (“a beautiful woman”), *baxta sqīla lā* (“the woman is beautiful”).

Neo-Aramaic was greatly influenced by the neighboring languages. The impact of Kurdish seems to have been especially strong in the early stages of the language and there are those who attribute the changes in the verb to it. As in all Jewish languages there are many words from Hebrew, especially in the sphere of tradition, which were absorbed in Jewish Aramaic: *שְׁמוּרָה*, *נְשׂוּמָה*, *גְּזִירָה*, *בְּרַכָּה*, *עֲשׂוּדָה* (!), etc.

Writing

The Jews use the Hebrew alphabet in writing their language and they add certain diacritical signs to represent the missing

consonants. In the earliest known manuscripts (17th century, north Iraq) the long vowels are indicated by *matres lectionis*: $\aleph = \bar{a}$; $\text{'} = \bar{i}$ or \bar{e} (final \bar{e} by ' or $\text{'}/ \text{'}$); *waw* for short and long *u* and *o*. In later manuscripts the system was not consistently maintained, vocalization also being used for this purpose.

The use of Neo-Aramaic as a written language was limited to certain literary types intended to be read in the synagogue both during prayers and apart from it: *tafsirs* (elaborated translations) of *haftarot* and *piyyutim*; Midrashim for some of the *parashiyot*; the midrashic Targum of Song of Songs, etc. Hebrew is used for secular purposes. It seems that the epic poems on biblical themes and the Targum in different dialects were first transcribed in Israel through the efforts of Joseph Joel *Rivlin.

[David Cohen]

NEO-FASCISM. Neo-Fascism lends itself to an exact definition even less than *Fascism, its ideological progenitor. In the postwar world all radical right-wing movements, irrespective of their doctrinal contents and differences – except those explicitly aiming at the restoration of an antisemitic, racialist, Nazi-type dictatorship (see *Neo-Nazism) – are commonly referred to as "neo-Fascist." They share an attitude of

extreme, militant nationalism; a belief in authoritarian rather than democratic government; and a total rejection of socialist, particularly Marxist, dogma with its underlying universalist and egalitarian ethos. Inhabiting the social periphery between the middle and the working class, Neo-Fascism appeals mostly to those deprived of their former independent status (as artisans, white-collar workers, small-holders, craftsmen, etc.) by the growth of an urban, industrialized society and driven to xenophobia and hostility toward minority groups, which they believe to have either caused their social and economic decline or contributed to it. Hatreds vary according to demographic conditions. In the United States and Britain, Neo-Fascist movements have a strong anti-color bias, whereas similar French groups in the 1950s and early 1960s were anti-Algerian, and in Switzerland these prejudices inspired agitation against alien workers. Antisemitism is almost always implicit in such attitudes and it can easily become, as in the case of the Argentinian Tacuara or the Swedish Nordiska Rikspartiet (Nordic Realm Party), an ideological focal point. In the West, the shock of the Nazi Holocaust militated after World War II against the spread of Neo-Fascist movements, particularly obsessively antisemitic ones; however, the Israel-Arab *Six-Day War (1967) modified this trend. Formerly disreputable antisemitic prejudices relabeled "anti-Zionism" became respectable again when disseminated by the Communist establishment, the *New Left, and Black Power activists. Arab anti-Israel propaganda agencies, until 1967 associated with the extreme right, have since – and without breaking their Neo-Fascist links – been courted and supported by the radical left as well.

Neo-Fascism survived best in Italy. The Movimento Sociale Italiano (MSI) obtained close to 1,500,000 votes (5.2% of the total poll) in the 1970 provincial elections, sending 32 deputies to the regional councils. However, neither occasional swastika-daubing forays into Rome's old ghetto (1958, 1960) nor parliamentary representation dating back to the early 1950s elevated the MSI to a significant position. Further to the right, the minuscule Ordine Nuovo (New Order), formed by activist dissidents from the MSI, is a terrorist, but otherwise negligible, force, cultivating links with like-minded European "New Order" movements. Prince Valerio Borghese, a former honorary MSI president, founded the militant National Front which made an abortive attempt to overthrow the government (December, 1970). In France the horrors of Nazi occupation inhibited the revival of overtly Fascist movements. Efforts by the Sidos brothers to channel resentments brought about by the loss of empire (Indochina, North Africa) into the Neo-Fascist Jeune Nation failed, while the less clearly defined anti-establishment campaign of Pierre Poujade won 60 parliamentary seats (1956). Both his party and the anti-Gaullist extremists of the Algérie-Française OAS had Fascist and antisemitic overtones, but neither survived the nationalist appeal of de Gaulle's presidency. In the post-de Gaulle era, Ordre Nouveau, the successor organization to the Occident (banned 1968), gained some notoriety for militancy and street-fighting.

Neo-Fascism also failed to prosper in postwar England. Sir Oswald Mosley's once-powerful British Union Fascists, renamed British Union, had dwindled into irrelevance. A number of extremist organizations like the Empire Loyalists, the British National Party, and the Racial Preservation Society (whose street-fighting propensities gained them brief notoriety in the early 1960s), combined in 1967 to form the National Front, without, however, making any impact on national politics. In the 1970 general election the Front put up ten candidates, none of whom polled more than 1,600 votes. In the United States old-style primitive antisemitism flourished among such movements as the Ku Klux Klan and the Christian Crusader, while the more sophisticated John Birch Society vented their anti-Jewish resentments on the "liberal establishment" represented as being predominantly Jewish. The Klans, Crusaders, and Birchists were typically U.S. phenomena; lacking any party organization able to attain power, they cannot be regarded as true neo-Fascists.

[Ernest Hearst]

NEOLOGY (Neologism), unofficial name of the communities in Hungary belonging to the *Reform movement. On the basis of the decisions of the General Jewish Congress (1868–69; see *Hungary), they constituted the majority and therefore called themselves the Congressionals. Reform tendencies had already appeared in the community organizations of Hungary from the beginning of the 19th century. Some were expressed in programs like that of Rabbi A.L. Rappoch (from the town of Veszprem, 1826) which called for centralization and supervision in the choice of rabbis, teachers, and communal officials. At about the same time Aaron *Chorin urged the convention of a synod of rabbis and laymen. From 1850 the Austrian government sought to assure the supervision of Jewish schools in Hungary. At that time a commission was set up to draft a constitution of 285 articles encompassing every aspect of Jewish communal life. One of the demands was for the establishment of a rabbinical seminary, which became one of the main questions of reform that led to the disputes between the communities of *Nagykanizsa, *Papa, Gyöngyös, and others.

The organizational activities of the advocates of Reform aroused the energetic but disunited opposition of *Orthodoxy, expressed particularly in the decisions of the *Michalovce Orthodox convention (1865). After the attainment of full civil rights (1867), the leaders of Pest, the most powerful Neologist community, took the initiative of preparing a memorandum on the organization of Hungarian Jewry which they submitted to the Minister of Public Instruction and Religious Affairs, Baron J. *Eötvös. They suggested that a convention of the delegates of Hungarian Jewry be held without the participation of the rabbis, in order to prevent a debate on theological questions and because the latter were liable to intervene beyond the scope of their function. This approach, which aroused the objections not only of the Orthodox but

also of the Neologist Leopold *Loew, became one of the fundamental platforms in the organization of Neologist communities. Differences of opinion were already apparent at the congress's preliminary meeting, to which Orthodox delegates were not invited. In their discussions with Eötvös, the Orthodox requested permission to convene a separate congress, but Eötvös rejected any move which was liable to imply that there were two sects within Judaism. Subsequently, however, it was decided that rabbis would also be invited to the congress. The elections, which were held after extensive propaganda and not always by valid processes, assured a Neologist majority with 57.5% of the vote (the Orthodox gained 42.5%). At the end of 1868 Minister Eötvös opened the congress, whose principal theme was the organizational structure of the communities. Violent disputes broke out at once over the determination of the objectives of debates. While the Neologists tried to define the community as "a society providing for religious needs," the Orthodox insisted on the declaration that "the Jewish community of Hungary and Transylvania consists of the followers of the Mosaic-rabbinic faith and commands as they are codified in the Shulhan Arukh." The question of the rabbinical seminary, which was to be financed by the "school fund" granted by Francis Joseph I from the fine paid by the Jews of Hungary after the 1848 Revolution, was also a much disputed one. In the end, 48 of the 83 Orthodox delegates walked out and the decisions of the congress were ratified. The Orthodox, however, succeeded in organizing themselves, obtaining the authorization of the emperor. On several occasions the Neologists endeavored without success to convene another congress. Finally a meeting was held in 1935 (at which only the Neologists were represented). In 1950, on the instructions of the Communist government, a decision on the unification of Hungarian communities was passed.

The attempts of the Neologists to amalgamate with the Orthodox were to no avail. The hope of establishing this union caused the Neologists not only to refrain from introducing drastic reforms in the prayers and religious services (with the exception of the question of the organ and the pulpit, which was removed from the center of most synagogues) but also to adopt a distinctly conservative orientation, particularly in the district synagogues of the capital. There is no doubt that this preserved the unity of Hungarian Jewry in spite of the ideological split. The hoped-for ideological consolidation of the Neologist camp did not materialize either and many differences remained. As early as 1848 a circle of the younger members and even some important personalities of the Pest community sought to establish a Reform synagogue, but the community, which had already alienated itself from Orthodoxy, wished to prevent a complete split; it therefore obtained from the authorities a liquidation order against the small Reform organization (1852). In 1884 a number of individuals once more attempted to establish a Reform community. However, the national office of the Neologists intervened to deny them this right. Some stood for a liberal orientation, and for the adoption of the conservative ideology (1943). The ideological

consolidation was hindered by the special organization of the communities. These contradictions were particularly evident after World War I, when the community became the sole focal point for the social activities of those who had been estranged from Judaism over a lengthy period and were attracted by communal life only because they were excluded from general society. These extreme assimilationists prevented Zionism from penetrating the communities.

During the period of Hungarian Jewry's utter isolation from the social and economic life of the country (1938–44), there was a great awakening within the Neologist communities. Their educational and charitable activities were extended until they were among the most developed in the sphere of widespread mutual assistance (where they also collaborated with the Orthodox). When the communities were reorganized after World War II, they were imbued with Zionism and a readiness to maintain relations with world Jewry, but this evolution was halted with the official prohibition of Zionist and foreign relations activities in 1949.

[Baruch Yaron]

NEO-NAZISM, a general term for the related fascist, nationalist, white supremacist, antisemitic beliefs and political tendencies of the numerous groups that emerged after World War II seeking to restore the Nazi order or to establish a new order based on doctrines similar to those underlying Nazi Germany. Some of these groups closely adhered to the ideas propounded in Hitler's *Mein Kampf*; others espoused related beliefs deriving from older Catholic, nationalist, or other local traditions. Some openly embraced the structure and aspirations of the Third Reich by displaying swastika flags and glorifying Nazi achievements, while others sought to mask their ideology and agenda. Neo-Nazi activity has surged and declined in unpredictable waves in Germany, France, England, Russia, the Scandinavian countries, the United States, Canada, South Africa, and elsewhere. In April 1993, after a series of incidents, the Italian government passed an emergency measure aimed at punishing racial, ethnic, and religious discrimination. The Mancino Law (Law No. 205) permits prosecution of individuals who incite violence using a broad range of methods, including displaying symbols of hate, such as swastikas. Hundreds of youths have since been convicted under the law. In February 2005, European Union ministers agreed to continue a long-term debate over the regulation of racism and xenophobia. Among the proposals under consideration is making it punishable by law to deny the Holocaust or other crimes against humanity.

Why do people become neo-Nazis? In the 1980s, social scientists began to move beyond notions of deviance and psy-

chopathology to theories of social mobilization that see people who join any social movement – even neo-Nazis – as motivated by shared grievances shaped by social circumstances, recruited by face-to-face interaction, and focused on goals that seem practical and reachable.

Major factors in the global neo-Nazi upsurge included unstable economic, political, and social conditions, with their many causes – including, in the 1970s, simultaneous inflation and recession caused in great part by dependence on Arab oil; the disruptions of globalization and the collapse of the Soviet empire; waves of nonwhite immigration into Europe (from places formerly ruled or dominated by Europeans) and the United States; the constant threat of war, especially in the Middle East and the Persian Gulf; and the continued sense among white men that they were losing power and prestige in areas ranging from world affairs to their living rooms to their relations with women. In the United States, racial issues, not resolved in the 1960s, took the form of conflict over school desegregation, affirmative action, social welfare provision, and government social spending in general. Moreover, the failure of the Vietnam War, based on untenable Cold War premises, produced an atmosphere of political and cultural resentment on the right that became increasingly strong over time.

Leaders of neo-Nazi groups skillfully exploited the anxieties caused by these and other factors. The worldview of neo-Nazis is shaped by the way leaders frame issues and use narrative stories. While most neo-Nazi frames and narratives are based on myths, demonization, and scapegoating, this does not make them less effective in building a functional identity for individuals, even if they come from dysfunctional families. This process allowed neo-Nazis to adapt to changing historic conditions and expand their targets beyond Jews and black people.

Neo-Nazis were among the earliest users of online computerized networks in the 1980s, and surged onto the Internet with hundreds of websites allowing for the mass distribution of hate material, including claims that America was controlled by “ZOG,” the Zionist Occupation Government, in Washington, D.C. As the gay rights movement grew, so did neo-Nazi attacks on gay men and lesbians. In response to the feminist movement, neo-Nazis crafted new roles and avenues for participation by women, while preserving a dominant role for men. Women were still placed on a pedestal with one arm around their children protecting hearth and home, but now they were expected to use the other arm to cradle an automatic weapon. Three other significant ideological innovations among neo-Nazi groups are “Third Position” neo-Nazism, Skinhead neo-Nazism, and neo-Nazi theologies built around hybrids of religion such as Protestantism and Paganism.

One group of neo-Nazis which denounces both capitalism and communism occupies what it calls the Third Position. This merges the early Nazi Party left wing's National Socialism with “revolutionary” white supremacy and opposes both globalization and multiculturalism. It calls for local economic

cooperatives, support for the working class, and ecologically sound policy using populist “voelkisch” rhetoric. Third Position National Socialist parties have been organized in Japan, Iran, Scotland, Russia, Lithuania, and the United States, among other countries.

Nonracist Skinheads originated in the late 1960s as a multiracial working class youth subculture in Britain built around black music imported by immigrants from former Caribbean colonies. The neo-Nazi National Front helped convert the skinhead movement into a vehicle of white rage built around racism and violence. In the mid-1980s the movement jumped to continental Europe and the United States through the music of racist bands such as Skrewdriver; skinheads in the U.S.A. then split into racist and anti-racist factions.

A hybrid of Protestant Christianity with neo-Nazi racialism produced the Christian Identity movement in the United States, discussed below. A more widespread phenomenon was the rise of pagan neo-Nazis in the 1990s, built around racist forms of Norse religious traditions: Odinism, Ásatrú, and Wotanism. This drew on Nazi fascination with Aryanism and esoteric religions. These groups appealed primarily to youth.

Bridges to the Mainstream

Starting in the 1970s, a trend of conservative, right-wing populist, ethnonationalist, and neofascist challenges to sitting centrist or social democratic governments allowed right-wing groups a degree of legitimacy they did not possess in the immediate post-World War II era. In response neo-Nazi groups have developed a variety of ways to build bridges to more mainstream political and social movements. Some neo-Nazis repackage their beliefs as forms of “White Nationalism” or “White Separatism,” hiding behind broader racist movements for “White Rights,” with alliances spanning Europe and North America. At the same time, Europe, North America, the Middle East, and South Asia saw the development of numerous right-wing populist political parties and reactionary fundamentalist religious movements that served to bridge the extreme right to the mainstream.

In several countries neo-Nazis (sometimes in alliance with quasifascist or xenophobic right-wing populist allies) became more involved in electoral politics, stressing anti-immigrant and sometimes antisemitic themes. Rather than simply staging street demonstrations, they ran for office, with surprisingly good results in some instances. According to the political scientist Cas Mudde, between 1980 and 1999 over 50 European extreme-right political parties ran candidates in Austria, Belgium, Denmark, France, Germany, Greece, Italy, Luxembourg, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, and the United Kingdom.

This interaction has created a dynamic in which antisemitic ideas and conspiracy theories once circulated almost exclusively by German Nazis and their neo-Nazi offspring entered popular culture, mainstream political debate, and

even broadcast television series, especially in Islamic and Arab countries in the Middle East. These even included a revival of the false allegations from *The Protocols of the Elders of Zion*. These conspiracy allegations moved into more mainstream circles through bridging mechanisms that often mask the original overtly anti-Jewish claims by using coded rhetoric about “secret elites” or “Zionist cabals.” The international organization run by Lyndon LaRouche is a major source of such masked antisemitic theories globally. In the U.S. the LaRouchites spread these conspiracy theories in an alliance with aides to Minister Louis Farrakhan of the Nation of Islam. A series of LaRouchite pamphlets calls the neoconservative movement the “Children of Satan,” which links Jewish neo-conservatives to the historic rhetoric of the blood libel. In a twisted irony, the pamphlets imply the neoconservatives are the real neo-Nazis.

Another way neo-Nazis launder antisemitic conspiracy theories is through *Holocaust denial, the attempt to “prove” that the Holocaust was a fiction and that the Nazis never used gas chambers to exterminate Jews. The international clearinghouse for this movement is the California-based Institute for Historical Review (IHR), founded in 1979, which held its first conference on “Historical Revisionism” that same year. IHR, publisher of the *Journal of Historical Revisionism*, was established by Willis Carto, founder of the Liberty Lobby and a figure long associated with organizing and propagandizing projects involving neo-Nazi, pro-Hitler, antisemitic and extreme-right alliances. Carto later lost control of IHR in a lawsuit, but started a new denial publication, the *Barnes Review*, edited by former IHR staff members. Holocaust denial also persists in France, where a scandal in the late 1970s was caused by the claims of Professor Robert Faurisson. In Britain, author David Irving sued American historian Deborah Lipstadt in the late 1990s for calling him a Holocaust denier. In 2000 Irving lost the case (see *Irving v. Lipstadt), which gained international headlines. Irving had previously appeared at an IHR conference, and Faurisson and other IHR advisors testified along with Irving on behalf of Canadian Holocaust denier Ernst Zundel.

Neo-Nazis often use Holocaust denial material along with anti-Jewish conspiracy theories, sometimes coming up with grotesque slogans. Neo-Nazis not only blamed the 1973–74 oil crisis on a Jewish conspiracy, but in the U.S. they distributed literature that proclaimed “burn Jews, not oil!” This approach was repeated during the 1990 Gulf War, which saw the extension of a rhetorical device in which Jews, Zionism, Israel, and Israeli government policies were conflated into a conspiracist stew serving up the Israeli spy agency Mossad as the secret power behind world affairs. Thus echoes from the *Protocols* moved from neo-Nazis into wider circles, including some pro-Palestinian organizers and left-wing antiwar activists. After the terror attacks in New York and Washington on September 11, 2001, some neo-Nazi groups praised the terrorists for striking a blow against this global conspiracy.

[Jack Nusan Porter and Chip Berlet (2nd ed.)]

Post-World War II, 1945–1970

Neo-Nazism in Germany came to be identified with anti-semitic, ultranationalist, extreme right-wing movements, whether made up of old or new Nazis. In Germany, incitement to race hatred, as well as any attempt to resuscitate the Nazi Party, were and are explicitly outlawed by the constitution and the criminal laws of the German Federal Republic (as they were by the German Democratic Republic); no party overtly attempting to revive Nazism can legally exist there. Without seriously threatening the still fragile West German democracy (in East Germany such political tendencies were severely repressed), a number of such movements gained some short-lived popularity and notoriety. The first to draw ex-Nazis into a political party, if somewhat unwittingly, was Alfred Loritz, a confused demagogue with an anti-Nazi record. His Bavarian Economic Reconstruction Association, founded in 1945 with U.S. consent, denounced Allied policies and articulated the widespread economic discontent of the pre-“economic-miracle” era. The “blonde Hitler,” as he was sometimes called, frightened the young republic and the world at large when he gained 14.4 percent of the vote in his native Bavaria, winning 12 seats in the Bundestag, in the first West German general election in 1949. The lack of positive policies, however, coupled with internal dissension, rent the party asunder long before the following general election of 1953, in which it failed to gain a single seat.

Similarly spectacular and ominous was Fritz Dorls’ deliberate attempt to revive Nazism through the Socialist Reich Party (SRP). Its leadership was made up entirely of old Nazis, the most prominent of whom was the deputy chairman, Otto-Ernst Remer, the Wehrmacht officer who successfully thwarted the July 20, 1944, plot against Hitler. Apart from distributing antisemitic election leaflets reminiscent of *Der Stürmer*, the SRP even boasted a gang organized on storm-troop lines, the so-called Reichsfront. In 1951 when the SRP gained 11 percent of the Lower Saxony vote, an alarmed federal government contested the party’s legality before the Constitutional Court. Declared illegal as an attempt to reestablish the proscribed Nazi Party, this particular specter of resurgent Nazism disappeared. It reappeared a year later when the British arrested Dr. Naumann, one of Goebbels’ top-ranking officials, whose plot to subvert the respectable Free Democratic Party by infiltrating ex-Nazis into key positions was well on the way to succeeding.

In the 1960s the spectacular and unexpected success of the NPD (National Democratic Party of Germany) aroused worldwide fears of a Nazi revival. Founded in 1965 by Adolf von Thadden to unite the hitherto splintered and ineffectual “nationalist opposition,” the party shocked German and world opinion when in the 1966–67 *Land* (state) elections it gained admission to a number of *Land* parliaments (*Landstagen*) by substantially exceeding the required 5 percent of the vote. Careful not to fall afoul of the Constitutional Court, the NPD, run largely by ex-Nazis, appealed to exactly the same prejudices and national self-assertion to which Germans re-

sponded so overwhelmingly in the Hitler era. Jews were not openly denigrated, but the state of Israel and its policies were viciously attacked. The “domination by alien big powers,” reminiscent of the Nazi fiction of a “Judeo-Marxist world conspiracy,” was denounced, as were references to Nazi crimes. The party manifesto demanded “an end to the lie of Germany’s exclusive guilt which serves to extort continuously thousands of millions from our people,” apparently a reference to restitution and compensation payments to Israel and individual Jews. Beset like its predecessors by internecine leadership struggles and lacking forward-looking policies, the NPD failed to gain the qualifying 5 percent in the 1969 general election. This failure led to a crisis of confidence, which resulted in the party’s losing its seats in the various *Landstagen* after the 1970 elections. At that time it was doubtful whether neo-Nazism still commanded a politically meaningful potential, although the phenomenon still lingered on in violently “anti-Israel” weeklies like the *Deutsche National Zeitung* and in the publications of ex-Reich press chief Suedermann’s Druffel Verlag and similar publishing houses.

In Austria, neo-Nazism lacked the organizational framework or a sufficiently numerous following to qualify as a politically relevant force. Among the minuscule groupings more or less openly committed to propagating Nazi ideas and extolling Nazi achievements, Theodor Soucek’s Sozialorganische Bewegung Europas (SOBRE) was perhaps the most noteworthy in the early 1950s. It tried to coordinate efforts of Nazi collaborators and sympathizers in the former occupied territories to revitalize the Hitlerian “new order” in the context of the then emerging Europe. SOBRE enjoyed the support of Konrad Windisch, one of the founders of the Bund Heimattreuer Jugend (BHJ, Federation of Homeland-Faithful Youth), whose initials HJ, recalling the Hitler Jugend (Hitler Youth), proclaimed its ideological lineage and identification. Despite the insignificance of these movements, residual antisemitism and subliminal Nazi sympathies seemed to be more widespread in Austria than in Germany; thus the marked reluctance of Austrian authorities to prosecute and of juries to convict such war criminals and Eichmann aides as Murer, Novak, or Raiakovic, and the parsimoniousness of Austrian restitution.

Argentina figured prominently in the Nazis’ plans to save the movement and themselves after defeat. This tied in well with President Juan Peron’s dreams of Argentinean hegemony based on a modernized army and an independent armaments industry, which the Nazi experts were to develop. Nazis headed nuclear research institutes, while World War II air aces like Rudel and Galland advised the Argentinean air force and Professor Tank, a German jet designer, started an Argentinean aircraft industry. Eichmann and others prominent in the Final Solution (Klingenfuss, Rademacher, and Mengele) found sanctuary, while Johannes von Leers, head of an anti-Jewish department in Goebbels’ Propaganda Ministry, became an adviser to Peron. Moreover, the Nazi gospel continued to be preached in German in *Der Weg* (Buenos Aires) and other Duerer Verlag publications. After Peron’s fall

(1955), some of these fugitives moved to Egypt (a Nazi sanctuary since 1945), where military needs and anti-Israel, antisemitic resentments offered them scope. Years later the efforts of ex-Nazis to develop Egyptian jet engines, supersonic fighters, and rockets (the Messerschmidt, Brandner, and Pilz teams) caused greater international consternation than the activities of von Leers and ss General Bender in the Egyptian Ministry of National Guidance or of the former Gestapo chief Sellman as a police adviser on “anti-Jewish action.”

[Ernest Hearst]

Into the Present, 1970–2006

The interaction among right-wing populist movements, quasi-fascist political parties and organizations, and outright neo-Nazi groups blurred boundaries and created controversy over where specific groups fell on the political spectrum.

The European National Front was a network of right-wing Christian nationalist groups. Members and affiliates included groups in the Czech Republic (Narodni Sjednoceni (National Unity)); France (Renouveau Français (French Renewal)); Greece (Patriotike Summachia (Patriotic Alliance)); Italy (Forza Nuova (New Force)); Latvia (Nacionala Speka Savieniba (National Power Unity)); Netherlands (Nationale Alliantie (National Alliance)); Poland (Narodowe Odrodzenie Polski (National Rebirth of Poland)); Portugal (Partido Nacional Renovador (Party of National Renewal)); Serbia (Otacastveni Pokret Obraz (Dignity Fatherland Movement)); and Slovakia (Slovenska Narodna Jednota (Slovak National Unity)), Jednota Slovenskej Mladeze (Association of Slovak Youth). Delegations attending meetings included those from Hyrsi Avgi (Golden Dawn), Greece; Nationale Alliantie, Netherlands; and Noua Dreapta (New Right), Romania. Supporters included Alternativa Espanola (Spanish Alternative) and La Falange (the Phalanx, the former ruling party under the Franco dictatorship), Spain; Garde Franque, France; and English First, United Kingdom.

Other nationalist far-right parties and groups operated in Australia (National Action, Patriotic Youth League); Austria (Freiheitliche Partei Österreichs (Freedom Party)); Austria and Slovenia (Kärntner Heimatdienst (Carinthian Homeland Service)); Belgium (Vlaams Belang (Flemish Interest), formerly Vlaams Blok); Canada (Heritage Front, Reform Party); Denmark (Dansk Folkeparti (Danish People's Party), Nationalpartiet Danmark (Danish National Party), Fremskridtpartiet (Progress Party)); Estonia (Eesti Rahvuslaste Keskliit (Estonian National League), Eesti Kodanik (Estonian Civic Union), Eesti Paremäärmuslik Organisatsioon (Estonian Extreme Rightist Organization)); France (Front National (National Front), Mouvement National Républicain (National Republican Movement)); Germany (Republikanische Partei (Republican Party), Deutsche Volksunion (German People's Union), Nationaldemokratische Partei Deutschlands (National Democratic Party of Germany)); Greece (Ellinoko Metopo (Hellenic Front)); India (Bharatiya Janata (Indian People's Party)); Italy (Lega Nord (Northern League), Alleanza Nazionale (National Alliance), Movimento Sociale Fiamma Tricolore (Tricolor

Flame Social Movement)); Latvia (Nacionala Speka Savieniba (National Power Unity)); Malta (Imperium Europa); Netherlands (Centrumdemocraten (Democratic Center), Nederlandse Volks-Unie (Netherlands People's Union), Nieuwe Nationale Partij (New National Party), Nederlands Blok, Nationale Alliantie, Nieuw Rechts (New Right), Pim Fortuyn's List, Liveable Netherlands, Centrum Partij 86 (banned in 1998)); New Zealand (National Front, New Zealand First); Norway (Progress Party); Portugal (Popular Party); Switzerland (Swiss People's Party); Russia (National Unity, Liberal Democratic Party); and United Kingdom (British National Party, Scottish National Party).

Most of these right-wing nationalist political parties denied any connection to fascism or neo-Nazism, yet they echoed many of the same xenophobic (and sometimes antisemitic and racist) themes, and provided a recruitment pool for neo-Nazi organizers.

Conversely, right-wing politicians in several countries often tried to capture those voters who might be inclined toward neo-Nazism, without offending those segments of the electorate that would be alienated if the appeal were too apparent and the link too explicit.

They walked a political tightrope, especially when it seemed as if they had the opportunity to be acceptable to a mainstream public. Their political parties were described as “extreme right” or “radical right-wing populist” by academics, while their political critics called them quasi-fascist or outright neo-Nazi, with their actual ideologies ranging along a continuum. In some countries, the right-wing electoral parties were built around ethnonreligious forms of nationalism, as was the case with numerous militant Islamic political parties, some sectors of the Israeli right, some Christian Right political groups, and the Hindu nationalist Bharatiya Janata Party (BJP) in India. Another common form, and more easily recognized, were the right-wing ethnonationalist parties that featured xenophobia and populist rhetoric.

In Austria, where an explicit appeal would shut down other forms of political support, the candidacy of Jörg Haider was a prime example of these phenomena. Haider took over the Austrian Freedom Party (Freiheitliche Partei Österreichs (FPÖ)) in 1986 and moved it further to the political right. By 1999 the FPÖ was gaining more than 25 percent of the vote, and the next year joined with the conservative People's Party to form a ruling coalition government. The FPÖ stumbled, however, and in 2002 only attracted some 10 percent of votes.

The French National Front (Front National [FN]) was founded in 1972 by Jean-Marie Le Pen, but only began attracting significant voter support in the mid-1980s. Since then the party and Le Pen have become major players on the French political scene, pulling 10–15 percent of voters. In 2002 Le Pen stunned observers with more than 17 percent of the vote, placing him in the second round of the French presidential election. To the right of the FN is a splinter group, the Mouvement National Républicain, led by Bruno Mégret.

The German Republican Party (Die Republikanische Partei (REP)) was founded by a former member of the Waffen SS in 1983, and began running candidates, whose fortunes varied over time. In 1989 some candidates attracted around 7 percent of votes in a West Berlin election, but then vote totals dropped. In 1992 the party staged a comeback with vote tallies in the 8–10 percent range in some elections. To the right of the REP was the German People's Union (Deutsche Volksunion) and the National Democratic Party (Nationaldemokratische Partei Deutschlands).

Flemish Interest (Vlaams Belang), formerly called the Vlaams Blok, was one of several ethnonationalist regional political parties around the world that called for more autonomy or outright secession, and often were highly critical of immigrants and immigration. The Northern League in Italy was another example.

In Italy, Forza Italia, led by Silvio Berlusconi, forged a fractious parliamentary alliance with the more obviously right-wing Northern League (Lega Nord) and National Alliance (Alleanza Nazionale (AN)), coming to power briefly in 1994, and again in 2001. Further to the right was the Movimento Sociale Fiamma Tricolore. In the late 1980s and early 1990s the Italian Social Movement/National Right (Movimento Sociale Italiano/Destra Nazionale (MSI/DN)) fielded candidates including Alessandra Mussolini (Il Duce's granddaughter). These candidates gained as much as 45 percent of the votes cast in local elections. When the MSI/DN split in 1995, Alessandra Mussolini joined the faction that created the National Alliance (AN), and sat in the national Chamber of Deputies. She left the AN in 2002 after its leader denounced fascism while in Israel. She then founded Liberta d'Azione and won a seat in the European Parliament.

In the United States Pat Buchanan pulled significant vote totals when running as a Republican Presidential candidate in 33 state primaries in 1992, attracting three million votes. His similar campaign in 1996 generally attracted 15–25 percent of Republican primary votes in the states where he was on the ballot. Buchanan's support plummeted, however, when he ran as the Reform Party candidate in 2000. The rhetoric of Buchanan's speeches included specific phrases that seemed innocuous but had special meaning for militant sectors of the Christian Right and the armed militia movement. Critics charged that Buchanan flirted with antisemitism and racism. Notorious antisemite Lyndon LaRouche, who shifted from left to right yet ran as a Democrat, has appeared on the presidential primary ballot for decades, attracting tens of thousands of votes in some states. The Constitution Party led by Howard Phillips and the America First Party (a splinter from the Reform Party) also fielded candidates for office.

Russian variants included several groups that more openly engaged in neo-Nazi and antisemitic rhetoric. These groups frequently complained about a gigantic Jewish or Zionist conspiracy. One of the largest of over 100 nationalist groups in Russia is the Russian National Unity Party, founded in 1990 and led by Aleksandr Barkashov. The founder of the

ultranationalist Liberal Democratic Party is Vladimir Zhirinovskiy. In 2001 he caused a scandal when, as a member and deputy speaker of the lower house of parliament, the Duma, he refused to stand for a minute of silence in remembrance of the victims of the Nazi genocide. He later expressed regret for his actions, which he claimed did not reflect antisemitism. In 1998, however, Zhirinovskiy blamed Jews for starting World War II and provoking the Holocaust.

As extreme-right political parties gained election victories across Europe, the language used to describe them became more moderate, raising fears that the situation was not being openly confronted. As the Belgian political scientist Jérôme Jamin explained:

Can one still apply the term fascist to a xenophobic party like the Lega Nord now that it has been in power... for many years? Can one view France's Front National as a mere relic of Pétainism when it made it into the second round of the presidential election... and when cities such as Toulon, Orange, Marignane and Vitrolles have had mayors from the FN? In what terms is it possible to stigmatize the Vlaams Blok in northern Belgium – a direct offshoot of pro-Nazi collaboration during World War II – when this party is one of the most powerful in Flanders? It is very hard to use the old words to characterize those parties in power today. It was a lot easier yesterday when they were small and noisy racist parties instead of the big powerful actors they have now become.

While neo-Nazis interacted with right-wing and mainstream political parties, they remained tiny marginal movements compared to national populations, although they were capable of brutal acts of violence. Much of their energy, however, was devoted to organizing within their own subculture.

Some neo-Nazis studied the ideological writings of Julius Evola, who promoted high-culture intellectual fascism, and Corneliu Codreanu, advocate of a mystical-spiritual form exemplified by the Romanian Iron Guard. Others remained disciples of Hitler, or supported the pre-regime national socialism of the Nazi Party's left wing, associated with the Strasser brothers. Many overt neo-Nazis were networked internationally through Blood and Honour, which emerged from the racist skinhead scene. Based in the United Kingdom, in 2006 Blood and Honour claimed active branches in Australia, Canada, Croatia, Cyprus, Denmark, Finland, Flanders (Belgium), France, Germany, Greece, Italy, Netherlands, Portugal, Slovenia, Spain, Ukraine, and the United States. Blood and Honour recruited primarily through white supremacist music. Not all racist skinheads engaged in violence, but violence was a hallmark of the movement. In Canada, for example, neo-Nazi skinheads desecrated Jewish synagogues and cemeteries. In 2005, a report for the International Bureau of Human Rights estimated that there were more than 120,000 neo-Nazi skinheads worldwide. A true count was, of course, difficult because neo-Nazi organizations were rarely registered with any official agency, and they hid their true numbers.

United States

Postwar neo-Nazism in the United States began in earnest

when George Lincoln Rockwell organized the American Nazi Party in 1959, gaining much publicity but negligible support. The group was later renamed the National Socialist White Peoples Party. After Rockwell's assassination by a former party member in 1967, several splinter groups emerged, including the National Socialist Party of America led by Frank Collin, who garnered international headlines in the mid-1970s by threatening to lead a march through the Chicago suburb of Skokie, Illinois, home to many Holocaust survivors. Instead, after winning a legal battle over the free speech issue, Collin led his uniformed brownshirts in several demonstrations in other Chicago suburbs and neighborhoods and a downtown plaza.

The next few years saw a great many neo-Nazis run for office, winning several primaries and one state legislative post. This trend began in 1975–76, when a neo-Nazi named Arthur Jones ran for mayor of Milwaukee, Wisconsin. Jones, campaigning vigorously on radio and in newspapers, gained 5,000 votes and lost decisively against incumbent Mayor Henry Maier, a popular and strongly pro-Israel politician. In November 1976, Richard Johanson, a 31-year-old neo-Nazi, ran for the San Francisco Board of Education and received 9,000 votes. Other neo-Nazi candidates ran and lost in Houston (for mayor), in Chicago (for alderman), and Georgia (for governor and lieutenant governor). The notorious white supremacist J.B. Stoner of Georgia ran for several offices in the 1970s and later on a platform calling for the “eradication” of Jews and blacks. His best finish was in the governor's race in 1978, when he received 71,000 votes and came in fourth out of ten candidates. (In 1980 he was convicted for a church bombing in 1958.)

In August 1980, Tom Metzger, a Ku Klux Klan leader and Nazi sympathizer, surprised political analysts by winning the Democratic primary in the 43rd Congressional District in Southern California, the most populous district in the U.S., although he had fewer than 50 volunteers on his staff and less than \$10,000 in campaign contributions. As the Democratic Party nominee in the November general election, however, he received only 35,000 votes (14 percent of the total) and was defeated by the Republican incumbent.

In Detroit, Gerald Carlson, a former member of the Ku Klux Klan, the John Birch Society, and the American Nazi Party, who ran a campaign based on a single issue – white “superiority” over blacks and Jews – defeated the official party candidate in the Republican primary in Michigan's 15th Congressional District to face the Democratic incumbent in the fall of 1980. The Michigan Republican Party was so embarrassed by the victory that it asked voters to vote for his Democratic opponent. Carlson went on to gain 53,000 votes (about 32 percent) in the November general election.

On May 6, 1980, Harold Covington, one of the major leaders of the American Nazi Party, ran in the North Carolina Republican primary election for state attorney general, and although campaigning with virtually no money and no neutral media coverage, received 56,000 votes, 42.88 percent of the total, losing by a narrow margin.

The most successful electoral drive was by David Duke, who spent years moving through various neo-Nazi, Ku Klux Klan, and racist groups. The photogenic Duke attempted to sanitize his views, establishing in 1979 the National Association for the Advancement of White People. In 1989 Duke was elected to the Louisiana House of Representatives as a Republican. He lost his campaign for governor in 1991, but pulled 55 percent of white votes.

NEW FORMS. In the United States, Christian Identity became a significant variant of neo-Nazism in the 1970s by merging a racialized version of Protestantism called British Israelism with theories of racial superiority. By claiming that a tribe of Jews migrated to the British Isles and then to the United States, Identity adherents asserted that White Christian Protestants in the U.S. were the true descendants of the biblical Hebrews, the chosen people of God's Covenant. Contemporary Jews were dismissed as fakes. Adherents of Christian Identity, which had been condemned by Catholic and Protestant leaders, usually blended their theology with race hate and antisemitism. Throughout the 1980s, Richard G. Butler's Aryan Nations compound in Idaho served as the most visible racist Identity institution; however, most practitioners worshipped in small halls and private homes in the absence of an organized national religious structure.

Christian Identity theology foresaw an apocalyptic race war between white Christians and inferior Jews and blacks, seen as doing the bidding of Satan, in the End Times prophesied in the New Testament Book of Revelation. This confrontational stance led to violence, such as the 1999 attack by Buford O'Neal Furrow, Jr., who wounded several children and their teachers at a Jewish community center near Los Angeles, and then killed a Filipino-American postal worker. When arrested, Furrow proclaimed his act was a “wake-up call to America to kill Jews”.

The murder in Texas in 1998 of James Byrd, Jr., a black man, was in part motivated by the Christian Identity beliefs shared by some of the white attackers who dragged Byrd to death on a chain attached to a pickup truck. Christian Identity beliefs were often acquired through neo-Nazi prison gangs, as in this incident, especially through the Aryan Brotherhood, which operated inside and outside of prisons. Two California brothers with views similar to Christian Identity's carried out 1999 arson attacks on three synagogues and a reproductive services clinic, and murdered a gay couple.

The National Alliance was founded in the mid-1970s by William Pierce, a former supporter of Rockwell and the National Socialist White People's Party. Pierce used a pseudonym to pen two books that became staples of neo-Nazi libraries, *The Turner Diaries* and *Hunter*. The books celebrated the murder of Jews, blacks, and homosexuals as part of a white revolution against what became known in neo-Nazi circles as the “Zionist Occupation Government” (ZOG) in Washington, D.C.

In the 1990s, the National Alliance was the largest and most active neo-Nazi group in the United States. Pierce paid some \$250,000 in 1999 to purchase Resistance Records, a race-hate music company that produced and sold CDs and White Power paraphernalia to a mostly young audience. Within a few years the Alliance was collecting over \$1 million in annual sales and had more than a dozen full-time staff, as well as active members in over a score of states. The organization saw bitter feuds and near-collapse after Pierce's death in 2002.

White Aryan Resistance (WAR), founded by former California Klan leader Tom Metzger, brought the Third Position form of neo-Nazism to the United States, where it became popular in the late 1980s. The group collapsed after Metzger lost a civil lawsuit stemming from a murderous racial attack by several of his followers. Third Positionist groups such as National Vanguard and Volksfront continued to operate.

Ben Klassen invented the Creativity religion (originally World Church of the Creator) in 1973, and after his death, the organization eventually ended up in the hands of Matt Hale, later jailed for soliciting the assassination of federal judge. A follower of Creativity, Benjamin Nathaniel Smith went on a 1999 shooting spree across Illinois and Indiana. He was an equal-opportunity racist, wounding six Orthodox Jews on their way home from synagogue on a Friday evening, and a man of Taiwanese descent, and killing an African American and an Asian American.

VIOLENT UNDERGROUND. On November 3, 1979, a confrontation between the National Socialist Party of America (NSPA) and the Ku Klux Klan on the one hand, and the Maoist Communist Workers Party on the other, in Greensboro, North Carolina, led to the shooting death of five communists, one of them a Jew, and the wounding of ten others. Fourteen neo-Nazis and KKK members were arrested and charged with five counts of first-degree murder and conspiracy to commit murder, but they were subsequently acquitted.

Following this incident, a number of neo-Nazis and members of right-wing "Patriot" groups began to move underground, while others began to set up armed survivalist and "militia" units. A 1983 shootout involving law enforcement agents and Gordon Kahl, an organizer for the Posse Comitatus wing of this underground movement, prompted neo-Nazi leader Louis Beam to call for "leaderless resistance" against the government. Kahl later died in a stand-off with authorities. Members of one Oklahoma Christian Identity group, Covenant, Sword, and Arm of the Lord (CSA, not coincidentally the initials of the Confederate States of America), began planning and staging attacks, including the 1984 murder by Richard Wayne Snell of a black Arkansas state police officer.

During this period eight persons affiliated with Aryan Nations, the National Alliance, and the KKK formed an underground terror cell called the Order, known internally as the "Bruder Schweigen" (Silent Brotherhood). The Order staged armed robberies, and was responsible for the June 1984 assassination in Denver of Alan Berg, an outspoken Jewish radio

talk-show host. The government responded with arrest warrants, rounding up the cell and killing Order founder Robert J. Matthews in a December 1984 shootout. In 1985 the government raided the CSA headquarters. A second Order cell formed in 1986 and used arson attacks to target human rights advocates, before being rounded up by authorities.

The federal government issued conspiracy indictments in 1987 naming several neo-Nazi and Patriot movement leaders. A jury acquitted the defendants, but the incident only added to growing anti-government anger. This increased after two raids were mishandled by government authorities. In August 1992 a raid on the Weaver family, Christian Identity survivalists, at Ruby Ridge, Idaho left the mother and teenage son dead, along with a federal marshal. In April 1993 a standoff at the Branch Davidian compound in Waco, Texas led to a shootout and conflagration in which 74 men, women, and children in the group died. Four federal agents died during the course of the standoff.

On April 19, 1995, the anniversary both of the first battle of the American Revolution and the raid on the Branch Davidian compound, and the day CSA member Snell was executed for murdering a state trooper, Timothy McVeigh carried out the bombing that destroyed the Oklahoma City Federal Building, killing 168 people. McVeigh, a U.S. Army veteran of the 1991 Gulf War, had drifted into neo-Nazi circles, and sold copies of the *Turner Diaries*. Another group, the Aryan Republican Army, staged 22 bank robberies and bombings between 1992 and 1996. The *Turner Diaries* was required reading for members.

Germany

Both states of the divided Germany were effective in combating neo-Nazism. In Communist East Germany, all neo-Nazi parties were banned, while West Germany was quite stringent in its reaction to right- and left-wing terrorism and successful in containing neo-Nazism. However, a terrorist bomb that exploded during Oktoberfest in Munich in 1980, injuring several people, was attributed to a neo-Nazi group. After the reunification of the country a number of neo-Nazi youth gangs arose, especially in the former East Germany, exploiting economic turmoil and racism toward nonwhite immigrant "guest workers" (many of whom had resided in Germany for decades, or had been born there, and were prevented from becoming citizens by restrictive ethnicity-based naturalization laws).

An American neo-Nazi, Gary R. ("Gerhard") Lauck of Lincoln, Nebraska, was a major publisher of neo-Nazi publications and in the late 1970s began to smuggle them into Germany, which had banned them. Lauck was deported from Germany several times for distributing Nazi material; arrested in Denmark in 1995, he was extradited to Germany where he was convicted and jailed for inciting hatred and distributing banned materials.

Before reunification, there were approximately 18,000 members of extreme right-wing groups in West Germany, members of the National Democratic Party (NDP), Neo-Nazi

(NSDAP) and National Freedom groups, and others. After reunification in 1990, especially in the former East, thousands of young adults joined openly neo-Nazi groups. There followed a wave of violent attacks on refugees, immigrants, “guest workers,” and Jews. In 1992 and 1993 two attacks left eight Turkish women and girls dead and a number of other family members and friends seriously injured. During this period German officials banned 17 neo-Nazi organizations, but the groups continued to thrive underground. Small groups called *freie Kameradschaften* (free fellowships) were set up to operate on a regional level. In 2002 a young man, Marinus Schoeberl, was tortured and murdered by neo-Nazi youth north of Berlin in the village of Potzlow. The attackers thought he “looked like a Jew.” More than 100 murders by neo-Nazis and their allies occurred between reunification and the year 2006, with some 150 like-minded groups being monitored by government authorities; the number of adherents was estimated to be in the 10,000–25,000 range. At the same time, there were huge demonstrations in Germany against the rise of neo-Nazism and xenophobic attacks, and the number of neo-Nazis was tiny compared to the size of the population.

France

France’s collaborationist and antisemitic legacy during World War II was exploited by neo-Nazi groups to gain legitimacy in France in the late 1970s, as was the strong pro-Arab and anti-Israel position concerning the Middle East. Later, the increase in immigrants from Arab and Muslim countries became a major factor.

In 1980 there were several attacks against individuals in the Jewish quarter of Paris in July and August, and a bomb exploded on October 4 in front of the Rue Copernic synagogue, a few minutes walk from the Arc de Triomphe, killing four passers-by, two of them non-Jews and one of them an Israeli woman, and injuring over 20. A telephone caller claimed responsibility on behalf of the European Nationalist Fascists, a neo-Nazi group led by Marc Fredriksen. Two other synagogues, two Jewish schools, and a Jewish war memorial were machine-gunned.

The bombing had political ramifications since it was alleged that 10–20 percent of the 150 members of the European Nationalist Fascists (FNE) were members of the police, and the government was criticized for its failure to stop the perpetrators. Massive demonstrations took place after the bombing.

Sporadic neo-Nazi activity and violence continued over the next twenty years, built around anti-Jewish, anti-Arab, and anti-Muslim bigotry. In addition, antipathy toward Jews from Muslim immigrants also increased, and it was clear that antisemitic conspiracy theories were shared by a range of anti-Jewish groups, not just in France, but across Europe.

In the mid-1990s the Front National de la Jeunesse (National Front for Youth), claiming 12,000 members, pursued a revolutionary nationalist agenda. This tendency was supported by its parent group, the National Front, led by Jean-Marie Le Pen. The racist skinhead movement in France remained small

throughout the 1990s, but its list of targets was familiar, including not just blacks, Arabs, and Jews, but also communists and drug addicts. The Charlemagne Hammerskins, however, claimed 1,500 members in the late 1990s. They blended neo-Nazi lore with pagan satanism and distributed printed and online materials promoting race hate, antisemitism, Holocaust denial, and Hitler.

In 2005 France sought to ban all neo-Nazi groups after violent incidents increased from 27 in 2003 to 65 in 2004. French government agencies estimated that such groups had 3,500 members.

United Kingdom

John Tyndall was a major figure in organizing British neofascist groups. He left the League of Empire Loyalists and in 1960 joined elements from the White Defence League to create the British National Party (BNP). Tyndall became a national BNP organizer, and also worked with a paramilitary group established by Colin Jordan. In the 1960s, neo-Nazis in London carried out 34 arson attacks on Jewish institutions. In 1967, the National Front was formed through a merger of the BNP and the League of Empire Loyalists. Tyndall became chairman of the group, which gained consideration as a serious political movement, garnering electoral support in some districts.

There was a significant increase in racial tensions in England during the 1970s, due to the increased waves of African, Caribbean, Indian, Pakistani, and other “Third World” immigrants. Previously, Jews had been more or less secondary targets but this began to change. The NF made a considerable appeal to the British masses as a result of its constant emphasis on racism, on Britain’s loss of power and prestige, and the “grand conspiracy” theory that Jews or pro-Zionist non-Jews dominate the world with their liberal and radical policies, and their assertion that “white races” will become extinct through the “mongrelization” and integration policies espoused by black leaders and their Jewish/Zionist allies.

Tyndall left NF in a dispute to form the New National Front, which reclaimed the name British National Party in 1982. When the NF itself went through further splits, the reformed BNP emerged as the leading far-right electoral party in Britain.

The original skinhead subculture emerged in Britain in the 1970s, but was converted into a racist movement in the 1980s by organizers from the British National Front, including “Ian Stuart” (Ian Stuart Donaldson), who was lead singer in the white power band Skrewdriver. Beginning in 1992 a militant neo-Nazi group named Combat 18, established to provide security for the BNP, was responsible for a wave of street-fighting violence. In April 1999, bombings targeted the black community of Brixton, the Asian community of Brick Lane, and a gay bar in Soho where three died. In all 139 people were injured. David Copeland, active with the neo-Nazi British National Socialist Movement, told police he had acted alone, but had tried blaming the bombings on Combat 18, which he described as a “bunch of yobs.” Another neo-Nazi group,

the White Wolves, had also been suspected of the bombings. Copeland apparently learned how to make the bombs from Internet instructions. Nick Griffin, educated at Cambridge and trained as a leader of the National Front, took over the British National Party from Tyndall in 1999. In recent years the BNP has combined racism with anti-European Union sentiment to gain a small but significant degree of public support.

Russia

Russian nationalists and neo-Nazis began to emerge and intersect after the collapse of the Soviet Union. Pamyat (Memory) was formed from a number of smaller groups around 1980. It split up in 1985. The National Patriotic Front/Pamyat was formed in 1987 but became inactive in the late 1990s. The Russian National Union, founded by Konstantin Kasimovsky with Aleksei Vdovin in a leadership role, split off from Pamyat in the early 1990s. The group became the Russian National Socialist Party in 1998. A similar group, also split off from Pamyat and the most popular such organization, is Russian National Unity, led by Aleksandr Barkashov. Some followers have used violence, and took credit for the 1998 bomb that exploded outside a synagogue in Moscow, injuring three. The organization began splitting in 2005 as new leaders started to emerge and followers chose sides. The National Front Party, led by Ilya Lazarenko, is more open in celebrating the Nazi heritage, as is the tiny Werewolf Legion, known for terrorist attacks.

In January of 2006, Russian President Vladimir Putin acknowledged that antisemitism and the growth of neo-Nazism in Russia were problems when he attended ceremonies marking the sixtieth anniversary of the liberation of Auschwitz. Also in 2006, Moscow's police chief promised to deploy officers to protect synagogues after a 20-year-old man was arrested for charging into the city's Chabad Bronnaya Synagogue with a knife, shouting "I will kill Jews." He managed to stab at least eight people. Russian newspapers noted that the young man had been reading a book about the Jews betraying Russia.

In a 2005 report for the International Bureau of Human Rights, Semyon Charny estimated that there were more than 50,000 neo-Nazi skinheads in Russia and more than a dozen neo-Nazi organizations there.

Scandinavia

In Scandinavia a number of groups emerged that oscillated between national socialist electoral activity and neo-Nazi activism: in Denmark, Danmarks Nationalsocialistiske Bevegelse (National Socialist Movement of Denmark); in Finland, Blood and Honour; in Norway, Norges Nasjonalsosialistiske Bevegelse (National Socialist Movement of Norway), Blood and Honour, and Vigrid (a branch of the National Alliance); in Sweden, Nationalsocialistisk Front (National Socialist Front), Svenska Motståndsrörelsen (Swedish Resistance Movement), Vitt Ariskt Motstånd (White Aryan Resistance), Riksfrenten (Reich Front), Ariska Brödraskapet (Aryan Brotherhood), and a branch of the U.S.-based Creativity Movement.

In Sweden, the number of active neo-Nazis has fluctuated between 100 and 1,000, with at least ten times as many supporters. There were violent acts, such as the murder of John Hron in 1995 by neo-Nazi skinheads. In Norway, a small national socialist skinhead movement has flourished.

The Future

It appears that neo-Nazism has become a permanent fixture on the global political scene. Limiting the growth of neo-Nazi movements in the West is the historical memory of Hitler and his SS, who spread war and genocide across Europe. The main forms of postwar neo-Nazism are xenophobic nationalism and National Socialism, but increasingly there are hybrids similar to the interwar clerical fascism. These theocratic forms of fascism have already produced several neo-Nazi movements. It is possible that if militant religious fundamentalism, especially within Islam, continues to expand, there will more intersections with fascist and Nazi ideas, a process that is already producing lethal threats to societies around the world. Whether these could ever approach or surpass the destruction of Hitler's Nazi movement cannot be predicted.

NEO-ORTHODOXY, name of the modernistic faction of German *Orthodoxy, first employed in a derogatory sense by its adversaries. Its forerunners were to be found among the more conservative disciples of Moses *Mendelssohn and N.H.

*Wessely, like Solomon *Pappenheim and Naḥman b. Simḥah Barash. At the time of the controversy over the *Hamburg Temple (1818), the participants in the campaign against the reformers included some rabbis who adopted a stance similar to that later advocated by the Neo-Orthodox; for example those of Amsterdam, Hanau, Rawicz, and other communities, who produced the polemic, *Elleh Divrei ha-Berit* (1819). Other fore-runners were the new Orthodox preacher of Hamburg, Isaac *Bernays; Jeremiah *Heinemann (1788–1855) of Berlin, the editor of *Jedidja* (1817–31); and Solomon Plessner (1797–1883) of Breslau, the author of various apologetic works.

However, the ideology of Neo-Orthodoxy crystallized later and its institutions were only established during the second half of the 19th century. In essence, the movement is connected with Samson Raphael *Hirsch and his doctrine of *Torah im derekh erez* ("Torah together with the conduct of life," meaning in this context secular culture), which he expressed in his major writings. In 1851 he became rabbi of the Orthodox separatist community of Frankfurt and was able to realize his ideas and plans in a suitable environment. During the second half of the 19th century, the rabbinical leadership had already suffered defeat in the campaign against reformers and assimilationists. The small groups which remained faithful to tradition referred to themselves as "remnants." At the same time, the rising tide of the Reform movement was curbed. The process of Jewish integration into general society was well advanced and was no longer conditional on their "religious" reform. Moreover, the radical line adopted by such Reform leaders as Abraham *Geiger and Samuel *Holdheim during those years had alienated important elements among the non-Orthodox (Leopold *Zunz, Zacharias *Frankel, and others).

The development of a trend combining features from both *Reform and *Orthodoxy thus became feasible. From the Reform movement it adopted the aim of integration within modern society, not only on utilitarian grounds but also through the acceptance of its scale of values, aiming at creating a symbiosis between traditional Orthodoxy and modern German-European culture; both in theory and in practice this meant the abandonment of Torah study for its own sake (as in the classical yeshivah) and adopting instead an increased concentration on practical *halakhah*. Other Reform features were the replacement of Hebrew by German as the language of Jewish culture; the acceptance of the Haskalah program in educational matters; the struggle for emancipation and the positive appreciation of the Exile; the exchange of the material idea of "Return to Zion" for that of the "Universal Mission"; German patriotism; the renouncement of a particular Jewish appearance (involving readiness to cut off the beard and the side-locks, to uncover the head when not at worship, etc.); the education of women, including their participation in religious life and their political emancipation; the abolition of the coercive powers of the community; and the acceptance of the liberal concept of freedom of conscience. From Orthodoxy the faction took: dogmatism (*emunat ḥakhamim*, "faith in the rabbis"); reservation toward the preoccupations of the

Wissenschaft des Judentums and opposition to the principle of freedom of research; the acceptance of the authority of the Shulḥan Arukh and the traditions and customs of the late 18th-century German communities; acceptance of the Orthodox position on laws which came into being as a result of its campaign against the reformers, such as those against the demands for changes in synagogue usage; excessive strictness in the observation of the precepts and customs; and acquiescence in the disruption of the Jewish community and the sectarian nature of those remaining true to Orthodoxy. The second most important leader of this trend was Azriel (Israel) *Hildesheimer, who founded a rabbinical seminary (1873) and broke the monopoly of the non-Orthodox in Jewish studies. He thus made possible the integration of the intelligentsia into the neo-Orthodox circle, in contrast to Hirsch, whose system was tailored to the requirements of the ordinary community members, the so-called *ba'alei batim*. Hildesheimer was more attached to ancient rabbinic Judaism than Hirsch and his attitude to Jewish affairs in general was more positive, while his approach to general culture was less enthusiastic. As a result of this, the role Hildesheimer played in world Jewish affairs led to the creation of contacts between the German Neo-Orthodoxy, East European Jewry, and the *Hibbat Zion movement. In 1876 a law (the *Austrittsgesetz*) was passed which enabled an individual to secede from a church or community without changing his religious affiliation. This facilitated the secession (*Austritt*) of Orthodox minorities from communities where they considered that coexistence with the reformist leadership was impossible. In many places this situation induced the reformers to make far-reaching concessions to the Orthodox minority. German Orthodoxy thus became split over the question of whether the new law should be exploited in order that they might secede from all communities administered by reformers. To Hirsch, the *Austritt* concept became a supreme religious principle, while Seligmann Baer (or Dov Baer) *Bamberger, his Orthodox opponent, showed reserve toward both the modernism and the extremist separatism of Hirsch, and preferred to preserve the unity of the community. After some time, German Orthodoxy was again divided on another issue: the attitude toward *Zionism. One section joined the *Agudat Israel movement, while the other showed a preference for the *Mizrachi and *Ha-Po'el ha-Mizrachi and later for the *Po'alei Agudat Israel.

[Moshe Shrager Samet]

NEOPLATONISM, the system elaborated by Plotinus and his pupil Porphyry on the basis of antecedent Middle Platonic and neo-Pythagorean developments. The system was modified by their successors, the main post-Plotinian currents and schools of late antiquity being (according to K. Praechter): the Syrian school founded by Iamblichus; the school of Pergamum (Sallust, Julian); the school of Athens (Plutarch, Syrianus, Proclus, Damascius); the school of Alexandria (Hierocles, Hermias, Ammonius and his followers: the pagans, Asclepius and Olympiodorus, and the Christians, Philoponus, Elias, David, and Stephanus); and the Neoplatonists of the West (Macrobius, Chalcidius, Boethius). In the Middle Ages Neoplatonism survived in the Latin West (Johannes Scotus Erigena) and the Byzantine East (Michael Psellus) and within the Arabo-Hebraic cultural sphere, and it underwent a revival during the Renaissance (Gemistos Plethon in the Byzantine East; Marsilio Ficino, *Pico della Mirandola, and Giordano Bruno in the West).

Neoplatonism postulates the derivation by a process of emanation of a hierarchically ordered series of spheres of being, leading from an ineffable and unqualified first principle (the One) to the material world. The "descent" is associated with increasing determination and multiplicity (imperfection). Although matter at the lowest rank in the scale of being is the principle of evil, the material world, as a reflection of the intelligible, possesses goodness and beauty (cf. *Gnosticism), and by contemplation of it the human soul ascends to the spiritual world. The human soul, being spiritual and self-subsistent, is independent of the body and having descended from the supernal world, reverts to its source by means of ethical and intellectual purification (or by theurgy; e.g., Iamblichus). The stages of ascent were commonly designated (after Proclus) the *via purgativa* (purification), *via illuminativa* (illumination), and *via unitiva* (union), the highest stage, a kind of *unio mystica* (mystical union) and apotheosis, being the sole means by which the One is apprehended. Individuation and investiture of the soul with a body is devalorized; release from the fetters of the body in ecstasy or in death is equivalent to salvation, this philosophical soteriology tending toward combination with a doctrine of metempsychosis.

Neoplatonism is thus seen to be a religious movement and a doctrine of salvation as well as a philosophical system. As such, it was potentially an antagonist and an ally of the monotheistic faiths. Ancient Neoplatonism (excluding the school of Alexandria) was hostile to Christianity: Porphyry and Julian wrote refutations of Christianity; Iamblichus, Proclus, and Damascius were implacable opponents of Christianity. Indeed, Neoplatonism as a philosophical interpretation of pagan mythology (e.g., Iamblichus and Proclus) represents the dying gasp of ancient paganism. The fundamental postulates of Neoplatonism conflict with those of the monotheistic faiths: an impersonal first principle, rejection of creation and revelation, the conception of man as essentially soul, and the attendant soteriology-eschatology (including metempsychosis) involving submergence of the individual soul in the uni-

versal soul. Nevertheless, for monotheistic philosophers the contradictions were not insurmountable. In fact, the method of figurative interpretation cultivated by ancient Neoplatonists (after the Pythagoreans and Stoics) in order to identify pagan mythological themes with philosophical ideas (Proclus, for example, identified the henads of his system with the traditional gods) was employed by monotheistic philosophers in order to read their neoplatonic doctrines into the text of Scripture. The ladder of Jacob's dream was thus interpreted as a symbol of the soul's ascent (e.g., by Ibn Gabirol; see A. Altman, *Studies in Religious Philosophy and Mysticism* (1969), 54–55; and A. Nygren, *Agape and Eros* (1953²), 230, 375, 441). Creation became a metaphor for eternal procession. Revelation and prophecy were discussed in terms reminiscent of the *unio mystica*. This identification was not without some basis in ancient Neoplatonism either, if one considers the aspect of grace or divine initiative implicit in *Enneads* 5:3, 17 and 5:5, 8, or the use of the Chaldean Oracles and Orphic Hymns by Porphyry and Iamblichus. Assimilation to the divine, the goal of philosophy according to the neoplatonic introductions to Aristotle of the Alexandria school, resonated with similar ideals of the monotheistic traditions. The deep spirituality of Neoplatonism promoted the kind of synthesis with religious feeling that finds moving expression in Ibn Gabirol's poem, *Keter Malkhut*.

In order to grasp the character of Neoplatonism as it was transmitted to the medieval world of Judaism and Islam, it is necessary to understand that it was closely bound with much of the religious and pseudo-scientific heritage of late antiquity (alchemy), Hermetism (see *Hermetic Writings), magic, theurgy. Also, Neoplatonism was not simply an amplification of *Plato. Plotinus admitted into his system those aspects of Aristotelianism (also Pythagoreanism and *Stoicism) which met its requirements. Porphyry went even further and initiated the reception of *Aristotle's lecture courses into the Neoplatonic curriculum. The school of Alexandria devoted much of its labors to commentaries upon Aristotle. The thesis that the views of Plato and Aristotle coincided, if properly understood, a theme traceable to Ammonius Saccas, the teacher of Plotinus, was embraced by Porphyry and influenced the course of Neoplatonism and its absorption within the Arabo-Hebraic milieu (cf. al-*Fārābī's *On the Harmony of the Opinions of the Two Sages, the Divine Plato and Aristotle*).

While reception of Neoplatonism in the medieval Latin West was mainly confined to Proclus and Pseudo-Dionysius, the Arabo-Hebraic milieu was saturated by numerous currents. Plotinus was conveyed in the guise of the *Theology of Aristotle* (a paraphrase of parts of Books 4–6 of the *Enneads*), through other paraphrases ascribed to "the Greek Sage," and a work entitled *The Divine Science* (J. van Ess, in bibl., 334 ff.). The *Theology of Aristotle* is extant in a shorter (vulgate) and longer version, the latter preserved in an Arabic manuscript in Hebrew characters (in Leningrad). This longer version was translated (on the basis of a Damascus manuscript) into Hebrew and Italian by a Cypriot Jewish physician, Moses Arovas,

who was also instrumental in having it rendered into Latin (S.M. Stern, in bibl., 59 n. 4, 79 n. 1).

Underlying the longer version of the *Theology of Aristotle* is another Aristotle pseudograph discovered by S.M. Stern and called by him “Ibn Ḥasdāy’s Neoplatonist” (it was incorporated by *Ibn Ḥasdai in his *Ben ha-Melekh ve-ha-Nazir; see Altmann and Stern, in bibl., 95ff.; Stern, in bibl.). (On knowledge of Porphyry’s work in the medieval world of Islam, see J. van Ess, in bibl., 338; R. Walzer in *Encyclopaedia of Islam*, 2 (1965), 948–50.) Proclus’ *Elements of Theology* was transmitted in the guise of the Arabic *Kitāb al-ḥayr al-maḥḍ* (“Book of the Pure Good”), known in the West as *Liber de causis* and generally understood to be a work by Aristotle, and three propositions of the *Elements of Theology* have been recovered in Arabic. Proclus’ work *On the Eternity of the Universe* was also known. (For the transmission of works by Proclus, see J. van Ess, in bibl., 339ff.; H.D. Saffrey, in *Miscellanea Mediaevalia*, 2 (1963), 267ff.; and R. Walzer in *Encyclopaedia of Islam*, 1 (1960), 1340.) Another pseudo-Aristotelian work of neoplatonic character was the *Liber de pomo*, which was extremely popular and available in Arabic, Persian, and Hebrew (see J. Kraemer, in *Studi orientalistici in onore di Giorgio Levi della Vida*, 1 (1956), 484–506). Neoplatonic ideas are also associated with pre-Socratics (particularly Pythagoras and Empedocles) in Arabic doxographic and gnomological collections (e.g., Ṣāʿid al-Andalusī’s *Ṭabaqāt al-umam* and *al-Shahrastānī’s al-Milal wa al-niḥal*). *Empedocles in neoplatonic dress is also preserved in *The Book of Five Substances*, of which a Hebrew translation from Arabic is extant (D. Kaufmann, *Studien ueber Salomon ibn Gabirol* (1899), 16ff.). Teachings of the school of Alexandria were transmitted mainly by Syriac-speaking Christians. The accommodation of Christian beliefs in that school (e.g., by Ammonius; see Westerink, in bibl. xii–xxv) may have served as a model for adjustment to religious belief on the part of Islamic and Jewish philosophers.

Medieval Islamic and Jewish Neoplatonism is not confined to philosophers. In both Judaism and Islam Neoplatonism entered the mystical stream. One finds such influence, for example, in the later Sufi works of al-*Ghaḥālī (the end of his *Mishkāt al-anwār*); it permeated Jewish kabbalistic circles in Spain and Provence, transforming an earlier gnostic tradition, and had an impact upon the German pietists (Scholem, *Mysticism*, 117). Israeli’s *Chapter on the Elements* (“The Mantua Text”), largely based upon “Ibn Ḥasdāy’s Neoplatonist,” was studied by the Gerona kabbalists, attracted by the similarity between its emanationist scheme and their own system of *Sefirot*, and it was commented upon by *Azriel of Gerona (*Perush ha-Aggadot*; see Altman and Stern, in bibl., 130–2; Stern in bibl., 61).

Isaac *Israeli is the fountainhead of Jewish Neoplatonism. He defines philosophy, following the neoplatonic introductions to Aristotle, as assimilation to God according to human capacity (from Plato’s *Theatetus* 176b; see Altmann and Stern, in bibl., 28ff., 197). Ascent of the human soul to the divine is described according to Proclus’ three stages (*ibid.*, 185ff.), the

ultimate stage depicted as becoming angelic or divine, an experience to which he applies the term *devekut*, thus anticipating its employment by later Jewish philosophers and mystics (Altmann and Stern, in bibl., 190). The famous Plotinus passage on his own ecstatic union with the One (*Enneads*, 4:8, 1) may have inspired Israeli; quoted in the *Theology of Aristotle* and in the *Rasāʾil Ikhwān al-Safāʾ* (“Epistles of the *Brethren of Sincerity”), it is also referred to by Moses *Ibn Ezra, Ibn *Gabirol, and Shem Tov ibn *Falaquera (Altmann and Stern, in bibl., 191–2). The neoplatonic doctrine concerning the unknowability of the first principle is expressed in Israeli’s thesis that only God’s existence (or quoddity: *anniyya*, *ḥaliyya*) is knowable, and not his essence (quiddity: *mahiyya*), a distinction perpetuated by *Baḥya ibn Paquda, *Joseph ben Ṣaddik, *Judah Halevi, and Abraham *Ibn Daud (Altmann and Stern, in bibl., 21–23).

The transplantation of Jewish thought to Andalusia is marked by an initial neoplatonic direction inaugurated by Ibn Gabirol. His *Mekor Ḥayyim* is unique in that it sets forth a philosophical system of neoplatonic tincture without any admixture of Jewish teaching. Significantly, the only authority named is Plato. Characteristically, the goal of human existence is the conjunction (*ittiṣāl*, *applicatio*) of the human soul with the supernal world through knowledge and action, i.e., intellectual and ethical purification (1:2; Arabic fragments published by S. Pines in *Tarbiz*, 27 (1958), 225–6). The fruit of the study of philosophy is said to be liberation from death and conjunction with the source of life (5:43). In the neoplatonic manner, knowledge of the First Essence is precluded because it transcends everything and is incommensurable with the intellect (1:5; Pines, *ibid.*, 224–5). Like Plotinus, Ibn Gabirol tends to rely upon concrete imagery from the world of senses in order to explain suprasensuous phenomena. But the insertion of will (*irāda*, *voluntas*) after the First Essence and his universal hylomorphism set his system apart from that of Plotinus.

Though the impact of the *Mekor Ḥayyim* was greater upon Christian scholastic philosophy than it was in the Jewish philosophical tradition, it did exert some influence in Jewish circles. Moses ibn Ezra quoted it in his *Arugat ha-Bosem* and a Hebrew epitome was made by Falaquera. Also, Ibn Gabirol’s views are quoted by Abraham *Ibn Ezra in his commentaries, from which it can be seen how Ibn Gabirol bridged between his Neoplatonism and Judaism through figurative biblical interpretation.

Ibn Gabirol’s successors do not evince his depth or originality. Baḥya ibn Paquda combines commonplace neoplatonic themes (e.g., God’s absolute unity as distinct from the relative unity of this world) with his mystical pietism. The anonymous (Pseudo-*Baḥya) *Kitāb Maʾānī al-Nafs* treats its main theme of psychology in a neoplatonic manner. The soul is a spiritual substance whose home is the supernal world. In its descent it assimilates impressions from the celestial spheres and the zones of the elements (a gnostic-Hermetic notion), and it reascends by means of ethical and intellectual purification, whereas evil souls may be confined to the region be-

neath the heavens (cf. Altmann and Stern, in bibl., 114). There are also neoplatonic elements in *Abraham b. Ḥiyya's writings (his theory of emanation and doctrine of metempsychosis), and Joseph ibn Ṣaddik makes a common neoplatonic motif – that man is a microcosm – the theme of his work (*Ha-Olam ha-Katan*); but no one, aside from Ibn Gabirol, is as deeply committed to a neoplatonic world view as is Abraham ibn Ezra, even as regards such sensitive subjects as creation and prophecy. Also to be considered is Judah Halevi, whose notion of “the divine influence” (*al-Amr al-Ilāhi/ha-inyan ha-Elohi*) may be of neoplatonic origin and whose idea of the God of Abraham is said to have been “conceived metaphysically in terms of the neoplatonic idea of God” (Guttmann, *Philosophies*, 133).

The Aristotelian reaction in the Islamic world (*Averroes) is paralleled on the Jewish side, where in the middle of the 12th century Aristotelianism begins to displace Neoplatonism as the regnant system. However, despite Ibn Daud's strictures against Ibn Gabirol and the authoritative opinion of *Maimonides in his disesteem for Israeli, neglect of Ibn Gabirol, and contempt for popular neoplatonic works, Neoplatonism did not entirely lose its appeal for Jewish thinkers. In fact, Ibn Ḥasdai respected Israeli, as did Falaquera. Furthermore, Aristotelianism was itself thoroughly suffused with neoplatonic themes. Maimonides was far from untouched by neoplatonic influence. Words for emanation occur approximately 90 times in the first two parts of the *Guide* (D.H. Haneth, in *Tarbiz*, 23 (1952), 178). Neoplatonic traces are also discernible in his description of knowledge in terms of light and lightning metaphors (from *Avicenna or *Avempace: Pines, *Guide of the Perplexed*, civ–cv), his insistence upon denying positive attributes of God, his placing limitations upon human knowledge, and perhaps the idea of assimilation to the divine at the end of the *Guide* (3:54).

The last work in the tradition of Jewish Neoplatonism is Judah *Abrabanel's *Dialoghi di amore*, written in the atmosphere of the Renaissance revival of Neoplatonism in the manner of contemporary discussions of the *Symposium* and love treatises (see J.C. Nelson, *Renaissance Theory of Love* (1958), passim). Love is a universal unifying force. The neoplatonic One and the theory of emanation are ascribed to Plato. Divine intellect (wisdom) emanates from God as light emanates from the sun, and this intellect is the creator of the world (cf. *Enneads*, 5:9, 3), containing all essences or forms in a simple and unified way (S. Caramella (ed.), *Dialoghi d'amore* (1929), 348). Judah Abrabanel was clearly influenced by Ibn Gabirol, whom he mentions by name along with his work (*ibid.*, 246).

NE'OT MORDEKHAI (Heb. נְאוֹת מֹרְדֵכַי; “Pastures of Mordecai”), kibbutz in northern Israel, 5 mi. (8 km.) S.E. of *Kiryat Shemonah. When the village was founded in 1946, Arabs launched an attack and two of the volunteers who were helping set up the first huts were killed. The founding members were from Czechoslovakia, Austria, and Germany. In 1970 the kibbutz had 625 inhabitants, dropping to 489 in 2002. Originally affiliated with Ha-Kibbutz ha-Me'uhad, Ne'ot Mordekhai decided, after the 1951 split in the movement, to remain outside any kibbutz federation, thus becoming the only unaffiliated kibbutz in the country. Kibbutz farming included field crops, fruit orchards, turkeys, and beehives; it also operated the Naot shoe factory, Naot Toys, and Palrig, manufacturing, marketing, and exporting polyethylene and polypropylene. The kibbutz is named after the Argentinian Zionist Mordecai Rozovsky.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

NEPHILIM (Heb. נְפִילִים), a race of giants said to have dwelt in pre-Israelite Canaan (Num. 13:33). Genesis 6:1–2 relates that the “sons of gods,” i.e., divine or angelic beings, took mortal wives; verse 4 continues, “It was then, and later too, that the Nephilim appeared [lit., were] on earth – when the divine beings cohabited with the daughters of men, who bore them offspring. They were the heroes [Heb. *gibborim*] of old, the men of renown.” This could mean that the Nephilim were contemporaneous, but not identical, with the offspring of divine beings and earthly women, who were called *gibborim* (so, e.g., Morgenstern, in *HUCA* 14 (1939), 85ff.). The above translation, however, follows an ancient tradition in equating the Nephilim and the *gibborim* as offspring of the union of *angels and mortals.

In apocryphal writings of the Second Temple period this fragmentary narrative was elaborated and reinterpreted. The angels were then depicted as rebels against God: lured by the charms of women, they “fell” (Heb, נָפַל *nfl.*), defiled their heavenly purity, and introduced all manner of sinfulness to earth. Their giant offspring were wicked and violent; the Flood was occasioned by their sinfulness. (None of these ideas is in the biblical text.) Because of their evil nature, God decreed that the Nephilim should massacre one another, although according to another view most of them perished in the Flood. One version asserts that the evil spirits originally issued from the bodies of the slain giants. These giants, or their offspring, are identified as Nephilim (See 1 En. 6–10, 15–16; Jub. 7:21ff.). As this dualistic myth does not appear in the apocalypses of Baruch and Esdras nor in the *aggadah* of the talmudic period, it was apparently rejected as incompatible with Jewish monotheism. The “sons of God” are explained in the Targum to Genesis

6:4 and the Midrash (Gen. R. 26:5) as young aristocrats who married the daughters of commoners. The Targum renders both *gibborim* and Nephilim by *gibbaraya*; the Midrash (Gen. R. 26:7) lists seven names applied to giants. The Babylonian Talmud mentions the names of Shamhazzai, Uzza, and Uzziel, the leaders of the fallen *angels in Enoch, but does not say that they were angels: *Yoma* 67b alludes to the sins of Uzza and Uzziel; *Niddah* 61a states that Sihon and Og were descendants of Shamhazzai. In Deuteronomy 3:11 *Og is described as a giant, and this theme was developed to a large degree in aggadic legend. In post-talmudic literature (cf. Rashi, *Yoma* 67b) the long-suppressed myth came to the surface again. The Palestinian Targum gives the orthodox rendering of Genesis 6:1, but translates verse 4 as: "Shamhazzai and Uzziel fell from heaven and were on earth in those days" – identifying the Nephilim as the fallen angels rather than their children. The same identification is found in a late Midrash, which calls the fallen angels Uzza and Uzziel; another passage in the same document says the Nephilim were descendants of Cain (*Aggadat Bereshit*, ed. S. Buber, introd., p. 38). The Zohar (1:58a) also identifies the Nephilim with the fallen angels. The standard medieval Bible commentators generally followed the classical *aggadah* in rejecting the mythological interpretation and asserting that the marriages in Genesis 6 were human. Some variant opinions about the "sons of God" are offered – e.g., that their distinction was not only social, but physical and even moral, and that the offspring were called Nephilim because they "fell short" of their fathers in these respects (Nahmanides, Abrabanel).

NEPPI, HANANEL (Grazziadio; 1759–1863), Italian rabbi and physician. Neppi was born in Ferrara and studied under Jacob Moses *Ayash and Solomon Lampronti. He was a rabbi in Ferrara, and represented his community at the *Assembly of Jewish Notables called by Napoleon in Paris (1806). In 1822 he settled in Cento, where he was rabbi until his death. (The inscription on his tombstone was engraved on a wall of the Cento synagogue.)

His works include *Zekher Zaddikim li-Verakhah*, a biographical and bibliographical lexicon of earlier Jewish scholars, modeled on the *Shem ha-Gedolim* of H.J.D. *Azulai and printed together with the *Toledot Gedolei Yisrael* of Mordecai Samuel *Ghirondi (1853); *Livyat Hen*, a collection of responsa in six volumes, in manuscripts, some of which were printed by Yare (1908); sermons (in Mss.). An ardent student of Kabbalah, Hananel was styled "*hakham hen*" by his contemporaries. A catalog of his library was published at Lemberg in 1873.

[Shlomo Simonsohn]

NERGAL-SHAREZER (Heb. נֶרְגַל שַׁרְעֶזֶר, נֶרְגַל שַׁרְעֶזֶר) Akk. *dNergal šar-ušur* ("Nergal protect the king!"), classical: Neriglissar), high-ranking official (*Rab Mag*) of Nebuchadnezzar (Jer. 39:3, 13). Nergal-Sharezer took part in the siege and conquest of Jerusalem in 587 B.C.E. He is probably identical with Neriglissar, a son-in-law of Nebuchadnezzar, the circumstances of whose succession to Evil-Merodach as king of Babylon are unknown, and who reigned from 560 to 556 B.C.E.

BIBLIOGRAPHY: B.H. Langdon, *Die neubabylonischen Koenigsschriften* (1912), 208–19; D.J. Wiseman, *Chronicles of the Chaldean Kings* (1956), 37ff.; I. Ephal, in: *EM*, 5 (1968), 926–7.

NERIAH (Menkin), MOSHE ZEVI (1913–1995), Israeli rabbi and *rosh yeshivah*. Neriah was born in Lodz, Poland. His father, R. Petahiah Menkin, later served as rabbi in various towns in Belorussia. At the age of 13, Neriah studied at the clandestine yeshivah in Minsk, and later in Shklov. In 1930 he immigrated to Erez Israel to study in the Merkaz Ha-Rav Yeshivah established by Rabbi A.I. Kook, and while still there took a prominent part in the *Bnei Akiva movement, formulating its educational program and editing its monthly *Zera'im*. He received *semikhah* from Rabbi J.M. *Harlap. Neriah was a youth delegate to the 20th and 21st Zionist Congresses. In 1940, he founded the Bnei Akiva Yeshivah in Kefar ha-Ro'eh, where he introduced many original educational principles which opened a new chapter in Torah education in Israel, including youth camps attached to the yeshivah. From this yeshivah there developed a network of some 20 Bnei Akiva yeshivot.

Neriah was particularly active in spreading Torah education, conducting study courses in Talmud over the radio, and lecturing extensively. A prolific writer, he devoted himself to halakhic problems connected with the emergence of the State, contributing articles to *Dat u-Medinah* and publishing *inter alia Milhemet Shabbat* on the right to wage war on the Sabbath; *Kehal Gerim* on conversion; *Mishmeret Yihudenu* on the "Who is a Jew?" question; and *Ki Sheshet Yamim Asah Ha-Shem* on the theological aspects of the Six-Day War. Following the reorganization of the educational system, he was elected to the Seventh Knesset in 1969, where he devoted himself particularly to questions of education, but was not a candidate for the Eighth Knesset.

In 1973 he published his *Massekhet Nazir*, a biography presenting the system of thought of R. David *Cohen, and was awarded the Tel Aviv Municipality Prize for education.

Rabbi Neriah received the Israel Prize for special contribution to Israeli society in 1978.

[Itzhak Goldshlag]

***NERO**, Roman emperor, 54–68 C.E. Nero reigned during a critical period in the relations between the Jews of Judea and imperial Rome. His reign saw the decline of the authority of the procurators in Judea and the outbreak of the Jewish War. He seems to have had no personal enmity against the Jews. Indeed, he supported Jewish vassal rulers and extended the borders of the kingdom of *Agrippa II to include Tiberias and a

number of other towns (Jos., Ant., 20:159; Jos., Wars, 2:252). He also bestowed Armenia Minor upon Aristobulus, son of the Jewish king of Chalcis (Ant., 20:158). In a dispute that broke out between the leaders of the high priesthood and the Jerusalem populace on the one side, and Agrippa and the procurator *Festus on the other, over the wall that had been erected to prevent Agrippa's palace from overlooking the Temple court, he decided in favor of the former (Ant., 20:195). His wife *Poppea Sabina, who had a certain sympathy for the Jews, had a hand in this decision. Nero's persecutions after the fire in Rome affected only the Christians but not the Jews. However, a number of factors combined to damage relations between the Jews of Erez Israel and the Roman government. The excesses and extravagances of the court were reflected in monetary extortion in the provinces, including Judea. Moreover, the rise of hellenizing elements in the administration benefited the non-Jewish inhabitants of the country while damaging the interests of the Jews. The procurators of Judea in Nero's time apart from Festus (60–62 C.E.) were *Felix (52–60 C.E.), who had already been appointed by *Claudius, *Albinus (62–64 C.E.), and Gessius *Florus (64–66 C.E.). They were the worst in the history of the Roman government of the country, and their rule saw the collapse of law and order in Judea. This was particularly so during the procuratorship of Florus, a Greek from Asia Minor, whose oppressive rule showed nothing but hatred toward the Jewish population. The situation was particularly bad in Caesarea, where, in a municipal dispute between the Jews and the Syrians, Nero decided against the Jews, annulling their privileges. Florus' conduct also caused the outbreak of disturbances in Jerusalem, which led up to the great revolt of 66. Nero, determined to crush the rebels, sent *Vespasian at the head of a large army to the country. Galilee was speedily reconquered by the Roman forces, but Jerusalem continued to hold out. According to talmudic tradition Nero became a proselyte (Git. 56a).

[Menahem Stern]

NER TAMID (Heb. נֵר תָּמִיד, “eternal lamp”), a light which burns perpetually in front of the *ark in synagogues. It is usually placed in a receptacle suspended from the ceiling. The *ner tamid* consisted of a wick burning in olive oil and it was considered a meritorious deed and an honor to give donations for the upkeep of the *ner tamid*. Indeed, people who do so are specially mentioned in the **Mi she-Berakh* prayer recited after the Torah reading in the synagogue on Sabbath mornings. In modern times, however, the *ner tamid* is an electrical bulb. The receptacle and the chains of the *ner tamid* are usually made of precious metal.

The institution of the *ner tamid* in the synagogue is a symbolic reminder of the **menorah* which burned continually in the Temple (see Ex. 27:20; Lev. 24:2), as the synagogue

is considered a spiritual replica of the Temple (“small sanctuary,” Meg. 29a). Originally, therefore, the *ner tamid* was placed into a niche in the western wall of the synagogue in remembrance of the position of the *menorah* in the Temple. Later, however, it was suspended in front of the Ark. In many East European synagogues which were built of wood, the *ner tamid* was placed in special vaulted stone niches because of the possible danger of fire. The *ner tamid* has also been interpreted as being symbolic of God's presence amid Israel (Shab. 22b) or as the spiritual light which emanated from the Temple (Ex. R. 36:1).

***NERVA (M. Cocceius Nerva)**, Roman emperor, 96–98 C.E. He mounted the throne at the tumultuous time following the death of *Domitian and succeeded in reconciling the interests of the traditionalist senate with those of the forces of spiritual revolution, Jews, Judeophile, or Christian. He had a generous social and economic policy which attempted to alleviate the fiscal excesses and increasing pauperism in the empire. He abolished the extortionist procedure of the **Fiscus Judaicus* that had given rise to abuse under Domitian. In commemoration of this he issued coins with the inscription *Fisci Judaici Calumnia Sublata*. He exempted adherents of the Christian faith from the obligation to pay the *Fiscus Judaicus*, thus officially recognizing Christianity as a new religion and not merely a sect.

[Alfredo Mordechai Rabello]

NESHAMAH YETERAH (Heb. נֶשְׁמָה יְתֵרָה, “additional soul”), a popular belief that every Jew is given an additional soul from the entrance of each Sabbath until its termination. This belief originated with the story in the Talmud (Bezah 16a): “Resh Lakish said, ‘On the eve of the Sabbath, God gives man an additional (or enlarged) soul, and at the close of the Sabbath He withdraws it from him, for it says; “He ceased from work and rested,” i.e., *va-yinnafash* (Ex. 31:17): once it (the Sabbath) ceased, the additional soul is lost.” (וַיִּנָּפֶשׁ – play on the word which could be read – וַיִּנָּפֶשׁ *vai (lenefesh* “woe to the soul”). The notion of *neshamah yeterah* was richly expanded in kabbalistic literature, especially in the Zohar. One explanation for the use of spices at the **Havdalah* service is that with the departure of the *neshamah yeterah* at the end of the Sabbath, it is necessary to strengthen the faint remaining soul (Tur, OH 297:1).

NESHER (Heb. נֶשֶׁךְ), urban community with municipal council status in northern Israel, 4 mi. (6 km.) S.E. of Haifa. Nesher was founded in 1925 as a workers' quarter for employees of

the Nesher Cement Works. Until 1948 it consisted mainly of small wooden huts. In the *War of Independence (1948), two nearby Arab villages whose inhabitants had participated in the massacre of Jewish employees from the oil refinery were captured by Jewish forces and abandoned by their inhabitants. The villages were later taken over by new immigrants and renamed Tel Hanan. They were finally included in the municipal area of Nesher. Nesher's population increased from 1,500 in 1948 to 9,450 by 1968. In the mid-1990s the population was approximately 16,000, and at the end of 2002 it was 20,900. The growth of Nesher's population was mainly due to its proximity to Haifa, with many young families who work in Haifa moving there, especially to its new neighborhoods. In 1995 Nesher received city status, its municipal area running to 5 sq. mi. (13 sq. km.).

[Efraim Orni / Shaked Gilboa (2nd ed.)]

NESVIZH (Pol. **Nieśwież**), town in Baranovichi district, Belarus; formerly in Poland. Jews are mentioned in Nesvzh in the early 16th century. In 1589 the Radziwill family, who owned the town, granted the Jews certain rights, and they were subject to the jurisdiction of the prince. The Lithuanian Council of 1623 (see *Councils of the Lands) assigned Nesvzh to the Brest-Litovsk province but in 1634 it was made capital of its own province. Nesvzh was a center for fairs, and *dayyanim* were sent there from all Lithuanian communities. The community wielded considerable influence in the Lithuanian Council, which convened there in 1761. According to a council decision of 1634, the Nesvzh representative was one of the five men who determined the amount of funds required "to wreak vengeance for murder," referring to a blood libel against the Jews. Of the 60,000 zlotys demanded as poll tax from the whole of Lithuanian Jewry in 1721, the council fixed the share of Nesvzh and the neighboring town of Sverzhn at 1,000 zlotys, as against 1,100 zlotys imposed on Vilna. In 1811 there were 716 Jews in Nesvzh; 153 of them were craftsmen, including 91 needleworkers, 21 tanners, and 13 barbers. The community numbered 5,053 (72.7% of the total population) in 1878; 4,678 (55.4%) in 1897; 5,344 (53%) in 1914; 3,346 (48.9%) in 1921, and 3,364 (out of a total population of 7,586) in 1931. Besides commerce and crafts the Jews of Nesvzh engaged in horticulture and market gardening, including marketing of agricultural products. It had a textile factory, a sawmill, and a cooperative Jewish bank.

Nesvzh was known for its talmudic scholars. Among the well-known rabbis who officiated in the community at various periods were Isaac Elhanan *Spektor and Samuel Avigdor "Tosfa'ah." The last rabbi was Yitzhak Isaac Rabinovitch. Joseph Baer *Soloveichik and Pinhas *Rozovski were natives of Nesvzh. The community had a yeshivah, a Hebrew school and kindergarten, and a Yiddish school. A branch of *Hovevei Zion was founded in 1871 and revived in 1888. There was considerable Zionist activity and in the 1930s *Ha-Shomer ha-Za'ir maintained a training farm in Nesvzh. An association of Jewish craftsmen originally known as Po'alei Zedek was

founded in 1908, and there was also a branch of the *Bund and Jewish members of the Communist Party.

Among the outstanding personalities who originated from Nesvzh were the philosopher Solomon *Maimon; Eliezer Dillon, who was one of two "deputies of Jewish people" sent to St. Petersburg; Moses Eleazar *Eisenstadt, the **kazyonny ravvin* in St. Petersburg; the authors and educators Nisan *Touroff and Falk Halperin; the authors Jacob Zalman Reizin and Mordecai Ze'ev Reizin; and Nahum Meyer Shaikevich (*Shomer), the Yiddish author.

[Dov Rabin]

Holocaust Period

During the period of Soviet rule (1939–41), the community institutions were liquidated and the activity of the political parties was forbidden. Zionist youth movements, however, maintained their frameworks underground. Large economic concerns were nationalized, small-scale trade almost came to a complete stop, and artisans were organized in cooperatives. The city was captured by the Germans on June 27, 1941. Looting and anti-Jewish incidents began. On October 19 a fine of 500,000 rubles and 2.5 kg. of gold was imposed. On October 29, 1941, all the Jews were ordered to gather in the market square and a "selection" was carried out. From among those gathered, 585 artisans were picked out and the others, about 4,000 in number, were executed near the city. The remnant of the community was concentrated in a ghetto that was surrounded by a wire fence.

At the end of December 1941, an underground organization was founded in the ghetto. It began with the acquisition of arms and the preparation of other means of self-defense. In July 1942 news of the destruction of nearby communities reached the ghetto and the underground prepared to fight. The chairman of the Judenrat, Magalif, a lawyer from Warsaw, cooperated with the underground. On July 17 the Germans surrounded the ghetto to carry out a selection. When the Germans broke through the gate, the Jews set their houses afire and defended themselves, with the few weapons they had and with knives, hatchets, and sticks. About 40 Germans were hit, but the Germans and their Lithuanian collaborators overcame the inhabitants of the ghetto. About 25 fighters fled into the forests. Some organized into a partisan unit and were integrated into the Chkalov battalion of partisans that was active in the forests of Volozhin. With the liberation of the city by the Soviets, Jewish life was not reconstituted. The survivors went to Poland, and from there some went to Erez Israel and others migrated overseas.

NES ZIYYONAH (Heb. נֶס צִיּוֹן; "Banner toward Zion"), semiurban settlement with municipal council status in central

Israel, between Rishon le-Zion and Rehovot. Nes Ziyonah was founded in 1883 in the Arab hamlet Wadi Hanin on the initiative of a single Jewish immigrant from Russia, Reuben Lehrer. A few more Jewish families joined the founder in the first years. The moshavah was given its present name in the 1890s when, for the first time in the country, the blue and white Jewish flag was raised at its anniversary celebration. In the first decade of the 20th century, citrus groves became prominent there and attracted both immigrants of the Second Aliyah and, in even greater numbers, Arab workers, some of whom settled there. Nes Ziyonah thus became the principal stage in the struggle for the “conquest of labor.” Until 1948 Nes Ziyonah was the only village in the country with a mixed Arab-Jewish population – the two communities living on opposite sides of the main road and, on the whole, coexisting peacefully. In the War of Independence (1948), the Arabs abandoned the village, which had by then 1,800 Jewish inhabitants. After 1948 Nes Ziyonah quickly expanded and reached 9,500 inhabitants in 1953; its rate of growth, however, slowed down subsequently. There were 11,900 inhabitants in 1968, in a municipal area extending over 6 sq. mi. (16 sq. km.), of which nearly two-thirds were cultivated for farming. Aside from the citrus branch, Nes Ziyonah was a beekeeping center, producing an annual average of 330,000 lb. (150,000 kg.) of honey. Industry was a prime factor in the local economy, employing workers in factories for building materials, electric appliances, fiberglass, rubber, metal, and foodstuffs. The Institute for Biological Research, a top-secret defense establishment employing 350 people, was also located there. By the mid-1990s the population had nearly doubled to 21,800, and in 2002 it was 25,800. In 1992 Nes Ziyonah received city status.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

NES ZIYYONAH, a clandestine Zionist society founded in 1885 by students of the yeshivah in Volozhin. The purpose of Nes Ziyonah was to organize a group of people (rabbis, preachers, and writers) to propagate the idea of the settlement of Erez Israel. The members of the society were sworn to secrecy and took it upon themselves to promote their cause orally and in print and to establish new Hovevei Zion societies (see *Hibbat Zion*). The central committee of Nes Ziyonah distributed circulars among its members and, when it acquired a duplicating machine, also published a *Mikhtav Itti u-Khelali* (“General Periodical”) in Hebrew. It also initiated a collection of essays and asked rabbis to submit their views on the idea of settlement in Erez Israel. Replies received from several outstanding rabbis served as a kind of positive “responsa” to the Hovevei Zion ideology. Some of the replies were published in the Hebrew press, but the book itself never came out because at the end of 1891 the police discovered the existence of the society, confiscated the duplicating machine and the archives, and put an end to Nes Ziyonah’s activities. Some of the rabbis’ letters were included in *Shivat Ziyon* (1891), a collection edited by A.J. Slutsky. A group of former members

of Nes Ziyonah then founded another society with similar aims, called Neẓah Israel. Among the founders was Hayyim Nahman Bialik, who was asked to formulate the aims of the new society. An article by Bialik – his first effort to appear in print – was published in *Ha-Meliz* 31, No. 80 (1891). The stated purpose of the society was “the settlement of our holy land in the spirit of holiness and Judaism.” The society planned the establishment of a rural settlement in Erez Israel with a majority of members from Nes Ziyonah, which would serve as an example to all the other settlements, especially in matters of education. In 1890 societies by the name of Nes Ziyonah were founded in Aleksot near Kovno and in Suwalki for the purpose of establishing a settlement in Erez Israel based on religious-national ideals. Eventually the two societies merged into one and, augmented by additional members from Mariampol, laid the foundations of Haderah. When the Volozhin yeshivah was closed by Russian authorities, the activities of Neẓah Israel came to an end. It was reestablished at Minsk by I. Nissenbaum and was finally disbanded in 1894.

[Israel Klausner]

NETA’IM (Heb. נְטָעִים; “Plantations”), moshav in central Israel S.W. of Rishon le-Zion affiliated with Tenu’at ha-Moshavim, founded in 1932 by veteran farm laborers of the Second Aliyah in the framework of the Thousand Families Settlement Scheme. Citrus groves were among its intensive farming branches. In 1968 its population was 212 and in the mid-1990s approximately 265, jumping to 456 in 2002 after expansion.

[Efraim Orni]

NETANYAH (Heb. נֶתַנְיָה), city in central Israel, on the Sharon coast. Netanyah is named after the U.S. Jewish philanthropist Nathan Straus. It was founded in 1929 as a moshavah based on farming by 40 young people of the Benei Binyamin association, led by Oved Ben-Ami, whose parents were veteran settlers in moshavot. The village soon served as a nucleus for the settlement of the central Sharon where no Jewish villages had existed before, particularly as its founding coincided with the purchase of the Hefer Plain by the Jewish National Fund. Because it was situated between Tel Aviv and Haifa, Netanyah was able to develop as a market town for its quickly expanding rural hinterland. In the initial period citrus groves constituted Netanyah’s principal economy, employing a considerable number of hired workers and thus causing an increase in population. A further growth factor was Netanyah’s location at a communications center. In 1948 the population was 8,500. Later Netanyah was given city status and by 1951 its population had already risen to 30,000, then to 60,100 by 1968 as large numbers of new immigrants were absorbed. By the mid-1990s the population had again more than doubled to 142,700 and in 2002 it was 164,800, making Netanyah the ninth largest city in Israel. Its area was 11 sq. mi. (28.5 sq. km.), with accelerated expansion continuing in the first years of the new century as new neighborhoods burgeoned.

The city's economy was based mainly on tourism and industry. Netanyah is one of Israel's foremost seaside resorts with dozens of hotels and pensions. The foremost industrial branch was diamond polishing, of which Netanyah became the Israeli center in the 1940s, when the industry was transferred from Nazi-dominated Belgium to Palestine – although subsequently the center moved to the Tel Aviv area and over the years most of the diamond-polishing workshops were closed. The city's industry is now concentrated in two industrial areas and includes hi-tech industries, steel, pharmaceuticals, food, beer, textiles, rubber, furniture, electronics, etc. In addition, Netanyah became a regional commercial center, including the first and only branch of the IKEA Corp. Public institutions located at Netanyah included the Ohel Shem Culture Hall, the Malben Old Age Home, the Wingate Sports Center, and Ulpan Akiva. The Netanyah Academic College has an enrollment of 3,500 students. During the al-Aqsa Intifada the city came under a number of terrorist attacks, most notably a suicide bombing at the Park Hotel in 2002, killing 22 and wounding 140 at a Passover *seder*.

[Shlomo Hasson / Shaked Gilboa (2nd ed.)]

NETANYAHU, BENZION (1910–), scholar and Zionist. Born in Warsaw, Netanyahu moved with his family to Tel Aviv in 1920. There he became active in the Zionist-Revisionist Party and its successor, the New Zionist Organization. From 1932 to 1935 he served on its executive committee and in 1934–35 as editor-in-chief of its daily paper *Ha-Yarden*. In 1940 he went to the United States as a member of the delegation, headed by Jabotinsky, of the World New Zionist Organization, and in the following year was appointed executive director of the New Zionist Organization of America; until 1948 he headed its press campaign and diplomatic action in the United States. From 1946 to 1948 he was a member of the American Zionist Emergency Council, under the leadership of Abba Hillel Silver.

After the establishment of the State of Israel, Netanyahu turned to his numerous scholarly interests in the field of Judaica. He became the editor-in-chief of the *Encyclopedia Hebraica* (1948–62); general editor of *The World History of the Jewish People* (1954–64); editor-in-chief of the *Encyclopaedia Judaica* (1961–63); co-editor of the *Jewish Quarterly Review* (1959–60); and editor of the works of Herzl, Nordau, and Pinsker. He was a professor at Dropsie College from 1957 to 1968, serving as chairman of its Department of Hebrew Language and Literature from 1962 to 1968. From 1968 he was professor of Hebraic studies at the University of Denver and in 1971 was appointed professor of Judaic studies and chairman of the Department of Semitic Languages at Cornell University. Upon his retirement, he became professor emeritus of Jewish studies at Cornell and a scholar at Princeton University.

Netanyahu published numerous original studies in various fields of Jewish history and literature, including *Don Isaac Abravanel* (1953), 1968²), *The Marranos of Spain* (1966),

and *The Origins of the Inquisition in Fifteenth Century Spain* (1995).

He is the father of Binyamin *Netanyahu, prime minister of Israel in 1996–99.

[Martin A. Cohen]

NETANYAHU, BINYAMIN (Bibi; 1949–), Israeli politician, prime minister in the years 1996–99. Netanyahu was born in Israel, to a Revisionist family, son of historian Benzion *Netanyahu. He was raised in Jerusalem, and in Philadelphia where his family lived in 1956–58 and 1963–67. Netanyahu returned to Israel in 1967 to do his military service, reaching the rank of captain in the elite *Sayyeret Matkal* unit. He finished his military service in 1972, and then returned to the U.S., where he attended the Massachusetts Institute of Technology, receiving a bachelor's degree in architecture. While studying at MIT he returned to Israel to participate in the Yom Kippur War. He then went back to complete a master's degree in business administration, and considered doing a doctorate in political science. While in the U.S. Netanyahu changed his name to Benjamin Nitai and started working in the international consulting firm the Boston Consulting Group. In these years he was active in presenting information about Israel. After his brother Jonathan (Yonni) was killed in the course of the *Entebbe operation in July 1976, Netanyahu returned to Israel in 1978, and started advocating international action against terrorism. In 1980 he set up and headed the Jonathan Institute for the Study of Terror, which was named for his brother. He also started working as marketing manager for the Jerusalem-based furniture manufacturer Rim. Netanyahu's speaking skills and fluent English brought him to the attention of Israel's ambassador in Washington, Moshe *Arens, who supported his appointment as minister plenipotentiary in the Israel Embassy in Washington, where he served from 1982 to 1984. In 1984–88 he served as Israel's ambassador to the United Nations. Inter alia, he got the UN archive to open its files on Nazi war criminals, and frequently appeared in the American media to explain Israel's positions. Netanyahu returned to Israel in time to run in the elections to the Twelfth Knesset on the Likud list. In the National Unity government he was appointed deputy minister for foreign affairs under Arens. After David *Levy succeeded Arens, Netanyahu was appointed deputy minister in the prime minister's office. During the first Gulf War he was one of Israel's leading spokesmen, and played a similar role in the Madrid Conference of October–November 1991. He was one of the staunch supporters of the direct election of the prime minister. After the Likud's electoral defeat in the elections to the Thirteenth Knesset in 1992, and Yitzhak *Shamir's resignation from the Likud leadership, Netanyahu was elected chairman of the Likud in March 1993, despite a well-publicized scandal over an affair he had had. In the Thirteenth Knesset he served on the Knesset Foreign Affairs and Defense Committee, and headed the opposition to the Oslo process led by Prime Minister Yitzhak *Rabin. Nevertheless, he supported the peace treaty with Jor-

dan. Netanyahu was accused by the left of having participated in the incitement against Rabin that led up to his assassination in November 1995. However, after convincing David Levy's Gesher party and Raphael *Eitan's Tzomet to run together in a joint list with the Likud in the elections to the Fourteenth Knesset in 1996, Netanyahu beat Shimon *Peres in the first direct election for prime minister, thus becoming Israel's first prime minister to be born after the establishment of the state. Netanyahu established a right of center-religious government, and soon after its establishment traveled to Washington, Cairo, and Amman, proclaiming that while Israel was committed to the peace process and the Oslo Accords, he would insist on the Palestinians' implementing all their undertakings, including the cancelation of the articles in the Palestine National Covenant that rejected Israel's right to exist, and putting an end to Palestinian terror against Israel. Netanyahu met with Palestinian leader Yasser *Arafat in September 1996, signed the Hebron Memorandum in January 1997, and the Wye River Memorandum in November 1998. He offered Syria negotiations based on the concept "Lebanon first," and an Israeli withdrawal from the security zone in southern Lebanon as a prelude to talks on other issues. However, Syrian President Hafez el-Asad rejected the initiative.

Netanyahu's government was characterized by a succession of scandals, some connected with his own political style, and others with various controversial decisions that he took, such as his choice of candidates for minister of justice and attorney general. Growing dissatisfaction with his leadership within the Likud led to several prominent members' leaving the party, while the partnership with Gesher and Tzomet fell apart. Finally, a slowdown in the economy and difficulties in getting the 1999 budget approved by the Knesset led Netanyahu to call for early elections to the Fifteenth Knesset.

In the direct election for the prime minister held in May 1999, Netanyahu lost by a large margin to Labor's Ehud *Barak. Rather than continue to lead the Likud in opposition, he decided to leave politics temporarily and engage in business and lecturing. Prior to the elections to the Sixteenth Knesset in January 2003 he returned to active politics and was reelected to the Knesset on the Likud list. In the government formed by Ariel *Sharon in 2003 he was appointed minister of finance, in which task he was forced to confront a deep economic recession. Pursuing an extreme neoliberal economic policy, Netanyahu managed to improve the performance of the economy, though at the cost of severe cuts in Israel's social welfare system and growing gaps between rich and poor.

Netanyahu opposed Sharon's policy of disengagement from the Gaza Strip, and the dismantlement of settlements, but on October 26, 2004, failed in an effort to vote down the policy in the Knesset. He then threatened to resign from the government unless a referendum were held on the disengagement, but he finally lifted his threat due to pressure that he remain in the Ministry of Finance to see the 2005 budget through. Netanyahu finally resigned from the government on August 9, one week before the beginning of the evacuation of

the settlements in *Gush Katif and northern Samaria, before the 2006 budget was brought to the Knesset. His intention was to contend for the Likud leadership before the elections to the Seventeenth Knesset, a post he won in December 2005 after Sharon bolted the party to form Kadimah.

He wrote *Don Isaac Abravanel, Statesman and Philosopher* (1982); *Fighting Terrorism: How Democracies Can Defeat Domestic and International Terrorists* (1995); and *A Durable Peace: Israel and Its Place among the Nations* (2000); he edited *Terrorism: How the West Can Win* (1986); and *A Place Among the Nations: Israel and the World* (1993).

Vardi, *Bibi: Mi Atta Adoni Rosh ha-Memshalah?* (1997); R. Gelbard, *Shinui Emdot Manhigim be-Sikhsukh Kiyumi u-Murkav: Binyamin Netanyahu* (2003).

[Susan Hattis Rolef (2nd ed.)]

NETHANEL BEN AL-FAYYUMI (d. about 1165), Yemenite scholar and philosopher. Nethanel appears to have been the father of Jacob b. Nethanel to whom *Maimonides addressed his *Iggeret Teiman*, ("Epistle to Yemen").

Nethanel wrote the Judeo-Arabic *Bustān al-'Uqūl* ("Garden of Intellects"), a compendium of theology published by R. Gottheil, in: *Festschrift... Steinschneider* (1896), 144–7; text edited and translated into English by D. Levine, 1908; translated into Hebrew under the title *Gan ha-Sekhalim* by Y. Kafah, 1954. The seven chapters of the work deal with (1) divine unity, (2) man as a microcosm, (3) obedience to God, (4) repentance, (5) reliance upon God and providence, (6) the nature of the Messiah with a discussion of the Islamic concepts of the abrogation of the Torah and the prophethood of Muhammad, and (7) the future life. In his discussion of the abrogation of the Torah, Nethanel denied that the Torah would be superseded, but, at the same time, maintained that there is a certain validity in the legislation of other religions. His tolerance is evident from his contention that God sent different prophets to the various nations of the world with legislations suited to the particular temperament of each individual nation.

The *Bustān al-'Uqūl*, a popular work, contains numerous citations from *aggadah* and from Arabic legendary and anecdotal materials. In addition to drawing upon Jewish sources, such as *Saadia's *Book of Beliefs and Opinions* and *Bahya's *Duties of the Heart*, Nethanel borrowed heavily from Islamic philosophy, from the Epistles of the *Brethren of Sincerity, and, as S. Pines points out, from the writings of the Ismā'īliya, in particular of the Fatimid branch. The Ismailian influence is particularly prominent in Nethanel's discussion of the nature of God, and the primary emanations. Pines considers the *Bustān al-'Uqūl* an Ismailian treatise that was inspired by the theology of the Fatimids, in the same way that a work like Saadia's *Beliefs and Opinions* was inspired by the Mutazilite *Kalām. Some identify the author of *Bustān* with Nethanel b. Moses ha-Levi the Gaon of Fostat or with the son of Fayyūmī b. Saadia who sent an epistle to Maimonides.

[Frank Talmage]

NETHANEL BEN ISAIAH (14th century), Yemenite scholar. Nethanel's fame rests upon his extensive midrashic anthology, *Nur al-Zalam* ("Light in the Darkness"). The book is a typical Yemenite Midrash: it is based upon the standard Midrashim, though with stylistic changes and adaptations, and the influence of Maimonides, with whom the author shows great familiarity, is conspicuous. Philosophical ideas from other schools as well as kabbalistic sayings are also woven into the work.

Nur al-Zalam contains few of the peculiarities of the other Yemenite Midrashim and is of a much higher literary standard, being comparable in this respect to the *Midrash ha-Gadol. It was utilized by authors of later Yemenite Midrashim, among them Manẓur Aldamari, in his *Sarag al-Ekol*, and Shalom *Shabazi. The Midrash was published in its entirety with a Hebrew translation accompanying the Arabic original, by Y. Kafah (1957). Nethanel also wrote a commentary on Maimonides' *Mishneh Torah* which was extant until recently and subsequently lost.

BIBLIOGRAPHY: Nathanel b. Isaiah, *Me'or ha-Afelah*, ed. by Y. Kafah (1957), introd.; A. Kohut, "Light of Shade and Lamp of Wisdom"... composed by Nethanel ibn Yeshaya (= *Studies in Yemen-Hebrew Literature*, pt. 2), (bound with proceedings of the fourth Biennial Convention of the Jewish Theological Seminary Association, 1894).

[Israel Moses Ta-Shma]

NETHANEL BEN MESHULLAM HA-LEVI (1660/1665–1735?), Italian kabbalist. Nethanel was born in Modena and was ordained rabbi around 1685. His first rabbinical post appears to have been in his native town, during the lifetime of his father, Meshullam b. Benzion ha-Levi, a kabbalist, who was a member of the Modena rabbinate. From 1693 Nethanel was also rabbi in Lugo, Pesaro, Padua, and Cento. In 1728 he returned to Modena, apparently succeeding Ephraim Kohen of Ostrog as chief rabbi, serving in that position until his death. Some of his responsa were published in the works of his contemporaries, such as the *Paḥad Yizḥak* of Isaac *Lampronti and the *Shemesh Zedakah* (Venice, 1743) of Samson *Morpurgo. Of great importance is his responsum written in Pesaro (in *Shemesh Zedakah*, 11M, no. 33), in which he discusses communal taxation and intercommunity responsibility, and protests against rabbis who pass judgment on matters concerning other communities without the consent of their local rabbis. In the sphere of Kabbalah his work exhibits affinity with the thought of Moses Ḥayyim *Luzzatto. He was close to the Kabbalah circle of Abraham *Rovigo and Mordecai *Ashkenazi. His son, ZEVI HA-LEVI, an emissary of the Holy Land, was one of the scholars of the yeshivah of Ḥayyim ibn *Attar in Jerusalem.

[Abraham David]

NETHANEL BEN MOSES HA-LEVI (12th century), *gaon* and *rosh yeshivah* in *Cairo. Nethanel inherited his position from his father Moses and according to documents of the Cairo **Genizah*, he held this position from 1160 to 1170. At that time, the role and the authority of the Cairo *rosh yeshivah* increased to a considerable extent because, after the death of *Samuel b. Hananiah, the position of the **nagid* was weakened as a result of the activities of *Zuta. Nethanel appointed judges and other religious officials in all the communities of Egypt and he headed the great *bet din*. He received a letter of ordination from R. *Daniel b. Ḥasday, the exilarch in *Baghdad, who thus sought to impose his authority on Egyptian Jewry; on the other hand, *Samuel b. Eli, the head of the *yeshivah* of Baghdad, supported the *geonim* of *Damascus. *Benjamin of Tudela, the 12th-century traveler, relates that Nethanel was in royal service. In 1171 Nethanel was succeeded by *Maimonides as head of the Jews. For some unknown reason Maimonides was compelled to give way to *Sar Shalom ha-Levi, the brother of Nethanel.

[Eliyahu Ashtor]

NETHANEL OF CHINON, French tosafist of the first half of the 13th century. Nethanel is mentioned several times in the standard *tosafot* (e.g., Beẓah 3a) and is probably identical with the Nethanel and the Nethanel ha-Kadosh ("the saint" – so called because of his piety and not because of his having died a martyr's death) mentioned in *Shitah Mekubbeẓet* (BK 18a; Men. 7a). *Jehiel of Paris approached Nethanel with a problem and was directed by him to Isaac b. Todros, his older contemporary (Resp. Maharik 102). *Samuel of Evreux turned to him with halakhic problems (*Mordekhai*, *Ḥul.* 681). Nethanel's fellow townsman *Samson of Coucy made abundant use of his teaching in his *Sefer ha-Keritut* (Constantinople, 1516). Nethanel b. Joseph of Chinon, younger brother of Eliezer of Chinon, the author of several *piyyutim*, was probably a grandson of this Nethanel.

NETHERLANDS, THE (Holland), kingdom in N.W. Europe.

The Middle Ages

It is not known when exactly the Jews settled in the area which is now called The Netherlands. As early as the 11th century one can find some indications of Jewish settlers in what was then called the Lowlands, an area which included the Southern Netherlands.

Main Jewish communities of the Netherlands in 1941 and 1960. Bold face type indicates places of Jewish settlement in the 17th century.

Early sources from the 11th and 12th centuries mention official debates or *Disputationes* between Christians and Jews, in which attempts were made to convince the Jews of the truth of Christianity and to try to convert them. It is not certain whether the Jews were residents in the area or whether they were just passing through.

However, as of the 13th century, there are sources which indicate that Jews were living in the areas of Brabant and Limburg, mainly in cities such as Brussels, Leuven, Tienen, and Maastricht. Sources from the 14th century also mention Jewish residents in the cities of Antwerp and Mechelen and in the northern region of Geldern.

Between 1347 and 1351, the entire area covering Europe was hit by the plague or Black Death and this led to a new theme in medieval antisemitic rhetoric. The Jews were held responsible for the epidemic and for the way it was rapidly spreading, because presumably they were the ones who had poisoned the water of the springs used by the Christians. Various medieval chronicles mention this, e.g., those of Radalphus de Rivo (c. 1403) of Tongeren, who wrote about how the Jews were murdered in the Brabant region and in the city of Zwolle because they were accused of spreading the Black Death. This accusation was added to the other traditional accusations against the Jews, such as piercing the Host used for

communion and using Christian children as an offering during Passover. For this reason local Jewish communities were often murdered in part or entirely or exiled. Thus, in May 1370, six Jews were burned at the stake in Brussels because they were accused of theft and of desecrating the Holy Sacrament. In addition to these drastic measures, traces can also be found of abusing and insulting Jews, e.g., in the cities of Zutphen, Deventer, and Utrecht, for allegedly desecrating the Host.

From the 15th century, Jews also resided in the Northern Netherlands. Their most important occupation was money-lending, making them dependent on the economies of the cities. In this way, Nijmegen became an important financial marketplace where a great many of Jewish families came to settle. Nonetheless, Jews continued to choose the large cities in the Southern Netherlands as for their home base. In the 16th century the city of Antwerp came to be a very important location for Jewish tradesmen and moneylenders because of its flourishing economy. This also turned it into a refuge for a number of Marranos who had been expelled from Spain and Portugal after 1492. Jewish bankers usually settled there using a Christian pseudonym. Francisco Mendes, born into a distinguished family of bankers, opened a branch in Antwerp that was one of the largest banks in Europe. After his death in 1536 it was run by his wife Gracia *Nasi. The flourishing Jewish trade in Antwerp ended, however, when The Netherlands were divided during the reign of king Philip II and many Jews took refuge in the Northern Netherlands, especially in *Amsterdam.

[Monika Saelemaekers (2nd ed.)]

Sephardim and Ashkenazim until 1795

The independent Dutch Republic was a popular emigration destination because of its economic prosperity and relative tolerance. Many job-seeking Germans, Huguenot Frenchmen, and dissenting scholars tried their luck in this strange country where, instead of a sovereign, the bourgeoisie were the rulers. Also Jews found their way to the Republic.

Among the Portuguese merchants in the Netherlands in the 17th century many were Marranos. It is known of one of them, Marcus Perez, became a Calvinist and played an important role in the Netherlands' revolt against Spain. Without doubt there were many Marranos among the 20,000 merchants, industrialists, and scholars who left Antwerp in 1585 for the Republic of the United Provinces. Around 1590 the first indications of a Marrano community are to be found in Amsterdam, but its members did not openly declare themselves as Jews. The Beth Jaäcob community was founded around 1600. It was discovered in 1603 and the Ashkenazi rabbi Moses Uri b. Joseph ha-Levi, who had come from Emden the previous year, was arrested. Religious liberty was not yet granted in Amsterdam and therefore the Marranos who had returned to Judaism, along with newly arrived Jews from Portugal, Italy, and Turkey, tried to obtain a foothold somewhere else. In 1604 they were granted a charter in Alkmaar, and in 1605 in Haarlem and Rotterdam. Not only were they accorded privi-

leges regarding military service and the Sabbath but they were also permitted to build a synagogue and open a cemetery as soon as their numbers reached 50, and to print Hebrew books. Nevertheless, only a few availed themselves of these privileges, and in spite of the difficulties most Jews settled in Amsterdam; among them was the representative of the sultan of Morocco, Don Samuel *Palache.

In 1608 a second community, Neveh Shalom, was founded by Isaac Franco and in the same year the first Sephardi rabbi, Joseph *Pardo, was appointed. As the legal status of the Jews was not clearly defined, the authorities were asked by various bodies to clarify their attitude: the two lawyers, Hugo *Grotius and Adriaan Pauw, were asked to draw up special regulations for the Jews. However, in a resolution of Dec. 13, 1619, the provinces of Holland and West Friesland decided to allow each city to adopt its own policy toward the Jews. The other provinces followed this example, and this situation remained in force until 1795. For this reason the status of the Jews differed greatly in the various towns. In Amsterdam there were no restrictions on Jewish settlement, but Jews could not become burghers and were excluded from most trades; however, no such disabilities existed in several other towns. A large number of Portuguese Jews, in search of greater economic opportunities, took part in the expedition to *Brazil and in 1634 Joan Maurits van Nassau-Siegen granted the charter they had requested. When the Netherlands was compelled to cede Brazil to Portugal (1654) many Jews returned to Amsterdam. The Dutch Republic, however, demanded that its Jews be recognized as full citizens abroad and that no restrictive measure be imposed on them if they visited a foreign country, especially Spain (1657). The Ashkenazim also enjoyed the rights which the Portuguese Jews had obtained in the larger towns.

In the first half of the 18th century in the eastern part of the country also, in the area bordering Germany, small communities could be founded with complete religious liberty. Following on the activities of some Jewish robbers, however, several cities enacted measures against Jewish settlement: Groningen (1710), Utrecht (1713), Gouda, the province of Friesland (1712), and the province of Overijssel (1724). Amersfoort protested against one such regulation in the province of Gelderland (1726), and it was decided to introduce a certificate of good behavior, which subsequently became a requirement in most cities. Because this certificate was issued by the *parnasim*, who also had to guarantee the good behavior of the applicant, they acquired considerable power over the newcomers. Until the Emancipation the legal position of the Jews remained unclear since it was wholly dependent on local or provincial authorities. In legal cases the Jews were subject to the laws of the land and were judged in the government courts. As they could not take the usual – Christian – oath, a special formula was introduced by the different provinces (the last in Overijssel in 1746), but this had no derogatory content. Sometimes Jews even sought the decision of Christian scholars in religious affairs. The municipal authorities intervened in the communities in the case of serious internal conflicts, as

in Amsterdam in 1673 where the Polish *kehillah* was ordered to join the German one (see below) and when the authorities had to approve the regulations of the *kehillah*.

Economic Expansion

In spite of the restrictive regulations to which they were subject (which included among other things exclusion from the existing guilds), the Sephardi Jews were able to acquire some economic importance. Thanks to their knowledge of languages, administrative experience, and international relationships, they played an important part in the expanding economy of the young Republic of the Netherlands, especially from 1610 onward when Amsterdam became an established center of world trade. After 1640 there was an increase in the number of current account customers and the size of their accounts at the discount bank (Wisselbank). In the second half of the 17th century the Sephardim also occupied an important place among the shareholders of the East India Company, the most powerful Netherlands enterprise. Portuguese Jews also acquired some prominence in industry, especially in sugar refineries, and the silk, tobacco, and diamond industries; although the latter had been initiated by Christian polishers, in the course of time it became an exclusively Jewish industry. However they became most celebrated for book printing; in 1626 a large number of works were produced at a high standard of printing for the day. Among the richest Portuguese Jews, who were purveyors to the army and made loans to the court, were Antonia Alvarez *Machado, the Pereira family, Joseph de Medina and his sons, and the baron Antonio Lopez *Suasso. These and other Portuguese Jews traded in stocks and shares from the second half of the 17th century and probably constituted the majority of traders in this field (see *Stock Exchange). Such activity was centered in Amsterdam; the only other important settlements were in The *Hague, because of the proximity of the royal court, and Maarssen, a village near Utrecht (which itself did not admit Jews) which was the center of the country houses of the rich Portuguese families. From Amsterdam the Portuguese Jews took part in the economic exploration and exploitation of old and new regions, mainly in the Western hemisphere: Brazil, New Amsterdam, *Surinam, and Curaçao.

During the course of the 18th century trade declined and economic activity concentrated to a growing extent on stock-jobbing. Daring speculations and successive crises led to the downfall of important families, such as the De *Pintos. The situation worsened after the economic crisis of 1772/73 and became grave during the French occupation (from 1794) when trade in goods practically came to a standstill. Government monetary measures struck especially at the rentiers, and by the end of the 18th century the once wealthy community of Amsterdam included a large number of paupers: 54% of the members had to be given financial support.

Cultural Activities of the Portuguese Community

The 17th century, the "Golden Age" of the Republic of the Netherlands, was also a time of cultural expansion for the Portu-

guese community. The medical profession was the most popular, and there were often several physicians in one family, as in the case of the Pharar family (Abraham "el viejo," David, and Abraham), and the *Bueno family (no less than eight, the most famous being Joseph, who in 1625 was called to the sickbed of Prince Maurits of Nassau, and whose son, Ephraim *Bueno, was painted by Rembrandt), and the De Meza, *Aboab, and De Rocamora families. The most celebrated physicians were *Zacutus Lusitanus and Isaac *Orobio de Castro. From 1655 onward there were physicians who had completed their studies in Holland, especially in Leiden and Utrecht. They were free to practice their profession among non-Jews also, but they were required to take a special oath. In Amsterdam, where the surgeons and pharmacists (who needed no academic training) were organized into guilds, Jews could not be officially admitted to these professions (according to the regulation of 1632). Nevertheless they set up in practice, with the result that in 1667 they were forbidden to sell medicine to non-Jews. This regulation was ignored, and so when a new

The Maastricht synagogue, built in 1841. Courtesy Maastricht Municipality.

regulation was issued in 1711 the restrictive clause was not included. Many Portuguese Jews were artists (notably the illuminator Shalom *Italia and engraver Jacob Gadella) and writers, mainly of poems and plays in Spanish and Portuguese; there were even two special clubs where Spanish poetry was studied. The best-known poet was Daniel Levi (Miguel) de *Barrios, the first historian of the Marrano settlement in the Netherlands.

More interesting, however, was the high level of study of Judaism and its literature from the early days of the settlement, and this in spite of the fact that large numbers of the newcomers had returned to Judaism at an advanced age. In order to teach the younger generation about Judaism the two *kehillot* in Amsterdam, Beth Jaacob and Neveh Shalom, founded in 1616 the Talmud Torah or Ets Haim yeshivah. Through the efforts of teachers from the Sephardi Diaspora, such as Saul Levi *Morteira and Isaac *Aboab da Fonseca, the yeshivah became renowned. Among the later teachers were, *Manasseh ben Israel, Moses Raphael de *Aguilar and Jacob *Sasportas. The facilities for printing books (see above) contributed to the high level of scholarship, and the independent production of scientific, theological, and literary works in Hebrew also developed. The most important writers were Moses *Zacuto, Solomon de *Oliveyra, Joseph *Penso de la Vega, and in the 18th century David *Franco-Mendes.

The return of the Marranos to Judaism was accompanied by conflicts about the nature of their religion. In 1618 a group of strictly Orthodox Jews left Beth Jaacob and founded the Beth Jisrael community because they did not accept the liberal leadership of the *parnas* David Pharar. Soon after, Uriel da *Costa's attack on Orthodox Judaism caused an upheaval throughout the whole *Marrano Diaspora. The most famous case was that of Baruch *Spinoza, who was banned from the *kehillah* for his heretical opinions. At this period – as among Sephardim elsewhere – Lurianic *Kabbalah had many followers in Amsterdam, which explains the enthusiasm for *Shabbetai Zevi that prevailed in the community in 1666. The Shabbateans maintained a strong influence for a long period and, during the chief rabbinate of Solomon *Ayllon, there was a serious conflict in which the Ashkenazi chief rabbi of Amsterdam Zevi Hirsch *Ashkenazi (Ḥakham Zevi) was involved (1713). The failure of the Shabbatean movement on the one hand and the power and wealth of the *kehillah* (all three congregations united in 1639) on the other led to an ever-increasing isolation from the rest of the Jewish world and to a rapprochement with Dutch society. The turning point was the founding of the famous Esnoga (synagogue), inaugurated in 1675, which subsequently dominated Sephardi community life.

The Ashkenazim

Unlike the Sephardim, the Ashkenazim spread throughout the whole Republic of the Netherlands, although their main center was also in Amsterdam. The first Ashkenazim arrived in Amsterdam around 1620, establishing their first congregation in

1635. The first emigration was from Germany but in the second half of the 17th century many Jews also came from Poland and Lithuania: they founded a separate community (1660), but in 1673, after disputes between the two, the municipal authorities ordered it to amalgamate with the German one. The community grew rapidly, outnumbering the Portuguese in the 17th century though remaining in a subservient position until the end of the 18th century. During the 17th century, the most important communities outside Amsterdam were in Rotterdam and The Hague. At that time Jews also settled in several towns in the provinces bordering Germany: Groningen, Friesland, Overijssel, and Gelderland. In spite of restrictive measures, their number increased in the 18th century, and they extended to a large number of smaller towns. There were a few very rich Ashkenazi families, such as the *Boas' (The Hague), the Gomperts (Nijmegen and Amersfoort), and the Cohens (Amersfoort), but the overwhelming majority earned a meager living as peddlers, butchers, and cattle dealers. In Amsterdam the economic difficulties of the Ashkenazi Jews were even more acute and the poverty among them even greater. Apart from the diamond and book printing industries, very few trades were open to them and the majority engaged in trading in second-hand goods and foodstuffs. Foreign trade, mainly in money and shares, was concentrated in Germany and Poland. Culturally the Ashkenazi *yishuv* depended on Germany and Eastern Europe, from where most of their rabbis came. The colloquial language was Yiddish, increasingly mixed with Dutch words. Contact with the non-Jewish population was superficial, except among the very small upper class which arose in the second half of the 18th century.

[Jozeph Michman]

Political Emancipation and National Integration, 1795–1870

EMANCIPATION PERIOD, 1795–1815. *Politics.* The Batavian Revolution of 1795, inspired by the French Revolution of 1789, brought an end to the Dutch Republic and the presence of the House of Orange in it. The Oranges left for England and in the local and national authorities the Orangist establishment was replaced by the enlightened party of the Patriots. The French army and French diplomats played a significant role in the political transformation of the country. Gradually the Batavian Republic, as it was called, replaced the old federalist system by a centralist structure. Several coups of more radical groups destabilized the political system. In 1806 the Kingdom of Holland replaced the Batavian Republic, providing the country a more direct link with the French Empire through the appointment of Louis Napoleon as king. He acted, however, too independently of his brother, resulting in his forced abdication and the annexation of the Kingdom of Holland to the Napoleonic Empire (1810). The discontent with the French grew in this period, because of the impoverishment of the country and the forced recruitment of Dutch boys for Napoleon's army. After the fatal Russian campaign, the French left the Netherlands in 1813. William of Orange returned to the country and after the Congress of Vienna in 1815 became

the first king of the United Netherlands, which included the Southern Netherlands.

Demography. There was a gradual drop of the number of newcomers, owing to the difficult economic situation and the Napoleonic wars. At the beginning of the Batavian period some influential families left with the stadtholder's family to England, including a part of the important Cohen family. Migration from Germany and Eastern Europe dropped in these years. Most Jews lived in Amsterdam, with significant communities in the other large cities: Rotterdam and The Hague. In 1810 there were 49,973 Ashkenazim and 5,000 Sephardim in the Netherlands.

Economy. The Continental System, introduced by Napoleon to prevent economic relations with his arch-enemy, England, had a devastating impact on Dutch economy. Not only the ties with British companies had to be ended, also the seaways to the colonies were henceforth closed to Dutch traders. The British empire took all Dutch colonies, including the East Indies, Ceylon, and Surinam. Many rich Sephardi families had put their money in the East and West Indies Companies, which were dissolved. This had a great impact on the Sephardi community, resulting in increasing impoverishment. Also the Ashkenazi community was hit by the economic measures. In the cities the proletariat grew, while in the countryside many Jews tried to earn a living as itinerant merchants, peddlers, and beggars.

Political position. The Batavian Revolution resulted in a new republic in which enlightened ideas became policy. On the demand of the predominantly Jewish *Felix Libertate society the national parliament discussed the granting of citizenship to the Jews. On September 2, 1796, the government published the Emancipation Decree, granting civil rights to the Dutch Jews. From now on, Jews could vote and be elected to all political representative functions (including the courts). Jews were also allowed to settle anywhere in the Republic, thus opening cities like Utrecht to Jewish settlement. The ban on Jews in certain economic fields, via exclusion from the guilds, was lifted as well. After a few years the guilds were even abolished.

This political emancipation resulted in the first two Jewish parliamentarians. In 1798 H.L. Bromet and H. de H. Lemon were elected and were active in the radical enlightened faction within parliament. Jews were also elected to the municipal councils of Amsterdam, The Hague, and Rotterdam.

Organization. The Emancipation Decree also meant the abolition of the semi-autonomous "Jewish Nation." The chief rabbis and *parnassim* of the communities no longer had the legal right to rule to community as before and to enforce obedience to the *halakhah* in the private lives of its members. The authority of the *bet din* to settle all internal conflicts according to the *halakhah* was severely diminished and reduced to the strictly religious domain. Because from now on the Jewish community was no longer a corporation within the state but

an association of free and independent citizens, the *parnassim* no longer had the right to collect taxes for the community. Although the legal situation changed, in practice many Jewish communities continued operating as before. In Amsterdam, the small group of enlightened Ashkenazi Jews tried to change things from within but failed and founded their own congregation, *Adat Yesurun*. Only under severe pressure of King Louis Napoleon was this community reunited with the older and larger one several years later.

One of the most enduring changes in this period was the centralization of the Jewish community. Just like the other religious groups within the Republic, the Dutch Reformed Church and the Evangelical Lutheran Church, the Jewish community was subsumed under a national organization, uniting all local communities that had enjoyed independence before. Modeled after the French consistorial system, the Opperconsistorie (1808–10) had to unite, control, and reorganize the Dutch Jewish community. The Sephardim were allowed to remain outside this organization. The Opperconsistorie functioned as part of the Department of Religious Affairs and was headed by Jonas Daniel *Meyer. Carel *Asser also played a decisive role in this organization. The Netherlands were divided into 11 provinces, headed by a consistorial synagogue controlling the *kehillot* in its vicinity. Through its rigorous emancipation policy it soon faced considerable opposition from the old establishment of *parnassim* and rabbis. It advocated the translation of the Bible into Dutch, promoted the erection of a special Jewish Corps in the army, and tried to ban Yiddish from synagogue.

After the annexation of the Kingdom of Holland into the French Napoleonic Empire in 1810, the Opperconsistorie was replaced by four regional consistories. These consistories operated under the aegis of the Consistoire Central in Paris, just like other consistories within the Empire. Because of the political developments, however, the new regional consistories had hardly any time to start their activities. In 1813 the French left the Netherlands and the consistories stopped their activities.

CENTRALIZATION AND NATIONALIZATION, 1815–1870.

Politics. The Kingdom of the Netherlands united once again Northern and Southern Netherlands. Both Amsterdam and Brussels acted as its capitals, but The Hague remained the actual administrative city, with the permanent residence of the king and his family. In 1830 a revolt broke out in the Southern Netherlands against William I's enlightened centralistic policies, including use of the Dutch language policy and control over the Catholic Church. This resulted in the establishment of Belgium, a fact accepted at last by William I in 1839. After he abdicated he was succeeded by his son, William II. Growing dissatisfaction with the autocratic style of leadership of the Oranges resulted in a growing Liberal movement. Fearing the wave of liberal revolutions that swept over Europe in 1848, William II agreed to adopt a constitution. The new constitution transferred much of the king's power to parliament. Also

the election system was reorganized, resulting in the political participation of a larger part of the population.

Demography. The Jewish community remained stable in this period. As a result of the economic situation, many Jews left the cities and sought to earn their livelihoods in the countryside (called the *mediene* in Dutch Yiddish). Regional cities which had banned Jews in the Dutch Republic were now open to them. Jews settled in even the smallest villages. This resulted in a growing regional differentiation among Dutch Jewry, because regional relations determined the fate of the Jewish families in the countryside. They married among themselves, started communal life, erected synagogues, and buried their dead in new Jewish cemeteries. Also economically the *mediene* Jews cooperated intensively. This is the only period in which the relatively dominant position of Amsterdam within the Jewish community declined.

Economy. The political emancipation of 1796 did not imply socio-economic emancipation. Although political barriers were lifted and the guilds no longer existed, the position of the Jews on the labor market remained one-sided and problematic. Most Jews did not break away from the traditional patterns of employment, because of family traditions and the non-Jewish fear of new competitors. Only in the course of the century did the Jewish poor learn crafts in order to broaden the economic base of the Jewish community. In the first half of the century, however, the situation remained precarious. In the cities no less than half the Jewish population were paupers. In the countryside Jews eked out a living as butchers, peddlers, and petty merchants.

Only a small but nevertheless growing part of the community succeeded in entering new domains. The Jewish newspapers proudly mentioned Dutch Jews who obtained important jobs in the government, juridical system, or army. A number of Jewish lawyers enjoyed authority, such as Jonas Daniel *Meyer, who was a member of the constitutional committee in 1815. The *Asser and De *Pinto families produced a number of renowned lawyers, while M.H. *Godefroï became the first Jewish minister of justice. In the countryside there was a small Jewish elite, such as the families Hartogensius in Brabant, Duparc in Frisia, and Schaap in Amersfoort and Groningen.

Organization. After the collapse of the consistorial system, in the wake of Napoleon's defeat, a number of *kehillot* advocated a return to the old model, in which they enjoyed independence. The Dutch government, however, created a new central organization, the Hoofdcommissie tot de zaken der Israëlitén (Supreme Committee on Israelite Affairs). This committee, being a part of the Department for Religious Affairs, functioned as an intermediary body between the government and the Jewish community. In it, the Sephardim and the Ashkenazim were brought together in one national organization. On the one hand, it enforced government laws within the community, which was structured hierarchally with the Hoofdcommissie

at the top. On the other hand, the Hoofdcommissie brought complaints of the Jewish community to the attention of the government. In this way, antisemitic local authorities were dealt with by the national government. The Hoofdcommissie, functioning from 1814 to 1870, had two equally important goals: the centralization and the nationalization of the Dutch Jewish community.

In the first half of the 19th century the entire Jewish community was restructured. Local Jewish communities were brought together under the jurisdiction of the largest provincial community, called the Supreme Synagogue. Also the Southern Netherlands, until 1830, and the colonies became part of this structure. For the rabbis a similar structure was created, with the chief rabbis responsible for the jurisdiction of their Supreme Synagogue. But also Jewish education, poor relief, and the *mohalim* were reorganized in order to make it easier to be controlled by the Hoofdcommissie and the national government.

Nationalization. The centralization of the community served the second objective of the Hoofdcommissie, namely its nationalization. The Emancipation Decree reduced Jewish identity to a religious one only. All national Jewish characteristics had to be eradicated and replaced by a Dutch identity. Therefore, Yiddish was combated and Dutch promoted. This language policy was successful in the end. The implementation of the policy was gradual. In order to have the new generation raised with Dutch as its mother tongue, much attention was paid to the Jewish schools. At first new Dutch textbooks were written to replace older Yiddish methods. Besides the Dutch language and Dutch history, also geography and mathematics were introduced into the school curriculum. As most of the teachers were only able to teach in Yiddish – because they were recent immigrants from Poland – they were tolerated for a while, until the new generation of Dutch schoolteachers was ready. Thereafter things went quickly and Yiddish was completely banned from the Jewish schools. The national inspector, Dr. Samuel Israel *Mulder, reported to the Hoofdcommissie on the language situation in the schools. If Yiddish was still in use somewhere, the government subsidy was withdrawn. After the new school law of 1857, which ended government subsidies for religious schools, the Jewish schools were closed and the children started attending public schools. Jewish religious instruction was given after regular school and on Sundays.

No less important was the shunting aside of Yiddish in the religious domain. This began with a prohibition against making announcements in Yiddish. These now had to be in Dutch. The second step was the promotion of Dutch sermons, replacing the Yiddish (and Portuguese) *derashot*. A prize was established for the best Jewish sermon in Dutch. Because many rabbis were from Poland and Germany and were not able to preach in Dutch, they were allowed to give their addresses in German. In the meanwhile the Dutch Israelite Seminary was reorganized in order to produce a new generation of

Dutch-speaking rabbis. After the installation of Joseph Hirsch *Duenner as rector of the Seminary in 1862, his pupils gradually took over the rabbinical positions in the Netherlands. From that moment on, Yiddish vanished from the pulpits and only Dutch was used to address the communities.

This language policy was accompanied by a series of measures to Protestantize synagogal liturgy. The Jewish elite that staffed the Hoofdcommissie and the boards of *parnassim* of the local *kehillot* promoted decorum and order in the synagogue. They forbade speaking during the service, banned traditional *Homenkloppen* on Purim, and tried to introduce the ceremony of confirmation in addition to the bar mitzvah.

Religion. However, these innovations did not result in the founding of Reform communities in the Netherlands. Although there were some attempts to introduce Reform Judaism in the Netherlands, especially in Amsterdam and the Eastern Provinces, they failed. Because the Jewish community, via the Hoofdcommissie, was controlled by the government, there was no chance for Reform Judaism. The government did not want any arguments within the community. The ruling Jewish elite had adopted the same policy as the Dutch patricians: a constant search for the middle way and avoidance of extremes. In order to keep the whole community together, only minor innovations were introduced, and all the religious ones had to be approved by the chief rabbis. The boundaries of the *halakhah* determined the space of policymakers in the Netherlands. On the whole, the Sephardi model, in which social integration and religious halakhic observance were combined, was popular among both Ashkenazi and Sephardi elites.

[Bart Wallet (2nd ed.)]

1870–1940: Rapid Growth and the Emergence of a Dutch-Jewish Sub-Culture

WHY 1870–1940? The year 1870 has been widely accepted in Dutch and Dutch-Jewish historiography as the beginning of a new period. Generally, industrialization and economic expansion improved the economic situation of all sectors of society, but also caused growing social awareness and the creation of trade unions; the democratization process caused the masses to get involved in politics, thus promoting political parties. Yet, this was accompanied in The Netherlands by a segmentation of society into several subgroups (the Protestant “pillar” with its subcurrents; the Catholic one; the Liberal or “neutral” one; and the leftist one, which included Socialists and various Communist factions). These developments affected all Jews very much – but especially those in Amsterdam, which was the capital and a major harbor – and Jewish society was deeply involved in all of them. Additionally, the countrywide community structure (with its two traditional wings: the Ashkenazi Nederlandsch-Israëlitisch Kerkgenootschap and the Sephardic Portugeesch-Israëlitisch Kerkgenootschap), which had started to evolve during the “French period” at the beginning of the 19th century, received its renewed structure in 1870, as a (delayed) result of the introduction of the constitutional principle of separation of church and state some 30 years before.

As the Netherlands did not participate in World War I, it affected Dutch Jewry only partially and indirectly and did not constitute a major turning point in its history, as was the case in most other European countries. Therefore, the period starting in 1870 can be seen as ending only in 1940, with the Nazi German occupation of the country.

DEMOGRAPHY AND OCCUPATIONS. The Jewish population grew during this period from 68,003 in 1869 (1.90% of the general population) to 97,324 in 1889 (2.15%), 106,409 in 1909 (1.81%), and 115,223 in 1920 (1.68). Afterwards a certain decline began: the registered number of Jews (who declared themselves as such) in 1930 was 111,917 (1.41%), a decline that can be attributed to lower birth dates and a growing percentage of intermarriages (in Amsterdam this grew between 1901 and 1934 from 6 to 17 percent, which was still low as compared to other West European countries). However, in the 1930s, mainly due to the emigration of many thousands of Jewish refugees from Nazi Germany and Austria, of whom about 16,000 remained in the country, the number grew again (for the census carried out in 1941 under the German occupation, see the Holocaust section below). The Jews anticipated general demographical trends in the Netherlands, both regarding the rapid growth during the second half of the 19th century and the declining birth and death rates, which point to their earlier and faster modernization. This included urbanization (in 1930, 80% lived in seven major cities: Rotterdam and the Hague, each with more than 10,000 Jews, and Groningen, Apeldoorn, Arnhem, and Utrecht with 2,500 to 10,000; Amsterdam towered over all other communities and became the main Jewish city, with 44% of all Jews in the country in 1869, amounting to 30,000, about 60%, or 68,758, in 1920 and almost 57% in 1941, or 80,000) and an improvement in their socio-economic position. The developments from the beginning of the 20th century also caused the rapid aging of the community.

As a result of the processes of modernization in general and of industrialization in particular, the occupations of Jews diversified. Jews were overrepresented in commerce, but quite underrepresented in the agrarian sector. They constituted a major part of the diamond trade and industry, and had also a considerable share in the textile industry. The poverty among the Amsterdam Jews declined somewhat from the end of the 1860s as a result of the development of the diamond industry. However, this branch had its ups and downs, affecting a great part of the Jewish population in the city, particularly in the 1930s. Thus, in spite of a general improvement, the Jewish proletariat remained large. Some Jewish families became extremely successful (and wealthy) in some economic sectors: textile (Salomonson, Menko, Spanjaard, Van Gelderen, etc.), retail chains (Cohen, Gerzon, Goudsmit, Isaac), food (Van den Bergh, whose enterprise later developed into the multinational Unilever), Zwanenberg, whose meat factory later evolved into the pharmaceutical giant Organon, and some in banking (Lissa en Kann, Van Nierop, Rosenthal, Teixeira de Mattos, Wertheim, Mannheimer). Jews were also overrep-

resented in the educated classes and the professions (higher percentages with academic titles, dentists, economists, physicians, and lawyers), even though the general numbers were relatively low.

RELIGIOUS DEVELOPMENTS AND SECULARIZATION. The secularization of the Jewish community intensified during this period, and this also eased the accompanying process of acculturation. Indeed, this process was more marked in the big cities, but as a result of the urbanization process its impact was decisive. Nevertheless, most of the Jews remained formally attached to the official orthodox community organizations, especially in the communities in the countryside. Together with the relatively low intermarriage rate, a Dutch-Jewish sub-culture thus crystallized. With the relative improvement in the economic situation of many Jews and the emergence of a Jewish bourgeoisie, many communities decided during this period to build new synagogues or renovate them. Some were designed by well-known architects (for instance, in Groningen).

The secularization process affected the tiny Portuguese (Sephardi) community immensely, and it was hence characterized by ongoing stagnation; only the splendor of the past kept the descendants attached to it. However, in the Ashkenazi community, which was also affected by the same developments, some noteworthy facts should be mentioned. First, it succeeded in keeping wealthy secular figures involved in leading positions in the community, on the condition that they would not interfere in religious issues. An illuminating example of this “pact,” which would characterize all the communities in the country for decades, was the banker and politician A.C. *Wertheim, who served as vice chairman of the Amsterdam Jewish community between 1878 and 1886, and afterwards, until his death in 1897, as chairman. In the religious sphere, the coming of the Cracow-born and Bonn University graduate Rabbi Joseph Zwi (Hirsch) *Duenner in 1862 was of major importance. He first was appointed as rector of the Nederlandsch-Israëlitisch Seminarium (rabbinical seminary). In this function, where he served until his death in 1911, he reformed the curriculum by introducing an academic approach to talmudic studies. He thus trained and shaped several generations of Dutch rabbis who served throughout the country. After a decade of success in the seminary, he was appointed chief rabbi of Amsterdam and the province of North Holland in 1874. In this position, and because of his religious and general scholarly capacity, he became the unparalleled spokesman of Dutch orthodoxy and Jewry in general. And as there was no official chief rabbi of the country, he was in effect regarded as such. Duenner had been a proto-Zionist since the 1860s, corresponding with such persons as Moses *Hess and R. Zacharias *Frankel in Germany. Upon the establishment of the Zionist movement by Theodor *Herzl in 1897, he welcomed and supported it. His Zionist views legitimized the movement in the Netherlands but were not accepted by most of his students at the seminary. However, a minority of his students became active in *Mizrachi, and played a significant role in

it. Most of his children and descendants also became fervent Mizrachists and made *aliyah* before the Holocaust.

As there was no chief rabbinate for the entire country, the chief rabbis of the different provinces decided at the turn of the century to try to coordinate their views on major issues from time to time. This was done through the unofficial body named Vergadering van Opperrabbijnen, which existed until the deportations of the Jews from the Netherlands in the Holocaust (in 1942).

Reform Judaism, so strongly developing in Central Europe, Britain, and the United States from the mid-19th century, did not find a real echo in the Netherlands until 1930. At the end of the 1920s Lily *Montagu of England, chairperson of the World Union for Progressive Judaism (WUPJ), first approached the industrialist Zwanenberg, and through him contacted several wealthy persons in the Hague. After several speeches on Reform Judaism by visiting leading Reform personalities, a tiny community was established in that city at the end of 1930, headed by Rabbi Meir Lasker, who was chosen and sent by the WUPJ. About a year later a Liberal-Religious Church Organization (i.e., countrywide roof organization) was institutionalized, followed by the establishment of a second community, established in Amsterdam, in January 1932. The appearance of Reform/Liberal Judaism on the Dutch Jewish scene caused much debate, even though the number of adherents of the new stream was at that time actually insignificant. One interesting point was the fact that among the first Reform Judaism activists there were many Zionists. With the influx of German-Jewish refugees from 1933, the movement became rooted, albeit with a clearly German character causing tensions within the movement between the “Dutch” and “Germans”. Among the German refugees joining this movement was the Otto *Frank family, whose daughter Anne would become famous for the diary she wrote during the Holocaust.

Jews in politics and Jewish politics: between Socialism and Zionism. While this period witnessed both the emergence of modern antisemitism and vehement outbursts of traditional Jew-hatred in other parts of Europe, the Netherlands was never plagued with these phenomena. Religious anti-Judaism existed, however, as it was part and parcel of Christian thought. It was expressed in some of the literature and also in politics, mostly by the founder of the Anti-Revolutionary (i.e., right-wing Protestant) party, Abraham Kuyper, in the last decades of the 19th century. Fascist and racist antisemitism made its appearance only in the 1930s, and remained marginal. No party proposed the abolition of the emancipation. Nevertheless, the marked segmentation of Dutch society and its relative conservatism perpetuated reservations about the Jews. Consequently, until 1940 no Jews were appointed to national or key representative positions, such as mayors, commissioners of the king, governors of colonies, ambassadors, or consuls. Many other functions also remained closed to Jews. But Jews were members of political parties – from the Liberals to the Social Democrats to the Communists; they were especially strongly

represented in the Social Democratic Workers Party (SDAP). The attraction of Jews to socialism had started already in the 1860s, with the Jewish diamond cutters being the first to organize in a general labor union (ANDB). This union served as a cornerstone from which the larger labor union and afterward the SDAP emerged. Henri *Polak (1868–1943) played a major role in these developments; he succeeded in leading large parts of the Jewish proletariat in Amsterdam to socialism. He was for several years chairman of the party, and afterwards its representative in the Dutch senate (Eerste Kamer). A number of other Jews also filled leading positions in the movement. The radical left wing David *Wijnkoop (1876–1941), son of a rabbi, was the most prominent figure. He was one of the founders of the Communist Party, and represented the party in the House of Commons (Tweede Kamer) and in the Amsterdam municipal council for most of the interwar period.

During the first half of the 19th century, Dutch Jewry had developed some strong ties to Palestine. In the beginning of the century the European-wide fundraising organization *Va'ad ha-Pekidim ve-Amarkalim was established by Zwi Hirsch *Lehren, and his sons continued his initiative, playing a major role in the life of the old *yishuv*. A group of Dutch Jews immigrated to Palestine and established Kolem HoD (Holland-Deutschland). But the influence of the Lehrens gradually declined, both in Palestine and in the Netherlands, from the beginning of the second half of the century. The Hovevei Zion movement, whose emergence was strongly linked to the difficult situation of the Jews in czarist Russia, did not win much support in the Netherlands.

But the political Zionist movement, established by Herzl, attracted two high-profile figures: the banker Jacobus *Kann, who attended the first Zionist Congress in Basel in 1879, and Rabbi Duennen, who openly and avidly supported the new movement from its inception and thus made possible its introduction into Dutch Jewish society. The Dutch Zionist Union (NZB) was established in 1899. In the beginning it attempted to attract the Jewish proletariat, but this effort failed almost entirely. In middle-class and certain religious circles success was higher, thus creating an active nucleus. Some of the first- and second-generation of Dutch Zionists played an important role in the world movement and in the new *yishuv* in Palestine in the first decades of the 20th century, such as Jacobus Kann, Eliezer Siegfried *Hoofien, Nehemia *de Lieme, and later Fritz (Perez) *Bernstein. The convening of the 1907 Zionist Congress in the Hague, contributed to the growth of the Union. It nevertheless met resistance from many circles. During World War I, a considerable number of East European Jews from Antwerp fled to the country, mainly to Scheveningen. As many among them were Zionists, their presence had an impact on the spread of Zionism in the Netherlands, especially among youngsters. It was in the wake of this and of the Balfour Declaration, which demonstrated the political success of Zionism, that the training of *halutzim* (first from abroad) at Dutch farms started, and a roof organization for all Zionist youth movements in the country – the Joodse Jeugdfederatie

(JJF – Jewish Youth Federation) – was established. The Balfour Declaration also contributed to securing for the NZB an important place in Dutch Jewish organizational life. In the 1930s, in the face of the rise of antisemitism in general and the rise of the Nazis to power in particular, the movement continued to grow. Among its youngsters radicalism grew stronger, and calls for “dissimilation” from identification with the Netherlands and Dutch culture were voiced.

Social care, education, and culture. With modernization and acculturation proceeding, the traditional Jewish local organizations for social care (“Chevres”) were transformed into a network of modern philanthropic organizations, many of them countrywide. They included organizations such as the Dutch-Jewish Organization for the Poor (Nederlandsch-Israëlitisch Armbestuur) and homes for the aged; health care institutions, such as the Joodsche Invalide and the Nederlandsch Israëlitisch Ziekenhuis (hospital); institutions for the mentally ill, such as the Apeldoornsche Bosch, etc. In the 1920s a (pro-Zionist) Union of Jewish Women (Joodsche Vrouwenraad) was established, which focused on welfare activities. Many organizations dealt especially with youth. Most of these institutions were supported by wealthy assimilated Jews.

The Jewish school system had deteriorated towards the middle of the 19th century. But the Elementary Education Act of 1857 changed the situation dramatically. The Jewish schools for the poor were abolished, and the children were integrated in the general school system (schools with 50% Jewish students would close on the Jewish Sabbath). Almost all children attending middle-class schools were also integrated in the general schools. Only in Amsterdam did several Jewish schools continue to exist, with a reduced numbers of students. The norm for Jewish children became to attend a local public school and have supplementary Jewish lessons on Sundays. In several communities additional lessons in Judaism were given at other times. The impact of this collapse of Jewish education was a rapid decline in Jewish knowledge among Dutch Jews. In order to counter this development a school network – Jewish Special Education – was established in Amsterdam in 1905. As a result of social awareness, teachers of Jewish studies at elementary and high schools organized in a union called Achawa in 1894.

With the growing number of Jews – secular as well as religious – getting academic training, together with a renewed search for Jewish identity, interest in Jewish studies and especially in Dutch Jewish history developed. An association for Jewish studies was established, and many publications, usually with an emancipatory approach, were published and read by a broad audience. In the second half of the 1920s the weekly *De Vrijdagavond* served as a spokesman for this trend. One of the outstanding historians of Dutch Jewish history was Sigmund *Seeligmann, who had emigrated from Germany.

The Jewish press played an important role in daily life and in promoting Jewish identity. The major general weeklies were the Amsterdam *Nieuw Israëlitisch Weekblad* (NIW),

established in 1865, which became the leading Jewish newspaper of the country (existing into the 21st century); the *Centraal Blad voor Israëlitien in Nederland* and the *Israëlitische Letterbode*. Beside these there were many organizational weeklies, such as the Zionist *Joodsche Wachter*, or cultural ones, such as *De Vrijdagavond*.

This period is also characterized by the emergence of many Jews active in the fields of literature, theater, cabaret, and the arts. The best-known authors were: the dramatist Herman *Heijermans (1864–1924), who depicted Jewish life in Amsterdam; the poet Jacob Israel de *Haan (1881–1924), a Zionist who emigrated to Palestine and became an ultra-Orthodox anti-Zionist and was murdered by an activist of the Haganah; his sister, the prose writer Carry van *Bruggen (1881–1932), who became one of the most influential writers in the Netherlands in the first decades of the 20th century; and the novelist Israel *Querido (1872–1932). There were many performing musicians among the Jews, but the only composer of importance was Sem Dresden (1881–1957). Many more Jews were active in the theater: Esther de Boer van Rijk (1853–1937), Louis de Vries (1871–1940), and the noted cabaret performer Louis Davids (1883–1939). The most famous painter was Jozef *Israëls (1824–1911); others were his son Isaac Israëls (1865–1934) and Martin Monnickendam (1874–1941). The most important sculptor was Joseph Mendes *da Costa (1863–1939), and the best-known architect was Michel *de Klerk (1884–1923), founder of the “Amsterdam School.”

Refugees from Nazi Germany and the threat of the 1930s. The rise of Nazism in Germany caused the emigration and flight of tens of thousands of Jews from there. Neighboring Netherlands, with its language close to German, became an important country for the (temporary) stay and for the transit of fleeing German Jews. A total of about 34,000 Jewish refugees arrived in the Netherlands; around 24,000 stayed for more than two weeks, and after the German occupation in 1940 there were still 15,000–16,000 in the country. The rise of Hitler to power and the first anti-Jewish measures prompted the establishment of a Comité voor Bijzondere Joodsche Belangen (CJB – Committee for Special Jewish Interests) in March 1933, consisting of a number of prestigious figures in the Dutch Jewish community and headed by Abraham *Asscher. The influx of refugees caused the CJB to establish a subcommittee for Jewish Refugees (JVC), headed by Prof. David *Cohen. The combined CJB-JVC turned into the most powerful organization in Dutch Jewry on the eve of the Holocaust, which dealt with the Dutch authorities and with international organizations and maintained contact with Jews and non-Jews of all parts of society, monitored political developments, and commanded a large budget. Its leaders and infrastructure became the basis for the Joodsche Raad (Jewish Council) during the Nazi occupation.

On the Eve of the Holocaust. All in all, on the eve of the German invasion in May 1940, Dutch Jewry had generally adapted itself to the Dutch mentality and way of life and saw

themselves as full Dutch citizens. However, the percentage of mixed marriages, although growing, was still low as compared with other West European democratic countries; and within the segmented Dutch society Jews had developed a marked subculture. With the influx of Jewish refugees, which were assisted by the Dutch Jewish community, the perception by Gentiles of “the Jews” as a different entity was reemphasized. From the Jewish side, the infusion of Dutch Jewry with new energy linked to general worldwide Jewish crosscurrents and organizations – such as Zionism, which became an important force in the 1920s and 1930s, and Reform Judaism, which emerged in the 1930s – pointed to possible new directions of development.

1940–1945: The Holocaust

The historiography of the Holocaust in the Netherlands has been relatively intensive and comprehensive as compared to almost all countries (except for Germany) and started immediately after the end of World War II. A first comprehensive history (authored by Hans Wielek/Kweksilber) appeared as early as 1947, and another five were written in the following six decades (by Abel Herberg, Jacques Presser, Louis de Jong, Jozeph Michman/Hartog Beem/Dan Michman, and Bob Moore). In addition, many partial studies have been made. The reason for the intensity in research is to be found in the urge to find answers to the puzzling fact that about 102,600 of the 140,000 “full” Jews (according to the German definition) living in the Netherlands at the beginning of the German occupation perished due to the persecutions, i.e., 74%. This is, in relative terms, the highest death toll in any West European Jewish community, including Germany itself. Among the additional 20,000 “half” and “quarter” Jews, most survived.

GERMAN INTENTIONS. Whereas the German attitude towards France in the wake of the occupation of Western Europe starting in May 1940 was relatively conciliatory, and whereas policies regarding Belgium were for a long time undecided, the intentions towards the Netherlands were clear from the start. The Dutch were perceived as a German tribe which had taken a separate course for several centuries, but should now be reintegrated into the commonwealth of Germanic tribes. Consequently, Arthur *Seyss-Inquart, an Austrian Nazi, was appointed Reichskommissar for the occupied country, Reichskommissar being in the Nazi vocabulary a title assigned to persons appointed to carry out a special ideological mission. He articulated his fanatic adherence to his mission in a public speech in Amsterdam on March 12, 1941, which was translated into Dutch and disseminated among the population. Also resulting from this was the fact that the position of the SS in the Netherlands was from the beginning much stronger than in other West European countries. The “final solution” of the Jewish question in the Netherlands was implemented by the German authorities – whose heads consisted of Nazi radicals, among whom were several other Austrians in addition to Seyss-Inquart – with much fervor from shortly after the occupation. Before the Nazi decision in the matter of a

European-wide Final Solution (in the second half of 1941), this meant segregation and impoverishment; afterwards – from 1942 – it meant the nearly total removal of the Jews through well-organized arrests and deportations. Dutch Jewry was not a tabula rasa for the occupiers: the Jewish Department of the *Sicherheitsdienst* of the ss had already produced a report in March 1939 on “The Jews in Holland,” which outlined the basic structure of Dutch Jewry and included the names of many of its leading figures.

ANTI-JEWISH MEASURES BEFORE THE DEPORTATION PERIOD (1940–1942). The first months following the capitulation of the country (May 14, 1940) passed relatively quietly, although some minor anti-Jewish actions were taken (such as the removal of Jews from anti-aircraft defense units or the first registration of Jews in the province of Zeeland); some Dutch organizations fired Jews on their own initiative. In September 1940 the German authorities, under the direction of *Generalkommissar* Fritz Schmidt, started the planning of systematic anti-Jewish measures. All Jewish newspapers were closed down. Then, in October–November, all people serving in the civil service (governmental, provincial, municipal, judicial, schools and universities) were ordered to sign an “Aryan declaration” (a statement of not having Jewish parents or grandparents) for themselves and their spouses; Jews were consequently fired (November 4). Both the secretaries-general (the Dutch heads of ministries who had stayed in the country after the flight of the government) and the majority of the Supreme Court decided to accede to this order, which consequently affected even the Jewish president of the Supreme Court, Judge Lodewijk E. *Visser. Protests were limited, and voiced mainly at some universities. At the same time, Jews were ordered to register their enterprises (October 22), making possible “Aryanization” (20,690 enterprises, most of them small, were listed). On this occasion the term “Jew” was legally defined (as in Germany).

On January 10, 1941, registration of all Jews was ordered. Only a small number of Jews did not show up. With the introduction of identification cards, IDs for Jews were stamped with a “J.” On March 12, the first of four expropriation and Aryanization decrees was promulgated. The most fateful among them, conceived by the economic mastermind *Generalkommissar* Hans Fischboeck, was the one enacted in August; it ordered the concentration of all bank accounts of Jews in a special branch of the Jewish Lippmann-Rosenthal (“Liro”) bank, which was under German control. The possibility to use the accounts was restricted, and on January 1, 1943, all individual accounts were concentrated in one joint account. From the opening of the bank, the Jewish accounts were used by the German authorities to finance, and thus supervise, the activities of the Joodsche Raad (see below). In addition, *Einsatzstab* Rosenberg confiscated Jewish private and public libraries, works of art, and later also furniture. From the summer of 1941 Jews were prohibited from visiting parks and other public places, and a daily curfew from 8 P.M. to 6 A.M. was imposed

on them; they were allowed to buy in shops only between 3 and 5 P.M. Jews were also removed from all general organizations and societies. In August *Generalkommissar* Friedrich Wimmer ordered the removal of all Jewish children from the general school system; a Jewish school system was opened under the auspices of the Joodsche Raad.

All these (and more) legal measures were accompanied from time to time by brutal roundups (“razzias”) and arrests. On Saturday February 22, in the wake of a violent incident in a Jewish café, in which a *Sicherheitspolizei* unit was involved, the old Jewish quarter in the center of Amsterdam was closed and around 390 Jewish youngsters were brutally arrested and beaten – all upon the orders of *Generalkommissar* Hanns Albin Rauter. They were deported shortly afterwards; 50 died in the Buchenwald concentration camp and only one survived, around 340 were sent to the Mauthausen concentration camp, and died there in horrific conditions. In June another 300 were rounded up in Amsterdam, in mid-September more than a 100 in several cities in the provinces, and in November several dozen in other cities in the east of the country. All were sent to Mauthausen and worked to death. As “death notices” were sent from Mauthausen to the families, “Mauthausen” became the most feared symbol of Nazi terror for Jews in the country (it was replaced by “Auschwitz” only after 1945). During this whole period, from time to time Dutch Nazis acted with violence towards Jews and Jewish institutions, such as synagogues. Such clashes with Jews, in the second week of February 1941, which ended with the death of one Dutch Nazi, served as the background for the establishment of the Joodsche Raad.

JOODSCHE RAAD VOOR AMSTERDAM (JR; JEWISH COUNCIL). The JR, established on February 12, 1941, on the verbal order of Senator Dr. Hans Böhmcker, Seyss-Inquart’s personal representative in charge of the city of Amsterdam and of anti-Jewish measures, became a pivotal institution in Jewish life under the German occupation. Its creation was apparently an improvised reaction to the above-mentioned clashes between proletarian Jews and Dutch Nazis several days before. In spite of the abundance of documentary material on the activities of the JR from German, Jewish, and Dutch sources, there is no document from before its establishment regarding any intentions to do so. Its establishment can be seen better in the broader context of the establishment of *Judenraete* on the initiative of ss officials throughout Europe, as a step in controlling the Jewish community as a collective entity. The authority of the JR was first limited to Amsterdam only, but, during 1941, with the involvement and sanction of the German authorities, it gradually extended to the entire country (through a network of “representatives”); this status was finalized at the end of October with the dissolution of the Jewish Coordination Committee (see below). It was headed by Abraham Asscher and Prof. David Cohen, who had chaired the Committee for Special Jewish Affairs and the Jewish Refugee Committee in the 1930s (see above), and were also active in general and Jewish politics. The JR was supervised by

the Zentralstelle fuer juedische Auswanderung, established in April 1941. Through the JR the Germans incrementally segregated the Jewish population and created an administrative and mental ghetto. All announcements concerning Jews were disseminated through its weekly, *Het Joodsche Weekblad*. Social care, first of the former refugees from Germany and afterwards of the increasingly impoverished Dutch Jews, was transferred to the JR and made many dependent on its services. It had to organize the segregated Jewish education system from September 1941. When industrialist Bernard van Leer was allowed to leave the country in September 1941, he left behind an enormous fund which enabled the JR to sponsor cultural institutions and activities (orchestras, theaters, cabaret, lectures, sports). For its financial needs the JR first solicited contributions (those who did not contribute money could receive no services from the JR), but afterwards it obtained its money from Jewish funds administered by the Germans. Its bureaucracy grew constantly and peaked at the end of 1942 to more than 17,000 people. Although not intended in the beginning to be exploited for deportations, this institution became vital to their success in 1942–43. Through its administration deportation orders were disseminated, and deportees were cared for while those remaining behind were provided with food, health care, and welfare services.

FORCED LABOR, CONCENTRATION OF JEWS IN AMSTERDAM, DEPORTATIONS. Among the later measures of the pre-deportation period was the recruitment of Jews for forced labor. This was imposed on about 7,500 Jewish males from 85 towns (about 2,500 were later released) from the beginning of 1942, through the JR; they were sent to 42 camps, all over the Netherlands. These people were ready victims at the start of the deportations (the so-called “labor recruitment” – *Arbeitsinsatz*) “to the east.”

Non-Dutch Jews had to leave the coastal region shortly after the occupation. At the end of 1941 Jews from the coastal region could move only to Amsterdam. Later the Jews in other parts of the country were forced to resettle in Amsterdam. Finally, the Jews were forbidden to live in eight of the eleven provinces. The remaining three provinces were restricted on April 13, 1943, leaving Amsterdam the only city for Jews to live in.

The cleansing of the Netherlands from its Jews as part of the Final Solution was planned by Adolf Eichmann and his staff as part of the joint cleansing of Western Europe. Planning commenced in April 1942. On April 29 the JR was ordered to distribute a yellow “Jewish Star” to all Jews in the country; this was carried out within a few days in the beginning of May. Deportation orders were sent out, through the JR, in the beginning of July, and a first roundup was carried out on July 14. From then until September 29, 1943, more than 100,000 Jews were deported in about 100 transports, mainly to Auschwitz (60,000) and Sobibor (34,000, all in 1943); only a handful survived. They were sent via the *Westerbork Polizeiliches durchgangslager* (Police (Jewish) transit camp), a

camp originally established in 1939 by the Dutch government for German Jewish refugees. In the camp certain cultural and religious activities were allowed. Tuesdays, the weekly day on which deportations trains left the camp, were the fearful “judgment days.” A tiny group of *Prominenten* was transported to Theresienstadt (about 5,000). In 1943–44 about 4,000 Jews with “Palestine papers” were sent to the Bergen Belsen “exchange camp” (*Austauschlager*) for a possible exchange for Germans from abroad. 222 were indeed exchanged in the summer of 1944 for Templars from Palestine; 136 entered Switzerland; 25% of the Bergen Belsen Jews survived. In addition to Westerbork there was *KL Herzogenbusch*, next to the city of *Vught*, a camp built in 1943. It served as a place for forced labor and later also for the concentration of Jews. From June 1943 to June 1944 all 12,000 inmates of *Vught* were sent to Westerbork.

JEWS LIFE AND RESPONSES; FLIGHT AND HIDING. At the beginning of the occupation Jews tried to maintain their prewar life. The community organizations continued their existence until the end of the deportations, but from 1941 lost their importance. As pressure on the Jews grew in the fall of 1940, a Joodsche Coordinatie Commissie (Jewish Coordination Committee, JCC), initiated by Zionists, backed by the community organizations, and headed by Lodewijk Visser, was established in December 1940. Its major aims were to advise the Jews politically in the new situation, help those who were in economic distress, and develop cultural activities. It was first helped by the organizational infrastructure of the Committee for Special Jewish Affairs and the Jewish Refugee Committee, headed by David Cohen. With the establishment of the JR less than two months later, the ways of the two organizations parted and later clashed; the JCC was finally dissolved in October 1941. With the growing expropriations, removal from jobs, and other segregation measures, the economic situation of most Jews rapidly deteriorated. Religious life was allowed by the Germans until the end of the deportations. However, ritual slaughter was prohibited, except for poultry. For Sukkot (Feast of Tabernacles) in 1940 and 1941 *etrogim* could be imported from Italy and *matzot* were openly baked by the Hollandia *matzah* factory.

Dutch Jews have been called “naïve” in their reaction to the deportations; this would account in part of the high percentage of deportees. It is, however, clear that the emancipatory background which caused Dutch Jews not to be rebellious vis-à-vis authorities, the late emergence of a significant Dutch resistance (only in 1943), and lack of knowledge about what was happening in “the East” together shaped the pattern of response of many Jews. Additionally, the enormous concentration of Jews in Amsterdam made it hard for many to find hiding places; in other parts of the country the chances of survival were generally higher. As for knowledge about the murders, it is typical that the JR team in charge of gathering information on the fate of the deportees still reported in January 1943 that apparently many of those sent to Auschwitz

were alive and living in family units! Nevertheless, after the first weeks of arrests in the summer of 1942, the percentage of Jews ignoring deportation orders grew enormously. According to a recent study by Marnix Croes and Peter Tammes (2004), about 28,000 Jews went into hiding, finding shelter with non-Jews. But only about 16,000 of these “divers” survived, as many were apprehended. Apparently, many more Jews looked for hiding places. Others tried to escape through Belgium and France to Switzerland and Spain, and some succeeded in doing so. Among them was a considerable number of members of the Halutz underground organization, headed by Joachim (Shushu) Simon, succeeding thanks to the organization and support of Joop *Westerweel and some aides. Some Jews, especially from the political left, albeit not too many, participated in general resistance groups

ATTITUDE OF NON-JEWS: PROTESTS, RESCUE, INDIFFERENCE, AND COLLABORATION. In spite of the high percentage of Dutch Jews who perished, the view of the Dutch as having helped the Jews is widespread. Like any historical generalization this perception is a distortion and quite exaggerated – yet not entirely erroneous. With the removal of Jews from the civil service in October 1940, Leiden University law professor R.P. Cleveringa openly delivered a protest lecture, and was later arrested. On February 25–26 a general strike, initiated by the Communist movement but spontaneously supported by many thousands of citizens, was held in Amsterdam and surroundings. The strike was sparked by many weeks of anti-Jewish actions by Dutch Nazis, and by the brutal roundup of February 22. The strike, unparalleled in Europe under the Nazi regime, was suppressed. It became a much-praised symbol, but had no long-term effect on the persecutions. With the beginning of the deportations in July 1942, an unprecedented initiative was undertaken by all Dutch churches to jointly protest against the persecutions during Sunday prayer services. Under the pressure of the occupier the Protestant churches retreated; the Catholics, under the leadership of Archbishop J. de Jong, did not give in and read out the declaration of protest. In reprisal, all Jews converted to Catholicism were arrested and almost all of them sent with the first deportees to Auschwitz. Among them was Edith *Stein (1891–1942). As mentioned, about 28,000 Jews went into hiding, finding shelter with non-Jews – the majority of them Catholics in the southern provinces and *Gereformeerde* Protestants in Friesland and elsewhere. As hiding could be maintained only with a circle of support, this number signifies that a considerable number of ordinary Dutchmen extended help. On the other hand, about 12,000 “divers” were apprehended, many of them through denunciators. Moreover, it can fairly be said that the efficiency and general disciplined obedience of the Dutch bureaucracy served the Germans in the persecution and deportation operations. For instance, the registration of the Jews in 1941 was carried out with the utmost punctuality. And as recent study has shown, during the Final Solution some sectors, such as the police command and especially the Amsterdam police,

collaborated to a considerable extent. The overall picture is therefore varied.

[Dan Michman (2nd ed.)]

Postwar and Contemporary Period

RESTORATION. The reintegration of surviving Jews into Dutch society after the devastation of World War II was not without serious problems. Jews who returned from the concentration camps or emerged from their hiding-places were faced with neglect and sometimes outright hostility. In addition, Jews suffered from a trend, supported by the former Resistance movements, to remold them as soon as possible into full Dutchmen without the slightest reference to their Jewishness. This attitude led to the suppression of Jewish identity and also placed Jews in a disadvantageous position, since their situation was the same as that of other Dutchmen. They had lost most of their relatives and all of their possessions and the supportive infrastructure of the Jewish community no longer existed. The Jews received support from international Jewish organizations, such as the American Jewish *Joint Distribution Committee, the *Jewish Agency, and the *Jewish Brigade. In the summer of 1945 the central Jewish weekly, the *Nieuw Israelietisch Weekblad*, resumed publication. Other institutions slowly followed.

Prewar Jewish rights were not automatically restored; for example, a bitter struggle developed over Jewish war orphans who had been in hiding with non-Jewish families. These children were not handed over to the Jewish community as a matter of course. The authorities established a committee with a Christian majority of former rescuers and a minority of Jews. The central issue was not whether it was better for some of these children to remain with their foster families or to return to a Jewish family or orphanage. The main question was who was to decide their fate: the Jewish community – as would have been the case with Jewish orphans in prewar circumstances – or the Christian rescuers. Some 358 children remained in non-Jewish homes, just over a quarter of the cases the committee had to decide upon.

Restitution of buildings and other fixed assets proceeded at a slow pace and while most had been returned to the Jewish community by around 1950, other forms of compensation and restitution came only in stages and over a much longer period of time. The possessions of murdered Jews, who had no heirs, initially were considered Dutch and not specifically Jewish. Insurance companies, banks, and the government itself, after much pressure, made these final restitutions to the Jewish community only around the year 2000.

DEMOGRAPHY. In 1945 the surviving number of Jews in the Netherlands was estimated at between 28,000 and 35,000, of whom about 8,000 had survived because they were married to non-Jews. In addition to this group there were another 20,000 “people of Jewish descent,” persons with one Jewish parent or one Jewish grandparent, who also had had a much better chance to survive. Some of them rejoined the community. The fact that many survivors were married to non-Jews or were children of mixed marriages transformed the com-

munity into a far more assimilated one when compared with the prewar situation. A second major change was of a socio-economic nature: the proletariat of Amsterdam had been wiped out completely. The postwar community was a typically middle-class one. A third feature was the fact that more Jews who originated in Eastern Europe were among the survivors: being more suspicious than the average Dutch Jew, they had quickly understood the seriousness of their situation and had taken measures at an earlier stage during the occupation. In the immediate postwar years some 5,000 Jews left the country, mainly for the U.S. Some 1,500 Zionists among these emigrants, who were very active in the postwar leadership of the community, went to Israel before 1950.

According to demographic studies in 2000 the total Jewish population in the Netherlands remained at 43,000; 70% had a Jewish mother, and fewer than 25% were affiliated with the official community. In Amsterdam 56% of the Jews still had two Jewish parents, in the Randstad (western part of the Netherlands) 44%, and in the rest of the country 33%. Some 20% of the Jews in the Netherlands come from Israel, and there are several hundreds refugees from Iraq and Iran and the former Soviet Union who were admitted on humanitarian grounds. The community has a low birth rate (1.5) and a disproportionately large number of elderly people, but despite all these factors, the Jewish community of the Netherlands has not declined in absolute numbers since 1945. However, the total population in the Netherlands grew quite dramatically from 9 million in 1945 to over 16 million in 2005.

INTEGRATION. In general, Jews became well integrated in public life after the war. The relationship between Jews and the Dutch government improved greatly from 1955 on. The 1960s are generally characterized by goodwill, both toward the Jewish community and the state of Israel. A major problem came to the fore in 1972 when the government intended to set free three German war criminals with direct responsibility for the deportation of the Jews. A by-product of the successful protests of the Jewish community was the familiarization of the wider Dutch public with the collective Jewish war trauma and the difficulties some of them had, as a result, even to earn a decent living. A special law came into being, guaranteeing a monthly income to victims of persecution.

In spite of their small numbers, Jews were members of Parliament and several became ministers of government. While before the war Jews did not serve as mayors, after the war several towns, like Amersfoort and Groningen, had Jewish mayors. Amsterdam had four in succession. Jews played an important role as university professors, journalists, artists, and so on. Abel Herzberg, a renowned lawyer and chairman of the Dutch Zionist movement, was a highly respected publicist in non-Jewish circles as well. Henriette *Boas was a prolific writer of articles and letters on the subject of Dutch Jewry and everything connected with Israel. Jaap Meijer was a leading voice in the postwar period castigating the bogus sentiments and pseudo-romanticism in the historical recon-

Ark of the Law and bimah in the Liberal synagogue built in Amsterdam after World War II. Photo M. Ninio, Jerusalem.

struction of Dutch Judaism. In the literary works of Judith Herzberg, Gerhard Durlacher, Leon de Winter, Marga Minco, and Arnon Grunberg, the Holocaust is often a painful source of inspiration.

Two major changes had an impact on the relationship of the Jews with Dutch society since the 1970s. Firstly, the Netherlands moved from a clear pro-Israel stand to a political position that fell into line with the more critical European one. A second major change was the growth of a considerable Muslim community in the Netherlands. Jews no longer are the only non-Christian minority group. In spite of often opposed views of the Middle East conflict, the Jewish and the Muslim communities actively seek to build a positive mutual relationship. Christian denominations which had shown much interest in their Jewish roots and in the land of Israel in the first decades after World War II, became more critical, but at the same time lost much of their relevance as a result of secularization. Jewish-Christian dialogue, the Protestant-oriented Counsel of Jews and Christians and the Catholic Counsel for Church and Israel, have contributed to a better understanding of Judaism.

INTERNAL ORGANIZATION. The Jewish community has undergone many changes. In 1950 the dominant Ashkenazi Orthodox Nederlands Israelietisch Kerkgenootschap (NIK) had

actively registered some 19,500 persons. Many of those were only included since the NIK still claimed to represent “the Jewish Nation” in the Netherlands. The majority of these registered Jews – about 10,000 – lived in Amsterdam, but the real active membership in Amsterdam comprised only some 5,200 Jews in 1951. Other Jews mostly lived in the *Randstad*-area, including The Hague and Rotterdam, where communities of several hundred Jews were reestablished. Smaller numbers of Jews live in towns like Groningen, Enschede, and Amersfoort, where they succeeded in reviving their congregations. Amsterdam is the only place with Jewish day schools. The presence of a considerable number of Israelis – about 8,000 in the whole country around 1995 – contributed to the operation of these schools.

Between 1945 and 2000, the membership of the Ashkenazi Orthodox community dwindled to fewer than 5,000 Jews in the whole country and the NIK lost its dominant position. Until the 1970s the character of Orthodox Judaism under the leadership of Chief Rabbi Aron Schuster hardly changed. Schuster was supported by Rabbi Vorst in Rotterdam and Rabbi Berlinger in Utrecht. Eli Berlinger was rabbi for most of the provinces and caused many Jews from smaller places to move to Israel. Since the 1970s, rabbis from abroad, such as Rabbi Meir Just from Hungary, and the Lubavitch movement had a significant impact on the community. All were more rigorous in their interpretation of the *halakhah* and changed local traditions. This led to a partial estrangement of the original Dutch membership. In 2005, this tendency resulted in the establishment of the first Conservative congregation, which – in Weesp and Almere together – started off with some 80 members. The Portuguese community is also still in existence but its numbers are very small: in 1945 there were about 800 Portuguese Jews left; in 2005 some 450 members were counted.

The only growing community after the war was the Union of Liberal Religious Jews in the Netherlands, established in 1931, and a member of the World Union for Progressive Judaism. Only in Amsterdam did a small community of some 130 Liberal Jews – mainly German refugees – survive the war. During its first 10 years the congregation in danger of disappearing, until Dutch-born Rabbi Jacob *Soetendorp was named to lead it in 1954. Under his leadership, together with Dr. Maurits *Goudekot and Robert *Levisson, the community added dozens of families to its ranks every year. New congregations were established in The Hague, Rotterdam, and Arnhem. Around 1970 a younger generation, represented by David Lilienthal and Awraham Soetendorp, took over as rabbis of Amsterdam, The Hague, and Rotterdam, followed by Rabbi Edward van Voolen in Arnhem in 1978. The Progressive community continued to grow and in 2000 it had a membership of well over 3,000, distributed in nine congregations throughout the country. The community has its own rabbinical seminary.

Outside the religious community – comprising only 20% of the total Jewish population – Joods Maatschappelijk Werk

(Jewish Social Work, JMW), undertook much activity. JMW was established in 1946 and all Jewish organizations are represented in it. With its neutral and non-religious character, JMW was able to reach Jews who had lost formal contact with the community. JMW also cared of the elderly and many people who suffered from war trauma. In the days of the establishment of the State of Israel Zionism was very strong: the Dutch Zionist Union (NZB) had a membership of 3,232 in 1948, and nearly all other Jews supported Zionism without formal membership. The NZB reestablished its journal *De Joodse Wachter* (“The Jewish Guardian”). Po’alei Zion was its largest faction, but when most members left for Israel the group declined. During the 1980s ARZA, the new Zionist faction of the Movement for Progressive Judaism, dominated the NZB as part of a worldwide struggle for equal rights for Progressive Jews in Israel. Later on the NZB was reorganized in order to achieve greater efficiency and was renamed the Federation of Netherlands Zionists (FNZ), but the organization barely continued to exist. The need to deal with growing anti-Israel sentiments in the Dutch media and public opinion since the early 1970s led to the establishment of CIDI, the Center for Information and Documentation on Israel. On the board of this organization all streams of Judaism are represented, and CIDI developed into a professional public relations office working on behalf of the organized Jewish community. WIZO is the oldest functioning network for Jewish women in the Netherlands and although both the Orthodox and the Progressive Jewish community developed their own women’s networks, WIZO remained very popular. One of its strongest features is that it is open to both religious and non-religious women alike.

Although on an administrative and public relations level the Orthodox and Liberal Jewish communities worked well together, the establishment of an umbrella organization comparable to the Board of Deputies in England or the CRIF in France did not materialize for a long time in the Netherlands. The Orthodox continued to claim that they were the only representative body of the Jews. In the end, however, numerical developments in the religious community shaped a new reality. In 1997, the CJO (or CJOEB: Central Committee of Jewish Organizations – External Affairs) was founded in which the religious, social, and political organizations of the community cooperate.

IDENTITY. Most Jews are not connected with the traditional community. For those who still feel a need for Jewish contacts, informal frameworks came into being, like social cafés and meeting groups. Israelis also have their own social activities. Loneliness is a large problem in the community, since most people still feel the absence of relatives and normal family life as a result of the Holocaust. Visits to the Jewish Historical Museum in Amsterdam and the annual *Yom Havoetbal* (Jewish Soccer Day) are the most popular expressions of identification. The Holocaust plays a major role in both Jewish and national consciousness: the central Jewish memorial sites are the Hollandse Schouwburg in Amsterdam, the Westerbork

transit camp, and the Vught camp. Many cities and villages have dedicated local monuments in memory of their own deported Jews.

In the first decades after the war synagogues were sold and turned into churches, shops, garages, and laundries. Hartog Beem, who knew the prewar communities from his own vivid experiences, was for some time the only individual who wrote extensively on earlier Jewish life in provincial towns and villages. He also documented the use of Yiddish in the Dutch language. During the late 1970s and early 1980s the tendency to close synagogues was reversed by a growing interest among Jews and non-Jews in the visible history of their local Jewish communities. New studies were published with detailed descriptions and efforts were made to restore Jewish cemeteries and synagogues. Restored synagogues became museums or were given other useful purposes in memory of the destroyed communities. In several cases synagogues returned to their previous use and became houses of prayer again, mostly for Progressive Jewish congregations. This happened in The Hague with the ancient Portuguese synagogue and also with the Ashkenazi synagogues of Tilburg and Haaksbergen. The synagogue of Weesp is in use by the first Conservative congregation in the Netherlands.

In academic and archival institutions the growing interest in the communities aside from Amsterdam resulted in some large-scale projects, such as in the province of Groningen, where the histories of all communities were written up and all tombstones were photographed and described. The richest center of Jewish studies in the Netherlands is no doubt Amsterdam, but a newly established independent institute of Jewish education is Crescas, which organizes courses in all parts of the Netherlands in an effort to strengthen Jewish identity also outside of Amsterdam.

[Wout J. van Bekkum and Chaya Brasz (2nd ed.)]

Relations with Israel

A long-standing history of cooperation links the Jewish people to the Dutch, from the period of the "Golden Age" of Dutch Jewry after the expulsion of the Jews from Spain and Portugal until the demonstrations of support and acts of rescue during the Nazi occupation of the Netherlands. On Nov. 29, 1947, the Netherlands voted in favor of the UN plan to partition Palestine, and thus for the establishment of a Jewish state, and soon afterward officially recognized the new State of Israel. Formal diplomatic relations were established on the ambassadorial level, with Holland being the first country to set up its diplomatic representation in Jerusalem. The Netherlands supported Israel in the United Nations as well as in other international frameworks on a number of occasions; supported Israel against the Arab boycott and Arab aggression; and played a role in the struggle for persecuted Jews, especially Jews in the Soviet Union and the Arab countries. It was also Israel's major aid in its efforts to establish ties with the European Economic Community. When the Soviet Union severed diplomatic relations with Israel in 1953, the Netherlands represented Israel's

interests in the U.S.S.R. and contributed to the resumption of diplomatic ties between the two states. It again assumed this role when the U.S.S.R. and other Communist states broke diplomatic relations with Israel after the Six-Day War (1967); subsequently Israel's interests in the U.S.S.R. and Poland were represented by Holland.

Trade relations between the two countries reached \$75,000,000 in 1966 and rose to \$84,000,000 by 1968, with Dutch exports to Israel somewhat larger than Israel exports to Holland. Tourism from Holland to Israel also rose, with 7,983 tourists in 1966, 9,308 in 1967, and 14,047 in 1968. The high points in cultural exchanges were the arrangement of a Dutch art exhibit in Israel and an exhibit from the Land of the Bible and appearances of the Israel Philharmonic Orchestra in Holland. Every year an Israel delegation participated in the popular march in Nijmegen, and a Dutch delegation took part in the yearly marches that take place in Israel, which are modeled on the Dutch ones. Prime ministers, foreign ministers, and other members of the government and of parliament of the two countries carried out mutual visits.

[Yohanan Meroz]

Netherlands governments in various coalitions continued to support Israel in the immediate post-Six-Day War period. On several occasions the Netherlands succeeded in having a UN anti-Israel draft resolution toned down. In the UN General Assembly Dec. 4, 1985, it was one of 16 countries voting against a resolution demanding unconditional withdrawal by Israel from all Palestinian and other Arab territories occupied since 1967. It was also among the 22 countries voting against a resolution calling the Israel decision of Dec. 1981 to introduce Israel laws and jurisdiction and Israeli administration into the Golan Heights an act of aggression and demanding a military, economic, diplomatic, and cultural boycott of Israel. On the other hand, it voted in favor of a resolution calling the incorporation by Israel of Jerusalem unlawful. The Dutch government criticized Israel for its bombardment of PLO headquarters in Tunisia.

The Netherlands withheld diplomatic recognition of the PLO and continued to limit the status of the Palestinian office in The Hague, which was opened in July 1983, to that of an Information Office.

In July 1983 the government, with the full approval of Parliament, decided to withdraw the Dutch Unifil battalion from South Lebanon as from October 19, 1983, as it could no longer play a useful role there.

The Netherlands continued to represent Israel's interests in Moscow and to mediate in the applications for visas to Israel by Soviet Jews until Israel was able to open its own consulate in Moscow.

In the Gulf War the Netherlands fully supported the American stand against Iraq and participated in the Allied forces, be it in a modest way.

At the end of January 1991 the entire Second Chamber of Parliament, with the exception of a few members of the

Green Left party, approved the government decision to lend eight Patriot systems to Israel, with 70 instructors and maintenance personnel. By the time they arrived in Israel the Iraqi Scud attacks had ceased, so that they never went into action. At the same time the government, in addition to the F 3,000,000 it had donated already for food for the Palestinians in the Administered Areas, gave another F 2,000,000 for this purpose, plus 10,000 gas masks. The news media had repeatedly pointed to the absence of gas masks for the Palestinians.

The first Intifada, from its start, received very great attention in the Dutch news media. The emphasis was often on the "cruelty" of the Israeli soldiers firing at young children who merely threw stones. Among the organizations showing great sympathy for the Palestinians was the Netherlands Council of Churches (mainly Protestant) and the Dutch branch of the Roman Catholic "Pax Christi."

Two small extreme left-wing parties, the PRP (Political Radical Party) and the PSP (Pacifist Socialist Party), often publicly criticized Israel. In 1987, together with the small Communist Party (CPN), they merged into the Green Left which often criticized Israel, as did some members of the Labor left wing.

On the second anniversary of the outbreak of the *intifada* the PLO representative in The Hague, Afif Safieh, organized a large-scale meeting, to which he invited representatives of all the major parties as speakers, but all declined. Nor was any official representative of the Foreign Ministry present. The meeting was addressed by the chairman of the Netherlands Council of Churches, Prof. Dirk C. Mulder.

The Israel-Palestine peace talks in Madrid had originally been scheduled to take place in The Hague, but Syria had objected for a number of reasons. The Hague was thus dropped, much to the relief of the Dutch authorities, in view of the vast organizational and security problems it would have caused.

No Palestinian terrorist attacks against Jewish persons or property took place throughout the decade under review.

On January 19–21, 1986, Israeli Prime Minister Shimon Peres paid an official visit to Holland, where he also met Spanish premier, Felipe Gonzalez.

The ICN or Israel Committee Netherlands, which consists of orthodox Protestants, is fully pro-Israel and every year from 1980 sent tens of thousand of flower bulbs to Israel to adorn its public gardens.

The Collective Israel Actie (United Israel Appeal) in 1992 raised some F 9,240,000, of which F 6,260,000 came from the campaign itself and some F 3,000,000 from bequests. This was a reduction of F 2,500,000 against 1991, but F 2,500,000 more than in 1989. In contrast to the situation in the 1950s and 1960s, many Israeli institutions now freely solicit funds in Holland.

The disaster of the El Al Boeing 747 cargo aircraft which crashed into two tall apartment buildings in the Bijlmer district of southeastern Amsterdam on Oct. 4, 1992, made a deep impression. In addition to the three Israeli crew members and

one Israeli woman passenger, 43 local residents were killed and four seriously wounded, nearly all of them recent immigrants from Third World countries. In all, 80 apartments were destroyed and 160 others were no longer safe for habitation. The ultimate blame for the disaster was eventually placed upon the Boeing company.

On the whole, beginning in the 1970s, the Netherlands has come closer to the more critical attitude of the European community toward Israel, but it still remains a very friendly nation. In 2004, exports to the Netherlands totaled \$1.23 billion while imports reached \$1.48 billion.

[Henriette Boas]

NETHERWORLD, the abode of the dead. The peoples of the Ancient Near East had elaborate doctrines concerning the dead and their abode. The Egyptians were very optimistic concerning the afterlife. They believed that ceremonies of mummification, rituals and spells, and declarations of guilt-

lessness would ensure them a happy afterlife almost identical to the life they led in this world. In the afterlife they would plow, harvest, eat, and drink; in short, do all they did while they were alive (*The Book of the Dead*, 110).

For the Babylonians, on the other hand, the realm of the dead was a place to be dreaded. It was a well-organized kingdom with Ereshkigal and *Nergal as its queen and king, respectively. To enter it one had to pass through seven gates and remove one's garments. The netherworld is depicted as "... the land of no return ... the dark house ... the house which none leave who have entered it ... the road from which there is no way back ... the house wherein the entrants are bereft of light, where dust is their fare and clay their food, [where] they see no light, residing in darkness, [where] they are clothed like birds, with wings for garments, [and where] over door and bolt is spread dust" (*Descent of Ishtar to the Netherworld*, 1–11, in Pritchard, Texts, 107; cf. *Epic of Gilgamesh*, 7, 3:33–39, in Pritchard, Texts, 87). The plight of the dead could be worsened or alleviated depending on whether they were properly buried, and whether or not food and drink were brought to them. Such practices and speculations are not entirely wanting in the Bible. Deuteronomy 26:12, 14 implies that only food that has been consecrated as tithe may not be left as a gift for the dead, the practice of feeding the dead as such being permitted, while Isaiah 14:14–19 and Ezekiel 38:18 ff., reflect a belief that those who are slain by the sword (and not decently buried), as also such as die uncircumcised, are assigned the lowest – and no doubt the least desirable – level of the netherworld (see Ginsberg in bibl.). On the other hand, the practice of occult arts including necromancy was abhorred by the Bible (Deut. 18:11; Isa. 8:19), and there was no sacrifice to the dead (Ps. 106:28). Sacrifice to the dead means sacrifice to no-gods, such as Baal-Peor; cf. Numbers 25:2–3.

Apart from the Isaiah and Ezekiel passages referred to above, the numerous biblical references to the netherworld are vague and inspired by Ancient Near Eastern folklore. Several names are given to the abode of the dead, the most common being *Sheol* – always feminine and without the definite article – a sign of proper nouns. The term does not occur in other Semitic languages, except as a loan word from the Hebrew *She'ol*, and its etymology is obscure. Other common designations of the netherworld are: *'erez*, "earth" or "underworld" (e.g., 1 Sam. 28:13; Jonah 2:7; Job 10:21–22); *qever*, "grave" (Ps. 88:12); *afar*, "dust" (Isa. 26:5, 19; cf. Gen. 3:19); *bor*, "pit" (e.g., Isa. 14:15; 38:18; Prov. 28:17); *shahat*, "pit" (Ps. 7:16); *avaddon*, "Abaddon" (e.g., Job. 28:22); *dumah* (apparently = "the place of abiding"; Ps. 94:17; 115:17); *nahale beliyya'al* ["the torrents of *Belial"; 11 Sam. 22:5]; "the nether parts of the earth" (Ezek. 31:14); "the depths of the pit" (Lam. 3:55); "the land of darkness" (Job 10:21). The netherworld is located somewhere under the earth (cf. Num. 16:30 ff.), or at the bottoms of the mountains (Jonah 2:7), or under the waters – the cosmic ocean (Job 26:5). It is sometimes personified as a voracious monster with a wide-open mouth (e.g., Isa. 5:14; Hab. 2:5; Prov. 1:12). Kings and commoners, nobles and paupers, masters and slaves are

equal in Sheol (Job 3:13–19; Ezek. 32:18–32). For Israel's neighbors, the rule of the universe was divided among various deities, and the netherworld was the dominion of a pair of infernal gods. For Israel, however, the Lord rules over the whole universe, His sovereignty extends from heaven to Sheol (Ps. 139; Job 26:6; cf. Ps. 90:2; 102:26–28). However, there is no communication between the dead and the Lord (Ps. 88:6); no praise to the Lord comes from the netherworld (Isa. 38:18; Ps. 30:10; 88:12–13).

[Laurentino Jose Afonso]

In the Aggadah

In the *aggadah*, the name Gehenna takes the place of the biblical Sheol as the abode of the dead. The name is derived from *Gei Ben Hinnom* (Valley of the son of Hinnom, Josh. 15:8; 18:16; et al.), a valley south of Jerusalem where children were made to pass through fire to the god *Moloch (see *Gehinnom). Jeremiah prophesied that it would become "a valley of slaughter" and a place of burial (Jer. 7:32). In the course of time, the name of this accursed valley, designated for suffering, became identified with the place of retribution for the wicked after their death.

No suggestion of this later notion of Gehenna is to be found in Scripture, but in the Talmud and Midrash "Gehenna" is so used. Joshua b. Levi refers to it by seven names (Er. 19a), all of which are synonyms for the netherworld of Scripture. Later, these seven names were given to the seven divisions of Gehenna (Mid. Ps. to 11:6, Sot. 10b). Descriptions of Gehenna include foreign elements which were widespread in the Hellenistic world (through Orphic and Pythagorean sources). The punishment of "the wicked one whose tongue hangs out to lap the water of the river but is unable to reach it" (TJ, Hag. 2:2 77d) is reminiscent of the punishment of Tantalus in Hades (Odyssey, 11:582–5). The source of this description is probably Greek, passing to Judaism, and thence to Christianity (Luke 16:24) and Islam. Most accounts of Gehenna, however, draw chiefly on the scriptural descriptions of the land of the dead. There is discernible in the *aggadot* on Gehenna a tendency to mitigate the application of strict justice, by limiting the categories of its victims (Ber. 10a; Er. 41b; et al.), and by detailing the many possibilities whereby the Jew might be delivered from its punishment (Pes. 118a; Git. 7a; et al.).

The *aggadot* about Gehenna in the Talmud and Midrash speak of its site, size, entrances, gates, divisions, and princes. A variety of motifs and partial descriptions from the Bible (sometimes self-contradictory) are combined. The *aggadah*, basing itself on verses which describe the site of the land of the dead, variously, as beneath the earth (Gen. 37:35; Deut. 32:22; et al.) and beneath the sea (Jonah 2:3–4; Job 26:5), states that Gehenna has entrances in the sea and on dry land (Er. 19a). In the school of Johanan b. Zakkai it was stated that one of its entrances is in the valley of Hinnom, near Jerusalem. There are also traditions, however, that Gehenna is in the sky (Tam. 32b), and that it is "beyond the dark mountains" (*ibid.*).

As against *aggadot* which, in the main, speak of the fire of Gehenna (Pes. 54a; BM 85a; BB 74a; et al.), there are those

which describe the darkness reigning there (1 Enoch, 10:4; et al.). According to Josephus, the Essenes described it as a cold and dark cave (Wars, 2:155). There are also sources combining both ideas, speaking of a fire found in Gehenna which gives no light – “fire causing darkness,” or “the darkness of eternal fire.” Descriptions of rivers of fire (Ḥag. 13b) in Gehenna appear also to be combinations of descriptions of its fire and of a river flowing in or near it (TJ, Ḥag. 2:2, 77d; Shab. 39a) with descriptions of the hot springs of Tiberias, whose heat is conceived as deriving from their passing the entrance to Gehenna. Extravagant accounts are given of the size of Gehenna and the power of its fire. “The world is one sixtieth of the Garden, the Garden one sixtieth of Eden, Eden one sixtieth of Gehenna – hence the world to Gehenna is as the lid to the pot. Others say Gehenna is immeasurable” (Ta’an. 10a). The account of the gates of Gehenna is followed by descriptions of the gatekeepers (Ḥag. 15b; Mid. Gan Eden, in: A. Jellinek (ed.), *Beit ha-Midrash*, 5 (1938), 42–51) and these gatekeepers are identified with its princes (Shab. 104a).

The descriptions of the sufferings of the wicked in Gehenna are faithful reflections of the judicial procedures during the era of their composition. The concept of “measure for measure” lies at the root of these punishments. “The suffering commences from the limb that began the transgression” (Sif. Num. 18; Toset., Sot. 3:2). The cruel torments of Gehenna, such as hanging by different limbs of the body (TJ, Ḥag. 2:2, 77d; Mid. Gan Eden, *ibid.*; Mid. *Ke-Tappu’ah*), roasting by fire (excerpt from “*Ḥazon Eliyahu*” quoted by Lieberman, in *Louis Ginzberg Jubilee Volume* (1946), 249–70 (Hebrew Section)) and suffocating by smoke (Mid. Gan Eden, *ibid.*), are also found in Christian books of the second, third, and fourth centuries which describe the divisions of Gehenna and the suffering of the wicked therein (e.g., “The Vision of Peter,” “The Acts of Thomas,” and “The Vision of Paul,” the influence of the Jewish *aggadah* being easily recognizable). Undoubtedly, the cruel torments used by the Roman government in its system of punishments played their part in the envisioning of Gehenna. The punishment of the wicked in Gehenna was conceived of as parallel to the procedures for punishment in this world. Just as the lower court does not inflict punishment on the Sabbath, so in Gehenna: “During weekdays they suffer, but on the Sabbath they are given rest” (Gen. R. 11:5).

Some are characterized by severe contrast. The wicked are cast into fire, then into snow, and the process repeated (TJ, Sanh. 10:3, 29b; PDRK, 97). There is a difference of opinion between Bet Shammai and Bet Hillel as to the duration of the punishment in Gehenna (RH 16b–17a); according to the former, the thoroughly wicked remain there for everlasting disgrace; the intermediate ones (between the wicked and the good) descend to Gehenna to be purged, and ascend after purification. According to the latter, the intermediate ones do not go there at all (ARN¹ 41:15), and whereas transgressors (both Jewish and gentile) are punished in Gehenna for only 12 months, only special categories of sinners – informers, those who deny the

resurrection of the dead and those who lead the masses into sin – are punished there for all time (RH *ibid.*). Rabbinic literature incorporates legends of visits to Eden and Gehenna of a type similar to that found among other peoples. Some of these are solitary visits in a dream (TJ, Ḥag. 2:2, 177d), and some escorted visits, in a dream at night. At times the visit takes place in a vision ascribed to one of the scriptural personalities, such as Moses (Mid. *Ke-Tappu’ah*), Isaiah (Mid. Gan Eden, *ibid.*), Daniel, Enoch, and Baruch (Apocrypha). Similar visits are attributed to *tannaim* and *amoraim* (Joshua b. Levi in Ket. 77b), of whom many *aggadot* are extant.

NETILAT YADAYIM (Heb. נְטִילַת יָדַיִם; lit. “raising the hands”), rabbinic term for the obligatory washing of the hands. The rabbis made this ritual mandatory in the following instances:

- (1) upon rising from sleep (Ber. 60b; Sh. Ar., OH 4:1)
- (2) after the excretion of bodily wastes
- (3) after the paring of nails
- (4) after the removal of shoes
- (5) after the combing of hair or touching parts of the body that are usually covered
- (6) after leaving a cemetery or participating in a funeral
- (7) after sexual intercourse (Sh. Ar., OH 4:18)
- (8) before prayer and the recitation of the **Shema* (Ber. 15a; Sh. Ar., OH 92:4)
- (9) before eating bread (Ḥul. 105a; Sh. Ar., OH 158:1)
- (10) before reciting Grace (Ḥul. 105a; Sh. Ar., OH 181:1)
- (11) before eating the parsley at the Passover **seder* (Pes. 115a–6; Sh. Ar., OH 473:6)
- (12) the levites wash the hands of the kohanim before the *Priestly Blessing (Sh. Ar., OH 128:6)

In all these instances the hands must be washed at least up to the third joint of the fingers, i.e., the junction of the phalanges and the metacarpus. Nevertheless, the rabbis considered it preferable to wash up to the wrist (Sh. Ar., OH 161:4). However, when washing before Grace, it is sufficient to wash only up to the second joint of the fingers (Sh. Ar., OH 181:4). A minimum of $\frac{1}{4}$ *log* (approx. $\frac{1}{2}$ pint) of water is poured over the hands from a utensil with a wide mouth, the lip of which must be undamaged (Sh. Ar., OH 159:1, 3; 160:13). The hands must be clean without anything adhering to them prior to the ritual washing, and no foreign object such as a ring may intervene between them and the water (Sh. Ar., OH 161:1–3). Upon rising from sleep, each hand must be washed three times (Sh. Ar., OH

4:2), but before partaking of bread, it is sufficient if they are washed once (Sh. Ar., OH 162:2). It is customary to hold the cup in the left hand and wash the right one first, and then to reverse the procedure (Mishnah Berurah to Sh. Ar., OH 158:1 n. 4). A benediction is only recited after washing the hands upon rising and before eating bread. Its text reads "... and commanded us concerning the washing of the hands." After rising, it is today recited as part of the preliminary **Shaharit* service, while before the meal it is recited prior to the drying of the hands (Sh. Ar., OH 158:11–12).

NETIRA (d. 916), businessman in *Baghdad. Netira wielded considerable influence in the court of the caliphs and the Jewish society of Babylonia. He was at first connected with the business of his father-in-law *Joseph b. Phinehas and his partner Aaron b. Amram. With the appointment of Caliph al-Mu'taḍid in 892, he became the principal figure of Babylonian Jewry and much authority was accorded him. He held this position until his death. During the reign of Caliph al-Mu'taḍid, Netira succeeded in frustrating the design of one of the caliph's ministers, Ibn-Abi al-Bagl, who planned to put many Jews to death. Between 909 and 916, when the controversy between the *rosh yeshivah* of *Pumbedita and the *exilarch *Ukva broke out, he and his father-in-law Joseph b. Phinehas supported the *gaon*. As a result of their intervention, the exilarch Ukva was twice banished from the country. According to Nathan b. Isaac ha-Bavli, the *gaon* in question was R. *Kohen Zedek, but J. Mann has proved, on the basis of *Iggeret Rav Sherira Ga'on*, that it was R. Judah b. Samuel, the grandfather of R. *Sherira Gaon. His sons Sahl and Isaac followed their father's example and they also held important positions in Jewish society. When the dispute between the exilarch *David b. Zakkai and R. *Saadia Gaon broke out in 930, they supported Saadia, who was also the teacher of Sahl. It seems that his third son was Joseph b. Netira, who was one of the heads of the Fostat community in the second half of the 10th century. Apparently the sons of Netira lost their influence during the rule of Caliph al-Qāhir (932–934).

[Abraham David]

NETIV HA-LAMED-HE (Heb. נְתִיב הֶלֶם), kibbutz in the Elah Valley, central Israel, affiliated with Ha-Kibbutz ha-Me'uhad. It was founded by a group of Israeli youth in 1949, later joined by immigrants from various countries. In the

initial years Netiv ha-Lamed-He was an isolated outpost, but it progressed after the *Adullam Region development project was launched in the mid-1950s. Its farming included field crops, fruit plantations, poultry, and dairy cattle. In addition, the kibbutz manufactured water filters and ran a guest house. In 2002 its population was 420. The name of the kibbutz, "Pathway of the Thirty-Five," commemorates the *Haganah unit of 35 men who were killed by Arabs while trying to reach the besieged Ezyon Bloc in the Israeli *War of Independence (1948; see *Kefar Ezyon). A memorial has been erected near the kibbutz.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

NETIVOT (Heb. נְתִיבוֹת; "Roads," from Prov. 3:17), Israel development town in N.W. Negev, 9 mi. (15 km.) S.E. of Gaza. Netivot was founded in 1956 in the framework of Israel's regional settlement and population dispersion policy. It was initially named Azzatah ("Toward Gaza"). Although placed in the center of a quickly expanding agricultural region, Netivot's progress was handicapped by the proximity of two other development towns, *Sederot and *Ofakim, and by its inability to attract educated veteran citizens in addition to new immigrants. Netivot's growth was slow, its population rising from 1,231 in 1957 to 4,830 in 1968; 95% of the immigrants came from Tunisia and Morocco. One of Morocco's most renowned rabbis, Yisrael Abuhatzzeira (the Baba Sali), settled there as well. After his death in 1984 his tomb became a major pilgrimage site, attracting hundreds of thousands of people every year. In the mid-1990s the population was approximately 13,600, rising further to 21,800 in 2002. The increase was due to the arrival of many new immigrants; 43% of the residents were below the age of 14. In 2000, Netivot received city status. The municipal area was 2.3 sq. mi (6 sq. km.). Most residents worked in local commerce and industry, with others commuting to the bigger cities of the region: Beersheba, Ashkelon, and Kiryat Gat. Income was about half the national average.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

NETOPHAH (Heb. נְטֹפָה), Judean village, evidently near Bethlehem (1 Chron. 2:54). It was the hometown of two of David's heroes (11 Sam. 23:28, 29) and of a captain of Gedaliah (11 Kings 25:23; Jer. 40:8). It appears after Bethlehem in the list of those returning from Babylonian exile (Ezra 2:22; Neh. 7:26). In Byzantine times, it is placed in the vicinity of Tekoa (*Life of Cyriacus*, in: PG, vol. 115, p. 929); the same source mentions a "desert of Netopha." The usual identification is with Khirbat Badd Falūh, about 3.4 mi. (5½ km.) south of Bethlehem, where Iron Age to Byzantine pottery was found. It has also been located at Ramat Raḥel, which, however, is identified with Beth-Cherem by its excavator.

[Michael Avi-Yonah]

NETTER, CHARLES (Yizhak; 1826–1882), leader of the *Alliance Israélite Universelle and founder of the *Mikveh Israel Agricultural School. Born in Strasbourg, Netter went into business, first in Lille and then in Moscow and London. He moved to Paris in about 1851 and began a life-long career of public activities, establishing a Jewish vocational school in 1865, a society for safeguarding the rights of workers, and a hostel for poor artisans in 1880. A founder of the Alliance Israélite Universelle (1860), he was elected its treasurer. Various proposals submitted to the Alliance to extend its activities to Erez Israel met with a favorable response on Netter's part, and the Alliance board, although opposed to the encouragement of emigration to Erez Israel, was ready to help Jews already there. In 1867 Netter submitted a proposal to the Alliance to assist Jews from Persia and other Eastern countries to emigrate to Erez Israel and to found agricultural settlements for them. The following year he visited Erez Israel on behalf of the Alliance, and upon his return he recommended the creation of an agricultural school, to be followed by the founding of settlements for the school graduates. In his report Netter noted that Erez Israel would provide a shelter for Jews fleeing from hostile surroundings and enable them, in the course of time, to occupy and settle the Holy Land. When his proposal was approved, he left for Constantinople in 1869, where he received the approval of the grand vizier of the Imperial State Council for the establishment of the school and the authorization of Rashid Pasha, governor of Syria, for the acquisition of 650 acres (2,600 dunams) of land for the annual rental of 1,800 francs, with a right of renewal for 25 years. A *firman* of 1870 confirmed the arrangement, whereupon he returned to Erez Israel and founded the school, naming it Mikveh Israel. After a stay of four years, he fell ill and had to return to Paris, revisiting Erez Israel for six months in 1873. He resumed his political activities on behalf of Jewish causes and in propaganda for the school. In 1877 he again went to Constantinople on behalf of the Alliance, and on the basis of this visit he submitted a report to the Great Powers on the situation of the Jews, especially in Romania and Serbia. In the following year he attended the Congress of Berlin. In 1880 he was at Madrid, where an international conference was deliberating the status of Morocco, and intervened on behalf of the Jews of that country. He was disappointed with the lack of success recorded by Mikveh Israel and the general unsuitability of Erez Israel for the absorption of large numbers of Jews. As a result, he opposed the *aliyah* of Russian and Romanian Jews in the 1880s, when events in those countries created strong pressure for emigration and a movement developed to resettle Erez Israel. At the end of 1881 he visited Brody, remaining there for some months, during which he arranged for the emigration of 1,200 Russian Jewish refugees to America and of a group of 28 children to Mikveh Israel. In March 1882 he even came out with a statement in the press opposing immigration to Erez Israel. Similarly, a conference of Jewish organizations in Berlin, in which Netter participated, decided to support emigration to the United States and to look for other countries where Jews

could find refuge, but failed to consider settlement in Erez Israel. Probably under the influence of Baron Edmond de *Rothschild, who believed that an attempt should be made to turn Erez Israel into a center for Jewish immigration, Netter revised his views, and in August 1882 he revisited the country. There he met Russian Jews who had settled in Rishon le-Zion and members of the *Bilu movement and offered them his help. He developed many plans for agricultural activities and the development of crafts in Erez Israel, but died a month after his arrival.

[Israel Klausner]

NETTL, PAUL (1889–1972), musicologist. Born in Hohenelbe, Bohemia, Nettel was lecturer in musicology in Prague from 1919 until 1939, when he immigrated to the United States. He taught in Chicago, and at Indiana University (1946–60). His works include: *Alte juedische Spielleute und Musiker* (1923); *The Story of Dance Music* (1947); *The Book of Musical Documents* (1948); *The Other Casanova* (1950) concerning Lorenzo da Ponte; *Forgotten Musicians* (1951); *Beethoven Encyclopedia* (1956); and *Mozart and Masonry* (1957). His son BRUNO was an ethnomusicologist, specializing in the study of American Indian music.

NETUREI KARTA, group of ultra-religious extremists, mainly in Jerusalem, who regard the establishment of a secular Jewish state in Erez Israel as a sin and a denial of God, and therefore do not recognize the State of Israel. Their name, which is Aramaic for “guardians of the City,” derives from a passage in the Jerusalem Talmud (Hag. 76:3) stating that religious scholars are the guardians and defenders of the city. Most of them come from the old *yishuv*, but they have been joined by some immigrants from Hungary, disciples of R. Joel *Teitelbaum of Satmar.

Neturei Karta broke away from *Agudat Israel in 1935, when the latter attempted to restrain extremist demands for an independent ultra-Orthodox Jerusalem community completely separate from the rest of the “Zionist” community. The group first adopted the name Hēvrat ha-Hayyim, after R. Joseph Hayyim *Sonnenfeld. It aimed at creating “a circle free from the influence of the contemporary spirit and its fallacious opinions,” and a condition of membership was “the education of sons and daughters in the traditional Jewish manner, without any change (girls’ schools which teach Hebrew do not provide education in the traditional Jewish manner).” The last phrase alluded to Agudat Israel’s Bet Ya’akov girls’ schools, where the language of instruction is Hebrew. The name Neturei Karta was first used in 1938 by a group of

youths, including members of Hēvrat ha-Hayyim, who violently opposed the Jewish community's levying of the voluntary defense tax, *kofer ha-yishuv*.

During World War II, Neturei Karta came out in opposition to Agudat Israel, when it cooperated more closely with the Jewish community and the *Jewish Agency, and attacked it in *Ha-Homah*, a newspaper which began to appear in 1944. In 1945, at the elections to the Orthodox Community Committee (*Va'ad ha-Edah ha-Haredit*), Neturei Karta and its sympathizers gained control; one of their first acts was to exclude from membership anyone educating his daughters at a Bet Ya'akov school. During the War of Independence, Neturei Karta opposed the creation of a Jewish state and Israel's control of Jerusalem, and tried to bring about the internationalization of the city.

The most consistent members refuse to accept an Israel identity card, to recognize the competence of Israel courts, and to vote in municipal or general elections. Although they consist of only a few dozen families – concentrated in the Me'ah She'arim quarter of Jerusalem and in Bene Berak – they gained some support in wider Orthodox circles by creating periodic religious controversies, such as their demonstrations against Sabbath violation and mixed bathing. In 1966 Neturei Karta split, following the marriage of their leader R. Amram *Blau to a convert, Ruth Ben-David. Members of Neturei Karta derive their livelihood mostly from small trade and contributions from abroad, notably from disciples of the Satmar rabbi in the United States. The Neturei Karta continued its spirited anti-Israel activities into the 21st century, demonstrating against Zionist organizations at every opportunity and agitating for the return of the Land of Israel to the Palestinians.

[Menachem Friedman]

NEUBAUER, ADOLF (Abraham; 1831–1907), scholar, author, librarian, and bibliographer. Born in Nagyanya, Hungary, Neubauer studied in Prague with S.J.L. *Rapaport and at the universities of Prague and Munich. In 1857 he went to Paris, where he pursued research at the Bibliothèque Nationale, and in 1864 to Jerusalem as a member of the staff of the Austro-Hungarian consulate. There, too, he sought out rare Hebrew books and manuscripts, discovering in the Karaite synagogue a manuscript of extracts from the lexicon of *David b. Abraham of Fez (15th century) which he published in the *Journal Asiatique* in 1861–62. Returning to Paris, he was befriended by the Orientalists S. *Munk, J. *Derenbourg, and E. *Renan. Invited to St. Petersburg in 1864 to examine the *Firkovich collection of Karaite manuscripts, Neubauer wrote a report for the French Ministry of Education (*Rapports...* (1865) with S. Munk) and published *Aus der Petersburger Bibliothek, Beiträge und Dokumente zur Geschichte des Karaerthums und der karaeischen Literatur* (1866). He presented his prize-winning essay *La Géographie du Talmud* (1868) to the

Académie des Inscriptions et Belles Lettres which in spite of some criticism (J. Morgenstern, *Die französische Akademie und die "Géographie des Talmuds,"* 1870²) has remained an important reference book. His *Notice sur la lexicographie hébraïque...* (1863), foreshadowing his edition of Jonah *Ibn Janah's *Sefer ha-Dikduk* (1875, 1968²), with additions and corrections by W. Bacher, and *Meleket ha-Shir* (1865), a collection of extracts from manuscripts concerning Hebrew poetry, belong to the same period.

In 1865 Neubauer settled in England, becoming librarian at the Bodleian Library, Oxford (1868), which he enriched by judicious purchases, particularly from the Cairo *Genizah; in 1884 he was appointed reader in rabbinic Hebrew at the university. There he produced some of his finest work, cut short in 1899 by failing eyesight. His works there include *Catalogue of the Hebrew Manuscripts in the Bodleian Library* (3 vols., 1886–1906; the second was finished by A.E. Cowley), with over 2,500 entries (some items consisting of 20–50 works); the third volume contains 40 facsimiles that illustrate Hebrew paleography of different countries and periods. He also prepared a *Catalogue of the Hebrew Manuscripts in the Jews' College* (1886).

His *The Fifty-Third Chapter of Isaiah According to the Jewish Interpreters* (vol. 1, texts, 1876; vol. 2, translations with S.R. Driver, 1877; repr. 1969) provided biblical scholarship with an anthology of Jewish reactions to christological interpretations. He was the first to publish original Hebrew portions of *Ben Sira as they were found in the Cairo Genizah, together with the text of early versions, quotations of Ben Sira in rabbinical literature, and an English translation (with A.E. Cowley, 1897). His two volumes of *Medieval Jewish Chronicles* (*Seder ha-Hakhamim ve-Korot ha-Yamim*, preface and notes in English, 1887–95, repr. 1967) collected texts of a number of talmudic, geonic, and medieval historiographical writings. The fruits of Neubauer's collaboration with Renan were two remarkable works of literary history: *Les rabbins français du commencement du quatorzième siècle* (1877) and *Les écrivains juifs français du XIV^e siècle* (1893). Other editions of his include *Vocabulaire hébraïco-français* (in: *Romanische Studien*, 2 (1875)), and *Petite Grammaire hébraïque provenant de Yemen* (Arabic, 1891) as well as *Talmudical and Rabbinical Literature* (in: *Transaction of the Philological Society*, 1875–76). Neubauer also contributed a stream of articles, notes, and book reviews to most of the learned Jewish (and many non-Jewish) periodicals of his time. In 1901 he moved to Vienna to live with his nephew A. *Buechler, and when the latter became principal of Jews' College, London, in 1906, he returned to London where he died shortly afterward.

NEUBAUER, JACOB (Jekuthiel; 1895–1945), halakhist and law historian; born in Leipzig. In 1917 Neubauer published

Bibelwissenschaftliche Irrungen and in 1918 his important dissertation *Beitraege zur Geschichte des biblisch-talmudischen Eheschliessungsrechts*. When he was appointed lecturer at the Wuerzburg teachers' training school, his home became a center of Jewish intellectual life for students of all faculties. In 1933 he was chief lecturer at the rabbinical seminary in Amsterdam. Neubauer was an outstanding scholar in the history of Jewish law and in the exposition of the development of individual laws. He died in Bergen-Belsen. His *Ha-Rambam al Divrei Soferim* was published in Jerusalem in 1957.

BIBLIOGRAPHY: B. de Vries, in: *J.J. Neubauer, Ha-Rambam al Divrei Soferim* (1957), 3–7; I. Grunfeld, *Three Generations* (1958), 65–67.

[Frederik Jacob Hirsch]

NEUBERG, GUSTAV EMBDEN CARL (1877–1956), German biochemist. Born in Hanover, Neuberger joined the Pathological Institute of the University of Berlin, becoming professor in 1919, and from 1920 directed the Kaiser Wilhelm Institute of Biochemistry, Berlin-Dahlem. The Nazis dismissed him in 1938, and he went to Amsterdam. In 1939–40 he was professor of biochemistry at the Hebrew University of Jerusalem. In 1941 he went to America, was professor at New York University until 1950, and then for a time visiting professor at Brooklyn Polytechnic. Neuberger's field of research was principally in sugars, albumen, fermentation processes, the biochemical action of light, and glycerin substitutes. He was an honorary member of ten national academies of science, the recipient of many honorary doctorates, prizes, and medals.

BIBLIOGRAPHY: *Experimental Medicine and Surgery*, 5 (1947), 100–6, incl. bibl.; A. Auhagen, in: *Zeitschrift fuer Naturforschung*, 4 pt. B (1949), 245; *Chemical and Engineering News*, 25 (1947), 3358.

[Samuel Aaron Miller]

NEUBERGER, ALBERT (1908–1996), British biochemist. Neuberger, born in Hassfurt, Bavaria, qualified as a doctor of medicine in Wuerzburg. He then settled in England, where he undertook research first at London University and then (1939–42) at Cambridge. In 1943 he joined the Medical Research Council. After war service in India he returned to work at the University of London until 1947, when he became head of the biochemistry division of the National Institute for Medical Research. In 1955 he was appointed professor of chemical pathology at St. Mary's Hospital Medical School in London. Neuberger's main research was in the metabolism of proteins and amino acids. He was a fellow of the Royal Society, chairman of the Biochemical Society, and a governor of the Hebrew University of Jerusalem.

[Samuel Aaron Miller]

NEUBERGER, RICHARD LEWIS (1912–1960), U.S. senator, journalist, and author. Neuberger, born near Portland, Oregon, graduated from the University of Oregon (1935), where he edited the student newspaper. He began writing in 1928, and in 1933 *The Nation* published an article of his that realistically

described the Nazi persecution of Jews and the preparation for war, which he had witnessed on a visit through Germany. From 1939 to 1954 he was the *New York Times*' Northwest correspondent. Neuberger served in the Oregon House of Representatives from 1941 to 1942, when he entered the U.S. Army. An aide-de-camp to General James O'Connor during the construction of the Alaska Military Highway, he left the army a captain in 1945.

In 1948 Neuberger was elected to the State Senate, and in 1955 he became the first Democratic U.S. senator from Oregon in 40 years. An affable liberal, Neuberger was active on behalf of natural conservation, civil rights, cancer research (he was himself afflicted), housing measures, Congressional reform, and Alaska statehood. He was chairman of the Subcommittee on Indian Affairs and a member of the Interior and Public Works committees, which dealt with conservation.

His books, which generally discuss politics and conservation in the northern U.S., include *An Army of the Aged* (with Kelley Loe, 1936), *Integrity – The Life of George W. Norris* (with S.B. Kahn, 1937), *Our Promised Land* (1938), *The Lewis and Clark Expedition* (1951), *Royal Canadian Mounted Police* (1953), and *Adventures in Politics* (1954).

His wife, H. MAURINE (BROWN) NEUBERGER (1907–2000) – who was not Jewish – served in the State House of Representatives from 1951 to 1955. The couple gained notice as the first married couple in U.S. history to serve together in a legislature – he in the Oregon Senate and she in the House. She worked closely with her husband, completing his Senate term after his death. In 1960 she was elected to the Senate, serving until 1967. She was the third woman elected to the U.S. Senate and the only woman from Oregon to serve in the legislative body.

Neal (ed.), *They Never Go Back to Pocatello: The Selected Essays of Richard Neuberger* (2000); *Memorial Services: Held in the Senate and House of Representatives of the United States, Together With Remarks Presented in Eulogy of Richard Lewis Neuberger* (1960).

NEUBURGER, MAX (1868–1955), Austrian medical historian. Born in Vienna, Neuburger worked at the Rudolfspital and the Allgemeines Krankenhaus and in 1898 went to teach at the University of Vienna. There he devoted himself more and more to medical history and was appointed professor of the history of medicine in 1904. He developed the department into a proper institute for the study of medical history and built up its library and museum (later described by A. Levinson, see bibl.). From 1901 to 1913 he collaborated with J. Pagel on a revised and enlarged edition of the history of medicine by his mentor, Theodor Puschmann. It appeared in three volumes, under the title *Handbuch der Geschichte der Medizin* (1902–05), a comprehensive and authoritative account of medical history. At the same time he wrote *Geschichte*

der Medizin (vol. 1, 1906; vol. 2, 1911; Eng. trans. by E. Playfair 1910–25) which served at the time as the most authoritative textbook on medical history of the ancient and medieval period, and aroused much interest in its treatment of Arabic and Jewish medicine. In 1928 on the occasion of his 60th birthday, he was presented with a Festschrift by his colleagues, friends, and disciples, *Festschrift zur Feier seines 60. Geburtstages...* Max Neuburger.

He showed an interest in Jewish aspects of medicine, writing *Die ersten an der Wiener medizinischen Fakultät promovierten Aerzte juedischen Stammes* (1918), and in 1936 he read a paper on Jewish doctors at the international congress for history of medicine in Jerusalem, published as *Die Stellung der juedischen Aerzte in der Geschichte der medizinischen Wissenschaften* (1936). Neuburger fled from the Nazis in 1938, settling in England, where he worked in The Wellcome Historical Medical Museum (1938–48). While in Britain he continued his research, writing *British Medicine and the Vienna School* (1943), in which he showed the reciprocal influence of both countries in medicine in the 18th and 19th centuries, and *British and German Psychiatry in the Second Half of the Early Nineteenth Century* (1945).

On his retirement in 1948 he was presented with *Festschrift zum 80. Geburtstag Max Neuburgers* in his honor (containing a bibliography). He then went to live in the U.S. until 1952, when he moved to Vienna, where he died. His other works include *Die Medizin im Flavius Josephus* (1919); *Hermann Nothnagel; Leben und Wirken* (1922); *Die Lehre von der Heilkraft der Natur im Wandel der Zeiten* (1926); and *Gomez Pereira, ein spanischer Arzt des 16. Jahrhunderts* (1936).

NEUCHÂTEL, canton and its capital city in W. Switzerland. The earliest records of Jews in the canton date from 1288, when they were accused of a blood libel and a number were put to death. During the Black Death excesses in 1348 the Jews of Neuchâtel were burned. After 1476 there are no further references to Jews living in the canton until 1767, when a few who had come from Alsace were expelled. In 1772 they arrived in the towns of *La Chaux-de-Fonds and Le Locle, but were refused permanent residence rights. By the 1780s the Jews were considered useful to the canton as they played an important part in the export of watches, though this did not prevent their expulsion in 1790. They began to return in 1812 and obtained residence rights in 1830. The Jewish population of the canton in 1844 was 144. They thrived economically during the 19th century and in 1900 numbered 1,020, declining, however, to 266 by 2000.

NEUDA, ABRAHAM (1812–1854), rabbi in *Lostice (Loschitz), one of the first in Moravia to have a secular education. His father, Aaron Moses, was also a rabbi in Lostice from 1812 to 1831. When his father became ill, Abraham, a favorite pupil of the *Landesrabbiner* Nahum *Trebitch of *Mikulov (Nikolsburg), substituted for him on the authorization of his teacher. After the death of Aaron Moses in 1831 the community elected Abraham rabbi, but this time Trebitch refused his authorization because Abraham had not only preached in German but also had acquired too much secular education (albeit clandestinely) at the yeshivah. A six-year-long conflict was finally brought before the provincial authorities, who requested the advice of Loeb *Schwab on the matter. Abraham was supported by Isaac Noah *Mannheimer. The authorities compelled Trebitch to examine Neuda before a committee of two other rabbis and a Catholic priest. In the end Trebitch was forced to acknowledge Neuda as rabbi of Lostice. Neuda published a collection of his sermons under the title, *Massa Devar Adonai*, in 1845. In his works, he attempted to reconcile the traditional *derash with the modern sermon. Parts of his historical account of the Jews of Moravia were published posthumously by Gerson *Wolf in **Neuzeit* (1863).

A year after Neuda's death, his wife, FANNY (1819–1894), sister of the Vienna rabbi Abraham Adolf *Schmiedl, published in his memory a prayer book in German for women, entitled, *Stunden der Andacht, ein Gebet- und Erbauungsbuch fuer Israels Frauen und Jungfrauen*, which attained great popularity among Jewish women in central Europe. It was the first prayer book of its kind to be written by a woman and took into account, besides the divine services, all the occasions in the life of a woman. Until the 1920s, 28 editions of the prayer book had been sold. In 1936 Martha Wertheimer published a revised version for the special conditions of Nazi Germany. An English translation by M. Maier, *Hours of Devotion*, was published in New York.

[Meir Lamed]

NEUFELD, DANIEL (1814–1874), Polish writer and educator. His name is connected with the Jewish weekly in Polish, *Jutrzenka* (*Ayyelet ha-Shaḥar*). Published in Warsaw from 1861 to 1863, the paper expressed Polish-Jewish solidarity during the 1863 revolution. Its goals were threefold; the diffusion of learning and culture; the promulgation of the idea of Jewish responsibility toward the Polish state; and the defense of Jews against antisemitism. It published serious works of scholarship on Polish Jewry and emphasized Jewish integration into the life and affairs of the general community. Such

well-known personalities as Hayyim Zelig *Slonimski, editor of **Ha-Zefirah*, the historian Alexander Kraussnar, and Matthias *Bersohn wrote for the journal. Publication ceased when its editor was exiled to Siberia in 1863.

Neufeld believed in a synthesis of Jewish and Polish cultures which would combine Polish patriotism and the Jewish religion. He was conservative in religious matters and progressive in his social concerns. Positively disposed toward Hebrew language and literature, Neufeld opposed Yiddish as obstructive of Jewish progress. He favored a scientific study of Jewish culture as a way of bridging past and present. Opposed to the *maskilim* of Galicia, he considered *Hasidism a positive force, hoping that it would encourage Polonization of the Jews. At the same time he opposed extreme assimilationist tendencies, regarding them as a break with talmudic tradition, which he saw as a nationalistic and political synthesis successful in preserving Jewish spiritual values. Presenting his ideas on education to Marquis Wielopolski, Neufeld called for the compulsory study of religion, along with Hebrew language, Jewish history, and the geography of Erez Israel. Neufeld was editor of the Jewish department of a general encyclopedia published by his friend Orgelbrand. He wrote a scholarly study of Napoleon's *Sanhedrin and a pamphlet on the establishment of a *consistory in Poland. Although he began the important task of translating the Bible into Polish, he had difficulty in obtaining permission to publish his work, the Catholic censors preferring that Jews should have to study the Bible in a Christian translation. Permission was finally granted on condition that the title page carry the notice that the translation was intended for Polish Jews. The Book of Genesis with both the Hebrew text and a Polish translation appeared in 1863, under the title *Pięcioksiąg Mojżesza dla Żydów-Polaków*.

[Moshe Landau]

NEUFELD, HENRY (1923–1986), Israeli cardiologist. Neufeld was born in Lvov, Poland. He received his M.D. degree at the University of Vienna in 1948 and completed his residency training there in 1951. He emigrated to Israel in 1951 and, from 1951 to 1959 he served as a cardiologist at the Chaim Sheba Medical Center in Tel Aviv. After spending two years at the Mayo Clinic in Rochester, Minnesota, he returned to Israel and became director of the institute of cardiology at Tel Ha-Shomer, introducing cardiac intensive care into Israel for the first time. Neufeld became professor of medicine at the Hebrew University of Jerusalem in 1965. From 1962 he served for eight years as the chief scientist of the Ministry of Health and professor of medicine and cardiology at Tel Aviv University Medical School, where he developed the department of cardiology. He was elected president of the International Cardiological Federation in 1978 and was president of the Israel Heart Association. He was elected in 1984 to the

Israel Academy of Sciences and Humanities, and in 1985 he received the Israel Prize for medicine. Neufeld was a man of great academic and personal distinction; he was an excellent clinician and an outstanding humanitarian and leader. He was a member of numerous committees of the World Health Organization, including the WHO Task Force against Heart Disease and the WHO Task Force on Cardiovascular Emergencies. Neufeld received worldwide recognition for his work. He was an honorary member of cardiac associations in Mexico, Portugal, Australia and New Zealand, Germany, and Britain. He was an honorary fellow of the Council of Clinical Cardiology, American Heart Association, and held that society's Honorary Citation for International Achievement. He published over 400 articles in major cardiology journals, 10 books, and 22 book chapters.

[Bracha Rager (2nd ed.)]

NEUGARTEN, BERNICE (1916–2001), U.S. psychologist and leader in the fields of human development and aging. Neugarten was born in Norfolk, Nebraska, to Lithuania-born David Levin and his wife, Sadie. She spent her educational and academic careers at the University of Chicago, obtaining her B.A. (English and French) and M.A. (Educational Psychology), before receiving the first doctorate from the innovative interdisciplinary program, the Committee on Human Development, in 1943. She became chair of the Committee in 1969. In 1980 she started a doctoral program in Human Development and Social Policy at Northwestern University but returned to the University of Chicago in 1988 as Rothschild Distinguished Scholar at the Center on Aging, Health, and Society, retiring in 1994. She and her husband, Fritz, had two children. Neugarten was the author or co-author of eight books and numerous articles, book chapters, addresses, and reports; these include *Vita Humane* (later titled *Human Development*) and a collection of essays, *The Meanings of Age: Selected Papers of Bernice L. Neugarten* (1996), edited by her daughter, Dr. Dail A. Neugarten. Neugarten's research disproved stereotypes about aging and the aged as well as misconceptions about development over the lifespan. Her coinages, including "the social clock," referring to the way individuals judge whether developments in their life are "on-time" or "off-time," "age-integrated society," "fluid life cycle," etc., have become mainstays of development studies; and her ideas greatly influenced social and governmental policies. For example, prior to her research, it was thought that personality was set early on. In contrast, she and her co-author David Gutmann found that personality develops and changes throughout life (1958). Similarly, while a vast body of medical and biological literature focused on the climacteric, her research revealed that middle-aged women did not view menopause as a significant event in their lives (1963). Her recognition that people age differently, based on their health and economic status, as well as chronological age, led her to cluster 55–74-year-olds as what she dubbed "young-old," and those over 75 as "old-old." In 1969–70 Neugarten chaired a faculty study on the status and opportunities open to women faculty

and students at the University of Chicago, which made a series of recommendations for improving their experiences and adding to their numbers. She was president of the Gerontological Society of America (1969) and served a term on the United States Federal Council on Aging in the early 1980s.

BIBLIOGRAPHY: N.K. Schlossberg and L.E. Troll, "Bernice L. Neugarten (1916–)," in: A.N. O'Connell and N.F. Russo (eds.), *Women in Psychology: A Bio-Bibliographic Sourcebook* (1990), 256–65.

[Phyllis Holman Weisbard (2nd ed.)]

NEUGEBAUER, OTTO (1899–1990), scientific historian and mathematician. Neugebauer was born in Innsbruck, Austria, and studied mathematics at the University of Göttingen where he later became a staff member. The Nazis forced him to leave in 1933, first to Copenhagen and in 1939 for Brown University in the United States, where he immediately became a citizen. Neugebauer started his career as a mathematician and later became the foremost authority on Babylonian mathematics and mathematical astronomy throughout the ancient world, in Islamic countries, and in medieval and Renaissance Europe. His Jewish interest included a study on Maimonides and astronomy and the Jewish calendar, which he showed to be the source of the Islamic calendar. His polymath knowledge made him a preeminent historian of the exact sciences and Brown became the leading institution in this field. From 1950 he was a member of the Institute for Advanced Studies, Princeton. His many awards included election to the U.S. National Academy of Sciences (1977) and his publications include the definitive history of mathematical astronomy.

[Michael Denman (2nd ed.)]

NEUGEBOREN, JAY (Michael; 1938–), U.S. writer. He graduated from Columbia University, Phi Beta Kappa, in 1959. Originally and primarily a fiction writer, Neugeboren makes sense of the world by imposing narratives on it. In both his fiction and his later nonfiction, he fixes on a narrative thread running through events, following it even as it twists in unexpected and multiple directions. In whichever genre he chooses, Neugeboren is, in short, a teller of tales.

Early in his career, he told tales about invented characters, but with nonfiction he draws increasingly on his own experience. In *Open Heart: A Patient's Story of Life-Saving Medicine and Life-Giving Friendship* (2003), he describes the technology and compassion that saved his life as a quintuple-bypass patient. Without formal training in psychiatry, he questions in *Transforming Madness: New Lives for People Living with Mental Illness* (1999) the puzzling, asystematic system with which America cares for its mental patients. For over 50 years, Neugeboren has been caring for his brother Robert, who has been sporadically institutionalized for a mental illness that has been hard to diagnose and harder to treat. Abandoning polemics to argue for kinder, more inventive, more progressive, and just plain better treatment for the mentally ill, Neugeboren simply tells the stories of the colorful, often strikingly intense mental-health advocates and patients he

met while trying to move his brother from one institution to another (and, finally, out of institutions entirely). Though filled with therapeutic and pharmacological detail, *Transforming Madness* is mainly narrated through the stories of these afflicted and driven souls. It is a passionate indictment told by a gifted raconteur.

Neugeboren tells his brother's story somewhat more intimately in his award-winning memoir, *Imagining Robert: My Brother, Madness, and Survival* (1997), and somewhat more obliquely in his fiction: in the powerfully inventive multilayered masterpiece *The Stolen Jew* (1981), one of whose plots concerns a writer's troubled relationship with his deranged brother, the characters are deeply connected and painfully estranged, often both at once. The recurring story of the two brothers, one quite mad, the other brainily rational, may serve as a synecdoche for Neugeboren's overarching interest in closeness and apartness.

The Diaspora is also omnipresent in his work, as a historical theme, as an ongoing development, and as a metaphor. Perhaps the most moving tale in *News from the American Diaspora* (2005) emerges in the preface, where Neugeboren describes his recent first meeting with an elderly cousin, separated from Neugeboren's family for nearly 60 years following the Holocaust. Those early postwar years were covered quite differently in his first collection of stories, *Corky's Brother* (1967), whose themes Neugeboren distinguishes from those in his second collection, *Don't Worry about the Kids* (1997): his early stories, he explains, concerned young people coming of age, "pastoral versions of growing up in Brooklyn, but these new stories are much more demanding of my reader.... If the *Corky's Brother* stories were pretty paintings, maybe you could think of these as woodcuts. The [1997] stories are more challenging, they're about grownups instead of teenagers, and their subject is mainly family life and things that threaten it, though the voices of the stories – and the settings – are more varied than my earlier work. Some ... are ghost stories, of a sort, more like Cheever's urban fantasies than like Singer's." Moving beyond the appealing first-person narration employed throughout *Corky's Brother*, particularly in the title story, he noted one technical shift: "I'm able to be a little more expansive in third person, use more far-ranging images and metaphors."

Neugeboren's linguistic playfulness, using puns, stories within stories, jokes, dreams, and fantasy, has increasingly touched on the borders of traditional fiction. As prolific as he has been in other genres – he has written prize-winning screenplays such as *The Hollow Boy* (1991), children's literature such as *Poli: A Mexican Boy in Early Texas* (1989), and personal memoirs such as *Parentheses: An Autobiographical Journal* (1970), and has edited and introduced his brother's *The Hillside Diaries and Other Writings* (2004) and *The Story of Story Magazine by Martha Foley* (1980) – Neugeboren is a novelist at heart. In a 20-year period, he wrote six novels, varying widely and inventively in their descriptions of the life of the mind and the life of the body: *Big Man* (1966), *Listen*

Ruben Fontanez (1968), *Sam's Legacy* (1974), *An Orphan's Tale* (1976), *The Stolen Jew* (1981), and *Before My Life Began* (1985); and he continued to write fiction in his retirement from academic life. From 1971 through 2001, Neugeboren served at the University of Massachusetts, Amherst, as writer-in-residence and professor.

[Steven Goldleaf (2nd ed.)]

NEUGROESCHEL, MENDEL (1903–1965), Yiddish poet, essayist, and editor. Born in Nowy Sacz, Galicia, Neugroeschel practiced law in Vienna until the *Anschluss*. He was sent to the Dachau and Buchenwald concentration camps but was released in March 1939 and immigrated to Brazil. Two years later he settled in New York. In his Vienna period he was influenced by Rainer Maria Rilke and *Mani-Leib, as is evident from his first three lyric collections: *In Shvartsn Malkhes* ("In the Dark Realm," 1924), *Getseltn* ("Tents," 1930), and *Kaylikhdige Teg* ("Circular Days," 1935). In 1936 he published *Kleyne Antologye fun der Yidisher Lirik in Galitsye 1897–1935* ("A Brief Anthology of Yiddish Poetry in Galicia"). In New York he felt himself a stranger and wrote sad, nostalgic lyrics about the Jewish world of his youth. His prose study, "Di Moderne Yidishe Literatur in Galitsie" ("Modern Yiddish Literature in Galicia," in: *Fun Noentn Over*, 1 (1955), 267–398), affords rich insight into the Galician neo-romantic group which was influential between 1904 and 1918.

[Melech Ravitch]

NEULANDER, ARTHUR H. (1896–1988), U.S. Conservative rabbi, author. Neulander was born in Hungary and immigrated to the United States in 1903. He received his M.A. from New York University in 1918 and was ordained at the *Jewish Theological Seminary in 1921. Neulander spent his entire career as a congregational rabbi on the East Coast of the United States, serving Temple Gates of Prayer, Flushing, N.Y. (1922–25); Society for the Advancement of Judaism, New York City (1925–26); Temple Beth-El, Camden, N.J. (1926–27); Temple Beth Israel, Richmond Hill, N.Y. (1928–53); and Bayswater Jewish Center, Far Rockaway, N.Y. (1953–68). Neulander's contributions to the workings of the *Rabbinical Assembly, meanwhile, were instrumental in shaping Conservative Judaism. As a member and later chairman (1954–59) of the RA's Committee on Jewish Law and Standards, he wrote and influenced key responsa that modernized **halakhah*: permitting the use of electricity on Shabbat "in consonance with the spirit of the Sabbath"; permitting *aliyyot* (to the Torah) for women; and reopening the study of the **agunah* problem.

Neulander also served for many years on the RA's executive committee and edited the *Proceedings of the Rabbinical Assembly* (1941–44). In addition, he chaired the Committee on Textbook Publications for the United Synagogue Commission on Jewish Education (1946–47). On behalf of the U.S. government and world Jewry, Neulander traveled to Hungary in the

wake of that country's 1956 revolt against Communist oppression to escort 20,000 fleeing Jewish refugees to the United States. As a regional officer of the Zionist Organization of America, he spearheaded fundraising efforts that enabled the purchase of the land now belonging to Neveh Ilan, a moshav in the Jerusalem Corridor settled by many American *olim*.

[Bezael Gordon (2nd ed.)]

NEUMAN, ABRAHAM AARON (1890–1970), U.S. rabbi, historian, and educator. Neuman was born in Brezan, Austria, and immigrated to the United States in 1898. He studied at the Rabbi Isaac Elhanan Yeshivah, Columbia University, and the Jewish Theological Seminary, where he was ordained in 1912. Before his ordination, he taught at the Teachers Institute of the Seminary, but the year after, he joined the faculty of *Dropsie College in Philadelphia, where he taught history until 1940. Neuman held rabbinical posts in Philadelphia at the B'nai Jeshurun congregation (1919–27) and the Sephardi congregation Mikveh Israel (1927–40). After Cyrus Adler's death in 1940 Neuman became president of Dropsie College, a post he held until his retirement in 1966. During his incumbency the college expanded its curriculum, adding departments in Middle Eastern studies, education, and philosophy. Active in the development of the Zionist movement in the United States and renowned as an orator, he was much sought after as a public speaker. He also participated actively in the work of the United Synagogue of America.

Neuman produced a number of works of high scholarly merit, chief among them being *The Jews in Spain* (2 vols., 1942). Based primarily on the responsa of Solomon ibn *Adret (RaShBA), the work has served as a model of research in this type of Jewish source material. *Cyrus Adler, a Biography* (1942) is the evaluation of the life of an exemplary public servant during the period when American Jewry was assuming worldwide responsibilities. Neuman contributed to many scholarly periodicals, and a number of these studies appeared in *Landmarks and Goals* (1953). From 1940 to 1966 he collaborated with Solomon Zeitlin in editing the *Jewish Quarterly Review*.

BIBLIOGRAPHY: Zeitlin, in: *Studies and Essays in Honor of A.A. Neuman* (1962), vii–xiii.

[Solomon Grayzel]

NEUMANN, ALFRED (1895–1952), German novelist. Born in Lautenburg, West Prussia, Neumann studied in Munich. For several years he was literary adviser to the Munich publishing house of Georg Mueller. In 1938 he settled in Nice and from there emigrated to the U.S. in 1941. Neumann moved from Los Angeles to Florence in 1949 and died in Switzerland. Together with Heinrich Mann, Max *Brod, Alfred *Doeblin and Lion *Feuchtwanger, Neumann was responsible for the revival of the German historical novel.

His first great work, *Der Patriot* (1925), dramatized in English as *Such Men are Dangerous*, dealt with the assassination of Czar Paul of Russia. *Der Teufel* (1926) was set during

the reign of Louis XVI of France. *Rebellen* (1927) and *Guerra* (1929) were concerned with the uprising of the Carbonari and the Risorgimento movement in 19th-century Italy. His other historical novels include *Koenig Haber* (1926), in which the central character recalls the rise and fall of Joseph Suess *Oppenheimer ("Jew Suess"); *Koenigin Christine von Schweden* (1936); *Neuer Caesar* (1934); *Kaiserreich* (1936); and *Die Volksfreunde* (1941), concerning the government of Napoleon III, the occupation of Paris in 1870, and the uprising of the commune in 1871. In his *Es waren ihre sechs* (1949) he was inspired by the resistance movement of the White Rose (*Weisse Rose*) among Munich students opposing National Socialism.

In 1950, an edition of his collected works (*Gesammelte Werke*) was published in two volumes. A selection of his work (*Eine Auswahl aus seinem Werk*) in one volume was edited by G. Stern in 1979. In 1977 Neumann's Correspondence with Thomas *Mann appeared (ed. P. de Mendelssohn).

BIBLIOGRAPHY: F. Lennartz, *Deutsche Dichter und Schriftsteller unserer Zeit* (1959⁸), 552–5. **ADD. BIBLIOGRAPHY:** K. Umlauf, *Exil, Terror, Illegalität. Probst, "Alfred Neumann's and Erwin Piscator's Dramatization of Tolstoy's 'War and Peace' and the Role of Theatre as a Contribution to America's War Efforts," in: *Exile and Enlightenment* (1987), 265–72; G. Stern, "The Image of America in Exile Literature: Alfred Neumann's Unpublished Film Script 'Commencement Day,'" in: H.D. Osterle (ed.), *Amerika* (1989), 19–28.

[Rudolf Kayser / Kurt Feilchenfeld (2nd ed.)]

NEUMANN, EMANUEL (1893–1980), U.S. Zionist leader. Neumann was born in Libau (Liepaja), Latvia, and was brought to the United States by his parents shortly after his birth. He received a B.A. in modern languages and a doctorate of laws from Columbia University; he practiced law in New York City for many years while dedicating much of his life to the establishment and development of the state of Israel.

Active in American Zionist affairs from his youth, Neumann edited the *Young Judean* in 1914–15, and served as education director of the Zionist Organization of America (ZOA) in 1918–20. Neumann was later elected president of the ZOA in 1947–49, and again in 1956–58.

As a co-founder of the *Keren Hayesod in the U.S. in 1921, Neumann served as its director from 1921 to 1925 and was chairman of the executive committee of the United Palestine Appeal from 1925–28. He was also president of the Jewish National Fund in the U.S. from 1929 to 1930, and from 1931 to 1941 he was a member of the Jewish Agency in Jerusalem. Returning to the U.S., he was political representative of the Jewish Agency in Washington during the 1940s and instrumental in winning influential political figures to Zionism.

In 1943 Neumann organized and directed the work of the Commission on Palestine Surveys that presented an investment proposal of approximately \$200 million in irrigation facilities and hydroelectric power development in the Jordan Valley.

A close collaborator of Abba Hillel *Silver in influencing the Jewish community and American public opinion to the post-World War II Zionist program, Neumann served with Silver as vice chairman of the American Zionist Emergency Council.

In 1947 he was a member of the Jewish Agency panel in its unsuccessful negotiations with England and a member of the agency's delegation to the UN Special Committee on Palestine which recommended that Palestine be partitioned. Although Neumann had opposed partition, he accepted the committee's recommendation as the best that the Jews would be able to obtain. After Israel's establishment, Neumann devoted himself to obtaining military and economic aid, and political sympathy for the country.

From 1951 to 1953 he headed the Jewish Agency's economic department and its information and public relations department. He was appointed chairman of the United States section of the World Zionist Organization-Jewish Agency in 1956, a position he held until 1972. Neumann also founded the Herzl Foundation in 1954 and the Tarbut Foundation for the Advancement of Hebrew Culture in 1961, and served as inaugural president for both organizations.

In 1958, he led a majority of the World Conference of General Zionists into a new organization of the same name, remaining as president until 1963 when he was elected president of the World Union of General Zionists. While in these positions, Neumann voiced the belief that while Jews in the United States owed political allegiance only to the United States, their spiritual allegiance belonged to their Jewish heritage. In 1976, he published *In The Arena: An Autobiographical Memoir*. He died in Tel Aviv.

[Jonathan Freund (2nd ed.)]

NEUMANN, ERICH (1905–1960), Israeli psychologist and psychoanalyst. Neumann, who was born in Berlin, studied analytical psychology under Carl Jung in Zurich. In 1934 he immigrated to Palestine, where he resumed his career as a psychoanalyst and therapist of the Jungian school. Later he was a frequent lecturer at the Eranos congresses in Ascona.

Neumann dealt with the inner crisis of modern man in two works, *Tiefenpsychologie und neue Ethik* (1949; *Depth Psychology and a New Ethic*, 1966) and *Krise und Erneuerung* (1961). Another major work, *Ursprungsgeschichte des Bewusstseins* (1949), first created a systematization of the human consciousness. The principal themes of his research into depth psychology were the world of archetypes, the psychology of creative man, the psychology of the female, and the archetypal in art. Other major publications were *Umkreisung der Mitte*, 3 vols. (1953–54); *Die Grosse Mutter* (1956; *The Great Mother*, 1955); *Der schoepferische Mensch...* (1959); *Die archetypische Welt Henry Moores* (1961; *The Archetypal World of Henry Moore*, 1959); *Das Kind* (1963); and essays in the *Eranos-Jahrbuch*, and psychological journals.

NEUMANN, HENRY (1882–1966), U.S. Ethical Culture leader. Neumann, who was born in New York, became leader of the newly formed Brooklyn Society for Ethical Culture in 1911, serving until his retirement in 1961. He also taught ethics in New York's Ethical Culture schools. In 1922, with his wife Julie, he founded the Brooklyn Ethical Culture School. Neumann's work reflects a combination of classic wit, moral rigor, and ethical humanism. Chief among his seven books is *Education for Moral Growth* (1923). Key figure in the American Ethical Union (Federation of Ethical Culture Societies), he was editor of *The Standard* (later the *Ethical Outlook*) and chairman of the Fraternity of Ethical Leaders (1952–61).

[Howard B. Radest]

NEUMANN, JOHANN (Johnny) LUDWIG VON (1903–1957), U.S. mathematician. Von Neumann was born in Budapest and showed outstanding mathematical ability at an early age. He accepted a chair at Princeton University in 1931. Two years later he was appointed the first professor of mathematical physics at the newly formed Institute for Advanced Study at Princeton. In 1954 his health began to deteriorate, and he died after a prolonged and painful illness.

Von Neumann's thought processes were rapid and his associates often found it difficult to keep up with his vast flow of ideas. He was also a linguist and could converse in seven European languages. He preferred general to special problems, and rarely worried about mathematical elegance. In connection with a long-winded but straightforward proof he is quoted as saying that he "didn't have the time to make the subject difficult." Von Neumann's interest in quantum mechanics was aroused by his stay in Goettingen in 1926. He aimed at developing the subject as a vigorous mathematical discipline in *Mathematische Grundlagen der Quantenmechanik* (1932). This investigation led him to research in Hilbert space and the initiation of continuous geometry. In addition, Von Neumann made important contributions to measure theory, ergodic theory, continuous groups, topology, classical mechanics, hydrodynamic turbulence, and shock waves. He opened up a new branch of mathematics with his paper "Zur Theorie der Gesellschaftsspiele," (in *Mathematische Annalen*, 100 (1928), 295–320) and the book *Theory of Games and Economic Behavior* (1944, 1953³) written in collaboration with O. Morgenstern.

Von Neumann's work in the war effort convinced him of the need for high-speed computers. He was instrumental in the development of MANIAC (the mathematical analyzer, numerical integrator, and computer) and was a member of the U.S. Atomic Energy Commission from 1955 until his death. His *Von Neumann Collected Works* were published in six volumes from 1961 to 1963.

Smithies, in: *Journal of the London Mathematical*

Society, 34 (1959), 373–84; S. Thomas, *Men of Space*, 1 (1960), 181–203 (incl. bibl.).

[Barry Spain]

NEUMANN, ROBERT (1897–1975), novelist and satirist. Born in Vienna, the son of a mathematician and bank director, Neumann studied chemistry and literature and got his Ph.D. with a thesis on Heinrich Heine. After losing his money in the inflation of the 1920s, he went to sea. His two early verse collections *Gedichte* (1919) and *Zwanzig Gedichte* (1923) attracted little attention, but *Mit fremden Federn* (1927), a volume of parodies, brought him fame. Of the works that followed, the anti-Nazi novels *Sintflut* (1929) and *Die Macht* (1932; Eng. tr. *Mammon*, 1933), and *Unter falscher Flagge* (1932), another book of parodies, were particularly successful. In February 1934, less than a year after the public burning of his books by the Nazis, he moved to England. Other works of his pre-World War II period were the novels *Karriere* (1931; *On the Make*, 1932); *Sir Basil Zaharoff, der Koenig der Waffen* (1934; *Zaharoff, the Armaments King*, 1935); *Struensee* (1935; *The Queen's Doctor*, 1936); and *An den Wassern von Babylon* (written 1937–38, Ger. orig. publ. 1945; *By the Waters of Babylon*, 1939).

Neumann also began to write in English, later novels including *The Inquest* (1944; *Bibiana Santis* (Ger.), 1950); *Children of Vienna* (1946; *Kinder von Wien*, 1948); and *Blind Man's Buff* (1949). A witty and ironical writer and a gifted political and social satirist, he had a fondness for the erotic and a genius for parodying modern poets. After the war, when he settled in Switzerland, he wrote an autobiography, *Mein altes Haus in Kent* (1957), and then turned to somber themes relating to the Holocaust. Works of this kind are the documentaries, *Ausfluechte unseres Gewissens* (1960), on Hitler's "Final Solution"; *Hitler, Aufstieg und Untergang des Dritten Reiches* (1961); *The Pictorial History of the Third Reich* (1962); and *Der Tatbestand oder Der gute Glaube der Deutschen* (1965). Neumann also wrote plays for radio and television and another autobiography, *Vielleicht das Heitere*, was published in 1968. Selected editions of his parodies appeared as *Typisch Robert Neumann* (with a preface by R.W. Leonhardt) in 1975 and *Meisterparodien* (ed. by J. Jessen) in 1988.

[Sol Liptzin]

NEUMANN, YEḤESKEL MOSHE (1893–1956), Yiddish poet, satirist, journalist, editor. Born in Zhichlin, Poland, he was educated in Łódź. He wrote for the *Łódzher Morgnblat*, edited booklets on literature and art, and was a founder of the Łódź writers' group "Yung Yiddish"; he later wrote film and theater reviews for the Warsaw daily *Haynt*, whose literary editor he became in 1933. In addition to contributing to various Yiddish periodicals, he was among the pioneers of Yiddish film, co-writing the scripts for "*Al Het*" ("For the Sin," 1936) and "*Tkias Kaf*" ("Handshake," 1937). During World War II he fled to Russia, before immigrating to Palestine (1940) and joining the editorial board of the daily *Davar*. He wrote about problems of the Yiddish and Hebrew theater, published articles in the Yiddish journal *Di Goldene Keyt*, and wrote about Jewish artists and architects. He also composed the dramatic poem "*Don Kishot in Shotn fun der Palme*" ["Don Quixote in the Shadow of the Palm Tree," in: *Di Goldene Keyt* (1951)] and "*A Khasene in Yerusholayim*" ("A Wedding in Jerusalem," *ibid.*, 1953).

[Israel Ch. Biletzky]

NEUMARK, DAVID (1866–1924), scholar and philosopher of Reform Judaism. Born in Galicia, Neumark was ordained as rabbi at the Lehranstalt fuer die Wissenschaft des Judenthums in 1897. He served as rabbi in Rakonitz (Rakovnik), Bohemia, from 1897 to 1904, and as editor in chief of the division of philosophy and *halakhah* of the proposed Hebrew encyclopedia *Oẓar ha-Yahadut* from 1904 to 1907, whose specimen volume on the principle and philosophy of Judaism he edited in 1906. He was professor of Jewish philosophy at the Veitel-Heine-Ephraimschen Lehranstalt in Berlin in 1907 and professor of philosophy at the Hebrew Union College in Cincinnati from 1907 to 1924. In 1919 Neumark founded *The Journal of Jewish Lore and Philosophy*, which became *The Hebrew Union College Annual* in 1921.

Neumark's philosophy of Judaism is representative of the Reform Jewish position of his time, and includes the following points: Judaism is an evolving religion which has undergone change in the past and will continue to do so in the future; the vital continuing element in Judaism is ethical monotheism, which Jewish philosophy must defend, explicate, and refine; the Bible was written by men, and while it is a source of inspiration and instruction, it is not binding and may be disagreed with. Neumark was unusual among the Reformists of his day in that he was an ardent Zionist. However, on the basis of his philosophy of Judaism, he insisted that Zionism must have a religious base, which for him was the only *raison d'être* for any significant Jewish enterprise.

Neumark's scholarship reflected his concept of Judaism. He attempted in his many works to show that throughout the evolution of Judaism the basic commitment of the Jew was to religion, and that the Jews remained true to Judaism through

the ages only because their concepts of God and morality differed from and were superior to all other religions and philosophies of their time. Neumark's magnum opus, *Geschichte der juedischen Philosophie des Mittelalters* (1907–10; translated into Hebrew under the title *Toledot ha-Filosofyah be-Yisrael*, vol 1, 1922, vol. 2, 1929), combines considerable acumen and occasional penetrating insights with a lack of critical method and an excess of imagination. His *Essays in Jewish Philosophy* (1929) contains a bibliography of his writings, which also included "The Philosophy of Judaism" (HUCA 1925), *The Philosophy of the Bible* (1918), and *Toledot ha-Ikkarim be-Yisrael* (Odessa, 2 vols., 1912–19).

[Alvin J. Reines]

NEUMARK, EPHRAIM (1860–?), traveler and writer. Born in Eastern Europe, Neumark was taken by his parents to Erez Israel. At the age of 23 he left *Tiberias on a three-year journey through the Jewish communities in *Syria, Kurdistan, Mesopotamia, *Persia, *Afghanistan, and Central Asia. The account of his travels, *Massa' be-Erez ha-Kedem*, is distinguished by critical observation and scholarly approach. He gives a detailed picture of every aspect of the Jewish communities in the Orient, their geographical diffusion, occupations, religious life, practices, and customs.

BIBLIOGRAPHY: KS, 24 (1947–48), 28–29; E. Neumark, *Massa' be-Erez ha-Kedem*, ed. by A. Yaari (1967), with introd. and notes; idem, in: *Ha-Asif*, 5 (1889), 39–75.

[Walter Joseph Fischel]

NEUMEYER, ALFRED (1867–1944), lawyer, chairman of the Jewish Community of Munich (Israelitische Kultusgemeinde Muenchen); founder and chairman of the Association of Jewish Communities in Bavaria (Verband Bayerischer Israelitischer Gemeinden). Born in Munich, Neumeyer completed the renowned Maximilians-Gymnasium and studied law in Munich and Berlin. He worked as a judge in several Bavarian cities until he was appointed to the Higher State Court (*Oberlandesgericht*) in Munich in 1918. In 1929 he was appointed to the Bavarian Highest State Court (*Oberstes Bayerisches Landesgericht*) in Munich. In June 1933 he was forced to retire. Neumeyer led the Jewish community in Munich until his immigration to Colonia Avigdor (Argentina) in January 1941. His brother, Karl *Neumeyer, committed suicide in July 1941.

BIBLIOGRAPHY: Alfred Neumeyer, *Erinnerungen* (Manuscript, Leo Baeck Institute New York; copy of manuscript at Bavarian State Library Munich); A. Neumeyer, "Alfred Neumeyer (1867–1944). Richter und Vorsitzender des Verbandes Israelitischer Kultusgemeinden in Bayern bis 1941," in: *Geschichte und Kultur der Juden in Bayern* (1988), 235–41.

[Andreas Heusler (2nd ed.)]

NEUMEYER, KARL (1869–1941), German international lawyer. Born in Munich, Neumeyer completed the renowned Maximilians-Gymnasium. After studying law in Munich, Berlin, and Geneva, he became a lecturer at the University of Munich in 1910. He was a member of the Institut de Droit

International in The Hague and represented Germany at the sixth Hague conference on private international law in 1928. In 1929 he was made professor of international law at Munich University and in 1931 became dean of the faculty of law. Though removed from all his posts in 1933 following the Nazi rise to power, Neumeyer refused to leave Germany and continued his research under most difficult conditions. After the Nazis confiscated Neumeyer's private library and it became obvious that the couple would be forced to leave their residence at Koeniginstrasse, Karl Neumeyer and his wife, Anna, committed suicide in July 1941. His brother Alfred *Neumeyer immigrated to Argentina in January 1941.

Neumeyer was the author of several important works on international law, including *Die gemeinrechtliche Entwicklung des internationalen Privat- und Strafrechts bis Bartolus* (2 vols., 1901–16), a history of international law; *Internationales Privatrecht* (1923), a detailed analysis of the sources of international law; and *Internationales Verwaltungsrecht* (4 vols., 1910–36), in which he set out his system of international administrative law.

BIBLIOGRAPHY: *American Journal of International Law*, 35 (1941), 672. **ADD. BIBLIOGRAPHY:** K. Vogel, "Karl Neumeyer (1869–1941). Ein Lebenswerk: das "Internationale Verwaltungsrecht," In: H. Heinrichs, H. Franzki, K. Schmalz, and M. Stolleis (eds.), *Deutsche Juristen Juedischer Herkunft* (1993), 531–41; A. Neumeyer, *Lichter und Schatten. Eine Jugend in Deutschland* (1967).

[Andreas Heusler (2nd ed.)]

NEUSNER, JACOB (1932–), leading figure in the American academic study of religion. He has achieved this prominence and influence in three ways. First, he revolutionized the study of Judaism and brought it into the field of religion. Second, he built intellectual bridges between Judaism and other religions and thereby laid the groundwork for durable understanding and respect among religions. Third, through his teaching and his publication programs, he advanced the academic careers of younger scholars and teachers, both within and outside the study of Judaism. Neusner's influence on the study of Judaism and religion is broad, powerful, distinctive, and enduring.

Judaism and the Study of Religion

Educated at Harvard, Jewish Theological Seminary, Oxford, and Columbia, Neusner began his career in the early 1960s, when religion was a minor field in American universities, largely limited to biblical studies and Christian (mostly Protestant) theology. Judaism was studied parochially, confined primarily to Jewish institutions. Neusner changed this. He understood that the power of the study of religion is its capacity to generalize, to discern common structures across religions, and, through them, to understand the similarities and differences among diverse traditions. Neusner also knew, as did no other student of Judaism, that scholars cannot generalize about religions that are closed to them.

Neusner addressed these problems in two ways. First, he established a career agenda to bring critical questions to the study of Judaism. His staggering success transformed not

only the study of Judaism; it also affected the study of religion. Neusner was the first to see that the sources of classical Judaism were not constructed to answer standard historical questions. He invented the documentary study of Judaism, through which he showed, relentlessly and incontrovertibly, that each document of the rabbinic canon has a discrete focus and agenda, and that the history of ancient Judaism has to be told in terms of its texts rather than personalities or events. His *Judaism: The Evidence of the Mishnah* (Chicago, 1981, translated into Hebrew and Italian) is the classic statement of his work and the first of many comparable volumes on the other documents of the rabbinic canon.

Neusner's discovery of the centrality of documents led to his even more decisive perception of Judaism as a system: an integrated network of beliefs, practices, and values that yield a coherent worldview and picture of reality for its adherents. This approach generated a series of very important studies on the way Judaism creates categories of understanding and how those categories relate to one another, even as they emerge diversely in discrete rabbinic documents. Neusner's work shows, for instance, how deeply Judaism is integrated with the system of the Pentateuch, how such categories as "merit" and "purity" work in Judaism, and how classical Judaism absorbed and transcended the destruction of the Jerusalem Temple in 70 C.E. His work depicts Rabbinic Judaism as the result of human labor in response to what its adherents believe is God's call and demonstrates its persistent vitality and imagination.

Second, in the process of producing his scholarship, Neusner translated, analyzed, and explained virtually the entire rabbinic canon – a massive compendium of texts – in English. The Mishnah, the Tosefta, the Jerusalem Talmud, the Babylonian Talmud, and nearly every work of rabbinic Bible interpretation are available to scholars of all backgrounds because of Neusner's scholarship. In the study of Judaism, no one in history can match Neusner's work.

In all of this, Neusner made Judaism and its study available to scholars and laypeople of every background and persuasion. That Judaism is now a mainstream component of the American study of religion is due almost entirely to Jacob Neusner's scholarship.

Bridges of Intellect and Understanding

Neusner's work did not stop with his exposition – in translation, description, and interpretation – of Judaism alone. To the contrary, unlike any other scholar of his generation, Neusner deliberately built outward from Judaism to other religions. He sponsored a number of very important conferences and collaborative projects that drew different religions into conversation on common themes and problems. Among other topics, Neusner's efforts have produced conferences and books on the problems of religion and society, religion and material culture, religion and economics, religion and altruism, and religion and tolerance. These collaborations build on Neusner's intellectual vision, his notion of a religion as a system, and would not have been possible otherwise. By working towards

general questions from the perspective of a discrete religion, Neusner produced results of durable consequence for understanding other religions as well.

In addition to these efforts, Neusner has written a number of works exploring the relationship of Judaism to other religions around difficult issues of understanding and misunderstanding. For instance, his *A Rabbi Talks with Jesus* (Philadelphia, 1993, translated into German, Italian, and Swedish; second edition Montreal and Kingston, Ithaca, 2004) establishes a religiously sound framework for Judaic-Christian interchange and earned the praise of Pope Benedict XVI. He also has collaborated with other scholars to produce comparisons of Judaism and Christianity, for instance, *The Bible and Us: A Priest and A Rabbi Read Scripture Together* (New York, 1990, translated into Spanish and Portuguese; second edition *Common Ground: A Priest and A Rabbi Read Scripture Together* (Eugene, 2005). He has done the same with scholars of Islam on Judaism and Islam. Neusner conceived the very effective textbook *World Religions in America: An Introduction* (third edition, Nashville, 2004), which explored how diverse religions have developed in the distinctive American context. It has had a strong impact in both colleges and secondary schools. He also has composed numerous college and school textbooks and general trade books on Judaism. The two best known examples are *The Way of Torah: An Introduction to Judaism* (seventh edition, Belmont, 2003) and *Judaism. An Introduction* (London and New York, 2002, translated into Portuguese and Japanese). No American scholar of any religion replicates Neusner's intellectual outreach.

Advancing the Careers of Others

Throughout his career, Neusner has established publication programs and series with various academic publishers. Each of these he has opened to the widest range of scholars and scholarship. Through these series, through numerous reference works that he conceived and edited, and through the conferences he has sponsored, Neusner has advanced the careers of literally dozens of younger scholars from across the globe. By fostering scholarship, he has stimulated the research of others and helped many younger scholars from around the world realize their potential. There is no one else in the American study of religion who has had this kind of impact on students of such a broad range of approaches and interests.

Conclusion

Jacob Neusner is often celebrated as the most published scholar in history. He has written or edited more than 900 books. He has taught at Columbia University, University of Wisconsin-Milwaukee, Brandeis University, Dartmouth College, Brown University, the University of South Florida, and Bard College. He is a member of the Institute of Advanced Study, Princeton, NJ, and a life member of Clare Hall, Cambridge University. In addition, he is the only scholar to serve on both the National Endowment for the Humanities and the National Endowment for the Arts. He also has received scores of academic awards, honorific and otherwise.

The real measure of Jacob Neusner's contribution to the study of religion emerges from the originality, excellence, and scope of his learning. He founded a field of scholarship: the academic study of Judaism. He built out of that field to influence a larger subject: the academic study of religion. He created durable networks and pathways of interreligious communication and understanding. And he cared for the careers of others. Ever generous with his intellectual gifts, Neusner is one of America's greatest humanists. In all aspects of his career, he exemplifies the meaning of American learning. In all he has done, Jacob Neusner fulfills the distinctive promise of the academic study of religion in an open and pluralistic society that values religion as a fundamental expression of freedom.

For a discussion of Neusner as a Talmud scholar see *Mishnah.

[Wm. Scott Green (2nd ed.)]

NEUTRA, RICHARD JOSEPH (1892–1970), U.S. architect. Born in Vienna, after World War I Neutra worked in Switzerland as a nurseryman and landscape gardener, an experience which helped to develop his remarkable talent for his buildings fitting into the landscape. In 1922 he joined Erich Mendelsohn in Berlin, and the following year they were awarded first prize for their joint design for a business center for Haifa, Palestine. Neutra emigrated to the U.S. in 1923 and studied under Frank Lloyd Wright at his architectural center at Taliesin, Wisconsin. In 1926 he settled in Los Angeles, where he entered the office of the Vienna-born architect, Rudolph Schindler. The buildings they designed and erected were among the first creations of the international style in America. Neutra was at this period concerned with town planning and architectural technology. This aspect of his work is seen in his "Rush City Reformed" (1923–30), a plan for an ideal city, in his designs for prefabricated housing units, and in his Channel Heights Housing Project, San Pedro, California (1942–44). It was for his private homes, however, that Neutra was best known. "Lovell House" (1927–29), a rambling construction in the then-modern style, established his reputation. The houses he built after World War II are often regarded as his greatest achievement. They are usually luxurious residences in which glass is extensively used to give a feeling of space; the effect of the glass is often enhanced by the use of reflecting pools of water. Neutra wrote several books, including *Survival Through Design* (1954).

BIBLIOGRAPHY: E. Mc-Coy, *Richard Neutra* (Eng., 1960), includes bibliography; W. Boesiger (ed.), *Richard Neutra, Buildings and Projects* (1951, 1959, 1966); A. Forsee, *Men of Modern Architecture* (1966), 131–60.

NEUWIRTH, BEBE (1958–), U.S. actress. Born in New York and raised in Princeton, N.J., Neuwirth majored in dance at the Juilliard School in New York. She made her Broadway debut in *A Chorus Line* in 1980 but she achieved fame as Dr. Lilith Sternin-Crane, a dour psychiatrist married to a psychiatrist, in the long-running hit television series *Cheers* and its spin-off *Frasier*. A singer and dancer, she featured in the

Broadway musicals *Damn Yankees*, *Sweet Charity*, and *Chicago* and won two Tony awards. In 2005 she starred in the crime drama series *Law & Order: Trial by Jury*. She appeared in more than 25 movies.

[Stewart Kampel (2nd ed.)]

NEUZEIT, DIE ("Modern Times"), liberal Austrian Jewish weekly in German language "for political, religious and cultural interests" (*Wochenschrift fuer politische, religioese und Kultur-Interessen*), published in Vienna from 30 August 1861 to 25 December 1903 (43 volumes). Modeled after the *Allgemeine Zeitung des Judenthums* (1837–1922) in Germany, *Die Neuzeit* marked the actual beginning of the Jewish press in Austria in the second half of the 19th century and became the main organ for Jewish emancipation until 1867. Before 1850, the Hebrew year books **Bikkurei ha-Ittim* (1820–45), **Kerem Hemed* (1833–56) and *Kokhevei Yizhak* (1845–73), I. *Busch's German *Kalender und Jahrbuch fuer Israeliten* (1842–47), and his weekly **Oesterreichisches Central-Organ* (1848) had appeared in Vienna, besides a few other short-lived periodicals in 1848. From 1849 to 1852, M. *Letteris continued to publish two far from successful papers, followed by his *Wiener Mitteilungen* (1854–69), Joseph *Wertheimer's *Jahrbuch fuer Israeliten* (1854–67), and *Das Morgenland* (1855) of Jacob *Goldenthal.

Die Neuzeit was founded by the Bohemian writer Leopold *Kompert (1822–1886) and the Hungarian rabbi and educator Simon *Szántó (1819–1882). In a way, both embodied the continuity of the German-Jewish press in Austria since 1842, taking over Wertheimer's *Jahrbuch*, which had succeeded Busch's annual and the *Central-Organ*. While *Die Neuzeit* was edited by Szántó till his death, Kompert withdrew after the first volume, still contributing articles from time to time. In 1882, the paper was carried on by the Vienna preacher and scholar Adolf *Jellinek (1821–1893), and in 1893, by his colleague D. Loewy (died 1902).

In their first editorial ("An unsere Leser!") of August 30, 1861, Kompert and Szántó were aware of filling a gap in the daily press, especially for Austrian Jewry, at the same time also hoping for non-Jewish readers. Judaism, as they saw it, should serve as a mirror for general society in a modern age, reflecting any progress or disruption in their time. *Die Neuzeit* sought to take the position of a peaceful yet determined mediator, ready to fight if necessary. By spreading information on a scientific basis, the paper was to serve an outward function as an organ for emancipation and apologetics, and an inward function by mediating between East and West, religious stagnation and radical reform.

Szántó, however, who wrote the majority of articles, assumed a rather liberal stance, both politically and religiously. While his paper reflected most religious controversies of the time, he distanced himself from the more conservative Ludwig *Philippson and the *Breslau *Juedisch-Theologisches Seminar* of Zacharias *Frankel, strongly opposing *Neo-Orthodoxy both in Germany and Hungary, which was led by Samson

Raphael *Hirsch and Azriel *Hildesheimer. Instead, Szántó favored the reform efforts of Abraham *Geiger and participated in the *synods of Leipzig (1869) and Augsburg (1871), presided over by Moritz *Lazarus. In 1871/72, together with Ignaz *Kuranda, he strongly supported the supposed reforms of Adolf *Jellinek in Vienna against the leader of Austrian Orthodox Jewry, Reb Zalman *Spitzer. In stressing the universalistic and ethical aspects of Judaism and its historic world mission against undue emphasis on ceremonial law, Szántó's *Neuzeit* was largely in keeping with the views of Jellinek, who had been called to Vienna in 1858, contributed to the paper from time to time, and finally became its editor in 1882. Politically, *Die Neuzeit* hailed the new era of Austrian liberalism that began in 1860/61, when a liberal constitution was restored and the situation for Austrian Jewry gradually improved. At the same time, much attention was also given to the newly founded *Alliance Israélite Universelle (1860). Although Szántó's paper promoted the concept of a Jewish *Stamm* as some kind of ethnic unity, it always stressed its loyal liberal German-Austrian position, opposing Polish *Hasidism and East European emigrants, who were unwilling to integrate into Austrian society. While rejecting both secular Jewish nationalism and *Zionism, it called for a common Jewish consciousness and solidarity against *antisemitism.

Like most Jewish weeklies, *Die Neuzeit* appeared on Fridays, and was designed for reading on the Sabbath. Due to a large concession it quickly spread throughout the German-speaking parts of the country and beyond, providing information on all of Austria-Hungary. Besides subscription fees *Die Neuzeit* was financed by a separate advertising section, and it served for some time as the official organ of several Jewish organizations. Its variety of contents also contributed to the paper's success. As stated in its first issue, *Die Neuzeit* was to offer editorials on politics and religion, relevant news from all parts of the country, popular rather than scholarly essays on science and literature, articles on Jewish communal affairs and the educational system in Austria-Hungary, a *feuilleton* section for pleasure and edification, and local news on weddings, births, and funerals in Vienna and beyond.

Szántó's death in 1882 in a way marked the end of the liberal era in Austria, in which *Die Neuzeit* had had its share for more than two decades. The rise of antisemitism in Austria and Hungary from the early 1880s brought about a profound change among the Jewish papers in Vienna – as to both their contents and their staff. Several new periodicals were founded, the most prominent being Dr. Joseph S. *Bloch's *Oesterreichische Wochenschrift* (1884–1920). *Die Neuzeit* was taken over by Jellinek, who considerably changed its style and substance. The paper turned toward the plight of East European Jewry and the question of emigration in a less polemic way, though still rejecting the *Hibbat Zion movement. At the same time, it actively fought antisemitic attacks, especially those of August *Rohling and Georg von *Schoenerer. In 1884, however, Bloch's *Wochenschrift* came to the fore – in opposition to the old liberal German-Jewish attitude of Jell-

inek's *Neuzeit*. From 1893, when Jellinek was succeeded by D. Loewy, *Die Neuzeit* gradually lost in importance. In 1899, Loewy was joined by Siegfried Fleischer, later secretary-general of the *Oestereichisch-Israelitische Union, to counterbalance Loewy's sympathies with Theodor *Herzl's new movement of *Zionism. *Die Neuzeit* ceased publication at the end of 1903. It has been reproduced on microfilm from the collection of the Leo Baeck Institute New York.

[Hugo Knoepfmacher / Johannes Valentin Schwarz (2nd ed.)]

NEVADA, state located in western U.S.; Jews numbered approximately 82,100 out of a population of 2,019,00 in 2005, which is a dramatic increase from the 2,380 out of a total of 440,000 in 1969 and more than four times the total of 1990. The two principal Jewish communities were in Las Vegas, which in 2005 was the fastest growing Jewish community in the United States, and the Reno-Carson City area which numbers some 2,100 Jews. There are Reform synagogues in State-line and Summerlin. Reno still has three synagogues – Reform, Conservative, and Chabad – as well as a *mikveh*. More than 600 Jewish families are estimated to move to Las Vegas each month, and in 2005 it had some 80,000 Jewish residents. Las Vegas boasts 18 congregations, three day schools, and a Holocaust memorial and resource library. Chabad operates four centers employing seven full-time rabbis. Orthodox residents and visitors can avail themselves of three *mikva'ot* (ritual baths), six kosher restaurants, a Glatt Kosher market, and two kosher stores embedded in local supermarkets. Three major casinos, meanwhile, maintain full-service kosher kitchens. Community affairs are chronicled in two community newspapers, *The Jewish Reporter* and *The Israelite*, and a monthly periodical, *Life & Style: The Las Vegas Jewish Magazine*. A Hillel Union at the University of Nevada, Las Vegas, tends to the needs of Jewish students on campus.

Jews first went to Nevada from California in 1859 with the discovery of gold on the Comstock Lode and the silver rush around Virginia City in 1862. The gold and silver strikes brought a flood of emigrants from all corners of the country, including Jewish engineers, storekeepers, traders, lawyers, journalists, doctors, and fortune hunters. Nevada's first directory in 1862 listed 200 Jews in Virginia City, Gold Hill, Silver City, Austin, Dayton, Eureka, and Carson City. All but the latter were ghost towns by the 1960s. A congregation and B'nai B'rith lodge were organized in Virginia City in 1862. In the same year a burial society was organized there and in Eureka. Worship services were first held in Carson City in 1869. When the U.S. went on the gold standard and silver deposits gave out, Nevada's population shrank and the Jewish communities in the mining towns faded away. Carson City still has a

Jewish communities in Nevada. Population figures for 2001.

historic Jewish cemetery known as the Bonanza Days Jewish Cemetery. A short-lived community grew up at Goldfield at the turn of the century when new gold and silver discoveries were made there. In 1969 the oldest permanent Jewish community was in Reno, which became the state's principal city after the mining towns were abandoned in the 1870s.

Among the pioneer Jews was Herman Bien, a rabbi, who opened the first Jewish school at Virginia City in 1861, and served in the first territorial legislature. He was one of four Jewish members of the convention that drafted the state's first constitution in 1864. Adolph *Sutro, later mayor of San Francisco, who arrived in 1860, built the Sutro tunnel that greatly aided mining operations. Albert *Michelson, the United States' first Nobel Prize winner, spent his boyhood in Virginia City, where his father was a storekeeper. Joseph Goodman was co-owner of *The Territorial Enterprise*, the first printed newspaper in Nevada, which employed Samuel Clemens (Mark Twain) as a reporter. Samuel Platt, whose father came to Carson City in 1864, served as speaker of the state legislature and U.S. attorney for Nevada, and was three times Republican candidate for the U.S. Senate. Col. David Mannheim commanded troops in the Indian wars of the 1860s, and Mark Strouse was the first sheriff of Carson City. Milton Badt was chief justice of the Nevada Supreme Court from 1947 to 1966, and David Zenoff was appointed to the court in 1965. The mayor of Las Vegas from 1999 was Oscar Goodman (1939–). Brian Greenspun, the scion of newspaper magnate, land developer and arms smuggler to pre-state Israel, Herman "Hank" Milton Greenspun (1909–1989), was the editor of the *Las Vegas Sun* and active in real estate and casino management. Casino mogul Steve *Wynn (1941–), who built the opulent Bellagio and Wynn Las Vegas hotels, is credited with the Las Vegas Strip's successful marketing, during the 1990s, as a family friendly environment. Rival Sheldon Adelson (1933–), who built the

Venetian Hotel, established Las Vegas as a major convention and trade show venue. Democratic Congresswoman Shelley Berkley (1951–) was elected to the House of Representatives in 1998 and won her fourth term in 2004. Jacob “Chic” Hecht (1928–) served in the Nevada State Senate from 1967 to 1975, as a Republican in the U.S. Senate from 1983 to 1989, and as U.S. Ambassador to the Bahamas (1989–94).

Many Jews serve the casino industry; others are retirees, many more are professionals, physicians, lawyers and accountants, meeting the needs of a booming economy and a growing population. While attention is concentrated on the Las Vegas strip, family life thrives in the suburbs around Las Vegas in Summerlin, Desert Shores, Seven Hills and Green Valley, and Henderson.

[Bernard Postal / Sheldon Teitelbaum (2nd ed.)]

NEVAKHOVICH, JUDAH LEIB (1776–1831), one of the earliest *maskilim* in Russia. Born in Polonnoye (today Khmel'nitskii district), Ukraine, Nevakhovich was a teacher and a companion of Abraham Peretz, son-in-law of the wealthy Joshua Zeitlin of Shklov. Together with the Peretz family, Nevakhovich settled in St. Petersburg at the end of the 18th century. Having mastered German and Russian, he was employed by the Russian government as a translator of Hebrew documents, including those connected with the imprisonment of R. Shneur Zalman of Lyady.

During the debate over legislation concerning the Jews of Russia at the beginning of the 19th century, Nevakhovich took an active part in the deliberations and wrote the pamphlet *Vopl Dushcheri iudeyskoy* (St. Petersburg, 1803; repr. in *Budushchnost*, Vol. 3, 1902). The purpose of this pamphlet was to combat anti-Jewish hatred. Such hatred, Nevakhovich believed, was the cause of all the decrees and persecutions endured by his coreligionists. He called on his Russian countrymen to treat the Jews with sympathy and tolerance. He pointed out that there was no foundation to the accusations – including blood libels – brought against the Jews, and that Judaism, furthermore, was not opposed to the laws of Russia. Nevakhovich rejected the demands of Christians that the Jews be converted. Within a year of its publication, Nevakhovich's pamphlet also appeared with various changes and additions in Hebrew, under the title *Kol Shavat Bat Yehudah* (“The Cry of the Daughter of Judah”) (Shklov, 1804; repr. in *He-Avar*, vol. 2, 1918). The Hebrew version also includes a short history of Russia, followed by an essay on “the hatred of religions, truth and peace,” which is in the form of a discussion between “truth” and religious hatred, with words of praise for Alexander I who convened a committee for “the reform of the situation of the Jews to their benefit and that of the country.” The pamphlet, in both its Hebrew and Russian versions, marks the beginning of Haskalah literature among Russian Jewry,

but it also signifies the end of Nevakhovich's literary activity on behalf of the Jews.

In 1809 his name is present on the list of signatories to *Ha-Melassef*, and it was about this time that Nevakhovich converted to Lutheranism. He was employed as a government official in Poland and later engaged in commerce. He also wrote dramas which were presented in St. Petersburg's theaters and translated German literature into Russian. The conversion of Nevakhovich and his companion, A. Peretz, turned many Jews away from the Haskalah movement, even in its most moderate forms. Although Nevakhovich's works appear episodic and without continuity in the literature (both Hebrew and Russian) of the Haskalah, they did, nevertheless, herald the arrival of a new period in the spiritual life of Russian Jewry. The scientist Elie Metchnikoff was the grandson of Nevakhovich, through his daughter.

[Yehuda Slutsky]

NEVATIM (Heb. נִבְּטִים; “Sprouts”), moshav in southern Israel, 5 mi. (9 km.) E. of Beersheba, affiliated with Tenu'at ha-Moshavim. It was the easternmost moshav of the 11 settlements erected in the night of Oct. 6, 1946, in the south and Negev. The founding group originated from various European countries, but immigrants from Cochin (South India) took their place after 1948. Nevatim's farming was of the oasis type, based on greenhouses and poultry. Some residents were employed outside the moshav, in the nearby factories. In 1968 Nevatim's population was 426, increasing to 540 in the mid-1990s and 753 in 2002 after expansion.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

NEVEH EITAN (Heb. נְוֵה עֵיטָן; “Habitation of the Strong”), kibbutz in central Israel in the Beth-Shean Valley, affiliated with Ihud ha-Kevuzot ve-ha-Kibbutzim. It was founded in 1938 as a tower and stockade settlement, after the group, which had originated from Poland, had participated in setting up neighboring Ma'oz Hayyim and had lived there for several months. Farming at Neveh Eitan was intensive and irrigated, comprising field crops (e.g., cotton), dairy cattle, and carp ponds. The kibbutz also operated a plastics factory and guest rooms. The name is based on a passage in Jeremiah 49:19. In 1968 its population was 250, dropping to 172 in 2002.

[Efram Orni / Shaked Gilboa (2nd ed.)]

NEVEH YAM (Heb. נְוֵה יָם; “Sea Dwelling”), kibbutz in northern Israel, on the Carmel Coast near Atlit, affiliated with Ihud ha-Kevuzot ve-ha-Kibbutzim. Neveh Yam was founded in 1939 by a pioneer group, Ma'pilim-Gordonia, from Poland, which had received training in seafaring in the Polish port of Gdynia; they were joined by immigrants from Austria and Czechoslovakia. The kibbutz sought to develop sea fishing and

aid “illegal” immigration. Farming was at first only a sideline, but after 1948 became the mainstay of the kibbutz’s economy, in addition to a guest house and a fish-canning factory. Fishing, however, was discontinued. In 1968 Neveh Yam had 130 inhabitants. In 2002 its population was 178. In the 1990s the kibbutz underwent a severe economic crisis. Its sources of livelihood in the early 2000s were a holiday village, field crops, and a fishery.

At the end of 2002 the population of Neveh Yam was 188 residents.

[Efram Orni / Shaked Gilboa (2nd ed.)]

°NÈVEJEAN, YVONNE (1900–1987), head of Belgium’s Children’s National Care Authority (Oeuvre Nationale de l’Enfance, also known as ONE) and Righteous Among the Nations. During the years of the German occupation in 1940–44, she agreed to shelter in ONE establishments (homes, summer camps, and rehabilitation centers) Jewish children trying to avoid deportation to concentration camps. In this major undertaking she worked closely with the Jewish Defense Committee (Comité de Défense des Juifs – CDJ), a clandestine organization created by Jewish activists to help people find hiding places and provide them with false papers. Yvonne Jospa, in charge of the CDJ’s children department, coordinated the rescue effort with Nèvejean. Various religious and lay organizations in the country also lent a hand to save the children. The work involved finding suitable addresses with organizational or private homes for the fleeing children, then assigning people to check on the care and living conditions of the children as well providing them with clothing and defraying the additional costs of their hosts. Nèvejean was also successful in freeing a group of children of the Wezembeek Jewish Children’s Home, arrested by the Germans on October 30, 1942, by appealing directly to Queen Elisabeth, who in turn intervened with the German authorities to have the children released. It is estimated that up to a thousand children, and perhaps a bit more, benefited from the care provided by ONE. Local financial institutions, such as the Société Générale Bank, helped defray the costs of Nèvejean’s large-scale rescue operation with monthly allowances. The Belgian government-in-exile in London also underwrote some of the debts incurred by ONE. As the Allied armies advanced toward Belgium in August 1944, Nèvejean learned that the Germans planned to pick up the remaining Jewish children, until then permitted to stay in several Jewish children homes, and in one sweep take them away for deportation. She immediately recruited her staff to take emergency measures, to fetch the children in time and remove them to temporary safe havens – an undertaking which proved successful. In 1965, Yad Vashem awarded her the title of Righteous Among the Nations.

[Mordecai Paldiel (2d ed.)]

NEVELAH (Heb. נבלה; “carcass”), descriptive noun for any animal, bird, or creature which has died as a result of any process other than valid ritual slaughter (*shehitah).

The Pentateuch forbids the consumption of such meat, which can be given to a resident alien, or sold to a non-Jew (Deut. 14:21; see also Pes. 21b). Punishment for eating *nevelah* applies only to “clean” animals (Meil. 16a; Maim. Yad, Ma’akhalot Asurot, 4:17) and is not added to the normal punishment for eating “unclean” animals. The *nevelah* is also one of the principal categories of ritual impurity (*tumah*), and touching or carrying it causes ritual impurity (Lev. 11:39–40; Maim. Yad, She’ar Avot ha-Tumah, 1–3).

See *Dietary Laws; *Purity and Impurity, Ritual; Animals.

NEVELSON, LOUISE (1900–1988), U.S. sculptor and print-maker. Arriving in the United States in 1905, Nevelson grew up in Rockland, Maine. Her father owned a lumberyard, an important influence on her mature sculpture when Nevelson adopted wood as her most significant material. She took her husband’s surname after her marriage in 1920, the same year that the couple moved to New York. Her artistic apprenticeship spanned several years, including private painting and drawing lessons with William *Meyerowitz and Theresa *Bernstein, followed by studies at the Art Students League (1928–31, 1933). Nevelson’s drawings and canvases from this period are figurative and expressionistic in nature. In 1931, she studied in Munich with Hans Hoffman, where she became familiar with Cubism. In 1932, Nevelson, along with Ben *Shahn, assisted Diego Rivera with his Rockefeller Center mural.

Nevelson made her first sculpture in 1934, at which time she took a class at the Educational Alliance with Chaim *Gross. Working in terracotta, bronze, and plaster, Nevelson executed blocky, figurative sculptures. Under the auspices of the Works Progress Administration, she taught sculpture at the Educational Alliance in 1937. She exhibited paintings and sculpture influenced by Cubism and Surrealism at her first solo show, held at New York’s Nierendorf Gallery in 1941. In the 1940s she began to make sculptural environments around themes, such as *The Circus – The Clown Is the Center of His World* at the Norlyst Gallery in New York (1943). Her sculptures grew increasingly abstract through the 1940s, influenced in part by non-Western art. In 1947 she also started making etchings, drypoints, and aquatints.

Around 1954, Nevelson began designing large wood, Cubist-inspired abstract constructions. In 1956, Nevelson made her first wall sculptures. The dramatic *Moon Garden + One* (1958) established Nevelson’s reputation. Open-faced, stacked wood boxes filled with disparate found objects such as furniture legs, broom handles, spindles, and other wooden abstract shapes, covered the walls of the Grand Central Moderns Gallery. The installation, which included the enormous *Sky Cathedral* (Museum of Modern Art, New York), was painted

a uniform black in an effort to occlude the original identity of the objects and to unite them.

Subsequent reliefs retained a monochrome appearance, painted entirely in either black, white, or gold. The all-white installation *Dawn's Wedding Feast* appeared in 1959 at the Museum of Modern Art's "Sixteen Americans" exhibition, and gold sculptures showed at *The Royal Tides* exhibition at the Martha Jackson Gallery (1961).

Nevelson expanded her materials in the second half of the 1960s, creating sculptures out of aluminum, Plexiglas, and Cor-ten steel. In 1964 Nevelson made the Holocaust memorial *Homage to 6000000* (private collection) using her iconic stacked boxes filled with wood collage elements. The first version was painted in black, but a second version, installed at the Israel Museum in Jerusalem in 1965, was painted white. In the early 1970s Nevelson received several commissions, including sculptures for Temple Beth-El, Great Neck, New York (1970); Temple Israel, Boston (1973); and seven metal sculptures for the Louise Nevelson Plaza in Lower Manhattan (1979).

[Samantha Baskind (2nd ed.)]

NEVERS, capital of the Nièvre department, central France. In 1208 Pope Innocent III protested vehemently to Hervé, count of Nevers, against the excessively advantageous conditions which he had granted the Jews of his town and county. This situation changed rapidly: in 1210 Hervé personally signed a promise that he would not retain any of the royal Jews fleeing to his lands from the king's demesne. Countess Mahaut ratified *Louis VIII's restrictive ordinance on the Jews immediately after its publication in 1224. Finally, Count Robert expelled the Jews from his county in 1294.

[Bernhard Blumenkranz]

NEVINS, SHEILA (1939–), U.S. television executive. Born in New York, Nevins earned a bachelor of arts degree from Barnard College and a master of fine arts from the Yale University School of Drama. She began her career with the United States Information Service, which produced and distributed documentaries about American life. After producing children's shows and documentaries for television, she joined Home Box Office, a pay television cable network, in 1979 as director of documentary programming and was named executive vice president, original programming, for HBO and Cinemax, a related company, in 1999. In that role, Nevins oversaw production of nearly 200 documentaries. They earned nine Oscars, 13 Primetime Emmy awards, 22 news and documentary Emmys, and 14 George Foster Peabody awards for HBO and one per-

sonal Peabody award. She was inducted into the Broadcasting and Cable Hall of Fame in 2000. Among the notable documentaries she was involved in were *The Times of Harvey Milk* (1984), the story of a gay political activist in San Francisco who was murdered along with the city's mayor; *One Day in September*, the recounting of the events at the 1972 Summer Olympics in Munich, where 11 Israeli athletes were killed; and *Protocols of Zion* (2005), a film that traces the history of the notorious fake antisemitic book. She has had an impressive record of awards with Holocaust-related documentaries based on survivor testimonies. Among her most memorable were *One Survivor Remembers: The Gerda Weissmann Klein Story* and *Into the Arms of Strangers*, a film on the Kindertransport.

[Stewart Kampel (2nd ed.)]

NEVU'AT HA-YELED (Heb. נְבוּאָת הַיֶּלֶד; "The Prophecy of the Child"), a medieval Hebrew short story. The body of the tale is followed by a number of occult prophecies in Aramaic. First printed at the end of *Sefer Nagid u-Mezavveh* by Jacob *Zemah (Constantinople, 1726) and published many times since, it was known already as early as the end of the 15th century and the beginning of the 16th when some kabbalists, among them R. *Abraham b. Eliezer ha-Levi, wrote commentaries on the prophecies in *Nevu'at ha-Yeled*. The story tells of a wonder child, Naḥman, born in the fifth century to a kabbalist; the child died very young, but immediately upon birth began to tell his mother secrets of the heavenly worlds. His father cautioned him not to reveal mysteries forbidden to man, and from then the child spoke only obscurely and enigmatically.

Modern scholars have attempted to date the story and the prophecies therein by tracing known historical events hinted at, and relating them to the text. The obscurity of the text makes this very difficult, but it seems probable that historical events in the 15th century, especially in the East, are referred to in the prophecies. However, the purpose of the story and its prophecies was to anticipate the coming of the Messiah and to describe the major political and historical events and catastrophes bringing about his final revelation. The kabbalists interpreted the prophecies as hinting at the coming of the Messiah in the early 16th century.

In literary genre, there is a great similarity between the prophecies of the Jewish child and comparable phenomena in non-Jewish literature, e.g., the cryptic prophecies of the wizard Merlin (according to legend, told when he was a boy) which many medieval Christian scholars interpreted as foretelling future events. A parody on *Nevu'at ha-Yeled* was written by R. Joseph *Delmedigo in his *Mazrefle-Hokhmah* (Basel, 1629) about a child in Poland whose duplicity was revealed.

[Joseph Dan]

NEVZLIN, LEONID BORISOVICH (1959–), Russian tycoon. Nevzlin was born in Moscow and graduated from the Gubkin Institute of Oil and Gas in 1981, specializing in automation and computers. Subsequently he graduated from the G.V. Plekhanov Economic Academy, specializing in management and marketing. In 1981–87 Nevzlin worked as a programming engineer at the Zarubezhgeologia foreign trade firm. In 1987 he was appointed manager of the contract department of the Center for Scientific and Technical Creativity for Youth (MENATEP), attached to the district Komsomol committee. There he began his long-time association with Mikhail Khodorkovsky, who would become Russia's richest man. In 1989–91 Nevzlin was the president of the Commercial Investment Bank for Scientific and Technical Progress.

In the privatization period Komsomol money was an important source of private business formation. Nevzlin enjoyed rapid advancement in the MENATEP bank and in 1993–96 was first vice chairman of its board of directors and the head of the public relations department (1994–96). In 1996 he became first vice chairman of the board of directors and vice chairman of the executive committee of the ROSPROM financial and industrial group. In 1996 he was appointed vice president of the YUKOS joint-stock oil company and made a member of the board of directors. In 1996 he was named among the 50 most influential businessmen in Russia. He was the chairman of the Russian Investors Union, a director of the TEPKO bank, and a member of the editorial board of *Ekho Planety* magazine. In 1997 Nevzlin became first vice chairman of the joint board of directors of the ROSPROM-YUKOS group. In 1997–98 he was first deputy to the general director of the Russian ITAR-TASS information agency in charge of economic affairs. He worked out the gradual transformation of the agency into a joint-stock company. In 1998 he became first vice chairman of the board of directors of the YUKOS-Moscow company.

Nevzlin was active in Jewish communal life. In 2000 he became chairman of the coordinating council of the Congress of Jewish Religious Communities and Organizations. In 2001 he was nominated acting president of the Russian Jewish Congress. He resigned at the end of year when he was appointed representative of the Mordovian Republic in the Federation Council, the upper chamber of the Russian parliament. The political activity of Nevzlin was greatly appreciated by President Yeltsin. During the Putin presidency, however, relations between the authorities and the business community changed. With Khodorkovsky's arrest and prosecution and later accusations of economic crimes against the heads of MENATEP and YUKOS, Nevzlin came under fire. In 2003 he resigned from the Federation Council and left Russia, becoming an Israeli citizen. In June 2003 the Leonid Nevzlin Center for the Study of Russian and Eastern European Jewry was opened at the Hebrew University of Jerusalem. His net worth has been estimated at \$2 billion.

[Naftali Prat (2nd ed.)]

NEW BEDFORD, a city in southeastern Massachusetts; estimated total population of 95,000, in 2005, Jewish population of greater New Bedford (including Dartmouth and Fairhaven) numbers approximately 3,000. Because of its proximity to Newport, the port of New Bedford in colonial days was of importance to two Jewish-Portuguese merchants, Aaron Lopez and Jacob Rodrigues Rivera, who settled in Newport. They came to New Bedford to learn the art of candlemaking at the Rodman Candleworks which was important in the whaling industry at the time. In the middle of the 19th century, a group of German Jews settled in the city and were later joined by new arrivals. The B'nai Israel Society, established in 1857, purchased a cemetery plot for these German-Jewish immigrants in the Peckham West Cemetery in the city.

The New Bedford Directory for 1869 contains Jewish names such as Adolphus Levi; Leon Levy, dry goods and variety store; Louis Henry, cigar maker; and Julius Simon, dry goods, fancy and retail. After 1877, Eastern European Jews went to New Bedford in large numbers. Ahavath Achim Synagogue began in 1893 with the purchase of a plot of land upon which the synagogue was built and incorporated in 1899 in the South End on Howland Street, and in the 1940s moved west to County Street. In 2005 the rabbi was Barry Hartman. Congregation Chesed Shel Emes was incorporated in 1898, and a synagogue was built in 1904 on Kenyon Street in the north end of the city. This synagogue was destroyed in the late 1950s to make room for the highway through the city. The Conservative Congregation Tifereth Israel Synagogue was dedicated in 1924, and its rabbi in 2005 was Raphael Kanter. Other Jewish organizations and branches of fraternal orders also existed. A communal Talmud Torah existed until 1935. The establishment of various industrial enterprises in the 1930s, and the establishment of the JCC (Jewish Community Center) from 1947 to 1972 added to the Jewish activity in the city. Since 1973, the Jewish Federation of Greater New Bedford has absorbed the programs of the JCC and continues to provide for the activities of the Jewish community through Jewish social service programs, under the leadership of executive director, Wil Her-rup, and a board of directors.

[Rudolf Glanz / Mel and Cindy Yoken (2nd ed.)]

NEW BRUNSWICK, U.S. industrial city on the Raritan River, in New Jersey, approximately 30 miles S.W. of New York City. It is the home of Rutgers University, the State University of New Jersey. It is estimated that the Jewish population of Middlesex County is 45,000 but given the nature of suburban Jewish life in northeastern New Jersey, it is also part of the larger community of more than 400,000 Jews in the area. Rutgers University has approximately 4,500 students.

New Brunswick's earliest Jewish settler seems to have been Daniel Nunez, who was a justice of the peace in 1722, about 40 years after the founding of the town (1679–80). Nunez was in business in Piscataway, a small village just outside the New Brunswick city limits. Hannah Lonzoda, a widow, lived in New Brunswick from 1750 on. In 1850 some

Bohemian and German Jews settled in the town, and by 1852 about 20 to 25 Jews were living there. The Jewish population grew from 90 in 1865 to 280 in 1897, slightly more than 1% of the general population. In 1888 an influx of Eastern European Jews began, and from the turn of the century on, the Jewish population of the greater New Brunswick area continued. In 1969, two Reform, five Conservative, and five Orthodox synagogues were serving the area. The oldest synagogue in New Brunswick, now Anshe Emeth Memorial Temple (Reform), was founded in 1859, probably as an Orthodox congregation; it became a Reform temple about 1890. Congregation Ahavas Achim (Orthodox) was founded in 1889. The Highland Park Conservative Temple was founded in 1930.

The Jewish Federation of Raritan Valley, launched in 1948, coordinates fund raising, social service, welfare, educational, and communal activities "calculated to enhance Jewish communal life." In 1969, 28 religious, social, and educational organizations were affiliated with the federation. A YM-YWHA was organized in 1911.

Before 1900, most New Brunswick Jews were peddlers and small shopkeepers. A few were professionals, including some Jewish teachers in the public schools in 1893, one of whom served as school principal. From 1900 to the 1930s, most of the Jewish population worked as tradesmen and artisans. In the 1960s many Jews were practicing the professions of law, medicine, accountancy, and teaching; many were engaged in business and industry. A number were serving as elected officials in municipal government. Samuel D. Hoffman (1900–1957), attorney and first president of the Jewish Federation, served as a city commissioner of New Brunswick in 1935. Harry S. Feller (1885–1954), second president of the federation and one of the organizers of the Ad Hoc Committee for United Jewish Appeal, taught in New Brunswick High School (1908–16) and served as first principal of the evening school (1912).

The Allen and Joan Bildner Center for the Study of Jewish Life at Rutgers

The Allen and Joan Bildner Center for the Study of Jewish Life at Rutgers, the State University of New Jersey, is committed to the pursuit of academic excellence, fostering faculty research, and sponsoring a variety of community outreach programs. The Bildner Center promotes scholarly exchange on an international scale by bringing visiting scholars to Rutgers to teach special courses and to contribute to the intellectual life of the University community. The center works closely with the department of Jewish Studies offering a wide range of extracurricular programs for students and seminars for faculty. The center's active agenda of community outreach includes: public lectures and symposia, Jewish communal initiatives, the Rutgers New Jersey Jewish Film Festival, and the activities of the Herbert and Leonard Littman Families Holocaust Resource Center.

The department of Jewish Studies offers an interdisciplinary approach to the academic study of all aspects of the Jewish experience. Courses offered by the department, which are open to all students, address the historical, social, cultural,

religious and political life of the Jewish people from ancient times to the present. Drawing on faculty from 12 departments, as well as on visiting fellows sponsored by the Bildner Center, the Jewish Studies curriculum offers over 60 interdisciplinary courses. Students pursuing a B.A. degree may major or minor in Jewish Studies. The department and the Bildner Center work together to promote Jewish Studies at Rutgers.

Hillel

Hillel partners with student leadership in planning and implementing religious, social, and cultural events for Rutgers/New Brunswick's 4,500 Jewish students. While Hillel is physically located on the Rutgers College/College Avenue campus, events are run on all five New Brunswick campuses. Pluralistic events include learning sessions, Birthright Israel, weekly Shabbat services and free dinners, *tikkun olam*/social action program, holiday and cultural commemorations, and programs for graduate students.

At Rutgers University is an active and extremely vibrant Hillel. Its mission is to enrich the lives of Jewish undergraduate and graduate students so that they may enrich the Jewish people and the world. Hillel student leaders, professionals, and lay leaders are dedicated to creating a pluralistic, welcoming, and inclusive environment for Jewish college students, where they are encouraged to grow intellectually, spiritually, and socially. Hillel helps students find a balance in being distinctively Jewish and universally human by encouraging them to pursue *zedek* (social justice), *tikkun olam* (repairing the world), and Jewish learning, and to support Israel and global Jewish peoplehood. Hillel is committed to excellence, innovation, accountability, and results.

Chabad House-Lubavitch, founded in 1978, nurtured and supported by concerned members of communities throughout New Jersey, is dedicated to the re-establishment and strengthening of our Judaic faith, principles, identity, commitment, and pride.

The Les Turchin Chabad House, a unique and vibrant center, provides a "home away from home" for college students at Rutgers, the State University of New Jersey. Chabad House operates over 20 community service programs. The new Chabad House is proud to serve as the largest Jewish Center on any university campus in the U.S. The new complex is located in the heart of Rutgers University. Serving as headquarters for all Jewish activities, the building features: housing for students, peer counseling and drug prevention centers, student activity offices, a 300-seat synagogue, a publications center, library, kosher dining hall, student lounges and a computer area. Some of its programs include: hospital and prison visitations; holiday rallies and festivals; counseling and Social Services; and Kosher Meals on Wheels. Rabbi Carlebach, the executive director of Chabad House-Lubavitch, is also the rabbi of Congregation Sons of Israel-Chabad in Wayside.

The Jewish News

The *Jewish News* has been an influential voice in the New Jersey Jewish community since its founding in 1946. Cover-

age includes local, national and world events; explorations of the world of Jewish culture and the arts; supplements on Israel, the holidays and other topics of interest; and a wide array of feature stories. Beginning as *The Jewish News*, the paper merged in 1947 with the Newark-based *Jewish Times*, keeping *The Jewish News* name. In 1988, reflecting the demographic changes in a community that was moving west to the suburbs, the paper was renamed *MetroWest Jewish News*. In 1997, *MetroWest Jewish News* acquired a second newspaper – *The Jewish Horizon* – of Union and Somerset counties; a new name, *New Jersey Jewish News*; and a new focus on Jewish issues statewide.

In the early 21st century *NJN* published four editions, reaching more than 50,000 households. The MetroWest edition continued to serve Essex, Morris, Sussex, and part of Union county and was mailed directly to the homes of 24,500 subscribers. In 1998, *Jewish News* further strengthened its position in the state when it acquired the *Jewish Reporter* and started publishing a third edition in the Princeton Mercer Bucks region. That edition covers the area from the Route 1 corridor to the greater Princeton area, to Yardley, Pa., and more.

In November 2000 the *Jewish News* began publishing a greater Middlesex County edition. With its newly acquired 14,500 subscribers, the Middlesex edition gives the paper contiguous coverage from Montclair to Princeton and from Morristown to Newark.

With its growth, the *Jewish News* has become the second largest Jewish newspaper in America, and the largest-circulation weekly newspaper in the state. The *Jewish News*' role is to be a strong, statewide voice representing the interests of all Jews as well as a weekly chronicle of the ways individuals are expressing their Jewishness both within and beyond the institutional Jewish world.

[Abraham Halperin / Allie Rimer (2nd ed.)]

NEWCASTLE-UPON-TYNE, port in Northumberland, N.E. England. Its small medieval Jewish group was expelled in 1234 at the request of the townspeople. Although there were individual Jews in the city by 1775, the organized community dates from 1831 – a year after a cemetery had been acquired – by which time there were about 100 Jewish residents. A synagogue was built in 1838, but by 1868 it had become too small for the growing population and a second congregation was formed. In 1873 the two groups amalgamated and a new synagogue was opened in 1880. The community increased during the mass immigration from Eastern Europe (1881–1914) and by 1900 numbered about 2,000. The small but very Orthodox community of *Gateshead is on the opposite bank of the River Tyne from Newcastle. Newcastle itself has an Orthodox and a Reform congregation. In addition there is the normal structure of communal institutions which is headed by a Representative Council of North-East Jewry. The estimated Jewish population for Tyneside (Newcastle, Gateshead, etc.) was 3,500 (0.38% of the total population) in 1969. In the mid-1990s, the Jewish population of Newcastle numbered approximately

1,230. The 2001 British census found 960 Jews by religion in Newcastle, with another 1,564 in Gateshead.

BIBLIOGRAPHY: C. Roth, *Rise of Provincial Jewry* (1950), 84–85; Roth, England, index. **ADD. BIBLIOGRAPHY:** L. Olsover, *The Jewish Communities of North-East England, 1755–1980* (1980).

[Vivian David Lipman]

NEW CHRISTIANS, a term applied specifically to three groups of Jewish converts to Christianity and their descendants in the Iberian Peninsula. The first group converted in the wake of the massacres in Spain in 1391 and the proselytizing fervor of the subsequent decades. The second, also in Spain, were baptized following the decree of Ferdinand and *Isabella in 1492 expelling all Jews who refused to accept Christianity. The third group, in Portugal, was converted by force and royal fiat in 1497. Like the word *Conversos, but unlike *Marranos, the term New Christian carried no intrinsic pejorative connotation, but with the increasing power of the *Inquisition and the growth of the concept of *limpieza de sangre*, the name signaled the disabilities inevitably heaped on those who bore it. In Portugal, the Marquis de Pombal officially abolished all legal distinctions between Old and New Christians in May 1773. Comparable measures were not enacted in Spain until 1860, by which time much of the distinction had been eroded by assimilation and inquisitorial repression. However, pockets of social discrimination against New Christians still continued, as, for example, against the *chuetas of the Balearic Isles.

[Martin A. Cohen]

In Halakhic Literature

The New Christians who continued secretly to observe the precepts of Judaism as much as possible after their conversion were not regarded as voluntary apostates. The basis of this decision was the statement of *Maimonides (Yad, Yesodei ha-Torah 5:3–4) that although one should allow oneself to be put to death rather than abandon one's faith in times of persecution, "nevertheless, if he transgressed and did not choose the death of a martyr, even though he has annulled the positive precept of sanctifying the Name and transgressed the injunction not to desecrate the Name, since he transgressed under duress and could not escape, he is exempted from punishment." In accordance with this, Isaac b. *Sheshet ruled that those New Christians who remained in their countries because they were unable to escape and flee, if they conduct themselves in accordance with the precepts of Judaism, even if only privately, are like full Jews, their *shehitah* may be relied upon, their testimony in law cases is accepted, and their wine is not forbidden by touch as that of non-Jews (Resp. Ribash, no. 4). However, some authorities ruled that if the Marranos of a certain locality succeeded in fleeing to a country where they could return to Judaism, while others remained there in order to retain their material possessions, the latter were no longer presumed to have the privilege of being regarded as Jews (Ribash, *ibid.*) nor are they regarded as valid witnesses (*Tashbez*, 3:47; Resp. Redakh, no. 24). Others, how-

ever, expressed more lenient views and held that no one is to be deprived of his rights as a Jew as long as he is not seen to transgress the precepts of Judaism even when there is no danger involved (*Tashbez*, 1:23). Moses Isserles, too, rules that even those Marranos who are able to flee but delay because of material considerations and transgress Judaism publicly out of compulsion while remaining observant privately do not make wine forbidden by their touch (Sh. Ar., YD 124:9, and see *ibid.* 119:12).

The problem of the Marranos in *halakhah* became increasingly complex as the length of their stay and that of their descendants in their native lands wore on. Jewish religious tradition was gradually forgotten by the descendants of the Marranos in Spain and Portugal, and many of them assimilated and intermarried with the gentiles. Since for several centuries individuals and groups of descendants of Marranos continued to escape to other countries where they were absorbed in the Jewish community, doubts and differences of opinion related to the laws of marriage and personal status arose among the great talmudists about the Marranos returning to Judaism. Isaac b. Sheshet, Simeon b. Solomon Duran in Algiers, and Elijah Mizrahi in Constantinople ruled that the children of Marranos counted as Jews in matters of marriage, divorce, levirate marriage, and **halizah* even after several generations (*Yakhin u-Vo'az*, pt. 2, no. 38; *Mayim Amukkim*, no. 31; Maharik, Resp. no. 85 in the name of Rashi). On the other hand, some ruled that the children of Marranos born after their parents had converted and succeeding generations were to be regarded in all ways as non-Jews; their betrothal to a Jewish woman was invalid, levirate marriage did not apply to them, and even if a Marrano begot a child by a woman forbidden under penalty of **karet* the offspring does not rank as **mamzer*, and should he become a proselyte would be permitted to marry a Jew. The Marranos who had lived among gentiles for more than a century came to regard those things forbidden by the Torah as permitted and married non-Jewish women, with the result that their children were presumed to be non-Jewish unless it could be proved that their mothers were Jewish (*Keneset ha-Gedolah*, EH 4; Resp. Maharit, vol. 2, EH no. 18).

A Marrano who could have fled but did not was penalized, in that he did not inherit the property of his Jewish relatives, while every Marrano heir who hastened to return to Judaism canceled the rights of the other Marrano heirs (Resp. Reshakh, pt. 1, no. 137). According to some authorities, the customs of dowry and marriage allowance applying to Marranos while they lived as gentiles remain in force (Resp. Maharashdam, HM no. 327), but according to others the agreements made by Marranos at the time of their marriages in accordance with gentile usages had no binding force (Joseph Caro, in *Avkat Rokhel*). A testamentary disposition or the gift of a dying person made by a Marrano not in accordance with Torah law was not binding (Joseph ibn Lev in *Edut be-Ya'akov*, no. 71, 195b; *Keneset ha-Gedolah*, HM 161; *Torat ha-Minhagot*, no. 51).

The scholars of Safed headed by Jacob Berab imposed flagellation upon Marranos who returned to Judaism as a punishment for transgressing the prohibitions which rendered them liable to *karet* in their previous condition (*Kunteres ha-Semikhah* at the end of Resp. Maharalbah); and since flagellation can be imposed only by ordained *dayyanim*, Jacob Berab and his colleagues wanted to enforce punishment when ordination was renewed (see **Semikhah*). A Marrano who escaped from his native land but was not circumcised through neglect was prevented from participating in the sacred service in the synagogue until he was circumcised (*Mayim Rabbim* of Raphael Meldola, YD nos. 51 and 52).

[Moshe Nahum Zobel]

NEWFIELD, MORRIS (1869–1940), U.S. Reform rabbi and social worker. Newfield was born in Hungary, where he earned a B.D. from the Jewish Theological Seminary in Budapest in 1889. In 1891, he abandoned his studies at the medical college of the University of Budapest to immigrate to the United States and attend Hebrew Union College and the University of Cincinnati concurrently. While at HUC, Newfield taught a course in Talmud and was superintendent of the John Street Temple Sunday School. In 1889, he received his B.A. from the University of Cincinnati and was ordained at HUC, which also awarded him an honorary D.D. in 1939, added to his honorary Doctor of Literature degree from the University of Alabama. Immediately after ordination, Newfield was appointed rabbi of Temple Emanu-El in Birmingham, Alabama, a position he retained throughout his life. He also joined the faculty of Howard College, where he taught Hebrew and Semitics.

In Birmingham, Newfield established himself as a civic and interfaith leader and fighter for social justice in the conservative South; a proponent of social gospel theology, his efforts were motivated by the classical Reform belief that the Jews' mission is to establish a Kingdom of God on earth. Accordingly, he founded the city's first free kindergarten and was an organizer and director of the Associated Charities (precursor of the Community Chest) and of the Citizens Relief Committee. He was particularly active in the fight against tuberculosis, as a founder of the Anti-Tuberculosis Society and of the Alabama Anti-Tubercular League. He also challenged prohibition and Sunday blue laws; despite this latter conflict with local Christian clergy, together they founded a chapter of the National Conference of Christians and Jews. As president of the Alabama Sociological College, he was a driving force behind ending child labor abuses, joining the Alabama Child Labor Committee and helping to establish a juvenile court, the Department of Child Welfare, and the Alabama Children's Aid Society. He also served as chairman of the Red Cross Advisory Case Committee and was responsible for assisting caseworkers in solving difficult problems.

During World War I, despite his misgivings as an advocate of peace, Newfield served as a part-time chaplain at Alabama's Camp McClellan, partly to show the Christian community that Jews were patriotic. After the war, he served as chairman of the Home Services Committee of the local Civilian Relief Committee, assisting returning veterans.

His involvement in the causes of the wider community notwithstanding, Newfield founded the local Federation of Jewish Charities, later renamed the United Jewish Fund. He was also instrumental in organizing the Alabama Jewish Religious School Teachers Association, serving as its president for two years. He brought his passion for social activism to the national stage via the *Central Conference of American Rabbis, which adopted an official position against child labor in 1910.

Newfield went on to serve as secretary of the CCAR and was ultimately elected to its highest office in 1931. During his two-year term as CCAR president, Newfield steered a non-Zionist course; within a few years, however, in response to the rise of Nazism, he had become a staunch Zionist. He spent the final years of his life championing the cause of the Jewish homeland in Palestine.

[Bezalel Gordon (2nd ed.)]

NEW HAMPSHIRE, one of the New England states, located in northeastern United States. One of the original thirteen colonies which broke from England in 1776, in 2005 it ranked 46th in area of the 50 states and 41st in population. While no accurate demographics are available, the best estimate is that 12,000 to 14,000 Jews lived within this small state (9,351 square miles, 1,299,500 inhabitants in 2005). The Jewish population is concentrated in the more urban south and southeast section (Manchester, Concord, Nashua, Portsmouth, and the seacoast).

The state was not always hospitable to its Jewish citizens (or Roman Catholics, for that matter) for the first state constitution in 1784 limited office-holding to Protestants. That requirement was in force until 1877 when the document was amended to remove religious qualifications. However, the number of Jewish inhabitants was small. Early records name William Abrams and Aaron Moses as having moved from New Castle on the coast to Sanbornton in 1693. A list of grants to settlers in 1770 included Joseph Levy, a settler near the present Ossipee. In 1862, the *American Israelite* reported that a *minyan* had gathered in Manchester to observe the holidays, but no further report followed. In 1880, a J. Wolf was the first recorded permanent Jewish resident. Ten years later the first congregation in the State, Adath Yeshurun, was organized.

A second Manchester synagogue, Anshei Sfard (now Temple Israel) followed in 1897 as a dissident breakaway from the Adath Yeshurun group. The first building erected as a synagogue anywhere in New Hampshire was built in 1911 to house the older *shul* and soon thereafter (1917) Anshei Sfard also built its own place of worship. Meanwhile, both congregations had purchased cemetery land, adjacent to each other

but separated by a fence. The fence stood until 1946 when elders from the two congregations decided to build a memorial chapel on the dividing line and removed the fence as part of the project.

The early Jewish settlers (particularly from the influx escaping the problems of eastern Europe) came as small merchants and trades people. Few, if any, worked in Manchester's huge Amoskeag textile mills. The first peddlers became merchants, and the downtown areas of Manchester, Nashua, Dover, Portsmouth, Keene, and Claremont soon had numbers of Jewish entrepreneurs. Professional people, lawyers, physicians, dentists, teachers began to appear, often from the first generation of native born Americans. At the same time, economic and political influence grew. No Jews served on the state's bench until Harry Lichman was appointed a probate judge in Keene and Bernard Snierston a municipal court judge in Laconia in the mid-1940s. No Jewish judge served on the Superior Court bench until Philip Hollman in 1987, and no federal judge until Norman Stahl was appointed to the Federal District Court in 1990 (in 2005 he was a senior judge for the U.S. Court of Appeals on the First Circuit). Jews joined bank boards in the late 1940s, Saul Greenspan and Milton Machinist, both in Manchester, being the first, and Jews became members of boards of trustees of the Manchester Historic Association, the Currier Gallery (now Museum) of Art, and the NH Historical Society.

The Jewish community also established its own non-synagogue groups. A YM-YWHA was founded in Manchester in 1906. Over time, the organization metamorphosed into a Jewish Community Center with a community Hebrew school, and later, in the 1970s, into the Jewish Federation. In 2005 the Jewish Federation of Greater Manchester became the Jewish Federation of New Hampshire as the only Jewish social agency

Jewish communities in New Hampshire. Population figures for 2001.

in the State. The Federation produces a monthly newspaper mailed to every identified Jewish household in NH. The mailing list totals 3,100.

New Hampshire's role in national elections from the beginnings of the preferential primary in 1954 grew and Jewish citizens, always alert to the political scene, have been involved at many levels in the national campaigns. Gerald Carmen, Republican activist and state chairman in the first Ronald Reagan campaign, went on to serve as General Services Administrator in Washington and in a State Department role at the League of Nations in Geneva, Switzerland. Jewish voters tended to be Democrats, but many were Republicans. Several have served in the 400-member New Hampshire General Court and a number in the State Senate as well. Saul Feldman of Manchester was probably the first Jewish General Court member in the late 1950s. Manchester lawyer Samuel Green served in the New Hampshire Senate and as its president from 1961 to 1963. During a period of Governor Wesley Powell's illness, Green stepped in as acting governor. In 2005, Debora Pignatelli of Nashua, former legislator, was a member of the five-person Governor's Council. Warren *Rudman, a Republican and former attorney general (an appointive post) served as United States Senator from 1980 to 1993 when he declined to seek re-election.

While there were remnants of discrimination ("No Jews" signs were found in White Mountain resort areas until the 1940s), many barriers dropped after World War II. The state's two largest institutions of higher education (Dartmouth College in Hanover and the University of New Hampshire in Durham) certainly were not friendly to Jewish faculty until after World War II. Dartmouth had only two Jewish faculty members in the early 1940s, and UNH one (in the engineering school) until 1954 when historian Hans Heilbrunner was hired in the College of Liberal Arts. Since then Dartmouth has had two Jewish presidents (John Kemeny, 1970–81, and James O. Freedman, a Manchester native, from 1989 to 1998); UNH has had one, Evelyn Handler (1980–83) who left to become president of Brandeis University. Dartmouth, which has the smallest percentage of Jews among its student body of all the Ivy League Colleges, has long had a distinguished Judaic Studies program. Jacob *Neusner, Arthur *Hertzberg, Steven *Katz, Marshall *Meyer and the current incumbent Susannah Heschel have all served on its faculty.

The demise of the Amoskeag Manufacturing Company in 1936 left the largest NH city with a vast surplus of industrial space and a large pool of skilled workers. A concerted effort to attract new employers brought numbers of Jewish manufacturers to New Hampshire. The Blums and Sidores brought Pandora Industries to the city, the Greenspans Waumbec Mills, the Cohens BeeBee Shoe, Boston's Gordon brothers, JS and BD, opened Hampshire Designers and MKM, both textile manufacturers. Until the migration of garment work overseas in the 1980s, there was a thriving Jewish presence in soft goods manufacturing. At the same time, growth in high

tech industry with many Jewish participants replaced some of the old industrial base and the number of Jewish professional men and women grew enormously.

As the Jewish population increased, new synagogues have been established in towns like Amherst and Derry, home to few Jews two generations ago. In 2005 there were fifteen synagogues or temples about the state, and most had full-time rabbis. The immigrant community was hardly distinguishable from the general community.

[David G. Stahl (2nd ed.)]

NEW HAVEN, U.S. port city in Connecticut. New Haven has a Jewish population of 24,300 (2001) out of a general population of about 124,000. It was settled in 1638 by Puritans who envisioned it as a Wilderness Zion based on biblical law. It was 120 years later, in 1758, that the first Jews, the brothers Jacob and Solomon *Pinto, arrived. They were soon integrally involved in the city's life. With the outbreak of the Revolutionary War, the three sons of Jacob Pinto – Solomon, Abraham, and William – took up arms in the Continental army. In 1783, Jacob Pinto was a signer of the petition to Connecticut's General Assembly which brought about the incorporation of New Haven as a town.

President Ezra *Stiles of Yale College recorded in his diary the arrival of an unnamed Venetian Jewish family in the summer of 1772 who observed the Sabbath in traditional Jewish manner, "worshiping by themselves in a room in which were lights and a suspended lamp." He noted that this was purely private Jewish worship, since the Venetians were too few to constitute a synagogue quorum, "so that if thereafter there should be a synagogue in New Haven, it must not be dated from this."

A slow influx of Jewish settlers began about 1840. Families from Bavaria, their friends and kinsmen soon constituted a *minyan* which became Congregation Mishkan Israel. A burial ground was acquired in 1843. Mishkan Israel was New England's second congregation and the 14th Jewish congregation established in the United States. Soon after its founding, divergences in religious approach arose, one in the direction of Orthodoxy, the other toward Reform. In 1846 a first break occurred: a Reform group broke away, for several years conducting its own congregational service.

Until 1854 the pioneer New Haven congregation met for prayers in a variety of local halls. In 1854, Mishkan Israel Congregation, along with other U.S. congregations, received a \$5,000 bequest from the estate of the philanthropist Judah *Touro. With this sum it purchased and refurbished a church as its first synagogue. By then the Reform segment of the congregation had become the majority and in 1855 the Orthodox members seceded permanently and established B'nai Sholom Congregation, which continued as a small congregation until it went out of existence in the late 1930s. Only the cemetery of this early German Orthodox congregation remains.

Mishkan Israel prospered over the decades, led by German-Jewish rabbis who maintained close ties with Rabbi Isaac

M. *Wise and the growing Reform movement. In 1897 the congregation built a large synagogue in Byzantine style, in keeping with its growing affluence; the sermons, previously in German, and much of the service as well, were now in English.

The first Jewish refugees arrived from Russia in February 1882, and were followed by a steady influx of Russian-Jewish families. By 1887 the Jewish population had grown to about 3,200. In the next decade it grew to about 8,000 and the increase was greatly accelerated in the wake of the Kishinev pogrom of 1903. By the beginning of World War I, New Haven Jewry numbered about 20,000.

The first congregation organized by the immigrants from East Europe was B'nai Jacob Congregation (1882), which grew into New Haven's largest Conservative congregation. Of the 11 Orthodox congregations organized during the height of the immigration period, four remained in 1968. Several new ones have been established as a response to the new religiosity of the last decades of the 20th century.

The first organized charity by the Jews of New Haven was undertaken in 1881. The pioneer German Jews established the Hebrew Benevolent Society to assist the Russian-Jewish immigrants, and the latter established the Hebrew Charity Society in 1885. In 1910 the sisterhood of Mishkan Israel began to devote itself to charitable enterprise, opening a special office for the purpose. In 1919 the three charitable undertakings were formally organized into the United Jewish Charities. The Jewish Family Service, professionally staffed, came into existence in 1939.

By the mid-1920s there were in New Haven over 60 Jewish religious, charitable, fraternal, and Zionist organizations, and in addition the Young Men's and Young Women's Hebrew Association, the Jewish Home for Children, and the Jewish Home for the Aged. Community leaders, recognizing the need for coordination, in 1928 created the New Haven Jewish Community Council, to which member organizations regularly elected delegates. Out of the council's efforts there emerged the Jewish Welfare Fund and, subsequently, the Bureau of Jewish Education.

Jewish education of children has improved since the 1950s with the growth of synagogue schools, the Lubavitcher-sponsored Hebrew Day School, and the Conservative-sponsored Ezra Academy. These schools are coordinated by the Bureau of Jewish Education. A community-sponsored Hebrew High School is maintained under the bureau's supervision. The first memorial to the Holocaust built on public land was erected in New Haven and the first project to video-tape Holocaust Survivors was begun in New Haven by local survivors, psychologist Dore Laub, and media specialist Laurel Vlock. It evolved over time into the Fortunoff Archive housed at Yale University Sterling Library. There are seven synagogues in New Haven itself. Neighboring Orange has three synagogues, Reform, Conservative, and Chabad, and also is the home of the New Haven Hebrew Day School, an Orthodox K-8 school. Woodbridge, which is now the center of Jewish activity, has a major Conservative synagogue, Congregation B'nai Jacob,

which moved from the city along with the Jewish Community Center that moved from downtown New Haven to the suburbs and Ezra Academy, a Solomon Schechter Day School affiliated with the United Synagogue of Conservative Judaism. The Jewish Community Center is housed in a 106,000 square foot building containing an Olympic-size shallow depth lap pool, two full-court gymnasiums, racquetball courts, health spa, fitness center, personal training, Judaic gift shop, Claire's kosher vegetarian restaurant, a library, auditorium and more, all on 53 acres. Hamden has two synagogues, one Reform and the other Conservative.

The Jewish Family Service has served the community since 1881.

Yale University is a major center of Jewish life. After generations in which there was a quota on Jews, in the early 21st century Yale has a large Jewish student body, a Jewish president, Richard *Levin, a distinguished Jewish Studies Department with scholars such as Paula *Hyman, Steven Fraude, and Ivan Marcus and a large Hillel building near the Center of campus, the Slifka Center. The Hillel Children's School at Yale which helps children aged 7 to 13 discover positive Jewish identities. Jewish life is a presence on campus and Jewish faculty participate in the community. Judaic scholars are a resource for New Haven Jews. There is an active Chabad presence at Yale.

The most famous Jewish citizen of New Haven is Joseph I. *Lieberman, the United States senator and an observant, self-described Orthodox Jew who was the Democratic nominee for vice president in 2000. He credits the rabbi of the Young Israel of New Haven with mentoring him on how to unite a staunch commitment to Jewish observance with his responsibilities as a United States senator. Marvin Lender, a New Haven based philanthropist whose family began Lender Bagels, is credited as national chairman of the United Jewish Appeal with convening a group of Mega donors to coordinate their own private philanthropy with the ongoing needs of the Jewish community.

[Arthur Chiel / Michael Berenbaum (2nd ed.)]

NEWHOUSE, SAMUEL IRVING (Solomon Neuhaus; 1895–1979), U.S. publisher. Born in New York City, Newhouse was the first of eight children of poor immigrant parents. Newhouse's initial venture came when, as a 16-year-old office boy in a law office, he was told by his employer to take charge of the *Bayonne* (N.J.) *Times*. He made the paper such a success that by age 21 he was earning \$30,000 a year. In 1922 he acquired the floundering *Staten Island* (N.Y.) *Advance* for \$98,000. Six years later he turned down an offer of \$1,000,000 for it. His formula for success was to cut operating costs, stimulate advertising and circulation, and allow local editors complete autonomy. During the Depression of the 1930s he bought five newspapers, and continued adding others, including the *Portland Oregonian* and the *St. Louis Globe-Democrat*. In 1955, in what was described as the biggest transaction in American newspaper history, he paid \$18,642,000 for a package that in-

cluded the *Birmingham* (Alabama) *News*, the *Huntsville* (Alabama) *Times*, and four radio and television stations. In 1959, to diversify his holdings, Newhouse bought controlling interests in two important magazine publishing firms – Condé Nast (*Vogue*, *Glamour*, *House and Garden*) and Street and Smith (*Mademoiselle* and five other periodicals). He owned 15 daily newspapers, 12 national magazines, and nine radio and television stations. In 1960 he gave two million dollars to Syracuse University to establish the Newhouse Communications Center, intended to be the world's largest educational and research institute for the study of the mass media, and he made provision for its future maintenance. In the 1960s Newhouse purchased the *Oregon Journal*; the *New Orleans Times-Picayune* newspaper group; three Springfield (Massachusetts) newspapers – *News*, *Republican*, and *Union*; the *Mobile Register*, *Mobile Press* and *Mississippi Press-Register*; and the *Cleveland Plain Dealer*. In 1976 he gained total ownership of the eight Booth newspapers and *Parade Magazine*.

[Irving Rosenthal / Ruth Beloff (2nd ed.)]

NEW ISRAEL (Rus. **Novy Izrail**), Jewish religious sect initiated in Odessa during the 1880s. At the beginning of 1882 Jacob Priluker, a teacher at the government Jewish school of Odessa, published an article in the *Odesskiy Listok* in which he proclaimed the 15 principles of a sect to be known as New Israel, whose objective was to introduce reforms in the Jewish religion which would reconcile it with Christianity. These principles recognized the Mosaic law only, and articulated “an attitude of contempt” toward the Talmud. The day of rest was transferred from Saturday to Sunday, while circumcision and the dietary laws were abolished. The members of the sect were required to consider Russian as their national language and to observe the laws of the state. The Russian government was requested to grant civic rights to the members of the sect, to authorize them to spread their doctrine among the Jews, and to permit them to wear a special sign which would distinguish them from other Jews. Their platform was to be a breakthrough for Russian Jewry after the tribulations it had suffered through the riots and increased antisemitism which followed the assassination of Czar Alexander II in 1881. However, even those *maskilim* who strove for reforms within Judaism regarded Priluker's proposals with reserve. They pointed to the utilitarian nature of his reforms, which suggested that part of the Jewish heritage be abandoned in exchange for civic rights. On the other hand, Priluker was encouraged by the Russian authorities. During the same year, his book *Reform Jews* (published under the pseudonym of E. Ben-Sion) was published in St. Petersburg with government assistance. It contained a violent attack on the Talmud and traditional Judaism, thus supplying material for antisemitic propaganda. In 1887 Priluker traveled to Western Europe at the government's expense to establish contacts with missionaries. However, his preaching to the Jewish masses of southern Russia met with no success

and the Russian government's sympathy for him declined. Indeed, his appeals for support in the publication of a Jewish newspaper which would propagate his ideas were rejected by the government. In 1891 Priluker apostatized to Protestantism and immigrated to England, and this marked the end of the attempt to establish the New Israel sect.

NEW ISRAEL FUND, THE. Founded in 1979, the New Israel Fund was designed to expand the work that the United Jewish Appeal was then doing. It sought to protect Israel's strength by protecting democracy, human rights, justice, and equality for all Israelis – Jews and Arabs. An international partnership of Israelis, Americans, Canadians, and Europeans, NIF pioneered the funding of Israel's social change organizations and advocacy groups, and is widely credited as the founder of much of Israeli civil society. NIF has funded more than 750 Non-Government Organizations with approximately \$200 million in 26 years.

From minority rights to religious pluralism, NIF is widely recognized to be on the “Dovish,” “leftist” spectrum of Israeli and American Jewish politics. It perceives itself and structures itself in the vanguard of fighting for social change in Israel. NIF grantees work in three core areas: (1) civil and human rights: Flagship NIF grantees such as B'Tselem and the Association for Civil Rights in Israel have won court battles on issues ranging from the prohibition of torture in civilian interrogations to changes in the route of the separation fence to respect humanitarian concerns. Other grantees work on issues ranging from evenhanded urban planning and land sales to women's and minority rights; (2) social and economic justice: As a nation with many disadvantaged minority groups, from citizen Arabs to Ethiopians to Oriental Jews, Israel has a special responsibility to observe its founders' vision and values of “freedom, justice, and peace as envisaged by the prophets of Israel.” Racism, injustice, and fanaticism defile Jewish values and threaten Israel's long-term security. NIF grantees organize communities, advocate for equitable government policies, and empower disadvantaged Israelis to help their communities and themselves; (3) religious pluralism and tolerance: NIF has long been a principal supporter of a pluralistic and tolerant Israeli culture that includes diverse approaches to Judaism and Jewish identity. NIF grantees are in the forefront of the struggle for civil marriage and other life-cycle events, recognition of non-Orthodox conversions, and the equal and unbiased allocation of government resources.

Through Shatil, the Empowerment and Training Center for Social Change Organizations, NIF provides grantees and other social change organizations hands-on assistance and training in the basics of nonprofit management. Widely regarded as one of the world's most successful capacity-building organizations, Shatil regularly originates and discovers

best practices for Israel's growing NGO sector and disseminates them.

The New Israel Fund also partners with other philanthropists in joint initiatives, including a multiyear program funded by the Ford Foundation to promote peace and social justice in Israel. Another joint program, the Green Environment Fund, is the first funding collaboration in Israel to protect and preserve the environment. NIF is also partnering with another U.S. foundation and with the Joint Distribution Committee to advance infrastructure development for the Negev Bedouin.

The NIF is headquartered in Washington, D.C., and employs people in the United States, Canada, and the U.K., as well as in four Israeli offices – in Jerusalem, Haifa, Beersheba, and Lod.

[Naomi Paiss (2nd ed.)]

NEW JERSEY, one of the original 13 states of the United States, total population 8,429,000, Jewish population 485,000 (2001 est.). Jews have lived throughout the state from the northern border with New York State to the southern border with Delaware and Pennsylvania, on the eastern coast as well as within the suburban New York communities. The largest concentration of Jews is in Bergen County (83,700), Essex County (76,200), Monmouth County (65,000), Middlesex County (45,000), Cherry Hill and southern New Jersey (49,000), Ocean County in the Northeast (29,000), Union County (30,000), and Atlantic and Cape May counties (15,800). While cities such as Newark, Paterson, and Camden were once the scene of thriving Jewish communities, Jews in New Jersey tend to be suburban and to a lesser extent exurban. New Jersey granted religious tolerance to its citizens as early as 1665, and the state constitution of 1844 abolished all religious qualifications for voting and holding public office.

Although the first organized Jewish communities in New Jersey were not established until the middle of the 19th century, Jewish merchants from Philadelphia and New York conducted business in the state as early as the 17th century. Among the first Jewish settlers were Aaron and Jacob Lozada, who owned a grocery and hardware store in Bound Brook as early as 1718. Daniel Nunez appears in a 1722 court record as town clerk and tax collector for Piscataway Township and justice of the peace for *Middlesex County. Perth Amboy, on the *Trenton-Philadelphia road, was a center for Jewish and other merchants from the time it became the capital of East Jersey in 1685. Among the early prominent settlers in the state was David *Naar, who was active at the state constitutional convention in 1844, became mayor of Elizabeth in 1849, and purchased the Trenton *True American* newspaper in 1853. Naar was instrumental in developing the first public school and public library in Trenton.

German Jews settled in *Trenton, the state capital, in the 1840s, the most prominent among them being Simon Kahn-

Jewish communities in New Jersey. Population figures for 2001.

weiler, a merchant and manufacturer. The Mt. Sinai Cemetery Association was incorporated in the town in 1857 and Har Sinai Congregation held its first service in 1858. The first organized Jewish community in New Jersey was in Newark (see *Essex County), where Congregation B'nai Jeshurun was incorporated in 1848. Other early communities with organized congregations included: Paterson (1847), New Brunswick (1861), Jersey City (1864), Bayonne (1878), Elizabeth (1881), *Vineland (1882), *Passaic (1899), Perth Amboy (1890), *Atlantic City (1890), Woodbine (1891), *Camden (1894), and Englewood (1896; see *Bergen County).

Newark once boasted a vibrant community of 80,000 Jews, immigrants from Eastern Europe. They started out destitute and within a generation had achieved a prosperity

that fueled a second mass migration, to the suburbs of Essex County and beyond. Newark's demise as a center of Jewish life, and death – at one time there were nearly 100 cemeteries – has been traced to the riots and looting of 1967. The riots wiped out much of the merchant class when stores were pillaged in a burst of rage. Actually, Jews began to leave earlier, lured by the charms of suburbia, the alternative to cramped urban living. The postwar building boom, generous loans to returning GIs, and the affordable automobile sent Jews out of Newark and to Livingston, Millburn, and the Oranges. Philip Roth immortalized the Weequahic section of Newark where he grew up in several novels, particularly *Portnoy's Complaint* and *The Plot Against America*. Weequahic, on the south side of Newark, was a destination place for recently arrived Jews who lived in cold-water flats and then moved up to the middle class. That neighborhood faded away, along with the Riviera, a fancy hotel where Roth's mother and father spent their wedding night. It is now the shabby Divine Hotel Riviera, named after Father Divine, a religious leader who founded a sect in the early part of the 20th century. By 2004, B'nai Jeshurun, Newark's first synagogue, had become the Hopewell Baptist Church on Muhammad Ali Boulevard.

Demographically (1970), New Jersey was divided into two major areas of settlement – northeastern New Jersey, from Bergen County to Middlesex County, which included nearly 300,000 Jews, and the Camden area, near Philadelphia, which included about 18,000 Jews – as well as the northeastern shore area (Long Branch and Asbury Park), the southeastern shore (Atlantic City, 10,000 Jews), the Trenton area (10,000 Jews), and other smaller communities. The Jewish population of New Jersey, which was dependent upon the economic development in the northeastern sector of the state, both for employment and market outlets in nearby New York City, grew from an estimated 5,600 in 1880, to 25,000 in 1900, 40,000 in 1905, 70,000 in 1907, 258,306 in 1927, and leveled off to 259,970 in 1937. By 1969 there were 387,000 Jews in the state. Whereas a third of the state's Jewish population resided in Newark in 1937, by the late 1960s the overwhelming majority of the Jews in the northeastern area (as was also true of the general population) lived in the suburban areas of Bergen, Essex, *Hudson, Passaic, and *Union Counties.

The economic life of New Jersey during the last half of the 19th century was largely dominated by the German Jewish community, which was small in number and engaged in small businesses and merchandising. By the end of the 1920s the waves of East European immigrants from Russia and Poland had changed the demographic nature of the northeastern part of the state. The silk industry of Paterson – largely in the hands of Polish Jews who had worked in the textile industry in Lodz and Bialystok – and the garment industry in Jersey City and Newark, as well as the woolen and worsted mills of Passaic, drew heavily upon the East European and Slavic population of the area. Sephardic families from the Mediterranean and the Balkans settled in New Brunswick and Atlantic City. Between 1912 and 1924 the Sephardim constituted about

one third of the Jewish community of 2,500 in New Brunswick. Many worked at Johnson & Johnson, U.S. Rubber, and Michelin Tire. Michelin was a French company, and because many of the Sephardim spoke French, it was an attraction as a workplace. The original members of the Atlantic City community came from many areas of the Middle East, and some worked for or ran auction houses or galleries on the Boardwalk. In the 1970s a large group moved from a Syrian enclave in Brooklyn (their ancestors were from Aleppo and Damascus) to Monmouth County, particularly Deal, Bradley Beach, and Elberon near the Atlantic Ocean. Strictly observant, the community flourished through the early years of the 21st century.

The Jewish colonies of Vineland, Carmel, Woodbine, Rosenhayn, and others, which were started in the late 19th century in southern New Jersey, were helped initially by the Alliance Israélite Universelle and the Baron de Hirsch Fund. Some of the communities, such as Carmel and Woodbine, found the soil generally poor and inadequate for agricultural uses, but Vineland, which had an estimated Jewish population of 2,450 in 1970, established a thriving poultry industry. Jews also played a significant role in the tourist industry of the shore areas of Lakewood, Long Branch, Asbury Park, and Atlantic City.

Jewish community life, which until World War II was largely distinguished by local congregations, Hebrew schools, Jewish centers, fraternal groups, and local philanthropic organizations of an Old World character, quickly changed in the 1950s and 1960s with the mass migration to the suburbs. Center city congregations merged and area-wide organizations like the Community Council of Passaic-Clifton, which administers the United Jewish Appeal, and the Passaic-Clifton Board of Rabbis, which supervises kashrut in the community, served a far-flung community. The Jews of Bergen and Essex counties, with more than 75,000 Jews each, were scattered among 100 communities – 70 separate municipalities in Bergen County alone. More than 100 Jewish organizations operated within Bergen County.

In recent years, younger Jews have moved from New York City to more affordable communities in New Jersey like Fort Lee, Jersey City and the gentrified Hoboken. Their influx was accelerated by an improvement in rail and bus service, which made Essex and adjacent counties a relatively easy commute into Manhattan.

Various community newspapers have appeared in the state since the beginning of the 20th century. In 1910 Mordechai Mansky began publication of the *Newarker Wochenblatt*, a Yiddish weekly which appeared until 1914. Among the early Anglo-Jewish newspapers published were the *Jewish Chronicle* of Newark (founded in 1921), *The Jewish Post* of Paterson, and the *Jewish Review* of Jersey City. In 1947 the *Jewish News*, a weekly, was founded, and by 1969 it had a circulation of over 25,000, the largest of any community newspaper in New Jersey.

[Yehuda Ben-Dror / James Marshall (2nd ed.)]

The *Jewish News* has been an influential voice in the New Jersey Jewish community for nearly 60 years. It publishes four editions, reaching more than 50,000 households. With its growth and mergers, the *Jewish News*, or *NJJN*, has become the second largest Jewish newspaper in America, and the largest-circulation weekly newspaper in the state.

[Abraham Halperin (2nd ed.)]

Several New Jersey universities have thriving programs in Judaic Studies, and Richard Stockton University in the Atlantic City area offers a Master's Program in Holocaust teaching.

U.S. Senator Frank R. Lautenberg remains the most prominent Jewish political leader in the state and one of its most important philanthropists. He was born, raised, and established his company in New Jersey (A.B. Data). For many years, he was the junior senator to Bill Bradley and then briefly its senior senator before retiring. Recalled into politics following a political scandal, he ran in 2004 and won again.

A New Jersey native, Michael Chertoff, the Jewish day school-educated son of a rabbi, was President George W. Bush's second secretary of homeland security.

[David Twersky (2nd ed.)]

NEW LEFT, the wave of left-wing radicalism, which attracted many students and other young people in the U.S. and in Western Europe especially in the late 1960s. It had no consistent doctrine and embraced various ideologies, from the Maoist interpretation of Marxism to outright anarchism. The Jewish aspect of the movement was twofold: a disproportionate participation of Jews in the leadership and sometimes also in the ranks, and the issue of Israel and Arab anti-Israel terrorism after the Six-Day War.

In the United States

As mentioned, the New Left counted a disproportionate number of Jews among its leaders and rank-and-file activists. In organizations such as the Students for a Democratic Society (SDS), the Congress of Racial Equality, the Student Non-Violent Coordinating Committee, as well as in the Free Speech and anti-Vietnam war movements, American Jews pressed for a social reform agenda that valued "participatory democracy" and rejected institutionalized power.

By the late 1960s, Jewish New Leftists clashed with their non-Jewish counterparts. The rise of the Black Power movement alienated Jewish civil rights workers while the anti-Cold War ethos of the New Left turned against the Jewish State, deemed an "imperialist aggressor" after its decisive 1967 victory in the Six-Day War. While some Jewish New Leftists remained active in secular political causes, others translated the tactics and strategies of direct-action protests to particularist Jewish causes.

Sociologist C. Wright Mills first coined the phrase in his 1960 "Letter to the New Left." Mills sought to distance himself from the labor-centered leftist political ideologies of the 1930s, which were subsequently labeled the "Old Left." During the era of the Great Depression and Franklin D. Roosevelt's New

Deal, most progressive political activism centered on unionization issues and the rights of workers. Members of the Old Left embraced strategies that sought to realign the United States government's relationship to labor.

At the 1962 SDS conference, Tom Hayden issued the founding document and constitution of the New Left movement, the Port Huron Statement. Named for the town that hosted the SDS meeting, the Port Huron Statement joined Old Left Marxism with contemporary liberal beliefs and the hopeful optimism of a post-war American middle class. It called for "participatory democracy" and pressed for direct action protests against injustices. "We are a people of this generation, bred in at least modest comfort, housed now in universities," Hayden and his SDS colleagues lamented, "looking uncomfortably to the world we inherit."

New Leftists opened a broad-ranged movement intended to challenge organizational authority and effect new systems of power and governance. They joined the emerging civil rights movement, engaging in direct-action protests they hoped would focus the world's attention on the injustices of southern racism.

In 1964, New Leftists claimed victory at the University of California, Berkeley, where the Free Speech Movement galvanized students, mobilized faculty support, and helped launch a national student-centered political movement. With Congressional passage of the Civil Rights Act of 1964 and the Voting Rights Act of 1965, New Leftists turned their attention away from domestic issues and focused on United States foreign policy in Southeast Asia. They spearheaded the anti-Vietnam war protest movement, rejecting the Cold War assumptions of mainstream liberal America in favor of an anti-imperialist critique that blamed the United States for much of the world's economic inequality.

In the late 1960s and early 1970s, the New Left fractured beyond repair. Those on the liberal-leaning side of the movement celebrated the successful conclusion of the civil rights movement and the U.S. withdrawal from Vietnam by stepping away from political activism. From the other extreme, New Left radical groups such as the Weather Underground Organization pressed for more confrontational strategies that included violent resistance, alienating their one-time political allies.

Though neither Tom Hayden nor most of the earliest New Left founders claimed Jewish ancestry, the movement grew to include a disproportionate number of Jews, including Mark Rudd, Jerry Rubin, and Abby Hoffman. Scholars estimate that Jews constituted between one-third and one-half of the New Left activists on college campuses across the country.

At a time when Jews represented just three percent of the American population and ten percent of those attending college, they constituted a majority of the New Left's most active members. Numerous social scientific studies pointed to strong Jewish influences in the nation's leading New Left groups. At the University of California, Berkeley, Jewish students lit can-

dles during a sit-in protest that coincided with the holiday of Hanukkah. The Oscar-nominated documentary film *Berkeley In The '60s* features Jewish student protesters leading Israeli folk dancing during a demonstration inside Sproul Hall, the university's main administration building.

During the civil rights movement, American Jews joined a number of local and national organizations including SNCC and CORE. When northern college students ventured south during the 1964 Mississippi summer, between one-third and one-half were Jewish. Jews remained throughout this period the most liberal white ethnic group in the United States, lending their time, money, and political influence to combating Jim Crow.

With Israel's dramatic victory in the 1967 Six Day War, Jewish progressives faced their greatest challenge. The New Left, splintering along racial and ideological lines, grew critical of the Jewish State, equating its occupation of the West Bank and Gaza Strip to the evil imperialist impulses of the United States in the Cold War. Many in the New Left rejected Zionism, labeling it a chauvinistic, even racist, manifestation of nationalism.

At the 1967 Conference for a New Politics held in Chicago, for example, African American delegates pressed for passage of a resolution that characterized the June 1967 conflict as an "imperialist Zionist war." As Black Power leader Stokely Carmichael said at a 1968 convention of the Organization of American Students, "We have begun to see the evil of Zionism and we will fight to wipe it out wherever it exists, be it in the Ghetto of the United States or in the Middle East."

Jewish New Leftists in Berkeley responded by creating the Committee for a Progressive Middle East in March, 1969. The Committee intended to strike a balance between the strident anti-Zionist influences growing with the New Left and the much less critical Zionist voices of Hillel and other Jewish groups. Radical Jewish Zionists, despite their attempts to locate progressive Zionism within the boundaries of the New Left, failed to re-unite Jewish leftists with an ever more radical, and anti-Zionist, movement.

The rise of Black Power also alienated Jews from the New Left, which had, by the mid-1960s, come to locate black militancy in its movement's vanguard. The rise of ethnic nationalism ended the inter-racial civil rights movement of the Martin Luther King, Jr., years. Jews, once valued as liberal America's most committed social reform advocates, faced a Black Power-inspired critique that labeled them white oppressors.

When Jewish New Leftists sought a strategic alliance with Oakland's Black Panther Party, for example, they were rebuffed. As one Jewish New Leftist explained, "Even if I were a superaltruistic liberal and campaigned among the Jews to support the Panthers' program, I would justifiably be tarred and feathered for giving aid and comfort to enemies of the Jews. I would rather it were not this way, but it was you who disowned us, not we who betrayed you." The end of the civil rights movement at home combined with Jewish concerns over the New Left's critique of Israel when, in 1969, Eldridge

Cleaver told a *New York Times* reporter that "the Black Panther Party in the United States fully supports Arab Guerillas in the Middle East."

By the early 1970s, the New Left lost most of its earlier Jewish influence. Jews, weary of anti-Zionism, occasional antisemitism, and the rise of ethnic and racial consciousness, turned inward, applying many of the New Left's political strategies to Jewish communal concerns.

The Soviet Jewry movement, nascent since its founding in the 1950s, enjoyed rapid growth in the years after 1964 when Jewish civil rights workers turned their attention to the plight of their co-religionists in the Eastern Bloc. In San Francisco, Jewish radicals staged a "pray in," emulating the Free Speech Movement's "sit in," to force that city's Jewish Federation Council to increase its support of Jewish education. Other groups such as Jews for Urban Justice and Breira – which counteracted the slogan in Israeli politics *ein breira* [there is no choice] – emerged as well, focusing attention on progressive political issues within the Jewish community.

In the final analysis, the New Left offered Jewish radicals a powerful legacy of both ethnic and religious identity. What began as a universalist movement for participatory democracy and inter-racial cooperation ended with an impressive campaign for progressive Zionism, stronger Jewish education, and greater focus on Jewish ethnic and religious continuity.

[Marc Dollinger (2nd ed.)]

In Western Europe

The West European New Left of the late 1960s differed in two respects from its U.S. counterpart. It lacked the reservoir of supporters among both the black masses and sections of the white population opposed to the war in Vietnam and it was opposed by the entrenched Socialist and Communist parties. The appeal of the European New Left thus tended to be restricted to amorphous groups on the periphery of society. However, the French students' revolt of May 1968 and similar, though less violent, demonstrations in Germany and throughout Europe, proved that under favorable conditions the New Left could act as an ideological catalyst and set into motion events of considerable consequence. Its total rejection of prevailing standards and social structures was echoed in the inarticulate, though widespread, misgivings about the values and workings of the "affluent society" and the "deadness of its culture." This applies to the well-publicized and opinion-forming sector of the New Left. There were, however, particularly in Great Britain, other, near-clandestine groupings that concentrated on disruptive industrial action, as, for example, Tariq Ali's Trotskyist International Marxist Group or the Socialist Labor League, which aimed at the subversion of the trade union and have been more disruptive than the 1968 student demonstrations at the London School of Economics and other British universities.

Whereas the protagonists of the European New Left were young, its ideologues were elderly scholars, such as the French

writer-philosopher Jean-Paul Sartre and Herbert Marcuse, a German-Jewish émigré and a cofounder of the Frankfurt Institute of Sociology. In his attempt to harmonize the teachings of Freud with those of Marx, Marcuse totally rejected the basic assumptions and ultimate objectives of the prevailing industrial society. Alienation in work and the repression of basic human drives could be overcome, Marcuse maintained, in a truly democratic and participatory society so organized as to serve essential human needs rather than the requirements of the socio-industrial complex. Since the service of the latter has corrupted mankind, the only hope for its future lies in the classes still untouched by the exigencies of the productive processes, which have become an obsession both under capitalism and Communism. These classes are the students of the industrialized nations and the masses of the developing Third World. From these assumptions it follows that New Left thinking on the Arab-Israel confrontation tends to sympathize with the Arabs as representatives of the oppressed Third World, while regarding the Westernized, technology-oriented Israelis with instinctive hostility. The Marxist rationalization of these feelings runs along arguments well known to Old Left Communists, that Israel and Zionism in general are only the “lackey of American imperialism,” etc. Marcuse, however, disassociated himself from this attitude while on a visit to West Berlin shortly after the Six-Day War (1967).

In the Federal Republic of Germany, the New Left's most important protagonist, the SDS (Sozialistischer Deutscher Studentenbund) in 1969 repeatedly disrupted public meetings at which the Israel ambassador was to appear. Later that year New Left terrorists tried to blow up West Berlin's Jewish community hall during a service commemorating the 1938 Nazi pogroms. The revulsion aroused by these activities was criticized by their perpetrators, who, in leaflets, under the headline “Shalom and Napalm,” deplored the guilt feelings of the German Left toward the Jews as “neurotic, backward-looking anti-Fascism” disregarding the “non-justifiability of the state of Israel.” German New Left leaders, such as Ulrike Meinhof of the left-wing weekly *Konkret* and Dieter Kunzelmann of West Berlin's Kommune 1, joined the Palestinian *fedayeen* in Amman and inveighed against “bourgeois Germany's *Judenkomplex*.” Except in the universities, the German New Left remained a negligible factor and failed to gain working-class support. Similar tendencies were at work in Italy, where such New Left organizations as Lotta Continua were militantly “anti-Zionist.”

In France, in May 1968, the New Left students' revolt led to nationwide strikes, a grave government crisis, and contributed to the eventual resignation of President de Gaulle (June 1969). Among the student leaders were many Jews, such as Alain Krivine, Marc Kravetz, Alain Geismar, and Daniel Cohn-Bendit, who, as “Red Danny,” became the figurehead of the uprising. Although their Jewishness did not induce them to follow an independent line on the Arab-Israel conflict, it sufficed to revive antisemitic resentments on either side of the political spectrum. Attacks against the German-Jew Cohn-

Bendit and slogans like “France for the French” were once countered by students chanting “We are all German Jews.” The French New Left succeeded temporarily in involving the workers in its struggle, but the subsequent leftist (old and new) defeat at the polls ended its role as a significant political factor. Characteristically it was the non-Jew Sartre who opposed the New Left anti-Israel slogans. It is absurd to pretend, he maintained, that “Israel is an imperialist state and that the Arabs are socialists, including their feudal states.”

[Ernest Hearst]

In Israel

In Israel, the New Left remained a fringe phenomenon and those groups which actively identified with the New Left received little support, even in student circles. Mazpen (“Compass”), which broke away from the Ha-Olam ha-Zeh group in the early 1960s, was especially vocal after the Six-Day War in calling for withdrawal from territories occupied in the war. It never had more than a handful of members and in 1970 these split into three groups.

The Semol Yisra'eli Ḥadash (“Israel New Left,” known as Si'ah) was founded in 1969. Consisting mainly of students and members of Ha-Shomer ha-Za'ir kibbutzim, it called for a more resolute peace policy on the part of the Israeli government. Si'ah was not crystallized as a political party but stressed its nonidentification with the policies of the Rakaḥ Communist Party (see *Communism: Israel).

°NEWLINSKI, PHILIPP MICHAEL (1841–1899), *Herzl's diplomatic agent in Constantinople and the Balkan countries. The son of a Polish aristocratic family, Newlinski took up journalism. He was appointed to the staff of the Austro-Hungarian embassy in Constantinople where he became familiar with the situation in Turkey and the Balkan States, established contacts with the royal houses, and gained influence with the sultan. In 1880 he resumed his profession as a journalist, first in Paris and from 1887 in Vienna, where he founded his own newspaper, *Correspondance de l'Est*. He also published booklets on political themes. Herzl established contact with Newlinski in 1896 and persuaded him to work for the realization of Zionist aims. At first Newlinski was paid for his efforts, but under Herzl's influence he became a zealous supporter of the movement and served as Herzl's trusted adviser. He accom-

panied Herzl on his first visit to Constantinople and tried to arrange an audience with the sultan, but succeeded only in attaining a decoration for Herzl as a sign of the sultan's esteem. Newlinski did arrange a meeting between Herzl and Crown Prince Ferdinand of Bulgaria, and himself met with the king of Serbia, obtaining the latter's support for the Zionist cause. He tried to gain the sympathy of Bismarck and the Vatican and in general was instrumental in recruiting many prominent personalities in support of Herzl's vision. Illness prevented him from attending the First Zionist Congress, but he was present at the Second Congress. His newspaper devoted a special column to Zionist affairs. In 1899 Herzl sent him to Constantinople, where he was received by the sultan. On his return from this mission Newlinski died.

[Israel Klausner]

NEW LONDON, city in S.E. Connecticut; population (2000) approx. 26,000; Jewish population of New London and its environs, approx. 3,900. The first recorded Jewish presence in New London dates from March 1685 when a Dutch Jew brought the brigantine Prosperous to the port of New London. Due to the official Christian charter of the Connecticut colonial government, which restricted Jewish and Catholic settlement in Connecticut, Jews did not establish a recognized community in Connecticut until 1843. The first Jews to make their home in New London were Joseph Jacob Schwartz, his wife, Esther, and son, David in 1860. The initial Jewish community was entirely German Jews, who came from communities in Central Europe that were not orthodox.

In 1878 the first congregation, Achim Shalom, was organized through the efforts of Joseph Michael, and a burial society was formed and purchased a section of the city's Cedar Grove Cemetery.

The German Jewish community did not grow, and in 1885, Samuel Cott of Lithuania, the first of a wave of refugees from Eastern Europe and Russia arrived in New London and transformed the community. These more orthodox Jews established regular services in 1892 and formed the Sick Benefit Society of Ahavath Chesed in July 1892. They also purchased land for a Jewish cemetery. In 1894 Kalef Soltz and his son Joseph opened the first kosher meat market, which remained open and active under Soltz ownership until 1995.

In 1895 the Ukrainian Jews organized their own congregation but rejoined the Lithuanian-dominated Ahavath Chesed in 1905 when that congregation moved into a new synagogue. In 1911 many of the Ukrainians reestablished their congregation, the Ohave Sholom Sick Benefit Society, and built their own building in 1919.

New London became a vacation destination for Jews from Hartford, CT., and Springfield, MA., and in 1925 a third Orthodox synagogue, Temple Israel was opened near the Neptune Park section of New London to cater to summer residents.

Conservative services began in 1924, with the congregation, Beth El, formally organizing in 1932. Rabbi Samuel Rudermand of Boston was the first rabbi, and services were held at a Community House on Blackhall Street, with *oneg Shabbat* and *kiddush* held at the home of Benjamin Kaplan. The congregation bought land in downtown New London near a major Protestant church but decided to build on Ocean Avenue closer to the beach and to new residences that were being purchased by younger Jewish families. The land in downtown New London was sold to the Greek Orthodox community. In 1951 a permanent home for Beth El was constructed on Ocean Avenue.

In 1960 a Reform congregation, Temple Emanu-El, was organized, meeting first at the Mohican Hotel in New London, then at a church in Groton, before building a permanent home in Waterford, CT.

Just to the north of New London a Jewish farming community was established in the 1890s with the help of the Baron de Hirsch Fund. This community built a synagogue, The New England Hebrew Farmers of the Emanuel Society. The community did not survive, but many of their members moved to New London, two of them, the Gruskins and Schneiders, opening hardware stores that joined a growing collection of Jewish merchants who helped create a vibrant downtown shopping district.

In 1899–1900 the *American Jewish Year Book* records a chapter of Chovevei Zion in New London, and in 1913 Morris Mallove, a jeweler in downtown New London established the Sons of Zion. Mallove became an active Zionist leader in Connecticut and helped raise funds to purchase land in the Jezreel valley of Palestine, near Afulah. He traveled to Israel in 1950 as part of a delegation from Connecticut to show support for the new state of Israel and continued to be active as a leader of Israel Bonds for many years.

The community organized a United Palestine Appeal in 1925, and worked hard after WWII to raise funds and to collect material for the Haganah. As a Navy town (Sub Base New London) there were a lot of surplus supplies that were collected and shipped to Palestine.

New London was one of the first cities, and Connecticut one of the first states, to observe the national Days of Remembrance of the Holocaust, a program supported by the U.S. Holocaust Memorial Council, and organized by New London businessman and Holocaust survivor Sigmund Strochlitz. He succeeded in having all 50 states of the Union officially observe a Holocaust Memorial Day. For two decades New London was represented in Congress by Sam Gejdenson, the child of Holocaust survivors who had settled in nearby Bozarah.

The Jewish community organized a Jewish Federation in 1975, and the Federation began to arrange for social welfare programs for seniors and others in need of help. It became a federally recognized refugee resettlement agency, and resettled over 350 Jews for the former Soviet Union. It was called upon by the state to be the relocation agency for victims of Hurricane Katrina who arrived in southeastern Connecticut.

In 2005 the Jewish community of New London was part of a greater Jewish community in eastern Connecticut. The community supported: a senior center and kosher hot lunch program; a Solomon Schechter school; a bi-weekly paper, the *Jewish Leader*; a full-time Orthodox congregation, Ahavath Chessed; a conservative congregation, Beth El; a summer congregation, Temple Israel; a Reform congregation, Temple Emanu-El (in Waterford); a Chabad House; a Hillel for Connecticut College, the Coast Guard Academy, and Mitchell College; and a Jewish Literacy Project for the public schools, as well as several commemorative and cultural programs that are open to the entire community.

[Jerome E. Fischer (2nd ed.)]

NEWMAN, ALFRED (1901–1970), U.S. film composer, conductor, pianist. Newman was born in New Haven, Conn., to produce dealer Michael Newman and cantor's daughter Luba Koskoff, both Russian immigrants. As a music lover, his mother took an active role in her son's music career. His first public performance as a piano prodigy was at the age of eight. After winning a scholarship to Sigismond Stojowski's Von Ende School of Music in New York, Newman's debut recital came on November 5, 1916. However, financial problems at home forced Newman to become a vaudeville musician, working on *Hitchy-Koo* from 1917 to 1918. The show's music director encouraged Newman to study conducting, and by 1919 he was conducting musical comedies. A recommendation from George Gershwin landed him the position as music director for the 1920 Broadway show *Scandals*. In 1930 Newman went to Hollywood at the invitation of United Artists. After working on the musical *Whoopie!* (1930), he became the studio's music director. During almost nine years with UA, Newman composed music for such films as *The Count of Monte Cristo* (1930), *The Prisoner of Zenda* (1937), and *Wuthering Heights* (1939). In 1940, he signed with Darryl F. Zanuck as general music director of Twentieth Century Fox, where he wrote music for such films as *How Green Was My Valley* (1941), *All About Eve* (1950), and *The Robe* (1953). With Martha Montgomery, whom he married in 1947, he had five children in addition to two from previous marriages. The 1960s found Newman working as a freelancer for projects like *How the West Was Won* (1962), *The Greatest Story Ever Told* (1965), *Flower Drum Song* (1967), and *Camelot* (1967). Newman received 45 Oscar nominations during his career and won nine, and was posthumously nominated for his final score, *Airport* (1970).

[Adam Wills (2nd ed.)]

NEWMAN, ARNOLD (1918–), U.S. photographer. Born in New York, Newman studied art at the University of Miami (1936–38) but did not complete his studies due to financial difficulties, and became a photographer's apprentice in Philadelphia. In 1945 he moved to New York, where he did freelance photojournalism for such publications as *Life*, *Look*, *Newsweek*, *The New Yorker*, *Esquire*, and *Fortune*. He specialized in portraiture, developing a style that did not necessarily flatter the subject but revealed his personality. Implementing an approach known as "environmental portraiture," he used as background associations and symbols connected with the life and work of the person he was photographing. Igor Stravinsky, for example, was shown seated at the extreme left of the picture, the lid of his grand piano serving to emphasize the character of the composer. Brooks Atkinson, the critic, was photographed sitting in an empty theater, where the seats created a pattern of forms and highlights. Prime Minister David Ben-Gurion was shown with the 1948 Declaration of Independence of the State of Israel. Over the decades, Newman photographed most of the major celebrities and public figures of the 20th century. His photographs are exhibited in many of the world's major art museums.

Newman's published works include *One Mind's Eye* (1974), *Arnold Newman: Five Decades* (1986), *Tropical Rainforest* (1990), *Arnold Newman's Americans* (1992), and *Arnold Newman* (with P. Brookman, 2000).

[Peter Pollack / Ruth Beloff (2nd ed.)]

NEWMAN, AUBREY (1927–), British historian. Educated at Glasgow and Oxford Universities, Newman was professor of history at Leicester University. He has published widely in two different fields, the 18th-century British aristocracy and Anglo-Jewish history. His work on *The Stanhopes of Chevening* (1970) is well known, as are his works on Anglo-Jewish history such as *The United Synagogue, 1870–1970* (1970). Newman was twice president of the Jewish Historical Society of England and was a founder of the Stanley Burton Centre for Holocaust Studies at Leicester University.

[William D. Rubinstein (2nd ed.)]

NEWMAN, BARNETT (1905–1970), U.S. painter. Newman was born in New York, to immigrant parents who were interested in music, literature, and art. He began to make drawings as soon as he could hold a pencil. At high school he was introduced to the Metropolitan Museum of Art, after which he regularly studied American painting. Deciding to become a professional artist, Newman persuaded his parents to allow him to enroll in the Art Students League, where he spent considerable time learning to draw from casts. He also studied at the City College of New York. At the Art Students League, he met Adolph *Gottlieb, two years his senior, who became one of his closest friends. When Newman graduated in 1927, his father insisted on his joining the family clothing business, which he virtually took over after the 1929 crash. From 1931 to 1939 Newman worked as a substitute art teacher in high schools.

Although he drew and painted throughout this period, it was not until the late 1940s that he emerged as a major artist, alongside a brilliant group of young Americans, including Pollock, de Kooning, Gorky, *Rothko, Gottlieb, and David Smith, now identified as the Abstract-Expressionists. They reacted to the Ecole de Paris in a moralistic, puritanical manner, against art as luxury. Newman in particular, well-educated and articulate, was the intellectual codifier of the movement. His work became abstract and symbolic, with some influence from Surrealism. Gradually he moved toward a single band or stripe, which allied to titles like "Adam," "The Beginning," "The Word," "The Command" indicates their Jewish mystical origin. He held his first one-man exhibition in January/February 1950, at Betty Parsons Gallery, New York; this and similar early displays of his work met with public hostility. Ten years later, Newman and his fellow Abstract-Expressionists were recognized as the first indigenous modern American school of painting. He once wrote: "Instead of working with the remnants of space, I work with the whole space." It is this concept of "wholeness" which has been exploited by the younger generation of American painters.

[Charles Samuel Spencer]

NEWMAN, ISIDORE (1837–1909), U.S. banker and philanthropist. Newman, who was born in Germany, went to the U.S. in 1851. During the Civil War, he founded a bank in New Orleans. He subsequently bought and ran the Carrollton Railroad, before selling it to become main owner of New Orleans' Maison Blanche department store. Active in New Orleans' Jewish affairs, Newman was a founder of that city's B'nai B'rith lodge and a generous patron of the Jewish Children's Home (renamed for him in 1913).

NEWMAN, JON O. (1932–), U.S. Court of Appeals judge. Born in New York City, Newman graduated magna cum laude from Princeton University in 1953 and earned his law degree from Yale Law School in 1956. He was admitted to the bar in Connecticut and in the District of Columbia in 1957, and he served as senior law clerk to Chief Justice Earl Warren in 1957 and 1958. Newman was partner in the law firm of Ritter, Satter and Newman in Hartford, Connecticut, from 1958 to 1960.

In 1959 Newman served as counsel to the majority in the Connecticut General Assembly, then from 1959 to 1961 he was special counsel to the governor of Connecticut. In 1961 and 1962 Newman served as executive assistant to the U.S. Secretary of Health, Education and Welfare, Abraham Ribicoff. From 1963 to 1964 he was administrative assistant to Ribicoff when he was elected to the U.S. Senate from Connecticut. Following that, he served as a U.S. attorney in Connecticut until 1969, when he entered private practice.

In 1972 Newman was appointed a judge on the U.S. Court of Appeals for the District of Connecticut. He served as circuit judge until 1993, then as chief judge until 1997, when he became a senior judge. He made significant contributions to

copyright law, issues of federal jurisdiction, and the application of international law by U.S. courts. Within the judiciary, Newman served as a member of the U.S. Judicial Conference, as chairman of its Committee on Federal Rules of Appellate Procedure, and as a member of committees on Appellate Judge Education, Codes of Conduct, and Cameras in the Courtroom.

Newman was a member of the International Society for the Reform of Criminal Law and the American Law Institute, serving as an adviser for its Restatement of the Law of Unfair Competition. He was a fellow of the American Bar Foundation and a member of its Action Commission on Tort Liability, and he is a fellow of the Connecticut Bar Foundation. Judge Newman lectured at the University of Connecticut Law School, and he served as chair of the Board of Regents of the University of Hartford. The author of many articles for law reviews, he has also coauthored a high-school textbook, *Politics: The American Way*.

[Dorothy Bauhoff (2nd ed.)]

NEWMAN, LOUIS ISRAEL (1893–1972), U.S. Reform rabbi and author. Newman was born in Providence, R.I., and received his B.A. from Brown University in 1913 and a Ph.D. from Columbia University in 1924. He became an assistant to Rabbi Stephen *Wise at the Free Synagogue in 1917 and was ordained by Wise and Martin *Meyer in 1918, whereupon he assumed the pulpit of the Bronx Free Synagogue (1918–21). In 1921, he became rabbi of Temple Israel in New York City and was appointed to the faculty of the Jewish Institute of Religion (JIR) when it was founded the following year. He also served as president of the Intercollegiate Menorah Association. In 1924, Newman succeeded Meyer at Temple Emanu-El in San Francisco, returning in 1930 to New York City to become rabbi of Temple Rodeph Shalom, where he was to remain until his retirement. He rejoined the JIR faculty and became active in the Zionist Revisionist movement, championing Zionism as primarily a political movement and the necessity of the creation of a Jewish state in Palestine. He was the chairman of the Palestine Mandate Defense Fund and honorary chairman of both the Revisionist Tel Hai Fund and the American Friends of a Jewish Palestine. He also served on the American advisory committee for the *Hebrew University and as a vice president of the *American Jewish Congress.

His books include *Jewish Influence on Christian Reform Movements* (1924) and *Jewish People, Faith and Life* (1957). He also compiled and translated the classic work *The Hasidic Anthology, Tales and Teachings of the Hasidim: The parables, folk-tales, fables, aphorisms, epigrams, sayings, anecdotes, proverbs, and exegetical interpretations of the Hasidic masters and disciples; their lore and wisdom* (1934, 1968, 1972), which has become a standard textbook for courses in Jewish studies.

[Bezalel Gordon (2nd ed.)]

NEWMAN, PAUL (1925–), U.S. actor. Born in Cleveland, Ohio, Newman was the son of an Irish-Catholic mother and a German-Jewish father who owned a successful sporting goods store. After high school he served in the navy until 1946. After graduating from Kenyon College, Newman spent a year at the Yale Drama School and then went to New York, where he attended the Actors Studio.

Newman first appeared on Broadway in *Picnic* (1953) and won a Theater World Award. His first film was *The Silver Chalice* (1954). His performance in the biblical costume epic proved to be such an embarrassment to him that he placed a full-page ad in *Variety*, apologizing for his appearance in the film. His career improved immeasurably after his impressive performance in *Somebody Up There Likes Me* (1956).

Among Newman's many notable films are *The Long, Hot Summer* (1958), *Cat on a Hot Tin Roof* (Oscar nomination for Best Actor, 1958), *Exodus* (1960), *From the Terrace* (1960), *Sweet Bird of Youth* (1962), *The Hustler* (Oscar nomination for Best Actor, 1961), *Hud* (Oscar nomination for Best Actor, 1963), *The Prize* (1963), *Torn Curtain* (1966), *Hombre* (1967), *Cool Hand Luke* (Oscar nomination for Best Actor, 1967), *Rachel, Rachel* (director, 1968), *Winning* (1969), *Butch Cassidy and the Sundance Kid* (1969), *Sometimes a Great Notion* (and director, 1971), *The Effect of Gamma Rays on Man-in-the-Moon Marigolds* (director, 1972), *The Life and Times of Judge Roy Bean* (1972), *The Mackintosh Man* (1973), *The Sting* (1973), *The Towering Inferno* (1974), *The Drowning Pool* (1975), *Fort Apache, the Bronx* (1981), *Absence of Malice* (Oscar nomination for Best Actor, 1981), *The Verdict* (Oscar nomination for Best Actor, 1982), *The Color of Money* (Academy Award for Best Actor, 1986), *The Glass Menagerie* (director, 1987), *The Hudsucker Proxy* (1994), *Nobody's Fool* (Oscar nomination for Best Actor, 1994), *Message in a Bottle* (1999), *Twilight* (1998), *Where the Money Is* (2000), and *Road to Perdition* (Oscar nomination for Best Supporting Actor, 2002).

On the Broadway stage, Newman appeared in *The Desperate Hours* (1955), *Sweet Bird of Youth* (1959), *Baby Want a Kiss* (1964), and *Our Town* (Tony nomination for Best Actor, 2003).

In 1994 Newman was awarded the Jean Hersholt Humanitarian Award, and in 1986 he was given an Honorary Academy Award "in recognition of his many and memorable and compelling screen performances and for his personal integrity and dedication to his craft."

In 1990 he was named by *People* magazine as one of the 50 Most Beautiful People in the World.

In 1982 he founded Newman's Own, a successful line of food products (salad dressing, spaghetti sauce, microwave popcorn, etc.) that has earned in excess of \$150 million, all of which he donates to charity and education.

Newman has been married to actress Joanne Woodward since 1958.

Books written by Newman include *Speed: Indy Car Racing* (with C. Jezierski, 1985), *Newman's Own Cookbook* (with

A.E. Hotchner, 1999), and *Shameless Exploitation in Pursuit of the Common Good* (with A.E. Hotchner, 2003).

[Jonathan Licht / Ruth Beloff (2nd ed.)]

NEWMAN, PAULINE (1889–1986), U.S. labor activist and advocate for workers rights. Newman was the first woman organizer for the International Ladies Garment Workers Union (ILGWU). She worked for that organization most of her adult life, also serving the union as a journalist, educator, and government liaison. Born in Kovno, Lithuania, to a traditional Jewish family, Newman was literate in Hebrew and learned Talmud from her father. Her discomfort at a young age with gender segregation in worship was a source of her commitment to fighting sex discrimination in her adult life. Newman emigrated to the United States in 1901 with her mother and two sisters after her father's sudden death, joining her brother, who had already settled in New York City. Newman, who began to work in a hairbrush factory at age nine, taught herself English. By age 16 she was writing commentaries for the *Jewish Daily Forward* about bad conditions for factory workers. In 1907 she organized a rent strike in lower Manhattan; although unsuccessful in its immediate goals, the strike galvanized the tenant movement.

Newman's activism gained the attention of labor leaders. From 1909 to 1913 she traveled around the United States organizing garment worker strikes in Philadelphia, Cleveland, and Boston. She spoke out for women's suffrage and supported electoral efforts of the Socialist Party. From 1913 to 1917 Newman served the New York State Board of Sanitary Control as a factory inspector and lobbyist for safety legislation for women workers. In 1917 she became an organizer for the Women's Trade Union League (WTUL), an organization that brought together upper-class and working-class women in support of the workers' movement, creating a chapter in Philadelphia. It was there that Newman met Frieda Miller, a research assistant in the Economics Department at Bryn Mawr College. Miller and Newman began a relationship that lasted until Miller's death in 1974. The women shared an apartment in Greenwich Village beginning in 1923 and raised a daughter together. Although lesbian relationships were not generally public at that time, Newman's relationship with Miller was known and accepted by her Jewish socialist union organizer colleagues.

From 1923 to 1983, Newman served as the educational director for the ILGWU's Health Center. She was relied upon as an expert consultant by the New York State Legislature, the U.S. Public Health Service, and the United Nations, and was part of the circle of women who advised Eleanor Roosevelt on worker rights. After World War II, Newman and Miller were sent by the Departments of State and Labor to investigate factory conditions in Germany. When the women's movement was revitalized in the 1970s, Newman was recognized

by feminist historians as an important figure in the struggle for women's rights in the earlier part of the century. She died in 1986 at the home of her daughter, Elisabeth Burger Owen. Her papers are in the Schlesinger Library, Radcliffe College, Cambridge, Massachusetts.

[Rebecca Alpert (2nd ed.)]

NEWMAN, PETER CHARLES (1929–), Canadian journalist, author, biographer. Newman was born into a prosperous Jewish family in Vienna, Austria. In 1940 he and his family escaped Nazi Europe when his father, a wealthy Czech factory owner, obtained a rare Canadian visa by promising to buy a farm through the Canadian Pacific Railway. Their ship to Canada, a converted cruise ship, was twice attacked by German U-boats before landing at Halifax's Pier 21. Newman later wrote about Pier 21, the "place where we became Canadians," describing the depth of feeling and expectation of refugees like himself arriving in the "new world." A refugee child, in 1944 Newman was enrolled at Toronto's elite private Upper Canada College. He went on to study at the University of Toronto and to a career in journalism and as an author of Canadian biography and history. While he continued to see himself as something of an outsider, he came to know many in the Canadian political and financial establishment. Newman interviewed every prime minister of Canada since Louis St. Laurent. He also served as editor-in-chief of one of Canada's most important newspapers, the *Toronto Star*, and editor of Canada's foremost news magazine, *Maclean's*.

A fellow writer described Newman as the "chronicler and conscience of a country often confused by its identity and perhaps the most influential journalist Canada has ever known." He remained widely respected for his intimate understanding of Canadian business and politics and of those who wield power in Canadian society. He wrote numerous articles and more than 20 books, mostly biography and history, including a biography of the prominent Canadian Jewish *Bronfman family, *The Bronfman Dynasty: The Rothschilds of the New World* (1978).

In 1978 Newman was named an Officer of the Order of Canada and in 1990 a Companion of the Order of Canada. His autobiography, *Here Be Dragons: Telling Tales of People, Passion and Power*, was published in 2004.

[Mindy Avrich-Skapinker (2nd ed.)]

NEWMAN, RANDY (1943–), U.S. singer-songwriter. He was born Randall Stuart Newman to internist Irving George Newman and secretary Adele (née Fox) in New Orleans, Louisiana. His parents were assimilated Jews, and his father considered himself an atheist. He was a nephew of *Alfred, Emil, and Lionel Newman and a cousin of David and Thomas Newman,

all film composers. In 1948, Irving Newman moved his family to Los Angeles. Newman began playing the piano at the age of six. He developed an appreciation for the blues when he visited with his mother's Jewish family in New Orleans, but was also affected by the racism and antisemitism of the South. At 16, he worked as a songwriter for Metric Music, and then studied music composition at UCLA. In 1967, he went on to work as a session arranger at Warner Bros. Newman's first two albums were commercial flops, despite positive reviews for his second album, *12 Songs*. Over the years his hits included *Sail Away* (1972), which contained "You Can Leave Your Hat On"; *Little Criminals* (1977), which featured his breakout hit "Short People"; and *Trouble in Paradise* (1983), which launched his commercial anthem, "I Love L.A." Newman then turned to the family business: composing songs for feature films. His first score was for *Ragtime* (1981), followed by such films as *The Natural* (1984), *Awakenings* (1990), and *Toy Story* (1995). In 1995, he released a musical version of *Faust*, which again received critical acclaim but did not meet with any commercial success. Nominated for 14 Academy Awards, Newman won the Oscar for the *Monsters, Inc.* song "If I Didn't Have You" in 2001.

NEWMARK, Los Angeles family. JOSEPH NEWMARK (1799–1881), who was born in Neumark, West Prussia, moved to New York in 1823; he helped to found Congregation B'nai Jeshurun in that city in 1825. He lived in St. Louis from 1840 to 1845, serving there as president of the fledgling congregation. Returning to New York in 1846, Newmark helped to organize yet another congregation before he moved to the village of Los Angeles with his wife and six children in 1854. He was the first spiritual leader of the Jewish community, conducting religious services, weddings, and funerals voluntarily until a professional rabbi was engaged. He founded the Hebrew Benevolent Society in 1855 and was the founding president of Congregation B'nai Brith (today's Wilshire Boulevard Temple) in 1862. During Newmark's lifetime the congregation remained Orthodox out of respect for him.

His nephew HARRIS NEWMARK (1834–1916) went to Los Angeles in 1853 and engaged in a variety of mercantile endeavors, ultimately establishing a wholesale grocery. For more than 60 years he was intimately involved in the civic, economic, and Jewish life of the community. He was a member of the committee that brought the first railroad connection to Los Angeles and was an organizer of the Agriculture Society of the 6th district, the public library, Board of Trade, and Chamber of Commerce. He engaged in real-estate activities and was one of the developers of the town of Newmark, now Montebello.

Toward the end of his life, Newmark wrote his memoirs of early Los Angeles; published as *Sixty Years in Southern California* (1916¹, 1926², 1930³), this work stands as the classic autobiographic history of southern California.

Harris's son MARCO ROSS NEWMARK (1878–1959), like his father a businessman and civic figure, served as president

of the Los Angeles Produce Exchange and as vice president of the National Wholesale Grocers Association. He was ardently interested in the early history of Los Angeles and with his brother Maurice Harris (1859–1929) co-edited his father's memoirs. The two brothers also edited and published *Census of the City and County of Los Angeles, California, for the Year 1850*. His numerous articles on general and Jewish history were gathered in *Jottings in Southern California History* (1955). Newmark was a president of the Historical Society of Southern California. One of the leaders in the Jewish community, he served as president of the Federation of the Jewish Welfare Organizations, the Los Angeles Lodge of B'nai B'rith, and of the Los Angeles District of the Zionist Organization of America.

BIBLIOGRAPHY: H. Newmark, *Sixty Years in Southern California, 1853–1913* (1916); M. Vorspan and L.P. Gartner, *History of the Jews of Los Angeles* (1970).

[Max Vorspan]

NEW MEXICO, a southwestern state of the U.S. with a minimally estimated Jewish population of 11,500 in the year 2001. Albuquerque, the largest city in the state, held about 7,500 in that year. In 2005, other significant Jewish numbers resided in Santa Fe, Las Cruces, Los Alamos, and Taos. Smaller groups dwelt in a number of towns. In 2005 Albuquerque had organized religious communities of Reform, Conservative, Renewal, Chabad, and Chavurah expression. Santa Fe had several Reform, Orthodox, Renewal, and Chabad communities. Las Cruces had a Reform congregation. Smaller communities such as Carlsbad, Los Alamos, Rio Rancho, Roswell, and Taos had less well-defined groups. Several regional groups existed in Gallup, New Mexico, and in Durango and Trinidad, Colorado, that included parts of New Mexico.

New Mexico became a settled part of New Spain with the expedition northward from Mexico of Juan de Onate in 1598. Recent research suggests the presence of crypto-Jews among the early settlers, following a period of active investigation and trials by the Holy Office of the Inquisition in Mexico City against the well-placed Carvajal family in Nuevo Leon in the mid-1590s. The existence of descendants of crypto-Jews re-emerged in the latter decades of the 20th century with open declarations of their past and, for some, their continuing of reawakened adherence to Judaism.

The takeover of the southwest by the United States from the mid-1840s allowed the influx of Americans (Anglos), among them Jewish traders who had accompanied the American military expeditions into the area. The earliest Jewish settlers, mostly from Germanic states, established a pattern of inviting family members or acquaintances to join them after they established themselves as merchants. Many of their enterprises proved highly successful, producing some of the wealthiest Anglo families in the Territory until the coming of the railroads in 1879–1880. They engaged in retail enterprises along with wholesale operations that linked local farmers with supplying army forts and Indian reservations. They

Jewish communities in New Mexico and dates of establishment. Population figures for 2001.

lived mainly in Santa Fe, the capital, Las Vegas, and Las Cruces. Among the best known were the Spiegelbergs and Staabs of Santa Fe, the Ilfelds in Las Vegas, and the Freudenthal-Lesinskys in Las Cruces. In 1880, there were probably some 180 Jews in the whole Territory.

Religious and social institutions developed very slowly. The scarcity of Jewish women and the slow development of family life probably contributed to that condition. It was only after the railroad reached New Mexico that the first formal institutions appeared. B'nai B'rith led the way in Albuquerque in 1883 followed by the first congregation, Congregation Montefiore, in Las Vegas in 1884. Albuquerque's Jews organized Congregation Albert in 1897, today the oldest extant religious community in the state. Both congregations followed the practice of Reform Judaism. In 1920 Congregation B'nai Israel was formed in Albuquerque, which adopted the practice of Conservative Judaism.

Santa Fe suffered a sharp economic decline in the 1880s as a result of the main line of the railroads bypassing the town, and it recovered only in the second decade of the 20th century. Its Jewish population had dwindled as the town's economic condition worsened. No formal Jewish organization existed until the creation of a B'nai B'rith chapter in the mid-1930s.

After the railroad's arrival, the old-style enterprises largely disappeared to be replaced by more modest mercantile operations and some expansion into ranching and mining in the more easterly plains and southwestern mountains where newer towns such as Roswell, Clayton, and Silver City flourished. Where Jews lived in some 16 places in 1880 they lived in no less than 35 towns in 1900. One of the more unusual events arising out of the close contacts of isolated Jews with local populations was the marriage of Solomon Bibó to Juana Valle, a member of the Acoma Indian pueblo. He was appointed its governor in 1888 and served in that post a number of times.

New Mexico's Jews participated heavily in the political life of the territory and state. They served as both appointed and elected officials in local communities and countries across the Territory. Nathan Jaffa of Roswell became secretary of the Territory after 1907. The first mayor of Albuquerque after its incorporation in 1885 was Henry N. Jaffa, who later was a stalwart member of Congregation Albert. In 1890, Mike Mandell was also elected to the post of mayor. In 1930 Arthur Seligman of Santa Fe attained the governorship of the state and died while in office, although his adherence to Judaism has been questioned.

World War II and the half-century since brought great and rapid changes to New Mexico and its Jewish population. Its open spaces, clear weather, and isolation persuaded the federal government to build a number of air force facilities and locate the site for the Manhattan project to create the atomic bomb in Los Alamos. The Cold War that followed World War II witnessed expansion of what had begun during the war years. The half million population of the state in 1940 had more than tripled by the year 2000. Albuquerque grew from 35,000 in 1940 to 200,000 in 1960 to nearly a half-million in 2000.

The Jewish population stood at somewhat over 1,100 in 1940. By the year 2001, it had grown to at least 11,500, outpacing the growth of the general population. Increased numbers also altered the economic makeup of the Jewish community. Where in 1940 merchants had formed an overwhelming proportion of the Jews' economic activity, the changing economy fostered by the federal government's goals brought in a professional population of scientists, engineers, professors, and doctors. The growth of Los Alamos, a new town, exemplifies some of the change. Population growth and the GI Bill offering college education to veterans of the war swelled the numbers in state universities. The University of New Mexico established medical and law schools adding considerable numbers of Jewish professors to the general faculty as well as to the professional school faculties. Growing recognition of New Mexico as a place to retire led to the creation of such towns as Rio Rancho, which drew Jews from the northeast in the 1960s and 1970s. The new population, by the nature of its employment, outdistanced its older mercantile appearance that had existed before World War II.

The problems created by the war, for the Jews, such as a large refugee population in Europe and the establishment of Israel, gave impetus to a rapid expansion of Jewish organization – both secular and religious. Increasing numbers allowed the formation of formal congregations where there had been none before the war and growth in those institutions that did exist. The desire to collect funds for aid and relocation of refugees and support for the new and endangered state of Israel led to the formation of the Albuquerque Jewish Welfare Fund, which translated itself into the Jewish Community Council of Albuquerque and into a broader Jewish Federation of Greater Albuquerque. In 1971 the community created a monthly newspaper, the *New Mexico Jewish Link*, which contains the most

concentrated source of information concerning Jewish activity in the state.

Jews continued to make their mark in the economic and political affairs of the state. More specialized than in the past, large businesses made a new appearance or grew greatly in the post-war economy. Among the most successful were those in furniture sales (American Furniture), home building (Sam Hoffman), and building supplies (Duke City Lumber), especially in the early decades after the war. Jews also moved into new areas of visibility, as they became police chiefs, conductors of the symphony, and leading architects. Well-known artists, such as Judy *Chicago, moved to the state. In the late 1980s a Jew and a Republican, Steve Schiff, was elected to the national House of Representatives where he remained for five terms until his death in 1998.

While New Mexico was heavily Catholic historically, the rapid growth of a diverse religious population led to an atmosphere of toleration and interreligious toleration and cooperation in the post-World War II period. Following Vatican II, in 1965, Jews and Catholics established formal dialogues. Jews became far more active in social causes such as civil rights and the rights of women than was the case before World War II. At the turn of the 20th century that expansive mood still existed.

[Henry J. Tobias (2nd ed.)]

NEW MOON (Heb. רֹשׁ חֹדֶשׁ, *Rosh Hodesh*; “head of the month”), the first day or beginning of the month. The Torah placed its celebration on a par with the observance of the festivals, declaring “Also in the day of your gladness, and in your appointed seasons, and in your new moons, ye shall blow with the trumpets over your burnt-offerings...” (Num. 10:10). A special *Musaf* sacrifice was ordained for the day (Num. 28:11–15). The Bible mentions various practices observed on it, including festive meals (1 Sam. 20:18, and Rashi ad loc.), abstention from business transactions (Amos 8:5), and the practice of visiting the prophet (11 Kings 4:23). When foretelling the chastisements that will come upon the Jewish people, Hosea says that the joys of the New Moon will cease (Hos. 2:13). The redemption is viewed as a time when “from one new moon to another, and from one Sabbath to another, shall all flesh come to worship before Me saith the Lord” (Isa. 66:23).

Originally, the New Moon was not fixed by astronomical calculations but was solemnly proclaimed after witnesses had testified to the reappearance of the crescent of the moon. On the 30th of each month, the members of the High Court assembled in a courtyard in Jerusalem, named Beit Ya'azek, where they waited to receive the testimony of two reliable witnesses; they then sanctified the New Moon. If the moon's

crescent was not seen on the 30th day, the New Moon was automatically celebrated on the 31st day. To inform the population of the beginning of the month, beacons were kindled on the Mount of Olives and thence over the entire land and in parts of the Diaspora. Later, however, the Samaritans began to light misleading beacons, and the High Court dispatched messengers to far-removed communities. Those Jews who lived great distances from Jerusalem always celebrated the 30th day of the month as the New Moon. On those occasions when they were informed of its postponement to the 31st, they also observed this second consecutive day as the New Moon (RH 1:3–2:7). By the middle of the fourth century, the sages had established a permanent *calendar and the public proclamation of the New Moon was discontinued. A relic of the original practice is, however, retained in the synagogue custom of announcing the *New Moon on the Sabbath preceding its celebration.

Work is permitted on the New Moon (Shab. 24a; Hag. 18a; Ar. 10b), although it was customary for women to abstain from it (TJ, Ta'an. 1:6, 64c). They were allowed to observe this additional semi-festival as a reward for not having surrendered their jewelry for the creation of the golden calf (Tos. to RH 23a, s.v. *Mishum*). It later became customary for them to refrain from difficult labor, such as weaving, but to do light work such as sewing (Simon b. Zemah Duran, *Tashbez*, pt. 3no. 244; cf. Rema, OH 417).

The biblical commandment of joy, so basic to festivals, (Deut. 16:14) is not explicitly prescribed in relation to the New Moon. Nevertheless, the rabbis inferred its applicability from the fact that the Bible equated the New Moon with the festivals (Num. 10:10) and from the duty to recite on it "This is the day which the Lord hath made; We will rejoice and be glad in it" (Ps. 118:24; ADPB, 770; Tur, YD, 401). It is therefore forbidden to fast on the New Moon (Ta'an. 2:10), and any funeral service is abbreviated (MK 3:9 and Sh. Ar., OH 420). Conversely, it is meritorious to partake of a festive repast (Sh. Ar., OH 419:1).

The recitation of the half-**Hallel* on the New Moon goes back to talmudic times (Ta'an. 28b). Parts of the *Hallel* were omitted, since the day was not biblically sanctified by the prohibition of labor (Ar. 10b). There is a difference of opinion among the codifiers as to whether the usual blessing that "who has hallowed us by Thy commandments and has commanded us to read the *Hallel*" (ADPB, 756) should be recited on Rosh Hodesh. In most communities, the blessing is recited (Isserles and Sh. Ar., OH 422:2), but Shneur Zalman, the founder of Habad Hasidism, ruled that only the cantor is to say the blessing, while the congregation merely responds "Amen."

On the New Moon the special prayer **Ya'aleh ve-Yavo* is inserted in the *Amidah* and in the Grace after Meals (Shab. 24a), and **Ta'anun* is not recited. The Torah reading designated for the day describes the New Moon sacrifices (Num. 28:1–15; Meg. 21b–22a). *Musaf* is also recited, since an additional sacrifice was brought on this day; it begins with the words: "The beginnings of the months Thou didst assign unto

Thy people for a season of atonement throughout their generations" (ADPB, 778).

The day before the New Moon has achieved importance among kabbalists, who observe it as a day of fast and repentance. It is called **Yom Kippur Katan*, a minor day of atonement.

[Aaron Rothkoff]

Contemporary Observance by Women

Female Rosh Hodesh groups first appeared in New York City in 1972, created and fostered by women seeking a uniquely female communal religious rite with ancient and medieval antecedents. Building on a teaching of the Tosafists (Tos. to RH 23a) which describes Rosh Hodesh as a reward for Israelite women's righteousness and an anticipation of the messianic restoration of the moon to the size of the sun, women gathered together to celebrate the new month, to express gratitude to God for being created female and to acknowledge the accomplishments and wisdom of Jewish women over the generations.

Rosh Hodesh groups have typically met outside of synagogue and community structures and have no standard form. Activities may include Torah study or other learning, singing, festive eating, story telling, performance of rituals expressing aspects of women's experiences, and prayer. As part of a larger Jewish feminist movement that has encouraged study of Jewish women's history, creation of new Midrash about women, and liturgical innovation, Rosh Hodesh groups have produced rituals and prayers subsequently used in other settings. These include the *Kos Miryam* (Cup of Miriam), a ritual vessel of water signifying Miriam's sustaining leadership in Egypt and the wilderness, which has become a part of many American Passover *seders*. As women's Rosh Hodesh groups grew in popularity throughout North America and Israel, they also became part of the regular programming of community centers, women's organizations, college Hillel programs, and synagogues from many religious streams.

Adelman, *Miriam's Well: Rituals for Jewish Women Around the Year* (1996); C. Diamant, *Moonbeams: A Hadassah Rosh Hodesh Guide* (2000).

NEW MOON, ANNOUNCEMENT OF. The Sabbath before the *New Moon, following the reading of the *haftarah*, the reader leads the congregation in announcing and blessing the coming month. This custom was introduced by the *geonim*, and its main purpose was to make a public pronouncement of the exact day(s) on which the New Moon will fall (*Maḥzor Vitry*, ed. by S. Hurwitz (1923²), 173; Abudarham, *Seder Rosh Hodesh*, ed. Jerusalem (1959), 193). It is possible that this practice was based upon the statement of R. *Yose, that he did not pray the *Musaf* service (on the Sabbath before the New Moon) until he knew exactly when the New Moon was to occur (TJ,

Sanh. 5:3, 22d; *Arukh ha-Shulhan*, OH 417:8). The announcement is made after a special prayer for the house of Israel, and in the Ashkenazi rite begins: "He Who wrought miracles for our fathers, and redeemed them from slavery into freedom, may He speedily redeem us and gather our exiles from the four corners of the earth, even all Israel united in fellowship; and let us say, Amen." The exact time of the *molad* (see *Calendar) is then announced and the reader proclaims the day(s) of the week on which the first day of the coming month falls; and the blessing concludes with the prayer that the New Moon be for life, peace, gladness, salvation, and consolation for the house of Israel (Hertz, Prayer, 510). Prior to the proclamation of the New Moon, the Ashkenazi ritual contains an introductory prayer, *Yehi Razon*, which is substantially the private petition recited daily by Rav upon the completion of the *Amidah* (Ber. 16b). In order to adjust this prayer to the occasion, the sentence "to renew unto us this coming month for good and for blessing" was inserted (Hertz, Prayer, 508). This introductory prayer was first recited in the Polish ritual during the first part of the 18th century. It then gradually spread to all Ashkenazi rituals. In some rites the words "*bi-zekhut tefillat Rav*" ("by the merit of the prayer of Rav") appear at the end of the prayer. It has been suggested that this is a mistake for a marginal note which originally read *berakhot, tefillat Rav* ("blessing [see Tractate *Berakhot*] the prayer of Rav") to indicate the source and authorship of the prayer. These words were later erroneously incorporated in the liturgy, *berakhot* being changed to *bi-zekhut*. A further mistake in some rites changed *Rav* to *rabbim* making it end "by the merit of congregational prayer" (E. Munk, *The World of Prayer*, 2:49). Many Sephardi and Oriental rituals contain introductory prayers for the ingathering of the exiles and the well-being of the rabbis (cf. Abudarham, loc. cit.). It became customary to recite the announcement of the New Moon while standing, in remembrance of the original sanctification of the New Moon by the *bet din* in Jerusalem, which was done when standing (*Magen Avraham* to Sh. Ar., OH 417:1). It is also customary for the reader to hold the Torah scroll while reciting this prayer. The Sabbath on which the New Moon is announced is popularly known as *Shabbat Mevarekheim* ("the Sabbath of the Blessing"), or the Sabbath which contains "*Rosh Hodesh bentshn*." A special sermon in honor of the event is preached in some communities. The New Moon of *Tishri is not blessed in advance since it is also Rosh Ha-Shanah and everyone knows when it will occur (*Mishnah Berurah*, *Sha'ar ha-Ziyyun*, 417:1, no. 2).

[H. Elchanan Blumenthal]

NEWMYER, ARTHUR GROVER (1885–1955), U.S. newspaper publisher. Newmyer, born in Washington, became advertising manager of *The Washington Times* (1906), and national advertising manager of the *Munsey* newspapers (1909). Going to New Orleans as business manager of *The New Orleans Item*

(1912), he became its publisher in 1927. After a year with Hearst newspapers, he returned to Washington in 1939 as associate publisher and general manager of *The Times-Herald*.

NEW ORLEANS, U.S. port and commercial center near the mouth of the Mississippi River in the State of *Louisiana. Before Hurricane Katrina struck the city on August 29, 2005, had an estimated population of approximately 1,200,000, of which about 12,000 were Jewish. As of January 2006, the future of the city, and its Jewish population remained uncertain. All but one of its major synagogues had been reopened, but the flood damage had wiped out large residential areas.

New Orleans was founded in 1718 by the French, who, six years later enacted *The Code Noir*, or Black Code, which regulated the slave population, but also contained a clause expelling Jews from the territory. There are no records of transient Jewish traders until the arrival of Isaac Rodrigues Monsanto in 1757. He and his family were Dutch Sephardic Jews who had settled in Curaçao until they braved the Code Noir to settle in New Orleans. The French, in their usual lax fashion, ignored the laws and allowed them to prosper, until the cession of Louisiana to Spain following the French and Indian War. In 1769, the Spanish governor Don Alejandro O'Reilly expelled the Monsanto family because they were Jewish, and confiscated their money and property. They fled to Pensacola, then an English territory, but soon were allowed to return minus their possessions.

After the Louisiana Purchase in 1803, and the dissolution of the *Code Noir*, New Orleans became more attractive to Jewish pioneers.

Judah *Touro, later a wealthy merchant and philanthropist, arrived in 1802, and Ezekiel Salomon, son of the American Revolution patriot Haym *Salomon, was a governor of the United States Bank in New Orleans from 1816 to 1821. Two more Jews who later achieved high position settled in the city in 1828: Judah P. *Benjamin, later Secretary of State of the Confederacy, and his cousin, Henry M. Hyams, later lieutenant governor of Louisiana. In the 1830s Gershom Kursheedt, who became the first communal leader, arrived in New Orleans; his nephew, Edwin Isaac Kursheedt, was a colonel in the Washington Artillery, the historic New Orleans regiment.

Shaarei Chessed, the first synagogue, was chartered in 1828. In 1848 James C. Gutheim of Cincinnati was invited to serve as rabbi. The Portuguese Congregation, Nefutzoth Yehudah, was founded in 1845. Temple Sinai, the first Reform congregation, founded in 1870, recalled Rabbi Gutheim to New Orleans from Temple Emanu-El in New York, to be its first rabbi. The first two congregations merged in 1881 to become what later was called Touro synagogue, which was reformed by 1892. Congregation Gates of Prayer, organized in 1850, was Reform by the turn of the century. The Reform congregations have the largest number of members, followed by Shir Chadash, New Orleans's only Conservative congregation, which resulted from the merger of Tikvat Shalom and Chevra Tehillim. Congregation Beth Israel (1904), and Agu-

das Achim Anshe Sfard (1896) remain the only Orthodox synagogues.

Beth Israel's Synagogue, located near Lake Pontchartrain, was inundated with over ten feet of water during Hurricane Katrina.

The Hebrew Benevolent Association, which funded many Jewish organizations, was founded in 1844. Touro Infirmary, still serving New Orleans, was founded by Judah Touro in 1852. The Jewish Widows and Orphans Home, later the Jewish Orphans and now Jewish Regional Services, was founded in 1856, and the Young Mens' Hebrew Association was founded in 1891. In 1913, 18 separate Jewish welfare and charity organizations merged to form the forerunner of the Jewish Welfare Federation.

Architects of the mid-19th century New Orleans were businessmen like Isidore Newman, Leon Godchaux, and Julius Weis, who led by example in creating and supporting Jewish institutions.

Among some of the prominent Jews of New Orleans in the late 19th and 20th centuries were the attorney Monte M. Lemann; Isaac Delgado, who gave the city its art museum; Samuel *Zemurray, president of the United Fruit Company; Captain Neville Levy, chairman of the Mississippi River Bridge Commission; Percival Stern, benefactor of Tulane and Loyola universities, Newman School, and the Touro Infirmary; Mr. and Mrs. Edgar B. Stern, who supported many institutions and schools as did Malcolm Woldenberg, Steven Goldring, and Sydney J. Besthoff III, whose extensive sculpture collection now graces the New Orleans Museum of Art. Jews have served as presidents and board members of practically all cultural, civic, and social-welfare agencies. Originally, because of its unhealthy climate and poor economy, New Orleans received little of the Eastern European Jewish immigration to America, although a small but vibrant group of Eastern European Jews settled in the Dryades Street neighborhood, with its own kosher markets, Orthodox synagogues, and small shopkeepers. In 2005 that neighborhood had, like the lower east side of New York, completely lost its Jewish flavor, and, like most of America, New Orleans Jews have bonded into a single community, forgetting their origins. In the aftermath of Hurricane Katrina they faced a challenge which exceeded even the Civil War and Reconstruction difficulties, as they sought to return to their city, their jobs, their flooded homes, and their synagogues.

NEWPORT, city in Rhode Island located at the southern tip of Aquidneck Island in Narragansett Bay. Newport was founded in 1639 by religious dissenters from Massachusetts Bay Colony. Roger Williams, also an outcast from the Puri-

tans' dominion, had founded Providence, at the head of Narragansett Bay, three years earlier. Newport became the first of five rotating capitals in a state still known officially as Rhode Island and Providence Plantations.

In 1658, approximately 15 Jews from Barbados settled in Newport. The Jewish cemetery, consecrated in 1677, was the subject of Henry Wadsworth Longfellow's poem published in 1854. Jews Street was identified in John Mumford's map drawn in 1712.

Newport's Jewish community was reestablished during the 1740s, when settlers arrived primarily from New York City. Several Jewish merchants flourished through trade with American ports, the West Indies, England, and West Africa. By far the most successful was Aaron Lopez, who emigrated from Portugal in 1752. He gained renown as a merchant, shipper, and manufacturer.

Congregation Yeshuat Yisrael (Salvation of Israel) was established in 1756, and land for a synagogue was purchased three years later. Peter Harrison, a Newporter and one of the colonies' most distinguished architects, designed an exquisite two-story brick building with a central *bimah* based on prototypes in Amsterdam and London. It accommodated approximately 30 Jewish households or 200 people, less than two percent of the town's population. Ezra Stiles, the Congregational minister who became president of Yale College, documented the synagogue's dedication in 1763 as well as other aspects of Jewish communal life. In 1773, Hayyim Caregal, a rabbi from Hebron in the Holy Land, preached in Newport. When it appeared in the *Newport Mercury*, his was the first Jewish sermon published in North America.

During the Revolution, Newport's Jews were loyalists and patriots. Most fled the lengthy British occupation.

In 1781, President George Washington visited the synagogue when it housed Rhode Island's General Assembly and Supreme Court. When he returned to Newport on August 17, 1790, Washington received a congratulatory letter from the Hebrew congregation, written by *hazzan* Moses Seixas, a fellow Mason. Washington's reply, perhaps America's most important expression of religious liberty, proclaimed "For happily, the government of the United States, which gives to bigotry no sanction, to persecution no assistance, requires only that they who live under its protection should discern themselves as good citizens, in giving it on all occasions their effectual support." The statement reflected the language of the invitation to Washington, but it help set the tone for religious liberty in the United States.

As Newport's economy continued to decline, however, Jews sought opportunities elsewhere. In 1822, Moses Lopez, the last Jew, departed for New York City.

The first reference to Touro synagogue occurred in 1824, when the nearby street, originally known as Griffin, was renamed Touro. Two years earlier, Abraham Touro provided funds to maintain the synagogue in memory of his father, Isaac, who had been the congregation's first *hazzan*. In 1854, the magnanimous bequest by Abraham's unmarried brother

Judah, of New Orleans, provided for the perpetual care of the synagogue and cemetery. Keith Stokes, a business leader and historian currently living in Newport, is a sixth-generation descendant of Judah Touro and his free African-American mistress, Ellen Wilson.

Although the synagogue reopened for summer visitors, it was not reconsecrated until 1883, when Rabbi Abraham Mendes arrived. Its ownership, retained by the founding families, was transferred to New York City's Shearith Israel in 1894. Though there were fewer than 100 Jewish families in Newport, two groups vied for Touro's use. An agreement reached in 1903 permitted Shearith Israel to lease the building to an Orthodox congregation of its choice and participate in the selection of a rabbi. The congregation's longest-serving clergy, beginning in the 1940s, were Cantor Ely Katz and Rabbi Theodore Lewis.

A second Orthodox congregation, Ahavas Achim, which existed from 1915 until 1981, participated in a United Hebrew School. In 1919 a YMHA was established, and in 1926 a historic house was moved to a site opposite Touro for use as a community center.

In 1946, largely through the efforts of Arthur Sulzberger, publisher of the *New York Times*, the synagogue was one of the first buildings designated a National Historic Site by the Interior Department. Though it was America's oldest surviving synagogue, Touro's recognition derived from the building's association with George Washington and its design by Peter Harrison. In 1982, Washington's 250th birthday was commemorated with a postage stamp showing Touro and quoting the "to bigotry no sanction" passage from his letter.

Touro's Society of Friends, which restored and helps maintain the building, has emphasized the synagogue's importance as a symbol of religious liberty. The reading of the Seixas and Washington letters has become an annual tradition. Numerous dignitaries have participated, including President Dwight D. Eisenhower and Justice Ruth Bader Ginsburg. Patriots' Park was built adjacent to the synagogue, and a visitors' center is planned.

Newport has been home to two of America's most successful summer music series. The Jazz Festival began in 1954, and the Folk Festival followed five years later. Both have featured numerous Jewish performers, and both have been produced by George Wein, a Jewish impresario.

In 2002, the Jewish population of Newport County was about 1,000. Rabbi Marc Jagolinzer was the long-time leader of Temple Shalom, a Conservative congregation in Middletown, which built its synagogue in 1978.

THE HEBREW PRESS IN NORTH AMERICA

LIST OF HEBREW NEWSPAPERS AND PERIODICALS

The term "Hebrew press" has undergone a basic metamorphosis since its early days. Originally, the term covered periodicals of varying frequency (yearbooks, monthlies, and irregular publications), the majority of which were literary and scientific in character, while only a small percentage were devoted to current affairs. News sections were almost nonexistent, and indeed would have been impractical in periodicals appearing infrequently. The first Hebrew newspaper worthy of the name, according to the concept of the time, began to appear in the mid-19th century, giving news of the Jewish and general world and containing literary, scientific, and social columns. Articles on public and current affairs, which were rare in the Hebrew periodicals of the previous 100 years, became increasingly popular in some journals. Thus a differentiation was created between the newspaper and other types of periodicals. The periodicals, too, began to modify their form and gradually devoted more attention to current affairs.

All types of periodicals, therefore, must be included within the term "Hebrew press" in its first century (1750–1856). Following this period, a gradual differentiation set in between scholarly and literary periodicals and purely news media. This development was particularly noticeable in Erez Israel where Hebrew became a living language, and periodicals began to appear, covering every field – literature, art, science, technology – while the daily newspaper grew to resemble its counterpart in European journalism.

THE SPREAD OF THE HEBREW PRESS

The Hebrew press began in Western Europe, mainly in Germany, in the second half of the 18th century. It gradually spread to Austria, and Galicia, and, a century after its initiation, appeared in czarist Russia, where there were more Hebrew readers. As the press began to flourish there, it declined in Western Europe. About the same time, a Hebrew press of an essentially Eastern European nature began to appear in Erez Israel. The waves of Jewish emigration to the United States in the second half of the 19th century brought about the establishment of

a Hebrew press in that country too (from the 1870s). Smaller centers of the Hebrew press were also established in England, South Africa, and, in later periods, in Latin America. Two factors determined the expansion or decline of the Hebrew press in the Diaspora: the degree of attachment to Hebrew of the Jews of a particular country, and the extent to which they acquired its native tongue. By the late 1930s the Hebrew press had almost disappeared in Eastern Europe. In Soviet Russia its decline had been deliberately encouraged, while in Poland it was brought about by competition from Polish and Yiddish. By contrast, the Hebrew press flourished in Erez Israel: from modest beginnings in Jerusalem in 1863, it gradually and confidently expanded, becoming the focal point of the Hebrew press after World War I, with its center in Tel Aviv-Jaffa. Since World War II, the Hebrew press in Eastern Europe has ceased to exist; outside Israel, several periodicals are still published with varying frequency, mainly in the United States. A real Hebrew press, encompassing daily papers and periodicals covering a range of subjects, now exists only in Israel.

While, in its early years, the Hebrew press constituted only a small percentage of the total Jewish press in all languages, by the outbreak of World War II it held fourth place in the Jewish press (after English, German, and Yiddish). Today, as a result of the expansion of the Hebrew press in Israel, it holds second place (after English), and, quantitatively, accounts for more than one-quarter of the total Jewish press in all languages.

MAIN STAGES OF DEVELOPMENT

In Europe through the Early 1880s

One of the earliest consequences of the Haskalah movement in Germany was the creation of Hebrew periodicals, such as those published in Germany and devoted to literature, philosophy, and social problems. This initial stage, which lasted almost a century (approximately 1750–1856), was inaugurated by the periodical **Kohélet Musar*, edited by Moses **Mendelssohn*. The differing intervals at which the variety of periodicals at this time were published was a decisive factor in determining the contents of those periodicals: much space was given over to belles lettres, translations, world literature, and various aspects of Judaic studies while very little was devoted to news matters. In this early period Hebrew began to adapt itself to modern expression, gradually discarding its cloak of sanctity and adopting neologisms and new literary forms. During the second stage (1856–86), current affairs were gradually introduced, at first by simply citing belatedly news items from other papers. Gradually, however, the traditions of the modern press developed, ranging from reports by regular correspondents to lead articles and political commentary, simultaneously continuing the traditions of the earlier Hebrew periodicals, by devoting considerable space to all subjects. The periodical press also continued to develop as before, improving its standards and its form. The interrelation between these two areas of the press is reflected in the fact that the same writers contributed to both. The Russian censorship constituted a great hindrance to the development of journal-

ism on public affairs, and editors consequently became adept at disguising statements in phraseology whose hidden meaning was clear to their own readers. Hebrew papers appearing outside Russia were also compelled to restrain their political commentaries, since most of their readers lived in Russia, where the papers might be banned. This accounts for the remarkable panegyrics on the czarist regime, which should not be taken at face value.

IDEOLOGY OF THE EARLY PRESS. Up to the early 1880s, the main trend was the dissemination of the Haskalah and its program for attaining equal rights. This ideology resulted in several by-products: the appeal for the creation of a productive Jewish economy by means of agricultural settlement in Russia or by engaging in crafts, and for the improvement of Jewish education by replacing the old-fashioned methods of the *heder* with the teaching of secular subjects and vocational skills. After the anti-Jewish pogroms in southern Russia in the early 1880s, however, Haskalah ideology changed, and almost all the newspapers and periodicals now supported the **Hibbat Zion* movement. Only **Ha-Maggid* had anticipated this new ideology by 20 years. Attitudes to the movement ranged from hostility (*Ivri Anokhi*) or hesitant support (**Ha-Zefirah*) to complete identification (*Ha-Maggid* and later **Ha-Meliz*).

Throughout this period, the press gradually progressed technically, nurturing several generations of writers of all types. Indeed, there is hardly a Hebrew writer who did not take his first literary steps in one of the newspapers. Some outstanding writers, such as J.L. **Gordon*, also served as editors, acting as patrons to many others.

Two events, however, disturbed the peace of the press. The first, in the late 1860s and early 1870s, was the controversy regarding religious reform, sparked by its two chief advocates, Moses Leib **Lilienblum* and J.L. *Gordon*, mainly in *Ha-Meliz*, and taken up by the extreme and moderate Orthodox elements in **Ha-Levanon*. The second event, less significant at the time as regards public reaction and support, but important historically, was the appearance of the socialist organs, *Ha-Emet* and **Asefat Hakhshanim*, edited by A.S. **Liebermann*, Morris **Vinchovsky*, and others. These journals attracted a considerable number of writers and contributors and served as a platform for those discontented with the czarist regime on the one hand, and with the traditional Jewish way of life on the other.

In Europe until World War I

The third stage in the Hebrew press was inaugurated by the establishment of the first Hebrew daily **Ha-Yom* edited by J.L. **Kantor* (St. Petersburg) – a revolutionary event, the novelty of which is now hard to appreciate. For the first time the Hebrew press and the Hebrew language were faced with the challenge of dealing, journalistically and linguistically, with day-to-day events. *Ha-Yom* introduced many innovations and experiments. Despite the gradual disappearance of florid and involved phraseology (*melizah*) in all types of literature, it was still used in Hebrew journalistic writing. The new paper gradually eradicated its last traces. To meet the compe-

tion, *Ha-Zefirah* and *Ha-Meliz* also became dailies in the same year (1886). All at once, a tradition of modern Hebrew journalism developed. Although almost all the Hebrew papers now shared the ideology of *Hibbat Zion*, they varied both in their local color – *Ha-Zefirah* being Polish and *Ha-Meliz* Russian – and in their particular stands within the *Hibbat Zion* movement.

The Hebrew press of Eastern Europe had now reached a peak which it was to sustain until World War I. A modern press in the true sense of the word, it attracted the best Hebrew writers of almost three generations, and Hebrew literature, in turn, flourished, as it spread to the many and varied literary publications of the day. Both **Aḥad Ha-Am* and **Bialik*, key figures of Hebrew literature, were nurtured by this press. Though the first Russian Revolution (1905) temporarily halted this development, it resumed shortly afterward, ending only with World War I. There was a brief but glorious and unparalleled era in the history of the Hebrew press and periodicals in Russia after the fall of the czarist regime in 1917. However, the Soviet regime soon declared the Hebrew language counterrevolutionary and suppressed all Hebrew publication.

In Europe between the Wars

The former heights were never regained in Poland between the wars. In the 1930s, after a long struggle for survival, the only daily Hebrew paper ceased publication. It was replaced by the weekly *Ba-Derekh*, and there were years when only the pioneer youth movements maintained Hebrew newspapers in Poland. Some Hebrew journals survived within the framework of the underground movements in Nazi-occupied Poland, but ceased to exist after World War II. Through the efforts of determined individuals, the Hebrew press in other countries, such as England, survived, and appeared regularly for years (cf. Suwalski's *Ha-Yehudi*). But most of the papers and journals published outside Central Europe were short-lived, since their sole support came from emigrants from the East. As these readers acquired the language of their new country, circulation dropped, and the periodicals ceased publication. Apart from Erez Israel, only in North America is there an uninterrupted tradition of Hebrew periodicals.

The one characteristic common to most Hebrew papers and periodicals over the years and throughout the world (with the exception of the extreme Orthodox and left-wing) is their strong attachment to *Hibbat Zion*, Zionism, and the State of Israel. There is an organic fusing of language and Israel content, overlapping their Jewish content. In this they are unique.

THE DURATION OF THE HEBREW PERIODICALS

Only a very small percentage of Hebrew newspapers and periodicals enjoyed longevity. The record until 1970 was held by the weekly **Ha-Po'el ha-Za'ir* (63 years), the dailies **Haaretz* (57) and **Davar* (45) – all in Israel – and the weekly *Hadoar* (49) in the United States. In earlier periods the record was held by *Ha-Maggid* (47 years), *Ha-Zefirah* (almost 50, with short intervals), and *Ha-Meliz* (43). The latter two began as weeklies

and later became dailies. The periodical **Ha-Shilo'ah* appeared in 46 volumes. Longevity is not always, however, an indication of the importance of the paper. Some short-lived papers, like the daily **Ha-Zofeh* at the turn of the 20th century, were of vital importance. There were also papers which appeared for decades under different names so as to evade censorship or because of licensing problems as was the case with **Ben-Yehuda's* papers in Jerusalem.

THE LEADING PERIODICALS AND NEWSPAPERS IN EUROPE

The First Period: Yearbooks and Periodicals

Kohelet Musar, published by Mendelssohn (about 1750), was the first attempt at translating traditional ethical concepts into a modern idiom.

IN GERMANY. Although the initial experiment was short-lived, it was revived in 1783 by a group of Mendelssohn's disciples who published *Ha-Me'assef*, the first modern Hebrew periodical. Appearing sporadically in several German towns between 1783 and 1811, it had considerable influence on the general evolvement of Hebrew Haskalah literature and, in particular, on that of the Hebrew press, both in style (as "purely" biblical as possible) and content (e.g., original and translated belles lettres, and studies of various aspects of Judaism). *Ha-Me'assef* dealt extensively with current affairs, but its main goal – the attainment of the Haskalah – was achieved at a more rapid rate than the editors and participants had ever anticipated. German Jewry, acculturated to its society, no longer needed a Hebrew journal. As a result, from the first third of the 19th century, the focal point of the Hebrew Haskalah began to shift to Austria, relying mainly upon readers in Galicia, Moravia, and Italy.

IN AUSTRO-HUNGARY. The new periodical press in Austro-Hungary, which both culturally (i.e., Jewish culture) and geographically lay on the border between West and East, was inaugurated by the yearbooks **Bikkurei ha-Ittim*, **Kerem Hemed*, *Kokhevei Yizhak*, *Ozar Nehmad*, *Bikkurim* – which appeared for over 40 years (1821–65), mainly in Vienna, but also in Prague and Berlin. Varied in content, they attracted the best of the Haskalah writers. At the same time, periodicals and literary collections began to appear at regular intervals in various parts of Galicia, serving as a nursery for modern Hebrew literature by creating the science of Judaic studies and by adapting the Hebrew language to modern belles lettres. The pioneers of Hebrew periodicals in Germany and Austria were closely attached to the German language, as is evidenced by German sections (printed in Hebrew characters) in the first volumes of *Bikkurei ha-Ittim*, and by the many translations from that language. In contrast to the above-mentioned periodicals, which allotted little or no space to current events, *Zion*, edited by I.M. Jost and M. Creizenach, prevailed on East European writers to participate in discussions on contemporary affairs.

An examination of the language and style of these periodicals reveals how the Hebrew language developed in liveli-

ness and suppleness from one issue to the next. Recent studies (particularly those by Dov *Sadan) of the florid *melizah* style of the early *maskilim* have demonstrated that this style did not, as was formerly believed, contain biblical elements exclusively, but rather drew from the linguistic and cultural traditions of centuries of Hebrew language and literature. As a result of the intimate acquaintance which the writers of this period had with the Bible and its study over the generations, their biblical commentaries are full of valuable insights. Since, in general, the periodical press was imbued with the spirit of the moderate Haskalah, elements from all movements could contribute to it, and it managed to remain as neutral as possible, apart from sharp polemics against extreme Reform Judaism as practiced by *Geiger. This tradition of neutrality was maintained in the Hebrew press outside Erez Israel as a rule, although there were periodicals that expressed more extreme views, e.g., the extreme Orthodox *Shomer Ziyon ha-Ne'eman*, and the radical **He-Ḥalutz*.

The Second Period: Early Newspapers

These periodicals constituted a 100-year-long preparation for a regular journal with the form and content of a newspaper. Such a newspaper, *Ha-Maggid*, which appeared in 1856 in Lyck, eastern Prussia, on the Russian border, thus inaugurating the second period of the Hebrew press, was meant for Russian Jewry. The only periodical which Russian Jewry had hitherto produced, *Pirkei Zafon*, enjoyed only two issues (1841 and 1844) before it ceased publication. With *Ha-Maggid* A.L. Silberman, the editor, created not only a new organ for Russian Jewry but also the first Hebrew newspaper that devoted considerable space to reportage and editorial comment on the news. As such, the new paper required different tools from those employed in earlier periodicals. It also introduced other innovations, e.g., a section containing translations of news items from the general press which are to be found in almost every issue; other periodicals followed suit. The Hebrew language gradually evolved into a living language, even though it retained a considerable amount of *melizah*. *Ha-Maggid* was also the pioneer in two other aspects: in the early 1860s it began to advocate *Hibbat Zion* and the settlement of Erez Israel, while all the other newspapers remained attached to the Haskalah ideology till the early 1880s; for many years it was the only paper of general Jewish character that reflected events in all the Jewish communities, including the United States and Australia. Immediately after its establishment, four other newspapers sprang up (1860–62), which dealt primarily with events in their own geographical area: *Ha-Meliz* (Odessa-St. Petersburg) for Russian Jewry; **Ha-Karmel* (Vilna) for Lithuanian Jewry; *Ha-Mevasser* (Lvov) for the Jews of Galicia; and *Ha-Zefirah* (Warsaw and, for a short period, Berlin) for Polish Jews. (Originally devoted to science, *Ha-Zefirah*'s later concern, under the editorship of *Sokolow, was primarily news.) All these newspapers covered current events, but likewise continued their traditions by devoting special columns to belles lettres, science, and criticism, so that even today it is difficult to envisage a Hebrew paper with-

out such columns. These papers still constitute a rich source for Jewish scholarship; only the lack of indexes prevents their being utilized properly. The papers also stimulated additional literary forms, for which there had not been room in periodicals, and developed reportage from provincial towns and, later, from overseas. Although this reportage may contain trivia, it also constitutes an extremely rich source of information on Jewish communities throughout the world.

LINGUISTIC AND IDEOLOGICAL DEVELOPMENT. A superficial comparison of a newspaper of 1856 with one of 1886 is sufficient proof of the radical development of the Hebrew press in this second stage. A new language had been created which differed greatly from that of *Ha-Me'assef* or even *Ha-Maggid* in their first years. There was also a change in the ideological content. Reality, and particularly the pogroms in southern Russia in the early 1880s, made Jews aware of the failure of the Haskalah's proposed solutions to the Jewish problem. There was, therefore, a gradual transition from the old ideals of the Haskalah and the Emancipation to the new ones of settlement of Erez Israel, Zionism and, finally, political Zionism.

The distinction between the periodical press and newspapers was still obscure, since current affairs began to play a more important role in the former. Such was the case with *Smolenskin's monthly **Ha-Shahar*, in which an attempt was made, particularly by the editor himself, to clarify Jewish problems, both past and future, and which first arrived at the ideology of "the people of the spirit." It then took up nationalism and Zionism, strongly criticizing the Haskalah and its methods. The same is true of its rival, *Ha-Boker Or*, edited by A.B. *Gottlober, which defended Mendelssohn's school of thought. The articles on Judaica in these publications became more popular and readable as a result of the growing flexibility of the language, while their scientific basis was not impaired.

Hebrew Dailies

In the meantime, the editors were obliged to enlarge the format of their papers and to produce them at greater frequency than the original weeklies. In 1886, exactly 30 years after the publication of the first issue of *Ha-Maggid*, J.L. Kantor published *Ha-Yom*, the first Hebrew daily. To meet the competition, *Ha-Meliz* and *Ha-Zefirah* also began to be published as dailies. The letters of J.L. Gordon (then editor of *Ha-Meliz*), who frowned upon this new development, show the difficulties that faced Hebrew editors. Conditions, however, forced them to accept the new burden. In the daily press it was essential to eliminate florid Hebrew, since the need for rapid translations of news dispatches left no time for complicated phraseology.

From 1886, the feuilleton which had existed before the development of the daily press became an integral part of the dailies, particularly of *Ha-Yom*, to which D. Frischmann and J.L. *Katzenelson (known as Buki ben Yogli) contributed. *Ha-Meliz* and *Ha-Zefirah* continued, of necessity, to appear as dailies even after *Ha-Yom* ceased publication (1888). The oldest of the papers, *Ha-Maggid*, remained a weekly, until discontinued in 1903.

In the mid-1880s, Sokolow – a man whose grasp of the spirit of the times was almost unique in his generation of Hebrew journalism – radically changed the periodical press. In 1884 he began to publish *Ha-Asif*, weighty annuals encompassing almost all the literary forms. Enjoying unprecedented circulation, their success spurred others to issue similar annuals (e.g., *Keneset Yisrael* by S.P. *Rabinowitz, 1886). It was a new development for Hebrew periodicals to reach thousands of readers, all of them subscribers. The publication of *Ha-Asif* is therefore frequently regarded as the first literary event which created a mass Hebrew readership. Innumerable periodicals, almost all of them short-lived, appeared in the last third of the 19th century in various places in Eastern Europe, and, occasionally in the West (mainly on Judaica or as appendixes to the German Jewish press). An important contribution to the rapid adaptation of Hebrew to everyday life was made by the numerous translations in the press, periodicals, and separate books, some of which were to become classics (particularly in the field of poetry). In the early 1880s even the Orthodox *Ha-Levanon* ceased its ideological polemics with the other papers and, because of its editor, J. *Brill, joined in preaching the settlement of Erez Israel and Hibbat Zion. Simultaneously, an Orthodox anti-Zionist press arose, e.g., *Ha-Peles*, *Ha-Modi'a*, *Ha-Kol*, which copied the modern style of the pro-Zionist press. In the 1870s the first two Hebrew socialist journals appeared, *Ha-Emet*, and *Asefat Hakhmamim*, edited by A.S. Liebermann, M. Vinchevsky, and others. These journals, which were short-lived because of the attitude of the East and West European authorities, created a new Hebrew by introducing terms taken from socialism and communism, and by translations.

At the beginning of the present century, the two veteran papers, *Ha-Maggid* and *Ha-Meliz*, closed down. As if to symbolize the rise of a new and younger generation in literature and in the press, two new dailies were established in Poland and Russia: *Ha-Zofeh*, in Warsaw, and *Ha-Zeman*, first in St. Petersburg, later in Vilna. A new generation of writers and journalists was nurtured by these papers. *Ha-Zofeh* was the first paper to hold a literary competition (1903). In that competition Y.D. *Berkowitz was discovered. At the same time, *Ha-Zefirah* reappeared after a lengthy interval. In 1904 the weekly **Ha-Mizpeh*, edited by S.M. Lazar, began to appear in Cracow, in place of *Ha-Maggid*, and encouraged many new writers (including S.Y. *Agnon, A. *Hameiri, U.Z. *Greenberg, and Z. *Diesendruck). In none of these papers was there a clear distinction between the literary and journalistic realms. The best of the Hebrew writers of the period contributed to them (e.g., *Fichmann, *Bershadsky, *Shneour, Berkowitz).

The End of the Hebrew Press in Eastern Europe and Russia

The most outstanding of these literary periodicals was the monthly, *Ha-Shilo'ah*, edited by Aḥad Ha-Am and, later, by J. Klausner; others included *Ha-Dor*, edited by Frischmann, *Ha-Zeman*, the annuals *Lu'ah Aḥi'asaf* and Sokolow's *Sefer ha-Shanah*. **Ha-Olam*, the official Hebrew organ of the Zionist Organization, for decades provided opportunities for Hebrew

writers. It would be hard to envisage the development of the young Hebrew literature that flourished at this time – starting with Bialik – without the periodicals of the early 20th century. Although this vital period came to an abrupt end with the outbreak of World War I, its influence could be felt almost until the 1960s. The Hebrew press in Eastern Europe never recovered its former glory after World War I but gradually flickered out. In Russia, after the downfall of czarism, Hebrew literary activity flourished briefly with the appearance of the literary journals **Ha-Tekufah*, *Massu'ot*, *He-Avar*, *Ha-Mishpat ha-Ivri*, *Erez*, and others, and the establishment of literary projects of formerly unknown scope (e.g., Stybel publishing house). The weekly *Ha-Am*, which later became a daily, also began to appear in this period. Soviet Russia's silencing of the Hebrew language, however, put an end to all this, a circumstance which has persisted, apart from certain isolated periodicals published in Russia, or published abroad by Russian Hebrew writers. The departure from Russia of the great majority of Hebrew writers, beginning with Bialik, marks the end of Hebrew literature and journalism in that country, and the gradual shift of its focal point to Palestine, via Berlin.

The papers and literary journals set up in Western Europe from the turn of the century till the 1930s and 1940s were a natural continuation of the Eastern European tradition. With one notable exception – *Ha-Yehudi*, edited in London from 1897 to 1913 by I. Suwalski – they were all short-lived. Another London-based journal, whose effect was in inverse ratio to its duration, was J.H. *Brenner's **Ha-Me'orer* (1906–07).

While the extreme Orthodox circles, having adopted methods of the secular press, attacked Zionism, the press of the Orthodox *Mizrachi Zionist Organization, which opposed the secular movement, fought anti-Zionist Orthodox elements. It established the monthly *Ha-Mizrah* (1903) as well as the weeklies *Ha-Ivri* (first in Berlin and later in New York) and *Ha-Mizrahi* in Poland after World War I.

Toward the end of the 19th century the Hebrew press in Eastern Europe began to produce more specialized journals. An educational press which lasted for decades was developed in Russia and Poland; magazines for children and youth began to appear, some of them of extremely high standard, such as *Olam Katan*, edited by S.L. *Gordon. I.H. Tawio even put out a daily for children (*He-Haver*; see *Children's Literature). Poland became the major Hebrew center in Eastern Europe between the wars after that language had been silenced in Soviet Russia. Its one Hebrew daily, however, *Ha-Zefirah*, could not survive in the face of the growing competition from Yiddish, on the one hand, and Polish, on the other. *Ha-Zefirah* closed down, was revived under another name (*Ha-Yom*), revived again under its old name, and finally discontinued in the early 1930s. For several years, it was replaced by the weekly, *Ba-Derekh*, the last Hebrew paper in Poland, which later also closed down.

A unique phenomenon, particularly in Poland between the wars, was the press of the *He-Ḥalutz and the pioneering youth movements, especially that of Ha-Shomer *ha-Za'ir. At

a time when Hebrew was abandoned in Poland even by the official Zionist Organization (the press of which was mainly in Yiddish and Polish), and Hebrew readers could no longer support the burden of maintaining a Hebrew paper, the youth movements safeguarded Hebrew expression (and speech) with unbounded loyalty and material sacrifice. For these young people, the Hebrew language and pioneer training were stepping stones to Zionist self-realization. Thus He-Ḥalutz issued the paper *He-Atid*, and Ha-Shomer ha-Ẓair, its organ, bearing that movement's name; other youth movements followed suit. This press was noted for its ties with Erez Israel and its constant contact with the labor press there.

[Getzel Kressel]

THE HEBREW PRESS IN NORTH AMERICA

Unlike the Anglo-Jewish, German-Jewish, and Yiddish presses in the United States, all of which have served large bodies of readers who often were literate in their native tongue alone, the Hebrew press was restricted from the outset to a relatively small coterie of subscribers. Nevertheless, a Hebrew periodical press has existed practically uninterrupted in the United States since the last decades of the 19th century.

The first Hebrew periodical in the United States, Zvi Hirsch *Bernstein's newsletter *Ha-Ẓofeh ba-Areẓ ha-Ḥadashah* ("The Observer in a New Land") appeared in 1871, a year after the first two Yiddish journals in America, one of which was Bernstein's New York *Juedische Post*. In their early years, in fact, the two presses frequently had intertwined fates: the same publishers, editors, and writers played active roles in both. *Ha-Ẓofeh ba-Areẓ ha-Ḥadashah* appeared irregularly until 1876. Hebrew was also one of four languages to appear in Bernstein's *Hebrew News*, an unusual polyglot venture published for several months in 1871.

A number of Hebrew periodicals appeared briefly in New York in the 1880s and 1890s, many of them largely one-man productions. Among them were the ḥovevei Zion organ *Ha-Le'ummi* ("The Nationalist," 1888–89), the *maskil* Ezekiel Enowitz's *Ha-Emet* ("The Truth," 1894–95) and *Ez ha-Da'at* ("The Tree of Knowledge," 1896), Michael *Rodkinson's *Ha-Sanegor* ("The Defender," 1890) and *Tekhumat Ru'ah ha-Yisre'eli* ("The Spirit of the Israelite," 1899), and Abraham *Rosenberg's *Ner ha-Ma'aravi* ("The Western Light," 1895–97). Somewhat longer lived were Zeev Wolf *Schur's *Ha-Pisgah* ("The Summit"), published irregularly in New York, Baltimore, and Chicago from 1891 to 1899, and *Ha-Ivri* ("The Hebrew," 1892–98, 1901–02), which was founded by the Yiddish publisher Kasriel *Sarasohn and edited by Gershon Rosenzweig.

The first attempt to publish a Hebrew daily in the U.S. took place in New York in 1909 with the appearance of *Ha-Yom* ("The Day") under the editorship of Moses Hacohen *Goldman, but the paper failed within a brief time, as did an effort to revive it in 1913. The latter year also witnessed the launching of the literary monthly *Ha-Toren* ("The Mast," weekly from 1916 to 1921), which in quality of contents and regularity of appearance far surpassed any of its predecessors.

Edited originally by a staff composed of such eminent Hebrewists as Max *Lipson, Daniel *Persky, Abraham *Goldberg, Y.D. Berkowitz, and Benjamin *Silkner, *Ha-Toren* was managed from 1919 until its demise in 1925 by the author Reuben *Brainin. Contemporary with it was the literary and political Mizrahi weekly *Ha-Ivri* ("The Hebrew," New York, 1916–21), edited by Meir *Berlin, who had previously managed the same journal in Germany.

The most successful and permanent of all Hebrew periodicals in the United States, however, was the weekly *Hadoar* ("The Post"). Started as a daily in 1921 by a staff directed by Lipson and including Persky, Hirsch Leib *Gordon, Abraham Orlans, and Menachem *Ribalow, *Hadoar* was briefly discontinued in the summer of 1922 and then resumed publication as a weekly under the auspices of the *Histadruth Ivrit of America. In 1925 Menachem Ribalow became sole editor, a position he held for nearly 30 years. During this period, except for a brief hiatus in 1925, *Hadoar* appeared every week in spite of continual financial straits, publishing Hebrew authors of note from all over the world and especially numbering among its steady contributors such U.S. Hebrew writers as Hillel *Bavli, Moshe *Feinstein, Reuven *Grossman, Simon *Halkin, Ephraim *Lisitzky, Daniel Persky, Gabriel *Preil, Abraham *Regelson, Zvi *Scharfstein, Eisig *Silberschlag, Yochanan *Twersky, Meyer *Waxman, and Reuven *Wallenrod. From 1934, *Hadoar* issued a biweekly youth supplement titled *Ha-Musaf la-Kore ha-Ẓa'ir*. Ribalow was succeeded as editor in 1953 by Moses *Maisels, who was in turn followed in 1959 by Moshe Yinon. *Hadoar's* circulation in 1970 was about 5,000. It attempted to reconstitute as a quality journal but was unsuccessful. It ceased publication in the early 21st century.

In addition to *Hadoar*, the literary monthly *Bitzaron* was published in New York from 1939 until 1992. Though the establishment of the State of Israel led to a broadening of interest in Hebrew among the U.S. Jewish public, the local Hebrew press has not grown as a result; the reasons are many. Air transportation has allowed the quick distribution of Israeli publications in the United States. Additionally, American Hebrewists preferred to write for the much larger Israeli audience and also to read the best of Hebrew literature in Israeli publications. The introduction of the Internet made some Hebrew language publications in the United States superfluous. Some Hebrew newspapers are published in the United States, primarily in New York and Los Angeles, for the Israeli community living the United States. Printed locally, they most often contain reprints of articles that have appeared in Israeli newspapers and advertisements aimed at the local American-Israeli community.

For Hebrew newspapers in Erez Israel and the State of Israel, see *Israel, State of: Cultural Life (Press).

[Hillel Halkin / Michael Berenbaum (2nd ed.)]

LIST OF HEBREW NEWSPAPERS AND PERIODICALS

Since the 1920s the Hebrew press, particularly in Erez Israel, has greatly and rapidly developed. From the point of view of quantity it exceeds, several fold, all the Hebrew press from its beginning until that time. Consequently, the following list is, of necessity, very selective and only the outstanding Hebrew newspapers and periodicals in all the countries and periods have been included. One of the aims of the list has been to provide a representative sampling of the vast professional and light literature press in the State of Israel, a sampling which is likewise very selective.

Jubilee and memorial volumes, periodicals of all types of educational institutions (from primary school to university), newspapers issued by individual settlements in Israel (of which there are hundreds), house organs of institutions, organizations, factories, and social and political movements, etc. have not been included. There is however a small sampling of Israel governmental publications: for the rest see *Reshimat Pirsumei ha-Memshalah* ("List of Government Publications") which appears quarterly.

The dates of the newspapers listed present a special problem in that it has not always been possible to translate the Hebrew date accurately because the Hebrew year starts with

Rosh Ha-Shanah (which usually falls in September) whereas the secular year starts on January 1. Another problem has been that of the continuity of many of the publications; some newspapers and periodicals did (or do) not actually appear with the regularity claimed and thus many items are described as "irregular." A large number of newspapers are unavailable and have not been listed; for others of this kind, which have been listed, no exact statistics have been recorded.

Notwithstanding the above factors, however, the list does reflect the scope and nature of the Hebrew press of the last 300 years.

Abbreviations used are:

| | |
|------------------|-------------------|
| A. = Annual | M. = Monthly |
| B-M. = Bimonthly | N.S. = New Series |
| B-W. = Biweekly | N.Y. = New York |
| D. = Daily | Q. = Quarterly |
| F. = Fortnightly | S-A. = Semiannual |
| Irr. = Irregular | T.A. = Tel Aviv |
| Jer. = Jerusalem | W. = Weekly |
| Lit. = Literary | |

1901–1940 indicates that the item appeared from 1901 until 1904; 1901, 1904 indicates that the item appeared in each of these two years only.

[Getzel Kressel]

NEW SQUARE, an incorporated village in Rockland County, southeastern New York. It has close to 6,000 residents. All its inhabitants are Skvera ḥasidim, followers of the Grand Rabbi (Rebbe) of Skvira, David Twersky (1940–). The group has its roots in the Ukrainian town of Skvera (*Skvira). New Square is an anglicized version of New Skvira.

The village was built on property purchased by the Zemach David Corporation, representing the then Skvera Rebbe and father of David, Rabbi Jacob Joseph Twersky (1900–1968), in 1954. Twersky was the third Skvera *rebbe*, whose predecessors were descended from the Chernobyl dynasty. Immediately upon his arrival in America in 1948, the *rebbe* began to lay plans to establish an all-ḥasidic village, outside the New York City area, in order to better maintain their traditional lifestyle and beliefs. Ḥasidism in the United States had taken a decidedly urban character and this was an attempt to build a ḥasidic community apart from the urban environment and its temptations. After two years which the group spent in Boro Park and seven in the Williamsburg sections of Brooklyn, the first four families moved to New Square in December 1956.

The settlement was confronted with a mixed reaction from the local community and the village's early years were plagued with controversy centering on the Ramapo Township's claims that New Square's sewer and drainage facilities and road patterns were not in keeping with required standards. Defenders of the village, including local government leaders as well as rabbis representing all Jewish denominations, saw in these criticisms a veiled desire to prevent the ultra-Orthodox from settling in large numbers.

A solution was sought by New Square leaders via incorporating the community which would free it from much of the Town Board's control. This move was contested in the courts by Ramapo. After a protracted struggle, ending in New York State Supreme Court, the New Squarers emerged triumphant and the village was incorporated in 1961.

New Square has seen rapid growth during its 50 years of existence, with families usually having ten or more children. The village is constantly expanding and was on the verge of having built on all its available space in the early 2000s. At-

tempts were made to locate another property where the *rebbe*'s followers would found a satellite community. In addition, the movement has a network of affiliated synagogues and schools in Brooklyn's Jewish centers and in major ḥasidic communities worldwide, including Montreal, London, Antwerp, Jerusalem, and Bene-Berak.

The New Square community has strict standards geared to restricting the influences of the modern world, such as the banning of television, maintenance of rigorous separation of the sexes, and requirements that all children be educated in the village schools. In addition, the community requires that its citizens adhere to the customs of the Skvera tradition and follow the *rebbe*'s rulings. These demands upon those choosing to live in the village are accompanied by a welcoming openness to visitors and guests featuring extensive hospitality. New Square also operates a host of charitable services which service people throughout the metropolitan area.

The *rebbe* often travels to Jewish communities around the world and many of his followers make pilgrimages to New Square to seek his counsel.

In 1997 four New Squarers were sentenced to prison terms ranging from two to six years on charges of having allegedly misused federal Pell Grant monies. On January 20, 2005, on his last day in office, President Clinton significantly reduced these sentences, after he was visited several weeks before by the Skvera *rebbe*, who interceded on the men's behalf. Defenders of Clinton's decision claimed that the original sentences were not in keeping with other similar cases of individuals who had channeled federal funding into non-profit institutions.

NEW TESTAMENT (Gr. ἡ καινὴ διαθήκη), the Christian Holy Scriptures (other than the Hebrew Bible and the Apocrypha).

Content

"The New Testament" (NT) is the usual name for a collection of 27 ancient Greek books concerning Jesus of Nazareth and his

earliest followers. It forms the second part of Christian Bibles following “the Old Testament,” which in Protestant Bibles contains the same books as Jewish Bibles but in a different order. Catholic and Orthodox Christian Bibles have their own orders of “the Old Testament” in which other ancient books are interspersed. Such additional books are sometimes found in Protestant Bibles in a separate section titled “Apocrypha” and placed between the two “Testaments.” Thus, whereas the extra books are authoritative for Catholics and Orthodox, for Protestants they have the lower status of informative and edifying material that bridges between the “Old” and the “New.”

The NT begins with the Gospels of Matthew, Mark, Luke and John, four accounts of the activities of Jesus. The authors do not write under those names; the ascriptions come from early Christian traditions. Thus the fourth gospel’s anonymous writer claims to be recording the testimony of a source figure identified only as “the beloved disciple” of Jesus. In broad terms, these gospels present similar versions of Jesus’ arrest, condemnation, death, and resurrection, but the Gospel of John has a markedly different account of earlier events and of the content of Jesus’ teaching. Consequently, the first three are commonly termed the “Synoptic Gospels” because of the ease with which they can be printed in parallel columns as a “synopsis.” Matthew and Luke contain versions of the virgin birth of Jesus to Mary (Matthew: shortly before the death of Herod, i.e., 4 B.C.E.) and Luke includes his visit to Jerusalem at age 12; otherwise only the last period of his adult life is featured (Luke: from age “about 30” on).

Next comes the Acts of the Apostles, which introduces itself as the continuation of the third gospel. In it, “apostles” mostly refers strictly to 12 early close disciples of Jesus. Acts begins with the last instructions of Jesus to his followers (after his resurrection), his ascent to heaven from the Mount of Olives, and their subsequent reception of the Holy Spirit. Their attempts to win over other Jews lead to clashes with the authorities and to the dispersal of most of them elsewhere. But then the appearance of Jesus himself in a vision to a certain Saul, who was their chief persecutor, turns Saul into an ardent follower. The latter, now called Paul, makes a series of journeys to the Jewish Diaspora, where his preaching about Jesus causes divisions among Jews but has remarkable success among non-Jews, especially those previously close to Judaism. He eventually returns to Jerusalem, where the followers of Jesus are again living peacefully among other Jews, but his eager style creates new clashes and leads to his arrest. After years of detention by the Romans in Caesarea, he is sent to Rome for two more years, awaiting trial, where the book ends rather abruptly (c. 60 C.E.).

The next 21 books are epistles of various early Christians. Nine epistles to Christian communities and four to individuals announce themselves as from Paul. A 14th, the Epistle to the Hebrews, lacks that announcement, but its concluding statement is in Pauline style. Others come from “James” (1), “Peter” (2), and “Jude” (1), who calls himself “brother of James.” Traditionally, Peter is identified with the initial leader

of the followers of Jesus in Jerusalem, and James, as “brother of Jesus,” with their subsequent leader after Peter set out on his own missionary journeys. The other three epistles are traditionally ascribed to “John,” who is identified with the source figure of the fourth gospel and with the author of the last book of the NT, Revelation, in which a certain John records a series of heavenly visions. These include messages to seven Christian communities and prophecies about coming persecutions (mostly Roman) and the eventual end of history, in which a new Jerusalem descends from heaven to inaugurate the universal rule of Jesus with God.

Language and Style

It is frequently, but wrongly, said that the NT books are written in popular Hellenistic Greek as opposed to the literary Attic Greek of the period. In fact, Hellenistic Greek was the language not merely of the populace but of learned scholars and officials in the Greek-speaking world created by the conquests of Alexander of Macedon. This scholarly language modified Attic by replacing its more idiosyncratic features with forms and words current in the wider world. The attempts of purists to impose the exact dialect of ancient Athens began around 200 B.C.E., gained ground slowly, and triumphed completely only in the later second century C.E.

There is indeed great variation in the language of the NT, reflecting the origins and genres of the various books. Thus in Matthew and Luke (to a lesser extent in Mark) and in the early chapters of Acts, much of the language has affinities to the “translation Greek” characteristic of the Septuagint as well as containing Hebraisms recognizable from rabbinic literature. By contrast, the introductions to Luke and Acts, the later chapters of Acts, and the Epistle to the Hebrews consist of elegant Hellenistic prose. Paul’s writings addressed to communities are composed in a brilliant epistolary style that evoked the admiration of Wilamowitz, the leading 20th-century authority on Greek literature. Only one book, Revelation, contains plain grammatical errors. The anonymous writer of the Gospel of John, however, writes in a Hellenistic Greek that is both very simple and very correct.

Origins, Acceptance, and Canonization

There is little firm evidence on which to date the precise composition of the NT books, except that the few Christian writings surviving from the early second century indicate knowledge of those four gospels and of collections of Pauline epistles. The NT books give almost no clear dates for Jesus himself (Matthew and Luke, as above). Thus their dating mostly reflects scholarly fashion. Whereas earlier fashion dated many of them to the period 100–140 C.E., current fashion puts almost all of them within 50–100 C.E. One leading scholar, John A.T. Robinson, dated them all before 70 C.E., above all because it is difficult to identify any NT author who is clearly aware of the Jewish catastrophe of that year.

At the beginning of the second century, only the Hebrew Bible or the Septuagint counted as inspired Scripture for Christians. By the end of that century, almost all the 27

books had widely acquired that status and Christian writers were speaking of Scripture as “the writings of the Old Covenant and of the New Covenant.” The contrast is derived from the expression “new covenant” (*berit ḥadashah*) of Jeremiah 31:31 (30), which receives various interpretations (as *kainē diathēkē*) in the NT books. The English names “Old Testament” and “New Testament” reflect the translation of that expression (as *novum testamentum*) in Latin versions of the NT.

The final list, the “canon,” was established only through the convocation of bishops from all over the Christian world in Ecumenical Councils, beginning in the fourth century. Only in some cases can a doctrinal reason be identified for the exclusion of what are called “New Testament Apocrypha,” such as other gospels and the acts of apostles not recorded in the canonical Acts. An interesting case is an ancient account of the childhood of Mary the mother of Jesus, currently called “the Protevangelium of James.” Although never canonized, it provides the source for many Christian holy sites in Israel and its story features in well-known traditional icons.

History of Scholarship

Scholarly studies of the NT fall into two main areas: edition of the text and analysis of the content. The widely used early edition of Erasmus (1517) was based on a handful of later manuscripts, among other defects. Later editors have employed hundreds of Greek manuscripts as well as translations into other ancient languages and quotations in early Christian writers. Today’s critical texts follow the lead of Westcott and Hort (1882), as updated in the many editions of Eberhard Nestlé and Kurt Aland.

Through his long residence in the Netherlands (1628–49), the philosopher Descartes provoked probably the earliest harsh questioning of the content of the Bible. The “Cartesian method” prescribes that in order to find secure foundations for science, one must first reject any statement about which the slightest doubt can be raised. Descartes himself explicitly excluded theology from such questioning, but his ardent Dutch disciples had fewer scruples. Especially the writings of Baruch *Spinoza and Balthasar Bekker provoked a massive controversy and scores of polemical publications in Dutch. Only the Latin works of Spinoza, however, had a major impact on the broader European public.

In the early 19th century, the Cartesian approach gained ground in classical philology in Germany. Under the influence of Friedrich August Wolf (1759–1824) especially, it became fashionable to question the authenticity of works ascribed to ancient authors merely on the basis of inconsistencies in the alleged author’s style and viewpoint. For example, major dialogues of Plato and a dozen speeches of Cicero (including the four against Catilina) were declared unauthentic. The Iliad and Odyssey, following Wolf, were seen as loose collections of poems by multiple authors; “Homer” was a fiction.

This skeptical paradigm of research was at its peak in the middle decades of the century, when German scholars began

to apply the methods of classical philology to biblical studies. Ready targets were the differences of style and emphasis in the Pauline writings and the very existence of four different gospels, which contain evident minor discrepancies in parallel passages as well as the broader differences noted above. In particular, the studies of David Friedrich Strauss (1808–1874) and Ferdinand Christian Baur (1792–1860) provoked first furious rejection, then cautious imitation. Both of them employed various arguments to undermine the testimony of the NT authors; then they employed Hegelian dialectics to build up reconstructed versions of the life of Jesus, the history of the first Christian communities, and the process whereby the NT books emerged.

By the early 20th century, classical philology had largely retreated from this kind of skepticism. Plato recovered his dialogues and Cicero his speeches. Both the Iliad and the Odyssey were now seen as brilliantly integrated compositions of a poetic genius; the remaining question was whether there was one Homer or two. In NT studies, by contrast, skepticism spread further, such that today its practitioners and classicists have difficulty in finding a basis for a shared discussion. Anything from four to 13 epistles are ascribed to Paul by different scholars, but using arguments of the kind that classicists today treat with great caution.

The result is that NT scholars have amassed an impressive quantity of information about the background of the NT but are deeply divided over questions of the origins and content of the books. As with Strauss and Baur, skepticism creates room for ingenious speculations rather than firm results. Concomitantly, a host of methods borrowed from elsewhere, be it “form criticism” and “redaction criticism” or methods of analysis of modern literature, are employed to find lasting significance in these theologically authoritative texts. An example is the commonly maintained view that the Gospel of Mark is the oldest and that it was used in the composition of Matthew and Luke in various combinations with a lost document designated as “Q.” During the later 20th century the main arguments in favor of this view were undermined by criticism. Yet it continues to be taught, less out of conviction than because its critics failed to gain acceptance for any of the proposed alternatives.

Relationships with Judaism

A Jewish reader will readily note in the NT books such resemblances to Jewish tradition as are evidence that they were written by Jews or in a Jewish milieu. A massive commentary on the NT from rabbinic sources was compiled by Paul Billerbeck (1922–28). Yet the significance of such relationships has often been minimized in skeptical scholarship. Many NT scholars have refused to take rabbinic literature into account because its earliest written source, the Mishnah (early third century), is “too late” for any reliable comparison. For classical scholars, of course, the mere “lateness” of a source is irrelevant; thus the main witness to Parmenides is Simplicius, who wrote a thousand years later.

Since no writing by Jesus himself is known, many scholars have advocated a “criterion of double dissimilarity” in order to ascertain the nature of his teaching. Take all his many sayings in the gospels one by one, they say, and set aside any that have parallels in Jewish tradition or later Christian writings, since the authors of the gospels may have projected the latter back upon Jesus. Whatever little is left may stem from him. Overlooked in this Cartesian approach is that it equates our knowledge with our ignorance. For if a new Dead Sea scroll or a lost early Christian work is discovered, it may well contain parallels with whatever the criterion has not yet excluded. Built into the criterion, therefore, is the assumption that ultimately nothing can be known about what Jesus taught, but that whatever he did teach was antipathetic to Judaism.

Particular violence was done to the interpretation of Paul in attempts to distance him from Judaism. To this end, early 20th century scholars invented a parody of rabbinic Judaism as a religion that sought salvation in an obsessive preoccupation with the minute details of Torah observance. Paul was proclaimed as the liberator from all that. More recent studies, fortunately, have demonstrated the falsity of that image of Judaism. Also, Paul expected Jews to remain faithful to Torah and rather sought to reformulate Judaism’s demands upon faithful non-Jews.

Dissent from the dominance of skepticism has come from two directions. On the one hand, there are NT scholars whose original training was in classics. On the other, the renewal of Jewish existence in the Land of Israel created new realities. Besides Israeli scholars who brought their familiarity with land, language, and tradition, there are Christian scholars who acquired similar familiarities by living in this Jewish society. A pioneer among the latter was the Anglican scholar Herbert Danby, whose translation of the Mishnah into English (1933) remains a standard. A pioneer among the former was Joseph *Klausner with his studies of Jesus (1929) and Paul (1946). His major important insight was to see that most characteristic of Jesus is less individual sayings, which have other Jewish parallels, than the ethical vision that suffuses them as a whole.

More recently, the decades-long cooperation at the Hebrew University between David *Flusser and Shmuel Safrai promoted a generation of younger Jewish and Christian scholars whose shared familiarity with both traditions transcends denominational affiliations. One of Flusser’s personal contributions was his pioneering use of the Dead Sea scrolls to illuminate a layer of thought that underlies various NT epistles. Another was the realization that the normal language of the teaching of Jesus, and especially of his parables, was not Aramaic but Hebrew, enabling a reconstruction of parts of that teaching through careful comparisons of the text of Luke and Matthew with Jewish sources. Flusser also found a novel solution to the paradox of the Gospel of Matthew, which is in some regards the most Judaic of the four, yet it contains the most severe attacks upon the Jewish people. The attacks occur precisely in passages that are less Hebraic, or lack parallels in

Luke and Mark, or give an unusual twist to parallels there. This Greek gospel is an adaptation of a Hebrew original by a sect of non-Jews who (like today’s “black Hebrews” in Dimona) felt that the Torah should belong to them because they were observing the Torah far more faithfully than the Jews.

BIBLIOGRAPHY: The literature on the NT is too vast to be surveyed here. Since 1956 it has been recorded systematically in *New Testament Abstracts*. Besides book reviews, this journal summarizes articles from many periodicals both under general categories and by NT book, chapter, and verse. The standard *Greek-English Lexicon of the New Testament* is by F.W. Danker (2000³), continuing the work of Walter Bauer. For the main textual issues, see the various books of Bruce M. Metzger. The relevant work of John A.T. Robinson is *Redating the New Testament* (1976). On the paradigms of scholarship and their history, see Malcolm F. Lowe, “The Critical and the Skeptical Methods in New Testament Research,” in: *Gregorianum* 81 (2000), 693–721. The problematic attitude of early 20th-century scholarship to Judaism was exemplified in Emil Schuerer’s *The History of the Jewish People in the Age of Jesus Christ*; the thoroughly revised edition by G. Vermes, F. Millar, and M. Goodman (1973–87) eliminated Schuerer’s biases and provides excellent background information for the NT. The Flusser-Safrai approach can be seen in the series *Compendia Rerum Iudaicarum ad Novum Testamentum* (many authors). See also the revised version of Flusser’s *Jesus* (1997) and his articles collected as *Judaism and the Origins of Christianity* (1988), edited by his pupils Steve Notley and Brad Young, respectively. The reevaluation of Paul and his relationship to Judaism is due to W.D. Davies, E.P. Sanders, Krister Stendahl and John Gager among others.

NEWTON (Neustaedter), HELMUT (1921–2004), fashion photographer. Born in Berlin to a well-to-do German-Jewish family, Newton became a widely imitated fashion photographer after his provocative, erotically charged photographs became a mainstay of *Vogue* and other publications. He was guided by a passion for the strength and allure of the female form and his unquenchable taste for sexual imagery, including the bizarre and scandalous, earning the nickname the King of Kink. Newton got his start in Berlin as an apprentice to the fashion photographer Else Simon. At 18 he fled Nazi Germany and moved to Singapore, then to Melbourne. After serving in the Australian army during World War II, he opened a studio of his own and his photographs appeared in Australian *Vogue*.

In 1961 he moved to Paris with his wife, June (known as the photographer Alice Springs), and made his name with French *Vogue* as well as *Queen*, *Nova*, *Marie Claire*, French *Elle*, *Stern* and *Vanity Fair*. He brought stylized cruelty to mainstream fashion. His images, often in stark black and white, were calculated to shock, and featured tall, blonde, sometimes naked women in heels, perhaps illuminated by headlights or trapped in a dark alley. “Fashion for me,” Newton once said, “is not an illustration but an idea around which to create a scene.” The scenes were often based on familiar pornographic depictions. Bondage, sadomasochism, voyeurism, murder, pornography, and prostitution were exploited and explored. Models were dressed and used in unexpected ways:

in orthopedic corsets, or in wheelchairs, or on all fours wearing a dog collar. His work was closely associated with leading fashion designers like Yves Saint Laurent, who favored tight, wide-shouldered suits and long-legged models, which Newton embraced. His work was also associated with photographers like Guy Bourdin and Deborah Turbeville, and sometimes drew the ire of groups that felt his depictions of women could be demeaning and exploitive. Newton and his wife frequently photographed themselves and each other naked: at rest, exercising, posing, joking, bathing.

In a 1996 interview, Newton suggested that his German upbringing and his experiences with the Nazis played a large part in his artistic philosophy. "The point of my photography," he said, "has always been to challenge myself. To go a little further than my Germanic discipline and Teutonic nature would permit me to." After working as a freelancer in the 1940s, he moved to France in the late 1950s. He kept a home in Monte Carlo, which was often a setting for his photographs, and from 1981 to his death he wintered at the Chateau Marmont hotel in Hollywood.

Newton published ten books during his lifetime, including an erotic photo album in 1976 called *White Women* and in 2003 *Autobiography*, a memoir of his adventures through life, women and high-fashion photography. Shortly before his death he created the Helmut Newton Foundation in Berlin. He also picked a symbolic home for the foundation, a former Prussian army officers' club that stands beside the railroad station where, as a teenager, he boarded a train and fled Hitler's Germany. He and his wife made an initial permanent loan of 1,000 prints of their work to the foundation. They stipulated that, after their deaths, their negatives and archives as well as all rights, royalties and income from sales of prints will go to the foundation. "It is my wish that the Helmut Newton Foundation be a viable and living institution, not a dead museum, that will financially exploit these archives," he said. Berlin's cultural establishment embraced the foundation with enthusiasm, not only for its artistic merit but also for the message implicit in a Berlin Jew's decision to return home.

Newton was fatally injured when he lost control of his car and crashed into a wall outside the Chateau Marmont. The city of Berlin offered him an honorary grave. On June 2, 2004, two days before the foundation's inauguration, Newton's ashes were laid to rest in the Friedenau cemetery in Berlin.

[Stewart Kampel (2nd ed.)]

NEWTON-JOHN, OLIVIA (1948–), U.K.-born, Australia-raised singer and actress who scored numerous top-10 pop and country hits in the 1970s and 1980s, including, "Physical" and "Have You Never Been Mellow." Newton-John is the granddaughter of German Nobel Prize-winning physicist Max *Born, who was a friend of Albert *Einstein. In a 2004 TV interview, Newton-John said: "My mother tells me ... that there used to be music in the house and Einstein used to come and play music with my grandfather." She has never been publicly identified as being Jewish. Newton-John moved to Australia

with her family at age five, but was back in the U.K. at age 16 to pursue a singing career. She joined the cast of U.K. singer Cliff Richard's TV show in 1972, and began releasing record albums. Her first British hit was a version of Bob *Dylan's "If Not for You." She topped the U.S. record charts for the first of five times in 1974 with "I Honestly Love You." Other No. 1 titles include: "Have You Never Been Mellow" (1975), "You're the One that I Want" (1978, a duet with John Travolta from the film *Grease*, in which she co-starred), and "Magic" (1980, from the film *Xanadu*). Her 1981 pop-disco song "Physical" spent 10 weeks at No. 1. She has not charted since 1985, but sang at the opening ceremony of the 2000 Sydney Olympics. She recuperated from breast cancer in 1992, and afterward became a spokeswoman for breast cancer awareness. Newton-John was recipient of the OBE (Order of the British Empire) from Queen Elizabeth in 1979.

[Alan D. Abbey (2nd ed.)]

NEW YEAR. The Mishnah (RH 1:1) enumerates four separate days of the year, each of which is regarded as a New Year (Heb. *Rosh Ha-Shanah, lit. "head of the year"). The fixing of those dates was essential, not only for civil and political purposes, but for the regulations concerning the procedure regarding the religious injunctions connected with agricultural produce. Since, for example, the tithe had to be given of animal produce, the fruit from the first three years of a tree's growth (**orlah*) was forbidden, and the beginning and end of the *Sabbatical year had to be determined, it was necessary to lay down when the year began for those various calculations. With one exception (and that only according to *Bet Hillel), all the New Years begin on the first of the month.

(1) The first of Nisan is the New Year for (Jewish) kings and for the religious calendar (for festivals). Thus if a king ascended the throne during Adar, the next month would constitute the second year of his reign, and Passover is the first festival of the year. The Talmud (RH 7a) adds that it is also the New Year for the purchase of congregational sacrifices with the *shekalim collected in Adar, and for the renting of houses.

(2) The first of Elul is the New Year for the tithing of cattle (but see the first of Tishri), i.e., tithes had to be given for all cattle born between the first of Elul and the 30th of Av.

(3) The first of Tishri is the New Year for the civil calendar (including the counting of the reigns of foreign kings; see RH 3a–b and cf. Git. 8:5) for the Sabbatical and Jubilee years (plowing and planting being forbidden from that date), and for the year of planting of fruit and vegetables. The establishment of the first of Tishri as the religious New Year (see *Rosh Ha-Shanah) depends upon the statement that on that day "all the world is judged" (RH 1:2). According to R. Simeon and R. Eleazar the first of Tishri is also the New Year for the tithing of cattle and therefore there are only three New Years.

(4) The first of Shevat is the New Year for trees, according to Bet Shammai, but Bet Hillel fixed the date as the 15th of Shevat, and since the *halakhah* is established accordingly, it is this date which is celebrated today (see *Tu bi-Shevat). The

reason given in the Talmud (RH 14a) is that on that date the greater part of the year's rain has fallen.

Only Rosh Ha-Shanah is fully celebrated, though in recent times a minor celebration has developed, especially in Israel, for Tu bi-Shevat. The others, as stated, are merely for calendrical computations.

NEW YEAR'S CARDS. The widespread custom of sending Jewish New Year's cards dates to the Middle Ages, thus predating by centuries Christian New Year's cards, popular in Europe and the United States only since the 19th century. The custom is first mentioned in the Book of Customs of Rabbi Jacob, son of Moses *Moellin (1360–1427), the spiritual leader of German Jewry in the 14th century (*Minhagei Maharil*, first ed. Sabionetta, 1556). Based on the familiar talmudic dictum in tractate Rosh ha-Shanah 16b concerning the “setting down” of one's fate in one of the three Heavenly books that are opened on the Jewish New Year, the Maharil and other German rabbis recommended that letters sent during the month of Elul should open with the blessing “May you be inscribed and sealed for a good year.” Outside of Germany and Austria, other Jewish communities, such as the Sephardi and Oriental Jews, only adopted this custom in recent generations.

The German-Jewish custom reached widespread popularity with the invention – in Vienna, 1869 – of the postal card. The peak period of the illustrated postcard, called in the literature “The Postal Card Craze” (1898–1918), also marks the flourishing of the Jewish New Year's card, produced in three major centers: Germany, Poland, and the U.S. (chiefly in New York). The German cards are frequently illustrated with biblical themes. The makers of Jewish cards in Warsaw, on the other hand, preferred to depict the religious life of East European Jewry in a nostalgic manner. Though the images on their cards were often theatrically staged in a studio with amateur actors, they preserve views and customs lost in the Holocaust. The mass immigration of the Jews from Eastern Europe to the United States in the first decades of the 20th century gave a new boost to the production of the cards. Some depicted America as the new homeland, opening her arms to the new immigrants, others emphasized Zionist ideology and depicted contemporary views of Erez Israel.

The Jews of 19th c. Erez Israel (“the old *yishuv*”), even prior to the invention of the postal card, sent tablets of varying sizes with wishes and images for the New Year, often sent abroad for fundraising purposes. These tablets depicted the “Four Holy Cities” as well as holy sites in and around Jerusalem. A popular biblical motif was the Binding of Isaac, often taking place against the background of the Temple Mount and accompanied by the appropriate prayer for Rosh ha-Shanah. Also common were views of the yeshivot or buildings of the organizations which produced these tablets.

In the 1920s and 1930s the cards highlighted the acquisition of the land and the toil on it as well as “secular” views of the proud new pioneers. Not only did this basically religious custom continue and become more popular, but the new cards

attest to a burst of creativity and originality on the subject matter as well as in design and the selection of accompanying text. Over the years, since the establishment of the State of Israel, the custom has continued to flourish, with the scenes and wishes on the cards developing as social needs and situations changed. The last two decades of the 20th century have seen a decline in the mailing of New Year's cards in Israel, superseded by phone calls or internet messages. In other countries, especially the U.S., cards with traditional symbols are still commonly sent by mail, more elaborately designed than in the past. Thus, the simple and naïve New Year's card vividly reflects the dramatic changes in the life of the Jewish people over the last generations.

1654–1870

DUTCH COLONIAL PERIOD. The arrival of some 23 *Sephardi and Ashkenazi Jews on the French privateer *St. Catherine* early in September 1654 marked the end of a tortuous journey that began earlier in the year when they left Recife, Brazil, after helping in the unsuccessful defense of the Dutch possession from Portuguese attack, rather than stay and face the Inquisition. The director general of New Netherland, Peter Stuyvesant, and the dominie Johannes Megapolensis tried to refuse haven to the penniless and tired refugees. They protested to the Dutch West India Company against the possible settlement of a “deceitful race” who professed an “abominable religion” and whose worship at the “feet of Mammon” would threaten and limit the profit of loyal subjects of the company. While Stuyvesant’s plea was under consideration, other Jews including David de Ferrara and Abraham de *Lucena arrived in the spring of 1655. The population as a whole accepted the group. Instructions from the Dutch West India Company followed letters written by the Jews to their coreligionists in the company, which directed that newcomers be permitted to live, trade, and travel in New Netherland, and, in effect, to have the same privileges enjoyed in the Netherlands. Probably in deference to Stuyvesant, and because of the small size of the Jewish colony, the Jews, although permitted a burial ground, were not allowed to build a synagogue.

Despite the orders of the company, the newcomers faced other obstacles. The right to trade with some areas, including Albany, was denied as were rights to serve in the militia in lieu of paying a special tax, to own land, and to engage in retail trades like baking. These restrictions were all put forth by Stuyvesant. The Jews’ response was twofold. The first took the form of a series of petitions drawn by Abraham de Lucena, Salvador d’Andrada, and Jacob Cohen Henriques addressed to the company in 1655 and 1656. The answers were affirmative. Burgher right, the right to conduct retail and wholesale trade in New Amsterdam, was extended to Jews in 1657, and the right to hold property was also upheld. Some Jews fought

Stuyvesant on his own ground. Asser *Levy and Jacob *Bar-simon (who had arrived with Solomon Pietersen in August 1654, prior to the main body of settlers) began a successful court action in November 1655 to permit Jews to serve in the militia in lieu of the payment of a special derogatory tax. Thus the Jews gained primary civil rights within a few years of settlement.

Having secured a foothold, the first Jews began the task of sustaining themselves. While economic opportunity was quite limited compared with those in the more stable, secure, and richer markets of Europe and the Caribbean, the average Jew managed well. In 1655 Jewish taxpayers paid 8% of the cost of the Palisade or “Waal,” later the site of Wall Street, while they made up only about 2% of the assessed population. Asser Levy became the most prominent and successful merchant. He built a prosperous real estate business, had a kosher butcher shop, and won the right to participate in the citizens’ guard. Another member of the founding group, Levy, a butcher and tanner by trade, carried on his business just outside the city’s wall. He expanded his interests to real estate and trade within the city, as well as in communities along the Hudson River. Levy was one of the few pioneer Jews who remained and died in the province and whose descendants could be traced to 18th-century New York.

ENGLISH COLONIAL PERIOD. The surrender of New Amsterdam to the British in 1664 brought a number of changes to the Jewish settlement. Generally, civil and religious rights were widened. Jews were permitted to hold and be elected to public office and restrictions on the building of a synagogue were lifted. While there is some evidence that a synagogue existed as early as 1695, it was undoubtedly a private home used for this purpose by the Jewish community. Shearith Israel, the first congregation in New York, was probably organized in about 1706. Between 1729 and 1730 the congregation erected the first synagogue, a small building on Mill Lane – known also as Mud Lane – the site of present South William Street. This event occurred some 75 years after the original settlement and was an indication of its permanence as well as of the acceptance by English authority of the Jewish economic and social position. Interestingly, the London and Curaçao communities, which were also founded in 1654, had built synagogues within a few years of their founding. The hesitancy of New York Jews was probably due to the smallness of their numbers, as well as to the transient nature of their status and to governmental opposition.

The roots of the colony depended upon its economic viability. Jewish merchants took a major interest in overseas trade, partly because ocean traffic negated somewhat onerous local control and requirements and partly because it provided a measure of freedom that allowed them to use their special skills. Movement from place to place was its own protection: investments were widespread and thus less vulnerable. The transient, wandering Jew was an answer to the ghetto and enclosing walls, for he was more difficult to tax and to ghet-

toize. He carried his wealth with him, and he had knowledge of languages – Hebrew, Yiddish, German, Spanish, Portuguese, Dutch. In the correspondence of Nathan Simson, there are letters written in three and sometimes four languages. Simson had knowledge of the international market, and his kinsmen were in the Caribbean, Italy, Spain, the Near East, and India. This provided an opportunity not usually afforded the restricted Catholic or Protestant. Certain markets were specialties. When in 1699 Governor Bellomont wanted a bag of jewels that had been seized from an accused pirate appraised, he “ordered a Jew in town to be present, he understanding Jewells well.”

Jews concentrated on such commodities as conditions required. They were among the first to introduce cocoa and chocolate to England and were heavily engaged in the coral, textile, and slave trades, and at times had virtual monopolies in the ginger trade. They are also said to have introduced whale-oil spermaceti candles to the colonies. In 1701 Jewish merchants accounted for 12% of those engaged in overseas trade, though they represented only about 2% of the general population. In 1776 they were less than 1% of the population and less than 1% of the overseas merchants. The decline of the overseas trade indicated not only that New York Jews had become rooted but also that they had found other means of earning a living. The colonial transience gave way to permanence.

During this process Jews struggled to obtain full citizenship, especially as it applied to trade. The Jew who wished to engage in overseas or wholesale trade had to face the question of his status, whether he was a citizen or an alien. As a citizen, except for some ambiguity with respect to his right to vote or hold office, he was allowed most rights including the right to trade. Since the English accepted Dutch citizenship equally with English, Jews who were burghers of New Amsterdam, as well as native-born colonists, continued to be citizens under British rule. The problems facing aliens, the status of the majority of Jews, were clearly set forth in the Trade and Navigation Acts passed between 1650 and 1663. This central body of British law applying to the colonies was intended not only to foster mercantilism but also to prevent the encroachment upon trade by “Jews, French and other foreigners.” Under these acts aliens could not engage in British commerce without severe penalty.

The necessity for some form of citizenship became obvious by the Rabba Couty affair. In November 1671 Couty’s ship *Trial* was condemned by the Jamaica Vice-Admiralty Court on the ground that Couty, a Jew, was by definition a foreigner. In appealing the decision in England to the Council of Trade and Plantations, Couty obtained certificates from Governor Lovelace of New York indicating that he had been a free burgher of New York for several years. On this evidence and the fact that the ship and crew were English, the council held the sentence illegal. Those Jews, therefore, who could prove native birth did not need to bother with naturalization proceedings, but the alien Jew had to become a citizen if he was to engage in foreign trade. In general, however, the Jews in New

York found that the procurement of naturalization, the right to trade and hold property, and the right of inheritance were not too difficult to obtain. Merchants in England were rarely naturalized; mostly they were endenized – i.e., they could trade, but not hold real estate. In New York, on the other hand, 46 Jews were naturalized but only six endenized. Freeman-ship, the right to engage in retail trade, was also relatively easy to obtain, despite instances of prohibition. Forty-seven Jews were made freemen between 1688 and 1770.

The decline of the overseas trade brought a corresponding increase in the numbers of Jews who were local retailers and craftsmen. They sold a wide range of goods, such as guns (especially during war), rum, wine, ironware, glass, furs, and foodstuff. Such merchants as Jacob Franks, Rodrigo *Pacheco, Judah *Hays, and Sampson *Simson often advertised their wares in newspapers. They were frequently in partnership with non-Jews, including members of the Livingston, Cuyler, and Alexander families. In some instances such partnerships developed into long friendships, as was the case of Rodrigo Pacheco with James Alexander. Myer *Myers, made freeman in 1746, became a noted silversmith and goldsmith whose work was much in demand and is displayed today in many museums. Benjamin *Etting, also a goldsmith, was made a freeman in 1769; Michael Solomon *Hays in 1769 was a watchmaker; and Abraham Isaacs in 1770, a tailor. These occupations were not found in the period of initial settlement, and there were few Jews in the professions during this period. Dr. Elias Woolin was in the city in 1744, but there were no Jewish members of the bar, though Jews represented about 10% of the litigants in the various courts. In addition, some Jews were not successful financially. A number, including Isaac Levy, Moses Hart, and Michael Jacobs, became insolvent debtors. Some were jailed and others, like Aaron Machado and Abraham Myers Cohen, were written off as bad debts.

During the period of British control Jewish merchants were able to hold many positions of responsibility. Jacob *Franks and his son David were provision agents for the Crown during the French and Indian War. Sampson Simson was a member of the group that received the charter for the Chamber of Commerce in 1770. Perhaps the highest position held by a Jew in colonial New York was that of colonial agent representing the colony’s interests in Parliament. This post was given to Rodrigo Pacheco in 1731. Daniel and Mordecai Gomez served as Spanish interpreters to the Supreme Court in New York. A number of Jews were elected to office, generally as constables or assessors. Members of the Hays family made the constabulary something of a tradition. For Jewish citizens, Christian oaths necessary for office, voting, and naturalization were often modified or eliminated. It was quite unusual for Jews to hold office in the other colonies, and the fact that they did in New York was an indication of the cosmopolitan nature of the colony and its general acceptance of the Jewish community. There was no ghetto and little overt anti-Jewish feeling. Most of the Jewish population lived in the area below Wall Street, generally in the Dock and South wards facing the East

River, mixed among their Christian neighbors. Jacob Franks lived off Coenties Slip and Asser Levy on Stone Street, as did Jacob Acosta. The burial ground off present-day Chatham Square was also on the East Side, at the end of Pearl Street, the main road through that part of town. In 1748 the Swedish naturalist Peter Kalm, then residing in the colony, wrote that Jews “enjoyed all the privileges common to the other inhabitants of the town or the province.”

Precise census figures are not generally available, but for most of the 17th and 18th centuries Jews represented 1% to 2% of the total New York City population. In 1700 there were 17 households listed in the assessment rolls; estimating this at six per family, there were about 100 individuals, or 2% of the general population of 4,500. In 1722, 20 households are named, or about 1½%. A peak of 31 families was recorded in 1728, about 2.3% of the general population of 8,000. This was followed by a gradual decline to 19 families in 1734, or 1.2%. In that year Jews paid 1.9% of the city’s taxes; in 1722 they had paid 2%. As a group they were seemingly slightly more affluent than their neighbors. After 1734 there are no extant assessment lists for New York City, so population figures are questionable, but it is fairly safe to rely on the 1% figure for the remaining period, although it may have been more.

Congregation Shearith Israel provided a cohesive force. Not the least of its functions was to provide a secular education, for there were no public schools. Religious subjects, as well as arithmetic and English, were taught by itinerant teachers. Moses Fonseca, for example, was brought in from Curaçao to be a *hazzan* as well as teacher. There were strong pressures for intermarriage. The limited number of Jews and hostility between Sephardim and Ashkenazim, plus a basic tolerance, created an atmosphere conducive for intermarriage. In 1742 Phila Franks, daughter of Jacob and Abigail Franks, one of the most noted Jewish families, married Oliver Delancey, an aristocrat and an Episcopalian. A few months later her brother David married Margaret Evans of Philadelphia; their children were baptized. By the eve of the American Revolution the pioneer Jewish citizens – the Pinheiros, De Mesquitas, Asser Levys, and their descendants – had all but disappeared from the New York scene.

REVOLUTIONARY PERIOD. The advent of the American Revolution found the Jewish community divided. In the past Jews had expressed their fealty to the Crown by word and deed. Numbers of Jews served in the colonial wars. Samuel Myers Cohen, Jacob Franks, and others were in the militia during the King George War, Abraham Solomon died in service during the French and Indian War, and others had served aboard privateers. Some, like members of the Franks family, were commissary agents for the British government. New York Jews, however, along with many others, sensed the emancipatory action of the Revolution and the possibility of full civil and political rights. Between 1768 and 1770 some 11 Jewish merchants, including Samuel *Judah, Hayman *Levy, and Jonas *Phillips, signed Non-Importation Articles that sought repeal

of the Townshend Acts, which placed duties on the importation of tea, paper, lead and paint among other articles. The conquest of the city by the British in 1776 caused many Jews to flee to unoccupied places, such as Philadelphia and several locations in Connecticut. One supporter of the American cause was Haym *Solomon, who for a time was imprisoned by the British as a spy. *Hazzan* Gershom Mendes *Seixas fled to Philadelphia and helped found Congregation Mikveh Israel there. Others, confident of British justice, chose to stay, and the congregation carried on services during the occupation. Among the Loyalists was Abraham Wagg, who left for England in 1779 and attempted reconciliation between the contending factions. Uriah *Hendricks, a noted merchant, remained loyal. David Franks was accused by Congress of being a Loyalist and relieved of his commissary rights with the American government. He held a similar post under the British. He also left for England, but returned after the war for a time. The majority of Jews preferred a neutral position in the conflict, partly in fear of the consequences of a wrong guess. Jews sympathetic with the British cause knew what to expect from England but did not know what their status would be under the new government. Patriotic Jews, on the other hand, looked forward to a new freedom.

EARLY AMERICAN PERIOD. The end of the Revolution brought many distinct changes. Civil liberties, often a matter of governmental whim under the English, became part of the New York State constitution. Opportunities were expanded and new fields opened. Within a decade after the Revolution, Judah Zuntz and Solomon *Simson were admitted to the bar. In 1792 Benjamin *Seixas and Ephraim *Hart were among the founders of the New York Stock Exchange. Gershom Mendes Seixas served as a trustee of Columbia College from 1784 to 1814, and was one of 14 ministers who participated at George *Washington’s first inaugural in April 1789, and Col. David M. Franks was one of the marshals in charge of the processional at the inaugural. Among the first Jewish graduates of Columbia College was Sampson Simson in 1800. Walter Judah, admitted to the college in 1795, also attended the medical school. He died while treating the sick during the yellow fever epidemic of 1798. In 1818 Governor De Witt Clinton attended the opening of Shearith Israel when the congregation rebuilt the synagogue on the Mill Street site. No colonial governor is known to have ever shown such deference to the community.

The Revolution reduced the Jewish population to less than 1% of the population. It remained at that level until the 1830s and 1840s, when an influx of German and Polish Jews caused a sudden rise to perhaps 15,000 in 1847 and to some 40,000, or approximately 4%, on the eve of the Civil War. Replacing the old and for the most part extinct pioneer generation were mostly German Jews, such as Harmon *Hendricks, son of Uriah, a mid-18th-century immigrant, who established possibly the first copper-rolling mill in the country in 1813. One of the distinctive changes in postwar New York was Jewish involvement in the political life of the community, perhaps

best seen in the career of Mordecai Manuel *Noah. Born in Philadelphia in 1785, he entered public service as consul to Tunis in 1813. He became a member of the Democratic Party and was elected high sheriff of New York in 1821, surveyor of the port from 1829 to 1833, and judge of the Court of Sessions in 1841. In 1825 he started the unsuccessful Jewish settlement of Ararat on the Niagara River. As editor of the newspaper *The Evening Star* during the 1830s, he broke with Andrew Jackson and became a founder of the Whig and Nativist parties. His espousal of Jewish causes and his involvement with politics reflected a distinct example of the interests of the community. His funeral in 1851 was attended with the most elaborate ceremony by the Jewish settlement. The publishers Naphtali *Phillips and Naphtali *Judah were powers in the Tammany Society in the first two decades of the 19th century. Mordecai *Myers was elected to the state assembly in 1829 and 1831, while Emanuel B. *Hart was elected to the House of Representatives in 1851. He also held the posts of surveyor of the port and president of the Board of Aldermen. Greater social mobility of the Jews after the Revolution could be seen in their movement uptown from the area below Wall Street into other parts of the city. Sampson *Isaacs and Naphtali and Benjamin Judah lived in the Third Ward, the present-day Greenwich Village. The residences of Jacob B. *Seixas and Asher Marx were located on the newly burgeoning East Side. The lower midtown area was the residence of Henry Hyman, Isaac *Moses, and Hayman *Seixas. The wealthiest Jews and non-Jews resided a little below and a little above Wall Street. Harmon Hendricks, probably the richest Jew of early 19th-century New York, lived at 61 Greenwich Street. Near him, on this "quality lane," resided the almost equally wealthy Solomon J. *Isaacs, Lewis Marks, and Mrs. Isaac Moses.

The changing character of the community was also evident in the changing religious organization. In 1825 a group of Ashkenazi Jews, led by Barrow E. Cohen and Isaac B. *Kursheedt, complaining of its formality and control, broke away from the parent body, Shearith Israel, and formed the Bnai Jeshurun Congregation. In 1828 another dissenting group of Dutch, German, and Polish Jews broke from Bnai Jeshurun and formed the Congregation Anshe Chesed. In 1839, Polish members of these two groups formed Congregation Shaarey Zedek. Other German Jews formed Shaarey Hashamayim in 1839, Rodeph Shalom in 1842, and Temple Emanu-El in 1845. Dutch Jews established Bnai Israel in 1847 and French, Shaarey Brocho in 1851. The proliferation of congregational organizations and divisions of the Jewish community were due partly to the new freedom resulting from the Revolution. At first, these new congregations used a number of privately owned buildings before erecting their own synagogue buildings in what became a period of synagogue construction. The old Mill Street synagogue was sold by Shearith Israel in 1833 and a new building was erected on Crosby Street. In addition, there were five major synagogue structures in New York by 1860: Bnai Jeshurun on Greene Street, Shaarey Tefilah on Wooster, Anshe Chesed on Norfolk Street, Temple Beth El on 33rd Street, and

Rodeph Shalom on Clinton Street. In the 1850s Anshe Chesed was the largest congregation in the United States. By the Civil War, Temple Emanu-El and Shearith Israel were the wealthiest and most influential of the congregations.

Religious organizations produced a number of distinguished leaders. Samuel M. *Isaacs, an English Jew who arrived in New York in 1839, was *hazzan* and possibly the first regular preacher in New York City. He was engaged as *hazzan* by Bnai Jeshurun and Shaarey Tefilah. From 1859 he edited the *Jewish Messenger*, one of the most influential Jewish periodicals. Jacques Judah *Lyons, the *hazzan* of Shearith Israel in the 1840s, compiled material for a proposed history of Jews in America, a task he did not complete. The first ordained rabbis arrived in the 1840s from Europe. Among them was Leo Merzbacher who ministered to Anshe Chesed and Rodeph Shalom and helped in establishing the Reform Temple Emanu-El, where he delivered sermons, attended official functions, and assisted in the education of the children. Others included Dr. Max *Lilienthal, considered the most capable preacher in German, and Dr. Morris J. *Raphall, who had a distinguished career with generally German congregations. *Hazzanim* with excellent singing voices who enhanced the synagogue services included Leon Sternberger of Warsaw and Ignatius Ritterman of Cracow.

The period after the Revolutionary War also saw the start of mutual-aid societies and *landsmanshaften*, which generally began as burial societies (*hevra kaddisha*). The Hebrah Gemilut Hasadim, organized at Shearith Israel in 1786, disbanded in 1790. As a successor, Rabbi Gershom Mendes Seixas founded Hebrah Hesed Vaemet in 1802, an organization still in existence. In 1826 Bnai Jeshurun formed the Hebrah Gemilut Hesed, known as the Hebrew Mutual Benefit Society, the forerunner of many such societies. The first president of this important group was Isaac B. Kursheedt. Anshe Chesed helped organize several societies, including the Montefiore Society in 1841.

Numerous fraternal orders began, the most important being the Independent Order *B'nai B'rith, founded in 1843 by 12 men, including Henry Jones, Isaac Rosenberg, and R.M. Roadacher. It combined mutual aid and fraternal features in an effort to bring harmony and peace among Jews. The groups spread rapidly with lodges and memberships throughout the country. Another such society was the Hebrew Benevolent Society, established in 1822 with Daniel Jackson as its first president. He was succeeded by John I. Hart and Roland M. Mitchell. (These names are an indication of the difficulty of identifying Jews during this period.) In 1820 women of Shearith Israel had organized a Female Hebrew Benevolent Society. In 1844 the German Hebrew Benevolent Society, a more narrowly based *Landsleute* group, was formed. These groups worked so well that by the eve of the Civil War few, if any, Jews had to apply to city institutions for aid. The Hebrew Benevolent Society and German Hebrew Benevolent Society united just prior to the Civil War, but other groups continued to maintain independence. Under the urging of Rev. Samuel

Isaacs in the *Jewish Messenger* and Dr. Samuel *Adler of Temple Emanu-El, the Hebrew and German societies formed the Hebrew Orphan Asylum in 1859.

For years after the Revolution there were demands for a Jewish hospital. It was not until 1852, however, that Sampson Simson, with the assistance of Shearith Israel and Shaarey Tefilah and a group of native and English Jews, founded "Jews' Hospital in the City of New York." This became known as Mount Sinai in 1866. Contributions from Judah *Touro of New Orleans and N.K. Rosenfeld of Temple Emanu-El, among others, helped in the construction of the building in 1853. Poor patients were given free treatment. The staff, as well as patients, were Jewish and non-Jewish.

Young men's Jewish groups also became part of the social scene of 19th-century New York and reflected a universal interest in education and its dissemination, so much a part of Jacksonian America. In 1852 a Hebrew Young Men's Literary Society was founded. A splinter group formed the Philocean Society, and in 1854 another group formed the Touro Literary Institute. Other groups included the Montefiore Literary Association and the Washington Social Club. In 1858 the Young Men's and Touro groups merged to form the Hebrew Young Men's Literary Society. Jews also organized military organizations that had strong social overtones. These included Troop K, Empire Hussars, and the Young Men's Lafayette Association. Most of these social organizations, which included the Cultur Verein and Sange Verein, were formed as *landsmanshaften*, i.e., Young Men of Germany, Polish Young Men, etc. The Harmonie Club of German Jews is still in existence. Various members of these socially and culturally conscious organizations joined B'nai Brith before the Civil War and in 1850 also founded the Maimonides Library Association. This was a large library, housed on Orchard Street, and it was open to the public. Elaborate balls, dinners, and charity concerts did much to enliven New York Jewish society. The annual ball of the Young Men's Hebrew Benevolent Society was first held in 1842, and the annual dinners of the Hebrew and German Hebrew Benevolent Societies were highlights of the social season.

The flourishing of New York Jewish society found expression in the rise not only of community organizations but also of the press. The late 18th-century bookseller and publisher Benjamin Gomez was joined in his profession by Naphtali Phillips, publisher of the *National Advocate*, and Solomon Jackson, publisher of the first Jewish periodical in the United States, a monthly entitled *The Jew* (issued from 1823 to 1825). The first successful Jewish periodical was Robert Lyon's *The Asmonean* (1848–58), which published the debates between Jewish leaders over the necessity of a union of American Jews. In 1857 Rabbi Samuel Isaacs' *Jewish Messenger* became the voice of Orthodox Judaism and called for a union of Jewish charities, while championing a Jewish free school. There were printers skilled in German type, including Henry Franks, who printed a holiday prayer book, *Mahzor mi-Kol ha-Shannah*, among other items. Isaac Bondi, rabbi of Anshe Chesed,

edited the *Hebrew Leader* from 1859 to 1874. Among the works of Jewish authors published during this period were Mordecai Noah's imaginative *Book of Yashar* and Rev. Raphall's *Post-Biblical History of the Jews*. Despite an interest in literature and the arts, few scholarly works were produced by Jews during this time. Highly skilled Jewish artisans in the tradition of Myer Myers were few, an exception being Jacob R. *Lazarus, a painter and student of Henry Inman, whose works are today in the Metropolitan Museum of Art.

Jewish education varied little from the 18th century, except that free public schools, which were Protestant in tone, were available from 1805. These schools were extensively used by the Jewish population, especially after they came under governmental control in 1842, slowly gave up sectarianism, and greatly expanded, thus lessening the demand for synagogue day schools. In 1842 Rabbi Samuel Isaacs of Bnai Jeshurun converted an afternoon school to the New York Talmud Torah and Hebrew Institute. It lasted until 1847. Other congregations such as Anshe Chesed and Rodeph Shalom also started short-lived Hebrew and English schools. Jews generally objected to the teaching of Christian ethics and the use of Christian textbooks in public schools. Such objections helped trigger the expansion of Hebrew schools in the 1850s. Bnai Jeshurun, Temple Emanu-El, Shaarey Zedek, and Shearith Israel all started parochial day schools combining secular and religious education. By 1854 there were seven such schools but there was great debate over their necessity. As in the colonial period, the education of Jewish girls was not considered too important; they were either sent to public schools or taught by private tutors. A few unsuccessful attempts were made to establish institutions of higher education. Sampson Simson organized the Jewish Theological Seminary and Scientific Institution, but there was little else. Jews of New York did not support Isaac Wise's Zion Collegiate Institute in Cincinnati and little was done for Samuel M. Isaacs' Hebrew high school founded in the 1850s.

Several world events stirred the community. The *Mortara case in Italy in 1859, in which a Jewish boy was converted to Christianity despite family objections, led S.M. Isaacs to form the *Board of Delegates of the American Israelites; it was intended to protect and secure civil and religious rights of Jews in the U.S. and abroad. An earlier episode, the *Damascus Affair (an accusation of ritual murder against the Jews of Damascus), led to several mass meetings in 1840 calling for President Van Buren to protest this accusation.

There was tremendous diversity to Jewish business interests during this period. Generally, however, the latter centered on small retail shops and small handicraft businesses. Some Jews held posts in civil service, generally of a minor nature, an exception being Albert *Cardozo, justice of the Supreme Court of New York. There were a few men of prominence in business. Hayman *Levy, one of the largest fur traders in the colonies, employed John Jacob Astor in his business after the Revolution. Another was Eli Hart, who was in the wheat and flour business. Daniel Jackson was a noted broker and banker.

Bernhard *Hart was honorary secretary of the New York Stock Exchange from 1831 to 1853. August *Belmont represented Rothschild interests in New York after he replaced Joseph L. and J. Josephs in 1836.

CIVIL WAR. The Civil War found the Jewish community, like the rest of the country, divided over slavery. New York City in many ways resembled a Southern city. Though slavery was prohibited after 1827, schools and theaters were segregated. Many Jews, including members of the Manumission Society of New York City, had freed their slaves, others retained them until forced to set them free. Mordecai M. Noah supported the pro-slavery position, as did Dr. Morris J. Raphall, who observed that the Ten Commandments condoned slavery. This position was attacked by Michael *Heilprin, writing in the *Tribune*, and he was joined by Rev. Samuel M. Isaacs as well as many others. With the start of the war the Jewish response was overwhelmingly in favor of the Union. On April 20, 1861, Joseph *Seligman was vice president of a Union meeting held at Union Square. His firm, J. and J. Seligman & Co., sold federal bonds in the astonishing sum of \$200,000,000. Although Jews enlisted quickly, there was strong anti-Jewish bias in the army. At first Jewish chaplains were not permitted to serve, but Samuel M. Isaacs and his son Myer were among the leaders of the successful struggle to change the restrictive terms of the law. Jewish soldiers were dispersed throughout the army, and there were few Jewish enclaves, except for Company D of the 8th, New York, National Guard.

Jews also supported the war effort by aiding the United States Sanitary Commission, and held numerous Purim balls or Feasts of Esther to help the sick and wounded. Shearith Israel, Anshe Chesed, and Temple Emanu-El were in the forefront of the effort to raise money for the war effort. The 1864 Sanitary Fair in New York, the largest held during the war, found Benjamin Nathan and Moses Lazarus on the executive committee and Moses Schloss and Lewis May on the general committee. The Jews Hospital opened its wards to the wounded and between 1862 and 1865 treated hundreds of soldiers of all faiths. Judge Albert Cardozo and Col. E.B. Hart were on the Advisory Committee of the New York State Soldiers Committee. By the end of the war the Jewish community was numerous, well-represented, and established. It had prepared the ground for future, more massive immigration. Newcomers after 1865 found a community with a history and a background of accomplishment that proved receptive to them.

[Leo Hershkovitz]

1870–1920

MIGRATION AND POPULATION GROWTH. Beginning in the 1870s and continuing for half a century, the great migration from Eastern Europe radically altered the demography, social structure, cultural life, and communal order of New York Jewry. During this period more than a million Jews settled in the city. They were overwhelmingly Yiddish-speaking and impoverished, the products of intensive, insular Jewish life and

wretched economic conditions. Meeting the harsh problems of economic survival, social integration, and the maintenance of the ethnic heritage required vast physical, emotional, and intellectual efforts.

On their arrival in the city the East European Jews (commonly called Russian Jews) found a Jewish settlement dominated by a group strikingly different in cultural background, social standing, and communal outlook. By the 1870s this older settlement had become, with some important exceptions, middle class in outlook, mercantile in its economic base, and Reform Jewish in group identity. Successfully integrated in the economic life of the city and well advanced in its acculturation to the larger society, the established community drew its leadership from a socially homogenous elite of bankers, merchant princes, brokers, and manufacturers. The two groups – the prosperous and Americanized “uptown Jews” and the alien and plebeian “downtown Jews” – confronted and interacted with each other, a process that significantly shaped the course of community development.

Two-thirds of the city’s Jews in 1870 were German born or children of German-born parents. Together with the smaller subgroups – descendants of the 18th-century community, clusters of English, Dutch, and Bohemian Jews, and a growing contingent of Polish Jews (who formed a distinctive subcommunity) – the Jewish population numbered 60,000, or 4% of the inhabitants of the larger city (Manhattan and Brooklyn). By 1920, New York (all five boroughs) contained approximately 1,640,000 Jews (29% of the total population), and they made up the largest ethnic group in the city. (The Italians, the second most numerous, formed 14% of the population. Their arrival in the city paralleled the Russian Jewish migration, and their initial areas of settlement adjoined the Jewish immigrant quarters.) By 1920, 45% of the Jewish population of the United States lived in New York.

As the main port of entry for immigrants, New York served as a transit point and temporary domicile. The city also attracted a portion of those who entered the country through other ports, particularly Philadelphia and Baltimore, or who came to the city after having lived inland for a time. Of all immigrant groups, Jews ranked first in their preference for New York. According to S. Joseph, 1,372,189 Jews passed through the port of New York between 1881 and 1911, of whom 73% settled in the city. The Table: Population Growth-NYC and Jews indicates the population growth of New York and of its Jewish community. (The statistical data for New York City and Brooklyn are combined for the period prior to 1898 to permit comparison with the later period. New York City in 1870 was restricted to Manhattan Island. In 1874 it annexed three western townships in the Bronx and in 1895 annexed the eastern towns. Brooklyn remained a separate city until 1898 when it consolidated with Manhattan, the Bronx, Queens, and Richmond (Staten Island) to form the present-day city. Before 1900 only scattered Jews lived in the areas that later became the boroughs of Queens and Richmond.)

New York City Population Growth and Jewish Population Growth: 1870–1920

| Year | Total Population of Greater New York | Estimated Jewish Population | Percentage of Jews to Total Population |
|------|--------------------------------------|-----------------------------|--|
| 1870 | 1,363,213 | 60,000 | 4% |
| 1880 | 1,912,698 | 80,000 | 4% |
| 1890 | 2,507,414 | 225,000 | 9% |
| 1900 | 3,437,202 | 580,000 | 11% |
| 1910 | 4,766,883 | 1,100,000 | 23% |
| 1920 | 5,620,048 | 1,643,000 | 29% |

Population dispersion within the city accompanied this growth (See Table: New York - Population Growth). In 1870 nearly two-thirds of the inhabitants of Greater New York resided in Manhattan. Fifty years later Manhattan's population had grown two and a half times, but it contained only two-fifths of the city's inhabitants. During this period Brooklyn's population multiplied fourfold, the Bronx's fifteenfold, Queens' ninefold, and Richmond's threefold. Queens and Richmond, still the most thinly inhabited areas of the city, had a density per acre of 6.1 and 3.2 persons, respectively, compared with 27.6 for the Bronx, 39.5 for Brooklyn, and 160 for Manhattan. On Manhattan's Lower East Side – bounded by Catherine Street, the Bowery, Third Avenue, 14th Street, and the East River – the population numbered 415,000 in 1920, a decline from a peak of 540,000 in 1910. At the height of its congestion, one-fourth of Manhattan's residents occupied one-twentieth of the island's space, an area of 1.5 sq. mi. For most of 50 years these East Side blocks, already overcrowded in 1870, were the reception center for the flood of Russian Jewish immigration. Only after 1900, when the immigrants themselves established new neighborhoods in areas like Harlem and Brownsville in Brooklyn, did some newcomers go directly there, bypassing the Lower East Side.

New York by Borough: Population Growth by Boroughs, 1880–1920, and Jewish Population by Boroughs in 1920

| | 1880 | 1910 | 1920 | Jewish Population 1920 (est.) | Percentage of Jews to Pop. 1920 |
|-----------|-----------|-----------|-----------|-------------------------------|---------------------------------|
| Manhattan | 1,164,673 | 2,331,542 | 2,284,103 | 657,101 | 28.8 |
| The Bronx | 51,980 | 430,980 | 732,016 | 278,169 | 38.0 |
| Brooklyn | 599,495 | 1,643,351 | 2,018,356 | 604,380 | 29.9 |
| Queens | 56,559 | 284,041 | 469,042 | 86,194 | 18.4 |
| Richmond | 38,991 | 85,969 | 116,531 | 17,168 | 14.7 |
| Total | 1,912,698 | 4,766,883 | 5,620,048 | 1,643,012 | 29.2 |

The Jews constituted the most conspicuous element in this dual phenomenon of rising congestion and rapid dispersion. In 1870 the less affluent, and those whose occupations required it, lived in the southern wards of the Lower East Side along the axis of East Broadway. Germans, Irish, and native Americans constituted a majority of the district's population.

The northern tier of wards, stretching from Rivington to 14th streets, were heavily populated by Germans. Two-story frame houses were the prevailing type of residence, though many of these had already been converted to multiple-family use. By 1890, with Russian Jews pouring in, the great majority of the earlier inhabitants, including the German Jews, left the 80 square blocks of the southern wards. Ten years later they were in the process of abandoning the entire region below 14th Street to the rising tide of Jewish immigrants. The characteristic type of residency in the enlarged Jewish quarter was now the double-decker or "dumbbell" tenement. (The dumbbell shape met an 1879 municipal regulation requiring an air-shaft between contiguously built tenements.) These tenements were five to eight stories in height, they occupied 75 to 90% of a plot 25 feet wide and 100 feet deep, and each floor contained four apartments – a total of 14 rooms, of which only one in each apartment received air and light from the street or from a cramped backyard. The most congested area was the tenth ward, the heart of the Jewish East Side. In the 46 blocks between Division, Clinton, Rivington, and Chrystie Streets that made up the ward (an area of 106 acres), there were 1,196 tenements in 1893. The population was 74,401, a density of 701.9 persons an acre.

The German Jews who left the Lower East Side in this population displacement joined their more prosperous brethren, who had moved halfway up the east side of Manhattan in the years following the Civil War. They settled between 50th and 90th Streets, a region that included the beginnings of Yorkville with its heavy concentration of Germans. Smaller contingents settled farther north in the upper-class neighborhood of Harlem, north of Central Park, and scattered numbers reached the zone of well-situated brownstone homes west of Central Park.

The relocation of synagogues and the establishment of other Jewish institutions underscored this process of removal and social differentiation: the geographical division, in short, of the Jewish populace into "uptown" and "downtown." As early as 1860 the venerable Shearith Israel moved from Crosby Street, in a rapidly declining downtown area, to 19th Street near Fifth Avenue. In 1897 it moved to Central Park West and 70th Street, its present site. (Shaarey Tefillah, the first congregation on the Upper West Side, erected its synagogue on West 82nd Street four years earlier.) Temple Emanu-El, the leading Reform congregation in the city, moved from East 12th Street to Fifth Avenue and 43rd Street, where the congregation in 1868 consecrated an impressive Moorish-style edifice. In 1872 Ahavath Chesed occupied its fourth site in its 26-year existence when it moved to Lexington Avenue and 55th Street (known as the Central Synagogue, this is the oldest building in continuous use as a synagogue in New York). A year later Anshe Chesed left downtown Norfolk Street for Lexington Avenue and 63rd Street. Soon after, it consolidated with Adas Jeshurun to form Temple Beth El, which in 1891 moved to Fifth Avenue and 76th Street. Though Bnai Jeshurun, the oldest Ashkenazi congregation in the city, eventually moved to the West Side,

it, too, belonged to the mainstream migration to the mid-East Side. In 1865 it occupied a newly completed house of worship, its third, on 34th Street and Broadway. It migrated further uptown to Madison Avenue and 65th Street in 1884. In 1918 the congregation moved to its present synagogue on West 88th Street near West End Avenue.

Also located in the mid-East Side area were a number of private clubs that catered to the social needs of the wealthier Jewish businessmen: Criterion, Fidelio, Freundschaft, Lotus, Progress, and the prestigious Harmonie, the club of the German-Jewish elite. Harmonie occupied its own building on 42nd Street west of Fifth Avenue from 1867 to 1912, when it moved to 4 East 60th Street. In 1872 uptown Jews transferred one of their most esteemed philanthropic institutions, Mount Sinai Hospital, to 67th Street and Lexington Avenue. By the turn of the century additional institutions supported by the older community were operating in the area. The Baron de Hirsch Trade School on East 64th Street, the Clara de Hirsch Home for Working Girls on East 63rd Street, and the Young Men's Hebrew Association (YMHA) at Lexington and 92nd Street were the most prominent. Fourteen synagogues served the growing Yorkville settlement, half of them Reform or Conservative. They occupied spacious buildings – Beth El seated 2,400 and Emanu-El 1,600 – and congregants had average annual incomes that ranged from Bnai Jeshurun's \$20,000 to Emanu-El's \$46,000. The Orthodox congregations mainly served a Central European group, though affluent East European Jews were moving into the area and joining them. Zichron Ephraim, organized in 1889 and located on 67th Street near Lexington Avenue, was the wealthiest. Its rabbi was New York-born and had received his university and rabbinical training in Germany and the U.S.

The Jewish settlement in Harlem developed along broadly parallel lines, though with some differences. It grew more slowly at the start. Less accessible to the center of the city – hence beyond the reach of most middle-class families – Harlem became a residential suburb for the wealthy. In 1874, when Temple Israel was established, it was the sole congregation in Harlem. Fourteen years later, when it dedicated its new synagogue on Fifth Avenue and 125th Street, three other small congregations were serving the community as well. By 1900 the number of permanent synagogues had grown to 13. Significantly, four of these had been founded by East European Jews, a sign that the movement of Russian Jews from the Lower East Side to Harlem was already well under way.

The immigrant influx inspired the poet Emma Lazarus in 1883 to compose *The New Colossus*, a paean to the future Americans. The famous sonnet echoes many of the conflicting identities and ideals swirling around the new arrivals. The compassion of the lines “huddled masses yearning to breathe free” welcomes the tired immigrants, but the following image of the “wretched refuse of your teaming shore” hints at the condescension these refugees were to suffer. These tensions, between ancient and modern, Jew and American, freedom and oppression, give Lazarus' work meaning and power. The

sonnet was engraved on a plaque and placed in the pedestal of the Statue of Liberty in 1903, 16 years after her death.

The completion of the first elevated railway in the late 1870s inaugurated a new age of transit, opening cheap, semi-rural land to intensive urban development. Along a network of expanding elevated and subway routes, Russian Jewish immigrants moved out of the downtown quarter in two great streams: north to Harlem and then to the Bronx, and southeast across the East River to Brooklyn's Williamsburg and Brownsville. By the 1880s three elevated lines were running the length of Manhattan. In 1904 the first subway was completed. One route extended to the tip of Manhattan and opened the West Side and Washington Heights to mass settlement. A branch ran through Harlem and even before its completion brought a wave of construction to peripheral areas. The subway placed sections of the Bronx within the reach of families of modest means. In like manner the transit net spread to Brooklyn. The barrier of the East River was first breached in 1883 with the completion of the Brooklyn Bridge. The Williamsburg Bridge (1903) and the Manhattan Bridge (1909) and subway tunnels under the river vastly improved interborough transportation. A construction boom in multi-family dwellings marked the years 1904–07. In 1914 and 1915 twice as many apartment units were built in Brooklyn as in Manhattan, a ratio that held into the 1920s, when additional subway facilities were completed.

Though transportation and moderate rents were essential for geographic mobility, rising expectations and economic progress were no less significant. The physical conditions the new immigrant encountered were tolerable while he made his initial adjustment and saved to bring the family that was left behind. With this achieved, the Jewish immigrant family looked beyond the immigrant quarter. Improved housing and environmental conditions, particularly as they might affect the young, were the predominant motives in a family's calculations (new neighborhood housing was superior because of the more stringent municipal regulations under which it was built). For the working class, moreover, the Lower East Side was losing its “walk to work” advantage. By 1910 the main immigrant area of employment – the clothing industry – was moving to the West Side between 14th and 23rd Streets (during the 1920s its center reached the Pennsylvania Station district). This development reflected the decreasing role of the sweatshop. Once the tenement-flat sweatshop, based as it was on cheap labor drawn from the neighborhood, was restricted or eliminated, a major feature that had attracted newly arrived Jewish immigrants to the Lower East Side disappeared. The gradual elimination of the sweatshop belonged to a general improvement in labor conditions beginning after 1900, when municipal housing regulations began having some effect over the worst abuses in the tenement sweatshops, and was especially marked in the 1910s, owing to the new militancy and effectiveness of the labor unions (see below). A shorter work week and higher wages created the margin in time and money needed to leave downtown for more congenial surroundings. In many cases the move became possible, or was hastened,

when children became old enough to add to family earnings. A study of pensioned clothing workers shows that 88% of the Russian Jews left the Lower East Side after residing in the area, on the average, for 15 years. In all likelihood those who became entrepreneurs lived on the Lower East Side for a briefer time. Indeed, between 1910 and 1915 the population of the Lower East Side declined by 14% and between 1915 and 1920 by a further 11%.

The most graphic instance of the growth of a new area of settlement is the case of the Brownsville-New Lots district of Brooklyn. A small group of Jews of German origin had settled in the village of New Lots. Only in 1885, however, did they establish a synagogue, Bikur Cholim (Temple Sinai). In 1886 real-estate promoters began dividing the farmland into lots for sale, and between 1890 and 1900 the Jewish population increased from less than 3,000 to more than 15,000. Five years later it had passed 49,000, and by 1916 the Brownsville-New Lots population had reached 225,490. It was served by 72 synagogues, all Orthodox.

In 1920, the primary immigrant quarter, the Lower East Side, was continuing to lose population at a rapid pace. Other areas of settlement, some of which had assumed features of the immigrant quarter, were beginning to lose population as well. Harlem was the outstanding instance. Around 1920 it passed its peak and began a steep decline as a large and culturally important Jewish neighborhood as its Jewish residents moved to the East Bronx and Washington Heights. In the Bronx, the direction was from the East Bronx and south-central region to the upper reaches of the Grand Concourse and the Tremont-Fordham areas. A similar trend occurred in Brooklyn. Though Brownsville and New Lots were still growing in 1920, the more affluent Jews were moving to leafy Eastern Parkway, Boro Park, Coney Island, and Flatbush. They were being replaced, at least in part, by a less affluent exodus from Williamsburg. By 1920 a socioeconomic hierarchy of Jewish neighborhoods had come into being.

The dispersion of Jewish population and the diversification of neighborhoods were indicators and facets of the process of acculturation.

ECONOMY. In a number of fields the Jews of New York loomed large in the economy of the city. One group of German-Jewish families played an outstanding role in revolutionizing retailing. In the decade after the Civil War, fathers and sons entered the dry goods business and transformed their establishments into great department stores, which still bear their names. Bavarian-born Benjamin *Bloomingdale and his sons Lyman and Joseph, both born in New York City, opened a dry goods store in 1872. By 1888, under the sons' direction, Bloomingdale's employed 1,000 people in its East Side emporium. On the West Side, the department store founded by Benjamin *Altman and his brother Morris expanded to the point where it required 1,600 employees. The giant in the field was R.H. Macy, which Isidore and Nathan *Straus joined in 1874, becoming the sole owners in 1887 (Oscar, a third brother,

had an interest in the business as well). Lazarus Straus and his three sons had migrated to New York from Georgia in 1865 and opened a pottery and glassware house that became the springboard to their association with Macy's. Stern's, Gimbel's, and the Brooklyn firm of Abraham and Straus (A&S) were also established during this time.

A significant number of German Jews entered investment banking. Closely knit by ethnic, social, and family bonds, they formed a recognizable group within the business community. Membership in the same temples and clubs, common philanthropic endeavors, and frequent marriages within the social set welded the group together, a fact that was important in their business dealings and led to frequent collaboration. Possessing excellent financial ties with banking interests in Europe – and especially in Germany – they were able to tap these sources for the U.S. market. Kuhn, Loeb & Company, under the leadership of Jacob H. *Schiff, was the leading house. But other firms achieved considerable standing in the financial world, including J. and J. Seligman & Co., James Speyer and Company; Goldman, Sachs & Company; Hallgarten and Company; and J.S. Bache and Company. Henry Lehman, an immigrant from Germany, had opened a small shop in Montgomery, Ala., in 1844. Two brothers joined him six years later. But the Civil War disrupted their business. When hostilities ended, the brothers moved to New York, where they helped found the Cotton Exchange. During the vigorous economic expansion of the second half of the 19th century, Lehman Brothers broadened its expertise beyond commodities brokerage to merchant banking. Building a securities trading business, they became members of the New York Stock Exchange in 1887. At the turn of the century, Lehman Brothers was a founding financier of emerging retailers like Sears, Roebuck & Company, F.W. Woolworth Company, May Department Stores, Gimbel Brothers, and R.H. Macy.

German Jews played a central role as entrepreneurs in the city's growing ready-made clothing industry. In 1888, of 241 such clothing manufacturers, 234 were owned by Jews and accounted for an annual product of \$55,000,000. The needle trade was fast becoming New York's most important industry. In 1870 the city's factories and shops produced men's clothes worth \$34,456,884. In 1900 the value of goods they produced reached \$103,220,201, and during the same period their work force rose from 17,084 to 30,272. The growth of the women's clothing branch of the industry was more spectacular. The value of goods produced rose from \$3,824,882 in 1870 to \$102,711,604 in 1900. Where 3,663 workers were employed in 1870, 44,450 were employed in 1900. In 1913 the clothing industry as a whole numbered 16,552 factories and 312,245 employees.

East European Jews began streaming into the industry in the 1880s and by 1890 were the dominant element. They nearly completely displaced the German, Irish, and English craftsmen, as well as the German-Jewish manufacturers. One estimate, made in 1912, calculated that approximately 85% of the employees in the needle trades were Jewish.

Jewish Craftsmen in New York, 1890

| | | | |
|-------------------------------|-------------------------------------|---------------------------------|-----------------------------------|
| Tailors (General) 9,595 | Tailors (Women's Coats) 2,084 | Tailors (Wholesale) 1,043 | Cigarette Manufacturers 976 |
| Haberdashers 715 | Painters 458 | Carpenters 443 | Tinsmiths 417 |
| Butchers 413 | Gold + Silver Smiths 287 | Bakers 270 | Glaziers 148 |
| Typesetters 145 | Machinists 143 | Shoemakers 83 | Musicians 67 |

The immigrant Jews entered the apparel trade in such numbers because it was close at hand, required little training, and allowed the congeniality of working with one's kind. The contracting system, which became widespread in the industry by 1890, was responsible in large measure for these conditions. Contractors, acting as middlemen, received cut goods from the merchant or manufacturer, rented shop space (or used their own tenement flat), bought or hired sewing machines, and recruited a labor force. Generally, about ten people worked in these "outside shops" (in contrast to the larger "inside shops," where the manufacturer directly employed the work force and where working conditions were better). The minute division of labor that prevailed permitted the employment of relatively unskilled labor. In the intensely competitive conditions of the time – compounded by the seasonal nature of the industry – hard-pressed contractors recurrently raised the required "task" of garments for payment. Under these circumstances the notorious sweatshops developed with their cramped quarters and long hours of work. In 1890 the journalist and social reformer Jacob Riis wrote:

The homes of the Hebrew quarter are its workshops also... You are made fully aware of [economic conditions] before you have traveled the length of a single block in any of these East Side streets, by the whirl of a thousand sewing-machines, worked at high pressure from earliest dawn till mind and muscle give out altogether. Every member of the family, from the youngest to the oldest, bears a hand, shut in the qualmy rooms, where meals are cooked and clothing washed and dried besides, the livelong day. It is not unusual to find a dozen persons – men, women, and children – at work in a single small room.

Until the turn of the century, a 70-hour work week was not uncommon.

Despite notorious abuses, the system of small shops on the Lower East Side had advantages for the new arrival. Old Country ties often played a role in the system and softened harsh conditions with an element of familiarity. Manufacturers set up fellow townsmen, *landsleit*, as contractors; contractors hired *landsleit*. Bosses who were practicing Orthodox Jews made allowances for the religious requirements of their workers. The smaller shops of the contractors, in particular, were closed on the Sabbath. Reuben Sadowsky, a large cloak manufacturer, not only closed on the Sabbath but encouraged

weekday services in his factory. The production system with its extreme specialization also had its advantages. The new immigrant could master a subspecialty commensurate with his experience – or lack of it – and his physical stamina, and do so quickly. Finally, the very competitiveness and instability of the industry provided opportunities and hope. The ascent from worker to contractor to small manufacturer, categories not far removed from one another, beckoned to the enterprising and ambitious.

Although the needle trade was the largest single employer of East European Jews, Jewish immigrants found employment in other industries as well. Approximately 20% of the cigar makers in the city in the early 1900s were Russian Jews. The building boom attracted Russian Jewish builders, who opened the way for their countrymen to enter the field as craftsmen. At first, because of limited capital and the discriminatory practices of the craft unions, Jewish building activity was limited primarily to renovating old tenements. But in 1914, for example, when the Jewish painters were finally accepted into the Brotherhood of Painters and Paperhangers, 5,000 joined the union. An Inside Iron and Bronze Workers Union, organized in 1913 under the auspices of the United Hebrew Trades, had a membership of 2,000 in 1918. Branches of the food-processing industry – like baking and the slaughtering and dressing of meat – were "Jewish industries" because of the ritual requirements of *kashrut*. One of the oldest labor unions in the Jewish quarter represented the bakers. It had 2,500 members by 1918.

The compact Jewish settlements had a broad working-class base. A survey of the most heavily populated Jewish wards of the Lower East Side conducted by the Baron de Hirsch Fund in 1890 showed that 60% of those gainfully employed were shopworkers in the needle trades, 6.9% were shopworkers in other industries, 8.2% were artisans (mainly painters, carpenters, and tinsmiths), and 23.5% were tradesmen, nearly half of these being peddlers. Except for Hebrew teachers and musicians, no other profession was listed, and the latter group accounted for but 1.4%.

By 1920, however, the occupational and class structure had changed considerably. The change was expressed in a decrease in the number of blue-collar workers, an increase in the number of college students, the rise of a professional group of notable size, the growth in the magnitude and income of the mercantile class, and the consolidation of a wealthy stratum composed primarily of clothing manufacturers and real estate entrepreneurs. Jacob Lestchinsky, the sociologist and economist, suggested that in 1916 nearly 40% of all gainfully employed Jews in New York City were garment workers, while the total employed in all manual work was more than 50%. By the turn of the century, a majority of the students at tuition-free City College was Jewish, and in 1918 the proportion of Jewish students was 78.7% of total enrollment. In the College of Dental and Oral Surgery, the comparable figure was 80.9%, while at the city's college for women, Hunter, the proportion was 38.7%. In 1907, 200 physicians, 115 pharmacists,

and 175 dentists served downtown's Jews (the number of Jewish physicians in the borough of Manhattan rose from 450 in 1897 to 1,000 in 1907). To this group of professionals, add the growing number of lawyers. Evening law school – generally a two-year course of study – enabled a younger generation to prepare for a professional career while being self-supporting. The careers of Morris *Hillquit and Meyer *London, labor lawyers and socialist leaders; Leo Sanders and Aaron J. Levy, active in Tammany politics; and Isaac A. Allen and Benjamin Koenigsberg, who were involved in Orthodox Jewish causes, indicate some of the avenues open to the young lawyers. Especially striking was the observation of Isaac M. *Rubinow, physician, economist, and statistician. Writing in 1905 he noted the growth of “Russian Jewish fortunes in New York,” many of which ranged between \$25,000 and \$200,000. “Almost every newly arrived Russian-Jewish laborer comes into contact with a Russian-Jewish employer,” he wrote, and “almost every Russian-Jewish tenement dweller must pay his exorbitant rent to a Russian-Jewish landlord.” He was alluding to such wealthy clothing manufacturers as Joseph H. Cohen, Louis Borgenicht, William Fischman, and Israel Unterberg, and to real-estate developers like Harry Fischel and Nathan Lampert. It was within this context of a “Jewish economy” that the Jewish labor movement in New York developed and made its impact. Organizing the Jewish clothing workers – the primary sphere of trade-union activity – entailed dealing with a constituency that considered its occupation temporary and was conservative in temper to a large degree. It meant negotiating with a multitude of bosses and a host of elusive contractors. However, the fact that the trade-union struggle took place in New York and in the garment industry also made it a Jewish communal affair. This had its mitigating consequences. Clothing manufacturers like Joseph Cohen and William Fischman were also leaders of the community. Downtown social workers like Henry *Moskowitz and Lillian *Wald and their uptown sponsors, Jacob Schiff and Louis *Marshall, were no less concerned with the good name of the community and the social integration of the newcomers. In the 1910s this led to a stabilization of the unions, vastly improved working conditions, and a pioneering formula of labor-industry relations. For the 20 years until the great strikes of 1909–16 the Jewish trade unions were weak and dispirited, despite occasional victories. The 1890 strike of the cloakmakers led by Joseph *Barondess was one such instance. The early success of the United Hebrew Trades was another. But ideological factionalism and seasonal apathy sapped the strength of the unions. From 1901 to 1909, the groundwork was laid, however, for the emergence of an aggressive, responsible, and socially progressive Jewish labor movement. The rising curve of immigration was drawing members and adherents of the *Bund, who were deeply committed to trade-union work. The socialist *Forward* was developing into the most widely read Yiddish daily and becoming a major educational medium for the Jewish working class. The Jewish socialist fraternal order, the Arbeiter Ring (*Workmen's Circle), was gaining strength. The “uprising of

the twenty thousand” – a strike of the waistmakers, mostly young women – in the fall of 1909 was followed by the “great revolt” of the cloakmakers a half year later. These strikes increased the numbers and the stability of the *International Ladies Garment Workers Union (ILGWU).

One tragic event in 1911, however – a fire at the Triangle Shirtwaist Company factory in lower Manhattan, in which 146 young women perished – led to sweeping changes in safety laws and gave a powerful impetus to the fledgling labor movement. The fire broke out near the end of a six-day, 52-hour workweek on the top three floors of a 10-story building. About 500 women, mostly Jewish and Italian immigrants, worked there behind locked doors making blouses. Within 15 minutes after the fire broke out, nearly 30% of the workers were killed. Firetruck ladders could reach only to the seventh floor. Firefighters held nets below, but so many women were jumping at the same time that the nets tore and did not hold them. Some rushed to the elevator shaft, hoping to escape by sliding down the cables, only to lose their grip. The owners of the business were acquitted of responsibility for the deaths, but in 1914, civil suits brought by relatives of 23 victims ended with payments of \$75 to each of the families. The fire became the most vivid symbol of the struggle for workplace safety. As outrage mounted after the fire, the ILGWU intensified its demands for safer working conditions. New York established a Bureau of Fire Investigation and over the next three years enacted 36 safety laws.

In the summer of 1912, the furriers fought their battle for recognition. From January to March 1913 nearly 150,000 struck different branches of the apparel trades, but in particular the men's clothing industry. The strike led to the founding of the Amalgamated Clothing Workers of America (ACWA). The strikes had much in common. High emotion and a deep sense of dedication marked them all. The scene of workers pouring into the streets from their shops at the appointed hour reminded the chairman of the cloakmakers' strike of the Jews leaving Egypt. Characteristic, too, was the climate of opinion: the Jewish labor movement succeeded in mobilizing broad material and moral support for the strikers both from its own ranks and from reform circles. In all instances, moreover, prominent Jewish communal leaders intervened and mediated between Russian Jewish labor leaders and Russian Jewish manufacturers. In the best-known case, the 1910 strike, Louis *Brandeis, Louis Marshall, A. Lincoln *Filene, Henry Moskowitz, Jacob Schiff, and Meyer Bloomfield became involved at one point or another in mediating the dispute. In the furriers' strike, Judah L. *Magnes, former rabbi of Temple Emanuel and chairman of the New York Kehillah, was instrumental in ending the dispute. He became permanent chairman of the conference committee of the fur industry and later chairman of the council of moderators of the men's clothing industry. Finally, in all cases, negotiations ended with some form of recognition for the union, a preferential or union shop, a smaller work week (generally 50 hours), a rise in wages, and arrangements for the continual arbitration of grievances. The latter

provision led to the creation of joint sanitation, grievance, and arbitration committees under the chairmanship of “impartial chairmen” aided by professional staffs, which supervised the enforcement of the decisions. This groundbreaking innovation in labor relations reflected a particular ethnic-economic reality and a particular Jewish group response.

COMMUNAL LIFE. In 1870 the New York Jewish community appeared to be well on its way to achieving homogeneity in form and content, directed by its Americanized element of German origin. For this group, Jewish communal life expressed itself in membership in a Reform temple, and sponsorship of Jewish welfare institutions. Lay leaders of the established community found in the institutional forms a way to maintain their Jewish identity in a manner they considered compatible with American practice. Though they drew upon Jewish communal traditions, these leaders were profoundly affected by the model of American liberal Protestantism with its emphasis on denominationalism, voluntarism, and morals rather than ritual.

By 1900 there were 14 Reform synagogues in the city: nine in Manhattan, one in the Bronx, and four in Brooklyn. In 1918 there were 16 Reform and 32 Conservative synagogues. These synagogues held services on weekends, sponsored one-day-a-week religious schools, and engaged university-trained rabbis. Their weekly sermons were reported by the leading newspapers as part of the notable sermons in the city’s houses of worship.

Among the distinguished Reform rabbis who served in New York between 1870 and 1920 were Gustave Gottheil, Joseph Silverman, Judah L. Magnes, and Hyman G. Enelow at Emanu-El, David Einhorn, Kaufmann Kohler, and Samuel Schulman at Beth El (later amalgamated with Emanu-El), Aaron Wise, and Rudolph Grossman at Rodeph Shalom, Adolf Huebsch, Alexander Kohut, and Isaac S. Moses at Ahavath Chesed (later the Central Synagogue), and Maurice H. Harris at Temple Israel of Harlem (later on the West Side). The establishment of the Free Synagogue in 1907 as a pulpit for Stephen S. Wise was a novel religious development, for its services were conducted on Sunday mornings at Carnegie Hall, and it also embarked upon a wide-ranging program of social service. Wise, who came to New York in 1907, and Magnes, who arrived in 1904, represented a new type of Jewish minister. American-bred and American-trained, they were young, excellent orators, and forceful – even daring – in espousing their causes and attracting large followings. Wise became best known for his attacks on municipal corruption and industrial conditions, while Magnes’ main efforts were directed toward cultural and social improvements within the Jewish community.

During the last third of the 19th century, the established community built a number of large and progressive philanthropic institutions: general relief agencies, hospitals, old-age homes, orphan asylums, vocational training schools, and neighborhood centers. The outlook of these institutions re-

flected the receptivity of uptown’s Jewish leaders to the social thought and patrician practices of the time. The emergence of scientific philanthropy, with its insistence on thorough investigation of the needy applicant, emphasis on economic and vocational rehabilitation, and espousal of the professionalization of welfare services, guided the policies of the older Jewish charities. So did the related sociological view of poverty that emphasized environmental factors, uplift, and “preventive work.”

The United Hebrew Charities (UHC; formed in 1874 by six philanthropic societies) was illustrative of this development. In addition to poor relief, UHC operated an employment bureau and a vocational training school, granted loans to aid families launching small businesses, and maintained a work room where women were paid while they learned one of the garment trades. Its medical department employed a physician, visiting nurses, and social workers who handled home births and consumption cases. In 1911 UHC opened a bureau to meet the problems of family desertion. The agency’s expenditures rose from \$46,000 in 1880, to \$153,000 in 1900, to \$344,000 in 1917. In 1886, 2,500 applied for assistance, and in 1900, 23,264 asked for aid. Beginning in 1901, the number of families receiving material aid decreased steadily from 8,125 to 6,014 in 1916. The vast majority were by then Russian Jewish immigrants. (As late as 1885 the largest single group of applicants were of non-East European stock.) An excerpt from a Yiddish article published in 1884 suggests the gulf that existed between the “professional methods” employed in the uptown-sponsored institutions, and the immigrant clients:

In the philanthropic institutions of our aristocratic German Jews you see beautiful offices, desks, all decorated, but strict and angry faces. Every poor man is questioned like a criminal, is looked down upon; every unfortunate suffers self-degradation and shivers like a leaf, just as if he were standing before a Russian official.

Child care was a priority. Two of the leading institutions in the city were the Hebrew Orphan Asylum at Amsterdam Avenue and 136th Street, which in 1917 had a capacity of 1,250 children and an annual budget of \$407,130, and the Hebrew Sheltering Guardian Society. The latter moved to Pleasantville, New York in 1912, where it introduced the “cottage plan,” a model program. The uptown Jews were the sponsors of Mount Sinai Hospital. In 1904 it moved to its present site, Fifth Avenue and 100th Street. By 1916 the hospital had reached a capacity of 523 beds; its dispensary treated 243,161 patients.

These institutions were served by a distinguished group of lay and professional leaders. Lee K. Frankel and Morris D. Waldman of the United Hebrew Charities, Ludwig B. Bernstein of the Hebrew Sheltering Guardian Orphan Asylum, Solomon Lowenstein of the Hebrew Orphan Asylum, and Dr. Sigismund S. Goldwater of Mount Sinai belonged to the first rank of administrators. Philanthropists like Jacob H. Schiff, Irving Lehman, Isidore Straus, and George Blumenthal were intimately connected with the routine management as well as with the financing of the Montefiore Home, the

92nd Street Young Men's Hebrew Association (YMHA), the Educational Alliance, and Mount Sinai Hospital, respectively.

The notion that philanthropic institutions should be non-sectarian clashed with a second approach, which stressed the encouragement of Jewish cultural and religious activity. Supporters of the latter position debated such fundamental issues as the meaning of Americanization, the legitimacy of preserving the Old World heritage and its secular offsprings, and the nature of inter-group relationships within the New York Jewish community. These issues found their clearest institutional expression in the work of the Educational Alliance, the largest and most influential community center on the Lower East Side. In 1889 a number of uptown societies sponsoring Jewish cultural activities on the Lower East Side amalgamated and formed the Hebrew Institute. Four years later, reorganization led to a change in name, emphasizing its nonsectarian stand by replacing Hebrew Institute with Educational Alliance. Its official scope was "of an Americanizing, educational, social, and humanizing character." In 1897 the agency's president, Isidore Straus, explained that "our work may seem sectarian... [because] we have reached chiefly Jews, but this is due to the fact that the neighborhood is inhabited principally by Jews." Nevertheless, the Alliance did recognize the background of its constituents. The library and reading room were well stocked with Yiddish, Hebrew, and Russian books and periodicals. A synagogue and a religious school were established as well. The Alliance followed on the heels of the founding of the Henry Street Settlement on the Lower East Side by Lillian D. Wald in 1893. Wald, who became one of the most influential and respected social reformers of the 20th century, began teaching health and hygiene to immigrant women. Within a decade the Settlement included a team of 20 nurses and was offering an array of innovative and effective social, recreation, and educational services. In the early 1900s, the Alliance softened its attitude toward Yiddish and Yiddish culture. Zvi H. *Masliansky's discourses became a weekly event that drew large crowds, as did guest appearances by such Yiddish literary figures as Shalom Aleichem. Orthodox Jewish leaders, however, still viewed the Alliance as a bastion of Reform Judaism located in the very heart of their quarter, while to the radical intelligentsia it represented the "uptown's" use of charity and Americanization to silence social protest. Despite the opposition, Jews took advantage of the opportunities the institution opened for them. There were English-language classes and naturalization courses for adults, preschool instruction for newly arrived immigrant children, literary and civic clubs, music classes, and a children's orchestra, drama circles, and art exhibits. The Breadwinner's College, inspired by Thomas Davidson, a physical education program, and the Aguilar Free Library added to the appeal. During the first decade of the 20th century, as many as 37,000 people went weekly to the main building and to the two branch centers. Some of those who served as key members of the staff were David Blaustein, Henry Leipziger, Paul Abelson, and Belle Moskowitz. Similar

agencies of smaller scope were the Jewish Settlement House and the Temple Emanu-El Brotherhood.

Important as uptown's welfare agencies were in aiding the immigrants, they at best complemented the communal order being created by the East European Jews. Transplanted religious institutions – synagogues, *talmud torahs*, and traditional charities – constituted a major part of that order. Mutual aid associations, fraternal orders, and benevolent societies provided other avenues of group endeavor. Finally, secular institutions spun a network of facilities, adding to the heterogeneity of Jewish life and enriching it intellectually.

In organizing their synagogues, the first and most typical communal undertaking, the immigrants mostly established congregations of *landsleit*, deriving their synagogues' names mostly from the congregants' town of origin. *Landsleit* congregations proliferated. In 1887 Moses Weinberger estimated there were 130 Orthodox congregations in New York City, by far the largest number on the Lower East Side. By 1902 the number of synagogues there had reached 254, and by 1917, 418. A 1917 study estimated that 40% of 365 congregations located in the older sections of the Lower East Side possessed traditional adult study groups, 45% free loan associations, 33% sick benefit societies, and 91% cemetery plots. Their average seating capacity was about 180. In addition, 50 to 70 "temporary" synagogues operated for the High Holidays on the East Side alone. In 1917 only 20% of the permanent congregations owned their synagogue building.

A few older synagogues gained stature as central institutions in the downtown community. They transcended the localism of *landsmanshaft*, though they still retained a regional identity. These included the Beth Hamidrash Hagadol on Norfolk Street, the Kalvarier Sons of Israel on Pike Street, the First Hungarian Congregation Ohab Zedek on Norfolk Street, and the First Roumanian Congregation Shaarei Shomayim on Rivington Street. (The Beth Hamidrash Hagadol is still located in the Norfolk Street building it acquired in 1888.) These larger synagogues were also among the minority of congregations able to support rabbis. In 1887 there were three or four East European rabbis in New York, and in 1917 the number may not have reached more than 50. Among the most prominent were Philip H. Klein of Ohab Zedek, Moses Z. Margolis of Kehillath Jeshurun of Yorkville, Shlomo E. Jaffe of Beth Hamidrash Hagadol, Simon J. Finkelstein of Oheb Shalom in Brownsville, and Gabriel Z. Margolis of Adath Israel, an East Side mutual aid and burial society. In 1917 the number of congregations in the newer centers of Russian Jewish population was: the Bronx, 35; Williamsburg, 49; and Brownsville and East New York, 70. All of New York City contained 784 permanent and 343 temporary synagogues. In 90% of them, Yiddish was the language of the sermon and of public announcements.

The plethora of small synagogues, the localism that produced them, and their constant precarious financial condition impeded their efficient operation and growth. Rivalries and vested interests compounded the situation and dogged all efforts at community collaboration. There were two signal at-

tempts at unity. In 1887 a number of Orthodox congregations federated for the purpose of creating a central religious authority to be headed by a chief rabbi. A renowned European scholar, Rabbi Jacob Joseph of Vilna, was installed as chief rabbi in 1888. The attempt failed, chiefly because of the inability of the chief rabbi and his supporting organization to establish communal regulation of *kashrut* and in the refusal of other rabbis to accept the chief rabbi's leadership. In 1902 Rabbi Joseph died in poverty. Under the auspices of the New York Kehillah (see below), a renewed effort was made from 1910 on to create an authoritative board of rabbis and to federate all Orthodox institutions in its support. Once again the supervision of *kashrut* was considered the key to its success. By bringing *kashrut* supervision directly under the purview of the board it was hoped that an assured income would be realized from the fees of supervision, which would then be used for financing neighborhood rabbinical courts, placing rabbis and other religious functionaries on the community's budget, and providing for Jewish religious education and other Orthodox needs. After early progress, the undertaking foundered. The community was too fragmented; the struggle for a livelihood too consuming; and the Old World rabbis ill equipped to provide the kind of leadership required in the complex new conditions of the U.S.

Orthodox religious education suffered as a consequence. In 1909 the first systematic study of Jewish education, by Mordecai M. Kaplan, found that three-quarters of the Jewish children of school age received no religious education at all. Of those who did, 27% supplemented their public school sessions with attendance in 468 or more improvised, ungraded, one-room private schools, the *hadarim*. The level of instruction on the whole was poor; the *hadarim* were beyond the reach of any form of communal supervision. About 20% of those receiving Jewish instruction attended the city's 24 *talmud torahs*. Since these institutions were supported by independent associations and accepted children who could not pay the tuition fee, they were in effect communal schools, supported by small contributions from over 6,000 people. The eight largest schools averaged 881 students, and were generally superior to the *hadarim*. The most auspicious endeavor to upgrade the *talmud torahs* – by means of modern textbooks, a graded curriculum, modern pedagogical methods, improved preparation and remuneration of teachers – was sponsored by the Bureau of Education of the Kehillah beginning in 1910. Dr. Samson Benderly directed the bureau and Jacob H. Schiff and his family were its chief financial supporters. Benderly encountered considerable opposition from Orthodox circles who feared the bureau's interference with the independence of the *talmud torahs* and mistrusted it because of the religious views of its lay supporters and staff. Nevertheless, in its first seven years, the bureau achieved notable results. It recruited and trained a group of young educators, popularized the notion of communal responsibility for Jewish education, established model schools, and conducted educational research. The bureau survived the demise of the Kehillah.

The year 1912 saw the beginning of the Young Israel movement. Immigrants' sons, concerned with what they viewed as the erosion of Orthodoxy, sought to combat radicalism, Reform Judaism, and indifference to the tradition by making the Orthodox service more appealing to younger worshipers. In 1915 Yeshivat Etz Chaim and the Rabbi Isaac Elchanan Theological Seminary united, and the institution began to offer a general high school education as well as yeshivah studies.

The comradeship of *landsleit* and the wish for protection in case of disability or death produced a vast network of mutual benefit societies, benevolent associations, and fraternal orders. Originally part of the congregations, they increasingly developed into separate organizations, offering some form of insurance, sick benefits, and interest-free loans, as well as cemetery rights. In 1917 there were about 1,000 such independent societies in New York with an aggregate membership of over 100,000, many of which found it financially advantageous to affiliate with a fraternal order. The largest order in New York City was the Independent Order Brith Abraham, which in 1917 had 90,000 members in 354 lodges. Various ideological movements recognized the attractiveness of the fraternal order and organized their own. The Arbeiter Ring (Workmen's Circle), appealing to workingmen in the name of socialism and insurance benefits, had 25,000 members in the city, and Zionists and Labor Zionists each had their own fraternal order.

Landsmanshaft societies too began to form federations. The Galician Jews were the first, in 1903. The Polish *landsmanshaftn* united in 1908, while the Romanian Jews were split into two federations. In 1911 the Federation of Oriental Jews was established, reflecting the increasing numbers coming from the Ottoman Empire. These were loose groupings. The unifying factor was some joint effort at overseas aid and some major philanthropic undertaking. The Galicians supported the Har Moriah Hospital, the Polish Jews Beth David Hospital, and the Bessarabians the Hebrew National Orphan Home.

This concern for self-help and for one's own welfare agency also produced central institutions that came to be identified with the city's East European Jewish subcommunity as a whole, of which the Hebrew Sheltering and Immigrant Aid Society (HIAS) was perhaps the most prominent. Beginning in 1909, when two older organizations merged to create it, HIAS expanded rapidly and succeeded in winning broad support in the immigrant community. Beth Israel Hospital, organized in 1890, was an instance of a downtown welfare facility whose standing became comparable to the older community institutions. It was founded in 1890 to provide services like kosher food and places for physicians of East European origin, neither of which were available at Mount Sinai Hospital. By 1917 it had 130 beds and a budget of \$155,000. One of the most respected community-wide bodies was the Hebrew Free Loan Society, established in 1892. By 1916 it had branches in the Bronx and in Brooklyn, and had granted 24,330 loans, aggregating \$711,940.

During the first decade of the century, influential leaders became increasingly aware of the social costs of institutional parochialism, profusion, and confusion. The sharp rise in immigration following 1903 underscored the need for more rational use of the resources and communal wealth. Uptown Jews, marginally identified with the total Jewish community, sought better ways to stem the social disorganization they sensed in the Jewish quarter and to expedite the integration of the immigrants. Some downtown leaders recognized the ineffectualness of their own institutions. In both sectors of the community some viewed with alarm the alienation of the younger generation from Judaism and Jewish life.

These concerns had led to two seminal events. The first was the short-lived New York Kehillah, an attempt to create a united community structure. The immediate catalyst was the accusation of police commissioner Theodore A. Bingham in 1908 that 50% of the criminals in the city were Jews. (Though the figure was exaggerated, crime in the Jewish quarter was a vexing problem.) Led by Judah *Magnes, a coalition of representative leaders in 1909 established the Kehillah as a federation of Jewish organizations. Magnes served as chairman until its demise in 1922. The Kehillah created a number of bureaus, for education, social morals (dealing with crime), industry (concerned with labor relations), and philanthropy. In addition, it organized a rabbinical board and a school for training communal workers. The Kehillah's productive years, however, were brief. By 1916 it had encountered financial problems, which led to the separation of its bureaus. Ties to the elitist American Jewish Committee drew it into controversies over the establishment of an American Jewish congress. During World War I interest was diverted to overseas relief and international Jewish affairs, while Magnes' pacifist activity crippled his effectiveness as chairman and adversely affected the Kehillah. These factors made it impossible to overcome the fragmented state of organized Jewish life. Though a number of the activities the Kehillah initiated proved to be of lasting significance, its failure pointed to the impediments that lay on the path of community organization. No similar attempt would be made again.

The establishment in 1917 of the Federation for the Support of Jewish Philanthropies, far more limited in scope than the Kehillah, proved more lasting. The federation movement to coordinate fund raising and encourage communal planning came late to New York, and from the early 1900s it encountered the opposition of the older philanthropic institutions sponsored by the German Jews, who feared it might impinge upon their independence. Some, moreover, objected to a federation of Jewish charities since such a grouping cast the pall of sectarianism upon their welfare agencies. However, the proliferation of East European institutions, the failure of the Kehillah as a device of social control, and the consequent threat to their own hegemony softened their opposition to federation.

As in other cities, the New York federation encompassed the larger welfare bodies and was therefore overwhelmingly

a federation of the German-Jewish philanthropies primarily interested in nonsectarian social welfare work. Of the original trustees of the federation only three were East European; of 54 constituent societies, four belonged to the East European community. A smaller Brooklyn Federation of Jewish Charities was established in 1909. Its 1917 budget was \$174,000 compared to the New York federation's budget of \$2,117,410.

There were signs, however, that the New York federation might develop into more than a central fund-raising agency. Soon after its establishment, under the pressure of the group that had supported the Kehillah, the federation accepted five *talmud torahs* and the Kehillah's Bureau of Jewish Education as beneficiary agencies. This implied that the federation would concern itself not only with the relief of distress but with the support of Jewish cultural endeavor. Jewish education was to become a responsibility of the Jewish community's exchequer. The federation also indicated in its first year that it expected to become the spokesman of the entire community. But the statements proved little more than declarations of intention.

After 1900 Zionism and Socialism played, with varying success, many-sided roles in the organizational and cultural life of the New York Jewish community. In institutional terms, the Zionist achievements were minimal. The Federation of American Zionists, the Order Sons of Zion, Mizrachi, Po'alei Zion, the Jewish National Workers Alliance, Hadassah, and the Intercollegiate Zionist Association in 1917 numbered about 8,500 members who belonged to 95 loosely organized chapters. The influence of Zionism, however, went beyond membership figures. Much of the interest in Hebrew culture, Jewish education, and community planning stemmed from Zionist circles. Up to World War I the cultural Zionists who emphasized the need to revitalize Jewish cultural life in the Diaspora predominated. Judah Magnes, Israel Friedlaender, Henrietta Szold, and Mordecai Kaplan gave vigorous expression to this position from the lecture podium, in the press, and as professional and lay leaders of Jewish institutions. The socialist Po'alei Zion was similarly short on numbers and organizational success but strong on ideology and polemics. It constituted an intellectual force of significance at a time when the leadership of the Jewish labor movement was largely cosmopolitan and assimilationist in outlook. Following the outbreak of World War I, Zionists of all shades vastly increased their influence in the community through the Jewish congress movement. In June 1917, 125,000 participated in the election of delegates from New York City. The 100 delegates elected to represent New York's Jews were overwhelmingly of East European origin, the majority sympathizers of Zionism.

The Socialists, through the Workmen's Circle (Arbeiter Ring), possessed a stronger organizational framework than the Zionists. The order's 240 New York lodges and 25,000 members made it in 1917 the second-largest fraternal order in the city. Though the Workmen's Circle drew its membership from the Yiddish-speaking immigrants, it did not consciously identify itself with the Jewish community as a whole until World War I. During the war years Jewish Socialists began partici-

pating in Jewish communal affairs. The Workmen's Circle, Jewish labor unions, and the Jewish Socialist Federation (12 branches in New York) were active in the local fund-raising campaigns for overseas relief. They also joined the American Jewish congress movement, and the Workmen's Circle in a principal policy change that undertook direct support of Jewish cultural activity like Yiddish schools.

CULTURAL LIFE. The Yiddish-speaking masses who settled in New York created a rich and varied cultural life. No less than the community's institutional structure, this life aided the newcomers in their adjustment to the great metropolis. The very size of the immigrant community, its compactness and heterogeneity, and the impact of the new condition of freedom encouraged a multiplicity of cultural undertakings. Between 1872 and 1917, for example, about 150 journals in Yiddish appeared. Ideologues, literati, artists, and entrepreneurs competed in offering guidance, information, entertainment, and psychic relief for a generation in the throes of accommodation to a strange civilization.

The Yiddish-language daily press in particular served these ends (see *Press, Jewish, in U.S.A.). By the early 1900s, four stable dailies had evolved: the Orthodox and Zionist *Tageblat*; the **Jewish Morning Journal*, Orthodox, conservative on social issues, and anti-Zionist; the radical and nationalistic *Warheit*; and the socialist **Forward*. In 1914 the **Tog*, pro-Zionist and liberal, was established; it absorbed the *Warheit* in 1919. The estimated daily circulation for New York City in 1916 was: *Forward* (149,170), *Jewish Morning Journal* (81,375), *Warheit Tageblat* (41,335). It was estimated in 1917 that nearly 600,000 people in New York City read the Yiddish newspapers daily. Besides the staple of general and Jewish news the papers contained serialized novels, literary criticism, political essays, and a woman's page. The *Forward* created the *Bintl Brief* column of personal woe and editorial advice. It was so successful that it inspired imitators in other papers. Editorials were slashing and polemical, frequently dealing with municipal problems and local Jewish affairs. The considerable advertising included notices of theaters, cantorial performances, books published, medicine and health aids, and, in the *Jewish Morning Journal*, want-ads. The *Forward*, in particular, sponsored communal undertakings like theater benefits and other fund-raisers.

The functions of the Yiddish press made its publishers and editors major communal leaders. Jacob Saphirstein of the *Jewish Morning Journal* was deeply involved in rabbinical politics. Leon Kamaiky, a proprietor of the *Tageblat*, was a vice president of the Hebrew Sheltering and Immigrant Aid Society and a member of the American Jewish Committee and the executive committee of the Kehillah. *Forward* editor Abraham Cahan's position in the Jewish labor movement was less formal but more powerful. Indeed, the preeminent place of the Yiddish press and its editors was recognized uptown. In 1902 Louis Marshall established the *Yiddishe Velt* in an effort to assert his group's influence. The initiative that led

to the establishment of the *Tog* in 1914 came from the same circles and for the same reasons.

The role of the Yiddish press found its fullest expression in the *Forward*. Cahan was the great innovator and his paper the pacemaker of Yiddish journalism. His apprenticeship as a reporter for the New York *Commercial Advertiser* under Lincoln Steffens served him well in turning the *Forward* into the leading Yiddish daily. The simple, direct style of the paper, its humanistic, undogmatic brand of socialism and its eschewal of the Orthodox-baiting of earlier socialist journals won it great popularity. Cahan appealed to highbrow no less than lowbrow tastes, and side by side with the *Bintl Brief* he published virtually every Yiddish author of note. From 1912 the *Forward* occupied its own ten-story building on East Broadway, close to the Educational Alliance. The United Hebrew Trades, the Jewish Socialist Federation, and the Arbeiter Ring (Workmen's Circle) had their offices in the building. The *Forward* was the focal center of the Jewish labor movement, a powerful cultural factor in the community, and thus had become a force for Jewish group continuity. Yiddish was so ubiquitous that when Shalom Aleichem, the great storyteller, died in 1916, his funeral was one of the largest public events in New York history.

Weeklies and monthlies filled out the broad range of ideas, movements, and professional interests of the New York community. Some, like the *Amerikaner* and the *Idishe Gazetten*, were weekly family supplements of existing newspapers. The anarchist *Freie Arbeiter Stimme*, the Zionist *Idishe Folk*, and the socialist *Zukunft* were representative of the literary and political journals sponsored by the various ideological camps. More local in their interests were journals published by the trade unions: the *Fortschritt* of the Amalgamated Clothing Workers of America and *Naye Post* of the Joint Board of the Cloak and Skirt Makers Union. Catering to small audiences were the Hebrew journals *Ha-Ivri* and *Ha-Toren*, and the Ladino *La America* (see Hebrew *Newspapers, N. America). The Yiddish journals and dailies drew to New York and sustained a significant colony of intellectuals, writers, poets, and critics whose work was read in the press and discussed in the lecture halls and coffeehouses of the East Side.

The Yiddish theater reinforced the press. It was, Moses Rischin wrote, "educator, dreammaker, chief agent of charity, social center, and recreation hub for the family." Melodrama and romantic musicals depicted historical and topical events drawn from the classic Jewish past, the "old home," immigrant life in the New World, and current American affairs. Nearly all weekday performances were benefits raising funds for some charity, strike fund, or literary journal. About 1900, three theaters were devoted exclusively to Yiddish drama. Together with other houses giving occasional performances, they drew about 25,000 patrons a week. By 1917 the number of houses presenting Yiddish theater reached seven, including one in Harlem and one in Brownsville.

Jewish immigrant life in New York inspired some of the earliest belles-lettres by Jews in English, notably Cahan's *Yekl* (1896) and *The Rise of David Levinsky* (1917). For most sec-

ond-generation American Jews, Yiddish literature was a closed book, and Jewish themes in the language of the land were of peripheral interest. The Anglo-Jewish weekly *The American Hebrew* supplied the older settlement with a resume of Jewish news and social happenings. Its circulation was less than 10,000.

POLITICS AND CIVIC AFFAIRS. For Jews, as for all minority groups, election to public office meant social recognition and acceptance into the body politic of the city. Before the 1900s the number of Jewish officeholders was small, their posts for the most part minor, their ethnic identity an insignificant factor, and their political careers brief. Three Jewish congressmen were elected in New York City between 1870 and 1899, and all served but one term; the most prominent was Isidore Straus. Considerably more served in the state legislature. Among them was Joseph Blumenthal, who was a member of the Committee of Seventy, which played a role in the downfall of the Tweed Ring. Joseph Seligman and Simon Sterne were other members of that reform group. Blumenthal was a trustee and president of Shearith Israel and from 1886 to 1901 president of the board of trustees of the Jewish Theological Seminary. In municipal government Adolph L. Sanger, elected in 1885 as an anti-Tammany Democrat, served as president of the Board of Aldermen for one term. He, too, was active in Jewish communal affairs, serving at different times as president of the Board of Delegates of American Israelites and vice president of the Union of American Hebrew Congregations. In the 1890s Edward Lauterbach, a specialist in railway law and a director of a number of street railways, served for three years as chairman of the Republican County Committee. Lauterbach was a director of the Hebrew Benevolent and Orphan Asylum and the Hebrew Technical Institute. Jews held minor judgeships prior to 1900, and only one, Albert Cardozo, served on the state Supreme Court. In 1871, in the wake of the Tweed scandals, Cardozo resigned to avoid impeachment (his son was Benjamin Nathan *Cardozo, on the Court of Appeals from 1914 until his elevation to the U.S. Supreme Court in 1932).

In the years following 1900 the densely populated Jewish neighborhoods and the rising political awareness of the immigrants carried increasing political weight. That a number of assembly districts and several congressional districts had Jewish majorities or pluralities was reflected in the ethnic origin of the candidates, the particular issues raised, and the language of the campaigns. The number of Jewish voters was large enough to influence the outcome of city-wide elections. Though uptown Jews denied it, a "Jewish vote" existed. It was not prone to act en bloc, but nevertheless responded to group interests and ethnic pride and was unafraid to demand its political due.

Jews came of age as a political force during the domination of the Tammany Hall political machine. Led by astute and, if need be, ruthless politicians, Tammany offered a host of services in return for votes, and some of its leaders were attuned to the moods and needs of their Jewish constituents. Although

a lag existed between Jewish numbers and numbers of Jewish officeholders, Tammany was sensitive to ethnic ambitions. In 1900 Henry M. Goldfogle went to Congress as representative of the Lower East Side, serving until 1921 with the exception of two terms. By 1910 Aaron J. Levy and Moritz Graubard were entrenched as East Side assemblymen, and Jews received 5 to 8% of the mayor's top appointments.

Support of Tammany was not, however, monolithic, particularly in mayoral and presidential campaigns. Anti-Tammany forces recognized this, and when mounting major reform campaigns, paid particular attention to the Jewish immigrant neighborhoods. In 1901, for example, the Fusion ticket flooded the Jewish districts with Yiddish circulars. Seth Low and William Travers Jerome were elected mayor and attorney general, respectively. Jacob A. Cantor, who had fought for tenement house reform as an assemblyman in the 1880s, was elected borough president of Manhattan as a Reform Democrat. The publisher William Randolph Hearst, in his effort to defeat the Tammany candidate for mayor in 1905, carried the Jewish East Side. His *New York American* had featured stories of Russian barbarism and solicited funds for the relief of pogrom victims. Hearst even launched a Yiddish newspaper for a time. John P. Mitchel, elected mayor in 1913 on a Fusion anti-Tammany ticket, won broad support in the Jewish districts. Henry Moskowitz, head of the Madison House Settlement and a native downtown reformer, became Mitchel's commissioner of Civil Service. The downtown voters exhibited similar independence in presidential elections. From 1888 to 1912 no party carried the Eighth Assembly District, heart of the Jewish quarter, twice in succession. However, Theodore Roosevelt, a Republican, was a particular favorite.

Among the uptown Jews a group of patrician "good government" reformers emerged who helped finance these repeated efforts to dislodge Tammany. Among them were men like Nathan and Oscar *Straus, who belonged to the Grover Cleveland wing of the Democratic Party, and liberal Republicans like Jacob Schiff, Isaac N. *Seligman, and Adolph *Lewisohn. They assumed a particular responsibility for wooing their downtown brethren away from the "twin evils" of Tammany and socialism by supporting the reform candidates in their East Side campaigns.

Socialism indeed had a significant political following in the Jewish immigrant districts. On the Lower East Side the Socialists could count on a straight party vote of about 15%, and in some Jewish election districts in Brooklyn and the Bronx it may have been even higher. However, only when the party offered a candidate able and willing to appeal to the particular interest and ethnic sentiment of the East European Jew did it win at election time. In 1914 it sent Meyer London to Congress, the first socialist elected to the House of Representatives and the first elected socialist for any office from New York City. London, a lawyer for a score of Jewish labor unions, lived in the Jewish quarter, and thus spoke the language of the immigrant. He eschewed party dogma. Reelected in 1916, he won a third term in 1920 despite the fact that his party was then

in complete disarray. Of special interest were the elections of 1917. Morris Hillquit, the outstanding figure in the Socialist Party, showed remarkable strength in his bid for the mayoralty. He won 22% of the vote – twice that of the Republican candidate. Ten socialist assemblymen went to Albany, seven aldermen to City Hall, and one socialist, Jacob Panken, was elected municipal court judge. The vote reflected the strong anti-war sentiment among the East European Jews as much as it did socialist sentiment.

The war years expedited the social processes that molded a variegated and fragmented Jewish public into a more homogeneous ethnic community. The same processes integrated that community into the larger polity. War brought prosperity, which enabled families to leave overcrowded immigrant districts for a better, more “American” environment and so accelerated the process of acculturation. The war also confronted all Americans with the problem of their group identity, Americanized Jews of German origin no less than recently arrived East European Jews. Though it brought to the surface sharp tensions, the Jews of New York by 1920 could see themselves as a major group at home in the city.

[Arthur Aryeh Goren]

1920–1970

DEMOGRAPHY. Following World War I the Jewish population of New York City grew moderately to 1,765,000 in 1927 and to 2,035,000 in 1937. It tapered off around 2,100,000 in 1950, and slowly decreased as Jews moved to the suburbs of Long Island, Westchester, and New Jersey from the 1950s. By 1960 the Jewish population of the city had declined to 1,936,000, while that of the metropolitan area increased to 2,401,600, owing to the large growth in the suburban counties (see *New York State). The city’s Jewish population, which fell further to 1,836,000 by 1968, was aging as younger families moved out. The move by Jews and other middle-class whites in search of more comfortable residences and greener neighborhoods was intensified from the mid-1950s by negative developments, primarily an increase in crime and racial tensions, a loss of confidence in the public schools, a perceived inadequacy of middle-class housing, and a decline of municipal services.

No less than during immigrant years, New York Jews preferred to dwell near one another. Thus, 676,000 of Brooklyn’s 857,000 Jews in 1940 resided in areas where Jews formed 40% or more of the total population; and later, in 1958, 388,000 of the Bronx’s 493,000 Jews were similarly concentrated. Anti-Jewish discrimination in the sale and rental of housing had been effectively quashed before 1950, except for isolated instances in opulent areas of Manhattan.

Within the city’s five boroughs, Jewish population centers shifted as Jews abandoned highly congested Jewish areas and moved to more widely dispersed areas farther from the older, more centrally located neighborhoods. In 1918, 696,000 Jews (46% of the city’s total Jewish population), lived in Manhattan. Most of them were on the Lower East Side and uptown in Harlem. Masses of Jews left the Lower East Side as their eco-

nomic circumstances improved, mainly before the Depression of 1929. While 314,200 Jews lived on the Lower East Side in 1923, by 1940 only 73,700 remained. By 1960 about 70,000 Jews lived there, mainly in cooperative housing projects sponsored by Jewish-dominated trade unions, and made up 34% of the general population compared with 40% in 1930. West and East Harlem, for a time the home of wealthier immigrant Jews, had about 177,000 Jews in 1923. Immediately thereafter Harlem became a black neighborhood; fewer than 5,000 Jews remained in 1930 and in 1940, only 2,000.

Many Jews from Manhattan and other areas moved north to the more recently settled Bronx, where in 1918 they totaled about 211,000. By 1927 about 420,000 Jews lived there, primarily in its south and south-central districts, where they made up 40% and 70%, respectively, of the general population in 1925. By 1937 the Bronx Jewish population rose above 592,000, making that borough 44% Jewish. As new subway lines and apartment buildings were built, Jews moved increasingly to more northerly and less populous regions of the Bronx. The number of Jews in the South Bronx fell from 34,200 in 1923 to less than 15,000 in 1960. Tremont, in the west-central Bronx, which had 121,000 Jews (96% of its total population) in 1925, dropped to about 44,000 before the 1960s, most of whom also left the area during the decade that followed. However, nearby Fordham rose from 13,600 Jews in 1923 to 83,350 in 1930 and 103,000 in 1960, about 48% of the general population. The middle-class West Bronx Jewish population increased from 26,000 in 1923 to 142,886 in 1940. It declined to 121,000 in 1960, when it was still 65% of the general population, and this downward trend continued. The Jewish population of Pelham Parkway, in the northeast Bronx, rose from 3,000 in 1923 to 65,000 by 1960, or 48% of the general population, and continued to rise. Following the general trend toward the suburbs, Jews began leaving the Bronx in the 1950s, so that by 1968 only 395,000 Jews remained, with new concentrations in the outlying Van Cortlandt and Riverdale areas.

From the 1920s Brooklyn became the borough most heavily populated by Jews as the number rose from 568,000 in 1918 to 797,000 in 1927. In contrast to Manhattan and the Bronx, Brooklyn tended to be a borough of well-defined neighborhood communities. Jewish religious life in Brooklyn apparently was more active than in other boroughs. While the older Jewish neighborhoods in the northern and western regions of Brooklyn began to lose their large Jewish populations by the 1930s, Jews were moving outward to form vast new communities in the central, southern, and eastern sectors. Thus, Williamsburg, across the East River from Manhattan, a community in which Jews numbered 140,000 in 1923, had only 33,400 Jews in 1957, though even as its population declined, it attained some celebrity as the home of a large Hasidic colony of post-World War II immigrants from Hungary and Eastern Europe. Bedford-Stuyvesant’s 70,000 Jews in 1923 declined below 30,000 in 1957 and fell further in the 1960s as the area became a low-income African-American neighborhood. In 1925 about 250,000 Jews, or 82% of the population

of the area, lived in East New York-New Lots-Brownsville. However, only 96,000 remained in 1957, and most of those left during the 1960s as Brownsville became predominantly black. On the other hand, in central Brooklyn the number of Jews in Boro Park increased from 46,000 in 1923 to 67,000 by 1950, in Bensonhurst from 45,000 in 1923 to 85,000 by 1950, and in Flatbush from 16,400 in 1923 to 123,000 by 1950. Sheepshead Bay in southern Brooklyn had 7,100 Jews in 1923 but 48,000, or 62% of the population, by 1950. Residential, middle-income Midwood-Marine Park grew from 3,200 Jews in 1923 to 64,000 by 1957. Jews settled early in the southern Coney Island-Manhattan Beach area, which was nearly 70% Jewish in 1940 when 53,400 Jews resided there. From the 1930s Jews also began to settle the eastern Flatlands-Canarsie area, whose Jewish population rose from 4,400 in 1923 to 28,000, or 60% of the population, in 1957.

Altogether, the Jewish population of Brooklyn began to decrease, dropping from its heights of 975,000 in 1937 and 950,000 in 1950 to 760,000 in 1968. Thus Crown Heights, close to Bedford-Stuyvesant, dropped from over 75,000 in 1950 to 58,400 by 1957, and similar drops occurred after World War II in Bensonhurst and Coney Island. The heavily Jewish East New York-New Lots area, in which 106,000 Jews lived in 1923, decreased to 74,000 Jews in 1950; it rose again, however, to 90,000 by 1957 with the construction of new housing on unoccupied land. Boro Park, long a center of Orthodox Judaism, became strongly Hasidic with an influx of Williamsburg Hasidim.

The borough of Queens saw a sustained increase in its middle-to upper-middle class Jewish population, owing to its newness, relative remoteness from the center of the city, and the rapid building of large apartment-house complexes like LeFrak City and other red-brick edifices constructed by Samuel J. LeFrak and his organization. While only 23,000 Jews lived there in 1918, the Jewish population grew to 200,000 by 1950 and 420,000 by 1968. Over 200,000 Jews moved there during the 1950s and large Jewish concentrations developed in Forest Hills-Rego Park, which had over 73,000 Jews, or 66% of the general population, by 1957; the Whitestone area, which had 24,000 Jews in 1957; Central Queens, in which 51,000 Jews lived in 1957; and Douglaston-Little Neck-Bellrose, which had 31,500 Jews in 1957. About 18,200 Jews lived in the Rockaways on the shore in 1923, and nearly 30,000 lived there by 1957.

About 5,000 Jews called the little-settled, isolated borough of Richmond (Staten Island) home in 1918, and that number increased moderately. In 1950 about 8,000 Jews lived there, but by 1968, after the construction of the Verrazano-Narrows Bridge between the borough and Brooklyn, their number reached about 11,000.

The Jewish population of Manhattan declined from the 1920s. In 1937 there were 351,000 Jews on the island, while only 250,000 remained in 1968. Nevertheless, several neighborhoods increased. The number of Jews in well-to-do cosmopolitan sections of the West Side rose from 21,300 in 1923 to 71,000, or 29% of the general population, by 1957. Washington

Heights, the uptown residential area, had 31,500 Jews in 1923 but nearly 70,000 by 1957. It was the center for German Jewish refugees of the 1930s. Nearly all Manhattan Jewish neighborhoods experienced declines in the 1960s, however, except the expensive, rebuilt Upper East Side, where Jews increased from 22,000 in 1940 to 42,000 in 1958.

The movement to the suburbs raised the Jewish population of rapidly built Nassau County, across the city boundary, from unknown but small numbers before 1940 to 329,000 in 1957 and 372,000 in 1963. Many families achieved the American dream of owning their own home by obtaining low interest loans offered to veterans of World War II and by buying the low-price, mass-produced homes of William and Alfred Levitt, who created a vast Levittown (17,311 nearly identical homes built between 1947 and 1951) in Long Island. Following already established city patterns, Jews tended to dwell together in suburban centers like Great Neck and Roslyn on the North Shore of Long Island and Woodmere, Cedarhurst, Lawrence, three of the Five Towns, and Baldwin and Hempstead on the South Shore. Beyond Nassau lay Suffolk County, in which the previously negligible Jewish population reached 12,000 in 1957 and 42,000 in 1963, with significant increases thereafter.

ECONOMIC ACTIVITIES. New York Jewry formed so large a proportion of the city's population that Jewish economic habits and aptitudes broadly influenced the city's economy. Jewish labor in the garment industry, the city's foremost industry, reached its peak at about 1920. In 1921, production of men's apparel in New York City was valued at \$326,832,000, and of women's, \$759,628,000. The value of allied industries like knit goods, was put at \$83,490,000. Perhaps 200,000 Jews belonged to the trade unions of the garment industry. From this point, the proportion of Jewish workers in the clothing industry steadily declined, until in the men's clothing branch it reached 39% in 1937; the new working group was largely composed of Italian women and, later, Puerto Ricans. The same process operated in the ladies' garment industry. One large local of the ILGWU was about three-quarters Jewish in the 1940s but declined to 44% in 1958. Jews remained in the garment industry in upper levels of skill as cutters and sample makers, and also as entrepreneurs and salesmen. The city, whose Garment Center epitomized the apparel business, provided the setting for the emergence of Ralph Lauren, Calvin Klein, Anne Klein, Arnold Scaasi (Isaacs backwards), Liz Claiborne, and Donna Karan, among others, in the design and marketing of men's and women's clothing. One woman, Helena Rubinstein, virtually created the cosmetics industry. After World War I, she opened beauty salons around the country, selling pots of face creams and other products. She trained sales people to teach women skin care and devised a diet plan for beauty. An ardent supporter of Israel, she created the Helena Rubinstein Pavilion of Contemporary Art in Tel Aviv, and her foundation, created in 1953, provided funds to organizations concerned with health, medical research, and rehabilitation.

The Jewish labor movement in New York, after its heroic era of strike victories during the 1910s, was firmly established by 1920. The unions turned back attempts between 1920 and 1922 to reestablish the open shop. However, they were beset during the 1920s by violent factional quarrels with Communists. The latter derived support not only because of their tactical and propagandistic skill but also from post-World War I Jewish immigrants who entered the industry and felt somewhat excluded by the established union leadership and ideology. Communists secured control of the New York Joint Board and led it into a series of disastrous strikes culminating in 1926. The union was left in ruins and did not reestablish itself until the New Deal period. The Amalgamated was more fortunate, however, in maintaining its unity and power. A third garment union, the International Fur Workers' Union, succeeded in its trade-union objectives under Communist leadership, while the United Hat, Cap and Millinery Workers did likewise under liberal leaders.

During the 1920s the New York Jewish unions entered areas of activity never previously known to U.S. trade unions. They conducted large-scale adult education, ran health clinics, owned a bank and summer resorts, built model urban housing, and generously subsidized struggling trade unions in such other industries as steel, coal, and textiles. Except for their Communist wing, they became pioneers of liberal political action, thus preparing a place for themselves in New Deal political and legislative affairs.

The Jewish immigrant generation was heavily represented as workers – 23% “operatives and kindred” and 16% “craftsmen, foremen, and kindred” as late as 1950. The 32% who were “managers, officials, and proprietors” included a mass of shopkeepers and small businessmen. Jewish retailers were especially heavily represented in such areas as candy and stationery stores, grocery stores, hardware stores, haberdashery stores, tailor shops, and delicatessens and small restaurants. An incomplete estimate placed Jewish trade-union membership about 1928 at 134,000 of a total of 392,000 concentrated, in addition to needle and leather trades, in amusement and food preparation and distribution.

The immigrants' children, however, shifted towards sales and clerical occupations and independent business; in 1950, 55% of immigrants' sons were in these groups, and only 22% remained in traditional working-class occupations. One important channel of ascent was New York's excellent public school and college system. Jews constituted 51% of enrollment in the city's academic high schools in 1931, and 49.6% of the city's college and university students in 1935. As early as 1915 they were 85% of the student body in the city's unique free municipal college system, a percentage that probably did not decrease before 1960; others attended college outside the city. This higher education launched thousands of young Jews from poor or very modest circumstances into independent business and the professions. During the 1950s about 17% of New York Jews, including the older, immigrant group, were professionally employed.

Areas of Jewish economic activity often were clearly demarcated. Thus, the port of New York, shipping and other transportation, large banks and insurance companies, and heavy industry hardly employed any Jews. Even after the removal of discriminatory employment policies in 1945, there were few Jews in these industries. Small, independent businesses, the garment trade and light industry employed masses of Jews, and Jewish entrepreneurs could be found in those fields as well as in real estate, building, and investment banking. By the 1930s, over half the city's doctors, lawyers, dentists, and public school teachers were Jews, notwithstanding sharp anti-Jewish discrimination in certain universities and schools. After World War II, Jews became strong components of the city's mercantile and professional class, heavily represented in academic, scientific, and civil service organizations. Reflecting their occupational changes, they formed a large part of the membership and most of the leadership in unions of teachers and other public employees.

POLITICAL AND CIVIC LIFE. As the largest single ethnic group, Jews were a highly important factor in the political life of the city. Jews, who were about 27% of the city's population, were outnumbered only by the Irish-dominated Catholics, who were just over half. In no other city could Jews as a group weigh so heavily in politics, or were real or alleged Jewish political interests reckoned with so carefully. Until the 1930s the city was governed through the Manhattan organization of the Democratic Party, known as Tammany Hall, which held the support of most immigrants, including Jews. Jewish Republicans, conspicuous by their low numbers, pursued interests in civic reform, like Stanley M. Isaacs and Nathan Straus Jr., and the party's New York County leader, Samuel S. Koenig. In addition, Jews in East Harlem during the 1920s supported that district's dynamic U.S. Congressman, Fiorello H. *La Guardia, a rebel Republican. On the far left, Jews dominated the Socialists and Communists. Jews generally followed the Democratic Party, and some received the rewards of party loyalty – personal and business favors, municipal appointments, and judgeships.

The period from 1928 to 1945 witnessed far-reaching change. Jews had heavily supported Alfred E. Smith, a liberal Tammany reformer of Irish stock, in his successful campaigns for the governorship of the state and unsuccessful attempt for the presidency in 1928. The onset of the Great Depression in 1929 brought New York Jewry overwhelmingly behind the New Deal and the Democratic Party. Support for Franklin D. *Roosevelt during his presidential campaigns of 1932, 1936, 1940, and 1944 ran from 80% to 90%, higher than among any other group in the city. The urban liberalism of the New Deal had many of its seeds in the Jewish trade unions, East Side settlement houses, and among Jewish philanthropists and social workers. New York Jews were enthusiastic for the New Deal Democrat, Herbert H. *Lehman, elected to the governorship in 1932, 1934, 1936, and 1938, and the German immigrant New Deal Senator, Robert F. Wagner. La Guardia, a Republi-

can, gained the mayoralty of New York in 1933 by the votes of Italians, Jews, mostly of middle-class reform sympathies, and upper-class good-government supporters. Of Italian stock but partially Jewish in descent, and fluent in Yiddish, La Guardia's mastery of ethnic politics succeeded by 1937 in attracting the Jewish working class and left wing for his municipal version of the New Deal. During La Guardia's incumbency, from 1934 to 1946, Jews figured more prominently as city officials and political leaders. As fervent supporters simultaneously of the Protestant aristocrat Roosevelt, the Jewish banker Lehman, and the Italian commoner La Guardia, New York Jews preferred liberal, reform-minded candidates and avoided Republicans unless they significantly differed from the generally conservative habits of that party. The American Labor Party (founded in 1936) and the Liberal Party (organized in 1944), served their intended purpose of drawing voters of the left, especially Jews, to liberal or left-liberal candidates.

Following La Guardia's tenure, the major parties adopted a policy of "ethnic balance." They regarded it as necessary to nominate a Jew, Irishman, and Italian for the three city-wide electoral offices. Under the non-Jewish Democratic mayoralties from 1945 to 1966, Jews remained firmly and prominently Democratic. During most of this period, Jews were elected city-wide comptrollers (Lazarus Joseph, Abraham D. *Beame), presidents of various boroughs (Abe Stark), and to the powerful position of county surrogates as well as other local judgeships. In 1965, the reigning Democrats for the first time nominated a Jew, Beame, for the mayoralty, but largely owing to a considerable Jewish defection to John V. Lindsay, the Republican reformer, Beame lost. As the number of blacks and Puerto Ricans in the city increased, Jewish and other white influence began to decline. But Jews, well-established, assimilated, and with money to finance political campaigns, continued to be major players.

Jews and other minorities suffered widespread discrimination by the hiring practices of banks, insurance companies, large corporations, law firms, and department stores, some of which were even owned by Jews. Several private universities and professional schools also imposed stringent admissions quotas against Jews and others, but the professional schools at the city's Catholic colleges enrolled a high proportion of Jews. Social discrimination against Jews, on the other hand, was so firmly fixed that even the most notable Jews could not belong to many of the city's leading business and social clubs, some of which their grandparents in fact had helped to found. Long-continued pressure, primarily from New York City and led by Jews, resulted in the passage of the state's Fair Employment Practice Act in 1945 prohibiting discrimination in employment. It was the first such law in the U.S.

After World War II, as the Cold War gripped the nation, Jews in New York figured prominently in the signature event of that period. Julius and Ethel Rosenberg, husband and wife, and members of the Communist Party, went on trial in 1951 for conspiracy to commit espionage, specifically for transmitting nuclear weapons secrets to Russian agents. Largely based

on testimony by David Greenglass, Ethel Rosenberg's brother, the couple were convicted and sentenced to death by Federal Judge Irving Kaufman. The assistant United States attorney prosecuting the case, Roy Cohn, stated in his autobiography that he had influenced the selection of the judge and had pressed him to impose the death penalty on both defendants. Kaufman held the Rosenbergs responsible not only for espionage but also for deaths in the Korean War. The case became the center of controversy over communism in the United States, with supporters steadfastly maintaining that the convictions were an egregious example of persecution typical of the hysteria of those times. Some likened it to the witch hunts in Salem, a comparison that provided the inspiration for Arthur Miller's critically acclaimed play, *The Crucible*. Despite appeals on humanitarian grounds from Pope Pius XII and others, the Rosenbergs were executed in the electric chair in 1953, both steadfastly maintaining their innocence. The case lingered in the public consciousness for decades, but in 1995, when decrypted Soviet communications became publicly available, the evidence indicated that Julius Rosenberg was actively involved in espionage, but there was no evidence that he was involved in the specific charges against him or that his wife was involved at all.

Antisemitic organizations existed spasmodically in New York City. The Ku Klux Klan barely appeared during the 1920s. The pro-Nazi Friends of New Germany and its successor, the German-American Bund, were active from 1934 to 1941 against fierce Jewish and pro-democratic opposition. The same held true of the contemporary "Christian Front," led by Joseph E. McWilliams and Father Edward Lodge Curran, a leading propagandist, which was close to Father Charles E. Coughlin's antisemitic movement. It conducted antisemitic street meetings and fostered petty hooliganism. These groups collapsed during World War II, following which organized antisemitism was virtually unknown for some 20 years. From about 1965 black militants, on the outer fringe of the civil rights movement, fostering and feeding upon black-Jewish frictions, helped stimulate the renewal of antisemitism. A climax was reached during the New York City teachers' strike of 1968, when some blacks made openly antisemitic remarks about the union and its leadership. The inclusion of antisemitic material at the same time in an exhibit on Harlem at the Metropolitan Museum of Art also proved highly provocative. Anti-Zionist statements from black militants and members of the New Left that emerged in the 1960s became difficult to distinguish from antisemitism. At the same time Jewish militants led by Rabbi Meir *Kahane organized the Jewish Defense League, a vigilante "self-defense" group. Ironically, two young New York Jews, Andrew Goodman and Michael Schwerner, seeking to register black voters in Mississippi, were killed in one of the watershed events of the civil rights struggle. It took decades for their killers to be brought to justice. Significantly, New York Jews were in the forefront in raising funds for civil rights causes across the country (see *Black-Jewish Relations in the United States).

Between 1940 and 1965, New York's black population tripled as a great wave of migrants poured in from the South. Older black neighborhoods like Harlem and Bedford-Stuyvesant could not accommodate the newcomers, and blacks moved into adjoining areas like Ocean Hill-Brownsville, from which whites, including large numbers of Jews, promptly fled. In 1963 and 1964, at the height of the movement to integrate New York's public schools, Jews in Brooklyn and Queens joined with white Catholics to form Parents and Taxpayers, a militant antibusing organization that eventually had half a million members. The group, known as PAT, staged massive demonstrations and even established a separate private academy. Its efforts were instrumental in the defeat of integration initiatives in the public school system. In response, black leaders sought to control their neighborhood schools. In 1967, the Board of Education began an experiment in community control of schools in the predominantly black Ocean Hill-Brownsville area, where residents elected a local board to run their schools. The local board soon clashed with the United Federation of Teachers over the extent of its personnel powers. The local board claimed the power to hire and fire teachers and administrators; the union argued that only the central board could do so.

In 1968 a junior high school science teacher, Fred Nauman, who was a chapter chairman of the 90%-white, majority Jewish, union, was fired. The action resulted in three citywide teacher strikes aimed at reinstating Nauman and nine co-unionists, who were also fired. The strikes lasted two months in all, affecting almost two million children, and they would be the most bitter in the city's modern history, full of charges of racism, union-busting, and antisemitism. The strikes pitted the city's white middle class, which backed the union, against the city's black poor and supporters of the community control idea. Mostly, the issues pitted blacks against whites, specifically blacks against Jews. The conflict exposed hidden fissures between the races. The strikes ended in mid-November 1968, substantially on the union's terms: the teachers were reinstated and the community control experiment was discontinued. But the controversy went beyond that. It helped to redefine the politics and culture of the city for decades. Outer-borough Jewish voters shifted to the right, moving closer to their white Catholic neighbors. The patrician mayor, John V. Lindsay, lost support in the wake of Ocean Hill-Brownsville, losing almost 60% of the Jewish vote, previously his strength. The city's next mayoral election, in 1973, produced its first Jewish mayor, Abraham D. Beame, elected with strong Jewish and Catholic votes.

The great growth of New York and its suburbs would not have been possible without Robert Moses, the master builder of the 20th century. Although he never held elective office, Moses was probably the most powerful person in New York City government from the 1930s to the 1950s. He changed shorelines, built roadways, and transformed neighborhoods. His decisions favoring highways over public transport helped develop Brooklyn, Queens, and the suburbs of Long Island. Moses rose to power under Al Smith after catching the eye of

the governor's top assistant, Belle Moskowitz. In several assigned tasks, Moses excelled, particularly the development of Atlantic Ocean beaches, pools, and parks at Long Island's Jones Beach, a recreation area without peer that accommodated thousands year after year. After Franklin D. Roosevelt became president, Moses anticipated the availability of New Deal dollars and secured funding for a host of projects. At one point, one quarter of federal construction dollars was being spent in New York, and Moses had 80,000 people working under him. He built hundreds of parks and recreation facilities, but just one pool in Harlem. His highway projects on Long Island followed a circuitous path so as not to cross the properties of wealthy land owners, all the while he demolished numerous middle-class neighborhoods throughout New York City. During the Depression, Moses and La Guardia were responsible for the construction in the city of 10 large swimming pools; they could accommodate 66,000 swimmers. At one point Moses held 12 separate city and state titles. For the city he was parks commissioner, and for the state he was chairman of the Long Island Parks Commission and Secretary of State as well as chairman of the New York State Power Commission, responsible for building hydroelectric dams. By doling out contracts and making deals, Moses built support from construction firms, insurance companies, labor unions, and real-estate developers. He used his influence to put projects on fast tracks, a tactic later repaid by legislators with funds for other projects. Moses controlled most public housing construction projects, but exercised vast power as chairman of the Triborough Bridge Authority. The bridge connects the Bronx, Manhattan, and Queens and the income earned from tolls helped Moses finance projects like the Brooklyn Battery Tunnel, a vehicle link to Manhattan. After La Guardia's retirement, a series of mayors agreed to almost all of Moses' proposals. From the 1930s to the 1960s, Moses was responsible for the building of the Throgs Neck, Bronx-Whitestone, the Henry Hudson and the Verrazano Narrows bridges. His other projects included the Staten Island Expressway, the Cross-Bronx Expressway, the Belt Parkway, the Laurelton Parkway, and many more. In the 1960s, he was the mover behind Shea Stadium, home of the New York Mets baseball team, and Lincoln Center for the Performing Arts. After a series of questionable decisions involving the 1964-65 World's Fair, Moses' power began to wane. His high-handedness and arrogance, depicted in Robert Caro's biography, *The Power Broker: Robert Moses and the Fall of New York* (1974), which won the Pulitzer Prize, presented Moses with a different face.

COMMUNAL, RELIGIOUS, CULTURAL, AND EDUCATIONAL AFFAIRS. In the years after World War I, New York retained its unchallenged position as the center of U.S. Jewish life. After World War II, the city became the capital of the entire Diaspora, as Zionist and other Jewish movements established their main offices in New York. The organizations sponsored rallies and mass meetings on behalf of overseas Jewry, sometimes attracting more than 100,000 people.

Jacob H. Schiff's death in 1920, Judah L. Magnes' withdrawal about 1918, and his removal to Palestine in 1922 left as the most representative New York figures Louis Marshall (d. 1929), Felix M. Warburg (d. 1937), and Stephen S. Wise (d. 1949). The former two were distinctly "uptown" leaders, Marshall a lawyer and Warburg a banker-philanthropist. Wise, a Zionist and Reform rabbi, was closely linked with liberal political and religious movements and drew much of his strength as an urban populist spokesman for the mass of working and lower middle-class Jews. His personal stature and influence was the source of much of the influence of the "American Jewish Congress, which he reestablished and headed from 1930 as a politically liberal, activist, pro-Zionist counterweight to the "uptown" bodies, the "American Jewish Committee in particular. Much of the Congress' importance was lost with Wise's death and the softening of social and ideological differences after 1945. Moreover, the Committee eventually broadened its communal base and retracted the anti-Zionism it had adopted during the preceding decade. The ambitious attempt to coordinate communal life in the Kehillah ended by 1920, and by then New York Jewry had acculturated with much rapidity and formed a proportion of the city's ethnically and religiously diverse population.

Virtually every Jewish organization had chapters and members in the city, including *landsmanshaftn* and benefit societies, lodges, cultural bodies, charitable groups, political causes, Zionists, and synagogues, so that the total number of Jewish organizations probably exceeded 4,000 before the 1940s; with the disappearance of many lodges, benefit societies, and small immigrant synagogues there was probably a decrease thereafter. Altogether the city's Jews constituted an agglomeration of social classes, ideologies, clustered interests, and institutions, possessing Jewish identification in varying degrees of intensity.

Alongside vigorous local activity on behalf of such national or worldwide causes as Zionism, there were fairly distinct although overlapping spheres of interest. The Federation of Jewish Philanthropies served the poor and dependent. All of the federation-affiliated hospitals and many other institutions associated with it were nonsectarian. The federation's original 54 affiliates numbered 130 by 1968, and included: hospitals, institutions for the aged and chronically ill, casework agencies, summer camps, Young Men's and Women's Hebrew Associations and neighborhood centers, and the Jewish Education Committee. Affiliates also received funds from patient and client fees, the Greater New York Fund, government assistance, and direct contributions and endowments. Service to the increasing number of aged and to troubled families (through the Jewish Family Service, successor to the United Hebrew Charities), and recreation and informal education for middle-class youth and adults slowly replaced the earlier relief services. The Jewish hospitals, some of which were rated among the world's finest, totaled about 7,000 beds in 1968. They included Mount Sinai, Montefiore, Joint Diseases (orthopedic), Brooklyn Jewish, Long Island Jewish, Jewish

Hospital for Chronic Diseases, Beth El (renamed Brookdale), Beth Israel, Maimonides, Bronx-Lebanon, Hillside, and Jewish Memorial. In addition, Jacobi Hospital, a municipal hospital, was attached to Yeshiva University's Albert Einstein Medical School, and Mount Sinai Hospital opened a medical school in 1968 as a unit of the City University of New York.

Life centered on Yiddish institutions typified by the daily *Forward*, the Workmen's Circle, Yiddish cultural societies and schools, the "Jewish Labor Committee after 1934, and the scholarly institution, "YIVO, held on, tenuously. Perhaps the foremost writer in Yiddish of that period was Isaac Bashevis Singer, who emigrated from his native Poland to New York in 1935 and who continued to write in the mother tongue for *The Forward* before achieving widespread recognition in English translation (and the Nobel Prize in literature in 1978). The early associations with Jewish trade unionism lessened as Yiddish secularism became a cultural and fraternal middle-class movement. Hebraists, centered in the "Histadrut Ivrit and the weekly *Hadoar*, and closely tied to Zionist and educational affairs, had a smaller group of adherents. Composed largely of writers, Hebrew teachers, and rabbis, the Hebrew group shrank as the reality of Hebrew in Israel took hold.

Religion played a major role in daily life, especially for the Orthodox. In several neighborhoods, particularly Boro Park, Crown Heights, Williamsburg, and sections of Flatbush in Brooklyn, as well as the Lower East Side even in its decline, Sabbaths and Jewish holidays provided an opportunity for Jews to assert their identity. Orthodox synagogues were full, stores in heavily Orthodox areas were shut, even those owned by non-Jews, and sectors of the garment and diamond industries regularly closed. The commerce and industry of the city came near a standstill on Rosh Ha-Shanah and Yom Kippur. Beginning in the 1960s the public schools closed on those days because Jews, who formed a majority of the teaching staff, absented themselves.

In 1967 there were 539 Orthodox, 184 Conservative, 93 Reform, and five unclassified synagogues known in Greater New York; all but 163 of the total were within the city's boundaries. Actual synagogue affiliation tended to be low, however. A study of Brooklyn suggested that merely one-quarter of its Jews belonged to synagogues in 1945-46, a proportion that probably differed little in other boroughs.

The Reform movement, using a good deal of English in the prayer book, liberal in social outlook, and generally wealthier than the immigrant community, attracted regular worshipers to its major temples, some of which were monumental or historic. Temple Emanu-El continued to be foremost because of its size, wealth, and prestige, and occupied a splendid edifice at Fifth Avenue and 65th Street from 1929. Other major congregations included the Central Synagogue (whose building at Lexington Avenue and 55th Street dated to 1870), the Free Synagogue, Rodeph Shalom, Shaarey Tefilah (West End Synagogue until its transfer from the West Side to the East Side of Manhattan in 1959), Union Temple and Beth Elohim in Brooklyn, and Central Synagogue in Rockville Cen-

tre (Nassau County). The older congregations did not share much in the movement within Reform toward more traditional worship. But many Reform Jews became active philanthropists. From the 1950s there was a gradual shift in the Reform movement toward liberal social and political action as a major goal, but there were objections and Temple Emanu-El left the Union of American Hebrew Congregations in protest at this direction. The foremost Reform rabbi was Stephen S. Wise, who in 1922 founded the Hebraic and Zionist-oriented Jewish Institute of Religion (JIR), which opened in 1925. Although the JIR intended to train rabbis for all denominations, most of its graduates went to Reform congregations. The notable early faculty included Salo W. Baron, R. Marcus, H. Slonimsky, S. Spiegel, C. Tchernowitz, and others, but the school declined after its first decade. Other New York Reform rabbinic notables included Samuel Schulman, Jonah B. Wise, Louis I. Newman, Bernard J. Bamberger, Samuel H. Golden-son, Julius Mark, Charles E. Shulman, and Edward E. Klein.

By the 1940s Orthodoxy in New York lost its intimate association with immigrant life, and tended to be divided internally between modernists oriented to the problems of Orthodox Judaism in a secular, scientific, urban society, and others indifferent or hostile to such concerns. The latter stressed piety, study, and aloofness from non-Orthodox Judaism. The modernist trend included such congregations as Kehillath Jeshurun, The Jewish Center, Fifth Avenue Synagogue, Riverdale Jewish Center, and such rabbis as Leo Jung, Emanuel Rackman, Joseph H. Lookstein, Simon G. Kramer, Walter S. Wurzbarger, and Irving Greenberg. The "pietist" group was led mainly from yeshivot and was augmented by Ḥasidic immigration from the 1940s. Special Orthodox segments were the S.R. Hirsch school of German Orthodoxy, transplanted in 1938–40 to upper Manhattan under the leadership of Rabbi Joseph Breuer, and Sephardi congregations, largely in Brooklyn, composed of contemporary immigrants from Turkey, Greece, Syria, and Iraq. The venerable Shearith Israel continued under the ministry of H.P. Mendes, D. de Sola Pool, and L.C. Gerstein. The common institutional effort of Orthodox Jewry was the promotion of yeshivot, whose enrollment multiplied from below 2,000 in 1920 to approximately 5,000 in 1935, 8,000 in 1945, and 45,000 in 1968. Yeshiva College became Yeshiva University in 1943 under the leadership of Samuel Belkin, and expanded to include several high schools, the college, graduate and professional schools, and a medical school. Its yeshivah brought notable rabbinic scholars from Europe to serve as principal *rashei yeshivah*, the first two being Rabbis S.H. Polacheck and Moses Soloveichik; Joseph B. Soloveichik later succeeded his father. Other notable Orthodox yeshivah scholars and talmudists were Rabbis Joseph E. Henkin, Moses Feinstein, Jacob Kamenetsky, Moses A. Shatzkes, and Aaron Kotler.

The city's Conservative congregations leaned close to Orthodoxy, in which most of their members had been raised. The Jewish Theological Seminary was the focal institution of the Conservatives, and exercised broad spiritual influence. Partly

owing to the influence of Mordecai M. Kaplan, Conservative synagogues also served as community centers, offering social, cultural, and recreational activities. The Jewish Center and the West Side Institutional Synagogue in Manhattan, both Orthodox although founded by Kaplan, began the trend. The Society for the Advancement of Judaism (Reconstructionist), B'nai Jeshurun, and Park Avenue Synagogue in Manhattan and the Brooklyn Jewish Center, Flatbush Jewish Center, and East Midwood Jewish Center in Brooklyn replicated this approach, which was continued in many large newer synagogues in Queens and the suburbs. The Conservative growth was greatest in Queens and the new suburban towns, where 145 of their 184 synagogues were situated in 1967. Rabbinic leaders, besides Kaplan, included Israel Goldstein, Max Drob, Israel H. Levinthal, Harry Halpern (d. 1981), Robert Gordis, Ben Zion Bokser, Milton Steinberg, William Berkowitz, and Judah Nadich.

The Jewish Division of the New York Public Library and the library of the Jewish Theological Seminary (damaged by fire in 1966) were two of the six or seven leading Jewish libraries in the world. No other city of the Diaspora offered such an abundance of Jewish scholars, books and manuscripts, and varied opportunities for study in a communal milieu that was profoundly Jewish.

The city was home to one of the greatest educational achievements of modern times, and it had a lasting effect on the individuals, the city, and the nation. Four colleges, City College and Hunter in Manhattan and Brooklyn and Queens Colleges, offered free tuition to qualified students. In the years when top-flight private schools were restricted to the children of the Protestant Establishment, thousands of indigent but brilliant Jewish New Yorkers attended the colleges. For struggling immigrants and their offspring, this proved an unparalleled opportunity to gain a first-rank education, prepare for life's challenges, and to broaden skills. Building on the accomplishments of earlier graduates like Bernard Baruch in finance and Felix Frankfurter in law, the colleges prepared students in the sciences, government, economics, education, political science, and the law. Beginning with Julius Axelrod, of the class of 1933, City College nurtured nine Nobel Prize winners, all of them Jewish, in economics, chemistry, physics and medicine, a figure unmatched by any public institution in the United States. All nine obtained their undergraduate degrees between 1933 and 1950. Across a wide path, the colleges educated such nationally recognized figures as Daniel Bell in sociology, Nathan Glazer and Irving Kristol in politics, Ira Gershwin, the lyricist, Bernard Malamud, the writer, Stanley Kaplan, founder of Kaplan Educational Services, the actors Edward G. Robinson, Judd Hirsch, Zero Mostel, Eli Wallach and Richard Schiff, and business and technology giants like Andrew Grove of Intel. Graduates of the city colleges rose to prominent positions on Wall Street as teachers, administrators, union officials, journalists, accountants, etc., becoming the backbone of the educational system, the economy, and society in general, all for the cost of subway fare. During the

1930s and through the 1950s, the colleges were bastions of free debate, with roiling political discussions over hot topics like communism vs. socialism and Trotskyites vs. Bolsheviks dominating campus activities. In the last years of the 1930s, as fascism threatened to dominate Spain, a contingent of New Yorkers (many of them leftist Jews recruited from the college campuses) made up the Abraham Lincoln Brigade and set off for Spain to “save” the country from Generalissimo Francisco Franco. These idealists, whose cause was dominated by Communists and other left-wingers, proved unsuccessful. In the late 1960s, black and Puerto Rican activists and their white allies demanded that the City University colleges implement an aggressive affirmative action program. The administration came up with an open-admissions plan under which any graduate of a New York City high school could matriculate at one of the 20 colleges in the system. But that program came at a high cost, as the colleges’ academic standing declined (along with the number of Jews, now more affluent and able to afford private, out-of-town schools).

Still another important achievement in higher education involved the founding of the University in Exile at the New School for Social Research. From 1933 until the end of World War II, the University in Exile served as a base for scholars who had been dismissed from teaching and government positions by totalitarian regimes in Europe. The university later became the New School’s Graduate Faculty of Political and Social Sciences, providing an academic base for notable scholars like the psychologists Max Wertheimer and Aron Gurwitsch and the political philosophers Hannah Arendt and Leo Strauss.

New York provided the launching pad for the nation’s feminist movement, beginning with the publication of Betty Friedan’s *Feminine Mystique* in 1963. At the time a suburban New York housewife, Friedan analyzed “the problem that has no name,” as she called it, based on interviews with women unhappy with their lot as housewives, babysitters, cooks and laundresses, and with limited career prospects. The book struck a nerve, providing the intellectual basis for the feminist movement. It permanently transformed the social fabric and consciousness of American society. Friedan was joined by more than two dozen women, including Gloria Steinem, in founding the National Organization for Women, and was its first president, serving from 1966 to 1970. The two Jewish women became the best-known figures in the feminist movement in the United States. Friedan’s death in 2006 reminded generations of women of the debt they owed to the founding mother of feminism, who campaigned tirelessly for equal treatment of women in the workplace and in all areas of public and private life.

CULTURE. The half-century following the end of World War I witnessed the entry of Jews in large numbers into every corner of New York artistic and cultural life. Since this period also marked the growing domination by New York City of U.S. cultural life in general, and in some areas, such as theater, music, and publishing, its virtual monopolization, New York

Jews prominent in these fields found themselves automatically at the center of national attention. The role of New York Jews as consumers of the arts also grew immensely. From the 1920s on, Jews formed a disproportionately high percentage of New York’s theatergoers, music listeners, book purchasers, and art collectors. (One rough estimate placed Jews at 70% of the city’s concert and theater audience during the 1950s.) Similarly, Jews also emerged in these years as major patrons of the arts. After World War II, particularly, they played a prominent part in endowing and supporting local cultural and artistic institutions.

In literature many Jewish writers of the 1920s and especially of the Depression years of the 1930s drew on their backgrounds in the immigrant communities to write memorable novels, essays, poetry, and short stories in the realms of social realism and “proletarian fiction.” Left-wing Jewish intellectuals like Sidney Hook, Irving Howe, Alfred Kazin, Philip Rahv, and Michael Gold wrote for *The Nation*, *The New Masses*, *The New Leader*, and *Partisan Review*. Some of the best descriptions ever written of New York life in the early and mid-20th century, especially of its immigrant neighborhoods, can be found in books like: Samuel Ornitz’ *Haunch, Paunch and Jowl* (1925), Henry Roth’s *Call It Sleep* (1934), Michael Gold’s *Jews Without Money* (1930), Alfred Kazin’s *On Native Grounds* (1942) and *A Walker in the City* (1951), Bernard Malamud’s *The Assistant* (1957), Paul Goodman’s *The Empire City* (1959), and the novels of Joseph Heller and Wallace Markfield (see *United States Literature, Jews in).

The poetry of Louis Zukofsky was suffused with the atmosphere of New York life, while Kenneth Koch was a leader of the school of “New York poets” in the 1960s. In the years after World War II, the 92nd St. YMHA served as a center for readings of modern American poetry and for the introduction to a wide public of a number of young contemporary poets. Perhaps no poet commanded the attention of the general public as did Allen Ginsberg (d. 1997), who created a storm with his first published work, *Howl* (1956), a long poem about consumer society’s negative human values. “I saw the best minds of my generation destroyed by madness” was the opening line, and Ginsberg, a homosexual and leader of the Beat generation, drew on Walt Whitman and others for inspiration. He famously wrote about his relationship with his mentally disturbed mother in *Kaddish for Naomi Ginsberg* (1961).

The Broadway musical theater and the world of popular music from the late 1920s through the 1960s were dominated by Jewish composers and librettists: Irving Berlin, George Gershwin, Jerome Kern, Harold Arlen, Frank Loesser, E.Y. (Yip) Harburg, and the teams of Rodgers and Hart, Rodgers and Hammerstein, and Lerner and Loewe. Many entertainers got their start in vaudeville, including Al Jolson, Eddie Cantor, the Marx Brothers, George Jessel, Fanny Brice and Sophie Tucker, and then transferred their talents to radio, the movies and television. Brooklyn-born Barbra Streisand attained fame on Broadway as a singer and actress before becoming a Hollywood star and director. The leading Broadway playwrights

of the 1930s and 1940s, Lillian Hellman, Clifford Odets, and Elmer Rice, achieved renown with their searing, realistic dramas, while George S. Kaufman, Abe Burrows, and Moss Hart, among others, lightened the stage with bon mots and witty comedies. Arthur Miller's *Death of a Salesman* (1949) won recognition as the best drama produced on the American stage in the second half of the 20th century. A series of popular comedies by Neil Simon, beginning with *The Odd Couple* (1968), achieved critical and popular success. In 1931, Lee Strasberg co-founded the Group Theater, a company that spawned such theatrical legends as John Garfield and Stella Adler, and in 1949 Strasberg started the Actor's Studio, where Paul Newman, Dustin Hoffman, and Eli Wallach trained. During this period, all the major Broadway theaters were owned and controlled by members and descendants of the Shubert family, which earned fees for the use of the theaters and sometimes became involved in producing the shows. Although others owned some Broadway theaters, the Shubert organization, by the 1970s, owned half of all the houses. Beginning in the mid-1960s Joseph Papp promoted the idea of offering free performances of Shakespeare in the parks of New York. His long campaign led to the founding of the Public Theater, supported by commercial Broadway productions like *A Chorus Line*. The Shakespeare performances continued well into the 21st century with major actors taking on classic roles in Central Park. David Merrick dominated the Broadway stage, producing successful musicals and straight plays for more than 20 years. Sol Hurok, who began his career organizing local Jewish productions in Brooklyn's Brownsville, developed into the leading musical impresario in the U.S. The avant-garde Off Broadway theater came into its own in the 1960s and provided venues for talented writers and actors. The Living Theater of Julian Beck and Judith Malina and the Open Theater of Joseph Chaikin staged a variety of provocative productions.

Indicative of the impact of Jewish audiences on the New York theater was the fact that a number of Broadway hits of the 1950s and 1960s were on Jewish themes, the most successful of all being the musical *Fiddler on the Roof*. Set in the fictional *shtetl* of Anatevka, the musical drew on the short stories of Shalom Aleichem about Tevye the dairyman. Zero Mostel's over-the-top portrayal of the central character became the talk of the town. The musical, written by Joseph Stein, and the music, by Sheldon Harnick and Jerry Bock, dominated the airwaves and graced stages around the world as it offered a universal message about family life in troubled times. A young Stephen Sondheim began his career as a composer by writing the lyrics for the smash *West Side Story* (1957), which had a book by Arthur Laurents, music by Leonard Bernstein, and was produced, choreographed, and directed by Jerome Robbins. The plot borrowed liberally from Shakespeare's *Romeo and Juliet* and became a staple of the musical repertory. After the 1920s, the Yiddish theater in New York lost much of its vitality. In 1928 there were at least 11 Yiddish theaters, giving hundreds of performances a month, but the number dwindled to a mere handful and only occasional productions by the 1960s.

The New York musical world, both classical and popular, served as a showcase for a host of Jewish talent. Jews, who made up 70% of the membership of the musicians' union, Local 801 from the 1930s on, held most of the important instrumentalist chairs of the New York Philharmonic Orchestra, the Metropolitan Opera Orchestra, and the National Broadcasting Company Symphony Orchestra, which was led by Arturo Toscanini during its heyday. The leading musical performers included the conductors Artur Rodzinski, Bruno Walter, Lukas Foss, and Leonard Bernstein; the opera singers Richard Tucker, Robert Merrill, Jan Peerce, Roberta Peters, Beverly Sills, and Friedrich Schorr; the pianist Vladimir Horowitz and the violinist Isaac Stern. In the 1960s, with the assistance of Jacqueline Kennedy Onassis, Stern led a successful drive to save Carnegie Hall, one of the greatest musical venues in the world. Their effort preserved the New York landmark, which had one of the clarion sounds in the world of music. Although Benny Goodman, one of the most important jazz clarinetists, was born in Chicago, it was in New York that he came to prominence. In 1938, Goodman and his group of swing musicians were booked to play in Carnegie Hall, then a citadel of upper-crust society and "high-class" music. Carnegie Hall had a seating capacity of 2,760 and Goodman's concert had been sold out for weeks. The concert started off on a polite, though tepid note. But when the group tore into *Sing Sing Sing*, an energetic, rhythmic and bouncy tune, the audience responded with deafening applause. That concert came to be regarded as the most significant in jazz history, proving that jazz could be accepted by mainstream audiences. Goodman was also responsible for a significant step in racial integration in the United States. In the early 1930s, black and white jazz musicians could not play together in most clubs or concerts. In the Southern states, racial segregation was enforced by Jim Crow laws. Goodman broke with tradition by hiring Teddy Wilson to play with him and the drummer Gene Krupa in the Benny Goodman Trio. In 1936 he added the black Lionel Hampton on vibes to form the Benny Goodman Quartet.

The financier Otto Kahn was a leading financial backer of the Metropolitan Opera in the 1920s and 1930s, while Morton Baum helped found the City Center for Music and Dance and was instrumental in the establishment of Lincoln Center for the Performing Arts. One of the premier American classical composers, Aaron Copland, got his start in Brooklyn. Lincoln Kirstein paired with the genius of George Balanchine, a non-Jew, to shape 20th-century dance. Kirstein thought of the idea of the New York City Ballet, which became one of the foremost dance companies in the world. It was solely responsible for training its own artists and creating its own works. The company had 90 dancers, making it the largest dance organization in the United States and into the 21st century had an active repertory of more than 150 works, many choreographed by Jerome Robbins, who created serious dance works as well as choreography for the Broadway theater.

In the early 1960s, a young singer-songwriter from Hibbing, Minn., drifted into Greenwich Village and changed the

nature of popular music. Originally Robert Zimmerman, he took the name Bob Dylan and performed his own compositions of story songs that quickly gained notice for their fierce political nature and their poetry. His “Blowin’ in the Wind,” about the changes looming on the American landscape, became one of the anthems of the civil rights movement as well as for the anti-Establishment postcollege generation in the wake of opposition to the war in Vietnam. Dylan’s whining delivery of his protest songs, and his adoption of acoustic techniques, also influenced generations of musicians. In the late 1960s, following Dylan’s success, the team of Simon and Garfunkel, songwriters and performers from Queens, achieved enduring popularity after their music (“Mrs. Robinson,” “The Sound of Silence”) was featured in the movie *The Graduate*, directed by Mike Nichols.

In painting, the Soyer brothers – Raphael, Moses, and Isaac – and Chaim Gross were prominent in the social-realist art movement that flourished in Greenwich Village in the 1920s. Ben Shahn and Jack Levine were among the many Jewish artists whose early careers were associated with the art programs of the Works Projects Administration during the Depression years. The Nazi persecution brought to New York a number of German expressionist painters, including Max Weber. Prominent in the “New York School” of abstract expressionists and other movements that developed after World War II were Franz Klein, Larry Rivers, Louise Nevelson and Mark Rothko. In the 1960s, the Jewish Museum diverged from its tradition of exhibiting Jewish art only to sponsor a number of important avant-garde shows of sculpture and art. The far-flung and diverse Guggenheim family played a major role as patrons. Peggy Guggenheim moved her gallery from Europe to New York during the war years and her uncle, Solomon Guggenheim, endowed a new building for the Guggenheim Museum of Modern Art on upper Fifth Avenue. The only building in New York designed by Frank Lloyd Wright, it opened in 1960 and quickly became one of the architectural landmarks of the city, if not the nation. In 1969 Robert Lehman’s world-renowned collection of impressionist and post-impressionist painting was willed to the Metropolitan Museum of Art. New York was the home, and the canvas, for a slew of important photographers: Richard Avedon (fashion), Helen Levitt (street life), Weegee (crime), and Diane Arbus (people on the fringes of society). Richard Meier, Paul Rudolph, Robert A.M. Stern, Gordon Bunshaft, Marcel Breuer, and Frank Gehry cut their architectural teeth in New York during this period.

In WEVD, established by the *Jewish Daily Forward* in 1931 and named with the initials of the socialist Eugene V. Debs, New York boasted the world’s only full-time Yiddish radio station, though by 1970 much of its programming had gone over to English. Gertrude Berg, Fanny Brice, Morey Amsterdam, Walter Winchell, and Barry Gray, New York radio personalities, became household names. Berg wrote and starred in *The Goldbergs*, a series about Jewish life in the Bronx. From the show’s opening – “Yoo hoo, Mrs. Goldberg!” – listeners got a brace of

Jewish New York, complete with mannerisms and Yiddish. The series transferred successfully to television. An entire school of television comedy, often deriving from the comic routines of the “Borscht Belt” (see *New York State), gave professional life to performers like Sam Levenson, Sid Caesar, and Jerry Lewis. But it was Milton Berle, with his Tuesday night variety show, who almost single-handedly changed the nation’s evening habits. Television was in its infancy when Berle, broadcasting from New York, wowed audiences week after week, interrupting acts, dressing in drag and participating in skit after skit. Audiences found him outrageously amusing and flocked to buy their own television sets, millions of them in the postwar years. Berle, or Uncle Miltie as he called himself, was known as Mr. Television. The National Broadcasting Company signed him to a 30-year contract, and Berle, who started in show business at the age of 4, continued to perform into his 90s.

Thanks to television, a “new breed” of comedian found favor with more sophisticated audiences. They were social commentators and satirists of common situations. Their styles varied widely, from the comedy sparring of the team of Nichols and May to the storytelling of Alan King to the obscenity spewing Lenny Bruce to the kvetching of the stage milquetoast Woody Allen to the angst of Shelley Berman. Jewish humor, in cabarets, nightclubs, on television, and in the movies, found a broad American audience.

At that time, the three major commercial television networks, the Columbia Broadcasting System (William Paley), the National Broadcasting Company (David and Robert Sarnoff), and the American Broadcasting Company (Leonard Goldenson), were run by Jews.

From the 1920s on, Jews played a prominent role in the New York publishing business, among them Horace Liveright of Liveright & Boni. B.W. Huebsch and Harold Guinzberg of Viking Press, Henry Simon and M. Lincoln Schuster of Simon & Schuster, Alfred Knopf of Alfred A. Knopf, Bennett Cerf of Random House, Roger Straus of Farrar, Straus & Giroux, and Jason Epstein of Anchor Books. The German-Jewish house of Schocken Books moved to New York City in 1946. Bloch Publishing Co., Thomas Yoseloff, and Abelard & Schumann put out a largely or wholly Jewish line. Brooklyn was the launching pad for the literary career of Norman Mailer, who wrote the signature book of World War II, *The Naked and the Dead*. Irwin Shaw, a prolific writer of short stories, got his start in Brooklyn as well. And beginning in 1955, New York was home to Elie Wiesel, the memoirist of the Holocaust and campaigner for human rights, who settled in the city after his liberation from Buchenwald. Wiesel wrote most of his more than 40 published works in the city.

In journalism, the unparalleled international coverage and national reporting of *The New York Times*, under the patronage of the Ochs and Sulzberger families, won widespread respect, proven in 90 Pulitzer Prizes and other recognized awards. Its publisher throughout the 1940s and 1950s, Arthur Hays Sulzberger, was a staunch anti-Zionist who opposed the creation of the State of Israel. He saw Judaism as a religion only

and he had a series of disputes with the leading American Jewish organizations over the newspaper's coverage. Particularly galling, in retrospect, was *The Times'* coverage of the Holocaust and Hitler's campaign against the Jews, which received limited space in the "paper of record." After the 1956 war in the Middle East, the newspaper's coverage of Israel got serious attention and its reports competed for space with all other news developments. *The New York Post* during the 1940s and into the 1960s, under the ownership of Dorothy Schiff, a descendant of Jacob Schiff, and the editorship of James Wechsler, gave voice to liberal and underdog causes while walking a financial tightrope. Numerous reporters came to prominence during World War II, the Korean War, and the war in Vietnam, including David Halberstam, Meyer Berger (*About New York*), Bernard Kalb and his brother Marvin Kalb, A.M. Rosenthal (*There Is No News From Auschwitz*, he famously wrote in *The Times* in 1958), Joseph Lelyveld, the son of a rabbi, and Max Frankel, a Holocaust survivor. The Yiddish press flourished despite declining circulations in the 1920s and 1930s, but lost ground steadily in the years after World War II. Three New York periodicals with nation-wide audiences were also under Jewish ownership or editorship: *The New Yorker*, *The Village Voice*, and the *New York Review of Books*. **Commentary* and *Midstream*, published under the auspices of Jewish organizations, had influential readerships (see *Press, Jewish, in U.S.A.). The Newhouse family played a major role in publishing as owners of newspapers and a plethora of national magazines, based in New York.

After World War I, Jews took a greater interest in popular sports, both as spectators and as performers. Hank Greenberg, a product of the Bronx, achieved renown as a home-run slugger (58 in one season) at a time when there were few Jews in major league baseball. Sandy Koufax, one of baseball's greatest pitchers, pointedly refused to pitch a World Series game on Yom Kippur. Although he was not observant, Koufax said he felt he had to be a role model. Among other well-known New York athletes were the boxers Benny Leonard and Barney Ross, the baseball players Harry Danning, Sid Gordon, and Cal Abrams, the football quarterback Sid Luckman, and the basketball star and coach Nat Holman. One of the signature events in sports occurred during Holman's tenure at City College, which fielded a basketball team assembled from the regular student body, not players recruited for their athletic ability. In the 1950–51 season, City College, known as the "Cinderella team," won the two most important basketball titles of the time, the National Invitational Tournament and the National Collegiate Athletic Association championship. But the celebrations were short-lived when it was disclosed that certain players on the team had "shaved" points, or played to reduce their margin of victory, at the behest of gamblers. It was a watershed moment in basketball, in the lives of the players, Jewish and non-Jewish, some of whom went to prison, and the college, which was forced to de-emphasize basketball.

(For biographies of the figures mentioned above, see individual entries.)

Jewish involvement in New York cultural life in the middle decades of the 20th century was so complete that it had an impact on local speech, gestures, food, humor, and attitudes. It is doubtful if anywhere else in the history of the Diaspora such a large Jewish community existed in so harmonious a symbiosis with a great metropolis, without either isolating itself from its surroundings or losing its own distinct sense of character and identity. If the Jews gave to New York unstintingly of their experience, energies, and talents, they received in return an education in urbanity and a degree of cosmopolitan sophistication unknown to any other Jewish community of similar size in the past. When 20th-century New York Jews thought of the city they lived in, they did not simply consider it a great capital of civilization that had generously taken them in; rather, they thought of themselves as joint builders of this greatness and one of its main continuing supports. Such a relationship marks a unique moment in Jewish history, and one that, given current cultural and demographic trends in the United States and the world at large, is not likely to recur again.

1970–2006

DEMOGRAPHY. At the center of international finance, politics, entertainment, and culture, with a nearly unrivaled collection of museums, galleries, performance venues, media outlets, international corporations, and financial markets, New York, the Big Apple, has long attracted large numbers of immigrants, as well as people from all over the United States. They settled in the city because of its culture, energy, cosmopolitanism, and economic opportunity. Perhaps the most compelling reality of the eight-county New York area Jewish community (the five counties of New York City and Westchester County, Nassau County and Suffolk County) at the tail end of the 20th century was its sheer size. The New York area was home to the largest Jewish community in the world outside of Israel: 643,000 Jewish households; 1,412,000 adults who consider themselves Jewish and children being raised as Jews; and 1,667,000 people living in Jewish households, including non-Jews (typically spouses who are not Jewish or children not being raised as Jews).

Kings County (Brooklyn) with 456,000 Jews led the way in a 2002 survey by Jewish Community Studies of New York, followed by Manhattan with 243,000, Nassau with 221,000, Queens with 186,000, and Westchester with 129,000. Suffolk with 90,000, the Bronx with 45,000, and Staten Island with 42,000 Jews had the smallest Jewish populations. One out of eight individuals in the eight-county New York area was Jewish. In the United States as a whole (including New York), nearly one person in 50 was Jewish. Of all the Jewish communities in the United States, only Los Angeles was home to more Jews than the borough of Brooklyn. Manhattan and Nassau County each had more Jews than either the Boston or Philadelphia areas. During the 1990s, the population remained essentially stable: the number of Jewish households

increased by less than 1% and the number of Jewish people decreased by less than 1%. But the number of people in Jewish households increased by 7%, from 1,554,000 in 1991 to 1,667,000 in 2002.

The city, despite a 5% decrease in population, towered as the geographic hub of the Jewish community, providing leadership and guidance in social, recreational, health, cultural, and educational programs, as well as delivering major philanthropic support from virtually all fields of endeavor. Unlike other Eastern and Midwestern Jewish communities, where suburbanization changed the geography of Jewish life, most Jewish households – 70% – were found in the city proper.

During the 1990s, however, there were substantial geographic shifts: greener, more affluent, car-friendly Westchester County recorded a 41% increase in the number of Jews from 1991 to 2002. Both Brooklyn, where large-family Hasidim and Russian immigrants flourished, and once-remote Staten Island experienced significant increases, 23% and 27%, respectively. The Bronx, despite a stable – and vibrant – Jewish community in Riverdale, showed a 45% decline, continuing a decades-long trend. Smaller declines occurred in Queens (20%) and Manhattan (21%).

During the 1990s, there were substantial changes in the composition of the population. In 1991, children made up 22% of the community while seniors aged 65+ made up 16%. In 2002, the community included about the same percentage of children younger than 18 but seniors were 20%. In addition, reflecting greater longevity because of advances in health care, those 75 or older more than doubled after 1991, from 5% to 11%. One organization, the Jewish Association for Services to the Aged, beginning in 1968, became a prime social-service agency in the city and suburbs, with assistance on home, housing, and legal services on a nonsectarian basis, to help sustain the elderly in their homes and communities and to offer opportunities for a better quality of life.

Unlike Jewish communities in other parts of the United States, New York's was a mix of different kinds of households. Over 378,000 lived in Orthodox homes (240,000 in Brooklyn, many in the distinct Hasidic garb). Over 220,000 lived in Russian-speaking households, about 94% of them in the five boroughs. In 1991, 13% of all Jewish adults said they had been born outside the United States. By 2002, this percentage had increased to 27%. Adults born in the former Soviet Union accounted for 43% of all foreign-born adults in 2002, compared with 26% in 1991.

The New York area, with 55,000 people, also had by far the largest number of survivors of the Holocaust in the United States, although it was aging significantly. Singles accounted for 35% of the Jewish households in Manhattan, which was home to one of the greatest concentrations of Jewish singles in the United States, 55,000, according to the 2002 survey. These singles participated in a broad range of social and cultural activities tied to a variety of Jewish institutions. Many singles successfully trolled popular Internet sites like JDate.com in an effort to meet their lifetime mates.

One of the most contentious and troublesome issues in Jewish life was intermarriage. In 2002, according to the survey, the New York rate, 22%, was approximately half the national average, probably because of the large Hasidic population, where arranged marriages were not uncommon, and the insular Russian groups, who often selected Russian-speaking mates. While still low by national standards, intermarriage rates in the eight-county area increased significantly (36% of marriages) in the 1998–2002 period.

Jewish children aged 6 to 17 had relatively high levels of Jewish education. About 45% were enrolled in a full-time Jewish day school. Only 13% had not received any formal Jewish education.

While there was substantial affluence within the community, there was also substantial poverty. As 17% of New York Jewish households reported an income of more than \$150,000 a year, 31% said they had an annual income of less than \$35,000. There were more poor Jews in New York than there were Jews in all but the largest Jewish communities in the United States. Poverty increased significantly in New York City after 1991 during a period when overall poverty rates in the city declined. From 1991 to 2002, the number of people estimated to be living in Jewish households under the poverty level in New York City rose from 167,500 to 226,000, an increase of 35%.

The poorest by far in the survey were in Russian-speaking households with seniors age 65 or older. Eighty-five percent of people who were both older and Russian-speaking reported significant poverty-level incomes, reflecting limited American work histories and therefore lack of qualification for traditional Social Security and private pensions. This group seemed to reflect the immigrant period of struggle and adjustment on the road to absorption in the American community.

Many people have defined New York by its ever-changing and ever-renewing neighborhoods, from the densely populated Lower East Side around the turn of the 20th century to the apartment-house-dominated Bronx and Queens at the middle and end of that century. Jewish New York in the 21st century was a continuation of that phenomenon, of living with like-minded and economically equal neighbors. About 84% of the Jews in the area lived in 26 specific areas. One out of four lived in five areas: Flatbush/Midwood/Kensington (107,800); Boro Park (82,600); the Upper East Side (73,300); the Upper West Side (71,800); and Central/Southeastern Westchester (64,300), a relatively easy commute to Manhattan.

In Brooklyn neighborhoods like Boro Park, Flatbush, Kings Bay/Madison and Coney Island/Brighton and in Nassau County's Five Towns, on the city's border, over 40% of the residents were Jewish. By contrast, areas like the Northeast Bronx, Western Suffolk, Southwestern Westchester, and Central Suffolk had Jewish populations of only 10%.

[Jacob B. Ukeles (2nd ed.)]

POLITICAL AND CIVIC LIFE. In the last quarter of the 20th century and into the 21st, Jews operated at the center of New York political life and power, partly because of numbers and

partly because of the high percentage of voter turnout, even in off-year elections. Following in the long tradition of activism and participation in democratic government, Jews took strong roles in city affairs, neighborhood disputes, and grassroots activities. Political-minded individuals often sought change through the ballot box or by becoming candidates themselves. As of 2006, three of the previous five mayors (and none before them) were Jewish: Abraham D. *Beame, elected in 1973, Edward I. *Koch, who served three four-year terms, and Michael R. *Bloomberg, who won re-election in 2005 with a whopping 59% of the vote. The candidates had taken different roads to the top, reflecting the complexity, diversity, and realities of political life in the city. Beame came up through the ranks of the Brooklyn Democratic organization, using his skills as an accountant to eventually win election as city comptroller, guardian of the finances. He followed the flashy tenure of John Lindsay, who led the city into a financial crisis. Beame's financial skills were not deft enough to save the city from near ruin, but eventually the city emerged with the help of some key power brokers (who happened to be Jewish): Felix Rohatyn, a Wall Street figure, and Victor Gotbaum, a labor leader, who put together a plan to save the city with new bonds and commitments from the well-financed union-city pension funds. Koch became active in his local reform Democratic organization in Greenwich Village, fighting to maintain its special neighborhood characteristics. After defeating a longtime "boss" in his home district, Koch secured the nomination to represent the area in the House of Representatives. He won the seat and served until he gained the mayoralty nomination and then triumphed in the citywide election. Bloomberg, a Democrat who ran as a Republican, was given little chance in the heavily Democratic city. But the multibillionaire businessman spent lavishly and campaigned hard and defeated a little-known candidate. When he ran for re-election, the formerly shy Bloomberg, who was not known for his religious observance, had no hesitancy about reaching out to Jewish audiences, and he campaigned in the Catskills, a favorite summertime retreat for New York Jews. Privately, he was one of the most philanthropic individuals in the world. He contributed regularly to at least a dozen Jewish organizations or institutions, and he and his sister endowed a fund in their mother's name to send teenagers to a kosher camp that is part of Young Judea, a Zionist youth movement. And just before the election, ultra-Orthodox leaders in Williamsburg, Brooklyn, held what was by far the largest rally of Bloomberg's campaign. With searchlights flashing across the sky and klezmer music blaring from loudspeakers hoisted on cranes, thousands of Hasidim cheered the mayor from rooftops and blocks upon blocks of bleachers. One barely mentioned controversy involved the city's Health Department drive, as a preventive measure, to ban an ancient form of ritual circumcision practiced by some Hasidic *mohelim* that had been linked to three cases of neonatal herpes in late 2004, one of them fatal. And as an indication of the sensitivity and power of the Jewish electorate, a candidate for a fringe party, Lenora Fu-

lani, who had said that Jews "had to sell their souls to acquire Israel" and had to "function as mass murderers of people of color," was removed from a leadership position after her party concluded that her inflammatory comments about Jews were "outrageous and distasteful."

During that period, prominent Jewish officeholders showed their ambitions by making runs for nomination or election but fell short. They included Ruth Messinger, then borough president of Manhattan and later president of the American Jewish World Service; Harrison J. (Jay) Goldin, the city's comptroller during the Beame years and president of the American Jewish Congress' Metropolitan Region; Albert Blumenthal, who was majority leader of the New York State Assembly; Richard Ravitch, former head of the Metropolitan Transit Authority who also served as head of the Jewish Community Relations Council and the Charter Revision Commission; Ronald Lauder, the cosmetics heir and former head of the Conference of Presidents of Major Jewish Organizations and former Ambassador to Austria, and Representative Anthony D. Weiner, a former congressional aide to Charles *Schumer, later U.S. Senator Schumer.

It was not unusual in New York City to see politicians strolling the streets or ambling in the parks, chatting with constituents. Although their surnames easily identified them as Jews, they did not campaign or serve as Jewish office holders, particularly in a vast, multicultural environment. One regular was Henry J. Stern, who served as Parks Commissioner for more than a dozen years under six mayors. Another popular political figure, Robert Morgenthau, son of Franklin D. Roosevelt's Treasury secretary, Henry *Morgenthau, Jr., won election as Manhattan district attorney in 1974 and kept getting elected, even at the age of 86, serving more than 32 years, a record. From his safe Lower East Side district, Sheldon Silver, Orthodox and observant, exercised considerable power in Albany for many years as a leader of the state assembly, a position he attained through seniority and political dexterity. In Congress, no one fought harder for equal rights for women than Bella S. Abzug, who represented a Manhattan district in Congress. Abzug, who was active in several feminist groups, including NOW, pressed for an Equal Rights Amendment, but the measure failed to gain approval in enough state legislatures to be adopted.

A number of Jews tried to use their political and financial base in New York City as a springboard for national or statewide office. These included three attorney generals: Louis *Lefkowitz, a popular Republican who campaigned as Looie, and two Democrats, Robert *Abrams and Elliot *Spitzer; and the comptrollers Alan Hevesi and Arthur Levitt, Sr., who served for six terms until 1979 and whose son, Arthur Levitt, Jr. was chairman of the Securities and Exchange Commission. During the last quarter of the 20th century, all the governors of New York were gentiles. By the second half of the 20th century, realizing that they had to appeal to a broad and more sophisticated electorate, Jewish candidates were barely mentioning their religious affiliation.

One crowning achievement, the appointment of Ruth Bader Ginsberg of New York to the United States Supreme Court in 1993, pointed to the importance of both Jews and women in politics.

In the last quarter of the 20th century, no citywide candidate could be elected without Jewish votes and no statewide candidate could ignore the sizable downstate Jewish vote in the city, on Long Island and in Westchester. Either because of firmly held opinions or because of political considerations, non-Jewish candidates for citywide and statewide office often took strong pro-Israel stances. Famously, Mayor Rudolph Giuliani turned down a donation for the victims of 9/11 from a Saudi Prince who had tied the 9/11 attacks to U.S. policy in favor of Israel. Senator Alfonse D'Amato, who served 18 years in the Senate, was an ardent champion of Israel. Senator Daniel Patrick Moynihan was beloved in the Jewish community because of his support for Israel during his tenure as U.S. ambassador to the United Nations. In 1975, when the U.N. passed a resolution declaring "Zionism is a form of racism and racial discrimination," basically an endorsement of antisemitism, Moynihan said: "This is a lie." And when Idi Amin, the tyrant who ruled Uganda, went before the world body and demanded the "extinction of Israel as a state," Moynihan called him a "racist murderer." Moynihan, who had never visited the Middle East, took his political direction from the State Department, he said, but on Zionism, Jewish history, antisemitism, and related topics, he relied on the advice of Norman Podhoretz, editor of *Commentary* magazine, and by that time a neoconservative, as was Moynihan. The senator was also a vigorous supporter of the rights of Soviet Jewry. Moynihan spoke out publicly and worked tirelessly with Jewish groups to get the Soviet Union to relax its grip on the dissidents and other Jews who sought to leave the Communist state. More recently, Hillary Clinton, who while First Lady committed the faux pas of embracing Suha Arafat, the wife of Yasser Arafat, became one of the most avid supporters of Israel in the U.S. Senate.

New York was the most important source of political fund-raising in the United States. Four of the top five zip codes in the nation for contributions were in Manhattan. The top zip code, 10021, on the Upper East Side, where many wealthy Jews resided, generated the most money for the 2000 presidential campaigns of both George W. Bush and Al Gore.

No event touched the soul of New York more than the attacks on the World Trade Center towers on the morning of Sept. 11, 2001. There were Jewish victims among the almost 3,000 dead, of course, but they had not been singled out as Jews. Indeed, the diversity of the victims was one of the hallmarks of the event, a tragedy that cut across all ethnic and religious lines, but the Moslem extremists who perpetrated the attack had identified Jews with New York City and with American capitalism. One rumor in the Moslem world that circulated shortly after the attacks was that Jews working in the World Trade Center had received phone calls from Israel warning them not to go to work on Sept. 11. The rumor was patently false.

A few years later, after the dust had settled, literally and figuratively, Larry Silverstein, the owner of the property, sought to rebuild after receiving insurance payments for both buildings. He enlisted the architect Daniel Liebeskind to design new towers and a memorial to the victims, but the project became bogged down in disputes among the city, state, families of the victims, commercial interests and others. Liebeskind's design was eventually abandoned and the timetable for construction was delayed.

[Neil Goldstein (2nd ed.)]

BUSINESS AND ECONOMICS. As the city emerged from its financial nightmare of the early 1970s ("Ford to City: Drop Dead," was the headline in *The Daily News* when its plea for aid was turned down by the White House) and became re-energized, it became clear that the economy and the engines that ran it were ready to reassert New York's primary position in the world of finance. On Wall Street, in banking, in fashion and merchandising, in department stores and in diamonds, among other areas, many Jewish New Yorkers were in the front ranks of movers and shakers. The old German-Jewish families that had established beachheads even before the wave of immigrants arrived toward the end of the 19th century, the Schiffs, Warburgs, Lehmans, Morgenthau, Oppenheims, and Guggenheims, to name a few, remained in the top tier at the giant financial brokerages like Kuhn Loeb, Goldman Sachs, Lazard Frères, and their successors. But the firms were so large that by the 21st century management was in the hands of a multitude of partners and officers, many of whom were Jewish and many of whom were not. Some individuals earned reputations on Wall Street, like Abby Joseph Cohen, a lead financial analyst for Merrill, Lynch, and Felix Rohatyn, who headed Lazard Frères, with time out for service as Ambassador to France, and Saul Steinberg, who rode a tiger to great wealth and renown in the insurance industry, only to suffer a letdown. Henry Kravis and Peter Kalikow won fame in a series of leveraged buyouts and Gerald Levin wound up as chief executive of the merged Time Warner AOL empire. Carl Icahn earned his stripes as a feared corporate raider and Ivan Boesky won riches and then shame dealing in junk bonds and other enterprises. Peter Cohen headed American Express for a time. The Greenberg clan, father Maurice and two sons, were powers in the insurance business, heading major companies until a scandal in 2005. Mortimer Zuckerman, who made a fortune in real estate in Boston and New York, bought and was publisher of *The Daily News*, once the newspaper with the largest daily circulation in the United States. Robert E. Rubin, who was born in New York, rose from the risk arbitrage department at Goldman Sachs to become its vice chairman and co-chief operating officer until he was plucked by President Clinton to serve in his administration. Rubin became the 70th United States Secretary of the Treasury, spanning both Clinton terms. And with New York as his base, George Soros, an immigrant from Hungary, formed private hedge funds and became the wealthiest man in the world – until he decided to

start giving away much of his fortune to charitable endeavors. In the same vein, Michael Bloomberg started on Wall Street and established a financial information service that became a “must have” for financial institutions large and small. Bloomberg, removing himself from his far-flung business empire, which included computerized data and radio and television stations stressing financial news, twice won election as Mayor of New York. In banking, Sanford G. Weill rose to become chairman of Citigroup, one of the largest institutions in the United States, encompassing banking, credit cards, mortgages, home equity loans, the brokerage Smith Barney and other consumer financial services. In the unpublicized and lightly regulated field of money management, investors like Michael Steinhardt accumulated fortunes. Steinhardt used some of the funds to become the driving force behind Birthright Israel, a project aimed at strengthening the connection between young Jews and Israel.

Estee Lauder, who was born in Queens, transformed beauty into big business. In the 21st century, her company controlled 45% of the cosmetics market in U.S. department stores. Its products were sold in 118 countries. Even after 40 years in business, she attended the launch of every new cosmetics counter or shop. Her sons Ronald and Leonard were important figures in New York business, culture and philanthropy. Well-known names in the fashion industry like Ralph Lauren, Calvin Klein, Isaac Mizrahi, Liz Claiborne, and Marc Jacobs found exposure in the great department and clothing stores of New York, like Jewish-founded Barney’s (once a store for hard-to-fit youth but later a fashion emporium), Bloomingdale’s, B. Altman, Gimbel’s, Saks, and Macy’s. But in the face of competition and changing tastes, the family-started stores found it difficult to continue. Some closed and some were bought out. One venture, Alexander’s, the best-known clothing store in the Bronx, was owned by the Farkas family. When it expanded to Manhattan and opened a vast store near Bloomingdale’s, Alexander’s failed, and the family eventually closed its stores. The tale of Stern’s, once a magnet for class-conscious German immigrants early in the century, later a destination for the aspiring middle class after World War II, provided a case in point. Four sons of an impoverished German Jewish immigrant founded Stern’s in 1867. Buoyed by their initial success, the Stern brothers led a retail migration to Ladies’ Mile in 1878 with the opening of a seven-story building on 23^d Street between Fifth and Sixth Avenues. It was the largest department store in New York until 1910. In 1913 the store moved to 42nd Street and Fifth Avenue and catered to show business people because of its proximity to Broadway. The store stocked other merchandise in an attempt to feed the aspirations of less wealthy shoppers. It thrived in this middle-market niche for decades but in 1951 Stern’s was bought by Allied Stores and a new era began. In the competitive postwar retail landscape, Stern’s began marketing itself to the masses. But ultimately, Stern’s lost out to big box stores and to the fact that, during the 1980s, customers of all incomes became bargain hunters. Stern’s is now gone. And

Bloomingdale’s and Macy’s became part of Federated Department Stores. Another family-owned concern rose up out of Brooklyn to succeed, on a smaller scale, on Long Island, in Manhattan, and in suburban New Jersey and Westchester. In the Brownsville-East New York section of Brooklyn in the 1920s, under an elevated subway line, Max and Clara Fortunoff sold dishes, linens, and other dry goods at low prices. As they watched the neighborhood decline in the late 1960s, the Fortunoff offspring sensed that their customers were moving to Long Island, so Fortunoff branched out to Long Island with housewares, furniture, luggage, and luxury goods like fine china and jewelry. In Manhattan, Fortunoff opened a jewelry store on Fifth Avenue.

Throughout this period, and stretching back to before World War II, 47th Street between Fifth and Sixth Avenues flourished as the diamond capital of the United States. It was a tightly-knit industry and was controlled by Jews, just as it had been for centuries, from the mines in South Africa to the skilled cutting and polishing craftsmen in Antwerp and other world capitals. As in the diamond exchange in Tel Aviv, deals on 47th Street were consummated by handshake and Yiddish confirmations. Trust ruled the transactions. Dozens of sales people, many in Hasidic garb, dominated the streets, which had the highest concentration of police protection in the city to thwart temptation. Secrecy and discretion were unspoken bywords, and in the 21st century the diamond district remained almost totally in Jewish hands.

REAL ESTATE AND HOUSING. The real-estate business in the city was a dynastic enterprise, the great fortunes being passed down from one generation to another, and Jewish families were front-and-center in acquiring land, building homes and commercial structures, and running vast enterprises. The practice bore little relationship to the modern world of the corporation. While the elders and parents of a generation made deals and brokered arrangements, their children went to school and summer camp with one another, cementing relationships for the future. The families, Rose, Tishman, Rudin, Milstein, Tish, LeFrak, to cite a few, occupied the top tiers of the business. These oligarchies were only a few generations old, tracing their roots and business involvement to the immigrant arrivals and pushcarts that flooded New York in the previous century. Some concentrated in Manhattan, shrewdly accumulating property slowly and rarely selling. Others tried to be prudent, rarely taking risks. Others built massively in the outer boroughs like Brooklyn and Queens, where lower prices prevailed. In addition to shaping the landscape of New York City, the families were the backbone of philanthropy. Not only did they give extensively to Jewish charities, but they were identified with hospitals and educational institutions. And many found the time to serve in high positions in government and civic life. Lewis Rudin, for example, was the founder of a group called the Association for a Better New York, which promoted the city’s reputation and performed good works. Seymour Milstein and his brothers, on the other

hand, used their fortune to buy other companies, and at one time owned United Brands, the Starett Housing Corporation, and Emigrant Savings Bank. Although they gave their word to city officials that they would protect the famed gilded clock and Palm Court lounge of the Biltmore Hotel, they demolished both in 1981. The family, once extraordinarily close, later split, and filed so many suits against one another that they almost destroyed themselves. When Seymour Milstein died in 2001, his nephew issued a statement that read in its entirety: “We will always cherish the happy times we shared and our many years together.”

If the real estate interests were bound by common interests, so were the social strivers who sought the best living arrangements. While the state banned discrimination in the sale and rental of housing, Jews in New York sometimes experienced more subtle stumbling blocks. Many of the grand old buildings lining Central Park West and Fifth and Park Avenues in Manhattan were cooperatives, and prospective tenants had to be screened and approved by the respective boards before being allowed to make their purchase. A number of high-profile, wealthy Jews, like Barbra Streisand, the singer; Mike Wallace, the television reporter; Ron Perelman, the financier; and Steve Wynn, the casino entrepreneur, were rejected, usually without reason. The co-ops functioned as private clubs and could determine if the applicant possessed the “right” connections or ethnicity or earned their living in an “approved” manner. Sometimes Jews were admitted one week and not the next, after some quota was reached. Whereas religion was once a key unspoken factor, by the early years of the 21st century rejection on economic grounds was much more common as old prejudices lost much of their sting.

CULTURE. Following the success of Stephen Birmingham’s *Our Crowd: The Great Jewish Families of New York*, published in 1967, Irving Howe weighed in with *World of Our Fathers* in 1973. Historically, the exhaustively researched tale of Jewish immigrant life on the Lower East Side provided a cultural anthropology spanning the Old Country to the settlement houses and synagogues, the matchmakers, dance halls, and the culture of Yiddish, from poets, novelists, and intellectuals to theatrical figures and popular entertainers. Although he was a scholar and an intellectual, Howe in *World of Our Fathers* taught a new generation about the notion of egalitarian socialism and how it emerged from the struggle for social justice, according to Morris Dickstein, writing two decades after the publication of the surprise best-seller. The book, written with the assistance of Kenneth Libo, made its way into virtually every Jewish home, and its readers, many of them second-generation Jews who had moved to the suburbs, were able to reconnect to a world of struggle and idealism.

Although Bernard Malamud, who died in 1986, set many of his stories in New York, sometimes a geographical New York, sometimes a metaphysical one, and used Jewish characters extensively, he was not considered a “Jewish” writer, but rather an American writer. To the writer and critic Jonathan

Rosen, Malamud’s city was a place of surprises, of trials, and of ultimate meaning. In his best fiction, New York haunted his imagination, and his prose told the story of struggling tailors, shoemakers, matchmakers, light-bulb peddlers, and immigrants. His work, critics said, showed a regard for tradition and the plight of ordinary men, and was imbued with the theme of moral wisdom gained through suffering. His death was followed five years later by that of Isaac Bashevis Singer, who won the Nobel Prize in literature in 1978. Singer wrote largely in Yiddish, although he had lived in New York since before World War II. His 1970 novel, *Enemies: A Love Story*, set in 1949 in New York, dealt with survivors of the Holocaust who felt guilty about having survived. It became a successful film in 1989.

The immigrant experience provided the background for E.L. Doctorow’s *Ragtime*, first as a novel in 1975 and then as a musical on Broadway in 1998. Doctorow, a New Yorker, had earlier won acclaim for *The Book of Daniel*, a fictionalized story of the executed atomic spies, the Rosenbergs, in 1971.

On the stage, through the end of the 20th century, Arthur Miller continued to churn out drama, although none achieved the commercial or critical success of his earlier works, which included *All My Sons* and *After the Fall*, a fictionalized version of his life with Marilyn Monroe, who converted to Judaism for their marriage.

The Broadway stage proved the perfect vehicle for Wendy Wasserstein (d. 2006), a Brooklyn-born playwright of wry, smart, and often highly comical plays. In 1989 she won both the Tony and Pulitzer Prizes for her play *The Heidi Chronicles*, and explored topics ranging from feminism to family to pop culture in such works as *The Sisters Rosensweig*, *Isn’t It Romantic* and *An American Daughter*. Like Miller, who often mixed his art and politics, Tony Kushner, who was born in New York and educated there, made a splash with *Angels in America*, a two-play exploration of the state of the nation in terms of sexual, racial, religious, political, and social issues that confronted the nation during the Ronald Reagan years as the AIDS epidemic spread. *Angels* is really two full-length plays. Part I: *Millennium Approaches*, won the Pulitzer Prize for drama in 1993. Part II: *Perestroika*, won the Tony award. Four characters represented Jews, Christians and agnostics; homosexuals and heterosexuals; blacks and whites; and men and women caregivers and patients – an American mix. The prolific Kushner’s masterpiece was directed for television in 2004 by Mike Nichols, proving its durability, and won numerous awards. AIDS, the great affliction of the 1980s in New York, found its chief stage and real-life opponent in Larry Kramer, a dramatist, author and gay rights activist. Beginning in 1981, Kramer published a series of articles on the growing AIDS epidemic, urging immediate government and private action. He was a founder of Gay Men’s Health Crisis, a New York-based advocacy group, which remains the world’s largest provider of services to gay men with AIDS. In 1987, increasingly discontented with the response to AIDS by both the U.S. government and the gay male community, Kramer founded the AIDS ad-

vocacy and protest organization, ACT-UP, which engaged in civil disobedience. His 1985 play about the early years of AIDS, *The Normal Heart*, was one of the most important cultural responses in the 1980s to the devastation of AIDS. It had more than 600 productions all over the world.

By contrast, Mel Brooks, the comedian and comedy writer, adapted his 1968 movie, *The Producers*, into a Broadway musical, with Thomas Meehan. The outrageous work was the smash hit of the 2000-2001 season, winning 12 Tony Awards, the most for one show. Brooks wrote the satiric – and some said offensive – *Springtime for Hitler*, a number that carried the story line, about a down and out producer who raises money for the world's worst show, a musical based on the life of Hitler. The humor took political incorrectness to a new level, which Brooks defended by saying that he had “to bring Hitler down with ridicule. It's been one of my life-long jobs – to make the world laugh at Adolf Hitler.”

On television, one of the most popular programs of the 1990s was *Seinfeld*, a comedy about “nothing.” Set in New York, the program had four main characters: Jerry Seinfeld, a comedian; George Costanza, played by Jason Alexander and based on the life of the show's co-creator, Larry David; Elaine Benes, played by Julia Louis-Dreyfus; and the lovable but loopy Kramer, portrayed by Michael Richards, based on a real New Yorker named Kramer. Many scenes were shot in a reproduction of a Manhattan diner and explored familiar problems among singles in the city.

In 2004 the Jewish Museum celebrated its 100th birthday, having achieved the status of one of the city's major art museums. The museum began as a repository of Jewish culture but became a significant force in the art world, unafraid to mount exhibitions with provocative themes that challenged and sometimes angered visitors. Before World War II, it bought important Judaica and became an important home to objects from a lost civilization. It expanded in 1983, adding exhibition space and a kosher café. Membership reached 11,250 and visitors reached more than 200,000 a year by around 2005. The museum was not the only repository of Jewish heritage. In 2003 a Center for Jewish History opened in four buildings in the Chelsea neighborhood of Manhattan. The center's members include: the American Jewish Historical Society, the American Sephardi Federation, the Leo Baeck Institute, the Yeshiva University Museum, and the YIVO Institute for Jewish Research. At the end of the 20th century, the Museum of Jewish Heritage opened at the foot of Manhattan as a living memorial to the Holocaust. The museum honored those who died by celebrating their lives. Its core exhibition of photographs, personal objects, and original films illustrated the story of Jewish heritage in the 20th century.

Perhaps the best-known cultural center in New York was the 92nd Street Y, a multifaceted institution and cultural center founded in 1874 by German-Jewish professionals. It grew from an organization guided by Jewish principles but serving people of all races and faiths. In 2006, it was serving over 300,000 people annually in 200 programs a day. Its programming en-

compassed Jewish education and culture, concerts featuring classical, jazz, and popular music, humanities classes, dance performances, film screenings, a nursery school, etc.

RACE RELATIONS. The most densely populated major city in North America, New York became known as “the melting pot” because of its hordes of immigrants from diverse places in Europe. But that sobriquet took on new meaning in the 1960s and later in a changing city as advocates for civil rights stepped up pressure for equal treatment in schools, housing, and employment. In 1984, the Rev. Jesse Jackson became the second black American to mount a nationwide campaign for President of the United States, running as a Democrat. A major controversy erupted early in the campaigns when Jackson, speaking to reporters, referred to Jews as “hymies” and to New York City as “Hymietown.” Later he made a perfunctory apology. While Jews, themselves victims of discrimination, had lived side-by-side with blacks for decades, and had been prominent in leadership and financial support for civil rights causes, they, and the city, were living in a new time. Crime was high on the list of concerns in the late 1960s and 1970s, drugs appeared to be easy to come by and many whites and blacks were eyeing each other warily. In 1991, in what came to be an iconic moment in the relationship between Jews and blacks in the city, a car in the motorcade of the Lubavitch grand rabbi, Menachem M. Schneerson, swerved onto a sidewalk, killing a 7-year-old black boy, Gavin Cato. The accident, combined with simmering tensions between Orthodox Jews and black residents, created a cauldron of ethnic suspicions. Three hours later, a group of black youths, incited by cries of “go get a Jew,” attacked Yankel Rosenbaum, an Australian Lubavitch student, apparently in retaliation. Four days of rioting and violence engulfed Crown Heights, headquarters of the Lubavitch, and a prosecutor called the crimes “emblematic of the worst kind of violence and religious hatred this city has every seen.” Fueling the violence was a deep-rooted belief among many blacks in Crown Heights that Jews received preferential treatment, not only from the police but also in city services. (In fact, studies after the disturbances showed that black organizations in Crown Heights received more city and state money than many Hasidic organizations.) Before his death, Rosenbaum identified Lemrick Nelson Jr., then 16, as his assailant. A bloody knife was found in Nelson's possession, and Nelson confessed the murder to the police. But a jury of six blacks, four Hispanics and two whites acquitted him. A day later, the jury members joined Nelson and his lawyer in a New York restaurant to celebrate the verdict. In a second trial, in 2003, Nelson was found guilty of violating Rosenbaum's civil rights, but the jury found that he had not directly caused Rosenbaum's death. The hate-crime killing seemed to have symbolized much of what had gone wrong in the special relationship between blacks and Jews in the city and was tirelessly debated on the streets, in the media, and in the courts. It took years for the case to be settled, and passions aroused by the incident were slow to cool. For David N. Dinkins, the city's first black mayor, Crown

Heights became a crushing political weight, and he was defeated when he sought re-election. Because the case took so many years in the courts, many youths in Crown Heights interviewed in the early years of the 21st century were barely aware of the circumstances of the deaths.

While relations between blacks and Jews were sometimes fragile in New York, Jews in the early 21st century were thrust into the debate over events in Israel, particularly on college campuses, as professors and students took a hostile approach to developments in the Middle East. On the campuses of Columbia University and Barnard, for instance, pro-Israel students said they had been intimidated by professors of Middle Eastern studies both in and out of the classroom. Symbolically, the incident pointed to a mood on American campuses skeptical of Israeli activities and sympathetic to Palestinian complaints, views originally espoused and pursued by the New Left of the 1960s and 1990s.

UJA-FEDERATION AND ITS ROLE IN THE COMMUNITY. As the largest avenue of philanthropy in New York and North America, UJA-Federation consistently ranked in the top tier of *The Chronicle of Philanthropy's* listing of U.S. charities that raised the most in donations from individuals, foundations, and corporations. The only institutions that raised more funds made national appeals (American Red Cross) or used funds primarily for endowment and plant rather than programs (universities, hospitals, and museums), making UJA-Federation of New York the largest broadly-based local philanthropy in the United States. In 2005, its campaign year closed at a record-breaking \$231,347,113, including \$140 million from its annual campaign, \$71.9 million in planned giving and endowments, and \$15.9 million raised through capital gifts and special initiatives. An additional \$3.3 million was contributed to an emergency relief fund. The total combined budget of UJA-Federation's local network of agencies exceeded \$1 billion.

In 1973, at the outbreak of the Yom Kippur War, community leaders combined the Federation campaign with a special United Jewish Appeal Drive called the Israel Emergency Fund. After raising a record \$100 million, the UJA-Federation Joint Campaign was created in July 1974 and Israel became the primary Jewish concern of the bulk of New York Jews. To meet both local and overseas needs, the joint effort raised an average of \$100 million annually, reaching \$110 million by 1983.

In 1999, UJA-Federation of New York became the first federation in the country to see the division of "domestic" and "overseas" as anachronistic and to instead organize its planning and allocations around types of services like health and human services, Jewish education and identity building, and Jewish peoplehood (rescue, resettlement, and fostering connections between Jewish communities in New York, Israel, and around the world).

As political, social, and technological changes fostered this increasingly global focus, other economic, social, and tax law changes forced changes in how the federation raised its funds. The primary vehicle for fundraising remained the

Annual Campaign. At the time, 80 to 90 percent of the funds came from just 10 to 20 percent of the donors. While efforts continued to be made to broaden the base, through direct marketing (mail and phone) and the Internet, the majority of the organization's fundraising efforts were targeted at higher-end donors through one-on-one relationships and to mid-level donors at more than 700 fundraising events each year targeting specific trades and professions, synagogues, communities, women, and families. UJA-Federation also opened full-service offices in Westchester (1988) and Long Island (1989), where affluent Jewish populations resided. The Annual Campaign reached over \$120 million per year from over 75,000 donors in the first years of the 21st century. At the same time, the donor base was shrinking (as recently as 1996, there had been over 91,000 donors), cuts in government spending for social services placed significant pressure on the agencies, and the modest increases in the campaign were counterbalanced by the effects of inflation.

By the end of the 20th century, needs had further shifted. The majority of Jews in New York were now long-time Americans who no longer needed help with the most basic needs and with integration into American society. The enormous wave of immigration from the former Soviet Union slowed down by the mid-1990s, and immigration was not anticipated ever to reach such heights again. In the 21st century, UJA-Federation's mission was revised to place equal emphasis on caring for those in need, rescuing those in harm's way, and renewing and strengthening the Jewish people in New York, Israel, and around the world. The share of local unrestricted grants for community centers, human-service agencies, and Jewish education increased by 11 percent between 1995 and 2003, while the share of grants to hospitals and geriatric centers decreased by 98 percent and 9 percent, respectively.

For the human-service agenda, the need to provide services to the most vulnerable continued. Despite the upward mobility of much of the community, significant pockets of poverty existed, particularly in Brooklyn and Queens. Publication in 1971 of "The Invisible Jewish Poor," by Anne Wolfe, revealed widespread poverty among Jews, with particular emphasis on senior citizens. The Metropolitan Council on Jewish Poverty was created in 1972 to provide clothing, food, housing, and job-placement services to Jewish New Yorkers in poverty. As poverty continued and some populations experienced difficulty accessing public services, the New York Legal Assistance Group was organized in 1990 to provide free legal help to at-risk and low-income individuals. In 2005, UJA-Federation developed a comprehensive system for individuals and families coping with terminal illness, helping them access medical, social, psychological, and spiritual care through three regional care centers, and opened the first and only state-certified residential hospice under Jewish auspices in New York State.

RUSSIAN JEWS. Mention "Russian Jews in New York" and what immediately comes to mind for most New Yorkers is

Brighton Beach – a garish, boisterous strip of Russian restaurants, nightclubs, and specialty food stores hunkered under the rumbling elevated subway line. A block or two away is the nearby boardwalk, one of New York's great people-watching locations in the summer, where svelte "New Russians" enjoy caviar and *blini* at a string of outdoor cafes, while babushkas with golden teeth sit on nearby benches watching their grandchildren play, and knots of men sit at tables playing chess and backgammon.

Yet Brighton is only the tip of the iceberg of Russian-speaking New York – a sprawling human archipelago of 350,000 people, 70 to 80% of whom are Jewish. According to a 2003 population survey conducted by UJA-Federation, 19% of the Jews in the five boroughs of New York were Russian-speakers. The survey found that 62% lived in Brooklyn (124,000), 19% in Queens (39,000); 5% in Staten Island (11,000), 5% in Nassau County (10,000), and 4% in Manhattan (9,000). Russians made up 27% of Brooklyn's Jewish community, 21% of Queens Jewry, and 26% of Staten Island's. It was believed that there were as many as 50,000 Russian-speaking Jews in the suburbs of northern New Jersey.

The Russian-speaking community got its start in southern Brooklyn during the mid-1970s but spread far beyond that neighborhood east to the more upscale marine communities of Manhattan Beach and Sheepshead Bay, and west to scruffy Coney Island, where it abutted African-American and Hispanic communities. The Russians then spread north to Bensonhurst, which they shared with Italian-Americans, Ocean Parkway, which had a large Syrian Jewish population, and Midwood, where they intersected with Pakistanis and Arab-Americans.

Away from Brighton Beach and Brooklyn, a second huge enclave of Russian speakers, the exotic Bukharan Jewish community of Persian-speaking Jews from *Uzbekistan, *Tadjikistan, Kyrgyzstan, Kazakhstan and Turkmenistan, all part of the former Soviet Union, set up home and culture in the Central Queens communities of Rego Park, Forest Hills, and Kew Gardens. There, 50,000 Bukharan Jews lived in streets filled with Bukharan *yeshivot*, synagogues, and restaurants/nightclubs, from which the sound of sinuous but exuberant Bukharan music exploded into the night. Although Bukhara is a city in Uzbekistan, the term Bukharan refers to all Central Asian Jews who speak Bukhari, a Jewish dialect of Persian. Bukharans celebrate and commemorate in big ways. Nightly, the community turned out for events: weddings, bar mitzvahs, birthdays, cultural presentations or memorials. Whereas most of their homes in Europe faced inner courtyards, in Queens they lived in cramped apartments, so restaurants became their courtyards. The neighborhood, along Queens Boulevard, from Rego Park to Forest Hills to Kew Gardens to Briarwood, featured small businesses runs by Bukharans and ethnic specialties like fried fish, dried fruits, and Samarkand raisins. Kosher bakeries with tandoor ovens dispensed crusty round breads called *non*, topped with black sesame seeds, baked on the clay walls. *Noni toki*, a domed matzlike bread,

was also a favorite, as were samosi, a pastry filled with a nut mixture, and *lavz*, a mixture of nuts and spices compressed into a flat bar. Most community events involved live music, whether the classical tradition of the shashmaqam, a repertory of vocal and instrumental sounds, folk songs, or Russian pop. The Bukharan Jewish National Theater performed regularly, sometimes using its other name, *Vozrozhdenie* (Russian for renaissance). Twenty synagogues served the community; their prayer books featured Hebrew on one side and a Russian transliteration on the other.

In that area, too, were the smaller but still substantial Oriental communities of Georgian and Mountain Jews, who hailed from *Azerbaijan and the northern *Caucasus. Some lived in Washington Heights at the uppermost tip of Manhattan, an area that attracted a community of so-called Russian intelligentsia – artists, writers, and bohemians. Over the years, many Russian families moving into the middle class left the gritty streets of Brooklyn for semi-suburban Staten Island, while others moved on to the commuter towns of northern and central New Jersey, as well as communities in Long Island, Westchester and southern Connecticut.

The origin of the emigration goes back to the period directly after the Six-Day War of 1967, when Soviet Jews giddy with the smashing military victory of the Israel Defense Forces against the armed forces of Egypt and Syria, armed to the hilt by the Soviet government, began to shake off their fear of the Soviet regime and demanded to be allowed to repatriate to Israel.

By the early 1970s, the Soviet government, seeking détente with the West, began to allow some Soviet Jews to leave for Israel on humanitarian grounds, for family reunification. It was during this period that many Soviet Jews who received invitations ("vysov") from real or supposed relatives in Israel managed to get out of the Soviet Union, "dropped out" along the way to Israel in Vienna, and instead applied to emigrate to the United States as political refugees. Though the Israeli government objected strongly to the dropout phenomenon and chastised those who decided to go West, the U.S. Jewish community leadership upheld the principle of freedom of choice and by the late 1970s as many or more Soviet Jews were coming to the U.S. as to Israel. Soviet Jewish immigration to the U.S. started en masse.

Close to half of all Soviet Jews headed for New York City and a significant number of families and individuals who were brought to smaller communities across the U.S. under the auspices of local Jewish communities also eventually headed for New York, the only city where it soon became possible to lose oneself in a largely Russian environment.

About a third of the Russian-speaking Jewish population in New York at the beginning of the 21st century arrived during the 1970s. The New York Association of New Americans (NYANA) provided them with housing, language training, and help in finding jobs, began routing many Russian families to southern Brooklyn, a strongly Jewish area with excellent low-rent housing stock that had become increasingly down at the

heels as American-born Jewish families left. The rollicking environment of crass mercantilism and *joie de vivre* for which Brighton Beach became known had much in common with the spirit of Odessa on the Black Sea, but even many Jews from very different environments like Moscow and Leningrad initially moved to Brighton so they could live in a Russian linguistic and cultural environment.

By the late 1970s, restaurants and businesses catering to the Russian community began to spring up, helping to bring renewed economic vigor and stabilizing real estate values.

As a result of 35 to 40 years of immigration, 700,000 Soviet-born Jews were living in the U.S., about half of them, or 350,000, chose New York and its vicinity as their permanent home. By any account, the number exceeded those of Russia and Ukraine combined, making New York the world's most populous Russian-Jewish city. The 1990s arrivals differed from their predecessors in many respects. The refugees of the 1970s tended to be ideologically deeply anti-Communist and anti-Soviet, ready to risk everything, including a term in prison, for a chance to get to the West. The refugees of the 1990s came at a time of virtually free emigration after Communism had collapsed, and were more inclined to be pursuers of a better life.

Since education was always a primary social value, Russian Jewish immigrants came with a high level of educational attainment. Their striving for education continued in America, where they made up the best-educated group in U.S. immigration history. Virtually all younger Russian Jews went to college, and New York city, state, and private colleges were full of the Russian-speakers. In 2005, two Russian-Jewish students, Lev Sviridov from the City College and Eugene Shenderov from Brooklyn College, won highly competitive and prestigious Rhodes scholarship for graduate education in Oxford.

[Sam Kliger and Walter Ruby (2nd ed.)]

NEIGHBORHOODS. One of the defining characteristics of New York are the neighborhoods, especially for Jews, who tended to live among fellow religionists for a variety of reasons, including proximity to local synagogues, friends, and familiar foods. Indeed, the history of New York Jewry is intertwined with the history of the neighborhoods: some with accommodating welcome mats, some achieving smashing successes, some declining over the years, some being reborn.

Following are snapshots of four local areas that have a distinctive Jewish flavor and history:

Boro Park. With the largest ultra-Orthodox Jewish enclave in the world outside Jerusalem, Boro Park combined the atmosphere and strictures of a 19th-century European religious-based village with many of the trappings of a 21st-century American consumer-oriented society. As home to several Ḥasidic sects, including the Bobover, Belz, Satmar, Stoliner, Vizhnitz, Munkacz, Sprinka, Klausenberg, Gerer, and Pupa, Boro Park was a center of Jewish learning and devotion, with hundreds of synagogues and yeshivas, and a Yiddish-speak-

ing community where the rich, poor, and working class could shop in high-priced and low-priced stores and buy kosher specialties from well-stocked supermarket shelves.

Boro Park, also spelled Borough Park, was a mainly rural part of south-central Brooklyn in the last years of the 19th century. One of the original settlers, Electus B. Litchfield, built a subdivision in 1887 and called it Blythebourne. In 1898 State Senator William H. Reynolds bought a tract of land abutting the east side of New Utrecht Avenue, extending from 43rd to 60th Streets. He called it Borough Park, and it eventually swallowed Blythebourne. All that remained of that name by the 21st century was Blythebourne Station, the local post office.

The first synagogue in the area was built in 1904 as Russian Jews, living in the teeming and overcrowded Lower East Side of Manhattan, trickled in to join Italian and Irish families in single-family attached houses. During the Brooklyn real-estate boom of the 1920s, the area thrived in a confluence of democratic trends.

After World War II, the Italian and Irish families began moving out, and Jews who practiced a modern Orthodox faith spread to neighboring Flatbush and Midwood. For the Jewish community, it was the heyday of assimilation, when most were intent upon being inconspicuous. The Ḥasidim, practicing an 18th century form of ecstatic Judaism rich with ceremony and prayer, were different. Wearing beards and side curls, black hats and 19th-century suits and speaking Yiddish, the men stood out. The conservatively garbed women, in wigs and often pushing baby carriages, kept to themselves and their tight-knit families and friends. Many mainstream Jews found Ḥasidim, at first a tiny minority in New York, self-righteous, almost embarrassing, unsettling reminders of what these secular co-religionists once were. Tentatively, the Ḥasidic survivors clustered anew around the few rabbis who had survived the war.

One of the first Ḥasidic groups to move to Boro Park were the Skverer, who trace their roots to Chernobyl, Ukraine. Like other Ḥasidim, who practice an ecstatic brand of Judaism, each sect centers on a charismatic spiritual leader, often called a tzaddik, or righteous one, and on an individual's direct relationship with God. In 1922 Rabbi David Twersky was born in Kishinev, Russia, in a long line of distinguished rabbis. When he was 2, the family moved to the Lower East Side, where his father, Yitzchok, established a synagogue. Yitzchok later moved the synagogue to Williamsburg in Brooklyn and finally to 47th Street in Boro Park. David was 19 when his father died, and he took over the Skverer's leadership. Rabbi Twersky, who raised his sons as though they were in an East European shtetl, aided many victims of the Holocaust in their efforts to emigrate to the United States. He also established a network of yeshivas, separately serving boys, girls, and married men, planting the Old World in the New World of Boro Park.

Rabbi Shlomo Halberstam, a Holocaust survivor, nurtured the postwar rebirth of the Bobover sect, a group based in southeastern Poland that was nearly exterminated by the Nazis. He arrived in New York in the late 1940s, with only his

oldest son. Much of his family had been killed. During this period, according to Samuel Heilman, a professor of Jewish studies and sociology at Queens College, the rabbi apparently had a crisis of faith, shaved his beard, and lost his desire to be a rabbi. But he soon recovered, and his change of heart proved inspirational to many Orthodox Jews coping with poverty and psychological distress in the wake of the war. His success in recruiting Jews in America to the Bobov sect was attributed to the fact that he was both nonconfrontational and charismatic. Under about 50 years of his conciliatory leadership, the Bobover became the leading Hasidic group in Boro Park, perhaps a third of all the Hasidim. The Bobovers tended to look to their grand rabbi more than most sects for advice on business, marriage, and family. Unlike the Satmars and Lubavitch, the Bobovers flourished with little public infighting. The main Bobov synagogue, on 48th Street between 15th and 16th Avenues, was known as Bobover Promenade. The Bobover, who like other Hasidism did not recognize the State of Israel, were conspicuously absent from Satmar-inspired anti-Israel rallies at the United Nations, and the Bobover developed good relations with the more ambiguously Zionist Klausenbergers and Belzers. Those two groups accepted educational stipends from the Israeli government.

As Boro Park became more Hasidic, the community's boundaries were considered to be between 12th and 18th Avenues and between 40th and 60th Streets. Its commercial center was 13th Avenue, with its aromatic bakeries, kosher pizzerias, and Judaica shops. But there were no video stores or national retail or food chains on the main shopping streets. The community flourished with the growth of Hasidism worldwide. Families grew, not only to follow the Biblical commandment to be fruitful and multiply but to replenish the post-Holocaust Jewish population. The fertility rate in Boro Park was double that of the city as a whole. Families with many children were common, and some had as many as 18 or 19. To accommodate the burgeoning population, homes expanded forward, backward, upward and even downward. In 1992 the city created a special zoning district in Boro Park so homeowners could legally build on 65% of their lot, and the footage for setbacks and rear yards was halved. From 1990 to 1998, the city's Building Department issued more permits, 822, for private construction projects of new homes and additions than in any other residential neighborhood of Brooklyn. Every other family was adding wings or floors just to keep pace with its growing brood. Sometimes wealthy families bought adjacent lots, razed row houses and built imposing single-family edifices from scratch. Others lived in a near-chronic state of renovation.

About 80% of the roughly 100,000 people were Jewish, according to estimates by Community Board 12 and local residents, early in the 21st century. Pockets of Moslems, Italian, and Irish as well as Mexicans, Chinese, Pakistanis, Russians, and Poles also lived in Boro Park, which in the early years of the 21st century also encompassed parts of Bensonhurst, Kensington and Flatbush. The boundaries were determined

to be 8th Avenue to 20th Avenue, and 37th to 62^d Streets and Dahill Road.

Life in Boro Park was decidedly different from other parts of New York. At 8 A.M. every morning, an armada of yellow buses lined up to transport girls in long skirts and boys in curly earlocks to the 65 religious schools in the neighborhood. Many blocks had several synagogues, from hole-in-the-wall shtiebels to vast tiered synagogues, with a ceiling that reached three stories above long wood tables where clusters of boys and men pored over Hebrew texts late into the night. One synagogue, Shomre Shabos, was called the local minyan factory. From dawn until 1:30 A.M., quorums of 10 men shuffled in and about, arranging themselves in parallel lines, swaying back and forth in prayer.

Rich, poor, and working class lived side by side, praying together and sending their children to the same schools. The wealthy paid tuitions that supported the neighborhood's many religious schools and cobbled together a kind of private social service system, complete with group homes and a volunteer ambulance corps. There were perhaps 150 interest-free loan associations to help the needy. Every night, young men in worn black coats and hats knocked on the back doors of the larger homes seeking charity. Every Thursday afternoon, in a converted transit way station, dozens of students and volunteers packed hundreds of Sabbath charity boxes with eggs, milk, noodles, chickens, and kosher wine. By evening, 65 young men packed the boxes into cars and vans to drop on the doorsteps of the poor families.

From sundown Friday to sundown Saturday, all the shops – perhaps 400 – were closed (while the synagogues were full). A car that traversed the neighborhood on the Sabbath was looked on unkindly, and occasionally was stoned. After Shabbat and on Sunday, most residents shopped, strolled, and frequented kosher food shops like Mendel's 18th Avenue Pizza near 50th Street, where falafel, pirogies, or blintzes could be munched, Amnon's Kosher Pizza on 13th Avenue, the Donut Shop on 13th Avenue and 47th Street, where omelets and pancakes were also on the menu, and China Glatt, on 13th Avenue at 45th Street, one of the few nondairy restaurants. There were no bars on 13th Avenue and there were no parks in Boro Park.

[Stewart Kampel (2nd ed.)]

Upper West Side. Running diagonally across Manhattan, from the lower tip of Manhattan to the island's upper reaches, Broadway on the Upper West Side serves as the area's backbone and heart. Originally a Native American trail and built as Bloomingdale Road in 1703, Broadway, the widest street in the neighborhood, is a well-worn pathway to synagogues, famous food stores, Jewish cultural sites, and schools. With its parklike island, Broadway is also the communal front stoop, the place of serious and friendly networking, or schmoozing, among friends, neighbors, local politicians, and community leaders. The Upper West Side stretches from 59th to 110th Street, from Central Park West to Riverside Drive, and is sandwiched between two large city parks, Central Park and Riverside Park.

According to the Jewish Community Study of 2002, the Jewish population of the Upper West Side is 59,400 (the number of Jewish households is 37,100, with 71,800 people living in those households). Thirty percent of the households belong to a synagogue, with 14% affiliating with Orthodox, 25% with Conservative, and 28% with Reform; 16% identify as non-denominational and 13% as secular. One segment of the community is heavily committed to Jewish life, with 47% of neighborhood children having some day school education, and 64% having visited Israel. On the other hand, the intermarriage rate of 35% is slightly higher than the overall rate for Manhattan.

Although the Upper West Side does not have the largest Jewish population in Manhattan – there are more Jews living on the Upper East Side – the Upper West Side has much more of the distinctive feel of a Jewish neighborhood. Its streets are lined with kosher restaurants and food stores, supermarkets with kosher sections, Jewish bookstores and Judaica shops, schools – from Chabad to the first Reform day school in the country – and cultural institutions like Makor, a division of the 92nd St Y and the Jewish Community Council of Manhattan. Posters hung on street lamps and storefronts announce Jewish speakers and concerts. Its many synagogues range from grand to humble, with rich history behind them. Early mornings, it is not unusual to see people rushing off to shuls for the daily minyan (women too, as there are daily egalitarian services) and to the recently-built JCC for daily meditation.

But it is on Shabbat and holidays that the Jewish character of the neighborhood is most visible. Many families and individuals, dressed up to varying degrees, walk comfortably to the synagogues. An *eruv* strung around the neighborhood enables observant Jews to carry items on Shabbat and push baby carriages, activities otherwise not permitted.

The history of the neighborhood as a Jewish area is closely tied to the history of its synagogues. The neighborhood began to develop as a residential area after 1904, when the subway was constructed, connecting the West Side to midtown and Lower Manhattan. As the area became populated, several synagogues moved uptown, both following and leading their congregants, who moved from Lower Manhattan and points in between. Congregation Shearith Israel, the Spanish-Portuguese Synagogue – the oldest synagogue in New York, founded in 1654 – moved to its striking neoclassical building on Central Park West and 70th Street in 1897. Congregation B'nai Jeshurun – the first Ashkenazi synagogue in New York and the second oldest congregation, having broken from Shearith Israel in 1825 – moved to its Moorish Revival structure, on 88th Street between Broadway and West End, in 1918.

The Reform Rodeph Shalom, founded on the Lower East Side in 1842, moved to its Romanesque building on 83rd Street off Central Park West in 1930, from an intermediary building in the East 60s. In celebration of the synagogue's 150th anniversary in 1991, Rabbi Robert Levine and 75 congregants retraced the six-mile journey on foot, from Clinton Street, the site of its first building, to West 83rd Street.

Other synagogues in the area, like the Institutional Synagogue (now called the West Side Institutional Synagogue), on 76th Street off Columbus, and Ohab Zedek, on 95th Street off Columbus, moved to the area from Harlem.

The Jewish Center, a modern-Orthodox synagogue on West 86th Street, had its roots on the Upper West Side. Led by Rabbi Mordechai Kaplan, it was the first synagogue-center, founded in 1918 on the philosophy that cultural, recreational and religious activities be incorporated in one institution. When Rabbi Kaplan had disputes with the synagogue, he went on to found the Society for the Advancement of Judaism, one block east on 86th Street in 1922, which would become the first Reconstructionist synagogue.

All the synagogues were functioning in 2006.

In the years before and after World War II, many European immigrants moved to the neighborhood, including refugees and Holocaust survivors. Clusters of Jews from Austria, Czechoslovakia, and also Iraq settled in the area, and brought a foreign flavor and accent to the restaurants and cafes. Many who came from European cities felt at home in the stately pre-war apartment buildings along Broadway and West End Avenue, built in the similar styles to those they had left behind.

In the 1950s and 60s, new Jewish residents trickled in, while many Jews left the neighborhood for the suburbs and other places in the city. But in the late 1960s and 1970s, younger Jews began moving to the area; the *Havurah* movement, embracing small groups that met for study, prayer, and to observe life cycles, established a strong base on the West Side as progressive Jews, many influenced by the counter-culture movement, sought to create alternative, traditional communities based on egalitarianism. Members of groups like the New York *Havurah* sought new ways to reinvigorate ritual with meaning, much in the spirit of the highly successful *Jewish Catalog*, a best-selling book that found an audience among the baby-boom generation. Rejecting existing religious institutions, they favored participatory prayer in intimate settings, often meeting in members' homes. Many leaders of the *Havurah* community would go on to take leadership roles in the New York Jewish community decades later.

One such group began meeting at Ansche Chesed, a once thriving synagogue and community center with a substantial congregation at 100th Street and West End Avenue whose membership had dwindled, and helped bolster and revitalize that congregation. The synagogue and its community center were saved from planned destruction by a community effort that saw Montessori and another locally based, parent-run day-care center rent space in the complex. Since then, many Jewish and non-Jewish organizations and projects co-habitated and revitalized the "plant." That synagogue became a new model: a congregation made up of several lay-led services, going on simultaneously on Shabbat. Rabbi Michael Strassfeld, a co-editor of *The Jewish Catalog* (before he was ordained), was the first rabbinic leader of the reconstituted Ansche Chesed (and later would go on to lead the Society for the Advancement of Judaism).

At the same time as *Havurah* movement was getting under way, another significant development in Jewish life was unfolding about thirty blocks south. Under the leadership of Rabbi Shlomo Riskin, Lincoln Square Synagogue, a modern-Orthodox institution, was founded in 1964; its members first met in the Lincoln Towers complex before erecting their own building in 1970, with an unusual sanctuary-in-the-round. Rabbi Riskin drew young, professional and single people to the new synagogue, delivering weeknight talks on popular topics like relationships, with Torah underpinnings, to overflow audiences. The synagogue became a meeting spot for Jewish singles, many of whom stayed in the area after marrying. In 1983, Rabbi Riskin and his family, along with several Lincoln Square families, moved to Israel and settled in Efrat, where he served as chief rabbi and headed several educational institutions.

In subsequent years, the Lincoln Square population aged, and the center of young Orthodox Jewish single life moved north, to several synagogues in the West 80s and 90s.

Rabbi Sally Priesand, American's first female rabbi, who served the Stephen Wise Free Synagogue for several years beginning in 1972, and Rabbi Marshall Meyer, who died in 1993, made significant contributions to Jewish life in the area. Rabbi Meyer, after spending 25 years in Buenos Aires and founding Jewish institutions there, returned to New York in 1985 and spearheaded the revival of B'nai Jeshurun. Its Friday night services, filled with music, singing, and spirited prayer, attracted more than a thousand individuals, including many young people. The synagogue was nondenominational, having broken with the Conservative movement over the issue of gay ordination. Committed to social action, B'nai Jeshurun became a sought-after model for synagogues around the country.

In 1991, after its roof collapsed, the congregation of B'nai Jeshurun was invited by its neighbors on West 86th Street, the Church of St. Paul and St. Andrew, to hold services in their sanctuary. Together, congregants of the two institutions created a large banner, with the words of Psalm 133: "How good it is when brothers and sisters dwell together in harmony." It hangs at the front of the church. Even after the synagogue roof was repaired, the congregation continued to use the church on Shabbat mornings and holidays, having outgrown the synagogue space.

Rabbi Shlomo Carlebach, the descendent of a German rabbinical family, was known internationally for his neo-Hasidic musical style, deep and joyful spirituality and extensive outreach. In his final years, he was based on the Upper West Side, at the Carlebach Shul on West 79th Street. He died in 1994, and the Orthodox congregation continued his tradition of welcoming people from all backgrounds.

Although Lincoln Square Synagogue was the last Upper West Side synagogue to construct a new building, several new congregations were founded without buildings and used the facilities of schools and community centers. These minyan groups stressed community and took prayer seriously; their services were traditional and experimental, not necessarily defined by denominational boundaries.

Along with synagogues of every denomination, there were "beginner's services" in various synagogues as well as smaller congregations known as *shtetlach*, usually named for the rabbi who led them, and located in brownstones on the side streets. The area also had a Chabad and other Hasidic presence: it was not uncommon to see men walking on Shabbat in traditional *shtreimels* and *bekeshes*, long black tailored coats.

There was fluidity among the congregations, with some people belonging to several institutions at once, others who attended services in different places, and people who moved from synagogue to synagogue. In the years before 9/11, when there were fewer security concerns, synagogues jointly held outdoor Simchat Torah celebrations, with dancing in the streets, and some returned to the practice as tensions eased. The synagogues and minyan groups convened together for Yom HaShoah commemorations. On the first day of Rosh Hashanah, the Jewish community is out in force. It gathers on the walkway above the banks of the Hudson River for the ceremony of *Tashlikh*, casting breadcrumbs into the water and reciting verses from Scripture relating to repentance. It is one of the more colorful scenes of city life, with fashionably dressed women, men in new suits, and some in more casual clothing exchanging greetings of the new year.

Some of the synagogues featured soup kitchens and operated shelters for the homeless. Some housed nursery and afternoon schools.

A neighborhood landmark that drew shoppers as well as tourists, Zabar's was a long-running family business on Broadway, featuring traditional Jewish specialties along with other food, fancy and plain. Barney Greengrass, an appetizing store and café on Amsterdam Avenue, was famous for its smoked fish, and Murray's, on Broadway, was a neighborhood favorite for similar fare. The dairy restaurants of decades ago, where neighborhood habitués like Isaac Bashevis Singer – the Nobel laureate who had a section of West 86th Street named in his honor – are no more. They gave way to kosher steak houses, sushi bars, pizza shops, and places that served Moroccan, Yemenite, and other ethnic food.

On any given evening on the Upper West Side, it was possible to hear Jewish music, attend a kosher cooking class, or study Jewish texts, listen to a Jewish author read from a new work, participate in a healing service, or sit in on a panel discussion on Jewish issues of the day. That tradition was likely to continue.

[Sandee Brawarsky (2nd ed.)]

Washington Heights. With its hills and parks overlooking the Hudson and Harlem Rivers, Washington Heights at the northern end of Manhattan proved especially attractive to European immigrants. The Heights was one of the last parts of the island to be settled. Before World War I, the areas east of Broadway and south of 181st Street became an urban neighborhood, but the more affluent areas to the north and west were settled mainly in the 1920s and 1930s. Virtually all the neighborhood housing consisted of five- and six-story brick apartment houses.

The first Jews in Washington Heights were mainly immigrants from Eastern Europe and their children who moved to the Heights from the Lower East Side or from neighboring Harlem, especially in the 1920s and 1930s. A number of institutions that were founded in Harlem moved north with their followers and constituents. Although located in Manhattan, Washington Heights resembled Jewish areas of second settlement in the Bronx and Brooklyn more than other parts of its own borough. Jews never made up a majority of the population, though they were probably between 35 and 40% of the total. Other ethnic groups included persons of Irish, Greek, and Armenian background. Washington Heights was considered a prestigious middle-class area, and in 1928 Yeshiva University relocated to Amsterdam Avenue in Washington Heights precisely because of the prestige of the address. The Moorish building of the university's main building became the nucleus of a campus that sprawled over a number of blocks on the eastern end of the neighborhood between 184th and 187th Street.

In the late 1930s the Jewish community was reinforced by a large influx of German-speaking Jews fleeing the Nazis. In all, 20,000 to 25,000 German-speaking Jews settled in, constituting about 40% of the Jewish population. Although Washington Heights was the home of the largest concentration of German Jewish escapees from Nazi Germany, its residents were not typical of the overall wave of German Jewish immigrants of the 1930s. Those in Washington Heights were atypical in their greater religious traditionalism, their overwhelmingly South German and often rural background, and their relatively modest socioeconomic and education levels. Though more "bourgeois" than most immigrants to the United States, the German Jews of Washington Heights bore little resemblance to the famous "intellectual immigrants" of the 1930s.

Most of the newcomers arrived between 1938 and 1940. Some moved to Washington Heights immediately. Others joined them. In the late 1930s, the newcomers began to build a network of institutions and give the neighborhood a German Jewish atmosphere. Social clubs and places of entertainment played an important role in the life of the community until about 1950, although many German Jews also found culture and entertainment outside of Washington Heights. After World War II German Jewish institutional life in the neighborhood was concentrated in the numerous immigrant synagogues founded between 1935 and 1949. Besides a dozen congregations organized by the immigrants themselves, there were several pre-existing synagogues in which they gained a majority and heavily influenced the congregational atmosphere. The synagogues influenced by German Jews in Washington Heights stretched across a broad spectrum, from the Reform Hebrew Tabernacle to right-wing Orthodox congregations.

Most of the synagogues followed Orthodox forms, though in some of them strictly observant Jews were in the minority. The largest German Jewish congregation in Wash-

ington Heights was K'hal Adath Jeshurun, founded in 1938 by former members of the separatist Orthodox community of Frankfurt, which had once been headed by Samson Raphael *Hirsch. The congregation was called Breuer's, after its first rabbi, Joseph *Breuer (1882–1980), Samson Raphael Hirsch's grandson. The Breuer community established an all-encompassing European-style communal structure highly unusual for the United States. Besides its large synagogue, social hall, and burial society, it had its own *kashrut* supervision, *mikveh*, school system from nursery school through postgraduate yeshivah, synagogue newspaper (*Mitteilungen*), and charitable and women's groups. Most of the other German synagogues in the neighborhood were also large and formal, often with several cantors, a choir, and an involved institutional structure.

Although German Jews were far from a majority of the population of Washington Heights, the German Jewish character of the neighborhood was evident in many subtle ways. Many of the immigrants spoke German at home and on the street, even after they learned some English, although the German language was almost never used in shop signs or public notices. German was also used in synagogue sermons and bulletins well into the 1960s. From the mid-1950s to the early 1970s, there was a slow transition to English after which German disappeared from every official capacity in synagogue life, though individual congregants sometimes continued conversing in German.

German Jewish culture was also evident in the conservative styles of dress and formalism in interpersonal behavior. German immigrants could often be seen sitting on benches in the park or standing in groups on the sidewalk conversing quietly in German. Some sat for hours over a cup of coffee in local restaurants talking about the olden days. As a sophisticated and educated group, many German Jews brought their libraries of German literature with them and attended classical concerts in other parts of the city. Even synagogue social events sometimes included classical music. These interests in high culture were not nearly as common among the many rural Jews who settled in Washington Heights. In general the immigrants who came to Washington Heights had a far stronger Jewish identity and more intense Jewish religious practice than German Jews who settled in other neighborhoods. Most severed their sense of connection to Germany after World War II. Though some residents of Washington Heights made occasional visits to Germany, to visit the graves of their relatives, see their hometowns, or do business, a larger number visited Israel, with which they had a far closer emotional tie.

Like most other immigrants, the great majority of the German Jews of Washington Heights sent their children to public schools, where they rapidly became acculturated to the English language as well as American political and cultural values. Most gave their children some supplemental Jewish education in synagogue Hebrew schools, though a growing proportion of the Orthodox minority sent their children to Jewish day schools. The American-born generation had little identification with the German culture of their parents, rarely

learned German, and almost never spoke it to one another. They also rejected many of the cultural values of their parents, especially what they considered the older generation's formality and rigidity. Members of the second generation saw themselves as American Jews whose German background was only a small part of their identities.

The children of the immigrants generally did well economically and educationally. Unlike most of their parents, they went on to higher education and entered the professions. Probably more than half married outside the German Jewish community (but generally not outside the Jewish community). As they grew up and succeeded, most of the children of the immigrants moved away from Washington Heights to the suburbs or more prestigious neighborhoods in New York. Some of the more successful of the immigrants also moved away.

The overall ethnic makeup of Washington Heights underwent a slow but thoroughgoing change. In the late 1940s and the 1950s, blacks and Hispanics began moving in large numbers into the southern sections of Washington Heights, which soon became merely a part of Harlem. In the 1960s and 1970s people of color slowly became the majority of the population of all of Washington Heights, except a small section of northwest Washington Heights near Fort Tryon Park. Most of the white residents moved away, though German Jewish outmigration may have been a bit slower than the "flight" of other white groups. Washington Heights became a primarily Hispanic neighborhood populated mostly by people from the Dominican Republic. The shops and institutions catered mainly to the new population, with many signs in the Spanish language. The social prestige of the neighborhood declined as crime and drug trafficking increased.

As they became more and more of a minority in the neighborhood, the remaining Jews organized to defend their stake in the area. They ran candidates for the local school board, organized a safety patrol, settled recently arrived Soviet Jews in the neighborhood, and created a Jewish neighborhood council. This council was dominated by the Breuer community, whose role among Jews became ever greater. Unlike other congregations, the Breuer was able to retain a considerable portion of its American-born generations within the neighborhood.

By the late 1980s, the German Jews of Washington Heights were an aging and shrinking community mainly huddled in one part of western Washington Heights. Most of their synagogues closed, moved, or merged, many German Jewish stores and food shops closed, and the German Jewishness of the community became less and less apparent. Besides the remnant of the German Jewish immigrant community, the main Jewish elements that remained were the campus of Yeshiva University and the Russian-speaking recent arrivals, neither of whom interacted very much with the German Jews.

The "decline" of Washington Heights began to be reversed in the late 1990s and thereafter. Two groups of young people began to move into the neighborhood. The first consisted mainly of Orthodox Jewish singles and young couples,

often studying at, or recently graduated from, Yeshiva University. They tended to live near the campus in the eastern part of the neighborhood or on Bennett Avenue near the Breuer synagogue. Few of them were of German-Jewish background and most stayed in the area only a few years, but they did give a boost to the German Jews who had remained. The second group consisted of upwardly mobile young professionals attracted by the area's closeness to midtown Manhattan and its picturesque views of the Hudson River. Some of these newcomers were Jews but they rarely showed much interest for the Jewish culture of the neighborhood. They tended to live in co-ops or condominiums on the streets bordering the Hudson River south of Fort Tryon Park, an area that real estate agents began to call "Hudson Heights" to distinguish it from the rest of the neighborhood. This new population brought with it many of the features of gentrification of poor neighborhoods, including finer restaurants and cultural events. By the beginning of the 21st century, real estate values in the area began to skyrocket. The remaining German Jews, in the early 21st century, who had come to America as children or adolescents, were now mostly in their 80s or even older. Whether the Jews ever return in large numbers remains to be seen.

[Steven Lowenstein (2nd ed.)]

Williamsburg. Three bridges unite the boroughs of Manhattan with Brooklyn – the Brooklyn Bridge, the Manhattan Bridge, and the Williamsburg Bridge. After it opened in 1903, the Williamsburg was nicknamed Jews' Highway because it drew immigrants from the teeming Lower East Side to the south Brooklyn neighborhood adjoining the East River. Served by trolley cars and an elevated subway line, Williamsburg became one of New York's major Jewish communities in the early part of the 20th century.

Williamsburgh (the h was later dropped) was first incorporated as a village in 1827, but its history goes back to 1638, when the Dutch West India Company purchased the land from Canarsie Indians. A period of squatting by farmers of various nationalities followed. It did not become a major residential area until 1803, when a real-estate investor, Richard Woodhull, purchased 13 acres of land, to be surveyed by his friend, Jonathan Williams, a grandnephew of Benjamin Franklin who planned and built most of the forts in New York Harbor. Williamsburg would later be named in Williams' honor.

Woodhull and Williams intended the area to be a residential alternative to Manhattan, accessible by ferry. Williamsburg became a city in 1827, with new docks, shipyards, and other businesses that profited from proximity to New York's port. The New York Navy Yard, colloquially known as the Brooklyn Navy Yard, was opened in 1801 and employed 6,000 men by the start of the Civil War. By the 1850s, Williamsburg had grown into a suburban-style city, with 31,000 people, and it was home to resorts, farms, distilleries, and breweries. It later became part of the city of Brooklyn, which joined New York City in 1898. The availability of jobs drew immigrants from Ireland, Italy, Germany, and England.

The character of Williamsburg would change dramatically, though, when the Williamsburg Bridge, built to relieve traffic on the Brooklyn Bridge, caused the displacement of almost 20,000 people and the destruction of their property. With Williamsburg linked to the Lower East Side, farms, resorts and mansions gave way to multiple-unit dwellings to accommodate the waves of immigrants. By the 1920s, the population exceeded 250,000, and the area was one of the most densely populated regions of the country.

In 1938, the growing need for public housing led to the first federal housing project in the nation, the Williamsburg Houses. The project, which cost about \$12 million, accommodated 1,622 low-income families in 20 four-story apartment houses. These buildings were the forerunner of a series of low-income and middle-income subsidized housing in the borough and the city. Completed near the end of the Depression, the projects, as they were known, provided clean and fresh apartments for civil servants, small-business owners and others, regardless of religion, and were an oasis of greenery in an area of small, largely dilapidated wood-frame housing. Almost 70 years later, in the 21st century, the projects continued to provide low-rent accommodations to a changing population. The working class influx also fueled an industrial boom, and Williamsburg became a center of manufacturing until a decline in the 1950s.

After World War II, the area was host to the renaissance of the Satmar Hasidic sect, which was nearly obliterated by the Nazis, and a majority of Jews living in the neighborhood today are Hasidim. The New York Jewish Population Survey of 2002 estimated that 57,600 Jews lived in Williamsburg, 40,000 of them Hasidic. In 2006, the Satmar, the men distinctive by their long black coats and *shtreimels*, or fur hats, and the women by their conservative dress and wigs and turbans as head coverings, was believed to be the world's largest Hasidic sect with 100,000 adherents. The name Satmar comes from the Romanian Satu Mare, or large village. Members of the Pupa, Wien, and Klausenberger sects, named for the areas of Europe from which they emigrated, also had a presence in Williamsburg.

The explosion of Williamsburg Hasidic life began in 1946 with the arrival of the Satmar Grand Rebbe, Joel Teitelbaum, who escaped from Nazi-occupied Hungary and the Bergen-Belsen concentration camp. The community thrived, founding an extensive network of synagogues and yeshivas and organizations like Bikur Cholim, providing help and support for the sick and needy. Overcrowding led followers to establish a satellite community, Kiryas Joel, in Orange County, NY. During the 1950s and subsequent decades Williamsburg's Jews ran the gamut of religious observance and affiliation, but the non-Hasidic population gradually declined. When Rabbi Teitelbaum died in 1979, his nephew, Rabbi Moshe Teitelbaum, formerly known as the Sigeter Rebbe, succeeded him. Since 1999, the sect has been engulfed in conflict after Rabbi Teitelbaum named his younger son, Zalman, to lead the central Satmar synagogue, Yetev Lev Bikur Cholim, bypassing his el-

dest son, Aaron, whose followers were mostly in Kiryas Joel. Factions supporting both brothers battled for years in court, and occasionally on the streets, where their clashes prompted a police response.

Bedford Avenue, with historic brownstones in tip-top condition, was one of the leafier enclaves of Jewish Williamsburg, and was along the route of the annual New York City Marathon. Although they rarely ventured out of their life of study and religious practice, it was not unusual to see the Hasidim cheering on the runners and providing refreshments during the race. On one particularly hot day, the Hasidim sprayed runners with seltzer, adding to the color of the race. The shopping strip on Lee Avenue had a distinctive Jewish flavor, with decades-old businesses flourishing under signs in Yiddish and English, and restaurants and take-out stores filling the air with the scent of kosher food. Children were everywhere, an average of about eight to a family. By the early years of the century, new grand synagogues were being built by the Satmar, while a few modern Orthodox congregations, like Beth Jacob Ohev Sholom on Rodney Street, persisted.

Beneath the surface of the bustling and thriving community, however, was the reality that Williamsburg harbored one of the poorest Jewish communities in the United States, with an estimated 59 percent living below the poverty line and eligible for government services like food stamps and subsidized housing. Many large families lived in cramped apartments, and it was not uncommon to find bathtubs doubling as beds. Some of the members of the sect supported their families by working in the diamond district in Manhattan, but more commonly the men studied or worked in yeshivahs as teachers, which for many was a calling. Some also earned a kollel, or stipend, for learning. The community itself also provided free food for Shabbat.

Jews were not the only large ethnic group in the neighborhood. Spanish-speaking Latinos or Puerto Ricans had congregated in the area following the end of World War II and the need for affordable housing caused stress between the groups. This conflict required regular intervention and mediation by public officials. In 1997, during the administration of Mayor Rudolph Giuliani, the groups agreed to place proceeds from the sale of city-owned property into a housing fund that would benefit both communities. Amid the conflict, Jews and Hispanics found much common ground, fighting the closing of fire stations and opposing possible environmental hazards like a proposed incinerator on the site of the Brooklyn Navy Yard (since defeated) and hazardous lead paint falling from the Williamsburg Bridge. The area had one of the highest incidences of asthma in the city. Jews and Hispanics joined to address the influx of artists and others fleeing the exorbitant rents of Manhattan studios and apartments. They were drawn to old commercial lofts that the city rezoned for residential use in 1985. Their presence led to the opening of galleries, museums, live-music night clubs, cafes and restaurants and an avant-garde branch of the Museum of Modern Art. The Ha-

sidim, who shun secular culture, called on members of their community to avoid renting to the artists. Both groups feared that they would be priced out of their own neighborhood if developers catered to the newcomers and that the rezoning they fought for to create affordable housing would be exploited for profit. The newcomers, however, helped to stabilize and revive the over-all neighborhood.

In the early 1950s, low-income Williamsburg was the scene of a sweeping transformation when the city planner Robert Moses designed the Brooklyn-Queens Expressway to pass through the neighborhood, cutting it in half and leaving the western segment between the highway and the East River, a destination for poor immigrants, in decline. Some 5,000 people were displaced, and numerous homes and businesses were condemned by eminent domain to clear space for the project. Many later attributed the area's high asthma rate to exhaust from the heavy expressway traffic. The Brooklyn Navy Yard was decommissioned in 1966, although it was sold to New York City and later became a major industrial park, with over 200 business tenants and 3,500 employees.

In addition to rabbinic councils and charities, the area's Jewish community was served by the United Jewish Organizations, an umbrella group affiliated with the Metropolitan Council on Jewish Poverty and the Jewish Community Relations Council of New York. Led for many years by Rabbi David Niederman, the organization lobbied for and administered government funding and acted as liaison with public officials. Jewish leaders played a significant role in charting the future of the neighborhood.

In May, 2005, Mayor Michael Bloomberg and the City Council approved a plan to rezone the North Side of Williamsburg and Greenpoint for residence and a waterfront park as well as luxury high-rises. The population of the area could increase by 40,000. The plan also aimed to attract top-name retailers. Critics lamented that the plan did nothing to return the thousands of lost manufacturing jobs to the neighborhood, which dropped from a peak of 93,000 in 1961 to fewer than 12,000 in 2006. They also feared that the city would not be able to improve transportation and safety in the area, and that it would make Williamsburg more like Manhattan.

NEW YORK STATE, an eastern state of the U.S., bounded on the north and west by the St. Lawrence Seaway, Lake Ontario, and Lake Erie, and at the southern tip, by the Atlantic Ocean. Of its 18,990,000 inhabitants (as reported in 2001), about 1,657,000 are Jews (down from 2,522,000 Jews in 1969).

In 1654, 23 Spanish Portuguese Jews, refugees from the Inquisition, arrived in New Amsterdam (*New York after 1664) from Recife, Brazil, and founded the first permanent Jewish settlement in North America. They stayed in part because they had no choice: they were without resources. When Peter Stuyvesant asked the Dutch West Indies Company what to do with the refugees, Jews who were part of the company in Amsterdam were influential enough to provide for them to stay. While the tiny community did not thrive at first, one of its leaders, Asser *Levy, by 1658 had real-estate holdings as far north as Albany, and in 1678 Jacob de Lucena was trading in Kingston, up the Hudson River. Successful merchants, Luis Gomez and his sons built a trading post on the Hudson near Newburgh in 1717, and in 1732 the *Hays family settled near New Rochelle in Westchester. During the French and Indian War, Hayman *Levy, a Hanoverian, conducted a large fur trade around Lake Champlain in the north, and Lyon and Manuel *Josephson supplied goods to northern British forts. In the 1760s, some Jews settled on Long Island and in Westchester. Until the 19th century, most Jews who settled in the area that became New York State in 1788 were of Spanish-Portuguese origin.

Following the War of 1812, improvements in maritime technology and transportation, particularly the use of steam and the opening of the Erie Canal, combined to intensify Jewish settlement. Aaron *Levy, for example, visited the Lake George region from 1805 to 1834. Significant Jewish communities developed in Albany, Syracuse, Rochester, and Buffalo between 1820 and the Civil War. During the substantial German Jewish immigration that began during the 1830s, many immigrants settled along the upper transportation routes to the Middle West: Newburgh (1848), Poughkeepsie (1848), Kingston (1853), Hudson (1867), *Albany (1838), Schenectady (1840s), Troy (1850s), Amsterdam (1874), Gloversville (1850s), *Utica (1848), Syracuse (1839), *Rochester (1848), and *Buffalo (1847) on the Hudson-Mohawk River route. Other settlements were founded in Binghamton (1885), Elmira (1850), and Olean (1882) along the southern Susquehanna River, Plattsburgh (1861) on Lake Champlain, and Ogdensburg (1865) on the St. Lawrence River. Isaac M. Wise, the principal architect of Reform Judaism in the United States, served briefly in Albany beginning in 1846. There he established the custom of mixed seating in American synagogues. By 1860 there were 20 congregations in the state and 53 by 1877. These Jews were predominantly merchants and peddlers, while some were farmers. By 1909 there were seven Jewish farmers’ organizations in the state, and the first Jewish farmers’ credit union was formed in 1911.

An estimated 60,000–80,000 Jews lived in the state in 1880. East European immigration increased that number to

Jewish communities in New York. Population figures for 2001.

900,000 by 1910. By 1928 the number reached 1,835,500. Although most of the East Europeans settled in New York City, others, encouraged to alleviate congestion, went to towns in the north, such as Haverstraw (1896), Ossining (1891), Peekskill (1894), New Rochelle (1880s), Lake Placid (1903), Liberty (1880s), Spring Valley (1901), Yonkers (1860s), Mamaroneck (1890), Massena (1897), Suffern (1880s), and Tarrytown (1887), as well as Ithaca (1891) in the central part of the state. In 1940, 90% of the state's 2,206,328 (1937 figure) Jews resided in the city. However, the next two decades saw a flow to the suburbs. In 1940 fewer than 100,000 Jews lived in all the New York City suburbs, but Nassau, fueled by returning GIs owning their own

homes, had 329,000 Jews by 1956 and 372,000 in 1968; Suffolk, 20,000 by 1956 and 42,000 in 1968 and 90,000 at the turn of the 21st century; and Westchester, 116,900 by 1956 and 131,000 in 1968 (the number has been stable since).

In 1902, Jewish organizations established summer camps for urban Jewish youth, beginning with the Educational Alliance's Surprise Lake Camp, in Cold Spring. And Jews made themselves felt on rural Long Island, too. In 1909, a Jewish dentist, Dr. Henry W. Walden, invented and flew the first American monoplane from Mineola Airport. One Long Island company, the Elberon Rubber Factory in Setauket, had so many Jews on its payroll that it had to close for the High

Holidays, even though the owners weren't Jewish. The Baron de Hirsh Jewish Agricultural Society operated a training farm in Kings Park and farm communities in Center Moriches, Riverhead, Calverton, East Islip, and Farmingdale. Turn-of-the-century Centerport was the home of a camp for boys and young men operated by the 92nd Street Y. It advertised "the finest in kosher cuisine."

Relief from summer heat, sweatshops, and squalor led to the development of the "Borscht Belt" in Sullivan, Ulster, and Orange counties. Some left the Lower East Side and bought small farms. But farming was not their forte, and soon the farms became boarding houses, then inns and bungalow colonies for visitors from the city. The guests insisted on entertainment, and by the 1920s that became a major undertaking. Waiters and busboys doubled as comics and entertainers, or tumblers, while the social directors became impresarios. Among the social directors were Moss *Hart, the future playwright, and Don Hartman, who became head of Paramount Pictures. The tumblers included David Daniel Kaminsky, Aaron Chwatt, Jacob Pincus Perelmuth, Morris Miller, Eugene Klass, Joseph Levitch, Milton Berlinger, Joseph Gottlieb and Murray Janofsky, later to become well-known as Danny Kaye, Red Buttons, Jan Peerce, Robert Merrill, Gene Barry, Jerry Lewis, Milton Berle, Joey Bishop, and Jan Murray.

The queen of the mountains was Jennie Grossinger, who became the region's best-known hostess, and her namesake hotel the most imitated. One of the imitators was Arthur Winarick, the bald manufacturer of Jeris hair tonic and the owner of the Concord Hotel, who constantly tried to one-up Grossinger's. In later years, television, jet travel, and increased competition proved serious threats to the region, and Grossinger's was sold in 1985 for conversion to condominiums and ski houses. Dozens of hotels closed or became retreats for religious cultists.

For 100 years, beginning at the end of the 19th century, Jewish life had a presence in the area. Synagogues were constructed in almost every hamlet. By 1999, 15 remained. Seven of them were listed on the National Register of Historic Places. They were: Agudas Achim, Livingston Manor; B'nai Israel, Woodbourne; Anshei Glen Wild, Glen Wild; Bikur Cholim B'nai Yisroel, Swan Lake; Chevra Ahavath Zion, Monticello; Tifereth Israel Anshei, Parksville; and the Jewish Community Center of White Sulphur Springs. Sharon Springs developed as a high-end Jewish refuge. After World War II, Sharon Springs got a second wind from the West German government, which paid medical care reparations to Holocaust survivors, holding that therapeutic spa vacations were a legitimate part of the medical package. Many hotel guests had tattoos on their arms.

Politically, the roster of New York Jews who served in Congress began in the 19th century and included Edwin Einstein (1879–81); Joseph Pulitzer (1883–85); Isidor Straus (1894–95); Israel Frederick Fischer (1894–95); Lucius N. Littauer (1897–1907); Mitchell May (1899–1901); and Jefferson M. Levy (1899–1901; 1911–15). In the 20th century, Herbert Ten-

zer (1965–69) was the first Orthodox Jew in Congress; Al-lard K. Lowenstein (1869–71), a leader of the anti-war movement, won election from Long Island, and Gary L. Ackerman (1983–), representing Queens and Long Island, was host in his office to *minhah* prayers each afternoon at the Capitol.

Herbert H. *Lehman was governor from 1933 to 1942, and U.S. senator from 1949 to 1957. Jacob K. *Javits served as U.S. senator from 1957 to 1981. Charles *Schumer first served as a congressman and later as a senator beginning in 1998. Benjamin N. *Cardozo (1927–32), Irving Lehman (1940–45), and Stanley H. Fuld (1966–73) were chief justices of the Court of Appeals, the state's highest bench. Pressure from Jewish members of the State Legislature led to the passage of the Fair Employment Practice Act in 1945, the first in the U.S. to prohibit discrimination in employment practices.

Jewish newspapers were published in Buffalo (since 1918), Rochester (1924), Westchester (1942), Long Island (1944), and Schenectady (1965).

[Edward L. Greenstein]

The 1,657,000 Jews of New York State represented around 9% of the total population of the state. New York City, long the most populous and influential of the American Jewish communities, had fewer than 1,000,000, with the Bronx being virtually without Jews except for Riverdale (45,000), Manhattan having 243,500 Jews, Brooklyn 456,000, Queens 186,000, and Staten Island 42,700. The metropolitan area, which included the suburbs as well as those in New Jersey and lower Connecticut, was the most predominant Jewish community outside of Israel, containing some 40% of all American Jews. Excluding New York City, there are more than 513 synagogues in New York State and some 50 *mikvehs*. Other population centers include: Nassau County (221,000), Suffolk County (90,000), Westchester (129,000), Rockland County (90,000), Rochester (22,500), Orange County (including Monroe and Newburgh, 19,000), Buffalo (18,500), Albany (12,000), and Syracuse (9,000).

NEW ZEALAND, independent country and member of the Commonwealth, situated in the South Pacific. In 1829, some 60 years after the rediscovery of New Zealand, the Sydney firm of Cooper and Levy established itself in the South Island at Port Cooper (Lyttleton) and Port Levy, a little to the north. Solomon Levy, the Jewish partner, later became a benefactor of both Jewish and Christian educational and charitable institutions. During the next decade, other Jewish traders began to arrive. In 1830 Joseph Barrow Montefiore (a member of the English *Montefiore family) from Sydney established Montefiore Brothers, dealing largely in flax and whale oil. In 1831 Joel Samuel *Polack, author of two books on New Zealand, came first to Hokianga to trade and deal in land. He shortly

Jewish communities in New Zealand with dates of establishment.

transferred to Kororareka, Bay of Islands, where a cousin of J.B. Montefiore had established a trading post in 1831. Four other Jews were resident at Kororareka in 1838, but along with David *Nathan who had arrived in 1839 they moved to Auckland after it was made the capital in 1840. With a handful of other Jewish storekeepers and traders, David Nathan founded the Auckland Jewish community. Members of the congregation read the services and conducted religious functions – a pattern to be followed elsewhere in New Zealand. The first ordained minister (J.E. Myers of Auckland) was appointed to a New Zealand congregation in 1859.

In Wellington the first Jewish arrival appears to have been Abraham Hort, Jr. who came in 1840 with two carpenter brothers, Solomon and Benjamin Levy. These were followed in 1843 by Abraham *Hort, Sr. (1799–1869), a London Jewish communal leader who went to New Zealand with the intention of founding a community and promoting planned immigration to relieve Jewish poverty in England, through the New Zealand Company which in 1840 had begun colonizing parts of the country. Although successful in founding the Wellington community, he failed to achieve his immigration plans. The discovery of gold in Otago and Westland in the 1860s led directly or indirectly to the establishment of the communities of *Dunedin and *Christchurch and to the temporary found-

ing of those in Hokitika, Timaru, and Nelson; the Timaru synagogue still stands without a congregation. David Isaacs, formerly of the Wellington and Dunedin congregations, was appointed shortly after 1863 to Nelson, and I. Zachariah of the gold-mining town of Hokitika was appointed in 1870 to the Christchurch congregation. Most of the ordained ministers came from Jews' College, England, including Herman Van Staveren (Wellington, 1877–1930) and Alexander Astor (Dunedin and Auckland, 1926–71). Chananiah Pitkowsky (Wellington, 1905–30) and the brothers N. Salas (Auckland and Christchurch, 1929–58) and M. Salas (Auckland, 1934–55) came from Erez Israel.

New Zealand's links with Erez Israel date from the time of the Crimean War, when money was being collected in Auckland and Wellington for starving Jews in Erez Israel. In 1862 Jacob *Saphir of Jerusalem visited Dunedin on a similar mission. Before New Zealand became a British colony in 1840, the Jewish population numbered less than 30. By 1861 it had risen to 326 (0.3% of the total), and six years later to 1,262 (0.6%). The gold rushes brought hundreds of Jews there, but by the 1870s their number had fallen to approximately 0.2%, above which it has never risen. The Jewish population numbered 1,611 in 1901, 2,380 in 1921, 3,470 in 1945, 4,006 (out of 2,750,000) in 1961, and just over 4,000 in 1968. In the 1980s significant numbers of Jews settled in New Zealand from the former U.S.S.R. and especially from South Africa. The number of Jews by religion reported in the 1991 New Zealand Census was 3,126. Most observers regard the actual number as significantly higher, in the range of 4,500–5,000. The vast majority of Jews are distributed between New Zealand's largest city, Auckland, and the country's capital, Wellington. For much of the country's history these two centers have had comparable numbers of Jews. However, from about the mid-1980s as Auckland's growth continued to outpace that of the rest of the country, so too the numbers of Jews in Auckland began to significantly outnumber the numbers in Wellington. Apart from the city's position as New Zealand's economic capital – with roughly one in four New Zealanders residing there – the imbalance between the two communities has also been the result of larger numbers of South African Jews choosing to migrate there.

For much of New Zealand's history there have been highly restrictive government policies on immigration, with migrants from Great Britain receiving preference. Only a minuscule number of Jews seeking to flee from Europe during the years of Nazi rule were able to gain entry to New Zealand. Similarly, after the war only a small number of homeless Jewish refugees were admitted to the country. Those fleeing persecution in Russia and Eastern Europe during the Cold War also faced strong obstacles if they sought haven in New Zealand.

Those European Jews who did manage to go to New Zealand generally did so through family or communal ties to New Zealand Jews. Jewish leaders also made strenuous efforts to assist Jews trying to go to New Zealand, lobbying parliamentarians and cabinet ministers. Communal organi-

zations were established to provide aid to Jewish immigrants to what was, for nearly all of them, a vastly different country from the one they left.

The Jews arriving in the 1930s had an impact on the New Zealand community, as some of them brought with them styles of worship and observance distinct from the largely ex-British Jewry of the country's congregations. Subsequent groups of migrants – including Jews fleeing the Hungarian uprising in 1956, former Soviet Jews during the 1980s and 1990s, and Jews leaving South Africa during the 1990s – have each had an impact on Jewish communities through participation in various communal organizations.

Assimilation into New Zealand society by the country's Jews reflects their being comfortable with the country's predominantly secular outlook and the overall absence of overt antisemitism. The growth of the Jewish population has been small not only because of assimilation and intermarriage, but because there has been substantial emigration from New Zealand over the years, particularly to Australia, by all New Zealanders, Jews among them. Emigration to Israel – *aliyah* – has been a further factor affecting communal growth and vitality, not only in absolute numbers but because many of those emigrating to Israel, identifying with the country and seeking a stronger Jewish lifestyle, have been those who, had they remained, would have been expected to be among the leaders of their communities.

Today, though complemented by various Zionist, social, and educational organizations, the synagogues remain the hub of the communities in Auckland and Wellington, where there are Orthodox ministers under the authority of the chief rabbi in London. Progressive congregations exist in Auckland (1959) and Wellington (1960). Smaller communal groups are also to be found elsewhere, in Christchurch, Dunedin, and Hamilton. Jewish youth groups continue to exist in Auckland and Wellington, with small numbers of Jews going annually on various programs to Israel – for some, the beginning of a process culminating in eventual *aliyah*.

From the turn of the century, Jewish social and welfare organizations have developed. Internationally affiliated *B'nai B'rith lodges were established in Wellington (1960) and Auckland (1961). The first national monthly Jewish journal, the *New Zealand Jewish Times*, was started in the 1920s. In 1971, there was one monthly newspaper, the *New Zealand Jewish Chronicle*.

Interest in Zionism was rather academic until the *Balfour Declaration and the return after World War I of units from the Palestine campaign. After 1918 Louis Phillips of Auckland, who had been New Zealand's first delegate to the International Zionist Conference, led the Zionist movement. A number of young New Zealanders settled in Israel after 1948.

Free from any discriminatory disabilities, the Jews in New Zealand have made valuable contributions to the country's development and progress. Sir Julius *Vogel, twice premier (1873–75 and 1876), has been called New Zealand's most

far-sighted statesman, while Sir Arthur *Myers was minister of munitions in World War I. Almost every major city in New Zealand has honored a Jew as its chief magistrate. There have been five Jewish mayors of New Zealand's largest city, Auckland; these were Philip A. Philips (1869–74) and Henry Isaacs in the 1870s, Sir Arthur Myers (1905–08), Sir Ernest David (1935–41), and Sir Dove-Myer Robinson (1959–65 and 1968–80). Sir Michael *Myers of Wellington was Chief Justice from 1929 to 1946 and acted as administrator during the absence of the governor. Some noteworthy Jewish names in New Zealand journalism have been Julius Vogel, Benjamin *Farjeon the poet and novelist, Fred Pirani, Mark Cohen, and Phineas Selig, and in medicine Sir Louis Barnett (surgery), Alfred Bernstein (chest diseases), and Bernard Myers (medical services). Wolf Heinemann, the philologist of Dunedin, was the first Jew to be appointed professor in a New Zealand university (Otago, 1895). Jews have pioneered in both business and farming. The oldest business in New Zealand is that of L.D. Nathan and Company. Joseph Nathan (Wellington) developed the Glaxo pharmaceutical company, a worldwide concern now operating chiefly from England, while the establishment of New Zealand's steel mills owes much to the industrialist Sir Woolf Fisher. Jews were instrumental in developing New Zealand's brewing and hotel industries, and in the wholesale and retail clothing industries they formed early national groups. Among Jewish farmers and agriculturalists was Coleman Phillips, who formed the first cooperative dairy farm in either Australia or New Zealand. In other aspects of New Zealand life, particularly sporting, cultural, and artistic, Jews have also played their full part.

The number of Jews in New Zealand was estimated at around 5,000 in 1980, most of whom lived in Auckland and Wellington, in roughly equal numbers. There was still considerable assimilation, with a high proportion of Jews marrying non-Jewish partners, some of whom chose to convert to Judaism.

In October 1980, Colin King, an Orthodox Jew, was elected mayor of Auckland succeeding Sir Dove Myer Robinson, also Jewish, who had served as mayor for 12 years. Two Jewish day schools exist in New Zealand – Kadimah College in Auckland, opened in the late 1970s, and Moriah College in Wellington, opened in 1987. There are also Jewish preschool facilities.

In 1981 the fresh supply of kosher meat for the Wellington Jewish community was organized by the Wellington Hebrew Congregation's board of management as a cooperative which functions at the local Jewish community center.

The New Zealand Jewish Council was established in 1981 as an umbrella organization authorized to represent the New Zealand Jewish community, and Wally Hirsch of Wellington was chosen to be the first chairman of the council. The council subsequently relocated in Auckland. Regional councils were also established, with leadership of the New Jewish Council alternating between community leaders in Auckland and Wellington.

Relations between the Jewish community and the New Zealand government soured considerably under the Labor government led by David Lange (1984–90), which constantly criticized Israeli policy on the West Bank and opened a dialogue with the PLO. Left-wing unions in New Zealand, powerful under the Labor government, tended to be dominated by hard anti-American elements who are also anti-Zionist. Relations improved following the return of the more conservative, pro-American National Party government in 1990.

A number of books have appeared over the last few years on New Zealand Jewish life, including Ann Beaglehole's *A Small Price to Pay: Refugees from Hitler in New Zealand, 1936–46* (1988), on the very restrictive government policy toward Nazi-era refugees, as well as her *Facing the Past: Looking Back at Refugee Childhood in New Zealand, 1940s–1960s* (1990), which contains accounts of 20th-century Jewish migration to (and adaptation in) New Zealand; Odeda Rosenthal's *Not Strictly Kosher: Pioneer Jews in New Zealand* (1988); and Ann Gluckman's two volumes on the Auckland community, *Identity and Involvement: Auckland Jewry Past and Present* (1990, 1993). Stephen Levine's commemorative volume on the Wellington Jewish community, *A Standard for the People: The 150th Anniversary of the Wellington Hebrew Congregation 1843–1993* (1995) describes the community groups, leaders, rabbis, and families of the Wellington congregation. His book *The New Zealand Jewish Community* (1999) is an analysis of New Zealand's Jewish organizations, part of a worldwide study of Jewish community groups sponsored by the Jerusalem Center for Public Affairs. In 2005 the New Zealand government's Ministry for Culture and Heritage launched its online Encyclopedia of New Zealand, including a chapter (with text and illustrations) on the country's Jews: see Stephen Levine, "Jews [of New Zealand]," in *Te Ara: the Encyclopedia of New Zealand*, New Zealand government, Ministry for Culture and Heritage, 2005 (online): <http://www.teara.govt.nz/NewZealanders/NewZealandPeoples/Jews/en.htm>

Other publications of note include Livia K. Wittmann, *Interactive Identities: Jewish Women in New Zealand* (1998) and Lotte Weiss, *My Two Lives* (2003) – the latter a biography by a Holocaust survivor who subsequently went to Wellington.

A conference was held in Auckland in 1994 under the heading "Beyond 2000 – Jewish Continuity in New Zealand," which provided a forum for frank analysis. The community, still numbering about 5,000, struggles with problems of resources stemming from a lack of involvement and persistently high rates of emigration, both by young and old alike.

During the 1990s the Jewish day schools in Auckland and Wellington continued to maintain high academic standards and substantial enrollments. In both cases, however, there were generally as many non-Jewish students as Jewish, somewhat defeating the purpose of establishing Jewish day schools. Other positive developments during this period included immigration from South Africa and the former Soviet Union; the maintenance of synagogues in Auckland and Wellington (for both Orthodox and Progressive congregations); and the

continued distribution of the national Jewish newspaper, the *New Zealand Jewish Chronicle*. An important means of communication is also the various congregational newsletters distributed to the membership.

Expressions of anti-Jewish prejudice were sporadic, although declining support for Israel worldwide and an increasingly antagonistic news media made possible often virulent anti-Jewish and anti-Israel correspondence in the country's newspapers. While the influence of organized religion in New Zealand continued to decline, there was an increase in interfaith activity by the Council of Christians and Jews. The campaign of the Anglican Church to remove references to "Zion" from the Psalms was reversed (see below). Where appropriate, Jewish community leaders involved themselves in lobbying with the government, although the presence of an Israeli ambassador in Wellington made intervention by Jewish leaders seem less necessary than during the pre-1975 period. The New Zealand government joined with other countries in co-sponsoring the successful United Nations resolution reversing the "Zionism is Racism" resolution.

New Zealand's Jewish community in 2005 remained focused around the congregations of Auckland and Wellington. Unlike the colonial period, when the country was being established, or the era during which New Zealand's primary businesses were being developed, Jews were less conspicuous as leading figures within New Zealand society. Although several members of Parliament had Jewish ancestry, there were no members of Parliament identifying themselves as Jews. The communities in Auckland and Wellington were the focal point of much Jewish spiritual and cultural activity, and the leadership of these communities in turn continued to focus on the usual problems of small communities, reflecting limited human and financial resources. As has been the case for some time, rabbinical leadership has been available from non-Commonwealth sources – the United States and Israel – as well as from the United Kingdom and Australia.

The community's concerns about security and survival were augmented by a number of factors during the post-1996 era, a period that coincides with New Zealand's introduction of a new electoral system (based on proportional representation) giving greater political strength to smaller groups that previously were unable to gain much if any representation in Parliament or government. One of the smaller parties, the Greens, has been more hostile to the United States, even opposing a parliamentary resolution of support in the aftermath of September 11, 2001. Another party, New Zealand First, has had much of its support based on its hostility to immigration, a stance that, for some, lends legitimacy to feelings of hostility to immigrants, law-abiding or otherwise. The opportunity for more politically marginal groups to gain a voice, and influence, has coincided with an increased antipathy toward Israel on the part of the news media and the government, particularly with the election of a Labor coalition in 1999. Even when the U.S. government signaled its loss of confidence in Yasser Arafat, the New Zealand government continued its contacts

with him, extending to a visit and a handshake in Ramallah from New Zealand's minister of foreign affairs.

The attacks on Jewish cemeteries in Wellington (see below), as well as an attack at a small Jewish memorial in the provincial city of Wanganui, provoked considerable alarm and distress, particularly among remaining Holocaust survivors – migrants from Europe who had been in New Zealand for decades – and their descendants. Their sensitivities have been affected as well by elements of “Holocaust denial” in New Zealand, including controversies at several New Zealand universities. Victoria University introduced a course on the Holocaust in its History program in 2001, making a permanent staff appointment in this subject in 2003. Intermittent (though well-publicized) attempts by a British Holocaust denier, David Irving, to go to New Zealand have also attracted considerable attention, with editorial writers, talk-back radio participants, and newspaper letter-writers divided over questions about the Holocaust, freedom of expression, and other issues. In 2004 the New Zealand government denied permission for him to go to New Zealand based on a conviction in another jurisdiction.

New Zealand's Jews thus faced the future with some of their institutions intact (but lacking strong numbers); with congregations in place in Auckland and Wellington (but facing decisions about resources and about possible relocation, particularly in Auckland); and with some concern about the reputation of Israel, and the image of Jews (and Judaism), in the news media (both New Zealand-based and from overseas) and more widely.

Antisemitism

Antisemitism (often influenced from abroad) has appeared at times over the years, particularly in periods of economic hardship, but its manifestations have been limited.

In 1989 the Anglican Church in New Zealand changed its Prayer Book to omit any references to “Zion,” substituting phrases like “God's Holy City.” According to Jewish sources, this was made in part through anti-Zionist pressures, although this has been officially denied by the Anglican Church. On the other hand, Councils of Christians and Jews have been established in Auckland and Wellington.

There was a small but often noisy extreme right-wing movement in New Zealand associated with the Australian League of Rights, as well as antisemitic Christian fundamentalist groups, but levels of antisemitism continued to be low, with few reports of anti-Jewish vandalism or violence. In 1990, there was a serious knife attack on school children at Kadimah College by a deranged non-Jewish woman who was placed under psychiatric care.

However, in 2004 unprecedented events occurred that led to a renewed focus on the dangers of anti-Jewish sentiments in New Zealand. Following a strong public statement from New Zealand's prime minister, Labor leader Helen Clark, downgrading relations with Israel in the wake of an attempt by an alleged Israeli intelligence agent to obtain a New Zea-

land passport, the historic Jewish cemetery in the capital, containing the graves of early Jewish settlers, was vandalized. Despite an outcry, no arrests were made. Only several weeks later a second Jewish cemetery, currently in use, was also attacked, and the Jewish prayer house at the site was set ablaze. Once again the police were unable to apprehend anyone. In response to this second desecration – each event found New Zealand gaining unwelcome international publicity – the New Zealand Parliament passed a unanimous resolution deploring antisemitism, with many members of the Jewish community watching from the public gallery. The resolution, introduced and passed on August 17, 2004, was moved by Acting Prime Minister Michael Cullen, who opened the debate, saying: “It is a sad day for this nation when it comes to the point that it is necessary to move a motion of this sort in Parliament.”

The resolution, unprecedented for New Zealand, stated: “That this House deplores recent attacks on Jewish graves and a Jewish chapel in Wellington; recalls the terrible history of antisemitism stretching over many centuries, culminating in the Holocaust under Nazi rule; and expresses its unequivocal condemnation of antisemitism, violence directed against Jews and Jewish religious and cultural institutions and all forms of racial and ethnic hatred, persecution and discrimination.”

Following speeches by each of New Zealand's party leaders, the speaker of the New Zealand House of Representatives rose and, unusually, made his own personal statement, describing the events this way: “In all the 37-and-a-half years I have been in Parliament, this, for me, has been one of the most shocking incidents I have ever noted in this country.” He then announced that he was sending the text of the resolution, and all of the speeches made with respect to it, to the speaker of the Knesset, Israel's parliament. Subsequently the speaker of the Knesset expressed his appreciation for the resolution and the action taken by New Zealand's speaker.

Relations with Israel

Friendly ties between the two countries go back to the relations established between the *yishuv* and New Zealand soldiers who served in Palestine and the Middle East during the two world wars. Israel honored the Australian and New Zealand soldiers (ANZAC) by erecting a memorial near Be'eri in southern Israel. New Zealand voted for the partition of Palestine in 1947 and accorded Israel recognition early in 1949. In the early postwar period New Zealand still maintained only a very small foreign service, with embassies located only in a handful of overseas capitals. However, even following subsequent growth in its international representation, New Zealand chose not to be directly represented in Israel, opting instead for one of its ambassadors elsewhere (for many years its ambassador in the Hague) to be accredited to Israel. Israel's ambassador to Australia was accredited to New Zealand until 1975 when the first resident ambassador arrived in Wellington. This asymmetry continued until 2003 when the Israeli government chose to close the Wellington embassy (and consulates in other countries) in a move described by Israel's

Ministry of Foreign Affairs as being taken for financial reasons. As a result, Israel's representation in New Zealand was provided from this point on by an honorary consul; the first such appointee was David Zwartz, who was also head of the New Zealand Jewish Council (and, for one term, a member of the Wellington City Council).

During the early years following Israel's reestablishment as an independent state, New Zealand gave the country its support at the United Nations. New Zealand does not recognize Jerusalem as Israel's capital and, accordingly, the country's news media, and particularly publicly owned broadcast services, refrain from describing the city as part of Israel. New Zealand's reliance on oil imports, as well as its at times highly profitable trade with Arab countries, contributed to a desire on the part of the government (under both National and Labor administrations) to maintain a more distant relationship with Israel. Following the Yom Kippur War in October 1973 the New Zealand government tended to adopt a more pro-Arab stance, but popular support for Israel's achievements continued.

[Stephen Levine (2nd ed.)]

NEYRAC, PIERRE, pen name of **Naphtali Cohen** (1898–1960), novelist. A fourth-generation Palestinian, Neyrac immigrated to France in 1927 and practiced as a physician. He expressed nostalgia for his homeland in three novels, *L'indifférence perdue* (1933), *La mort de Frida* (1934), and *La jeunesse d'Elias* (1956).

NEZER SERENI (Heb. נֶזֶר סֵרֶנִי), kibbutz in central Israel, between Nes Ziyonah and Ramleh, founded on June 20, 1948, during a short cease-fire of the Israel *War of Independence, by "Kibbutz Buchenwald," composed of young survivors of the Holocaust who, while still in a displaced persons' camp, had formed a pioneering group for settlement in Palestine. The site, a German farm from the beginning of the century, was temporarily used during World War I as Gen. *Allenby's headquarters. After the 1951–52 split in *Ha-Kibbutz ha-Me'uḥad a large minority group from *Givat Brenner decided to join Kibbutz Nezer which was affiliated with Iḥud ha-Kevuẓot ve-ha-Kibbutzim. In 1968 the kibbutz numbered 510 inhabitants, in 2002 it was 499. The kibbutz engaged in intensive farming and started up three industrial plants, for foodstuffs, metal, and wood products. The name "Nezer" ("Young Shoot") refers to Kibbutz Buchenwald's origins. After the members of Givat Brenner joined, the kibbutz was named Nezer Sereni to commemorate the Haganah parachutist Enzo *Sereni, who had been a member of Givat Brenner.

NEZHIN, city in Chernigov district, Ukraine. Jews first settled in Nezhin in the early 17th century, but the community

was destroyed during the Khmelnitski uprising. They resettled there in the early 18th century. The *zaddik* Dov Ber of *Lubavich, the son of *Shneur Zalman of Lyady, the "middle rabbi" of Chabad Ḥasidism, died and was interred in Nezhin in 1827. The town became a center for the Chabad Ḥasidim of the Ukraine. It was especially well known while Israel Noah *Schneersohn lived there from 1867 to 1882. In 1847, 1,299 Jews were registered in the community; in 1897 there were 7,631 Jews (24% of the total population). The waves of pogroms which overtook Russian Jewry on July 20–22, 1881, and in 1905 also affected the Jews of Nezhin. On September 2, 1919, Nezhin's Jews were attacked by soldiers of the "volunteer army" of *Denikin, 100 Jews were killed, many women raped, and much property pillaged. The dead included Menahem Mendel Hen, rabbi of Nezhin. The Yiddish poet *Mani-Leib (Mani-Leib Brahinski) was born there. In 1926, there were 6,131 Jews in Nezhin (16.1% of the population), their number dropping in 1939 to 2,725 (7% of the total population). The Germans occupied the town on September 13, 1941. Most of the Jews succeeded in escaping. The few dozens who remained were killed by October 1941. In 1959 there were 1,400 Jews (3% of the total population) in Nezhin.

NEZIKIN (Heb. נִזְקִין; "torts"), fourth order of the Mishnah according to the order given by Simeon b. Lakish (Shab. 31a), although according to another tradition (Tanḥuma in Num. R. 13:15), it is the sixth. Originally *Nezikin* was the name of the first tractate only (see below). Because of Simeon b. Lakish's homily applying to it the word *yeshu'ot* ("salvation") in Isaiah 33:6, it is so called in many rabbinic sources, including the Tosefta. *Nezikin* is devoted to civil law (except for matrimonial law, dealt with in the order **Nashim*), and the administration of justice and legal procedure, as well as penal law insofar as the subject does not appertain to some other part of the Mishnah. The tractate **Eduyyot* was included in *Nezikin* because it contains "testimonies" most of which were given before the Sanhedrin of *Jabneh after the destruction of the Temple, and is consequently connected with the tractate **Sanhedrin*. **Avodah Zarah* was placed in *Nezikin* because it deals with the *halakhot* of idolatry, some of which are given in *Sanhedrin-Makkot*, and also because it opens with prohibitions against trade with idolators, thus connecting it with the tractate *Nezikin* (**Bava Kamma*, **Bava Meẓia*, and **Bava Batra*), which gives the laws of trade in general. The inclusion of the aggadic tractate *Avot*, which deals with moral maxims, is due to the fact that it contains an exceptional number of instructions to **dayyanim*, dealt with in *Sanhedrin*.

Nezikin contains ten tractates, although at first there were only seven, the first three originally forming one tractate now divided into *Bava Kamma*, *Bava Meẓia*, and *Bava*

Batra (see Av. Zar. in Mishnah Kaufmann and Cambridge, etc.). The name of the first tractate was then applied to the whole order. *Sanhedrin* and **Makkot* were also originally one tractate (and are so in the Kaufmann and Parma Mishnah, in *genizah* fragments, and elsewhere), which contained 14 chapters; they were divided into two tractates, also apparently in Babylon, for reasons that are not yet sufficiently clear. Thus in the order *Nezikin*, too, the tractates were originally arranged according to the number of chapters in descending order. *Nezikin* has the following separate tractates: *Bava Kamma*, with 10 chapters; *Bava Me'zia*, 10; *Bava Batra*, 10; *Sanhedrin*, 11; *Makkot*, 3; **Shevu'ot*, 8; *Eduyyot*, 8; *Avodah Zarah*, 5; *Avot*, 5; and **Horayot*, 3.

In the Tosefta of *Nezikin* each of the three *Bavot* has 11 chapters; *Sanhedrin*, 14; *Makkot*, 4 (or 5); *Shevu'ot*, 6; *Eduyyot*, 3; *Avodah Zarah*, 9 (or 8); and *Horayot*, 2 chapters; there is no Tosefta to *Avot*. *Eduyyot* and *Avot* have no *Gemara* in either the Jerusalem or the Babylonian Talmud. The importance of nearly all the tractates in the sphere of practical *halakhah* led to an abundant development of these spheres in rabbinic literature. Especially comprehensive is the literature on the first three tractates and on *Shevu'ot*, about which innumerable studies and commentaries have been written, which have material discussed in the responsa of all periods, and which (together with **Ketubbot* in the order *Nashim*) encompass the whole of Jewish civil law.

English translations of the Mishnah: Danby (1933); Neusner (1988); English translation of the Tosefta: Neusner (2002); English translations of the TJ: Neusner (1984); English translations of the TB: Soncino (1935); Neusner (1984, 1990, 1992); a students' edition of part of TB *Bava Me'zia*, vocalized, with translation, commentary, and notes in English, appeared as part of the Talmud El-Am.

[David Joseph Bornstein / Stephen G. Wald (2nd ed.)]

***NICANOR**, one of the Syrian officers sent by *Lysias to fight against Judah Maccabee. He is mentioned at length in I and II Maccabees, both passages giving an account of the battle of Emmaus in which Nicanor and Gorgias were defeated by Judah. There is also mention of a Syrian commander called

Nicanor who played an important role in the war against Judah in the time of Demetrius. He attempted to approach Judah peacefully or, as another version has it, to capture him by deceit. At all events he was unsuccessful. Enraged that Judah had eluded him once and later defeated him in a battle near Kefar Shalem, he threatened to wreak his vengeance on the Temple and its priests. With the arrival of reinforcements from Syria, Nicanor was once more in a position to confront Judah. In 161 B.C.E. a decisive battle was fought at Bet Horon, but Judah once again triumphed and Nicanor was slain. This was Judah's last military victory. It is uncertain whether the Nicanor who took part in the battle of Emmaus is to be identified with the Nicanor sent by Demetrius against Judah Maccabee, but it is probable that they were two separate persons. The downfall of Nicanor, who had reviled and insulted the Temple, brought joy to the people and the day of triumph, the 13th of Adar, was established as an annual festival.

[Uriel Rappaport]

NICANOR'S GATE, one of the gates leading to the Temple courtyard during the period of the Second Temple. According to the Mishnah, "There were seven gates in the Temple courtyard.... In the east there was the gate of Nicanor, which had two rooms attached, one on its right and one on its left, one the room of Phinehas the dresser and one the room of the griddle cake makers" (Mid. 1:4). This gate was one of the best known of the gifts made to the Temple and "miracles were performed in connection with the gate of Nicanor and his memory was praised" (Yoma 3:10). Of these miracles the Talmud states: "What miracles were performed by his doors? When Nicanor went to Alexandria in Egypt to bring them, on his return a huge wave threatened to engulf him. Thereupon they took one of the doors and cast it into the sea but still the sea continued to rage. When they prepared to cast the other one into the sea, Nicanor rose and clung to it, saying 'cast me in with it.'" The sea immediately became calm. He was, however, deeply grieved about the other door. As they reached the harbor of Acre it broke the surface and appeared from under the sides of the boat. Others say a sea monster swallowed it and ejected it out onto dry land. Subsequently all the gates of the Sanctuary were changed for golden ones, but the Nicanor gates, which were said to be of bronze, were left because of the miracles wrought with them. But some say that they were retained because the bronze of which they were made had a special golden hue. R. Eliezer b. Jacob said, "It was Corinthian copper which shone like gold" (Yoma 38a). Corinthian gold was the name given to a family of copper alloys with gold and silver which were depletion-gilded to give them a golden or silver luster (see Jacobson). An important production center for Corinthian gold was in Egypt, where, according to tradition, alchemy had its origins.

Scholars disagree over where the gates stood. Some claim that they were on the western side of the Court of Women which was to the east of the Court of Israelites; others maintain that they were on the eastern side of the Court of Women. The basis of this conflict is in the interpretation of a passage in Josephus (Wars, 5:204). Schalit's discussion of the problem concludes that the words of Josephus are to be explained as meaning that the gates of Nicanor were "beyond" the entrance to the Sanctuary and facing "the gate that was larger," i.e., that it was on the eastern side of the Court of Women. The gates were undoubtedly made after the time of Herod (the most reasonable date being about the middle of the first century, a generation before the destruction) and were the work of an Alexandrian craftsman. Nicanor is also recorded in a first century C.E. inscription on an ossuary found in October 1902 in a cave on Mt. Scopus in Jerusalem ("the Cave of Nicanor"). The Greek inscription reads: "the remains of the children of Nicanor of Alexandria who made the doors." Nicanor's name also appears in a Hebrew inscription as well. Nicanor's gift was so well known that no additional explanation was necessary. Nicanor was an Alexandrian, though he may have gone to live in Jerusalem. It seems more likely, however, that his remains were brought from Alexandria to Jerusalem, where he had a family tomb. The ossuary mentioning Nicanor is now in the collections of the British Museum. Klein (1920; see also Tal 2002) expressed certainty that the Nicanor of the ossuary was the same as the Nicanor who made the set of gates of the Temple according to rabbinic sources; Schwartz (1991), however, has expressed some doubts about this.

[Uriel Rappaport / Shimon Gibson (2nd ed.)]

NICARAGUA, Central American republic. Although some Jews settled in Nicaragua in the 19th century, a new community was founded by Jews who arrived from Eastern Europe after 1929. They established the Congregación Israelita de Nicaragua, the most important Jewish association in the coun-

try. The majority of the Jews lived in Managua and engaged in commerce, industry, and agriculture; the few who lived in the interior also engaged in agriculture and commercial representation. The congregation maintained close ties with Jewish institutions abroad. All the women in the community belonged to *WIZO, which had been active in the country since 1941. Since 1935 the congregation had its own cemetery and, since 1964, its own synagogue in Managua. Services were held on the Sabbath and on all festivals, and rabbis from abroad were invited to officiate.

[Leonardo Hellemberg]

The community peaked in 1972 with 250 Jews, most living in the capital Managua, but after the disastrous earthquake of December 1972 many Jews emigrated. In 1978, the synagogue in Managua was attacked by five Sandinistas guerrilla fighters. The Sandinista government, which ruled from 1979 to 1990, took different measures against the small Jewish community, which culminated in the virtual expulsion of the few Jewish families that remained in Nicaragua and the implementation of antisemitic propaganda. The government sequestered the synagogue and other Jewish property and imprisoned the community leader Abraham Gorn (at age 70), who however managed to escape. Until 1979 there was a central Jewish organization, but in the early 21st century only a few Jews lived in the country.

Relations with Israel

Nicaragua voted in 1947 for the UN Resolution on the partition of Palestine, and from the establishment of the State of Israel very cordial relations existed between the two countries. Israel was represented in Managua by a nonresident ambassador residing in Costa Rica, and Nicaragua was represented in Israel by a nonresident ambassador residing in Rome. Israel enjoyed Nicaragua's wholehearted support in the international arena, and Nicaragua repeatedly took steps to counteract anti-Israel moves in the United Nations. Israel developed a ramified program in the area of technical aid. Nicaraguan trainees participated in courses in Israel, mainly in the fields of agriculture and community organization. Israel experts were active in Nicaragua in the field of agricultural settlement and conducted a mobile course in agricultural cooperation. In 1969 the scope of trade reached \$100,000 in Israeli exports to Nicaragua, mainly in synthetic fibers. In the 1970s Nicaragua became an anti-Israel stronghold, in Latin America and on the international front, particularly following the take-over of power by the Sandinista Junta in July 1979. In 1982 the Sandinista government severed diplomatic relations with Israel, but with the ousting of the Sandinista regime in 1990, ties with Israel were restored.

***NICARCHUS** (date unknown), author of a book on the Jews in which he says that Moses was called Alpha because of the many leprous spots (*alphous*; cf. a similar canard in *Mane-

tho) which he had on his body. (Alpha was an honorific title for senior members of the museum in Alexandria, and was regarded as synonymous with excellence.)

NICE (Heb. נִיִּצָּה), capital of the Alpes-Maritimes department, on the Mediterranean coast of France. The first specific mention of Jews can be found in the Statutes of Nice, enacted in 1342 while the town belonged to Provence, which compelled the Jews to wear a distinguishing *badge. By 1406, when Nice belonged to Savoy, the community had a bailiff. In 1408 it owned a cemetery, and from at least 1428, a synagogue. An edict issued by the duke of Savoy in 1430, which was also intended for the Jews of Turin, protected the Jews from forced baptism, while imposing a series of prohibitions (on moneylending, on interest, etc.) and obligations (confining Jewish residence to a separate quarter, the *Giudaria*, etc.). In 1449, a Jew was authorized to settle there and charge a rate of 20% interest. In 1499, Jews expelled from the island of Rhodes were permitted to settle in Nice. From 1551, the Jews were placed under the jurisdiction of a *Conservator* (except in cases of crimes and offenses committed against the Catholic religion) and were allowed to engage freely in moneylending. In the same period, Jews in Nice also engaged in commerce and could practice medicine freely. Beginning in 1648, many newcomers of “Portuguese” origin (*Marranos) from Italy and Holland, attracted by the free port edict, which expressly favored the Jews with numerous privileges, joined the “old Nissards.” Twenty years later, many Jews began arriving from Oran (Algeria), often bringing with them their slaves. The newcomers, who settled outside the ghetto, were accorded full rights in the existing community institutions without having to contribute toward its upkeep. The Jewish community of Nice, which had been affiliated to that of Turin, became separated from it from the beginning of the 17th century. The fusion of the diverse groups of Jews was achieved slowly. At the same time, the authorities allowed the legal differences, which had benefited some groups and disadvantaged others, to become obsolete. In particular, beginning in 1732, every Jew was obliged to live in the Jewish quarter, the Rue Giudaria (the present Rue Benoît Brunice). The community, known as *Università*, was led by *massari-parnassim*, deputies, councillors, and a treasurer. The Jews of Nice conversed in Judéo-Niçois, a mixture of the local dialect and Hebrew. The temporary reunion of Nice with France from 1792 to 1814 brought emancipation to the Jews, but they lost their rights after the restoration of Sardinian administration. In 1828, for example, they were ordered to return to the ghetto, and it was only in 1848 that emancipation was finally guaranteed. The annexation of Nice by France in 1860 did not result in further changes in the social and economic situation of the Jews. The number of Jews did not grow substantially during the 19th century. In 1808, the population was approximately 300. In 1909, there were 500 out of a total population of 95,000, and the number did not substantially change up to World War II.

[Bernhard Blumenkranz / David Weinberg (2nd ed.)]

Holocaust and Contemporary Period

During World War II Nice came under Italian control, which was far less severe than the German occupation. As a result, thousands of Jews took refuge there. For a while, the city became an important center for various Jewish organizations, especially after the landing of the Allies in North Africa (November 1942). When the Italians signed the armistice with the Allies, however, German troops invaded the former Italian zone (Sept. 8, 1943) and initiated brutal raids. Alois Brunner, the SS official for Jewish affairs, was placed at the head of units formed to search out Jews. Within five months, 5,000 Jews were caught and deported from Nice and surrounding areas. A great number of others were martyred in the city itself. The courage displayed by the resistance and Jewish youth movements, however, along with the sympathy of the vast majority of the population and clergy, helped save thousands who were either hidden or were helped to escape.

After the liberation several hundred Jews, including original inhabitants of Nice and refugees, reestablished the community. With the influx of Jews from North Africa in the 1960s, the Jewish population in Nice and the vicinity increased from 2,000 to 20,000 by 1969. An estimate of the number of Jews in 1987 in Nice suggested that the population had not changed appreciably since then. The community has two main synagogues (Ashkenazi and Sephardi) and boasts a variety of Jewish institutions, including restaurants, butchers, and a *mikveh*. The Musée Marc Chagall, containing the painter's major works on biblical themes, is situated in Nice.

***NICHOLAS**, name of five popes.

NICHOLAS III (Giovanni Gaetano Orsini), pope 1277–80. During his brief reign Nicholas displayed a considerable zeal for the conversion of the Jews. His bull *Vineam sorce* encouraged conversion through “sermons and other means.” Copies of the document were sent (1278–79) to the *Franciscans and provincial priors of the *Dominicans in various provinces. Concurrently, however, he renewed the decisions of his predecessors forbidding the forcible baptism of Jews and protecting them from attacks by Christians. Nevertheless, several *Church councils and synods legislated against the free intercourse of Jews and Christians. It is not clear whether it was the supposed hostility of Nicholas or his mildness toward the Jews which prompted Abraham b. Samuel *Abulafia to announce his intention of visiting the pope to demand the

release of captive Jews. (When he arrived, however, the pope was already on his deathbed.)

NICHOLAS IV (Girolamo Masci), pope 1288–92. Like many medieval popes, Nicholas IV displayed a mixed attitude toward the Jews. On the one hand, he issued various instructions (1288) to the inquisitors to proceed against *Conversos and he renewed earlier legislation concerning the Jews in Portugal, compelling them to wear a *badge. On the other hand, he specifically protected the Jews of Rome from being molested by Christians (January 1291). He wrote to Emperor *Rudolph (Aug. 29, 1288) requesting the release of *Meir b. Baruch of Rothenburg from prison. There is a belief that he enlisted the services of the Jewish physician and scholar Isaac b. Mordecai Maestro Gaio, who also attended Boniface VIII and who was the first of the Italian Jewish papal physicians.

NICHOLAS V (Tommaso Parentucelli), pope 1447–55. The attitude toward the Jews of this otherwise enlightened pontiff might be characterized as cruelty tempered by a certain moderation. Soon after his election, under the malign influence of John of *Capistrano, he revived the persecutory legislation of his predecessor, *Eugenius IV. Originally framed for Castile and Leon, this legislation was applied en bloc to Italy. Several subsequent edicts, based generally on those of Eugenius, imposed very severe restrictions on Jewish life. Nevertheless, while urging strong measures against Crypto-Jews, Nicholas insisted on the complete equality of New and Old Christians. After a protest by Emperor Frederick III, Nicholas reversed anti-Jewish legislation adopted by various German synods, and he also granted Borso, duke of *Ferrara, complete freedom to allow Jews to reside in his states and operate banks (1451).

[Nicholas de Lange]

***NICHOLAS**, name of two Russian czars.

NICHOLAS I, czar of Russia from 1825 to 1855. His reign was marked by a general reaction, the persecution of liberal elements in the country, and the oppression of religious and national minorities. Nicholas I regarded the Jews as a harmful alien group whose unity should be destroyed so that it would become completely assimilated within the Russian people. To achieve this, he adopted many measures. The first, which left its imprint on the whole of his Jewish policy, was the introduction of compulsory military service for the Jews (1827). This was accompanied by the seizure of Jewish children, who were to be educated in the schools for soldiers' children in the spirit of the Christian religion (see *Cantonists). The area of the Pale of *Settlement was reduced and the Jews were expelled from *Kiev, *Sevastopol, and *Nikolayev. There was also a suggestion that they be expelled from within 50 versts of the border. On the other hand, the government encouraged renewed agricultural settlement of the Jews in southern Russia and around

their townlets, exempting the settlers from military service. The government of Nicholas I supported the *maskilim* in their struggle against Orthodoxy. Under the influence of the *maskilim*, a severe censorship was imposed on Jewish books, their publication being authorized at two presses only, in *Vilna and *Zhitomir. During the 1840s the government set out to develop the network of Jewish government schools, particularly the rabbinical seminaries of Vilna and Zhitomir, which offered a general education in addition to a Jewish education in the spirit of the *Haskalah. At the end of the 1840s, the Jews were forbidden to wear their traditional garb.

Toward the close of Nicholas' reign the "classification" (*razbor*) of the Jews into "useful" (merchants, craftsmen, agricultural workers) and "non-useful" persons was proposed. Severe repressive measures were to be adopted against the "non-useful" – principally the intensification of conscription. This project was interrupted by the death of Nicholas I, which also resulted in the abolition of the special conscription of Jews and in other alleviations. Of the hundreds of anti-Jewish laws which were passed during his reign, the most important for the Jews were the Jewish statutes of 1835 and 1844 (which officially abolished the Jewish communities and introduced the status of **kazyonny ravvin*). In the memory of the Jewish people, the reign of Nicholas I is regarded, especially because of the Cantonists decree, as one of the darkest periods in the history of the Jews in czarist Russia.

NICHOLAS II, Russian czar from 1894 to 1917. His reign was marked by a violent struggle against the revolutionary movement, the war against Japan (1904), which was followed by the first Russian Revolution (1905–06), and Russia's participation (1914–17) in World War I, which culminated in the Revolution of the spring of 1917 and the removal of Nicholas II from the throne. At the outset of his reign the Jews, like other Russian circles, hoped that the new czar would change the extreme reactionary and antisemitic policy of his father *Alexander III. This hope was, however, soon disappointed. The czar, whose education at the hands of Constantine *Pobedonostsev had made him an indubitable Jew-hater, regarded the Jews as the principal factor in the Russian revolutionary movement. He favored antisemitic statesmen, rejected any attempt to change the anti-Jewish laws in spite of the advice of some of the leading statesmen of his court (such as S. *Witte and P. Stolypin), and took under his aegis the violent antisemitic movement, "*Union of Russian People" (popularly known as the "Black Hundreds"), and other organizations formed in reaction to the liberal and revolutionary organizations. The pogroms against the Jews, which were at first due to the free hand given to anti-Jewish incitement and the rioters, were later directly perpetrated by the police and the army, as part of the campaign against the revolution. The *Beilis blood libel trial at Kiev, which was designed to set off renewed persecutions of the Jews, was inspired by the czar. Although no new anti-Jewish laws were passed during the reign of Nicholas II, the administrative pressure which accompanied the pogroms encouraged hundreds of thousands of Jews to emigrate to the U.S. and elsewhere.

[Yehuda Slutsky]

°NICHOLAS, EDWARD, author of a famous 17th-century plea in favor of the resettlement of the Jews in England. Entitled *An Apology for the Honourable Nation of the Jews, and all the Sons of Israel*, and published in London in 1648, it was translated into Spanish, perhaps by *Manasseh Ben Israel, and made a profound impression. However, since the author is otherwise unknown, there is reason to believe that the publication was inspired or even written by a Jew. Its theme was that England should make amends for her former maltreatment of the Jews by readmitting them to the country. Some scholars believe that its actual author was Rev. Henry Jessey (1601–1663), a philo-semitic Nonconformist minister. Little is known about Edward Nicholas himself beyond the fact that he was apparently a young man reading for the bar in 1648. He is sometimes confused with Sir Edward Nicholas (1593–1669), a government official who was in exile with Charles II in 1648, but this man was 55 when *An Apology* appeared.

[Vivian David Lipman / William D. Rubinstein (2nd ed.)]

°NICHOLAS DE LYRE (incorrectly **Lyra**; c. 1270–(not before)1349), Bible commentator and theologian. A 15th-century allegation of his Jewish extraction lacks all basis. Born in Lyre, near Evreux, Normandy, Nicholas joined the Franciscan Order at Verneuil (c. 1291) and subsequently studied in Paris. He held the position of professor of theology at the Sorbonne until he was appointed Franciscan provincial of Burgundy in 1325. He wrote controversial studies against Judaism (e.g., *De Messia ... ad Judaei argumenta, De diversis contra Judaeos ...*) and produced a commentary on Peter Lombard's *Sentences*, which, together with the Bible, constituted the basis of Western theological studies. His importance, however, lies in *Postillae Perpetuae*, which he composed from 1322 to 1330 (published in Rome, 1471–72).

These works form a continuous commentary on the entire Bible, with priority accorded to the literal meaning, while other senses (“*moralitates*”) are relegated to 35 substantial appendixes. The *Postillae* constitute the first Christian Bible commentary to be printed. The literalist approach led Nicholas to *Rashi, whom he often cites by name (Salomo). In this he had been anticipated by the Victorine scholars, especially by *Andrew of Saint Victor whom he quotes (G.

Calandra, *De... Andreae Victorini... in Ecclesiasten* (1948), 83–85). However, Nicholas, who records his perusal of a controversial tract *hebraice scriptus* (“written in Hebrew”; see Hailperin in bibl., p. 140), used Rashi directly as well. In addition he read some rabbinic material in Raymond *Martini's *Pugio Fidei*. Soon after his death, Nicholas' *Postillae* were available in virtually every library in western Christendom. Nicholas had abiding influence (Hailperin, p. 282f.). Wycliffe acknowledged his indebtedness to Nicholas in his (later) English version of the Bible (c. 1388). *Luther was particularly dependent on him, especially on Genesis. In his commentary to Daniel, Abrabanel controverts Nicholas' christological exegesis.

[Raphael Loewe]

°NICHOLAS OF DAMASCUS (b. c. 64 B.C.E.), Greek historian, peripatetic philosopher, orator, dramatist, and statesman. Nicholas came from a distinguished family in *Damascus, where his father, Antipater, occupied a prominent position and was proud of his origin. For a time he was in the service of Antony and Cleopatra, acting as their children's instructor. Later he joined the court of *Herod whose confidant he became, instructing him also in philosophy and rhetoric. It was at Herod's instigation that he wrote his *Universal History* (see below). Nicholas' fame as a writer and an intellectual, his outstanding talents as an orator, and his connections with leading Romans equipped him to undertake delicate diplomatic tasks. He acted as Herod's representative to Marcus *Agrippa in 14 B.C.E., when the Jews of Asia Minor submitted their complaints against the inhabitants of the Greek cities (Jos., Ant., 16:29–58). He also interceded with *Augustus on behalf of Herod when the latter had lost favor in Rome due to his aggressive action against the Arabs in 8 B.C.E. (*ibid.*, 16:335–55). Nicholas exercised great influence on Herod's internal policy. According to his own testimony, he was a consistent opponent of *Antipater, Herod's eldest son, and helped to get rid of him (*ibid.*, 17:106–21). Even after Herod's death, Nicholas remained loyal to him: he traveled to Rome in 4 B.C.E., with *Archelaus, Herod's son, to obtain Augustus' confirmation of Herod's will and to defend the name of the dead king and the interests of Archelaus against the charges brought by representatives of the Jewish nation (*ibid.*, 240–8). At the same time Nicholas persuaded Archelaus not to oppose the granting of independence to the Hellenistic cities on the borders of Herod's former kingdom. On this occasion, too, Nicholas' efforts were successful, and Augustus confirmed Herod's will in broad outline. This was Nicholas' last active intervention in the affairs of Judea. He apparently stayed on in Rome.

The most famous of Nicholas' many writings was his *His-*

toria Universalis in 144 books, in which events are described in greater detail the nearer they approach the days of the author. Those in which he was personally involved are given special treatment. Nicholas' intervention on behalf of the Jews of Asia Minor is described in books 123 and 124 (Jos., Ant., 12:126–7). He also wrote an autobiography, the contents of which correspond to some extent to the last books of the history, as well as a biography of Augustus. Nicholas used to provide Augustus with a choice variety of dates from his estate, which Augustus called after him (Athenaeus 14:652). They are possibly the dates referred to in rabbinical literature (Av. Zar. 146; Num. R. 3:1) as "Nikolaos." Nicholas' history is no longer extant, except for lengthy excerpts, particularly those dealing with most ancient times, preserved in the compilations of Constantine Porphyrogenitus, the 10th-century Byzantine emperor. Shorter extracts have been preserved in the works of Josephus, Athenaeus, Stephanus of Byzantium, and others.

Nicholas' connections with Herod, his acquaintance with the Jews, and his defense of them on several occasions precluded him from adopting a contemptuous attitude toward the ancient Jewish tradition, as did most Greek and Roman writers. Thus he reveals a tendency to combine the Damascene-Syrian with the biblical-Jewish traditions. In the fourth book of his history he deals sympathetically with the personality of Abraham (Jos., Ant., 1:159), whom he depicts as a foreigner who came at the head of an army from the land of the Chaldees to Damascus, where he reigned as king and from which he later migrated with his people to the land of Canaan. The name of Abram, says Nicholas, is still honored in the region of Damascus. In the same book of his history he refers to the biblical account of the wars between Israel and Aram in the days of David as well as after the division of the kingdom (*ibid.*, 7:101–3). Among pre-Christian Greek writers, Nicholas is the only one to mention David. He recalls the biblical tradition when referring, in the 96th book of his history, to the Flood, and mentions that "Moses, the Jewish legislator, wrote" (*ibid.*, 1:95). To judge from these fragments, Nicholas' interest in Jewish history is due chiefly to Jewish connections with his native city, Damascus; it seems unlikely that he was a major source for the early books of Josephus' *Antiquities* which parallel the Bible.

In regard to Jewish history in the period of the Second Temple, he describes the actions of Antiochus Epiphanes against the Jews (Jos., Apion, 2:83–84) and is quoted by Josephus a number of times verbatim. Josephus was perhaps naturally attracted to the work of a man who, like himself, had written an autobiography defending himself against charges of time-serving. Nicholas' *Universal History* provided the basis of Josephus' description of Herod's kingdom in *The Jewish War* (book 1) and *Antiquities* (books 15–17). As is to be expected from a courtier and collaborator in the policy of the king, Nicholas' books about Herod are a panegyric upon him. Marked by their dramatic tension and replete with pathetic descriptions, these books are written in a spirit of open hostility toward Antipater, the son of Herod and Nicholas' mor-

tal enemy. These characteristics are also notable in Josephus' account, except that in the *Antiquities* Josephus makes a conscious effort to free himself from the panegyric approach of Nicholas. Josephus' dependence on Nicholas is further shown by a comparison between his account and the excerpts preserved in Nicholas' autobiography, and by the fact that for the period no longer covered by Nicholas' work (after 4 B.C.E.) Josephus' narrative is meager. The description, too, of the Hasmonean kingdom in Josephus' two works is chiefly derived from Nicholas' history, a conclusion that necessarily follows from the non-Jewish viewpoint that generally characterizes this description.

[Menahem Stern]

NICHOLS, JACK (1921–), Canadian painter, draftsman, printmaker, educator. Born in Montreal, Nichols is one of the best-known official Canadian World War II artists. Unable to afford traditional schooling, he was mainly self-taught. However, he occasionally worked with the Montreal artists Louis Muhlstock and Frederick Varley, and considered the former his mentor. After he enlisted in the Merchant Navy in the fall of 1943, the National Gallery of Canada commissioned him to produce drawings during his service on Caribbean-bound ships. In 1944, he was appointed an official war artist with the rank of lieutenant in the Royal Canadian Naval Reserve. Nichols witnessed the D-Day landing, and traveled on a number of warships, including the HMCS *Iroquois*, which together with British warships destroyed a German convoy as it attempted to evacuate the town of Brest in 1944. Nichols depicted this event in at least two compositions: the drawing *Men on H.M.C.S. Iroquois at Action Stations* represents a crowd of Canadian soldiers and their varying reactions to the violence at sea. *Action Aboard His Majesty's Canadian Ship Iroquois* again represents a dense mass of soldiers, three of whose massively muscled arms seem to press against the picture plane, while other sailors ready weapons in the background. Nichols' characteristically dark palette and his attention to facial expressions conveying fear, anguish, and suffering draw the viewer's attention to the vulnerability of his subjects as they face their mortality. One of Nichols' most famous paintings, the expressionistically rendered *Drowning Sailor*, depicts the screaming anguish of a seaman desperately trying to extricate himself from the maelstrom of water encircling him. Many of Nichols' compositions have Christian overtones. For example, *Ammunition Passer* is reminiscent of traditional depictions of Christ carrying the Cross. The oil painting *Taking Survivors on Board* portrays a prone man supported by another figure in a position which recalls a Pietà. At the time he left the navy in 1946, Nichols had created 20 works on paper and nine oil paintings. In 1947, Nichols won a Guggenheim fellowship which enabled him to

paint and study printmaking in different parts of the United States. He taught at the Vancouver School of Art in 1948. In 1952, he garnered a prize at the Second International Exhibition of Drawing and Engraving in Lugano, Switzerland. Six years later, his lithographs were displayed at the Venice Biennale. Nichols lived and worked in Toronto. The artist had exhibitions at the Ellen Gallery at Concordia University, the McCord Museum, Montreal, the MacKenzie Art Gallery, Saskatchewan, and the Vancouver Art Gallery, among other venues. His work is owned by the Canadian War Museum, Ottawa and the Canadian War Records Collection.

[Nancy Buchwald (2nd ed.)]

NICHOLS, MIKE (Michael Igor Peschkowsky; 1931–), U.S. comedian and director. Born in Berlin, Nichols and his family fled Germany in 1939. Educated at the University of Chicago, he studied for a time with Lee Strasberg in New York. Nichols was one of the founders of The Compass, an off-campus theater group, later forming the Second City Improvisational company in Chicago. He toured in cabaret with Elaine May (see *Theater) from 1954, and in 1960 they presented *An Evening with Mike Nichols and Elaine May* on Broadway, for which they won a Grammy for Best Comedy Performance (1961).

In 1961 Nichols turned to acting on his own, and then directed a series of successful plays on Broadway. Among them were *Barefoot in the Park* (Tony Award, 1963), *The Knack* (1964), *Luv* (Tony Award, 1964), *The Odd Couple* (Tony Award, 1965), *The Apple Tree* (1966), *The Little Foxes* (1967), *Plaza Suite* (Tony Award, 1968), *The Prisoner of Second Avenue* (Tony Award, 1971), *Uncle Vanya* (1973), *Streamers* (1976), *Comedians* (1976), *Annie* (producer, Tony Award, 1977), *The Gin Game* (1977), *The Real Thing* (two Tony Awards, 1984), *Hurlyburly* (1984), and *Spamalot* (Tony Award, 2005). Turning to movies, he directed the film version of *Who's Afraid of Virginia Woolf?* (Oscar nomination for Best Director, 1966); *The Graduate* (Academy Award for Best Director, 1967); *Catch-22* (1969); *The Day of the Dolphin* (1973); *The Fortune* (1975); *Gilda Live* (1980); *Silkwood* (Oscar nomination for Best Director, 1983); *Heartburn* (1986); *Biloxi Blues* (1988); *Working Girl* (Oscar nomination for Best Director, 1988); *Postcards from the Edge* (1990); *Regarding Henry* (1991); *Wolf* (1994); *The Birdcage* (plus screenplay, 1995); *Primary Colors* (1998); *What Planet Are You From?* (2000); the Emmy award-winning TV movie *Wit* (2001); the Emmy award-winning TV miniseries *Angels in America* (2003); and *Closer* (2004).

Nichols is one of a handful of celebrities to have garnered the coveted quartet of an Oscar, an Emmy, a Tony, and a Grammy.

In 2003 he was one of the recipients of the Kennedy Center Honors. He is chairman emeritus of the non-profit orga-

nization Friends in Deed, founded in 1991 to provide support to those affected by life-threatening illness.

After three divorces, Nichols has been married to news personality Diane Sawyer since 1988.

Nichols wrote the books *Life and Other Ways to Kill Time* (1988); *Real Men Belch Downwind* (1993); and *Women Are from Pluto, Men Are from Uranus* (1996).

[Lee Healey and Jonathan Licht / Ruth Beloff (2nd ed.)]

NIDDAH (Heb. נִדָּה "menstruating woman"; literally, "one who is excluded" or "expelled"). According to Jewish law, a man is forbidden to maintain sexual relations with his wife during and for some time both before and after (see below) her menses. Marital intimacy may resume only after the wife has undergone ritual immersion (see **Mikveh*; **Ablution*) at the appropriate time. These strictures of separation and ritual cleansing, which apply only to married Jewish women, are intended to preserve men from the ritual pollution that would follow from any contact with their ritually impure wives. Procedures for calculating the intervals of time when spousal contact is forbidden rely heavily on a woman's knowledge of the stages of her cycle. Fidelity to the rules of marital separation, self-examination, and expedient immersion comprise one of the three areas of ritual obligations specifically incumbent on women (together with **hallah*, separating a part of the dough used to make Sabbath loaves, and *hadlakah*, kindling Sabbath lights (see **Candles*)). Jewish girls were traditionally taught to comply strictly and promptly with *hilkhot niddah*, the regulations pertaining to the menstruating woman.

The laws relating to the *niddah* comprise some of the most fundamental principles of the halakhic system. They also constitute one of the few remnants of biblical regulations pertaining to ritual impurities that survived in Jewish life following the destruction of the Second Temple. Among the most difficult and intricate in the entire range of the *halakhah*, these laws are elucidated in a lengthy and detailed tractate of the same name devoted to the subject (see *Niddah*, tractate). The historical development of the relevant *halakhot* through the centuries is likewise extremely complicated. To decide a law relating to a *niddah* demands, besides a profound knowledge of the *halakhah*, experience in various medical matters, and at times also the ability to assume the grave responsibility of disqualifying a woman from pursuing a normal married life and of – at times – separating her forever from her husband. In every generation and in every place there have generally been men, referred to in the Talmud simply as "sages," who specialized in the subject, as did eminent *tannaim* and *amoraim*, to whom particularly difficult questions were sent, even from remote places, together with specimens of blood (Nid. 20b). In brief, the *halakhah* as at present codified is that sexual intercourse (and any other intimacies which may lead to it) is forbidden from the time the woman expects her menses until seven "clean" or "white" days (i.e., days on which no blood whatsoever is seen) have elapsed. For this purpose a mini-

mum of five days is fixed for the menses themselves. Thus the minimum period of abstention from marital intimacies is 12 days. On the evening of the seventh day without sign of blood the woman immerses herself in a **mikveh* and normal marital relations are resumed until the next menses are expected. Any bleeding in ensuing days is considered as menstrual and requires a waiting period of seven “white” days (see below). The laws of *niddah* are codified in the *Shulhan Arukh*, *Yoreh De'ah*, 183–200.

In the Bible

A detailed discussion is devoted to the *niddah* as part of the general “law of him that hath an issue” (Lev. 15:19–32), within the framework of the many laws of ritual purity and impurity whose main purpose was to preserve the purity of the sanctuary and its precincts. To this aspect the Bible adds a further prohibition against sexual intercourse with a menstruating woman, the punishment for which is *karet* for both the man and the woman (*ibid.* 20:18). While this prohibition at present constitutes the main feature of the *niddah*, in the Bible it is the former context that is the decisive factor. According to the literal meaning of the biblical passages, most of which are, however, unclear, the law is thus: A woman who discerns blood within and up to a period of seven days is ritually “impure” (*teme'ah*) for those seven days from the time the blood first appears. On the eighth day – if she sees no further blood – she is “pure” (*tehorah*). Whoever touches her or anything she sits or lies on during the week of her “uncleanness” is “unclean until the evening” and must bathe himself in water and wash his clothes. One who has sexual intercourse with a menstruant is unclean for seven days, since she transfers her condition of ritual impurity to him (“and her impurity is upon him”). If, however, a woman sees blood for more than seven days, she becomes a *zavah* (“one who has a discharge”) and is in a state of ritual impurity until her discharge of blood ceases. All the laws previously mentioned apply to her. Unlike the *niddah*, however, the *zavah* does not revert to her state of ritual purity immediately after her discharge of blood stops but has to wait a further seven “clean” days, reckoned from the day she has ceased to see blood. At the conclusion of this period she brings “two turtle-doves, or two young pigeons” as a sacrifice. Although not specifically mentioned in the Bible, the purification of the *niddah* of both the first and second types was undoubtedly associated with immersion in a ritual bath, since this is clearly stated in the Bible with respect to others rendered levitically impure by reason of a discharge. The Bible does not lay down the normal length of time between one menses and another.

In the Talmud

On the basis of the tradition of the Oral Law, the sages gave the biblical passages a different interpretation. Their basic assumption is that there is a fixed cycle of 18 days, comprising seven days of *niddut* (the state of being a *niddah*) and 11 days between one menses and another, this being, in the view of the sages, the “allotted” interval. This cycle of 18 days is counted

consecutively from the appearance for the first time of blood in a female at the age of puberty and in rare instances even earlier. A woman who sees blood on one or all of the seven days is ritually impure for these seven days and becomes ritually pure again on the eighth day on condition that she immerses herself in a *mikveh* (“ritual bath”; see also Ablution) and that no further blood has appeared before her immersion. If blood reappears on the eighth day, she is ritually impure on that day, immerses herself on the following morning, and waits until the evening. If no more blood is seen she is ritually pure; if it is seen, she has to adopt the same procedure on the next day. If after the conclusion of the seventh day blood is discerned on three consecutive or non-consecutive days during the 11 days between one menses and another, the woman becomes a *zavah* and has to count seven “clean” or “white” days, as stated above. If, however, she passes the 11 or at least nine of the days between one menses and another in a state of ritual purity, she reverts to the beginning of a new cycle and any blood that she may see during the subsequent seven days does not necessitate seven “white” days. These 11 days are a traditional law ascribed to Moses (“*Halakhah le-Moshe mi-Sinai*”). Any blood appearing during the interval between one menses and another – on the conclusion of the above-mentioned cycle of 7+11 days – is due to a discharge that requires seven “white” days. This cycle commences from the day blood appeared for the first time and no longer depends on the appearance or nonappearance of blood: the seven days are “appropriate” for blood of menstruation, the 11 days for blood of a discharge, and only childbirth interrupts this automatic reckoning (see below). Such is the basic law; however, as early as the end of the tannaitic period, Jewish women were accustomed to observe seven “white” days for any spot of blood they observed that was as large as a mustard seed (see below).

The problem that arises if a woman does not examine herself during the days when she is in a state of ritual purity and suddenly sees blood is dependent on the tannaitic controversy over whether the laws of fixed menses are of biblical or rabbinical authority. In the former instance, the woman automatically reverts to her state of ritual impurity retrospectively from the beginning of her fixed menses unless she has examined herself and found no blood, whereas in the latter case she is ritually pure until she physically feels the movement of, or sees, blood. In any event it is halakhically of great importance that a woman knows the dates of her menses, since she has to refrain from sexual intercourse near their onset, so that they should not come on during sexual intercourse. In the tractate *Niddah* the various types of menses, the way in which they are fixed, and their halakhic significance form the subject of extensive talmudic discussion.

The sages distinguished among several types of blood, some ritually pure, others ritually impure, that issue from a woman, the distinction being based on the different sources of the blood in the womb. However, since modern knowledge of a woman's anatomy and physiology does not accord with the sages' assumptions, their statements are not clear. Various

scholars have unsuccessfully tried to harmonize the statements of the sages on this subject with existing anatomical knowledge. But although the sages have given indications for distinguishing between one type of blood and another, either by its appearance or by various examinations made in a woman's body, already in talmudic times a thorough knowledge of the subject was limited to experts. In consequence, the *halakhah* states that, since we are not adept in the matter, all blood renders a woman ritually impure. A very difficult and painful question concerns instances of a discharge of blood which is due to an external cause, as for example, an internal wound, but cannot definitely be identified as such. This problem was particularly formidable so long as its solution depended on halakhic discussions among the sages and not on a clear, objective medical examination. A more general distinction is made between a woman's blood and her other discharges which are not blood and hence do not render her ritually impure. In this instance, too, the sages have given several indications, based mainly on the intensity of the reddishness of the discharge. Here it has similarly been laid down that we no longer possess the knowledge requisite to make a precise distinction and hence any discharge, unless it is white or green (in their various shades), causes ritual impurity. Whereas nowadays doubt can be easily and definitely resolved, previously this problem, like the former one, was often one of paramount human significance and an obstacle to married life for not a few couples. Accordingly, the works of the codifiers in all periods contain hundreds of responsa dealing with the subject out of a manifest desire to alleviate this hardship, though with a very scant possibility of doing so.

Another problem in this category, much rarer but devoid of any practical solution, concerns a woman who bleeds during the act of sexual intercourse. This blood is assumed to be menstrual blood, and its regular appearance at such a time prevents any possibility, according to the *halakhah*, of a married life between the couple, since after several recurrences it is considered a permanent feature, and hence intercourse is prohibited from the outset. In this case the couple have to be divorced, particularly if the husband has not yet fulfilled the *mitzvah* of procreation. Virginal blood forms a special halakhic subject, being in principle ritually pure, for, since its source is an external one, it is in every respect identical with blood that has issued from a wound. This was the earlier *halakhah*. Later a stricter view was taken in the matter, particularly in Babylonia, for fear that such blood might be mingled with menstrual blood discharged due to sexual excitement, and hence the couple had to keep apart from each other immediately after the first coition. In Erez Israel this stricter view was not common practice. In geonic times this restriction received, in Babylonia, the force of absolute law, but from the many questions addressed to the *geonim*, it is evident that in fact the prohibition did not extend throughout that country. The subject was still included as a section in *Sefer ha-Hillukim she-Bein Benei Bavel u-Venei Erez Yisrael*, compiled in the middle of the geonic period. With the spread of the influ-

ence of the Babylonian Talmud this prohibition was generally observed among almost all Jewish communities and was laid down as a *halakhah* in the Shulhan Arukh (EH, 193).

An essential change in the entire laws of the *niddah*, which since talmudic times became the accepted law throughout Jewry, relates to the addition of the seven "clean" or "white" days. This change took place due to a twofold difficulty arising from the earlier procedure: first, the lack of a reasonable and practical possibility of keeping a methodical, precise, and consecutive count of the days of menstruation and of discharge, as described above, from the first day of the appearance of blood until the end of the period of the menses; and secondly, the recognition that there is no real possibility of distinguishing with any certainty between clean and unclean blood, thus making the actual counting impracticable. In the days of Judah ha-Nasi the first regulations in this connection were issued, and in the middle of the amoraic period it was already accepted as axiomatic that seven "white" days were to be counted for any blood seen (Nid. 66a; et al.). The essence of the regulation was that the days of menstruation were henceforth equated with those of any other discharge. To this regulation a further restriction was added, according to which a single spot of blood is treated as a regular flow also with regard to the necessity of counting seven "white" days. It is evident from the sources that originally only sexual intercourse was prohibited during the seven "white" days, as against the prohibition of all physical contact during the actual days of menstruation (see below). In the course of time, however, this latter prohibition was extended to cover the "white" days as well, which thus became further days of ritual impurity (Shab. 13a).

Although transgressing the prohibition with regard to a *niddah* is punishable with *karet*, a marriage with a woman who is menstruating is binding, and her offspring is entirely legitimate, fit even for the priesthood and suffering only from a "taint" which is unattended by any halakhic consequences. The marriage ceremony of a bride who has begun menstruating shortly before is not postponed, even though, generally speaking, a marriage should be capable of immediate consummation. Nevertheless, many restrictions and minutiae with regard to the prohibition relating to the *niddah* came to be observed. In ancient times a *niddah* was completely segregated, particularly in Erez Israel where the laws of purity were still in vogue from the time when the Temple existed. Excluded from her home, the *niddah* stayed in a special house known as "a house for uncleanness" (Nid. 7:4), she was called *galmudah* ("segregated," RH 26a), and was not allowed to adorn herself until R. Akiva permitted her to do so, that she might not be repulsive to her husband (*Sifra, Mezora*, 9:12). No food was eaten with a *niddah* (Tosef., Shab. 1:14) nor did she attend to her household duties, until the stage was reached in which "during all the days of her menstruation she is to be segregated" (ARN A 1, 4). The origin of this segregation lies in the custom, prevalent in Erez Israel long after the destruction of the Second Temple, of eating ordinary meals prepared according to the levitical rules originally prescribed for sacred food. This custom did

not obtain prevalence in Babylonia where there was neither any reason for, nor any halakhic possibility of, observing absolute purity, and where accordingly all these expressions of the *niddah*'s segregation were not practiced. Thus, in Babylonia, she attended to all the needs of her household, with the exception of filling her husband's cup of wine, making his bed, and washing him (Ket. 61a). In the latter half of the geonic period the *geonim* of Babylonia, adopting an increasingly stricter view with regard to the ritual impurity of the *niddah*, accepted the restrictions of the earlier scholars of Erez Israel. Related to the spread of the Muslim religion which was particularly strict in matters associated with "cleanness and uncleanness," this process reflects the strong desire of the *geonim* not to be inferior in their practices to their neighbors. Nevertheless, Maimonides at a later stage maintained that the restriction imposed on the *niddah* to refrain from cooking, touching a garment, and so on, was devoid of any significance and might even savor of Karaism. These restrictions were generally not adopted in Europe where the two factors that led to their introduction in Erez Israel and Babylonia were lacking, as well as because of the high status enjoyed there by the Jewish woman in managing the affairs of her household.

Yet it was mainly in Europe that new limitations and prohibitions were imposed on the *niddah* and on the members of her family. These measures are all contained in a small work entitled *Baraita de-Niddah* (1890), which is so strange that some scholars contended that it originated in a heretical Jewish sect. Where and when it was written has, up to the present, not been determined, although it has generally been assigned to the end of the geonic period. The special limitations mentioned in the work include the following: The *niddah* is prohibited from entering synagogue, as is also her husband if he has been rendered impure by her in any way (by her spittle, the dust under her feet, and so on). She is likewise prohibited from kindling the Sabbath lights. One is not allowed to enquire after her welfare or to recite a benediction in her presence. A priest whose wife, mother, or daughter is a *niddah* may not recite the priestly benediction in synagogue. No benefit may be derived from the work of a *niddah*, whose very utterances defile. From the beginning of the Rabbanite period the influence of this work on codifiers has been particularly marked, and although it is generally admitted that its statements have no halakhic validity, they adopted its stringent measures. This is especially notable with regard to prohibiting a *niddah* from entering a synagogue, which gave rise to a not insignificant literature among the early scholars of Germany.

This phenomenon is best understood against the background of the various superstitions current among the Jews, some of which derived from the non-Jewish environment. These superstitions held that the breath of a *niddah*'s mouth causes harm, that her glance "is disreputable and creates a bad impression," that a menstruant's blood proves fatal to anyone drinking it, and if mingled with the bloodstream produces pustules and boils in the newly born child. If a *niddah* looks for a long time in a mirror, red drops resembling blood ap-

pear on it. She pollutes the air in her proximity, is regarded as sick and even as afflicted with plague, despite the fact that menstruation is natural to a woman (Nahmanides, *Gen.* 31:35; *Lev.* 12:4, 18:19). A menstruant at the beginning of her menses who passes between two men causes one of them to be killed; she produces strife between them if she is at the end of her period (Pes. 111a).

A Woman after Childbirth

The law relating to the woman who has given birth to a child is stated in Leviticus 12:1–8. According to the literal meaning of the passage, her discharge of blood is in the same category as menstrual blood and hence she is in a state of ritual impurity, like a *niddah*. This extends for seven days if she bears a boy and for 14 days if she has a girl. In addition to this, a further period of 33 days in the former instance and 66 in the latter is laid down, these being "the days of her purification," and the blood seen during that time is called "the blood of purification." During this period she is sexually permitted to her husband but may not enter the sanctuary until the days of her purification have ended. On their conclusion she had to bring the prescribed sacrifices. The law of the post-partum woman was preserved in this form by the sages, who, however, added that any blood seen during the days of her purification renders her ritually impure, requiring immediate ritual immersion before further sexual contact with her husband. In the view of the sages, childbirth and the counting of the days associated therewith annuls that of the above-mentioned 11 days and a new cycle of menses begins. In the geonic period the regulation in respect of the "white" days, previously referred to, was extended to include "the days of her purification," and consequently the custom obtained in Babylonia, Erez Israel, Spain, and North African countries that a woman who had given birth to a child observed seven "white" days for any spot of blood seen during the days of her purification. This extended regulation, which is wholly incompatible with the essential character of "the days of purification," in that they are not subject to the ritual impurity that accompanies menstruation, was not accepted in France and Germany, where sexual intercourse was permitted after a discharge of "blood of purification" (see *Yad, Issurei Bi'ah*, 11:6–7). The *baraita* in tractate *Niddah*, quoted above, mentions a yet more stringent custom according to which a woman is prohibited to her husband as a *niddah* for all the 40 and 80 days after the birth of a son and a daughter respectively, even though she has seen no blood during the entire period of her purification. This custom was regarded by Maimonides (*Yad, ibid.*, 11:15) as "the way of heretics," and is indeed practiced by the *Karaites (Anan, *Sefer ha-Mitzvot*, 19) – as also by *Beta Israel.

Non-Jewish Women

A non-Jewish menstruating woman does not impart ritual impurity (*Sifra, Tazria*), but there are scholars who hold that in ancient times this was not so – a state of affairs which explains Bet Hillel's statement in the Mishnah (Nid. 4:3). Furthermore, it is held that it was precisely this ancient *halakhah*

that led to the decree that gentiles, in general, were ritually impure as a result of having intercourse with their menstruating wives. Most scholars, however, hold the opposite view, contending that Bet Hillel's statement refers merely to the ritual impurity conveyed by a *niddah*'s blood, and that it did not refer to the actual menstruating woman herself. It was rather the Hasmonean *bet din* which first "decreed that a Jew who had intercourse with a heathen woman is liable on account of her being a *niddah*" (Av. Zar. 36b), and that this decree was a general restriction intended to deter Jewish men from sexual relationships with gentile women.

[Israel Moses Ta-Shma / Judith R. Baskin (2nd ed.)]

Aggadic Traditions

Rabbinic aggadah stresses the seriousness of *niddah* regulations and encourages their observance; they are considered *gufei Torah* ("essential laws"; Avot 3:18). According to the Talmud, when the Romans issued decrees intended to undermine Judaism, they ordered Jews to have intercourse with women in a state of *niddah* (Me'il. 17a). Midrashic homilies praise notable women of Israel who scrupulously prevented themselves and their husbands from transgressing this prohibition; these include Sarah (Gen R. 48:15) and Esther (Meg. 13b). The sages also stressed the psychological importance of the enforced separations required by *hilkhot niddah* in sustaining romance in a married couple's sexual relations (Nid. 31b). Genesis Rabbah 17:8, on the other hand, is among a number of midrashic sources that connects women's three ritual obligations, including *hilkhot niddah*, with women's supposed culpability in bringing death into the world. In several aggadic texts, menstruation and *niddah* regulations are described as atonements or eternal punishments brought upon women to remind them of Eve's responsibility in the death of Adam, and therefore in all human mortality. *Avot de-Rabbi Nathan* B 9 states that the commandments of *niddah* were given to women because "Adam was the blood of the Holy One, blessed be He, and Eve came and spilled it." According to Shabbat 2:6, women who disregard any of these three commandments may die in childbirth (also ARN B 9). Such dire pronouncements may be part of a rabbinic polemic against non-compliance with *hilkhot niddah*.

The rabbinic extension by a week of the length of time a wife and husband were to abstain from physical contact following a woman's menses indicates how seriously later formulators of rabbinic literature and Jewish social practice took the prospect of even accidental contact with a *niddah*. Evidence that this separation was resented by some as onerous is evident in the statement criticizing men who are unable to wait until their wives' purification: it was said that "the law concerning young trees (whose fruit is forbidden for the first three years – Lev. 19:23) cuts off the feet of those who have sexual intercourse with menstruating women" (that is, should teach them patience). Such men were regarded by the sages as the worst type of transgressor. The *Midrash on Psalms*, 146:4, says that although nothing is more strongly forbidden than inter-

course with a *niddah*, "In the time-to-come, God will permit such intercourse," based on Zech.13:2. While this minority view is immediately countered with the ascetic statement that it is sexual intercourse itself which will be forbidden in the messianic era, it has been suggested that this midrash may be read as one "voice of protest raised against the legal strictures on sexuality" (D. Biale).

Contemporary Practice

Reform Judaism has consistently held that the observance of the laws of *niddah* is not necessary in modern times. In the first half of the 20th century, observance of these laws appears to have declined significantly, even among nominally traditional families. This was despite Orthodox exhortation in sermons and written tracts on the spiritual and medical benefits of **taharat ha-mishpahah* (family purity regulations), as these laws came to be called. Many Jewish feminist writers of the late 20th century condemned *niddah* regulations as archaic expressions of male anxieties about the biological processes of the female body and argued that they reinforced the predominant construction, in rabbinic Judaism, of women as other and lesser than men.

However, the 1980s and 1990s saw a resurgence in the numbers of Orthodox Jews and a new sympathy for various previously discarded practices of traditional Judaism in Reform, Conservative, and Reconstructionist Judaisms. In this period, positive new interpretations of observance of *hilkhot niddah* emerged, praising the ways in which they enhanced the sanctity of marriage and human sexuality. Some writers maintained that traditional Judaism recognized and valued the fluctuating rhythms of human relationships by mandating a monthly separation between husband and wife when spousal communication and empathy must be enhanced in non-physical ways (Frankiel). Supporters commended the elevating value of fulfilling a demanding divinely ordained mandate and also praised the consciousness of the body and its rhythms that these rules impose on women, as well as the feeling of personal renewal and rebirth following each ritual immersion (Adler).

Reflections on Hilkhot Niddah

In a religious system like rabbinic Judaism, which likens ritual impurity to a state of spiritual death, periodic female flows of blood were central to male characterizations of women as sources of potential pollution and as portents of physical extinction. Such fears were deeply rooted in the cultures of the ancient Near East, and similar taboos are found in cultures worldwide. While separation from the *niddah* is often presented as a matter which is of concern only to husband and wife, both biblical and rabbinic sources connect contact with any menstruating woman to defilement and even to danger (eg: Ezek. 7:19–20; Lam. 1:17; Ezra 9:11; II Chron. 29:5). Shabbat 9:1 quotes Isaiah 30:22 in equating the desecration conveyed by carrying a *niddah* to that acquired by carrying an idol.

S.J.D. Cohen has pointed out that such attitudes, more expressive of folk piety than legal formulation, confirm "the

marginality of all women, menstruating or not, in the organized, public expressions of Jewish piety.” That *niddah* regulations are essentially androcentric is evident in the fact that menstruating women constitute no danger to themselves or to other women, nor were they halakhically prohibited from taking part in rituals or in study. Ber. 2:12 is quite clear that “Men who have experienced an abnormal genital discharge and women who have experienced an abnormal genital discharge, as well as menstruating women and women who have recently given birth, are permitted to chant Torah, Prophets, and Writings out of a scroll and to chant from memory *mishnah*, *midrash*, *halakhah*, and *aggadot* ...” Significantly, however, the Talmud at Ber. 22a omits any mention of the licit participation of women, whether *niddah* or not, in such activities, and takes for granted that these acts of worship and study are exclusively male prerogatives. Since Berakhot 22a affirms that words of Torah are not susceptible to ritual impurity, it seems clear that the exclusion of women from these activities is not based on any apprehension that they might defile the divine word. Rather, it appears to originate in a rabbinic concern that women might defile the men with whom they would come into contact if their presence was encouraged in sites of worship and learning. (Although, as M. Gruber has noted, many Jewish men have been content to let women believe that the reason for their exclusion from study of Torah was because of their susceptibility to menstrual impurity.) *Hilkhah niddah* demonstrate that the rabbis inscribed male piety on female bodies: in order to construct fences to protect male ritual sanctity from the *niddah*, all women had to be eliminated from places of holiness. Moreover, the *halakhah* also subordinated women in the most intimate areas of their lives. As C.E. Fonrobert has observed, in rabbinic writings women appear as ciphers in legal discussions of their bodily discharges or as speakers in narratives fashioned by men. To study tractate *Niddah*, she has argued, is to witness men insisting upon their authority to interpret women’s bodies.

NIDDAH (Heb. נִדָּה; “menstruous woman”), seventh tractate of the order *Tohorot* in the Mishnah and in the Babylonian Talmud – the only tractate of the order with *Gemara*. The tractate deals with the ritual uncleanness of a woman which is caused by menstruation or other fluxes, and is based chiefly upon Leviticus chapters 12 and 15:19 ff.

The Mishnah consists of ten chapters. Chapter 1 discusses the determining of the onset and duration of menstruation in those with regular and irregular menses. Chapter 2 continues that topic and deals with the source and colors of the blood causing uncleanness. Chapter 3 discusses the uncleanness of a woman following miscarriage, abortion, and childbirth. Chapter 4 deals with the untrustworthiness of Samaritans and Sadducees with regard to menstruation; menstruation in the case of heathens and after childbirth; difficult confinements; and menstrual regularity. Chapter 5 deals with caesarean births; the moment that uncleanness commences; and the different ages and stages in the development of a male and female child. Chapter 6 continues this theme; deals incidentally with a list of cases in which the presence of one factor presupposes another although the reverse is not true; and deals with doubts about the source of bloodstains. Chapter 7 discusses the uncleanness of the blood itself; cases where its origin is uncertain; sources of uncleanness that have dried out; and, once again, with the untrustworthiness of Samaritans in regard to uncleanness. Chapters 8 and 9 continue the subject of doubtful stains or flows of blood. Chapter 10 continues this theme and deals with the duration of menstruation and borderline cases.

It is possible to discern several strata in the Mishnah. Thus 2:6 may predate the schools of Shammai and Hillel, and Akavya b. Mahalalel. Moreover, several earlier *mishnayot* are interpreted in later *mishnayot*: Thus Mishnah 1:1 is explained in 1:2, 1:3 in 1:4–6, and 2:2 in 2:3. *Mishnayot* 5:3–6 form a distinct group, which gives the various ages, from one day to 20 years, at which laws become applicable for males and females. These laws are irrelevant to the subjects of *Niddah* and were incorporated because the first Mishnah states that a female child has the potential of becoming a *niddah* from the age of one day. Similarly *mishnayot* 6:2–10 consist of various laws which have as their common theme that wherever A occurs B will be found, but not the reverse. These follow 6:1, where the formula occurs with regard to the *niddah*. A. Weiss claims that most of these grouped *mishnayot* are of ancient origin, and that the editor collected and condensed most of them from older mishnaic sources (*Al ha-Mishnah* (1969), 31). The end of *Niddah* contains supplements to various *mishnayot* in the tractate; for example, *mishnayot* 9:8–10 are supplements to 1:2; *mishnayot* 9:1 and 10:1 supplement 1:7; and *mishnayot*

10:2–3 supplement 4:7 (see further H. Albeck, *Shishah Sidrei Mishnah, Seder Tohorot* (1959), 377f.).

In the Tosefta, *Niddah*, containing nine chapters, is the fifth tractate in the order *Tohorot*. It includes original legal and aggadic passages, such as a section on birth control which is debated in 2:6. Another passage sounds like a version of the Jonah story and tells about a ship that was caught in a storm; the passengers prayed to their own gods, but a little boy reproached them: “How long will you delude yourselves? Pray to the Creator of the ocean,” i.e., to the God of Israel (5:17). Another group of *beraitot* tells of several reforms of existing customs, some of which were instituted for the dignity of the poor and women (9:16–18), such as the decision to give the same simple burial to both rich and poor alike. Only three chapters (and a fragment of a fourth) of the Jerusalem Talmud to *Niddah* are extant. It is placed after *Nezikin* and contains very little aggadic material. In the Babylonian Talmud there is *Gemara* on the whole tractate. Because of its practical importance the tractate is much studied and much space is devoted to it both in the various codes and in the responsa literature. It contains aggadic material, one noteworthy view being (16b) that while a man’s physical qualities are preordained, his moral character and spiritual outlook are left to his free choice. There is also a vivid description of the wonderful life of learning and joy that the embryo enjoys in his mother’s womb. Before birth he is made to take the oath: “Be righteous and not wicked, and if all the world tells you ‘you are righteous’ consider yourself wicked” (30b). Another passage reports 12 questions and answers on law and *aggadah* that the Alexandrians asked Joshua b. Hananiah (69b–71a). The Mishnah was translated into English by H. Danby (*The Mishnah*, 1933), and J. Neusner published a translation of both the Mishnah (1991) and the Tosefta (2002). The Babylonian Talmud was translated into English in the Soncino edition by I.W. Slotki (1948), and the Jerusalem Talmud by J. Neusner (*The Talmud of the Land of Israel*; vol. 34 – *Horayot & Niddah*, 1982).

NIEBUHR, CARSTEN (1733–1815), German traveler. In 1760 he was proposed to join the expedition sent out by Frederick V of Denmark on the initiation of J.D. Michaelis, the renowned German biblical scholar, for the scientific exploration of *Egypt, *Arabia, *Syria, and *Persia (1761–67), visiting *Jerusalem in 1766. He was assigned the position of surveyor and geographer. All the members of the expedition

died during the trip, except Niebuhr, who saved his life and restored his health by adopting native habits in dress and food. Niebuhr’s account of his travels, *Reisebeschreibung nach Arabien und andern umliegenden Laendern* (2 vols., 1774–78), are considered classics on the geography, the people, the antiquities, and the archaeology of much of the district of Arabia which he traversed and were accepted with enthusiasm by Western scholars. A third volume, *Reisen durch Syrien und Palaestina*, was published by J. Olshausen in 1837. His books were translated into Dutch, French, and English. Two recent Arabic books sum up his travel to *Yemen and to *Iraq. His travels and publications are an important landmark for modern Oriental studies in the West in general and especially for the Jews of Yemen.

[Yosef Tobi (2nd ed.)]

°NIEBUHR, REINHOLD (1892–1971), U.S. Protestant theologian who spent most of his teaching career at New York’s Union Theological Seminary. Niebuhr brought to this position a social conscience formed during a pastorate in Detroit, Michigan, in the 1920s. Active in many public causes, gifted as a journalist, he fashioned his ethical approach in countless articles and a number of books, the most famous being the Gifford Lectures, *The Nature and Destiny of Man* (1941–43). Niebuhr frequently acknowledged that his social passion had been born at the side of activist Jews, even as his prophetic realism was nurtured by a reading of the Hebrew prophets. His own preaching reproduces something of their cadences and much of their concern for justice. “I have as a Christian theologian sought to strengthen the Hebraic-prophetic content of the Christian tradition.” His conception of Judaism and blatant opposition to Christian missionary activity among Jews are expressed in Chapter 7 of his book *Pious and Secular America* (1958; publ. in England under the title: *The Godly and the Ungodly* (1958)). By 1941 Niebuhr had begun publicly to advocate a Jewish homeland, particularly for European refugees, though he also wanted to welcome refugees to America. Though consistently arguing that Palestine should be that homeland, he had a reputation for fair-mindedness in Middle Eastern affairs and was not identified with ideological Zionism. He was awarded an honorary doctorate by the Hebrew University of Jerusalem in 1967.

[Martin E. Marty]

NIEDERSTETTEN, city in Wuerttemberg, Germany. Jews were mentioned there as victims of the *Rindfleisch massacre of 1298. There is no further trace of them in the city throughout the Middle Ages until their settlement in 1675. By 1714 the

community had acquired a prayer room; in 1737 a cemetery was consecrated in which Jews from Archshofen, Creglingen, Gerabronn, and Muldingen were also buried. In that same period a *hevra kaddisha* was also founded. The Jews earned their livelihood mainly from trade in livestock, wine, and wool. By 1744 a synagogue was built, and by 1807 the community numbered 138 Jews. The number rose to 171 in 1824, and in 1832 the community was included in the rabbinate of *Mergentheim. A religious school was also founded in the 1830s. The community numbered 215 in 1854, decreased to 163 in 1900, and to 81 in 1933. In the 20th century, Jews were active as wholesale merchants in leather and wine, and as shopkeepers. They also engaged in textile manufacturing and banking. They were active in the political and cultural life of the town, and one Jew was a member of the municipal council during the Weimar Republic. In 1933 Jewish merchants were subject to the Nazi *boycott, and some leaders of the community were physically assaulted. This resulted in large-scale Jewish emigration. During the general destruction on *Kristallnacht* in 1938, the synagogue itself was preserved, but eight Jewish men were sent to concentration camps. Between 1941 and 1942, 42 Jews were deported to extermination camps, never to return. In early 1945 the synagogue was destroyed as a result of the war. The ritual objects of the community were saved, however, and turned over to a U.S. Army chaplain when the war ended. All that was left of a once active community in Niederstetten was the Jewish cemetery. A plaque has been mounted to commemorate the former synagogue.

[Alexander Shapiro]

NIEGO, JOSEPH (1863–1945), teacher and social worker. Niego was born in Adrianople into a rabbinical family. In about 1891 he was appointed director of the *Mikveh Israel Agricultural School (near Tel Aviv). He served in this post for 18 years, and during that time he went to Kurdistan on behalf of the *Alliance Israélite Universelle. On his return he presented an interesting report about the Kurdish Jews which was published in French and in a Hebrew translation. Later he was nominated as inspector of the Jewish Colonization Association agricultural settlements in Oriental and European countries, including its colonies in Palestine (Gederah, Be'er-Toviyah, Sejera, Haderah, etc.). He remained at this post for 20 years. His headquarters were in Istanbul, but he was also very active in agricultural research in Anatolia. In 1923 he became the manager of a loan association in Istanbul which was established by the American Jewish Joint Distribution Com-

mittee. Niego took part in the social life of the Jews in the city and was president of the B'nai B'rith Grand Orient Lodge. A jubilee book was published on his 70th birthday that was dedicated to his activities and includes some of his lectures and articles (see bibl.).

[Eliyahu Hirschberg]

NIEMIROWER, JACOB ISAAC (1872–1939), chief rabbi of Romania. Niemirower was born in Lemberg. In 1897 he was appointed rabbi of Jassy and in 1911 rabbi of the Sephardi community of Bucharest. In 1921 he was appointed rabbi of the main synagogue of Bucharest and shortly after, chief rabbi of Romania. He succeeded in uniting the Jewish communities of Romania under his leadership. As chief rabbi he was elected in 1926 to the Romanian senate – the first Jew to receive such an appointment – and was recognized by the government as the representative of all Romanian Jewry. He fought against the humiliating wording of the Romanian oath, *more judaico*, and succeeded in having it annulled. By force of his intellect and personality he became the chief figure in the religious as well as in the general communal life of Romanian Jewry. Although his election was largely due to the progressive element which dominated Jewish communal life there, Niemirower's authority was accepted by all circles, including the Orthodox, and his influence was decisive. He did much in the sphere of Jewish education – founding Jewish schools and establishing a theological seminary, a society for Jewish education called Sharon, a society for Jewish studies, etc. He was president of the order of B'nai B'rith in Romania. He was an active Zionist and took part in the First Zionist Congress. In 1936 a Romanian nationalist made an attempt on his life and Niemirower was slightly wounded. He published many works in Romanian, German, and French on various Jewish topics. Between 1918 and 1932 his complete works were issued entitled *Scieri Complete* (4 vols.). The fourth and fifth volumes of the journal *Sinai* (1932–33) were dedicated to him in honor of his 60th birthday.

[Itzhak Alfassi]

NIERMAN, LEONARDO (1932–), Mexican artist. Nierman sought a relationship between abstract art and cosmic phenomena. In 1956 he painted a mural at the Mexico University School of Commerce. In 1965 he executed a mural for the Golden West Savings Bank in San Francisco, California, and in 1966 made the stained glass windows at the Jewish Cultural Center of Mexico City. Collected all over the world, Nierman is considered by many to be Latin America's great-

est abstract artist. In 2002 the mayor of Chicago proclaimed a Leonardo Nierman Day, and in 2003 he received the Gloria Award from the International Latino Cultural Center of Chicago. "Painting," he wrote, "is to me the aperture through which it is possible to enter a certain world; in it the viewer may find an endless number of magic images, objects, remembrances, associations, fears, joys, hopes and dreams.... It is my non-verbal world surrounded by combat, stress and sights; joy, sensuality and death. Dreams, moments of ecstasy in the creation of images. Piercing the darkness, radiant smoke and dust, a world of volcanic vapors, lava, storms, prehistoric vegetation, bottoms of oceans, enchanted caves filled with stars, precious stones and cosmic winds ascending into the silence of infinity."

NIEROP, VAN, family of Dutch jurists and bankers. **NIEROP, AHASVARUS SALOMON, VAN** (1813–1878), jurist, politician, and communal leader. Born at Hoorn, Holland, Van Nierop became a prominent attorney in Amsterdam. He published numerous articles on commercial law in the law journals *Themis* and the *Weekblad voor het Recht*, and sat in the Second Chamber of Parliament from 1851 to 1853 and from 1864 to 1866. Van Nierop was the first Jewish MP in the Netherlands. He also became a member of the Communal Council of Amsterdam and of the First Chamber of Parliament. Van Nierop played an important part in the reorganization of Jewish communal bodies which led to the establishment of the Netherlands Israelitisch Kerkgenootschap of which he was chairman of the executive (1870–71). His son **FREDERIK SALOMON VAN NIEROP** (1844–1924), banker, was born in Amsterdam and graduated in law at the University of Leiden. For some years he practiced law in Amsterdam. In 1871 he became the founder of the Amsterdamsche Bank. As one of its directors Van Nierop played an important part in expanding its operations. A progressive liberal, he was a member of the Amsterdam Municipal Council (1879–1905), of the North Holland Provincial Council (1883–99), and of the First Chamber of Parliament (1899–1922). Though an assimilated Jew and religiously indifferent, he became president of the Netherlands Israelitisch Kerkgenootschap and president of the Consistory of the Amsterdam Kehillah (1876–99). A principled liberal, he favored the emancipation of Jews as Dutch citizens, and opposed private Jewish education and the Zionist movement. His son **HENDRIK ABRAHAM VAN NIEROP** (1881–1976), banker, succeeded him as a director of the Amsterdamsche Bank in 1916, but played no part in the community.

[Henriette Boas / H.F.K. van Nierop (2nd ed.)]

NIETO, DAVID (1654–1728), philosopher and haham of the Spanish and Portuguese Synagogue in London (1701–28). Having studied medicine at the University of Padua, Nieto functioned as *dayyan*, preacher, and physician in Leghorn before going to London. He was proficient in languages and an astronomer of some repute. His calendar (1717) served the London community until the 19th century as a guide for the Sabbath and festivals. His works indicate that he was fully aware of the religious currents and crosscurrents of his time, including *Spinozism, Deism (see conceptions of *God), and Shabbateanism. *Matteh Dan* (1714), his *magnum opus*, devoted to a defense of the Oral Law against the attacks of ex-Marranos to whom the rabbinic tradition was both novel and unacceptable, has frequently been reprinted as a defense of rabbinic Judaism (last edition: Jerusalem, 1958). *Esh Dat* (1715) was directed against the Shabbatean heresiarch, Nehemiah Hiyya Hayon. Previously, Nieto had published *Pascalogia* (1702), dealing with the date of the Christian Easter in relation to that of the Jewish Passover, and *De La Divina Providencia* (1704). The latter was an elaboration of a sermon Nieto had delivered to combat the deistic notion of a "Nature" apart from God. Nieto identified Nature with God; and, although he made it clear that he had *natura naturans*, and not *natura naturata* (see *Spinoza) in mind, he was accused of Spinozistic leanings. Nevertheless, "Hakham Zevi" Ashkenazi (cf. his responsum no. 18) ruled in his favor. Nieto's *Reply to the Archbishop of Cranganor*, published posthumously in 1729, controverts the christological interpretation of the Bible. In his writings, Nieto gives evidence of wide reading in science and the humanities. He argues for the compatibility of Judaism and scientific investigations. Nieto is also one of the very few Jewish theologians who used the argument *de consensu gentium* to establish the dogmas of God's existence and of retribution.

[Jakob J. Petuchowski]

NIETO, ISAAC (1687–1773), English rabbi. Born in Leghorn, Nieto was taken to London when his father David *Nieto became haham in 1701. He was appointed to succeed him in 1732, after an interregnum of four years. Nieto seems to have had a difficult character however, and held office only until 1741, when he went abroad. Returning to England, he was admitted as a public notary and built up a considerable practice. On the death of Moses Gomes de *Mesquita (1688–1751), who had been haham since 1744, Nieto was appointed *av bet din* (in effect, acting rabbi) of the community, but resigned in 1757 in protest against the appointment to the *bet din* of Moses Cohen *d'Azevedo (1720–1784, haham from 1761). During the controversy over ritual slaughter in London, which began in 1761 through the captious criticisms of Jacob Kimhi, Nieto attacked the *bet din* so vigorously that the *Mahamad ordered that his

decisions in matters of Jewish law should thereafter be disregarded. Nieto published a number of sermons in Spanish and Portuguese, of which one appeared also in English (London, 1756) on the occasion of the earthquake of 1756; this was the first Jewish sermon to be published in English. His translations into Spanish of the liturgy for Rosh Ha-Shanah and the Day of Atonement (*ibid.*, 1740) and of the daily prayers (*ibid.*, 1771) were highly regarded for their style. Following his father's example, he also published a series of calendars.

His son PHINEHAS NIETO (1739–1812) carried on the family tradition by publishing a “New Calendar” (London, 1791), and his remoter descendant ABRAHAM HAYYIM NIETO published “Nieto’s Jewish Almanac for One Hundred Years 5663 – 1902 to 5763 – 2002” (1902).

[Cecil Roth]

NIETZSCHE, FRIEDRICH WILHELM (1844–1900), German philosopher, one of the key influences on modern thinking. The perception of Nietzsche’s philosophy is to a considerable extent – more than is the case with other philosophers – marked by the transforming impact of its reception after he himself lapsed into silence (1887–89) due to mental illness. His highly enigmatic philosophy was subsequently adopted by circles which later had a powerful influence on Fascism, Nazism, and related movements. Using barely understood slogans from his works like “the Will to Power,” “the Superman,” and “Transvaluation of Values,” they gave their own racist and antisemitic twist to the philosopher’s conceptions. The Nazis hailed Nietzsche as one of the spiritual progenitors of Nazism, along with H.S. *Chamberlain and R. *Wagner. His letters and writings do indeed contain antisemitic remarks, and his nihilistic critique of liberalism, democracy, and modern culture contributed to the rise of irrational political movements. The claim that he was antisemitic was reinforced by Nietzsche’s sister Elizabeth (the wife of Bernhard Foerster, a rabid professional antisemite), his literary executor; she forged, emended, and selectively edited his writings to bring them into line with her ideology.

In the course of his friendship with Richard Wagner, Nietzsche himself voiced some anti-Jewish opinions; after his break with the composer, however, he condemned antisemitism in the strongest terms. His attitude toward Judaism is usually described as ambivalent; yet this description blurs the intentions of his statements. His main reproach against Judaism was that it had given birth to Christianity, the religion of humility, weakness, and an inverted and unnatural “slave morality” that had caused immeasurable harm to the Western world. Thus he was attacking ancient, post-exilic Judaism, particularly its priests, who drew the ire of his anti-clerical convictions. According to Nietzsche, the “priests” (and Pharisees) of the Second Temple period, or rather the proto-Christian priests, developed a morality according to which the weak hate and negate the strong (his “slave moral-

ity,” *Sklavenmoral*). Nietzsche saw this development as a total re-evaluation of morality and as a revolutionary success, and it is against this *ressentiment* (that they have in common with his contemporary antisemites) that Nietzsche battled against ardently. Biblical and Diaspora Judaism, by contrast, earned his admiration for their august strength (even in times of persecution) and creativity. Accordingly, he considered contemporary Jewry as a possible source of ferment for his ideal, “dionysian,” atheistic world.

His first acclaim came from Georg *Brandes, the Danish literary historian and critic. Oscar Levy was the first to translate Nietzsche into English, further helping to spread his ideas. Nietzsche also exerted a considerable influence on modern Hebrew writers, namely M.J. *Berdyczewski, J.H. *Brenner, Uri Zevi *Greenberg, and S. *Tchernichowsky. He also influenced certain activist elements within the nascent Zionist movement, an influence severely criticized by *Aḥad Ha-Am.

NIFOCCI (Nafusi), ISAAC (late 14th century), physician-astronomer and scholar of *Majorca. In 1359 King Pedro IV of Aragon invited Nifoci to Barcelona to construct clocks and astrolabes. Three years later, he was appointed palace astronomer (*maestre astralabre de casa del senyor rey*) and also received the sinecure of ritual slaughterer and inspector (*shoḥet u-vodek*) of the community of Majorca, an office he was empowered to pass on to his son Joseph. In 1380 he entered the service of the infante John as manufacturer of astrolabes (*maestre de fer stralaus*). During the persecutions of 1391 he was forcibly converted to Christianity. However, shortly afterward he took refuge in Bugia (Bougie), North Africa, where he returned to Judaism, then emigrated to Erez Israel. From Bugia, Nifoci addressed a question to Simon b. Zemah *Duran and *Isaac b. Sheshet, on whether it was permissible “to set out on a caravan journey to Palestine, on a Friday” (cf. Duran’s responsa, vol. 1, no. 21).

NIGER, SHMUEL (pseudonym of **Shmuel Tsharny**; 1883–1955), Yiddish literary critic. Niger was born in 1883 in Dukor, a village near Minsk. His father was a fervent follower of Chabad Ḥasidim who died when Shmuel was six years old. Among his siblings were BORUCH TSHARNY VLADECK (1886–1935), managing editor at the Yiddish *Forverts* and founding president of the Jewish Labor Committee in New York, and DANIEL TSHARNY (1888–1958), one of the foremost Yiddish poets, journalists, and memoirists of his time. When

Niger attended yeshivah in Minsk, he came in contact with the Zionist ideas of *Aḥad Ha-Am and the socialist doctrines of Russian revolutionists, soon joining the newly founded Vorozhdenye Party, and helping to found the *Zionist-Socialist Workers Party and participating in its often illegal propaganda activities. Though repeatedly arrested and tortured in Russian prisons, he continued to write revolutionary proclamations and articles, in particular for *Der Nayer Veg*. His 1906 essay, "Vos iz der Yidisher arbeter" ("What Is the Jewish Worker"), was his first work with wide distribution. His initial literary efforts were in Russian and Hebrew, but after the onset of the 1905 Revolution he wrote mainly in Yiddish. A major essay on Sholem *Asch, "Vegn der Tragedye fun Gole" ("On the Tragedy of Exile," 1907), was his initial attempt to place himself at the forefront of the new Yiddish literary culture as well as to introduce the still relatively unknown Asch to a much broader audience. The following year, together with the Bundist dramatist A. Vayter and the Zionist essayist S. *Gorelik, he founded the short-lived journal *Literarishe Monatshriftn* in Vilna, which is widely credited with having launched the Yiddish literary renaissance. Niger's reputation soon equaled, and later eclipsed that of *Ba'al-Makhshoves, the founder of Yiddish literary criticism. In 1909 Niger left for Berlin and soon after for the University of Berne, Switzerland, in order to extend his knowledge of philosophy, world literature, and European literary criticism. In 1912 he returned to Vilna to edit a new monthly, *Di Yidishe Velt*, which rapidly became the authoritative organ of Yiddish *belles lettres*. That same year he published a collection of his early essays, *Vegn Yidishe Shrayber: Kritishe Artiklen* ("On Yiddish Writers: Critical Articles"). Assisted by Ber *Borochov, he edited *Der Pinkes* (1913), the first Yiddish scholarly volume devoted to the study of Yiddish literature, language, folklore, criticism, and bibliography. He also edited Zalmen *Rejzen's *Leksikon fun der Yidisher Literatur un Prese* ("Lexicon of Yiddish Literature and Press," 1914). The best of his essays from this period were later collected in a volume entitled *Shmuesn vegn Bikher* ("Conversations on Books," 1922). After the 1917 Revolution he edited the Moscow weekly *Kultur un Bildung* (1918), and the Vilna monthly *Di Naye Velt* (1919). In April 1919, Polish legionnaires stormed Vilna, broke into an apartment Niger was sharing with A. Vayter and Leib *Jaffe, shot Vayter, and arrested the others. After his release from prison, Niger left for the U.S. In 1920, he joined the staff of the New York daily *Der Tog* and for 35 years wrote weekly reviews of books and articles on literary trends, becoming the most revered and feared Yiddish critic of his generation. His praise or censure often made or destroyed reputations. His participation in the literary monthly *Di Tsukunft*, which he co-edited from 1941 to 1947, helped to maintain its high quality and enduring influence. Niger was a pillar of the *YIVO Institute for Jewish Research from its very beginning, contributing studies to its important publications. He was also active in CYCO (Central Yiddish Culture Organization), editing its complete edition of the works of I.L. *Peretz, on whom he wrote a definitive study (1952). Niger was the chief adviser of the Louis

La-Med Foundation for the Advancement of Hebrew and Yiddish Literature and, under its auspices, published his study *Di Tsveyshprakhikayt fun Undzer Literatur* ("The Bilingualism of our Literature," 1941). In this study, he emphasized that bilingualism had been a Jewish tradition since biblical days and that in the modern era both Hebrew and Yiddish were necessary pillars sustaining Jewish culture. In 1948, Niger helped to found the *Congress for Jewish Culture. In 1954, he undertook to co-edit its *Leksikon fun der Nayer Yidisher Literatur* ("Lexicon of the New Yiddish Literature"). He died while the first volume was in press. A number of his works were published posthumously: *Yidishe Shrayber in Soviet-Rusland* ("Yiddish Writers in Soviet Russia," 1958); *Bleter Geshikhte fun der Yidisher Literatur* ("Page from the History of Yiddish Literature," 1959); *Kritik un Kritiker* ("Criticism and Critics," 1959); *Sholem Asch* (1960).

NIGER OF PEREA (d. 68 C.E.), patriot leader of Perea, Transjordan. After distinguishing himself in the attack on Cestius at the outset of the revolt against the Romans in the autumn of 66, Niger apparently took charge of operations against them in Idumea, in due course becoming for a short time deputy governor of this province. Later in the same year he was placed in command of the disastrous expedition against *Ashkelon, together with *John the Essene and Silas the Babylonian. He was the only one of the three to survive, leading another attack later on with no greater success from his base in Idumea. During the reign of terror in *Jerusalem after the triumph of the Zealot extremists, he was among the moderates who were executed, apparently on suspicion of wishing to come to terms with the Romans (Jos., Wars, 2:520, 566; 3:11–27; 4:359–63).

[Cecil Roth]

NIGHTINGALE (Heb. נָמִיר (mod.), *zamir*), a name applied to singing birds of the genus *Luscinia*, of which three species are found in Israel. The most outstanding for its song is the *Luscinia megarhynchos* which hatches its eggs in the thickets of the Jordan. It is a small brown bird, common in Western Europe. The Hebrew word is mentioned only once in the Bible in a description of spring in Erez Israel: "The time of the *zamir* is come, and the voice of the turtledove is heard in our land" (Song 2:12). The parallelism between *zamir* and turtledove indicates that the reference here is to a bird and, according to the meaning of the Hebrew root, to a singing one. Apparently the nightingale is not specifically meant but

rather all singing birds that in spring and during the breeding season fill the air with their melodious song. Some, however, maintain that *zamir* is derived from the root signifying “fruit-picking,” since in the *Gezer Calendar there occurs the expression *yarho zamor* denoting the fruit-picking months in summer. But as the Song of Songs speaks of spring, this interpretation is improbable.

[Jehuda Feliks]

NIGHT PRAYER (Heb. קְרִיאַת שְׁמַע עַל הַמִּטָּה, *Keri'at Shema al ha-Mittah*; “the reading of the **Shema* on retiring,” lit. “on the bed”), a prayer recited before retiring for the night. The custom to pray before going to sleep reflects man’s need for protection in a state of suspended consciousness and vulnerability, especially since sleep was held in ancient times to be similar to death. Possibly practiced earlier, the Night Prayer in which one commends one’s soul to God for the night became obligatory only in mishnaic times. It was incorporated into the prayer book of nearly all Jewish communities in an almost identical form (but see below): When **Arvit* became established as a community prayer to be recited in the early evening, the Night Prayer became the individual concluding prayer of the day. The name *Keri'at Shema al ha-Mittah* refers to the central part of the prayer which is the first paragraph of the *Shema*. The Talmud states that he who wishes to go to sleep should say the *Shema* until the words *Ve-hayah im shamoa* and recite the prayer *Ha-Mappil* to God “Who causes the bands of sleep to fall upon my eyes...” (Ber. 60b). Some codifiers demand the recitation of the first two sections of the *Shema* (see R. Asher to Ber. 9 no. 23); the majority, however, require the first one only (Maim. Yad, Tefillah, 7:1–2; Tur and Sh. Ar., OH 239:1), to be preceded by *Ha-Mappil* (Maim. loc. cit., but see Tur and Sh. Ar., loc. cit.). The order of these two portions of the Night Prayer is widely accepted and is probably derived from the talmudic view that “man ought to recite the *Shema* and repeat it until sleep overcomes him” (TJ, Ber. 1:1, 2d). The rabbinic concept of sleep being a state of minor death is in consonance with this outlook; just as one is obliged in the last hour of life to recite the *Shema* and bless the unity of God, so one should recite the *Shema* at night and commend one’s spirit to God before succumbing to sleep. The reversed order, in which the *Shema* is recited first and is followed by *Ha-Mappil*, is given by *Amram Gaon, but is less common. In Amram’s order, the *Shema* is prefaced by blessing “the Lord Who has sanctified us with His commandments and commanded us to recite the *Shema*,” and concludes (as in the Italian rite) with blessing “the Lord Who guards His people Israel forever.” The *Ha-Mappil* benediction underwent a number of changes and considerable curtailment compared with the original talmudic version (see Yad, Tefillah 7:1, R. Asher to Ber. 9 no. 23; Tur, OH 239).

The significance of the Night Prayer is prophylactic: the *Shema* and *Ha-Mappil* are invocations of divine protection

against the various dangers that might befall man at night and during sleep, and especially against sin. The latter idea derives from Psalm 4:51: “Tremble, and sin not, commune with your heart upon your bed, and be still.” Consequently, some scholars held (Ber. 5a–b) that for a man whose sole occupation was the study of the Torah no Night Prayer was necessary or one short supplicatory text was sufficient, e.g., “I commend my spirit into Thine hand” (Ps. 31:6). According to the Mishnah (Ber. 2:5), a bridegroom on the night of his wedding was exempted from the obligation of reciting the *Shema* at night because, excited over his nuptials, he would not be able to muster the necessary concentration (Ber. 16a–b; Maim. Yad, Keri'at Shema, 4:1). In later times, however, this exemption was abolished since proper spiritual concentration at prayer was rare anyway (Tur, OH 70).

Subsequently more prayers and scriptural texts were added to the Night Prayer by the talmudists and later authorities: e.g., Psalm 91 (also known as *Shir shel Pegg'a'im*; “Song against Untoward Happenings”), Psalm 3, and certain sections from *Arvit* (e.g., *Hashkivenu* and *Barukh Adonai ba-Yom*). Further additions were made under kabbalistic influence, the latter strengthening earlier angelological elements (e.g., Gen. 48:16) in the Night Prayer.

It is customary not to recite these additional prayers and texts on the first night of Passover; as this is a “night of watching unto the Lord” (Ex. 12:42) God Himself guards the Jews from the dangers of this night (Sh. Ar., OH 481:2).

[H. Elchanan Blumenthal]

NIGRI (Niger), PETRUS (Peter Schwarz; 1434–1483), Hebraist and polemist. Born in Bohemia, Nigri entered the Dominican Order and studied Hebrew, perfecting his knowledge in Spain, where he apparently acquired or compiled anti-Jewish polemical material subsequently exploited in his writings. On his return to Germany, he launched a conversionist campaign in several Jewish communities and ingratiated himself with the antisemitic bishop of Regensburg by arranging a week-long religious disputation there in 1474. In the following year, Nigri published his *Tractatus contra perfidos Judaeos de conditionibus veri Messiae...* (Esslingen, 1475), the first incunabulum to contain printed Hebrew characters, which was later consulted by Conrad *Pellicanus. It was followed by a treatise in German, *Der Stern Maschiach* (Esslingen, 1477), another early document of the Christian Kabbalah. Both works contained appended guides to the study of Hebrew and were venomously anti-Jewish and anti-talmudic. Their author characteristically identified the Trinity in the second word of the Hebrew Bible, *bara* (“created”), being said to represent the initials of *Ben* (“Son”), *Ru'ah* (“Spirit”), and *Av* (“Father”). Nigri, who also wrote a commentary on the Psalms, is said by Yom Tov Lipmann Heller (*Sefer Nizzahon*, 1644, p. 191) to have been a Jewish apostate.

NIKEL, LEA (1918–2005), Israeli painter. Nikel was born in Zhitomir, Ukraine, the daughter of Bat Sheva and Haim Nikelshperg, who immigrated to Erez Israel two years after she was born because of the pogroms. Although she lived in many cities during her lifetime, she identified with Tel Aviv. Nikel can be seen as a self-taught artist. She studied for a short while with the artist Haim Gliksberg and spent some time in the famous studios of Yehezkiel *Streichman and Avigdor *Stematzky. In these studios Nikel was exposed through books and reproductions to the world of modern art, and her decision to travel to Paris matured. Nikel remained in Paris 11 years (1950–61). She was fascinated by the artistic atmosphere there, enjoying the possibility of visiting art museums housing European collections and of considering herself an artist. Nikel's first steps in the abstract style took place in this period. The attraction of the art world and the need to become part of it influenced her mode of wandering from place to place. From the 1970s Nikel lived close to open spaces, near nature, in Moshav Kidron. In 1995 she won the Israel Prize.

Nikel was an independent artist committed to her own style. Despite criticism, she continued to work on her abstract, colorful, and optimistic paintings. Nikel's courage in coping with abstraction was unique in Israel's art world. Art critics labeled her style Lyric Abstraction, a term that came from the New Horizons art group. But Nikel's works took abstraction one step further since she examined formal questions of the abstract without linkage to local places as the other members of the group did.

The main artistic tool in Nikel's paintings is color. She used a wide variety of colorful compositions. They move from figurative dark painting to abstract colorful works during the 1960s in Paris. From geometric compositions with contour lines and muddy color (*View from the Window of My Chambre de Bonne: Paris*, 1950, Tel Aviv Museum of Art) she turned to a spontaneous turbulent style (*Untitled*, 1969, Israel Museum, Jerusalem).

In the 1990s her style was still vivid and optimistic, and she was invited to exhibit in very stylish new galleries. Her perception of art as emotional creativity produced nuanced changes and renewal in her painting. Occasionally a new image would appear in some of her paintings and then disappear (*Black Butterfly*, 1994, Private Collection).

Nikel passed away ten years after a retrospective exhibition of her art was shown at the Tel Aviv Museum of Art. During this last decade, being quite elderly and ill, she continued to create in a fresh and vivid style.

[Ronit Steinberg (2nd ed.)]

NIKITIN, VICTOR (1839–1908), writer and scholar. Nikitin's special field was the history of Jewish agricultural settlement in Russia. At the age of nine, he was kidnapped and sent to the *Cantonist regiment in Nizhni Novgorod. There he was forced to convert to Christianity, and his Jewish name (not known) was changed. Because of his excellent handwriting he was assigned to office work in the army. While in the army, he studied on his own, and after completing his military service (1869), he served as a high official in the Ministry of Agriculture. Nikitin described the life of kidnapped children and the Jewish Cantonists in "*Vek perezhit – ne pole pereyti*" (in *Yevreyskaya Biblioteka*, 4 (1876), 164–213), and in *Mnogostradalnye* ("Those who Suffer"). The latter was banned by the censors but later appeared in two editions (1872, 1896). There is a great deal of material of historical importance in his *Yevrei Zemledeltsy* ("Jewish Tillers of the Soil"), published in *Voskhod* (1881–86) and later in 1887 as a separate work, and in *Yevreyskiye poseleniya severnykh i yugo-zapadnykh guberniy* ("Jewish Settlements in Northern and Southwestern Provinces," 1894), which was written on the basis of archival material.

[Yehuda Slutsky]

NIKOLAYEV, port on the Black Sea coast, Nikolayev district, Ukraine. The town was founded in 1789 and Jews settled there from its earliest days, engaging in commerce and crafts. Many of them moved there from Galicia. In 1830, among the inhabitants of the town were 24 Jewish families of merchants, 691 families of townsmen, and 424 individual Jews. In 1829 a government order prohibited the residence of Jews (with the exception of those serving in the army) in Nikolayev and *Sevastopol, using the existence of naval bases in the two towns as a pretext. The Jews were allowed two years to arrange their departure. The local authorities opposed the decree, arguing that the expulsion of the Jews would harm the development of the town; the expulsion was therefore postponed until 1834. At the beginning of the reign of Alexander II the right of residence in the town was granted to Jewish merchants and industrialists (1857), and later also to craftsmen (1861). Many Jews lived in the villages and estates in the vicinity of Nikolayev, where they conducted their commerce. In 1866 all restrictions were lifted and the Jewish community of Nikolayev developed rapidly. In 1880 there were 8,325 Jews in Nikolayev, and in 1897 the number rose to 20,109 (21.8% of the total population). A native of the town, Moshe Katz, described Nikolayev in the early 20th century in his memoirs, *A Dor Vos Hot Farloren di Moyre* (1956). Jews suffered in the pogroms of May 1881 and April 1899. The pogrom of 1905 was averted by Jewish self-defense units. In the early 20th century the community supported 15 schools. During the Civil War (1919–20) the Jews of neighboring towns suffered severely. In 1926 there were 21,786 Jews (about 20.8% of the total population) in Nikolayev. A court held its sessions in Yiddish in the 1920s, and 5 elementary schools, a vocational school and a high school existed

in Nikolayev between the wars. Many Jews worked in factories, including the steel plant, and in the shipyard. There were 25,280 Jews in 1939 in the city (15.2% of the total population). The Germans occupied the city on August 17, 1941. On September 21–23, 1941, the Germans murdered 7,000 Jews in the vicinity of the city. With the liberation of Nikolayev (March 1944), Jews began to return to the city. According to the 1959 census, there were 15,800 Jews (7% of the population) in Nikolayev, but the actual number was probably closer to 20,000. The last synagogue was closed down by the authorities in 1962. In 1970 there were 17,978 Jews in the Nikolayev district, but later in the 1990s many emigrated to Israel.

[Yehuda Slutsky]

NIKOPOL (Nicopolis), small city in the Plevna district of Bulgaria. A Byzantine Jewish community existed in Nikopol during the tenth century. Jewish refugees arrived in Nikopol after their expulsion from Hungary in 1376 and also from Bavaria after expulsion in 1470. Jews expelled from Spain also sought refuge there. During the 16th century there were six synagogues in Nikopol – a Romanian, Hungarian, Wallachian, and Ashkenazi synagogue and two Sephardi synagogues. From 1523 to 1536 R. Joseph *Caro lived in Nikopol where he founded a famous yeshivah and continued the writing of his *Beit Yosef*. The synagogue that bears his name, Maran Beit Yosef, was destroyed several times and rebuilt in 1895. Some of the Jews expelled from Italy in 1569 by decree of Pope Pius V went to Nikopol. Those Jews who did not succeed in escaping at the approach of Michael the Brave of Wallachia, during the Turkish-Wallachian wars from 1595 to 1599, were taken to Wallachia and executed. After the wars R. Isaac *Beja (d. before 1630), author of *Bayit Ne'eman*, was the rabbi of the city. In 1688 the Jewish population increased with the arrival of war refugees from Smederevo (Semendria; Serbia) following the German invasion.

During the Russian-Turkish War of 1877 the Jews of Nikopol fled to Plevna (Pleven), and Adrianople, returning after the peace treaty of 1878. The economic situation, which deteriorated after the war, induced many Jews to settle in other Bulgarian towns. In 1904 there were still 210 Jews in Nikopol, but in 1926 only 12 Jewish families remained. During World War II the city received refugees from Germany and other European countries. The Nazis converted Maran Beit Yosef synagogue into a warehouse and stable. In 2004, after a process of migration process, only a few Jewish families lived in Nikopol.

[Simon Marcus / Emil Kalo (2nd ed.)]

NIKOVA, RINA (1898–1972), Israeli dancer and choreographer, who originated a style for the interpretation of biblical subjects in dance. Born in Russia, trained in Moscow, Nikova

made her first appearance in Berlin. In 1925 she joined the opera company of Mordecai *Golinkin in Tel Aviv as prima ballerina. In 1931 she formed the Palestine Singing Ballet, a Yemenite group. She established Jerusalem Biblical Ballet, 1949.

NILE, river in N.E. Africa. The Nile is the lifestream of the civilizations flourishing in the valley bordering it. If the river is too high or too low in one year, disaster and famine follow in the next. Indeed, the ancient Egyptians saw in the yearly inundation the annual renewal of the first act of creation, the rising of the primeval mound out of the primordial ocean. From the correct observation of this yearly flooding, which enriched the fields of the lower Nile Valley with the fertile black alluvial soil, developed much of the later civilization of the pharaohs, and particularly the 365-day calendar. Unquestionably, the Egypt of the pharaohs was “the gift of the Nile.” The Hebrew word for the Nile, נִלוֹ, is a loan word from the Egyptian *’itrw* (“river”) which by the period of the Middle Kingdom came to designate the Nile as the river par excellence.

Although the name Nile is not explicitly mentioned in the Bible, it is alluded to as “the river” (Gen. 41:1; Ex. 2:3), the “river of Egypt” (Gen. 15:8), the “flood of Egypt” (Amos 8:8), Shihor (Josh. 13:3), brook of Egypt (according to some, but see *Egypt, Brook of), river of Cush, and many more. The Nile plays a prominent part in the early stories of the Exodus (Moses, Ex. 2:3; the ten plagues, 7:15, 20; et al.), and is used by the prophets as the symbol of Egypt (Amos 8:8; 9:5; Jer. 46:8).

[Alan Richard Schulman]

NILES (Neyhus), DAVID K. (1890–1952), U.S. presidential aide. Born in Boston to immigrant Russian parents, Niles went to work in a local department store. He regularly frequented Ford Hall’s Sunday forum of public lectures and discussions, and caught the eye of the forum’s director, George W. Coleman, who eventually made him his assistant. During World War I, when Coleman went to Washington as an official in the Labor Department, Niles accompanied him as an aide. After the war he continued his association with Ford Hall, of which he was appointed associate director in 1924. Through his work there he became acquainted with numerous political figures, as a result of which he took part in La Follette’s 1924 presidential campaign on the Progressive ticket. In subsequent elections, he was active in the Democratic Party, working for Smith in 1928 and Roosevelt in 1932. In 1935 he returned to Washington as labor assistant to Harry Hopkins, director of the Works Progress Administration and an intimate of President Roosevelt. He remained with Hopkins when the latter was made secretary of commerce in 1938. By then a member of the White House’s inner circle, Niles helped to engineer the third-term “draft” of President Roosevelt in 1940 and was appointed assistant to the president in 1942. In this capacity, he performed the functions of a political trouble-shooter, an unofficial dispenser of patronage, and a liaison man with orga-

nized labor and various racial and religious minority groups. He remained in the post when President *Truman took office in 1945 and is said to have been instrumental in helping to shape Truman's ultimately positive stand on the partition of Palestine, which led to swift U.S. recognition of the State of Israel in May 1948. With his characteristic aversion to publicity, however, which often caused him to be labeled by the press as a political "mystery man," Niles publicly referred to his interest in Israel only once in the course of his career. That was in his letter of resignation from office in 1951, in which he gave his desire to visit Israel as a private citizen as one of the reasons for his retirement.

[Bernard Sternsher]

NILI, secret pro-British spying organization, that operated under Turkish rule in Syria and Palestine during World War I, from 1915 to 1917, under the leadership of Aaron *Aaronsohn, Avshalom *Feinberg, Sarah *Aaronsohn, and Yosef *Lishansky. Its name consists of the initial letters of the Hebrew verse "*Nezah Yisrael Lo Yeshakker*" נֶזַח יִשְׂרָאֵל לֹא יִשְׁקֶר – "the Strength of Israel will not lie" (1 Sam. 15:29), which served as its password. In British official documents it is named the "A. Organization." Nili was founded by a number of Jews in the moshavot (Jewish agricultural villages), most of whom were born in the country. Their disappointment with the Turkish authorities' treatment of the Jewish population and fear of a fate similar to that of the Armenians led them to the conclusion that the future of the Jews depended on Palestine being taken over by Britain. In January 1915, Avshalom Feinberg, who worked in Aaronsohn's agricultural experimental station at Athlit, was arrested with a group of young men in Haderah who were falsely accused of having contact with British boats off the coast. After his release, Feinberg presented to his teacher and friend, Aaronsohn, a plan for a Jewish revolt with the aid of the British army stationed in Egypt. Aaronsohn, who held an important position in locust control under the Turkish authorities, rejected the plan as impractical, but accepted Feinberg's basic assumption that the British army should be aided by espionage.

Establishing contact with the British headquarters in Egypt was quite difficult. The first messenger, Aaronsohn's brother Alexander, met with the disapproval of the British Arab Bureau in Cairo and went to the United States, where he conducted propaganda against Turkey and Germany. The second, Feinberg, was promised in August that contact with the group would be maintained, but the British did not keep their word; he was caught by the Turks and released only after strenuous efforts by Aaronsohn. Feinberg's trip to Turkey in February 1916, with a view to contacting British agents in neutral Romania, did not bear fruit either. In the meantime the group was joined by Sarah Aaronsohn, Aaron's sister; Yosef Lishansky, head of a watchmen organization in the southern villages; and others, most of them from Zikhron Ya'akov,

Haderah, and Rishon le-Zion. Some of the recruits were enlisted in Aaronsohn's locust control staff, thus being able to move all over the country and enter military camps. Military, political, and economic information was collected in the experimental station in Athlit, but there was no way of transmitting it to the British.

To contact the British, Aaronsohn went on a fictional Turkish mission to Germany, in the summer of 1916; then to neutral Denmark, where he contacted British agents; and finally to London. There he met statesmen and soldiers, and, having gained their confidence, was sent to Cairo, where he served as intelligence adviser and helped in the planning of the British offensive against Palestine. In January 1917 Feinberg and Lishansky, disguised as Bedouin, tried to get to Egypt by land to renew contact with Aaronsohn. They were attacked by Bedouin and Feinberg was killed near the British front in Sinai. Lishansky was wounded but found his way to the British lines and joined Aaronsohn. In February 1917 contact was first established between the espionage center at Athlit and British intelligence in Egypt through Lishansky, who was brought to the coast by a British boat. The connections were maintained by sea for several months and the British received useful information collected by the group, supplemented by Aaronsohn's extensive knowledge of the geographical conditions and the personnel of the Turkish command.

The group also sought to help the Jewish population, many of whom were expelled from Jaffa and Tel Aviv by the Turks during the spring of 1917. Aaronsohn devoted much publicity to this persecution, which was later stopped. Other members helped transfer financial support to the *yishuv*, a difficult task after the United States broke off relations with Turkey in April 1917. Aaronsohn founded an assistance committee corresponding to the one in Egypt, which was set up by exiles from Palestine at the beginning of the war. Sarah Aaronsohn and Lishansky went to see Aaronsohn in Egypt and brought back £2,000 in gold coins, which they handed over to the political committee of the *yishuv*. This helped change the attitude of the Jewish population and its leaders, who were afraid of the consequences if Nili's activities were discovered by the Turks. The group was asked to arrange for two representatives of the *yishuv* to meet Aaronsohn and Zionist leaders abroad, to show that the latter approved of Nili's operations. Aaronsohn met Chaim *Weizmann and his colleagues in London in September 1917 and succeeded in convincing them of the importance of Nili's work as part of the political and military work of the section of the Zionist movement that had called for an alliance with Britain from the beginning of the war. It seemed that Nili was trying to become a political factor in Palestine and the Zionist movement; it made approaches to *Ha-Shomer and other groups.

In September 1917 the Turks caught a carrier pigeon sent from Athlit to Egypt that provided clear proof of espionage within the Jewish population, and the leadership again dissociated itself from Nili's actions. Internal conflicts weakened the organization, and there were grave suspicions over the cir-

cumstances of Feinberg's death. One of the group, Na'aman Belkind, was captured by the Turks while trying to get to Egypt and gave his interrogators information on the organization and its operations. On Oct. 1, 1917, Turkish soldiers surrounded Zikhron Ya'akov and arrested numerous people, including Sarah Aaronsohn, who committed suicide after four days' interrogation and torture. Lishansky managed to escape. The authorities hunted after suspects in other villages as well. The prisoners were taken to the Khan al-Pasha prison in Damascus. Zikhron Ya'akov was given an ultimatum: if Lishansky was not handed over, the village would be destroyed. The Jewish leaders decided to hand over the suspects and wash their hands of responsibility for them.

Lishansky took shelter among his former friends in Ha-Shomer and was taken from one village to another. As it was impossible to go on like that for a long period, the Ha-Shomer committee decided that he must die in case he fell into the hands of the Turks and brought disaster to the whole *yishuv*. Emissaries of Ha-Shomer set out to assassinate Lishansky, but succeeded only in wounding him, and he managed to escape. On his way to Egypt he was caught by Bedouin near Rishon le-Zion and handed over to the Turks. Following his interrogation in Damascus, more people were arrested. Due to the intensive endeavors of Jewish leaders and the secret intervention of German representatives, most of the prisoners were released, but 12 were sentenced to periods of one to three years in prison and 30 were conscripted into the army. Lishansky and Belkind were sentenced to death and were executed on Dec. 16, 1917. The remaining members of the organization went on with their spying activities. Aaronsohn, who was sent by Weizmann on a political and propaganda mission to the U.S., returned to Palestine in the spring of 1918 with the Zionist Commission. With his death in an air accident on May 15, 1919, the group finally broke up.

From a sociological and historical point of view, Nili was an attempt by young people born in the moshavot, under Aaronsohn's leadership, to form an independent political movement that would win the support of the entire *yishuv*. However, it was unable to appeal to a broad social stratum; hence its rapid dissolution after its leader's death. Its aid in the conquest of Palestine by the British, which was well appreciated, was part of the efforts of the pro-British section of the Zionist movement that was active in 1914–18 and determined policies in the subsequent 20 years.

[Yehuda Slutsky]

NÎMES, capital of Gard department, S. France. Although a number of Jews took part in the revolt led by Hilderic, governor of Nîmes, against the Visigothic king Wamba in 673, there is no direct evidence that Jews were then living in the town itself. However, a community was established during the second

half of the tenth century at the latest, and from 1009 there is documentary evidence of the existence of a synagogue. From the middle of the 11th century, the name *Poium Judaicum* was used to designate one of the seven hills enclosed within the wall of Nîmes (later Puech Juzieu, etc.; in 1970 the promenade of Mont-Duplan); the Jewish cemetery was situated there. Toward the close of the 11th century, an entire quarter of the town was known as *Burgus Judaicus* (later Bourg-Jézieu). At the beginning of the 13th century, the community appears to have consisted of about 100 families. Although a church synod held in Nîmes in about 1284 decreed severe measures against the Jews, the bishop of Nîmes, who had authority over the Jews of the town, was nevertheless able to protect them, even from King *Philip IV the Fair who had ordered the imprisonment of several Jews. But the bishop could not prevail against the royal expulsion order of 1306 which, in Nîmes as elsewhere, was accompanied by the confiscation of all their belongings. When the Jews returned to France in 1359, the Nîmes municipal council allocated them the Rue de Corrègerie Vieille (the modern Rue de l'Etoile). After being harassed by the Christians there, they obtained a new quarter in the Rue Caguensol (part of the Rue Guizot) and the Rue de la Jésuberie or Juiverie (Rue Fresque). Shortly afterward they moved yet again, to the Garrigues quarter. There the 1367 census recorded the only three houses in the town (out of a total of 1,400) that were owned by Jews. This community ceased to exist in 1394, after the general expulsion of the Jews from France.

In a letter to *Abraham b. David of Posquières – who lived in Nîmes long enough to be sometimes named after that town – Moses b. Judah of Béziers stressed the superiority of the yeshivah of Nîmes over all the others in southern France, comparing it to “the interior of the Temple, the seat of the Sanhedrin, from where knowledge goes forth to Israel.” Other than Abraham b. David, the only scholar of the town who is known is his uncle, Judah b. Abraham. The municipal library of Nîmes possesses a rich collection of medieval Hebrew manuscripts, several of French origin, in the French provinces; all these volumes were obtained from the Carthusians of Villeneuve-lès-Avignon.

From the 17th century, some Jews of *Comtat Venaissin went to trade in Nîmes and a few of them attempted to settle there; the *parlement* of *Toulouse ordered them to leave in 1653 and again in 1679. From the end of the 17th century, the Jews obtained the right to buy and sell in Nîmes for three weeks or a month in every season. Even though this concession was abolished in 1745 and 1754, some Jews succeeded in settling in the town during the second half of the 18th century. The community of 30–40 families appointed a rabbi, Elie Espir from *Carpentras, and set up a small synagogue in a private house. After a split in the community in 1794, a new synagogue (which has been in use ever since) was built in the Rue Roussy, completed in 1796. During the Reign of Terror, three Jews of Nîmes were imprisoned; one of them was subsequently executed. In 1808, when the *consistories were established, the community was affiliated to the consistory of *Marseilles,

and there were then 371 Jews in the town, with the surprising number of eight rabbis. Among the rabbis of Nîmes was Solomon Kahn (1854–1931), historian of the Jews of southern France. Other notable personalities who originated from there include Adolph *Crémieux and Bernard *Lazare. From the close of the 19th century, the community diminished steadily in number. Although 40 families were recorded in 1941, some of these were refugees from the interior of France. In 1970 the community of 1,200 persons, mainly of North African origin, possessed a synagogue and a community center.

NIMOY, LEONARD (1931–), U.S. actor and director. Born to Russian immigrant parents in Boston, Massachusetts, Nimoy starred as Hansel as an eight-year-old in a production of *Hansel and Gretel*. He studied drama at Boston College and Antioch University, and then moved to Southern California, where he studied at the Pasadena Playhouse with Jeff Corey. He took roles in low-budget films, like *Zombies of the Stratosphere* (1951) and *Them!* (1954). After an 18-month stint in the U.S. Army Reserve, Nimoy was discharged as a sergeant in 1956. Back in Hollywood, he turned to television roles, appearing on such shows as *Sea Hunt*, *Twilight Zone*, and *Bonanza*. In 1966, Nimoy helped create his Emmy-nominated role of Mr. Spock in the series *Star Trek* (1966–69). Drawing on his Jewish heritage for inspiration, he used a priestly (kohen) blessing as a Vulcan greeting in the series. After *Star Trek* ended, Nimoy went on to play the spy, Paris, in *Mission: Impossible* from 1969 to 1971, and narrated the documentary series *In Search Of...* (1976–82). His frustration at being type-cast as Mr. Spock led him to write the autobiography *I Am Not Spock* (1977). Although Nimoy refused to play Spock for a new TV series, he agreed to star in *Star Trek: The Motion Picture* (1978). In 1982, he received an Emmy nod for his supporting role in *A Woman Called Golda*. After directing *Star Trek III: The Search for Spock* (1984) and *Star Trek IV: The Voyage Home* (1986), Nimoy continued to direct such films as *Three Men and a Baby* (1987) and *Funny About Love* (1990). In 1991, Nimoy produced and acted in the made-for-television film *Never Forget*. He released his second autobiography, *I Am Spock*, in 1995. An avid poet and black-and-white photographer, Nimoy also published his Jewish-themed photo collection *Shekhina* in 2002. The annual Nimoy Concert Series at Temple Israel of Hollywood is sponsored by the Nimoy.

[Adam Wills (2nd ed.)]

NIMROD (Heb. נִמְרוֹד, נִמְרוֹד), son of *Cush and grandson of *Ham son of *Noah (Gen. 10:8–12; 1 Chron. 1:10). He is described in the Table of Nations as “a mighty hunter by the

grace of the Lord” (Gen. 10:9) whose exploits as a hero of the chase became proverbial. He was also “the first man of might on earth” (Gen. 10:8), i.e., the first to found a great empire after the *flood. He is said to have ruled over the famous capitals of southern Mesopotamia, Babylon, Uruk (Erech), and Akkad as well as, apparently, over the great cities of Calah and Nineveh in the land of Assyria. The term “land of Nimrod” appears as a synonymous variant of Assyria in Micah 5:5. The etymology of the name is uncertain as is also the identification of Nimrod with an historical personality. E.A. Speiser connects him with Tukulti-Ninurta 1 (13th century B.C.E.), who was the first Mesopotamian ruler effectively to have combined Babylon and Assyria under a single authority. However, the association of Nimrod with Cush son of Ham presents a difficulty if Cush refers to the area south of Egypt. Another possibility is to connect it with the Kassites who conquered Babylon in the second millennium (cf. Gen. 2:13), in which case a confusion of genealogical traditions is to be presumed. The extraordinary notice about Nimrod in the Table of Nations indicates the existence of a well-known and widespread narrative about him. U. Cassuto has postulated that the five verses in Genesis 10 derive from an ancient epic devoted to his heroic exploits.

[Nahum M. Sarna]

In the Aggadah

Nimrod is the prototype of rebellion against the Almighty (Ḥag. 13a), his name being interpreted as “he who made all the people rebel against God” (Pes. 94b). As the first hunter, he was the first to eat meat and to make war on other peoples (Mid. Ag. to Gen. 10:8), and he eventually became a king (PdRE 24). His physical prowess came from his coats of skin, which God had made for Adam and Eve (Gen. 3:21) and which Noah had preserved in the Ark. When the animals saw Nimrod wearing these coats, they knelt before him. He became the first man to rule the whole world and he appointed Terah, Abraham’s father, his minister (PdRE 24). Elated by his glory, he became an idolator (*Sefer ha-Yashar*, Noah 9a, 1870). He built the Tower of Babel (which is called by the rabbis, “the house of Nimrod”) for idol worship (Av. Zar. 53b) and he had the whole world pay divine homage to him (Mid. Hag to Gen. 11:28). When informed of Abraham’s birth, Nimrod ordered all male children to be killed (*Ma’aseh Avraham*, in: A. Jellinek, *Beit ha-Midrash*, 2 (1938², 118f.) and he later had Abraham cast into a fiery furnace because he refused to worship fire (Gen. R. 38:13).

Nimrod (identified with *Amraphel) became a vassal of his rebellious general Chedorlaomer, and was later defeated by Abraham (see Gen. 14; *Sefer ha-Yashar*, loc. cit.). He was slain by Esau who was jealous of his success as a hunter and who coveted his magic garments (PdRE 24). In messianic times Nimrod will testify before the whole world that Abraham never worshiped idols (Av. Zar. 3a).

In Islam

Namrūd (Namrūdh) b. Kūsh (Cush), or b. Kanʿān (Canaan), is not mentioned by name in the *Koran. The commentators

are justified, however, in their contention that Suras 21:69; 29:23; and 37:95, in which it is said that the courtiers and the people of *Abraham suggested that he be thrown into the fiery furnace, refer to Namrūd. In the discussion between the ruler of the land and Abraham (Sura 2:260), another allusion is made to Namrūd. The allusions to the Jewish *aggadot* about Abraham in the fiery furnace are sufficiently evident. At a later period Nimrod b. Cush (Gen. 10:9), or b. Canaan, is mentioned by name. The theme of Abraham, who worships God and is persecuted by the ruler, recurs in various popular literary works. In a fragment of the *qaṣīda* (poem) attributed to Samaw'al al-Quarṣī, found in the Cairo **Genizah*, the following stanza appears: "It was only in the case of one man [among our ancestors] that the fire which encircled him was changed into fragrant and bowing garden plants." The influence of Muslim legend is most clearly evident in late Jewish legend. These same descriptions are again to be found in the writings of later commentators on the Koran: Zamakhshari (p. 888; 12th century) and Baydāwī (vol. 1, p. 620; 13th century).

NIMRODI, family of Israeli press moguls. The family's financial empire ranges from the media to real estate and tourism. YAACOV NIMRODI (1926–) was born in Baghdad. After the family immigrated to Palestine, Nimrodi and his nine siblings grew up in poverty, Nimrodi working as a gardener and warehouseman. In 1948 he joined the Palmah as an intelligence officer and subsequently worked in the Mossad. In 1956 he was appointed IDF military attaché and Israel Defense Ministry representative at the Israel Embassy in Teheran, in which role he was involved in large-scale arms sales to the Shah of Iran in the 1960s. After he left the IDF, he returned with his family to Teheran where he acted as a middleman in arms sales, including involvement in the so-called Irangate affair. Following the fall of the Shah he returned to Israel to pursue his business interests. In 1988, Nimrodi, worth an estimated \$48 million, purchased the Israel Land Development Corporation (Hakhsharat ha-Yishuv) from the Jewish National Fund and Bank Leumi. Established in 1909 as the Palestine Land Development Company, the public corporation purchased and developed land for urban and agricultural settlement. The package which Nimrodi received for \$26 million, included properties in prime areas like Jerusalem, Tel Aviv, Jaffa, Rishon le-Zion, and Beersheva, and hotels, private dwellings, and industrial holdings. Yaacov had one son, and three daughters. His son,

OFER (1957–), born in Teheran and a law graduate from Tel Aviv University, studied business management at Harvard University and in 1989 was appointed the company's managing director. Over the years, the company increased its profitability and moved into such other areas as the media and tourism. Yaacov's three daughters and their husbands filled various positions in the business empire.

In 1992 Yaacov Nimrodi purchased the shares of the **Maariv* newspaper which had been owned by Robert *Maxwell until his death. Nimrodi subsequently sold 50 per cent of the shares, half to *Haaretz* publisher Amos *Schocken, and the other half to an Australian-Israeli consortium. Appointed by Yaacov the financially ailing newspaper's editor-in-chief, Ofer Nimrodi set for himself the goal of winning the circulation war with the highly successful **Yedioth Aharonoth*. Ofer succeeded in reducing the circulation gap, partly by going down-market in editorial content and layout, but *Maariv* still lagged behind, with 23% of Israelis read the paper daily and 28% on weekends according to a 2005 Teleseker survey. IDLC earnings enabled Ofer Nimrodi to invest in the paper by purchasing new technologies and employing leading journalists. In the 1990s he established local newspapers in key cities – supplements added to *Maariv*'s Friday weekend issue – tapping local advertising potential. The competition between *Maariv* and *Yedioth Aharonoth* reached a climax in the mid-1990s in the so-called wiretapping scandal, as a result of which Nimrodi was imprisoned in 1999 for tapping the phone of *Yedioth Aharonoth* publisher Arnon *Mozes as well as of Dov *Yudkovsky, who had been *Maariv*'s editor under Maxwell. A *Maariv* investigative reporter, Amnon Abramovitch, resigned after discovering that his phone had also been tapped. In 1999 Ofer Nimrodi sold 25% of *Maariv*'s stock to Vladimir *Gusinsky, a Russian businessman, for \$85 million; majority control in the newspaper remained in Nimrodi's hands.

Nimrodi's other media-related interests included: magazines geared to youth; a tv guide (*Ratings*); shares in the Tel-Ad subsidiary of Channel 2 television (including studios), which Nimrodi subsequently sold; *Maariv*'s publishing house (Sifriat Poalim); the Hed-Artzi music company; and interests in the cellular phone business. In 2004 he established the NRG Internet news website.

[Yoel Cohen (2nd ed.)]

NIMZOVITCH, AARON (1886–1935), chess master. Nimzovitch, who was born in Riga, won important tournaments in the 1920s but was particularly important as a theoretician. He was responsible, together with Tartakover, Réti, and Alekhine, for the general departure from the dogmatism of *Tarrasch's "strong center" theory. Two of his openings, the Nimzovitch Defense and the Nimzo-Indian, which remained popular long after their inventor's death, carried "hypermodern" theory into practice. His book, *Mein System* (1925; Eng. tr., 1930), a collection of important aperçus on points of technique, is still of great value.

[Gerald Abrahams]

NINE DAYS, period of mourning from the first of *Av until noon after the fast of the Ninth of *Av commemorating the destruction of the *Temple. The period is also called *Bein ha-Mezarim* ("In Stress") and actually starts previously with the fast of *Tammuz (see *Three Weeks, The). However, from the first of Av onward, the mourning becomes more severe, and strictly observant Jews, especially in the Ashkenazi rite: (1) abstain from meat and wine except on the Sabbath; (2) recite special dirges of lamentation (*kinot*), as well as Psalm 137 ("By the rivers of Babylon") and Psalm 79 (also recited during *Tikkun Haẓot) every noon and midnight; and (3) refrain from wearing new or festive clothing. Even on the Sabbath some wear ordinary weekday clothes. Others, especially Sephardim, observe these rules of mourning only during the week in which the Ninth of Av falls (See: Maim. Yad, Ta'an. 5:6). This is in accordance with the Mishnah which ordains that during that week one should not cut one's hair or wash clothes (except on the Thursday in honor of the coming Sabbath; Ta'an. 4:7).

BIBLIOGRAPHY: Sh. Ar, OH 551:1–18; 552:1–12; J.T. Lewin-ski (ed.), *Sefer ha-Moadim*, 7 (1957), 268–361; Eisenstein, Dinim, 1, 38–39.

NINEVEH (Heb. נִינְוָה; Akk. Ninua, Ninâ; in Mari Ninuwa; Ar. Ninawa), the capital of the Assyrian empire from Sennacherib's time on, situated about 1 mi. (about 1½ km.) E. of the Tigris, opposite modern Mosul. Since the cuneiform for Nineveh (*Ninâ*) is a fish within a house, it has been suggested that the name of the city was derived from that of a goddess associated with fish, but it seems that it is of Hurrian origin. From the Akkadian period on, the city was dedicated to the "Ishtar of Nineveh."

The ancient citadel of Nineveh was situated on a hill known today as Quyunjiq ("Little Lamb") and located near the center of the western region of the city. On the hill there were also the Assyrian royal palaces and the temples. South of this citadel is a smaller tell, called Nebi Yūnis ("the Prophet Jonah"), where, according to Islamic tradition, the prophet Jonah is buried, and on which is a large mosque. The city, however, extended over a much larger area.

Archaeological excavations were conducted in the city for about a century, mainly by the British (beginning in 1842). The excavations of 1932 (by M.E.L. Mallowan) laid the foundations for the study of the prehistory of northern Mesopotamia, the city thus becoming a key site for a knowledge and understanding of the prehistoric period.

History

The investigation made during the 1932 excavations of Quyunjiq down to its virgin soil uncovered the tell's earliest stratum, which contains remnants of the Hassuna culture and has been assigned to about 5000–4500 B.C.E.

One of the earliest pieces of written evidence is an inscription of Narâm-Sin of the Akkadian dynasty (2291–2255 B.C.E.). Hammurapi king of Babylonia mentions the city in the introduction to his code of laws as the site of a temple of Ishtar. At

the beginning of the 14th century B.C.E. Nineveh belonged to Mitanni. Tushratta king of Mitanni sent the image of "Ishtar of Nineveh" (identified with the Hurrian goddess Šauška) twice to Egypt to heal Amenophis III, his ally and in-law. Subsequently, Nineveh reverted to Assyrian rule, since the Assyrian king Ashur-uballit (1364–1329 B.C.E.) stated that he rebuilt the temple of Ishtar which, according to indications, was renovated a number of times between the 13th and ninth centuries B.C.E. Individual bricks, inscribed with the builders' names and with dedicatory inscriptions that have been brought to light, attest to the existence of several palaces built during these centuries. The earliest palace of which actual remains have been uncovered is that of Ashurnāširpal II (883–859 B.C.E.).

The city reached its zenith toward the end of the eighth century B.C.E., when it was in effect reconstructed during the reign of Sennacherib (705–681 B.C.E.) and became the capital of the Assyrian empire. Near the city – and in fact within its limits – Sennacherib planted a botanical garden with trees from all parts of the empire, among them vines and fruit-bearing trees. Magnificent spacious palaces were erected in the city. In the southwestern corner of the site, Sennacherib built a new palace to replace the earlier smaller one that had been there, and called it "the palace which has no equal." Today it is known as "the southwestern palace." On most of the walls of the halls, reliefs have been found depicting scenes from the building of the palace as well as war scenes, including the siege of *Lachish (found in Hall xxxvi). In the disorders that broke out upon the death of Sennacherib, part of his palace was apparently burned down and left in ruins for about 40 years. On the smaller tell (Nebi Yūnis), Esarhaddon (681–669 B.C.E.) built himself a palace. Ashurbanipal (668–627 B.C.E.) reestablished his residence on the main tell (Quyunjiq). Not content with merely renovating and embellishing the palace of Sennacherib, his grandfather, he built his own palace at the extremity of the tell. It was explored in the course of the excavation of Quyunjik, 1853–54, and reliefs portraying scenes from various battles and representing Assyrian art at its zenith were uncovered. Ashurbanipal's greatest achievement was the establishment of a vast royal library in the city, containing several thousand cuneiform documents in the fields of literature and ritual, science and mythology, lexicography, astronomy, and history, as well as economic documents, letters, and state contracts.

At the end of Ashurbanipal's reign, the royal residence was apparently transferred from Nineveh and established, according to one view, in Harran. Nineveh was captured, plundered, and destroyed in the summer of 612 B.C.E. by the forces of the Median and Babylonian empires, and became a desolate heap. The site itself was later occupied again until the Mongol invasion of the 14th century.

In the Bible

According to the Table of the Nations, Nineveh was established – together with other principal centers in Mesopota-

mia – in the days of *Nimrod (Gen. 10:10–12). In the Book of Jonah (3:3) it is referred to as “an exceedingly great city, three days’ journey” (from one end to the other). A subsequent verse (4:11) tells that its infant population alone numbered “more than a hundred and twenty thousand persons.” Even if this is somewhat exaggerated, it is probable that the number of Nineveh’s inhabitants at the pinnacle of its greatness in the seventh century B.C.E. was indeed extremely large (see *Jonah).

In 11 Kings 19:36–37 (and in the parallel passage in Isa. 37:37–38), Nineveh is mentioned as the city to which Sennacherib returned after his failure to capture Jerusalem, and in which he was murdered by his sons.

Two contemporary prophets, *Zephaniah (2:13ff.) and *Nahum, prophesied the destruction of Nineveh.

[Yuval Kamrat]

In the Aggadah

Nineveh was a huge city, covering 40 square parasangs and containing a million and a half persons. The “six score thousand persons” alluded to in Jonah 4:11 refer to the population of only one of the 12 districts into which the city was divided. The voice of the prophet Jonah was so stentorian that it reached every corner of the city and all who heard his words resolved to turn aside from their ungodly ways (Mid. Jonah, 99–100, in A. Jellinek, *Beit ha-Midrash*, 1 (1938²)). Under the leadership of their king, the people of Nineveh justly compelled God’s mercy to descend upon them. The king of Nineveh was the pharaoh of the Exodus, who had been installed by the angel Gabriel. Seized with fear and terror he covered himself with sackcloth and ashes and with his own mouth made proclamation and published this decree through Nineveh: “Let neither man nor beast, herd nor flock taste anything, let them not feed nor drink water, for know that there is no God beside Him in all the world; all His words are truth, and all His judgments are true and faithful” (Yal. Ex. 176). The repentance of the people of Nineveh was sincere. They held their infants heavenward, crying, “For the sake of these innocent babes hear our prayers.” They separated the young of their cattle from their dams and both began to bellow. Then the Ninevites cried, “If Thou wilt not have mercy on us, we will not have mercy upon these beasts” (Ta’an. 16a; Mid. Jonah 100–2). The penitence of the people of Nineveh manifested itself not only in fasting and praying, but also in deeds. If a man had usurped another’s property, he would return it, even at the cost of leveling his castle in order to restore a stolen beam to its owner (Ta’an. 16a). Others publicly confessed their secret sins and declared themselves willing to submit to their punishment. According to the Palestinian *amoraim*, however, the repentance of the Ninevites was not sincere (TJ, Ta’an. 2:1, 65b). After 40 days they departed again from the path of piety and became more sinful than ever. Then the punishment foretold by Jonah overtook them and they were swallowed by the earth (PdRE 43). The attitude of the Palestinian aggadists in their evaluation of the repentance of the

Ninevites may have been a reaction to Christian criticism of the Jews for their stubbornness in not following the example set by the people of Nineveh.

NINGPO, city in Chekiang province, E. China. The presence of Jewish settlers there in 1461 is recorded on the *Kaifeng stele inscriptions, which state that when the Kaifeng synagogue was destroyed by floods in that year and the sacred scriptures were lost, the Jews of Ningpo presented emissaries of the Kaifeng community with a Torah scroll. No other evidence recording the presence of Jews in Ningpo has been preserved.

INGSIA, a province in N.W. of China, (now **Yinchuan**), city formerly in the predominantly Muslim Kansu province of N.W. China. Members of the Jewish Chin family from *Kaifeng community came to settle there but remained in touch with the religious life of the Kaifeng Jewish community. Their donations and active participation are recorded in the Kaifeng stele inscriptions of 1489 and 1512.

[Rudolf Loewenthal]

NINI, ACHINOAM (1969–), Israeli pop, jazz, blues singer; Israel’s most successful performing artist on the international scene. Of Yemenite background, Achinoam Nini or, as she is known abroad, Noa, grew up in New York and returned to Israel at the age of 17. After completing her army service, she enrolled at the Rimmon School of Music in Tel Aviv, where she met guitarist Gil Dor, who was on the school’s teaching staff, and the two began to perform together. Their first concert, at the Jazz, Blues & Videotape Festival in Tel Aviv, was enthusiastically received. Nini’s debut album, *Achinoam Nini and Gil Dor Live*, was recorded live in Tel Aviv and released in 1991. It included songs in Hebrew and reworkings of numbers by the Beatles and Madonna. The material was accessible to audiences both inside and outside Israel and Nini soon began to play at festivals and major venues – such as New York’s Carnegie Hall and the White House. In 1993 Nini released an album entitled *Achinoam Nini and Gil Dor* with songs based on the work of two of Israel’s most eminent poets – *Rahel and Leah *Goldberg. This followed a highly successful ap-

pearance at that year's Israel Festival and the album sold well in Israel and abroad.

Nini's global profile rose significantly after she released *Noa* in 1994, her first foreign recording. The album, which was produced by acclaimed jazz guitarist Pat Metheny, included a rendition of Bach's "Ave Maria," with new words written by Nini. Following this she became the first Israeli artist to perform in the Vatican when she sang the song in St. Peter's Square, in the presence of Pope *John Paul II. In 1997 Nini performed a program of specially arranged numbers with the Israeli Philharmonic Orchestra, including some of her best-known songs and works by Leonard *Bernstein and by leading Israeli composer Sasha *Argov, as well as a traditional Yemenite song called "Yuma." The concert was recorded and released the following year as *Achinoam Nini & the Israel Philharmonic Orchestra*.

Nini has maintained a very active career, both in Israel and around the globe, and was invited to perform "Ave Maria" for the state Italian television network after the death of Pope John Paul II.

[Barry Davis (2nd ed.)]

NINTH FORT, Nazi killing site four miles from the center of Kovno (Kaunas), Lithuania, which served as the execution and burial site for Jews from Kovno and for German, Austrian, and Czech Jews shipped to Kovno during the Holocaust. Originally built as a military fortress, during German occupation it became a site of torture and mass executions. Abraham Tory reports in his ghetto diary that "single and mass arrests as well as 'actions' in the ghetto almost always ended with a death march to the Ninth Fort, which in a way completed the ghetto area and became an integral part of it."

The road from the ghetto to the Fort was called the "Way to Heaven." Detainees were held in underground cells in conditions of dampness and darkness and above all fear. Jews were forced into pits inside the Fort, which served as mass graves.

In July 1943 the digging of mass graves ceased and in August 1943 under Aktion 1005 the digging up of bodies began. Jewish prisoners of war, ghetto Jews, and four non-Jews made up the squad of 60 men and four women who had to dig up the bodies, extract the gold teeth, and search for valuables in the garments of the dead before they were cremated.

Sixty-four prisoners escaped from the Ninth Fort on December 24, 1943. Some reached the Kovno ghetto; others escaped into the forest. Each escapee brought word of what had happened. Thus this killing field was known even before the war's end.

Some 45,000–50,000 Jews were killed in the Ninth Fort.

NIR AM (Heb. נִיר עַם; "The People's Plowed Field"), kibbutz in southern Israel, 6 mi. (10 km.) N.E. of *Gaza, affili-

ated with Ihud ha-Kevuzot ve-ha-Kibbutzim. Its founding in 1943 by immigrants from Central and Eastern Europe, most of them *Youth Aliyah graduates, constituted a step in the expansion of Jewish settlement toward the Negev. Abundant groundwater reserves were discovered soon after, and in 1947 the first pipeline leading to the Negev outposts was laid from the Nir Am – *Gevat'am area. In the Israeli *War of Independence (1948), the kibbutz became the headquarters, hospital, and supply center for the settlements in the south and Negev, cut off for several months from the rest of Israel. The kibbutz economy was based on intensive field crops, citrus groves, and dairy cattle, as well as a factory for fine cutlery. In addition, the kibbutz developed a tourist industry, including a resort, water museum, paintball, an environmental activities site, and catering. In 2002 its population was 301.

[Efram Orni / Shaked Gilboa (2nd ed.)]

NIR DAVID (Heb. נִיר דָּוִד; *nir* – "Plowed Field"), kibbutz in central Israel, at the foot of Mt. Gilboa, affiliated with Kibbutz Arzi ha-Shomer ha-Za'ir, founded in 1936 as the first *stockade and watchtower outpost in the Beth-Shean Valley. The settlers, Israel-born youth and pioneers from Poland, set up camp on the site a year earlier but after the outbreak of the Arab riots had to live temporarily at neighboring *Bet Alfa while continuing to cultivate their land. Nir David repelled Arab attacks and soon became a model farming community, pioneering in carp breeding in ponds and in growing crops adapted to its hot climate. Kibbutz farming also included field crops, plantations, and poultry. In addition, it opened factories for farm equipment and plastic tubes. Later it began to develop tourism, opening 26 guest rooms and an Australian zoo with animals such as kangaroos and koalas. Nir David also had a local museum. In 2002 the population was 534. The name commemorates the Zionist leader David *Wolffsohn.

NIRENBERG, MARSHALL WARREN (1927–), U.S. biochemist and Nobel Prize winner. Nirenberg was born in New York City and educated in Orlando, Florida. He received his B.Sc. (1948) and M.Sc. (1952) in zoology from the University of Florida at Gainesville and earned his Ph.D. in biochemistry from the University of Michigan at Ann Arbor, guided by Dr. James Hogg. He joined the staff of the National Institutes of Health, Bethesda, in 1957 where he was appointed chief of biochemical genetics at the National Heart Institute and where he has remained for the rest of his career. Nirenberg and his co-workers showed that genes control protein synthesis through DNA sequences transmitted by RNA. They elucidated the "language" dictating the synthesis of a single amino acid as the first step in understanding what is now termed the "genetic code." He was awarded the 1968 Nobel Prize for physiology or medicine jointly with Robert Holley and Har

Gobind Khorana. Subsequently Nirenberg and his colleagues completed the task of unraveling the full code. He remained an active research worker investigating the conserved genes that control development called “homeoboxes” and the genes and factors that regulate the growth of cell lines derived from the nerve cell tumor, neuroblastoma. His many honors include election to the U.S. National Academy of Sciences (1967), the American Academy of Arts and Sciences, and the American Philosophical Society (2001). His awards include the U.S. National Medal of Science (1966), the Gairdner Award (1967), the Lasker Award in Basic Medical Science (1968), the U.S. National Medal of Honor (1968), and the Joseph Priestley Award (1968). Nirenberg showed great and often controversial interest in the social responsibilities of geneticists and was actively involved in action against world poverty and nuclear proliferation. He often protested against the political repression of fellow scientists including the Soviet refusal to allow Mikhail Stern to immigrate to Israel. He married the biochemist Perola Zaltzman in 1968.

[Michael Denman (2nd ed.)]

NIR EZYON (Heb. נִיר עֶזְיוֹן), moshav shittufi in N. Israel, on Mt. Carmel, affiliated with Ha-Po'el ha-Mizrachi Moshavim Association. It was founded in 1950, initially as a kibbutz, by the surviving defenders of *Kefar Ezyon in the Israeli *War of Independence (1948), who were joined by other members of their movement. The economy was based on intensive farming (field crops, orchards, flowers, poultry, and dairy cattle). The moshav opened a resort run on strictly Orthodox Jewish principles and operated a catering service as well. Nir Ezyon includes the *Youth Aliyah village Yemin Orde, which is named for Orde Charles *Wingate. Its total population in 1970 was 450, rising to 800 in 2002.

[Efram Orni / Shaked Gilboa (2nd ed.)]

NIRIM (Heb. נִירִים; “Plowed Fields”), kibbutz in southern Israel, in the “Eshkol Region” of the western Negev, affiliated with Kibbutz Arzi Ha-Shomer ha-Za'ir. Originally established as one of the 11 villages founded in the Negev on the night of Oct. 6, 1946, it was, until 1948, the westernmost Jewish settlement in the country and the closest to Egyptian-held Sinai. The founders, Israel-born youth, were joined by pioneers from Hungary and Romania. In the Israeli *War of Independence Nirim was the first Jewish village exposed to a concentrated attack of the invading Egyptian army (May 1948). Although the kibbutz was entirely leveled, Nirim's members held their ground, compelling the enemy to change tactics and advance exclusively through Arab-inhabited terrain while leaving most of the Jewish settlements to the rear intact. After the cessation of hostilities in April 1949, the kibbutz was transferred to a site further northwest on the Gaza Strip border, while the former site was taken over by Nir Yizhak, another kibbutz of Ha-Shomer ha-Za'ir. Besides partly intensive farming (field crops, avocado plantations, flowers, poultry, and dairy cattle), the kibbutz also developed organic farming. An

electronics factory mainly for farming aids was later closed. The kibbutz is co-owner of Nirlat, a paint factory located at nearby Kibbutz Nir Oz. In the mid-1990s the population was approximately 445, dropping to 365 in 2002. A beautiful mosaic synagogue floor, dating from the Byzantine period, was unearthed in the Nirim fields.

[Efram Orni / Shaked Gilboa (2nd ed.)]

NIR-RAFALKES, NAHUM (1884–1968). Israeli labor politician, second speaker of the *Knesset, and member of the First and Third to Fifth Knessets. Born in Warsaw, Nir-Rafalkes studied in a *heder* and then in a gymnasium. He studied natural sciences at the universities of Warsaw and Zurich and law at the University of St. Petersburg, receiving a doctorate in law in 1908. In 1903 he joined the Zionist students' organization Kadimah, and joined *Po'alei Zion in 1905, representing it as a delegate in the Sixth and Seventh Zionist Congresses. In 1906 he was imprisoned for four months for his political activities. In 1917 he represented Po'alei Zion in the All-Russian Soviet of Workers' and Soldiers' Deputies during the revolution. In 1919 he moved back to Warsaw and was elected to its city council. He participated in the Po'alei Zion Conference in Stockholm in 1919, and after the movement split the following year, he joined Left Po'alei Zion, becoming its secretary, and held negotiations for its entry into Comintern. He remained secretary of Po'alei Zion until 1935. In 1925 he settled in Palestine, where he practiced law and represented his party in the *Histadrut and the Va'ad Le'ummi. After Left Po'alei Zion merged with *Ahdut ha-Avodah and, with it, joined *Mapam, he became a member of the pre-state People's Council and its deputy chairman. He was elected to the First Knesset on the Mapam list, and from the Third Knesset on the Ahdut ha-Avodah-Po'alei Zion list. Already in the First Knesset he was chosen as one of the deputies to the speaker, and upon the death of Joseph *Sprinzak in 1959, was elected by an *ad hoc* coalition of all the parties in the plenum except *Mapai as speaker, serving in that capacity until after the elections to the Fourth Knesset. He then returned to serve as deputy speaker until leaving the Knesset in 1965. In the First Knesset he served as chairman of the Constitution, Law, and Justice Committee, and in the Fourth and Fifth Knesset as chairman of the Public Services Committee. He wrote many articles in Russian, Yiddish, and Hebrew and published a number of books. Among his writings are *Wirtschaft und Politik in Eretz Yisrael* (Yiddish, 1930); *Leningrad* (Yiddish, 1942); *Pirkei Hayyim – Ba-Ma'agal ha-Dor ve-ha-Tenu'ah 1884–1918* (1958); *Vanderungen* (Yiddish, 1966).

[Susan Hattis Rolef (2nd ed.)]

NIŠ (Lat. *Naissus*), town and important communications center in Serbia. Jews lived in Niš apparently from Roman times but there are no documents to confirm their presence before the 17th century. The disappearance of Jacob, a wool trader, was noted in 1651. Visits by *shadarim* (emissaries from Palestine) are on record for the second half of the 18th century.

The rabbis who served in Niš were Levi Jitzhak Yerushalmi, Jacob de Mayo, Rahamim Naftali Gedalya, Moshe Shaban, and Abraham Daniti. In 1900 the town's Jewish population numbered 800, their number gradually diminishing through emigration. A Zionist group called Zion joined the world movement in 1902.

The Jews were engaged mainly in the textile trade and in moneychanging; some were artisans, while a few were manual laborers. A prayer house was built in 1695 and a synagogue in 1909. Local spiritual leaders consulted the rabbis of Belgrade on halakhic matters. The Jews of Niš participated in Serbia's wars and suffered casualties in them. In 1921 there were 547 Jews in the town. In the 1930s there was a good deal of communal activity, including a choir and Zionist youth groups like Ha-Shomer ha-Tza'ir and, later, also Betar.

In 1939 Yugoslav Prime Minister Cvetkovic, a native of the town, offered to arrange exit visas to Turkey for the Jews of Niš, but the Jews chose to remain despite the danger signs. In 1940 they numbered 430, increasing to 970 in 1941 with the arrival of refugees from Germany, Austria, and Poland. The Germans arrived in April 1941. In October 1941 the Jewish men were imprisoned in the "Red Cross" camp at Bubanj. In February 1942 several inmates escaped from the camp after attacking the guards, and in retaliation several prisoners, most of them Jews, were shot. Two days later, more Jews were shot. In the spring of 1942 all women and children were arrested and after a few days in the "Red Cross" camp they were sent to the Sajmiste (Semlin Judenlager) death camp. In 1952 there were 25 Jews in the city. The community was not renewed. The synagogue was used as a concert hall.

[Simon Marcus / Zvi Loker (2nd ed.)]

NISAN (Heb. נִסָּן), the post-Exilic name of the first month of the Jewish year. Its pentateuchal name is *ḥodesh ha-aviv* (lit. "month of spring," Ex. 13:4 and parallels) and it is also referred to as the month of the ripening ears of barley (*ibid.* 9:31). The post-Exilic name, occurring in the biblical and apocryphal records (Esth. 3:7, Neh. 2:1; I Esd. 5:6, Add. Esth. 1:1) and frequently in Josephus and rabbinic literature (e.g., *Megillat Ta'anit), is linked with the Babylonian first month, Nisannu (derived from *nesa*, Heb., *nasa* "to start"). The Mishnah calls the first of Nisan the "new year for kings and festivals" (RH 1:1). Reigns of monarchs in biblical times were reckoned from that time, but later it was made the seventh month of the civil year (RH loc. cit.). The zodiacal sign of this month is *Aries*. In the present fixed Jewish calendar it invariably consists of 30 days, and the 1st of Nisan never falls on a Monday, Wednesday, or Friday (see *Calendar). In the 20th century Nisan, in its earliest occurrence, extended from March 13 to April 11, and in its

latest from April 11 to May 10. According to R. Joshua, this is the month during which the world was created and the Patriarchs were born (RH 11a). It was in Nisan that God spoke to Moses from the burning bush. In this month redemption will occur in the time to come (*ibid.*). The tabernacle was erected in Nisan (Ex. 40:17), and the princes brought their offerings then (Num. 7:1–2). Because the 12 princes offered their gifts to the tabernacle every day beginning with the first of Nisan, each day was considered a festival. All public mourning is prohibited in Nisan. **Taḥanun* and **Zidduk ha-Din* are not recited, nor are eulogies allowed (Sh. Ar., OH 429:2). As "the greater part of the month was thus sanctified, the entire month is deemed holy" (*ibid.*, comm. of *Magen Avraham*, 3).

Memorable days of Nisan include the Passover period: the 14th of Nisan, the eve of the biblical feast of *Passover when all leaven is cleared from Jewish households, and in Temple times, the *Paschal lamb was sacrificed (Ex. 12 and parallels); and the festival of Passover from the 15th to the 21st (in the Diaspora, the 22nd) of Nisan. The 15th and 21st of Nisan (in the Diaspora 15th–16th and 21st–22nd), the first and last days of Passover, respectively, are full holidays; 16th–20th of Nisan (in the Diaspora 17th–20th) are the intervening days of the festival, **ḥol ha-mo'ed*. The 16th of Nisan is the controversial "morrow of the Sabbath" (see Lev. 23:11, 15, 16) when an *omer* of barley was offered in the Temple and marked the commencement of the counting of the *omer*. Other traditional dates in this month are 1st–7th of Nisan, the defeat by the Pharisees of the Sadducees' claim that the *tamid* (Ex. 29:38–42, Num. 28:1–8) was to be defrayed by private donations (Meg. Ta'an. 1); 8th–21st of Nisan, a Pharisaic victory over the Sadducees in a dispute concerning "the morrow of the Sabbath" and the day of the month on which Shavuot falls (Meg. Ta'an. 1); 1st (or 8th), 10th, and 26th of Nisan, the respective anniversaries of the death of *Nadab and Abihu, of *Miriam, and of *Joshua, once observed as fasts (Meg. Ta'an. 13).

NISHAPUR, town in Khurasan, N.E. *Persia. Jewish settlement here allegedly dates from the time of the early Diaspora. According to the 12th-century Jewish traveler *Benjamin of Tudela, the district of Nishapur was inhabited by descendants of the Jewish tribes Dan, Zebulun, Naphtali, and Asher. They were united under a Jewish prince named R. Joseph Amarkala ha-Levi, and were engaged in agriculture and warfare in alliance with the "infidel Turks." There were some scholars among them. In 11th-century fragments from the Cairo **Genizah*, mention is made of an Isaac Nishapuri, an Egyptian silk merchant who settled in *Alexandria.

[Walter Joseph Fischel]

NISHMAT KOL HAI (Heb. נִשְׁמַת כָּל חַי; "The soul of every living being"), the initial words and name of a prayer recited

at Sabbath and festival morning services at the conclusion of the *Pesukei de-Zimra introductory biblical hymns. This prayer expresses the gratitude men owe to God for His mercies in sustaining them. In talmudic literature it is called *Birkat ha-Shir* ("Benediction of the Song," Pes. 10:7, and 117b–118a). Based upon the opinion of R. Johanan, *Nishmat* also became part of the Passover **Haggadah*.

Nishmat consists of three main sections. The first contains an avowal of God's unity: "Besides Thee we have no King. Deliverer, Savior, Redeemer... We have no King but Thee." Some scholars believed that this passage was composed by the apostle Peter as a protest against concepts foreign to pure monotheism (A. Jellinek, *Beit ha-Midrash*, 6 (1938²), 12; *Maḥzor Vitry*, ed. by S. Hurwitz (1923²), 282; Hertz, 416). The second section starting with the words: "If our mouths were full of song as the sea..." "originated in the tannaitic period. It is similar to the formula of thanksgiving for abundant rain recited in that period. The passage: "If our eyes were shining like the sun and the moon... we could not thank God for the... myriads of benefits He has wrought for us" especially, is thought to substantiate this ascription to the tannaitic period since it reflects the opinion of Rav Judah that God has to be praised for each drop of rain (Ber. 59b; Ta'an. 6b; Maim. Yad, Berakhot, 10:5). The third section, starting with the words: "From Egypt Thou hast redeemed us," is believed to have originated in the geonic period (c. tenth century C.E.). There is considerable disagreement among scholars about the original version of the *Nishmat*. There is, however, a general consensus that there existed an ancient but shorter version, called *Birkat ha-Shir*, which was later amplified and enlarged. This view is supported by the fact that the *Nishmat* in the Ashkenazi and in the Sephardi ritual, respectively, differ only in the wording of two or three sentences (compare *Seder R. *Amram Ga'on*, 27b and *Maḥzor Vitry* (1923), 148–54). In most prayer books the words *ha-Melekh*, *Shokhen ad* and *ha-El* are printed in large type, since the *hazzan* starts the central part of the morning service at these places, on High Holy Days, Sabbath, and festivals respectively. In the section *Be-fi yesharim* ("By the mouth of the upright") some prayer books mark an acrostic of the names Isaac and Rebekah, which was not customary in Jewish liturgical poetry prior to the Middle Ages. Some scholars consider it a later addition, but it could be also coincidental.

NISIBIS (**Nešibin**, **Nezibin**), the modern townlet Nesib in S. Anatolia. Over a long period (under the Roman rule, until 363; and under the rule of Persia and the Arabs) Nisibis was a flourishing trading station on the commercial route from the

Far East to the western countries. During the 13th century, as a result of the *Mongol conquests, the town was destroyed; the Maghrebian traveler Ibn Baṭṭūṭa, who visited it during the first half of the 14th century, relates that most of the town was in ruins.

The first evidence of a Jewish settlement in the town was related by Josephus during the first century C.E.; he says that in Nisibis and *Nehardea the Jews of Babylonia consecrated their half shekels and their vows and donations to the Temple in Jerusalem; they traveled from Nisibis to the Holy City. The community appears to have been well founded because it also absorbed the Jews of Seleucia and Ctesipon who fled the vengeance of their neighbors as a result of the acts of *Anilaus and Asinaeus (see *Nehardea). The town is known to have been a Torah center during the second century, when Judah b. Bathyra II attracted students from as far away as Palestine. During the third century, as a result of the rising influence of the Christians, which surpassed that of their Jewish neighbors, there was a cooling down of Nisibis' relations with Palestine and its scholars.

During the period of Islamic rule the Jewish settlement in the town prospered. At the time of the great emigration of the Jews of Babylonia to the lands which bordered on the Mediterranean Sea during the tenth century, however, Jews also left Nisibis. In a document of 989, for example, Netira b. Tobiah ha-Kohen of Nisibis is mentioned as an inhabitant of the town *Damietta in Egypt. During the second half of the 12th century the traveler *Benjamin of Tudela nevertheless found about 1,000 Jews there; his contemporary Pethahiah of Regensburg mentions a large community, the synagogue of the *tanna* R. Judah b. Bathyra II, and two synagogues which were built, according to tradition, by Ezra the Scribe. After the campaigns of the Mongols the Jewish settlement of the town was also impoverished. R. Moses Basola, who visited the Oriental countries between 1521 and 1523, met a Jew in Beirut from the environs of Nisibis who told him of the pillar of cloud which appears on the 18th of Sivan and at Pentecost over the tomb of the *tanna* Ben Bathyra in Nisibis and also that pilgrimages to his tomb took place from the surrounding areas. Under Ottoman rule the decline of the community continued and its members even turned to the Jews of Cochín with requests for support (D.S. Sassoon, *Ohel David*, 2 (1931), 995). At the close of the 19th century, according to Obermayer, there were approximately 200 miserable clay houses in the town, half of which belonged to Jews. Apparently no Jews resided in Nisibis at the outset of the 21st century.

[Eliyahu Ashtor and Moshe Beer]

NISSAN (**Katznelson**), **AVRAHAM** (1888–1956), labor politician in Palestine and Israel diplomat, brother of Reuben *Katznelson. Born in Bobruisk, Belorussia, he was a medi-

cal officer in the Russian army during World War I. In 1917, between the two revolutions, he headed the Organization of Jewish Soldiers in the Russian army on the Caucasus front (10,000 men) and was attracted to Joseph *Trumpeldor's plan to set up Jewish battalions of 200,000 soldiers and volunteers and transport them to the front in Palestine to fight together with the British army for the liberation of Erez Israel from the Turks. In 1919–20 he was the head of the Palestine Office of the Zionist Executive in Constantinople. In 1921–23 Nissan was active at the central office of Hitaḥdut (the union of *Ha-Po'el ha-Za'ir and *Z'eirei Zion) in Vienna and Berlin. He settled in Palestine in 1924, served as the director of the health department of the Zionist Executive and as a member of the Va'ad Le'ummi (1931–48). He was also a member of the central committee of the Ha-Po'el ha-Za'ir Party and of Mapai. From 1950 until his death, he was Israel's minister to the Scandinavian countries in Stockholm.

[Abraham Aharoni]

NISSELOVICH, LEOPOLD (Eliezer; 1856–1914), delegate to the Third *Duma in Russia. He was born in Bauska district of Courland, Latvia. After graduating from the law faculty of the University of St. Petersburg (1880), he was employed in the Ministry of Finance. In connection with his work he wrote several studies on economic legislation and on the economic and financial institutions of Russia. In 1882 he left his government post to practice law. In the elections to the Third Duma (1907), he was chosen as representative for Courland province. He joined the Cadet Party (the Russian liberals) on the explicit condition that he would not have to follow the party line in matters concerning Jews. Together with his colleague, N. Friedmann, he represented the Russian Jews at this Duma, and both were frequently the target of attacks by rightist members. Nisselovich was responsible for the bill proposing the abolition of the *Pale of Settlement, presented to the Duma on May 31, 1910, with the signatures of 166 members. The bill was transferred for consideration to the Duma commission on personal freedom but did not reach the full session for debate and vote. His activities in the Duma, and fights against antisemitism, severely undermined his health, and he did not offer his candidacy for the 4th Duma. Nisselovich died in Geneva.

[Yehuda Slutsky]

NISSENBAUM, ISAAC (1868–1942), rabbi, Hebrew writer, and religious Zionist in Poland. Born in Bobruisk, Belorussia, Nissenbaum was ordained as a rabbi. He settled in Minsk, where he began his Zionist activity. When the yeshivah of *Volozhin was closed in 1892, he became head of the secret nationalistic association of that yeshivah, Neẓaḥ Israel, an office which he held until 1894, when he moved to Bialystok. There he became Samuel *Mohilever's secretary. From then on he was a central figure in the Zionist movement, particularly among the Orthodox Jews. After Mohilever's death, Nis-

senbaum served as a Zionist preacher, traversing towns and townlets in Russia, Poland, Latvia, and Lithuania. He used midrashic elements in his Zionist preachings and had a considerable influence on Orthodox Jews. In 1900 he settled in Warsaw and became a regular preacher in synagogues and other places. He was an active member of Mizrachi from its beginning, a member of the executive of the Polish Zionist Organization, and one of the heads of the Jewish National Fund.

Beginning in 1889, Nissenbaum wrote many essays on current events, Zionism, and religious Zionism, as well as personal memories and several exegetical books. He was one of the editors of *Ha-Zefirah*, and after World War I, editor of Mizrachi's weekly in Poland. He edited a series of republished classical books in Jewish studies. The first explanatory pamphlet concerning the Jewish National Fund was written by him (1902). During World War II he remained in the Warsaw ghetto and was murdered there.

Among his homilies are *Derushim ve-Homer li-Derush* (1903), *Derashot le-Khol Shabbatot ha-Shanah ve-ha-Mo'adim* (1908, 1923²), *Hagut Lev* (1911, 1925²), and *Imrei Derush* (1926). In the field of religious Zionism he wrote *Ha-Dat ve-ha-Tehiyyah ha-Le'ummit* (1920), *Ha-Yahadut ha-Le'ummit* (1920), and a monograph on Samuel Mohilever (1930). He also published an autobiography entitled *Alei Hēldi* (1929, 1969²). In 1948 a selection of his writings was published in Israel under the editorship of E.M. Genichovsky, and in 1956 a selection of his letters was edited and published by I. Shapira.

BIBLIOGRAPHY: I. Shapira, *Ha-Rav Yizḥak Nissenbaum* (1951).

[Getzel Kressel]

NISSENSON, AARON (1898–1964), Yiddish poet, journalist, and essayist. Born in Chepeli, Belorussia, he immigrated to the U.S. at the age of 13. He graduated as a pharmacist but preferred a literary and journalistic career. In 1918 he co-edited the literary monthly *Der Onheyb*. He was business manager of the New York daily, *Morgn Zhurnal*, for 30 years, while he published his works in the major Yiddish publications of the day, including *Tsukunft*, *Der Yidisher Kemfer*, and *Fraye Arbeter Shtime*. In his later years he was press representative of the *American Jewish Joint Distribution Committee. His first volume of poems, *Hundert Lider* ("Hundred Songs," 1920) was followed by six other books of lyric and dramatic poems. The central hero of his dramatic poem *Der Veg tsum Mentsh* ("The Road to Man," 1934) was the American socialist leader Eugene V. Debs, for him a symbol of a pure-hearted man. In the dramatic poem *Dos Tsugezogte Land* ("The Promised Land," 1937), Nissenson portrayed the struggle between good and evil as embodied in opposing personalities, beginning with Moses and Pharaoh and continuing throughout history. He expressed faith in science as the ultimate redeemer, leading man ever closer to moral perfection. This faith remained with him during World War II, when he composed the poems of *Dos Lebn Zingt Afle in Toyt* ("Life Sings Even in Death," 1943). In his last poems, *In Tsadiks Trit* ("In the Footsteps of

the Righteous,” 1950), he continued to sing of compassionate, just human beings who would evolve from imperfect contemporary man. Shortly before his death, Nissenson published an English novel, *Song of Man* (1964), whose central character was again Eugene V. Debs.

[Sol Liptzin]

NISSENSON, HUGH (1933–), U.S. novelist, short story writer, and essayist. Although born in Brooklyn, Nissenson often turned to a broader time and place for subjects. His novel *The Tree of Life* (1985) depicts a settler's life in early 19th century Ohio. His *Notes from the Frontier* (1968) reflect his impressions of Israel and the 1967 War. *My Own Ground* (1976) takes place in the Lower East Side of New York. *The Song of the Earth* (2001) is set in the future. *The Days of Awe* (2005) intertwines personal and family catastrophe, the events of 9/11, and the act of faith itself. *A Pile of Stones* (1965) and *In the Reign of Peace* (1972), collections of stories, are at home in settings as diverse as Israel, Poland, and America. Much of the strength of his writing resides in his depiction of modern, secular Jewish culture and the faith of the religious. His work captures the dissonance – and eloquence – amongst those Jews who are secular and those who are faithful, both groups searching for values and certainties that comport with their circumstances.

In 1988, Nissenson's *The Elephant and My Jewish Problem: Selected Stories and Journals, 1957–1987* was published.

[Lewis Fried (2nd ed.)]

NISSI (Nissim) BEN BERECHIAH AL-NAHRAWANI (late ninth–early tenth century), head of the **kallah* and poet in Babylon. Nissi appears to have come from Nahrawan in Persia. *Nathan ha-Bavli relates (Neubauer, *Chronicles* 2 (1895), 29–80) that when the Exilarch David b. *Zakkai was embroiled with the head of the Pumbedita Academy Rav *Kohen Zedek – in fact, the person involved was Mubashir b. Rav Kimoi *ha-Kohen and not Rav Kohen Zedek – it was Nissi, *Resh Kallah* in the Sura Academy, who succeeded in 922 in making peace between the disputants. Nathan ha-Bavli relates there that Nissi was *noda be-nissim* (i.e., a doer of miraculous deeds). In 928 when the question of appointing a *gaon* in the Sura Academy came up, this post was offered to him by *David b. Zakkai, but he refused it because of his blindness. Zemaḥ ibn Shahin and Saadiah b. Josef *Alfayumi competed for this post and despite the recommendation of Nissi that Zemaḥ ibn Shahin be appointed, the Exilarch appointed Saadiah to the gaonate. Nissi was one of the most important and fruitful of the *paytanim* of his country. In the Cairo *Genizah*, and also in other sources, poems and *piyyutim* by him were preserved, of which only a few have been published. Well known is his confession for the Day of Atonement, beginning: “Lord of the Universe, before

all else, I have no mouth to answer,” which has been adopted into many rites and republished hundreds of times. However, only with the discovery of the *Genizah* did the true identity of its author become clear.

[Abraham David]

NISSI (Nissim) BEN NOAH (11th century), Karaite writer who lived in Persia. Nissi was formerly thought to be a contemporary of *Anan b. David (c. 800), but on the basis of his use of David *Alfasi's Hebrew dictionary and Judah *Hadassi's apparent knowledge of him, Harkavy placed him in the 11th century. Nissi advocated that Karaites should study rabbinic literature and the Talmud. Two works have been attributed to him, *Sefer Aseret ha-Devarim* (Firkovich Ms. 610), a commentary on the Ten Commandments, and *Bitan ha-Maskilim* (now lost), a treatise on the precepts of Jewish Law.

NISSIM, ABRAHAM HAYYIM (1878–1952), Iraqi government official and member of Parliament; born in Baghdad. Nissim served as an employee in the administration of the sultan's estates; he later became a senior officer of the German railways in Iraq. After the British conquest he was appointed assistant to the Hilla District political officer and in the 1920s held a senior post in the Ministry of Finance. From 1930 to 1948 he represented Baghdad Jewry in the House of Representatives. During most of this period he was a member of the budget committee, serving as its draftsman. He settled in Israel in 1951 and died in Ramat Gan.

[Haim J. Cohen]

NISSIM, ISAAC (1896–1981), chief rabbi of Israel and *rishon le-Zion*. Nissim was born in Baghdad. His father was a merchant and also a scholar. Nissim early attained a reputation as a scholar and, although he occupied no rabbinic office, his opinion was sought in religious matters. His method of study approximated closely to that of the Lithuanian rabbis and he engaged in halakhic discussion with them and with heads of yeshivot. He had ties with eminent rabbis of Erez Israel as well as with scholars of Germany and Poland. In 1925 he settled in Jerusalem, where he was closely associated with Solomon Eliezer *Alfandari whose lectures he attended. In 1926 he published *Zedakah u-Mishpat*, the responsa of Zedakah *Ḥozin, an 18th-century Baghdad scholar, together with an introduction and notes from a manuscript in Iris large library. Nissim wrote responsa on a variety of halakhic topics, some of them being published in his *Yein ha-Tov* (1947). In 1955 he was elected to the office of *rishon le-Zion* and chief rabbi of Israel.

He displayed his independence in various fields of activity and strove for understanding and the creation of amicable relations between all sectors of the population, visiting for example, left-wing kibbutzim, which were regarded as closed to rabbis. He took a strong stand in the halakhic recognition of the Bene Israel of India and refused to meet Pope Paul VI when the latter visited Israel in January 1964. After the 1967 Six-Day War he transferred the supreme *bet din* to a building opposite the southern Wall of the Temple near the site of the Chamber of Hewn Stone, which was the ancient seat of the Sanhedrin.

[Itzhak Goldshlag]

NISSIM, MOSHE (1935–). Israeli politician and lawyer, and member of the Fourth, and then Seventh to Thirteenth Knessets. Born in Jerusalem, Nissim was the son of Rabbi Isaac *Nissim, who served as Sephardi chief rabbi from 1955 to 1973. Nissim went to the Magen David primary school and the Ma'aleh High School in Jerusalem, and received an M.A. in law from the Hebrew University of Jerusalem in 1964. He served in the IDF as a law officer. He was first elected to the Knesset on the list of the *General Zionists in 1959, at the age of 24, and was thus the youngest person ever elected to the Knesset. He was a delegate to numerous Zionist Congresses on behalf of the World Association of the General Zionists. In 1977 he was elected chairman of the *Israel Liberal Party executive, and was a member of its presidium. In 1978 he was elected chairman of the *Likud executive.

Until the Ninth Knesset, Nissim served on various Knesset committees. From January 1978 until August 1980 he served as minister without portfolio, and from August 1980 to April 1986 as minister of justice. Together with Labor's Moshe *Shahal, Nissim drafted the coalition agreement for the National Unity government established in 1984, on the basis of parity and rotation in the premiership. In 1986 he replaced Yitzhak *Modai in the Ministry of Finance, and continued the policy of economic stabilization introduced by him, in addition to reducing both income tax and corporate taxes. As minister of finance he also successfully refinanced the government debt to the U.S., through the Wall Street capital markets. In the National Unity government formed after the elections to the Twelfth Knesset in 1988 he was appointed minister without portfolio, and in March 1990 minister of industry and trade, replacing Ariel *Sharon, who had resigned from the government over the plan to hold elections in the West Bank and Gaza Strip. In the government formed by Yitzhak *Shamir in June 1990, he was appointed deputy prime minister as well. After the elections to the Thirteenth Knesset, which the Likud lost, Nissim served on the Knesset Foreign Affairs and Security Committee. As a politician Nissim was known for his mild manner. After retiring from politics in 1996 Nissim returned to practicing law, serving as arbitrator and mediator in commercial disputes. He served as chairman of the Public

Commission on the Immunity of Knesset Members and of the Public Commission on the Reclassification of Public Lands, and he was a member of the Public Commission on the Status and Authority of the Attorney General.

[Susan Hattis Rolef (2nd ed.)]

NISSIM BEN JACOB BEN NISSIM IBN SHAHIN (c. 990–1062), together with *Hananel b. Hushi'el, the outstanding leader and talmudist of North Africa. His father headed a *bet ha-midrash* in Kairouan and was the representative of the academies of *Sura and *Pumbedita for the whole of North Africa. Little is known of Nissim's personal history. It is known that he, too, was head of an academy in Kairouan and maintained close ties with the academy of Pumbedita. After the death of Hananel, he was appointed by the Babylonian academies *Rosh bei-Rabbanan* ("Head of the College") in his stead. There were close ties between Nissim and *Samuel ha-Nagid. Samuel supported Nissim financially and Nissim served as the principal channel for Samuel's knowledge of Babylonian teachings, particularly those of Hai Gaon. When one of Nissim's sons died in childhood, Samuel composed a poem in consolation for the bereaved father. Nissim's daughter married Joseph *ha-Nagid, Samuel's son, and on that occasion Nissim visited Granada and taught there. According to Abraham *Ibn Daud, Solomon ibn *Gabirol was among those who heard his lectures. Nissim's teachers were his father, *Hushi'el, and possibly also the latter's son Hananel, whose teachings reveal a close affinity with that of Nissim. Nissim obtained a great part of his halakhic tradition from Hai Gaon, with whom he corresponded. Noteworthy among his pupils is Ibn Gasom, the author of a book on the laws of prayer (see Assaf. bibl.).

Nissim was a prolific and versatile writer. Five works of great length and value are known to have been written by him:

(1) *Sefer Maft'e'ah Manulei ha-Talmud* (Vienna, 1847) on the tractates *Berakhot*, *Shabbat*, and *Eruvin* was first published from an early Hebrew translation and then included in the Romm (Vilna) editions of the Talmud. Subsequently, many fragments of the Arabic original were published. It is a reference book for quotations encountered in the course of talmudic study. It also gives the sources of the *beraitot* and *mishnayot* quoted in the Talmud as well as parallels in the Talmud and Midrashim and includes extensive commentaries on many talmudic themes. Only the sections on the orders *Zera'im* (*Berakhot*), *Mo'ed*, and *Nashim* are extant but it is probable that the original scope of the work was greater.

(2) Commentaries on a few tractates of the Talmud, apparently written in Hebrew. Only a few fragments from several tractates are extant.

(3) Halakhic rulings. A few fragments of what was evidently a comprehensive work are extant.

(4) *Megillat Setarim* (completed in 1051 at the latest). This work was very well known among the *rishonim, Sephardim as well as Ashkenazim. It was written for the most part in scholarly terms. The book contains many variegated, unrelated top-

ics on all subjects coming within the range of interest of the scholars of the generation – beliefs and opinions, scriptural exegesis, religious polemics, explanations of passages in the Talmud and Midrashim in *halakhah* and *aggadah*, responsa on various subjects, customs and their sources, and other matters. This characteristic aspect of the book, as well as its bilingual construction (Hebrew and Arabic), which resulted in its division into two works even during the author's lifetime, led copyists in different places to arrange it in different orders according to their needs and interest, and in consequence to vary the numeration of its passages. Various compilations were made of the work, which were occasionally drawn upon by other authors such as Jacob *Tam whose *Sefer ha-Yashar* includes a number of rulings from it. The halakhic compendium *Sefer ha-Pardes* (written by *Rashi's school) may also have drawn upon it. Although the work is no longer extant, the discovery in the *Genizah of a subject index contained in the indexer's copy (published by S. Assaf, *Tarbiz*, 11 (1940), 229–59) has made knowledge of its contents far more precise. The book exercised a great influence upon the major halakhists of subsequent generations, including Isaac *Alfasi, *Maimonides, *Nathan b. Jehiel of Rome, *Abraham b. Nathan ha-Yarhi, and *Isaac b. Abba Mari.

(5) *Hibbur me-haYeshu'ah* (Ferrara, 1557), Nissim's best-known work, is a collection of Hebrew stories and folktales taken from early sources. It is designed to strengthen belief, faith, and morality among the people and to raise their spirit. This work, possibly the first prose storybook in medieval Hebrew literature, paved the way for Hebrew belletristic literature as a literary genre. Tradition has it that Nissim dedicated the book to his father-in-law, Dunash, who is otherwise unknown, to console him in his mourning. The first printed edition was published from an early Hebrew translation, and the Arabic text was published by J. Obermann (see bibl.). The Hebrew version has been frequently republished, not always according to the same translation. A new Hebrew translation, together with critical annotations by H.Z. Hirschberg, was published in 1954. Additional Arabic texts have been published by S. Abramson (see bibl.). The work circulated widely even before its first printing, and had a great influence on similar story collections. *Ma'asiyyot she-ba-Talmud* (Constantinople, 1519) was based upon it, and the *Hibbur ha-Ma'asiyyot* (*ibid.*, 1519) is an anthology of its stories. Many of the stories included by Gaster in his *The Exempla of the Rabbis* (1924; 1968²) were taken from it.

Although some other works have been ascribed to Nissim on the basis of various quotations, it may be assumed that all these are from the works already referred to. This may not apply to his many responsa, which are recorded in the works of *rishonim*, though these too may have been included in his *Megillat Setarim*. Most of Nissim's works found in the *genizah* are undergoing the process of identification and publication. S. Abramson devoted the labors of a lifetime to the collection of Nissim's work from the *genizah*, from manuscripts, and from printed works, and published a monumental work.

[Israel Moses Ta-Shma]

NISSIM BEN MOSES OF MARSEILLES (14th century), radical philosophical exegete. The dates of Nissim's birth and death are unknown. He was the author of a commentary on the Torah, titled, variously, *Ma'aseh Nissim*, *Sefer ha-Nissim*, and *Ikkarei ha-Dat*. The commentary was edited by H. Kreisel (Mekizei Nirdamim, Jerusalem, 2000). This work reflects a single-minded commitment on the part of its author to provide a naturalistic explanation for all seemingly supernatural elements of the Torah, whether it be the story of creation, the longevity of the ancients, the miracles in Egypt, the parting of the Sea of Reeds, the Revelation at Sinai, the rewards and punishments mentioned in the Torah, or the commandments that appear to have no rational reason or appear to involve supernatural intervention (such as the ceremony involving the woman accused of adultery by her husband). In the 14-chapter introduction to the commentary, Nissim deals with such topics as political theology, divine reward, principles of the faith, prophecy (including Mosaic prophecy), providence, and miracles. Most miracles actually occurred in his view, but they were the product of the superior knowledge of the prophet and his divinatory ability. Other miracles did not happen at all but appeared in a vision of prophecy or are to be understood metaphorically. The rewards and punishments mentioned in the Torah are treated by Nissim as the natural consequences of the individual's or nation's behavior. In his commentary he drew heavily from *Maimonides, Abraham *Ibn Ezra, Samuel ibn *Tibbon and his son Moses, as well as other Provençal Jewish thinkers such as *Levi ben Abraham. Nissim was exceptionally well versed in rabbinic literature, which he cites extensively in his commentary. Internal evidence suggests that Nissim composed his treatise sometime after 1315. One of the manuscripts of *Ma'aseh Nissim* contains a philosophical allegorical commentary on Ruth (edited by H. Kreisel in: *Jerusalem Studies in Jewish Thought*, 14 (1998), 158–80), which M. Schorr believes was also written by Nissim. His authorship of this work, however, is questionable.

BIBLIOGRAPHY: M. Schorr, in: *He-Halutz*, 7 (1865), 88–144; C. Sirat, in: *Jerusalem Studies in Jewish Thought*, 9 (1990), 53–76; H. Kreisel, introduction to *Ma'aseh Nissim*, 1–52.

[Howard Kreisel (2nd ed.)]

***NISSIM BEN REUBEN GERONDI** (known from the acronym of Rabbenu Nissim as the **RaN**; ?1310–?1375), one of the most important Spanish talmudists. Nissim's family originated in Cordova and settled first in Gerona, where he is thought

to have been born, and then in Barcelona, which became his permanent place of residence. Few biographical details are known of him. He never held any official rabbinical post, even though in fact he fulfilled all the functions of a rabbi and *dayyan* in his community. Furthermore, many *takkanot* enacted in Spain originated with him, and his reputation as an authoritative *posek* was such that he received queries from as far as Erez Israel and Syria. He is also known to have served as a physician in the royal palace. Because of a calumny, the date and causes of which are not certain, he was imprisoned for some time. It is also known that in 1336 he wrote a *Sefer Torah* for his own use, which became well known and served as a model. This *Sefer Torah* was moved from place to place until it reached Tiberias, where it was preserved until recently. Nissim's main teacher, apart from his father, was Perez ha-Kohen, with whom he was in close correspondence; Nissim even assisted him to become accepted as rabbi of Barcelona (after 1349). It seems that Nissim's main activity in his community was as head of the Barcelona yeshivah. Among his chief pupils were Isaac b. Sheshet *Perfet, who frequently quotes him, mostly anonymously, Ḥasdai *Crescas, Joseph *Ḥabiba, and Abraham *Tamakh.

Nissim's renown rests chiefly on his halakhic works. His method and system were solidly founded in accordance with the tradition of learning acquired from the school of Nahmanides, Solomon b. Abraham Adret, Aaron ha-Levi of Barcelona, and their contemporaries, and though his works contain many sayings of these scholars without naming them, he adapted their words, crystallized them, and added much of his own so that his works are among the best produced by this school of learning. One of his main works is a commentary on the *halakhot* of Isaac *Alfasi to the Talmud. It seems that all the parts of this work have been preserved, and all have been published on the margin of Alfasi's commentary beginning with its first printed editions down to the present day.

This commentary comprises the tractates *Shabbat*, *Pesaḥim*, *Beṣah*, *Rosh Ha-Shanah*, *Yoma*, *Ta'anit*, *Megillah*, *Sukkah*, *Ketubbot*, *Gittin*, *Kiddushin*, *Shevu'ot*, *Avodah Zarah*, *Hullin*, and *Niddah*. He also wrote novellae to the Talmud, of which up to the present the following have been published: *Gittin* (Constantinople, 1711), *Niddah* (Venice, 1741), *Hullin* to the end of chapter 8 (in: *Ḥamishah Shitot*, Sulzbach, 1762), *Bava Meṣia* (Dyhrenfurth, 1823), *Shevu'ot* (Venice, 1608, at the end of the responsa of Moses *Galante), *Rosh Ha-Shanah* (1871), *Avodah Zarah* (1888), *Mo'ed Katan* (1937), *Bava Batra* (1963), *Eruvin* (1969), and *Pesaḥim* (1970).

His commentary to the tractate *Nedarim*, which is his best-known work, is published in all the usual editions of the Talmud and serves as the standard commentary to this tractate instead of that of Rashi. Some of his novellae to the Talmud still remain in manuscript, but most of them have been repeatedly republished, since they are among the works most acceptable to scholars of all countries and times. His commentaries to Alfasi differ from those to the Talmud in that they aim at giving the halakhic ruling, and in fact they have no

real literary connection with Alfasi, with whom he frequently disagrees. The novellae to tractates *Megillah*, *Shabbat*, *Ketubbot*, and *Sanhedrin* published under Nissim's name are not by him. They represent one of the most difficult problems connected with the study of Nissim's works and teachings, as it is definite that a generation and more before him there lived in Barcelona another scholar with the same acronym – RaN (whose personal name is not certain), and whose works to several talmudic tractates have been recently published. Only 77 of Nissim's responsa are extant (Rome, 1545; Constantinople, 1548² from a different manuscript; and thereafter in many editions); also a book of 12 sermons (Constantinople 1533¹ and frequently thereafter), of a decidedly anti-philosophical character, though written in the style of philosophical literature; and a commentary on the Pentateuch of which the section on Genesis has been published (1968). The publication of the commentary to the Pentateuch has removed the few doubts that remained among some scholars as to whether Nissim is the RaN of the book of sermons ascribed to him or whether they were perhaps written by the other scholar of the same name. Discernible in both these works is Nissim's strong desire to prove the superiority of prophecy and Bible over philosophy, and thereby to strengthen the people's faith and their spiritual ability to bear up during the difficult periods of persecution and polemics of those times. He also wrote *piyyutim* and poems, some of which have been preserved and published.

NITRA (Hung. **Nyitra**; Ger. **Neutra**). Slovak historians believe that Nitra is the location of the oldest Slovakian Jewish community. In 896 Hungarian tribes invaded the Panonian plain; in 906 they destroyed the Slavonic kingdom of Moravia and probably captured Nitra as well. One of these tribes may have been the *Khazars of Jewish faith, which settled in the vicinity of Nitra. In a 1248 description of Nitra, "castrum iudeorum" can be interpreted as a Jewish settlement, in the vicinity of the neighboring village of Parovce. For centuries Parovce served as the Jewish extension of Nitra, where Jews were not admitted. In 1840, when the Budapest parliament allowed Jews to settle anywhere, the Jews of Parovce moved to Nitra. Many poor Jews who could not afford to move to Nitra stayed in Parovce. In 1989, with the collapse of Communism in Czechoslovakia, Parovce was inhabited by gypsies.

The anti-Jewish legislation of Emperor Charles VI (1711–1740) encouraged the migration of Moravian and Bohemian Jews to upper Hungary, where those laws did not apply. Nitra and its environs were included in this migration. The 1840

legislation of the Hungarian Parliament permitted Jews to live wherever they chose, which increased the Jewish population of Nitra dramatically.

The Jewish community was established in 1750, numbering 21 families. They had a small synagogue and a rabbi. In 1778 there were 132 people. The royal census of 1785/87 recorded 449 Jews. In 1840 the number rose to 1,654. A Jewish school was established in 1855, with German as the language of instruction. Subsequently, a *talmud torah* was opened. Rabbi Ezekiel ben Jacob Peneth (1773–1864) headed the local yeshivah, which at its peak had 200 students from many countries. In 1880 there were 3,541 Jews (22.4% of the entire population). The 1921 Czechoslovak census records the Jewish population as 3,901; the 1930 census records 3,809. In 1940, on the eve of the deportations, there were 4,358 Jews.

After the 1868 Hungarian Jewish Congress, the Nitra congregation remained Orthodox. However, in 1907 a split occurred and a *Neolog congregation was established. Each congregation had a synagogue and a cemetery. The monumental Neolog synagogue was erected in 1914. There was a Jewish hospital in the city, a *mikveh*, an orphanage, a home for the elderly, and a public kosher kitchen. *Machzike Hadas*, the official organ of Slovak Orthodoxy, was published every two weeks.

Nitra was not involved in the riots and vandalism of 1918 and 1919 which spread over Slovakia because the National Guard, manned by Social Democrats and Jews, guarded the town. In 1930 the Catholic Church and the Slovak Nationalist Party, headed by Father Dr. Josef *Tiso, the future president of the wartime Slovak state, instigated against the Jews. Tiso proposed their expulsion. But the Jews had a strong representation in the Social-Democratic Party, and in 1931 Dr. Vojtech Szilagy (Schlesinger) was elected deputy mayor of Nitra. The Zionist movement prospered in Nitra in the early 1900s, but it faced determined Orthodox competition. Rabbi Samuel David *Unger, the leading figure of Slovak Orthodoxy, moved to Nitra from Trnava in 1931 and brought along the Trnava yeshivah. There was long-standing hostility between the two communities. While the Jewish community was generally affluent, there were many impoverished people among them.

On March 14, 1939, the Slovak state was established under the aegis of the Third Reich. The state persecuted Slovak Jewry, peaking in 1942 when the Jews were deported to Poland. Some 4,400 of Nitra's Jews were sent to extermination camps. By the end of August 1944, German troops, accompanied by the local Slovak garrison, entered Nitra and sent the remaining Jews to Auschwitz.

In 1947 there were 784 Jews in Nitra. The returnees established a single congregation, with Rabbi Eliahu Katz serving as its spiritual leader. The synagogue and *mikveh* were re-established, and the cemeteries were cleaned up. In 1948–49, most of the community emigrated; in 1950 there were 150 Jews. In 1957 a kosher restaurant was opened, and a ritual butcher (*shohet*) attended to religious needs. In 1963, the authorities destroyed all Jewish public buildings except the Neolog syna-

gogue. After 1989, the cemeteries were again desecrated and besmirched with swastikas. Local authorities claimed that the Jews were responsible, preparing a provocation.

In 1990 there were 65 Jews in Nitra. A *minyan* continued to convene almost regularly in the early 21st century.

NITTAI OF ARBELA (= *Arbel in Lower Galilee; second half of second century B.C.E.), one of the **zugot*; a colleague of *Joshua b. Perahyah. He was a pupil of *Yose b. Joezer of Zeradah and *Yose b. Johanan of Jerusalem, the first of the *zugot*, whom he and Joshua succeeded with Nittai serving as *av bet din* (Ḥag. 2:2; Avot 1:6). All that is known of his teaching is that he took part in the only halakhic dispute of his time: whether the placing of the hands upon a sacrifice (*semikhah*) during a festival is permitted. Nittai held that it was permitted, in contrast to Joshua b. Perahyah who forbade it (Ḥag. 2:2). His saying preserved in Avot is, “Keep at a distance from an evil neighbor; do not make yourself an associate of a wicked man; do not abandon faith in [divine] retribution” (Avot 1:7).

***NIXON, RICHARD MILHAUS** (1913–1994), 37th president of the United States. After his discharge from the U.S. Navy in 1946 with the rank of lieutenant commander, Nixon entered politics and was elected to the 80th Congress in 1946. In his first term, Nixon quickly established himself as a staunch conservative on domestic issues, with a preoccupation with internal security, and a firm supporter of the new global role then being assumed by the Truman administration. By 1950 his slashing political style had earned him the lasting enmity of liberal intellectuals and many Jewish voters committed to its civil libertarian tradition. His opportunity to run for the presidency came in 1960, but pitted against John F. Kennedy, he suffered his first political setback. This was followed two years later by a second political setback when he lost the race for the California governorship, and it seemed that his political career was at an end.

In fact, in June 1963 Nixon left his political base in California to join a Wall Street law firm. During the next six years, however, he traveled extensively, becoming a familiar figure at local Republican Party gatherings and earning political credits everywhere. Soon his name was being mentioned once again as a possibility to head the Republican ticket in 1968. The Vietnam and civil rights issues had created serious schisms in the Democratic Party and not even the sacrifice of Lyndon Johnson seemed able to heal them. His hairbreadth victory over Hubert Humphrey resulted in one of the most remarkable political comebacks in American history.

In a geopolitical sense, Nixon was anxious to restore American influence in the Arab world, so that his primary

purpose, the containment of Communist influence, might be served. It was not unexpected therefore that the preinaugural fact-finding mission of William Scranton to the Middle East was accompanied by much talk of a new “evenhanded” policy in the area. The words had an ominous ring for Jews since Nixon could easily impose a settlement from on high without too much fear of domestic repercussions. Some American Zionists sorely regretted the absence of a closer connection to the Republican Party.

By February 1969 the Nixon administration appeared ready to impose such a peace on the basis of the Rogers plan. It called for an overall guarantee of security to all the nations in the area and freedom of navigation along the Suez Canal and Straits of Tiran, in return for which Israel would, with minor modifications, revert to the pre-1967 boundaries. Negotiations were begun with the Russians and a cease-fire was arranged. Arms shipments to the area, including promised Phantom jets, were held up.

Then three events reversed the administration's policy: the Russian rejection of the Rogers plan, the Egyptian deployment of SAM missiles in the cease-fire area, with Russian connivance, and the Jordanian civil war. This last event in particular brought Nixon and the Jewish community closer together. Fearing that Syrian intervention would lead to a direct confrontation with the Soviet Union, Nixon made arrangements in secret talks with Yizhak Rabin, the Israeli ambassador, to prevent such a possibility. Israel would, if necessary, stop the Syrian tank column from reaching Amman, while a reinforced Sixth Fleet would protect Israel's rear against Egyptian action. With such an agreement in hand, Nixon was easily able to face down the Soviet Union in his own version of the Cuban missile crisis. For Jews these events put Nixon in a new light. Even if Nixon had no special attachment to Israel, he could be depended upon in a crisis to act in Israel's interests, motivated by the *realpolitik* of the Middle East situation. Nixon was re-elected in 1972. The aid which he extended to Israel during the Yom Kippur War, in 1973, particularly the airlift which supplied much needed arms, showed him as a supporter of Israel.

His resignation in 1974, as a result of the Watergate affair, brought his political career to an end.

NIZER, LOUIS (1902–1994), U.S. lawyer and author. Nizer, who was born in London, England, was taken to the United States in 1903. He graduated from the Columbia School of Law in 1924. He was an expert on contract, libel, divorce, and antitrust law. His expertise in the areas of law related to the arts, including copyright and plagiarism, attracted clients from the theatrical and motion picture fields. He rapidly gained the confidence of the movie industry, and in 1928 was appointed

attorney and executive secretary of the industry's trade association. He became well known as a magnetic courtroom lawyer, and a play about his career, *A Case of Libel*, written by Henry Denker, was produced in New York in 1963. Reputed to be a spellbinding speaker both in and out of the courtroom, Nizer represented such celebrities as Charlie Chaplin, Mae West, Salvador Dali, and Johnny Carson.

Nizer was active in the United Jewish Appeal and the Federation of Jewish Philanthropies.

His books include *New Courts of Industry* (1935); *Thinking on Your Feet: Adventures in Speaking* (1940); *What to Do with Germany* (1944), in which he advocated war crimes trials for Nazis, reversion of Nazi-appropriated property to the owners, a new educational system for Germany, and the temporary loss of German sovereignty; two widely read autobiographical volumes, *My Life in Court* (1961); *The Jury Returns* (1966); *Between You and Me* (1964); *The Implosion Conspiracy*, which examined the Rosenberg trial and execution (1973); *Reflections without Mirrors: An Autobiography of the Mind* (1978); *The Uncensored John Henry Faulk* (with J.H. Faulk, 1985); and *Catspaw: One Man's Ordeal by Trials* (1992).

The Carnegie Council on Ethics and International Affairs established the Nizer Lectures on Public Policy in 1994.

[Ruth Beloff (2nd ed.)]

NIZZANAH (Heb. נִצְנָה; Gr. *Nessana*), a ruined town in the Negev identified with 'Awjā al-Ḥafir on the Ismailiya road, 50 mi. (80 km.) S.W. of Beersheba. Nessana was the ancient name of the site as revealed in the papyri found there. It was founded in the second or first century B.C.E. by the Nabateans, who built a small fort with round towers (two of which were found in the excavations there) on a small hill dominating the wide and fertile Wadi Ḥafir. Hasmonean coins found there indicate that the place had commercial relations with Judea. The site was abandoned after the Roman occupation of Petra, the Nabatean capital, in 106 C.E., but was rebuilt as a frontier post by the emperor Theodosius I (379–95). The soldiers of the garrison received plots of land in the valley, and a town was built beneath the fortress (now called Hospice of St. George). Nizzanah was connected by a road with Elusa, the capital of the Byzantine Negev, with Elath and with Sinai. The Byzantine town included two churches with mosaic floors (one dated 435) and a large cemetery with tombstones (dated 430–64). It prospered during this period, serving merchants bound for Egypt, pilgrims traveling to Mt. Sinai, and anchorites living in the desert. The town survived the Persian and Arab conquests; papyri discovered by the Colt Expedition in 1936 show that a mixed Arab-Greek administration persisted until approximately 750 C.E. The settlement declined and was eventually abandoned until its reoccupation by the Turks as a police post in 1908. Under the British Mandate a central headquarters for the border police was located there. In May 1948, during the Israel *War of Independence, the Egyptian invasion started from this point. Israel forces took the area in December, and it was declared a demilitarized zone in the Israel-Egypt Ar-

mistice Agreement. It was also the site for the Israel-Egyptian Mixed *Armistice Commission meetings until 1967.

[Michael Avi-Yonah]

The site was discovered by U.J. Seetzen in 1807, with the first proper investigations at the site conducted by E.H. Palmer and C.F. Tyrwhitt-Drake in 1870. A. Musil made a detailed plan of the site in 1902, followed by the investigations of C.L. Woolley and T.E. Lawrence in 1913/14. Important excavations were conducted at the site in 1935–37 by H.D. Colt, with the discovery of an important archive of papyri. In 1987 excavations were resumed at the site under the direction of D. Urman and J. Shereshevski on behalf of Ben-Gurion University. Further parts of the flight of steps connecting the town with the acropolis were uncovered. Two building complexes were unearthed close to the Southern Church, and the excavators suggest that they were used by the priests as their living quarters. Further work was done on the acropolis, and a new area of excavations was opened up next to the bank of the wadi which extends between the lower and upper towns, revealing a large living quarter dating to the Late Byzantine period built above *Nabatean settlement remains. A previously unknown church with a martyrium and baptistery was uncovered in the lower town, and an unknown monastery was found on the north edge of the northern hill of the upper town. Numerous ostraca were uncovered inscribed in Greek, Latin, Syriac, Arabic, and Coptic.

[Shimon Gibson (2nd ed.)]

In 1987 the *Jewish Agency for Israel decided to establish an education center in Nizzanah. The main aim was to educate Israeli and Diaspora youth about the settlement potential of the desert. The village served as an absorption center and *ulpan for young immigrants. In addition, it offered various educational programs for Diaspora youth. Nizzanah was also a research center for environmental studies attached to the Hebrew University of Jerusalem. It had a guest house with 50 rooms for visitors to the region. At the end of 2002 the educational community numbered 230 residents.

NIZZANIM (Heb. נִצְּנִים; “sprouts”), kibbutz and youth village in southern Israel, 5 mi. (8 km.) N. of Ashkelon, affiliated with Ha-No’ar ha-Ziyyoni. Nizzanim was founded in 1943 by pioneers from Romania, when efforts were made to expand Jewish settlement in the south and Negev. In the early stages of the Israel *War of Independence (1948), Nizzanim was subjected to concentrated attack by the advancing Egyptian army and suffered utter destruction. After five days of resistance, Nizzanim was given up on June 8, 1948, and most of its surviving defenders fell prisoner. The site was recovered in October 1948, and the kibbutz was rebuilt by the remnants of the group about 2 mi. (3 km.) further south. In 1949 a farming

school, belonging to *Youth Aliyah, was opened on the original site by Nizzanim. In 1969 the combined population of the kibbutz and youth village was 594. In the mid-1990s the population dropped to approximately 365, maintaining its size at 375 residents in 2002. Nizzanim’s economy was based on citrus groves, field crops, and dairy cattle as well as the Paltechnica plant for chairs and seating components.

[Efram Orni / Shaked Gilboa (2nd ed.)]

NOACHIDE LAWS, the seven laws considered by rabbinic tradition as the minimal moral duties enjoined by the Bible on all men (Sanh. 56–60; Yad, Melakhim, 8:10, 10:12). Jews are obligated to observe the whole Torah, while every non-Jew is a “son of the covenant of Noah” (see Gen. 9), and he who accepts its obligations is a *ger-toshav* (“resident-stranger” or even “semi-convert”; see Av. Zar. 64b; Maim. Yad, Melakhim 8:10). Maimonides equates the “righteous man (*hasid*) of the [gentile] nations” who has a share in the world to come even without becoming a Jew with the gentile who keeps these laws. Such a man is entitled to full material support from the Jewish community (see ET, 6 (1954), col. 289 s.v. *ger toshav*) and to the highest earthly honors (*Sefer Hasidim* (1957), 358). The seven Noachide laws as traditionally enumerated are: the prohibitions of idolatry, blasphemy, bloodshed, sexual sins, theft, and eating from a living animal, as well as the injunction to establish a legal system (Tosef., Av. Zar. 8:4; Sanh. 56a). Except for the last, all are negative, and the last itself is usually interpreted as commanding the enforcement of the others (Maim. Yad, Melakhim, 9:1). They are derived exegetically from divine demands addressed to Adam (Gen. 2:16) and Noah (see Gen. R. 34; Sanh. 59b), i.e., the progenitors of all mankind, and are thus regarded as universal. The prohibition of idolatry provides that, to ensure social stability and personal salvation, the non-Jew does not have to “know God” but must abjure false gods (Meg. 13a; Kid. 40a; Maim. Yad, Melakhim, 10:2ff.). This law refers only to actual idolatrous acts, and not to theoretical principles and, unlike Jews, Noachides are not required to suffer martyrdom rather than break this law (Sanh. 74a; TJ, Shev. 4:2). They are, however, required to choose martyrdom rather than shed human blood (Pes. 25b and Rashi). In view of the strict monotheism of Islam, Muslims were considered as Noachides (cf. ET, loc. cit., col. 291, n. 17), whereas the status of Christians was a matter of debate. Since the later Middle Ages, however, Christianity too has come to be regarded as Noachide, on the ground that *shittuf* (“associationism”) – this was the Jewish interpretation of Trinitarianism) is not forbidden to non-Jews (see YD 151). Under the prohibitions of blasphemy, murder, and theft Noachides are subject to greater legal restrictions than Jews because non-Jewish society is held to be more prone to these sins (Rashi to Sanh. 57a). The prohibition of theft covers many types of acts, e.g., military conquest (*ibid.*, 59a) and dishonesty in economic life (*ibid.*, 57a; Yad, Melakhim, 9:9). A number of other Noachide prescriptions are listed in the sources (see Sanh. 57b; Mid. Ps. 21; Yad, Melakhim, 10:6), e.g., prohibitions of sorcery, castra-

tion, mixed seeds, blemished sacrifices, injunctions to practice charity, procreate, and to honor the Torah (Hul. 92a). These are best understood as subheadings of “the seven laws.” Noachides may also freely choose to practice certain other Jewish commandments (Yad, Melakhim, 10:9–10). Jews are obligated to try to establish the Noachide Code wherever they can (*ibid.*, 8:10). Maimonides held that Noachides must not only accept “the seven laws” on their own merit, but they must accept them as divinely revealed. This follows from the thesis that all ethics are not ultimately “natural,” but require a theological framework (see Schwarzschild, in: JQR, 52 (1962), 302; Fauer, in: *Tarbiz*, 38 (1968), 43–53). The Noachide covenant plays an important part in both Jewish history and historiography. Modern Jewish thinkers like Moses *Mendelssohn and Hermann *Cohen emphasized the Noachide conception as the common rational, ethical ground of Israel and mankind (see H. Cohen, *Religion der Vernunft* (1929), 135–48, 381–8), and see Noah as the symbol of the unity and perpetuity of mankind (*ibid.*, 293). Views differ as to whether the ultimate stage of humanity will comprise both Judaism and Noachidism, or whether Noachidism is only the penultimate level before the universalization of all of the Torah (see TJ, Av. Zar. 2:1). Aimé *Pallièrè, at the suggestion of his teacher Rabbi E. *Benamozegh, adopted the Noachide Laws and never formally converted to Judaism.

[Steven S. Schwarzschild]

In Jewish Law

While in the amoraic period the above-mentioned list of seven precepts is clearly accepted as the framework of the Noachide Laws, a variety of tannaitic sources indicate lack of complete agreement as to the number of such laws, as well as to the specific norms to be included. The Tosefta (Av. Zar. 8:6) records four possible additional prohibitions against: (1) drinking the blood of a living animal; (2) emasculation; (3) sorcery; and (4) all magical practices listed in Deuteronomy 18:10–11.

The Talmud records a position which would add prohibitions against crossbreeding of animals of different species, and grafting trees of different kinds (Sanh. 56b). Nonrabbinic sources of the tannaitic period indicate even greater divergence. The Book of Jubilees (7:20ff.) records a substantially different list of six commandments given by Noah to his sons: (1) to observe righteousness; (2) to cover the shame of their flesh; (3) to bless their creator; (4) to honor parents; (5) to love their neighbor; and (6) to guard against fornication, uncleanness, and all iniquity (see L. Finkelstein, *ibid.*).

Acts (15:20) refers to four commandments addressed to non-Jews, “...that they abstain from pollutions of idols, from fornication, from things strangled, and from blood.” This latter list is the only one that bears any systematic relationship to the set of religious laws which the Pentateuch makes obligatory upon resident aliens (the *ger ha-gar* and *ezrah*).

NATURE AND PURPOSE. There are indications that even during the talmudic period itself there was divergence of opinion as to whether the Noachide Laws constituted a formulation of

natural law or were intended solely to govern the behavior of the non-Jewish resident living under Jewish jurisdiction. The natural law position is expressed most clearly by the assertion, as to five of the seven laws, that they would have been made mandatory even had they not been revealed (Yoma 67b; Sifra *Aḥarei Mot*, 13:10). Similarly, the rabbinic insistence that six of the seven Noachide Laws were actually revealed to Adam partakes of a clearly universalistic thrust (Gen. R. 16:6, 24:5). The seventh law, against the eating of flesh torn from a living animal, could have been revealed at the earliest to Noah, since prior to the flood the eating of flesh was prohibited altogether. The very fact that these laws were denominated as the “seven laws of the sons of Noah” constitutes further indication of this trend since the term “sons of Noah” is, in rabbinic usage, a technical term including all human beings except those whom Jewish law defines as being Jews. Nor was there a lack of technical terminology available specifically to describe the resident alien. On the other hand, the entire context of the talmudic discussion of the Noachide Laws is that of actual enforcement by rabbinic courts. To that end, not only is the punishment for each crime enumerated, but standards of procedure and evidence are discussed as well (Sanh. 56a–59a). This presumption of the jurisdiction of Jewish courts is most comprehensible if the laws themselves are intended to apply to non-Jews resident in areas of Jewish sovereignty. Of a similar nature is the position of Yose that the parameters of the proscription against magical practices by Noachides is the verse in Deuteronomy (18:10) which begins, “There shall not be found among you...” (Sanh. 56b). The attempt of Finkelstein (op. cit.) to date the formulation of the seven Noachide commandments during the Hasmonean era would also suggest a rabbinic concern with the actual legal status of the non-Jew in a sovereign Jewish state. It might even be the case that the substitution by the *tanna* of the school of Manasseh of emasculation and forbidden mixtures of plants for the establishment of a judicial system and blasphemy (Sanh. 56b) itself reflects a concern with the regulation of the life of the resident alien already under the jurisdiction of Jewish courts. Of course, the seven commandments themselves are subject to either interpretation; e.g., the establishment of courts of justice can mean either an independent non-Jewish judiciary and legal system or can simply bring the non-Jew under the rubric of Jewish civil law and its judicial system.

THE BASIS OF AUTHORITY. A question related to the above is that of the basis of authority of these laws over the non-Jew. Talmudic texts seem constantly to alternate between two terms, reflecting contradictory assumptions as to the basis of authority, namely seven precepts “which were commanded” (*she-niṣṭavvu*) to the Noachides, and seven precepts “which the Noachides accepted upon themselves” (*she-kibbelu alei-hem*; BK 38a; TJ, Av. Zar. 2:1; Hul. 92ab; Hor. 8b; Sanh. 56b). This disparity between authority based on revelation as opposed to consent reaches a climax when Maimonides asserts that the only proper basis for acceptance of the Noachide laws

by a non-Jew is divine authority and revelation to Moses, and that "...if he observed them due to intellectual conviction [i.e., consent] such a one is not a resident alien, nor of the righteous of the nations of the world, nor of their wise men" (Yad, Melakhim 8:11; the possibility that the final "*ve-lo*" ("nor") is a scribal error for "*ella*" ("but rather") while very appealing, is not borne out by any manuscript evidence). Of course, this same conflict between revelation and consent as basis of authority appears with regard to the binding authority of Torah over the Jew, in the form of "we will do and obey" (Ex. 24:7) as opposed to "He (God) suspended the mountain upon them like a cask, and said to them, 'If ye accept the Torah, 'tis well; if not, there shall be your burial'" (Shab. 88a).

NOACHIDE LAWS AND PRE-SINAITIC LAWS. The *amoraim*, having received a clear tradition of seven Noachide Laws, had difficulty in explaining why other pre-Sinaitic laws were not included, such as procreation, circumcision, and the law of the sinew. They propounded two somewhat strained principles to explain the anomalies. The absence of circumcision and the sinew is explained through the assertion that any pre-Sinaitic law which was not repeated at Sinai was thenceforth applicable solely to Israelites (Sanh. 59a), whence procreation, while indeed obligatory on non-Jews according to Johanan (Yev. 62a) would nevertheless not be listed (cf. Tos. to Yev. 62a s.v. *benei*; Tos. to Hag. 2b s.v. *lo*).

LIABILITY FOR VIOLATION OF THE LAWS. While committed to the principle that "There is nothing permitted to an Israelite yet forbidden to a heathen" (Sanh. 59a), the seven Noachide Laws were not as extensive as the parallel prohibitions applicable to Jews, and there are indeed situations in which a non-Jew would be liable for committing an act for which a Jew would not be liable. As to the latter point, as a general rule, the Noachide is criminally liable for violation of any of his seven laws even though technical definitional limitations would prevent liability by a Jew performing the same act. Thus a non-Jew is liable for blasphemy – even if only with one of the divine attributes; murder – even of a *foetus; robbery – even of less than a *perutah*; and the eating of flesh torn from a living animal – even of a quantity less than the size of an olive. In all these cases a Jew would not be liable (Sanh. 56a–59b; Yad, Melakhim, ch. 9, 10). One additional element of greater severity is that violation of any one of the seven laws subjects the Noachide to capital punishment by decapitation (Sanh. 57a).

[Saul Berman]

Noachide Laws as Tools for the Interpretation and Development of Jewish Law

THE LIMITS OF THE RULE "DINA DE-MALKHUTA DINA." Noachide laws, which are seen as reflecting universal law, include the general precept of establishing a legal system (*dinim*). This in turn leads to the delimitation of boundaries governing the interaction between the Jewish and other legal systems, within the framework of the principle "*dina de-malkhuta dina*" (see **Dina de-Malkhuta Dina*). According to

Nahmanides (in his Torah Commentary, at Gen. 34:13), the precept of *dinim* is not limited to the establishment of courts, but includes an entire system of fundamental laws regulating commerce and social order. "In my opinion... He also commanded them to observe the laws of theft, fraud, oppression, wages, the laws of bailees, rape, seduction, the laws of tort, damages, borrowing and lending, commerce and so forth, similarly to the laws commanded to the Israelites. And they are liable to capital punishment for theft, oppression, rape, seduction, arson, battery and so forth..." To be sure, this list does not include laws of betrothal and divorce. The Talmud (Gittin 9a–b) brings a *baraita* stating that Jewish law recognizes all documents made in non-Jewish courts with the exception of writs of *divorce. According to Rashi (ad loc.), the general recognition of documents is based on the "*dina de-malkhuta dina*," which affords competence to non-Jewish legal systems on the assumption that they represent universal legal values. But Jewish marital law is not included in universal law, since there are no Noachide laws pertaining to betrothal and divorce. Therefore, "*dina de-malkhuta dina*" cannot be applied to Jewish marital law, not even with respect to its evidentiary aspects. According to this approach, the rule of "*dina de-malkhuta dina*" is identical with the universal law that existed in ancient Hebrew society before the Torah had been given, and which received expression in the seven Noachide laws. Other authorities have taken a rather different approach, stating that the Noachide laws cannot bind the Jewish people, which was separated from the other nations and received its own set of laws (the Torah). For example, the Jewish laws of evidence are not governed by *dina de-malkhuta dina*, since the laws of evidence originate from the ancient Noachide law: "One – one of the seven precepts of Noachide law is to establish a legal system, and their law is administered by a single judge and one witness. But we, the descendants of Abraham, are no longer included amongst them and we are sanctified by this (our laws), and we require two witnesses for all legal matters. As this is according to their ancient laws – Heaven forbid that we should follow them on the basis of "*dina de-malkhuta dina*," since they are [only] Noachide laws" (*Responsa Hakhmei Provence*, Sofer Publications, p. 421).

THE SUBSTANCE AND SCOPE OF THE KING'S LAW. The king's Law constitutes a system of law, supplementary to the laws of the Torah, to adjudicate and punish in cases where it would not be possible in accordance with settled *halakhah* (See *Punishment for extensive discussion). Halakhic authorities of the last century noted the similarity between Noachide law and king's law (R. Meir Dan Poltzki, *Hemdat Israel, Ner Mizvah* 288, 19th century, Poland); R. Meir Simḥah of Dvinsk, *Or Same'ah*, Melakhim 3:10). The king's law resembles Noachide law in that it reflects "natural conduct" as opposed to the Torah law, unique to the Jews, which reflects "Divine conduct." According to the king's law one is permitted to judge on the evidence of a single witness, as in Noachide law, but the scope of the latter is limited to the seven Noachide pre-

cepts. The exclusive laws for Jews, which were added to the seven Noachide laws, must be adjudicated only according to the laws of evidence of the Torah – i.e., on the testimony of two witnesses and forewarning (see *Evidence).

Capital Punishment for Violating Noachide Laws – Maximal, Not Mandatory

Even though the Talmud and Maimonides (Sanh. 47a; Yad, Melakhim 9.14) stipulate that a non-Jew who violated the Noachide laws was liable to capital punishment, authorities in recent generations have expressed the view that this is only the maximal punishment. According to this view, there is a difference in this respect between Noachide law and the *halakhah*. According to the *halakhah*, where a Jew was liable for capital punishment, it was a mandatory punishment, provided that all conditions had been met, whereas in Noachide law death is the maximal punishment, to be enforced only in exceptional cases such as when the need arises to fight against the proliferation of crime (viz. *Or Same'ah*, *ibid.*). This is the similarity between Noachide law and the king's law, as stated above. According to some opinions, this approach, in which a differentiation is made between various levels of severity in crimes and sentencing policy in Noachide law, may be corroborated from the works of Maimonides (viz. Bibliography, Enker).

NOAH (Heb. נֹחַ), son of Lamech, father of Shem, Ham, and Japheth (Gen. 5:28–29; 6:10; 1 Chron. 1:4). Noah is described as a righteous and blameless man who walked with God (Gen. 6:9) and whom God decided to save from a universal *Flood to become the progenitor of a new human race. He was given instructions to build an *ark, to provision it, and to take aboard members of his family and representatives of the animal and bird kingdoms. After surviving the Flood, Noah disembarked and offered sacrifices to God, who, in turn, blessed Noah and his sons and made a covenant with them. He also laid upon them certain injunctions relative to the eating of fish and the taking of life (6:9–9:17).

In the genealogical lists of the biblical Patriarchs given in Genesis 5 and 11, Noah occupies a position midway between Adam and Abraham. He is also tenth in the line of antediluvian Patriarchs. This tradition is doubtless dependent upon a Mesopotamian source. It is especially reminiscent of a nota-

tion in the writings of Berossus (third century B.C.E.) according to which the hero of the great flood was Babylonia's tenth antediluvian king. In the biblical material dealing with the Patriarchs there is an extension of the use of the number ten, or numbers based on ten, not found in the cognate Mesopotamian notices. For instance, ten generations separate Noah from Abraham, and Noah's age is reckoned by tens and multiples of ten. Noah had reached the age of 500 at the birth of his three sons (5:32) and another period of 100 years elapsed before the onset of the deluge (7:11). However, the biblical treatment differs importantly from its Mesopotamian antecedents, for in the latter, the reigns of the antediluvian kings range from 18,600 to nearly 65,000 years. There is no denying that the lifespans of the corresponding biblical personages, including Noah's 950 years (9:28), have been considerably compressed and fall far short of the briefest reign mentioned in the related Mesopotamian texts.

Another discrepancy between the biblical and Mesopotamian traditions lies in the name of the hero. The earliest Mesopotamian flood account, written in the Sumerian language, calls the deluge hero Ziusudra, which is thought to carry the connotation “he who laid hold on life of distant days.” The Sumerian name obviously has in view the immortality granted the hero after the Flood. It is this name which is reflected in the later version set down in writing by Berossus. In the ancient Babylonian versions there is likewise clearly an indebtedness to the prior Sumerian account (see *Flood). In one of these versions the hero bears the name Atra(m)hasis, meaning “the exceedingly wise.” This name apparently is in the nature of an epithet. Woven into the famous Epic of Gilgamesh is another version, in which the man who survived the flood is known as Utnapishtim, signifying “he saw life.” This is patently a loose rendering of the Sumerian Ziusudra, which symbolizes the status attained by the hero. The name Noah, by contrast, cannot be related to any of these on the basis of present knowledge.

The foregoing factors strongly suggest that in the transmission of the Babylonian antediluvian lists to biblical chronicles an intermediate agent was active. The people most likely to have fulfilled this role are the Hurrians, whose territory included the city of Haran, where the Patriarch Abraham had his roots. The Hurrians inherited the Flood story from Babylonia. Unfortunately, their version exists in an extremely fragmentary condition, so that nothing positive can be said one way or the other on the matter. There is preserved, however, a personal name which invites comparison with the name of Noah. It is spelled syllabically: *Na-ah-ma-su-le-el*. It is possible, but by no means certain, that Noah is a shortened form of this name.

The Bible itself attempts to interpret the name: “This one will provide us relief from our work and from the toil of our hands” (5:29). This explanation links Noah with the Hebrew *niham*, “to comfort,” but this is popular etymologizing and not based on linguistic principles. The true significance of the name was probably unknown to those speakers of He-

brew who inherited the Flood narrative. The interpretation of the name seems to refer to Noah's invention of wine. It is possible, however, that it reflects a lost tradition connecting Noah with the invention of the plow. The biblical statement that Noah was the first to plant a vineyard (9:20–21) seems to reflect an ancient attitude that grape culture and the making of wine were essential to civilization. The account also takes for granted that grapes were properly utilized by turning the juice into a fermented drink. Furthermore, Noah's drunkenness is presented in a matter-of-fact manner and not as reprehensible behavior. It is clear that intoxication is not at issue here, but rather that Noah's venture into viticulture provides the setting for the castigation of Israel's Canaanite neighbors. It is related that *Ham, to whom the descent of the Canaanites is traced, committed an offense when he entered the tent and viewed his father's nakedness. The offender is specifically identified as the father of *Canaan (9:22), and Noah's curse, uttered upon his awakening, is strangely aimed at Canaan rather than the disrespectful Ham. In any event, the inspiration for the scene is clearly not Mesopotamian in origin, as is the case with the greater part of the material in the first 11 chapters of Genesis.

Noah as a personality is again mentioned in the Bible only by the prophet Ezekiel (14:14, 20) who refers to him as one of three righteous men of antiquity, although Isaiah (54:9) does describe the Flood as "the waters of Noah."

[Dwight Young]

In the Aggadah

Although the Bible says of Noah that he was (Gen. 6:9) "in his generations a man righteous and wholehearted," and hence was saved, not a single action is mentioned there to illustrate his righteousness. Philo, too, asks (LA 3:77): "why did he [Moses] say 'Noah found grace in the eyes of the Lord' (Gen. 6:8), when previously he had, as far as our information goes, done nothing good?" Filling in details lacking in the Bible, the *aggadah* tells of Noah's righteousness before and during the building of the ark and while he was in it. Noah's first good deed was to "introduce plows, sickles, axes, and all kinds of tools to his contemporaries," thus freeing them from doing everything with their hands (Tanḥ. Gen. 11). He was what the Greeks would call εὐεργέτης, one whose inventions benefit mankind and cause him to be particularly beloved of the gods. Noah's uprightness and love of his fellowmen are further exemplified in what he did to save his contemporaries. Instead of hurrying to build the ark, he delayed it for many years waiting until the cedars which he had planted for it had grown (Tanḥ. No'ah 5). Finding it difficult to disregard God's command, yet dreading the destruction of the human species, he waited for 120 years in the hope that his contemporaries would depart from their evil ways.

Noah also admonished and warned his contemporaries, and called upon them to repent. A similar motif is found also in Josephus (Ant. 1:74) and the Apostolic Fathers (Clement, 1, 7, 6). Noah's reproof of the men of his generation is derived

from a reference to him as a righteous man (Gen. 6:9); the *aggadah*, states that "wherever it says 'a righteous man' – the reference is to one who forewarns others" (Gen. R. 30:7), only such a one being worthy of the designation "righteous." In the Bible, Noah figures as a man wholeheartedly righteous and reticent; in the *aggadah*, a prophet, a truthful man, a monitor of his generation, a herald persecuted for his rebukes and honesty.

Noah's righteousness was also shown in his devoted attention to the animals in the ark. Because of the great care taken by Noah and his sons to provide each animal with its usual diet at its usual mealtime, they slept neither by day nor by night (Sanh. 108b; Tanḥ. B. 58:2). Noah regarded himself as responsible for the preservation of all the animal species. Philo, too, stresses the fact that when God brought a flood on earth, He wished that all the species He had created should be preserved (Mos. 2:61). Plato, in one of his myths (*Protagoras*, 321), attributes a similar desire to the gods. In spite of these testimonials to Noah's high-mindedness, R. Johanan interpreted the biblical statement, "thee have I seen righteous before Me in this generation" (Gen. 7:1) as indicating Noah's righteousness only in relation to his own generation and not in relation to others (Sanh. 108a). Philo (Abr. 36) concurred, stating that Noah would not have been regarded as upright in relation to the Patriarchs: he affirmed his greatness in opposing the tendencies of his generation (*ibid.* 38).

[Elimelech Epstein Halevy]

In Christianity

In Christian symbolism Noah is one of the most important typological figures. The New Testament describes him as a symbol of the just (11 Pet. 2:5), and as an example, in a sinful world, of faith in and submission to God (Heb. 11:7; Luke 17:26–27; 1 Pet. 3:20). As a type and prefiguration of Jesus, Noah exhorts to repentance and announces the inevitable judgment. Being spared from the universal catastrophe, he appears as a redeemer through whom humanity is saved from complete destruction and is reconciled with God.

The Flood, the ark, and the dove also serve as Christian prefigurations. Just as Noah triumphs over drowning to death in the waters of the flood, so Jesus and the Christians vanquish Satan and death through the water of baptism which initiates them into a new world (1 Pet. 3:18–21). In later Christian tradition Noah's ark symbolizes the Church outside of which no salvation is possible. The dove sent out by Noah prefigures the Holy Spirit moving upon the baptismal waters, symbolizing divine reconciliation.

In Islam

Nūḥ (Noah) is one of *Muhammad's favorite biblical characters. He devotes a complete sura to Noah (71) considering Noah's life as a prototype of his own. Noah is the reprover who attempts to make his people repent (7:57–61), but the elders scorn and do not heed him. Following the *aggadah* (Sanh. 108a and other Midrashim) Noah relates that it has been revealed to him that he must build the ark (11:29, 34,

38–39). When Noah and the members of his family entered the ark on Allah's command, one son stood at the side of the Ark and was drowned in the waters of the *Flood because he refused to enter when Noah called (11:43). According to some commentators, this son was *Canaan; hence, the belief that Noah had four sons, and not three as recorded in the Bible. Noah's wife may also have been among those who drowned in the Flood (see Tabarī, below), because as the wife of *Lot, she was not a believer (66:10–11). The Ark settled on Mount Jūdi (11:46). The poets al-Nābigha, al-A'shā, 'Adī b. Zayd, and especially, Umayya ibn Abī al-Ṣalt, who were contemporaries of Muhammad, describe the ark, its construction, and the salvation of Noah. As usual, the commentators on the *Koran add many legendary details and embellishments and are familiar with the names of the sons of Noah (see below). The number of those who were saved varies. One source mentions 80 survivors: Noah, his three sons, their wives, and 73 believers, the descendants of *Seth (Shīth; Tabarī 129). According to others, only eight survived: Noah and his wife (!), his three sons, and their wives.

The three sons of Noah are not mentioned by name in the Koran. Tabarī (vol. 1, pp. 132–3) presents a list stating how the land was partitioned among them, and later (pp. 140–9) includes the genealogies of all the nations which existed in his time. Sām (Shem) was the progenitor of the Arabs, the Persians, and the Rūm (Byzantines) who are considered good nations. Yāfath (Japheth) was the ancestor of the Turks and the Slavs, Yājūj and Mājūj (*Gog and Magog), all of whom possess no good qualities (p. 145), and are not noble. Hām (Ham) gave birth to the Copts, the "Blacks," and the Berbers. His sins were having carnal relations with his wife in the Ark and acting disrespectfully toward his father.

[Haim Z'ew Hirschberg]

In the Arts

The dramatic aspects of the biblical story of the Flood have ensured Noah's continued popularity as a subject for treatment by writers and artists. During the Middle Ages, Noah was seen as a prefiguration of Jesus (see above) and christological interpretations were also placed on his drunkenness, which was believed to foreshadow the bitter drink of the Passion. At the same time, however, some of the English mystery plays showed Noah and his wife in a comic light, their ribald dialogue appealing to unsophisticated audiences. The English medieval cycles, which used a prefabricated stage setting of the ark, include those of Chester ("The Deluge"), Coventry ("Noah's Flood"), Towneley, and York ("The Building of the Ark" and "Noah and his Wife"). Some of these plays were presented by trade guilds, such as the Newcastle shipwrights (*Noah's Ark, or the Shipwrights' Ancient Play or Dirge*). The theme inspired the Norman poet Olivier Basselin's "Eloge de Noé" – a drinking song with the refrain "O le bon vin!" Toward the end of the 15th century, the Italian Annio of Viterbo published a book of spurious *Antiquities* (Rome, 1498) containing the "Pseudo-Berosus," a legendary account of Noah and

his descendants which especially linked the Japhethites with some of the European nations. The 16th-century epic treatment of the Deluge theme was written by the Polish poet Jan Kochanowski (1558). The subject still retained some popular appeal in 17th-century England, with "Noah's Flood," a musical presentation licensed in 1662; a Bartholomew Fair "droll" entitled *The Creation of the World*; and Edward Ecclestone's opera, *Noah's Flood; or The Destruction of the World* (1679). The Dutch Catholic Joost van den Vondel's five-act drama, *Noah, of ondergang der eerste weereelt* (1667), was on a higher level than all of these.

The only major writer of the 18th century to show interest in the theme was the Swiss poet and dramatist Johann Jacob Bodmer, who devoted two separate epics to the Bible story: *Noah ein Heldengedicht* (1750, 1752²; published as *Die Noachide*, 1765) and *Die Synd-Flut* (1751, 1753²). Twentieth-century interpretations have included *Die Suendflut* (1924), a drama by the German anti-Nazi author and artist Ernst Barlach; a poem by the U.S. writer Robert *Nathan (in "A Cedar Box," 1929); *Noé* (1931; *Noah*, 1935), one of the great successes of the French dramatist André Obey; and *Noah and the Waters* (1936), a poem by the Anglo-Irish author Cecil Day Lewis. Two treatments of the post-World War II period were *The Flowering Peach* (1954) by the U.S. playwright Clifford *Odets, who transferred the Noah story to a modern setting; and Hugo Loetscher's *Noah* (1970), a satire on the affluent society, which used the biblical theme to point a contemporary moral.

In art, the main subjects treated are the Flood (Gen. 7, 8) and the drunkenness of Noah (Gen. 9). The subject matter of catacomb art is often drawn from the prayers of the *Comendatio Animae*. Like Isaac and Daniel, Noah is a popular subject in the art of the catacombs because he figures in the prayers as a symbol of the redeemed soul. Notable representations are those in the second-century murals from the catacomb of Priscilla and the fourth-century murals from that of Domitillus. In early Christian Art, the ark is represented as a small floating cask in which Noah stands alone, his arms upraised in an attitude of supplication. Later it became a floating house or three-tiered basilica, differing from a ship in that it had no oars or sails. A representation of Noah's ark is found on a mosaic from the ancient synagogue in Gerasa, Jordan, and scenes from the story of Noah are depicted in the 12th-century mosaics of Palermo and Monreale, and in the 13th-century mosaics from St. Mark's Cathedral, Venice. The theme also occurs in sculpture, frescoes, manuscript illuminations, and stained glass. There are carvings of the subject in the Gothic cathedrals of Bourges, Wells, and Salisbury, and in 12th-century wall paintings from St. Savin, France. It is illustrated in the sixth-century *Vienna Genesis* (National Library, Vienna), the seventh-century *Ashburnham Pentateuch* (Bibliothèque Nationale, Paris), the 13th-century *St. Louis Psalter*, and in a number of Hebrew manuscripts, including the French 13th-century *British Museum Miscellany* (Add. 11:639) and the 14th-century *Sarajevo Haggadah*. In the 13th-century Hispano-Provençal

Farhi Bible (formerly in the Sassoon Collection, Letchworth) there is a plan of the ark.

During the Renaissance, Lorenzo Ghiberti executed a bas-relief of the story of Noah after the Flood on his bronze gates to the Florence Baptistery, and Paolo Uccello painted a fresco of the Deluge in the Church of Santa Maria Novella in Florence. One of the most dramatic representations of the Flood is that by Michelangelo (Sistine Chapel, Vatican), who also depicted the sacrifice and the drunkenness of Noah, and Shem and Japheth covering his nakedness. In this, as in other Renaissance paintings of the subject, the sons are themselves oddly depicted in the nude. The story of Noah also figures in the Raphael frescoes in the Vatican. There are paintings of Noah entering and leaving the Ark by Jacopo Bassano in the Prado, and a painting of Noah leaving the ark by Hieronymus Bosch is in the Boijmans Museum, Rotterdam. In the 17th century, Nicolas Poussin painted the Flood as an image of winter in a series of four paintings representing the four seasons (Louvre). Poussin's painting of the sacrifice of Noah is in the Prado. Among modern artists, Lesser Ury painted the Flood, and a painting of Noah's Ark by Marc Chagall is in the Louvre.

In music, there were two 19th-century oratorios on the theme of the Flood, one by Johann Christian Friedrich Schmerder (1823); and *Le Déluge* (1876; première at Boston, U.S., 1880) by Camille Saint-Saëns. In 1970 *Two by Two*, a musical on the theme based on Clifford Odets' above-mentioned play and with Danny Kaye in the star role, was staged on Broadway.

NOAH, BOOKS OF. Although a Book of Noah is not referred to in the Christian canon lists, there is a good deal of evidence that such a work or works existed. In Jubilee 10:1–15 reference is made to a medical and anti-demonic work transmitted by Noah to his descendants after the Flood, when, in spite of Noah's intercession, a tenth of the demons were left on earth, causing trouble and affliction. What appears to be another form of this passage is to be found in the opening paragraphs of the medieval medical treatise *Sefer Asaf ha-Rofe*. Some scholars, such as Charles, would also attri-

bute Jubilees 7:20–39 to a Book of Noah. A second body of Noah material is that discerned by Charles in 1 Enoch. The chapters which appear assuredly to be drawn from a Noah book are 1 Enoch 6–11, 60, 65–69, 106–7. Material closely associated with 1 Enoch 6–11 and 106–7 appears in 1Q19, the so-called “Book of Noah” from Qumran. This text does not appear to be simply the Hebrew original of the 1 Enoch Noah material, but to be closely associated with it. Yet another group of Noah texts associated with ritual instructions of a priestly character is referred to in Jubilees 21:10, there as part of Abraham's instructions to Isaac. This tradition was also known to the author of the Greek “Fragments of the Testament of Levi,” undoubtedly a very ancient text, again directly attributed to Noah and included in Abraham's instructions to Isaac (Greek fragment 57), and in a brief form, without the attribution to Noah, in the Testament of the Twelve Patriarchs, Levi 9:11. The Jewish magical book *Sefer ha-Razim* is also ascribed to Noah.

[Michael E. Stone]

NOAH, MORDECAI MANUEL (1785–1851), U.S. editor, politician, and playwright. Noah, who was probably the most influential Jew in the United States in the early 19th century, was born in Philadelphia. His father, Manuel Noah (c. 1755–1822), was a bankrupt itinerant merchant, and Mordecai Noah was raised by his maternal grandfather, Jonas Phillips. After apprenticeship as a gilder and carver, Noah became a clerk in the U.S. Treasury through the assistance of Robert Morris (1734–1806), the financier and senator.

Noah began his political career in Philadelphia in 1808 when he, along with other “Democratic Young Men,” supported the Republican candidate, James Madison, for president. A year later Noah went to Charleston, where he edited the *City Gazette*. A war “hawk,” he strongly supported the War of 1812. In 1813 he was appointed consul at Tunis, but was recalled two years later after he was accused of misappropriation of funds, though the charges were never proved. On his return to the United States, Noah established himself permanently in New York with the help of his uncle Nathaniel Phillips, publisher of the *National Advocate*, which ardently supported the Democratic Party of New York County. Noah became the editor of the newspaper in 1817, giving him access to the Tammany Society. He was appointed high sheriff in 1822 and two years later was elected grand sachem of Tammany.

When Phillips sold the *National Advocate* in 1824, Noah became the publisher of the *New York National Advocate*. He broke with Tammany over its opposition to De Witt Clinton, then commissioner of canals, and in 1825 supported Clinton for governor. Noah continued to oppose Tammany in the paper he established, the *New York Enquirer*, published 1826–29.

Critical of Andrew Jackson, particularly of his attack on the U.S. Bank, he associated himself with the newly created Whig Party in 1834, and as publisher and editor of the *Evening Star*, a Whig paper, demonstrated anti-immigrant and anti-Catholic bias. When the Native American Party of 1835–36, the forerunner of the Know-Nothing Party, was created, he was one of its chief supporters. He also supported the Texas revolt of 1836 against Mexico and angrily attacked the abolitionist cause. In 1841, he became a judge of the Court of Sessions.

Noah was a prolific playwright; many of his plays reflected his patriotic fervor. His first play, *Fortress of Sorrento* (written 1808), was followed by, among others, *She Would Be a Soldier* (1819); *Siege of Tripoli* (1820), also produced as *Yuseff Caramalli*; and *Marion, or the Hero of St. George* (1822).

Noah's interest in Jewish affairs drew him into activities on behalf of the congregations of Mikveh Israel in Philadelphia and Shearith Israel in New York. Long taken by the idea of a Jewish territorial restoration, Noah, in 1825, helped purchase a tract of land on Grand Island in the Niagara River near Buffalo, which he named Ararat and envisioned as a Jewish colony. Though the proposal elicited much discussion, the attempt was not a success and Noah's pretensions as ruler were ridiculed. After the failure of the Ararat experience, Noah turned more strongly to the idea of Palestine as a national home for Jews. As the best-known American Jew of his time, Noah in 1840 delivered the principal address at a meeting at B'nai Jeshurun in New York protesting the *Damascus Affair.

[Leo Hershkovitz]

NOB (Heb. נוב), priestly town in the territory of Benjamin, near Jerusalem. When David fled from Saul's court, he traveled by way of Nob (1 Sam. 21ff.). Pretending to be on a royal mission, he obtained from the chief priest Ahimelech hallowed bread and the sword of Goliath from the local sanctuary for himself and his men. Doeg the Edomite, Saul's chief herdsman, denounced the priest to the king (1 Sam. 22:9ff.); on Saul's order, he slew 85 priests and also "men and women, children and sucklings, and oxen and asses and sheep" (1 Sam. 22:19). Abiathar son of Ahimelech escaped and later became high priest to David. Nob was the last stopping point, after Anathoth, of Sennacherib's northern army before their assault on Jerusalem (Isa. 10:32). It was one of the cities settled by Jews returning from Babylonian Exile. In the Mishnah, the question of the permissibility of high places at Nob is discussed (Zev. 14:7; Tosef., Zev. 13:5). The ancient city is identified with an Iron Age site near the village of 'Isawiyya on Mt. Scopus, near the modern campus of the Hebrew University.

[Michael Avi-Yonah]

NOBEL, NEHEMIAH ANTON (1871–1922), German Orthodox rabbi and religious leader. Born in Nagymed (Hungary), he was the son of JOSEPH NOBEL (1840–1917), author of a number of exegetical and homiletical works (*Hermon*, 1919³; *Levanon*, 1911; *Tavor*, 1899; and others). After being brought up in Halberstadt, where his father was *Klausrabbiner*, Nehemiah Nobel studied at the Berlin *Rabbinerseminar. He served in the rabbinate of Cologne from 1896 to 1899, and then for several months in Koenigsberg. From there he went to the University of Marburg to study under Hermann *Cohen, who had a great influence upon him, although they did not agree about Zionism. Nobel's activity in the Zionist Movement began in Cologne. He was on close terms with Theodor *Herzl and David *Wolffsohn and was one of the original founders of the Zionist Federation in Germany. He also took part in the founding convention of the *Mizrachi movement in Pressburg (1904). Nobel's Zionist activity, motivated by his conviction that religion and nationhood are organically connected in Judaism, stood out in contrast to the united anti-Zionist front of Orthodox and liberal rabbis in Germany at the time. From 1901 he served in the rabbinate of Leipzig, from 1906 in the rabbinate of Hamburg, and finally, from 1910, in the rabbinate of Frankfurt, where he succeeded Marcus *Horovitz. There he prompted closer contacts with Judaism and Zionism in circles that had been drifting away from Judaism. His sermons and preachings, in which he was extraordinarily impressive, tackled topical problems. He influenced such Jewish thinkers as Ernst *Simon, Oscar Wolfberg (Y. *Aviad), F. *Rosenzweig, and M. *Buber. The last two helped to publish the jubilee book for his 50th birthday (1921). In 1919 he was elected chairman of the Union of German Rabbis and was head of the Akademie fuer die Wissenschaft des Judentums. He died a short time after having been appointed professor of religion and ethics at the University of Frankfurt. A number of his sermons as well as scholarly and halakhic articles, which first appeared in *Festschriften*, have been published in Hebrew as *Hagut ve-Halakhah* (1969). Nobel's younger brother, ISRAEL (1878–1962), rabbi in Schneidemuehl and Berlin, published *Offenbarung und Tradition* (1908) and a Passover *Haggadah* with German translation and notes (1927).

***NOELDEKE, THEODOR** (1836–1930), German Orientalist. Born in Harburg, near Hamburg, Noeldeke taught from 1872 until 1906. Best known for his prizewinning *Geschichte des Qorâns* (1860), he was an acknowledged expert on the comparative philology of the Semitic languages and published grammars of New Syriac (1869), Mandaean Aramaic (1874), and Syriac (1880). His expertise in this field was fully revealed

in his *Beitraege zur semitischen Sprachwissenschaft* (1904) and its supplement (1910).

Noeldeke was also a distinguished scholar in the biblical and rabbinic fields. Among his works in this sphere are *Ueber die Amalekiter und einige andere Nachbarvoelker der Israeliten* (1864); "Die Geschichte der Juden in Arabien" (in *Beitraege zur Kenntniss der Poesie der alten Araber*, 1864); *Die alttestamentliche Literatur* (1868), a French edition of which, by H. Derenbourg and J. Soury, appeared in 1873; and *Untersuchungen zur Kritik des Alten Testaments* (1869). Noeldeke, whose pupils included Louis *Ginzberg, was a prolific writer on Islamic history and Arabic and Persian culture, his general works including *Orientalische Skizzen* (1892; *Sketches from Eastern History*, 1892). He also published *Die Inschrift des Koenigs Mesa* (1870), an explanatory work on the Mesha Stele; an essay on the Aramaic papyri of Assuan (1907); and various introductions and annotations to books by other scholars, for example, Friedrich Schulthess' *Grammatik des christlich-palästinischen Aramaeisch* (1924).

NOERDLINGEN, city in Bavaria, Germany. Jews were to be found in Noerdlingen from the 12th century, but the sources reflect an organized community only in the 13th century. Eight Jews were martyred there during the *Rindfleisch persecutions (1298), but community life was renewed soon afterward. In 1331 Emperor Louis IV granted four "honorable" Jewish elders the extraordinary privilege of jurisdiction over foreign Jews. There were about 20 Jewish houses in the Judengasse (which was also inhabited by Christians), and the community possessed a synagogue and a cemetery; the Jews made their living as moneylenders. During the *Black Death persecutions of 1348 many Jews were killed or imprisoned; their property and promissory notes were confiscated by the city. Emperor *Charles IV pardoned the burghers and canceled their debts to the Jews. Subsequently he acceded to the city's request to readmit Jews. A synagogue was mentioned in 1357, and in 1378 the community consecrated a cemetery. However, during fresh riots in 1384 about 200 Jews were murdered and the community ceased to exist. After Jews were again admitted into the city in 1401, a new and prosperous community came into being; a new cemetery, which also served the neighboring communities, was put into use in 1415. Taxes were heavy: five **Schutzjuden* ("protected Jews") provided three-eighths of the amount paid by the whole 34-member city council. In 1437 Jews were forbidden to hire Christian servants and ordered to wear the Jewish *badge – though this order does not seem to have been strictly enforced. The Hussite wars resulted in temporary banishment between 1454 and 1459, and hostile agitation by the clergy led to the expulsion of the Jews in 1507. The synagogue was sold in 1517, but refugees who had settled nearby attended Noerdlingen's annual fairs. A community, with 25 families, was organized in 1870, dedicated a new

synagogue in 1885, and founded a *hevra kaddisha* in 1898. It numbered 489 persons in 1899, and 314 (3.8% of the total) in 1913. By June 16, 1933, only 186 remained; 145 of them left before 1942, when the remnants of the Jewish community were deported. The mayor of the city prevented the destruction of the synagogue in 1938, and in 1952 it was sold to a Protestant group as a community center. The building was rebuilt but, in the process, the architecture of the former synagogue was destroyed. In 1997 the building was demolished and replaced by a new structure. A plaque commemorates the former synagogue.

NOETHER, family of mathematicians in Germany. MAX NOETHER (1844–1921), born in Erlangen, was professor of mathematics for nearly 50 years. He made important contributions to geometry and was the foremost authority of the algebraic-geometric school in Germany. He wrote many papers on the geometry of hyperspace, Abelian and Theta functions. His son FRITZ NOETHER (1884–1941) became professor of applied mathematics at the Technische Hochschule, Breslau. EMMY (AMALIE) NOETHER (1882–1935), Max's daughter, was born and educated in Erlangen. She went to Goettingen in 1916, but because of the prevailing anti-feminine bias she was unable to obtain an official post. Conditions changed under the Weimar Republic and after much opposition she was appointed "unofficial extraordinary professor" in 1922. She derived an income from a lectureship in algebra. The advent of the Hitler regime forced her to emigrate to the U.S. where she was appointed professor at Bryn Mawr College, Pennsylvania. She was a pioneer in the general theory of ideas, and from 1926 onward initiated advances in non-commutative algebra. A creative mathematician of high caliber, her influence on contemporary mathematics cannot be judged solely by her published work, as she exerted great influence through her students and many of her ideas were developed by them.

NOLA, ELIJAH BEN MENAHEM DA (baptismal name, **Giovanni Paolo Eustachio**; c. 1530–c. 1602), Italian Hebraist and apostate. One of the leading rabbis in Rome during the late 16th century, Da Nola was also a renowned physician and philosopher. When Moses *Alatino was commissioned to translate Hebrew texts into Latin, he received valuable assistance from Da Nola. While acting as a Hebrew tutor to Tommaso Aldobrandini, brother of Pope Clement VIII, Da Nola was induced to convert to Catholicism in 1568, and eventually became a *scrittore* at the Vatican library. He copied Hebrew manuscripts for Cardinal Federico Borromeo, archbishop of Milan, many such works in his hand being preserved in the Vatican.

Da Nola later published *Sacro Settenario raccolto dalle sacre Scritture...* (Naples, 1579), on the symbolism of the figure 7 in the Old and New Testaments. A collection of sermons, *Salutari discorsi... aggiuntavi un modo utilissimo de la vita che denno tenere i Neophiti* (Naples, 1582), dedicated to Pope Gregory XII, contained an apologia for his apostasy which, the author claimed, had been based on knowledge and conviction, rather than on fear or greed. Like many others who converted during the Renaissance era, Da Nola endeavored to prove the superiority of Christianity over Judaism by judicious manipulation of kabbalistic books, particularly in regard to the significance of the Trinity and the numerical value of selected Hebrew terms.

NOM, IBRAHIM (Avram Naon, 1870–1947), Turkish poet and lawyer. A successful *Istanbul attorney, he was prominent in Turkish literary life, publishing a review and writing for leading periodicals. A collection of his verse, *Kalbi Şikeste* (“Broken Heart”), appeared in 1901. Other poems, some of which inspired popular Turkish songs, were published from 1938 until 1947 in the Ladino paper *La Boz de Türkiye*. Nom is said to have pioneered the use of the acrostic in Turkish poetry.

[Shmuel Moreh]

NOMADISM, a socioeconomic mode of life based on intensive domestication of livestock which requires a regular movement of the community in an annual cycle in order to sustain the communal ecological system.

Definition

The defining feature of pastoral nomadism is movement, which is neither aimless nor boundless, from pasture to pasture and from watering point to watering point, along well-

defined routes, at fixed periods, in rhythm with the rainy and dry seasons, and in greater or lesser comity with adjoining nomadic and settled groups. Little or no agriculture is practiced. Nomads necessarily rely upon trade with or raids upon agriculturalists for food and other necessities or occasional luxuries not supplied by their herds. Pastoral nomads often supply settled peoples with transport services by providing animals and serving as caravaneers. Occasionally, control of routes and specialization in trade lead to settlement of nomad elites in commercial centers such as Palmyra in Syria and Petra in Edom. Ethnographers are generally agreed that pastoral nomadism arose later than the emergence of neolithic agriculture in the Middle East. At first it involved herders of sheep and goats who adapted themselves to the spartan conditions of life on the steppe but who were unable to venture more than one or two days’ journey from water. Full nomadism emerged only in about 1500–1000 B.C.E. with the domestication of camels which can go as long as 17 days without water. Introduction of the horse at a somewhat later date allowed for still more flexibility of movement and agility in warfare. Full nomadism never replaced seminomadism altogether and agriculturalists learned how to specialize on the side in pastoralism through a form of nomadism known as transhumance. Actual nomadic groups are extremely varied according to environmental conditions, types of animals bred, communal forms for establishing kinship, wealth, and status, historical fortunes of the group, and relations to surrounding nomadic and settled peoples.

In Ancient Israel

Ancient Israel was in contact with peoples who practiced pastoral nomadism. Some segments of Israel proper were pastoral nomads for varying periods of time in the arid and semi-arid zones of Sinai and the Negev, Transjordan, and the rain shadow regions of Canaan, i.e., mostly on the eastern slopes of the central highlands. Excluded from consideration is animal husbandry, which is frequent in agricultural communities in which a few animals raised by farmers are allowed to forage in the human settlement and to graze on farmland stubble and fallow land. The animals referred to in the early Israelite Book of the Covenant (e.g., Ex. 21:28–37; 22:3–4, 9–12; 23:4–5, 12) reveal that the laws applied to resident farmers for whom animal husbandry was a secondary activity and among whom vast pasturage as a special ecological aspect shaping the entire socioeconomic life was absent. Also, we omit all consideration of non-pastoral nomadism, e.g., wild species moving on their own through an annual cycle and nomadic human communities of hunters, fishers, and gatherers. Full or classic pastoral nomadism entailed maximum independence through human symbiosis with the camel and, to a lesser degree, with the horse. It allowed the nomad to keep a safe distance from the settled lands but, when required to trade or raid, he could do so from a position of considerable strength. The occasional camels mentioned in early Israel, if not an outright anachronism, were for transport and were too few in number and

insufficiently domesticated to have become the basis for an entire economy. The only full nomadism directly attested in the Bible is non-Israelite, e.g., a caravan of Ishmaelite-Midianite merchants who bought Joseph from his brothers (Gen. 37:25–28); Midianites, Amalekites, and people of the east who carried out camel razzias against Israel in the time of Gideon (Judg. 6:1–5); and Amalekites who raided southern Judah on a smaller scale in the time of Saul (1 Sam. 30).

SEMINOMADISM. Seminomadism or partial nomadism (also known as ass nomadism to distinguish the ass from the camel as the chief form of transport) is a mode of pastoral nomadism loosely applied to peoples who are often conceived as midway in the process of settling down after an earlier fully nomadic life. This is misleading in some instances and erroneous in others. In its origins pastoral nomadism was a specific adaptation of animal domestication to desert conditions after it was first developed among agriculturalists. There are of course instances of full nomads reverting to seminomadism and finally to agricultural settlement. But there are also cases of agriculturalists who are “depressed” into seminomadism by geopolitical circumstances. Sometimes this depression is permanent, while in other cases it is temporary. There is some reason to believe that the Israelite groups in the wilderness between Egypt and Canaan were thrown temporarily into a more fully nomadic life than they had known either in Egypt or prior to their entrance into Egypt and, furthermore, that they were consciously seeking a return to a more stable and perhaps even largely agricultural existence. More precisely, seminomadism indicates the relative dependence of herders of sheep, goats, and asses on the settled peoples or on full nomads for the sharing of water rights and for permission to graze. It also refers to their relative military weakness, lacking as they do a striking force of camels or horses. The concomitant of this reality is the high probability that the seminomad will engage in some form of limited agriculture. He is often sedentary for part of the year; fields and pasture are often interspersed; and the herd sizes relative to the human population are much smaller than in full nomadism. Accordingly, the seminomad will often appear to be an incipient peasant who has not yet attained his goal or a decadent farmer who has lapsed into a less secure life. In many cases, however, the seminomad regards his way of life as more satisfying than the softer and more politically lettered existence of the peasant. Traits of seminomadism appear frequently in the patriarchal stories concerning Abraham and Lot (Gen. 12:16; 13:2–12; 18:1–8; 20:14–15; 21:25–26), Isaac (Gen. 26:12–22), Jacob and Esau (Gen. 30:43; 31:17–18; 32:13–15; 33:18–20; 36:6–8), and Joseph (Gen. 37:2, 7; 42:1–5; 43:11; 46:31–34; 47:6). The precise nature of this type (or these types) of seminomadism is difficult to assess in that the movements are not strictly described as regular but are explained largely with reference to famine, intermarriage, religious pilgrimage, and conflicts within and between groups. The Israelites in Egypt are pictured as small stock breeders who also cultivate vegetable gardens (Ex. 10:24–26; 12:1–13,

31–34, 37–39; Num. 11:4–6). Living close to the Egyptian frontier with Sinai (Ex. 1:11; 9:26; 12:37), the holy place of their deity is located a three-day journey away in the desert (Ex. 3:18; 5:3; 8:24). Their relatively self-contained economy was threatened by the recent imperial policy which forced them to work on state building projects and in state-owned fields. One tradition has it that, as they departed Egypt with their flocks, the Israelites despoiled the Egyptians of jewelry and clothing in the manner of a nomadic razzia (Ex. 3:21–22; 12:35–36). In the wilderness the Israelites present a confused picture of a semi-nomadic people thrust suddenly into conditions where only well-provisioned travel parties or full nomads with camels might normally survive. The Israelites adjusted to this crisis by retaining their flocks for dairy products, wool, and hides. Occasional sacrifice of their animals provided some meat but food staples were supplied by improvising with quail and wild plant products (“manna”). Water was available from oasis to oasis. Even so they seem to have survived only because the Midianites, into whom Moses is said to have married, supplied them with knowledge of the terrain and with basic survival skills; at least some of these Midianites accompanied certain of the Israelite groups into Canaan (Ex. 2:15b–22; 3:1; 18:1ff.; Num. 10:29–32; Judg. 1:16; 4:11). Although unreported, it is reasonable to suppose that the Israelites cultivated small vegetable plots during the time they spent at the oases in the vicinity of Kadesh. All available evidence points to the fact that the component groups in the larger Israelite confederation in Canaan were predominantly agricultural and engaged in supplementary animal husbandry (cf. the laws of the Covenant Code, Ex. 20:24 (19)–23:9 and the descriptions of tribal life in Gen. 49 and Deut. 33). This type of economy characterized a large majority of the population in the highlands of Galilee, Gilead, Samaria, and Judah – the heartland of ancient Israel. However, a significant minority of Israelites, who lived in the semiarid regions to the east and south, sustained a seminomadic economy. A diminishing frequency of references to such seminomadic life in later biblical books suggests that the percentage of seminomadic Israelites relative to the total population steadily declined. Given the marginal rainfall of the land, however, and the abiding attraction of the steppe for certain individuals and groups, seminomadism never ceased in biblical times. In fact, the *Rechabites were one group who made a sectarian virtue of their seminomadism, identifying it with the pure form of Yahwism and refusing adamantly to build houses or to engage in viticulture or grain-growing (Jer. 35). According to one tradition these Rechabites were actual descendants of the Midianite-Kenite group into which Moses married (1 Chron. 2:55). A more individualistic version of the tendency to equate holiness with seminomadic culture was the “consecration” of a person as a nazirite, perhaps originally associated with the spontaneous leadership of a war chieftain (Num. 6:1–21; Judg. 13:5, 7; 16:17). While such primitivist equations of Yahwism with seminomadism were not central to biblical traditions, it is nonetheless striking that many of the features of the early religion of Israel, although developed by a

predominantly agricultural people, were powerfully indebted to nomadic influences, e.g., the belief that the original home of YHWH was in the wilderness and the decided preference for a mobile shrine over that of a fixed shrine.

CUSTOMS AND WAY OF LIFE. As a congeries of ethnically, geographically, economically, socially, and politically diverse people formed Israel in Canaan, they adopted a framework for their socioeconomic life which drew on the norms, institutions, and practices of pastoral nomadism, with suitable modifications to settled conditions. Among these abiding influences were the practice of blood revenge (Gen. 9:5–6; Num. 35:19; Judg. 8:18–21; II Sam. 3:30; 14:4–7; 21:1–14); protection of the integrity of the patriarchal family (Ex. 20:12, 14, 17; 21:15, 17; 22:15–16, 21; Lev. 18:6–18; Deut. 25:5–10); the institutions of the *ger* – the protected resident alien (e.g., Ex. 22:20; Deut. 10:19); and the asylum (Ex. 21:13–14; Num. 35; Deut. 19), related to the nomad law of hospitality and asylum. Instead of a primitivist attempt to construct seminomadism in Canaan, early Israel was a synthetic socioeconomic formation of loosely federated seminomadic and peasant populations arranged in a socially fictitious kinship network and cemented by a common cult of HWHY. The complex transformation and adaptation of the seminomadic elements in the Israelite confederation are reflected in the ambivalent biblical attitude toward the desert, which is sometimes idealized as the setting for an originally pure Yahwism but which is more often pictured as a place of rebellion and division, in itself a region of waste and horror, the quintessence of death and danger.

Yet another form of pastoral nomadism is transhumance which occurs in communities with developed agricultural specialization where herds are moved to select pastures for a part of the year by herders who specialize in their tasks. A common form of transhumance is to take the herds into mountain ranges for summer upland pasturage after the snows have melted. In Canaan transhumance took at least two forms. Immediately following the winter rains, herds were taken some distance into the steppes to feed on the temporary spring growth. As the summer wore on, and pasturage withered, they were taken to the better watered seaward-facing plains and mountain slopes. There are some biblical data which may be read as evidence for the practice of transhumance nomadism among the Israelites. Joseph and his brothers care for the flocks near Shechem and Dothan while Jacob remains at Hebron (Gen. 37:12–17). Nabal is a man of wealth in Maon whose hired men or slaves care for his large flocks at Carmel (I Sam. 25). Wealthy landowners in Transjordan provision the exiled David with agricultural and pastoral products (II Sam. 17:27–29; 19:31–32). The Job of the prose framework (Job. 1:1ff.; 42:12–17) is a wealthy farmer who also has thousands of domesticated animals cared for by his servants. The region of Bashan in northern Transjordan was well known as a prime cattle-breeding area, to which wealthy Israelites appear to have sent their flocks and herds (Ezek. 39:18; Amos 4:1; Ps. 22:13). Israelite kings capitalized on this process by appointing

stewards over royal herds and flocks which were permanently located in the most attractive pastoral regions (II Sam. 13:23; I Chron. 27:28–30; II Chron. 26:10; 32:27–29).

In order to achieve a more exact socioeconomic characterization of early Israel, scholars will increasingly require expertise both in biblical studies and in ethnography and the social sciences. It is evident that the assumption that Arab Bedouin nomadism supplies the nearest surviving approximation to Israel's nomadism, while broadly apt, lacks all exactitude unless care is taken to distinguish among the various subforms and historical constellations of Bedouin existence.

It is necessary to reject the vague notion that full nomadism in the Arabian peninsula was the temporally original base for Middle Eastern socioeconomic evolutionary development. Far from full nomadism having been some simple state from which seminomadism and agriculture grew, almost precisely the opposite occurred in the Middle East over millennia of time as agriculture originated animal domestication was introduced into the sparse conditions of the desert and was elaborated through the eventual introduction of the camel and the horse. Identification of the mutually illuminating affinities between Arab and Israelite nomadism must not obscure the complex web of cultural and historical factors at work in the two different contexts from age to age and from subregion to subregion.

[Norman K. Gottwald]

NOMBERG, HERSH DAVID (1876–1927), Yiddish essayist and short story writer. Nomberg was born into a family of rabbis and Hasidim, in Mszczonow, near Warsaw. Though he traveled widely, Nomberg remained associated with the Polish capital. After both a traditional Jewish and a self-taught secular education, he joined the circle of Y.L. *Peretz (to which Abraham *Reisen and Sholem *Asch also belonged), becoming an ardent and loyal disciple and one of the best interpreters of his works. It was Peretz who persuaded Nomberg to write in Yiddish, his first poem in this language appearing in 1900. Nomberg wrote for the Warsaw Hebrew paper *Ha-Zofeh* (1903–5) and was, for a time, its editor. His first collection of Hebrew stories appeared in 1905, followed by five collections in Yiddish. It was under his and Peretz's influence that the struggle between Hebraists and Yiddishists at the *Czernowitz Yiddish Conference in 1908 was resolved and a compromise resolution adopted which proclaimed Yiddish as *a* (not *the*) national language of the Jews. The anonymous hero of his

masterful, psychoanalytical tale "Fligelman" ("Winged Man," 1908) served as a symbol for the entire generation of this crucial period. Indeed, most of Nomberg's heroes can be characterized as "winged men."

After 1910 Nomberg almost entirely gave up belles-lettres for politics and journalism. In 1916, he was one of the founders of the Folkspartei ("People's Party") which advocated concentration on Jewish autonomous rights in Poland, though not opposing emigration to Erez Israel. He served in 1919–20 as a member of the Polish *Sejm*. In 1912, however, he published the later often-staged drama, *Di Mishpokhe* ("The Family," 1912), based on the idea of the potential for moral improvement in humans. His interest in the Yiddish theater was also expressed through reviews and translations.

In general he was a controversial figure: his characters often reverse traditional gender roles, while his language is characterized by minimalist, anti-rhetorical traits. In the press of the time he was often compared with the protagonists of his fiction in their cynicism and lack of values. His criticism of progressive movements, such as the New York group, *Di Yunge*, contributed to this trend. Even so, Nomberg helped to provide a home for Jewish writers in Warsaw. He was the driving force behind, and for many years the president of, the Society for Jewish Writers and Journalists, which came to be better known as "Tlomatske 13," after the address of its building, a famed center of Yiddish cultural activity until its liquidation by the Nazis. Jewish audiences followed his perceptive articles, especially in the Warsaw Yiddish daily *Der Moment*, with which he was connected for a decade. When he died in 1927, tens of thousands of his readers accompanied him to his grave near that of his friend and preceptor Peretz. His was one of the few tombstones which survived Nazi destruction.

[Melech Ravitch / Shifra Kuperman (2nd ed.)]

NONES, BENJAMIN (1757–1826), U.S. patriot and soldier during the American Revolution. Nones, who was born in Bordeaux, France, served as aide-de-camp to his former schoolmate, Marquis de Lafayette (1777), fought in Count Casimir Pulaski's legion during the defense of Charleston and was cited for bravery (1779), and served as aide to General Washington, holding the rank of major. After the Revolution, Nones settled in Philadelphia where he was variously employed as a broker and factor, a notary public, and as government interpreter for French, Spanish, and Portuguese. He was active in Republican politics and, in keeping with his abolitionist sympathies, freed his slaves after the Revolution. Nones served as president of Congregation Mikveh Israel in Philadelphia.

His son JOSEPH B. NONES (1797–1887) was wounded while serving as a midshipman in a battle against Algerian pirates in 1815. At the age of 70, he wrote a colorful account of his adventures in the Navy. He was a pioneer in processing concentrated foods, and in 1829 he proposed a program to combat scurvy in the Navy. In later life, he was an importer in Philadelphia.

NORDAU, MAX (Simon Maximilian Suedfeld; 1849–1923), co-founder of the World Zionist Organization, philosopher, writer, orator, and physician. Born in Pest, the son of Rabbi Gabriel Suedfeld, Nordau received a traditional Jewish education and remained an observant Jew until his eighteenth year, when he became a militant naturalist and evolutionist. In 1875 he earned an M.D. degree at the University of Pest, and he settled in Paris in 1880 as a practicing physician. Nordau's career in journalism dates back to his childhood. In 1867 he joined the staff of the *Pester Lloyd*, and in time he became a correspondent for leading newspapers in the Western world, including the *Vossische Zeitung* in Berlin, the *Neue Freie Presse* in Vienna, and *La Nación* in Buenos Aires, Argentina.

Nordau achieved fame as a thinker and social critic with the publication of *Die Conventionalen Luegen der Kultur-menschheit* (1883; *The Conventional Lies of Our Civilization*, 1884). He sharply criticized "the religious lie," the corruption and oppression of monarchical and aristocratic regimes, the deceptions of political and economic establishments, and the hypocritical adherence to outworn sex mores. He set forth as an alternative what has been called his "philosophy of human solidarity." Nordau's "solidaritarianism" signifies the unity of mind and love. It insists on the intimate connection between free institutions and free inquiry in all areas of human concern. The *Lies* was translated into fifteen languages, including Chinese and Japanese. It raised a storm of controversy and was banned in Austria and Russia. It was followed by *Paradoxe der Conventionalen Luegen* (1885; *Paradoxes*, 1896), which discussed such topics as optimism and pessimism, passion and prejudice, social pressure and the power of love, sham and genuine success. This work also went through several editions and translations.

Even more controversial was *Entartung* (1892; *Degeneration*, 1895), in which Nordau subjected major figures and trends in European art and literature to scathing denunciation. Applying Cesare Lombroso's term "degeneracy" to the works of such men as Nietzsche, Tolstoy, Wagner, Zola, Ibsen, and such phenomena as symbolism, spiritualism, egomania, mysticism, Parnassianism, and diabolism, Nordau predicted the coming of a human catastrophe of unprecedented proportions. An entire literature developed over *Degeneration*, including a rebuttal in book form by George Bernard Shaw. More than 60 years after its first publication, *Degeneration* continued to be the subject of doctoral dissertations accepted

by American universities; the book was republished in New York in 1968. Three other works merit perhaps even greater attention than *Lies* and *Degeneration*. The first is *Der Sinn der Geschichte* (1909; *The Interpretation of History*, 1910), which examines man's advance from parasitism through supernaturalist illusion to knowledge and human solidarity. To Nordau, the purpose of man's history was to achieve a lessening of human suffering and to actualize "the ideal of goodness and selfless love." The second, *Biologie der Ethik* (1921; *Morals and the Evolution of Man*, 1922), is a treatise on the natural roots of ethics, the relations between the legal and the moral, and the meaning of "scientific ethics," which aims at the improvement of human life through the cultivation of the twin "solidaritarian" powers of intelligence and compassion. The third, *Der Sinn der Gesittung*; "The Essence of Civilization" (written in 1920), was published in 1932 in an unsatisfactory Spanish version. In this last, fragmentary work, Nordau advocated "the elevation of the independent local community, the free city-republic, to the general type of community" as the best means of redeeming the individual from his bondage. Nordau argued the case of "solidaritarian socialism," which assigns to private property its proper limits without, however, abolishing it. Nordau regarded Communism as entirely unacceptable and, in its Bolshevik form, as "socialism gone mad."

In the field of belles lettres, Nordau's major works are *Der Krieg der Millionen* (1882), *Die Krankheit des Jahrhunderts* (1888; *The Malady of the Century*, 1896), *Seelenanalysen* (1892), *Das Recht zu Lieben* (1894; *The Right to Love*, 1895), *Drohenschlacht* (1898; *The Drones Must Die*, 1899); *Doktor Kohn* (1899; *A Question of Honor*, 1907); *Morganatisch* (1904; *Morganatic*, 1904), *The Dwarf's Spectacles, and Other Fairy Tales* (1905), and an unpublished biblical tragedy in four acts, *Rahab* (c. 1922).

The Jewish problem was never foreign to Nordau's thoughts. His revulsion against antisemitism is reflected in his essay on Jacques Offenbach entitled "The Political Hep! Hep!" included in *Aus dem wahren Milliardenlande* (an abridged translation entitled *Paris Sketches* appeared in 1884). In the *Lies* Nordau condemned hatred of the Jew as a symptom of the malady of the age. Nordau's upbringing, his piety toward his Orthodox parents (his observant mother lived in his house in Paris until her death in 1900), and the references to Jewish destiny in his general writings all show that the frequent charge of Nordau's alienation from Judaism in his pre-Zionist period is exaggerated.

Nordau met Theodor *Herzl in 1892. As Paris correspondents for German-language newspapers, they witnessed the manifestations of antisemitism in the French capital. In November 1895 Herzl discussed his idea of a Jewish state with Nordau, after Emil Schiff, a friend concerned over his mental condition, advised him to see a psychiatrist. Far from declaring Herzl insane, however, Nordau concluded the consultation by saying: "If you are insane, we are insane together. Count on me!" To Nordau, the idea of a Jewish state appeared as a most welcome means for the implementation of his "solidaritarian" philosophy by Jews in the land of the Jews.

At the First Zionist Congress (1897), Nordau drafted the famed Basle *Program. He served as vice president of the First to the Sixth Zionist Congresses and as president of the Seventh to the Tenth Congresses. In his famed addresses to these Congresses he surveyed the Jewish situation in the world and described and analyzed the physical and material plight of the Jews in Eastern Europe, as well as the moral plight of the emancipated and assimilated Western Jew, who had lost his contact with his fellow-Jews and faced political and social antisemitism, which excluded him from non-Jewish society. These addresses, together with his other Zionist pronouncements, became classics of Zionist literature. At the Congress of 1911 he warned that if current political trends persisted, six million Jews, i.e., those living in the Russian Empire and other East-European countries, were doomed to perish. He was convinced that only political Zionism could forestall the tragedy. Nordau passionately defended Herzl's political Zionism against Aḥad Ha-Am's cultural Zionism, which he regarded as being pre-Zionist. He believed that his opponent's idea of a "spiritual center" would only obstruct the Zionist effort to rescue large masses of Jews in Erez Israel. Citing a statement of the "cultural Zionists" – that "we are not concerned with Jews but with Judaism" – Nordau told the Sixth Zionist Congress, "Judaism without Jews' – we know you, beautiful mask! Go with this phrase and join a meeting of spiritualists!"

In loyalty to Herzl, Nordau supported the *Uganda Scheme and coined the phrase *Nachtasyl* (night asylum) to stress the temporary nature of the proposal. He himself was convinced that the idea of a charter for Uganda was a grave error, because Jews who could not go to Palestine would prefer America or Australia. An assassination attempt in Paris, by a young anti-Ugandist, Chaim Selig Luban, who held Nordau responsible for the scheme, failed. Nordau himself defended Luban before the investigating judge.

In his last conversation with Nissan *Katzenelson, Herzl stated that Nordau should be his successor as president of the Zionist Organization, adding, "I can assure you that he will lead the cause at least as well as I did or better." Nordau, however, declined to serve as president when he was offered the post after Herzl's death; he chose to remain outside the organizational hierarchy. His opposition to the cultural Zionism espoused by Aḥad Ha-Am was only matched by his opposition to the practical Zionists led by Chaim *Weizmann. Nordau believed in political action rather than in small-scale, gradual agricultural colonization.

Nordau spent World War I in exile and in relative isolation in neutral Spain. He favored Vladimir *Jabotinsky's idea of a *Jewish Legion, but felt that the Zionist movement should remain neutral, since Zionists lived in countries on both sides of the international conflict. In 1920 he delivered his celebrated Albert Hall address in London, in which he told British statesmen and Zionist leaders that if the *Balfour Declaration of 1917 was to have meaning, that meaning must be made manifest by the swift creation of a Jewish majority and ensuing Jewish political independence in Palestine. In 1919, when a wave of po-

grooms swept the Ukraine and other parts of Russia, he began advocating the speedy transfer of 600,000 Jews to Palestine within a matter of months. The Zionist leadership rejected his proposal as unrealistic, and in 1921 Nordau retired from active Zionist work. He died in Paris in 1923 and was interred in the Old Cemetery in Tel Aviv in 1926. In the late 1930s, Jabotinsky was to name his own program for the speedy creation of a Jewish majority in Palestine by the mass transfer of Jews from the Diaspora "The Max Nordau Plan."

[Meir Ben-Horin]

His daughter MAXA NORDAU (1897–1991) was a French painter. She was born in Paris, where she studied under Jules Adler. In 1937 she painted mural decorations in the Palestine pavilion at the Paris international exhibition, and during World War II lived in the U.S. A conservative representational artist, her subjects included Israeli landscapes, urban scenes, workyards, nudes, and portraits. Among her portraits are *Max Nordau*, *The Young David*, and *The Pioneers*. She illustrated books, including *Contes pour Maxa* by her father, and collaborated with her mother in writing *Max Nordau, a Biography* (1943).

Heyman, *The Minutes of the Zionist Council, The Uganda Controversy*, 1 (1970).

NORDEN, family of South African pioneers (mid-19th century), consisting of five brothers – Benjamin, Joshua Davis, Marcus, Samuel, and Harry. They were among the 18 Jewish members of the party of settlers sent out by the British government in 1820 to the turbulent frontier of the eastern Cape Colony. The 1820 settlers endured great privations in a wild country exposed to depredations by African tribesmen. After some years many of them, including the Nordens, settled the small towns which had sprung up. BENJAMIN NORDEN (1798–1876), a man of adventurous nature, traveled into the interior, engaged in the ivory trade, and had dealings with the Zulu king, Dingaan. He was a friend of the Boer voortrekker leader, Piet Retief. Norden was interested in plans for the development of Delagoa Bay and Port Elizabeth and joined in a gold prospecting venture. In 1840 he moved from Grahamstown, where he had a trading store with his brother MARCUS, to Cape Town and was associated with the De Pass family in exploiting the guano deposits on the west coast. In Cape Town he was active in civic affairs and was one of the municipal commissioners. He took the lead in forming Cape Town's first Hebrew congregation, Tikvath Israel (1841). When the first synagogue was built in 1849 Norden was president,

holding the office until 1857 when he returned to England. JOSHUA DAVIS NORDEN (1803–1846) settled in Grahamstown as an auctioneer after leaving his frontier farm. Like his brother, he served as a municipal commissioner and was leader of the Jewish community. To defend the town from attacks by tribesmen he raised and captained the Grahamstown Yeomanry, which bore his name. In 1846 he was killed at the head of his men in a skirmish during the War of the Axe, one of a long series of "Kaffir wars." As a tribute to his "intrepidity and bravery," his former comrades erected a plaque to his memory on a wall of St. George's Cathedral, Grahamstown. A third Norden brother, SAMUEL, was killed while leading a charge in the Basuto War (1858). A nephew of Benjamin Norden was the famous San Francisco, California eccentric Joshua Davis Norton (1818–1880), known as the "Emperor Norton," who in 1859 proclaimed himself "Norton the First, Emperor of the United States."

[Louis Hotz]

NORDHAUSEN, city in Thuringia, Germany. The earliest documentary evidence for the presence of Jews in Nordhausen dates from 1290, and by 1300 a Jewish community had come into being. Shortly thereafter a *Judenstrasse*, *mikveh*, and synagogue were established. A Jewish well is noted in records dating from 1322, and a cemetery is mentioned in 1334. During the course of a disturbance in 1324, the community's synagogue was destroyed. The Jews of the period made their living primarily through moneylending, and their sound economic position brought more Jewish immigrants into the city. In 1333 the municipal council agreed to the adjudication of all disputes between Jews by the rabbinic court. During the course of the *Black Death persecutions of 1349, however, a number of Jews suffered martyrdom. Frederick the Brave was partly responsible for deaths of Jews during this period. (A legendary account published in a Worms prayer book indicates that the entire Jewish community went dancing to its death, willingly submitting to the funeral pyre.) Although refugees from the persecutions fled to *Erfurt and *Frankfurt, by 1350 at least one Jew had already returned to resettle in Nordhausen. Abandoned Jewish property was transferred by King Charles VI to Count Henry von Hohlstein. Despite the upheaval and loss of life and property, by the end of the century a small Jewish community had reestablished itself in Nordhausen, holding its religious services in a private house. In 1391 King *Wenceslaus released the burghers from their debts to the Jews on payment of a fee to the royal chamber.

A small number of Jews continued to live in Nordhausen during the 15th century. In the 16th century they were subject to increasingly restrictive legislation, and they were finally expelled in 1559. They settled in the surrounding towns, however,

and continued to trade; the right to trade in Nordhausen itself was granted in 1619. By 1630 there were four **Schutzjuden* ("protected Jews") in the city; in the 18th century, however, no Jews were left. A modern community came into being only in 1808, after Nordhausen was annexed by *Westphalia. By 1817 there were 74 Jews in the city; in 1822 there were 100; in 1840 the number was 210; and in 1880, it was 494. A new cemetery was consecrated in 1827 and enlarged in 1854. The first rabbi in Nordhausen was Nathan Meyer, who assumed his post in 1817. A synagogue was dedicated in 1845, and the community was officially recognized in 1847. Among the prominent members of the community in the 19th century was the banker and philanthropist Jacob Plaut (1816–1901). From 1908 until 1925 the community was served with distinction by Rabbi Alfred Sepp. In 1925 the community numbered 438; in 1933 it had 394 members, five cultural and philanthropic organizations, and a religious school. In 1939, under the pressure of Nazi persecution and consequent emigration, the number of Jews declined to 128; in 1942 there were only 19. The community came to an end during World War II. The Jewish cemetery is preserved. In 1988 a memorial was consecrated to the synagogue that had been destroyed in 1938.

[Alexander Shapiro]

NORELL, NORMAN (1900–1972), U.S. fashion designer. Born Norman David Levinson in Noblesville, Indiana, the son of a haberdasher, Norell became the dean of American women's fashion designers in the 1950s and 1960s. At that time, he was the one American whose clothes were held to be the equal of anything created by the Paris couture. One of the first designers whose name appeared on a label, he was the first president of the Council of Fashion Designers of America. After attending military school during World War I, Norell traveled to New York City and studied at the Parsons School of Design in 1918 and Pratt Institute from 1920 to 1922. He returned to Parsons as a teacher in the 1940s and continued mentoring design students there until the end of his life. In 1922 he was hired by the New York studio of Paramount Pictures to create clothes for Gloria Swanson and other stars of the silent screen. He also designed for Broadway shows, including the Ziegfeld Follies. In 1928, he was hired by Hattie *Carnegie, working with her until 1941, when he went into partnership with Anthony Traina to form Traina-Norell. Traina retired in 1960 and Norell formed his own company, Norman Norell

Inc. He was known for making clothes with clean, precisely tailored silhouettes and superb workmanship. Breaking with tradition, he conducted his fashion shows for visiting buyers in the evening instead of during the working day – and in front of a black-tie audience. In 1943 he received the first of five Coty Awards for Fashion. In 1956, the same year Parsons gave him its Medal for Distinguished Achievement, he was inducted into the Coty Hall of Fame. He died in October 1972, suffering a stroke on the night before the opening of a retrospective of his work at New York's Metropolitan Museum of Art. In 2000, when New York's fashion industry paid tribute to its top designers by installing bronze plaques on Seventh Avenue, the heart of the garment district, Norell was among the first to be so honored.

[Mort Sheinman (2nd ed.)]

NORFOLK, central city of the Tidewater region of S.E. Virginia, noted for maritime activities and the presence of U.S. military bases. Its Jewish population in 2001 was 11,000.

The first-known Jewish settler in Norfolk, Moses *Myers (1752–1835) arrived in 1787 and became one of the city's leading merchants. The home he erected is on display as part of the city's Chrysler Museum of Art.

From the beginning of their existence as an organized community, Norfolk's Jews created a network of synagogues. German immigrants founded the city's first congregation in 1844, Ohev Sholom. In 1850 a traditionalist faction seceded and founded Beth El congregation, which later became an original member of the United Synagogue of America. East European immigrants created several Orthodox congregations, which united after World War II as B'nai Israel. Migration from the North, connected to the economic growth of Norfolk during World War II, and movement from older neighborhoods into newer and suburban areas, resulted in the formation of new congregations: Temple Israel (Conservative) in 1953 and Beth Chaverim (Reform) in 1982. After a successful, city-sponsored revitalization of Norfolk's downtown commercial and residential areas in the 1980s, the synagogues there rebounded, and a Chabad center, first opened in Virginia Beach in 1980, moved downtown in 2002.

After World War II, Norfolk Jewry, now predominantly American-born, asserted itself by creating a network of communal institutions: the Jewish Family Services in 1948; the Jewish Community Council in 1950, which grew into the United Jewish Federation; the Jewish Community Center, 1952, and the Hebrew Academy of Tidewater, a community day school, in 1954. Later institutions include the Beth Sholom [nursing] Home of Eastern Virginia, founded in 1980, and the Torah Day School, an Orthodox yeshivah, in 2003. Spurred by the philanthropic response to the Six-Day War, the United Jewish Federation grew into the central address of the community by the 1970s.

Postwar Jewish residential patterns, and consequent institutional developments, followed national demographic trends. Small towns close to Norfolk, such as Berkley and

Portsmouth, lost all or most of their Jewish residents, and newer suburbs grew. While some Jews were at the forefront of the local civil rights struggle of the 1950s, many Jews moved into the neighboring suburb of Virginia Beach after court-ordered school desegregation in 1959. In 1974, the Hebrew Academy moved to a Virginia Beach location and in 2004 the United Jewish Federation and the Jewish Community Center of Tidewater, along with the Hebrew Academy, relocated to a Virginia Beach campus.

Although Jews had suffered social discrimination prior to World War II, the Jewish community gained increasing social acceptance in the two generations following. Whereas a descendant of Moses Myers, Barton Myers, Sr., mayor of Norfolk from 1886 to 1888, had been raised as a Christian, the mayor of Virginia Beach from 1988, Meyera Oberndorf, was a professing Jew. Jews were prominently active in Norfolk's urban redevelopment work and a variety of general as well as Jewish philanthropic causes throughout the region.

[Michael Panitz (2nd ed.)]

NORMAN, EDWARD ALBERT (1900–1955), U.S. financier and philanthropist. Norman, who was born in Chicago, attended the U.S. Military Academy at West Point before transferring to Harvard. He worked for *The Survey* (1924–25) and as a research secretary for the Cooperative League of the U.S. (1925–28) before assuming the management of his family's various financial interests. Although a non-Zionist, Norman was extremely interested in the welfare of Palestine and its people and he urged a roof organization to coordinate and funnel the American Jewish aid for Palestinian educational, cultural, and social service institutions. The result was the founding of the American Fund for Israel Institutions (1939), of which Norman was president at his death (see *America-Israel Cultural Foundation).

His other posts in Jewish organizational and communal life included president of the American Economic Commission for Palestine (1939–43); national secretary for the American Jewish Committee (1946–55); non-Zionist member of the Jewish Agency's Executive Council; governor of the Hebrew University (1949–55); and director of the Joint Distribution Committee (1936–55). Norman was also president of the Group Farming Research Institute (1940–55), founded for the purpose of studying cooperative systems throughout the world; treasurer of the Urban League (1928–38); and chairman of the finance commission of the Association of American Indian Affairs.

NORONHA (Loronha), FERNÃO DE (1470?–1540?), New Christian explorer and colonizer of Brazil. Noronha was head of the first of the Portuguese *donatários*, associations formed to lease land for development in Brazil, and his association was composed of *New Christians. Arriving in Brazil in 1503 with six ships, troops, and supplies, he discovered an island near the north coast of the country which he named São João, although it was generally known by his name. Follow-

ing the terms of his contract, he explored and colonized large areas of Brazil, exploiting them for the benefit of his company. In return for his services, King Manuel I named him Knight of the Crown in 1504 and granted him the captaincy for life of the island he discovered. According to a report of 1505 by the Venetian Lunardo Chá Masser, Noronha acted as the Lisbon agent for the senate of Venice and was a pioneer in the import and export of timber, receiving a monopoly on dyewood from the crown. His contract, originally for three years, was apparently extended to 1512 or 1515. Noronha appears to have been a wealthy Jew, close to the court, who had converted to Christianity prior to 1497. He took his surname from his godfather, a nobleman descended from the royal house of Castile.

NORSA, HANNAH (d. 1784), English actress. The daughter of an Italian Jew from Mantua, who kept The Punch-Bowl tavern in Drury Lane, she went onto the stage and played the part of Polly Peachum in the 1732 production of *The Beggar's Opera* with great success. She subsequently became mistress of the Earl of Orford. Her sister Maria, mistress of the latter's brother, Sir Edward Walpole, is believed to have been the mother of Maria, countess of Waldegrave, whose second husband was the duke of Gloucester, brother of King George III.

NORTHAMPTON, town in central England. Its Jewish community, first mentioned in the 12th century, was one of the most important in medieval England. In 1194 representatives of Anglo-Jewry were summoned there to apportion among themselves a levy of 5,000 marks for ransoming Richard I from captivity (The Northampton Donum). Northampton had its own *archa. Though expelled from Northamptonshire in 1237, Jews were allowed to remain in Northampton itself. In 1263 they were attacked by the baronial rebels and took refuge in the castle. A ritual murder accusation occurred apparently in 1277, the repercussions and consequences of which were much exaggerated by historians. Several local Jews were executed in London in 1278 for coin-clipping. The community continued in existence until the expulsion of 1290. R. Isaac b. Perez of Northampton was one of the most distinguished medieval Anglo-Jewish scholars. A small community was established at the end of the 19th century and in 1969 numbered approximately 300. In the 2001 British census, its population of declared Jews was 322. There was an Orthodox congregation.

NORTH CAROLINA, state in S.E. U.S. Its population in 2000 was 8,049,313, of which the Jewish population was estimated at 26,500. Jews appeared in early colonial times, but a community did not develop until the late antebellum era, a trend that accelerated after Reconstruction with the rise of an urban and industrial New South. In the later 20th century, as the state transformed from an agrarian, southern society into the prosperous, multicultural Sunbelt, Jewish population grew dramatically.

North Carolina was the site of the first Jewish settler in a British colony in North America when Joachim Ganz, a native of Prague, arrived in 1585, well before the much heralded date of the 1654 settlement in New Amsterdam, on Raleigh's second expedition to Roanoke Island. Ganz, a metallurgist, returned to England two years later. John Locke's Fundamental Constitutions of 1669 opened the Carolinas to "Jews, heathens, and other dissenters," but the colony, beset by sectarian politics, was inhospitable. The 1776 state constitution included a religious test that restricted public office to Protestants. With few navigable rivers, a swampy coast, and a forested terrain, North Carolina lacked commercial opportunities for Jews.

In the early colonial era a few Jewish settlers followed coastal and inland trade routes from Virginia and South Carolina. A 1702 petition protested illegal votes by undesirables, including Jews. Jewish names appear on Masonic rolls and militia rosters. In the Charlotte area were storekeepers and Revolutionary War veterans Abraham Moses, Solomon Simons, and Aaron Cohen. A 1759 document identifies Joseph Laney as a Jew. Newport merchant Aaron Lopez sent 37 ships to North Carolina between 1761 and 1775. Eighteenth-century Sephardic Jews in Wilmington included Rivera, Gomez, David, and Levy. A rabbi, Jacob Abroo, is reported to have died in New Berne in 1790. The Benjamin family, whose son Judah became a U.S. senator and later a Confederate statesman, lived in Wilmington and Fayetteville after 1813.

The most notable family was the Mordecais who settled in Warrenton in 1792, and in 1808 opened the Warrenton Female Seminary, which pioneered the liberal education of women. Jacob *Mordecai was a Hebrew scholar who later served as lay leader of Richmond's Beth Shalome. His daughter Rachel, married to the Wilmington merchant Aaron Lazarus, was a literary figure, and his son Alfred graduated from West Point in 1823. Mordecai children, including George Washington Mordecai, a railroad builder who served as president of the Bank of North Carolina, largely assimilated into the Christian community.

In 1808 Jacob *Henry of Beaufort was elected to the state legislature, but a year later his constitutional right to serve as a Jew was challenged. After an impassioned speech, Henry was permitted to hold his seat, but the legislature reaffirmed the religious test repeatedly, and it was not removed until 1868. German Jews immigrated after 1835 when the state reformed its constitution and embarked on internal improvements. Jews from Norfolk, Baltimore, Charleston, and Richmond settled in coastal ports and market towns along rivers and rail lines.

Jewish communities in North Carolina and dates of establishment. Population figures for 2001.

Peddlers, like the Bloomingdale brothers, worked the countryside before opening stores. In the 1850s Lazarus Fels operated a peddler's way station in Yanceyville. In 1858 Herman Weil arrived in Goldsboro, later joined by his brothers, and the family over generations organized the state's Jewry. By 1850 Charlotte had nine Jewish families, and Wilmington claimed 26 Jewish merchants. By 1852 Wilmington supported a burial society, and an Orthodox congregation formed in 1867, which was supplanted by a Reform one in 1872.

When Civil War came, the state's Jews were ardent Confederates. More than 70 Jews served in North Carolina regiments, including six Cohen brothers. Civil War Governor Zebulon Vance, grateful to a courtesy from the merchant Samuel Wittkowsky at war's end, penned a celebrated philo-Semitic speech, "The Scattered Nation," which was delivered and reprinted repeatedly across the South.

As the textile, furniture, and tobacco industries expanded in the New South era, Jews found opportunity in emerging mill and market towns. By 1878, 16 North Carolina towns reported Jews, and the population center began moving from the coastal plain to the piedmont. Country peddlers and urban storekeepers served both a black and a white clientele. Rail lines linked merchants to distribution centers in Baltimore and New York. In 1871 the Wallace brothers of Statesville created the country's largest herbarium. Samuel Wittkowsky, as president of the Board of Trade and founder of the South's first savings and loan, underwrote much of Charlotte's development. In 1895, Moses and Caesar Cone, traveling agents for the family's Baltimore commercial house, built their first textile factory in Greensboro, and, joined by partners Herman and Emmanuel Sternberger, Cone Mills ranked among the world's largest producers of denim, flannel, and corduroy. In the 1880s Tarboro had 11 Jewish stores and supported a congregation, a B'nai B'rith lodge, a YMHA, and a Jewish Literary Society; in 1885 Henry Morris was mayor. The first synagogue, Temple of Israel, was erected in Wilmington in 1875, followed by Oheb Shalom in Goldsboro (1886) and Temple Emanuel in Statesville (1892). All evolved to Reform. By 1900

congregations could also be found in Asheville, Durham, Lumberton, New Bern, Raleigh, and Winston-Salem. Typically, they accommodated both Reform and Orthodox worship until Jewish population grew sufficiently to form separate congregations.

With an increasing East European immigration, the 820 Jews of 1878 grew to 8,252 by 1927, and congregations increased from one to 22. In the early 1880s J.B. Duke imported more than 100 Jewish immigrants to roll cigarettes in his Durham factory. Jews arrived in family chains, a pioneer drawing relatives and *landsleit*. Like the Germans before them, they often peddled before opening stores, and they maintained an ethnic economy, mostly in dry goods. The Baltimore Bargain House financed and supplied young immigrants and directed them to towns across the state. In 1929, 53 percent of the state's Jewry was rural. Upward mobility was rapid. Moses Richter of Charlotte earned the title of Peach King for his marketing. William Heilig and Joseph Max Meyers, two Latvian immigrants, expanded their Goldsboro store into the nation's largest furniture chain.

During World War II, Jews headed to North Carolina to serve in military bases and to provide commercial services in camp towns. North Carolina welcomed émigrés from Nazi Europe. The Van Eeden colony, a dairy and agricultural collective on the coastal plain, housed refugee families from the 1930s to 1949. The state's universities offered havens to European scholars. Duke University gave sanctuary to German psychologist Louis Stern, physicist Fritz London, and Polish law professor Raphael Lemkin, author of the Genocide Convention, who coined the very word genocide. In 1981 the state created the North Carolina Council on the Holocaust.

North Carolina's Jews have been notable for their philanthropies and public service. Moses Cone Memorial Hospital in Greensboro was created by a family endowment, and the Brody School of Medicine at East Carolina University in Greenville was named for a local family. The Blumenthals of Charlotte supported the arts, health care, and Jewish causes including the interfaith retreat, Wildacres, and the Jewish Home for the Aged in Clemmons. In 1954 I.D. Blumenthal created a unique Circuit Riding Rabbi program, with a bus outfitted as a synagogue, to serve rural communities. Leon Levine of Charlotte, who created a national network of Family Dollar Stores, has endowed museums, universities, and Jewish facilities. Prominent Jews include Gertrude Weil of Goldsboro, a suffragette leader, who was a tireless advocate for social and racial justice as well as for Jewish and Zionist causes. In 1918 Lionel Weil organized a statewide campaign for the Jewish War Sufferers Fund, and his North Carolina Plan became a national model. Jews have served in the state legislature. Charlotte's Harry Golden published the *North Carolina Israelite*, which was outspoken in its advocacy of liberalism and civil rights. In 1955 the North Carolina Association of Rabbis passed a resolution calling for rapid integration of the public schools, a stand that they reiterated a year later when the governor called for voluntary segregation.

Solomon Fishblate was elected to his first term as Wilmington mayor in 1878. Jews have also been elected mayors of Chapel Hill, Durham, Fayetteville, Gastonia, Greensboro, Hendersonville, Holly Ridge, Lumberton, Morganton, Tarboro, and Wilmington. E.J. Evans served six terms as mayor of Durham, 1951–1963. Numerous Jews have served in the state legislature.

The success and social acceptance of Jews contrasts with a latent antisemitism that turned occasionally violent. In 1909 a new immigrant to Charlotte, Max Kahn, was murdered, and in 1925 a salesman, Joseph Needleman, was castrated outside Williamston by a mob after he allegedly affronted a woman. In the civil-rights era bombs were planted at synagogues in Gastonia and Charlotte. Jews were generally not accepted into social elites, and the Pinehurst golfing resort maintained antisemitic housing codes. In 1933 University of North Carolina president Frank Graham forced the resignation of the medical-school dean who refused to end a Jewish quota.

North Carolina's Jews maintained communal ties through a network of B'nai B'rith Lodges, Hadassah, and National Council of Jewish Women chapters. The North Carolina Association of Jewish Women, founded by Sarah Weil in 1921, was a nationally unique organization that united communities across ethnic, denominational, and geographical divides. In the 1950s the Jews of High Point sponsored a statewide debutante cotillion. The mountains were home to Jewish summer camps, most notably Blue Star in Hendersonville. Jewish federations, linked to the United Jewish Communities, formed in the Charlotte, Greensboro, Raleigh, and Durham-Chapel Hill areas.

The Sunbelt has welcomed the Jewish doctor, scientist, retiree, and entrepreneur just as the New South welcomed Jewish peddlers, merchants, and industrialists. North Carolina benefited from national demographic trends, which saw Jewish population shift southward. Jewish communities in Charlotte, Wilmington, the Research Triangle (Raleigh-Durham-Chapel Hill), and the Triad (Greensboro-High Point-Winston-Salem) on the high-tech interstate corridor grow while small-town, agrarian communities like Tarboro, Weldon, and Wilson wane or expire. Coastal and mountain resort communities have drawn Jewish retirees. With the breakdown of academic barriers, college towns also have grown dramatically. Jewish studies programs flourish at Duke University, which in 1943 had become the first southern university to establish such a program, and at the University of North Carolina campuses in Asheville, Chapel Hill, and Charlotte. Highlighting the professional migration, Gertrude Elion and Martin Rodbell won Nobel Prizes while working at the Research Triangle Park.

With rapid Jewish population growth, the number of *havurot* and congregations has grown to more than 40 by 2005. Greensboro is the site of the American Hebrew Academy, a pluralistic boarding school with a global outreach. Charlotte supports the Shalom Park campus that includes a day school, federation headquarters, library, community center, and Re-

form and Conservative congregations. Lubavitcher Hasidim lead congregations in four communities. New or expanded synagogues are arising in all the state's Sunbelt metropolitan areas even as historical Jewish enclaves in mill and market towns struggle to survive.

[Leonard W. Rogoff (2nd ed.)]

NORTH DAKOTA, state located in the upper Midwestern part of the U.S. The total population (2004) of 634,366, includes fewer than 500 Jews.

History

At least 800 Jewish individuals filed for land between 1880 and 1916. They generally settled in clusters. Many were aided by the Jewish Agricultural and Industrial Aid Society. In addition several of the earliest settlements, Painted Woods and Devils Lake, were aided by synagogues located in Minnesota's Twin Cities. Homesteaders endured great hardships such as plagues of grasshoppers, prairie fires, blizzards and drought. Most left after acquiring full land title (generally five years). A number settled in market towns along the two railroads that crossed the state and where they operated general stores.

By 1889 the country's growing railroad industry lured people to the eastern community of Grand Forks. A permanent congregation was established in 1892. It was from the pulpit of B'nai Israel Synagogue that President William McKinley urged the Jews to participate in the war with Spain. The city of Fargo also grew near the turn of the century and by 1896 a synagogue was chartered there. The Jews of North Dakota are engaged mainly in retailing. A few, such as Fargo Mayor Herschel Lashkowitz, and Federal Judge Myron Bright, distinguished themselves in politics.

Jews also settled in larger towns such as Fargo, Grand Forks, Bismarck, and Minot where they established synagogues and other elements of Jewish communal life. They have also been included in civic life. One rabbi in particular deserves mention: Benjamin Papermaster was sent to North Dakota by the Chief Rabbi of the Kovno Yeshiva, serving in

Grand Forks from 1891 to 1934. He was also the circuit-riding rabbi for the state, circumcising babies, officiating at weddings and funerals, and even slaughtering cattle. Today, Fargo and Grand Forks rely on student rabbis. In the 1960s the Jewish population of Fargo was some 500 people; it has declined as young people leave and do not return.

[Linda M. Schlof (2nd ed.)]

NORWALK AND WESTPORT, U.S. towns in southeast Connecticut on Long Island Sound, which are joined together with Wilton in a federation. The Jewish population of the communities in 2005 is an estimated 11,500. As early as 1760 there was a small Jewish community in Norwalk. Michael Judah is mentioned in the Connecticut historical annals of that period, and David Judah was a soldier in the Connecticut Line in 1776. In 1776 Norwalk received an influx of Jews from New York, mainly from Congregation Shearith Israel, who were fleeing the British. In 1777 Jews were among the signatories to a petition asking for a patrol vessel for the Norwalk shore. The early community came to an end when Norwalk was burned down by the British in 1779. It was rebuilt in the 1870s by Eastern European immigrants, who were merchants and storekeepers. After 1925 more Jewish families from New York moved to Norwalk, and after World War II many more Jewish families moved to Norwalk in the general move to suburbia and in response to the development of Norwalk as an electronics and engineering center.

Beth Israel Congregation, Orthodox, founded in 1906, was the first synagogue in Norwalk and remained the only one until 1934, when Temple Beth El, Conservative, was organized. The Reform Temple Shalom was formed in 1957. Shortly after World War I, a Young Men's Hebrew Association was founded; it later became the Jewish Community Center. Norwalk has a communal Hebrew school. The United Jewish Appeal drives are sponsored by the Jewish Community Council, formed shortly after World War II to coordinate the efforts of local organizations and fund-raising campaigns.

Participation in community life is extensive. About two-thirds of the Jewish families of Norwalk are affiliated with at least one synagogue; almost 40 percent of the Jewish families belong to the Norwalk Jewish Center; and two-thirds of the adult Jews of Norwalk contribute to the Federated United Appeal Drive. Small Jewish populations in Wilton, Weston, Darien, and Georgetown also participate in Westport and Norwalk's Jewish communal life.

Prominent members of the Jewish community have included Harry Becker, who was superintendent of schools 1952–70; Malcolm Tarlov, the 1967 national president of the Jewish War Veterans; Charles Salesky, who was president of the Hat Corporation of America; and Jack Rudolph, state senator in 1970. Several chairmen of the Board of Education have been Jewish as well. As in most of the United States, most barriers have fallen. There is little discrimination. Employment

Jewish communities in North Dakota. Population figures for 2001.

appears free of anti-Jewish discrimination, but there is still a sense of distinction, though not outright discrimination, in upper-class social clubs.

There are ten synagogues within these towns, which often are joined for Jewish communal activities. Beth Israel Synagogue of Westport/Norwalk, Adat Torah Conservative Congregation, and Beit Chaverim Synagogue of Westport/Norwalk use both towns in their name. Chabad has come to Westport and runs the only Jewish day camp in the towns. There is also a Congregation for Humanistic Judaism in Westport, in which God is not part of the service. Westport itself has a Conservative Synagogue, which is called The Conservative Synagogue of Westport, and a Reform synagogue, Temple Israel, while neighboring Georgetown is the home of Temple B'nai Chaim. There is also a conservative congregation in Wilton, Adat Torah.

The Federation provides all the usual services of a local federation including Family Services and a Home for the Elderly. In addition, it sponsors Kesher, a program for Jewish developmentally challenged adults, which meets to celebrate Jewish holidays with discussion, music and refreshments and Positive Directions (formerly Alcohol and Drug Council), which works with the local Jewish Family Service to offer a 12-step program for Jews in recovery. It belies the myth that Jews don't have these problems.

Many of the Jews are professionals. Some work locally and many commute to neighboring New York City as part of the seamless suburbs of New York in which the Jewish community stretches from the City through Fairfield County and beyond.

[Michael Berenbaum (2nd ed.)]

NORWAY, kingdom in N. Europe. Throughout the 17th and 18th centuries, when Norway and *Denmark were united, most general regulations concerning the Jews of Denmark also applied in Norway. However, according to the Norwegian Legal Code promulgated by King Christian v in 1687 the Jews were barred from admission to Norway without a letter of safe-conduct; without this, a Jew risked arrest, fines, and deportation. As a result of this measure the special regulations allowing free access to the so-called "Portuguese" Jews (issued by the Danish crown in 1657, renewed in 1670, 1684, and 1750) were not consistently adhered to by the Norwegian authorities. An incident which took place in 1734 became notorious: three Dutch "Portuguese" Jews were arrested on their arrival in the country and spent two months in prison. In the 17th and 18th centuries, few Jews stayed in Norway, usually only temporarily, though some Jews in other countries had business connections there, such as Manuel Teixeira from Hamburg who was co-owner of some Norwegian mines. In 1814 Norway became free of the union with Denmark and a Norwegian constitution was produced. Despite the liberal tenor of the Norwegian constitution of 1814, Article Two – stating that Lutheran Protestantism is the official state religion in which all Lutheran children must be brought up – confirmed the exclusion of Jews and Jesuits

Jewish communities in Norway and dates of establishment.

from Norway; this was strictly enforced. A new union was immediately formed with Sweden. At first this did not interfere with Norwegian politics, but from 1884 the Swedes decided to take an active part in Norway's foreign affairs. This union lasted until 1905. In 1817 a shipwrecked Jew was thrown into jail and then deported. In the 1830s, however, a more liberal spirit gradually emerged. The government issued letters of safe conduct from time to time; one was given to Heinrich *Heine's uncle, Solomon *Heine, who was instrumental in the granting of a loan to the Norwegian state by the Copenhagen banking house of Hambro and Son. In 1844 the Ministry of Justice confirmed the free immigration rights of "Portuguese" Jews. The repeal of the ban on Jewish settlement was largely the result of the efforts of writer Henrik *Wergeland. In 1839 he submitted his first proposal to the Storting, the Norwegian parliament, accompanying his proposal with a lengthy memorandum and publishing his essay on the Jewish question, *Indlaeg i Jødensagen* (1841). This was followed by numerous articles in the press, several of them by Wergeland himself. In 1842 a committee on the constitution dealing with the problem made a notable proposal in which it was stated that the right to free immigration was an international one. The motion to give the Jews free access received a simple majority, i.e., more than 50% of the vote, in 1842, 1845, and 1848, but did not ob-

tain the requisite two-thirds majority until 1851. In that year 93 votes were cast in favor of admitting the Jews with full civil rights, with ten votes against.

The First Communities

The first Jew settled in the country in 1852 and for many years he remained the only representative of his faith; in 1875 only 25 Jews had their permanent residence in Norway. After 1880 immigration increased considerably, and Eastern European Jews gradually became most numerous. In 1890 there were 214 Jews in Norway; ten years later there were 642, most of them in *Oslo, the capital, and in Trondheim. The oldest communities, called "The Mosaic Congregation" (Det Mosaiske Trossamfund), were founded in Oslo in 1892 and in Trondheim in 1905; both congregations are still in existence. (See Map: Jews in Norway). Land for a cemetery was bought in Oslo as early as 1869, and the first burial took place in 1885. For some years there were as many as four congregations in the capital, but only two continued to exist for any length of time. In the 1920s and 1930s, a Jewish orphanage and home for the aged was founded. The census of 1920 recorded 1,457 Jews, of whom 852 lived in the capital. This was the highest number of Jews recorded prior to World War II. In 1930 there were 1,359 Jews in Norway, with 749 resident in Oslo.

In the years before and during World War I, young people's associations, women's groups, Zionist associations and charitable societies were established in Oslo and Trondheim. In the 1930s there were several Jewish theater societies, a choir and other cultural societies, a Norwegian Jewish Youth Society (JUF) that expanded into a Scandinavian Jewish Youth Society (SJUF) as well as an academic society. Two Jewish periodicals were published, *Israelitten* from 1911 to 1927 and *Hatikwoh* from 1929 to 1938. The two synagogue buildings in Oslo and Trondheim, both still in use today, were consecrated in 1920 and 1925 respectively. The second synagogue in Oslo, dedicated in 1921, has not been in use since World War II. (This building was converted into a Jewish museum that opened to the public in 2006.) For many years most Norwegian Jews engaged in trade; gradually they also moved into industry and some entered the professions. Between 1930 and 1940 immigration was comparatively slight.

It is possible to trace the rise of antisemitism in the Norwegian press during World War I and preceding World War II. In the 1930s anti-Jewish race theories were advocated by the Norwegian police, politicians, and press.

Holocaust Period

In 1941–42 the Jewish population of Norway consisted of approximately 1,000 households, numbering a total of 2,173 individuals living mainly in Oslo and Trondheim, but also thinly spread out in other parts of the country. Among these individuals 530 were Jewish refugees from the European continent and were not Norwegian citizens. About 1,800 were registered in the various communities. The number of Jewish refugees was relatively low, Norway being even more restrictive than Denmark and Sweden in the admission of Jewish refugees.

The Jews of Norway were hard-hit during the German occupation in World War II (April 1940–May 1945). Already in October 1940 Jews were prohibited to engage in academic and other professions. In some regions the actual persecution of the Jews began in 1941, but only in the fall of 1942 did it become countrywide. In two raids, on October 25 for all men over 16 and on November 25 for women and children, 767 Jews were seized and shipped via Stettin to *Auschwitz. About 930 Jewish inhabitants succeeded in fleeing to Sweden, while about 60 others were interned in Norway proper. A very small number of Jews managed to remain in hiding, in hospitals, sanatoria or in the Jewish old-age home. Quite a large percentage of Norwegian Jewish men who had managed to escape joined the Norwegian army encampments in Sweden or England and fought with the allied forces throughout the war. Victims of the war, 60% of whom were men (two-thirds of whom were citizens of Norway), totaled 758. Twenty persons perished either through acts of war or were shot in Norway. Of those deported 740 were murdered in extermination camps and only 29 survived. The Germans inflicted heavy damage on the synagogue in Trondheim, and planned to obliterate the Jewish cemetery there. The physical persecution of the Jews by the Germans was facilitated by orders given by *Quisling's government for the forced registration of all Jews (June 1942) and the confiscation of all Jewish property (October 1942). The final arrest was carried out by Norwegian police officers carrying out orders issued by the Nazis. The bishops of Norway sent a protest letter on Nov. 11, 1942 to Quisling. It was also signed by the other Protestant churches of Norway. The letter, in denunciation of the illegal acts, states: "God does not differentiate among people... Since the Lutheran religion is the state religion, the state cannot enact any law or decree which is in conflict with the Christian faith or the Church's confession." The letter was read from the pulpit on Dec. 6 and 13, 1942 and was quoted in the 1943 New Year message. Many Norwegians, with the guidance of the Underground movement, did their utmost to help Jews escape to Sweden, often at the risk of their own lives.

[Leni Yahil / Lynn Claire Feinberg (2nd ed.)]

1945–1970

Most of the survivors of the Holocaust returned to Norway from Sweden after the war. Owing to the liquidation of Jewish property during WWII, most returned to homes that were emptied of all contents or valuables or homes occupied by Norwegians. The same was true of formerly Jewish-owned businesses. Miraculously, one of the synagogues in Oslo, including its Torah scrolls and contents, was untouched. The building had been used to store Nazi literature and property from Jewish homes that the Nazis had confiscated.

The Norwegian government was eager to demonstrate the sympathy of the Norwegian people toward the suffering Jewish people. About 400 Jewish DPs came to Norway in 1947, but many left a while later for North America or Israel. With the abolition of the DP camps in Germany in the 1950s, Nor-

way accepted several scores of “hardcore” cases. By the mid-1950s the Jewish population reached close to 1,000 souls, of whom over 700 resided in Oslo, about 150 in Trondheim, and the rest were scattered throughout the country.

The communities in Oslo and Trondheim were reconstituted: Orthodox services were conducted in the synagogues; a home for the aged that had been in use before the war continued to exist for a few years after the war in Oslo; social work, supported by the American Jewish *Joint Distribution Committee and the Conference on Jewish Material *Claims, was expanded; a *B'nai B'rith lodge was established in Oslo in 1952; a community center was opened in Oslo in 1960; the small community participated in all activities in support of Israel. Rabbi Zalman Aronson was rabbi of Oslo from 1949 to 1958 and was head of the community's religious instruction. Rabbi Aronson introduced a bat mitzvah ceremony for girls at the end of their religious instruction. At this time approximately 80 school-age children received regular religious instruction in Oslo and Trondheim; In addition to weekly religious instruction, many children also attended Bnei Akiva, a Zionist youth organization arranging gatherings of a more social nature and summer camps with children from the other Scandinavian countries as well as trips to Israel. During the 1950s and 1960s the Norwegian government, the Church, and all political parties were actively engaged in eradicating antisemitism. Pro-Israel sentiment was very strong and found expression in many actions.

[Chaim Yahil / Lynn Claire Feinberg (2nd ed.)]

1970–2005

POPULATION. The total number of Jews in Norway in 1981 was estimated at 1,100 (0.027% of the total population). In 1992 the number of Jews in Norway was about 1,300–1,400, of which 200–300 were Israelis. More than 1,000 people (including children) were members of the Jewish congregations in the two Jewish communities in Norway: about 900 in Oslo and 135 in Trondheim. This number remained relatively stable throughout the 1990s. There has been a distinct aging process throughout the period with a high percentage of community members older than 65, which explains why there has been a relatively high rate of deaths in proportion to births since the WWII.

Over the years, a small but steady stream of Norwegians have converted to Judaism. There is general tendency among younger members to study and live in places abroad such as Israel, where there are more Jews, and not to return. The number of members of the Oslo Jewish community has traditionally stabilized around the 900 mark but in 2004 there were only about 800 members and in Trondheim only about 100 members. Quite a large percentage of Norwegian-born community members have spouses who are non-Jewish or who have converted. Due to many marriages among Scandinavian Jews, several community members were born in Sweden, Denmark, or Finland. There are also several members who come from other countries.

COMMUNITY. During the late 1970s and 1980s the Jewish community's activities expanded in Oslo. Starting in the 1970s there was a gradual increase in Norwegian school children and other groups visiting the synagogues and learning about Judaism and the fate of the Jews during World War II. Several seminars on Jewish subjects were arranged at the universities of Oslo and Trondheim with Jewish and non-Jewish lecturers. In 1976 Kai Feinberg (1921–1995) became the head of the community, succeeding Harry M. Koritzinsky (1900–1989), who had held this post since 1946. In September 1980 Michael *Melchior (1954–), son of Rabbi Bent Melchior, chief rabbi of Denmark, was inaugurated as rabbi in Oslo by his father after completing his rabbinical studies in Israel. Among those present were representatives of the Lutheran and Catholic Churches, universities, and state and municipal authorities. The community had existed without a rabbi for most of the years following World War II.

In Trondheim religious school instruction recommenced after a break of some years owing to the lack of Jewish children aged 8–13. The community, which celebrated its 75th anniversary in May 1980, had no cantor, and services and religious education were conducted by the community leader.

Moshe Dayan, when foreign minister of Israel, visited Oslo in May 1978, as did his successor Yitzhak Shamir in November 1980. The Jewish community arranged a dinner in the community center for Prime Minister Menahem Begin when he received the Nobel Peace Prize in Oslo in 1978.

With Rabbi Michael Melchior the Oslo community experienced a renaissance. Melchior helped make Judaism more visible to the Norwegian public at large and was often cited in newspapers and appeared on national TV. One of his first accomplishments was to open the Jewish kindergarten in Oslo in 1981. The kindergarten received some financial support from the city and soon became an important entry point for Jewish children and their parents into active participation in community life. In 2005 the kindergarten celebrated its 25th anniversary. In collaboration with the synagogue cantor, an Israeli, a children's choir was formed and many new melodies were introduced at the Sabbath morning services encouraging greater participation. Services were followed by a *kiddush*, with refreshments in the community center, also a novelty at this time. This event has since become the weekly meeting place for community members and guests. As a result of Melchior's involvement in the community the frequency of people participating in the Sabbath morning service in Oslo increased. Other services apart from Rosh Ha-Shanah and Yom Kippur were not as well attended. In Trondheim the membership was too small to arrange morning services on Saturday. Services were usually held on Friday afternoons, on Rosh ha-Shanah, Yom Kippur, and some of the other festivals. For many years the service was conducted by the community chairman and superintendent Jacob Kommisar (1922–1995). In recent years the Trondheim community has started holding Friday evening services every two weeks, conducted by one of the community members, often in con-

junction with a communal meal. This is in addition to High Holiday services.

With Rabbi Melchior, religious school education was greatly improved; in Oslo in the 1990s the religious afternoon school was taught by the cantor and some community members. There were about 70 pupils in Oslo in the 1990s aged 7–16, and this figure has remained quite stable since. For a number of years, a young member of the Oslo community visited Trondheim every two or three weeks to teach. In recent years several of the teachers at the Trondheim weekly religious school have been recruited from Jewish youth born and raised in Oslo and currently studying at the University of Trondheim. Trondheim also offers weekly religious education for pre-school children.

Beginning in the 1980s, in addition to the ordinary religious school lessons, weekend gatherings (also for the children in the kindergarten) have been arranged once or twice a year in the community vacation home 12 miles (20 km) from Oslo. At regular intervals the community invites children and their parents to spend a weekend at a hotel some 50 miles (80 km) from Oslo and celebrate a full Sabbath. Community members from Trondheim have also participated in these events. The annual summer camps have also been attended by Jewish children from other places in Norway. Bnei Akiva continues to engage members from the ages of 7–18 with weekly gatherings, inter-Scandinavian activities, and trips to Israel.

Twenty apartments for the elderly, partly subsidized by the city of Oslo, were built alongside the synagogue and inaugurated in 1988. A new wing was later added to this building, providing a place for elderly Jews who are too poor to take care of themselves.

The *Jodisk Menighetsblad*, the Jewish community journal, edited by Oskar Mendelsohn, 1976–1991, was succeeded in 1992 by a new publication, *Hatikwa*, which is issued four times a year.

In June 1992 the Oslo Jewish community marked its centenary with various celebrations, seminars and public lectures, while the religious school arranged a walk to and over the Swedish border along one of the fall 1942 escape routes. There was also an exhibition showing the religious holidays and a survey of important events from the past 100 years, which attracted more than 5,000 schoolchildren, and for which a special publication was printed. Jewish children published a paper about Jews in Norway which was distributed to schools. The community published a 230-page jubilee book.

The jubilee, held on June 14, started with a ceremony in the Jewish cemetery at the memorial for Jewish victims of World War II. This was followed by a festive service in the synagogue in the presence of Norwegian authorities and representatives of the other Scandinavian Jewish communities that was broadcast on Norwegian television. Rabbi Michael Melchior spoke and the cantor, the synagogue choir, and Cantor Joseph Malovany of New York conducted the service. There was also a festive concert at which the Norwegian king and queen were present. Rabbi Melchior was honored in 1993 with

the Bridgebuilder Prize by the joint council of the Norwegian Church academies. He was granted this award for his significant efforts toward creating a dialogue and building bridges between people of different groups and backgrounds with the aim of counteracting the influence of hatemongers.

In Norway kosher slaughter was made illegal in the 1930s. The community has therefore had to import kosher meat ever since. In 1986 the first shop to sell frozen kosher meat and various kosher food products was opened; until then kosher meat had been sold at appointed times in the community center.

Since 1991 kosher meat has been imported from the U.S. and other kosher foods from Denmark and Israel. In more recent years kosher goods have been imported from Israel and European countries. The import of kosher meat and especially chicken is regularly an issue of concern, due to Norway's strict regulations on the import of agricultural products. The community rabbi has given several Norwegian food products a kosher certificate. The community regularly provides an updated list of kosher products obtainable in Norway.

For a few years starting in 1988, the Oslo community's leadership was divided between the head of the board (administration) and the superintendent of religious affairs. In 2005 Anne Sender was elected the first woman to head the community. Rabbi Michael Melchior, who settled in Israel in 1986, remained the religious leader of the community, spending about four months a year in Oslo until 1999. Since then he has been the chief rabbi of Norway. From 1999 to 2003 the community hired Rabbi Jason Rappoport from England and in 2003 he was replaced by Rabbi Jitzhak Rapoport from Sweden. Over the years the community has had several Israeli cantors serving for an average of two or three years doing service abroad. Services are also conducted by a young Danish Jew who has settled in Oslo and occasionally by local young men from the community.

Antisemitism and Anti-Zionism

There was more evidence of antisemitism during the 1970s and after than in the first decades after World War II, often taking the form of increased anti-Zionism. In January 1979 the synagogue in Oslo was vandalized with swastikas and anti-Jewish slogans in Norwegian and German (*Juden raus!*). The police did not succeed in finding the perpetrators. In autumn 1977 the country's bishops urged a clear and fearless attitude against all forms of antisemitism and aggressive anti-Zionism.

In the 1980s there were numerous articles in the press relating to Israel. Anti-Zionism was on the increase, primarily among political leftists. Pro-Palestinian attitudes, however, were also reflected in youth organizations of the Labor Party and some of the center parties as well as in some trade unions. On the other hand, there were many pro-Israeli articles. In the 1990s there was a tendency to connect anti-Israel and anti-Zionist sentiments with antisemitic statements. The Norwegian press has been increasingly critical of the policy of the State of Israel and many journalists have shown growing sympathy for and bias towards the Palestinians. Many Norwegian

Jews have in later years experienced an increase in antisemitic tendencies, in the guise of anti-Zionist or anti-Israel views. On several occasions newspaper headlines and caricatures have described the Israelis as Jewish aggressors in the Nazi mold. In 2003 the Norwegian head of the Labor Union urged Norwegian shops to stop buying goods from Israel. Several threats have been directed at the Jewish communities.

Renewed Interest in the Holocaust

With a new generation of historians in the 1970s, renewed interest in the Jews and their World War II fate started to emerge. At this time there was a focus on the emergence of Norwegian neo-Nazi youth gangs and ways of taking preventive measures. Many concentration camp survivors began to tell their stories for the first time. "This Concerns You," an account from Auschwitz by Herman Sachnowitz, a Norwegian Jew, was published in 1976 and sold more than 160,000 copies in Norwegian. This was the first of several such accounts written by Norwegian Jewish survivors. In 1978 the television series *Holocaust* led to a whole series of questions related to the fate of the Jews of Norway during the war. Another series about how people were helped to flee to Sweden, among them the nation's Jews, was also aired. One of the questions raised was why persecution of the Jews had received such scant attention in the teaching of history, another related to the complicity of the Church throughout the ages. The *Holocaust* series was succeeded by many information programs on radio and television about events and persecution during the war, including interviews of several of the Norwegian Jewish survivors. Interest was revived in the diary of Anne Frank. In March 1978 three of the people most active in the resistance movement during the war in helping to rescue Jews were invited by the Jewish community in Oslo to spend a week in Israel and to plant a tree in the Avenue of the Righteous on Har ha-Zikkaron. Several other people who helped Jews during the war have over the years been honored as Righteous Among the Nations by Yad Vashem.

In 1992 the Hvite Busser organization ("White Buses") was formed by Norwegian concentration camp survivors. Their aim has been to arrange field trips to Auschwitz for teenage schoolchildren in order to teach about antisemitism and the Holocaust. Accompanying the groups is a first-hand witness, a Norwegian who survived a concentration camp, and a few of the witnesses are also Jewish. At the 50th anniversary of the end of World War II in 1995, several television programs and films appeared showing interviews with Jewish and non-Jewish Norwegian concentration camp survivors and members of the resistance. There were also several books written by Norwegians depicting the fate of the Jews and putting the role of the Norwegians during WW II in a new light. With the passing of the legislated time period, recently released archive material from the war years was now made available and fresh pages could be written in the nation's history books.

As a result of the focus on Jewish property confiscated by the Nazis during World War II in the Western world, re-

newed attention was also directed to the fate of the Norwegian Jewish population during the war and their property. In 1996 the Norwegian government formed a committee whose purpose was to ascertain what happened to Jewish property during World War II so as to determine how and to what extent seized assets/property had been restored after the war, and their value. As a result the Norwegian government decided to pay 450,000,000 NOK in restitution. One part was paid as individual compensations to Jewish individuals who had lost one or more relatives in the Shoah and who had been resident in Norway prior to the war. The rest was to be given as collective compensation to the Jewish communities in Oslo and Trondheim. However, in agreement with the Norwegian state some of these funds were to be put aside as the foundation for what has become the Center for Holocaust and Minorities Studies in Norway, a research center and Holocaust museum housed at Villa Grande, the house Vidkun Quisling used as his home and headquarters during World War II. The Jewish communities also decided to set apart a sum to establish the Fund for Support of Jewish Institutions or Projects outside Norway. The remainder of the restitution money was used to restore the community centers and synagogues in Trondheim and Oslo. Because of the ongoing work that led to the Norwegian restitution, the World Jewish Congress chose to hold its executive meeting in Oslo in November 1996.

As a result of extensive work done by Norwegian Jews and Christians in the former Soviet Union, the Hjelp Jødene Hjem (HJH, Help the Jews Home) organization was founded in 1990 to coordinate all Norwegian contributions to help former Soviet Jews immigrate to Israel. It is a joint venture of a number of Christian organizations in Norway and the Jewish Community of Oslo. HJH also provides information about antisemitism and its consequences. In recent years most of the money collected has been used to support humanitarian projects in Israel.

Since the 1970s Norwegian society has become more multicultural. New immigrants have arrived from many parts of the world, among them many Israelis, bringing their religion and culture with them. The Protestant Norwegian State Church had a tradition of being very homogeneous, the Jews having been one of the very first non-Christian religious minorities in the country. There was now a need to find ways to cope with a new multicultural reality. In 1990 Oslo hosted a conference called "The Anatomy of Hate: Resolving Conflict through Dialogue and Democracy," which was convened by the Foundation and the Norwegian Nobel Committee. Former political prisoners and statesmen, writers and scholars from 30 countries – among them Vaclav Havel, Nelson Mandela, Francois Mitterrand, and Jimmy Carter – discussed ways of living with ethnic and national conflict and managing regional tensions through dialogue. This conference was followed by a series of religious dialogues. The first was held in 1991, called "Common Ethics in a Multicultural Norway." Several smaller and larger interfaith groups followed throughout the country.

From 1991 to 1993 representatives of the Norwegian government were engaged in an ongoing project called “Norway as a Multicultural Society Aiming at Acquiring Knowledge about the Different Minorities’ Special Needs.”

The Council for Religious and Life Stance Communities in Norway was established on May 30, 1996. The main task of the council is to promote mutual respect and understanding between various religious and humanistic communities. The Council seeks to prevent differences in belief from being used as a basis for prejudice and xenophobia and has received government support for its work since 1998. Representatives from 12 different religious and life stance communities meet regularly to discuss and find resolutions to issues that involve problems arising in the interaction between religious and life stance traditions and Norwegian society at large. Several conferences and dialogue projects have been initiated by this council.

In 1997 the Norwegian government introduced a new subject into the schools: Christianity, Religion and Life Stance – a subject meant to teach different religions against a backdrop of Christian values and religious beliefs. Previously children belonging to religions other than Christianity could be exempt from religious education in school, but now all schoolchildren regardless of their faith were required to learn religion in this way. The various minority religious communities and the humanists lodged strong protests. This was one of the first issues to be dealt with by the Council for Religious and Life Stance Communities in Norway. The strong protest brought about minor alterations in the curriculum and a more lenient approach towards parents who wished to avoid sending their children to these classes. However, despite the negative response to this subject, the effect has also been that all Norwegian schoolchildren regularly learn about Judaism throughout their school years. This has also resulted in a great increase in the number of schoolchildren visiting the synagogues and students contacting the communities for information. There has also been a greater demand to make Jews more visible in society at large.

In 1998 Norway ratified the Council of Europe’s convention on acknowledging national minorities. As a result Norwegian Jews were granted the status of a national minority together with several other ethnic minority groups such as Roma (gypsies) and similar groups that have lived in Norway for more than 100 years. Under the new legislation, the Norwegian government is obliged to help its national minorities express, sustain, and develop their individual identities, cultures, and languages. As a result, the two Jewish communities have received government funds for the establishment of Jewish museums. In 1997 a Jewish museum was established in Trondheim and officially opened on May 12, 1997. In 2003 the Oslo Municipality agreed to accept plans to build a Jewish museum in Oslo. This museum was planned to open in 2007 in a building that used to serve as a second synagogue before World War II.

The Restitution Fund from the Norwegian government enabled a major restoration of the synagogue and community

buildings of Trondheim and Oslo. In Trondheim the newly restored community center, including a library and multimedia center, was opened in the fall of 2001.

In September 2004 the Oslo Jewish community officially reopened its newly rebuilt community center and redecorated synagogue in the presence of prominent guests from the government.

CULTURE. Many novels and short stories with Jewish motifs and other books on Jewish matters – including the Holocaust – were translated into Norwegian during the 1970s, among them works by Bellow, Heller, Kellerman, Malamud, Potok, Roth, and Wouk. In the late 1970s most of Isaac Bashevis Singer’s books were translated as were Eli Wiesel’s. In the 1980s and 1990s several books by Amos Oz and David Grossmann were published in Norwegian as were books by Yoram Kaniuk and in 2004 a book by Etgar Keret.

The Norwegian-Jewish author Eva Scheer published several Jewish folklore collections of tales and stories, with books on 19th-century Jewish life in Lithuania following in the 1970s and 1980s.

Among the many books on Zionism and Israel, *The Right to Survive* (1976), edited by Pater Hallvard Rieber-Mohn and Professor Leo Eitinger – “a book about Israel, Norway and antisemitism” – merits special mention. It includes articles by eleven Norwegians (two of them Jews). Lectures given at the university seminar in Oslo in 1976 in a series called “The Jews and Judaism,” with the subtitle “From the Old Testament to the Middle-East Conflict,” were published in 1977.

During the 1980s books by Norwegian Jews as well as books on Norwegian Jewry appeared, only some of which are mentioned here. Professor Leo Eitinger edited *Human among Humans: A Book of Antisemitism and Hatred Against Strangers* (1985), the lectures from the Nansen Committee hearing on antisemitism. An autobiography was published by Jo Ben-kow; Mona Levin, a well-known author and cultural critic, wrote the biography of her father, the Norwegian Jewish pianist Robert Levin: *Med livet i hendene* (“My Life in My Hands,” 1983). Robert Levin (1912–1996), a pianist and professor of piano and interpretation, was one of Norway’s most renowned musicians. The author of the two-volume *History of the Jews in Norway during 300 Years* (vol. 1, 1969; vol. 2, 1986; second edition, 1987), Oskar Mendelsohn, was awarded a knighthood, 1st Class, of the Royal Saint Olav Order in 1989 for his work on the history of the Norwegian Jews and in 1993 he received the gold medal of the Royal Norwegian Society of Sciences and Arts, the oldest Norwegian society of science (founded 1760), for his “comprehensive scientific work in the investigation of the history of the Jewish minority in Norway.” A concise popular edition of Mendelsohn’s work was published in 1992. Mendelsohn died in 1993.

The Holocaust was the subject of many Norwegian books and of several books translated into Norwegian during the 1980s. A Norwegian, Jahn Otto Johansen, wrote *Det hendte også her* (“It Also Happened Here”). In the 1980s came sev-

eral accounts of concentration camps by survivors still living in Norway: Ernest Arberle, written by Arvid Møller, *Vi må ikke glemme* ("We Must Not Forget," 1980); Robert Savosnik with Hans Melien, *Jeg ville ikke dø* ("I Did Not Want to Die," 1986); Herman Kahan with Knut M. Hansson, *Ilden og lyset* ("The Fire and the Light," 1988); Mendel Szajnfeld, with Simon Szajnfeld, *Fortell hva som skjedde med oss; erindringer fra Holocaust* ("Tell What Happened to Us; Memories From the Holocaust," 1993); Kai Feinberg with Arnt Stefansen, *Fange nr 79108 vender tilbake* ("Prisoner No. 79108 Returns," 1995); Vera Komissar with Sverre M. Nyrønning, *På tross av alt: Julius Paltiel – norsk jøde i Auschwitz* ("Despite Everything: Julius Paltiel – Norwegian Jew in Auschwitz," 1995). Vera Komissar also wrote a book about Norwegian Jews who escaped to Sweden in 1942, *Nådetid: norske jøder på flukt 1942* ("Time of Grace: Norwegian Jews on the Run 1942," 1992).

Kristian Ottosen, a Norwegian historian, wrote the account of the deportation of Norwegian Jews during World War II: *I slik en natt* (1994); Karoline Frogner, a Norwegian film producer, did the film and book *Mørketid: kvinners møte med nazismen* ("Time of Darkness: Women's Encounters with Nazism," 1995). It records interviews with several women who survived the Ravensbrück concentration camp, among them four Jews.

During the late 1990s and early 2000s several books and chapters of books on Judaism were written in Norwegian for all school levels and at university level. As part of a series on religious texts from all religions, central Jewish religious texts were translated and published in Norwegian for the first time. Bente Kahan, a Norwegian Jewish actress and singer, has become known in Norway and Europe for her interpretations of Yiddish songs.

In 2001, the Wergelands Barn (The Children of Wergeland) project was made to commemorate the 150 years since Jews were allowed into Norway in 1851. Brit Ormaasen and Oskar Kvasnes interviewed a number of Norwegian Jews who were alive before the war and collected photographs to depict Jewish life in Norway from the first immigration up until 1945. This work was made into an exhibition that has been shown all over Norway and in 2004–5 in the United States. In 2004 two Norwegian film producers produced a film called *Manen som elsket Haugesund* ("The Man Who Loved Haugesund"), a story about Moritz Rabinowitz, a Norwegian Jew who lived in Haugesund and who was arrested and killed by the Nazis in 1941.

Relations with Israel

Norway voted for the establishment of a Jewish state in 1947, and Trygve Lie, as secretary-general of the United Nations, used all his diplomatic skill to remove obstacles to the adoption of the resolution. Diplomatic relations between Norway and Israel were soon established, first through nonresident ministers, and since 1961 on the level of resident ambassadors. At the United Nations, Norway frequently came out in support of Israel. The friendly relations found expression in great cel-

ebrations of Israel's tenth anniversary and in official visits by prime ministers, foreign ministers and other public figures.

The murder in 1973 of an Arab from Morocco living in Lillehammer temporarily created anti-Israel feelings in the Norwegian press and public. Strained relations developed between Norway and Israel when some of the alleged perpetrators were arrested at the home of an Israeli attaché.

Israel's right to exist within secure borders remained the basic foreign policy of Norway and the Norwegian delegation withdrew from the Geneva Conference on racism in 1978. Israeli policy on the West Bank has been criticized, but all demands for recognition of the PLO were rejected at this time because of the PLO Charter. Representatives of different parties in many cases spoke in favor of Israel, not least those of the Christian People's Party, and Israel has many friends in Christian quarters. However, there is also a smaller Christian pro-Palestinian group.

The group "With Israel for Peace," consisting mostly of non-Jewish youth, including university students, was founded in 1976 for the purpose of disseminating information about Israel and to fight anti-Israel and anti-Zionist propaganda from the Norwegian left-wing.

Cooperation between universities in Norway and Israel was strengthened through technical-scientific symposiums held in Trondheim and in Israel. The organization "Norwegian Friends of the Hebrew University" (reestablished in 1977) raised money for a Norwegian-Israeli research fund. Israeli artists held exhibitions and concerts in Norway, among them the Israel Philharmonic Orchestra. Trondheim and Petaḥ Tikvah became twin towns.

Norway became the center of world attention during the 1990s due to the negotiations that led to the Oslo Accords, a part of the Middle East peace process directly connected with Norway. Due to the close relationship that had developed over the years between the Norwegian and Israeli Labor parties, Norway already had a long-established connection with Israeli officials. During the 1990s Norway also established increasing contacts with the PLO through research projects in the area. Using Norwegian mediators, secret negotiations were conducted between representatives of the PLO and Israel at several locations in Norway. On August 20, 1993, in Oslo, an agreement in principle was signed regarding the establishment of an autonomous Palestinian state. In 1994 Yasser Arafat, Yitzhak Rabin, and Shimon Peres received the Nobel Peace Prize in Norway for this breakthrough. On September 28, 1995, the Oslo II agreement was signed, which was supposed to be the next step in the peace process. Over the years public opinion regarding Israel has changed from being very supportive to being more critical and more in favor of recognizing the Palestinian struggle. Increased hostility towards Israel and its policy continues to characterize the Norwegian press, left-wing intellectuals, and several politicians.

NORWICH, county town of Norfolk, E. England. The medieval Jewish community is first mentioned in 1144, when the discovery of the body of a boy, William of Norwich, in a wood near the town gave rise to the first recorded *blood libel in Europe. Although this apparently had no immediate effect on the community, there were attacks by citizens on the Jews in the 1230s, the one in 1234 following an accusation that the Jews had kidnapped and circumcised a Christian child. The descendants of *Jurnet of Norwich, who were financiers, patrons of learning, and scholars, dominated the community from 1160 to 1260: the lower part of their stone house still stands in King Street (as part of the “Music House”). The 13th-century community (numbering about 100 to 150) seems, from the considerable documentary evidence surviving, mainly to have consisted of financiers who lent to local traders and the rural gentry and villagers. The community suffered from the “coin-clipping” charges of 1279 and the execution for blasphemy of the local magnate, Abraham fil’ Deulecresse; by the time of the general expulsion from England in 1290, it numbered only 50 souls. The poems of *Meir b. Elijah of Norwich (c. 1244) have survived, mainly in a Vatican manuscript.

Individual Jews settled in Norwich in the first half of the 18th century and there was an organized community by 1754 when a quarrel in the synagogue attracted much attention in the press. Continuous communal activity dates from the purchase of a burial ground in 1813 and the opening of a new synagogue in 1828. Local 19th-century families included those of Samuel (father of the first Lord *Mancroft), Haldinstein, and Soman (founder of the *Norwich Argus* newspaper). The community was especially known for shoe manufacture, antique dealing, and the press and printing. The synagogue, which was destroyed by bombing in World War II, was rebuilt in 1948; the community’s numbers remained between 100 and 200 (1% of the total population) through most of the 20th century. The 2001 British census found a total of 239 declared Jews in Norwich. The town had an Orthodox and a Reform synagogue.

[Vivian David Lipman]

NORZI, Italian family whose name derives from the Umbrian city of Norcia (where Jews were living from the third century C.E.). The more common forms of the name are de Nursia, da Norcia, da Norsa, Norsa, Norzi. A certain NATHAN (d. 1369) is

considered the founder of the family. Many documents attest to the presence of members of the family in Ferrara, in Bondeno, and under the House of Este in the 15th century, mainly in connection with banking activities. Although others lived in Modena, Reggio, Brescia, Verona, and Padua, the *Mantua branch was the wealthiest and most important. According to De Rossi, they came from the regions of Bologna and Turin. The Norzi family played an important part in the life of the community of Mantua. The former synagogue of the family, destroyed when the ghetto was demolished, has been entirely reconstructed on the present community premises, in Via Govi, and is now the only synagogue in Mantua. Many members of the family, pupils of Joseph Colon and Judah b. Jehiel Messer Leon, became rabbis celebrated for their learning beyond Italy.

MANUELE DA NORCIA moved from Rimini to Mantua in 1428 and obtained permission to open a loan bank (*condotta*). LEONE DE NURSIA and others were authorized in 1482 to trade in wool and silk cloths. In 1493 DANIELE DE NURSIA settled in Mantua, where he bought a house which had a painting representing the Virgin on its façade; its erasure by Daniele, although authorized by the bishop, caused a general uproar. Nursia first had to pay 1,100 gold ducats to the painter Andrea Mantegna for a painting of the Madonna, now at the Louvre; he was subsequently evicted, and the house was demolished by order of Marquis Giovanni Francesco II Gonzaga, the ruler of Mantua, who ordered that a church should be built on its premises dedicated to Santa Maria della Vittoria to commemorate his victory over the French at Fornovo. Another work by an unknown painter, now at the Basilica of S. Andrea in Mantua, depicts the ceremony of dedication, with four members of the Norzi family wearing the Jewish *badge; the words *Debellata hebraeorum temeritate* appear at the top of the painting. In 1504 ISAAC BEN DANIEL NORZI was authorized by Gonzaga to engage in moneylending. BENJAMIN BEN IMMANUEL NORZI wrote *Sod La’asot Lu’ah* (1477; in Ms.), a study of the Jewish calendar, and commentaries on rulings by R. Isaac Tiburino, and on the Talmud tractates *Pesahim*, *Yoma*, *Sukkah*, *Yom Tov*, *Rosh Ha-Shanah*, and *Megillah* (Wolff, *Bibliotheca*, 1 (1715), 252).

RAPHAEL BEN GABRIEL (1520–1583?) rabbi at Ferrara and Mantua, was author of various works on rational ethics in religious questions: *Se’ah Solet* (Mantua, 1561); *Marpe la-Nefesh* (Mantua, 1561; Venice, 1571); and *Orah Hayyim* (Venice, 1549; Amsterdam, 1557). He exchanged polemics with the rabbi of Ferrara. A *kinah* was published on the occasion of his death (Zunz, *Lit*, Poesie, 128, 254; C. Bernheimer, *Catalogue des manuscrits et livres rares hébraïques de la bibliothèque du Talmud Tora de Livourne* (1915), no. 27 (1)). ELIEZER BEN DAVID NORZI (16th century), son of a banker from Mantua, cousin of Raphael b. Gabriel, wrote a commentary on Abraham Ibn Ezra’s *Sefer ha-Shem* (1834, ch. 6), dealing with the significance of letters and of the Holy Name. The geometrical diagrams in the commentary indicate that he had knowledge of mathematics (Mortara, *Indice* 45; M. Steinschneider, *Die*

Mathematik bei den Juden (1901), 198; S. Simonsohn, *Toledot ha-Yehudim be-Dukkasut Mantovah* (1964), 458, 474, 528). MOSES BEN JEDIDIAH SOLOMON (d. 1590) was rabbi at Mantua and author of a commentary to tractate *Middot* (Mortara, Indice; Simonsohn, *ibid.*, index). SOLOMON BEN SAMUEL, 16th-century scholar, wrote responsa (Mantua, 1588).

JEHIEL VIDAL BEN JEDIDIAH SOLOMON (d. 1665), son of the rabbi and scholar Jedidiah Solomon Raphael ben Abraham *Norzi, was appointed rabbi of Mantua in 1628 shortly before the expulsion of the Jews from the town, when he led the exiles to San Martino. They resettled in Mantua in 1630 and he devoted himself to the community until his death. He was often at variance with his community. His responsa are scattered in the archives of the community and in works by contemporary authors (Mortara, in: *Corriere Israelitico*, 2–3 (1863–65), 56, 71; S. Wiener, *Mazkerot Rabbanei Italyah* (1898), 40, 66; S. Simonsohn, *ibid.*, index). MOSES BEN JEDIDIAH SOLOMON, rabbi in Mantua in the 17th century, brother of Jehiel, corresponded with Samuel *Aboab (S. Simonsohn, *ibid.*, index). JEDIDIAH SOLOMON BEN ABRAHAM *NORZI (1560–1616) was a rabbi and biblical scholar. HAYYIM BEN JEHIEL (d. c. 1698), who sat in the rabbinical tribunal of Mantua in 1665, was a *sofer* in 1677, and became rabbi of the community with the assent of Moses *Zacuto in 1685. With Zacuto and other rabbis he drew up the statutes of the community in 1677, and issued moral precepts for the Jews of Mantua. Some of his responsa were recorded by Zacuto and other *posekim* of that time. He is often confused with another rabbi of the same name of the 16th century (Mortara, Indice, 45; P. Norsa, *I Norsa*, 2 (1959), 122; S. Simonsohn, *ibid.*, 528 and index).

ISAAC BEN MOSES NORSA was rabbi in Ferrara in the 18th century, and author of a ruling on *shehitah* as part of a talmudic discussion held at Ferrara and presided over by Isaac Lampronti (*Ittur Bikkurei Kazir*, Venice, 1715; Steinschneider, Cat Bod, 140; Fuerst, Bibliotheca Judaica, 3 (1863)). UMBERTO NORSA (1866–1943), scholar, translator from various languages into Italian, including the Psalms (1926, not published), was president of the community of Mantua (G. Bedarida, *Ebrei d'Italia* (1950), index). PAOLO NORSA wrote a history of the Norsa family in the 14th to 16th centuries (*I Norsa*, 2 vols.; 1953–59).

BIBLIOGRAPHY: V. Colorni, in: RMI, 9 (1934/35), 217ff.; P. Norsa, *I Norsa* (1350–1950), *Contributo alla Storia di una Famiglia di Banchieri*, 2 vols. (1953–59); E. Castelli, *I Banchi Feneratizi Ebraici nel Mantovano (1386–1808)* (1959); S. Simonsohn, *Toledot ha-Yehudim be-Dukkasut Mantovah* (1964); A. Portioli, *Atti e memorie R. [Alfredo Mordechai Rabello]

NORZI, JEDIDIAH SOLOMON RAPHAEL BEN ABRAHAM (1560–1616), Italian rabbi, biblical and masoretic scholar. Born in Mantua in a well-known family (see *Norzi), he was a pupil of his uncle Moses Cases, and was later appointed a member of the rabbinate of that town. He achieved a great

reputation through his critical masoretic commentary on the Bible, a work to which he devoted the greater part of his life. In his research he not only consulted published works, but undertook journeys to many countries to compare various manuscripts. He succeeded in gaining access to the manuscript of Toledo written in 1277 (known as the Codex de Rossi, no. 782). He consulted his friend R. Menahem *Lonzano, the midrashic and talmudic scholar.

Norzi's work, called *Goder Perez*, was completed in 1626. It is in two parts; the first on the Pentateuch and the five Scrolls, and the second on the remaining books of the Bible together with some grammatical treatises. The work was published under the title *Minhat Shai* (Mantua, 1742–44). The second edition (without the grammatical treatises) was published in Vienna (1816). *Minhat Shai* is also printed in the rabbinical Bible *Mikra'ot Gedolot*. Norzi's introduction was published in 1819, and in 1876 by A. Jellinek. A commentary to the *Minhat Shai* called *Or ha-Hayyim* (Vilna, 1867) was written by Hayyim Ze'ev Bender of Bobruisk.

[Hirsch Jacob Zimmels]

NOSSAL, SIR GUSTAV (1931–), Australian immunologist. He was born in Bad Ischl and emigrated to Australia with his family (1938) because of the Nazi threat. He earned his B.Sc. (1952) and medical degree (1954) from the University of Sydney and Ph.D. (1960) from the University of Melbourne. After clinical training at the Royal Prince Alfred Hospital, Sydney (1955–56), he became Research Fellow at the Walter and Eliza Hall Institute of Medical Research in Melbourne (1957–59) and then assistant professor in the Department of Genetics at Stanford University, Palo Alto, California. He returned to the Hall Institute as deputy director for immunology (1961–65), and became director of the institute and professor of medical biology at the University of Melbourne (1965–96). His research mainly centered on the immune cells which produce antibodies and started with the important original observation that each antibody producing cell only makes one kind of antibody. Subsequently he analyzed the way in which these cells respond to stimulation by antigens, their organization within the immune system, and the mechanisms which prevent antibody producing cells from attacking an individual's own tissues. The practical consequences of these discoveries include a better understanding of autoimmune diseases and the development of diagnostic and therapeutic monoclonal antibodies. He collaborated closely with Israeli immunologists including Dr. Ruth *Arnon. Sir Gustav played a major role in national and international organizations concerned with vaccination programs and education in health and science, including chairing the World Health Organization's Global Program for Vaccines and Immunization. He was especially concerned with training health workers working at the grass roots level. He was president of the International Union of Im-

munological Societies (1986–89) and of the Australian Academy of Science (1994–98). His leadership of many charitable organizations includes that of the Council for Aboriginal Reconciliation. His many academic honors include election to the Royal Society of London and the U.S. National Academy of Sciences, the Albert Einstein World Award of Science, the Rabbi Shai Schacknai Prize, and the Robert Koch Gold Medal. His many other honors include the CBE (1970), a knighthood (1977), the Companion of the Order of Australia (1989), and election as Australian of the Year (2000).

[Michael Denman (2nd ed.)]

NOSSIG, ALFRED (1864–1943), writer, sculptor, and musician; one of the first supporters of the Jewish national movements and of Zionism. Born in Lemberg, Nossig's diversified talents found expression in literature (poems, plays, essays in literary criticism), music (a monograph on the life of Paderewski and libretto for his opera), sculpture (his works were exhibited in a number of world exhibitions and achieved considerable recognition). In addition, Nossig engaged in various public and social activities. Yet all of his life he was a kind of outsider, despite the wide veneration he enjoyed. In his youth he belonged to the assimilationist Polish Jews and was one of the editors of their Polish-language journal. Later he abandoned them and in 1887 published the first Zionist work in Polish, "An Attempt to Solve the Jewish Problem" (*Próba rozwiązania kwestji żydowskiej*, 1887), in which he proposed the establishment of a Jewish state in Palestine and adjacent countries. This book had a great impact on the Jewish intelligentsia, especially in Galicia. From that time, Nossig was active in the area of political Zionism. During that period he published books and essays on Jewish national problems and critical writings on socialism.

Nossig participated in the first Zionist Congresses but he soon ran into conflict with Herzl, for his individualistic character prevented his cooperating with other people. From time to time, however, Nossig raised new suggestions and plans for the founding of Jewish and general societies to solve the world's problems in general, and those of the Jews in particular. Thus in 1908 he founded a Jewish colonization organization (Allgemeine Juedische Kolonisations Organisation – AIKO), which, like other plans of his, was not implemented. In his works on Jewish statistics (1887, 1903), he laid the basis for the Jewish Statistical and Demographic Institute and thus was among the founders of the scientific study of Jewish statistics. His most famous pieces of sculpture were *Wandering Jew*, *Judas Maccabaeus*, *Nordau*, and *King Solomon*. Nossig lived in Berlin until the Nazi rise to power, when he was expelled to Poland. There he continued his diversified activities, among other things, in the design of a monumental piece of statue called "The Holy Mountain" to be placed on Mount Carmel as a symbol of world peace and the establishment of a national home for the Jews in Palestine. After the Nazi occupation of Poland and the establishment of the Warsaw Ghetto, he drew up plans for Jewish emigration and sub-

mitted several memoranda to the German authorities. Upon order of the Nazi authorities, the chairman of the Warsaw *Judenrat*, Adam Czerniakow, nominated him as a member of the *Judenrat* and head of its Department for Art, which actually existed only on paper. Early in 1943 the Jewish Fighting Organization became convinced that Nossig was collaborating with the Nazis. He was sentenced to death by the Jewish underground and shot on Feb. 22, 1943, by members of the Jewish Fighting Organization.

[Getzel Kressel]

NOSTRADAMUS, also known as *Michel de Nostre-Dame* (1503–1566), French astrologer and physician. Both of his grandfathers, Jean de Saint-Rémy and Pierre de Nostradonna, were professing Jews, but when Provence became a French possession in 1488, Charles VIII's anti-Jewish policy induced them to convert to Christianity. Consequently Nostradamus was born and raised as a Catholic. In 1529 he graduated from the University of Montpellier as a doctor of medicine. The unorthodox but successful methods of combating the plague which Nostradamus later described in his *Remède très-utile contre la peste* (Paris, 1561) nevertheless failed to save his own wife and children in 1538. For some years thereafter he led a wanderer's existence and, while in Italy, is reputed to have sought out Jews, especially kabbalists.

On his return to France, Nostradamus turned to the occult sciences and, from 1550 onward, published a number of astrological works. The most famous of these, *Les Prophéties de Maistre Michel Nostradamus* (Lyons, 1555), consisted of some 350 quatrains couched in obscure French. The quatrains were arranged in groups of 100, and the work thus acquired its alternative title, *Les Centuries*. Among the many calamities predicted in it was the French king's death in a duel, and the astrologer's fame was assured when Henri II was accidentally killed at a royal tournament in 1559. In 1564 Nostradamus was appointed physician and counselor to Charles IX. The first complete text of the *Centuries* appeared in 1610 and ran to countless editions, not only in French but also in many other languages. Nostradamus uncannily predicts the English and French revolutions and even the rise and fall of a German dictator (whom he calls Hister). The most celebrated astrologer of all time, Nostradamus remains one of the most fascinating and enigmatic figures of the Renaissance.

[Godfrey Edmond Silverman]

NOTARIKON (Gr. νοταρικόν; Lat. notaricum, from *notarius*, "shorthand-writer"), a system of abbreviations by either

shortening the words or by writing only one letter of each word. This method is used in interpreting the Pentateuch and is the 30th of the 32 hermeneutical rules of the *Baraita of 32 Rules. The word is derived from the system of stenographic shorthand used by the *notarii* in recording the proceedings in the Roman courts of justice (Kohut, *Arukh*, 5 (1926), 336). The word *notarikon* occurs only once in the Mishnah (Shab. 12:5). Although there is an opinion that the hermeneutic law of *notarikon* has biblical authority (Shab. 105a), the Talmud does not use it for halakhic interpretations. It is only employed in *aggadah* and *asmakhta* (support for the *halakhah*). Nevertheless, there were rabbis who objected to the excessive use of *notarikon* even in *aggadah* (Sif. Deut. 1).

The *notarikon* can be divided into two categories. One kind interprets every letter in a particular word as the abbreviation of a whole word, since "the words of the Torah are written as *notarikon*" (Mekh. Ba-Hodesh, 8). Thus the word נִמְרֶזֶת (*nimrezet*, "grievous"; 1 Kings 2:8) stands for נֹאֵף, מוֹאֲבִי, רוֹצֵחַ, צוֹרֵר, תוֹעֵבָה (*No'ef, Mo'avi, Roze'ah, Zorer, To'evah*; "adulterer, Moabite, murderer, oppressor, despised") and the first word of the Ten Commandments, אֲנֹכִי (*Anokhi*, "I") was interpreted to mean אֲנִי נָפְשִׁי כִתְבִּיתִי יְהֹוִה (Anna Nafshi Ketavit Yahavit; "I Myself wrote (and) gave [them]") (Shab. 105a).

A second and later application of *notarikon* consists of breaking up a word into various components. Through this method the name רְאוּבֵן (*Re'uben*, "Reuben"; Gen. 29:32) becomes רֵא וֵבן (*re'u ven*, "see (the) son"; *PRE* 36) and the word אֲבִירָא (*avrekh*, "senior adviser"; Gen. 41:43) changes into אֵב בְּחֻמָּה רֵךְ בְּשָׁנִים (*Av Be-hokhmah, Ra-Kh be-Shanim*, "father in wisdom (though) tender in years"; Sif. Deut. 1). Sometimes, one-syllable words are transposed. An example of this is when the noun כֶּרְמֶל (*karmel*, "fresh corn"; Lev. 2:14) is taken to mean רַךְ מֶל (*rakh mel*, "tender and easily crushed"; Men. 66b). At other times, a word is even transposed although the abbreviation for one of the derived words is missing: מְצוֹרַע (*mezora*, "leper"; Lev. 14:2), is therefore taken to mean מוֹצִיא שֵׁם רָע (*mozi shem ra*, "slanderer"), although there is no letter *shin* in the original word (Tanh. *Mezora*, 4). Conversely, a letter may not be used at all. Words were interpreted through the principle of *notarikon* even when the words derived from the original did not necessarily correspond to it. Thus *nazuf* ("under divine censure") is connected with *Nezem Zahav be-aF hazir* ("a ring of gold in the snout of a pig"; Avot 6:2). The rabbis made extensive use of the *notarikon* and the anagram in the interpretation of dreams (e.g., Ber. 57a), and many analogous usages of them can also be found in Hellenistic writings of the period (S. Lieberman, see bibl.). The use of the *notarikon* was also widespread in medieval homiletical and kabbalistic writings (e.g., *Baal ha-Turim* by Jacob b. Asher). Through such methods of interpretation many words in the Bible became *notarikonim*. An example of such kabbalistic interpretation is the taking of the word בְּרֵאשִׁית (*bereshit*, "in the beginning") to refer to the cosmogenic order יָם תְּהוֹם שָׁמַיִם אֶרֶץ (Bara Raki'a Erez Shamayim Yam Tehom; "He created the firmament, the earth, the heavens, the sea, and the abyss"). An-

other example is to interpret *bereshit* to mean בְּרֵאשִׁית ("created in six primordial days"; Zohar, Gen. Prologue, 3b). According to the Mishnah, Queen *Helena of Adiabene had a golden tablet made for the Temple on which the portion of the **sotah* (see *Ordeal) was written in an abbreviated *notarikon* manner (Yoma 3:10; 37b).

Krauss, in: *Byzantinische Zeitschrift*, 2 (1893), 512ff.; M. Halperin, *Notarikon, Simanim, Kinnuyim* (1912); S. Lieberman, *Hellenism in Jewish Palestine* (1950), 69ff.; M.D. Gross, *Ozar ha-Aggadah*, 2 (1961), 796f. (a list of *notarikonim*).

***NOTH, MARTIN** (1902–1968), German Bible scholar, disciple of Albrecht *Alt, to whose ideas Noth was deeply indebted. Noth was born in Dresden and served as professor at Königsberg (1930–45) and Bonn (1945–65). He edited *Zeitschrift des deutschen Palaestina-Vereins* from 1929 to 1964 and was director of the Deutsches Evangelische Institut in Jerusalem from 1965 until his death. Noth brought his extensive topographical studies, mainly published in *Palaestinajahrbuch* and *Zeitschrift des deutschen Palaestina-Vereins*, linguistic research (in particular, *Die israelitischen Personennamen*, 1928), and form-criticism studies to bear on problems of Israelite history. Of primary importance was his thesis that from the time of the settlement, Israel was organized into a 12-tribe confederation, similar to the Greek amphictyony (in his *Das System der zwölf Staemme Israels*, 1930). He felt that virtually nothing can be known about pre-settlement history.

Noth was one of the foremost representatives of the form-critical approach, and his studies of pentateuchal traditions, *Ueberlieferungsgeschichte des Pentateuchs* (1948, 1960²), and Deuteronomy (*Ueberlieferungsgeschichtliche Studien*, 1 (1943, 1957²)), had widespread influence on biblical research. In the former work he examined the themes of the pentateuchal narrative and the history of its traditions and presented the idea that both J and E go back to a common source, G (*Grundlage*). In the latter he originated the idea of the Deuteronomic history work, a unified history extending from Deuteronomy to 11 Kings (minus insertions), in which previously independent units were joined and unified by a distinctive theology and philosophy of history. In *Die Gesetze im Pentateuch* (1940) he linked Hebrew law to the religious confederation rather than to the monarchy. He wrote commentaries to individual books of the Bible: Exodus (1959², Eng. tr. 1962), Leviticus (1962, Eng. tr. 1965), Numbers (1966), Joshua (1953²), and 1 Kings 1–16 (1964). He also wrote *Geschichte Israels* (1954², 1961⁵; *The History of Israel*, 1960²); and *Die Welt des Alten Testaments* (1946, 1957³). Some of his articles were collected in his *Gesammelte Studien* (1957, 1960²). *The Laws in the Pentateuch and Other Studies* (1966) is an English translation of some of his works.

[Michael V. Fox]

NOTKIN, NATA (**Nathan Note of Shklov**, also **Nathan Shklover**; d. 1804), Russian merchant and army contractor.

Notkin was a champion of the improvement of the status of Jews in Russia at the beginning of the 19th century. Born in Shklov, he lived in Mogilev and later in Moscow and St. Petersburg. He was introduced by General Zorich, the squire of Shklov, to Count Kurakin, and used this opportunity to act in behalf of his fellow Jews. He presented the count with a project for the establishment of large-scale agricultural colonies for the Jews of "New Russia" as well as plans for industrial plants near the ports of the Black Sea, which he hoped would direct the Jews to productive labor. Toward the end of 1802 he was invited by G.R. *Derzhavin to be a member at the Committee for the Betterment of the Jews. In all of his writings and projects Notkin tried to demonstrate to the government ways to improve the condition of the Jews, e.g., the gradual removal of Jews from the liquor business, the establishment of Jewish schools, and the direction of Jews toward productive labor. Notkin was one of the founders of the St. Petersburg Jewish community.

[*Encyclopaedia Judaica* (Germany)]

NOTOVICH, OSIP KONSTANTINOVICH (1849–1914), journalist and playwright. Notovich was a graduate of the University of St. Petersburg. In his youth he converted to the Greek Orthodox Church. Acquiring the small daily *Novosti* in 1876, in time he developed it into an important political journal. Although Notovich published facts about the persecution of Jews, he did not come to their defense for fear of losing his Russian readers. Notovich wrote several philosophical works and plays, some of which were performed on the stages of the imperial theaters of Moscow and St. Petersburg. His translation of H.T. Buckle's *History of Civilization in England* (1890) was especially popular. In 1905 Notovich published a revolutionary appeal for a trade union. As a result, his newspaper was confiscated and he was summoned to court. Subsequently, he fled the country and died abroad.

NOTTINGHAM, industrial city in the E. Midlands, England. In the 13th century Nottingham was one of the 27 centers in which an *archa was established for the registration of Jewish debts. An attack was made on the Nottingham Jews during the Barons' Revolt in 1264. From the resettlement until the 19th century only individual Jews settled in the city. By 1805 there was a small, organized community; a cemetery was acquired in 1822; and by 1880 there were about 50 Jewish residents, though a synagogue was not built until 1890. The Nottingham lace-curtain industry was founded by a Jewish immigrant from Germany, Lewis Heymann. By 1939, the community had increased to 180, but World War II brought an influx of new residents. In addition to an Orthodox synagogue there was a Progressive congregation; communal institutions included a Zionist Association and a University Jewish Society. In 1969 the community was estimated at 1,500 (out of a total population of 310,000), and in the mid-1990s it was estimated at about 1,050. The 2001 British census found 627 Jews by religion

in Nottingham. There is a Nottingham Representative Council and an Orthodox and a Progressive synagogue.

[Vivian David Lipman]

NOVAK, DAVID (1941–), U.S. theologian, rabbi, and leading authority on Jewish law. Born in Chicago, Novak received his bachelor of arts degree from the University of Chicago in 1961, his rabbinical ordination from the Jewish Theological Seminary of America in 1966, and his doctorate in philosophy from Georgetown University in 1971. From 1966 to 1969 he was Jewish chaplain at St. Elizabeth's Hospital, National Institute of Mental Health, in Washington, D.C., and he served as rabbi to congregations in Maryland, Oklahoma, Virginia, and New York City from 1966 to 1989. He taught at Oklahoma City University, Old Dominion University, the New School for Social Research, the Jewish Theological Seminary of America, and Baruch College of the City University of New York. From 1989 to 1997 he was the Edgar M. Bronfman Professor of Modern Judaic Studies at the University of Virginia. In 1997 he joined the University of Toronto, holding the J. Richard and Dorothy Shiff Chair of Jewish Studies as professor of the study of religion, professor of philosophy, and director of the Jewish Studies Programme.

Novak wrote primarily on the philosophical aspects of Jewish legal tradition; his work concerns the foundations of Jewish theology and its application to contemporary problems, especially those involving ethics. His books include *Law and Theology in Judaism* (1974, 1976), *Suicide and Morality* (1975), *The Image of the Non-Jew in Judaism: An Historical and Constructive Study of the Noahide Laws* (1983), *Jewish-Christian Dialogue: A Jewish Justification* (1989), *Natural Law in Judaism* (1998), and *Covenantal Rights: A Study in Jewish Political Theory* (2000). He contributed numerous articles to theology, law, and philosophy journals, and he was a contributing editor of *Sh'ma: A Journal of Jewish Responsibility*.

Novak was a founder of the Panel of Inquiry on Jewish Law of the Union for Traditional Judaism and a founder of the Institute of Traditional Judaism in Teaneck, N.J. He is a fellow of the American Academy for Jewish Research and of the Academy for Jewish Philosophy, and he was a member of the international advisory board to the government of Poland concerning the Auschwitz-Birkenau site. Novak was a fellow of the Woodrow Wilson International Center for Scholars in Washington, D.C., and in 1996 delivered the Lancaster/Yarn-ton Lectures in Judaism and Other Religions at Oxford University. He lectured extensively throughout North America, Israel, Europe, and South Africa. He spoke Hebrew, Yiddish, and German, and had a knowledge of Aramaic, Greek, Latin, and French.

[Dorothy Bauhoff (2nd ed.)]

NOVAK, ROBERT (1931–), U.S. journalist. Born in Joliet, Illinois, Novak graduated from the University of Illinois

in 1952 with a bachelor of arts degree. His journalism career began when he wrote for local newspapers while in college. During the Korean War, Novak served in the Army, attaining the rank of lieutenant. After the war, he joined the Associated Press and became a political correspondent in Indianapolis. In 1957 Novak was transferred to Washington, where he reported on Congress. He left the AP to join the capital bureau of *The Wall Street Journal*, covering the Senate, and in 1961 he became the newspaper's chief congressional correspondent. In 1966 Novak teamed up with Rowland Evans to create the Evans-Novak Political Report, a nationally syndicated column. After Evans's death in 2001, Novak continued the column on his own. By that time, Novak had also become a television personality, appearing on many interview and opinion programs on CNN, most notably *The Capital Gang*, *Crossfire* and *Evans, Novak, Hunt and Shields*. While he held centrist views early in his career (he supported the Democratic presidential candidacies of John F. Kennedy and Lyndon B. Johnson), he moved to the right and his feisty personality earned him the nickname the Prince of Darkness.

As his career evolved in the 1980s and into the early years of the 21st century, Novak became embroiled in a number of controversies for his public comments and actions. He was frequently criticized as acting as a political operative for the Republican Party while posing as a journalist. He was implicated in a number of political scandals and violations of journalistic ethics and standards. Twice Novak was reportedly involved in situations that led to the dismissal of Karl Rove, later the architect of George W. Bush's presidential victories, from George H.W. Bush's vice presidential campaign and in 1992 while working for Bush's re-election campaign. Both times Rove was dismissed for leaking campaign information to Novak, a charge they both denied. Novak's loyalty to his sources was called into question after he revealed Robert Hanssen as the confidential source for some of his articles. Hanssen was later found guilty of selling state secrets, including the identities of covert operatives, to the Soviet Union. In 2003, Novak disclosed the identity of Valerie Plame, an agent of the Central Intelligence Agency, in his newspaper column. Novak reported that the information had been provided to him by "senior administration officials." Plame was the wife of Joseph Wilson, a former ambassador, who wrote an article charging that the Bush administration twisted intelligence to explain its rationale for going to war against Iraq. The leak and allegations of a possible cover-up were investigated by a special prosecutor and a grand jury. I. Lewis Libby, chief of staff to Vice President Dick Cheney, was indicted on five counts in the case and resigned. Rove was questioned by the grand jury at least four times.

Novak was born Jewish but said he lost his faith while in college. He converted to Roman Catholicism in 1998 and was a member of the ultra-conservative Catholic organization Opus Dei. He was an avid supporter of a Palestinian state and was a fierce critic of the State of Israel and most especially of

Ariel *Sharon, whom he deliberately called General Sharon, well after he became prime minister.

[Stewart Kampel (2nd ed.)]

NOVAYA USHITSA, town in Khmielnitskii (Kamenets-Podolski district until 1954), Ukraine. The Jewish community in Novaya Ushitsa and its environs dates from the beginning of the 18th century. In 1765 there were 203 poll tax payers. From 1838 to 1840, 80 Jews of the Novaya Ushitsa region, including rabbis and community leaders, were tried in what became known as the Oyshits Incident. They were accused by the governor of Kiev, General Gurayev, of the murder of two Jews who had informed on "absconders" (unregistered persons who had avoided paying taxes and doing military service) to the authorities. Most of the accused were sentenced by a military court to flogging and exile to Siberia.

The 1847 census records 725 Jews living in Novaya Ushitsa, with 1,235 in the communities of the district. The Jewish population numbered 2,213 in 1897 (34.5% of the total). After the Bolshevik Revolution and the civil war, their sources of livelihood were drastically curtailed. In 1926 there were 1,844 Jews in the town (28.4% of the total), and in 1939 they numbered 1,547 (55% of the total population). In the 1920s there existed a rural Jewish Council (Soviet). Germans entered the town on July 14, 1941. In September a closed ghetto was instituted and in spring of 1942 Jews from the environs were herded there. On August 20, 1942, an *Aktion* was conducted, and 3,222 were murdered. A group was taken to the labor camp in Letichev and perished there. Those remaining in the town ghetto were killed on October 16, 1942. After the *Holocaust the community ceased to exist.

[Arthur Cygielman]

NOVE, ALEC (1915–1994), British historian and economist. Born Alexander Novakovsky in St. Petersburg, the son of left-leaning middle-class parents, Nove came with his family to Manchester in the 1920s, when his father, a Menshevik, was given the choice of emigration or Siberia by the Bolshevik government. Nove was educated at the London School of Economics and, after serving in the British civil service, became a senior academic in 1958 with a readership at the LSE and, subsequently, a chair at Glasgow University. Nove was regarded as one of the foremost experts in the West on the Soviet economy, publishing *An Economic History of the U.S.S.R.* (1969) and many other works on the realities of the Soviet economic system. He was one of the few Western experts on the Soviet Union to predict the possibility of the reform of the system from within, as actually occurred in the 1980s.

NOVECK, SIMON (1914–2005), U.S. rabbi. Born in Atlanta, he earned a B.A. from Yeshiva College and then moved to the Jewish Theological Seminary where he was ordained in 1941. He earned a Ph.D. from Columbia University in 1955.

He entered the pulpit upon ordination serving Baldwin Jewish center during the early war years (1940–44) and as acting rabbi in Temple Beth El in Cedarhurst during the last part of World War II and rabbi in B'nai Israel in Freeport, Long Island (1946–49). He then assumed the assistant rabbi position at Park Avenue Synagogue under Milton *Steinberg and became rabbi upon his passing in 1950.

Noveck had an active interest in adult education and was director of the National Academy for Adult Jewish Studies (1952–57) that became part of United Synagogue of America. He resigned from Park Avenue to head the Adult Jewish Education Department of B'nai B'rith and initiated the B'nai B'rith Great Books Series (1959–63) which added significantly to the classical texts available in the English language at that time.

Having once succeeded a legendary rabbi in Manhattan, he returned to the pulpit to succeed Morris *Silverman in Hartford, Connecticut. Silverman was the editor of the Conservative Movement Sabbath and Holiday Prayerbook. Noveck helped plan the congregation's move from its imposing sanctuary in Hartford to West Hartford, where it has remained for over a generation.

Among his works are: *Judaism and Psychiatry: Two Approaches to the Personal Problems and Needs of Modern Man* (1956); *Great Jewish Personalities in Modern Times* (1960); *Great Jewish Thinkers of the Twentieth Century* (1963); *Contemporary Jewish Thought: A Reader* (1963); *Creators of the Jewish Experience in Ancient and Medieval Times* (1985); *Milton Steinberg: Portrait of a Rabbi* (1978); and *Creators of the Jewish Experience in the Modern World* (1985).

[Michael Berenbaum (2nd ed.)]

NOVE MESTO NAD VAHOM (Slovak, **Nové Mesto nad Váhom**; Hung, **Vágúhely**), town in western Slovakia, since 1993 Slovak Republic. During the reign of King Luis the Great (1342–1382), Jews lived there, were expelled, and later permitted to return. In 1465 there were 10 Jews; the community was expelled again in 1514. In 1683, many Jews died in the Kuruc massacre in the Moravian city of *Uhersky Brod. The surviving 11 families received permission to settle in Nove Mesto and engage in trade and craft. They belonged to the Uhersky Brod congregation and were obliged to pay taxes. The community continued to grow, with more Moravian Jews arriving. They were subject to the "Familiants" law of the Emperor Charles VI (1711–1740), which permitted only one Jew per family to marry and limited the number of Jews in a city. The others immigrated to upper Hungary.

By 1735 there were 372 Jews in Nove Mesto. In 1780 they built their first synagogue. In 1785 there were 2,320 Jews; it was

the second most important Jewish city in upper Hungary, after *Pressburg (Bratislava). In 1830 there were 2,495; in 1840 there were 2,050; in 1880 there were 1,850; and in 1910 they numbered 1,553. In 1930 there were 1,581; in 1940 the number fell to 1,209.

In 1754 the community hired its first rabbi, Moses Hamburger (1754–1764). In 1780 a *talmud torah* was opened. Following the order of Emperor Joseph II (1780–1790), a school was founded in 1783, with German as the language of instruction. During the Hapsburg Empire, the Jews lived undisturbed until the Spring of Nations (1848–49). In May 1848, a massive pogrom claimed many Jewish lives. During the Magyar war of independence, nine Jews enlisted in the Magyar army. Thus Jews clashed with the Slovak national interest, which wanted self-rule. A fire in 1856 destroyed a large part of Nove Mesto. In 1848 a primary school opened, still using German; in the 1860s it switched to Magyar. In 1856 Rabbi Joseph Weisze (1855–1897) founded a government-supported Jewish high school, the first of its kind in Jewish Hungary. When support was lost in 1919, the school was taken over by the authorities and it ceased to be Jewish. In 1860 a school for girls was established, operating until 1919.

After the 1868 Hungarian Jewish Congress many congregations split, but Nove Mesto continued its old tradition, called "Status Quo Ante." In 1921, several families established an Orthodox congregation. They hired a rabbi, built a synagogue, and founded a *hevra kaddisha* and a *talmud torah*. In 1928 Rabbi Lipmann Donath established a small yeshivah. The two rival congregations made peace in 1932.

During World War I dozens of Jews were recruited into the army. At the end of the war there was a wave of pogroms in Slovakia, and Nove Mesto was one of the hardest hit. Jews tried to defend themselves, using the rifles they had kept from the army; Hungarian soldiers came to their rescue. Nationalist and Catholic elements continued to persecute Jews. Pro-Czechoslovak and Social-Democratic figures protested, serving to calm the situation.

In the New Czechoslovak Republic, Jewish entrepreneurs helped industrialize Nove Mesto. They established food, metal, wood, and textile industries; Jewish physicians, lawyers, and teachers contributed to intellectual life, and Jews figured largely in retail and handicrafts. The Jewish party played an important role in local political life, and its members were regularly elected to the municipal council and as deputy mayor. The Zionist movement was well established.

With the support of the Third Reich, Slovakia proclaimed independence on March 14, 1939. A wave of antisemitism ensued, culminating in 1942 with the deportation of 1,300 of the city's 2,215 Jews to Sobibor and Treblinka. In August 1944 there was an anti-Nazi uprising in Slovakia in which Jewish youth participated, but the invading German army deported the surviving Jews to Auschwitz.

In 1947 there were 266 Jews in Nove Mesto; most emigrated. In 1965 there were 25. In 1975 the Communist authorities destroyed the ancient cemetery. The synagogue was de-

stroyed during the war, and Jewish communal buildings were expropriated.

[Yeshayahu Jelinek (2nd ed.)]

NOVE ZAMKY (Slovak. **Nové Zámky**; Hung. **Ersekújvár**; Ger. **Neuhaeusel**), town in S. Slovakia, since 1993 the Slovak Republic. Until 1840, Jews were not permitted to live in Nove Zamky. They attended markets in the town and lived in nearby Surany (Nagysuran). In 1840, when the Hungarian Parliament passed the law permitting Jewish settlement, the first Jewish families moved there, where they traded in grain and horses. In 1855 the community numbered 85. In 1857 they founded a *hevra kaddisha* and in 1858 consecrated a cemetery. In 1860 the first synagogue was erected. Railway connections with Budapest and Vienna increased the economic importance of the town, and the Jewish population grew accordingly. In 1857 there were 892 Jews; in 1890 there were 1,491; and in 1910 there were 1,540. The first Czechoslovak census of 1921 recorded 2,087 Jews; the 1930 census recorded 2,535. On the eve of the deportations in 1940 there were 3,000 Jews in Nove Zamky.

In 1842 the first school was founded. The language of instruction was German; it changed to Magyar in 1869, by which time the school was a regular elementary school. In 1920, courses in Slovak and Hebrew were added to the curriculum. After the 1868 Jewish Congress, an Orthodox congregation was founded as well. They built a synagogue and organized a *hevra kaddisha*, a primary school, a *talmud torah*, a cemetery, and a yeshivah. In 1927 the community established a Jewish high school and, later, a Beth Jacob elementary school for girls. The Neolog Rabbi Dr. Samuel Klein (1866–1940) as well as his son and heir in the rabbinate, Dr. Ernst Klein, advocated speaking Slovak in daily life.

During World War I, some 85 Jews enlisted in the army. Nove Zamky suffered less than other cities from the wave of pogroms and looting that swept Slovakia in 1918–1919, probably because of the presence of the Hungarian army. However, Czechoslovak troops occupying the region faced Magyar armed resistance; fighting also took place during the Bolshevik Commune in 1919, causing considerable damage.

The Czechoslovak Republic signified prosperity for the Jewish community. Both congregations expanded in number and affluence. The American Jewish Joint Distribution Committee assisted in establishing a credit society that served the entire region; at its peak it held 684 deposits (totaling more than 3,000,000 crowns); 1937 was the society's best year. Jews participated in municipal life and were elected to the city council. The Jewish party and the Zionist movement had important branches in the town. The local branch of Ha-

Shomer ha-Za'ir was one of the largest in the country, and Brit Trumpeldor thrived.

In November 1938 Nove Zamky was ceded to Hungary. The Hungarian anti-Jewish laws were applied immediately, and the local authorities added their own. They curtailed Jewish economic activity, forbidding them to do business on certain streets. When Hungary introduced the Labor Service System (*Munkaszolgalat*) in 1939, Nove Zamky Jews were recruited. After the German occupation of Hungary in March 1944, the deportation of Hungarian Jewry to Auschwitz began. Nove Zamky's Jews were concentrated in a temporary ghetto comprised of several shabby streets, while neighboring Jews were moved to the Kurzweil Brick Works. On June 12 and 15, 1944, two transports of Jews were sent to Auschwitz. The entire local Jewry was deported; only a few managed to return after the war.

In 1947 there were 501 Jews in Nove Zamky. After the war, the surviving Jews worked hard to revive their congregation. They abolished the division by rite, and reconstructed the Orthodox synagogue (the Neolog synagogue had been bombed), both cemeteries, and the *mikveh*. The congregation remained active during the entire Communist regime, one of the few that retained its religious life. In 1990, there were 70 Jews in the city. A plaque bearing the names of the Nove Zamky Holocaust victims was mounted in the synagogue in 1999. Slovakia has maintained the synagogue and other Jewish communal buildings.

Peter *Ujvary, the author of *Zsidó Magyar Lexicon* (Budapest 1929), was born in Nove Zamky.

[Yeshayahu Jelinek (2nd ed.)]

NOVGOROD-SEVERSK, city in Chernigov district, Ukraine. During the 14th century, Novgorod-Seversk was conquered by the princes of Lithuania; in the 16th and 17th centuries it was alternately in the hands of the Poles and the Russians; and in 1667 it was definitively annexed by Russia. A Jewish settlement is mentioned for the first time in a residence permit granted to the townspeople by King Sigismund III Vasa (1587–1632) of Poland. According to the permit Jews were forbidden to sell meat in the town, except in the courtyard of the synagogue. Also included were several tax levies which Jews were ordered to pay. During the *Chmielnicki persecutions of 1648 many Jews in Novgorod-Seversk were massacred by the Cossacks. The community was renewed only in the late 18th century. In 1847 1,336 Jews were registered in the community; by 1897 the number had risen to 1,956 (32% of the total population). The community suffered in the wave of pogroms which swept over Russia in 1905. On April 6, 1918, units of the Red Army retreating before the German army savagely attacked the Jews of Novgorod-Seversk and 88 Jews (including the author A.J. Slutzky) lost their lives. In 1926 there were 2,089 Jews (22.8%

of the total population) in the town, and in 1939 it dropped to 982 (8.56% of the total population). The Germans arrived there on August 26, 1941, and they found 200 Jews in the town. On November 7, 174 were murdered; others were executed some days later. There is no information on a Jewish community after World War II.

[Yehuda Slutsky]

NOVI SAD (Hung. **Ujvidék**; Ger. **Neusatz**), city on the Danube in Vojvodina, Serbia. Some Jews from Belgrade seem to have settled at the foot of the later Petroradin fortress in the 16th century. Under Ottoman rule (16th–17th centuries) they were treated well and engaged in trade on the Danube. During the Austro-Turkish war of 1683–99, Ashkenazi Jews were among the *contractors to the Austrian army. When the region passed under Austrian rule in 1699, it was devastated and depopulated. Jews were therefore exceptionally authorized to settle in the new town of Neusatz opposite the fortress but were not allowed to form a recognized community. Austrian archives mention Salomon Hirschl, probably the first *rosh kehillah* of Novi Sad. At the beginning of the 18th century three Jewish families are known to have lived in Novi Sad; however, there were probably more, as only owners of real estate were registered. Most Jews came from Nikolsburg in Moravia. All Jews had to pay the Jewish tax (until the end of the 18th century). They were subject to limitations, such as the interdiction of acquiring real estate; as only the eldest son of each family could marry in the same town (see *Familiants Laws), others had to leave and settle elsewhere. The *hevra kaddisha* was founded in 1729 as a “Holy Welfare Society.” Under Joseph II the teaching of German or Hungarian became obligatory, and in order to open a business or marry, Jews had to have some formal education. A Jewish school was built in Novi Sad in 1802 and a synagogue in 1829. During the Hungarian revolution of 1848–49 all Jewish property was destroyed, but in 1851 the synagogue was rebuilt, and a new, monumental one was built in 1901 (still standing in the 1970s). Previously all Vojvodina belonged to Hungary (within Austria-Hungary); however, in 1918, when Vojvodina became a part of the new Yugoslav kingdom, it formed a province closely linked with Serbia.

Between the two world wars communal life was intensive and diversified. There was a Jewish school, a home for the aged, a modern community center, widespread Zionist activities, and Jewish newspapers were published (*Juedisches Volksblatt*, later *Juedische Zeitung Jevreyske Novine*).

Until the Holocaust, in 1941, there were 4,000 Jews in Novi Sad, out of a total population of 80,000. The extermination of the Jews of Novi Sad was carried out in successive waves, initially under the Hungarian occupation and later by German troops. It began with individual arrests, torture, and murders. On Jan. 21–23, 1942, a small rebellion near Novi Sad served as a pretext for the so-called “*razzia*,” when total curfew was ordered and Jewish homes were searched and plun-

dered while their occupants were murdered in the streets. On January 23 more than 1,400 Jews were marched to the Danube and lined up in four rows. The ice in the frozen river was broken and throughout the day Jews, including women and children, were shot in the back, disappearing in the waters, which carried corpses down to Belgrade and beyond for weeks. Among the victims were also some 400–500 Serbs. The “*razzia*” caused an upheaval even in Hungarian circles, and cabled orders arrived from Budapest to stop the massacre on the evening of January 23. Several hundred survivors, half frozen and frightened to death, were released. The extermination policy continued, however. During 1942 all male Jews between the ages of 18 and 45 were gathered into “labor battalions,” maltreated, and starved (first in Hungary), and then sent to the Ukrainian front, where they perished. The last phase came with the German occupation in March 1944. With the aid of Hungarians, the Germans sought out all remaining Jews and transported about 1,600 to Auschwitz in April 1944. Jewish property was plundered completely, except for personal and worthless items, which were gathered in the synagogue. About 1,000 Jews survived the Holocaust; 700 left for Israel and about 200 remained in Novi Sad in 1970, most of them survivors of POW camps. Subsequently the community grew to around 630 with the addition of former residents returning from abroad and Jews arriving from places depleted of their Jewish inhabitants. Restoration of the synagogue and of community offices was undertaken and legal proceedings initiated for the return of Jewish public buildings like the community center and the Jewish orphanage. The chapel of the cemetery was also renovated. The pre-Holocaust choir was reconstituted and an art club was set up in addition to regular cultural gatherings. The synagogue was used only for holiday services.

The presidents of the community were Pavle Šosberger, Prof. Theodore Kovač, and Tihomir Ungar.

[Zvi Loker]

NOVITCH, MIRIAM (1908–1990), Holocaust historian. Novitch was born in Yurtishki, White Russia. She studied at the gymnasium in Vilna and at the Superior School for the Languages of Eastern Europe. She traveled to France before World War II and as a French resistance fighter was arrested in June 1943 and taken to the Vittel camp in France. After being liberated by the Americans in 1944, she devoted her life to Holocaust research. She arrived in Erez Israel in 1946 and was a founder of kibbutz Loḥamei ha-Getta’ot, and its Holocaust museum in 1949. She was the first curator of the museum. She was also a pioneer in collecting film on the Holocaust.

She brought archival material from Eastern and Western Europe to the museum, collecting material in Poland, Germany, Czechoslovakia, Spain, Belgium, Italy, and Switzerland. She did pioneering research soon after World War II on the Sobibor death camp, Greek Jewry in the Holocaust, and the confiscation of Jewish art. She was a model to many younger researchers and helped them with scholarships and research. She made many trips to Europe in the early years following the Holocaust when research was difficult and countries were closed to such initiatives.

She published the following books: *Women and The Holocaust, Personal Reflections* (1965); *Le Passage Des Barbares, Contribution a l'Histoire de la Deportation et de la Resistance des Juifs Grecs* (1967, 1982); *La Verite sur Treblinka* (1967); *Sobibor – Camp of Death and Revolt* (1979); *Spiritual Resistance: Art from Concentration Camps 1940–1945 – A Selection of Drawings and Paintings from the Collection of Kibbutz Lohamei Haghetat* (1981); and *Le Genocide des Tziganes sous le Regime Nazi* (1968).

[Yitzhak Kerem (2nd ed.)]

NOVOGRUDOK (Pol. **Nowogródek**; also referred to by Jews as **Novaredok**), city in Grodno district, Belarus. Novogradok was within Poland-Lithuania until the third partition of Poland (1795), when it passed to Russia, from 1842, and a county capital in the province of Minsk. It reverted to Poland in 1921, but passed to the Soviet Union in 1939. The Jewish community of Novogradok, one of the oldest in Lithuania, is first mentioned in documents in 1529. In 1563, at the request of the townspeople, King Sigismund II Augustus ordered that the Jews were to move to one of two streets at a distance from the center, where space had been allocated to them for building houses. In 1576 King Stephan Báthory confirmed all the former rights of the Jews of Novogradok and of the other Jews in Lithuania. According to a decision of the Council of the Province of Lithuania (see *Councils of the Lands) of 1623, Novogradok Jews were subject to the jurisdiction of the *Brest community. There were 893 poll tax payers in the community and surrounding villages attached to it in 1765. There were 2,756 persons in 1847 and 5,105 in 1897 (63.5% of the total population). In the 19th century two of Russia's leading rabbis, Jehiel Michael *Epstein and Isaac Elhanan *Spektor, officiated in Novogradok. At the end of the 19th century the city became one of the centers of the *Musar movement after a *yeshivah and **kolel* had been founded there in 1896 by Joseph Hurwitz, one of the most prominent disciples of Israel *Salanter and a leader of the Musar movement. During World War I the yeshivah was transferred to *Gomel. The Zionist movement and the Bund were active before World War I and after. The community decreased considerably after that war, numbering 3,405 (53.4% of the total) in 1921 and increasing to 6,309 in 1931. There were a Hebrew Tarbut school, a Yiddish CYSHO school that operated for 4 years, and a religious Tushia school (of the Mizrahi). In the 1930s the Yiddish weeklies *Novaredok Life* and *Novaredok Week* appeared in the town.

[Yehuda Slutsky]

Holocaust Period

In 1939 after the outbreak of the war (September 1939) refugees from western Poland settled in town. During the period of Soviet rule (1939–41), the institutions of the Jewish community were destroyed, enterprises were nationalized, small trade was drastically reduced, and artisans were organized in cooperatives. The Jewish schools were closed and a Yiddish one with a Soviet curriculum was opened. There were arrests among the "bourgeois" Jews. With the outbreak of the war between Germany and the U.S.S.R. on June 22, 1941, groups of Jews attempted to reach Soviet territory but the Soviet guards prevented them from crossing the border and they returned to the city. Germans entered the city on July 3, and as early as July 10 they had murdered about 50 men. On December 7 the Jews were ordered to assemble in the courtyard of the district courthouse. About 1,896 skilled laborers with their families (only two children per family) were concentrated in a ghetto, and the others, about 4,500, were murdered outside the town. The *Aktion* was carried out by Einsatzkommando 8, with the help of local policemen. The survivors were concentrated in the ghetto that was set up in the suburb of Peresieka immediately after this *Aktion*. The first chairman of the Judenrat was the lawyer Ciechanowski, and the second was Chaim Ajzykowicz. Jews from the surrounding communities were also brought into the ghetto; they came from Wielub, Korelicze, Iwieniec, Rubiezewicze, Lubcz, and Naliboki.

The second *Aktion* was carried out on Aug. 7, 1942, and about 2,000 Jews perished in it. Only 1,240 artisans survived. They were concentrated in two places: construction workers in Peresieka and the others in a camp that was set up at the district courthouse. In October 1942 a group of about 50 Jews succeeded in escaping to the forests. Contact was made with a partisan unit headed by a Jew, Tuvia *Bielski. On Feb. 4, 1943, the Germans liquidated the camp of construction workers. In another *Aktion* on May 7, about 375 people were killed including the last of the women and children, and 300 skilled workers were left. At the beginning of 1943 a resistance group was created by Berko Joselewicz, Yasha Kantorowicz, and others, and headed by Dr. Yaakov Kagan. They decided to break out of the camp in which they were imprisoned and join the partisans. They dug a tunnel, and about 323 Jews escaped, but only 200 succeeded in reaching the forests; most of them joined the Jewish Battalion commanded by the Bielski brothers. Many of them took part in the fighting against the Nazis, Belorussian collaborators, and others. After the war about 1,200 Jews returned to Novogradok from hiding in the forests. In 1970 the Jewish population was estimated at about 75 (15 families).

NOVOMEYSKY, MOSHE (1873–1961), industrial pioneer in Erez Israel. Born in Barguzin, a village on Lake Baikal in Siberia, Novomeysky attended a secondary school in Irkutsk, graduated as a mining engineer in Germany, and engaged in gold mining in Siberia. He received a Jewish upbringing and became involved in Zionism, although the Russian revolutionary movement also attracted him and he spent some time in prison. While in Germany in 1906, he became interested in a study of the potentialities of the Dead Sea as a source of valuable chemicals for industrial use. He visited Erez Israel before World War I and participated in the establishment of the Palestine Industrial Syndicate in Berlin. During the war and the Russian Revolution, he was active in Jewish affairs in Siberia and became head of the National Council of Siberian Jews and of the regional Zionist Organization. When the Bolsheviks came to power he left Siberia and settled in Palestine in 1920, where he took first steps toward the realization of his plans for the exploitation of the Dead Sea. It took some ten years to obtain the necessary concession in the face of opposition in the British Parliament; but eventually his Palestine Potash Company became the most important enterprise of its kind in the Middle East. During the Israel War of *Independence (1948), the Potash Works on the north of the Dead Sea were evacuated and totally destroyed by the Arab forces, and only the plant erected in the south, near Sedom, survived. After the establishment of the State of Israel, the Potash Company, registered in Britain, was replaced by an Israel company under government control. Novomeysky was also a founder of Fertilizers and Chemicals, another large chemical enterprise in Haifa.

Apart from his intensive work in the economic field, Novomeysky devoted much time to public affairs. For a time after he settled in Palestine, he acted as treasurer of the *Haganah. He was a founder of the Palestine Economic Society for the study of the country's economic problems. Deeply interested in the Arab question, he succeeded in establishing good relations with the Trans-Jordanian authorities and the hundreds of Arabs employed by his company. In later years he devoted his time to writing his reminiscences, *My Siberian Life* (1956), and the story of the Dead Sea concession, *Given to Salt* (1958). He died in Paris and was buried in Tel Aviv.

[Moshe Medzini]

NOVOSELITSA (Rom. *Nouă Sulița* or *Sulița*), town in the Khotin district, region of Bessarabia, Moldova. As a result of the large emigration of Jews to Bessarabia, Novoselitsa developed in the first half of the 19th century from a rural into an

urban community. There were 3,898 Jews living there (66% of the total population) in 1897 and 4,152 (86.2%) in 1930. Among the 875 members registered in the loan fund in 1925, were 461 merchants, 213 craftsmen, and 65 farmers. Prior to World War II, community institutions included a *talmud torah*, a kindergarten, and a school, all belonging to the *Tarbut network, and an old-age home. The town was annexed on June 29, 1940, to the Moldavian S.S.R.

[Eliyahu Feldman]

Holocaust Period

The town was captured by Romanian forces on July 2, 1941. On the same day, 800 Jews were murdered on the pretext that Jews had shot at the Romanian troops. Sixty Jews were arrested and taken to the local spirits factory, where they were shot to death. The surviving Jews, as well as others gathered from the entire district, were rounded up and put into the factory. On July 5, the old men, the women, and children were forced into a ghetto in the town. On July 20, all the Jews were put on the road to *Transnistria. En route they were exposed to constant brutality, and the old and weak among them were put to death. They reached *Ataki, on the banks of the Dniester, on August 6, by which time the Germans had closed the Ukrainian border, and the deportees were sent back to *Securenii. In a report by the gendarmerie commander at Cernauti, dated August 11, 2,800 Jews from Novoselitsa are mentioned among the prisoners of the Securenii camp. Their fate was the same as that of the other Jews in that camp; many were killed and others buried alive. Only 200 returned from Transnistria after the war. In 1959 the authorities closed down the community's two synagogues, one of them being converted into a club. In 1970 the Jewish population was estimated at about 1,000.

***NOVOSILTSEV, NICOLAI NIKOLAYEVICH** (1761–1836), Russian politician. As the czar's adviser in the Polish kingdom (1815), he took charge of Jewish questions. He recommended that the Polish government should gather material on the conditions of the Jews in the kingdom so that the czar could decide how to improve their situation and "make them more useful to the country." He was the author of a project which forbade the Jews to manufacture or trade in alcohol, but at the same time proposed granting them self-government, with the aim of modernizing Jewish life and promoting science and the arts, so that ultimately they would be awarded political rights. However Novosiltsev, head of the secret police, was implacably opposed to Polish nationalism, and the true purpose of this project was to sow dissension between the Jews and the Poles.

NOVOZYBKOV, town in Oriol district, Russian Federation. Before the 1917 Revolution, Novozybkov was a district town in the province of Chernigov in the *Pale of Settlement. Although the town was founded at the beginning of the 19th century, it was not until the middle of that century that Jews were permitted to live there. In 1847 they numbered 446, and in 1897 there were 3,836 Jewish residents (about 25% of the total population). A *talmud torah* existed there. In October 1905 the town was subjected to pogroms. In 1926, 4,825 Jews (22.4% of the total) lived there, with the number dropping to 3,129 in 1939 (13% of the total population.). The Germans occupied the town on August 16, 1941, and on February 18, 1942, they murdered the 950 remaining Jews in a forest near the railway station. There is no subsequent information on any Jewish life in the town.

[Yehuda Slutsky / Shmuel Spector (2nd ed.)]

NOVY, JIM (1896–1971), U.S. business executive. Novy, who was born in Knyszyn, Poland, went to the U.S. in 1913 and settled in Austin, Texas, where he played a leading role in the metal industry. A member of many Jewish organizations, he was especially active on behalf of the State of Israel. In December 1963 his long-time friend President Lyndon B. *Johnson took part in the dedication of the newly erected synagogue of Novy's congregation, Agudas Achim in Austin, Texas, the first time a United States president ever helped dedicate a Jewish place of worship. In fact, Johnson may well have saved Novy's life 25 years earlier. In 1938, Novy was planning to take his son to Palestine to celebrate his bar-mitzvah and, on the way over, stop in Poland and Germany to visit relatives. But the first German-Czechoslovakian crisis had occurred and Nazism was on the rise, and Johnson, then a Congressman, warned Novy to try to get as many Jews as possible out of the two countries. To that end, as part of "Operation Texas," he supplied Novy with a letter of introduction to the diplomats in the U.S. Embassy in Warsaw and a large number of signed immigration papers. When he reached the embassy, Novy learned that Johnson had already called the consul and asked him to process the visas immediately. Forty-two Jews from Poland and Germany, including four of Novy's relatives, received the documents and safely fled Europe. Novy and his son went on to Paris, but Johnson tracked them down and insisted that they return to the U.S., as the second German-Czech crisis was imminent.

[Ruth Beloff (2nd ed.)]

NOVY BOHUMIN (Czech *Nový Bohumín*; Ger. *Neuoderberg*), town in N.E. Moravia, Czech Republic. In 655 the local lord permitted a Jewish soap-maker and a Jewish distiller to settle under his jurisdiction. In 1751 six Jewish families lived in various localities of the Oderberg domain. Jews settled in the town early in the 19th century, attracted primarily by the fact that Novy Bohumin, a border town, was one of the important railway-crossings in central Europe, and was later the site of an oil refinery. The Jews there first came under the adminis-

tration of the *Teschen and later of the *Ostrava community. A synagogue was built in 1900; an independent community established in 1911; and a Jewish center opened in 1924. In 1933 a large Maccabiah (sports festival) was held in Novy Bohumin. The Jewish community numbered 722 (6.6% of the total population) in 1931. During the German occupation the Jews were put to work rebuilding a bridge blown up by the Poles. The synagogue was burned on Rosh Ha-Shanah 1939. Later that year most of the Jews were deported to Nisko. The community was not revived after the Holocaust.

[Meir Lamed]

NOVY BYDZOV (Czech *Nový Bydžov*; Ger. *Neubitschow*), town in N.E. Bohemia, Czech Republic. Jews are first mentioned in town records of 1514; they acquired a cemetery in 1520, the oldest tombstones dating from the mid-17th century. A synagogue was mentioned in 1559 (renovated in 1660 and 1838) and ten Jewish families were recorded in 1570 and 1620. In 1650, after the Swedish invasion of the Thirty Years War, 18 Jewish families were living there. Between 1656 and 1670 Jews sold salt. After a case of plague, the community was temporarily expelled, some of its members founding communities in surrounding villages. There were 90 Jewish families in Novy Bydzov in 1724. Three years later they were segregated from Christians in a special quarter. Expellees from Prague in 1744 reinforced the community. In 1750 Mendel of Novy Bydzov was burnt at the stake in connection with the emergence of the sect of the *Abrahamites. There were 37 Jewish houses in 1786. A new cemetery was consecrated in 1885 (still in existence). Some of the 838 members of the community in 1893 lived in the 35 surrounding villages. The old Jewish quarter burned down in 1903. In 1930 the community numbered 148 (2.1% of the total population). During the Holocaust 98 Jews were deported to *Theresienstadt and from there to the death camps in 1942; one only returned. Synagogue equipment and documents were transferred to the Central Jewish *Museum in Prague. No congregation was reestablished after the Holocaust. The synagogue dating from the mid-16th century was remodeled in 1660, 1838, and 1902. It was last restored in 1985 and subsequently used by the Czech Brethren Protestant Church.

[Jan Herman]

NOVY DVOR (Rus. *Novyi Dvor*), small town in the Grodno district (county of Sokolka), Belarus. The first Jews settled there during the first half of the 16th century. During the second half of the 16th century there was an organized Jewish

community with a synagogue and cemetery. In 1561 12 houses and a number of orchards were owned by Jews. During the following decades Jews from Grodno joined the local community and, according to the decisions of the Council of Provinces of Lithuania (*Councils of the Lands; 1623), the community of Novy Dvor was subordinated to that of Grodno. In 1648 Jewish refugees from Ukraine arrived in Novy Dvor. A few years later local Jews suffered the onslaught of the Russian and Swedish armies. In 1765 there were 299 poll-tax paying Jews in Novy Dvor and the surrounding villages. During the 19th century the sources of livelihood of the Jews of Novy Dvor were cut off and a period of economic stagnation ensued. In 1847 there were 394 Jews and in 1897, 490 (38% of the total population). In 1900 a new synagogue was erected, and during the first weeks of the Polish rule (1918) a Jewish self-defense organization was active. In 1921 there were 402 Jews (33% of the population) in Novy Dvor. From 1925 there was a *Tarbut school. The last rabbi of the community was Isaac Kamieniecki, who perished in the Holocaust.

Holocaust Period

At the end of June 1941, a few days after the Nazis entered the town, 50 Jewish men were deported to concentration camps. In October 1941 the Jews of Novy Dvor were sent to the ghetto at Ostryna, and in the spring of 1942 to the ghetto in Sukhovolia, and finally to the extermination camp of Auschwitz. Only six Jews of the community survived, three of them having joined the partisan movement. No Jews returned to Novy Dvor after World War II.

[Arthur Cygielman]

NOVY JICIN (Czech, *Nový Jičín*; Ger. *Neutitschein*), town in Moravia, Czech Republic. Jews are recorded in Novy Jicin in the middle of the 14th century as owners of houses, and as cloth merchants. The Jewish lane (*Judengasse*), which in 1581 contained 46 houses, was situated next to the castle, but Jews resided in other streets as well. When the community was expelled in 1562, its leaders sold the synagogue to the mayor and presented the city with the cemetery, requesting that it should not be damaged. The expellees settled in the neighboring villages. In the late 18th and early 19th centuries Jews returned to the vicinity of the town, and by 1828 a few privileged families were again residing in it. Full freedom of settlement was granted only in 1848, and in July 1850 the authorities quelled an attempt to organize anti-Jewish riots. In 1868 the statutes of a *Kultusverein were confirmed, and by 1892 it was acknowledged as a community. The cemetery dates from 1875 and the synagogue from 1908. The Jews of Novy Jicin were active in the local textile industry and in trade. The community numbered 14 in 1847, 155 in 1868, 275 in 1880, 253 in 1900, and 206

(1.4% of the total population) in 1930. Novy Jicin was the site of the first *hakhsharah* farm in Czechoslovakia, organized in 1921. At the time of the Sudeten crisis in 1938, the community dispersed, and it was not revived after World War II.

NOVY OLEKSINIEC, small town in Kremenets (Krzemieniec), today in Tarnopol district, Ukraine, noted for leather products. In 1765, 203 Jewish taxpayers were registered in Oleksiniec and its suburb (Oleksiniec Stary). The printing press established there in 1760 was one of the first Hebrew presses in Russia. H. Margolis, active between 1766 and 1776, printed some 18 rabbinical works there. Noteworthy is *Zemir Arizim ve-Harvot Zurim* (1772), a collection of anti-ḥasidic proclamations. Rabbis of Oleksiniec include Mordecai ha-Kohen Rappoport, son of Shabbetai, author of *Imrei No'am* (Oleksiniec, 1767), and Jacob Joseph ha-Levi Horovitz of Brody, installed in 1790.

°NOWACK, WILHELM GUSTAV HERMANN (1850–1928), German Bible critic. Nowack was professor at Halle, and from 1881, of biblical exegesis and Hebrew in Strasbourg.

Among his writings, the *Lehrbuch der hebraeischen Archäologie* (2 vols., 1894) represents a classical armchair approach to Palestinian archaeology in its description of ancient Israelite realia. He prepared the second edition of E. Bertheau and F. *Hitzig's commentaries on Ecclesiastes for the *Kurzgefasstes exegetisches Handbuch zum Alten Testament* (1883²) and the third edition of H. *Hupfeld's commentary on Psalms (2 vols., 1888). He also wrote commentaries on Amos and Hosea for the *Religionsgeschichtliche Volksbuecher* (vol. 9, 1908). From 1892 to 1903 he served as editor of *Goettinger Handkommentar zum Alten Testament*, to which he contributed the sections on the Minor Prophets (1897; 1922³); Judges (1902); Ruth (1902); and Samuel (1902). He also wrote on the religious development of ancient Israel (*Die sozialen Probleme in Israel und deren Bedeutung fuer die religioese Entwicklung dieses Volkes*, 1892), and on Israel's role against the background of the Assyrian Near East (*Die Zukunftshoffnungen Israels in der assyrischen Zeit*, 1902). His other studies on the Bible are: *Die Bedeutung des Hieronymus fuer alttestamentliche Textkritik* (1875); *Die assyrisch-babylonischen Keil-Inscripten und das Alte Testament* (1878); and *Der Prophet Hosea erklart* (1880). He also prepared the masoretic text of the Minor Prophets for R. *Kittel's *Biblia Hebraica* (1906).

[Zev Garber]

NOWACZYNSKI, ADOLF (1876–1944), Polish playwright and satirist. The son of a Catholic aristocrat and of a Jewess, Nowaczyński (who used the pen name Neuwert) joined the

right-wing, antisemitic pamphleteers and wrote many satirical attacks on the Jews and the Polish bourgeoisie. His historical dramas include *Wielki Fryderyk* ("Frederick the Great," 1910), *Pułaski w Ameryce* ("Pułaski in America," 1917), and *Cezar i Człowiek* ("Cesare Borgia and Copernicus," 1937). Nowaczyński was killed during the anti-German Warsaw Uprising.

NOWAKOWSKI, DAVID (1848–1921), Russian choirmaster and cantor. Born in Malin near Kiev, Nowakowski went to Odessa at the age of 21. There he was choirmaster and assistant to Chief Cantor Nissan *Blumenthal in the Brody Synagogue; and then to Blumenthal's successor, Pinḥas *Minkowski. He trained the Brody Synagogue choir, long noted for its quality, and the 30 years during which he worked with Minkowski became a brilliant period in the development of synagogue music. He left printed works and hundreds of compositions in manuscript which continued to be sung by many cantors and choirs. Two volumes of his work, *Shirei David*, were published during his lifetime: *Sabbath Eve and Evening Services* (1901) and *Ne'ilah* for the Day of Atonement (1895). He employed to a large extent the traditional chants of the cantors, integrating them into the choral sections.

[Joshua Leib Ne'eman]

NOWY DWOR MAZOWIECKI, town in Warszawa province, central Poland. The Jewish settlement appears to have been founded at the close of the 17th century. From the beginning of the 18th century there was an organized Jewish community owning a synagogue and a cemetery (which until 1780 was also used by the Jews of Praga, a suburb of Warsaw). In 1768–69, a number of Jews fleeing from the *Haidamack massacres in Podolia found refuge in Nowy Dwor, bringing the ḥasidic teachings with them. During that period the Jews earned their livelihood primarily from innkeeping and by trading in wood. A woolen cloth factory established in the 1780s by the Poniatowski family (owners of the town) was to a considerable extent dependent on Jewish merchants for its financing, for supplying its raw materials, and for taking on the bulk of its orders. Jewish craftsmen and merchants earned their livelihood from tailoring, shoemaking, carpentry, construction, innkeeping, and the supply of building materials and food to the military units stationed in the district. In 1808, 183 Jews formed 25% of the town's population; in 1827 there were 334 Jews (28% of the total population), increasing to 1,305 (49%) in 1857. A German editor, J.A. Krieger, had taken over a Hebrew printing privilege from the Warsaw printer and bookseller Du Four, so that between 1781 and 1816 Nowy Dwor had one of the most active Hebrew presses in Eastern Europe, issuing well over 100 works. The driving powers behind the business were Eliezer b. Isaac of Krotoszyn and his son-in-law, Jonathan b. Moses Jacob of Wielowicz, who had also acted as proofreader and later as manager of Krieger's

bookshop in Warsaw. An ambitious project of a Talmud edition did not proceed beyond the publication of the first two volumes in 1784, and subsequently the Napoleonic wars put an end to Krieger's enterprise.

During the middle of the 19th century Jews of Lithuanian origin, who were principally employed as purveyors to the Russian authorities, settled in the town. As a result of their powerful economic status they rapidly gained control of most of the community's institutions. During the last third of the 19th century the rabbinical office was held by Jacob Moses *Teomim and until 1904 by R. Menahem Mendel Ḥayyim Landau, a leader of Agudat Israel, later a rabbi in Detroit, Michigan. Landau was succeeded by Moses Aaron Taub, and between the two world wars Judah Reuben Neufeld served as the last rabbi of the town.

Industrialization, the departure of Jews from regions suffering pogroms, and the expulsion of Jews from Moscow (1891) caused a rapid increase in the Jewish population of Nowy Dwor. In 1897 there were 4,735 Jews (c. 65% of the population) in the town. In 1905–06 Jewish trade unions gained in strength under the influence of the *Bund and the *Po'alei Zion. In addition to retail trade, the Jews of Nowy Dwor engaged in shoemaking, millinery, carpentry, locksmithing, tailoring, and portage; about 300 Jewish women were employed in embroidery workshops. A general conflagration in 1907, in which more than half the town's houses were destroyed, led many Jews to move to Warsaw or to emigrate to the United States. In 1920, during the war in Soviet Russia, the Polish army expelled hundreds of Jews from the town and desecrated its synagogue. In 1921 there were 3,916 Jews (50% of the population) in Nowy Dwor and 3,961 (42%) in 1931. In the municipal elections of 1927, four Jewish delegates won seats in the town's administration and the delegate of the Bund was appointed vice mayor. For a number of years the CYSHO (Central Yiddish School Organization) and *Tarbut schools as well as the Shalom Aleichem Library were subsidized by municipal funds. In the early 1930s Jewish haulage workers organized a self-defense movement against antisemitic rioters.

[Arthur Cygielman]

Holocaust Period

At the outbreak of World War II there were about 4,000 Jews in Nowy Dwor. The German army entered the town on Sept. 30, 1939. The ghetto was established at the beginning of 1941. In May 1941, 3,250 Jews were deported to Pomiechówek camp, where most of them perished. In November 1942 two deportations to *Auschwitz took place. The ghetto was liquidated on Dec. 12, 1942, when 2,000 Jews from Nowy Dwor and nearby Czerwinsk were sent to Auschwitz. After the war the Jewish community of Nowy Dwor was not reconstituted.

NOWY DZIENNIK ("The New Daily"), first Zionist Polish-language journal. It appeared daily in Cracow from the end of 1918. The paper was representative of the climate of linguistic assimilation current in certain nationalist Zionist circles in the region. Its founding was to some extent the result of the murder of a Jew: since, to the dismay of the Jewish community, the incident was glossed over by the Polish press, a need was felt for some independent means of expression. For technical reasons and because of censorship, the early editions of *Nowy Dziennik* were published in Moravska-Ostrava. However, by the beginning of 1919, the paper had its own building and presses in Cracow. Dr. Wilhelm Berkelhammer, who served as editor for many years, not only set an example of polished newspaper style but fought numerous and continuous battles against antisemitism. Other noted editors were Isaac Ignacy Schwarzbart, Elijah Tisch, and David Lazar, the last serving until the paper's demise during the Holocaust. Among the regular contributors were Osias (Joshua) *Thon, who set the tone of the paper and gave it its political direction, and Moses Kanfer, literary and artistic critic, who was particularly devoted to the Yiddish theater. Other such well-known personalities as Isaac *Deutsch, Hersch *Lauterpacht, and Ezriel *Carlebach also contributed to the paper. Particularly noted for his essays on antisemitism was Matthias *Mises. One important role played by the journal was its publication from time to time of a list compiled by the community leaders of Jews who had converted to Christianity but who sought to keep this secret from the Jewish community. Despite governmental interference and the bombing of its building by Polish nationalist extremists in 1923, the paper prospered. Carefully organized and efficiently run by Sigmund Hochwald, it grew from its initial four to a format of 32 pages. While ideologically the journal served as an organ of the Zionist Movement, its scope was quite wide, serving the general Cracow community as well as the region of western Galicia and Silesia.

[Moshe Landau]

NOWY SACZ (Pol. **Nowy Sącz**; Ger. **Neu Sandec**; in Jewish sources **Zanz**, **Naysants**), city in the province of Cracow, S. Poland. Jewish settlement is mentioned in a document of 1469; in 1503 a Jewish eye doctor, Abraham, practiced in Nowy Sącz. The Jews participated in the reconstruction of the town after the invasion of the Swedes. The royal privilege of 1676 (ratified in 1682 by King John III Sobieski) accorded them the right to build their houses on the town's empty lots and to engage in commerce (mainly with Hungary) and weaving. The Great Synagogue, renowned for its beautiful frescoes, was completed in 1746. In 1765 there were 609 Jews (154 families) in Nowy Sącz paying the poll tax and owning 70 houses (595 additional

Jewish poll tax payers lived in 103 surrounding villages). At the beginning of the 19th century Austrian authorities compelled the Jews to live in a special quarter. During the first half of the 19th century the ḥasidic dynasty of the Zanzur Ḥasidim was established (see *Halberstam). In 1880 there were 5,163 Jews (46% of the total population) living in the town, earning their livelihoods from the sale of wood, agricultural produce, and clothing, or engaging in such trades as tailoring, carpentry, shoemaking, and engraving. By 1890 the number of Jews had decreased to 4,120 (32%), to rise again to 7,990 (32%) in 1910. Between 1900 and 1914 a Jewish school was established by the *Baron de Hirsch fund, which in 1907 was attended by 204 pupils. In 1921 the Jewish community numbered 9,009 (34%). *Tarbut and Beth Jacob schools, a yeshivah, and sport clubs were supported by the community. Over 10,000 Jews lived in Nowy Sącz before the outbreak of World War II, with another 5,000 living in smaller towns of the county.

[Arthur Cygielman]

Holocaust Period

The German army entered the town on Sept. 5, 1939, and the anti-Jewish terror began. In March 1940 about 700 Jews from Lodz were forced to settle there; in August 1941 a ghetto was established. Two forced labor camps for Jews were built by the Germans near the town: one, in Roznow, existed from the spring of 1940 until December 1942, and the second, in Lipie, from the autumn of 1942 until July 1943. Over 1,000 Jewish prisoners perished in these camps. In April 1942 a few score members of the underground *Po'alei Zion organization fell into German hands and were executed on the site of the town's Jewish cemetery. In Aug. 24–28, 1942, the entire Jewish population was deported to the *Belzec death camp and killed there.

NOY, DOV (1920–), scholar in Jewish folklore. Born in Kolomyja, Poland, he graduated from a Polish secondary school, and then immigrated to Palestine where he began his academic studies at the Hebrew University of Jerusalem. He interrupted his studies to volunteer for military service in the British Army Royal Engineers during World War II, returning to the Hebrew University to complete his master's degree in Talmud, Jewish History, and Bible studies in 1946. He directed educational and cultural activities in the Cyprus Detention camps of Jewish refugees and worked there until the camps' liberation in 1948. For the next three years he served as editor of the leading Israeli children's weekly, *Davar le-Yeladim*.

Returning to his studies, he received his post-graduate education in folklore, comparative literature, and anthropology at Yale University and at Indiana University, from which he obtained his doctorate in 1954, studying under Stith Thompson.

In 1955 he began his teaching career at the Hebrew University of Jerusalem where he taught *aggadah*, folk literature, general folklore, and Yiddish. He became professor and incumbent of the Chair of Folklore and Hebrew Literature. Noy's contribution to Jewish folklore has been pioneering. He founded and directed the Haifa Ethnological Museum and Folklore Archives (1956–82) and edited the Israel Folktale Archives Publications series until 1981. He founded the Israel Folklore Archives, the largest treasure of Jewish folktales recorded in Israel. He was director of the Hebrew University Folklore Research Center from 1968 and edited *Studies*, its journal. He served as the *Encyclopaedia Judaica* departmental editor for folklore. He also trained a generation of researchers and students to tape and collect folk stories from all the various Jewish ethnic groups. He started the folklore section at Haifa University within the department of Hebrew Literature. From 1985 to 1992, he served as professor of Yiddish Folklore at Bar-Ilan University. In 1992–93 he served as professor of folk literature at Ben-Gurion University and in 1995–96 professor of folklore at Haifa University. In addition to teaching in Israeli universities, Noy devoted himself to spreading Jewish folk culture all over the world. He also wrote and edited about 60 books, covering a wide range of Jewish folklore: European, North African, Yemenite, and others. In 2004 he was awarded the Israel Prize for literary research.

[Elaine Hoter]

NOY, MEIR (1922–1998), Israeli musician, composer, and song collector. Born in Kolomea, Galicia, Noy received a Jewish and musical education. He studied violin and engineering. During World War II he escaped his town's ghetto and joined the Red Army, where he served as a musician and directed a musical ensemble. After the war he emigrated to Israel. On his way, he was interned in a Cyprus British Mandatory camp where he decided to collect Yiddish songs to commemorate the lost Yiddish musical folklore. In Israel, he first joined the army music entertainment troupe, the Tshisbatron, as an accordionist. He also composed his first Hebrew songs, such as “*Ba-Derekh le-Eilat*” (1949) and “*Ha-Pegishah*” (1949), for this troupe, and later composed for other troupes. Other popular songs he composed are “*Ha-Zekankan*” (1956) and “*Al Rosh ha-Djindji Bo'er ha-Kova*” (1957). After his army service, he taught music in a school in Tel Aviv for 30 years. From 1949 until his last day, he collected Yiddish and Hebrew songs from written and oral sources, which he transcribed and catalogued. His collection includes about 100,000 Hebrew songs and 30,000 Yiddish songs. This collection is one of the most complete collections of this sort and contains unique and accurate information about the creation and continuity of Israeli popular song. The collection was donated with the assistance

of the Wachs family to the Music Department of the Jewish National and University Library in Jerusalem. The collection was recatalogued and is open to the public and serves scholars from all over the world. Meir Noy also published two books of songs from his collection, *Otiyyot ha-Alef Bet* and *Ma'ayanei ha-Zemer*, in which he compares Yiddish and Hebrew songs with the same melody.

[Gila Flam (2nd ed.)]

NUDEL, IDA (1931–), Russian Jewish activist and *refusenik*. Born in the Crimea, she was trained in Moscow as an economist. Under the impact of the 1967 Six-Day War and the 1970 Leningrad Trial, she and her sister – her sole relative – decided to leave for Israel in 1971. Her sister and her family were permitted to emigrate but Nudel was refused permission on the ground that she was privy to state secrets (she had been working as an accountant in a planning institution which was totally non-secret). Dismissed from her job, she became extremely active in the Jewish Emigration movement and was known as the “guardian angel,” caring for Jewish prisoners and their families. Through demonstrations, correspondence, and meetings with foreigners visiting Moscow, she brought the plight of the prisoners to public attention. She was arrested on many occasions, placed under house arrest, harassed frequently and physically abused.

In 1978 she hung a banner on the balcony of her apartment reading “KGB – GIVE ME MY EXIT VISA,” as a result of which she was sentenced to four years' exile in Siberia on charges of malicious hooliganism. There she suffered great hardships and after her release in 1982 was refused the right to live in a major city and moved from one place to another. In the Western world she became the best-known woman *refusenik*, winning the active support of many public figures such as Jane Fonda (who visited her in her exile) and Liv Ullmann (who portrayed her in a movie). Finally in 1987 she was permitted to leave for Israel where she settled near her sister in Rehovot.

NUDELMAN, SANTIAGO ISRAEL (1904–1961), Argentine politician. Born in the colony of Médanos in the province of Buenos Aires, Nudelman graduated in both medicine (1930) and law (1936) from the University of Buenos Aires. He was a member of the Federal Chamber of Deputies representing the Unión Cívica Radical (1946–55) and championed the cause of civil liberties in parliament. In 1958 he became director of the daily newspaper *Crítica*. He wrote *El radicalismo al servicio de la libertad* (1947) and *El régimen totalitario – Torturas, presos políticos, negociados* (1960).

NUISANCE. The owner or person in possession of land is not at liberty to use it as he pleases. Land, even if unencumbered, may not be used in such manner as to harm or disturb one's neighbors. Any neighbor can require the offending landowner to abate the nuisance or to have the cause thereof removed from their common boundary.

Among the restraints imposed on the use of land, the Mishnah (BB 2) makes mention of the following: A person may not dig a cistern near to his neighbor's cistern or wall, since they would thus be damaged, and he must remove lime from the vicinity of his neighbor's wall; he may not open a bakery or stable under his neighbor's barn, nor a shop on residential premises where the customers will disturb the neighbors; he may not build a wall so close to his neighbor's windows as to darken them; he must not keep his ladder near his neighbor's dovecote since it will enable a weasel to climb it and devour the pigeons; his threshing floor must not be too near a town or his neighbor's field lest the chaff harm the vegetation. There are further instances of the potentially harmful use of land enumerated in the Talmud.

The *tanna*, R. Yose, is of the opinion that the person creating a nuisance cannot be obliged to abate it and is free to act as he pleases and the injured party must keep his distance if he wishes to avoid suffering harm. The *halakhah* of the Talmud was decided in accordance with R. Yose's view, but the latter was interpreted as admitting that the tort-feasor must abate a nuisance if the interference with his neighbor's use of his property arises from his own harmful act (i.e., an act of his own body, as if he had "shot arrows" into his neighbor's domain; BB 22b). The scope of this qualification is not clear and some scholars hold that most of the injuries enumerated in the Mishnah (above) are of the kind qualified by R. Yose, which the latter concedes must be abated by the tort-feasor. Other scholars hold that R. Yose disagrees with the above-mentioned *mishnayot* and obliges the tort-feasor to abate a nuisance only when damage is actually (and directly) caused by his own act (see Rashi and Tos. *ibid.*). In fact, in the post-talmudic period, the instances in which R. Yose was considered to have conceded the existence of tort-feasor's obligation to abate a nuisance were extended as far as possible (see *Asher b. Jehiel (Rosh), quoted in Tur, *ḤM* 155:20–23). The Talmud (BB 17b) also records the dispute over the question whether the obligation – when it exists – of abating a nuisance applies even if the offender's particular use of his land preceded that of his neighbor – the latter suffering no damage until the time of such conflicting use by him – or whether prior use takes precedence. Thus if the injured party's particular use of his land preceded his neighbor's conflicting use of his land, the latter must curtail his use, but if the other way round the obligation rests upon the injured party. There is an opinion (Tos. *ibid.*, 18b), which holds that the rule of precedence by virtue of prior use is universally accepted and that there is no dispute save with regard to a single case, that of digging a cistern in the vicinity of a common boundary with a neighbor.

Which Nuisance Must Be Abated

An analysis of the cases of nuisance referred to in talmudic literature and the reasoning behind them suggests that all cases of nuisance may be divided into four categories:

(1) An interference arising when land is used in a manner usual for that particular place and time, but the neighbor

suffers injury in an unusual manner, either because of the unusual use of his own land or because he is uncommonly sensitive to the disturbance. It is unanimously agreed that in this event the alleged tort-feasor is at no time obliged to abate the so-called nuisance.

(2) The tort-feasor uses his land in an unusual manner for that particular place and time, while the injured neighbor uses his land in the usual manner, in the same way as other people do, and is neither more sensitive nor anxious than most people. In this event all agree that the tort-feasor must always abate the nuisance he has created.

(3) Both parties use their land in the usual manner and the injured party is not uncommonly sensitive.

(4) The tort-feasor uses his land in an unusual manner, and the injured party does so too or is uncommonly sensitive.

The latter two categories are the subject of the dispute mentioned above between R. Yose and the sages, as to whether the party causing the nuisance is obliged to abate it or whether it must be suffered by the injured neighbor; and of the dispute whether the injuring party must always abate the nuisance or whether it is a matter of prior use taking precedence. Most acts of nuisance referred to in the Talmud fall into the third of these categories (see Albeck, bibliography).

The Rules of Nuisance as Part of the Law of Property

The prohibition against using land in a manner interfering with a neighbor's enjoyment of his own property is inherent in the proprietary rights over that immovable property, and the right to the undisturbed use of one's property may be sold like any other proprietary right. A person may sell or transfer part (or all) of his right to the undisturbed enjoyment of his property by agreeing to a particular use of his neighbor's property, whereupon the neighbor may make such use of his land regardless of any nuisance thereby caused to the former. Thus, for instance, a person may become entitled to erect a dovecote alongside this common boundary and may transfer this right, together with the land itself, to a new owner. Furthermore this right is retained by the owner of the disturbing property even when the adjacent land is sold to a new owner (see Sh. Ar., *ḤM* 155:24). A nuisance which is continued for a period of three years (or even from the outset, according to some scholars), if supported by a plea that the right was granted to him by the injured neighbor (or even without such a plea, according to some scholars), constitutes evidence of such right of user. However, these rules apply only when the nuisance is not so severe as to be insufferable (*ibid.*, 155:35–36.)

Relationship of Nuisance to the Laws of Tort

A person suffering a nuisance may oblige his neighbor to abate the nuisance and if physical damage results from the nuisance which itself was the result of the neighbor's negligence, he is also entitled to be compensated for such damage (BB 20b). If the nuisance is of a kind which the law does not require the tort-feasor to abate, the neighbor cannot oblige the tort-fea-

sor to do so, nor, according to some scholars, can he recover compensation for damage of a physical nature even when caused by negligence, because he, in turn, is expected to take precautions. Other scholars, however, hold the tort-feasor liable for resulting damage. If a person's use of his land is such that it may cause his neighbor damage for which compensation is payable but it is not likely that such damage will result, the neighbor cannot demand the abatement of the nuisance because people are not normally afraid of or disturbed by an unlikely risk; but if in fact the damage does result from the landowner's negligence he is obliged to compensate his neighbor. If such use of the land habitually causes damage for which compensation is payable, people will usually be disturbed thereby and the neighbor can require the abatement thereof. If the damage is of a kind which is foreseeable, the landowner will be deemed negligent, but if the damage was unforeseeable, he is exempt from liability. The law of the State of Israel (Civil Wrongs Ordinance, 1947) defines private nuisance as any conduct which causes a material interference with the reasonable use and enjoyment of another's immovable property. The injured party is entitled to compensation and the court may order the abatement of the nuisance.

[Shalom Albeck]

Visual Trespass (*hezzeq re'iyah*)

The damage occasioned by a neighbor's ability to "look" into another person's home (*hezzeq re'iyah*) is a nuisance bearing unique characteristics. It occurs as a result of the neighbor's ability to observe another person's activities in his home. The damage may be caused when a person builds a window opposite his neighbor's window in a way that enables him to see into his neighbor's home, and the "trespasser" may be compelled to remove the potential source of damage – i.e., his visual trespass into another person's private domain – by requiring him to close off the window (Mish., BB 3:7; Yad, Shekhenim 5:6; Sh. Ar., ḤM 154:3). In the case of partners sharing the same courtyard, the possibility of this kind of trespass, occasioned by the proximity of their dwellings, imposes on each of the parties the advance (financial) obligation of erecting a partition between the separate parts of the courtyard (BB 2:2; Yad, Shekhenim 2:14; Sh. Ar. ḤM 157:1).

Regarding partners to the same courtyard, the *posekim* agree that one cannot acquire a *ḥazakah*, i.e., a right established by ongoing practice, to visually trespass in another person's domain. Hence both parties are entitled at all times to force the other to participate in the construction of the partition, and the other cannot argue that a waiver may be inferred from the length of time that has elapsed without protest (Maim., Yad, Shekhenim 11:4; Sh. Ar., ḤM 155:36). The *posekim* however dispute the question of visual trespass created by the construction of a window. The issue is whether visual trespass under these circumstances establishes a *ḥazakah* (in the sense referred to above) so that in the absence of protest by the other party, the builder of the window gains the right to perpetuate the existing situation, and what length of time must

elapse after the window's construction for a lack of protest to be deemed as a waiver on the neighbor's part. This dispute is based on the various tannaitic views cited in the Talmud (BB 59b), and indicates the uniqueness of this type of nuisance. Certain *posekim* view this form of trespass as analogous to any other nuisance, so that if protest is not expressed from the outset, it may be seen as consent and the person causing it will acquire a *ḥazakah* with respect thereto (Yad, Shekhenim 5:6; *Kesef Mishneh*, ad loc.; Yad, Shekhenim 11:4; *Maggid Mishneh*, ad loc.). Other *posekim* classify it as a nuisance in respect of which there can be no *ḥazakah* based on waiver because it falls into the category of nuisance caused without any action being taken and, as such the nuisance is a permanent one and the evidentiary presumption is that others do not pardon it. Nevertheless, if one of the parties waived his right to the other by a formal *kinyan*, his waiver is effective and he cannot retract it (Rif, quoted in *Nimukei Yosef*, BB 1b; for a general discussion of waiver of obligations, see *Acquisition; *Meḥilah). A third view is presented by the Rashba (Resp. Rashba, vol. 2. no. 268; see also *Hiddushei ha-Ramban* to BB 59a). Rashba states that visual trespass is forbidden, not only in terms of civil law, but in order to preserve modesty, which a Jew is not at liberty to waive, and should he do so his waiver is invalid. Rashba finds support for this opinion in the words of Rabbi Johanan in the Talmud (BB 60a), who states that the law of *hezzeq re'iyah* is based on the Biblical verse (Numbers 24:2): "And Bilaam lifted up his eyes and he saw Israel dwelling according to their tribes," which emphasizes the modesty of Israel. In light of this ruling, Rashba stated that a custom accepted by the people in a place not to insist on matters involving visual trespass is an erroneous custom and of no validity (see *Minhag; *Mistake). Some consider Rashba's statement as the source for protection of privacy in Jewish law (see *Rights, Human).

NULMAN, MACY (Moshe; 1923–), ḥazzan. Born in Newark, New Jersey, Nulman held cantorial positions in Anshei Sefard Congregation of Boro Park, Etz Chaim of Flatbush, and various other congregations in the United States. He acted as principal of the Philip and Sarah Belz School of Jewish Music of Yeshiva University until he retired in 1983. From 1970 to 1972 he taught Jewish music in Brooklyn College and appeared on educational programs on radio and television. He was among the founders of the Cantorial Council of America of Yeshiva University. Nulman published "Wedding Service" (1948), "Sabbath Chants" (1958), "*Ma'ariv* Chants" (1965). He was editor of the *Journal of Jewish Music and Liturgy*. His other publications included *Concise Encyclopedia of Jewish Music* (1975), *Concepts of Jewish Music and Prayer* (1985), and *Encyclopedia of Jewish Prayer: Ashkenazic and Sephardic Rites* (1993), an award-win-

ning volume with comprehensive information on every prayer recited in the Ashkenazi and Sephardi traditions.

[Akiva Zimmerman / Raymond Goldstein (2nd ed.)]

NUMBERS, BOOK OF (Heb. **בְּמִדְבָּר**; “in the wilderness”), the fourth book of the Pentateuch. Like the other books of the Pentateuch, its name in Hebrew is taken from the first significant word in the book (the fifth word in chapter 1), which also reflects its theme, the wilderness wanderings. The English name Numbers derives from the Greek translation, the Septuagint, which titled the book thematically after the censuses mentioned in the first four chapters. The Greek name corresponds to an earlier Hebrew name in the Talmud, *Hummash* (properly, *homesh*) *ha-Pekudim*

Jewish tradition divides the book into 10 *parashiyot*, “annual pericopes”; based on the Vulgate system the book is divided into 36 chapters.

Contents and Sequence

Numbers is a complex collection of texts woven of a variety of literary genres: legal material; ritual prescriptions; historical narratives; and poetic folk traditions. Its present form reflects a long and intricate literary history. The book can easily be divided by subject matter and other criteria into three major sections; these can be further subdivided into smaller segments. Often it is difficult, however, to determine any meaningful relationship between contiguous segments, though certain structural patterns do exist. Numbers has a broad outline, with the main thread leading from preparations for the departure from Sinai and ending with the stay in Shittim in Moab opposite Jericho. Three main units reflect a literary sandwich of sorts:

(1) 1:1–10:10: Final encampment at Sinai.

(2) 10:11–22:1: Generation-long march in the wilderness from Sinai to Moab.

(3) 22:2–36:13: Encampment on the plains of Moab and preparation to enter Canaan.

According to the chronology in Numbers, the 40 years in the wilderness are divided as follows: 19 days at Sinai (unit 1); approximately 38 years from Sinai to Moab (unit 2); and five months of the 40th year on the plains of Moab (unit 3).

(1) **FINAL ENCAMPMENT AT SINAI (1:1–10:10)**. The first ten chapters conclude the bloc of priestly material dealing with the portable sanctuary, given in the previous books of the Pentateuch. Where *Exodus (25–31 and 35–40) gives the details of the preparation of a portable sanctuary, and *Leviticus the consecration of the officiating clergy and the sacrificial ritual, Numbers 1–10 concentrates on the movement of the sanctuary. The functionaries featured are Levites, who lend logistical support to the priests. This first unit focuses on preparations, practical and cultic, for the desert marches and encampments. Maintenance of cult purity within the camp is stressed, as it assures God’s presence. In chapters 1–4 the subject is the group service (*zava*, usually military service, but not exclusively; cf. Akk. *šābu*, and see Nahmanides to Num. 1:2). The laic tribes

must prepare to engage in battle; the Levites carry the components of the portable sanctuary. The numbers of the able-bodied males are given; and the order in which they camped and marched with the 12 tribes ranged around the sanctuary, three on each side. This first census, oriented to military preparedness as well as procedures for the march, has the same total as Exodus 38:26, namely 603, 550 (Num. 2:32). The numbers are not easy to interpret in detail, but they reflect an effort to clothe the schematic number 600,000 (see *Exodus) with the details of a tribal breakdown. Topics that focus on the Levites include their consecration in place of first-born Israelites, two censuses, and their familial relationships and duties (ch. 3–4).

The next section switches focus from camp organization to maintenance of camp purity. Conditions are outlined for the removal and readmission of persons who have become impure (parts of ch. 5). The procedures for the *Nazirite follow (6:1–21). As seen here in its aspect of supererogatory piety, the institution offers an outlet to the zealous Israelite; he may take on, for a limited time, additional personal restrictions. This part of the book, concentrating on the protection of the Tabernacle, culminates with the Priestly Blessing (6:22–27). Chapter 7, which describes the presents offered by the tribal leaders for the service of the Tabernacle, jointly (six wagons and 12 oxen) and individually, is the longest chapter in the Torah. Each tribal leader is assigned a day for his presentation (following the order in ch. 2), and the formula is scrupulously repeated without variation. The first Passover is celebrated in the wilderness (9:1–14) and Moses makes provisions for ritually impure persons to celebrate a second Passover one month later. In final readiness for the march, two silver trumpets are fashioned (10:1–10), and instructions are provided for their use, in battle and on festive occasions.

(2) **GENERATION-LONG MARCH IN THE WILDERNESS FROM SINAI TO MOAB (10:11–22:1)**. The middle unit is woven of narratives interspersed with sacrificial law, various prohibitions, and expiation processes. Recurring rebellions and murmuring against God and Moses characterize these narratives. Ultimately, all the preparations for the imminent entry into the Promised Land came to naught as a result of the moral degeneration of the people that resulted in the decree that all those who were 20 years and older when they left Egypt, with the sole exception of Joshua and Caleb, were to die in the wilderness. The “murmuring” which runs throughout this part of the book is probably a technical term for disloyalty, in the terminology of a treaty between suzerain and vassal (see *Covenant). Even Moses, Aaron, and Miriam have moments of disloyalty to God. The unit opens with a description of the departure from Sinai on 20 Nisan, year 2 of the Exodus (10:11). It is followed immediately by a litany of grievances and their resolutions (ch. 11); a key complaint is the monotony of the people’s staple food, manna, which is then supplemented by the delicacy of quail meat (as in Ex. 16). In satisfying their hunger for substantial food, the people gorge themselves and

are punished by a plague. Woven into this story is the initiation of 70 elders to share the burden of the people of Israel, the prerequisite for such service being an experience of prophetic ecstasy occasioned by the presence of Moses in the vicinity of the Tent. Probably the original number was 72, six from each tribe; the failure of *Eldad and Medad to report to the Tent resulted in the installation of only 70. The next account treats the loss of faith of Miriam and Aaron (ch. 12). The occasion is Moses' marriage to a Kushite, although the laconic account gives no indication of whether the pigmentation of the woman is an issue. The affliction of Miriam with leprosy, which turns her skin white, may be a poetic judgment because she slurred a black woman.

The nadir in the loss of faith is the story of the refusal to invade Canaan from the south (chs. 13–14). Twelve men, eminent representatives of each tribe, reconnoiter the land that has been promised to the Israelites. It is this incident which brings the decree of the death of that generation in the wilderness. The story is of major importance in Israelite tradition. It is similar in many points to the other great act of treason, the episode of the Golden Calf (Ex. 32–34). It has a military context, which is central to the wilderness experience and the conquest of the Promised Land. Chapter 15 is an aggregate of prescriptions, which are apparently placed here as a pause in the drama. It begins with cultic ordinances for Canaan, which serve as a placebo after the dire punishment. Then come prescriptions relating to errant behavior, climaxed by the execution of the man who gathered firewood on the Sabbath. The final section ordains the use of a garment fringe with an azure thread, to serve as a reminder of the Covenant. In pre-Israelite times the fringe had an apotropaic function, the warding off of demonic harm, and was regarded as an extension of the person. As with the *phylacteries, the fringe was transvalued by the Bible, to serve as a reminder to the Israelites that they are a Covenant community. This is a fitting epilogue to the account of the treason in chapters 13–14, as well as to the ordinances of errancy attached to it. The rebellion of Korah (chs. 16–17) blends two (or three) attacks on the authority of YHWH as vested in Moses and Aaron. One reflects the dissatisfaction of a group of laymen from the tribe of Reuben. Another shows the dissatisfaction of a Levite, from the most important family (Kohath) of the Levites with the assignment of Levites to the subordinate service of supporting the priests, who alone are authorized to officiate in the Tent. Through divine intervention both parties are punished. The subsequent murmuring of the Israelites against Moses and Aaron leads to punishment by plague, which is stopped when Aaron carries a pan with burning incense into the midst of the dying. In this way, the authority of Aaron is brought home strikingly, and is underscored by the contest of the staves. This is followed by a restatement of the relationship between the priests and the Levites (ch. 18), including the perquisites due to each group (*terumah* and *tithe). Then comes the prescription of the *red heifer (ch. 19), the ashes of which serve to decontaminate those in a state of ritual pollution; the ashes also contaminate the

uncontaminated. This double nature of sanctuary taboo may reflect the attitude toward a superhuman power source, which can electrify or electrocute, as dramatized in the Korah story. Possibly this explains the location of chapter 19. The death of the leadership is the theme of chapter 20, which opens with the death of Miriam and ends with the death of Aaron. The cause of the death of Aaron and the doom of Moses is reported in the laconic account of water from the rock (cf. Ex. 17:1–7): they demonstrate loss of faith, which fits into the catalog of acts of disobedience.

The narrative now moves to the end of the 40 years in the wilderness. The generation of the Exodus is coming to an end. It is here that the Israelites anticipate the move into the area of Transjordan, and they ask for peaceful passage through the southern state of Edom, but permission is refused (20:14–21). They gain a victory over the Canaanite king of Arad (21:1–3), and turn south, to avoid Edom. Another incident of dissatisfaction is recorded, which is met by God with venomous snakes, followed by an antidote in the form of a bronze serpent. Reports of the Israelite itinerary are interspersed with two fragments of poetry supposedly derived from an ancient source, the Book of the Wars of YHWH. Then follows the victory of Israel over the Amorite king Sihon, which results in the first acquisition of territory, and a second victory, over Og king of Bashan. *The unit ends with the Israelites encamped on the plains of Moab.*

(3) ENCAMPMENT ON THE PLAINS OF MOAB AND PREPARATION TO ENTER CANAAN (22:2–36:13). Unit three finds the Israelites encamped on the eastern side of the Jordan River, opposite Jericho. This unit too, is composed of narratives, legislation, and folk tales. Its theme centers on final preparation to inherit the promised land. The first section (chs. 22–24) tells the story of *Balaam, an expert seer who is hired to curse the Israelites (damnation of one's enemies before battle is a practice well known from the ancient Near East). He is summoned in desperation by Balak, king of Moab, with the concurrence of his Midianite overlords. Repeatedly Balaam tries to curse the Israelites but God thwarts his mission and he is able only to bless them. Finally, Balaam is expelled angrily by Balak. The tale of Balaam, recorded in prose and poetry, seems to be an independent composition inserted at this juncture because its outcome determines if Israel will indeed inherit Canaan. Ultimately, it demonstrates the invincibility of Israel under the protection of YHWH, impervious to the greatest outside powers, human or magical. A non-biblical inscription from the site of Deir Alla in Jordan reveals an account of a seer by the same name, indicating at least an ancient tradition surrounding one Balaam known for his prophecies (see Levine, Balaam). Another act of treason follows at the heels of Israel's rescue from Balak's intended curses at Baal-peor. There, the people are enticed by Moabite women, and are attracted to their cultic worship; a (Simeonite) tribal leader is beguiled by a Midianite woman of high position and the two parade their liaison in the presence of the whole camp. Phinehas kills

them, earning for his descendants the right of perpetual priesthood (25:1–15). As revenge for the supposed trickery, the Israelites are enjoined to assail the Midianites. Here the catalog of treacherous acts ends.

The latter part of the book begins with a second census and the apportionment of the land to the tribes. The census of chapter 26 follows the pattern of chapter 1, with a slightly lower total, reflecting the losses resulting from punishment, which offset the natural increase. It also serves to introduce the theme of the remainder of the book and the preparation for the conquest of Canaan. Arising from the tribal allotment is the special case of Zelophehad's daughters, who petition Moses for the right to inherit, since their father *Zelophehad had no sons. Their claim is allowed (27:1–11), with the stipulation, in a later supplemental narrative, that they marry within their own tribe, so as not to disturb the tribal divisions (ch. 36). The promise of the land is the subject of the remaining material. Into this outline is set, first, the ceremony of succession, so that the people have Joshua to command them during the conquest. Again the narrative is suspended, by the insertion of prescriptions concerning festival sacrifices (chs. 28–29). There is no clear reason for the placement of these cultic regulations here, except that they are part of the testamentary matter that preceded the death of Moses, as the subscription (30:1) indicates. The same is true for chapter 30, the regulations governing the validity of vows made by a woman. The defeat of Midian, allegedly in retaliation for the seduction of the Israelites at Baal-peor, is recorded in chapter 31. Chapter 32 records the approval of the request of two and a half tribes to settle in the territory of the Amorites. Chapter 33 contains a list of the stations in the wilderness trek, most of which are unidentified, and many of which are not mentioned elsewhere. It is followed by the command to conquer Canaan and distribute the land among the tribes. There follows an outline of the ideal borders of the territory designated for Israelite settlement, and then the names of the men who will effect the division of the land by lot (ch. 34). Chapter 35 calls for the assignment of cities for special inhabitants: for the Levites, who have no share in the land allotment, and for the unwitting manslayer, to find refuge from the blood-avenger (cf. Ex. 21:12–14). The book ends with the resumption of the subject of Zelophehad's daughters, whose case serves as a model for marriage regulations enjoined on female heirs. The final verse of Numbers (v. 13) forms an inclusio with 22:1, stating the place where the precepts of this unit were given to the Israelites.

Critical View

The problems of the composition of Numbers must be viewed in the broader framework of Bible criticism. Modern critical scholarship – based on stylistic, linguistic, and contextual criteria – identifies separate sources underlying the final version of the book. Primarily, the texts of Numbers derive from various layers of the Priestly source (P); additional texts are identified with two older sources, the Yahwist (J) and the Elohist (E) (see *Pentateuch). The predominant Priestly material fre-

quently serves to expand, supplement, or recast ideologically the earlier *je* texts to fit the agenda of the Priestly writers. The Balaam pericope, both the prose and poetry, seems to derive from a different author altogether. Dating the varying sources in Numbers, as in the rest of the Bible, remains incredibly difficult. Even the priestly material, which Bible scholars at an early date assigned to the post-Exilic period, seems to contain earlier layers. Numerous pre-Mosaic cultic texts from the Ancient Near East have been discovered, which display the same characteristics of the repetition of formulas and scrupulous detail. The argument from exaggerated and schematic numbers is similarly neutralized; earliest texts, such as the Sumerian Kings List, have exactly these features. The prodigious cultic requirements in the priestly material are also found in other early cultures, notably in Hittite sources. The theory that the Priestly legislation reflects the post-Exilic theocracy is still widely held, but has been challenged by a number of scholars. Even the dating of the narrative material of J and E, once believed to be securely dated to the pre-Exilic period, is debated. Essentially, one may recognize various narrative traditions, not necessarily consistent throughout Numbers, combined with Priestly material, narrative and cultic, which is of diverse dates and origins.

Jewish tradition, however, views the apparently disparate texts of Numbers as a single work written by Moses. Even so, the attempt to descry principles and patterns of arrangement is as early as the rabbis of the Talmud. They pursued the question of juxtaposition (or sequence), and it was they who implied an order other than the simple chronological thread: "There is no earlier and later in the Torah" (see Rashi on Num. 9:1). Although critical scholarship does not recognize Mosaic authorship, certain modern approaches have emphasized a kind of literary study that focuses on the final form of the text (synchronic approach) rather than its layers (diachronic approach). This method views the preserved text as an organic unit and searches for techniques of style and structure that bind the individual literary units into a whole (Milgrom, 1990). Finally, redaction criticism demonstrates the interaction of the different parts of the text. Milgrom highlights the literary style of Numbers. His structural analysis focuses on the device of chiasm and introversion as well as the prevalence of repetitive subscripts and resumptions, septenary repetitions, and recapitulations.

Religious Values

According to the critical view it is virtually certain that the Book of Numbers as we now have it is considerably later than Moses. In addition, the historical value of its accounts is considered minimal by most modern scholars, not only because of the late date of the written version, but because the agenda of its authors was to write a redemption history of Israel that focuses on ideology rather than historically accurate records in the modern sense. Several religiously motivated messages can be uncovered in the texts of Numbers and in their interaction with those in other books of the Pentateuch. The

treatment of the traditions from the wilderness experience in Numbers has many points of contact with the wilderness journey in Exodus (especially 16–17). According to Abrabanel, the two collections are sharply distinguished: in Exodus, prior to Sinai, the Israelite failure of faith was not punished; in Numbers, after the revelation, it was punished. It seems that the Israelite traditions of the wilderness experience were largely used in duplicate, to convey the implications of the Covenant. Numbers 1–26 stresses the failure of faith even after the elaborate sanctuary ritual is instituted. The peroration comes in Deuteronomy 31:16–21. This reveals the (or a) Torah view regarding humankind: humans are constitutionally capable of rising above the realities of everyday life, but consistently do not. Confronted with circumstances, the theoretical supports of religious experience desert a person, who reacts to human situations with human behavior, which is not the standard set by the deity. On the whole, this is a depressing message. But while individuals and communities fail, the people, chosen by God, survives, always to find another chance to live up to the Covenant standards. God's fidelity, in contrast, remains constant. This hopeful note of recurrent opportunity is muted but audible in the latter section of Numbers. The failures of the wilderness experience are tied off: Israel is ensconced in the territory east of the Jordan. Perhaps in the land of the Covenant, the people of the Covenant will fulfill the terms of the Covenant.

NUMBERS, TYPICAL AND IMPORTANT. Biblical numbers are primarily based on the decimal system, which is of Hamito-Egyptian origin. The sexagesimal system, however, which ultimately derives from Sumerian usage, also plays an important role in Scripture, and since 60 is divisible by ten and five, the two methods of reckoning easily coalesce. The numbers in the Bible range from one (Gen. 1:5) to 100,000,000 (Dan. 7:10), though the latter figure is to be regarded as a hyperbole rather than a literal numerical expression. The largest number to be understood literally is that given in 1 Chronicles 21:5 in connection with David's census: 1,100,000 men from

Israel plus 470,000 from Judah that drew the sword (but cf. the smaller figures in 11 Sam. 24:9). The idea of infinity in the mathematical sense (in contrast to the theological concept of God's unlimited powers) is not found in the Bible. However, it is recognized that there are limits to the human ability to count (Gen. 13:16; 41:49).

Biblical Arithmetic

The Israelites in biblical times did not take a special interest in mathematics. Their knowledge was confined, it seems, to their essential needs and was based on Egyptian and Babylonian methods of calculation. The four basic arithmetical operations are represented in the Bible, but only the results – not the method of calculating – are given. Thus there are examples of simple addition (Num. 11:26), subtraction (Gen. 18:28–33), multiplication (Lev. 25:8; Num. 7:84–86), and division (Num. 31:27). More complicated operations, involving “the rule of three,” are exemplified in Leviticus 25:50 ff.; 27:18, 23. The Hebrews also had an elementary control of fractions, but they seem to have avoided, as did other peoples of antiquity, the problem of converting mixed fractions to a common denominator. The biblical use of complementary fractions (i.e., fractions in which the numerator is one less than the denominator, e.g., $2/3$, 11 Kings 11:7; $4/5$, Gen. 47:24; $9/10$, Neh. 11:1) shows Egyptian and Mesopotamian influence. Of particular interest is the use of certain parts of the body to express fractions or multiplication, e.g., *yad*, “hand” (fractions: *ibid.*; multiplication: Gen. 43:34); *regel*, “foot” or “times” (multiplication: Num. 22:28); *pi*, “mouth” (fraction: Zech. 13:8; multiplication: Deut. 21:17, according to many exegetes). The term *pi shenayim* originally meant two-thirds but subsequently came to signify “twice as much” (11 Kings 2:9). The latter is the meaning it always has in the Mishnah and Talmud. In Deuteronomy 21:17 the sense is uncertain: the expression could mean either two-thirds of the inheritance or a double portion. *Rosh*, “head,” frequently occurs in the sense of “sum, total” (Ex. 30:12; Num. 1:2), or “capital” (Lev. 5:24). The curious psychological approach that enables *yad*, for example, to serve both for division and multiplication is also reflected in the use of certain denominative verbs (in the *pi'el*) derived from numbers. Thus *shillesh* denotes “to divide into three” (Deut. 19:3) and “to repeat an action three times” (1 Kings 18:34). The value of π was taken to be 3 (1 Kings 7:23). Even the Mishnah in *Eruvin* 1:5 retains this approximate value, but *Mishnat ha-Middot* (second century) estimates π as $22/7$.

Method of Expression

Biblical numbers are expressed by words denoting units, tens, 100, 200, 1,000, 2,000, 10,000, 20,000, and by combinations of these. There is no real evidence of the use of arithmetical symbols either in Scripture or in monumental inscriptions of the biblical period, like the *Siloam Inscription (c. 700); cf. also the *Mesha Stele of the ninth century. However, the use of figures in everyday documents, chiefly for small numbers, is demonstrated by the *Samaria ostraca (eighth century),

where both words and figures are employed for numerals. The *Lachish Letters (sixth century) likewise contain numerical symbols. But, whereas these figures appear to be based on Egyptian models, other Samaritan inscriptions display symbols that correspond to the Phoenician-Aramaic tradition. The *Elephantine papyri (fifth century) also use arithmetical signs (chiefly vertical strokes for units and horizontal lines for tens). In later times (the Hasmonean period and throughout the talmudic age), following the Greek example, the letters of the alphabet were given numerical values. The letters *alef* to *tet* represent the digits one to nine; *yod* to *zade*, the tens to 90; and *kaf* to *tav* 100 to 400; thousands are expressed by the letters for units with two dots above. The system eventually gave rise to the numerological method called **gematria*, which R. Eliezer b. R. Yose made the 29th of his 32 hermeneutical rules, and examples of which are to be found already in the New Testament (Rev. 13:18), as well as in the Talmud and Midrash; while the kabbalists went to fantastic lengths in the application of this exegetical device. In modern times, G.R. Driver has revived the idea that even in the Bible, numbers are occasionally indicated by the first letter of their name (acrophonic system) or by the numerical value of letters of the alphabet. Thus the number 318 in Genesis 14:14 represents אֱלִיעֶזֶר (Eliezer) (cf. Gen. R. 43:2, and the *Epistle of Barnabas*).

Symbolic and Rhetorical Use

Biblical numbers are not always intended to be taken at their face value. They are often used indefinitely – as round figures – or rhetorically, for emphasis or in a hyperbolic sense. At times the rhetorical effect is achieved through a latent number, i.e., certain words or names occur a given number of times, although the actual figure is not specified. Many numbers are noteworthy for their symbolic nuances. Hebrew literature is not altogether unique in this regard; analogues are to be found in Egyptian, Sumerian, Akkadian, Canaanite, and Hittite writings. Ugaritic, in particular, provides many examples of the rhetorical and symbolic use of numbers. Especially significant is the biblical use of sacred numbers, which play an important religious role. There is, in addition, a distinct tendency in Scripture to achieve numerical harmony or symmetry. This aspect has been worked out in considerable detail for Genesis, notably its early chapters, by U. Cassuto (see bibliography).

ONE. One is sometimes used as the indefinite article (1 Sam. 24:14), and often as an indefinite pronoun, “someone, anyone, a certain man” (11 Kings 4:39). Though a cardinal number, it is also used as an ordinal (Gen. 1:5; 8:5, 13; Ruth 1:4). It also signifies uniqueness and indivisibility. Hence it is expressive of the unity of marriage (Gen. 2:24) and of the doctrine of monotheism (Deut. 6:4).

TWO. The fact that various organs and limbs of the body occur in pairs (eyes, hands, etc.) invested the number two with a certain importance. The animals entered the ark in pairs; the Decalogue was inscribed on two tablets of stone. Often two sacrifices were ordained (Lev. 14:22). The fraction one-half is

also common in the Bible: the half-tribe of Manasseh (Num. 32:33) and the half-shekel (Ex. 30:13). The Hebrew preference for the concrete to the abstract finds expression, inter alia, in the idiomatic use of two for “a few” (Num. 9:22; 1 Kings 17:12). Sometimes “three” is added to emphasize the approximate character of the number (11 Kings 9:32; Job 33:29; Isa. 17:6). Mention may also be made here of the idiom *temol shilshom*, “hitherto” (literally: ‘yesterday, the third day back’). A not uncommon device for achieving emphasis is the repetition (latent two) of a word or phrase (1 Kings 13:2; Isa. 43:25).

THREE. Three is a very common biblical number. At times it is difficult to tell whether it is used with precision or as a small round number (Gen. 30:36; Ex. 2:2); but the addition of the next high number establishes its approximate character (Ex. 20:5; Jer. 36:23). Of special importance is its use in sacred contexts. It conveys the idea of completeness, having a beginning, middle, and end. Even in remote antiquity the pagan peoples worshiped triads of gods (in Babylonia: Anu, Bel, and Ea; in Egypt: Isis, Osiris, and Horus). The universe was divided into heaven, earth, and the abyss (or the netherworld), which the three deities represented. The family group of father, mother, and child, without doubt, also contributed to the significance of the number. In the Bible three has various religious associations: a three-year old (or third-born) sacrifice in Genesis 15:9; three feasts (Ex. 23:14); for three years the fruit of a newly planted tree was forbidden (Lev. 19:23); ritual purification on the third day (Num. 19:12; 31:19); Daniel kneeled and prayed three times a day (Dan. 6:11). The following occurrences of three are also of interest: In Genesis 40, three has symbolic significance. It exercises a mystic power in the story of Elijah’s revival of the child (1 Kings 17:21). Three cities of refuge are mentioned in Deuteronomy 19:7, 9. Three daughters (plus seven sons) seem to be an ideal number (Job 1:2; 42:13). Three is latent in a number of passages where it expresses a complete and perfect number or is used for emphasis. The expression “and God blessed” occurs, for example, three times in Genesis 1:22, 28; 2:3. The Sanctuary has three divisions: a court, a holy place, and a Holy of Holies (Ex. 26:33; 27:9; 1 Kings 6:16–17). In Aaron’s benediction (Num. 6:24–26) the Tetragrammaton occurs thrice, and three pairs of blessings are pronounced. On the other hand, the trisagion in Isaiah 6:3 is a form of superlative (in the Qumran scroll, 1QIsa, “holy” is found only twice); while the occurrence of “temple of the Lord” three times in Jeremiah 7:4 merely lends emphasis to the prophet’s mocking rebuke.

FOUR. The importance of the number four is probably derived from the four cardinal points of the compass (some scholars point to the square). It is regarded as sacred in various parts of the world, and signifies completeness and sufficiency. Four rivers issued from the Garden of Eden (Gen. 2:10). Jephthah’s daughter was lamented annually for four days (Judg. 11:40). In Jeremiah 15:2 the people is divided into four groups, each subjected to a different type of disaster; in the next verse the category of “the sword” is itself divided into

four phases. There are four winds; four quarters of heaven (Jer. 49:36); four sore judgments (Ezek. 14:21); and four horns that scatter Judah (Zech. 2:1 [1:18]). The number four frequently occurs in the measurements of the furniture of the Tabernacle (Ex. 25ff.; 36ff.) and of the Temple (1 Kings 7). The bearers of God's throne are four (Ezek. 1, 10), and four chariots issue from two mountains (Zech. 6:1–8). Multiples of four are discernible in the length of the Tabernacle curtains – 28 cubits (Ex. 26:2); in the large round number 400 (Gen. 15:13; Judg. 21:12), and in the still larger figure of 400,000 (Judg. 20:2, 17; 11 Chron. 13:3).

FIVE. Five probably means simply “a few” in 11 Kings 7:13, perhaps also in Genesis 43:34; 47:2 (cf. Ex. 6:6, 8). Five as a basic number goes back to remote antiquity. There was a primitive Hamitic system based on the number five before the decimal system. It is obviously derived from the fingers of the hand used by early man in his simple calculations. In the Bible, five is related to both the decimal and sexagesimal systems. It is a feature of sacred architecture (1 Kings 7:39, 49). It is also found in connection with penalties (Ex. 21:37), redemption (Num. 3:47; 18:16), and gifts (Gen. 43:34; 45:22). The fraction one-fifth is likewise common (Lev. 5:16; 22:14). It is often used as a small round number (Lev. 26:8; 1 Sam. 17:40; Isa. 19:18). For the multiple 50 see below. Other multiples up to 500,000 occur frequently (Gen. 5:32; Ex. 30:23–24; 11 Chron. 13:17, et al.).

SIX. Six is part of the sexagesimal system but has little symbolic value. Examples of its occurrence are: the working days of the week (Ex. 20:9); the maximum years of servitude for a Hebrew slave (Ex. 21:2); the steps of Solomon's throne (1 Kings 10:19–20); the wings of the seraphim (Isa. 6:2); the six-cubit measuring reed of Ezekiel's vision (Ezek. 40:5; 41:8).

SEVEN. Seven played an exceptionally important role in antiquity. It was sacred to Semitic and other peoples, including the Egyptians, Assyrians, Persians, and the Vedic folk in India. Its importance is often derived from the worship of the seven heavenly bodies: the sun, moon, and the five planets. It is also pointed out that the seven-day week was approximately a quarter of the lunar month (29½ days), and that the Pleiades (Amos 5:8) were thought to comprise seven stars. Others see the origin of the number's prominence in the fact that it is composed of the sacred numbers three and four, or in the “unrelated” character of seven in the series one to ten. Like the Sumerians, the biblical writers often add seven to a large number to indicate a very big figure. U. Cassuto writes: “It clearly follows that the chronology of the Book of Genesis as a whole is also founded on the dual principle of the sexagesimal system and the addition of seven” (*From Adam to Noah*, in bibl., 259). In the Bible the number seven is connected with every aspect of religious life in every period: e.g., the clean beasts in the ark (Gen. 7:2ff.); Abraham's covenant with Abimelech (Gen. 21:28–30); cleansing from leprosy (Lev. 14); the festivals (Lev. 23; Deut. 16:9); Balaam's altars (Num. 23); the

induction of the priests and the consecration of the altars (Ex. 29:35–37); sacrifices (Gen. 8:20; Num. 28:11; Job 42:8; 1 Chron. 15:26); the Temple furnishings (1 Kings 7:17); the *menorah* (Ex. 25:31–37; Zech. 4:2); the Temple steps (Ezek. 40:22); the width of the Temple entrance (Ezek. 41:3); the sprinkling of blood (Lev. 4:6, 17; 16:14; Num. 19:4) and the like. The innate, mystic power of seven is exemplified in Joshua 6:4, 8, 13 (Jericho); Judges 16:13, 19 (Samson); and 11 Kings 5:10 (Naaman). It also occurs in connection with punishment (Gen. 4:24; Lev. 26:18; Deut. 28:7, 25; 11 Sam. 21:6; Prov. 6:31; Dan. 4:13, 20, 29; 9:27). In relation to time, seven represents a fitting (or sacred) period (Gen. 1:3ff.; 8:12; 50:10; Ex. 7:25; Lev. 8:33; Josh. 6). More generally it indicates a complete or round number of moderate size (Isa. 4:1; 11:15; Micah 5:4; Ps. 12:7 [6]; Prov. 26:16, 25; Job 1:2; Esth. 1:10; 2:9). In Deuteronomy 7:1 it is equated with “many.” Other interesting references are: Genesis 29:20, 27, 30 and Judges 14:12, 17 (marriage); Ezekiel 9:2 (angels); 11 Kings 4:35 (sneezes of revival); Genesis 41; 11 Kings 8:1 (famine and plenty); Genesis 33:3 (prostrations; parallels are found in the Tell El-Amarna Letters and in Ugaritic writings). Multiples of seven bear the same character with added emphasis (Lev. 12:5; Num. 29:13; 1 Kings 8:65). For 70 see below. The half of seven, three and a half, also has special significance. “Times, time, and half a time” occurs in Daniel 7:25 and 12:7. “Half of the week” in Daniel 9:27 is explained by CH Cornill to mean 3½ years and to have its origin in the 3½ years of Antiochus' persecution. H. Gunkel, however, traces the expression to Babylonia (half Kislev, Tevet, Shevat, and Adar), the references being to the 3½ months between the winter solstice and the festival of Marduk, i.e., the period of the supremacy of Tiamat.

EIGHT AND NINE. The numbers eight and nine do not appear to have any intrinsic symbolic import. Their significance seems to be related to seven and ten, respectively. The eighth day of circumcision (Gen. 17:12), of the consecration of first-born beasts (Ex. 22:29), of the sacrifices of the defiled Nazirite (Num. 6:10), and of the holy convocation (Lev. 23:36) is simply the day after the important period of seven days. Noteworthy, however, is Ezekiel's predilection for the number eight in the Temple structure (Ezek. 40:9, 31, 34, 37). Nine is at times significant insofar as it is one less than the important number ten (Neh. 11:1).

TEN. Like five, ten is clearly derived from the use of the fingers in counting (the Sefirot, it may be noted, emanate from the fingers according to *Sefer Yezirah*) and is the basis of the numeral system chiefly, though not solely, used in the Bible. It expresses completeness and perfection (Gen. 24:10, 22; Josh. 22:14; Judg. 17:10; 11 Kings 20:9–11; Jer. 41:8; Job 19:3). Its sacred character, which may derive from the fact that it is the product of three and seven (both sacred numbers), is exemplified in the Decalogue (Ex. 20:2ff.), where it may also serve as a mnemonic; the tithes (Gen. 14:20; Num. 18:21, 26; Deut. 26:12); the Tabernacle and Temple furnishings, including multiples of ten (Ex. 26; 1 Kings 6–7; Ezek. 45; 11 Chron. 4); and

the minimum number of righteous men required to save Sodom. It also occurs in latent form: e.g., there are ten patriarchs from Adam to Noah (Gen. 5), and ten from Noah to Abraham (Gen. 11:10–27). It is stated that the Israelites put the Lord to test ten times (Num. 14:22). In ritual observances the fraction one-tenth occurs frequently (Num. 28).

TWELVE. The number 12 may have derived its importance from the division of the lunar year into 12 months, and from the 12 signs of the Zodiac. It should also be noted that it can be broken down into the significant numbers five (+) seven or three (×) four. But undoubtedly its divisibility and its role in the Sumerian sexagesimal system gave it a special status. In the Bible the fact that the tribes numbered 12 (Gen. 35:22; 42:13, 32; 49:28; Num. 1:44) endowed the number with special religious significance (cf. the Greek amphictyonies). To maintain the number 12, Ephraim and Manasseh were counted as two tribes when Levi was omitted. The tribes of Ishmael likewise numbered 12 (Gen. 17:20). Representative persons and objects often correspond to the number of the tribes (Ex. 24:4; 28:21; Lev. 24:5; Num. 7:3; 17:17, 21; Josh. 4:2; 1 Kings 10:20; 18:31; Ezek. 48:31ff.; Ezra 6:17; 8:35). Multiples of 12 are found in the 24 classes of priests and Levites (1 Chron. 24:4; 25:31); the 48 levitical cities (Num. 35:7); the 24,000 men in the monthly courses that served King David (1 Chron. 27:1–15). The male descendants of Adam listed in Genesis 4:1–26 numbered 12, and the verb *yalad* (“to bear”) occurs there 12 times.

TWENTY. Twenty marks a distinctive period in human life. Isaac’s sons were born 20 years after marriage (Gen. 25:20, 26). Also, the age for army service was 20 (Num. 1:3).

FORTY. Forty is an important round number, indicating a fairly long period. The length of a generation is approximately 40 years. A man reaches full adulthood at 40 (cf. Josh. 14:7; 11 Sam. 2:10). Isaac and Esau married at 40 (Gen. 25:20; 26:34). The complete span of human life is thrice 40 (Gen. 6:3; Deut. 34:7), while twice 40 represents advanced old age (11 Sam. 19:33–36; Ps. 90:10). The Israelites wandered 40 years in the wilderness (Ex. 16:35; Deut. 2:7), in which time an entire generation died out (Num. 14:33; 32:13). In 1 Kings 6:1 (cf. 1 Chron. 5:29–36 [6:3–10]) 480 years represents 12 generations. At various periods the land had rest for 40 years (Judg. 3:11; 8:28; 1 Sam. 4:18; 80 years in Judg. 3:30 is the equivalent of two generations) and David, Solomon, and Joash reigned for 40 years (11 Sam. 5:4; 1 Kings 2:11; 11:42; 11 Chron. 24:1). This was a sign of divine grace. It is noteworthy that, according to the Mesha Stele, Israel oppressed Moab for 40 years. Periods of special significance often consist of 40 days (Gen. 7:4, 12; 8:6; Ex. 24:18; 34:28; Num. 13:25; Deut. 9:9ff.; 10:10; 1 Sam. 17:16; 1 Kings 19:8; Ezek. 4:6; 29:11–13; Jonah 3:4). Other interesting examples of the occurrence of 40 are: 40 lashes (Deut. 25:3); sons (Judg. 12:14); camel loads (11 Kings 8:9); shekels (Neh. 5:15); Temple measurements (Ezek. 41:2; 46:22). Forty thousand indicates a very large number (Josh. 4:13; Judg. 5:8; 11 Sam. 10:18; 1 Chron. 12:37).

FIFTY. Fifty, a multiple of ten, occurs in measurements (Gen. 6:15; Ezek. 40:15); in compensation (Deut. 22:29); and in civil and military organization (Ex. 18:21; Deut. 1:15). Other multiples of ten, up to 500,000, are frequently encountered (Gen. 5:32; Ex. 30:23–24; 11 Chron. 13:17).

SIXTY. Sixty, the basis of the sexagesimal system, is a heritage from the Sumerians, whose method of calculation has left its mark on the civilized world to this day. The division of the circle into 360 degrees, of an hour into 60 minutes, the minute into 60 seconds, and counting by the dozen and the gross are derived from this ancient people. The system originated, it is suggested, “in a mythical addition of zenith and nadir to the four points of the compass” (Mc-Gee). Although the biblical method of reckoning is based mainly on the decimal system, many scriptural (and likewise talmudic and midrashic) numbers show a sexagesimal structure. Thus the total ages of the patriarchs from Adam to Noah and their ages at the birth of the first son are either exact multiples of five or of five with the addition of seven (see Seven above), in accordance with a stylistic Sumerian usage. All the ages in Genesis 5 are to be analysed in the same way, as U. Cassuto has shown in his commentaries to Genesis (see bibl.). The sexagesimal method of calculation applies to other parts of the Bible, too.

SEVENTY. Seventy (the product of two sacred numbers, seven times ten) is used as a round figure, with symbolic or sacred nuances. It occurs in various contexts; it is the number of the family of Jacob that went down to Egypt (Ex. 1:5; Deut. 10:22); of the palm trees at Elim; of the elders that went up with Moses, Aaron, Nadab, and Abihu (Ex. 24:9); of the elders set round about the Tent (Num. 11:24); of the years that the nations will serve the king of Babylon (Jer. 25:11ff.); and of the weeks mentioned in Daniel 9:24ff. The nations enumerated in Genesis 10 total 70 (or 71, or 72, according to others); cf. also the 77-fold of Lamech’s vengeance (Gen. 4:24). In Ugaritic literature 70 funerary offerings for Baal are mentioned, and the gods are referred to as “the 70 children of Asherah.”

A THOUSAND. A thousand and its multiples are frequently used in the Bible as round numbers indicating a large amount. Etymologically the Hebrew word *elef* (“thousand”) denotes “a crowd,” and hence at times has the sense of “tribe,” “clan,” or designates a military unit, which does not necessarily comprise 1,000 (Ex. 18:21; Deut. 33:17; Judg. 6:15). Flinders Petrie (*Researches in Sinai*), interpreting *elef* to mean a family or tent, reduced the figure for the first census to 5,500, and to 5,730 for the second. Multiples of 1,000 are often hyperbolic expressions (Lev. 26:8; Deut. 32:30; 1 Sam. 18:7; Ps. 3:7[6]; Song 5:10). Seventy thousand (11 Sam. 24:15) and 1,000,000 (Dan. 7:10; 1 Chron. 21:5; 22:14; 11 Chron. 14:8) are globular figures indicative of a vast number, while “thousands of ten thousands” (Gen. 24:60) and “ten thousand times ten thousand” (Dan. 7:10) are imaginative numerical ultimates. Similarly high figures are found in Ugaritic literature.

Accuracy

The question of the accuracy of biblical numbers is an exegetical problem. There are actual contradictions within the Bible itself (cf. 11 Sam. 24:9 with 1 Chron. 21:5). The correctness of other figures is doubted on other grounds. Unquestionably, some excessively large numbers must be regarded as symbolic or hyperbolic figures. In certain cases critics suppose that estimates – especially of enemy forces – are only rough, and possibly exaggerated, guesses. However, errors in transmission and copying must be taken into account. Manuscripts generally show that they are particularly prone to corruption where numbers are concerned. In Hebrew a single letter could change five to 50, for example. It is interesting to note that one Hebrew Ms. of the Bible (no. 9 of Kennicott) reads in Numbers 1:23, 1,050 for 59,300 (MT); Numbers 2:6, 50 for 54,400; and in Numbers 2:16, 100 for 151,450. There are also considerable divergences between the Masoretic Text, the Septuagint, and the Samaritan versions. For example, the years between the Creation and the Flood are 1,656 in the Hebrew Bible, 2,262 in the Septuagint, and 1,307 in the Samaritan recension.

Ascending and Descending Numbers

The manner in which large numbers are arranged is subject to interesting variations: sometimes they are arranged in ascending order (Gen. 5:17), at other times in descending order (Gen. 23:1; Ex. 38:26), and occasionally a combination of both (Num. 3:43). The conventional explanation is that J, E, and D prefer the descending order, while P favors the ascending order. Cassuto, however, has argued that not a documentary criterion but a linguistic principle is operative here: "When the Bible gives us technical or statistical data and the like, it frequently prefers the ascending order, since the tendency to exactness in these instances causes the smaller numbers to be given precedence and prominence. On the other hand, when a solitary number occurs in a narrative passage or in a poem or in a speech and so forth, the numbers are invariably arranged, save in a few cases where special circumstances operate, according to the more natural and spontaneous order, to wit, the descending order" (*The Documentary Hypothesis*, in bibl., 52).

Numerical Harmony

Another question to which Cassuto has given special attention is that of numerical harmony. He demonstrates, for instance, that heptads repeatedly occur in Genesis 1:1–2:3, leaving no doubt that these literary variations on the theme of seven were carefully designed so as to achieve a harmony of numbers. "This numerical symmetry," he writes, "is, as it were, the golden thread that binds together all the parts of the section and serves as a convincing proof of its unity" (*From Adam to Noah*, in bibl., 15).

Graded Numbers

Another interesting feature of biblical style is the use of graded numbers. This consists of the collocation of two consecutive

numbers for rhetorical purposes. The usage may be divided into three categories:

(a) In prose it expresses approximation and, as a rule, fewness, and has a colloquial character (11 Kings 9:32; 13:19).

(b) In poetry the two numbers form a parallelism and also express inexactness (Micah 5:4; Job 5:19). A similar usage is found in Sumerian and Akkadian, and, especially, in Ugaritic epic poetry. Since numbers are involved, the parallelism cannot be expressed through synonyms, and consecutive numbers are the only alternative (cf. the parallelism between 1,000 and 10,000 in Ps. 91:17). A combination of the idiom for fewness and poetic parallelism is seen in Isaiah 17:6.

(c) In proverbial sayings a schematic device is employed in which two successive numbers are given of things that share a common characteristic, and the actual items subsequently enumerated conform to the second, i.e., the higher, number (Prov. 30:15–31). The use of numbers in Proverbs (including single numbers as in Prov. 30:15a) is intended as an aid to memory. In Amos 1:3–2:6, where three and four are repeatedly mentioned but only one example is cited, the prophet apparently uses surprise as a rhetorical factor.

Reviewing the facts adumbrated above, it appears that numbers are used in the Bible not solely for statistical or arithmetical purposes. They are also employed as stylistic devices to express symbolically the idea of completeness and perfection, to convey the concept of sanctity, to provide mnemonics, and are often arranged so as to give numerical symmetry or harmony to a passage. They are used both expressly and latently to emphasize the leading thought of a text, and thus often establish its intrinsic unity. The rhetorical uses of numbers in Scripture unquestionably constitute a highly valuable aid to biblical exegesis. Furthermore, the biblical approach to numbers strongly influenced the thinking of later ages. Philo and other Hellenistic writers, the Apocryphal literature, the New Testament, the Talmud and Midrash, and especially the kabbalistic writers laid great stress on numerology in various forms. In this way, numbers became an integral part of both literature and theology.

[Israel Abrahams]

NUMBERS RABBAH, aggadic Midrash to the Book of Numbers, also called *Va-Yedabber Rabbah* in medieval literature. (For the name "Rabbah" see **Ruth Rabbah*.)

Structure

The book is divided into 23 sections. The Midrash on chapters 1–8 of the book of Numbers, which are the first two weekly portions as read today – *Ba-Midbar* and *Naso* – is two and a half times longer than the remaining Midrash on chapters 9–36, which cover the eight remaining portions. This dispro-

portion – five sevenths of the Midrash applying to one fifth of the book of Numbers – is in itself sufficient indication that there are here two different Midrashim: *Numbers Rabbah I*, consisting of sections 1–14, and *Numbers Rabbah II*, consisting of sections 15–23.

Numbers Rabbah I

This appears at first sight to be an exegetical Midrash, since (with certain omissions) it forms a kind of consecutive interpretation to Numbers 1–8, chapter by chapter and verse by verse. Nevertheless, many of its long expositions deal with one single theme and are typical of homiletic Midrashim. The division into sections is at times determined by the open and closed sections of the Torah (see *Masorah) and at times by the weekly division of the reading of the law according to the triennial cycle once customary in Erez Israel. In general each section begins with an anonymous proem, either an imitation (not always successful) of the classical proem typical of the amoraic Midrashim (see *Midrash; *Homiletics), or of the type combining *halakhah* and *aggadah* common in the *Tanḥuma Yelammedenu* Midrashim. Some sections have epilogues of consolation or of future destiny. The language of the Midrash is Hebrew, in part mishnaic and in part of the early medieval period. It contains a little Galilean and also Babylonian Aramaic and a few Greek words.

In the light of the many parallels between *Numbers Rabbah I* on the one hand, and **Genesis Rabbati* and *Midrash Aggadah* (see Smaller *Midrashim) which are of the school of Moses ha-Darshan, the 11th-century scholar of Narbonne, on the other, it seems that *Numbers Rabbah I* is also based on Moses ha-Darshan's Midrash to the Pentateuch, of which it preserved not only the contents but even the terminology. This conclusion follows also from the fact that quotations by medieval scholars from the work of Moses ha-Darshan are found in *Numbers Rabbah I*. Since, however, the parallel part of *Midrash Aggadah* (to Num. 1–8) contains many homilies not in *Numbers Rabbah I*, it is obvious that *Numbers Rabbah I* is not an actual part of the work of Moses ha-Darshan, but his book served as the main source for its editor and compiler. The basis of *Numbers Rabbah I* was a Midrash of the *Tanḥuma Yelammedenu* type (which is the reason for the many parallels to these Midrashim and for the homilies which mix *halakhah* with *aggadah*), but the late compiler broke down and reconstructed its homilies, changing its character by greatly enlarging it (particularly in the case of the homilies to *Naso*, sections 6–14, which themselves constitute four sevenths of the whole Midrash *Numbers Rabbah*), adding to it from various sources, especially from the work of Moses ha-Darshan. That work was a combination of biblical commentary, *aggadot* and homilies, and halakhic topics, and included old and new sources (the greater part of which had been revised), together with original novellae. Among the works utilized by Moses ha-Darshan were the *Apocrypha and *Pseudepigrapha of the Second Temple period, especially those of the *Enoch circle (see also *Jubilees; the *Testaments of the Twelve Patriarchs), of which

he seems still to have had Hebrew versions. He used all the tannaitic literature, the Jerusalem Talmud, the early amoraic Midrashim, the *Tanḥuma Yelammedenu* Midrashim (including **Pesikta Rabbati*), **Seder Eliyahu Rabbah* and *Seder Eliyahu Zuta*, the Babylonian Talmud, and even late Midrashim like the *Midrash Tadshe*; his work also contains pseudepigraphic material. *Numbers Rabbah I* also makes use of the *piyyutim* of *Kallir and of *Sefer *Yezirah*, and contains topics of esoteric lore, mysticism, and combinations of numbers and calculations. Hence its comparatively late Hebrew is understandable. As the compiler was apparently acquainted with the Midrash **Lekah Tov*, which like the work of Moses ha-Darshan dates from the end of the 11th century, the middle of the 12th century seems to be indicated as the earliest possible date for the compiling of *Numbers Rabbah I*. It is of interest that the Paris manuscript (no. 149) of 1291 only includes sections 1–5 of *Numbers Rabbah* (on the reading of the law for Numbers), while the Munich manuscript (97, 2) of 1418 includes the whole of *Numbers Rabbah I* but not *Numbers Rabbah II*.

Numbers Rabbah II

This homiletical Midrash of the *Tanḥuma Yelammedenu* type is identical in all respects with the part parallel to it in the printed *Tanḥuma* and in Buber's edition of the *Tanḥuma*. Moreover a much better version has at times been preserved in *Numbers Rabbah II* than in the parallel passages of both the above-mentioned *Tanḥuma* Midrashim. Thus, for example, it has not the Babylonian *She'ilta*, added to the *Tanḥuma* Midrashim *Hukkat*, 2. Instead of the expression *Yelammedenu Rabbeni* ("teach us, our master") found in the *Tanḥuma*, it has *halakhah* (in the manuscripts, however, *Numbers Rabbah II* too has *Yelammedenu Rabbeni*). Many of the halakhic proems found in the *Tanḥuma* have been abridged in *Numbers Rabbah II*, as for example the first. However, they are found in full in the manuscripts. The division of *Numbers Rabbah II* into sections, not found in the manuscripts, is, as in the *Tanḥuma*, almost identical with the division of the triennial cycle. The view accepted by the majority of critical scholars is that *Numbers Rabbah II*, which is apparently the second half of a complete Midrash whose first half, which served as the original basis, was lost, was compiled in the ninth century, like most of the *Tanḥuma Yelammedenu* Midrashim. It has, however, also some late additional interpolations from the book of Moses ha-Darshan (18:15–18; 20:5–6, lacking in the *Tanḥuma*; and 18:29 found also in the printed *Tanḥuma*).

The union of *Numbers* Midrashim *Rabbah I* and *Rabbah II* is the work of a copyist of the beginning of the 13th century. The complete Midrash was not yet known to the author of the *Yalkut Shimoni*; it seems that the first to cite it was Naḥmanides. The earliest manuscripts of the whole of *Numbers Rabbah* date only from the 15th century, but they are nevertheless much better than the printed versions.

[Moshe David Herr]

NUMENIUS, son of Antiochus, Jewish envoy sent by the high priest *Jonathan to renew the Hasmonean pact with Rome. Numenius, together with Antipater the son of Jason, was instructed at the same time to deliver a pledge of friendship to the Spartans, who, according to Josephus, “received the envoys in a friendly manner” and reciprocated with a decree of their own “concerning a friendly alliance with the Jews” (Ant., 13:169–70). It appears that both envoys were used in a similar capacity by Jonathan’s successor, *Simeon, and the Spartan reply to Simeon is quoted in 1 Maccabees 14:20 ff. It has been suggested, however, that the two representatives were in fact sent to Rome and Sparta by Jonathan, who died during their mission, and therefore the Spartan correspondence is addressed to Simeon. In any event, Numenius was subsequently sent again to Rome by Simeon, taking with him on this occasion a golden shield in honor of the renewed pact. Numenius participated in yet another mission to Rome, for a similar purpose, during the early years of John *Hyrcanus. The document to this effect, however, was erroneously inserted by Josephus into the priesthood of Hyrcanus II (Jos., Ant., 14:143 ff.).

[Isaiah Gafni]

***NUMENIUS OF APAMEA** (c. 150–200 C.E.), Greek philosopher, author of a lost work “On the Good” where he introduced the Jews to support his Platonic-Pythagorean view of God as incorporeal. A quotation in Eusebius, *Praeparatio Evangelica* 9:8, praises Moses; according to *Clement of Alexandria Numenius called Plato, whom he revered, “Moses speaking pure Greek.”

NUMERUS CLAUSUS (“closed number”), amount fixed as maximal number in the admission of persons (or certain groups of persons) to specific professions (in particular the liberal professions), institutions of higher learning, professional associations, positions of public office, etc.; frequently applied to Jews. The numerus clausus on the admission of Jews to institutions of higher learning was applied in the 19th century, and extended in the 20th century, in particular in the countries of Eastern Europe, but also in others. It assumed its most characteristic form in czarist Russia (see below) as the *protsentnaya norma* where the restrictions and limitations on the admission of Jews were established by special legislation. In countries such as Poland and Romania (see below) the numerus clausus was introduced as a quasi-legal means, or was applied in practice, as part of an antisemitic policy. However, in democratic countries the numerus clausus was also tacitly applied, at least in some institutions of higher learning, for social or prestige reasons. A numerus clausus of this type was applied not only to students but also (sometimes principally) to teaching staff in the universities or in admission to the civil or public services where higher professional qualifications were required. It was also applied in admission to positions which

carried a special status, as in the higher ranks of the civil service, the diplomatic service, army, etc.

In Czarist Russia

During the first half of the 19th century, the policy of the Russian government toward the Jews, as formulated in the statutes concerning the Jews (“*polozheniya*”) of 1804, 1835, and 1844, was to attract the Jewish youth to Russian schools. This ambition encountered strong opposition from the Jewish masses who regarded education in these schools as a step toward the alienation of Jewish youth from its people and its religion. They also viewed the network of Jewish state schools established by the government to promote general education among the Jews with suspicion. In 1853 there were 159 Jewish pupils in all the secondary schools of Russia (1.3% of the total student roll), while in the universities there were a few dozen. On the other hand, the *maskilim* advocated education in the Russian schools as a means of rapprochement with the Russian people.
